On some of the points which had been raised by the members of the Council, the authorities have given satisfactory explanation. They informed the Council that goods liable to Central excise duty were not normally re-examined at the land customs frontiers; such examination was undertaken only when the seals of packages were found to be broken. Instructions, it is stated, have been issued to the Customs authorities that, where the value of the goods alone has been stipulated as a limiting factor, they should not go by the quantity of the goods imported. The appraisers have been asked to take a liberal view in deciding which articles could be deemed component parts of machinery. The Government is formulating a procedure, whereby even a part of machinery imported from abroad would be entitled to the same concession in the matter of duty as the entire machinery. Further, if samples, drawn by the Customs authorities, are destroyed in the process of test, the import duty on the samples will be waived, if it amounts to Rs. 10 or more.

It is noteworthy that, at the end of the two-day deliberation, the Government accepted several of the suggestions made by the Council. Thus, the existing procedure of charging duty on the actual quantity of sugar recovered from unfinished sugar will be continued without change; the time limit for submitting the final manufacturing report by sugar factories has been extended to 25 days after the close of the season and the old procedure of check-weighment of empty gunny bags has been restored. Mills will be allowed to bring in duty-paid paper for manufacture of certain items of stationery. Instructions have been issued for maintenance of separate accounts for articles brought back to factories after reconditioning. The manufacturers of vegetable non-essential oils have been permitted to organise their programme in such a way that they can manufacture dutiable oils in certain weeks and the exempted varieties in certain other weeks in a month. The Government has agreed to the suggestion for payment of excise duty by cheques or credit notes. These reforms are to be welcomed for the reason that they go some way towards mitigating the hardships of those on whom the immediate burden of customs and excise duties falls.

An aspect of customs administration which deserves fuller examination is pilferage at the docks and delay in customs appraisal. This problem has a certain relevance to tourist industry and marine insurance. Vexatious delays in examination of goods at ports should be reduced if foreign tourists are to be attracted to this country. Again, pilferage at the docks is a serious drain on taxpayers, in general, and a heavy burden on general insurers, in particular. In his address at the recent annual meeting of the General Insurance Council (Tariff) of the Insurance Association of India, held in Bombay, the Chairman, Mr. B. K. Shah, made the point that "landed but missing" certificates are issued by the authorities as a "way out of difficulties." Closely related to this problem is the delay in customs appraisal, for the longer the process takes the greater are the chances of pilferage. A suggestion that has been made is that the period of liability of the Port authorities as bailees of goods, which now extends to five to seven days, should exclude the period taken up in completing customs formalities. The acceptance of this suggestion will, perhaps, induce a certain sense of urgency among the authorities. But the question is not merely the fixing of responsibility for pilferage but preventing it. Mr. Shah said: "It is found in practice that the customs officials do not have the cases opened for appraisal and closed in their presence but allow the consignees or clearing agents' representatives to open the cases and to leave them open until the customs examination is concluded. This encourages pilferage." Here is a defect which could be remedied. It is true that pilferage is not a problem peculiar to Indian ports. In varying degrees it exists all over the world and has always existed. But, when it increases beyond a point, it constitutes a slur on Port and Customs administrations. Constant vigilance should, however, be able to reduce the evil. At the New Delhi meeting, an official of the Union Ministry of Transport and Communications gave the assurance that the authorities, who were fully alive to the situation, were taking several measures in order to eliminate pilferage. The results of this action will be awaited with interest.

MARKET GOSSIP

THERE have been some bull liquidation and short-sales in the share markets this week. An impression has come to prevail that the authorities of both Calcutta and Bombay Stock Exchanges would shortly be taking steps to curb the boom in equities. This has primarily been responsible for inducing the bulls to be on the defensive and the bears to try their luck again.

It would appear that, in Calcutta, the authorities are thinking mainly in terms of bringing down the premia on new shares such as Philips Carbon Black, Hindustan Aluminium and East Anglia Plastics. Last week, they introduced the dubious experiment of quoting only the premia on these new shares, especially partly-paid shares. We are unable to see any justification for this practice. Its idea seems to be to mislead the public by not indicating the actual cost of the scrip. Indeed, the low level of the quotation, especially when compared with the rates quoted in Bombay, Madras or Delhi, where they are shown inclusive of the paid-up value, may tempt the unwary to make fresh purchases. So far as the regular speculators are concerned, they know all the particulars and their decisions either to buy or sell will not be influenced by any such tactics. If anyone were to suffer as a result of this measure, it would be the simple folk. Another measure which the Calcutta market authorities are said to be contemplating is the compulsory entry of the buyer's name in the transfer deed pertaining to new shares. It remains to be seen how this ingenious device would work; at worst, it may affect the liquidity of the scrips, but it amounts to a discrimination against the new companies.

So far as the Bombay share market is concerned, the President of the Exchange is said to be seriously considering more effective means of curbing excessive speculation. It is said that the concentrated attention of a handful of operators are Telcos and Standards. He is believed to be contemplating to subject these scrips to special margins based on daily making-up prices, instead of on special making-up prices decided on each settlement, and that he may extend this measure to daily outstanding short-sales also in case the bears are found to be exploiting the situation. Knowledgeable circles are of the view that the scope for evading this rigorous margin system is very little, if not *nil*, the only alternative being to buy the shares for cash. A decision on this move will be taken on 2nd August.

Enquiry needed?

Meanwhile, reports from Calcutta published in the daily Press are demanding, almost in a unanimous voice, that an expert enquiry should be conducted into the speculation that has gone on in recent weeks, as certain powerful parties have joined hands and are indulging in racketeering. In other words, these reports are alleging "share-pushing" by a few persons which, in course of time, may prove detrimental to the interests of genuine investors, especially the smaller fry, who may find one fine morning that they have been left with excessively high-priced shares. Such an enquiry may prove useful, provided it is carried out by competent persons with no axe to grind. It will at least help clear the position and enable one to judge the situation properly and devise suitable measures for safeguarding the interests of genuine investors. From time to time, one hears all sorts of reports about what is going on in the share markets. For instance, it was stated on Friday the 22nd inst. that an operator in the Bombay share market had taken delivery of thousands of Telcos by arranging for finance "outside the market." The figure mentioned was well over 30,000 shares. It is stated that earlier he must have accumulated a still larger parcel, which means that he must be holding at least 60,000 Telcos, which, at today's price, are worth Rs. 1.92 crore. Surely, he must be long at least in a few other scrips, too. Now, who is this operator? How much is he worth? Why has he bought such a large number of Telcos? By operating on such a large scale, what economic service is he rendering to the society? Should such large-scale operations be allowed in the market? Through how many brokers is he operating? What tax does he pay to the Government? Has he not been avoiding the margin system by putting his business through a large number of brokers? If so, will that not help him to avoid or minimise the tax payable to the Government also? There may be many such operators indulging in other scrips. An enquiry of the type mentioned above may bring forth revealing information, only, of course, if it is conducted by persons with expert knowledge of the intricate nature of stock exchange operations, who will not be afraid of exposing powerful interests and have no stake of their own, except their genuine investments. The findings will be valuable at least to students of stock exchanges.

State Loans

Although the borrowing programme of the Central Government was delayed this year by about a month, owing to the continued stringency of the money market, and although there has been no perceptible improvement in the supply of money in the short-term market, the borrowing programme of State Governments has been announced on time. There is only one difference. Last year, the interval between the date of announcement and the date of subscriptions was about three weeks and the list was scheduled to remain open for seven days. This year, a longer period of notice, almost a whole month, has been given to investors to mobilise their funds and invest them in State loans. The scheduled period for the list to remain open is, however, a little short, six days to be precise. The loans will open for subscription on 29th August 1960 and close on 3rd September 1960. Only the Kerala loan will be on offer for a longer period up to 6th September 1960. The Reserve Bank, has, of course, the option to close the list earlier, if the loans are fully subscribed.

As in the past year, the number of borrowing States is 12, but they are not the same. Assam and the Punjab are not borrowing this year. Kerala did not come in with the batch of twelve and entered the market only a little later. This year it has appeared along with the others. Instead of one Bombay State last year, there are now two States, Maharashtra and Gujarat.

The total amount of borrowings sought by all the 12 States, as will be seen from the details of announcement on the next page, is Rs. 75 crores, the highest on record so far. Madras, which borrowed Rs. 8 crores last year, now wants Rs. 12 crores. Maharashtra is the next biggest borrower, with an invitation of Rs. 10 crores. Gujarat has asked for Rs. 5 crores. The total needs of these two are thus Rs. 15 crores, as against only Rs. 6 crores raised by the Bombay State last year.

Two existing loans of Madras, one loan each of Bombay State (Maharashtra), Madhya Pradesh and Uttar Pradesh, aggregating Rs. 12.98 crores, are maturing now and can be converted into the new loans at par.

All the State loans carry a uniform rate of interest of 4 per cent. per annum, but the issue price varies from par to a discount of As. 8. Only the loans of Maharashtra and Gujarat are at par. While the rate of interest now offered is the same as last year, the period of redemption is only nine years, as against 12 years last year. As the same rate of interest is being offered for a slightly shorter period (by three years) than a year ago, the terms are a little more favourable to the lenders this year. The following table shows the total amount of loans raised by the State Governments in the past three years, along with that now offered to the public:

(Amount in crores of rupees)

Year	No. of States	Amount of issues	Amount subscribed	Amount accepted: Cash	Amount accepted: Conversion
1956 ..	15	64.00	74.23	66.53	2.48
1957 ..	2	9.00	12.52	8.58	1.33
1958 ..	11	50.00	65.84	49.18	5.24
1959 ..	12	61.50	102.27	67.65	0.57
1960 ..	12	75.00	..	..	..

In view of shortage of funds with banks, the response to the State loans this year will be relatively poor, as compared with the overwhelming response they had last year, when oversubscriptions alone amounted to no less than Rs. 32.05 crores.

Aftermath of Recent Strike

No precise idea of the line of approach the Government proposes to take in dealing with its employees who went on strike is as yet available. But it is possible to pick up some common threads from the tangled maze of widely varying and at times conflicting reports. It is now certain that the Government, while not wishing to be vindictive, has made up its mind to be firm. Apparently, it does not want to be harsh; nor does it wish to create the impression that it is lenient and soft. As the degree of guilt of those who participated in the strike varies, it is thought that some sort of graded penalty will meet the ends of justice.

All those who participated in the strike, in one way or another, stand to lose, as they will attract any one or more of the penalties laid down, namely, dismissal from service, disciplinary action, adverse entry in character rolls, and loss of pay for the period of unauthorised absence. The only party which appears to have gone scot-free is the self-styled leaders who organised and directed (or misdirected) the strike. Are these political climbers, to whom trade unions are only springboards from where they can leap into seats of power, above the laws of the land? Are there a favoured few in this country, however high their political stature, who can defy bans, evade arrests and instigate illegal activity with impunity? It is, indeed, a sad commentary on the standards of public morality in India that those who indulge in such crude, unseemly antics as squatting in front of offices and prostrating themselves on rail tracks, instead of being roundly condemned, are glorified as heroes. Such acts might have been all right in the days when the country was fighting for its independence and when they were aimed at overthrowing a colonial power. To indulge in them against a constitutionally established, democratic Government is a grave crime. This surely is not the way to organise strikes or to practise trade unionism.

An apt comparison that suggests itself in this context is the recent steel strike in the U.S. A common feature is that both the strikes attracted Presidential intervention. Following the failure of efforts of Federal mediators to bring about a settlement, the U.S. President invoked the Taft-Hartley Act and issued an injunction making it legally obligatory on the striking workers to return to duty and continue on their jobs for the period for which the injunction was valid, namely, 80 days. All workers, almost without exception, promptly bowed to the Presidential order and returned to work. The fact that agreement was reached, thanks to the good offices of Mr. Richard Nixon, the Vice-President, before the expiry of the injunction, is beside the point. The relevant point is that the steel workers obeyed the order of their President and worked hard at their jobs, even though the final outcome was uncertain for several weeks. In painful contrast to this, we found in India the humiliating spectacle of the Government's own employees flouting the Ordinance promulgated by the President. We, as a nation, have yet to show evidence of having respect for the democratic institutions we profess to foster.

Another noteworthy feature of the U.S. steel strike was that, though it was, perhaps, the longest (it lasted for about six months) and one of the biggest witnessed in the country, no untoward incident, involving damage to property or loss of life, was reported throughout its duration. In distressing contrast to this, the strike by the employees of our Government was followed by rioting, stone-throwing, hooliganism and, worse still, sabotage of vital lines of communication. There were derailments on railways, damage to buses, trams, taxis, and even loss of several lives. When will the workers and their leaders in this country realise the folly of cutting off the nose to spite the face? For what else is destruction of means of production which are the basis of their livelihood?

While appropriate punishments will be meted out to individual employees who participated in the strike, the Government is also understood to be considering how to deal with the unions which are guilty of the same charge. Withdrawal of recognition of such unions is reported as likely. The Government should have no compunction in doing so, for there is no reason why it should recognise a union which does not recognise and respect law. It is a distortion of justice to club together law-breakers and law-abiders and treat them as equals.

We find it difficult to appreciate the fear, expressed in some quarters, that withdrawal of recognition would strengthen the rival unions and encourage them to become authoritarian and irresponsible. The workers can form themselves into new unions by choosing leaders who are devoted to genuine trade unionism and eschewing the politicians who led them along the wrong path. Nor do we share the view that it will be construed as evidence of Government's opposition to trade unionism as such. Condoning illegal actions will do more harm to healthy trade unionism in the long run than punishing unions for breach of law.

Wage Escalator Clause

To those who have got used to watching two wings of the Government of India working, sometimes at cross purposes, it may not be a big surprise if one policy of the Government is found negatived by another. It has been, and continues to be, the policy of the Union Government to encourage collective bargaining and voluntary settlement of dispute between employers and employees. But certain practices of the Government cut at the very root of this policy. An instance in point is the wage escalator clause in Government contracts in regard to purchases from manufacturers in the private sector. According to this, the Government will admit claims arising out of higher wages paid to workers only as a result of a statutory enactment or a court or tribunal award; it will not recognise claims arising out of a negotiated settlement. Attention to this has been drawn by the Directors of Burn and Company Ltd., Calcutta, in their latest annual report to shareholders of the Company. They point out that, because of this clause, employers are forced to meet their workmen in courts, for that is the only way of realising the cost of the additional benefits paid to workers. By thus penalising the reasonable employer, they argue, the Government is forcing employers and employees into protracted adjudication proceedings, although both parties might desire an out-of-court settlement. This, of course, sets at naught the efforts of the Ministry of Labour to strengthen collective bargaining and encourage negotiated settlement of disputes. The Directors of Burn and Company do not suggest that, merely because a contractor has, in his contract with the Government, an escalator clause regarding wage increases to labour, he should be compensated for any settlement, however irresponsible. But their stand that Government should not repudiate a settlement, without even examining the merits of the case, is perfectly just and deserves to be considered sympathetically. It may be noted, in this connection, that Mr. J. R. D. Tata, in his statement to the shareholders of T.E.L.Co., also has made a reference to this anomaly. He points out that the price of locomotives supplied to Government awarded by adjudicators fell short of expectations, mainly because it excluded altogether the annual bonus paid to the staff. There is no reason why such bonus should not be taken into consideration, unless, of course, the Government wants the employers to go to a court of law for getting a verdict, every time they have to pay a bonus to workers. Since this is not the intention of the Government, nor is the practice a feasible proposition, the Government will be well advised to change its policy on this question.

World Coffee Situation

There has been a sharp drop in export prices of coffee in recent weeks. The average price secured for Plantation A in the export sale held on the 7th of this month was no more than Rs. 209.34 per 50 kilos, as against Rs. 237.18 fetched at the sale on 4th May last and Rs. 235.73 on 23rd March 1959. Similarly, the rate for Arabica Cherry Flats was lower at Rs. 156.59, as against Rs. 187.87 and Rs. 181.43, respectively, on the aforesaid dates. The drop in export prices is not surprising, in that it has followed the general trend of the world coffee market which has been ruling weak for sometime now. Uganda Robusta

SHARE MARKET EASY

ALL-ROUND FALL IN VALUES

(From Our Own Correspondents)

BOMBAY, 28*th July*

BARRING a few select scrips which continued to attract good investment support, the share market presented a distinctly easy trend during the major part of the week under review. Actually, today, there was a landslide in quite a good number of counters. This was due to apprehensions that the Stock Exchange authorities were contemplating some additional measures to check speculative transactions. The Board of the Exchange met on Tuesday the 26th inst. to review the situation, but no decision was taken and the whole issue was postponed for consideration at the next meeting convened for Tuesday, 2nd August. There were rumours that the Board might levy flat *ex-parte* margins on entire purchases without offset of sales in the place of margins only on outstanding long positions. Further, the President of the Exchange was expected to be given powers to do away with the free limit of business in any counter and to impose outright margin from time to time whenever excessive speculation was found in such counters. The visit of the Union Finance Minister to the City on Saturday was noted and operators thought that he might discuss with the Reserve Bank authorities the question of checking the boom in equities. All these rumours, together with reports of heavy deliveries at the last settlement, fears regarding some sort of control over cotton textiles and delay in the announcement of revised retention prices for steel, led to bull liquidation as well as some bear pressure. Equity values, as a consequence, suffered a marked setback.

Steels were erratic, with rates moving within a narrow range. Induced by reports that the Directors of the Tata Iron and Steel Company at their meeting today might again postpone their decision on the dividend for 1959-60 by a fortnight pending the Government's announcement of new retention prices, Tata Ordinaries which had gone up earlier from Rs. 161 to Rs 162.50, receded and touched Rs. 158.50 today. Towards the close, they were better at Rs. 159.50. The net loss over the week was Re. 1.50. Indian Irons moved down from Rs. 25.80 on Friday to Rs. 24.56 today before finishing at Rs. 24.72. Mukund Irons suffered a fall of Re. 1.50, today's closing rate being Rs. 25.50.

Selling was quite pronounced in the textile section. Centurys began the week at Rs. 526, as against the previous closing of Rs. 524.50. After rising to Rs. 529 on Monday, they retreated to as low as Rs. 497 today before finishing at Rs. 505.50. The net loss over the week was Rs. 19. Morarjis fell by Rs. 20 to Rs. 365, Podars by Rs. 7.60 to Rs 163 *ex-div.*, Gokaks by Rs. 5 to Rs 152.50, Svadeshis by Rs. 4 to Rs. 252 and Edward Textiles by Rs. 3 to Rs 327. Simplex dropped Rs. 2.50 to Rs. 176.50. Swans lost a like amount to Rs. 497.50. Central Indias, Shree Niwas and Tata Mills declined by Rs. 2 each to Rs 120, Rs. 270 and Rs. 44.50, respectively. India Uniteds shed 80 nP to Rs. 13.48 on reports that some prominent Directors of the Company had resigned. A meeting of the Board is being held as these lines are written. Standards were subjected to selling pressure early today, the quotation moving down from Rs. 1,940 to Rs. 1,860. Subsequently, however, they recovered to Rs. 1,900 on hopes that the scheme for the new undertaking would be announced in the very near future. Khataus elicited excellent buying enquiries on renewed expectations of enhanced dividend and climbed up from Rs. 497.50 to as high as Rs. 590 today. At this level, some profit-taking set in and the scrip closed lower at Rs. 562.50. The net improvement over the week was of the order of Rs. 65. Finlays strengthened by Rs 12 to Rs 350, Kohinoors by Rs 4.50 to Rs. 358.50 and Minervas by Rs. 3.50 to Rs. 80.50. Bombay Dyeings advanced from Rs. 68.30 to Rs. 71.90 on Monday. Subsequently, they eased to Rs. 69.30 today before closing at Rs. 70.10.

Sugar shares were subdued. Belapurs, which had hardened from Rs. 386 to Rs. 390 on Monday, receded thereafter and touched Rs. 377 today. Phaltans decreased by Rs. 4 to Rs. 189. Walchandnagars lost Re. 1.25 to Rs. 305. Bhopals were quiet at Rs. 27.50, but Changdeos gained 25 nP to Rs. 34. In contrast to sugars, cement shares were well favoured on expectation of an increase in cement prices. Digvijays picked up Rs. 5 to Rs. 175. Associated Cements at Rs. 146.50 put on a rupee, after being higher still at Rs. 149 on Monday and yesterday. Orissas gathered 24 nP to Rs. 14.16 and Dalmias 20 nP to Rs. 12.

Activity in the bank section was restricted, with values generally looking down. Bank of Barodas declined by Rs. 2 to Rs. 82. Central Banks eased by Re. 1.70 to Rs. 51.80, "A" shares quoting Rs. 53.50, same as last week. Bank of Indias lost 50 nP to Rs. 104.50, "A" shares easing by a rupee to Rs. 105. Unions shed 12 nP to Rs. 6. United Commercials, however, were well favoured, the quotation rising by Rs. 3.50 to Rs. 73.50. Punjab Nationals hardened by Re. 1.52 to Rs. 20.52.

Among engineerings, Khandelwal Alloys slumped by Rs. 31 to Rs. 106. New Standards fell by Rs. 17.50 to Rs. 158. Premier Constructions dropped Rs. 17 to Rs. 360. Alcock Ashdowns receded by Rs. 11 to Rs. 299. Mahindras declined by Re. 1.48 to Rs. 22.76 and Kamanis by 32 nP to Rs. 20.24. Larsen and Toubros lost a rupee to Rs. 50.50, notwithstanding the Chairman's disclosure at the annual meeting on Friday that the Company had received official consent to issue fresh capital of Rs. 31.50 lakhs at par with a view to investing in the new project of Utkal Machinery Private Ltd. Tata Locomotives, after rallying from Rs. 308.50 to Rs. 349 on Monday, declined thereafter and touched Rs. 316 today before closing at Rs. 321.50. Josts Engineerings, however, strengthened by Rs. 5.70 to Rs. 82. Jaipur Metals also hardened by Rs. 5 to Rs. 145.

Among shipping shares, Great Easterns declined by 8 nP to Rs. 17.48, but Scindias picked up 4 nP to Rs. 15.56. In the automobiles group, Premier Automobiles receded by Rs. 2 to Rs. 183. Hindustans lost 8 nP to Rs. 23.

Several miscellaneous industrials suffered a distinct setback. Indian Dyestuffs slumped by Rs. 95 to Rs. 770. Amar Dyes were hammered down by Rs. 67.50 to Rs. 460. Poly Chems dropped Rs. 55 to Rs. 265. Anil Hardboards and Colour Chems fell by Rs. 45 each to Rs. 390 and Rs. 425, respectively. National Rayons declined by Rs. 33 to Rs. 527, after being lower still at Rs. 519. Bombay Burmahs receded by Rs. 27.30 to Rs. 613 *ex-div.* Baroda Rayons climbed down from Rs. 162 to Rs. 138 and Ceat Tyres from Rs. 287.50 to Rs. 260. Premier Tyres fell by Rs. 18.50 to Rs. 98. Philips Carbons eased by Rs. 5.24 to Rs. 18, Killicks by Rs. 8 to Rs. 108, West Coast Papers by Rs. 5 to Rs. 223, Tata Oils by Rs. 3.50 to Rs. 79 and Wimcos by Rs. 2 to Rs. 241. Gwalior Rayons were quoted lower at Rs. 46, as against Rs. 48. Hindustan Levers lost Rs. 2.50 to Rs. 45.50.

* * * *

Madras Stock Exchange

MADRAS, 27*th July*

Equities on the Madras Stock Exchange continued to move up for the second week in succession, thanks to persistent professional support. Towards the close of the week, there was of course, some setback, following profit-taking and rumours that the Government might curb speculative activities in the share market by enforcing stricter credit control. Nevertheless, the closing rates today were generally well above those prevailing a week ago. Textiles were distinctly steady, despite reports of the Government's growing concern over the rise in textile prices and possibility of measures to check the rise. Teas were quite active on reports of strong demand for tea at the recent auctions. Rubbers followed suit. Coffees were initially well favoured, but lacked support at the later sessions. Enlarged enquiries pushed up sugar shares. Miscellaneous industrials were firm, with chemicals and engineerings making much headway.

4 PER CENT STATE GOVERNMENTS LOANS 1969

Name of State	Amount	Issue price per cent
	Rs.	Rs.
1. Andhra Pradesh	900 lakhs	99.75
2. Bihar	300 ,,	99.50
3. Gujarat	500 ,,	100.00
4. Kerala	400 ,,	99.50
5. Madhya Pradesh	500 ,,	99.50
6. Madras	1200 ,,	99.75
7. Maharashtra	1000 ,,	100.00
8. Mysore	400 ,,	99.75
9. Orissa	400 ,,	99.50
10. Rajasthan	500 ,,	99.75
11. Uttar Pradesh	700 ,,	99.75
12. West Bengal	700 ,,	99.75

All the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 29th August 1969.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 29TH AUGUST 1960 AND CLOSE ON 3RD SEPTEMBER 1960 (6TH SEPTEMBER 1960 IN CASE OF KERALA LOAN) OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 29th August 1960.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% Bombay State Development Loan 1960 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3% Madhya Pradesh Loan 1960, Madras Government 3% Development Bonds 1960, Madras Government 3% Loan 1960 and 3% U.P. Loan 1960 will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest at the rate of 3% per annum on the securities of Madras Government 3% Loan 1960 and 3% U.P. Loan 1960 tendered for conversion will be paid upto and inclusive of 28th August 1960. In case of securities tendered in respect of Madras Government 3% Development Bonds 1960, 3% Madhya Pradesh Loan 1960 and 3% Bombay State Development Loan 1960 which are due to mature on 31st July 1960, interest will be paid at the rate of 3% per annum upto and inclusive of 30th July 1960 and at the rate of 4% per annum from 31st July 1960 to 28th August 1960 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows :—

(i) At the office of the Reserve Bank of India at Nagpur in the case of Maharashtra loan.

(ii) At the branches of the State Bank of India and at treasuries and sub-treasuries in the case of Andhra Pradesh, Bihar, Kerala, Gujarat, Madhya Pradesh, Maharashtra, Madras, Orissa, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India in the case of West Bengal loan.

(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Maharashtra State loans.

(v) At the branches of the State Bank of Mysore (except at Bangalore, Mangalore and Gulbarga), the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in Mysore State in the case of Mysore State loan.

(vi) In the case of Gujarat loan the State Bank of Saurashtra at Bhavnagar and its branches in the State of Gujarat will collect applications and forward them to the nearest receiving office.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, New Delhi and Madras will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans, which may not be fully subscribed by that time. To avail of this facility, the persons tendering their applications should complete the SPECIAL OPTION FORM copies of which are available on application from any of the abovementioned offices of the Reserve Bank of India.

NEWS IN BRIEF

A SCHEME for crop insurance is proposed to be introduced in the Punjab during the third Plan period.

The State Trading Corporation of India, the sole distributor of cement, has received enquiries from Pakistan for the supply of about 100,000 tons of cement.

The next meetings of the Import Advisory Council and the Export Promotion Advisory Council will be held at New Delhi on 27th and 28th August, respectively.

A common insurance fund has been set up by the Government of Gujerat. The fund will act as insurer for all Government commercial and industrial schemes. It will be administered by the State Director of Accounts and Treasuries through the State Insurance Officer.

The nine-day strike by the workers of the Buckingham and Carnatic Mills, Madras, has been called off unconditionally, with effect from the 24th inst. The workers of the mills went on strike, following differences between the labour and millowners on the question of implementing the Textile Wage Board's recommendations.

Production of copper ore during January-May 1960 amounted to 182,753 metric tons, an increase of about eight per cent., as compared with the output of 168,683 tons in the corresponding period of 1959. The entire production was reported from the Singhbum district of Bihar State. The production of copper metal was 3,658 tons, as against 3,441 tons in the same period last year.

The Government of India is reported to be considering the possibility of raising the ex-factory price of cement, following representation from manufacturers that the cost of production and packing charges have gone up considerably. One of the proposals is to increase the ex-factory price without pushing up its selling price, probably by a slight reduction in the excise duty on cement.

In order to promote the development of coconut and arecanut cultivation, the Government of India has sanctioned loans amounting to Rs. 7 lakhs to be utilised by the respective States for the purchase and distribution of fertilisers to the arecanut and coconut growers in 1960-61. Of this amount, Kerala will receive over Rs. 4.75 lakhs, Madras Rs. 1 lakh, Orissa Rs. 74,550 and Assam Rs. 50,000.

The Indian Sugar and General Engineering Corporation in the Punjab has entered into an agreement with the British heavy engineering firm of Messrs. John Thompson Ltd. (Wolverhampton, Staffordshire) for the manufacture in India of some of the British Company's major products. The agreement provides for erection at the Corporation's works of a new plate shop capable of carrying out welding to class I specifications.

The production of lead-zinc ores in India during January-May 1960 was 63,137 metric tons. The entire production was reported from the Zawar mines in Udaipur district of Rajasthan State. The recovery of lead and zinc concentrates amounted to 2,252 tons and 4,007 tons, respectively. Lead concentrates are sent to the lessee's smelter at Tundoo in Bihar State for extraction of lead and silver while the zinc concentrates are shipped to Japan for smelting of zinc, as there is no zinc smelter in India at present. The production of lead metal was 1,562 tons.

In a communication addressed to the Mayor of the Calcutta Corporation, the French Embassy in India has proposed the construction of monorail in the city to solve its problem of overcrowding in public transport. Complete installation and equipment for monorail will entail an expenditure of Rs. 1.2 crore per km. as against Rs. 7 to 10 crores for a standard underground railway. Monorails were introduced in France early this year. A single monorail coach, which can accommodate 32 seated and 91 standing passengers, travels at a speed of 60 miles per hour.

The Oil and Natural Gas Commission, at its two-day meeting at Dehra Dun last week, under the chairmanship of Mr. K. D. Malaviya, Union Minister for Oil, drew up a drilling programme for exploration of oil in Cambay, Ankaleshwar, Sibsagar and Jwalamukhi. The Commission reviewed the progress so far made in these regions and felt that the Ankaleshwar and Cambay areas were promissing. Further, it decided to put into operation the second drill at Jwalamukhi for further tests. It also decided to send ten drillers shortly to Soviet Russia and two to Rumania for further specialised training.

A sum of Rs. 2 lakhs has been earmarked by the Government of Madras for schemes to augment coconut production. One of the schemes is designed to double the coconut seedlings to 250,000 per year by setting up three new nurseries, in addition to seven existing nurseries in the State. The Government will also appoint special coconut assistants to carry on the work of development. Besides, the Government has under consideration a scheme for expanding coconut plantations on east coast *poromboke* lands between Mandapam and Thiruturaipundi. The possibility of cultivating cashewnuts in these areas is also being examined by the Government.

The National Metallurgical Laboratory at Jamshedpur has embarked on a major research programme to study the suitability of Indian raw materials for the production of ferro-alloys. The Laboratory will also develop methods for the manufacture of special ferro-alloys, such as low-carbon ferro-manganese and low-carbon ferro-chrome. For this purpose, a pilot smelting furnace with a capacity of one ton ferro-manganese per day is being installed at the Laboratory. The pilot furnace is expected to yield useful information on process efficiency, power and electrode consumption, percentage recovery and other relevant data on various production techniques. Ferro-alloys are essential in the production of all types of steel. Their function is to provide the alloying element to be incorporated in steel and, at times, act as an agent for removing impurities in the course of smelting operations. Common ferro-alloys in use are ferro-silicon, ferro-manganese, ferro-titanium, ferro-chromium, ferro-vanadium, ferro-molybdenum and ferro-tungsten. Excepting ferro-manganese and ferro-silicon, other ferro-alloys are largely imported.

Production of civilian goods in ordnance factories is likely to fall, in view of the greater attention now being paid to enhance the production of defence requirements, following border disputes in the Northern frontiers. The present ratio of military equipment to items of general use is seven to one. Among the items the ordnance factories have been making for some years are sporting rifles and cartridges, mathematical and medical instruments and precision tools. More recently, however, items like expresso coffee machines, hair clippers and cinema projectors have been made, although they have not yet been put on sale. Under orders from the Government's own departments, the defence factories have been making leather bags and *chappals* for postmen and uniforms for railwaymen, besides fulfilling some of the heavy engineering requirements of the railways, the dockyards and of private concerns. It is claimed that India was able to save foreign exchange to the tune of Rs. 34 crores during the three years ended March 1960, as a result of increased production in ordnance factories for both military and civilian use.

A Bill seeking to regulate payment of dividends to preference shareholders is among the 27 new Bills, to be introduced in the next session of the Lok Sabha which will commence on 1st August. Six Bills to be introduced are to put into effect the metric system of weights and measures in different fields. These are: the Indian Post Office (Amendment) Bill, the Standards of Weights and Measures (Amendment) Bill, the Indian Tariff (Amendment) Bill, the Tea (Amendment) Bill, the Central Excise Laws (Metric System Adoption) Bill, and the Motor Vehicles (Amendment) Bill. The Central Maternity Benefit Bill is to be introduced to regulate the payment of maternity benefits to women workers employed in factories, mines, plantations, etc., on a uniform basis. The Employees' Provident Funds (Amendment) Bill will reduce the limit of employees' strength for coverage of an establishment under the parent Act from 50 or more to 20 or more persons. The other Bills to be introduced include the Indian Telegraph (Amendment) Bill, the Indian Wireless Telegraph (Amendment Bill), the Indian Trade Unions (Amendment) Bill, the Indian Aircraft (Amendment) Bill, the Khadi and Village Industries Commission (Amendment) Bill, the Rubber (Amendment) Bill, the dustries (Development and Regulation) Amendment Bill, the Bilaspur Commercial Corporation (Amendment) Bill, the Delhi (Urban Areas) Tenants Relief Bill, the Tripura Excise Law (Repeal) Bill, the Railway Passenger Fares (Amendment) Bill and the International Development Association Bill.

PERSONAL

MR. M. Ct. Muthiah, Chairman of the Indian Overseas Bank Ltd., has left on a business tour of the U.K. and the Continent.

Mr. Rajkumar Raghunath Sinha, until recently Indian Consul-General in San Francisco, has been appointed Ambassador of India to Cambodia.

Mr. S. C. Sen Gupta, Postmaster-General, Bihar Circle, has been appointed Deputy Director-General of Posts and Telegraphs and a member of the Central P. and T. Board.

Mr. S. M. Mohta has been elected President of the Tea Association of India, Calcutta, for the year 1960-61. Mr. S. R. Daga and Mr. G. D. Kothari have been elected Senior Vice-President and Vice-President, respectively.

Mr. M. K. Mathulla, Managing Director of the Hindustan Machine Tools, Bangalore, has left for Tokyo to finalise plans for the proposed watch factory to be set up as an adjunct to the H.M.T. with Japanese collaboration.

Mr. F. Edwards of the Belapur Company, Ltd. and Mr. M. L. Apte of the Phalton Sugar Company, Ltd. have been re-elected President and Vice-President, respectively, of the Deccan Sugar Factories Association, Bombay, for the year 1960-61.

Dr. P. S. Deshmukh, Union Minister for Agriculture and leader of the Indian agricultural delegation to Soviet Russia, left for Moscow on Tuesday this week. The delegation includes, among others, the Agricultural Ministers of U.P., Rajasthan, Andhra Pradesh, Madras and Mysore. It will study the various facets of the development of Soviet agriculture.

MADURAI.

Ref. No.....

23rd June 1960

The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
MADRAS-1.

Dear Sir,

There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-58. We are operating them on mofussil routes and none has experienced any major breakdown so far.

Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.

In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.

Thanking you,

Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,

Managing Director.

We thought you might like to read this

JWT/AL-887a

This testimonial explains Leyland's enormous popularity in over 50 countries in the world. The exacting standards of precision combined with fine craftsmanship makes Leyland the most wanted vehicle today.

Ashok Leyland COMET
- precision built to give lasting service

CRITERIA FOR INVESTMENT

IT is through wise investments, promptly undertaken and vigorously executed, that enterprises grow from strength to strength. What factors guide the giant enterprises in their investments in expansion? An answer to this question is to be found in the speech delivered by Lord Heyworth, ex-Chairman of Unilever Ltd., at the last annual meeting of the Company, now made available in pamphlet form in India. Unilever is fully qualified to furnish the answer, for in the fifties alone (1950-59) it invested £337 million in fixed assets and £176 million in working capital; of the capital expenditure, the U.K. and the European countries accounted for 29 per cent. each, the Middle East and Americas (North and South) for 13 per cent. each, Africa for 12 per cent. and the Orient for 4 per cent.

What have been the chief considerations behind these massive investments? Candidly enough, Lord Heyworth said: "We invest money where we hope to make money." In some quarters, profit is, of course, suspect. But it is well to remind them that profit is the result of efficient service, and also, without it, no further investment and, therefore, no further progress would be possible. But the principle of return is not applied blindly. Lord Heyworth said: "To ignore that principle would be wasteful, and we require all our management to take account of it, but, in practice, it cannot always be applied simply and blindly." What is aimed at is a rising return on capital employed, consistent with proper replacement of fixed assets, social responsibilities towards employees and maintenance of competitive power through adequate research; Unilever employs 3,500 men on research alone. He went on to stress the point: "We do not always expect to see a quick return on our capital. We are in business for a long time, and where we go, we mean to stay. If we have to spend a long time and a lot of money in building an enterprise up, we will do it, provided we are reasonably sure that the return, in the long run, will match the effort." This, in fact, is the essence of the long-range view in investment.

What questions does Unilever put to itself before it undertakes investment in a new country or region? The questions, according to Lord Heyworth, are: "Is the population going up? Is the general standard of living rising? Have any strong competitors dug themselves in before us? Can we get materials to build a factory, labour to work in it, transport to carry our goods away? Can we get materials to make products to our standard of quality? Is the Government fairly stable? What kind of a view does it take of foreign investors? Shall we be able to get our profits out, if we want to (often we prefer to leave them there for the development of the business)?" To a country which would like to see enlightened foreign companies like Unilevers participate in its own material progress, the questions are suggestive of the kind of economic policy it should pursue. In particular, it should, besides possessing a stable Government, adopt a helpful, constructive attitude towards foreign investors.

L. I. C.'S CREDITABLE RECORD

The statement made by Mr. P. A. Gopalkrishnan, Chairman of the Life Insurance Corporation of India (full text on page 194), presents a fairly clear picture of the many-sided progress of the Corporation in 1959. Not only in respect of new business, where the Corporation scored a brilliant innings, but also in the various related fields, the performance was demonstrably better. Although there are shades here and there, such as the poor progress of the *Janata* scheme, the overall picture is illumined by the progress made in many directions.

New life business written by the Corporation during the year was 25 per cent. higher at Rs. 429 crores, as against Rs. 345 crores in 1958 which itself was 22 per cent. more than in 1957. The 1958 pace of growth was, therefore, not only maintained but improved upon. Consequently, new business last year exceeded the target of Rs. 415 crores fixed under the Corporation's own five-year plan which aims at reaching the figure of Rs. 1,000 crores per year by the end of 1963. Foreign business, though it forms only a very small portion of the total business of the Corporation, showed a marked improvement from Rs. 5.62 crores in 1958 to Rs. 9.47 crores. This is, perhaps, a reflection of the new impetus given to overseas business, as a result of the Chairman's visit to some of the more important overseas markets of the Corporation in the second half of 1958 and the first half of 1959.

The figures of new business can give an altogether distorted picture, unless account is taken of lapse ratio which indicates the quality of the business written. Figures relating to lapse experience in 1959, it is said, are being collected. Data relating to previous years, already collected, show that the lapse ratio has been steadily declining. Net lapses, that is, lapses less revivals, which amounted to 7.6 per cent. of the mean business in force in 1955, the last year of insurance under private management, after rising to 9.1 per cent. in 1956, the first year of nationalisation, declined to 6.4 per cent. in 1957 and 5.1 per cent. in 1958, indicating that the improvement in business has not been at the expense of quality.

The progressive decline in renewal expense ratio is an indication that the economy measures, said to have been taken by the Corporation, are beginning to bear fruit. The rapid increase in new business also appears to have contributed to lowering of the renewal expense ratio. The ratio, which was 15.89 per cent. in 1956-57, declined to 15.46 per cent. in 1958. As a result of the tighter budgetary controls introduced last year, the renewal expense ratio declined further to 12.92 per cent. in 1959. This, it must be said to the credit of the Corporation, compares favourably with the ratios of some of the best companies in the pre-nationalisation days.

There are a few other progress indicators worth mentioning. The life fund, which stood at Rs. 380 crores on the day of nationalisation, has increased to Rs. 493 crores at the end of 1959. Total assets have also similarly risen from Rs. 414 crores to Rs. 552 crores. The Corporation's annual income, comprising premium and income from investments, has steadily advanced and crossed the Rs. 100-crore mark to touch Rs. 105 crores in 1959. Disbursements to policyholders and their beneficiaries, by way of claims, have also shown a commensurate rise. Payments on this account in 1959 alone have aggregated Rs. 28 crores, bringing total claims settlement since nationalisation of life insurance to Rs. 82 crores.

It is heartening to note that the efforts to tone up the administrative machinery and gear it to enable the Corporation to reach its five-year plan target of Rs. 1,000 crores of new business per year are yielding encouraging results. The Chairman quoted figures to prove that the output of the Corporation has improved. According to him, the average output of a field officer, which was Rs. 4,90,000 of new business in 1957, has increased to Rs. 6,50,000 in 1958 and to Rs. 7,50,000 in 1959. The average output of agents has similarly improved from Rs. 31,067 of new business in 1957 to Rs. 37,494 in 1958 and to Rs. 44,435 in 1959. The Chairman hoped that the output of the clerical staff would also register a similar improvement, thanks to the administrative training scheme now in progress. Mechanisation of routine and calculating work, which the Corporation is having under consideration, should also contribute to higher turnover of work.

The Corporation seems to be responsive to the criticism of the rapid proliferation of branch offices of the L.I.C. For the Chairman explained at length the method followed in establishment of branch or sub-offices. The annual business potential, he said, was the main criterion. He has given the assurance that every care is taken to see that none of the new offices turns out to be uneconomical. If the Corporation keeps this always in mind, the aforesaid criticism, the sole object of which is to keep the Corporation vigilant against incurring infructuous overhead expenses, will not have been in vain.

The only discordant note in an otherwise harmonious performance is the disappointing record of the *Janata* scheme. The scheme, it is now officially admitted, has not been a success, even though it was worked only on a pilot scale. It is, therefore, surprising to learn that, undeterred by the failure, the Corporation has recently launched another scheme, which has more or less the same objective as the *Janata* scheme, presumably as a substitute for the latter. It is not known in what respects the new scheme differs from the *Janata* scheme, so that it can reasonably be expected to succeed where the other has not. Surely, it is not advisable for the Corporation to indulge in costly experiments, in the name of taking insurance to the doorstep of the common man.

WHITHER CUBA?

It may not be wrong to infer that Cuba has now virtually joined the ranks of communist nations. Cuba has not merely drifted away from the free world countries, especially the U.S. which has contributed much to its economic progress all these years, but also established strong economic contacts with the three powerful countries in the communist bloc, namely, Soviet Russia, China and East Germany. The first link was forged with Russia about five months ago, when Cuba accepted the Russian offers to buy a large quantity of sugar every year for a period of five years and to grant a credit for $100 million for the purchase of machinery and equipment, as well as provision of technical assistance. This has since been followed by the conclusion of two barter agreements with Russia and Communist China, under which Cuba will sell 700,000 tons of sugar to Russia and 500,000 tons to China in exchange for certain goods supplied by the two countries. An agreement has also been entered into between the Foreign Trade Bank of Cuba and the Inwenst-Export Organisation of East Germany on assistance to Cuba for establishing a number of enterprises. Meanwhile, the Cuban Government has seized the American-owned Esso and Texaco refineries, as also the British-owned Royal-Dutch Shell Refinery and, more recently—on Friday last week—placed under "administrative sequestration" three plantations belonging to the Cuba-American Sugar Mills Company, the largest U.S. sugar firm operating in Cuba.

Cuba's recent deal with Russia provides for the supply by the end of this year of 700,000 tons of sugar at the minimum price of 3.25 cents per lb. fixed by the Cuban Government. The major portion of the payment for sugar, to the extent of 80 per cent., will be made in Russian goods, the balance being paid in U.S. dollars. Under the barter-agreement concluded with China, Cuba will sell 500,000 tons of sugar annually over the next five years. In the first year, China will pay 20 per cent. in sterling and the rest in merchandise. During the remaining four years, sugar (both crude and refined) will be supplied, along with nickel, copper, manganese, chrome, cobalt, tobacco, beans, coffee and cow hides in exchange for China's agricultural, textile, mining and electric machinery, electronic and telecommunication equipment, steel, raw materials for a pharmaceutical industry, vegetable oil, tea, salt, and frozen pork, fruits and other articles. Cuba will also send a mission to Peking to sign a long-term credit pact, under which China will supply machinery and equipment for Cuba's industrial development. Details regarding either the price China will pay for Cuban sugar or the amount of credit to be given are, however, not available. Commenting on the barter agreement between Cuba and China, *The Times* of London feels that, in effect, "China takes from Cuba goods she does not want in exchange for goods she cannot share." The implications of this statement is that the Chinese motive is purely political and not economic.

The latest Russian-Cuban sugar deal was a sequel to Mr. Khrushchev's offer to buy 700,000 tons of sugar, which was made immediately after President Eisenhower announced a cut of an equivalent quantity in the import quota for Cuban sugar for 1960. The reasons that prompted the U.S. Administration to take this decision as explained by President Eisenhower have already been referred to in this journal (*vide* page 104 of the issue dated 16th July), so that it is unnecessary to go into them again. Suffice it to say that the U.S. Government's decision is fully justified. Surely, the decision would not have been taken, if Cuba had not vilified the U.S. and moved closer economically and politically to Russia. Is it not too much to expect the U.S. to pay the high subsidised price of 5.25 cents for every pound of sugar it buys from Cuba, when the same is sold by Cuba to Russia at ludicrously low rates, 2.78 cents per lb. under the first deal covering 345,000 tons and 3.25 cents under the second deal mentioned above?

Be that as it may, the aforesaid change has prompted the International Sugar Council to step up the 1960 export quotas of its producing countries from 87.5 per cent. of basic tonnages to 100 per cent., with a proviso that the quotas are to be increased further to 105 per cent., when the world price of sugar "has been confirmed as being established between 3.25 cents and 3.45 cents a lb." This decision was announced by the Council at its meeting in London on the 21st inst. The reason adduced for the decision was that a "structural change" in the world free market for sugar had occurred. The phrase "structural change" is understood to refer to the cutting of Cuba's sugar export quota to the U.S. The Council has also announced that, if, as a result of the loss of its U.S. quota, Cuba is obliged to exceed even its increased export quota, such should not be regarded as a transgression of the rules of the International Sugar Agreement.

Since the U.S. purchases of Cuban sugar are not covered by the normal export quotas fixed by the Council, the upward revision in the basic export tonnages now announced will enable Cuba to make up for the loss of the American market by selling more to other countries. Apparently, the Sugar Council must have thought it better to accommodate Cuba's point of view than to run the risk of Cuba resigning its membership of the Sugar Agreement.

ANOTHER REPORT ON AGRICULTURE

A strong plea to ensure a co-ordinated system of agricultural education, research and extension suited to the unique characteristics and requirements of the country's cultivators has been made by the second joint Indo-American Team, in its report submitted to the Government of India last week. The Team considers such a co-ordination of some of the organisational and administrative efforts as the "key to increased and more efficient agricultural production." It was mainly concerned with an evaluation of agricultural education, research and extension in the country and has sought to bring into bold relief the inter-dependence of these three functions. It has stated that research is required to solve the cultivators' problems and education is necessary to develop research talents through which science and technology serve agriculture. Extension is the only effective means of informing cultivators of research findings and of securing their acceptance of new ideas that can accelerate the rate of change in food production. Education, in turn, is required to develop the extension competence and leadership necessary to bridge the gap between research workers and cultivators.

It may be recalled that the second Joint Indo-American Team was set up by the Government of India in September 1959, with Dr. M. S. Randhawa, Vice-President, Indian Council of Agricultural Research, as its Chairman. The members of the Team included three representatives of high standing from American Land Grant Universities and one from the U.S. Department of Agriculture, in addition to a group of Indian experts on the various facets of agriculture. The first Joint Indo-American Team, comprising five Indian experts and three American specialists, had been set up in 1954. The recommendations of this Team were accepted in principle by the Government. The subsequent establishment of the first Agricultural University in India at Rudrapur in U.P., in particular, was the result of the suggestions made by the first Team. Incidentally, it may be noted that the second Team has now favoured the continuance of "sisterhood arrangements" for technical assistance, initially made in 1955, with the American Land Grant Colleges under the Inter-University Contract Programme. It has, however, felt that technical assistance should largely be concentrated in fewer colleges with special emphasis on those institutions which are likely to develop into agricultural universities.

One of the significant suggestions made by the present Team relates to measures for streamlining the organisation of Agriculture and Community Development from the Central Government down to the village level. This streamlining, according to the Team, should include the appointment at the Centre of a Minister of Agriculture, Community Development (Extension) and Food, who may be assisted by Ministers or Deputy Ministers. At the State level, the recommendation is that the Minister in charge of Community Development should also be the Minister for Agriculture, Animal Husbandry, *Panchayats* and Co-operation. It adds: "Agriculture and animal husbandry should provide the techniques, *panchayats* the organisation and co-operation the finance. It is necessary that all these three must be linked up effectively."

On the question of agricultural education, the Team has stressed the need for evolving an agricultural educational pattern with a well-defined objective to encompass agricultural teaching from the *manjri* type vocational school and the multipurpose high school to the agricultural college and the university. Regarding agricultural education below college level, the Team has suggested that there should be one agricultural school of the *manjri* type in each district, with adequate facilities and well qualified teaching staff. The Team has made no bones about the fact that the rural institutes,

(Continued on page 227)

BHILAI FEEDS
OVER 120,000 TONS

OF BILLETS TO INDIA'S RE-ROLLING MILLS

Billets worth about Rs. 6 crores have been supplied to Re-rolling Mills all over the country by the Bhilai Steel Works since December 24 last when its Billet Mill went into operation.

The Re-rolling Mills will convert these billets into a variety of finished marketable products like bars, rods, wires and other light sections. With these supplies, the long-felt need for larger quantities of billets by the country's Re-rolling industry has been met. A small quantity of Bhilai billets has even been exported abroad.

Bhilai, one of the three steel plants, owned by Hindustan Steel Limited, has thus already helped in the productivity and stabilisation of the economy of an important industry of the country.

The Billet Mill at Bhilai has an annual capacity of 427,000 tons, out of which 150,000 tons will be for sale and the rest will be used in the Merchant Mill for conversion into rounds, angles, beams, channels, light rails etc., of which there is a great demand in the country.

HINDUSTAN STEEL LIMITED

LONDON LETTER

BRITAIN'S OLDEST STORY

INDUSTRY EXHORTED TO EXPORT MORE

From Our Own Correspondent

LONDON, 22nd July

AT the beginning of this week, the Prime Minister met four hundred business men and industrialists from the Association of British Chambers of Commerce, the Federation of British Industries and the National Union of Manufacturers, in the opening move of a campaign which the Government are opening up and down the country to stimulate British exports by exhortation.

