An expansion of Rs. 18.92 crores in notes in circulation and of Rs. 72.36 lakhs in notes held in the Banking Department, resulting in an aggregate rise of Rs. 19.64 crores in total notes issued, is disclosed by the Reserve Bank's statement for the week ended 11th November 1960. This addition has been matched by a rise of Rs. 20.03 crores in rupee securities and a fractional fall of Rs. 39 lakhs in rupee coin. Foreign securities held in the Issue Department remain unchanged at Rs. 123.00 crores, but balances held abroad in the Banking Department have gone down by Rs. 16.69 lakhs. Consequently the total foreign assets held by the Bank are slightly lower at Rs. 141.11 crores. The deposits of the Central Government have gone down by Rs. 20.91 crores, while those of other Governments have risen by Rs. 4.65 crores. Deposits of banks are up by Rs. 1.28 crores at Rs. 105.08 crores. Other loans and advances have gone up by Rs. 3.24 crores, of which advances to scheduled banks against usance bills account for Rs. 2.32 crores; these now stand at Rs. 8.14 crores. Reflecting the addition in rupee securities held in the Issue Department, the investments portfolio of the Banking Department is down by Rs. 20.24 crores.

A fall of Rs. 6.10 crores has occurred in demand deposits of scheduled banks in the week ended 4th November 1960. There has also been a decline of Rs. 66 lakhs in time deposits. Of the contraction of Rs. 6.76 crores in total deposits, the share of the State Bank of India is nearly Rs. 4 crores. Borrowings from the Reserve Bank have gone up by Rs. 6 crores to Rs. 22.62 crores. Advances have gone down by Rs. 5.07 crores to Rs. 955.31 crores, but bills purchased and discounted have gone up by Rs. 3.50 crores, resulting in a net fall of Rs. 2.50 crores in bank credit which now stand at Rs. 1,109.61 crores. During the same week, the advances of the State Bank of India showed a minor fall of Rs. 1.94 crores. Investments standing at Rs. 698.97 crores reveal a rise of Rs. 9.42 crores. Almost the whole of this addition is on account of the State Bank of India whose portfolio shows a rise of Rs. 10.42 crores. Total cash balances are also higher by Rs. 7.39 crores at Rs. 151.74 crores. The whole of this accretion is on account of banks other than the State Bank of India.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 16*th November*

The bullion market ruled easy during the major part of the week under review. Both gold and silver were subjected to selling pressure by bears, thanks to the absence of any marked rise in offtake and heavy contango charges. There was also some stale liquidation by tired bulls. The weakness of raw cotton, too, acted as a damper. Consequently, prices staged a retreat. The downward trend persisted till yesterday, when some recovery was in evidence, following revival of buying by dealers in Delhi and South India. There were also rumours that a bull syndicate had been formed at Calcutta which would insist on delivery in the *Margashir* settlement. But today, the market again developed a sagging tendency, owing to lack of follow-up support. The closing rates were lower than those prevailing a week ago.

The daily average arrivals of gold during the week amounted to 6,500 tolas, which were, of course, lower than those in the previous week, namely, 9,800 tolas. Offtake was higher at 4,600 tolas, as against 3,800 tolas. In the case of silver, daily average arrivals and offtake were both higher at 45 bars and 12 bars, as against 38 bars and 7 bars, respectively. The floating stocks of gold are reported to be around 75,000 tolas, while those of silver are estimated at 800 bars.

In the gold section, *Margashir* (December) settlement encountered selling and receded from Rs. 116.60 to Rs. 115.40 yesterday and, after recovering to Rs. 115.80, finished easy at Rs. 114.60 today. The net loss over the week was Re. 1. Ready gold continued to be quoted at a discount under the forward, though the discount declined by 5 nP to Re. 1.05. The closing rate for the metal today was Rs. 114.55, as against Rs. 115.50 on Wednesday last week, the highest and lowest levels touched in the week being Rs. 115.75 and Rs. 114.30, respectively.

The *Margashir* settlement in silver began the week at Rs. 197.20, as against the previous closing of Rs. 197.65, and moved down to touch a low of Rs. 196.30 on Monday the 14th inst. After recovering to Rs. 197.05 yesterday, it declined to Rs. 196.55 before finishing at Rs. 196.65. Ready silver eased from Rs. 196 to Rs. 194.60 on Monday. Thereafter, it recovered and stood at Rs. 195.50 at one time today. Towards the close, the metal was subdued at Rs. 195.05.

The world price for gold in the London bullion market declined from $36¼-$36⅜ to $35⅞-$36 during the week. The decline followed the "stepping in" of the Bank of England to meet the demand for gold from its own stock and to absorb a fairly large offering of dollars on the foreign exchange market, holding the rate at the year's peak of $2.81.11/16. Ready gold in London rose from 255s. to 256s. 6d. early in the week, but receded subsequently and stood at 253s. 3d. yesterday. But ready and forward silver, however, continued unchanged at 79½d., as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	16-11-60 (closing)	High	Low	9-11-60 (closing)
GOLD				
Ready (.99 fine)	Rs. 114.55	Rs. 115.75	Rs. 114.30	Rs. 115.50
Forward:				
*Margashir**	115.60	116.65	115.40	116.60
Sovereign	90.00	90.00	89.75	90.00
SILVER				
Ready (.996 fine)	195.05	195.75	194.60	196.00
Forward:				
Margashir†	196.65	197.45	196.30	197.65
London:	15-11-60			8-11-60
Silver Ready	79½d.	—	—	79½d.
Silver Forward	79½d.	—	—	79½d.
Gold	253s. 3d.	256s. 6d.	253s. 3d.	255s.
New York:				
Silver	91.375 cents	—	—	91.375 cents

* 5th December settlement. † 6th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

There has been no worthwhile change in the Gilt-edged market. The selling pressure, which was particularly marked in State loans, has, however, considerably eased following the relaxation in the Reserve Bank's reserve ratio system, as mentioned above.

There was a further weakening of the rupee *vis-a-vis* the U.S. dollar, with the Banks' selling rate for ready T.T. at New York being Rs. 476 per $100, as against Rs. 475.50 a week ago. The Banks' buying rate for ready T.T. has also risen by 50 nP to Rs. 472.50. This trend follows the slight fall in the sterling-dollar cross rate. The spot rate for sterling in the New York market has come down from 281.49-281.52 cents to 281.24-281.27 cents per £. Three months forward has also declined, by 0.19 cent to 280.18-280.21 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 14*th November*

There was no change in the hides and skins market during the week under review. Prices ruled firm. Arrivals of stocks were negligible, as E.I. tanners were not able to get their productions well dried, due to heavy rains for over a week.

Export trading was small. Tanners were quoting 2d. per lb. over importers' ideas for hides and calves and three to six pence for goat skins. Overseas buyers were not following the prices at origin, but the tone was firm. A small volume of business was placed in sheep skins at last prices, with sellers trying to obtain higher levels.

Raw goat skins were weak, while sheep ruled steady.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 16*th November*

In contrast to the firmness witnessed last week, the cotton futures market ruled distinctly easy during the week under review. The easiness was due to the following reasons: (1) The reported move of the Indian Cotton Mills' Federation to undertake distribution of cotton requisitioned by the Textile Commissioner on behalf of mills. This move, operators feared, would eliminate the scramble for cotton and bring down the price of cotton as mills would prefer to get cotton from the Federation rather than from traders at not more than the ceiling price, in any case. (2) Mr. Lal Bahadur Shastri's threat to introduce price control and rationing of cloth if prices did not come down unnerved the operators who thought that, in view of this threat, mills would not be prepared to pay higher prices for cotton. (3) Larger arrival of cotton in upcountry centres and the consequent downward trend in prices in the terminal markets. (4) The fresh warning issued by the Forward Markets Commission against illegal trading in cotton.

Last week's rise in price level, as much as Rs. 18.25, was too steep and the market was already in for a technical reaction. The aforesaid factors were, therefore, sufficient to spark off a wave of selling which wiped off the earlier gains. The Jarilla April Contract slumped from the last week-end rate of Rs. 612.25 to Rs. 591.25 (per three quintals) at close yesterday. Opening lower at Rs. 588.50 today, the Contract improved to Rs. 591 on reports of higher turnover in the spot market. The closing was, however, fractionally down at Rs. 590.50. The net loss over the week is Rs. 21.75.

In the spot market, early in the week there was good demand for new crop Khandesh, Berar, etc., at prices slightly above the ceiling. Interest, however, sagged following the decision of the Cotton Mills Federation to distribute requisitioned cotton. Mill buyers deferred purchases in anticipation of a fall in price. Meanwhile, arrivals upcountry became larger and prices receded. Reflecting this, prices in the Bombay market too declined. Today, however, a revival of demand was reported at Sewri. Turnover consequently improved to about 10,000 bales.

Bengal *Deshi* cotton attracted some export interest. Indian price is said to be lower than what is quoted for equivalent Pakistan cotton. Hence the current interest in Indian *Deshi* cotton. However, in view of the absence of quota, not much firm business could be done. The little business put through was on a subject-to-licence basis.

Foreign cotton was neglected. Stray interest was noted for U.S. cotton.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Berar 27/32" 875; Khamgoan 915; Moglai ¾" 810; American G.M. 1" staple 1,100.

The Karachi cotton futures market, after having ruled quietly steady during the most part of the week, rallied towards the close. The January and March contracts spurted from the week's opening rates of Rs. 68-10 and Rs. 68-8 to Rs. 70-1 and Rs. 69-7, respectively yesterday. This was due to the emergence of fresh foreign demand. Continental countries and Japan made sizable purchases. Domestic mills too supported the market. Futures values consequently rose sharply.

In the spot market prices of ready cotton hardened. Punjab *Deshi* was quoted at Rs. 91 per maund, as against Rs. 85 last week-end. Sind *Deshi* remained at last week's level of Rs. 81. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi. 4F Punjab Roller 78-6; S.G. 82-6; L.S.S. Punjab Roller 81-6; S.G 85-6; N.T. Roller 85-14; S.G. 90-14; 289F Punjab Roller 91-6; S.G. 95-14.

Cotton futures in Alexandria suffered a setback during the week under review. Speculative selling induced by the brisk progress of pickings and the record crop expected resulted in a fall in prices.

Demand for ready cotton was, however, fairly well maintained. East European countries continued to show interest in available lots. The latest available quotations—in tallaris per lb.—are as under:

Karnak: November 75.30; January 73.05; March 73.35; May 73.30.

Ashmouni: December 67.07; February 63.95; April 63.77.

Quiet conditions prevailed in the Liverpool cotton futures market during the week. A small volume of liquidation and some hedge selling in July position found buyers reserved. The dullness of the market was influenced by the inactivity of the spot section, where spinners were keeping off the market as they had covered most of their winter requirements of cotton. The November estimate of the U.S. Department of Agriculture which placed the U.S. crop this season at 255.000 bales lower, as compared with the previous estimate, and the victory of Senator Kennedy, who had promised higher price support in the U.S. Presidential election, though bullish factors, did not have any marked effect on the Liverpool market. In fact, after a small rise, following the announcement of election results, both the American and American type contracts in Liverpool receded. Sudan cotton contracts, however, ruled steady. The latest available quotations—in pence per lb.—from Liverpool are given below:

American cotton one inch staple contract: December 22.75; March 23.25; May 23.60; July 23.80.

American cotton mixed growth contract: December 23.05; March 23.55; May 23.90; July 24.10.

Sudan: November, January, March 35.75.

Cotton futures in New York scored modest gains during the week. The reduction in crop estimate by 255,000 bales, Kennedy's victory in the Presidential election which indicated higher sup-

port prices for cotton, and adverse crop news prompted buying which pushed cotton futures higher. Towards the close of the week, values tended to recede, thanks to profit-taking.

The November crop report of the Department of Agriculture estimated the 1960-61 U.S. upland crop at 14,298,000 bales (of 500 lbs. each), as against 14,533,000 bales estimated last month and 14,551,000 bales harvested last season. The yield per acre was placed lower at Rs. 442 lbs. as against 450 lbs. a month ago and last season's 462 lbs. The next report will be issued on 8th December.

The following are the latest available quotations from New York, as compared with those a week and three weeks ago:

(In cents per lb.)

	15-11-60	7-11-60	25-10-60
Spot	32.25	32.20	32.25
December	31.71	31.68	31.53
March	32.33	32.25	32.05
May	32.64	32.64	32.40

OILSEEDS: NEW CURBS ON SPECULATION

(From Our Own Correspondent)

BOMBAY, 16*th November*

The Forward Markets Commission did mean business when it warned the trade last week against excessive speculation. For the warning was followed, albeit a b't hastily according to some, by the imposition of more stringent measures to bring the market under control; these measures include the enhancement of special margins on the trading of groundnuts futures and the introduction of special margins on castorseeds futures, for the first time in the new crop contract. In a Press note issued on Sunday, the Commission stated:

"In respect of groundnut at the Bombay Oilseeds and Oils Exchange Ltd., the rates of special margin of Rs. 20 and Rs. 60 payable by longs, whenever the prices of groundnut futures February 1961 delivery rise above Rs. 187 and Rs. 212 per 250 kgs., have been raised to Rs. 40 and Rs. 160 respectively. Further, whenever the prices rule above Rs. 212, the margin payable by the members holding a long position in excess of 1,250 metric tons has been stipulated at Rs. 150 per 250 kgs. During the delivery period, the rate of special margin payable by all longs has been prescribed at Rs. 212 per 250 kgs. whenever the prices rule above that rate, irrespective of the quantum of long position held by them. In addition the free limit of 75 metric tons to members holding a position up to 125 metric tons will not be available during delivery period. Similar restrictions have also been extended to the groundnut transferable Specific Delivery Contracts for December 1960-January 1961 delivery traded in the Exchange. Similar restrictions have been introduced in respect of groundnut and groundnut oil traded in the other recognised associations.

"A special margin of Rs. 20 per 250 kgs. has been introduced for the first time during the current season in castorseed futures contract of May 1961 delivery traded in the Bombay Oilseeds and Oils Exchange whenever its prices rise above Rs. 187 per 250 kgs. and above Rs. 186.50 per candy at Ahmedabad. This rate of special margin will be payable both during the non-delivery period and delivery period. A free limit of 75 metric tons or 300 candies is also permitted to those members holding a total long position not exceeding 125 metric tons or 500 candies.

"In the case of rapeseed and mustard seed, the Commission has introduced a third marginal line in the four recognised associations at Delhi, Agra, Kanpur and Bhatinda in respect of current and new crop deliveries. At Delhi, the third marginal lines for the current crop November 1960 delivery and new crop May 1961 delivery are Rs. 31.50 per B. maund and Rs. 33.50 per 40 kgs. The rates of special margin payable at these levels are Rs. 1,750 per unit of 112½ Bengal maunds and Rs. 1,675 per unit of 4,000 kgs. respectively. For those holding a long position above 100 units in November 1960 and May 1961 deliveries, the rates of special margin payable are Rs. 2,625 and Rs. 2,500 per unit, respectively.

"During the delivery period, however, the rates of margin payable by longs irrespective of the long position held are Rs. 3,500 per unit in the November 1960 delivery and Rs. 3,350 per unit in the May 1961 delivery. The free limits now extended to members are withdrawn during the delivery period."

By and large, the market has ignored the new special margins. For even after the new move, castorseeds were well maintained and the bulls were in no mood to liquidate their stocks. This is understandable to a certain extent in that, owing to the larger export of castor oil this year, stocks held by the trade at present are quite limited. In the ordinary course, prices are not expected to fall until the end of December, when the new crop will make its presence felt in the market. In addition, the margin is now leviable only at Rs. 187, a rate which is well above the current level of prices. So nothing prevents operators from pushing up prices at least upto that limit. In respect of groundnuts, the sentiment has turned rather subdued, partly owing to new curbs and partly to improvement in arrivals. On the whole, these special margins do not generally achieve what is expected of them. They serve simply to drive the small fry out of business, while the more well-to-do class will not mind paying margins, which in the case of castorseeds are less heavier than those on groundnuts.

The undertone of the market was quite steady during the week under review. Groundnuts, after an initial spurt, drifted slightly lower, but the closing prices were somewhat above those in the last week. The initial firmness was the result of rumours that Government would announce a liberal export policy in respect of H.P.S. groundnuts, apart from taking an early decision on the recent tender scheme for the export of groundnut oil. As already mentioned, new arrivals and bullish crop reports, on top of the stricter margins, brought the prices down subsequently. Groundnut February 1961 contract, which had wound-up last week at Rs. 208.75, rallied to Rs. 211.25, before closing today at Rs. 209. Khandesh quality rose by 25 nP to Rs. 43.25, but relapsed to Rs. 43 towards the close. Oil ex-mill closed at Rs. 18.90, as against Rs. 18.75.

Speculators apparently turned their attention away from groundnuts to castorseeds. Although there were no firm overseas business in oil, sustained support was given by upcountry interests. Consequently, prices moved up. Castor May 1961 rose from Rs. 176.87 to Rs. 177.25 by Monday, but drifted lower subsequently to Rs. 177, with a net gain of 13 nP over the week. Ready Madras improved from Rs. 34.31 to Rs. 34.50, but declined later on to Rs. 34.25. Oil Commercial, too, improved from Rs. 14.31 to Rs. 14.75, before closing at Rs. 14.15.

In the linseed section, May 1961 contract put on 9 nP to Rs. 33.59, it had touched Rs. 33.66 earlier. Bold ready gathered 38 nP to Rs. 33. Oil hardened by 19 nP to Rs. 14.50.

Dull conditions prevailed in the cottonseed section, in sympathy with the raw cotton market. February 1961 contract, which had risen from Rs. 89 to Rs. 90, fell to Rs. 87.50 today. In the ready section, Berars, whites and non-whites were quiet at Rs. 20.25 each.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	16-11-1960	8-11-1960	2-10-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	209.00	208.75	211.50
Nizam bold	42.00	42.00	44.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

SPURT IN STAPLE FIBRE YARNS

(From Our Own Correspondent)

BOMBAY, 16*th November*

Barring staple fibre yarns which ruled distinctly firm, the yarn market put on a lethargic appearance during the week under review. Art silk yarns suffered a further setback in prices following fresh offerings by some parties, while buying support was negligible. Operators preferred to await the emergence of a clear picture regarding demand from consuming centres. Cotton yarns continued to be dull in the absence of any encouraging news. The firmness of staple fibre yarns was engendered by hopes of enlarged offtake by powerlooms as a result of the recent decision of the Government to regularise the unregistered looms through the issue of formal permits.

Imports of art silk yarn into Bombay port during the month of October 1960 amounted to 1,432,657 kilograms. During the same month, 80,016 kilograms of synthetic yarn and 15,759 kilograms of cotton yarn were imported. Exports of cotton yarn and cotton sewing thread from Bombay during October were of the order of 227,661 kilograms and 22,993 kilograms, respectively.

Cupressa Bemberg yarn (60 x 1) December contract encountered selling and dropped Rs. 14 to Rs. 2.129. February contract declined by Rs. 19 to Rs. 2.124. Spot cupressa climbed down from Rs. 2,224.44 to Rs. 2,176. Among other imported art silk yarns, 120 Italy fell by Rs. 26.50 to Rs. 1,212.50. 120 Japan receded by Rs. 15.38 to Rs. 1,294.12. 150 Japan lost Rs. 6.63 to Rs. 1,514.56. 150 Italy however, elicited special enquiries and jumped up by Rs. 41.87 to Rs. 1,474.87. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade shed 13 nP to Rs. 12.19. 150 Bt. cones 1st grade were quiet at Rs. 11.41.

In the staple fibre yarn section, 40 x 2 December delivery rallied from Rs. 761 to Rs. 795. February delivery advanced by Rs. 26 to Rs. 795. Spot Centurys firmed up by 34 nP to Rs. 9.03. Kohinoors rose by 26 nP to Rs. 9.22. Citys gained 11 nP to Rs. 8.93.

Cotton yarns, as already stated, were dull. Ten counts were unaltered at Rs. 18.12. Moderns changed hands at Rs. 18.75. Twenty counts Moderns and Gokaks were done at Rs. 23.25 and Rs. 23.12, respectively, same as last week. Business was put through in forty counts Minaxis at Rs. 31.75. Madurai were quoted at Rs. 32. Sixty counts were quiet at Rs. 59.59. Radhakrishnas were enquired at Rs. 51.87. Eighty counts Moderns eased by 50 nP to Rs. 71.50. Mahendras were unchanged at Rs. 70.50 and Finlays at Rs. 79.79.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	16-11-1960	9-11-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)		
December	2,129 00	2,143.00
February	2,124 00	2,143 00
60/1 Cupressa Bemberg spot ..	2,176 00	2,224 44
120 Japan (per 100 kg.)	1,294 12	1,309.50
150 Japan (per 100 kg.)	1,514 56	1,521 19
120 Italy (per 100 kg.)	1,212 50	1,239 00
150 Italy (per 100 kg.)	1,474 87	1,433.00

80s Modern	71.50	72.00

TEAS FOR EXPORT FIRM

(From Our Own Correspondent)

CALCUTTA, 15*th November*

Teas offered at export auctions held yesterday were firm. There was strong general demand. Operators noted that fresh arrivals of tea from gardens so far in this season had been below the normal quantity and, as a result, exports were lower. Not only the crop in this part of the country has been lower but transport facilities were disrupted for one reason or another in this season, including communal disturbances in Assam and strike by Central Government employees in July. Including the figure for October, which was 100.5 million lbs. or 8.4 million lbs. higher than for October 1959, production so far amounts 459.5 million lbs. which is less than 33.8 million lbs. as compared with the corresponding period last year. Considering that November and December are poor plucking months and that production in these two months do not vary significantly from year to year, it can now be stated that the 1960 North-East Indian crop would be lower by 33.8 million lbs.

Viewed against the background of these figures, the marketing outlook for the remainder of the crop is considered to be fair. Also, the carry-over for the next year would be smaller and it should be correct to say that the new season would begin well.

The increase in U.K. tea stocks to 83 million lbs. in the week ended 9th November from 74 million lbs. in the previous week was attributed to the commencement of arrivals which had been earlier diverted to the Continent, in order to prevent congestion in London docks consequent on the stoppage of work by tally clerks. This was also reflected in the increase in tea offered in the Mincing Lane auctions last week. It is to be expected that the increasing trend in quantity offered would be maintained in the coming weeks in Mincing Lane auctions.

In the internal sales held here last week, dusts on offer amounted to 23,191 packages, prices of which eased, despite good general demand. Medium C.T.Cs gave way by 10 to 20 nP. The best C.T.Cs also registered some losses. However, the plainer orthodox teas were about dearer, while the brighter and smaller Assams eased in line with the general trend. Legg-cut Dooars were also easy. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. dust Rs. 6.20 to Rs. 6.40; medium Assam C.T.C. dust Rs. 5.95 to Rs. 6.10; medium Assam dust Rs. 4.90 to Rs. 5.50; and medium Dooars Rs. 4.70 to Rs. 5.10.

Leaf offerings amounting to 416 packages met with good general demand.

There was strong general demand to offerings amounting to 70,850 packages during yesterday's export sale. Tippy teas were firm, as were leaf grades, while Darjeelings recorded an easing trend. Best C.T.Cs, though irregular, were firm at last rates, buyers showing more attention to fannings grades than brokens. Strong competition was offered to the teas for price and plain B.P.s, prices of which gained. Legg-cut teas maintained the previous rates. In strong competition, black, clean and low medium B.O.Ps recorded small gains in prices, while medium B.O.Ps eased. Orthodox teas were fully steady, but medium B.P.s sagged. The quotations inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6.50 to 7.00; clean black pekoe Rs. 5.30 to 5.70; medium fannings Rs. 5.10 to 5.40; best Assam C.T.C. B.P. Rs. 6.10 to 6.50; plain fannings Rs. 4.90 to 5.10; medium B.P. Rs. 4.65 to 4.85; and plain B.P. Rs. 4.55 to 4.65.

Export quota changed hands at ¼ nP per kilo.

QUALITY TEAS EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 8*th November*

Just over 550,000 kilograms were offered in Sale No. 43 held today. Quality teas generally showed a slight decline. However, a few brighter invoices from the Nilgiris were on offer. There was strong demand at dearer rates except for high-grown which were easier. Highgrowns came to an irregular market, better sorts often being dearer, but the lesser kinds generally sold at below last prices. Good mediums were sold at fully firm to dearer rates. Coloury medium and low medium brokens advanced by 10 nP-20 nP per kilo, while the poorer sorts in this category sold at around last rates. Similar fannings were very irregular but were generally much dearer. Whole leaf grades were sold at higher prices than last week. Black leaf descriptions sold well, particularly fannings which were often upto 50 nP dearer. C.T.C. and legg-cut types were slightly easier.

	1960 Rs.	1959 Rs.
Low medium	4.45-4.85	4.19-4.41
Medium	4.85-5.15	4.52-5.07
Good medium	5.20-5.60	4.96-5.51
Quality	5.75-8.95	5.51-8.93

The average price realised in Sale No. 43 was Rs. 5.29 per kilo, as against Rs. 5.09 in the previous sale and Rs. 5.27 in the corresponding sale of 1959.

About 240,000 kilograms were offered in Sale No. 'OO' held on Thursday, 10th inst. A useful selection of dusts was on offer. The market opened to a very strong and active demand which eased towards the close of the sale. Prices were generally dearer for all descriptions. Coloury mediums advanced 10 nP to 15 nP, while others were in strong demand and were dearer by up to 25 nP. Milled and residual descriptions were the strongest feature of the sale, and these were much dearer. Highgrowns were in better demand and were irregularly dearer by 10 nP to 20 nP. C.T.C. and legg-cut descriptions met with useful support at around last week's rates.

The average price realised in Dust Sale 'OO' was Rs. 4.67 per kilo, as compared with Rs. 4.55 in the previous sale and Rs. 4.14 in the corresponding sale last year.

Export quota: A 5 per cent. release on the best crop basis was announced by the Government on 5th November. This brings the total released so far this year to 60 per cent. There are sellers at ¼ nP per kilo.

Colombo: Just over 3½ million lbs. were offered. They met with good demand. Best liquoring B.O.Ps again came to a considerably dearer market, but their fannings remained steady. Good medium brokens and fannings were well supported at dearer rates, but the plainer mediums and lowgrown tended to rule easier.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire as follows:

"*Sale No.* 44: 500,000 kilograms. General demand good. Plain and low medium dearer by 10 nP to 20 nP. Good medium and highgrowns irregular and easier. Orange pekoes very strong."

SPECIAL MARGINS ON JUTE

(From Our Own Correspondent)

CALCUTTA, 15*th November*

Although foreign buyers of jute goods continued to resist higher levels of prices during the week under review and the volume of business that passed for export was very small, conditions were mixed. Despite rise in stocks of goods with mills as at the end of October, prices rose, thanks to support by local operators, but, over the week-end, an abrupt downtrend set in, following announcement of stringent measures by the East India Jute and Hessian Exchange Ltd. and the Forward Markets Commission in a determined and firm attempt to control excessive speculation and overtrading. It was stated that the maximum prices of Rs. 51 per 100 yards of hessian cloth for standard contract No. 1 and of Rs. 140 per 100 bags of sacking bags for standard contract No. II-B already in force on trading in hedge contracts against November 1960 delivery and prohibition of fresh transactions in these hedge contracts would continue from 15th to 29th November. Offsetting transactions would continue to be allowed. The Forward Markets Commission, in a concerted move to control the situation, announced the imposition of special margins on transferable specific delivery contracts in raw jute for November-December 1960, November 1960 and December 1960 deliveries (Rs. 72.35 per 100 kgs., if the price is above Rs. 116.55), hessian 10 oz. (Rs. 30.50 per 100 metres for price above Rs. 55.77), 7½ oz. hessian (Rs. 24 per 100 metres for price above Rs. 42), B. twills (Rs. 86.50 per 100 bags for price above Rs. 140.00), Australian cornsacks (Rs. 94.50 per 100 bags for price above Rs. 144.50), and heavy cees (Rs. 86.50 per 100 bags for price above Rs. 140) for November and December and January-March deliveries. The special margins would not be payable in respect of raw jute purchased by members of the manufacturers' panel of the Exchange against quotas allocated by the I.J.M.A.

An index of the absence of adequate business in jute goods for export during the week was the availability of shipping space to most destinations. However, ready space for ports in the Indian coasts, Australia and Colombo was difficult to obtain. The fall in business in October has been reflected in the stock of goods with mills as at the end of October, figures in respect of which were released during the week. Overall stocks rose by 800 tons to 78,500 tons. Constructionwise, sacking goods rose by 200 tons and hessian by 900 tons, while miscellaneous goods fell by 400 tons. The fall, although it is small, becomes significant as a result of the fall in output in that month, following reduced number of looms in operation. Overall output fell by as much as 4,900 tons to 84,500 tons. The total availability of goods in the month of October thus amounted to 162,300 tons, stocks at September-end being 77,800 tons. Stocks at the end of October being 84,500 tons, demand in the month was only 77,800 tons. It may be noted that, during the week, discussions were held between the I.J.M.A. and the trade unions on the question of putting into operation the looms sealed recently. The unions thought that, since indigenous jute was adequate, there was no justification for the reduction in production. The I.J.M.A. disputed this view but offered to reduce the looms sealed from 19 to 14 per cent., if the unions agreed to reduce working hours. No agreement was reached, as the unions pointed out that the offer, if accepted, would in practice have the effect of increasing the looms closed to 20.5 per cent. In line with the fall in prices here, New York burlap prices also recorded small declines; in business done with overseas countries. They but trade circles here were alarmed at the fall could not resist the impression that foreign buyers were progressively switching on to substitutes. Since prices of goods in Dundee and Europe have also risen in line with the upward trend in fibre prices in Pakistan, it is stated that foreign consumers are left with the only alternative of changing over to substitutes.

The satisfactory working of the quota system was one of the factors that led to the small decline in fibre prices during the week. Quota-holding mills were operating mostly in the agencies, and they were rejecting contract jute. The result was that prices in the agencies were higher than in Calcutta, a reversal of the position hitherto in evidence. Assam bottoms opened here at Rs. 140.50 for November-December delivery and, after rising to Rs. 142, receded to Rs. 139.25. On balance, daissee bottoms at Rs. 142.25 were lower by more than one point.

The small rise in the stock of jute goods with mills as at the end of October was announced on Tuesday last. Prices were held at previous levels, although business passing with overseas markets was insignificant. Not much note of the rise in stocks was taken, in view of the existing buoyancy. Ready hessian 40" 10 oz. was firm at Rs. 56.50, while B. twills were nominally higher at Rs. 178, as against Rs. 175.50 on the previous day. On the following day, hessian 40" 10 oz. rose to Rs. 57.25, but B. twills were unchanged at Rs. 178. Some uncertainty was felt by sellers, following the change in the by-laws for T.S.D. contracts, and sellers were not inclined to enter into fresh contracts. However, on Thursday, ready as well as forward deliveries jumped up by several points, as local operators turned buyers. B. twills scored to Rs. 183 and hessian 40" 10 oz. to Rs. 58.25. The hardening trend received greater momentum on Friday, B. twills advancing to Rs. 185 and hessian 40" 10 oz. to Rs. 58.75. The announcement of the imposition of special margins for specified jute goods up to March 1961 deliveries by the Forward Markets Commission over the week-end had a sharp reaction on prices on Saturday; November B. twills declined to Rs. 176 and hessian 40" 10 oz. to Rs. 57. The January-March B twills toppled down from Rs. 177.50 to Rs. 167. Yesterday, heavy goods were marked higher, though actual business was limited. Ready B. twills were higher at Rs. 178, but hessian 40" 10 oz. was lower at Rs. 55.75.

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

HAPUR, 14*th November*

Sugar continued to rule depressed, following easy supply position due to the monthly quota release of 200,000 tons for sale by the Government. The Joint Sugar Control Board for U.P. and Bihar has recommended to the Central Government either to have control over sugar all over the country or to lift it altogether. Most of the factories started crushing on the 4th inst., in order to avail themselves of the cane cess remission announced by the U.P. Government. The Simbhauli sugar factory, which has increased its crushing capacity by 500 tons to 2,000 tons daily, is due to start production on the 16th inst. The latest prevailing prices of crystal sugar here were:—Rs. 110 per bag in wholesale and Rs. 1.06 per *seer* in the open market.

Weak conditons continued to prevail in the sugar market at Muzaffarnagar during the week, as the supply position of the commodity remained comfortable and prices ran down by 50 nP to Rs. 1 per bag in the open market to be quoted at Rs. 110 per bag for spot delivery. Stocks allotted against previous monthly quota had not been cleared, as lifting speed remained slow.

Sugar continued quiet around Rs. 111 per bag in the Kanpur market, thanks to satisfactory supply position.

New *khandsari* season has commenced. Although prices for new produce were quoted slightly better than old stocks, prices of old stuff ran down further by about Rs. 1 per maund. Most of the crushers were still in favour of being manufacturing *gur* as *khandsari* manufacture was still uneconomical, due to lesser percentage of sugar in cane and these crushers were purchasing cane at Rs. 1.09 to Rs. 1.19 a maund as against fixed prices of Rs. 1.50 to Rs. 1.62 a maund for deliveries at out-centres and mill gates, respectively. The joint Sugarcane Control Board of U.P. and Bihar has recommended the Centre for enhancement of sugarcane price for 1961-62 season to Rs. 1.75 a maund. Week-end prevailing prices of *khandsari* were:—*galawat* Rs. 18 to Rs. 20; inferior Rs. 28 to Rs. 30; superior Rs. 31 to Rs. 35; crystal Rs. 30 to Rs. 32; *boora* Rs. 32 to Rs. 35; new *khandsari* Rs. 34 to Rs. 36 a maund.

New *gur* arrivals here as well as in *mofussil* centres increased sharply and were about 12,000 maunds here today. Under pressure of arrivals, prices sought lower levels to be quoted at:—*pansera* Rs. 16 to Rs. 16.25; *balti* Rs. 17.25 to Rs. 17.75; *shakker* Rs. 19; old kotha Rs. 12 a maund. Loading facilities were easy, as, due to interchange obligations in railways, *gur* loading has been placed in A class booking. Entire arrivals are being despatched to outside destinations and while *balti* quality is attracting demand from Saurashtra and Gujarat side, *pansera* is being lifted to Punjab and Rajasthan. Old stocks left were poor at about 1,500 maunds.

Gur arrivals also mounted to an average of 10,000 maunds daily in the Muzaffarnagar market where prices suffered a sharp fall. *Pansera* quality was in demand from Bengal, Rajasthan and Punjab, while *Chaku* was in request from Gujarat and Madhya Pradesh. Buyers from east U.P. were also interested and week-end prevailing prices were:—*pansera* Rs. 15 to Rs. 16; *Chaku* Rs. 16 to Rs. 17.50; *khurpa* Rs. 16.25 to Rs. 16.50; *Laddo* Rs. 17 to Rs. 17.50 a maund.

After an early improvement from the last Monday's opening of Rs. 13.43 to Rs. 13.69 in mid-session, *gur jagun* declined in line with the bearish trend in ready prices and was quoted today at Rs. 13.50.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 14*th November*

Quietly steady conditions were witnessed in the foodgrains market during the week under review. The Union Deputy Food Minister, Mr. A. M. Thomas, said that the overall food situation in the country inspired confidence. Increased production, larger imports, comfortable stock position and indicious distribution. The wholesale prices of rice have touched the lowest levels in the past four years, thanks to good overall crop. Another contributing has been the excellent stock position of the Centre, the rice reserves being about 1.5 million tons. Wheat has begun to reach India under the latest P.L. 480 agreement; this is the beginning of the shipment of 17 million tons of foodgrains to India.

Wheat at Hapur ruled almost stationery at Rs. 17 a maund for average quality and upto Rs. 18.25 for better farm produce. Daily arrivals of wheat here were about 150 maunds and supplies locally were augmented further by sales of wheat and wheat flour through fair-price shops.

Rice depressed further. Inferior quality lost about Re. 1 per maund, as new rice was reaching the markets in larger quantities. Rice reserves of about 50,000 maunds on State Government account were being despatched to Gujarat. The latest prevailing prices of rice here were:—*basmati sela* Rs. 29 to Rs. 30; *ramajwayan* Rs. 22; *raimunia* Rs. 23; *mainpuri* Rs. 21; and *gadda* Rs. 18 a maund.

Gram continued to rule steady at Rs. 17 a maund for Punjab quality and old stocks were being lifted at Rs. 16 a maund. The U.P. Government's reserve of about 100,000 maunds of gram had all been exhausted and local stocks with trade were also poor at about 10,000 maunds. *Barley* ruled quiet at Rs. 12.50 to Rs. 13 a maund and *bejhar* continued to be quoted at Rs. 12.25 a maund for inferior quality and Rs. 13 for *moongia* variety. Arrivals of new maize from outside the State were quite good, resulting in the local stock mounting to 17,000 maunds and new *bajra* was also reaching the markets. Seasonal demand was being diverted to these grains, but prices ruled quiet at maize Rs. 12.50 to Rs. 13 and bajra Rs. 13.37 a maund. *Juwar* was quoted slightly higher at Rs. 14 to Rs. 14.50 and *guwar* white at Rs. 13 to Rs. 13.50 a maund.

METAL SUPPLIES BETTER

(From Our Own Correspondent)

CALCUTTA, 15*th November*

Quiet conditions were again in evidence in the metal market during the week under review. The comfortable supply position led to a further recession in prices of base metals, excepting tin. The fall in copper scrap indicated the availability of virgin metal against permits in sufficient quantities. Utensil copper scrap gave way from Rs. 198 to Rs. 195 per cwt. and the berry quality from Rs. 218 to Rs. 210. There was a further rise in the price of electrolytic copper on the London Metal Exchange from £224½ per ton to £227½ to £226½. This rise was attributed to the likelihood of greater inflation following the U.S. Presidential election. Also, there had been no change in the Chuquicamata strike situation. Tin was in good demand here, and a shortage was apprehended. The price steadied around Rs. 565 per cwt., as against the opening of Rs. 564. In London, tin regained to £803 per ton, after sagging from £803 to £799½. Electrolytic zinc here closed lower at Rs. 163.50 per cwt. Earlier, a low of Rs. 158 was touched, after opening at Rs. 163.50. The decline was due to consumers getting permit-metal in adequate quantities. Lead was quiet at Rs. 64.

SURVEY

(*Concluded from page* 895)

having 'developed' their department in size rather than in quality.

"The Director of the C.S.I.R. should devote his time and energy to a really useful job of work. With his suave drawing-room manners and insatiable desire to be for ever moving about from one capital of the civilised world to the other on the pretext of attending conferences, the Director of our scientific research department is not likely to 'direct' many in the right path. To his credit one may be tempted to retort that he is instrumental in starting the co-operative research in the four industries you have referred to. Starting such organisations with the influence Government-sponsors wield these days is one thing but seeing to them doing a worthwhile job is another and there is where the C.S.I.R. has utterly failed.

"We should not be over-hasty in emulating industrially advanced nations. That is where we have failed hitherto. Let us put our industries in order and that itself requires man-power on a colossal scale; research is a necessary adjunct, but, without the personnel, there is no use wasting money on research merely for the sake of pretext. You have suggested that the situation calls for remedy 'through incentives to attract foreign scientists and researchers.' A more puerile suggestion could not have been made—to ask foreigners to come and do research for our benefit!! Money may attract some, no doubt, if that is what you meant by 'incentive' but let us face facts; a more sound suggestion would have been to differ the high-sounding activity of research in industry to a more suitable time in the future. Strengthen, by all means, the existing national laboratories and provide the means to attract to them whatever number of men may be available but research on a wider scale and to a more useful purpose must bide its time."

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from July 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of July 1960 amounts to 9,28 lakhs of rupees.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 month's notice. (j) Redeemable after 28th July 1956 on 6 months' notice. (k) Participating up to 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after any time at Rs. 115 on one month's notice. (n) Redeemable after 20th December 1954. (o) Redeemable at par after 17th June 1954. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (q) Redeemable at on various dates. (w) Redeemable at any time 3 years after the date of issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent. on 6 months' notice. pp—Partly paid.

Calcutta Representative : Mrs. S. P. CHATTERJEE, 24,

sector, is the most telling point made by him in this context. While the Government rightly took a series of strong measures to handle the general strike by its employees in July last, it was to be logically expected that it would give up its neutral attitude towards strikes in the private sector. The declared policy governing strikes in essential Government services is to ban them. It is also proposed to permit no outsider to be the leader of any trade union in such services and to provide machinery for compulsory arbitration. Mr. Mookerjee's plea for similar protection to the iron and steel industry, which is no less essential in the phase of heavy industrialisation, cannot be easily brushed aside. In an industry consisting of integrated and continuous operational plants (coke oven batteries, blast furnaces, etc.), a strike is bound to cause costly disruption and bring down production. In our view, it should be possible for the Government and the management to prevent, without adopting Draconian measures, the very possibility of a strike in an industry which is already working below capacity because of scarcity of raw materials of appropriate quality.

ROUBLE—AN INTERNATIONAL CURRENCY?

FOLLOWING the Plan which Mr. Krushchev hinted in his "State of the Nation" message in May last to give the Russian rouble the status of an international currency, the Soviet Government announced, on Tuesday the 15th inst., a realignment of its exchange rate with outside currencies. This announcement was made simultaneously with the decision to increase the gold content of the rouble, so that the revaluation of the external value of the rouble has been made to coincide with a reconversion operation by which a heavier rouble, ten times heavier than the old, is put into circulation. These two simultaneous changes have created some confusion in the public mind the world over whether the external value of the rouble has appreciated or depreciated. The following figures will, however, clear this doubt:

> Prior to the change announced on Tuesday last week, the external value of the rouble was 11.2 old roubles to the pound sterling. Under the new ukase, the pound will be equivalent to 2.52 new (heavy) roubles or 25 old roubles.

This clearly shows which way the external value has moved. The new Russian rouble, heavy though it is in gold content, is lighter in relation to the pound and the dollar because of the new parity announced by the ingenious managers of the "Gosbank." In fine, there has been a clear devaluation of the rouble.

What are the implications of this change to the Soviet economy and to the world? The two related measures, namely, (1) the increase in the gold content of the rouble and (2) the depreciation in its external value, should be considered separately in discussing their significance.

To take the first. To some Soviet people, that is, those who must have hoarded Russian roubles, the conversion of old roubles into new ones may mean some trouble. They have to explain to the authorities as to how they came into possession of so many old roubles. The fear of disclosing the hoards has increased purchases of jewellery and other articles of permanent value. Although the people in other communist countries in Europe do not hold Soviet roubles, it is reported that there are some psychological repercussions on the public in these countries, too, as they fear that their Governments may also follow the lead given by the "Gosbank." To the general living standards in Russia, which depend on the real wages and not on the gold content of the currencies, the symbolic change in the accounting medium may mean little, because the tenfold increase in the gold content of the coins will not mean a tenfold increase in the real wage. On balance, the change is only formal and even its propaganda value may not last very long when the people in Russia and elsewhere come to know the realities.

Now, to take up the second reform. From the point of view of the non-communist world, the change in the external value of the rouble would not mean much. Soviet trade with foreign countries is at present carried on in foreign currencies. If India has to purchase machinery from the U.S.S.R., the price is quoted not in terms of roubles but in pounds or dollars. So, even if Russian roubles have become cheaper in terms of pounds and dollars, there will be no commensurate benefit to India. Thus depreciation in the external value of the rouble will have no effect on the competitive standing of Russian exports. The only advantage will be to the permanent foreign residents, such as the employees in Embassies and journalists, who have to spend roubles in Russia. They will get more roubles for the same quantity of their currencies. In the case of tourists, the differential rate which was applied earlier—this stood at 27 old roubles to the pound—has been withdrawn and the uniform rate of 25 roubles per £ will prevail. As a consequence, the costs of holidays in Russia will be higher.

All in all, the aforesaid measures are notable only for the novelty of the change and nothing more. Some are wondering whether they are a prelude to the rouble becoming a freely convertible currency. Such guessing is not based on air. For Russia has huge gold reserves believed to be of the order of $8,000 million, which are much in excess of its foreign monetary obligations and large enough to serve the purposes of a convertible currency. Indeed, Russia holds the distinction of being the second largest gold holding and producing country in the world. It will also be to the benefit of underdeveloped countries such as India, if the rouble is made a convertible currency and Russia gives untied loans, for that will enable them to buy their needs in the cheapest market in the world. But, with all its traditional bias for bilateralism and with no prospect of authoritarianism coming to an end in the foreseeable future, there is no likelihood of Russia adopting the system of multilateral convertibility in its relations with other countries. Convertibility and communism are poles apart.

POWERLOOMS

THE prolonged uncertainty regarding the future of cotton powerlooms has now been removed, with the recent enunciation of a clear-cut policy by the Union Government. The policy imposes a ban on the installation of new powerlooms, except in cases where they are required for the purpose of imparting vocational training in any educational institution or for some other special purpose approved of by the Textile Commissioner. The policy also seeks to regularise the unregistered powerlooms through the issue of formal permits, applications for which are required to be submitted before the end of next month.

The Government's decision not to allow any new powerloom to be installed except for non-business purposes must evidently be a sequel to the representations made by both the mill and handloom sectors. The mill sector has been complaining that the pace of expansion taking place in the powerloom sector is very fast and that it will, if it is not checked in time, hold out a serious threat to the prosperity of the mill industry. As it is, it is pointed out, the powerloom are offering stiff competition to mills, because they, unlike the latter, enjoy the advantages of tax relief, absence of any liability to adhere to labour laws and low cost of production. The output of powerloom cloth is currently estimated at an annual rate of more than 1,000 million yards, as against the figure of 350 to 400 million yards mentioned in official documents. On behalf of the handlooms, fears are expressed that installation of more and more powerlooms will lead to unemployment in the handloom sector.

Not all the objections raised by the mills and the handlooms against the expansion of the powerloom sector are valid. May be, several powerlooms are working surreptitiously, in that they have no licence, and produce cloth by utilising cheap electric power and availing themselves of the benefit of employing modern appliances for weaving but sell such cloth as handloom products, thereby enjoying an unfair advantage over the mills. Whether this advantage is large enough to offset the disadvantages of working on a relatively small-scale is a moot point. But that is not so important as the fact that defiance of law deserves to be condemned. It is chiefly a law and order problem and must be dealt with as such. If one were to go into the circumstances in which such surreptitious practices take place, one would find the existence of corruption in many places. Otherwise, it is difficult to understand how the weavers are able to get electric power and how they are able to get their production accepted as handloom fabrics in order to get the tax benefits.

But all this does not constitute an argument against powerlooms or a case for preventing the growth of this small-scale industry, which has many good points to its credit. To the extent to which its growth is fostered, the problem of unemployment and underemployment in the rural and semi-urban areas can be solved on more gainful lines than will be possible with the help of handlooms. In view of the comparatively low production cost owing to small overhead charges and economies of mechanical production, the powerlooms must be introduced in the handloom sector. It is only by doing so that the productivity of weavers can be stepped up and their meagre earnings raised to a decent level without imposing an undue hardship on consumers. It may even be possible to do away with the handloom cess on mill-made cloth, or the funds that are now being used to subsidise handloom weavers may be made available for more productive investments. The powerloom sector must be viewed as a distinct advance from the handloom industry, representing, as the Kanungo Committee pertinently remarked more than six years ago, the attempt of the *entrepreneur* to get a higher return by increasing the productivity of the tool. If the handloom weavers come out with proposals to install powerlooms, they should be given all possible encouragement and assistance.

THE CHAMBAL PROJECT

THE Chambal, described as a river pregnant with prosperity, is being harnessed by stages for the benefit of two States—Madhya Pradesh and Rajasthan. The first stage of the Project, taken up for execution in 1953, has just been completed, with the commissioning of the Gandhisagar Dam, the power station of 80,000 kw. ultimate capacity and the two main canals—one on the Rajasthan side and the other on the Madhya Pradesh side. The irrigation potential created at the headworks can cover 1.4 million acres when the whole project is completed. The cost of impounding water in the reservoir, with a storage capacity of about 7 million acre feet, is placed at Rs. 20 only per acre foot—perhaps the cheapest unit cost of storage so far in India under the new major irrigation projects. This exceptionally low cost is probably explained by the fact that the length of the Gandhisagar Dam is only 1,685 feet, but that its catchment area is as large as 8,700 square miles because of topographical advantages. This is not the only unique feature of a project which has been planned and executed entirely by Indian engineers and which has utilised all available manpower fully in the stage of construction.

The other special feature of the Project is the high degree of co-operation between the two participating States. Thanks to this co-operation, which has been reflected in the agreements about sharing of costs and benefits as also the transfer of an area connected with the Gandhisagar Dam to Madhya Pradesh, the Chambal Project has come to be known as an outstanding example of inter-State enterprise. This co-operative attitude of the two State Governments has enabled the Chambal Control Board to function smoothly and effectively, even though it has not been clothed with any statutory powers. It goes to the credit of the two State Governments and the Chambal Control Board that no serious disputes and controversies, which usually crop up between two or more States sharing a river, have arisen so far. This is a happy augury for the ultimate successful completion of the Project in its second and third stages—the second stage comprising the Ranapratapsagar Dam, a power station at the dam site and the extension of distributary system of canals and the second stage covering the Kota Dam and power station with an installed capacity of about 45,000 kw.

How neatly and harmoniously the two States have solved the relevant problems should be of interest to some other States which have been openly quarrelling with one another in recent months on riparian questions. First, the two States—Rajasthan and Madhya Pradesh—have agreed to share the irrigation benefits equally between them, though the disposition of irrigable lands in the commanded area of Madhya Pradesh would require more water than for the same area in Rajasthan. Secondly, the two States have also agreed to share the cost of construction of common works in equal proportions. Thirdly, the problems of compensation, resettlement and rehabilitation of people displaced from the submerged area of the reservoir have been amicably solved by the two States. Above all, the question of sharing the cost of operation and maintenance of common works—a question which will soon engage the attention of the Chambal Control Board and the two State Governments concerned—is also expected to be solved in the same co-operative spirit as has been evinced in the solution of more intricate problems.

MARKET GOSSIP

THE winter session of Parliament has commenced with a number of legislations on the anvil which are important to the business community. The Bill on preference dividends has been referred to a Select Committee. A new Bill has been introduced for tightening the restrictions on forward trading in commodity and bullion markets. This is sought to be done by amending the Act that regulates the working of forward markets. The general debate on the Companies (Amendment) Bill, as modified by the Joint Select Committee, has just been finished. The amendment to the Employees' Provident Fund Act, in order to extend it to a larger number of establishments, has been adopted. Business men and their staff will, therefore, have a tough time in the coming months in understanding these pieces of new legislation and trying to fall in line with them. The lawyers and chartered accountants are assured of a bright future for a long time to come and so also those engaged in the manufacture and distribution of paper.

The general debate on the Companies Amendment Bill had an air of unreality about it. The provisions of the Bill were criticised more on political and doctrinaire grounds than on their administrative feasibility. The fear of misuse of the vast additional powers that are being conferred on the Government was uppermost in the minds of those who championed the cause of private enterprise. The leftists did not miss this opportunity to run down the private sector and harp on the need for the State curtailing the power of the management of joint-stock companies. There was strong opposition to the provision which seeks to enable companies to donate unlimited funds to political parties. "Democracy in danger" was the cry of those who criticised this provision. Even the Communist members parroted it, not because they are supporters of democracy, but because they were afraid that the move would lead to the perpetuation of one party (Congress) rule. The most refreshing part of the debate was the reply given by Mr. Lal Bahadur Shastri. His was a dignified and well-reasoned performance, exposing the paper fears and some of the unrealistic assumptions of the rightists and leftists alike.

Rift in Scindia Steam?

Mr. M. R. Masani put up an able defence on behalf of private enterprise. But, unfortunately for him, all is not well with the management of some of the biggest joint-stock companies in this country. There is, for instance, the case of the India United Mills, to which we shall refer presently. Now comes the news that there is, again, a serious rift in the board of directors of the Scindia Steam Navigation Company Ltd., which has already disappointed its shareholders by drastically curtailing the dividend for 1959-60 to a mere 60 nP from Re. 1.30 nP last year, both submject to tax deduction. It is stated that two of the senior-most directors of the Company, namely, Mr. Tulsidas Kilachand and Mr. Lalchand Hirachand, have resigned from the Board. It is further reported that one of the senior executive officers has also left the Company. This is not the first time that such a development has taken place in the history of this leading shipping Company and the Government was compelled, on more than one occasion, to use its good officers to settle the differences among the management, as they were having a deleterious effect on the working of the Company. It had to lend the services of one of its officers to set matters right. Would Mr. Masani say that, in such instances as Scindia Steam and India United Mills, Dr. Erhard's remedy (the law of the market, the law of supply and demand, the laws of the free competitive society and the law of non-interference by the State) should be followed?

Landmark in Corporate Law

The Central Government's directive to the India United Mills Ltd., Bombay, to adopt the principle of proportional representation on the board of directors of the Company is an important landmark in the history of corporate law in this country, in that the Government has invoked, for the first time since the passing of the Companies Act 1956, its powers provided in Section 408 of the Act to force a company to amend its articles of association for the adoption of the principle of proportional representation in terms of Section 265 of the Act. It is likely to have wider implications and pave the way for the extension of this principle to many other units in the private sector where the interests of minority shareholders are not adequately protected or where the affairs of a company are conducted in a manner prejudicial to its larger interests.

The Government's directive is a sequel to the representation made by two shareholders of the Company, Mr. Rameshwar Prasad Bagla and Messrs. Ramkumar Shewchandray and Sons Private Ltd., who between themselves hold not less than one-tenth of the total voting power as required under Section 408 of the Companies Act 1956, for the appointment of two Directors or for an order for the adoption of the principle of proportional representation. The representation followed the success of one of the two groups of members in their struggle for getting control and management of the Company, after the expiry of the old managing agency of Messrs. Agarwal and Co. on 15th August 1960. The managing agency was not renewed in time. The successful group was able to get most of the Directors elected in their favour. After an enquiry, the Government is satisfied that an action on the above lines is necessary to prevent the affairs of the Company being conducted "in a manner which is oppressive to any members of the Company or in a manner prejudicial to the interests of the Company." On the advice of the Company Law Advisory Commission, the Government has now directed the Company to amend its articles of association in the manner provided under Section 265, for the appointment of Directors according to the principle of proportional representation by the single transferable vote. The Government has further directed the appointment of the Directors afresh in pursuance of the article so amended within 90 days of the date of the order, which was made on 15th November 1960. Until such elections are held, the Government has appointed two independent persons, namely, Mr. N. K. Petigara and Mr. S. G. Nivetia, as additional Directors of the Company.

Section 265, which provides for proportional representation, is an important new provision introduced in the Companies Act 1956, after a great deal of discussion by the Joint Select Committee. It provides a compromise between two extreme points of view presented before the Committee. It permits the appointment of not less than two-thirds of the total number of Directors according to the principle of proportional representation whether by the single transferable vote or by a system of cumulative voting or otherwise. The adoption of this method of election is only discretionary and it will be operative only if a company provides for it in its articles. The Directors so elected can hold office for three years.

It may be recalled that, as early as in 1936, Pandit Govind Ballabh Pant, then Deputy Leader of the Congress Assembly Party, sponsored an amendment to the Companies Act 1913 providing for the election of Directors on the principle of proportional representation by means of a single *non-transferable* vote (as against the transferable vote provided under the 1956 Act), but it was defeated.

While Section 265 is only a permissive section, the Government, it may be mentioned in passing, has additional remedy for minority shareholders in case of mismanagement or oppression. Thus, under Section 408, the Government can appoint two members of the Company as Directors to protect the interests of the minority. If, however, an application is made by not less than 200 members of the Company or by members holding not less than one-tenth of the total voting power, the Government may, instead of appointing two Directors of its own accord, direct the Company to (1) amend its articles of association to permit the appointment of Directors by the principle of proportional representation in terms of Section 265, and (2) make fresh appointment of Directors in pursuance of the power so taken within a time fixed by it. It is this less drastic power of not forcing any of its own nominies on the Board that the Government has chosen in the case of the India United Mills and that too after taking the advice of the Advisory Commission as provided in Section 411. This cautious approach should serve to infuse confidence among business men that the Government will not misuse the vast powers it has already assumed and still more power it seeks to take under the Companies (Amendment) Bill. Even if the Government had acted a little more drastically in this case, there would have been no cause for alarm for, after all, it is a well-known fact that the India United Mills had been badly managed for a number of years and deserves better management in the larger interests of the country, in general, the Company's employees and its shareholders, in particular. It, however, remains to be seen whether the remedy now being tried will lead to any sustained improvement in the Company's affairs, for there is no guarantee that its Board of Directors will function unitedly, without indulging in quarrels. A company with a board of directors which is split into two warring groups is in no better position than a ship on the high seas in charge of a mutinous crew.

Dr. Ramaswami on Shipping

For sometime past, Indian shipping companies have been facing adverse circumstances. Despite the general upward trend in security prices, shares of shipping companies have been under strain. This is mainly due to lower dividends announced in 1959 and the reports that the operating results for the current year, too, are unlikely to be any better as a result of the spiral of increasing costs and wages. This phenomenon of depression in the shipping industry is not confined to India alone but is prevalent throughout the world. Shipping being truly an international industry, Indian shipping companies have also been forced to accept lower freight rates, with consequential reduced profits or operating losses.

The causes for the substantial loss sustained by the India Steamship Company Ltd., during the year ended 31st March 1960, were lucidly analysed by its Chairman, Dr. A. Ramaswami Mudaliar, in his speech at the annual general meeting of the Company held at Calcutta and published on page 960 of this issue. The most important reason for the losses of shipping companies is the overall decline in international trade. During the year under review, the liner trade had to suffer aggressive competition from foreign tramps which, scouring the seas for the decreasing volume of trade, offered very low rates to shippers, thus causing diversion of traffic from the usual liner companies. The Indian Steamship felt the competition both in its inward and outward trade and its ships were compelled to call at a greater number of ports than usual to secure cargo and had thus to incur very heavy expenses by way of port dues and other similar charges. But the unfortunate competition is encountered not only from foreign tramps but also from some liner companies who happen to be India Steamship's colleagues in the Conference. Dr. Ramaswami Mudaliar observed that some of these companies are undercutting the freight rates through larger rates of rebate to shippers than permissible under the Conference rules. In his characteristic candour, Dr. Ramaswami Mudaliar blamed some of the "forwarding agents" on the Continent of Europe, who, by illegitimate means, have influenced the direction of the cargo to the ultimate detriment of both the shippers and the lines concerned. As a consequence of these malpractices, even the Central Government has been thwarted in its attempts to conserve foreign exchange.

Dr. Ramaswami Mudaliar was not content with merely drawing attention to the aforesaid unfair practices. He went a little further and put forward some constructive proposals, which would go a long way towards removing the chaotic competition from the shipping industry and help conserve the scarce foreign exchange which the country very badly needs for the completion of its development plans. The scheme put forward by the Chairman of India Steamship aims at allocating the total freight earnings of all the shipping lines of a Conference in certain agreed proportions over a term of years, providing at the same time for the growth and development of the fleets of underdeveloped countries through a well defined and reasonable increase in the rate of allocation. The co-operative approach implied in this scheme has some commendable features and has already won the acceptance of the Scindia Steam, the pioneer of Indian shipping. Dr. Ramaswami Mudaliar is of the view that his scheme would eliminate the unworthy charges of flag discrimination which are often made against Indian liners. The scheme, however, seems to be defective in one important respect. It may mean limiting the rate of growth of Indian shipping to a predetermined level. The anxiety to safeguard profitable operation for the existing tonnage is understandable, but this should not mean surrendering the freedom for growth in keeping with the country's maritime needs. Another possible objection may be that the shippers' freedom of choice of ships will be restricted to a greater extent than is implied in the Conference arrangements.

Dr. Ramaswami Mudaliar was also frank in his appraisal of the role of the State Trading Corporation *vis-a-vis* Indian shipping. He expressed his disappointment at the manner in which its chartering section was functioning. According to him, the criterion of chartering ships to carry the cargo of the State Trading Corporation should not be only the level of freight rate offered. If this is the only test to be applied, the cargo may be given to foreign tramps, resulting in loss of valuable foreign exchange to the country. He, therefore, urged that the question of foreign exchange should be "a formidable corrective to an oversimplified calculation of a low freight charge." There is considerable justification for adopting this criterion. In effect, it only amounts to paying some incentive for stimulating invisible exports. If incentives could be provided to visible exports at the expense of domestic consumers, there is no reason why similar incentives should not be offered to those who are responsible for invisible exports.

In his speech, Dr. Ramaswami Mudaliar also referred to the worsening conditions in some of the Indian ports which are severely handicapping the earning potential of Indian liners. Due to the further deterioration in the drafts in the port of Calcutta, the ships are unable to lift even the decreased cargo. In fairness to those in charge of the Calcutta port and acknowledging the sustained interest evinced by the Transport Ministry, Dr. Ramaswami Mudaliar conceded that some improvements have been effected in recent months. But he thought that the beneficial results from such improvements were being nullified by the attitude of labour at some of the ports. Unauthorised strikes by dock workers and the tugmen's strike in Bombay, for instance, paralysed the work at the ports for many days, with considerable financial loss to shipping companies.

Alluding to the future of Indian shipping, Dr. Ramaswami Mudaliar said that he did not share the belief that "the future is one of unrelieved gloom," notwithstanding the sombre aspects of Indian shipping discussed above. Dr. Ramaswami drew pointed attention to the fact that the shipping industry is subject to violent fluctuations, implying thereby that the present period of depression may be followed by an improvement sooner or later. He also acknowledged that the Government of India was following policies which were helpful to Indian shipping. He even went so far as to observe that the development of shipping in the public sector was a help and not a hindrance to shipping in the private sector, because, in its role as a shipowner, the Government would be in a good position to appreciate the difficulties of shipping companies in the private sector. This is a pertinent inference, but it is a very expensive way of understanding the problems of shipping companies. Governments in other parts of the world have been able to help their shipping companies more effectively and substantially than the Government of India, without necessarily being owners of mercantile marine. There is no reason why the powers-that-be in this country also cannot do so. They can, if they are less doctrinaire and more realistic.

Mahindra's Tractor Project Fails

It is reliably learned that the project of Mahindra and Mahindra to manufacture the 2-D diesel agricultural tractor in collaboration with the well-known British firm of David Brown Industries Ltd. has been completely given up, thanks to the disagreement on the terms of the agreement between the two firms. Even the agreement entered into in 1953 under which Mahindra and Mahindra Ltd. was appointed the sole distributors of David Brown tractors in India is said to have been terminated. On an average, about 400 tractors, each

EQUITIES LISTLESS

NARROW MOVEMENTS IN PRICES

(From Our Own Correspondents)

BOMBAY, *24th November*

IN distinct contrast to the generally cheerful tone which prevailed last week, conditions in the share market during the week under review were listless and fluctuations were confined to a narrow range. Over the week, the changes were small on a wide front. The prospect of fresh curbs on joint-stock companies, as indicated by the Union Government's decision to fix premium on new issues of established concerns, to place a ceiling on promotional expenses of companies at 1.5 per cent. of the estimated cost of a project where corporate enterprises were managed by managing agents and at 2 per cent. in the case of companies managed by a board of directors and to fix a time limit of three months from the date of receipt of application for allotment of shares of new companies, made operators cautious. The Finance Minister's statement on the difficult balance of payments position of the country, envisaging a drastic cut on imports and the actual announcement of cuts on some of the important items, such as machine tools, agricultural tractors, etc., also restrained activity. Mr. Biren Mookerjee's statement to the shareholders of the Indian Iron and Steel Company, Ltd., drawing pointed attention to the difficulties experienced by the steel industry on account of the irregular supplies of raw materials and inadequacy of coking coal was viewed with some concern, in view of its wider implications. Mr. Mookerjee states that, so long as the metallurgical coal supply position remained unchanged, there is no prospect of the Company achieving its target of production, as envisaged under its expansion programme. He has also warned, in this connection, against fixation of retention prices based on theoretical plant capacity and normal working conditions.

There were, however, some exceptions to the general trend, prominent among these being Khataus in the textile section, Voltas, Anil Hardboards and Premier Tyres in the miscellaneous section.

In the steel section, Tata Ordinaries moved between Rs. 144.50 and Rs. 143.25 before closing at the latter level. Indian Irons gave way from Rs. 24 to Rs. 23.64 and closed at Rs. 23.68.

Barring a few scrips, which scored handsome gains over the week, textiles were featureless, but the undertone was steady. Centurys at Rs. 474.50 gained no more than Rs. 2. Bombay Dyeings came up to Rs. 63.90 from Rs. 63.30, before finishing at Rs. 63.50. Kohinoors fluctuated between Rs. 277.50 and Rs. 271.50. Central Indias were dull at Rs. 107. Finlays put on Re. 1.50 to Rs. 336.50. Gokaks attracted attention and appreciated by Rs. 2.50 to Rs. 169.50. Indu Ordinaries were marked up by 84 nP to Rs. 13.04. Khataus provided a bright feature with a marked rise of Rs. 28.75 to Rs. 480, on expectations that the Company would stand to gain from the proposed new project. Mysore Spinnings shot up by Rs. 9 to Rs. 64, while Morarjee Mills declined by Rs. 13 to Rs. 321. New Greats were better at Rs. 192 and Shree Niwas Cottons at Rs. 230. Simplex were a steady feature at Rs. 163. Standards looked up by Rs. 11 to Rs. 1,185.

Cements lacked support in the face of general apathy. Associated Cements were listless at Rs. 146.75. Digvijays were marked down by Rs. 2.50 to Rs. 157.25 and Orissa Cements by 20 nP to Rs. 15.04.

Interest in Belapurs, in the sugar group, was not sustained after the declaration of a handsome dividend. Initially, this scrip slided down from Rs. 402 to Rs. 391, but, towards the close, it again gained ground to Rs. 398. Phaltans were, however, firm with a gain of Rs. 4.50 to Rs. 189 and so also Walchandnagars which put on Rs. 2 to close at Rs. 299.50.

The disappointing dividend of Scindias, which has been cut by more than 50 per cent. from Re. 1.30 for 1958-59 to 60 nP per share (both subject to deduction of tax) for the year ended 30th June 1960, brought the value of this scrip down from Rs. 14.84 to Rs. 13.76. Great Easterns were quiet at Rs. 15.80. Among automobiles, while Hindustan Motors were dull at about Rs. 20.20, Premier Automobiles moved up by Re. 1.50 to Rs. 177.

Tata Engineerings were highly erratic. After an early rise from Rs. 307 to Rs. 313, the scrip reacted to Rs. 299, but rallied to close at Rs. 310. The Company would shortly enter into a contract with the Government for the supply of 325 metre-gauge locomotives to the railways during the third Plan period. Negotiations have been finalised and the agreement is in the final stages of scrutiny. Alcocks were marked down by Rs. 3 to Rs. 252 and Premier Constructions by Rs. 9.50 to Rs. 302. Larsen and Toubros were quiet at Rs. 37.75, while Texmacos were a bright feature with a gain of Re. 1.60 to Rs. 24.16.

Mining shares were steady, Shivrajpurs gaining Rs. 5 to Rs. 73 and Indian Coppers 16 nP to Rs. 4.64.

In the miscellaneous section, Bombay Burmahs were erratic within a narrow range and closed with a net loss of a rupee at Rs. 592, as also National Rayons at Rs. 522. Gwalior Rayons were marked down by a rupee to Rs. 42 and Barodas by Rs. 3 to Rs. 135.50. Tata Oils were quiet at Rs. 73.80 and Tata Chemicals at Rs. 17.32. Voltas were conspicuous with a rise of Rs. 8 to Rs. 271. In the cash group, Anil Hardboards were firm with a rise of Rs. 25 to Rs. 370, following the announcement of a rights issue in the ratio of one ordinary share for every three ordinary shares, and a maiden dividend of 6 per cent. tax-free for the year ended 31st March 1960. Adarsh Chemicals were in good form, recording a rise of Rs. 4 to Rs. 65.50. Colour Chems were steady at Rs. 341.25, while Poly Chems were marked down by Rs. 6.25 to Rs. 237.50 and Indian Dyestuffs by Rs. 6.25 to Rs. 513.75. While Ceat Tyres declined by Rs. 5 to Rs. 230, Premier Tyres hardened by Rs. 7 to Rs. 87. Khandelwals moved down by Rs. 4.50 to Rs. 89.50 and West Coast Papers by Rs. 3.50 to Rs. 194.50. Tractors (India) were a firm feature with a spurt of Rs. 4 to Rs. 33.25.

Madras Stock Exchange

MADRAS, *23rd November*

In the absence of any fresh encouraging news, the Stock Exchange remained subdued during the week under review, excepting textiles which elicited special support. Operators noted the new measures announced by the Government of India this week for controlling the promotional expenses of joint-stock companies and for ensuring allotment of new companies' shares within a period of three months after the receipt of applications, but they did not have any perceptible effect on the market. The report that the Life Insurance Corporation had lent support to the Calcuta Stock Exchange also failed to enthuse local operators. The tea section ruled weak, despite generally satisfactory advices from auction centres. Coffees and rubbers moved narrowly; today's closing quotations were, of course, slightly lower than those a week ago. Selling pressure was in evidence in the sugar section as well. Lack of fresh enquiries brought down the values of several miscellaneous industrials.

In the tea section, Blue Mountains encountered selling and suffered a setback of 88 nP to Rs. 4.17. Nonsuchs declined by 25 nP to Rs. 27. Periakaramalais eased by 6 nP to Rs. 3.47. Chembras lost 5 nP to Rs. 5.15. Haileyburias were quiet at Rs. 14.75. Parksides at Rs. 29.75 and Peermades at Rs. 22.80. Waterfalls, however, gathered 17 nP to Rs. 5.07. United Nilgiris put on 12 nP to Rs. 21.87, Kil Kotagiris and Neelamalais were higher by 3 nP each at Rs. 5.68 and Rs. 4.91, respectively.

Among coffees, Consolidated Coffees fell by 25 nP to Rs. 23.90. Ouchterlony Valleys shed 5 nP to Rs. 4.95. Balanoors were neglected at Rs. 16.70 and Rajendras at Rs. 14.25. Coffee Lands, however, picked up 15 nP to Rs. 23.90. Cowcoodys rose by 7 nP to Rs. 5.25.

In the rubber group, Midlands gave way from Rs. 12.50 to Rs. 12.30. Thirumbadis lost 5 nP to Rs. 1.50. Cochin Malabars shed one naya paisa to Rs. 7.32. Malankaras changed hands at Rs. 17.70 and Vaikundams at Rs. 30.40. Rajagiris were quiet at Rs. 20.12. The Directors of the Company have announced a final taxable dividend of 10 per cent., making a total of 20 per cent. (equivalent to 14 per cent. tax-free) for the year ended June 1960, as against 20 per cent. tax-free for the previous year.

A feature of trading in the textile section was the rise in the quotation of Metturs from Rs. 370 to Rs. 371. Bangalore Woollens, Coimbatore Spinnings and Cannanores gained a rupee each to Rs. 197, Rs. 45 and Rs. 156, respectively. Maduras were done higher by 50 nP at Rs. 35.20. Loyals gained a like amount to Rs. 36. Buckinghams were fully steady at Rs. 198, Coimbatore Cottons at Rs. 162 and Premiers at Rs. 225.

Notice

BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN *Ad-interim* Dividend for the half-year ended 30th September, 1960 at the rate of 6 per cent. per annum, i.e., Rs. 3 per Share (subject to deduction of tax) has been declared and made payable at the Chartered Bank, Bombay, on and after 20th December, 1960, to those Shareholders whose names stand on the Register on Saturday the 17th December, 1960, to whom Dividend Warrants will be posted.

For the purpose of this payment the transfer books of the Company will be closed from Friday, 2nd December, 1960, to Wednesday 14th December, 1960, both days inclusive.

Intimation of any change of address should be given to the Share Department of the Company, immediately.

By Order of the Board,

FOR BOMBAY SUBURBAN ELECTRIC SUPPLY, LTD.,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

KILLICK HOUSE,
HOME STREET, FORT,
BOMBAY-1, *24th November*, 1960.

Among sugars, Travancores receded from Rs. 11.30 to Rs. 11.10. Indias declined by 15 nP to Rs. 12.25. East India Distilleries were quiet at Rs. 44.50, Cauverys at Rs. 143.50 and United Breweries at Rs. 114.50. But Deccans rose by 5 nP to Rs. 15.70.

In the miscellaneous section, chemicals were distinctly easy. F.A.C.Ts dropped 30 nP to Rs. 10.20. Mysore Fertilisers lost 5 nP to Rs. 11.50. Metturs were neglected at Rs. 13.20, as also Mysore Chemicals at Rs. 27.50. Among cements, Indias were quoted today at Rs. 6.40 *cum-div. ex-right*, as against Rs. 7.20 *cum-right* last week. The Company has announced an interim dividend of 6 per cent. taxable (equivalent to 4.2 per cent. tax-free) for the year ending March 1961. Dalmias were lower by 5 nP at Rs. 11.20. Andhras were done at Rs. 10. Orissas, however, scored a gain of 20 nP to Rs. 15. Travancores hardened by 15 nP to Rs. 8.65. Among others, Aluminium Industries eased by 10 nP to Rs. 22.95. Standard Motors lost a like amount to Rs. 17. Indian Steel Rollings were unaltered at Rs. 10.25, Textools at Rs. 190 and Tube Investments at Rs. 305. Western India Plywoods elicited special support and rose by Rs. 3.50 to Rs. 240. Ashok Leylands picked up 3 nP to Rs. 8.83.

Calcutta Stock Exchange

CALCUTTA, *23rd November*

After an initial recovery under the impact of the Reserve Bank's relaxation of the deposit impounding scheme, conditions, which indicated caution on the part of investors and operators, were in evidence on the Calcutta Stock Exchange during the week under review. This followed the realisation that the relaxation of credit control would not in itself release more funds to stocks and shares. Despite the enlightening views of Mr. Kennedy, which forebode the possibility of increased U.S. aid, anxiety continued to centre around the country's balance of payments position, and Mr. Morarjee Desai's view, forthright and candid though it is, that India should have to depend "wholly" on foreign aid to finance projects in the next few years, added only to increase such anxiety. The country's future depended on the success that would follow "the continuing and difficult quest for foreign exchange to match the external cost of the third Plan projects," and this was taken in market circles to mean that the country's development had not been well planned. The successful working of the scores of new units of industries that are being set up now and the shares of which have gained a quick appreciation in no small measure depends upon the continued availability of foreign exchange for raw material and spares. The anxiety in this regard explained the sharp down-trend in this class of shares. Particular note was taken of Mr. Biren Mookerjee's note of warning to the shareholders of the Indian Iron and Steel Company Ltd. that the full working of the expanded capacity of one million ton ingots depended upon adequate coal supplies of the right type. He was referring to the existing coal shortage and the deterioration in quality. The flexible coal policy, which would now permit the limited expansion of the private sector, led to increased activity in coals, but, in the face of general dullness, prices did not show much improvement. Jutes continued to be in the doldrums.

Jutes were quiet. Howrahs, after being pushed down to Rs. 19.50 from Rs. 19.87, closed higher on balance at Rs. 20.06. New Centrals fell to Rs. 22.06 from Rs. 23.06. Kelvins at Rs. 137 accounted for a loss of one point, and Ganges were unchanged at Rs. 11. Naihatties were quiet at Rs. 61.50 and Chitavalsahs were put through at Rs. 12.94, as against Rs. 13.31 previously.

Engineering shares were better. The encouraging results of I.I.S.Co. continued to gather attention and at one time Indian Irons were as high as Rs. 24.15 before closing firm at Rs. 23.86. Moderate interest in Texmacos pushed up the scrip to Rs. 23.40 from Rs. 22.70 and Braithwaites were better at Rs. 32.25. Britannia Engineerings were firm at Rs. 14.19, while Guest Keen Williams moved down to Rs. 39.50 from Rs. 40.12. Indian Oxygens rose to Rs. 40 from Rs. 39.31.

A striking feature in the miscellaneous industrial section was the steady uptrend in Alkali and Chemicals which, at Rs. 37, recorded the impressive gain of Rs. 3.50. On interested attention, Dharbanga Sugars scored to Rs. 17.12 from Rs. 16.62 previously. Champaran Sugars were fully steady at Rs. 20.06. National Cables were fully firm at Rs. 30.69, as were National Pipes at Rs. 19.50. At Rs. 72.50, a further smart gain was recorded by Ballarpur Papers. Aluminium Corporations moved upto Rs. 18.06 from Rs. 17.82. Balmer Lawries realised Rs. 219, as against Rs. 215 previously. Dunlop Rubbers, after being higher at Rs. 42.94 against opening of Rs. 42, closed firm at Rs. 42.37. Shree Gopal Papers after being firm at Rs. 27 closed quiet at Rs. 26.62. Orient Papers moved up to Rs. 42.20 from Rs. 40.50, but shed the gain partially to Rs. 41.80. Angelo Bros, responding to enquiries moved up to Rs. 19.81 from Rs. 19.62. Likewise Martin Burns realised Rs. 26.67, as against Rs. 26.50 earlier.

Teas lacked attention. Brooke Bonds were put through at Rs. 17.12, as against Rs. 17.25 earlier. Hasimaras were pulled down to Rs. 22.62 from Rs. 23.25, while Dhunseries realised Rs. 16.78, as against Rs. 16.50 previously.

NEWS IN BRIEF

THE Kerala Government is already taking necessary steps to acquire about 100 acres of land required for the second shipyard. It is expected that this work will be completed in about six months' time.

An agreement covering the grant of a DM 125.1 million West German credit to India was signed at Bonn last week by the representatives of the two Governments.

It is proposed to introduce diesel traction for running of through goods train on the Barauni-Amingaon section, which includes the Assam Rail Link, as soon as the necessary diesel locos are available.

The National Development Council will meet at New Delhi on 10th and 11th December to discuss the outlays and targets of the third Plan in the light of the talks held by the States' representatives with the Planning Commission.

A team of experts has been deputed by the Union Government to study the possibilities of starting rubber plantations in the Nicobar islands, in accordance with the suggestion made by the experts of the Goodyear Tyre and Rubber Company of the U.S.

The Mica Export Promotion Council, at its meeting held at Calcutta last week, decided to set up a committee for fixing minimum export prices for mica. Meanwhile, the Central Government has decided to set up a mica research centre at the Central Glass and Ceramic Research Institute, Jadavpur, at an estimated cost of over Rs. 8 lakhs.

The Indian Airlines Corporation proposes to buy four second-hand *Viscounts* to meet the increasing traffic on trunk and some other important routes, as well as to replace the *Skymaster* aircraft. The Government of India has received proposals for the sale of second-hand *Viscounts* from a number of parties in the U.S. and the U.K. These offers are now being considered.

A slot machine, designed to sell 5 nP post cards, has been installed at the General Post Office in Bombay. The machine is designed by the Bombay Telephones Department and delivers a post card on insertion of a 5 nP coin in the slit provided for the purpose. This is the first time that the Indian Posts and Telegraphs Department has introduced the slot machine for sale of post cards.

A team of Russian officials is expected to arrive in India in the middle of December to discuss with the Government the utilisation of the credit of 500 million roubles (Rs. 60 crores) which Russia announced in September last. It will be recalled that this credit is in addition to the 1,500 million roubles that Russia extended initially towards meeting the cost of the third Plan projects and was settled during the visit of the Finance Minister, Mr Morarji Desai, to Moscow last summer.

The present zonal arrangement between Orissa and West Bengal in regard to the movement of foodgrains will continue to be maintained, although food production has improved in both the States, with the consequent decline in prices. This was disclosed by Mr. A. M. Thomas, Union Deputy Minister for Food and Agriculture, in the Lok Sabha last week. He added that about 161,000 tons of rice and 249,000 tons of paddy had been exported from Orissa to West Bengal up to the end of October 1960.

The scheme for the development of Haldia port in West Bengal which has been allotted Rs. 7 crores in the Draft Outline of the third Plan, will be finalised after the experts who are at present conducting technical investigations submit their reports, according to Mr. Raj Bahadur, Minister of State for Transport and Communications. In order to acquire land for the project, the West Bengal Government has already notified an area of 17.62 sq. miles covering 68 villages under the Land Acquisition Act.

A project to lower sub-soil water level in New Delhi is being implemented by the Union Ministry of Works, Housing and Supply. The broad features of the project are sinking of 303 tube-wells for pumping out subsoil water; providing of underground drainage in the Central Vista Lawns, laying of porous concrete drains in the Central Vista, providing sprinkler equipment for economy in the use of unfiltered water for gardening and improvement of surface drainage by the local bodies concerned.

The Government of India has decided to abolish the requirement that tax-clearance certificates should be produced by every Indian national proceeding abroad. It is only when the income-tax authority concerned declares that a clearance person is not likely to return to India that a clearance certificate will be required from him. The new procedure will come into effect from the 1st December 1960. It applies only to Indian nationals. As regards persons of non-Indian domicile, however, the existing procedure will continue to apply.

The second plenary assembly of the International Telegraph and Telephone Consultative Committee will be inaugurated by the Prime Minister Mr. Nehru, on 8th December at New Delhi. The plenary assembly will be in session till 16th December. About 150 delegates from 36 countries, 12 recognised private operating agencies and six international organisations are expected to participate in the plenary assembly—the first to be held anywhere in Asia. India will be represented by a 30-member delegation, led by Mr. R. C. Vaish, Chief Engineer (Development), P. and T., New Delhi.

The President has given assent to the Indian Forest (Gujarat Unification and Amendment) Bill 1960. With slight modifications, the Bill extends the Indian Forest Act 1927 to the whole of Gujarat State and repeals the corresponding laws now in force in some areas of the State. At present the Indian Forest Act is applicable only to the Bombay and Kutch areas of the State. In the Saurashtra area, the Act has been adopted and applied with certain modifications. The present legislation has been promoted to have uniform law throughout the State on the subject.

The Government of India proposes to amend the Workmen's Compensation Act to provide increased rate of compensation. The proposal is to double the quantum of compensation in the case of death and permanent disablement and to replace the system of lump-sum payments with periodic payments to be disbursed through the agency of the Employees' State Insurance Corporation. It is proposed to increase the compensation for temporary disablement by 25 per cent., provided that the amount payable does not exceed the wages for the same period and to increase the wage limits for coverage from Rs. 400 to Rs. 500.

The new phosphoric acid plant of the Fertilisers and Chemicals Travancore Ltd. (F.A.C.T.), Alwaye, Kerala, has been put into commission. The plant has a capacity to produce 25 tons of phosphoric acid a day. The production of phosphoric acid marks the commencement of manufacture at the factory of ammonium phosphate, a balanced fertiliser containing both nitrogen and phosphorus. With the production of phosphoric acid and ammonium phosphate, the F.A.C.T. will be completing its first stage of expansion involving an investment of over Rs. 3 crores. Mr. S. K. Patil, Union Minister for Food and Agriculture, will formally inaugurate the ammonium phosphate production some time next month.

The Union Minister for Industry, Mr. Manubhai Shah, disclosed in the Lok Sabha last week that cheap radio sets priced at Rs. 125 (including all taxes except the local State sales tax) would become available in the market by the end of this year (1960). He added that, as a result of the discussions with the radio manufacturers in May last, it had been decided that production of 50,000 to 60,000 cheap radio sets should be aimed at annually. Every manufacturer would produce cheap radio receivers at least upto 10 per cent. of his production, within the existing foreign exchange allocation. The Minister further said that, for every 5 per cent. additional production of cheap radio sets over 10 per cent., the manufacturers would be given 5 per cent. additional foreign exchange for importing components and raw materials, subject to a maximum additional production of 20 per cent. sets.

With a view to securing maximum efficiency in the administration and working of the Central Excise Department and the rationalisation of its procedures, the Government of India has recently appointed a Central Excise Reorganisation Committee, with Mr. A. K. Chanda as Chairman, to examine the organisation and methods of the Department and to review the Central Excise Act and rules which regulate its work. While the Committee would shortly issue a questionnaire to elicit information relevant to its work, it would, meanwhile, welcome suggestions from those interested for the simplification of procedures of assessment and collection, for the removal of any weaknesses in either, and on any other matter germane to the enquiry. Communications should be addressed to the Secretary, Central Excise Reorganisation Committee, Ministry of Finance, Department of Revenue, Central Revenues Building, Mathura Road, New Delhi-1.

The Union Minister of State in the Ministry of Transport and Communications enumerated in the Lok Sabha last week the important steps taken by the Government to expand Indian shipping. These are: grant of loan assistance to Indian shipping companies for acquisition of ships on easy terms and at concessional rates of interest; setting up of shipping corporations in the public sector to supplement national tonnage; making available to Indian shipping companies ships built at the Hindustan Shipyard Ltd., Visakhapatnam, at subsidised prices; rendering assistance to Indian shipping companies operating in overseas trade to secure admission to various international shipping conferences; release of limited amounts of foreign exchange to companies for acquisition of ships in spite of the existing extremely tight foreign exchange position; allotment of Government owned and controlled cargoes to national ships on preferential basis and securing of foreign credit for acquisition of ships.

From Abroad

The British House of Commons has passed a Bill authorising the U.K. Government to contribute £20.86 million by way of grant to the World Bank towards financing the scheme for distribution of Indus waters between India and Pakistan.

West German imports amounted to 90 per cent. of exports during the first nine months of 1960, as against 87 per cent. in 1959 and 84 per cent. in 1958. During the first three quarters of 1960, imports rose 21.3 per cent., as against the comparable 1959 period, but exports rose only by 17.7 per cent.

The U.S. Ford Motor Company has offered to buy 46 per cent. of the shares of the British Ford Motor Company. The offer involves $363 million (about £129 million). The U.K. Ford is the second largest motor manufacturer in the U.K. with sales last year exceeding £33 million. It then accounted for about 27 per cent. of total car production, compared with 36 per cent. for the British Motor Corporation and about 13 per cent. for Rootes and the U.S.-owned Vauxhall group.

The United States exports of domestic and foreign merchandise during September totalled $1,628 million, which is about one per cent. higher than the August total of $1,613 million, and about 10 per cent. higher than the September 1959 total. The official estimate of total exports, excluding military shipments, for the first nine months of 1960 is $14,431 million, or a level about 20 per cent. higher than the $11,996 million reported for the corresponding period of 1959.

Coffee imports into West Germany have increased by 56 per cent. since 1955, sizably outpacing the comparable growth of imports (an average of 22 per cent.) of all other major coffee consuming nations of the world, according to Ibero Amerika Bank, Bremen, The Bank said that since the West German coffee tax was heavily cut (from DM 10 to DM 3 per kg.) seven years ago, West German coffee imports had more than doubled. In 1959 the *per capita* consumption of coffee in the country (3.4 kg.) surpassed the pre-war level (3.2 kg.).

Eight out of ten West Germans will forgo a wage increase, provided prices remain unchanged, rather than have wages raised, if this means "certain" price increases. This is the highlight of a recent poll of a representative section of the population of West Germany undertaken to test the public's price and wage consciousness. Only 12 per cent. of the persons polled said that they would prefer a wage increase even if the price level would rise "somewhat." Five per cent. had no opinion. Answers broken down by occupation, social status, age or party affiliation showed no basic departure from this line of thinking.

A plea to the United Nations to launch a world-wide campaign for birth control has been put forward by a group of leading world personalities, including 39 Nobel prize winners, led by Sir Julien Huxley. In a note submitted to Mr. Hammarskjoeld, U.N. Secretary-General, the group has pointed out that two-thirds of the world's present population is undernourished, and stressed that this population continues to increase by some 140,000 a day. In a generation, the world's population will double if there is no change in the current trend.

Following cutbacks in production by the British motor car industry, many component and accessory suppliers to the industry have announced shorter working week. The Alford and Adler (Engineers) of Hemel Hempstead, a component making subsidiary of the Standard Triumph International, is now working on a four-day week. The Cam Gears, manufacturers of steering gears, has followed suit. The Wilmot Breeden which produces door mechanisms, handles, bumpers and other components has reduced the working week of most of its 5,000 workers to between 4 and 4½ days. Nine factories producing dynamos, starter motors and lamps have also been adversely affected. Besides, the Dunlop Rubber Company has decided to go on a four-day week shortly at its plants in Birmingham, Coventry, Liverpool, Manchester and South Wales. The Dunlop Company, however, hopes to retrieve its position partly, thanks mainly to strong demand for giant earthmover and agriculture tyres, etc.

PERSONAL

MR. V. K. Krishna Menon, Union Defence Minister, has returned to New Delhi, after attending the U.N. General Assembly as the leader of the Indian delegation.

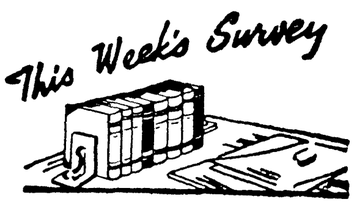
Mr. Sherman Cooper, a former U.S. Ambassador to India, who has been recently re-elected to the American Senate, is scheduled to pay a brief private visit to New Delhi towards the end of this month.

Mr. Vance Brand, Managing Director of the U.S. Development Loan Fund (D.L.F.), arrived in New Delhi on the 24th inst., for an eight-day stay in India. He is holding discussions with the Union Finance Minister and other Government officials.

Mr. A. L. Dias, until recently Secretary to the Home Department, Government of Maharashtra, has assumed his new office as the Chairman of the Bombay Port Trust. He succeeds Mr. V. T. Dehejia, who has been appointed Revenue Secretary to the Government of India.

Mr. Ramdas Kilachand has been elected President of the Bombay Oilseeds and Oil Exchange Ltd. for the current year. Messrs. Chandulal Kasturchand and Gokalchand J. Agrawal have been elected Senior Vice-President and Junior Vice-President, respectively. Messrs. Mangulal Trikamlal and Chandulal Dalsukhbhai Parikh have been co-opted on the Board of Directors of the Exchange.

Mr. V. Shankar, until recently Director General of Posts and Telegraphs, has taken over charge as Special Secretary in the Ministry of Food and Agriculture. He will also be Vice-President of the Indian Council of Agricultural Research in the place of Mr. M. S. Randhawa, who had held the post for five years and has now proceeded on leave. Mr. Shankar will look after the implementation of the "package programme," which will be in operation in seven districts of seven States shortly.



COAL POLICY

SARDAR Swaran Singh, Union Minister for Steel, Mines and Fuel, who not long ago dismissed the World Bank Mission's criticism of India's coal policy as 'uncharitable,' has happily accepted, in effect, the Mission's view that "the overriding need now is to get more coal quickly and other considerations should be subordinated to this purpose." His latest statement in the Lok Sabha, clarifying the Government's policy in regard to coal production, is certainly a welcome concession to the private sector of the coal industry which has been pleading for permission to open up new areas. But, unfortunately, this concession does not go far enough, because it is intended to give *special permission* only to *individual units* to work new areas. Since this will not be a general permission, there is no question of any drastic modification of the Industrial Policy Resolution of 1956 which has reserved the opening up of new areas to the public sector. Actually, the present limited relaxation, whereby the private collieries can work, under special permission, non-contiguous or proximate areas, is in accord with the Industrial Policy Resolution itself. There is, therefore, nothing far-fetched in the Minister's interpretation of the spirit of the Resolution. He said:

"That Resolution stipulates that all new units in the coal industry will be set up by the State. But this does not preclude the expansion of the existing privately owned units or the possibility of the State securing the co operation of private enterprise in the establishment of new units when the national interests so require. The role that has been assigned to the private sector I have just mentioned does not involve a general relaxation of the Industrial Policy Resolution itself. A realistic assessment having been made of the optimum production that can come from existing mines in the private sector, our intention is to give special permission to individual units to work new or non-contiguous areas where the raising of coal from such areas has to be ensured to make up the total production required. This is quite in consonance with what the Industrial Policy Resolution states, namely, that, where the national interests so require, private enterprise may be allowed to expand."

Such a practical adjustment between the two sectors, good in so far as it goes, may still not be sufficient for the purpose of achieving the third Plan's target of coal production to the tune of 97.5 million tons per annum. The Minister's reference to an additional production of 37.5 million tons over the target of 60 million tons in the second Plan does not provide a true measure of the additional effort required, for the estimated shortfall of about 12 million tons in the actual achievement of the second Plan target has not been taken into account here. As this shortfall will have to be made good in the third Plan period, the additional production would have to be of the order of about 50 million tons. If, according to the Working Group on Coal, the public sector comprising the National Coal Development Corporation and the Singareni Collieries is capable of achieving an additional production of only 19 million tons per annum by the end of the third Plan, the private sector must be enabled to achieve an additional production of not less than 31 million tons (50 million tons *minus* 19 million tons) per annum by the end of that Plan. The Working Group's estimate that the private sector can produce an additional 16 million tons only (12 to 13 million tons from the existing workings in the collieries and the rest from areas adjacent to them as well as from non-contiguous or proximate areas) errs on the side of caution, because it cannot possibly take into account, in the absence of appropriate policy changes, the additional production potential that may conceivably result from an upward revision of coal prices and a general permission to all private collieries to open up new areas.

The conditions necessary for enabling the private collieries to achieve a higher additional production target than 16 million tons have been indicated in a leading article entitled "Private Collieries Can Do It" in our issue of 29th October last. It only needs to be added here that Sardar Swaran Singh's proclaimed "adherence to a policy of holding the price line" in regard to coal prices is as unrealistic as his earlier adherence to a rigid policy in regard to expansion in the private sector of the coal industry. The proposed subsidy (from the proceeds of the coal cess fund) to collieries which are handicapped by adverse factors such as presence of gas, very deep workings, difficult geological conditions, excessive accumulation of water, etc., and which, therefore, cannot be worked economically at the existing coal prices, and the raising of the ceiling for slowing subsidy from 75/85 per cent. to 100 per cent., can be no substitutes for a general coal price increase so as to benefit the industry as a whole. Such an increase is called for on the triple ground of higher manufacturing costs, higher replacement costs of mining machinery and equipment and greater need for augmenting internal resources for reinvestment and expansion. The Government is bound to be persuaded, sooner or later, to do the right thing in the interests of greater coal production which, in the main, will have to come from the private sector.

F.I.C.C.I. ON SALES TAX

Ever since the enactment of the Additional Excise Duties Act in December 1957, which levied additional excise duties on cloth, sugar and tobacco in place of the sales tax on these commodities, there is a general feeling that the extension of this Act to cover more commodities would improve the revenues and eliminate the onerous administrative complexities involved in the collection and payment of sales tax. It was in this context that the Committee of States' Chief Ministers and Finance Ministers met last July to consider the replacement, by additional excise duties, of the sales tax on silk fabrics, matches, paper and vegetable products. The Committee, however, failed to come to any unanimous decision on this issue, because of the opposition of certain State Governments which felt that their fiscal autonomy would be jeopardised at a time when more resources were required for financing the third Plan programmes of their respective States. The Federation of Indian Chambers of Commerce and Industry is, however, not satisfied with this outcome and, in a brochure on sales tax published this week, it has urged the Central Government "to persuade the States to agree to the extension of centralisation to cover all the articles on which Central excise is levied at present."

While conceding that the States derive a sizable proportion of their aggregate revenue from sales tax, the Federation maintains that, on a balance of considerations, the advantage is clearly in favour of centralisation. The States will not stand to lose. On the contrary, it is pointed out that revenue collected from additional excise duties in 1959 amounted to Rs. 40 crores which is higher by Rs. 8 crores than the revenues from sales tax on these commodities. While countering the argument that the States would be losing their fiscal autonomy, the brochure indicates that, even today, 51.5 per cent. of the total expenditure of State Governments is in the shape of Central grants, shared taxes, etc. In view of this, the Federation sees no objection in extending centralisation to the remaining excisable commodities. Apart from the improvement in the yield, centralisation would mean, according to it, reduced cost of collection, reduced cost of compliance for the trading community as well as less scope for avoidance of the tax.

While the cogency of the case presented by the Federation in favour of centralisation cannot be denied, it will be too much to expect the States to toe its line. As a compromise and taking into account the extent of political feasibility, the treatment suggested by the Federation may be confined to articles of common consumption. The State Governments will do well to realise that, besides the advantages of centralisation referred to by the Federation, they will be able to better the collection of sales tax from the remaining items, as the sales tax administration can concentrate on fewer articles handled by fewer trading establishments.

If its suggestion of centralisation is unacceptable to the Government, the Federation has made the alternative proposal of drafting a Model Sales Tax Act by the Centre for the guidance of the States. This would bring about uniformity in the definition of certain basic concepts, rationalise the procedure of registration, appeal, revision, etc., and thus remove the existing anomalies. The Federation favours sales tax only at a single point and that at the first point wherever feasible. It has also entered a plea for exempting raw materials and accessories, as, invariably, sales tax is levied on the manufactured articles.

Alluding to inter-State sales taxation, the Federation points out that even after the enactment of the Central Sales Tax (Amendment) Act, the difficulties of the mercantile community have not come to an end. The condition that the selling dealer in an inter-State transaction has to produce a declaration form for becoming eligible for the concession is still vexatious, because the declaration forms cannot be easily obtained. In their absence, the traders have to pay the tax at seven per cent., instead of the concessional rate of one per cent. The Federation has emphasised the urgent need to supply such forms *expeditiously to the traders*. In case of raw materials, the cumulative burden of sales taxation is well known. In order to minimise this burden in case of those raw materials which are important in inter-State trade, the Central sales tax legislation has specified the maximum rate. At present, this category of raw materials includes only coal, cotton and yarn, hides and skins, iron and steel, jute and oilseeds. The Federation would like to include many other raw materials in this category. The illustrative list furnished in the brochure contains cement, coke and coal gas, electric energy, fertilisers, sugarcane and molasses, bamboo, pulp, oilcakes, lac and shellac, iron ore, manganese, mica, gypsum, rubber, raw wool, dyes and chemicals. In the case of all these raw materials, the Federation contends only the maximum rate should be applicable.

In the case of export and import trade, at present only the final transactions, that is, the export-sale and the import-purchase are exempt from sales tax. In order to promote the country's exports, the Federation has suggested that the earlier transactions should also be subject to concessional rates. It has also emphasised the need for taking suitable steps to decrease the sales tax burden on export products by allowing exporters to obtain rebate, on an *ad hoc* basis, of sales tax paid on raw materials and accessories used by them in the manufacture of export articles. In regard to imports, the Federation has suggested a small surcharge on import duty in place of the sales tax.

The Federation has, once again, reiterated its demand for establishing an inter-State Taxation Council consisting of Sales Tax Commissioners of some of the States and the representatives of the Ministry of Finance, Government of India. The Federation is of the view that at least a Central Sales Tax Advisory Committee should be set up forthwith which could act as a medium between the Government and the business community.

It will be seen from the foregoing account of the Federation's case that there is considerable room for legitimate reform in the collection and administration of sales taxation. The object of these suggestions is not to reduce the incidence of taxation and the revenue of the States, but only to facilitate the growth and movement of trade the benefits of which will accrue to all.

PILOT JOINT FARMS

The National Co-operative Farming Advisory Board, recently constituted with Mr. S. K. Dey, Union Minister of Community Development and Co-operation, as Chairman, has just held its first meeting and made some recommendations for implementing the pilot projects programme of co-operative joint farming. The recommendations are that joint farming societies in such projects should be constituted on a voluntary basis, the bulk of their membership be composed of small cultivators or landless agricultural labourers or both, land be pooled for a minimum period of five years and labour-intensive agricultural methods and mixed farming like dairy and poultry keeping be adopted in such societies. Another crucial recommendation is that State financial assistance to the pilot project farming societies should follow the same pattern as has been provided under the general co-operative plan—consisting of State participation in share capital, managerial subsidy, medium and long-term loans and subsidy and construction of godown-*cum*-cattle sheds. The Board has also proposed that the first pilot projects—70, each covering 10 societies—be launched from 1st April, 1961, and that 15 training centres be set up for imparting education and training in co-operative farming.

Most of these proposals are quite appropriate to the phase of implementation. The voluntary character of the programme may well be sustained by two factors, namely, that no special State assistance over and above what is given to co-operatives, in general, will be given to joint farming societies and that the members will have the right to opt out at the end of five years. But there may be some difficulty in securing compact cultivation blocks in a village if the bulk of a society's membership is composed of small cultivators with their scattered holdings and if medium and big landowners in that village cannot be persuaded to pool their lands. There are villages consisting almost entirely of smallholders only and they can be more usefully selected for the pilot projects. Another difficulty may arise where agricultural labourers also are enrolled as members and they expect such returns as may reduce too drastically the dividend the landowning members, whether working or non-working, expect for their lands pooled in the society. This difficulty can be overcome by determining a five-year fair rent in advance as dividend for land. As for labour-intensive methods and mixed farming techniques, they would be feasible propositions where the pooled manpower is large in relation to the small extent of pooled land. At the most, the 700 pilot societies to be constituted in the first year may cover 200,000 acres in all and their working for five years will reveal whether co-operative joint farming can become widely popular in the long run of, say, twenty years.

TELEPHONES IN BOMBAY

It is difficult to think of industrial, trade and banking activity in Bombay City without the telephone service. Business worth crores of rupees is put through every day through this means of communication. Although the telephone department has been rendering much useful service, the difficulties experienced by users of telephone service continue to be not inconsiderable. The hardships include failure of supply to cope with increasing demand, enhanced burden following the recent upward revision in rates, excess billing for calls, frequent breakdown of service, delay in attending to complaints and the like. All these were brought to the attention of Mr. Uma Shankar, General Manager, Telephones, Bombay, by the Committee of the Indian Merchants' Chamber when it met him on Monday this week. The reply which Mr. Uma Shankar gave was not quite heartening. He, however, stated that various measures were being taken to ensure a satisfactory operation of the telephone service, that complaints regarding disturbances and interruptions during trunk calls would be looked into, that he would endeavour to improve the department's public relations work, that steps were being taken to obviate heavy incidence of breakdown (through replacement of overhead lines in congested areas by underground cable), that the position in respect of excess-billing for calls had improved markedly, and that the personnel operating the service attended to their duties properly.

As for new connections, the Bombay Telephones chief could not hold out any prospect of an early improvement in position till the two exchanges at Gamdevi and Fort, which are expected to be ready by 1964, started functioning. On the contrary, he said that the position would continue to be difficult till such time as additional exchanges proposed could be provided. Hitherto, according to him, connections were being given largely from the 18,200 lines equipment installed during the period 1946 to 1956 on the basis of the post-war expansion scheme sanctioned in 1946. The question of offering new connections was linked to the putting up of 13 telephone exchanges in the City, three in Bombay proper and ten in the suburbs. We are now told that a project costing Rs. 12.5 crores has been sanctioned. When these exchanges are ready it will be possible, according to Mr. Uma Shankar, to offer an additional 51,300 connections—31,000 in Bombay proper and 20,000 in the suburbs. But, in the interim period, additional telephones, it is gratifying to be told, will be provided by the utilisation of capacity (10,800 lines) in Mandvi, which is expected to be available by the end of 1961, as well as other additions (1,300 lines) to the exchanges in Bombay and the suburbs. Capacity to the extent of 2,050 lines is being created in the current financial year.

Mr. Uma Shankar could not also give any assurance in regard to supply of additional facilities to telephone users. He explained away this point by reference to the difficulty in procuring adequate supplies of stores from both foreign sources and the workshop in the country. Even so, he stated that, during the period May 1960 to October 1960, as many as 1,351 direct exchange lines had been given and 2,040 extension telephones installed or a total of 3,391 telephones. Similarly, he met the complaint about the incidence of higher rates by merely saying that a revision of rates was effected by the Government based on the economics of running the telephone service. He could have given some details of its economics to carry conviction to the public. One does not want the telephone service to be subsidised; nor does one want it to exist by eating into the capital investment. The telephone service must be run as a public utility commercial enterprise, that is, its profit margin must be sufficient to afford a reasonable return on the capital employed and to retain sufficient funds for replacing its assets. But the question is whether the telephone service is being run efficiently and economically and whether the incidence of telephone bill cannot be brought down through a speedy expansion in the number of connections. It would be interesting to know how the position in Bombay or Calcutta compares with that, say, in London, New York or Tokyo. The authorities will do well to arrange for such a comparative study by inviting a team of experts from any one of these centres. It will help improve the service on right lines and bring down the cost of operations.

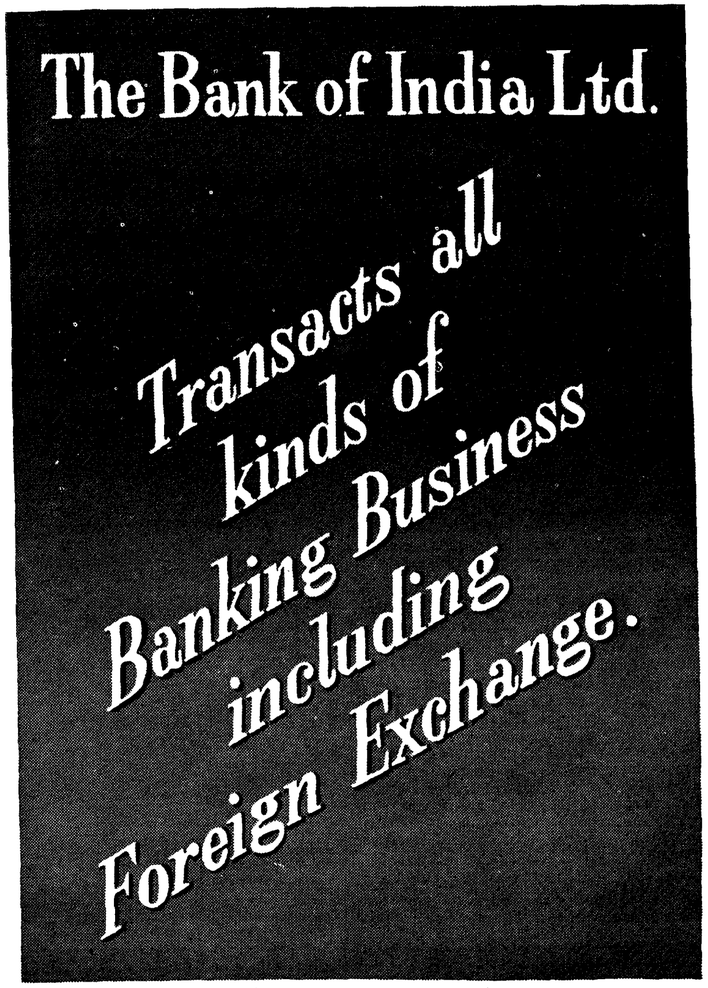
Meanwhile, Mr. Uma Shankar must do something to prevent overlapping of lines which has become a serious defect not only in the Fort area but even in suburbs such as Matunga. Apart from the fact that it does away with secrecy of conversation over the phone, as one's talk is liable to be heard by a third or even a fourth party, it is a great nuisance and not uncommon often leads to a number of unprovoked quarrels between telephone users. Another defect that is urgently in need of attention is the increasing number of wrong calls, which sometimes make the telephone an infliction on the subscriber, instead of an instrument of service.

COLOMBO PLAN

The twelfth annual meeting of the Colombo Plan Consultative Committee was held at Tokyo from 14th to 16th November. The three-day meeting was attended by delegates of 21 member-nations and territories. For the first time, Afghanistan attended the meeting as an observer. The annual report of the Consultative Committee, which was adopted at the meeting, will be released in January next. The annual meeting of the Consultative Committee is a unique occasion for exchange of ideas and experience between the Governments of member-countries in the Colombo Plan region as well as between them and other member-Governments outside it. At this meeting, Ministers and officials concerned with the economic development of the countries of South and South-East Asia, are able to know how problems similar to theirs are being tackled in other countries and thus profit from their practical experience. Member-Governments from outside the Colombo Plan region also get an opportunity to know, at firsthand, the problems of these countries and are better able to see in what particular ways the help they are to extend to these countries can most advantageously be directed.

The Prime Minister of Japan, Mr. Hayato Ikeda, set the tone for the discussions of the Committee in his inaugural address by emphasising that the fundamental spirit of the Colombo Plan lay in mutual aid and that the economic prosperity of the member-countries was interdependent. He admitted that assistance from Japan, the most advanced country in the Colombo Plan region, had not so far been "substantial." But his country, he asserted, had done its utmost to co-operate with these countries and went on to pledge that the policy will be *continued with greater vigour in future*. An observation of Mr. Ikeda, which will be particularly welcomed by the less-developed member-countries, was that, in its new, long-range economic plan, which aimed at doubling national income in ten years and trebling imports and exports in the same period, Japan would lay emphasis "on those products which would not conflict with their (the less-developed partners)

(*Continued on page 984*)



ON THE ARENA

By The Archer

ONE of the legacies which we have inherited from our struggle for independence appears to be the impunity with which a few people, mostly introverts, could join together for destroying anything, from private property to public monuments, provided they can sing the *Ram Dhun* in chorus and chant a few Vedic hymns. The Indore cinema poster ballyhoo indicates that what would normally be classed as an unlawful display of subjective prejudice resulting in defiance of law and order can be turned into a ceremonial act of purification, if the organised effort is labelled as *sarvodhaya* and has been blessed by the approval of Acharya Vinobha Bhave. The underlying assumption appears to be that, as the intentions of the organisers are entirely honourable, their execution may assume the most summary form, irrespective of whether the extension of their methods to other fields may lead to unpredictable repercussions.

The Indore cinema poster was considered indecent, merely because it showed a young man embracing a girl. I shall not consider the *sarvodhaya* workers who took this view as prudish or puritanical; I am content to assume that they belong to the class which believes that tenderness, affection, love or even passionate attachment may not be picturised by more than a distant pat (by a man) on the shoulder (of a woman); it may, of course, be accompanied by the raucous recital of a love song fully laden with erotic imagery. Words don't count, for they take longer to provoke the imagination; the picture can be offensive because it hits the eye. The same cinema poster may pass entirely unnoticed in cities like Bombay, Calcutta, Delhi or Madras, which only indicates that concepts of decency and indecency, as of virtue and sin, are mostly geographical. Perhaps, the ladies and gentlemen of Indore would be able to tone down their subjective prejudices, if they were taken for a tour of the temples of Konarak and Kajuraho, or even of some in Tamilnad, in which the erotic sculptures will shame the best efforts of poster engravers. Or, would they? Who can imagine what they will be up to, if they are suddenly activated to an impulse for purifying the souls of foreign tourists who visit the temples as treasure houses of art? The possibility of wholesale destruction of some of our priceless works of art solely because they are capable of generating erotic impulses in certain sightseers cannot be ruled out if movements of the type set afoot at Indore are not discountenanced, or, shall we say, effectively put down.

It is not my thesis that the poster at Indore is a work of art; I have not seen even a photographic reproduction of it. The news agency that gave publicity to the Indore effort would get credit for objective reporting if they had reproduced it, and left the public in the rest of India to judge the merit of the upsurge, if there was any. However, I expect that the poster, like most of its type, was only a reproduction of a still shot from the whole film which had been passed by the censor. Considering the fact that film censors in India are reportedly very careful to cut out anything that is even remotely suggestive of immoral or indecent behaviour, the poster must have been passed by the censor as a part of the whole picture. It would thus seem that the Indore agitators have taken the law into their own hands to improve on the work of the censor, and the far-reaching implications of such a move are infinite. Some of us who are extroverts (and therefore sinners according to the Indore criterion) in another geographical area are more allergic to men embracing other men in friendship than to boy embracing girl in a natural and biological manifestation of endearment, and may decide upon *satyagraha* at airport and railway station receptions when old men, from dignitaries to *chaprassis*, embrace each other. We may also chant *Ram Dhun* and indulge in *Veda Parayan*. And, when or if we do so, would we be applauded for our (misdirected) efforts to purify society, or would we be marched off to the nearest police *chowki en route* to the lunatic asylum?

In several directions, we have been sowing the wind and reaping the whirlwind, the wind being encouragement of direct action—call it *satyagraha, hartal*, strike, fasting, what you like —and the whirlwind being lawlessness, destruction of property and defiance of the rule of law. The policeman, who is charged with the duty of protecting private rights and property, is reduced to impotence, as soon as a body of people, avowedly intent on making inroads on them, start chanting *Ram Dhun* alongside the *zindabad* of their pet likes and the *murdabad* of their pet dislikes. Is it not time that we sat back and sought a forthright solution to this misdirected application of a potent weapon which stood us in good stead when we had an understanding bureaucracy to rule us, and which is unthinkable under our present democratic Government elected through adult franchise?

By way of a tailpiece, I shall recount the story of what happened to a *Dubash* of the East India Company at Madras, one that I read in one of the old annals, now out of print. Rangiah Chetty, the *Dubash*, was a pious and orthodox man who bought and sold extensively for the Company, and visited Fort St. George every day, dressed in spotless white, with an aggressive *Vaishnavite* caste mark on his forehead, a thickly dubbed U in white, with a red streak in the centre. The soldiers at the gate accosted him one day and asked him what he had on his forehead; replied Rangiah that it was his 'god'. Scoffing at the idea of a painted god on the forehead, the soldiers told Rangiah that they would let him off then, but he should not return the next day with such an ostentatious display of piety, or they would put to test the potency of his god by licking it up. Tucking away the threat at the back of his head, Rangiah came back the next day with an even broader *Namam* (caste mark). Three of the soldiers caught hold of him and, despite his importunities, protests and threats, they swiped the *namam* clean with their tongues and let him go. It took Rangiah a few hours to finish his work in the Fort, and, by the time he returned to the entrance, he found a contingent of privates and subalterns waiting for him, entreating him to intercede with his god to save the lives of the soldiers who had to be taken to hospital with incessant retchings and purgings after they had irreverently lapped up his caste mark. Rangiah sat down, mumbled a series of chants, and handed over a little of a powder which he had in a silver box on his person, one that he said was sacred ash sanctified by prayer. The story ends by saying that the soldiers recovered almost immediately after the powder was administered, and for ever after, they kept to a discreet and respectful distance from Rangiah when he visited the Fort. What Rangiah had done was that he had mixed a sizable dose of croton, a virulent purgative, with his *namam* paste in the morning, apprehending the execution of the lapping up threat, and had also carried its antidote with him in his silver box. The moral is obvious. It is dangerous to attempt direct action to obtain relief from subjective prejudices. Sometimes, as happened in the Rangiah episode, two parties can play at the same game.

Preference Share Dividends

The Bill intended to retrieve holders of preference shares from the doldrums into which they were pushed by the Finance Act of 1959 is now before Parliament. Only two speakers spoke at the initiation debate and both were members of the Select Committee. It only shows that members of the Lok Sabha are more solicitous of the interests of equity shareholders than of preference shareholders who are mostly the pensioners, chicken-hearted, middle-class investors, widows, orphans, trusts, etc., and, of course, the L.I.C., I.C.I.C.I., and general insurance companies. (I suppose the latter three can be clubbed with widows and pensioners as they seem to be equally helpless.) One would expect that, in line with their policy of encouraging a conservative dividend policy on the part of companies, definite discouragement of the violent operations of bulls and bears on the stock markets, and general solicitude for the middle-class investor who seeks a safe and steady return without need for the eternal vigilance which is the price one pays for collecting hedging profits on the stock exchange, Government would take positive steps (and avow their intention to do so) to restore the position of holders of preference shares to *status quo ante* the Finance Act of 1959. But, unfortunately, Mr. Gopal Reddy's speech, when introducing the Bill, was very lukewarm. According to him, Government felt that the savings arising to companies from the abolition of wealth tax would result in preference dividends being stepped up; that, if more profit was made by a company, its equity shareholders may not be so unreasonable as to deny a share of it to preference shareholders; and that it should not be difficult for companies to get together their equity shareholders to arrange for a fair deal to the preference crowd. The facts of the matter are, and Mr. Gopal Reddy ought to know, (*a*) almost all companies have been extremely legalistic over the interpretation of the Finance Act, their excuse being that they hate to have arguments with the Tax Collecting Authority, (*b*) almost all companies that I know of care two brass buttons for preference shareholders who can only suck their thumbs and bear their losses, (*c*) equity shareholders look upon their preference counterparts as belonging to a lower caste entitled only to the leavings on their plates, and (*d*) in any case, most companies find it impossible to obtain the consent of 75 per cent. of ordinary share holding which is required for alteration of rights under Section 106 of the Companies Act, while, in a number of cases, this consent has to be expressed in writing. Quite a few companies have been in indecent hurry to disburse their preference dividends after deducting the tax without so little as an expression of regret or explanation. The reduced amounts paid are mangy substitutes for the tax-free 6 or 6½ per cent. originally promised. As the old cock crows so crows the young; or if you prefer a more apt Sanskrit proverb, "*Yatha Raja, Thatha Praja.*" If Government has felt no compunction about changing the law in such a way as to cut across existing contracts between companies and shareholders, why should the companies display any anxiety to be more civilised in their dealings, especially towards those who can be neither bulls nor bears, and cannot even whimper in protest? Indeed, why?

IMPORT POLICY FOR TWELVE MORE ITEMS

The import policy for 12 out of the 20 items, which had been held over at the time of the announcement of the half-yearly import policy (October 1960-March 1961) on 1st October last has been announced. For machine tools, the import quota for established importers has been reduced from 30 per cent. general and 30 per cent. soft to 20 per cent. general and 20 per cent. soft. In the case of surgical instruments, apparatus and appliances, while there is no change in the import quota, the concession extended during the last half-year period in the shape of supplementary licences has been withdrawn. For tractors, there will be no import quota for the current half-year. The import quota in respect of complete watches has been halved to 5 per cent. general and 5 per cent. soft. For photographic negatives and printing paper excluding X-ray films, the reduction will be from 33⅓ per cent. general and 33⅓ per cent. soft to 25 per cent. general and 25 per cent. soft. For printing paper, the quota has been reduced from 12½ per cent. to 7½ per cent. and for packing and wrapping paper from 7½ per cent. to 5 per cent. In the case of filter paper, there is no change, as compared with April-September 1960. For paper not otherwise specified, the quota has been maintained as during the last half-year, but the additional licences which were being issued during the last half-year will not be granted now. In respect of giant motor, motor cycle, bicycle tyres and tubes and flaps and solid tyres, the quota will continue to be the same as during the last half-year, that is, 75 per cent. The licences will, however, not be valid for import of bicycle tyres and tubes. For diamond sunset and imported uncut, excluding bort and industrial diamonds, no quota has been granted. The policy for card clothing and card accessories will continue to be the same as before, namely, 66⅔ per cent. general and 66⅔ per cent. soft.

STRICTER CONTROL OVER FORWARD TRADING

An official Bill which seeks to enable the Central Government and the Forward Markets Commission to exercise stricter control over forward trading activities has been introduced in the Lok Sabha. The Bill is designed to amend the Forward Contracts (Regulation) Act of 1952. Among the important provisions in the amending Bill are powers to the Central Government to impose conditions regarding the transferability of specific delivery contracts. One of the objects of conferring this power on the Government is to limit the number of transfers in the case of such contracts. The Bill invests the F.M.C. with certain powers of a civil court, such as summoning and examining persons on oath, on the lines of similar powers conferred on the Tariff Commission. One of the provisions requires all associations to register themselves with the F.M.C. The registration of associations will enable the Commission to have a census of all associations that are now trading in transferable specific delivery contracts in free commodities as well as non-transferable specific delivery contracts in regulated or prohibited commodities and to ascertain the extent to which such associations misuse the non-transferable specific delivery contracts for speculative purposes.

AMERICAN LETTER

KENNEDY'S VICTORY IS NOT A POPULAR MANDATE

TRADE UNIONS LOSING THEIR HOLD

SECRETARY TO GOVERNMENT 28 NOV 1960 PUBLIC GOVERNMENT

From Our Special Correspondent

NEW YORK, 19*th November*

THE Presidential elections in the United States are still somewhat of an enigma. The margin of popularity of Senator John Kennedy over Vice-President Richard Nixon is so thin that it cannot be called by any means "a popular mandate." This means that little change in direction of policy can be expected, economically, socially and politically. So far, Senator Kennedy's appointments have been sound. He was gracious enough to confer with Vice-President Nixon. And the changeover from a Republican to a Democratic President, January next, will be no problem.

Absentee ballots from voters out of towns are still being counted. The run in favour of Mr. Nixon and they thin the lead of Senator Kennedy who will be the next President of the U.S., but without a popular mandate.

There was no real issue in this campaign, as mentioned in previous despatches. Neither Senator Kennedy, nor Vice-President Nixon, were national heroes—a term which was applicable to President Eisenhower as the liberator of Europe. The latter could have won on any ticket and platform, but it was impossible constitutionally-wise, since the President of the U.S. is now confined to two terms of four years each and, at this point, he is one of the oldest Presidents the U.S. has ever had.

The fact that Senator Kennedy had only a narrow margin of victory over Vice-President Nixon will, I think, make the Senator more cautious in changing policies radically. There is uncertainty in the air; it has always been apparent in every Presidential election year.

Boiled down to fundamentals, it amounts to the question of what will the next fellow do? It reflects in the hesitancy of the stock market, in cautious buying by manufacturers and retailers and lagging enthusiasm by the buying public in certain areas.

Business in the U.S. has been good, but there is much talk of another recession or even a depression, according to your own semantics. A depression along the lines of 1929 and the early 1930s is unthinkable. There are too many "built-in" stabilisers, such as social security and State unemployment insurance.

There are also far greater savings now than there were then. There are pension funds and other buffers against starvation and destitution. Unless a national calamity occurs, there is not a chance of a depression in the U.S. which would affect India and the rest of the world.

Trade Unions

As a long-range thought, it may also be mentioned that the influence of trade unions may be diminishing. The latest example was the strike at General Electric Company, where members of the trade unions refused to go along with the recommendations of their leaders. It was a full-fledged defeat for what is popularly known as "labour." There is very little distinction these days between so-called capital and labour.

Most working men in the U.S. own their own homes, they have their automobiles, and, except in distressed areas, which are part of human existence all over the world, they are capitalists as well as labourers.

There is no such thing, for example, as the "labour vote," though the leaders of the unions proclaim obedience to one party or another. In effect, the individual involved pays no attention to it. And, with a few exceptions, the so-called labour leaders seem to have had their day in the U.S. Their days are numbered.

The entire labour movement in the U.S., and elsewhere, was brought upon by the abuses of management, but now the pendulum is swinging the other way, it would seem from all indications. Management is better informed in the U.S. of what it should do or should not do and so is the average member of a trade union.

Thus, a greater understanding is emerging. Labour is beginning to realise that prolonged strikes, even if they produce higher wages, will not make up the loss of income in two or three years.

Management loses through loss of production and the national Treasury loses through loss of taxes, both on the individual and corporate levels. Moreover, every strike and walk-out intensifies management's search in manufacturing industries to eliminate labour by greater use of automation. And automation, in turn, while decreasing employment in manufacturing, as has been quite evident in the U.S., leads to an increase in the service industries, including those which have to automation monsters to keep them in working order.

World Trade

The forty-seventh National Foreign Trade Convention has just concluded here. Among the final declaration was a call for a large and expanding volume of international trade, carried on through private enterprise channels. It was held vitally important in promoting the economic and social progress of all nations.

There is still great concern in the U.S. about the imbalance of international payments and the continual loss of gold and other foreign balances resulting from it.

The convention, of which every important industrial organisation in the U.S. with international connections is a part, urged that Washington make every effort through existing and projected General Trade and Tariff negotiations and "by other appropriate means" to secure a reduction in arbitrary barriers in international trade.

This referred specifically to the elimination of discriminations and other onerous restrictions against exports of U.S. goods and services.

In a final gesture, the convention held private investment constitutes the best and most effective means of promoting industrial and general development. It was an important statement of policy.

The U.S. economy is at an even keel. No violent changes, either up, or down, can be expected until early spring, when the new Administration's policies will have become apparent. In the meantime, all is as well as can be expected under the prevailing circumstances.—*All Rights Reserved.*

U.S. GROSS NATIONAL PRODUCT

Gross national product of the United States for the third quarter this year was at a seasonally annually adjusted rate of $503,500 million, as compared with 505,500 million in the second quarter. The figure for the nine months (total of goods and services produced in the country) is also at the estimated annual rate of $503,500 million. This is $22,500 million, or more than 4.5 per cent. above the corresponding period last year. Measured in constant or real dollars, the rise is about three per cent.

(*Concluded from next column*)

greater drain on the overseas balance of payments. Indeed, the U.K. would be sacrificing its birthright for a mess of pottage.

And there is another aspect to the question; this time on broad industrial lines. Is it wise on the part of the Americans to be exporting $250 million at the present time? The U.S. gold reserves would plunge still lower below the $18,000 million mark, and, in the very week when the American President is taking steps to reduce American spending abroad, it seems odd that this large golden fish should be slipping through his hands. And the American President has need to be concerned, for, in the three quarters of this year, the net excess of American payments over receipts has topped $1,000 million. There seems here a case for the British and American Treasuries to get together and at least hold this deal in suspense until the matter has been debated further. But with both Governments more strongly committed to the sacredness of the rights of industry to look after its own affairs than would be the case in most European and Commonwealth countries, it is unlikely that such a sensible solution would be adopted.—*All Rights Reserved.*

UNWANTED DOLLAR INVESTMENT

LONDON LETTER

(From Our Own Correspondent)

LONDON, 18*th November*

IT is rare that a move in the business world creates as much stir simultaneously in the City as in Parliament, but that is what the American Ford proposal to buy out British minority shareholders has done. There are so many facets to this matter, and so many points of view being hotly debated—and in Parliament, be it noted, not along the Party divisional lines—that it is difficult to see the clear picture. By the time this is read, the Government decision will probably have been taken, but, whatever that may be, the beginnings of future policy regarding dollar investment in British industry will have been laid.

One must begin with the fact that, before the bid was announced, Ford shares in the City were exchanging at under £5 each, and that the bid was to pay over £7 each. Clearly, the American company were taking no chances in regard to making their offer sufficiently attractive to British shareholders. The obvious question is why? The Chancellor hankers after freedom for the inflow of American capital into this country and his interest, as also that of the Treasury, is to accept the $250 million odd that would seem likely to accrue on the exchange. The varying estimates of what this figure should be are the result of differences of view of what proportion of the capital is actually in the hands of British nationals. The parent company owns 54 per cent. and the Chancellor has estimated that 15 per cent. additionally is owned privately by Americans, so that the dollars would not accrue to the full extent of the $365 million of the bid.

Accordingly, the Chancellor has argued that, since the company is already American controlled, it makes little difference if the rest of the capital passes into American ownership. But powerful cudgels have been taken up against this argument. Even in strongly Conservative quarters it is pointed out that, if the deal goes through, over half the investment in the British motor industry will be owned by the two leading American car companies and over 40 per cent. of the British motor industry will be wholly controlled by American companies.

Why should this situation give rise to special concern? It is because the British car industry plays an enormous part through its demands on the steel, engineering and rubber industries, to mention only the most important of the whole British economy. At this very moment, with industry plunging into depression through fear of a recession throughout the economy, and when the reason for the bid is said to be to ensure greater applicability in the use of the American company's productive plant, that would seem to mean only one thing, namely, that the American plant in Germany, inside the Common Market, might at times be more economic to operate at full capacity than the British plant which might be having difficulty in exporting its products into the Continent.

The Chancellor has agreed, therefore, to get certain assurances from the American company on what they would propose to do. But such assurances would in practice be valueless. They could only be given in the most general terms, since an American company could not consent to have its policy in fact controlled by the British Treasury, and good reasons would always be found, if necessary, for sacrificing production in this country to that elsewhere.

This is excellent for international economics, but, at present, Britain is outside the Common Market, outside the American economy and must look to her own narrower interests.

The next interesting argument is on broad economic lines and has been devised by Sir Roy Harrod. He points out that it is not altogether desirable for a highly industrial country like the U.K. to be importing capital. This appears to be a heresy against the British Government's general policy *vis-a-vis* North America; for the Government has been inviting American and Canadian business men to invest in the U.K. In the short run, Sir Roy Harrod says, dollars would accrue to this country, but, in the long run, the payment of dividends would cause a

(*Continued in previous column*)

GOLD AND BALANCE OF PAYMENTS PROBLEMS

U.S. MUST AVOID COST AND PRICE INCREASES

By Per Jacobsson

MANAGING DIRECTOR, INTERNATIONAL MONETARY FUND

[This article has been adapted from Mr. Per Jacobsson's address at a luncheon given by the Committee for Economic Development at Washington on 17th November 1960. In this article, Mr. Jacobsson has dealt with an important international economic problem of the day which has a direct bearing on India's plan for development.—ED.]

ONLY a few years ago, it was, so to say, a standard jargon to speak about the "structural dollar shortage," and, indeed, to imply that European and other countries could hardly ever hope to earn enough dollars to pay for their imports from the United States. There were only a few who dissented, and they generally quoted some words in an article by Lord Keynes which was posthumously published in July 1946. In this article, he gave as his opinion that the high costs and high living in the United States would restore equilibrium in the rest of the world's balance of payments with this country. I have often quoted Keynes' opinion myself—and in a review of a book of mine by Dr. Thomas Balogh he derided me for the "pathetic way" in which I tried to evoke the authority of Keynes. I think I must admit that the attainment of equilibrium took longer than either Keynes—or I—had expected, for peculiar circumstances—such as the excessive and persistent post-war liquidity and also the Suez crisis—delayed the effect of the basic corrective forces, although, in the end, they proved predominant. You know the famous lines of Longfellow: "Though the mills of God grind slowly, yet they grind exceeding small." I would say: "Though the trends of cost act slowly, yet they act exceeding sure."

Influence of Costs

I shall refer several times to the influence of costs on the problems before us, but I would first like to say a few words about recent changes in the balance of payments of this country. In 1957, the year most affected by the Suez crisis, the United States had a balance of payments surplus, but, by the following year, there was a deficit of $3.5 billion and in 1959 one of $3.8 billion.

How was it that there was such a sudden change from 1957 to 1958? It was caused, I think, by two things. Once the difficulties of the Suez crisis were overcome—and they proved less untractable than had generally been feared—European industries, with capacity restored and considerably modernised, were able to deal promptly and efficiently with orders, and were thus able, for the first time since the war, to compete effectively with American industries. This competition made itself felt in foreign markets—in Europe, and elsewhere—and also in the American home market itself. Secondly, the change resulted from the fiscal and monetary policies pursued here in the United States.

In late 1957, after the recession had begun, there emerged a deficit in the Federal budget, which finally reached $12.4 billion for the fiscal year 1958-59, and there was an expansion of credit of very much the same magnitude. In a smaller country, strongly expansionary fiscal and credit policies soon lead to a "spilling-over" of purchasing power, and thus have an adverse effect on the balance of payments. Personally, I hold the belief that this is very much what happened here in the United States. I think the Lord has given no dispensation to the United States from the ordinary credit principles.

No Talk of Creeping Inflation

The American authorities soon realised that doubts were beginning to be expressed about the strength of the dollar, and that fears were spreading in fairly wide quarters. Obviously, steps had to be taken, and the first thing that was done was to alter the fiscal and credit policies, and this was also desirable for internal reasons, as soon as the business trend turned upward in 1959. Indeed, in the fiscal year 1959-60, there was a surplus of over $1 billion in the Federal budget, and over a period of fifteen months, taken as a whole, there was no net increase in the money supply. These changes in policy have had the expected effect, but have been reinforced, to some extent, by the psychological change that has taken place here since the beginning of this year. There no longer seems to be a general expectation of a continued rise in prices, and there has not been any talk in the newspapers for many months, as far as I have seen, even about "creeping" inflation. And business men have shown increased concern about profit margins, which have, in many cases, shrunk even though gross turnover has risen.

What has been the effect on the balance of payments? Exports have risen, helped considerably by the boom in Europe, while imports have remained very much the same. As a result, the export surplus in merchandise trade this year may amount to more than $4 billion, as compared with $1 billion in 1959. Net income from investments and services should come to roughly $2 billion. This total of more than $6 billion would be sufficient to cover fully the present rate of U.S. Government expenditure abroad, including expenditure for military purposes and official foreign assistance of all kinds.

But there remains an overall deficit in the balance of payments which is likely to exceed $3 billion, resulting from private long-term investment abroad and the outflow of short-term funds, mainly to Europe, in response to the interest-rate differential which, until recently, has been about 2 per cent. These movements of funds —and the same is true of Government loans— have as their counterpart the net acquisition of foreign assets—and from this point of view the deficit is, perhaps, less perturbing than a deficit on current account would be. However, an overall deficit of $3 billion per annum can clearly not be allowed to continue for ever. In trying to decide how and when the deficit can be eliminated or even reversed, we have to consider particularly the prospect for capital movements in the years ahead, and that will depend, among other things, upon the prospective supply and demand for capital in the United States and Europe.

Demand for Capital

As far as the demand for capital is concerned, it is useful to remember that we can make some kind of forecasts about population trends, which are important because a growing population requires large investments, not only for houses, hospitals, schools, and services, but also for tools and equipment. The experts tell us that, over the next forty years, the annual increase in population in Western Europe will be at the rate of about 0.7 per cent., while in the United States it will be something like 1.4 per cent., and in the rest of the world, nearly 2 per cent.

Because of these trends, I think it is fair to expect that Europe will have more capital available than the United States, or indeed other continents, after meeting its own needs. It is interesting to remember that, before 1914, France, with a relatively small rate of growth of population, was the main centre for the issue of foreign loans.

It is, therefore, to be expected that there may fairly soon be a tendency for capital to flow from Europe to other continents, including the United States. The capital outflow from Europe may well take many forms: the financing of international trade, repurchase of assets now owned by Americans in Europe, purchase of stock exchange securities, as well as direct investment by Europeans in the United States. There is, of course, the question of timing. How soon will this reversal set in? At present, there is a construction boom in Germany, Great Britain, and in many other European countries, which absorbs much capital, but there are few who think that this boom will go on for many years to come. Once it is over, I think that the movement of capital will begin to change direction and I believe the outflow of funds from the United States will very likely be reversed in the not too distant future.

Need for Caution

I do not say this to promise immediate relief for the U.S. balance of payments, but, if relatively cautious policies are continued in the U.S., the task of eliminating the deficit should not be too difficult or too protracted. This is one of the reasons why I am not pessimistic about the value of the dollar, provided always, of course, that sufficient care is taken.

The present gold stock of the United States is now some $18 billion and short-term foreign liabilities—excluding those due to international institutions, which are a kind apart—have reached about the same figure. From a banking point of view, to have 100 per cent. gold backing for short-term liabilities is a very sound position. But every banker knows how embarrassing would be a loss of confidence, leading to a run on his liquid assets, even though he himself has every confidence that his position is good enough to weather any storm. It is not in the interest of those foreigners who hold short-term dollar assets, on which interest is earned, to exchange them for gold yielding no interest, and, as long as the United States pursues policies which seem to them to ensure that the value of the dollar will be maintained, it will be to their advantage to maintain their dollar holdings.

Rise in Gold Price

The recent flurry on the gold market in London is noteworthy in this connection. For a few days the price of gold rose to over $40 per fine ounce, as compared with the official price of approximately $35. Such an increase was unfortunate, because it could have provoked a psychological chain reaction engendering further distrust in the dollar, especially since it seems that at least a proportion of the buying was done on behalf of American clients. I have tried, on the one hand, to make it clear that official policy will certainly not be determined by the misconceptions of speculators, and, on the other hand, to point out that there is more co-operation between the monetary authorities than is generally known. The price has in fact come down to less than $36, but it is, perhaps, too early to say that all the "heat" is out of the market.

Questions have been asked about the financial role that the International Monetary Fund could play in this context. The U.S. Government has substantial drawing rights in the Fund, some of which it could use well-nigh automatically. But being the owner of so much gold of its own, it has preferred to rely on its own resources—which has been a well justified display of strength.

No Recession

From a more fundamental point of view, the balancing of the Federal budget and the cautious credit policies of the past two years have inspired confidence, and, though the recent outflow of funds on capital account has been partly converted into gold by foreign central banks, there has been little or no reduction in the total amount of dollar balances held by other countries.

But people are naturally asking the question: What will happen if there is a recession in the United States, leading to a deficit in the budget and the pursuit of an easy money policy? As you all know, this question has been asked more pointedly during the recent election campaign, but I can assure you that people were wondering about it long before the summer and autumn of this year. I remember a meeting over a year and a half ago in Paris, when I discussed this question with some knowledgeable friends at that time.

In the present period of some relaxation of business activity, it might perhaps be helpful to repeat what I said in a speech this last September at the Annual Meeting of the Board of Governors of the International Monetary Fund. I then indicated that countries had allowed their policies to be determined predominantly by domestic considerations, and that they should, up to a point, try to take an outflow of short-term funds in their stride. But I added that "predominantly" must clearly be taken to mean that other considerations have not to be forgotten. It would indeed be shortsighted to neglect them, even in relation to the main domestic purpose of sustained expansion. If, in an attempt to raise activity by credit and fiscal policies, inflationary pressures are set up, the resulting cost and price increases and weakness in the external balance may soon create conditions under which economic expansion could not be maintained.

If we now try to apply these general principles to the present American situation, I would say, for my part, that the easing of credit conditions recently undertaken by the Federal Reserve system has been the proper policy. There has been a decline of more than $20 billion in the rate of demand for new credit accommodation this year, as compared with 1959, mainly as a result of the stronger budget position, but also because of the reduction in the growth of inventories. In view of the sharp increase in the surplus of exports over imports of merchandise,

it seems to me that balance of payments considerations ought not to stand in the way of the proper measures which should be taken for internal reasons, especially as the transition from an inflationary psychology to the expectation of more stable prices will ensure greater attention to costs. This later consideration is certainly of crucial importance.

The avoidance of cost and price increases is indeed a vital consideration in the formation of U.S. policy, now and in the near future.

Interest Rates

But, before turning to the question of costs, I would like to say a word about interest rates. A policy of pegging either the long-term or the short-term rate of interest by intervention in the market will, of course, not be attempted. This does not mean that credit policy will have no influence on the rate of interest, but it will be more effective if it is allowed to work with the market forces, rather than against them. It is no use trying "to spit against the wind," as a European central banker told me some years ago in a conversation about his own market.

Costs

Returning to the question of costs and the external balance, I think particular attention must be paid to the fact that, on the world markets, generally prices have ceased to increase, and, indeed, that the prices of some raw materials have even declined. Supplies have caught up with demand for fuels (both oil and coal), raw materials generally, and even for most manufactured products. It is my personal belief that the world price level is largely determined by factors outside the United States, even if for some products U.S. demand is of great importance. The imports of raw materials and foodstuffs of Western European countries are nearly three times as high as U.S. imports of the same products. Most of the international commodity markets are situated outside this country and, as I have already mentioned, European competition in manufactured products has become increasingly strong. Before the war, in 1931, when sterling and a number of other currencies were devalued, world prices followed sterling and not the dollar. The United States is self-sufficient in many fields, and often so self-contained that it cannot be expected that the trend of world market prices will really be determined by prices in the United States.

That being the case, it is evident that an increase in costs and prices here will involve the risk of American industries pricing themselves out of world markets. It would obviously be wrong to say that this has already happened, after the very impressive increase in U.S. exports over the last twelve months. Fortunately for the United States—and the world in general —there are many materials and manufactured products, including complicated types of machinery, that the outside world has to purchase in this country, and will continue to do so in the future. Productivity is high here, but wages are also high. All this means—briefly—that from a balance of payments point of view cost increases should be avoided.

But I would also suggest to you that this is the proper policy from the internal point of view, too. I think that, even if there were no balance of payments problem, every effort should be made to avoid cost increases. Let me again quote Keynes. He was, as everybody knows, anxious to ensure that there should be a sufficient volume of demand. But, while strongly recommending an increase in liquidity to overcome a depression, he also laid particular stress on the need to avoid an increase in money wages, and even went so far as to contemplate, as a temporary measure, somewhat lower *real* wages. Professor Alvin H. Hansen, in his book *A Guide to Keynes*, has explained Keynes' views of the effects of an increase in costs on unemployment:

> "In so far as marginal costs rise as output increases, some part of the increase in demand must be dissipated in higher prices. But if, in addition, money wage rates also rise, employment suffers as a result of the higher wages of the already employed workers."

I think it is important to remember what Keynes' views really were, because they are so often misrepresented, and I am glad to see that such a devoted follower of Keynes as Professor Alvin H. Hansen has stated them so correctly.

If we examine past experiences, we generally find that those countries that have combined cost adjustments with credit expansion have fared better than those that did not, certainly as far as recovery in business activity

JOLLYBOARD India's finest hardboard

At surprisingly low prices

JOLLYBOARD, the top-quality Indian hardboard equal to the world's best, has a thousand uses in the factory, office and home. But it costs the same as, if not less than, inferior substitutes.

Thicknesses : 3 mm, 4.5 mm, 6 mm.

Sizes : 12'x4', 8'x4', 6'x4', 4'x4'

Insulation Board will be available soon

Send for free samples today!

JOLLYBOARD

* Very strong, light and durable; is made from wood-fibre, compressed into solid sheets — to British Standard Specification. * Comes in many sizes, thicknesses and attractive surfaces; a versatile building and decorating material. * No laminations, plies or knots; won't split or crack. * Easily sawn to any shape, easily affixed to any surface. * Quicker to work with, finer in finish. Takes paint, varnish or polish perfectly. * Certified by the Government Test House, Calcutta.

JOLLY BOARD

JOLLYBOARD—wood as you want it

REHABILITATING COTTON MILLS

LABOUR LEADERS' CHARGE OF FRITTERING OF RESOURCES REFUTED

OFF and on, the cotton mill industry comes in for severe criticism at the hands of labour spokesmen who accuse it of great exploitation. In their exuberance to win popularity among workers, these spokesmen allege that the industry is making unduly heavy profits and that it has not cared to pay much attention to the problem of rehabilitation. Only recently, Mr. G. D. Ambekar, a leading labour leader, declared, at a meeting of the Steering Group on wages, that the rehabilitation problem would not have arisen if only the cotton mills had set apart sufficient funds during the boom period. His contentions were as under:

Since 1946, the allowances made by various Tribunals for the cotton mill industry in Bombay comes to Rs. 90 crores whereas the actual amount spent has fallen far short of this figure.

There is no guarantee, even if resources for rehabilitation are made available, that the machinery will get rehabilitated.

Only the pre-war machinery and equipment give rise to the problem of replacement cost.

These allegations have been rebutted by a spokesman of the Indian Cotton Mills Federation who has done some painstaking research into the relevant data. His analysis of the trend of dividends distributed by Bombay mills in pre-war years reveals that, even if a dividend of 6 per cent. is considered reasonable, the dividend payment of pre-war years fell short of it by Rs. 8.76 crores. Actually, the then rates of interest and even the return on Government securities were much higher than what they are at present and, on this basis, a dividend of 6 per cent. for that period must be considered to be less than fair. Apart from the shortfall in dividend, the shareholders lost Rs. 12 crores of their capital in the process of liquidation, reorganisation and reconstruction of mills during the period 1923 to 1939. The total loss to shareholders thus comes to Rs. 20.76 crores. The shareholders could recoup just only a little over half of their losses during the period 1940 to 1958 when the excess payment of dividend came to Rs. 11.49 crores on the basis of 6 per cent. on paid-up capital plus 2 per cent. on free reserves; actually, on that part of reserves which is invested elsewhere and not used as working capital, a higher return in the shape of "extraneous income" is permissible.

Dividend Payments

The following table gives the particulars regarding dividend payment in pre-war years and during the period 1940 to 1958:

Pre-war Period

(In lakhs of rupees)

	1923	1939	Variation over the period 1923 to 1939
Paid-up capital	19,19	12,49	—6,70
Dividend calculated at 6% ..	1,15	75	..
Dividend actually paid	94	45	..
Difference	—21	—30	—8,76

1940 to 1958

	1940	1958	Cumulative total for the period 1940 to 1958
Paid-up capital	12,81	26,51	..
Dividend*	77+nil	1,59+32	30.74
Dividend actually paid ..	52	2,18	42.23
Difference	—25	+27	+11.49
Average cost of living index ..	112	393	..
Dividend* adjusted to cost of living index	86	7,51	93.63
Difference between dividend actually paid and dividend adjusted to cost of living ..	—34	—5,33	—51.40

* Dividend calculated at 6 per cent. on paid-up capital *plus* 2 per cent. on free reserves calculated as paid-up capital. + All reserves. — Gross block.

The adjustment of dividends to rise in cost of living needs a word of explanation. This is simple. Since the wage earners are being compensated for the rise in the cost of living index, there is no reason why the shareholders also should not be compensated similarly. The amounts that should have been distributed during the period 1940 to 1958, merely to maintain the dividends (at the assumed modest rate of 6 per cent. per annum) at the pre-war value of the rupee come to Rs. 93.63 crores, whereas the dividends actually paid amounted to only Rs. 42.23 crores. This means that the shareholders had received Rs. 51.40 crores less than what they should have received. The millowners' spokesman, however, does not contend that the dividend payment must be allowed fully to neutralise the rise in cost of living index. But even if the rise is neutralised to the extent of 50 per cent., the dividend payment falls short by no less than Rs. 26 crores.

Writing Down of Capital

Another pertinent point to be noted here is the progressive writing down of paid-up capital in pre-war years because of depression. As a result of this development, the capital of Rs. 12.81 crores in 1940 was much lower than what it should have been. Then there was the loss of a good deal of capital equipment due to liquidation in the pre-war period. Elucidating this point, the millowners' spokesman observes:

"In 1924, Bombay mills had a paid-up capital of Rs. 19.28 crores, as against an installed spindleage of 34.27 lakhs and loomage of 71,133. In 1940, the paid-up capital went down to Rs. 12.81 crores, as against an installed spindleage of 27.49 lakhs and loomage of 65,177. Even in relation to the reduced equipment of the mills, the paid-up capital of 1940 should have been in the neighbourhood of Rs. 16.50 crores, as against Rs. 12.81 crores (actual). The return should, therefore, be calculated on a capital of this size. In 1958, the industry had a paid-up capital of Rs. 26.51 crores, as against a gross block of Rs. 84.47 crores, which shows that the paid up capital is far too low in relation to the size of the industry.

"Still another factor is the applicability of Section 23A to some 18 companies, out of some 50 companies comprising the Bombay cotton mill industry, and these include mills like Khatau, Shree Ram, Finlay group, Mafatlal group, whose dividend payment is governed by the provisions of the Statute. These are high-dividend paying mills and, but for Section 23A, their dividend distribution would have been much less.

"All this will show that the oft-repeated charge against the industry of having frittered away its resources is totally unfounded.

"Here, I would like to underline the fact that calculation of dividend has been made above at 6 per cent. on paid-up capital and 2 per cent. on reserves, because these rates have been mentioned in the bonus awards. The awards themselves have clarified that the various figures taken by them are notional and the actual disbursement need not follow this notional pattern. Even closely controlled industries like steel, cement and coal are allowed to distribute dividends at rates much higher than these notional rates and, if any industry, including the textile industry, is going to be bound down to dividends at these rates, there will be chaos in the financial structure of industries with disastrous consequences to future industrialisation of the country."

The charge that the cotton mills have not set aside sufficient amounts for rehabilitation is also examined by the aforesaid spokesman. In this connection, the readers' attention is invited to the following table:

(In crores of rupees)

	1958	1946	1939
Paid-up capital	26.51	15.11	12.40
Reserve fund	18.64	14.57	4.52
Equalisation of dividend fund	1.45	1.09	0.27
Insurance fund	0.29	0.39	0.29
Sundry funds	9.08	4.35	0.89
Depreciation fund and written off ..	48.91	25.58	14.15
Total ..	100.48	61.09	32.31
Value of the block (at its original price).	84.47	37.37	33.45

The foregoing table shows that, between 1946 and 1958, the total of paid-up capital and reserves went up by Rs. 39.39 crores and, at the same time, the gross block also increased by Rs. 47.10 crores. The millowners' spokesman is unable to understand how Mr. Ambekar got the figure of Rs. 90 crores as the amount allowed to the industry by Tribunals. Perhaps, it represents, according to him, the total of some hypothetical figures which may include the so-called allowance for depreciation and rehabilitation even to mills incurring losses as a result of which the mills concerned could not avail themselves of these allowances. Proceeding, he asks: "In any case, the mills not having frittered away their profits on payment of dividends, where else could the money have gone, unless payment of bonus is also to be regarded as a frittering away of resources?" "The industry," to quote him again, "has invested in

ORDER LISTS OF TEXTILE MILLS FULL

RAW COTTON SUPPLY VERY TIGHT

From Our Special Correspondent

MANCHESTER, 15*th November*

MANCHESTER LETTER

A CHANGE in Administration in the United States is a matter of major importance, from both political and economic points of view. The return to power of the Democratic Party is certain to have substantial repercussions which cannot fail to leave their mark on the cotton trade. At the same time, the new leaders will have to settle down before reactions can be expected and, meanwhile, some hesitation must be anticipated among operators dealing in the raw material and finished products.

Arrangements have already been made to cope with future agricultural programmes, which cannot afford to stand still pending the results of elections, so that the effect of the change may be somewhat delayed. Other aspects of the political scene, however, may be revised as new measures are adopted to deal with international affairs. The President-elect has the reputation of being a man of action and, in the present unsettled political arena, the rest of the world can only stand by and wonder how the many problems involved will be tackled by the new regime.

Democratic policy in the United States has invariably followed the system of a more controlled economy, involving rigid clamps on agricultural acreage and financial aid for the farmers. Under the Republican Administration, a similar, though less dogmatic, programme was adopted, although its opponents constantly criticised the effect on the national budget and the burden which it placed on the taxpayer. An expansion of measures designed to hold the economy in check must be forecast, with a consequent continuation of the shackles which still restrict free trading in the raw material.

Tight Supply Position

Quotas establishing a bigger national cotton allotment in the United States for the 1961-62 season will be voted on by farmers next month. On the basis of a rise of nearly 2,400,000 acres planned by the Department of Agriculture, a crop of over 15,500,000 bales would be obtained. It has been officially stated that the increase in acreage has been approved "in order to maintain a desirable supply position."

Meanwhile, in this country, the spot situation has become exceedingly tight. Visible supplies held in Liverpool and Manchester earlier this month had declined to below 140,000 bales, plus nearly 50,000 bales on its way to British ports. Although this tendency is not altogether unusual at this time of the year, when new crop supplies are only just beginning to cross the Atlantic in any quantity, the availability of the raw material is of considerable importance to spinners when order lists are so full and every effort is being made to expedite deliveries.

Sudden strikes at the docks can have a damaging effect on the flow of such commodities, in view of the substantial volume of trade being done direct with suppliers in producing countries, underlining the dangers of trusting to the maintenance of shipments when the mills are so busy. The drop in spot supplies indicates the reluctance of merchants to replace stocks which have moved off rapidly as a result of the recent upsurge in yarn and cloth buying.

Extra Long Staples

A complete transformation has taken place in the extra long-staple cotton market during the past two years. Production is now approaching 2,000,000 bales annually, representing an increase of more than 50 per cent. as compared with the preceding five-year average, according to the International Advisory Committee. As in the case of other varieties of cotton, consumption has risen almost dramatically, so that the larger supplies have been well absorbed and the surplus, which threatened a massive accumulation of stocks in the 1953-59 season, did not materialise. Demand from Communist countries has been an important factor in providing equilibrium between the growth of such cotton and the offtake.

Production last season was held in check by acreage restrictions in Egypt and sharply reduced yields in the Sudan. The tendency towards a surplus was reversed and total disappearance of long-staple supplies exceeded output by a fair margin. The strength of the market resulted in a price rise of as much as 10 cents per lb.

Big changes have lately taken place in the consumption of extra-long staples. From being a highly specialised product, about a quarter of which was used in British mills, supplies are now being dispersed to many different countries. Last season, Lancashire absorbed only about 18 per cent. of these staples, while European use of such cotton widened considerably. India is now challenging Britain as the largest single user and domestic consumption in Egypt has improved from negligible quantities to about 80,000 bales.

Cotton Board Changes

Mr. A. G. B. Burney, who has directed the big reorganisation schemes in the cotton industry, is now relinquishing the post of Director of Reorganisation at the Cotton Board headquarters in Manchester. Mr. Burney, a partner in Binder, Hamlyn and Co., accountants, will be succeeded by Mr. E. R. Thompson, another partner, who will assume responsibility for the administration of the redundancy part of all the reorganisation schemes. Mr. R. Hill has been appointed Director of Re-equipment to take charge of this side of the reorganisation. Announcing this, the Cotton Board paid tribute to Mr. Burney's services in the formulation and introduction of the reorganisation schemes.

Internal appointments also announced by the Board include the promotion of Mr. T. D. F. Powell to the post of Deputy Director-General of the Board with an overall responsibility for reorganisation and re-equipment. Mr. J. H. P. Hadden will succeed him as a Director of the Board's Overseas Trade Department.

Cotton Plan "Courageous"

The big reorganisation scheme now in progress to streamline the Lancashire cotton industry to meet modern conditions is one of the most courageous and radical operations which any industry in any part of the world has ever undergone. Dr. Kurt Dieterich of Bavaria, the newly-elected President of the International Federation of Cotton and Allied Textile Industries, said this in Manchester when he made his first official visit to the city and to the headquarters of the 17-nation International Federation. "Cotton industrialists on the Continent follow with admiration the speed and determination with which the programme is being carried out," he said.

Describing what was happening to the Lancashire industry as "something of a test case," Dr. Dieterich said that the growing industrialisation of underdeveloped areas meant that old-established industries in countries with high standards of living and equally high costs of production were finding themselves in a completely new situation. They were being compelled to make bold and sometimes painful adjustments in order to meet changed conditions. One of the most important tasks of the future was the need to promote the advance of the developing countries whilst safeguarding and maintaining the prosperity of old-established industries elsewhere. The problems involved would be discussed at the next annual meeting of the International Federation to be held in Japan. "We have come to the conclusion that a solution can only be found jointly," he said.

Fibre Consumption

Rivalry for the consumer's purse has resulted in a somewhat smaller share being taken up by textiles as compared with the many other items of equipment on which surplus cash may be spent in areas where living standards are high. Hire purchase, dampened as it may be by the credit squeeze and other restrictionist policies, still encourages the consumption of electrical durable goods, such as washing machines, refrigerators, television sets and, of course, cars. Many other services, holidays and entertainment also compete for the available purchasing power. A factor which is sometimes overlooked in assessing the volume of fibre consumption is the modern use of lighter fabrics in clothing, furnishings and industrial equipment. A long-term trend towards lighter clothing reflects not only the drift of population to the cities, but the development of car heaters and more central heating at home.

Changing styles also emphasise this tendency, including the decline in popularity of double-breasted men's suits, as well as the favour given to two-piece garments. In furnishings, the use of electric blankets has resulted in lighter weight bed linen, as well as fewer coverings. Improvements in fibre quality have enabled industrial yarns, such as tyre cord, to provide a better service, although they weigh less.—*All Rights Reserved.*

EXTRA LONG-STAPLE COTTON

INDIA LARGEST IMPORTER IN THE WORLD

IN its October 1960 review of the world cotton situation, the International Cotton Advisory Committee, Washington, reports that a complete transformation has taken place in the extra long-staple cotton situation. Production of extra long-staple cotton, that is, cotton of staple length over 1.3/8", is now approaching two million bales annually, an increase of more than 50 per cent., as compared with the preceding five-year average. As in the case of other varieties of cotton, consumption has recorded a spectacular rise, so that supplies have been well absorbed and the surplus, which had threatened a massive accumulation of stocks in the 1958-59 season, did not materialise. Demand from communist countries has been an important factor in bringing about equilibrium between supply of and demand for extra long-staple cotton. This, however, also made for some uncertainty in the demand for these varieties.

It is necessary to view these developments in their proper perspective. To a large extent, extra long-staple cotton is a special group of cotton and, therefore, acreage, consumption, exports, prices, etc., do not necessarily move in sympathy with other staples. Evidence of this is to be found in the decline in production of extra long-staples in 1953-54, while production of other staples showed a marked increase, the apparent failure of the extra long-staple to share in the general expansion of cotton consumption in recent years, lower exports in 1956-57 when trade in other staples was at a maximum and the marked rise in extra long-staple prices in 1956-57 when cotton prices were generally declining. Fundamentally, these divergent movements between extra long-staples and other cottons reflect differences in supply and demand but the influencing factor may be, to some extent, autonomous, by virtue of the greater concentration of production in a relatively small number of countries (mainly Egypt, Sudan, Peru and the U.S.). Experience of past two seasons, namely, 1959-60 and 1958-59, however, shows that, far from being an exclusive group, immune from the influences affecting other cottons and competition from them, extra long-staples display, at times, a fair degree of price elasticity. In the 1958-59 season, for instance, the low price of extra long-staple cotton led to its substitution for shorter staples.

Pattern of Consumption

A notable development of the 1959-60 season is the change that has occurred in the pattern and quantity of consumption of extra long-staple cotton. Britain, which accounted for 23 per cent. of the total free world consumption two years ago, was responsible for only 18 per cent. in 1959-60. But the rate of consumption in Europe, as a whole, increased to over 70 per cent. in the last season, as compared with only 23 per cent. in the previous two years. Consumption in Italy doubled last season. Marked increases were shown by virtually all other countries. India was challenging the U.K. as the largest single consumer of this type of cotton. Consumption in Egypt itself, which was virtually negligible a few years ago, had risen to about 80,000 bales last season. Currently, consumption is running at a still higher rate, namely, 1.25 million bales per annum which is over 50 per cent. higher than the rate two years ago.

Total world exports of extra long-staple cotton reached 1.9 million bales last season. Egyptian exports rose by 38 per cent. over the previous year's. Exports from Sudan, though below the 1958-59 level, were still high in relation to reduced availability.

The following table gives the destination-wise breakdown of exports from the principal producing countries (mentioned above) during the last five years:

(In 1,000 bales of 478 lbs. each)

Countries and regions	1959-60	1958-59	1957-58
U.K.	211	288	167
W. Germany	149	107	54
Italy	126	94	52
France	87	68	76
Total W. Europe (all countries)	730	720	513
India	267	145	115
Japan	57	89	25
U.S.	126	30	103
Total free world	1,204	970	766
U.S.S.R.	208	209	37
China	171	116	62
Total Soviet bloc (all countries)	673	646	330
World Total	1,877	1,616	1,096

It is evident from the above table that India was the largest importer of extra long-staple in 1959-60, its share having been of the order of 267,000 bales which is about double the quantity imported by it in the previous season. In the previous four seasons, this country ranked second, the first position going to the U.K., though in 1959-60 she ousted the U.K. to top the list of importers.

As regards the prospects for the current season, production in 1960-61, according to the Committee's monthly survey, should, given normal conditions, be equal to the last season's total of 1,875,000 bales and probably higher but, with a reduced carryover, supply will be rather less than in either of the last two seasons. Present estimates are that supply will be 2,573,000 bales, comprising a carryover on 1st August 1960 of 622,000 bales and estimated production of 1,951,000 bales, as compared with 2,730,000 bales in 1959-60.

Outlook

Although the Committee does not make any forecast of consumption in the current season, it points out that, if consumption continues at around its present rate (1,250,000 bales per annum), supply and disappearance of extra long-staple cotton should be in equilibrium. Chances on this score, according to the review, would be reasonably bright, provided prices are maintained at competitive levels and the overall economic outlook, particularly in Western Europe, remains favourable.

Unquestionably, a major factor in the improved situation in extra long-staples is the demand from the communist countries; but increased dependence on them could also work the other way round. This has injected an element of uncertainty into the picture. As far as the present season is concerned, it looks as though the demand from these countries would continue to be sizable, thanks to the setback suffered by the crop in the U.S.S.R. and China.

The position of the U.S., though marginal as far as extra long-staple cotton is concerned, is, according to the Committee, fraught with difficulties. Supima prices in the U.S. are still out of parity with competing growths and this situation over a period of time, had led to the development of a surplus situation just as serious, if not more, than that which existed in upland cotton a few years ago. The total supply of extra long-staple cotton in that country is estimated at 300,000 bales while disappearance is put at less than half this quantity. In addition to this, there is the stockpile amounting to over 200,000 bales. So far, the export subsidy (the current rate is 6 cents per lb.) has not been applied to this type of cotton and the annual import quota has remained unchanged at 83,000 bales. Acreage restrictions have been intensified and, consequently, production is equivalent to only about half of domestic consumption and considerably less than imports.

EGYPTIAN COTTON EXPORTS

Exports of cotton from Egypt during the 1959-60 season (August-July) aggregated 1,837,000 bales (500 pounds gross). This was 33 per cent. above the 1,380,000 bales exported in the previous season, and the highest since 1933-34 when 1,867,000 bales were exported, according to the United States Department of Agriculture. Exports of all varieties, except Ashmouni, increased during 1959-60 as compared with 1958-59 with the largest gains in Menoufi and Karnak. In December 1959, Egypt banned exports of lower grades of Ashmouni to assure adequate supplies for domestic use.

The Soviet Union continued to be the largest buyer of Egyptian cotton, with Communist China second. However, the proportion of Egypt's cotton exported to communist countries decreased from 66 per cent. (908,000 bales) of total exports in 1958-59 to 56 per cent. (1,030,000 bales) in 1959-60.

In an effort to prevent re-exports this season, the Egyptian Government announced plans to issue export licences to Egyptian exporters only up to the known capacity of Communist countries to absorb cotton for their own needs. Also, European Common Market countries will be requested to buy cotton directly from Egypt.

SUGAR INDUSTRY IN PAKISTAN

PRODUCTION TO BE DOUBLED IN NEXT FIVE YEARS

THE sugar industry in Pakistan has launched upon an ambitious programme of doubling white sugar output from the present annual rate of 150,000 tons to 300,000 tons by 1965. The additional output is proposed to be achieved partly by setting up new mills and partly by expanding some of the existing units. Four new mills, with a daily cane crushing capacity of 1,000-1,200 tons each, will be established in East Pakistan by the Pakistan Industrial Development Corporation, as private capital is unable to do it, and three units, with a capacity of 1,500-2,000 tons each, are earmarked for private enterprise in the Western wing. If these plans are implemented, according to schedule, the two wings will be producing, by 1965, 140,000 tons and 160,000 tons of sugar, respectively, or a total of 300,000 tons.

The production target for sugar fixed to be achieved in 1965, namely, 300,000 tons, falls short of the estimated requirements of about 500,000 tons, taking into account the increase in population and changes in consumption habits in a developing economy. A part of the gap of 200,000 tons thus will be met by increased supplies of *khandsari* sugar, and no provision is made for imports. It is made clear by the Pakistan Planning Commission that "some continued austerity will have to be observed in consumption, mainly because of the high capital and foreign exchange costs involved in adding to capacity."