The *Times* newspaper summarised the Prime Minister as saying: "Still not good enough. What we have to do is to do even better"—and that, the newspaper commented, is by now the oldest story that can be told about British exports. And it added, in a comment which reflected the views of the spokesman for the audience, "If general exhortation could produce exports, the export trade would by now be flourishing to everybody's satisfaction."

The trouble is that Britain's share in world exports and manufactured goods has been steadily falling and, although other factors in the home and overseas position have enabled the Government, the City and Industry alike to avoid worrying about the export trade, the time has now come when the margin of safety in this country's overseas balance will not permit the future of exports to be ignored any longer."

"Export Joy"

Nothing that the Prime Minister had to say was particularly new, although he drew applause by describing hard selling as a continuing and increasing drive for increased efficiency and *in keeping to delivery dates.* The note of humour which he tried to introduce in his speech fell flat on an audience who were well aware that the subject in hand was a grim and difficult one. The Germans, according to the Prime Minister, had coined a word which meant "export joy," but there was little joy in this first and most important meeting of Britain's exporters. They are looking not only at the present position but at the long-term outlook, and there are few who view Britain's exclusion from the European Common Market without misgiving.

Even though the City of London has made a handsome contribution to Britain's invisible exports, the Prime Minister stressed the need for this country to expand the sale of its services; banking, insurance; broking, finance and merchanting. And, here again, the future of Common Market will affect the City, for there will be a greater tendency for the European Six to rely upon their own services for their own trade.

Reasons

Since the initial meeting, a good many comments have been made, particularly by small firms, as to the reasons for Britain's lagging behind in the general world expansion in export trade. These reasons appear to be various: some say there are too few exporters, "forty firms accounting for 30 per cent. of manufactured goods exported"; some say that, with the credit squeeze, they cannot get enough home credit to buy the materials for export, and they cannot offer as much long-term credit as their competitors; some aver that manufacturing industry does not, broadly speaking, contain the ability which active export trade requires; others maintain that there is too much paper work involved and some that they cannot get enough steel!

The weaknesses in export do not run through all trades. The engineering industry, for instance, is continuing to improve. Over the *nine months* to the end of March this year, the volume of new orders coming in for exports exceeded in rate of increase those for the home trade. And the number of orders on hand for exports were also proportionately greater than that for the home trade. Deliveries significantly had not shared in this improvement and were slipping back. This means that delivery dates must be growing longer and that a backlog of orders must be beginning to pile up. This difficulty, of course, is one that can be resolved domestically, and ought to be so resolved, if the competitive strength of the British engineering industry is to be maintained.

But such, unfortunately, is not true of the problem facing Britain's export industries as a whole. They are either not selling hard enough or not being sufficiently competitive. Late deliveries, excessive costs, inadequate selling methods, are among the reasons why some firms fall behind. Again, these are matters which the firms concerned must put right for themselves. But the exhortations which the Government are beginning to make throughout the industrial regions of this country are apparently designed to draw a greater number of firms into the export trade, and here it may be that the Government will have to ask themselves whether they are giving enough help or whether Britain's efforts to sell overseas are adequate to assist newcomers to overseas selling.

But, perhaps, beyond all this something more fundamental—whether the general forces covering the flow of trade through the world are running with or counter to British policy. The immediate issue, as British industry sees it, is the future of the Common Market, but, on that matter, oddly enough, the Government seems to have lost interest. There is no doubt they will be told, with increasing insistence, in the months ahead that they have got to think again.—*All Rights Reserved.*

The British Post Office has announced plans for what is claimed to be the largest transatlantic telephone cable system directly connecting the U.K. with the U.S. The total cost of the project is estimated at about £12 million to be shared equally between the two countries. It is scheduled for operation in 1963. The project will provide 128 telephone circuits. It is the fifth cable between the two continents and represents a further stage in plans for the development of a world-wide system of submarine telephone cables.

Shortage of manpower in Britain, which became apparent in January last, continues to grow. The number of vacant jobs in July was 379,000, about 19,000 more than in the previous month. This is the highest level touched since July 1956, when it was 397,000. The number of persons who are out of work declined by 13,208 to 291,919, the smallest figure since October 1957, when 275,000 persons were unemployed.

An international convention of business men will be held at Karachi in Pakistan in December next under the auspices of the International Chamber of Commerce. The convention is convened mainly with the object of providing an opportunity to the industrialists and business men of capital-exporting countries to assess the requirements of those importing capital and to enable them to exchange views on matters of mutual interest.

WHEN your shoes get wet, stuff them with paper and dry them away from heat.

If muddy, remove lumps with a blunt knife immediately after wear. Then sponge down using a minimum of water and wipe with a dry rag. Do not wet any part more than necessary. Do not rub hard or gritty particles will damage leather.

When dry, apply Bata Polish or Cream. Never use polish or cream to remove dirt; get the dirt off first.

Polish by brisk but gentle use of a soft Bata Brush. Finish off with a dry soft cloth.

Have your shoes repaired at first signs of wear. A new heel or sole will save permanent injury. Take advantage of Bata Repair Service.

WORKING OF STATE FINANCIAL CORPORATIONS

SUBVENTIONS FROM GOVERNMENTS CONTINUE

AN important feature common to the working of six State Financial Corporations (Bombay, Andhra Pradesh, Assam, Bihar, Madhya Pradesh and Mysore) which have sent us their reports for the year ended March 1960 is that all of them still rely on subventions from the State Governments in order to pay the minimum dividend rate of 3½ per cent. guaranteed under the State Financial Corporations Act of 1951. This is due to two factors. First, the net profits earned by the Corporations have not increased to any significant extent, because the volume of idle funds held by them is quite large, thanks to the generally low level of loan disbursements as compared with the loans actually sanctioned, as will be seen from the table given at the foot of the page. This means that the demand for accommodation from these institutions is not as large as was anticipated. Secondly, the incidence of direct taxation (income-tax, corporation tax and surcharge) is heavy in relation to their profit-margin. In the case of Bombay, Assam and Bihar, the net profit earned would have been more but for the substantially large interest charges on bonds, deposits, debentures and borrowings.

The quantum of subventions has, however, declined in the case of Bombay, Andhra Pradesh, Bihar and Madhya Pradesh Corporations. Mysore is a relatively new entrant, having been established on 30th March 1959. This trend may be expected to continue, resulting in the disappearance of subventions in the next few years. For the scope of the Corporations' activities has been greatly widened. For instance, under the credit guarantee scheme for small industries, introduced with effect from the 1st inst., the State Financial Corporations can avail themselves of the guarantee facilities in respect of advances granted to small-scale industries. Further, a larger provision is made in the third Plan for the development of small industries and great stress is being laid on decentralisation of manufacturing activities as well as on reducing concentration of economic power through encouragement to small *entrepreneurs*. The completion of reorganisation of States should be an additional advantage, as it has put an end to uncertain factor and generated a fresh fervour among State Governments for speeding up industrial and agricultural progress.

A detailed review of the Bombay State Financial Corporation's results and a brief review of those of the Madhya Pradesh Financial Corporation have already been made in these columns (*vide* pages 1,074 and 1,122 of our issues dated 18th June and 25th June 1960). It is, therefore, proposed to confine this article only to the remaining four Corporations. Of these, a comparative study of the working during the years 1959-60 and 1958-59 cannot be done in respect of the Mysore Corporation, because, as already mentioned, it was established only on 30th March 1959.

Andhra Pradesh

The Andhra Pradesh State Financial Corporation's review of business for the year 1959-60 reveals that there was a steady inflow of applications for financial accommodation, the total amount involved being Rs. 62.54 lakhs, while the sum sanctioned was Rs. 42.01 lakhs, as against Rs. 15.94 lakhs in 1958-59. The sanctions given since the inception of the Corporation four years before aggregate Rs. 185.23 lakhs, the total of effective sanctions being lower at Rs. 130.22 lakhs. But the actual disbursements of loans during 1959-60—the fourth year of the Corporation—were very small; they aggregated no more than Rs. 11.43 lakhs which compare unfavourably with Rs. 26.00 lakhs in the previous year. The total of loans outstanding as at 31st March 1960 was Rs. 68.41 lakhs, as against Rs. 62.30 lakhs on the corresponding date a year before. On the same date, a sum of Rs. 2.66 lakhs by way of instalments and Rs. 98,994 by way of interest were in arrears. Loans for an aggregate balance of Rs. 4.07 lakhs were paid back before the due date. Debts due from loanees whose management the Corporation has taken over are no less than Rs. 10.98 lakhs.

The Corporation's main function has been to assist and aid new industrial concerns belonging to the medium and small-scale sector started under the development programmes in the private sector. The applicants for assistance were largely from food processing (rice and flour mills, and solvent extraction plants), textiles, tobacco, chemicals, paper and strawboard. The Corporation has been careful enough not to overestimate the demand for accommodation from its resources. This is evident from the fact that it has not sought to augment its resources through borrowings and acceptance of medium-term and long-term deposits. Even as at the end of March last, its paid-up capital was well in excess of effective sanctions and cash balances and investments in Government securities stood at Rs. 47.88 lakhs and Rs. 31.33 lakhs, respectively. The major portion of the Corporation's income was still from investments and deposits. Thus, the interest on these assets fetched Rs. 3.58 lakhs, as against Rs. 3.28 lakhs by way of interest on loans. The reserves of the Corporation now stand at just Rs. 2.87 lakhs, while the subvention drawn from the State Government so far comes to Rs. 14.14 lakhs. In other words, the Corporation has still a long way to tread before it reaches self-supporting position. Alluding to this position, Mr. Bikkani Venkatratnam, Chairman of the Corporation, observed in his speech at the Corporation's annual meeting held recently:

"In view of the insufficient margin between the lending rate and the minimum dividend payable on the capital which forms the main corpus of the Corporation's working and the tax liability the profits attract, it has not been possible to make the working results self-sufficient. This unsatisfactory position would continue till the loans increase to a high level. At the seminar held at Hyderabad in July 1959, under the auspices of the Reserve Bank of India, for considering the financing methods to small-scale industries in our country, the working of State Financial Corporations came up for review and several suggestions were made to reorientate their policies and improve their methods of working so as to make them more useful to the industrial development envisaged in the Plans. I am hopeful that a definite shape to the working of the Corporations would be given as a result of these deliberations. In view of the inherent risks involved in long-term lending, which is a new feature to our country, proposals are under consideration between the Reserve Bank of India and our State Government for creating a special reserve fund out of the dividends received by them to strengthen the reserves of the Corporation with certain conditions attached thereto as regards the quantum and the use thereof. I trust these proposals would fructify soon for establishing this fund."

An interesting point made by Mr. Venkatratnam was that, as the commercial banks, too, were beginning to take interest in medium term loans, they might turn out to be potential competitors to State Financial Corporations. Proceeding, he observed:

"But the Corporations should feel satisfied in catering to promotional finance, while, ultimately, it is the purview of the other financial agencies and the capital market, in the case of corporate units, to help strengthen their capital needs. In this way, I envisage a greater need of co-ordination in functions between commercial banks and Corporations so as to fulfil their respective roles in the general economic and industrial development of the country."

Assam

The steady progress made by the Assam Financial Corporation in handling loan operations in 1958-59 was maintained during the year 1959-60 also. In the latter year, the Corporation received 46 loan applications for an aggregate amount of Rs. 113.63 lakhs and there were 26 pending applications involving Rs. 71.77 lakhs at the end of 1958-59. The Corporation sanctioned 30 applications together amounting to Rs. 51.72 lakhs, as against Rs. 46.25 lakhs in the previous year, and one application for Rs. 2.50 lakhs was deferred. The loans disbursed were also larger, being Rs. 40.43 lakhs, as against Rs. 29.00 lakhs.

During the six years of its working, the Corporation sanctioned loans amounting to Rs. 205.47 lakhs, of which Rs. 21.85 lakhs were either declined by the parties or subsequently cancelled by the Board. Out of the balance of Rs. 183.62 lakhs, loans aggregating Rs. 13.80 lakhs sanctioned to four industrial concerns were repaid in full. Thus, the effective amount of sanctioned loans as on 31st March 1960 was Rs. 169.82 lakhs. The total disbursements since the establishment of the Corporation aggregate Rs. 136.32 lakhs. Excluding Rs. 16.68 lakhs received back from the borrowing concerns towards repayment of principal and Rs. 12.32 lakhs repaid in full settlement of dues from four industrial concerns, the loans outstanding at the end of 1959-60 stood at Rs. 107.32 lakhs. The report does not give a clear picture of instalments and interest overdue. From such information as is provided, it would appear that about Rs. 1.77 lakhs are due by way of instalments and Rs. 42,500 by way of interest.

The financial assistance rendered by the Corporation covers a wide range of industries, existing as well as new. The new industries include, among others, automatic roller flour mills, timber treating and seasoning plants, tea chests and cold storage plant. Among the industries receiving aid for purposes of expansion and improvement, special mention must be made of tea gardens and engineering concerns.

Although the Corporation earned a larger profit of Rs. 4.93 lakhs in 1959-60, as against Rs. 4.72 lakhs in the previous year, the subvention received from the State Government was higher at Rs. 1.62 lakh, as against Rs. 1.48 lakh. This was due to larger provision for taxation. The Chairman of the Corporation, Mr. J. P. Chaliha, is, however, confident that the Corporation can look forward to a substantial reduction in the amount of subvention in the current year, provided it is not called upon to meet unexpected demands. Out of its income by way of interest aggregating Rs. 6.91 lakhs, the share of loans and advances was as high as Rs. 5.85 lakhs. This shows that the Corporation has firmly established itself as a provider of industrial finance. The rate of interest charged by the Corporation on its loans remained unchanged at 7 per cent. per annum, with a rebate of ½ per cent. for punctual payment of interest and instalments of principal. It may be noted here that, during the year 1959-60, the Corporation raised funds by the issue of 12-year bonds of the face value of Rs. 50 lakhs and bearing interest at 4½ per cent., in order to replenish its resources. The issue was oversubscribed and the total subscriptions accepted amounted to Rs. 55 lakhs, that is, 10 per cent. in excess of the amount issued. Referring to the outlook, Mr. J. P. Chaliha observed:

"Assam has great potentialities for industrial development but, the progress in this direction has so far been retarded mainly due to the lack of adequate transport facilities and non-availability of cheap power. With the completion of the Umiam hydro-electric project in the U.K. and J. Hills, the plant for generation of electricity from natural gas at Nahorkatiya, and the bridge over the river Brahmaputra at Pandu, Assam can look forward to an all-round industrial development. But the question is whether the talented young men of the State are going to avail of these facilities by setting up independent industrial units."

The last sentence in the aforesaid quotation is a little provocative. Why should not young *entrepreneurs* from other States be encouraged to start medium and small industries in Assam? After all, what is important is the provision of employment opportunities for the people of the State and not who provides them. Why should there be any objection if a Bengali, Bihari, or a Punjabi youth wants to try his luck in Assam?

Bihar

There was a reduction in the Government subvention received by the Bihar State Financial Corporation during 1959-60 which amounted to Rs. 1.40 lakh, as against Rs. 2.07 lakhs in 1958-59. The reduction was due to the improvement in the profit earned, from Rs. 3.04 lakhs to Rs. 4.20 lakhs, following the notable rise in the loans sanctioned and disbursed as is evident from the comparative table in the previous page. The gross income of the Bank in 1959-60 was Rs. 9.97 lakhs, of which interest on loans and advances amounted to no less than Rs. 6.99 lakhs, the balance being interest on deposits and investments.

The total loans sanctioned by the Corporation since it was set up in 1955-56 amount to Rs. 189.90 lakhs, while those disbursed aggregate Rs. 145.08 lakhs. The instalments repaid come to Rs. 13.81 lakhs and the loans outstanding at the close of March 1960 were of the order of Rs. 131.87 lakhs. The Corporation had hardly any investments in gilt-edged securities. Only, it had cash and bank balances amounting to Rs. 69.79 lakhs. As the loans sanctioned are fast approaching the total funds available, the Corporation has decided to augment its resources further by issuing bonds worth Rs. 50 lakhs, in addition to the bonds for Rs. 100.25 lakhs issued in October 1958. The details of the issue are being worked out and the issue, according to the Chairman of the Corporation, Mr. Rajandhari Sinha, will be announced at a propitious moment as advised by the Reserve Bank of India. The Corporation has also decided—the decision has already been put into effect—to levy a commitment charge of ¼ per cent. for the unutilised portion of sanctioned loans in certain circumstances, to collect inspection charges from the borrowing concerns, and to insist upon the borrowing concerns to get their assets mortgaged for their full value.

Mysore

The Mysore State Financial Corporation earned, in the first year of its operation, that is, 1959-60, a total income of Rs. 3.33 lakhs. The major portion—Rs. 3.18 lakhs, to be precise—of course, represented interest on investments and deposits. Excluding the administrative and other expenses incurred, the net profit of the Corporation for the year amounts to Rs. 2.45 lakhs. After providing Rs. 1,12 lakh for taxation and transferring Rs. 12,000 to statutory reserves, the surplus available for distribution was Rs. 1.20 lakh which was less than what was required to pay the guaranteed dividend, namely, Rs. 2.87 lakhs. The Corporation has, therefore, approached the Government of Mysore for a subvention of Rs. 1.67 lakh.

During the year under review, the Corporation received 52 loan applications involving an aggregate sum of Rs. 84.90 lakhs. The Corporation, however, could sanction loans amounting to Rs. 28.00 lakhs only, the number of applications being eleven, and the sum actually disbursed was Rs. 13.01 lakhs. Explaining the small amount of loans sanctioned, Mr. H. V. Koujalgi, Chairman of the Corporation, said at the first annual meeting: "As the period under report was the first year of the formation of the Corporation during which period many preliminaries had to be attended to and the actual time that was available for disposal of these applications was short, more cases could not be disposed of." But he gave the assurance that the pending applications, numbering 38, seeking loans aggregating Rs. 52.25 lakhs, would be disposed of expeditiously during the current year.

The industries which have received financial assistance from the Corporation include units manufacturing bricks and tiles, textiles, oil mills, engineering works and granite works. Some of these concerns are new, while others are existing ones which require to be rehabilitated or expanded. The Corporation, we are told, is making arrangements to have periodical inspections of the loanee concerns and also to obtain from them periodical progress reports in the forms prescribed by it, the objective being to see that the loans granted are utilised for the purpose for which they are sanctioned.

† The subventions are given by the State Government concerned with a view to making up the gap between the net profit available after providing for taxation, reserves, etc. and the amount actually required to pay the minimum dividend at the rate of 3½ per cent.

CENTRAL WAREHOUSING CORPORATION

SPEECH OF CHAIRMAN, MR. B. B. GHOSH

BANKS REQUESTED TO CO-OPERATE

A SPECIAL appeal to the scheduled banks to contribute to the share capital of the Central Warehousing Corporation was made by its Chairman, Mr. B. B. Ghosh, in his speech at the Third Annual General Meeting of the Corporation held at New Delhi on 16th July 1960. Mr. Ghosh declared that such investment, apart from being good and safe, would enable the banks themselves to benefit distinctly from the development of good warehousing facilities throughout the country. Pointing out that the Corporation would benefit greatly from the association of banks, he stated that it was not desirable that a scheme of this nature should be left entirely or mostly to Government.

The following is the full text of Mr. Ghosh's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to this third annual general meeting of the Corporation. The report of the Directors and the annual accounts, which have been presented to you, give an account of the working of the Corporation for the year 1959-60. The report of the auditors has been appended to the balance-sheet and profit and loss account. The Director of Commercial Audit has also carried out his audit, on behalf of the Comptroller and Auditor General, but his report has not yet been received.

"You will notice that, during the year under report, there was a significant increase in the number of shares subscribed which was due mainly to the purchase of 4,000 shares by the Life Insurance Corporation. I hope this will act as an encouragement to others. I would specially appeal to the scheduled banks to participate in this venture. Apart from this being good and safe investment, I would point out that the banks would distinctly benefit from the development of good warehousing facilities throughout the country. I feel we shall also benefit greatly from their association. It is not desirable that a scheme of this nature should be left entirely or mostly to Government.

Steady Progress

"You will also notice from the report that there has been a steady progress in the actual working of the Corporation. The number of centres has risen from 9 to 26. The stocks deposited at Central warehouses increased from 1,63,000 maunds on 31st March 1959 to 5,17,000 maunds on 31st March 1960. The number of commodities handled has risen from 30 to 60. The maximum overall occupancy during the year has been 83 per cent. and the minimum as high as 60 per cent. With the increase in business, the financial results have also shown improvement. Broadly speaking, the warehouses, which were started the year before, showed a profit, while those started during the year under report are expected to show a profit during the current year. The excess of expenditure incurred directly on the warehouses over earnings dropped from Rs. 1,25,000 during the previous year to only Rs. 19,000 during the year under report. Receipts from storage charges increased from Rs. 76,000 to Rs. 3,81,000 during the same period. There is justifiable reason to feel optimistic about the future. At the initial stage, most of the warehouses have had to be started in whatever accommodation was available on hire. As we make progress in our construction programme and succeed in having warehouses of the economic size and as the total number of warehouses increases further, we can reasonably hope to realise not only our expenditure in the field but also the expenditure on the headquarters organisation. I understand construction work has been undertaken at 20 centres.

"I should draw attention to another favourable trend in our working. The number of producer-depositors taking advantage of our facilities has shown a marked increase during the period under report. Our main object is to cater to the needs of the producers, either direct or through producers' co-operatives. You may be interested to know that a Central warehouse has been set up at Delhi with a view to catering to the needs of the federations of consumers' co-operatives and also to provide cold storage facilities.

"I mentioned last year that the progress of the Central Corporation should be judged not merely by the development and success of the Central warehouses but also by its contribution, financial and otherwise, to the development of the State warehouses. The Central Corporation subscribed Rs. 13,00,000 to the share capital of the State Corporations during the year. This brings the total of share capital contributed by the Central Corporation to approximately Rs. 1 crore. The number of State warehouses rose from 42 during the preceding year to 148 during the year under report. The State Corporations are also, generally speaking, making steady progress.

Warehousing Consciousness

"Every warehouse, Central or State, has become our agent for carrying the message of 'warehousing.' I venture to say that, largely due to them, there has been a general awakening of consciousness throughout the country of the need and utility of warehousing facilities in any scheme of rural or agricultural development. It is now generally agreed that whether for the development of agricultural production or for the development of co-operatives or even for storage of Government's own stocks, proper storage or warehousing facilities are an essential requirement. There is only some argument occasionally as to the agency which should provide these facilities. As long as we are in a position to provide satisfactory facilities at a reasonable charge, in competition with others, we have nothing to be afraid of.

"Before I conclude, I would like to express on your behalf and on behalf of the Board of Directors our appreciation of the work of the officers and staff of the Corporation.

"I now invite you to consider the annual accounts and the report of the Directors which have been presented to you."

A USEFUL RESERVE BANK PUBLICATION

Exactly a year after the seminar on finance for small-scale industries was held at Hyderabad (20th to 23rd July 1959) under the auspices of the Reserve Bank of India, the deliberations of the seminar have been published by the Bank in two volumes. One wonders whether the Bank could not have arranged for their publication earlier. It is needless to say that an undue delay in releasing to the public information on any aspect makes such information stale and may also render a part of it out of date. Be that as it may, the publications, under reference do give valuable and useful data relating to the various aspects of small-scale industries. Of the two, Volume I contains the report of the proceedings of the seminar, the papers prepared by some of the participants for discussion, the reports of the four groups into which the participants were divided to facilitate discussion, and the summary of conclusions and suggestions of the seminar. The background papers containing detailed information on financial technical and operational aspects of small-scale industries in India are contained in Volume II.

Besides bringing together a great deal of factual information relating to small-scale industries, the report contains a comprehensive account of the views and opinions expressed by commercial bankers, industrialists, etc., who participated in the seminar. One of the major recommendations of the seminar was the introduction of a scheme for guarantee of loans to small-scale industries by banks and other financial institutions. As readers are aware, this scheme, which was sanctioned on an experimental basis for a period of two years by the Government of India, has already been put into operation with effect from 1st July 1960. The other recommendations of the seminar are being further processed by special committees or working groups set up by the Government or the Bank for the purpose.

Copies of the publications can be had from the Administrative Officer, Economic Department, Reserve Bank of India, P.B. No. 1036, Bombay 1, at Rs. 4 per volume (postage extra) or $1 or 7s. (post free).

The International Finance Corporation (I.F.C.) has decided to invest $156,000 in a well-known Finnish textile manufacturing group, comprising the companies Tricol Oy and Oy Kutomotuote Ab. The investment will help finance the construction and operation of a new plant, expansion of production, and relocation of a part of the group's operations. The Tricol-Kutomotuote group is one of Finland's largest producers of knitted goods, with its 1959 sales amounting to $2·6 million. The loan will be in dollar notes maturing between 1962 and 1968 bearing 6.75 per cent. interest payable in dollars. In addition, the I.F.C. will receive in Finnish marks additional payments related to sales.

REASONS FOR HIGH PRICES OF CLOTH

CHIEF OF COTTON MILLS' FEDERATION EXPLAINS AND SUGGESTS REMEDY

BY the time these lines appear in print, the Cotton Textiles Consultative Board, at its meeting at New Delhi on Friday the 29th inst., will, perhaps, have put forward its suggestions for bringing down the present high prices of cloth in the light of the views expressed by the official spokesmen as well as the representatives of millowners and traders. It is, therefore, unnecessary to speculate on the outcome of this meeting. This much, however, can be said and that is that some firm measures may be adopted by the Government to check the upward trend of cloth prices.

Why are cloth prices ruling high? This is a question which has once again attracted country-wide attention for some time. And reports have been appearing in the Press from time to time to the effect that cloth prices have recorded a phenomenal rise in the past few months. Some say that the prices have gone up by 20 to 30 per cent. But, apart from such vague observations, no one seems to have made a thorough study of the reasons responsible for whatever rise in cloth prices has taken place lately. The result is that the millowners are, as usual, made the scapegoat. May be, some mills have rigged up textile prices disproportionately with a view to getting rich quick, but to throw the whole blame for the rise in prices on the entire industry is to be unfair to it. How the rise in the prices of cloth has been beyond the control of the industry was forcefully brought out by Mr. Krishnaraj M. D. Thackersey, Chairman of the Indian Cotton Mills' Federation, at a special Press Conference he held in Bombay on Friday the 22nd inst. He not merely explained the real factors responsible for high cloth prices but also indicated the lines on which a reduction in prices could be ensured.

Cost Inflation

At the very outset, Mr. Krishnaraj was at some pains to show that the increase in cloth prices had been due largely to cost inflation, thanks to the appreciable rise in cotton prices, enhanced incidence of wages and dearness allowance following the implementation of the Wage Board's award, and upward trend in the prices of stores and chemicals. According to him, the prices of cotton, both Indian and foreign, have appreciably risen this season. The rise is particularly marked—as much as Rs. 200 to Rs. 300 per candy—in the case of cottons used for producing coarse and medium qualities. It is attributed to the poor cotton crop estimated to be no more than 3.75 million bales of 400 lbs. each gross, as against 4.30 million bales expected even as late as January last and the normal average size of 4.8 million bales. As readers are aware, early in the monsoon months of 1959-60 season, reports of cotton sowings, were encouraging that a crop of 5.2 million bales was considered likely. The shortfall in indigenous cotton supply, occasioned chiefly by adverse weather, has naturally compelled the mills to consume a larger quantity of foreign cotton—about a million bales, that is, 500,000 bales more than the average consumption in the last three years. What is worse, of the foreign cotton, nearly 350,000 bales represent cotton of one inch and below which is used for manufacturing coarse and medium varieties. The use of such foreign cotton puts up the production cost of these varieties, because not only is the price of foreign cotton higher than indigenous cotton but there is also some wastage, in that it has to be spun down. It must be noted, in this connection, that much of the rise in prices has occurred only in coarse and medium varieties of cloth.

The Real Solution

Mr. Krishnaraj also sought to stress that, in considering the prices of cotton textiles, note must be taken of the 2½ years of crisis through which the mills passed when prices had been unduly depressed and that, therefore, it would be wrong to compare today's prices with those prevailing at that time. Elucidating this point, he observed:

"Little attention was paid to the industry's plight when it was suffering from depression, but much is made of as soon as the prices rise. It must not be forgotten that, even in what are called normal times, the profit-margins of the cotton mill industry are among the lowest, whether we consider them as percentage of the sale price or percentage of the employed capital, as may be seen from a study published by the Reserve Bank of India. Because of this unenviable position of the cotton mill industry, capital tends to flow away from this industry to others where the profit-margins are more reasonable. The textile industry, therefore, needs a better profit-margin to attract capital for rehabilitation and modernisation of its old and worn-out equipment. In fact, a sustained reduction in the prices of cloth can be brought about only through modernisation, which, in turn, will be possible only if capital can be attracted to this industry.

"The real remedy to meet the present situation is more production and the industry has been pressing Government for liberal imports of foreign cotton to enable the industry to achieve higher output. If cotton is available, there is scope for expanding the working of shifts and making more cloth available, but, in view of the difficult foreign exchange position, Government have not been able to import as much foreign cotton as is needed to overcome the present shortage of cotton. This is one of the main reasons for the rise in cloth prices."

Any impartial observer of trends in the textile economy of India will fully appreciate the force of these observations. In addition to the increase in cost of production, the increasing pressure on the available supplies of cloth on account of higher domestic offtake and exports has also been responsible for the high cloth prices. Surely, this pressure would not have been there, but for the grave defects in the official textile policy. The Government of India has not only not allowed the mills to expand the weaving capacity but also imposed restrictions on the production of certain varieties, not to speak of the tax burden levied with a view to encouraging the production of the high-cost handloom cloth. The production of mill cloth is currently at an annual rate of just 4,932 million yards, which, though slightly higher than the actual output of 4,925 million yards in 1959 and 4,927 million yards in 1958, is markedly lower as compared with the 5,317 million yards produced in 1957. In other words, the mill cloth output has tended to decline at a time when domestic offtake is rising following the increase in population and improvement in the purchasing power in the hands of people. This phenomenon is clearly reflected in the marked decline in the stocks of cloth held by mills; the total of these stocks at the end of last month was no more than 283,000 bales (1 bale: 1,500 yards), as against 399,000 bales a year before and 601,800 bales towards the end of October 1958. The pressure on supplies is especially great in respect of coarse and medium varieties of cloth which account for over 90 per cent. of India's cloth exports.

Viewed thus, it is clear that the real solution to the problem of high prices of cloth lies in augmenting production. Nevertheless, the need for stabilising prices at reasonable levels cannot be overemphasised. Mr. Krishnaraj himself admitted this and assured the public that the industry was "most willing to take any steps that lie within its power" in this direction. Proceeding, he observed:

"There are many ways like prevention of hoarding to meet the situation, but, in the changed circumstances, price stamping is not likely to prove efficacious. The industry has certainly no objection to this measure, but it cannot be a substitute for higher production. In fact, the mills are anxious that this should not lead to cloth going into black market or Government losing their legitimate revenue. Nor does the industry want to be accused of profiteering and be misunderstood by the public as wantonly putting up cloth prices in spite of the stamping of prices. Government are doing everything to bring in more cotton and, if cotton crop of next year turns out to be normal, it will not be long before the anxiety on the score of cloth supply position is removed. What is now necessary is to prevent a scare being raised about shortage of cloth and a further rise in prices. It is necessary to change the psychology of the public and of the trade with regard to cloth supply position, so that there should not be a scramble for those particular varieties which, for the time being, may be in short supply."

Dehoarding Measures

It is thus evident from the aforesaid quotation that stamping of cloth prices may not achieve the desired purpose of making cloth available at cheaper rates to consumers. The traders also seem to be doubtful about the success of price stamping. In fact, some apprehend that such stamping may worsen the situation. In the course of a statement issued to the Press, the Bombay Piecegoods Merchants Mahajan, for instance, points out that stamping of cloth prices will give rise to black marketing, entry of unscrupulous elements in the trade and many other malpractices. Instead, the Mahajan has urged the need for taking other measures such as manufacture of specific standardised cloth, reopening of closed mills, resumption of third-shift working, permission to mills to install new looms, and reduction of bank advances against cloth. While measures such as these merit due consideration, energetic action must also be taken to curb any tendency on the part of traders to corner stocks of cloth and inflate prices. There is a strong feeling in certain circles that one of the causes for the rapid decline in stocks of cloth with mills is hoarding by the trade. Consequently, they feel that dehoarding measures must be given high priority in any scheme designed to depress the prices of cloth.

COTTON INDUSTRY IN PARLIAMENT

GOVERNMENT SPOKESMAN EXPLAINS IMPLICATIONS OF SCRAPPING SCHEME

From Our Special Correspondent

MANCHESTER, 19th July

MANCHESTER LETTER

AFTER a period in which little news came to hand about the way in which the scrapping programmes in spinning and weaving were developing, further details are now following thick and fast. Scarcely a week goes by without some reference being made to the effect of the schemes and new figures are disclosed concerning the reconstructed industry. It has been stated in the House of Commons that the cost to the Exchequer of the whole policy of reorganising the producing sections of £4,100,000 has so far been paid. The amount of re-equipment, for which applications for subsidy have been received in spinning, doubling and weaving is £9,200,000.

Prior to this statement, Sir Alfred Roberts, Secretary of the Cardroom Workers' Amalgamation, had quoted figures to show that over £3,000,000 had been paid to employers to compensate them for scrapped machinery. The total claims by millowners exceeded £16,500,000. Lump-sum payments to displaced workers under the schemes amounted to £2,112,966 up to mid-June, with weekly payments aggregating £189,111. Sir Alfred admits that the number of cases in which compensation had been refused had not been on as large a scale as was originally anticipated. Doubtful claims had been dealt with by negotiation at local or central level, and only nine of those within the union's sphere had been referred to the Appeals Board.

Short-time Ended

Commenting on the significant increase in output per operative of 7½ per cent, revealed in the higher production totals obtained from a smaller labour force, Sir Alfred said: "It would be unrealistic to assume that this is due entirely to extra effort on the part of each individual worker. The elimination of short-time working has played a major part, and the more effective organisation of production has certainly improved machine efficiency and enabled operatives to produce more."

Although trading prospects appear generally favourable, with long order books and additional contracts still being arranged, Sir Alfred adds his note of warning to other voices lately raised about the still menacing problem of foreign imports. "It is unfortunate that the reorganisation of the industry came at a time when world demand began to increase, because it has led merchants to seek their requirements in these particular fabrics from abroad," he says. "In fact, the increase in imports is the most disquieting feature we have to face."

Shift-working in spinning mills has now increased to the equivalent of one-third of the industry. Although there was a reduction in the number of applications submitted during the past quarter, approval was given in all thirteen cases. As a result, spindle hours have increased to 55 per week over the whole industry.

Clearing the Air

The Parliamentary debate on the reorganisation schemes in the finishing trades, prior to their approval by the House of Commons, gave members the opportunity to discuss in some detail their doubts and fears about the project. Questions were asked which produced answers and comments, helping to clear the air a little in some directions.

When the schemes were launched, it was stressed that only one participation period for scrapping applications was essential, the second and final period would only be called for by the Cotton Board, if there appeared to be room for further elimination of machinery in the interests of the industry. If the scheme is extended, subsequent applications will be dealt with in order of receipt. The Board, however, can end the second participation period at any time before the end of January, if it considers that there is any risk of too much capacity being scrapped.

Mr. John Rodgers, Parliamentary Secretary to the Board of Trade, said that the Order did not lay down any precise maximum limit for elimination, but, in practice, the Cotton Board would regard as an overall effective maximum the extent of the excess capacity which its figures showed to exist in the industry—some 32 per cent. in the woven cloth scheme and 34 per cent. in the yarn processing scheme. This limit would only be reached if applications came forward in exactly balanced proportion, and this naturally appeared unlikely.

The official reason for insisting that only complete units could be submitted for scrapping was that firms could not take the risk of their intention to close down becoming known, without an assurance that a redundancy scheme would become fully operative from the outset. In other words, some measure of elimination of excess capacity would be guaranteed. The Government spokesman pointed out that the fact that the industry was prepared to accept the possibility that there would be no Treasury contribution showed the importance attached to having such a reorganisation project.

Social Consequences

Inevitably the debate included lengthy references to the "test case" relating to the take-over of the United Turkey Red Company by the Calico Printers' Association Ltd. Fears that the Scottish works might be closed down, resulting in substantial unemployment in the area, were at the back of much questioning. In reply, it was pointed out that, even if the bid had not been made, there was nothing to stop the existing management from applying to close down under the scheme.

This brought further discussion on whether the social consequences of scrapping should be borne in mind by those responsible for deciding whether or not to accept applications. Mr. Rodgers emphasised that, although the Cotton Board might be able to refuse permission to particular firms, or particular sections of the industry, to participate in the schemes, it could not prevent them from going out now or later if they wished to do so. All it would then have achieved would be to prevent the workpeople from being eligible for compensation.

It is important to note that the vital decisions to be made in this connection are the responsibility of a sub-committee, consisting of three independent business men and a trade union representative, under the chairmanship of Lord Rochdale. The Cotton Board as such has no say in the matter. From the Government benches it was suggested that this committee, when considering scrapping applications, would be guided by such factors as the effect on the efficiency of the industry, on export trade and on unemployment.

A final point reverts back to the controversy which arose on the earlier schemes. Mr. Rodgers was asked what was to prevent another firm coming in and starting up again when one firm had received compensation for the machinery in a factory. The reply was: "It would be a pretty expensive process to start from scratch, and it is doubtful if re-equipment would be payable. No decision has been taken on whether this will be paid to the new sections, but there is nothing to prevent a new man from coming in and buying an existing building."

Foreign Yarn Purchases

National figures relating to overseas trade have caused some concern, as they indicate a sharp rise in the adverse balance between the value of imports and exports. This situation, of course, is no new phenomenon in the cotton trade, where the rising tide of arrivals of foreign goods has been a feature for several years back.

Board of Trade statistics do not show the countries supplying the larger volume of cotton yarn purchased from overseas sources, but the Cotton Board discloses that, in the first three months of 1960, arrivals of cotton yarn reached a new peak at 8,760,000 lbs., as compared with 6,681,000 lbs. in the final quarter last year, and a quarterly average of 5,340,000 lbs. during 1959.

India remains the chief country from which cotton yarn is obtained, having shipped 2,510,000 lbs. in the first quarter, but this was slightly below the level of imports in the corresponding period last year. Arrivals from Hong Kong at 1,090,000 lbs. were also smaller than in the early part of 1959. In contrast, there were sharp increases in the quantity of yarn shipped from Continental countries. Italy supplied 1,180,000 lbs. and Spain 1,860,000 lbs. Arrivals of Spanish yarn, as in the case of cloth, have made a distinct mark in this trade, as up to the final quarter of last year they were negligible.—*All Rights Reserved.*

LIFE INSURANCE CORPORATION OF INDIA

CHAIRMAN, MR. P. A. GOPALKRISHNAN, REVIEWS PROGRESS ACHIEVED AND THE TASKS AHEAD

ADDRESSING the Fifty-second Meeting of the Life Insurance Corporation of India, held at Bombay on 25th July 1960, Mr. P. A. Gopalkrishnan, Chairman, observed that, although the Corporation wrote new life insurance business of the order of Rs. 429 crores in 1959, twenty-five per cent. more as compared with the previous year and the highest on record, it had touched only the fringe of the problem of mobilising resources for the successive Five-year Plans which was the primary objective of nationalisation of life insurance. Coverage of life insurance in India, he said, was poor, as compared with countries like the U.S. and Canada, where life insurance in force exceeded the national income, even after making allowance for the fact that the people here were poor by comparison and their savings potential low. It should be the endeavour of the Corporation, he emphasised, to expand business to the maximum extent possible, so that more funds could be made available for the economic development of the country.

The following is the full text of Mr. Gopalkrishnan's speech:

"I have great pleasure in welcoming you to this special meeting of the Board which has been convened mainly to consider the draft annual report and audited accounts for 1959. These have already been circulated to all the members. I wish to take this opportunity to review the steady and satisfactory progress made by the Corporation after it was established on 1st September 1956.

New Business

"You will remember that the Corporation secured a new business of Rs. 345 crores in 1958 which was 22 per cent. more than that of 1957. In 1959, our new business amounted to Rs. 429 crores recording an increase of 25 per cent. over that of the previous year. The number of new policies issued has also steadily increased to 1.15 million in 1959, which is about 41 per cent. more than the number issued in 1957.

"A small amount of foreign business is also done by the Corporation and is included in the figures quoted above. During the period between the 19th January and 1st September 1956, there was considerable uncertainty as to whether the Corporation will do new business in foreign countries. Because of this uncertainty, many of our good agents in those countries left us to join our competitors. Even when we finally decided to do foreign business, we excluded doing of new business in Ceylon, Burma and Pakistan. Owing to these reasons, our foreign business amounted only to Rs. 5.40 crores in 1957. In 1958, it was Rs. 5.62 crores. I visited East Africa in the latter half of 1958 and Malaya and Singapore in early 1959. As a consequence of my visit, we took various measures for increasing our business in those countries. The results of these measures are reflected in our increased new business in 1959 which amounted to Rs. 9.47 crores. The improvement of business thus brought about in 1959 continues in this year also.

"Although the Janata Scheme is not working successfully in all the places where it was started, the number of Janata policies issued has been gradually increasing. 21,208 policies were issued in 1957, 24,325 in 1958 and 28,705 in 1959, the sums assured being Rs. 1.17 crores, Rs. 1.61 crores and Rs. 2.01 crores respectively. We have recently introduced another scheme which has more or less the same objective as the Janata, namely, extending insurance to sections of the population which would otherwise remain uncovered. Under this scheme, policies are issued without medical examination in rural areas which are inaccessible and where there is paucity of doctors. These policies are issued only up to a total sum assured of Rs. 2,000. We have to watch the working of this scheme for two or three years before we decide to extend it all over the country.

Lapse Ratio

"Questions have been asked in certain quarters about the stability of the increasing business secured by the Corporation. We have made a detailed analysis of our lapse experience during the years 1957 and 1958. The figures for 1959 are being collected for analysis. You will find from the analysis already made that the Corporation's experience in the matter of lapsation of business is distinctly better than the experience of the companies before nationalisation. The net lapses which amounted to 7.3 per cent. of the mean business in force in 1954 and 7.6 per cent. in 1955 came down to 6.4 per cent. in 1957 and 5.1 per cent in 1958. The percentage of lapses is thus steadily coming down.

"It is also a matter for satisfaction that our business in force has increased enormously after nationalisation. It took all the companies in India several decades to build up a business in force of Rs. 1,220 crores at the end of 1955. The Corporation's business in force at the end of 1959 was Rs. 1,964 crores, recording a net increase of Rs. 744 crores, that is, more than 60 per cent. The number of policies in force on 31st December 1959 was nearly 7 million, representing an increase of 45 per cent. over that at the end of 1955.

Economy of Management

"The next question to be considered is the economy of management. Here also, we have set up a record which should be deemed satisfactory. I would like to recall in this connection that we took over all the staff of the old companies with their emoluments protected. Then we considerably increased our administrative expenditure by standardising their scales of pay which meant in several hundreds of cases a considerable increase in the emoluments which they were drawing before nationalisation. On the other side, we reduced our premium income by reducing our premium rates by Re. 1 per Rs. 1,000 sum assured below the Oriental rates and by removing various extras, such as extras on the insurance of female lives. The net result would have been an increase in our renewal expense ratio but for various measures of rationalisation adopted by us. Our progressive increase of new business has also contributed considerably to the fall in our renewal expense ratio. This ratio came down to 15.89 per cent. in the accounting year 1956-57 from the combined renewal expense ratio of 17.3 per cent. of all the companies in India in 1955. It came down further to 15.46 per cent. in 1958. I introduced a system of budget control with effect from 1959, which was approved by the Board. The result has been extremely satisfactory since the renewal expense ratio in 1959 has come down to 12.92 per cent., which compares favourably with that of some of the best companies in the past.

Progress Indications

"I shall now refer to some other figures which indicate the progress of the Corporation. Our Life Fund, which stood at Rs. 380 crores on the day of nationalisation, has increased to Rs. 493 crores at the end of 1959. Our total assets have similarly increased from Rs. 414 crores to Rs. 552 crores. Our annual income consisting of premiums and income from investments has been steadily going up until it crossed the hundred-crore mark in 1959 amounting in that year to Rs. 105 crores. With increasing business and investments, this income should go up further in future years.

"Our disbursements to policyholders and their beneficiaries by way of settlement of claims have also been increasing year after year. In 1959, we paid out Rs. 23 crores, of which about 25 per cent. were claims arising from death, the balance representing maturity benefits. Since the nationalisation of life insurance the Corporation has paid about Rs. 82 crores in all on account of claims.

"While we have, thus, every reason to be satisfied with our performance so far, we have to examine how far we are realising one of the fundamental objectives of nationalisation of life insurance, namely, the mobilisation of resources for the successive Five-year Plans of the country. Here, I should admit that we have only touched the fringe of the problem. It is true that we have increased the business in force from about 11 per cent. of the national income in 1955 to 15 per cent. in 1959. There are countries in the world, particularly the United States and Canada, where the life insurance business in force exceeds the national income. Canada is the leader in this respect with life insurance in force amounting to 157 per cent. of the national income in 1958. Our population is poor by comparison and the saving potentiality is much less in this country than in the highly industrialised countries like the United States and Canada. Nevertheless, it should be our endeavour to expand our business to the maximum possible extent every year so that more and more resources can be contributed by us for the economic development of our country.

Training Scheme

"As you are aware, the Corporation has started with a modest Five-year Plan of its own from 1959 and has fixed Rs. 1,000 crores as the target of new business in 1963. Although there are reasons to believe that the potential business in the country is very much more, this target has been fixed on realistic grounds after taking into account the Corporation's capacity to expand its organisation consistent with the maintenance of efficiency. We had inherited from the old companies all sorts of staff who had varying degrees of experience, whose methods of working were not uniform and who needed training before they could be fitted into the Corporation's way of working. We have since then recruited additional staff every year who also stand in need of training. In order to meet this need and to strengthen and equip our organisation to handle the increasing volume of business, we have recently started one training college for junior officers and training courses for our clerical staff at almost all the headquarters of our divisions. The eleven training schools that we started over a year ago for our development personnel have already made much progress in training our field officers and agents. I hope that these training institutions will enable the Corporation to function efficiently when business flows in in accordance with our Plan.

"Before nationalisation, the private companies were operating from their headquarters in big cities and the number of centres in the country, where they had their offices, was only 97. The Corporation has, on the other hand, a widely decentralised organisation and the number of branch and sub-offices has been increased from 216 on 1st September 1956 to 345 at the end of 1959. A further increase in the number of offices has been sanctioned in 1960. Every care is taken to see that none of the new offices opened by us turns out to be an uneconomic proposition. The method that we have adopted is to start with a development centre where a field officer or assistant branch manager is posted to organise business without the aid of an office. When the annual business procured increases beyond a certain limit, the development centre is upgraded into a sub-office which is in effect a miniature branch office. When the sub-office begins to procure more than about Rs. 70 lakhs of business, it is upgraded into a full-fledged branch office. This gradualness of our expansion ensures that we don't take any avoidable risk while expanding our organisation in the country. In the next three or four years, our growing network of offices should be in a position to serve every nook and corner of India.

Mechanisation

"No large insurance company in the world can operate efficiently without the aid of machines. Millions of premium notices and receipts have to be sent out every year and millions of calculations are necessary in connection with the collection and analysis of statistics, maintenance of accounts and periodical valuations. The output of our employees can be increased considerably by switching over to modern electronic and other equipments, thus reducing our expenses of management and making more and more surpluses available to our millions of policyholders. We have been studying this question for some time and have come to the conclusion that at the rate at which we are expanding, we have no alternative but to resort to the latest machine techniques if our service to policyholders is not to suffer and if we are to reduce our expenses at a rapid rate. I shall be bringing up proposals in this connection as soon as I find it possible to do so.

Work Turnover

"Meanwhile, everything possible is being done to improve our system of working as well as the output of our employees. The average output of a field officer was Rs. 4.9 lakhs of new business in 1957. It increased to Rs. 6.5 lakhs in 1958 and to Rs. 7.5 lakhs in 1959. The average output of our agents has similarly increased from Rs. 31,067 of new business in 1957 to Rs. 37,494 in 1958 and to Rs. 44,435 in 1959. These improvements have come about as a result of persistent efforts on our part to improve the quality of our field force instead of depending merely on numbers. When our administrative training has continued for a sufficient time I have every hope that the output of our clerical employees will also register a similar improvement.

"You are aware that we had a programme for decentralising the policies of the old companies and getting them serviced by the appropriate divisional offices of the Corporation. The first phase of this programme has now been completed and the policies of 139 companies have been decentralised up to the end of June 1960. The next phase of the programme will be taken up shortly.

"You will remember that the total book value of our Stock Exchange investments was Rs. 338.59 crores on 31st December 1957. The market value of these investments had depreciated by Rs. 8.02 crores of which the depreciation of the investments taken over from the erstwhile insurers was Rs. 7.28 crores. We made a contribution of Rs. 8.02 crores to the reserve for investments which, together with the previous reserves, now stand at Rs. 13.32 crores. As at 31st December 1959, the book value of our Stock Exchange investments pertaining to life business was Rs. 409.82 crores while the market value was more by Rs. 4.68 crores. Nevertheless, we propose to leave the reserves intact which will be a cushion against any future developments of an adverse character.

Investment Research

"As you are aware, we have set up an Investment Research Section in our Investment Department and this section has been systematically analysing the balance-sheets of all the companies whose shares are quoted on the Stock Exchanges of the country. The Investment Committee is thus provided with all the necessary data before its advice is taken on investments to be made. In the case of new industrial ventures which approach us for investments, searching enquiries are made and all relevant data are carefully examined before the Investment Committee is asked for its advice. We thus make sure that all the investments that we make are in sound concerns and bring us returns which we consider attractive. We have also been reviewing the investments that we inherited from private companies and selling all those which are found to be unprofitable. Thus, we are constantly endeavouring to improve the quality of our investments.

"Before I close this statement, I would like to convey my thanks to all the members of the Corporation for the assistance and co-operation that I have uniformly received from them. My thanks are also due to the members of the Investment Committee whose advice has been most useful for the Corporation in the matter of investments. I should also like to put on record my appreciation of the invaluable services rendered by our field force and our office personnel including officers who have contributed in no small measure to the progress of the Corporation."

"Oil is now the world's most valuable seaborne cargo. On any average day some 15 million tons of petroleum and its products, valued at well over Rs. 133 crores, are at sea—a far cry from the early days of the modern oil industry. In the eighteen-sixties, oil was shipped in wooden barrels—a highly inflammable cargo for the wooden sailing ships of the period. The oil industry, however, soon began to develop specialized facilities for swift, safe and economic transport of oil in bulk. Most outstanding achievement in this field was perhaps the production of the oil tanker—a type of ship which now accounts for approximately one-quarter of the world's entire merchant fleet."