The total outlay on the development programme for white sugar is put at Rs. 16.6 crores, of which Rs. 14.0 crores will be spent on the starting of new mills and Rs. 2.6 crores on modernisation. The bulk of the outlay—Rs. 10.6 crores—will be privately financed, the balance of Rs. 6.0 crores being the share of the Government. In addition to this amount, about Rs. 2.6 crores will be spent in the private sector on the development of *khandsari* industry. An increased production of 30,000 tons of *khandsari* is to be met from 30 mills each of 100 tons daily cane crushing capacity—20 in East Pakistan and 10 in West Pakistan. Processing of cane into *gur* will remain important. Further, research and development of desi sugar production will be encouraged by the Small Industries Corporation.

Cane Development

In view of the marked expansion envisaged in the production of white sugar, *khandsari* and *gur* thus, great stress is naturally laid on the need for improving conditions in the sphere of sugarcane cultivation. The target for cane output fixed for 1964-65 is 20.80 million tons, which represents a rise of 35 per cent., as compared with the 15.43 million tons harvested in 1959-60. The share of West and East Pakistan in this target is 15.34 million tons and 5.46 million tons, as against 11.59 million tons and 3.84 million tons, respectively, in 1959-60. Out of the net increase of 5.37 million tons, only 12 per cent. will be raised by augmenting the area sown to the crop, the entire balance being achieved through a more intensive system of cane growing. The percentage contribution to increased output to be achieved under this programme is 46 from use of fertilisers, 13 from improved seeds, 12 from plant protection measures, 4 from improved water and drainage, and 13 from adoption of other cultural practices.

There are at present 14 sugar mills in Pakistan—six in the Western wing and eight in the Eastern wing. The aggregate rated production capacity of these mills and the three units under construction is estimated at 196,000 tons.

The *per capita* consumption of white sugar in Pakistan is very low, being just 5 lbs. The daily diet provides only 0.021 ozs. of sugar, equivalent to 195 calories, which is said to be 70 calories or about 25 per cent. less than what is medicaly required (240 to 260 calories) for normal health. If the *per capita* sugar consumption is to be raised to 15 lbs., the sugar industry will have to be expanded more markedly than that envisaged in the second Plan. According to Mr. S. Zaman, Chairman of the Sugar and Power Alcohol Panel, West Pakistan needs 10 new sugar mills of 1,500 tons daily cane crushing capacity and East Pakistan 23 units of 1,000 tons capacity each.

The most pressing problem confronting the sugar industry in Pakistan is the difficulty of procuring enough sugarcane of proper type for a full crush. Drawing attention to this aspect, Mr. Zaman emphasised, in his speech at the first meeting of the Panel sometime last month, that a higher yield per acre and a larger sucrose content would benefit the sugar mills as well as the cultivators. He said:

"A larger cultivation of improved varieties of cane will incidentally release lands for other crops. Alternatively, the acreage now under sugarcane will feed additional sugar mills to augment sugar production. Not only the consumers will benefit but this will also enable the industry to produce sugar cheaper and later to enter the export markets.

"The objective of attaining a higher yield per acre will not be attained, unless provision is made for proper seedcane, ample water for irrigation, suitable manures and fertilisers to meet soil deficiencies, improved agricultural implements, adequate plant protection measures, agricultural credit and agronomical guidance to the cultivators. For providing these essentials, a master plan as conceived in East Pakistan should be prepared for the whole country for development of cane and its scientific cultivation."

Sugar Prices

Simultaneously with the aforesaid measures, Mr. Zaman urged, steps must be taken to provide adequate transport facilities, greater efficiency in production methods, training of personnel, establishment of a central sugarcane committee to co-ordinate problems on agricultural and technological research, development of by-products of sugar (molasses and bagasse), and manufacture of sugar mill machinery and spare parts. He also wanted fixation of sugar prices on a realistic basis, taking into account allowances for depreciation of plant, machinery, etc., of mills. It may be noted here that the manufacturing cost per maund of sugar ranges from Rs. 6-1-2 to Rs. 11-1-3 in West Pakistan and from Rs. 7-0-6 to Rs. 16-10-9 in East Pakistan. Mr. Zaman said: "Such wide differences indicate that there is a great deal of room for effecting economy by improving efficiency. This matter should receive the immediate attention of millowners."

The incidence of cane cost in sugar manufacturing is said to be higher in Pakistan than in India, being Rs. 19-4-2 to Rs. 19-11-6 per maund of sugar in West Pakistan and Rs. 24-11-2 to Rs. 30-8 in East Pakistan, as against Rs. 14-8 in India, which itself is high as compared with other sugarcane producers in the world such as Cuba, Java and Australia. Alluding to this, Mr. Zaman observed:

"There is, therefore, a great need for us urgently to increase the yield of cane per acre in both the wings of the country. It is not a feasible proposition at this moment to reduce the cane price, as it will hit the cane supply as well as the interests of the cultivators very severely. It will immediately reduce the area under cane. It is hoped that, through the efforts of the newly set up Sugarcane Development Board in East Pakistan and a similar body in West Pakistan, the cane supply per acre will increase to permit a reasonable reduction in the sugarcane price."

The sugar mills in Pakistan are at present allowed a profit of Re. 1-5 per maund without regard to their capital investment. In the opinion of Mr. Zaman, this is one of the most serious deterrents to the expansion of the sugar industry. This is illustrated by reference to an old mill and a new one with a rated capacity of 272,000 maunds. At the rate of Re. 1-5, the total profit comes to Rs. 3.57 lakhs. The capital required for a new mill is over Rs. 2 crores, as against less than Rs. 50 lakhs in the case of the old mill. On this basis, the return on investment will work out to only 1.78 per cent. for the new mill, whereas the old mill will get a return of 7.14 per cent. Mr. Zaman pointed out that nothing could be more detrimental to the expansion of sugar industry and efficiency of the individual mills than the allocation of an *ad hoc* profit-margin which takes no account of the actual capital investment and cost of replacing old assets.

historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

ANOTHER BUMPER CROP OF COFFEE EXPECTED

OUTLOOK DOES NOT SEEM TO BE PROMISING

THE latest estimate of India's 1960-61 coffee crop made by the Marketing Committee of the Coffee Board is a record output of 52,290 metric tons, comprising 30,885 metric tons of arabica and 21,405 metric tons of robusta. This is more or less in line with the earlier expectations of the Coffee Board announced in April last, namely, that the 1960-61 season's crop would exceed 50,000 metric tons, with a possibility of touching 55,000 metric tons, thanks to the satisfactory blossom showers in all planting districts, except parts of Hassan and North Coorg. If the latest estimated crop were to be realised, it would represent an increase of about 3,000 metric tons over the current season's crop, the receipts of which into the pool upto 31st October 1960 were of the order of 49,160 metric tons. With this increase, the coffee output in India will have maintained the upward trend for the sixth year in succession and will have more than doubled itself in six years, from 25,025 metric tons in 1954-55, to be precise.

The receipts of coffee in the 1959-60 pool up to 31st October 1960, as stated above, amount to 49,160 metric tons, comprising 25,181 metric tons of plantation, 6,667 metric tons of arabica cherry and 17,312 metric tons of robusta. This represents an increase of about 3,000 metric tons over the receipts (46,178 metric tons) on the corresponding date of 1959. The increase is mainly accounted for by plantation varieties which have gone up from 17,819 metric tons to 25,181 metric tons. To a large extent, this has been offset by the decline in arabica cherry from 7,464 metric tons to 6,667 metric tons and a more sizable fall in robusta from 20,895 metric tons to 17,312 metric tons.

Internal Offtake Lower

The trend of internal offtake of coffee is not in consonance with that of production. On the contrary, the internal consumption during the first ten months of 1960 is a shade lower at 24,380 metric tons in the corresponding period of 1959. The quantity sold for export upto 9th November 1960 amounts to 14,127 metric tons, of which plantation accounts for 10,442 metric tons, arabica cherry for 2,124 metric tons and robusta for 1,561 metric tons. Tenders have been invited for an export sale of a further quantity of 1,806 metric tons in the current month, which, if it materialises, will bring the total export sales to 15,933 metric tons, leaving a balance of 4,667 metric tons to be sold for export out of a total allocation of 20,600 metric tons from the 1959-60 crop, as against 2,000 metric tons at the end of November 1959 in the allocation out of the 1958-59 crop of 17,000 metric tons. This brings the total surplus out of the current year's production to over 9,000 metric tons still to be marketed.

Despite the larger production expected in 1960-61, the Marketing Committee has not raised the export allocation out of the next crop. It has earmarked only 20,020 metric tons, comprising 13,699 arabica and 6,321 robusta.

Outlook

The rising trend in internal production, in the context of the predictions that stocks of coffee with producing countries are likely to grow, makes the outlook for Indian coffee not promising. The Food and Agricultural Organisation of the United Nations has forecast that the world output in the next crop year (1960-61) is likely to be substantially less than the 1959-60 record of 4.5 million metric tons, consequent on the fall in Brazilian output to less than 2 million metric tons on account of adverse weather in the last months of 1959. "However, the size of the 1959-60 crop was," it adds, "only in part due to favourable weather and reflects to a greater extent the coming into bearing of large new areas planted with high-yielding strains. Barring very bad weather, this would suggest a continuation of crops between 4.0 and 4.5 million metric tons in the years to come." Commenting further on the outlook for world coffee, the F.A.O. observes in the *State of Food and Agriculture* 1960:

"With ample stocks in importing countries, world imports are not likely to show further gains in 1960. United States imports in the first six months of 1960 were 5 per cent. lower than a year before. However, the limitation of supplies, if economically feasible for producing countries, may effectively stem the price decline in the short run. Although world imports and domestic consumption of coffee will rise in the coming years, it is unlikely that the annual increase will exceed 5 per cent. even at present reduced prices. The proposal has been advanced to extend the International Coffee Agreement for another year and consider, in the meantime, the conclusion of an export agreement for five years, to provide time for producing countries to enact and carry out measures of production control, at present still at the planning stage. Unless such measures are taken, stocks will continue to accumulate in producing countries and could reach twice their present size three to four years from now."

* Crop years 1959-60 and 1958-59.
† 30th June 1960 and 30th June 1959.

The world production of coffee in 1959-60 amounted to 4.5 million metric tons, representing an increase of over one million metric tons, while the expansion in world imports from 2.2 million metric tons to 2.5 million metric tons was not commensurate with rise in output, so that the stocks with producing countries enlarged from 1.6 million metric tons to nearly 3 million metric tons, as will be noted from the comparative table at the foot of the previous column.

More than 80 per cent. of the increase in world production in 1959-60 was due to the record crop in Brazil, unofficially placed at about 2.5 million metric tons. Large crops were also harvested in Columbia, Mexico, the main African growing regions and India.

There was an increase in world consumption "stimulated by the general reduction in retail prices, relatively low consumer stocks and good economic conditions in the main markets." An encouraging feature of this trend is the rise in imports into Eastern Europe, which, in 1959, took 50 per cent. more coffee than in the previous year. Even so, the imports of these countries are said to be only a little over 40 per cent. of the pre-war total.

The restriction on exports under the International Coffee Agreement has been mainly responsible for the large additions to stocks in the main producing countries, as on 30th June 1960, the three largest producing countries alone accounting for an increase of 1.4 million metric tons. At 3 million metric tons, the stocks with these countries were equivalent to one year's world consumption. The regulation of exports, however, effectively prevented a price slump. Between March and June 1960, coffee prices fluctuated within a range of 5 per cent. Nevertheless, the average prices in 1959 were about 20 per cent. less than in 1958 and were the lowest since 1949. The high quality coffee (milds) was in greater demand and its price was, therefore, relatively better.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common : every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia : these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

NEW PUBLICATIONS

Protection of Trade Union Funds and Property. By International Labour Office, Geneva. Price: $2.00 or 12 shillings. Pages: 200.

MANAGING the affairs of a trade union has hitherto been considered in this country to be the exclusive concern of the unions. Although the Indian Trade Union Act contains certain provisions requiring the unions to submit returns and prescribing the uses to which trade union funds could be devoted, etc., in practice, trade unions have almost unfettered freedom in running the show. It was only recently that an amendment was made to the Trade Unions Act, empowering Registrars of Trade Unions to inspect the books of account, membership registers, etc., of trade unions. This is not surprising, considering that, even in some Western countries, where the trade union movement has taken firm roots and has a long history, administration of trade union funds and property and their protection against misuse came to be regarded as a subject of public interest and concern only recently. That all was not well with trade union leadership and that sound administration of trade unions could not be taken for granted was abundantly proved by the shocking story of corruption in the U.S. trade unions unfolded before an investigation sub-committee of the U.S. Senate (McClellan Committee) in 1955. But it is also in the United States, a country where trade union funds run into millions of dollars, that there is sufficient awareness of the extent and importance of the problem. Leading trade union organisations like the A.F.L.-C.I.O. themselves have taken firm action to put an end to financial maladministration.

The I.L.O., which has come to be regarded as a sort of an international guardian of the trade union movement, also took cognisance of this problem. A Committee on Freedom of Employers and Workers Organisation, appointed in 1955, reported that the question of reconciling the need to ensure that trade union funds are protected against misuse with the principle of freedom of trade unions from Governmental interference constituted a real problem in a large number of countries and that the methods adopted in law and practice for solving it varied widely from country to country. It felt that international consideration of the question of protecting trade union funds against misuse was desirable and that protective measures were particularly necessary in the early stages of development of trade unions. It also suggested to the Governing Body of the I.L.O. that the Director-General might be asked to prepare an objective study on this question. The publication under notice was prepared in pursuance of this suggestion.

It reviews, in detail, the relevant law and practice in force in various countries. The first chapter deals with the existing international standards. Chapters two to eight are devoted to a study of national law and practice, with particular reference to the following subjects: sources of trade union funds and property, purposes for which trade union funds and property may or may not be used, internal administration of trade union funds and property, voluntary measures to secure or encourage good trade union administration, supervision of trade union financial administration by public authorities, sanctions in respect of unauthorised use of trade union funds and contravention of legislative provisions, disposal of trade union assets on winding-up or dissolution. The conclusions which could be reached from the study are summarised in the last chapter.

The publication, which is objective as well as well-documented, is highly useful for reference purposes. All trade unions in the country, as well as employers' organisations and Government Departments concerned with labour, must make it a point to have a copy of it in their respective offices.

Industrial Finance in India. By Dr. P. C. Jain. Published by Suneja Book Centre, 24/90 Connaught Circus, New Delhi. Pages: 300. Price: Rs. 8.00.

This book is an elaboration of the author's thesis for which a doctorate was conferred on him by the University of Allahabad. It covers the usual ground traversed by books with the same title. One of its principal merits is that it deals with almost every type of agencies and institutions providing finance for industry in India. The reader is thus provided with a picture of industrial finance in its entirety.

Although the treatment is, by and large, descriptive, the incorporation of much useful, up-to-date data into the text and comparative studies of the sources and methods of providing industrial finance in foreign countries make the book interesting and instructive reading.

Among chapters of special interest to students of Indian economics are those dealing with the role of institutional investors in industrial finance, the part played by the Government in financing private industries and financing of industries in the public sector. The chapter reviewing the capital structure and sources of finance of major industries will facilitate a better understanding of the current problems of these industries. But loose statements such as "L.I.C. will be allowed to act as a speculator also" (page 159) and the explanation that follows and sweeping generalisations (e.g., "L.I.C. is more enterprising than insurance companies before nationalisation" (page 160) mar the objectivity of the book.

* * * *

N.B.—The author of the book must not be confused with Prof. P. C. Jain of the Allahabad University who, too, has several publications to his credit.

Practical Cost Accounting for Cotton Mills. By M. S. Srinivasan. Publishers: Popular Book Depot, Lamington Road, Bombay-7. Pages: 166. Price: Rs. 10.00.

Application of scientific costing in the textile industry is in its infancy. At this juncture, when the industry is admittedly in need of major rehabilitation and modernisation, this useful publication has been brought out by the efforts of Mr. M. S. Srinivasan, who has considerable experience in the line.

The principles and assumptions made by the author generally fit in with the current thoughts on the subject. The author has done well to devote a chapter to "Standard Costing" and another to "Quality Control." Without being academic, the author has tried to approach the problem of quality control from a perspective more in tune with Cost Accounting. The chapter on the "Information to Management" should prove a helpful guide on the vital aspect of cost control in relation to the management functions and responsibilities. This lucidly written book gives a good number of useful illustrations and charts.

Written for practical reference and application, this book should be a useful addition to the growing literature on Cost Accounting and to those engaged in textile industry as cost accountants, technicians and managers.—*K.R.A.*

Salient Features of Company Law. By R. K. Dalal, B. Com., F.S.A.A., F.C.A. Published by N. M. Tripathi Private Limited. Pages 294. Price: Rs. 7.00.

The author of this book is a very eminent chartered accountant with considerable experience of the Company Law, old and new, both. In writing the book, he has brought to bear upon the work his mature experience, wide knowledge and deep insight in the subject.

The book is divided into 18 chapters which deal with the complex Company Law in a lucid, concise and authentic manner. The book will prove very valuable to the students of Degree and Diploma examinations and also to business men who seek to acquire a basic knowledge of the Company Law.

The author should be congratulated on taking out a very handy volume and for writing it with so much clarity and accuracy. —*S.V.G.*

INDIA STEAMSHIP COMPANY LTD.

DR. A. RAMASWAMI MUDALIAR COMMENDS POOLING OF FREIGHT EARNINGS

OUTLOOK FOR INDIAN SHIPPING FAIRLY OPTIMISTIC

THE allocation of the total freight earnings of all the shipping lines of a Conference in certain proportions over a term of years, providing at the same time for the growth and development of the fleets of underdeveloped countries, through a defined and reasonable increase in the rate of allocation, is now engaging the serious consideration of the Conference lines. Commending this step in the course of his speech at the Annual General Meeting of the India Steamship Company, Ltd., held at Calcutta on 14th November 1960, Dr. A. Ramaswami Mudaliar, Chairman of the Company, said that this would greatly minimise many evil practices now adopted by many companies.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the period ended 31st March 1960, have been in your possession for some time. With your permission, I shall take them as read.

"The Directors' report shows that the freight earned during the year was Rs. 8,38,59,427, as against Rs. 8,04,04,160 in the previous year. The total number of liner voyages during the year was 47.5, compared to 39 voyages in the previous year. Though the freight earned was higher than last year, I regret to state that the net result is a substantial loss to the Company. It is necessary that you should be informed of the reasons for the loss and the steps that are being taken by the Company to remove some at least of the factors that produced this result.

Overseas Trade and Freight Rates

"I had referred last year to the decline in international trade and to its effect on international shipping which is always extremely competitive. During the year under review, the liner trade had to face aggressive competition from tramps which, scouring the seas for decreasing volume of commodities, offered rates of freight which made many shippers divert their custom from their usual liner companies. In spite of the Conferences reducing freights to meet this fierce competition, particularly in commodities which could form bulk cargo, the lines were heavily handicapped. Your Company has felt the effect of this competition both in the outward and inward trade. Your ships had to call at an even greater number of ports than usual, to secure the cargo and had necessarily to incur heavy expenses for port dues and other similar charges.

"The first factor which affected your Company's net earnings and which perhaps was common to many other lines in this trade was the reduced rates of freight. A second and more serious factor which affected your Company was the unhealthy and unfair competition to which it was subject from some of the liner companies which are its colleagues in the main Conferences of which it is a member. It must be recorded, however, unpalatable the fact, that competition by undercutting the freight rates through larger rates of rebate to shippers than permissible by Conference rules, has been freely resorted to by some lines in a desperate attempt to secure the freight at any cost. Other forms of evasion of rules have come to notice and their effect has been equally disastrous.

"The system of entrusting the booking of cargo by shippers to institutions named 'forwarding agents' is a useful and well recognised system and has been of equal help to shippers and shipping companies. But, unfortunately, during the last two years, even this system has come to be misused by some forwarding agents on the Continent of Europe who, by illegitimate means, have influenced the direction of cargo to the ultimate detriment of both the shipper and the lines concerned. It is unnecessary to refer in any detail to the methods adopted by these few forwarding agents and the harmful effects of such practices. In addition to some lines adversely affected by such practices, the Central Government has also been thwarted in its attempts to conserve foreign exchange and the authorities are generally aware of the position.

"Your Company, along with some others, have given most anxious consideration to means whereby these evils can be reduced, if not eliminated. They have realised along with some of their colleagues that the Conference system itself will be seriously jeopardised if these conditions continue. It is unnecessary to dilate on the salutary purpose which the Conference system serves. Contrary to the notions of a few shippers who sometimes feel that it restricts their freedom of choice of ships, it is of at least equal value to shippers as to shipping companies. The suggested solution, which is now engaging the serious consideration of the lines, is the allocation of the total freight earnings of all the shipping lines of a Conference in certain proportions over a term of years, providing at the same time for the growth and development of the fleets of underdeveloped countries, through a defined and reasonable increase in the rate of allocation during the years comprised in the stated term. Your Directors have, after very anxious consideration, put forward proposals in this regard jointly with the sister Indian company, the Scindia Steam Navigation Company Ltd., and are expecting that an arrangement would be agreed upon by all companies, members of the Conference in the India/U.K./Continent trade, very shortly. I do not wish to deny that there are some disadvantages in any practicable arrangement that may be arrived at, but your Directors after weighing both the disadvantages and the advantages have come to this decision. It will eliminate those unworthy charges of Flag discrimination which really reflect on the fair and equitable judgment of those who level such charges. Above all, the evil practices that I have referred to will be greatly minimised. If contrary to expectations an arrangement on the above lines is not arrived at and that very shortly, the Indian lines are prepared to adopt other measures in consultation with their Government to secure their right.

"It should not be imagined that, if a pooling arrangement of freight earnings is adopted, Indian companies can sit back and calmly await the result of the allocation of the pool amount. Your Company cannot relax its efforts to carry a fair amount of freight in either direction and shippers whether in the private sector or in the public sector will, I hope, fully co-operate in developing national shipping by a fair allocation of cargo to Indian shipping companies. I may, in this connection, be permitted to express my concern and disappointment at the manner in which the State Trading Corporation in its chartering section has been functioning. It may be that, owing to the rigidity of financial regulations, it has had to pursue a policy which, at least among Indian shipping companies, has not found a supporter. There are more far-reaching aspects of chartering than the consideration that a cheap freight can be had from an overtonnaged tramp fleet or a distress charter vessel. Foreign exchange earnings for which an intensive drive is being made by the Central Government should be, one would have thought, a formidable corrective to an oversimplified calculation of a low freight charge. I still hope that the Charter Committee will be reconstituted on a broader and firmer basis and its policy better clarified.

Port Delays

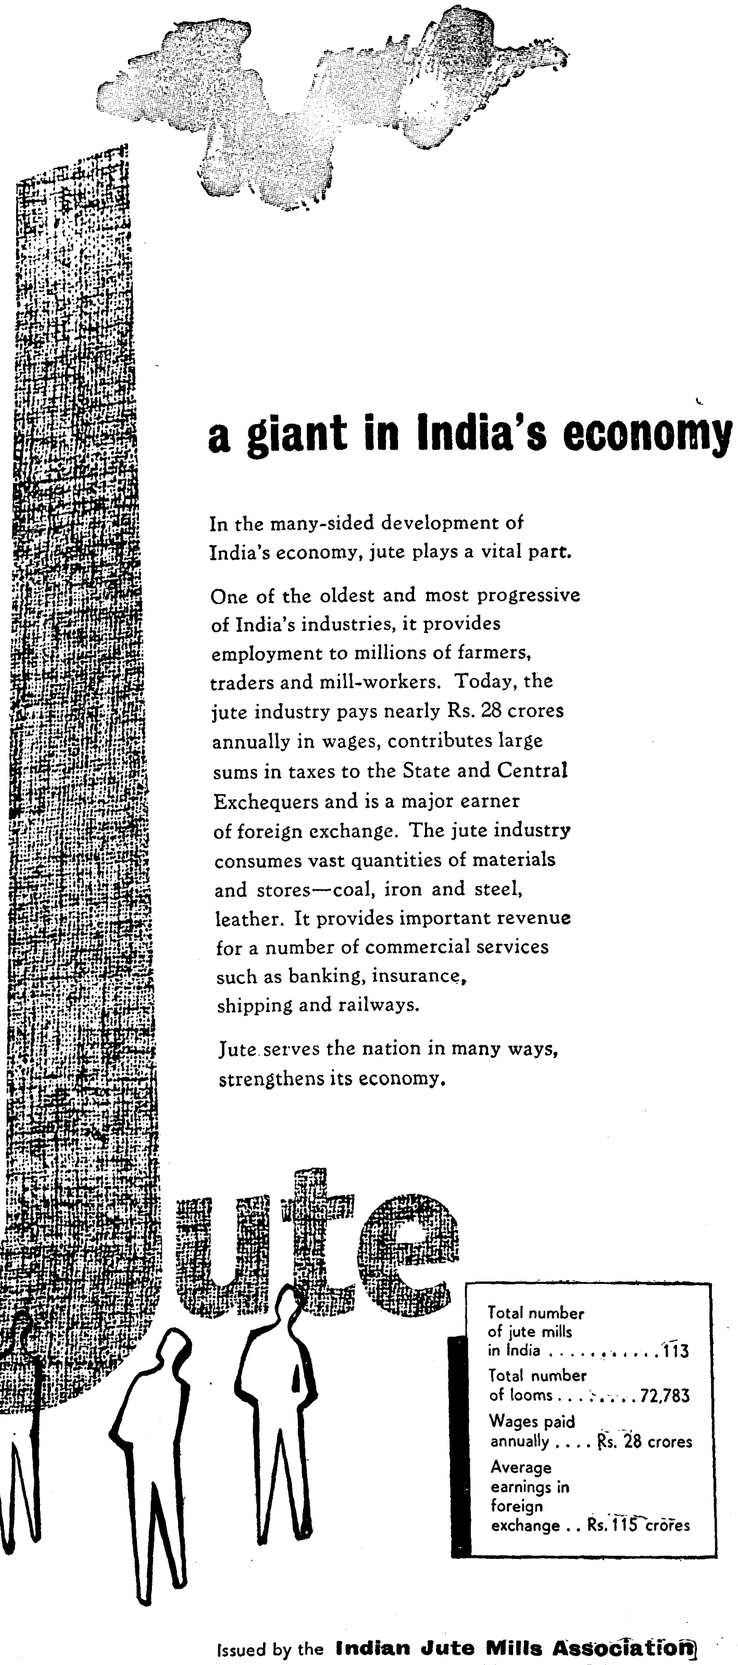
"A severe handicap, particularly to Indian shipping, is the condition of some of the Indian ports and the substantial delay in the turnround of ships both at Indian and foreign ports. I have stated at successive annual meetings that ships earn only when they are voyaging on the high seas and that more time is spent in ports in a year than on the high seas. During the year under review, the drafts in the port of Calcutta showed further deterioration and in many cases ships were unable to lift even the decreased cargo that was offered owing to draft restrictions. I must, however, in fairness to those in charge of the port, state that conditions have considerably improved during the current year and that, thanks to their sustained effort and the interest taken by the Transport Ministry, more permanent improvement is in the offing. While we are thankful for these improvements in the major Indian ports and for the greater awareness which the Government and the port authorities are showing in the modernisation of our ports, we must also express our regret at these beneficial results being nullified by the attitude of labour at some of these ports. Unauthorised strikes by dock labour unions and lightning strikes, such as the strike of tug operators are causing loss and damage to shippers and shipping companies, the extent of which is not properly understood or appreciated. The recent tugmen's strike in Bombay paralysed the work of the port for many days with considerable financial loss to all concerned. But what is not apparent is the adverse effect it has on other ports when the strike is over, by the bunching of ships at these ports and consequential delays in obtaining berthing facilities. It is not in Indian ports alone, but even more in foreign ports and particularly in the U.K. ports of London and Liverpool that this evil of undeclared and unauthorised strikes is manifesting itself all too frequently. Unless remedial measures are adopted, such chaotic conditions will lead to harmful results to all concerned.

The Future

"I have given a faithful picture of conditions that existed during the year. I confess, however, that there may be overtones in the picture presented and that it may lead you to the belief that the future is one of unrelieved gloom. I do not hold to that belief myself. International shipping is notoriously subject to fluctuations, sometimes violent fluctuations. I consider that we have passed through such a period and that it will not be unreasonable to look forward to a less anxious future. Your Company, in particular, is firmly established and rests on a solid basis. The eagerness and enthusiasm which its officers of all ranks and the staff show is unabated. The interest that is taken by the authorities in the development of Indian shipping is gratifying and encouraging. The National Shipping Board, under its Chairman, Mr. G. L. Mehta, continues to take an increasing interest in the development of Indian shipping. The present Minister of Transport, Dr. Subbaroyan, and the Minister of Shipping, Mr. Raj Bahadur, are evincing keen interest in the problems of Indian shipping. Mr. Raj Bahadur has devoted himself to a study and understanding not merely of the major but even of the minor problems of Indian shipping. The Ministry of Transport, through its Secretariat, the Director-General of Shipping and the Senior Deputy Director and other officers, have been in constant touch with Indian shipping companies and have greatly helped them with advice and assistance. The establishment of the Shipping Co-ordination Committee holds out promise of fair treatment to Indian shipping. When the Chartering Section of this Committee is properly organised and broadbased, it should help the development of Indian tramp shipping, so badly needed by the country. Above all, the development of shipping in the public sector, in so far as it is within proper limits, is in my opinion a help and not a hindrance to the development of Indian shipping in the private sector. It will present to the authorities more directly and more vividly the difficulties and handicaps which it suffers from and thereby will increase still further the awareness of problems of Indian shipping by the authorities. I, therefore, take a fairly optimistic view of the future of Indian shipping and of your Company, in particular.

"In spite of the financial results of the year, I feel it my duty to pay a tribute to the devoted services which the officers, both ashore and afloat, and the staff of the Company have rendered during the year. In the face of exceptional difficulties, they have spared no pains to achieve results such as they are. I must also convey the thanks of the Board to the shippers who have extended their continued and firm support to us and to the brokers and forwarding agents who have shown confidence in us and in the standard and quality of our shipping service.

N.B.—*This is not a report of the proceedings at the above annual general meeting.*



a giant in India's economy

In the many-sided development of India's economy, jute plays a vital part.

One of the oldest and most progressive of India's industries, it provides employment to millions of farmers, traders and mill-workers. Today, the jute industry pays nearly Rs. 28 crores annually in wages, contributes large sums in taxes to the State and Central Exchequers and is a major earner of foreign exchange. The jute industry consumes vast quantities of materials and stores—coal, iron and steel, leather. It provides important revenue for a number of commercial services such as banking, insurance, shipping and railways.

Jute serves the nation in many ways, strengthens its economy.

Total number of jute mills in India 113
Total number of looms 72,783
Wages paid annually . . . . Rs. 28 crores
Average earnings in foreign exchange . . Rs. 115 crores

INDIAN IRON AND STEEL COMPANY LIMITED

STATEMENT BY THE CHAIRMAN, MR. BIREN MOOKERJEE

GOVERNMENT'S INDUSTRIAL AND LABOUR POLICIES CRITICISED

THE Annual General Meeting of the Indian Iron and Steel Company Ltd. will be held at 12, Mission Row, Calcutta, at 3 p.m. on Thursday, 15th December 1960. In the course of his annual statement, circulated along with the Directors' report and statement of accounts for the year ended 31st March 1960, Mr. Biren Mookerjee, Chairman of the Company, has subjected the Union Government's industrial and labour policies to a critical examination and clearly shown how the defects therein have slowed down the country's economic growth.

The following is the full text of Mr. Mookerjee's statement:

"The highlight of the year was the improvement recorded in the Company's output of steel, the production of steel ingots, at 827,072 tons, showing an increase of 218,867 tons over the previous year. This position is of course attributable to the enlargement of the steel-making capacity of our plant under the expansion programmes and, while we have still a long way to go to achieve our ultimate target of one million ingot tons, it is heartening to see the planning and labour of the last five years now beginning to bear fruit. On the reverse side of the picture there are, however, no grounds for complacency as regards the production of iron which was, and continues to be, seriously affected by the high ash content of our coke, consequent upon the unsuitable quality of the coal that we are being forced to accept. I will refer to this matter in more detail later, since the position with which not only ourselves but the iron and steel industry of the country as a whole is faced as a result of the inadequacy of supplies of good quality coking coal is of the utmost gravity.

Accounts

"I am compelled to comment again this year on the taxation provisions relating to the allowance of development rebate which require that, as a prerequisite to the grant of such allowance an amount representing 75 per cent. of the rebate shall be charged against profits and set aside to reserve. With company taxation now at the revised rate of 45 per cent. this means that over and above the saving in taxation arising from the allowance, which quite rightly should be set aside to reserve, a dead charge of 30 per cent. of the amount of the rebate is thrown against available profits compared with 23½ per cent. in the previous year. In our own case the excess of the compulsory reserve for the year under review over the actual taxation saving amounts to no less than Rs. 1,03,49,296 and I cannot, on principle, accept without protest a position whereby a charge of this magnitude should be thrown against the profits of a company. In order that the profit and loss account should show the true results of the working for the year the position has, therefore, been compensated by the write-back to profits from the general development reserve of this excess amount of Rs. 1,03,49,296, the effective and logical result being, accordingly, a net accretion to the development reserves of the actual saving in taxation and a consequential net charge against profits of the amount of taxation that would have been payable but for the allowance of development rebate.

"In the profit and loss account this year will be found a new head of expense, namely, 'interest on special advance from the Government of India,' which I should perhaps explain. The special advance totalling Rs. 10,18,26,476 consists of two items of Rs. 10 crores and Rs. 18,26,476 covered by separate agreements with the Government, the Rs. 10 crores having been granted as direct assistance towards finance of the cost of expansion and the Rs. 18,26,476 to meet the commitment charge on the first World Bank loan between the date from which such charge commenced to run and the later date, owing to circumstances beyond the control of the Company or the World Bank, from which the loan actually became effective for withdrawal purposes. In terms of the relative agreements it was provided that the advance should bear no interest prior to 30th June 1958 or such other later date as might be mutually agreed upon and that thereafter, the question of charging interest and the rate of such interest should be decided by Government on the advice of the Tariff Commission. It was further provided that any interest charged should be payable by the Company out of its earnings arising from a special element in the prices of iron and/or steel over and above the normal retention prices. The matter was accordingly in due course referred by the Government to the Tariff Commission who recommended that interest should be charged at the rate of 5 per cent. per annum as from the 1st July 1958, but that recovery of such interest and the allowance of the special element should be postponed until after the 31st March 1960 when decision had been taken as to the retention prices to apply from that date. Acceptance of these recommendations was notified by the Government on 25th November 1959. The Company has protested against the unnecessary complications introduced by deferment of the interest compensating element and, since in terms of the agreements with the Government, all interest chargeable must be compensated, the interest accrued from 1st July 1958 to 31st March 1960, as necessarily provided for in the accounts under review, has been offset by the inclusion under the head 'sales' of the similar amount to arise from the enhancement of the sales retention prices.

Dividend on Preference Shares

"I would take this opportunity to express my sympathy with the preference shareholders in the position in which they have been placed in regard to their dividends by the amendments made to the Income-tax Act by the Finance Acts of 1959 and 1960, for when we have been able to compensate the ordinary shareholders in full for the loss of the previous notional credit on their dividends in respect of income-tax payable by the Company, it should follow in equity that the preference shareholders should also be compensated. Under the provisions of the 1959 Act we were able to increase the preference dividend for the half-year ended 30th September 1959 to such gross amount as after deduction of 30 per cent. thereof represented the amount previously payable without deduction of tax, but with the cancellation of these provisions by the 1960 Act we have had no option in law but to pay the dividends for the half-years ended 31st March 1960 and 30th September 1960 at the rate of 5 per cent. stipulated in the Company's Articles of Association.

"The preference shareholders were advised at the time of payment of the 31st March 1960 dividend that your Directors were considering the legal steps to be taken in an endeavour to effect a fair and reasonable adjustment of the position. In the meantime, however, a Bill entitled The Preference Shares (Regulation of Dividends) Bill has been introduced in the Lok Sabha and is awaiting the consideration of Parliament. If passed into law, the provisions of this Bill in their application to our own preference dividend would mitigate the present most unsatisfactory position to the extent that the rate of preference dividend would be compulsorily increased with retrospective effect. Since legislation is now pending, your Directors accordingly feel that it would be inadvisable for them in the meantime themselves to take any unilateral action lest this should result only in making confusion worse confounded.

Competitive Power of Indian Steel

"I am glad to inform you that over the last price fixation period of five years which ended on 31st March 1960, we have been able to achieve in total a production of saleable steel exceeding by some 13 per cent. the target set us by the Tariff Commission in 1955 and that, despite heavy increases in our works costs, the position remains that under a free economy no foreign steel could undersell us in our own country. Under the present policy of the Government, however, the advantage we enjoy over foreign steel is appropriated by the Government and a further heavy burden by way of surcharge is additionally loaded by the Government on to the selling prices. In this connection not even our retention prices, that is to say the prices which we are allowed to retain as distinct from the much greater prices we are required to charge to the consumers for the further benefit of the revenues of the country, give a true indication of the position, since these retention prices themselves include the incidence of the heavy excise duty levied by the Government of Rs. 40 per ton on ingot steel equivalent to about Rs. 50 per ton of saleable steel. Even if allowance be made for this excise duty, our competitive power is, in fact, greater than the retention prices would indicate for we suffer from a number of disabilities peculiar to our country.

"We are handicapped by the policy of the Government which prevents us not only from reducing the number of superfluous labour but compels us to retain in our employment workmen who are found by experience to be inefficient. We have to employ a large number of men to provide all the necessary health and municipal services which are supplied by the Government or the municipal corporations in other countries. We have also to provide housing accommodation requiring heavy capital expenditure and maintenance costs. We have also to provide at heavy capital and recurring expenditure, buildings for schools, hospitals and social services, to equip them adequately and to secure and pay for the necessary trained staff to run them.

"I explained last year the dangers of the present extremely heavy loading of the price of steel to the consumer by way of surcharge and I would again urge the necessity that the statutory selling prices should be reduced. Steel either directly or through the medium of construction or operational costs enters into the final cost to the consumer of practically every commodity and artificial inflation of this cost is certainly no help towards the solving of the urgent problem of effecting a reduction in the cost of living. The surcharge levied by the Government was intended primarily to rebate the cost of imported steel, so that each category of steel, whether indigenous or imported, should be sold at the same price. With the increase in production of the plants in the private sector and with the three Government steel plants now coming into operation, imports of steel have already fallen considerably and will continue to fall. Maintenance of the surcharge at its present level can, therefore, no longer be justified.

"It is necessary also that selling prices should be reviewed having regard to the necessity of building up an export market for the surplus production there will, in my opinion, undoubtedly be when the three Government plants come into full operation. In this connection it is reported that certain exports of semi-finished steel have already been made by the Government plants and it would be of considerable interest to know the real effective prices at which these exports have proved possible.

Increase in Works Cost

"Owing to variations in the different categories of end product an assessment of the trend of works costs in relation to the production of saleable steel gives a somewhat unreal picture. It is preferable, therefore, to compare works costs in relation to ingot production. This will include also the variations in the works cost of pig iron. At the same time, since the ingot enters into every finished product, its works cost will be distributed in proportion to the quantity of ingot used in the production of each saleable product. If this basis is adopted we are able to obtain a more accurate picture.

"Under normal conditions, that is to say when there are no external causes beyond the control of a manufacturing unit to affect its operations, it is to be expected that the works cost per ingot ton should show inverse variation according to the volume of production. In our own case, however, while the production of ingots increased between 1955-56 and 1959-60 by about 55 per cent., the works cost increased over the same period by nearly 40 per cent. Some explanation of this illogical position is, therefore, required. The main cause is of course the enhancement by the Government of the rate of excise duty on steel ingots from Rs. 4 per ton to Rs. 40 per ton with effect from 16th May 1957. Other causes, some or all of which have operated in our works at different times either separately or simultaneously, as you will have gathered from my previous statements, are (a) continued upward revision of labour costs as a result of the pernicious system of automatic annual increments as opposed to an assigned pay for each particular job and of enforced increases in the rates of wages, allowances and incentive bonus; (b) increase in railway freight rates on raw materials and stores; (c) the sales taxes imposed by the State Governments or excise duties by the Central Government on such indigenous raw materials and stores as are used in the manufacturing processes and the customs duties on imported goods imposed by the Central Government; (d) the increases from time to time in the statutory prices of controlled commodities, such as coal and other raw materials; (e) variation in the quality of stores and raw materials and, in particular, the severe deterioration in the quality of coking coal; and (f) complete, partial or go-slow strikes by labour.

Coal—An Intractable Problem

"There has been for a long time a deplorable shortage in the quantity of coal required by the iron and steel and many other coal consuming industries. A still greater difficulty in maintaining, far from increasing, the production of iron is created by the admitted and ever-growing deterioration in the ash content of available coking coal. Washing the coal before use has, therefore, become an indispensable necessity. There has, however, been virtually no decision yet taken by the Government for the establishment of washeries at the main coal producing centres to meet the needs of the iron and steel industry in the private sector.

"Our works costs and our production alike are seriously affected by the continuous deterioration that has taken place in the quality of coking coal and by its chronic inadequate availability, although paradoxically we are virtually sitting on top of coal. Such is the position that, apart from diversion of outside supplies, there has even been an occasion when coal in transit to Burnpur from the Company's own collieries has been diverted elsewhere. These factors will definitely preclude us from achieving the production envisaged under our expansion programmes until improvement in the quality as well as the quantity of coking coal is effected. To illustrate the conditions under which we are now forced to operate our blast furnaces I have had a chart appended at the end of this statement (not published herewith—Ed.) showing the variation in the ash content of our coke due to the inferior quality of the coal we are being allotted. This chart shows not only the current increase in the ash content over the previous normal but also the present extremely wide day-to-day variation in ash content. Paucity of stocks has made it impossible for us to blend the coal in an attempt to achieve in some measure a consistent even if far too high ash content in our coke and the problem of endeavouring to produce a standard grade of iron under these most unsatisfactory and constantly varying conditions is one that can be better imagined than described.

"Recently as a result of concentration of railway transport on the priority movement of coal against the demands of the steel industry there has been some increase in the volume of coal supplies, although I very much fear that this may be only a temporary phase. So far as we ourselves are concerned, this increase in transport has, however, merely served to emphasise the shortage of good quality metallurgical coal that exists in the country, for all that has happened is that collieries have taken advantage of the position to get rid of accumulations of inferior quality coking coal totally unsuitable for the steel industry. In our own case, an ash content of the ridiculously high figure of 32 per cent. has been recorded in much of these additional supplies. While, therefore, on paper our stocks of so-called coking coal have shown some improvement in tonnage, the added supplies have resulted only in a still further increase in the ash and sulphur content of our coke and an accentuation of operational difficulties to a point of the utmost gravity in relation to the maintenance of production.

Retention Prices

"The last fixation of our steel retention prices expired on 31st March 1960 and the question of the revised prices to apply from that date is now under consideration by the Government. So long as the metallurgical coal position remains unchanged there is, as I have said, no possibility of achieving the production envisaged under our expansion programmes and any fixation of prices by reference to a theoretical plant capacity based on normal working conditions would, accordingly, be entirely erroneous. I have full confidence, however, that the abnormal conditions under which, through force of circumstance, we are now being compelled to operate our plant will be recognised by the Government, so that the new retention prices may be fixed on the basis of working conditions as they actually obtain and not by reference to a theoretical capacity or standard of working that, until the raw materials problem is resolved, is quite incapable of attainment.

"I am afraid that until the further coal washeries scheduled by the Government have been installed, which will probably take a minimum of three years, the position as regards metallurgical coal will remain critical for there will, in fact, be an increasing demand against the already inadequate available supplies as the Government steel plants attain their full production potential. In the case of the jute industry where installed capacity greatly exceeds production, the industry has had to adjust itself to the position by the sealing of looms. It would be a tragedy if the steel industry, to adjust itself to the inadequacy of the supply of suitable coking coal, were to find itself faced with the alternative either of having to seal off blast furnaces or to operate its plants uneconomically and hazardously below the efficient level of their productive capacity.

Coal Production

"Blueprints and fixation of targets of coal production are no substitute for effective and instant action for alleviation of the position with the minimum of delay. The target fixed for the second Five-year Plan of sixty million tons per annum will definitely not be achieved and the still higher target for the third Five-year Plan of ninety-seven million tons annual production has meagre chances of success unless a large number of new collieries are opened up in the private sector and the existing ones substantially expanded wherever possible even at a higher cost. This will necessitate the purchase and installation of foreign mining and handling machinery for which the tentative allocation in the third Five-year Plan of about Rs. 138 crores may prove to be inadequate. It has been reported in the Press that in a statement made in the Lok Sabha it was admitted that there would be a shortfall of some six million tons from the target fixed for the second Five-year Plan, but the matter was dismissed with the remarks that the shortage would be made good in 1961 and that this would, therefore, involve a delay of only a few months. In face of the position with which the country is confronted it has been somewhat disconcerting to note the apparent complacency with which this critical question of coal supplies has until recently been regarded by the Government. I am glad to say, however, that the seriousness of the position appears at last to be realised with the appointment by the Government of a high-powered committee to examine means for the amelioration of the position of the iron and steel industry in regard to the shortage of raw materials, in general, and coking coal, in particular.

"The coal producing and coal consuming interests alike will be further prejudiced by the Government's industrial policy resolution of 1956. Future main development of the coal industry is undertaken by the Government under this resolution to the exclusion of the private sector which has been practically solely responsible for starting, expanding and equipping the industry at great financial risk during the last hundred years or so. A further deterrent to the expansion of the existing private industry has been created by the enactment of the Coal Bearing Areas (Acquisition and Development) Act of 1957. What is, however, of great national importance is that the Government do not seem to have adequately realised that no new collieries can be opened and brought into full operation within less than five years under the most favourable conditions and that during this period all industries, including the iron and steel industry, in particular, are likely to face disaster both in the public and private sectors. I would urge, therefore, that to retrieve so far as possible the desperate position with which the country is faced, the Government should relax all ideological restrictions and permit and encourage the private setor of the coal industry to participate to the fullest extent in the great effort that is called for to meet the crisis. Apart from its vital necessity, such action would also involve the mundane consideration that to the extent to which this participation is allowed the cost to the Government funds of the development of the industry would be reduced.

The Strike of Government Employees

"It is impossible to estimate the total loss to the country by reason of a strike, particularly if it takes the form of such a general strike as the recent one of Government employees, for it hits the national economy at too many points, visible and invisible to permit of any measurement of the damage caused. I can, therefore, give you only the position as it affected our Company.

"An integrated iron and steel works is a complex organisation in which all departments rely on each other, the primary and subsidiary products of one entering into the operations of the others, the whole being designed as a fully balanced plant. The primary basic producing units, that is to say the coke oven batteries and blast furnaces, are continuous operational plants and any disruption of their workingg causes innumerable problems. Blast furnaces have to be damped down involving risk of their loss through sudden or too rapid cooling, while, on the other hand, coke ovens must be maintained at high temperature in order to prevent their collapse even if little or no metallurgical coke is produced in the process. The ensuing loss of blast furnace and coke ovens gas for heating and power purposes affects all other departments.

"As a consequence of the strike, all inward supplies of raw materials ceased from the morning of 12th July 1960. Ground stocks having been reduced to below emergency level owing to the previous inadequacy of transport and supplies, the coke ovens throughput was reduced to 1,800 tons of coal a day from 15th July 1960 against the normal throughput of approximately 6,000 tons. No. 1 blast furnace was damped down from 13th July 1960 and No. 4 blast furnace from 15th July 1960. No. 2 blast furnace which had been re-lined but which, owing to the previous shortage of coal supplies, had already been waiting one month to be brought back, had to continue to remain out of production. The steel melting shop activities were reduced from seven to two furnace operation. Loss of production, an irretrievable loss to the country as well as to ourselves, amounted to some 22,000 tons of iron and 20,000 tons of ingot steel. Despatches of finished steel remained totally suspended from 9th to 19th July 1960, owing to non-allotment of wagons. The strike was called off from 17th July 1960 and from 18th July 1960 the blast furnaces, coke ovens and steel melting furnaces were gradually brought back into production and by 26th July 1960 all plant and equipment was again fully operational. Such in our case was the result of the strike. I am glad to inform you, however, in testimony to the skill with which the position was handled by the works senior executive staff that it has been confirmed by our Consulting Engineers that little, if any, damage has been caused to the plant as a result of the enforced shut down.

Difference in Policy

"The strike of Government employees has given an illuminating indication of the difference between the policy of the Government in respect to the handling of a strike and its treatment of its own employees and its policy in relation to strikes in the private sector. The dismissal of many of its employees, the disciplinary action of various kinds against others and even imprisonment under the Preventive Detention Act were perhaps very necessary, and it is not my purpose to call the Government's action in question for all strikes are anti-social in their effect and cannot be taken as a matter of course, whatever justification their might be from the employees' point of view. The point I wish to make, however, is that no employer in the private sector is allowed in self-defence to adopt any of these or similar courses, but is obliged to stand the consequences of a strike with all that these entail.

"To illustrate the effect a strike even of brief duration can have, I will relate the sad experience we ourselves had in September last year when an illegal one-day strike was brought about by the I.N.T.U.C. Labour Union over the question of profit-sharing bonus. Although in our working for 1958-59 we had fallen short of the estimate computed by the Tariff Commission it was decided by the management as a gesture of goodwill to pay the same profit-sharing bonus of 65 days' wages as for the previous year. Considerable agitation was worked up by the Union leaders that the amount of bonus should be increased and, on the management standing fast on their generous decision, workers were prevented by the Union from taking payment of their bonus, although, in fact, some of the men had already willingly accepted payment, and the illegal one-day lightning strike brought about commencing from midnight. Revenue loss to the Company at retention prices as a result of the direct loss of production for the day amounted to approximately Rs. 15 lakhs, while the cost to the country of making good this loss of production from foreign sources is computed at some Rs. 20 lakhs.

"This, however, is not the full story. An unfortunately severe damage was caused to No. 1

blast furnace by the irresponsible action of the strikers in refusing to co-operate with the management to damp down this furnace in an orderly manner. The furnace was scheduled to be blown out on 25th September for a partial relining from the mantle upwards which work would have taken approximately 30 days to complete. Before a furnace is taken out for relining it is essential that some blast be kept on so that the charge may remain fluid for draining off. Owing to the action of the strikers the charge went cold and about 100 tons of metal and slag solidified inside the furnace necessitating long labour for its removal by blasting with high explosive followed by a complete instead of partial re-lining. As a result, work on the furnace lasted 110 days instead of the contemplated 30 days with a consequential loss of production of some 39,000 tons of pig iron and an additional re-lining cost of some Rs. 13 lakhs. To complete the sad story it has to be added that this furnace was producing against an export order from Japan, the contract for which had to be cancelled in view of inability to supply, with resultant direct loss to the country of foreign exchange to the extent of some £700,000 or Rs. 93 lakhs. In total, the loss caused accordingly amounted to some Rs. 121 lakhs; such is the damage that can be done to a company and to the country by an ill-considered and irresponsibly led strike even of one day's duration.

"I have in previous years emphasised the necessity that the Government should require and instil the utmost sense of responsibility in trades union leadership and it is, accordingly, the more disturbing to me that occurrences such as the above can continue to take place in an industry so vital to the progress of the country. The position becomes all the more difficult for me when I am asked by shareholders to comment on the fact that the leader of the I.N.T.U.C. Union in question is also a Government nominated Director of Hindusthan Steel Limited. I can of course say nothing on this matter for the propriety of such a duality of roles is naturally a subject solely for Governmental policy decision.

"Government have recently decided in the case of all essential Government services, *inter alia*, (*a*) completely to ban strikes, (*b*) to permit no outsider to be the leader of any union, though unions affiliated to the Government-sponsored Indian National Trade Union Congress are led by complete outsiders, and (*c*) to provide machinery for compulsory arbitration. It is difficult for any impartial observer to understand why similar legislative provision should not be made to protect some of the most essential industries, such as the iron and steel industry and the engineering industries, on which practically the whole structure of our national planning is to be built through the establishment of heavy industries of which these are the linchpins.

Disabilities Imposed

"Far, however, from the extension of these provisions to the private sector, as I have pointed out on previous occasions, all kinds of disabilities are imposed upon it in regard to disciplinary action, reduction of redundant labour and payment of heavy compensation to labour when a unit in whole or in part is closed down temporarily or permanently. Though in the more efficient industrial units in the private sector, generally speaking, as in our own works, the workers enjoy more favourable conditions of service, wages, housing and other amenities than those employed by the Government in comparable non-technical departments, we as employers are brought under constant Government criticism as if we were indifferent to the welfare of our labour. Consequently, on almost every occasion when any serious conflict takes place between us and our employees, and the dispute is referred to a Tribunal or for conciliation proceedings, often after a delay which may have already caused us heavy loss, the awards of the Tribunals or the directions or orders of the Government have been generally in favour of labour, increasing their wages, their amenities and other perquisites. The natural consequence of this continuous increase in wages is to accentuate the inflationary effect created by the Government on prices of all essential commodities and particularly of food and other consumer goods. If, for instance, steps were taken by the Government to reduce the cost of living by the provision of more food and consumer goods, a tremendous improvement at much smaller cost than is involved in the establishment of heavy industries could be made in the standard of living of the country at large, which would help also to reduce the excessive burden of taxation and the heavy costs of industrial production.

"I maintain that the first duty of our Government as that of any other country is to adopt prompt and adequate measures to promote the reduction of prices of essential commodities by increasing their production particularly in the private sector. Apart from the incalculable monetary loss, strikes of any kind and high cost of living will slow down the pace of our industrial development and make the cost of implementation of future plans so high as to be beyond our domestic or foreign aid resources. It must be remembered that the common man and woman are the real sinews of national economic and industrial development, and not high taxation, heavy domestic borrowings, foreign aid, deficit finance or unreliable index figures and *ad hoc* statistics. Without securing the complete and wholehearted co-operation of the common man by supplying at reasonable prices his daily needs, particularly of food, clothing, shelter and health services, the optimistic Five-year Plan for the future may remain substantially on paper.

Labour Legislation

"To the already full roll of labour legislation there has recently been added The Employment Exchange (Compulsory Notification of Vacancies) Act, 1959 and rules have been framed under this Act requiring every establishment, whether in the public or private sector, to report to the local Exchange vacancies, with some few exceptions, occurring in such establishments from time to time. So far as I am aware, there is no democratic country in the world where the employers have to notify vacancies to the Labour Exchanges, though those in search of employment may have to register their names in the local Exchanges. If the employer is desirous of recruiting any operatives he may apply to the appropriate Labour Exchange and if he is satisfied, select such of them as appear to him to be suitable for the particular jobs. It is true that the rules as promulgated by the Government definitely state that no compulsion will be used by Exchanges to employ any particular person but rules may always be changed and I must confess to some misgiving that these Exchanges should be under the control of the individual State Governments and administered by local officials who cannot fail to be subjected to pressure in varying forms.

"I very much fear that the present requirement for the notification of vacancies may be only the first step towards the prohibition of the filling the vacancies except through the medium of the local Labour Exchanges. I sincerely hope that my fears may be groundless, for the consequences that might follow are disturbing to consider, including as they would the dangers of nepotism, favouritism and corruption and above all of fostering the evil of provincialism, of which there is already alarming manifestation in the country and which, if not checked, threatens in my opinion ultimately to disrupt the Union.

"There has been for some time an agitation sponsored by some trade unions and several of the State Governments to insist on the restriction of jobs to those popularly described as 'sons of the soil.' If this principle is carried to its logical conclusion, it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other States. The mobility of industrial labour, which is of benefit both to the workers and their employers, will be seriously impaired and cause no small embarrassment to the management of industrial establishments all over the country.

"It is regrettable that in order to confine the available jobs only to the 'sons of the soil,' some States are making the local language the official language. Recent unhappy, tragic and most deplorable occurrences in Assam prove the danger of adopting such a course for achieving an object outside the purpose for which the States have been given the right to localise the State language.

"So far as our Company is concerned, we employ as many 'sons of the soil' as we find suitable for the jobs to be filled, but for the rest impose no restrictions of any kind. This to my mind is the only reasonable course. This is no platform for discussing the merits of the language controversy, either at the Centre or in the States, and all I wish to emphasise as a business man is the adverse effect that any other course will have on the economic development of the country.

Acknowledgments

"In conclusion, I should like to express on behalf of the Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, and his executive staff throughout the year. An expansion on the scale undertaken by our Company throws a very great burden and responsibility on all staff additional to the normal cares, troubles and anxieties of management on which there has now been superimposed the constant problem of the operational difficulties caused by the short supply and severe deterioration in quality of raw materials. Our thanks are also due to our Consulting Engineers, The International Construction Company Limited, who have so ably planned and supervised the execution of the expansion. To all it must be a source of the greatest satisfaction to see as a monument to their efforts the fine expanded plant as it stands today in the final stages of its completion. It gives me pleasure to place on record this expression of our thanks."

The above statement is not a report of the proceedings of the annual general meeting.

LLOYDS BANK LIMITED
AND
NATIONAL AND GRINDLAYS BANK LIMITED

It is announced that, as from the 1st January 1961, the business of the branches of Lloyds Bank Limited in India, Pakistan and Burma will be merged with and carried on by National and Grindlays Bank Limited.

The interest of Lloyds Bank Limited in the banking business of the territories concerned will be continued through a substantial shareholding in National and Grindlays Bank Limited and by representation on their Board of Directors.

National and Grindlays Bank Limited

(Amalgamating National Bank of India Limited and Grindlays Bank Limited)

(Incorporated in the United Kingdom. Liability of members limited)

Head Office:

24/26 Bishopsgate, London, E. C. 2.

The first of five A.E.I. hydro-electric generators which will supply a total of 450 MW. of power to the Punjab and the neighbouring states, Rajasthan and Delhi, has been put on load at Bhakra, on the river Sutlej, some 200 miles north of Delhi. A second machine will begin its trials shortly and is expected to be commissioned in the New Year.

Bhakra Dam, the world's highest straight-gravity dam (740 feet high and 1,700 feet long) is part of the £130 million Bhakra-Nangal project, an ambitious scheme which will eventually have an installed capacity of more than 1 000 MW., as well as irrigating millions of acres of land. Besides the dam at Bhakra, which will store water for two power stations, another dam, at Nangal, supplies water for power stations at Ganguwal and Kotla. Both dams are part of the irrigation system. One of the Bhakra power stations is nearly finished, and delivery of the five generators has been completed. Work has started on the other power station, which is being built on the opposite bank of the river.

The A.E.I. generators ordered by the Punjab Government from A.E.I. (India) Private Ltd. are rated at 100 MVA., 0·9 power factor, 166·7 r.p.m., and supply power at 11 kV, 3 phase, 50 cycles. Closed-circuit ventilation is provided. Protective relays, automatic voltage regulators, and neutral earthing and surge protection equipment were also supplied.

It may be recalled that the proposal to set up the Central Scientific Instruments Organisation at an estimated cost of Rs. 72 lakhs was recently approved by the Governing Body of the Council of Scientific and Industrial Research. The United Nations Special Fund is expected to make an allocation of $850 000 available for the proposed organisation. A specialist team from foreign countries will be invited to render assistance in improving methods of production, standardising processes and designs and producing proto-types of improved designs and of new types of instruments. The C.S.I.O. will carry out a survey of the scientific instruments industry, maintain up-to-date statistics of production centres, their production capacity, types of instruments produced, quality of production, etc., and assess the demand for different varieties of instruments. The organisation is also expected to establish a few units to undertake servicing and repair of scientific instruments and, in addition, a few development units in the factories themselves on an *ad hoc* basis to give a more practical bias to development work among the better organised manufacturing units. These development units will study the problems of manufacturers and assist them in introducing better production techniques.

TOWARDS ACHIEVEMENT

In three brief years a wilderness of swamp and paddy fields has been transformed into the giant steelworks at Durgapur. This remarkable achievement has been made possible by ISCON—a consortium of thirteen leading British firms who are responsible together for the construction of the steelworks. When completed, the steelworks will have capacity for one million ingot tons of steel and a wide range of end products for the industrial markets of India.

HEAVY INDUSTRIES IN THIRD PLAN

ENGINEERING ASSOCIATION SUPPORTS PLANNING COMMISSION

THE Engineering Association of India (Calcutta) has just submitted a memorandum to the Planning Commission on the Draft Outline of the Third Five-year Plan. This memorandum, while it recognises ungrudgingly that "the Draft Outline shows a high degree of insight and intelligent anticipation of the trends of industrial production," has nevertheless considered it necessary to subject the proposals regarding industries, particularly engineering industries, to a measure of constructive criticism. The Association urges at the very outset that, in the interest of speedier development of basic industries—steel, oil, power and machine-building—private enterprise should be encouraged in these fields also, should it come forward with feasible schemes therefore. The view held in some industrial circles that the concentrated effort on the establishment of basic capital and producer goods industries with special emphasis on the machine-building programmes is not fully justified, does not find favour with the Association. Since there will be a considerable time lag between installation of plant capacity in steel and the output materialising on the basis of installed capacity, the Association thinks that all discussions about our having any exportable surplus in steel by 1966 will be merely of academic interest.

Exports

It is here that the memorandum touches specifically on the position of engineering industries. The prospects, it is stated, are that finished steel may not be available to the engineering industries in quantities and categories required by them to keep them fully engaged by 1966. While import of steel in bulk may at first sight appear very attractive from the point of view of stepping up our exports of engineering goods, the Association does not expect any spectacular rise in such exports in the near future, even if we import all the raw materials, including steel, for a gigantic export drive. The Association's view is expressed pointedly in the following arguments:

"To secure a sizable increase in exports, we shall have to plan for a good deal of diversification in products. Have we enough resources in technical know-how, in product design and the skilled manpower to tackle a job like this at short notice? The build-up period is long, and the build-up process is one of trial and error for the uninitiated. Hence discussions on the relative merits of export of steel and articles made of steel also tend to be academic in the present context. That a country as rich as India in iron ore deposits should depend on steel imports is anomalous."

The Association is on the whole satisfied that the priorities regarding basic and heavy industries in the Plan as outlined is the best in the circumstances. At the same time, it is emphasised that, in so far as the development of secondary and consumer goods industries is concerned, efforts should be made to develop such engineering industries as have export potential in preference to others and that, to this extent, priority for such industries should be the highest.

Engineering Industries

The memorandum deals at length with the state of engineering industries in general. A good deal of knowledge, it says, has been gained during the past ten years about the problems in the manufacture of industrial plant and machinery, structural fabrication, railway rolling stock, automobiles, ball and roller bearing, diesel engines, ship-building, electric transformers and motors, electric cables and electric fans, etc. It is now time to take stock of the mistakes made, whether they be in financial estimates, availability of materials for manufacture, defects in the planning and commissioning of plants, estimates of engineering know-how and skilled labour available, or estimate of demand related to plant capacity. The Association itself has been collecting data of idle capacity in engineering industries from time to time, but has not been able to ascertain the real causes for idle capacity in all cases. It is feared that, in the future, when a good deal of new capacity is created, more or less the same mistakes as in the past would be made. The memorandum then proceeds to give some concrete examples and suggests suitable ways of avoiding mistakes in the organisation and working of engineering industries.

The automobile industry, for example, has had to work under the handicap of high capital charges and overheads, because each individual unit has been permitted to work on the basis of self-sufficiency in certain respects. Capital and working costs could have been very low, if there had been centralised services for Forge and Press serving all prodution units. The foreign exchange content of the phased production programmes in this industry could also have been brought down by such means. The Association says it can point to a hundred similar things relating to other engineering industries. In its opinion, it is not unlikely that, if such centralised services are brought into being, a good deal of productive capacity would be released for new items of manufacture without additional capital investment, without additional expenditure of foreign exchange and without additional technical personnel.

The need for such centralised services is emphasised in the case of the machine tools industry also. If this industry is to be developed rapidly, there should be, according to the Engineering Association, a Central Organisation, prepared to undertake design work for a reasonable fee. Other services such as Tool Room, Foundry, Forge, etc. should also be provided. Besides these, this central organisation should also have capacity to make certain intricate parts of machine tools such as unit heads for drilling, milling, grinding, boring and tapping, hydraulic pumps, switchgear and other electrical control items, leadscrews, tracing equipments, turret heads with slides, traverse gear boxes, two-speed machine tool motors, and hardened and ground gears and splined shafts. In the opinion of the Association, if these centralised services are started even on a small-scale, it will give such a fillip to the machine tool industry that the latter will quickly take up the different types and ranges of machine tools in demand. This industry is so vital to our future development that any amount of help for its sake would be worthwhile. The memorandum points out that the types and ranges required are very wide and they are required in different price ranges also. If the centralised services suggested by the Association can be provided, it will be advisable to permit a fairly large number of new concerns to undertake manufacture of machine tools, for only thus can the country hope to cover a fair proportion of its requirements from indigenous sources.

Consortium

As for plant and equipment for various industries, the Association's view is that the present output can be considerably improved by developing the consortium outlook. Although a beginning has been made in this respect, the *modus operandi* has not been perfected. The Association thinks there is no use in bringing a few manufacturers together and calling them a consortium. A consortium, according to the Association, should not rest content with parcelling out orders among its members, and the division of work amongst the constituents should not be on the basis of duplicating work. It is emphasised, in this connection, that each constituent member should attempt making only a particular part of an industrial plant and not the whole plant. So, the relation, *inter se*, should be complementary. Each consortium should also act as a single entity for canvassing orders and supplying fabricated materials, erection, etc., and satisfy the customers exactly in the same manner as an individual firm would be called upon to do. It is only in this way, the Association concludes, that the most economical processes would be employed in executing work and completion of work ensured to the satisfaction of the customers.

The Association's memorandum has also referred to the rehabilitation and modernisation of the textile, jute and sugar industries because this has a direct bearing on the engineering industries. The Draft Outline does not indicate the provision of investment for rehabilitation and modernisation of these three industries. Their modernisation will provide the indigenous engineering industries with ample scope to exploit their plant capacity and skills. The Engineering Association is, therefore, rightly interested in this matter.

It is also equally interested in another matter, namely, the availability of iron and steel. In its estimation, there is some unsatisfied demand for steel and this position will continue both during and at the end of the third Plan period. The question is whether iron and steel would be allowed to be imported, if necessary, to keep up the tempo of development visualised in the Plan. As for alloy, tool and special steels, the Association's estimate of their requirement by 1965-66 is about 250,000—300,000 tons per annum, if the increased requirements of stainless steel and alloy steel in various new industrial and machine tool plants about to be set up are taken into account. The Association has accordingly suggested an upward revision of the third Plan target (200,000 tons per annum by 1965-66) for alloy, tool and special steels. Since the project for alloy, tool and special steel plant in the public sector has not been accorded a high priority in the matter of foreign credits, the Association urges that the private sector should be invited to participate, if necessary by giving incentives, to make up the deficit in alloy, tool and special steels and electric steel sheets. The memorandum says that the Association is aware of a good deal of enthusiasm evinced by private industrialists in this field. Surely, the Planning Commission and the Government must be aware of it. And, the Government has repeatedly stated that, where the private sector is ready to undertake a project, it has no objection to allow that sector to have that project. Here is an instance to prove that it means what it says.

COMMONWEALTH TELEPHONE CABLE SYSTEM

The ninth annual report of the Commonwealth Telecommunications Board states that plans for a "round the world" system of large-capacity telephone cables to provide for the future needs of the Commonwealth are "being pushed ahead rapidly." The new large-capacity transatlantic cable to be constructed in 1961 by the United Kingdom and Canada will be the first link in an extensive system. Experts from the United Kingdom, Australia, Canada, and New Zealand have devised plans for the next stage—a cable system right across the Pacific Ocean which will link Australia and New Zealand with Canada, and thence, via a microwave system across Canada and the transatlantic cable, with the United Kingdom.

This transpacific cable will be over 8,000 nautical miles long, with more than 300 undersea repeaters, and will have capacity for at least 80 simultaneous telephone conversations. In places, cables and repeaters will be laid at depths of nearly four miles. The design of the cable and repeaters is British. The Governments concerned are ready to go ahead with the project, and it is hoped to complete the laying by 1964.

The report also reveals that the telecommunications facilities of the Commonwealth continue to expand. In 1959, there was a particularly large number of new telephone and Telex services, and their rapid growth continues. The total international telephone traffic originating over the Commonwealth telecommunications system showed an increase of more than 11 per cent. in 1959 over 1958. International Telex traffic recorded an increase of over 18 per cent., though total international telegraph traffic showed a decrease of 1.9 per cent.

International standards concerning several electrical goods were finalised by the International Electrotechnical Commission, which concluded its two-week annual meeting on 18th November at New Delhi. These standards, which will be published as I.E.C. recommendations, relate to a wide range of subjects such as thermal endurance of enamelled wire, insulation resistance of solid insulating materias, unification of sizes and tolerances of round cells, crystal units, rotary wafer switches, toggle switches, connectors, isolators, and earthing switches.

The Delhi meet of the I.E.C. also approved of a large number of draft recommendations for circulation to member bodies for their comments. These drafts cover brushes and brush holders for electrical machinery, capacity of batteries for transistor radio receivers, leakage test, discharge test for batteries used for electronic photoflash apparatus, tests for corrosion, circuit breakers, component classification, post insulators, etc. Besides, the meeting discussed the question of standardising electric motors, switchgear and controlgear, electrical measuring instruments, electric fans, components for electronic equipment, etc. All these subjects were of particular interest to India in the present context of our industrialisation programme when India is emerging from a purchasing to a producing nation. It is claimed that the preparation of international standards for these items would also greatly add to the prospects of our export trade.

Not by Words Alone...

The story is told of St. Francis of Assisi, that he once stepped down into the cloisters of his monastery, and laying his hand on the shoulder of a young monk, said, "Brother, let us go down into the town and preach".

The venerable father and the young monk set out together, conversing as they went. They wandered down the principal streets, and wound their way through alleys and lanes, and even to the outskirts of the town and the village beyond, until they found themselves back at the monastery again.

Then enquired the young monk, "Father, when shall we begin to preach?"

And the father looked kindly down upon his son and said, "My child, we have been preaching; we were preaching while we were walking. We have been seen....looked at; our behaviour has been remarked, and so we have delivered a morning sermon. AH! MY SON, IT IS OF NO USE THAT WE WALK ANYWHERE TO PREACH UNLESS WE PREACH AS WE WALK".

YES .... it is no use that we walk anywhere to preach unless we preach as we walk ..... in building the India of our dreams ... there is little room for preaching by mere words .... what are needed are DEEDS ... And DEEDS include higher production of some ESSENTIAL commodities like

CEMENT ... THE GREAT MODERN MATERIAL OF BUILDING CONSTRUCTION ....

In 1952, we had placed at the Nation's disposal over 1,32,000 Tons of Cement.
In 1954, we had produced over 2,02,000 Tons of Cement.
In 1958, we produced nearly 3,50,000 Tons of Cement.

This year .... in 1960 ....

We expect to place at the nation's disposal over 3,60,000 Tons of Cement

BECAUSE INDIA NEEDS MILLIONS of TONS of CEMENT ...

for Building the richer and prosperous India of our dreams ...

NEW PRODUCTS AND PROCESSES

Dry Bearings from Bronze

A NEW range of dry bearings made from bronze impregnated with polytetrafluroethylene (p.t.f.e.) has been introduced by Bound Brook Bearings Ltd. of the United Kingdom. This firm first introduced dry bearings in 1958, but the material is said to have been improved since then to such an extent that the bearings made from it have a performance four to five times better than the earlier range at less cost. Known as Polysilp IM, the material consists of a porous bronze matrix produced by powder metallurgy (for strength) with pores at its working surfaces impregnated with p.t.f.e. (for low surface friction over extreme ranges of temperature) mixed with lead additive (for a low rate of wear). The new bearings are particularly recommended for use at high temperature, limited only by the oxidation resistance of bronze and the fact that p.t.f.e. changes chemically at temperatures above 330° C. With a suitable margin of safety, the upper limit of operation is put at about 280° C. Virtually, no lower temperature limit is specified because the bearing properties of cold p.t.f.e. have been found to be maintained down to —200° C. Making allowance for contraction and expansion on the running clearances, the bearings can be operated where temperature fluctuates between extremes. Sizes of Polysilp IM cylindrical bearings are based on B.S. 1131, part 5, 1955, providing 14 internal diameters from 3/16 inch to 2½ inch. Two alternative lengths are generally available for each standard bore. The maximum pressure at which the bearings can work is 4,000 lb./sq. in., a figure determined by the strength of the bronze matrix. While cheaper than the bearings it supersedes, the new range is more expensive than equivalent oil-retaining bearings.

New Device for Sampling Soils

An Australian device for sampling soils could prove useful in countries which are undertaking large agricultural development programmes. The device, which is power-driven and mounted on a motor vehicle, withdraws an undisturbed core of soil from depths of 30 feet or more. It is already said to be greatly aiding the immense task of mapping Australia's soils. The new, power-driven "soil profile core sampler" promises to both speed up this work and increase its accuracy. Samples can be taken from far greater depths than is feasible by traditional methods and an area can be speedily covered because the device is mounted on the back of a Landrover. The core sampler was devised by Mr. C. B. Wells, of the Australian Commonwealth Scientific and Industrial Research Organisation's Division of Soils, and was built by Proline Sales Ltd. of Adelaide, South Australia.

It is hydraulically driven from the power-take-off on a Landrover, and requires only an hour to attach or remove. Samples are removed by a special ejector that eases the tube on the core of soil. This cause little disturbance to the sample—much less than if the soil was pushed out of the tube. The core comes up in one almost unbroken piece without any mixing between soil horizons. There is little compression or disturbance in length, diameter or orientation. Two of these machines have so far been made: one takes a core 3 feet x nearly 2 inches diameter and the other a core 3 feet x nearly 6 inches diameter. Greater depths are sampled in 3 feet increments by adding extension augers. A two-man team can take six 3 feet x 2 inches samples in an hour.

Automatic Dimpling Machine

The advantages of hot dimpling to provide crack-free dimples for flush rivets or fastenings are well known, particularly in the aircraft industry, and to exploit this process as widely as possible a fully automatic machine has been designed, developed and manufactured by a Belfast firm, Short Brothers and Harland Ltd. The fully automatic production machine consists basically of robust castings forming a yoke which supports the male and female dies, the latter being mounted directly on the lower jaw. The upper die, which is movable, is mounted on a hydraulic ram which is operated by an electrically controlled pneumatic/hydraulic system. All control and setting arrangements are built into the main castings and all components are readily accessible for setting or maintenance. The dies are electrically heated, temperatures being controlled by a built-in thermo-couple in conjunction with a specially designed electronic system. This unit also controls the solenoid operated pneumatic valves which function, in accordance with the temperature control, to exert the forming pressure in two stages. The control unit prevents initiation of the operating sequence until the dies are at the correct preset temperature, as indicated by a green light on the panel. The operator then positions the component on the tool by means of a predrilled hole and presses the foot switch. From this point onward the whole cycle is entirely automatic. A unique feature of the design is that a dimple cannot be completed until the metal has been heated to the correct temperature to ensure the desired ductile state.

Smoking Machine for Fish

An automatic smoking machine for curing bacon and fish, invented by a member of a U.K. Government laboratory, has been offered to the National Research Development Corporation in London for manufacture under licence. The new smoke generator is entirely automatic except for the necessity of filling a supply hopper with sawdust. It is also economic and uses only about a quarter of the sawdust required for the old method. The machine is intended to run for long period with minimum attention and extensive tests have shown that it produces kippers, white fish and bacon, of a consistent 'smoky' flavour. The machine uses a principle in which sawdust is supported in a stream of heated air. The air is heated electrically and the temperature so adjusted and controlled that the sawdust particles char without catching fire. In this way, it is possible to make a large amount of dry smoke from a small quantity of sawdust. Sieved and dried sawdust is fed at a controlled rate into the machine and the charred material continuously removed. Simple automatic controls are fitted and the smoke, which is produced at a constant density, is cleaned before passing to the kiln by a cyclone separator fitted in the outlet duct.

Chemical Process for Colouring Metals

A new chemical process which will colour the surfaces of all types of metal in a single treatment is now ready for commercial application in the U.S. The coatings are claimed to be resistant to acids, alkalis, and solvents and to be more economical than colour anodising or painting. The coatings are applied in an aqueous solution at room temperature and can be applied by roller coating, dipping or spraying. The only pre-treatment required is thorough cleaning and rinsing, as for any finishing system. "Curing" time, ranging from 350 to 425 degrees Fahrenheit, can be as little as a few seconds, depending on the amount of heat applied. Two of the coatings available are clear and provide a satin finish. They are claimed to have good corrosion resistance and to be a suitable substitute for organic finishes. The colour coatings can be applied to aluminium, zinc, carbon steel, stainless steel and magnesium and are available in a hard, solvent-resistant grade and a ductible grade. Colours available include red, brown, green, blue, black, grey and bronze.

Checking Weight of Paper During Production

A new system for automatically and continuously checking on the weight of paper during production, which, it is claimed, can be applied to all types of paper, paste-board and cardboard manufacture has been developed in the U.K. The operation of the system, which enables both statistical checking and fully automatic control to be carried out, depends on the use of a special registering system which is synchronised with the speed of the paper machine and stopped photo-electrically if the strip breaks. A series of electro-magnetic computers built into the system calculate numerically any deviations which occur from the required sheet weight. The system enables production performances to be calculated during any time interval for instance in a working shift. At the same time, although initially designed for use in the plastics manufacturing or paper industry, it can also be adapted readily for use of the packaging industries.

Fertiliser from Sawdust

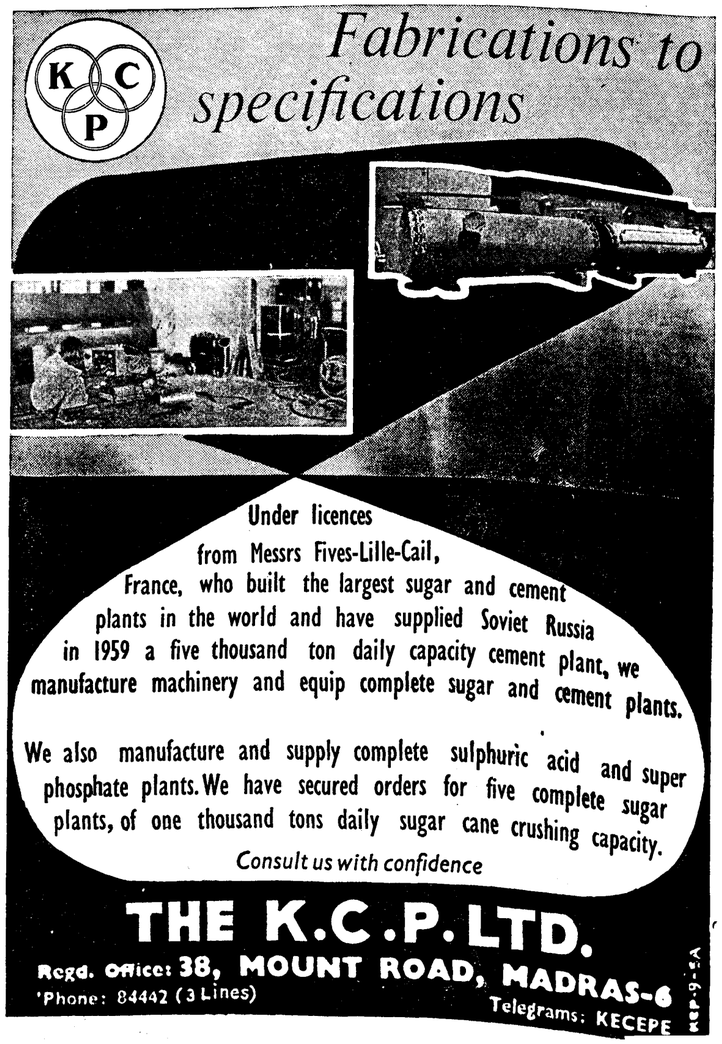
The Australian Commonwealth Scientific and Industrial Research Organisation has been doing research on the profitable use of sawdust as a soil additive. The most important ingredient in sawdust for this purpose is lignin, which acts as a storehouse of soil nutrients. Sawdust also improves the physical structure of soils, loosening heavy soils and improving water-holding properties of the light ones. One of its harmful effects, however, is to reduce the level of soluble nitrogen compounds that serve as plant food. Results of research in Australia show that sawdust is suitable as a mulch for crops, pastures and orchards which demand little nitrogen. It can be mixed with oil when first used for fowlyard or cowshed bedding, where it will acquire the nitrogen to support later growth of micro-organisms.

Meter for Measuring Steel Wire Temperature

A neat inexpensive and compact meter suitable for measuring the temperature of steel wire during its passage through reducing dies has been developed recently by the Adison Electric Company Ltd. The new instrument should make it easier to control the wire drawing operation and to maintain optimum speeds without fear of impairing the properties of wire and lubricant. Specifically designed for rapid manipulation, it is contained within a leather case and the whole assembly weighs less than 6 lb. To obtain a reading the pulleys, which are made from dissimilar metals, are pressed firmly against the moving wire. This completes an electrical circuit which, in turn, moves a needle across a calibrated dial.

New Fire Detector

A new fire detector invented in the U.S. works by sensing ultra-violet rays from an open flame, rather than heat or smoke. It is insensitive to intense illumination from light sources enclosed in glass, which block the rays, but can be set off by the open flame of a candle. The device can also be used as an alarm when a flame which should be present has gone out.



DIFFERENTIAL BONUS FOR L.I.C. POLICYHOLDERS

PLEA FOR PUBLISHING METHOD AND BASIS OF COMPUTATION

By G. S. Diwan

"There should be nothing in the conduct of a Life Insurance Company that the managers should not be prepared, if necessary, to proclaim to all the world and justify."—*Journal of the Institute of Actuaries, London.*

THE Life Insurance Corporation did not start from scratch. It took over the running businesses of as many as 245 insurers, whose financial positions naturally showed wide variations. Broadly speaking, the financial strength or weakness of any commercial concern on any day is indicated by the difference between the values of its liabilities and assets on that day; and it is this difference which determines its profit earning capacity. The distinguishing characteristic of a life insurance concern, however, is that its liabilities are almost wholly contingent, in the sense that the exact time when any of them will have to be met is uncertain; and this feature makes their evaluation, and therefore also the determination of the profit-earning capacity of the insurer, an essentially actuarial problem. Since the assets and the liabilities of the 245 insurers, now merged in the L.I.C., could not, in the very nature of things, be expected to show the same, or nearly equal, profit-earning capacity for the different insurers, the L.I.C. was quite justified in deciding to allot bonuses at different rates (differential bonuses) to with-profit policies, now in force with it, but issued, in pre-nationalisation days, by, and taken over by the L.I.C. from, different insurers (now called units). This it is permitted to do, with Government's prior approval, under Section 49(2) (k) of the Life Insurance Corporation Act.

Fair Distribution of Profits

The scheme of differential bonuses is intended to secure a fair distribution of the divisible profits of the L.I.C. between the policies issued by different units. At the 1957 valuation of the L.I.C., a divisible profit of about Rs. 27.56 crores has emerged and its allocation between approximately 41,70,000 policies is at present held up because of the non-finalisation of the scheme of differential bonuses. A fair and equitable distribution of life insurance profits is not, even under ordinary circumstances, an easy task and it has now been made much more complicated by the manner in which life insurance was nationalised in 1956. The Managing Director of the L.I.C., in his report on the 1957 valuation, remarks as follows: "In actuarial science the search for equity has always been elusive and the problem has not been rendered easier by the fact that it is necessary to deal with as many as 245 insurers varying widely in size and strength. The Corporation has been engaged for a long time in evolving suitable "bonus indices" (i.e., ratios to the Corporation bonus of the various differential bonuses) "for the several units. But owing to the magnitude and the complexity of the task involved, it has not been possible to complete it." Even now the final bonus indices have not yet been evolved; but, in the meantime, some of the 41,70,000 policies are becoming claims by death or maturity and in their case it becomes a matter of urgent necessity to know what bonus is to be paid to them. It would be clearly inconvenient to the claimants under such policies to take the claim money in instalments, which they would be required to do if they were asked to wait until the finalisation of the bonus indices for receiving the reversionary value of their share in the above divisible profit of Rs. 27.56 crores. Therefore, in order to remove any such inconvenience to these claimants, a *provisional* schedule of bonus indices, giving what may be called a *provisional* scheme of differential bonuses, was adopted by the L.I.C. in June 1959. In September 1953, long before the adoption of this provisional scheme, it was reported, on the basis of official information, that "the Corporation has conducted an exhaustive investigation into the profit-earning capacity of the various insurers." This shows that "it is after a detailed examination of the profit-earning capacity of the various units of the Corporation that the provisional scheme of differential bonuses has been arrived at." The Press advertisement of 20th June 1959 about the provisional scheme of differential bonuses stated that the final scheme was expected not to differ materially from the provisional scheme.

Thus in spite of a 'detailed' and 'exhaustive' investigation having been made for months before the adoption of the provisional scheme, and in spite of more than a year having elapsed thereafter, the final scheme has not yet been published. Indeed the present situation is somewhat confusing. One does not know whether any one of the major principles underlying the provisional scheme is being now changed in arriving at the final scheme or whether the position is that the major principles continue unaltered but some refinements in working or some slight changes in minor principles are being adopted. In the former case, the declared expectation that the final results would not be materially different from the provisional results does not seem to be quite justified; and, in the latter case, the period of more than a year elapsed after June 1959 should have ordinarily been more than enough to effect minor changes in the working. If the L.I.C. were to make known to the public the principles on which it is working, not only will the present position be clear but the L.I.C. will also understand the reaction to these principles of the professional and other informed public opinion and, above all, also of the policyholders concerned. It is in the fitness of things that the decision on such a technical matter of public importance as differential bonuses for the L.I.C. should be taken not only after proper consideration of the views of those affected by, but also of those professionally interested in, this question.

Basic Items

The following are the basic items on which information, including the principles adopted in arriving at the bonus indices, should be given.

(i) On what date is the profit-earning capacity of each unit being measured?

(ii) Is a common valuation basis being adopted for evaluating the liabilities of the different units on this day? If so, what is it? If not, what are the principles on which differentiation in the bases is made and what are these different bases for the various units?

(iii) The policies issued by the Corporation after nationalisation form a distinct unit. If the method adopted for measuring the profit-earning capacity of the Corporation as a distinct unit is not the same as under (ii) above, then what is it?

(iv) In valuing the unquoted assets of the units, like land and building property, mortgages, dead stock, etc., if the values assigned to these by the Corporation differ (except in the usual way owing to depreciation, etc.), from those last assigned to them by the previous insurers, then a list of such differences, if any, for the various insurers should be available for reference to the policyholders of the respective insurers. The L.I.C. should also state whether these changes in values were made by it on its own or after consulting independent valuers. A policyholder is entitled to know whether, and if so which, bad investments of his previous insurer, now come to light after nationalisation, are responsible for the reduced differential bonus that he may be getting.

(v) It appears that, though the L.I.C. is calculating the profit-earning capacity of each unit separately, different units, with numerical measures for this capacity within a certain range, are being grouped together and given a single bonus index. In the provisional scheme of differential bonuses there are only six bonus indices for the six such groups into which all the different units are divided. This grouping, which is a process opposite to that implied by differential bonuses, may be necessary for practical reasons in order to reduce to manageable dimensions the numerical work in applying the bonus indices. However, the list of the several different measures of the profit-earning capacity for the various units should also be published, so that it will be possible to know whether the degree to which differentiation and therefore equity are sacrificed for practical reasons bears a reasonable relationship to the degree to which they are achieved.

Information under all the above five items can be immediately given for the provisional scheme and that under the first four of these items can also, presumably, be immediately given for the final scheme. Indeed, it was expected that the L.I.C. would publish a report on the working out of the bonus indices, just as it has published a valuation report; but not only no information is so far available on any of the above five basic items but there is reason to apprehend that no information would probably be given hereafter, even though a request may be made for it. Final bonus indices are, at least in theory, applicable until the last of the pre-nationalisation with-profit policies goes off the books of the L.I.C., which may happen probably some time after 1980. Again they affect the rights under some few millions of life policies. Their determination is therefore a matter of very great importance, affecting, as it does, lakhs of people for varying lengths of time, up to a maximum of probably more than 20 years from now.

Very probably, the L.I.C. feels that if the requisite information about the method whereby bonus indices are being calculated is given, there would be too many representations in the matter; and it would be impracticable to deal with a large number of representations. This is an extremely regrettable attitude on the part of the L.I.C. If the sole purpose of taking such an undemocratic attitude is to avoid considering too many or worthless representations, then surely the L.I.C. could have still given all the information but decided to consider and deal with only such representations as were signed by a minimum number of with-profit policyholders of a unit, say fifty. Under Section 53 (2)(*a*) of the Insurance Act, 1938, a representation to the Court "by not less than fifty policyholders holding policies of life insurance that have been in force for not less than three years and are of the total value of not less than fifty thousand rupees" requesting that the insurance company be wound up had to be considered and dealt with. If such a serious matter as even the liquidation of a company could be examined by a court on the strength of a representation of fifty policyholders, why should not the L.I.C. be prepared to consider and deal with a similar representation urging nothing more serious than just a reconsideration of the differential bonus?

It is also doubtful whether the L.I.C. can, under the present law, refuse to give any information as to how the differential bonuses have been arrived at. Under Section 49 (2)(k) of the Life Insurance Corporation Act, the regulations for classification of policies for differential bonuses have to be published in the *Gazette*. Surely, the regulations for classification are something different from the classification itself and should include the information on the items mentioned above. Again, bonus indices are a published result of a financial investigation; and under Section 13(2) of the Insurance Act, 1938, which applies to the L.I.C., whenever an investigation is made of which the results are made public, the necessary information about the investigation is required to be given in a suitable form, and this information includes that on the above five items.

Position Prior to Nationalisation

It would not be out of place here to consider the position in respect of such a matter as differential bonuses in days prior to the nationalisation of life insurance. If two or more insurers desired to amalgamate their life insurance businesses, then they had, in those days, to conform to the provisions of Sections 35 and 36 of the Insurance Act. The scheme of amalgamation had naturally to specify the method whereby bonuses, to be given after amalgamation to the with-profit policyholders of the two amalgamating units, were to be determined. This method was the item analogous to the scheme of differential bonuses now being devised for the L.I.C. The document stating the whole scheme of amalgamation, including this item corresponding to differential bonuses, together with all relevant material had, under Section 35, to "be kept open for the inspection of the members and the policyholders at the principal and branch offices and chief agencies of the insurers concerned" "during the two months" before the application for amalgamation was made to the controller who was to sanction the scheme, under Section 36, only "after hearing the directors and such

(Continued on page 971)

SOME ASPECTS OF THIRD PLAN

PRIVATE SECTOR MUST BE ALLOWED TO PLAY ITS PART WELL

By S. R. Damani, M.P.

THE draft third Five-year Plan has been approved by Parliament by a majority of votes, unlike the previous two Plans which were passed unanimously. Under the third Plan, outlay is placed at Rs. 10,200 crores which is equivalent to the outlay of the first and second Plans together. The public sector has been allotted Rs. 6,200 crores and the private sector Rs. 4,000 crores which means an increase in investment of 51 per cent. and 29 per cent. in the two sectors, respectively. The following is the breakdown of figures:

(In crores of rupees)

	Public sector plan outlay	Current outlay	Total	Private	Total
1st Plan	1,900	400	1,560	1,800	3,360
2nd Plan	4,600	950	3,650	3,100	6,750
3rd Plan	7,250	1,050	5,000	4,000	10,200

In the public sector, out of Rs. 7,250 crores, a sum of Rs. 3,600 crores is proposed to be spent by the Centre and Rs. 3,650 crores by the States. The most important feature is increased allocations for agriculture and industries. In the case of agriculture and irrigation, the allocation is Rs. 1,675 crores, as against Rs. 980 crores in the second Plan, whereas, under the industry and minerals head, the allocation is placed at Rs. 1,500 crores, as against Rs. 880 crores. Thus, in agriculture and irrigation, the allocation has been increased from 21.3 to 23.1 per cent. and similarly in industries and minerals from 19.1 to 20.7 per cent. Both these are interrelated and allied and their progress is necessary for the country's development.

The Plan is most realistic and not at all ambitious. The size of the Plan is in keeping with the size of the country, the population for which it is meant, and the stage and level at which the completion of the previous two Plans will have placed the country. Had the Plan been less than Rs. 10,000 crores, it would have been unrealistic. Only few months back when some indication was given about the proposed outlay, it was considered to be ambitious, but the sad feeling has now faded out on rethinking.

Considerable value is attached to Planning. Planning, if it is to be really affective, must be a continuous process linking two plans together in an unbreakable thread. The Planning Commission has considered all these pros and cons and has given this draft Outline of the third Plan. Having completed the two Plans and the progress the country has made in the various fields, agriculture and industry, in particular, it was but natural that the tempo of the progress should be maintained. In this regard, for instance, the anticipated increase in employment opportunities to be provided to 10.5 million in urban areas and 3.5 million in rural areas with a backlog of 2 million is modest. Similarly, the target of 5 per cent. increase in national income is also fair. Naturally, therefore, outlay is bound to be commensurate to the anticipated achievements in terms of physical targets.

Annual Plans

There had been appraisal and reappraisal in the case of the second Plan, due to foreign exchange and other difficulties. If the Planning Commission had divided the Plan into annual plans, the same could have been avoided. However, a beginning can be made with the third Plan. The Plan can be split into five annual plans within the overall framework of the third Plan. Annual plans with certain outlays and physical targets to be achieved in different fields in the relevant period with due emphasis on the progressive developmental needs of the regions, districts, States and the country as a whole can be prepared. The States shall also make their own annual plans and distribute the investments among the constituent districts and fix the targets in various fields to be achieved by them, to which the Collector and *Pramukh* of *Zila Parishad* shall be responsible. Such annual plans shall be presented to Parliament and State legislatures along with the budget for discussion. While presenting such annual plans, the extent to which the previous annual plan has been affective and how it is comparable in its achievements with the targets laid down for it together with reasons for variations, if any, must be indicated. The progress can be checked up and, in the light of the experience gained and achievements accomplished, the next annual plan, the framework of which is already ready, can be suitably modified to suit the exigencies of the time when prevailing. This annual planning will accordingly prove to be more effective, as it will go deep into detailed planning and is, therefore, destined to prove successful. This involves considerable flexibility in planning too.

Industrial Sector

The Industrial Policy Resolution of 1956 will continue to govern the expansion of industries during the third Plan, the public and private sectors continuing to be supplementary and complementary to each other. It may be noted that the performance of the industrial sector during the second Plan period has been very satisfactory. It has exceeded even anticipated outlay of Rs. 1,094 crores and the latest estimates indicate investment of Rs. 1,450 crores in the private and public sectors taken together, an increase of 32 per cent. May be, a part of the increased outlay has been due to rise in cost, but it is a fact that this sector has done exceedingly well.

The private sector has played its part very satisfactorily to harness resources of Rs. 3,100 crores during the second Plan and it will be possible to do the job assigned to it under the third Plan and invest Rs. 4,000 crores for the development of industries in the spheres earmarked for it. If no more regulations are placed, if there are no delays in the sanction of schemes, if financial help provided by the Government financial institutions is quickened and if other formalities are simplified, the private sector will be able to perform its part well.

Agricultural Sector

Agriculture is equally important; rather it is the basis of industrial planning. It supplies raw materials, etc., to industries and the majority of population live and thrive on agriculture. It, however, seems that, for agriculture, it is more a problem of organisation than of investment. There is shortage of trained personnel in agricultural technology and the sums are not usefully employed. Blocks are not fully equipped with very efficiently trained people and this sector needs proper guidance. Irrigation facilities, too, have not been availed of. As against anticipated 88 million acres, only 70 million acres have been irrigated. In this respect, the State Governments should help the cultivators by granting advances for constructing field canals, etc., and should take the initiative. The same applies to fertilisers and co-operative farming. The success of our planning and increased agricultural output depends to a large extent on these factors. If our farmers are properly guided and the investment of funds is properly utilised, I do not find any reason as to why the target of 105 million tons of foodgrain and other targets of agricultural production will not be achieved.

Financial Resources

A reference to the financial resources of the third Plan can be made here (the relevant details are given on page 378 of *Commerce* dated 27th August 1960). Promotion of small savings and investment is a must and, if the third Plan is to succeed, there has to be increased domestic saving. It is suggested that it will imply restraint on consumption, but this should not apply to Indian conditions where the *per capita* consumption is already low. It will, therefore, require a positive policy to encourage small saving and its investment in productive activities. The Prize Bond, a good scheme, has collected just Rs. 10 crores. About one-fifth is accounted for by Bombay and Gujarat. I think that insufficient publicity has been the main cause for its poor performance. Wider publicity is needed to make it popular.

The budget estimates for 1960-61 provided for Rs. 95 crores under small savings collections and, on this basis, an average Rs. 110 crores during the next five years appears to be ambitious. Further, the activities of officials to show increased figures on 31st March, which are eventually withdrawn within the next week or so during the ensuing financial year, make a mockery of the scheme. This has been observed by Mr. J. P. Narain, the *Sarvodaya* leader and Mr. Shriman Narayan, Member, Planning Commission. Such activities do not help much but only present rosy statistics to official hierarchy, and are devoid of any authenticity. More remains to be done in rural areas to tap resources through small saving collection and what is necessary is to man the administration with honest and sincere officers to do things in the right way.

In a total outlay of Rs. 7,250 crores, a deficit financing of Rs. 550 crores is definitely moderate, as against Rs. 1,175 crores in the total outlay of Rs. 4,800 crores. The planners have kept the scope for deficit financing very limited. It is conceded that, upto a reasonable level, deficit financing is a stimulating factor and only beyond a limit it becomes inflationary in its impact which give rise to other undesirable trends. As an economic measure, it has been employed by the advanced countries and it has helped in the economic development. However, a vigilant eye should be kept, so that there is a constant and corresponding increase in the production; otherwise, inflationary trend may ensue.

The third Plan provides for the raising of resources through taxation to the tune of Rs. 1,650 crores, out of which one-third, that is, Rs. 550 crores, is to be raised by the States. It may be said that direct taxation has already reached saturation point. The corporation tax of 45 per cent. is already on the higher side and the Government will receive more revenues than it would otherwise have received from this source. The personal taxation of 78 per cent. (earned) and 84 per cent. (unearned), together with expenditure tax, wealth tax, gift tax, etc., hardly leaves any substantial amount for capital formation and reinvestment in profitable channels. Investible income is thus becoming stagnant and extinct and any further burden under direct taxes will be a disincentive measure. Incidentally, the Plan relies on indirect taxation. The Planning Commission says: "As regards income and corporation taxes, further increase in yields will have to be sought mainly through tightening of administration, watch on expense account of companies, and measures to check tax evation. Indirect taxes and increase in the prices of products of public enterprises will, it must be recognised, tend to raise prices and costs, but this is part of the calculated sacrifices that have to be made."

I do think that, while selecting the items for indirect taxation, the Government will have to be careful. It is right that development process benefits all sections of the community and no member of the community should shirk or grudge to shoulder any burden on that account. I am, however, doubtful about the raising of resources to the tune of Rs. 550 crores by the States. Past experience shows that most of the States have hardly presented surplus budgets. Any shortfall on their account will mean more Central aid or grant which, incidentally, means that the Centre will have to find that much additional resources.

The Plan has made two important points. First, it starts with a low level of foreign exchange reserves and, as such, it is considered essential to exercise utmost care and vigilance in respect of imports and in enhancing foreign exchange earnings. The second point is about the level of prices which are more than 20 per cent. as compared with those prevailing at the beginning of the second Plan.

Foreign Exchange

The Plan sets a foreign exchange deficit balance of Rs. 3,200 crores—one-third of the total outlay and equal to the outlay of the first Plan. If the amount of Rs. 500 crores required for repayment of loan and interest thereon and the Rs. 600 crores estimated receipt by way of assistance in rupees under P.L. 480 are taken into account, the country will need foreign exchange of the order of Rs. 2,100 crores for import of machinery and equipment for projects in the Plan, components, intermediate products, etc., for increasing the production of capital goods within the country.

I think it is too early to estimate any foreign aid to India. Things will be clear by the end of the year, when the U.S. Presidential election will be over and something will definitely be known from the friendly countries in the West. However, looking to the sympathetic attitude of foreign countries, India will not be disappointed with due regard to our sincerity of purpose and the gigantic task we have undertaken to improve the standard of living of the masses.

With the loans we obtain and the complexities of its repayment which may continue further, we do not know where the country will land. It is, therefore, advisable if the flow of foreign private capital is accelerated. Atmosphere must be created for such a flow. The Government has allowed foreign collaboration in the private sector and what is required is the creation of a more attractive and healthy atmosphere.

Level of Prices

The level of prices is the basic factor that affects the whole economic life of the country. If we can control the price of food, the basic item which is the backbone of the cost of living index, the other problems will automatically be solved. All other items are related to the prices of food item.

It is an economic principle that prices tend to stabilise at a reasonable level in a perfect market where forces of demand and supply have free role to play. Regulation and control must not become a permanent feature. The only way to have a stabilisation of prices at economic levels is to ensure increased production on all fronts. All other problems would be solved automatically.

Administrative Efficiency

The Plan is modest and what matters is its successful implementation and execution. The success of the Plan will depend mostly on its proper and purposeful execution. This object can be achieved through administrative machinery. The salient features of public administration necessary are integrity, efficiency and public co-operation. It depends upon the administration to utilise the allotted money in proper channels. The Plan itself says that success depends on the efficiency with which it is implemented. There is no difficulty in the Plan, but the difficulty is of its efficient implementation. Our young men should not hesitate to go to villages and work. Our administrative cadre should throw away tendencies of the steel frame. The administrative personnel should feel that they are part and parcel of the public and that they are the servants of the public and not its masters. They should be far away from political pressure and work for the public interest in the national spirit. They should be immune from political influence from within or without. As such, the whole administration should be streamlined, and dishonesty must be punished and virtues encouraged through proper inducements. For the quick execution of work, delays should be avoided and files should move quickly. The whole atmosphere should be surcharged with plan-consciousness and, in order to have more public co-operation, more publicity must be given.

Increase your exports the ERIC way

ERIC can help you—as it has helped hundreds of exporters—to stay in business by minimising export risks resulting from changes in the economic and political climate abroad. ERIC assists you in increasing your turnover by enabling you to offer better credit terms to your buyers—thus enlarging your overseas market.

This is how ERIC has helped others*:—

ANNUAL TURNOVER in Rs. Lakhs

Exporter	Before taking ERIC Policy	At the end of the First year	At the end of the Second year
A	17	45	75
B	4.5	14	40
C	12	21	27

WORLD AGRICULTURAL TRADE

BOTH VOLUME AND VALUE HIGHER

WORLD trade in agricultural products, which had suffered a distinct setback in 1953 under the impact of 1957-58 recession, staged a smart recovery in 1959. Both the volume and, to a lesser extent, the value of international trade itself registered an improvement. Apart from the revival of general world economic expansion, this trend was assisted by the sustained improvement in production. World production of agricultural products (excluding those of mainland China) rose by 2 per cent. in 1959-60 over the previous year, with Western Europe and the Far East accounting for the largest increase. According to *The State of Food and Agriculture—1960*, brought out by the Food and Agriculture Organisation, of the United Nations (priced at 10s. or $2), the expansion in the volume of exports of agricultural products at 6 per cent. was lower, as compared with those of manufactured goods which registered an increase of 7 per cent. The average unit value of agricultural exports, however, continued to fall, this time by about 3 per cent. Consequently, the total value of agricultural exports rose in 1959 by only 3 per cent.

Tables I and II at the bottom of this page show the trend of production and exports of major commodities during the last two years, as compared with the pre-war period (1934-38) and 1948-52.

Raw Materials

A feature of world trade in 1959 was the remarkable recovery recorded in the exports of agricultural raw materials, which had been worst hit by the 1957-58 recession. The volume of raw material exports went up by 10 per cent. over the previous year, mainly because of heavier shipments of wool and rubber. For the group as a whole, there was practically no change in the average unit values. The F.A.O. Report points out that the commodity group, beverages and tobacco, also showed a marked increase of some 8 per cent. in the volume of exports in 1959, as compared with the year before, and reached a new high level. Increases in the volume of trade in coffee (16 per cent.) and cocoa (14 per cent.), following heavy crops in Latin America and West Africa, offset some decline in exports of tea, wine and tobacco. Prices of cocoa, however, fell back somewhat after the recovery of 1958, while average values of coffee exports continued to decline. In consequence, the value of exports for the whole group was some 7 per cent. lower than in 1958, despite the larger volume of trade.

The exports of food and feedingstuffs generally improved, though there were marked differences between commodities. Thus, while the volume and value of cereal shipments showed no marked change from the level of the last few years, both the volume and value of sugar exports declined further from the 1957 peak; most of the fall occurred in exports from Cuba. On the other hand, exports of edible oils and oilseeds, dairy products, fruit and, to a lesser extent, meat, continued to increase in volume. The value of exports of the first two groups of commodities recovered sharply from the decline in 1958, while that of meat, which had not been reduced by the 1958 recession, continued to rise. Export values of fruit declined slightly in 1959, but, over the past five or six years, fruit and meat are the only major commodity groups for which the value of exports has increased more rapidly than their volume.

A region-wise analysis of trade shows that only three regions, namely, Oceania, the Far East (which includes India, Pakistan, Ceylon, Burma and Malaya) and the Near East, recorded some gain in their earnings from agricultural exports. Export earnings of the Far East region alone rose by 14 per cent. (as against an increase of only 3 per cent. in the volume of exports), thanks mainly to the improvement in export prices, particularly of rubber. The largest increase in export earnings, that is, by as much as 24 per cent., was attained by Oceania (Australia and New Zealand), as a result of larger shipments of wool, meat, dairy products and grains. The volume of agricultural exports from the Near East (Iran, Israel, Turkey and Egypt) rose by 20 per cent. and value by 7 per cent. Shipments of cotton, the major agricultural export of the region, rose by 40 per cent. in volume to a record level in the Near East. All other regions recorded lower agricultural export earnings in 1959.

Over 40 per cent. of the increase in the volume of exports in 1959, says the F.A.O. Report, was directed to Western Europe and over 30 per cent. to North America, where the volume of agricultural imports for the first time exceeded the average for 1948-52, a period when they were influenced by stockpiling operations. The remainder represented increased shipments into the less-developed regions, including shipments under special terms, and, to a smaller extent, larger shipments to Eastern Europe, Russia and Mainland China.

Changes in the volume of imports by regions were not closely reflected by changes in values. For imports into the less-developed regions as a whole rose in volume by 4 per cent., but decreased in value by 2 per cent. As compared with 1957, the volume of imports was almost the same, but the value had fallen by about 10 per cent.

Less-developed Regions

Examining the trends in the pattern of agricultural trade between the industrially developed and less-developed countries, the F.A.O. Report observes as follows:

"In the last decade, imports of agricultural products into the economically less developed regions have increased more quickly than imports into the more developed regions, partly because of shipments under special terms. The recession of 1958 led to some decline in agricultural imports into all the less developed regions except the Near East, where grain production was affected by drought, but the rise was resumed in 1959 in each of these regions except Latin America. In 1959, agricultural imports into the less developed regions as a whole had increased in volume by 55 per cent. over the 1948-52 average, while the comparable figure for the more developed regions was only 28 per cent. Even so, imports into the less developed regions in 1959 amounted to only about one-third of those into the more developed regions.

"In contrast to imports, the volume of agricultural exports has tended to grow more rapidly in the case of the more developed regions. By 1959, the volume of exports of all agricultural products had increased by some 38 per cent. over the 1948-52 average in the more developed regions and by only 29 per cent. in the less developed ones. For food and feedingstuffs, the difference was still more marked, exports of the more developed regions rising by 50 per cent. and those of the less developed by 30 per cent. in the same period. The less developed regions accounted in 1959 for about 56 per cent. of world exports of agricultural products as a whole (excluding exports of Russia, Eastern Europe and Mainland China), but only 38 per cent. of world exports of food and feedingstuffs.

"Thus, exports of agricultural products from the less developed regions, in particular exports of foodstuffs, tend to lag behind those in the more developed regions, while their imports race ahead. In consequence, their net exports of foodstuffs have fallen sharply, while their net exports of agricultural products as a whole have done little more than hold their own, though there was some recovery in 1959. Food and feedingstuffs accounted for about 17 per cent. of the net agricultural exports of the less developed regions as a whole in 1934-38, but only 16 per cent. in 1948-52 and 13 per cent. in 1958-59. This trend reflects the failure of production of foodstuffs in these regions to keep pace with their growing requirements. While the decline in net exports of food has made possible some improvement in nutritional levels, it runs counter to the need of the less developed countries to increase their earnings of foreign exchange."

Prices (average unit values) of agricultural exports as a whole in international trade averaged about 2 per cent. less in 1959 than the year before, almost the whole decline occurring in the beverages and tobacco group. The F.A.O. Report adds that, in the latter part of 1959, prices steadied and even recovered somewhat, but "preliminary indications suggest that the decline was resumed in 1960." Raw materials were an exception, with rubber prices continuing to rise. The Report says that grain prices remained fairly steady in early 1960, and those of beef and mutton continued to rise, but there were sharp falls in prices of dairy products and certain oilseeds. Coffee prices were somewhat firmer, while those of cocoa declined appreciably.

Terms of Trade

With the aforesaid decline in general agricultural prices, the terms of trade of agricultural products (derived from comparison of export unit values for agricultural products with those of manufactured goods) fell to the lowest point since the war. The following table shows the recent trends in the movement of terms of trade, along with export unit values:

TABLE III

(Indices, average 1952-53=100)

Year	All agricultural products	Food, feeding-stuffs	Beverage, tobacco	Agricultural raw materials
1948	98	115	76	86
1951	116	110	98	155
1954	103	97	129	95
1955	97	91	109	98
1956	91	88	97	90
1957	89	87	94	90
1958	83	83	95	76
1959 (prel'minary) ..	81	83	84	75

N.B.—Indices are at current prices deflated by average unit values of manufactured goods.

It is necessary to add here the F.A.O.'s qualification to the above indices, so that readers may be able to view the situation in its proper perspective. The relevant remarks are as follows:

"These generalised estimates of the terms of trade for agricultural products as a whole, or for broad groups of commodities, are of significance in bringing out the general situation for agriculture. They do not necessarily correspond closely with the situation for individual agricultural exporting countries. Price trends for different agricultural products vary rather widely, so that much depends on the composition of the countries' exports. Moreover, while manufactured goods usually represent a large share of the imports of agricultural exporting countries, they are not the only constituent; as noted earlier they include increasingly a proportion of raw materials, and especially foodstuffs. To judge the influence of agricultural price movements on the external payments situation of any individual country, it is, therefore, necessary to take into account the actual composition of both its exports and imports."

A special section in the Report is devoted to the study of the trade of communist countries with the rest of the world. The only defect is that these data generally relate to 1958, presumably because they are "less generally accessible." In 1958, trade with other members of this group accounted for nearly 80 per cent. of the agricultural exports and over 50 per cent. of the agricultural imports of Russia. Imports into this group from the less developed regions have increased sharply, notably of rubber (mainly from the Federation of Malaya) and cotton (mainly from the United Arab Republic). Imports of beverages, spices and other products are also rising, though the total volume of trade remains small. In contrast to the general trend, imports of sugar and oilseeds have been reduced because of greatly increased domestic production.

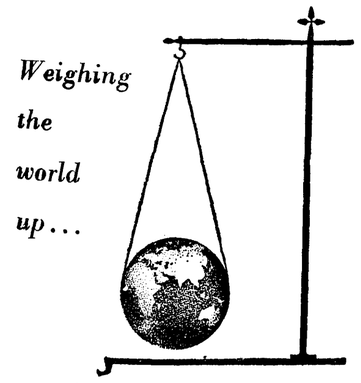
§ Excluding imports into Malaya and Singapore for re-export, but including rubber smuggled from Indonesia into Malaya and Singapore.



Weighing the world up . . .

. . . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

BROOKE BOND PAYS MORE

GROSS PROFIT, HOWEVER, A SHADE LESS

THE drought of unprecedented severity from the beginning of 1960 up to May, resulting in a slightly lower crop, and a decline in prices were mainly responsible for the small setback in the earnings of the Brooke Bond Estates India Ltd., Calcutta, during the year ended 30th June 1960. The gross profit has come down from Rs. 18.22 lakhs in 1958-59 to Rs. 17.44 lakhs, in contrast to the sizable increase recorded in the previous year from Rs. 11.13 lakhs in 1957-58. The output of tea during the year under review amounted to 3.10 million lbs., as compared with 3.20 million lbs. in 1958-59, and the average price realised, after deducting sale charges and cost of export rights, is Rs. 2.27 per lb., as against Rs. 2.29 per lb. in the previous year.

The results for the year under review would have been worse but for the fact that climatic conditions during the latter half of 1959 were favourable and a satisfactory crop was harvested during this period. The effect of the severe drought in the subsequent months was no doubt widespread, but the Directors are happy to report that no lasting damage to the Company's properties has been done and all areas are recovering satisfactorily. The effect of the drought would appear to be greater on the current year's crop.

Marketing conditions were mixed, the orthodox manufacture having a less favourable year. The better grade teas were in less demand and, as a result, fetched substantially lower prices. Although this was made good, to a large extent, by the better prices fetched by poorer grades, consequent on a temporary shortage of low-priced teas in the world market, the average price realised was a shade lower as stated above.

The net profit, after providing for depreciation and taxation, at Rs. 9.82 lakhs, represents an increase of Rs. 1 lakh. The transfer to the various reserves has been stepped up from Rs. 2.24 lakhs to Rs. 4.27 lakhs, the increase being mainly accounted for by the addition of Rs. 2 lakhs to the general reserve, which had not received anything for some years past. The dividend on ordinary shares is being stepped up from 12.5 per cent., subject to deduction of tax, or 8.75 per cent. net, to 15 per cent., subject to deduction of tax, or 10.5 per cent. net, thus more than making good the cut made last year from 10 per cent. tax-free paid for 1957-58. The larger allocation to the reserves and higher distribution on ordinary shares after meeting the preference dividend liability have, however, meant a dip into the large surplus brought in from the previous year, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds of tea	77.97	77.49	72.88	87.42
Other income	1.75	1.61	1.73	2.02
Closing stocks of tea	5.92	7.03	6.38	7.20
Estate expenditure	50.38	48.53	48.78	48.34
Other expenditure	11.89	12.33	13.87	17.18
Gross profit	17.44	18.22	11.13	21.80
Provision for—				
Depreciation	2.42	2.38	2.44	2.46
Taxation	5.20	7.02	3.50	7.85
Net profit	9.82	8.82	5.19	11.49
Transfer from reserves	3.15	0.03	3.25	2.65
Bonus in respect of previous years	2.21	0.08	2.76	2.83
To reserves	4.27	2.24	1.89	3.45
Dividends—				
6 per cent. taxable preference	2.10*	2.10*	1.44	1.44
Ordinar	5.25	4.37	3.50	6.12
	(15%)*	(12.5%)*	(10%)	(17.5%)
Carry forward	2.54	4.40	4.30	5.45
Tea output (in million lbs.)	3.10	3.20	3.00	3.44
Average price realised (per lb.)	Rs. 2.27	Rs. 2.29	Rs. 2.10	Rs. 2.12

* Subject to deduction of tax.

In accordance with the agreements reached between the Indian Tea Association and representatives of staff and labour, the dearness allowance of staff was increased by 6 per cent. of the basic pay with retrospective effect from 1st June 1958 and the minimum wage was raised from 1st December 1959 by 20 nP per day in the case of adults and by 10 nP per day for children. The full effect of the latter increase for a year will be felt in the current year.

The uprooting and replanting of tea plants continues in accordance with the Company's programme. The seed 'Bari' on Dering is said to be developing excellently, producing a high quality of seed.

The Company's financial position is quite satisfactory. The paid-up capital of Rs. 70 lakhs is supplemented by reserves and surplus aggregating Rs. 19.80 lakhs. The current liabilities and provisions amounting to Rs. 27.92 lakhs are more than adequately covered by current assets, at Rs. 56.72 lakhs, of which cash balances alone account for Rs. 27.31 lakhs. The gross block of the value of Rs. 94.39 lakhs has been written down to Rs. 60.21 lakhs. Capital expenditure in progress amounts to Rs. 79,469.

The Company has terminated, with mutual consent, the selling agency of Brooke Bond India Private Ltd., which was associated with the former from its inception, first as Managing Agents until 31st May 1956 and latter as selling agents. The termination, which has taken effect from 31st October 1960, has been made without compensation for loss of office or otherwise. This arrangement has been made, with a view to having a wide and direct representation in world markets. The Company is now established in the world markets, where its produce is well known, and the Directors are of the view that greater advantages will arise from direct contact with agents in the various foreign countries to assist in the furtherance of the Company's business by an increase in its exports. It may be of interest to note that over 50 per cent. of the Company's equity shareholding is still held by the Brooke Bond group of companies and there is at present no intention of these companies parting with such interest.

The latest market value of the Company's Rs. 10 fully paid-up ordinary shares is Rs. 16.87 *ex-div.*, at which rate the yield on them is 6.2 per cent. per annum, free of tax.

TRACTORS (INDIA) LTD.

Tractors (India) Ltd., Calcutta, has shown slightly improved results for the year ended 30th June 1960, in refreshing contrast to the sharp setback suffered in the previous year. The turnover was better, thanks to the judicious utilisation of import licences and the extension of service facilities made possible by the installation of automatic plant and machinery at the works. The expansion in turnover was no doubt accompanied by a rise in cost of sales and in other expenses. Nevertheless, the gross profit has gone up by Rs. 1.19 lakhs to Rs. 24.37 lakhs, but it still falls short of the 1957-53 profit by no less than Rs. 6.28 lakhs. The net profit, too, which had shrunk from Rs. 13.95 lakhs to Rs. 11.62 lakhs in 1958-59, has recovered to Rs. 13.05 lakhs in the year under review. The reserves get a little more, at Rs. 2.72 lakhs, as against Rs. 2.50 lakhs a year ago, but the dividend is unchanged at 30 per cent. subject to deduction of tax or 21 per cent. net. The Directors' intention of carrying forward as much as Rs. 14.14 lakhs, which is Rs. 3.47 lakhs more than that brought in, instead of ploughing back something more into the reserves, is not clear.

The progress of the Company since 1956-57 is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds	89.01	86.11	1,48.97	1,73.26
Other income	7.70	5.18	2.57	3.24
Cost of sales	51.74	49.82	98.40	1,32.66
Other expenses	20.61	18.29	22.63	23.51

	(30%)*	(30%)*	(22.5%)	(20%)
Carry forward	14.14	10.67	8.41	9.61

* Subject to deduction of tax.

The Company's negotiations with the Union Government for licensing an indigenous manufacturing programme and certain other proposals for extension of its activities have borne fruit. As a result, the Company, in association with Steel and Co., Ltd. of Sunderland, U.K., has promoted a company by name Coles Cranes of India Private Ltd., which, for the first time, will manufacture mobile cranes in India. The project is said to be already well in hand and the Directors expect the new company to go into production by the third quarter of 1961. The Company (Tractors India Ltd.) has also acquired a substantial interest in Willcox (Buckwell-India) Private Ltd., New Delhi, which holds franchise for lines similar to those handled by it over extensive territories in Northern India. Further, negotiations are in progress with some of the Company's overseas principals for the manufacture of their products in India. The Directors feel that these activities, together with the business in hand and the prospects in view, will go a long way to ensure continued prosperity for the Company.

The Company's paid-up capital as on 30th June 1960 is Rs. 22.89 lakhs and this is supplemented by reserves and surplus aggregating Rs. 30.46 lakhs. The current liabilities and provisions, at Rs. 28.40 lakhs, are covered by a very large margin by current assets at Rs. 75.90 lakhs, of which trade investments account for Rs. 8.44 lakhs, stock-in-trade for Rs. 34.65 lakhs and book debts for Rs. 31.86 lakhs. The gross block of the value of Rs. 14.78 lakhs stands written down to Rs. 5.85 lakhs.

In order to bring the capital structure of the Company in line with its increased activities and commitments, the Company recently issued fresh shares and these were substantially oversubscribed.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted in Bombay at Rs. 29 *cum-div.*, at which rate and on an *ex-div.* basis they provide a yield of 7.8 per cent. per annum, free of tax.

ESSO STANDARD EASTERN

The Standard Oil Company (New Jersey) and Socony Mobil Oil Company Inc., which jointly own the Standard-Vacuum Oil Company, have decided to give up their joint ownership of the Company, but the international petroleum interests of Standard-Vacuum will be divided between them. Jersey Standard and Socony Mobil each owns 50 per cent. of the capital stock of Standard-Vacuum, which is carrying on business either directly or indirectly through affiliates, in some fifty countries and territories in South Asia, including India, South-east Asia, the Far East, Australasia, and parts of Africa. Those interests which Socony Mobil will acquire will be held through Mobil Petroleum Company, Inc., a new wholly owned affiliate. The remaining portion will be held by Jersey Standard through ownership of Standard-Vacuum, the name of which will be changed to Esso Standard Eastern. Standard-Vacuum's present interests in India will be retained by Esso. These interests include Standard-Vacuum's marketing businesses, its stock ownership in Standard-Vacuum Refining Company of India Ltd. and its petroleum exploration activities in India.

The aforesaid decision brings to an end the twenty-seven year old partnership of Jersey Standard and Socony Mobil, two of the world's largest and most highly competitive companies. These two companies, which had independent facilities in the East, formed Standard-Vacuum in 1933. Before the formation of this joint venture, Jersey Standard was engaged in this area primarily in the product on of crude oil and in the refining of petroleum products. Socony Mobil's interests were mainly confined to marketing of finished products. The two companies then felt that they could better serve the interests of the consuming public, as well as their own, through joint ownership of facilities from the well-site to the market place. During the last quarter of a century and over, world conditions have undergone a change and petroleum industry has developed and the two companies accordingly feel now that a realignment of Standard-Vacuum is best. Under the terms of the reorganisation agreement, the two companies will each be in a position to serve separately the consuming public with its petroleum products.

The proposed step will not fundamentally alter relations with employees, customers, dealers, suppliers or others having business dealings with Stanvac. All the existing services and contractual obligations will be continued without interruption.

KOTHARI SUGARS AND CHEMICALS LTD.

Kothari Sugars and Chemicals Ltd. Madras, will shortly enter the capital market with a public issue of equity shares of the value of Rs. 80 lakhs. The Company was incorporated only a few days ago—on 7th November 1960—with an authorised capital of Rs. 5 crores and has been promoted by Messrs. Kothari and Sons, the well-known managing agency firm of Madras.

The object of the Company is to set up a sugar factory in Tiruchirapalli (Madras State) with a crushing capacity of 1,000-1,250 tons per day. The plant and machinery will be of the latest model and will be manufactured by Binny's Engineering Works, Madras, in collaboration with Messrs. Mirrless Watson & Co. Ltd., Glasgow, reputed U.K. sugar machinery manufacturers. The factory is expected to go into production by December 1961.

The present sugar production in the South is 80.000 tons, while consumption is of the order of 135 000 tons per year. There is thus a wide gap to be bridged. The new factory is a step towards this end. As compared to the sugarcane areas in the North, the South is well suited for sugarcane cultivation. Most of the factories in Madras State have a crushing period of 240-270 days which is more than twice as long as the average period of about 100 days in the North. The recovery of sugar is satisfactory, owing to the good climate and soil conditions in this area. Besides these favourable factors, the Southern factories have a freight advantage over those of the North which currently supply the Madras market.

Out of the total capital issue of Rs. 80.00.000, the Industrial Investment Corporation Ltd. of Madras and the Life Insurance Corporation of India have each agreed to subscribe Rs. 15.00.000 of shares. The balance of the issue has been underwritten. The list for public subscription is expected to be opened on 15th December 1960.

The Company will have some of the leading industrialists of India on its Board of Directors, namely, Mr. A. D. Shroff, Mr. B. M. Ghia, Mr. A. M. M. Murugappa Chettiar, Mr. D. C. Kothari, Mr. H. C. Kothari, Mr. J. M. Mehta and Mr. J. R. Mehta of Bombay.

UNITED DYESTUFF INDUSTRIES LTD.

The United Dyestuff Industries Ltd. proposes to issue shortly 50.000 equity shares of Rs. 10 each. Of these, 25,500 shares have already been taken up by the promoters, their friends and the Directors and the balance of 24,500 equities will be offered to the public. The entire equity capital to be issued to the public has been underwritten by the Devkaran Nanjee Banking Company Ltd.

The Company was incorporated in August 1960, with an authorised capital of Rs. 2 crores, with a view to meeting the growing needs of textile mills in Maharashtra and Gujerat in Vat dyes and other allied products along with its various intermediates. The Company has been given a licence to manufacture 168 tons of Vat dyes and other allied products. The total production of Vat dyes in India during 1959 was 325 tons and this is expected to grow to about 1,200 tons by 1961, in view of the growing consumption of Vat dyes by cotton textile mills. Besides, a number of Vat solubilising units are dependent upon import of Vat colours for use as raw materials. The Company's manufacturing programme is such that their products can be converted into Vat soluble dyes and meet the demand of these units also, which are unable to get their requirements on account of foreign exchange difficulties. The outlook for the Company thus appears to be promising and, in the absence of any unforeseen circumstances, the Directors feel that the Company will be in a position to pay a reasonable dividend on the equity capital. The Company is negotiating for foreign technical collaboration and production is expected to commence in 1962.

INCREASE OF CAPITAL BY COMPANIES

One hundred and seventy-four companies were given consent to increase their capital between 1st April 1959 and 31st October 1960, according to the Union Finance Minister, Mr. Morarji Desai. Giving the names of these companies in a list attached to his written reply to a question in the Lok Sabha on the 16th inst., Mr. Desai said 21 companies were given consents during the said period for issue of shares at a premium. A list showing the names of such companies was also attached.

Asked what were the reasons for imposing the condition on some companies that new shares should be issued only at a premium, the Minister said the question whether a particular rights issue should bear a premium was examined on the merits of the case. As regards the criteria for such condition, he said regard was given to the relevant considerations, namely, the intrinsic value of the shares, their quotations in the share market, the dividend record and the prospects of the company, the size of the issue in relation to the existing equity capital, the climate of the share market, etc. The question of premium was settled, in consultation and agreement with the company, with due regard to these considerations, be added.

HINDUSTHAN TWYFORDS LTD.

The offer of 145,100 equity shares of Rs. 10 each of the Hindusthan Twyfords Ltd. has been very well received. The issue is about 74.39 times subscribed. The Company has to deal with approximately 57,000 applications. The Calcutta Stock Exchange Association Ltd. has given its consent to the allotment. All applications up to 1,475 shares will go in the lottery. The lucky applicants of 25 shares each will be allotted 10 shares each, while the other lucky applicants will be allotted 25 shares each. Fixed allotment for applications of 1,500 shares and above are as follows:—

1,500— 2,475	...	...	25 shares each;
2,500— 5,100	...	...	50 shares each;
5,125— 7,475	...	...	75 shares each;
7,500— 9,975	...	...	100 shares each;
10,000—14,975	...	...	125 shares each;
15,000—30,000	...	...	250 shares each;
Over 30,000	...	...	375 shares each.

It is expected that the applicants will be duly informed by the second week of December 1960.

W. BENGAL GOVERNMENT TAKES OVER ORIENTAL GAS

The West Bengal Government has taken over the Oriental Gas Company Ltd., Calcutta, with effect from the 16th inst., immediately after the Calcutta High Court held that the Act authorising the Government to nationalise the Company was a valid piece of legislation. The Company was taken over on behalf of the State Government by Mr. C. K. Ray who has been appointed administrator of the Company.

Earlier in the day, Mr. Justice A. N. Ray of the Calcutta High Court discharged the rule which had been issued by His Lordship on the *ex-parte* application of the Oriental Gas Company, Ltd. and the Calcutta Gas Company (Proprietory) Ltd., on the State of West Bengal and others, granting, at the same time, an *ad interim* injunction restraining the respondents, until the disposal of the rule, from taking over possession of the Oriental Gas Company Ltd., which was scheduled to have been nationalised from Monday, 17th October, under an Act passed by the West Bengal Legislature. The petitioners had contended, *inter alia*, that the State Legislature was not competent to pass any legislation authorising the taking over of the management and control of the Oriental Gas Company Ltd. Further, the Company's undertaking was not an industrial concern and it could not be nationalised. After considering the law and the decided cases applicable to this application, His Lordship held that the Act was a valid piece of legislation and accordingly discharged the rule, holding that the petitioners had no right to apply under Article 226 of the Constitution of India. His Lordship also refused a stay of the operation of this order pending

COMPANY MEETINGS AND DIVIDENDS

TRACTORS (INDIA) LTD. Annual General Meeting, Calcutta, 7th December 1960. Dividend: Rs. 3.00 per share, subject to deduction of tax. Transfer books remain closed from 21st November to 7th December 1960, both days inclusive.

Notice

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

NEPANAGAR

NOTICE

THE THIRTEENTH ANNUAL GENERAL Meeting of the Shareholders of the National Newsprint and Paper Mills Limited will be held at Nepanagar on Tuesday the 27th December 1960 at 3.30 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report, the Auditors' Report, the Audited Profit and Loss Account for the period from 1st April 1959 to 31st March 1960 and the Balance Sheet as on the 31st March 1960, together with the comments of the Comptroller and Auditor General of India with the observations of the Board of Directors thereon.
2. To consider and if deemed fit to pass the following as an Ordinary Resolution:—

   "RESOLVED that the strength of the Board of Directors inclusive of the Chairman and the Managing Director be increased from 12 to 14 Directors."
3. To elect a Director in place of Shri Nagendra Bahadur who retires under Article 132 of the Articles of Association and is eligible for re-election.
4. To elect a Director in place of Shri K. L. Ghei who retires under Article 132 of the Articles of Association and is eligible for re-election.
5. To elect a Director in place of Dr. G. P. Kane who retires under Article 132 of the Articles of Association and is eligible for re-election.
6. To elect a Director in place of Shri Ram Singh Bhai Verma, M.P., who retires under Article 132 of the Articles of Association and is eligible for re-election.
7. To transact such other business as may be placed before the meeting by the Managing Director with the permission of the Chair.

By Order of the Board of Directors,

S. L. VISVANADHAN,
Managing Director.

NEPANAGAR, 10*th November*, 1960.

The Share Transfer books of the Company will remain closed from 12th to 27th December 1960 (both days inclusive).

Shareholders desirous of having at the Annual General Meeting any information concerning the Accounts of the Company are requested to send a written requisition to the Managing Director so as to reach him seven (7) days before the meeting.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory Statement of Item 2 as Required by Section 173 of the Companies Act, 1956

2. The present strength of the Board of Directors as approved at the last Annual General Meeting is 12 including Chairman, Managing Director, 4 nominees of Union Government, 4 nominees of Madhya Pradesh Government and 2 Directors representing the shareholders. Both the Union and Madhya Pradesh Governments have desired that an additional Director should be appointed on the Board of Directors of the Company with the joint concurrence of both the Governments. The Board of Directors therefore feel that the strength of the Board of Directors should be increased from 12 to 14 so that one more Director could be co-opted, if necessary. You are requested to accord your sanction to the

SYNOPSES OF COMPANY REPORTS

Agra Electric Supply Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The plant extension scheme to which references were made in the directors' reports for the years ended March, 1958 and 1959, is now nearing completion, and it is expected that the plant will be in commercial operation by December, 1960. While this will help to meet growing demands for a time, the question of meeting future load developments is already under discussion with the State Electricity Board.

The following Schedule indicates the progress that has been made:—

Year Ended	*Units Sold*	*Revenue* Rs.
31st March 1958 ...	36,282,671	42,28.832
31st March 1959 ...	37,191,369	45.96,285
31st March 1960 ...	42,780,392	50,67,189

The reduced rate of Company taxation does not increase the reasonable return out of which distribution of dividends is made by an Electric Supply Company. It is not, therefore, possible for Electric Supply Companies, unlike other Companies, even partially to compensate shareholders for the loss of tax benefits previously enjoyed by them. The trifling concession by way of special appropriation that is likely to be considered by the State Government in this connection will be availed of to the extent permissible. As hereinafter stated, a sum of Rs. 4,345 has been set aside in the accounts to Notional Tax Relief Reserve, to be utilised for capital extensions, subject to the approval of the State Government which is awaited.

The profit after providing for taxation, depreciation and all other charges, amounts to Rs. 5,85,937 (Rs. 8,20,214). From this has been deducted a sum of Rs. 3,66,737 (Rs. 2,95,504) in respect of the following reserve allocations:—

To contingencies reserve Rs. 69,900 (Rs. 66,480), to development reserve Rs. 62,910 (Rs. 92,400) to notional tax relief reserve Rs. 4.345 (*nil*), to reserve for redemption of debentures Rs. 51,500 (*nil*) and to general reserve Rs. 1,78,082. There remains a balance of profits amounting to Rs. 2,19,200 (Rs. 5,24,711 after providing Rs. 68.312 to tariffs and dividends control reserve and Rs. 68,312 for provision for rebate to consumers) to which is added Rs. 48,145 (Rs. 49,394) the balance brought forward from the previous year to make an available balance of Rs. 2,67,345 (Rs. 2,48,105 after placing Rs. 1,03,000 to reserve for redemption of debentures and Rs. 2,23,000 to general reserve). The directors recommend that there be paid for the year ended 31st March, 1960, a dividend at the rate of 11 (10 per cent. tax-free) per cent. subject to deduction of tax at the prescribed rates in accordance with the provisions of Section 18(3D) of the Indian Income Tax Act, leaving a balance to be carried forward of Rs. 47,389 (Rs. 48.145).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,99,600	Gross block	1,39,99,790
Debentures ...	10,00,000	*Less*—Depreciation ...	39,25,042
Reserves ...	51,38,028		
Provision for taxation ...	2,17,602	Net block ...	1,00,74,748
Liabilities ...	1,07,61,809	Work-in-progress ...	30,24,347
Profit and loss account (surplus) ...	47,389	Stores, tools, etc. ...	15,43,416
		Book debts ...	16,28,533
		Investments	5,22,201
		Cash ...	23,43,486
		Miscellaneous expenditure	27,697
Rs.	1,91,64,428	Rs.	1,91,64,428

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The profit and loss account, after charging depreciation of Rs. 44,787 (Rs. 35,920) and after crediting adjustments in respect of previous years totalling Rs. 25.048 (Rs. 29,958) [net] shows a balance of loss of Rs. 3,37,393 (Rs. 2,93,456). From this amount has to be deducted transfer from provision for doubtful debts of Rs. 18.860 (*nil*) and dividends forfeited of Rs. 350 (*nil*) leaving a total of Rs. 3,18,183 (Rs. 2,93.456). With the debit balance brought forward from previous year of Rs. 2,35,349 (credit of Rs. 57,344) there is a total debit balance of Rs. 5,53,532 (Rs. 2,35,349 after deducting Rs. 763 being dividends forfeited) to be carried forward to the next account. Manufacture and despatches during the year were as follows:—

	Manufactured Tons	*Despatched* Tons
Coke	36,545	35,232
Tar and pitch	1,862	1,638

During the year extensive over repairs were continued and as at 31st March 1960 24 ovens out of the total of 35 had been either completely or partially reconstructed. Consequent disruption to output however, resulting from the closure of each oven for about 6 to 8 weeks for such repairs, again resulted in a reduced production of coke and by-products. The directors are, however, pleased to report that this programme of reconstruction, decided upon during 1958, is proceeding well within schedule and as has already been stated, should be completed by March 1961. In the meantime, efforts continue to be directed towards further reduction of production and management expenses.

In order to effect additional economies and further eliminate unproductive expenditure, a programme of complete reorganisation of workers and staff was put in hand. A sum of Rs. 66,165 was paid as retrenchment compensation to workers whose services were found to be redundant but this further reduction in the labour force had up to the end of the year covered by the accounts provided only small relief in the overall financial position of the Company.

With the entry into the market of coke oven by-products manufactured by the various steel plants, the demand for the Company's production has diminished. During the year it was necessary to reduce considerably the selling price of coal pitch and sulphuric acid, and during January it was in fact found necessary to close the sulphuric acid plant for complete overhaul and repair so that, on reopening, full-rated capacity production could be obtained in an effort to compete with prevailing market prices.

In their last report the directors stated that the future of the Company was attended by many uncertainties and at the 31st March 1960 these conditions still prevailed. With the reconstruction and overhauling of the coke oven battery and its by-product plants nearing completion, however, the directors are confident that improvement can be expected during the current financial year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12.00,000	Gross block	38.08,529
Reserves* ...	2,96,358	*Less*—Depreciation ...	34,12,329
Provision for taxation ...	4,878

Rs.	26,14,572	Rs.	26,14,572

*Reserves are shown after deducting the debit balance of Rs. 5.53,532 in the profit and loss account.

Dishergarh Power Supply Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The accounts show a profit, after charging all expenses, of Rs. 14,63,487 (Rs. 9,51,526). Of this profit provision for taxation requires Rs. 5,69,791 (Rs. 4,40,283) less the amount debited to contingencies reserve in accordance with the provisions of the Electricity (Supply) Act, 1948 Rs. 9,791 (Rs. 12,283) leaving a sum of Rs. 9,03,487 (Rs. 5,23,526). With the balance brought forward from last year of Rs. 3,77,066 (Rs. 8,16,830) there is a total amount available for appropriation of Rs. 12,80,553 (Rs. 13,60.000 including Rs. 20,000 transferred from provision for taxation in respect of previous years). The directors have transferred to contingencies reserve Rs. 25,593 (Rs. 25,290) and to general reserve Rs. 2,50,000 (Rs. 5,00,000). The directors now recommend that the following dividends be paid: At Rs. 5.00 (Rs. 5.00) per share on "A" preference shares absorbing Rs. 80,000 (Rs. 80.000), at Rs. 4.50 (Rs. 4.50) per share on "B" preference shares, absorbing Rs. 54,000 (Rs. 54.000) and at Rs. 10.00 (Rs. 7.50) per share on ordinary shares, absorbing Rs. 4,32,000 (Rs. 3,24,000) leaving a balance to be carried forward of Rs. 4,38,960 (Rs. 3,77,066). The above dividends are subject to deduction of tax.

The presentation of these accounts has been delayed by circumstances arising out of the provisions of the Preference Shares (Regulation of Dividends) Bill, 1960, and the Electricity (Supply) Act, 1948. After careful consideration of the provisions of the Preference Shares (Regulation of Dividends) Bill 1960, the Board have decided that they can recommend to the members of the Company the payment at this stage of only such dividends on the "A" and "B" preference shares as the preference shareholders are entitled to under the Company's Articles of Association and that, as soon as the Preference Shares (Regulation of Dividends) Bill, 1960 becomes law, they will recommend the payment of such further dividends as may become due under the Act. Accordingly, the dividends now recommended on the "A" and "B" shares are at the rates of 5 per cent and 4.5 per cent. respectively, from which income tax at the appropriate rates will be deducted.

It is understood that, as a result of representations made by the Industry, the Central Government has now recommended to the State Governments that Electricity Supply Undertakings may appropriate to reserve the equivalent of the reduction in tax payable by the Company as a result of the 1960 Finance Act. The relevant appropriation, amounting to Rs. 1,08,572 has been made in the accounts for the year ended 31st March, 1960, but this is subject to the approval of the Governments of West Bengal and Bihar to whom the appropriate applications have been submitted.

During the year, 119.28 million units were sold compared with 103.44 million during the previous year, representing an increase of 15.3 per cent. During the past nine years bulk purchases of power from the Damodar Valley Corporation have increased from 3.48 million units during the year ended 31st March, 1952 to 73.91 million units during the year under review.

Owing to the inability of the Damodar Valley Corporation to meet demands, consumers were requested in February, 1960, to restrict temporarily their offtake until the Damodar Valley Corporation's additional thermal generating plant came into operation. This temporary restriction is expected to be withdrawn shortly, but availability of power in the long term continues to cause concern inasmuch as the Corporation has so far been unwilling to enter into fresh commitments covering the period until 1964.

Messrs. Andrew Yule and Company, Limited ceased to act as managing agents of the Company on 15th August, 1960, and their appointment as secretaries and treasurers of the Company for a period of 5 years from that date has been approved by the Central Government. At an extraordinary general meeting of the Company held on 26th July, 1960, the members formally appointed Andrew Yule and Company, Limited as secretaries and treasurers of the Company with effect from 15th August, 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	71,20,000	Gross block	1,02,37,174

Nagri Farm Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 1,76,542 (Rs. 2,81,178) after providing for depreciation amounting to Rs. 13,419 (Rs. 14,814) and providing Rs. 18,000 (Rs. 14,000) for contingencies. After transferring the above profit, making various adjustments, setting aside Rs. 85,000 (Rs. 1,30,000) for taxation the balance available on profit and loss account amounts to Rs. 2,39,935 (Rs. 2,63,737). From this amount it is proposed to transfer to the building reserve account Rs. 25,000 (Rs. 50,000), to repairs and renewals reserve account Rs. 25,000 (*nil*) and to pay a dividend of 20 (30 per cent. tax-free) per cent. for 1959 absorbing Rs. 59,980 (Rs. 89,970) leaving to be carried forward Rs. 1,29,955 (Rs. 1,23,767).

The following are comparative statistics of sales for **the past three years**:—

	Pounds	Average price per pound
1957	399,478	Rs. 3/01
1958	391,092	Rs. 3/44
1959	405,068	Rs. 3/14

The estimate for 1960 provides for a crop of 424,000 lbs. or 192,350 kg. of tea at a cost of Rs. 2/72 nP per lb. or Rs. 6/00 per kg.

The term of office of Messrs. Williamson Magor & Co., Ltd., as managing agents of the Company expired on 15th August, 1960 in terms of Section 330 of the Companies Act, 1956. The Company in General Meeting held on 24th September 1959, had already approved of the proposal that Messrs. Williamson Magor & Co., Ltd., be reappointed managing agents for a further term of ten years from 15th August 1960, subject to the approval of the Central Government. The Central Government gave its approval to the reappointment but reduced the term of office to five years and prescribed a sliding scale of remuneration. At the General Meeting of the Company held on 13th August 1960, the reappointment with these modifications were confirmed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,99,900	Gross block	7,30,361
Reserves ...	4.43,000	*Less*—Depreciation ...	2,14,761

Mysore Chemicals and Fertilisers Ltd.

The directors of the above Company (Chairman: Mr. T. Shamanna, Mysore) present the audited accounts of the Company for the year ended 31st March 1960.

The results of the working of the Company for the year ended 31st March 1960 have shown a welcome change for the better and the production and sales are the highest recorded so far. The Factory worked continuously during the year only with minor interruptions, thereby resulting in improved production in all departments. Sales realisation during the year under review was Rs. 47,55,277 as against Rs. 31,72,594 of the previous year. The manufacture of *fertiliser mixture* was undertaken on a large scale during the year and there has been good demand for this product.

As pointed out previously, the directors still hold the view that the charges levied on the Company for the supply of electrical energy are normally unworkable. However this heavy and abnormal expenditure has been met with great difficulty. But for the increased production and expansion of certain sections, it would not have been possible to do so.

Recognising the urgency of speedy rehabilitation and renovation of the several units in the Factory, the directors took steps to examine this essential question with particular reference to the equipments which have already worked for more than 20 years. While on the one hand action was taken to improve the all-round efficiency of the plant with a view to securing both increased production and better quality, the directors also decided to expand the *Superphosphate plant* by adding suitable equipment which was got manufactured indigenously. The production of *Superphosphate* was thus stepped up to a considerable extent.

The directors have proceeded with further expansion by sanctioning the installation of a new 50 tons *Sulphuric acid plant* and it is expected that this plant would be commissioned for production in about 18 months. It is also decided to install a fully mechanised *Superphosphate plant* of a greater production capacity, mainly with a view to making the existing plant economic. It is hoped that with the installation of these two plants the position of the Company will be strengthened to a considerable extent. These two schemes are proposed to be financed in a manner which will not impose undue strain on the resources of the Company.

The welcome turn in the affairs of the Company referred to above has emboldened the directors to propose a higher rate of dividend, which it is hoped, will be appreciated by all.

The working of the Company for the year ended 31st March 1960 including the balance of Rs. 10.884 (Rs. 17,093) brought forward from the previous year has resulted in a net available surplus of Rs. 3.41,574 (Rs. 1,54,944 including a sum of Rs. 11,000 being provisions in previous years no longer required) after making a provision of Rs. 3,76,137 (Rs. 5.32,295) towards depreciation and development rebate and Rs. 3,60,641 (Rs. 1,80,000 inclusive of wealth tax) towards the payment of income and super tax, which the directors proposed to dispose of as follows:—

To pay a dividend of 10 (5 per cent. tax-free) per cent. subject to tax or at the rate of Re. 1 (Re. 0.50) per share of Rs. 10 absorbing Rs. 2,48,122 (Rs. 1,24,061), to transfer to div dend equalisation fund Rs. 20,000 (*nil*), to transfer to general reserve fund Rs. 47,000 (*nil*), to transfer to employees' retiring gratuity fund Rs. 15.000 (*nil*) and to carry forward Rs. 11,452 (Rs. 10,883 after providing Rs. 20,000 for taxation for previous years).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,81,220	Gross block	55,64,434
Reserves ...	10,04,155	*Less*—Depreciation ...	40,80,625
Provision for taxation ...	8,73,000		
Liabilities ...	15,40,480	Net block ...	14.83,809
Profit and loss account (surplus) ...	11,452	Stock-in-trade	9.48,165
		Stores, etc ...	8.26,797
		Book debts ...	9,27,621
		Investments	3,60,976
		Cash ...	13,62,939
Rs.	59,10,307	Rs.	59,10,307

Swinton Estates Co., Ltd.

The directors of the above Company (Madras), present the audited accounts of the Company for the year ended 31st March 1960.

The extent of the Company's properties remains unchanged as under: 216 acres are fully planted with Arabica coffee. 220 acres under reserve are partially fit for cultivation.

Crop: The coffee crop harvested during the year was 74.610 Tonnes, which is the highest achieved since the inception of the Company.

After meeting all expenses and providing Rs. 2,697 (Rs. 2,697) for depreciation, the year's working resulted in a profit of Rs. 85,141 (Rs. 9,746) to which should be added the balance brought forward from the previous account of Rs. 559 (Rs. 6.563) making available the sum of Rs. 85,700 (Rs. 16,309). From this amount the directors recommend the following appropriations:— To provision for taxation Rs. 42,000 (Rs. 3,000), to write off the entire preliminary expenses outstanding Rs. 20,785 (*nil*), to transfer to general reserve Rs. 3,000 (*nil*), to pay a dividend at 12½ (7½ per cent. tax-free) per cent. less tax, absorbing Rs. 15,625 (Rs. 9,375) and to carry forward a balance of Rs. 4,289 (Rs. 559).

The estates are in good condition and it will be noticed that the policy of intensive cultivation has started yielding results. Hence the programme of intensive manuring was further stepped up during the year and this is reflected in the increased consumption of stores.

Estimate: The 1960-61 crop is estimated at 40 Tonnes.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,25,000	Gross block ...	1,98,241
Debentures ...	75,000	*Less*—Depreciation ...	7,968
Reserves ...	15,000		
Provision for taxation ...	47,038	Net block ...	1,90.273
Liabilities ...	1,01,932	Stores, etc. ...	8,342
Profit and loss account (surplus) ...	4,289	Book debts ...	1,65,077
		Cash ...	4,567
Rs.	3,68.259	Rs.	3,68.259

N.B.—Figures within brackets relate to the corresponding period of the previous year.

you have just opened

A METAL BOX OPEN TOP CAN!

Simple though it looks, the 'Open Top' Can in which processed fruits, vegetables, fish, milk or butter comes to you is a container scientifically designed to protect and preserve perishables over long periods. The Open Top Can allows processing of the contents *after* they are hermetically sealed, thereby killing all disease-carrying and other germs. Wherever necessary, Open Top Cans have an inner coating of a chemically inert lacquer that effectively prevents interaction with the metal of the container itself. Thus, Open Top Cans prolong the life of perishable products, allow round-the-year selling, encourage wide distribution and thus help to stabilise prices.

Metal Box, leaders in the packaging field, have been supplying Open Top Cans in India for nearly a quarter of a century. This is only one example of their wide range of scientifically designed containers that deliver consumer goods to you.

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats • **MACHINERY** Can Closing and Reforming and Bottle Sealing Equipment

Notices

MADHYA PRADESH INDUSTRIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighth Annual General Meeting of the Shareholders of Madhya Pradesh Industries Limited, will be held at the Registered Office of the Company at Chola Road, Bhopal, on Thursday the 29th December, 1960, at 12 noon, to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st March, 1960.
2. To declare Dividends.
3. To appoint Directors in place of those retiring by rotation and in this connection to consider and, if, thought fit, to pass the following Resolution as special resolution of which Special Notice as required under Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement is annexed hereto.

   RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Shri Lakshmipat Singhania, an associate of the Managing Agents and a Director retiring by rotation be and is hereby re-appointed a Director of the Company.
4. To appoint Auditors and to fix their remuneration.
5. *As Special Business*: To consider and if thought fit, to pass with or without modification, the following as special Resolutions:

   (i) RESOLVED that the contract dated 18th March, 1952 entered into between the Company of the One Part and Bengal and Assam Investors Ltd., of the Other Part, whereby the Company agreed to pay finance commission at 10 per cent. of the annual profits to Bengal and Assam Investors Ltd. (who was until recently, an associate of the Managing Agents) for a period of ten years in consideration of their providing necessary finance for acquisition and working of mines, be and is hereby ratified and the arrangement recorded in the said contract be continued and all payments made thereunder be and are hereby approved and confirmed.

   (ii) RESOLVED that the payments heretofore made by the Company to National Insurance Company Ltd., on account of general insurance premia and for supply of services be and is hereby ratified.

   (iii) RESOLVED further that the Company do from time to time insure with National Insurance Company Ltd., the Company's properties and pay necessary premia therefor, and receive supply of legal and other services which that Company is able to supply and pay in respect thereof such sum or sums of money as may be decided by the National Insurance Company Ltd., who will make allocation of the expenses to be incurred by them for supply of such services among different concerns benefiting therefrom.

The Share Registers and Transfer Books of the Company will remain closed from the 14th to the 29th December 1960, both days inclusive.

By Order of the Board,
J. K. AGENTS PRIVATE LTD.,
Managing Agents,
H. S. SINGHANIA,
Director.

The 21st November, 1960.

Note:—(1) Dividends as recommended by the Directors, if approved at the Annual General Meeting; including the additional dividend payable to the Preference Shareholders on enactment of Preference Shares (Regulation of Dividends) Bill, will be paid to those Shareholders whose names are on the Company's Registers on the 29th December 1960 or to their mandatees. The payments will be made on or after the 21st January 1961 and of additional dividend after enactment of the Preference Shares (Regulation of Dividends) Bill.

(2) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

(3) An Explanatory Statement is annexed to the Convening Notice issued to the members of the Company.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Forty-third Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 3 p.m., on Thursday the 15th December, 1960, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1960, and the Directors' and Auditors' Reports thereon.
2. To confirm as the final dividend for the year ended 31st March, 1960, the interim dividend on the Ordinary Shares declared by the Board on the 9th August, 1960.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that two special Notices as defined in Section 190 of the Companies Act, 1956, have been received by the Company under Section 281 of that Act to move the following Resolutions at the meeting:

   "That Sir P. P. Ginwala be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

   "That Dr. N. N. Law be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, *19th November*, 1960.

Note.—An Explanatory Statement is annexed to the convening notice issued to Members of the Company.

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated in England with Limited Liability)

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Eighth Annual General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Friday, the 30th December, 1960, at 11 a.m. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 30th April 1960, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the one retiring.
4. To fix the Auditors' remuneration.
5. (*As special business.*) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a SPECIAL RESOLUTION, viz.:—

   "That the Articles of Association of the Company be altered in the manner following:—

   (*a*) *Article* 51. That the words 'twice the nominal amount of the share capital of the Company for the time being issued' be deleted wherever they occur and the following words substituted therefor, viz., 'twice the aggregate amount of the nominal capital of the Company for the time being issued and the reserves including undistributed profits.'

   (*b*) *Article* 108*A*. That the following new article be inserted immediately after Article 108 and numbered 108A:

   'A resolution in writing signed by all the Directors for the time being entitled to receive notice of a meeting of the Directors shall be as valid and effectual as if it had been passed at a meeting of the Directors duly convened and held.'"

Notice is also given that the Share Transfer Books of the Company will be closed from the 14th December to the 30th December 1960, both days inclusive.

A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a Member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents and Secretaries.

CALCUTTA-1, *17th November*, 1960.

INSURANCE

(Concluded from page 969)

policyholders as apply to be heard and any other persons whom he considers entitled to be heard...." It was thus in those days a statutory right of the policyholders concerned to be in a position to know the full details of, and to be heard on, any such matter as differential bonuses. If now, after nationalisation, the policyholders are denied the right to know the method whereby differential bonuses are being arrived at and to make a representation in the matter, if necessary, it would appear that the rights of ordinary individuals are more restricted under State enterprise than under private enterprise. If it is our aim to achieve a socialistic pattern of economy in our country without curtailing the essential democratic rights of an individual, then surely the denial of the above right is a step taking us away from our aim.

It may be stated here that a letter has been sent, more than six months back, under the signature of some 200 policyholders to the Finance Minister of the Government of India, requesting that Government should first arrange to publish the requisite information about the method adopted in the calculation of bonus indices and then allow some time for the policyholders concerned to make a representation in the matter, if necessary, before according its approval to the scheme. This article is written with a view to bringing the question of giving proper publicity to the method of calculating the differential bonuses before the public and particularly Members of Parliament. In this connection, the following remarks of our Prime Minister, made on 17th August 1948 in the Constituent Assembly (Legislative), are worth quoting: "We, this House, and even more so the Government, live, and ought to live, in the full blaze of publicity. There should be nothing hidden. There are many secrets that the Government have to deal with, of course, and we shall have secrets of that kind, but, otherwise, our activities must be completely public, open to public questioning and open to public condemnation. No democratic system can function otherwise satisfactorily." Surely, this applies as much to a public institution like the L.I.C. as to Government, and the method underlying the differential bonuses for the L.I.C. is certainly not one of the "secrets of that kind."

MONEY EASY

(From Our Own Correspondent)

BOMBAY, *23rd November*

The short-term money market has had another comfortable week. While the demand for bank credit has not shown any notable slackness, the supply position has improved sizably, with the result that banks do not have any difficulty in getting their requirements. There has been a further drop in inter-bank call money rate from 4½ per cent. to 3¾ per cent. among all sections of banks. The rates for term money are, however, unchanged at the ceiling fixed under the inter-bank agreement. House money upto 21 days' notice is being quoted at 2 per cent. and over 21 days at 3 per cent. Deposits for 31 days and over but upto 60 days fetch 3½ per cent., 61 days and over but less than 12 months 3¾ per cent. and for twelve months 3¾ per cent.

The prevailing conditions in short-term money are also reflected in the results of this week's Treasury Bill sales. The total amount offered was again a shade higher at Rs. 2.49 crores, as against an invitation for Rs. 2 crores. The average rate of accepted tenders (discount rate) was lower at 2.564 per cent., as against 2.565 per cent. per annum in the previous week. The sales of Intermediate Treasury Bills were also higher at Rs. 80 lakhs, as against Rs. 31 lakhs in the previous week.

A contraction of Rs. 6.90 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 18th November 1960. Notes held in the Banking Department are, however, higher by Rs. 7.85 crores, so that the total notes issued show a modest rise of Rs. 95 lakhs and this is covered by a corresponding increase in rupee coin. There is no change in foreign securities, but balances held abroad have declined by Rs. 1.48 crores, so that the total foreign assets stand lower at Rs. 139.63 crores. In the Banking Department, deposits of banks have shrunk by Rs. 9.92 crores and loans and advances other than to Governments by Rs. 7.57 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.29 crores. Investments have enlarged by Rs. 11.95 crores, while holdings of Government Treasury Bills show a fall of Rs. 11.48 crores.

For the second week in succession, the demand deposits of Scheduled banks have declined. In the week ended 4th November, they had fallen by Rs. 6 10 crores and this is followed by a further drop of Rs. 7.59 crores in the week ended 11th November 1960. Time deposits have, however, gone up by Rs. 4.87 crores. Of the net fall of Rs. 2.72 crores in total deposits, the State Bank of India accounts for Rs. 1 crore. Inter-bank borrowings are lower by Rs. 1.96 crores, while borrowings from the Reserve Bank are higher by Rs. 2.56 crores. The total bank credit shows a shrinkage of Rs. 56 lakhs, due to the decline of Rs. 1.50 crores on State Bank's account. Investments stand reduced by Rs. 10.81 crores, which is mainly due to the fall of Rs. 10.06 crores in State Bank's portfolio. Cash balances show a shrinkage of Rs. 2.91 crores, despite a rise of Rs. 3.30 crores on State Bank's account. Money at call and short notice is higher by Rs. 1.11 crores.

The Gilt-edged market is ruling distinctly better, with a sizable recovery in many counters, particularly in the State loans section, thanks to the abatement of selling pressure. 3 per cent. 1986 Conversion Loan has gained 20 nP to Rs. 74.35 and 3 per cent. 1970-75 has put on 25 nP to Rs. 89.05. 3 per cent. 1966-68 has hardened by 5 nP to Rs. 95 20 and 3 per cent. 1963-65 and 1964 have each moved up by 15 nP to Rs. 97.70. 3½ per cent. 1964 is 5 nP better at Rs. 99.45, while 3 per cent. 1963 is quiet at Rs. 99.80. 4 per cent. 1972 and 1973 have each shed 5 nP to Rs. 100.45 and Rs. 100.40, respectively. Among State loans, 4½ per cent. issues have been marked up by 10 nP to 50 nP.

The rupee rules steady in terms of the dollar, in consonance with the trend of sterling abroad. Banks' selling rate for U.S. dollar (ready) is unchanged over the week at Rs. 476 per $100 and their buying rate at Rs. 472.50 per $100. In New York, spot sterling is maintained at 281.24-281.27 cents, while three months' forward has advanced from 280.18-280.21 cents to 280.41-280.44 cents.

HIDES FIRM

(From Our Own Correspondent)

MADRAS, *21st November*

The hides market ruled firm in all selections. Arrivals of stocks were held up by the active monsoonish rains. There was equal demand for low grade kips for inland consumption.

There were good enquiries from importers in the U.K. and higher prices were paid for cow hides and buff calf, while cow calf and buff hides ruled unchanged.

Tanned goat skins market was firmer, especially better selection in medium and heavy weights and all grades in lights. Tanned sheep skins middle class was active and prices advanced. Prime and semi-prime tannages were steady.

The next London tanned skins public sales take place on the 28th inst. when 225,000 goat skins and 175,000 sheep skins have been catalogued for sale. The German auctions also commence on the 28th inst. and 94,300 goat skins and 8,300 sheep skins will be offered for sale. The results are awaited with great interest.

BULLION INDECISIVE

(From Our Own Correspondent)

BOMBAY, *23rd November*

The bullion market moved rather indecisively during the week under review. For there were still no signs of revival of buying, though the busy season commenced three weeks ago. The daily average offtake was low, being 5,200 tolas of gold and nine bars of silver, as against 4,600 tolas and 12 bars, respectively, in the previous week. Despite reduced offtake, prices did not suffer a setback. On the contrary, the trend was slightly upward. Some operators were inclined to buy, having been encouraged by the reduced pace of arrivals. The actual daily arrivals during the week were at an average of 5,200 tolas of gold, as against 6,500 tolas last week, and 29 bars of silver, as against 45 bars. Reports regarding a depletion of floating stocks also aided the sentiment of operators. The stocks of gold and silver in the city are estimated at 45,000 tolas and 600 bars, respectively, whereas they were around 75,000 tolas and 800 bars a week ago.

The *Margashir* (December) settlement in gold met with good buying enquiries in the earlier sessions, the quotation advancing from Rs. 115.60 to Rs. 116.15 on Monday. At this level, profit-taking set in and the settlement declined to Rs. 115.90. It eased further to Rs. 115.70 today before finishing at Rs. 115.75. Ready gold was well supported and rallied from Rs. 114.55 to Rs. 115.75 yesterday. After softening to Rs. 115.45 today, it closed at Rs. 115.50. The discount under forward declined from Re. 1.05 on Wednesday last week to 25 nP today.

In the silver section, *Margashir* settlement began the week at Rs. 196.50, as against the previous close of Rs. 196.05, and moved up to touch Rs. 197.30 on Friday the 18th inst. After retreating to Rs. 195.70 today, it recovered and stood at Rs. 195.95 towards the close. Ready silver continued to be quoted at a discount under the forward, though the discount narrowed down from Re. 1.60 to Re. 1.20. The closing rate for the metal today was Rs. 194.75, as against Rs. 195.05 last week-end, the highest and lowest levels touched being Rs. 195.75 (Thursday) and Rs. 194.60 (Monday), respectively.

The world price for gold in the London bullion market was practically unchanged during the week under review, at $35⅛-$35⅞, as against $36¼-$36⅜ a week ago. The gold reserves of the U.S. are believed to have declined below $18,000 million—the lowest level for the past twenty years—in the week ended 23rd November. In the week preceding it, there was a loss of $110 million, bringing the total loss since the beginning of 1960 to $1,450 million. In a bid to curb the rapid outflow of gold and reserves, President Eisenhower issued last week a series of orders to the military services and other Government agencies to curtail overseas spending. Ready gold in London eased from 253s. 3d. to 253s. on Monday, but recovered to the previous level yesterday. There was, however, no change in the quotation for ready and forward silver which both stood at 79½d. Silver in New York also continued unaltered at 91.375 cents.