PROBLEMS OF SUGAR INDUSTRY IN MAHARASHTRA

JOINT-STOCK UNITS ACCORDED STEP-MOTHERLY TREATMENT

IN the development programme for sugar industry under the second Five-year Plan, the Planning Commission had specifically emphasised that expansion of existing capacity should generally be allowed and licences for new factories must be granted "only when it is known that sufficient supplies of sugarcane are already available or are expected to be available within a reasonable period around the proposed sites." It is indeed regrettable to find that this rational criterion has not been adhered to by the authorities at least so far as the Bombay-Deccan region is concerned. An equally important criterion is that it is more advantageous to permit an existing unit to expand its capacity rather than establish a new one. In their anxiety to promote and foster the establishment of co-operative sugar mills, the State Government has completely ignored the economics of industrial location and accorded step-motherly treatment to joint-stock sugar companies. How else is one to explain the way in which co-operative units have been located in the State and the way in which their cane supplies have been secured? A typical instance of such defective planning was cited by Mr. F. Edwards, the retiring President of the Deccan Sugar Factories' Association, in his speech at the twenty-first annual general meeting of the Association held at Bombay on Monday this week. Here is what Mr. Edwards said:

"Some of our member-factories have already submitted applications to the Union Government for the expansion of their existing units, and I had strong hopes that the applications would be supported by the State Government and sanctioned by the Union Government. Unfortunately a case has recently been brought to my notice, in which the Union Government, on the advice of the State Government, has turned down a member-factory's application for expansion, while according, at the same time, sanction for setting up a new co-operative factory in the area adjacent to the member-factory. This action is quite wrong in its basic economy and is contrary to the assurance given on behalf of the Union Government in Parliament that preference would be given to schemes of expansion rather than to establishment of new units. Moreover, the siting of such new units close to the existing units is bound to lead to agglomeration and give rise to situations similar to those obtaining in U.P. and Bihar, where sufficient cane supplies are not available to closely situated factories, as a result of which they are unable to work to their full capacity and have to close down early for want of cane."

Government Gives Deaf Ear

Mr. Edwards has certainly not cried "wolf." Even as it is, the cane supply areas of different sugar mills in the Deccan are inter-mixed, and instances are not wanting where the cane grown in the village in which the factory is situated goes to feed new units several miles away. Similarly, cane supplies to some existing factories come from the proximity of new units. Consequently, there has been waste in the use of transport and available strain on roads. Although the joint-stock sugar mills have drawn the attention of the authorities to this aspect on more than one occasion, things continue to be as before. This is deplorable especially when the joint-stock sugar mills are continuing to make earnest efforts at maintaining as high a level of output as possible, not to speak of their pioneering work in promoting scientific agriculture.

The warning given by Mr. Edwards is quite timely, considering that more and more co-operative sugar factories are being set up in the State. In addition to the 13 co-operative factories out of the 26 units working in Maharashtra State during 1959-60 and a new unit that is expected to start working in the ensuing season, the Union Government has further sanctioned the starting of five new units (two in Kolhapur district, two in Poona district and one in Ahmednagar district) and six more are awaiting sanction (one each in the districts of Ahmednagar, Nasik, Nanded and Satara and two in Poona district). Whatever may be the justification for the policy of encouraging the establishment of new co-operative sugar mills, it would be worthwhile first to examine the economic aspects of the policy. As Mr. Edwards rightly emphasised, the capital cost of creating fresh production capacity by setting up new factories is always more than the creation of an equivalent production capacity by expanding the existing units and the opening of new factories involves additional outlay, owing to the duplication of overhead capital expenditure such as construction of roads and buildings, as well as duplication of overhead revenue expenditure on management, administration, etc.

Discrimination

It is not the defective location of co-operative sugar factories alone that is causing anxiety to the joint-stock sugar companies. In the field of distribution, too, these companies are subjected to certain hardship, as a result of the State Government's policy of discrimination. Alluding to this, Mr. Edwards said:

"The scheme for sugar distribution in the State was evolved by the then Bombay Government in consultation with representatives of the industry. The scheme was put into operation in accordance with a gentleman's agreement arrived at between the State Government and the Association and, for sometime, there is no doubt, the scheme worked smoothly and satisfactorily. Lately, however, there has been a noticeable change in the Government's policy which appears to favour co-operative factories to the detriment of joint-stock factories, which is contrary to the spirit of the gentleman's agreement under which the joint-stock factories were assured of the continued use of their normal trade channels. Joint-stock factories are, however, now finding that their old-established customers are being supplied sugar by Government from co-operative factories under the permit system which leaves these customers no choice. Consequently, the established distributors of joint-stock factories are experiencing some difficulties in moving their released quotas of sugar, and I hope the State Government will review their policy and bring it back into line with the gentleman's agreement."

The molasses problem also continues to give a lot of trouble to the companies, notwithstanding all the plea for relief from the vexatious and harsh controls on both alcohol and molasses on account of the Prohibition Act put forward time and again. It is disquieting to hear from Mr. Edwards that the difficulties have been aggravated by the recent orders of the Director of Prohibition and Excise which require the sugar mills to give eight days' notice in advance before they load molasses in tank lorries or wagons outside office hours. How can such advance notice be given when the railways supply wagons at odd hours without prior intimation and these have to be loaded as soon as they are received in order to prevent levy of demurrage charges? It is a pity that the Association's representation to this effect has not impressed the authorities.

The retiring President of the Deccan Sugar Factories' Association had also a few pertinent observations to make on three important problems of sugar industry in general, namely, controls, wages and the production target for sugar in the third Plan. There is considerable force in the statement of Mr. Edwards that it would be premature to expect the Government to lift sugar controls at this stage merely on the basis of the estimated carryover of about 500,000 tons at the beginning of the ensuing season. As this journal itself pointed out in these columns only three weeks ago, a sudden plunge towards decontrol during the off season is not desirable, because (*a*) free movement of sugar is often interrupted by heavy rains; (*b*) it is too early to say anything about the size of the sugarcane crop that will be harvested in the next season; (*c*) there are hardly any stocks of sugar in the pipeline now and it is a moot point whether the stocks available after the provision for buffer stock (250,000 tons) will be sufficient to take care of the normal stocking requirements of the trade; and (*d*) the population to be served and the purchasing power in the hands of people are greater than two or three years ago. Having regard to all these factors, we stressed that the risk involved in decontrol should be taken only when it could serve as an effective stimulus to increased production.

On the question of wages, Mr. Edwards said that they had been increased from time to time during the past several years without there being any increase in the productivity of labour. He was quite right when he remarked that, while fixing new levels of wages for workers, the Central Wage Board for Sugar Industry should not ignore the desirability of relating wages to productivity.

Target for Sugar Low

Commenting on the production target of three million tons of sugar per annum and a capacity target of an equal quantity as envisaged in the Draft Outline of the third Plan, Mr. Edwards made the following interesting observations:

"My initial reaction to this proposal is that the targets have been pitched rather on the low side. I understand the anxiety of planners to divert the major part of the country's resources and available foreign exchange to the establishment of heavy and machine-building industries. But, at the same time, I would like to urge the authorities not to underestimate the pressure of demand for white sugar which is bound to increase for a variety of reasons, of which the increasing amount of purchasing power in the hands of the people, the rapid growth of population and the pronounced trend of urbanisation are the most important. Since sugar is an essential article of food, the aim should be to provide it, at least in adequate quantity, if not to bring its price down, so that irksome controls and rationing may not be forced on the industry and consumers. A tight supply position is the source of malpractices, which, in turn, make the sugar industry a convenient target of attack for a section of political leaders. This should be avoided in the third Plan period. I am sure my colleagues in the industry will agree with me when I say that a bigger target will be in the best interests of sugar consumers and the Exchequer alike. Sugar has proved to be one of the best contributors of rupee finance in the second Plan period."

This is certainly an impressive way of presenting the case for a more liberal production target for white sugar. If, however, the Planning Commission finds it difficult to step up the target straightaway while finalising the third Plan, it should, as Mr. Edwards pertinently urged, at least provide for a careful review of the position at the end of the second year (1962-63) and permit programmes to be initiated for further expansion, if the trend of demand for sugar points to the need for expansion of capacity. The importance of this suggestion will be realised when one takes into account the fact that at least three years are required to bring into existence additional capacity. Surely, the sugar industry will not be able to catch up with the demand before the end of the third Plan, unless after a proper assessment of consumption trends, suitable arrangements are made in good time for expanding its capacity.

The Government of India has decided to reduce the compound levy on *khandsari* sugar by one-third from 22nd July to 31st October. Announcing this, an official Press Note says: "With a view to helping the manufacturers of *khandsari* sugar working without the aid of sulphitation plants, the Government of India introduced a compounded levy scheme from 1st March 1960. In view of the special difficulties of the industry this year, the Government has decided to reduce the rates by one-third for the period 22nd July to 31st October 1960. From 1st November 1960, the original rates will apply."

PRODUCTION AND EXPORTS OF TEA

GOVERNMENT FAVOURS HIGHER TARGETS

THE targets for tea production and exports fixed in the draft outline of the third Five-year Plan are 850 million lbs. and 550 million lbs., respectively. Commenting on these targets, Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry, disclosed, at the fourth annual general meeting of the Tea Association of India held at Calcutta on Friday the 22nd inst., that they did not inspire in him a sense of optimism and that, in certain conditions, the production target might prove to be modest. "I may not conceal from you the fact," Mr. Satish Chandra added, "that the Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, is deeply disappointed with these targets." Urging the need for increasing the targets, Mr. Satish Chandra cited the following statistics:

The production target of 850 million lbs. of tea by 1965, though it is 135 million lbs. more than the actual output of 715 million lbs. achieved in 1958 (the output in 1959 was 725 million lbs.), does not inspire a sense of optimism. Considering that the average rise in domestic consumption is about 15 million lbs. per annum, India will be left without much surplus over and above the present level of exports. Many countries have expanded production of tea considerably in the last decade, but India's share in the total world output has fallen from 46.5 to 42.8 per cent. The target of 550 million lbs. for export in 1965 is only 27 million lbs. more than 523 million lbs. exported in 1956 and 42 million lbs. more than 508 shipped in 1958 (actual shipment last year was 472.5 million lbs.). From 1950 to 1958, India's exports rose from 403 million lbs. to 508 million lbs. or an increase of 105 million lbs., while, in the seven years from 1958, the rise contemplated is only 42 million lbs.

Incentives Wanted

The dissatisfaction expressed by Mr. Satish Chandra at the low targets for tea output and exports is understandable. This journal, too, has expressed itself in favour of higher targets. If, however, the tea industry has not agreed to more liberal targets, it is evidently because of the changing world situation and several disturbing trends in India's tea economy, as well as uncertainties regarding official policy. Some in the tea industry are of the view that even the output target of 850 million lbs. tentatively fixed for 1965-66 may not, in fact, be achieved, unless a co-ordinated action is directed towards it by the Government, the industry and the labour. Expressing his views on the target, Mr. B. P. Bajoria, the retiring President of the Tea Association of India, observed thus:

"...planning involves more than merely the fixing of targets. It implies co-ordinated action directed towards the attainment of the targets fixed. Thus, the production target of 850 million lbs. for 1965-66, representing an increase of about 125 million lbs. over the 1959 output, may be regarded either as impossibly optimistic or, on the other hand, as relatively modest. It all depends on whether, in the period of the third Five-year Plan, the industry will receive the necessary incentives, to enable it to attain the prescribed target. If, as I hope it will, the Government displays the virtue of consistency and provides the necessary incentives, I am confident that we shall not only attain the prescribed target but exceed it. Otherwise, I am afraid that we shall find, at the end of the third Plan, that the target remains unrealised."

It is gratifying that Mr. Satish Chandra fully recognised the fact that the industry, if it is to achieve a higher target of production, should have the necessary means and tools. And reassuring is his statement that, "if you (the tea industry) have a bold and forward-looking approach, the Government will make all possible endeavours to provide you with reasonable facilities for the achievement of higher targets of production and exports."

In his presidential address, Mr. Bajoria sought to draw attention to what may be called the critical situation facing the tea industry and indicate the lines on which remedial action is required. At the outset, he alluded to the growing intense competition in the world tea market. His analysis reveals that, over the ten-year period 1950-59, whereas India's production of tea went up by 17 per cent., East Africa (including Mozambique) had stepped up its output by 102 per cent., Ceylon by 35 per cent. and Indonesia by 23 per cent., while China is an unknown quantity. Over the same period, exports from East Africa and Ceylon increased by 121 per cent. and 29 per cent., respectively, as against an increase of only 17 per cent. in the case of India. One of the important markets in which Indian tea is losing ground is Britain. India's share of this market has declined from 65 per cent. in 1950 to 55 per cent. in 1959, although, quantitatively, there has been an improvement from 239.1 million lbs. to 284.2 million lbs. Characterising this as an "ominous trend" fraught with the most serious consequences for the future of tea industry, Mr. Bajoria said:

"Competition for export markets is becoming more intense, as the years go on. If we sit back and allow the present trend to continue unchecked, it will not be long before our exports decline not only proportionately but in absolute terms. This is the time to take stock of the situation and to take the steps necessary to halt and reverse the trend to which I have drawn your attention. I am confident that this can be done. India's dominance in the world tea market was not a historical accident. It was based on real advantages, natural, economic and even human. But I regret to say that these advantages have, to a large extent, been offset as a result of measures which have set the Indian industry at a disadvantage in meeting the rising competition of other producing countries. Nevertheless, I should like to emphasise that whatever reverses we have suffered have not been because of any deterioration in the quality of our teas. I have not the least doubt that, given proper incentives, India can reign supreme and no other country can assail her position in the tea world."

Remedial Action

The industry, as is well known, is the largest earner of foreign exchange for the country—Rs. 136.54 crores in 1958 and Rs. 126.39 crores in 1959—besides being a contributor of considerable sums of money to the Exchequer in the form of taxes and provider of employment to a large number of persons. Naturally, it is entitled to receive more generous treatment at the hands of the authorities. Some of the specific points on which Mr. Bajoria considers action is necessary are listed below:

Fertiliser supplies: One of the main obstacles in the way of increasing production is inadequate supplies of fertilisers. For producing 723 million lbs. of tea, the industry was allotted 51,000 tons of fertilisers, as against the actual requirement of 70,000 tons. Now when the industry is about to embark on an output expansion of 125 million lbs., the fertiliser allocation, instead of being increased, is actually retained at 51,000 tons.

Publicity and propaganda: A far more vigorous comparison of publicity and propaganda for Indian tea in foreign countries is needed. Considerations of economy should not stand in the way of a substantial rise in expenditure.

Export duty: The export duty on tea must be abolished, a part of the revenue lost thereby being made up, if necessary, by enhancing the tax borne by tea consumed internally.

Export quotas: The system of export quotas is an unnecessary nuisance and there is no justification for retaining it.

Replantation: The problem of replantation deserves the most serious attention. The Plantation Enquiry Commission reported in 1956 that about 25 per cent. of the acreage under tea was in need of immediate replanting and estimated the total cost at about Rs. 60 crores. Without some sort of Government assistance, many tea producers find it difficult to carry on replantation work. The expansion in output of tea resulting from replantation should not be largely nullified by unrooting of other areas as provided by Rule 31 of the Tea Rules 1954. If Government considers that some restriction of this sort is necessary, the time limit for uprooting the equivalent acreage be increased from three to eight years.

Land requisition: The policy of land requisition followed by the Governments of Assam and West Bengal has created serious misgivings among tea producers. In requisitioning land, the Governments should leave tea land alone.

Housing: The burden of house construction imposed as a statutory obligation under the Plantation Labour Act of 1951 is heavy. It must be reduced (a) by lowering the prescribed rate of construction from 8 to 4 per cent. a year, (b) by making the industry eligible for the subsidy of 25 per cent. of the house construction cost under the subsidised industrial housing scheme, and (c) by allowing expenditure on house construction to be charged to revenue account for purposes of income-tax.

Tea Board: The officials of the Union Ministries of Finance and Commerce and Industry must be given suitable representation on the Board, so that the inordinate delays in implementing decisions can be avoided.

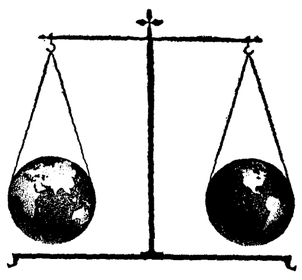
Committee of Investigation: The Government should set up a high-power committee, consisting of persons representing Government, the Tea Board, trade and industry, to examine the present position in the tea industry and decide, within a stipulated time limit, what measures of relief, if any, are called for.

Minister's Replies

In the course of his detailed replies to the aforesaid points, Mr. Satish Chandra revealed that several schemes for providing replantation finance were before the Government, that the Government accepted in principle the need for such finance and that a decision in the matter would be taken soon. On the question of housing, he declared that the difficulties in the way of utilising the Rs. 2-crore plantation housing loan had now been resolved. These loans, according to him, will be advanced on easy terms and a pool guarantee fund will cover bad debts. Losses, if any, exceeding the accumulation in the fund will be shared equally between the Central Government, the State Government and the Tea Board. He, however, declined to accept the suggestion for a reduction in the prescribed rate of 8 per cent. This rate, he thought, was "reasonable for an industry which has been doing well."

Dealing with tea promotional efforts, Mr. Satish Chandra struck a note of realism when he said that "more important than any drum-beating we do for our tea abroad is the task of organising the supply line from the garden to the foreign buyer on a more efficient manner." He rightly emphasised the importance of competitive prices, improvement in quality, and strict adherence to specifications and delivery. "The temptation on the part of some planters to grow rich quickly by sacrificing quality in favour of immediate quantitative gain which works to the great detriment of the fair name of Indian tea should," he went on to add, "be resisted by organised bodies of tea planters." Alluding to export quota system, he remarked: "I agree that it is a survival from the days of International Tea Agreement. ... Export quota releases have been made so liberal that its price has been pushed down to the lowest level. However, it is a matter which should be discussed in the Tea Board. If the consensus of opinion in the industry is that the quota should be abolished, the Government would certainly be prepared to consider the matter." Incidentally, he recalled the impression abroad, particularly in the U.S., that domestic demand for tea in India was competing with the foreign customer of Indian teas. Stating that such competition did not exist in Ceylon, he pertinently stressed that India should adjust its outlook suitably in a competitive world market and that it should produce more tea to take care of both export and domestic needs. This, however, is possible only if the authorities adopt right policies governing production and export of tea.

An official Bill providing for the levy of plantation tax, announced in the Kerala budget for 1960-61, will be introduced in the Kerala Legislative Assembly shortly, according to Mr. R. Sankar, the State's Finance Minister. He disclosed that he would be making certain changes in his original proposal in order to meet some of the criticisms against it. Thus, for the purpose of the levy, holdings of an individual, it is said, will be taken as a whole for calculating the acreage. Only plantations which have started yielding will be made subject to levy. In the case of plantations consisting of both yielding and non-yielding plants, the Bill will provide for the exclusion of the latter group in the calculation of acreage to be covered by the levy.



In both hemispheres . . .

. . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

MANUFACTURE OF CO-AXIAL CABLES

A MAJOR STEP TOWARDS SELF-SUFFICIENCY IN TELECOMMUNICATIONS EQUIPMENT

THE inauguration of the co-axial cable manufacturing plant in the factory of the Hindustan Cables Ltd., Rupnarainpur (W. Bengal), last week, marks an important stage in the development of telecommunications in India. It brings the country nearer its goal of self-sufficiency in the manufacture of telecommunication equipment. It is the culmination of a process which commenced six years ago when the factory began manufacturing certain types of cables and thereby reduced the drain on foreign exchange involved in their import. The ready availability of co-axial trunk cables will mean a greater network of trunk telephone channels, a reduction in traffic disturbance—thanks to the fact that these cables are laid underground—and more telegraph and teleprinter circuits. In short, it will mean more telecommunication facilities to meet the growing demand for them from industry and people in general.

Co-axial Cable

A co-axial cable consists of a copper conductor placed centrally in a copper tube which is made from a copper tape. The copper conductor is held in position by polythene discs placed at regular intervals. In order to reinforce it mechanically and provide electro-magnetic screening, the copper tube is bound by two mild steel tapes and finally insulated with two tappings of paper. Two or more such tubes are formed into a cable, the interstices being filled with the requisite number of quads (four, as per Posts and Telegraphs Department's requirements) on either side. Of the four quads on either side, two consist of polythene insulated conductors and the other two of paper insulated conductors. Wrapped in paper, the final cable is covered with a lead sheath. For underground use, the lead-sheathed cable is reinforced with steel tapes, as in the case of dry core telephone cables. Two co-axial tubes will provide multi-channel (upto 960 nos.) circuits. One of the tubes is used for transmission in the "go" direction, the other being used for the "return." For short-distance traffic, it is possible to have 100 circuits on the interstatal carrier quads. The use of such cables results in making available extra trunk channels.

The Hindustan Cables Ltd., which commenced production in 1954, is primarily intended to manufacture telecommunication equipment for the Posts and Telegraphs Department. It is a wholly State-owned company, with an authorised capital of Rs. 3 crores and paid-up capital of Rs. 1.25 crores. This capital has been supplemented by a loan of Rs. 79 lakhs received from the Government of India, carrying interest at the rate of 4½ per cent. The accounts of the Company for the year 1958-59, revealed a surplus of Rs. 16.31 lakhs, as against Rs. 10.10 lakhs in the previous year. Again, in 1958-59, it produced 656 miles of cables of different sizes; in the current year, it is expected to produce 1,000 miles of cables. During the period April to September 1959, it produced 328 miles of telephone cables, as against 325 miles in the corresponding period in 1958.

The principal raw materials required for the manufacture of telephone cables are copper wire, antimonial lead, steel tape, insulating paper, hessian, bitumen and timber. Copper wire and antimonial lead are obtained from indigenous sources, while insulating paper is imported. The Indian Tube Company of Jamshedpur is meeting a part of the factory's requirements of steel tape. The value of the factory's output in the current year is placed at Rs. 1.71 crores, as against only Rs. 77 lakhs five years ago.

Expansion Scheme

An expansion sheme for the factory of the Hindustan Cables Ltd. is now under consideration. The Union Minister for Industry, Mr. Manubhai Shah, who inaugurated the co-axial plant last week, revealed that there was a proposal for doubling the output of the dry core telephone cables to 2,000 miles per year and also to set up a wire drawing plant with a capacity of 1,500 tons per year. He also revealed that the manufacture of plastic insulated switchboard cables was also under consideration. These schemes, which are estimated to cost Rs. 4 crores, are expected to be completed by 1962-63. With a total investment of Rs. 7 to 8 crores, according to Mr. Shah, an annual production of about Rs. 8 to 10 crores worth of cables and other products would be achieved in the third Plan period.

The project for the manufacture of co-axial cables was the result of an increasing demand for additional long-distance telephone channels and the realisation that the existing overhaul circuits are inadequate along many lines, particularly on important trunk routes. In order to reduce the chances of dislocation of traffic in consequence of copper wire thefts, the Posts and Telegraphs Department has decided, in the first stage, to link the major cities of the country with underground co-axial trunk cables and associated equipment.

Production

The factory's production target for co-axial cables in 1960-61 is 200 miles. These cables will be laid between Kanpur and Banaras, so as to constitute a link with the other imported cables which have already been laid. Thereafter, the output will be gradually raised to 600 miles of cables per year. They will be laid between Agra and Bombay via Ahmedabad and on the Bombay-Madras, Madras-Coimbatore and Delhi-Amritsar routes. The sale value of the cables, when the factory goes into full production, will be Rs. 1.40 crores a year; there will be a corresponding saving in foreign exchange.

The manufacture of co-axial cables will mean an indirect fillip to the copper and steel and other industries, which will be called upon to manufacture such raw materials for the factory as copper wire, copper tapes, special polythene discs and granules, lead and steel tapes. In the initial stages, however, considerable reliance will have to be placed on imported raw materials. But indigenous raw materials will be increasingly used, so long as they continue to adhere to approved standards.

TATA GROUP OF POWER COMPANIES

It is, perhaps, a fitting tribute to the memory of the late Jamsetji Tata, who conceived the idea of harnessing the rain water of the Western Ghats in the nineties of the last century, that the management of the Tata group of hydro-electric companies should have decided to institute a Foundation of Rs. 1 lakh for financing research in electricity. When Jamsetji N. Tata first realised the possibility of hydro-electric power in Western India, electricity was still in its infancy; only a decade earlier, Edison had discovered his incandescent lamp with crude carbon filaments which came later to be replaced by metallic substance. The Tata group of power companies, comprising the Tata Hydro-Electric Power Supply Company, Ltd., (the oldest member of the group, incorporated in 1910), the Andhra Valley Power Supply Company, Ltd. and the Tata Power Company, Ltd., owes its origin to the farsighted genius of Jamsetji Tata, though he did not live to see the light of day when his ideas took concrete shape. Announcing the institution of the Foundation, the present Chairman of the Tata group, Mr. J. D. Choksi, in the course of his statement to shareholders accompanying the report and accounts for the year ended 31st March 1960, states that the money will be paid to the Indian Institute of Science at Bangalore—another of J. N. Tata's contribution to scientific progress—where it will be used as an endowment for research on problems connected with electric power.

Discussing the prospects for power supply in the Bombay region, Mr. Choksi says that, with the capacity of the three units at Trombay, the total installed capacity of the Tata system exceeds 470 MW.; including the capacity of the Chola station, the installed capacity of the Tata-cum-Railway system is nearly 600 m.w. But the demand continues to grow at the rate of about 8 per cent. per year. By the middle of 1963, when the first stage of Koyna development is completed, there will be an assured supply of 115 MW. of additional power from the source. If Government's plans for the second stage of Koyna go through, the region will have on the Tata-Koyna-Railway inter-connected grid a firm load-carrying capacity of about 700 MW. by 1965. At this level, it will be able to meet the peak demand. The question is: "What after that?" There are, according to Mr. Choksi, two alternatives: (a) nuclear power plants and (b) hydro-cum-thermal development. The nuclear power programme envisages a plant of 300 MW. capacity, which will be interconnected with Surat and Ahmedabad in the north and the Tata-Koyna system in the south. Mr. Choksi feels that the "commercial operation of a project of this type, dimension and complexity will take more than five years to materialise." He adds: "It might, therefore, be more prudent to plan some further power development within our own area, independent of the Central Government's project. If necessary, at a later stage, these plans could be co-ordinated with the Government project." Although some additional power supply could be planned at and outside Bhira power station, it would not materially alter the position. This leads him to the conclusion that one is left with the possibility of considering further thermal expansion at Trombay.

TECHNICAL CO-OPERATION AMONG AIRLINES

There is an interesting form of technical co-operation between six airlines, viz., Alitalia, Japan Air Lines, PAA, KLM, SAS and Swissair, which all have DC-8's in operation or on order. Technical co-operation between airlines was a common feature during the last twelve years and has become even more important since the introduction of the giant jetliners. In 1948, KLM, Sabena and Swissair signed a pool agreement for Convair 240 aircraft. Each airline had to provide certain airports with certain spares, so that, if necessary, the partners could rely on these being available at the airports in question. The great advantage of such a technical co-operation was recognised by an increasing number of airlines, while other types of aircraft were included in the pool. The partners had to provide reserve engines and spares and agreed on joint maintenance of their aircraft, so that use could be made of one another's ground engineers. Millions of guilders could be saved in this way. Until 1959 technical co-operation for conventional aircraft existed between Alitalia, Air France, Deutsche Lufthansa, KLM, Sabena, SAS, Swissair, Air India and Qantas. After the introduction of the jetliner, new pools have been formed by several airlines operating DC-8's, Boeing 707s or Caravelles.

KLM has signed a DC-8 pool agreement with Alitalia, Japan Air Lines, PAA, SAS and Swissair. Since the DC-8 spares cost much more than, for example, those of the DC-7C (the average costs of a set of spares for the DC-8 are $87,000 per station, against $31,000 for the DC-7C), co-operation in this field is now a first essential. A provisional "spares pool" now comprises 25 stations, of which 16 are included in the KLM network. KLM only needs to keep a stock of spares at six stations and can then rely on technical assistance at all 16 airports. Reserve engines for the DC-8, which cost 1,000,000 guilders each as against 500,000 guilders for the DC-7C, also come under this pool arrangement. Together with the members of the B-707 pool, the equipment needed for the ground handling of jet aircraft is pooled at all stations, wherever possible. This also means a considerable saving on the costs, since the DC-8 requires a different and much more expensive ground equipment than conventional aircraft.

It seems likely that the co-operation will still be expanded when in 1960 more airports will be included in the DC-8 network and more airlines will fly the DC-8.

THERMAL POWER FROM GAS

The Government of India has approved the Nahorkatiya thermal power station project, under which a thermal power station, along with a network of transmission lines, will be constructed at Namrup in Assam. The power station, utilising the natural gas available from the Nahorkatiya oil-fields, will have an installed capacity of 50,400 kw., each of the three gas turbines producing 16,800 kw. of power. There will also be a provision for the addition of two similar sets at a later date. The total length of the transmission system will be 416 miles. Of this, the 66 kv. double circuit lines from the power house to Tinsukia, Golaghat via Nazira and Mariani, and 66 kv. single circuit lines from Tinsukia to Dibrugarh and from Golaghat to Bokajan will be 112 miles. For regulating the supply of power, 12 sub-stations will be established—66 sub-stations at Dibrugarh, Tinsukia, Naziira, Mariani, Golaghat and Bokajan, and 33 sub-stations at Moran, Nazira, Jorhat, Doom-duma, Digboi and Margherita.

It is estimated that the load demand on the power station will rise to 33,750 kv. by 1965. Among the industrial units requiring power in the region are the fertiliser, cement and oil plants at Namrup, Bokajan and Moran respectively. The tea estates, railways and other units, will also be supplied with power by this thermal station. The estimated cost of the project is Rs. 926.71 lakhs—Rs. 608.89 lakhs for the generating station and Rs. 317.82 lakhs for the transmission system. The work relating to the projects will start in 1960-61.

RADIO CONTROL SYSTEM IN ASSAM-BIHAR

A British firm—Murphy Radio Ltd.—is to design, supply and install a radio control system for the 800-mile oil pipeline of the Burmah Oil Company between Nahorkatiya, in Assam, and Barauni, in Bihar. The contract, which is worth slightly more than £ one million, is expected to be signed within a month. It is for telecommunications, telemetering, telecontrol and instrumental equipment for the pipeline, now under construction. The system will provide a 36-channel radio link for telephone communications, with the central control point 260 miles from Nahorkatiya, at Nunmati. Control by telemetering is handled over one speech channel, leaving 35 speech channels connecting the 26 stations along the pipeline. Control will be automatic, with instrumentation at various points to give details such as the flow of oil, temperatures, pressures, amount of oil in tanks, or information on blockages. This is transmitted on a pulse line to a central control office and flow regulated remotely.

Planning and design of the undertaking is already going on, and production of the equipment is expected to start early next year. By the end of 1961, the first stage will be completed, and the contract concluded by the end of the first quarter of 1962.

Murphy are also negotiating for the contract for X-ray inspection of the complete pipeline to detect any flaws in construction.

GIANT DIESEL LOCO

A giant diesel locomotive, TE-12, with 6,000 h.p., has been manufactured by the Malayshev plant at Kharkov, the Ukraine (U.S.S.R.). Although its capacity is 2,000 h.p. larger than the TE-3 diesel locomotive widely used in the country's railing system, it has the same weight as the latter. The new locomotive can do 120 kilometres an hour and also pull a goods train 50 per cent. heavier than the one which can be tugged by the TE-3 locomotive.

NEW PRODUCTS AND PROCESSES

Compact Grinding Machine

A HEAVY duty plunge cut cylindrical grinding machine which takes up an unusually small floor space area has been designed by a Peterborough firm of machine tool manufacturers. The grinder was specially developed for plunge grinding the outer diameters of large size precision bearing races. As the production requirement entails plunge grinding only, no table traverse is necessary though provisions are of course made for wheel reciprocation and wheel dressing. The manufacturers claim that the elimination of work-table movement, together with other design considerations, have resulted in a floor saving with this machine of approximately 33 per cent. by comparison with a conventional grinder of equivalent capacity. The machine has a 12½-inch wide grinding wheel and will grind components up to 20 in. diameter. The wheelhead assembly, which is extremely robust, incorporates a hydraulically operated mechanism to produce oscillation of the spindle. The rate of oscillation is adjustable and the length of stroke is steplessly variable between 0 and ⅜ in. The wheelhead has a 3-in. rapid withdrawal and approach motion and five inter-changeable pulleys are supplied for fitting to the 35 h.p., 1,160 r.p.m. drive motor in order that the peripheral speed of the grinding wheel can be maintained within the range 5,500 to 6,000 r.p.m. for variations in wheel diameter from 16 in. to 24 in. Operated by the customer's own two-stage sizing device, two independently adjustable feed rate controls are provided.

New Electronic Computing System

A new concept of electronic computing and data handling equipment representing a significant advance in combining the advantages of both analogue and digital computers in a single system has been developed by a U.K. firm. The new system called Radic, (Redifon Analogue-Digital Computing System) has been designed for general purpose used as a system rather than a fixed size computer. It is claimed to be the first of its kind in the world specifically developed to integrate the stability, convenient input/output equipment and extensive storage facilities of the digital machine with the speed of operation, ease of programming and low cost of the analogue. Cost of the Radic system will range from about £10,000; but it can be easily expanded if required into a large computing system costing up to £150,000. This brings the system within the reach of even the smallest company or organisation requiring a flexible computing system for carrying out complex calculations, simulation and data reduction. A major field of application will be the analysis and computation necessary for designing automatic process control equipments for various complex industrial processes such as may be found in the oil, steel, auto, aircraft, chemical and nuclear industries. Apart from the field of engineering design, Radic is likely to be extremely useful to the economist and statistician for statistical, flow-line and systems analysis and linear programming.

Long-lasting Generator

Three American engineers, Messrs. James J. Keenan, George P. Dix and Cecil O. Riggs of the Martin Company's nuclear division in Baltimore, have designed a long lasting electric generator whose heart is Strontium 90. The potentially harmful Strontium 90 is contained within tightly sealed, crash and corrosion-resistant pellets. The principle of the strontium generator is as follows: Heat produced by normal radioactive decay in about a pound of a Strontium 90 compound would be converted directly into five watts of continuous electrical energy by a series of thermo-electric elements around the fuel capsule. The unit, the engineers said, could run without maintenance or refuelling for several years.

Such a low-power, continuously working generator would be ideal to power lights, for example, on channel buoys or to furnish power for unmanned scientific stations in remote areas such as the Antarctic.

Elaborate safety precautions are incorporated in the design. The generator can withstand a plane crash or explosion without releasing its fuel. The pellets are to be surrounded by three layers of a material called Hastelloy-C, which is so corrosion-resistant that it would provide protection against sea water for centuries. The fuel compound envisioned is strontium titanate, which is virtually insoluable in water. (Strontium 90 is harmful to human beings and other living organisms only if it is absorbed in soluble form.)

Hydraulic Shipyard

A Netherlands firm manufactures 60 to 1,000 ton-pressure hydraulic presses for use in the shipbuilding industry in conjunction with an automatic travelling crane for supplying material. They are capable of pressing even large ships' plates to the correct shape. They are operated by two persons; presses of over 300 tons sometimes require a third operator on account of the heavier weight of the plates.

The equipment is provided with a high-pressure pump with an amply rated capacity, ensuring rapid operation of the press. The supply of material can be automatically adjusted from 20 cm. to 300 cm. per stroke. The stroke of the press plunger has a minimum length of 50 mm. (2") and a maximum length of 1,000 mm. In addition, when the length of stroke is not fully used the path along which the stroke travels permits of vertical adjustment. This depth adjustment which, if required, can be set to within an accuracy of 0.1 mm. may be useful when plates are pressed in several operations. The operating speed varies between a maximum of 25 and 50 strokes per minute, dependent on the size of the press. In general, the design of the press is adapted as much as possible to the work for which it is intended. The free passage between the columns can be varied between 320 cm. and 750 cm. and the length of the crane runway between 7 meters and 16 meters. The travelling crane is usually designed with two travelling crabs, one on the inlet and one on the outlet side of the press. Operation of the crabs can be combined. When the shipyard press is purchased together with the automatic crane runway the entire switchgear with stardelta switches is assembled in one housing. The control panel of press and crane operates on push buttons.

Preserving Wood

A further development of the polyethylene glycol method of conserving wooden objects retrieved from the sea has been evolved by Swedish scientists for the preservation of the sculptural treasures from "Wasa," the seventeenth-century Swedish man-of-war now being salvaged in the Port of Stockholm. With previously used methods it was only possible to preserve the outer layers of the wood. However, owing to special conditions in the water of the port of Stockholm the inner core of the wood is entirely undecayed; only an exterior layer of 5-15 mm. is affected by the water, which makes the core shrink and deteriorate when conventional methods are used. This is caused in some cases the top layer to peel off. The new method consists of a long-term treatment of the objects. After they have been cleaned they are immersed in a 30 per cent. solution of glycol in water with an additional anti-rot chemical, pentachlorphenol of sodium. After 30 days in this solution the objects are immersed in a 100 per cent. solution of polythene glycol. Thereafter they are enclosed in plastics, with only a small aperture for slow drying. Tests are made at regular intervals in order to determine the correct amount of humidity. The preservation of the ship itself will present further difficulties, as it cannot be immersed in chemicals in its entirety. Experiments are going on at the Swedish Wood Research Institute and the scientists believe that they will master this problem also.

Coil-free Stretchable Wire

A new stretchable wire made in the U.S. is now available to carry electricity to reciprocating parts of machinery. Unlike wires which depend on being coiled for their stretching ability, this one is claimed to be straight even when not under tension. Basically, the wire has a rubber or rubber-like core, with a conductor of copper-and-cadmium wires braided around it. The insulation is braided nylon. Braid has the ability to stretch by reducing its own diameter, with the rubber core returning it to normal diameter and length when tension is relaxed. The wire is available with either single or multiple (up to six) conductors. The elongation is 300 per cent. and samples have shown a life of 100,000 stretch-and-relax cycles. Resistance of commercial types ranges from two-tenths to four ohms per foot.

Cream from Vegetable Oil

Many physicians have removed cream from the diets of certain of their patients. This is because medical investigators have suggested a relationship between atherosclerosis—and resultant heart disease—and the amount of cholesterol in the blood. Foods high in animal fats, such as cream, have been thought by some investigators to interfere with the normal methods by which the body handles cholesterol. Thus, the result would be abnormal deposits of cholesterol-containing substances on the walls of blood vessels. However, diets high in vegetable oils tend to enhance normal means of handling blood cholesterol.

These persons on an animal-fat-free diet have been able to substitute non-fat milk for whole milk and vegetable-oil margarine for butter. But cream has remained forbidden, and no facsimile without animal fat has been available.

Looking to margarine as a successful example, food chemists J. P. Nielsen and R. D. Mathews of the Stanford Research Institute, reasoned that vegetable oils could be used to make a cream substitute. Under sponsorship of the California Fruit Concentrate Company of San Jose, they overcame the technological difficulties and produced an unsaturated vegetable-oil cream comparable in nutrition and physical properties to the natural product. The cream is a canned, sterilised product processed in a manner similar to canned milk. An evaluation panel tasted and pronounced the flavour of vegetable-oil cream to be very similar to that from the cow.

The project's sponsor is now setting up a pilot plant operation to determine the problems of producing the new cream commercially. If the process proves feasible, Nielsen and Mathews suggest that dieting persons can use the product in coffee and on cereals, fruits, and desserts. Moreover, it can be used to fortify non-fat milks, giving the flavour of whole milk.

Plastic Films and Soaps

Two interesting chemical processes have been developed at Stanford Research Institute for Tallow Research, Inc. Plastic films have been prepared from certain fatty monomers and vinyl chloride and vinyl acetate. The films have excellent clarity, good low temperature characteristics, and high tensile strength. One particular polymer prepared has properties that may make it suitable for packaging or accoustical uses. An inexpensive process has been developed to convert a component of animal fat into isooleic acids, which in turn may be used to make soaps. Soaps prepared from isooleic acid have two- to three-fold greater detergency than conventional soaps. Moreover, the newer soaps are in the form of free-flowing crystalline powders.

Transistor Ignition System for Cars

Transistor ignition systems are planned for American automobiles within the next few years. Patents have already been issued to a General Motors employee for such a system but further development work has still to be done. The new system will provide a "hotter" spark, of the order of 30,000 volts compared to the present 17,000. The system will work by building up voltages in an oscillating circuit, using transistors instead of electronic valves and eliminating the present high-tension transformers and magnetos.

THE TATA POWER COMPANY LTD.

SALES LARGER—PLANNING FOR MORE POWER BEYOND 1965 UNDERTAKEN

STATEMENT BY CHAIRMAN, MR. J. D. CHOKSI

IN his statement to the shareholders of the Tata Power Company, Ltd., circulated along with the annual report and accounts for the year ended 31st March 1960, the Chairman, Mr. J. D. Choksi, has referred to the fact that this is the golden jubilee year of the Tata Hydro-Electric Power Supply Company, Ltd., the oldest of the three Tata power supply companies. He has also discussed the demand for power beyond 1965. The Company's engineers have undertaken a study of the planning for additional power beyond that date. He states that some additional power could be obtained through a small hydro plant outside Bhira and an additional machine at the Bhira power station on the completion of the new tunnel. But this will add very little to the present capacity. He adds: "We are, therefore, left with the posibility of considering further thermal expansion at Trombay."

The following is the text of Mr. Choksi's statement:

"TO THE MEMBERS,

"This is the jubilee year of the Tata Hydro-Electric Power Supply Company Limited, the oldest of the three Tata Power supply companies. It was incorporated on 7th November 1910, and will be fifty years of age in November of this year. The Tata Hydro-Electric system occupies a unique place in the family of Tata enterprises. It is one of the three great projects, to the planning and development of which the founder gave so much of the last years of his life. When the late Mr. Jamsetji Tata, who might aptly be described as the 'Founder of Industrial India,' first conceived the idea, in the nineties of the last century, of harnessing the rain water of the monsoons on the Western Ghats, the idea was unique, because although river valley projects had been developed in other countries, it was perhaps the first large-scale project for directly conserving rain water. After extensive preliminary investigation, the plan took final shape some years after the founder's death. A licence for generating electricity was applied for and obtained in the year 1907 and the enterprise took shape with the promotion of the Tata Hydro-Electric Power Supply Company. The Company's power station at Khopoli started with five machines each of 8,000 kilowatts, or a total installed capacity of 40 megawatts.

Expansion

"Later, the two sister companies were promoted—first Andhra in August 1916 and then Power in September 1919—and in spite of passing through many vicissitudes, the three undertakings, operating as an integrated system, have continuously expanded and have, throughout, provided a high quality of service noted for its continuity and efficiency. Add to this the low cost of supply, as our rates consistently have been among the lowest in India and comparable with the lowest standard rates obtainable in other countries, and the Tata electric group can, I think with justice, claim that it has well and truly served the people of Bombay and the other areas over which our licences extend. Today, the installed capacity of the group, inclusive of thermal power, exceeds 470 megawatts.

"Although the jubilee to be commemorated in November 1960 is that of the Hydro Company, it is also that of the Tata electric system as a whole. The other two sister companies have, therefore, agreed to take their place as co-equal members of the Tata electric group in the commemorative action that is proposed. The Directors of the three Companies propose to celebrate the jubilee in a threefold manner: first, to institute a Foundation of Rs. 1 lakh (to be contributed in the usual proportions by the three Companies) from which to finance scholarships for research on problems connected with electric power. The money will be paid to the Indian Institute of Science at Bangalore—another of J. N. Tata's great schemes—as an endowment for this purpose. Second, to give to each one of the employees of the three Companies, without consideration of rank and status, a Government of India Prize Bond worth Rs. 100. The total cost on this account will also be shared proportionately by the three Companies. If anyone of the staff who receives a Prize Bond is fortunate to win a prize, as I hope will be the case, he will have occasion to remember this jubilee always. These payments will be made during the year 1960-61.

"Third, although the jubilee may be considered to fall perhaps more appropriately within the accounts year 1960-61, your Directors have decided that, as it occurs in the calendar year 1960, the jubilee bonus on dividends should be paid this year out of the profits for 1959-60. Quantitatively, an extra ½ per cent. dividend might appear somewhat small, but as you will see from the statement of accounts in the annual report, it represents a fair contribution from the profits of the Company, and I trust that our dividend proposals will have your approval.

Larger Sales

"The year 1959-60 registers in the case of all three Companies larger energy sales, and therefore larger profits, except in the case of the Tata Hydro Company, where the increase in revenue from power supply is more than offset by the additional tax provision, which is relatively higher because there was no unabsorbed development rebate carried forward from previous years, as was the case with each of the other two Companies.

"While the financial position of the Companies was sustained satisfactorily, the capital base increased and activities and revenues considerably expanded, the market value of the shares of the three Companies registered a substantial fall during the year. In the case of Andhra, the price of the ordinary shares actually went below par, a thing which had not happened for nearly twenty-five years in the history of our group's shares which once stood at a considerable premium and were universally regarded on a par with gilt-edged securities.

"Considering the buoyant tone of the share market as a whole, the drop in the value of our three Companies' shares, clearly reflects the loss of confidence in these scrips which has resulted from the stringent limitation in profits and other restrictions imposed upon public utilities by the Electricity (Supply) Act and, more recently, from the introduction of the tax on dividends under the Finance Act 1959.

Industry's Claims

"I explained at some length in my statement last year the adverse effect of this unfortunate innovation on the reasonable return allowed to our Companies. The Federation of Electricity Undertakings has continued to press the claims of the industry for an improvement in the permissible return on the capital base, either by permitting the tax on dividends to be regarded as legitimate expenditure for calculating the reasonable return and clear profits or by increasing the standard rate of return. While we have been assured of sympathetic consideration there is yet no indication of Government's decision on these representations.

"I mentioned last year that the manufacturers of the turbine-generators installed at Trombay were about to undertake certain modifications to the first two turbines. I am glad to say that this work has been completed. No. 1 turbine-generator has been proved to fulfil the contracted guarantees; tests on the second machine will be conducted shortly.

"New Unit No. 3 has now gone into operation within three months of the target date. Its boiler is designed to burn coal in addition to refinery fuel. The unit was started on refinery fuel, but will soon be switched over to coal firing. Coal comes to us from the Pench Valley areas, and we have reached satisfactory arrangements with the railways for regular supplies. In addition, suitable reserves of coal will be stacked in our yard.

"During the months March to June, when No. 2 unit was out of commission for major modifications, and No. 3 had not started, we had to lean rather heavily upon the railway's power station at Chola to meet load demands. I would like to thank the railway authorities for the fine manner in which they co-operated with us. Despite this, there were a few days on which, owing to the demand being almost equal to available capacity, frequency differences and a drop in voltage occurred, causing some inconvenience to the public, which I much regret. On one day alone, however, throughout that critical period did we have to drop load to the extent of about 20 MW.

"With three units at Trombay now, the total installed capacity of the Tata system exceeds 470 MW.; including Chola, the installed capacity of the Tata-cum-Railway system is nearly 600 MW. We are, therefore, in a position to meet a maximum system demand of about 500 MW. against the present maximum of 442, but the growth in demand and energy requirements continues to increase at the cumulative rate of about 8 per cent. per year. For the immediate future, we may expect some additional power from Koyna. According to Government plans, the first 60 MW. set at Koyna is expected to go into commercial operation during the latter part of 1961; thereafter, at six-monthly intervals, the second, third and fourth sets of 60 MW. each will be brought into service. By the middle of 1963, therefore, when the first stage of Koyna development is completed, we will be assured of 115 MW. of additional power from this source, the balance being required to meet other local commitments.

"The second stage of Koyna development, rated to yield another 240 MW. may be carried out between 1963 and 1965. However, with the inter-State agreement limiting the diversion of water from the Krishna river basin, the limited capacity of the transmission lines connecting Koyna with our system and the reservation of a substantial amount of power required for use in the Southern Maharashtra region, our system can expect to receive no more than 250 MW. altogether from Koyna. If Government's plans for the second stage of Koyna go through, we will have by 1965 on the Tata-Koyna-Railway inter-connected grid a firm load-carrying-capability of about 700 MW.

Future Demand

"Studies made by our engineers indicate that the system peak demand will also have grown to about the firm capacity of this inter-connected grid by the end of 1965. What after that? Planning for additional power beyond 1965 has commenced. Two alternatives are being considered: (*a*) Nuclear power plants, and (*b*) hydro-cum-thermal development. All of us have heard of the Central Government's intention to set up a nuclear power plant of 300 MW. capacity at some suitable location some miles north of Bombay. This plant, we are told, will be inter-connected with Surat and Ahmedabad in the north and our system and Koyna in the south. An inter-connected grid such as this extending over many hundreds of miles, with power stations with varying capacities of generating units from 10 MW. to 150 MW. will create many intricate and difficult technical problems. Our engineers are studying the possible repercussions on our system. We believe, that the commercial operation of a project of this type, dimension and complexity, will take more than five years to materialise. It might, therefore, be more prudent to plan some further power development within our own area, independent of the Central Government's poject. If necessary at a later stage, these plans could be co-ordinated with the Government project.

"We are in close touch with the Government of Maharashtra and its State Electricity Board, whom we shall consult in planning further expansion to our system beyond 1965. Development of hydel power on our system, of necessity will be restricted. Perhaps, a small hydro plant could be installed on the tail race waters outside Bhira on the Kundalika river. This will give additional peaking assistance, but will not, to any substantial extent, meet the demand for additional power beyond 1965. Similarly, on the completion of the new tunnel at Bhira, an additional machine could be installed at the Bhira power station, but even that will add very little to the system capacity. We are, therefore, left with the possibility of considering further thermal expansion at Trombay.

"May I, in conclusion, on behalf of the shareholders, the Board, and myself, express our thanks to all employees of the Company who have served us so well during the year."

J. D. CHOKSI,
Chairman.

11th July, 1960.

HOW WOULD YOU LIKE TO GET OUT FROM UNDER

It's very simple—you can do this immediatley through the Data Processing Services at the IBM Service Bureau. CHICAGO PLAN OF CREDIT CONTROL

WILL IT WORK IN INDIA?

By Prof. R. K. Amin

HEAD OF DEPARTMENT OF ECONOMICS, SARDAR VALLABHBHAI VIDYAPEETH

THE Reserve Bank of India announced several measures for credit control on Friday, 11th March 1960. One of them was for impounding with the Reserve Bank of India 25 per cent. of the additional deposits with the banking system; the percentage was subsequently raised to fifty. Other measures were of the conventional type. The action of impounding a part of the additional deposits is an unconventional step and is remarkable for a variety of reasons. First, the Reserve Bank of India has not made use of such a weapon in the past. It is entirely a new technique, with which the Bank has had no previous experience. Secondly, the acceptance of a measure of this type opens the possibility of introducing, as a whole or in a modified form, the system known as 100 per cent. reserve or otherwise known as Chicago Plan. And, thirdly, although apparently a move which is to be welcomed, it will create problems in its train, which may lead to undesirable consequences of various kinds, if it is operated as the Chicago Plan.

It is true that the system known as T.D.R. which was introduced in Britain during the Second World War was somewhat of this type, but it was never considered desirable to continue the system after the war was over (*The Economist*, 26th March 1960, p. 1234). In what way then, will a measure of this type lead to the introduction of the Chicago Plan in India? And in what way will a reform in the form of 100 per cent. reserve or in its modified form, lead to undesirable consequences? Will this measure serve its purpose of checking inflation or of reducing the substantial liquidity of the banking system?

Cent Per Cent Reserve

It is, no doubt, very tempting to recommend a scheme similar to the Chicago Plan in India, especially to facilitate the adoption of deficit financing as a technique of raising budgetary resources for plan investment. At present, during the second Five-year Plan, the extent of deficit financing has been of the order of Rs. 1,200 crores and about the same amount has also been raised from external sources, while the loans and taxes may be of smaller amounts than these. In the third Five-year Plan, it is proposed to invest Rs. 7,250 crores in the public sector alone. Although the share of deficit financing is placed at only Rs. 550 crores, in actual practice it may turn out to be much larger, as the Government may find it difficult to raise resources through market loans, small savings and taxation to the extent estimated by the planners. Is it not then desirable to try to minimise the inflationary effects of deficit financing as far as possible? Why should the Government not exercise its authority for creating money entirely by itself instead of sharing this privilege with commercial banks? Why should it not ask commercial banks to keep 100 per cent. reserve, especially against the part of their total liabilities which is to be looked upon as created money? It may be that the Government may ask the banks to keep 100 per cent. reserve against additions to demand liabilities accruing after a particular date or a part of the total liabilities, which may include demand, time and saving deposits. Or else, the Government may begin, in the first instance, with 25 per cent. of the additional liabilities to be kept as reserve on which some interest may be paid, which later on may be altered in the form of higher percentages of reserves to be kept on additional liabilities without interest charges. If these developments take place, it will certainly be the introduction of Chicago Plan in the country, with all its desirable or undesirable consequences.

What is the scheme of 100 per cent. reserve? What are its essentials? Why is it called Chicago Plan? How will it work in India if the scheme is introduced? Is it a feasible proposal? Will there be any undesirable developments from such a move? These are some of the questions which need to be examined.

The proposal for 100 per cent. reserve is as old as the development of the banking system. The origin of this expedient can be traced to the practice of keeping 100 per cent. reserves by the goldsmiths in the sixteenth and seventeenth centuries when there were hardly any monetary troubles of the type which we face now. The moment these goldsmiths started creating money by allowing their deposit receipts to circulate as if they were gold coins or money, monetary troubles in the form of excess in the circulation of money began. The question of keeping such credit creation or monetisation of private credit within limits was faced by various thinkers and financiers from time to time but no widely acceptable answer has been found so far. One remedy suggested then was to keep the power of issuing currency as a monopoly of the Central Bank or of the Government.

But even then when the State or the Central Bank were given the monopoly of issuing currency, the power of creating of credit remained, in a large measure, with the commercial banks. The proposal of 100 per cent. reserve is intended to prevent such creation of credit by the commercial banks by asking them to keep 100 per cent. reserve against their checking deposits. This proposal is also known as Chicago Plan, since a group of economists in Chicago put forth, in 1934, a concrete scheme embodying this idea for the reform of the banking system in the U.S.

How will the scheme of 100 per cent. reserve work? The scheme means primarily that the entire creation of money will be done by the monetary authorities (that is, the Government and the Central Bank). The commercial banks will be asked to keep 100 per cent. reserve against their checking deposits and thus, although both types of money, currency and bank deposits, may remain in existence, the total quantity of money may be only what there would be if there were one type of money, i.e., currency only, and the commercial banks' deposits may be used only in so far as their use offers distinct advantages over the use of currency.

Anti-inflationary

Perhaps, the working of the commercial banks may be divided into two departments, one for checking deposits against which 100 per cent. reserve will be kept, in which case the banks act as warehouses for money, and the other for savings deposits where the banks may act as investment trusts. Perhaps, the commercial banks may collect some charges from the depositors for providing them the convenience of checking deposits for which the banks at present impose no charge. Thus, there may remain commercial banks without the banking functions; they will not influence the pattern of investment by making loans to some individuals and for particular industries. Nor will they influence the investment by providing more resources than what the public may have decided to invest on its own initiative. The advantage to the Government will be that there will be a reduction in the National Debt, since the commercial banks, in order to raise the necessary balances, may sell their Government securities to the Reserve Bank. In that case, recourse to deficit financing can be taken up without inflationary consequences.

But, a scheme of this type will be acceptable, only if the difficulties in its implementation are very few and unimportant and would not create other problems which are absent in the present system of monetary controls. Broadly speaking, there are four kinds of difficulties in introducing the 100 per cent. reserve system in India. They are: (*a*) The transition itself would probably induce fluctuations in the demand for money which might be difficult to manage without avoiding dangerous fluctuations in prices and output. (*b*) It may be that, in view of the great importance of banks as a component of the capital market, it may not be possible to effect this transition without radical disturbances. (*c*) There may be a danger, in the process of making checking deposits more manageable, of driving business to other and less manageable methods of payments. And (*d*) the transition may leave the institutions succeeding to the non-monetary functions of the banks dangerously weak.

The acceptance of banking deposits by the public as money was not intended by the State: it took place, because it was convenient to the banks as well as to the public. If the banks were compelled to become warehouses for money—without banking functions—the cost of keeping accounts and clearing of cheques would be too high. The banks would then be compelled to impose high charges for these services and as the public would like to avoid such high charges if they could, they would co-operate with the commercial banks to evolve a system to evade the law. They may in that case use private debts of the third party or may allow the savings deposits to act as though they were time deposits. Somehow or other, a money substitute would be invented, and, as both the parties would be willing to use such substitutes, the State could not prevent such a development. The distinction in that case between demand, time and savings deposits would not remain as at present and, if it remained, it would have no meaning.

If, eventually, these money substitutes act as money, the whole purpose of the system of 100 per cent. reserve will be thwarted. The State will then have to devise ways and means to control these money substitutes, and, in that case, the banks may be given a subsidy which may be equal to the rates of interest paid on the Government securities which are held by the banks as statutory reserves. Then the amount of reserves to be kept would depend on how much subsidy the Government would like to give. If the subsidy is paid, there is no difference between the present system and the proposed system.

Leap in the Dark

One more difficulty which the Government would encounter in implementing this scheme is that the bankers not only create money, but also influence the direction of investment. Still, in the Indian banking system, there is an investment amounting to about Rs. 900 crores of advances and about Rs. 750 crores of investment for which the bankers are really taking a risk. In the 100 per cent. reserve system, either this function of banking will be stopped, or some other institution will have to be created to perform it. If this function is stopped, it will be a great handicap to the operation of a competitive economy and, if it is continued, it would either be performed by the Government or by some other institution. If the Government conducts this business of making loans, it would lead to a detailed Government interference and nationalisation of banking and, if it is done through some other institution, the latter would be very weak as it would have no support of liquid assets. Shall we then take the risk of so detailed a Government interference and, ultimately, nationalisation of banking, or shall we face the evolution of the new institution which may be very weak and whose nature we do not know? Will it not be, in both the cases, a leap in the dark?

One other difficulty which the scheme will have to face is of a permanent nature. Suppose that the difficulties of the transition are met and we could face any possible fluctuation in the demand for money and thus avoid price and output changes? Suppose again that we could introduce the scheme in such a way that no money substitutes were created and the Government managed to distribute the loans which the banks make today in a way which satisfied most of the people? Suppose that there was no trouble in the capital market and the depositors accepted the higher cost of banking services willingly? Even then, the question of determining the amount of money will remain. The Government at present makes the changes in the total supply of money by changing a small amount of notes, because the superstructure of credit has already been evolved by the present banking system which leads to further creation of money. But, in the 100 per cent. reserve system, the Government will have to introduce big changes in the quantity of money in order to counteract the changes in the velocity of money and this might lead to greater interference by Government in the economy than is possible at present.

Further, on what basis should the total quantity of money be fixed? That is a big question which any Government will have to face in the proposed scheme. In the present system, we can proceed by trial and error; small changes are made in the quantity of money and we watch how the other variables in the economy behave; we need not bother about the question of determining the ideal quantity of money, since the changes in liquidity position act as a cushion. But, in the 100 per cent reserve system, we shall be more concerned with the problem of ideal amount of money and at this stage, there is no agreement among experts as to how we can determine the ideal quantity of money. Even the suggestion to stabilise the price level is not feasible, since there are various difficult questions arising from the problem of index number. Nor do we know the underlying principles for variation in the velocity of the quantity of money. In short, the mechanism of introducing the 100 per cent. reserve system will prove so clumsy and will involve so many changes of an unpredictable nature in our economy that it is not desirable to take the risk which such changes involve.

Even apart from these difficulties, there are no good grounds for hoping that any definite rule of action would help to reduce the intensity of expectations. On the other hand, the very existence of discretionary authority with the Central Bank and the feeling of uncertainty with regard to monetary policy might help a great deal to keep the expectations of the public within manageable limits. The case in point is the behaviour of the Bank of England as against that of the Federal Reserve System. Very few documents are published by the Bank of England. Its annual reports are not worth reading. Its policy is kept more or less in secret; on the other hand, there are massive publications and voluminous reports by the Federal Reserve System and yet the Bank of England could manage its affairs more successfully than the Federal Reserve Bank. Perhaps "Do's and Don't's for Central Banks" are not desirable.[1]

Risks

Thus, the introduction of 100 per cent. reserve system would lead to many authoritarian trends which might kill the possibility of maintaining a competitive economy. The Government would have to fix arbitrarily the price index; it shall have to decide the timing of the action, and, ultimately, the scale of necessary operations would be so great as to compel the Government to encroach upon many economic activities. If the present function of making advances is taken up by the Government, then there would be large scope for arbitrary lending of money and, if new institutions to circulate money substitutes are allowed to crop up, they would be of unknown nature and character and might introduce unreliable and uncertain elements in the economy. The elements of certainty brought in the monetary policy in this manner are not at all an effective remedy for the spectacular changes in expectations, and there is very little in monetary policy as such to assure us that it could do the trick by itself. We may not be prepared to face all these difficulties and plunge into an unknown sphere while we are confident of being able to manage our affairs more or less satisfactorily by introducing reforms here and there in the present system and by keeping its basic nature intact.

It is, therefore, very necessary to prevent such undesirable tendencies from developing in this country. The measure for impounding 50 per cent. of additional deposits is of this type and there are chances of its developing on the lines of a 100 per cent. reserve. Since, however, the Reserve Bank has agreed to pay interest on special deposits, one can consider the system as equal to the T.D.R., which has its use as a temporary measure. If that is so, there is not much objection.

If there are no possibilities of the present measure developing towards hundred per cent. reserve and if the Reserve Bank continues to pay interest on special deposits, the Government would achieve nothing substantial. The credit which would have been increased upto Rs. 100 crores ordinarily would now increase upto Rs. 125 crores or so and about Rs. 25 crores more may be put as reserve in the Reserve Bank by depleting the investment portfolio or liquid assets.[2] The behaviour of advances will, however, remain unaffected, since interest charges are paid on this reserve and the banks need not charge higher interest rates on their advances. If the Reserve Bank were not to pay any interest on special deposits, there might be some increase in the rates of interest on advances, but, in that case, the raising of the Bank Rate would have served the purpose more directly and without any complications. Moreover, the use of Bank Rate weapon would have an additional advantage, in that it would produce certain desirable psychological effects which a measure of this type would not. The Radcliffe Report, too, leads to a similar conclusion.

Care should, therefore, be taken in wielding the weapon of special deposits in India. The banks do not keep a stable cash ratio; it varies from place to place and from season to season. Nor do they follow any conventional rule in regard to the size of their investment portfolio. The proportion of their various assets to deposits also varies within very wide limits. Nor is there a rigid adherence of any rule in regard to classification of deposits into the categories of demand, time and saving; the distinction between time and savings deposits is not at all clear. In these circumstances, a measure similar to the Chicago Plan will be easily evaded by the commercial banks.

[1] See D. H. Robertson, *Lectures on Economic Principles*, Vol. III, p. 160.

[2] It is interesting to read the following few lines published in the *Economist*, 26th March 1960 (air edition), page 1235, on the subject of special deposits.

"Asked early in 1959 what they (*the commercial bankers*)—italics mine—would do in the event of a call to special deposits, the representatives of the clearing bankers replied immediately that they would tighten their lending. The bankers were reminded that a year before they had said that *their first response to pressure in liquidity was to unload gilt-edged investments.*"

INDIAN COPPER CORPORATION LIMITED

PRODUCTION OF ELECTROLYTIC COPPER TO COMMENCE BY THE END OF 1962

ADDRESS OF CHAIRMAN, MR. PATRICK E. G. W. PARISH

THE Annual General Meeting of the Indian Copper Corporation Ltd. was held at Calcutta on 27th July 1960. Addressing the meeting, Mr. Patrick E.G.W. Parish, O.B.E., Chairman of the Company, stated that the steady increase in production in recent years would be kept up through further development of the Company's mine and that a beginning had already been made in regard to the implementation of the scheme for producing electrolytic copper and wire bar. The following is the full text of Mr. Parish's address:

"GENTLEMEN,

"Your Directors' report and the accounts for the year ended 31st December 1959 have been in your hands for some time. I once again welcome this opportunity to give you a short outline and some further information on the results of the working of your Company during the year, together with some comments concerning copper prices which are of interest and affect your Company's working results.

General Review

"It is a fact that, if all copper mines throughout the world worked to capacity, production would exceed current consumption. In that event, prices would be bound to fall. During the year 1959, however, strikes took place in various mines, especially in America, with the result that production was curtailed, world stocks were reduced and a consequent rise in price took place.

"For the first ten months of the year, the average London Metal Exchange price for this metal fluctuated within small limits around £230 per ton, and thereafter steadily increased to a maximum figure of £255 per ton in December. There were further increases in price for the first few months of this year, followed by a small decline, but at present the price appears to be steady around £255 per ton.

"As regards the future, it would seem that, if settled conditions return, stocks will increase and prices are likely to fall, unless some of the world's larger producers voluntarily agree to restrict output.

Working Review

"Your Company's production of fire-refined copper during 1959, but for an unfortunate breakdown in the smelter during December necessitating the annual shutdown for repairs a month early, should have been another record. However, it is expected that the shortfall of 1959 will be made good during this year, provided there are no other unforeseen setbacks.

"Copper consumption in India at present is about 50,000 tons per annum against which your Company, the only indigenous mine, produces about 8,000 tons. Naturally, the price at which our copper is sold is linked to the price of imported metal.

"The more copper we can produce the less foreign exchange will be required for imported metal. The steady increase in production during recent years is planned to continue in line with the further development of the mine. This will obviously require considerable further capital expenditure which will have to be met in the years ahead. In particular, a new crushing plant, smelter and a small concentration plant will shortly be required to deal with the increased ore output and these items alone will cost something in the neighbourhood of £1 million.

"Prospecting throughout our leasehold continues, but results so far cannot be regarded as particularly favourable and do not at present indicate that any major deposits which might be equal in size to your Mosaboni and Badia Mines are available. These prospecting operations have been intensified over recent years; it is premature to forecast what final results will eventually be obtained.

"Ore reserves have again increased from 4,034,147 short tons to 4,203,547 short tons, despite the decrease of 35,793 short tons in Badia section. This has been achieved by concentrating on development at depth in the Mosaboni Mine and on development of the new small mine—Surda.

"The satisfactory final results for 1959 are directly attributable to the increased selling prices. As I predicted last year, the working costs have increased due to the necessity of mining at greater depths. There has also been a further increase in these costs, as a result of lower production and heavy maintenance charges.

"Once again, I am pleased to inform you that, during 1959, relations with the employees remained satisfactory. The three-year agreement with the mines and works unions is at present under review and negotiations are taking place between the management and the unions to try to arrive at a new settlement.

Kyanite

"The demand for our raw material in world markets continues to be satisfactory, despite the increased consumption of synthetics and competition from other sources. New world markets are being sought and there are hopeful signs that, provided prices can be kept at competitive levels, it may be possible to recapture certain established markets, particularly in America. Our exports to the U.S.A. last year amounted to approximately 20 per cent. of all our exports.

"At the moment, I have nothing further to report concerning the suits in regard to your Company's kyanite leases, as they are *sub-judice* in the Supreme Court.

Electrolytic Project

"All matters appertaining to the electrolytic project for the installation of a refinery and foundry for the manufacture of electrolytic copper and wire bar have been finalised, and I am pleased to report that a start has already been made to implement the scheme. The proposal is to utilise some or all of the Company's production of copper supplemented, if required, by the importation of blister copper for the refinery. At the same time, the production of rolled copper and brass sheets will be continued as in the past. The target date to commence production of electrolytic copper is the end of 1962.

Accounts

"The profit for the year, before providing for taxation, depreciation and reserves amounts to £1,202,259. Your Directors have decided to place £175,000 to depreciation and £125,000 to general reserve. Income-tax and super-tax on profits for the year amount to £439,949.

"Your Directors recommend a dividend of 27 per cent., subject to deduction of tax, which gives a slightly higher nett yield than the dividend of 18 per cent., free of tax, paid in the previous year. You are no doubt aware that, under the Income-tax laws, dividends now have to be declared subject to deduction of tax. With these proposals, £107,121 will be carried forward.

Staff

"I think you will agree that we have had another satisfactory year and I am sure that I speak for you all in extending our thanks to the General Manager, Mr. N. A. B. Hill, to the staff both at the mine and at the works, and to the workers, all of whom have contributed to the results during 1959."

NUTRITIONAL LEVEL AND PATTERN OF CONSUMPTION

By R. Dayal

AS a result of rapid increase in population on the one hand and lack of organised effort, under foreign rule, to step up production on the other, the dietary and nutritional status of the average Indian gradually deteriorated during the first half of the current century. The country now faces, despite considerable improvement in recent years, the twin problems of under-nutrition and mal-nutrition. The calorific value of the average Indian diet is at present around 2,400 per adult per day, as against a level of more than 3,000 (gross) recommended by nutrition experts (Nutrition Advisory Committee) in the country. Even allowing for the fact that human beings in a hot climate need less calories than those in a cold climate, the level of nutrition in India is considerably lower than that in countries like the United States, Canada, U.K., Norway, Australia, New Zealand, Japan, Egypt, etc. The protein content of the average diet in India is also about one-third short of the requirements laid down by biochemists in the light of Indian conditions.

Apart from deficiency, the average diet in India also reflects lack of balance. It is highly lopsided towards cereals, which account for about two-thirds of its total calorific value and a somewhat smaller proportion of its total protein content. This may be compared with the average diet in the United States, to which cereals contribute about one-fourth of calories and about one-sixth of proteins. The deficiency of the Indian diet is centred more on foods of animal origin, which contain proteins of high biological value, and on fruits and vegetables. The actual availability of milk for human consumption is about one-half of the quantity prescribed for the standard diet suggested by experts after taking into account the vegetarian diet of approximately 70 per cent. of the Indian people. Similarly, the availability of meat, fish and eggs is about one-tenth of the recommended level. In the case of fruits and vegetables also, the gap between availability and requirements is acute. An important item of the Indian dietary consists of pulses which are rich in proteins and are regarded as "vegetarians' meat."

A comparison of the dietary pattern in India with that in many important countries of the world shows that India is in an unfavourable position in regard to all items except cereals and pulses.

Just as cereals constitute the most important item in Indian diet, rice is the most important item among cereals. Of the average consumption of cereals, about one-half is represented by rice, about one-sixth by wheat and the remaining one-third by millets.

The level and pattern of food consumption in India differ considerably from region to region and between rural and urban people generally, in view of the variations in the stages of economic development, climate, topography, cropping practices, and traditional habits and customs. Generally speaking, the consumption of foodgrains in rural areas is larger than in urban areas. In regard to other items, however, the differential between urban and rural consumption is not so much as in the case of foodgrains. Certain parts of the country depend mainly on rice, while in others the staple cereal is either wheat or one or more of the millets. People in the wheat-eating areas have generally better physique than in the rice-eating areas. This may partly be due to the fact that wheat, known as the "king of cereals," has greater protein content and is useful as a body-builder.

Recent Improvements in Diet

While the problem of insufficient and faulty diet persists, there has nevertheless been considerable improvement in the past decade since the commencement of India's first Five-year Plan in 1950-51. The earlier trend of diminishing *per capita* consumption due to population growth in the face of stagnant agriculture was reversed with the launching of the integrated programme for agricultural development under the first Five-year Plan, and food supply increased more rapidly than population, so that the quantity of food available *per capita* showed a considerable increase. During the period of the first Five-year Plan, as against the population growth of about 8 per cent., the availability of cereals for consumption increased by about 12 per cent., of pulses by about 16 per cent., milk by more than 20 per cent., meat, fish and eggs by about 25 per cent., sugar (all types including cane used for chewing and juice-making) by about 7 per cent., and vegetable oils by about 12 per cent. The calorific intake per adult per day increased by about 8 per cent. and protein intake by about 12 per cent. In addition to progress towards a higher level of consumption, there was also some improvement in the quality of the average diet but the achievement in this direction was relatively small.

During the first three years of the second Plan, further progress was achieved in the level of nutrition. Population during these three years is estimated to have gone up by about 8 per cent. as against which availability of cereals for consumption increased by about 13 per cent., of pulses by about 13 per cent., vegetable oils by about 5 per cent. and sugar by about 21 per cent. Survey estimates for other items of food are not yet available. But, on the basis of certain guess estimates for these items, the level of nutrition of an average Indian during the first three years of the second Plan has risen by about 6 per cent. over and above the progress achieved in the first Five-year Plan.

Food Habits

The qualitative and quantitative improvement in food supply is matched by twofold development on the demand side. Firstly, the overall demand for food is increasing rapidly, as a result of population growth and higher incomes of the people generated by economic development. Secondly, with the improvement in the people's incomes, their food habits are also undergoing a change. The growing urbanisation and the better contacts between urban and rural people are leading to the spread of urban food habits to rural areas. The combined effect of higher incomes and urbanisation is that those who have been living mainly or partly on root crops or millets are tending to shift towards superior foodgrains, namely, rice, wheat and pulses, and those living on superior foodgrains are tending to increase the proportion of foods like milk, meat, eggs, fruits and vegetables in their diets. There is also an increasing demand for more processed or out-of-home foods.

However, these changes in dietary habits take place gradually and at the margin. In the nature of things, no widespread and wholesale transformation can take place immediately. There are a number of dominant factors such as long-established cultural heritage, social and religious preferences, level of education of the consumers, etc., which determine the prevailing food habits in the country. While food habits of the Indian people are not static and are subject to changes corresponding to changes in the environmental factors, the pace of change in these matters, which are inextricably bound up with cultural heritage, social preferences and prejudices, etc., is necessarily gradual. It has been observed that, while the shift from millets to superior cereals is gradually taking place over a period of time, bulk of the millet eaters at any particular time continue to demand millets even if superior cereals have considerable price advantage.

The scope for shift from cereals to high protein and protective foods is mainly limited by the expensive nature of those foods. For instance, calories obtained from milk cost five times as much as those derived from cereals. Similarly, milk proteins are twice as expensive as cereal proteins. Meat, eggs, fruits and vegetables are still more expensive in terms of calories and proteins. Of course, the energy and proteins provided by these protective foods are much superior to those of cereals and, moreover, those foods provide additional nutrients which are not contained in cereals. Nevertheless, the fact remains that, in view of the several times more expensive character of protective foods, no sudden or drastic shift from cereals to these foods is feasible. The cost of balanced diet, including protective foods in quantities recommended by nutrition experts, would, at present prices, come to about Rs. 30 *per capita* per month. As against this, the *per capita* income at current prices is about Rs. 25 per month. Thus, even if the entire income of an average Indian is spent on food, he will be able to afford only four-fifths of the balanced diet. A large proportion of the population has *per capita* income much below the national average. In view of the low incomes of the people, the average Indian draws his nutrition from relatively cheaper foods like cereals. Heavy dependence on cereals in dietary is one of the main characteristics of underdevelopment. Until *per capita* income shows a large increase, any major shift from cereals to protective foods would not be possible and the share of non-cereal foods in the total diet would increase but gradually. As between millets and superior grains, however, the disparity in costs is not large and considerable shift towards superior grains is economically possible.

The net effect of these various influences is that the rate of increase in *per capita* demand with the increase in incomes is the highest in the case of foods of animal origin, fruits and vegetables and sugar, followed by pulses and cereals. However, an increase in the demand for animal foods would partly be reflected in larger requirements of foodgrains, as a substantial part of the supply of feeding stuffs will have to come from foodgrains or from land, which will, otherwise, have gone to foodgrains. Among the cereals, the response of *per capita* demand to an increase in income is the keenest for wheat followed by rice, while for coarse grains it is largely static.

Diversification of Production in Third Plan

The programme for increasing the production of different foods in the third Five-year Plan is being oriented in the directions indicated by the changes in dietary pattern and food habits. In view of the prevalence of widespread under-nutrition, attention in the first and second Five-year Plans was primarily focussed on increasing the total quantum of food and the question of qualitative improvements was given a secondary place. This was natural in view of the fact that the cost in terms of land of a given amount of nutrition derived from animal foods is several times more than an equivalent amount of nutrition derived from foodgrains. For instance, the cost, in terms of land, of producing milk of a given nutritive value is five to six times more than that of producing cereals of the same nutritive value. (However, if milk is produced through increased yields of the existing stock, then the difference in land cost is not much.) Any undue stress on animal foods at the cost of foodgrains would, therefore, have greatly added to the already heavy pressure on land. But now that considerable improvement in the volume of food supply has been achieved, due attention can be paid to the diversification of the diet. As the income level of the people in the third Five-year Plan is anticipated to increase by a larger extent than in the earlier Plans, the changes in dietary habits are likely to be more marked than before. Accordingly, the targets of production of different foods are being formulated with proper emphasis on non-cereal foods. In addition to developing the country's land and livestock resources, the water resources are also to be exploited through the development of fisheries, which occupies a place of special importance in view of the limited availability of land in relation to population.

Subsidiary Foods

While the main solution to the problem of under-nutrition and mal-nutrition lies in increasing the supply of different food items by developing the production resources, a good deal can be done by better utilisation of available foods and production resources. An important step in this direction is the production of certain high-yielding subsidiary foods like tapioca, potatoes, sweet potatoes, bananas and papaya, which can support, as compared with cereals, a larger number of people on a given area of land. Thus, in comparison with rice, potatoes provide 1.7 times as much calorific value per acre. Similarly, the calorific value per acre of sweet potatoes is 5.2 times, of papaya 2.9 times, of tapioca 3.2 times and of bananas 4.5 times the number of calories yielded by an acre of land under rice. While having this advantage in terms of calorific value, these subsidiary crops also compare favourably with rice in their protein and mineral content per acre of output. The production of these land-saving subsidiary foods is planned to be greatly increased, so that the land thus released is used for producing protein foods and commercial crops.

A number of steps are under way or are being contemplated to secure more rational utilisation of available foods. For instance, it is known that breakage in the preparation of raw rice is considerable. If, however, rice, which is the most important cereal consumed in India, is parboiled and milled, the loss due to breakage is much less. At the same time, parboiled rice is more nutritious than raw rice prepared from the same paddy. Certain improvements in the process of parboiling and drying of rice have been worked out, which would yield a product of better quality and free from unpleasant odour. Steps are under contemplation for securing the adoption of improved methods of parboiling, which would make valuable addition to the supply of rice, besides improving its quality.

Again, many of the high-yielding subsidiary foods are largely carbohydrate foods, deficient in proteins. They have to be blended with protein-rich foods so as to make them wholesome and balanced foodstuffs. At the same time, India has considerable resources of edible oil-meals like groundnut meal, which are rich in protein but are not being used for human consumption. Their blending with carbohydrate foods will serve the dual purpose of augmenting the total availability of food for human consumption and making them properly balanced. Certain preparations have been evolved consisting of carbohydrate foods, oil-seeds meals and wheat, keeping in view the need for low cost, palatability and nutritive value. Steps are under way to popularise these preparations. Similarly, certain concentrated foods like the Indian multipurpose food, have been developed from such foodstuffs as groundnut flour and Bengal gram fortified with minerals and vitamins. These preparations are beneficial as supplementary foods, particularly for vulnerable groups. Oil-bearing seeds are also planned to be utilised increasingly for the preparation of what is termed in India as vegetable milk, which can be used in the same way as animal milk. There is also a proposal for the better utilisation of fish resources by converting surplus fish and certain varieties of fish not ordinarily used for human consumption, into edible fish flour for supplementing the protein-content of Indian dietary.

These are just illustrations. In general, attention is being given to the development of various food materials and mixtures, preferably from unusual sources, which might help towards balanced combination of nutrients in the same meal. The underlying principle is that different diets, which would not produce the desired results, if given at different times, would supplement each other, if given at the same time.

Several items of food are highly perishable and there is considerable loss of these foods in the absence of adequate arrangements for preservation and processing. Apart from augmenting the storage facilities, it is planned to organise the dehydration industry on an adequate scale, so as to enhance the availability of foods in the right form and at the required time.

Attention is also being paid to the fortification of foods of mass consumption with minerals, vitamins and amino-acids, wherever considered necessary.

Nutritional Education

An important means of making the best possible use of available food resources is the spread of education in nutrition and catering. There is a rich mine of literature, tradition and folklore in India regarding dieting and nutrition. This, together with the results of modern developments in science and technology in the field of nutrition, has to be carried to the masses. it is proposed, through publicity, propaganda and extension work, to educate the masses as to how to derive low-cost balanced diets from local foodstuffs and how to derive optimum benefits from those foodstuffs. Non-cereal cafeterias, known as *annapoornas*, have also been organised in the country and these supply and demonstrate the preparation of meals of good nutritive value at low cost, thereby contributing appreciably to the improvement of the diets of the low-income groups. More colleges of catering are planned to be set up for the development of catering technology and for providing training in scientific methods of preparation, handling and utilisation of food at home and in catering establishments.

Thus, through increased production, through better utilisation of available foods by the application of results of scientific and technological developments in the field of nutrition, through educating the masses in principles and practice of nutrition and catering, India is trying to solve the problems of under-nutrition and mal-nutrition. Considerable success has already been achieved, and efforts are being maintained and accelerated. Increasing attention is being paid to the diversification of dietary in accordance with changing food habits of the people.—*All Rights Reserved.*

MARINE AND GENERAL INSURANCE COMPANY, LIMITED

CHAIRMAN, MR. R. N. BANGUR, AGAIN DRAWS ATTENTION TO HEAVY INCIDENCE OF JUTE FIRES

ADDRESSING the Sixteenth Annual General Meeting of the Marine and General Insurance Company Ltd., held at Calcutta on 26th July 1960, Mr. R. N. Bangur, Chairman, expressed concern over the continued heavy losses resulting from jute fires and hoped that the efforts now being made to deal with the problem would succeed. He also regretted Government's decision to enhance the share of Government-controlled companies in the business written by the Insurance Companies' Pool from 50 per cent. to 75 per cent. The following is the text of Mr. Bangur's statement:

"I have pleasure in presenting to you the Directors' report, audited accounts and balance-sheet for the year ended 31st December 1959.

"Once again I am pleased to report the continued expansion of your Company, the total net premium for the year under review amounting to Rs. 7,84,198, an increase of Rs. 1,11,772 as compared with 1958. Commission and expenses of management amounted to Rs. 2,94,922 (37.6 per cent.) and incurred losses to Rs. 4,13,424 (52.7 per cent.).

"The fire department showed an increase over the previous year's figures of Rs. 67,036, producing a premium income of Rs. 5,06,847. Net losses were Rs. 2,67,894 and commission and expenses of management Rs. 2,18,988. As a result of the increase in premium, our reserve for unexpired risks has increased by over Rs. 30,000 and, after taking this into consideration, there is a profit of Rs. 40,734 which has been transferred to the profit and loss account.

"Once again I have to refer with regret to the continued heavy losses resulting from jute fires, 1959 showing no improvement when compared with the previous year. This serious problem, affecting not only insurers and manufacturers but also the national economy, continues to receive the urgent consideration of the parties concerned and it is to be hoped that a solution to the problem will soon be found. Also receiving consideration is a suggestion that a salvage corps for the Calcutta area, on similar lines as for Bombay, be formed.

"In the miscellaneous department, the net premium income increased by Rs. 13,802 to Rs. 1,25,269 and, after taking into consideration net losses at Rs. 55,243 (44.1 per cent.) and commission and expenses of management at Rs. 51,274 (40.9 per cent.), a profit of Rs. 11,851 is transferred to the profit and loss account.

"The marine department also continued to expand, premiums in this department amounting to Rs. 1,52,082 as compared with Rs. 1,21,148 for the previous year. As a result, and after taking into consideration net losses at Rs. 90,287 and commission and expenses at Rs. 24,660, there is a profit of Rs. 6,201 transferred to the profit and loss account.

"After making the departmental transfers to the profit and loss account and taking into consideration non-underwriting expenses, interest and other income, I am pleased to report a profit of Rs. 75.596 (9.6 per cent.).

"As mentioned in my previous report in 1958 we established branches in Bombay and Ujjain and these have continued to expand producing satisfactory results.

"In 1957, I referred to the Indian Insurance Companies Pool formed some years ago to handle business from Government sources to be shared among Indian companies. As you are aware, in 1957, the Government decreed that 50 per cent. of such business should go to insurance companies in which they have a controlling interest and it is with regret that I have to report that the percentage has this year been increased to 75 per cent., leaving only 25 per cent., to be shared among the independent companies.

"I also have pleasure in welcoming to the Board Mr. A. I. Murison and we look forward to the benefit of his knowledge and experience.

"Finally, I would again like to thank our agents and policyholders for their continued support and also the staff for their work during the year under review.

"I now have pleasure to move:

"That the Directors' report and audited accounts and balance sheet for the year ended 31st December, 1959 having been circulated to the shareholders be received and that they be approved and adopted.'"

Note:—*This does not purport to be a report of the proceedings of the annual general meeting.*

DIFFICULTIES OF GENERAL INSURERS

AMALGAMATION OR GROUP WORKING ONLY SOLUTION, SAYS MR. B. K. SHAH

IN the chorus of anxiety expressed by general insurance executives over the closure of some units, the sharpest note was struck by Mr. B. K. Shah, Managing Director of New India Insurance Company, Ltd. Speaking as the Chairman of the General Insurance Council (Tariff) of the Insurance Association of India, at its ninth annual general meeting held at Bombay recently, Mr. Shah termed the closure as the "most disturbing development of the past year." He felt that Indian insurance called for some "radical steps to ensure existence and progress to all." He was clear in his mind as to what these steps should be and listed them out as under:

1. Management of the affairs of companies on economic cost basis.
2. Stepping up the rates for motor car and marine insurance.
3. Amalgamation, or coming into groups, of smaller units.

Dilating upon the first point, namely, management of units on economic cost basis, Mr. Shah said that, in his opinion, however liberal provisions of management expenses under Rule 17E in respect of some offices might be, costs, including commission, should be around 45 per cent. The industry, he observed, should be prepared to eradicate the evil of rebating by adopting unorthodox measures. Although Mr. Shah did not make it clear as to what exactly he meant by unorthodox measures, he emphasised that no sacrifice for the industry, or individual offices, would be too big to put the industry on sound and correct lines.

As regards revision of motor car and marine rates, Mr. Shah suggested that the rates should be stepped up, so that the loss ratio in these two classes of business would be about 40 per cent. It was only by such adjustment in rates, he averred, could the industry expect to work on an operating cost of about 85 per cent., leaving a surplus of 15 per cent.

Mr. Shah was convinced that amalgamation or group working was the only cure which was still available to many units to save themselves. They must act quickly; otherwise, he warned, forced closure was the only inevitable end.

In this connection, he cited the example of British insurance and commended it as worthy of emulation in India. In the U.K., during the last eighteen months, a number of integrations of mighty units had taken place through amalgamation, with the sole object of economising cost and efficient working. Realising that world leadership of insurance demanded greater integration of the British insurance units, the conservative but prudent British insurance leadership had brought about, practically overnight, a silent revolution.

Amalgamation

The suggestion that the smaller units should amalgamate or resort to group working so that an average unit will have at least a premium income of one crore of rupees, will, if adopted, result in a substantial reduction in the number of units transacting general insurance business in India. The gross premium income from general insurance business was Rs. 29.66 crores in 1958, the latest year for which full figures are available. This was shared by 184 insurers, of which 91 were Indian and 93 non-Indian. The average gross premium per insurer, therefore, works out to about Rs. 17 lakhs. If the 184 units were to amalgamate into groups, so that each might have a premium of not less than one crore of rupees, the total number of units or groups would have to drop to 30, that is, less than one-sixth the number of insurers existing at the end of 1958. However urgent the need for economy in costs, it is doubtful whether amalgamation of this magnitude will ever be favoured by the smaller units or by the Government itself. If it were to come about, it would render a good portion of the staff in smaller units superfluous. Be that as it may, if amalgamation could be brought about with minimum disturbance to employment and other aspects of insurance, it would be a genuine gain to the industry.

Dealing at length with the problems which general insurers faced in the various departments of their business, Mr. Shah said that, as far as fire insurance was concerned, the most important single event of last year was the downward revision of fire tariff rate which took effect from 1st January 1960. This general revision called for readjustment of rates for jute and cotton textile industries. Regarding jute rates, the incentive offered for proper stacking did not prove attractive enough. Consequently, close and heavy stacking continued unabated, resulting in heavy losses. The rates for jute presses and godowns had been increased recently. Although the increase was not commensurate with the loss experience, Mr. Shah was happy that it was an indication that the insurers were alive to the necessity of revising the rates on the basis of loss experience. As regards textile mills, a formula for rating had been evolved which took into account the loss experience for an extended period as well as the potentiality for fire in the various constituent units of the textile industry.

Mr. Shah revealed that the General Insurance Council had already represented to the Government that the aforesaid reduction in fire tariff rates would adversely affect insurers and that it was unlikely that the Council would agree to any further reduction in the near future.

Marine Insurance

Referring to marine insurance, which continues to cause headaches, Mr. Shah said that insurers were called upon to pay unnecessary claims, because of theft and pilferage in the docks and the disappearance of entire packages, in some cases quite bulky. A typical case cited by him was one in which an entire consignment of 12 packages was reported as missing and listed as "landed but missing." Many of these "landed but missing" certificates were issued by Port Trust Authorities, Mr. Shah pointed out, as a way out of difficulties and instances had come to light of packages having been traced after a considerable lapse of time far away from the original point of discharge.

A further difficulty was the delay in customs appraisal and the losses by theft and pilferage occurring during customs examination. The liability of Port Authorities as bailees of goods extended to a period of five to ten days after discharge. It was practically impossible, according to Mr. Shah, to complete all formalities in connection with imports and to have the goods cleared by the customs within this very short period. As a result, the Port Authorities could repudiate liability on claims made after this period had expired. Mr. Shah suggested a solution to this problem. According to him, the period taken up in completing import formalities and customs examination should be excluded when computing the period during which the Port Authorities could be held liable as bailees.

It was found in practice that the customs officials did not have the cases opened for appraisal and closed in their presence but allowed the consignee's or clearing agent's representatives to open the cases and to leave them open until the customs examination was concluded. This naturally encouraged pilferage.

Motor Insurance

As regards motor insurance, Mr. Shah observed that the position continued to cause anxiety. The experience on class A(2) commercial vehicles and on motor scooters had been disastrous. The proposal to increase the rates for these vehicles was still being considered by the special sub-committee appointed by the Tariff Committee.

While the position in respect of motor insurance was thus far from encouraging, it was complicated by what Mr. Shah called "a couple of disturbing factors." One was the statement attributed to Mr. B. Gopala Reddy, Minister for Revenue and Civil Expenditure, that the Government was examining the question of taking over the third party risk insurance on automobiles. Mr. Shah pointed out that the third party section of the motor portfolio, though profitable at present, was unlikely to continue to be remunerative, as had been the case practically all over the world. He, therefore, appealed to the Government not to weaken the position of insurers by withdrawing the third party section from the insurance market through compulsory legislation. For, while the Government would derive no benefit from it, such a step could hit the insurers hard.

The second disturbing development, according to Mr. Shah, is the reported decision of the automobile associations to start their own mutual insurance company. Mr. Shah did not wish to be critical of the decision but made the following remark about it:

"The automobile associations in India are being substantially subsidised by insurance interests. Any effort by them to form mutual funds is going to weaken and throw into greater confusion the working of the indigenous insurance market, without any hope of profit or more economical motor insurance rates. The insurance industry should take all constructive steps to dissuade such actions."

These developments, Mr. Shah felt, had to be borne in mind when considering methods for improving the position of general insurance in the country.

INSURANCE IN BRITAIN

Continuing the post-war upward trend, the British insurance industry set new records for net premium, invested assets and net new savings last year. The reason for this expansion of business, to quote Mr. H. A. Walters, Chairman of the British Insurance Association, "lies in the favourable economic climate during the twelve months in which production has been rising in Britain, the Commonwealth and Western Europe as well as in the U.S. and many other countries. There has been an increased demand for insurance protection from people enjoying a higher standard of living and with more money to save, from industrialists with more valuable stocks and new factories to safeguard and from traders with more goods to move round the world."

The combined net premium income of the Association's 250 member-companies increased by £95 million to £1,520 million last year. Once again, this represented, according to Mr. Walters, "a very real growth of business in conditions of reasonably stable prices and not an expansion which contained any marked element of inflation."

The following table gives the class-wise breakdown of net premium income during 1958 and 1959:

(In thousand pounds)

	1959	1958
Fire	288,825	270,899
Accident	510,467	479,298
Marine	76,124	73,508
Ordinary Life	484,913	444,260
Industrial Life	164,715	157,669
Total ..	1,520,044	1,425,134

As is evident from the table, life assurance was particularly buoyant. Net new savings through life insurance were at a record £423 million, as compared with £366 million in 1958. About £36 million came from life business transacted overseas, as against 32 million in 1958. Thus life insurance maintained its position as the largest source of net new savings in Britain, despite the competition from National Savings, Building Societies, Unit Trusts and other savings media.

Overseas business in the non-life sections, is much more important than in life business. British insurance companies benefited from the general improvement in underwriting experienced in the U.S. At the same time, they were hit by the heavy domestic fire losses, estimated at £44 million in 1959, the highest ever recorded. Commenting on this loss, Mr. Walters said that a particularly disturbing feature was the large proportion of damage caused to a few really big factories.

The adverse trend in fire losses has showed no improvement so far in 1960. Fire wastage during the first four months was estimated at £20 million, as against £11 million in the same period last year.

In motor insurance, there was a material improvement in world-wide underwriting in 1959. Premium income rose from £203 million in 1958 to £278 million in 1959. The underwriting loss was only £1.5 million in 1959, as against £10 million in the previous year. The improvement was mainly due to increasingly selective underwriting

(*Continued on next page*)

PROTECTION TO ALUMINIUM INDUSTRY

FIFTH TARIFF ENQUIRY HELD

THE Tariff Commission held the public enquiry into the question of continuance of protection to the aluminium industry beyond the current year, in Bombay on the 20th inst. Opening the enquiry, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, observed that the steady growth of aluminium industry in all its stages was essential to the industrial progress of the country. As a versatile metal finding increasing uses in the industrial field, he added, aluminium ranked only next to steel in the progress of heavy industries in the Western world. Mr. Aiyangar predicted bright prospects for the development of the industry in India, in view of the shortage in the domestic production of other non-ferrous metals like copper, which had to be imported, the existence of large deposits of bauxite in the country, the possibility of obtaining cheaper electricity for its manufacture with the progress of power schemes and, above all, the rising trend in the domestic demand. He, however, reminded the aluminium manufacturers, that they should not lose sight of the fact that the biggest spurt to expansion could arise only through a reduction in the prices of their products. He stressed that, as aluminium was important both for industrial and engineering uses, as well as for domestic and household goods, it would be necessary to encourage the consumption of aluminium by keeping prices low, which would, in turn, ensure the rapid progress of this protected industry.

The primary producers have now pleaded for continuance of protection for a further period beyond the current year on the grounds that the industry is capital-intensive, that the domestic bauxite is of inferior quality, that the rates of power supply are comparatively high, that the capacity of their plants are small and that costs of imported raw materials are rather high. One of the primary producers has pointed out that 1965 would be the proper time for examining the question of continuance of protection to the industry as by that time expansion and new schemes already licensed will have materialised. Some of the re-rollers have, on the other hand, represented that, as they have to depend upon imports for their requirements of aluminium ingots, the protective duty on aluminium ingots should be abolished but that the duty on semi-manufactures should be continued for a further period. The sole manufacturer of foils in the country has also pleaded for further continuance of protection beyond the end of the current year. Besides continuance of protection, the industry has asked for various other measures of assistance.

(*Concluded from previous page*)

and rate alterations in certain territories. However, in Mr. Walters' opinion, "it will still be hard going before we achieve even a modest profit on so large a section of our business."

The results of motor business in Britain during the five-year period 1955-59 showed an underwriting loss of £976,000 on a premium income of £431 million. In 1959, however, the companies were able to show a small profit of 2 per cent. of premium income. There was no immediate factor, in the opinion of Mr. Walters, which would make an increase in premiums necessary at present.

Investments of insurance companies continued its established post-war trend in 1959. Book value of invested assets increased by £520 million to £6,047 million in 1959. The flow of investment funds into equities was at a faster pace. Investment in ordinary shares in 1959 increased by £196 million to £1,216 million. This was the result of the particular advantages these shares offered. By channelling a growing proportion of funds into equities, policyholders are given a direct stake in the prosperity of Britain. They also benefit from the larger dividends paid.

British insurance companies, did not, however neglect the gilt-edged market. The gilt-edged portfolio rose by £26 million to £1,261 million, a level only slightly lower than the highest peak of £1,269 million touched in 1954.

The following table gives the breakdown of investment portfolio:

	1959		1958	
	Million £	%	Million £	%
Mortgages	813.3	13.4	758.0	13.6
British Government and British Government-guaranteed securities	1,260.9	20.9	1,235.0	22.4
Commonwealth Government, Provincial and Municipal stocks	242.7	4.0	217.5	3.9
Foreign Government, Provincial and Municipal stocks	251.1	4.2	241.5	4.4
Debentures, loan stocks, preference and guaranteed stocks, etc. ..	1,283.8	21.2	1,187.6	21.5
Ordinary stocks and shares ..	1,216.7	20.1	1,021.2	18.5
Real property and ground rents ..	553.4	9.2	494.2	8.9
Other investments	425.2	7.0	377.6	6.8
Total ..	6,047.5	100.0	5,528.0	100.0

It will be seen from the above table that investments in gilt-edged securities at the end of 1959 were only slightly higher than in equities. It should be noted that the figures relate not to net new investment nor to market values but only to book values. In practice, therefore, investments in equities in terms of their market value, will certainly be higher than in gilt-edged and not lower as appears from the book values given in the table.

History of Protection

The aluminium industry, it may be recalled, has been enjoying protection for over the last ten years. Following a tariff enquiry in 1946, the industry was given protection, for the first time, from 15th May 1949. The rates of protective duty imposed were 30 per cent. *ad valorem* plus specific duties at Rs. 328 per ton of ingots and Rs. 121 per ton of sheets, strips and circles in 1949-50. Besides, differential rates of subsidy on a sliding scale were also fixed for a three-year period. But, after a review of the scheme of protection in 1950, the subsidy and the specific duty were dropped; but protection was extended till 14th May 1952 by retaining the *ad-valorem* duty of 30 per cent. The period of protection was continued from year to year till 31st December 1955. The third inquiry was undertaken by the Commission in 1955 and, on its recommendation, the then existing protective duty of 30 per cent. *ad valorem* plus a surcharge of 5 per cent. was continued upto 31st December 1958. Under the Finance (No. 2) Act, 1957, the protective duty was rounded off to 35 per cent. *ad-valorem*.

The fourth tariff inquiry held in 1958 led to further continuance of protection at the rate of 35 per cent. *ad-valorem* duty upto 31st December 1960. By the Finance Act 1960, excise duties at Rs. 300 per metric ton of aluminium in any crude form, including ingots, bars, blocks, slabs, billets, shots and pellets and Rs. 500 per metric ton of aluminium manufactures, namely, plates, sheets, circles, strips and foil including foil in any form or size ordinarily used as parts and fittings of tea chests, were imposed from 1st March 1960. Countervailing duties at the rates of excise duty leviable on the domestic products were fixed in respect of imports of the products covered by I.C.T. item Nos. 66(1) and 66 (*a*), respectively. By a notification issued on 20th April 1960, Government exempted aluminium in any crude form if manufactured from old aluminium scrap or scrap obtained from virgin metal on which the appropriate excise duty had been paid from the whole of the excise duty payable thereon, while, in the case of aluminium manufactures produced from such scrap, the excise duty payable thereon was reduced to Rs. 200 per metric ton.

Expansion

The industry has recorded considerable expansion of capacity and production, under the shelter of protection granted to it. Although the Indian Aluminium Company Ltd. and the Aluminium Corporation of India Ltd. still continue to be the only two producers of aluminium ingot, the commissioning of the former Company's new smelter at Hirakud in January 1959 has increased the ingot capacity by 10,000 tons a year. According to the figures furnished by the manufacturers, the present capacity of the industry for the manufacture of primary metal is 17,800 tons, as against 7,700 tons in 1958. The Indian Aluminium Company has been licensed to expand the capacity of the Hirakud smelter from 10,000 to 20,000 tons a year—the Aluminium Corporation also has been allowed to expand from 2,500 to 7,500 tons. These expansion schemes are expected to be completed by 1962-63. In addition, licences have been issued by the Government to three new units, namely, the Hindusthan Aluminium Corporation Ltd., the Tendulkar Industries (Private) Ltd., and the Madras Aluminium Ltd., for an aggregate capacity of 50,000 tons. When these capacities are installed, the capacity of the industry will increase to 83,100 tons. The output of aluminium ingots, which amounted to 8,134 tons in 1958, rose to 17,114 tons in 1959, and to 7,387 tons during the five months January-May 1960.

In the sector of semi-manufactures, there were in 1958 eight rolling mills, inclusive of two primary producers, with a total annual capacity of 17,800 tons, of which the capacity for industrial sheets accounted for 8,000-9,000 tons. There are at present eleven units in the organised sector. The Commission was able to get data in respect of only nine units, with a total annual capacity of 21,000 tons. Besides these, there is a number of small units in the various parts of the country engaged in rolling non-ferrous metal products, including aluminium, depending upon the availability of raw material. The Commission has collected information on 45 small units which together account for a capacity of 4,635 tons per year. The total production of aluminium sheets and circles by the organised sector was 13,582 tons in 1958 and 15,931 tons in 1959. The production in the small-scale sector, we are told, was only small.