The following table shows the trend of the market during the week under review:

	23-11-60 (closing)	High	Low	16-11-60 (closing)
GOLD				
Ready (.99 fine)	Rs. 115.60	Rs. 115.75	Rs. 114.55	Rs. 114.55
Forward:				
*Margashir**	115 75	116.15	115.40	115.60
Sovereign	90.00	90.12	90.00	90.00
SILVER				
Ready (.996 fine)	194.75	195.85	194.50	195.05
Forward:				
Margashir†	195.95 22-11-60	197.30	195.70	196.65 15-11-60
London:				
Silver Ready	79½d.	—	—	79½d.
Silver Forward	79¼d.	—	—	79¼d.
Gold	253s. 3d.	253s. 3d.	253s.	253s. 3d.
New York:				
Silver	91.375 cents	—	—	91.375 cents

* 5th December settlement. † 6th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

TIN SUPPLIES SCARCE

(From Our Own Correspondent)

CALCUTTA, *22nd November*

While a firmer trend was in evidence in tin and electrolytic zinc, copper scrap and lead eased during the week under review. Tin closed firm at Rs. 569 per cwt., after touching Rs. 570, as against the opening of Rs. 564. The supply position was causing anxiety, and so the price of this metal recorded a rise. On the London Metal Exchange, tin opened at £799 a ton and, after being higher at £802, closed at £800½. Demand on London was reported to be fair. Good consumer interest was in evidence in electrolytic zinc. Had it not been for the availability of metal against permits, the price would have hardened further. During the week, the price was firm at Rs. 159 a cwt. Lead eased from Rs. 64 to Rs. 63 a cwt. Demand was fair. Berry quality copper scrap sagged from Rs. 215 to Rs. 209 a cwt., while utensil scrap remained unchanged at Rs. 195 a cwt.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, *23rd November*

The declining trend of prices witnessed in the cotton futures market last week was arrested during the week under review. Although on the opening day, namely, Thursday, prices receded, they recovered in subsequent sessions. The recovery was due to fresh support by leading spot houses, investment buying and short-covering. The talks, which representatives of the trade had with the Indian Cotton Mills' Federation on Friday, seemed to have cleared the misconception and apprehension about the Federation's resolve to give active support to the Government in requisitioning and distributing cotton. It was agreed by both sides that the need for requisitioning cotton would not arise if the industry as well as the trade behaved properly in the procurement of cotton. This understanding strengthened the view that requisitioning would not be resorted to if prices were below the ceiling and that, so long as prices did not exceed the ceiling, there would not be any undue interference in the marketing of the crop. This confidence was reflected in the higher turnover in the futures market and the firmness of prices. From the opening rate of Rs. 593.00 (per three quintals), the I.C.C. Jarilla April Contract rose, after having declined to Rs. 589 on the same day, to Rs. 605 on Monday. This level attracted profit-taking and the Contract receded to Rs. 604.25 yesterday. Lower advices from upcountry centres and selling by bear operators led to a further fall in prices today. Today's closing rate of Rs. 597 is still Rs. 6.50 higher than last week-end's quotation of Rs. 590.50.

In the spot market, mill demand for new crop was well maintained. Popular varieties like Khandesh, Berar, Moglai, 197/3, etc., received good attention. Prices were well maintained. There was anxiety regarding the Vijay crop. If present trends were to continue, it was feared that the crop would suffer some quantitative setback.

Export demand for Bengal *Deshi* was reported to be good. There were renewed rumours in the market that an export quota for Bengals would be released earlier than expected.

On the import front, although bulk business was absent, stray activity in U.S. cotton continues as mills have to cover the unutilised balance of their allocation before the end of this month. Selected East African and Egyptian growths also found buyers.

Mills in Uttar Pradesh, Bihar, West Bengal and Orissa have welcomed the decision of the Joint Chief Controller of Imports and Exports, Bombay, to give them, in all cases where licences have been issued to them to import U.S. cotton through Bombay and Cochin ports only, the option to have cotton imported through Calcutta port where fumigation facilities are expected to be available from 1st January 1961. But, only cotton arriving after 1st January 1961 will be allowed to be diverted to Calcutta.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Berar 875; Khamgaon 897; Moglai ½" 805; American on sample 1,120; B.P. 52 1,324; Busoga 1,305-1,310; B.P. (UNUG) 1,350.

The Karachi cotton futures market suffered a setback during the week under review. Last week's rally seemed to have been too sharp to last. There was, therefore, a technical reaction during the week. Profit-taking and speculative selling added momentum to the downward trend. N.T.R.G. January Contract declined from Rs. 70-1 last week-end to Rs. 69-6. The March Contract receded by six annas to Rs. 69-11.

The spot section, however, continued to rule firm, thanks to good export demand. *Deshi* prices hardened further. Other varieties were also quoted higher. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—from Karachi:

Sind *Deshi* 98-8; Punjab *Deshi* 94; 4F Punjab Roller 78-13; S.G. 82-13; L.S.S. Punjab Roller 81-13; S.G. 85-13; N.T. Roller 86-13; S.G. 91-13; 289F Punjab Roller 92-5; S.G. 96-13.

Further fall in prices was recorded in the Alexandria cotton futures market during the week. Larger arrival of new crop in the wake of slackness of export demand was responsible for the pressure on futures. Both the long-staple Karnak and medium-staple Ashmouni contracts gave way on large-scale selling. Towards the close of the week, however, prices tended to look up; thanks to short-covering. A part of the earlier loss was made up. The week's closing quotations are still much below last week-end rates. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing quotations:

Karnak: November 72.30 (75.30); January 71.25 (73.05); March 72.29 (73.35).

Ashmouni: December 62.15 (64.05); February 63.12 (63.95); April 63.15 (63.77).

Barring the Sudan contracts, which were steady, cotton futures in Liverpool ruled easy during the week. Both the American and American type contracts suffered losses which ranged from 5 to 10 penny points. Lower advices from New York and slow demand from spinners, who have covered most of their winter requirements, induced selling which met only limited absorption. The steadiness of Sudan cotton contracts was due to encouraging advices from Khartoum where higher and higher prices were realised at successive auctions. The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: December 22.05; March 23.20; May 23.50; July 23.75.

American cotton mixed growth contract: December 22.95; March 23.50; May 23.80; July 24.25.

Sudan: November, January, March 35.75.

Trading on the New York Cotton Exchange was featureless. Activity was confined to a small

amount of evening up operations and some hedge selling which, in the absence of buyers, resulted in a fall in prices. The spot market was, however, active, thanks to good spinner demand and export interest.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	22-11-60	15-11-60	7-11-60
Spot	32.30	32.25	32.20
December	31.47	31.71	31.68
March	32.10	32.33	32.25
May	32.51	32.64	32.64

SEEDS STEADY

(From Our Own Correspondent)

BOMBAY, *23rd November*

The details of the new incentive scheme for the promotion of exports of groundnut oil, which has held the trade in suspense for over a month, have been announced, albeit after considerable delay. The Government of India has decided to accept the lowest tender for the export of groundnut oil in return for the import of copra. Under the tender accepted, half a ton of copra will be allowed to be imported for every ton of groundnut oil exported. In addition, three and a half tons of groundnut oilcake will be allowed to be exported for every ton of groundnut oil exported. On the basis of half a ton of copra for the export of one ton of groundnut oil, the total exports of oil would, according to market estimates, be no more than 400 tons. Traders were expecting a quota of at least 1,000 tons of groundnut oil. In effect, the tender scheme, as is now framed, will not help expanding India's exports of oil to any significant extent. It remains to be seen whether the operators, whose tenders have been accepted, will find it at all remunerative to export groundnut oil. On present terms some are of the view that it may even be advantageous to lose the 5 per cent. guarantee money rather than fulfil the export quota that has fallen to their credit. There are, however, some traders who have sold for export in advance and they may be anxious to secure export quotas at a premium. If this possibility materialises, those who have paid guarantee money may be able to get some compensation.

Despite the unencouraging nature of the incentive scheme, the groundnut section continued to be distinctly firm. This was due mainly to the pronounced strength in upcountry centres and the tight supply position. The spot market was quite cheerful. Local crushers and vanaspati manufacturers, too, lent good support. Reports of heavy rains and cyclone in Madras and the consequent damage to groundnut crops at Arcot and elsewhere, tended to encourage some speculative buying. In these conditions groundnut February 1961 contract advanced gradually from Rs. 209 to Rs. 210.50, after an initial decline to Rs. 208.25. Khandesh quality rose from Rs. 43 to Rs. 43.25. Oil ex-mill put on 10 nP to Rs. 19.

Distinctly steady conditions prevailed in the castorseed section as well, despite the absence of any encouraging overseas enquiries from the U.S. and the margins imposed last week. There were reports of continuing pressure of Brazilian supplies of oil in the American market. A section of the operators, however, felt that Brazilian supplies would taper off after December which would, in turn, revive the U.S. interest in Indian castor oil. Castor May 1961 which had closed last week at Rs. 177 rallied to Rs. 181.12 yesterday. It eased, however, to Rs. 180.50 today on profit-taking. Ready Madras rose from Rs. 34.25 to Rs. 35. Oil B.S.S. improved by 40 nP to Rs. 15.45.

The linseed section, too, was well maintained on better upcountry support. May 1961 contract moved up from Rs. 33.59 to Rs. 33.87, after fluctuating between Rs. 33.56 and Rs. 33.94. Bold ready advanced by 62 nP to Rs. 33.62. Linseed oil put on 40 nP to Rs. 14.90.

In the cottonseed section February 1961 contract was marked up by Rs. 2 to Rs. 89.50. Berars, whites and non-whites, however, fell by Re. 1.35 to Rs. 18.90 each.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	23-11-1960	16-11-1960	8-11-1960
Groundnut	Rs.	Rs.	Rs.
February 1961	210 50	209.00	208 75
Nizam bold	42 50	42 00	42 00
Coromandel ready	43 00	42 25	43 00
Khandesh quality	43 25	43 00	43 00
Oil ex-mill ready*	19 00	18 90	18.75
Railway receipts*	18.70	18.65	18.50
Castorseed			
May 1961	180.50	177 00	176.87
Ready Madras	35.00	34 25	34.31
Ready Kanpur	34.00	33 25	33.31
Oil B.S.S.†	15.45	15.05	15 15
Oil commercial†	14.55	14.15	14.31
Linseed			
May 1961	33.87	33.59	33.50
Bold ready	33.62	33 00	32.62
Oil ready†	14.90	14.50	14.37
Cottonseed			
February 1961	89.50	87 50	89.00
Niger seed	38.50	39 00	38.00
Kardi seed	24.00	24.00	24.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

YARNS BUOYANT

(From Our Own Correspondent)

BOMBAY, *23rd November*

Buoyant conditions prevailed in the yarn market during the week under review. Art silk yarns were particularly firm. The firmness was due to speculative support lent by some bulls who tried to corner stocks with a view to rigging up prices. In sympathy with art silk yarns and on expectations of better demand from consuming centres, staple fibre yarns also recorded an improvement in prices. Cotton yarns were well favoured following encouraging advices from the cotton market.

Cupressa Bemberg yarn (60×1) December contract forged ahead from Rs. 2,129 to Rs. 2,161. February position picked up Rs. 10 to Rs. 2,134. Spot cupressa spurted from Rs. 2,176 to Rs. 2,231.06. Among imported art silk yarns, 150 Japan advanced by Rs. 28.69 to Rs. 1.543.25 and 120 Japan by Rs. 28.63 to Rs. 1,222.75. 120 Italy improved by Rs. 26.50 to Rs. 1,239. 150 Italy put on Rs. 26.44 to Rs. 1,501.31. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade registered a rise of 12 nP, today's closing rate being Rs. 11.53. 120 Bt. cones 1st grade were done at Rs. 11.98, as against Rs. 12.19 last week.

Staple fibre yarn (40×2) February delivery gained Rs. 2 to Rs. 797. December contract changed hands at Rs. 794, as against Rs. 795. Spot Citys firmed up by 16 nP to Rs. 9.08. Centurys rallied from Rs. 9.02 to Rs. 9.36. Kohinoors hardened by 7 nP to Rs. 9.29.

In the cotton yarn section, ten counts Moderns strengthened by 25 nP to Rs. 19. Podars gathered 7 nP to Rs. 18.19. Twenty counts advanced by 31 nP to Rs. 23.56. Gokaks were fully maintained at Rs. 23.12. Forty counts Maduras climbed up by 75 nP to Rs. 32.75. Sixty counts Finlays were steady at Rs. 59.59. Among eightys, Mahendras spurted by a rupee to Rs. 71.50. Moderns were firm at Rs. 71.50 and Finlays at Rs. 79.79.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	23-11-1960	16-11-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)		
December	2,161.00	2,129.00
February	2,134 00	2,124.00
60/1 Cupressa Bembers spot	2,231 06	2,176.00
120 Japan (per 100 kg.)	1,322.75	1,294.12
150 Japan (per 100 kg.)	1,543.25	1,514.56
120 Italy (per 100 kg.)	1,239.00	1,212.50
150 Italy (per 100 kg.)	1,501.31	1,474.87
Staple fibre yarn—		
40×2 December (per 90.72 kg.)	794.00	795.00
40×2 February	797.00	795.00
40×2 Century (per kg.)	9.36	9.03
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.19	18.12
20s Gokak	23.12	23.12
30s Gokak	27.00	27.00
40s Minaxi	31.25	31.75
60s Finlay	59.59	59.59
80s Modern	71.50	71.50

PLAIN TEAS FIRM

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *15th November*

Sale No. 44: Approximately 500,000 kilograms were offered in Sale No. 44 held on 15th November 1960. Quality showed no noticeable change. Although highgrowns continued to be irregular, there were a number of teas with improved quality. There was good general demand. Plainer and low medium descriptions met with keen competition and were dearer by 10 to 20 nP. Good medium brokens met irregular support and were easier, whilst fannings under this category were quoted firm. Black leaf descriptions were firm and sold at around last week's rates. Highgrowns continued irregular and easier with the exception of a few selected bests which were dearer. There was a strong demand for whole leaf grades, particularly orange pekoes, which advanced considerably over last rates. Legg cut and C.T.C. types sold well at slightly dearer rates.

	1960	1959
	Rs.	Rs.
Low medium	4.60-5.00	4.19-4.41
Medium	5.00-5.30	4.52-5.07
Good medium	5.30-5.60	4.96-5.51
Quality	5.75-8.90	5.51-8.93

The average price realised in Sale No. 44 was Rs. 5.38 per kilo, as against Rs. 5.29 in the previous sale and Rs. 5.42 in the corresponding sale last year.

Dust Sale 'PP': Sale 'PP' held on 17th November 1960 comprised 180,000 kilograms. Quality was well maintained. The market met with a very strong demand and prices were dearer for most descriptions. Medium descriptions were 5 to 10 nP dearer and those with more colour sometimes advanced further. Buyers showed keen interest in milled and residual grades which were dearer by 5 to 10 nP and in some cases more. There was better support for highgrowns, although these are quoted barely steady. C.T.C. and legg cut types continued in demand and sold at around last week's rates.

The average price realised in Dust Sale 'PP' was Rs. 4.77 per kilo, as compared with Rs. 4.67 in the previous sale and Rs. 4.32 in the corresponding sale last year.

Export Quota: The market remains rather quiet with last business being registered at ¼ nP per kilo. At present there are sellers at ¼ nP.

Colombo: A total quantity of 3,660,000 lbs. were offered. The market met with less demand and prices were generally easier. Teas from Dimbula and Dickoya districts declined by 40 to 50 cents. Better liquoring mediums were in useful demand and are quoted steady. Teas from Uva districts also were in less demand and were considerably easier.

London:—North Indian and other growths: 23,912 packages were offered on Monday, of which 19,400 packages were from North India. There was good general demand. Prices were steady for teas up to 5s. per lb., but prices realised for teas above this level were slightly irregular. Plain B.P. is quoted at 3/10½*d*.

Ceylon and South Indians: In Tuesday's sale 27,500 packages were offered and 9,210 packages came from South India. There was good demand and prices were steady for lower descriptions, whilst others were irregular.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 45:—461,000 kilograms. Good demand, particularly for good mediums which are 10 to 20 nP dearer. Plain and low medium fully firm. Best liquoring highgrowns much easier following decline in quality. Whole leaf very strong."

QUALITY TEAS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, *22nd November*

There was good demand for quality teas during the export sales held yesterday. This trend should be attributed to the realisation in market circles that this year's crop would be lower than last year's and that as such the marketing outlook for the remainder of the crop should be considered bright.

It should be noted that prices rose here, despite the fall in demand in Mincing Lane sales and the sagging tendency there. Following the increased quantity on offer in London, interest waned. The increased quantity on offer in London was due to greater arrivals as ships diverted to the Continent had started reaching London docks now that the tally clerks have resumed work. It is a reasonable inference that the increase in London stocks to 90 million lbs. in the week ended 11th November from 83 million lbs. should have also affected sentiment.

Export offerings during yesterday's sales held here amounted to 64,552 packages. Darjeelings met with good demand and the keenest attention was paid to the higher grades. Tippy teas recorded an irregular trend as did leaf grades. The better C.T.Cs were steady, while the poorer C.T.Cs eased by 20 to 30 nP. Best and medium C.T.Cs were shown interest subject to quality. Medium B.Ps and fannings were firm. A few selected medium B.O.Ps hardened, while the poorest lots eased liberally. O.Fs also eased, but teas for price and plain brokens were steady. Legg-cut teas eased by 10 to 20 nP, while the cheaper varieties of the same category hardened. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.90 to Rs. 6.30, clean black pekoe Rs. 5.30 to Rs. 5.60, medium fannings Rs. 5.00 to Rs. 5.30, medium B.P. Rs. 4.65 to Rs. 4.85, plain fannings Rs. 4.85 to Rs. 5.00, and plain B.P. Rs. 4.55 to Rs. 4.65.

Export quota was offered at ¼ nP per kg. However, there were no buyers.

Prices were easy at the internal auctions held here in the last week. Dusts on offer amounted to 22,928 chests. Best C.T.Cs were difficult to sell at quoted rates, while the medium ones fell by 15 to 20 nP. Demand for the plainer orthodox teas was good and prices for these were steady, but the brighter liquoring Assams eased. Although enquiries were good, legg-cut Dooars shared the general market trend and declined. The quotations per 1 kg., inclusive of excise duty, were: best Assam C.T.C. dust Rs. 6.15 to Rs. 6.30 (nominal), medium Assam C.T.C. dust Rs. 5.80 to Rs. 6.00, medium Assam C.T.C. dust Rs. 4.90 to Rs. 5.40, and medium Dooars dust Rs. 4.70 to Rs. 5.10.

Leaf on offer amounting to 666 packages met with good demand.

JUTE REACTS

(From Our Own Correspondent)

CALCUTTA, *22nd November*

Following the imposition of the heavy special margin deposits by the East India Jute and Hessian Exchange Ltd. under orders from the Forward Markets Commission in respect to futures contracts, full details of which were given in these columns last week, prices of both jute goods and raw jute, for forward and ready deliveries, fell noticeably during the week under review. The declines would have been more marked and striking, had it not been for the report that the Calcutta High Court was being moved for the issue of an injunction against the levy of these special margins. This report, however, did not arrest the declining tendency, but the pace of decline was retarded. Yesterday, the High Court issued a rule calling on the authorities (the Government of India, the F.M. Commission and the E.I.J.H.E.) why the amendment to bye laws of the Exchange as per notifications of 5th and 11th November imposing restrictions on T.S.D. contracts should not be set aside. No *ad-interim* injunction was, however, issued. Overseas buyers of goods continued to remain idle, and it is very likely that no major purchases would be attempted by them until the bottom of the decline is reached. However, a few sales of hessian were put through with the United States, but since the quantity involved in each of these transactions was small these did not influence prices. The fact that mills paid greater attention in covering their quota of fibre from the agencies contributed to higher prices in the agencies. However, prices in both the agencies and Calcutta began to fall, as new crop arrivals recorded a marked increase during the week, and sellers were keen in getting buyers. The increase in arrivals was a fact which provided great confidence to mills and those sellers having to fulfil some low-priced contracts. Against this background, crop estimates are being revised by one and all concerned with the trade and industry and optimism prevails as to the size of the crop being able to meet indigenous demand.

An index of the stringent measures taken by the Forward Markets Commission and the E.I.J. & H. E. Ltd. can be had from the extreme strain to which offices concerned with the futures transactions are put to having regard to the enormous increase in paper work. Even offices, staffed liberally, have been hard put to. All the same, the restrictions have begun to have a salutary effect, and it is to be hoped that the vigil of the authorities would continue with its present seriousness. The only complaint heard against the orders is that some of them are not specific, with the result that inconvenience has been caused. In passing, it should be mentioned that had the authorities acted earlier, that is, even when signs of the brewing crisis appeared, the jute industry could have been saved from the present phase of difficulties which, judging from the present lull in the export market here and reports from overseas markets, has affected the long-term interests of the industry. For evidence is not wanting for the inference that high prices have given a handle for substitutes. Orders from foreign countries in the last two months give the indication that substitutes are being tried and jute goods are put to minimum uses only. During the week, there were reports that the Reserve Bank of India would be asked by the Government of India to restrict bank credit against raw jute and jute goods. The progress of the decline in prices following the imposition of heavy deposit margins would probably explain why these rumours had not turned to actuality so far.

The prospect of mills here importing Pakistani cuttings has receded. Although it was recently stated that further licences would be issued, imports at current prices would be highly uneconomic and would not be resorted to by mills. For obvious reasons, mills have yet to receive Pakistani cuttings, contracts for which had been placed when the price was between Rs. 100 and Rs. 160 per bale. The current ruling price is Rs. 260 a bale. If mills are to use the new quota, stated to total about 450,000 bales, it is pointed out they would consider placing contracts with those sellers who would fulfil the outstanding low-priced contracts.

As stated above, business passing in the goods market was limited. Prospective buyers were watching the decline. Local operators were also naturally hesitant in entering into fresh commitments. On Tuesday last, ready B. twills were nominally quoted at Rs. 173.50 and hessian 40" 10 oz. at Rs. 55.75. The only feature on Wednesday was a small amount of buying in hessian on American interest, but heavy goods continued to be deserted. Meanwhile, news came forth that the new margins would be payable on outstanding contracts too. Local operators at one stage became active, and after wide fluctuations ready B. twills closed firm at Rs. 171.00. Ready hessian 40" 10 oz. was fractionally lower at Rs. 55.25. On Thursday, the decline in prices continued to be in evidence, albeit some activity in hessian on U.S. interest. Ready hessian 40" 10 oz. finished lower at Rs. 55, as did B. twills at Rs. 170. On Friday, fluctuations in prices were sharp following the application in Court praying for injunction on the margin levy. B. twills closed quiet at Rs. 170 and hessian 40" 10 oz. at Rs. 55.25. Over the week-end, prices fell sharply, as overseas buyers were firm in their silent demeanour. B. twills fell to Rs. 166 and hessian 40" 10 oz. to Rs. 54. Holders were caught in selling pressure. Following this declining trend, fractional losses were also reported on New York burlap values. A steadier trend in heavy goods was recorded, following some covering business, and ready B. twills closed slightly higher at Rs. 169. However, ready hessian 40" 10 oz. was unchanged at Rs. 54. In consultation with the West Bengal Government and the trade unions, mills have decided to reduce working hours from 48 to 45 a week, and the percentage of looms sealed from 19 to 12. This will reduce unemployment distress, and, in effect, mean reducing looms sealed from 19 per cent. now to 17 per cent. based on working 48 hours a week. Naturally, it would take some time before the decision is implemented. Meanwhile, a good sign is the improving fibre supply position and the declining price-trend.

Fibre prices also fell. Sellers were keen for business. However, business passing in the Calcutta market was small, as mills were covering against their quotas in their own agencies in the mofussil. Assam bottoms declined to Rs. 124.50, per 100 kg. from Rs. 138, and daissee bottoms to Rs. 130 from Rs. 142, both November-December delivery.

BLACK PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, *23rd November*

Malabar black pepper ruled easy during the week under pressure of new arrivals and lack of foreign inquiries. Ready garbled (old) went down to Rs. 192½ per cwt., while ungarbled (old) was done at Rs. 1,150 and new at Rs. 1,050. December delivery receded from Rs. 225 to Rs. 194, there being very small turnover, owing to various restrictions placed by the major operators on the Cochin Exchange. Whatever little business was done in the forward ring was by way of short covering. There were no advance sales either in overseas or in the forward ring at Cochin. The exporters were, therefore, unwilling to buy except their immediate requirements. Arrivals were not so heavy as was expected earlier, because picking and drying was often interrupted by rain in the area. On the advent of sunshine, arrivals will be heavy which in the present mood of the market is likely to remain unsold, hanging heavy on the market. The present weak trend is attributed to the impending heavy new arrivals which are already overdue. Absence of export business, coupled with financial stringency, has adversely affected the outlook for the commodity. In the meantime, if Singapore comes out in the field either to undersell or to compete with Malabar, there is likely to be a rate war between the two primary suppliers. Then, nobody knows what will be the bottom for pepper for the year 1961.

Spot in New York climbed down from $0.55 to $0.50 under pressure of arrivals and lack of grinders' demand. New York dealers are reported to have bought afloat from India with the named steamers at prices ranging from $0.49 to $0.43½. There seems to be little interest for November shipment. December and January shipments are indicated at $0.40. There being no shortage of supply of pepper in the world market during the year 1961, the psychological effect on consumers in the world at large will be for hand to mouth buying.

Singapore is ruling easy at Str. $255 for white and at Str. $150 for black. The bull syndicate is reported to be trying to push up prices often, but without success, as any advance in prices attracts increased arrivals from Sarawak and Indonesia.

The trade in general is at a loss to know why check prices for Lampong are fixed on the basis of spot price in America when afloats are selling at a discount of as low as 6 cents. If check prices in Indonesia are kept high, no export of Lampong will be possible, as India will be competing, in view of its harvesting season. This means accumulation of stock of Lampong either at Telok Betong or at Singapore which ultimately will prove a disturbing factor for the stabilisation of pepper prices in the world market.

Arrivals in Calicut are reported to have started earlier. As such, there is likely to be a pressure of combined selling on the market by all the important primary centres on the coast.

Ready pepper in Bombay is quoted at Rs. 235 per 50 kilos.

TEXTILES

(Concluded from page 952)

block even more than the increase in its funds. Of course, the industry could do this only by increasing its borrowings for working capital."

The contention that only the pre-war machinery gives rise to the problem of replacement is also disputed. The millowners' representative argues that this is a fallacious contention from whatever angle one looks at it. Plant and machinery become obsolete due to (*a*) changes in machinery design and (*b*) introduction of new processes, etc. He has done well to highlight the rapid strides taking place in evolving new processes and designs in textile machinery. In spinning, for instance, several processes are being dropped and, in winding and warping, the latest machinery has rendered obsolete the so-called high-speed machinery which was in vogue some five or ten years ago. Automatic looms of even ten years ago have become almost antiquated by now. Surely, a cotton mill industry, which has to export over 15 per cent. of its production, cannot hope to compete in the world markets, if it lags behind modern trends, because its products will suffer in both quality and price. The domestic consumer, too, should not be denied the advantages of superior quality and lower cost accruing from modern technology.

The question of allowance for obsolescence has also to be viewed from the angle of production cost. In this connection, the industry's spokesman makes the following interesting observations:

"The advantage with an old machine is its low incidence of depreciation. But it suffers from the disadvantages of lower production, inferior quality, higher proportion of waste and higher labour cost, and progressively increasing bills of repairs and replacement. A new machine suffers from higher capital cost and higher incidence of depreciation. But as against these disadvantages in capital cost, the new machine gives savings in running cost, due to higher production, superior quality, lower waste, lower labour cost, and lower expense of maintenance and repairs. A balance must be struck between these advantages and disadvantages to arrive at an estimate of the useful life of an existing machine, after which, its replacement by a new machine is more economical, provided, of course, the necessary initial finance is available. Japan, which was forced to install new machinery because of war devastation, can produce goods at a lower cost than those countries which continue to use the older machines."

He has also highlighted the fact that not only pre-war textile machinery but also post-war machinery and even the recently installed equipment gives rise to the problem of replacement cost owing to the continuance of the rise in prices. The following table indicates the trend of prices of a few items:

(In rupees)

	1957	1948	1946	1938-39
Blow-room machinery ...	3,09,375	1,30,150	1,01,455	41,486
Carding engines, 38" ...	13,800	8,661	7,782	3,041
" " 40" ...	13,900	10,201	8,096	3,563
Combers	23,975	18,966	16,467	7,033
Inter frames	51,675	25,758	17,621	6,722
Ring spinning frame (warp) ...	41,525	29,593	23,676	9,515
Looms (plain), 36" ...	1,825	..	820	260
" " 44" ...	1,925	..	863	274
" " 50" ...	2,000	..	1,022	310
" " 56" ...	2,150	..	1,094	347

On the basis of the currently prevailing prices of textile machinery and equipment, the industry's needs of rehabilitation over the next five years are estimated at Rs. 180 crores. There is no exaggeration whatever in the warning given by the industry's spokesman that, considering the rise in prices following the large-scale investment in the third and succeeding Plans, it would be suicidal not to make adequate provision for the replacement cost of machinery that is installed even today, a fact which has been stressed in a recent study by the National Council of Applied Economic Research. What is urgently wanted, as this journal has stressed ere now, is that the cotton mill industry must be enabled to earn a profit which will leave sufficient margin to plough back the amounts required to meet at least a part of the cost of replacing its assets and to sustain a level of dividend that will induce confidence among investors in the shares of its units.

Notice

THE ALUMINIUM CORPORATION OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Annual General Meeting of the members of the ALUMINIUM CORPORATION OF INDIA LTD., will be held at the Registered Office of the Company at 7, Council House Street, Calcutta, on Tuesday the 27th December, 1960, at 4.30 p.m., for the following purposes:

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st March, 1960.
2. To declare dividends.
3. To appoint Directors in place of those retiring by rotation and in this connection to consider and, if thought fit, to pass the following resolution in respect of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relevant Explanatory Statement is annexed hereto.

RESOLVED: That pursuant to the provisions of Section 281 of the Companies Act, 1956, Shri D. N. Sen, a Director of the Company, who has attained the age of 71 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is specially declared that the age limit prescribed under Section 280, of the said Act shall not apply to him.

4. To appoint Auditors and to fix their remuneration.

The Registers of Members and Transfer Books of the Company will be closed from the 9th to the 27th December 1960, both days inclusive.

By Order of the Board,
J. K. INDUSTRIES PRIVATE LTD.,
Managing Agents,
H. S. SINGHANIA,
Director.

CALCUTTA, *the 21st November*, 1960.

Note: (i) Dividends as recommended by the Directors, if approved at the Annual General Meeting, including the additional dividend payable to the Preference shareholders on enactment of Preference Shares (Regulation of Dividends), Bill will be paid to those shareholders whose names are on the Company's Registers as on the 27th December, 1960, or to their Mandatees. The payments will be made on or after the 21st January, 1961 and of additional dividend after enactment of the Preference Shares (Regulation of Dividends) Bill.

(ii) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An Explanatory Statement is annexed to the convening Notice issued to the members of the Company.

BANKING

(*Concluded from page 951*)

was concerned. Costs can, of course, be reduced in many ways, even without reducing money wages. The more attention that is paid to cost and price adjustments, the less need there will be to rely on massive credit expansion as a means of mitigating a business recession, and only in that way can a more lasting remedy be found. For a policy of cost adjustments through rationalisation should make the economy more efficient, and should thus be the policy most likely to improve real wages over a period of time. I have naturally no illusions about the difficulty of pursuing such a policy in actual practice. Such cost adjustments were made, however, in Great Britain and Sweden at the time of devaluation in 1931, and costs were held down in the Netherlands and Switzerland at the time of devaluation in 1936; and I am sure that these countries benefited from the policies they pursued, while those countries in which cost increases continued found it more difficult to reduce unemployment.

I think there can be great merit in studying past experiences in this way and relating them to what one considers is the best theoretical analysis of these matters. Keynes in his *General Theory* dealt with a closed economy, and ignored all balance of payments considerations. This is one reason why I think that it is very opportune to consider his views at the moment, for I have come to the conclusion that the proper policy on costs to be followed here in the United States ought to be very much the same whether internal or external considerations are given the more weight. Indeed, in this country (the U.S.) it is almost more important for industrialists to avoid pricing themselves out of the home market, which is so much larger than the markets provided by the export trades. This is emphasised, once again, by the fact that this country experienced no balance of payments difficulties in the 1930's, but at that time accumulated much gold from abroad as a result of Europeans seeking a safe haven for their funds from dictators and the threat of war. Although the difficulties were thus essentially internal, the measures then taken still failed to cure the evil of unemployment.

Supplementary Steps

Returning, however, to the question of the balance of payments, I would strongly acknowledge that for many countries the adequacy of their gold reserves depends very much on the policies that they pursue. If wrong policies are followed, no amount of reserves would suffice. But, given the proper fiscal and credit and cost policies, there are a number of supplementary steps that could be taken in the United States and abroad which would help to improve the position, and I would mention the following:

(1) It is good that individual firms in the United States should be made more aware of the possibilities of the export trade, and should try energetically to develop that part of their business. When home trade is slackening, there is every inducement to do so, and this inducement seems to have been pretty effective in recent months. More can no doubt be done in this field, however.

(2) The U.S. Government and the International Monetary Fund, and, of course, the G.A.T.T., have for years pressed for the elimination of trade and payments discrimination against dollar goods. Great progress has been made, but continued efforts are required.

(3) The U.S. Government has also favoured a general lowering of tariffs. It is faced with a very tough problem in its relations with the new trading areas, especially in Europe, where it must seek to ensure that U.S. interests are not ignored.

(4) Then, there is the whole problem of U.S. Government expenditure abroad, whether for military purposes or for assistance for the less-developed countries, as set out so clearly in the President's statement on steps to be taken with respect to the balance of payments problem, which was made public on the 16th inst. Other countries which have regained their strength during the post-war years may well be expected to assume a larger share of such expenditure. Discussions with some European countries, especially with Germany, are taking place this very month. I am glad to hear that the loans which will be a part of the increased assistance now planned by Germany will take the form of untied loans.

(5) In the field of international capital transactions, the recent reductions in short-term interest rates in France, Great Britain, and Germany should also be helpful.

Several of the steps I have outlined have already been taken and others are in the offing. They can certainly make a useful contribution, but, as I said before, the fiscal and credit policies pursued (by the U.S.), together with continued attention to costs, will be decisive.

Aid Should Not Be Cut

Perhaps, I should mention certain steps, sometimes hinted at but which in my opinion should not be taken. Although European countries will, as I hope, increase their share of foreign assistance, I do not believe that the U.S. contribution can be substantially curtailed. It seems to me that the many statements made on this subject during the election campaign pointed to continued U.S. concern about further progress in the underdeveloped countries and the importance of continued assistance for that purpose. A greater danger, which should be avoided in any circumstances, would be to increase tariffs. To do so would surely be a double-edged weapon; it would slow up the expansion of world trade, and I need not enlarge upon the dire consequences for the Western world of such a slowing-up. Of course, an increase in tariffs and a reduction in the rate of expansion of world trade would reduce foreign competition in U.S. markets, but I am one of those who believe that such competition is salutary—here as in other countries.

It is, once again, interesting to remember that the increase in U.S. tariffs in the 1930's did not help to combat the depression. Indeed, in those unfortunate years, when other countries, too, raised their tariffs and Great Britain abandoned its free trade policy, we experienced a stagnation of international trade which lasted for a decade, and caused great distress all round the world. I hope you will forgive me for referring so often to what happened in the 1930's. While I believe that many useful lessons can be learned from our experience during that period, I would not like to convey the impression that I think we now are faced with the same problem that we faced then—a world-wide deflation. We might all agree, however, that we are in a rather difficult situation, and that there is great need for co-operation between the financial authorities in the various countries.

In particular, it is essential that there should be close contact between the financial authorities on the two sides of the Atlantic, what we failed to establish in the period between the two wars. The International Monetary Fund has been useful in this context, and it is proposed, as you know, to transform the Organisation for European Economic Co-operation, in which the United States and Canada were associate partners, into the Organisation for Economic Co-operation and Development in which the United States and Canada will be full members. I hope very much that this proposal will be speedily adopted, for I think it is in the best interest of all concerned.

Fortunately, today, the leading industrial countries have nearly all accumulated sufficient, or almost sufficient, reserves, especially taking into account the secondary reserves available to them through access to the International Monetary Fund. In the next few years, I hope we shall be able to consolidate the present exchange structure, and, on this basis, be able to create the conditions for sustained economic growth. Such growth can occur under a variety of conditions, as past experiences teach us. There was, for instance, a period of rapid economic growth in the U.S. from 1873 to 1895, although, at that time, prices were on average slowly falling. In the 1920's, there was another period of growth, but then with stable prices, and, after the Second World War, there has been growth with rising prices. In each of these periods, business attitudes and practices have had to be adjusted to the prevailing trend. Assuming that we may prevent both inflation and deflation, we shall have to adjust our practices to the requirements of a more stable price level, which I am fairly confident that we shall be able to ensure. For my own part, I have no fear that a period of stagnation will result. It is my opinion that the attainment of a satisfactory rate of growth and higher employment and the preservation of a relatively stable price level are fully consistent goals. In view of the great technological developments, and for other reasons, demand for capital all over the world may be expected to be large, and there should be no accumulation of idle savings.

There is work of noble note to be done, and, with the greater insight and the more effective institutions that we now possess, there is every reason to believe that we shall be able to do it.

LLOYDS—NATIONAL AND GRINDLAYS

The agreement for the amalgamation of the business of Lloyds Bank's Eastern branches in India, Pakistan and Burma with that of National and Grindlays Bank Ltd. has been confirmed by the shareholders of the latter Bank and the issue of 1,520,700 shares of 15s. each of National and Grindlays to Lloyds Bank has been approved. This issue represents 25 per cent. of the issued capital of National and Grindlays.

It was originally indicated that National and Grindlays Bank Ltd. would make an issue of shares to Lloyds Bank Ltd. as consideration for the acquisition of Lloyds Bank's Eastern branches and that Lloyds Bank would simultaneously subscribe for additional shares in National and Grindlays Bank Ltd. Instead, Lloyds Bank Ltd. has agreed to make a transfer of additional reserves appropriate to the business of the Eastern branches, and the number of shares to be issued for the business has consequently been increased. The profits of Lloyds Bank's Eastern branches for the year ending 1960 will be retained by Lloyds and its new shares in National and Grindlays will not participate in any dividend for the year ending 31st December 1960.

By the agreement now concluded, Lloyds Bank Ltd. will exchange the direct banking responsibility hitherto exercised through its branches in India, Pakistan and Burma for an indirect, but substantial, interest in the form of its holding in the share capital of National and Grindlays Bank Limited. The acquisition of this shareholding will, in fact, result in the overseas interests of Lloyds Bank being considerably enlarged as, in addition to 32 branches in India, Pakistan and Burma, National and Grindlays Bank already has over 80 branches and sub-branches in Ceylon, Aden, Somalia, the East African territories and the Rhodesias.

National and Grindlays Bank Limited already has a link with the National Provincial Bank Ltd. as a result of the acquisition of Grindlays Bank Ltd. in 1948, and by the recent merger there is now a close connection with Lloyds Bank Ltd. The issued capital and reserves of National and Grindlays Bank Ltd. will amount to over £7¼ million on 1st January 1961, and deposits will be considerably in excess of £200 million, out of which Lloyds Bank's Eastern branches will have provided over £50 million. The substantial increase in resources available to the amalgamated bank will strengthen its position and enable it to play a more purposeful part in financing the expanding economies of the countries in which it operates.

It is the intention of the amalgamated bank to continue each former branch of Lloyds Bank Ltd. with the same staff, under the title of National and Grindlays Bank Ltd., "Lloyds Branch," so that the long established connections of Lloyds Bank in India, Pakistan and Burma will be maintained. In addition, Lloyds Bank Ltd., London, will have representation on the Board of National and Grindlays Bank Ltd.

INDO-COMMERCIAL BANK

The Reserve Bank of India has prepared a draft scheme for the merger of the Indo-Commercial Bank Ltd., Madras, which was recently given a moratorium for a period of two months, from 25th October to 24th December 1960, both days inclusive, under Section 45 of the Banking Companies Act as recently amended, with the Punjab National Bank Ltd. and sent it to the two banks for their comments. The Bank has also invited objections and suggestions, if any, from the creditors and members of both the banks. The scheme, a copy of which was placed on the table of the Lok Sabha by the Deputy Minister of Finance, Mr. B. R. Bhagat, envisages the payment to the depositors of the Indo-Commercial Bank, in the immediate future, of an amount equal to the readily exchangeable value of the assets and such further amounts thereafter as may be realised by the Punjab National Bank.

The broad outline of the scheme is as follows:

The Punjab National Bank will take over the assets of the Indo-Commercial in so far as they are considered good. The Bank will maintain a collection account to realise bad and doubtful debts and to salvage assets as much as possible. To this account will be credited the entire paid-up capital and reserves of the Indo-Commercial and treated as provision for bad and doubtful debts and depreciation on other assets. The uncalled liability in respect of the 'B' shares is proposed to be called up along with arrears of calls, if any. The paid-up capital of the Bank is Rs. 18.75 lakhs, of which the 'A' and 'C' shares of Rs. 100 and Rs. 50 each, respectively, are fully paid-up while the 'B' shares of Rs. 50 each are paid-up to the extent of only Rs. 25 each. This will fetch Rs. 2.50 lakhs.

If, as a result of the realisation of the advances considered doubtful and other assets, there is a balance left in the collection account after all adjustments, any residual claim of the depositors will be satisfied first and the share capital will be repaid to the extent possible. The Punjab National Bank will open corresponding and similar accounts in the names of the depositors of the Indo-Commercial Bank. The depositors can draw up to Rs. 250 in respect of a particular account or the entire amount standing to their credit if such amount is less than Rs. 250, while the others can operate up to the *pro rata* available in respect of each of the accounts.

After valuation of the assets of the Indo-Commercial Bank and scrutiny of the advances by the Punjab National and after considering the suggestions and objections of the depositors and creditors of the banks concerned, the amalgamation scheme will be finalised by the Reserve Bank of India.

MARKET GOSSIP

(*Concluded from page 943*)

costing Rs. 10,000, were being sold annually by Mahindras in India.

A preliminary scheme envisaging the manufacture of David Brown tractors in India was formulated by Mahindras and submitted to the Government for approval as far back as 1954. A detailed programme was submitted in November 1956. The programme received the final approval of the Government in a modified form during 1957-58 and negotiations were conducted with David Brown Industries Ltd. for the large capital required for the import of plant, equipment and tooling. Agreement was reached last year with the foreign firm for its financial participation in a new company, David Brown-Mahindra Tractors Private Ltd. The Government of India also granted the necessary licences for import of capital equipment for the first phase of the 2-D tractor manufacture. To start with, the assembling of tractors imported from the U.K. in C.K.D. (completely knocked down) condition had been contemplated. It was to be followed by the implementation of a plan for progressive manufacture of components in India. It was expected that the Company would be able to make 66 per cent. of the parts in the next four years. A higher percentage of indigenous production was considered feasible in the later stages of the scheme, depending on the development of the local ancillary industries. The licence covered production of 1,250 tractors per annum.

One thought that the tractor manufacturing project of Mahindras was well under implementation. The Company had sent some technicians for training in the works of David Browns in Britain. It had also spent quite a good bit of money in connection with the preliminaries of the project. It is a pity that, at this late stage and after all this effort, the collaboration agreement should have broken down, causing a setback to the growth of tractors industry.

President Eisenhower Acts

The reported failure of the U.S. delegation, led by Treasury Secretary Anderson, to get any immediate help, or any firm promise of it, to ease the U.S. balance of payments position lends added significance to the cut in foreign spending proposed by President Eisenhower in a directive issued on the 16th inst. For efforts to persuade W. Germany to lend a helping hand having failed for the time being, it appears that the U.S. has now to "go it alone," at least till such time as the W. German authorities agree to remove import restrictions on American goods which they have agreed to consider.

The aim of the delegation, which concluded talks with W. German Treasury officials on the 23rd inst., was to persuade W. Germany to (1) assume a greater share of the defence cost of N.A.T.O., (2) supply its legitimate share of economic aid to underdeveloped countries, (3) take measures to equalise interest rates in W. Germany with those prevailing in the U.S., and (4) remove restrictions on imports of certain American agricultural commodities and to liberalise trade generally. Apart from the reaffirmation that W. Germany will provide about DM 3,500 million (Rs. 400 crores) for 1961 for aid to underdeveloped countries and the expression of willingness to consider the question of liberalisation of trade, the U.S. delegation does not appear to have got any assurance of favourable consideration of the other points. No wonder the *communique* issued after the conclusion of the talks was discreetly silent on the specific issues mentioned above.

But even before the West German attitude came to be known, the U.S. gave fresh evidence of its determination to take effective measures to improve its balance of payments position, taking care, at the same time, to see that they do not harm the interests of the developing nations. The strain on the U.S. balance of payments, as reflected in payments deficit which is currently running at the annual rate of about $3,000 million, began to be felt since as early as 1950. As a result of the heavy contributions to the post-war economic reconstruction of Europe, the massive military aid programme, and the generous aid granted to developing nations, the U.S. has been experiencing continuous deficits in its balance of payments. In the last three years alone, the U.S. paid out a total of $10 billion more than what it received. The settlement of the resulting deficits resulted in sizable outflows of gold and increase in the dollar liabilities to other countries, as is evidenced by the decline of about $4.5 billion in Treasury gold stocks since the end of 1957.

Not until 1958, however, did the world begin to take notice of the continuing deficit in the U.S. balance of payments. It was only when the gold reserves began to register sharp losses that the possibility of dollar not being able to maintain its strength began to be talked about. It must, however, be said to the credit of the U.S. Administration that, though it was not late in recognising the problem, it did not resort to any crisis measures that would have had adverse reactions on the other countries of the world. At the same time, it took a series of steps to improve the balance of payments position and to maintain world confidence in the dollar. As a result of this, there has been a significant and heartening improvement in exports during the current year. In 1959, U.S. merchandise trade surplus reached a post-war low of $1 billion, whereas this year it is estimated to reach an annual rate of over $4 billion.

In his directive referred to above, President Eisenhower has outlined the following three-phased programme, covering the fields of international trade, finance and the domestic economy which aims at reducing the deficit in the U.S.'s balance of payments:

"In the field of international trade, the U.S. will (*a*) continue to press other countries urgently, and particularly those that are economically and financially strong, to reduce tariffs, relax quotas, and remove trade restrictions that hamper United States exports, and also urge these countries to reduce or eliminate internal taxes and other measures that have a special impact in curtailing their purchases of United States goods and services; (*b*) take all reasonable means to increase exports, including facilitating the financing of exports where this is needed, to increase our sales both of consumer goods and capital goods.

"In the field of international finance, the U.S. will (*a*) insist that its friends and allies accept their full share of the cost of maintaining the security of the free world; (*b*) insist that the other economically advanced countries of the free world increase their share of the long-term truly developmental type of financing extended to the developing countries; (*c*) urge international institutions to use as fully as possible currencies other than dollar available to them, whenever and wherever possible; (*d*) encourage the other strong countries to permit the borrowing by these institutions and by other borrowers in their capital markets where appropriate; (*e*) continue to review all phases of governmental operations, both at home and abroad, in order to minimise the balance of payments effects of these operations.

"In the field of the domestic economy, the U.S. Government will continue (*a*) to implement fiscal, financial, monetary and debt management policies of the Government and Federal Reserve System designed to avoid inflation in the United States; and (*b*) to recommend to both management and labour that they take all reasonable steps to insure the competitiveness of United States-produced goods in the export market, and actively pursue opportunities in those markets."

While these and other policies are undergoing critical examination, President Eisenhower has thought it appropriate to initiate administrative action to cut U.S. foreign spending by $1,000 million. This is part of the gold-saving programme and is aimed at reducing the outflow of American gold. This is to be achieved by reducing the number of dependents of U.S. soldiers maintained abroad, buying American, instead of foreign, goods for military forces and military assistance programmes and economic aid.

Interpreting the implications of this step, the U.S. Treasury Department officials say that the reduction in overseas spending will not affect the amount of economic, technical and military assistance now being provided by the U.S. The main brunt of the reduction in spending will be borne by the advanced countries where there are large U.S. troop contingents, such as W. Germany, England, France and Japan. And all these countries are in a position to absorb the shock without any adverse effect on their economies.

SURVEY

(*Concluded from page 947*)

products and which would be those required to achieve their industrialisation."

A notable feature of this year's meeting was the suggestion put forward by the Burmese delegate that aid by donor nations should be given on a multilateral rather than bilateral basis. He proposed that donor countries should determine, by prior consultation, the amount of capital aid to be made available in any particular year to the region which in turn could be broken down to enable the recipient countries to know in advance the amount available from each donor country. This suggestion touched off a heated debate. The leader of the British delegation, the Marquess of Lansdowne, opposed changing the bilateral basis of aid, which, according to him, had "worked satisfactorily so far." He averred that the whole concept of the Colombo Plan was based on bilateral aid which rendered it free from strains and stresses which sometimes followed from groupings. Any proposal which tended to go against the bilateral principle would not, in his view, be advantageous to anyone. The Philippine delegate, on the other hand, was in favour of multilateralism. The Ministerial meeting, however, wisely upheld bilateral aid and, consequently, the proposal was dropped without being put to vote.

Less controversial, however, were the two other suggestions made by the Burmese delegate. One was that the Consultative Committee should take up seriously "regional angle and approach" in facilitating the development of the countries of the region. For this purpose, he proposed the establishment of regional centres for specialised training and research. This, the British delegate rightly pointed out, was a thoroughly sound and business-like suggestion. The other proposal was that the annual meeting of the Consultative Committee should include discussion of an agreed theme on the basis of a paper prepared by some appropriate body as, for instance, the E.C.A.F.E. This suggestion is well worth considering. It may be noted here that the International Labour Organisation follows a similar practice. The discussions at the I.L.O.'s annual meetings are based on a report prepared by the Director-General which has as its central theme one of the current problems faced by world labour.

WEEK'S STOCK EXCHANGE TREND

STRAIT-JACKET FOR COMPANIES—I

THE clause-by-clause discussion of the Companies Amendment Bill in the Lok Sabha, in the course of the second reading of the Bill, which was over on Wednesday, 30th November 1960, has brought little comfort to those who have complained of overlegislation and excessive restriction on the freedom of joint-stock companies to manage their affairs in the light of their own judgment and to expand the scope of their activities in keeping with their ability, administrative and financial alike. Barring some valuable assurances by the Ministers concerned, none of the major amendments proposed by the Opposition has been accepted. The result is that the Government's attempt to take advantage of the opportunity to amend the Companies Act for making this legislation to serve its basic objective of establishing a socialist pattern of society more effectively than hitherto has been a success. Following this amendment, the scope for existing companies to bring more new companies into existence has been severely restricted. An attempt has been made to close the loopholes through which the objective of preventing concentration of economic power in the hands of existing *entrepreneurs* is being defeated. The Bill contains as many as 215 clauses and imposes more paper work on the executives of companies. By assuming more and more powers, the Government has exposed itself to the risk of courting more criticism from the public which will be politically embarrassing. If it fails to exercise them judiciously and efficiently, it will be accused of many omissions and commissions.

The debate in the Lok Sabha on the Bill has brought to light a number of controversial issues of very vital importance to the growth and development of corporate enterprises. The Companies Act, which was passed in 1956 after prolonged and detailed consideration, both inside and outside the legislature, failed to satisfy several people interested in the working of joint-stock companies, chiefly because of various defects such as its inordinate length, the complexity of its structure, the extensive authority that it put in the hands of the Government even in regard to minor matters, and the vagueness and obscurity of many of its material provisions. It was in recognition of the cumbersome and defective structure of the present Companies Act that the Government of India agreed to appoint the Company Law Amendment Committee, under the chairmanship of Mr. A. V. Vishwanatha Sastri, a retired Judge of the Madras High Court, on 15th May 1957, that is, barely a year after the commencement of the Act. The Sastri Committee was asked to suggest proposals for overcoming certain practical difficulties found in the working of the Companies Act and for removing the drafting defects, as well as to consider the changes necessary in its structure for simplifying the Act. Within a short period of six months, the Sastri Committee submitted its thought-provoking report, after taking into account all the diverse opinions expressed before the Committee by the representatives of trade and industry. The report was placed before both the Houses of Parliament in December 1957 and a Bill for amending the Act was introduced in the Lok Sabha on 1st May 1959 and was referred to a Joint Select Committee of both the Houses, consisting of forty-five members, reflecting all shades of business and political opinion. The Committee submitted its report in August last. Now that the second reading of the Bill is over in the Lok Sabha, it will not be long before the amendments are finally placed on the Statute Book. The year 1960 will thus have the distinction of having witnessed the end of the efforts to overhaul the Company Law. It is to be hoped that no other year in the sixties at least will have to undergo this experience.

As the amendment to Company Law is of gargantuan dimensions, it is not possible to comment here on all the changes suggested by the Joint Select Committee. We propose to confine ourselves in this series of two articles—the second one will appear in the next issue—only to those issues which figured prominently in the Lok Sabha debate. These are undoubtedly of great importance to the smooth working of companies.

To take clause No. 70 of the Bill, dealing with the question of special audit, first. This clause has raised a fierce controversy. The majority of the Joint Select Committee was of the view that, "where the Central Government has reason to believe that the affairs of a company are not being managed in accordance with sound business principles or prudent commercial practices or they are being managed in a way likely to cause serious injury or damage to the interests of trade, industry or business to which it pertains or the financial position of the company is such as to endanger its solvency, it should be entitled to order a special audit of the company's accounts, so that a critical appreciation of the company's working and the state of its affairs may be available to the Government." This provision, over and above the statutory audit required under the Companies Act, is altogether an innovation. In the Act now governing the working of the joint-stock companies, there are certain remedies to deal with companies which are not functioning properly or are being mismanaged. Thus, the Government is empowered by the present Companies Act to launch an investigation into the affairs of a company. Besides, minority shareholders can seek relief in Court for oppression and mismanagement under Sections 397 and 398. Section 408 gives powers to Government to appoint directors on the Board, in order to prevent the affairs of the company being conducted in a manner oppressive to the members or prejudicial to the interests of the company. Apart from these remedies under the Company Law, recourse can also be had to the provisions of the Industries (Development and Regulation) Act 1951, under which investigation can be ordered into the affairs of a company. It is, therefore, pertinent to question the Government's insistence on arming itself with one more instrument of control, namely, power to order special audit of companies' accounts. In several dissenting minutes, strong objections have been taken by Mr. M. R. Masani, Mr. Babubhai Chinai, Mr. G. D. Somani and Mr. Dahyabhai V. Patel to this provision and their views deserve to be given due deference. According to them, the provision seeks to overregulate the corporate sector and interfere in matters of corporate administration and policy which should be no concern of the Government. They feel that the theory underlying this clause is that the Company Law Administration and the officials who make it up are better judges of the interests of the shareholders than the shareholders themselves. According to Mr. M. R. Masani, shareholders are all grown-up people to take care of their own interests and there is no need for any additional governmental audit to pry into the affairs of companies. It is also felt by many persons that institution of special audit would bring the members of the auditing profession into disrepute.

While some of the above arguments may be true, there is no gainsaying the fact that there has been a good number of cases of mismanagement of companies, including some large ones, resulting in lower production, loss of employment and absence of any return to shareholders. A point that must be borne in mind, in this connection, is that Section 18 of the Industries

(Development and Regulation) Act can be called into operation by the Government only after the closure of companies. Thus, the provision pertaining to special audit, far from being redundant, would actually supplement the existing powers of the Government for bringing to book managements of companies, the affairs of which are deliberately mismanaged by anti-social elements. Again, instead of bringing the auditing profession into disrepute, the new provision would act as a spur on the statutory auditors, who are now appointed by the companies, to do their work more effectively and conscientiously than at present, because of the fear of the Damocles' sword of special audit. Without casting any aspersions on the auditors as a class, we would like to add here that, in the case of several companies where there have been irregularities, the auditors concerned had not done their duty. There is no reason why honest auditors and honestly managed companies should fight shy of the special audit. The auditors will, perhaps, have no objection to this provision on the ground of it being derogatory to their profession, if it is designated as "special inspection" instead of "special audit." It is not known why the word "audit" was chosen; "inspection" would have been more appropriate. Be that as it may, the provision of special audit would have a salutary effect on the working of the corporate sector. It may well play a major part in weeding out anti-social persons from company managements who only seek to swindle the hard-earned savings of the shareholding and investing classes.

There are some, as, for instance, Mr. Masani, who strongly object to the addition of such sweeping powers as those implied in special audit to the armoury of the State on grounds of principle. It is argued by them that laws of this nature will lead to totalitarian rule. The fear of power being misused by an irresponsible executive is not without foundation. But one has to hope for the best and go by precedents. And the precedents are in favour of the Government of India. Moreover, the solemn assurances given by the Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, in replying to the debate, are there on record and should go some way towards assuaging such fears.

Two more important points were made by Mr. Masani in regard to special audit: (1) before subjecting a company to special audit, the Government must issue a show cause notice to it; and (2) the report of the special auditor should be submitted to the company and its shareholders. Since special audits are to be confined only to companies which are believed to have been badly managed, adoption of these procedures might enable those who have committed fraud to escape punishment. If special inspections are to be effective, they must be conducted with speed and surprise. The banking companies are now being subjected to surprise inspections by the Reserve Bank and none of the fears voiced by Mr. Masani has proved correct in the case of these companies, which, as credit institutions, are more delicate than industrial concerns from the point of view of public confidence. On this point also, Mr. Shastri gave satisfactory assurances. He said that the company involved would be informed of the report, if there were only minor irregularities. But, if it contained major irregularities, it would not be advisable, the Minister felt, to give a copy of the report to the company concerned lest the culprits should try to escape. But as the matter in such cases would be sent to the court, the company would get an opportunity of defending itself in public. If these assurances and intentions of the Government are borne in mind by the Department of Company Law Administration when exercising the new power of instituting special audit, the danger of any *mala fide* actions on the part of officials, as hinted by Mr. Masani, would be greatly minimised.

The clause pertaining to provision of depreciation has also turned out to be a very controversial one. Under the Companies Act, 1956, Section 205 governs the manner and time of payment of the dividend. The Sastri Committee found this section unsatisfactory. The Committee categorically stated that there was no definition of 'profits' in the Indian Companies Act; nor was there any indication of the manner in which profits of companies have to be computed for purposes of declaration of dividend. Sections 349 to 351 provide for the computation of profits only for the purpose of determining the remuneration of managing agents, directors or managers. Section 10 of the Income-tax Act provides for ascertaining the profits of a business during a year for the purpose of assessment to tax, but Section 205 of the Companies Act does not require this method to be followed for determining profits. The Sastri Committee further found that the decisions taken by various company managements as to the funds out of which dividends might be paid were not uniform and suggested the inclusion of the following provision:

> "Dividends may be declared or paid only out of the net profits of the company, after providing an amount of depreciation for that year on the scale prescribed by Section 350(*a*) of the Act or out of the undistributed profits of previous years or out of both."

The Joint Select Committee was, however, of the opinion that even the aforesaid provision in the Bill involved an element of latitude in favour of companies. The majority view in the Committee was that, before declaring dividends for any year, a company must provide not merely depreciation for that year but also all arrears of depreciation of past years. It is easy to see that this insistence may become a source of hardship for struggling companies, especially in the initial years of their operations when their profits would not be large enough to declare dividends after making full provision for all arrears of depreciation. It will be impossible for such companies to pay any dividends for a fairly long period of time. Even a well-established company, which has embarked upon a large scheme of expansion, will find it difficult to pay a dividend until the new project pays its way. This will be particularly true of companies engaged in heavy industries. The non-declaration of dividends will affect the credit of the company in the stock market and shareholders of such companies will stand to lose. It is also feared by some that this will restrict the formation of new companies and expansion of existing ones.

As against this view, some eminent business men, as well as some acknowledged experts in the field of accountancy, have strongly defended the new clause pertaining to the declaration of dividends. Mr. G. P. Kapadia, a leading chartered accountant and a former President of the Indian Merchants Chamber, Bombay, for instance, has stated, in the course of a Press statement, that the recommendation about the provision of depreciation is a healthy one and would check indiscriminate frittering away of the amounts to be set aside for depreciation and rehabilitation by way of dividend distribution. He feels that it will arrest speculative tendency in the shares of new companies or in new capital issues by existing companies for financing their expansion schemes. It is difficult to deny the correctness of these arguments. Profits computed without providing for depreciation in full do not reflect the true financial position of the company concerned. It is precisely for this reason that the Government exercises a certain measure of tax compulsion in regard to provision for development rebate. But, at the same time, exigencies of the situation in regard to certain types of companies have to be borne in mind if their growth prospects are not to be marred. Even today there are companies, which are 10 to 15 years old but still have to provide for depreciation in full. They have, however, just turned the corner and their prospects are good. They have also on hand expansion plans which are vital for the economic development of the country and for executing which they will have to raise additional capital. No harm will accrue to them, if they pay a modest dividend to keep their shareholders, who have had no return for a long time, in good humour and to induce some confidence among investors in their equities. For, in a few years, these companies will be able not only to wipe out all arrears of depreciation but also to build up reserves. There should be a provision in the law to give exemption for such hard cases. This saving proviso, however, must be exercised only in deserving cases, where the prospects for the immediate future are clear.

ROLE OF ROAD TRANSPORT

THE road transport industry has a reliable and sympathetic friend in the Union Ministry of Transport. This is the unmistakable impression produced by the inaugural address of Mr. Raj Bahadur, Minister of State for Transport and Communications, at the All-India Conference of State Transport Commissioners and Controllers which concluded its two-day session in Bombay on Friday last. The helpful approach of the Transport Ministry is distinctly discernible in some of the observations of the Minister. There is, for instance, his remark bitterly regretting the non-implementation of many of the recommendations of the Masani Committee relating to road transport administration—recommendations which had been accepted by the last conference of the State Transport Commissioners. Secondly, there is the admission in the Minister's address that the share of road transport in the third Plan "is, no doubt, very low." But a redeeming feature of the road transport plan, according to the Minister's interpretation, is that, even though the allocation for nationalised road transport has been kept down at Rs. 18 crores only, the Planning Commission has agreed to a target of 60,000 for commercial vehicles (in the private sector) by the end of the third Plan—a target which will bring the road transport industry to the "take-off stage" at which it will be in a position to expand "to any limit."

Mr. Raj Bahadur is convinced that the case for expansion of the road transport industry has been accepted and that, as a consequence, "the expansion and improvement of roads will follow automatically." His criticism that the propaganda of some road transport operators "that there is no serious shortage of transport" might do incalculable harm to the role of road transport in the future economy of the country is wholly appropriate. What is more, Mr. Raj Bahadur's advice to the Transport Commissioners to assemble data on the extent to which the use of road transport is essential for trade and industry is timely, because such data will be useful both to the National Council of Applied Economic Research (which is engaged in an investigation into the relationship between road transport and industrial development) and to the Neogy Committee on Transport Co-ordination (which is expected to recommend a larger role for road transport in the transport economy). While the Minister does not deny that other modes of transport have a potential for expansion, he is convinced that "road transport has an advantage over others, in that technological development can be harnessed more easily for the development of automobiles and, consequently, of road transport than for others." It may be that all this is evidence of a certain realisation by the Government of the truth of the Road Transport Productivity Team's observation that "a contractionist philosophy goes ill with an expansionist economy."

Some of the recommendations of the Bombay Conference are also happily in tune with the emerging expansionist philosophy. Noteworthy in this context is the recommendation that a model scheme for setting up State Transport Finance Corporations or similar agencies be drawn up for implementation by the State Governments. The question of making adequate credit facilities available to the transport operators, it may be recalled, has figured in the Masani Committee's report in a different form, the relevant recommendation of that Committee being that the State Finance Corporations themselves should lend money to operators. The latter recommendation is preferable to the former, because there is no point in multiplying financial institutions; there are already quite a few of them. Another noteworthy recommendation is that an earlier decision on single-point taxation be implemented with expedition. It is gratifying to be told, in this connection, that the Transport Ministry has come out strongly against the double taxation that is being levied in a number of States on motor vehicles plying on inter-State roads, whether on permanent or temporary permits. The southern States, for instance, are now levying an additional tax of one-sixth of normal rates on all vehicles operating on inter-State routes. If single-point taxation on vehicles becomes the rule throughout the country, there can be no gainsaying that it will give a fillip to long-distance road haulage. But another recommendation, namely, that goods transport co-operative societies be formed, with membership restricted to drivers, mechanics, booking clerks and depot managers, does not seem to be a practical one. The Indian Productivity Team on Road Transport Industry in West Germany, U.K. and U.S.A., it may be noted, has recommended only service co-operatives, covering small operators who already own something. Since most drivers and mechanics may not be in a position to contribute to the share capital of co-operative societies, the feasibility of the recommended scheme is doubtful. But, happily, it is to be introduced only on a pilot basis in four States. It would appear that co-operative experimentation will not be confined to the sector of farming. Perhaps such experimenting will not be wholly out of place in the huge laboratory that India is, with its infinite variety. Only, the cost will be heavy. In a country such as India, suffering from scarcity of capital and informed leadership, there should be a limit to the amount of resources that can be devoted to experimentation, even if it be in the field of co-operation.

MARKET GOSSIP

THE share markets are in a subdued mood. Speculative buying is of a modest nature and for a quick profit. It is confined only to some engineering and miscellaneous industrial scrips. The grist for their mill is provided by rumours and reports about expansion schemes and/or issue of new capital. Even in these cases, the bulls invariably try to book their profit as soon as the quotation goes up by a few points. This trend suggests that they are not sure of their ground. Similarly, the bears also seem to be playing only for small stakes. This is understandable, because there are really no tangible developments in their favour. Investors, too, are not obliging them by coming forward to book their profit. The hope of seeing fresh peaks, after the uncertainties about the forthcoming budget are over, is inducing them to stick on to their investments. At the same time, they are reluctant to make fresh purchases, barring some bargain hunting here and there. They feel that yields in most cases are not attractive. The series of new issues in recent weeks have also absorbed a substantial part of investors' reserves. The reluctance of investors to follow the lead given by bulls, coupled with the high cost of credit, is having a restraining effect even over the creeping upward trend in equities, which has been the feature of share markets in recent weeks.

The gilt-edged market is depicting a steady trend. The L.I.C. has changed its mind and been buying a sizable amount of 4 and 4½ per cent. State loans at slightly higher rates than, say, a fortnight ago. This change in its attitude is evidently due to the low rate of 2 per cent. per annum on "house money" repayable on a few days' notice. Before the Reserve Bank fixed this low ceiling on "house money," the L.I.C. could earn as much as 3 per cent. on deposits repayable on seven days' notice. A cut by one-third of its income from this investment must have compelled it to switch over a part of the funds on call deposit to gilt-edged securities offering a yield of more than 4 per cent.

Clearing Rate for T.E.L.Co.

One is unable to understand the basis adopted by the Bombay Stock Exchange authorities in the fixation of clearing rates—*Havala* rates as they are called—for scrips in the forward list. At the last settlement, that is, on Friday 25th November, the clearing rate fixed for National Rayons was Rs. 520, as against Rs. 463 fixed at the settlement on 28th October. The increase in the rate was proportionate to the rise in the closing quotation for the scrip from Rs. 463 to Rs. 523. But, in the case of Telco, the increase in the clearing rate was only from Rs. 270 to Rs. 290, even though the closing rate had advanced from Rs. 269.50 on 28th October to Rs. 315 on 25th November. One would naturally ask: Why such discrimination? As a result of the fixation of *Havala* rates at a much lower level than the actual closing quotations, the bulls are obliged to deposit a heavy margin, Rs. 25 per share of Telco. And so, it is argued by some, the bears may exploit the situation and try to hammer down values. The bears, of course, can succeed in this attempt only if the bulls are financially weak. Otherwise, they will get badly caught.

Prof. Galbraith on Public Enterprise

Harvard economist, Professor John Kenneth Galbraith, who is said to belong to President-elect Kennedy's group of advisers, has always stood high in the esteem of the Government of India, more particularly of Prime Minister Nehru. He has always had something refreshingly new to say, albeit a shade controversial. As early as in 1956, when he visited this country to advise on railway economics, he reported that Indian freights and fares were among the cheapest in the world and could, therefore, be increased. Subsequently, in 1958, he wrote a thought-provoking article on India in the American quarterly, *Foreign Affairs*, in which he made the startling twin observation that this country "is one of the world's least controlled or 'planned' economies" and that what obtains here is "a small socialised sector atop what, no doubt, is the world's greatest example of functioning anarchy." More recently, in 1959, when he returned to India after an absence of three years, he concluded his report on some aspects of the third Plan with these words:

> "In many parts of the world, including India, there is in fact no real alternative to extensive public enterprise. And, while public enterprise is often successful, the record is highly uneven. It is sufficiently imperfect, so that no one concerned with the success of economic development can take it for granted."

Prof. Galbraith is one of the few independent thinkers of our time, who has the happy knack of calling as much disquiet to socialists as to capitalists. Neither those who disapprove of socialism nor those who swear by it can afford to miss the practice wisdom of some of his observations on public enterprise in particular.

Prof. Galbraith, it would appear, stands for what may be called a non-socialist orientation of public enterprise. This should be pretty clear from the following passage in his 1959 report to the Planning Commission:

> "I have assumed that India has made a firm decision in favour of a public sector. But this decision is the beginning, not the end of the discussion. In the old days, the principal enemy of public enterprise was, no doubt, those who disapproved of socialism. Now it is the socialists themselves. For it is socialists who refuse to consider seriously the peculiar requirements of the modern productive enterprise, whether public or private; who decline to give it the autonomy it must have; who destroy it by meticulously passing on its decisions and thus forcing upon it an intolerable and unworkable centralisation; who decline to see that the organisation of public enterprises must keep pace with new conditions and new tasks; who are careless about the standards to which management of the enterprises must be held; and who, on occasion, encourage workers and consumers to appropriate the surplus on which expansion and growth depend and without which there will be stagnation. Above all, it is socialists who are responsible for the paralysing belief that success is a matter of faith, not work."

There cannot be a more damning indictment of the socialists' propensity to muddle in matters germane to public enterprise which need not necessarily or always be associated with a socialist polity. Incidentally, there cannot also be a more fitting background to the theme here, which is "a six-point charter of 'fundamental essentials' for the successful working of public corporations," outlined in Prof. Galbraith's latest report—this time to the Government of Ceylon on that country's plans for economic development.

Each of the six points in the suggested charter which has been published in the *Daily News* of Ceylon is a gem worthy of consideration in India too. The first point is that the corporation's charter of business rules should state basic policies governing labour, price, procurement policy, financial procedures, etc., and that, if the management abides by these rules, its individual actions and decisions should not be subject to question. Secondly, the board of directors should consist of men of general wisdom and competence appointed for fairly long periods; *no active public official should ever serve on this board.* Thirdly, the board of directors should not play a large role in management; it must only serve as a forum for discussing and deciding on larger functions of financial and other policies. Fourthly, the decisive figure in management should be the chief executive officer—chairman, president or managing director—on whom the responsibility for the success of the enterprise should always rest. The selection of this executive is the task—a high responsibility—of the Minister. Once appointed, the executive must have the autonomy and independence necessary to get results. His term of office should not be longer than that needed to show results. If he succeeds, he should be continued in office; if he fails, he must be superseded. Within the framework of rules that exclude favouritism and nepotism, he should have large authority over the promotion and demotion of his staff and subordinate executive. So long as he gets results, he should not be challenged on individual decisions; but, if the results are unsatisfactory, the proper procedure is never to revise and correct his decisions but to replace him. Fifthly, the salaries paid to the executives of public corporations should be higher than in the civil service, as this would, in part, be a reward for the greater gamble involved. And, sixthly, a successful corporation must be assigned new tasks as rapidly as it can absorb them and, perhaps, more rapidly than it thinks it can. This means that it must be continuously concerned with training new executive talent for which there would be new tasks and new opportunities in the wake of success.

Although these six points should generally speak for themselves, they call for some supporting comment. What is most significant about them is that, together, they involve decentralisation to the farthest extent compatible with the safety of public money invested in the State enterprises. If this is also accompanied by participation of private investors in the share capital of such enterprises, it will go a long way towards removing some of the basic objections to State participation in industrialisation raised by the protagonists of private enterprise. The accountability to Parliament should be clearly that of the Minister, for, in the ultimate analysis, the decision to set up a public enterprise is a political decision. Any attempt, in whatever form, to bypass or whittle down this ministerial accountability would only open the door wide for parliamentary interference in the day-to-day administration of public enterprises. As the Minister concerned will claim the credit for himself if the enterprise succeeds and prospers, so also must he take the discredit if it fails and languishes. It is here that his responsibility to select the right man for the job becomes crucial. Since he has the right to replace the chief executive if the latter fails to get results, he would not have to be unduly worried over or be interfering in the day-to-day management of the enterprise.

Such considerations as security of tenure, seniority and the like associated with the civil service cannot be applied to the productive enterprises of the public sector. It would be most salutary if no civil servant is appointed to the board of directors or as the chief executive. The tendency to confuse public enterprises (even where they are not departmentally run) with Government departments would, therefore, need to be curbed. Prof. Galbraith is wholly in the right where he says: "Rightly or wrongly, the civil service is tolerant of the man who does not quite come off, but the standards of public corporations must be much more severe. If a man fails, he must go." But he must have the requisite authority (and thus the opportunity) to get things done successfully. It would be well to remember in this context that a productive enterprise demands prompt decisions and quick action. It is not, as Prof. Galbraith says, a perfect score in every case but a high average that makes the successful business executive who has to run a large productive enterprise which involves the co-ordination of a wider range of technical skills than does a Government department. He will have to perform a vastly more difficult task, if he is in charge of a 'multi-purpose enterprise' which, in the opinion of Prof. Galbraith, is the ideal form of public industrial organisation.

Health of Executives

The health of executives is as much an asset to his employers as are his skill, knowledge and experience. But one is yet to hear anyone saying in this country that this is a question that deserves attention. There are health plans and welfare schemes galore for the lower-grade staff but, barring a few exceptions, the bulk of the employers in this country do not have similar schemes for their executives. May be, since the executives know what is good for their company, they are supposed to know what is good for themselves. But, in Western countries, particularly in the U.S., employers take special care of the health of their executives and also look into the problems that affect it. Even Britain, which India has copied in many respects, is making rapid strides in this direction. British business men and the medical profession in that country have been showing increasing interest in the problem.

Last year, the British Heart and Chest Association organised a unique conference on the health of business executives in which 700 executives from industry, commerce, trade etc., participated and listened to some of Britain's top physicians and surgeons discoursing on the ways and means of keeping good health by those who sit in the board rooms and at executive desks. The Association organised a second conference this year on 24th November. An equally large number of executives from a wide range of industries and occupations, heard from eminent medical men their latest views on how the increasing strain of modern conditions and circumstances on executives' health could be lessened and how to avoid premature failure of their powers through ill-health.

The conference was held in two sessions, one in the morning and the other in the afternoon. The organisers took special care to see that it did not degenerate into a business conference. They invited the participants to relax between the sessions and allowed plenty of time for lunch. The opening session was presided over by Sir Ronald L. Prain, Chairman of the Rhodesian Selection Trust, who said that, in business, "health played a bigger part than any of us really know." It was not, he added, just a question of avoiding particular diseases. "We want to get the maximum out of ourselves. Likewise, we want to understand how to help those for whom we are responsible."

Speaking of the value of health education, Dr. L. G. Norman, Chief Medical Officer of the London Transport, said that health education, unless properly conducted, would create morbid anxiety, a haunting fear that coronary thrombosis, high blood pressure or some other disorder was lurking just round the corner. This observation, in particular, has considerable relevance to India also, what with an increasing number of officers in the public and private sectors being victims of heart attack. Dr. Norman said that there were two schools of thought about the health of executives. One believed that executives were more healthy and the other that they were less healthy than the other employees. The truth, according to him, lay somewhere in between. All evidence so far obtained showed, he disclosed, that executives, as a group, had less total disease than the average of all other groups. "Executives probably form," he said reassuringly, "one of the healthiest groups of men in industry." Dr. Norman was of the view that the executive could, by his own actions, do much to preserve or ruin his own health. The best advice he could give was moderation in all things—food, drinks, smoking, etc., and regular exercise.

Dr. Norman had a word to say about the burden of social activities which have come to form a part of the routine of executives. He was of the view that it was not safe to burden laborious days with constant "nights out." He suggested that executives in an organisation should get together and arrange to share social activities between them.

"What executives expect from the doctor" was the theme of the remarks made by Mr. A. D. Bonham-Carter, a Director of Unilever. Speaking of his own Company's experience, Mr. Bonham-Carter said that Unilever employed 14 full-time and 21 part-time doctors in the U.K. When the scheme was started, no more than a handful of people saw what could be done with advice on questions on environmental hygiene and hazardous processes. It was, however, quickly perceived that the doctor had a constructive contribution to make on such things as overtime and accident prevention and, before long, he was called in on such things as the physical and physiological problems of people whose job had been affected by changing condition. So within three or four years, a new conception of the doctor's role emerged—that of assisting in the maintenance of satisfactory human relations.

Presiding over the afternoon session, Sir Godfrey Ince, Chairman of Cable and Wireless Ltd., and a former Permanent Secretary of the Ministry of Labour, underlined the importance of the problem thus:

> "Managers of high skill with wide knowledge and ripe experience are not so plentiful that we can afford a premature failure of their powers through ill-health or run the risk of the early termination of their lives."

The seven hundred executives who attended the conference must have certainly left the Festival Hall wiser and more health-conscious. And they may be expected to pass on their fresh knowledge to those who work under them, so that there will be a new awareness among all employees of the importance of health.

SHARE MARKET EASY

ALL-ROUND FALL IN VALUES

(From Our Own Correspondents)

BOMBAY, *1st December*

A DISTINCTLY easy trend was in evidence on the Stock Exchange during the week under review. Offerings of scrips were generally large, while buying enthusiasm was somewhat subdued. There was, of course, no serious bearish factor adversely affecting the sentiment of operators. But the reports that the recent purchases by the L.I.C. Investment Committee consisted mainly of gilt-edged securities, instead of shares as was anticipated before, acted as a damper. The persistently rising trend of production costs in industries was also a matter of some concern. The series of clauses in the Companies (Amendment) Bill now on the anvil of Parliament were taken note of, but they did not have any significant effect, because operators preferred to study carefully the implications of the amendments. However, the fact that no change was made in the provision relating to depreciation, which requires a company not to pay dividends until all arrears of depreciation are fully provided, had an adverse effect on the issues of new companies as well as on the equities of concerns like Hindustan Motors having large arrears of depreciation. Towards the close of the week, there was a revival of speculative buying in a few active counters, but, over the week as a whole, the list shows widespread losses, albeit of a modest nature.

Tata Steels began the week quiet at Rs. 143.25 and drifted lower to touch Rs. 141 yesterday. They, however, recovered to Rs. 142.25 before finishing at Rs. 142. The production in the Company's works at Jamshedpur during the month of November amounted to 139,500 metric tons of pig iron, 141,800 tons of steel ingots, 68,600 tons of finished steel and 38,400 tons of semi-finished steel. Indian Irons were well favoured in the earlier sessions, the quotation rising from Rs. 23.68 to Rs. 24.12 on Monday. At higher levels, profit-taking set in and the rate declined to Rs. 23.52 on Wednesday. After moving up to Rs. 24 today, it closed at Rs. 23.84. Mukand Irons suffered a loss of Re. 1.12 over the week, today's closing rate being Rs. 22, as against Rs. 23.12 on Thursday last.

Textiles encountered selling on reports of low offtake of piecegoods for domestic consumption and mounting competition in export markets. Standards were hammered down from Rs. 1,185 to Rs. 1,075. Khataus fell by Rs. 17.50 to Rs. 462.50. Centurys dropped Rs. 14 to Rs. 460.50; they were lower still at Rs. 454 yesterday. Morarjis receded by Rs. 11 to Rs. 310, Kohinoors by Rs. 9 to Rs. 266.25, Svadeshis by Rs. 7.25 to Rs. 226 and Finlays by Rs. 4.50 to Rs. 332. Central Indias eased by Rs. 3 to Rs. 104. Ahmedabad Advances lost Rs. 2.25 to Rs. 171.25. New Greats, Shree Niwas and Simplex shed Rs. 2 each to Rs. 190, Rs. 228 and Rs. 161, respectively. Bombay Dyeings declined from Rs. 63.50 to Rs. 61.90 yesterday, but recovered to Rs. 62.50 today, a loss of Re. 1 over the week. Podars were dull at Rs. 135, as also Tata Mills at Rs. 40.50.

Sugar shares tended to look down. Walchandnagars retreated from Rs. 299.50 to Rs. 290. Belapurs came in for some selling and receded from Rs. 398 to Rs. 386 yesterday. Today, however, they firmed up to Rs. 395 on the publication of encouraging working results. Phaltans retreated by Rs. 2 to Rs. 187.

Cement shares ruled irregular. Associated Cements spurted by Rs. 5 to Rs. 1571.75, following the declaration of a higher dividend of Rs. 12 (net Rs. 8.40), for the year ended 31st July 1960, as against the gross of Rs. 11 (net Rs. 7.70) paid in the previous year. But Digvijays declined by Re. 1.25 to Rs. 156. Orissas were dull at Rs. 15.04.

Activity in the electricity section was restricted. Bombay Suburbans lost a rupee to Rs. 84. Ahmedabad Electrics shed 50 nP to Rs. 87.20. The note of optimism regarding the future struck by the Chairman of the Company at the recent annual meeting had no effect. Andhra Valleys were quiet at Rs. 1,007.50. Tata Powers, however, elicited special support and gained Rs. 5 to Rs. 1,035, Hydros rising by 50 nP to Rs. 104.

In the banking section, Centrals eased by 30 nP to Rs. 56. 'A' shares receding by a rupee to Rs. 60. Barodas were unchanged at Rs. 82.50 and United Commercials at Rs. 85. Bank of Indias gained a rupee to Rs. 108; 'A' shares were done higher by Rs. 2.50 at Rs. 109.50. Punjab Nationals put on 8 nP to Rs. 19.36. Unions gained 4 nP to Rs. 6.

Shippings and automobiles were easy. Among the former, Great Easterns dropped 36 nP to Rs. 15.44. Scindias, after improving from Rs. 13.76 to Rs. 14, declined to Rs. 13.88 today. Among automobiles, Premiers fell by Rs. 6 to Rs. 171. Hindustan Motors shed 48 nP to Rs. 19.72, despite the increased net dividend of 63 nP per share recommended for the year ended March 1960, as against 50 nP distributed for 1958-59.

Engineering shares were subjected to selling. Telcos moved down from Rs. 310 to Rs. 295 yesterday. At this level, some support ensued from bears and bulls and the scrip recovered to Rs. 304.50 today. The closing was a shade easy at Rs. 303. Alcocks receded by Rs. 12 to Rs. 240. Premier Constructions dropped Rs. 3.50 to Rs. 298.50. Larsen and Toubros lost a rupee to Rs. 36.75. Mahindras shed 60 nP to Rs. 20.76.

Among mining company shares, Shivrajpurs eased by Re. 1 to Rs. 72. Indian Coppers suffered by 2 nP to Rs. 4.62.

In the miscellaneous section, National Rayons slumped by Rs. 31 to Rs. 391. Baroda Rayons declined by Rs. 3.25 to Rs. 132.25. Gwalior Rayons shed 50 nP to Rs. 42.50. Bombay Burmahs retreated from Rs. 592 to Rs. 571.50 yesterday. Today, however, they strengthened to Rs. 582. Anil Hardboards fell by Rs. 23.75 to Rs. 346.25, notwithstanding the decision of the Directors to issue new shares at par in the proportion of one share for every three held. Indian Dyestuffs lost Rs. 18.75 to Rs. 495, Colour Chems Rs. 13.75 to Rs. 327.50, Ceat Tyres Rs. 12.50 to Rs. 217.50, Wimcos Rs. 4.50 to Rs. 268, Amar Dyes Rs. 3.75 to Rs. 411.25 and Voltas Rs. 2 to Rs. 269. Killicks eased by Rs. 3.20 and went into a discount to stand at Rs. 99.80. Polychems suffered a loss of Rs. 2.50, today's closing rate being Rs. 235. Asian Cables, however, attracted good attention and forged ahead from Rs. 97 to Rs. 120.

* * * *

Calcutta Stock Exchange

CALCUTTA, *30th November*

Despite disheartening news from New Delhi in respect of the economic situation in the country originating from the deepening foreign exchange crisis, which, with the recent import cuts in respect of twelve items, caught news headlines, the Calcutta Stock Exchange accounted for a better performance with a modest rise in prices in several miscellaneous scrips and with a slight gain in speculative stocks during the week under review. This was due to the continued encouraging corporate results and a better realisation of industrial prospects. Although firm promises of foreign aid are a nibble as compared with what is required to carry through the third Plan, much hope is placed on the forthcoming change in U.S. Administration and larger U.S. aid from that country is anticipated. Further, much encouragement is derived from the striking increase during recent months in joint Indo-foreign ventures in the private sector. All these point to the fact that the country is on the eve of impressive strides in industrial development. This reasoning explained this week's gains, not all of which was the work of speculative holders. Genuine investment in the wake of several new issues absorbing much funds testified to the inherent strength of the capital money market. Advices from Bombay, showing a rapid fall in the shares of some newly-floated concerns, were not altogether a surprise, as such a development is a corollary to the Bill that was passed in the Lok Sabha empowering the Government to "freeze" the transfer of shares for three-year periods and to restrict inter-company investment. Against this background only genuine investment could contribute to rises on the Stock Exchange. Although the announcement of the rights issue by the Bengal Coal Company Ltd. at a premium of Rs. 100 in the proportion of one for every five existing shares steadied this counter, there was a keen sense of disappointment, in that the Government is not following a uniform policy with regard to premium for rights issues. The continued demonstration of lack of friendship by China to India and the political dissatisfaction prevailing in this State on the Constitution Amendment Bill to facilitate the proposed transfer of Berubari to Pakistan were factors which, however, imparted caution.

Among coals, for the reason already stated, Bengals were difficult to locate, while Burrakurs after hardening to Rs. 18 from Rs. 17.75 closed at Rs. 17.69. Central Indias dipped to Rs. 11.44 from Rs. 11.62, and Pench Valleys were unchanged at Rs. 18, but Raneegunges sagged to Rs. 16.06 from Rs. 16.25.

Jutes were featureless, and this is explained by the reversal of the declining trend in fibre and goods prices, and by the limited inquiries for goods from abroad. Howrahs were at one time as low as Rs. 19.75 against opening of Rs. 20.06, while Agarparas, on modest support, improved to Rs. 12.06 from Rs. 11.44. At Rs. 136 Kelvins accounted for a rise of one point, and a similar rise was recorded in Belvederes at Rs. 144.

Engineering shares were better all round. Jay Engineerings, despite the news of the imposition of fresh import duties by West Germany on light engineering goods including sewing machines, which is exported to that country by India in large numbers, were better at Rs. 32.44. Indian Irons opened at Rs. 23.84 and, after moving down to Rs. 23.74, reached a high of Rs. 24.13 to close at Rs. 23.68, on profit-taking by bulls. Texmacos moved up to Rs. 24.10 from Rs. 23.90 to close lower on balance at Rs. 23.10. Braithwaites staged an early rise to Rs. 32.25 from Rs. 32.12, and maintained the improvement. At Rs. 14.50, Britannia Engineerings were fractionally higher.

The steady improvement in Indian Oxygens to Rs. 40.81 from Rs. 39.24 and in National Pipes to Rs. 20.75 from Rs. 19.50 highlighted activity in the miscellaneous industrial section. Another strong feature was the rise in India General Navigations to Rs. 70 from Rs. 60.75 previously, although India Steamships, after being higher at Rs. 10.31 against Rs. 10.19 previously, sagged to Rs. 9.75 as prospects were considered as not too bright against the background of the falling trend in freight income as depicted in the annual report. On steady support, National Rollings at Rs. 19.94 touched an all-time high. At Rs. 15 Orissa Cements accounted for a gain of a few nP, and Jayshree Textiles found buyers at the high rate of Rs. 15.37. Karanpura Developments were as high as Rs. 18.19 against Rs. 16.44 earlier in the week.

* * * *

Madras Stock Exchange

MADRAS, *30th November*

For the second week in succession, equities on the Stock Exchange ruled easy on account of sustained selling pressure. Operators took note of the various amendments to the Company Law passed by Parliament which seek to extend the scope of executive control over the functioning of companies, including, among other things, provision for special audit, and other restrictions on transfer of shares, voting rights, appointments of sole selling agents and inter-corporate investments, as also official interference with the managements' discretion in making provision for depreciation before declaring dividends. Textiles were distinctly weak, thanks mainly to the decline in the domestic offtake of piecegoods. Teas, coffees and rubbers all lacked support. There was moderate activity in the sugar section but the general undertone remained easy. Selling pressure was in evidence in the miscellaneous section as well.

A feature of trading in the textile section was the fall in the quotation for Lakshmis from Rs. 156 to Rs. 154. Dhanalakshmis were marked down by Rs. 2 to Rs. 223. Cannanores lost a rupee to Rs. 155. Travancore Rayons fell from Rs. 34.40 to Rs. 35.25 before closing at Rs. 35.30. Kotharis dropped 5 nP to Rs. 12. Bangalore Woollens were quiet at Rs. 197, Coimbatore Cottons at Rs. 162, Coimbatore Pioneers at Rs. 347 and Metturs at Rs. 371. Premiers were neglected at Rs. 225 as also South Indias at Rs. 22.95. Buckinghams, however, rose by Rs. 2 to Rs. 200.

In the tea section, Nonsuch Teas suffered a setback of 35 nP to Rs. 26.55 *ex-div.* Haileyburias were lower by 25 nP at Rs. 14.50. Blue Mountains shed 6 nP to Rs. 4.15 *cum-div. ex-right*. Waterfalls and Peermades shed 5 nP each to Rs. 5.02 and Rs. 22.75, respectively. Periakaramalais were unchanged at Rs. 3.47. United Nilgiris, however, scored a gain of Re. 1.44 to Rs. 23.31. Parksides improved from Rs. 29.75 to Rs. 30.50.

Among coffees, Coffee Lands encountered selling and fell by Rs. 3.90 to Rs. 20 *cum-div.*, following the disappointment of operators over the lower dividend of 6 per cent. taxable, proposed for the year ended June 1960, as against 25 per cent. taxable for the previous year. Consolidated Coffees gave way from Rs. 23.90 to Rs. 22.50, before closing at Rs. 22.75 today, the net loss over the week was Re. 1.15. The Company has announced a dividend of 20 per cent., taxable, for the year ended June 1960 which compares unfavourably with 25 per cent., taxable for the previous year. Cowcoodys shed 9 nP to Rs. 5.16. Rajendras were quiet at Rs. 14.25. The Directors of the Company have declared a dividend of 25 per cent., taxable, for the year ended March 1960, (equivalent to 17.5 per cent. tax-free), as against 50 per cent. tax-free for the previous year.

Among rubbers, Midlands eased by 15 nP to Rs. 12.15. Cochin Malabars sagged by 12 nP to Rs. 7.20. T.R. and T.S. were lower by 5 nP at Rs. 9.70. Malankaras changed hands at Rs. 17.70 and Vaikundams at Rs. 30.40. But Kailas hardened by 10 nP to Rs. 5.30, and Thirumbadis by 2 nP to Re. 1.52.

In the miscellaneous section, India Cements eased by 20 nP to Rs. 6.20. While Andhra Cements and Orissas were neglected at Rs. 10 and Rs. 15, Travancores gathered 10 nP to Rs. 8.75. Among chemicals, F.A.C.Ts moved down by 13 nP to Rs. 10.07. Metturs were quiet at Rs. 13.20, as also Mysore Chemicals at Rs. 27.50. Mysore Fertilisers however, hardened by 25 nP to Rs. 11.75. Among others, Ashok Leylands declined by 13 nP to Rs. 8.70. Aluminium Industries were fancied at Rs. 22.95, Indian Steel Rollings at Rs. 10.25, Standard Motors at Rs. 17, Textools at Rs. 190, Tube Investments at Rs. 305 and Western India Plywoods at Rs. 240.

"POWERMASTER" BOILERS

An agreement is understood to have been reached between the Nestler Boiler Manufacturing Company of Bombay and Messrs. Orr and Sembower, Inc. of the U.S. for the manufacture in India of the famous "Powermaster" brand automatic packaged boilers upto 50,000 lbs. of steam per hour at a pressure of 250 lbs. per square inch. The project is a phased one, extending over five to seven years. The details regarding the technical and financial collaboration of the foreign firm were finalised recently when Mr. Fred Klein, President of Messrs. Orr and Sembower, was in India. Mr. Fred Klein and Mr. S. N. Tavaria, Managing Director of the Nestler Boiler Manufacturing Company, held discussions with Mr. Manubhai Shah and the officials of the Union Ministry of Commerce and Industry at New Delhi last week. The sponsors of the project have been assured of the requisite industrial licence to set up the factory. No information is, however, yet available about the capital outlay of the project, rated capacity and location of the plant, as well as on the terms of the collaboration agreement. It is said that the Western Manufacturing Company, which is the sole concessionaire in India for the sale of "Powermaster" boilers, will continue to hold that position under the agreement.

NEWS IN BRIEF

THE total area of land received from various individuals towards the *Bhoodan* movement upto August 1960 amounted to 4,411,191 acres, according to the *Akhil Bharat Sarva Seva Sangh*.

The National Coal Development Corporation has accepted three project reports submitted by Russian experts for the development of Korba coalfields in Madhya Pradesh.

Caltex has informed the Government of India that it is not in a position to surrender its duty protection immediately but will constantly keep this in mind and periodically review the position.

The Wage Board for the Sugar Industry submitted its report to the Government of India on 28th November. The recommendations of the Wage Board, along with the decisions of the Government thereon, will be announced as soon as possible.

A new marshalling yard is being constructed at Bhilai at an approximate expenditure of about Rs. 3.23 crores, comprising a reception yard, a classification yard with a hump, a despatch yard, a loco yard, a steam loco shed and an exchange yard.

The U.S. Export-Import Bank has offered a credit of $4.1 million to India for the purchase of one Boeing 707 Commercial jet airliner for Air-India International. The terms and conditions of the loan are still under consideration.

A Direct Taxes Advisory Committee is proposed to be set up to advise the Government of India on measures to develop and encourage mutual understanding between taxpayers and the Department of Income-tax.

The proposal to inter-connect the various State grids and regional grids in the first instance and evolve an all-India grid system ultimately is being studied by the Central Water and Power Commission (Power Wing) in consultation with the State authorities.

The Oil and Natural Gas Commission has been requested by the Government of Nepal to undertake a survey of certain areas in the western part of that country in collaboration with Nepalese experts. Four Indian experts will shortly go to Nepal in this connection.

The foundation-stone for the first co-operative sugar factory in Orissa, to be put up by the Aska Co-operative Sugar Industries, was laid at Berhampur by Dr. H. K. Mahatab, Chief Minister of the State. The plant is estimated to cost Rs. 135 lakhs. About 2,000 tons of sugarcane is expected to be crushed daily, engaging 600 workers.

The Central Wage Board for the jute industry (Chairman: Mr. L. P. Dave) held its meeting at Calcutta last week. The Board will work out a wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages and determine the categories of employees who should be brought within the scope of the proposed wage fixation.

The Union Deputy Minister for Finance, Mr. B. R. Bhagat, stated in the Lok Sabha last week that the manner in which and the purposes for which the Soviet credit of Rs. 60 crores for the third Plan would be utilised were still being considered by the Government. He added that it was intended to discuss this matter with a Soviet Government delegation due to arrive at New Delhi next month.

The possibilities of exporting isotopes produced in the Indian Atomic Energy Establishment are being explored at present. This was disclosed in the Lok Sabha by Prime Minister Nehru last week. He added that the present production capacity for major istopes was considerably above the present demand in the country and that production in the "Apsara" reactor in the Trombay establishment had far exceeded the original target.

Foreign exchange of about Rs. 5 to Rs. 6 crores will be saved annually as a result of of the establishment of the proposed Heavy Machine Tool Plant in collaboration with Czechoslovakia, according to the Union Minister for Industry, Mr. Manubhai Shah. Negotiations with Czechoslovakia are in progress to settle the terms under which the project report in respect of the plant will be entrusted to them. Twenty-two types of machines are proposed to be produced in this project. The categories will be central lathes, planers, horizontal borers, vertical boring and turning mills, plane-milling machines, grinding machines and radial drilling machines.

The Rajasthan *Kraya Vikraya Sangh*, which is currently engaged in the distribution of seeds, camphor and U.P. rice, has secured the sole right to sell and distribute Russian kerosene in the State. The Indian Oil Company will deliver the supplies to the *Sangh* at six railheads as soon as the *Sangh* has made arrangements available to consumers at about 90 nP per gallon. The sale of diesel and other public sector oil products will, it is learnt, be made through the State Government's departmental machinery. Initially, the *Sangh* hopes to market 300,000 gallons of kerosene through marketing societies and service co-operatives.

A scheme for setting up a pig iron plant, with a capacity of 100,000 tons annually at Chanda in Vidarbha, submitted by Hind Traders, Bombay, has been approved by the Government of India. The total outlay of the plant will be about Rs. 10 crores, including coking plant with its by-product recovery units. The plant, machinery and technical services are expected to be provided by the German Democratic Republic. The sponsors of the project will follow the same process as is in vogue in the G.D.R. which makes about 300,000 tons of pig iron yearly in eleven low shaft furnaces, using coke made from very low-grade coal usually regarded as uncokable. The sponsors claim that this is the first time that they will be setting up low shaft furnaces for producing pig iron, for which there is a great demand in the country.

The Government of India has decided to set up an optical and ophthalmic glass plant at Durgapur, West Bengal, in technical collaboration with the Soviet authorities, by utilising a portion of the 500-million rouble credit from Russia, according to Mr. Manubhai Shah, Union Minister for Industry. A contract, it may be recalled, was entered into with Technoexport, Moscow, in December 1957 for the preparation of the detailed project report for this plant. Subsequently in June 1959 a team of engineers was deputed to Moscow for participation in its preparation. The detailed project report, which envisaged a production of 200 tons of ophthalmic glass and ten tons of optical glass annually, was received in July last year. The plant, which will manufacture 300 tons of ophthalmic glass per year, is expected to go into production by 1963.

From Abroad

The Pakistan Shell Company, which is now making a search for oil, has found gas-bearing areas at Rasidpur in Sylhet district; but no oil has been discovered so far.

Cost of living in the U.S. reached an all-time high during the month of October 1960, the official index (Base: 1947-49=100) standing at 127.3, a rise of 0.4 per cent., as compared with the previous month.

The British Treasury has given the Ford Motor Company at Detroit permission to take over the complete ownership of its British subsidiary. The parent company, which already owns about 55 per cent. of its subsidiary shares, has made a £128 million bid for the rest.

The British Petroleum and the Shell have agreed in principle to establish jointly a refinery in Nigeria, with a capacity to produce one million tons of crude oil a year. This will be the first refinery in the country to process its crude oil into refined products for the Nigerian market. A new company, called the B.P.-Shell Petroleum Company of Nigeria, will be incorporated to build the refinery which is expected to cost £12 million.

A single power grid has been set up in Uzebekistan linking the Republic's 31 electric stations, with a total capacity of more than one million kw. The output of electricity in Uzebekistan during 1960 is estimated at about 5,700 million kw.h. The annual output of electricity *per capita* will total 700 kw.h. which is said to be several times more than the *per capita* output of electricity in Turkey, Iran and Pakistan.

Prices of some steel products in the U.K. have been reduced and others increased but a greater number of prices remain unchanged, according to an announcement by the Iron and Steel Board. The changes include increases in the maximum prices of high phosphorus foundry iron and of certain kinds of hot finished tubes and non-alloy bright bars, and of reductions in the prices of alloy bars, stainless steel, cold rolled strip, and forging quality billets.

The Ford Motor Company in the U.K. has put all its workers on a four-day week with effect from 28th November. About 18,000 workers in the seven plants of the Company have been affected by this move. Apart from the Suez crisis period, this is the first time since the war that Fords has reduced its working week. Altogether, about 108,000 of the 442,000 workers (nearly 25 per cent.) in the British motor vehicle and accessories industries are on short-time at present.

A research electrical engineering institute has been set up in the Novosibirsk turbo-generator plant (Siberia) in Russia. The Institute will, in close contact with the plant's workers and engineers, conduct research and study problems connected with the designing and building of the most up-to-date large electric machines. These machines will be fully automated. The Institute will continue to work on the designing of 300,000 kw. turbo-generators with water-oil cooling.

The Indonesian Government's supervisory body for nationalised Dutch enterprises has taken over the management of the leading Dutch bank, "Nederlandsche Handel Matschappij," in Djakarta and its branches in the other parts of the country. The take-over is effected under the Finance Ministry regulation of 8th November which required the management of all Dutch banks to be placed under this body. The N.H.M. bank had already been nationalised before, but hitherto its operations in Indonesia were being supervised only by Government's agents. Now the supervisory body will be responsible for the entire management of the bank which is the last nationalised Dutch bank to be so placed. The Government is also expected to change the name of the bank.

West German imports in October were 15.7 per cent. higher than a year ago, while exports rose only 9.5 per cent. For the first ten months of 1960, the export surplus shrank to DM 3,900 million, as against DM 4,300 million in the comparable period last year. West Germany's trade deficit with the U.S. has almost trebled this year. For the first nine months of 1960, imports from the U.S. exceeded export by DM 1,587 million. This compares with an import surplus of DM 584 million for the comparable period last year. In monetary terms, W. German imports from the U.S. rose by 33 per cent. from DM 3,250 million to DM 4,320 million, while exports edged up only about 2 per cent. from DM 2,670 million to DM 2,730 million.

A large textile mill is being built in the Siberian town of Chernogorsk. It will annually manufacture fabrics sufficient for making five million suits. The new mill is one of the 212 enterprises of Soviet textile industry which are now being built or reconstructed. Their construction is under way in Central Asia, Siberia, the Urals, the Transcaucasus and in other areas of the country. Large textile mills have already been built during the past two years in Engels (on the Volga), in Kishinev (Moldavia), Kiev (Ukraine), and in many other cities. The commissioning of the new textile enterprises will provide the Soviet Union with facilities for manufacturing this year some 8,000 million metres of fabrics, that is more than is manufactured by France, Britain and West Germany combined.

The number of persons wholly unemployed in the U.K. (excluding school leavers) rose between 10th October and 14th November by 17,142 to 325,678. The normal seasonal increase is about 15,000. Unemployment expressed as a proportion of the estimated number of employees was 1.6 per cent. in November, as against 1.5 per cent. in October and 2 per cent. in November 1959. The number of vacancies notified to employment exchanges but remaining unfilled in November was 14,758 less than in October. The normal fall between October and November is about 11,000. The latest unemployment figures, it is pointed out in London, show no significant change in the trend. Unemployment is still low and the demand for labour still high, although certain regional pockets of temporary unemployment are now beginning to appear with the recession in the motor industry.

Ways and means to broaden understanding for the economic, political and cultural problems of developing nations are being discussed in Berlin by directors of academies, institutes and other centres in West Germany by organising orientation courses for German technical assistance personnel. The one-week exchange of ideas were sponsored by the German Foundation for Developing Countries which recently said that annually hundreds of Government and thousands of private industry experts and technicians from W. Germany go to work in countries of Asia, Africa and Latin America. All of them, the Foundation added, should understand the problems of their host countries thoroughly before going abroad to avoid misunderstandings and make the best out of the assistance they can offer. To this end, it is planned to increase the number of orientation courses considerably.

Recommendations for increasing world trade and exports from less developed nations are sought under a resolution adopted by the Economic Committee of the United Nations General Assembly last week. Following the vote, a general debate was held on a more controversial proposal backed by 14 member-States requiring the Assembly to approve a resolution for the establishment of a Special U.N. Capital Development Fund. The co-operative part of the approved trade resolution requests that a number of studies and recommendations be made to the Economic and Social Council (Ecosoc) next summer bearing on measures to strengthen and develop world markets and improve trade conditions of less developed nations. The Commission on International Commodity Trade and the Regional economic commissions of the Ecosoc are now engaged in such studies. The resolution wanted the Ecosoc to recommend a continuation of these inquiries into "the causes and obstacles which have resulted in substantial fluctuations, whether in volume or price, or exports of the economically less developed countries as well as ways and means of improving the existing situations." To the four regional economic commissions, the General Assembly should recommend that they elaborate further measures to promote intra-regional trade co-operation. Before submitting their reports to Ecosoc next summer, a preliminary exchange of views on all recommendations would take place between the executive secretaries of the four economic commissions and the chairman of the Commission on International Commodity Trade.

PERSONAL

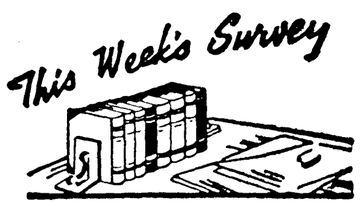
DR. RADHAKRISHNAN, Vice-President of India, has returned to New Delhi after a fortnight's tour of France and the U.S.

Mr. Lalchand Hirachand, Chairman of the Premier Automobiles Ltd., has been elected President of the Maharashtra Chamber of Commerce for the ensuing two years 1960-62.

Mr. V. Shankar, I.C.S., special secretary to the Union Ministry of Food and Agriculture and Vice-President of the Indian Council of Agricultural Research, has been appointed President of the Indian Central Oilseeds Committee.

Mr. Vance Brand, Managing Director of the U.S. Development Loan Fund, is leaving New Delhi for Bangkok today. During his eight-day stay in India, he held discussions with Government representatives and private industrialists.

Dr. Koichi Aki, a distinguished Japanese engineer and water resources expert, has been appointed Director of the Bureau of Flood Control and Water Resources Development of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.). He succeeds Dr. Shen Yi, who was Director of the Bureau for eleven years until he was recently appointed Minister of Communications of the Government of Republic of China.



COAL COUNCIL'S DECISIONS

THE Coal Council of India, which met at New Delhi over the week-end, has taken some important decisions on coal production and utilisation. While it has approved the third Plan target of about 97 million tons of coal production per annum, it seems to have forgotten that the additional annual production potential in the end-year of the third Plan will have to be about 50 million tons in the light of the most likely actual production in the last year of the second Plan. Since the public sector may have overestimated its production potentialities in the third Plan even as it did in the second Plan, it is doubtful if it will have an additional annual production potential of about 28 million tons (20 million tons being the third Plan target plus 8 million tons of shortfall in the achievement of the second Plan target). Even if it is supposed that it will have that much additional potential (28 million tons), the private sector will have to contribute 22 million tons as against the 17 million tons which has been laid down as its target of additional annual production under the third Plan. Actually, it would be prudent to proceed on the basis that the private sector will have to produce an additional 30 million tons or so per annum by the end of that Plan. It would appear that there are good prospects for expansion of production to that desirable level, if the report that the World Bank is likely to make its first loans to help the private collieries in India to step up their production is true.

On coal utilisation, the Council has taken two decisions. First, it has asked the Council of Scientific and Industrial Research to appoint a committee to go into the question of feasibility of underground gassification of coal for generation of power and to locate suitable areas where this could be tried out on a commercial scale. And, secondly, it has decided to set up another committee to explore the possibility of utilising middlings from the washeries of coking and non-coking coal and link it up with power production in and around the vicinity of washeries. It is estimated, in this connection, that there would be at least 6 to 7 million tons of middlings from the coking coal washeries and some more quantity from the non-coking coal washeries. If these middlings can be utilised for power generation, it is said, coal washing would become comparatively more economical. The second technical committee, which will consider the question of utilisation of middlings, is also expected to suggest ways and means of expediting the setting up of washeries. Incidentally, the recent decision of the Government of India to set up a Coal Washery Corporation in the public sector, with its headquarters at Dhanbad, and entrust to it the construction of two more new washeries proposed at Kathara and Bhurkunda is to be welcomed for the reason that there are only a few washeries in the private sector. But the Government's lukewarm attitude towards proposals from the private sector for setting up washeries in the event of certain favourable terms being granted, is to be deplored.

THE O.E.C.D.

If everything goes as scheduled, the Organisation for Economic Co-operation and Development—O.E.C.D. for short—will come into being in autumn next, when the present Organisation for European Economic Co-operation will be wound up. The preparatory committee, headed by Herr Thorkil Kristensen, the Secretary-General-designate of the O.E.C.D., which was constituted at the ministerial conference held at Paris in July last to prepare the convention of the new body, has completed its task. Its report has already been sent to the Governments of the twenty member-countries, including the U.S. and Canada. The convention is expected to be signed at the ministerial meeting convened for the 13th and 14th inst. in Paris and will be given effect as soon as it is ratified by fifteen nations. It will be recalled that the recommendation for replacing the eighteen-member O.E.E.C., established in 1948, by a broader international organisation was made in January 1960 by the "four wise men"—Mr. W. Randolph Burgess of the U.S. (Chairman), Mr. Bernard Clappier of France, Sir Paul Gore-Brooth of Britain and M. Xenophon Zolotas of Greece.

No details regarding the convention of the proposed O.E.C.D. are yet available. It is, however, gathered that the operating procedures outlined generally follow those used by the O.E.E.C., so that the decisions of the O.E.C.D. will be unanimous. A member-country can, of course, abstain on any issue, but it cannot block the others from making decisions themselves. Further, no geographical limitations are set on ultimate membership or on participation in the work of the Organisation's committees. Meanwhile, the convention has provided for the participation of non-member countries in the Organisation's work, as, for example, the membership of Japan in the Development Assistance Committee, formed with the object of accelerating the flow of financial and technical assistance to the developing countries. The convention has retained several Acts of the O.E.E.C. but has dropped some others. A few Acts are made applicable only to Europe and not to North America, such as those relating to manpower.

In preparing the convention, the Kristensen Committee is claimed to have succeeded in evolving a compromise formula on one of the issues most debated, namely, co-ordination of the economic policies of the twenty member-nations. Hitherto, the U.S. was somewhat unwilling to accept an obligation to co-ordinate its economic policy with that of other members. It was stated that such an acceptance would be unrealistic and that the Administration would find it hard to defend it before the Congress. Under the compromise formula, the U.S., we are told, has now agreed that the O.E.C.D. members should avoid developments which may endanger the economies of other countries. It has also agreed that the members must co-operate closely and take co-ordinated action where it is appropriate.

It is, indeed, noteworthy that the Kristensen Committee has taken care to see that the O.E.C.D. consultations on economic policy will be concerned not merely with the problems of member-nations but with those of the less developed countries like India as well. Of utmost importance to these countries is the stress specially laid by the Committee on the need for giving them technical assistance, help in expanding their export markets and a steady flow of capital.

AN IRRESPONSIBLE STATEMENT

It is difficult to think of a more irresponsible statement by a Minister than the one made by Mr. K. Chandrasekharan, Kerala's Minister for Revenue and Law, on the question of location of one of the two oil refineries proposed to be established in the public sector. Addressing a P.S.P. meeting at Calicut this week, the Minister, who belongs to the Socialist Party observed that, if the proposed oil refinery for South India were located in Coimbatore (in Madras State), instead of in Kerala State, Kerala would not allow the laying of pipelines from Cochin Harbour to Coimbatore through its territory. According to the Minister, though it had been decided to establish a refinery in Kerala, there were "signs that the neighbouring State of Madras was bringing pressure on the Central Government and the Planning Commission to establish it in Coimbatore." The case for locating the refinery in Kerala, the Minister said, was strong. Manpower, he added, which was one of the most essential requirements for a refinery, was available in plenty in Kerala, more than in any other State. As regards power, another equally essential requirement, he stated that the present scarcity was only a temporary phase. The three thermal stations now planned would meet the needs in the interim period, while, in future, when the hydro-electric projects now under execution were completed, Kerala might even be in a position to supply power to neighbouring States, after fully meeting its needs.

We do not propose to question the validity of the Minister's claim or to sit in judgment over the relative merits or demerits of Cochin and Coimbatore for the location of the proposed refinery. But what we do view with concern and would most strongly condemn is the thinking behind the statement which is fraught with dangerous consequences for the unity and economic solidarity of the country. If every State were to take the stand which the Kerala Minister took, no Central undertaking could be established in any State except in the centrally administered areas. It is not suggested that Kerala's case is weaker than that of Madras. Since both States have put up rival claims, the suitability of both Cochin and Coimbatore should be carefully considered before a final decision is taken. It is true that, among the considerations for deciding the location of an industrial project for which there is competition among the States, the needs of relatively underdeveloped areas should be given a certain amount of priority. But this should be done only if the locational disadvantages are not so overwhelming as to make the project highly uneconomical. In making the final choice, it is these considerations and not political pressure based on parochialism that should be the deciding factors. If one State feels that its claim has not been given proper consideration, it is free to urge for a reconsideration. But to say that, if the refinery were located in Coimbatore, Kerala would assert its territorial supremacy and would not permit the pipelines to be laid through its territory, is the very acme of irresponsibility. It actually amounts to a threat against the Union Government. One can understand such a statement being made by a petty local politician, but not by a worthy person holding the high office of Minister of a State. As the Minister for Law, Mr. Chandrasekharan ought to be aware that industries and communications come under the Union list and no State Government can deny the right of the Central Government to lay a pipeline in any part of India it likes. The Kerala Minister has, perhaps, been encouraged by the weakness shown by the Centre when Assam resorted to similar bullying tactics for securing one of the refineries. But a wrong action can by no means be regarded as a right precedent.

EXPORTS OF MANGANESE ORE

Once again, the Government of India has bungled in framing the export policy for manganese ore. It has failed to make a bold and imaginative approach to the question, which would have arrested the rot that has set in in India's export trade in manganese ore. The Government has decided to allot export quotas for a three-year period beginning from 1st January 1961, the basis for issuing quotas being the same as in 1959-60. The most unwelcome feature of the new policy is that it seeks to maintain, if not extend, the overlordship of the State Trading Corporation. All export transactions of manganese ore will have to be registered with the S.T.C. The exporters will be allowed, under the joint marketing arrangements of the S.T.C., to negotiate, sign and execute contracts and ship the ore, as agents of the S.T.C. in respect of the quantities out of the S.T.C.'s quota placed at their disposal. In addition, all barter transactions will be handled exclusively by the S.T.C.; the export tonnages under such transactions will be procured under the joint marketing arrangements according to the qualities, ports of shipment, schedules of delivery, etc.

It is a well-known fact that the S.T.C. has not been able to deliver the goods in the matter of exports of manganese ore. In fact, exports had fallen from the record of 1.6 million tons touched in 1957 to no more than 900,000 tons in 1959. The inevitable conclusion is that the opportunity offered by the industrial boom abroad has not been utilised to India's advantage. India's traditional buyers, such as the U.S. and the U.K., have turned to other sources of supply, presumably because of the relatively high price of Indian ore. At the same time, the growing competition from Brazil and Chile in the American market and from Russia, Ghana and South Africa in Europe has rendered India's position weak. The pity is that, except for such small mercies as the abolition of export duties and liberalisation of facilities for transporting the ore, the Indian exporters are not given requisite incentives to enable them to compete effectively in world markets. On the contrary, they are weighed down by bureaucratic controls. In Western countries, India's customers of manganese ore are mainly private interests and, therefore, the intrusion of the S.T.C. only reduces the scope for strict business practices. It is true that they deal with the Russian export trade organisation, but there is no reason to believe that bureaucratic set-up under a democratic administration can function as effectively and efficiently as its confrere can under a communist regime. The requirement that all sales contracts negotiated by exporters should be filed with the S.T.C. is strongly resented by the trade, and justifiably so, in view of the fact that the S.T.C. also is competing for securing foreign business.

Like the curate's egg, the new policy is, however, good in part. An encouraging feature is that, for the first time, the Government has laid down the policy for a period of three years. The periodical modifications in India's export policy in the past were a source of uncertainty which on all accounts drove away some of our foreign buyers. The new policy eliminates that handicap. Another helpful feature is the relaxation of restrictions in respect of movement of exportable ore by rail. A section of the trade feels that it would have been helpful had the Government also given an assurance that the export duty on the ore would not be reimposed during the three-year period. There is a lot of merit in this suggestion, because the fear of export duty may make it difficult to negotiate contracts for a long term. But, at the same time, the reluctance of the Government is understandable. It may not want to commit itself on this point, lest the benefit of any possible windfall to manganese exports would go to them entirely. In a case like this, however, the Government should attach greater importance to the present requirements of the country and the ways and means of meeting them than to future probabilities. Today, India has to build up its export trade by all possible means. The Government should, therefore, give every encouragement to exporters. Accordingly, there is no harm in giving an assurance that it would levy no export duty on manganese exports during the next three years. If the export market for this mineral were to improve or even if there were to be a sudden boom, the Government could still get a share in the exporters' bumper profit through income and super-taxation.

HANDLOOMS—POWERLOOMS

The official move to get reliable information regarding production in the handloom and powerloom sectors all over the country, though belated, must be welcomed as a move in the right direction. It will certainly enable the public to assess the real progress made by these two sectors and judge whether the enormous sums of money spent on their development by the Central and State Governments are well spent. It will also indicate the extent to which reliance can be placed on the two sectors to meet the expanding clothing requirements of the country in the coming years. Otherwise, there will be the danger of an irrational allocation of the additional demand for cloth among the mills, the handlooms and the powerlooms. As readers are aware, the reports of the output capacity of the decentralised sector are confusing as well as conflicting. The official estimates of annual production are 1,900 million yards of handloom cloth and 400 million yards of powerloom cloth. The handout on the proposed census of handlooms and powerlooms issued by the Press Information Bureau says:

"The total estimated production of handloom cloth in India is about 1,900 million yards. On the basis of about 2.28 million commercial looms, the per-loom production is about 830 yards per annum. This figure, it may be pointed out, is much smaller than the actual figure already revealed by the surveys going on in Madras State for the past two years. It has been shown that the per-loom production of handloom cloth in Madras is of the order of 1,200 yards, production in the area for 1958-59 and 1959-60 having been estimated at 622 million yards and 532 million yards, respectively. The results of the Madras surveys have confirmed that the estimates so far made of the total country-wide production of handloom cloth (1,900 million yards) are not in any way unrealistic. The census of powerlooms, which has just been completed, indicates that the total number of unauthorised powerlooms producing cotton fabrics is about 18,000. The estimate of 33,000 unauthorised powerlooms mentioned in some quarters may thus be regarded as an overestimate. Government have recently decided to regularise the unregistered powerlooms through the issue of formal permits and, when this process is completed, the total number of powerlooms operating in the country would emerge in precise terms."

The well-informed section of textile interests, however, consider the figure of handloom cloth output to be a gross overestimate and the output of 400 million yards of powerloom cloth an underestimate. The correct levels of production, according to them, are 1,150 million yards of handloom fabrics and an equal quantity of powerloom cloth. Surely, statistically designed surveys on sample basis already begun in six States—they are expected to be initiated in other States shortly—will help one to get a more accurate picture of the position.

PROBLEMS OF PROSPERITY

To a country which is suffering the pangs of poverty, it is not easy to imagine the pains of prosperity. The annual report of the Confederation of German (West) Employers indicates that the problems of overdevelopment are not less difficult to tackle than those of underdevelopment. The present worries of W. Germany, according to the Confederation, are, to a large extent, the result of over-full employment. An idea of the employment position in West Germany can be had from the fact that, while not so long ago, five jobless were chasing one employer, today five employers are chasing one unemployed. This situation has produced high wages, union militancy, increased labour turnover, and slackened work morale. An average increase of about five per cent. in real wages this year has raised the workers' purchasing power by more than 70 per cent. above the 1950 level. Simultaneously, the average work-week has been cut by three hours, thereby putting the Federal Republic in the top group of nations which have raised their real wages and cut their work-week most.

Complete exhaustion of manpower resources could not be offset by increased hirings of foreign workers, which now number about 300,000, mostly from Italy, Greece and Spain. A period of overfull employment such as this naturally shifts the scales of power to the advantage of trade unions which secured one of the biggest round of wage increases this year. It is estimated that the wage increases in 1960 have been of the order of 13 to 15 per cent. (about DM. 11,000 to 12,000 million). As a result, prices are feeling the double stress of rising costs and rising demand, the cost of living index having gone up by 2.5 points above the level a year ago. W. Germany is thus faced, more clearly than ever, with the thorny problem of simultaneous maintenance of full employment, stable prices and free collective bargaining.

From the point of view of India and other underdeveloped countries, it is heartening to note that, in spite of these problems, West German employers are conscious of the development needs of the less developed nations and their obligations and responsibilities to them, as the following quotation from the annual report will testify:

"The problem of the future social order of the developing countries is inescapably linked with their rapid economic and political development. The Western world must co-operate with these nations in the field of social policy just as it aids them economically.... The Confederation, therefore, fosters its contacts with the developing countries and their leaders responsible for social policy. It does so by aiding delegations from developing countries visiting the Federal Republic, handing out information material, advising German employers on aids for their trainees from developing countries, and by assisting programmes to send German instructors abroad. The problems of the developing countries are among today's most important international problems. The Confederation will not fail to shoulder the tasks increasingly facing it in this field."

The underdeveloped countries will surely watch with interest the crystallising of this welcome awareness into concrete aid plans.

INDO-BURMA TRADE

When the Burmese official trade delegation arrived in New Delhi on 10th November at the invitation of the Union Government, one had hoped that, as a result of the talks, the prospects for India's exports to Burma would improve significantly. But the hope has been belied. For the Press note issued by the Ministry of Food and Agriculture does not hold out any such possibility. All that the Press note says is simply this: "As a result of the visit, the members of the delegation have already made some purchases.... The two delegations have agreed that the volume of trade between these two neighbouring countries should be raised to as high a level as practicable and that the question of entering into another long-term trade agreement and also another long-term rice agreement should be considered. The Burmese delegation offered to sell and the Indian delegation agreed to purchase 200,000 tons of rice out of the 1961 crop for the present. The delegation agreed to offer an additional quantity later, if possible."

It is thus evident that the Burmese delegation has not committed itself to taking concrete steps designed to augment imports of Indian goods. And so India may continue to have adverse balance of trade with Burma. During the first eight months of the current calendar year, the adverse balance was the order of Rs. 10.27 crores, as against just Rs. 50 lakhs in the corresponding period of 1959 (and Rs. 55 lakhs in the whole of 1959). The widening of the deficit has been due to the marked increase in imports, mainly rice, from Burma—from Rs. 7.78 crores to Rs. 15.27 crores—while India's exports to that country declined from Rs. 6.44 crores to Rs. 5.00 crores.

The five-year trade agreement entered into between India and Burma in September 1956 has not been of much benefit to India's export trade. The actual exports of goods and commodities to Burma no doubt improved last year—they stood at Rs. 12.62 crores, as against Rs. 7.48 crores in 1953—but they have suffered a setback this year, the annual rate of exports being no more than Rs. 8 crores. It is somewhat surprising that the representatives of the Indian Government who conducted the negotiations with the Burmese delegation did not adequately impress upon the delegation the need for Burma buying more goods from India. That the scope for such purchases is pretty vast will be clearly seen from a look at the schedule A of the Indo-Burmese agreement of 1956 which lists a hundred and one commodities for export from India—textiles, food and agricultural products, chemicals and soaps, engineering and electrical goods, household and building requirements, hardware, scientific instruments, rubber and leather manufactures, handicrafts and cottage industry products, stationery and paper, and a score of miscellaneous items. It would be useful to both the countries if either the Ministry of Commerce and Industry or the Indian Exporters' Association were to investigate the causes for the fall in India's exports to Burma.

FOOD ADULTERATION

Adulteration of foodstuffs is a ubiquitous phenomenon in this country. The culprits at any rate go scot-free thanks mainly to the absence of any effective Government machinery to enforce the laws governing adulteration and the indifference of consumers. The absence of any non-official organs for consumer protection, as in such advanced countries as the U.K. and the U.S., has further aggravated the problem. It is, therefore, not surprising that Mr. D. P. Karmarkar, Union Health Minister, candidly confessed that, though an attempt had been made to provide an All-India Act against adulteration (passed in 1954), the results were not quite satisfactory. Mr. Karmarkar was inaugurating the first seminar on the prevention of food adulteration, organised by the Central Committee for Food Standards at Hyderabad on November. He stressed that the Governments, both at the Centre and the States, and the local bodies should tackle the problem effectively, before the situation deteriorates to such an extent as to force society to "take the law into its hands against adulterators of foodstuffs."

On the question of the use of food colours, Mr. Karmarkar observed that the extensive and increasing use of extraneous agents, such as synthetic colours and flavours, particularly coal-tar colours, though technically justified, had caused great concern to the Government as well as international organisations, namely, the World Health Organisation and Food and Agriculture Organisation. He held the view that such additives had been used sometimes to disguise the employment of faulty processing and handling techniques and to deceive the consumer. The prolonged consumption of these additives, he added, had been proved to give rise to carcinogenic toxic symptons.

Mr. Karmarkar rightly condemned the indiscriminate use of colouring agents in foodstuffs. But he endorsed in the same breath the advisability of the adoption of some colouring agents in vanaspati, as a device to prevent its adulteration with ghee. Does this mean that synthetic additives are not unhygienic or not cancer-producing, if mixed with vanaspati? Adulteration of ghee is, no doubt, an extremely condemnatory practice. But, even before vanaspati was produced, availability of pure ghee was a rare thing, as butter and ghee used to be mixed with many cheap materials, such as white rice flour, vegetable oils and animal fats. In any case, the question of finding a suitable colouring agent which will not have any adverse effect on consumers of vanaspati or make vanaspati less popular has been considered for long and defied a satisfactory solution. One, therefore, fails to understand as to why the Government still insists in pursuing it. In fact, vanaspati is now being mixed with sesame oil (about 5 per cent. in weight) so that its presence in ghee can be detected easily by a simple chemical test by those who want to make sure that they are buying pure ghee. But all such efforts are of a negative character and do not touch the root of the evil. The real solution to adulteration of ghee lies in creating conditions that will lead to an increase in the production of ghee at a lower cost. This means raising the number of milch cattle and increasing their productivity. It will be more rewarding to the country as a whole to find a remedy along these lines than pursuing the barren path of controls and discovering and manufacturing colouring agents for vanaspati.

ON THE ARENA

By The Archer

Strengthening the Structure of Banking

WE are told that there is a fourfold plan in the offing for strengthening the structure of the banking industry. Brief details have appeared in the Press and although I feel strongly tempted to write lengthily on the subject I shall resist the temptation to do so for the very good reason that the sketchy particulars which have been published are not sufficient to be discussed in detail. One of the steps is stated to be amalgamation or reconstruction, with the assurance that it is not proposed to do away with small banks as such, nor to promote a large-scale merger of smaller units with bigger ones. Then, what? In recent times we have witnessed the amalgamation of large overseas banks such as Grindlays with National, and Lloyds with National and Grindlays, so that, while amalgamation is feasible in any strata, it is difficult to envisage the specific manner in which amalgamation will be effected in India so as to 'strengthen' Indian banking, unless the objectives and criteria are clearly indicated. Obviously, the group in which amalgamation will be fostered will consist of units in which "the salt has lost its savour," and it is certainly going to be a very tough job, both for the Reserve Bank and Government, to catch them by their tails and apply mustard paste beneath them. Their employees will not like amalgamation, as it would involve reduction in numbers; equally so, the supervising staff, as it will result in quite a few of them being down-graded or uprooted from their moorings; the Directors will start kicking their heels, as many of them will lose their status and all of them cannot be accommodated; and many constituents will be deeply disappointed, as the pleasure of having a plurality of current or deposit accounts (cheque books in particular) will be denied them, and the possibility of having borrowings from multiple banks (mostly on the same security) will disappear. A scheme in which so many vested interests will be adversely affected is not going to find an easy passage.

Another step will be widening of the equity base, and if this should involve the calling up of additional capital, it would be a safe guess to assume that the response will be extremely tardy, if not negligible, while the requirement to increase reserves will mean either cutting down expenses or lowering dividends or both, and both steps are well-nigh impossible of achievement under existing conditions. The third step will be maintaining a higher liquidity ratio which will, of course, result in restricting advances, ergo less earnings, ergo, again, less to pay as dividends or to plough back. The fourth step is the much talked about scheme of deposit insurance. We do not have the report of the Deputy Governor of the Reserve Bank on this subject and it is premature to assess the merits or demerits of any such scheme on the basis of its working in the U.S.A. However, what is obvious is that the good banks will have to share in the losses created by the bad ones, sinning bankers and foolish depositors will be supported, and, eventually, there will be general satisfaction that everything has been done to make this country safer to live in.

All this savours of curative medicine. The preventive aspects of this problem have not been touched upon either in Press reports or in Press comments. No one has so far laid his finger on the sore spot, which, in my view, is the indiscriminate opening of branches by the smaller banks, barely in their teens, originally started with the object of fulfilling local or regional needs, but later spreading themselves out in far-away localities, ostensibly to gather deposits, but, in reality, to satisfy the vanities and exhibitionistic tendencies of the management. It should be obvious that I am excluding from this reference the expansion of the State Bank of India, which has a statutory obligation to fulfil and is capable of undertaking the responsibilities of a much bigger family of branch offices than it has now. But the smaller banks are like teen-agers, with narrow pelvic developments, and have been saddled with frequent and increasing branch births with corresponding detriment to their post-natal health. The ever-increasing demands by staff by the application of trade union techniques, deterioration in standards and efficiency, paucity of trained personnel, and breathless expansion have cumulatively resulted in making the outlying branches poor props for the prestige of their parent institutions. As far back as April 1954, the "Committee on Finance for the private sector" recommended, on the complaint of a number of banks, that the Reserve Bank should cease to be too liberal in granting licences to banks to open new branches, as overcrowding in undeveloped areas resulted in excessive competition. As far as can be seen from the periodical announcements in the papers of new branches being opened by various banks, the Reserve Bank has been continuing its liberal policy. It should now sit up and exercise more "vigilance and control" on the breeding proclivities of its teen-age wards. A measure of family limitation will be all for the good of the banking industry.

Another direction in which the Reserve Bank might, perhaps, exercise some vigilance is to examine the credentials and equipment of persons who are 'elected' as Directors of banks. I believe that it is not an altogether uncommon feature in many banks for Directors to take special interest in sponsoring and piloting applications for advances to their friends (above the heads of the experienced technical executives who are paid to do the job), and, while their declared intentions were to help in building up the banks' business, they were not entirely unmixed with the desire to build up their friends' businesses also. Some day, it will be an interesting exercise for a senior Reserve Bank executive to undertake an examination of the affairs of a bank in distress and trace the origins and courses of the various cankerous trends that have brought about the crisis in its affairs; such a study might, perhaps, serve as a sample of the entire terrain of banking with its surface cracks and potholes, fissures and quagmires.

The nostalgia for the placid old days when banks were institutions, each with a distinct tradition of its own, and banking was a respectable and honourable profession, seems almost unrealisable; banking has become an industry and bank employees have become 'workers' with a fierce emphasis on the pride of possession and almost obliteration of pride in performance. Controls, regulatory directives, curbs and vigilance from outside agencies have taken the place of what should be inherent in the working of banks, a solicitude for the welfare of depositors and a concept of fair bankers' risk in enlightened self-interest. Alas, there is no alternative to good banking except good banking itself. For, if the salt loseth its savour, wherein shall it be salted?

* * * *

Small Savings

The Finance Minister has appealed to people in Surat to contribute generously to the National Small Savings Schemes to "ensure their own economic betterment as well as to hasten the pace of the country's economic development." I am entirely at one with him in asserting that the country's economic development will be greatly benefited if people contribute liberally to the National Small Savings Schemes, and, in fact, to all savings schemes, national or otherwise, small or big. As regards individual economic betterment, may I suggest to the Finance Minister that he might appeal more to the patriotism of people than to their sense of economic well-being when asking them to be generous? Thanks to the wide publicity given by prominent people to the dangerously corrosive effects of inflation and the suggestions made by stock brokers in their periodical bulletins to the need for providing a hedge to the falling value of money, most people who have savings to invest are perpetually pre-occupied with the search for investments which are called "growth equities." Investments in small savings certificates provide yields free of tax, but not any cover for deterioration in the rupee's purchasing power. A man investing Rs. 1,000 today in National Plan certificates will no doubt get Rs. 1,650 after twelve years, but the Rs. 650 is the interest on capital and not any compensation for the likely fall in the value of the rupee at the time of redemption. No one can deny that the rupee has depreciated in value by 30 to 35 per cent. since 1954 and no one can predict that there will not be a further depreciation by 1966. Despite all the steps that Government may take to keep down inflation (between you and me and the lamp-post, no one is very clear in his mind as to what steps should be taken), investors have cause to worry that their savings may become emaciated by inflation, and, indeed, they cannot be blamed for worrying so. What is required, therefore, is a system of index-tied deposits under which investments in Government securities as well as funds on savings accounts are tied to cost of living indices at the time of redemption. Erosion through inflation being a nightmare to most middle-class depositors, the mere promise of adding compounded interest to the principal at the time of repayment does not look to be satisfactory enough to most of them. All of them have been asked to take intelligent and enlightened interest in our development plans, and, as a corollary to their education, they have learnt enough to comprehend not only the good that can come from successful planned development, but also the evil that can result from runaway inflation.

* * * *

Bravo, Rajasthan!

Girls' schools in Rajasthan will no longer be obliged to send their students to participate in entertainment programmes arranged by other departments of the State Government. A recommendation on these lines made by a conference of headmistresses of Government and aided schools held at Jaipur recently has found strong favour with the educational authorities, says the Jaipur staff correspondent of a leading newspaper. He adds that the never-ending round of festivities leaves little time for the girls for studies, and that, looking at the matter from another angle, the headmistresses raised the question as to how far it was desirable, from educational or moral viewpoints, to let the girls appear on the stage for the entertainment of other people.

It is interesting to observe, in this instance, that the need to protect school-going children from exploitation (I cannot think of an alternative word) by sponsors of programmes was realised, primarily, by the headmistresses, and *not* by parents, which only goes to show that there are still quite a few people in this world who are not entirely irresponsible or lacking in a sense of proportion. Times without number I have seen large groups of children being marched in the sun, and long distances, too, to provide clapping hands at airports and railway stations for the delectation of V.I.Ps; and, in one instance, I saw some two hundred boys and girls at dusk in an airport, herded together to shout "Jais" to a Chief Minister who was returning after just a day's visit to a neighbouring State for some political mediation. All this may be classed as extra-curricular activity or inculcation of patriotic fervour, but, in the ultimate analysis, it is nothing short of regimentation. I am sure nothing like this is in vogue in other mature democratic countries. I am also sure that nowhere else are parents so utterly dense as not to bother about how their children spend their time at school. For I think that is what happens in most of the small towns in India.

There is a Biblical saying somewhat like this: "Blessed is the man who hath his house full of children, for he shall not be afraid of the enemy at the gate." Perhaps, a parody of it, in the above context, will be: "Blessed is the organiser who hath, in his area, schools full of children; for he shall not despair of a rousing reception for the V.I.P. at the airport."

INFLATION—WHAT REMEDY?

Apropos Archer's comments relating to inflation in this column, a reader writes as follows:—

"*Commerce* of 12th November 1960 carries an article by 'The Archer' with the title 'Inflation—What remedy?' I started reading it with the hope of finding an answer to a serious current malaise, but was sadly disappointed. The writer, perhaps, intended the article to be a humorous skit. For one thing, he only sets forth to do some loud thinking on a 'bunch of Press cuttings.' After referring to some pronouncements, in the order of precedence (!), he refers to the views expressed by Mr. A. D. Shroff and equates those to the views of Rajaji. Then he goes on to quote Mr. Santhanam and calls his views text book maxims and prosaic. He pooh-poohs Mr. Santhanam's advocacy of an increase in agricultural production and economy in Government expenditure. It looks as if, in the opinion of 'The Archer,' textbook maxims

SHADOW OF THE FALLING DOLLAR

(*From Our Own Correspondent*)

LONDON, 26*th November*

LONDON LETTER

THIS has been a disturbed week on the London Stock Exchange, ending with two days of steeply declining prices which have brought the industrial share indices below their end summer trough. The principal reason for this weakness is the really serious slump in the motor car industry with the repercussions which this has already had on other consumer goods industries as a result of reduced purchasing power. If the business world continues the way it has been going the past week, Christmas will not be as gay, commercially, as usual.

So much for the immediate factors. But there is also, overriding all this, the long-term worries over Britain's external trade position, accentuated, above all, by the dollar weakness. At the moment, of course, the U.K. is profiting by this weakness inasmuch as London is the depository of funds of American origin. But the weakness has been so prolonged especially since the U.S. gold reserves dropped below the conventional safety level of $18,000 million, that America is bound to take remedial action that will not benefit the European economy.

Generally, estimates are that the U.S.A. must save up to something of the order of $4,000 million a year. In relation to the total American economy, this will not be difficult. But the necessary measures will nevertheless be unpleasant. For instance, America is spending $2.0 million a year on U.S. forces stationed in this country. She is spending much larger sums in Germany and has already tried, without success, to get the German Government to contribute towards these expenses. The American Treasury Mission, which has just visited London as part of its European tour, is going to make a further attempt to make Germany pay more for the N.A.T.O. forces, though the German Chancellor of the Exchequer has so far prided himself on not having given one penny away. The Germans are inclined to offer advance repayment of their debts to the United States, but that, of course, is a capital repayment and will not do much more than meet the deficiency which will be caused by the American purchase of the Ford Company shares at the moment owned by Britons!

If the American Mission is successful and Germany does agree to contribute, will not the U.K. be asked also to pay something? Objectively, the contribution could be demanded solely from Germany, because Germany's external balance of payments permits her to bear the additional expense. But the argument is not likely to stop there.

An American economy drive on its overseas Government spending will then clearly reduce Britain's dollar income. If the American drive is extended to cut down the enormous American tourist expenditure, Britain is bound to suffer. And, finally, if America decided that she can only save her economy by boosting her export programme, then, in a non-inflationary world, the increased American exports may oust British exports. For these reasons, the dismal shadow of dollar distress falls also across the British economy.

Some interesting data have just been published on the extent of American investment in the U.K. The bulk of such investment is in manufacturing and it seems that, last year, a quarter of such American overseas investment for 1959 came to the U.K. This amounted to some $250 million. Not all of this represents new money coming to the U.K., though the total of such new money was rather more than half the gross investment: the remaining part, rather less than half, consisted of undistributed earnings. Investments in 1960 raise the annual total coming to the U.K. to about $300 million (ignoring, of course, the special Ford deal).

This level of investment could, however, be lowered, if America pursues a restrictive policy in defence of the dollar. Mr. Kennedy does not believe in a restrictive policy. He wants to see increased American investment abroad, increased dollar aid going abroad and somehow he is committed to coupling all this with a sound dollar and an end to the gold drain. If he succeeds in finding some way of realising these two objectives, then the worst effects of American retrenchment may be spared this country.—*All Rights Reserved.*

INDIAN ORDERS FOR BRITISH FIRM

Two orders worth about £472,000 for the installation of steam-generating plant in India have been received by a British firm of marine and electrical engineers and boilermakers, Clarke, Chapman and Co. Ltd., of Gateshead. One of the plants, a specially designed bi-drum boiler unit, can be fired in four ways—by coal, oil, coal and bamboo sawdust, or oil and bamboo sawdust. It will be installed at the new factory of Gwalior Rayon Silk Manufacturing and Weaving Co. in Kerala, which will be producing pulp from bamboo. The waste sawdust will be used as fuel for the power plant.

The other order is for a coal-fired, bi-drum boiler unit for the extension of the Hussainsagar power station in Hyderabad, Andhra Pradesh. Other recent contracts secured by Clarke, Chapman and Co. have included plant for Bhopal and Satna.

a name to remember...

THE BANK OF INDIA LIMITED

MORATORIUM TO BANKS

MR. B. R. BHAGAT EXPLAINS OFFICIAL POLICY

THE Government of India has, on the recommendation of the Reserve Bank, granted a moratorium for a period of forty-three days from 27th November 1960 to 8th January 1961, to the Bank of Nagpur Ltd., Nagpur, under Section 45 of the Banking Companies Act, as amended recently. This has been done in the general interests of the depositors and with a view to facilitating the contemplated reconstruction and amalgamation of the Bank with a bigger and powerful unit. The question of reconstructing the Bank and amalgamating it with the Bank of Maharashtra Ltd. is under the active consideration of the Reserve Bank of India. If the proposed amalgamation goes through, it is expected that the depositors of the Bank of Nagpur Ltd. will receive almost immediately credit for the bulk of the deposits against the readily realisable assets. They will receive subsequently such additional sums as may be available from further realisations that may be made by the Bank of Maharashtra Ltd.

This is the fourth instance of a moratorium being granted to a Scheduled bank after the Palai Bank incident, the other three being those of the Indo-Commercial Bank Ltd., Madras, the New Citizen Bank of India Ltd., Bombay, and the Prabhat Bank Ltd., Delhi. As in the case of the Bank of Nagpur, efforts are being made to reconstruct these three banks also and amalgamate them with other banks, the Indo-Commercial with the Punjab National, the New Citizen with Bank of Baroda, and the Prabhat with the National Bank of Lahore.

While the process of reconstruction and amalgamation is the only sound and practical step, in the existing circumstances, to maintain public confidence in the organised banking sector, there seems to be still a certain amount of misapprehension regarding the policy which the Government intends to pursue. The official policy and the manner in which the powers conferred on the Government by the recent amendment to the Banking Companies Act are to be implemented were explained by Mr. B. R. Bhagat, Union Deputy Minister for Finance, in the course of his speech at the opening of the Ajmere Gate Extension branch of the Bank of India Ltd. at New Delhi on Monday this week. He thus observed:

"I would like to point out, if I may, that this (grant of moratorium) does not by itself indicate any change either in our basic approach to the problem or in the condition of the banking system generally. The word moratorium, in the context of today, has a meaning which is entirely different from the one which it used to have in the days when the Government was not concerned with bank failures or when nothing much could be done in any case in regard to defaulting banks. The moratorium orders which have recently been passed in the case of a few banks are neither disturbing nor unjustified. They are merely the means of facilitating the reconstruction or the amalgamation of the institutions concerned.

"The interests of the depositors, or for that matter of the shareholders, have not been and are not intended to be prejudiced to any extent by these proposals for reconstruction or amalgamation. They are, on the other hand, very carefully preserved and safeguarded; and the ability of the institutions concerned to pay the depositors, and in the order of priority thefeafter, the shareholders, is being improved by the provision of better management and by the creation of improved facilities for the realisation of assets, wherever this is necessary.

"I have considered it desirable to explain our current ideas on this subject at some length, as I think that it is very important for the public to understand that the powers which have recently been conferred on the Government, or the manner in which these powers are being used, cannot by themselves be held to imply that there has been any deterioration in the banking system or any cause for anxiety as to the state of health of our banking institutions."

The Deputy Minister availed himself of the opportunity to refer to the dangers of "ill-informed discussion" of matters relating to credit institutions like banks. He was referring to the rumours regarding the "runs or attempted runs" on one or two leading institutions in recent days. Although these "runs" created no major or difficult problem for the institutions concerned, as they were very strong and in a position to tackle the situation as and when it arose, the Minister added, "the fact that the rumours were in circulation and that the known and elementary facts relating to these institutions had to be restated by those in authority, is, I think, somewhat surprising." Condemning this "extremely unsatisfactory state of affairs," the Minister appealed to the enlightened members of the general public "to be careful and restrained in their comment and to ensure, in so far as they are able to do so, that the circulation of ill-founded, unjustifiable rumours is discouraged."

Mr. Bhagat referred at length to the recent criticism about the manner in which the powers of the Government or the Reserve Bank had been used, while the need for the exercise of these powers and for a positive and constructive policy in relation to the banking system as a whole, had not itself been questioned. It had also been admitted, he said, that the status and responsibilities of banking companies had to be entirely different from those of other companies in the private sector. Mr. Bhagat, however, regretted that the recognition of the problems incidental to our economic growth had not always been accompanied by a precise and full understanding of the contribution which the Government and the Reserve Bank, between themselves, had made towards the consolidation and strengthening of the banking system.

Referring to the system of supervision and control which has been built up over a period of more than ten years, the Minister said that the Reserve Bank had been able to eliminate the weaker, ill-managed and unhealthy institutions, numbering over 250, which had no significant contribution to make towards the growth or progress of the country's economy. Mr. Bhagat testified that the Reserve Bank had been able to achieve this with the minimum amount of dislocation either from the point of view of the depositors or from that of the general public as a whole. Proceeding, he observed: "The result is that nearly all the deposits of the banking system, except for a very small and rapidly diminishing percentage, are today with the very sound and well-established banks. These banks are not only able to pay the depositors in full at any time but are also in a position to take a very broad and enlightened view of their special position and responsibilities in the altered circumstances of the present time." These remarks are gratifying and provide a reply to those who every now and then advocate nationalisation of banking.

Mr. Bhagat also justified the "flexible" credit-control policy of the Reserve Bank and said:

"The Reserve Bank has also used during the last four years or so, the powers conferred on it in regard to the control of the overall volume of credit and the loans granted against certain selected commodities. It has done this, I am glad to say, in a manner which has been flexible and restricted to the attainment of the objects in view. The Reserve Bank, like the Central Government itself, has avoided a doctrinaire and unrealistic approach to the question of dear money or cheap money as such. The only test it has adopted is the pragmatic one, namely, whether the policy which is actually being implemented helps our economic growth and development.

"It is in pursuance of a flexible policy, and as a result of a very careful study of the trends in our own capital markets, as compared with those of the rest of the world, that the credit restriction measures imposed earlier this year have recently been liberalised or modified. The criticism that these measures, or any of them, have not been carefully considered, or that they are not suited to the needs of the economy, seems to me to be quite unjustified. It overlooks the obvious fact that no one measure of restriction or liberalisation can be judged in isolation. On the pragmatic test which I have indicated, it is, I think, obvious and it has also been widely accepted that the overall effect of our financial and monetary policies has been quite salutary."

Mr. Bhagat justified the control on banking on two main grounds. First, whatever may be the mode of providing finance for development, either by banks to their constituents or by the Central or other refinancing institutions to the banks themselves, the ultimate responsibility rests, to a large extent, with the Government, and the Central bank. "It is the Government, with the Reserve Bank's help and advice," he added, "which is ultimately responsible for ensuring that the funds which are accruing to the banking system are not misused or diverted for purpose which may not be in the interests of either the depositors or the country." Secondly, banks are no longer mere proprietory concerns; they are mainly trustees acting for the general public. "If they are to extend their functions in this role," the Minister continued, "they must submit to the discipline which planning increasingly imposes on all of us." The system of control which the Government has been enforcing successfully has, according to the Minister, proved to be effective, without being irksome.

The Union Deputy Minister was of the view that the future of commercial banking in India was very bright. For, according to him, banks have considerable opportunities of assuming and discharging certain concrete responsibilities in relation to India's economic developments. He was confident that the major Indian Scheduled banks would take the lead in undertaking these fresh burdens of economic development and in carrying out the objectives which were common to both the Government and other non-official agencies.

The Reserve Bank has no statutory responsibility for control and supervision of the co-operative banks. Disclosing this in reply to a question in the Lok Sabha last week, the Deputy Minister of Finance, Mr. B. R. Bhagat, added, however, that since 1952, the Reserve Bank had been conducting inspection by a voluntary arrangement with the consent of the banks concerned. So far, it had completed two rounds of inspection of all central co-operative banks. Periodical audit of these institutions by the State Governments supplemented by the inspection by the Reserve Bank served to keep a watch over their working.

The Reserve Bank of India is in close and continuous touch with commercial banks and financial institutions in the country and with the Government of India with regard to the monetary and credit system in India, according to the Finance Minister, Mr. Morarji Desai. Replying to a question in the Lok Sabha last week, Mr. Desai said that appropriate measures were taken from time to time to ensure its smooth working. Therefore, he added, the appointment of a commission did not seem to be necessary at the present stage.

ON THE ARENA

(*Concluded from page 992*)

are fit only to be consigned to the waste-paper basket and only the theories of the neo-politicians regarded with any respect. Textbook maxims contain the distilled wisdom of the ages and we disregard them only at our peril. It is a pity that the writer has dealt with such a serious subject so flippantly. I would particularly invite the attention to the following portion of his article:

"I ask, of what use is it for us to consider this example (the example of West Germany) when we keep on calling German post-war recovery as the 'German Miracle.'

"Ludwig Erhard, the architect of West German post-war economic recovery, has written a book with the title *Prosperity Through Competition*, in which he has explained in great detail how the transformation was effected. Those who refuse to learn the lessons of his methods try to decry his achievements by calling them a miracle, and your contributor apparently belongs to that tribe. Mr. Erhard has cried out against his detractors in the following words:

"'Since all the successes which have been achieved as a result of my economic policy can be traced back to the activities of those actively taking part, I do not believe that the idea of a "German Miracle" should be allowed to establish itself. What has taken place in Germany during the past nine years is anything but a miracle. It is the result of the honest efforts of a whole people, who, in keeping with the principles of liberty, were given the opportunity of using personal initiative and human energy. If this German example has any value beyond the frontiers of this country, it can only be that of proving to the world at large the blessings of both personal and economic freedom.'

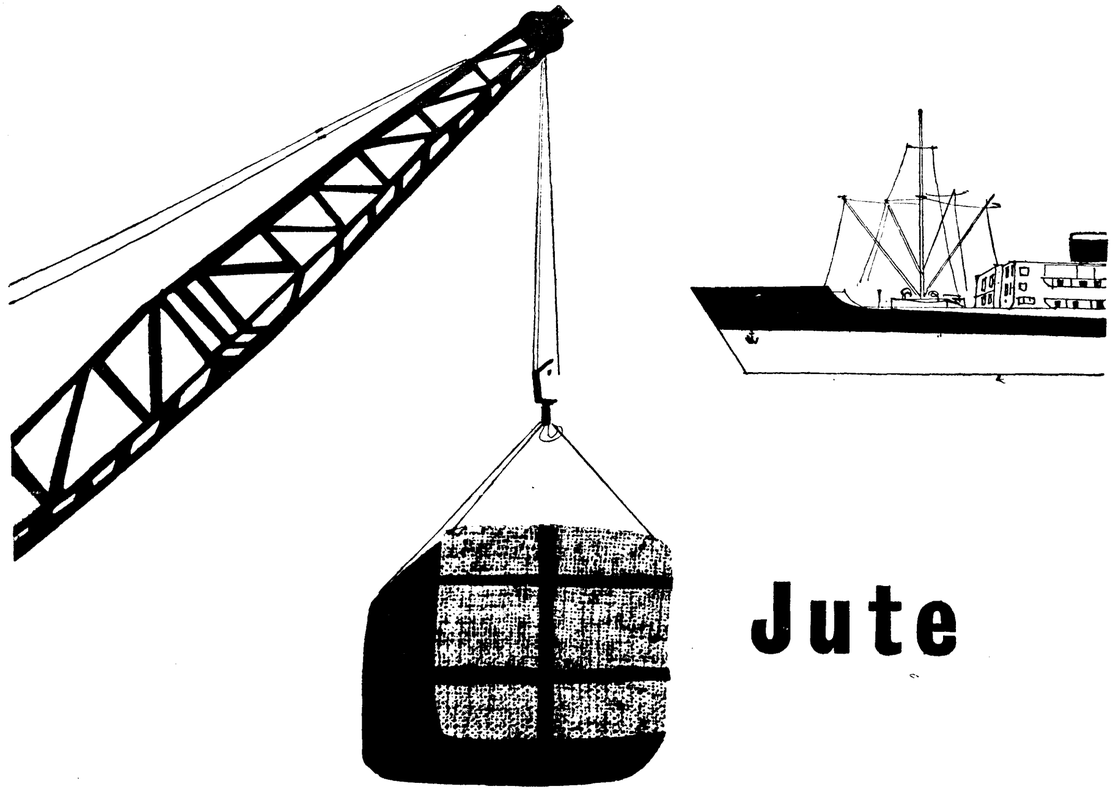
"Writers like your contributor obstruct the lessons of the German achievement benefiting other countries. The whole attitude of your writer is condensed in his closing remarks: 'I am afraid this subject of inflation and high prices is becoming an obsession with most of us and tends to increase our frustration.' The potential mischief in inflation is so great that no patriot can afford to turn away from the subject in despair. It is the duty of every intelligent citizen, especially those technically qualified to deal with this intricate subject, to tell the TRUTH (and nothing but the truth) to the public and to warn them against the disaster that is waiting round the corner, if our rulers do not desist from inflation before it becomes a runaway inflation."

Bangalore. P. H. S. RAO.

• • • •

[The Archer's piece on "Inflation—What Remedy?" was a synopsis, in lighter vein, of a few recent articles and speeches on the subject. Its purpose was mainly to indicate the diversities in approach. When some of the suggested remedies were labelled as textbook solutions, all that was meant was that they were well known and somewhat elementary. There was certainly no suggestion here, even by implication, that they should be consigned to the waste-paper basket.

Dr. Erhard's thesis has been expounded in two books: *Germany's Come-back in the World Market* and *Prosperity Through Competition*. Anybody who has seen things for himself in West Germany will agree that many features in its economic technique can be adopted by India too. Only, we will face obstacles, some economic and some psychological. German recovery should not be called a "miracle," for, when this is done, it ceases to be classed as practicable in our country and is thus an admission of our defeatism. That, probably, was what the Archer had in mind when he wrote in obvious anguish: "Of what use is it to consider this example when we keep on calling it a miracle?" In a way, the Archer appeared to have translated, in a sarcastic vein, a part of Dr. Erhard's declaration which, incidentally, the correspondent himself has quoted. Obviously the cause of the Archer's frustration has been misunderstood.—ED.]



Jute

in the forefront of India's export trade

The Indian jute industry is essentially an export industry. Almost 80% of the industry's production—or about 900,000 tons of jute manufactures—is shipped to overseas markets; 55% of the jute goods used as packaging material throughout the world are supplied by India.

But jute no longer serves merely as the humble gunny or hessian bag. Today, jute fabrics are used in large quantities in industrial processes to give a remarkably wide range of end-products. From the massive export of jute goods the country earns valuable foreign exchange, which in 1959 amounted to Rs. 110.8 crores. Out of this, Rs. 50 crores came from the dollar area, making jute goods India's largest dollar-earner by far.

The Indian Jute Mills Association—the organisation of the industry—carries on extensive propaganda in several foreign countries to promote the exports of jute goods, undertakes research at home to widen the applications of this golden fibre.

MR. L. B. SHASTRI ON TEXTILE SITUATION

NO RATIONING CONTEMPLATED NOW

THE Press version of Mr. Lal Bahadur Shastri's statement in the Lok Sabha on 14th November created much confusion in the minds of cotton textile interests, in that it gave the impression that the Government was contemplating to reintroduce statutory price controls and rationing of textiles. It is, however, gratifying to be told that the Press version was distorted and that Mr. Shastri did not hold out any such threat. All that he stated, according to the Press note issued by the Indian Cotton Mills Federation, was as follows:

"The revision of cloth and yarn prices recently announced by the industry represents a definite reduction. The new cotton crop will be made available to the mills at reasonable prices. Normally, cotton begins to come into the market by the end of November in fair quantities. The question of introducing controls and rationing of cloth may not arise at all, if adequate supplies of cotton become available and, as a result, the prices of cloth and yarn come down of their own accord. I will review the cloth and yarn price situation towards the end of this year."

After Mr. Shastri's statement was wrongly reported in the daily Press, the Press Information Bureau of the Government of India should have immediately issued a Press note giving the correct version of the statement. It is to be hoped that the Bureau will be a little more alert in future, so that doubts and misconceptions arising from wrong reports of Ministers' statements can be avoided.

That Mr. Shastri is not in favour of controls is evident from his reply to a memorandum submitted by the Bangalore Wholesale Piecegoods Merchants' Association on Saturday last. Mr. Shastri is reported to have said:

"The three wings of the cotton textile industry—mills, wholesalers and retailers—should voluntarily co-operate among themselves in regulating and controlling the prices of cotton textiles. If this is done, I have no doubt that the position will improve. In case they do not do so, the Government will have to consider taking other steps. But I do not like to dilate on these steps, namely, introduction of controls and rationing. This is because I feel that the organisations concerning the industry will themselves take steps and will not force the Government to have measures which they do not like. I do not like these measures, because introduction of controls has its own evils which sometimes are fairly of a serious nature. There may be some advantages, too. However, if there is no way out, the Government will have to adopt such measures."

Mr. Shastri admitted that the position in respect of cotton textile prices had eased considerably following the efforts of the Federation. The rise in prices of cloth, he said, had been arrested, and fine and superfine cloth were being sold at prices below the prescribed levels. But he expressed dissatisfaction with regard to medium and coarse varieties of cloth the prices of which had not come down. In such circumstances, Mr. Shastri added, the plea of wholesalers for the enhancement of the profit margin from 15 to 20 per cent. was "rather embarrassing." Urging efforts to reduce prices, he said: "The shortage of cotton felt sometime back has been removed and imports from the U.S.A. and other countries are expected to flow on a big scale. It is for the mills to see that prices of cotton fabrics come down automatically." Mr. Shastri categorically rejected the plea for higher margin, but expressed his readiness to consider whether any further concession could be made without increasing the commission. And he also assured the trade that he would ask the Textile Commissioner to look into the question of railway freight.

A reference to the penalty of Rs. 500 per powerloom imposed for the registration of unregistered powerlooms in existence in Mysore State was also made by Mr. Shastri. His reply was as follows:

"I do not consider this (the penalty) very high, in view of the fact that 6,000 of such powerlooms have been illegally established since 1956. This has created difficulties for the Government in the matter of yarn supply. It is necessary to legalise the powerlooms by requiring them to be registered by paying the penalty. I will, however, extend the time for such registration by two or three months. I am even prepared to take the amount of Rs. 500 in three or four instalments."

This is, indeed, a generous offer, considering that those who are affected are guilty of having contravened the law. It is in the interest of powerloom owners to avail themselves of this opportunity to attain the legal status. They have a good economic justification to exist, but they will be spoiling their case, if they do not comply with the requirements of law.

INDIA'S FOREIGN TRADE IN WOOL

Exports of raw wool from India during January-June 1960 showed a decline of 4 per cent. as compared with the corresponding period of 1959, the quantity actually shipped being 18.2 million lbs. Shipments to the United Kingdom and the Common Market fell by 11 per cent. and 18 per cent., respectively. Exports to the Soviet Union, however, rose from just 300,000 lbs. to 4.7 million lbs. During the period, internal prices were maintained by strong Russian demand. Other foreign buyers were not prepared to pay prices which were often out of parity with the world level, and so shipments to these countries dropped.

During the first six months, imports of raw wool were 79 per cent. higher than the corresponding period of last year, while those of wool tops (processed wool) declined by 19 per cent. It is believed that this greater import of raw wool results from the more intensive use of wool-combing machinery in the country. Prior to import restrictions, the manufacturers found it more economical to buy tops. Now raw wool, costing comparatively less foreign exchange, is taken whenever possible. Imports of raw wool from Australia more than doubled. Receipts of tops from both Australia and the United Kingdom, the chief sources of Indian imports, fell by 14 per cent. each. This trend is expected to be intensified when newly licensed combing plants come into full commission.

Delegates from the three main wool growing countries of the Commonwealth—Australia, New Zealand and South Africa—met at London recently to discuss new plans to sell more wool throughout the world. The delegates represented a total of more than 175,000 wool growers. They are the Executives of the International Wool Publicity and Research Fund set up 23 years ago by the Commonwealth wool growers. Total capital investment of fine and raw wool sales now amount to more than £450 million a year.

After a week's deliberation, the leaders reached full agreement on a new administrative plan for the International Wool Secretariat. The plan includes fundamental changes in the constitution of the Secretariat, which are designed to make it more flexible and efficient.

towards the Quarter Million mark

INDIAN TUBE is expanding again! A licence has just been granted to instal a second high-speed, continuous weld mill, with a capacity of 90,000 metric tonnes a year, at the Jamshedpur works, taking the total in this category of tubes to 200,000 tonnes.

Adding to this the 30,000 tonnes of seamless, and 20,000 tonnes of electric resistance weld tubes made at Jamshedpur, the total tube capacity will stand at a quarter million tonnes—an impressive advance since the first mill went into operation five years ago. In addition, Indian Tube makes tubular steel poles for which it has a capacity of 150,000 a year.

With all the technical and service facilities already available at Jamshedpur, this latest expansion will, like the others, be speedily completed to provide a substantial increase in output, bridging the present gap between demand and supply.

COTTON MILLS WORKING EFFICIENTLY

LABOUR FORCE SHRINKS

From Our Special Correspondent

MANCHESTER, *23rd November*

TUCKED away at the bottom of the columns of a few newspapers last week was an item which might have very substantial repercussions for Lancashire textile traders. A message from Hong Kong simply said that China had agreed to supply 5,000 million gallons of water a year indefinitely to the Colony. Shortage of water has long been one of the chief drawbacks to the expansion of the textile finishing trade in Hong Kong. All observers who have visited the Colony have commented on this situation and there have been frequent references to the effect of a drought on the factories which have been growing up in profusion in the Colony during the past few years.

MANCHESTER LETTER

Already there has been a notable change in the type of goods being exported to this country from Hong Kong, mainly as a result of the voluntary agreement to curtail shipments of grey cloth. The garment-making industry has lately provided much bigger supplies for the British market and, now that the threat of a shortage of water seems to have been removed, there is little to impede the progress of finishing works, except perhaps lack of space. At all events, the development bodes no good for the processors of grey cloth in this country, who already have enough troubles of their own, as exemplified by the reorganisation plan, which is not proceeding very smoothly.

Hong Kong millowners have not reacted favourably to the comment recently made in Lancashire that a good deal of the Continental cloth now being imported could have been supplied by the Colony were it not for "unrealistic delivery dates and prices." Local traders persist in their contentions, but advices from Hong Kong deny the allegations. They point out that sales for re-export from the Colony during the second quota year up to the end of October were over 18 million square yards and assert that delivery dates have shortened considerably in recent weeks. Many mills are now said to be quoting facilities for shipping goods in little more than one month, while prices are being maintained at a steady level as a result of the barter arrangement with Indonesia.

Holding the Line

Anybody intimately connected with Lancashire cotton trade affairs at the moment would scarcely subscribe to the view that the industry is standing still. Developments which have taken place even within the past few months have brought an animation which was singularly lacking in similar trading periods some years ago and the major reconstruction, which has taken place as a result of the disposal of so much redundant plant, hardly smacks of inactivity. Yet when figures for production and employment are considered, the situation is very much "as you were." The variations from month to month, particularly when holidays are involved, must be anticipated; during the summer, the seasonal dwindling of output has been much as usual but the mills are now back at full stretch, hampered only by the labour problem, which presents such fundamental difficulties in virtually every district.

In September, average weekly cloth production at 36,650,000 yards reverted to the June level, but the long week-end holidays interfered with a return to the peak figures recorded at the beginning of the year. A similar situation occurred in the spinning branch where yarn output averaged 14,550,000 lbs. per week—about 1,000,000 lbs. lower than the highest point reached in May.

Jobs for All?

For the first nine months of the year, the general level of output is almost identical with the comparable period in 1959. Yarn production amounted to 556,680,000 lbs., as against 558,580,000 lbs. In cloth, the comparison is just as close. The quantity woven in the first nine months of this year was 1,412,710,000 yards, as against 1,411,480,000 yards.

During the twelve months ended September, the labour force on the books of employers in spinning and weaving has fallen by rather more than 14,000, so that the trend of output is mainly the result of more efficient working in the mills and the introduction of shifts. It is very noticeable, however, that, since the end of the scrapping programme in spinning and weaving, which was completed in March, the manpower situation has been practically static. At the end of the first quarter, the labour force was 183,890; at the beginning of October, it was 184,410. Slight variations took place within the different sections in that manpower in spinning has fallen by just over 1,000 in the six months, while in weaving the labour force has increased by 2,000. Small reductions have taken place in the number of employees in doubling and waste spinning.

Deliveries and Orders

Board of Trade statistics covering the textile and clothing industries for the month of September have attracted some attention, particularly as they show that net new orders were running at a distinctly lower level than during the same month last year. It should be recalled, however, that a very big buying movement had then developed on the strength of the response to the reorganisation schemes in spinning and weaving.

The orders held are still 30 per cent. higher than in April 1959, although they are very slightly lower than earlier this year. Deliveries in September were 2 per cent. up on the same month in 1959 and apart from October last year, have not been exceeded since the inauguration of these figures from April 1959.

In contrast, official returns show that manufacturers' sales of made-up clothing in September were higher than at any time this year and were 14 per cent. above the same month in 1959. All sections of the industry shared this increase, but mainly as an outcome of the exceptionally wet weather, deliveries of waterproof garments showed a very pronounced rise, being 57 per cent. above the level recorded a year previously.

Closer Ties

More pooling of resources between the cotton and man-made fibres industries in the U.K. is foreshadowed by the announcement that a joint Cotton and Man-made Fibres Tariff Section is to be established. As the statement says: "The linking of the activities of the Cotton Board and the British Man-made Fibres Federation in this field is a logical development of the close co-operation between the two organisations on tariff matters for many years."

Duplication of effort should be eliminated wherever possible in industries which are so narrowly separated in their ideas and projects. Both organisations have extensive statistical information at their disposal and on topics such as tariffs, much necessary routine work obviously overlaps. The industry as a whole will be served more effectively by the joint study of the latest position as regards changes in customs tariffs, so that traders can obtain the relevant information without switching from one branch to another when different fibres are involved.—*All Rights Reserved.*

TEXTILES IN U.S.

The American cotton industry's preoccupation at the moment with imports seems to be an extension of the same highly complicated situation which faced traders in Britain a few years ago and which has only been temporarily alleviated by the voluntary restrictions on exports, self-imposed by the the leading Commonwealth textile producing countries. The way in which those involved in such negotiations can advocate apparently contradictory doctrines is illustrated by proposals which some politicians in the U.S. are planning to bring forward in the next session of the Congress. One Senator is to urge the establishment of a system of textile import quotas on a country-by country basis, including varying quantities of specific types of textiles. At the same time, the sponsors of this arrangement have put forward a 12-point programme, one of which calls for renewed efforts to eliminate foreign trade barriers against American products.

Commenting on the aforesaid development, Messrs. Frederick W. Tattersall Ltd. of Manchester observe: "Past experience has shown that individual countries are extremely sensitive to this type of behaviour by others; discrimination on any single issue invariably leads to retaliatory measures. Senator Bridges, the protagonist of these ideas, however, seems to be a man unafraid of stepping 'where angels fear to tread.' Not only are his views on the import quota arrangements contradictory, but he invites criticism from other sectors of the American economy by urging the Government to encourage foreign nations to switch their exports to the U.S. away from textiles and into other products 'able to withstand heavy competition from abroad.' Such candour is at least refreshing, if liable to lead to repercussions from elsewhere! America's foreign aid programme has often been under fire from those who have to foot the bill at home. The Senator has called for a special watch to be kept on expenditure liable to result in excessive expansion of foreign textile industries, especially when such expansion is clearly intended to build up textile exports."

COTTON CROP PROSPECTS ENCOURAGING

ARRIVALS GATHER MOMENTUM

IN no other season, the probable size of the cotton crop had exercised so decisive an influence on the cotton policy of the Government of India as it has done in the current cotton marketing year. The Government's policy has been geared not only to the overall estimated size of the crop but also to its pace of movement. Quotas of indigenous cotton are being issued to mills in instalments according to the volume of arrival of new crop, with a view to discouraging scramble for cotton and preventing cornering of available lots by the more powerful and resourceful mills. Random requisitioning is being resorted to as a check against spurt in raw cotton prices.

Quotas for Indigenous Cotton

That this policy would continue to be pursued till such time as the circumstances warranted a change was confirmed by Mr. W. R. Natu, the Textile Commissioner, in Kanpur last week. Addressing a meeting of the textile millowners of U.P., Mr. Natu said, on the 22nd inst., that the Government hoped that cloth prices would come down when new crop arrived in the market in larger quantities in December and that, under no circumstances, raw cotton prices would be allowed to pierce the ceiling fixed under law for the current season. He pointed out that marginal requisitioning of raw cotton had already resulted in a fall in prices. Mr. Natu also said that the quota already allotted to mills in Northern India (30 per cent. of annual consumption) would not be raised for three months, as the Government wanted cotton prices to come down and to ensure adequate supplies to mills in all textile centres. The Government, he added, would, however, consider the question of issuing additional quotas, if it was found that cotton was moving faster.

Thus, the policy of releasing quotas to mills has come to be hitched entirely to the size and movement of the crop, thanks to the bitter experience of the last season, when, due to the sharp decline in production, prices pierced the ceiling early in the season. Crop outlook this season, on the other hand, is encouraging and it looks as though a crop of 5 million bales expected at the start of the season might materialise.

Crop Development

Weather conditions till the end of September were ideal and at the end of the month hopes of a good crop strengthened. October is a critical period and that month, too, has passed without any major damage to the crop, though dry weather in the Punjab and locusts invasion in the central cotton belt did affect the crop adversely. In the Punjab, crop estimates had to be scaled down slightly. Contrary to the experience of the past two seasons, the trouble with this year's Punjab crop seems to have been too little, rather than too much, moisture. Extremely dry conditions, without any dewfall, prevailed from the middle of August till the end of October. Under these conditions, fruiting of late-sown plants was considerably less than normal. The central belt, consisting of the Oomras, Gujarat and Saurashtra, had mostly dry and sunny weather which hastened the maturing of plants. Although swarms of locusts appeared in various parts of Oomras and Gujarat, the actual damage done appears to have been insignificant. Towards the end of the month, arrivals of 197/3 crop started in Berar and Khandesh regions. This year's 197/3 crop is reported to be very promising.

In the South, there were excessive rains in October. This additional moisture, however, proved beneficial for the growing crops in the Westerns and Comptah regions. The untimely and excessive rain in November is feared to have done damage to the crop. No estimate of the possible destruction is, however, available at present.

New crop arrivals gives an indication of the crop position during the current season. Total arrivals till the end of October aggregated 235,000 bales, comprising 125,000 bales in the Punjab, 100,000 bales in the Oomra region and 10,000 bales in other places, as against 170,000 bales in the corresponding period of the previous season. It is noteworthy that, barring the Punjab, arrivals in all other regions have been very much higher. The movement of the crop gathered momentum in November and, if everything goes well, by the end of December, a sizable portion of the crop would have come to upcountry markets.

REQUISITIONING BENGAL DESHI

In response to representations from mills consuming Bengal *Deshi* cotton that they are not able to procure their requirements within the ceiling prices and at their specific request, limited stocks of Bengal *Deshi* (about 5,000 bales) cotton have already been requisitioned by the Textile Commissioner. Additional stocks will be requisitioned if applications are received from the mills, states a Press note issued by the Textile Commissioner this week.

With a view to ascertaining the actual quantity of Bengal *Deshi* cotton required for the whole season, textile mills and factories engaged in the manufacture of absorbent and surgical cottons have been requested to send to the Textile Commissioner particulars of their requirements, giving information about: (1) stocks and outstanding deliveries of Bengal *Deshi* cotton at the end of the season 1959-60; (2) first quota of Indian cotton granted this year, that is, 1960-61; (3) purchases of Bengal *Deshi* cotton made from this year's quota; (4) total requirements of Bengal *Deshi* cotton during the season 1960-61; (5) additional quota required to complete the season's requirements of Bengal *Deshi* cotton, and (6) the quantity desired to be requisitioned for the consumption of mills, if any.

In the meanwhile, the Government has viewed with concern the rising trend of prices of Bengal *Deshi* cotton in the Punjab. With a view to holding prices below the statutory ceiling, the Textile Commissioner has banned the movement of Bengal *Deshi* cotton from the Punjab, Rajasthan and U.P. to any other place in India without obtaining a permit from him, except in cases where the cotton is intended for delivery directly to a mill. Cotton ginning and pressing factories, the trade and mills have been asked to co-operate in the maintenance of prices within the statutory ceiling, so that imposition of more stringent measures may be avoided.

IMPORT OF FOREIGN COTTON

The Government of India's decision last weekend to start issuing licences for the import of 200,000 bales of cotton (400 lbs. each) of stapling 1.1/16" and above from any area has been received with a sigh of relief by importers and consumers of foreign cotton. The import quota for this quantity was announced as early as July last. Out of the quantity of 200,000 bales, 50,000 bales will be allocated to mills against their retention quota under the export incentive scheme. The balance of 150,000 bales will be distributed to the consumers of foreign cotton. 50,000 bales of cotton of staple length 1.1/16" and above but below 1.3/16" will be distributed to consumers of this type of cotton on the basis of the allocation of such cotton during the last season and the balance of 100,000 bales will be distributed to consumers of foreign cotton of staple length 1.3/16" and above on the basis of allocation of such cottons during the last season. In both cases, for purposes of calculation, the quantity under retention quota and previous expired quotas, if any, will be excluded.

Mills applying for licence to import cotton of staple 1.3/16" and above are required to pay, as usual, to the Indian Cotton Mills' Federation or the Southern India Millowners' Association, a premium at the rate of Rs. 160 per bale. The premium for cotton of staple length 1.1/16" and above but below 1.3/16" is Rs. 120 per bale.

The shipment period in respect of this quota has been staggered, as suggested by the Indian Cotton Mills' Federation. Half the quantity may be shipped before 31st March 1961 while the other half should be shipped only after that date but before 31st May 1961. Applicants have been asked to indicate the quantities they wished to ship before and after 31st March 1961.

While the anouncement has been welcomed by mills, the trade, which had hoped that it would be given a chance to participate in the imports, has been disappointed because it has been left out again.

SUDAN COTTON

The Sudan Gezira Board made good progress in the disposal of its unsold stocks of 1960 crop cotton. By the end of October, the unsold balances of Gezira Sakel and Gezira Lambert were reduced to 5,800 bales and 14,900 bales respectively. The Gezira Board decided to hold 3 auctions weekly, with effect from the beginning of November.

Private growers have already sold out their entire production of 171,000 bales PL cotton. The weather has been generally favourable for the development of the 1961 crop and the young plants have been progressing satisfactorily so far. Provided the weather in November was not too cold, a normal crop may be expected.

MADURAI.

Ref. No.——

23rd June 1960

The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
M A D R A S-1.

Dear Sir,

There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-58. We are operating them on mofussil routes and none has experienced any major breakdown so far.

Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.

In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.

Thanking you,

Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,

Managing Director.

JVT/AL-887a

We thought you might like to read this

This testimonial explains Leyland's enormous popularity in over 50 countries in the world. The exacting standards of precision combined with fine craftsmanship makes Leyland the most wanted vehicle today.

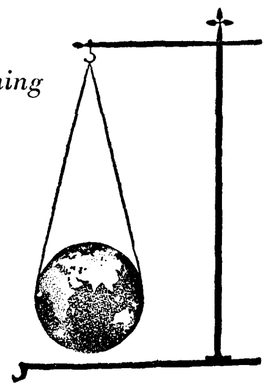
Weighing the world up...



...even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

Pardon our Presumptuousness..... but.....

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living....

Today, on the eve of the Third Five Year Plan, we of the Raza Buland Sugar Co. Ltd. believe that 25 years' useful service to the Nation is something to talk about, but we will rest contented by narrating a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past 12 months.

At the close of the last crushing season we.....

Crushed.....Over 1,13,00,000 maunds of Sugarcane
Bagged.....Over 10,93,000 maunds of Sugar
Paid to Cane-growers.....More than Rs. 1,76,00,000
Paid to Workers.....Over Rs. 17,70,000

And expect to pay to the Government and National Exchequer as Excise and Taxes Over 1,55,00,000 Rupees.

On the occasion of our Silver Jubilee celebrations recently almost a hundred of our oldest workers who had served the Raza Buland Factories for over 25 years were awarded silver medals, and cash awards.

These are our humble contributions towards the cherished targets and goals of

TRENDS IN WORLD SUGAR

HIGHER OUTPUT MAY OUTSTRIP CONSUMPTION GROWTH IN THE NEXT DECADE

THE world sugar supply position will continue to be quite comfortable during the next decade and prices will not show any hardening tendency. This is the impression that one gets from the latest annual review of the U.N. Food and Agriculture Organisation. It is true that the world consumption of sugar will increase substantially, especially in the low income countries with small *per capita* consumption, in response to both higher real incomes and, perhaps, a decline in the prices of sugar relative to other foods in most countries. But the growth of consumption is expected to be outstripped by the upward trend of production. The F.A.O. says: "Protectionist policies, which aim at saving foreign exchange and at diversifying agriculture, or which have been prompted by various political and social reasons, are stimulating a new wave of expansion in sugar production in many countries and the establishments of new sugar industries in countries which until now depended on imports."

The current sugar season (1st September 1960-31st August 1961) commenced with fairly large carryforward stocks, amounting to 12.0 million metric tons. This quantity, though it is slightly less than the opening stocks of the previous season (1959-60), was markedly higher than that in the season preceding it (1958-59). The large opening stocks of 12.2 million tons in 1959-60, together with the actual output of 48.2 million tons (centrifugal sugar only), give a total available supply of 60.4 million tons, as compared with 58.9 million tons in 1958-59 and 54.2 million tons in 1957-58.

Current Season

No information is yet available as to the trend of world sugar production in the current season, but indications are that it will be higher than in 1959-60. The first estimate of the European beet sugar output released by Messrs. F.O. Licht of Britain places the total production at 20.81 million tons, as against 17.22 million tons in 1959-60. The anticipated rise in output is shared by both Western Europe and Eastern Europe, as is shown below:

(Metric tons—raw value)

	1960-61	1959-60
W. Europe	9,540,600	7,906,723
E. Europe (excluding Russia)	4,167,000	3,216,505
Soviet Russia	7,100,000	6,100,000
Total Europe ...	20,807,600	17,223,228

The world production of centrifugal sugar in 1959-60, as already stated, was of the order of 48.4 million tons (excluding Mainland China), which is slightly less than the record output of 1958-59, but well above the crop of other recent years. The smaller figure mainly reflects the effect of the drought in 1959 on the beet sugar output of Western Europe which fell by 12 per cent. In terms of quantity, the reduction comes to one million tons. There was, however, a substantial expansion in production in North and Central Americas, due largely to higher crops in the U.S., Puerto Rico and Mexico. The slight decline in the sugarcane output in South America was principally the result of adverse weather in Argentina, as well as limitation of output in Brazil because of large stocks and quota reduction under the International Sugar Agreement. Although bad weather caused a fall in production in the Union of South Africa, this was compensated by a record crop in Mauritius. Output was larger in all the major Asian producing countries, except Taiwan which suffered flood damage. In Turkey, production rose by 43 per cent. with increased area and favourable weather. The F.A.O. report attributes the increase in sugar production in India during 1959-60 to "higher domestic prices following the scarcity of centrifugal sugar early in 1959." But the factors actually responsible for the record output of sugar (2.42 million tons) were the bumper cane crop (75.04 million tons) and the Government of India's scheme of incentives in the form of rebate of excise duty and enhanced cane prices.

The following table indicates the trend of world centrifugal sugar production in the past three years as compared with the average output for the seasons 1952-53 to 1956-57:

(In million metric tons)

	1959-60	1958-59	1957-58	1952-53 to 1956-57 (average)
North and Central America ..	13.8	13.3	12.5	11.2
Western Europe	7.2	8.2	7.1	6.6
Asia*	9.7	6.6	6.4	4.9
South America	6.0	6.3	5.2	4.4
Africa	2.6	2.2	2.1	2.0
Oceania†	2.5	2.5	2.2	2.4
Total free world ..	38.8	39.1	35.5	31.4
Eastern Europe and U.S.S.R.‡ ..	9.4	9.5	8.3	6.6
Total world* ..	48.2	48.6	43.8	38.0

* Excluding Mainland China. † Including Hawaii. ‡ Trade figures.

Following the exceptionally good harvests in many sugar importing countries during 1958-59, world trade suffered a distinct setback in 1959. The aggregate world exports amounted to 14.6 million tons, or about a million tons less than in 1958. Exports from Cuba, at 5.0 million tons, were 12 per cent. lower than those a year before. Imports into Western Europe were approximately 5 per cent. below the volume of the previous year.

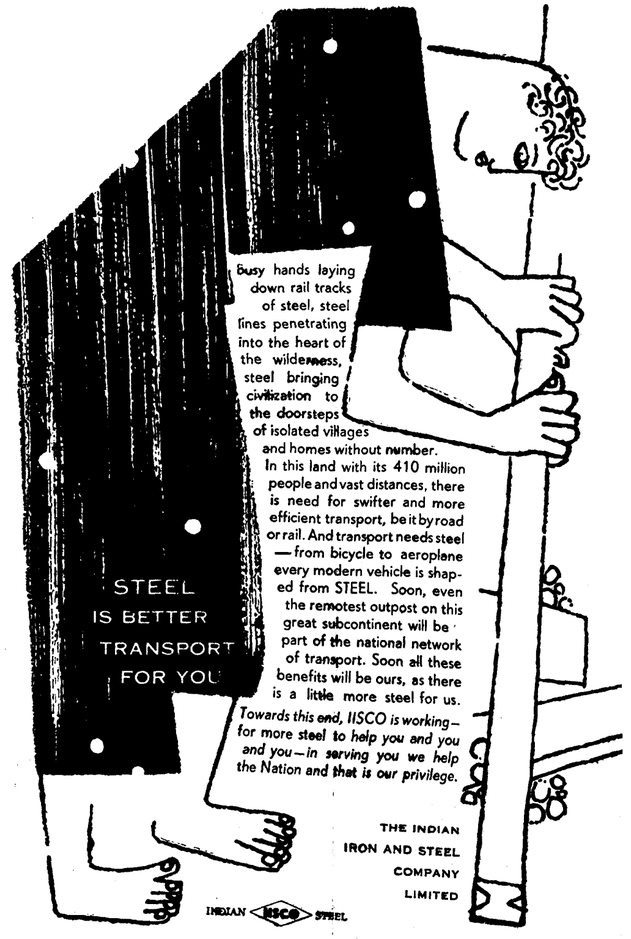
Sugar Prices

With ample supplies in the market and uncertainty in trade quarters regarding Cuba's sugar policy, the world prices fell continuously in the first half of 1959 and stood at as low as 2.55 cents per lb. in July 1959, the lowest level since the war. Subsequently, prices recovered partly in response to the action taken by the International Sugar Council but also because of large U.S.S.R. purchases and the prospect of a smaller European beet crop and the consequent larger import requirements in 1960. By October 1959, the average monthly price had risen to 3.10 cents.

The world sugar price, however, declined again in the following months, in spite of higher imports into Western Europe and substantial sales to the East European countries (which appear as exporters in the International Sugar Agreement). The average price in November 1959—March 1960 was 3.00 cents, as against the minimum price of 3.15 cents stipulated in the Agreement. The Sugar Council met in March-April 1960, and it was agreed not to raise the export quota from the 85 per cent. of basic tonnages decided earlier. This was expected to strengthen the market, as supplies and demand appeared to be closely in balance. But, owing to various factors, including the sale policies of some major producing countries, the rise in prices was only short-lived. These factors, coupled with the prospects of a better crop in Western Europe and other areas, brought about a further decline in prices, particularly in the futures market positions, during June 1960. The world sugar price currently stands at 3.25 cents per lb. in New York and £27 per ton in London.

Indian Sugar Exports

It is against this background that one has to assess the outlook for Indian sugar exports. In view of the wide gap between India and world prices, exports will be possible only at a considerable loss. Considering the necessity of earning foreign exchange, there may, however, be the need for building up an export market for sugar. But the loss on exports must be reduced, say, by selling sugar to the U.S. at a special price which it was paying to Cuba. It may be noted here that, out of the 50,000 tons of sugar released for export on 17th September 1960, about 10,000 tons had been sold up to 15th November—7,000 tons to Malaya and 3,000 tons to Middle East countries. The foreign exchange earned is estimated at Rs. 46 lakhs. But the loss of rupee resources on this transaction is quite considerable.



Busy hands laying down rail tracks of steel, steel lines penetrating into the heart of the wilderness, steel bringing civilization to the doorsteps of isolated villages and homes without number. In this land with its 410 million people and vast distances, there is need for swifter and more efficient transport, be it by road or rail. And transport needs steel — from bicycle to aeroplane every modern vehicle is shaped from STEEL. Soon, even the remotest outpost on this great subcontinent will be part of the national network of transport. Soon all these benefits will be ours, as there is a little more steel for us.

Towards this end, IISCO is working— for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

TEA STATISTICS FOR 1959 ANALYSED

PRODUCTION AND PRICES HIGHER, BUT EXPORTS LOWER

THE year 1959 was on the whole a satisfactory one for the tea industry in India. Although exports during the year were lower in terms of both quantity and value, thus bringing about a fall in foreign exchange earnings, the prices fetched in both Calcutta and Cochin auctions were higher than in 1958, except for Darjeelings, tippy Assams and a few other quality grades. Producers of common teas were thus able to obtain better prices for their teas than in recent years both in India and London. Disclosing this trend, *Tea Statistics—1959*, the sixth in its series, published by the Statistics Branch of the Tea Board of India, shows that the area under tea, as well as production, recorded an increase over the previous year. The upward trend in production was thus maintained unbroken since 1952, though the pace of increase was less marked than that in 1958.

The estimated production during 1959 was 719.68 million lbs., representing an increase of 2.68 million lbs. over the actual output in 1958, at 717.00 million lbs., which was higher than the 1957 production by no less than 31.80 million lbs. The production during the year under review comprised 564.80 million lbs. from North India and 154.88 million lbs. from South India. As compared with 1958, the production in North India was higher by 9.70 million lbs., while South Indian output was lower by 7.02 million lbs. Of the increase of 9.70 million lbs. in North India, Dooars alone accounted for about 6.5 million lbs. The production in India during the last five years is compared with those of the other countries in the following table, which shows to what extent the African countries have expanded their output of tea.

(In million lbs.)

Countries	1959*	1958	1957	1956	1955
India	719.68	717.00	685.20	680.61	678.37
Pakistan	57.17	56.41	46.43	55.04	52.48
Ceylon	413.13	413.15	397.77	375.58	380.01
Indonesia	96.43	102.65	108.87	94.65	96.99
Kenya	27.87	25.18	22.02	21.27	19.06
Uganda	9.76	8.26	8.02	6.80	6.96
Tanganyika	8.15	6.33	6.13	5.35	4.52
Nyasaland	23.27	23.29	18.09	20.80†	17.50†
China	N.A.	312.00	240.00	265.00	238.00
Japan	N.A.	164.44	159.57	155.07	160.62
Formosa	N.A.	34.75	33.07	29.61	32.36
Argentina	N.A.	N.A.	21.40	23.75	4.04

* Provisional. † Estimated.

The area under production of tea as on 31st March 1959 was 809,555.74 acres, having gone up from 798,849.54 acres at the end of 1956-57 and 803,968.86 acres a year later. On the basis of the output in 1958, the yield per acre works out to 886 lbs., which compares favourably with 852 lbs. in the previous year. A breakdown of the per-acre yield shows that the yield in South India, at 900 lbs., exceeds that (882 lbs.) in North India, as in the previous year, when the South Indian yield at 866 lbs. per acre was in excess of the yield in North India by 18 lbs. Two years ago, the yield in North India was over 100 lbs. more than that in South India. There has been an increase in yield in almost all leading tea producing countries in the world, but the sharpest rise is noted in Pakistan from 606 lbs. to 729 lbs. per acre. In Ceylon, it has improved from 697 lbs. to 721 lbs., in Indonesia from 523 lbs. to 530 lbs. and in East Africa from 642 lbs. to 649 lbs.

The total quantity of tea sold at Calcutta auctions during the season 1959-60 was 320.84 million lbs., which compares a little favourably with 319.87 million lbs. in 1958-59. It, however, falls short of the previous record touched in 1955-56 by 10.98 million lbs. On a calendar year basis, however, the sales in Calcutta showed a slight decline from 330.93 million lbs. in 1958 to 329.88 million lbs. in 1959. The quantity sold in Cochin during 1959 was higher, at 59.05 million lbs., as compared with 54.72 million lbs. in the previous year, and constituted a record in the history of Cochin auctions. At London auctions, 183.97 million lbs. of North Indian tea and 33.83 million lbs. of South Indian tea were sold during 1959, as against 145.13 million lbs. and 38.87 million lbs., respectively, in 1958. The sharp rise in North Indian tea sales lifted the total quantity of Indian tea sold from 183.99 million lbs. to a peak of 217.80 million lbs.

The only other country which substantially increased its sales in London auctions was East Africa, from 33.83 million lbs. to 42.97 million lbs. It may incidentally be noted that the quantity of East African tea sold last year in London was in excess of South Indian tea by 9.14 million lbs. It may also be noted that, in 1952, the first year after the London auctions were reopened, the sales of African tea in London were no more than 13.5 million lbs. or 4.7 per cent. of the total quantity (288.03 million lbs.) offered from all countries. In 1959, they represented as much as 12.1 per cent. of the total of 354.49 million lbs. This gives an idea of the rapid growth of tea in East Africa and its successful competition in the leading international market.

The following table shows the progress of sales of Indian tea for export through the markets in Calcutta, Cochin and London:

(In million lbs.)

Calendar year	Calcutta	Cochin	London
1951	165.89*	17.72	53.57
1955	171.40	24.95	184.98
1956	251.80	30.57	179.60
1957	225.69	38.43	193.73
1958	245.19	36.69	183.99
1959	243.79	41.06	217.80

* For season 1950-51.

The trend of prices fetched at the various auctions during the last four years is fully indicated by the following comparative table:

(In rupees per lb.)

	1959	1958	1957	1956
At Calcutta :				
For export	2.17	2.14	2.23	2.15
For internal consumption—				
Dust	2.00	1.90	1.88	2.00
Leaf	1.59	1.46	1.53	1.24
At Cochin :				
For export	2.19	2.10	1.93	2.22
For internal consumption—				
Dust	1.80	1.56	1.61	1.74
Leaf	1.08	1.02	1.64	1.04
At London :	s. d.	s. d.	s. d.	s. d.
North Indian tea	4 10.07	4 10.92	4 8.57	5 1.05
South Indian tea	3 8.46	3 9.85	3 9.07	4 3.11

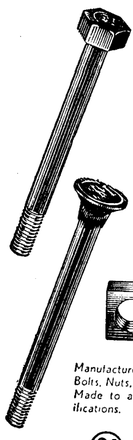
The decline in prices at London in 1959 is accounted for by the fall in prices of quality teas, on the one hand, and the lower export duty prevailing in 1958, on the other. The only two countries which fetched higher prices for their teas were Ceylon and Malaya. Nevertheless, the price of North Indian tea was higher than that fetched by other producers and was as such higher than the average of 4s. 6.59d. for all countries.

The exports of tea from India during 1959 were not encouraging, the quantity having declined from 505.96 million lbs. in 1958 to 472.47 million lbs. and the value thereof from Rs. 136.54 crores to Rs. 126.39 crores. The decline is mainly accounted for by U.K., the exports to which fell from 330.92 million lbs. to 282.57 million lbs. The other countries which took less Indian tea than they did in 1958 were the U.S., Canada, Australia and Iran. Exports to Sudan, Turkey, Iraq, Afghanistan, U.S.S.R., Irish Republic and West Germany, however, showed a marked rise.

The decline of 48.35 million lbs. in exports of Indian tea to the U.K. is a matter of some concern, but it seems to be a part of the general trend. Thus, the total imports into the U.K. from all countries declined by 70.01 million lbs. from 588.28 million lbs. to 518.27 million lbs. The share of India declined from 325.8 million lbs. (55.4 per cent. of the total) to 284.2 million lbs. (54.8 per cent.), that of Ceylon from 160.96 million lbs. (27.4 per cent.) to 137.54 million lbs. (26.5 per cent.), and that of Indonesia from 15.66 million lbs. (2.7 per cent.) to 9.57 million lbs. (1.8 per cent.). The imports from African countries like Nyasaland Tanganyika, Mozambique and Belgian Congo, as well as Formosa, however, recorded substantial increases over 1958.

The estimated internal consumption of tea in India during 1958-59 is 242.98 million lbs. This figure, which is provisional, does not compare favourably with the estimate of 247.96 million lbs. for 1957-58.

According to the estimates prepared by the International Tea Committee, the total world supply of tea during 1959 was 1,513 million lbs., while total absorption was 1,508 million lbs., thus leaving a nominal surplus of 5 million lbs. as against a shortage of the same order in 1958. "It is possible that absorption in the producing countries, particularly India," the Tea Board says, "has been somewhat underestimated by the I.T.C., so that there may not really have been any excess of supply over absorption in India." At any rate, the Tea Board concludes, the world supply and absorption continue to be balanced.



BOLTS and NUTS
for all tightening purposes

You can rely on the output of our modern factory, made to I.R., I.S.D. & B.S. Specifications. Accuracy is meticulously checked in every stage of the manufacture.

a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories ... manufacture plants for water treatment ... supply paper for a variety of uses ... make jute goods and steel castings and structurals ...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

U.N. CONFERENCE ON NEW SOURCES OF ENERGY

SCOPE FOR APPLICATION IN LESS DEVELOPED COUNTRIES TO BE DISCUSSED

THE Economic and Social Council of the United Nations had adopted, during its thirtieth session, a resolution on new sources of energy—solar energy, wind power and geothermic energy. The resolution was to the effect that a United Nations Conference be held in August 1961, in Italy, to discuss the progress made in the application of these new forms of energy, especially with a view to indicating the possibilities of harnessing them in the less developed countries lacking sufficient conventional energy resources for their economic development. In pursuance of this resolution, preparations are now afoot for this important conference to be held in Rome next year. It is stated that this conference will be devoted solely to the exchange of ideas and experience on new energy sources, focussing attention on applications rather than on scientific principles and basic research. This emphasis will include consideration of how techniques could be brought into wider use, particularly for the benefit of less developed areas. The Conference is also expected to keep constantly in view the practical end-uses of the three energy sources and aim at a better understanding not only of the potentialities and limitations of each but also of the possibilities for their combined use, with one another and with other sources of energy.

It is possible to construct a picture of practical application (present and future) of new energy sources from the "substantial guide lines" provided for prospective contributors of papers to the Conference. To take geothermal energy first. A geothermal field may be found in the natural emission of free steam, or natural occurrence of hot water, or the presence of boron, hydrogen sulphide or other substance normally associated with hydrothermal activity. The bringing of steam or hot water to the surface in production wells raises a number of problems connected with drilling and maintenance of wells. Utilisation of geothermal energy for power generation involves development of simple non-condensing and condensing plants. Recent developments and foreseeable improvements concerning turbines, condensers and compressors are considered in this context. Current experience in the utilisation of geothermal energy for heating purposes and in combined schemes involving power generation, heating and/or by-products is also stated to be considerable.

Wind Power

Recent developments and potential improvements in wind power utilisation are dealt with under three headings, namely, for household and other individual uses, for community purposes (isolated units and units in combination with conventional power sets) and for use in connection with electrical networks. The first category refers to small machines, associated with full battery storage, for electricity supplies to individual households or other isolated premises. Here, actual and potential uses include, for example, domestic amenities (such as for lighting and radio) and small power uses (such as grinding, mixing, and small refrigeration) and special applications such as lighthouses and telecommunication stations. Non-electrical machines, used, for instance, for pumping water, may also form part of new developments. The second category mainly refers to medium-sized machines (or combination of several smaller machines) intended for use by larger establishments, or by communities, when only limited battery storage can be envisaged and when some stand-by plant, of conventional type, might be used. The third category is formed by large machines intended for connection to electrical networks fed by thermal or hydro-power plants when the purpose of the wind power plant is to reduce fuel consumption or to conserve water. Important problems raised here include the choice of the total power capacity of the wind power plants in relation to that of the conventional power plants supplying the network, operating problems relating to the combined wind-power/conventional-power-system and the choice of size and type of the individual power units.

Solar energy is being harnessed for three purposes, namely, mechanical power and electricity generation, heating and cooling. The first purpose is achieved by means of piston engines and turbines and by means of thermo-electric converters. The process of utilising solar energy by direct conversion to electricity, by means of thermo-electric converters, is considered very important in the context of power needs in less developed and isolated areas where electricity is either unavailable or prohibitively expensive. Substantial advances are stated to have been made in the development of thermo-electric materials, solar collectors suitable for this use, thermopile assembly and configuration, storage facilities, etc. Although based on a different principle, thermionic generation is considered a potential method for producing electricity from solar energy. The process of utilising solar energy, by means of photo-electric cells, has also registered some progress, especially in its application in the field of telecommunications. It is noteworthy that increasing attention is being given to new materials suited for use in solar equipment.

Solar Energy

Solar energy is being harnessed for a variety of heating purposes. In the sphere of water heating, design studies, manufacture and installation of solar water heaters are proceeding at a quick pace in a number of countries. The economic value of solar water heating in semi-tropical areas is well established; in temperate climates, it may help diminishing appreciably the use of electricity or of fuels when an alternative exists. Considerable experience have been obtained with solar water heating systems in small- or medium-scale industrial plants. In the sphere of space heating, there is already some experience obtained from several solar-heated buildings. Though space heating in many of the underdeveloped regions is of less importance than space cooling, there are large areas, especially at higher altitudes, where it is needed. As for solar drying, it is nothing new. It has been used for centuries in the drying of agricultural products, almost invariably by the simple process of spreading the material on the ground and directly exposing it to sunshine. Relatively little use, however, has been made of solar-heated air in the drying of materials in more or less conventional drying equipment. Some new developments appear to have taken place primarily in processes and equipment for drying materials by solar-heated gases and liquids.

In the sphere of solar cooking, the most important factors in the development and utilisation of solar cookers are their adaptability to the cooking and eating habits of peoples who might benefit from their use. There are also economic factors such as cost of fuel replaced (measured in units of money or of man-hours for gathering wood), cost and method of financing solar cooker purchase, and the value of the fuel replaced, if used for other purposes (e.g. animal wastes for fertiliser rather than fuel). Furthermore, the technical requirements relating to cooker design and performance, including degree of concentration, thermal output, heat loss output, capacity for cooking (quantity of food, rate of cooking) must be adequately met. Solar cookers are already in use or in broad field testing. Subjects of interest, in this context, are improvements in present designs and materials by which cost reductions can be achieved, possibilities for short-term (few hours) heat storage, integration of cookers with other heating requirements, relationship to cooking utensils and their improvement for solar heat supply, portability of cookers, particularly as related to nomadic living. It is felt that the economic, sociological and statistical data on solar cooker use are of exceptional importance, and that one of the most important purposes of the U.N. Conference will be the exchange of reliable information in this field.

For the utilisation of solar energy, the problem of the storage of heat energy in some form or other is a vital issue, since this source of energy is available for a limited period and only during the day. Two questions immediately arise here: first, the locality or the region, for this will determine the number of hours of sunshine available and its intensity; and, secondly, the end-use of energy, since it will determine whether the storage desired has to be at a comparatively higher or lower temperature. For certain uses, again, the period over which storage is desired may be short as, say, storing during the day and using it at night, while for some other purposes, as, for instance, house heating, the storage period for certain regions may extend over the entire winter months. In this connection, the consideration of the nature of the material and the way it stores energy assumes some importance whether the heat is stored in the form of sensible heat only or as heat of fusion or crystallisation or any other manner.

The cooling purposes for which solar energy is utilised are food preservation by refrigeration and space cooling and dehumidification. It is stated that several research groups are engaged in developing solar refrigerators. Similarly, ice-making machines based on absorption refrigeration have been constructed. But not much is known of developments which have already resulted in some practical application of a commercial or semi-commercial character. As for space cooling and dehumidification, there is already some experience in the matter of absorption refrigeration devices as well as humidification and dehumidification processes.

There are two other lines in which solar energy is being, or can be, utilised. One is the production of fresh water with the help of small- and large-scale distillers. Conversion on a vast scale of sea and brackish water into fresh water at acceptable prices, it is said, would have a great bearing on the economy of many areas. To reach this result, it is necessary to reduce the cost of the equipment in the form of distillers. The other line is high temperature processing in solar furnaces. There is, however, a paucity of industrial applications in this line at present.

STAINLESS STEEL IN THE U.S.

Stainless steel sales in the United States will pass the 1,000,000-ton-a-year mark by 1967, according to market research studies just completed by the International Nickel Company, Inc. (I.N.Co.) The summary of individual studies indicates that in 1967 sales of stainless steel will be of the order of 1,112,000 tons, an increase of 87 per cent. over the 592,000 tons sold in 1957. The 1957 sales, in turn, were 118 per cent. above those of 1947. The projected estimate for 1967 would indicate a quadrupling of stainless steel sales since 1947, when consumption was 273,000 tons.

I.N.Co. undertook the market research studies on stainless steel because this group of alloys—the majority of which contain nickel—is currently the largest single market for nickel. Further, "the research results provide practical comprehensive selling aids for use by stainless steel producers and steel service centres in defining and locating stainless steel markets, in forward sales planning, and in realising the big stainless steel sales potential of the sixties. All the forecasts for 1967," it is said, "are necessarily statistical. No set of projections so derived can make practical allowance for future developments in technology or marketing."

In addition to projecting estimated sales for stainless steel, I.N.Co. studies indicate for 1967: carbon steel sales of about 96,585,000 tons, an increase of 38 per cent. over 1957, and total alloy steel sales of 7,280,000 tons, a gain of 61 per cent. over 1957.

The following table of total United States sales summarises the results of the study:

	1947	1957	1967
	Tons	Tons	Tons
Stainless steel	273,000	592,075	1,112,750
Total alloy steel	3,077,000	4,525,000	7,280,000
Carbon steel	54,515,000	70,110,000	96,585,000

The first individual study—"Appliances, Utensils and Cutlery"—indicates that stainless steel sales in this major field will in 1967 be double those of 1957—76,800 tons as compared with 38,600 tons. The study outlines the economic picture as it affects this field, and sets forth the sales picture for utensils, hollow ware, flat ware, cutlery, small appliances and major appliances—the last including home laundry equipment, dishwashers; stoves, ranges and space heaters; refrigerators and air conditioning equipment.

The second study—"Food Processing Machinery"—shows that 43,000 tons of stainless steel will be required by this field in 1967. This represents an increase of more than 100 per cent. over 1957.

A NEW DESIGN OF OIL CIRCUIT-BREAKER

A new 132-kV circuit-breaker produced by the Switchgear Division of Associated Electrical Industries Ltd. has been designed with special regard to convenience of transport and installation, and orders for the new equipment have already been received from overseas.

The new circuit-breaker, Type LG6C, is of three-tank monobloc design, and has 60 per cent. less oil content than a conventional 132-kV oil circuit-breaker, while retaining all the required clearances under oil. Each phase is contained separately. The rigid one-piece construction provides easy shipping and installation, the circuit-breaker being transported as a fully tested unit complete with mechanism and bushings. This construction also ensures negligible deflection under short-circuit conditions.

NEW PRODUCTS AND PROCESSES

Equipment To Measure Speed of Passing Vehicles

A NETHERLANDS firm has developed what is claimed to be a simple and reliable equipment enabling the speed of passing vehicles to be measured very accurately. It consists of two rubber tubes stretched across the road at a specified, very short interval and connected electrically to an instrument in the checker's hand. This instrument indicates in hundredths of seconds the time required by the front wheels of the vehicle to be checked to cover the distance between the two tubes. By means of a table the speed of the vehicle can be determined from the time read off. Operation of the equipment is only ensured by pushing a button on the instrument so that, when a number of vehicles are passing in file, it is possible to single out one for checking its speed. The instrument only responds to the passing of the front wheels of the selected vehicle across the two tubes, the passing of the rear wheels and wheels of other vehicles being of no effect. The use of an extension cable enables the observer to take up his position at a considerable distance from the measuring point, so that he can himself immediately halt any drivers exceeding the speed limit. The unit operates on a 12-volt car battery. The unit is small but robust and weighs only a few kilograms without the extension cable. The equipment can also be used for other purposes requiring measurement in very short time units, e.g., human reactions. In this case a simple accessory can be supplied as an extra.

Universal Manometer

Manometers commercially available in the market are either mercury or air type. Their functions are not interchangeable and they are not adaptable to wide range of differential pressures. A new device, designed and fabricated at the P.S.G. College of Technology, Coimbatore, under a research scheme sponsored by the Council of Scientific and Industrial Research, combines the features of both air and mercury manometers and can measure static pressure, vacuum pressure and differential pressure. The new device is specially adapted for indicating fluid flow in closed conduits and over a wide range of differential pressures. Such devices are not commercially available in the market. Besides its use as mercury manometer for very low pressure, it can be used for intermediate ranges by using tinted carbon tetrachloride, acetylene tetrabromide or bromoform, in place of mercury, as manometric liquid. Unlike ordinary single column manometers, the readings in this manometer are not affected by any irregularities in the bore of the glass tube.

Mobile Soil Testing Apparatus

British Railways' construction engineers can now take their soil testing apparatus right on to the site. A new mobile laboratory, specially designed for scientific tests of earth samples, is now in use in their North Eastern Region to supplement the main laboratory at York. It has already been successfully used for compaction testing of materials on the sites of the new mechanised marshalling yards in the area. The laboratory is an 11 feet long road trailer fitted with benches and cupboards. Its equipment includes a chemical balance, a 10 kg. balance and a portable 3-ton tri-axial testing machine for testing specimens of clay by compressing on all sides. A light hand-operated drilling rig is used in conjunction with the mobile laboratory for obtaining undisturbed earth samples up to 50 feet below ground. Other items include a water heater, bunsen burners, convector heater and thermostatically controlled oven, all fed by Calor gas. Lighting is maintained by batteries. Before travelling, the chemical balance is dismantled and the 10 kg. balance damped and secured to the wall of the trailer. Two lockers are fitted on the outside of the vehicle for spades, earth augers and associated equipment, and a third contains the Calor gas supply.

Novel High Voltage Relay

The use of electromagnetic relays in monitoring devices on circuits at very high voltages can introduce serious problems with regard to satisfactory insulation. A neat solution to these problems has been devised by an electrical engineer at the Harwell Atomic Energy Research Establishment of the U.K. Atomic Energy Authority. The invention replaces the relay by a beam of light and a photocell. The beam is produced by a neon glow-discharge tube inside a plastic housing which defines the path for the light beam, acts as insulation and excludes external light. The circuit being monitored incorporates the neon tube and is arranged to energise the latter in case of fault conditions. The tube strikes and the light emitted causes the photocell to operate an ordinary low-voltage relay which in turn operates an alarm. In one embodiment, the device operates satisfactorily with as much as 8 kV between the neon tube and the photocell, the low-voltage relay being near to earth potential and thus presenting no insulation problem. For use at still higher voltage where insulation problems require the distance between neon cell and photocell to be increased, a light-guide of glass or methyl methacrylate rod may be inserted to give better light transmission.

Foundry Core Oil

Foundries in India have been faced with the problem of finding a core oil that would yield rapid-hardening accurate cores comparable in strength and other characteristics with those obtained with imported oils. A product recently developed at the National Chemical Laboratory, Poona, from linseed oil using a special polymerisation technique seeks to provide an answer to this problem. The product has the following advantages: It imparts sufficient green strength to the sand core at room temperature in 2-3 hours; the core can, therefore, be taken out of the core box without any deformation and transported safely from the box to the oven for baking. This property is specially desirable in making large cores. It eliminates the need for starch or dextrin generally used as an adjunct to the core oil. It imparts good finish to the mould and minimises machining operations in casting, resulting in higher efficiency of production. Cores made with this oil give castings which shake out and clean easily. This is because the core oil is rendered destructible at high temperatures attained with the heat of the molten metal during pouring. Hammering and cleaning are thus entirely obviated. Sand cores made with the new product bake in a shorter time than those made with double boiled linseed oil. This is a great advantage as more cores can be cycled through a furnace per day with consequent fuel economies.

The new product is cheaper than imported air-hardening oils.

Fibre Glasstop for Convertible Cars

An immensely strong fibreglass hardtop, easy to fit and light in weight, is now available for Hillman Minx, Sunbeam Rapier and Singer Gazelle convertible models from 1956 onwards. The new hardtop, weighing only 43 lbs., gives convertible owners the best of both worlds, for it is designed to be fitted over the folded down soft hood. It also offers greater security from pilferage, good all-round vision and gives a new smart look for winter motoring. The hardtop can be fitted and removed in under two minutes and is secured to the body by four chromium-plated brackets—two at the front and two at the rear. Rubber sealing ensures that no part of the hardtop touches the body of the car direct and this eliminates the possibility of "drumming" at high speed.

Determining Ash Content of Coal

The Netherlands State Mines have designed an apparatus for the rapid, continuous determination of the ash content of coal. The apparatus consists of: (a) A sampling unit which takes a representative sample from the run of coal. (b) A conditioning unit in which the sample is dried and ground. (c) The actual analysis unit. The operation of the analysis unit is based on the difference in the reflection of X-rays between combustible and non-combustible coal constituents. The samples chosen from the run of coal and conditioned are fed continuously to a rotary disc exposed to an X-ray beam. The difference in reflection between the various constituents of the sample and a reference sample is measured photo-electrically and recorded on a strip, and also transmitted to a meter calibrated in per cent. ash. The signal can also be used for automatic control of the coal-washing plant, thereby ensuring a more constant product as regards ash content.

'Drop-in' Petrol Engine

A petrol engine which can be lifted out of a lawn mower and merely dropped into place to power some other garden tool is the latest American effort to extend the use of engines. The exchange of tools is made simpler by fitting the expanding clutch member on the engine into a clutch cup built into each tool. This means the power shaft does not have to be connected. Instead, as the engine starts up, the clutch expands and locks to the mechanism of the tool. The engine, with its own control handle, weighs some 40 pounds. A four-stroke, it produces 3.25 horsepower. It can be fitted into a rotary or sickle-bar mover, a tractor to pull a garden tiller or cultivator, or a vacuum cleaner to clear a lawn of fallen leaves. A heavy wire lock of the cam type holds the engine down to each tool after it is inserted.

Preservation of Sugarcane Molasses

A 1.5 inch supernatant layer of crude diesel oil on molasses has been found to have a preservative action. The method reported by Birla Sugar Research Laboratory, Hargaon, is economical, yet effective. Crude diesel oil is easily available and the quantity required is very small—for a 38 feet diameter tank holding 31,000-35,000 maunds of molasses, only about 1,000 gallons (cost Rs. 1,500) of diesel oil are required. While removing molasses from the tank, a small quantity of it should be left back so that the supernatant layer of oil remains intact for further use.

you have just opened
A METAL BOX CONTAINER!

Salted or plain, cashewnuts need to be sealed in a specially designed container in an inert atmosphere. This way they retain their freshness and flavour for long periods. Thanks to the container's protective qualities, India has been able to export large quantities of cashewnuts to distant lands and to earn valuable foreign exchange. The U.S.A. alone buys Rs 11 crores worth every year, making the humble cashewnut India's second largest dollar earner.

In the country's drive to expand the export of consumer goods, Metal Box, leaders in the packaging field, are playing an important role. Already, over Rs 30 crores worth of consumer goods—mostly perishables—are finding their way abroad in Metal Box containers. Scientifically designed for protection and superbly printed for sales appeal, Metal Box containers are showing how correct packaging helps to establish Indian goods in foreign markets.

Metal Box are also taking a direct part in the country's drive to earn foreign exchange by rapidly expanding the export of containers, closures, hardware and publicity media.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal
COLLAPSIBLE AND RIGID TUBES for toothpaste, ointments, adhesives and pills
CROWN CORKS for carbonated drinks
R. S. PILFER-PROOF AND OTHER CLOSURES for bottled products
COMPONENTS for radio, automobile and electrical industries
PUBLICITY MATERIAL including advertising tablets and calendars
PLASTIC PRODUCTS including Diothene bags, foil laminate pockets and injection mouldings
HARDWARE including trays and table mats
MACHINERY Can Closing and Reforming and Bottle Sealing Equipment

NEW PUBLICATIONS

The Commonwealth and Europe. Prepared by the Economist Intelligence Unit, 22, Ryder Street, St. James', London, S. W. 1., September 1960. Pages: 606. Price: Sh. 42, including postage.

THIS painstaking study by the Economist Intelligence Unit has been sponsored by Britain in Europe Ltd., an organisation composed of leading industrialists, bankers and trade unionists interested in economic developments in Europe and their likely effects on British economy. It is complementary to the Unit's earlier study, *Britain and Europe*, which gave the finding "that the prospects for British industry within a single European market would be decidedly favourable." It would appear that British hesitancy in the matter of full-fledged participation in a single market formed by a possible merger of the European Economic Community of the Six and the European Free Trade Association of the Seven (including Britain) has been due to some serious doubts. These doubts have stemmed from Britain's special interests in the Commonwealth. The effect of Britain's integration with the Continent on the Commonwealth trade with the U.K. and other European countries has, therefore, been very much in the mind of the British Government. Since the present study has come to the conclusion that "if the E.E.C. and the E.F.T.A. were to merge, it would be possible to arrange terms that neither violated the principles of the Common Market nor did serious harm to any substantial flows of Commonwealth trade" and that, at the same time, "the Commonwealth's exports, in general, would benefit from faster economic growth in the U.K. and easier access to Continental markets," it may be that, as the Right Hon. Lord Salter, President, Britain in Europe Ltd., has stated, the study may "at least help to remove some of the doubts which have led to British hesitancy in this respect of the past."

The study, based on extensive research and interviews, is purely objective and technical. It provides a complete account of the economics and trade of the Commonwealth countries in the context of European integration. Already, according to the study, the E.E.C.'s imports from the Commonwealth, which in recent years have been in the region of £750 million to £850 million, are tending to increase more rapidly than Commonwealth sales elsewhere. A high proportion of this trade, mainly in raw materials will continue to enter the Common Market duty-free. While the study admits that exporters of manufactures may be hurt in the event of the E.E.C. pursuing a restrictive quota policy against low labour-cost goods from Asia and that exports of cocoa from West Africa and coffee from East Africa may be affected, it also gives the broad finding that the creation of the E.E.C. should in general either improve the chances of increasing exports from individual Commonwealth countries or leave them largely unaffected. As for the E.F.T.A., its creation, according to the study, will have negligible effects on Commonwealth trade other than exports from Canada.

In this context, it would be useful to quote *in extenso* the study's observations on India's fears:

"With its external finances in so precarious a situation, India is understandably nervous about the effect on its trade of current plans for economic integration in Europe. The E.F.T.A. arouses no concern, but it is feared that Indian exports will suffer by the creation of the E.E.C. particularly through competition from French African produce, and that European capital which might have come to India will now go elsewhere. These fears are probably groundless. India can put up a stronger political claim to financial assistance from foreign Governments than almost any other underdeveloped country, and the small inflow of private capital is unlikely to be much influenced by changes in Europe. It appears too that very little of India's existing export trade will be damaged by the common external tariff of the Community, even though over two-fifths of identifiable exports to the E.E.C. will be subject to tariff changes.

"Among the more important of India's exports to the Six, hides and skins, manganese ore, raw wool, coir yarn, and raw cotton will enter duty-free and there are many items in the enormous range of minor Indian exports of raw materials—iron ore, mica, shellac, hemp and a miscellany of vegetable and animal products—which will also continue to do so. Sales of jute and cotton textiles to the Six are very small and are unlikely to be much affected by the change in tariff levels though they could be wiped out by unfavourable quota treatment. Foodstuffs are inevitably more vulnerable. Coffee sales are safeguarded against French African competition by the excellent quality of the Indian product, but some Indian common tea, though not the higher-grade leaf, might be displaced by tea from the Belgian Congo. If, on the other hand, the E.E.C. could be persuaded to reduce internal taxation on tea, the market might grow sufficiently to permit a substantial increase in Indian sales. India's small tobacco exports to the Six are again protected from French African competition by their superior quality, while French Africa does not compete on any significant scale in such items as pepper, cashew nuts, castor and linseed oil. On the whole, then the effect of the E.E.C. on India's trade is likely to be slight.

"The effect of a merger of the U.K. tariff with that of the Six would also be negligible so far as raw material exports to Britain are concerned. The loss of Commonwealth Preference on tea and tobacco would be no great matter since it is shared with India's chief competitors, but a duty fixed at the E.E.C. level on tea imported into Britain would damage India's trade by raising the price of tea and so depressing consumption. It seems unlikely, however, that Britain would in practice be asked to take such a step; the two markets could be kept separate in this instance.

"Manufactures present a more difficult problem. Few Indian goods, other than jute textiles, are sufficiently competitive to maintain their footing in the U.K. market, if they had to sell across a tariff on equal terms with the Chinese and the Japanese and meet duty-free competition from the Continent. If trade were not to be damaged fairly severely by a merger between Britain and the Six, India would have to have a duty-free quota for grey cloth sold to the U.K., and liberal quota treatment on the Continent for jute manufactures to offset the loss of trade with Britain in other goods. U.K. participation in a wider European association on these terms would probably mean that any Indian losses would be neutralised; but the structure of India's exports is such that it is unlikely to secure much positive gain from more rapid economic expansion in Europe. Nor has it much to give in return for European concession; Commonwealth Preference on Indian imports is strictly limited."

The study has also reached the broad conclusion that the system of Commonwealth Preferences is less important to the exporting countries concerned than the guarantee of an adequate market in the U.K. This is in so far as the existing system of Commonwealth trade is concerned, which explains the importance that the Commonwealth attaches to trade with the U.K. But, what will happen when Britain decides, in its own interests, to participate fully in a single European market involving a common external tariff? It is here that the study comes to the wise conclusion that Britain should throw its weight on the side of liberalism and help to secure easier access for Commonwealth manufactures, especially cheap Asian goods, to the European market as a whole. If that happens, it would be a gain outweighing any loss entailed by less easy access to the U.K., in the wake of that country's full-fledged participation in European integration. But the 'if' here is a big one.

Industrial Labour in India. Edited by Messrs. V. B. Singh and A. K. Saran. Published by Asia Publishing House, Bombay. Pages: 528. Price: Rs. 18.50.

This book is a collection of essays on the various aspects of industrial labour in India by well-known scholars both from India and abroad. In planning the volume, the editors had in mind primarily the post-graduate students of labour economics who have for long felt the need for an up-to-date book of this kind. This perhaps explains the academic slant of most of the contributions and the absence of trade unionists among the contributors. Whatever the reasons, the omission of such questions of current interest as workers' participation in management and productivity certainly makes the book less topical than it would otherwise have been. If space was the limiting factor, some chapters included in the volume could easily have been dispensed with without having to alter materially the plan of the book or the relative importance assigned to each subject.

The book is divided into six sections. The first deals with the theories of wages, the methods of wage payment, their social and economic consequences, the relation between wages and national income and wage policy in a planned economy. The second is concerned with various conceptions of social security and the question of reconciling social security measures with development programmes. The concept of, and the trends in, real wages form the subject matter of the third section while the fourth deals with the development of social and labour welfare. The legal machinery for industrial peace as it has evolved in this country and the history and functions of trade unionism with particular reference to India, form the theme of the penultimate section. The last section, devoted to industrial sociology, discusses principles of industrial sociology and psychology, problems of personnel management, industrial fatigue, occupational diseases, accidents, etc.

These essays, scholarly and well-written though they are, do not add up to a general theory or an integrated philosophy of labour; but they do provide a comprehensive survey of the field by experts. No better assessment of the volume is possible than that made by Mr. V. V. Giri (who else is more competent to do that?) in his foreword to the book:

"Its more important merit lies in the fact that an attentive reading will enable both the student and the general reader to acquire a perspective on labour in contemporary society. That this has been achieved to some extent through a collaborative volume is itself significant. In this way, the volume is more than a textbook of labour economics; it is a preliminary attempt towards a unified theory of industrial relations."

It is rarely that the various aspects of industrial labour are so exhaustively and competently dealt with in one volume. Students of labour economics would find this volume an invaluable aid to a more thorough understanding of labour problems.

Directory of Indian Engineering Exporters. Published by the Engineering Export Promotion Council, India Exchange (7th Floor), Calcutta 1. Pages: 271. Price: Rs. 10.

The Engineering Export Promotion Council was established in 1955 with the object of promoting export of engineering goods from India. Since its inception, this Council has been doing yeoman service to Indian exporters. The multifarious activities of the Council include, among others, sending trade delegations to survey foreign markets and assess their potential, participating in trade fairs and exhibitions, opening showrooms in foreign countries and maintaining registers of exporters, etc.

The Directory under review, prepared by the Council, is in its third edition. It covers the same ground as its two predecessors did. It contains a brief review of the engineering industries besides a list of members of the Council, brands and trade marks registered in India and names and addresses of exporters and Government of India's embassies, high commissions, etc. It will serve as a useful reference guide to Indian exporters and foreign importers.

INTERNATIONAL HIGHWAY NETWORK IN ASIA

Highway experts from five South-East Asian countries have just concluded a meeting in Bangkok and have agreed to forge ahead with the United Nations-sponsored project for the establishment of an international highway network in Asia.

The experts attending the zonal meeting were able to reach agreement on several aspects of the international highways plan. For example, in discussing the need for outside aid that the countries of Asia will require to improve their national roads and to establish the missing links within the international network, several suggestions were considered. One proposal calls for an international team of highway experts to be set up to review the present status of the roads, particularly the missing links, and to help mobilise outside assistance.

The meeting also reviewed the progress made by the participating countries in the implementation of the Asian Highway project. It was seen that serious bottlenecks exist in Burma, where missing links in the international network appear outstanding. In Cambodia work is under hand and construction along the proposed international routes is going on. In Laos, large-scale road construction works have not been possible "due to certain unavoidable circumstances." Work on the missing links in the North and South of Thailand, connecting with Burma and Malaya, is proceeding according to plan. In the Republic of Viet-Nam, too, work is proceeding and a great deal of road construction has been undertaken within the continental scheme.

The group, likewise studied the proposed numbering of the international highway network in Asia, and agreed that Highway 1, for example, identified as A1, would run from Saigon to Teheran, through Saraburi (Thailand), Mandalay (Burma), Dacca (East Pakistan), New Delhi (India), Lahore (West Pakistan), and Kabul (Afghanistan). The other main routes of the network would be numbered A2, A3, A4 and A5. Other arterial and secondary routes would follow progressive numbering up to 99.

Notice

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Preference Register of Members of the Company will be closed from the 12th December 1960 to 2nd January 1961 both days inclusive for the purpose of payment of the dividend for the half-year ending 31st December, 1960 on the 2nd January, 1961 at the rate of Rs. 3.50 per share less tax to be deducted in accordance with the provisions of the current Finance Act.

FIRE PROTECTION AND FIRE INSURANCE

SOME LESSONS FROM BRITISH EXPERIENCE

SOME recent outbreaks of fire in the City and in other parts of the country have again turned the spotlight of public attention on inspection and control of storage of inflammable goods as also the wider question of prevention of fire. Apart from damage to property, the human tragedy, not infrequently involved in outbreaks of fires, makes its prevention an issue which transcends the cold calculations of loss of property and production.

No precise estimate of the loss and damage to property caused by fires in this country is available. But if anyone cared to count the cost, as is done in countries like Britain, it will surely add up to a staggering figure. The incidence of fire, especially industrial fire, is likely to increase, as more and more factories and industries come into being. Unless, therefore, effective action is taken to ensure the provision and maintenance of adequate fire protection in all business establishments and factory premises, the wastage of wealth will inevitably go up.

Insurance companies have a direct stake in prevention of fire, in that they are called upon to indemnify the losses arising out of fire if the property damaged happens to be insured. The experience of Britain in the prevention and fighting of fire and the role played by insurance companies in them offers some lessons which could be learned with profit in this country.

Continuous Inspection

Insurance companies in Britain participate in the battle against fire in four ways. First, insurance surveyors are continually inspecting premises and advising on fire precautions. At the same time, the insurance companies have a differential premium structure which gives strong financial incentive to policyholders to take proper preventive measures. Secondly, insurance companies founded in 1935, the Fire Research Station at Borehamwood and now share its cost with the Government. This station provides much valuable new information about the behaviour of materials when exposed to fire and the best techniques of fire fighting and fire protection in buildings. Thirdly, in order that the community might derive the utmost benefit from this research, the Fire Protection Association was formed by the companies as a national centre to formulate codes of practices for fire protection and to give advice on problems relating to fire in all types of buildings. Fourthly, the companies seek to limit the damage to property once a fire has occurred by setting in motion their salvage corps. They have three salvage corps, one each in London, Liverpool and Glasgow, whose duty it is to attend all outbreaks where salvage work may be practicable.

The sharp increase in fire losses in Britain in the past two years has imparted extra urgency to the question of fire prevention. The cost of direct fire damage in the U.K. jumped up from £24 million in 1953 to £44 million in 1959, the highest ever recorded. If the trend so far witnessed this year were to persist, 1960 may prove to be the worst on record in respect of fire losses. Total direct fire losses during the first eight months of this year aggregated £30 million, £3 million higher than in the corresponding period of last year. The monthly average till the end of August 1960 was £3.77 million, as compared with the monthly average of £3.68 million for the whole of 1959 and £2.01 million for 1958. Apart from the direct loss, there is also the consequential loss which results from reduction of output and interruption of trade and business. It is clear, therefore, that the total loss involved, direct as well as consequential, is higher than what the abovementioned figures indicate. It is for this reason that the British Home Secretary recently described fire as one of the three main enemies of society, the other two being road accidents and crime.

The direct relationship between incidence of fire and the business of insurance companies is evident from the fact that higher fire wastage has cut into the profits of fire insurance, traditionally regarded as the most stable branch of insurance. In 1959, for instance, 17 of the leading British companies, having worldwide business and a combined premium income of £248 million, showed a profit of only 1.85 per cent., as compared with 2.79 per cent. in 1958.

In spite of the advances made in the science of fire protection and the techniques of fire fighting, the fact remains that there are ever so many causes of fire, especially in industrial areas, as to make certainty in the prevention of fire almost impossible. Industrial firms can do much to prevent and minimise the risks of damage by fire if they consult experts on the subject when planning new premises and modify the existing ones.

Comprehensive cover offered by British insurance companies has taken the sting out of the fire losses suffered by individuals and firms. Insurers undertake to indemnify not only the direct loss resulting from fire but also loss of profits arising from interruption of production or business. In Britain, buildings and plants can be insured in two different ways. Either they can be covered for their present value or they can be insured on a reinstatement basis. The former is the ordinary basis of fire insurance. In the latter case, the insurers undertake to meet the cost of reinstating buildings and plant which have been destroyed by fire in a state equal to, but not better than, their condition when new.

L.I.C. TO DO BUSINESS IN U.K.

Replying to a question, Mr. Morarji Desai, Union Minister for Finance, confirmed in the Lok Sabha on 24th November that the scheme to start writing life insurance business in the United Kingdom by the Life Insurance Corporation had been finalised. Outlining the main features of the scheme, Mr. Desai said that both sterling and Indian rupee policies would be issued in the United Kingdom to suit the needs of Indian nationals residing in that country as well as of other Commonwealth citizens. Policies under most of the existing schemes in India would be offered in the U.K. However, joint life assurance and two-year temporary insurance would not be offered. He disclosed that it had been decided to offer slightly reduced rates of premium for people insuring in the U.K. These reduced rates were on a par with what the Corporation offered in British East Africa.

FIRE PREVENTION WEEK

Aroused, perhaps, by the alarming increase in the incidence of fire, Britain is launching a all-out drive to arouse national consciousness t the dangers of fire. A National Fire Prevention Week is to be observed next year. It is being organised jointly by the Fire Protection Association and the Royal Society for the Prevention o Accidents. Government departments, local authorities, fire brigades, insurance offices, industry, commercial establishments, schools and many other organisations are participating in the observance of the week. It will be backed by all the media of public relations and publicity. Exhibitions and displays will show how the public and industry can help fire prevention.

The idea of the Week originated from the comment of Mr. R. A. Butler, the Home Secretary that fire, crime and road accidents were the three major enemies of society. On an average, about 550 people die by fire in Britain every year, in addition to fifty to hundred at work. Fires reported to the Fire Prevention Association during the first quarter of this year resulted in the death of 111 people.

ROAD SAFETY CONGRESS IN BRITAIN

Eight far-reaching road safety proposals affecting all classes of road users were discussed by over 1,000 delegates at this year's National Safety Congress organised by the Royal Society for the Prevention of Accidents held in the third week of October at London. Among the proposals submitted by the R.S.P.A. and discussed at the Congress included introduction in Great Britain of a scheme of awarding black marks to drivers with the withdrawal of licences in cases where drivers received a maximum number of black marks, penalties for parents who allow children to go unaccompanied on busy roads and penalties for unqualified driving instructors, and regulations for pedestrians.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia; these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

TUBE INVESTMENTS OF INDIA, LIMITED

DR. A. RAMASWAMI MUDALIAR OUTLINES PROGRESS OF EXPANSION SCHEMES

INDUSTRIAL DEVELOPMENT HAMPERED BY CERTAIN FACTORS

ADDRESSING the shareholders of the Tube Investments of India, Ltd. at their Eleventh Annual General Meeting held at Madras on 28th November 1960, Dr. A. Ramaswami Mudaliar, Chairman, said that the year ended 31st July 1960 witnessed the completion of some of the expansion schemes on hand. He indicated that further progress was contemplated, but there were certain adverse factors which had to be removed for the proper industrial development, in general, and the smooth evolution of the productive capacity of the Company in several directions, in particular.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"I have much pleasure in extending to you a cordial welcome to this the eleventh annual general meeting of the shareholders of Tube Investments of India Limited.

"The Directors' report, the balance-sheet and the audited accounts for the year ended 31st July 1960 have been in your hands for some time and, with your permission, I shall take them as read.

"In my last report, I referred to various expansion schemes which were in progress, both in connection with the cycle factory and the tube factory. The year under review has seen the completion of some of these projects. Your factory now produces bottom bracket axles and bottom brackets, and these are expected to be available to manufacturers by January next. I referred to the chain project in my speech last year. It is our object in establishing the chain project, to produce industrial chains, as well as chains for bicycles. Owing to a change in the foreign collaborators whose technical know-how was specially desired for industrial chain production, the project was a little delayed. We have now secured the association in technical matters of Messrs. American Steel Foundries International, who are associates of Diamond Chain Company of Indianapolis, U.S.A., and a subsidiary of your Company has been formed under the name T. I. Diamond Chain Private Limited. Another subsidiary company, T. I. Miller Private Limited, will shortly be established for the manufacture of lamps for all kinds of automatic vehicles, bicycle dynamo lamps, etc., in collaboration with Messrs. H. Miller & Company Limited of Birmingham.

Saddles Manufacture

"The manufacture of Wright saddles, to which reference was made last year, has been slightly delayed owing to the fact that it has since been decided that the factory should be situated at Ambattur and not at Avadi. The machinery for the purpose has started coming and production will begin during the current year.

"So far as the tube factory is concerned, a second tube mill has been erected and is in operation. The work and preparation for the installation of the cold rolling mill is proceeding and we hope to have it in production during the current financial year.

"All this expansion and the consequent foreign exchange outlay have been made possible by the unhesitating co-operation which Tube Investments of Birmingham has extended to us. The foreign exchange has been obtained partly in the increased equity capital allotted to them and partly in the form of loans. While these developments are in themselves satisfactory and while further progress is anticipated, there are certain factors which I hope will be resolved to enable the smooth evolution of the productive capacity of our work in several directions.

Adequate Power Supply Needed

"One of the most urgent needs in this State for proper industrial development is adequate power supply, a fact which has been frequently brought to the notice of the authorities. The resources from hydro-electric power have virtually been exhausted. Thermal power is stated to be costly as coal is not available within the State itself. The power proposed to be derived from the lignite at Neyveli, is virtually earmarked for industrial development round that area. It is, therefore, of the highest importance that the State Government and the Central Government should explore the possibilities of adding to the power supply in this area, if industrial development adequate to the needs of the population has to be ensured. I look forward partly to the collaboration in this regard of the neighbouring Southern Indian States which may have power supply in excess of their needs; but I look forward even more to the Central authority which, by its planned programme of industrialisation, has taken the responsibility of ensuring for each area, at least a minimum standard of industrialisation and, therefore, of industrial employment, to see that the essential factor in industrialisation, namely, power supply is ensured for this State.

"A second factor which has to some extent affected rapid industrial development is the law that has been enacted regarding development rebate, and how and when it is to be provided for. The present legislation on the subject makes it very difficult for industrial units which desire to expand rapidly, and find their own foreign resources to do so, as the incidence of such a provision seriously impinges on a fair dividend policy which a company wishes to pursue. I still hope that the Finance Minister will reconsider this aspect of the question and provide for a substantial period of time during which the amount of development rebate may be spread over.

Government Policy

"There is a third factor which has caused concern to industrialists and intending industrialists, particularly in areas like the southern region. It has been stated that the policy of the Government is to see that no particular industry is overdeveloped in any particular region. If, for instance, the bicycle industry is developed in West Bengal or Madras, new units for the production of cycles should be licensed elsewhere than in these States. *Prima facie* this looks reasonable, but there is a serious fallacy behind this reasoning. If every industry could be so distributed, equally or proportionately, in every part of the State, such a decision may not be incorrect. But the position that would arise if this were to be followed to any degree will be that the underindustrialised areas are even more at a disadvantage with resultant overprosperity in one area and underemployment and sub-prosperity in another area, for it is quite patent that certain areas can only develop certain kind of industries. The fact is that the total industrial development of an area has to be taken into consideration and not the development and distribution of a particular industry alone. The public projects established by the Central Government have created enough disharmony among the various States and I venture to utter a caution that this disharmony may be aggravated and added to, by the policy of distributing any particular industry to all parts of the country.

"Let me turn now to our own specific problems. As you may have noted from the Directors' report, there was an unfortunate strike in the cycle factory for a period of six weeks, due more to misunderstandings than to lack of sympathy or co-operation on the part of the management. I am, however, glad to state that a five-year agreement has been reached, between the management and the workers, whereby conditions of peace and progress will prevail during the period.

Social Needs Developed

"Your Company, as I pointed out in a previous report, is aware of the part it should play towards society, and especially towards the society around which it is situated. The profits that it earns are not only divided between the Governments and the shareholders but a substantial portion of them has been diverted towards promoting the social needs of the population in the area. The polytechnic established in the area is one of the best in the State. The higher secondary school which has recently been inaugurated and the hospital which is contemplated and the foundation-stone of which will be shortly laid, are evidences of the enlightened policy of the management, a policy in which the British shareholders participate with equal enthusiasm along with the Indian shareholders. I should add that these projects costing several lakhs of rupees have been made possible by a very substantial contribution by the A. M. M. Charities Trust, the trustees of which are also among your Directors. Whatever comment may be made about the private sector and its policy of profit making, I trust that you have sufficient evidence to show that this Company and your shareholders are trying to march with the times and are conscious of the dictates of the times.

"I should only like to say a final word about the excellent and enthusiastic co-operation we have received from all our officers and from our workers both in the administration office and in the factories, during the year under review."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

BRITISH BID FOR LEAD IN CLOCK INDUSTRY

With meeting competition from the "European Six" as its principal aim, a new company Minipulse Clocks Ltd., has been formed with offices at Clutha House, 10 Storeys Gate, London, S.W. 1. In certain types of clock installations, particularly those required by industry, it has become increasingly obvious that continental manufacturers are producing at prices which are considerably below average British prices. By developing a completely new design of clock and movement ("all-British" stress the makers), Minipulse claim to have placed themselves in a highly competitive position without sacrificing standards of time-keeping or the quality of those materials which tend to make British instruments seem so expensive in comparison with continental types.

The Minipulse system is the subject of patent applications. One of its unique features, possessed by no other clock system, is the movement which operates the slave dials. This is less than 1 inch thick and can be housed within the clock bezel—so avoiding the need for cutting recesses in walls as is the case with normal flush-mounted dials. Prices, "without waging a price war," are keenly competitive, say Minipulse, including design service for turret and bracket clocks where needed.

SOME ASPECTS OF COMPANY LAW AMENDMENT

OVER-LEGISLATION GALORE—COURTS MAY BE REPLACED BY GOVERNMENT

By A. C. K. Krishnaswami

OUR legislators are at it again. The ink is not yet dry on the new Companies Act, and it is doubtful if even the Administrative Officers appointed to enforce it have fully grasped all its sections. And now we are adding a few hundred sections to a statute already overburdened with provisions. The new Bill legislates for evasions of and loopholes in the new Act. Hard cases make bad law. At this rate, this legislative activity will have to be an annual feature, as, before long, loopholes would be discovered in the amending Act by the ingenious few intent on evading the law.

It is, alas, too true that the law evader is ahead of the law and will always be so. The crook-proof law has yet to be enacted, not only as regards companies but all other subjects.

I submit that, even from 1936, if not from 1913, the law clothed Government with sufficient powers to detect and punish every kind of offence that can be committed. A company law can only consolidate special statutory provisions applying to particular types of corporate activity. Behind it should be, and always was, a general body of law and equity applicable to all companies and holders of offices of trust in them. The advantage of a self-contained company code to the exclusion of the general law is doubtful. Parliament should not lose sight of this aspect of the matter in its anxiety to add to Company Law provisions.

Fraud, breach of trust and theft have been known ever since civilisation dawned. The company mode of organisation presents greater scope for practising these activities than other trust bodies, obviously. But that is no reason why these offences cannot be punished in the same way as prescribed in, say, Section 88 of the Trusts Act.

The company form of activity confers two main advantages—those of limited liability and corporate finance. In theory, the company is an association of persons joined together for trading and commercial purposes; in practice, the association is largely a fiction, and the shareholder is only a person providing finance, with but nominal control on the business, exercised at annual intervals in a purely negative manner. In theory, he can select, appoint and dismiss his "agents," the Directors and Managing Agents; in practice, this right is largely non-existent. All that special legislation should be primarily designed to do is to secure fullest publicity and information to shareholders and the creditors and "find means of making it easier for shareholders to exercise a more effective general control over the management of their companies." Any law in respect of companies should be examined to see if it does that and serves these ends.

The concept of a Welfare State, impinging on company regulation, introduces the need for anti-monopoly provisions, regard for public interest in private commercial enterprises and recognises that, if a company is an association for trade, there is greater association between the management and the workers than between the Directorate and absentee shareholders. But to say this is one thing: to legislate that, even in purely internal matters, the sanction of 100 per cent. of the shareholders, after full disclosure and information, should be endorsed by a secretariat official in order to be effective, is another. There is the danger that the Government may take decisions which are properly the functions of Courts. There is also a danger of the Welfare State concerning itself too much with organisational matters, without the equipment and capacity to make proper decisions.

An Instance

Let us examine one instance. The judges laid down in England the doctrine of *ultra vires*, that no company may undertake anything which is beyond the objects clauses of its memorandum, its charter as it were. Companies subsequently incorporated got over this difficulty by drafting out objects clauses and ancillary powers embracing every type of activity, known and unknown, and which the promoters had not even the remotest idea of engaging in. Thus the interpretation of the law was self-defeating as a direct consequence of trying to do too much. Now the pendulum has swung the other way and companies with specified majorities in general meeting may amend their objects as they please, and it is left to an aggrieved shareholder to take the matter to Courts where justifiable. Indian law has not yet caught up with this provision but it soon will and when it does, I submit, it should properly provide that the objects clauses are matters of internal interest and so do not affect dealings with outsiders, as the Cohen Committee recommended to Parliament unsuccessfully.

It is a sad commentary on our legislative activity that so much time should be spent in listing out all possible people, legitimate and illegitimate, who can be called "relatives" in a bid to end nepotism in companies; that more time should be consumed in adding to and taking away from such lists; and the queer logic that results that, if a relative is not properly appointed to the post of a peon in the company, the Director concerned loses his post and the peon remains; if a person not being a "relative" as defined is paid a large salary as a sinecure and he shares it with the management it will pass muster. I know of a case where such a complaint to a Registrar provoked his reply that he will not interfere as no law was broken. In the same way a man who was once a managing agent needs special sanction to be a selling agent without reference to the fact that selling agencies can be real posts of work and responsibility properly performed or again they may be sinecure posts with parasites occupying them. The principle should always be that a sinecure post should be prohibited and proper appointments even of relatives qualified therefor should be allowed, after full disclosure and sanction by specified majority vote. To impose on such internal matters the need for Government sanction is to perpetuate the evil of conferring powers of decision on those ill-qualified and ill-equipped to exercise them. The results will be uneven to say the least.

I repeat, therefore, that company legislation should not, in its enthusiasm, try to do overmuch but should confine itself to its proper sphere of strengthening the shareholder, protecting public interest to the extent it is necessary in such specialised legislation, and leave the Courts to deal with infractions of the law, general and specialised.

Effective Enforcement

The Company law administration leaves much to be desired. The average Registrar of Companies is a public official, with limited discretion and imagination. At least from 1936 onwards, the Registrar would normally be quick to pounce upon a company which has by oversight filed a routine return a few days late. He would have neither the imaginative capacity, nor the scientific organisation to deal with a false balance-sheet. The result is that prevention of fraud is nowhere in his scheme of things. His duty is confined to a technical interpretation of the less important regulatory sections. A fraud had to grow into large dimensions, shareholders had to be important enough and with time and money to spare, before the matter went before a court. In hundreds of other instances, the companies were either struck off as defunct or liquidated quietly. In the recent famous scandal in which a popular Minister of the Centre had to resign, the companies were to all appearances being well conducted, in strict consonance with the law and with the approval, among others, of the Registrars concerned. Suddenly one fine morning the scandal burst and banner headlines appeared in newspapers. Thereafter, as many as 129 prosecutions were launched against the same company Director.

If today companies are being maladministered and there are quite a few cases, the fault is not that the law has not enough provisions or that the general law is not applicable. The fault is wholly that the enforcement machinery is ineffective and inefficient. I daresay that, if every time a wave of motor accidents happened, the Motor Vehicles Act were amended without strengthening the traffic police, there would be a hue and cry. But, when an analogous situation arises in the sphere of company management Parliament promptly appoints its special committees and sub-committees and rushes through amendments, without strengthening the law enforcement branch.

Statutory Secretary

Elaborate provisions have been tailored to provide for special audits of companies. Apart from the implied slur cast on existing audits by qualified chartered accountants, this provision only aims at detecting fraudulent conduct of business. Would it not be simpler to legislate as in England or as in Scheduled Banks, that every company, with a paid-up capital of Rs. 25 lakhs and over should employ a secretary who is a qualified chartered accountant or "secretary" and vest such officer with defined responsibilities about compliance with the Companies Act like issue of share certificates, answering shareholders' questions, complying with the Act as regards returns, accounts, etc., prohibited transactions, cross-financing, interested contracts and so on. Why not guarantee to him security of service and freedom from undesirable influences by providing an appeal to Central Government in cases of wrongful dismissal or alteration of his terms of service to his disadvantage? Government can publish a panel of persons qualified to be appointed as secretaries, from time to time, make additions or deletions to the list as necessary. Such a system will prevent many frauds before they take place and a scandal, such as referred to earlier, resulting in 129 prosecutions, would hardly be necessary. The auditor with responsibilities to be exercised only periodically will be relieved of much of his responsibility, ensuring at the same time that day-to-day attention would be given, at least in bigger companies, to problems of law enforcement, which the Registrars can exercise at best inefficiently.

Stock Exchanges and Shareholders Associations

Again as Gower observes, "statutory provisions have owed much to the stringent requirements of the various stock exchanges. ... Such regulations have of course no legal force and, until recently, they received no legal recognition. In practice, however, they have been far more potent instruments of production than the legal provisions in the Companies Acts." The reference no doubt is to listing of companies and prospectuses but can with advantage be made to apply to company accounts, and general meetings also, if the Stock Exchange Acts were suitably modified. Government are thinking in terms of shareholders' associations fulfilling this need. But I venture to submit that, unless manned by men of integrity and probity, these will degenerate, in the atmosphere of power without responsibility, into organs of blackmail and private profit and nepotism. A strengthened stock exchange can afford a secretariat which will keep track of company developments like, say, sales or purchases of undertakings, selling agency appointments, schemes of amalgamations, fiduciary responsibility in increasing capital, reserve funds and so on.

Managing Agency

The Managing Agency system has come in for a lot of attention and even more than its fair share of abuse. One hesitates to be seen in a company of advocates for their retention. But, by and large, notwithstanding implied legislative compulsion for its gradual abolition, the system fulfils a real need and deserves to stay, until it can be replaced by something equally useful, if not more so. Regulations have been provided to prevent abuses, though one doubts the advisability of restrictions on the continuity of good managements. One would put up his hands in horror, if it were suggested that every I.A.S., or I.C.S., official should seek re-election and Government confirmation every five years. Yet a managing agent with at least comparable responsibilities is expected to do just that. If the civilian official has freedom from fear or favour in his work, it is owing to his covenant of service. Security of tenure is the best guarantee of proper functioning and it is unwise to instil a sense of insecurity in such posts. This will be the biggest factor encouraging devious and "smash and grab" methods and discouraging a policy of steady consolidation of company business. Be that as it may, I venture the following suggestions for strengthening the system:

(i) Managing agents must be compelled to hold at least 10 per cent. of the issued preference and equity capital in their own name, so that they have a real stake in the company. But the maximum requirement may be limited to Rs. 10 lakhs in the case of any company. It may be ensured that these shares are to be free from pledges or charges, excepting the company's paramount lien on them. If necessary, they may be held jointly in the name of the managing agents and the Registrar of Companies by designation or the scrips may be deposited with the company's bankers for safe custody.

(ii) No managing agency house should be permitted to engage in other business or trade activity or speculation. A broker or a lawyer is subject to such restrictions and a managing agency should be made into a profession or vocation at least as responsible and respectable as these, even if it is more remunerative.

(iii) Wherever the Government approve of a minimum commission to a managing agent, it stands to reason they should also lay down, depending on the circumstances, the maximum commission. The managing agent may take his remuneration, depending on the fortunes of the company at a specified percentage, usually 10 per cent. But, if he wants a guarantee in lean years, he must be prepared to limit his remuneration in the good years to a maximum figure. Otherwise it would be a case of "heads I win tails you lose."

(iv) The managing agent is empowered to appoint two ex-officio Directors, but, usually, they are dummies and he changes them without rhyme or reason. It must be provided that where the ex-officio Directors are other than Directors of the managing agency house, they must hold, in their own name and beneficially, the required qualification shares, so that they have some interest in the company they manage. Their appointment and removal must be with prior approval of the Board of Directors at least.

(v) There have been notable instances where internal quarrel among the partners or Directors of managing agency houses has seriously affected companies. It must be provided that internal dissensions of a serious character would *ipso facto* terminate managing agencies: Internal dissensions in private companies are deemed just and equitable causes for liquidation of the companies. Why not analogous provisions for managing agency houses?

Shareholders' Rights and Control

As the law stands today, the shareholder gets annually the accounts presented in a particular form. On the rare occasions he asks the company for details of any item appearing in the balance-sheet, the company either conveniently forgets to reply, or, if it does, enquires the provisions of law under which the demand is made. Section 237 (b)(iii) impliedly suggests that shareholders should be given information but there is no specific entitlement of a shareholder for getting information even on important matters. Section 237(1) and (5) no doubt enable a Registrar to help where he wants to do so. But Registrars rarely, if ever, exercise this power, and, when they do so, they are so slow that it requires Job's patience and persistence to avail of this facility. Why not insert a simple section to say that a shareholder is entitled to information on his queries on the accounts within 21 days of his demand, unless, meanwhile, the company obtains a ruling from the Registrar that any particular queries need not be answered, on the ground that the information may be used antagonistically to the company or favourably to its competitors. This should be simple enough and fulfil the basic objectives of securing fuller information to shareholders.

The general law should be amended to ensure that *benami* shareholdings in companies is outlawed whatever the law may be in regard to other forms of property. This will end many abuses. And, side by side, it should be enacted that no shareholder should on a poll have a voting power exceeding 10 per cent. of the total votes in a company. This will strengthen shareholders' control, the other basic objective.

The prescription of retiring age of Directors has become a farce. Almost all companies have automatically passed the requisite resolutions for re-electing overaged Directors, and one is struck by the special pleading on behalf of aged men, who have earned the right to rest, to continue their services to company boards. Similar is the case of Directors who are associates of the managing agents. Will it not be worthwhile amending these provisions, so that no associates of managing agents can be other than ex-officio Directors, and no Director above 65 years can be re-elected, whatever the circumstances?

ECONOMICS OF TRACTOR CULTIVATION

EXPERIENCE OF THE PUNJAB

THE Board of Economic Inquiry, Punjab, has just published its report on the economics of tractor cultivation in that State for the year 1956-57. It is seen from this report that there were as many as 4,172 tractors in the State in 1957, as against 858 in 1951. The increase in their number even as compared with a later year, namely, 1956, is as much as 48 per cent. The reasons for this steep increase were sixfold. The first reason was the land reclamation programmes sponsored by the Government (both Central and State) and by individual farmers. Another reason was the shortage of labour due to migration of Muslims to Pakistan. Thirdly, the migration of Muslims had also resulted in a shortage of tenants in some areas; in this situation, some of the landowners had to resort to self-cultivation with the help of tractors. Fourthly, in view of the threatened land reforms, many landowners brought more areas under their direct cultivation with the help of tractors. Another reason was the growing unemployment among the educated young men who took to mechanised farming as a more respectable pursuit than walking behind a bullock-driven plough. And, lastly, the high prices of agricultural commodities tempted the landowners to resort to direct cultivation which in turn resulted in the use of tractors. These six factors together have accounted for the leading position occupied by the Punjab in the matter of tractor cultivation.

Area Cropped

The report is notable for its study of 11 tractor-cultivated and 20 bullock-cultivated holdings, the former covering 821 acres and the latter 424 acres. The irrigated area represents 59 per cent. of the former and 56 per cent. of the latter. Figures of area cropped per worker, per pair of bullocks and per tractor are as under for tractor-cultivated and bullock-cultivated holdings separately:

Tractor-cultivation:

Per permanent worker ...	...	20.4 acres	
Per pair of bullocks	...	53.0	"
Per tractor ...	...	92.2	"

Bullock-cultivation:

Per permanent worker ...	...	10.7	"
Per pair of bullocks	...	17.1	"

The details regarding investment form another important part of the study. In the case of tractor-cultivated holdings, the investment is mostly on tractors and tube-wells. The total investment in the case of tractor-cultivated holdings works out to Rs. 241 per acre, as against an investment of Rs. 118 per acre in the case of bullock-cultivated holdings. The item-wise expenditure in a consolidated form at all the tractor and bullock-cultivated holdings is given in the following table:

Item	Tractor-cultivated holding				Bullock-cultivated holding			
	Number	Total	Per acre	Percentage to total	Number	Total	Per acre	Percentage to total
		Rs.	Rs.			Rs.	Rs.	
Tractor	11	1,26,121	153	63	..	..	..	..
Tractor shed	4	1,850	2	1	..	..	..	..
Bullock	19.12 (pairs)	11,976	14	6	33.73 (pairs)	23,071	54	46
Bullock shed	9	7,684	10	4	12	5,878	14	12
Implements	..	3,452	4	2	..	4,862	11	9
Tube-well	8	36,425	44	18	..	..	..	..
Well and Persian-wheels	7	10,730	14	6	13	16,368	39	33
Total	..	1,98,238	241	100	..	50,179	118	100

The results bearing on the economics of tractor cultivation are the most interesting part of the study. The gross income per average irrigated acre and that per average unirrigated acre in tractor-cultivated holdings are Rs. 302 and Rs. 124, respectively, while the corresponding figures for bullock-cultivated holdings are Rs. 272 and Rs. 169, respectively.

The data regarding the outturn per acre of different crops show that irrigated tractor-cultivated holdings have given better results than irrigated bullock-cultivated holdings. On the other hand, unirrigated bullock-cultivated holdings have shown better results than unirrigated tractor-cultivated holdings. The figures are given in the following table:

(In maunds)

Crops	Irrigated		Unirrigated	
	Tractor-cultivated holdings	Bullock-cultivated holdings	Tractor-cultivated holdings	Bullock-cultivated holdings
Cotton American	6.20	7.45	5.79	0.59
Cotton *Desi*	7.92	9.28	0.88	15.20
Wheat and wheat-gram (grain)	14.79	11.25	9.10	11.61
Bhusa	20.27	15.59	9.95	14.66
Gram and barley (grain)	6.20	9.39	8.52	7.67
Sugarcane (*gur* and *shakar*)	31.78	21.37	18.08	24.06
Maize (grain)	16.34	20.44	5.58	13.64
Toria (grain)	6.00	8.67	0.27	..
Rice (grain)	25.46	16.65	8.03	24.10
Bajra (grain)	10.00	3.69	4.15	1.58

The actual expenditure per acre held has also been computed in the study. The relevant figures are given in the following table:

(In rupees)

Item	Irrigated		Unirrigated	
	Tractor-cultivated	Bullock-cultivated	Tractor-cultivated	Bullock-cultivated
Manual labour	62.2	31.5	25.7	25.1
Bullock labour	22.0	59.8	12.8	31.5
Tractor and power	47.0	..	42.2	..
Implements	1.2	4.1	1.0	2.1
Seed	13.2	13.8	10.0	9.6
Artisan	1.4	3.2	0.8	1.9
Irrigation	18.7	3.7	..	..
Water rates	3.6	5.0	..	..
Manure	7.4	3.6	2.6	3.4
Gross rent	1.8	21.4	6.4	18.2
Land revenue	2.5	2.7	2.0	2.0
Miscellaneous	0.5	1.1	..	0.3
Total	181.5	149.9	104.5	94.1

The actual return per family worker per year and per day has been worked out as Rs. 5,042 and Rs. 13.8 respectively, in the case of tractor-cultivated holdings and Rs. 1,079 and Rs. 3.0 respectively in the case of bullock-cultivated holdings. It is clear from these figures that the actual return per family worker per year and per day is four times for the tractor-cultivated holdings as compared with the bullock-cultivated holdings. This is partly because the area per permanent worker in a tractor-cultivated holding is larger than the area per worker in a bullock-cultivated holding.

Net Income Per Acre

The net income per acre, both actual and on a comparable basis, is presented in a consolidated form in the following table:

(In rupees)

	Actual	*Basis A* Land and capital owned and worker permanent family members	*Basis B* Land owned permanent worker family members and capital borrowed	*Basis C* Land taken on rent, permanent workers, family members and capital borrowed	*Basis D* Land taken on rent all workers hired, and capital borrowed
Irrigated Tractor-cultivated holdings—					
Gross income	302.26	302.26	302.26	302.26	302.26
Expenditure	181.56	142.00	152.90	222.72	280.62
Net income	120.70	160.26	149.36	79.54	21.64
Bullock-cultivated holdings—					
Gross income	272.36	272.36	272.36	272.36	272.36
Expenditure	149.69	109.33	115.59	212.56	303.78
Net income	122.67	163.03	156.79	59.80	—(31.42)
Unirrigated Tractor-cultivated holdings—					
Gross income	124.28	124.28	124.28	124.28	124.28
Expenditure	104.46	78.54	86.37	118.67	149.31
Net income	19.82	45.74	37.91	5.61	—(25.03)
Bullock-cultivated holdings—					
Gross income	169.35	169.35	169.35	169.35	169.35
Expenditure	93.22	56.78	59.22	119.92	170.72
Net income	75.43	112.57	110.13	49.43	—(1.37)

The conclusion of the study is that it does not reveal any clear difference between the income and expenditure per acre of the tractor-cultivated holdings, on the one hand, and bullock-cultivated holdings on the other. The only firm finding given is that there is some economy in the use of manual labour on tractor-cultivated holdings but that the increased expenditure on the other items more than offsets this advantage.

NATIONAL INCOME DATA AND ECONOMIC PROGRESS

SOME FACTS AND FALLACIES

By Prof. V. G. Ramakrishna Aiyar

AT the present time, it has become almost the 'cliche' of everyone to speak of economic growth, national income, the rate of saving, the rate of investment, and so on, without any serious attempt to understand what exactly we mean by these things. According to the old classical view, economic growth should be indicated by increase in *per capita* real income and economic growth must be continuous and must be outstripping the population growth; and the share accruing to each should be in goods and services, irrespective of the way in which prices might behave.

The emphasis today is on what is called the National Income approach. The first thing to be emphasised about National Income is that it is arbitrary and, from the standpoint of scientific precision, an indeterminate figure. Even a great statistician like Kuznets makes a frank admission regarding the limitations of the National Income approach to the study and interpretation of modern economic development. In the words of Kuznets: "The statistician who supposes that he can make a purely objective estimate of National Income, not influenced by preconceptions concerning the 'facts' is deluding himself, for whenever he includes one item or excludes another, he is implicitly accepting some standard of judgment, his own or that of the compiler of the data. There is no escaping this subjective element." Estimates of national income necessarily involve legal and moral considerations. How shall we draw a line between economic activity and economic goods, on the one hand, and active life in general and its stream of satisfaction, on the other? Should washing, shaving and playing for amusement on the musical instrument be treated as economic activity? When judged by the attributes of satisfaction-yielding, scarcity, and disposability, they do not differ from the same activities carried on for money as services to other people (nursing, barbering, giving concerts, etc.).

Snags

And yet statisticians like Kuznets decide to include only items that "are dealt in on the market." This, of course, excludes all do-it-yourself activities (which in total are probably enormous). It excludes all the products of the family economy, including all the activities of housewives, so that we get to such paradoxes as these. When a man marries his cook, the value of her work disappears from the national income accounts. When an opera singer sings professionally, she is considered as adding the equivalent of her salary to the national income. When she sings for charity or for friends, it does not count. How are we to prevent double counting at a hundred points? If we count the income of doctors, should we not deduct it from the income of patients? What is it that we are trying to measure, anyway? Are we trying to measure national income *produced* or national income *paid out* or national income *spent* or national income *consumed*?

Today most laymen (and a large number of statisticians and economists) conveniently assume that all these problems must have been satisfactorily solved, because they read daily in the newspapers official figures showing exactly what the national income, personal income, disposable personal income, and above all, the gross national product (G.N.P.) were not only in the past, but at what annual rate they are currently running. And these figures are presented with great precision, with decimal points. Few laymen are aware that these figures are made up not of definite items which can be lined up and counted, but in large part of *estimates* subject to error.

To take a recent illustration from one of the leading countries, namely, the U.S.A. The President's annual Economic Report of January 1958 boasted, in its opening paragraph, that the nation's G.N.P. or output of goods and services in 1957 totalled 434 billion dollars or 5 per cent. larger than in the preceding year and it was also pointed out that about four-fifths of this increase was accounted for by rising prices, and, therefore, in physical terms, the increase was only about 1 per cent.

This brings us to one of the great problems in estimating national income. For example, when we speak of increase in national income in India as a result of the Five-year Plans, it is measured in rupees which has itself no fixed value. In a period of inflation, all values are falsified. Today, in every country, the most frequently cited overall figure is not that of national income, but of gross national product or G.N.P. We are told that India's national income has increased, namely, 30 per cent. during the last 10 years. The Government of India statisticians get this result by dividing actual rupee totals by an index number of prices for each year. They print, in fact, a separate table of "implicit price deflators" for the gross national product figures for each year, based on an index number of 100 for what they choose as the base year, say, 1939, or 1954, etc.

Though inflation and the changing value of the rupee make comparative overall national income figure quite misleading, is it, in fact, possible to correct the comparison by applying "implicit price deflators"? Yes, only approximately, never accurately. Goods never remain the same for two years in succession either in relative quantities or in comparative quality and no index number can be completely scientific.

Limited Value

There is another factor which distorts and falsifies comparative national income figures and it is the problem of measurability. Larger crops, for instance, have often a smaller total rupee value than smaller crops (hence crop-restriction schemes). Today, the national income figures expressed in a common medium of exchange or "money-of account" does not express any *absolute* total at all, but merely an *internal relationship of marginal values* (time quantities). The problem of translating money-value income into *real*, or heterogeneous physical, income is insoluble, still more so is the problem of translating either into 'psychic' or 'enjoyment' income. In brief, national income estimates have a very limited value, a far more modest value than is now commonly supposed.

We now come to the crux of the whole matter, namely, the danger of adopting national income figures as a basis for policy formulations. It is impossible to arrive at a precise, scientific objective or absolute measurement of the national income in terms of rupees. But the asumption that we can do so has led to dangerous policies. Policy implications, in fact, are already found in the "national income approach." For this means an attempt to deal with economic problems starting from an arbitrarily constructed 'whole' from a 'collective' and not from acting individuals. This 'macro-economic,' as differentiated from the 'micro-economic,' approach raises first of all the question: Why is the *nation* considered the 'collective' to be chosen, and not the State, the municipality, the *panchayat*, etc.? The chief answer to this question is that the choice of the 'collective' is determined mainly by political considerations. This political tendency also explains why these people are always talking about the distribution of national income, and not about the contribution of various individuals and groups of individuals to its coming into existence. Logically, this contribution problem ought to be considered first. Much of the national income discussion is dominated by the Marxian thesis, according to which all goods are 'socially' produced and afterwards individually appropriated.

Love for Big Figures

Though Government statistics publish nowadays estimates of both gross national product and national income, it is the former figure that is much more frequently cited. This is partly because it appears earlier (as a private firm knows its gross income before it knows its net income) and partly because it is the larger figure. National planners love big figures. We are constantly being told that 'we' (i.e., the Government) can easily afford to spend or give away as loans to other States, this or that huge sum because it is after all only such and such a percentage of our gross national product. No one would dream of considering such measuring valid as applied to a private firm.

Large deductions have to be made from the gross national product before we can estimate the national income. This can be illustrated in the case of depreciation charges which is not so much an estimate of past deterioration as a forecast of future probabilities. For example, it is never known when an old machine is going to be made obsolete by a new invention. In a period of monetary inflation, depreciation charges are systematically underestimated because they fail to allow for ever-mounting replacement costs. Another bad practice to which a too liberal reliance on national income figures has led is that of insisting on the urgency of *certain rate of growth* of the national income, no matter what level it has already reached. Thus it is often said that a growth rate of 5 per cent. a year would lead to a bigger growth in 10 years than a 3 per cent. or even 4 per cent. rate. This insistence on achieving or maintaining a *certain rate of growth* is the result of several misconceptions. There is a long-run tendency for industrial growth rates to slow down or retard as the level of production gets higher. There are several explanations for this feature—one has to do with a trick of percentage figures. Another has to do with a physical satiety point in human needs. If only one family in a country has a radio, and the next year 50 families get one, the rate of growth is 5,000 per cent. But once everybody has a radio, the net growth stops; a similar thing happens in regard to houses, motor cars, etc.

Further, as more and more things become plentiful (except rupees), there might be a tendency for the national income figures to reflect this by *falling*, because prices might fall faster than output rose. Another practical danger of the religious use of national income figures is that it can lead to a confusion or reversal of economic cause and effect. The national income of a given year is the total result of all the production and transactions during that year. In this respect, the national income figures are similar to the account books of a private firm. But more and more, in current discussion, one finds the national income treated as a *cause* of production. The national income is thought of as the purchasing power that automatically creates and buys the production. The truth is that national income does not cause national production, but national production causes national income. The national income approach has become one of the important incitements to inflation. For the easiest and surest way to get constantly bigger national income figures is not by increasing output and consumer *satisfactions*, but by constantly shrinking the measuring rod, i.e., by constantly depreciating the rupee.

Poor Record of Keynesians

Finally, it may be pointed out that economic forecasting based on "national income approach" has been a failure. In fact, the Keynesian forecasters have quite a poor record. Note the egregious failure of most Keynesian forecasts after World War II which was very largely due to an unexpected upward jump of the consumption level. Similarly, in 1953, the Keynesian models of mechanical inter-relationships between investment and consumption did not work out. In fact, the national income approach which has received great strength and popularity as a result of the "new economics" associated largely with economists like Keynes, and the consumption function, in particular, has given the mathematicians an ideal concept for building models of national income and making economic forecasts. Thus far, the economic forecasts even in the Western developed countries have been almost uniformly bad and in underdeveloped countries like India, with inadequate and unreliable statistics, the rate of growth of national income, rate of saving and the rate of investment have very limited application and have to be used with great caution by our planners.

In conclusion, at the present time, when India's planned economy and its progress are being shown in terms of national income figures, we cannot afford to forget that efforts to determine national income in monetary terms have merely a limited usefulness for special purposes. Actually, all estimates of national income rest on certain arbitrary (and sometimes false) assumptions. They are not purely objective or strictly determinate. The present fetish made of such estimates leads not only to confusion of economic cause and effect, but to inflationist and totalitarian policies.

PROTECTION TO CONTINUE FOR SHEET GLASS

INDUSTRY ENVISAGES RAPID EXPANSION

THE manufacturers of sheet glass will be happy to learn that the Government of India has endorsed the Tariff Commission's recommendation that protection to the industry be continued for a further period of two years from the close of 1960 at the prevailing rate of duty, namely, 70 per cent. *ad valorem*. It is true that this decision is only of theoretical importance, for import of sheet glass of the gauges manufactured in the country are restricted to a negligible quantity and, what is more, these restrictions are not likely to be relaxed in the foreseeable future. In fact, the Development Wing of the Government of India had informed the Commission that protection had lost its significance, in view of the virtual absence of any threat of foreign competition. But, from the point of principle, the continuance of protection has some significance. It suggests that the industry is not yet fully developed, that it is capable of further growth, given protection, and that it deserves to receive this assistance.

Commission's Stand

Disagreeing with the Development Wing, the Tariff Commission observes that "this is not a correct perspective from which the question of continuance of protection should be judged." Elaborating this point, the Commission adds, in its report, as follows:

"While the present position is that import restrictions on balance of payments considerations afford a sheltered market to the indigenous product, it is important that the domestic sheet glass industry should develop along sound lines. From the evidence available to us we have found that, though production of thicker varieties of sheet glass has increased since the last inquiry, it is still confined to one or two producers and that glass of thicker gauges for special uses is not available in adequate quantities and at reasonable prices. The application of sheet glass for building and industrial uses is rapidly increasing and the demand for diversified products is likely to grow. It is, therefore, essential that consumers of all types who have been carrying the burden of protection for over a decade should be in a position to obtain sheet glass of grades required by them at fairly reasonable prices. Reduction in costs of production and therefore prices can be expected only with fuller utilisation of plant capacity and expansion of production. From this point of view, we, therefore, consider that the progress of the industry needs to be carefully watched. All the four producers have requested for continuance of protection. They have pleaded that the domestic industry is still at a considerable disadvantage in the matter of supply of essential raw materials and their prices which are higher than those prevailing in foreign countries. We trust that the position in this regard will improve in the near future. In the meantime, new schemes of expansion and development have been licensed or approved and considerable investment in them is likely to take place in the next two or three years. When these projects go into production, it is reasonable to expect that the domestic requirements of sheet glass would be met at competitive prices This will, however, take about two or three years. We do not, therefore, consider it advisable at this stage to withdraw the protection granted to the sheet glass industry."

Since a few of the schemes of expansion and establishment of new units, with modern equipment and more economical process of manufacture, will be commissioned in 1961, the Commission is of the view that a more realistic assessment of the cost of production will become possible in 1962 than now. Hence its specific suggestion that the period of protection be extended by two more years.

The industry has made considerable progress in recent years not only by expanding production but also by diversifying its range of products. There are, at present, four units manufacturing sheet glass, including the one unit which was commissioned in October 1957, namely, the Indo-Asahi Glass Company Ltd., Bhurkunda. The three other units are (1) the Seraikella Glass Works (Private) Ltd., Kandra, (2) the Hindustan-Pilkington Glass Works Ltd., Asansol, and (3) the U.P. Glass Works Ltd., Bahjoi. The Seraikella Glass Works has already completed a scheme of expansion and is expected to achieve higher output shortly. Besides plain sheet glass, this unit manufactures blue sheet glass and has plans to produce glass of other colours and to polish thick sheet glass for which it has installed the necessary equipment. The other two units have also worked out plans for expansion. Thus, the Hindustan-Pilkington Glass Works and the Indo-Asahi Glass Company have been producing sheet glass of thicker varieties for which the demand in the country is rapidly developing. The industry is at present in a position to meet the bulk of the domestic requirements of sheet glass.

The present annual installed capacity of the industry is estimated by the Commission at 113.80 million square feet, as against 106.60 million sq. feet in 1957, that is, at the time of the last tariff enquiry. The following table shows the break-down figures of the annual capacity of the existing units (on treble shift), as estimated by the Commission, as compared with 1957:

	Capacity (million sq. ft.)	
	1960	1957
Hindustan-Pilkington	30.00	30.00
Seraikella Glass Works	36.00	28.80
Indo-Asahi Glass Co.	36.00	36.00
U.P. Glass Works	11.80	11.80
Total	113.80	106.60

It may be noted here that the estimates of present capacity, prepared by the Development Wing (at 107.56 million sq. ft.) and by the producers (at 138.60 million sq. ft.) do not agree with those of the Commission.

The Commission has pointed out that, in view of the expansion plans of the existing units and the schemes for establishing new ones, the rated capacity of the industry will be raised from 113.80 million sq. ft. to 163 million sq. ft. in 1961 and further to 170.20 million sq. ft. in 1962. When all the other additional schemes are completed, the aggregate rated capacity of the domestic industry will be of the order of 232.20 million sq. ft. It would appear that the present installed capacity will be more than doubled in the course of the next four years. It may be recalled in this connection that sheet glass is one of the forty-nine industries in respect of which licences for setting up fresh capacity will be issued freely, according to an announcement made by Government in April 1960.

Production

The production of sheet glass increased from 46.86 million sq. ft. in 1956 to 79.54 million sq. ft. in 1959, or by 70 per cent. Although the installed capacity remained more or less stationary, there was progressively higher utilisation of capacity, which was about 75 per cent. in 1959. While the bulk of the total output consists of 16 to 18 ounce and 24 ounce sheet glass, a definite shift towards production of thicker gauges has become perceptible in the past three years. The Commission has made particular reference in this connection to the fact that the demand for 3/16" glass, which is used for making safety glass for automobiles, is not being met in full. It has, therefore, urged the industry to step up the production of this type of glasses. The recent trend in the production of sheet glass (in terms of 2.2 mm. thickness) is shown in the following table:

(In million sq. ft.)

	1960 Jan-June	1959	1958	1957
Hindustan-Pilkington	13.19	23.96	21.42	18.44
Seraikella Glass Works	21.32	23.26	30.61	28.57
Indo-Asahi Glass Co.	8.15	19.97	24.22	4.25
U.P. Glass Works	4.02	7.35	5.48	5.41
Total	46.68	79.54	81.73	56.67

The plans for stepping up general industrial and building activities in the country are expected to raise further the demand for glass. The Commission, therefore, considers it reasonable to place the current domestic demand at 100 million sq. ft., as against 55 million sq. ft. in 1957. The rate of annual increase in the next three years is expected to be in the neighbourhood of 15 million sq. ft. over the level of 1960. The demand for sheet glass emanates mainly from (1) building and other constructional activity, (2) automobile industry and railways, and (3) mirror-making, picture frames and furniture manufacture, the demand for all of which goes up as a result of improvement in the standard of living.

The principal raw materials required for the manufacture of sheet glass are sand, soda ash, limestone, sodium sulphate, dolomite, fluorspar and arsenic trioxide. In addition, coal and furnace oil are used as fuel and refractories for lining the furnace. While the quality of the indigenous sand is said to be generally satisfactory, its supply is not properly ensured owing to shortage of wagons for sand. The Commission has suggested that, instead of sand, the sheet glass industry should use ground quartz, if available in the vicinity of their factories, and install the necessary equipment for processing the material.

In respect of soda ash, the industry has been using imported heavy soda ash, in the absence of indigenous production. Following the last tariff enquiry in 1957, the industry was asked to use light soda ash in place of heavy soda ash. The industry has stated that light soda ash adversely affects the quality of sheet glass. The Commission has accepted this contention and recommended that Government should make available heavy soda ash to meet the full requirements of sheet glass industry in the country. Licence has already been granted for the indigenous manufacture of 72,000 tons of heavy soda ash a year. In respect of coal, the Commission has suggested that Government should, after making technical assessment of the requirements of each sheet glass unit, grant necessary facilities for the import of equipment for gas producers as early as possible, so that readjustment of plant capacity to utilise lower grades of coal could be smoothly effected by the industry. Besides, it has urged the Railway Administration to examine the request of the industry for upgrading the transport, classifications of raw materials and take such appropriate steps as may be deemed feasible.

Quality

The consensus of opinion of consumers is that "the quality of indigenous sheet glass has considerably improved and is, by and large, satisfactory." It is further expected to improve when some of the units adopt the new process, called "Pittsburgh system." There were, however, some complaints relating to waviness, uneven thickness and distortion, apart from such defects as bubbles, blisters and uneven thickness.

A comparison of the fair ex-works prices of indigenous sheet glass with the landed cost (ex-duty) of imported products (based on quotations received from Japan, the U.K. and Belgium) has shown that the domestic industry suffers from price disadvantages ranging from 26.39 per cent. for 26 oz. sheet glass to 70.33 per cent. in respect of 3/16" glass *vis-a-vis* the imported product. The weighted average of the duties works out to 59.58 per cent., even without taking into account the freight disadvantage.

In conclusion, it may be pointed out that the industry, which has been enjoying protection since 1949 at a fairly high rate of protective duty, should spare no efforts to consolidate its position in such a way as to dispense with the need for this artificial prop as early as possible. Besides, the industry should, in co-operation with the authorities concerned, rationalise the machinery of distribution to remove periodical shortages of sheet glasses and ensure fair prices.

CUSTOMS ADMINISTRATION IN ASIA

Measures to simplify and liberalise customs and frontier formalities, including a draft code of recommended customs procedures, were adopted by E.C.A.F.E.'s Working Party on Customs Administration, which met at Bangkok recently. Senior customs officials from 23 E.C.A.F.E. member-countries, and observers from the German Federal Republic, the International Civil Aviation Organisation, the Customs Co-operation Council and three non-governmental organisations attended the session. One of the principal tasks of the Working Party was to present the specific recommendations made at its first session last year in the form of a Code of Customs Procedures for adoption by countries of the E.C.A.F.E. region. The Working Party emphasised that the code was not mandatory, nor was it intended to take the place of existing national regulations. It would, however, give a more permanent character to the list of customs procedures already agreed to by a majority of countries of the E.C.A.F.E. region as being desirable in the interests of sound customs administration and to facilitate the flow of international trade. The code covers such subjects as import, export and exchange control procedures; detention and bonding of goods; and customs formalities for business men and tourists.

The Working Party made a number of recommendations regarding the functions of customs brokers and customs clearing agents, and spelled out their general obligations, as well as those of the customs authorities with whom they deal. It suggested that it might be useful if the E.C.A.F.E. secretariat could compile a list of multilateral international conventions and agreements currently in force with respect to the freer movement of goods and passengers, and could circulate the list to member-countries. It also studied the possibilities for co-operation in preventing smuggling and evasion of customs regulations.

The Working Party emphasised the need for basic provisions governing bilateral agreements on transit trade and frontier facilities between countries in the region. Member-governments were urged to attach due importance to the planned training of customs officers, particularly training on the job, and it was suggested that facilities for such training be arranged on a bilateral basis, or under one of the foreign technical assistance programmes. Training should cover not only the specialised aspects of customs administration, but its general role in the economy of the country. Finally, the Working Party examined the suggestion, made by United Nations Headquarters, that consideration should be given to the establishment of a regional training centre for customs administration.

SHARP RISE IN EARNINGS OF INDIAN IRON

BUT DIVIDEND AGAIN LARGELY MET OUT OF PAST EARNINGS

THE highlight of the results of the Indian Iron and Steel Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) for the year ended 31st March 1960 is the increased pace of expansion in production and earnings as compared with that noted in the previous year. The output of steel ingots, for instance, has increased by 218,867 tons or 36 per cent. (to 827,072 tons), which compares very favourably with the rise of 100,625 tons or about 20 per cent. in 1958-59. This is due to the enlargement of the steel-making capacity under the Company's expansion programme. Though there is still considerable leeway to be made up in order to reach the capacity of one million ingot tons, it is comforting to note that the Company's planning and labour during the last five years have now begun to bear fruit, despite many handicaps. Production of saleable steel, too, has improved to the extent of 164,562 tons or 33 per cent., as against 85,509 tons or 20 per cent. in the previous year. The gross profit, which had gone up from Rs. 6.89 crores in 1957-58 to Rs. 7.02 crores in the following year, has shot up to Rs. 8.99 crores, a rise of over Rs. 2 crores or 30 per cent. in two years.

The increased production has, no doubt, been accompanied by a sharp rise of Rs. 4.82 crores in the cost of raw materials, stores and spares consumed and of Rs. 4.16 crores in other expenses; the increase under the former head is much higher than that in the previous year, while the pace of increase in the latter has slowed down. It is evidently the slower pace of increase in "other expenses" that has raised the profit-margin (ratio of gross profit to sales) slightly to 16.1 per cent. from 15.6 per cent., to which level it had dwindled in 1958-59 successively from 26.3 per cent. in 1955-56. Notwithstanding this trend, the increase in cost of production still continues to be high. This is borne out by the further fall in the gross profit per ton of steel produced from Rs. 141 to Rs. 135.7. The increase in production cost under the escalator clause of the Company's agreement with the Government has since been compensated by the increase in steel retention prices of Rs. 4.85 per ton. As in the previous years, this increase has been granted by averaging the incidence over the five-year period ended 31st March 1960. It also covers, according to the Directors, the incidence of the negotiated settlement with the labour union in regard to wages and dearness allowance that was included in the Company's claim last year, but was deferred by the Government for further consideration.

Development Rebate

The net profit, at Rs. 4.97 crores, is higher by Rs. 41 lakhs. The relatively small increase in net profit is mainly due to the larger provision for depreciation, which has been raised from Rs. 2 crores to Rs. 3 crores, consequent on the further large additions to fixed capital expenditure under the expansion programmes. Of this profit, as much as Rs. 4.52 crores or 91 per cent., has been ploughed back into the reserves, including a sum of Rs. 2.59 crores to the development rebate reserve. Though the addition to the development rebate reserve is less than that (Rs. 3.15 crores) set aside a year ago, it has proved to be a much heavier burden on the Company to the extent that its excess over the actual tax remission has gone up from Rs. 98.60 lakhs to Rs. 103.49 lakhs. Commenting on this inequitous position, Mr. Biren Mookerjee, in his annual statement (published in our issue dated 26th November 1960, *vide* pages 962-964) observes:

"I am compelled to comment again this year on the taxation provisions relating to the allowance of development rebate which require that as a prerequisite to the grant of such allowance an amount representing 75 per cent. of the rebate shall be charged against profits and set aside to reserve. With company taxation now at the revised rate of 45 per cent. this means that over and above the saving in taxation arising from the allowance, which quite rightly should be set aside to reserve, a dead charge of 30 per cent. of the amount of the rebate is thrown against available profits compared with 23½ per cent. in the previous year. In our own case, the excess of the compulsory reserve for the year under review over the actual taxation saving amounts to no less than Rs. 1,03,49,296 and I cannot on principle accept without protest a position whereby a charge of this magnitude should be thrown against the profits of a company."

The Directors have, however, written back this excess of compulsory reserve over the actual tax saving from the general development reserve. The effective and logical result of this step is, as Mr. Mookerjee puts it, "a net accretion to the development reserves of the actual saving in taxation and a consequential net charge against profits of the amount of taxation that would have been payable but for the allowance of development rebate."

Position of Dividends

In addition to the amount written back from the general development reserve, the Directors have withdrawn the entire sum of Rs. 42.50 lakhs standing to the credit of steel prices equalisation reserve created only last year and Rs. 13 lakhs from the taxation contingencies reserve. It is only by writing back such large amounts that the Company has been able to increase the dividend to Re. 1.50 per share or 15 per cent., subject to deduction of tax (that is, 10.5 per cent., tax-free) from 10 per cent., free of tax, paid for the previous year, and that, too, on the increased capital of Rs. 12.44 crores following the capitalisation of Rs. 2.07 crores from the share premium account in February 1959. As will be seen from the accompanying table, consequent on the large additions to the reserves, the Company has, as in the previous year, had to meet the bulk of the dividend burden from out of the reserves created out of the past taxed profits. The dividend for the year under review affords compensation in full to the shareholders for the withdrawal of the former notional credit on their dividends in respect of income-tax paid by the Company. So far as the 5 per cent. tax-free preference shares are concerned, the Directors made the interim distribution at the gross amount, which, after deduction of 30 per cent. tax, would represent the amount previously payable free of tax. Consequent on the amendment of the Income-tax Act under the Finance Act 1960, however, the Directors have declared the final distribution, subject to deduction of tax, so that the total net dividend received by preference shareholders would be 4.25 per cent. free of tax.

Results Compared

The salient features of the Company's results for the last four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales (including items used in works)	55,67.85	45,02.31	35,04.53	30,62.96
Other income	73.55	43.67	51.64	42.40
Raw materials, stores and spares consumed	19,52.95	14,71.39	11,53.23	9,95.41
Other expenses	27,89.80	22,72.86	17,13.59	13,44.74
Gross profit	8,98.66	7,01.63	6,89.35	7,65.20
Managing Agency commission	37.22	26.51	27.71	30.90
Provision for—				
Depreciation	3,00.00	2,00.00	1,40.00	1,35.00
Taxation	64.28	18.62	1,61.65	3,19.00
Net profit	4,97.16	4,56.50	3,59.99	2,80.29
Transfer from reserves	1,58.99	2,15.60	1,34.06	47.00
To reserves	4,51.92	5,54.60	3,66.54	2,57.33
Dividends—				
5 per cent. preference	16.39	13.50	13.50	13.50
Ordinary	1,86.61 (15%)	1,03.67 (10%)	1,03.67 (10%)	51.84 (10%)
Carry forward	11.50	10.27	9.94	9.13
Production of—	Tons	Tons	Tons	Tons
Pig iron	1,053,612	959,933	733,945	695,156
Steel ingots	827,072	608,205	507,580	532,915
Saleable steel	662,113	497,551	412,042	443,721
Despatches of—				
Pig iron	875,718	822,328	619,689	573,113
Steel	667,648	506,141	403,978	1 420,477

The increase in "other expenses" is mainly accounted for by the rise of (1) Rs. 1.28 crores in "other manufacturing and miscellaneous expenses," (2) Rs. 1.24 crores in freight and insurance and (3) Rs. 1.03 crores in provision for repairs and renewals, as also by the interest charged on special advance from the Government of India for the period from 1st July 1958 to 31st March 1960 amounting to Rs. 89.10 lakhs. Though this interest, which was fixed at 5 per cent. by the Tariff Commission, is to be compensated by a special element in the increase in retention prices, the Government postponed consideration of the allowance of special element until after 31st March 1960. The Company, however, protested against this postponement and took credit for the corresponding amount of interest in its accounts for the year under review and included it under the head "sales."

All the major items of plant installations scheduled under the Company's 1953 and 1955 expansion programmes have now been commissioned, though, according to the Directors, it will be some time yet before the provision of the many subsidiary facilities required for the full and efficient working of the expanded plant is finally completed. But, as already stated, the Company is not in a position to work to its full capacity due to difficulties in getting adequate supply of the right quality coking coal and other raw material. When this handicap is overcome and assuming that labour, as well as transport, situation is favourable, the production and profits of the Company are bound to look up still further.

Financial Position

The Company's balance-sheet as on 31st March 1960 shows that its main source of finance for its capital expenditure and working capital continues to be borrowings, the total outstandings of which at the end of the year amount to Rs. 34.87 crores, representing an increase of Rs. 2.18 crores over the year. At this level they are not very much short of the total of paid-up capital and reserves at Rs. 36.40 crores. The current liabilities and provisions aggregate Rs. 21.84 crores, as against Rs. 23.37 crores a year before. There has been an addition during the year under review of Rs. 13.93 crores to the fixed assets which, after making allowance for deductions and transfers, stand at Rs. 71.29 crores. These have been written down to Rs. 56.82 crores. The capital work-in-progress is Rs. 3.89 crores. The current assets have declined from Rs. 37.25 crores to Rs. 31.96 crores. Even so, they provide adequate cover against short-term (unsecured) loans and current liabilities.

The current market value of the Company's Rs. 10 fully paid-up ordinary shares is Rs. 23.72 *ex-div.*, at which rate the yield on them is 4.4 per cent. per annum, free of tax.

COLOUR-CHEM MAKES A GOOD START

The twelve months ended 31st March 1960 represent the first year of manufacture for the Colour-Chem Ltd. (Managing Director: Mr. Charanjit Rai, Bombay) after its incorporation in 1957. The production of pigment emulsions was started in May 1959, of binder materials in September 1959 and of pigment powders in March 1960. Since then the production of the various items is proceeding according to schedule. The sales during the year amounted to Rs. 36.94 lakhs, on which the Company has earned a sizable gross profit of Rs. 11.58 lakhs. The Directors have set aside Rs. 4.67 lakhs for depreciation and created a development rebate reserve with an initial allocation of Rs. 6 lakhs, leaving a net surplus of Rs. 91,392, which has been utilised to reduce the accumulated losses (Rs. 1,31,375) brought forward from the previous years to Rs. 39,984. This small deficit is being carried forward and this is likely to be wiped out in the current year.

The Company issued during the year under review 35,000 equity shares of Rs. 100 each for public subscription and they were heavily oversubscribed. This has raised the paid-up capital of the Company to Rs. 1 crore. The reserves amount to Rs. 6 lakhs. The current liabilities and provisions at Rs. 31.96 lakhs are more than adequately covered by current assets amounting to Rs. 34.43 lakhs. The Company has made an addition of Rs. 106.37 lakhs to the fixed assets during the year under review, bringing the total value thereof to Rs. 107.92 lakhs. This has been written down to Rs. 103.10 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 338.75.

T.W.A.'S NET PROFIT DECLINES

Trans World Airlines Inc. earned a net profit after taxes of $6,083,000 in the first nine months of 1960, according to Mr. Warren Lee Pierson, Chairman of the T.W.A. Board of Directors. All except $4,000 of this year's net was earned in the third quarter. This represents a sharp fall from $9,068,000 earned in the corresponding period of 1959. The net earning per share was 91 cents, as against $1.36 in 1959. Total operating revenues for the nine months were $290.16 million over the $263.44 million recorded last year. Greatest passenger revenue gains were in the area of coach travel, which rose from $89.06 million to $101.22 million and international economy which increased from $21.93 million to $37.95 million. This situation reflected passenger appreciation for the greater speed, comfort and reliability of coach travel on jet aircraft.

The new 17-day European economy fare providing jet round trips between Europe and U.S.A. for as low as $350 is expected to generate more of this popular form of air travel in the winter months. This fare can be combined with the India-Europe fares. During the first week of the 17-day excursion plan which began 1st October, a total of 1,085 trans-Atlantic passengers or an average of 15 per flight availed themselves of this new economical form of transportation.

BELAPUR COMPANY EARNS RECORD PROFIT

ENHANCED DIVIDEND FULLY COVERED

THE handsome dividend of 58 per cent. subject to deduction of tax, or 40.6 per cent. on a tax-free basis, for the year ended 30th September 1960, recommended by the Directors of the Belapur Company Ltd. (Managing Agents: W. H. Brady and Company, Ltd., Bombay), two weeks ago, which is the highest to be paid so far in the history of the Company and represents an increase of 11.6 per cent. over that paid for 1958-59, is quite in consonance with the highly encouraging results for the year under review. The quantity of cane crushed during the year was higher than in the previous one, the recovery recorded an improvement and the production of sugar was larger. Although the area harvested was only 121 acres more than in 1958-59, the additional quantity of cane produced was over 26,200 tons. Over and above this, the Company was able to purchase 7,630 tons of cane from local outside cane cultivators.

The aforesaid trend is reflected in a bumper gross profit of Rs. 85.60 lakhs, which represents and increase of Rs. 37.44 lakhs over that for the previous year and is a fresh record in the Company's history. Such a sharp rise is in refreshing contrast to the successive decline in the previous two years from the then record profit of Rs. 77.96 lakhs earned in 1956-57 to Rs. 48.16 lakhs in 1958-59, the lowest level since 1950-51. After providing a larger sum for managing agency commission and taxation and more or less maintaining the provision for depreciation at the previous year's level, the net profit works out to Rs. 54.59 lakhs, an amount which is nearly double that (Rs. 27.86 lakhs) for the previous year. Of this amount, Rs. 13.63 lakhs, which is equal to no less than 25 per cent., has been ploughed back to the reserves, as against a mere Rs. 37,500 added a year ago. The higher dividend, together with the burden of 30 per cent. tax deductible at source which the Company is bearing on behalf of the shareholders, has increased the dividend liability by Rs. 11.28 lakhs to Rs. 40.89 lakhs. Even so, it is fully covered by the profit available, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September

The releases of sugar stocks for sale in the market continued to be regulated by the Government and, since the beginning of the year, a new scheme of distribution control introduced by the State Government has also been in operation. The movement of sugar to consuming centres was slower than in the previous year and the monthly release orders by the Government were not stepped up in proportion to the increase in production. This accounts for the increase in stocks with mills at the end of the year. There was an increase in the minimum price to be paid to cane growers during the year, but a corresponding rise in the maximum *ex-factory* selling price of sugar was allowed and the increased price has been in force since November 1959.

It will be seen from the foregoing analysis of the Company's results so far that the impressive rise in profit is chiefly the result of increase in production of sugar brought about by higher crushing and better recovery. The Company could crush more because, unlike in previous years, it brought a certain amount of outside cane. The fixation of a higher price for sugarcane both in North India and Bombay State has been accompanied by a higher selling price for sugar. The rebate in excise duty as an incentive to increased production has also helped widen the profit margin. A point that must be borne in mind in comparing the results for 1959-60 with those for 1958-59 is that, in the latter year, the Company suffered a loss of a sizable amount on the sugar which it was compelled to export. There was no such debit in the year under review. But it will reappear in the current year as the industry is obliged to export sugar again.

The most important development of the year under review is the acquisition by the Company of a financial interest in the Gangapur Sugar Mills Ltd., a modern sugar factory with a crushing capacity of 1,000 tons of cane per day. This factory is situated about 25 miles from the Company's own factory. When all formalities are completed, the Gangapur Sugar Mills Ltd. will become a subsidiary of the Company (Belapur). The Company owns 25,980 equity shares of Rs. 100 each in the Gangapur Sugar, of which 16,880 shares were transferred to the name of Belapur Company on 11th October 1960 and the balance of 9,100 shares are yet to be transferred. The total cost of this investment is Rs. 29.88 lakhs. Besides this investment, the Belapur Company has also advanced loans aggregating Rs. 23.50 lakhs to the Gangapur Sugar to enable it to pay off some of its debts. The latter will, according to the Directors, require further financial assistance in the near future for capital expenditure on a lift irrigation scheme to enable it to cultivate its 4,000 acres of freehold land. The Gangapur Sugar has made losses during its two years' working, but "strenuous efforts" are being made to put it on a profit-making basis. It is, however, expected that the ultimate objective will not be reached in the next two or three years.

The aforesaid investment and loan are reflected in the sharp fall in the cash resources of the Company from Rs. 84.70 lakhs to Rs. 18.45 lakhs. The investments have gone up from Rs. 24.46 lakhs to Rs. 53.98 lakhs. Stock-in-trade, crop-in-progress, etc. have gone up from Rs. 105.61 lakhs to Rs. 147.36 lakhs and book debts from Rs. 5.06 lakhs to Rs. 33.03 lakhs. The gross block of the value of Rs. 163.93 lakhs has been well written down to Rs. 53.27 lakhs. As against these assets, the current liabilities and provisions amount to no more than Rs. 83.04 lakhs, thus leaving net assets of Rs. 223.35 lakhs, represented by a paid-up capital of Rs. 70.49 lakhs and reserves and surplus of Rs. 152.86 lakhs.

The investors' confidence in the financial strength of the Company and its efficient working is indicated by the substantial premium which the shares of the Company (Rs. 50 fully paid-up) have always commanded in the market. The latest market value at Rs. 398 per share (*cum*-dividend), is nearly eight times the face value. Even at this rate the shares of the Company offer a sizable yield of 5.4 per cent. per annum, free of tax. From all available indications, the prospects for the current year are promising. Assuming no untoward developments take place, it should be possible for the Company to maintain the results at the levels recorded in the year under review.

SYNTHETICS AND CHEMICALS LTD.

The foundation digging operations of the synthetic rubber factory near Bareilly in Uttar Pradesh began on 28th November 1960. The factory will be run by the Synthetics and Chemicals, Ltd. The manufacture of synthetic rubber by this factory will be processed by utilising alcohol obtained from the U.P. sugar mills. The factory is expected to go into production in the middle of 1962.

The setting up of this important basic industry is being made possible through financial aid and know-how promised by the U.S. Government and American private business. The Firestone Tyre and Rubber Co. of the U.S. will contribute 25 per cent. of the capital. The U.S. Government, acting through the Export-Import Bank, has given a loan of 3.92 crores to the Synthetics and Chemicals Ltd., from the sale proceeds of U.S. agricultural commodities supplied to India. Four private American banks will also contribute equal amounts to a loan of $6,000,000 to the Indian Company. Besides, the Firestone Tyre and Rubber Company will make available to the Indian Company $5,625,000 in cash in American and other currencies for the purchase of machinery, equipment and the initial stores. The Indian Company will also be assisted by its American associate—the Firestone Tyre and Rubber Company—with the necessary technical information, know-how, expert advice and supervision in setting up the factory.

In India, especially in Uttar Pradesh, plenty of alcohol is available as a by-product of sugar factories which explains the location of the Indian synthetic rubber factory in the centre of an alcohol producing area. The new factory will need about 14 million gallons of alcohol a year. The Uttar Pradesh sugar factories, currently producing nearly 12.5 million gallons, are expected to be able to meet the synthetic rubber factory's alcohol requirements by the time it goes into production. Initially the new factory will produce 20,000 tons of synthetic rubber annually with a capacity to expand production to 30,000 tons.

COMPANY MEETINGS AND DIVIDENDS

COWCODDY ESTATES LTD. Annual General Meeting, Bunder, Mangalore—South Kanara, Mysore State, 14th December 1960. Dividend: 25 per cent. or Re. 0.50 per share, subject to deduction of tax. (This includes an interim dividend of 10 per cent. Re. 0.20 per share.) Transfer books remain closed from 1st to 14th December 1960, both days inclusive.

T. MANEKLAL MFG. CO., LTD. Annual General Meeting, Bombay, 14th December 1960. Transfer books will remain closed from 7th to 21st December 1960, both days inclusive.

MYSORE CEMENTS LTD. Annual General Meeting, Bangalore, 15th December 1960. Transfer books remain closed from 3rd to 17th December 1960, both days inclusive.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. Annual General Meeting, Belmont, Coonoor, Nilgiris, 17th December 1960. Dividend: 27½ per cent. or Rs. 2.75 per share (includes interim dividend of 7½ per cent. or Re. 0.75 per share, paid in April 1960), subject to deduction of tax. Transfer books will remain closed from 5th to 17th December 1960, both days inclusive.

BENGAL ELECTRIC LAMP WORKS LTD. Annual General Meeting, Calcutta, 17th December 1960. Transfer books remain closed from 3rd to 17th December 1960, both days inclusive.

MYSORE TOBACCO CO., LTD. Annual General Meeting, Bangalore, 17th December 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax, payable on and after 28th December 1960. Transfer books will remain closed from 5th to 17th December 1960, both days inclusive.

INVESTMENT TRUST OF INDIA LTD. Annual General Meeting, Madras, 21st December 1960. Dividend: 5 per cent. or Rs. 5.00 per share, subject to deduction of tax, payable on 22nd December 1960. Transfer books will remain closed from 13th to 21st December 1960, both days inclusive.

TALAYAR TEA CO., LTD. Annual General Meeting, Kottayam, Kerala State, 21st December 1960. Dividend: 8 per cent. or Re. 0.16 per share, subject to deduction of tax, payable on or after 27th December 1960. Transfer books will remain closed from 7th to 21st December 1960, both days inclusive.

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 21st December 1960. Dividend: Re. 0.90 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 5th to 21st December 1960, both days inclusive.

DARJEELING ROPEWAY CO., LTD. Annual General Meeting, Calcutta, 27th December 1960. Dividend: Re. 0.50 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 27th December 1960, both days inclusive.

ATAL TEA CO. (1943) LTD. Annual General Meeting, Calcutta, 27th December 1960. Dividend: 10 per cent. subject to deduction of tax. Transfer books will remain closed from 13th to 27th December 1960, both days inclusive.

ALUMINIUM CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 27th December 1960. Transfer books will remain closed from 9th to 27th December 1960, both days inclusive.

MADHYA PRADESH INDUSTRIES LTD. Annual General Meeting, Bhopal, 29th December 1960. Transfer books will remain closed from 14th to 29th December 1960, both days inclusive.

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 30th December 1960. Transfer books will remain closed from 14th to 30th December 1960, both days inclusive.

ASSOCIATED CEMENT COS. LTD. Annual General Meeting, Bombay, 20th January 1961. Dividend: Rs. 12.00 per share, subject to deduction of tax, payable on and from 2nd February 1961.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD. Ad-interim dividend of 6 per cent. per annum or Rs. 3.00 per share, subject to deduction of tax, for the half-year ended 30th September 1960, payable on and after 20th December 1960. Transfer books remain closed from 2nd to 14th December 1960, both days inclusive.

CENTRAL PROVINCES RAILWAYS CO., LTD. Final dividend of Rs. 2.00 per share (making a total of Rs. 3.50 per share, for the year), subject to deduction of tax, for the year ended 30th September 1960. Transfer books will remain closed from 16th December 1960 to 6th January 1961, both days inclusive.

INDIA JUTE CO., LTD. Taxable final dividend of Re. 1.00 per share, for the year ended 31st March 1960.

MEGNA MILLS CO., LTD. Taxable final dividend of Re. 0.60 per share, for the year ended 31st March 1960.

MARIKAR MOTORS LTD. Taxable dividend of 18 per cent. or Rs. 9.00 per ordinary share, for the year ended 31st March 1960. Transfer books will remain closed from 15th to 28th December 1960, both days inclusive.

RADIO AND ELECTRICALS MFG. CO., LTD. Taxable final dividend of 11 per cent. (making a total of 23 per cent. for the year), for the year ended 31st March 1960. Transfer books will remain closed from 7th to 19th December 1960, both days inclusive.

STANES AMALGAMATED ESTATES LTD. Taxable final dividend of 12 per cent. (making a total of 17 per cent. for the year), or Re. 1.20 per ordinary share, for the year ended 30th June 1960. Transfer books will remain closed from 15th to 30th December 1960, both days inclusive.

INDIA CEMENTS LTD. Taxable interim dividend of 6 per cent. or Re. 0.60 per ordinary share, for the year ending 31st March 1961. Transfer books will remain closed from 20th to 27th December 1960, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Bijhauth Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The season's working resulted in a profit on revenue account of Rs. 3,58,698 (Rs. 1,96,109) after providing for depreciation amounting to Rs. 2,26,571 (Rs. 1,84,931) writing off development expenditure of Rs. 1,69,419 (Rs. 1,30,108) incurred during the year on tea estates, providing Rs. 2,25,000 (Rs. 2,39,600) for contingencies and Rs. 5,60,000 (Rs. 95,000) for taxation. After transferring the above revenue profit making sundry adjustments and bringing forward the unappropriated balance of Rs. 7,54,179 (Rs. 3,54,184) from last year the balance remaining in profit and loss account amounts to Rs. 11,12,877 (Rs. 5,50,293). From this amount it is proposed to transfer to building reserve Rs. 2,00,000 (*nil*), to repairs and renewals reserve Rs. 1,00,000 (*nil*), to pay a dividend of 13 (*nil*) per cent. for 1959, subject to deduction of tax, absorbing Rs. 4,29,000 (*nil*) and to carry forward Rs. 3,83,877 (Rs. 5,50,293).

The following are comparative statistics of sales for the past three years:—

	Pounds	*Average price per pound*
1957	3 635,385	Rs. 2.58 nP
1958	3,903,729	Rs. 2.44 nP
1959	3,390,440	Rs. 2.75 nP

The revised estimate for 1960 provides for a crop of 13,75,920 kg. or 30,32,800 lbs., a drop of 3 57,540 lbs. on the previous season's crop. This drop is entirely due to the exceptionally severe drought which affected most parts of Assam without precedent in the history of the tea industry in North-East India.

The total working cost per kg. of tea was Rs. 5 28 or Rs. 2.40 (Rs. 2.07) per pound.

The Central Government gave its approval to the reappointment of Messrs. Williamson Magor & Co., Ltd., as managing agents, but reduced the term of office to five years and prescribed a sliding scale of remuneration. At the general meeting of the Company held on 14th August, 1960 the re-appointment of Messrs. Williamson Magor & Co., Ltd., as managing agents of the Company was formally confirmed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Central India Coalfields Ltd.

The directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The profit for the year before charging depreciation and taxation amounts to Rs. 16,14,495 (Rs. 9,93,185) from which is deducted provision for income-tax Rs. 4,91,000 (Rs. 3,05,000) and depreciation Rs. 5,04 459 (Rs. 2,67,745) leaving a balance of Rs. 6,19,036 (Rs. 4,20,440). Together with the balance brought forward from last year's account of Rs. 7,059 (Rs. 10,769 and excess provision of wealth tax now written back Rs. 1,551 (*nil*) makes a total of Rs. 6,27,646 (Rs. 4 31,209). Out of this amount the directors have transferred to development reserve Rs. 1,25,344 (Rs. 1,74,300) and to reserve for contingencies Rs. 75,000 (*nil*) leaving a balance of Rs. 4,27,302 (Rs. 2,55 903). The directors recommend payment of dividend at the rate of Re. 0.80 (Re. 0.50 free of tax) per share, subject to tax, absorbing Rs. 3,99,760 (Rs. 2,49,850) leaving a balance to be carried forward to the next year's account of Rs. 27,542 (Rs. 7 059).

Raising and Workings:

	1958-59 tons	1959-60 tons
Raisings	3.16 881	3,74,738
Despatches	3,06,540	3,73,834
Colliery consumption ...	9,167	7,736

Working of the company shows satisfactory improvement during the year. Rs. 1 20 000 of the accumulated depreciation has been written off during the year, and the directors have further transferred Rs. 75,000 to a new account called reserve for contingencies. Difficult mining conditions restricted the output at the Pure Chirimiri and Khas Badjna collieries of the company, while at the Orient colliery, the workings were on the whole satisfactory.

On the basis of the grades fixed for collieries in Madhya Pradesh and Orissa, the Government announced revised prices of coal in these fields from 16th November 1959.

Accounts in brief are as follows:—

Liabilities	Rs.	Assets	Rs.

Rs.	81.64.171	Rs.	81.64,171

Cowcoody Estates Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Peirce Leslie & Co. Ltd., Mangalore) present the audited accounts of the Company for the year ended 30th June 1960.

Acreage.—The total acreage of the properties remains unchanged as follows: Coffee in bearing: arabica 405.38 acres; robusta 28.55 acres; new clearings 11.00 acres; cardamoms 108.51 acres and oranges 52.02 acres. Wet lands cover 50.16 acres and reserve lands 223.63 acres.

After providing for depreciation and all other charges except taxation, the accounts show a profit of Rs. 1,56,167 (Rs. 1,11,152) to which is added the balance brought forward from last year of Rs. 28,530 (Rs. 71,748) and refund of income-tax Rs. 11,983 (*nil*) making a total of Rs. 1,96,710 (Rs. 1,82,900). After deducting from this the interim dividend of 10 (10) per cent. taxable declared on 30th May 1960 amounting to Rs. 40,856 (Rs. 40,856), transfer to taxation reserve of Rs. 41 900 (Rs. 27,200) and transfer to general reserve of Rs. 25,000 (Rs. 25.000) there remains a balance of Rs. 88,954 (Rs. 89,844). The directors recommend payment of a final dividend of 15 (15) per cent. subject to deduction of tax absorbing Rs. 61,284 (Rs. 61,284) leaving a balance to be carried forward of Rs. 27,670 (Rs. 28,560).

Coffee.—The total crop of 99.155 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.20 per point or Rs. 3,283 per metric tonne. A comparative statement of production and costs for the past three years is given below:

Year	*Crop (metric tonnes)*	*Estate expenditure per metric tonne*	*All in cost per metric tonne*
1957-58 ..	177.805	Rs. 1,330	Rs. 1,850
1958-59 ..	101.457	Rs. 2.370	Rs. 2,750
1959-60 ..	99.155	Rs. 2,395	Rs. 2,883

Final payment on 1957-58 crop has been received making the total for the year Rs. 2.51 per point. This is equivalent to Rs. 3.727 per metric tonne. The 1958-59 crop has been revalued at Rs. 2 45 per point being the figure so far declared by the Coffee Board and this is equivalent to Rs. 3.589 per metric tonne.

The 1960-61 crop has been estimated at 120-122 metric tonnes and the all-in-cost of production at Rs. 2.377 per metric tonne. Capital expenditure for the year is estimated at Rs. 12,600.

Cardamoms.—A crop of 499 lbs. of cardamoms was harvested. Out of this 355 lbs. was sold at Rs. 8.50 per lb. and the balance of 144 lbs. has been valued at Rs. 7 per lb. The 1960-61 cardamom crop is estimated at 700 lbs.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Indian Hume Pipe Co., Ltd.

The directors of the above Company (Messrs. Walchand and Co. Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The net profit for the year after providing Rs. 12,00.000 (Rs. 19,00.000) for taxation is Rs. 11,49.221 (Rs. 17 41.000) to which is added the amount brought forward from the last year of Rs. 84,342 (Rs. 83.338) making a total of Rs. 12,33,563 (Rs. 18,24,342). The directors propose to transfer to debenture redemption reserve Rs. 2,00.000 (Rs. 3 00,000), to rehabilitation reserve Rs. 1,00,000 (Rs. 3,00,000) and to additional provision for taxation Rs. 50,000 (Rs. 5,00,000 to excess profit tax provision) leaving a balance of Rs. 8.83 563 (Rs. 7,24,342). The directors now recommend payment of dividends as follows:—

On 5 per cent. cumulative preference shares, subject to tax Rs. 2.50,000 (Rs. 2,50,000) and on ordinary shares at 13 (13) per cent per annum, subject to tax Rs. 5.62,617 (Rs. 3,90 000) leaving a surplus to be carried forward of Rs. 70,946 (Rs. 84,342). The dividend on ordinary shares, for the year 1960 is on increased capital of Rs. 59,99,900 (Rs. 30.00,000).

During the period under report 2 factories were closed and 4 new factories are opened making the total number of factories to 58 and the working of the factories in general is satisfactory.

The income-tax Assessments of this Company are completed upto the year ended 30th June 1954 i.e., Assessment year 1955-56 and the Company has gone in appeal.

The Company issued ordinary shares of Rs. 30 lakhs at par and the whole issue was fully subscribed.

The Company has recently secured an order for supply of *Steel Penstocks* worth about Rs. 67 lakhs for Sharavathi Hydro-Electric Project in Mysore State. These *Penstocks* will be manufactured at the Company's Factory at Hadapsar near Poona. The Company has also secured an order for supply of 40,000 *Prestressed Concrete Poles* for transmission of Koyna Power, from Maharashtra State Electricity Board. The Company is erecting a new Factory at Karad for manufacture of these poles.

The Company has secured order for supply of Steel Penstocks worth about Rs. 1,32,00,000 for Koyna Hydro Electric Project. By the end of the accounting year although the fabrication of pipes had commenced and a few *Penstock* pipes were erected, the entire job was in a preliminary stage and as such the expenses on these jobs are carried forward.

During the year under report consent from the Central Government has been received approving the re-appointment of Messrs. Walchand and Co. Private Ltd. as managing agents of this Company with effect from 15th August 1960, for a period of 5 years on a remuneration which is fixed on a slab system, other terms remaining the same as approved by the Members, at the extraordinary general meeting of the Company held on 31st August 1959. Necessary managing agency agreement has been executed accordingly.

Accounts in brief are as under:—

Mysore Chemical Manufactures, Ltd.

The directors of the above Company (Managing Director: Mr. S. Ramanathan, Bangalore) present the audited accounts of the Company for the year ended 31st March 1960.

The working of the Company during the year resulted in a net profit of Rs. 2 16,050 (Rs. 1,93,203) after providing Rs. 64,925 (Rs. 74,208) for depreciation, Rs. 3,20,000 (Rs. 3,20,000) for income-tax, super-tax and tax on bonus shares issued, and Rs. 17.741 (Rs. 32,698) for development rebate. Together with the last year's balance brought forward of Rs. 41,137 (Rs. 24,933), the total sum available for distribution is Rs. 2,57,186 (Rs. 2,23,137). The directors recommend to dispose of this amount as follows:—

To payment of dividend of 6 per cent. for the year under report on 20,000 6 per cent. cumulative preference shares subject to deduction of tax, absorbing Rs. 12 000 (Rs. 12,000), to payment of a dividend of 20 (20 per cent. free of tax) per cent. for the year under report on 80,000 ordinary shares subject to deduction of tax, absorbing Rs. 1,60,000 (Rs. 1,20,000) and to carry forward to next year's account Rs. 85,186 (Rs. 41,137 after transferring Rs. 50,000 to dividend equalisation reserve).

Under the new provisions of the Income-tax Act, a compulsory deduction of tax at 30 per cent. able. The directors desired to raise the rate of dividend on the preference shares to cover the deductions of income-tax by placing necessary resolutions before the equity and preference shareholders, but in view of the recent Bill introduced before the Parliament regarding the Preference Share Regulation of Dividends Bill 1960, they are awaiting the legislative provisions and have decided to pay the usual 6 per cent. dividend (deducting income-tax at source. The necessary revision for payment of the additional dividend will be given effect to as soon as the Bill is passed. The amount of the additional increased dividend will be paid to the preference shareholders out of the unappropriated profits carried in the accounts.

During the year a sum of Rs. 2,00,000 was capitalised from the reserve fund and 20,000 equity shares of Rs. 10 each were allotted as bonus shares to the existing equity shareholders in the proportion of one share for every three shares held as per the resolution passed at the extraordinary general meeting of the Company held on 2nd May 1959. These shares rank *pari passu* with the old equity capital. The proposed dividend of 20 per cent. taxable on the enhanced capital should be considered satisfactory.

During the year a total quantity of 3.163 tons of *chemicals* were produced as against 3,085 tons in the previous year. The total sales amounted to Rs. 33,85,208 including *fertilisers*, while the sales for the previous year were only Rs. 30,98,434.

The output of *chemicals* during the year has shown slight increase. The Company could not maintain full production for want of sufficient supplies of *sulphuric acid*.

The Company has secured licence from the Government of India for installing a sulphuric acid plant and the directors intend proceeding with the scheme.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	38.21.205	Rs.	38.21.205

Mysore Tobacco Co., Ltd.

The directors of the above Company (Chairman: Mr. M. Mallaraj Urs, Bangalore), present the audited accounts of the Company for the twenty-third year ended 31st March 1960.

The net profit for the year amounted to Rs. 75,422 (Rs. 81,112) after providing Rs. 68 037 (Rs. 66,547) towards depreciation and Rs. 61,790 (Rs. 1,13,147) towards taxation. With the amount brought forward of Rs. 200 (Rs. 4,088) of last year and by drawing Rs. 25,000 (Rs. 40.000) from the dividend equalisation fund the directors recommend the following appropriations to be made:—

To declare a dividend of 10 (12½ per cent. free of tax) per cent. subject to taxation. absorbing Rs. 1,00,000 (Rs. 1,25,000) and to carry forward Rs. 622 (Rs. 200).

The Company acquired 1,01,41,935 pounds of green leaf from a planted area of 3,083 acres in the year under report as against 1 12,80,291 pounds obtained from 3,364 acres in the previous year.

The seasonal conditions were adverse to the tobacco crop and there was a general decline in the yield of the crop. The production of tobacco in Gowribidnur area both in quantity and quality was reduced. The tobacco production in the private sector also declined due to greater interest in the cultivation of sugarcane and inadequate water supply in the wells for early planting of tobacco. Keener competition continued from other buyers for purchase of the tobacco. The quantity of cured leaf acquired during the year was 5.99,368 lbs. as against 8,05,421 lbs. in the previous year. The spot disease in Mandya Area continued to reduce the quality of tobacco.

Although it is gratifying to report that the out-turn of top grades in the year was higher than in the previous year, the increase in the cost of production due to the rise in the price paid for the green leaf and cured leaf, the levy of *Octroi* on green and cured tobacco and other operational expenses, were responsible to reduce the margins available to the Company. The directors are therefore actively considering ways and means by which a steady return may be achieved. The processing of tobacco in the Redrying Plant at Whitefield of other agencies is being continued as during previous years.

Accounts in brief are as under:—

New Manbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) presented the audited accounts of the Company for the year ended 31st March 1960.

The revenue account shows a gross profit on the working of the year of Rs. 2,14,133 (Rs. 1,69,402). After adding to this the profit on sale of sand lease Rs. 18.080 (*nil*) and profit at Howrah depot Rs. 2,982 (*nil*), there is a total of Rs. 2,35,195 (Rs. 1,64 510 including Rs. 4,108 being refund from railway). From this amount is deducted directors' remuneration of Rs. 2,575 (Rs. 2,055), contribution to superannuation fund Rs. 4,019 (Rs. 12,013), managing agents' remuneration Rs. 23,650 (Rs. 24 100), colliery manager's commission Rs. 9,962 (Rs. 7,397), provision for taxation Rs. 58 (Rs. 1,521), reserve for doubtful debts Rs. 12,000 (*nil*) and development rebate reserve of Rs. 9,792 (Rs. 10.838) leaving a balance of Rs. 1,73 139 (Rs. 55.313 after writing off losses on sale of machinery and investments, bad debts and providing for wealth tax) with the balance brought forward from the previous year of Rs. 97,273 (Rs. 1,34,222) and credit adjustments in respect of previous year of Rs. 8,327 (Rs. 262), less debit adjustments in respect of previous year Rs. 27,136 (Rs. 12,524), there is a credit balance in the profit and loss account of Rs. 2 51,603 (Rs. 1,77,273). Out of this amount directors have transferred Rs. 1,50,000 (Rs. 50,000) to general reserve and they recommend that the balance, namely Rs. 1,01,603 (Rs. 1,27,273) should be disposed of as follows:—

To pay a dividend of 7½ (5 per cent. tax-free) per cent. for the year ended 31st March, 1960. subject to deduction of tax at source, absorbing Rs. 45,000 (Rs. 30.000) and to carry forward Rs. 56,603 (Rs. 97,273).

The raisings and despatches for the year ended 31st March, 1960, amounted to 139,431 tons and 116,109 tons, respectively, as against 129,736 tons and 122,017 tons, respectively, for the previous year.

The second stowing and crushing plant referred to in the last year's report has been delivered and steps are being taken to put this into operation in course of next few months. After the installation of this machine there should be increase in output of selected grade coal for which there is a great demand and it is expected that this will lead to considerable improvement in the working results of the colliery. Although as detailed above raisings during the year improved appreciably as compared to previous year, the total output was less than the estimated figure, due to very heavy and prolonged rains during monsoon period which impeded mining operations for some time. The directors are glad to report that raisings during the six months ended 30th September, 1960, show a satisfactory improvement of position as compared to the same period of 1959.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00.000	Gross block	28,97,827

		Cash ...	45.822
Rs.	21,00,442	Rs.	21,00,442

Parkside (Neilgherry Hills) Estate Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Matheson, Bosanquet & Co. Private Ltd., Belmont, Coonoor) present the audited accounts of the Company for the financial year ended 30th June 1960.

The year under review is the most successful the Company has ever had with a record crop of 8,19,500 lbs. of made tea. The average sale price though lower than for the previous season continued to be far above the average auction prices and as a result the season has produced very satisfactory working results.

The gross profit for the year after providing for depreciation amounts to Rs. 9,02,078 (Rs. 7,11,767) from which is to be deducted provision for Central and agricultural income-tax of Rs. 4 30,000 (Rs. 3,20,000) leaving a sum of Rs. 4,72,078 (Rs. 3,91,767). With the balance brought forward from the previous year of Rs. 50,402 (Rs. 5,024) and excess provision for taxation in previous year not required of Rs. 6,818 (Rs. 26,886) there is a total amount available for disposal of Rs. 5.29.298 (Rs. 4.23.677). The interim dividend of 7½ (7½) per cent. already paid on 20th April 1960, absorbed Rs. 1,01.520 (Rs. 1,01,520). The proposed final dividend of 20 (20) per cent. will absorb Rs. 2,70,720 (Rs. 2,70 720). The directors propose to transfer to development rebate reserve Rs. 6,790 (Rs. 1,035), to general reserve Rs. 1,00,000 (*nil*) and to provision for taxation in respect of 1957-58 Rs. 2,857 (*nil*) leaving a balance to be carried forward to next year of Rs. 47,411 (Rs. 50.402).

Bonus Shares: The directors are pleased to recommend the issue of free bonus shares to all the shareholders in the proportion of 1 Bonus share for every 10 shares held.

The total area of the Estate remains unchanged at 649.71 acres out of which 579.40 acres are tea bearing.

Crop: As stated above a record crop of 8,19,500 (6,55,200) lbs. of made tea was secured which is equivalent to 1,414 lbs. per acre, and the harvest is some 77,360 lbs. above the previous record which was gathered two seasons ago. It is indeed fortunate that the Factory and machinery has been modernised in recent years so that the Company was in a position to manufacture teas of a high standard even during peak cropping periods.

While weather conditions have of course been unusually favourable, the tea shows no ill effects from the heavy crop removed indicating that the liberal cultivation policy adopted is on sound lines. It is too early to give an estimate of the probable crop intake for the current season but present indications are that the estimate will be obtained without difficulty.

Estimates for the season 1960-61 provide for 6,50 000 lbs. of made tea to cost 145.08 nP per lb. inclusive of 16.61 nP per lb. for manuring.

Accounts in brief are as under:—

Smith Stanistreet and Co., Ltd.

The directors of the above Company (Chairman: Mr. A. H. Hume, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1960.

The Company continues to establish progressively its products in the market and to maintain its distribution organisation to the satisfaction of its principals. Rationalisation of the Company's own products has continued and promotional activities for the ethical products have given satisfactory results although the full benefit of further increases in the number of field personnel is still to be realised.

During the current year a further rise in sales is anticipated in all directions and the future is looked to with optimism. During the year supplies of raw materials for the Strychnine plant became increasingly available and production and sales have been satisfactory.

After making adequate provision for depreciation, taxation and all other charges and transferring Rs. 50.000 (Rs. 50.000) to general reserve, Rs. 50,000 (Rs. 50,000) for doubtful debts and Rs. 12.500 (*nil*) as a reserve for additional dividend on preference shares, the profit for the year amounted to Rs. 4,48 372 (Rs. 4,34,192). After bringing in the amount of Rs. 75.219 (Rs. 87.459) brought forward from last year the balance at the credit of the profit and loss account is Rs. 5.23.591 (Rs. 5,21,647) which sum the directors recommend should be disposed of as follows:

To payment of dividend on the preference shares at 10 (14.286) per cent. per annum, absorbing Rs. 50,000 (Rs. 71,423) and to dividend on the ordinary shares at 25 (25) per cent. per annum, absorbing Rs. 3.75,000 (Rs. 3,75,000) leaving to be carried forward to the next account Rs. 98,591 (Rs. 75,219).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20.00.000	Gross block	24,40,260
Reserves ...	14,69,737	*Less*—Depreciation ...	15,05.655

Rs.	82.55.814	Rs.	82 55.814

Woodland Estates Ltd.

The directors of the above Company (General Manager: Mr. S. Sivaramakrishna Aiyar, Trivandrum) present the audited accounts of the Company for the year ended 31st March 1960.

Crops	1959-60 pounds	1958-59 pounds
Tea: Braemore and Marigold ...	165,429	2,20 732
Rubber: Braemore	172.234	1,65.983
Lakshmi	66 779	67,574
	239,013	2,33,557

The Estate cost of production for tea was 137.90 (108.28) cents per pound and for rubber was 100.36 (99.84) cents per pound. The average sale price obtained for tea was 178.49 (139.18) cents per lb. Rubber prices were as follows:—RMA Grades and ctgs 153.84 (152.95) cents per lb.; EBC Grades 129.56 (128.97) cents per lb. and for PLC Sole Crepe and ctgs 199.78 (202.07) cents per lb. Sundry Produce fetched Rs. 49,640 (Rs. 42,822).

The net profit after allowing for the usual depreciation and other outgoings, debenture interest and income-tax thereon, amounts to Rs. 1,30,466 (Rs. 1,71 959) of which Rs. 45,000 (Rs. 70,000) has been provided for taxation. With the balance brought forward of Rs. 2.109 (Rs. 5.473) there is a total of Rs. 87,574 (Rs. 1,07,432) out of which the directors have already paid an interim dividend of 10 (dividend of 5 per cent. free of tax for 1959) per cent., subject to tax, on ordinary shares absorbing Rs. 69.500 (Rs. 34,750) and 6¼ per cent. dividend subject to tax on preference shares absorbing Rs. 15.113 (Rs. 15.113). The balance left over is Rs. 2,962 (Rs. 2,109 after transferring Rs. 50.000 to debenture redemption fund and writing off Rs. 5,461 for preliminary expenses) which is proposed to be carried forward.

The tea crop is less by 52.000 odd lbs. compared to last year which is due to the labour troubles. The tea prices realised were better. Rubber prices including Sole crepe was steady. Income from sundry produce was higher due to the increased price for arecanuts. Income from rubber area given out for slaughter tapping was Rs. 10,143. 50 acres have already been replanted with budded rubber. Working of tea fields at Marigold also was not satisfactory and as a result the Estate has been closed down in March 1960.

Pursuant to the resolution passed in the annual general meeting held on 30th December 1958 the Company was looking forward to receive a competitive offer for Lakshmi or Marigold. Lakshmi Estate was sold for Rs. 5 lakhs and the property was handed over to the purchaser on 24th February 1960 in terms of an agreement between the purchaser and the ex-managing director of the Company. The profit earned by the Company by selling the Estate is Rs. 3,85,924 of which a sum of Rs. 2.85,924 has been transferred to debenture redemption fund, leaving the balance Rs. 1,00,000 available for investment. As the above transfer has been made to the debenture redemption fund, the usual transfer of Rs. 50,000 from the profit and loss appropriation account was not made this year. Out of the sale consideration of Lakshmi Estate a sum of Rs. 3.00.000 has been put in fixed deposit in the joint names of the Company and the debenture trustee [earmarked for debentures].

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-first Annual General Meeting of the Belapur Company Limited, will be held on Thursday, the 29th December, 1960, at 4.30 p.m. (S.T.), at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1960.
2. To declare a Dividend.
3. To elect a Director in place of Mr. Krishnaraj M. D. Thackersey who retires by rotation but offers himself for re-election.
4. To elect a Director in place of Mr. Maneklal Premchand, who has attained the age of 71 years and who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following of which special notice has been received by the Company and is hereby given:

   "That Mr. Maneklal Premchand, who retires by rotation be and is hereby appointed a Director of the Company and that the age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to him."
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and if thought fit to pass the following Resolution as a Special Resolution:—

   RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956 the Company hereby approves and confirms and consents to the arrangement between the Company and W. H. Brady & Company, Limited, (the Managing Agents of the Company) whereby W. H. Brady & Company, Limited, permit the Company to occupy space in the premises belonging to them and known as Brady House, 12/14, Veer Nariman Road, Bombay, for the purpose of the Company's Office together with facilities for the holding of General Meetings and Directors' Meetings, facility to the staff to utilise the lunch room and other facilities and services appertaining to the building in common with the staff of other companies and that for the facility so provided the Company do pay to W. H. Brady & Company, Limited, a monthly rent of Rs. 288.06 plus a varying charge for the consumption of electricity, telephone and other common services not exceeding Rs. 400.00 per month and that the Directors of the Company shall have authority to increase or reduce the monthly rent as well as the said monthly payment if the space and facilities offered by W. H. Brady & Company, Limited, and the taxes and other charges for consumption of electricity and telephone shall hereafter be increased or reduced.
7. To consider and if thought fit to pass the following as a Special Resolution:—

   RESOLVED that the payments made by the Company to W. H. Brady & Company, Limited, for rent and for the services mentioned in the above Resolution No. 6 for the period from 1st April, 1956 to 30th September, 1960 be and the same are hereby confirmed.
8. To consider and if thought fit to pass the following Resolution as a Special Resolution:—

   RESOLVED that subject to the consent of the Central Government being obtained the existing Article 152 of the Company's Articles of Association be deleted and the following Article be substituted for the same as Article 152:—

   "152. The remuneration of every Director inclusive of Ex-Officio Directors, Special Directors (if any) Alternate Directors (if any) and the Debenture Directors (if any) shall be a sum of Rs. 200 for every meeting of the Board or of a Committee consisting wholly or partially of Directors attended by him."