The Venesta Foils Ltd. continues to be the only unit at present manufacturing aluminium foils. Its capacity for manufacturing foils and container sheets is reported to be 3,504 tons, as against 1,600 tons in 1958. The firm has plans to increase its capacity to 4,104 tons during 1961 and further by 2,000 tons during the third Five-year Plan. It is also understood that Aluminium Corporation of India has been granted a licence to manufacture upto 480 tons of aluminium foils. The actual production of foils amounted to 1,864 tons in 1958, 2,429 tons in 1959 and 1,342 tons during January-May 1960.

Increase in Consumption

There has been a steady increase in the consumption of aluminium and its products in the country. In 1958, the Commission had estimated the annual domestic demand at 35,000 tons; this is expected to go up to 44,000 tons by 1961. The estimates of current demand, received from different parties, range from 34,000 tons to 58,000 tons and those for 1963 from 54,500 tons to 98,000 tons. According to the Development Council for Non-ferrous Metals, the annual consumption of aluminium was 35,000 tons in 1958. It expects the demand to increase to 50,000 tons by 1961 and to 100,000 tons by 1966. An indication of the country's consumption is usually provided by sales of indigenous products, scrap arisings and imports, though, in view of the restriction on imports, there may be a volume of unsatisfied demand. The total of three items was 34,024 tons in 1957, 32,273 tons in 1958 and 40,301 tons in 1959.

Despite the restrictive import policy, the volume of imports of aluminium has been quite sizable. The total imports of aluminium in all forms were 21,391 tons (valued at about Rs. 8 crores) in 1957, 19,163 tons (about Rs. 6 crores) in 1958, and 19,011 tons (Rs. 5·94 crores) in 1959. The principal sources of supplies are Canada, Norway, the U.S., Russia, the U.K., Yugoslavia and Sweden. It may be noted that India has been exporting some quantities of aluminium products. Exports of aluminium sheets, circles and utensils are allowed freely. The exports of aluminium products aggregated 501 cwts. (valued at Rs. 1·95 lakhs) in 1957, 277 cwts. (Rs. 1.22 lakhs) in 1958 and 215 cwts. (Rs. 1·12 lakhs) in 1959. The declining trend in exports is attributed to the "failure to bring down prices to comparable levels in the overseas markets, in spite of natural geographical advantages, fiscal concessions and export facilities provided."

Quality

On the question of the quality of indigenous products, Mr. Aiyangar observed:

"General satisfaction has been expressed by consumers with regard to indigenous ingots. A few complaints have been made in regard to the quality of flat sections and they relate to existence of streaks, water stains, pitting, uneven thickness, incorrect temper, etc. By and large, the products of the small-scale sector have been found unsatisfactory by consumers. Both the primary producers have explained to us that they have introduced quality control measures and that their products are subjected to tests at various stages of manufacture. Most of the other manufacturers in the organised sector have also claimed that they have adopted various measures since the last inquiry to make further improvement in the quality of their products. The small-scale manufacturers have observed that the inferior quality of their products is due to the poor quality of scrap available to them."

The principal raw materials required for the manufacture of aluminium ingots are bauxite or alumina (an intermediate product), caustic soda, petroleum coke, soft pitch, cryolite, aluminium fluoride and fluorspar. Examining the problems facing the industry in respect of the availability of raw materials, Mr. Aiyangar pointed out as follows:

"Bauxite is available in many parts of India on a large scale near Lohardaga in Bihar and also in Kolhapur, Belgaum, Thana (Maharashtra), Salem (Madras) and certain districts of U.P. and M.P. The domestic producers have complained that Indian bauxite is of inferior quality and comparatively more expensive to mine and process.

T.E.L.CO. STRIDES FORWARD

OUTLOOK ENCOURAGING—RIGHT ISSUE CONTEMPLATED

THE Tata Locomotive and Engineering Company, Ltd. (Director-in-Charge: Mr. S. Moolgaokar, Bombay) is now more a general engineering and automobile company than a locomotives manufacturer. Indeed, there is no reference at all either in the Directors' report for 1959-60 or in the Chairman's statement circulated therewith to the last year's proposals for manufacturing diesel hydraulic locomotives. This, together with other projects described in the latest report and statement, suggests that, in course of time, the locomotive business of the Company will be of secondary importance. Its shortened popular name T.E.L.Co., wherein the letter "E", representing engineering, precedes "L" representing locomotives, is, therefore, more appropriate than its full name, in which the word "locomotive" comes before "engineering." This is only as it should be, for, with a large section of Parliament repeatedly demanding year after year that production of locomotives should be in the public sector and with the Government itself indulging in unmerited criticisms, bargaining and bickering over the question of prices, no honest *entrepreneur* would like to take the risk of making this heavy engineering activity as the bread-and-butter line of his business. The directors of T.E.L.Co. have, therefore, done well to concentrate on the other and more paying lines of engineering industry.

As readers will doubtless have noted from the statement of Mr. J. R. D. Tata, Chairman, and from our brief reference on our Market Gossip page last week, the Company will soon be manufacturing paper and pulp machinery and power shovels. The output of steel castings, used in the manufacture of locomotives at Jamshedpur and Chittaranjan workshops, passenger coaches in Perambur, and by the cement companies as well as other concerns, has continued to rise, with their quality well maintained. The alloy iron foundry went into large-scale production during 1959-60 and the Company will be self-sufficient in regard to its requirements of alloy iron castings this year. The production of Tata-Mercedes-Benz vehicles has gathered momentum both in terms of numbers and the quantum of indigenous content. The four-year phased programme for making 7,200 vehicles per year was completed by the end of October 1959. The expansion programme envisaging a production of 12,000 units a year will be completed in January 1961. At present 78 per cent. of the contents of vehicles are of indigenous manufacture and this will be raised further in the coming years. It is proposed to double the capacity to 24,000 vehicles, with an indigenous content of over 90 per cent. The Government's sanction for this project is awaited. Steam locomotives manufacture will also be continued. An order for 325 locos to be supplied in five years from 1st June 1960 has been received from the Railway Board. This compares with 101 locos made in 1959-60, with 97 per cent. indigenous content. Thus, the Company's manufacturing activities are being diversified and expanded on lines that admirably fit in with the country's plan for economic growth. The prospects for its own development are thus assured.

While in three or four years' time, the Company will be nearly three times its size, if not more, even now it has attained a stature of considerable significance to the national economy. The comparative table at the foot of the first column will give one an idea of its rapid growth in the past four years.

It will be seen from the data given above that, as compared with 1958-59, sale proceeds have expanded by nearly Rs. 2 crores and that gross profit has shot up from Rs. 2.84 crores to Rs. 4.08 crores. The provision for depreciation has been stepped up sizably from Rs. 113.06 lakhs to Rs. 161.30 lakhs. There is a steep rise in the amount set apart for taxation, from a mere Rs. 13.25 lakhs to Rs. 93.30 lakhs. This is due partly to higher profits and partly to the reduction in development rebate which is a compulsory provision related to the extent of increase in the fixed assets installed in a year and has a prior charge on the distributable profit. The transfer to development rebate reserve for 1959-60 is only Rs. 14.04 lakhs, as against no less than Rs. 74.62 lakhs a year ago, because the value of new fixed assets installed was much lower than in the previous year. A sum of Rs. 6 lakhs, as against Rs. 10 lakhs last year, has been credited to deferred taxation reserve. The general reserve has not been credited with anything.

So far as dividends are concerned, the Directors have been quite considerate to shareholders. The preference dividend, which is taxable, has been subjected to only one deduction and it costs the Company Rs. 2.15 lakhs more than in the previous year; there has been no increase in the size of preference capital which remains unaltered at Rs. 2 crores. The rate of ordinary dividend has been stepped up from 9 per cent., tax-free, to 12½ per cent., taxable. This means a tax-free dividend of 8.75 per cent. and costs, on the same level of equity capital as a year ago, Rs. 50.33 lakhs more. Normally, a part of the profit should have been set apart to general reserves but this has not been done. Evidently, the Directors have given a higher priority to the needs of shareholders. They might have thought that, in future, the Company's profits would be large enough for strengthening the reserves as well as for maintaining the return to shareholders at a decent level. Another equally valid explanation may be the increase of Rs. 48 lakhs in the provision for depreciation.

As regards the financial position of the Company, the following summary of the latest balance-sheet as well as that as on 31st March, 1957 will give the readers a good idea:

(In lakhs of rupees)

	31-3-1960	31-3-1957
Liabilities—		
Paid-up capital	999.99	700.00
Reserves and surplus	174.16	105.61
Loans	1,013.85	1,381.53
Current liabilities and provisions	931.72	534.97
Total	3,119.72	2,722.11
Assets—		
Gross block	2,201.27	1,352.27
Less depreciation	939.95	474.51
Net block	1,261.32	877.76
Current assets	1,847.89	1,835.51
Cash	10.51	8.84
Total	3,119.72	2,722.11

The main features of the latest financial position of the Company are a slight undercapitalisation, the low level of reserves—these are equal to only 17 per cent. of the paid-up capital—and the shortfall of current assets as compared with the total of current liabilities and loans. These features, however, reflect the growth character of the Company. It must not be forgotten that the Company is still in its adolescene, being only 15 years of age, and that, in the initial years, it had to struggle a lot. Also, as compared with joint-stock undertakings of comparable nature, there is no doubt that T.E.L.Co's position is distinctly better.

In the light of the foregoing data, as also of the plans for expansion, it is obvious that the Company will need additional capital of a very substantial nature. This point is conceded by the Chairman in his statement to shareholders. Investors are keenly awaiting information about the extent of increase in capital and the terms of issue.

The share market is more than satisfied with the Company's results for 1959-60 and its expansion programme. For since they came to be known first, they have gone up by Rs. 78 to stand at Rs. 340 at the time of writing, to yield a return of about 2.6 per cent. free of tax. This low yield reflects good prospects of further capital appreciation and the forthcoming issue of right shares.

The Company has, as on 31st March 1960, some 14,600 shareholders, as against a little less than 13,000 a year before, a little over 7,000 at the end of March 1960, and just 5,000 at the close of 1954-55. In other words, the number of shareholders has nearly trebled in five years.

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale of products and services	28,25.29	26,44.80	26,94.37	21,44.57

BURN AND COMPANY MAINTAINS PROGRESS

DIVIDEND UNCHANGED—FINANCES SOUND

ALTHOUGH, in terms of actual figures, the gross profit and net profit of Burn & Co. Ltd., Calcutta, one of the largest wagon-building and heavy general engineering units in India, for the year ended 30th April 1960, are lower than those for 1958-59, there has actually been no setback in the Company's results for 1959-60. On the contrary, sale proceeds are higher by well over a crore at Rs. 11.40 crores. Other income, too, has gone up from Rs. 65.64 lakhs to Rs. 78.32 lakhs. The gross profit is slightly lower by Rs. 6.09 lakhs at Rs. 126.33 lakhs. The net profit works out to Rs. 33.59 lakhs, a decline of Rs. 18.36 lakhs. The return to ordinary shareholders, however, has been maintained at 28.5 per cent., subject to deduction of tax at 30 per cent., the same as that for 1958-59. The net dividend comes to 19.95 per cent., which does not compare very unfavourably with the tax-free dividend of 20 per cent. per annum consistently paid for three years preceding 1958-59.

The following table shows at a glance the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th April			
	1960	1959	1958	1957
Sale proceeds	11,40.21	10,16.81	9,55.68	8,49.81
Other income	78.32	65.64	94.96	76.76
Closing stocks of finished goods and work-in-progress	2,87.45	3,60.51	4,31.41	4,37.24
Raw materials, stores and spares consumed	5,90.81	5,11.62	5,56.94	5,77.58
Other expenses	4,27.74	3,86.91	3,46.56	3,04.92
Gross profit	1,26.93	1,33.02	1,41.28	1,51.84
Managing Agency commission	11.35	11.76	12.83	14.06
Provision for—				
Depreciation	18.74	18.31	17.36	13.34
Taxation	63.15	50.00	59.00	70.65
Net profit	33.59	52.95	52.09	53.79
To reserves	7.46	26.88	33.27	35.21

Preference	2.38*	2.07*	1.81	1.81
Ordinary	23.94* (28.5%)*	23.94* (28.5%)*	16.80 (20%)	16.80 (20%)
Carry forward	1.25	1.37	1.30	1.10

* Subject to deduction of tax.

Note.—The Company's chart on distribution of revenue in 1959-60 shows that materials took 53.3 per cent., employees 25.5 per cent., taxation 7.2 per cent., working expenses 7 per cent., reserves 0.6 per cent., depreciation and repairs 3.4 per cent., return to shareholders 2.1 per cent. and administration 0.9 per cent.

The profit for the year under review would have been higher but for certain adjustments made in the profit and loss account in regard to bonus to workers due for 1960-61 and writing off the cost (Rs. 1.20 lakhs) of certain patent rights and trade marks purchased during the year. Ordinarily, such purchases could be added to the block account, but, as the amount is small, the Directors wisely decided to debit it to the profit and loss account. As many may wonder why the Directors provided for the bonus for workers in respect of the current year in the accounts for 1959-60, it is necessary to quote here their explanation from the report:

"Prices for 1954-55, 1957-58 and 1958-59 wagon contracts have now been finalised with Government, resulting in further sums to be taken to the credit of profit and loss account which accounts for most of the Rs. 14,13,357 shown in the profit and loss account under 'Credits in respect of previous years.' Against the large credit referred to in the previous paragraph has to be set the provision for annual bonus payable about September this year and next year. Until now the item of 'salaries, wages and bonus' has included bonus paid during the year, but legal decisions have related annual bonus to the profits of a stated year and thereby created what is in the nature of a profit-sharing bonus. For that reason, the Directors decided to provide in the accounts the amount it is expected will be paid as bonus against those profits. Therefore, the sum included as being in respect of previous years, is, in fact, the payment made during the year under review *plus* the payment to be made in this year."

The above quotation also explains why the other income for 1959-60 is higher than that for the preceding year.

A perusal of the profit and loss account reveals that the item "salaries, wages and bonus" has absorbed Rs. 297.12 lakhs in 1959-60, as against Rs. 243.51 lakhs in the previous year, that is, an increase of Rs. 53.61 lakhs.

It will be observed from the table that, while the provision for depreciation has been maintained, that for taxation is sharply higher. The reason for the more marked fall in net profit is now clear. And because of this steep fall, the transfers to reserves have appreciably gone down.

The Directors are experiencing a genuine difficulty in maintaining the *status quo* in regard to preference dividend, in view of the changes made last year in the system of corporate taxation. Explaining their point of view, they observe as follows:

"Since the various dates on which the preference shares were issued, no deduction has been made from the dividends on the preference shares in respect of the income-tax paid (or payable) by the Company on its own assessment. No such deduction has been made in the past nor is it proposed to be made now or in the future. The income-tax deducted and to be deducted by the Company from the preference dividends is a deduction at source in respect of personal income-tax of the recipient at the rate applicable to him, made under legal compulsion in terms of Section 18(3D) of the Indian Income Tax Act as amended by the Finance Act, 1960. The tax deducted is not retained by the Company but is paid over to Government on behalf of the shareholder who will be afforded an equivalent tax credit in connection with his assessment.

"The Finance Act 1959 abolished the legal fiction under which a shareholder was previously deemed to have paid the income-tax that was in fact paid by the Company on its own assessment and in consequence of which the shareholder enjoyed a corresponding income-tax credit. In partial alleviation of the resultant tax position, the Finance Act 1959, simultaneously brought about a reduction of the overall rate of taxation applicable to companies themselves. In these circumstances, your Directors are naturally of the opinion that the benefits of this reduction in the Company's taxation should, to the extent they are distributed, be shared by the holders of ordinary shares and preference shares, with due regard to the interests of both, and not appropriated by one class to the exclusion of the other.

"No amendment to the Articles of Association of the Company involving a variation of rights of different classes of shares can be made in terms of Section 106 of the Companies Act 1956 without the consent or votes, of the holders of three-fourths of the *issued shares* of each class of shares. These requirements are formidable and, in the case of many a company, can never be complied with, despite the best efforts of the management, until the requirements are materially relaxed by fresh legislation.

"The steps to be taken to overcome these difficulties, as they now confront all companies, with a view to equitable adjustment of the rights of the preference shares in the matter of dividend entitlement, are engaging the earnest attention of the Directors.

"There is also the matter of the periods covered by half-yearly dividends on preference shares. It has always been the custom of this Company to pay the dividends on the preference shares in two equal instalments about the 10th January and the 10th July each year. During the year under review, the Directors have followed the customary practice and propose doing so again about the 10th July 1960. However, with increasing legislation, it is desirable that the payments should clearly relate to a particular financial year. Consequently, your Directors intend taking the first suitable opportunity to make this minor change."

The Howrah Works of the Company remains fully booked. The Directors continue to seek new lines of business and diversify the activities, as they anticipate a "falling off in demand for wagons from the Government of India over the next few years." During the year under review, an agreement between the Company and the Vaughan Crane Company Limited of the U.K. was concluded for the manufacture of cranes at the Howrah Works: the U.K. Company's contribution being drawings and technical "know-how." All the works comprising the Raniganj Refractory Group are also booked to capacity. The manufacture of insulating bricks and other refractory products have always been a profitable business for the Company. During the year, the Company purchased the patents and trade marks of Armco (India) Private Ltd., which decided to wind-up its affairs. The new factory at Salem for manufacturing magnesite shapes is under erection, with all the plant ordered from abroad having arrived at the site.

The financial position of the Company as at 30th April 1960 is strong. As against a paid-up capital of Rs. 112 lakhs (of which Rs. 84 lakhs) are in ordinary shares of Rs. 100 each), the reserves and surplus amount to Rs. 234.85 lakhs. There are no secured loans. Current liabilities and provisions aggregate Rs. 560.79 lakhs and are more than adequately covered by floating assets of the order of Rs. 680.53 lakhs, including Rs. 34.82 lakhs cash and bank balances. The fixed assets (including vehicles and livestock) have been well written down from Rs. 531.85 lakhs to Rs. 227.11 lakhs.

The yield on the Company's equity shares, which are now standing at Rs. 522, as against Rs. 453 a year ago, works out to a little less than 4 per cent. free of tax.

COMPANY MEETINGS AND DIVIDENDS

MARSHALL, SONS AND CO. (INDIA) LTD. Annual General Meeting, Calcutta, 30th July 1960. Dividend: 10 per cent. or Re. 0.20 per share, subject to deduction of tax, payable on and after 16th August 1960. Transfer books remain closed from 23rd to 30th July 1960, both days inclusive.

STANDARD COAL CO., LTD. Annual General Meeting, Calcutta, 2nd August 1960. Dividend: Re. 0.35 per share, subject to deduction of tax, payable on or after 16th August 1960. Transfer books remain closed from 20th July to 2nd August 1960, both days inclusive.

LAKSHMI MILLS CO., LTD. Annual General Meeting, Pappanaickenpalayam, Coimbatore, 3rd August 1960. Dividend: 20 per cent. subject to deduction of tax. Transfer books remain closed from 19th July to 3rd August 1960, both days inclusive.

CARRON TEA CO., LTD. Annual General Meeting, Calcutta, 3rd August 1960. Dividend: 15 per cent. or Rs. 15.00 per share, subject to deduction of tax. Transfer books remain closed from 25th July to 3rd August 1960, both days inclusive.

JEEWANLAL (1929) LTD. Annual General Meeting, Calcutta, 5th August 1960. Dividend: 2½ per cent. subject to deduction of tax. Transfer books remain closed from 28th July to 5th August 1960, both days inclusive.

CHEMBRA PEAK ESTATES LTD. Annual General Meeting, Calicut, Kerala State, 6th August 1960. Dividend: 20 per cent. or Re. 0.40 per share, subject to deduction of tax. Transfer books remain closed from 23rd July to 6th August 1960, both days inclusive.

NATIONAL EKCO RADIO AND ENGINEERING CO., LTD. Annual General Meeting, Bombay, 8th August 1960. Transfer books will remain closed from 2nd to 8th August 1960, both days inclusive.

CLIVE ROW INVESTMENT HOLDING CO., LTD. Annual General Meeting, Calcutta, 10th August, 1960. Dividend: Re. 0.75 per share (includes interim dividend of Re. 0.25 per share), subject to deduction of tax. Transfer books remain closed from 28th July to 10th August 1960, both days inclusive.

RAJESWARI MILLS LTD. Annual General Meeting, Gudiyattam, (S. India), 11th August 1960.

ESTRELA BATTERIES LTD. Annual General Meeting, Bombay, 12th August 1960. Dividend: Rs. 4.50 per ordinary share, subject to deduction of tax, payable on and after 2nd September 1960. Transfer books remain closed from 27th July to 12th August 1960, both days inclusive.

TATA LOCOMOTIVE AND ENGINEERING CO., LTD. Annual General Meeting, Bombay, 12th August 1960. Dividend: Rs. 12.50 per ordinary share, subject to deduction of tax, payable on and after 13th August 1960.

HOWRAH MILLS CO., LTD. Annual General Meeting, Calcutta, 12th August 1960. Dividend: Re. 1.25 per ordinary share, subject to deduction of tax. Transfer books remain closed from 26th July to 12th August 1960, both days inclusive.

COCHIN MALABAR ESTATES LTD. Annual General Meeting, Calicut, 18th August 1960. Dividend: 10 per cent. final, subject to deduction of tax. Transfer books will remain closed from 5th to 18th August 1960, both days inclusive.

ANDHRA VALLEY POWER SUPPLY CO., LTD. Annual General Meeting, Bombay, 19th August 1960. Final dividend of Rs. 55.00 per ordinary share (includes bonus of Rs. 10.00 per share), subject to deduction of tax. This makes a total dividend of Rs. 85.00 per share, for the year ended 31st March 1960, subject to deduction of tax.

TATA POWER CO., LTD. Annual General Meeting, Bombay, 19th August 1960. Final dividend of Rs. 55.00 per ordinary share (includes bonus of Rs. 10.00 per share), subject to deduction of tax. This makes a total dividend of Rs. 85.00 per share for the year ended 31st March 1960, subject to deduction of tax.

TATA HYDRO-ELECTRIC POWER SUPPLY CO., LTD. Annual General Meeting, Bombay, 19th August 1960. Final dividend of Rs. 5.50 per ordinary share (includes bonus of Re. 1.00 per share), subject to deduction of tax. This makes a total dividend of Rs. 8.50 per share, for the year ended 31st March 1960, subject to deduction of tax.

INDIAN DYESTUFF INDUSTRIES LTD. Annual General Meeting, Bombay, 19th August 1960. Dividend: Rs. 4.20 (net) per old ordinary share and Re. 1.30 (net) per new ordinary share, payable on 1st October 1960. Transfer books will remain closed from 12th to 25th August 1960, both days inclusive.

ARVIND BOARDS AND PAPER PRODUCTS LTD. Annual General Meeting, Antalia, Bilimora, 20th August 1960. Transfer books will remain closed from 1st to 20th August 1960, both days inclusive.

KUMARDHUBI FIRECLAY AND SILICA WORKS LTD. Annual General Meeting, Calcutta, 27th August 1960. Dividend: Re. 1.80 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 27th August 1960, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Annual General Meeting, Calcutta, 30th August 1960. Dividend: Re. 0.30 per share, subject to deduction of tax. Transfer books will remain closed from 16th to 30th August 1960, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 2nd September 1960. Dividend: Rs. 400.00 per share (final), on whole ordinary shares, subject to deduction of tax, for the year ended 31st March 1960, payable on and after 3rd September 1960. Transfer books will remain closed from 8th August to 2nd September 1960, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 2nd September 1960. Dividend: Rs. 182.00 per share (final), subject to deduction of tax, for the year ended 31st March 1960, payable on and after 3rd September 1960. Transfer books will remain closed from 8th August to 2nd September 1960, both days inclusive.

BALMER LAWRIE AND CO., LTD. Final dividend of 20 per cent. for the year ended 31st December 1959.

SYNOPSES OF COMPANY REPORTS

Osmanshahi Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bansilal Bisesardas Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th September 1959.

The directors report that the working for the year under review has resulted in a loss of Rs. 10,02,174 (Rs. 10,70,571) after taking into account a sum of Rs. 1,09,704 (*nil*) received from the Nanded Market Committee towards market fees in terms of the appeal decided by the High Court in favour of the Company and after providing for a sum of Rs. 20,000 (Rs. 45,000) as development rebate reserve. The above loss of Rs. 10,02,174 has been transferred to the general reserve of the Company. In view of the losses incurred, the directors regret they have not been able to provide for any depreciation on the fixed assets of the Company this year nor to recommend payment of any dividend. The Company paid a sum of Rs. 1,02,334 by way of service gratification to workers during the year in terms of the service gratification award made by the Industrial Tribunal in revision of the existing scheme. An Award was made by the arbitrators increasing the dear food allowance as from June 1959 which added a further sum of Rs. 82,273 to the wage bill. All these factors have gone to increase the loss during the year.

Trading conditions were almost as bad as in the past with the exception of a little decline in the cotton prices. Prices for most of the varieties of cloth and yarn were most unremunerative. Revival for demand of cloth began to show improvement from about June-July 1959 but improvement in prices of cloth was noticeable only in early November 1959. The benefits derived from incentive schemes for export introduced by the Government of India have helped us in cutting down the losses to some extent which otherwise would have been much heavier.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	87,23,800	Gross block	1,77,24,075

Bombay Suburban Electric Supply, Ltd.

The directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March 1960.

In order to comply with Government requirements, the existing tariff rates were converted into decimal coinage with effect from the monthly meter reading commencing 23rd October 1959. Otherwise there was no change in the basic rates of supply during the year under review. 12,786 new consumers were connected to the mains, bringing the total number to 80,399 which is an increase of 18.91 per cent. over the previous year. The number of units purchased from the bulk suppliers rose by 22.10 per cent. The following table indicates, in terms of units sold, the development of the sales of energy since the year 1957-58.

Kilowatt hours sold for the year ended 31st March	Public lighting and general purposes	Power purposes	Total	Percentage of increase on previous year
1958 ..	37,924,132	45,657,315	83,581,447	16.54
1959 ..	44,833,025	55,035,583	99,868,608	19.48
1960 ..	53,518,883	67,751,791	121,270,674	21.43

The year under review showed progressive results. The sale of energy for lights and fans and general purposes increased by 19.37 per cent. and for motive power by 23.11 per cent.

The maximum load on the Company's system was 29,400 kWs. as against 25,500 kWs. during the previous year, an increase of 15.29 per cent. The Company's transmission and distribution systems were maintained in good order, and continued to give trouble free service. At the close of the year there were 204 miles of high tension and 261 miles of low tension mains on the Company's system.

Development:—During the year 18 new substations were added (making a total of 226) and the transformer capacity of 16 existing substations was increased. The high tension system has been substantially strengthened and extended. The low tension net-work including mains, services and street lighting, has been expanded. Extensive developments are taking place in the Company's area of supply due to industrial and residential expansion. Enquiries for large blocks of power have been received.

The Central Government have agreed to the reappointment of Messrs. Killick Industries Ltd., as managing agents of the Company for a further period of 5 years commencing from 1st April 1960.

The gross profit for the year amounts to Rs. 21,52,986 (Rs. 15,48,077) after charging depreciation amounting to Rs. 11,58,526 (Rs. 10,44,649) in accordance with the provisons of the Electricity (Supply) Act, 1948, and Rs. 7,38,330 (Rs. 5,18,160) for taxes on income and profits. A credit to employees' retiring gratuities reserve of Rs. 93,865 (Rs. 92,064) has also been charged against the profits of the year. To the profit of Rs. 21,52,986 there falls to be added Rs. 6,83,533 (*nil*) being write-back of provisions made for additional income-tax in the years ended 31st March 1954 and 1955 which have now become redundant by reason of the ruling given by the Supreme Court in a test case, and Rs. 3,513 (Rs. 452) brought forward, making a total of Rs. 28,40,032 (Rs. 17,22,219 including Rs. 1,73,690 transferred from tariffs and dividends control reserve). After writing off Rs. 1,258 (Rs. 1,258) from new share capital issue expenses, Rs. 8,950 (Rs. 8,950) from promotion expenditure and providing Rs. 1,01,235 (Rs. 91,272) for contingencies reserve, Rs. 4,44,412 (*nil*) for consumers' benefit and Rs. 6,32,220 (Rs. 1,94,726) for development reserve, all in terms of the Electricity (Supply) Act, it is proposed to take Rs. 2,50,000 (Rs. 1,10,000) to equalisation of dividends reserve. There then remains a balance of Rs. 14,01,957 (Rs. 13,16,013). Deducting from this ad-interim dividend of Rs. 3 (Rs. 3.00 per share, free of tax) per share, absorbing Rs. 5,25,000 (Rs. 5,25,000) there is available Rs. 8,76,957 (Rs. 7,91,013) which it is proposed to apply as follows:—

To payment of a dividend for the half-year ended 31st March, 1960, at the rate of Rs. 5 (Rs. 4.50 per share, free of tax) [making 8 (7½) per cent. for the year] subject to deduction of tax, absorbing Rs. 8,75,000 (Rs. 7,87,500) and leaving a balance to be carried forward of Rs. 1,957 (Rs. 3,513).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,75,00,000	Gross block	4,06,37,564
Reserves ...	78,52,280	*Less*—Depreciation ...	98,99,329
Provision for taxation ...	8,67,167		
Wealth tax provision ...	89,596	Net block ...	3,07,38,235
Liabilities ...	1,26,08,940	Work-in-progress ...	10,28,781

		Miscellaneous expenses ...	1,63,378
Rs.	3,89,19,940	Rs.	3,89,19,940

Clive Row Investment Holding Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule and Co., Ltd., Calcutta) submit the audited accounts of the Company for the nine months ended 31st December, 1959.

The accounts show a profit, after charging all expenses, of Rs. 14,57,890 (Rs. 13,05,940 for the 12 months ended 31st March 1959) in respect of which taxation provision requires Rs. 5,35,000 (Rs. 6,30,000) leaving a balance of Rs. 9,22,890 (Rs. 6,75,940). With the balance brought forward from last year of Rs. 3,34,488 (Rs. 8,10,588) there is a total amount available for appropriation of Rs. 12,57,378 (Rs. 14,86,528). An interim dividend of 25 nP (25 nP per share, free of tax) per share in respect of the period was declared on 30th April 1960, absorbing Rs. 3,47,000 (Rs. 3,47,000). The directors now propose a final dividend for the period of 50 nP (12 nP per share, free of tax) per share, absorbing Rs. 6,94,000 (Rs. 1,66,560) leaving a balance to be carried forward of Rs. 2,16,378 (Rs. 3,34,488 after paying an additional dividend of 9 nP per share, free of tax, for the year ended 31st March 1955 and 37 nP per share, free of tax, for the year ended 31st March 1956, together absorbing Rs. 6,38,480). Both the interim and the final dividends are subject to deduction of tax at the rates currently in force.

A net gain on realisation of investments amounting to Rs. 2,08,396 has been credited to capital reserve which has been debited with tax of Rs. 93,778 estimated to be payable on this gain.

On 19th December, 1959 the Company became a subsidiary of Calcutta Discount Co. Private Ltd., which is a wholly owned subsidiary of Andrew Yule and Co., Ltd. Consequently, as the accounts of both holding companies close on 31st December, it was decided in accordance with Section 212 of the Companies Act, 1950 to close this Company's accounts on the same date.

As a result of further purchase of shares, Basmatia Tea Co., Ltd., Hoolungoorea Tea Co., Ltd., the Murphulani (Assam) Tea Co., Ltd. and Rajgarh Tea Co., Ltd., became subsidiaries of the Company.

On 31st December, 1959 the distribution of the Company's portfolio was:—

	Per cent.	Rs. in lakhs
Jute	24	45.07
Coal	15	28.16
Tea	23	44.79
Miscellaneous	38	72.80
Total	... 100	190.82

Increased dividends were received during the period under review from the Company's investments in jute companies, while dividends from coal, tea and miscellaneous companies were maintained at a satisfactory level. The coal industry should benefit from the price increases which were introduced last year, but the jute industry is now passing through a difficult period, and tea company results for the current year may be effected by the prolonged dry spell at the beginning of the season, while among miscellaneous companies, paper mills results must inevitably be adversely affected by the price schedule which was introduced at the beginning of this year in accordance with the recommendations of the Tariff Commission. Accordingly, although prospects for the current year are satisfactory, particularly as the dividend from the four tea companies which have become subsidiaries will receive the benefit of the lower rate of tax applicable to dividends from subsidiaries, future prospects are uncertain.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Liabilities ...	39,23,440		
Profit and loss account (surplus)	2,16,378		
Rs.	2,05,38,149	Rs.	2,05,38,149

Ramnugger Cane & Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August 1959.

Crushing operations started on the 8th December, 1958 and continued up to the 12th March, 1959. The total quantity of sugarcane milled during this period was 19,04,559 mds. with an average sugar recovery of 10.27 per cent., as compared with 16,14,999 mds. and 9.40 per cent., respectively during the previous season.

The total crush was made up of 10,39,318 mds. of cane from the Company's own farms and 8,65,241 mds. from cultivators. The corresponding figures for the preceding season were 9,59,198 mds. and 6,55,801 mds., respectively. Supplies of cultivators' cane fell considerably below estimates due to large-scale manufacture of *gur*, which was lucratively priced during the period.

The factory delivered its export quota of 464 bags to the Indian Sugar Mills' Association and the net price realised, exclusive of excise duty, was Rs. 15.69 per maund approximately. Additionally, 9,435 bags of sugar were sold to the Association for export out of India at market rates.

The factory's total production of molasses was requisitioned by the West Bengal Government for supply to distilleries in the State at a rate of Re. 1.00 per maund.

The profit of the Company, after deducting all working charges and commissions, and after providing Rs. 3,12,402 (Rs. 2,63,458) for depreciation, Rs. 89,500 (Rs. 8,600) for development rebate, and Rs. 1,95,000 (Rs. 28,000) for taxation, amounts to Rs. 6,04,578 (Rs. 27,750). To this is added the balance brought forward from last year of Rs. 19,826 (Rs. 2,28,300) making a total of Rs. 6,24,404 (Rs. 4,51,050 including Rs. 1,75,000 transferred from general reserve and Rs. 20,000 being provision for doubtful debts written back). This amount the directors recommend should be dealt with as follows:—

In payment of dividends for the year ended 31st August, 1959, subject to deduction of income-tax on preference shares at 6 (6 per cent. free of tax) per cent. per annum absorbing Rs. 24,000 (Rs. 24,000), on ordinary shares at 21-3/7 (15 per cent. free of tax) per cent. per annum, absorbing Rs. 3,55,676 (Rs. 2,48,973), to be transferred to preference dividend suspense account Rs. 10,286 (*nil*), to be transferred to general reserve Rs. 1,75,000 (*nil*) and to be carried forward Rs. 59,442 (Rs. 19,826 after writing off loss on agricultural operations amounting to Rs. 1,38,251 and providing Rs. 20,000 for wealth tax).

Season 1959-60.—The factory completed the season on the 24th March, 1960 after crushing a quantity of 25,58,490 mds. of cane with an average sugar recovery of 9.08 per cent. This was an excellent crop but was, unfortunately, affected severely by floods early in October, 1959. Consequent upon heavy rains, the level of the river Bhagirathi rose suddenly and Ramnugger village, Zemindari office and staff quarters were heavily inundated, forcing the employees to take shelter on roof tops. The 1959 floods were no less in intensity and magnitude than the 1956 floods. No water, however, entered the factory and the stocks of sugar, manures and other stores were kept fully protected. The quality of cane, a part of which was completely submerged in water, was adversely affected and this resulted in a sharp fall in sugar production.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Notices

BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956, (being the Thirty-first Ordinary General Meeting) of BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED, will be held on Wednesday, the 17th August, 1960, at 4-15 p.m., at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts made upto 31st March, 1960.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. N. K. Petigara who retires by rotation but being eligible offers himself for re-election.
4. To appoint Auditors until the conclusion of the next Annual General Meeting and to fix their remuneration.

SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"THAT pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of contracts or arrangements entered or being entered into with Bombay Garage Private Limited, who are or may be deemed to be Associates of Killick Industries Limited, the Managing Agents of the Company, for the supply of motor cars, motor lorries, motor car accessories, petrol, air-conditioners, domestic appliances and other articles sold by them or for the supply or rendering of any services as may be required by the Company from time to time upon the following terms:

(*a*) That the prices or amounts charged to the Company are at rates which are not less favourable to the Company than the market rates or are otherwise reasonable;

(*b*) that the other terms and conditions of purchase of such motor cars, motor lorries, motor accessories, petrol, air-conditioners, domestic appliances and other articles sold by them or rendering of services shall be generally the same as those on which the Company can purchase such property or acquire such services elsewhere;

(*c*) that the said purchases or rendering of services shall be sanctioned by the Board of Directors."

By Order of the Board,

FOR BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

BOMBAY, 15*th July*, 1960.

N.B.—(*a*) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member. Under Article 96 of the Company's Articles of Association, the instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the Meeting at which the person named in the instrument proposes to vote and in default the instrument of proxy shall not be treated as valid.

(*b*) The Transfer Books of the Company will be closed from Friday, the 29th July, 1960, to Wednesday, the 17th August, 1960, both days inclusive.

(*c*) The Dividends when declared will be made payable at the Chartered Bank, Bombay, on and after the 19th August, 1960, to those Shareholders, whose names stand on the Register on the 17th day of August, 1960, to whom Dividend Warrants will be posted.

ANNEXURE TO THE NOTICE

Explanatory Statement Under Section 173(2) of the Companies Act, 1956.

Item No. 5.—The Company for many years has been purchasing, although not exclusively, motor cars and motor lorries, and also part of its requirements of motor car accessories, petrol, air-conditioners and other items and also has been getting motor maintenance done by Bombay Garage Private Ltd. Under the Companies Act, 1956, however, Bombay Garage Private Ltd., are or may be deemed to be an "Associate" of Killick Industries Limited, the Managing Agents of the Company, by virtue of Mr. M. R. Chinoy becoming a Director of the Managing Agency Company from 22nd September 1959 and who together with his relatives as defined by Section 6 of the Companies Act, exercises more than one-third voting power in Bombay Garage Private Ltd. It is expedient, therefore, having regard to the provisions of Section 360 of the said Act, for the Company to approve, by a Special Resolution, the purchase of motor cars, motor lorries, motor car accessories, petrol, air-conditioners and other items and also of obtaining maintenance services for the Company's vehicles. The Special Resolution is, accordingly, commended for acceptance.

Mr. A. N. Haksar is interested as a Director and Shareholder of Killick Industries Limited. Sir Purshotamdas Thakurdas, K.B.E., C.I.E., and Mr. Dominic J. Ferreira are interested as shareholders of Killick Industries Limited. Killick Industries Limited, who are Managing Agents of the Company and are Associates of Bombay Garage Private Ltd., are interested for these reasons and as Shareholders of the Company.

By Order of the Board,

FOR BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

BOMBAY, 15*th July*, 1960.

THE PULLANGODE RUBBER AND PRODUCE COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Monday, the 22nd August, 1960, at the Registered Office of the Company at Fort Cochin, to transact the following business:—

1. To receive and adopt the audited accounts and Balance Sheet for the year ended 31st March 1960 and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

Note: (*a*) As Mr. F. A. Murphy is an employee of the Managing Agents, Messrs. Aspinwall & Co. Ltd., a Special Resolution of the Company is necessary for his re-election. Special Notice of the following special Resolution for his re-election as required by Section 261 of the Companies Act 1956 is hereby given:—

"Resolved that Mr. F. A. Murphy, an employee of Messrs. Aspinwall & Co. Ltd., Managing Agents of this Company be and is hereby re-elected as a Director of the Company."

(*b*) Mr. R. Sundram Iyer, the other retiring Director is now 73 years of age. Special notice has been received and is given of the following resolution proposed to be moved:—

"Resolved that Mr. R. Sundram Iyer, who has attained the age of 73 years and who retires by rotation be and is hereby re-appointed a Director of this Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

4. To appoint Auditors.
5. To transact the following Special business, namely:—

To consider and if thought fit to pass the following special resolution which will be proposed as a Special Resolution:

"Resolved that the last sentence in Article 23 of the Articles of Association of the Company reading 'each transfer and transmission shall entail the issue of a fresh share certificate' be deleted."

The Explanatory Statement under Section 173 of the Companies Act, 1956 has already been sent direct to the Shareholders and is available for inspection at the registered office of the Company during office hours on all working days till the date of the above meeting.

The Transfer Books and Register of Members of the Company will remain closed from 6th August, 1960 to 24th August, 1960 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to vote instead of himself subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

FORT COCHIN,
20*th July*, 1960.

PHILIPS INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING TO BE HELD ON AUGUST 27, 1960

THE THIRTIETH ANNUAL GENERAL Meeting of the Members of Philips India Limited will be held on Saturday, August 27, 1960, at 11 a.m. at the premises of the Bengal Chamber of Commerce and Industry, Room No. 1, 6 Netaji Subhas Road, Calcutta 1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1959.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of an Annual General Meeting.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions as Ordinary Resolutions, namely:

6. That with effect from January 1, 1960, Dr. P. K. Kapre, a whole-time Director of the Company and its Industrial Adviser, shall be entitled to receive from the Company remuneration for his services in accordance with the terms specified in the Agreement dated July 12, 1960, made between the Company of the one part and Dr. Kapre of the other part.
7. That with effect from January 1, 1960, Mr. H. R. Vorstman, a whole-time Director of the Company and its Technical Adviser, shall be entitled to receive remuneration for his services in accordance with the terms specified in the Agreement dated July 12, 1960, made between the Company of the one part and Mr. H. R. Vorstman of the other part.
8. That with effect from January 1, 1960, Mr. J. Zantman, a whole-time Director of the Company and its Administrative and Financial Adviser, shall be entitled to receive remuneration for his services in accordance with the terms specified in the Agreement dated July 12, 1960, made between the Company of the one part and Mr. Zantman of the other part.

The Register of Members of the Company will be closed from August 8, 1960 to August 27, 1960, both days inclusive.

The Dividend, if approved, will be payable on or after September 26, 1960, to those share-

holders whose names are on the Register of Members on August 27, 1960, or to their mandatees.

By Order of the Board,
P. C. VINK,
Chairman and Managing Director.

July 25, 1960.
7, JUSTICE CHANDRA MADHAB ROAD,
CALCUTTA 20.

Notes:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll to vote instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

2. Shareholders are requested to notify the Company immediately of any change in address.

3. An Explanatory Statement as required under Section 173(2) of the Companies Act, 1956, in respect of the aforesaid Special Business is annexed to the convening Notice issued to Members of the Company.

THE INDIAN MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING (being the SEVENTY-NINTH Ordinary General Meeting) of The Indian Manufacturing Company, Limited, will be held at the Registered Office of the Company, "Sir Vithaldas Chambers," 16, Apollo Street, Fort, Bombay, on Friday, the 2nd September, 1960, at 3-30 p.m. (S.T.), to transact the following business:

1. To adopt the Directors' Report and audited Balance-sheet and Profit and Loss Account for the year ended 31st March, 1960.
2. To declare dividends on Preference and Ordinary Shares.
3. To appoint Directors in place of Shri Bhagwandas Vasanji and Shri Mangaldas H. Vora, who retire by rotation, but being eligible, offer themselves for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a Member.

By Order of the Board of Directors,
V. M. MERCHANT,
Director.

BOMBAY, 15*th July*, 1960.

N.B.—The Transfer Books of the Company will be closed from Monday, the 8th August, 1960, to Friday, the 2nd September, 1960, both days inclusive.

The Dividends, when sanctioned, will be made payable at the Company's Registered Office, on and after Saturday, the 3rd September, 1960, to those shareholders whose names stand on the Registers on Friday, the 2nd September, 1960, and the Dividend Warrants will be posted to each shareholder to his last registered address. Change of address, if any, should be notified without delay so that the Dividend Warrants may not be lost or misdirected.

THE RAMNUGGER CANE AND SUGAR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, on Wednesday, the 10th day of August 1960, at 2.45 p.m., to consider and, if thought fit, to pass, with or without modification, the following Resolutions, namely:—

1. *As an Ordinary Resolution*:

"That Anderson Wright Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August, 1960, on the terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved and signed by the Chairman thereof."

2. *As a Special Resolution*:

"That the Articles of Association of the Company be altered in manner following:—

(a) Article 134 shall be deleted and the following new Article substituted therefor:

"Anderson Wright Limited are the Managing Agents of the Company and shall continue to act as such upon the terms and conditions as to remuneration and otherwise as may be mutually agreed upon from time to time between the Company and the Managing Agents and embodied in a separate Agreement."

(b) Articles 135 to 143 inclusive shall be deleted.

3. *As an Ordinary Resolution*:

"That, as provided in Clause 9 of the said draft Agreement referred to in the foregoing Resolution No. 1, Anderson Wright Limited, the Managing Agents of the Company, and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the managing agents, secretaries and treasurers, manager, agent, secretary or selling or buying agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. *As a Special Resolution*:

"That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Anderson Wright Limited be and are hereby authorised to provide the Company with suitable office accommodation at the Registered or Principal Office for the time being of Anderson Wright Limited in Calcutta and also, if so required by the Company, at any other place or places in which Anderson Wright Limited may be able to provide such accommodation, and the Company shall pay to Anderson Wright Limited such monthly sum as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

The Share Transfer Register of the Company will remain closed from the 6th to the 10th August, 1960, both days inclusive.

By Order of the Board,
THE RAMNUGGER CANE & SUGAR CO., LTD.,
ANDERSON WRIGHT LTD.,
B. P. KEDIA,
Director,
Managing Agents

7, WELLESLEY PLACE,
CALCUTTA, 13*th July* 1960.

Note:—A Member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

MONEY STILL IN GOOD DEMAND

(From Our Own Correspondent)

BOMBAY, 27*th July*

There has been an increase in the flow of funds into banks since last week. Consequently, there are fewer borrowers, but this has not brought down the rates of interest, as demand for bank credit continues to be quite good. Even inter-bank call money is quoted at the self-same rate of 3½ per cent. per annum. The other short-term money rates also are unchanged: 3¼-3⅜ per cent. for seven-days' House money; 3¼-3⅜ per cent. for one to six months' deposits. What is more, it is the higher rates that are still really representative.

The weekly sale of 91-day Treasury Bills by tenders, which had remained suspended last week in view of the Central Government's new loans, was resumed this week. The response was poor and confined only to special quarters, as is evident from the fact that the total amount offered at Rs. 2 crores was the same as that invited. The average rate of accepted tenders remained unchanged at 2.745 per cent. per annum. It may be noted that this rate has continued since 3rd May 1960. There were no sales of 91-day Intermediate Treasury Bills either. Nevertheless, they are being continued and will be available on tap from 27th July to 30th July 1960 at 99.326 per cent., giving a yield of 2.696 per cent. per annum.

The Reserve Bank's statement for the week ended 22nd July 1960 discloses, as compared with that for the previous week, a contraction of Rs. 26.28 crores in notes in circulation and a rise of Rs. 3.27 crores in notes held in the Banking Department. The net result is a decline of Rs. 23 02 crores in total notes issued. This has been balanced on the assets side by a reduction of Rs. 24.83 crores in rupee securities and an increase of Rs 1.81 crores in rupee coin. In the Banking Department, deposits of Central Government have fallen by Rs. 21 79 crores to Rs. 52.45 crores, but those of other Governments have jumped up by Rs. 19.27 crores to Rs. 31.08 crores. There is a substantial fall of Rs. 16 08 crores in deposits of banks which stand at Rs. 113.85 crores. On the assets side of the Banking Department, balances held abroad have declined further by Rs. 5.05 crores. This latest fall has brought down the total foreign assets to Rs. 160.30 crores. Loans and advances to Government have fallen by Rs. 7.60 crores and so also other loans and advances by Rs. 16.63 crores. Investments have declined by Rs. 9.72 crores, but Treasury Bills held by the Bank are higher by Rs. 16.57 crores.

The latest available statement of Scheduled Banks is for the week ended 15th July 1960. This, as compared with that of the previous week, shows only minor variations. Inter-bank borrowings of both demand and time nature are higher by Rs. 4.05 crores. Demand deposits have gone up by Re. 1.03 crore, but time deposits have declined by Rs. 10.42 crores. Borrowings from Reserve Bank are lower by Rs. 2.71 crores. Bank credit is lower by Rs. 10 crores, as also investments by Rs. 16.80 crores. Money at call and short notice has gone up by Rs. 4.80 crores and total cash by Rs. 17.10 crores. These variations suggest that, during the week under review, the banks were preparing themselves to meet the demand for funds required for subscribing to the new loans of the Central Government which opened on the 18th inst.

There have been no new developments in the Gilt-edged market during the week under review. There is hardly any turnover these days either in Central loans or in State loans. There is no worthwhile change in rates which are almost the same as a week ago. Both 3½ per cent. bonds 1966 and 4 per cent. loan 1980—the new issues of the Central Government—are being quoted at their issue price, namely, Rs. 99.75 and Rs. 99.90, respectively.

A further press note, issued by the Reserve Bank shortly after we went to press last week, on the subscriptions to the new Central loans shows that the total subscriptions amounted to Rs. 180.30 crores, of which Rs. 74.25 crores represented conversions. 3½ per cent. 1966 bonds attracted subscriptions of the order of Rs. 82.66 crores and the 4 per cent. 1980 loan Rs. 97.64 crores. All subscribers received full allotment.

In the foreign exchange market, the rupee was a shade quiet in terms of the U.S. dollar. The banks selling rate for ready T.T. on New York which stood at Rs. 476.50 per $100 moved up to Rs. 476.75. Their buying rate also was higher by 25 nP at Rs. 473.50. In the New York market, £ sterling was quiet. The latest rate at 280.76-280.79 cents per £ for spot compares unfavourably with 281.02-281.05 cents a week earlier. Three months forward sterling has also come down by 0.18 cent, the latest rate being 279.24-279.27 cents per £.

KIPS HARDEN

(From Our Own Correspondent)

MADRAS, 25*th July*

Arrivals of tanned hides and calves were moderate, and clearance kept pace with arrivals. As U.K. enquiries broadened for medium and heavy weight kips, prices in the local market hardened to some extent. Light weights were weak. In the case of top marks, however, the relative tanners were in a well sold forward position. Demand for cow calf and buff calf was negligible. Buff heavies were steady, due to exporters buying for shipment to the U.K.-U.S.A.

There was selective demand for tanned goat skins and the tone was dull. Tanned sheep skins ruled weak, except on prime tannages.