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
Per pro W. H. BRADY & Co., LTD.,
J. SYMON,
Technical Adviser,
Managing Agents.

BOMBAY, *16th November*, 1960.

Notes: (i) The Transfer Books of the Company will be closed from the 21st day of November, 1960 to the 20th day of December, 1960, both days inclusive, for declaration of dividend.

(ii) The Dividend when declared will be made payable through the Bank of India, Ltd., Fort, Bombay, and will be negotiable at par at all its Indian Branches on and after the 7th February, 1961. The Dividend Warrants will be posted to those Shareholders whose names stand on the Company's Register on the 20th day of December, 1960.

To the Shareholders of the Belapur Company, Limited and in particular to:—

Mr. William Abel,

M/s. Rajabali Hasom Paroo & Sons Ltd.

ANNEXURE

STATEMENT of material facts and reasons in respect of items of special business in the accompanying Notice dated the 16th November, 1960.

Explanatory Statement as Required by Section 173 of the Companies Act, 1956

Items No. 6 & 7: The Registered Office of the Company is situate in Brady House, 12/14, Veer Nariman Road, Fort, Bombay. The said premises belong to W. H. Brady & Company, Limited, the Managing Agents of the Company and in addition to other tenants the premises contain the offices of W. H. Brady & Company, Limited, as well as of companies managed by them or in which they have an interest. It is convenient for the Company to continue to have its office in the said premises. Looking to the space now used by the staff of the Company in the said premises and the general facilities and services available to the Company and to the staff, a monthly rent of Rs. 288.06 is considered by your Directors to be reasonable and has been agreed to. In addition to this monthly rent, the Company will pay a part of the actual expenses incurred by W. H. Brady & Company, Limited, for charges for electricity, telephone and other services. This charge will be a variable charge but will not exceed Rs. 400.00 per month.

It is believed that the payments to be made for the above purposes by the Company to the Managing Agents do not fall within the provisions of Section 360 of the Companies Act, 1956, but as some doubt has been expressed, it is thought advisable to place the matter before the Company for passing the special resolutions under Section 360 of the Act.

Resolution No. 6 also authorises the Directors to agree to an increase or reduction of the monthly rent in the event of the accommodation and services being increased or reduced.

Resolution No. 7 provides for confirming the payments that have been made to W. H. Brady & Company, Limited, from 1st April, 1956. The payments that have been made for monthly rent are at the rate of Rs. 288.06 per month for the year 1959-60 and the varying payments for consumption of electricity, telephone and other services, of which the totals are as follows:—

	Rent	*Other Payments*	*Total*
For the period from	Rs.	Rs.	Rs.
1-4-1956 to 30-9-1956:	1,500.00	1,560.00	3,060.00
For the year 1956/57	3,000.00	2,931.00	5,931.00
For the year 1957/58	3,132.00	2,978.00	6,110.00
For the year 1958/59	3,411.36	3,147.00	6,558.36
For the year 1959/60	3,456.72	3,594.00	7,050.72
		Rs.	28,710.08

Your Directors, Mr. Neville N. Wadia and Mr. Pallonji S. Mistry, are interested as Directors of W. H. Brady & Company Ltd., and also as Shareholders, and your Director, Sir Jamsetjee Jejeebhoy as a Shareholder.

Mr. Neville N. Wadia and Mr. Pallonji S. Mistry hold 280 and 50 Ordinary Shares respectively of Messrs. W. H. Brady & Co., Ltd., in their own names and Sir Jamsetjee Jejeebhoy holds 94 shares jointly with others.

Item No. 8: The business of the Company has since recently considerably increased and the remuneration of Rs. 100 paid to the Directors for every meeting of the Board or of a Committee wholly or partially of the Directors is inadequate. The Directors propose that their remuneration for attending every meeting of the Board or for attending every meeting of a Committee consisting wholly or partially of Directors should be at least Rs. 200.

Section 310 of the Companies Act 1956 provides that any increase in the remuneration of the Directors shall not have any effect unless approved by the Central Government. The said Special Resolution No. 8 will, therefore, be passed subject to the consent of the Central Government being obtained.

By Order of the Board of Directors,
Per pro W. H. BRADY & Co., LTD.,
J. SYMON,
Technical Adviser,
Managing Agents.

BOMBAY, *16th November*, 1960.

THE INDIA JUTE COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of THE INDIA JUTE COMPANY, LIMITED, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Thursday, the 22nd day of December, 1960, at 3-15 O'clock in the afternoon, for the following purposes:—

AGENDA

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1960, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th December, 1960, to 22nd December, 1960, both days inclusive.

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA, *22nd November*, 1960.

Note: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

THE MANAGING AGENTS ARE AUTHORISED to announce that the Board of Directors of the above Company have resolved to recommend payment of a Dividend at the rate of Rs. 12 per share (subject to deduction of tax) for the year ended 31st July, 1960.

The said Dividend, when sanctioned at the Annual General Meeting of the Shareholders of the Company to be held on 20th January, 1961, will be made payable on and from 2nd February, 1961, to those Shareholders whose names stood on the Register of Members on 30th November, 1960, to whom or to whose Mandatees dividend warrants will be posted at their registered addresses.

INTIMATION OF ANY CHANGE IN ADDRESS SHOULD BE GIVEN TO THE COMPANY IMMEDIATELY.

For CEMENT AGENCIES (PRIVATE) LTD.,
N. DANDEKER,
Managing Director.

BOMBAY, *25th November*, 1960.

THE MEGNA MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of THE MEGNA MILLS COMPANY, LIMITED, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Thursday, the 22nd day of December, 1960, at 3 o'clock in the afternoon, for the following purposes:—

AGENDA

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1960, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 11th December, 1960, to 22nd December, 1960, both days inclusive.

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA, *22nd November*, 1960.

Note: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE CENTRAL PROVINCES RAILWAYS COMPANY, LIMITED

NOTICE

AT A MEETING OF THE BOARD OF Directors of The Central Provinces Railways Company, Limited, held on 24th November, 1960, it was decided to recommend a final Dividend for the year ended 30th September, 1960, at the rate of Rs. 2-00 nP per Share (making Rs. 3-50 nP for the year), subject to deduction of tax, to those Shareholders whose names stand on the Register on Friday the 6th January, 1961.

For the purpose of this payment the Transfer Books of the above Company will be closed from Friday, 16th December, 1960, to Friday the 6th January, 1961, both days inclusive.

By Order of the Board,
For THE CENTRAL PROVINCES RAILWAYS CO., LTD.
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

KILLICK HOUSE,
HOME STREET, FORT,
BOMBAY-1, *24th November*, 1960.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Tuesday, the 27th day of December, 1960, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 74 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281 (2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended.

To be Proposed as an Ordinary Resolution

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 6th to 27th December, 1960, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, *10th November*, 1960.

Notes: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after the 30th of January, 1961, to those shareholders so entitled whose names appear in the Company's books on the 27th December, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE MYSORE KIRLOSKAR LIMITED

YANTRAPUR P.O., HARIHAR

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Annual General Meeting of the Company will be held on Monday the 26th December 1960 at 11 a.m. (I.S.T.), at the Registered Office of the Company at Harihar, to transact the usual business and also special business, the details of which have been made known to the shareholders separately by notice sent along with the Balance Sheet and Profit and Loss Account and Directors' Report.

The Share Transfer Books and Membership Register shall remain closed from 19th December 1960 to the 2nd January 1961 (both days inclusive).

By Order of the Board,
For THE MYSORE KIRLOSKAR LIMITED,
(Sd). M. S. VARTAK,
Secretary,

30th October 1960.

THE INDIA JUTE COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at its Registered Office on Thursday, the 22nd day of December, 1960, at 3.30 o'clock in the afternoon, to consider, and if thought fit, to pass either with or without modification, the following resolution which will be proposed as a special resolution, namely:

"That subject to confirmation by the High Court at Calcutta and to such modification (if any) as that Court may direct the Memorandum of Association of the Company be and is hereby altered by deleting subclause (*y*) of Clause 3 and substituting the following in its place:

To receive money on deposit at interest or otherwise and to lend money either with or without security and generally to such persons and upon such terms and conditions as the Company may think fit."

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA, *dated 24th November*, 1960.

Note: 1. A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on his behalf and the proxy need not be a member of the Company.

2. Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all shareholders along with the Notice convening the meeting.

THE MEGNA MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at its Registered Office on Thursday, the 22nd day of December, 1960, at 3.10 o'clock in the afternoon, to consider, and if thought fit, to pass either with or without modification, the following resolution which will be proposed as a special resolution, namely:

"That subject to confirmation by the High Court at Calcutta and to such modification (if any) as that Court may direct the Memorandum of Association of the Company be and is hereby altered by deleting subclause (25) of Clause 3 and substituting the following in its place:

To receive money on deposit at interest or otherwise and to lend money either with or without security and generally to such persons and upon such terms and conditions as the Company may think fit."

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA, *dated 24th November*, 1960.

Note: 1. A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on his behalf and the proxy need not be a member of the Company.

2. Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all shareholders along with the Notice convening the meeting.

THE NAIHATI JUTE MILLS COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the abovenamed Company will be held at the Registered Office, No. 33, Netaji Subhas Road, Calcutta-1, on Monday the 26th December, 1960, at 3 p.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Report thereon.
2. To appoint Auditors and fix their remuneration.
3. To appoint a Director in place of a retiring Director.

The Share Transfer Registers of the Company will be closed from 13th December, 1960 to 26th December, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
K. C. BHAGAT,
Chairman.

33, NETAJI SUBHAS ROAD,
CALCUTTA, *1st December*, 1960.

AHMEDABAD ELECTRICITY COMPANY, LIMITED

SPEECH OF THE CHAIRMAN, MR. A. N. HAKSAR

ADDITIONAL POWER PLANT OF 30 MW. TO BE INSTALLED

THE Directors of the Ahmedabad Electricity Company Ltd. have decided to purchase an additional power plant of 30 MW. capacity even before the first one of similar capacity is installed. Disclosing this at the Forty-eighth Annual General Meeting of the Company held at Bombay on 29th November 1960, Mr. A. N. Haksar, Chairman of the Company, said that it was the intention of the Company to bring this additional capacity into commission by March 1963. The question of how best the needed resources could be raised would receive the Board's consideration in due course, he added.

The following is the full text of Mr. Haksar's speech:

"GENTLEMEN,

"The forty-eighth annual general meeting of the Company is the first to be held after the inauguration of the State of Gujarat. The new State embraces an area which is both prosperous and progressive and it is certain that the achievements of the past will be more than embellished under the new constitution. It is perhaps not realised today that, in years gone by, your Managing Agents made a substantial contribution to the growth of the region which today is the State of Gujarat. Apart from various industrial enterprises including your own Company, they promoted a number of railway companies which more than anything else, perhaps, led to the opening up and rapid development of the northern part of the old Bombay State. We, today, are as alive as our predecessors to the needs of the new State, and on your behalf, as well as my own, I extend greetings and all best wishes to Gujarat in the years to come. As in the past, your Company will be called upon to play an important part in the development of Gujarat and I am certain that we shall not be found wanting.

"As an example of what I have just referred to, I would like to tell you that on the eve of the birth of the new State your Company was called upon to make available special power facilities to numerous premises, both public and private, in the city of Ahmedabad and its environs. All these calls were fully met and I am pleased to say that the promptness with which the Company responded to the demands has been fully appreciated and recorded by the Gujarat Government.

Expansion Projects

"The area served by your Company has witnessed significant industrial development in recent years, in the wake of a rapid expansion in generating capacity at the Sabarmati power station. With the formation of Gujarat State the pace of development is expected to be stepped up at an even quicker pace. This will be seen from the fact that the Gujarat Electricity Board is now engaged in organising large-scale thermal development at Dhuwaran, near Cambay, comprising three 50 MW. sets with an option for one more similar set. The Board of your Company, following the decision to purchase 30 MW. of plant, has now decided to repeat the order even before the first set is installed. Materials for this first set are now beginning to arrive from the suppliers and the commissioning date is expected to be at the latest, March 1962. The idea of repeating the earlier order is to try and ensure that additional power capacity is brought into commission by March 1963. Sanction for this new expansion has been received from the Gujarat Electricity Board, and it is hoped that Government will release sterling for the new project. It is appreciated by all concerned that a repeat order will bring the quickest relief to the power-starved city of Ahmedabad and Gujarat State as a whole. Efforts are, therefore, under way to obtain the necessary clearance from the exchange and import authorities, so that firm orders can be placed with the overseas suppliers.

"With the completion of these extensions, the Sabarmati power station will have reached its optimum size at the present site. As far as is known at present, the first 50 MW. set at the Dhuwaran thermal station is expected to be commissioned by the end of 1963 or the beginning of 1964. The subsequent sets are expected to be brought into commercial use every 3/6 months thereafter. Further power for Gujarat is expected to be available from the proposed 300 MW. nuclear power station to be installed at Tarapore in Maharashtra. Power from this source may not, however, be available during the third Five-year Plan period. Hydro power resources in Gujarat have large-scale potentialities but by its very nature development of hydro power is time-consuming and, consequently, new power capacity from these sources will not be available until after the third Five-year Plan period.

Growing Demand for Power

"In the immediate years ahead, therefore, power availability both in the North Gujarat and South Gujarat regions will be limited by the plant capacity at Sabarmati power station (217.5 MW), Dhuwaran thermal station (200 MW) and the Utran thermal station of the Gujarat Electricity Board (67.5 MW). These together will make a potential installed capacity of 480 MW. Making due allowance for standby, it has been anticipated that by the end of the third Five-year Plan period, the demand in the combined regions including Saurashtra will outpace the available capacity by at least 30 MW. In the light of experience gained in so many power systems the world over one has been led to expect a much faster rise in demand than planners generally have reckoned with. I predict that this trend will, if anything, be even more marked in Gujarat, in view of the new sense of drive and direction in industrial development following the creation of the new State. There may, therefore, be scope for your Company to expand even further its generating capacity. I am sure I echo your views when I say that the Company for its part is more than ready to take upon itself further obligations in this direction. This, however, would entail the location of additional generating plant at a completely new site, and preliminary thoughts are already being given to this problem.

"Whatever may be the Company's position in Gujarat's scheme of power development, whether it continues to export power for distribution by the Gujarat Electricity Board or whether it will have to import power from the Board for distribution in its own licensed area, there can be no doubt that a large measure of finance will be needed to augment distribution facilities in its area of supply. Certainly, the city of Ahmedabad is a centre of great load density, but the history of power expansion shows that there is no such thing as saturation point and money will be needed in the years to come to satisfy the inevitable growth in demand.

Investment in Electricity Industry

"Speaking of development, it is only appropriate for me to elaborate at this stage on the factors which influence adversely, investment in the electricity supply industry at the present time. Since the application of the financial provisions contained in the Electricity (Supply) Act, 1948, electricity shares have continued to shed their values. The Amendment Act of 1956 brought no improvement. The situation became worse when the Finance Act of 1959 prevented 'grossing up' of dividends as hitherto and, in addition, shareholders had to suffer a deduction of tax at the rate of 30 per cent. from the dividends paid to them. The industry's memorandum submitted to the Ministry of Irrigation and Power following the enactment of the Finance Act, 1959 suggesting that the tax deducted from dividends be permitted as a charge on the consumer of electricity did not find favour with the authorities, and the best which has been achieved so far has been a recommendation by the Government of India to the State Governments requesting the latter to permit undertakings as special appropriation, the tax relief of 6¼ per cent. representing the difference between the old rate of taxation of 51.5 per cent. and the present rate of 45 per cent., being permitted to be ploughed back into the business without deduction from the capital base.

"As your Company has a 'nil' assessment for the financial year 1959-60—for which period the tax relief visualised would apply—there cannot be any tax 'saving,' but nevertheless an opportunity has been taken, pursuant to the recommendation by the Central Government, to represent to the Gujarat Government that in our cases the sanction should be extended to cover notional tax relief. The Government's reaction is still awaited.

Tax Burden

"More recently the Federation of Electricity Undertakings of India has on behalf of the electric supply industry, formulated proposals for consideration of the Central Government which, among other matters, are to include (1) shifting of the tax burden on to the consumer, which, if conceded, would automatically permit the tax at the prescribed rate deducted from dividends payable to the shareholders being reckoned as a charge for determining the clear profit under the Electricity (Supply) Act, and (2) an increase in the standard rate by 1 per cent. on the old capital block and 2 per cent. in respect of new finance. Profitable opportunities are available for equity capital in other sectors of industry, and it is to be hoped that the authorities will recognise that capital always flows towards the enterprise which can offer the best return. While the problem of offering adequate incentive for new capital is paramount in relation to development, the need to restore values in existing equities is equally important. Otherwise, disinvestment in the industry, already evident in loss in share values, will be further accentuated. I believe that it was the intention of those who framed the Electricity (Supply) Act that investors in the industry should receive a net return on their investments. I further believe that the return stipulated at the time was worked out taking into account the fact that it has always been the general practice to gross up dividends in the hands of shareholders. I would, therefore, urge those who are at present engaged in reviewing the financial provisions of the Act to consider this point and frame a reasonable return on investments accordingly. I would also like to point out that in so many other ways does the electric supply industry receive priority in planning and in foreign exchange allocation for example, although unfortunately much of this priority is directed towards the public sector. I hope that the authorities will not overlook the major contribution which the private sector has to make in the field of power development. However more should be known about the liberalisation of the Electricity (Supply) Act within the next few months.

Resources for Expansion

"While at this stage we must suspend judgment on any future financial provisions of the Electricity (Supply) Act, we must face up to the need to raise finance to cover expansion plans. As far as the first 30 MW. extension is concerned, the foreign exchange component has been covered by a loan of $3.9 million (equivalent to Rs. 1.85 crores) which the Company was very fortunate to receive from the Development Loan Fund of the United States. This loan carries interest at 3½ per cent. repayable in fifteen years in semi-annual instalments, the first instalment being repayable three years after the first disbursement. This loan will make it easier to finance the second 30 MW. project and how best the needed resources can be raised will receive your Board's consideration in due course.

"The demand for power on the Company's system has continued to grow, and recently the maximum demand has reached the danger level of 150 MW. With an installed capacity of 157.5 MW, this means that we only have one old 7.5 MW generating set available as standby in case of breakdowns and the greatest ingenuity is needed in order to carry through the programme of routine maintenance. For the present, a measure of control involving the staggering of recesses on a five-group basis has been introduced for the textile mills in Ahmedabad. This load control is expected to bring about a relief of 3 MW. There can be no doubt, however, that until the first 30 MW. set is brought into commission in March 1962, further control measures will be necessary. Furthermore, the demand for power is growing at such a pace that it would be rash to assume that controls will not be necessary after the installation of the first 30 MW set. Much of the capacity of this set has already been mortgaged and by March 1962, overhauls of our hard-worked existing plant may be necessary.

Inadequate Supply of Coal

"I have no doubt that suitable measures will be implemented as circumstances demand, so that the available power supply can be equitably distributed to the best advantage of all concerned. In the meantime, the heavy load carried by the plant installed in the Company's power station speak well of both the type of plant in operation and the skill and hard work of the operating staff in keeping it in good order. The operating difficulties have been further accentuated by the inadequate movement of coal supplies to the Company's power station in recent months. This has been due partly to the diversion of coal to the new steel plants and partly to the recent railway strike. However, I should be failing in my duty if I did not point out the serious consequences that would arise if for any reason there was a further stoppage of vital coal supplies to our power station. The problem is of general application at the present time, and we are in close touch with the authorities to try and ensure that adequate stocks are built up.

"Your Company's agreement with Killick Industries Limited, the Managing Agents, was renewed by the Central Government with effect from 1st April 1960 for a period of five years. May I take this opportunity to stress that your Managing Agents will strive to conduct your affairs even more vigorously than has been the case in the past. We are fully aware of our responsibilities at this critical juncture in your Company's affairs and once again I would ask those people who in recent years have tended to be critical of us to give us a chance to show that we are fully capable of improving upon even the high standards of the past.

Accounts

"The accounts for the year under review reflect a satisfactory position. The proposed final dividend of Rs. 4.50 per share, making 7 per cent. for the year, represents some improvement, albeit small, and a sum of Rs. 1 lakh has been set aside to the equalisation of dividends reserve.

"A reference has been made earlier to the Company's application to the Gujarat Government claiming as a special appropriation under the Electricity (Supply) Act the tax relief of 6¼ per cent. on the notional assessable income. A sum of Rs. 4,71,778 has been set aside on this behalf in the accounts under review, subject to the sanction of the State Government. In view of the fact that it would be a condition of the approval that the money will be ploughed back into the business, it is hoped that the approval will be forthcoming.

"You will also have seen that the note which was appended to the balance-sheet up to 1958-59 concerning the contingent liability for additional income-tax on dividend, is omitted in the balance-sheet under review. This is due to the fact that following the judgment of the Supreme Court on test cases filed by the Income-tax Department, all the appeals filed by this Company covering the six years 1948-49 to 1953-54 have been heard and disposed of in favour of the Company. The sum of Rs. 4,03,922 which was actually paid in respect of 1948-49, subject to appeal, has also been refunded.

"It now remains for me to record our thanks to the Resident General Manager, Mr. K. N. Paulin, and all ranks of the staff for yet another year of successful operations. While on the subject of staff and before closing my speech I would also like to make reference to the fact that our relations with the Union have never been more cordial than at present. This has not been only because of the efforts made by the management but is also due, in no small measure, to the friendly co-operation which we have received from the officials of the Union. I hope that this satisfactory state of affairs may long continue so that the Company and the Union may share their joint responsibilities to our employees, consumers and shareholders."

Note: *This does not purport to be the proceedings of the annual general meeting which can be seen by any shareholder on request.*

AMALGAMATED ELECTRICITY COMPANY LIMITED

CHAIRMAN, MR. N. C. JAVERI, ON PROBLEMS OF ELECTRICITY UNDERTAKINGS

THE problems facing the electricity supply industry have been briefly but critically reviewed by Mr. N. C. Javeri, Chairman of the Amalgamated Electricity Company, Ltd., Bombay. In a statement covering the year 1959-60 (Silver Jubilee year of the Company), circulated to shareholders, Mr. Javeri has observed that rectification of the anomalies in the Electricity (Supply) Act and the Finance Act, 1959, though urgently called for, would not, in itself, be sufficient to help electricity undertakings to find enough finances for expansion programmes. What is required, according to him, is additional incentives to attract new capital for development.

The following is the full text of Mr. Javeri's statement:

"To

"THE MEMBERS,

"The current year of the Company is the silver jubilee year. The Company was incorporated in the year 1936 with a capital of Rs. 12,50,000 and, under it, there were four undertakings. In the year 1951, Ajmer and Jalgaon public limited companies were merged with this Company and four other undertakings were taken over in the same year. The capital of the Company this year is Rs. 1,25,75,000.

"The Company's works have been progressively expanding and the installed capacity, which was 2,000 kw. in 1936, is today about 20,000 kw. The Company served a population of about 1,00,000 in 1936 and today it serves a population of 10,00,000. The consumers served have risen from 4,000 to 72,000 during this period. The revenue of the Company similarly increased from Rs. 5,00,000 to Rs. 95,00,000. The result of the working shows a satisfactory position befitting the Company's jubilee year.

Staff Welfare

"The practical way in which this occasion would have been celebrated is the recommendation of the Board of a bonus of 1 per cent. dividend totalling this year to 10 per cent. Similarly, the Directors have decided to pay this year about Rs. 80,000 as a special allowance to the employees of the Company, so also, at their discretion, until otherwise decided by them, to grant every year, as a measure of staff welfare, about Rs. 6,000 to deserving children of the employees of the Company for the purpose of higher education.

"Yours is a company which has special characteristics in that the nine undertakings owned and operated by the Company are not contiguous to one another. They are in various States, and this aspect alone creates a number of complicated problems which are not normally faced by other undertakings operating in compact areas.

"In almost all the power systems operated by the Company expansion continues apace. Most of the undertakings operated by your Company run on diesel plants and, in spite of progress being made in multi-purpose river valley projects, it looks as if, in almost all these areas, the Company will have to reconcile itself to the possibility of further diesel expansion. We have had considerable difficulties in obtaining import licences for plant needed at Malegaon and Ajmer but due to the good offices of the Central Water and Power Commission firm orders have materialised for these plants.

"By their very character, development of diesel stations beyond optimum sizes would not be economical and I can only hope that, before long, bulk power would be available in these areas. In common with the rest of the power systems, in the country, the undertakings managed by the Company have scope for large-scale expansion. This in turn would call for sizable finance. While in the rest of industry in general there is general recognition that expansion should, by and large, spring from internal resources, the basic character of the Electricity (Supply) Act 1948—under which the electric supply industry now operates—is such that new development must perforce depend on new finance.

Limited Finance

"Speaking of finance, this for the present is circumscribed by the very limited return under the Electricity (Supply) Act. Whereas, until the enactment of the Finance Act, 1959, whereby the old tax pattern was changed involving the abolition of 'grossing up' and deduction of tax at 30 per cent. was made applicable from dividends, undertakings could raise a measure of finance for development, the situation after the enactment of the Finance Act of 1959 has considerably deteriorated. When the scheme inherent in the Finance Act, 1959, was under consideration it was understood that the rates of taxation were based on the assumption that industries by and large distributed only 50 per cent. of their net earnings. It was, therefore, on this basis that 45 per cent. corporate tax and 30 per cent. dividend tax were fixed. However, the situation in the case of the electric supply industry is not on all fours with other industries, and it is, perforce, obliged to distribute all the 100 per cent. of the profit to maintain even the modicum of reasonable return. All efforts so far made to prevail upon Government to permit the tax deduction from dividends as an operating expenditure chargeable to the consumer have not succeeded. With the scheme of the sixth schedule to the Electricity (Supply) Act being one based on all forms of tax, it is only proper that the return of the investor should be really tax-free. I can only hope that, before long, this proposal would be acceptable to the Central Government.

Additional Incentives

"Rectification of this anomaly in the case of the electric supply industry would at best mean restoration of the *status quo* prevailing prior to the Finance Act, 1959. However, with the electric supply industry requiring large blocks of capital for expansion, a restoration of the prior position would not by itself be sufficient and what is additionally required is a further measure of incentive to attract new capital for development. The situation has also been further complicated by the Reserve Bank rate tending to be out of focus, from time to time, with prevailing rates on borrowings. As this type of anomaly is likely to persist, it is only proper that the differential of 2 per cent. over the Bank rate now fixed under the Electricity (Supply) Act for determining the 'clear profit' should be upgraded at least by 1 per cent. There are a number of other improvements which are necessary to streamline electricity legislation and the Federation of Electricity Undertakings of India, of which your Company is an active constituent, is vigorously engaged in this task.

"It has been some months since the Draft Third Five-year Plan has been before the public; subsequently there have been discussions on details of the State Plans. As far as power development is concerned, the Draft Third Plan visualises an investment of Rs. 900 crores. With such large-scale finance being earmarked for State and quasi-State projects, one wonders why Government should be less bold when it comes to creating conditions which would enable the licensees' electric supply undertakings to raise finance for development. The alternatives are either for Government to create such stable conditions or make available to the licensees' electric supply undertakings sufficient loans as part of the outlay on power projects, repayable at the time the undertakings are due for acquisition by the purchasing authority.

Rural Electrification

"Rural electrification has always found exponents and the enthusiasts have tended to advance the cause by overlooking hard economic facts. By their very nature, supplies to rural areas are uneconomic and if the beneficiaries are unable to outlay the finance then presumably somebody else should. Most of your undertakings have semi-rural and rural areas and your Company is doing its best to enlarge the scope of supplies to cover such areas. This task would be rendered easier if the State Governments, who are allotted sufficient finance by the Planning Commission for rural development, take into account the requirements of licensees' undertakings and offer appropriate support. I can only hope that this proposal will be acceptable in the interest of the rural population."

MONEY RATES TEND TO HARDEN

(From Our Own Correspondent)

BOMBAY, *30th November*

After two weeks of comfortable position, conditions in the short-term money market have, once again, turned a little tight this week. Evidently, the funds released by the Reserve Bank of India as a result of the modification of the special deposit system have been used up, though this is not reflected in the bank returns by way of an increase in advances. A slight improvement in demand for bank credit to meet seasonal requirements is also reported. Consequently, there has been a tendency for money rates to harden, particularly for inter-bank transactions. While the common rate for inter-bank call money is still 3½ per cent., some banks are reported to have bid it at 4 per cent. House money upto 21 days' notice is being done at 2 per cent. Deposits for 31 days and over, but upto 60 days fetch 3¼ per cent., for 61 days and over but less than 12 months 3½ per cent. and for twelve months 3¾ per cent.

That the conditions in the short-term money market are still far from difficult as to influence the Treasury Bill results are indicated by the further decline in the discount rate from 2.564 per cent. to 2.540 per cent. per annum. The amount offered was Rs. 2.40 crores and tenders at Rs. 99.365 were accepted in full. The sales of Intermediate Bills were, however, considerably lower at Rs. 3 lakhs.

For the second week in succession, there has been a small contraction in notes in circulation. In the week ended 18th November, the active notes had dropped by Rs. 6.90 crores and this has been followed by a fall of Rs. 9.34 crores in the week ended 25th November 1960. Notes held in the Banking Department are only a shade higher, so that the net decline in total notes issued is of the order of Rs. 9.05 crores. This is covered by a reduction of Rs. 10 crores in rupee securities and an increase of Rs. 95 lakhs in rupee coin. No change is noted in foreign securities, but foreign balances are higher by Rs. 34 lakhs, so that the total foreign assets stand at Rs. 139.97 crores. Deposits of the Central Government have gone up by Rs. 13.66 crores, while those of other Governments are lower by Rs. 13.16 crores. Deposits of banks show a rise of Rs. 3.32 crores. Loans and advances to Governments have risen by Rs. 1.16 crore, while other loans and advances have declined by Rs. 3.92 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.58 crores. Investments are higher by Rs. 9.18 crores, while holdings of Government Treasury Bills are lower by Rs. 2.48 crores.

A net decline of Rs. 6.15 crores in total deposits of banks is disclosed by the Scheduled banks' statement for the week ended 18th November 1960, mainly due to a fall of Rs. 8.72 crores in the State Bank of India's portfolio. Borrowings from the Reserve Bank are also lower by Rs. 7.33 crores and those from the State Bank by Rs. 1.83 crore. Advances show a reduction of Rs. 2.39 crores; this is mainly accounted for by the fall of Rs. 2.97 crores on State Bank's account. Following a decline of Rs. 7.06 crores in the State Bank's portfolio, the investments of banks have gone down by Rs. 7.33 crores. Cash balances have dwindled by no less than Rs. 8.59 crores, of which all but Rs. 1.80 crore is accounted for by banks other than the State Bank of India. Money at call and short notice shows an increase of Rs. 1.13 crore.

The Gilt-edged market continues to be steady. Though there has been no sizable improvement in turnover, the sentiment has gained strength and changes in prices, wherever they have occurred, have been in favour of holders. While 3 per cent. 1986 Conversion Loan has been a little quiet at Rs. 74.30, 3 per cent. 1970-75 has recorded a further smart rise of 35 nP to Rs. 89.40. 3 per cent. 1966-68 has hardened by a further 5 nP to Rs. 95.25 and 2½ per cent. 1961 by 20 nP to Rs. 98.85. 3½ per cent. 1967 has gained 10 nP to Rs. 98.90, 3¾ per cent. 1974 5 nP to Rs. 99.05, and 4 per cent. 1979 and 1980 each 5 nP to Rs. 99.90. Among State loans, scarcity of sellers in 4 per cent. and 4¼ per cent. issues has pushed up values by 10 to 75 nP. 4¼ per cent. issues are all now quoted at par.

The rupee has lost some ground in terms of the U.S. dollar, following the weakness of sterling abroad. Banks' selling rate for U.S T.T. (ready) has thus gone up from Rs. 476 to Rs. 476.50 per $100 and their buying rate from Rs. 472.50 to Rs. 473.25. In New York, spot sterling has declined from 281.24-281.27 cents to 281.00-281.03 cents and three months' forward from 280.41-280.44 cents to 280.20-280.23 cents.

METALS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, *29th November*

Following greater consumer demand in the context of shortage of supplies, prices in the metal market gained during the week under review. There was enlarged demand for copper scrap, as stocks of virgin copper were down following good releases in recent weeks. Utensil scrap moved up from Rs. 195 to Rs. 198 a cwt. and the berry quality although unchanged at Rs. 209 a cwt., was firm.

Tin, after being higher here at Rs. 570 a cwt., closed firm at Rs. 569. Stocks were limited, but fresh arrivals are on the way. The feature in London was a fair demand on Continental account. The price moved narrowly around £800¼ a ton. Earlier, the price was higher at £801, as against the opening of £800. Electrolytic zinc was in greater demand from bucket galvanisers. The price moved up from Rs. 159 to Rs. 165 a cwt. before closing firm at Rs. 164. In London, the price, after being higher at £88 a ton, as against the opening of £87¼, closed at £86¾. In contrast with the general trend, virgin lead gave way from Rs. 63.50 to Rs. 63 a cwt. in Calcutta, following poor demand.

"POUSH" SETTLEMENT IN BULLION

(From Our Own Correspondent)

BOMBAY, *30th November*

Trading in the *Poush* (January) settlement in both gold and silver commenced on Monday, 28th inst., subject to the special margins on "longs" at the same levels and rates as were imposed by the Government of Maharashtra in respect of the *Margashir* (December) settlement. The rates of margins are Rs. 35 per 10 grams of gold when the closing price of the *Poush* settlement exceeds Rs. 111 per 10 grams and Rs. 600 per bar of 10 kilograms whenever the price rules above Rs. 187 per kilogram. A free limit of 30 kg. of gold and 160 bars of silver is allowed to all members who use the Clearing House and whose net open position does not exceed the aforesaid limits.

Certain amendments to the by-laws of the Bombay Bullion Association Ltd., as effected by the Central Government under Section 12 of the Forward Contracts (Regulation) Act 1952, have been published in the *Gazette of India Extraordinary* dated 24th November 1960. Accordingly, the Board of the Association is now empowered, with the prior approval of the Forward Markets Commission, to permit the members to trade in various settlements in gold and silver, to subject trading in such settlements to a scheme of special margins, and to close down the market in the event of an emergency. The Commission is also empowered to impose special margins and to take other suitable steps which the Board of the Bullion Association is authorised to take in case of emergency under the existing by-laws of the Association.

The starting rates for *Poush* settlement in gold and silver were fixed at Rs. 116.70 and Rs. 198.45, as against the non-margin limit of Rs. 111 and Rs. 187, respectively. Consequently, *ex parte* margins at the rate of Rs. 35 per 10 grams of gold and Rs. 600 per bar of silver became effective on bulls on the very first day. The margins continued today also. At the same time, the bears in gold *Margashir* settlement were required to pay a margin of Rs. 8 per 10 grams, as the rate for transferring commitments from this settlement to the *Poush* settlement was against bulls to the extent of 95 nP. The rate exceeded a rupee and stood at Re. 1.15 today, so that the bears were obliged to pay a higher margin of Rs. 20 under by-law 33D(i)(ii).

The bullion market ruled distinctly firm during the major part of the week under review. Both gold and silver elicited good buying support, while fresh offerings were limited. Operators expected enlarged demand in the coming weeks. Consequently, prices registered an improvement. Today, however, there was some liquidation by bulls in both the metals and the prices suffered a setback. Not only were the earlier losses in gold completely erased but today's closing rates were lower than those at the end of last week. Silver prices, however, were well above the rates prevailing on Wednesday last.

The average daily arrivals of gold were less than those in the previous week, being 6,000 tolas, as against 6,500 tolas, while offtake was slightly better at 3,750 tolas, as against 3,400 tolas. In the case of silver, both arrivals and offtake were lower at 26 bars and 8 bars, as compared with 29 bars and 12 bars, respectively. The floating stocks of gold are estimated at 45,000 tolas and those of silver are reported to be around 600 bars.

In the gold section, *Margashir* settlement advanced from Rs. 115.75 to Rs. 116.05 on 28th November but receded to Rs. 114.95 before finishing at Rs. 115. *Poush* settlement began at Rs. 116.70 and, after moving up to Rs. 117.05, declined to Rs. 116.10 today. The closing was a shade better at Rs. 116.15.

The *Margashir* settlement in silver was well supported, the quotation spurting from Rs. 195.95 to Rs. 197.10 on Monday. After easing to Rs. 196.70, it finished at Rs. 196.75. *Poush* settlement stood at Rs. 198.15 today, which is the same as the starting rate, the highest level touched being Rs. 198.45 on Monday. The rate for transferring commitments from the *Margashir* to *Poush* settlement widened slightly from Re. 1.35 to Re. 1.40 today.

A striking feature of trading in the ready section was that gold, which was quoted at a discount of 25 nP under the *Margashir* settlement last week, commanded a premium of 5 nP today. The closing rate for the metal was Rs. 114.95, as against Rs. 115.50 last week-end, the highest and lowest levels touched being Rs. 116 and Rs. 114.50, respectively.

Ready silver began the week at Rs. 194.45, as against the previous close of Rs. 194.95, and rallied to touch a high of Rs. 196.55 today. Towards the close, however, it was lower at Rs. 196.40.

The following table shows the trend of the market during the week under review:

	30-11-60 (closing)	High	Low	23-11-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready .99 fine)	114.95	116.00	114.50	115.50
Forward:

Silver	91.875 cents	—	—	91.875 cents

* 5th December settlement. † 6th December settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES DOWN AGAIN

(From Our Own Correspondent)

BOMBAY, *30th November*

After a firm start the cotton futures market turned easy on Friday. The easiness gathered momentum in subsequent sessions and persisted till the close of today. The earlier firmness was due to the spurt in Bengal *Deshi* prices in the Punjab, thanks to hectic purchases by exporters and strong rumours of an early release of export quota. The slow movement of new crop in the Punjab also assisted the uptrend. When Government swiftly moved into action and requisitioned stocks at random and also banned the movement of Bengal *Deshi* out of the Punjab, Rajasthan and U.P., except with the permission of the Textile Commissioner, the rise in *Deshi* prices was checked. This had a sobering effect on the future market. Another factor, which influenced the rising trend of prices, was the decision of the Government, announced last week-end, to start issuing licences for the import of 200,000 bales of foreign cotton on a global basis. With the Government determined to hold the price line in cotton at any cost and with the flow of new crop sure to gather momentum in December, operators did not think it wise to sit tight on long positions. The absence of speculative support in the wake of selling prompted by the above considerations led to a sharp decline in price. Reports of damage to the crop in Saurashtra and Gujerat areas were neutralised by the possibility of more Pakistan cotton being imported this season, thanks to cordial trade talks at Karachi between the Indian and Pakistan officials this week.

I.C.C. Moglai Jarilla April 1961 Contract which opened the week on a firm note at Rs. 594.50 (per three quintals), succumbed to selling and receded to Rs. 591.25 on Friday, the Contract declined further to Rs. 587.50 the next day. It however, recovered to Rs. 591.50 on Monday thanks to short covering and scattered speculative support. The market was closed yesterday as a mark of respect to the memory of the late Mr. M. A. Mulky, member of the Forward Markets Commission, whose sudden death was mourned by all sections of the trade. When the market reopened today the Jarilla Contract attracted speculative selling in bulk which resulted in a recession in prices. The Contract declined from the opening rate of Rs. 587 to Rs. 582.75 and finished at that rate.

The spot market, however, put on a better appearance. Mills having unutilised quotas were regular buyers of popular styles such as Khandesh, Berar, CO2 and Moglai Jarilla at ceiling prices. Some of them are even reported to have paid a premium. Export demand for Bengal *Deshi* was brisk early in the week and prices firmed up. Later, however, prices declined due to the above-mentioned reasons. Demand for foreign cotton was largely confined to the U.S. growths and selected East African cotton.

The following are the latest available spot quotations—in rupees per candy of 782 lbs.—from Sewri:

Berar 27/32" 845; Khamgaon 27/32" 855; Moglai 13/16" 845; B.P. (U.N.U.G.) 1,355; American 1" G.M. 1,160.

A mixed trend was witnessed in the Karachi cotton futures market during the week under review. While the January Contract was steady, thanks to the absence of selling and scattered support, the March position succumbed to selling. Easy upcountry advices and lack of fresh demand owing to the high price, led to a decline in price. The March position receded from Rs. 69-1 last week-end to Rs. 68-12. The January Contract, as noted above, remained unchanged at Rs. 69-6.

Weather in the cotton-growing districts has been dry and warm. Consequently, the crop has made rapid progress. In Sind, crop movement has been unusually brisk this year. The bulk of the crop has already arrived. In the Punjab also, crop progress has been satisfactory and pickings are in full swing.

In contrast to the easy trend witnessed during the last two weeks, the Alexandria cotton futures market put on a cheerful appearance during the week under review. The low level of prices was itself sufficient to induce a recovery. Some speculative support based on expectation of revival of demand from continental countries aided the recovery. Both the Karnak and Ashmouni Contracts made handsome gains. Towards the close of the week, however, profit-taking ensued and prices came down. A part of the earlier gains was erased. The week's closing quotations are still higher than the last week-end rates. Karnak November Contract went off the board on 26th November. The last known quotation for it was 72.80 tallaris. The following are the latest available quotations—in tallaris per lb.—from Alexandria.

Karnak: January 71.75; March 72.82; May 73.0. April 63.57.

Ashmouni: December 62.65; February 63.70; April 63.57.

Cotton futures in Liverpool declined further during the week. Both the American and American type contracts receded, thanks to hedge selling and liquidation prompted by the sluggishness of the yarn and piecegoods market. Demand from spinners continued to be feeble. Sudan contracts were fully steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 22.45; March 23.05; May 23.40; July 23.70.

American cotton mixed growth contract: December 22.75; March 23.35; May 23.70; July 24.25.

Sudan: November, January and March 35.75.

Quiet conditions prevailed in the New York cotton market during the week, with futures values showing a tendency to ease. As the firmness noted immediately after the victory of Senator Kennedy in the Presidential election had lost its momentum, operators began to take a more cautious view of future prospects. The general tendency was to discount legislation which will have any pronounced bullish effect on the market. Improvement in crop prospects in some regions, thanks to better weather of late, also acted as a check on speculative rise in price. Futures values consequently tended to seek lower levels.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	29-11-60	22-11-60	15-11-60
Spot	32.30	32.30	32.25
December	31.31	31.47	31.71
March	32.03	32.10	32.33
May	32.47	32.51	32.64

SEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, *30th November*

The oilseeds market, which displayed distinctly steady conditions in the earlier part of the week, was in a little subdued mood towards the close. Groundnuts were well maintained initially on bullish crop reports from South India, and castorseeds on expectations of better export enquiries for o l. Vanaspati manufacturers were reluctant to enter into fresh business in groundnut at higher levels which brought down values in this section. The arrivals, too, continued to be large. The protracted absence of the U.S. from the Indian market for castor oil and rumours that Brazil will be able to maintain supplies of oil to the U.S. for some time more dampened the enthusiasm of bulls. There were some enquiries from the U.K., but this did not have any perceptible effect on the market. Cottonseeds and linseed moved both ways, following the pattern set by the other major seeds.

In the groundnut section, February 1961 contract which had wound up last week at Rs. 210.50, fell to Rs. 208 50 today, after fluctuating between Rs. 209.75 and Rs. 210.62. Coromandals closed today 50 nP lower at Rs. 42. Khandesh quality was, however, maintained at Rs. 43. Oil ex-mill lost 25 nP to Rs. 18.75, and railway receipts 35 nP to Rs. 18.35.

Among castorseeds, May 1961 contract closed today lower at Rs. 178.50, as against Rs. 180.50 last week-end. Ready Madras fell initially from Rs. 35 to Rs. 34.75, but later improved to Rs. 34.81; it, however, eased to Rs. 34 75 today. Oil B S.S. declined by 35 nP to Rs. 15.10, after moving both ways between Rs. 15.31 and Rs. 15.37. Oil commercial closed lower at Rs. 14.55.

In the linseed section, May 1961 contract improved initially from Rs. 33.87 to Rs. 33.97, but declined subsequently to close at Rs. 33.69. Bold ready receded by 25 nP to Rs. 33.37. Linseed oil dropped 10 nP to Rs. 14.80.

In the cottonseeds section, February 1961 contract was marked down Re. 1.25 to Rs. 88.25. The spot section, however, improved. Berars, whites and non-whites rose by 10 nP each to Rs. 19 each.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	30-11-1960	23-11-1960	16-11-1960
Groundnut	Rs.	Rs.	Rs.
February 1961	208.50	210.50	209.00
Nizam bold	42.00	42.50	42.00
Coromandel ready ..	43.00	43.00	42.25
Khandesh quality ..	43.25	43.25	43.00
Oil ex-mill ready* ..	18.75	19.00	18.90

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

YARNS QUIET

(From Our Own Correspondent)

BOMBAY, *30th November*

A quiet trend was in evidence in the yarn market during the week under review. Enquiries from consuming centres were subdued, thanks to absence of any encouraging news. Transactions put through were limited, with values moving narrowly. Forward deliveries of Cupressa Bemberg yarn (60 x 1) encountered selling and drifted lower. Operators took note of the slow pace of export business in art silk piecegoods of late. The actual exports during the month of October were put at no more than 2,665,000 yards (Rs. 22.79 lakhs) as against 3,528,000 yards (Rs. 32.36 lakhs) in the previous month. The total value of export for the whole of 1960 was expected to be only Rs. 4 crores, as against the target of Rs. 6 crores.

Cupressa Bemberg yarns (60 x 1) December delivery receded from Rs. 2,161 to Rs. 2,132. February delivery dropped Rs. 29 to Rs. 2,105.

Spot cupressa, however, met with good support and advanced by Rs. 15.46 to Rs. 2,246.50. Among imported art silk yarns, 120 Japan was dull at Rs. 1,322.75, as also 150 Japan at Rs. 1,543.25 and 120 Italy at Rs. 1,239. But 150 Italy rose by Rs. 13.25 to Rs. 1,514.56. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade fell by 40 nP to Rs. 11.13. 120 Bt. cones 1st grade declined by 14 nP to Rs. 11.84.

In the staple fibre yarn section, 40 x 2 February contract came in for selling and shed Rs. 5 to Rs. 792. December position lost Rs. 3 to Rs. 791. Spot Citys, however, recorded a rise of 14 nP to Rs. 9.22. Kohinoors gained 8 nP to Rs. 9.37 and Centurys 6 nP to Rs. 9.42.

Among cotton yarns, 10 counts Moderns were neglected at Rs. 19. Podars declined by 7 nP to Rs. 18.12. Twenty counts Moderns and Gokaks were unchanged at last week's level of Rs. 23.56 and Rs. 23.12, respectively. Thirty counts Gokaks picked up 25 nP to Rs. 27.25. Forty counts Maduras were unchanged at Rs. 32.75 and Radhakrishnas at Rs. 51.87. Sixty counts Finlays changed hands at Rs. 59.59, same as last week. Eighty counts Mahendras moved down from Rs. 71.50 to Rs. 69. Moderns shed 25 nP to Rs. 71.25.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago.

	30-11-1960	23-11-1960
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 kg.)		
December	2,132 00	2,161 00
February	2,105 00	2,134 00
60/1 Cupressa Bemberg spot ..	2,246 50	2,231 96
120 Japan (per 100 kg.)	1,322 75	1,322 75
150 Japan (per 100 kg.)	1,543 25	1,543 25
120 Italy (per 100 kg.)	1,239 00	1,239 00
150 Italy (per 100 kg.)	1,514 56	1,501 31
Staple fibre yarn—		
40 x 2 December (per 90.72 kg.) ..	791 00	794 00
40 x 2 February	792 00	797 00

JUTE ADVANCES

(From Our Own Correspondent)

CALCUTTA, *29th November*

This week's rise in prices of jute goods and raw jute has belied earlier expectations that, with last week's fall, values had set in for the much-desired declining phase. Although earlier in the week, the unsealing of 2 per cent. of the looms by the mills from 23rd November, to result in an increase in production by 2,000 tons a month, in accordance with the decision of the Indian Jute Mills Association in concurrence with the Union and West Bengal Governments, passed off unnoticed in the goods market, the business that was attracted by lower levels reversed the declining phase in the goods market. Induced by this encouragement and on reports of a fall in fresh arrivals in the agencies, fibre prices also moved up. The fall in arrivals in the agencies was attributed to growers' preoccupation in harvesting the good crop of paddy and also to their ability to hold on, thanks to their and the middlemen's improved financial position, due to the unexpected high prices of recent weeks. For a time, the improved arrivals of jute mills' stations in October in respect of which figures were released earlier in the week contributed to arrest the uptrend. Also the steps taken by the East India Jute and Hessian Exchange Ltd. and the decision of mills to buy jute on a quota basis were also factors that led to the salutary result.

Arrivals in October amounted to 602,750 bales (544,100 bales from India and 58,650 bales from Pakistan), which were higher by 213,950 bales (197,050 bales from India and 16,900 bales from Pakistan) as compared with the previous month. As compared with October 1959 also, the total receipts were higher by 70,550 bales (26,700 bales from India and 43 850 bales from Pakistan). Adding the figure for October, total arrivals in the current season beginning from July were 1,412,400 bales (1,239,350 bales from India and 173,050 bales from Pakistan), representing a fall of only 121,250 bales, as compared with the corresponding previous period when total arrivals from India amounting to 1,471,900 bales were higher by 232,550 bales, but arrivals from Pakistan amounting to 61,700 bales were less by 111,350 bales. The lower arrivals in the current season are due to late sowing and also to exaggerated ideas of shortage leading to hold-up all along the line from cultivators to the mills. However, the remarkable improvement in October proves that the earlier ideas of shortage were, in fact, exaggerated. The higher arrivals in the current season from Pakistan are due to the increased import quota. By and large, the impression that there would be enough jute to go around is gaining ground, although a possible price rise later in this season is anticipated, in view of the hand-to-mouth position which the mills have been forced to adopt. The estimated raw jute consumption in the July-October period being 2,032,500 bales, total arrivals should have resulted in a fibre stock of 620,100 bales with mills as at the end of October. In the last year, consumption up to October was estimated at 1,988,600 bales which was less by 444,200 bales as compared with arrivals. Considered from this angle also, the performance in this season has been much encouraging, but this should also partly be attributed to the fall in production in mills to tackle the situation caused by high prices, and to increased arrivals from Pakistan.

Meanwhile, available indications are that the quota system which mills have adopted in regard to purchase of fibre is working satisfactorily, inasmuch as no mill buys more jute than is necessary to maintain production at the current rate. Although the quota system is encouraging, much depends upon how the situation is faced when new crop arrivals would cease later in the season and mills would be left to the mercy of stockholders who should have built up moderate stocks in the meantime. If Governmental action is taken even now to create a bufferstock on the lines of the bufferstock for tin in London, much advance should be considered to have been made and prices should be normal at least in the next season. The lower level earlier in the week was due to some "panicky" sales in Cossipore in anticipation of continuation of the falling trend and also to an anxiety to save godown rent in Cossipore, if ready buyers were not found for fresh arrivals. Quota-holding mills thus turned to Cossipore to make their purchases. However, with the improved price trend in goods as the week progressed, fibre prices also gained. Had only the declining trend continued, there was opinion in the market that the market would have attracted much hidden jute. It is to be hoped that prices would once again begin to decline, thus enabling mills to increase production and mitigating the distress to workers from lower pay-packets as a result of the cut in working hours.

On Tuesday last, the price of ready B. twills was unchanged at Rs. 169, while ready hessian 40" 10 oz. was fractionally higher at Rs. 54.50. Business passing in both constructions was restricted. On the following day, however, the Government announced a tender for 10,000 bales of B. twills against December delivery, and the price moved up to Rs. 171.50. In sympathy, hessian 40" 10 oz. hardened to Rs. 55.50. It is questionable if the Government should come out with such a large tender for B. twills. For it was this tender which reversed the declining phase in goods, following an eased fibre market, and fibre prices soon began to move up in line with goods. Foreign buyers continued to buy in small quantities only, and the price trend in both goods and fibre should have benefited, had the Government only delayed purchases or split the quantities into a few tenders at intervals. Advices from the New York burlap market showed that buyers were restricting purchases and continuing to meet their commitments from their own stocks. This was also indicated from the latest stock figures released during the week. U.S. consumption in October fell by 9 million yards to 67 million yards. Nevertheless, stocks at the end of October were fewer by 20 million yards at 232 million yards. Much food for thought is contained in the detailed analysis of consumption for the year, since the average monthly consumption so far amounted to only 71.3 million yards, as against 73.7 million yards in the same period last year.

On Thursday in Calcutta, Australia placed orders for woolpacks against May-August 1961 delivery. There were more inquiries from overseas markets and covering business was brisk. The cumulative result was the price of ready B. twills rose to Rs. 174 and that of hessian 40" 10 oz. to Rs. 56.50. On Friday, sellers became reserved as more and more buyers were inquiring for goods for varying delivery periods. As a result, B. twills hardened further to Rs. 176.50 and 40" 10 oz. hessian to Rs. 57. Business passing over the week-end was small, but the price at Rs. 176 and Rs. 56.50 respectively were fractionally lower. The feature during yesterday was that support to heavy goods for all deliveries was of such a nature that the price of ready B. twills spurted to Rs. 184 and in sympathy hessian 40" 10 oz. closed higher at Rs. 58.50.

With a fall in arrivals and the hardening trend in goods, fibre prices rose. Mills continued to support the market in accordance with the quota system. The quota system, although working satisfactorily, must have encouraged sellers, inasmuch as the mills are authorised to buy on a hand-to-mouth basis only, mills cannot afford to remain without purchasing for long. Herein lies the drawback of the quota system in the absence of a buffer stock. Assam bottoms steadily rose to Rs. 136.50 per 100 kgs. equivalent to Rs. 51 per maund against November/December delivery from Rs. 123.50 or Rs. 46.00 per maund, and daissee bottoms from Rs. 127.25 to Rs. 139.50.

EXPORT TEAS EASY

(From Our Own Correspondent)

CALCUTTA, *29th November*

There was good general demand during the export sales of teas held here yesterday. Prices, however, were easy. The easier conditions in Mincing Lane following the increasing quantity on offer in the last week imparted a cautious tendency here. Although the increased offerings in London were only expected and would continue for a few weeks more, in view of the backlog of arrivals caused by diversion of ships from London to the Continent to get over the situation caused by the recent strike of tally clerks in London docks, it was assumed in trade circles here that the increased quantity on offer at one and the same time had enabled bidders in London to adopt a resilient attitude. In the week ended 18th November, London tea stocks rose by 6 million lbs. to 96½ million lbs.

In Calcutta, arrivals from upcountry continued to show improvement, which, however, was not as marked as expected during the week. The quantity loaded on fast-moving ships destined to the U.K. was satisfactory during the week.

In the internal sales held last week, offerings of dusts amounted to 21,942 packages. A fall in demand was in evidence. C.T.Cs of all descriptions declined by 20 nP. In an irregular tendency, the plainer orthodox teas accounted for an overall loss, and the better teas of this category and Assam orthodoxes recorded a gradual easing tendency. Leaf-cut Dooars also eased, although

irregular. Quotations per 1 kg. (inclusive of excise duty) were: best Assam C.T.C. dust Rs. 6.10 to Rs. 6.30 (nominal); medium Assam C.T.C. dust Rs. 5.70 to Rs. 5.85; medium Assam dust Rs. 4.80 to Rs. 5.20, and medium Dooars dust Rs. 4.70 to Rs. 5.00.

Leaf on offer amounting to 390 packages, of which 36 packages were green teas were lifted at dearer rates.

During yesterday's export sales, as already stated, there was good demand for the offerings amounting to 71,291 chests. Excepting the prices for a few descriptions of teas, all other teas gave way following quality. Despite good demand for best and medium C.T.Cs, prices of these declined by 10 nP to 20 nP depending on quality. The poorer types of this category were often lower by as much as 30 nP. Brokens were in greater demand than fannings. Good support was accorded to leaf grades at last rates. The higher grades in the brighter Darjeelings were about steady, but the poorer Darjeelings eased in an irregular tendency. Tippy teas were well supported. Medium B.O.Ps possessing bright liquors were in good demand, while the poorer types and O.Fs came to an irregular market. Teas for price and plain brokens recorded a small addition to prices, but similar fannings recorded an impressive addition to prices. Another strong feature of the sale was medium B.Ps prices of which rose by 10 nP to 15 nP. The better medium fannings were firm, whereas those with inferior liquors eased by 10 nP to 20 nP. Legg-cut teas were taken at rates lower by 10 nP to 20 nP. The quotations per 1 kg. (inclusive of excise duty) were: best Assam C.T.C. fannings Rs. 6.10 to Rs. 6.60; best Assam C.T.C. B.P. Rs. 5.80 to Rs. 6.20; clean black pekoe Rs. 5.30 to Rs. 5.60; medium fanning Rs. 5.00 to Rs. 5.30; plain fannings Rs. 4.86 to Rs. 5.00; medium B.P. Rs. 4.80 to Rs. 5.00; and plain B.P. Rs. 4.55 to Rs. 4.70.

HIGHGROWN TEAS NEGLECTED

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 22*nd November*

Sale No. 45: A total of 460,000 kilograms were offered in sale No. 45 held today. Although a few brighter invoices were on offer, quality generally showed a falling away. There was a good demand for all descriptions, except highgrowns which were neglected. Highgrowns received much less enquiry at lower rates and there were many withdrawals. Good medium brokens were a strong feature at firm rates and those with improved quality advanced 10 to 20 nP per kilo. Their fannings were well supported at around last rates. Medium brokens sold well at firm to dearer rates, with fannings often advancing in price. Plain and low medium descriptions sold readily and can be quoted fully firm. Black leaf teas came in for good enquiry at enhanced prices. C.T.C. and legg-cut types sold at around last prices. There was strong enquiry for whole leaf grades at dearer rates with buyers' emphasis on orange pekoes.

	1960	1959
	Rs.	Rs.
Low medium	4.60-5.00	4.52-4.74
Medium	5.00-5.35	4.85-5.07
Good medium	5.35-5.70	4.96-5.40
Quality	5.75-9.25	5.29-9.37

The average price realised in Sale No. 45 was Rs. 5.25 per kilo, as against Rs. 5.38 in the previous sale and Rs. 5.29 in the corresponding sale last year.

Dust Sale 'QQ': Two lakh kilograms were offered in Dust Sale 'QQ' held on 24th inst. There was a very strong demand and prices were generally dearer for all descriptions. Mediums, particularly those with improved quality, were in keen demand and advanced by 5 to 10 nP. Buyers showed keen interest in milled and residual descriptions which were dearer and were the strongest feature of the sale. Highgrowns met useful support and sold at around last week's rates. C.T.C. and legg-cut types are quoted fully firm.

The average price realised in Dust Sale 'QQ' was Rs. 4.84 per kilo, as compared with Rs. 4.77 in the previous sale and Rs. 4.29 in the corresponding sale last year.

Export Quota: There are sellers at ¼ nP per kilo.

Colombo: In this week's sale, there was only a fair demand and prices declined for all descriptions. Dimbulas eased 20 cents, whilst Uvas were 15 to 30 cents easier according to quality. Mediums and lowgrowns were up to 5 cents lower. Fannings came to a weaker market.

London:—North Indian and other growths: In Monday's auctions, there was a good demand, but prices for best Assams were mostly lower, following quality. Coloury Dooars and plain kinds came to a firm market. Plain broken pekoe is quoted at 3/9*d*.

Ceylon and South Indians: Tuesday's sale comprised 25,074 packages, of which 9,234 packages were from South India. Good demand prevailed throughout the sale and there was little change in prices realised from most of the teas.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 46:—550.000 kilograms. Market irregular. Plain and low medium brokens barely steady, fannings 10 nP easier. Black leaf medium and good medium brokens stronger and bearer, but similar fannings 15 to 20 nP easier. Highgrown fannings neglected. Brokens upto a rupee below valuation. Whole leaf 20 to 30 nP easier."

SUGAR DEPRESSED

(*From Our Own Correspondent*)

HAPUR, 28*th November*

Sugar prices lay flat during the week at Rs. 110.50 per bag wholesale and at Re. 1.06 per *seer* in the open market. All the factories in west U.P. are working with their full capacity, as cane supplies to them are reported to be adequate. The U.P. is bidding to establish a new record in sugar production. The actual production last season was 12.20 lakh tons, as against the second Plan target of 11.25 lakh tons, and production this year is estimated at 13.57 lakh tons (9.31 lakh tons in west U.P. and 4.26 lakh tons in east U.P.). The area under sugar cultivation in current season is 22.63 lakh acres, as against 19.17 lakh acres in the previous season.

Sugar was quoted lower at Rs. 109 per bag wholesale and at Re. 1.06 per *seer* in the Muzaffarnagar market, thanks to easy supply position, as the entire quotas issued were not being lifted. All the factories in the area were working. Sugar crystal D 29 was quoted at Rs. 112 to Rs. 112.50 per bag in the Kanpur market in the week-end.

While new *khandsari* stayed steady, following good demand, old quality sagged further for want of support and comfortable stock position. The crushers manufacturing *khandsari* were drawing cane at Re. 1.25 per maund and the latest prevailing prices in the Muzaffarnagar market were:—*khandsari* new Rs. 32 to Rs. 36.50; old *galawat* Rs. 16 to Rs. 20; inferior Rs. 23 to Rs. 29; superior Rs. 31 to Rs. 33.50; crystal Rs. 32 to Rs. 34; *boora* Rs. 34 to Rs. 37 a maund.

New *gur*, after an early fall as loading facilities were completely stopped, improved towards the week-end, as the Western and Central Railways covering most of the consuming areas of Gujerat and Saurashtra and M.P. have given higher priority to *gur* loading. *Balti* quality was much in request. Daily arrivals mounted to an average of 70,000 maunds, and, as the entire arrivals were being lifted, there was no stock building as yet. The crushers manufacturing *gur* had reduced their cane purchasing prices to Re. 1.12 per maund, but supplies to them were reported to be inadequate. Prevailing prices were:—*pansera* Rs. 14 to Rs. 14.25; *balti* Rs. 15.25 to Rs. 15.75; *shakker* Rs. 16 a maund.

Gur and *shakker* arrivals mounted to an average of 10,000 to 12,000 maunds daily in the Muzaffarnagar market and, as the loading facilities were not upto requirements, prices ruled depressed to be quoted in the week-end at:—*Pansera* Rs. 13.50 to Rs. 14.12; *Chaku* Rs. 13.50 to Rs. 15; *Khurpaper* Rs. 13.75 to Rs. 14; *ladu* Rs. 14.50 to Rs. 15.50 a maund.

Gur futures ruled both ways during the week. *Fagun* opened at Rs. 13.22 last Monday and after touching the highest and lowest in mid-session at Rs. 13.46 and Rs. 13.20, respectively, was quoted today at Rs. 13.34.

* * * *

The total sugar production in India during the season 1959-60 (November 1959-October 1960) amounted to 2,420,000 tons, as against 1,918,000 tons in 1958-59. The figures exclude 51,000 tons produced prior to November 1960, for the season 1960-61, as against the corresponding figure of 31,000 tons for the last season.

Offtake of sugar from factories during the month of October 1960 was 169,000 tons, as against 172,000 tons in the same month last season. The total despatches in the season 1959-60 were 2,018,000 tons, as against 2,105,000 tons, including about 30,000 tons of sugar despatched by factories for export.

The total closing stocks with factories as on 31st October 1960 were 549,000 tons (excluding 41,000 tons of stocks out of the 1960-61 season's output produced before November 1960) as against 153,000 tons on the same date in the previous season (this also excludes stocks of 20,000 tons produced for 1959-60 season before November 1959).

FOODGRAINS DECLINE

(*From Our Own Correspondent*)

HAPUR, 28*th November*

Quietly easy trend was witnessed in the foodgrains market during the week. Mr. Patil, Union Food and Agriculture Minister, attributed the downward trend at this time of the year to the new agreement between India and the U.S. under which India would receive 17 million tons of wheat and rice in the next four years. Arrivals under the agreement have already began to reach India. Stocks with both the Centre and the State Government were fairly heavy. Besides the heavy imports from the U.S. a new deal for purchase of 200,000 tons of rice from Burma has been finalised. Three States of Madhya Pradesh, Maharashtra and Gujerat have been linked into one food zone, and this is considered to be a step in the direction to make the country one food zone.

Wheat at Hapur recorded a fractional fall during the week to be quoted now at Rs. 16.37 a maund for average quality and upto Rs. 17.50 for farm produce. Daily arrivals of wheat ran down to an average of 50 maunds, but the State Government was selling heavy quantities of wheat flour at lower prices and demand for wheat subsequently declined. Consumer demand shifted further to maize and *bajra*.

The easy trend in rice continued and prices were quoted Re. 1 to Rs. 2 per maund lower than last week at: *sela basmati* Rs. 27 to Rs. 29; *mainpuri* Rs. 23; *gadda* Rs. 17.50; *ramajwayan* Rs. 22; *raimunia* Rs. 23 a maund. The rice supply position was quite easy, as new produce grain was reaching the markets in heavy quantities. The Central Government was expected shortly to make purchases of rice to bolster the falling prices.

Gram ruled quiet at Rs. 16.50 a maund for Punjab produce, while old stocks were being lifted at Rs. 15.50 a maund. Punjab advices recorded a quiet trend and the local gram stocks with trade were running down. Barley was stationary at Rs. 12.50 and *bejhar* was quoted at Rs. 12.25 a maund for inferior quality, while *moongia* superior variety was quoted at Rs. 12.75 a maund. New maize was reaching here in heavy quantities from Bareilly and Rampur side and, despite good consumer demand, prices declined by 37 nP per maund to Rs. 12-Rs. 12.25 a maund. Local maize stock swelled to 25,000 maunds. New *bajra* was quoted at Rs. 14, *juwar* at Rs. 13.50 to Rs. 15 and *guwar* at Rs. 13.62 a maund, following good seasonal demand.

Peas continued to attract good demand. The local stocks were fast running down and were now put at 20 *khatties*, as against 27 *khatties* last week-end, but prices ruled quiet in line with other grain prices. Demand for *arhar* was dormant and prices were quoted 37 nP per maund lower at Rs. 13 a maund. New *urd* and *moong* were almost stationary, as requisite quantity was reaching here from outside. Week-end prevailing prices were:—peas *dara* Rs. 12.50; old Rs. 12; white farm Rs. 14; peas *dal* Rs. 14; *arhar* Rs. 13; *arhar dal* Rs. 17 to Rs. 18; new *urd* Rs. 19; new *moong* Rs. 18.50 to Rs. 19.50; *massor* Rs. 15 to Rs. 17 a maund.

EXPORT BUSINESS IN KIPS PATCHY

(*From Our Own Correspondent*)

MADRAS, 28*th November*

There was no significant change in the tanned hides and skins market during the week under review. Arrivals of stocks from tanneries were small. Export trading was patchy, as importers were not willing to pay increased prices demanded by tanners after each sale.

Inquiries for cow hides and buffalo hides were good, while those for buff-calf were patchy and for cow-calf poor.

In the skins section, trading was small, as tanners were quoting fancy prices, in view of the strength in the raw skins centres.

Notice

GANNON DUNKERLEY AND COMPANY LIMITED

NOTICE

THE 37TH ANNUAL GENERAL MEETING OF the Company will be held at its Registered Office, Chartered Bank Building, Fort, Bombay, on Friday, the 23rd December, 1960 at 4-00 p.m., to transact the following business:—

1. To receive and adopt the Directors' report for the year ended 31st March, 1960 together with the audited statement of accounts for the period.
2. To declare a dividend.
3. To elect a Director in place of Shri J. L. Mehta who retires by rotation but being eligible offers himself for re-election.
4. To appoint a Director in place of Shri Shivnath Kanoria who was appointed a Director by the Board of Directors of the Company on 12th February 1960 and who holds this office only upto the date of the Annual General Meeting but is eligible for election. And to consider and if thought fit, to pass the following resolution as an ordinary resolution of which notice as required by Section 257 of the Companies Act 1956 has been received by the Company.

"Resolved that Shri Shivnath Kanoria be and is hereby appointed a Director of the Company."

5. To appoint Auditors for the financial year ending 31st March, 1961.

You are requested to be present in person or by proxy. The Share Transfer Books of the Company will be closed from 16th December 1960 to 30th December 1960, both days inclusive.

By Order of the Board,

R. MORARKA,
Governing Director.

BOMBAY, *dated 10th November* 1960.

Note: A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by this Company at its Registered Office not less than 48 hours before the Meeting.

Explanatory Statement Under Section 173(2) of the Companies Act 1956

Item No. 4: At the invitation of your Board of Directors, Shri Shivnath Kanoria joined the Board on 12th February 1960, but he holds the office only upto this Annual General Meeting. Notice has been received by the Company from a member of the Company, as required by Section 257 of the said Act, of his intention to propose a resolution at the forthcoming Annual General Meeting for election of Shri Shivnath Kanoria as a Director of the Company. The said resolution is recommended for your acceptance in order that the experience of Shri Shivnath Kanoria should be made available to the Company.

All preference shares are taxable unless otherwise stated.

•••These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

RAILWAY DIVIDEND TO EXCHEQUER

THE recommendations of the 1960 Railway Convention Committee are disappointing, in that the rate of contribution by the Railways to the rev

public utility concern, are making indirectly sizable contributions to General Revenues by way of concessions in tariff rates to the P. & T. and Defence Departments and to the national economy by charging comparatively low tariff rates on the haulage of coal, foodgrains, industrial raw materials, etc. There is nothing *prima facie* wrong in this view, because, while at the *existing* level of fares and freights gross receipts are expected to go up from Rs. 464.5 crores in 1960-61 (Budget) to Rs. 611.2 crores in 1965-66 (Estimate), working expenses will also go up from Rs. 329.8 crores in the former year to Rs. 423.4 crores in the latter. If the rate of dividend is fixed at 4½ per cent., the gross surplus available to the Railways, after paying dividend to the General Revenues, will be as in the following table in the next five years:

(In Rs. crores)

Head	1961-62	1962-63	1963-64	1964-65	1965-66
Gross surplus	65.2	67.2	65.6	65.2	75.5
Minus Appropriation to Depreciation Reserve as recommended	65.0	67.0	70.0	73.0	75.0
Net surplus	0.2	0.2	—4.4	—7.8	0.5
Average annual contribution to Development Fund*	23.0	23.0	23.0	23.0	23.0
Net surplus if dividend is 4¼%	4.0	4.3	0.1	—2.9	5.8

* This would be necessary from the final net surplus in order to enable the Railways to fulfil its third Plan objectives.

It will also be seen from the above table that the position will be pretty grim in respect of the net surplus necessary for contribution to the Development Fund, even if the rate of dividend is only 4.25 per cent. and not 4.5 per cent. While the Committee has recommended the continuance of the facility of providing temporary loans from General Revenues to finance the Railway Development Fund during the next five years, it has necessarily had to refrain from recommending an increase in fares and freights to meet the situation. It is obvious that a reasonable remedy will have to be devised to meet the situation. Such a remedy could conceivably consist of two major elements. First, the rate of dividend to the General Revenues may be not less than 4.5 per cent. for reasons mentioned earlier. Second, since this would mean a net revenue deficit of Rs. 11.3 crores for the entire third Plan period and since the projects to be financed from the Development Fund are as important as projects financed from capital, a total sum of Rs. 126.3 crores (Rs. 23 crores × 5 *plus* the appropriate amount to cover the deficit) would have to be found partly by judiciously increasing passenger fares and rationalising the freight rates and partly by achieving economies in working expenses through greater operational efficiency in all lines like turnround of wagons, performance of engines, fuel consumption, etc. Actually, the net surplus that would need to be produced during the entire third Plan period may have to be at least Rs. 150 crores, if the States are not to be deprived of the additional yields from the passenger tax from year to year.

It is here that the Convention Committee's recommendation that the passenger tax at the existing rate be merged with passenger fare from 1st April 1961, and the State Governments be paid a fixed amount based on the average of the collections for the years 1958-59 and 1959-60, seems to be inappropriate. This recommendation has also specified that this fixed amount in the nature of a subvention payable by the Railways to the States may be Rs. 12.5 crores per annum during the quinquennium 1961-66. This is not a reasonable proposition, because the passenger tax has been levied solely for the purpose of making some resources available to the States and the secular increase in its yield should, therefore, go only to their benefit. And this is all the more unreasonable because the States are being called upon to raise as much as Rs. 550 crores by way of additional tax revenue during the third Plan, which is a rather tall order. The State Governments have thus good reason to grouse at the recommendations of the Committee. To raise the rate of dividend payable to the General Revenues to 4.25 per cent. and then to merge the passenger tax in the fare would be like taking away with one hand what is given by the other. By far the best course would have been to keep the passenger tax as a separate element as hitherto and make the entire proceeds, whatever they be, available to the States from year to year.

STRAIT-JACKET FOR COMPANIES—II

IN our last issue, we commented at some length on two of the controversial issues arising from the amendment to Company Law now before Parliament. We propose to continue the discussion this week by referring to two more issues, namely, inter-corporate investment, and restrictions on transfer of shares in certain specified circumstances, leaving the regulation over the appointment of selling agents and donations to political parties to be covered next week. The main object of Government wanting to interfere with the functioning of the corporate sector in the first three respects is to check concentration of economic power. And the Government has tried to justify this course further by saying that the interests of shareholders of companies require to be protected against company managements which are greedy of both power and money alike.

The present Act contains a stringent provision aimed at restricting inter-corporate investment. Thus, Section 372 of the Act regulates the purchase by a corporate enterprise of the shares of other companies. Under this section, the investing company is entitled to invest in the shares or debentures of any other body corporate in the same group only upto ten per cent. of the subscribed capital of the "investee" company, subject to the limitation that aggregate investment made by the "investing" company in all other companies in the same group does not exceed 20 per cent. of the subscribed capital of the investing company. This restriction tends to inhibit the growth of new companies with the help of existing companies. It is common knowledge that, while sponsoring new enterprises, it becomes necessary for the *entrepreneur* to take up a substantial block of shares in such enterprises, in order to inspire confidence in the investing public and to ensure the success of the new issue. No individual is rich enough to perform this function alone. He, therefore, takes the help of companies that are under his management by investing a part of their funds in the capital of new enterprise. From this point of view, the existing limit of ten per cent. has been found inadequate. Section 372(3), however, allows this limit to be exceeded, if the investing company sanctions, by a resolution, such investment and the Central Government approves of it. But this is a very cumbersome procedure. This point was recognised by the authors of the amending Bill. They have proposed certain substantial changes which are in the nature of concessions to investing companies.

The Select Committee, for instance, has excluded investments in debentures and in right shares for the purpose of calculating the specified percentage, as these investments do not *normally mean* acquisition of a greater degree of control over the "investee" company. Again, the 20 per cent. ceiling on the aggregate holdings of investing company as a proportion of its subscribed capital has been raised to 30 per cent. Welcome as these concessions are, they do not go far enough. Individual savings are greatly restricted, owing to high level of taxation and increase in cost of living. The growth of industries in the private sector depends, therefore, on the availability of corporate savings. In the economic development of many foreign countries, internal resources of companies have played a significant role and there is no reason why undue restrictions should be placed on the play of this natural force in this country. The force of this argument is conceded in the income-tax law, under which companies are given a rebate on the tax payable by them on dividends earned from investments in approved industries. There is, however, a clear need to distinguish investments by the corporate sector for promoting new industries from those directed merely to secure monopoly control which Mr. Nityanand Kanungo picturesquely described as "cannibalism." Even here, not all cases of absorption will deserve the odium implied in the use of this word. If certain corporate mergers are clearly in the larger and long-term interests of the country, as they may well be, they need not be decried. In fine, while conceding that the State does require powers to prevent monopolies that are harmful to the public, it is better to deal with the problem in a more democratic manner than through the instrument of Company Law administered by bureaucracy. Meanwhile, all that one can hope is that, where inter-corporate investments are clearly for the purpose of establishing new industries, the Company Law Administration would be liberal in sanctioning limits in excess of the ceilings.

Another much criticised amendment to the Companies Act is that clause (Clause 79) of the Bill which seeks to vest enormous power in the hands of the Government to restrict, as well as prohibit, transfer of shares and debentures in certain extraordinary cases. The object of this provision is to protect managements of companies, which are well run and in a sound financial position, against attempts made by persons possessing or commanding immense resources to snatch the controlling interest. The representatives of managements, in their memoranda to the Sastri Committee, were very critical of the relevant restrictive provisions, while the representatives of shareholders pressed for their tightening up. The Sastri Committee held that, in view of the wide prevalance of *benami* system among particular sections of the mercantile community, the need for these provisions is greater in India than elsewhere. "Affluent speculators," the Committee added, "manage to corner shares of public companies, with a view to ousting the established management, however efficient or satisfactory it might have been, to commit depredations on reserves and manage or mismanage the company's affairs with a view to their personal gain or to compel the management to purchase peace by buying their newly acquired shares at unreasonably high prices." The evil effects of these speculative manœuvres were vividly pointed out to the Sastri Committee at Calcutta. The Committee was, therefore, of the view that Sections 247 to 250, which are intended to prevent the aforesaid speculative manœuvres and are modelled on the corresponding provisions of the English Act, were essential. The Committee's suggestion was that Section 250 might be amended so as to confer power on the Central Government in a case, where, owing to a change in the ownership of shares, a change in the managing agency or in the directorate of a company is likely to take place, which, if permitted, would, in its opinion, be prejudicial to the public interests, to direct by an order that, for a specified period, say, three years, the voting rights shall not be exercised by the transferees of those shares. In keeping with these suggestions, Clause 79 of the Amending Bill seeks to widen the scope of Section 250 (1) of the existing Act so as to enable the Central Government to impose restrictions on transfer of shares in cases of the type mentioned above, even though there may not be any investigation under Sections 247, 248 or 249 of the Act. The power provided under this section can enable the Government to prevent the buyer of shares either in his name or through *benamis* from enjoying, for a maximum period of three years, the fruits, as well as the rights, of his ownership. The aggrieved party, however, will continue to have the privilege of challenging the Government's order in a court of law. It is urged by the opponents of this provision that these powers are too wide and are likely to be exercised arbitrarily. Expecially the retroactive aspect of the provision which will enable the Government to divest ownership of shares that are *already transferred* is criticised more strongly. It is further felt that the measure would encourage minority control of company managements to the detriment of the majority.

The powers that are now sought to be conferred are, of course, of a sweeping nature. But it is equally true that there have been quite a few cases of snatching of controlling interests by "affluent speculators" and that some of these have proved to be injurious to public interest. The Government could do nothing in such cases, as it had no power to avert the disaster before it was too late. In view of this development, this journal cannot share the views of those critics who think that this provision is unnecessary or that it is too drastic. It may appear to be drastic, but that cannot be helped, if all the loopholes are to be effectively plugged. Neither the ordinary small investor nor the big genuine investor need be worried because of this section of the law. Further, the Minister for Commerce has given the assurance that the clause would not come in the way of genuine amalgamation of companies or acquisition of controlling interest in a company with the willing consent of the party concerned. The restraint implied in this assurance, coupled with the judicial remedy provided for in the Section, is sufficient to remove the fear that the Government will interfere with normal changes in the management of companies. At the same time, the very existence of this power will tend to deter cornering of shares by anti-social elements.

MARKET GOSSIP

Preference Dividends

THE changes made by the Select Committee in the Bill pertaining to preference dividends give only partial relief. In the absence of the full text of the Committee's report, one's comment has necessarily to be brief and tentative. It is, however, clear from the reports published in the daily Press that, though both the tax-free and taxable preference shareholders will get a little more than that contemplated in the original Bill, they will still be substantially worse off as compared with what they were getting before the abolition of grossing. Under the original Bill, a tax-free preference share was entitled to an increase of 25 per cent. of the rate of dividend and the taxable preference share to a rise of 7 per cent. The Select Committee has raised these percentages to 30 and 11, respectively. The loss works out to nearly 11 per cent. in the case of tax-free preference shares and a little over 11 per cent. in the case of taxable preference shares. The rationale behind these changes is not clear. It would appear that the Committee has tried to see that the extent of loss to both the classes of preference shares is almost equal. But what is involved here is a question of principle affecting property rights. This injustice could have been avoided, if the Committee had listened to the suggestion made by the interested institutional investors that the boards of directors of companies should be vested with the necessary powers to raise the rates of preference dividends to the extent required so as to ensure that the preference shareholders obtained the same net dividend as before. This solution would be in keeping with the original intention of the Finance Minister, namely, that preference shareholders should not suffer in any way as a result of the change in the system of corporate taxation. The whole trouble arose because of the legal interpretation that an increase in the rates of preference dividend could be effected only through the adoption of a special resolution which needs a 75 per cent. majority, a requirement that cannot be easily fulfilled. This difficulty could have been overcome, if the aforesaid simple solution had been adopted. If directors of companies can decide the terms of secured loans, no harm will be done to companies by enabling them to do justice to preference shareholders.

The Government's unhelpful attitude in this matter will make preference shares unpopular with investors. Many companies will prefer to borrow from banks and other institutional investors rather than issue preference shares or they may raise the bulk of the capital required in the form of equities. Such an arrangement will be found disadvantageous to companies in times of slump and low profit-margins.

Lok Sabha's Time Wasted

With a persistence worthy of a better cause, certain political parties are desperately trying to force the hands of the Government of India to nationalise general insurance. Last February, Mr. Bhupesh Gupta (Communist) moved a resolution in the Rajya Sabha urging nationalisation of general insurance, which was rightly rejected after a heated debate in which Mr. Babubhai Chinai, a leading industrialist, exposed the hollowness of the plea for nationalisation. Obviously, neither reason and logic nor cold economic facts can convince the comrades who are still labouring under the illusion that nationalisation will usher in the millennium. In the current session of Parliament, the Communists again brought before the Lok Sabha another motion having the same objective. It was moved by Mr. T. B. Vital Rao. The resolution was rejected by the House this time also.

It is difficult to see what changes have taken place in the insurance trade, in the general economic situation in the country or in the political climate to warrant the tabling of another motion within ten months after the rejection of the earlier one. On the other hand, whatever developments that took place in the interval, have only served to reduce the private sector in general insurance as well as its margins of profits. The Government has grabbed an additional 25 per cent. of the "pool business," bringing its total share to 75 per cent., leaving only the balance to private companies. With effect from 1st January 1960, a new insurance company was established in the public sector, by converting Indian Guarantee, a subsidiary of L.I.C., into a purely reinsurance company, to transact reinsurance business in competition with the India Reinsurance Corporation, an organisation jointly owned by private companies. The reduction in fire insurance premium, with effect from 1st January 1960, would surely cut into the profits of fire insurance, the only business which not only pays for itself but also subsidises other uneconomic portfolios.

It is true that there are malpractices in the general insurance trade, as there are in every other field, but they are not so chronic or widespread as not to lend themselves to curative treatment. Insurers themselves are aware of this and have addressed themselves to the task of solving it by concerted action. Moreover, the Government has sufficient powers to check malpractices, and can arm itself with more, if found necessary. But the most important point to be noted in this connection is that some of the so-called malpractices, cheating, for instance, are the result of defective controls designed to protect primarily uneconomic rents. Thus, the Government itself is in a way responsible for creating a situation in which competition for more business and investments in sound industrial equities happen to be classified as malpractices.

The closure of some companies and the amalgamation of some others have helped a section of politicians to fish in the troubled waters of insurance. In one case at least, the closure was brought about by purely extraneous factors and, in others, it was due to economic reasons. Amalgamation, which is a world-wide phenomenon in insurance—in India only five units have amalgamated so far—has also been found necessary in the interest of economic working and financial viability.

The mover of the resolution stated that the Government should nationalise general insurance both in its own interest and in the interest of the public. He could not convince anybody as to how nationalisation would serve these interests. The puerile plea that the Government would get an appreciable amount of money to finance its development plans is entirely unfounded. The profit margin of general insurance is, perhaps, the lowest that can be earned from any service industry in the country and there are many companies that are not in a position to declare any dividend, let alone a fair return on capital, because there is hardly any surplus money in the business. If the Hon'ble Member wanted general insurance to be nationalised for raising money for the Plan, he was surely barking up the wrong tree.

In fine, general insurance, as it is, does not fulfil even a single test to qualify it for nationalisation. And, as Mr. B. R. Bhagat, Deputy Minister for Finance, observed while rightly turning down the plea for nationalisation, "it is not advisable for the Government to go on nationalising one industry after another."

Small Car—A Luxury That Can Wait

The problems of the automobile industry, with particular reference to the Government's proposal to establish a unit in the public sector for manufacturing a low-cost car, recently came in for discussion in the Rajya Sabha. Mr. Manubhai Shah, Union Minister for Industry, whose imaginative handling of his portfolio has done considerable good to the industrial progress of the country, was on solid ground when he refused to run down the automobile industry. On the contrary, he was ungrudging in his tribute to the industry for its good performance. He also refuted the criticism that the industry was over-centralised. In fact, he said, all the six or seven units were not manufacturing all the items but were producing only such items as could be produced scientifically and technically under their supervision, leaving the rest of the ancillary products to small units of which there were already 120 or 130 all over the country. And these small units alone had produced in the last year Rs. 2 crores worth of ancillary products. But much more remains to be done in this line. Mr. Shah's reference to the plan for half-a-dozen "functional industrial estates" suitable for the manufacture of ancillary components is encouraging. As every automobile has got about 4,000 to 5,000 parts and components, the proposal to group them on a scientific and technical basis and create 50 or 100 small units in each of the estates for manufacturing them strikes one as realistic.

But the Minister's idea that an integrated approach would be adopted from the beginning to the manufacture of a low-cost car in the public sector was not clear on the point whether the proposed unit would be highly centralised, itself manufacturing all or most components. Mr. Shah seemed to be excessively optimistic when he said that within 2½ to 3 years steps could be taken to establish the main shops for manufacturing and assembling the normal basic model, as also to manufacture the components connected with this car. Whether 90 per cent. or 95 per cent. of all the parts and components could be manufactured, either on a centralised or a decentralised basis, within 2½ years or so, is a moot question. It would appear that the Minister has given a very rash promise.

The difficulties in the way of establishing a unit to manufacture a low-cost car at an ex-factory price of Rs. 5,000 (costing the ultimate consumer anything between Rs. 6,000 and Rs. 6,500) do not seem to have been fully recognised. First, the deadline for commencement of production is not practical. Second, it will have to secure the best possible foreign technical collaboration which cannot be arranged at short notice; any hasty deal in this connection may ultimately mean a lot of waste. Third, a production target of 20,000 cars, going up to 50,000 "in the shortest possible time," is palpably low by foreign mass production standards. If mass production on a far larger scale is thought of, capital investment will have to be much more than the contemplated Rs. 10 to Rs. 12 crores; that will mean that this project will further eat into the resources required for higher-priority projects. If mass production on a far larger scale is not considered desirable because the size of the "lower middle class market" is an unknown factor, the "low-cost" may turn out not so low as all that. The experience of private automobile units to date is that, with a relatively small level of production, as Mr. Shah himself has bemoaned, "year after year, in spite of all our care, prices go up." Will the experience of the proposed public sector unit be any different?

If the price of the 'janata car'—this is an anticipatory christening here—goes up, how will the aspirations of the "lower middle class," now so assiduously kindled, be satisfied? Mr. Shah has waxed eloquent on the widely felt need among the "lower middle class" for a cheap car. Yet, the need may be "felt" in a negative way by this class which always grumbles at the rich and casts envious eyes on the rolling limousines. But is it a need which this class has the capacity to satisfy? What is this "lower middle class," anyway? Does it cover all those who have monthly incomes of more than Rs. 1,000 and less than Rs. 2,000? If it does not, is it to be expected that an urban middle class family getting less than Rs. 1,000 per month will have the wherewithal to invest Rs. 6,500 (?) in the car and to incur a recurring monthly expenditure of, possibly, Rs. 150 on fuel and maintenance and still more where a driver is employed? Even if all the stated requirements—sturdiness of the car, low cost of operation and maintenance, etc.—are fulfilled, there is every reason to believe that the burden on a middle class family in terms of depreciation and operational and maintenance costs will be far too heavy.

There are also other problems that will crop up—problems relating to modifications in the road system, parking space in the congested middle class localities, traffic congestion on roads, etc. But these are only theoretical possibilities based on the dubious assumption that the low-cost car will command a big market. If it does command a market, it may probably be due to the rich people wanting to have more than one car. Then, there is the important question of oil for which the country has to depend primarily on imports. Thus, the conclusion is irresistible that the small-car project is a luxury which the country cannot afford at the present time when both foreign exchange and rupee resources have to be husbanded for more essential purposes. In any case, it is a luxury which the middle class man cannot afford in the current context of urban living costs. The existing city transport services, if they are rendered more efficient, can more easily and cheaply meet his needs. If commercial concerns can maintain their own buses or station wagons for the use of their staff, the situation may be further eased.

World Sugar

The member-countries of the International Sugar Agreement have been asked by the Sugar Council to limit their sugar exports to the "free" market next year to 85 per cent. of the basic tonnages laid down in the Agreement, as against 105 per cent. applicable for 1960. The Council took a decision to this effect at Mexico on Thursday the 1st inst., after deliberating for three days. It is, of course, stated that the quotas may be revised from the beginning of the second quarter of 1961, if the statistical situation appears to warrant it. The cut in export quotas is justified on the following grounds:

There would be a surplus of sugar on the free market amounting to about a million metric tons, if quotas were left at the basic level. Free market demand next year is expected to reach approximately 6.38 million tons, which is only slightly larger than the basic export quota. But the countries outside the Agreement are likely to export 600,000 tons and other permissible exports outside the Agreement quotas may total 435,000 tons. The "structural changes" which have occurred in the sugar market may be intensified next year. (The changes are understood to refer to the cancellation of Cuba's sugar quota with the U.S. and the corresponding increase in U.S. imports from other countries.)

The Sugar Council has thus not taken any specific decision bearing on the U.S. sugar imports. This is, perhaps, because it does not yet know clearly the countries from which the U.S. intends to purchase sugar, nor is it in a position to say whether the U.S. has decided not to buy any Cuban sugar at all. All that the Council has done is to constitute a special committee to watch the situation and to announce that it will hold another full session as soon as the factors affecting the sugar market in 1961 become clearer. This session, according to London observers, may well decide on some distribution of free market quotas to balance changes in the source of supply for the U.S. market.

Meanwhile, some countries, including India which is still not a member of the Sugar Agreement, are hoping to secure a share in the U.S. market, besides the usual quotas in the world market allotted to them by the Sugar Council. This hope has already given an impetus to boost production in certain countries. To the extent production rises, the surplus of sugar hanging on the world market will be more uncomfortable. If some countries are unable to secure any high-price quota in the U.S. and, therefore, are forced to sell at the unattractive prices offered in the free market, they will naturally complain bitterly. The Mexico meeting of the Sugar Council has not given the answer to these problems. Here is what the London *Financial Times* says on the subject:

"The International Sugar Agreement is not designed to limit production but only exports and, so far, since the leading exporters are prepared to limit their own production, this has worked satisfactorily. The trouble now is, however, that countries which used to be major importers of sugar are starting to produce their own, thus upsetting the export market and the international price of sugar in a way which the Council is powerless to control."

It is to these problems that the Sugar Council will have to address itself at the next meeting. If it fails to find a solution to these problems which is satisfactory to both the exporting and importing countries, the Sugar Agreement may, once again, run into serious difficulties.

Reserve Bank Vindicated

The judgment of the Kerala High Court on the application filed by the Reserve Bank of India for permission to wind up the Palai Central Bank under Section 38 of the Banking Companies Act did not receive as much publicity in the local Press as did the news of the Bank's crash and the debate on it in Parliament. Since the case involved interpretation of the powers vested in the

(Continued on page 1078)

EQUITIES EASY AGAIN

TEXTILES, HOWEVER, LOOK UP

(From Our Own Correspondents)

BOMBAY, *8th December*

THE share market continued to rule easy during the major part of the week under review, barring textiles which were somewhat well favoured and tended to move up. Fresh investment support was lacking, despite encouraging reports about the implementation of expansion and development schemes by certain industrial concerns. Buyers were reserved, thanks to persistently strained Sino-Indian relations. Even the Union Finance Minister's statement discounting the possibility of an upward revision in the Bank rate failed to have any significant effect. Consequently, equities continued their downward march. Some of them, of course, attracted support at lower levels, but the actual recovery in values was not marked enough to make up for the earlier losses.

In the steel section, Tata Ordinaries receded from Rs. 142 to Rs. 140 on Tuesday and, after recovering to Rs. 142.25 yesterday, declined again to touch Rs. 141.25 today. The Investment Committee of the Life Insurance Corporation was reported to have bought 2,500 shares of Tata Steels. Indian Irons eased from Rs. 23.84 to Rs. 23.52; at one time on Tuesday, they were lower still at Rs. 23.44. Mukand Irons suffered a loss of 24 nP, today's closing rate being Rs. 21.76.

Textiles, as stated at the outset, met with some support induced by hopes of increase in production as a result of comfortable raw cotton supplies. Operators noted the Government of India's announcement regarding the terms of reference of the Tariff Commission on the issue of prices and generally expected that the industry would receive a fair deal at the hands of the Commission. Kohinoors rallied from Rs. 266.25 to Rs. 278 today before finishing at Rs. 274.50, a rise of Rs. 8.25 over the week. Morarjees firmed up by Rs. 8 to Rs. 318. Gokaks advanced by Rs. 3 to Rs. 173. Khataus picked up Rs. 2.50 to Rs. 465. Svadeshis hardened by Re. 1.50 to Rs. 227.50, Indores by Re. 1 to Rs. 123 and Centurys by 50 nP to Rs. 461. Bombay Dyeings began the week at Rs. 62.40, as against the previous close of Rs. 62.50, and improved to Rs. 62.90 today. Towards the close, they were a shade quiet at Rs. 62.70. Central Indias were fully maintained at Rs. 104, as also Simplex at Rs. 161 and Shree Niwas at Rs. 228. Standards, however, declined by Rs. 3 to Rs. 1.072. Finlays lost Rs. 2 to Rs. 330. Tata Mills softened by 50 nP to Rs. 40.

Sugar shares lacked support. Belapurs moved down from Rs. 395 to Rs. 386.50 today before finishing at Rs. 387, a decline of Rs. 8 over the week. Walchandnagars shed a rupee to Rs. 289. Bhopals lost 5 nP to Rs. 28. But Phaltans evoked special enquiries on proximity of dividend and rose by Rs. 2 to Rs. 189.

Cement shares encountered selling induced by the recent statement of the Minister for Commerce and Industry that cement prices could not be raised from the present levels. Digvijays were marked down by Rs. 4 to Rs. 152. Associated Cements retreated from Rs. 151.75 to Rs. 150.75. Sone Valleys shed 8 nP to Rs. 5.04 and Jaipur Udyogs 4 nP to Rs. 11.72. Orissas were neglected at Rs. 15.04.

Electricity shares ruled irregular. Tata Hydros eased by Re. 1.50 to Rs. 102.50, while Powers gained Re. 1.25 to Rs. 1,036.25. Ahmedabad Electrics shed 20 nP to Rs. 87. Andhra Valleys strengthened by Rs. 7.50 to Rs. 1,015. Bombay Suburbans gathered a rupee to Rs. 85.

Among bank shares, Central Banks receded by Re. 1.50 to Rs. 54.50, 'A' shares declining by 80 nP to Rs. 59.20. Barodas were quiet at Rs. 82.50, Punjab Nationals at Rs. 19.36, United Commercials at Rs. 85 and Denas at Rs. 53. Bank of Indias hardened by 50 nP to Rs. 108.50, 'A' shares rising from Rs. 109.50 to Rs. 111.

Shippings were steady, Scindias gaining 8 nP to Rs. 13.96 and Great Easterns 4 nP to Rs. 15.48. In the automobiles group, Premiers put on a rupee to Rs. 172. Hindustan Motors were better at Rs. 19.80, as against Rs. 19.72.

Engineering shares were quiet. Telcos slipped down from Rs. 303 to Rs. 295 yesterday, but recovered to Rs. 306 today. They, however, finished easy at Rs. 302.75 on reports that imports of spare parts might be curtailed. Alcocks were unchanged at Rs. 240, as also Larsen and Toubros at Rs. 36.75. Cooper Engineerings declined by Rs. 2.50 to Rs. 168. Mahindras eased by 40 nP to Rs. 20.36. Premier Constructions, however, improved by Rs. 2 to Rs. 300.50 on special support.

In the mining group, Shivrajpurs came in for selling and dropped 50 nP to Rs. 71.50. Indian Coppers shed 8 nP to Rs. 4.54.

A striking feature of trading in the miscellaneous section was the setback suffered by the shares of dyes and chemical companies on fears of a reduction in import quotas for raw materials. Indian Dyestuffs slumped by Rs. 35 to Rs. 460. Amar Dyes fell by Rs. 26.25 to Rs. 386. Colour-Chems receded by Rs. 17.50 to Rs. 310, notwithstanding the note of optimism regarding the outlook for the Company held out by its Chairman at the annual meeting. Adarsh Chemicals declined by Rs. 4.50 to Rs. 60. Alembics were quiet at Rs. 232.50 *ex-right*. Among other industrials, National Rayons, which had gone up from Rs. 491 last week-end to Rs. 507 yesterday, retreated to Rs. 497.50 today. Bombay Burmahs eased from Rs. 582 to Rs. 578 on Tuesday, even though the Chairman of the Company gave a favourable assessment of the current and prospective performance in his speech at the annual meeting. They, however, recovered subsequently and touched Rs. 588 today before closing at Rs. 585. B.B. Petrols fell by Rs. 10.75 to Rs. 195.50, Anil Hardboards by Rs. 7.50 to Rs. 338.75, Asian Cables by Rs. 5 to Rs. 115, Baroda Rayons by Rs. 3.25 to Rs. 29 and Greaves Cottons by Rs. 2 to Rs. 155. Gwalior Rayons shed 25 nP to Rs. 42.25. Voltas and Hindustan Levers eased by a like amount each to Rs. 268.75 and Rs. 44.75, respectively. Wimcos, however, gathered Rs. 2 to Rs. 270, Ceat Tyres picked up Re. 1.25 to Rs. 218.75. Tata Oils hardened by Re. 1.50 to Rs. 75.

* * * *

Madras Stock Exchange

MADRAS, *7th December*

Several counters on the Stock Exchange were subjected to selling pressure during the week under review. Textiles ruled distinctly easy, following reports of new restrictions imposed in Ceylon on imports of sarongs and sarong cloths of cotton, artificial silk, rayon and synthetic fibres. The operators also noted the terms of reference of the Tariff Commission regarding fixation of fair prices for textile goods. Tea shares were subdued as operators preferred to await the award of the Central Wage Board for the tea plantation industry (Chairman: Mr. L. P. Dave), the constitution of which was announced this week. Coffees and rubbers were also subdued, except a few shares which elicited special support. There was some selling pressure in sugar scrips, too, induced mainly by the publication of the Wage Board's recommendations. Miscellaneous industrials were also depressed.

Among textiles, South Indias came in for selling and fell by Rs. 4 to Rs. 156. Buckinghams lost Re. 1.50 to Rs. 198.50. Travancore Rayons declined by Re. 1.05 to Rs. 34.25. Metturs were marked down by a rupee to Rs. 370. Coimbatore Spinnings dropped 50 nP to Rs. 45. Maduras eased by 35 nP to Rs. 34.90. Kotharis shed 10 nP to Rs. 12.10. Bangalore Woollens were dull at Rs. 197, Coimbatore Cottons at Rs. 162, Coimbatore Pioneers at Rs. 347, Cannanores at Rs. 155, Dhanalakshmis at Rs. 223, Premiers at Rs. 225 and Lakshmis at Rs. 152. But Radhakrishnas hardened by 25 nP to Rs. 29.25.

In the tea section, Haileyburias receded by 25 nP to Rs. 14.25. Neelamalais decreased by 15 nP at Rs. 4.74 and Peermades by 10 nP at Rs. 22.65. Chembras shed 3 nP to Rs. 5.10. Blue Mountains eased by 5 nP to Rs. 4.06 before closing at Rs. 4.10. Periakaramalais declined initially from Rs. 3.47 to Rs. 3.45, but recovered to Rs. 3.46 today. Nonsuch Teas were neglected at Rs. 26.55, Parksides at Rs. 30.50 and United Nilgiris at Rs. 23.31. Waterfalls, however, rose by 18 nP to Rs. 5.20. Kil Kotagiris put on 5 nP to Rs. 6.60.

Coffees tended to look down. Coffee Lands retreated by 68 nP to Rs. 19.32. Rajendras suffered a loss of 25 nP, today's closing rate being Rs. 14. Ouchterlony Valleys receded from Rs. 4.95 to Rs. 4.80. Balanoors and Cowcoodys were quiet at Rs. 16.70 and Rs. 5.16, respectively. Consolidated Coffees declined from Rs. 22.75 to Rs. 22.30 initially, but staged a smart rally subsequently and touched Rs. 23.12 today.

In the rubber group, Cochin Malabars fell by 20 nP to Rs. 7. T.R. and Ts drifted lower by 15 nP to Rs. 9.55. Kailas dropped 5 nP to Rs. 5.25. Thirumbadis shed a naya paisa to Re. 1.51. Teekoys and and Be Bes were neglected, the former at Rs. 6.10 and the latter at Rs. 3.06. Both these companies have passed over the dividend for the year ended March 1960. The dividends (tax-free) paid in 1960 in the previous year, it will be recalled, were 6 per cent. in the case of Teekoy and 5 per cent. in respect of Be Bc. Malankaras changed hands at Rs. 17.70. But Vaikundams and Midlands made handsome gains, the quotations improving by 35 nP each to Rs. 30.75 and Rs. 12.50, respectively.

In the sugar section, East India Distilleries receded by Re. 1.50 to Rs. 42.75. Deccans moved down from Rs. 15.85 to Rs. 15.75. They were lower still at Rs. 15.65 earlier. Cauverys were quiet at Rs. 144, as also Indias at Rs. 12.25, Mysores at Rs. 60.50, Travancores at Rs. 10.85 and United Breweries at Rs. 114.50.

Among cements, in the miscellaneous section, Indias declined by 33 nP to Rs. 5.87, and Orissas by 15 nP to Rs. 14.85. Dalmias were unaltered at Rs. 11.25, Andhras at Rs. 10 and Travancores at Rs. 8.75. Among chemicals, F.A.C.Ts sagged by 17 nP to Rs. 9.90. Metturs lost 10 nP to Rs. 13.10. Mysore Chemicals were dull at Rs. 27.50. Mysore Fertilisers, however, rose by 5 nP to Rs. 11.90. Among others, Ashok Leylands wound up the week at Rs. 8.10 *ex-right*, as against Rs. 8.70 *cum-right* last week. India Steel Rollings moved down from Rs. 10.25 to Rs. 10.15. Aluminium Industries closed lower by 5 nP at Rs. 22.90, after fluctuating between Rs. 22.85 and Rs. 23.15. Textools were unchanged at Rs. 190. The Directors of the Company have declared a dividend of 15 per cent., taxable, for the year ended April 1960, as against 12 per cent. last year. The share of Seshasayee Papers, lately included in the list of the Stock Exchange, were quoted at Rs. 5.

Notice

THE DEHRI-ROHTAS LIGHT RAILWAY COMPANY, LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE Shareholders of the Company will be held on Friday, the 30th December, 1960, at 12-30 p.m., at the Registered Office of the Company at Dalmianagar, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1960.
2. To declare a dividend.
3. To elect a Director in place of Shri S. K. Bagla who retires by rotation but, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from 20th December, 1960 to 30th December, 1960, both days inclusive.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, *5th December*, 1960.

KOTHARI SUGARS AND CHEMICALS

The list for public subscription of the equity shares of the Kothari Sugars and Chemicals Ltd., a reference to which was made in *Commerce* dated 26th November 1960 (*vide* page 974), will open on Thursday the 15th inst. The details of the announcement appear on page 1063 of this issue. It will be seen therefrom that 400,000 equity shares of Rs. 10 each are being offered to the public, Rs. 5 per share being payable on application and the balance as and when called; applications must be for a minimum of 100 shares and in multiples of 100 shares.

The public offer of Rs. 40 lakhs represents half the total issued capital of Rs. 80 lakhs. The other half comprises subscriptions made by the following:

Directors of the Company and their friends —Rs. 12 lakhs (120,000 shares).

Madras Industrial Investment Corporation* —Rs. 13 lakhs (130,000 shares).

Life Insurance Corporation of India—Rs. 15 lakhs (150,000 shares).

The issued capital of Rs. 80 lakhs will meet 50 per cent. of the total outlay of Rs. 1.60 crore required to reach the stage of production. Of the remaining portion, Rs. 35 lakhs will be secured by way of a loan from the Industrial Credit and Investment Corporation at 6½ per cent. interest and an equal amount from the Bank of India Ltd. at a rate of interest 2 per cent. above the Bank rate subject to a minimum of 6½ per cent. The balance of Rs. 10 lakhs or such amount as is required to cover the increase, if any, in the actual cost over the estimated cost of plant and machinery and working capital, is proposed to be borrowed from banks and other sources.

It is noteworthy that the Company does not propose to issue any preference shares. Evidently, the promoters have realised that a preference issue, if it is to be successful, will cost the Company more than secured loans from banks.

The prospects for the new venture appear to be bright. The sugar manufactured by the Company will have an assured market. The factory is to be located in an area (Tiruchirapalli District, South India) which is well suited for growing sugarcane. It will be equipped with the latest type of plant and machinery for which orders have been placed with Binny's Engineering, Madras. And the Company has an influential Board of Directors, presided over by Mr. A. D. Shroff, a leading industrialist of India, who needs no introduction to our readers.

*The Corporation has also agreed to make an open application for a further 20,000 shares which will rank for allotment on par with other applications received from the public.

NEWS IN BRIEF

THE Government of India has decided to extend the benefit of compulsory provident fund under the Employees' Provident Funds Act to three more industries, namely, rice milling, *dal* milling and flour milling, with effect from the 31st inst.

The number of non-company wealth-tax assessees in India, with net wealth of over a crore of rupees, was 28 as on 31st March 1960. This was disclosed by Mr. B. Gopala Reddy, Union Minister for Revenue and Civil Expenditure, in the Lok Sabha last week.

A committee has been appointed by the Government of India to examine the question of quality control on goods exported from India and to recommend measures for ensuring good quality of exports. Mr. Lal C. Verman, Director of the Indian Standards Institution, is the Chairman of the Committee.

In a bid to check black marketing in fertilisers, the Government of India is understood to have decided to ban all inter-State movements of fertilisers and to authorise the State Governments to impose similar restrictions on inter-district movements, if necessary. This move is a sequel to complaints that supplies allocated to one State are being resold in another.

The Government of India has accepted the Tariff Commission's recommendation not to continue protection to the plywood and tea-chests industry after the 31st of this month. If, however, import control is substantially relaxed in future and imports of foreign plywood constitute a threat to the industry, domestic producers may apply for reconsideration of their case.

It is too early to make any assessment of production capacity of Jawalamukhi or its zone of supply, according to Sardar Swaran Singh. Drilling in Jawalamukhi well No. 2 is in progress and nothing important has yet been observed. In Jawalamukhi well No. 1, two horizons (that is 919-923 and 879-890 metres) have indicated a possible production of about 600,000 cubic feet per day, but the commercial potentialities have not yet been assessed or estimated. In Cambay and Ankleshwar, gas is associated with oil. No separate commercial potentialities of gas have so far been assessed.

Construction work on the 54,000-kw. Sholayar hydro-electric project in Kerala, estimated to cost Rs. 4.32 crores, was inaugurated last week by the State's Chief Minister. This project is the second in the chain of power schemes proposed to be established on the Chalakudy river, the first being Peringalkuthu project. A special feature of project is that the controlled water let out from the Sholayar power house will again be utilised in the existing Peringalkuthu power station, increasing its firm power output from the present 8,000 kw. to 23,000 kw. without any additional cost.

About 15,000 acres of forest land in Kerala will be cleared for rubber cultivation early next year. Under the scheme, for which the Central Government proposes to give substantial aid, the State Government will undertake rubber cultivation in about 4,000 acres, the balance of 11,000 acres being distributed to private parties. Of the balance, 5,000 acres will be allotted to the landless poor and educated unemployed with an annual income less than Rs. 3,600, the individual allotment being restricted to seven acres. A few ten-acre plots will be auctioned to small holders. The joint-stock companies will be assigned units of 300-500 acres out of a total of 2,000 acres set apart for them.

In order to encourage collieries to improve the quality of coal supply to steel plants, it has been decided that they may be paid an extra sum over and above the existing controlled prices for each grade, depending on the extent to which the ash content is less than the maximum prescribed for a particular grade. This was stated by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, in the Lok Sabha last week. The steps to be taken in cases where the ash content of the coal supplied is consistently above the maximum prescribed for the grade are under consideration. Any apparent increase in the coal bill of steel plants will be more than offset by the advantages accruing from the improved quality of coal supplied to them.

The Central Board of Irrigation and Power, at its annual session held at New Delhi last week, recommended for consideration by the Government immediate steps to be taken to make an overall assessment of the country's water resources in co-operation with the Survey of India, the Geological Survey of India and the Indian Meteorological Department. It was also stated at the session that collection of correct data and sustained research were the basic requirements for future planning. The Board further recommended the setting up of pilot projects to increase the efficiency of manual labour, as the methods employed at present could be further improved. The other recommendations made by the Board emphasised the need for manufacture of scientific instruments for research work and electrical equipment for power houses within the country.

Details of the progress made in the indigenous manufacture of industrial machinery were given in the Lok Sabha last week by the Minister for Industry, Mr. Manubhai Shah. According to his review, the second Plan production target in respect of sugar machinery has been more than fulfilled. As against a target of Rs. 2.5 crores worth of sugar machinery for the Plan, the 1960 level of production is estimated at about Rs. 3 to 4 crores. For cement machinery, a target of Rs. 2 crores had been fixed. There are at present six firms registered or licensed under the Industries' Act for the manufacture of cement machinery and parts. Of these, three firms are licensed to produce complete cement plants with a total turnover of Rs. 4 crores annually. It is expected that, when these three units go into full production (by the end of 1962), much of the country's demand for cement machinery will be met. The estimated production in 1960-61 is Rs. 65 lakhs. The value of agricultural machinery produced has increased from Rs. 35 lakhs in 1956-57 to Rs. 83 lakhs in 1958-59. No target has been indicated for this industry under the second Plan.

From Abroad

The United Arab Republic has nationalised a Belgian-owned bank and some other concerns belonging to Belgians.

The U.S. Export-Import Bank has decided to lend $30 million to Chile to assist in a five-year railway rehabilitation programme. The credit will cover orders for U.S. manufactures.

The terms of the new agreement between Pakistan and the U.K. on avoidance of double taxation have been initialled. The draft is now awaiting the approval of the Governments of the two countries.

A Pakistan delegation, headed by Mr. Z. A. Bhutto, Minister for Fuel, Power and Natural Resources, is scheduled to leave Karachi on the 10th inst. for Moscow to negotiate on Soviet assistance in the exploration of oil in Pakistan.

A plea for the introduction of plastic coins, which are "easy to carry, probably durable and very cheap to make," has been put forward by the Deputy Master and Comptroller of the British Royal Mint, in his annual report for 1959 to the Treasury.

Sudan has signed the Articles of Agreement of the International Finance Corporation to become its 60th member-country. Its capital subscription to the Corporation is $111 million, bringing the total subscribed capital of the Corporation to $96.617 million.

Communist China will give Cuba a five-year interest-free loan of 240 million roubles (about $216 million), under an Economic Co-operation Agreement signed at Peking last week. A trade protocol has also been signed for 1961, under which China will buy one million tons of Cuban sugar and other commodities.

PERSONAL

LORD Rochdale, Chairman of the U.K. Cotton Board, has arrived in Bombay on a short visit.

Mr. P. A. Menon, Ambassador of India to Argentina, has been appointed Ambassador to West Germany. He will assume charge of the new assignment next month.

Mr. G. L. Mehta has resigned from the chairmanship of the Hindusthan Shipyard. He will, however, continue to be the Chairman of the National Shipping Board.

Mr. Lala Ram Sharan Singh, at present Chief Commissioner, Pondicherry, has been appointed the first Ambassador of India to Poland. He will take up his new post in March 1961.

Mr. A. K. Chanda, until recently Comptroller and Auditor General of India, has been appointed Chairman of the third Finance Commission, *vice* Mr. G. L. Mehta who expressed a desire to be relieved of this responsibility on grounds of health.

The Shell International Petroleum of the U.K. has secured a new concession for offshore oil exploration from the Kuwait Government, against severe competition from other oil companies. The concession is based on the traditional 50 : 50 partnership principle. But it is learned that the Kuwait Government has been given an option to participate in the exploration and production of the Company, on the understanding that it can sell its oil to Shell, if it so wishes, at "reasonable" prices.

The World Bank has announced the grant of a loan equivalent to $25 million to Norway for assisting further in financing the Tokke hydro-electric development scheme. Ten commercial banks in the U.S. are participating in the loan, without the World Bank's guarantee, to the extent of $1,231.000 representing the entire first three maturities and part of the fourth maturity which fall due between 15th November 1964 and 15th May 1966. The loan is for a term of 25 years and bears interest at the rate of 5¾ per cent. annually, including the 1 per cent. commission which is allocated to the Bank's Special Reserve. Amortisation will begin on 15th November 1964. Including the latest loan, the Bank has made five loans aggregating $120 million to Norway. Two of the earlier loans were also for electric power expansion, and two were for general development purposes.

D.L.F. LOANS TO INDIA

TO the impressive record of financial assistance received by India from the U.S. Development Loan Fund has now been added six more loans, together amounting to Rs. 54.30 crores ($114.1 million). All the agreements covering the new loans were signed this week, five at New Delhi and one at Washington. The biggest of these loans (Rs. 23.80 crores or $50 million) is given to the railways for procuring electric and diesel locomotives and centralised traffic control equipment. This is the third loan to the railways from the D.L.F., bringing the total of credits so far granted to Rs. 54.74 crores ($115 million). A loan of Rs. 11.90 crores ($25 million) is given to private industries for the import of capital equipment in the fields of metallurgy, electrical installations, machine tools, earthmoving equipment, chemicals, etc. Another loan of an equal amount covers purchase abroad of steel and steel products needed by private and public enterprises. This is the third loan bringing the total to Rs. 28.56 crores ($60 million). The remaining three loans are for the following projects:

Industrial Finance Corporation: Rs. 4.76 crores ($10 million) for making available medium and long-term credits to private industries in India.

Barapani Hydro-electric Power Project: Rs. 1.19 crore ($2.5 million) for the construction of a concrete dam across the Umiam river and erection of a power house of 27,000 kilowatts capacity. In addition to this, a loan of Rs. 6.2 crores will be made out of the P.L. 480 funds to meet rupee costs.

Kanpur Thermal Electric Power Plant: Rs. 76 lakhs ($1.6 million) for the extension of capacity by 15,000 kilowatts. A loan of Rs. 95 lakhs will also be given from the P.L. 480 funds to meet local currency costs.

It may be noted here that the last two projects will be financed in their entirety by the U.S. A notable feature of all the six loans is that they are repayable in rupees. What is more, the amounts repaid will not be transferred back to the U.S., either in cash or in goods, but will be kept within the country to be used in such manner as is mutually agreed upon. The loans will thus not be a charge against India's balance of payments at any time. A number of other D.L.F. loan agreements are being drafted and these are expected to be signed soon. Reassuring is the statement of Mr. Vance Brand, Managing Director of the Fund, who signed all the agreements excepting the I.F.C. loan at New Delhi, that the Fund "maintains an abiding interest in the private sector of business and in the co-operative efforts of American and Indian private business interests."

PAPER INDUSTRY

Two major factors—the spread of literacy and educational facilities and the rising tempo of industrialisation and business activity—have invested the paper industry with some basic importance. Its progress to date is heartening. According to the latest available figures, production of paper and paperboard has reached the level of 29,500 tons as of June 1960. The monthly average production during the first half of the current calendar year works out to 28,790 tons, as against the total installed capacity of 29,820 tons per month during the same period. The corresponding figures for the previous half-year period (July-December, 1959) were 27,520 tons and 26,750 tons, respectively. It would appear from these figures that the steady expansion of production has been due to a corresponding growth in the installed capacity of the industry and a more or less full utilisation of that capacity. Since the installed capacity in the second half of the current year is stated to be 33,350 tons per month, it may be that production in this period will have reached a monthly average of about 32,000 tons. From the monthly production and capacity figures for 1960, it could be broadly figured out that the output target of 350,000 tons set for the industry for 1960-61 will have been exceeded and the capacity target of 410,000 tons set for that year will have been fully reached. This trend of achievement of the second Plan targets for the paper industry augurs well for the achievement of its third Plan targets of 700,000 tons for output and 820,000 tons for capacity. But it would be preferable to have a target capacity of 900,000 tons, as suggested by the Indian Paper Mills' Association and reiterated in Mr. H. P. Singh's presidential address at the eighteenth annual general meeting of the Association this week at Calcutta, so that there can be absolute certainty of reaching the output target of 700,000 tons under the third Plan.

Mr. Singh's view, which is based on experience, is that installed capacity should exceed anticipated production by a margin of 20 to 25 per cent. Although currently the margin is less than 15 per cent., a higher margin may be necessary for the reason that paper industry is yet to be enabled to equip itself for expanding production through modernisation of plant and machinery. As the Government has not conceded a rehabilitation allowance as an element in the fair ex-works prices of paper, the industry's difficulties in the way of modernisation of equipment can be easily imagined. The cost of replacing worn-out and obsolete machinery and plant has gone up and the depreciation allowances, for income-tax purposes, are quite inadequate. Such allowances are based on the original cost of equipment and bear no relation to the greatly increased cost of replacement. If, as Mr. Singh has pointed out, the industry is forced to meet the cost of rehabilitation out of the already meagre return of 12 per cent. on capital employed, it will have less money for paying reasonable dividends to shareholders and for building up reserves for expansion. In such a situation the prospects for attracting equity capital to the industry for expansion purposes will be poor. It would appear that paper industry has a good case either for a separate rehabilitation allowance or for a higher return on capital employed. Otherwise, with obsolete plant and machinery, the industry will be producing much less than its installed capacity warrants or will be manufacturing more of coarser varieties of paper as it seems to be doing now. The present lower margin of about 10 per cent. by which installed capacity exceeds production is probably due to this factor of manufacture of coarser and thicker varieties of paper and is, therefore, not a true index of the state of plant and machinery in the older paper mills.

Some other requirements of paper industry would also need to be sympathetically considered by the powers-that-be. Firstly, the large-scale section of paper industry can be given larger allocations of foreign exchange for installing new capacity, if it is true that very few small mills of the capacity of 5 to 10 tons per day, which have been licensed so far to the tune of 200,000 tons aggregate capacity, are likely to come up. Secondly, the contingency allowance of 5 per cent., it is said, does not compensate for the cost increases which have occurred since the officially fixed prices came into effect at the beginning of this year. These cost increases are on account of railway freight, surcharge on raw materials, increase in the price of waste paper, chemicals, etc. If something is not done about them, they will only eat into the already inadequate return of 12 per cent. on capital employed allowed in the prevailing schedule of prices. And, thirdly, but not lastly, the industry's case for long-term leases of forest areas supplying bamboo or other wood is unassailable and has been supported by the Planning Commission as well as by some committees appointed by the Government. Only, the State Governments have yet to be persuaded to ensure for the industry long-term supplies of forest raw materials at reasonable and stable prices.

THIRD FINANCE COMMISSION

Under the provisions of the Indian Constitution, the President is enjoined to appoint quinquennially a Finance Commission to recommend on two specific matters, namely, (1) the distribution between the Union and the States of the net proceeds of taxes which are to be, or may be, divided between them and the allocation between the States of respective shares of such proceeds, and (2) the principles which should govern the grant-in-aid of the revenue of the States out of the Consolidated Fund of India.

As the period to which the recommendations of the Second Finance Commission applied comes to an end on 31st March 1962, the third Finance Commission would be set up, according to the announcement made in the Lok Sabha on the 2nd instant, by about the middle of this month. It will be headed by Mr. Ashok Kumar Chanda who was until recently the Controller and Auditor-General of India. In addition to its work pertaining to clauses A and B of Article 280(3) of the Constitution, the Third Finance Commission has been asked, according to the terms of reference announced this week, to make recommendations in regard to the grant-in-aid of revenues to be given to the States in need of such assistance. While recommending such grants, the Commission is instructed to take into consideration the requirements of the States under the third Five-year Plan and the efforts made by the States to raise additional revenue from their own resources. The Commission is also enjoined to determine the principles of distribution of estate duty on non-agricultural property, net proceeds from the tax on railway fares and the revenue from additional excise duties on cloth, sugar and tobacco levied by the Central Government, replacing the sales tax on these commodities.

It is noteworthy that the recommendations of the Third Finance Commission would apply only to a four-year period (1962-63 to 1965-66) instead of five years, as was the case with the two previous Commissions. This change suggests that the Government of India has at last realised the necessity for co-ordinating the work of the Finance and Planning Commissions. The position so far was highly anomalous, because the Five-year Plan period did not coincide with the quinquennium to which the recommendations of the Finance Commissions applied. This entailed avoidable duplication in the work of estimating the resources of the States, their committed expenditures pertaining to the Five-year Plans and the additional resources to be raised by the respective States. The result was that forecasts made by the Planning Commission had to be recast by the Finance Commission and no integrated view of States' finances, taking into account their developmental and general requirements, could be taken by the authorities. The Santhanam Commission, that is, the Second Commission, had focussed attention on the need to co-ordinate the work of the two Commissions. The Santhanam Commission had found that the forecast of financial resources and expenditure agreed to between the States and the Planning Commission at the time of formulating the second Five-year Plan, showed overestimation of the yield from existing sources of revenue. At the same time, the committed expenditure was not only an underestimate but there was also a misunderstanding of the scope of the term "committed expenditure." It was also found, as a result of scrutiny of the States' forecasts, that the contribution from existing revenues were actually not available and further that, in some States, the committed expenditure itself would have absorbed a part of the resources which they were expected to raise for financing the Plan through additional taxation. One possible reason for this phenomenon may be that, with a view to appropriating a sizable share of the total Plan for itself, an individual State deliberately overestimated its ability to finance the Plan, when submitting forecasts of its resource to the Planning Commission. But, when dealing with the Finance Commission, it took care to adopt a more realistic assessment of its financial resources, so that it could secure more resources through the good offices of this Commission.

Now that the Government has removed this defect by confining the period to be covered by the Third Finance Commission to four years, that is, upto the fiscal year ending 31st March 1966, the successor to the Commission now appointed, that is, the Fourth Finance Commission, would be able to work in unison with the Planning Commission, provided it is appointed in time, and the necessity of making two separate assessments of the needs of the States would be eliminated at the time of the fourth Five-year Plan. So far as the Chanda Commission is concerned, it will also have to revise the estimates of the States' resources and requirements as was done by its two predecessors. Its task, however, will be less heavy, in that it will not be confronted with the problems arising from reorganisation of States which fell to the lot of the previous Commissions.

To turn to the prospects of the States at the hands of the Chanda Commission. It would be useful to recall here that the scheme of devolution recommended by the Second Finance Commission was very generous and was found to be satisfying to most States. It provided for a transfer of Rs. 140 crores, on an average, annually for the five years ending on 31st March 1962, as against only Rs. 93 crores under the Neogy (the First) Commission. In addition, the States stood to gain on account of the share of the tax on railway fares and the share of the increase from additional Central excise duties. Further, the States also benefited from the Santhanam Commission's recommendations consolidating the large number of Central loans

to the States into four categories and rationalising their rates of interest so as to range between 2½ and 3 per cent. The formula for distributing the income-tax, namely, 90 per cent. to be divided on population basis and 10 per cent. on collection basis with an increase in the States' overall share from 55 per cent. to 60 per cent., was quite satisfying to most States. It is to be seen whether the Chanda Commission will suggest any important modifications in these percentages or in the principles governing the grants-in-aid recommended by the Neogy Commission, which were found "unexceptional" by the Santhanam Commission. There is no mention whatever in the terms of reference of the question of interest rates on the loans given by the Centre to the States. Since the award of the Santhanam Commission, the rates of interest have gone up and it is only but fair that the States should be asked to pay rates of interest on its borrowings from the Centre that will be in consonance with prevailing rates.

ECONOMY IN EXPENDITURE

If committees and commissions were any remedy, the disproportionate rise in civil and administrative expenditure of both the Central and State Governments would have come to a halt long ago. For, in the post-war period, as many as seven committees had gone into the reorganisation of administration, with a view to effecting economy in expenditure. In spite of all these committees, and their excellent recommendations, the fact remains that administrative expenses are steadily mounting up year after year, indicating that Parkinson was not, after all, wrong when he said that paper work multiplied in proportion to the increase in the number of people employed on it. It is true that planning and expansion of Governmental activities would inevitably result in an increase in expenditure, but what is causing concern is not the increase incidental to the execution of plans or discharge of other Government functions, but the rise in expenditure which is out of all proportion to the increase in work or the benefit accruing from it.

The non-official resolutions, urging the appointment of a commission to examine the questions of increase in civil expenditure and to suggest measures for economy, moved by Mr. Jugal Kishore, a Congress member, in the Rajya Sabha on the 2nd inst., should serve to focus, once again, the attention of the Government and the public on this vital question. Although the resolution was withdrawn at the instance of Mr. B. Gopala Reddi, Union Minister for Revenue and Civil Expenditure, the very fact that it evoked a wide measure of support from all sections of the House shows that Parliament is anxious to ensure that the unproductive expenditures are kept down to a minimum. It is true, as the Minister pointed out, that, since so many committees had already gone into the question and made various suggestions, many of which were accepted and were being implemented, no useful purpose would be served by yet another commission or committee. But this does not mean that the Government could take its own sweet time and go about the job leisurely. A time limit should be set for the Government to show the results of the efforts now being made to prune expenses.

An indication of the extent to which the rise in non-Plan expenditure had swallowed up the revenues raised by additional taxation was given by the Planning Commission in its *Appraisal and Prospects for the Second Plan*, issued in May 1958. It was pointed out therein that, despite new tax measures adopted in the second Plan period, the tax effort had not provided enough resources for the Plan as a large part of it had been absorbed by other demands. The Estimates Committee (Chairman: Mr. H. C. Dasappa) examined the growth of non-Plan expenditure and suggested in its ninety-second report, various economy measures. The Committee noted that, in the sphere of civilians employed by the Central Government, there had been a rise of 60 per cent. in the strength of the "administrative and executive" category since 1951 and an increase of as much as 78 per cent. in the clerical staff. The Committee also felt that the increase in the strength of Joint Secretaries, Deputy Secretaries and Under Secretaries was unduly high and that overstaffing in Government offices arose because staff requirements were often estimated and sanctioned on the basis of conjecture in the absence of analysis of the methods of work. The Committee reiterated the recommendation of an earlier Estimates Committee that scales of work should be laid down for each job on scientific and business principles and that the staff strength should be fixed in the light of such standards.

It is not in expenditure on staff alone that there is room for economy. Mr. Gopala Reddi revealed that expenditure on staff accounted for only 20 per cent. whereas that on buildings, plants and stores represented 80 per cent. of the total expenditure. The Planning Commission, it is said, has set up 27 panels for scrutinising estimates and effecting all possible economies. Two special units have also been formed to study workloads, with a view to reducing the number of employees. All these steps are in the right direction, but to what extent they will lead to economy in expenditure remains to be seen.

The Minister's assertion that the question of economy is continuously under review by the various agencies of the Government and the Planning Commission provokes one to ask: what has come of all these reviews and scrutiny? Two Five-year Plans have almost been completed and the third is about to be initiated. The Government certainly cannot plead that it has not had time to attend to this all-important question. The fact of the matter is that the Government has yet to show evidence that it is actively practising the austerity and economy which it preaches to the citizens.

MR. RUSSI MODY ON THIRD PLAN

Will the third Five-year Plan, due to commence on 1st April next, be implemented successfully? This is a question which is rather difficult to answer, for there are a score of factors which cannot be sized up at present with any degree of accuracy. The first and foremost is the availability of adequate finance—internal and external. But even if sufficient financial resources are found and applied to the task, the targets set in the Plan may not be achieved, if there is blind adherence to ideological considerations, muddle-headed and bureaucratic administration, persistent suspicion of the motives of private enterprise, and excessive zeal of Ministers to make themselves indispensable by trying to take on more responsibilities in the sphere of production than their capacity to cope with them. This aspect was well brought out by Mr. Russi Mody, President of the Indian Chamber of Commerce, Calcutta, at a meeting of the Chamber held on the 1st inst. Mr. Mody very aptly put it when he said that it was only through a more realistic approach, greater administrative efficiency and a genuine desire to enlist the co-operation of all sectors in the economy that the Plan targets could be fully achieved and even exceeded.

Of vital importance to the success of the Plan is the need for taking quick and effective policy decisions by the powers-that-be. This need is clearly brought out by the experience of the past few years. How else is one to explain the lack of decisive action in the manufacture of aircraft and cars, setting up of petroleum refineries and fertiliser factories, and installation of coal washeries? Firm decisions on these would have, as Mr. Russi Mody said, saved the country several crores of rupees. Lack of foresight in planning coal production is another instance. Alluding to this defect, Mr. Russi Mody observed: "It leaves me speechless to think that, in this age of planning, vast new steel plants and other industrial projects requiring the use of coal were planned and executed without first making sure that the necessary coal production of the requisite quality would be forthcoming and the carrying capacity of the railways would be adequate. The various and vigorous measures now being contemplated by both the Steel, Mines and Fuel Ministry and the Railway Ministry are to be welcomed, but the effort has come too late and crores of rupees worth of steel production capacity lies idle.

The Indian Chamber of Commerce President also made a brief reference to the Company Law Bill which seeks to impose several new restrictions on managements with the object of checking malpractices and evasions. He did not, of course, deny the existence of black sheep among company managements, as in other walks of life. Only, he sought to emphasise that the enormous elaboration of formalities had imposed a severe strain on well-managed companies in fully complying with the provisions of the law, without at the same time deterring the less reputable managements the omissions of which went unnoticed. Mr. Russi Mody was wholy in the right where he pleaded for "more efficient administration of the Company Law to bring refractory managements to book rather than this misguided zeal for proliferating procedures which penalised the law-abiding majority for the sins of the few." He characterised as "most objectionable" the additional safeguards now sought to be introduced to protect the shareholders and the community. His reason was that the new powers meant an enlargement of bureaucratic authority over companies, leading to delay and possible harassment. There can, however, be two opinions on this aspect of the amendment to Company Law. There have been quite a few instances of serious irregularity in company managements which could not be remedied by the intervention of shareholders alone.

SUGAR EXPORTS AND CONTROLS

The observations made by Mr. S. K. Patil, Union Minister for Food and Agriculture, during question hour in the Rajya Sabha on 29th November and at a meeting of the Bombay Sugar Merchants Association, held on Saturday the 3rd inst., indicate the determination of the authorities to build up an export market for sugar. Sugar exports, Mr. Patil declared, had become imperative for augmenting the country's foreign exchange resources. India, we are told, has approached the U.S. for an annual quota of 500,000 tons. But, before India can export sugar to the U.S., it must become a member of the International Sugar Agreement. Efforts are, therefore, being made to secure the membership, Mr. Patil did not disclose as to how the exports would be effected—whether the task would be left to private channels of trade or to the State Trading Corporation, as is feared by some in the industry.

While the need for sugar exports may be urgent, the quota of 500,000 tons asked for by India is too large and one wonders whether such a large quota will not cut into the supply available for domestic consumption which is bound to rise considerably in the coming years. It is to be hoped that the quota mentioned by Mr. Patil is only the maximum, the actual export of sugar to the U.S. being determined every year according to the size of domestic production. Otherwise, the consumer will find it difficult to satisfy his requirements of sugar fully at a reasonable price. The difficulty will be all the greater, if, in any season, production suffers a decline owing to a setback to the cane crop.

Whatever may be the quantity of sugar sold to the U.S., there will be a not inconsiderable loss of rupee resources, arising from the full remission of excise duty and cane cess. The loss works out to as much as Rs. 342 per ton of sugar. Even after excluding taxes, the cost of Indian sugar amounts to about Rs. 800 per ton, as against the world price of Rs. 450. In other words, the loss on exports will be of the order of Rs. 350 per ton, besides the loss by way of excise duty and cane cess amounting to Rs. 342 per ton. The loss of Rs. 350 per ton can be met, to a considerable extent, if, as Mr. Patil stated, the U.S. pays for Indian sugar, as it pays for the sugar bought from other countries, 60 per cent. more than the world market price. Mr. Patil disclosed that India has initiated steps, with the co-operation of certain other sugar exporting countries, for persuading the International Sugar Conference to raise the world prices of sugar. It remains to be seen whether they will succeed and, if they do, whether the U.S. will still pay a special price which will be 60 per cent. higher than the enhanced world price. India's move to get the world price itself raised is, however, quite pertinent. There is a lot of "closed market" arrangements in world sugar trade which are based on political considerations. The subject needs some careful study at expert level.

Assuming Mr. Patil succeeds in getting the world price of sugar raised, it is to be hoped that it would not breed more complacency among the State Governments in tackling the question of raising the yield of sugar per acre. As readers are aware, the progress made by the principal sugarcane growing States in this direction is extremely disappointing. There is no denying the fact that the real solution to the problem of sugar export lies in stepping up the yield of sugar per acre from the present low level of 1.4 ton to at least 3.0 to 3.5 tons. Mr. Patil no doubt gave evidence that he was fully aware of the problem, but did not indicate as to how it could or should be tackled, excepting his casual remark that the sugar mills which have their own cane plantations must address themselves to this task. There may still be room for raising the yield per acre even in plantations owned and cultivated by sugar mills. But it is sugarcane raised by individual farmers that is poor in quality and it is they who account for the major portion of cane from this country. The problem has, therefore, to be tackled at the level of individual cane growers. It is true

ON THE ARENA

By The Archer

Need Suavity be Scarce?

ABOUT a fortnight ago I took a cutting of a brief Press report of a speech by Rajaji under the auspices of The Forum of Free Enterprise in which he was stated to have observed that India was exploiting the cold war situation to borrow money from the West and that her neutrality had become a means of blackmailing the West. I was interested in the cutting not so much because it contained anything very different from Rajaji's oft-publicised views on foreign aid, but that the harsh epithet used by him was even more vitriolic than his norms in recent times. The cutting vanished into the limbo of forgotten material during a period of ten days, but I had to dig it up hastily after I read the speech of Mr. B. K. Nehru on 28th November in the U.N. General Assembly's Economic Committee advocating the establishment of a U.N. Capital Development Fund, to ask myself if Rajaji's harshness (not, perhaps, the particular epithet) was not, after all, justified in the context of the crude bludgeoning indulged in by Mr. B. K. Nehru and the devious historical analysis employed by him. The graceful dignity and suavity which should characterise the delicate role of a roving economic ambassador was nowhere in evidence during Mr. B. K. Nehru's performance, and the most that could be said in his defence is that he was, perhaps, briefed to (meaning, in diplomatic parlance, made to) raise the arguments which he did in his speech.

Mr. B. K. Nehru asked for the promotion of two ideas: first, the setting up of a Capital Development Fund, and, secondly, that all economically advanced States should ensure, as a matter of continuing national policy, that the total annual net outflow of funds from their own countries for promoting economic development of underdeveloped States is increased and maintained at a level not below approximately one per cent. of national income. He urged the vital consideration, on behalf of the poorer countries, that outflow of such funds be so arranged as not to bear heavily on the future balance of payments positions of the less developed countries. Directing his remarks to the richer countries, Mr. B. K. Nehru is reported to have assured them that the resolution was neither dangerous nor radical nor visionary nor impractical. Asserting his credentials to sponsor the proposal, he declared: "I have been for the most part of my life a treasury official myself and am consequently imbued with the moderation and conservatism which is the hallmark of all treasuries." The fact that this portion of his speech has been included in the cabled despatch with inverted commas may be a pointer to the respect with which it was received, or even to its irrelevance; for it is possible to contend that the reactions of a treasury official from an underdeveloped country which is an applicant for massive assistance need not be a guide to his counter-parts from richer countries which are faced with intriguing problems arising out of the very affluence which they enjoy. No argument acquires an aura of validity merely by the superior qualifications or past experience of the person that makes it, especially when it is placed before a body of persons not all of whom can claim similar credentials; the very manner in which it is padded may defeat the purpose for which it is made.

I am being critical, not because of the somewhat pontific self-assurance with which Mr. B. K. Nehru comforted his audience, but the subsequent historical arguments which he propounded, urging greater efforts from developed countries towards the underdeveloped ones. One was that contribution to the Capital Development Fund should be considered as payment by the Western countries for salvaging their consciences for their colonial exploitation on the gains from which they had built their prosperity in the past. To use his words: "It is true and undeniable that possession of colonies has been of immense material benefit to the colonial powers. Many historians have held that the industrial revolution in the United Kingdom and subsequently in the Continent of Europe could not have been financed, had it not been for the rape of Bengal. The part played by the inflow of gold from South Africa into Europe is even better known."

Another point made by Mr. B. K. Nehru was reiteration of the Soviet argument that countries which had colonies and had exploited them should not be equated with countries which developed as a result of their own efforts. In the position that he was occupying and at the forum from which he was addressing it was obviously unwise for him to emphasise the Soviet contention, and, of course, it was also historically untrue. If the point that was made sought to throw the spotlight on the iniquities perpetrated on the victims of colonial exploitation, it was meaningless to separate the perpetrators into two castes, the lower of which consisted of those who maintained a dynastic continuity, and the higher consisted of those who had severed the dynastic line through fortuitous upheavals. On this reasoning, the U.K. might disclaim all liability and responsibility for the sins of the East India Company. It might be convenient for Soviet Russia to deny any accumulated inheritance from Colonial loots, but Russian colonialism was very much in existence in the Czarist regime, and, if Czarist Russia failed to expand economically from its proceeds, it was because it lacked the initiative and regimentation which Soviet Russia subsequently developed. Historically, therefore, the Russia of pre-revolution days was not innocent of colonial exploitation.

The third point made by Mr. B. K. Nehru was that the International Development Association did not have universality of membership and had weighted voting, so that it necessarily reflected the ideology, philosophy and even the theology of the group in control. It was, indeed, unfortunate that Mr. B. K. Nehru raised this point, for, in the context of the assistance that we have already received, it is purely academic. Two out of the three public sector steel plants which we have in our country owe their existence to the Governments and *entrepreneurs* of countries which belong to the ideological, philosophical and theological group to which oblique reference has been made.

There are already large sections of people in our country who believe that (*a*) we are *entitled* to unlimited foreign assistance, (*b*) that the underdevelopment from which we suffer is solely due to our having been subjected to economic exploitation in the past, and (*c*) that foreign money should come pouring into our coffers as expiation for the sins of omission and commission of which the givers or their tribe have been guilty in the past. Apart from the fact that speeches like that of Mr. B. K. Nehru are likely to deaden our sensitivity and retard our progress, they are bound to result in stiffening the mental attitudes of peoples who are disposed to be friendly and helpful out of a newly awakened sense of social responsibility but will not appreciate being reminded of the fact that their forefathers had been sinners and that, therefore, they should not only give more than ever, but also declare at every stage, the rottenness of their pedigree.

Before an international forum it is more easy to be clever and forthright than it is to be serene and suave. A speech may be taut as a drum, but, if it makes the listener purple as a beet, it negatives its purpose. Would our representatives at international gatherings bear this in mind?

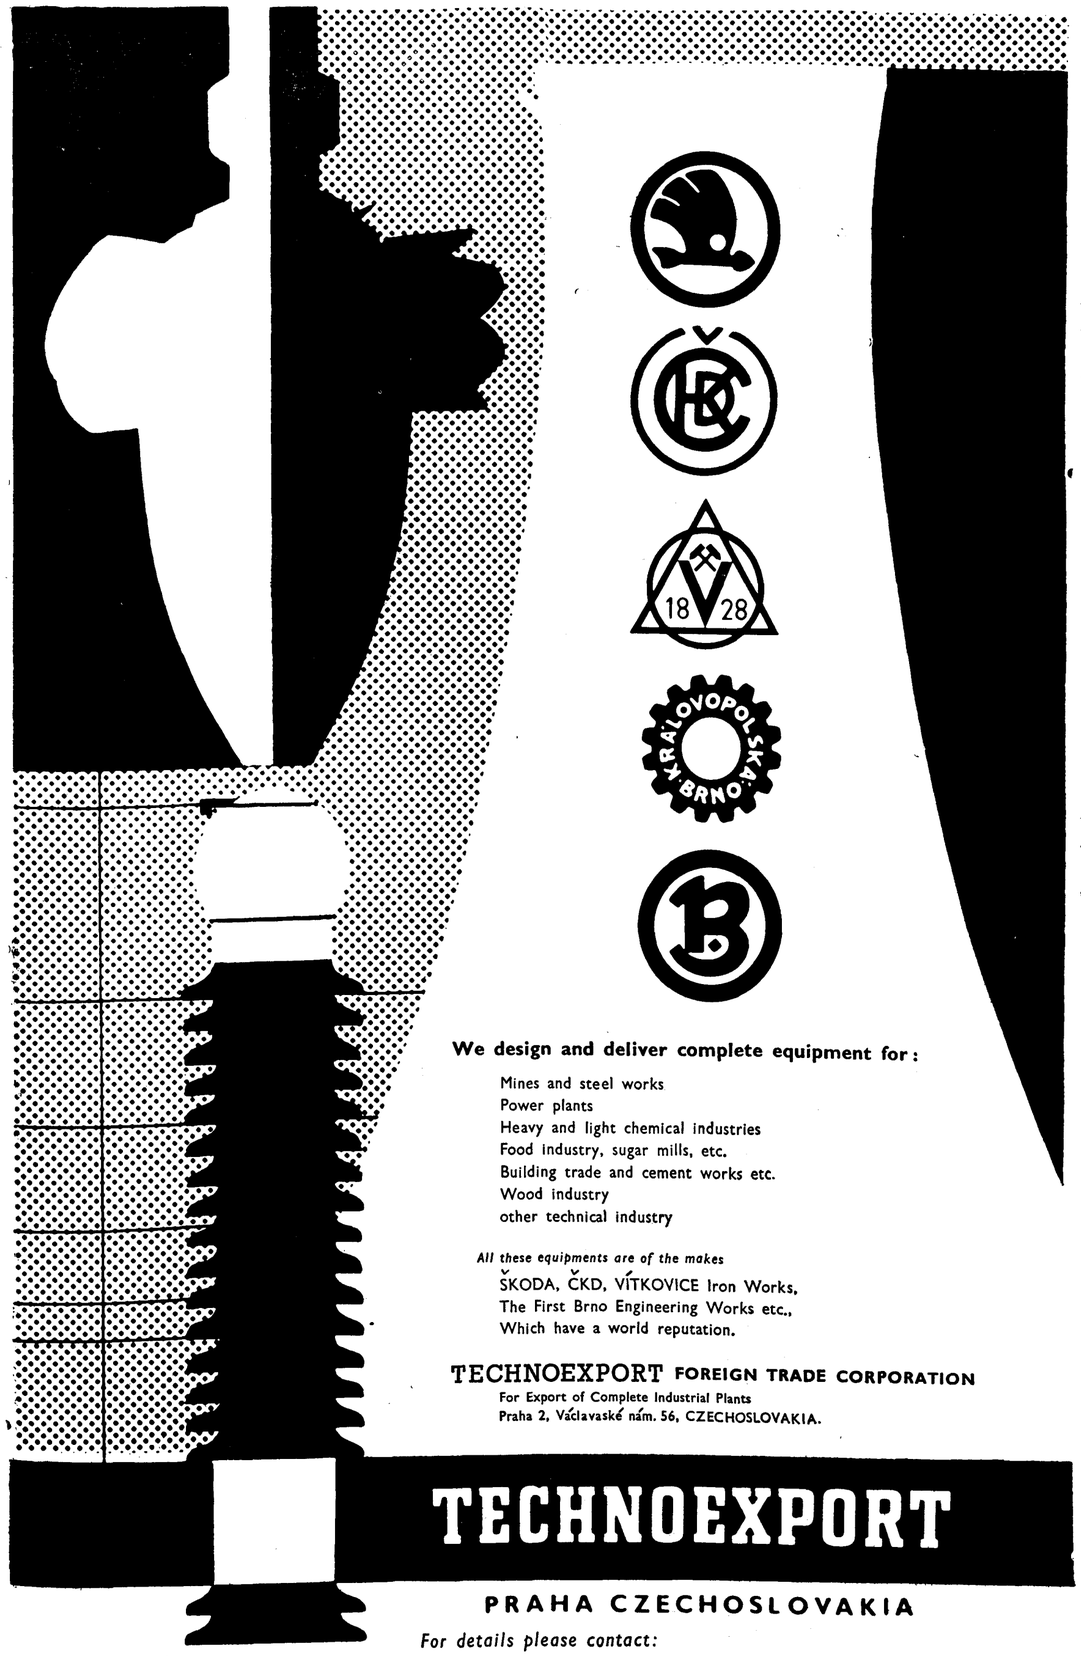
Third Plan Allocations

Allocations to States for the third Plan have been finalised on the basis of a formula under which the Plan expenditure will be staggered, beginning with roughly twelve per cent. of the total Plan budget in the first year and ending with about twenty-five per cent. in 1965-66. No State appears to have been given all that it required, and two at least, as far as I know, namely, Maharashtra and Bengal, have had their claims drastically scaled down. The original Plan of Rs. 497 crores for Maharashtra was conceded only to the extent of Rs. 360 crores, while, in the case of Bengal, the original figure of Rs. 341 crores was reduced to Rs. 250 crores. Madras State presented a Plan for Rs. 397 crores and procured an allotment of only Rs. 292 crores, but the Madras State Ministers have proclaimed that they are satisfied, although they would have been happier if the figure had been raised to Rs. 300 crores. All this is very intriguing. Either the State targets had been drawn up in a very haphazard manner without careful appraisal of the priorities and objectives, or the Planning Commission has just come down with a heavy hand owing to paucity of resources. In either case, there is lack of co-ordination between the Commission and the States, and it is hard to believe that a system cannot be devised under which States' Plans will, in the first instance, be drawn in consultation with the Commission. That it would be eminently satisfactory to avoid drastic cuts and changes in the final stages, as also the resultant heart-burns, protests and recriminations which get publicised in the several States, does not seem to be realised by the Planning Commission. Or, is it that it does realise, and yet would let things happen this way so that its superior status in the scheme of things may be recognised all over the country? If the Commission is as knowledgeable in the art of maintaining an even political climate in the country as it is, professedly, in the art of maintaining planned development, it should direct its efforts to avoid rivalries among States, and loss of face to their cabinets of ministers. Loss of face arises when ministers' efforts to secure maximum benefits for their people are defeated and the defeats are publicised. Could this not be avoided by co-ordinated action *in camera* at the formative stages, so that agreed solutions may be presented at the end?

The aftermath of these powwows between State Chief Ministers and the Commission is that the former have declared their intentions to adhere to their original targets and raise internal resources to make up the shortfall. As the maintenance of *izzat* is the *sine qua non* of political survival, this attitude is quite understandable. But what I am perturbed about is that the fervour to raise resources may lead State Governments to adopt measures which might inhibit industrial development, for the sources from which revenues can be collected by States are indeed limited. For instance, electric power may be surcharged, as happened in the past, especially where hydel energy was originally available at comparatively low rates, and the very attraction that those areas had for establishment of industries may rapidly vanish. Transport might be asked to bear a heavier burden than at present, with corresponding increases in the costs of production of most commodities. The rates for leases of forests or for exploitation of mineral resources may also be enhanced, resulting in increases in the prices of basic raw materials. In fact, practically every step that may be taken by States to augment their resources might result in queering the pitch for established industries, and their competitive strength as envisaged in original estimates may rapidly disappear. This is one aspect of the matter which should engage the attention not only of the Planning Commission but also of the several ministries at the Centre which are engaged in ensuring the country's even development. It is all very well to allocate certain fields to States in which they are free to raise resources, but, if past tendencies in certain States are any indication of future propensities, it is not unlikely that they may do damage to overall development in their eagerness to get the utmost out of the reserved fields. It is not enough that targets are fixed for the country's overall Plan and for the share of the States therein; it would also be necessary to ensure that the methods employed by States to maximise the collection of resources are wisely set within a permissible pattern which would create no impingement on the country's industrial and economic development.

LEIPZIG FAIR

The Leipzig International Autumn Fair, held from 4th to 11th September last, is claimed to have been a great success. In all, 6,853 exhibitors from 47 countries took part in the Fair, including both the communist and non-communist countries. The overall turnover of business done at the Fair through the East German foreign trade organisation rose, as compared with the 1959 Autumn Fair, by 25 per cent. to 2,735 million marks. Of this, the communist countries accounted for 1,558 million marks and other countries for 1,177 million marks. According to the organisers, the increase in the size and comprehensive character of the exhibits of consumer goods, including durable consumer goods of all kinds, from the socialist countries, was reflected in the increased interest shown in the Fair by businessmen and industrialists, professional and trade associations and official circles in all parts of the world. Numerous Government and commercial delegations attended the Fair, as well as leading figures from all walks of life in both socialist and non-socialist countries. Particularly significant was the presence of a number of representatives of newly independent and economically less developed States in Asia, Africa and South America. In 1961, the Spring Fair will be held from 5th to 14th March next and Autumn Fair from 3rd to 10th September.



We design and deliver complete equipment for:

Mines and steel works
Power plants
Heavy and light chemical industries
Food industry, sugar mills, etc.
Building trade and cement works etc.
Wood industry
other technical industry

All these equipments are of the makes
ŠKODA, ČKD, VÍTKOVICE Iron Works,
The First Brno Engineering Works etc.,
Which have a world reputation.

TECHNOEXPORT FOREIGN TRADE CORPORATION
For Export of Complete Industrial Plants
Praha 2, Václavaské nám. 56, CZECHOSLOVAKIA.

AMERICAN LETTER

CONFUSION OVER ECONOMIC TRENDS

MR. ANDERSON'S EFFORTS HAVE ONLY BROUGHT DOWN THE PRESTIGE OF DOLLAR

From Our Special Correspondent

NEW YORK, *3rd December*

THERE is a good deal of confusion in this country. There is an air of uncertainty. Unlike the predictions of the "glorious 1960s" at the beginning of the year, there are doubts now. Predictions of a recession are rampant.

This is quite difficult to explain, because it is emotional rather than rational. Steel production has edged up a bit to about 53 per cent. of capacity, but it is, obviously, disappointing. There are no strong expansionary forces, with exceptions, of course.

As yet, nobody knows what the economic and political course of the new Administration is going to be. Some appointments have been made which appear to be good on the surface. Others are doubtful.

Actions will count, not speculation over what the appointees with their known background will do, or might do, that is where the uncertainty comes in. This is reflected chiefly in a slackening of spending for capital goods and equipment. It is a reflection of people who control corporate purse strings, rightly, or wrongly.

All this is quite nebulous, against the background of an inherently sound economy. The construction industry is showing renewed strength. The electrical machinery industry has increased bookings and the total output of mines and factories has held up well. Office and store machinery orders have been good, too.

American economists are worried by "the soft spots." New orders for industrial machinery, generally, have been dropping. Backlogs have been shrinking. There is little prospect of a rise in steel production unless a war breaks out.

The gross national product is still formidable at $503,500 million a year during the third quarter. This was a slight decline from the $505,000 million in the second quarter of the year. A further decline to about $502,000 million may be expected, on an annual basis, for the last three months of 1960. But this is no national calamity.

Two Major Problems

There are two other major problems which appear troublesome to analysts—the outflow of gold from the U.S. and unemployment.

U.S. gold stocks, not so long ago, above $25,000 million, are now quite near $18,000 million. Government measures to stem the outflow of gold have had little effect, so far, despite valiant efforts.

The imbalance of trade cannot be stopped by negotiation. Russia, at this point, has about $9,000 million of gold and West Germany about $6,000 million. In my opinion, the visits of Treasury Secretary Anderson to European countries, trying to relieve the dollar drain, were foolhardy ventures. They have only helped to lessen the value of the dollar, instead of improving it.

The competitive position of the U.S. in world markets cannot be changed by monetary exchange agreements. The roots are based on such conditions as costs, including wages, inflation, capital investments, if possible, and other factors. In the last few years, the U.S. has been losing, rather than gaining.

St. Lawrence Seaway

The St. Lawrence Seaway has finished its first year of operation. The waterway was opened, officially, this year by President Eisenhower and Queen Elizabeth II. The traffic was considerable and both the U.S. and Canada have benefited.

Yet, many bottlenecks have to be overcome. Port facilities in such places as Chicago are inadequate for taking care of incoming cargoes. This means delay for shipowners and unexpected costs.

Perhaps, this year's performance of the Seaway was not an accurate gauge of normal performance. Generally speaking, the Great Lakes' shipping lanes are dependent a good deal on iron ore shipments originating from the Mesabi range and other places in this geographical area.

As stated above, the steel business was rather poor and, thus, the iron ore consumption was quite low. This had national and international implications. However, in the long run, the St. Lawrence Seaway is bound to be, and to become, an important artery of international trade from all parts of the world.

Agricultural Production

Agricultural production in the U.S. this year, again, reached records. The total volume of crops as reported from Washington was at 122 per cent. of the 1947-49 average. The previous record of 118 per cent. was set in 1958 and 1959.

The agricultural surplus problem has long been a very important political issue in the U.S. Despite conflicting claims, no spokesman of the two major parties here know what to do about it. The farmers, although decreasing in numbers, owing to mechanisation, are still an important element in the U.S. economic and political life.

Foreign Trade Convention

The forty-seventh National Foreign Trade Convention concluded its meetings here the other day. It is an important gathering of all segments of U.S. business with world-wide interests. As such, the convention, usually, commands the attention of authorities in Washington.

One of the final resolutions was devoted to world trade. It was suggested that a large and expanding volume of international commerce, carried on through private enterprise, is vitally important for promoting the economic and social problems of all nations. This, of course, is a platitude, but it is meant sincerely.

As regards the U.S., a high level of international trade was held to be especially important as a means of enabling this country to increase its exports and, thus, to reduce sharply the deficit in its balance of payments, in order to meet its commitments abroad and to maintain an inflow of needed imports.

The convention urged also that Washington should make every effort to secure a reduction in arbitrary barriers to international trade. A good deal of attention was paid to the negotiations under the auspices of G.A.T.T. (General Agreement on Trade and Tariffs).

There was, as well, a fairly general agreement that greater facilities should be provided to the Bureau of Foreign Commerce, U.S. Department of Commerce, and to the U.S. Foreign Services to strengthen their trade promotion services, particularly in the fields of commodity, economic and intelligence reports.

It was a sane and down-to-earth convention, devoid of nationalism and pettiness. There was frequent mention of India as the emerging leader of the Orient, politically, economically and otherwise.—*All Rights Reserved.*

you have just opened

A METAL BOX CLOSURE !

Soft drinks and concentrates are today being purchased in India in increasing quantities *with their purity taken for granted.* Processing by bottlers of repute is guaranteed to be under most hygienic conditions, and the contents are filled into sterilised bottles. Crown Corks and pilfer-proof Roll Seal (R.S.) Closures made by Metal Box—Crown Corks for carbonated or aerated drinks and R.S. Closures for syrups, fruit squashes and concentrates—put an efficient seal on these precautions. The wad or cap liner used as a sealing gasket is so constructed and fitted that it will not react with the contents nor, in the case of carbonated drinks, allow gas pressure to escape. Efficient packaging ensures that your drinks are served in excellent and, above all, hygienic condition.

The production of a wide range of scientifically designed packages is the business of Metal Box, leaders in the packaging field. R.S. Closures and Crown Corks are only two instances of the many ways in which they help to deliver first class consumer goods to you.

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats **MACHINERY** Can Closing and Reforming and Bottle Sealing Equipment

LONDON LETTER

GOLD INFLOW SLOWING DOWN

HALF OF U.K.'S RESERVES REFLECT ARRIVAL OF NON-STERLING FUNDS

From Our Own Correspondent

LONDON, *3rd December*

IN the last week of November, the American Treasury lost $76 million of gold, bringing the total decline in American gold stocks for the year to $1,546 million. But the rate of outflow is clearly slowing down rapidly and, as a result of various subtle interventions in the London gold market, the price of gold at the daily fixings has now fallen below $35.50 per oz. Normalcy is slowly returning.

In the month of November, the British gold stocks rose by £10 million and when it is appreciated that, during that month, the country was coping with an adverse trade balance, it is clear that, in spite of the reduced rate of inflow of foreign money, these funds are at least more than sufficient to meet Britain's current trade deficit.

But £10 million is not after all very much gold. It represents a good deal less than half the loss of the American gold reserves in the last week of November. If this outflow of gold were to be substantially reversed, what would be the effect on the British gold and dollar reserves? It is encouraging to note that the gold acquisition of November was made, in spite of a further one half per cent. reduction in the Bank rate at the end of October. On the other hand, the British authorities may ultimately accept the thesis that internal trade recovery will depend upon some further relaxation of credit restrictions and, if that happens, London might no longer have competitive interest rate advantages to offer to foreign short-term investors.

Sterling Liabilities

The total British gold stock is now £1,131 million, the highest since September 1959. To what extent are these stocks committed against sterling liabilities? The Treasury analysis is that, in the third quarter of 1960, foreign short-term funds flowed into this country as follows:

From Western Europe	...	£143 million
From the United States	...	£42 million
From other sources ...	...	£41 million

representing a total net inflow from non-sterling sources of £226 million. But, while non-sterling areas were sending funds into London in this manner, the sterling areas were drawing down their balances and, in the third quarter, this drawing down was as high as £154 million, so that the net inflow of foreign funds in the third quarter was no more than £72 million, that is, so far as the banking system reckons sterling liabilities.

The net inflow in the third quarter was only slightly higher than the figure of £63 million for the first half-year. This £63 million was made up of a net inflow from non-sterling countries of £137 million and a net outflow to sterling areas countries, that is, a drawing down of balances by such countries of £30 million, thus a reduction in the sterling holdings of the International Monetary Fund of £44 million. For the nine months to the end of September, therefore, the sterling area and the International Associations drew down their sterling balances by £228 million while, over the same period, the non-sterling area countries increased their sterling balances by no less than £363 million giving a net increase in sterling liabilities of £135 million.

Not Formidable

Such an increase is by no means formidable and the British gold and dollar reserves will be well able to cope with a substantial drawing down of the non-sterling area balances, especially since it could easily happen that, at the same time as such balances were being drawn down, the sterling area would reverse its present trend and build up balances.

But there is every reason to suppose that the sterling balance figures by no means represent the whole of London's short-term of liabilities for the third quarter of this year, the National Institute of Economic and Social Research has made estimates of the amount of foreign investments here, including such diverse sources of investment as the new facilities which the City of London offers to foreign banks to invest in domestic issues such as those of local authorities. Taking into account all the various ways in which funds may be held here, the Institute concludes that, in the third quarter, the increase in foreign funds here was no less than £350 million, that is, about more than half as much again as the official figures of non-sterling balances. If the same ratio were to apply to the inflow of foreign funds in the first half of this year, then we must conclude, taking account also of the inflow during the months of October and November, that this year non-sterling funds must have come into this country at a rate in excess of £600 million, or rather more than half the total of British reserves.

But one must not be alarmist about such figures, large as they are. All sorts of influences can play upon the movement of foreign funds, and, if a really serious drain should for any reason take place, then that is the proper time for the I.M.F. to come to the rescue of the Bank of England and make new advances. It is after all far better that a country such as this should have a high turnover of funds, and invest long even when it borrows short, than play the same game as Western Germany is indulging in, and that is absorbing funds without investing them overseas sufficiently.—*All Rights Reserved.*

CADBURY MEANS QUALITY

PATTERN OF TEXTILES CONSUMPTION

FINDINGS OF MARKET RESEARCH IN U.P.

THE cloth consuming capacity of India will expand to a significant extent in the next few years, what with the continued growth of population and the rising living standards of the masses. The cotton mill industry can, therefore, count on a persistently high level of demand for the products it manufactures. But it cannot afford to develop a complacent attitude on this score. Indeed, the industry will have to bend its energies to manufacture fabrics of high quality according to consumers' taste and at an economic cost. In such a task, both the State and the workers should, of course, lend their unstinted support and co-operation. Viewed thus, there is no exaggeration in the statement made by the Marketing Research Corporation of India Ltd., in its report on the pattern of cotton textiles and competing fabrics in Uttar Pradesh (1959), submitted to the Cotton Textiles Fund Committee, that indications in the pattern of preference are clear that the mills will need to fight harder to earn this share of the town and city markets by concentrating on those fabrics for which mill-made cloth is still in demand as well as on finer varieties which will compete with artificial silk and handloom goods. The chances of recurring crises, the Corporation warns, constitute a potential threat to the development of India's largest industry, if both production and sales policy are not adjusted to the hard facts of the declining elasticity of demand in the towns and the rising demand for alternative fabrics.

It is clear that the cotton mill industry should keep itself constantly abreast of the changes in demand for textiles from time to time. For this purpose, there is, as Mr. R. G. Saraiya, Chairman of the Cotton Textiles Fund Committee, rightly emphasises in his foreword to the report, the need for carrying out market research not only on the volume of demand for cotton textiles but also on the varieties in demand, the channels of distribution, the inroads, if any, made on the demand for cotton textiles by other competing fabrics and other relevant trends which will enable the industry to market its products to better advantage.

In its report, the Marketing Research Corporation traces the relation between the income and consumption pattern of fabrics, the consumption pattern of mill-made cloth as effected by alternative and competing fabrics, and the changing preferences and structure of demand for cotton cloth. In the first place, an attempt has been made to measure at the time of the survey the pattern of *per capita* expenditure by income groups in villages, towns and cities and to illustrate how the processes of urbanisation have assisted or obstructed the demand for cloth. While income is the dominant component, it has been demonstrated that it is by no means uniformly favourable. The findings of the survey reveal two striking features. They are:

1. The peak consumption of cloth in terms of rupees appears, paradoxically, in a low income group, where there is a massive rural production, but there is an almost equally massive demand in the rural group with a household income of Rs. 101-Rs. 105 and Rs. 151-Rs. 200 per month, as well as Rs. 201-Rs. 300 per month. Higher income is offset by a smaller population so that the paradoxical result is reached that the highest sales are actually recorded in some of the lowest income groups.

2. The village is the most hopeful place for increased cotton textile consumption. A larger percentage of current expenditure will be expended on cotton cloth in the village than either in towns or cities.

Out of the total expenditure incurred by the population, the percentage share of cotton cloth is 9.5 in villages, 8.1 in towns and 11.0 in cities, the corresponding figures for expenditure on non-cotton cloth being 0.6, 1.8 and 3.0, respectively. It is stated that the pressures on cloth demand reflect themselves in a changing elasticity of demand relating to income. In the case of villages, the rate of decline of elasticity is very small, because the percentage capacity of almost every group to absorb cloth is practically unaffected by income alone. The position is, however, different in cities and towns. Table I shows that there is a dramatic fall in terms of the marginal propensity to consume cotton fabrics as one moves from the lowest income group in household income to the highest group.

The survey has established the point that the marginal propensity to consume cotton fabrics declines steadily in both percentage and absolute terms. Thus, in the lowest income bracket in cities, a rise of Rs. 10 in income will lead to an increase of Rs. 2.33 in expenditure on cotton fabrics, whereas a rise of Rs. 10 at the highest level will involve an increase of only 18 nP. Put in a different term, a 10 per cent. advance in the lowest income bracket in cities will lead to a spurt of 14.35 per cent. in the demand for cotton fabrics, but, at the highest income group, the demand will rise by only 2.93 per cent. The steady upward movement of income is thus by no means uniquely favourable to cloth consumption. The rapidly falling elasticity of demand or otherwise of the marginal propensity to consume with rising income offsets the higher capacity of purchasing power and a remarkable levelling off in the process of consumption takes place in both towns and cities. This does not seem to prevail with anything like measurable force in villages and, therefore, it may be deemed to be a major consequence of urbanisation.

Since the rural areas have an element of absorption in relation to towns (this refers to the rate of rise and not to absolute rise at each income level) and because the villages are so much more numerous and dominant in population than the towns, the future markets for cotton fabrics, it is pointed out, obviously depend more on village than on town consumption. The peak consumption of cotton fabrics is in the low income group (Rs. 51-Rs. 100 per month) where there is a massive rural population, though there is an almost equally massive demand in the rural groups of Rs. 101-Rs. 150, Rs. 151-Rs. 200 and Rs. 201-Rs. 300. Higher sales are actually recorded in some of the lowest income groups. This is a fact that must be duly taken note of in formulating the advertisement and sales policy for cotton textiles. An idea of the pattern of cotton fabrics consumption (all groups) can be had from Table II.

The structure of demand for cotton fabrics is the resultant of a number of pressures connected with income but by no means finally determined by it. The largest of the pressures inside the given income arises from the character of the demand for food, but there are other items such as expenditure on certain non-food items and durables which compete with the demand for cloth in such a manner that the latter must be reckoned by no means as urgent a necessity as current opinion often assumes. To quote the report: "... In addition to the normal tendency of demand to fall with rising income because of what the economists call decline in 'marginal utility' in isolation, there is at work in the Indian economy at the present time a rising pressure which arises from the fact that the order of urgency of practically every group of commodities led by food is higher than that of cloth in terms of the rate of rise of expenditure from the lowest to the highest income groups, particularly in towns and cities."

Even inside the cloth expenditure figures, there are said to be pressures which, as income increases, continue to grow more than the demand for cloth itself. The most important of these appear to be artificial silk and handloom cloth, the rate of increase in demand for which, particularly for artificial silk that has made an entrance into the village, are markedly significant.

The village, according to the report, is the most hopeful place for increased cotton textile consumption. This is attributed largely to the very low decline of elasticity in the village, for, as income rises, the vast population at village level uses cotton fabrics without regard to the finer qualities which artificial silk and some handloom goods provide. Further, a larger percentage of current expenditure will be expended on cotton cloth in villages than in either towns or cities. There is also the tremendous population bulge at some of the lowest income groups that are not yet seriously touched by other fabrics. The Marketing Research Corporation has accordingly urged the setting up of a more elaborate rural field organisation than at present for gathering and analysing data with a capacity to project demand and to adjust supply to demand in a more scientific and co-ordinated manner. And it rightly observes that organisational adjustment (in the cotton textile industry) can be productive of results on a scale not hitherto achieved, if the information pertaining to demand in each income group is analysed by type, area and volume.

TABLE I

Demand for Cotton Fabrics

Monthly household income (Rs.)	Cities		Towns	
	Marginal propensity* to consume cotton fabrics	Elasticity of demand for cotton fabrics	Marginal propensity to consume cotton fabrics	Elasticity of demand for cotton fabrics
50	0.223	1.435	0.253	2.178
100	0.116	0.695	0.126	0.902
150	0.078	0.546	0.084	0.639
200	0.058	0.466	0.063	0.528
250	0.047	0.416	0.051	0.473
350	0.033	0.368	0.036	0.408
450	0.026	0.337	0.028	0.370
550	0.021	0.308	0.023	0.341
650	0.018	0.293	0.019	0.326

* This is a measure of additional expenditure incurred on an item of consumption consequent on a small increment in the income of the household. Thus, a value of 0.23 for marginal propensity to consume of an item at a certain income level signifies that an additional expenditure on that item will be incurred to the extent of 23 nP. where the income of the household moves up by one rupee.

TABLE II

Cloth Consumption Pattern

	Cities	Towns	Villages
Population (thousands)	13,371	5,456	54,390
Per capita monthly expenditure on cotton fabrics (Rs.)	39.51	25.60	19.40
Total monthly expenditure on cotton fabrics (Rs. lakhs)	110.0	116.5	870.5
Total annual expenditure on cotton fabrics (Rs. lakhs)	1,332.0	1,398.0	10,554.0
Aggregate average annual expenditure (Rs.)	360.60	302.89	202.88
Of which, percentage share of:			
Cotton cloth	11.0	8.1	9.5
Non-cotton cloth	3.0	1.8	0.6
Food	59.2	52.2	71.0
Other than food	18.4	34.2	13.7
Durables	8.4	3.7	5.2
Aggregate average annual expenditure on cloth (Rs.)	50.32	29.88	20.59
Of which, percentage share of:			
Cotton cloth	78.6	82.2	93.7
Artificial silk	9.3	4.5	1.0
Pure silk	1.2	0.6	0.4
Woollens	10.9	12.7	4.9

FINANCES OF BIGGER TEXTILE GROUPS

BETTER PROFITS AND HIGHER DIVIDENDS

From Our Special Correspondent

MANCHESTER, 29*th November*

COMPANY news takes on a seasonal pattern and several of the bigger textile groups in Lancashire report progress of one sort or another about this time of the year. In consequence, it is possible to assess the recent trends and get some guide as to future developments, according to the information provided by the accounts available.

MANCHESTER LETTER

Commentators on cotton trade affairs have lately been unanimous in their assumption that financial results now being declared should underline the very prosperous period which the trade is passing through. Admittedly, the orders secured in the middle of last year were at barely economic margins, but the buying phase which developed twelve months ago and the succeeding pressure for supplies enabled most producers to increase their earning capacity to a marked degree. Now the results can be seen, in the shape of formidable profits and even stronger balance-sheets.

Probably the biggest revival in terms of figures has been achieved by Joshua Hoyle and Sons, whose meagre profit of below £4,000 in the previous year soared to practically £150,000. As a result, the Directors are able to make a dividend payment of 15 per cent for the year on the reorganised capital, against 5 per cent. Another big mill combine, whose fortunes have not been subject to such wide variations in the past as have some of its competitors, is Barber Textile Corporation. The latest returns show a net profit more than doubled at £194,000 and the dividend stepped up from 10 to 15 per cent.

Profits and Dividends

Also recording a substantial turnround, of virtually equal merit with Joshua Hoyle's results, is Combined English Mills, whose net loss of over £250,000 last year has been switched to a profit of just over £400,000, enabling the dividend to be raised from 2½ per cent to 6 per cent. The Belgrave Mills group has effectively raised its profit from £13,000 to nearly £65,000, with the dividend up from 12½ per cent to 15 per cent.

Among some of the smaller spinning firms, the trend is just as noticeable. The net profits of Bury Ring Mill have been more than doubled at over £35,000 and the dividend increased from 17½ per cent to 25 per cent. Werneth Spinning has recorded net earnings of £78,000, as against less than £30,000 and, in this case, the dividend is doubled at 12½ per cent. The Lancashire and Yorkshire Tulketh Group, whose interests range well into the West Riding with worsted and woollen cloth manufacture, has indicated that its trading profit for the past six months at £223,000 is practically as much as the comparable earnings in the previous twelve months. This flourishing concern is steadily expanding.

So much for the factual accounts published already this month; even more indicative of future trading possibilities are a number of promising interim statements which emphasise the optimistic mood now so prevalent in many board rooms. The Directors of Crosses and Heatons, for example, have returned to the interim paying list and have described the prospects as encouraging. J. and P. Coats doubled their interim at 5 per cent, and among other companies whose "half-time" distributions have been increased are Carrington and Dewhurst, Robert Pickles, Hayeshaw, Royton Textile Corporation and Hindley Bros.

Boardman, Marden, Ltd., the once predominantly spinning and weaving firm, whose activities are now almost exclusively devoted to drapery and merchanting, have increased their interim from 7½ per cent to 9 per cent. After clearing off substantial arrears of preference dividend, the old-established firm of Richard Haworth and Company has announced its first ordinary dividend payment since 1954.

Heartening News Ahead?

In the face of this accumulating evidence, it would be hard to convince the outsider that the industry is still beset with innumerable problems, ranging from shortage of manpower at local level to a rising flood of imports of foreign goods which shows no sign of being cut down. On the basis of current order lists, which have been built up at distinctly remunerative prices, there should be some very heartening news for shareholders in textile companies for months to come.

The cynics may ask: "How long will it last?" Any reply must depend as much on outside influences as on the efficiency of the trade itself. Reorganisation and the present re-equipment programmes will undoubtedly assist managements to make further progress, but the quantity of supplies arriving from abroad, coupled with possible curtailment of purchasing power at home, are factors which cannot be ignored. The outlook, although not without its fundamental difficulties, seems reasonably well assured for most of 1961, but beyond that few prophets would hazard a guess.

Unions To Merge?

The trade unions in the Lancashire cotton industry are to meet next month to decide how they can achieve closer integration.

The Legislative Council of the United Textile Factory Workers' Association, meeting in Manchester, decided to summon a meeting on 19th December of the executives of the two big spinning unions, the Cardroom Workers' Amalgamation and the Operative Spinners' Amalgamation, together with the Central Board of the Northern Counties Textile Trades' Federation, which represents eight unions on the weaving side of the industry. But union spokesmen emphasised that the meeting did not indicate any plans to telescope the unions into one organisation.

Re-equipment Guess-work

Lancashire mills contemplating re-equipment will have to do some "risky guess-work about the future" in the next 12 months, Mr. Geoffrey S. Willcocks, Chairman of the Household Textiles Association, said in Manchester last week. The answer to the question "will re-equipment pay?" depended very largely on what happened about textile imports, he told the annual meeting of the Association, which represent 300 firms. It depended also on how intensively new equipment could be worked and whether or not the industry could attract and retain the labour force it needed.

On top of the capital cost of new machinery, there were the extra wages to be paid, especially to night-shift workers. And to make mechanisation pay, it was necessary to show really substantial improvements in productivity and quality of output. Mr. Willcocks said that he foresaw more mergers, re-groupings and concentration, resulting in a more compact, high wage, highly productive industry. There was no room for inefficient management or uncooperative units.

Yarn Exports Dip

Very little can be said in favour of the overseas returns for October. Exports of cotton cloth from the United Kingdom seem to have settled down at a level of around 25 million yards a month, although this average is somewhat below the comparable figures a year ago. At the end of ten months, the total was 270,688,000 square yards, as against 283,411,000 square yards in 1959.

Last month's cotton yarn shipments, at 1,448,000 lbs., were the lowest for many years, barring war-time exigencies, and their value was only £570,000. In comparison, shipments in several months of 1951 reached more than £3 million and the total for that year exceeded £30 million, whereas in the first ten months of 1960 earnings have reached only £7,250,000.

Despite the relatively poor showing of exports by volume this year as compared with 1959, the total earnings from shipments of cotton yarns and manufactured goods are a little higher. In the first ten months of 1960, their value amounted to £52,197,000, as against £51,832,000 in the same period last year.

On the other hand, the relentless rise in imports has continued. In October, the cost of purchases of foreign yarn and cloth exceeded £6 million, bringing the total for the ten months to nearly £54,500,000—practically £20 million more than in the same period last year. Imports of foreign grey cloth to the end of last month reached 490,510,000 square yards, as against 363,047,000 square yards in 1959, while finished fabric arrivals were 104,408,000 square yards, as against 58,710,000 square yards. Cotton yarn imports have now practically doubled in size as compared with last year, being 32,156,200 lbs., as against 16,821,500 lbs.

Grey cloth import returns for the ten months show India still well in the lead, having sent 194,249,000 square yards, a rise of 54,000 square yards. Hong Kong's share has fallen from 111,487,000 square yards to 85,727,000 square yards, but Pakistan has supplied 33,384,000 square yards, as against 22,558,000 square yards. Undesignated foreign countries, mainly in Europe, are a major influence in the situation, having increased their shipments to the United Kingdom from 17,200,000 square yards to 92,157,000 square yards so far this year.—*All Rights Reserved.*

GERMAN DEMOCRATIC REPUBLIC

CONSUMPTION AND EXPORT OF COTTON

ANOTHER FAVOURABLE YEAR ANTICIPATED

RECORD consumption, coupled with large stock-building, resulted in a sharp increase in the volume of international trade in cotton during the 1959-60 season which ended on 31st July 1960. In the current season (1960-61), however, consumption may not be as high as in the past year and demand for stocking purposes also will not be as great. Nevertheless, the export outlook is still encouraging. While it would be overoptimistic to expect the current season's exports to reach the 1959-60 level of 15.5 million bales, knowledgeable observers predict another good year for cotton exports.

Current expectation is that the overall level of consumption would remain high, though it might be less than in the previous season. In the U.S., although there are signs that consumption may temporarily have reached a peak and may show a slight decline from the last season's level of 9 million bales to 8.75 million bales, the longer term outlook is regarded as promising. Recent studies have shown that, though the failure of cotton consumption in the U.S. to show any sustained progress, in the contest of a continuous rise in incomes, would seem to indicate that the demand for cotton does not increase in proportion to the rise in income, in certain sections of the U.S. cotton industry, namely, manufacture of clothing and other household fabrics, the rate of increase has outstripped the rise in incomes and cotton has generally gained from its competitors in this sphere.

Fibre Consumption

In the free world outside the U.S., especially in underdeveloped countries, growing populations with rising standards of living will call for an increasing volume of fibre, especially apparel fibre, the consumption of which is restricted at present owing to low purchasing power.

In fact, the less developed countries will, it is said, account in future for the major part of the increase in consumption of cotton. Recent trends already point to this conclusion. The Food and Agriculture Organisation of the U.N.O., for instance, points out, in its latest (1960) report, *The State of Food and Agriculture*, that, while technical factors affecting fibre utilisation tend to limit the expansion of consumption in the more developed countries, expansion in the more densely populated, less developed areas has more than offset this and might continue to do so. This is evident from the following table:

	Cotton			Total apparel fibre*		
	Average 1952-54	Average 1956-58	Average annual change	Average 1952-54	Average 1956-58	Average annual change
	Kilograms *per capita*		%	Kilograms *per capita*		%
North America ..	11.2	10.0	—2.1	16.3	15.1	—1.9
Western Europe ..	4.1	4.7	+3.5	7.4	8.7	+4.1
Eastern Europe ..	4.6	5.2	+3.1	6.2	7.6	+5.2
Oceania	4.0	4.3	+1.8	7.5	8.0	+1.6
Latin America ..	2.9	3.3	+3.3	3.9	4.4	+3.1
Near East ..	2.0	2.2	+2.4	2.7	3.0	+2.7
Far East	1.9	2.2	+3.7	2.2	2.6	+4.3

Source: F.A.O. Commodity Bulletin.
* Cotton, wool and other man-made fibres.

According to the F.A.O., if the cost of cotton and its manufacture remain at competitive levels and the products are available on equal terms to consumers, cotton is more likely to share *pari passu* in the expansion of total fibre consumption.

U.S. Cotton Stocks

To revert to exports of cotton. The only feature missing from the current season's export potential is the one million bales imported by net importing countries last year over and above their consumption requirements to rebuild depleted stocks. The upsurge in consumption last season more than offset the increase in supply so that the season ended with a lower carryover stock of 15.4 million bales, comprising 7.4 million in the U.S. and 8 million bales in the rest of the free world. Stocks in U.S. on 1st August last have more than usual significance for international trade in the present season. By the beginning of the current season, stocks of American type cotton in most other producing countries had been whittled down to minimum levels and, until the new crop becomes available in volume, the major part of the world supply available for export is in the U.S. The following table gives the staple length-wise breakdown of stocks on 1st August as compared with those a year and two years back:

(In running bales of 500 lbs.)

Staple length	1960	1959	1958
13/16" and below	6,203	49,921	123,859
7/8"	53,018	511,559	608,001
29/32"	132,226	979,151	822,842
15/16"	640,933	1,438,464	1,212,440
31/32"	598,432	742,265	944,663
1"	732,880	876,898	1,373,636
1-1/32"	1,546,173	1,535,498	1,713,406
1-1/16"	2,829,369	1,971,099	1,281,170
1-3/32"	589,523	375,526	307,313
1-1/8"	176,563	165,315	133,914
1-5/32" and above ..	87,193	72,794	70,709
Total (all staples) ..	7,392,513	8,718,490	8,592,043

Source: International Cotton Advisory Committee, Washington.

The composition of stocks has revealed some startling changes. The average grade was unusually high with an index of 97.9 (middling white=100) for upland cotton. The carryover also contained the largest proportion of strict middling and higher grade since 1948 and the largest proportion of middling cotton in the past five years. As regards staple, the average staple was the longest since 1951. Two-thirds was in the staple length range 1-1/31" to 1-3/32", the largest proportion since 1949. Cotton stapling 1-1/16", which India imports in large quantities, alone accounted for 38 per cent. of total stocks.

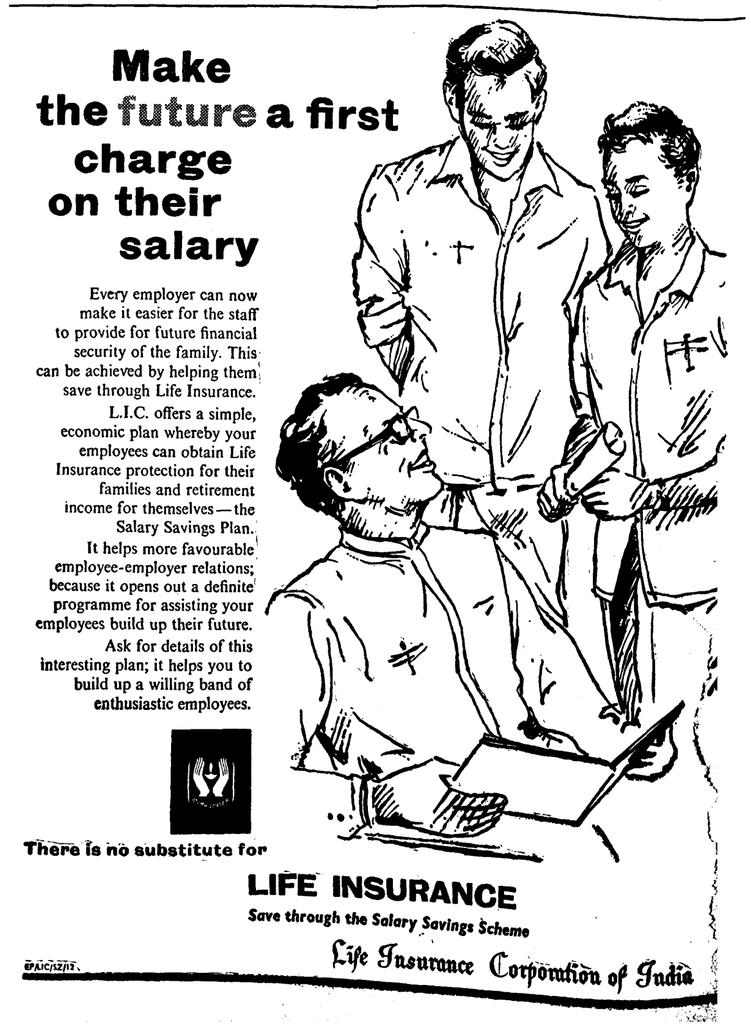
The increase in consumption has been accompanied by a marked expansion in the volume of international trade in cotton. U.S. exports in 1959-60, estimated at 7.2 million bales, were over 2½ times the quantity exported in 1958-59 and only 400,000 bales below the record post-war shipment of 7.6 million bales in 1955-56. While this was accomplished with the aid of an export subsidy in kind of 8 cents per pound (reduced to 6 cents with effect from the beginning of the current season), the quantity exported under special programmes did not show a commensurate rise. In fact, cotton which moved under special programmes in 1959-60 was, in fact, the lowest for several years. This is illustrated by the table below:

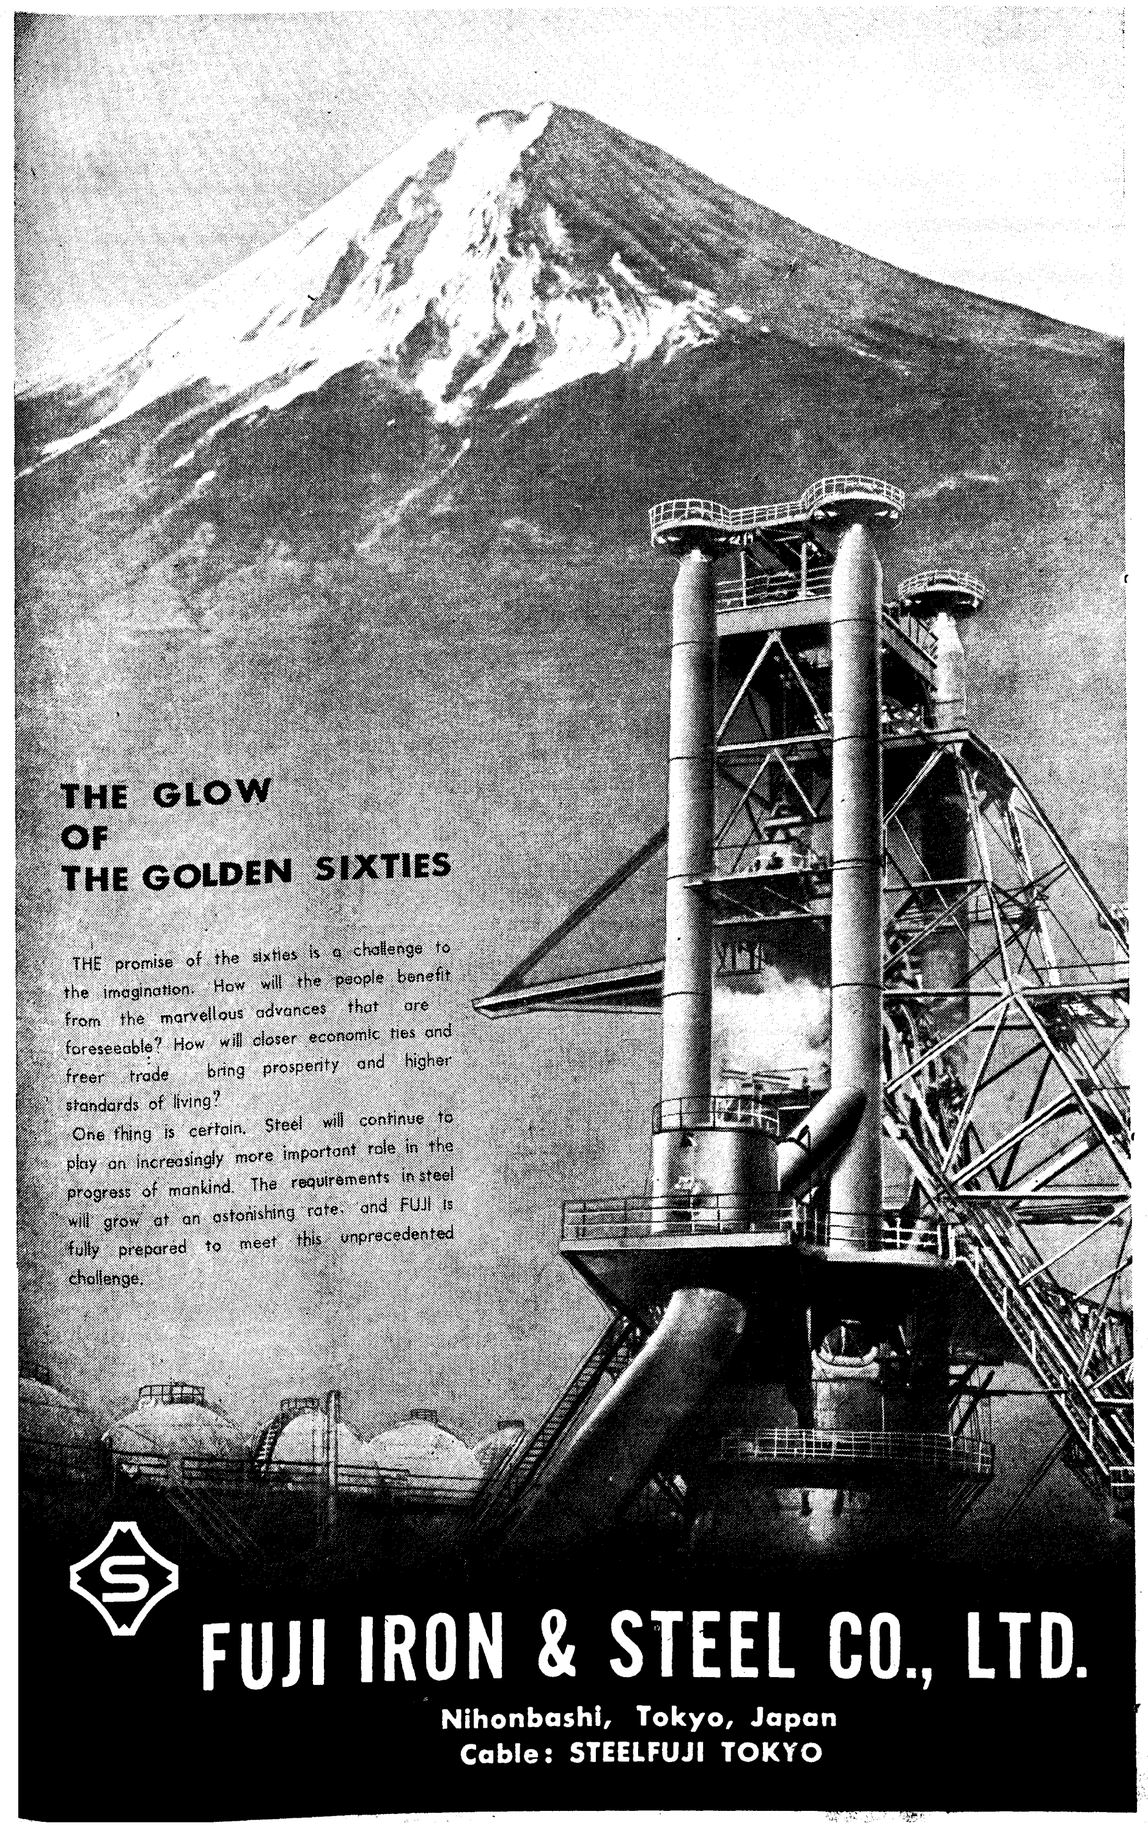
(In 1,000 bales of 478 lbs. each)

Programmes	1959-60	1958-59	1957-58
Public Law 480—			
Title I	705	639	863
Title II	10	7	26
I. C. A.	355	729	662
Barter	117	375	465
Total ..	1,187	1,750	2,016
Ex-Imp. Bank Loans ..	257	519	727
Grand Total ..	1,444	2,269	2,743
Total U.S. exports ..	7,183	2,789	5,717

Source: International Cotton Advisory Committee, Washington.

It will be seen that shipments under the I.C.A. programme, barter and by Export-Import Bank loans, were all down in 1959-60 by comparison with previous years. Of course, cotton exported under P.L. 480 showed a significant increase, mainly as a result of heavier shipments to India to cover the shortfall in production in this country. Cotton moving under special financing programmes is expected to be larger in the current season. The heavy registrations under the payment-in-kind export subsidy programme and the competitive price of U.S. cotton *vis-a-vis* other growths are expected to make total exports from the U.S. to be at a high level in the present season also. The Department of Agriculture expects that total exports will reach 6.5 million bales which, though 703,000 bales less than the quantity shipped last season, would still be the third highest on record.





INTERNATIONAL SUGAR SITUATION

PROSPECTS OF EXPORT FROM INDIA EXAMINED

By Narendra Wadhwana

INTERNATIONAL TRADING COMPANY, CALUTTA

WE are about to enter 1961 and the international sugar situation is rather unusual. In order that the developments may be clearly appreciated, an attempt is made here to present a few thoughts on the subject, with particular reference to India's plans to sell sugar abroad.

The crop of the 1960-61 season would be an all-time high record. If the estimates now made by various authorities prove to be accurate, the world crop this season will be larger by 4,000,000 tons or roughly by about 8 per cent. larger than 1959-60 crop. The following table shows the world sugar production during the last five years and the estimate for 1960-61:

(In thousand metric tons—raw value)

Crop year	Production	Absolute	Percentage variation
1955-56 ..	39,901	+1,422	+ 3.70
1956-57 ..	42,270	+2,369	+ 5.94
1957-58 ..	45,973	+3,703	+ 8.76
1958-59 ..	50,862	+4,889	+10.63
1959-60 ..	50,205	— 657	— 1.29
1960-61* ..	54,250	+4,045	+ 8.06

* Estimated.

During 1961, the usual average annual increase of 5 per cent. in the world consumption of sugar should result. On this basis, the consumption during the crop year 1960-61 can be estimated at 51,000,000 tons. The increase in consumption during the last five years has ranged between 3.21 per cent. (estimate) for 1959-60 and 5.74 per cent. in 1957-58. The average yearly increase for the past ten years was 5.11 per cent. The table below gives the world consumption figures for the past five years, along with the estimate for 1960-61:

(In thousand metric tons—raw value)

Crop year	Consumption	Increase or decrease over previous year		*Per capita* consumption (in lbs. raw value)
		Absolute	Percentage	
1955-56 ..	40,129	+1,757	+4.58	32.12
1956-57 ..	42,400	+2,271	+5.66	33.38
1957-58 ..	44,833	+2,433	+5.74	34.63
1958-59 ..	47,194	+2,361	+5.27	35.82
1959-60 ..	48,708	+1,514	+3.21	36.22
1960-61* .	51,143	+2,435	+5.00	37.40

*Estimated.

Stock Position

The world stocks should also see a substantial increase on the basis of the above production and consumption figures. The world stocks should rise by over 3,000,000 tons. The statistics for the last five years plus this year's estimates are:

(In thousand metric tons—raw value)

Crop year	Production	Consumption	Indicated yearly increase or decrease in world stocks
1955-56 ..	39,901	40,129	— 228
1956-57 ..	42,270	42,400	— 130
1957-58 ..	45,973	44,833	+ 1,140
1958-59 ..	50,862	47,194	+ 3,668
1959-60 ..	50,205	48,708	+ 1,497
1960-61* ..	54,250	51,100	+ 3,150

* Estimated.

Analysing the world production figures, one would not fail to notice that the current year's European beet crop will be the largest ever. Messrs. F. O. Licht of the U.K. have estimated the crop at 20,836,600 metric tons, as against the last year's crop of 17,252,228 metric tons. This shows an overall increase of 3,584,372 metric tons. A clearer picture can be had from the production estimates of European beet crop during the last six years given at the bottom of the page. The pressure of large European beet crop is already being felt in the world. Recent sales by Poland to Ireland and Lebanon, by Russia to Ceylon of Russian and Czech whites, sales by Bulgaria and Roumania are instances of this pressure. The offering of Polish beet raws against the recent Morocco tender at a low parity of about 2.76 cents. Cuban equivalent would amply substantiate this statement. Indian sugar has been facing direct competition from these sources in the Red Sea and Middle Eastern countries. Of course, the competition does not cause a direct problem in Malayan market, owing to the preferential import duty, but the pressure is felt all the same by way of lower prices.

Cuban Situation

Cuba's position is most unenviable. Its production and carryover figures for the last five years are:

(In metric tons—raw value)

Calendar year	*Production*	*Carryover*
1955	4,527,621	1,620,283
1956	4,740,414	637,525
1957	5,671,915	680,684
1958	5,778,550	542,342
1959	5,964,114	1,222,033
1960	5,845,293	

What is the amount of carryover Cuba would be left with at the end of 1960 is still a point on which it is difficult to make any estimate. If it is able to sell all its world export quota and ship all the sugar sold to Russia and China, it should have a carryover of 500,000 tons. But there does not appear to be a possibility of it being able to do either of the two. Thus, Cuba will be left with a large carryover at the end of 1960.

There have been quite a number of reports about the size of the next Cuban crop. Some of the members of the Castro regime have unofficially stated that they are able to produce during 1961 a crop of 7,000,000 Spanish long tons. Weather conditions there have been very favourable. But then there are several points against a good crop. The chief one is that most of the millowners, top officials and experienced technicians have already left Cuba, and this may make the production rather difficult and, therefore, the total crop may be rather small. The general impression is, however, that this factor may not influence the size of the crop as much as the cost of it. Some people believe that the crop may not be affected by the inexperience of the people in charge, but the cost would definitely be high. And so responsible opinion is inclined to place the Cuban crop around 5,500,000 metric tons.

Whatever be the size of the Cuban crop, the marketing of the same would cause a great problem to the Cuban Government. Having lost a lucrative market of 3,200,000 short tons in the United States, it will be forced to find an outlet for this quantity of sugar elsewhere. Russia, China, other communist countries and United Arab Republic are the only people who would be interested in buying Cuban sugar next year. As regards Russia, the question is that it already has a commitment for one million tons and it has itself an increased crop of another million tons. In view of this, can it take more Cuban sugar for its own consumption? This is rather unlikely. (It may buy the entire crop and then resell in world market—this question is being discussed later). China, with its immense population and low *per capita* consumption can buy a substantially large quantity; but the question arises as to how it can pay for the sugar. Other communist countries and the United Arab Republic would have at best limited demand for its sugar.

Cuba's sales to non-communist countries may be limited to a great extent by the fear that the buyers have about the litigation with the expropriated owners of the Cuban sugar mills. A suit has already been instituted in London. The other expropriated owners are threatening to take similar action. This factor will greatly influence the buying of Cuban sugar by other non-communist buyers who will prefer to buy sugar from other origins rather than face the possibility of litigation. Another important factor which concerns Cuba relates to its export quota under the International Sugar Agreement. Will it be able to obtain a proportionately larger quota, in view of the loss of the U.S. Market and, if not, will it adhere to the Agreement? This is another question which cannot be answered at this stage.

Russian Sugar

Russia, as already said above, will have a large crop during the coming year. It will have a million tons more than last year. Besides, it is already committed to take from Cuba during the next year a million tons of sugar. Russia has a basic export quota of 200,000 tons under the International Sugar Agreement. Although it has been selling some sugar abroad, it has also been buying some from abroad and generally its exports have been offset by its imports.

As has been rumoured since some time past, if Russia were to take over the entire Cuban crop, it is not probable that it would consume the whole lot itself. It will resell the sugar in the world market either itself or through some of its satellite friends. Thus, in any case, the pressure of Cuban sugar would remain on the world markets all the same. And the resale policy of Russia being most unpredictable, it will simply add to the uncertainties of 1961.

International Sugar Council

The Council is already in its annual session at Mexico City wherein it will have to decide the provisional export quota for 1961. The task of the Council has been made more difficult in the absence of an announcement from the United States as regards its sources of supplies during 1961. On the other hand, the Cuban negotiations with Russia and China have not yet resulted in anything concrete, and this will add to the difficulty of the Council. The problem that the Council has to solve is this: In view of the loss of U.S. market by Cuba and the availability of the U.S. market to other producing countries, would the latter be willing to give up some of their export quotas so that Cuba could have more? The International Sugar Agreement will come up for review during the next year and how the "structural" changes in the demand and

(*Continued on page 1076*)

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

RUBBER—ACHILLES' HEEL OF MALAYAN ECONOMY

INDIAN SETTLERS' IMPORTANCE DIMINISHING

(By A Correspondent who was lately in Malaya)

WHATEVER the historical hindsight about the consequences of restricting Indian nationals to emigrate to Malaya, the position of Malayan citizens of Indian origin is that of a minority in a country where the majority is not a decisive one of local origin. The Chinese population has almost reached parity with the Malays in number and its industry and energy have given it an edge in the economic balance. With 80 per cent. of the population divided almost equally into Chinese and Malays, the 20 per cent. Indians hold a political balance of decisive importance the use of which might be the most impolitic thing to do in Malaya today.

The Indian *immigre* points to the Georgian public buildings, the well-paved roadways and bridges in Singapore and the millions of acres of rubber trees and oil palms in the mainland and claims that it was Indian hands which built the buildings and planted the plants. In the saying of this, there is an element of suppressed pathos. It seemed to convey the impression that Indians in Malaya generally feel that they have no right to the things they helped to create or to the country which has been their home for all their working life. Many Indians who have been in the country for thirty, forty or more years feel they should return to their native lands and a number of basic Indian qualities play a part in the make-up of this attitude. Whether the political inconsequence of the Malay Indians is not a powerful factor in the development of this attitude is now almost beyond question. Malayan *merdeka* has introduced a new factor, in that the restrictions on immigration, citizenship rights and rights to non-labouring class employments provide for a wastage by repatriation and death which cannot be made good by the birth rate. The civil service has been thrown open to Malay Indians and Chinese, but at the rate of one to every four Malays. As for private industrial employment, the scope for Indians is much smaller, as there are few Indian undertakings of big size. The Chinese-owned industries would naturally favour compatriots and British-owned industries now recognise the political value of recruiting Malayans to the better posts. With the three races meeting together on a common land, which offers great scope for development and economic growth, the prospect of a racial and social mix up should be considered a logical process. But the Indian social and communal insularity is proof against it.

The Chinese have come to occupy a predominant position with their numerical parity with Malays, with their energy and industry and the stranglehold they have on trade and small business. The Chinese make excellent settlers and the large majority of them are as politically indifferent as they are economically active. Their politics are furthered by small professional groups, the ubiquitous secret societies and by methods of early Chinese education in the schools. The Communist terrorist activities spanning 12-post-war years were largely led and manned by the Chinese, a good many of them of recent Chinese origin. The magnetic pull of a powerful China to the north may allure a section of the race-conscious Chinese, but there is an almost equal pull in the opposite direction from the Chinese who have acquired wealth or professional status or stake in the country. They stand to gain nothing and may lose all by the spread of Red Chinese influence but, like all human beings, the Chinese, individually, would not like to be found too vocal against Communist Chinese power. It is too risky and is not relevant to business.

The Chinese as a rule are non-political as the Indians are a-political. They are settlers and the bounds of their community are clearly marked by family ties. With a triangular political balance in Malaya, there is certainly a greater awareness of the Chinese identity, but, left to themselves, they would rather tend their small vegetable plots, do such trades as are possible and live as well as they can. They are not inclined to join together to fight an evil just as much as they will not to further a good cause. This leaves them open to easy domination by any organised body and hence the disproportionate influence of secret societies.

There are many who wonder: what is the role of the British in Malayan affairs and to what extent do they influence or control Malayan policy and the Government apparatus? With a majority of the population of non-Malayan origin, it is to be expected that the real Malays would lean heavily on the British arm. This natural tendency to seek protection was not weakened by the Chinese Communist terrorists who sought to gain control over Malaya by insurrection and violence from 1948 to 1960.

Against the threat of being reduced to a political minority in a multi-racial society such as Malaya has, the Malays are becoming politically conscious and active. This is well illustrated by the registration figures on the voters' list made at the time of the first election to the Federal Legislature in 1955. As much as 84 per cent. of the registered voters were Malays, as against 11 per cent. Chinese and 5 per cent. Indians. When *merdeka* came in 1957, the Malays had two crucial problems to face. One was the position of Singapore, with its 80 per cent. Chinese population, which if allied with one Federation, would have decisively tilted the balance in favour of a Chinese majority. The other was a continuing emergency arising from the Communist terrorist activities. To keep out Singapore and yet have the benefit of its trade organisations and port facilities and to maintain Malayan prosperity and fight the Communists, Malaya needed the experienced and not unwilling hands of the British. With their consummate skill for adoption, the British changed from rulers to advisers and servants. It must be said to their eternal credit that, towards the end of their direct rule, they did all they could to encourage the creation of a non-communal political consciousness, a common culture, and educational system and a cohesive national awareness and approach.

A general election was held in 1956 in which the Alliance party under the leadership of Tungku Abdul Rehman won a decisive victory. It repeated this performance in 1960 with a slightly reduced majority. The Alliance has Malayan-Chinese and Indian support, but it is still chary of admitting Singapore to the Federation and the short regime of Mr. George Marshall, his peculiar brand of anti-colonialism notwithstanding, did nothing to assuage the Malayan fear of an intemperate and immoderate Singapore tail wagging the Malayan body. For a time before the P.A.P. settled down to quieter business and political nerves, the fears were such that many leading business houses were openly talking of shifting to the mainland. It is still too early to say how much of P.A.P.'s remarkable moderation and devotion to orderly government are the result of the sobering effect of responsibility in office and how much to political expediency. Singapore is a British creation and it is they who turned a sparsely populated tropical swamp, which the Sultan of Johore did not want, into one of the finest cities in the East, a modern port and naval base and a great world emporium for the

Scruffy and Smarty

Scruffy: *"I am kicked out every time. How is it you are always received so well by the clients?"*

Smarty. "It is not that you are a bad salesman. But look at your clothes . . ."

Scruffy: *"What do you mean? I am here to sell my products and not my clothes!"*

Smarty: "But the client judges your product by his first impression of you. So you must dress well. Preferably with BINNY'S. They Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings look smart and last long."

BINNY—
a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussores - Union Fabrics - Towels - Silk Sarees - Rugs - etc. etc.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board. →

In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

THE INDUSTRIAL FRONT IN ORISSA

PLENTY OF SCOPE FOR PRIVATE SECTOR

By G. N. Das

THE State of Orissa, with its 13 districts, covers an area of 60,000 square miles. It has a population of nearly 15 millions, which exceeds that of Australia and some of the countries of Europe, America and the Middle East. Its natural resources are far more than those of many countries represented in the United Nations. Yet millions of its inhabitants live under conditions of "abject poverty and incredible squalor." In recent years, however, progress has been made in the economic field and the State has been able to make a break-through from stagnation to development. Let us briefly review the achievements in the sphere of industries during the last two years.

Large and Medium Industries

India's iron ore deposits, having an iron content of over 60 per cent., are estimated at 6,000 million tons, the amount of ore with a lesser iron content being unknown. These are mainly concentrated in the Orissa-Bihar belt which contains more than 3,000 million tons of iron ore with an iron content of over 60 per cent. If we include ores with an iron content of less than 60 per cent., the reserves would amount to at least 20,000 million tons. The ore-bearing layers extend over an area about 60 km. long and 20 km. broad and the main seams are more than 300 metres thick. Accordingly, plans were made in 1953 for building the first steel plant in the public sector at Rourkela in the Sundargarh district of Orissa as a combined Indo-German industrial venture. Since then, its construction has made good progress and red-hot molten iron swirled out from its first blast furnace in February 1959. It is scheduled to be completed by the end of the second Plan period on 31st March 1961. It is designed to produce only flat products like plates, sheets, strips and tin plates, and will consist of three blast furnaces, three coke oven batteries, a complete by-product plant, a power plant, a steel melting shop, rolling mills, etc. It will have a fertiliser works, scheduled to be completed by 1962, which, according to Dr. Karl Winnacker, a distinguished German chemical engineer, may well fertilise half of the cultivated land in Orissa. Rourkela is the first steel factory in India to use the L.D. (Linz-Donawitz) process which ensures "lower capital and operating costs, higher rate of production and saving in space and ancillary equipment" and is superior to open-hearth steels in many technological aspects. Its present capacity is 1,000,000 tons of ingot steel per year, but it can be expanded to produce 2,000,000 tons, without a wholesale change of layout. There is little doubt that the area bids fair to become the Ruhr of India. It took the U.S.A. 20 years to raise steel production from less than one million tons to 4.5 million tons and the U.S.S.R. could only treble its output between 1930 and 1948. India, on the other hand, has planned to increase its production of steel by more than four times, that is, from 1.7 million tons to 6 million tons, between 1947 and 1962, and to this gigantic task Rourkela is bound to make an important contribution.

In the private sector, a Rs. 3.88-crore plant for the manufacture of refractory bricks, a vital necessity for steel mills in the country, has been inaugurated at Belpahar in the Sambalpur district. Another result of Indo-German co-operation, the factory starts with a capacity of 67,000 tons of refractory bricks and 10,000 tons of mortar. In addition, a paper mill with an annual capacity of 12,000 tons of paper of all grades has been set up at Chowdwar in the Cuttack district and a low shaft furnace for the production of pig iron and ferro-alloys at Barbil in the Keonjhar district. Among the large-scale industries established earlier, mention may be made of a paper mill at Brijrajnagar (Sambalpur district); a spinning and weaving mill in Mayurbhanj district; a sugar mill at Rayaghada (Koraput district): a ferro-manganese plant each at Joda (Keonjhar district) and Rayaghada; a refractory plant at Rajgangpur (Sundargarh district); a textile mill; a tube factory; two aluminium factories; and several manufacturing units near Cuttack, like a rolling mill, a glass factory, a textile mill and a refrigerator manufacturing plant. This is a creditable achievement, considering the fact that, prior to 1949-50, there was hardly any large industry in the State.

Licences have also been granted by the Government for: (1) the manufacture of steel billets in a tube factory at Chowdwar; (2) the production of manganese dioxide with an installed capacity of 1,200 tons per year at Dhenkanal; (3) the setting up of a co-operative sugar mill at Aska in the Ganjam district; (4) the expansion of the installed capacity of an aluminium factory at Hirakud in the Sambalpur district from 10,000 tons of aluminium ingots per year to 20,000 tons; (5) the manufacture of several industrial machines at Hirakud; (6) the making of fire-bricks and potteries at Jharsuguda in the Sambalpur district; (7) the establishment of a co-operative spinning mill with a capacity of 12,000 spindles at Bargarh in the same district; (8) the construction of a paper mill at Singhapur in the Koraput district with an annual capacity of 18,000 tons; (9) the expansion of a ferro-manganese plant at Rayaghada in the same district so as to have an installed capacity of 24,000 tons per annum; (10) the enlargement of a sugar factory—also at Rayaghada—to reach the production target of 24,000 tons a year; and (11) the establishment of a refractory plant at Lapanga in the Sambalpur district.

Village and Small-scale Industries

Industrial estates, where factory buildings with power and other facilities are made available to small-scale industrialists on rent, are springing up at Cuttack (with an annexe at nearby Jagatpur), Kendrapara (Cuttack district), Jharsuguda (Sambalpur district), Berhampur (Ganjam district) and Rourkela. Steps are being taken to complete the construction of these estates during 1960-61.

Under the pilot project scheme, limited liability companies, to which both the State Government and private *entrepreneurs* contribute share capital, are being set up to manufacture articles for which materials are locally available or which are likely to command a local market, like phenyle, ink, furniture, collapsible gates and shutters, storage batteries, drugs, etc. So far, 37 companies have been started under the project, of which 12 have already gone into production. Investment on this head by the end of the second Plan is expected to be between Rs. 53 and Rs. 55 lakhs.

In the field of leather industry, two State-owned tanneries, a demonstration shoe factory, a testing and research station and a training-*cum*-production centre are at work and a provision of Rs. 5.42 lakhs has been made for these during 1960-61.

Financial assistance is given to small-scale industries under the State Aid to Industries Act at low rates of interest. The amount so provided may run to Rs. 27.72 lakhs by the end of the second Plan. The Orissa State Financial Corporation also gives aid to medium- and small-scale industries and had sanctioned Rs. 32,65,000 by way of loans till the end of March 1960. In addition, facilities exist for the hire purchase of machineries and for financial assistance from the State Bank of India.

The Subsidised Industrial Housing Scheme provides financial aid to private employers for giving housing facilities to industrial labour. Till recently, 529 houses had been built under this arrangement. About 1,700 industrial tenements are proposed to be set up by private employers during 1960-61.

Six local productivity councils are being set up in the industrial areas of the State in order to launch a productivity drive. Of these the one at Cuttack is already at work.

The development of handloom industry is going forward largely through the instrumentality of co-operative societies. Production of handloom cloth in the co-operative sector, which was 6,000,000 yards in 1955-56, is now 33,000,000 yards. An important feature of this industry is the introduction of powerlooms together with the establishment of powerloom weavers' co-operatives. It is proposed to start eight powerloom units by the end of the second Plan period, each having 100 looms. Government have also established eight cottage dyeing units as well as a calendering plant in Cuttack to process the fabrics of weavers and improve their finish.

With regard to sericulture, two stations, one for tassar seeds and the other for eri seeds, have been supplying the needs of rearers who are also given better appliances free of charge, thanks to financial aid from the Central Silk Board. There is also a research centre for sericulture.

Similarly, with assistance from the Government of India, 26 projects for improving various handicrafts, like the making of horn, ivory and filigree objects, cane and bamboo articles, essence and perfumes, durries, stone carvings, toys and the like have been taken in hand. Artisans have thus been enabled to better their economic condition and villagers, especially women, have been provided with part-time work.

Instead of giving subsidies to artisans individually, Government have set up nine common service centres in villages where they are given opportunities to handle modern equipment and adopt the latest manufacturing processes. They are located in areas where there is a maximum concentration of artisans. The trades covered are blacksmithy, carpentry, tailoring, horn work, filigree craft and leather work. In addition, a ceramic industries centre has been founded at Cuttack, a tile-making centre is being added to the pottery development centre at Jharsuguda, tile-making centres are being established at Balasore, Kendrapara and Jajpur (Cuttack district), and a training centre for making roofing tiles with power-driven machines is being put up at Jharsuguda.

The Orissa Khadi and Village Industries Board is attending to the growth of khadi and village industries. It has set up an organisation at Bhubaneswar for making ambar charkas, oil *ghanies*, beehives and other articles. The manufacture of coir products is receiving the attention of six co-operative societies in Puri, Cuttack and Ganjam districts which receive loans and grants from Government.

Mineral Development

To all intents and purposes, the organised exploitation of the vast mineral resources of Orissa dates only from 1956-57. The net output of minerals which stood at Rs. 4.52 crores in 1950-51 is expected to increase to Rs. 8.98 crores by 1960-61. Revenue from mines amounted to Rs. 46 lakhs during 1959-60. Six survey parties are carrying on prospecting operations under the Directorate of Mines and about a tenth of the State may have been surveyed by the beginning of the third Plan period. In the dense forests of Keonjhar the National Mineral Development Corporation has been undertaking its first major project for extracting two million tons of iron ore per year from the Kiriburu hill for export to Japan from 1964.

Power

Electricity is essential for industrial progress. Orissa had only 4,620 kw. of power in 1951. In the first Plan period, it rose by 16,285 kw. By the end of the second Plan, an increase of 184,725 kw. is expected, ensuring a total installed capacity of 205,630 kw. Stage II of the Hirakud Dam Project, which will be finalised by the beginning of the third Plan, will ensure an additional 147,000 kw. Under the rural electrification scheme, 93 villages have been electrified by 1959-60 and about 38 more may be given the same benefit during the current official year. The per capita consumption of electricity, which stood at 0.30 kw.hr., as against the all-India average of 13.25 kw.hr. at the commencement of the first Plan, is expected to go up to 2.17 kw.hr. at the end of the second Plan.

Technical Education

Regarding technical education, an engineering college and a mining school were established during the second Plan period. There are three engineering schools under Government management and two managed by private bodies. In addition, there are five Industrial Training Institutes, a vocational training centre as well as a training-*cum*-production centre to impart instruction in the maintenance of modern equipments. There are 12 industrial schools, of which half were modernised during the current Plan period. An evening class to improve the theoretical knowledge of industrial workers in their respective trades has been started at Chowdwar.

Industrial Production

The existing industrial units in the State continue to make good progress. In 1959, the production of paper registered an increase of 7 per cent. over the figures of the preceding year and the extraction of iron ore, chromite, china clay, fire-clay, white clay, coal, dolomite, mica and limestone was marked by an improvement ranging from 9 to 44 per cent. The production of cloth also increased to a small extent. Unfortunately, however, cement production decreased by 29 per cent. because of labour troubles. There was also a reduction in yarn production by 9 per cent., in the extraction of graphite by 7.5 per cent., in that of kaolin by 28.9 per cent. and in that of manganese by 12.5 per cent. due to unfavourable trends in the world market.

On the whole, while much has been achieved a great deal still remains to be done to make Orissa rich and prosperous and spread the blessings of the Welfare State among its people. The Governor, Mr. Y. N. Sukthankar, struck the right note when he told the Orissa Legislative Assembly on 17th February 1960: "It may be that, in the various fields of activities, progress is not even—in some, it may be more and in others it may be less. Having done two Plans, we should now know both how to do things and also how not to do them."

Third Plan

The Chief Minister, Dr. H. Mahtab, said in the Orissa Assembly on 10th November 1960 that, by the end of the second Plan period, the State would have incurred about 95 per cent. of its target expenditure, the shortfall being due to non-availability of technical personnel and foreign exchange. Orissa's draft third Plan, as announced on 9th October 1960, provided for a total outlay of Rs. 182.21 crores, but the Planning Commission reduced it subsequently by Rs. 22 crores. It gives top priority to agricultural production. For industries and minerals, the present outlay proposed under three major heads is as follows: large and medium industries, Rs. 55 lakhs; village and small-scale industries, Rs. 5.10 crores; and mineral development, Rs. 1.53 crores. A provision of Rs. 43.62 crores has been made for power development.

With regard to large and medium industries, it is the aim of the State Government to help *entrepreneurs* by giving them lease of Government lands, acquiring private lands, supplying electricity and water, developing suitable areas required for factory units, giving loans from the funds of the State Financial Corporation, obtaining individual licences, importing capital goods and securing finance from institutional agencies in suitable cases. In addition, large investments will be made for more and better roads, increased power generation, expansion of technical education and training of a large number of skilled workers.

Suitable land in five large areas in backward parts of the State will be developed and leased out in the main to medium industrial units. Regarding small-scale industries, more industrial estates will be set up. Raw material depots, a co-operative spinning mill and a co-operative sugar factory are also proposed. For the development of the immense mineral resources of the State, there are schemes to construct railway lines and a ropeway in the Sukinda mining belt in the Cuttack district. Further, the Orissa Mining Corporation will be allotted more areas for exploitation, so that it may increase its annual production of about 1 to 2 lakh tons, as at present, to 1,000,000 tons as well as supply iron ore for the steel factories and for export *via* the newly developing port at Paradip.

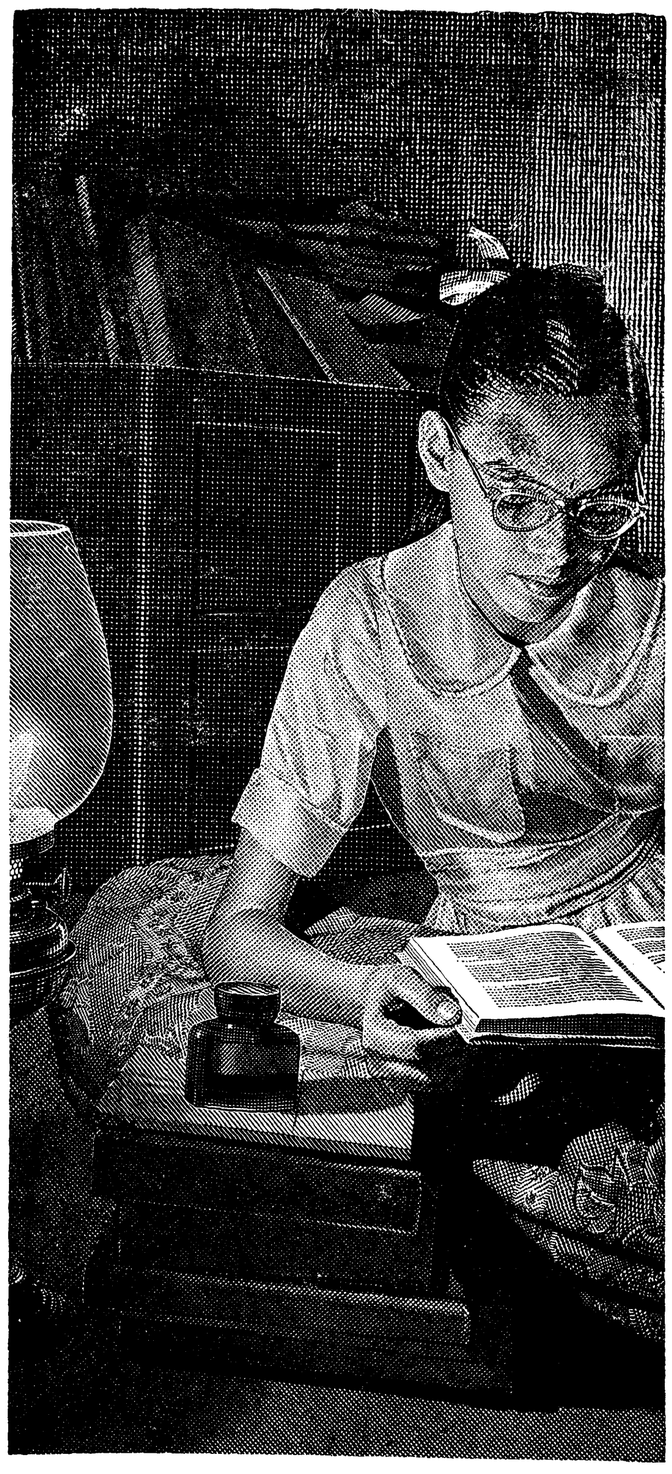
A large portion of the Plan outlay is earmarked for the development of power resources. It provides for both continuing and new schemes. As stated in the Draft Outline: "After completion of all the continuing schemes, the total installed capacity will be of the order of 3,15,130 kw., with a firm capacity of 2,52,000 kw. against the expected maximum demand of 5,76,500 kw. by 1965-66. This leaves a net deficit of 3,24,500 kw. of power demand on the basis of 0.8 load factor which it should be the aim of the third Plan to make up, as, otherwise, industrial development of Orissa will suffer a serious setback and many prospective industries will drift away from this to adjoining States." It has, therefore, been proposed to set up a thermal station at Talcher (Dhenkanal district), with an installed capacity of 240 MW. to serve the industries in the north and north-west of the State, and a hydro-electric plant on the Balimela river in the Koraput district, with an installed capacity of 240 MW., to meet the demands from the medium and heavy industries in the southern region.

As regards technical education, it is proposed to increase the intake capacity of the existing engineering college, engineering schools and institutions for craftsmen training,

(*Continued on page 1069*)

N.B.—The latest official and other authoritative publications available in November 1960 and information on certain items personally obtained from the Government of Orissa have been used in the preparation of this article.

The comforts of life are spreading



Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that demand for Kerosine will be around 2.9 million tons, or well over 800 million gallons a year. There can be no question that the first priority should be exploration and the production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

NEW PRODUCTS AND PROCESSES

Water Soluble Polymer

A NEW group of water soluble polymers, or plastic compounds, which can be used for a wide variety of different purposes, has been developed. The basic material of the polymers consists of a white free-flowing powder which can be turned into a solution very readily by mixing it with cold water. The solution thus produced is clear, holds colour readily without its degrading under different types of physical conditions and has a constant unchanging viscosity. Films of the new materials can be produced by means of extrusion, or casting processes, directly from water solutions. These films possess the advantage that their adhesive qualities can be activated either by heat or by the application of moisture. They are, therefore, expected to be especially useful in adhesives applications. At the same time, the compounds are expected to find applications as thickeners, binders, protective compounds—in the form of colloids—and stabilisers for emulsions. Films made from the compounds are thermoplastic in type and have considerable strength. They are expected to be especially useful in paper-making and textile production. The investigation of further applications for the new compounds is proceeding.

Sun Turbine

An apparatus described as a sun turbine has been developed in Russia. Its operation depends on the use of a special metal alloy which becomes non-magnetic when comparatively small increases in temperatures, such as those created by exposure to the rays of the sun, occur. It consists of a rotor designed as a system of rings mounted on a shaft. These rings are made of the special alloy and the movement of the turbine is brought about by the fact that this alloy becomes non-magnetic when heated. As the rings of the rotor rotate between the poles of the permanent magnet, the path which is just between the poles is exposed to the sun's rays and, therefore, become heated and non-magnetic. At the same time, the cold portion of the rings is attracted by the magnet and this produces the force which causes the turbine to rotate. The device, which is in a prototype stage, is now being developed for practical use and is expected to find applications as a power source in remote areas where reasonable quantities of sunlight are encountered, as well as in the Arctic and in Antarctica. The turbine can be used, it is claimed, either to generate electricity which can then be stored, or to undertake physical work such as pumping water up to a header tank from which it can be released to produce power via a further turbine at the desired intervals.

Automatic Hot-house

The Soviet Union's first automatic hot-house is being built on a state farm near Moscow. It has been designed by the Leningrad Agrophysics Institute. The vegetables in the hot-house will be grown in pebbles rather than in usual soil. The space between the pebbles will be filled with a nutritional solution containing all the ingredients necessary for the plants to develop normally. The hot-house will be equipped with a special conditioner to maintain the desired air humidity. Another device—an atomiser—will break up the water supplied into the hot-house into a fog. But the heart of the hot-house will be a central command post. This will be a switchboard, the size of a domestic frig. It will carry all the instruments to monitor the growth of the vegetables, to control the supply of nutritional substances, and to do the watering. Automatic hot-houses will be built in the Soviet Union on a large scale in the nearest future. This, it is claimed will substantially cut the cost of vegetable-growing.

A New Process for the Manufacture of Vinegar

The origin of vinegar goes back to the remotest antiquity, and the methods used to manufacture this product have changed very little down through the centuries. Now, a Swiss firm has perfected an automatic system of submerged acetification known as "Acetomatic", which possesses distinct advantages over previous methods. The production of vinegar by the "Acetomatic" system does away with wood shavings which become charged with "mothers" of vinegar; consequently manufacture is much more hygienic. In addition, this production process is approximately ten times as fast as the traditional methods, the output 10 per cent. higher, the space required ten times less. The plant can be fitted with special devices making the whole process completely automatic. Most of the apparatuses and gear necessary for the erection of the "Acetomatic" plant can be bought locally and installed by the customer's own staff.

Tile-cutter

A unique, time-saving device is now being manufactured by a British firm, J.A. Cannings Ltd. It is a glazed tile-cutter which, it is claimed, saves both time and labour costs. In fact, it is claimed that it is possible to save the cost of the device on one job. Made entirely of sheet metal, with a locking device on the guide setter, it is possible to keep the guide in one position for repetition cutting. The tile is placed, face downwards, on the cutting table, and simply pushed over a special cutter wheel, which scores a mark on the surface of the tile, and a clean break is then obtained by pressing it across the edge of the angle on the guide setter. The cutter wheel, which has an extremely long life, is easily replaceable, and it is possible to cut six-inch and four-inch tiles up to half an inch thick, at a rate, depending upon the operator, of about 12 per minute. The cutter is extremely robust, and is **rustproof**.

Film-processing Equipment

A U.K. firm displayed a unique rapid film processing equipment at the Industrial Photographic and Television Exhibition held at the Albert Hall, London, in November. Basically the equipment owes much to the original military equipment which was designed to U.K. Air Ministry specification to provide a large bright screen display of radar images photographed from a cathode ray tube. Present day developments of that equipment cover all sizes of film in general use and find application in scientific, industrial, commercial and entertainment fields. The first public demonstration of rapid colour processing was given by the makers (Kelvin Hughes) at the last Farnborough Air Show and Exhibition. On that occasion colour processing of characters on a cathode ray tube was achieved in 25 seconds and projected on to a large screen for daylight viewing.

Industrial Uses for Ionites

The manufacture of ionites on an industrial scale in the Soviet Union opens broad vistas for their use in many sections of the economy. Thus, for example, thanks to ionites, many Soviet jewellery factories, mints and copper electrolysis plants have reduced losses of precious metals in flush water to the smallest minimum. Ionites are being successfully used in hydrometallurgy for extracting copper, nickel, cobalt and other non-ferrous metals from waste water. Ionites in a chemist's hands are a means for rapid and accurate analysis; in a technologist's hands they are a tool for producing substances of such purity which they could never have dreamed of before, notably, rare elements used in electronics, vacuum techniques, glassmaking, semi-conductors, photoelectric cells and refractory alloys.

New Use for Felt

Until a few weeks ago, felt, manufactured from high quality wool, was used only for processes where its softness and durability made it pre-eminent, notably for hats, shoes and underoverings for carpets. U.K. scientists have now found a new use for it—to produce crash helmets. By hardening and chemically treating felt, they have succeeded in producing a strong, light and flexible material. Altogether, 20 separate manufacturing processes go into the production of the new helmets from the initial washing and "carding" of high quality wool into hoods weighing eight ounces to the final inspection, packaging and despatch. Because of the high safety standards required—each helmet has to pass the vigorous British Standards Institution test before its seal of approval can be attached—the processes take up to four days in all to complete.

New Non-aqueous Foams

A series of new non-aqueous foams for use in aerosols and other forms of industrial and domestic equipment of a similar type, whose foam density can be varied at will, has been developed in Britain. At the same time, the stability of the new foams can likewise be varied over a very wide range with extreme precision, as also can their "wettability." The new foams, which are also denser and in general more stable than foams which are made with water, are expected to be especially useful in the production of pharmaceutical products and in the cosmetics industry. Tests carried out with the new materials are said to have shown that their performance is better than that of comparable water-containing foams.

Safer Navigation

An ingenious device, tipping the scales at 7 kg., has been developed in the Soviet Union to prevent ships at sea from colliding with one another. This is an electronic attachment to a marine radar. Should ships approach on head courses in a fog, the device will automatically switch on to record the radar's data about the approach speed, as well as the bearing and speed of the ship on which it is installed. Then the electric computer built into the attachment will momentarily process the data to indicate on its dial what turn should be made to avoid the collision.

New Plastic

The name "F.A.T." has been given to a new plastic evolved by the Ferghana Polymer Laboratory, the Uzbek Plastics Research Institute, Central Asia. Products made of "F.A.T." easily withstand temperatures over 400° C. The new plastic will find a broad field of application in electrical and mechanical engineering as a substitute for bronze, nickel and brass. The valuable polymer can be obtained from ginnery wastes and cotton-seed husk. Currently, the Laboratory is carrying on studies into the useful properties of F.A.T.

New Weed Killer

Uzbek (U.S.S.R.) scientists have synthetised a new weed killer for use on cotton fields. The chemical is introduced into the soil and kills almost all weeds without doing any harm to the cotton crop. Another advantage of this weed killer is that no weeds appear the next year. It also does a good job in cleaning irrigation canals.

INSPIRING SHADES FOR
HANDLOOMS

O A D-25

By virtue of their possibilities of endless combinations in tones and shades, ADC provide the Handloom Industry of our country with a wide selection of Dyes and at remarkably low cost, too.

WORLD STEEL MARKET OF THE SEVENTIES

RESULTS OF A U.N. PROJECTION STUDY

A REMARKABLE projection study of the world steel market of the nineteen-seventies is contained in a recent survey produced by the United Nations Steel Committee in Geneva. This survey, in the words of the *Steel Review*. (The British Iron and Steel Federation Quarterly) of October 1960, which has succinctly presented its results, "is absorbing both in its scope and in the originality of its methods." Its major prediction is that, in the period 1972-75, world steel consumption would be of the order of 625 million metric tons, if no wars or severe depressions occur in the interval, as compared with 300 million tons produced in 1959, the best year hitherto. Here it is validly assumed that the world forecast for production must be the same as that for consumption, for the only difference at world level between consumption and production represented by the movement of stocks can be disregarded in the long term.

The methods used in this projection exercise are so interesting that they can be usefully described at the outset. First in the methodology of the study is the deduction of a law of growth of world steel consumption from the late nineteenth century until the present day. This law is that "the *rate of increase* of steel consumption tends to diminish, the higher the absolute level of consumption that is reached." In other words, as the world, and its individual countries, become economically more advanced, their need for steel grows at a slower pace. This is because, at the outset of economic development, huge construction projects are all heavy consumers of steel. As a country's economy matures, it proceeds to the manufacture of machinery, durable consumer goods, etc., which require a small unit weight of steel; as these industries become more efficient, they waste less of steel they use, and so further reduce demand. There is also the natural tendency to switch to newer materials. Here it is estimated that the main competing materials, if they develop at the fastest rate ever attained by steel itself, would not capture more than 8-9 per cent. of total steel consumption in 1972. Taking this factor also into consideration, the authors have expressed this law as a mathematical formula and used it in turn to draw a curve of theoretical growth of consumption. The theoretical curve has been super-imposed on the real historical curve of consumption. It is seen from this combined graph that the fit of the theoretical with the actual curve is very close over the whole period, except where development is interrupted by wars or severe economic depressions. Since the formula for the rate of growth appears, therefore, to be reasonably sound for all periods of undisturbed growth, the theoretical curve is accordingly projected forward to 1972-75, and a figure for consumption—some 625 million tons—at that date predicted.

As for consumption of steel in each individual country, the law of growth that has been discovered is applied in a different way. This is done by plotting the rate of increase in the steel consumption of every country between 1950 and 1957 on a graph in relation to the country's actual level of consumption in 1950 and thereby producing a pattern which could be resolved mathematically into two lines of average increase, one for fast-moving and one for slower-moving countries. These two lines thus represent the average increase rates by countries from 1950 to 1957 for a world consumption of 297 million tons in 1957. It is necessary only to shift the lines until they correspond with a world consumption of 625 million tons, and a series of future increase rates is produced. By means of this, individual consumption in 1972-75 is calculated for the main countries and areas. These data are presented in Table 1.

The world forecast for production (628.2 million metric tons) in Table 2 is about the same as that for consumption (630.7 million metric tons). And the method followed for the prediction of country totals (Table 2) is also the same as that for consumption. But it is possibly less impressive than when applied to consumption. The demand for steel is the result of a variety of largely independent forces acting through the economy, and it is admissible to resolve these into a theoretical trend for projection into the future. But steel production is the outcome of deliberate decisions taken by a relatively small number of people. A much greater amount of empirical judgment has, therefore, been used in the case of production forecast than in the case of consumption forecast. On the other hand, it is true that even decisions on production are influenced by factors like the supply of money, and a check of this nature is applied to the forecast by an evaluation of the proportion of national gross capital formation that the installation of new plant would represent. On the whole, the forecast can probably be taken as a fair statement of how steel capacity will expand if decisions in the future are taken in the same way and in response to the same factors as in the past. So far as India is concerned, the U.N. study suggests that production will have to expand to 26 million tons by 1972-75, as against the present rate of production of 2.6 million tons per annum. This will mean that the country will have registered an average annual *per capita* increase of 19.1 per cent. which will be the highest rate for any country.

When a comparison of the production figures in Table 2 is made with the consumption figures in Table 1, it will be found that net exports of three million tons are ascribed to the United Kingdom. Further, Germany is credited with net exports of only one million tons, although this excludes the Saar. The only European country assumed to change from a net importer to a net exporter is Sweden which is credited with net exports of half a million tons. The traditional importing areas will be less dependent than formerly on outside supplies; owing to the rapid growth in their consumption, their imports will, however, grow in absolute terms. Nonetheless, it should be noted that the entire increase will be provided by the Middle East and the Far East. The absolute level of Latin American imports will remain stationary.

The study also contains forecasts regarding the two main steel-making raw materials, namely, pig iron and scrap. With an assumed world production of steel more than double today's total, a very large growth in the supply of these raw materials has also to be presupposed. It is assumed that scrap supplies for the world as a whole will always be consumed to the full, no matter in what quantity they arise, even as they have always been fully used in the past. The forecast shows that domestic supply of scrap in 1972-75 will be nearly 290 million tons for the world as a whole. Although such abundant scrap resources are prophesied for 1972-75, they will not, in view of the high level of production, constitute a higher proportion of raw materials used. The pig-iron to scrap ratio will thus remain virtually unchanged. The world will, therefore, remain as dependent on iron ore resources as before. But, if the basic axiom of the study, namely, the diminishing rate of expansion of steel consumption, is fully borne out, there will come a time, albeit in the distant future well beyond 1972-75, when steel production will level out and then begin to fall. The study shows that at that distant point, the entire raw material requirements of the industry will be available from scrap.

NUCLEAR POWER FROM NEW U.K. STATION

Britain's latest and the world's most economical nuclear power station is to be built at Sizewell, Suffolk, for the Central Electricity Generating Board. Supplying 580 megawatts of electricity to the national Grid distribution system, the station will have the highest output and be the most compact of the seven commercial atomic stations now on order in the United Kingdom. Work will begin in April on the site, and the station is expected to be in operation in 1966. The novel features embodied in the design, together with the evolution of new civil engineering techniques, have combined to make considerable economies in the overall cost of the station. This should enable power to be generated at a figure well below the national average and the cheapest in the world so far from a nuclear power station.

When the £55,000,000 contract is completed, it will bring the total power from Britain's nuclear plants to 3,000 megawatts. This is over 10 per cent. of Britain's present total generating capacity, and a further step towards the goal of 5,000 megawatts by 1968. Like previous stations, it will have two gas-cooled graphite-moderated reactors. Designers have succeeded in evolving a plant which will produce nearly four times as much electrical power as the two earlier pioneer stations together, and this from a layout occupying only about one-third of the other stations' area.

I.B.M. OPENS NEW PROFESSIONAL SCHOOL

A computer system for one of the world's largest accounting tasks—that of the Internal Revenue Service—was described at the recent opening, at New York, of a new type of school to teach the science of data processing systems design and operation. The school is International Business Machines Corporation's Systems Research Institute. It is the first industry-sponsored graduate school to educate people for advanced professional work in data processing systems engineering. Data processing systems engineers are broad-gauged computer experts whose job it is to help business, industry, science and Government make the best use of changing data processing equipment and techniques.

The Internal Revenue Service is one example of a large data processing system calling for imaginative systems of engineering skills. The I.R.S. system involves a large computing centre to be established in Martinsburg, West Virginia, with smaller computers in regional areas. It will handle all forms of Federal taxes and cross check such data as individual income-tax returns, W2 forms, corporate income-tax statements, dividend payment notices, and interest payment notices. I.B.M. expects to invest about $2 million annually to train eventually up to 300 people a year at the Institute. Approximately 5,000 people now participate in the Company's systems work. Within five years, it expects this force to be doubled. I.B.M., it is recalled, was the first corporation to set up its own schools to train people to use data processing machines. The Company's educational system has grown to include today 25 education centres with over 200,000 students annually.

REINSURANCE BUSINESS IN INDIA

NATURE AND SCOPE—NEED FOR FRESH THOUGHT

By "Insurer"

THE most interesting study of *laissez faire* in India is provided by the reinsurance companies. Although the public sector now has a small share in reinsurance business, it has no significant effect on the methods of business. Reinsurance in India is hardly subject to any control or regulation and so the pattern shown is very diverse and one finds all manner of companies wanting to do reinsurance business.

Reinsurance of a sort has always been transacted in India, by all insurance companies. Facultative reinsurance, where individual risks are offered and accepted on merits by reinsurers, has been transacted both by life and general insurance companies, and societies as a necessary part of business. Again, it has always been necessary to have automatic treaty arrangements to offload the excess of any risk over and above the individual retention capacity of any insurance company. This is the only method by which any insurance company can accept a risk which may be too big to be absorbed by itself. It would be generally true to say that most of the facultative risks have been placed inside the country all these years, while there is a marked tendency to place the treaty reinsurances abroad. This has been necessary not only because competitors like to avoid dealing with one another, but also because, in the event of a large catastrophic loss, companies with similar portfolios are likely to be hit very hard simultaneously not only in their direct business but also in their reinsurance business.

New Factors in the Field

Two new developments have recently become more apparent in the field of reinsurance in India.

First, there is a growth of pure reinsurance companies which do not do any direct business with clients and deal only with insurance companies. This is the result partly of Government policy. The Government is vitally interested in stopping the drain of foreign exchange caused by most of the general insurance business of Indian insurance companies being reinsured abroad. The composition of insurance institutions in India has been unbalanced, as there has hardly been any reinsurance sector all these years. Till recently general insurance in this country was dominated by British insurers, who were not interested in fostering a reinsurance market in India at a sacrifice to the reinsurance market and the vested interests of brokerage houses in London.

The second factor which has contributed to the growth of reinsurance business is, ironically enough, the slow effectiveness of Governmental regulation of insurance. But, before we come to this point, it is necessary to make a reference to the following peculiarities of the Indian insurance market:

(*a*) In India, there are nearly two hundred insurance companies competing for a limited and almost constant volume of business.

(*b*) There is an oligopolistic tendency, in that the first ten biggest Indian companies go on growing. This is at the expense not only of the smaller companies but also the foreign companies, mostly British, who are steadily losing ground.

(*c*) India is the only country in the world where the expenses of insurance companies are limited by law. As these expenses are made a fixed proportion of the gross direct premium income, companies of an uneconomic size have to exist by writing undesirable business. Another way to get more direct business is to pay a higher price for business. This is done by various types of rebates to the assured which are illegal and yet are an accepted factor in the strange calculus of the cost of procuration. As the intermediary also has to subsist, he gets a higher commission than is allowed by law. This takes the form of bogus claims, salaries, travelling, entertaining and other expenses, etc. All these make for uneconomic operations.

Mushroom Growth

These peculiarities of the insurance market have given rise to a mushroom growth of reinsurance companies. These are companies which have found it difficult to exist as direct business writing companies, in view of the restrictive nature of insurance laws in India. There is no law limiting the expenses or commission payments of reinsurance companies. Thus, a reinsurance company has all the legal means of evading all the difficulties of harsh laws. It is possible for a reinsurance company to give illegal rebates to the original assured by adjustments in the reinsurance commission which is customarily high. Reinsurance brokerages are subject to negotiation, can be paid in different currencies and are possible to be shared. The Controller of Insurance files the forms of returns if and when sent by insurance companies and publishes some results as and when ready. But he does not seem to notice some disturbing trends in his reports, unlike the Reserve Bank whose studies of banking operations and inspections have to be up-to-date and effective.

Reinsurance business is more risky than normal insurance business, because the profitability is low and the catastrophic hazard is greater. To encourage reinsurance widely is to let fools rush in where angels fear to tread.

Two Important Goals

It is necessary to impress on all reinsurance companies the following two goals of policy under the present state of the Indian economy:

(i) Reinsurance companies in India have not yet been able to get a proper reciprocity of business for their cessions abroad. Another factor which aggravates the foreign exchange position is the customary exchange of profitable Indian business for unprofitable business abroad. This sounds as silly as it is true.

(ii) There is no point in starting a reinsurance company in this country, if it is to retrocede abroad a substantial amount of its business, like individual companies do at present. The only way out of this impasse is to make sure that all companies operating in India—whether Indian or foreign—are made to place all their reinsurances abroad through Indian reinsurance companies and brokers whose head offices pay taxes in India. At present, profits on reinsurances placed abroad are not taxed in India. Again, these reinsurance companies must be forced to retrocede a progressively higher proportion of their business inside India in rupees so as to conserve some foreign exchange and, at the same time, help stabilise the experience of different companies of India. Each company has its own quality and geographic source of business and its business will be subject to fluctuations, unless an averaging factor is introduced.

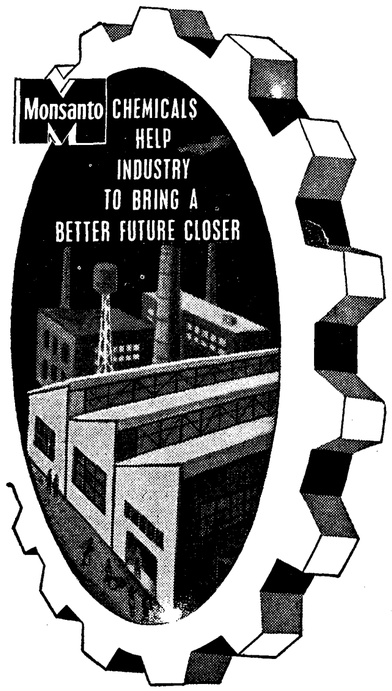
The ideal form a reinsurance company can take today is by technical collaboration with a foreign professional reinsurer. To maintain any semblance of efficiency, the Government should be associated only at the directorial level. The necessary calibre of staff would be readily available from the hard core of educated people who run insurance companies, in spite of the technical incompetency of managers of insurance companies who hold their positions because they are successful salesmen. All this is necessary only for the general insurance sector. The Life Insurance Corporation now has sufficient resources and experience not to place any reinsurance outside its own organisation.

EXPORT CREDIT INSURANCE

An offshoot of the new export-consciousness among some Western countries is the demand by exporters for credit insurance for periods exceeding the five years fixed by the International Union of Credit Insurers (Berne Union). British exporters, in particular, have been pleading with the Export Credit Guarantee Department that their foreign competitors somehow manage to get credit cover for longer periods for capital goods and that British exporters too should be given the same terms if they were to compete in foreign markets successfully. Partly in response to this plea and partly as a measure of export promotion, Mr. Reginald Maudling, President of the British Board of Trade, recently announced that the lending practices of the E.C.G.D. would be extended to enable a British exporter "to match terms offered by a foreign competitor with the backing of an export credit guarantee institution or equivalent official support." Britain, he made it clear, would not take the initiative in lengthening the terms of credit and thereby touch off a credit race. But he said, by implication, that, if other countries were to provide longer-term credit. Britain might have to do something to strengthen the position of British exporters.

Canadian exporters of capital goods, too, have now been offered more liberal export credit insurance under a new scheme announced on 25th November. The scheme involves the setting up of a new export financing organisation as a joint venture of Canadian banks which will handle

(*Continued on page* 1073)



Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

OBJECTS OF THE COMPANY

The Company has been incorporated on 7th November, 1960 for the several purposes set out in the Memorandum of Association, in particular to carry on the business of sugar manufacturers in all its branches.

PROSPECTS

The Company has been promoted by M/s. Kothari & Sons, Madras. The Promoters obtained a licence for this Company from the Government of India for the establishment of a Sugar Factory by this Company in Lalgudi Taluq of the Tiruchirapalli District, Madras State for the manufacture of sugar with a crushing capacity of 1,250 tons of sugarcane per day.

It is proposed to establish a factory for the manufacture of sugar in the Lalgudi Taluq in Tiruchirapalli District, Madras State with an initial crushing capacity of 1,000 tons per day which could be increased later on to 1,500 tons crushing capacity per day.

TAX BENEFITS

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate and depreciation; in addition, as a new Industrial undertaking, it will enjoy exemption from Income-tax for profits upto 6 per cent. on the Capital employed for the first five years of the Company's operation.

Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under Clause XX of Subsection (1) of Section 5 of the Wealth-tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

PLANT AND MACHINERY

It is proposed to enter into an agreement with M/s. Binny's Engineering Works (Private) Ltd., for the supply of the plant and machinery. They have agreed to import the necessary foreign components and to manufacture and supply the plant before the end of 1961. It is, therefore, expected that the factory will commence production early in 1962.

CAPITAL OUTLAY

In respect of this issue, the minimum subscription on which the Directors will proceed to allot is Rs. 15 lakhs being 1,50,000 Equity Shares of Rs. 10 each.

The capital required to reach the stage of production is estimated as follows:

		Rs.
(*a*)	Land and Buildings	31,00,000
(*b*)	Plant and Machinery (Including spares)	1,05,00,000
(*c*)	Preliminary Expenses	4,00,000
(*d*)	Pre-operative Expenses ...	4,00,000
(*e*)	Working Capital	16,00,000
	Total	1,60,00,000

The Industrial Credit and Investment Corporation of India Ltd., and The Bank of India Ltd., have agreed to give a loan of Rs. 35 lakhs each, i.e., Rs. 70 lakhs secured by a mortgage over the land, factory, plant and machinery and other fixed assets. The loan by The Bank of India Ltd., will carry interest at the rate of 2 per cent. over the Bank Rate subject to a minimum of 6½ per cent. while the loan from the Industrial Credit and Investment Corporation of India Ltd., will carry interest at 6½ per cent. The balance required will be borrowed from Banks and other sources.

MANAGING AGENTS

Subject to the approval of the Government of India, the Company will be under the management of M/s. Kothari & Sons (Industries) Private Limited. Articles 137 and 138 of the Company's Articles of Association provide for the appointment of M/s. Kothari & Sons (Industries) Private Limited as Managing Agents of the Company on the prescribed scale of commission subject to a minimum of Rs. 50,000 per annum.

UNDERWRITING

The Underwriters will each be paid an underwriting commission of 2½ per cent. on the face value of all the shares underwritten by them respectively besides brokerage of 1 per cent. on shares allotted on application bearing their rubber stamp.

BROKERAGE

Brokerage at the rate of 1 per cent. will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to the Underwriters in addition to the underwriting Commission on all allotments in respect of applications made or procured by them and bearing their rubber stamp.

Copies of the Prospectus and application forms may be obtained from the Company, the Underwriters, Bankers and Brokers set out above.

EXPANDING EXPORTS FROM UNDERDEVELOPED COUNTRIES

LIVELY DISCUSSION AT G.A.T.T. SESSION

THE highlight of the seventeenth session of the Contracting Parties to the General Agreement on Tariffs and Trade, held at Geneva last month, was a lively discussion on the problems confronting developing countries in the sphere of world trade. Although no new ground was covered, the representatives of the developing countries spared no effort to impress upon the industrially advanced countries the compelling urgency to remove the remaining obstacles in the way of free flow of trade placed by the latter on exportable commodities of the former group. Problems of less developed countries assumed particular importance in this session owing to three significant factors. First, joint note submitted by 19 of the less developed countries (including India, Burma, Ceylon, Pakistan, Malaya, Indonesia, Ghana, Tunisia, Turkey and Uruguay) on the question helped to enliven the deliberations in an informed way. Secondly, the G.A.T.T. Committee III, which is making a detailed study of the special commercial problems of these countries, presented its fourth progress report to the session. This report virtually confirms the existence of discriminatory measures detrimental to the interests of less developed countries. Lastly, the latest G.A.T.T. annual report, *The International Trade* 1959 (*vide* page 890, *Commerce* dated 19th November 1960), which usually forms the major background document for the session, has emphasised in unmistakable terms the imperative need for offering larger facilities to these countries by removing the remaining import restrictions in the developed countries.

Joint Note

The joint note submitted by 19 underdeveloped countries reflects their anxiety to secure larger export earnings to finance their plans for development. The note seeks to emphasise that, if the attitude of advanced countries does not change, the less developed countries will be compelled to find resources for their economic development by means of quantitative restrictions, monopoly practices and subsidies, which will be against the basic objectives of the G.A.T.T. It makes no bones about the fact that the choice is between "either to encourage less-developed countries to transform into economies based on diversified and rational international division of labour and a free and expanding exchange of goods and services, or to compel them to develop into more or less closed systems, with a self-sufficient continental type of economy based on a restricted and limited mutually balancing trading system."

The signatories of the note hold the view that high tariffs, restrictive fiscal levies and import quotas in some of the developed countries inhibit the entry into them of primary products, such as tea, coffee, cocoa, raw cotton and tobacco as well as such manufactured goods as cotton and jute products and sewing machines, for which less developed countries are seeking larger outlets in overseas markets. The imposition of regulations by State or other monopolies, surplus disposal activities and subsidies, too, according to the note, restrict the actual and potential markets for tobacco, vegetable oils and some other products of less-developed countries. The note further contends that industrialised countries should not ask the less-developed countries to give reciprocal and equivalent concessions in the tariff negotiations now going on at Geneva under the auspices of the G.A.T.T. It is not clear from available reports whether the developed countries are demanding any *quid pro quo* from the underdeveloped countries for giving up their restrictive practices or whether the reciprocal concessions are for other reliefs demanded by the developing countries. There is no justification for the former, because the request of underdeveloped countries is for the removal of unjust practices which is long overdue. As for the second, the developed countries will do well to realise that the developing countries are having balance of payments difficulties arising from their large developmental expenditure. Reciprocal concessions will be relevant only between countries which are of equal economic strength. The underdeveloped countries must first be given a chance to raise their living standards and then they must be asked to reciprocate the concessions shown to them. This means that the developed countries should wait at least for a decade.

The report of the G.A.T.T. Committee III, which reviews the progress made by individual Contracting Parties in removing obstacles to trade in the "first" list of commodities, is of considerable interest to less-developed countries. The commodities concerned include cocoa, coffee, copper, cotton textiles, jute manufactures, lead, oilseeds and vegetable seeds, raw cotton, tea, timber and tobacco. The types of obstacles to trade, according to the report, fall within three broad categories, namely, quantitative restrictions on imports, customs tariffs and internal revenue and fiscal charges. The report also describes the preliminary work of the Committee in examining the obstacles facing the exports of the "second" list of products, including light engineering goods (bicycles, sewing machines, electric fans, small diesel engines and electric motors), finished leather, leather footwear, iron ore, aluminium, alumina, bauxite, and sports goods. In this connection, the Committee has stressed the urgency with which less-developed countries view the need to diversify their economies and expand their exports of goods in the second list. It may be recalled here that the Committee III was established (as also the other two committees, the first one concerned with the arrangement for a general round of multilateral tariff negotiations now in progress at Geneva and the second one dealing with agriculturist policies, including protectionism) as a result of a resolution passed at the thirteenth G.A.T.T. session in November 1958, which sought to carry out a co-ordinated programme of trade expansion.

Presenting the report at the plenary session, Baron C. H. von Platen, the Acting Chairman of Committee III, pointed out that the exportable products of the less-developed countries could be divided into (*a*) products for which there is an "already existing surplus capacity" (examples are coffee, possibly jute, some tropical timber, some vegetable oils), (*b*) goods with a "latent surplus capacity," that is, goods which could be made available within a short time and with but little extra effort (examples are cocoa, tea, sports goods, finished leather footwear) and (*c*) products involving "long-term expansion plans," that is, calling for simultaneous solution of complex questions, such as manufacturing skill, marketing methods, investments, etc. (examples are light engineering goods, aluminium). Baron von Platen stressed that nothing should delay the diminution, as soon as possible, of the present degree of protectionism which prevents the less-developed countries from developing their exports to the industrialised countries and their intra-trade. Regarding the work of Committee III, he observed that too little time had elapsed to make a fair assessment; nevertheless, he had been much impressed by the obvious wish of all parties to understand problems which fundamentally are of mutual concern, and to co-operate. In conclusion, Baron von Platen said that the lowering of protective barriers sometimes called for the solution of delicate and intricate tax questions, that most industrialised countries could well afford to increase their imports from the less-developed countries and that it would be in the long-term interest of all members if the industrialised countries would make every effort to overcome existing difficulties in order to implement the recommendations of Committee III.

Slow Progress

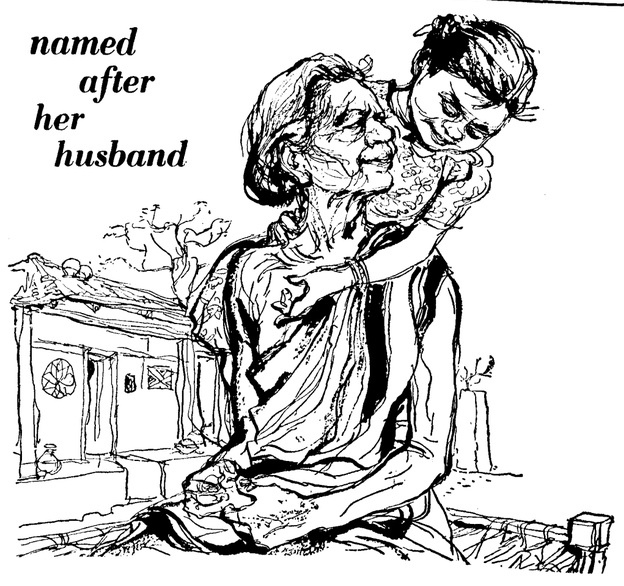
In the discussion which followed, while the delegates generally welcomed the report, those representing less-developed countries expressed disappointment at the slowness with which its recommendations were being implemented by the industrialised countries. While Committee III had helped to identify such obstacles as high tariffs, restrictive fiscal charges and import quotas which inhibit the entry into industrialised countries of primary products, there was, in the view of the less-developed countries, no real justification for the use of these protective and fiscal devices by the industrialised countries, in the context of the increase in national incomes and industrial activity. Although they had relaxed some quota restrictions in recent months, the benefits accruing to less-developed countries had been insignificant and there had been little or no action specifically directed towards improving the access of exports from the less-developed countries to the markets of the industrialised countries. It was pointed out that, over the last two years during which Committee III has been in existence, the export earnings of the less-developed countries had, by and large, continued to stagnate; they had not kept pace with the rate of growth in trade achieved by the industrialised countries. Attention was drawn, in particular, to the use by industrialised countries of fiscal levies or internal taxes which, it was stated, had actually been increased on products such as tobacco, tea and coffee in certain countries. The less-developed countries felt that conditions are now very favourable for the industrialised countries to reduce fiscal charges on primary and tropical products such as tea, coffee, cocoa and tobacco. They regretted that the progress which most industrialised countries have made towards liberalisation of imports has not extended to any real freeing of markets for imports from the less-developed countries and that restrictions continue to be maintained on items like cotton textiles, jute goods and other simple manufactures. In conclusion, the less-developed countries emphasised that "time is the most important consideration in regard to their economic development." What matters is not only the expansion of their trade and an increase in their export earnings, "but even more so, the rate of such expansion and increase, and the extent to which progress in this field induces investment from abroad."

Delegates representing the industrialised countries conceded that the difficulties faced by the less-developed countries required immediate and sympathetic attention. They, however, did not indicate the possibility of any major change in the existing policy. It is significant that no decision on the question was taken at this session. This is rather disappointing, because the translation of developed countries' verbal sympathy for underdeveloped countries into positive actions is overdue. Unless the industrial powers do something effective for buying more goods from the less industrialised countries and primary producers, the faith of the latter group of nations in the efficacy of G.A.T.T. will begin to diminish. Indeed, already a considerable section of public opinion in these countries have begun to wonder whether the G.A.T.T. will at all be able to form world trade on the lines envisaged in the Havana Charter.

Market Disruption

Another problem which came in for discussion at the latest session was the issue of what is called "market disruption," caused by sudden influx of imports. It was pointed out that sharp increase in imports over a brief period of time and a narrow range of products could have serious economic, political and social repercussions in the importing countries. The problem was to find the means to alleviate the adverse effects of such "abrupt invasions of established markets" while continuing to provide steadily enlarged opportunities for trade. On the basis of the proposals submitted by a working party on this question, the Contracting Parties have now agreed to certain procedures for considering the problem of "market disruption." In order to solve this problem consistent with the basic aims of the G.A.T.T. and to establish requisite procedures which will facilitate negotiations among Contracting Parties, it has been decided to maintain the Working Party on Avoidance of Market Disruption as a permanent Committee of the Contracting Parties. It has also been agreed that situations, which have been described as "market disruption," generally contain the following characteristics in combination: (1) A sharp and substantial increase or potential increase of imports of particular products from particular sources, (2) these products are offered at prices which are substantially below those prevailing for similar goods of comparable quality in the market of the importing country, (3) there is serious damage to domestic producers or threat thereof, and (4) the price differentials referred to in (2) above do not arise from governmental intervention in the fixing or formation of prices or from dumping practices.

Solutions to the problem of market disruption have so far been sought unilaterally or through bilateral arrangement. This has tended to cause difficulties in other markets and create problems for other Contracting Parties. The Governments of the affected countries have also been resorting to "exceptional measures" to safeguard their interests. In some cases, importing countries have taken or maintained discriminatory measures either outside the framework of the provisions of the G.A.T.T. or contrary to its provisions. In some other cases, exporting countries have tried to correct the situation by taking measures to limit or control the export of the products giving rise to the situation. It is to be hoped that the establishment of the new machinery for consultations will lead to solutions which are mutually helpful to both the exporting and importing countries.



Last year, 61-year old Lakshmi Hansda retired from the Jamshedpur Steel Works which she and her late husband, Sitaram Hansda, joined as a young Adivasi couple shortly after the first steel ingot was cast in 1912. The family connection with the Steel Works is maintained through two of her three sons who work there.

Lakshmi and her family—sons, daughters and grandchildren—live in the same area in Jamshedpur where she first set up her home on arrival from a Ho village in Seraikella nearly 50 years ago. That once-desolate spot is now a busy, bustling Adivasi community, with clean huts, roads, water supply and a primary school and is named Sitaramdera in memory of Lakshmi's husband.

Like men and women from other parts of India, Adivasis have found a happy home in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

RUBBER—ACHILLES HEEL OF MALAYA

(*Concluded from page* 1054)

goods of all countries. To frighten the businessmen, the skilled traders and others who give value to Singapore and make them run to the Malayan mainland is foolish. But the politicians of Singapore did the damage which now makes Malaya more reluctant than even before to include Singapore in the Federal set-up. It may be a very long time before this fear is overcome in the Malayan mind.

Malaya's economic Achilles' heel is, of course, her heavy dependence on one single crop: rubber. But the last few years have been kind to Malaya and rubber has brought much prosperity to the country so as to provide her with a strong currency and enough resources to enable the development of Malayan economy. It is the view of some of the close observers of recent Malayan economy that she is probably making the mistake of economic profligacy by squandering too much on non-productive organisations and institutions, on fashionable buildings and lavish import of consumer goods and on embellishing social services. The sense of well-being and prosperity fostered by the Government might suddenly vanish, if rubber were to have a few bad years, a prospect which nobody seems to take too seriously at present. A drive for industrialisation is, of course, under way and the Government offers great scope for the participation of foreign technical skill and capital.

A remarkable feature of the Malayan scene is the serenity and equableness of its political character which contrasts so starkly against the Communist upheaval with which the country had to grapple for 12 years and all the problems of which are not yet solved. Is there a simmering volcano below the taproots of the rubber trees? How much of the present calm and confident state is due to an orderly Government, peace and prosperity or in the easy and pleasant Malayan character which is so well exemplified by Tungku Abdul Rehman himself? The future will provide the answer. But it can be confidently stated that, in Tungku Abdul Rehman, and for a newly free nation, Malaya has a leader and statesman who minds his country's business with no wish to parade on the international stage, and goes about it quietly and with remarkable ability.

STEEL

manufacture

[redacted] at

MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

	1957/58	1958/59	1959/60
	(Rs. in lacs)		
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

MUKAND | STEEL STRENGTHENS THE NATION

OUTLOOK FOR BOMBAY BURMAH

CHAIRMAN'S OBSERVATIONS FAIRLY OPTIMISTIC

THE Chairman of the Bombay Burmah Trading Corporation Ltd., Mr. Pratapsinh Mathuradas, visualises an encouraging trend regarding the current and prospective performance of the Company. Presiding over the ninety-seventh annual meeting of the Company held on the 2nd inst., Mr. Mathuradas pointed out that the progress of the Company's tea estates in India was very satisfactory. Helped by the favourable weather conditions, tea crop during 1959-60 exceeds the previous year's record crop, the increase being from 6,959,132 lbs. to 7,536,327 lbs., with the overall average yield per acre now approaching 1,200 lbs. The Chairman, however, stated that, despite the satisfactory increase in yield, the rise in labour costs and other charges in the plantation industry provided a disquieting picture and efforts would have to be made to halt these mounting costs.

Discussing the prospects for the current year, Mr. Mathuradas indicated that the tea crop on the estates was running at a level appreciably higher than that in the past year and, if favourable weather conditions continued during the remaining part of the year, this year's harvest might compare well with that obtained in 1959-60. Although the demand for Indian tea in London—the world's main tea market—had declined a little, there were signs of recovery and quality teas were expected to sell well. In the Cochin market, too, sales were somewhat restricted, but that market also was expected to strengthen, with increased demand from export buyers. Local sales had been most encouraging and the Company was giving special attention to the allocation between internal and export markets, so as to secure the best advantage. He concluded that overall tea prospects for the year "are reasonably encouraging, thanks to the increased consumption in India which is helping to stabilise prices, as well as increase in the world demand after an uncertain start." The tea estates of the Company, situated in Tanganyika, were also showing encouraging progress.

Alluding to the Company's coffee plantations in India, Mr. Mathuradas admitted that the year was one of the mixed fortunes. Crop prospects for the current year were also uncertain. Crop indications were on the whole rather more favourable than last year, but much would depend on weather conditions over the next two months. There were also signs of disease over a wide range of coffee estates in South India, including the Company's gardens. The trend of future coffee prices too was not bright, and the world excess of coffee supplies would continue to exercise a depressing effect for which the only remedy, visualised by the Chairman, was increasing reliance on potential markets within India.

Referring to the Company's timber selling business, Mr. Mathuradas stated that, though the timber selling prices, which remained at a very high level in the months of June and July of the current year, recorded a general fall thereafter, the average for the year would not be far from that of 1959-60. In this case, much would depend on the ability of the Japanese market—which is by far the largest buyer of Borneo timber—to absorb the increasing production now coming forward. Meanwhile, the Company was also making efforts to develop other markets and the general prospects were encouraging. Profitable timber working in North Borneo depended, he said, on the maintenance of a very high volume of extraction and sales. With this in view, the Company's branches, namely, the Wallace Bay Branch and the North Borneo Timbers Ltd., were currently engaged in forest surveys in order to secure extensions in the extraction areas available to them and ample sources for future supplies.

Outlining the Company's plans for expanding its activities, the Chairman stated that, consequent on the closure of the Company's teak working in Burma and Thailand, it had become necessary to reallocate resources. In doing this, a balance was being struck between development within India and overseas, as well as between short-term ventures, offering quicker yields and longer term schemes taking a long gestation period. In the choice of alternatives, the Company's specialised experience in the timber and plantation industries was being given sufficient attention. The broad future movements in commodity markets, stability of conditions in different areas and cost trends were also influencing the selection of lines of development. "While much still depends to be done, a point has now been reached," Mr. Mathuradas added, "when your Company can start to reap the benefits of past developments."

Turning to the Company's business pertaining to the manufacture of marine craft, the Chairman of the Bombay Burmah pointed out that, despite a marked increase in turnover from some Rs. 20 lakhs to Rs. 30 lakhs during the year, no margin of profit was earned on the year's working during 1959-60. The long-term prospects in this line were, however, encouraging. In Burma, a number of new boat building orders were received and the current year's results would reflect this improvement. As regards the Company's asbestos cement and concrete pipe factories in Rangoon, the prospects were stated to be reassuring. High level of production and an increase in offtake of these goods are anticipated in future years.

The Chairman also briefly referred to the opening up of cocoa on Quoin estate in North Borneo as well as to the investment of the Company to the tune of Rs. 7 lakhs in a first class rubber estate in Java, of approximately 5,000 acres complete with factory and line installations, and said that these operations of the Company would serve to offset any marked fluctuations in timber income. The earning position of the rubber business was also reported to be basically sound.

It will be seen from the foregoing account of Mr. Mathuradas's speech that investors can take a fairly optimistic view of the outlook for the Company. In all the main branches of the Company's business, namely, tea, timber and marine craft, the position is sound. Further, the management is not resting on the oars of past efforts. On the contrary, it is planning for diversifying its activities. What is more, it has sufficient resources to branch out on new lines of production.

While replying to the shareholders' questions, Mr. Pratapsinh Mathuradas stated that the Company was thinking in terms of extending its activities in India. But, in view of the numerous formalities, technical and otherwise, which had to be undergone, he was not in a position to say the exact nature of the schemes the Company would undertake. He agreed, in principle, with the shareholders' plea that the dividend be stabilised at 30 per cent. but he did not commit himself to the suggestion of some shareholders that the Company should commemorate its centenary, due shortly, by making a gift to shareholders in the form of a bonus issue of shares at the time of the forthcoming centenary celebrations of the Company.

HINDUSTAN MOTOR FARES WELL

MOVE TO DIVERSIFY COMPANY'S ACTIVITIES

THE financial results of the Hindustan Motors Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) for the year ended 31st March 1960 show a remarkable improvement over those for the previous year, with the result that the Directors have been able to recommend a slightly higher dividend for that year as compared with the previous one. The dividend declared last year amounted to 50 nP per share of Rs. 10 whereas this year, the shareholder will get a net of 63 nP per share or a gross of 90 nP. This excellent working of the Company has also reflected itself in the prices of the ordinary shares of the Company which are currently being quoted at Rs. 19.76, as against Rs. 14.92 a year ago. A few months earlier, this scrip was quoted as high as Rs. 23.64 and just before the dividend announcement they were very nearly Rs. 20.50. These high levels were the result of speculative buying and the general boom in the market. The speculators were rather disappointed that the gross dividend was not even Re. 1 per share, but they had allowed their expectations to run riot. The subsequent reaction cannot therefore be regarded as a true reflection of genuine investors' appreciation of the Company's results for 1959-60.

In the last accounting year, the turnover of the Company was sizably lower as compared with that in the year 1957-58, due to lower output of cars and trucks, consequent on the inadequate and irregular supply of imported components. These difficulties continued to handicap the production programme only in the first quarter of the year under review, when the regular production of cars and trucks was disturbed for lack of imported components. In the subsequent months, however, thanks to a liberal quota of foreign exchange allotted to the Company by the Central Government, production of cars and trucks showed a distinct improvement, though it still remained below plant capacity. The sales proceeds increased by two and a half times over the previous year and the gross profits have jumped up, from Rs. 126.87 lakhs for 1958-59 to Rs. 253.85 lakhs for the year under review. This represents almost an increase of 100 per cent. and is on top of a rise of Rs. 43.33 lakhs or 52 per cent. recorded in the previous year.

A large part of the expansion in profit has gone to swell the coffers of the Government. Thus, the provision for taxation absorbs Rs. 70.15 lakhs (including Rs. 2.15 lakhs for sales tax in respect of previous years). The depreciation account has received a slightly smaller amount, Rs. 51.80 lakhs, as against Rs. 69.63 lakhs in the preceding year. The net profit after these essential charges has risen from Rs. 42.98 lakhs to Rs. 109.10 lakhs. A sum of Rs. 30 lakhs has been set aside for development rebate reserve, which is nearly four times the amount devoted last year for this purpose. The Company has still arrears of initial depreciation and development rebate to the tune of Rs. 84 lakhs, but it has met all new depreciation and development rebate.

The following comparative table shows the Company's working results for the past four years:

(Value : In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957

In their report to the shareholders, the Directors have given a succinct account of the ceaseless efforts they have been making to get the Government's permission for fully utilising the Company's productive capacity. It shows that, if only the Government had been a little more imaginative, the Company's progress in 1959-60 would have been even more impressive, with additional benefits to the Government and the country alike. The Directors say that efforts are being made to increase the indigenous components for the Ambassador car and the Bedford truck, so that the Company will become less dependent on imported parts. The Company has submitted its expansion proposals for cars and trucks to the Government and has requested import licences for completion of this expansion programme.

Some idea of this programme can be had from the following quotation from the Directors' report:

"The *Ad Hoc* Committee on the Automobile Industry appointed by the Government made a detailed study of the existing conditions and progress made by the industry and submitted its report to the Government. The Committee has recorded that 'the Hindusthan Ambassador is undoubtedly the leader in this field.' 'Today on the assessment made by us, the indigenous content is a little over 70 per cent. They have in fact made all the components which an automobile manufacturer normally produces.' 'The further progress in increasing the indigenous content of the Hindusthan Ambassador will depend mainly on the development of ancillary industries and Hindustan Motors themselves have a relatively small contribution to make.'

"As regards trucks, the Committee has noted that commercial transport vehicles should be looked upon as capital goods of the road transport industry as it provides continuous widespread employment with benefit both to the consumer and producer. With similar expenditure few other industries can do so. The Committee recommended that 'of the chassis manufacturers, the claim of Hindustan Motors for being allowed to make the Bedford diesel engine is the stronger for the reason that the Bedford engine has a considerable commonality of parts as between diesel and petrol versions and for the latter Hindustan Motors have already got Government's permission. Furthermore, the Bedford engine is designed for the Bedford chassis.' Bedford trucks have been well received by the public and the demand for them is satisfactory. It is expected that these trucks will become more popular with the introduction of Bedford diesel engine. Permission for the manufacture and capital goods licence for it, is still awaited from Government. We hope Government will now take a final decision and allow us the necessary licence. Manufacture of chassis frame has already been completed. Arrangements have also been completed for the manufacture of rear axle and the gear box, which are being deleted from imports.

"The Committee has considered various estimates of the likely demand for vehicles by the end of the third Five-year Plan amounting to about 60,000 commercial vehicles and 40,000 cars and recommended that the industry's capacity should be increased to take care of this, and added that, in order that the expansion programme for commercial vehicles, is completed as quickly as possible, Government should ask the manufacturers to submit their expansion proposals immediately and that there should be no limit on each individual company's expansion. The Committee considered that the import of capital goods for the automobile industry should receive a higher priority in allocation of foreign exchange. Accordingly, your company has submitted its expansion proposals for cars and trucks to the Government and has requested for import licence for capital goods. The Government decision announced by their resolution dated 6th September 1960 has been published. However, we now await its actual implementation to ensure expansion of the industry which is so vital in national interest."

Another development of interest having a bearing on the future prospects for the Company is the four agreements which it has entered into with established manufacturers in foreign countries with a view to diversifying its activities. These agreements are:

(1) With Universal Marion S.A. Switzerland, and the Marion Power Shovel Company, a division of the Universal Marion Corporation of U.S. for the manufacture and sale of 93 M Crawler mounted diesel powered excavators and components thereof in India,

(2) With Caterpillar Tractor Company of U.S.A. for the manufacture and sale of bulldozers and scrapers in India,

(3) M.A.N. Nuremberg, for the manufacture and sale of crane engineering products of M.A.N. design in India, and

(4) With Athey Products Corporation, Chicago, for the manufacture and sale of Athey Dumpers in India.

The Company has received the development licence for the aforesaid items and arrangements have been made to manufacture these after receipt of licence for raw materials, capital goods, etc.

During the year under review, the Company made a capital expenditure of Rs. 183.73 lakhs bringing the total of block account as at the end of the year to Rs. 736.56 lakhs. The depreciation provided on this amounts to Rs. 325.48 lakhs so that the net value of assets stands at Rs. 411.08 lakhs. The other assets aggregate to Rs. 752.34 lakhs, out of which stock in trade accounts for Rs. 337.00 lakhs and cash balance for Rs. 257.98 lakhs. As against this, current liabilities and provisions came to Rs. 290.70 lakhs, leaving net assets of Rs. 872.72 lakhs, represented by a paid-up capital of Rs. 819.57 lakhs, and reserves and surplus of Rs. 53.15 lakhs.

The Rs. 10 paid-up shares of the Company are being currently quoted at Rs. 19.76 *cum-div.* On an *ex-div.* basis, the yield on the share works out at 3.3 per cent. per annum, free of tax.

COMPANY MEETINGS AND DIVIDENDS

HINDUSTAN MOTORS LTD. Annual General Meeting, Calcutta, 21st December 1960. Dividend: Re. 0.90 per ordinary share, subject to deduction of tax. Transfer books remain closed from 9th to 21st December 1960, both days inclusive.

SIJUA (JHERIAH) ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 22nd December 1960. Dividend: Re. 1.00 per share, subject to deduction of tax, payable on or after 22nd January 1961. Transfer books will remain closed from 12th to 22nd December 1960, both days inclusive.

ANIL HARDBOARDS LTD. Annual General Meeting, Bombay, 22nd December 1960. Dividend: Rs. 6.00 per ordinary share (exempt from tax—to be paid out of the Company's 15-C profit reserve), payable on and after 15th March 1961. Transfer books remain closed from 2nd to 23rd December 1960, both days inclusive.

INDIA JUTE CO., LTD. Annual General Meeting, Calcutta, 22nd December 1960. Dividend: Re. 1.00 per share, final, subject to deduct on of tax. Transfer books will remain closed from 11th to 22nd December 1960, both days inclusive.

MEGNA MILLS CO., LTD. (Jute Co.) Annual General Meeting, Calcutta, 22nd December 1960. Dividend: Re. 0.60 per share, final, subject to deduction of tax. Transfer books will remain closed from 11th to 22nd December 1960, both days inclusive.

GILLANDERS ARBUTHNOT AND CO., LTD. Annual General Meeting, Calcutta, 23rd December 1960. Dividend: Re. 1.00 per share, subject to deduction of tax. Transfer books remain closed from 9th to 23rd December 1960, both days inclusive.

GANNON DUNKERLEY AND CO., LTD. Annual General Meeting, Bombay, 23rd December 1960. Dividend: 10 per cent. or Rs. 10.00 per share, subject to deduction of tax. Transfer books will remain closed from 16th to 30th December 1960, both days inclusive.

RAJAGIRI RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Alleppey, Kerala State, 26th December 1960. Dividend: 20 per cent. or Rs. 2.00 per share (includes interim dividend of Re. 1.00 per share), subject to deduction of tax. Transfer books will remain closed from 19th to 26th December 1960, both days inclusive.

NAIHATI JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 26th December 1960. Dividend: *Nil*. Transfer books will remain closed from 13th to 26th December 1960, both days inclusive.

MYSORE KIRLOSKAR LTD. Annual General Meeting, Harihar, 26th December 1960. Dividend: Rs. 8.40 (net) per share, on old and new ordinary shares, payable on and after 1st February 1961. Transfer books will remain closed from 19th December 1960 to 2nd January 1961, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 27th December 1960. Dividend: Re. 1.30 per share, final, on 'A' and 'B' ordinary shares and Re. 0.125 per share, final, on preferred ordinary shares, subject to deduction of tax, payable on or after 30th January 1961. Transfer books remain closed from 6th to 27th December 1960, both days inclusive.

ALUMINIUM CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 27th December 1960. Dividend: 12 per cent. or Re. 1.20 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 9th to 27th December 1960, both days inclusive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 28th December 1960. Rs. 2.00 per share, subject to deduction of tax (being the interim dividend already paid).

BALLARPUR PAPER AND STRAW BOARD MILLS LTD. Annual General Meeting, Ballarpur, District Chanda, Maharashtra, 28th December 1960. Dividend: 14.30 per cent. on ordinary shares, subject to deduction of tax. Transfer books will remain closed from 19th to 28th December 1960, both days inclusive.

GREAT EASTERN SHIPPING CO., LTD. Annual General Meeting, Bombay, 29th December 1960. Dividend: 10 per cent. or Re. 1.00 per ordinary share of Rs. 10 paid up and Re. 0.50 per ordinary share of Rs. 5 paid-up, subject to deduction of tax, payable on and after 20th March 1961. Transfer books remain closed from 5th to 29th December 1960, both days inclusive.

BELAPUR CO., LTD. Annual General Meeting, Bombay, 29th December 1960. Dividend: Rs. 29.00 per share, subject to deduction of tax, payable on and after 7th February 1961. Transfer books remain closed from 21st November to 20th December 1960, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Anderson Wright Ltd.

THE directors of the above Company (Chairman: Mr. B. P. Kedia, Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The Company's profit for the year is Rs. 7,14,215 (Rs. 1,18,756) to which is added the amount brought forward from the previous year of Rs. 6,145 (Rs. 7,803) making a total of Rs. 7,20,360 (Rs. 1,26,559). After deducting provis on for taxation of Rs. 3,01,383 (Rs. 55,414) the amount available for disposal is Rs. 4,18,977 (Rs. 96,145 including Rs. 25,000 transferred from general reserve). This amount the directors recommend should be dealt with as follows:

In payment of dividends subject to deduction of income-tax on preference shares at 4½ per cent. per annum, absorbing Rs. 90,000 (Rs. 90,000) on ordinary shares at 10 per cent per annum, absorbing Rs. 2,00,000 (*nil*), to be transferred to preference dividend suspense account Rs. 22,500 (*nil*), to be transferred to debenture redemption reserve Rs. 50,000 (*nil*), to be transferred to general reserve Rs. 25,000 (*nil*) and to be carried forward Rs. 31,477 (Rs. 6,145).

The Preference Shares (Regulation of Dividends) Bill which seeks to adjust the unhappy situation created by the Finance Acts 1959 and 1960 in relation to d vidend on preference shares is, at present, before the Parliament. In view of the retrospective provisions of the proposed legislation, the directors have set apart Rs. 22,500 representing 25 per cent. of the year's preference dividend, which they may be called upon to declare as additional dividend to the preference shareholders if and when the Bill becomes law.

The directors report that inspite of adverse trading conditions which prevailed during the period under review, the Company's achievements as reflected in the accounts have been satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block*	42,79,039
Debentures ...	10,00,000	*Less*—Depreciation ...	56,113
Reserves ...	15,22,500		
Provision for taxation ...	2,01,956	Net block ...	42,22,926
Liabilities ...	70,02,857	Book debts ...	43,36,270
Profit and loss account (surplus) ...	31,477	Investments	51,89,309
		Cash ...	10,285
Rs.	1,37,58,790	Rs.	1,37,58,790

*Gross block includes an amount of Rs. 41,94,400 being share in the firm of Anderson Wright & Co. at cost.

Jubbulpore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

In the report for the year ended 31st March 1959 mention was made that as from 1st April 1959 the Madhya Pradesh Electricity Board had declared Jubbulpore Power Station as a controlled station under the provisions of the Electricity (Supply) Act, 1948. The provisions of the First Schedule to the said Act accordingly became applicable to the Undertaking as from 1st April 1959, and the accounts for the year ended 31st March 1960 have been prepared in accordance with the provisions laid down therein.

A comparative schedule of sales and revenue for the past three years is as under:—

Year Ended	*Unit sold*	*Revenue*
		Rs.
31st March 1958	32,108 866	35,87,927
31st March 1959	33,191,190	35,24,601
31st March 1960	29,088,170	33,43,871

The reduced rate of Company taxation does not increase the reasonable return out of which distribution of dividends is made by an Electric Supply Company. It is not, therefore, possible for Electric Supply Companies, unlike other Companies, even partially to compensate shareholders for the loss of tax benefits previously enjoyed by them. The trifling concession by way of special appropriation that is likely to be considered by the State Government in this connection will be availed of to the extent permissible.

As the clear profit for the year under review falls short of the reasonable return calculated under the Electricity (Supply) Act, 1948, a sum of Rs. 30,922 representing the shortfall has been transferred from the balance at credit of the tariffs and dividends control reserve to the profit and loss account in accordance with the provisions of Sub-Clause (2) of Clause II of the Sixth Schedule to the Act.

The profit, after providing for taxation, depreciation and all other charges, amounts to Rs. 3,66 095 (Rs. 4,14,526). From this has been deducted a sum of Rs. 1,41,789 (Rs. 2,06,047) in respect of the following reserve allocations:—To contingencies reserve Rs. 53,649 (Rs. 52,096), to development reserve Rs. 33,140 (Rs. 15,953) and to general reserve Rs. 55 000 (Rs. 1,10,000). There remains a balance of profits amounting to Rs. 2,24,306 (Rs. 2,08,478 after transferring Rs. 13,999 to tariffs and dividends control reserve and Rs. 13,999 to rebate to consumers) to which is added Rs. 30,945 (Rs. 29,425) being the balance brought forward from the previous year to make an available balance of Rs. 2,55,251 (Rs. 2 37,904). The directors recommend that there be paid for the year ended 31st March 1960, a dividend at the rate of 10 (8 per cent. tax-free) per cent. subject to deduction of tax at the prescribed rates in accordance with the provisions of Section 18(3D) of the Indian Income Tax Act, leaving a balance to be carried forward of Rs. 30,296 (Rs. 30,945 after making an additional payment of Re. 0.12 per share, free of tax absorbing Rs. 30,945).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,49,700	Gross block	1,07,31,716
Reserves ...	27,02,877	*Less*—Depreciation ...	40,42 273
Provision for taxation ...	53,879		
Liabilities ...	40,56,715	Net block ...	66,89,443
Profit and loss account (surplus)	30,296	Work-in-progress ...	3,82,967
		Stores, etc. ...	6,25,773
		Book debts ...	7,91,653
		Investments	2,84 038
		Cash	3,19,593
Rs.	90,93,467	Rs.	90,93,467

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

To cope with load development pending the State Electricity Board's decision as to whether or not additional generating plant is to be installed at the power station, arrangements have been made with the State Government to take over from them on hire eleven oil engine sets of 250 kw. each. These has been installed and are in commission.

The following schedule indicates the progress that has been made:—

Year ended	*Units sold*	*Revenue*
		Rs.
31st March 1958	36,063,750	44,14,417
31st March 1959	38,909,655	48,11,800
31st March 1960	43,254,359	51,18,851

The reduced rate of Company taxation does not increase the reasonable return out of which distribution of dividends is made by an Electric Supply Company. It is not, therefore, possible for Electric Supply Companies, unlike other companies, even partially to compensate shareholders for the loss of tax benefits previously enjoyed by them. The trifling concession by way of special appropriation that is likely to be considered by the State Government in this connection will be availed of to the extent permissible. As hereinafter stated, a sum of Rs. 6,615 has been set aside in the accounts to national tax relief reserve, to be utilised for capital extensions, subject to the approval of the State Government which is awaited.

The profit, after providing for taxation, depreciation and all other charges, amounts to Rs. 6,41,627 (Rs. 6,80,801). From this has been deducted a sum of Rs. 4,51,372 (Rs. 5,09,785) in respect of the following reserve allocations:— To contingencies reserve Rs. 85,454 (Rs. 81,233), to development reserve Rs. 91,435 (Rs. 1,13,920), to tariffs and dividends control reserve Rs. 27,634 (Rs. 28,916), to rebate to consumers Rs. 27,634 (Rs. 28,916), to national tax relief reserve Rs. 6.615 (*nil*), to reserve for redemption of debentures Rs. 87,600 (Rs. 1,16,800) and to general reserve Rs. 1,25,000 (Rs. 1,40,000). There remains a balance of profits amounting to Rs. 1,90,256 (Rs. 1,71,016) to which is added Rs. 42,307 (Rs. 41,291) being the balance brought forward from the previous year to make an available balance of Rs. 2,32,563 (Rs. 2,12,307).

The directors recommend that there be paid for the year ended 31st March 1960, a dividend at the rate of 11 (10 per cent. tax-free) per cent. subject to deduction of tax at the prescribed rates in accordance with the provisions of Section 18(3D) of the Indian Income-tax Act, leaving a balance to be carried forward of Rs. 45,563 (Rs. 42,307).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,00,000	Gross block	1,71,05,214
Debentures ...	12,00,000	*Less*—Depreciation ...	47,49,307
Reserves ...	47,66,354

Bengal Luxmi Cotton Mills Ltd.

The directors of the above Company (Managing Director: Mr. D. N. Bhattacherjee, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The Company had suffered loss during the year under report amounting to Rs. 88.149 (Rs. 8.35.310) which is of course much less than the last year's amount of loss. There has been a provision of Rs. 69,500 (Rs. 37,000) as development rebate reserve and a transfer of Rs. 19.142 (*nil*) to general reserve which represents dividends forfeited and shown at the credit of the profit and loss account for the year. Besides, after further adjustment of Rs. 28 (*nil*) being sales-tax provided in excess during the previous years and Rs. 1.68,477 being balance at debit brought forward from the last year's account, the profit and loss account of the Company shows at the end of the year a net debit balance of Rs. 3,26,098 (Rs. 1.68.477) against reserves of Rs. 2.44.733 (Rs. 1.56.980), not available for the purposes of distribution. The directors, therefore, regret being not in a position to declare any dividend on the ordinary as also the preference shares.

The prices of Cotton during the year were abnormally high due to short supply on account of partial failure of crops. The prices of stores, dyes and chemicals were also higher. Besides, the full impact of higher wages under the Tribunal Award of 1953 had come up. The prices of cloth, though not very satisfactory during the earlier part of the year, improved and became remunerative since November, 1959. Inspite of the higher costs of production as aforesaid, the Company could make profits but unfortunately due to labour strikes the Mill remained closed for two months. Though the Factory re-opened on the 18th January 1960, the full units could not be worked till the end of the financial year. This naturally had seriously affected the working of the Company resulting in a loss as aforesaid.

The directors are glad to inform that the labour position has since improved a great deal and the Mill is now working satisfactorily. Further, the Company has got the sanction of a loan of Rs. 30.8 lahks from The National Industrial Development Corporation Limited, for modernising its plant and machinery. Some of the new machines have already arrived and more are expected to come before the end of the current year. With the working of these new units the directors hope to reduce the cost of production and show better results in the current year.

Accounts in brief are as under:—

Gillanders Arbuthnot and Co., Ltd.

The directors of the above Company (Managing Director and Chairman: Mr. P. E. G. W. Parish, Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The profit for the year before providing for income-tax and super tax amounts to Rs. 26,10,322 compared with Rs. 23,07,024 for the previous year. After making the relative tax provisions and other necessary adjustments, and taking into account the credit balance brought forward from the preceding year, the amount available for disposal is Rs. 16,24,794 (Rs. 12,52,026), arrived at as follows: The profit and loss account shows a balance of profit of Rs. 26,10,322 (Rs. 23,07,024) to which has to be added the balance brought forward from the previous year of Rs. 1,57,026 (Rs. 1,46,370) making a total of Rs. 27,67,348 (Rs. 24,53,394). The provision required for taxation is Rs. 11,53,841 (Rs. 12,01,368) leaving a balance of Rs. 16,13,507 (Rs. 12,52,026). After deducting therefrom transfer to development rebate reserve of Rs. 4,200 (Rs. 20,000) and initial contribution to approved superannuation fund Rs. 6,84,513 (*nil*) there is left a balance of Rs. 9,24,794 (Rs. 12,32,026). With the transfer from superannuation fund (reserve) of Rs. 7,00,000 (*nil*) the amount available for disposal comes to Rs. 16,24,794 (Rs. 12.32.026). Of this balance the following amounts have been utilised in paying in full the dividends for the year ended 31st March 1960, on the preference share capital. on 1st October 1959 Rs. 62,500 (Rs. 62,500) and on 1st April 1960 Rs. 62,500 (Rs. 62,500). The directors now recommend that the remaining balance of Rs. 14.99,794 (Rs. 11,07,026) should be disposed of as follows:—

By payment of a net (tax-free) dividend for the year on the 6,50.000 ordinary shares of Rs. 10 each at the rate of 10 (10) per cent. (subject to the deduction of additional tax for non-resident shareholders) absorbing Rs. 6.50.000 (Rs. 6,50.000), to provide for tax payable on behalf of the shareholders at 30 per cent. Rs. 2.78.572 (*nil*) to transfer to general reserve Rs. 3,00.000 (Rs. 2.00,000) and to transfer to contingencies reserve Rs. 1.00.000 (Rs. 1.00.000) leaving to be carried forward to the next year Rs. 1,71,222 (Rs. 1,57,026).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,00.000	Gross block	30,57,755

Anil Hardboards Ltd.

The directors of the above Company (Managing Agents: Jolly Industrial Agencies Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1960.

The year's working after providing Rs. 9,93,5[illegible] (*nil*) for depreciation and Rs. 91.017 (Rs. 11,30 00 for development rebate, resulted in a profit Rs. 10.11,603 (Rs. 54,549). Adding thereto a su of Rs. 4,351 (debit of Rs. 50,198) brought forwa from the preceding year, the amount available Rs. 10,15,954 (Rs. 4,351) out of which, after appropr[illegible]

ating Rs. 2,49.851 (*nil*) being the unadjusted depreciation and Rs. 3,76,243 (*nil*) being the development rebate of the preceding year, the amount available is Rs. 3,89,860 (*nil*). The directors have set aside therefrom Rs. 3,74,894 to 15-C profit reserve, leaving Rs. 14,966 (Rs. 4,351) which the directors recommend for appropriation as under:—

To provision for taxation Rs. 14,000 (*nil*) and balance to be carried forward Rs. 966 (Rs. 4,351). The directors recommend that out of the 15-C profit reserve, following dividend be declared:— 8 (*nil*) per cent. on preference shares absorbing Rs. 1,58,400 (*nil*) and 6 (*nil*) per cent. on equity shares absorbing Rs. 1,80,000 (*nil*) leaving a balance of Rs. 36,494 (Rs. 4,351) in the 15-C profit reserve which may be carried forward.

During the year, the factory worked to its full capacity. The Company has made every effort to popularise the hardboard again, which, due to the import restrictions from 1951 had lost the consumers' market. The directors inform that the Company has been enlisted with the Director General of Supplies and Disposals New Delhi and has secured a substantial contract for supply of hardboards to the Railways. It is hoped that, in the near future, other Government Departments will follow suit and that the demand from various Government Departments will increase considerably, in addition to the general demand which is already on the increase.

The import licence, for establishment of an Insulation Board Mill has been duly received, and orders had already been placed for required machinery. The necessary foreign exchange required for import of machinery has been obtained from the International Bank for Reconstruction and Development through the Industrial Credit and Investment Corporation of India Ltd., on a long term loan. The machinery is expected to reach India by March 1961 and the directors expect the Insulation Board Mill to function by 1961. The construction of factory building has already commenced and is coming up according to schedule.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Gross block	80,65,990
Reserves ...	16,33,754	*Less*—Depreciation ...	12,43,589
Provision for taxation ...	14.000		
Liabilities ...	48,65,938	Net block ...	68,22,401
Profit and loss account (surplus)	966	Stock-in-trade	27,71,850
		Stores, etc. ...	2,33,455
		Book debts ...	3,17,716
		Cash ...	1,61,564
		Miscellaneous expenditure	2,07,672
Rs.	1,05,14,658	Rs.	1,05,14,658

Jardine Henderson, Ltd.

The directors of the above Company (Secretary: Mr. D. Fordwood, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The profit and loss account shows a balance of profit of Rs. 27,02,566 (Rs. 27,50,714) to which has to be added unclaimed dividends forfeited, less paid Rs. 7,033 (Rs. 2,168), profit on realisation of investments and assets (net) Rs. 5,353 (*nil*) and the balance brought forward from the previous year of Rs. 5,40,165 (Rs. 4,92,742), making a total of Rs. 32,55,117 (Rs. 32,45,624). Out of this amount the directors have provided for taxation Rs. 9,50,000 (Rs. 11,30,000), transferred to development rebate reserve Rs. 8,623 (*nil*) and transferred to general reserve account Rs. 1,00,000 (Rs. 2,50,000) leaving a balance available for disposal of Rs. 21,96,494 (Rs. 17,28,540 after deducting Rs. 46,963 being loss on realisation of investments and Rs. 90,121 being adjustment in respect of directors' remuneration for the previous year). The directors declared an interim dividend in respect of the year ended 31st March 1960 on the preference shares at the rate of 2½ (2½) per cent., which dividend was paid on the 5th October 1959 absorbing Rs. 1,37,500 (Rs. 94,188) and a second interim dividend at the rate of 2½ (2½) per cent., which dividend was paid on the 6th May 1960 absorbing Rs. 1,37,500 (Rs. 94,187). The directors now recommend the payment of a dividend on the ordinary shares of the Company at the rate of 7 (5 per cent. tax-free) per cent. subject to deduction of income-tax and super-tax at the appropriate prescribed rates absorbing Rs. 14,00,000 (Rs. 10,00,000), leaving a balance at the credit of profit and loss account of Rs. 5,21,494 (Rs. 5,40,165) to be carried forward to the next account.

The improved working of the jute mill companies under the Company's management produced the anticipated increase in managing agency commission during the year. Conditions in the jute mill industry, however, since the date of the last report have given rise to anxiety on account of the shortage of raw jute which became evident at the end of 1959 and which will unfortunately recur in the present season. While this has rendered profitable operation of the mills extremely difficult, every effort is being made further to increase the working efficiency of the mill units. Nevertheless, it is already clear that the Company's earnings from the management of the mills must show a decline in the current year.

Earnings from the tea companies under the Company's management are slightly less than for the previous year. The drought conditions which prevailed in all districts during the early part of this year have caused a large drop in crop in nearly all estates which it is unlikely can be made good before the end of the season. Earnings from this source are, therefore, expected to be further reduced for the current year.

Reorganisation and preparatory work in connection with the expansion programme continued to dislocate the working of the collieries belonging to the coal Company under the Company's management and earnings from this source diminished; a substantial improvement is, however, foreseen during the current year. The working of the coke Company was unsatisfactory and, as a result of losses sustained, some time must elapse before the anticipated benefits from the renovation of plant and rationalisation of production methods are reflected in increased commissions and dividends from this source.

As anticipated in the last report of the directors, there was a setback in the profits from the Company's trading activities during the year but earnings from the shipping agencies again showed a satisfactory increase. Active steps are being taken to restore, as far as possible, the Company's trading income but in the nature of the commodities mainly dealt in, fluctuations in profits from year to year are to some extent unavoidable.

The Company's main stake in the engineering industry is represented by its investment in Braithwaite & Co. (India) Ltd. and despite production difficulties, due to shortage of steel supplies, that Company's profits were well maintained for 1959. Early in 1960 Braithwaite & Co. (India) Ltd. took over control of the Angus Engineering Works in the Hooghly District and plans for a substantial expansion and diversification of that Company's activities are developing satisfactorily.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,00,000	Gross block	42,66,244

THE INDUSTRIAL FRONT IN ORISSA

(*Concluded from page 1057*)

as well as establish a new engineering college and a regional college at Rourkela.

The National Council of Applied Economic Research, New Delhi, is carrying out a techno-economic survey of Orissa to assess industrial possibilities in different areas and prepare project reports of various industries. Its report may be ready towards the end of 1960. According to its preliminary findings, Orissa's *per capita* income in 1951 was Rs. 190, as against the all-India figure of Rs. 248. It is expected that the *per capita* income in 1961 will be Rs. 237, as compared with Rs. 312 in India as a whole, the annual rate of growth in either case being about the same, namely, 2.5 per cent. It is, therefore, necessary that Orissa's rate of growth should be much higher than the all-India average, and for this three lines of action are called for, namely, a large investment in agriculture, a more intensive industrial development and greater stress on power generation and the improvement of transport, health, technical education and the like. The National Council has, therefore, recommended an investment outlay of Rs. 13,750 millions between 1960-71, so that the State income may be raised from Rs. 3,839 million in 1960-61 to Rs. 8,872 million in 1970-71 at an average rate of 13.1 per cent. per annum, and the *per capita* income from Rs. 237 to Rs. 444 at 9 per cent. per year. These rates of growth greatly exceed those expected for India as a whole during the third and fourth Plan periods, but would increase the *per capita* income of the State to a level with the rest of the country.

ROHTAS INDUSTRIES LIMITED

NOTICE

THE TWENTY-SEVENTH ANNUAL GENERAL Meeting of the Shareholders of Rohtas Industries Ltd. will be held at the Registered Office of the Company at Dalmianagar on Wednesday, the 28th December, 1960, at 11 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the financial year ended 31st March, 1960.
2. To declare dividends on Preference Shares and to confirm as final dividend the interim dividend on Ordinary Shares declared by the Board on 15th September, 1960.
3. To elect a Director in place of Shri B. N. Chaturvedi, who retires by rotation but, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

As a special business

5. To pass the following resolution which is proposed as an Ordinary Resolution with or without modification:—

"RESOLVED that the appointment of Messrs. Ashoka Marketing Ltd., Calcutta as sole selling agents of the Company for the sale of Paper and Boards of all varieties, except Vulcanised Fibre Board, for the whole of India, on the terms and conditions enumerated in the Agreement, submitted to this meeting and approved by the Board of Directors of the Company, be and is hereby approved and confirmed."

By Order of the Board,

For SAHU JAIN LTD.,

A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA, *28th November*, 1960.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY NOTE

Messrs. Ashoka Marketing Ltd. have been the Sole Selling Agents of the Company for sale of Paper and Boards of all varieties, except Vulcanised Fibre Boards, in India, except the States of Bombay and Saurashtra. The last agreement between the Company and Messrs. Ashoka Marketing Ltd. was for period upto 31st October, 1960. It has been considered expedient that the Company continues to avail of the sales organisation of Messrs. Ashoka Marketing Ltd. The Board of Directors have reappointed Messrs. Ashoka Marketing Ltd. as the Company's Sole Selling Agents for the whole of India for a period of five years from 1st November, 1960 for sale and distribution of Paper and Board of all varieties, except Vulcanised Fibre Boards, manufactured by the Company on terms and conditions contained in the relevant agreement. A copy of this agreement is available for inspection of the members on all working days during business hours at the Registered Office of the Company and the same will be placed before the shareholders at the above meeting. The appointment of Sole Selling Agents requires approval of the Industrial Finance Corporation of India in terms of the Mortgage Debenture Trust Deed executed by the Company in favour of the said Corporation. Industrial Finance Corporation of India have been pleased to accord their requisite approval to the said appointment. Approval of the shareholders is sought under Section 294 of the Companies Act, 1956.

The Managing Agents and the Directors of the Company have no interest in the said appointment or agreement.

SONE VALLEY PORTLAND CEMENT COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of Sone Valley Portland Cement Company Limited will be held on Friday, the 30th December 1960, at 11 a.m., at the Registered Office of the Company at 11, Clive Row, Calcutta, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1959.
2. To elect a Director in place of Shri A. K. Jain who retires by rotation, but being eligible, offers himself for re-election.
3. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. Lovelock and Lewes, Chartered Accountants, being eligible, offer themselves for re-appointment.

As Special Business

To consider and if thought fit, to pass with or without modification following Resolution which will be proposed as a Special Resolution:

RESOLVED that The Articles of Association of the Company be altered in the following manner:—

(i) At the end of Article 19 the following proviso be added:—

"Provided that no fee shall be charged for issue of new Certificates in replacement of those which are old, descrepit or worn out or where the cages on the reverse for recording transfers have been fully utilised."

(ii) In Article 43 the words "both of the transferor and" be deleted and be substituted by the word "of".

(iii) At the end of Article 68 the following proviso be added:—

"Provided that Debentures with the right to allotment of or conversion into shares shall not be issued except with the sanction of the Company in General Meeting."

(iv) In Article 169 the word "three" be deleted and substituted by the word "six".

Share Transfer Books and Register of Members of the Company will remain closed from the 21st to 30th December 1960, both days inclusive.

By Order of the Board,

For SONE VALLEY PORTLAND CEMENT CO., LTD.,

SAHUJAIN SERVICES PRIVATE LTD.,

S. SRIKRISHNA AYYAR,
Director,
Secretaries.

CALCUTTA, *1st December*, 1960.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company.

EXPLANATORY NOTE TO SPECIAL BUSINESS

The Shares of your Company have been listed on the official quotation list of the Bombay Stock Exchange. The alterations in the Articles proposed as above are in compliance with the listing requirements of the said Stock Exchange. The consent of the Shareholders is therefore sought for the above alteration.

The Directors have no interest in the proposed alterations of the Articles of Association.

THE JAIPUR UDYOG LIMITED

NOTICE

THE ANNUAL GENERAL MEETING OF THE Company will be held at the Registered Office of the Company at Sawai Madhopur on Friday, the 30th December, 1960 at 4 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st March, 1960.
2. To declare dividends on Preference and Ordinary shares.
3. To elect a Director in place of Shri C. L. Jaipuria who retires by rotation but, being eligible, offers himself for re-election.
4. To elect a Director in place of Shri A. K. Roy who retires by rotation but, being eligible, offers himself for re-election.
5. To elect a Director in place of Shri C. L. Jhunjhunwala who retires under Clause 118 of the Company's Articles of Association but, being eligible, offers himself for re-election.
6. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, M/s. R. D. Joshi & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will remain closed from Monday, the 19th December, 1960 to Friday, the 30th December, 1960, both days inclusive.

By Order of the Board,

For THE JAIPUR UDYOG LIMITED,

M. L. RATHI,
Secretary.

SAWAI MADHOPUR,
Dated 28th November, 1960.

Note: (a) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(b) The dividends declared will be payable to those shareholders whose names stood on the Register of Members on Friday, the 30th December, 1960 or their mandatees.

ASHOKA CEMENT LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the registered office of the Company at Dalmianagar on Friday the 30th December 1960 at 11-30 a.m. to transact the following business:—

(1) To receive and adopt the Directors' report and audited accounts of the Company for the financial year ended 31st March 1960.

(2) To declare dividend.

(3) To elect a Director in place of Shri B. D. Goenka, who retires by rotation but being eligible offers himself for re-election.

(4) To appoint Auditors for the current year and fix their remuneration. The retiring Auditors, Messrs. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

As Special Business

(5) To consider if thought fit and pass with or without modification the following resolution, which will be proposed as a special resolution.

Resolved that Clause 113A (C) of the Articles of Association of the Company be amended by inserting the following proviso after the word "Provided Further" in the 11th line of the said clause "THAT THE AFORESAID LIMIT MAY BE ALTERED OR VARIED WITH THE CONSENT OF THE TRUSTEES PROVIDED LASTLY."

Explanatory Statement

The Clause 113A (C) was incorporated in the Articles of Association of the Company in pursuance of an agreement executed by the Company in favour of Industrial Finance Corporation of India. The amendment proposed is required to bring the clause in line with the clause in the Debenture Trust Deed. The Directors have no interest in the proposed amendment except as shareholders of the Company.

The Share Transfer Books of the Company will remain closed from 20th December 1960 to 30th December 1960, both days inclusive.

By Order of the Board,

For SAHUJAIN SERVICES PRIVATE LTD.,

(S. SRIKRISHNA AYYAR),
Director,
Secretaries.

CALCUTTA, *2nd December*, 1960.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

MONEY IN GOOD DEMAND

(From Our Own Correspondent)

BOMBAY, *7th December*

The demand for money this week was greater than in the past week and, with no perceptible improvement in the supply of funds, the banks were keen borrowers in the inter-bank section. The day-to-day call money rate, therefore, went up to 4 per cent. The other short-term interest rates, however, remained unchanged at the levels mentioned here last week, thanks to the ceiling under the inter-bank agreement. Even Treasury Bill results also were exactly the same as in the past week. Not only the average rate of 91-days' Bills sold by weekly tenders was the same at 2.540 per cent. per annum, but even the amount offered was so at Rs. 2.40 crores, as against an invitation for Rs. 2 crores. Sales of intermediate Bills, however, fetched a sizable amount of Rs. 70 lakhs, as against a mere Rs. 3 lakhs in the previous week. Sales of both types of Treasury Bills are being continued.

The most important feature of the Reserve Bank's statement for the week ended 2nd December is a rise of Rs. 11.79 crores in foreign assets, taking up their total to Rs. 151.76 crores. The improvement has occurred in balances held abroad by the Banking Department. The foreign assets with the Issue Department remain unaltered at Rs. 123 crores. Notes in circulation have gone up by Rs. 17.14 crores and so also notes held in the Banking Department by Rs. 1.35 crores. The resultant increase of Rs. 18.49 crores in total issues is balanced by a rise of Rs. 20 crores in rupee securities and a fall of Rs. 1.51 crores in rupee coin. Deposits of banks with the Reserve Bank have shrunk by Rs. 8.70 crores and so also the Central Government's balances by Rs. 6.65 crores. The funds of other Governments disclose a small increase of Rs. 1.40 crores. These variations have taken place, despite an increase of Rs. 4.18 crores in loans and advances to Governments and of Rs. 6.65 crores in other loans and advances, of which Rs. 4.06 crores represent addition to advances to Scheduled banks against usance bills.

The format of Scheduled banks' statement has been changed, with effect from the one covering the week ended 25th November 1960. The change is for the better, in that the statement has been made more informative. Both demand and time deposits reveal a rise of Rs. 3.29 crores and Rs. 6.56 crores, respectively, or a total of Rs. 9.85 crores. Of this, the share of the State Bank is approximately Rs. 2.27 crores. Borrowings from banks have risen by Rs. 5.46 crores under demand nature and Rs. 92 lakhs under timing nature, but borrowings from the Reserve Bank are down by Rs. 5.56 crores. The total of advances and bills purchased and discounted reveal a fall of Rs. 10 crores, of which the share of the State Bank is Rs. 1.66 crores. Investments are higher by Rs. 4.03 crores, the whole of this rise being on account of the State Bank whose portfolio is up by Rs. 5 crores. Although the State Bank's cash balances have gone up by Rs. 4.63 crores, the position of scheduled banks as a whole shows a fall of Rs. 3.40 crores. But money at call and short notice reveals a rise of Rs. 6.66 crores, the whole of which has occurred in banks other than the State Bank.

The gilt-edged market continues to be steady, with no significant variations in values.

The pound sterling in New York, after recording a slight improvement to cross 281 cents per £ during mid-week, is a shade lower at 280.91-280.94 cents for spot and 280.18-280.21 for three months forward. Over the week, the spot rate shows no change, though the forward rate is a little better by 0.07 cent. The rupee-dollar rate is unchanged at Rs. 476.50-Rs. 473.25 per $100.

YARNS IRREGULAR

(From Our Own Correspondent)

BOMBAY, *7th December*

There was a sharp rise in the quotations for forward deliveries of Cupressa Bemberg yarn (60 x 1) during the week under review. The rise followed hectic purchases made by certain parties on fears that the floating stocks in the market might be depleted considerably. But spot yarn was not influenced by such fears. In fact, it showed a distinctly hardening trend. Imported and indigenous art silk yarns moved rather indecisively, as operators preferred to await the Government of India's reaction to the reported plea for liberal import quotas to established importers put forward by the Yarn Merchants Association and Exchange Ltd. Staple fibre yarns ruled dull in the absence of any fresh development. Business put through was small, with values moving narrowly. Other yarns tended to look down, as there was still no sign of revival of demand from handlooms and powerlooms.

Cupressa Bemberg yarn (60 x 2) December delivery forged ahead from Rs. 2,132 to Rs. 2,192. February position firmed up by Rs. 41 to Rs. 2,146. Spot Cupressa stood at Rs. 2,204.62 today, as against Rs. 2,246.50 on Wednesday last. Among imported art silk yarns, 150 Japan was quiet at Rs. 1,543.25. 120 Japan declined from Rs. 1,322.75 to Rs. 1,309.50. 120 Italy dropped Rs. 13.25 to Rs. 1,225.75. 150 Italy, however, met with special support and strengthened from Rs. 1,514.56 to Rs. 1,530. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade shed 2 nP to Rs. 11.11, while 120 Bt. cones 1st grade gathered 13 nP to Rs. 11.97.

Staple fibre yarn (40 x 2) December contract encountered selling and fell by Rs. 15 to Rs. 786. But February delivery picked up a rupee to Rs. 793. Spot Kohinoors gained 11 nP to Rs. 9.48. Citys were quiet at Rs. 9.22 and Centurys at Rs. 9.42.

In the cotton yarn section, ten counts Podars declined by 12 nP to Rs. 18. Gokaks were neg-

(Continued in next column)

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *7th December*

The firm trend noted in the bullion market last week abated during the week under review. In fact, the market ruled easy, excepting yesterday when there was some recovery. The easiness was due to lack of follow-up support, increase in carry-over charges, and unloading by a few operators on reports of heavy arrivals and bearish advices from Calcutta. Consequently, prices of both gold and silver tended to move down.

The average daily arrivals of gold were larger than those in the previous weeks, being 8,000 tolas, as against 6,000 tolas. Offtake was also slightly better at 4,000 tolas, as against 3,750 tolas. In the case of silver, both arrivals and offtake were lower at 23 bars and 6 bars, as compared with 76 bars and 8 bars, respectively. The floating stocks of gold are reported to be around 100,000 tolas and those of silver are estimated at 700 bars.

The *Poush* (January) settlement in gold encountered selling and receded in the course of the week from Rs. 116.15 to Rs. 115.65 today. *Margashir* settlement ran off the board at Rs. 114.60 on Tuesday the 5th inst., as against Rs. 115 on Wednesday last week. The rate for transferring commitments from *Margashir* to *Poush* settlement continued to be against bulls, the actual rate widening from Re. 1.15 to Re. 1.25, so that the margin of Rs. 20 per 10 grams payable by bears persisted.

Ready gold began the week at Rs. 115.70, as against the previous close of Rs. 115.50, and declined steadily to touch Rs. 114.50 today.

In the silver section, *Margashir* settlement eased from Rs. 196.75 to Rs. 196.10 yesterday at which rate it ran out. *Poush* settlement was quoted today at Rs. 196.80, a drop of Rs. 2 as compared with the last week's closing rate. The *badli* payable by bulls for getting their commitments transferred from the *Margashir* to the *Poush* settlement stood higher at Re. 1.80 yesterday, that a week ago being Re. 1.40. As the *badli* rate was more than Re. 1.50 since Friday the 2nd inst., the bears were obliged to pay a margin of Rs. 300 per bar.

Ready silver continued to be quoted at a discount under the *Poush* settlement, the actual discount today being Re. 1.80, as against Re. 1.75 on Wednesday last week. The closing rate for the metal today was Rs. 195, as against Rs. 196.40 a week ago, the highest and lowest levels touched being Rs. 196.65 (Friday) and Rs. 195 (today), respectively.

The world price for gold in the London bullion market declined from $35.60-$35.80 last week to $35.40-$35.55 this week, owing to slackness in demand and some sales by private operators. Following this decline and on account of the firmness of the pound sterling *vis-a-vis* the dollar, ready gold in London fell from 253s. 10d. to 252s. on Monday the 5th inst. Yesterday, however, it recovered to 252s. 6d. Both ready and forward silver continued unchanged at 79¼d., as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	7-12-60 (closing)	High	Low	30-11-60 (closing)
GOLD				
Ready (.99 fine)	Rs. 114.50	Rs. 115.05	Rs. 114.40	Rs. 114.95
Forward:				
*Poush**	115.65	116.15	115.65	115.00
Sovereign	90.00	—	—	90.00
SILVER

60s Finlay	59.50	59.50
80s Modern	70.70	71.25

COTTON FUTURES STEADY AT CLOSE

(From Our Own Correspondent)

BOMBAY, *7th December*

The downward trend of cotton futures witnessed last week was arrested during the week under review and the market staged a smart recovery. This was due partly to technical factors and partly to fresh buying influenced by the revival of mill demand for ready cotton. The bearish interpretation of the Textile Commissioner's statement at Ahmedabad that the estimated crop of five million bales and import of 600,000 bales of foreign cotton would meet the requirements of the mill industry and that, if they did not, the Government would allow more imports of cotton, coupled with reports of beneficial showers in certain cotton tracts, touched off some speculative selling which depressed cotton futures on Monday. This recession was, however, short-lived. Smaller arrival of new crop in terminal markets and higher upcountry advices induced fresh buying subsequently with the result that prices again edged forward. Renewed activity in the spot market where mills made sizable purchases of new crop in anticipation of the second instalment of the Indian cotton quota, also helped sentiment. Monday's losses were more than made up in yesterday's and today's trading.

I.C.C. Moglai Jarilla April 1961 opened the week on a firm note at Rs. 585.50 (per three quintals), as against the previous day's closing of Rs. 582.75 and after rising to Rs. 591.25 on Saturday, declined to Rs. 587.50 on Monday. It recovered to Rs. 594.50 yesterday. Commencing today's session at Rs. 595, the Contract put on Rs. 2.25 before finishing at Rs. 595. The net gain over the week is Rs. 12.25.

Demand for ready cotton was well maintained, as already stated. Early in the week, spinners bought sizable quantities of new crop Khandesh, Berar, which fetched ceiling and near ceiling prices. Southern and Bombay mills evinced special interest in CO2 at prices ranging from Rs. 1,275 to Rs. 1,300. Towards the close of the week, rumours that the second instalment of quota for Indian cotton would be issued to mills shortly and reports of reduced arrivals in terminal markets, touched off fresh buying by mills. Prices tended to rise.

Interest in foreign cotton was subdued. There was moderate demand for U.S. cotton at unchanged prices. Selected East African growths were in demand. But the rise in quotation by Rs. 20-25 per candy, following the news of Chinese demand for East African cotton, made buyers reserved. B.P. 52 was done at Rs. 1,335 to Rs. 1,340. B.P. (UNUG) at Rs. 1,375 and Busoga at Rs. 1,320. Stray buying was reported in Syrian cotton at Rs. 1,165 per candy.

Importers have represented to the Government of India that shipment period for U.S. cotton to be imported under P.L. 480 against purchase authorisation No. 39-47, which is due to expire at the end of this month, should be extended suitably so as to give them sufficient time to arrange for shipments. The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Berar Fine 880; Khandesh 890; CO2 1,280-1,290; Khamgaon (Cambodia) 1,035.

Easy conditions prevailed in the Karachi cotton futures market during the week under review. Pressure of selling induced by the increasing volume of new crop arrivals and small export demand depressed both the March and January Contracts. Reports of the possibility of India importing more Pakistan cotton failed to induce a recovery. N.T.R.G. January declined from Rs. 69-6 last week-end to Rs. 68-15. The March position receded by two annas to Rs. 68.-12. Spot prices too were a shade easy.

Cotton futures in the Alexandria market ruled steady during the week. Activity was restricted, thanks to the paucity of demand from overseas buyers who preferred to watch the trend of new crop prices. Domestic spinner demand too was slack. Values, however, held steady, due to the absence of sellers. The supply position of the longer staple cotton is said to be very tight and if demand is maintained at last season's level, it is feared that there will be shortage of supplies later in the season. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: January 72.00; March 73.40; May 73.95.

Ashmouni: December 62.45; February 62.80; April 63.85.

Barring the December contracts of both the American and American type contracts, which attracted some support, the Liverpool cotton futures market was subdued during the week. Lack of activity in the ready section, where spinner demand continued to be small, and the weakness of the London Stock Exchange were reflected in the futures market which was lethargic. Values declined on scattered selling which found buyers reserved. The near months, as noted above, received support from local operators. Sudan cotton contracts in Liverpool continued to rule steady. The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: December 22.75; March 23.00; May 23.35; July 23.65.

American cotton mixed growth contract: December 23.05; March 23.30; May 23.65; July 24.25.

Sudan: January, March, May 37.75.

Cotton futures in the New York cotton market made handsome gains during the week. A fair amount of short-covering, some fresh buying in current crop months and Commission House support for distant March and May positions resulted in a smart rally in prices. The operators were anxiously awaiting the December crop report of the Department of Agriculture. The mid-November parity price of 38.37 cents, announced by the

Bureau of Agricultural Economics, was the same as the mid-October parity.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	5-12-60	29-11-60	22-11-60
Spot	32.30	32.30	32.30
December	31.62	31.31	31.47
March	32.32	32.03	32.10
May	32.72	32.47	32.51

BASE METALS RISE

(From Our Own Correspondent)

CALCUTTA, *6th December*

Base metals ruled steady during the week under review. This was due not to any precise circumstance arising from domestic consideration but to higher advices from overseas markets. For instance, on the London Metal Exchange, electrolytic copper opened this week at £229¾ a ton and hardened to close at £231¼. This followed good demand on London, reinforced by bear-covering. The loss in production in the Chuquicamta mines in Chile as a result of six weeks' strike, which ended a couple of weeks ago, engendered firmness in London as well as New York. Although production was resumed a couple of weeks ago, normal flow of the metal to Europe would not commence before January. In New York, the price hardened from 28.15 cents to 28.32 cents a lb. Copper scrap prices ruled steady here, though demand was dull. Utensil scrap hardened from Rs. 198 to Rs. 200 a cwt. and the berry scrap from Rs. 209 to Rs. 212 a cwt. Local demand for tin was greater than availability and, as a result, the price closed higher on balance at Rs. 574, as against the opening of Rs. 570.50. At one time, the quotation was high as Rs. 577 which incidentally is the highest level touched so far during the year. On the other hand, in London, the price eased from £800 to £799 a ton. The rate was even lower at £798½ earlier. Reduction in the London price was attributed to poor demand from overseas. Electrolytic zinc met with subdued demand and the price gave way from Rs. 162.50 to Rs. 161 a cwt. Virgin lead continued to be neglected, the rate being quiet at Rs. 63 a cwt.

SEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *7th December*

Once again the Forward Markets Commission has warned the oilseeds trade against "rampant" speculation. A similar warning, it may be recalled, had been given a month ago, followed by stringent measures of control. In a Press note issued on Monday this week, the F.M.C. has made it clear that it will not hesitate to take "drastic" action, if anti-social activities in the castorseed markets and evasion of special margins in respect of groundnut contracts do not cease forthwith. In particular, the Commission regrets that speculation in castorseed futures is rampant, May 1961 delivery being currently quoted at "levels for which there is hardly any justification." It has come to the notice of the Commission that in Bombay and Saurashtra illegal trading is being carried on in groundnut oil in terms of wagons and tins in the guise of non-transferable specific delivery contracts. The warning, however, fell on deaf ears. For it only touched off, paradoxically enough, a fresh wave of buying.

It would appear that the rise in prices would have gone up further but for another discouraging development relating to freight rate for oilcakes. The Karmahom Conference has announced an increase in freight rates for oilcakes and meals from 85*s.* to 100*s.* per ton with effect from February next. It was only in October last that the Conference reduced it from 100*s.* to 85*s.* This has been a very disappointing development in so far as exporters are concerned, especially those who have already transacted business for the period February and March on the basis of prevailing freight rates. Already, the overseas demand for groundnut meal has tended to be weak. Whatever may be the case for the revision of freight rates, traders feel that periodical changes in freight rates will adversely affect India's exports.

Another development of interest to the trade is the decision of the Government of India to allow export of H.P.S. groundnuts in shell by all shippers, including established shippers and co-operative societies, to the U.K. and the Netherlands against the quota of 2,000 tons already released. This measure would appear to have not had any perceptible effect on the market. The operators have also noted reports suggesting the possibility of import quotas for betelnuts and cloves against exports of groundnut oil. The import policy for these items for October-March period has still not been announced. Apparently the Government wants to take advantage of the high profit margin accruing to importers of betelnuts and cloves by making them contribute something towards export promotion.

The sentiment in the oilseeds market ruled distinctly firm during the week under review, thanks mainly to sustained speculative buying. Groundnut futures moved up, despite pressure of larger arrivals and none-too-encouraging performance on the export front. Spot groundnuts also were well maintained. February 1961 contract rose steadily from Rs. 208.50 to Rs. 210.62. Nizam bold declined initially from Rs. 42 to Rs. 41.37, but recovered subsequently to Rs. 42. Oils, however, were weak, with ex-mill being quoted lower by 25 nP at Rs. 18.50 and railway receipts by 5 nP to Rs. 18.30.

Cheerful conditions prevailed in the castorseeds section. Except for some moderate business enquiries from Communist countries, the export front for castor oil remained dull. A section of the trade felt at any rate that, in view of Brazil's commitments to Russia for the supply of castor oil, its competition in the American market for castor oil would be only limited significance to India's exports. Castorseed May 1961 contract, which had wound up at Rs. 178.50 last week, rallied to Rs. 179.25, before closing to Rs. 177.50 on Monday. It once again rose to close at Rs. 177.87 yesterday and improved further to Rs. 178.62 to-day.

In sympathy with the trend in other major seeds, linseed was also well supported. May 1961 delivery improved by 12 nP to Rs. 33.81, after fluctuating between Rs. 33.69 and Rs. 33.84. Bold ready put on 38 nP to Rs. 33.75. Linseed oil scored a gain of 10 nP to Rs. 14.90.

Active conditions were in evidence in the cottonseed section as well. February 1961 contract closed higher at Rs. 89.75 today, as against Rs. 88.25 last week-end. Berar, whites and non-whites, all gathered 56 nP to Rs. 19.56.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	7-12-1960	30-11-1960	23-11-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	210.62	208.50	210.50

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms

PLAINER TEAS WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, *6th December*

While plainer teas were well maintained, the common teas found bidders only at declining rates at the export auctions held yesterday. Although tea arrivals in Calcutta during the week registered a small improvement, exports were not as encouraging in volume as expected.

Dusts on offer in the internal sales held yesterday amounted to 28,902 packages. Good demand was in evidence at declining prices, which were attributed to a deterioration in quality. The best C.T.Cs were in better demand, while the medium teas belonging to this category eased by 20 nP. Legg-cut teas were shown less attention and, though the trend for orthodox teas was irregular, prices were lower on balance. The quotations per 1 kg. (inclusive of excise duty), were: best Assam C.T.C. dust Rs. 6.10 to Rs. 6.40 (nominal); medium Assam C.T.C. dust Rs. 5.60 to Rs. 5.75; medium Assam dust Rs. 4.80 to Rs. 5.10; and medium Dooars dust Rs. 4.65 to Rs. 5.00.

Good demand was in evidence to leaf on offer amounting to 627 chests.

During the export sales held yesterday, offerings amounting to 73,293 chests met with only fair general demand. Prices as a consequence, eased on a broad front. There was good support for the brighter B.O.Ps and O.Fs, but the balance of this category eased by 20 to 30 nP. Plain B.Ps and teas per price gave way by 10 nP. Similarly fannings also eased, but, thanks to the irregular trend, the quantum of decline was lower. Legg-cut teas declined by 20 nP. The very few selected lines, among C.T.Cs, were about firm, while the remainder of the category gave way by 20 to 30 nP. In line with the general trend, leaf grades also declined, though the trend was irregular. Tippy teas were also irregular. Among Darjeelings, the brighter grades were firm, but the poorer grades were lower. The quotations per 1 kg. (inclusive of excise duty) were: Best Assam C.T.C. fannings Rs. 5.90 to Rs. 6.30; Best Assam C.T.C. B.P. Rs. 5.60 to Rs. 6.00; clean Black pekoe Rs. 5.30 to Rs 5.30; medium fannings Rs. 4.90 to Rs. 5.20; Plain fannings Rs. 4.80 to Rs. 4.90; medium B. P. Rs. 4.70 to Rs. 4.90; and Plain B.P. Rs. 4.50 to Rs. 4.65.