BULLION PRICES RECOVER AT CLOSE

(From Our Own Correspondent)

BOMBAY, 27*th July*

The bullion market presented a firm trend in the first two sessions of the week under review, but developed a sagging tendency on Saturday the 23rd inst., which persisted till today when the market picked up strength again. The earlier firmness was engendered by large purchases made in spot section by some dealers on fear of dwindling stocks. Consequently, both silver and gold scored handsome gains. On Friday, the premia commanded by ready position over the *Shravan* (August) settlement widened to Rs. 2.75 in silver and Re. 1.66 in gold, as against Rs. 2 and Re. 1.25, respectively, prevailing on Wednesday last week. The upward tendency in prices was checked on Saturday when, on account of profit-taking, both the metals suffered a decline. The decline gathered further momentum in the subsequent two sessions also, thanks to rumours regarding large inflow of contraband stocks. Today, however, there was a recovery in values, following scattered buying by spot houses. The closing rates for silver were higher than those prevailing on Wednesday last, while those for gold were lower.

The daily average arrivals of both gold and silver during the week were larger than in the previous week, while the offtake was comparatively less as is indicated below:

	Week ended	
	27-7-60	10-7-1960
Gold (tolas):		
Arrivals	3,600	2,625
Offtake	2,700	3,125
Floating stocks* ...	25,000	
Silver (bars):		
Arrivals	28	14
Offtake	8	9
Floating stocks* ...	350	

*Latest estimates

In the gold section, *Shravan* (August) settlement advanced from Rs. 129.87 to Rs. 130.56 on Friday and, after receding to Rs. 128.81 yesterday, recovered to Rs. 129.68. The closing rate was slightly lower at Rs. 129.56.

Ready gold began the week at Rs. 131.31, as against the previous close of Rs. 131.12, and moved up on good support to touch a high of Rs. 132.22 on the 22nd inst. Thereafter, it declined and stood at Rs. 129.65 at one time yesterday. Opening firm at Rs. 130.31 today, it rose to Rs. 130.50 but closed lower at Rs. 130.37.

Shravan settlement in silver evoked good enquiries early in the week, the quotation rallying from Rs. 218.06 to Rs. 219.31 on Friday the 22nd inst. After easing to Rs. 218.19 in the subsequent three sessions, it recovered to Rs. 219.37 but finished a shade easy at Rs. 219.22. The net gain over the week was Re. 1.16. *Bhadrapad* (September) settlement fluctuated between Rs. 216.56 and Rs. 219.37 before winding up the week at Rs. 217.97. The net gain over the week was Re. 1.53. The rate for transferring commitments from *Shravan* to *Bhadrapad* settlement continued to be in favour of bulls throughout the week, though it narrowed down slightly from Re. 1.62 on Wednesday last to Re. 1.25 today.

Induced by good support, ready silver hardened from Rs. 220.06 to Rs. 221.56 on Friday. After receding to Rs. 219.44 on Monday, it moved up again subsequently and touched Rs. 220.65 today before finishing at Rs. 220.50. The net rise over the week was 44 nP.

Forward silver in the London bullion market improved by ¼d. to 79½d. during the week, while ready silver was unchanged at 79¼d. Silver in New York continued to stand at 91.375 cents. Ready gold in London firmed up from 249s. 10½d. to 250s. 1½d., owing to the weakness of the pound sterling *vis-a-vis* the dollar. The latest available world price for gold in London is $35.09½-$35.11½ per fine ounce, same as last week.

The following table shows the trend of the market during the week under review:

	27-7-60 (closing)	High	Low	20-7-60 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.999 fine)	130.37	132.22	129.65	131.12
Forward:

Gold	250s.1½d.	250s.1½d.	249s.10½d.	249s.10½d.
New York:				
Silver	91⅛ cents	—	—	91-3/5 cents

LINSEED FIRM AGAIN

(Messrs. A. Bradley and Co.)

CALCUTTA, 25*th July*

The linseed market has continued to be firmly held and sellers are very reserved. The local stock position is poor, with arrivals scarce and crushers working on a hand-to-mouth basis. There are enquiries for oil from local buyers for ready and forward deliveries, but business done is on a small scale, as supplies are very short.

The oilcake market is keeping firm, owing to good local demand.

The latest quotations per maund are: Ready Rs. 26 and September Rs. 26.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 27*th July*

In contrast to the sustained firmness noted during the past many weeks, the cotton futures market turned easy during the week under review. Prices declined fairly sharply in unofficial dealing from the peaks reached last week. (Official trading continued to remain suspended). The main reason for this reaction was the fall in ready prices following increased offerings by stock holders who wanted to dispose of their stocks before 1st August when the Government's new order, prohibiting sales above the ceiling prices, comes into force. The revival of monsoon, so essential for the crop in Western India, would also appear to have imparted weakness to the market. Rumours that, the Government would not favour an upward revision in ceiling prices, also unnerved bulls. The selling that ensued resulted in a set back in futures values. The Jarilla August Contract receded from Rs. 826 last week-end to Rs. 817.50 yesterday. A mild recovery was witnessed thereafter which persisted today also.

The Special Committee appointed by the E.I.C.A. under By-law 55, fixed on Tuesday the tendering differences in respect of the various descriptions of cotton tenderable against the August Contract. The rates are subject to the floor and ceiling prices fixed under the Cotton Control Order for the 1959-60 season, and right of appeal, provided it is lodged on or before 28th of July 1960.

Traders were eagerly awaiting the outcome of the meeting of the Cotton Textile Consultative Board scheduled to take place at New Delhi on 29th inst. wherein the cotton and cloth situation would come up for review.

In the spot market, traders, who still held unsold stocks, were eager to sell them even at a lower price in view of the coming into force of the new order on 1st August. Although mills too were inclined to replenish their stocks, subject to the availability of quotas, prices turned some what easy. There was good demand for cotton spinning 14 counts and below. Staple styles also met with ready absorption. Interest in foreign cotton was moderate. There was a revival of demand for high grade Sudan. East African Mwanza and U.S. cotton also attracted buyers. Stray interests was noted in Syrian cotton also.

Export demand for Bengal *Deshi* continued to be good. Firm commitment already entered into were reported to be over 20,000 bales of which Japan accounted for the lion's share.

Detailed procedure for sales of cotton after 1st August, when the Textile Commissioner's order dated 13th May comes into force, has been notified. Each trader is required to submit to the Textile Commissioner, on the 1st and 15th of every month commencing from 1st August, details of the cotton held by him together with his distinguishing pressmarks and other particulars. Releases of these cottons will be made to the mills at the ceiling prices applicable to the description, staple and class of the cotton concerned which shall be determined by the Textile Commissioner's Appeal Committee. Mills, which have not been able to complete purchases against their quotas of Indian cotton should, if they so desire, apply, on the 1st and 15th of every month commencing from August 1960, for release of cotton against their unutilised quotas from the stocks lying with the trade. Allottee mills are required to take delivery of the cotton in accordance with the Bye-laws of the East India Cotton Association Ltd., Bombay.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:—

Wagad 960; Kalyan 950; Digvijay 1,055; Jaydhar 1,005; Mwanza 1,175; Syrian 1,150.

Quiet conditions prevailed in the Karachi cotton futures market during the week. China, whose bulk purchases were responsible for the recent firmness in prices, appeared to have withdrawn from the market for the time being. Demand from other countries, with the exception of Japan, was slack. Report of satisfactory crop progress was a restraining influence. Prices tended to recede. The N.T.R.G. July Contract went off the Board on 25th inst. The last known quotation for the Contract was Rs. 84. The new crop March Contract opened at Rs. 69-3 but receded to Rs. 68-4 at close. The January Contract declined from Rs. 70-2 last week-end to Rs. 69.

In the spot section, barring *Deshi* prices which were firm, thanks to good export demand from Japan, the trend was generally easy. Sind *Deshi* was quoted on rupee higher at Rs. 92. Punjab *Deshi* was priced at Rs. 90, as against Rs. 89-8 last week-end. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 87-2; S.G. 92-2; L.S.S. Punjab Roller 87-2; S.G. 92-2; N.T. Roller 92-2; S.G. 96-2; 289F Punjab Roller 99-2; S.G. 104-2.

Cotton futures values at Alexandria drifted downward during the week. Bearish weather news and the larger area planted to cotton during the season (the Ministry of Agriculture estimated the area under cotton this season at 1.87 million feddans, as against 1.76 million feddans last season) induced selling. Both the Karnak and Ashmouni contracts were marked down.

The latest available quotations—in tallaris per lb.—are as under:

Karnak: July 75.55; November 74.55; January 74.10.

Ashmouni: August 63.58; October 63.00; December 63.00.

Reports from Khartoum state that the Sudan Cotton Exporters' Association has unanimously resolved to establish at the earliest possible date, an approved active spot market in Port Sudan with the support and participation of both Government and private growers. The Association has also re-

solved to request the authorities to transfer the cotton auctions from Khartoum to Port Sudan.

Steady conditions prevailed in the Liverpool cotton futures market during the week. Selling, which was mainly on American account, was offset by trade covering orders and some speculative buying. Prices moved in narrow range and remained nominally unchanged over the week. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 22.50; October 22.60; December 22.40; March 22.45.

American cotton mixed growth contract: July 22.70; October 22.90; December 22.75; March 22.80.

Sudan: July, September, November 35.50.

Cotton futures in the New York market suffered a setback during the week. News of favourable weather and good crop progress weakened sentiment. Both current and new crop contracts succumbed to selling. Spot values, too, gave way.

The results of the forthcoming Presidential election are watched with great interest by cotton traders. If the Democrats win it will mean higher price supports.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	26-7-60	19-7-60	12-7-60
Spot	31.60	33.95	34.20
July	—	—	32.98
October	31.14	31.18	30.93
December	31.28	31.33	31.10
March	31.72	—	—

BEMBERG YARN MOVES DOWN

(From Our Own Correspondent)

BOMBAY, 27*th July*

A sharp drop in prices of Bemberg yarn was the feature of trading in the Yarn market during the week under review. The drop followed liquidation by some bulls who were unable to hold on to the large stocks they had bought in recent weeks. There was also forward selling in yarn by certain parties, while buying orders from consuming interests were not quite encouraging. Viscose yarn also tended to decline, owing to arrivals of goods from mills and slack demand. In sympathy and following lack of support from weaving units, staple fibre yarn, too, ruled easy. Cotton yarn, however, continued to attract good attention of operators who feared that stocks held by traders and mills would dwindle in the coming week. The fears were based on the ground that the output of yarn might suffer a further setback as a result of shortage of cotton supplies. The quantity of yarn actually produced in the first six months of 1960 was 839 million lbs., as against 841 million lbs. in the corresponding period of 1959. The traders noted reports that the handloom weavers had represented to the Government that they were not getting adequate supplies of yarn at reasonable prices.

Cupressa Bemberg yarn (60 x 2) August delivery was subjected to selling pressure and climbed down from Rs. 1,963 to Rs. 1,918. October delivery slumped by Rs. 47 to Rs. 1,934. Spot Cupressa fell by 19 nP to Rs. 9. 120 Italy declined by a like amount to Rs. 6. 120 Japan was quiet at Rs. 5.59. 150 Italy, however, met with special support and rose by 13 nP to Rs. 6.19. 150 Japan was also bid higher by 3 nP at Rs. 5.90. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade receded by 13 nP to Rs. 6.12. 150 Bt. cones 1st grade lost 4 nP to Rs. 5.24.

Staple fibre yarn (40 x 2) August delivery encountered selling and declined from Rs. 733 to Rs. 721. October position suffered a fall of Rs. 11, today's closing rate being Rs. 734. Spot Centurys eased by 6 nP to Rs. 3.62. Citys shed 2 nP to Rs. 3.75. Kohinoors were quiet at Rs. 3.76. 80 x 2 Paramounts (imports) changed hands at Rs. 12.75, same as last week.

Cotton yarns, as already stated, ruled strong. Twenty counts, Moderns advanced by a rupee to Rs. 24.75. Gokaks picked up 25 nP to Rs. 24.50. Forty counts Minaxis strengthened by 81 nP to Rs. 32 and Maduras by 63 nP to Rs. 32.50. Sixty counts Raghuvamshis spurted by Re. 1.58 to Rs. 58.58. Finlays were fully maintained at Rs. 60.60. Eighty counts Moderns rose by 50 nP to Rs. 75. Finlays were firm at Rs. 82.82. Among ten counts, Podars were fully steady at Rs. 19, while Gokaks eased by 25 nP to Rs. 19.25.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	27-7-1960	20-7-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
August	1,918	1,963
October	1,934	1,981
60/1 Cupressa Bemberg spot (per lb.)	9.00	9.19
120 Japan (per lb.)	5.59	5.59
150 Japan (per lb.)	5.90	5.87
120 Italy (per lb.)	6.00	6.19
150 Italy (per lb.)	6.19	6.06
Staple fibre yarn—		
40 x 2 August	721.00	733.00
October	734.00	745.00
40 x 2 City (per lb.)	3.75	3.77
40 x 2 Century	3.62	3.68
Cotton yarn (per bundle of 10 lbs.)—		
10s Gokak	19.25	19.50
20s Gokak	24.50	24.25
40s Minaxi	32.00	31.19
60s Finlay	60.60	60.60
80s Modern	75.00	74.50

NEW COTTONSEED CONTRACT

(From Our Own Correspondent)

BOMBAY, 27*th July*

The sustained rally in the groundnut prices noted last week was arrested during the week under review, thanks mainly to reports of revival of favourable weather conditions in the producing centres. There was, however, no official dealings in forward groundnut contract since the prices continued to be above the ceiling level. Castorseeds and linseeds met with some selling pressure. In the cotton seeds section, trading in new contract for February 1961 delivery commenced on Tuesday. The new contract is based on metric system of weights and measures. Unit of trading in cottonseeds which had been 100 candies, replaced by 25 metric tons, while the rate will be quoted for 250 kilograms instead of one candy. The Forward Markets Commission has not, however, granted permission to start new crop contracts in groundnuts, castorseeds and linseeds.

During the initial sessions, groundnut section displayed distinct firmness, mainly on account of smaller arrivals from upcountry centres and also reports of damage to seeds owing to unfavourable weather conditions. The abrupt change in the weather in the major producing centres like Saurashtra and Andhra dampened the enthusiasm of bulls. This led to some liquidation of stocks, though it did not lead to any notable setback. This is due mainly to the general scarcity of supplies as also keen enquiries from crushers and *vanaspathi* manufacturers. Incidentally, it may be noted that the third Plan target for *vanaspathi* production is placed at 500,000 tons annually. The production in 1960-61 is estimated at 350,000 tons, as against 276,000 tons in 1955-56 and 153,000 tons in 1950-51.

To revert to the market trend. While there was no official dealings in forward groundnut contract it was privately quoted in the neighbourhood of Rs. 226, a decline of about a rupee, as compared with the last week-end. Nizam bold presented a firm front with the quotation recording a rise of 50 nP over the week. Khandesh quality which had risen from Rs. 19.25 to Rs. 50.25 by Saturday, declined subsequently to Rs. 49.75. Oil ex-mill fell from Rs. 25.50 to Rs. 25.37. Railway Receipts, too, lost 13 nP to Rs. 25.12. But oilcakes were firm on good overseas enquiries.

Distinctly easy conditions prevailed in the castorseeds section owing to protracted absence of any encouraging export enquiries for castor oil and also to pressure of supplies. In these conditions, castorseed September contract 1960, which had wound up last week at Rs. 181, after an initial spurt to Rs. 181.25, gave way gradually to close today at Rs. 177. Ready Madras eased by 50 nP to Rs. 35. Oil Commercial receded from Rs. 20.25 to Rs. 19.87.

There was no notable development in the linseed section. In the absence of any overseas enquiries for oil, linseeds drifted to lower levels. Linseed September contract declined by 37 nP to Rs. 34.19. Bold ready fell from Rs. 34 to Rs. 33.62.

In the cottonseed section, there were no transactions in the maturing contract. The new contract, which started yesterday at Rs. 93.25, gave way subsequently to wind up the week today at Rs. 91.75, in the absence of support at higher levels.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	27-7-1960	20-7-1960	13-7-1960
	Rs.	Rs.	Rs.
Groundnut	—	—	223.50
August 1960	49.25	48.75	48.00
Nizam bold	49.75	49.25	48.00
Coromandel ready	49.75	49.25	48.00
Khandesh quality	25.37	25.50	25.00
Oil ex-mill ready*	25.12	25.25	24.75
Railway receipts*			
Castorseed			
September 1960	177.00	181.00	182.25
Ready Madras	35.00	35.50	35.25
Ready Kanpur	34.00	34.50	34.25
Oil B.S.†	19.87	20.25	20.25
Oil commercial†	18.44	18.87	18.87

September 1960	34.19	34.56	34.75
Bold ready	33.62	34.00	33.87
Oil ready†	17.19	17.32	17.25
Cottonseed	—	—	105.00
September 1960	91.75	—	—
February 1961	38.50	38.50	38.00
Niger seed	25.00	24.50	24.50
Kardi seed			

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates of new cottonseed contract are per 250 kilograms.

KEEN EXPORT DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 19*th July*

Export sale No. 29, conducted on the 19th inst., contained 1,650,000 lbs. and quality often showed some improvement. The sale opened to a much improved demand and both exporters and internal buyers were operating keenly, the latter being able to buy more freely following the settlement of the strike. In particular, plain and low medium teas were well supported and advanced irregularly by 5 nP. There was good support for improved quality medium teas and these, together with the best liquoring highgrowns, were dearer by 5 nP to 15 nP. All fannings grades met with better enquiry than in recent weeks and black leaf types were a strong feature of this sale. The more fibrous fannings, however, remained in limited demand. Whole leaf grades were irregular. Orange pekoes met with good demand and were up to 10 nP dearer. Flowery pekoes and pekoes, however, were often easier. The quotations were:

	1960	1959
Low medium	1.60-1.70	1.48-1.65
Medium	1.70-1.80	1.60-1.75
Good medium	1.85-1.95	1.85-2.10
Quality	2.10-2.68	2.05-3.00

In the dust sale "AA" held on Thursday the 21st inst., 760,000 lbs. were on offer. There was strong general demand. Most descriptions were irregularly dearer by 10 nP to 15 nP, with the exception of the milled dusts which were fully firm. There was useful enquiry for legg-cut and C.T.C. teas which were sold well at considerably enhanced rates.

There are sellers in export quotas at 2 nP per kilo.

At Colombo, 6.75 million pounds were offered which met with strong demand. Best Dimbulas were steady, whilst other South-West highgrowns were easier. Uvas were dearer, following quality, particularly fannings. Low mediums tended dearer, but the better sorts were slightly easier. Lowgrowns and plainest kinds advanced by 3/5 cents.

In Monday's auction in North Indian and other growths at London, there was good demand, especially for the better new season's North Indian teas, whilst all other descriptions showed no quotable change. On Tuesday, there was good demand for Ceylon and South Indians and prices were generally unchanged.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 29: 1,600,000 pounds offered. Excited demand, particularly from internal buyers. Low medium and medium brokens advanced by 10 nP to 15 nP. Similar fanning rose by 5 nP. *Good medium* and best liquoring up to 20 nP dearer, following quality. Whole leaf very strong and dearer."

JUTE GOODS BUOYANT

(From Our Own Correspondent)

CALCUTTA, 26*th July*

There was a steep rise in heavy goods prices in the jute markets during the week under review, following commencement of Chinese buying interest. It would be remembered that, at this time last year also, Chinese bought heavily, and, in consequence, prices of not only heavy goods but hessian and miscellaneous constructions had recorded a phenomenal increase, and enabled the mills to follow a policy of progressive unsealing of idle looms and thereby increase production. A moderate quantity had already been lifted by Chinese buyers, and market circles expected the Chinese to continue buying, since, as a result of the reported increase in Chinese agricultural production, China would require even a greater number of bags for package and storage than last year. Hessian constructions did not benefit from the up-trend in heavy goods, though the trend was fully firm. The reasons were meagre U.S. buying and report earlier in the week that burlap consumption in the month of June aggregated only 71 million yards representing a decrease of 3.5 million yards as compared with the previous month. It was, however, noted that consumption up to June amounted to 444 million yards which was only 10 million yards less than in the corresponding period of last year. In 1959, burlap consumption in the U.S. touched a record figure and market circles noted that, in consideration of this factor, consumption up to June this year was not unsatisfactory. The fact is that U.S. buyers have now adopted the policy of lifting hessian in driblets. Burlap stocks at the end of June were higher by 3 million yards at 266 million yards, which were considered to be sufficient for 12 to 14 weeks.

Now that Chinese buyers have begun to show interest and prices of heavy goods are moving up, it is expected that the U.S. buyers would also keep on buying, despite reports that they may not show interest unless prices are lower. Meanwhile, fibre prices have also moved up following certain bullish rumours. Although weather reports have continued to be good and harvest is proceeding smoothly and there is adequate water in tanks and canals for proper retting, the report that a smaller area has been sown in this season has been circulated. However, since at sowing time fibre prices were high, reflection should enable the inference that there is no basis for such a hypothesis. Following communal disturbances in Assam, selling agencies in the State have of course, reported difficulty in recruiting trained staff who are Bengalis. For the Bengali staff have expressed reluctance to proceed to Assam until the law and order situation there improves. As a result of this, market circles anticipate some delay in the despatch of jute from Assam. This has been one of the reasons for the hardening tendency in fibre prices noted this week. The publication of figures in regard to jute arrivals has also aided the up-trend. The quantity of Indian jute that reached mills' stations during June was only 209,850 bales, which was lower than in any month since August 1955. In June last year, arrivals were as much as 303,350 bales. Arrivals in May this year were higher by 96,400 bales as compared with the following month of June. However, a redeeming feature is that, in June, arrivals from Pakistan were 92,550 bales which represented an improvement of 80,200 bales as compared with June 1959 and of 49,150 bales as compared with the previous month. Such satisfactory arrivals from Pakistan were due to the liberal issue of import licences granted by the Government of India.

Total arrivals during the twelve months ended June were 5,788,650 bales which were below the estimated consumption by mills during the period. Of the total, 5,191,650 bales represented Indian jute, and they were lower by 984,850 bales as compared with the previous jute season. Arrivals from Pakistan increased by 268,000 bales, so that the total of the drop from both the countries was only 716,850 bales.

The goods market opened on Tuesday last on a steady trend generated by reports of an order from Saigon for 5,000 bales of heavy Cees for ready shipment. Covering business in heavy goods was swift, and ready B. twills rose from Rs. 124.75 to Rs. 126.25. In sympathy, ready hessian 40" 10 oz. at Rs. 45 recorded a fractional gain. On the following day, fresh business with Australia for corn-sacks for shipment before September was a feature. Both heavy goods and hessian were pushed up, as fibre prices were also hardening. Swift activity was reported from the futures market, and the November contract B. twills recorded an impressive gain. Following this, ready B. twills rose to Rs. 131.30 and hessian 40" 10 oz. to Rs. 45.90. However, soon came encouraging crop reports, and also overseas buyers of goods were not prepared to support the uptrend. Consequently, ready B. twills dropped to Rs. 128.50 and hessian 40" 10 oz. to Rs. 44.65. The feature on Friday was the announcement of an official tender for nearly 20,000 bales of B. twills for delivery in August and September. Ready B. twills closed better at Rs. 129.60 and hessian 40" 10 oz. at Rs. 44.75. The gain would have been more impressive, but rumours of the tender earlier in the day related to a higher quantity. Towards the week-end, B. twills improved to Rs. 131.35, while hessian 40" 10 oz. was quiet at Rs. 44.55. Yesterday was an official holiday for the market, and prices were nominal. Ready hessian 40" 10 oz. was slightly better at Rs. 44.65, but ready B. twills sagged to Rs. 130.85.

For reasons already indicated, fibre prices improved. Mills showed keen interest in near delivery near crop. Sellers were reserved. Sept.-Oct. northern bottoms rose from Rs. 89.50 to Rs. 91 per 100 kg. and Oct.-Nov. *Daissee* bottoms from Rs. 93 to Rs. 96.50.

TEA ADVANCES

(From Our Own Correspondent)

CALCUTTA, 26*th July*

Good demand was in evidence during yesterday's export sale in tea as well as last week's internal auctions. The very steady conditions and the gain in prices in Assam teas during last week's London auctions were noted. Similarly, in London, there was improved demand for Ceylonese and South Indian teas.

The report that the U.K. was importing more and more Chinese tea and that it was possible that some of the Chinese teas imported were taking up for blending was a matter of concern to trade circles. This was especially so since India's exports to the U.K. had been declining. According to a London report, the U.K. imported as much as 9 million lbs. of Chinese tea in 1959, but, in 1947, the imports were less than 1 million lbs.

Offerings during the export sale held yesterday amounted to 34,045 packages. Following the selective preference shown by buyers, a substantial quantity from the different categories had to be withdrawn towards the close of the sale. In Darjeelings, the flavoury teas were firm, while an easier trend was recorded by the plainer teas. Among orthodox Assams, the brighter liquoring teas commanded fair attention and were firm, but prices for the rest of this category declined by 20 nP to 30 nP. A strong feature was the plain brokens prices of which improved, but fannings closed 10 nP to 15 nP below last rates. Among legg-cuts, the poorer lots received attention of buyers at prices below 10 nP. Prices of better descriptions sagged up to 30 nP below brokers' valuations. In whole leaf-grades, a dearer tendency was recorded by the cheaper lots. The superior teas in this category were taken by Turkish buyers and, as a result, prices improved. Tippy teas were irregular.

The quotations per kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 8.50 to Rs. 9.00; best Assam C.T.C. B.P. Rs. 8.00 to Rs. 8.50; clean black pekoe Rs. 5.30 to Rs. 5.00 (nom.); medium fannings Rs. 4.80 to Rs. 5.20 (nom.); plain medium B.P. Rs. 5.00 to Rs. 4.60; and plain B.P. fannings Rs. 4.40 to Rs. 4.60. Rs. 4.60 to Rs. 4.70.

Dusts on offer during last week's internal sales amounted to 11,531 chests. There was good general demand. Among orthodox exportable teas, the smaller and thicker liquoring lots commanded higher prices. Legg-cut Dooars were generally easier, but the powdery teas were bought at hardening rates. Among C.T.Cs, the brighter kinds were firm, while the mediums lost 10 nP. The quotations per kg. including excise duty were: best Assam C.T.C. Rs. 6.10 to Rs. 6.50; medium Assam C.T.C. Rs. 5.60 to Rs. 6.00; medium Assam Rs. 4.50 to Rs. 4.90; and medium Dooars Rs. 4.40 to Rs. 4.60.

Legg on offer amounting to 223 chests were sold at higher rates.

Yesterday, export quota changed hands at 2 nP per kg. Buyers soon reduced the price to 1¾ nP, but sellers continued to demand 2 nP.

COPPER SCRAP DECLINES

(From Our Own Correspondent)

CALCUTTA, 26*th July*

Copper scrap fell during the week under review, while tin and electrolytic zinc recorded handsome gains. Advices from the London Metal Exchange were encouraging earlier in the week, but closing levels were below the best for the week. Opening at £252 a ton, electrolytic copper in London touched a high of £258, but soon eroded and closed easier at £250½. The earlier rise was attributed to the Congolese situation and the possibility of an imminent strike in a Chilean mine. However, the subsequent recession was in accord with the easier trend in New York. Locally, during the week, following a decline in interest, berry quality scrap gave way from Rs. 216 to Rs. 212 a cwt. and utensil scrap from Rs. 200 to Rs. 195. Tin shot up to Rs. 567 per cwt. from Rs. 562. There was good demand. Stocks were limited, but arrivals were soon anticipated. In London, the price touched a high of £823 a ton, after opening at £810½ and before closing at £815. Demand in London was reported to be keen. Local demand for electrolytic zinc was heavy, but the supply position was tight. The price hardened from Rs. 173 to Rs. 176 a cwt. In London, the price opened at £90⅛ a ton and, after moving up to £91¼, closed at £90½. Lead was firm at Rs. 69 per cwt.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 25*th July*

Foodgrains registered an easy trend during the week. The easiness was due mainly to brighter *Kharif* crop prospects following clear weather after two week's heavy rains. There were reports that large-scale sowings of maize and fodder crop had also been done during the week and land was being prepared for *rabi* sowings.

Wheat at Hapur ruled almost stationery during the week to be quoted on Monday at Rs. 17 a maund for average quality and upto Rs. 18.25 for farm produce. Arrivals of wheat, which were almost nil in last two weeks due to heavy rains and waterlogging in villages, improved to about 150 to 200 maunds a day, and all these arrivals were being lifted by consumers.

Rice continued to rule steady, as stocks with trade were not very heavy. It was reported that the State Government had procured substantial quantities of rice and had now offered one lakh tons to other States. Rice continued around previous week's levels at: *sela basmati* Rs. 31 to Rs. 35 ; *ramajwayan* Rs. 25 ; *raimunia* Rs. 26 ; *mainpuri* Rs. 24.25 ; *gadda* Rs. 21.75 a maund.

Gram recorded a fall of about 50 nP a maund during the week to be quoted now at Rs. 15.25 a maund, thanks to easy Punjab advices and better *Kharif* crop prospects. The U.P. Government was reported to be quite keen on selling 125,000 maunds of gram from its stocks and traders were said to have offered Rs. 13.25 to Rs. 14.75 a maund according to quality. Barley fell to Rs. 12.75 a maund and *bejhar* too was quoted slightly lower at Rs. 12.25 a maund for inferior quality and Rs. 13 for superior *moongia* quality. *Jowar* ruled quiet at Rs. 13.50 to Rs. 14.25 a maund, as also *guwar* at Rs. 12.50 to Rs. 13. Stocks of both these with the trade were poor. Demand too was slack.

After an early fall to Rs. 12 a maund for *dara* green quality following selling pressure by stockists, peas improved again to Rs. 12.25 a maund towards the week-end on revival of demand. Superior farm quality peas was quoted at Rs. 13 and peas *dal* at Rs. 13.75 a maund. Daily arrivals were about 200 maunds and local stock is put at 88 *khatties*. *Arhar* also drifted lower to be quoted at Rs. 13.50 a maund in the absence of demand. *Arhar* stock remained unchanged at 26 *khatties*. Other pulses were almost unchanged, *urd* from South at Rs. 20, *moong* Punjab at Rs. 20.50, *moong* from Rajasthan at Rs. 22 and *massor* at Rs. 15 to Rs. 18 a maund.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 25*th July*

Sugar continued to rule depressed during the week, thanks to easy supply position and slack demand. The week-end quotation was Rs. 112 per bag, a rupee lower than in the previous week. In view of sugar production having touched the peak of 24.10 lakh tons this year, besides a carryover of 1.73 lakh tons, trade was expected to press again for decontrol of sugar. Although the Government was as yet following a wait and watch policy, there were reports that it would shortly review the question. Sugar in retail continued to be quoted at Rs. 1.12 per *seer* in the open market, the control price being Re. 1.04.

Sugar also eased by Re. 1 to Rs. 2 per bag in the Muzaffarnagar market, spot delivery being quoted at Rs. 114 per bag, following easy supply position and booking restrictions again.

Sugar in the Kanpur market too suffered a setback. The quotation stood at Rs. 112.50 a bag in the week-end.

Khandsari registered sharp gains during the week on brisk demand from Kutch, Saurashtra, Punjab and Gujerat. The latest rate was about Rs. 2 a maund higher as compared with the previous weeks level. Inferior was done at Rs. 30 to Rs. 32, superior at Rs. 34 to Rs. 41.50, crystal *khandsari* at Rs. 37 to Rs. 42, and *boora* from crystal at Rs. 43 a maund. *Khandsari* stocks were fast running down and were put at about 50,000 maunds in the Muzaffarnagar market.

Ready *gur* recorded fractional gains during the week to be quoted now at Rs. 17 a maund for best dry quality and Rs. 16.25 for dry wet *kotha* quality. *Shakker* was quoted at Rs. 19.50 a maund. Daily arrivals during the week were meagre and local stock ran down to 18,000 maunds, the corresponding figure last year being 40,000 maunds when best *gur* was quoted at Rs. 21.25 a maund. Total arrivals of *gur* here during the season just coming to a close were 5.86 lakh maunds, as against the total arrivals of 6.61 lakh maunds last year. Following good rains in last fortnight, prospects of the coming cane crop were reported to be bright.

Future *gur* moved both ways during the week, but the trend overall was bearish, following heavy rains brightening cane crop prospects. *Fagun* opened at Rs. 14.22 last Monday, touched the highest and lowest at Rs. 14.26 and Rs. 13.94, respectively. It was quoted today at Rs. 14.14.

Notices

THE SIMPLEX MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the Company will be closed from Saturday the 13th August 1960 to Saturday the 27th August 1960, both days inclusive.

Shareholders are requested to notify immediately any change in address to the undersigned.

FOR THE SIMPLEX MILLS COMPANY LIMITED,
S. R. DAMANI,
Director.

30, CLERK ROAD,
JACOB CIRCLE,
BOMBAY-11, 22*nd July* 1960.

BALMER LAWRIE AND COMPANY LIMITED

THE BOARD OF DIRECTORS OF THE above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 20 per cent. for the year ended 31st December, 1959.

BALMER LAWRIE & Co. LTD.,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 11*th July*, 1960.

BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 19th August 1960, at noon, to consider the Accounts of the Company for the year ended 31st December 1959, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 1st August 1960 to 19th August 1960, both days inclusive.

By Order of the Board,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 15*th July*, 1960.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

THE BOARD OF DIRECTORS OF THE above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 30 per cent. for the year ended 31st December, 1959.

BALMER LAWRIE & Co. LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 11*th July*, 1960.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page 183*)

grade 10 (unwashed), for instance, is currently quoted in the London market at about £108 per cwt., the corresponding quotations prevailing a month and a year before being £127 and £195, respectively. The net decline in world coffee price over the year is thus as much as £87.

The slump in the world coffee market must be attributed to competitive selling of large quantities by a number of countries, especially the African producers. In French West Africa, the prices of Robusta coffee were cut by nearly a third since the end of May 1960. Uganda in British West Africa also made cut-price block sales in coffee, following the relaxation of selling restrictions by the Uganda Coffee Board last month. Brazil, too, had recourse to its "matched deals" in which sizable lots of old crop coffee were offered at very low prices to buyers of new crop coffees.

Lately, however, the downward trend in world coffee prices has somewhat been checked, at any rate for the time being. A recent report from London avers that the price war in coffee has been abandoned. In support of this view, the report points out that the French have had discussions about maintaining the price of Robusta coffees, that the Chairman of the Uganda Coffee Board has discounted the possibility of Uganda making

PAKISTAN'S FINANCIAL DEFAULTS

IN our last issue, we briefly referred in these columns to the difficulties experienced by Indian investors in Pakistan not only in regard to facilities required for the successful operation of their businesses but also in remitting their *profits to India.* These difficulties, as any Indian who has to do business with Pakistan knows full well, are the result of obstructive tactics adopted by the Government of Pakistan. Since Mr. Mohammed Shoaib, Pakistan's Finance Minister, has tried to mislead public opinion by throwing the blame on the Government of India, it is necessary to return to the controversy. Mr. Shoaib's contention is that it is "India which is creating difficulties by refusing to accept and encash Indian securities given (by the Pakistan Government) to Indian industrialists in part repatriation of their profits." India, he avers, has "no right to refuse acceptance of its securities. These securities are not related to financial issues outstanding between the two countries. They were received by Pakistan at the time of the Partition, as part of liabilities and assets." This is a very clever way of trying to justify the Pakistan Government's discrimination against Indian nationals who have investments in Pakistan. Can Mr. Shoaib honestly say that other foreign investors in his country are also being treated in the same way? When the latter have profits or cash balances arising from their sales in Pakistan, are they not being allowed to remit them in pounds sterling? If the Pakistan Government has Indian securities, it can as well sell them in India and give the rupees to Indian business men in exchange for their profits and/or sale proceeds blocked for no justifiable reason. It is a curious thing, indeed, for a Government to compel individuals to accept current payments in dated-securities of some other Government. And it is surprising that the Government of India continues to adopt a sphinxlike attitude, even though Mr. Shoaib has made several public statements accusing it of practising obstructive tactics. Its silence may be due to a genuine desire not to foul the atmosphere for establishing friendly relations with Pakistan and for bringing about a *smooth* settlement of all outstanding issues, financial as well as political. But, as silence has also the disadvantage of being construed as acceptance of the claims made, it is necessary to rebut Mr. Shoaib promptly and adopt some degree of firmness in India's financial dealings with Pakistan. The simple truth is that Pakistan has been indulging in a series of defaults of its commitments with India and, what is more, is trying to get away with it. It is high time we called a spade a spade.

The present situation, as was briefly explained by us last week, is that Indian investors earning profits in business in Pakistan are being asked to take up Indian securities enfaced for payment in Pakistan. Since India will not pay for these securities until the due date, Indian business men who accept them from Pakistan will simply have to hold on to them. By compelling them thus, Pakistan is, in fact, forcing India to give a loan in its favour, inasmuch as current earnings belonging to Indians are being converted into long-term debts. In other words, Pakistan is collecting through the Indian investors money which the Government of India will pay at some future date; it is thereby forcing an earlier collection of its securities which are due for payment at some later stage. At the same time, under one pretext or another, it is postponing the payment of its debts to India long overdue. Thus, while Pakistan is not paying to India what is due, it is forcing India to pay in advance what is due to it much later. This it is doing not by forcing the Government of India but by forcing helpless individuals and firms to hold back the cash due to them now in return for a debt which they may realise when it eventually becomes redeemable. In fine, whereas Pakistan is winning heads and tails, India is losing both.

There has been a disposition on the part of *India to be lenient to Pakistan* in several ways on financial matters. Pakistan is taking full advantage of this lenience and is using the mood to force every bargain against India. In this situation, there are certain obvious steps that India could and ought to take legally and constitutionally. For one thing, the practice mentioned above amounts to a discriminatory practice in exchange matters, because it applies to remittance of funds by individuals of only one country and does not apply to the nationals of other countries. To this extent, it clearly contravenes the spirit of the Articles of the International Monetary Fund Agreement to which Pakistan is a signatory. It is true that, in terms of Article XIV of the Fund Agreement, Pakistan can maintain restrictions, in order to secure its balance of payments position. But the nature of these restrictions is subject to review by the Fund in its annual consultations with member-countries. During such a review, it would be valid for India to protest formally that Pakistan is adopting a discriminatory restriction and that such restriction should be ended. Some may be tempted to argue that international institutions such as the Fund would not automatically come to the help of India, because these institutions function in a penumbra of political influences from the State Department of the U.S.A. and of the Western countries in general. India has, they may add, sufficient experience of these international bodies to know that they will not act vigorously against a member-country which is a political ally of Western powers. Nevertheless, there is no reason why India should not at least go on *formal* record firmly in protest against such discrimination. India's action will at least provide a test to the impartiality of the I.M.F.

Secondly, Pakistan owes a certain amount of debt to India, but is not paying any instalments of this on the ground that other financial matters have also to be settled at the same time. It is thus defaulting on payments which at one time were clearly agreed as due to India. It may be interesting to recall here what another country placed in a position similar to that of India did to register its claims in the appropriate international forum. The Netherlands has to receive some debts from Indonesia and the latter, like Pakistan, has been adopting delaying tactics. The Netherlands, therefore, formally lodged a complaint with the international *institutions that Indonesia is a defaulter* and, taking note of this fact, the World Bank, for example, has not lent any moneys to Indonesia. The debts involved here are of a political nature and, pending the settlement of political issues. Indonesia should not, in fact, have been regarded as being in default. In the case of Pakistan's debts to India, however, there are *no such complications.* Pakistan solemnly undertook certain definite commitments at the time of Partition and it is making no payments even in regard to these commitments, let alone those that are under dispute. India has, therefore, *a better* case than the Netherlands. Pakistan is, of course, not Indonesia. Nor is India the Netherlands. And the cynics may, perhaps, be right in arguing that, because of Pakistan's political alignment with the West, neither the I.M.F. nor the World Bank will listen to any complaint against it from India with the same eagerness which they showed to the Dutch complaint *against Indonesia.* Nonetheless, it is important for India to have faith in the justice of its case. If it fails to move or convince the I.M.F. or the World Bank, its complaint can at least serve the purpose of creating public opinion abroad that the nature of default in the case of Pakistan's debt to India is not different from that of any other international obligation. In this matter, the Government of India has, we are constrained to add, badly neglected the country's interests. It has neither formally lodged a complaint anywhere nor has any of its representatives spoken clearly and bluntly about the whole situation. Again, the Government of India's forbearance or timidity has been a cause of damage to its own interest and the world does not realise that Pakistan is in default of large sums which it owes to India in terms of the Partition agreements. Surely, later issues, which have been deliberately raised to befog some of the earlier commitments which are clear and unambiguous, should not dissuade India from formally agitating for *prompt settlement of claims* that are indisputably in its favour.

In the light of Pakistan's defaults in regard to its financial obligations to India, wisdom demands that this country must be cautious and wary in entering into any fresh financial relationships with Pakistan. As readers are aware, one such relationship is already in the offing, namely, the settlement of the so-called Canal Waters dispute. According to information supplied some time ago by the World Bank, over a billion dollars in aid has been proposed and promises have been obtained in favour of Pakistan from various Western countries for the construction of the Indus Canal System, if the negotiations initiated by the World Bank are to lead to the signing of a water treaty between the two countries, This aid, which is undoubtedly quite generous, is aid which accrues *entirely* to Pakistan, but the Western Press glibly brackets India with Pakistan, saying that this money is being given to help *India and*

should not in some way be linked with Pakistan's obligation to honour its earlier financial obligations to India. Failure to do so would only mean that the Government of India is still prepared to tolerate a situation in which Pakistan does not honour any of its obligations to India on some pretext or other and India goes on agreeing to more and more contributions.

By withholding current remittances, the Pakistan Government is enforcing a premature repayment of Indian obligations to Pakistan. At the same time, in the name of peace and good relations, Pakistan is also able to lever up a sizable contribution from India over and above that already secured for the construction of its canal system. After all, one has to ask whether Pakistan is really in such a difficult situation that it is willy-nilly forced into making these arrangements. As was pointed out by us last week, there has been, in recent years, a clear rise in Pakistan's external reserves. Pakistan has been receiving generous military assistance, as well as off-shore expenditures of a sizable character from its allies. Besides, it has also been receiving economic aid on a scale which is far more generous than that given to India on any principle of proportionality. The aid given by the U.S., for instance, from 1st Juy 1951 to 30th June 1960 for economic development alone is said to be as large as Rs. 614 crores. This compares with Rs. 1,646 crores (including the latest P.L. 480 grain agreement covering Rs. 607 crores) of aid authorised to India which has four times the population of Pakistan. If even in this favourable perspective, Pakistan is unable to honour its commitments, it must be due not to a lack of ability but either to a lack of desire to do so or to a lack of capacity to manage its financial affairs competently. Whatever be the reason, is there any moral obligation on the part of India to play soft with Pakistan and not to protest even constitutionally and in formal terms where such protests can be made? It is important that the authorities of this country should maintain an atmosphere of rightful agitation, by keeping both the Indian public and the public abroad informed of all the proper facts relating to these matters, for it is only the weight of public opinion that can ultimately secure satisfactory results. Even Mr. Nikita S. Khrushchev is fully alive to this secret of success in national and international affairs alike.

REPLACING SALES TAX BY EXCISE DUTY

THERE will be some disappointment in trade and commercial circles over the failure of the Committee of States' Chief Ministers and Finance Ministers to reach an agreement over the extension of the principle of replacement of sales tax by excise duty, now applicable to sugar, tobacco and textiles. When the legislation replacing sales tax on these three commodities by additional excise duties was passed in December 1957, it was generally hailed as a measure calculated as much to increase revenue as to remove hardship to assessees to sales tax on the commodities. No fiscal legislation affects the common trader more than sales tax. And any measure that reduces the area of application of this tax affords much relief to traders. Replacement of sales tax by excise duty serves a threefold purpose, in that it maintains the revenue at original levels, eliminates the relatively more onerous administrative complexities involved in the collection and payment of sales tax, and minimises the scope for evasion.

At the meeting of the Committee of States' Chief Ministers and Finance Ministers, which was held at New Delhi last week, divergent opinions were expressed over the extension of the levy of additional excise duties in lieu of sales tax on commodities. The Committee met to consider the replacement, by additional excise duty, of the sales tax on a few more select commodities such as silk fabrics, matches, paper and vegetable products. While the Committee agreed to the application of this principle to silk fabrics, it could not reach a unanimous agreement over the other three commodities. An official announcement records that "it was decided not to pursue the matter until further experience was gained on the working of the existing scheme of additional excise duty on sugar, tobacco and textiles." Reports from New Delhi published in the daily Press are somewhat conflicting as to whether it was only a small minority or a majority of States that was opposed to a further extension of the scheme. It is, however, reported that Dr. B. Gopal Reddi, Union Minister for Revenue and Civil Expenditure, stated in Madras that only a minority of States was opposed to the scheme. The main objections to the scheme, it is stated, was that, at a time when they had to devise ways of raising resources for the third Plan, they could not agree to surrender in haste the right to levy sales tax on many more commodities.

There is certainly something to be said in favour of a school of fiscal thought which holds that sales tax and excise duties are not mutually replaceable modes of taxation. The Taxation Enquiry Commission, which examined the subject, was at some pains to point out the difference between the two levies—the excise duty and the sales tax. Excise duties, as the Commission observed, are collected from the manufacturer on his production even if there are no sales, whereas sales tax is collected only when the manufactured goods are sold. Further, excise duties are necessarily selective and the rates normally high, whereas sales tax operates at different points of the trade channel over a large number of commodities and in varying degrees of proximity to the point of final consumption, so that it can be levied at comparatively low rates.

The reluctance of the States to surrender to the Centre their right to levy sales tax is thus understandable. For they will lose thereby a fiscal weapon which can be wielded with considerable benefit to their treasury. It is true that the revenue collected by way of additional excise duties will accrue to the States. But, then, some States probably feel that, if they retain the right to levy the tax, they can vary the rates to suit their regions and thereby get more revenue themselves than what they are likely to get through any scheme of State-wise distribution of the revenue by the Central Government. As against this view must be set down certain vital considerations. In the first place, the working of the scheme of additional excise duties in lieu of sales tax, brief as this experience has been, shows that the revenue from these duties shows a generally steady trend. The States' share of the revenue from additional excise duties aggregated only Rs. 11.51 crores in 1957-58. It must be remembered here that the duties were in operation only for a part of that official year. In the following year, it increased to Rs. 39.50 crores. For 1959-60, it fell slightly to Rs. 38.91 crores, but it is expected to move up to Rs. 39.70 crores in 1960-61. It will thus be seen that these duties constitute a relatively steady source of revenue. Indeed, if production of excisable commodities goes up, the revenue will also increase. And, by spreading the additional excise duties over as many commodities as possible, the law of averages will come into play. Since it is unlikely that the production of all excisable commodities will fall in a particular year, the revenue from this source will be one on which the States can rely with a fair degree of certainty. Nor should the point be overlooked that, whereas excise duty falls on the entire production of a commodity, nearly all systems of sales tax legislation provide for exemption of minimum turnover limits. This, in effect, means that some sections of traders escape the tax liability. In other words, the revenue from excise duty—assuming that it is not unduly low—can always be expected to be higher than what could be collected by way of sales tax. Secondly, there will be an enormous saving in costs of administration. After all, it is administratively cheaper to tax a commodity at its source than to tax it at different points of the pipeline between the producer and the consumer. Thirdly, the task of checking tax evasion is rendered very much easier, when the duty is collected at the source.

Clearly, it is not all commodities that will lend themselves to the fiscal treatment implied in replacement of sales tax by excise duty. And even among such commodities as can be given this treatment, there must necessarily be only a few on which the States will give up their right to levy sales tax in favour of a Central excise duty. Accordingly, the marked advantages in favour of excise duty should induce the authorities to keep the subject under constant examination. Further, in a country where the level of education among the trading community is low, there is a special case for reducing the area of sales tax which impinges upon the trading activity of every member and involves the maintenance of elaborate accounts books for purposes of scrutiny by tax officials. From this point of view, it will be widely regretted that the States should have refused to yield additional fiscal ground, particularly because the commodities, which had been selected for discussion at the New Delhi meeting, are admirably suited for additional excise duties in lieu of sales tax. When the subject comes up for review again, the States will do well to adopt a less rigid stand.

SWATANTRA PARTY

THE Swatantra Party's deliberations in Bombay last week covered a surprisingly limited field. Presumably, this was because of the Party's spokesmen have repeatedly clarified their stand on several public issues. Even so, the Party could have made a weightier contribution to the discussion of the many economic issues which confront the country today. Its session was brief, the speeches made by the spokesmen were not always sufficiently thought-provoking and the resolutions adopted were less forward-looking than they might have been. The Party's leader, Mr. C. Rajagopalachari, as was only to be expected, dominated the scene, though some forthright utterances came from his able lieutenants, Mr. N. G. Ranga, Mr. K. M. Munshi and Mr. M. R. Masani. Judging, however, from the epoch-making beginning the Party made a year ago and the interest its deliberations at Patna evoked not only in this country but also abroad, its session in Bombay last week-end was a relatively tame affair.

Is it that the Party found it less easy to criticise the Congress than formerly? If that is so, it is as much a tribute to the flexibility of the ruling party's policies as to the Swatantra's ability to carry conviction to its political opponents. To a certain extent, Mr. Murarji Vadya was right when he declared that his Party has, "within this very short space of 12 months, made a great impact on the thinking of the ruling party and made it pause and reconsider its policies and action." Indeed, for sometime to come, the Swatantra Party may have to be content with an active role in the relatively difficult task of educating public opinion in its political and economic philosophy. Nor should the Party indulge in the tempting pastime of criticism for criticism's sake. This will breed much unnecessary opposition. But, on fundamental issues, its voice must be strong, united and unequivocal.

The Party's resolution on the third Five-year Plan was merely confined to the appointment of a panel which is expected to report on the subject in the next two months. The panel consists of Prof. B. R. Shenoy, Sardar Lal Singh, Mr. M. A. Sreenivasan, Prof. M. Ruthnaswamy and Mr. Lobo Prabhu. Moving the resolution, Sardar Lal Singh said that the food situation in the country was grave and India had imported 35 million tons of foodgrains in the last 12 years; there was the proposed import of 17 million tons from the U.S. An agricultural country like India, he pointed out, could not afford to go on importing foodgrains for an indefinite period without going into bankruptcy. The Panel's report will be awaited with interest. It remains to be seen whether it will be merely content with pointing out what, in its opinion, are the shortcomings in the Plan or suggest some means whereby the Plan could be made into a better instrument of economic reconstruction. The question the public will ask is whether the Party has a constructive alternative to the Plan, which, with its many defects, points to a way of raising living standards.