QUALITY TEAS DECLINE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *29th November*

Sale No. 46 was held on Tuesday, 29th November 1960, at which 550,000 kilograms of tea were offered. Quality continued to show a general decline. The market met an irregular demand. Plain and low medium brokens met fair enquiry and were barely steady whilst similar fannings met with less support and were easier by 10 nP. Medium and good medium brokens, particularly those with black leaf appearance, were in strong demand at dearer rates but corresponding fannings sold at 15 to 20 nP below last. There was fair enquiry for highgrown brokens although these sold up to a rupee below valuation whilst fannings were neglected and a number of them were withdrawn from the sale. There was less support for whole leaf grade which declined by 20 to 30 nP. C.T.C. and legg-cut types also shared in the downward trend of the market and declined by 20 to 30 nP. A small selection of tippy teas met with fair support.

	1960	1959
	Rs.	Rs.
Low medium	4.60-4.95	4.52-4.74
Medium	4.95-5.35	4.85-5.0
Good medium	5.35-5.75	4.96-5.4
Quality	5.75-8.65	5.29-9.3

The average price realised in Sale No. 46 was Rs. 5.28 per kilo, as against Rs. 5.25 in the previous sale and Rs. 5.25 in the corresponding sale last year.

Dust Sale 'RR': 175,000 kilograms were offered in Sale 'RR' held on Thursday, 1st December 1960. There was a good general demand. Highgrowns came to an irregular market with the poorer sorts advancing in price. Mediums received keen competition at around last prices whilst the cleanly sorted descriptions were about firm. Residuals were a strong feature at dearer rates. C.T.C. and legg-cut sorts were firm.

The average price realised in Dust Sale 'RR' was Rs. 4.85 per kilo as compared with Rs. 4.77 in the previous sale and Rs. 4.29 in the corresponding sale last year.

Export Quota: The market remains unchanged with large sellers at ¼ nP per kilo with no ready buyers.

Colombo: Just under 6 million pounds were offered this week and met with a strong general demand but at lower rates with the exception of best liquoring Dimbula brokens which were dearer; other highgrowns came to a lower market at 10/20 cents below last rates. Medium descriptions eased 15/25 cents whilst lowgrowns and plainest descriptions declined 5/15 cents.

London: North Indian and other growths: In Monday's auction, there was more general demand and prices were firm for all descriptions. Plain broken pekoe is quoted at 3*s.* 9*d.*

Ceylon and South Indians: Tuesday's sale comprised 25,270 packages and 8,111 packages were offered from South India. There was good general demand with the exception of best liquoring teas which were irregular. Others sold at firm to dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale* 47: 462,000 kilograms. Fair demand. Highgrowns irregularly 50 nP easier. Good medium and medium brokens steady. Similar fannings 20 nP to 30 nP easier. Plain and low medium about steady. Black leaf types considerably easier."

EMERGENCY CLEARING IN JUTE

(From Our Own Correspondent)

CALCUTTA, 6th *December*

Following the emergency clearing on Wednesday last in respect of outstanding futures contracts and the consequent closure of all outstanding contracts as at 8.30 a.m. on that day, in accordance with the decision of the Board of the East India Jute and Hessian Exchange Ltd., raw jute and jute goods eased in the ready market. Subsequently, a reaction to higher levels set in and, since it was not marked, the closing levels for the week under review were well lower on balance. Foreign buyers continued to support the market on a hand-to-mouth basis only and this week's shipments continued to be poor, despite the free availability of shipping space to most destinations. It was announced during the week that freight on gunnies to Australian main ports has been increased by 15*s.* as from 1st January 1961. According to an announcement by Nedlloyds, their rates to Ciudad Trujillo (Dominican Republic) with transhipment at New Orleans have been increased with effect from 8th January. Fibre arrivals during the week did not show any improvement and it was feared that the decline in prices affected the pace of movement. The news that the visiting Chinese trade delegation in Dacca placed an order for 1,500 bales of gunnies with Pakistan mills was noted here, although, the quantity being small, this was not considered as diminishing Chinese interest in the Calcutta market.

The Chinese delegation in Pakistan also bought 15,000 bales of raw jute. Nevertheless, Pakistan price did not harden. For other overseas interests continued to buy in small quantities only. It was, however, reported that prices in the interior were well maintained. Cultivators and middlemen were encouraged to hold on to their stocks by lower estimates of the crop. Prices in Pakistan had moved up to such high levels that there were suggestions that Indian jute was being smuggled to Pakistan markets. One redeeming feature in Pakistan is the glut in supplies of cuttings, stocks of which are also adequate with mills there. The recent reduction in the E.P.C. rate by £4 a ton is a pointer in this regard. The fears of a shortage in crop were reinforced by the keen activity by Dundee buyers who, in the first fortnight of November, lifted as much as 30,360 bales out of the total sales to foreign countries amounting to 116,636 bales. The next highest buyers were Egypt and the United States. A point to be noted is that, although wet jute is finding ready buyers in the Narayanganj market, balers are disinclined to sell at the declining rates. For they believe that prices are bound to move up and that, if they now dispose of their stocks at lower rates, they would incur losses, inasmuch as cultivators in the interior are in no mood to discount rates. In fact, the continued support by buyers on behalf of Dundee, Australia and France is taken as proof that these buyers also apprehend that there will be a shortfall in production. The market trend in Pakistan is of significance, since, in India also, market conditions have become similar. For this week's fall in prices in fibre in Calcutta has not been accompanied by a similar decline in the interior. And that is proof of the improved financial stability among cultivators and middlemen. To this extent, the quota system of buying by mills has not solved the problem of rising prices for fibre, although it initially led to a decline.

The rates for the emergency clearing referred to above were Rs. 151.50 per 100 bags for B. twills and Rs. 53 for 100 yards of hessian cloth, both November 1960 contracts, and Rs. 44.50 per maund for raw jute for December 1960 contract. The maximum prices in force were Rs. 140, Rs. 51 and Rs. 43.50, respectively. With these clearings, arrangements for tendering alternative varieties in regard to hessian and sacking hedge against November 1960 contracts together with premium and discounts have been cancelled. The prevalent maximum price for raw jute contract against December 1960 contract has also been withdrawn.

Following news on Tuesday last of the above clearing arrangements, there was selling pressure and prices eased. Ready B. twills declined from Rs. 184 to Rs. 180 and ready hessian 40" 10 oz. from Rs. 58.50 to Rs. 58. At lower levels, however, foreign inquiries did not broaden. Prices showed no change on Wednesday. On the following day, some business was reported in woolpacks with Australian buyers for delivery varying from January and June. B. twills gave way to Rs. 179 and hessian 40" 10 oz. to Rs. 57. At this stage, reports of an easing trend were also received from the New York burlap market, where spot hessian fell by 5 cents per yard. The fall was attributed to the emergency clearing in Calcutta. U.S. buyers here showed no inclination of increasing their activity. In ordinary circumstances, the low level of goods in stock with mills should have resulted in greater business from abroad. The lack of such inquiries showed that foreign buyers were content to restrict their activity on a hand-to-mouth basis only, leading to apprehensions that substitutes were gaining more rapidly than earlier thought of. On Friday, rates eased further on account of accumulated selling pressure and lack of adequate inquiries from abroad should have nerved holders. B. twills were pushed down to Rs. 176.50 and hessian 40" 10 oz. to Rs. 56.50. Towards the close of the week, the undertone was easy, with B. twills quoting at Rs. 177 and hessian 40" 10 oz. at Rs. 56. Following some buying interest yesterday, ready B. twills hardened to Rs. 181 and hessian 40" 10 oz. to Rs. 57.00.

In the absence of receipt of their quota, mills showed no interest in the raw jute market. This, coupled with the fall in goods prices, imparted an easier tendency in fibre, despite lower arrivals from *mofussil* centres. Daissee bottoms eased to Rs. 138.00 per 100 kg. or Rs. 51.50 per maund Dec.-Jan. from Rs. 140.50 or Rs. 52.50 a maund. Assam bottoms opened at Rs. 135.25 (Rs. 50.50 per maund) and eased to Rs. 132.50 (Rs. 49.00 per maund).

SUGAR HARDENS

(From Our Own Correspondent)

HAPUR, *5th December*

Sugar recorded a hardening trend towards the week-end at Rs. 112 per bag in wholesale in the open market on reports that the Government of India was anxious to arrange for exports soon. It was indicated that India was in a position to export 350,000 tons of sugar to the U.S. after meeting internal requirements, but such exports would be possible only early next year when India would become a member of the International Sugar Agreement. Meanwhile, it was reported that all the factories in west U.P. were crushing to their full capacity, as cane supplies were satisfactory. In view of the easy supply position evidenced by not lifting a major part of monthly quota releases, trade circles were again clamouring for removal of control on sugar. It was further reported that there was heavy accumulation of stocks of sugar in the South, due to increased releases, with the result that deficit areas had now become surplus.

Sugar displayed an easy trend in the Muzaffarnagar market during the week, owing to lack of demand, coupled with comfortable supply position and prices were quoted around Rs. 110 per bag wholesale in the open market. Stocks allotted for October and November were not lifted. All the factories were attracting cane and production was being done with maximum capacity.

Sugar ruled quiet at Rs. 111 to Rs. 111.25 per bag in Kanpur, thanks to satisfactory supply position.

Old *khandsari* declined further by Re. 1 to Rs. 2 per maund on slack demand, while new *khandsari* improved by 50 to 75 nP a maund due to keen demand from east U.P., Punjab and Rajasthan. The latest prevailing prices in the Muzaffarnagar market were: new Rs. 32 to Rs. 37; old *galawat* Rs. 17 to Rs. 20; inferior Rs. 27 to Rs. 30; superior Rs. 30 to Rs. 32.50 a maund.

Gur declined sharply and the fall was more perceptible in *balti* quality, as demand from the consuming areas of the South was slack. It was being met from the producing areas of the South itself where prices too had declined. Loading facilities in the later part of the week were poor, as *gur* loading was again degraded to E class booking. Daily arrivals were about 7,000 maunds which were lifted at lower prices and, consequently, no accumulation of stocks has taken place. Most of the crushers are now lying idle for want of cane supplies, as the cultivator is not willing to supply cane at Re. 1 per maund and crushers are unable to pay more compatible with prevailing *gur* prices. Week-end prices were: *pansera* Rs. 13.25 to Rs. 13.50, *balti* Rs. 13.75 to Rs. 14.12; *shakker* Rs. 15 per maund. Prevailing prices last Monday were: *pansera* Rs. 13.75 to Rs. 14; *balti* Rs. 15.25 to Rs. 15.50 and *shakker* Rs. 16 a maund.

Gur was depressed in the Muzaffarnagar market also, where daily arrivals of *gur* and *shakker* were about 10,000 maunds daily and prevailing prices were: *—chaku* Rs. 13.25 to Rs. 15; *pansera* Rs. 14; *khurpapar* Rs. 13.74 to Rs. 14; *laddo* Rs. 14.25 to Rs. 15 a maund.

Gur futures moved both ways during the week, but the trend was bullish on brisk speculative support. *Fagan* opened at Rs. 13.28 last Monday, touched the highest of the week at Rs. 13.52 on Wednesday, and was quoted at Rs. 13.41 today.

FOODGRAINS RECEDE FURTHER

(From Our Own Correspondent)

HAPUR, *5th December*

Quietly downward trend continued in the foodgrains market during the week under review, thanks to good supply position. The Union Food Minister, Mr. S. K. Patil, stated this week that, in the present circumstances, State trading in foodgrains had become unnecessary, but it would not be abandoned, as it was a good weapon to be kept in hand for use when necessary. Wheat at Hapur recorded a fractional fall to be quoted on Monday at Rs. 16.12 a maund for *dara* quality, while superior farm produce was done at Rs. 17.37. In the smaller markets of West U.P., wheat was lower at Rs. 16 a maund. It was stated that wheat was taken to east U.P. for being stealthily exported to Bihar. Daily arrivals of wheat here were small at an average of 50 to 75 maunds, but demand was also slack, as it was met from U.P. Government's sales of wheat flour. Sowings of *rabi* grains was now over and first germination reported indicated that, due to good moisture in soil, germination was quite satisfactory.

Rice continued to rule quietly depressed, due to easy supply position, following heavy arrivals of new produce in the markets. Week-end quotations here were:—*sela basmati* Rs. 27 to Rs. 29; *mainpuri* Rs. 20.50; *ramajwayan* Rs. 22; *raimunia* Rs. 23; *gadda* Rs. 17.50 a maund.

Gram remained stationary at Rs. 16.50 for better Punjab stuff and Rs. 15.75 a maund for old stocks. Barley continued unchanged at Rs. 12.50 and *bejhar* at Rs. 12.25 to Rs. 12.75 a maund according to quality. Consumer demand for these coarse grains was slack, as it was diverted to maize and *bajra* due to winter season. Maize was reaching here in heavy quantity from Rampur and Bareilly side and, despite good seasonal offtake, prices ruled quiet at Rs. 12 to Rs. 12.25 a maund and local stocks were put at 25,000 maunds. *Guwar* attracted better demand at Rs. 13.50 and *juwar* was stationary at Rs. 14 a maund. New *bajra* arrivals were meagre and were being lifted at Rs. 14.25 a maund.

Peas and *arhar* registered a fractional fall in prices, as demand was dormant and stockists were anxious sellers. Peas stock continued at 20 *khatties* and that of *arhar* at 17 *khatties*, the corresponding figures last year being 38 *khatties* and 25 *khatties*, respectively, when peas *dara* was quoted at Rs. 10 and *arhar* at Rs. 16.50. The prevailing prices now were:—peas *dara* Rs. 12.25; farm white quality Rs. 13.75; old Rs. 11.50; peas *dal* Rs. 13.75; *arhar* Rs. 12.75; *arhar dal* Rs. 16 to Rs. 17 a maund. Total arrivals of peas upto date during the current season here were put at 109,500 maunds, as against 126,000 maunds in the corresponding period last year, and that of *arhar* at 22,100 maunds, as against 28,300 maunds. New *urd* was quoted at Rs. 19; *moong* at Rs. 18 to Rs. 19.50 and *massor* at Rs. 15 to Rs. 17.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, *5th December*

There was very little activity in the linseed market during the week. Towards the close, there was slight weakening in prices, but supplies were still very scarce. Very few crushers who are working on a restricted scale and are unable to cover their crushing costs were operating. With sellers of seeds reserved and buyers for oil pausing, business was negligible. The oilcake market ruled dull, with only small local business passing daily at prevailing rates. Ready was done at Rs. 27.25 per maund.

HIDES ARRIVALS LARGE

(From Our Own Correspondent)

MADRAS, *5th December*

Arrivals of tanned hides and calves were larger, while clearance was slow, because U.K. importers were not prepared to follow the prices quoted at origin. Inland demand for low grade cow hides was moderate, and tanners were likely to take lower prices in all selection. Inquiries for calf skins were patchy. U.S. buyers were not willing to pay Madras prices.

Tanned goat was firm, as also sheep. Export trading was small, on account of stiff prices quoted by the E.I. tanners.

At the tanned skins London public auctions, tanned goat skins realised very poor prices where sold, and sheep skins were unquotable.

At the German auctions, 50 per cent. of the tanned goat stocks on offer were sold at 3*d.* to 6*d.* below c.i.f. levels, while buyers did not show any interest in sheep.

Shipments during November were: 2,462 bales tanned cow hides, 183 cow calf, 49 buff hides, 250 buff calf, 420 goat and 403 sheep to the U.K. ports; 42 cow calf, 54 buff calf, 612 goat and 371 sheep to the Continental ports; 78 buff hides, 163 buff calf, 352 goat and 11 sheep to the U.S.A.; and 32 bales tanned sheep to Japan.

(*Concluded from page 1062*)

credits for a period not exceeding five years. These will be insured by the Export Credit Insurance Corporation, a Government undertaking. Through the medium of the new export financing organisation, the Government proposes to arrange guarantees and put up credit for approved capital exports requiring more than five years' credit. Canadian authorities claim that this is possible within the terms of the Berne Union, although they have not explained how. In offering credit insurance for periods exceeding five years, Canada may not be doing anything which other countries have not done. But it lends substance to the long-standing complaint of Britain that its competitors are circumventing the Berne Union agreement to offer credit terms for periods exceeding five years. It is now clear that the five-year limit fixed by the Berne Union bears no relation to the requirements of both exporters and importers. It will, therefore, be better to have the limit revised upwards, so that the temptation for the surreptitious violation of the agreement, which, after all, is a gentlemen's agreement, will be eliminated.

Notices

THE CONSOLIDATED COFFEE ESTATES (1943) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Annual General Meeting of the Company will be held at the Registered Office of the Company, Pollibetta, at 10-30 a.m. on Friday the 30th December 1960, for the purposes stated below:

1. To receive and consider the Balance Sheet and Profit and Loss Account for the year ended 30th June 1960.
2. To receive and consider the Report of the Directors on the working of the year ended 30th June 1960.
3. To declare a Dividend.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other competent business which may be brought before the meeting.

The Ordinary Share Transfer Books of the Company will be closed from 16th December 1960 to 30th December 1960, both days inclusive.

By Order of the Board,

For THE CONSOLIDATED COFFEE ESTATES (1943) LTD.,

A. J. AUSTEN,
Secretary.

POLLIBETTA, *23rd November* 1960.

(*P.S.*—The Board of Directors recommend a Dividend of 20 per cent, subject to deduction of tax on the Ordinary Shares.)

Note 1: The Dividend when declared will be made payable on or after Tuesday the 10th January 1961.

Note 2: Any member of the Company entitled to attend and vote at the meeting of the Company shall be entitled to appoint another person (whether a member or not) as his proxy to attend and vote instead of himself.

STATE BANK OF INDIA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Monday, the 2nd January 1961 to Saturday, the 21st January 1961, both days inclusive.

S. P. PURI,
Managing Director.

STATE BANK OF INDIA,
BOMBAY, *the 16th November* 1960.
25th Krtk. 1882 (*Saka*).

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. I—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of July 1960 amount to Rs.28 lakhs of rupees.

MARKET GOSSIP

(Concluded from page 1039)

Reserve Bank by the Banking Companies Act and the rights of individual banking companies vis-a-vis the Reserve Bank, the judgment has significance transcending the confines of this particular case.

The Palai Bank sought the dismissal of the application on two grounds. First, that Section 38 (3) (b) (iii) of the Banking Companies Act was void under Article 31 of the Constitution, because it offended Articles 14 and 19 (1) (f) and (g), and, secondly, that, in bringing the said application before the Court, the Reserve Bank had acted *mala fide*. It was argued before the Court by counsel for Palai Bank, Mr. K. M. Munshi, that the petition had been made by the Reserve Bank purely on its own subjective satisfaction and discretion without the right of appeal or redress by a judicial review for the banking company. The Palai Bank, he contended, had not been given an opportunity to make representation in respect of the ground alleged for the relevant action being taken by the Reserve Bank.

It was contended on behalf of the Reserve Bank by Mr. K. V. Suryanarayana Iyer, Advocate-General of Kerala, that the allegation that the exercise of power by the Reserve Bank under Section 38 (3) (b) (iii) of the Banking Companies Act was untenable. He argued that the Reserve Bank was not called upon to issue notice to the Palai Bank before taking the relevant action, because it would defeat the very object of the statute giving the Reserve Bank the discretionary power in such circumstances. The orders or directions of the Reserve Bank, he submitted, were not meant to end the Palai Bank or throttle it but were intended only to help it to survive.

The Advocate-General detailed the facts and circumstances which led the Reserve Bank to take the action it did. From the inspection and scrutiny of working of the Palai Bank over a period of the last nine years, the Reserve Bank had found that the affairs of the Bank were conducted in a manner prejudicial to the interests of the depositors. This conclusion was reached after careful consideration of the explanations offered by the Bank from time to time. Many defects were noticed in the affairs of the Palai Bank which arose from the unsound policies and methods of operation followed by it. The Bank had lost not only its entire paid-up capital but also its reserves and deposits. A new situation arose by way of a run on the Bank after the publication, for the first time, of the balance-sheet of the Bank on 23rd June 1960, which had shown a big loss of Rs. 16 lakhs. The Reserve Bank decided to take action only when it was informed of the seriousness of the situation (arising out of the run) by the General Manager of the Palai Bank himself.

His Lordship, Mr. Justice P. T. Raman Nair, in his judgment delivered on the 5th inst., said that the several opportunities given by the Reserve Bank to the Palai Bank ever since 1952 to explain its difficulties and to remedy the state of affairs in the conduct of its business would show that the Reserve Bank, far from having acted *mala fide* or in haste or ill-considered manner, had doubtless been fully alive to the great responsibility placed on it in the interests of the monetary structure of the country and acted with a degree of care and responsibility which had drawn to it adverse criticism from those who did not share such responsibility.

Commenting on the complaint that the impugned provision of the Banking Companies Act vested an authority like the Reserve Bank with the power for bringing a banking company into liquidation in the exercise of its own discretion without any safeguards inherent in the judicial process, His Lordship observed that, once a position envisaged in the Reserve Bank's petition had been reached and once a state of affairs had come about, whereunder a company should not continue any longer if the purpose of the statute should be served, it seemed to him clear that the judicial process, with its opportunity for hearing, enquiry and concomitant judicial review at several stages and the loss of time, which all this involved, would practically negative the purpose in view.

His Lordship maintained that the Reserve Bank was the one authority, which, with its expert knowledge and all the information necessary, might be trusted, because of its high position, to act effectively and impartially. It could also be expected to be in a position to take prompt and effective action. If the statute (Banking Companies Act) had thought it fit to repose in such a body the confidence that, in the light of the principal guidance given by the statute, the Reserve Bank, in its subjective satisfaction, would act properly and without bias, he did not think that it would, in viewing the circumstances for acting, differentiate between banks placed in similar circumstances or between one bank and another.

A banking company, the continuance of which was prejudicial to the interests of depositors, His Lordship observed, must be made to stop and wound up. Therefore, the law which provided for this could not be assailed on grounds of fundamental rights enshrined in Article 19 of the Constitution. A corporate body like the Palai Bank, His Lordship held, enjoyed the same fundamental rights under Article 19 of the Constitution as were allowed to a natural citizen. But it could scarcely be urged, His Lordship averred, that the very statute to which the company owed its existence could offend Article 19 of the Constitution. A corporate personality like the Palai Bank, which was the creature of the Banking Companies Act, could not look to Article 19 for enlarging the scope of its rights, which the very law that brought it into existence thought it fit to restrict. His Lordship, therefore, rejected the contention on behalf of the Palai Bank and ordered its winding-up as sought by the Reserve Bank. Thus the Reserve Bank has emerged from the judicial ordeal with flying colours.

SURVEY

(Concluded from page 1043)

that the State Governments have miserably failed. Mr. Patil must go at them and see that they rectify the defect within a specified period. If he is really serious about raising the per-acre yield of sugar, he must unhesitatingly accept the urgency of replacing the present irrational system of paying for cane which ignores quality considerations.

Be that as it may, in the course of his speech at the meeting of the Bombay Sugar Merchants Association, Mr. Patil endorsed the plea for abolition of distribution controls on sugar put forward by the Association's President, Mr. Parsram Parumal. Actually, he said that the country had a surplus of more than 500,000 tons of sugar and that the Centre was prepared to offer as much sugar as the States required. He, however, made it clear that the initiative for the abolition of restrictions on distribution remained with the State Governments. These statements of Mr. Patil run counter to what Mr. A. M. Thomas said in Parliament a few weeks ago. The latter had observed in effect that, as the Government had decided to export a sizable quantity of sugar, the controls on sugar distribution could not be relaxed. Apparently, Mr. Patil, in his anxiety to be pleasant to his hosts, tried to pass on the blame to State Governments. Surely, the latter were not responsible for the reintroduction of controls. They were forced to resort to this unpleasant step by the exigencies of the situation. They would certainly be happy to withdraw the controls, if Mr. Patil could assure them that he would *always* supply as much sugar as they want and would not ask them to reimpose controls again. Is Mr. Patil in a position to give such an assurance? We have our doubts. Anyway, there can be no complete freedom for sugar trade, if (*a*) large quantities of sugar are to be exported for earning foreign exchange and (*b*) a sizable quantity of sugar is to be kept as a buffer stock. The only factor that can win this freedom is a still larger increase in production than the one now envisaged.

PROBLEM OF PRICES

The vital need for holding the price line of consumer goods during the third Plan period was stressed by Mr. Kumararajah M. A. M. Muthiah Chettiar of Chettinad, in his address at the fiftieth annual general meeting of the Southern India Chamber of Commerce at Madras last week. He asserted that it would be self-defeating to allow prices to "run away" at a time when large projects were under way which required harnessing of manpower. He, however, considered it unwise to oversimplify the problem of holding prices down or of freezing them. He attributed the present increase in price to the expansion of money supply through deficit spending. To quote him: "On the one side, Government continues to increase the money supply as part of finding Plan resources, and, on the other side, is trying to erect barrages against the advancing tide of prices. One is the cause and the other is the effect and so long as money supply continues to flow at a particular pace, all efforts to stem the tide of prices through physical controls would only make life harder for the poor man by the flight of goods from legitimate markets and by the creation of scarcities." Mr. Chettiar, therefore, urged the Government to go deeper and examine the limits to which it could undertake deficit financing to aid Plan efforts. But he did not dilate on the issue. Nor did he suggest any new measures to tackle it. He thus merely confined himself to the relatively easy task of stating the problem.

Explaining the causes for the rise in prices of manufactures, in particular, Mr. Chettiar pointed out that the industry in the private sector in the recent past had to battle against a wide range of forces, such as high and continuously increasing wages, high cost of replacement of plant and machinery, higher rates of electric energy, coal, furnace oil and other fuels, higher excise duties and direct taxes as well as higher cost of borrowed money. He stressed the fact that, while there was a general increase in the table of component costs, it was not possible for any industrialist to keep the price of the end-product alone at a low level, "but still this is what the Government expects the industrialists to do." This is also what the Tariff Commission expects him to do, as a reward for protective tariffs extended by them. Mr. Chettiar endeavoured to bring out the anomaly in this expectation by pointing out that "no industrialist can merrily continue to exploit the consumer and still expect to stay in business." "The great equity factor in the private sector," he went on to add "is competition and this is the most wholesome force in favour of minimum margins of profit." These observations imply that the Government must encourage healthy competition by creating conditions for increased production, especially of consumer goods. But what is to be done if the country cannot afford this remedy, as it will require more investments? The answer is that there is scope for adopting this remedy in a number of industries and trade. Where there is no scope, application of a certain amount of controls is inevitable.

SUGAR

(Concluded from page 1052)

supply position will be adjusted remains to be seen.

Such, then, is the International situation in sugar. How does this affect India is a question which will have to be examined now. India ended its last sugar season with a carryover of about 550,000 tons. Production during the current season is estimated anywhere between 2,600,000 tons and 2,700,000 tons. Therefore, the total availability of sugar in India next year will be over 3,200,000 tons. Consumption during the last season was just a little more than 2,000,000 tons. Conceding that consumption next year will increase, the estimated offtake will be 2,200,000 tons. There will thus be an excess of about a million tons of sugar in India at the end of the current season, if no sugar is exported from India during 1961. Allowing for a carryover of 500,000 tons for the next season, there will still be left 500,000 tons for export during 1961. The question, therefore, arises: Can India hope to sell this quantity during 1961 in a market which has been described above?

As is quite well known, the question of India being able to sell to the United States entirely depends on the Sugar Act of the U.S. The present Act expires on 31st March 1961 and it, therefore, appears that the Congress will first extend the same beyond that date, when the Congress meets in January, and then re-write the Sugar Act conveniently during the year.

Meanwhile, India can probably sell some sugar under what is known as the "non-quota sugar purchase authorisation programme." But the prerequisite of being able to sell to the U.S. is the membership of the International Sugar Agreement. India's entry into the Agreement will mean restriction of exports to other world markets to the quota under the Agreement. Again, there is no certainty that, once India sells under the "non-quota" programme, it will have a permanent access to the U.S. market. In this connection, Mr. Lawrence Mayers, Director of Sugar Division of the U.S. Department of Agriculture, has cautioned the new suppliers to the United States that changed circumstances may some day mean the readmission of Cuban sugars into the U.S. and hence the closure of that market to new suppliers. Significant, in this connection is a Washington report published in the *New York Times* that "diplomats have been calling to warn that, if the United States makes purchases from markets other than Cuba on a short term basis, it could do long-term damage to sugar producers and to the United States relations with Latin America." Thus, any great reliance on the American market at this stage will hardly be justified.

The question of marketing about 500,000 tons of sugar during 1961 to markets other than the United States should, therefore, be considered. While it cannot be said that it is absolutely impossible to market this quantity, there should be no mistake about the fact that the task would be quite a difficult one. The capacity of natural markets to take white sugar is limited and, there again, India cannot completely oust all its competitors who have been on those markets for a number of years in the past. Some of our neighbouring markets like Ceylon and South Viet Nam are large buyers of raw sugar. But India is unable to offer any raw sugar. It may be usefully examined whether any raw sugar can be produced during the current season, especially for export purposes.

Besides, the question of repercussions of export losses on the internal price structure of sugar will have to be examined. Any large-scale export of the magnitude of about half a million tons of sugar will have to be compensated by way of a higher internal price. An increase in the price of sugar for home consumption will tend to reduce its consumption locally, perhaps to the advantage of *gur* and *khandsari*. This is a problem which will have to be examined.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

REGIMENTATION OF FORWARD MARKETS

ONE more legislation designed to regulate the activities of business men has been revised by the Lok Sabha, with a view to making it more stringent. The statute under reference is the Forward Contracts (Regulation) Act, 1952 and the business men affected are those who operate in forward markets either as jobbers and brokers or as producers and consumers of commodities in order to insure themselves against future uncertainties. This legislation was recently made applicable to the bullion market also and its amendment, therefore, concerns those who have dealings in gold and silver as well. The operators in commodity and bullion futures regard the changes made in the parent Act as too drastic to permit them to function smoothly and effectively and they gave expression to their sorrow over the further curtailment of their freedom to do business by staging a quiet *hartal* for as many as three days, when they refrained from transacting any business. Is their contention right? If the amending Bill contains drastic provisions, is there any justification for them? In other words, has the Government acted without any provocation? It is to these questions we propose to address ourselves in this article.

There are some in this country who question the utility of futures trading to a controlled and planned economy and they are not confined to the Communist Party, though only its spokesmen in Parliament advocated abolition of futures markets when the Bill came up for discussion. This is undoubtedly a highly controversial question. The argument (voiced in the Lok Sabha by Mr. A. P. Jain, the erstwhile Union Minister for Food and Agriculture) that, so long as India is a mixed economy with private enterprise playing an important role, there is need for futures markets is not sufficient. In fact, it is only a minor rationale. More important, however, is the question whether conditions for the smooth functioning of futures markets are favourable. The first requisite is the availability of sufficient supply of commodities. The second one is the existence of sufficient freedom for the interplay of market forces. The third one is the extent of interest taken by producers and consumers of commodities in hedging facilities provided by the commodity exchanges.

The list can be easily expanded, but the three mentioned here are enough for the limited purpose we have in view. Neither the prevailing conditions nor those that one can foresee for the near future, say, next five years, fulfil these requisites. The demand for almost all commodities in which futures trading is allowed is more than the available supply. Exports and imports are strictly regulated. No futures trading is allowed in a manufactured article like cloth, while this facility is provided for jute textiles. Both cotton and cloth made out of it are subject to price controls which look like staying for a long time to come. Foodgrains and sugar have not been enjoying the "benefits" of a hedge contract, but they are none the worse for it. So is the case with soft beverages such as tea and coffee that are grown in India. None will be the loser if futures trading in bullion is done away with. None of the futures markets in this country is a foreign exchange earner, as their counterparts in London and some of the Continental cities are. There are many large-scale consumers who have not felt the need for the hedging facilities provided by the commodity exchanges. There are many small-scale manufacturers who do not know the technique of hedging and are unable to withstand the impact of fluctuations in prices caused by the speculators. For both of them, a hedge market is more of a nuisance than of any help. In fine, there is an overwhelming case for reducing the scope for futures trading and discouraging the growth of a parasitical class by either abolishing or suspending futures trading in some of the commodities the position of which is such that they are easy targets for speculators.

The Congress Party has, however, taken the stand that a well-organised and neatly conducted futures market has a useful role to play even in the type of planned economy which it has imposed on the country. For some reason or other, it has a soft corner for forward markets. May be, the Party has found it difficult to resist the argument that abolition or suspension of futures market will only aggravate the problem of unemployment amongst a highly diligent section of middle class. The futures markets have helped many a middle class trader to blossom into rich industrialists. It is also not incorrect to say that the Congress Party gets solid support from those who are in charge of these futures markets in terms of both money and men. If futures markets are thus to be had, then the least that requires to be done is to regiment them in such a way that they do not lend themselves to be exploited by speculators, who are either rich or unscrupulous, or both, taking advantage of conditions flowing from the forced development of the economy such as inflation, a progressively rising demand for goods, shortage of supplies, and isolation of domestic markets from world markets through restrictions on imports and exports. Imposition of margins, however stiff they may be, does not adversely affect the rich operators or those who are unscrupulous and well versed in the art of evading rules and regulations. It is only the operators with modest resources and respect for law that are handicapped. In such a situation, the utility of futures markets to those desiring to have genuine hedging facilities is diminished further. The point of diminishing utility for them moves down still further when the terms of a hedge contract are so adjusted as to place a severe handicap on buyers, as is the case with contracts in many of the commodity exchanges at present.

The Forward Contracts (Regulation) Act of 1952 provides sufficient powers to the Government to regulate futures trading and it must be said to the credit of the Forward Markets Commission that, in the face of heavy odds, it has endeavoured to exercise these powers to the maximum extent possible to keep excessive speculation under check. But the existing Act has been found wanting in certain respects to regiment futures markets to the extent necessary for preventing them from overdoing things to the point where their extermination will become inevitable, despite the readiness of the Government to keep them alive. The scheme of the existing Act is such that, if it is to be effective, the governing bodies of the exchanges have to be alert and ready to take punitive measures against those members who are contravening even the spirit of the regulations. Such co-operation has not always been spontaneous. The Forward Markets Commission has had to resort to persuasion and, in some cases, even threats. Secondly, the present Act does not provide for the prevention of misuse of transferable specific delivery contracts and the situation is such that even non-transferable specific delivery contracts are being used for speculative purposes. Thirdly, there has been

widespread kerb trading which is outside the control of the market authorities and has been distorting the price structure. Fourthly, the Commission has been finding it difficult to launch legal action against the operators evading controls, as establishment of documentary proofs of illegal trading to the full satisfaction of courts is next to impossible, thanks to the ingenuity and deftness of operators to hide evidence or to destroy it where it is available. And, fifthly, unauthorised forward markets have sprung up in many parts of the country. They are said to number anything between 100 and 200 and non-coverage of transferable and non-transferable delivery contracts by the Act has helped them to indulge in futures trading for all practical purposes. Besides accentuating fluctuations in prices of commodities, these markets have been ruining a number of innocent people financially by whetting the natural human appetite for quick and easy profit.

Some of the aforesaid serious drawbacks in the present situation are doubtless the result of the efforts made by the Commission to check speculation under the existing Act. When attempts are made to restrain speculators from exploiting the opportunities offered by the prevailing economic conditions to the maximum extent possible, they try to reach their goals in other ways and through other means. It will, therefore, be no exaggeration to say that the need for amending the present Act has arisen because of the absence of even the minimum prerequisites for ensuring the smooth working of futures markets. It is a case of evil breeding more evil, another version of the operation of Parkinson's law.

The amending Bill, if it is to serve the purpose the Government has in view, has necessarily to be a far-reaching measure. And far-reaching, indeed, it is. The Bill provides for a considerable increase in the powers of the Commission and an expansion in its size. Under the existing Act, the Commission can consist of only three members. The Bill provides for four and widens the field from which the Government can select them. Even this may be found insufficient, if the enormous amount of work and responsibility that are being entrusted to the Commission are to be efficiently discharged. For the first time, the Commission is being vested with powers of direct control over every member of the recognised associations instead of through their boards of directors as at present. When the Bill goes on the Statute Book, the Commission can, among other things, (1) suspend a member of the recognised association, (2) call upon a member or members to supply any information, and (3) inspect the books of accounts of members. If these powers are exercised, the governing bodies of the so-called "self-managed" associations will be reduced to the status of Government agencies. Time and again, the Government has repeated that the primary responsibility for regulation will be on the recognised associations themselves and that it will step in only when any association fails to act against excessive speculation and illegal trading or acts in a manner prejudicial to public interest. The vesting of power in the hands of the Commission, which runs contrary to this assurance, implies that the Government has found it necessary from experience. One can reasonably assume that the intention of the Government is to use this extraordinary power only if the governing bodies do not conscientiously discharge their responsibilities in letter and spirit alike.

In an attempt to kill "kerb trading" and trading by members outside their recognised associations, the Bill provides for declaring such business as illegal, instead of merely void as at present. But the adoption of this solution to prevent options has not proved efficacious and there is no reason to believe that it will be successful when applied to kerb trading. The code of honour among those who do such business is even higher than that adopted and respected by thieves. The standard of business morals among this section of trading community is of such a high order that even a contract orally made and not reduced to writing is rarely repudiated. It is, therefore, extremely doubtful whether this measure can be effectively enforced. But the most ludicrous part of this restriction is the one which seeks to make publication of quotations of kerb trading, etc., a penal offence. This journal fails to see the relevance of this prohibition. Committing murder is a heinous crime, but reporting of that event by newspapers is not. Is kerb trading worse than murder? The existence of kerb trading is widely known because of the extensive publicity given to it. Kerb trading takes place not because an account of it is publicised in papers or through radio but because of the desire among operators to do that business. Publication of kerb quotations is the result and not the cause of kerb trading. It is hard to understand how prevention of such publication will cure the malady. Here is a perfect example of confusion over cause and effect. It is a pity that this confusion has been carried to such an extent as to infringe the freedom of the Press which is sacred. The extremely ridiculous nature of this clause in the Bill will be easily realised if it is remembered that reporting of the happenings in the kerb market is sought to be placed on a par with publishing a seditious account.

The Bill gives the Commission the powers of a civil court in respect of summoning witnesses, examining them on oath, etc., and the proceedings before the Commission will be construed as a judicial proceeding for certain purposes, including contempt. The saving grace here is that the Commission will have no powers of conviction: it has to refer the cases to the proper judiciary. Further, the penal provisions of the Act have been severely tightened. The punishment prescribed is imprisonment or a fine of not less than Rs. 1,000 for the first offence and both imprisonment and fine for subsequent offences. The burden of proof is also sought to be thrown largely on the accused and the courts are empowered to forfeit any gains through illegal transactions. All this is regarded by some as very drastic, especially as it amounts to putting these offences on par with gambling and smuggling. But a deterrent punishment is essential, if the objectives of this regulation are to be fulfilled. The speculators' respect for law is very low in this country and there need be no sympathy for those who merrily indulge in illegal trading without any qualms.

Another important clause in the Bill is the one requiring all markets providing forward trading facilities (including non-transferable specific delivery contracts), whether they deal in commodities brought within the purview of the Act or not and irrespective of the nature of their business, to register themselves with the Commission. "Registration" here is only another name for "recognition," except that Government control will be very little or nominal. In other words, the difference between "recognition" and "registration"—apart from the extent of control exercised over them—is one of degree, a "registered association" being permitted to deal in all types of forward contracts in "free" commodities and in the non-transferable contracts, unless specifically prohibited, and the "recognised association" being permitted to trade only in commodities that are brought under Section 15 of the Act.

The scheme of regulation contemplated in the original Act, it may be noted, is generally to exclude the non-transferable specific delivery contracts from its purview even in regulated commodities and to impose such regulation only where otherwise it is likely to defeat the purposes of regulation. In fact, the Expert Committee, headed by Mr. A. D. Shroff, which considered the original Bill, had observed that to bring such contracts within the purview of the Act "would cause serious inconvenience to trade and make normal trading practically impossible." But conditions have radically changed since then and, with the increasing resort to non-transferable specific delivery contracts for purposes of evading regulation, it has been clearly found necessary to bring them within the purview of the Act in several commodities, particularly in oilseeds and cotton in the city of Bombay and in jute and jute goods in Calcutta. The proposed provision appears to be a compromise between bringing them fully under the collar of regulation and leaving them entirely free. But it is a poor compromise. For, under the Bill, the conduct of business in forward contracts by an unregistered association will be an offence, while its members will be free to conduct business in such contracts among themselves as individuals. This apparently conflicting provision is the result of the belief that, without the medium of an association, the misuse of non-transferable contracts or camouflaged forward trading in regulated commodities under the guise of free commodities will be impossible. But this belief is very much open to question. Even without the inconvenient facade of an association, members can still enter into chain contracts, and settle differences mutually, very much in the manner of *havalas*. One also wonders to what extent registration of such associations and even calling for returns from them will mend matters, for the main problem, namely, non-reporting, or suppression, of business through mutual understanding, which is largely responsible for the present-day state of affairs, will continue to exist even thereafter.

Yet another important provision in the Bill is the amendment to the definition of transferable specific delivery contracts, empowering the Central Government to impose restrictions relating to their transferability by the issue of notifications. This gives a long hand to the Government, in that it can try to prevent the misuse of this machinery of forward trading even in free commodities without bringing them within the regulatory scheme of the Act. But what is surprising about this approach is that, even after all that has happened, the Government should continue to delude itself into thinking that it is necessary to make a distinction between transferable specific delivery contracts and hedge contracts. Whatever be the theoretical distinction between them, it is now widely established that, because of the rigorous restrictions placed on trading in the hedge contract proper, speculators have been successfully using the medium of transferable specific delivery contracts to serve their ends. The Forward Markets Commission has ample evidence of this practice which has been rampant particularly in oilseeds in Bombay and jute and jute manufactures in Calcutta.

The most objectionable feature of the Bill is the provision which enables the Commission to amend the by-laws of a futures contract with retrospective effect and without even adequate notice to the public and to vary the terms of the contract even during its currency. Although it is true that such action was upheld by the High Court in a recent case in Bombay, it will be extremely undesirable to effect any changes in the fundamental conditions of the futures contract when it is current. Such a practice is against all canons of futures trading. In the event of unforeseen developments which make the working of the contract injurious to public interest, the best thing to do would be to close out the contract rather than vary its terms. The existence of this objectionable proviso in the amending legislation virtually reduces the hedge contract to the status of wagering contract and makes it an unreliable form of insurance.

Our Next Issue

With this year, "Commerce" completes 50 years and crosses an important landmark in its career. We propose to commemorate this event by publishing a Golden Jubilee Number. It will be integrated with our 1960 Annual Number and consist of well over 250 pages of our usual size. There will be some 50 special articles of a comprehensive nature on a variety of topical subjects by eminent contributors. As the writers are too numerous, it is not possible to publish their names here. To choose only a few and name them may be regarded as invidious selection by the other contributors. The subjects covered include the various aspects of the third Plan, industrial policy, monetary policy, foreign aid, administration, stock exchanges, banking, corporate finance, trade grouping in Europe, inequality of incomes, agriculture, road transport, railways, shipping, aircraft industry, etc. In addition, there will also be our customary annual review of all the aspects of Indian economy, major industries and the principal markets.

The Number will be free to subscribers and will be published in the first week of January 1961. A limited number of copies will also be available for sale at Rs. 10 per copy.

There will be no regular issue of "Commerce" in the weeks ending 24th and 31st December 1960, in view of our preoccupation with the aforesaid Number and of the Christmas holidays. Our next regular issue will be dated 7th January 1961.

We take this opportunity of wishing all our readers a Merry Christmas and a Happy and Prosperous New Year. EDITOR

MARKET GOSSIP

THE share markets are having a few jitters. It looks as though the fear which this journal had entertained for some months now about the impact of foreign exchange shortage on imports of pulp required by rayon fibre producers will soon materialise. There have been reports this week that there will be a cut of 10 per cent. in the import quotas for pulp. The position, according to our information, is that the producers' raw material requirements are covered up to 31st March 1961 and it is only the quota for the following half-year that may have to bear a reduction. Nevertheless, market sentiment has suffered a setback and all rayon shares have sustained a sharp fall. The possibility of a similar cut in the raw materials required by the newly established chemical units also has told on the shares of chemical companies which were a rage with operators not long ago. In sympathy with chemical shares, tyres and plastics also have been drooping.

Some of the reported statements of Mr. Morarji Desai about raising funds for the third Plan through indirect taxation and issue of new shares at a premium have also upset the operators. It is not clear to what extent these reports are correct. Did the Finance Minister speak, for instance, about the new issues of existing companies or did he refer to the issues of new companies as well? Enquiries made in reliable quarters reveal that he did not refer to the latter at all and that he made no categorical statements even about the issue of fresh capital by the existing companies. The issue is, however, coming up for discussion with a delegation of industrialists in a few days. The Federation of Indian Chambers of Commerce has sought an interview with the Government for ascertaining the norms and principles adopted by the latter for determining the quantum of premium. The Federation has done well to approach the Government for a clarification on this question, because the policy pursued by the authorities is distressingly erratic and none can make out the considerations that influence them in deciding the premium. Recently, in the case of Bengal Coal and G.K.W., the Government insisted on the companies collecting a heavy premium, while it allowed Rohtas Industries and Larsen and Toubro to raise additional capital at par. Now, Mysore Paper has announced that it would like to issue new shares at par, but will it succeed in getting the permission of the Controller of Capital Issues?

There is nothing new in the reported statement of Mr. Morarji Desai about indirect taxation. It is all there in the draft report of the third Plan. The speculators are simply trying to exploit the change in the mood of the market.

What is really worrying the serious-minded operators at present is the prospect of an increase in the burden of direct taxation. Their fear is that, after all the criticisms made in Parliament on the donations to political parties by joint-stock companies, the Government might not refrain from imposing more direct taxes, lest it should be accused of trying to please the "money bags" in order to collect funds for the General Elections in 1962. Would it not, they ask, prefer to enhance the direct taxation in the forthcoming budget at least to disprove the charges made on the floors of both the Houses not only by the Opposition but also by some leading Congress men?

Maharashtra Gives Shocks to Sugar Companies

The spurt in the shares of Deccan sugar companies, following the bumper dividend of Belapur Company, has proved to be a short-lived affair. On the contrary, there has been a substantial fall in their values this week. This is not due to any sudden feeling that other sugar companies in Maharashtra will not be able to match the preference of the Belapur Company. Belapurs themselves have lost the major part of their recent gains. The real reason seems to be the fear that the Deccan sugar companies will be in for some harsh treatment in the legislation which the Maharashtra Government is drafting for introducing ceiling on agricultural landholdings. It is reliably learned that this fear is not without firm foundation. The intention of the Maharashtra Government seems to be to subject the farm lands (both cultivated and in reserve for expansion) belonging to joint-stock sugar companies to the ceiling legislation. The fact that this move runs counter to the latest directive given by the Planning Commission to all State Governments as well as to the changes effected by the President in the Kerala Land Reform Bill drafted and adopted by the Communist regime has not deterred the Maharashtra Government. When we heard the news, we could not believe it, for, in Mr. Y. B. Chavan, Maharashtra has an able and a very sensible Chief Minister. Even now, it is hard to believe that he would be a party to the reported legislation which would place the President of India in an embarrassing position. But we are told that the news is true, that Mr. Chavan has won the blessings of Prime Minister Nehru for the Bill and that he has obtained special clearance for it from the Planning Commission. It is to be hoped that, even if the news is true, Mr. Chavan will reconsider the matter before it is too late and exempt the sugarcane plantations and efficiently managed farms from the ceiling. The joint-stock sugar companies in the Deccan have brought prosperity to Maharashtra by raising sugarcane on scientific lines and producing the highest rate of sugar per acre in India. Their achievements compare favourably even with those of sugar producers in Java and Hawaii and they have set an excellent example to the other States in this country. To subject them to land ceiling is to place a penalty on efficiency and enterprise.

Novelty in Import Policy

The import policy for the current licensing period (October 1960-March 1961) in respect of six more items, namely, betel-nuts, cloves, mace, cassia and cinnamon, dates and nutmegs, announced this week, has come as a disappointment to the trade, for the quota has been slashed by 50 per cent., as compared with the previous half-year. A novel feature introduced this time is the link arrangement with exports of certain other commodities, which are in no way related to those that are to be imported, either as a raw material or in any other capacity. The fact that importers of the above-mentioned spices and dates have been getting a substantial profit margin, as much as 400 per cent. in some cases, seems to have been an eyesore to the Government. Obviously, the latter does not want the importers to reap the benefit of higher prices within the country without their sharing a part of the burden of export promotion. In accordance with this new policy, import quota for spices and dates will be given subject to the condition that they will export against this some groundnut oil, tapioca flour, etc., the domestic prices of which are well above those in the world market. More or less a similar scheme, it may be recalled, was introduced in October last under which tenders were invited for the export of groundnut oil against imports of copra and palm oil. This was designed to be not only as an incentive to export promotion of groundnut oil but also as replacement of one type of fat by another. Ultimately, however, it was found that exports of groundnut oil under the tender scheme would not exceed a bare 400 tons. But the new scheme is an improvement on its predecessor in that no tender has been invited and the proportion of import entitlement against exports has been clearly specified.

Apart from the merits of this new scheme, one wonders why the Government waited so long to announce the scheme. Already, two and a half months have elapsed since the new licensing period began on 1st October last. The trade was held in suspense for a pretty long time which only created confusion and uncertainty in the market quite detrimental to the interests of consumers.

According to the new scheme, the import of four items, namely, betel-nuts, cloves, mace as well as cassia and cinnamon will not be permitted, unless importers undertake to export a specified amount of groundnut oil and tapioca within six months of the imports, either direct or through an Export Council or Association or through an established exporter. *Ad hoc* licences for the import of betel-nuts will be issued to established importers for a value equal to their entitlement at 2½ per cent. of half of their best year's imports, and for cloves, mace and cassia and cinnamon 5 per cent. each. Against imports of every 7.5 cwts. of betel-nuts and 2.5 cwts. each of cloves and also cassia and cinnamon, one ton of groundnut oil or 8 tons of tapioca flour should be exported. In respect of mace, 2.5 cwts. of imports will be allowed against exports of two tons of groundnut oil or 16 tons of tapioca flour.

For the import of dates, established importers will be given *ad hoc* licences for a value equal to their entitlement at 20 per cent. of half of their best year's imports on condition that the licensee will within six months of the date of importation of dates effect export of tinned fruits, biscuits and confectionery, syrups and juices, pickles, molasses, cigarettes and *bidis*, etc., up to a value of 50 per cent. of the imports. In all these cases, licensees will be required to give a bond duly supported with bank guarantee for an amount equal to the c.i.f. value of imports for fulfilment of the export obligation. With regard to nutmegs, the quota for established importers will be 5 per cent. The last date for receipt of applications by the licensing authorities will be 31st January 1961.

Traders of these items have not yet been able to assess fully the implications of the scheme, which, on any account, is quite novel. The smaller quota has fallen short of the anticipation of trade. The consumers of these items, no doubt, seem to be in for trouble, since prices of these commodities have already spurted on the announcement of the new policy, anticipating shortage of supply. The reaction of traditional groundnut oil exporters is one of complete dissatisfaction and the Board of the local Oilseeds and Oils Exchange has taken up the issue with the Government. In a communication addressed to the Ministry of Commerce and Industry, it has urged immediate reconsideration of the scheme. The note points out that the Government's policy of linking imports of half a dozen items, such as betel-nuts and cloves, to the export of groundnut oil and tapioca flour will accelerate the rise in the prices of groundnuts and groundnut oil. It adds that the Government should not blame the trade for the rise in prices resulting from export promotion measures and that, if the Government still wishes to force exports of groundnut oil, through the incentive scheme just announced, the benefit should directly go to exporters of groundnut oil and to importers of the aforesaid commodities.

The grievance of oil exporters is understandable. For, even though the total export of groundnut oil under the new scheme is not likely to exceed 5,000 tons, it will adversely affect their business. The quantity of groundnut oil available for export is already limited and competition for it from the importers of the commodities mentioned above will only make their position worse. It may be that the latter may share a part of their gain by asking the established exporters of groundnut oil to do the export on their account. But this is only a case of something better than nothing. Further, the world market for groundnut oil being a very competitive field, the Government cannot expect the new-comers to deliver the goods. Another argument against the scheme is that no proper agency has so far been set up by the Government or the trade to co-ordinate imports and exports. This will add to the hardships of the business men concerned. There is also considerable force in the argument that prices of groundnut oil may go up still further on account of the new scheme. Only last week, the Forward Markets Commission had administered a strict warning against speculation. But the latest policy of the Government is such that it will lead to a further rise in prices. This situation will create crucial difficulties for domestic consumers of oil, including the *vanaspati* industry. The inevitable conclusion is that there is absolutely no case for exports of groundnut oil, when domestic production of groundnuts falls short of consumption requirements within the country. A section of the trade is of the view that the Government should try to arrange for import of some soyabean oil, either under a barter arrangement or under P.L. 480, to relieve the scarcity of supply in oils and fats in the country.

I. M. F. Supports the Dollar

Efforts are being kept up to strengthen the position of the U.S. dollar. Britain has reduced its Bank rate further from 5½ per cent. to 5 per cent., with effect from the 7th inst. It remains to be seen whether W. Germany also will oblige by cutting down its Bank rate again from 4 per cent., to which level it was lowered from 5 per cent. on 10th November 1960. The International Monetary Fund, too, has taken a step which, though not deliberately meant for supporting the dollar, will surely have that effect. It has sold to the U.S. $300 million worth of gold from its stocks.

It is common knowledge that the Fund has in its possession large gold holdings which were substantially raised, thanks mainly to the increase in the quotas of member-countries effected in 1959. The abundant exchange reserves which some of the West European countries are having today owing to their buoyant balance of payments position imply that there are not likely to be many calls of a sizable nature on the resources of the I.M.F. in the foreseeable future. The provision under which member-countries, whose gold reserves have increased after the credit extended to them by the Fund, have an obligation to repay a part of their loans in gold has also accounted for the rise in the gold holdings of the I.M.F. But, like any other financial institution, the I.M.F. cannot hold in its vaults excessive liquid reserves which would yield no income. It is, therefore, a sound policy of the I.M.F. to invest a part of its funds in interest-bearing securities repayable in gold. Only the U.S. Government loans are eligible for this purpose, because, when securities are sold to the I.M.F., the American Government provides a guarantee to repay in gold.

Before the present purchase of $300 million worth of short-term Treasury securities, the I.M.F. had sold gold to the U.S. twice since 1956. The Fund's motive at that time, of course, was of earning some additional income to cover its rising expenses. The object of the present move is not officially explained by the Fund. But foreign observers feel that it is meant to relieve the pressure on the gold holdings of the U.S. and to impart confidence among holders of dollars. There is also some justification for the Fund in rendering this timely assistance to the dollar. After all, when France had to repay its obligation to the Fund, it had to make a part of that payment in gold. And it obtained this gold from the U.S. by converting a part of its dollar reserves, instead of drawing down its own gold reserves.

It is important to note here that the aforesaid investment of the I.M.F. in U.S. Treasury stocks is not a part of the assistance which the U.S., as a member of the Fund, can claim. It can, for instance, draw its rights in foreign currencies. Wisely, the U.S. is desisting from falling back on this support, because such an action will only add to the uneasiness of foreigners holding dollar balances and encourage them to withdraw their funds.

As a result of the purchase of dollar securities by the I.M.F., the U.S. gold reserves have increased by $267 million in the week ended 7th December 1960 to $18.177 million. The difference between this addition and the I.M.F. contribution, namely, $33 million, represents the gold drain during the week. This brings the net decline so far during the current year to $1.279 million. Given the continuance of the flow of gold to other countries, the transfer of I.M.F. gold to the U.S., would keep the American reserves beyond the $18.000-million barrier only for a few weeks and, as the scope for repetition of such transfer from the I.M.F. is not very great, other remedies will have to be thought of. One solution will be a further increase in U.S. exports. The latest indications are that these are continuing to expand at a substantial rate. Another will be reducing further the disparity between the European and U.S. interest rates on short-term funds and increasing the flow of untied long-term capital exports from West European countries. The first measure could prevent the flight of hot money from the U.S., while the second would relieve the pressure on U.S. balance of payments.

EQUITIES FALL FURTHER

OFFERINGS LARGE, SUPPORT POOR

(From Our Own Correspondents)

BOMBAY, 15*th December*

THE easy trend noted on the Stock Exchange in the past two weeks gathered fresh momentum during the week under review, with most equities continuing to march downward. Offerings of scrips were generally very large, while investment support was at a low ebb. The sentiment of operators was adversely affected by the reported statement of the Union Finance Minister at a meeting of the Informal Consultative Committee of Parliament that the country must be in for a period of increased taxation and that it was the Government's policy to insist on a premium being charged when established companies raised fresh capital or started new ventures. The persistently rising trend of production costs in industries also acted as a damper. The setback to equity values would, indeed, have been more marked but for some enquiries from the L.I.C. Investment Committee and normal carry-forward charges in the last settlement. The bulls, of course, were obliged to pay more, but this was due to the fact that the current settlement is for a longer period in view of the Christmas holidays.

Preference shares continued to lack support. Operators were somewhat dissatisfied with the hurried Lok Sabha passage of the Bill to regulate dividends on preference shares as modified by the Select Committee. As was pointed out by us in our Market Gossip columns last week, the tax-free and taxable preference shareholders, though they will get a little more than that contemplated in the original Bill, will still be substantially worse off as compared with what they were getting before the abolition of grossing. Some of the leading preference shares suffered a decline during the week under review, Tata Powers by Rs. 3.75 to Rs. 1.100, Rohtas 'B' by Rs. 2.50 to Rs. 58. Tata Chemicals by Rs. 2 to Rs. 84 *ex-div.*, Tata Steel second Preference 'A' by Re. 1 to Rs. 102 and Hindustan Motors by 25 nP to Rs. 184.75

Steel shares drifted lower, despite reported purchases of Tata Steels by the L.I.C. and purchase of a large parcel (believed to be 15,000 shares) of Indian Irons by a leading broker. Tata Steels receded a rupee, from Rs. 141.25 to Rs. 139.50 today, before finishing at Rs. 140.25. Indian Irons dropped 16 nP to Rs. 23.36. Mukand Irons retreated from Rs. 21.76 to Rs. 19.48. Towards the close, they were better at Rs. 20.

In the textile section, Standards were hammered down from Rs. 1,072 to Rs. 992; at one time today, they were lower still at Rs. 965, which compares with a peak of Rs. 2.065 touched on 25th July 1960. Khataus fell by Rs. 17.50 to Rs. 447.50 and Centurys by Rs. 11 to Rs. 450. Kohinoors declined by Rs. 8 to Rs. 266.50. Minervas eased by a like amount to Rs. 64. Finlays lost Rs. 7 to Rs. 323, Svadeshis Rs. 4.50 to Rs. 223, Central Indias Rs. 4 to Rs. 100, Podars Rs. 3 to Rs. 131, Elphinstones Re. 1.50 to Rs. 58 and Simplex Re. 1 to Rs. 160. Bombay Dyeings decreased from Rs. 62.70 to Rs. 60.70 today before finishing at Rs. 61.10. Gokaks were done at Rs. 169, as against Rs. 173 last week-end.

Sugar shares encountered selling by knowledgeable sources. It is reported that the contemplated Land Ceiling Bill of the Maharashtra Government will adversely affect the working of Deccan sugar companies, having their own plantations. Belapurs moved down from Rs. 387 to Rs. 365 today but closed higher at Rs. 370, the net loss over the week being Rs. 17. Walchandnagars slipped down by Rs. 11.50 to Rs. 278.50. Phaltans receded by Rs. 11 to Rs. 178.

Cement shares also came in for selling. Digvijays dropped Rs. 5 to Rs. 147. Associated Cements eased by Re. 1.75 to Rs. 149. Bagalkots shed 16 nP to Rs. 8.20. Sone Valleys eased by a like amount to Rs. 4.88. Orissas and Ashokas lost 8 nP each to Rs. 14.96 and Rs. 9.28, respectively.

Bank shares tended to recede. Operators noted reports that the Reserve Bank had asked the banks to consider seriously the question of strengthening their capital base. Bank of Indias receded by Rs. 2.50 to Rs. 106, 'A' shares remaining quiet at Rs. 111. Barodas, Centrals, United Commercials and Denas shed 50 nP each to Rs. 82, Rs. 54, Rs. 84.50 and Rs. 52.50, respectively.

Shippings and automobiles drifted downward. Among the former, Great Easterns eased by 28 nP to Rs. 15.20. Scindias shed 20 nP to Rs. 14.16. India Steamships receded from Rs. 9.50 to Rs. 9.28 *ex-div.* Among automobiles, Premiers fell by Rs. 6.50 to Rs. 165.50. Hindustan Motors lost 16 nP to Rs. 19.64.

Almost all the leading counters in the engineering section suffered losses. Premier Constructions slumped by Rs. 15 to Rs. 285.50. Alcock Ashdowns were marked down by Rs. 13 to Rs. 227. Telcos fell by Rs. 11.25 to Rs. 291.50, notwithstanding reports that the Company had received the official sanction for its proposal to put up a forging plant. Cooper Engineerings declined by Rs. 4.40 to Rs. 154.50, Larsen and Toubros by Re. 1.75 to Rs. 35 and Mahindras by 58 nP to Rs. 19.48.

Selling pressure was pronounced in the miscellaneous section. In particular, dyes and chemicals were depressed. Indian Dyestuffs climbed down by Rs. 57.50 to Rs. 402.50. Amar Dyes slumped by Rs. 35 to Rs. 350 and Colour-Chems by Rs. 28.75 to Rs. 292.50. Adarsh Chemicals fell by Rs. 9 to Rs. 51. Alembics declined by Rs. 2.50 to Rs. 230. Among others, Bombay Burmahs receded by Rs. 27 to Rs. 558. Rayon shares were subjected to selling on rumours regarding a cut of 15 per cent. in the import quota for rayon pulp. National Rayons lost Rs. 23.50 to Rs. 474, South India Viscose Rs. 18 to Rs. 138, Barodas Rs. 13 to Rs. 116, Indian Rayons by Rs. 6 to Rs. 52 and Gwaliors Rs. 4.25 to Rs. 38. Ceat Tyres retreated by Rs. 28.75 to Rs. 190. West Coast Papers by Rs. 12 to Rs. 177.50 and Khandelwals by Rs. 11 to Rs. 75. Wimcos eased by Rs. 7 to Rs. 263. Voltas shed Rs. 6.75 to Rs. 262. Tata Oils eased by Re. 1.50 to Rs. 73.50. Hindustan Levers lost 75 nP to Rs. 44. Killicks were dull at Rs. 100.

* * * *

Madras Stock Exchange

MADRAS, 14*th December*

With the exception of a few rubber and coffee shares, which tended to move up on special support, the Stock Exchange ruled easy during the week under review, despite some purchases of leading scrips by the Life Insurance Corporation. Textiles encountered selling, as operators were much concerned over the continuously rising prices of raw cotton and stores. Teas also encountered selling on reports that Russia was lately turning away from the Indian tea market and was purchasing more from Ceylon. Sugars, cements and chemicals and other miscellaneous industrials were all dull.

Among textiles, South Indias fell by Rs. 5 to Rs. 151. Lakshmis receded from Rs. 152 to Rs. 150. Metturs lost a rupee to Rs. 369. Buckinghams declined by 50 nP to Rs. 198. Kotharis were lower by 30 nP at Rs. 11.80. Maduras initially moved down from Rs. 34.90 to Rs. 34.70, but recovered to close at Rs. 34.80. Travancore Rayons after improving from Rs. 34.25 to Rs. 34.50, closed at Rs. 34.25. Bangalore Woollens put on a rupee to Rs. 198.

In the tea section, Haileyburias and Twyfords receded by 25 nP each to Rs. 14 and Rs. 12.25 respectively. Peermades and Kil Kotagiris softened by 15 nP each, the former to Rs. 22.50 and the latter to Rs. 5.45. Periakaramalais shed 6 nP to Rs. 3.40. Nonsuchs lost a like amount to Rs. 26.40 Chembras, however, scored a gain of 52 nP to Rs. 5.62, following the issue of bonus shares by the Company at the rate of 1 : 2.

Rubbers put on a cheerful appearance. Midlands rose by 37 nP to Rs. 11.72 and Malankaras by 20 nP to Rs. 17.90. Vaikundams were higher by 25 nP at Rs. 31. Cochin Malabars picked up 3 nP to Rs. 7.03. Travancore Rubbers, however, were marked down by 40 nP at Rs. 10.90. T.R. and T's dropped 5 nP to Rs. 9.50.

Among coffees, Coffee Lands moved up by 18 nP to Rs. 19.50. Consolidated Coffees gathered 18 nP to Rs. 19.50, mainly on technical considerations. The other coffee shares were firm.

In the sugar section, East India Distilleries lost 25 nP to Rs. 42.50. Travancores eased by 15 nP to Rs. 10.70. Deccans moved down from Rs. 15.75 to Rs. 15.65. But Cauverys spurted by Rs. 2 to Rs. 146.

Among miscellaneous industrials, Tube Investments suffered a setback of Rs. 7 to Rs. 291. Andhra Cements sagged by 10 nP to Rs. 9.90. Orissas were lower by 5 nP at Rs. 14.80 and Indias by 1 nP at Rs. 5.88. Mettur Chemicals receded by 10 nP to Rs. 13 and F.A.C.Ts by 4 nP to Rs. 9.86. Aluminium Industries were lower by 5 nP at Rs. 22.85. Western India Plywoods, however, staged an impressive rally by Rs. 6 to Rs. 246. Textools strengthened by Rs. 3 to Rs. 193.

A METAL BOX COMPONENT !

Metal Box, leaders in the packaging field, have diversified their production and now manufacture pressed metal components for the radio, automobile and electrical industries in particular. Backed by their long experience in the forming and stamping of metal sheets to various shapes—a basic process in the manufacture of containers—Metal Box are now able to supply regulator covers for fans, chasis and transformer cans for radios, hub caps for automobiles and a variety of other components made of steel, aluminium, tinplate, lead, brass and other alloys.

The production of pressed metal industrial components by Metal Box, an organization specialising in container manufacture, is evidence of the Company's adaptability and its desire to adjust itself to cater for the country's needs. In order to place the minimum strain on foreign exchange, press shop equipment already available in the country was modified to suit the production of industrial components, a ready supply of which is so essential for the rapid growth of India's industries.

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats

NEWS IN BRIEF

THE Bill, which seeks to introduce metric system of weights and measures in postal transactions, was passed by the Lok Sabha last week.

The Government of Maharashtra has constituted a Cotton Committee, consisting of officials and non-officials, to review from time to time cotton extension work done in the State for achieving the targets laid down for cotton production.

A needle-producing firm in West Germany, Rheinnadel Gruppe, has submitted to the Government of India a proposal to set up a needle manufacturing plant in India. The proposed plant, it is said, will give employment to about 250 persons.

A Roumanian mission is currently discussing with the officials of the Union Ministry of Commerce and Industry details regarding the supply of Indian iron ore on a long-term basis in return for oil rigs and petroleum products.

The Indian delegation which went to Japan to negotiate the price of iron ore to be supplied next year, has returned to New Delhi without reaching an agreement. The Indian delegation insisted on fixing the price at the 1957 level of 84*s.* a ton, as against 80*s.* in 1959 and 1958. The Japanese interests, however, were said to have opposed the rise.

It is proposed to observe an "India Plan Week" in all the State capitals from 14th to 22nd January, under the auspices of the Union Ministry of Information and Broadcasting. The objectives of the week are to mark the completion of ten years of planning as well as to show the achievements attained so far and the prospects for the third Plan.

Mud *volcanoes oozing* a mixture of oil and inflammable gas are found in several parts of the Andamans. A geological party carried out preliminary work during the 1959-60 field season to examine the possibility of oil exploration in those areas. The work is being continued during the 1960-61 field season. It is, however, considered too early to assess the results of the investigations.

The National Chemical Laboratory, Poona, has invented a colour for *vanaspati* which can prevent its use as an adulterant with ghee. Disclosing this in the Lok Sabha, Dr. M. M. Dass, Union Deputy Minister for Scientific Research and Cultural Affairs, added that the new colour satisfied "nearly" all the tests; the test for chronic toxicity was now being carried out in the National Drug Research Institute at Lucknow.

A team of Soviet officials will visit India shortly to discuss the allocation of the latest Soviet credit of Rs. 60 crores for the third Plan. The projects tentatively selected by the Government of India for financing out of this loan are oil refinery in Gujerat, oil and mineral drilling equipment, ball and roller-bearing plant, heavy compressors and pumps project, basic refractories project, and certain power schemes and coal washeries.

The proposal submitted by Tatas for setting up an alloy and steel plant during the third Plan period has been approved by the Government of India. The plant is expected to be located near the present steelworks at Jamshedpur. It is reported that negotiations for collaboration with a U.S. special steelworks plant are being held now. Another alloy and special steel plant will be set up in the public sector at Durgapur during the third Plan period.

Licences for setting up two pig iron plants, one in the Chanda district of Maharashtra and the other in Keonjhar district of Orissa, with an annual capacity of 94,000 tons and 72,000 tons, respectively, have been granted to private parties by the Government of India. The grant of these licences follows the revised policy of Government which seeks to permit the private sector to establish pig iron plants with a capacity upto 100,000 tons. The previous ceiling was no more than 15,000 tons.

India's first electric locomotive will roll out of the Chittaranjan railway works by the middle of 1961, according to Mr. Shah Nawaz Khan, Union Deputy Minister for Railways. It is proposed to manufacture four D.C. electric locomotives during the third Plan. It is also proposed to manufacture A.C. locomotives by the middle of 1963 at Chittaranjan. Global tenders have been received for the manufacture of A.C. locomotives and are under scrutiny. The estimated cost of the electric locomotives to be manufactured at Chittaranjan is Rs. 10 lakhs each.

The three steel plants at Rourkela, Bhilai and Durgapur produced upto October this year 1,556,525 tons of pig iron, including pig iron for steel-making, and 550,073 tons of semi-finished and finished steel. Of this, 913,769 tons of pig iron and 268,097 tons of semi-finished steel have been sold locally, either direct from the steel works or through controlled and registered stockists. A total of 104,497 tons of pig iron, slabs, ingots and billets was exported to seven countries, namely, Japan, Pakistan, the U.K., the U.S., West Germany, Holland and Italy.

From Abroad

World oil production touched a record level in September last, with the average daily production amounting to 21.27 million barrels, according to the latest issue of the *Oil and Gas Journal*. This is 10 per cent. higher than that in September 1959.

The sterling area's central gold and convertible currency reserves rose by £10 million during November and stood at £1,131 million on the 30th of that month. The reserve level in November was the highest since September 1959, when it was £1,173 million.

Japan and the Philippines have signed a treaty of "amity, commerce and navigation" with mutual most-favoured nation treatment. The treaty, concluded after ten months of negotiations, is said to be the first such treaty Japan has concluded with a neighbouring country in South-East Asia after the last world war.

The International Monetary Fund has sold $300 million worth of gold to the U.S. The dollars obtained are to be invested in short-term Treasury securities. With the purchase of this gold, the total U.S. stocks of gold, which had been declining in recent months due to foreign purchases, now stand above 18,000 million dollars. It is the third time since 1956 that the Fund has sold gold to the U.S.

The British Colonial Development Corporation and the Government of Kenya propose to launch a £960,000-scheme to promote tea growing by African small holders in the Central, Nijauza and Rift Valley provinces of Kenya. The scheme provides for grant of financial assistance for a period of over eight years, with a view to extending the area under tea by 9,000 acres.

The Government of Ceylon is contemplating to establish a State-owned Corporation to import and distribute petrol and other petroleum products. The Government will buy oil from the cheapest source, irrespective of whether they are communist countries or not. Initially, the oil imported by the Corporation will be distributed to Government departments and the nationalised Ceylon Transport Board.

A new organisation, called the National Hygiene Council, which will inspect food shops, restaurants and cafes, has been launched in Britain. The Council's inspectors will award a seal of approval—a lion superimposed on a cleansing flame—to premises which reach specified minimum standards of hygiene. Formation of the Council has followed discussions between M.Ps and leading food manufacturers.

People in the U.K. spent an average of 29*s.* 3*d.* a week each on food in 1959, 3*s.* 7*d.* more than in 1955, according to the British National Food Survey. The Survey indicated that there was a 4 per cent. rise in the total amount of food consumed in the period, most of it being of the "convenient" type—food such as frozen peas, cooked and canned meat and dehydrated food.

The U.N. General Assembly's Economic Committee passed last week two resolutions of vital importance to the underdeveloped countries. One of the resolutions, drafted jointly by Pakistan and Indonesia, calls for a study of the feasibility of establishing international credit insurance organisations to help promote flow of investment capital to underdeveloped countries. It also calls for a report on the extension of existing national credit insurance institutions. The other resolutions call for increased international aid to underdeveloped countries to reach as soon as possible one per cent. of the combined national revenue of economically advanced nations. The resolution proposes that a major part of this aid be directed through the U.N. and its specialised agencies in a manner which will not weigh heavily on the balance of payments of underdeveloped countries. The Economic Committee has also endorsed a nine-nation move, led by India, to raise the combined target for the U.N. Special Fund and expanded programme of technical assistance from $100 million to $150 million.

PERSONAL

MR. B. K. Choudhuri, a former Judge of the Madhya Pradesh High Court, has been appointed Member of the Industrial Court of Maharashtra State.

Mr. Mirza Rashid Ali Baig, at present Chief of Protocol and Joint Secretary in the Ministry of External Affairs, has been appointed Ambassador of India to Iran. He is expected to assume charge of the new assignment in April 1961.

Mr. Enrico Mattei, President of the Italian State-owned oil company, the Ente Nizionale Idrocarbari, has arrived in India for consultations with Government on the question of collaboration in oil exploration in the country.

Mr. H. L. Muschamp, Managing Director of Muschamp Textile Machinery Ltd., Ashton-under-Lyne, Lancashire, will shortly leave on a market survey of the United Arab Republic, Cyprus, Israel, Iran, India, Pakistan, Iraq, Turkey and Greece. In India, Mr. Muschamp will visit Bombay and Delhi. The Indian section of his tour will last from 22nd January to 7th February 1961.

TEXTILE RESEARCH

PRESIDENT Dr. Rajendra Prasad certainly struck a note of realism when he stated, while declaring open the Textile Research Institute at Bombay on Friday the 9th inst., that the major role in the matter of cloth supply undoubtedly belonged to the mill industry. For the mill industry, in view of all the advantages of large-scale manufacture, can produce cloth more efficiently and at less cost as compared with the decentralised sector. This aspect deserves to be specially stressed in the context of the steadily expanding propensity for consumption of cloth in the country. If the mill industry is not enabled from now onwards to meet such demand because of the preference shown by the powers-that-be for handlooms and Ambar Charka, there is bound to be a virtual cloth famine in the not too distant future. It is to be hoped that the Planning Commission will bear this point in mind when it formulates the programme of development for cotton textiles in the third Plan period.

Assuming that the mill sector will be given the bulk of the share in the additional market for textiles, a great responsibility will devolve on the mills, namely, that of adjusting the nature and quality of cloth according to the changing needs and trends. Dr. Prasad did well to make particular mention of this aspect, as well as of the growing competition in world textile markets from other producing countries. He pertinently remarked: "... the challenge which these conditions pose should be met squarely and there is no other way of doing so except by conducting research." Viewed thus and considering that research, since it entails quite a bit of expenditure, cannot be undertaken by individual mills, the joint venture of the Bombay millowners to set up a special body for research work is, indeed, commendable.

The Textile Research Institute in Bombay is one of four such institutes which the Cotton Textiles Fund Committee, constituted by the Government of India in 1944 for administering the funds raised by the levy of export duty on yarn and cloth, had decided to establish. The Committee agreed to share the recurring and non-recurring expenditure of the institutes on a 50—50 basis. The Millowners' Association, Bombay, formulated a scheme for the establishment of the Bombay Textile Research Association and the foundation-stone of the Institute at Ghatkopar was laid in April 1957 by Mr. Y. B. Chavan, Chief Minister of Maharashtra. The present membership of the Association is 36 mill companies, of which 28 are from Bombay City.

The Institute, we are told, will undertake research in the entire field of textile technology, including engineering, operational methods, marketing and human relations. Such research will not, however, be of any avail, if its results are not made use of effectively by the mills. The President very aptly put it when he averred: "The only precaution that will have to be taken is that the results of these researches are properly collated and communicated to all the manufacturers, big and small, so that they are implemented quickly and in their entirety." It is, indeed, gratifying to be assured by Mr. Krishnaraj M. D. Thackersey, Chairman of the Association's Governing Council, that it is the desire and determination of the Association to see that the development work carried out in the Research Institute will materially help the textile industry not only to maintain its present level of prosperity but also to enable it to achieve further progress and prosperity.

IKE-KENNEDY JOINT STATEMENT

It is generally unusual for the outgoing and incoming Presidents of the United States to confer in an atmosphere of cordiality and friendliness, because the election campaign almost always becomes a smearing affair. This time, however, the outgoing President was not made the target of electioneering fusillades by the Democratic Party and Senator Kennedy, in particular, was very careful in not hurting the feelings of Mr. Eisenhower whom he holds in high esteem. Mr. Eisenhower, too, was very dignified and restrained in his speech on the eve of the election defending the policies and actions of his regime. On the 6th inst., therefore, the two leaders met in Washington in a very friendly spirit and discussed various problems of the American Administration affecting peace, security and freedom in the world. Apart from the profound political significance of their joint *communique* declaring that "the American nation does not covet the territory of any people nor does it seek to dominate or control any other nation," the Eisenhower-Kennedy statement has a very vital bearing on the economic problems of poorer nations throughout the free world.

In the context of the present balance of payments difficulties, which have caused some significant changes in the U.S. external financial policies, doubts have been expressed in highly knowledgeable financial circles the world over, whether the new administration would continue to undertake the programme of massive economic aid and technical assistance to underdeveloped countries. The joint statement, issued after the meeting between the two leaders wherein the problems regarding the balance of payments and the position of dollar were specifically discussed, derives its abiding significance from the fact that both the retiring President and the President-elect have reiterated that "the American people and their Government have consistently sought to protect freedom and *have tried to help people throughout the world to better their standards of living.*" The statement further adds that *"these national objectives will be vigorously pursued by the incoming Administration."* These categorical words are encouraging and should set at naught any doubts that, in view of the strain through which the dollar is passing, the U.S. may not be able to help underdeveloped countries to the extent it did in the past.

DOUBLE TAXATION ON MOTOR VEHICLES

If it is true that the Governments of Madras and Maharashtra have expressed their inability to implement the principle of single-point taxation on motor transport, it is to be deeply regretted. It may be recalled that this question recently came up before the Bombay Conference of State Transport Commissioners and Controllers (*vide* leading article entitled "Role of Road Transport" in our issue of 3rd December 1960), This Conference, while reiterating an earlier decision favouring single-point taxation on motor vehicles throughout the country, agreed that a correct assessment of the flow of traffic between the reciprocating States in the case of motor vehicles plying on inter-State routes be made and thereafter a suitable machinery be devised to find a solution to the difficulties explained by the Governments of Madras and Maharashtra. It was rightly felt at the Conference that levy of double taxation, even on temporary permits, was discriminatory.

It would appear that these two States are the chief sinners as of today. Although they have both accepted the principle of single-point taxation as recommended by the Masani Committee on Road Transport, they are yet to implement it in practice by abolishing the additional tax they are levying. In Madras, the position is that an additional tax of one-sixth of normal rates is levied on all vehicles operating on inter-State routes on the ground that inter-State operation of transport is more profitable and should, therefore, be taxed at a higher rate. Although the neighbouring States in the South do not share the Madras Government's view, they too have been forced to levy the additional tax as a result of reciprocal arrangements with Madras. So the principal sinner, in so far as the additional tax on vehicles plying on temporary or permanent permits is concerned, is Madras. It is this State Government that has to be persuaded to fall in line.

In Maharashtra, the additional tax is justified on the ground that temporary permits should not be treated on a par with permanent permits. This State Government is of the view that some additional tax on motor vehicles plying on temporary permits is justified. What this means in practice is that the Government refuses to issue to a lorry a temporary permit for entering its State until the vehicle tax, already paid to the home State, is paid in this State also. Since the Maharashtra Government has, or will have, reciprocal arrangements with neighbouring States, these States are or will be forced to levy the additional tax on vehicles plying on temporary permits, if not on those plying on permanent permits. So the principal sinner in this regard is Maharashtra which, too, like Madras, would have to be persuaded to fall in line. These two States, for two different reasons, have sought to justify their additional taxes, forgetting that their obstinacy has led to the spectacle of all States agreeing to the single-point taxation on paper but many of them not being able to implement it in practice and that this double taxation is another factor which discourages through traffic on inter-State routes. Already a motor vehicle in India, on an average, pays by way of all taxes and duties nearly Rs. 3,000—a figure which could come down to some extent in the event of double taxation being eliminated throughout the country. The Governments of Madras and Maharashtra, it is to be hoped, will reconsider their stand in the interests of road transport which is most likely to be assigned a bigger role following the generally expected recommendations of the Neogy Committee on Transport Co-ordination.

WORLD BUSINESS MEN MEET

The central purpose of the International Business Men's Conference, held at Karachi last week, was to explore the possibilities for greater foreign private investment in underdeveloped countries. Business men in the newly independent countries of Asia and Africa were anxious to attract private capital from the advanced countries of the West obviously for two reasons. For one thing, they were fully alive to the need for playing their role in industrialisation in the conditions of their countries' poverty and backwardness—a role which they had necessarily to perform if public enterprise was not to be unduly expanded. For another, they were not confident of bringing about, single-handed, an industrial revolution in their countries without the aid of advanced technical know-how which foreign capital would bring with it. But, strangely, they were not wholly in a position to scotch fears of expropriation and the like, for not all the underdeveloped countries were free from political risks and consequent business anxieties. If, of all the countries in Asia and Africa, India had much to offer by way of "potentialities, climate, facilities and incentives" for foreign capital—which, incidentally, were neatly described in a *Guide for Foreign Investors* issued by the Federation of Indian Chambers of Commerce and Industry at the Karachi Conference—it was more an exception than the rule.

It was, therefore, wholly appropriate and necessary that the 500 and odd business men from 32 countries who had assembled at the Karachi Conference, held under the auspices of the International Chamber of Commerce for the first time in Asia, declared their "great concern at arbitrary and discriminatory acts of expropriation which harmed the interests of developing countries and investors." And they were right in urging that "nationalisation, if applied at all, should be non-discriminatory and accompanied by effective and adequate compensation." The Conference's plea that all investments, old or new, should be treated on an equal footing and nothing should be done to deter existing investors from expanding was particularly necessary, because potential investors, "who inevitably assessed a country by reference to its treatment of existing foreign enterprise," would be otherwise discouraged. At the same time, it was a sound piece of advice when the Conference urged the old-established enterprises to adjust themselves to changing political and social conditions, if they wished to prosper or even survive. An organic part of this advice was the wholesome emphasis, placed by the Conference, on the importance of the transfer of technical and managerial skill to nationals and on the training and development of "a class of able managers."

All these principles could well form part of an international investment code. Actually, when the Karachi Conference said some such thing it referred to past attempts to have an international treaty containing rules about nationalisation, compulsory arbitration, etc., and to current proposals for the provision of guarantees or insurance facilities to cover non-commercial risks particularly in the international context. If the Governments of underdeveloped countries were to observe, of their own accord, the principles regarding nationlisation, compensation, repatriation and the like, all would be well and there would be no need for an international treaty as such. The next best course would be to constitute an international investment guarantee institution with a membership roughly the same as that of the World Bank. Almost at the same time as the Karachi Conference was discussing this proposal, by a coincidence, as it were, the U.N. Economic Committee had passed a Pakistani-Indonesian draft resolution "calling for a study of the feasibility of establishing international credit insurance organisations to help promote the flow of investment capital to underdeveloped countries." There is, however, something ironical about this resolution, in that the sponsoring countries themselves are guilty of unfair treatment to foreign investors. Indonesia, for instance, has seized the properties and businesses of foreign investors in a manner which is nothing short of expropriation, while Pakistan has been following a policy of unfair discrimination against Indian investors, as this journal had occasion to point out earlier. Anyway, the Karachi Conference took no definite decision on the identical proposal, because it had to be further studied by the International Chamber of Commerce. Although the Conference took no concrete step, it had amply served its purpose by contributing sufficient thought for shaping business and, possibly, political opinion in favour of a suitable climate for the flow of private capital from the industrial West to underdeveloped areas.

The Karachi Conference had also other notable achievements to its credit. Its discussions, for instance, revealed a general consensus of opinion in favour of reductions in the World Bank's rates of interest and commission. It redounded to the credit of the Indian National Committee of the International Chamber of Commerce that its memorandum on international loans and export credits provided the basis for the relevant discussions at the Conference. Although the World Bank's rates did not compare unfavourably with interest rates charged by private international agencies, it was urged that the rates could be revised now in terms of the Bank's charter which provided that it could do so after the expiry of 10 years. There was nothing new in this plea which had been advanced on more than one occasion in the past. Nor was there anything new in the consistent refusal of the World Bank to entertain it. On this occasion, the representative of the Bank declared emphatically that it was not possible to reduce the rates, because it had to build up reserves continuously and thereby provide a cushion against defaults. The criticism against the International Finance Corporation was also similarly refuted by its Vice-President who said that it had been launched as an experimental measure and, therefore, much of the criticism arose from a misunderstanding of its real functions.

Another consensus of opinion which emerged at the Conference was that foreign agencies should continue to encourage private enterprise, preferably joint ventures with national industrialists. Equally notable was the Conference's opinion that the formation of an Asian Common Market was not to be seriously thought of for the present. This was not surprising, for the impact of the European Common Market and the European Free Trade Association on the economies of Asian countries was by no means clear yet and the political and cultural diversities of Asia were too formidable to permit of anything like integration in the economic sphere. The idea, originally sponsored by the Philippine delegation at the E.C.A.F.E. Conference in March last, had obviously not become sufficiently popular to gain wider support. It could not have been otherwise in the political, as well as economic, conditions of Asia.

I.M.C. PRESIDENT'S SPEECH

In his presidential address at the third quarterly general meeting of the Indian Merchants' Chamber held on the 8th inst. Mr. Pratapsinh Mathuradas dwelt on some of the economic problems confronting the country. One of them was the controversy over the role of the private sector in India's economic development. Mr. Pratapsinh regretted that the Prime Minister had, once again, revived the controversy and had unnecessarily condemned the private sector by stating that "the private sector had neither the capacity nor the mental approach to undertake the industrialisation of India, a task that could only be achieved by planned activity in the public sector." The President of the Indian Merchants' Chamber rightly observed that such statements, emanating from men in authority such as the Prime Minister of the country, were bound to create a sense of frustration and disappointment among the business community. By way of reply to the Prime Minister's unjustified attack on the ability of the private sector to deliver the goods, he drew attention to the fact that the private sector, both in the pre-Plan period and in the period of the two Five-year Plans, had made a significant contribution to the industrial development of the country, in spite of its being hamstrung by all sorts of restrictions. This was borne out, the speaker very pertinently recalled, by the progress reports of the Planning Commission, which clearly testified to the fact that the industries in the private sector had fulfilled, and in some cases more than fulfilled, the targets of investments and production laid down in the Plans. Defining the appropriate function of the public sector, Mr. Pratapsinh declared that it should act only as a catalytic agent. His statement that the public sector could never possess the qualities of initiative, enterprise and the inherent dynamism of the private sector constitutes an implied warning to the country that, if this sector were to bite much more than it could chew, there would be an enormous waste of resources and delay in delivering the goods.

Like all business men Mr. Pratapsinh also wished that this ugly controversy would be ended and hoped a healthier atmosphere would be created for the smooth and effective functioning of the private sector in attaining the objective of rapid economic development of the country. Experience so far, however, shows that this wish can never be fulfilled. The issue stems from ideological considerations that weigh with the Government in deciding priorities for industrial projects and their place in the public or the private sector. It is, therefore, bound to crop up from time to time, depending upon the political exigencies. It is a phenomenon that will not cease to exist in the present political set-up in the country. Accordingly, business men must decide either to ignore the statements of politicians when they are made or to keep on replying to them in suitable terms,

University Education

WHEN a well-informed foreigner, who is a specialist in a particular field, holds a Press conference and throws out certain suggestions for correcting imbalances in our social systems or attitudes, he expects that, if our approaches to problems are as dynamic as we claim them to be, some notice will be taken of the suggestions at least by way of discussion in the Press, or that people most vitally concerned will initiate them to bring out their merits or demerits, as the case may be. It is disappointing to discover that the observations of Sir Alexander Todd, a Nobel Laureate, at a Press conference in Bombay, on the attitude to university education in India, appear to have attracted no further attention than the issue of a summarised report by the P.T.I.

Sir Alexander was of the view that providing opportunities for every one does not and should not mean that each and every student passing the matriculation examination should be admitted to a university, and that, if this happens, it will destroy the high standard of university education and prove disastrous to the country. In his view, universities are necessarily meant to produce top class people, who would, in turn, undertake the responsibilities of the nation, and it is dangerous to fill them with sheer numbers. Secondary education need not, necessarily, be correlated to university education. Steps should be taken to provide more technical education as distinct from university education, as the country's survival depends on the provision of first class scientific and technological education to the people. Bifurcation of students for specialised courses should take place after they attain the age of eighteen. By that age, the students should have attained some common background of both scientific subjects and humanities which are essential for everyone in his future career.

Sir Alexander also suggested that junior colleges should be established for students between the ages of fifteen and eighteen as a solution to their mass enrolment to universities; he added that such colleges existed in America and Japan and enabled students to select their future courses. I do not propose to examine this suggestion now, as, apart from the fact that there are many facets to this problem that have to be gone over, we have to bear in mind that what has been found suitable for America and Japan may not be equally so in our country, owing to the wide disparity in the respective levels of social and economic development. I shall content myself with a total agreement with Sir Alexander that university education in India has registered considerable quantitative development, but not qualitative, the increase in numbers of our universities and of students passing through them does not indicate a progressive increase in standards, and the time has arrived for us to pause and reorient our basic objectives and approaches to suit the increasing and altered needs of the country.

For the majority of our teen-agers, the purpose of acquiring a university degree such as B.A., B.Sc. or B.A. (Hons.) is only to obtain a basic qualification for securing a job. Those who opt for a medical course or engineering course have a definiteness of purpose, namely, choosing a profession; but those working for a basic degree have none; they go through a painful process, hoping for eventual deliverance from impecuniosity. If they work for a class or distinction, it is invariably to qualify for the relative preferment which employers offer. Even the students who work for a Law Degree are not clear in their minds that they would eventually enrol themselves as lawyers; many of them admit that they are marking time and hope that the acquisition of a double degree would give them a better competitive position. Not infrequently, youngsters who have procured degrees in geology or agriculture unashamedly apply for careers in banks and business houses even against stipulations calling for persons who have specialised in economics or commerce, and succeed too; which only goes to show that employers also believe that the theory that a university degree implies specialised knowledge is just a myth.

Even in the matter of standards, universities in India do not maintain any kind of uniformity, and there is an ever-increasing tendency to simplify courses and lower requirements. I am not sure that the Union Public Services Commission has a research section which collects and examines all the data required to assess the respective merits of apparently equivalent degrees in the different universities in the country and can equate them properly; in the absence of such examination, candidates for appointments are likely to be wrongly judged by the application of faulty yardsticks. I can cite quite a few instances to prove that this might happen. Till a few years ago, degrees in science were offered by some universities as M.Sc. and by others as B.A. (Hons.), B.Sc. (Hons.), or M.A. The courses were identical in content and examinations analogous in standard. Yet, the M.Sc. was given preference, because there was much in the name. In one university, again, there are four different categories of M.Sc: by research only, by research and examination, by examination only (with the degree awarded in all three cases after two years of work and study), and by examination after one year's work to a student who has procured the Honours degree. All these four categories are assessed uniformly, although their equipment and attainments are divergent.

The importance attached to university degrees and the complacence with which most of us have reconciled ourselves to lowered standards is even more forcibly brought out in in our evaluation of degrees obtained from foreign universities. Even experienced academicians fail to take note of the distinction between a doctorate obtained after passing an examination and one obtained after research and submission of a thesis. French and German degrees are mostly awarded after passing examinations, not so the British or Indian, and yet the superiority of the latter over the former is not taken into account when selections are made. But the case relating to American degrees is indeed comic, if all that I have heard about the facile way in which an Indian student can procure a university degree in U.S.A. in under a year, even without having obtained a basic degree in India, is correct. I am informed that a degree of M.S. (Master of Science) can be obtained after ten months of academic work with a certificate that the student has covered ten or even twelve subjects; he is awarded credits in all of them. Although it should be obvious to everyone that he cannot claim specialised knowledge in any of them, he still obtains greater recognition in India than a Master of Science of an Indian university who has put in two years of specialised study because—well, has he not been through a foreign university?

And, while on the subject of foreign education, I might refer to the distressing news agency report from Germany that, during the past two years, two Indian students committed suicide and another twelve became mentally ill—six of them critically—as a result of not faring well in examinations; some of them *had to be given* pass marks to enable them to return home with degrees. It is stated that the calibre of many students going to West Germany in recent times for education has been low, that Indian educational authorities have exercised no selective controls over their sojourn—many of them had been refused admission in Indian universities because of poor scholastic records. (An angry sceptic with whom I discussed this point has no doubt that this assessment must be correct from the numerous advertisements that appear in the papers announcing the arrivals and departures of students, accompanied by their photographs—instances of immodest exhibitionism, as he calls them.) The indiscriminate permission granted to several Indian students for proceeding overseas for studies (not necessarily for specialising) has resulted in avoidable drain on our foreign exchange. Some students get as much as DM 700 per month, but the allowances vary widely and therefore much heart-burning is reported to exist among them with allegations against Government of partiality to students with high connections. Perhaps as a result of this, or, may be, due to general indiscipline, some of the unruly elements among Indian students are reported to have been discourteous to Mr. Morarji Desai when he addressed the Indian community in Bonn during his last visit.

All that I have written on this subject sums up to this: that a drastic revision in our thinking on the subject of university education is needed urgently, and that, while, in accordance with the spirit of our time, emphasis has been laid on increasing the available facilities and opportunities, there is, at the same time, no evidence of awareness of the objectives and methods which should be pursued by our universities to suit the country's requirements. There is colossal waste of human endeavour in putting a young man through four or five years of expensive university education to secure a clerkship in a post office, a bank, a commercial firm or a Government office. It takes him years to stop leaning on his university degree for preferment and start competing for promotions; the eradication of his superiority complex brings about, first disillusionment and later, frustration. It is tragic that university graduates should be reduced to the position of realising the futility of their study of sciences or humanities when they are put through the paces in the careers that they have chosen, but that is exactly what happens in a majority of cases when the struggle for survival in pedestrian avocations becomes one continuous and constant obsession.

U.S. Delegation to Bonn

I see a comic side to the outcome of the U.S. Treasury Mission, consisting of Mr. Robert Anderson and Mr. Douglas Dillon, to West Germany to find ways and means of strengthening America's balance of payments position. Mr. Adenauer was tough and Dr. Erhard was sarcastic; but the Federation of German Taxpayers were indeed clever, which is better than both. It is reported that they wrote to the American delegation asking for confirmation of President Eisenhower's 1957 promise that a satisfactory solution could be found to the question of return of sequestered German property in America, involving about two thousand million marks. The moral of this is that there is great safety in debiting "Debts due" to a "Past Due Bill Account" and keeping an eye on them; this is what wisely administered banks do to ensure periodical review of even apparently irrecoverable outstandings. One can never tell when prosperity may return to a bad debtor, or when it might become necessary to twist his tail if he displays signs of impertinence during the period of his indebtedness.

The joint *communique* issued on 23rd November seems to have welcomed West Germany's decision to make available between three billion and four billion marks in 1961 towards assisting developing countries. But Americans are believed to be afraid that German industrialists may borrow the amount from the American market and lend it to the Federal Government at a comparatively high rate, thus not only making the American balance of payments position still worse, but also making a neat profit in the process. Apparently no agreement has been reached on equalising the interest rates in Germany with those available in the U.S. This only shows that the Germans can, indeed, be very clever. There is an Indian proverb which says that, if you wish to make an offering to a *Vigneswara* made out of jaggery, you may pinch a tiny portion of its body for the purpose. I am almost sure that German financiers are acquainted with this proverb.

Tailpiece

The latest method of assessing the I.Qs of candidates applying for jobs is to ask a question, suggest three possible answers, and ask for the candidate's choice of the correct answer. One such poser was: Who is called the Father of the Nation—Mahatma Gandhi, Srimathi Indira Gandhi, Srimathi Vijayalakshmi Pandit?

A *few* candidates did choose Mahatma Gandhi.

PROBLEM OF INTEREST RATES

(From Our Own Correspondent)

LONDON, *9th December*

LONDON LET·TER

FOR the second time within six weeks, the Bank of England has cut its discount rate in an endeavour to help the American authorities cope with their gold outflow. There is no domestic reason on the part of either the Bank or the Treasury in this country for the cut, because the Government has reiterated this week their refusal to amend their economic policy. They believe a policy of continued restriction is right at the moment. They argue that unemployment is still at a low level and regard the collapse throughout the motor car industry, even though it involves wide sectors of British engineering and steel, as nothing more than local. The fact that labour has not yet begun to shift from the idle plants into the other sectors of capital goods industries indicates to the Government that the pressure has not yet been sufficiently severe.

They point to the number of unfilled vacancies on the books of the Ministry of Labour. They point, above all, to the pressure from one union after another for increased wages, and the implied dangers for higher costs throughout industry, and in particular for the export industry.

This mid-week, the Economic Secretary to the Treasury threw out as broad a hint as possible to the employers of firms in forthcoming wage negotiations. He said, "The country cannot yet afford increases of the size now being claimed so quickly after the last increase."

The general level of industrial output has remained stationary, taking into account the seasonal changes since the spring of this year, and this is regarded by the Government as paramount evidence that wage increases can only be paid for by increased costs which the falling trend of exports cannot afford. Thus, in spite of the facts that wage difficulties of unemployed and short-time workers are now building up, that the losses in the hire-purchase companies is estimated as £10 million since January, and that this reflects a collapse in demand for many consumer goods industries, the Government remains convinced that retrenchment and cost-cutting is still the formula for the British economy.

Restrictions on hire purchase are likely to be reduced in the New Year, but this does not mean that the Government wishes to relax; it means that the Government is convinced that the slackness in the consumer goods industries and the unfortunate experience in hire purchase will oblige the credit companies to keep a tight hold themselves on any facilities they offer to the public.

The reduction in the Bank rate is thus directed towards the country's external position, but whether it will have much effect is doubtful, since the fall in American interest rates means there is still a 2 per cent. difference between London and New York short-term interest rates, after allowing for the cost of covering a switch of funds in the forward exchange market. If the switch back of funds is to be ignored and a long-term short rate investment made, London will offer a 1 per cent. advantage to the American investor.

The inflow of dollar fund has, it is well known, more than counteracted Britain's adverse trade balance. It is now revealed that, at the end of November, Britain's official gold and dollar holdings totalled $3,167 million or £1,130 million. In addition, it was estimated that, in the middle of 1960, private dollar holdings amounted to over $1,200 million, this being double the figure of eighteen months previously. This figure has been increased by a substantial percentage in the last few months, and it is these private dollar holdings which would take the first brunt of a reversal of the general movement of liquid funds. But Britain has now gone as far along the road to help the Federal Reserve system as she can without going counter to the Government's own view and the needs of the domestic economy. The rest is up to the U.S. Monetary Authorities, and these should now appreciate that they must take some steps to make good their total lack of any sort of exchange control mechanism.—*All Rights Reserved.*

WHITHER U.S. DOLLAR?

DEVALUATION IS NO REMEDY

By Dr. Anwar Iqbal Qureshi

Economic and Business Consultant, Karachi

DURING the past few weeks, a bewildering amount of literature has appeared regarding the future of the dollar. Since October last, a large outflow of gold started from the United States to the U.K. and Germany, as a result of speculative dealings in the free gold market of London. The situation was further aggravated by comparatively attractive rates of interest in the latter countries. The price of gold, at one time, reached $41 per ounce compared to its official price of $35 per ounce. Though the speculative spiral has come down from its peak, the price of gold is still above the parity. All this has caused a good deal of alarm and has released various disruptive forces which tend to threaten world monetary stability. The large outflow of gold to the markets of Western Europe has come as a shock not only to many Americans but also to outsiders who had become accustomed to regard the American dollar as a rock of stability.

A question is repeatedly being asked as to what is going to be the future of the dollar. The foreign stakes in the stability of the dollar are very high, as about $20 billion have been invested by foreigners in various reserves and dollar funds. Will the Federal Reserve Board be able to maintain the free convertibility of the dollar at the existing parity? It may be observed that the Federal Reserve Board is committed to buy and sell gold at the rate of $34.9125 and $35.0875 per ounce, respectively. However, its dealings are strictly confined to the Central Banks.

If the situation is reviewed dispassionately and all the factors are taken into consideration with cold analysis, one is led to believe that the present situation has been very much exaggerated and there appears no possibility in the near future about either the devaluation of the dollar or imposition of any restrictions on its convertibility.

Interest Rate Remedy

The United States is, indeed, facing a difficult situation. The deficit in its external balance of payments has been running in the neighbourhood of $4 billion a year, at a time when there has been a recession in the United States economy and it cannot be said, with any degree of confidence, if this has yet touched the bottom. There are already over four million people unemployed. In a situation like this, the main difficulty is that the steps, which may be taken to prevent the flow of gold and restore the disparity in the balance of payments equilibrium, may adversely affect the receding economy of the country and thus perpetuate a depression. To illustrate, it may be pointed out that the dominant reason for the outflow of gold from the United States is the attractive interest rates in the United Kingdom and Germany. Until the recent reduction, the bank rate in England was 6 per cent. and in West Germany 5 per cent. These have now been reduced to 5½ per cent.* and 4 per cent., respectively. The rate of interest in the United States is only 3 per cent. If the United States interest rate was considerably raised, much of the attraction for the outflow of gold would disappear. Gold worth about 2 billion dollars is estimated to be flowing out because of this. But the very step of raising the U.S. interest rate would seriously affect the economy of the United States, causing a lot of unemployment, which step can hardly be taken by any popular Government. The memory in the public mind of the last depression has still not died down when the Federal Reserve Board sharply raised its rate of interest from 1½ per cent. to 3½ per cent. and the Board was blamed for intensifying the crisis. The Stock Exchange boom burst in November 1929, and eventually unemployment figure reached 12 million. It has, therefore, to be realised that it is extremely difficult for the Federal Reserve Board to raise its interest rate to stop the outflow of gold.

Exchange Restrictions

Other countries have tried to check the outflow of gold by adopting exchange restrictions. This course is clearly unthinkable in a country like the United States, as the dollar is the international reserve currency. Any restriction of its free movement and any doubt about its spontaneous convertibility will seriously undermine the public confidence and will do irreparable harm. Moreover, it is doubtful whether such a step would be acceptable to the people of the United States, who believe in economic freedom; and will not surrender this right unless there is a grave emergency, which certainly is far from the case at present.

It may, however, be stressed that confidence begets confidence; and the present situation has been worsened by some doubts regarding the ability of the United States to withstand this drain. It is, therefore, most essential that this confidence should be re-established by combined action of the Central Banks of the world and further backed by the International Monetary Fund. If international co-operation means anything, it is high time that it should be put into practice. It is in the larger interest of foreign Central Banks to extend sincere and wholehearted co-operation to the authorities of the United States. It is in their own interest to maintain the stability of the dollar and to see that the United States Government is not forced to restrict the outflow of gold in a manner which may seriously affect the capacity of these European countries to earn dollars. This would cause serious unemployment in certain sectors of the European economy which will have far-reaching repercussions.

It will be very harmful to the world economy if the United States was forced to resort to its traditional policy of raising the tariff walls against the import of foreign goods. To give one example, it should be noted that a number of European countries have been selling small cars to America, in which Germany has taken the lead, followed by France. This is only possible due to a 10 per cent. import duty on the import of foreign cars in the U.S.A. and there are no quantitative restrictions on the numbers of cars to be imported. On the other hand, the import duty of foreign cars is 30 per cent. in Britain and France and 45 per cent. in Italy. The U.S. tourist at present spend about $1.6 billion, and if this flow is drastically curtailed, it will severely affect the economy of many European countries. The European countries should remember that the post-war loans and aid funds to them from the United States amounted to $36 billion. It was this generous flow of funds which has leased a new life to Europe. Such a phenomenon has been unprecedented in world history. I am glad to note that some of the important European central banks are realising the gravity of the present situation and have started extending their co-operation in certain important directions.

A Way Out

The U.S., at present is facing burdensome surplus of many agricultural products which are artificially protected in many European countries. If a part of these could be sold at world prices, it would help the consumers in European countries. The present export of 800 million dollars worth of cotton and foodstuffs to Western Europe can easily be doubled. The core of the U.S. economy is absolutely sound, and, barring some fields, the prices of United States goods are fairly competitive. It may also be mentioned that, while other countries had been trying to promote the growth of their exports by various types of programmes of export promotion, tax rebates, etc., the U.S. exports since 1950 have increased by one-third without any such props.

Fears have been expressed in certain quarters that this drain on its balance of payments may affect the U.S. foreign aid policies. One may, however, point out that any such step would hardly improve the U.S. balance of payments.

It is quite possible that, if the U.S.A. was more pressed and the present drain continued unabated, it may restrict some of its private investments abroad which are being incurred at the yearly rate of $3 billion. This will adversely affect Europe and Canada, who have taken a lion's share of these investments. In Canada alone, the total U.S. private investments are around $16 million. The worst fear is that, if the present drain continues, which is unlikely if economic forces are allowed their free play, as observed by Per Jacobsson of the International Monetary Fund in a recent interview, the dormant forces of isolationism may raise their head, which would be very lamentable indeed. The strength of these forces should not be under-estimated. The feelings are growing in the United States, and these are corroborated by facts, that the resources in the United States are not keeping pace with its foreign commitments. The defence programme, especially the nuclear weapons, where the missiles cost more than their weight in gold, has skied the bill to $40 billion per year. On the other hand, some of the European countries, it is felt, are not playing their part in sharing the growing burden of global defence, aid and development.

Devaluation

It has been suggested in certain quarters that the remedy lies in devaluing the dollar. In my view, this suggestion is very unsound. It should be noted that the dollar, at its present par value, is not overvalued; and, by and large, the American prices, keeping quality in view, are quite competitive. If the American dollar is devalued, many other countries will not like to be outplaced in foreign markets and will have to devalue their currencies. This will set an all-round chain of devaluation and will benefit no one except the gold-producing countries. The U.S. Government has very definitely ruled out any idea of devaluation.

In short: the core of the U.S. economy is inherently sound. The Gross National Product has doubled since 1948 and her *per capita* income is still the highest in the world. Her export and internal prices are, by and large, competitive. The surplus balance of visible trade is in her favour to the tune of $4 billion. As such, the U.S. dollar is not overvalued; and devaluation as a remedy is ruled out. Moreover, the cure is worse than the disease as it will release disruptive forces which will adversely affect the world economy as a whole.

The U.S. private investment abroad, at present, is at the rate of $3 billion a year. Furthermore, her tourists spend every year the colossal sum of $1.6 billion in other countries. If, in the matter of arresting the drain on the U.S. balance of payments, no mutual action is taken by other Governments through equitably shouldering the responsibility of global defence and economic aid, thereby forcing the U.S. to resort to restrictive policy, the economy of the European countries will be seriously affected.

*Reduced to 5 per cent. since this article was prepared.

BANKS IN LIQUIDATION

Fifty-one banks have gone into liquidation since 1st January 1957. Giving a list of them in a written reply to a question in the Lok Sabha on 29th November 1960, the Finance Minister, Mr. Morarji Desai said the total paid-up capital of these banks as on the date of liquidation amounted to approximately Rs. 109.76 lakhs. Mr. Desai said that of the 51 banks, the total deposits of 33 banks in respect of which returns had been received by the Reserve Bank, amounted to approximately Rs. 379.21 lakhs as on the dates of liquidation. As most of these banks were in the process of being wound-up and payments were being or would be made to depositors from time to time as and when assets were realised, he added, it was not possible to evaluate the extent of financial loss sustained by the depositors till these banks had been finally dissolved.

ALLEPPEY, *8th December, 1960.*

Jute packs a world of goods

Australian wool, Burmese rice, Cuban sugar, Egyptian cotton, Canadian wheat, Chilean nitrate...these are only a few of the commodities that travel to the markets of the world packed in jute cloth. By providing the cheapest heavy-duty packaging material known, jute plays an important part in international trade.

India produces 55% of the world's jute goods. The Indian jute industry provides employment to millions of farmers, traders and mill-workers in the country...earns on an average about Rs. 115 crores annually in foreign exchange.

Jute serves India in many ways, strengthens her economy.

Issued by the **Indian Jute Mills Association**
Royal Exchange, Calcutta.

IWT (JM 429)

MORE ON EXTRA LONG-STAPLE COTTON

PRICES MORE THAN HALVED IN NINE YEARS

A BRIEF reference was made in one of our earlier issues (*vide Commerce* dated 26th November 1960, page 954) to the extra long-staple cotton situation during the 1959-60 season and the outlook for the present season. Fuller information now available from the latest (October) monthly review of the International Cotton Advisory Committee, Washington, gives a clearer picture of the remarkable transformation that has taken place in the extra long-staple cotton situation during the past two seasons.

By virtue of its premier position as the free world's largest importer and the second largest consumer of extra long-staple cotton, India has a direct interest in the shifts and changes that occur in the trend of production, prices and export of extra long-staple cotton. Last year, shipments of this type of cotton having a staple length of 1⅛" and above to India aggregated 267,000 bales of 478 lbs. each, the largest quantity imported by any country. Consumption of extra long-staple cotton by Indian mills amounted to 200,000 bales which was the second largest quantity consumed by any country in the world.

Despite acreage restriction in Egypt, production of extra long-staple cotton during the last season was near the 2-million-bale level (1.87 million bales, to be precise) which, though 116,000 bales lower than in the previous season, represented an increase of more than 50 per cent. over the preceding five-year average. Consumption, on the other hand, rose at the same rate as in 1958-59. Exports last season were heavier than in the previous year. Prices ruled firm throughout most part of the season and showed a rise of 7 to 9 cents per lb. except for U.S. growths, the price of which declined by 1.07 cents per lb. The tendency for accumulation of surplus stocks, so typical of previous years, was reversed and disappearance exceeded production by a wide margin.

The following table indicates the supply and distribution of extra long-staple cotton during the past four years:

(In '000 bales of 478 lbs. each)

Item	1960-61*	1959-60*	1958-59	1957-58
Stocks	622	855	607	697
Production	1,951	1,875	1,991	1,257
Total	2,573	2,730	2,688	1,954
Domestic consumption	N.A.	163	149	97
Exports	N.A.	1,934	1,658	1,139
Total	..	2,097	1,807	1,236

* Preliminary. N.A.—Not available.

These developments, especially the increase in consumption, says the Committee in its review mentioned above, have important implications for the future. The increase in consumption during the last season has been fairly widespread. The United Kingdom, though still the largest single consumer, has declined in relative importance. India, for example, is now consuming almost as much extra long-staple cotton as Britain. Consumption in Italy has doubled over the last two years and the rate of increase in the Continental countries has been much higher than the average for the world as a whole.

Consumption is currently running at the rate of 1.25 million bales per annum which indicates that, if exports to Communist countries were maintained at last year's level, disappearance will be of the order of 2 million bales, as compared with 1.2 million bales in 1957-58. This improvement in disappearance is particularly significant for two reasons. First, the increase in consumption has coincided with a marked increase in production in the last two years and has consequently prevented an inordinate build-up in carryover stocks which otherwise would have occurred. Secondly, it has had a perceptible effect on prices which are now 50 per cent. above the low levels reached in March 1959.

The role of consumption in the fortunes of extra long-staple cotton will be even more important in future than it has been in the past. The expansion of acreage under extra long-staple cotton in recent years, in spite of declining prices, indicates that production is, to some extent, immune to changes in demand or price. It is all the more important, therefore, that the existing rate of consumption should be maintained to preserve equilibrium between supply and demand in future. The following table gives trend of consumption of extra long-staple cotton during the four seasons ended 1959-60:

(In '000 bales of 478 lbs. each)

Country	1959-60*	1958-59	1957-58	1956-57
United Kingdom	230	212	187	232
Italy	125	90	60	67
Switzerland	49	39	37	39
Spain	40	20	25	25
Other W. Europe	330	284	195	211
Total	774	645	504	574
India	200	136	119	137
Other Asia	60	45	25	40
United States	124	109	98	111
Egypt (U.A.R.)	80	75	45	22
Others	30	25	9	6
Total	1,268	1,035	800	890

* Preliminary.

The revival of trade in extra long-staple cotton over the last two years, according to the Committee's review, has been nothing short of sensational. Exports in 1958-59 rose by over half a million bales. To this another 300,000 bales were added last season, bringing total exports in 1959-60 to 1.93 million bales, or nearly double the 1956-57 exports. In fact, more cotton was exported in 1959-60 than was produced during the season which is said to be a rare occurrence in recent cotton history.

Of equal significance to the overall expansion in trade in extra long-staples is the fact that, whereas in 1958-59 the major part of the increment to trade went to the Communist countries, virtually the entire increase last season stemmed from increased demand by the rest of the world. In fact, exports to Communist countries last season were only slightly higher than in 1958-59, in view of the increase in total trade, the share going to these countries declined to 35 per cent., as against 39 per cent. in 1958-59. Nevertheless, such trade, varying in quantity between 600,000 bales and 700,000 bales per annum, is still of vital importance, either directly or indirectly, to the economies of producing countries.

Prices of extra long-staple cotton in 1959-60 recovered from the low level reached in the previous season, although they were much below the 1956-57 peak. The following table indicates the trend of prices of extra long-staple cotton:

(In cents per pound)

Season	C.I.F. Liverpool (Dudley Windel)			El Paso/Phoenix average
	Egyptian Karnak F.G.	Sudan Sakel G.S.S.	Peruvian Pima No. 1	U.S.A. Grade 2 1⅛"
1951-52	105.04	88.63	72.34	105.01
1952-53	55.51	48.16	46.74	93.25
1953-54	55.06	..	47.56	71.79
1954-55	60.05	53.54	50.95	64.43
1955-56	64.65	54.41	53.49	59.36
1956-57	72.11	69.33	63.61	67.20
1957-58	49.57	48.51	49.19	64.40
1958-59	35.70	34.59	35.76	58.14
1959-60	44.77	41.63	43.73	57.07

It is noteworthy that the 1959-60 prices were less than half of what they were in 1951-52, except in the case of U.S. cotton. In the latter case, Supima prices are still out of parity with those of competing growths. This trend over a period of time has led to the development of a surplus situation in this variety just as serious, if not more, as that which existed in the upland types a few years ago. Supply of extra long-staple in the U.S., comprising carryover *plus* production *plus* the import quota (83,000 bales a year) now aggregates over 300,000 bales, while the estimated disappearance is only less than half this quantity. On top of this, is the stockpile, amounting to over 200,000 bales.

As far as the outlook for the present season is concerned, supply is estimated to be 2.57 million bales made up of an anticipated crop of 1.95 million bales and stocks of 622,000 bales, as compared with 2.73 million bales in 1959-60 comprising a crop of 1.87 million bales and a carryover of 855,000 bales. Acreage in the 1960-61 season is expected to be equal to the record reached in 1958-59. Acreage in Egypt, however, is significantly lower than what it was two years ago while there has been a corresponding increase in Sudan. The increase in importance of Sudan as a producer of extra long-staple based on acreage data has, nevertheless, been offset by the marked rise in yields in Egypt over the past five years and, in terms of actual production, therefore, the relative position of Egypt is very much the same, with its output still over half the free world total. This situation could, however, be changed, if the declining trend of yield in Sudan were reversed. If the crop in Sudan were normal this season, total free world production could easily match last season's 1.87 million bales. Since carryover at the beginning of the season is 233,000 bales lower than at the start of the previous season, supply this season, as noted above, will be less than in either of the last two seasons. The key factor in the outlook for 1960-61, however, will be consumption both in the free world and the Communist countries. If consumption continues at its present level, supply and demand would be more or less in equilibrium. The chances on this score, the Committee feels, are reasonably bright, provided prices are maintained at competitive levels and assuming that the overall economic outlook, in Western Europe particularly, remains favourable.

On a long-range view, however, the review concludes, it must be recognised that the production potential for extra long-staple is at present high. The expansion of acreage in times of falling prices would seem to indicate that production is, to some extent, immune to changes in demand or price. On the other hand, consumption has proved itself capable of wide fluctuations in a relatively short space of time. This and the present dependence on Communist countries for outlets for extra long-staple are unstable elements in the future of these cottons.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

TARIFF COMMISSION'S ENQUIRY INTO TEXTILE PRICES

At last, the Government of India has announced the terms of reference to the Tariff Commission about the fixation of fair prices for cotton textiles. The Commission has been asked to conduct a "full enquiry" into the following aspects:

1. Cost of production in respect of the various representative types of cloth and yarn.

2. Capital structure, investments, and fair return thereon, bearing in mind the need for continuous rehabilitation and modernisation.

3. Fair ex-mill prices of cloth and yarn.

4. Methods for effecting suitable adjustments from time to time in the fair ex-mill prices, so as to allow for major fluctuations in the prices of raw cotton and other elements of production cost.

5. Distribution cost for cloth and yarn in the country with reference to all relevant factors, including the present pattern of sales adopted by the different units of the industry.

6. Reasonable basis for determining the fair retail prices of cloth and yarn.

Justifying the reference of the question of textile prices to the Tariff Commission, the Government says:

"The question of fair prices which should be charged by the cotton textile industry to the trade and the prices which the trade should, in turn, charge to the consumers has assumed considerable importance in recent period. The prices of cotton textiles were under complete control (in regard to prices, distribution, etc.) during the war and post-war periods until the lifting of such controls in the middle of 1953. Thereafter, the prices were governed by the normal conditions of supply and demand till the end of 1955. During the first half of 1956, the prices shot up to high levels and Government had to step in by resorting to an increase in excise duty to remedy the situation. In the latter half of 1957 and in 1958, the industry was faced with a different problem of accumulation of stocks and particularly marginal units were reported to be experiencing difficulties. A committee was appointed to enquire into the problems and suggest remedial measures. On the basis of their interim recommendations, a readjustment of the rates of excise duty was done which improved the position.

"For over a year now, the price of cotton textiles has been increasing, causing undue hardship to the consumers. Even after taking into consideration the difficulties faced by the industry in securing essential raw materials like cotton and other factors affecting the manufacturing costs, it has become clear that the prices were unaccountably high requiring immediate measures to bring down and hold the price line.

"The warning issued by the Indian Cotton Mills' Federation as early as January 1960 at the suggestion of the Government proposing certain measures to bring down the prices, had only a transitory effect and that the prices had started going up again to further high levels. The extent of the increase has not, however, been uniform in the several units of the industry, as each unit adopted its own pattern of price fixation.

"It has been contended that a large slice of this increase was legitimate on account of the increase in the cotton prices and in the wages on account of award of the Wage Board. The mills have also claimed that they should be allowed to charge extra margins to recoup their past losses. Broadly, the industry, through the Indian Cotton Mills' Federation, have urged that, as compared with the basic period August 1959, that is, just before the commencement of the cotton season 1959-60, there is a legitimate case for increase in prices of coarse cloth by 25 per cent., lower medium cloth by 22 per cent., higher medium cloth by 18 per cent., fine cloth by 11½ per cent. and superfine cloth by 9 per cent. The impact of this increase on the consumers is one of great hardship to the general public and also to the large number of persons employed in the handloom industry. Under these circumstances, the Government consider that several aspects affecting the production of cotton textiles and its prices should be referred to the Tariff Commission for a full enquiry and report."

In an earlier issue (*vide* page 889, *Commerce* dated 19th November 1960), we had contended that there was really no need for a Tariff Commission enquiry into cotton textile prices. It is true that prices began rising since August 1959 and touched very high levels in the first few months of 1960. But the rise was due not so much to the tendency among mills or traders to rig up prices but to the steeply enhanced cost of production and rising pressure of demand. A large part of the rise could have been avoided if only the Government had allowed the industry to expand its production capacity and arranged for adequate imports of foreign cotton in good time. It will be recalled that the 1959-60 cotton season witnessed a sharp setback to the crop. The lapse on the part of the Government, was serious and, in order to cover itself against public criticism, its spokesmen have been warning the textile interests time and again and urging them to reduce prices. The mills have themselves voluntarily cut the prices of cloth and yarn. The effect of the cut is already being felt and one can expect a further improvement in the situation, what with the encouraging prospects of rise in output of mills, following the comfortable raw cotton supply position. The Government could have certainly waited for some more time, instead of hastily referring the question of prices to the Tariff Commission. Apparently, the Government, however, has reasons to feel that there is no scope for any significant increase in the production of mill-made cloth goods and that the supply of such goods will fall short of demand. Such a deduction is a logical inference of its present policy of not allowing the mill sector to expand to any sizable extent and reserving all future growth in demand for handlooms. The Government would have carried conviction, if it had mentioned this as the main reason for putting the cotton mill industry once again into the strait-jacket of controls.

PROTECTION TO COTTON TEXTILE MACHINERY TO CONTINUE

The Government of India has accepted the recommendation of the Tariff Commission to extend the protection to the cotton textile machinery industry in respect of the complete ring frames, spindles, spinning rings, fluted rollers, and automatic looms for a further period of three years ending 31st December 1963 at the existing rate of protective duty of 10 per cent. *ad valorem*. The Government has taken note of the following two other recommendations:

The Textile Commissioner, whose organisation has assessed the raw material requirements of the individual units, should endeavour to ensure regular and adequate supplies of essential raw materials to the cotton textile machinery industry.

An Inspectorate in the Textile Commissioner's Organisation with adequate staff should be set up as early as possible.

Steps, it is said, will be taken to implement these as far as possible. The Government has also taken note of the other two recommendations and says that they will be implemented to the extent possible. One, the policy regarding imports of automatic looms should be so regulated as to permit maximum utilisation of the indigenous capacity. Two, in future agreements for technical collaboration with foreign firms, the restrictive clause which precludes the Indian manufacturers from exporting their goods outside India should be avoided as far as possible.

The Human Touch

Humanism has been defined as devotion to human interests. You are certainly entitled to receive the necessary attention.

At all the offices and branches of the State Bank you may expect to find friendly, eager and alert officials to cater to your needs. Whether you are opening a modest account or putting through a big deal, there is the same human warmth in the service rendered to you.

Besides, the State Bank offers the widest banking facilities to the depositor and the borrower alike. It will be worth your while to call at the office or branch of the Bank nearest to you to know in how many different ways the Bank can serve you.

REORGANISING COTTON MARKET

COMMITTEE OF ENQUIRY SET UP TO RECOMMEND MEASURES

From Our Special Correspondent

MANCHESTER, *6th December*

MANCHESTER LETTER

FROM small beginnings, all sorts of big developments can follow. The posing of an apparently innocent question about Government aid for the cotton industry when the Prime Minister was at Harrogate only two years ago, has brought in its train big consequences for Lancashire. Following the promise of State assistance, the physical size of the spinning and weaving trades has been slashed by half, the finishers are contemplating similar measures and, throughout Lancashire, "reorganisation" has spread like a prairie fire.

Old-established barriers are being broken down at every turn. The gap at organisational level is already narrowing, judging from the attempts being made to merge employers' associations in both spinning and weaving, while the amalgamation of cotton and man-made fibres in research is an accepted fact. Now the "wind of change" has reached even Liverpool, whose raw cotton "kings" have often in the past appeared to take little more than an abstract interest in the affairs of the rest of the trade.

Raw Cotton Probe

A reorganisation committee headed by Lord Forster, of Harraby, has been set up by the Liverpool Cotton Association to consider how an active raw cotton market can best be maintained in Liverpool in present and anticipated conditions. The Committee will consist of four members of the Association, including two former presidents, and will consider the constitution, financial structure and organisation of the Association; collate evidence from all those connected with the trade; and recommend to the Board what changes should be made. The Committee will also report on the services rendered to the industry by the Association and its members and the extent to which they might be improved.

The Association resumed trading in cotton futures in 1954, but the two-price system imposed in the U.S. in 1955 to subsidise American farmers has created difficulties for cotton exchanges all over the world. Earlier this year, trading in the Liverpool "ring" was switched to a smaller room in order to save an annual rental of £3,000. Colonel Palmer, President of the Association, disclosed that the running of the futures market, provision of committees, and statistical and other services had lost the Association about £17,000 annually over the last two years, but these deficits had been covered by investments and rents from the Exchange building.

The impression gained when the probe was announced is that the Association is anxious to join in the general mood of integration which is so prevalent throughout the cotton and allied trades today. Rightly or wrongly, the former attitude of Merseyside men has frequently antagonised their colleagues in Manchester and the mill towns, but a change of atmosphere is now apparent.

Change of Tune

A significant comment which underlines this break with tradition was made by a leading official of the Association, who was urging the collaboration of the Press and other sections of the trade. He said: "We have got to dress our shop window." Such a remark would have been surprising even a few years ago, but, in the light of the recent transformation in Lancashire, it merely serves to emphasise how each branch now recognises its dependence on the other involved in the chain of production, from the raw material to the finished article.

The Committee hopes to start its investigations early next month and, if all goes well, should be in a position to submit its recommendations at least by March. It is safe to say that spinners, in particular, will not be slow to offer advice on the way in which raw cotton affairs can be managed and constructive ideas should provide the basis for an improved service from Liverpool.

Whatever action is taken, however, futures trading in any commodity is nowadays far too much at the mercy of Governments in producing countries. As Col. W. R. Palmer, President of the Liverpool Cotton Association, said: "The prospects of the futures market being revitalised are mainly dependent on the United States reverting to a one-price system." Democratic party policies in America generally tend towards stricter controls, involving more interference with markets. On this basis, the outlook for Liverpool would not appear to be encouraging, but any measures adopted to create more favourable trading conditions, supplement existing services and improve the efficiency of the raw cotton supply system can only be to the benefit of the Lancashire cotton trade as a whole.

New Industries in Mills

One in every three of the Lancashire cotton mills closed down under the £30-million Reorganisation Scheme for the industry now houses new industries. The estimate was given by the Lancashire and Merseyside Industrial Development Association when it announced that yet another mill, the Hartford Mill at Oldham, had been bought for use as a mail order warehouse. A spokesman for the Association said that 100 of the 300 mills which ceased to produce cotton textiles as a result of the Reorganisation Scheme had now been put to new uses. "This is quite an achievement considering that the scheme only closed eight months ago," he said.

The Company which has purchased the Hartford Mill is the International Import and Export Company, an associate of Littlewoods Mail Order Stores. They will move in early in the new year and will ultimately provide jobs for 400 men and women. The Littlewood group already occupies several former mills in the Manchester area.

Imports: The Opening Gambit

It was surely no coincidence that, within a few hours of the arrival of Lord Rochdale in Hong Kong last week, a lengthy statement was issued on behalf of the local spinning and weaving association, putting up a verbal barrage to prevent new discussions from starting on the renewal of the voluntary arrangements to curtail Hong Kong's exports to the United Kingdom. In vain, the Chairman of the Cotton Board attempted to explain that he was on an "entirely private" visit. Rumours of his tour, which includes not only Hong Kong but India and Pakistan, were circulating at the time of the Harrogate conference and, in view of the speculation surrounding the import situation, it would be idle to pretend that such a journey would be made without the prospect of at least tentative approaches being put forward to test the feeling of those Eastern interests directly involved.

Although it is true that more than a year has yet to elapse before the present Hong Kong agreement expires, the months have a habit of slipping by. Everyone in the Lancashire trade knows quite well how much depends on events which must take place before the end of 1961. At the moment, distributors are finding little difficulty in disposing of practically all the cloth they can import, whether from Hong Kong, India, Pakistan or European manufacturing centres.

Developments within the past few weeks in other sections of the home market, however, have shown how swiftly the trading atmosphere can alter. Domestic producers would be severely harassed by soaring imports at a time when demand suddenly diminished, particularly after the intense pressure for supplies which has now been evident for more than a year.

Lord Rochdale's reply to the Hong Kong outburst contained some interesting information about the destination of many of the recent imports into this country. Supplies received from non-Commonwealth countries during 1959 were invariably re-exported, he declared, and, as the ceilings did not apply to such goods, Hong Kong had full opportunity to compete for this trade. Even during the current year, some 50 per cent. of the increased imports from outside the Commonwealth have been re-exported, leaving Hong Kong on exactly equal terms with every other country.—*All Rights Reserved.*

U.S. COTTON EXPORTS

The Agriculture Department expects United States cotton exports to reach 6.5 million bales during the 1960-61 season, 700,000 bales less than the preceding year. This relatively high level of exports, which would be the third greatest since 1933, is attributed to the large financing of cotton exports by the U.S. Government, heavy registrations under the payment-in-k'nd programme, and the strong competitive position for prices of U.S. cotton in world markets.

Not by Words Alone...

The story is told of St. Francis of Assisi, that he once stepped down into the cloisters of his monastery, and laying his hand on the shoulder of a young monk, said, "Brother, let us go down into the town and preach".

The venerable father and the young monk set out together, conversing as they went. They wandered down the principal streets, and wound their way through alleys and lanes, and even to the outskirts of the town and the village beyond, until they found themselves back at the monastery again.

Then enquired the young monk, "Father, when shall we begin to preach?"

And the father looked kindly down upon his son and said, "My child, we have been preaching; we were preaching while we were walking. We have been seen....looked at; our behaviour has been remarked, and so we have delivered a morning sermon. AH! MY SON, IT IS OF NO USE THAT WE WALK ANYWHERE TO PREACH UNLESS WE PREACH AS WE WALK".

YES .... it is no use that we walk anywhere to preach unless we preach as we walk ..... in building the India of our dreams ... there is little room for preaching by mere words .... what are needed are DEEDS ... And DEEDS include higher production of some ESSENTIAL commodities like

CEMENT ... THE GREAT MODERN MATERIAL OF BUILDING CONSTRUCTION ....

In 1952, we had placed at the Nation's disposal over 1,32,000 Tons of Cement.
In 1954, we had produced over 2,02,000 Tons of Cement.
In 1958, we produced nearly 3,50,000 Tons of Cement.

This year .... in 1960 ....
We expect to place at the nation's disposal over 3,60,000 Tons of Cement

BECAUSE INDIA NEEDS MILLIONS of TONS of CEMENT ...

for Building the richer and prosperous India of our dreams ...

ORISSA CEMENT LTD ... Rajgangpur ... (Orissa)

SUGAR INDUSTRY WAGE BOARD AWARD

ADDITIONAL BURDEN ESTIMATED AT RS. TWO CRORES PER ANNUM

ON the basis of the present labour complement of about 190,000 in 170 sugar mills, the wage bill of the industry as a whole will rise by more than Rs. 2 crores annually, when the award given by the Central Wage Board for Sugar Industry is implemented. The report of the Board was placed on the table of the Rajya Sabha on Wednesday the 7th inst., by Mr. Abid Ali, Union Deputy Minister for Labour. The Board, it will be recalled, was appointed nearly three years ago—on 26th December 1957—with Mr. B. Prasad, ex-Judge of the Allahabad High Court, as Chairman. The members of the Committee were: Mr. Gulabchand Hirachand and Mr. R. P. Nevatia (employers' representatives); Mr. Kashinath Pande, M.P., and Mr. Gangadhar J. Ogale (workers' representatives); and Dr. P. S. Lokanathan and Mr. H. C. Dasappa, M.P. (independent members).

The Board submitted its interim report towards the end of 1958, under which the monthly wage of a sugar mill worker was raised, with effect from 1st January 1959, by Rs. 3 in the case of workers getting less than a monthly wage of Rs. 100 and Rs. 9 in respect of those drawing between Rs. 301 and Rs. 500. The final report was submitted to Government sometime last month. Only a summary of the report of the Board has been published. The Government of India's decision thereon is yet to be known. The Board has stated that its recommendations should be effective from 1st November 1960 and that both joint-stock and co-operative mills are bound by them.

Wage Scales for Operatives

For the purpose of wage fixation, the country is divided into four regions: North, Central, Maharashtra and South—each region having eight basic wage scales for operatives, six for clerks and four for supervisory employees receiving up to Rs. 500 per month. The basic wage scales for operatives are as follows:

Operatives	Basic Wage Scales	
	For Central, North and South Regions	For Maharashtra Region
	Rs.	Rs.
Unskilled	60-1-65	60-1-65
Semi-skilled, B ..	65-1.50-74	66-2-86
" A ..	68-2-90	73-3.50-108
Skilled, C ..	75-3-96	80-4-120
" B ..	90-4-110-E.B.-5-135	95-5-120-E.B.-5-145
" A ..	105-6-135-E.B.-7-170	115-7-150-E.B.-7-185
Highly skilled, B ..	135-7-170-E.B.-9-215	150-9-195-E.B.-9-240
" " A ..	180-8-220-E.B.-10-270	180-10-230-E.B.-10-280

It will be seen from the aforesaid figures that the basic wage structure is common to Central, Northern and Southern mills, with allowance made for differing paying capacity of the industry in different regions in the graduated dearness allowance rates. A departure is, however, made in the case of Maharashtra region. Explaining the reason for this, the Board says: "...otherwise, the amount of graduated dearness allowance would have to come to form an unduly large proportion of the total wages, while the Board's view was that the bulk of the total wages should consist of the basic wage." Although the total minimum wages necessarily vary from region to region depending on the regional paying capacities of the industry, the Board considers it desirable to have uniform minimum basic wages in the sugar industry throughout the country, as the same has several advantages. It has accordingly recommended a basic minimum monthly wage of Rs. 60 in the grade Rs. 60—1—65. Some deductions are, however, allowed in the following special cases.

Element of house rent in the emoluments of sugar workers at the minimum wage level should be to the extent of Rs. 5 for standard housing accommodation.

Where food articles are distributed at subsidised rates, or where fuel is supplied at concessional rates, or free to a certain extent, the sugar mills will be entitled to make adjustment of concession against wages, if the workers opt for the continuance of the supply of these articles from the side of mills.

Dearness Allowance

Since the total minimum wages fixed by the Board has been conceived in reference to 123 points of cost of living index, the difference between the total wages prescribed for an occupation and its basic wage, it is pointed out, will represent the element of dearness allowance in the respective regions for 23 points of index over 1949 base (100). The scheme of dearness allowance (D.A.) as formulated by the Board provides for (a) graduated rates of D.A. and D.A. rates linked to cost of living index. Regional differences in graduated D.A. rates have been devised to adjust the wage structure to the regional differences in the paying capacity of the industry and, in the same region, D.A. will vary from one class of occupations to another, depending upon the scales of wages. For rises over 123 points of the all-India average consumer price index numbers for working class or falls below this level, the D.A. is to be adjusted at the rate of 55 nP per point of cost of living index in the case of operatives upto skilled 'B' grade and clerks drawing basic wage upto Rs. 100 per month, while, for supervisory and technical employees of not less than skilled 'A' grade and for clerks drawing basic pay of over Rs. 100, the rate recommended is 65 nP per point. While for rises over 123 points of cost of living index or falls below this level, adjustments in dearness amount shall not be made for less than 10 whole points, when once there has been a rise or fall by 10 or more whole points, adjustments should be made for every point of the rise or fall. Once an adjustment has been made, further adjustment shall be made for further rise or fall of ten or more whole points, provided, first, that for a fall of the average cost of living index below 123 points, no reduction from the graduated flat rate D.A. shall in the first instance, be made unless the fall exceeds 15 points and, secondly, that at no stage the deduction shall go to the extent of curtailing the basic wage in the scale.

Retaining Allowance

The Wage Board has recommended that the supervisory, clerical, highly skilled and skilled workmen employed on seasonal basis be paid retaining allowance at 50 per cent. and the semi-skilled season workmen at 25 per cent. of their monthly basic pay and dearness allowance.

Gratuity

A detailed gratuity scheme covering all permanent and seasonal workmen (with the exception of apprentices) employed in, or in connection with, the sugar mills has been framed by the Board. The scheme, *inter alia*, provides for the general superannuation age of 58 years, lays down other conditions governing payment of gratuity and fixes the rates of gratuity to be applicable in the case of permanent and seasonal workers separately for different periods of service. In factories where basic wage and dearness allowance were paid separately, the gratuity for period of service prior to 1st November 1960 will be calculable on basic pay immediately preceding the date of application of the new wage structure subject to a minimum of Rs. 30. But, in factories where consolidated wage system prevailed, such calculation will be made on the notional monthly basic pay (as shown in the schedule). For the period of service from the date of implementation of the recommended wage structure, the gratuity will be calculable on the basic wage as may be payable in respective cases when the gratuity claim becomes due.

Bonus

The Wage Board has also evolved a bonus formula for the Northern and Central regions which, for the calculation of net profit, rests on the regional cost schedule (given by the Tariff Commission in 1959) as adjusted to the duration of season and sugar recovery percentage attained by individual mills. It is recommended that, in the North and Central region, 22 per cent. of profits after tax, calculable in the manner prescribed will be paid by mills as bonus to their employees, provided that, in case of factories having daily (24 hours) cane crush of less than 1,000 tons as the season's average, the bonus at 20 per cent. of such profits will be paid. Saving in taxation according to clause

TARIFF COMMISSION ON RUBBER PRICES

MANY DRAWBACKS IN ITS RECOMMENDATIONS

By An Esteemed Correspondent

THE disturbing fact that, within another short nine years—the time it takes for a rubber plant to come to yield, if it is planted today—India may have to pay in foreign exchange for about 50,000 tons of raw rubber requires that we take a second look at the Tariff Commission's Report on its enquiry into the price of rubber. Looking at the terms of reference issued to the Commission by the Government, one cannot but wonder whether the Government was more concerned with the routine disposal of a claim for a revision of price of a controlled commodity or with the introduction of a price scheme which aimed at achieving self-sufficiency in a critical raw material.

The price of rubber has been controlled in India since September 1940 and there is a background of two decades of price control from which experience the Government should have drawn when making this reference to the Tariff Commission. The price of rubber has alternated between control and protection during the past 20 years, more often and for long duration as control when world prices were higher. Anyone who looks at the Government's price policy over a sufficiently long time cannot but appreciate the wisdom of those who demanded at the Rubber Conference in 1946 that the Government give up all controls, protective or otherwise, over rubber. The increase in the output of rubber in countries where neither protection nor control existed has been far greater than anything we have achieved in India.

A Lacuna

It was a pronounced lacuna in the terms of reference to the Tariff Commission that there was no explicit direction to it to approach its enquiry from the point of view of achieving self-sufficiency in the production of rubber within the shortest possible time. The Commission may, indeed, have assumed that this purpose was to be kept in view, but a marked feature of its approach was that of a cost accountant's and not that of a provider of economic stimuli and checks for developments in the desired direction.

In the fixing of the price for Indian rubber, it is generally claimed that it has no relevance to the world price of the commodity, but almost every discussion of the subject proceeds from it, from the growers' point of view if the prices abroad are higher, and from the manufacturers' point of view if they are lower. The accompanying graph shows Indian and world price trends during the past 15 years.

There were other external considerations in fixing commodity prices in 1960. The year saw the launching of the great anti-inflation drive and the general climate of opinion, not to speak of the obsessive Government concern, was against price rises. The Commission was, therefore, probably more conscious of the need to hold down the price level than to fix its eyes on achieving a vastly larger production level. With a fine jugglery of structural elements, the Commission contrived to give the impression that something has been done for the grower, without increasing the net price receivable by him and the manufacturer has been left with the satisfaction that he has got away with a much smaller increase for his rubber supply cost than he had feared for some time.

The critical grower is however likely to find cause for complaints at several points in the latest report of the Tariff Commission, the full text of which is now available. The Commission, for the purpose of costing, selected 16 units, of which 14, with a total acreage of 14,770 acres, represented large estates owned by companies and two small holdings representing 140 acres. Small holdings account for 57 per cent. of the total acreage under rubber and a selection of 140 acres to represent them was wholly inadequate. Even these two units had to be ignored, as the Commission could not obtain authentic figures from them. The remaining 14 units which supplied the data, on which the costing was done, were, if at all representative, of the very large units or of the minority units of the industry. To apply the result of this costing to the whole industry was, on the face of it, inappropriate and the result could not fail to be assailed by the producers, even if it is admitted that their accredited associations provided the list of estates for the costing. The Commission cannot, of course, get behind this excuse, for it is responsible to get at the relevant facts irrespective of any organisation or agency in the same manner as the Commission is entitled to reject a list or data which it considers unrepresentative or capable of distorting the true picture. The error of selection was compounded when the Commission rejected the demand for weightage for small growers and threw out the weightage element given in the price structure these last nine years, first by the Tariff Board in 1951 and then by the Tariff Commission in 1953.

The report states that the average yield of small growers was 181 pounds per acre and of the large growers 419 pounds. The weightage given for small growers in the previous enquiries was based on this glaring difference between the yields on which costing is done. The reason given for rejecting this claim seems to be inadequate and, at least on one point, deserving of protest. The Commission observes that, if such a weightage is given in the price structure, the efficient grower who produces more per acre stands to earn more. This seems to be a case of cutting the small grower's nose to spite the large grower's face!

A Serious Error

The Commission found that the overall average yield for tapped acreage in 1958 was 314 pounds, nearly 100 pounds less than the one assumed by the previous Commission for the period its price would be in force. There is nothing wrong with having an optimistic view about prospective yields. The error is of consequence when that expectation forms the basis of a whole series of calculations for fixing the fair price and provisions for various obligations.

Among the 12 units selected for costing, representing 14,770 acres, nine units had yields exceeding the industry's average of 314 pounds and three were below it. The Commission, by applying the average rate of yield of the larger units to the whole industry, created an unreal figure on which the various elements in the structure had to be built up. In providing for certain items, the Commission used the yield figure of 460 pounds per acre. For instance, the depreciation element has been calculated for a return of Rs. 1,400 in 30 years and the figure of Rs. 9 per 100 pounds is arrived at on a yield basis of 460 pounds per acre. The Commission deserves credit for having introduced an innovation by making rubber trees eligible for a depreciation provision, but it made the provision unreal for about 80 per cent. of the present stand. For an estate with a yield of 460 pounds, the rate of Rs. 9 per 100 pounds would allow Rs. 41.40 per acre, but fields with 180 pounds as almost 60 per cent. of the acreage normally obtain, the same depreciation element would yield only Rs. 16.20 per acre. The small grower producing less from each acre which stands most in need of replacement receives the lowest yield of the depreciation element.

There were three distinct failings on the part of the growers in the course of this enquiry. They, particularly the small growers, failed to produce reliable evidence of their cost of production, a failure which reveals the whole weakness of industrial organisation in rubber. The growers in presenting their case seem to have failed to carry conviction that enough was done to rehabilitate for which an element was provided in the previous costing. Therefore, the growers' plea for not finding the rehabilitation element was rejected and then the Commission wisely provided for a fund being created for more liberal subsidies. This may be hard on the progressive units, where large-scale replanting has already taken place with little, if any, assistance. They will produce more rubber from their acres and so contribute more to the fund from which they will receive less in return. On the other hand, those who neglected their fields and whose trees are nearly non-productive will receive a bounty from the fund. With a little effort, the Board could have worked out a scheme to prevent the fund operating in the manner of a reward for past neglect. The growers also seem to have failed to make out a case which needed making out even more before the Government of India, that rubber does not lend itself to exploitation at maximum efficiency in small-holding units. The Commission, on its own, has dealt with this particular feature but very cursorily, although it is a vital factor in the speedy achievement of self-sufficiency in rubber.

A Disturbing Trend

The enquiry brings out certain interesting details of the financial position of rubber companies. The report says that, analysing the record of 28 companies, it was found that, in a three-year interval, working capital for the companies covered declined from Rs. 42.37 lakhs to Rs. 15.85 lakhs, reserves from Rs. 114.92 lakhs to Rs. 86.87 lakhs, net worth from Rs. 320.81 lakhs to Rs. 311.88 lakhs and profits from Rs. 68.44 lakhs to Rs. 54.65 lakhs, although the value of assets used in business, the value of fixed capital, borrowings and proceeds of sales—all had increased during the period. At the same time, provision for taxation increased from 41.2 per cent. of profits to 53.9 per cent. and net profits after taxation, on the capital employed, dropped from 10.4 per cent. to 6.5 per cent. On paid-up capital, it was down from 17.7 to 12.6 per cent. Dividends dropped from 14.8 to 9.6 per cent. on paid-up capital. These figures should have helped the Commission to find the reason why rubber has not been an industry capable of attracting fresh capital investment for about 15 years. Most of the new planting, the Commission should have realised, is represented by small holdings brought into being under the compulsive influence of the land reforms measures. It was not reward from rubber, but fear of alienation of non-rubber land, which induced a flight into rubber cultivation.

Rubber the world over, except in India, is likely to be in abundant supply in the coming years. Whatever the niceties of yield figures and costing, the Tariff Commission may have found it difficult to ignore the overall economic indicators relating to prices or provide for a price which increased the handicap of the manufactured products in the export trade. The growers have two strong counter-arguments against this. For one, the price of rubber has moved the least among agricultural commodities or raw materials in 20 years, a fact which is difficult to be challenged easily. For the other, they can well ask the question: Is it better in national interest to pay an attractive price which will stimulate a sizable effort or to face a sizable shortage, growing each year as the manufacturing capacity expands, and pay for our supply with increasing drain on our foreign exchange resources?

QUALITY GOES OVERSEAS

Made in India—proudly they wear that mark, goods which are shipped overseas, boosting our country's exports.

These goods are an evidence of India's economic progress. As such they must uphold the good name of Indian industry.

The Indian Standards Institution gives the ISI certification mark only to those goods which conform to relevant Indian standards. The ISI mark is the guarantee of quality of such goods both at home, and in overseas markets.

Every exporter has the facility to have his goods checked, tested prior to shipment, giving assurance to his overseas customer of conformity to agreed standards.

PROTECTION TO BALL BEARINGS

CONTINUANCE FOR ANOTHER TWO YEARS ORDERED

THE Government of India has given its consent to the recommendations of the Tariff Commission that protection to the ball bearings industry be continued for a further period of two years ending 31st December 1962, at the existing rate of duty, namely, 95 per cent. *ad valorem* and that parts of ball bearings and adapter ball bearings upto 2" bore diameter also be liable to the same rate of protective duty. The Government resolution containing this acceptance also states that the Government will implement, to the extent possible, the Commission's recommendation for expediting the formulation of standard specifications for ball bearings. It also draws the attention of the industry to the recommendations of the Commission that the duty-free imports of tubes cannot be supported, that the records of costs be improved to facilitate the determination of costs with accuracy and that suitable measures be adopted to make after-sales service more effective.

The Tariff Commission's report, on which the Government has passed the above resolution, is interesting for the facts and figures it has assembled regarding this important industry. Ball bearings are an essential industrial component and are widely used in electric fans, electric motors, pumps, machine tools, cotton textile machinery (ring frames and carding engines), automobiles, cycle rickshaws, chaff cutters, etc. For 1960-61, the domestic demand for ball bearings is estimated at 4.5 million, composed of 1.8 million for electric fans, 0.4 million for cotton textile machinery, 0.6 million for automobiles, 0.2 million for electric motors, 0.2 million for pumps and the balance for other industries and for replacement purposes. The future demand is variously estimated, but the Commission has accepted the estimate (11.7 million) of the Development Wing which proceeds on the basis of the production targets laid down in the third Plan for different industries. On this estimate of 11.7 million pieces (both for original equipment and replacement) for the year 1965-66, the demand for the year 1963 is placed at 8.5 million to 9 million pieces. This estimate of demand for 1963 may well be compared with the Commission's estimate of the likely double-shift capacity of the industry in 1962, namely, 6 million pieces. Here, the Commission has given the finding that, if the actual consumption turns out to be as estimated, the present shortage must continue for a considerable time in future, unless fresh capacity is developed.

At present, production in the National Engineering Industries is increasing steadily; as against 1.7 million bearings in 1959, the estimate for 1960 is 2.5 million. In small-scale units in the Punjab, production is about 250,000 bearings as of 1959.

Current and prospective capacities on a double-shift basis may be usefully given in this connection. How much expansion has taken place in capacity since 1957 may also be seen from the following figures:

(In thousands)

	1957	1960	1962
Large scale:			
National Engineering Industries ..	1,020	1,800	3,000
Indian S.K.F. Manufacturing Co., Ltd. ..	..	..	1,500
Pioneer Bearings	..	..	840
Small scale:			
Dhirajlal & Co.	25		25
Total ..	1,020	1,825	5,365

If the capacity of small-scale units in the Punjab is added, the figure for 1962 will be 6.4 million. Other prospective producers who may add to the estimated capacity in 1962 are stated to be Maklashankar P. Joshi & Co. and the Investment Corporation of India Ltd. But it is not known whether there will be sufficient capacity by 1963 for meeting fully the domestic demand of 8.5 million to 9 million pieces. Otherwise, there will be need for some imports in future also as in the past. Incidentally, it may be noted here that imports of ball bearings were of the total value of Rs. 48 lakhs in 1959 and Rs. 18 lakhs in the first quarter of 1960.

There is also reference in the Tariff Commission's report to the raw material requirements of the industry. The principal raw materials for the manufacture of ball bearings and components are: H.C.1 steel bars and tubes, H.C.1 steel wires, M.S. bars, plates and tubes, M.S. wire and brass strips or rods. Of these, H.C.1 steel bars, tubes and wire are mainly imported. A small quantity of bars is, however, rolled from steel billets purchased from Metal and Steel Factory, Ichhapur; this accounted, in terms of value, for about 13 per cent. of supplies in 1959. The other items of raw materials mentioned above are available indigenously. The Commission has found that the overall economy in the use of tubes is such that it results in a lower cost of production even after payment of a higher price and import duty on tubes. After duly weighing all circumstances, including the relative quality of the ball bearings and the high protective duty thereon, the Commission has come to the conclusion that the case for duty-free imports of tubes cannot be supported any longer.

The Commission has estimated the cost of production and fair ex-works prices of indigenous ball bearings. Since the only large-scale company in the field is the National Engineering Industries, Ltd., Jaipur, managed by Birlas, its task has been comparatively easy. The cost examination for 1959-60 has provided the basis for the Commission's estimates of fair ex-works prices of a few representative sizes of ball bearings below 1" bore diameter, between 1" and 2" diameter and adapter ball bearings. These estimates for 38 bearing sizes range from Rs. 2.08 to Rs. 31.13 per piece. In working out the fair ex-works prices, the Commission has provided for depreciation at normal income-tax rates and for a return of 12 per cent. on capital employed. The difference between fair ex-works price and landed cost ex-duty as a percentage of c.i.f. is, on an average, 104 per cent. for ball bearings upto 1" bore, 136 per cent. for ball bearings above 1" and upto 2" bore and 141 per cent. for adapter ball bearings upto 2" bore diameter.

The high cost of ball bearings in the country is due to several causes, among which are counted some special features of the situation such as the type of raw materials available and the age and type of the machinery in use. Also, working of three shifts with the consequent unavailability of surplus capacity does not permit sufficient respite for preventive maintenance and overhaul, etc.

As for the quantum of protection, the Commission has determined it by working out the fair ex-works price on the basis of the actual cost of production during the costed period. This is a departure from the Commission's usual practice of estimating the future costs for the period for which protection is to be recommended. In this particular case, the Commission has found it difficult to estimate the future costs with reasonable accuracy due to various causes. The quantum of duty to protect the domestic industry is recommended to be maintained at the present rate of 95 per cent. *ad valorem*, although the difference between fair ex-works price and landed cost exduty as a percentage of c.i.f. would appear to indicate the need for a larger quantum of protection. The Commission has not considered it necessary to increase the present duty of 95 per cent. *ad valorem* in view of the severe restrictions on imports. It has not also favoured continuance of protection for a longer period than two years, because substantial reduction in costs is expected to be achieved when the expansion programme of the only Company in the field now is completed.

PROTECTION TO POWER AND DISTRIBUTION TRANSFORMER INDUSTRY

The Tariff Commission has recommended that protection to the power and distribution transformer industry be continued at the existing rate of duty, i.e., 10 per cent. *ad valorem*, for a further period of three years ending 31st December 1963 and that the protective duty be made applicable to power and distribution transformers upto 10,000 kVA and 132 kV on the H.T. side, and parts of such transformers, not otherwise specified. These recommendations have just been accepted by the Government of India. The Government resolution on the Commission's report states that Government has also accepted the recommendation regarding the continuance of the present practice of assessing transformer oil imported with transformers to duty at the same rate as is applicable to transformer oil imported separately and that steps will be taken to implement it in due course.

Government has also taken note of the recommendations of the Commission for thorough scrutiny of applications for import of transformers upto 10,000 kVA and 132 kV on the H.T. side, classification of imported power and distribution transformers by voltage, etc. The resolution states that steps will be taken to implement them as far as possible.

RETURNS FROM IRRIGATION PROJECTS

It was officially disclosed in the Lok Sabha last week that the Planning Commission had suggested to the State Governments to adopt some suitable measures for improving financial returns from the irrigation projects. Although the value of crops produced as a result of irrigation had increased and the maintenance costs of projects had also gone up, there had been no commensurate increase in the water rates. In the opinion of the Planning Commission, the rates required upward revision. At the same time, the existing water rates would have to be reviewed with a view to bringing about greater uniformity in them as between different regions or irrigation systems in individual States. Another suggestion made by the Commission was that, in those States where water rates were optional, there should be a compulsory water cess leviable on the entire area for which irrigation facilities were provided, irrespective of whether water was taken by cultivators or not.

AGRICULTURAL MACHINERY

Mr. Manubhai Shah, Minister for Industry, told the Lok Sabha recently that the second Plan target for power-driven pumps and diesel engines had already been achieved and these two industries had well developed with indigenous content of 85 to 95 per cent. As for agricultural tractors, their production had just commenced.

The Minister further observed that there were at present 63 units, with a production capacity of 1.4 lakhs of power-driven pumps. The production of such pumps in 1959 had amounted to 85,067 and in 1960 (upto September) 72,900. In the case of diesel engines, the number of units was 26 with a production capacity of 53,455 annually. In 1959, production had amounted to 30,335 diesel engines and in 1960 (upto September) 30,790 diesel engines. Four units with an annual capacity of 10 000 agricultural tractors had been licensed and one unit had gone into production in September this year.

16th Edition of
KAPOOR'S INTEREST CALCULATOR
Thoroughly revised and enlarged, now also includes:
Regular range of products from 1 lac to 99 lacs.
Regular range of calculations for 1 day to 29 days.
Calculations at seven new rates including 3¼% and 3½% in its PARTS II and III.
More useful information like Metric Weights and Measures tables, Stamp Duty, Current Yield on Government Securities, etc., etc.
All cloth bound on modern lines.

STEEL PRODUCTION SOARS BY 173% AT MUKAND

In 1940, Mukand employed 694 men; in June 1960—2,187. Over the past seven years, production figures have soared—18,234 tons in 1952/53; 49,787 tons in 1959/60. This increase is a reflection of a good management of finances:—

(Rs. in lacs)	1957/58	1958/59	1959/60
Capital	51	51	71
Depreciation provided up to date	32	36	41
Profits retained in business to date	25	35	45
Profit for the year	19	30	32
Dividend for the year	5	5	8

Mukand manufacture high-grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing influx of big orders—like the one placed by the Railways with Mukand on 16th July 1960 for 4,035 sets of Centre Buffer Couplers valued at 84 lacs.

Mukand provides India's new and growing industries with the quality steel components they must have.

NEW PRODUCTS AND PROCESSES

New Welding Aid

THE English Electric Company Ltd. recently produced a new meter for measuring the electrical conditions in an A.C. welding arc. It consists of a watthour meter, an ammeter, a voltmeter and a protective relay, all housed in a single compact case, so that the user can see at a glance the arc voltage, the current and the total energy consumed. The meter is suitable for any manufacturing process in addition to welding, where energy consumption over short periods must be measured. The watthour meter has a pointer which moves over a 4 inch. (10.16 cm.) dial, one revolution being equivalent to 100 watthours at 100/5 amps. For other ratios a multiplying constant must be used. The voltmeter and ammeter are of the 4 inch square moving iron type and are both scaled 0-120. The relay gives protection against overcurrent resulting from an incorrect current/transformer ratio. A four range current transformer for stepping down from 100, 300, 500 or 1,000 amps to 5 amps can also be supplied.

English Electric also recently announced the new THERMEES electrode for applying a rapid and concentrated heat to metal workpieces before welding, bending or straightening. This electrode can be used on any standard metal and in any position, thus providing a means whereby heat can be applied to an exact spot in relatively inaccessible places without the use of a special flame or heating equipment. The Thermees is handled like a normal electrode and can be used on A.C. or D.C. welding plant. An A.C. supply should have an open circuit voltage of 80 to 85 volts for the best results.

Shot-blasting Technique

Aggregate exposure on new concrete surfaces by grinding, bush hammering and acid etching has always been complicated by the necessity to complete the process during the relatively short period between setting and hardening. By using a Vacu-Blast "Medium" closed circuit shot-blasting unit, it has now been found possible to expose a 6-week old concrete wall at the rate of 4 sq. yds. an hour, while a limestone wall, made of a 4-2-1 mix, was scoured to a depth of 1/8 in. at the rate of 1 sq. ft. per minute. The Vacu-Blast principle involves automatic recovery of the abrasive by a pressure/vacuum system inside the gun-head, the abrasive and the broken down mortar being returned through the vacuum line to the unit, where the former is cleaned for re-circulation while the latter is transferred to a dust collector. The gun of the "Medium" unit can be used at a height of 15 ft. and a horizontal distance of 40 ft. from the machine. For the rubber and plastics industries, the manufacturers have developed a new unit, known as the Dry Honer, which will clean intricate moulds in a matter of seconds. In this equipment, the operation takes place in a totally enclosed glove cabinet, the cleaning media being 40/80 micron glass beads. These are continuously re-circulated, any below a certain size being automatically transferred to the dust section. The entire process is completely dry. No liquids or solvents are used at any stage. An ordinary 3-in. diameter mould can be cleaned in this way in 30 seconds, but will suffer no damage even if exposed to the abrasive for a full hour. Larger moulds for motor tyres, poly-urethane foam upholstery or cushions are cleaned in situ with a Vacu-Blast "Major" machine, using special hoods placed between the mould halves.

Aid for Oil Search

The research laboratories of a big oil company here are using a new X-ray and computer procedure to "fingerprint" rock specimens and speed the discovery of oil. Newly devised analytical equipment, which operates unattended, employs an X-ray machine and a computer which "memorises" the characteristics of 35 commonly observed minerals. The computer, through an elaborate mathematical programme, absorbs and digests the punched card data for a set of unknown samples, identifies the constituent minerals, calculates their approximate percentage occurrence and correlates and prints a complete analysis of the important minerals contained in the rock samples. When drilling an oil well, thousands of rock "cores" or fragments are recovered and knowing the composition of these "cores" is important to geologists. Normally a staff of trained analysts could determine the mineral composition of only a few core fragments a day. With the new equipment a detailed analysis of rock samples at the rate of 150 or so per day is said to be possible, nearly 50 times faster than previous methods.

Oxygen Profiling System

The "Hancoline" oxygen profiling machine, made by a British firm, Hancock and Co. has been provided with an electronic device whereby all or any of its four, six or eight burners can be made to "sense" the height of a plate being cut and remain at a constant distance above it throughout the operation. The new unit is controlled through a portable switch box and connected to probe rings fitted to each nozzle as well as to a small fractional horse-power motor geared to each burner. The switch box controls all the burners. When a burner is switched to "automatic", variations in capacity between its probe ring and the plate beneath are transmitted electronically to the motor, causing it to raise or lower the burner according to any undulations in the plate. The equipment can also be used for bevelling up to 45°, either by angling the whole burner assembly (in which case the burner moves up and down in the line of the cut) or by angling the burner only. It is intended for use with a 220-250 v., 50 cycles, single phase A.C. supply.

Electronically-controlled Conveyor

An electronically-controlled overhead conveyor which opens up entirely new possibilities in the realm of mechanical handling has been developed by a U.K. firm. The system has a standard overhead conveyor—without any of the special mechanical attachments—controlled through an electronic console. The system can be adapted to deal with virtually any number of pick-up points and delivery stations. A typical system now in the course of manufacture for a plastic plant in the U.K. involves 30 machines, each of which must be fed with any one of 70 different raw materials. On long continuous runs, some machines use the same material for several weeks whilst others change their material feed every few hours. The flexibility of this particular system is such that feed variations of this nature can be carried out in less than two minutes by a single operator at a central control console.

Calcium Silicate Insulation

A new type of calcium silicate insulation, known as "Paratemp" has been specially developed for the chemical, petroleum and similar industries by the Chemical and Insulating Company Ltd., a member of the Darlington Chemicals Group. Paratemp has a uniformly low thermal conductivity between 200°F. (93.3°C.) and 1,400°F. (760°C.). It has a compressive strength, at 5 per cent. deformation, of 70 p.s.i. (5 kg./cm.2), a modulus of rupture of 60 p.s.i. (4.2 kg./cm.2) and a density of about 12 lbs./cu.ft. (192 kg./m.3). The material is chemically inert and retains most of its strength even after long exposure to its limiting temperature; it is undamaged by wetting and dries without deformation or loss of thermal efficiency. Linear shrinkage after heating for twenty-four hours at 1,200°F. (650°C.) is 1 per cent.—2 per cent. with a 12 per cent. loss of weight.

New Type of Refrigerator

An entirely new type of refrigerator has been demonstrated in Stockholm by A. B. Electrolux. It has no moving parts, will last indefinitely and needs no servicing. The model being shown is small—capacity less than three-quarters of a cubic foot—and is intended for campers, yachtsmen and car owners. The only source of power needed is a car battery, from which the refrigerator takes between 25 and 30 watts, which is considerably less than the power consumption of the lighting system of an ordinary family car. The principle is that when two dissimilar metals are joined at each end and a current is made to pass in one direction round the circuit, then one junction is warmed and the other cooled. This phenomena has been known in physics for more than a century.

Oil and Gas Engines

On the basis of existing types of four-stroke diesel engines for stationary work an engine works at Amsterdam (Holland) has developed an engine which is adapted for operation on liquid fuels only and may also work on combustible gas into which a small quantity of liquid diesel fuel is injected. Combustion is initiated by injecting through the conventional, unaltered, diesel injection system a small quantity of diesel fuel, which is less than 15 per cent. of the quantity required for high-speed diesel engines (47-140 h.p.) operating at full load and less than 10 per cent. for heavy-duty engines (150-500 h.p.). Unlike the conventional gas engines the new engines have the high diesel compression ratio of about 1:14, so that they also have a high efficiency when operating on gas. The compressed air-gas mixtures is kept lean to prevent detonation, the temperatures of pistons, valves, etc. thus differing little from those in diesel-engine operation. The lean air-gas mixture can only be ignited by injection of a small quantity of liquid fuel. The engine can also be fully used as a diesel engine with the same injection system. To prevent too great a difference between total specific gas plus liquid fuel consumption at low loads and the economical diesel engine the air intake is throttled, thereby preventing the gas-air mixture from becoming so lean that it burns too slowly or not at all. These engines are started up like conventional diesel engines. Gas is supplied when the normal operational temperature has been reached.

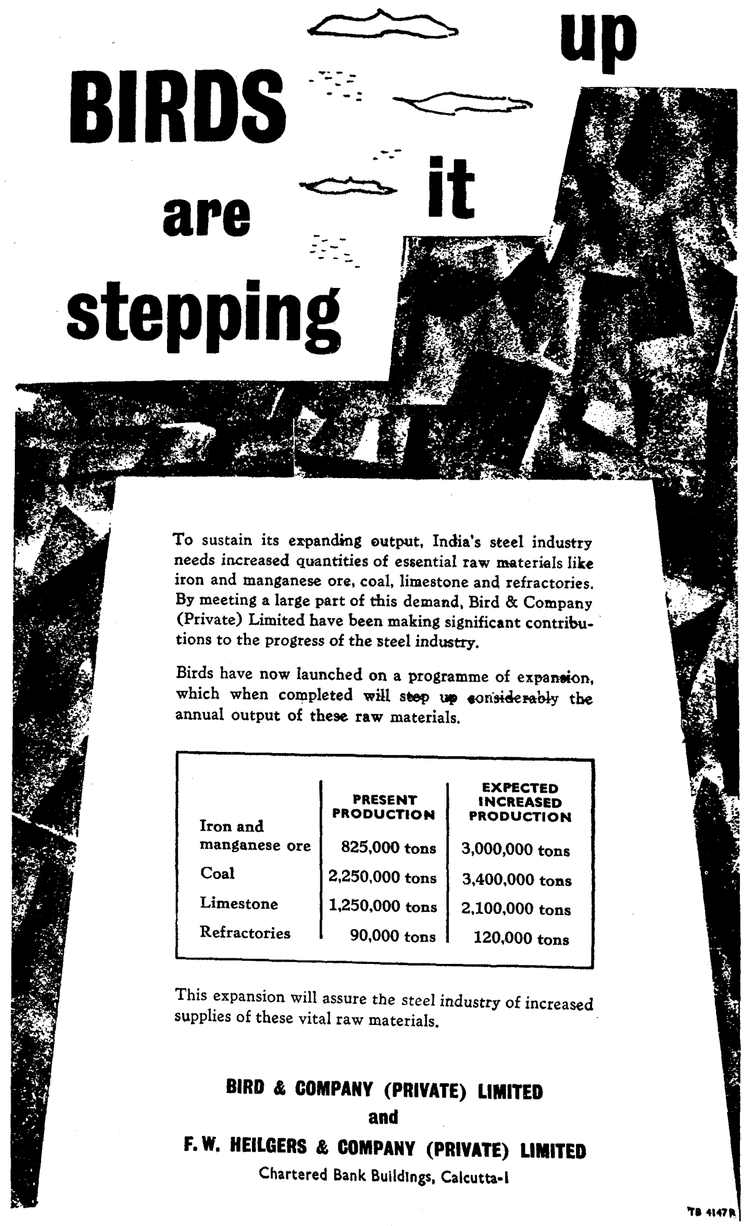
BIRDS are stepping up it



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

MARKETING OF OIL IN EUROPE

SEVERE PRICE COMPETITION—NO PROSPECT OF RISE IN PRICES

UNDERSTANDABLY, the Governments of the world's main oil-exporting countries, now setting up the new Organisation of Petroleum Exporting Countries (O.P.E.C.), are concerned that prices of crude oil (and therefore the producers' profit upon which their oil revenues are based) should be maintained at a satisfactory level. Until the present excess of productive and refining capacity appeared, with the consequent pressure upon crude oil prices, the good level of profits earned was accepted as part of the order of things. But the drop in Middle East crude prices in February 1959, the round of cuts in August last, and fears of further cuts, have now led the exporting countries to join together to attempt to halt the effects of market forces.

This attempt, through O.P.E.C., rests on the assumption that it is the major oil integrated concerns who themselves determine the value of petroleum products and therefore of crude oil. This is by no means so. Each company is subject to the many competitive factors that pervade the industry, above all to those obtaining in the marketing areas where the products made from crude oil are consumed. The value of Middle East oil is not established in the Middle East, but at the gasoline pump and the oil consuming factory. And with so many seeking to serve the consumer, so as to gain, or retain, trade, heavy pressure upon prices is inevitable. Faced with the consequences of today's extremely keen competition, some of the oil producing countries themselves might, of course, now wish that the oil industry was not so highly competitive as they themselves have helped to make it. But today's realities have to be faced.

Being the largest oil-importing region in the world, oil marketing conditions in Europe have a great influence in determining what is the ultimate market worth of crude oil. It is, therefore, useful to survey briefly the chief factors that enter into the highly competitive oil marketing now being experienced there. Public opinion in most European countries, as in the U.S., insists, for good reasons, that oil distribution should be competitively run. Cartels are regarded as anathema, and moreover as the current investigation by the U.K. Monopolies Commission shows, even sensible arrangements in regard to service stations can be subject to enquiry to ensure there is no undesirable restraint of trade.

Many More Marketers

The extraordinarily rapid increase in European oil demand in recent years, with the prospect of further expansion in an area regarded as politically safe for investment, has encouraged the entry, often at considerable initial expense, of oil distributing concerns already established elsewhere. Also, new local traders and brokers have been enticed into oil distribution, sometimes because their coal business is being badly hit by oil, and sometimes by specially favourable occasional offers of oil deals on an *ad hoc* basis, which, thanks to the availability of hired storage, they can handle without the need to incur large-scale investment.

Examples of important new ventures in the field of marketing in recent years are the establishment of new sales organisations by both C.F.P. and Petrofina in several European countries, the start of full-scale marketing by B.P. in Italy and in Finland, and by Mobil in the Netherlands, and the new oil marketing interests of the local co-operative organisation in the Netherlands. The process is by no means ended. The Italian State concern E.N.I., having, by its aggressive sales activities and large imports of Russian oil, forced down prices drastically in the Italian market, is now determined to establish itself as a marketer in other countries, notably Southern Germany, Switzerland and Austria. In France, a new State-controlled company—U.I.P.—has entered the market, so that products from crude purchased by French State-owned concerns shall have some direct retail outlets. In Denmark, Tidewater is building a refinery in order to start large-scale distribution in the Scandinavian area, while in Germany, already overrun by small oil concerns of various kinds, the new refining and distributing concern Frisia, associated with the Swiss cut-price trader, Herr Duttweiler, has recently completed its 1.4 million tons refinery at the seaport of Emden. It uses Kuwait Neutral Zone crude obtained from American Independent, and intends to export to other countries if opportunity offers. Two U.S. companies which have found oil in Libya have both taken the first steps towards marketing in the European area—Continental Oil by acquiring a distributing organisation in Germany, and Ohio by undertaking to build a refinery in Northern Spain, the products of which will be sold by Campsa so displacing oil from existing suppliers. Cities Service and the German oil marketing concern, B.V. Aral, have each recently acquired a distribution network in Italy and it is known that Standard of Indiana is also contemplating entering Italy and possibly other European markets.

Responsibilities of Bigness

The entry of new marketers and/or refiners compels already established concerns to do all they can to maintain their share of the market. As it is usually only by cutting prices (or giving inducements that have that effect) that a newcomer can get trade in already very well-served markets, lower returns all round is the usual result. Many European refiners already have refining capacity which they find difficult to utilise to the full without having recourse to price-cutting to capture business, and yet, under the spur of competition, hardly a month passes without the announcement of further refinery projects in one European country or another. Also, the present low rates of tanker freights often make it worthwhile to ship odd lots of low-priced excess products, say, from Italian refineries to Northern Europe and so make a quick marginal profit.

Indeed, much of the present pressure upon market prices results from the activities of aggressive operators with no responsibility for exploration, production, research, and all the other long-term complex activities that eventually bring petroleum products to our doors. By bargaining, seizing an opportunity, and selecting the trade they will do, they may capture, or threaten to capture, outlets which established concerns are unwilling to lose. The smaller trader with little investment, no responsibility for country-wide distribution or for assured supplies for the future, can cut prices as occasion demands, whereas the integrated company has always to bear in mind that it has to earn most of the funds needed to expand so as to cope with the world's rising demands. Logically enough, the consumer tends to look only at cash outgoings today.

Competitive Retailing

These different approaches and attitudes naturally give rise to price competition, and they extend to the retail as well as to the wholesale markets. Throughout Europe, there are comparatively few oil company-owned and company-operated gasoline retailing points. In some countries, there are none. On the other hand, there are large numbers of retailers who own their sites, and are either completely independent or have only a contractual supply link with one or other of the oil companies; even where such a link exists, they are usually free to fix their own profit margins, although in the interests of price stability the wholesaler usually indicates a desirable retail price. However, contrary to the tendency in recent years, there is now a trend in a number of countries for oil companies to own, and then lease, service stations under contracts designed to maintain price stability. But this can be no more than an influence in that direction. Indeed, with the availability of low-priced petroleum products from European refineries and with an

saving the city's water supply

On 1st October 1959, as rain and cyclone lashed Jamshedpur, a small group of Tata Steel workers hurried to a reservoir adjoining the Subarnarekha to save the city of Jamshedpur from a major disaster.

A raft, cut adrift by storm, stood poised on the very brink of a dam separating the reservoir and the river . . . threatening to hurtle down with the swelling current any moment and smash the water main running along a bridge over the river.

As catastrophe seemed imminent, 27-year old Shamsuddin Khan jumped into the swirling water. Fighting his way to the raft, he managed to pull it away. His colleagues gave him a hero's welcome and Tata Steel gave a reward of Rs. 500 and a permanent job to this brave son of an ex-employee.

Risking life from a sense of duty is a tradition that worker heroes like Shamsuddin are setting up in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

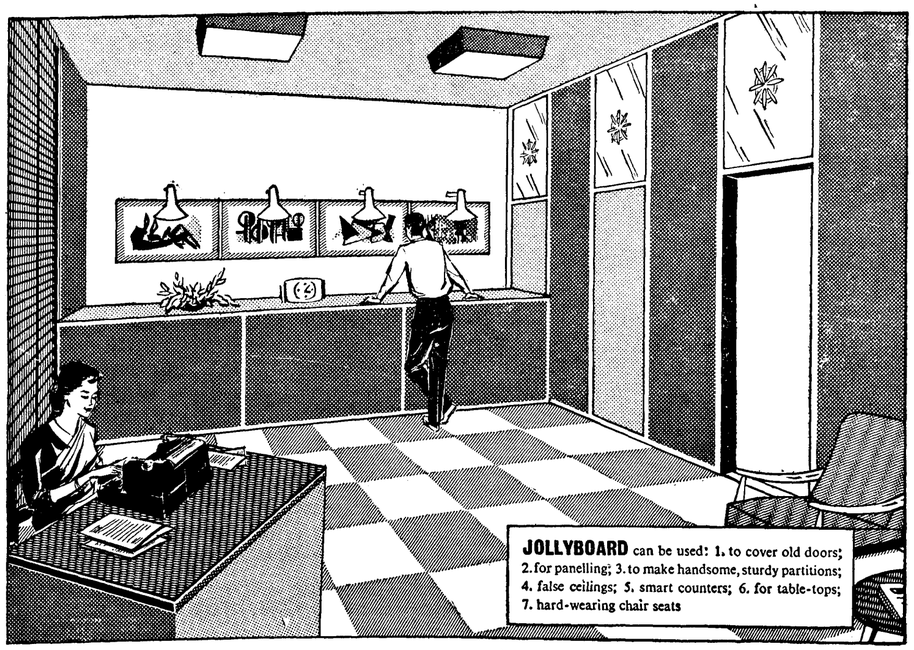
JOLLYBOARD the multi-purpose material



several attractive surfaces— in full supply everywhere

GET smartness like this for your shop or office; whatever the improvements you have in mind, JOLLYBOARD can make them look far better, last far longer, at about the same cost. For JOLLYBOARD is India's top-quality hardboard—the modern building and decorating material—at prices as low as, if not lower than, inferior substitutes.

AT SURPRISINGLY LOW PRICES!

JOLLYBOARD • Very strong, light and durable; is made from wood-fibre, compressed into solid sheets—to British Standard Specifications. • Comes in many sizes, thicknesses and attractive surfaces; a versatile building and decorating material. • No laminations, plies or knots; won't split or crack. • Easily sawn to any shape, easily affixed to any surface. • Quicker to work with, finer in finish. Takes paint, varnish or polish perfectly. • Certified by the Government Test House, Calcutta.

Thicknesses: 3 mm, 4.5 mm, 6 mm
Sizes: 12'x4', 8'x4', 6'x4', 4'x4'
Insulation Board will be available soon

DEVELOPMENT OF EXPORT MARKETS

SPECIAL INCENTIVE SCHEMES AND BARTER DEALS HAVE ONLY LIMITED VALUE

By Chinoobhai C. Javeri

SUCCESSFUL implementation of the third Five-year Plan will depend upon the valuable foreign exchange our country can earn through exports. On this subject, much has been said and written. A plethora of schemes have been framed and introduced: efforts have not been spared to explore and capture new markets: despite these, the results have belied our expectation. In a controlled economy such as ours, Government's assistance and co-operation are indispensable for our export drive to bear substantial fruit. No doubt, the Government does assist but often when it acts, it acts either late or half-heartedly. Consequently, the full benefit of the remedies adopted is not derived and exports suffer a set-back. Sometimes, the Government might be justified in turning down recommendations of the trade and industry and in delaying to take decisions. Whatever the justification, in these days, unless we move fast and keep abreast of the times, go at the very root of the problem, eradicate the causes of our basic weakness and follow a bold, radical, progressive policy, it is futile to hope for a significant rise in our exports.

Diversification

It is in the field of manufactured goods that exports could be highly diversified. The wider the range of goods, the greater the scope for diversifying exports and increasing turnover. In view of the rapid industrialisation of the country, concentrated efforts should be made to export more and more of manufactured goods by reducing or even forgoing consumption at home. No doubt, quite a number of items could be exported at random in a small way. That, however, is not the point. Basically, the production of those items whose exports could be sustained, in the future, in competition with other countries should be progressively developed. We should export from our strength than from weakness. But the basic weakness in the export of our manufactured goods is twofold: price and quality.

Generally speaking, prices of Indian goods are comparatively high, with the result that we are unable to compete with other countries in the same field. Other things being equal, buyers prefer to buy their requirements from a cheaper source. What accounts for high prices of our goods is the high cost of production due largely to manufacturers being obliged to use in their manufacture costly indigenous raw materials, accessories, and components, which are further loaded with various imposts.

The other basic weakness in our manufactured goods is the quality which is not equal to the international standard. It is this drawback which restricts their sales, spoils reputation and lowers their value. To enhance the value and increase the marketability of our manufactured goods, the quality has to be improved by increasing the efficiency of labour at all stages of production and instilling in labour a sense of personal initiative and discipline, born or patriotism and responsibility.

The industries have also to be rationalised, and the machinery modernised, where outmoded. Unless this is done, neither the quality could be improved and the efficiency increased nor the prices brought down.

Incentives

Special incentives are one of the methods of equalising the price disparity of a commodity in export. Their main aim is to neutralise the disadvantages under which industries are suffering and thereby make goods competitive in the world markets. Today, prices of most of our manufactured goods are unworkable in export markets. Even the traditional items, hitherto competitive, are difficult to sell in the teeth of foreign competition. Incentives have, therefore, become more of a routine than an expediency.

But, as incentives are increased, there is a tendency for domestic prices to go up, neutralising their advantage. Further, incentives, then, become necessary. Thus, the race between rising prices and higher incentives continues until further incentives are impossible.

Though justifiable as a price-corrective measure, special export incentive schemes should be used with extreme caution and discretion. When exports are achieved with the help of disproportionate incentives, the manufacturers tend to lean more and more on them and the disparity between the cost of production and the international price goes on widening, with the result that the basic objective of producing goods at competitive prices will not be achieved. The only right and rational course for combating the spiral of rising price is to increase and rationalise production.

Hurdles and Handicaps

The road to diversification of our exports is obstructed by many hurdles and handicaps. Even with incentives, prices of almost all our products are unworkable in export to withstand competition. New ideas and methods have, therefore, to be explored and ventured forth for boosting exports.

To some extent, barter, euphemistically called the linking business, could help in promoting exports of those items whose prices, even with incentives, cannot stand upto foreign competition. The negotiation and operation of this type of deal requires shrewd business acumen and intelligent grasp of its intricacies; otherwise, it could land us into difficulties with our regular exports and the country might suffer heavy losses, if unreasonably high prices are paid for goods imported in exchange for exports under the deal. There should be a definite and clear-cut policy of the Government that goods allowed to import under such a deal are essential and in short supply, while the Indian goods exported in exchange are non-traditional and difficult to export. This type of business, since it lacks an element of competition, is not salutary. However, like the use of potent drugs in sickness, it may be tried in the last resort.

Such deals could be further developed into a middleman's triangle trade. Goods of country "A" may be bought and then sold to country "B" where they are in demand and with which we may have adverse trade balance. To country "A", our non-traditional items may be sold in exchange for goods purchased from it. But, as this type of trade is complicated and risky, it requires vast experience, intimate and expert knowledge of different markets and sound judgment of price fluctuations and adjustments. As such, it could be best handled by people well established in the trade.

The State Trading Corporation has been negotiating such types of deals and also acting as an intermediary in transacting business with countries accepting payment in Indian rupees. Some of the deals have been severely criticised as not being sound, justifiable and beneficial in the national interest. The S.T.C. is handicapped for lack of experienced personnel well conversant with the intricacies of the trade.

The European Common Market—a new phase in our foreign trade—is a factor to reckon with. It shows a distinct trend towards economic co-operation and integration in Europe. The idea of forming a similar economic integration in Asia and Africa was mooted, but it seemed impracticable under the existing conditions. Nevertheless, it would be worthwhile to examine further the prospects of our entering into arrangements on the lines of Free Trade Association with some selected Asian and African countries.

Another notable feature among the countries of the world is the growing tendency to achieve self-sufficiency. Many European industrial countries have been having agricultural protectionism and are finding substitutes for the imports.

There is another significant development. A number of countries in Africa have become independent, and many more are likely to become so in the near future. Most of these countries are potential markets for our goods. It is, therefore, an opportune time to market Indian goods in these territories and get a foothold before our competitors invade them. For this purpose, a detailed study of these markets should be undertaken forthwith, concluding trade agreements wherever warranted.

The aforesaid changes have offered an opportunity and a challenge which must be accepted in all seriousness. They call for fresh thinking and reorientation in our export policy.

Export Industries

Apart from pursuing these schemes, more positive and constructive methods will have to be adopted for stepping up exports, so that the annual average exports can exceed the target of Rs. 690 crores outlined in the draft third Plan. So far, our efforts have been focussed on exporting traditional goods and other commodities in which we have a surplus. But there is no scope for further expansion of export in the traditional lines. On the other hand, our need for foreign exchange will increase and continue to remain so for a long period in order to repay the loans and interests thereon as and when they fall due. It is high time that organised and systematic efforts were directed and concentrated on building up export industries for manufacturing goods which are in demand and saleable in foreign markets. A selection of such industries should be listed and a definite policy laid down for providing them with the required facilities and assistance by way of encouragement and inducement.

In the final analysis, the capacity to compete in the world markets has to be built up painstakingly by means of enlightened and realistic economic and taxation policy that will give fillip to production and ensure greater efficiency in terms of lower cost and better quality production.

HANDBOOK OF INDIAN COTTON TEXTILE INDUSTRY 1960

This is an exhaustive and detailed compendium carrying a survey of the cotton mill industry, the hosiery and apparel industries and narrow-woven fabrics trade brought out by the Cotton Textiles Export Promotion Council. Comprehensive coverage has been given to spinning and weaving mills, textile processors, hosiery and apparel fabrics in respect of their capacity, equipment and production so as to make it convenient for the exporters in India and importers overseas to locate sources of supply for the range of goods required by them. The information contained in the Handbook is compiled on the basis of the Council's field investigation extending for over eight months. The publication is well illustrated with photographs of several manufacturing processes in the mill, hosiery and apparel industries. Priced at Rs. 10 per copy, it is a useful guide to the textile trade.

IMPORTANCE OF WORK STUDY

GREAT GAINS CAN BE ACHIEVED WITH LESS INPUT

(Contributed)

WORK study is the systematic, objective and critical examination of the application of human activity in an undertaking in order to effect an improvement. It is, primarily, a service to management in the achievement of higher productivity.

$$\text{Productivity} = \frac{\text{Goods and services}}{\text{Materials, Equipment, Human Activity}}$$

Goods and services are produced from some complex of materials and equipment by the application of human activity. The productivity of an undertaking is the ratio of goods and services produced to resources used.

There are, of course, many ways of improving that ratio. Research paves the way for the development of new and improved basic processes, materials and equipment; and obviously the most significant improvements in productivity and standards of living have come in that way.

Study of customer requirements, the design and specifications of products and elimination of unnecessary variety in products is another important way of increasing productivity. Both those ways require time and capital to achieve results.

In the meantime, productivity must be improved to provide the reserves necessary for further major changes. The only way open is to make better use of existing resources, to produce the same quantity of goods and services from a smaller input by improved deployment and utilisation of those resources. This can be done by improving:

(*a*) methods of operating and maintaining equipment;

(*b*) layout, to avoid unnecessary movement of materials;

(*c*) planning of associated activities;

(*d*) utilisation of manpower.

It can be done by increasing the effectiveness of work done by all concerned. Achievement of these improvements is the duty of operational management. Work study is a management technique developed for that purpose.

An essential part of work study is quantitative measurement of human work: to answer the question "how much work is there in this or that task?" Then, given that an average rate of doing work, which varies according to the ability of the worker and the way his activities are planned and controlled, the question "how long should this or that task take?" can also be answered. The work contents of highly repetitive activities can economically be measured more accurately than those of infrequently repetitive tasks. Different work measurement techniques are used.

Clearly the time required to do something at a given activity rate depends on the equipment used, the method of working and the layout of the workplace. These must be defined more or less precisely according to the repetitiveness of the activity and the need for precise data. Since men are not machines, working time must include time to recover from the immediately fatiguing effects of the activity. The various factors which cause need for relaxation are taken into account systematically.

Work measurement is a special, data-collecting technique. It is not work study, but an essential part of most studies of human activity in industry.

Sir Ewart Smith, a past Deputy Chairman of Imperial Chemical Industries Ltd., one of the British delegates to the International Science Congress held in Bombay early this year, refers to work study as an attitude of mind rather than a technology. It requires a determination to disclose facts and to challenge them ruthlessly in the endeavour to create improvement by change. That systematic, objective and critical examination demands clean, honest answers to a series of questions related to the activity under investigation. The series is designed to eliminate unnecessary or wasteful activity, to combine activities which could then be done more effectively and to simplify those remaining activities which are necessary. The questions are:

What is achieved by the activity?
Is it necessary? Why is it necessary?
What causes it to be necessary?
Could the cause be eliminated?
What else could be achieved?
What should be achieved?
When is it done?
When else could it be done?
When should it be done?
How is it done?
How else could it be done?
How should it be done?
Where is it done?
Where else could it be done?
Where should it be done?
Who does it?
Who else could do it?
Who should do it?

The questions are simple to ask but often difficult to answer and the study usually requires a team effort. In dealing with complex problems, it may be necessary to resolve a number of conflicting requirements. "What should," "When should," "How should," "Where should" and "Who should," taken separately, may lead to different solutions and the best overall solution may require a great deal of thought and hard work.

Whatever the problem, a logical procedure is followed. Thus, define the problem as regards objective, scope and restrictions; collect and record all relevant data; consider all possible alternatives; and develop the best, practical solution, in relation to the objective.

Work study was started round about the time the cave man first sent his young son to gather flints; while he sat at home making spear heads and so saved himself from doing something a less experienced man could do equally well.

However, it could not really be said that the cave man used a systematic, objective and critical procedure for arriving at his conclusion. It is difficult to say when that kind of approach to the application of human activity first began to seem important. Certainly, one of the people who realised clearly that much could be done in that way was Fredrick Taylor. He started to develop what he called "scientific management" in 1880 in the U.S.A. His work and the work of other pioneers were the early steps in the development of work study as it is now. Gilbreth pioneered the detailed study of methods of working which he called Motion Study. His wife, now very old and mother of 12 children, still takes an active interest in the work her husband started.

For many years after 1880, it was of interest in only a few places. Gradually, however, the importance to management both of data provided by work measurement and of work study as a whole became recognised. Progressive industrial undertakings encouraged the development of work study units to provide a specialist service to their managements. Consultants in work study began to establish themselves.

Between the two world wars, a number of managements used the results of work study in a somewhat ruthless manner and, when that happened, bitterness between workers and management was generated. Other undertakings who had always emphasised the need for maintaining healthy employee relationships used work study sensibly and with understanding.

In the U.K., the I.C.I. was one of a few undertakings which started to use work measurement as a basis for financial incentive schemes from about 1925. After the second World War, when most industrial countries faced the problem of repairing the ravages of war and when they were short of capital, materials and skilled manpower, I.C.I. decided to develop work study as fast and as far as possible as one way of overcoming the difficulties. The Company was large enough to devote considerable effort in that direction. Also, it had a diversity of products and processes and could experiment with different techniques in a wide range of industries.

Early post-war efforts were concentrated mainly in extending the applicability of work measurement, particularly in the two fields of continuous process work and plant maintenance. The main objective at that time was to develop financial incentive schemes based on work measurement data.

It soon became evident that even more important gains in productivity could be achieved by study of methods, layout and planning. The need to combine the efforts of work study specialists and people specialising in the technical complexities of process and maintenance work was felt. Concurrently, the study of office activities was developing along similar lines.

I.C.I's experience was described to many British industrialists in two conferences on work study. One was arranged by the Association of British Chemical Manufacturers in 1953; the other by the British Institute of Management in 1954. The papers were published and those for the latter conference are still available from the B.I.M.

Many studies carried out in the works had shown that changes in methods of working, layout and so on would increase productivity; but they could not be put into effect because of the cost of modifying complex plant. Those responsible for the design of new projects quickly began to realise that high productivity could and should be built into the new plants while the work was still on the drawing boards. Work study practitioners, or young design engineers who had been given training in work study, were brought into the design teams.

Very substantial savings in capital expenditure resulted.

Work Study in India

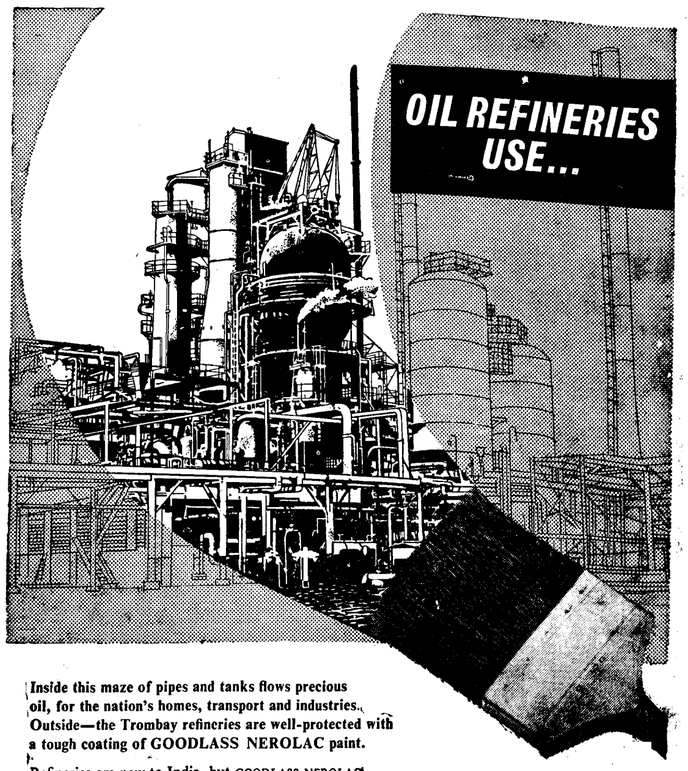
India in her drive for higher standards of living faces:

(*a*) a shortage of basic necessities;
(*b*) a shortage of industrial materials;
(*c*) a shortage of capital reserves; and
(*d*) a shortage of skilled industrial manpower at all levels.

Throughout the country, the need is for greater production. All responsible members of Government, unions and managements know that the only immediate way to achieve that greater production, in face of the shortages which exist, is to maximise productivity—to make better uses of existing resources—materials, equipment and manpower. In that way not only can more consumer goods be made available but also reserves necessary for the creation of further industries can be found, at least in part.

In passing, there is some discussion nowadays about sharing the gains of higher productivity between customer, employee and shareholder. The immediate aims must be to keep prices down and to build up new industries or expand existing ones. Of course, the employee must benefit to some extent. But only in so far as he is willing to work more effectively. With so many living at or below the subsistence level, each increase in earnings—salaries or wages—should be dependent on willingness to accomplish greater workloads and to work more effectively. While the country is spending so much on new projects, which for some time absorb capital without producing, there must be some inflation. That, within reason, should be borne by the employed sections of the community.

In fine, the conditions of industry in India today are precisely those in which management elsewhere have found work study of greatest use. Good work study, properly applied and properly understood by those directly concerned, cannot fail to help in India.



Inside this maze of pipes and tanks flows precious oil, for the nation's homes, transport and industries. Outside—the Trombay refineries are well-protected with a tough coating of GOODLASS NEROLAC paint.

Refineries are new to India, but GOODLASS NEROLAC have twenty-five years' manufacturing experience in India, backed by a century of technical and scientific development of methods and products.

GOODLASS NEROLAC—the Paint Specialists—supply all types of paints...each one specially manufactured to provide the best protection for every type of industry.

India's leading manufacturers of industrial paints and finishes

DEVELOPMENT PATTERN OF RAILWAYS

EXPERIENCE OF BRITAIN HAS SOME LESSONS FOR INDIA

By B. V. Vagh

EXECUTIVE VICE-PRESIDENT, I.R.T.D.A.

IN a paper on the Statistics of the Transport of Goods by Roads presented to the Royal Statistical Society, London, in January 1960 (pages 90 to 92, *British Road Federation Bulletin* No. 278 for April 1960), Mr. K. F. Glover gives the following traffic statistics (inland goods transport) in Great Britain for the 20 years from 1938 to 1958 with an estimate for 1959:

(In thousand million ton-miles)

	Road	Rail	Total
1938	8 to 10	16.3	24 to 26
1951	18.0	23.0	41.0
1952	18.3	22.4	40.7
1953	18.7	22.8	41.5
1954	19.5	22.1	41.6
1955	21.0	21.4	42.4
1956	21.0	21.5	42.5
1957	20.8	20.9	41.7
1958	23.1	18.4	41.5
1959 (estimated)	24.6	17.7	42.3

It is interesting to note from this table that the railways' share of total inland goods traffic, which was about 65 per cent. in 1938, fell to about 44 per cent. in 1958 and is estimated at about 42 per cent. in 1959. Between 1951 and 1958, the total goods traffic of the country averaged about 41.6 thousand million ton-miles, as against about 25 thousand million ton-miles in 1938, that is, an increase of about 16.6 thousand million ton-miles. During the same period, the railways' average was about 21.5 thousand million ton-miles, as against about 16.3 thousand million ton-miles in 1938, while the average of road transport was about 20.05 thousand million ton-miles, as against about 9.00 thousand million ton-miles in 1938. That is, out of an increase of about 16.6 thousand million ton-miles in the total traffic between 1938 and 1958, the railways' share was about 5.2 thousand million ton-miles (21.5-16.3) and the share of road transport was about 11.0 thousand million ton-miles (20.0-9.0). In other words, during this period, out of the additional traffic generated in the country, about two-thirds have been going by road and about one-third by the railways. The public's preference for road transport for the additional traffic generated is thus clear.

A third fact which this table reveals is that the railways' 1959 traffic is expected to be practically about the same as in 1938 (17.7 thousand million ton-miles, as against 16.3 thousand million ton-miles). This is significant, since it shows that, in an expanding economy, the railways remain practically stagnant after a certain period and that, thereafter, all additional traffic goes by road.

Experience in Our Country

In the light of this experience in other developed countries, the conclusion seems inevitable that the aim of our Planning Commission should be to make progressively less allotments for the development of rail transport in this country and more for road transport. Instead, our Planning Commission has been making more allotments for rail transport than for roads and has raised the goods traffic capacity of the railways from about 92 million tons in 1950-51 to 114 million tons in 1955-56, 162 million tons in 1960-61 and proposes to raise it to about 235 million tons in 1965-66. This is against the experience in other countries and requires to be looked into.

The composition of the 1958 rail goods traffic in Great Britain was as follows:

	(Million ton-miles)
(i) Coal and coke	8,927
(ii) Minerals	4,268
(iii) Merchandise and livestock ...	5,231
Total ...	18,426

(Source: *British Transport Commission's Report for* 1958, Volume II, pages 190 and 191.)

This means that, out of about 18,000 million ton-miles of rail traffic in 1958, about 13,000 million ton-miles, that is, over 72 per cent. consisted of coal, coke and minerals. This fact, together with the one referred to early, shows that a time has come for the Planning Commission to take stock of things and slow down their programme of the development of the railways from the third Plan onwards, limiting it initially to carry about one-third of the extra traffic generated by each Plan and confining the bulk of the total rail traffic to the carriage of coal, coke and minerals.

In spite of the fact that the railways had a large allotment in the second Plan and that a good deal of it was for carrying coal and raw materials for the steel plants, the steel plants at Rourkela and Bhilai had to remain idle for some time. Also the Tata Iron and Steel Company have complained in their 1959-60 report about inadequate and irregular deliveries by the railways. These facts suggest that the railways have been asking for and the Planning Commission has been granting them far more than the railways can cope with. This is not a healthy sign. The picture may have been different had the extra rail capacity been confined mostly to the estimated additional quantities of coal and raw materials.

It is interesting to note, in this connection, that the measures reported to be under consideration to relieve the bottleneck in the transport of coal and raw materials for the steel plants are the pressing into service of overaged rolling stock and increasing the production of wagons. Both are unsatisfactory. The former will slow down deliveries and may force stockpiling; the latter will take some time to materialise. Industrial plants are generally stationed as close to the source of supplies of raw materials as may be possible. If this be so, one wonders why it is necessary to lay down rail tracks at over three times the cost of a road per mile for carrying these raw materials with steam locomotion at a speed of around eight miles per hour, instead of developing roads in the neighbourhood of these plants at about one-third the cost of rail tracks per mile and carrying materials at around 20 miles per hour. Either there is some flow in this economics or the Planning Commission has not thought of it.

Provision in Third Plan

The Road Wing of the Ministry of Transport has estimated that the capital invested in our roads up to 1958-59 was about Rs. 500 crores. For all this investment, our surfaced roads carried in 1957-58 by commercial vehicles only 0.113 million ton-miles per mile, including passenger traffic. The capital invested in rail tracks is about Rs. 600 crores. For it the railways carried in 1957-58, 1.395 million ton-miles per mile, including also passenger traffic. There is something to think about this state of affairs, since, according to two surveys carried out recently by the National Council of Applied Economic Research, New Delhi, the contribution of road transport to the general revenues is much bigger than that of the railways and that its employment potential also is higher. These facts suggest that, from the point of view of our national economy, there should be a greater emphasis on the development of road transport.

It is a great pity that, in spite of experience in other countries and in spite of facts disclosed by independent authorities in our own, the Planning Commission's allotment for roads in the third Plan is practically the same as during the second, that is, Rs. 250 crores, and its target of automobile production, other than scooters, etc., in that Plan is only about one and a half times of what was originally planned for the second Plan (100,000, as against 65,000). Even now, it is not late for the Planning Commission to set matters right. Let us hope that the Neogy Committee paves the way for this.

Since 1935 Simon-Carves have received orders for and put into service, one hundred and thirty two Simon-Carves-Monsanto sulphuric acid plants of which 21 have been installed in India. With an aggregate rated capacity of nearly 3¼ million long tons of 100% sulphuric acid per annum, these plants have been built in twenty three countries throughout the world. Their individual rated capacities range from 10 to over 400 tons of 100% acid per day. Designed to use any sulphur bearing material including raw sulphur, pyrites, sludge acid, refinery waste gases, anhydrite etc, their output is used in oil refining, steelmaking, uranium processing, the production of fertilisers, explosives, rayon, dyestuffs, pigments and many other industries.

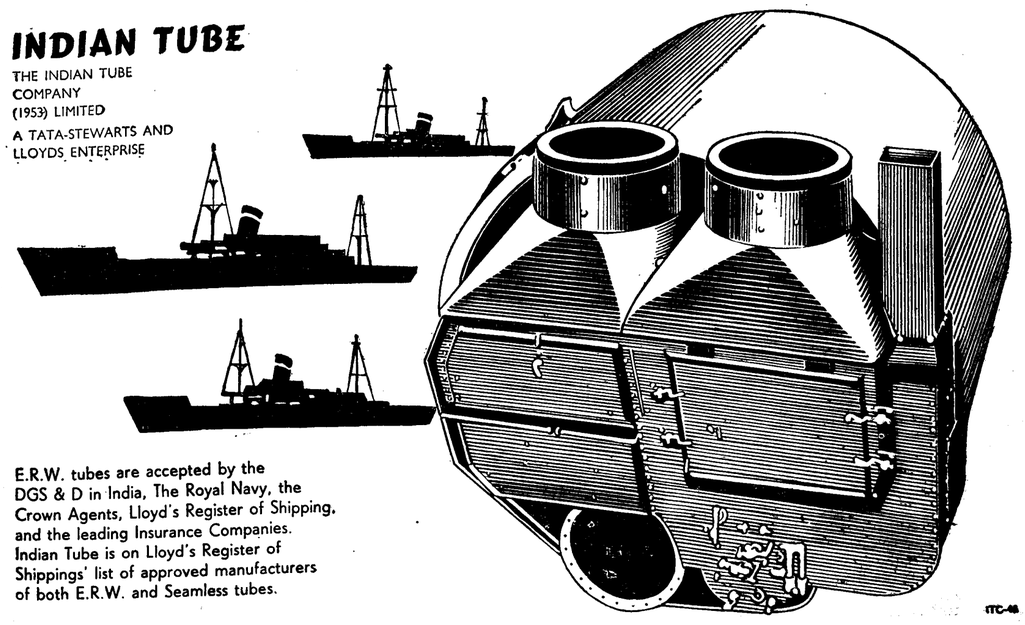
E.R.W.
MARINE
BOILER
TUBES

Recognised for their outstanding performance E.R.W. steel boiler tubes, manufactured by Indian Tube, are specially designed for protracted use in land, loco and marine boilers. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish. Rigid quality control from the raw material stage to the finished product guarantees that Indian Tube's E.R.W. tubes will meet all the tests specified by Lloyd's Register of Shipping. E.R.W. tubes are, in every respect, the equivalent of seamless tubes of similar dimensions.

INDIAN TUBE

THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE



E.R.W. tubes are accepted by the DGS & D in India, The Royal Navy, the Crown Agents, Lloyd's Register of Shipping, and the leading Insurance Companies. Indian Tube is on Lloyd's Register of Shippings' list of approved manufacturers of both E.R.W. and Seamless tubes.

BANK OF MAHARASHTRA CELEBRATES SILVER JUBILEE

PROUD RECORD OF BANKING SERVICE TO A NEGLECTED REGION

By S. V. Kale

EDITOR, *ARTHA*, POONA

THE Bank of Maharashtra Ltd., Poona, will celebrate its Silver Jubilee on 18th December 1960, under the presidentship of Shri Yeshavantrao Chavan, Chief Minister of Maharashtra. In this article, an attempt is made to bring out the special features of the Bank, which has made a significant contribution not only to trade and industry but also to sound banking.

"The inauguration of the Bank of Maharashtra is a happy augury for the bright future of banking in these parts of our country.

"The promoters of the Bank humbly aspire to play their part in the work that lies ahead —that of developing organised banking on modern lines, so as to satisfy the requirements of changing economic conditions, a necessity more urgently and insistently demanded in Maharashtra than anywhere else. They propose steadily to build up a banking machinery that will utilise the financial resources of Marathi-speaking districts for the benefit of their trade and industries and for the promotion of the economic welfare of their people.

"I am sure that, in course of time, the Bank of Maharashtra will occupy its appointed place in the banking structure of this country."

Prophecy Comes True

These prophetic words of the founder-Chairman, the late Professor V. G. Kale, uttered at the inaugural ceremony of the Bank on 6th February 1936, have come true and the Bank now occupies the position of the premier banking institution of the Marathi-speaking people. With owned funds of about half a crore of rupees, deposits of more than Rs. 15 crores, and with 52 offices, the Bank has attained the status of a big-sized bank. The expectations of the founders have been more than realised and their dream has become a reality. The inauguration of the State of Maharashtra has given further impetus to the activities of the Bank, opening up greater opportunities for the service of the people. The Directors, under the chairmanship of Shri V. P. Varde, have been alive to this extended scope and the Board has chalked out an expansion programme worthy of the Bank's achievements. The consent of the Controller of Capital Issues has been obtained to raise the paid-up capital to Rs. 40 lakhs and new shares are being offered to the present shareholders in the proportion of one new share to four shares held by them.

The Bank of Maharashtra owes its existence and development to the public-spirited effort on the part of several distinguished and farsighted men in the public life of Maharashtra. Against the dark and discouraging background of bank failures in the past, it was, indeed, a bold idea, efficiently executed, worthy of its sponsors. There were practically no large business or industrial undertakings, as big banks catered to the needs of the large concerns only. The small units were completely neglected by them. The Bank of Maharashtra was established precisely to satisfy the needs of these neglected small units of trade and industry.

Mahratta Chamber Takes the Initiative

The then newly established Mahratta Chamber of Commerce and Industries convened an Industrial and Commercial Conference in Poona in February 1935. This conference adopted a resolution asking the Chamber to formulate a scheme for the starting of a commercial bank for Maharashtra. The Chamber made the necessary preliminary preparation and its Honorary Secretaries, Shri A. R. Bhat and the late Shri G. D. Apte, along with other members, took a leading part in doing everything necessary to bring about its establishment. Amongst the Directors who took the initiative in promoting the Bank, apart from the founder-Chairman, the late Professor Kale, special mention must be made of Shri D. K. Sathe, who later became the Chairman, Shri V. P. Varde, who has been at the helm of affairs since 1954 and is chiefly responsible for the Bank's later development, and Shri B. M. Gupte, who has taken active interest since the inception of the Bank. It may be stated here that, long before the establishment of the Bank of Maharashtra was thought of, Shri Varde had such a bank in his mind; he had even made an effort to get support for his idea.

Opened by Sorabji Pochkhanwala

The Bank of Maharashtra Ltd. was registered on 16th September 1935. It received the commencement certificate on 13th January 1936 and was formally inaugurated on 8th February 1936 by the late Sir Sorabji Pochkhanwala, the eminent Managing Director of the Central Bank of India Ltd.

The first Board of Directors was as under:—

1. Prof. V. G. Kale (*Chairman*)
2. Shri D. K. Sathe (*Vice-Chairman*)
3. Shri B. M. Gupte
4. Shri N. G. Pawar (who later became Vice-Chairman in 1943)
5. Shri T. V. Ranade
6. Shri V. P. Varde (who later became Chairman in 1954)
7. Shri M. R. Joshi
8. Shri S. G. Marathe (who later became Vice-Chairman)
9. Shri R. C. Sohoni
10. Shri F. D. Pudumjee (co-opted later in the year)

Shri Shantanurao Kirloskar was co-opted a Director in 1946, and his mature advice on industrial finance was available to the Board till 1955, when he was appointed to the local Board of the newly formed State Bank of India.

The present Board is as under:—

1. Shri V. P. Varde (*Chairman*)
2. Shri D. K. Sathe
3. Shri B. M. Gupte
4. Shri F. D. Pudumjee
5. Shri M. V. Shah
6. Shri M. B. Jambhekar
7. Shri M. S. Parkhe
8. Shri J. K. Rege
9. Shri V. S. Shirgaonkar
10. Shri R. B. Banthia

Shri C. V. Joag, B. Com., F.I.B. (London), is the Manager of the Bank since 1943 and has just been appointed as the General Manager.

Steady Progress

From small beginnings, the Bank has made steady progress and has now come to occupy a leading place in the banking field of the Marathi-speaking public. The credit for this success goes to the sound foundations laid by the founder-Chairman, the late Prof. V. G. Kale, and the traditions of safety and security followed by his successor, Shri V. P. Varde and his co-Directors. The following statement shows the progress of the Bank in different aspects:

Comparative Statement of Progress

1940-59

Year	Branches	Paid-up capital	Deposits	Advances	Investments
		Rs.	Rs.	Rs.	Rs.
1940 ..	2	1,81,000	27,52,000	13,05,000	11,46,000
1945 ..	9	12,50,000	1,20,75,000	60,19,000	60,47,000
1950 ..	18	16,00,000	2,30,74,000	1,25,19,000	90,04,000
1955 ..	29	16,00,000	5,06,31,000	2,33,66,000	2,38,44,000
1957 ..	38	22,94,000	7,85,53,000	3,78,76,000	2,54,85,000
1959 ..	51	31,68,000	13,25,56,000	5,06,97,000	6,52,64,000

The Bank has opened branches in all parts of Maharashtra. After the integration of the Marathwada districts with Bombay State, the Bank opened seven branches in that area, bringing the total number of offices to 52. The Bank has plans to open more branches in unrepresented areas. Safe deposit arrangements are available at 12 branches.

The Bank was included in the second schedule in 1944. In 1946, the Bank started a subsidiary company—the Maharashtra Executor and Trustee Company P. Ltd.—to undertake executor and trustee business. In 1953, the new spacious building of the Bank was opened. In 1955, the Bank received its licence under the Banking Companies Act. In 1954, the Bank took over certain assets and liabilities of the Banthia Bank Ltd. and thus six new branches of the Bank started functioning. In 1959, the shares of the Bank were listed on the Bombay Stock Exchange in the cash list. In 1960, the Bombay State Financial Corporation included in their list of Agents this Bank for accepting and processing applications for small and medium-sized industrial units. Very recently, the Bank received licence to deal in foreign exchange in all currencies.

The Bank of Maharashtra was founded with the avowed object of bringing about the economic regeneration of the backward parts of Maharashtra. Naturally, the Directors have always kept before them this objective, which is now adopted as a part of major policy by the Reserve Bank of India. A large number of industries, small and medium scale, have been established and nourished by the Bank's liberal policy towards them, with gratifying results. The Bank is now embarking on its well considered plan of providing medium term finance for the purchase of land, machinery, buildings, etc. It is now acknowledged that well-equipped banks, having large resources, should not confine themselves to the provision of working capital only, but that they must participate in the financing of small-scale industries also. The Bank of Maharashtra can claim to have adopted this policy right from its inception.

An Able General Manager

Such finance requires careful handling and that in turn calls for a very efficient and trained staff. The Bank of Maharashtra has in its General Manager, Shri C. V. Joag, a very able, experienced and trained banker; and he is assisted by a specially trained staff. The Bank makes full use of the training facilities provided by the Reserve Bank and in addition runs its own Training School for its employees. Its officers are encouraged to get management training.

The splendid success of the Bank is due to the very encouraging response received by it from the public, and the sincerity and loyalty of its officers and staff. With this glorious history behind it, the Bank is bound to progress from strength to strength, and make a more effective contribution to the economic development of the country. The public of Maharashtra feel very proud of this Bank—a symbol of a patriotic effort, attaining its objective by following the co-operative ideal. The Bank of Maharashtra is a Peoples' Bank, in the real sense of the term. We wish it a glorious future in keeping with its lofty traditions.

ERIC

POLICY HOLDER REPORTS 1% INCREASE IN TURNOVER EVERY SINGLE DAY

This actual case of an ERIC policy holder reads like a fairy tale, yet it's true!

Three years ago, an exporter sought ERIC's help. His turnover was Rs. 4.5 lakhs—and this he was in danger of losing when his foreign buyers demanded credit terms which he was unable to entertain. His problem was to stay in business.

As advised he bought an ERIC Policy. Twelve months later, he was able to report that:

1. ERIC helped him stay in business by minimising export hazards.
2. ERIC helped him attract new buyers with tempting credit terms, and
3. ERIC helped him obtain finance facilities from his bankers who treat ERIC policies as additional security.

Within 12 months of taking ERIC policy his turnover was Rs. 14 lakhs. He was a happy man. He did not know it then, but his business was to grow even further—within another 12 months it was to rise to Rs. 40 lakhs—an increase of 788.8% in only two years—or a little over 1% every single day.

ERIC can help you too.

PLYWOOD INDUSTRY TO BE DEPROTECTED

NEED FOR IMPROVING SUPPLY OF TIMBER STRESSED

THE plywood industry plays not an insignificant role in the nation's economy, providing as it does basic materials for packing tea, a commodity consumed all over the country, and, above all, India's major foreign exchange earner. Plywood is also used in the manufacture of furniture and as lining material in aircraft and houses. The industry has made satisfactory progress in recent years, attaining notable improvement in working efficiency and in the quality of its products, thanks mainly to the tariff protection which it has been enjoying for the last twelve years. It has now a virtually sheltered market, on account of severe restriction imposed on imports. Apparently, the industry therefore no longer needs any shield of protection against foreign competition. The Tariff Commission, which undertook a fresh enquiry early this year into the question of continuance of protection to the industry, recommended its withdrawal from the 1st of next month onwards, when the current term of protection comes to an end.

The present scheme of protection covers (1) plywood, including plywood panels and tea-chests, and (2) battens for tea-chests. The Government of India has now announced its decision to accept the Commission's recommendations. If, however, the import control is substantially relaxed in future and imports of foreign plywood constitute a threat to the industry, the domestic producers' case for protection may be reconsidered. It would appear that the Government has not yet taken a decision regarding the revenue duty to be imposed on these items.

Present Position

There are at present 72 factories engaged in the manufacture of plywood and included in the list of the Development Wing. Out of these, 38 units are authorised to manufacture both tea-chest plywood and commercial plywood, 31 tea-chest plywood exclusively and three commercial plywood only. The industry is concentrated mainly in three States, namely, West Bengal, Assam and Kerala, which account for 36, 16 and 13 units, respectively. Mysore has five factories and Bihar and U.P. one each. Most of the larger units are located in Assam and Kerala. Since the last tariff enquiry in 1957, no new unit has been permitted to be established for the manufacture of tea-chest and commercial plywood on the mainland of India, since it was found that the existing units could cater to the domestic demand in full. Three new units have, however, been licensed for Andamans. A few existing units in the mainland have also been allowed to expand. The annual assessed capacity (on single shift) is 148.71 million sq. ft. as of September 1960, according to the Development Wing. This is expected to go up to 154.71 million sq. ft. by the end of this year and further to 205.29 million sq. ft. by the end of 1962. An additional capacity of 56.58 million square feet has now been sanctioned, the bulk of it being in the commercial plywood sector.

The production of commercial plywood, which had been about 33 million sq. ft. in 1957, rose to 37 million sq. ft. in 1958 and jumped up to 58 million sq. ft. in 1959. It is expected to touch 60 million sq. ft. in 1960. As regards tea-chest plywood, there was a fall in output from about 95 million sq. ft. in 1957 to about 87 million sq. ft. in 1958, but it improved to 97 million sq. ft. in 1959. In terms of standard tea-chest (19″×19″×24″ equivalent to 17.68 sq. ft.), the output was 5.373 million sets in 1957, 4.907 million sets in 1958 and 5.479 million sets in 1959. The following table shows the trend of production (State-wise) during 1957 and 1959:

(In million sq. ft.)

	Plywood for tea chests		Commercial plywood

Assam	37.06	33.62	8.03	1.78
Kerala	17.08	18.18	17.63	14.86
Mysore	0.89	1.07	11.28	11.44
Bihar	0.48	0.49	..	..
U.P.	..	..	11.20	1.43
Total ..	96.87	94.99	58.10	32.56

Apart from registering an increase in production, the industry has also diversified its output by undertaking the manufacture of decorative plywood, marine plywood and medium strength aircraft plywood. The last two items are, however, manufactured only against firm orders.

Domestic Demand

The domestic demand for tea-chests is variously estimated, from 5 to 7.07 million sets for 1960, and from 5.20 to 7.34 million sets for 1962. The Commission has estimated the current demand for standard chests (19″×19″×24″) at 6.39 million sets. This is expected to go up to 6.48 million sets in 1960, 6.67 million sets in 1961 and 6.90 million in 1962. The Commission has worked out these figures on the assumption that tea production will be of the order of about 730 million lbs. in 1960, 750 million lbs. in 1961 and 775 million lbs. in 1962. About 15 per cent. of the tea output every year, it is estimated, will consist of dust, which will be packed in smaller tea-chests (16″×16″×18″) and another 30 million lbs. of tea will be sold in gunny bags in the internal market.

The demand for commercial plywoods is expected to touch 60 million sq. ft. in 1960. This is expected to go up by 10 million sq. ft. every year, as a result of the rising tempo in building, furniture and other industries consuming commercial plywood.

Raw Materials

The most important raw material required by the industry is timber. The nature of difficulties faced by the industry in securing timber varies from region to region. In Kerala, the production of softwood from departmental forests is much below the annual requirements of such industries as matchwood, plywood, saw mills and packing case. The State Government has, therefore, introduced a system of rationing timber among the various manufactures. The Commission has, however, pointed out instances of certain coupes in Wynaad division, containing valuable species of softwood, being auctioned out in public. Since Kerala is not self-sufficient in softwood and its plywood industry has to acquire at a higher price an appreciable part of its timber requirements from Mysore, the Commission has expressed the view that it is desirable that all valuable species in the entire State should be conserved and rationed out to selected industries. In Mysore, the supply of fresh and suitable timber from local forests is satisfactory. In Assam, the supply of timber is said to have become inadequate, with the expansion of plywood industry in the State. The State Government is, therefore, said to have entered into an arrangement with the N.E.F.A. administration for getting 300,000 c.ft. of timber per annum. In order to meet the timber requirements of plywood industry in the North Bengal area, the Commission has suggested that the Bengal Government also should try to make arrangements for the supply of at least 1,000 tons of plywood logs from N.E.F.A., until good forest roads connecting the inaccessible areas are built and adequate supplies from North Bengal forests are ensured to the local industry. The factories in the neighbourhood of Calcutta are experiencing considerable difficulties. The supply of plywood logs is not only inadequate but also irregular. Most of the units, the Commission says, work intermittently for want of logs. Long distances and transport difficulties rule out the possibility of bringing adequate supplies from N.E.F.A. or other parts of India. These factories naturally depend on Andaman timber, but the price of the latter is said to be on the high side. In this connection, the Commission has advised the Union Ministry of Food and Agriculture to reconsider the prices of Andaman ply logs as supplied to the Calcutta units.

Drawing attention to the need for conserving the available timber resources and removing wastages of timber, the Commission has observed as follows:

"Considerable wastages take place for lack of prophylactic treatment of logs immediately after

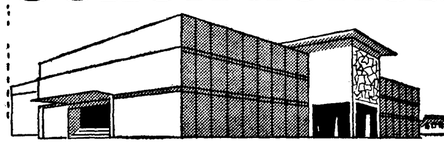
WATERTIGHT Concrete Construction



as only Impermo can make it

IMPERMO Cement Waterproofing Compound is available in powder form, convenient to use. IMPERMO is most economical: only 2% by weight need be added to cement to prevent the penetration of damp through cement mortar or concrete.

- IMPERMO renderings prevent dampness.
- Damp walls are cured by IMPERMO.
- Watertight joints can be ensured by using IMPERMO.
- IMPERMO is essential for producing water-repellent backings on which to apply coloured cement renderings.

Whatever your concrete construction, make it watertight as only IMPERMO can make it:

Tanks – Reservoirs – Basement Walls – Inspection Pits – Roofs – Cast Stone – Swimming Baths – Sewage Works – Floors – Conduits – Renderings, particularly backing coats of white or coloured cement finishes – Pools – Cellars – Garage Pits – Walls – and many others.

IMPERMO costs only Rs. 135.00 per case of 50 x 1 kilogram packets, i.e., approximately Rs. 48.00 to waterproof 100 cu. ft. of 1: 2: 4 concrete mix.

MARKETING OF OIL IN EUROPE

(*Concluded from page 1100*)

increasing number of competing oil importers, wholesalers and retail dealers are now in a relatively strong position to secure favourable terms for long-term contracts, also credit or other benefits. For example, in Switzerland the gasoline retailers' trade association, Autogewerbeverband, was able, last year, successfully to press for large reductions in ex-pump prices of gasoline without similar reductions in the retailers' profits.

A service station is usually a profitable venture and its gasoline retailing is an indispensable function which can be very rewarding if the volume handled is sufficiently large. In general, siting is the most important element in determining the volume of trade a service station will do. There is therefore strong competition between retailers and/or oil companies to secure good sites, notably in countries, e.g., the Netherlands, where new good sites are relatively scarce, or where the planning authorities strictly control the location of stations. A costly site makes selling competition sharper as it is necessary to get a big throughput in order to justify the capital outlay.

Impact of Russian Oil

Competition in Europe is further sharpened, and the relative position of the larger companies weakened, by the rising volume of oil sold by Communist countries. Although small in comparison with the imports from customary sources, oil deliveries from Eastern Europe, invariably at low prices, have a disturbing influence on the market out of proportion to their actual volume. Russian exports to European countries outside the Soviet Bloc are expected to reach this year about 15 million metric tons—roughly half of it crude and most of the balance black oils—as compared with 10¾ million tons in 1959 and about six million tons in 1958; in addition, some 2,000,000 tons or so of products annually arrive from satellite countries. The largest Russian oil deliveries go to Italy, where E.N.I. is the main purchaser, followed by Finland where, by Government action, they constitute most of the oil imports. In Sweden, Germany, France and many of the smaller countries, the inflow of substantial quantities of Soviet Bloc black oils is made possible by the presence of small importers seeking to capture trade from the established marketers by offering lower prices. Some European countries are also importing Italian refined low-priced products based on Russian crude, in addition to their direct oil purchases in Eastern Europe.

The U.K. has hitherto had less varied competition than most other large European markets, but there is now increasing cut-price competition from independent gasoline dealers who obtain supplies from German refineries. A full-scale sales organisation is being gradually set up by C.F.P., and there is a possibility that E.N.I. and Tidewater will do likewise. The Russians, who disposed of their former oil distribution organisation in the U.K. after World War II, are seriously considering re-establishing it, as they are otherwise unlikely to gain much of a foothold in this, Europe's largest, market. The forms and the strength of market competition in Europe vary from country to country, but, in general, the trend is towards a much greater number of wholesalers and retailers, such as has long existed in the U.S.

Prices and Costs

In these conditions, price lists and official fixing of prices often mean little. The authorities in France, Italy and Norway still fix maximum prices for major petroleum products —excepting fuel oil in Norway. The Norwegian maximum prices, being artificially low, are generally accepted as selling prices in that country, but in France and Italy competition drives distributors frequently to sell at prices below the official maxima. In Italy, in particular, actual black oil prices bear no relationship to the very much higher maximum prices fixed by the Government which, incidentally, are the basis for calculating fuel taxes. In Italy, the Government recently used persuasion and pressure to enforce a substantial "voluntary" reduction of the retail gasoline price, but the State-owned A.G.I.P. now sells two cents lower than the official price.

In addition to the pressures from inside the oil industry, black oils in Europe have to stand the growing competition of natural gas in some areas, also to withstand the measures taken to protect the coal industry. In Germany and Belgium, substantial punitive taxes have been imposed on fuel oil, and, though these have failed to engender any large-scale reconversion to coal, they have diminished the return which can be obtained for black oils.

Given the extent and variety of the oil distribution business in Europe, and the expected continued pressure of supplies, no diminution of selling competition can be expected. Indeed, if the present rate of expansion were to slow down, selling competition would become even sharper.

There are, however, two underlying factors that tend, over a period, to correct this situation to some extent. One is that the very process that reduces selling prices itself tends to stimulate the volume of demand and to act as a defence against possible inroads made by other sources of energy supply. The other is the high capital cost of setting up in the oil distribution business in a substantial way. The limiting factor in the multiplication of outlets and facilities undoubtedly is finance and, as soon as a small distributor starts expanding, he comes up against this problem; it is not without significance that, so far, the Soviet Union has relied on importers who will finance the distribution facilities needed to sell Russian oil and has been unwilling to make large capital investments.

The small concern that concentrates its selling activities at or near refineries or import terminals will often have some local advantage over the widely established distributor who assumes responsibility for regular supplies throughout the country. But, in the last resort, it is a battle of overall costs—the total cost of the oil and the cost of the services that bring it from the well to the refinery and to the consumer. With the economy drives which all major oil companies have already had, the costs of distribution have probably already been pared down to their minimum, and the selling pressures can henceforth only be directed at the price level of the oil. With oil available in abundance for years ahead, and with so many competitors selling it, the price it can command is likely to fall. That is a commonplace of every market place which, unless circumstances change, oil cannot escape. Eventually, the complicated cycle of adjustment will pursue its course and the situation should adjust itself. Meanwhile, however, the oil producing countries must pin their hopes for higher revenues upon bigger demand rather than upon higher prices.—*By special arrangement with Petroleum Press Service.*

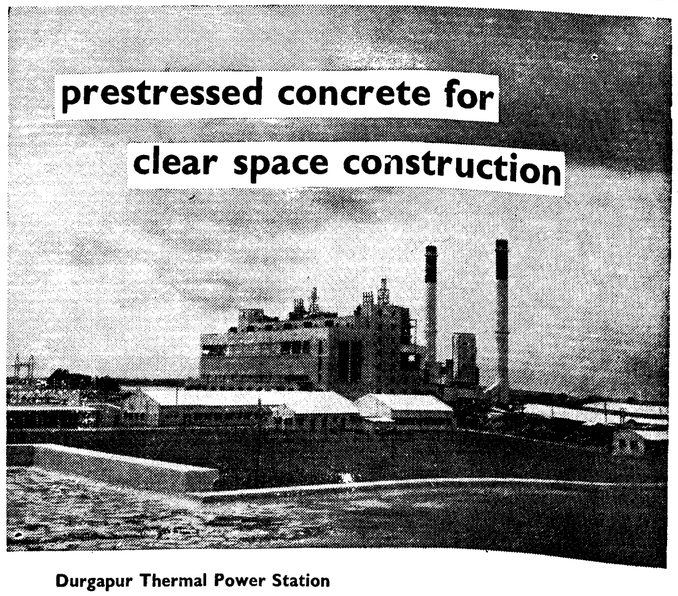
SUGAR

(*Concluded from page 1092*)

VII of the formula on the amount distributable as bonus will be further distributed in the same proportion being relief under the Income-tax Act, but it could be done only once. The bonus will be subject to a ceiling of three months' consolidated wages. In view of the fact that the practice of settling bonus claims unit-wise by collective bargaining in the broad framework of the full bench Labour Appellate Tribunal formula has on the whole worked satisfactorily in Maharashtra and Southern regions, the Board, besides taking note of the fact that the Government has already announced its intention of appointing a Bonus Commission, does not feel it necessary to evolve a fresh bonus formula for the sugar industry of these regions. In respect of Maharashtra and Southern regions, the Board wants the continuance of the present practice of settling bonus claims by negotiations in the background of the full bench Labour Appellate Tribunal formula as recently interpreted by the Supreme Court.

As a safeguard against any reduction in existing wages, the Board has stressed that in no case should the existing wages come to be reduced in consequence of deduction for any of the amenities, for example, housing and fuel, which was being enjoyed free or at concessional rates in the past. The Board has also stressed that its recommendations constitute a composite scheme and must be implemented as such. Besides, it has made it clear that its award must not be revised at least for five years.

The Wage Board has laid special emphasis on the need for the early institution of studies for assessing fair workloads and actual manpower requirements of sugar mills. It considers it important that such studies should be preceded by a reasonably specific programme of implementation drawn in consultation with the organisations of the interests concerned.



Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled out because of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

SALES OF TITAGHUR PAPER IMPROVE

PROFIT, HOWEVER, DECLINES DUE TO CUT IN PRICES—NET DIVIDEND SMALLER

HOW the paper industry is today caught between continuously rising trend of production cost, on the one side, and reduction in the selling prices of paper, on the other, is amply illustrated by the working results of the Titaghur Paper Mills Company Ltd. (Managing Agents: Messrs. F. W. Heilgers and Company Private Ltd., Calcutta), for the year ended 31st March 1960. Although the output of paper in the Company's factory rose by only 804 tons to 53,120 tons during the year as compared with the previous year, the cost of raw materials, stores, etc., consumed increased by as much as Rs. 32.06 lakhs to Rs. 341.54 lakhs, power and fuel by Rs. 6.21 lakhs to Rs. 91.03 lakhs, other expenses by Rs. 30.67 lakhs to Rs. 307.07 lakhs, and payment of excise duty by Rs. 3.56 lakhs to Rs. 127.96 lakhs. The increases under all these heads have neutralised the improvement of Rs. 43.74 lakhs to Rs. 986.18 lakhs in the Company's sales proceeds, so that the gross profit of the Company for 1959-60 stands appreciably lower at Rs. 124.59 lakhs, as against Rs. 149.77 lakhs for the year preceding it.

Despite the shrinkage in gross profit and the larger provision of Rs. 32.46 lakhs (as against Rs. 29.06 lakhs in 1958-59) for depreciation, the net profit has gone up by Rs. 9.41 lakhs to Rs. 55.42 lakhs. The rise must be attributed largely to the lesser provision for taxation, namely, Rs. 27.09 lakhs (as against Rs. 62.56 lakhs in 1958-59) as a result of the development rebate allowance on No. 3 Mill. The net profit of Rs. 55.42 lakhs, together with the sum of Rs. 1 lakh received from the Trustees on winding-up in part of the Indian Workers' Pension Fund and the amount of Rs. 1.01 lakh brought in from the previous year's account, gives a total of Rs. 57.43 lakhs available for distribution, a rise of Rs. 10 lakhs as compared with the previous year. Notwithstanding the larger sum available, the Directors of the Company have not proposed any increase in the dividend on ordinary shares. On the contrary, the Directors have subjected to tax the dividends (interim and final) declared for the year 1959-60, namely, Rs. 2.50 per share, whereas, in the previous year, the dividends were without any deduction for income-tax payable by the Company. Consequently, the net return that the ordinary shareholder will get for the year under review is substantially lower at Re. 1.75 per share, as against Rs. 2.50. Apparently, the Directors are not certain about the future prospects for the Company. Here is what the Chairman of the Company, Sir Walter Michelmore, says on the issue of dividend in his statement to the shareholders:

"In view of the future prospects, your Directors have felt it advisable to recommend that the dividend remain at the same rate as for the previous year, though, as shareholders are aware, that dividend is now subject to deduction of tax. I should also like to explain to the holders of second preference and preferred ordinary shares that it is proposed to pay their dividends for the year at the rates specified in the Articles of Association for one reason only, that the Preference Shares (Regulation of Dividends) Bill, 1960, has not been passed at the time of the closure of these accounts. The dividends for the half year to 30th September 1959 were grossed up in accordance with our interpretation of the law as it existed at the time of payment and, therefore, the dividends for the half year to 31st March 1960 have been adjusted so as to pay in aggregate the same as in previous years but, of course, subject to deduction of tax. I can assure the holders of all preference shares and preferred ordinary shares that, when the Bill is passed into law and its effect studied, such additional dividend as is due will be promptly paid."

The salient features of the Company's results for the past four years are given in the comparative table in the previous column.

It will be seen from the table that, of the net profit of Rs. 55.42 lakhs, a considerably large amount—almost Rs. 25 lakhs—has been ploughed back to the statutory development rebate reserve, as against just Rs. 9.13 lakhs (in addition to Rs. 7.00 lakhs transferred to reserve for new mill project). This is, perhaps, considered necessary to implement the next stage of the Company's renovation programme. Alluding to this, the Chairman observes:

"The prospect of increasing competition and the slow but steady rise in cost of production has prompted your Directors to plan the next stage in the renovation programme. Considerable economies in cost of fuel and chemicals have been achieved at No. 1 Mill, which is now a well-balanced unit, and it is proposed to concentrate on No. 2 Mill. It is proposed to install a large water-tube boiler to replace certain old and inefficient Lancashire boilers and thus increase the production of steam and economise in coal. With the increased steam, the soda recovery plant will work more effectively and is to be supplemented to increase its efficiency further. The cost of caustic soda and bleach is high at No. 2 Mill and considerable benefit will be felt from the installation of an electrolytic bleach plant on the lines of that at No. 1 Mill. These renovations will cost about Rs. 30 lakhs and should reduce the cost of production at No. 2 Mill by about Rs. 40 per ton. The opportunity has been taken to acquire a second water-tube boiler which it is intended to install at No. 3 Mill in preparation for further expansion there in the future.... Your Company is concerned in a further interesting development, the manufacture of paper and pulp making plant and chemical equipment. A company has been formed, named Bertrams-Scott Private Ltd., in which three well-known U.K. concerns, James Bertram and Son Ltd., Bertrams Ltd. and Ernest Scott and Company Ltd., are collaborating with the Birds-Heilgers and Yule Groups. Your Directors have agreed to provide land and buildings at Titaghur against shares in this Company. The venture is well advanced and the new Company is in a position to deal with enquiries for 50-ton paper-making units and all types of paper-making plant."

The fixed capital expenditure incurred by the Company during 1959-60 in pursuance of its renovation and expansion scheme aggregated as much as Rs. 2.51 crores, bringing the total value of the block account to over Rs. 9.00 crores, on which the depreciation provided up to the end of March 1960 was Rs. 4.35 crores, leaving the net book value of the fixed assets at Rs. 4.65 crores. The value of the block account includes Rs. 10 lakhs added on capital reorganisation in August 1937 and Rs. 76.30 lakhs added on revaluation of assets during the half-year ended September 1948. The latter amount was, however, set apart last year as revaluation of fixed assets reserve for being utilised specifically for the purpose of making adjustments in the future value of the fixed assets. In the earlier balance-sheet, it will be recalled, the Auditors had made qualifications on the amount by which fixed assets were written up on revaluation in 1948. In order to remove the cause of these qualifications and to bring the fixed assets of the Company back to their actual written-down value on their original cost, the Directors have authorised the writing down of the assets by a sum of Rs. 76.30 lakhs by debiting the reserve for revaluation of fixed assets account in the year under review in the same proportion as the assets were written up in 1948.

Besides the net block account noted above, the Company's capital work-in-progress as at 31st March 1960 amount to Rs. 31.13 lakhs. The current assets aggregate Rs. 531.77 lakhs. As against these assets, there are loans and current liabilities to the tune of Rs. 531.24 lakhs. The paid-up capital of Rs. 142.92 lakhs is supplemented by reserves and surplus of Rs. 353.88 lakhs.

The Rs. 10 fully paid-up 'A' ordinary shares of the Company are being currently quoted at Rs. 36.70 *ex-div.* At this rate and on the basis of the latest dividend, the yield on the shares is 4.8 per cent. per annum, free of tax.

GANNON DUNKERLEY'S RESULTS EXCELLENT

DIVIDEND RAISED—OUTLOOK GOOD

THE stringent import restrictions, imposed in recent years on balance-of-payments considerations, have virtually upset the apple-cart of established business in the country. But this has not been the fate of Gannon Dunkerley and Company Ltd. (Chairman: Mr. Morarka, Bombay), which until recently was a predominantly trading concern. The credit for this goes to the management which had the foresight to realise that the Company's future lay in entering the manufacturing field and depending upon Indian manufactures. Hence it took steps to diversify its business in such a way that the Company could withstand the impact of import restrictions without suffering any major setback. The outcome is clearly reflected in the Company's results for the year ended March 1960. The Directors have recommended a higher dividend of 10 per cent., taxable, for the year 1959-60 (equivalent to 7 per cent. tax-free), which compares favourably with 6 per cent., tax-free, for the previous three years. The gross profit has substantially improved, that is, from no more than Rs. 7.35 lakhs for 1958-59 to Rs. 12.27 lakhs for 1959-60. The provision for depreciation has been nearly doubled, from Rs. 1.26 lakhs to Rs. 2.35 lakhs. Because of higher profit, the provision for taxation is also substantially higher at Rs. 3.50 lakhs, as against Rs. 2.20 lakhs. (The taxation figure, it may be noted here, has been arrived at after taking into consideration the benefit of tax abatement under Section 15(C) which the Company will receive on the income of the engineering workshop manufacturing L.P. cylinders). These essential provisions leave a net profit of as much as Rs. 6.38 lakhs, representing an increase of 64 per cent. over the previous year's figure of Rs. 3.89 lakhs.

The proposed dividend absorbs Rs. 3.60 lakhs, as compared with Rs. 2.16 lakhs distributed last year. The amount ploughed back at Rs. 1.63 lakhs is, however, about Rs. 50,000 less than the additions made out of the profit for 1958-59. The transfers to reserves include Rs. 59,606 to development rebate, Rs. 83,000 to dividend reserve, and Rs. 15,000 to general reserve. If the reserves have been strengthened on a smaller scale, it is evidently because the Directors have found it necessary to write off Rs. 1,36,956 by way of deferred revenue expenditure. Another point to be noted is that, whereas last year they had to withdraw Rs. 55,000 from the dividend reserve, there was no such depletion this year.

The following comparative table shows at a glance the trend of results:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Gross income	1,87.15	1,61.48	1,85.50	1,50.98

* Taxable.

During the year under review, 81.79 per cent. of the Company's income was from trading, contracts and manufacturing activities, while indenting accounted for 15.98 per cent. Of the outgo, employees' remuneration accounted for 44.69 per cent., other establishment expenses for 26.07 per cent., Directors' remuneration 1.85 per cent., dividends 8.04 per cent., taxation for 7.82 per cent., depreciation and development rebate for 6.57 per cent. and reserves and surplus for 4.96 per cent.

Explaining the trend of business during the year, the Directors observe as follows:

"You will observe that the working results of this year show a considerable improvement over the previous year. The turnover in the General Department has improved due to switching over to the marketing of products made in India. The indent business has shown a fall, due to the difficult foreign exchange position of the country and the stringent import restrictions. The Civil and Mechanical Engineering Departments have maintained the turnover and continue to have a reasonable volume of contracts still to be completed.

"The Engineering Workshop for the manufacture of liquefied petroleum cylinders (commissioned in December 1958) has been on production throughout the year and its results are fully reflected in the improved earnings of the Company. The hope of your Directors in this respect has fully materialised.

"The position with our Trading Departments continues to be difficult in view of the present import policy of the country, and the difficulties of obtaining necessary foreign exchange. Competition is growing in the Civil and Mechanical Engineering sphere."

As for the current and prospective plans for expansion, the quotation below from the Directors' report will give one a clear idea:

"A subsidiary, Gannon Dunkerley (Orissa) Private Ltd., was incorporated at Cuttack on 24th March 1960 for purposes of putting up a small workshop for structural and mechanical engineering. This is a wholly-owned subsidiary of the Company. Two other subsidiaries, Gannon Electrolytics Private Ltd. and Gannon Norton Metal and Diamond Dies Private Ltd., have since been registered in Bombay for undertaking the manufacture of electrolytic capacitors for the radio industry and diamond and tungsten carbide and other metal dies for the wire drawing industries. The latter factory is being established in collaboration with Messrs. Wire Drawing Dies (Manchester) Ltd. of Manchester, England, who have agreed to contribute the plant and machinery required for the shares to be allotted to them. Both these factories are expected to go into production before the close of this financial year.

"The Company has also received an industrial licence for setting up a wire drawing unit at Indore, with a capacity of 3,900 tons per annum, particularly high tensile steel wire. Preliminary steps towards the formation of the new company, obtaining of import licence, acquisition of land and buildings have been initiated.

"With all these expansion activities, the Directors look forward to a confident future and hope to maintain and improve the progress achieved in years to come."

The Company's balance-sheet as at the end of March 1960 shows that the reserve position has improved from Rs. 5.70 lakhs (including the development rebate reserve of Rs. 3.05 lakhs) to Rs. 7.37 lakhs (including development reserve of Rs. 3.64 lakhs). While this trend is quite gratifying, there is still need for further strengthening of the reserves, when viewed against the background of the subscribed capital of the Company standing at as much as Rs. 36 lakhs. Borrowings and liabilities aggregate Rs. 79.79 lakhs, which are more than adequately covered by current assets (including work in progress Rs. 50.06 lakhs) amounting to Rs. 93.70 lakhs. The capital expenditure incurred by the Company during the year under review was Rs. 3.15 lakhs, as against Rs. 19.16 lakhs in 1958-59. The gross block is shown at Rs. 40.31 lakhs, against which the depreciation provided so far is Rs. 10.67 lakhs.

LEYLAND MOTORS AND STANDARDS MAY MERGE

Leyland Motors, one of the largest producers of commercial vehicles with important Indian interests, and Standard-Triumph International, the Coventry motor firm making T.R. sports cars, Vanguards and other models, may merge as a result of an offer by Leylands which the Directors of Standards have approved. Leylands is making a share exchange offer worth about £18 million (at current market prices). Leylands, which makes a wide range of vehicles, including heavy lorries, coaches, trolley buses and fire engines, will continue to produce the Standards range of cars.

The news of this move, it is stated in London, has not come as a surprise, for Standards, as one of the smaller groups, has been particularly affected by recent difficulties in the industry. In the year ended August 1960, the firm produced 139,000 vehicles. It had embarked on a £11 million project on Merseyside, and had also just completed a £2 million car assembly building at Coventry which is just in the proving stages. Not long ago, it opened an assembly plant near Brussels, Belgium.

Leylands' main plant is in Lancashire, but the firm has a factory near Glasgow. There has been a considerable expansion in recent years, particularly in the development of engines for industrial, marine and railway use. Altogether, the firm produces about £60,000,000 worth of vehicles annually, of which about two-thirds are exported all over the world. It also has subsidiaries in many parts of the Commonwealth, including India, where its plant is one of the largest of its kind. Sir Henry Spurrier, Chairman of Leylands, in a statement, says that his Company will continue to prosper and expand only if its range of products is comprehensive and equal to those of its most powerful competitors, particularly overseas. The purchase of Standards, according to him, offers great development possibilities. And he adds: "An extension of the use of Diesel engines in the lighter range of vehicles will have a high priority in future plans. There is need to diversify still further both firms' production."

PROFIT-SHARING PLANS IN U.S. INDUSTRY

About 30,000 profit-sharing plans are in operation in the United States, according to an estimate by the Council of Profit-sharing Industries, Chicago. The Council—an association of companies having such plans—says that the 30,000 profit-sharing plans compare with 34,097 pension and annuity plans, but a greater number of employees are covered under pension plans. The 2,641 profit-sharing plans adopted in the first six-month period and 69 per cent. more than in the 1959 period. These new profit-sharing plans cover 115,544 employees, as compared with 66,721 covered by new plans approved in the first half of 1959. According to B. L. Metzger, Director of the Profit-Sharing Research Foundation, while many of the biggest and most successful profit-sharing plans began before 1940, it was not until the last 20 years that these plans had their most pronounced rise.

The *New York Times* has reported that profit-sharing plans are used by both small and large companies, and several of the oldest are to be found in some of the nation's biggest corporations. Profit-sharing has a particular appeal for small companies, because it can serve not only as a motivating force in employee efficiency but also as a highly successful way for a business to establish a retirement plan without obligating a company with fixed charges that would have to be borne under a pension plan.

U.K. ENGINEERING COMPANY FORMS INDIAN SUBSIDIARY

A well-known British engineering firm which has had close links with India for many years is forming a new subsidiary with administrative headquarters at Calcutta. Head, Wrightson & Co. Ltd., of Thornaby-on-Tees, County Durham, has announced the registration of Head, Wrightson India Ltd., which will act as contracting company for the supply—as far as possible from Indian sources—of various types of plant to the designs of the parent company. As a wholly owned subsidiary, the new organisation will make the fullest use of the manufacturing facilities in India for the class of work concerned in both the public and private fields. The Chairman of Head, Wrightson India Ltd. will be Mr. Peter Wrightson. Mr. Vaughan Pendred has been appointed Managing Director. The formation of the company, said a spokesman of the firm, is the first step in strengthening Head, Wrightson's participation in India's development. As a further measure, it is hoped to incorporate a rupee company within the next three years.

Head, Wrightson has been responsible for supplying much of the specialist equipment used in Indian basic industries today. It is at present playing a large part in the Durgapur steelworks project and is supplying all the ironmaking plant together with much of the ancillary equipment.

INDO-U.S. VENTURE TO MANUFACTURE AUTOMOTIVE SHOCK ABSORBERS

An Indo-U.S. venture in the field of automotive ancillary products has been established to produce tubular shock absorbers for all types of vehicles in a new plant under construction in Mulund, Bombay. The new Company, Gabriel India Private Ltd., is scheduled to commence production in the second quarter of 1961 with an initial output of 120,000 automotive shock absorbers a year. Its planned outlay of Rs. 19 lakhs will be equally shared by the Gabriel Company of Cleveland, Ohio, the largest independent manufacturer of automotive shock absorbers in the world, and Anand Automobiles, the largest truck body manufacturer in India. Gabriel India will serve both producers of original equipment and the replacement market in India and, in due course, is expected to serve foreign markets as well.

In addition to the capital investment, the new Company brings to India other benefits such as Gabriel product designs and engineering developments in a field in which the Company is a leading world supplier; technical know-how in a field in which its manufacturing technology is particularly advanced; foreign exchange savings exceeding Rs. 6 lakhs in the first year and substantially more in subsequent years; and training of key Indian personnel in the U.S. in various phases of automotive component manufacturing techniques.

Replying to a question in the House of Commons on the 6th inst., Britain's Chancellor of the Exchequer, Mr. Selwyn Lloyd, stated that he had been in touch with the U.S. Secretary of the Treasury, Mr. Robert Anderson, about the Ford Motor Company transaction concerning the British Ford Company, and, "with his agreement, I am able to state that the United States Treasury has no intention of intervening in this transaction." The Chancellor replied to a further questioner who asked whether he would give an assurance that his permission for the sale of the Ford Motor Company would remain contingent upon full payment being made in dollars. Mr. Selwyn Lloyd said: "The Ford offer to the shareholders has been made in sterling, but it is an exchange control requirement that external sterling must be used for payment. External sterling can only be acquired by the sale across the official exchange of an acceptable currency such as dollars. There is, of course, nothing to prevent the purchaser from using any external balances which he already has at his disposal."

(*Continued in previous column*)

PROFITS OF ROHTAS INDUSTRIES LOWER

EFFECT OF UNREALISTIC PRICE CONTROLS

THE extent to which higher raw material cost, enhanced operating expenses and unremunerative ex-factory prices fixed for cement, paper and sugar have cut into the profit-margin of Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta), is clearly reflected in the accounts of the Company for the year ended 31st March 1960. In spite of higher output in all the three main lines of production of the Company, namely, paper and paper boards, cement and sugar, and a larger turnover of Rs. 17.64 crores, as against Rs. 15.11 crores in the previous year, the gross profit has declined from Rs. 2.89 crores for the year ended 31st March 1959 to Rs. 2.60 crores for the year under review.

In keeping with this fall in profit, the Managing Agents' remuneration is lower at Rs. 13.20 lakhs, as against Rs. 15.50 lakhs for the previous year. Provision for depreciation has been reduced from Rs. 86.06 lakhs to Rs. 76.03 lakhs and so also that for taxation by Rs. 3 lakhs to Rs. 52 lakhs. In spite of these reduced allocations, the net profit works out to only Rs. 1.19 crores, as compared with Rs. 1.33 crores for the previous year. Both gross and net profits are, however, better than those for 1957-58. But this is no matter for solace, for the higher capacity brought about by more investment since then has fetched little or no return. As we shall presently show, the chief cause for this unsatisfactory state of affairs is the unrealistic manner in which the Tariff Commission and the Government have fixed the ex-factory prices for the products mentioned above.

Dividend Kept Up

The net dividend to ordinary shareholders has, however, been maintained, though the amount required is substantially more than last year in view of the tax deduction at source, which is being met by the Company. The Directors had already declared an interim dividend on ordinary shares at 20 per cent., or Rs. 2 per share of Rs. 10 paid-up, subject to deduction of tax, and had made it clear that no further dividend would be recommended for the year. Since under Section 15C of the Income-tax Act, a portion of the income for the assessment year 1960-61 (out of which the dividend is paid) would be exempt from income-tax, deduction of tax at the rate of 50 nP per share [instead of 60 nP per share which would have been the case but for relief under Section 15(C)] has been made under Section 18(3D), thereby leaving the net return to shareholders unaffected at Re. 1.50 per share.

Lower net profit and a larger amount for maintaining the net dividend have meant smaller additions to reserves. The amount of profit conserved this year is thus no more than Rs. 29.10 lakhs, as against Rs. 64.05 lakhs in the past year, as will be seen from the following comparative table:

(In lakhs of rupees)

	Year ended March 1960	Year ended March 1959	17 months ended March 1958
Sale proceeds	17,64.05	15,10.74	14,89.63
Other incomes	28.57	31.05	41.64
Stocks	2,20.43	2,33.56	1,80.65
Raw materials, stores and spares consumed	8,04.48	6,76.47	7,06.60
Royalty, cess and duties	2,70.62	2,40.48	2,08.60
Other expenses	7,00.17	3,88.00	..
Gross profit	2,60.00	2,89.75	1,05.91
Managing Agency remuneration	13.20	15.50	7.34
Depreciation	76.03	86.06	83.31
Taxation	52.00	55.00	10.00
Net profit	1,18.77	1,33.19	95.26
Transfer from reserves	..	1.50	54.72
To reserves	20.10	64.05	96.27
,, bonus to employees	30.94	28.50	..
Dividends—			
Preference	6.68	5.41	7.67
Ordinary	50.16 (15%)*	37.62 (15% p.a.)	45.60 (14.1% p.a.)
Carry forward	1.93	0.04	0.93

* Dividend per share of Rs. 10 each is Rs. 2, less deduction of tax at 50 nP., leaving a net dividend of Re. 1.50 per share.

Directors' Explanation

Explaining the reasons for higher expenses and lower profits of the Company, the Directors point out, in their report to the shareholders, that the price fixed by the Government for cement, paper and sugar is unremunerative, as adequate allowance has not been made for increases in the various elements of cost of production. The Tariff Commission has been asked to examine the cost of production of cement for the purpose of determining the fair ex-works price payable to producers as from 1st July 1961 only and not earlier. Representation has been made to the Government to examine the present position of the industry and recommend the required relief for the period prior to 1st July 1961 also.

The new paper prices recommended by the Tariff Commission and accepted by the Government, which came into effect from 1st January 1960, has reduced the profit margin on paper and paper boards and affected the total profits of the Company for the year. The story is no different in regard to the Company's sugar factory. In spite of the fact that the Company availed itself of the incentive allowed by the Government for increased production and crushed more sugarcane, the financial results of this branch did not show a corresponding improvement, as the ex-factory price of sugar for mills in South Bihar was not properly readjusted to make allowance for the peculiar difficulties of that region. The Company's excellent physical performance in 1959-60 can be clearly seen from the following comparative figures:

(In tons)

	1959-60	1958-59
Paper and boards	53,170	47,130
Cement	300,646	276,157
Clinker	264,427	270,416
Asbestos cement	9,781	10,449
Caustic soda	5,582	4,992
Vanaspati	10,260	8,876
Sugar (in maunds)	416,305	388,254

The Company, it may be noted, is the single largest producer of papers and boards in India.

Another factor that adversely affected the Company's fortunes was transport bottleneck and the supply of lower quality of coal.

Besides expanding the present capacity of the Company's paper unit at Dalmianagar by 36,000 tons per annum, the Company proposes to install a newsprint plant at a new site, for which technical collaboration has been secured from the U.S. The raw material for this plant will be bagasse. It has also undertaken manufacture of small-scale pulp and paper plants, with the help of a reputed Japanese manufacturing concern. Both these new projects will give new dimensions to Rohtas Industries and make it one of the industrial giants of this country.

Capital Raised

The Company spent Rs. 35.62 lakhs on additions to fixed assets during the year, as compared with Rs. 71.20 lakhs in the previous year, bringing the gross value of the block account to Rs. 14.76 crores. Depreciation so far provided amounts to Rs. 6.19 crores, so that the net block at the end of the year stands at Rs. 8.57 crores. The other assets amount to Rs. 7.89 crores, of which cash balances account for Rs. 10.14 lakhs. On the liabilities side, the Company has a loan liability of the order of Rs. 6.24 crores, made up of Rs. 2.17 crores of debentures, Rs. 3.83 crores of secured bank loans and other loans Rs. 24 lakhs. Other liabilities and provisions amount to Rs. 4.16 crores. The net assets, therefore, work out to Rs. 6.07 crores, comprising a paid-up capital of Rs. 3.56 crores and reserves and surplus of Rs. 2.51 crores.

Since the close of the financial year, the authorised capital of the Company has been increased from Rs. 5 to Rs. 15 crores. The subscribed capital has been increased by issuing 2,508,000 ordinary shares of Rs. 10 each at par to the existing shareholders in the proportion of one ordinary share for each existing share held. As a result, the paid-up capital has been raised to Rs. 606.37 lakhs, of which the equity capital accounts for Rs. 501.60 lakhs. These right shares rank *pari passu* in all respects with existing ordinary shares except that they do not participate in the dividends declared till the forthcoming annual general meeting.

SYNOPSES OF COMPANY REPORTS

Dehri-Rohtas Light Railway Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The gross earnings for the year amounted to Rs. 42,99,047 (Rs. 39,29,709). After deducting working expenses amounting to Rs. 19,33,054 (Rs. 17,44,672) the surplus available is Rs. 23,65,993 (Rs. 21,85,037). After deducting interest, depreciation, employees' bonus, managing agents' and directors' commission, etc., of Rs. 6,00,061 (Rs. 5,62,701) there is left a net profit of Rs. 17,65,932 (Rs. 16,22,336). Out of this provision for development rebate takes Rs. 25,000 (Rs. 16,000) and taxation Rs. 7,85,000 (Rs. 8,45,000) leaving a balance of Rs. 9,55,932 (Rs. 7,61,336). With the balance brought forward from last year of Rs. 4,085 (Rs. 2,749) there is a total of Rs. 9,60,017 (Rs. 7,64,085). Out of this amount the directors have transferred to general reserve Rs. 8,10 000 (Rs. 2,50,000) leaving a balance available for appropriation of Rs. 1,50,017 (Rs. 5,14,085). A further dividend in respect of the year ended 31st March 1959 at the rate of 17 per cent., without deduction of income-tax absorbing a sum of Rs. 5,10,000 out of the general reserve was declared at the extraordinary general meeting of the shareholders held on 31st March 1960 and the payment of the same has been made. While recommending the said dividend the directors had mentioned that they did not propose to recommend payment of any dividend in respect of the year ended 31st March 1960. Since then the directors have reviewed the position and have decided to recommended a dividend of 3 per cent. (A total dividend of 34 per cent. of which 17 per cent. was paid out of profits for 1959 and 17 per cent. as additional dividend from the general reserve. These dividends are free of tax) subject to deduction of tax, out of the profits of the year under report payable to the shareholders as on the 30th day of December 1960. This absorbs a sum of Rs. 90,000 (Rs. 10,20,000) leaving a sum of Rs. 60,017 (Rs. 4,085) to be carried forward to next year.

In order to cope with the increasing traffic, rolling stock has been further strengthened. During the year under report, 4 tank locomotives, 3 passenger coaches, 1 brake van, 4 four-wheeler open trucks and one tank wagon were added. Since then 16 wagons have also been constructed in the Company's workshop and put on the line. The Company's workshop can take up building up of further wagons as may be required. Some of the flag stations are being converted into full-fledged stations with train crossing facilities. Points and crossings are also being replaced so as to have smoother curves for permitting faster movement. The working of this Company continues to be satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Investment Trust of India Ltd.

The directors of the above Company (Managing Agents: Messrs. Kothari Mehta and Co. Private Ltd., Madras) present the audited accounts of the Company for the year ended 30th September 1960.

The result of the Company's working for the year under review is a profit of Rs. 46,253 (Rs. 54,019) to which is added the balance brought from last year of Rs. 7,644 (Rs. 3,625) making a total of Rs. 53,897 (Rs. 57,644). From this amount the directors recommend payment of a dividend at 5 (5) per cent. on the ordinary shares, absorbing Rs. 50,000 (Rs. 50,000) leaving a balance of Rs. 3,897 (Rs. 7,644) to be carried forward to next year.

The share market was fairly steady during the year under review. The total market value of the investments held by the Company as on 30th September 1960 was about 30 per cent. higher than the book value. No provision for taxes has been made as the provision already made will be sufficient to cover the income-tax payable.

Investments in ordinary shares amount to 92 per cent. of the total investment and preference shares and debentures amount to 8 per cent. and industry-wise, investments of the Company are 28 per cent. in textiles, 35 per cent. in plantations and 37 per cent. in banking, sugar, engineering and other shares.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	10,00,000	Investments	12,12,231
Reserves	2,61,027	Book debts	6,602
Provision for taxation	23,863	Cash	1,36,722
Liabilities	66,768		
Profit and loss account (surplus)	3,897		
Rs.	13,55,555	Rs.	13,55,555

Khardah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright Ltd. Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The revenue account after deduction of all working charges, shows a profit of Rs. 30,40,945 (Rs. 19,61,545) to which is added the amount brought forward from last year of Rs. 10,158 (Rs. 45,833) making a total of Rs. 30,51,103 (Rs. 25,40,753 including Rs. 5,33,375 transferred from general reserve). After providing for depreciation Rs. 5,99,308 (Rs. 5,51,222), for development rebate reserve Rs. 49,890 (Rs. 4,06,264) and for income-tax Rs. 10,80,000 (Rs. 4,39,109 including Rs. 47,000 for wealth tax) the amount available for disposal is Rs. 13,21,905 (Rs. 11,44,158). This amount the directors recommend should be dealt with as follows:—

In payment of dividends for the year ended 31st March 1960, subject to deduction of income-tax:—On preference shares at 6 per cent. per annum, absorbing Rs. 54,000 (Rs. 54,000), on ordinary shares at 20 per cent. per annum, absorbing Rs. 10,80,000 (Rs. 10,80,000). The directors further propose to transfer to preference dividend suspense account Rs. 13,500 (*nil*) and to general reserve Rs. 1,00,000 (*nil*) leaving a balance to be carried forward of Rs. 74,405 (Rs. 10,158).

The Preference Shares (Regulation of Dividends) Bill which seeks to adjust the unhappy situation created by the Finance Acts 1959 and 1960 in relation to dividend on preference shares is at present, before the Parliament. In view of the retrospective provisions of the proposed legislation, the directors have set apart Rs. 13,500 representing 25 per cent. of the year's preference dividend, which they may be called upon to declare as additional dividend to the preference shareholders if and when the Bill becomes law.

The profit for the year under review shows a substantial increase over the previous year. This was mainly due to judicious jute purchases and satisfactory working of the Mills.

With the approach of the new jute purchasing season, there was general apprehension of a smaller crop in this country. There was also delay in the issue of import licences for jute from Pakistan, where also the panic of an acute shortage of crop flared the prices up by nearly 30 per cent. in the course of a few days. In trying to ensure adequate supply of raw material for the Industry's needs, the Indian Jute Mills' Association agreed on a voluntary sealing of 5 per cent. of the looms from 17th October and a further 5 per cent. from 24th October 1960 bringing the total sealing up to 19 per cent.

Against this background there was hectic buying by the manufacturers, traders and speculators which pushed the prices of jute and jute goods to staggering heights. In order to curb speculative activities, the East India Jute and Hessian Exchange Ltd. banned trading in futures. They also enforced registration of transferable specific delivery contracts in raw jute and certain constructions of jute goods. At this stage the Government intervened to impose prohibitive margins and take other restrictive measures in respect of transactions in T. S. D. Contracts including transactions made before such imposition. The unprecedented steps taken by the Government would appear to indicate that they did not seriously consider the possibility of any shortage of raw jute. It is interesting to note, however, that in spite of the sharp rise, the prices of jute and jute goods in India are still cheapest in the world.

The directors fully share the Government's concern in this unfortunate crisis, and they are also of the opinion that any wild speculative fluctuation in prices of jute and jute goods is not only detrimental to the Industry but does a great damage to the export trade. They, however, feel that the measures adopted by the Government are more penal than corrective for the long term interest of the Industry. The consequences of any step which purports to impose retrospective effects on contracts and commitments already made by manufacturing Mills may leave a permanent scar on the Industry as a whole.

Accounts in brief are as under:—

Rajagiri Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey, Kerala State) present the audited accounts of the Company for the year ended 30th June 1960.

The total estimated crop for the year under report was 6,00,000 lbs. rubber from Rajagiri and 7,80,000 lbs. from Shaliacary (total 13,80,000 lbs.) to be produced at an average cost of 83 nP per lb. The actual crop harvested was 14,81,630 (14,34,881) lbs., viz., 6,45,400 lbs. on Rajagiri and 8,36,230 lbs. on Shaliacary at an average estate cost of 84 nP per lb. The average sale price realised remained unchanged at Re. 1.50 per lb.

CALTEX

Care for your car—with CALTEX

The directors after full consideration of the matter again, have declared preference dividend for the year 1959-60 at the rate of 6 per cent. subject to deduction of tax under Section 18(3)(*d*), as this is the only proper procedure. It is also pointed out that even according to the Bill now before the Lok Sabha in this connection, the additional payment for a Company with predominantly agricultural income like this Company, will be nominal and could be paid from available surplus, as and when the Bill is finally passed.

The net profit for the year after usual provisions amounted to Rs. 7,79,721 (Rs. 8,29,860). After providing Rs. 4,00,000 (Rs. 4,20,000) for taxation and after adjusting Rs. 1,35,600 (Rs. 1,35,600) towards the dividend of 6 per cent. on preference shares for the year and the 10 per cent. interim dividend of Rs. 1,35,000 (*nil*), there is a balance of Rs. 1,09,121 (Rs. 2,74,260). This together with the amount brought forward of Rs. 44,924 (Rs. 40,664) comes to Rs. 1,54,045 (Rs. 3,14,924) which the directors recommend be disposed of as under:—

To payment of a final dividend on equity shares of 10 (20) per cent. subject to deduction of tax, making 20 per cent. for the year absorbing Rs. 1,35,000 (Rs. 2,70,000) and to carry forward Rs. 19 045 (Rs. 44,924).

A total crop of 15,00,000 lbs. rubber—6,50,000 from Rajagiri and 8,50,000 lbs. from Shaliacary—is estimated to be harvested during 1960-61 season, at an average cost of 81 nP per lb. The capital expenditure is estimated to be Rs. 1,97,729.

In accordance with the provisions of the Companies Act, 1956, Messrs. A. V. Thomas & Co., Ltd., have been re-appointed managing agents of the Company for five years from 15th August 1960.

Jaipur Udyog Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st March 1960.

The year's working subject to outgoing of interest etc., shows a surplus of Rs. 1,04,74,344 (Rs. 78,23,048) from out of this amount is deducted interest Rs. 27 34,805 (Rs. 26,08,750), write offs etc., Rs. 39,463 (Rs. 9,337), debenture issue expenses Rs. 1,20,098 (*nil*), depreciation Rs. 38,21,911 (Rs. 30.00 000) and development rebate reserve Rs. 17,07,000 (Rs. 22,00,000) leaving a balance of Rs. 20,51,067 (Rs. 4,961). With the balance brought forward from last year of Rs. 98,237 (Rs. 93,276) there is a total of Rs. 21.49,304 (Rs. 98,237). This amount the directors recommend for appropriation as under: To transfer to general reserve Rs. 3,55,000 (*nil*) and to payment of dividends to the shareholders of the Company as on 30th December 1960 as follows:—On 75,000 3 per cent. cumulative preference shares for the year 1958-59 Rs. 2.25,000; for the year 1959-60 Rs. 2,25,000 and on 20,00,000 ordinary shares of Rs. 10 each at 6 (*nil*) per cent. subject to tax for the year 1959-60 Rs. 12,00 000 (*nil*). This leaves a balance to be carried forward of Rs. 1,44,304 (Rs. 98,237).

In accordance with Section 18 (3F) of the Income-tax Act for ascertaining the quantum of tax to be deducted from dividend under Sub-Section (3D) of the said Section, the assessing Income-tax Officer has provisionally determined a sum of Rs. 8,41,488 as the exempted portion of the Company's profits in terms of Section 15C of the Indian Income-tax Act. In view of the same deduction of tax at source would be made to the extent of 10.62 nP per ordinary share leaving a cash dividend of 49.38 nP on ordinary shares payable by the Company to the resident shareholders. It is recommended that payment to shareholders be made upto the nearest naya paise, ignoring fraction thereon.

Cement and clinker production increased by nearly 2 lakh tons in the report year. With this improvement in production, the increase in profits would have been larger but for the higher cost particularly on account of substantial rise in the freight on limestone, the incidence of which is very high in the case of this Company. A breakdown in a *Turbine* affected production in the current year which would otherwise have been substantially higher than in the report year. A new *Turbine* of 4,200 kw. is being installed as a standby till the expected power supply from Chambal is available.

The Company has been experiencing acute difficulty about proper quality of coal. The position has deteriorated with the Government's revised grade-wise allocation of coal under which the grade and size of coal for cement industry has been considerably lowered. This creates difficulties in working and hampers production due to lower power generation on account of unsuitable quality of coal. This has also resulted in increased consumption of coal and consequent increase in production costs. The directors hope the Government and the Tariff Commission would take notice of this position.

The Central Wage Board for the Cement Industry while recommending substantial increase in wages with effect from 1st January 1960 came to the conclusion that the industry had no capacity to pay the higher wages recommended. The Government accepted the recommendations but gave specific assurance that they would correspondingly increase the ex-works price payable to cement producers covering the additional burden. Had not Government given this assurance it would not have been possible for your Company to implement the resolution of Government, which has caused substantial increase in wages both in the Works and in the Quarries. The liability on this account for January-March 1960 has not been provided in the accounts as the amount is to be compensated by the Government.

COMMERCE AND INDUSTRY

(*Concluded from page* 1110)

felling. Such wastages have assumed serious proportions in Kerala and Andamans. The matter is under consideration by the Wood Preservation Branch of the Forest Research Institute, Dehra Dun. The representative of the Institute stated that experiments were being carried on possible methods of improving the keeping quality of logs without driage and that it would take some time before final results would be known. Meanwhile no prophylactic treatment is being given to ply logs nor are their butt ends painted with the result that considerable wastages occur. As stated earlier, there is general shortage of timber in the country and the plywood industry in Calcutta is suffering from acute and chronic shortages of its raw material. In the circumstances, some interim measures should be taken promptly to prevent wastages due to heart rot, fungus attacks, etc., pending the formulation of long-term measures by the Forest Research Institute. We not only reiterate our earlier recommendation that satisfactory arrangement for prompt prophylactic treatment of timber after felling should be made in all cases where there is an interval between the felling of logs and their delivery to the mill site, but also urge that, until the Forest Research Institute announces the results of its investigations in this behalf, the Andaman and the Kerala Forest Departments should at least apply bituminous paint to the butt ends to prevent heart rot, etc.

"The representatives of the State Governments explained that adequate steps were being taken to ensure that regeneration takes place at the same rate as the felling of timber. But a contrary view was expressed by representatives of the industry who stated that, since contracts for the working of coupes are granted to contractors who have no interest in the long-term development of forests, considerable denudation is taking place and the State Governments working plans for regeneration of forests do not take account of the need for making good such accelerated wastages. Nor is any effort made towards artificial regeneration of industrial species of timber. They urged that areas which have potentialities as sources for the supply of species of timber suitable for plywood manufacture should be conserved for the ultimate requirements of the industry more particularly in areas which are in the operational zones of existing units or of units which have been licensed. They also urged that where long-term leases have been given by the Forest Department the lessees should be compelled by suitable amendment of their leases to do replanting on a scale approved by the Forest Department. We commend these suggestions for careful consideration by the State Governments concerned."

The price of plywoods for tea-chests compare somewhat satisfactorily with that of the imported product. Plywoods for tea-chest need an import duty of only 7 per cent. to equate the ex-duty landed cost of imported product with the fair ex-works price of indigenous product. Consequently, the Commission is of the view that, *prima facie*, the quantum of protection needed by plywood for tea-chests is nominal. Even if allowance is made for the higher cost of timber in respect of Calcutta units, the quantum of disadvantage, according to the Commission, will not exceed 14 per cent. In this connection, the Commission has stated that there is already a tendency for shifting units engaged in the manufacture of such plywood from North Bengal and Calcutta to Assam in order to take advantage of timber availability and proximity to tea gardens.

The quantum of disadvantage suffered by the commercial plywood industry is 32.28 per cent. *ad valorem*. But the Commission has pointed out that protection to commercial plywood sector has all along been given as incidental to that granted to plywood for tea-chests. According to the Commission, what the industry badly needs at present is not tariff protection but abundant and regular supplies of good plywood logs and additional equipments for making the best use of corner-pieces of wood, broken veneers, etc., which are being wasted at present as fuel.

Calcutta, *12th December*, 1960.

STRINGENCY IN MONEY

(*From Our Own Correspondent*)

Bombay, *14th December*

Keen stringency has come to prevail in the short-term money market. The pressure of seasonal demand for funds is quite acute and some banks have found it necessary to borrow from the Reserve Bank even at penal Bank rates. The inter-bank day-to-day call money rate has advanced from 4 per cent. to 4½ per cent. per annum and it may soon touch even 5 per cent. There is no other indicator to reflect the prevailing scarcity of floating funds in the market, as the short-term deposit rates are all pegged under inter-bank agreement.

The sale of 91-day Treasury Bills through weekly tenders evoked applications amounting to Rs. 2.25 crores, as against Rs. 2.40 crores in the past week, the amount invited remaining unchanged at Rs. 2 crores. The average rate of accepted tenders was a little higher at 2.548 per cent. per annum, as compared with 2.540 per cent. per annum last week. There was no response for intermediate Treasury Bills which had fetched Rs. 70 lakhs in the past week. These features of Treasury Bill results are in consonance with the prevailing tight money conditions.

The strong seasonal demand for money is borne out by an increase of Rs. 34.61 crores in notes in circulation disclosed by the Reserve Bank's statement for the week ended 9th December 1960. Since there has been a contraction of Rs. 11.83 crores in notes held in the Banking Department, the total notes issued have gone up by only Rs. 22.78 crores. For the first time since the week ended 12th August 1960, foreign securities in the Issue Department have gone up by Rs. 5 crores to Rs. 128 crores. This increase has been effected by drawing down the balances held abroad by Rs. 4.14 crores. It may be recalled that last week this item had staged a rise of Rs. 11.79 crores. The net change in foreign assets over the week is a rise of Rs. 86 lakhs, the total thereof being Rs. 152.62 crores. Deposits of the Central Government have gone down by Rs. 9.88 crores to Rs. 50.83 crores, but those of other Governments have gone up by Rs. 1.53 crores. Deposits of banks have also risen by Rs. 3.44 crores to stand at Rs. 93.22 crores. Loans and advances to Governments have risen by Rs. 4.82 crores and so also other loans and advances by Rs. 3.47 crores. There has been a slight fall of Rs. 7 lakhs in advances to Scheduled banks against usance bills.

The statement of affairs of Scheduled banks for the week ended 2nd December 1960 discloses a contraction of Rs. 5.41 crores in total deposits, of which Rs. 4.96 crores are the share of time deposits. There has been a fall of Rs. 2.50 crores in inter-bank borrowings, but borrowings from the Reserve Bank show a rise of Rs. 7.78 crores to Rs. 20.07 crores. There is no significant change in borrowings from the State Bank. Advances and bills purchased, which together constitute bank credit, have increased by Rs. 13.50 crores. While investments are a shade higher by Rs. 1.24 crores, total cash and money at call have declined by Rs. 5.60 crores and Rs. 2.29 crores, respectively.

The statement of the State Bank of India for the aforesaid week (2nd December 1960) shows hardly any change in deposits. Advances are higher by Rs. 5.97 crores and so also investments by Rs. 1.98 crores. These increases have been met by reducing cash to the tune of Rs. 7.72 crores.

With the short-term money market getting tight as mentioned above, there is some selling pressure in the gilt-edged market, but there has been no noteworthy decline in values. On comparing the list of prices of Central Government loans as of today with that a week ago, one finds that there is a fall of 5 nP in 3½ per cent. 1964 and 3½ per cent. 1961. 3 per cent. 1963-65 shows a loss of 10 nP. Only the 3 per cent. Conversion loan is fractionally higher at Rs. 74.05. Among the State loans, a slight rise of 5 nP is noted in the 4½ per cent. issues of Maharashtra, West Bengal, Madras and U.P. This is probably due to buying for provident funds. There is no change in the Reserve Bank's open market policy; nor is the L.I.C. known to have bought any sizable parcels of securities this week.

In the foreign exchange market, there has been a slight weakening of the rupee in terms of U.S. dollar. The banks' selling rate in ready T.T. has been revised upwards from Rs. 476.50 to Rs. 477 per 100 dollars. There buying rate for ready T.T. is also higher by 25 nP at Rs. 473.50. These variations merely reflect the slight decline in the sterling dollar rate. In the New York market, the value of spot sterling has declined over the week from 280.990-281.020 to 280.680-280.710 cents per £. There has been a perceptible fall in three months forward, the closing rate at 280.030-280.060 cents per £ showing a loss of 0.2 cent.

TIN AND ZINC RISE

(*From Our Own Correspondent*)

Calcutta, *13th December*

Mainly due to shortage of supplies, tin and electrolytic zinc recorded a small addition during the week under review. Advices from foreign markets were also firm. On the London Metal Exchange, electrolytic copper opened at £233¾ a ton and hardened to £234½, but closed at £233 on account of profit-taking. 'Berry' quality scrap was firm here at Rs. 212 a cwt., as also utensil scrap at Rs. 200 a cwt. Both these were difficult to be located. Virgin metal, however, was available against permits. Electrolytic zinc opened at Rs. 162.50 and closed higher on balance at Rs. 163, after touching Rs. 164.50 earlier in the week. The metal was in good demand and offerings were limited. In London, the price closed lower at £85½ a ton, as against the opening of £86½. Tin opened here at Rs. 570 and closed higher at Rs. 576. Demand on London was poor, but the price was earlier steady at £799, thanks to the good statistical position of the metal. The closing rate stood at £797. Lead was quoted here at Rs. 63 a cwt. Good offtake was reported, but this did not affect the comfortable supply position.

BULLION EASY AGAIN

(*From Our Own Correspondent*)

Bombay, *14th December*

This week's review of the bullion market covers only three sessions, since the market was unofficially closed for three days (Saturday, Monday and Tuesday), with operators refraining from transacting any business as a mark of protest against the Forward Contracts (Regulation) Amendment Bill passed by the Lok Sabha on Friday the 9th inst. The Bill, it may be noted here, seeks to empower the Central Government and the Forward Markets Commission to impose conditions regarding the transferability of specific delivery contracts, prescribes a minimum penalty of a fine of Rs. 1,000 for any offence under the Act, provides for compulsory sentence of imprisonment for a second or a subsequent offence of a serious nature, and gives powers to suspend members from a recognised association. It also enables a recognised association to declare as illegal certain kinds of transactions entered into in contravention of its by-laws such as kerb trading.

During the three days on which the bullion market was open (Thursday, Friday and today), a distinctly easy trend was in evidence, thanks to liquidation by certain interests and poor enquiries. There were also reports suggesting heavy arrivals. Consequently, both gold and silver suffered a setback. The actual total arrivals on the two days were 18,000 tolas of gold and 26 bars of silver, while the offtake was of the order of 7,000 tolas and 14 bars, respectively. The floating stocks of gold in the city are estimated at 100,000 tolas and those of silver are reported to be around 700 bars.

Gold weighing 52,220 tolas valued at Rs. 68,53,330 approximately was seized as smuggled by the Customs, Land Customs and Central Excise Authorities during the period 1st August to 31st October 1960. This information was given by the Union Finance Minister in the Rajya Sabha on the 8th inst.

In a written reply to a question in the Rajya Sabha on the 6th inst. whether the Government was negotiating with the Government of Mysore for taking over the Kolar Gold Mines and, if so, what progress had been made in this respect, the Finance Minister said that the question was still under consideration and that it was difficult at this stage to indicate precisely when a final decision would be taken. The Minister stated that gold-bearing ore was now extracted from three mines in the Kolar District, namely, Mysore, Champion and Nundydroog. The average annual extraction of gold from these mines was 156,388 ounces. After allowing for interest at 5 per cent. of the estimated capital outlay, the State Government had obtained a profit of Rs. 27.49 lakhs from these mines during the period 29th November 1956 to 31st March 1960.

In the gold section, *Poush* (January) settlement moved down from Rs. 115.65 to Rs. 114.70 (nominal) on the 10th inst. and, after recovering to Rs. 115 today, finished lower at Rs. 114.90. The net loss over the week was 75 nP.

Ready gold continued to be quoted at a discount under the forward, though the actual discount declined from Re. 1.15 on Wednesday last week to 70 nP today. The closing rate for the metal was Rs. 114.20, as against Rs. 114.50, the highest and lowest levels touched being Rs. 114.40 and Rs. 113.50, respectively.

The *Poush* settlement in silver encountered selling and receded from Rs. 196.80 to Rs. 195.95 today. Ready silver began the week at Rs. 195.15, as against the previous close of Rs. 195, and drifted lower to touch Rs. 194 today. Towards the close, it was a shade better at Rs. 194.15. The discount under the forward was Re. 1.80, same as a week ago.

The world price for gold in the London bullion market, which had declined from $35.60-$35.80 to $35.40-$35.55 last week, recovered slightly during the week under review, the latest available quotation being $35.64. Ready gold advanced from 252*s.* 6*d.* to 254*s.* yesterday, owing to the easiness of the pound sterling *vis-a-vis* the dollar. Ready and forward silver, however, continued unchanged at 79½*d.*, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	14-12-60 (closing)	High	Low	7-12-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	114.20	114.40	113.50	114.50
Forward:				
*Poush**	114.90	115.70	114.80	115.65
Sovereign	90.00	—	—	90.00
SILVER				
Ready (.996 fine)	194.15	195.60	194.00	195.00
Forward:				
Poush†	195.95 13-12-60	197.40	195.80	196.80 6-12-60
London				
Silver Ready	79½*d.*	—	—	79½*d.*
Silver Forward	79½*d.*	—	—	79½*d.*
Gold	254*s.*	254*s.*	252*s.* 7*d.*	252*s.* 6*d.*
New York				
Silver	91.375 cents	—	—	91.375 cents

* 2nd January settlement. † 3rd January settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES ADVANCE

(*From Our Own Correspondent*)

Bombay, *14th December*

The cotton futures market had, as was the case with other main commodity markets in the City, a short week of only three trading days. Though the market was officially open on all days, traders did not transact business for three days, namely, Saturday, Monday and Tuesday, as a protest against the Forward Contracts (Regulation) Amendment Bill, approved by the Lok Sabha on Friday, which, they said, conferred arbitrary powers on the Forward Markets Commission. The Board of East India Cotton Association, at its meeting held yesterday, decided to depute its President, Mr. Madanmohan R. Ruia and Mr. Ramdas Kiachand, to represent to the Government its views on certain provisions of the Bill.

The market ruled distinctly firm on the first two days of the week prior to the observance of the *hartal*. This was due to fresh buying induced by the announcement, late on Thursday, of the long-awaited export quota for 50,000 bales of Bengal *Deshi* of "superfine and above" and renewed rumours (which have not so far proved correct) of the possibility of immediate release of the second instalment of Indian cotton quota to mills. The Jarilla April Contract, which commenced the week on a subdued note, firmed up from Rs. 594.50 (per three quintals) to Rs. 603 on Friday. When futures trading was resumed today, the Contract attracted short covering and speculative buying touched off by reports of reduced arrivals of new crop in upcountry markets and the consequent hardening of ready prices both in the spot and terminal markets. From the opening level of Rs. 602, the Jarilla April Contract rallied to Rs. 609.25 today before finishing the session fractionally lower at Rs. 609. The net gain over the week is Rs. 14.

Demand for ready cotton was well maintained. Berar and Khandesh were favourites and mills from all regions showed keen interest in them. Staple varieties such as Co2, 0394, L.147 also attracted attention. Although demand was good mills showed reluctance to pay high prices for long staples presumably because they were expecting to get deliveries of U.S. cotton shortly which, if utilised soon, would reduce carrying costs.

Spinners showed little interest in foreign growths except perhaps East African cotton which attracted some needy mills. The general tendency was to defer purchases till East African prices, which had gone up of late, thanks to Chinese demand, come down.

Exporters have welcomed the export quota of 50,000 bales of Bengal *Deshi*. But they are disappointed that the quantity had fallen short of expectations. Business already concluded, subject to licence, is said to be in excess of this quantity. A part of it will, therefore, have to be cancelled. There is also another reason for them to worry. This is the stipulation, which is an entirely novel feature of this year's quota, that every intending exporter shall have sold and delivered to a cotton textile mill or a factory manufacturing absorbent cotton, a quantity equal to that proposed to be exported. Shippers feel that this restriction will hamper exports. For an exporter, who is a specialist in his line, is now forced to assume the role of a supplier of cotton to mills. The object of this restriction presumably is to enable mills to get their requirements of Bengal *Deshi* at the controlled price. But the unnecessary saddling of shippers with additional burdens, which this stipulation involves, is cited as evidence of the Government's indifference to the interest or convenience of the trade.

They are, however, happy that export licences will be issued this time on the basis of shipping bills instead of registration of sales as previously. This, it is said, will do away with false registrations of sales and encourage only genuine business.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

CO2 1,250-1,270 according to type; Khamagaon 901; Berar 27/32" December delivery 855; B.P. 52 1,353; B.P. (U.N.U.G.) 1,370.

The Karachi cotton futures market ruled firm during the week under review. Good domestic mill buying and renewed export demand by Japan and Continental countries resulted in hardening of prices. N.T.R.G. January met with good support and rose from Rs. 68-15 last week-end to Rs. 75-2. The March position too came in for active trading. Its quotation improved from Rs. 68-12 to Rs. 73-4. The rise in price of both the Contracts would have been more but for the restraining influence of new crop arrivals which are gathering momentum.

The spot section too reported livelier trading. *Deshi* prices were particularly firm, thanks to good foreign demand. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 103; Punjab *Deshi* 4F Punjab Roller 86-1; S.G. 91-11; N.T. Roller 87-11; S.G. 93-11; 289F Punjab Roller 94-3; S.G. 98-11.

Listless conditions prevailed in the Alexandria cotton futures market during the week. Turnover was small and price fluctuations narrow. Operators were marking time. A revival of demand from foreign buyers was anticipated. The dullness of the spot section affected sentiment in the futures market. Both the long-staple Karnak and medium-staple Ashmouni Contracts declined in slow dealings. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: January 71.30; March 72.95; May 73.60.

Ashmouni: December 61.85; February 62.62; April 63.20.

The Ministry of Agriculture, in its second estimate, has put the 1960-61 cotton crop at 10,672,000

cantars as against the October estimate of 10,735,000 cantars and last year's production of 9,964,600 cantars.

The staple length-wise break-down is as under:

(In thousand cantars)

Over 1⅜″	5,009
Over 1¼″	2,451
Over 1⅛″	3,026
Total	10,486
Scarto	186
Grand total ...	10,672

Cotton futures values in Liverpool receded during the week. The higher U.S. crop forecast by the Department of Agriculture and the slow offtake in the spot market induced selling. However, occasional short-covering by local traders and some Commission House buying based on expectations of a revival of spinner demand lent support to a declining market. Sudan cotton contracts at Liverpool too eased, thanks to selling. The latest available quotations—in pence per lb.—are as under, the figures in brackets being the last week's closing rates:

American cotton one inch staple contract: December 22.70 (22.75); March 23.00 (23.00).

Sudan: January, March, May 35.25 (35.75).

An important development of the week in the New York cotton futures was the publication by the Department of Agriculture, on the 8th inst., of the final estimate of the 1960-61 U.S. crop. The Department put production at 14.31 million bales, as against 14.29 million bales a month ago and last season's output of 14.55 million bales. The yield per acre was estimated at 448 lbs., 6 lbs. higher than the previous estimate, but 14 lbs. below the 1959-60 yield.

Cotton futures in New York declined on the publication of the crop report as the estimate was above trade expectations. It, however, recovered, thanks to lack of offerings and Commission House support prompted by the good offtake of ready cotton by domestic mills and export demand. Net change in futures prices over the week was negligible.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	13-12-60	5-12-60	29-11-60
Spot	32.25	32.30	32.30
December	—	31.62	31.31
March	32.40	32.32	32.03
May	32.85	32.72	32.47

BLACK PEPPER SUBDUED

(Messrs. Parekh and Co.)

BOMBAY, 14*th December*

Malabar black pepper ruled subdued with undertone unhealthy during the week, in view of poor foreign demand and under pressure of new arrivals at important terminal centres such as Cochin and Alleppey. Daily arrivals there averaged more than 300 candies and those at Calicut are at present in the neighbourhood of 50 candies and are likely to increase from January. The present downward trend is not likely to be checked unless there is continuous support from exporters. In the beginning of the season, no exporter can lend support unless there are advance sales or he sells only at buyers' price.

New York, after buying a sizable quantity at every decline from $0.45 to $0.42, has revised its buying limit down to $0.40. At this price, too, the U.S. dealers do not seem to evince as good an interest as was earlier expected. Their indication is now $0.39. If the present buying policy of New York is any criterion, it seems that most of the dealers have adopted a policy of hand-to-mouth buying, which does not augur well, particularly at a time when there is pressure of crop movements. Marketmen attribute this to the present surplus position of pepper in the world market. Small merchants in the villages who collect pepper from growers in the interior seem to be resisting to sell below Rs. 1,000, as they lose in most of their purchases when brought down the next day for sales to exporters at the primary markets, since the market is declining. It remains to be seen whether such resistance can be maintained when there will be competition in selling from Tellicherry area early in January.

The market in Singapore seems to have lost former activities, as the big speculators are inactive. White lost during the fortnight to Str. $171/2, and black to Str. $71/2. There appears more selling pressure on London market, the prices having established a new low level of 53¾d. and 35½d. for white and black, respectively.

Indonesia is at present maintaining its check prices at higher levels. As such, no sizable export for Singapore is reported. One of the analysts terms such an attitude of the Indonesian export authorities as dangerous, because no one knows when the check prices for export will be revised downward, as, at present, the export is impossible on the basis of current check prices which are mostly based on the quotations supplied by the news agencies which have proved in many cases unreliable.

The future of the market is uncertain and there is likelihood of the market going down still further, though slowly, unless there are some speculative manœuvres or some aggressive buyings from the consuming countries like the U.S.A. and Russia.

The U.S.S.R. and other East European countries are at present out of the market, their indication being lower than the sellers' idea. Everybody is awaiting a new development, as market is lacking in incentive. Knowledgeable source estimate the new crop. Malabar black at 25,000 tons.

Ungarbled at Alleppey was down from Rs. 390 to Rs. 345 per quintal. Garbled at Cochin moved down from Rs. 399 to Rs. 355, while, in December delivery, the highest and the lowest were Rs. 413 and Rs. 362 per quintal, respectively. January moved down from Rs. 419 to Rs. 372. Calicut sold at Rs. 345, the highest being Rs. 400. The present nominal quotation for Calicut pepper is Rs. 350.

Ready pepper in Bombay is nominally quoted at Rs. 195 per 50 kilos.

BEMBERG YARN SHOOTS UP

(From Our Own Correspondent)

BOMBAY, 14*th December*

Cupressa bemberg yarn (60 x 2) scaled dizzy heights during the week under review, thanks to manipulations by certain bull operators who tried to corner supplies on fears of a marked depletion of floating stocks. The fears stemmed from the continued restrictions on imports. Imported art silk yarns, however, ruled dull, the general tendency of prices being downward. Staple fibre yarns were listless, as there was no fresh encouraging development. Consuming centres were making purchases only on a hand-to-mouth basis and values moved narrowly. Cotton yarns ruled easy, due to expectations of an improvement in supply position following higher output in mills as a result of encouraging raw cotton supplies to mills.

Imports of art silk yarn into Bombay Port during the month of November 1960 amounted to 1,376,528 kilograms. In the same month, 64,075 kilograms of staple fibre yarn and 8,523 kilograms of cotton yarn were also imported. Exports of cotton yarn from Bombay Port aggregated 362,579 kilograms and those of cotton sewing thread were of the order of 23,990 kilograms.

Cupressa bemberg yarn (60 x 2) December delivery forged ahead from Rs. 2,192 to Rs. 2,335. February delivery climbed up from Rs. 2,146 to Rs. 2,245. Spot Cupressa spurted by Rs. 13.19 to Rs. 2,217.81. Among imported art silk yarn, 120 Japan declined from Rs. 1,309.50 to Rs. 1,294.12 and 120 Italy from Rs. 1,225.75 to Rs. 1,212.50. 150 Japan was neglected at Rs. 1,543.25, as also 150 Japan at Rs. 1,530. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade lost 2 nP to Rs. 11.11, while 120 Bt. cones 1st grade gathered 13 nP to Rs. 11.97.

Staple fibre yarn (40 x 2) December settlement came in for selling and dropped Rs. 5 to Rs. 786. But February settlement gained a rupee to Rs. 793. Spot Citys and Centurys were quiet at Rs. 9.22 and Rs. 9.42, respectively, while Kohinoors met with special support and improved by 11 nP to Rs. 9.48.

In the cotton yarn section, ten counts Moderns were dull at Rs. 19. But Podars put on 12 nP to Rs. 18. Twenty counts Moderns shed 6 nP to Rs. 23.50. Gokaks were done at Rs. 23.12, same as last week. Forty counts Maduras receded by 12 nP to Rs. 32. Minaxis lost a like amount to Rs. 31.12. Sixty counts Finlays changed hands at Rs. 59.59, same as last week. Radhakrishnas fell by 50 nP to Rs. 41.50. Eighty counts Moderns retreated from Rs. 70.70 to Rs. 70. Finlays and Mahendras were dull, the former at Rs. 79.79 and the latter at Rs. 69.69.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago.

	14-12-1960	7-12-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.) December	2,335.00	2,192.00
February	2,245.00	2,146.00
60/1 Cupressa Bemberg spot	2,217.81	2,204.62
120 Japan (per 100 kg.)	1,294.12	1,309.50
150 Japan (per 100 kg.)	1,543.25	1,543.25
120 Italy (per 100 kg.)	1,212.50	1,225.75
150 Italy (per 100 kg.)	1,530.00	1,530.00
Staple fibre yarn—		
40 x 2 December (per 90.72 kg.)	781.00	786.00
40 x 2 February	792.00	793.00
40 x 2 Century (per kg.)	9.42	9.42
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.12	18.00
20s Gokak	23.12	23.12
40s Madura	32.00	32.12
60s Finlay	59.59	59.59
80s Modern	70.00	70.70

SEEDS RALLY

(From Our Own Correspondent)

BOMBAY, 14*th December*

Firm conditions prevailed in the oilseeds market during the week under review. The firmness was engendered by hectic purchases by buils who ignored all official warnings against speculation in commodity exchanges. Traders appear to have been concerned over the adoption of the Forward Contracts (Regulation) Amendment Bill by the Lok Sabha. As a mark of protest, they abstained from transacting business on Monday as well as yesterday. At its meeting today, the Board of the Exchange was understood to have decided to make a strong representation to the Central Government to reconsider the new amendments.

Yet another step has been taken by the authorities to control the trend of trading in the oilseeds market. By a notification issued yesterday under Section 12 of the Forwards Contracts (Regulation) Act 1952, the Central Government has amended the by-laws of the associations recognised in respect of groundnut, groundnut oil, rapeseed and mustard seed so as to provide for powers being taken by the Board of Directors of the Associations and the Forward Markets Commission to take the following steps when they consider it expedient to do so: (*a*) to fix limits on the volume of trading and on the total open position controlled by members, (*b*) to withhold outward payment of clearing dues to members for a specified period; and (*c*) to make the maximum or the minimum price when fixed to be applicable to the rate for settlement of contracts on the due date.

Despite these measures, the rising trend of prices persisted, thanks to two other developments in the sphere of exports of groundnut oil and H.P.S. kernel. One, the import policy for spices, such as betelnuts and cloves (discussed elsewhere in this issue) announced this week, seeks to link their imports with exports of groundnut oil. Shippers are, of course, much perturbed over this scheme and urged the Government to revise the policy in such a way as to give incentives to groundnut oil exporters. Two, the Government has released quota of 20,000 tons of H.P.S. groundnut kernels for export by all shippers against registration of contract in the form of cable offer and cable acceptance during the year 1961. The traders welcomed this measure. It may however, be noted that a substantial part of the quota already released still remains unutilised.

The groundnut section was distinctly cheerful mainly on account of the above-mentioned developments relating to export trade. There were larger arrivals, but they were well absorbed. *Vanaspati* manufacturers and crushers extended good support. Groundnut February 1961 contract which had wound up last week at Rs. 210.62, picked up strength and touched Rs. 212.12 today. Khandesh quality rose by 75 nP to Rs. 42.75. Oil ex-mill put on 30 nP to Rs. 18.80 today.

Castorseeds, too, moved up on sizable buli buying. Although the U.S. continued to be absent from the Indian market for castor oil, there were enquiries from the U.K. and some countries of the Communist bloc. Castorseed May 1961 contract spurted from Rs. 178.62 to Rs. 181.50. Ready Madras scored a gain by 88 nP to Rs. 35. Oil B.S.S. and Commercial were higher by 30 nP each at Rs. 15.50 and Rs. 14.60, respectively.

In sympathy with other major oilseeds, linseed put on a cheerful appearance. May 1961 contract closed higher at Rs. 34.31 today, as against Rs. 33.82. Bold ready hardened by 50 nP to Rs. 34.25. Linseed oil rose from Rs. 14.90 to Rs. 15.05.

Similarly, cottonseeds displayed a distinctly steady trend. February 1961 contract strengthened Rs. 3.25 to Rs. 93. In the spot section, Berars, whites and non-whites, all improved by 19 nP to Rs. 19.75.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	14-12-1960	7-12-1960	30-11-1960
Groundnut			
	Rs.	Rs.	Rs.
February 1961	212.12	210.62	208.50
Nizam bold	42.00	42.00	42.00
Coromandel ready	42.75	43.00	43.00
Khandesh quality	43.50	43.00	43.25
Oil ex-mill ready*	18.80	18.50	18.75
Railway receipts*	18.65	18.30	18.35
Castorseed			
May 1961	181.50	178.62	178.50
Ready Madras	35.00	34.12	34.75
Ready Kanpur	33.87	33.25	33.75
Oil B.S.S.†	15.50	15.20	15.10
Oil commercial†	14.60	14.30	14.20
Linseed			
May 1961	34.31	33.81	33.69
Bold ready	34.25	33.75	33.87
Oil ready†	15.05	14.90	14.80
Cottonseed			
February 1961	93.00	89.75	88.25
Niger seed	35.75	36.25	36.25
Kardi seed	24.00	24.00	24.00

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEAS IN GOOD DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 6*th December*

Sale No. 47:—A smaller quantity aggregating 460,000 kilograms was offered in Sale No. 47 held on Tuesday, 6th December 1960. Although a few brighter invoices were seen from the Nilgiris, quality generally continued to show a decline. There was a good demand with an irregular and slightly easier tendency in evidence. Highgrown brokens were irregular and generally lower with the exception of a few which realised enhanced prices following improved quality. Their fannings were lower and a weak feature, often proving difficult of sale. Good medium and medium brokens came in for fair support at irregularly lower rates. Their fannings generally declined 20 nP to 30 nP per kilo. Plain and low medium brokens were barely steady but similar fannings often ruled dearer. C.T.C. and legg-cut type teas sold well at last rates. Whole leaf grades came to a firm market. Black leaf teas ruled much easier.

	1960	1959
	Rs.	Rs.
Low medium	4.60-4.95	4.52-4.74
Medium	4.95-5.25	4.74-4.96
Good medium	5.25-5.60	4.96-5.29
Quality	5.60-8.30	5.51-9.04

The average price realised in Sale No. 47 was Rs. 5.14 per kilo as against Rs. 5.28 in the previous sale and Rs. 5.14 in the corresponding sale last year.

Dust Sale 'SS':—Offerings in Sale 'SS' amounted to 212,000 kilograms. A useful selection of dust was on offer. The market opened to a strong demand which continued throughout the sale. Plainer, medium and good mediums came to a strong enquiry and sold at full firm rates. Highgrowns met with good support at slightly easier rates than last. C.T.C. and legg-cut types sold well but tended a little easier.

The average price realised in Sale 'SS' was Rs. 4.83 per kilo as compared with Rs. 4.85 in the previous sale and Rs. 4.25 in the corresponding sale last year.

Export Quota:—There are sellers at ¼ nP per kilo.

Colombo:—Just under 5¼ million lbs. were offered and met with a strong general demand but at rates which were lower following quality. Highgrowns and plainest descriptions were 5 cents easier. More interest was shown in fannings grades.

London: North Indian and other growths:—In Monday's sale, there was a stronger and more general demand and where prices showed any change, they were firm to dearer. Plain broken pekoe remains at 3/9*d.*

Ceylon and South Indians:—On Tuesday 24,374 packages were offered and of this quantity 7,115 packages came from South India. There was a good general demand. Lowgrowns and low mediums were in keen demand and were much dearer. The best liquoring teas met better support than last week at firm rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:—

"*Sale No.* 48:—660,000 kilograms. Less general demand. Plain and low medium barely steady. Medium and good medium 20 nP to 30 nP easier. Best liquoring very irregular and considerably easier."

EXPORT TEAS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 13*th December*

Fair demand for tea was noted at the export auctions held yesterday. During the week, more tea was shipped to the United Kingdom. In November, the North Indian production amounted to 54.06 million lbs., representing a small fall of 740,000 lbs. as compared with November 1959. In the first eleven months of this year, production amounted to 513.36 million lbs. or less by 34.56 million lbs. It is also interesting to compare shipment figures. Shipments so far have been only 182.81 million lbs, representing a decline of 30.27 million lbs. as compared with the corresponding figure for the last season. This shortfall is commensurate with the fall in production.

Yesterday's offerings aggregated 73,604 packages. The trend was irregular, and a decline in prices was recorded in a few categories. Prices of medium B.O.Ps and O.Fs declined by 10 to 20 nP, and medium B.Ps and fannings by 5 nP. Legg-cut Dooars were firm at about last rates as were teas for price and plain brokens, some of the cleaner types scoring to higher rates. Good support was accorded to a few selected lines of the very best C.T.Cs and their prices rose. However, the balance of this category sagged by 20 to 40 nP, and the poorer and the more fibrous varieties were difficult to sell. Tippy teas in line with the general market trend eased, although the offerings were only limited. Among Darjeelings, the brighter lots received more inquiries, but the rest, composed of the poorer types, eased. The quotations per 1 kg. (inclusive of excise duty) were: best Assam C.T.C. fannings Rs. 5.80 to Rs. 6.30; best Assam C.T.C. B.P. Rs. 5.50 to Rs. 5.90; clean black pekoe Rs. 5.30 to Rs. 5.45; best Assam C.T.C. B.P. Rs. 5.50 to Rs. 5.90; medium fannings Rs. 4.90 to Rs. 5.20; plain fannings Rs. 4.80 to Rs. 4.95; medium B.P. Rs. 4.70 to Rs. 4.90; and plain B.P Rs. 4.50 to Rs. 4.65.

At the internal sales held on Wednesday last, offerings of dusts amounted to 23,900 chests. Prices eased and there was a good general demand. C.T.Cs including the best teas declined by 15 nP, and orthodox teas by 10 to 15 nP. The quotations per 1 kg. (inclusive of excise duty) were: best Assam C.T.C. dust Rs. 6.00 to Rs. 6.30 (nominal); medium Assam C.T.C. dust Rs. 5.50 to 5.65; medium Assam dust Rs. 4.75 to Rs. 5.00; and medium Dooars Rs. 4.60 to Rs. 4.90. Leaf on offer amounting to 557 chests met with a strong market.

RAW JUTE DECLINES

(From Our Own Correspondent)

CALCUTTA, 13*th December*

A small fall in the prices of fibre on limited interest shown by mills was the feature in the jute markets during the week under review. Prices of goods also declined, as interest shown by foreign buyers continued to be poor, and as a result of which shipping space for most destinations was freely available. During the week, a reduction in the freight on gunnies for East African ports was announced by the Bank Line Ltd. Yet another factor which led to pushing down prices of goods was the announcement of figures relating to goods in stock with mills at the end of November. For, despite decreased production the total of stocks at 82,100 tons increased by 3,700 tons. At 43,100 tons, the largest increase was shown in sacking by 3,600 tons. Miscellaneous goods at 8,900 tons accounted for a small increase of 500 tons, while the fact that hessian at 30,100 tons fell by 400 tons explained the comparatively less decline in hessian prices. The lack of good activity in the New York burlap market was due not only to the need to keep new year inventories as low as possible but also to the reluctance of primary consumers to support the market at the present high levels. The continued lack of U.S. interest has caused anxiety. In spite of low stocks, U.S. buying is not taking place in substantial quantities. It was, therefore, feared that recent reports of a shift to substitutes had not been without foundation.

The policy of extension of installed capacity in Pakistan announcing the increase of 1,000 in the number of looms in the near future was noted here. Reports coming from overseas countries suggested that this year's spurt in prices of goods had caused disappointment. Although the fears of a shift to substitutes may have been exaggerated, the fact remains that prices during recent weeks have been maintained at high levels as a result of local speculation.

The increased holding power among cultivators is having disastrous consequences for the jute goods industry. This was revealed by the fact that, while rates in Calcutta fell slightly, fibre prices upcountry were steady. It is now known that fibre arrivals in mills' stations in November had not been so bad as earlier expected, though they were below the arrivals in November 1959. Although there are firm indications, judging from reports coming from mofussil centres, that the crop would fall shorter than requirements, it is estimated that since sowing was delayed by six to eight weeks fibre arrivals should show some improvement in the latter part of the season and that there would be no difficulty in meeting the demand of mills for the reduced turnover as at present. It is also expected that thanks to the present high prices, area sown would increase in the next season. In the Pakistani market, buyers could not be found to be active at higher levels. However, sellers were not discounting.

On Tuesday last, with very little interest being shown in goods, prices fell. Ready B. twills at Rs. 178 accounted for a loss of Rs. 3 and ready hessian 40″ 10 oz. at Rs. 56.25 of Re. 1.75. On the following day, prices were maintained at the above levels. Although overseas buyers were silent, local operators bought heavy goods. Subsequently, Australia bought 2,000 bales of woolpacks against shipment in February. This was on Thursday, when the increased stock figures of mills were announced. This pushed down B. twills to Rs. 176 and hessian 40″ 10 oz. to Rs. 55.25. On Friday, the easing trend continued and B. twills were quoted at Rs. 175 and hessian 40″ 10 oz. at Rs. 55.25. Over the week-end, with little business passing, a further drop in prices was reported. B. twills moved down to Rs. 174 and hessian 40″ 10 oz. to Rs. 54.75. Yesterday, prices moved narrowly with ready B. twills around Rs. 175 and ready hessian 40″ 10 oz. at Rs. 54.00.

The issuance of quotas enabled mills to show more interest in the fibre market. The delay had earlier been interpreted as an indication of a possible abolition of the quota system. Mills bought fairly against their quotas. This led Assam bottoms to rise to Rs. 135.50 per 100 kg. equivalent to Rs. 50 per maund from Rs. 132.50 or Rs. 49.50 per maund, and daisee bottoms to Rs. 139 or Rs. 52 per maund from Rs. 138 or Rs. 51.50 per maund, both against Dec.-Jan. delivery. Mills soon withdrew and only scattered deals were put through, whereupon Assam bottoms declined to Rs. 131.25 (Rs. 49 per maund) and daisee bottoms to Rs. 138 or Rs. 51.50 per maund.

WHEAT FIRM, RICE QUIET

(From Our Own Correspondent)

HAPUR, 12*th December*

Quiet to steady conditions were witnessed in the foodgrains market during the week under review. While arrivals of *kharif* grains were satisfactory and the pressure of arrivals was being felt in the markets *rabi* grains arrivals receded further. The progress of *rabi* crops sown last month was reported to be satisfactory, but, it was felt that rains were needed in unirrigated areas. Wheat at Hapur recorded modest gains during the week to be quoted at Rs. 16.75 a maund for average quality and upto Rs. 18 for better farm produce. Daily arrivals of wheat in the local market were small at an average of 50 maunds, but sales of wheat flour by State Government at Rs. 17 a maund and consequent slack demand for wheat has checked the rising trend in wheat prices. Lean months are still to follow, but no rise in wheat prices is anticipated, due to heavy stocks with both the State and Central Governments and flow of regular heavy imports from the U.S.

Rice continued quiet at almost unchanged price levels, with *mainpuri* coarse quality continuing to drift lower, thanks to easy supply position with arrivals of new crop in the markets.

Gram recorded fractional gains, due to fast dwindling local stock position and steady advices from Punjab. Barley was almost stationary and *bejhar* also continued featureless. New maize was reaching here in heavy quantities from Rampur side and, despite brisk consumer demand, maize ruled quiet and local stock was heavy at about 25,000 maunds. New *bajra* arrivals were not upto requirements and prices tended to rise on good seasonal demand. *Juwar* and *guwar* continued dull and featureless. The week-end prevailing prices were: rice *sela basmati* Rs. 27 to Rs. 29; *ramajwayan* Rs. 22; *raimunia* Rs. 23; *mainpuri* Rs. 20; *gadda* Rs. 17.75; gram Punjab Rs. 16.75; old Rs. 16; barley Rs. 12.50; *bejhar* Rs. 12.25 to Rs. 12.75; maize Rs. 12.25 to Rs. 12.75; *bajra* Rs. 15; *guwar* Rs. 13.50; *juwar* Rs. 13.24 to Rs. 14.37.

Among pulses, peas and *arhar* sought higher levels, due to good demand in the face of falling local stock position. Peas was in demand from east U.P. and Madras side and local peas stock ran down to 10 *khatties* and that of *arhar* to 17 *khatties*. Other pulses ruled quiet and week-end prevailing prices (in rupees per maund) were: peas *dara* 13; farm white 14; old 12.25; peas *dal* 14.50; *arhar* 13; *arhar dal* 17 to 18; new *urd* 19; new *moong* 18.50 to 19.50; and *massoor* 14 to 17.

SUGAR HARDENS

(From Our Own Correspondent)

HAPUR, 12*th December*

Sugar recorded a slightly hardening trend, the quotation towards the week-end standing at Rs. 112 per bag in wholesale in the open market, as against the controlled price of Rs. 108.50 per bag. Early export prospects acted as the main bullish factor. The Union Food Minister turned down the oft-repeated demand for an increase in cane price. He urged the cultivators to increase the per-acre yield of cane and then voluntarily agree to reduce its price which would automatically reduce the price of sugar and enable the country to enter international markets with competitive prices. The question of early decontrol of sugar was also ruled out. Factories in west U.P. are crushing with their maximum capacity and cane supply to them is reported to be adequate.

Sugar ruled steady in the Muzaffarnagar market, though the supply position was quite comfortable. Stocks of sugar were lying in bulk against allotments made in previous months. The latest prevailing prices were: Rs. 110 to Rs. 110.25 per bag in the open market.

Crystal sugar was quoted at Rs. 112 per bag in the Kanpur market in the week-end.

New *khandsari*, which ruled steady earlier on Punjab and east U.P. support, declined later, as demand was slack at higher rates. The supply of cane to crushers manufacturing *khandsari* also declined, as the price paid by them was Re. 1.12 to Re. 1.25 per maund, as against Re. 1.62 paid by factories. Stocks of old *khandsari* were about 10,000 maunds in Muzaffarnagar, where the latest prevailing prices were: new *khandsari* Rs. 32 to Rs. 37.50; old inferior Rs. 28 to Rs. 29.50; superior Rs. 30 to Rs. 32; *galawat* Rs. 16 to Rs. 20 a maund.

After an early fall to Rs. 13 a maund for *pansera* and Rs. 14 for *balti* quality, *gur* improved fractionally towards the week-end on revival of better loading facilities, as *gur* loading was uplifted to B class. Daily arrivals were poor at an average of 4,000 maunds and most of the crushers were now idle, as they could not afford to pay more than a rupee per maund for cane at prevailing *gur* prices and the cultivator was not supplying cane at this price. The prevailing prices on Monday were:—*pansera* Rs. 13.25 to Rs. 13.62; *balti* Rs. 14.37 to Rs. 14.75; *shakker* Rs. 15 a maund.

After an early decline, *gur* improved slightly in the Muzaffarnagar market, thanks to better loading facilities. Daily arrivals were about 10,000 maunds and latest prices were:—*pansera* Rs. 13.75; *khurpapar* Rs. 14; *laddo* Rs. 14.22; *chaku* Rs. 13 to Rs. 15 a maund.

Gur fagun also tended to rise on bull support influenced by better ready prices. *Fagun* opened at Rs. 13.41 last Monday and was quoted today at the best level of session at Rs. 13.66.

* * * *

The Reserve Bank of India has directed scheduled banks to relax the margin requirement in respect of advances against sugar. In a communication to all scheduled banks sent on the 9th inst., the Bank points out that there had been a significant rise in sugar output in 1959-60 and that the prospects of sugar production in 1960-61 appears to be as good as in the previous year. The stock position is also comfortable and sugar prices have in recent months shown stability. In view of this and in conformity with the Reserve Bank policy of operating its selective credit controls in a flexible way, the Bank has decided to elax the margin requirement in respect of advances against sugar and reduced it from 45 per cent. to 25 per cent. The following is a full text of the relevant directive sent by the Reserve Bank to all scheduled banks:

"In exercise of the powers conferred upon it under Section 21 of the Banking Companies Act, 1949 and in supersession of the directive contained in its circular letter No. DBO.Sch.4768/C-218-58 dated 18th July 1958, the Reserve Bank of India hereby directs that every scheduled bank shall, with immediate effect, maintain in respect of each credit limit and advance against the security of sugar a margin of not less than 25 per cent. on the value of the stocks where such a limit or advance has been granted, whether before or after the date of receipt of this directive, to (a) parties other than those manufacturing sugar, and (b) to parties manufacturing sugar in respect of such stocks as have left the factory or mills' premises and on which excise duty has been paid."

KIPS WEAK

(From Our Own Correspondent)

MADRAS, 12*th December*

Export trading in kips was poor and the market was weak during the week under review. Middle class tannages of goat and sheep were firm and exporters were active in the local market.

Owing to competitive buying in the raw goat skin centres by E.I. tanners, prices advanced sharply. The tanners in turn were quoting high prices for superior tannages, which importers were not willing to support. It was reported that American leather was making headway into the Continental markets at cheaper prices.

The Union Minister for Industry, Mr. Manubhai Shah, disclosed in the Lok Sabha last week that it was proposed to set up a separate company for implementing the four new drug projects to be established with Soviet collaboration. Mr. Shah added that there was no proposal to integrate Hindustan Antibiotics Limited, Pimpri, with the new company. He explained that, since the penicillin factory at Pimpri was a separate company and the collaboration in this case was with the U.N.I.C.E.F. and W.H.O. for penicillin manufacture and with a firm in the U.S. for streptomycin production, this would have to be kept as a separate company. According to him, the technical and administrative problems of the drug projects with Soviet collaboration and Hindustan Antibiotics at Pimpri and the Organic Intermediates Plant at Panvel (Maharashtra) with German collaboration would be somewhat of a common nature, and so a Co-ordinating Committee of the Chairman and Managing Directors of these companies was proposed to be set up for discussing common problems. The four drug projects being undertaken with Soviet collaboration are the Antibiotics Unit at Rishikesh, Synthetic Drugs Unit at Sanatnagar, Hyderabad, Surgical Instruments and Medical Appliances Unit at Madras and phyto-chemical unit at Munnar, Kerala State. The total capital investment on these four projects, excluding investment on land, township and working capital would be about Rs. 28 crores.

TITAGHUR PAPER MILLS COMPANY, LIMITED

STATEMENT BY CHAIRMAN, SIR WALTER MICHELMORE

SUPPLY OF PAPER LIKELY TO EXCEED DEMAND

THE prospect of increasing competition and the slow but steady rise in cost of production in the next five years are forecast by Sir Walter Michelmore, Chairman of the Titaghur Paper Mills Company Ltd., in his latest annual statement issued to the shareholders of the Company. Sir Walter Michelmore admits that it is difficult to predict whether there will be a buyers' or sellers' market in paper during the third Plan period, but he feels that healthy competition will increase and it is by no means impossible that there will be an excess of supply over demand by 1965. He characterises as completely out of date the cost of production on which the Tariff Commission based its findings and warns that, so long as the present selling price structure exists, enhanced costs of certain raw materials and coal and 5 per cent. surcharge on railway freight cannot but have an adverse effect on the results of the Company's operations.

The following is the full text of Sir Walter Michelmore's statement:

"Once again, I take this opportunity of reviewing the state of the Company's affairs and elaborating a little on the Directors' report and accounts. You will observe that this year these accounts have been presented in a more modern and graphic form and I hope that shareholders will find them of interest.

"The results for the year ended 31st March 1960, as I forecast, are not so favourable as those of the previous year, though there has been a considerable saving in tax due mainly to the development rebate allowance on No. 3 Mill. It will be noticed that the addition to the compulsory development reserve amounts to nearly Rs. 25 lakhs.

"In view of the future prospects, your Directors have felt it advisable to recommend that the dividend remains at the same rate as for the previous year, though, as shareholders are aware, that dividend is now subject to deduction of tax. I should also like to explain to the holders of second preference and preferred ordinary shares that it is proposed to pay their dividends for the year at the rates specified in the Articles of Association for one reason only that the Preference Shares (Regulation of Dividends) Bill, 1960, has not been passed at the time of the closure of these accounts. The dividends for the half-year to 30th September 1959 were grossed up in accordance with our interpretation of the law as it existed at the time of payment and, therefore, the dividends for the half-year to 31st March 1960 have been adjusted so as to pay in aggregate the same as in previous years but, of course, subject to deduction of tax. I can assure the holders of all preference shares and preferred ordinary shares that, when the Bill is passed into law and its effect studied, such additional dividend as is due will be promptly paid.

Cost of Production Rises

"The paper industry has been passing through a period of re-adjustment following the cut in selling prices effective from 1st January 1960. I am pleased to say that, though severe, the fall in income may not be as great as first anticipated but, nevertheless, costs of certain raw materials and coal have increased and a surcharge of 5 per cent. was imposed on railway freights from 1st April 1960. The cost of production on which the Tariff Commission based their findings is now completely out of date and, so long as the present selling price structure exists, these factors cannot but have an adverse effect on the results of your Company's operations.

"Despite a less prosperous outlook in the immediate future, the paper industry is forging ahead and the licensed capacity by the end of the third Plan period will, if all schemes reach completion, amount to 960,242 tons per annum and is made up as follows:

	Tons
Present licensed capacity	400,000
Substantial expansion of existing units	136,880
New major units	225,800
New small units	197,562
	960,242

Competition

"It is pleasing to note that, even now, there is less imbalance between demand and supply of paper and, in general, I feel that consumers are able to buy their requirements at prices in consonance with mills' official selling prices. It is difficult to forecast whether there will be a buyers' or sellers' market during the third Plan period, but I feel myself that healthy competition will increase, and it is by no means impossible that there will be an excess of supply over demand by 1965. The licensing of as many as 74 small units is an interesting development and will undoubtedly result in a wider distribution of paper and reduction in transport charges. These units and, in fact, any new unit, will not have an easy time in the initial stages of development and a comprehensive training scheme for technicians is very necessary. Your Company has already undertaken training of a large body of apprentices in all branches which will no doubt be of benefit not only to these Mills but to the industry as a whole.

"The prospect of increasing competition and the slow but steady rise in cost of production has prompted your Directors to plan the next stage in the renovation programme. Considerable economies in cost of fuel and chemicals have been achieved at No. 1 Mill, which is now a well-balanced unit, and it is proposed to concentrate on No. 2 Mill. It is proposed to install a large water tube boiler to replace certain old and inefficient Lancashire boilers and thus increase the production of steam and economise in coal. With the increased steam, the soda recovery plant will work more effectively and is to be supplemented to increase its efficiency further. The cost of caustic soda and bleach is high at No. 2 Mill and considerable benefit will be felt from the installation of an electrolytic bleach plant on the lines of that at No. 1 Mill. These renovations will cost about Rs. 30 lakhs and should reduce the cost of production at No. 2 Mill by about Rs. 40 per ton. The opportunity has been taken to acquire a second water tube boiler which it is intended to install at No. 3 Mill in preparation for further expansion there in the future.

"Your No. 3 Mill in Orissa commenced production on 12th March 1960, and one machine is in operation producing about 13 tons of paper per day. The second machine has been in operation at No. 2 Mill for some time and will, in the near future, be transferred to Orissa.

Not So Satisfactory

"The operation of this mill in the first few months cannot be considered as satisfactory and it has, in fact, been working at a loss. This has been mainly due to the necessity of training local people unused to working in an industrial establishment and to interruptions caused by shortages of certain commodities. There was a short strike in July and the severe floods in August and September resulted in complete disruption of communications and it was necessary to fly down essential stores in specially chartered aeroplanes. The supply of coal to No. 3 Mill from the Talcher field has been a source of considerable anxiety and has been most irregular. Conditions have improved recently and, it is hoped, supplies will be adequate in future. The problem of disposal of effluent in the clear waters of the Mahanadi has also been a big problem, but a considerable degree of success has been achieved through the measures adopted and, though these were costly to install and fairly expensive to run, I feel that the amenities of the district will suffer no damage.

"Though we have had our difficulties at No. 3 Mill, the mills in West Bengal have run satisfactorily both in the year under review and in the current year to date. Stocks of bamboo at the mills have been considerably reduced and, though adequate supplies exist at our depots, the problem of rail transport is very real and we have been unable to build up an adequate stockpile, despite the assistance we have received from the railways who have had to contend with manifold difficulties. As I have already mentioned, the cost of production continues to rise and, though economies have been achieved in several directions, much has yet to be done. To assist us in our efforts an eminent firm of business consultants, Messrs. Urwick, Orr and Partners, have been called in to give advice on reorganisation of the costing system and their report will be available shortly.

Paper Making Plant

"Your Company is concerned in a further interesting development, the manufacture of paper and pulp making plant and chemical equipment. A company has been formed, named Bertrams-Scott Private Ltd. in which three well-known U.K. concerns, James Bertram and Son Ltd., Bertrams Ltd. and Ernest Scott & Co. Ltd., are collaborating with the Birds/Heilgers and Yule Groups. Your Directors have agreed to provide land and buildings at Titaghur against shares in this Company. The venture is well advanced and the new Company is in a position to deal with enquiries for 50-ton paper-making units and all types of paper-making plant.

"It has been a trying year for staff both at the mills and head office and continuous endeavour will still be required. I wish to thank them on your behalf and am sure that they will continue to give of their best in the years that lie ahead."

The above statement is not a report of the proceedings of the annual general meeting, which will be held on 27th December 1960.

CALCUTTA, *1st December* 1960.

SURVEY

(*Concluded from page* 1083)

without being doctrinaire. Since their case will go by default if they adopt the former course, they have no alternative but to join issue every time it is raised.

A major part of Mr. Pratapsinh's speech was devoted to the present trends in agricultural production and prices which are already well known. Looking into the future, the President of the Indian Merchants' Chamber more or less agreed with Mr. S. K. Patil, Union Minister for Food and Agriculture, that the major problem regarding food prices in the months to come would be one of arresting the downward trend rather than the upward movement. This seems to be an overoptimistic view. But granting, for argument's sake, that the plans for an increase in agricultural production succeed in good time, it cannot be denied that, in a country, with more than 70 per cent. population depending on agriculture, any substantial fall in agricultural prices would lead to discontentment and frustration. It would also result in a widening of the gap between urban and rural living standards. Further, as Mr. Pratapsinh felt, a fall in agricultural prices would cause a distortion of the pattern of production due to a shift in cultivation from food crops to commercial crops, thus adversely affecting food production. A sharp fall in agricultural prices, if and when it materialises, would call for a systematic and continuous study. But such a situation is a long way off. There is no need to be unduly preoccupied with it now, lest it should stand in the way of bringing down the ruling prices to more reasonable levels. Even the prices of foodgrains are still much higher than they need be. It may, however, be added in passing, that, if food prices tend to go down to uneconomic levels, the situation can be readily utilised by the authorities for stepping the magnitude of investment efforts in certain directions, such as programmes of road construction and improving rural sanitation which do not require other expensive co-operant factors but which can create sufficient employment, if undertaken on a large scale. Through such programmes, it should be possible to create much needed amenities for the rural population as well as to support agricultural prices through a wider diffusion of purchasing power.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—Issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. I—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of August 1960 amount to 9.53 lakhs of rupees.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

Capita and dividend unconditionally guaranted by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

HEAD OFFICE: HONG KONG

BRANCHES IN INDIA

BOMBAY CALCUTTA

Offices in Europe and the United States and throughout the Far East.

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

The journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, has as its regular features:

★ A monthly newsletter surveying the latest developments in the field.

★ Authoritative special articles on topics of current interest.

★ Extensive information on events and trends in India and abroad.

★ Reviews of production and prices of various commodities.

★ A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation in India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual Subscription .. .. .. Rs. 12

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C. 2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: { Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8.

SIEMENS INDIA

SIEMENS TRANSFORMERS now made in India

As a result of the technical collaboration with the internationally known HOUSE OF SIEMENS—Siemens Transformers are now being made in India by Bharat Bijlee. They are well-known for their high quality and dependability, and for the outstanding features of their design and construction. These transformers are manufactured under Siemens licence and conform to Siemens Design.

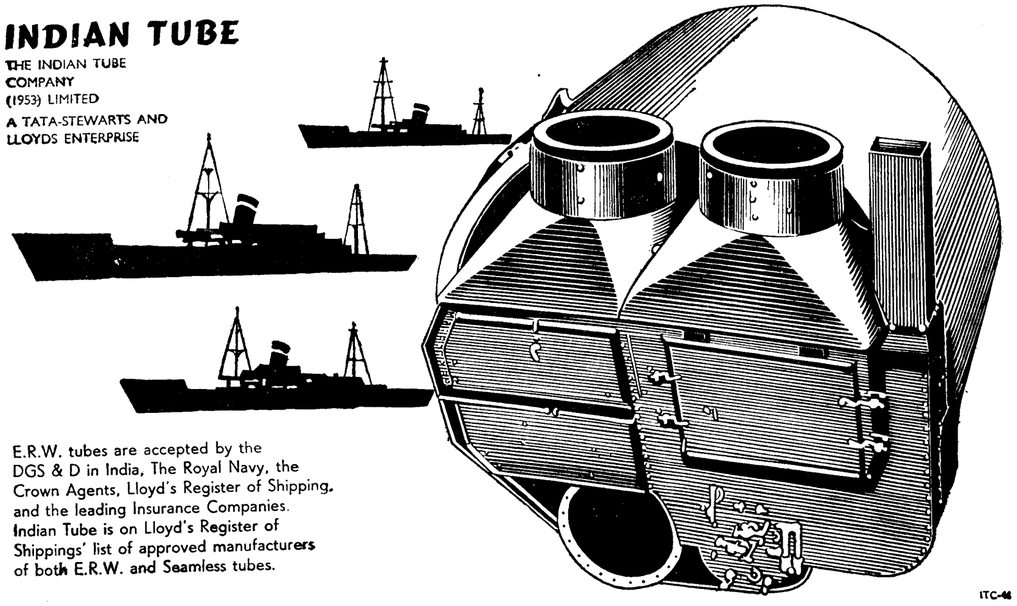
E.R.W.
MARINE
BOILER
TUBES

Recognised for their outstanding performance E.R.W. steel boiler tubes, manufactured by Indian Tube, are specially designed for protracted use in land, loco and marine boilers. High frequency current ensures efficient welding, and normalising is carried out in controlled atmosphere furnaces to produce a ductile tube with a smooth, blue finish. Rigid quality control from the raw material stage to the finished product guarantees that Indian Tube's E.R.W. tubes will meet all the tests specified by Lloyd's Register of Shipping. E.R.W. tubes are, in every respect, the equivalent of seamless tubes of similar dimensions.

INDIAN TUBE
THE INDIAN TUBE COMPANY (1953) LIMITED
A TATA-STEWARTS AND LLOYDS ENTERPRISE



E.R.W. tubes are accepted by the DGS & D in India, The Royal Navy, the Crown Agents, Lloyd's Register of Shipping, and the leading Insurance Companies. Indian Tube is on Lloyd's Register of Shippings' list of approved manufacturers of both E.R.W. and Seamless tubes.