A cornerstone in the Party's economic philosophy is the maintenance of the value of the rupee, while another important cornerstone is that economic regimentation should be avoided; in the words of Rajaji, although regulation, as enforced by the Government, was conceived probably with good intentions, namely, to protect the weaker elements of society, it "has ended, as it must, in the cramping of national energy and in the suppression of initiative and enterprise." There is considerable truth in this criticism as well as in the chief tenets of the Party's economic policy. But the question is how it will propose to translate these principles into actual practice or embody them in a workable plan. It is true that a panel cannot, at short notice, produce an effective alternative to the draft outline of the third Five-year Plan. But, unless it indicates the broad lines of its own approach to the solution of the country's economic problems, its efforts will fail to inspire confidence. The Congress Party's strength rests, at least partly, on its having produced three Five-year Plans which, whatever their defects, have added and promise to add to the country's economic potential. It is not enough to show, as it may well be shown, that a high price has been paid for this achievement. From the point of view of the Swatantra Party's political future, it will be necessary for the Party's leaders to make a convincing case for alternative paths to economic prosperity, more suited to the genius of the people, more certain of yielding results at lesser cost in terms of sacrifice.

MARKET GOSSIP

THE general expectation that the margins on stock exchanges would be made stiffer and more effective has not so far (Thursday evening) materialised, but the fear persists. No satisfactory explanation is available for the failure of the Governing Board of the Bombay Stock Exchange to meet on Tuesday the 2nd inst. for discussing the question of margins. The reports prevailing in the market last week asserted that the Board would definitely meet and take a decision. It is to be hoped that they were not a mere stunt to frighten the bulls. In view of the widespread belief that the Board would be meeting on the date mentioned, the Stock Exchange authorities ought to have explained the position in a Press *communique*. If the reports current last week were wrong, then they *should* have denied them forthwith. Be that as it may, it would appear that, in view of the strong criticisms in the Press that certain selected shares were being rigged up, a few brokers prevailed upon the bull operator concerned to lighten his commitments and that, as a result, he did sell a part of his purchases in such scrips as Bombay-Burmahs, Telcos and National Rayons. Although the prices of these scrips are now lower than those a week or ten days ago, the fall does not seem to be substantial enough to warrant the inference that he has unloaded any significant part of his accumulations.

As regards the other counters, steel shares are ruling quite steady in expectation of sizable rise in the retention prices of steel. The delay in holding up the dividends of the Tata Iron and Steel Company Ltd., for the year ended 31st March 1960, on which the Directors' decision is overdue. It seems that market circles are not expecting anything more than a mere maintenance of the ordinary dividend at the 1958-59 level. Although there are a few who feel that the net dividend may be no more than Rs. 6.45 per share, quite a good number expect it to be Rs. 6.60. Another expectation attributed to knowledgeable circles is that the management of the T.I.S.Co. will disclose the details of the project for establishing a plant to manufacture stainless steel and alloy steel either in the Directors' report of the Company for 1959-60 or in the Chairman's statement accompanying it and that these will be found quite cheerful to shareholders. Some say that it is this possibility, more than the long anticipated increase in retention prices of steel, that has been responsible for sustaining the value of Tata Steels in the neighbourhood of Rs. 162 for the last four weeks or so.

Synthetics and Chemicals

Those who have applied for the shares of Synthetics and Chemicals may not have to wait much longer for knowing whether they are lucky and, if so, to what extent. We learn on reliable authority that the details of allotment have been practically settled in consultation with the Stock Exchange authorities and that only some technical formalities, such as the approval of the Board of Directors, have to be completed. This should not take more than 10 days, if not a week from now at the most.

Cost of Bank Credit in the World

To what extent bank credit in India is cheap or dear as compared with the rest of the world? An answer to this question is provided by the *Monthly Letter* of the First National City Bank of New York in its August issue which has just been received. It has compiled and published what is described as "commercial bank prime loan rates" in no less than 59 countries. Prime loan rates are defined as the "lowest rates (of interest) at which business firms of the highest credit standing can borrow from banks on an unsecured basis." It then goes on to add that, "while the major business firms occasionally may be able to borrow at lower interest costs where an open market in 'commercial paper' exists, the volume of funds available in these markets is limited and such borrowings lack the flexibility of bank loans." The table from the *Monthly Letter*, showing the prime loan rates, is published in the second column of this page. Making a few observations on their findings, the authors of the *Letter* observe as follows:

"It must be borne in mind that money is frequently scarce at the banks' minimum rates. Most borrowers able to obtain funds must pay higher rates. In many countries, there are commissions and other arrangements which increase the cost of borrowing. The effective interest costs thus are generally higher than the rates shown in the table; for a number of countries, the posted rates are, in fact, nominal.

"Prime loan rates of 5 per cent., as in the United States, prevail in very few other countries. Rates of 6 to 8 per cent. are quite frequent even in countries with developed money markets. Since last June, the prime rate has been at 6½ per cent. in the United Kingdom, following the increase in the official discount rate from 5 to 6 per cent.

"Here, a less restrictive Federal Reserve policy, evidenced in a half-point discount rate cut in June, created some stir of expectation that the 5 per cent. commercial bank prime loan rate (in effect since 1st September 1959) might be cut. However, bank resources, curtailed by deposit contraction, remained too scarce to justify general loan-rate reductions.

"Interest rates today seem high when contrasted with the extremes of the past three decades of cheap money. But the artificially low rates were made possible only by a continuous creation of money, which, in turn, brought about price and cost inflation, economic distortions, and waste, as well as seemingly unmanageable balance-of-payments strains. *In the post fifteen years, nation after nation has accepted the idea that there is no inherent virtue in cheap money and that interest rates should be flexible so as to bring the demand for loanable funds into a sustainable balance with supply.* (Italics ours—Ed.)

"Free dynamic economies continuously require vast amounts of capital, which in turn depend upon adequate savings. The price of capital—the rate of interest—therefore has an essential function to perform in a free society.

"The interest rate is neither the hero nor the villain. It is the end-result of manifold influences permeating our entire economic life. The cost of borrowing can be reduced, without injurious effects on the economy, only if the nation's monetary and fiscal affairs are handled responsibly."

It will be seen from the table that the "prime loan rate" in India is either the same or a little lower than it was in 1957, even though cost of banking operations has distinctly gone up and that it is lower than in most of the 59 countries included in the table. Only five countries, of which only one country—the U.S.—is the most important, are having a rate of interest which is slightly lower than in India. Again, only in four countries the rate is the same as that in India. Of these, Australia is the only big country. In all the remaining 50 countries, bank credit costs more than in India. These include such industrial giants as the U.K., West Germany, Japan, France, Italy, and Belgium. Almost all the other West European countries, the British Commonwealth countries other than those already named and the whole of Latin America, as well as several others, charge a higher rate than India. Even in the well-known socialist countries like Sweden and Denmark, the rate of interest is well above that prevailing in this country.

Cloth Prices

The Government of India has been wise in deciding not to control the price of both cotton textiles and unginned cotton (*kapas*), and in accepting the assurance of the representatives of cotton mills that they would take all possible steps to bring down prices of cloth before Diwali. Stamping of prices either through gentlemen's agreement or statutory enforcement is a Herculean task, involving enormous expenditure and labour, and yet the results will by no means be satisfying. It will not be easy to determine fair prices for thousands of varieties. Even if it can be done, as was the case during the war and early post-war years, it will lead to a lot of corruption and the failure of controls will cause a sense of demoralisation. The quality of cloth will go down and the consumer will have to spend more on his clothing needs than he would have to if there were no controls. The Government, too, will lose a lot of revenue. The only advantage in having price controls is that the cost of living index can be kept stable for the duties will be based on controlled prices and not on what the consumer has actually to pay. But this will mean that the cost of living index number will be fictitious and those whose fetal wages are related to this index number will be defrauded.

Gentlemen's agreements, too, have been tried in the past in various consumer goods, including cloth and sugar. They always ended in failures, bringing a bad name for the industries concerned. Since there is no statutory bluecoat on the signatories, the agreement cannot be enforced against the black sheep, of which there will be at least some where the manufacturers are in a large number. Again, malpractices can and do occur in distribution, in which are engaged thousands of persons. This will lead to recriminatory controversies between producers and distributors, one blaming the other for the high prices paid by consumers. Such a controversy already exists in cloth business. Indeed, price controls through the so-called gentlemen's agreements can be more demoralising than statutory controls and will be a positive danger to the future of private enterprise, for their failure will be used by the Socialists and Communists, not to mention the leftist-minded Congressmen, to bring down the manufacturers and traders in the esteem of the public and to advance their case for spreading the tentacles of the public sector. If the Indian industrialists are wise, they will refrain from giving their support to the system of controls through gentlemen's agreements.

The only effective way in which prices can be brought down and kept at reasonable levels is to step up production. Realising this, the Government has decided to import more cotton (for details *vide* page 244 of this issue). In a couple of months, the supply of imported cotton will increase and the mills can work to full capacity. Those mills that are not now working three shifts should take to this extra shift, as soon as they get the necessary supply of cotton. Meanwhile, the mills should try to reduce their selling prices to the extent possible and announce them to the public through country-wide publicity. They can also concentrate on the production of popular varieties. Besides opening fair price shops of their own wherever they can, the mills should insist on shopkeepers keeping lists of fair retail prices for their most popular varieties to be produced whenever buyers ask for them. The mills may also print on every piece of cloth the prices which they consider to be fair to consumers; this must be absolutely voluntary. The availability of these facilities should be brought to the notice of the public through group advertisements. The Government, for its part, may advise the public, through all means of communication, to defer purchases of cloth by two or three months, by which time production is expected to expand and even then to buy no more than their minimum requirements.

The problem will automatically solve itself, if the next season's (1960-61) cotton crop turns out to be of normal size, namely, 5 to 5.2 million bales. There is no reason why it should not be, if weather happens to be favourable. If the crop fails again as it did this (1959-60) season or records only a small increase of 4 to 5 hundred thousand bales, the position will be critical enough to warrant fresh thinking. Since, however, there is still a possibility of a good cotton crop in the coming season, since the Government has already taken steps to bridge the gap through additional imports, and since the supply position of cloth is by no means as short as is exaggerated by certain interested parties, it is unnecessary now to resort to the highly complicated, cumbersome and negative means of providing relief to consumers.

While the rise in cotton prices and wages have contributed, in a large measure, to the increase in prices of cloth in recent months, the fact cannot be brushed aside that the supply of cloth is not adequate enough to maintain a competitive free market in favour of buyers. There is no doubt that mill production must go up, in the near future, by at least 500 million yards, if the requirements of domestic consumers and export markets are to be met comfortably. If the situation now being witnessed is not to repeat itself in the coming years, there is an urgent need to raise the production target for the mills and to afford them the necessary facilities for reaching it. Equally important is the need for very substantially raising the production of cotton.

Cotton Prices

This takes us to the question of ceiling and floor prices for cotton. Almost every one connected with this commodity had taken it for granted that, while it would be too much to expect abolition of controls on cotton, a convincing case had been put up to the Government for raising the floors and ceilings. Consequently, the disappointment over the Government's decision to leave these unchanged is very keen. It may be noted here that almost all representative bodies—the East India Cotton Association, the Cotton Advisory Board and the Indian Central Cotton Committee, to name only a few—had urged the Government to raise the ceilings. Incidentally, some of those who claim to speak for cotton growers allege that the millowners were against such an increase and that they had conspired among themselves to see to it that cotton growers were denied of their rightful due, so that they could get their raw material at a cheap price. While we hold no brief for millowners, we cannot resist the temptation to expose the hollowness

LONDON LETTER

INFLATION SMOTHERED

(From Our Own Correspondent)

LONDON, 29*th July*

WHEN the President of the Board of Trade met the Council of Industrialists and Business Men a few days ago, he was speaking for the Chancellor of the Exchequer who is, of course, leaving office in a few days' time, with his successor, the ex-Foreign Secretary, taking over. He made no bones about the extent of the danger which, in the Government's view, had threatened the economy earlier this year, and one cannot do better than quote his precise words:—

"Total final expenditure in the first quarter was 11 per cent. above a year earlier. The gain on the previous quarter was 2 per cent. for consumption and 3 per cent. for fixed investment, after allowing for seasonal variations. Private investment, in particular, was rising very fast. A further rise in investment in stocks also added to total demand. Industrial production has in fact continued to show a quarterly rate of rise of 2 per cent., with production of capital goods going ahead rapidly. The fall in unemployment has been much heavier than is normal for the time of year. Against this background of strong internal pressures, the external trade position has clearly weakened, with imports still growing and exports actually falling in the second quarter to 3 per cent. below the first."

It will continue to be a matter of controversy, whether the picture so revealed should be a cause for congratulation or alarm. But about the facts there is no doubt. The Government views the situation with alarm and the measures which it took have certainly battered about the picture outlined above. Retail sales of durable goods in May declined sharply, as a result of the re-imposed hire purchase controls and, contrary to the seasonal trend, were no higher than in April. The same is also true of all other retail sales. The hire purchase sales of vehicles were 11½ per cent., down on April and in June they fell another 8 per cent. One motor car firm has given authority to all its distributors to slash their selling price without limit. So that motors can, in some cases, be sold as low as the ex-works price.

Exports

Total hire purchase business in May dropped by 3 per cent. below the level of a year ago, after running 18 per cent. higher in the first four months of the year. In the four weeks ended 15th June, advances by the London Clearing Banks to private borrowers rose only slightly—the rate of increase had been set back and the measures to check the growth of credit were beginning to do their work.

But all this had been happening as a result of the first dose of credit restrictions and the second dose recently announced has been directed to the special objective of attempting to boost exports by damping everything else. The Government takes the view that exports have been suffering from the buoyant demand in the home market. It knows that deliveries have become increasingly delayed and export deliveries have equally suffered. Although the Government's measures can do nothing to counter the reduced buoyancy in world trade, it obviously hopes that they will be effective in so far as productive effort can be switched towards exports.

The Six

It is also well known that many industrialists would like the Government to reconsider its attitude towards the Common Market. But the Government has now made it abundantly clear that it is not in public prepared to do this. It has fallen back on the old argument: Commonwealth relations and the need to protect agriculture, and appear to wish to leave it at that. Its attack is going to be on the front G.A.T.T., where it hopes that, by lowering the general level of world tariffs, it can avoid some of the disadvantages of the formation of the new Europe. It is also pinning its hope on the European Free Trade Association. On 1st July, this group of countries reduced their tariffs against each other by 20 per cent. and increased quotas where they existed. There is also naturally a climate of opinion between the partners in this group of Seven towards an expansion of mutual trade, and the Government hopes this will have a long-term effect.

Clearly, there is not much of a policy in all this, although the Government is trying to make it look like one.—*All Rights Reserved.*

NITROGEN PRODUCTION IN THE PRIVATE SECTOR

The East India Distilleries & Sugar Factories Limited, Madras, have completed their arrangements for the establishment of a factory to produce 51,000 tons of nitrogenous fertiliser (ammonium phosphate) per year, at Ennore, near Madras. A contract for all the machinery required has been placed with Simon-Carves Limited, Stockport, England, and Calcutta, and the factory is expected to go into production in June 1962.

The project will be financed by an issue of Ordinary Shares to the Company's existing shareholders at a premium of 10*s.* per Ordinary Share of £1 each. This issue will realise £825,000 (Rs. 110 lakhs), of which £282,000 (Rs. 37.6 lakhs) is subscribable in sterling by shareholders on the London register, and £543,000 (Rs. 72.4 lakhs) in rupees by shareholders on the Madras register. In order to ensure the maximum accrual of sterling, it has been arranged that the London part of the issue shall be underwritten by S. G. Warburg & Company Limited. Additionally, the Company has arranged loans of £600,000 (Rs. 80 lakhs) from the Commonwealth Development Finance Company Limited, London, £250,000 (Rs. 33.3 lakhs) from Simon-Carves Limited, England, and Rs. 180 lakhs from The State Bank of India.

The Government of India has accorded all the necessary sanctions.

NEWS IN BRIEF

THE Tea Board is currently considering a proposal to set up a publicity unit in the U.K., in order to encourage consumption of tea in that country.

A Soviet team of construction specialists has arrived in Bhilai to examine the possibility of organising mass construction of houses in this steel town.

A Ludhiana firm has entered into an agreement with a Japanese automobile concern, under which the latter will provide technical know-how for the manufacture of scooters. The ultimate capacity of the proposed plant will be 1,000 scooters per month.

A three-man team of top U.S. coal mining executives will arrive in India in response to a request from the Government of India to advise on developing a programme for expansion of coal production. The team, which will visit this country under the auspices of the International Co-operation Administration, will be led by Mr. Raymond E. Salvati, President, the U.S. Land Creek Coal Company.

Zinc smelter based on zinc concentrates from the Zawar mines in Rajasthan is expected to be commissioned by the middle of the third Plan. The annual installed capacity of the plant will be about 15,000 tons. The smelter will also be equipped with a by-product sulphuric acid plant based on the smelter gases, which will be used for manufacturing phosphatic fertilisers.

The third Finance Commission is expected to be appointed shortly to study the general tax structure in the country and make suitable recommendations to the Central Government as to how best its revenue could be increased, besides indicating the quantum of assistance to be given to the different States. The first Commission was headed by Mr. K. C. Neogy and the second by Mr. K. Santhanam.

The Indian Institute of Handloom Technology at Salem in the Madras State, sponsored by the Government of India, will start functioning from the middle of this month. This Institute, which will run two courses for diplomas in handloom weaving and handloom designing, will cater to the needs of Madras, Andhra, Mysore, Kerala, Maharashtra and Gujerat States, as also Pondicherry.

West Bengal will soon have a second thermal plant at Durgapur, with an installed capacity of 150 m.w., according to Dr. B. C. Roy, Chief Minister. The cost of the plant is estimated at about Rs. 14 crores. The first plant at Durgapur is now nearing completion. The State is expected to go in for a third thermal plant, with a capacity of 250 m.w., during the third Plan period. Its cost will be about Rs. 22 crores.

Two schemes for the manufacture of watches in the private sector, one in collaboration with an Italian firm and the other with a West German firm, have been tentatively approved by the Government of India, according to Mr. Manubhai Shah, Union Minister for Industry. These two schemes are in addition to the watch factory proposed to be set up in the public sector as an adjunct to the Hindustan Machine Tools, Bangalore, in collaboration with a Japanese firm.

An official Bill to amend the Rubber Act, 1947, has been introduced in the Lok Sabha. The Bill seeks to change the method of collection of cess on all rubber produced in the country in order to check evasion of tax. The cess will be collected either from the owner of a rubber estate or manufacturer who consumes rubber. The Bill also seeks to increase the permissible maximum rate for the levy of cess from 6 nP per lb. to 50 nP per kilogram.

A new shipping freight conference, known as the "Bombay West African Ports Conference," has been formed, following a pooling agreement between the Scindia Steam Navigation Company, Bombay, and the Mitsui Steamship Lines of Japan. Under the agreement, the two shipping lines will each operate six sailings a year on the Bombay-West African ports route.

An agreement has been signed between the representatives of the Government of India and the Rank Films of the U.K. on the question of imports of films from the latter. The agreement, which will remain in force for a period of two years, provides for the utilisation of the earnings from the British films in this country for rental or purchase of Indian films for export to non-traditional markets and for production of films in India in collaboration with domestic producers or otherwise. It may be recalled that a similar agreement was signed recently with the Motion Picture Export Association of America regarding imports of films from the U.S.

The Export Risks Insurance Corporation issued 135 policies during the six months ended 30th June 1960, as against 110 policies in the corresponding half-year in 1959. The Corporation, which started underwriting risks involved in exports on credit terms in October 1957, had a total of 269 policies, with a maximum liability of Rs. 6.74 crores, in force on 30th June 1960, as compared with 198 policies, with a maximum liability of Rs. 6.64 crores a year before. In the first half of this year, the Corporation covered shipments-contracts for Rs. 3.50 crores, as against Rs. 2.32 crores in the first half of last year. This showed an increase of 50 per cent. in risks covered by the Corporation, as against those covered dering the same period last year. Premium income during this period rose by 40 per cent., that is, from Rs. 75,238 to Rs. 1,05,885. During this period, the Corporation registered 835 assignments in favour of the financing banks, as against 703 in the corresponding period of 1959.

A Bill to regulate the grant of loans to small-scale and cottage industries in Maharashtra has been published in the State Government *Gazette* dated 26th July 1960. There was no unified law in the State for granting assistance in the form of loans to small-scale and cottage industries. In Vidarbha, loans were given under the Central Provinces and Berar State Aid to Industries Act, 1933, and in Marathwada, under the Hyderabad State Aid to (Small-Scale and Cottage) Industries Act, 1956. These two Acts have now been repealed, in so far as they related to State aid given in the form of loans. The provisions of the State Aid to Small-Scale and Cottage Industries Rules, 1935, which are executive rules and which were in force in the Bombay State prior to the States Reorganisation on 1st November 1956, were extended to all the component parts of the State in July 1958. But it is considered expedient to take statutory power to regulate the grant of loans to small-scale and cottage industries, and hence the present Bill.

The detailed project report for the alloy and special steels plant to be established in the public sector during the third Plan period has been submitted to the Union Ministry of Steel by the consultants, Messrs. Dastur & Co., Calcutta. A study of the future consumption of alloy and special steels in India made in the report estimates the requirements of such steels to exceed 200,000 tons of finished steel by 1965. This quantity is four times the initial capacity of the proposed plant in the public sector. The report, therefore, points out that, even after this plant is expanded, it will be necessary to install new capacity to produce alloy steels. Durgapur has been recommended as the most suitable site for the public sector project. The consultants are said to have expressed themselves against splitting up this project into two units to be located at two different sites. It is learnt that offers of collaboration in the project have been received from about half a dozen foreign firms which specialise in manufacturing alloy steels.

Replying to a question in the Lok Sabha, the Union Deputy Minister for Food said that, at present, shipments against the previous short-term agreements with U.S.A. were in progress. According to him, shipments against the new agreement will probably begin from about the second half of September 1960. There is plenty of shipping available and no difficulty is anticipated in making the necessary shipping arrangements. The extent to which Indian shipping may be available for the purpose and whether it will be advantageous to have some long-term arrangements with shipowners in view of the long-term agreement for import of wheat, are being investigated. While no serious difficulty in handling the foodgrains at the ports is anticipated, the possibility of improving the arrangements in different ways is being examined. The landed cost of U.S. wheat in India varies from about Rs. 12.20 to Rs. 13.10 per maund, while that of Australian and Canadian wheat is about Rs. 11.60 and Rs. 13.40 per maund, respectively. For internal procurement of wheat by the State Governments, the price fixed is Rs. 14 per maund for common white wheat and Rs. 13.00 per maund for red wheat. For superior qualities, the prices are between Rs. 15 and Rs. 16 per maund.

The Governments of India and Switzerland have signed a credit agreement providing for the purchase of Swiss capital goods for development programmes. The credit is for a period of ten years, covering transactions of the value of 100 million Swiss francs (Rs. 10.9 crores). Of this amount, a sum of 60 million francs will be made available immediately and the balance of 40 million francs later. The credit will be provided by a consortium of Swiss banks on mutually agreed terms. It will be guaranteed by the Swiss Government within the framework of its Federal law on export risk guarantees. The agreement was signed at Berne on Saturday last by the Indian Ambassador, Mr. N. K. Vellodi, and the Swiss Minister, E. Stopper, delegate for trade agreements, on behalf of the Swiss Government. Indian imports of specified capital goods under this agreement will be in addition to Indian imports under the normal import policy of the Government of India which provides for non-discriminatory licensing so far as imports financed from India's own free foreign exchange resources are concerned. Discussions on this agreement, it may be recalled, were initiated last year during the visit of the Finance Minister, Mr. Morarji Desai, to Switzerland at the invitation of the Swiss Government.

From Abroad

A double taxation avoidance pact has been concluded between the U.K. and Italy.

The total economic aid given by the U.S. to Pakistan, during the nine years ended 30th June last, amounts to Rs. 614 crores. This is exclusive of military aid for which figures are not available.

In order to stimulate exports, the U.K. Government is considering the possibility of establishing export councils, on the lines of Dollar Exports Council, for other trading areas also.

The current livestock of France is 39.13 million, comprising 18.46 million cattle, 8.75 million sheep, 8.47 million pigs, 1.20 million goats, 1.90 million horses, 72,600 mules and 81,300 donkeys.

A leading Japanese automobile firm, the Toyota Motor Company, has announced plans to commence exports of cars to Mexico in "completely knocked down" form at a rate of about 4,000 units per annum.

The Pakistan Government proposes to ask the oil companies operating in Pakistan to effect a general reduction in prices of oil products. The Government has already made enquiries regarding the details of price cuts made by Burmah-Shell and Stanvac in India.

Japan has replaced the U.K. as the biggest importer of Australian wool in the 1959-60 season. Out of Australia's total exports of wool worth £A386.3 million—an increase of £A84 million over the previous year—Japan accounted for £A95.7 million, and the U.K. for £A75.8 million. France and Italy ranked next, with purchases amounting to £A40 million, £A38.6 million, respectively.

The population of France, as on 1st January 1960, was 45,355,000, as against 44,840,000 a year before. Between 1946 and 1960, the French population rose by 5.2 million, giving an average annual growth rate of 375,000. This increase is nearly twice as much as in the period from 1860 and 1946, when the net increase in the inhabitants of France was no more than 2.7 million.

The Governments of Pakistan and Portugal are expected to sign shortly an agreement under which Portugal will supply iron ore (from Goa) to feed the 200,000-ton steel mill proposed to be set up in Pakistan, as well as manganese, copra, coconut oil, fresh canned fruits, bamboo and timber. In return, Pakistan will supply machinery, machine tools, textiles and other industrial products to Goa.

The Standard Oil of Indiana (the U.S.) has concluded an agreement for the purchase of an Italian refinery, belonging to the Societa Italia Raffinazione Oli Minerali. The price of the refinery, which has an installed capacity of 1.30 million tons of crude oil per year, is fixed at 9,750 million lire. The U.S. company has plans to expand the annual capacity of the refinery to 2 million tons.

An international organisation, called the Institute of Synthetic Rubber Producers, has been set up at New York, with the object of promoting world trade in synthetic rubber, *inter alia*, through the exchange of technical information within the industry. Mr. Bancroft Henderson, a former President of the American Synthetic Rubber Corporation, will act as the first Chairman of the Institute.

The Royal Dutch-Shell group has decided to commence, in collaboration with the American company, namely, the National Distillers and Chemical Corporation, production of finished plastics materials for the first time. The two companies will form a joint company in London shortly, with equal participation in the development of production and marketing of polyolefin film and plastic packaging materials outside the U.S. and Canada. The Shell group is already manufacturing basic plastic materials. The National Distillers is one of the world's largest producers of polythene and it owns the Kordite, a leading American company engaged in the manufacture of plastic film for packaging.

Pakistan is prepared to supply Sui gas to India, if the proposition is found economically feasible, according to Mr. Nazir Ahmed, Secretary, Pakistan Ministry of Natural Resources, Fuel and Power. Sui gas is a natural gas found in abundant quantity in Sui, near Quetta in Baluchistan. The gas is used for domestic and industrial purposes in many West Pakistan towns, including Karachi, Lahore, Rawalpindi and Multan. It is also used for generating electricity. In Multan, electricity is generated entirely by using Sui gas. India's Minister for Iron and Steel, Sardar Swaran Singh, during his recent visit to Pakistan, had informal discussions with the Pakistan authorities for supply of Sui gas to India. Mr. Nazir Ahmed has disclosed that the construction of a pipeline for carrying the gas is found to be feasible between Sind (Pakistan) and Ahmedabad. The Government of India is understood to be considering the proposal to buy this gas to feed industrial areas, particularly in Ahmedabad and the Punjab.

PERSONAL

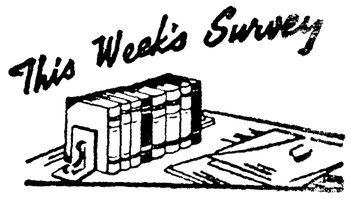
MR. D. N. Shroff and Mr. Shantilal M. Mehta have been re-elected President and Vice-President, respectively, of the Silk and Art Silk Mills Research Association for 1960-61.

Mr. Chandulal Kasturchand Shah and Mr. Rameswardas Saboo have been elected President and Vice-President, respectively, of the Bombay Bullion Association for the current year.

Mr. Burjor A. Guzdar has been appointed Assistant Manager of the British Bank of the Middle East, Bombay. He has been connected with the Bank as an officer for the last 25 years and was with the Holland-Bombay Trading Company, Ltd. for 27 years before joining the Bank.

Mr. K. P. Modi (Ruby General) has been elected President of the Indian Insurance Companies' Association, Calcutta, for the current year. The members of the Committee are: Messrs. P. Balan (United India), P. S. Bhandari (General Assurance Society), K. P. Chakrabarthi (New Great Insurance), D. Das Gupta (Hindustan General), M. R. Das Gupta (Calcutta Insurance) and B. C. Rakshit (National Fire and General).

Mr. T. M. Telang (of the Indian Trade and General) has been elected Chairman of the Indian Insurance Companies' Association, Bombay, for 1960-61. The other elected members of the Committee are: Messrs. P. A. Advani (New India), M. S. Dastur (British India), D. N. Desai (Union Co-operative), G. V. Jannah (Oriental), M. G. Mody (New Great), E. J. Poncha (Hercules), P. M. Shroff (Ruby General), C. M. Telivala (Indian Mercantile), P. U. Patel (Universal) and H. V. Gandhi (Devakaran Nanjee).



MR. RICHARD NIXON

AS was widely expected, Mr. Richard M. Nixon, Vice-President of the U.S., has been unanimously nominated by the Republican Party as its candidate for the Presidency to run against Senator John Kennedy, the Democratic Party's nominee. With the selection of these two persons, the final stage is now set for the Presidential election campaign; the election will be held early in November. And, for the first time in U.S. history, the Presidential nominees of the rival political parties will appear in a series of face-to-face debates on nation-wide television and radio to discuss campaign issues.

Mr. Nixon has been the U.S. Vice-President since 1952. He is known for his extensive knowledge of both domestic and foreign affairs through service in the House of Representatives, the Senate and official councils as well as through international travel on affairs of State. In the past six years, he has travelled nearly 160,000 miles outside the U.S., visiting more than fifty countries. Indeed, it is no exaggeration to say that Mr. Nixon has acted "as the eyes and ears of President Eisenhower on goodwill trips to India, Asia, the Far East, the Middle East, Africa, the Soviet Union, and Central and South America."

So far as India is concerned, Mr. Nixon would, if he were elected President of the U.S., surely ensure for this country continued large-scale financial and technical aid for economic development. How keen is the interest which Mr. Nixon has been taking in India's economic progress is clearly borne out by the following statement he made some time last year:

"The people of India are attempting to achieve economic progress with freedom .... What happens in India will have a tremendous impact on the decisions made in other countries in Asia, in the Near East, Africa and even in the Americas. This indicates the tremendous stake the free world has in the economic problems of India....

"...I would not underestimate the importance of the Berlin crisis, but I will say today that, in my mind, what happens to India in so far as its economic progress is concerned in the next few years could be as important, or could be even more important in the long run, than what happens in the negotiations with regard to Berlin."

The need for economic aid to India and other developing countries was reiterated by Mr. Nixon most effectively in his speech after accepting the nomination of the Republican Party last week. He declared:

"The great task of the next President of the United States will be to develop a grand new strategy which will win the battle for freedom for all men and women without a war. And this will be a difficult task. Difficult because, at times, our next President must tell the people not what they want to hear but what they need to hear. Why, for example, it may be just as essential to the national interest to build a dam in India as in California. A young America shall fulfil her destiny, by helping to build a new world, in which men can live together in peace and justice and freedom with each other. This is possible, because, for the first time in human history, we have the resources to wage a winning war against poverty, misery and disease *wherever it exists in the world....*" (Italics ours.)

Mr. Nixon's staunch support for economic aid to India and other underdeveloped countries has always been substantial. And if he becomes the chief executive of the U.S., he will doubtless endeavour, with the assistance of Mr. Henry Cabot Lodge, the Republican nominee for Vice-Presidency, to give a concrete shape to his views on economic aid.

GENERAL INSURANCE PROBLEMS

The Chairmen of two insurance companies' associations spoke on the problems of general insurance in the country this week. Both of them drew attention to more or less the same problems and suggested almost identical remedies. This indicates the wide area of agreement on the nature of the malady that afflicts general insurance in the country and the corrective measures called for, although their application has not proved easy.

One of the main problems that figured prominently in the speeches of both Mr. Jayant S. Dalal, outgoing Chairman of the Indian Insurance Companies' Association, Bombay, and Mr. B. C. Rakshit, outgoing Chairman of the Indian Insurance Companies' Association, Calcutta, is that the rate of growth of general insurance is not commensurate with the rise in industrial production. This, according to Mr. Dalal, is due to the companies adopting the line of least resistance, that is, procuring business by offering rebates and higher rates of commission than those prescribed by law. It is paradoxical, he said, that it should be necessary for insurers in the country to have recourse to this method, because not only the number of units has shrunk considerably, but also the opportunities for new and more business have increased substantially due to the expansion of trade and industry. He suggested that the larger and more powerful units, having the benefit of tied accounts, should adopt the principle of 'live and let live' by concentrating their energies on creating new business. This gesture, according to him, will have the salutary effect of reducing wasteful competition for business already on the books of companies, on the one hand, and opening up new avenues of business, on the other.

There is no doubt that this suggestion, if accepted by the larger units, could eliminate some of the alleged malpractices and unhealthy competition and induce fraternal feelings among insurers. But the smaller units should not count on this. They should themselves seek more business in old as well as new lines. There is scope for new business even in the traditional fields. As Mr. Rakshit pointed out, a substantial volume of business in the country still consists of large risks. Simple risk business has not yet become popular. There is no reason why smaller units should not bend their energies in this direction, instead of complaining against unfair competition by bigger units and waiting for their indulgence to make room for them.

More important than all this is the need for the small companies to merge themselves or join the bigger companies and become strong enough to offer, as well as face, healthy competition. Although the number of insurers has declined, there are still far too many of them. Integration of these units is the best and most effective solution to the ills of general insurers. The country cannot indefinitely wait for this process to materialise through voluntary effort, especially as the mushroom growth of companies is due to groupism, with each business house floating a general insurance company of its own, apparently to get the benefit of rebates and commissions on the insurance needed by its industrial and commercial undertakings. To expect an insurance company belonging to *X* business house to merge with that of *Y* or *Z* business house is to hope for an impossible thing to happen. In the larger interests of the country, some means must be found by the Government, in collaboration with insurers, which will either induce or compel amalgamation of general insurers. The plan adopted by the British Government to eliminate excess capacity in the textile industry and to streamline it into a highly competitive export industry offers some food for imagination in this direction.

Mr. Dalal doubted the wisdom of the recent reduction of rates of fire insurance, the only class of business which is reasonably profitable. The reduction, he felt, would affect the financial position of companies by depriving them of the only source of financial strength. He wished that, instead, the Government had acted upon the recommendation of the Taxation Enquiry Commission that the companies should be allowed to add five per cent. of their annual premia to the reserves every year, free of tax, until the reserves reached 75 per cent. of premia in respect of fire and miscellaneous business and 150 per cent. in respect of marine and aviation hull business.

The formula for limiting the expenses of management under Section 40C of the Insurance Act and Rule 17E also came in for criticism by both the chairmen. According to them, the existing formula is a major factor responsible for the scramble for business which resulted in unfair competition. The very fact that a number of companies contravene the said section and warnings have therefore to be administered every year even to companies well within the solvency margin, shows the arbitrary nature of the present formula. It is worth considering Mr. Dalal's suggestion, namely, either an increase in the limits prescribed under the section or to find some other formula not necessarily co-related with the quantum of gross direct premium. In fact, this section is the subject of increasing criticism. This clearly shows that the present formula is not a satisfactory one. The fact that there are differences of opinion as to how it should be modified does not weaken the case for a revision of the formula. It should not be impossible for insurers to suggest a formula acceptable to all and seek the Government approval for it.

The need for adequately trained personnel for efficient running of the business has also been stressed. If insurance trade in this country is to retain its good name and play its important role in the country's progress, it is necessary, as Mr. Dalal said, to have a pattern of field organisation based on full-time career agents supervised by well-trained development officers. The suggestion made, in this connection, by Mr. Rakshit that all insurance companies should join together to establish a college of insurance, in collaboration with the Federation of Insurance Institutes, for imparting training in insurance, is a valuable one. For, in the last analysis, the quality of business and the efficiency of service depend, to a large extent, on the quality of the insurance personnel. Insurers, who visualise a bright future for their business in the country, should devote their attention to this important aspect.

Another question, having a bearing on the development of insurance in the country, to which Mr. Jayant Dalal rightly called attention, is the formation of an all-India association of insurers. At present, there is no body which can speak with one voice on behalf of all insurers in the country. An all-India organisation can make the views of insurers heard in Governmental circles and also be of considerable help in solving the problems within the trade itself.

GOVERNMENT PAY SCALES

The Government of India has just announced its decision to accept the pay scales recommended by the second Pay Commission. The announcement is, in fact, a confirmation of earlier decisions so far as the large majority of class III and class IV employees are concerned. Thus, the minimum wage has been raised from Rs. 75 to Rs. 80 as recommended by the Commission. The Government, according to a statement laid on the table of the Lok Sabha last Tuesday, has finalised the scales covering about 75 per cent. of its employees. It is said that it will be some time before the Government completes its task of fitting 2 million employees, receiving at present 500 different scales of pay, into the 140 scales laid down by the Commission. Even so, this work should be expedited, in order that the period of uncertainty for the staff might be reduced to the minimum. In border-line cases, where new scales affect adversely the income and prospects of an employee, he is given the option to retain his old scale.

Immediate gains to employees are strictly limited, though the long-term benefits are somewhat substantial. Among the immediate concessions, mention must be made of the concession that the maximum rent recoverable from employees whose pay is below Rs. 150 per month should be limited to 7½ per cent. of their pay. The majority of Government servants, who are low paid staff, will stand to gain by this concession. Those who do not occupy Government residence will be entitled to get house rent allowance at higher rates. Leave rules have been liberalised. A notable decision is the Government's acceptance, in principle, of the Commission's plea for introducing a scheme for educational assistance to the employees' children. The scheme, which will be on the lines of what has been implemented in respect of railway employees' children, envisages the establishment of subsidised hostels. Since Central Government employees are subject to frequent transfers, the scheme of educational assistance will, when it is implemented, bring much relief to those parents who are often faced with the problem of break in their children's educational career. Again, a decision which is bound to create a sense of relief among all recent recruits to Government service is that existing temporary posts will be converted into permanent ones within the limits permissible; all eligible temporary persons will be confirmed as early as possible. For many employees, this will mean an early end of a painful period of uncertainty, provided this assurance is promptly implemented.

The Government has, however, virtually stuck to its original stand on dearness allowance. But its stand is in conformity with the Pay Commission's recommendation. Thus, it has agreed that, if, during a period of 12 months, the consumer price index remains on an average of 10 points above 115, it will review the position and consider whether an increase in the allowance should be allowed; and if so, at what rate. There will thus be no automatic adjustment in dearness allowance, though such adjustment had been demanded by certain sections of employees. It would be obviously difficult for the Government to permit automatic revisions in dearness allowance which would introduce large elements of uncertainty into the revenue budget. But the fact that the Government has recognised the need for periodical revision in dearness allowance has an important implication, in that it has now acquired a certain vested interest in holding the price line. Hitherto, inflation meant new burdens only for the private employer. It will now mean that inflationary rise in prices will add to the Government's expenditure, met from revenue. It is true that it is always open to the Government to pass on the burden to the taxpayer. But a vigilant legislature will always want to know what the Government has done to keep to the minimum this avoidable increase in expenditure.

The long-term benefits include liberalisation of the mode of calculating pension and the introduction of the gratuity scheme. The Government has accepted the Commission's recommendation that special pay should also count for pension in full, if the post to which it was attached was held in a substantive capacity, and to the extent of half in all other cases. So far as gratuities are concerned, the Government's decision, accepting the Commission's suggestions, had been announced earlier. The announcement made this week incorporates the Government's decisions on the Commission's recommendations in favour of a compulsory provident fund scheme. Subscription to the fund will be at the rate of 6 per cent. Low-paid employees will pay only Rs. 4 or Rs. 5, though there will be no restriction, if they want to subscribe at a higher rate. Savings whether effected voluntarily or enforced by the Government, will certainly add to the employees' comfort in old age. Presumably, the employees will be permitted to pay their insurance premia out of the provident fund. Perhaps, the Government will also do well to examine the feasibility of introducing a family insurance or group insurance scheme for its employees which could be financed by collecting low rates of premia; it could even combine the scheme with the provident fund scheme it has now introduced. This is a field in which actuarial investigation should yield some beneficial scheme of welfare for Government servants.

DEVELOPMENT ASSISTANCE COMMITTEE

One of the important decisions taken at the twenty-nation ministerial conference on the reform of the O.E.E.C., which concluded its two-day session at Paris on 23rd July, related to the incorporation of the Development Assistance Group (D.A.G.) into the proposed Organisation for Economic Co-operation and Development (O.E.C.D.). Further, it was decided to change the name to the Development Assistance Committee. The D.A.G., it will be recalled, is the body established with the object of accelerating the flow of long-term funds from some of the friendly countries in the free world to underdeveloped areas. The setting up of the Group was the outcome of a meeting, in Paris on 13th and 14th January, of spokesmen representing eight countries (the U.K., the U.S., Canada, West Germany, France, Belgium, Italy and Portugal), as well as the European Economic Community. Japan joined the Group later, that is, in March, when the international conference on aid to economically backward regions was held at Washington.

After the O.E.C.D. comes into being, the Development Assistance Committee will act as one of its primary limbs. Japan will participate in the Committee's activities, without being a member of the O.E.C.D. Council. The Committee, we are told, will contribute to the economic development of both member and non-member countries through the flow of capital. The "article" adopted at the recent Paris meeting refers specifically to the importance of technical assistance and expansion of export markets to the economies of underdeveloped nations.

Another primary limb of the O.E.C.D. will be a trade committee, which will include among its functions, the discussion of the rift between the Six and the Seven. It has yet to be decided what power, if any, the Trade Committee will have in order to settle disagreements. The task of deciding the rules and procedure, according to which the Committee will operate has been entrusted to a preparatory committee headed by Herr Thorkil Kristensen, the Secretary-General-designate of the O.E.C.D. The Preparatory Committee will also take the final decision as to which of the 400 or so Acts of the O.E.E.C. should remain in force and draft another convention for the O.E.C.D. The Commiteee is scheduled to finish its work by 10th November 1960, in time for another ministerial conference. This conference is expected to sign the convention by the end of the year and, after the member-States have had another six months to ratify the convention, the O.E.C.D. is expected to come into existence in September 1961.

The establishment of the O.E.C.D., with the U.S. and Canada as full members, will be widely welcomed by India and other underdeveloped countries, for two important reasons. One, there will be a greater inflow of assistance, financial and technical, from the economically more prosperous countries of the West through the agency of the Development Assistance Committee. Two, the underdeveloped countries may be in a position to augment their foreign exchange earnings by stepping up exports to the Western nations, as a result of the efforts of the O.E.C.D.'s Trade Committee to liberalise restrictions on trade. If, however, these two benefits are to prove effective in the task of raising the low living standards of the teeming millions, it is imperative that the Governments of the developing countries should pursue rational economic policies.

DEVELOPMENT OF OILSEEDS

The view that the tentative target for the production of five major oilseeds now laid down at 9.2 to 9.5 million tons for the third Plan is insufficient even to meet the growing domestic demand, let alone the demand for exports, was expressed by Rai Bahadur G. V. Swakia, the retiring President of the East India Oil Millers Association, while addressing the annual general meeting of the Association at Calcutta the other day. The demand for oilseeds for both edible and industrial uses together, according to Mr. Swaika, would rise to as much as about 10.6 million tons by 1965-66. He, therefore, made a fervent plea to the Government of India to revise the proposed targets for the production of oilseeds in such a way as to leave a "comfortable surplus" for exports, over and above the quantity needed for catering to domestic requirements. Reviewing the progress of the current Plan, he admitted that the overall trend in production of oilseeds had consistently been upward; only, the pace of progress had been slow. The output of the five major oilseeds improved from 5.6 million tons in 1955-56 to 6.1 million tons in 1957-58 and 7.0 million tons in 1958-59. The crop in 1959-60 is said to be a little shorter than in the previous year. It is expected, according to the Draft Outline of the third Plan, to reach 7.2 million tons by 1960-61, the final year of the second Plan. This, however, falls short of the second Plan target by about 300,000 tons, owing mainly to shrinkage in area consequent upon unfavourable weather conditions.

The slow rate of growth in the output of oilseeds is one of the causes for the current high level of prices of seeds and oils. What is needed, therefore, is to expand the cultivation of oilseeds and to ease the supply position. Mr. Swaika rightly emphasised that higher outturn and larger yield per acre should be the major objective of policy. Of the five major oilseeds in the world, India ranks first in the production of groundnut, second in rape-mustard, sesame, castor, and fourth as regards linseed. But it is a sad commentary on agricultural productivity in this country that, in the matter of yield per acre, India has only the tenth place in groundnut, second in rape-mustard and linseed, and sixth in sesame. Mr. Swaika called upon farmers, as well as the authorities, to study the methods of oilseeds cultivation in China, Brazil, Argentina, etc., and adopt them in this country with such modifications as would help promote more intensive cultivation.

Side by side with promoting production, efforts should be made to conserve the edible seeds, by restricting its use for non-edible purposes, such as in the manufacture of soaps, paints and varnishes. Mr. Swaika appealed to industrial consumers of edible oils to devote greater attention to tap the potential resources of non-edible oils such as neem, mahua, karanja in the plains, and khakun, pisa, kukum, dhupa, nahar and sal in the forests, to avoid the misuse of edible oils, which were in short supply. It is gratifying to note that, of late, there is an increasing realisation at the official level of the need for developing non-edible seeds. In fact, the Special Committee for Development of Minor and Non-edible Oils, which met under the chairmanship of Dr. D. M. Sikha, Additional Agricultural Commissioner, Government of India, at Bhubaneswar, Orissa, last week, has recommended that the exploitation and utilisation of non-edible oil wealth of the country should be given due priority in the third Plan.

Mr. Swaika deprecated the practice of using whole cottonseeds as conventional cattlefeeds. He stated that, out of 1.7 million tons of cottonseeds produced in the country, only six per cent. was available for crushing, the rest being used as fodder. He appealed to people to put a stop to this waste, so that more cottonseed would be made available to the crushing industry.

The expansion of production and rational utilisation of oilseeds will substantially improve the supply position. This, in turn, will reduce prices and make them more competitive in world markets. Although vegetable oils and oilseeds have been traditional export items of this country, they are facing severe competition of late. In this connection, Mr. Swaika took exception to the present export policy of the Government. He added:

"It is a very disturbing feature that India's share of world export of vegetable oils is not comparable with her pre-eminence as a producer. I must say that permanent damage has been made in the international markets, due to vacillating export policy followed by the Government of India and periodical changes in regulation of exports through manipulation of export duties. In fact, the export policy for vegetable oils and oilcakes was primarily intended to hold the domestic price line and foreign exchange earning, and international prices played little part in the determination of such a policy. Prices of Indian vegetable oils were higher, whereas quotations given by competing sources of supply like Brazil, Argentina, Nigeria, etc., were much lower, thereby maintaining this disparity. India was holding an 'umbrella' over the competing sources of supply to enable them to sell successfully."

Mr. Swaika emphasised the paramount need for setting up a permanent machinery like the Export Promotion Council for Oils, Oilseeds and Oilcakes to make concentrated efforts for exploration of new markets abroad, besides rehabilitating the position of Indian oils and oilcakes in the traditional markets. As "the crushers and crushers alone could supply quality oil according to the standard and specifications given by the foreign importers at competitive prices," he urged the Government of India to allow export of oils only by the organised sector of industry.

In order to boost the export of oils and oilcakes, Mr. Swaika suggested immediate adoption of: (1) concessional railway freight for oils and oilseeds for the purpose of export of oils, (2) top priority for the movement of seeds meant for export in the form of oil, (3) a substantial reduction in freight rates for shipment of oils to the U.S. and the Continent, (4) introduction of a net rate of freight for a long-term period by the Conference Lines in place of the present deferred rebate system, (5) substantial reduction of port charges at Calcutta port to bring it in line with other ports in India, and (6) merger of sales tax with Central excise duty.

These suggestions deserve to be given due consideration by the authorities concerned, if the export promotion measures for oilseeds and oils are to bear fruit. It may be added, however, that, the effects of these measures will be lost, unless steps are taken to ensure stability in prices. In this context, Mr. Swaika doubted the utility of the special margins. He observed:

"I cannot refrain from sounding here a note of caution regarding export of groundnut oil *vis-a-vis* operation of forward markets in groundnut. The prices of groundnuts and its oil have reached virtual ceiling levels and trading in the forward section has come to a standstill. It is admitted that, in a controlled economy, measures to regulate forward trading are necessary, but they should not be such as to stifle the *bona fide* trade. The operation of the special margin has helped only the wealthier classes to take the maximum advantage of the position, while the small fry has almost been eliminated. But prices cannot be brought down simply by imposing special margins, unless production goes up materially and unless export facilities are revised. The Forward Markets Commission would do well to take a realistic view of the situation and to realise the need for prohibiting exports of edible oilseeds and their oils, if prices are to be held in check..."

While nobody questions the need for earning more and more of foreign exchange, this should not be done at the expense of the domestic consumer, particularly as edible oils occupy a significant place in the family budget of a large number of people. There is, therefore, a strong case for restricting exports of edible oilseeds and oils, particularly when their production lags behind.

THE U.S. ECONOMIC SCENE

AN INTERVIEW WITH DR. SAULNIER

[In the following interview in Washington, Dr. Raymond J. Saulnier, Chairman of President Eisenhower's Council of Economic Advisers, was asked to comment on various current issues of an economic nature, particularly in regard to the U.S. economic growth rate and probable effects, if a secure disarmament agreement were possible, heavy cuts in U.S. defence spending. Before taking his present post, Dr. Saulnier was a Professor of Economics at Columbia University.—ED.]

QUESTION: Dr. Saulnier, in the Economic Report the President submitted to Congress in January last, it is stated that, since the Employment Act was passed in 1946, the average annual rate of economic growth in the United States has been 3.2 per cent. Can this rate be accelerated? And if so, how?

Answer: Well, the rate at which an economy grows varies a good bit from year to year. The American economy at the moment is growing at a rate substantially above this average that you have mentioned for a longer period of time. Now the interesting point, of course, is whether a higher rate of growth can be sustained over a long period of time. The fact is that the outlook for this in the American economy over the next decade is very good.

We are entering a period in which our labour force will grow more rapidly than it has in the last decade. And that more rapid rate of growth of our labour force will provide the opportunity to achieve a substantially higher rate of economic growth.

I would emphasise that it is an opportunity that we can realise, if we have the right kinds of public policies, not just by the Federal Government but also by State and Local Governments, and likewise the right kinds of private actions by private citizens and private groups. If we get the right blend of public policies and private actions, we have this opportunity to substantially accelerate our rate of growth. And I for one believe that we can and will achieve this.

Question: The U.S. Gross National Product or total of goods and services produced reached a record level last year of about $485,000 million. If the present business prosperity continues, how high do you estimate the Gross National Product will go this year?

Answer: Well, it's difficult, of course, in an economy such as ours that is open and competitive and motivated in the main by private actions to make a firm estimate of economic performances as much as 12 months ahead. Between 1958 and 1959, our economy was growing in real terms at something around 5 per cent or better. We ought easily to achieve in 1960 something substantially better than the $500,000 million economy. How high it will go at the end of the year is a question that no one can be entirely sure of. It could easily be in excess of $515,000 million.

Question: To change the subject abruptly, Dr. Saulnier, a basic Marxist dogma is that economic depressions and mass unemployment are inherent in the capitalistic system. What is your comment? Can the problems of the business cycle be solved?

Answer: Well, the first comment I am tempted to make is that, since the publication of the Communist Manifesto in 1848, communist theoreticians have been forecasting the doom of capitalism. It is my observation that the capitalistic system is stronger today than it has ever been before and is showing increasing vitality.

Now as far as the business cycle is concerned, we have made very substantial progress under our form of government and our form of economic system in moderating fluctuations in the business cycle.

I would just make one statistical observation—in the economic recession in the United States that took place in 1957-58, the decline in the personal income available to people for spending was less than 1 per cent. Now I would regard this as a very substantial improvement over some of the performances of the past under our economy or under other economies.

Question: Communists have charged that Americans do not really want disarmament because they say that, if the United States stops spending $41,000 million annually on defence, the nation's economy would collapse. What is your answer to that one, Dr. Saulnier?

Answer: Our expenditures for purchases of goods and services for defence reached the annual total of $165,000 million in World War II, that was the actual expenditure in 1944. Those defence expenditures were reduced within a period of four years to the total of $16,000 million.

Now what happened? Did our economy go to pieces?

On the contrary. You will find that our total production of goods and services which was $366,000 million (in constant 1959 dollars) in 1944 was actually $328,000 million (in constant 1959 dollars) in 1948. Now this reduction in armaments had made possible a vast expansion in the output of consumer goods. And this is actually what I would expect to happen if we were to cut back our expenditures for national defence under a secure disarmament programme.

Question: In other words, what the United States is now spending for defence could be spent for more constructive things?

Answer: It could indeed and we would welcome the opportunity to do so. And, honestly, I do not see this in any sense as an economic problem before which we should quake. On the contrary, it is a great opportunity and nothing would please me more than to preside over the business of effecting such a reconversion of our economy.

All Americans would welcome a tax cut and let me point out that all of this need not go into a tax cut either. There are other areas of activity of the Federal Government that might, in the absence of the great burden of national defence, properly be expanded.

The U.S will grant a million-dollar credit to the Nepal Industrial Development Corporation for stimulating private industrial development in that country. An agreement to this effect was signed at Washington last week. The loan will be in U.S.-owned Indian rupee which is being made available by the International Co-operation Administration from funds acquired by the sale of surplus agricultural commodities to India. The Nepal Industrial Development Corporation will use the money for the purchase of industrial machinery, equipment and construction materials in India.

AMERICAN LETTER

ECONOMY STEADY AT A HIGH LEVEL

SEIZURE OF ASSETS BY CUBA DISQUIETING

From Our Special Correspondent

NEW YORK, 26*th July*

THE economy of the United States is at a standstill, but at a high level. Stock market prices which are supposed to reflect future economic conditions have also been in a seesaw condition. At the present time, the country is engulfed in political oratory, owing to the conventions of the Republican and Democratic parties. This year, the conventions have had a particularly depressing effect on business.

The nomination for the Democratic Presidency of Senator John F. Kennedy was bought. He employed as many as 500 people as Press agents and he is reported to have spent $750,000. Mr. Nelson Rockefeller, Governor of New York State, with an equal fortune behind him, is trying to do the same thing at this writing, so far as the Republican Presidential nomination is concerned. It is a rather unpleasant performance.

People are concerned and business is concerned. It stands to reason. There is a big cleavage in the Democratic Party over so-called "civil rights." The South of the U.S. with its large Negro population has been opposed to integration, while the North is insisting on integration in schools and elsewhere. That does not make for much harmony.

President Eisenhower's choice as his successor is Vice-President Richard Nixon who has had an excellent record on the foreign missions he undertook on behalf of the President. He has a fighting chance to win even Southern votes, despite a strong civil rights programme and, perhaps, because of it.

For some reason or other, there are very few people who are exuberant about Mr. Nixon, despite his good record as a Vice-President of the U.S. Before this appears in print, either Mr. Nixon or Mr. Rockefeller will have been nominated for President on the Republican ticket.

[*After this letter was posted, Mr. Rockefeller withdrew from the contest, leaving Mr. Richard Nixon to be unanimously nominated by the Republicans for the Presidentship.*—ED.]

Both Messrs. Kennedy and Nixon are in the forties and the accent is on youth and vigour, but can their experience be compared with that of Winston Churchill, Konrad Adenauer and Charles de Gaulle or Prime Minister Nehru?

The only thing in favour of Mr. Rockefeller is that he is over 50 years of age and has great international experience, especially in Latin America. What is against him is that he is a rich man's son who never had to earn a living for himself and his family. He has a farm in Venezuela where he flies for week-ends and vacations which the average American cannot afford to do. While wealth is revered greatly in the U.S., it is also suspect. Moreover, Mr. Rockefeller, in his tenure of office as Governor of New York State, has managed to antagonise most of the legislators by his lavish spending plans. Being rich and having inherited it without earning it, he does not know the value of money.

All this is mentioned merely as part of several reasons for the relative stagnation in the U.S. business situation. There is hesitation. There are grave doubts, such as lack of judgment in high places. There is also apprehension about the flare-ups in Africa and in Asia, as well as Cuba. There is fear of the increasing East-West tensions and the collapse of international conferences.

Recession Ahead?

Economists' viewpoints regarding the outlook differ at this time. Some see a recession next year, others are still mildly optimistic. Labour economists, generally, see a deficient rate of growth in the face of a rapidly increasing population. The argument is that combined public and private demand for goods and services have grown far too little to absorb the increases in the labour force. There is also the question of increasing technology which is being raised and the need for sustaining an adequate level of capital and equipment investment.

Nobody disputes that a high level of business activity will continue. It is only the question of degree and will that degree be sufficient not to lead into another downturn. As mentioned in previous dispatches, there has been a slow-down in inflation.

Part of the reason for it was a reduction in defence expenditures. Aircrafts have suffered with the advent of the missiles, as did the blacksmith with the advent of the automobile.

Consumer prices edged up again in June to a new high. The price level was 1.6 per cent. higher than 12 months previously. Rents for flats and homes are the main contributing factors for this boost. They are becoming exorbitant.

Personal income continues in a rising trend. Official reports placed it at an annual rate of $405,800 million in June which was $1,100 million higher than in May. There was a slight advance in wage and salary incomes, despite a drop in manufacturing payrolls. This trend has been going on for some time. Gains were made mostly in service and trade industries and in the payrolls of State and Local Governments.

Free World in Sixties

Intensified international competition is plaguing American industry. In a study made here, it is stated that, for the first time in two decades, world production capacity is equal to current demands. At the same time, world demand and capacity are in a cycle of unprecedented expansion. The consumer will benefit from this by a wider range of choices. Expectations are that the nations of the free world will attain a rise in production of more than 50 per cent. and a gain in population of 20 per cent. in the next decade. The study was prepared by economists of Marplan, the marketing research affiliate of McCann-Erickson, a U.S. advertising agency, with 58 offices in 21 countries.

They report, on India, that significant improvement is expected in the next ten years. Mexico is also singled out as to have one of the sharpest growth rates of any economy in the free world, with a one-third rise in population and a doubling of its national output.

Predictions for Western Europe are that the population of this area is expected to rise to 320 million persons by 1970. This compares with 295 million at the present time. Accompanying this, it is envisaged that there will be a rise of industrial output in the neighbourhood of 70 per cent. during the next decade above the 1958 level. Canada is also highlighted as due for a 60 per cent. increase in its economy for the next ten years.

* * * *

NEW YORK, 15*th July*

(*Delayed in Transit*)

Summer Lull

The overall business outlook continues satisfactory. But there are some reservations. There is, and will be, the usual summer lull. In addition to the usual doldrum of the "dog-days," new orders in industry have been running below shipments ever since 1959. When statistics for the summer months become available, it may be expected that a few major lines will be lower, rather than higher, as was anticipated earlier in the year. One of these areas is automobiles. Production in this field is being curtailed, so that dealers may clear their heavy stock of 1960 models.

This is fairly important since 1961 models are in the blue-print stage. The automotive industry has a distinct influence on steel production which is very important in this country. Steel mills are now operating at less than 55 per cent. of capacity, the lowest in any non-strike year.

There are many cheerful aspects on the other hand. Employment in May, for example, reached 67.2 million. It was 1.2 million higher than that in May, 1959. Yet, employment in manufacturing industries has declined because of increased technology. But more people are now employed in services, Government and trade.

Spending for plant and equipment seems to adhere closely to earlier forecasts. Estimates place such expenditures at an annual rate of $37,000 million in the second quarter, which would be 5 per cent. over the first quarter of 1960. Personal income has been rising steadily. It was recently on the threshold of a seasonally adjusted rate of $400,000 million per annum.

India's New Five-year Plan

There was much Press and private comment here about India's new Five-year Plan, projecting an outlay of more than the equivalent of $21,000 million for economic development. It was described in the Press as "the most ambitious development programme" in your country's 13 years of independence.

Interest is being expressed here in India's self-sustaining growth programme, whereby 23.1 per cent. of the plan's funds would go to develop agriculture and community developments and 56.9 per cent. would go to small and large industry, mineral production, communications and power development.

Under the new programme large shipments by the United States are envisioned of grains and capital equipment. Much of this is to be provided on credit. Some of the rupee payments for grain, worth more than $1,000 million, will be returned to India under quite flexible arrangements. They envisage reduction of imports by India and an increase in exports, according to informed sources here. It may be added that since the cordial reception to President Eisenhower, India has been very much in the news with great esteem and great respect, much more so than before.

Cuba

While all economic factors for the rest of the year spell "no boom and no bust," developments in Cuba are most disturbing to the U.S. Premier Fidel Castro is in the process of taking over all U.S. property "down to the nail of their shoes," in his own words. The only winner in this battle would seem to be Soviet Russia.

There is a large naval base of the U.S. in Cuba which has been on the alert for several months. It has aircraft carriers, the latest missiles and submarines. Beyond the iron-wrought gates, Soviet technicians have now taken over the operation of the expropriated American oil refineries.

Cuba is less than an hour's flying time from the tip of Florida and Premier Nikita Khrushchev of Russia has threatened to help Premier Castro with missiles in the event of interference in Cuban affairs by the U.S. Unless the counter-revolutionaries get the upper hand over Premier Castro, a show-down is obviously approaching. President Eisenhower has stated that the U.S. cannot tolerate a Communist-dominated country on the doorstep.

The U.S. intervened once before in Cuban affairs owing to the sinking of the battleship *Kaine* in Havana harbour. The situation lends itself to a first class explosion between the U.S. and the U.S.S.R.

Investors Get Together

In the wake of the seizure of American property in Cuba, a group has been formed which many turn out to be rather important. The National Foreign Trade Council, which is composed of industries interested in foreign trade and with manufacturing facilities overseas, has appointed a foreign property committee. Its first job will be to seek a solution to the problem of expropriation in Cuba.

Possibilities of preventive action which might forestall any repetition of the Cuban seizures in other parts of the world will also be explored. The Foreign Property Committee will also take up questions of international law, business policies and governmental actions.

About 100 member-companies of the Council, representing more than 4 million shareholders, have substantial investments in Cuba. They constitute the bulk of the $861 million American-owned property on the island. None of these companies has received any compensation whatsoever for seized property and offers to some for partial compensation in bonds have been far from reasonable or just.

Quoting from a declaration adopted by the last National Foreign Trade convention—"the right of a sovereign government, under the principle of eminent domain, to expropriate private property for well-recognised public purposes, is generally accepted in cases, where such action is not in violation of specific treaty or contractual obligations; but this right is coupled with reciprocal obligation to pay full and just compensation at the time of taking."

There are many Cubans in this country now who supported Premier Castro originally, and they are so disenchanted that they do not care to go back to their homeland.—*All Rights Reserved.*

BANKING IN THE FIRST HALF OF 1960

TURNOVER LARGER—PROFITS BETTER

CONTRARY to general expectations, the half-year ended 30th June 1960 has proved to be more prosperous for scheduled banks in India than the corresponding period of 1959. It was once feared that, consequent on the high cost of operations and the relatively cheaper rate of interest at which banks had been lending, the profits of banks would not be adequate. The expansion of branch banking, which would take some time to come to a profit-earning stage, and the fear of a rise in Bank rate which, if it had come true, would have meant a sizable depreciation in values of banks' investments, were other factors which were responsible for the apprehension that bank profits would be inadequate. To the extent the banks' profits for the first half of 1960 are better than that for the same period of the previous year, the earlier misgiving has not materialised. But on the question whether bank profits are adequate or not, there can still be differences of opinion. In this context, the decision of two of the largest commercial banks to raise their interim dividends for 1960 strikes a jarring note. As we shall show later, this was a very unwise decision.

Three main reasons can be attributed to the improvement in earnings. First, the turnover of banks was substantially larger than in the corresponding period of 1959. It may be noted that the whole of the half-year under review was marked by heavy demand for bank credit and the level of advances was throughout higher than in the corresponding half-year. Thus, the total advances rose from Rs. 976.66 crores at the beginning of the year to Rs. 1,127.66 crores at the end of June, representing a rise of Rs. 151 crores, while in January-June 1959 they had gone up by only Rs. 107.98 crores, that is from Rs. 885.31 crores to Rs. 993.29 crores. The peak level of advances touched during the year was Rs. 1,139.62 crores (this was in the week ended 6th May 1960), from which it declined by only Rs. 12 crores at the end of June. The corresponding high touched in the first half of 1959 was Rs. 1,027.26 crores (this was on 8th May 1959), from which it had dropped by Rs. 50.60 crores by the end of June 1959.

Bank Data

Unlike in the first half of 1959, the expansion in bank deposits during the half-year under review was less marked than that in advances, as will be evident from the following comparative table of the changes in the main portfolios of all Scheduled banks and the share of the State Bank of India thereof:

(In crores of rupees)

	All Scheduled Banks		State Bank	
	First half of		First half of	
	1960	1959	1960	1959
Deposits—				
Time ..	+ 88.68	+119.08	+56.19	+58.15
Demand ..	+ 35.98	+ 30.12		
Advances ..	+151.00	+107.98	+49.76	+15.03
Investments ..	- 10.32	+ 6.52	+15.87	+21.33
Cash balances ..	+ 2.45	— 9.03	—14.20	—12.89

As a matter of fact the increase in deposits was smaller than that in the corresponding six months of 1959, being Rs. 124.66 crores, as against Rs. 149.20 crores. The decline was accounted for solely by time deposits, which, as will be seen from the table above, rose by only Rs. 88.68 crores, as against Rs. 119.08 crores in January-June 1959. This was due, presumably, to the cut of ½ per cent. in deposit rates under the inter-bank agreement (revised in September 1959) and to diversion of funds for investment in equities which were experiencing boom conditions. The break-down figures of deposits for the State Bank of India are not available, but the fall in the pace of increase in the deposits of this Bank is attributable to the placing of all fresh P.L. 480 counterpart funds with the Reserve Bank, from 1st April 1960, instead of with it. The larger demand for credit was met by banks partly by a disinvestment of their holdings of Government securities, on which the return was low, and partly by an increase in borrowings from the Reserve Bank. It will be seen from the table that, despite an increase of Rs. 15.87 crores in the investments of the State Bank, the total for all Scheduled banks is down by Rs. 19.32 crores. This means that the other Scheduled banks must have liquidated their gilt-edged investments to the tune of over Rs. 35 crores.

The second factor which must have contributed to the rise in earnings of banks is the deduction at source of only 30 nP per rupee this year, instead of 45 nP per rupee last year, from the interest on Government securities, consequent on the changes in the tax law.

Thirdly, despite the fact that banks had to pay interest on a larger quantum of deposits, the further cut in the maximum rate of interest on deposits effected in September 1959 must have brought about a sizable saving in their expenses.

Profits Comparad

The following comparative table brings out clearly the trend of profits, before taxation, of some of the leading banks for the first half of the last three years:

(In lakhs of rupees)

Bank	Half-year ended 30th June		
	1960	1959	1958
Central Bank	65.35	43.53	42.03
Bank of India	42.65	28.11	33.14
Punjab National	45.37	42.76	41.67
Bank of Baroda	17.22	14.19	13.39
Indian Bank	22.39	19.65	N.A.
Indian Overseas	18.04	14.84	14.02
Dena Bank	10.18	6.98	7.61
Andhra Bank	7.14	6.99	5.10
Pandyan Bank	3.69	2.18	2.01

It must be added here that the profit figures for 4960, as well as for 1959, are not strictly comparable with those for the preceding years in view of the changes in the rates and the system of corporate taxation. There was a basic change in the system of taxation in the 1959-60 budget and a reduction in the rate of tax deductable at source for corporations in the 1960-61 budget.

Of the above banks, only five, namely, the Central Bank of India, the Bank of India, the Punjab National Bank, the Bank of Baroda and the Dena Bank have announced their interim dividends. While the first two have stepped up the rate of dividend, the other three have maintained it. The Bank of India was the first to annnounce an increase in the interim dividend from Rs. 3 per share of Rs. 50 or 12 per cent. per annum paid for 1959 to Rs. 3.75 per share or 15 per cent. per annum. This was followed by the Central Bank with a rise from Re. 1.90 per share of Rs. 25 to Rs. 2.10 per share. The Punjab National Bank has maintained its interim dividend at Re. 1 per share of Rs. 10, Baroda at Rs. 3.50 per share of Rs. 50 and Dena at Re. 1.86 per share of Rs. 50. The dividends for both the half-years are subject to deduction of tax. The decision of the Bank of India and the Central Bank to step up the interim dividends was not, in our view, a wise move, though the earnings of both, which have recorded a marked rise, may justify it. This is so for four reasons. First, in view of the growth in deposits and advances, it is necessary for banks to expand their owned funds. Accordingly, preference should be given to strengthening the reserves of banks. Secondly, the bankmen's claim for higher wages is before the Bank Tribunal and the increase in dividend may substantiate their demand. Thirdly, there is also the possibility of an increase in the Bank rate sooner or later. If this were to materialise, there would be a fall in the value of banks' investments obliging the banks to set apart a bigger slice of their profit to reserves. And, fourthly, the banks have been proposing an increase in the service charges as well as in the rate of interest on their advances. This claim will not carry conviction to the public or to the politicians if the banks raise their dividends. The banks can, however, argue that their net dividends are lower than those for 1958 or 1957 and that they are only trying to do some justice to their shareholders, as is the case with all other companies. Be that as it may, the investors have not been very much impressed by the apparent prosperity of banks for the current year. After a temporary spurt, bank shares have turned quiet and become friendless, again, on all the leading stock exchanges in this country.

(Concluded from next column)

the railways, loans have been granted for the expansion of iron and steel production and of electric power facilities, for the purchase of commercial aircraft, for the development of agriculture and ports and for a development bank (I.C.I.C.I.) to lend to private industry.

ANOTHER WORLD BANK LOAN TO RAILWAYS

RATE OF INTEREST LOWER

THE latest World Bank loan to the Indian railways, amounting to an equivalent of $70 million, for their improvement and expansion granted last week (on 29th July), is notable in many respects. First, it is a continued recognition of the importance of the railway programme as a central part of the second Five-year Plan, accounting as it does for one quarter of all public expenditure under the Plan. Secondly, it covers the bulk of the foreign exchange requirements for the final year of the railway programme under the Plan which is due to end on 31st March 1961. Thirdly, it is the second largest loan given by the Bank to the railways, next only to the 85-million-dollar loan given in 1958. Fourthly, it brings the total loans granted to the Indian railways so far to the largest amount ever lent by the World Bank for a single project. And, fifthly, it is given at a slightly more favourable rate of interest than the previous loan in July 1959.

As in the case of the previous loan, the latest one is for a term of twenty years, but it bears interest at the rate of 5¾ per cent. per annum, including the one per cent. commission which is credited to the Bank's special reserve, as compared with 6 per cent. which last year's loan carries. The reduction in the rate of interest is in consonance with the recent trend of interest rates in the U.S. Six private commercial banks are participating in the loan without the World Bank's guarantee to the extent of $2.5 million, representing the first maturity and part of the second which falls due between January 1964 and July 1964.

Eighth Loan

This is the eighth loan granted by the World Bank to the Indian railways and brings the total to $328 million, the largest amount lent by it for any single project. The first loan to the railways was, it will be recalled, made in August 1949 for $32.8 million and since then the Bank has made seven loans, aggregating $295 million, to assist the financing of the Indian railways' expansion programme during the second Five-year Plan. The following are the details of the various loans granted so far to the railways by the Bank:

Date of loan	Maturities	Rate of Interest* Per cent.	Loan amount (In million $)
August 1949	1960-1964	4	32.80
July 1957	1961-1972	5¾	24.00
Do.	"	"	19.11
Do.	"	"	11.20
Do.	"	"	35.70
September 1958	1963-1979	5½	85.00
July 1959	1963-1979	6	60.00
July 1960	1964-1980	5½	70.00

*Includes the commission of 1 per cent.

The total investment in the railway programme in the first four years of the second Plan is estimated at Rs. 870 crores ($1,827 million), of which Rs. 230 crores ($483 million) are expected to be expended during the current year of the Plan. Of the total amount, foreign exchange requirements are now estimated at $718 million, of which 40 per cent. will have been supplied by the World Bank and another 20 per cent. from other external sources. The original estimate of foreign exchange cost of the programme was $893 million, but this has been progressively reduced to the present figure of $718 million, thanks to the increased availability of railway equipment manufactured in India. Of the Rs. 230 crores to be spent during the current year, foreign exchange cost for purchases will account for Rs. 40.5 crores, of which the latest World Bank loan will provide Rs. 33.3 crores and will be used for the purchase abroad of rolling stock, track material and other equipment.

It will be recalled that representatives of the Governments of Canada, Germany, Japan, the U.K. and the U.S. first met at the invitation of the Bank in August 1958 to seek ways of helping India to meet the foreign exchange requirement of the remaining years of the second Five-year Plan. At that time, the Bank indicated its intention of extending to India loans of the order of $225 million for the then remaining 2½ years of the Plan. Actually, the World Bank has lent $255 million, of which $225 million are expected to be disbursed when the Plan period ends on 31st March 1961.

The World Bank has so far made 24 loans to India, aggregating $662 million. In addition to

MODERNISING TEXTILE INDUSTRY—I

LABOUR PROBLEMS INVOLVED AND THEIR SOLUTION

THERE is a section of opinion in India, including some belonging to the Party in power, which continues to oppose tooth and nail any attempt at modernising the cotton textile industry. The opposition stems from either political considerations or ignorance. Whenever the need for modernisation of mills is urged, this section immediately reacts violently and raises, among workers, the ghost of unemployment and other dangerous consequences solely with the object of securing their support for party ends. Only recently—on 12th July—the leftist *Mumbai Girni Kamgar Union* organised a one-day strike in mills as a mark of protest against rationalisation; the strike was, of course, not successful. By opposing modernisation of cotton mills time and again the so-called trade union leaders are only working against the interests of workers, because, so long as the mills are forced to work old and outdated equipment, the wages and living conditions of workers cannot be expected to improve in real terms. The introduction of new machines and methods no doubt creates some labour problems but these can be solved satisfactorily provided there is agreement between employers and employees and the atmosphere of cordial labour-management relations prevails in the industry.

Those who oppose modernisation of textile industry will do well to ponder the interesting observations made by no less an authority than the International Labour Office in the course of an article published in the June issue of the *International Labour Review*. The article reviews some of the plans for modernising the textile industry introduced in a number of countries and, in the light of technical developments taking place in the industry, discusses the labour problems arising from them. Since many of the developing countries start their industrialisation by establishing cotton textile mills, there has been a gradual shift in the location of the industry towards these countries accompanied by a contraction of the industry in a few older manufacturing countries. Some of the resulting problems such as those relating to redundancy, application of work study methods, training, working conditions and labour-management relations are found everywhere. The article describes how far these problems have arisen and gives examples of the solutions found for them. It is proposed to refer here to the general findings of the I.L.O., leaving its observations with reference to India to be covered in the next issue.

Three Important Considerations

At the very outset, the I.L.O. review lays stress on the three important considerations which invest the need for modernising the textile industry with urgency. In the first place, being an old-established one, the industry has operated for the most part with antiquated machinery and traditional methods. Secondly, the development of textiles in new areas has had the effect of converting large consuming countries into producers. The textile industry in the industrially advanced countries is specially vulnerable to competition from these new comers, since it has a relatively high labour-content. Naturally they find that modernisation is necessary to make their products competitive in the world market. Moreover, in conditions of full employment prevailing in the industrially advanced countries, installation of automatic machinery is also found to be essential to combat increasing labour costs and, in some cases, labour shortage. The third consideration is the growing use of man-made fibres in the production of textiles either alone or along with the older natural fibres. The percentage share of cotton and wool in the total world consumption of fibres has fallen from 72.7 and 12.5 in 1949 to 70.1 and 9.4, respectively, in 1958, while that of man-made fibres has risen from 14.8 to 20.5. Apart from increased use, a large variety of man-made fibres has made their appearance. The effect of their introduction and the greater use of mixtures of different fibres have resulted in the development of new machines and processes, as well as in higher skill requirements of operatives.

The I.L.O. review refers to some of the distinct developments that have greatly altered the technique and character of the textile industry during the last few years. It observes:

"Broadly speaking, the main aim of introducing technical improvements is to strengthen the yarn and reduce breaks. This improves the quality of the yarn and enables a single worker to handle more machines; it is also a necessary preliminary to the efficient use of more automatic machinery. The most important improvements may be briefly summarised as 'continuous machinery' (single-process systems) for 'opening' the raw cotton and wool, instead of separate machines; wider 'cans' and carding machines, which make it possible to process more slivers with less machines; 'short processing' in spinning, by which a number of speed frames are eliminated; further mechanisation in winding operations; automatic looms; new weaving machines; continuous bleaching and dyeing; and new finishing processes. Among new weaving machines, the Sulzer-type loom using a small metal shuttle to pull the weft thread off a large motionless cone from one side of the loom gives an increased output and offers great scope in the saving of labour, since the weight of the conventional shuttle is widely regarded as the main obstacle to any great increase in loom speed. A water jet loom which also dispenses with the shuttle as a means of inserting the weft has been in operation in Czechoslovakia. This also offers great possibility for increasing productivity, especially in the mass production of nylon fabrics. However, these new weaving machines have not so far made any great impact, and the automatic loom remains the greatest single widely accepted technical advance in the textile industry. ... If the full benefits of modernisation are to be achieved, systematic planning is needed. ... Taking a longer view, the advantages of modernisation in improving the quality of the product and in lowering costs are obvious, especially in countries where labour costs tend to rise."

Modernisation—Broad Trends

The problem of modernising the textile industry varies from country to country, depending partly on the stage of industrialisation reached. Generally speaking, certain broad trends emerge from the I.L.O. review. Thus, in countries where labour is abundant and capital scarce, maximum, utilisation of resources may demand that machinery should be used only when it tends to an increase in output that cannot be achieved merely by using more labour. In developing countries, which have started a textile industry since the Second World War, there is no problem of replacing old machines by modern machinery. Rather the difficulty is one of operating the modern equipment and machines successfully. Drawing attention to this aspect, the I.L.O. review rightly emphasises that, in order to introduce new techniques of production, it is not enough merely to install up-to-date equipment. Simultaneously, steps must be taken to ensure proper maintenance and operation of machinery, development of a stable labour force, efficient methods of work, equitable system of remuneration and satisfactory labour-management relations in the new technological set-up. In the industrially advanced countries, on the other hand, the problem of modernisation of textile industry is frequently one of diverting economic resources from the production of textiles and of transferring workers to new industries. It is estimated that, during the next ten years, about $200 million per annum will have to be invested to keep the cotton textile industry in Western Europe. The experience of the U.K. shows that, if a co-ordinated effort is made, excess capacity will be no bar to the introduction of a scheme of modernisation. A rough indication of the extent of modernisation so far achieved in the different countries is given by the statement relating to the percentage of automatic looms to total looms in place in the cotton and wool textile industries appearing on the next page.

In any attempt to modernise the textile industry, the main labour problems encountered in both the developing and the industrially advanced countries, according to the I.L.O. review, arise from the fact that modernisation, whether in the form of further mechanisation, automation or improved working methods, results in the need for smaller numbers of workers to produce the same output. The review goes on to observe:

"First of all, there is the fear of the workers that they will lose their jobs either because production in the particular plant has not expanded to reabsorb redundancy or because of insufficient demand for the skills of particular operatives. Attempts have been made to meet this situation by guaranteeing security of employment, or by regularating the recruitment of additional employees, or, in the event of dismissals, by offering compensation. Secondly, there is anxiety about the effect of modernisation on wages and other conditions of employment, including the work-load, shift working and hours of work. Thirdly, there is the question of ensuring that the changes are introduced smoothly and that the abovementioned preoccupations do not affect adversely production and human relations within the factory. This is basically a question of maintaining satisfactory labour-management relations... It is obvious that they (these problems) are very closely interrelated; the action taken by management to ensure that redundant labour is speedily reabsorbed into employment affects the relations between labour and management in the factory; likewise, the manner in which modernisation is introduced and the effect it has on conditions of employment also affect relations. Conversely, good labour-management relations make it possible to bring about changes associated with modernisation smoothly."

Dealing With Labour Problems

It is apparent from the I.L.O. review that a number of measures have been taken to deal with the aforesaid problems. Steps to avoid or minimise redundancy include regulating the pace of modernisation, inter-departmental or inter-factory transfer of workers, working additional shifts or extending the operations of the mill. In cases where redundancy is unavoidable, practices and procedures of dismissals have been evolved, so as to avoid injustice and hardship as far as possible. No standard measures can, of course, be applied to meet the problem of redundancy, since the policy adopted must depend on the situation in each mill. By and large, however, it may be said that, if workers displaced as a result of modernisation cannot be reabsorbed in the same undertaking, action must be taken, as the I.L.O. review points out, at the level of the industry, or by the State, to provide alternative employment.

Compensation payments are, in some cases, made to dismissed workers under legislative provisions or collective agreements. Some compensation schemes provide for the payment of higher initial benefit and instalments spread over a period, with a view to affording more security to dismissed workers while they are in search of alternative jobs. Suggestions have been made to set up separate funds to meet the expenses of displacement, thus recognising the principle that the society which benefits from modernisation should also share in its costs. In this connection, the need to encourage labour mobility and to link modernisation schemes to general plans for industrial development and the location of new industries has received attention. Alluding to this aspect, the I.L.O. review makes the following observations:

"Despite the lack of mobility of textile workers and their reluctance to change their employment and domicile, transfer to other industries undoubtedly offers the best solution for redundancy in old-established textile industries which are on the decline; but it requires measures to facilitate vocational retraining and, where necessary, the establishment of new industries in declining textile regions. This is a field in which initiative lies primarily with Governments. It is significant, however, that, in France, under an agreement concluded in 1953 between the employers' organisation and the workers' unions, a resettlement service for industrial establishments in the cotton textile industry was established to assist discharged textile workers to find jobs. It was the function of this service to draw up a list of textile mills that had ceased, or were about to cease, operations in particular areas, to discover an alternative activity that could be carried on on the premises, to find an *entrepreneur* to undertake the experiment and to obtain the capital required. Experience in other industries shows that measures to facilitate transfers of workers to other regions should include the refund of the removal expenses of the worker and his family, the payment of installation grants, and a guarantee that proper housing will be available and that the worker's new job affords some security."

Organising Production

Once the problems of labour displacement and redundancy, together with the associated issues relating to compensation as well all transfer of workers to other occupations and industries are solved and modernisation is under way, the main day-to-day problems centre round methods of organising production efficiently in the new set-up. The most important among them are those concerning application of work study methods, provision of appropriate working conditions and conditions of employment, and reorganisation and retraining of personnel to suit new methods. Work study methods are applied to an increasing extent in the textile industry. These have resulted in a more efficient use of manpower and machines and in more equitable systems of wage payment. While no general solution has been found to the problem of sharing the benefits accruing from modernisation, there is increasing recognition that changes in skills and responsibilities and working conditions do occur, and these should be reflected in the wages of the workers concerned. Improved training schemes have been introduced and it is generally agreed that retraining should be provided for displaced textile workers, in order to help them to obtain new employment.

In undertaking the various measures connected with modernisation, close co-operation between labour and management is necessary to avoid friction and dislocation. Practices and procedures for consultation between their representatives have, in fact, been established. In this connection, permanent machinery for consultation has been found to be particularly useful. Since modernisation schemes have to be planned in advance and are limited by the amount of capital available for investment, the supply of textile machinery and shortages of properly trained personnel, the labour problems involved can be foreseen and measures taken sufficiently far ahead. If this is done and if both the managements and the workers adopt an attitude of "give-and-take," the pace of modernisation of cotton textile industry will be not only quite smooth but also fairly quick.

ANNUAL REPORT OF BOMBAY MILLOWNERS' ASSOCIATION

The latest Annual Report of the Millowners' Association, Bombay, namely, that covering the year 1959, gives, as was done by its predecessors, much useful information pertaining to the textile industry in India. Part I of the Report contains an interesting review of the trends in Indian economy during 1959, with particular reference to the conditions in the textile sector. It also contains some of the important legislative enactments and the views expressed by the Association from time to time on these, as well as on the several aspects of the official textile policy. Part II of the Report includes the proceedings of the Association's annual general meeting, the budget speech of the Union Finance Minister on 29th February 1960, and rules and regulations of the Association, etc. Further, the statistical tables relating to the size of the cotton industry in India, U.S., U.K., Germany, Japan and China, trend of cotton, yarn and cloth output in India, exports, taxes and other subjects have been brought up-to-date.

The cotton textile export incentive scheme has been extended to cover ropes, tapes, newar, twine, webbings and braids manufactured out of cotton yarn. Thus, with effect from the quarter April-June 1960, exporters of these articles will be entitled to import entitlements of 10 per cent. of the f.o.b. value of the articles exported. Coal tar dyes, textile chemicals, etc., imported under the scheme will have to be sold only to any unit of the textile industry. Licences will be granted by the Joint Chief Controller of Imports and Exports, Bombay, once in a quarter on the basis of exports effected in the preceding quarter.

The Orissa Textile Mills *Mazdoor* Union, affiliated to the All-India Trade Union Congress, and the management of the Orissa Textile Mills Ltd., Choudar, the biggest textile mill in the State, have signed an agreement for the implementation of the Central Textile Wage Board recommendations. As a result of this agreement, signed on 26th July, the workers of the O. T. Mills, numbering about 5,000, would get an additional annual wage increase amounting to Rs. 5.50 lakhs.

Life Insurance spells benefits to the security of an individual. But it also spells benefits to the economy of a nation. By investing its funds in agriculture and industry, LIC stimulates vigorous national development.

In fact, by the end of 1958, LIC had Rs. 76 crores invested in such industries as sugar, paper, cement, jute, cotton, textile, iron and steel, engineering, chemicals, pharmaceuticals, shipping, transport, plantations, etc.

With more funds at its disposal, the more will LIC have for investment. Employers everywhere will be working towards greater prosperity in every way by spreading greater insurance-consciousness among their employees.

There are several group schemes which LIC offers to industrial establishments. Ask a Life Insurance Agent to explain the Salary Savings Scheme, the Group Insurance Scheme and the Superannuation Scheme.

CREDIT CURBS AFFECT TEXTILE TRADE

BUT NO EMBARRASSING STOCKS STILL

From Our Special Correspondent

MANCHESTER, 26*th July*

SPINNERS and manufacturers in Lancashire have now had rather more than a full year's trading on favourable terms, even though some of the orders booked in the summer of 1959 were at little more than barely economic rates. With the pressure for supplies which emerged so forcibly during the autumn of last year and developed to a substantial extent in the final quarter of 1959, the quantity of business done reached a size rarely equalled since the war. Subsequently, the majority of producers have been able to keep their heads well above water and have made remarkable progress in adding to their order lists and putting down additional contracts on extremely remunerative terms. Within the past two or three months, however, this steady improvement in the offtake has met with some setbacks.

MANCHESTER LETTER

Economically, the nation has been beset with problems and the Chancellor of the Exchequer has had to introduce monetary measures which have been by no means favourable to free trading. It remains to be seen what further action may be necessary to restore the country's balance of trade, but, in the meantime, customers tend to be cautious and the cotton trade has been affected as much as other industries. Curtailment of credit, which had a very sharp impact on the general flow of business only a few weeks ago, can have a varying reaction on different trades. Already there have been signs that the sales of relatively expensive durable goods, including cars and many electrical household products, have been curbed by the measures adopted, whereas less costly consumer products, such as those in the textile range, have not suffered to the same extent.

Uncertain Prospects

At this time of year, there is always at least one cotton mill town of consequence away on holiday and, as a result, output of yarn and cloth must be regularly restricted. The attitude of customers is affected by such circumstances, while, in addition, during 1960, the outlook is rendered more obscure by the anxiety over international trends. Consumers, whatever their individual view of events, must be affected by the mood of international politics and their attitude towards purchasing has undoubtedly been governed by the uncertain outlook.

Home trade operations are now more than ever reflected in the ability of retail customers to buy their requirements over the shop counter. Last year, the wonderful weather was an important factor in clearing retailers' shelves to such an extent that the pipelines were emptied on a massive scale. This year stocks were built up in hopeful anticipation of another rush to buy and, at first, the ambitions of salesmen and distributors in all branches were not disappointed.

With traders so dependent on the home market and the whole chain of production and merchanting so much at the mercy of the vagaries of Britain's notably fickle climate, forecasting the rate of mill activity tends to be coupled with the role of a weather prophet. Nevertheless, despite the storms and periods of depressing atmospheric conditions, the general public has rallied round the shops and made extensive purchases of clothing. Perhaps the offtake has not been quite as staggering in its intensity as it was last year, but there is still time in an English summer for the mood, and the climate, to change in no uncertain manner. Clearances so far have been well up to average and there are no embarrassing stocks to keep merchants awake at nights.

Sometimes in the past when business has been slack, traders have found time hanging heavy on their hands. Not so, in this day and age, at least for spinners and manufacturers who have little time to spare for contemplation, unless it be deep thought on how best to re-equip to get the maximum advantage from the opportunity presented by the modernisation subsidy and the wisest way to redeploy their labour.

Looking Ahead

In the midst of the transition from an overweight industry on the machinery side to a lither and more resilient figure, the persistent imports of foreign goods have received less attention than at one time. The half-year's totals for 1960 may serve to re-emphasise their volume on the minds of traders. Full order books and lengthy delivery terms are conducive to a more docile frame of mind.

Swiftly enough, the time will come round for fresh arrangements to be made to deal with purchases from the Eastern Commonwealth countries, while the mounting arrivals from Continental mills still go unchallenged. Lancashire, as Mr. K. O. Boardman has lately pointed out, will be one of the first areas to be hit by a return to keen competition, because local prices are among the dearest.

Certainly any firms which regard modernisation of machinery as an unnecessary expense will find that their "penny-wise and pound-foolish" policy will pay no dividends in the long run, both literally and metaphorically speaking. To be fair to the Lancashire trade, however, the response to reorganisation has displayed a spirit unknown for a generation or more and, in practically every sphere, there is a mood of determination which was singularly absent before the fundamental changes which swept the industry during 1959.

Output Averages

Any assessment of production figures at this time of year is bound to create complications because of holiday influences. Even the May returns could not be correctly judged because of the incidence of Whitsuntide. As a result, it is preferable to take the aggregate of the five months, if some comparison is to be made with the 1959 level of production.

To the end of May, total output of single yarns was 319,300,000 lbs., an increase of nearly 14,000,000 lbs. on last year's rate. The weekly average of 15,560,000 lbs. was the highest since November and has only been exceeded in two months since the beginning of last year. As compared with 1959, output of woven cloth has also increased, in the first five months of this year, the total of 815,900,000 yards was 35,000,000, higher than in 1959. In both yarn and cloth, the gains made in the man-made fibres section and mixtures were more pronounced than in purely cotton goods. May cloth production of 39,150,000 yards weekly was lower than in the first two months of the year and substantially below the peak rate of over 41,500,000 yards per week in October last.

For the second successive month, the number of operatives on the books of employers showed an advance—this time, of 560, after a rise of 1,020 in April. The chief gain over the two months has been in the weaving branch, where manpower has risen by over 1,300. The total labour force at the end of May in spinning, doubling and weaving was 185,470, exactly 16,000 fewer than at the same date in 1959.

Printers and Scottish Works

An urgent plea to the Calico Printers' Association not to close down the newly-acquired United Turkey Red dyeing and printing works in Dumbartonshire was made in Manchester last week by a nine-man Scottish deputation, led by Mr. Tom Steele, M. P. for Dumbarton West. The deputation made up of officials of four textile trade unions and three workers appointed by the 1,350 employees at the Vale of Leven factory, made its representations about the future of the works in talks lasting 90 minutes, with Mr. Roger M. Lee, the Chairman of C.P.A., and two of his directors.

The United Turkey Red Company was recently purchased by C.P.A. in a £547,000 deal. The takeover moves led to reports that the new owners intended to close the works, and questions were raised about it in Parliament. A joint statement issued after the meeting said: "Mr. Lee gave an assurance that the matters raised by the deputation would be given very serious consideration when the directors of C.P.A. were in a position to make a decision." Association spokesmen had already indicated that there was at present no question of closing the Vale of Leven works. Its future could not be considered until the full effect of the cotton reorganisation scheme was known.

At the annual meeting of the United Turkey Red Company, a statement from the Calico Printers' Association said that no undertaking had been given regarding the continued operation of the Scottish print works. If it should be decided to close the works under the reorganisation scheme, due notice would be given to all employees affected, who would become entitled to financial compensation for loss of employment. If the company continued to operate with the print works in production, there could be no prospect of early dividend for any shareholders because of the large debit balance.—*All Rights Reserved.*

SUGAR INDUSTRY AND MOLASSES DISPOSAL

THIRD PLAN TARGET FOR ALCOHOL

WITH plans for expansion of sugar industry in the coming years and establishment of a large synthetic rubber factory at Bareilly in Uttar Pradesh, coupled with the increasing tempo of manufacture of innumerable goods based on alcohol, the scope for development of alcohol industry will, indeed, be quite considerable. The production target for white sugar, to be reached in the last year of the third Plan (that is, 1965-66), is three million tons. Even on the basis of this conservative target, the recovery of molasses, the thick brown liquid left after the crystals are removed from the motter liquor which is the basic raw material for alcohol, will be of the order of more than 1.1 million tons—1,144,000 tons according to one estimate—an increase of 369,000 tons as compared with the actual recovery obtained in 1958-59. This quantity (1.1 million tons) will be sufficient to produce 64 to 65 million gallons of power and industrial alcohol, taking the standard yield of 57.16 gallons per ton of molasses.

Alcohol, as readers are aware, is widely used for various industrial purposes. Besides its utilisation in blended fuels, it finds use in alcohol lamps, anti-freeze for automobile radiators, bronzing liquids, cleaning fabrics, glass, etc., in disinfectants, dyes, enamels and etching, for scientific purposes, inks, lacquers, oil-refining, paints, varnishes, perfumes, soaps, soldering fluxes, water-proofing compounds, etc. The synthetic rubber plant, now being erected at Bareilly in U.P. alone is expected to consume as much as 14 million gallons of alcohol per annum, the consumption rising to 20 million gallons when the annual capacity of the plant is stepped up from 20,000 to 30,000 tons. What is more, to the extent the alcohol industry expands and develops, there will be an economical disposal of the surplus molasses of sugar factories which, incidentally, will go to reduce the cost of sugar production.

Doubling Production

In view of the prospects of plentiful supply of molasses in the third Plan period and considering the almost unlimited number of industrial uses of alcohol, the draft outline of the third Plan has naturally accorded a notable role to the development of the alcohol industry. The production target to be reached in 1965-66 is fixed at the liberal level of 50 million gallons (power and industrial alcohol) which is double the estimated output of 25 million gallons in 1960-61 (last year of the second Plan). In order to secure this additional quantity, the draft outline envisages an expansion in the installed capacity from 45 million gallons (estimated) in 1960-61 to 60 million gallons in 1965-66. It is, however, not stated as to how the proposed increase in capacity is to be brought about, whether by permitting the existing distilleries to expand or by licensing the setting up of new ones or through both. It is needless to add that, whatever be the pattern of development, due care must be given to see that adequate supply of molasses will be available. New alcohol distilleries must be allowed to be installed only near sugar mills. Further, only those distilleries that are situated near sugar mills at present must be permitted to expand their capacity.

Equally obvious is the need for creating conditions favourable to the fulfilment of the target. This aspect needs to be stressed, because of the considerable idle capacity that continues to exist in the alcohol distilleries. The actual extent of idle capacity in 1959 was as much as 53 per cent. in power alcohol and 46 per cent. in industrial alcohol (commercial spirit). The following figures relate to the installed capacity and actual output of alcohol during 1959, as compared with 1956 and 1950 (base year of the first Plan):

(In million gallons)

	1959	1956	1950
Power Alcohol—			
Installed capacity	16.45	14.35	9.33
Production	7.74	10.27	4.50
Industrial Alcohol (rectified spirit only)—			
Installed capacity	14.42	12.35	12.04
Production	7.78	4.21	3.44

N.B.—The installed capacity is calculated on the basis of three-shift working and 300 working days in a year.

It is thus evident that, over the three-year period from 1956 to 1959, the installed capacity of power alcohol sector rose by over two million gallons, while the actual output declined by 2.53 million gallons; in the case of rectified spirit, however, there was a rise of 3.57 million gallons in output. The decline in production is traceable to three important factors; (1) inadequate and irregular supply of molasses, (2) delay in the disposal of alcohol stocks, and (3) low prices fixed for power alcohol. Drawing attention to these factors in the development programme for alcohol industry under the second Plan, the Planning Commission said:

"The major problem facing the industry is stated to be the unremunerative price of power alcohol. Difficulties in the supply of molasses are also responsible for the intermittent working of some of the distilleries, but these have been overcome to some extent.... As regards industrial alcohol, the diverse excise rules and regulations existing in different States and the varying rates of duty and other charges levied on this commodity have also created many difficulties which have, perhaps, stood in the way of developing larger industrial uses for alcohol. The industry is also called upon to pay penalties when losses of spirit occur in transit. With the introduction of prohibition in some of the States, these restrictions have become all the more rigorous and have had the effect of hampering the progress of the industry considerably."

Controls

The difficulties mentioned above still persist, notwithstanding the recommendations of the expert committee on alcohol industry. In particular, the molasses problem continues to give a lot of trouble to the sugar mills. Only last week, we referred in these columns to the presidential speech of Mr. F. Edwards at the annual meeting of the Decan Sugar Factories Association in the course of which he drew attention to the aggravation of difficulties by the recent orders of the State Director of Prohibition and Excise requiring the sugar factories to give eight days' notice in advance before they load molasses in tank-lorries or wagons outside office hours.

If the pace of progress of alcohol industry is to be accelerated in the coming years, it is imperative that the Prohibition Acts in States are so amended as to make the controls on both molasses and alcohol less vexatious and harsh. Also, the Government of India may consider the question of raising the ceiling on the basic ex-distillery price of alcohol which is only 80 nP per gallon for alcohol of 99.5 per cent. strength and 78 nP per gallon for alcohol of 96 per cent. strength, besides an additional allowance of 37 nP per gallon in both cases to cover the average actual transportation cost incurred on molasses. The adoption of these measures will not only result in better production performance by alcohol distilleries but also enable the sugar mills to dispose of their surplus molasses easily."

SUGAR PRODUCTION AND STOCKS

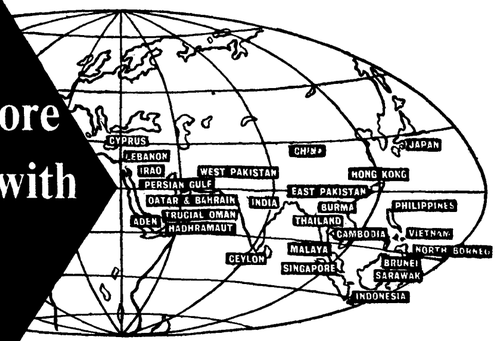
Sugar production during the month of June 1960 was 7,000 tons, whereas no sugar was produced in the same month last season. The total output for the season 1959-60 upto the end of June 1960 was 2,401,000 tons, as against 1,904,000 tons produced in the corresponding period of the previous season.

The offtake of sugar from factories during the month of June was 198,000 tons, as against 173,000 tons a year before. The total despatches upto 30th June 1960 amounted to 1,322,000 tons, those in the same period last season being 1,402,000 tons.

The total closing stock of sugar with factories as on 30th June 1960 was 1,224,000 tons, as against 833,000 tons a year before.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The associated banks, The Chartered Bank and The Eastern Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.

More and more trade with the East



Let your worry be our pleasure.

which together have a complete branch service in The East extending from Cyprus to Japan.

NO CHANGE IN FLOOR AND CEILING PRICES OF COTTON

MORE IMPORTS TO KEEP DOWN PRICES

THE categorical statement of Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, at the meeting of the Cotton Textile Consultative Board, should put an end to all speculation regarding the Government's policy on the floor and ceiling prices of cotton for the 1960-61 season. Addressing the Board's meeting held at New Delhi on 30th July, Mr. Shastri said that, in view of the paramount need to hold the price line, the Government had decided to maintain the ceiling and floor prices unchanged in the coming season also. This decision has come as a bitter disappointment to the cotton trade, which had thought that there were very good reasons for raising the floor and ceiling prices, if not for abolishing the ceiling altogether, and had fondly hoped that the Government would see the logic of their contention and act accordingly. Representatives of the trade had pleaded with the Government to do away with controls on prices on the ground that they could not be enforced when there was scarcity of cotton and that they were not needed when the supply was abundant. Since abolition of control on price was unacceptable to the Government, it was suggested, as an alternative, that the ceiling prices of cotton should be raised so as to induce larger production of cotton and also to make it possible for trading to be done within the limits set by the law. The illogicality of controlling cotton prices, when neither the price of *kapas* (unginned cotton) nor of cloth (manufactured cotton) was controlled, was also adduced in favour of the plea for decontrol of cotton.

None of these arguments seems to have carried conviction with the Government which seems to fear that any increase in the ceiling would add to the inflationary pressure to which cloth prices are already subject. It has, therefore, decided to maintain the ceiling prices unchanged and, at the same time, allow more cotton to be imported, so as to bring down prices. It is significant to note that, on the very day the Government announced its decision to keep the floor and ceiling unchanged, it also signed a fresh agreement with the U.S. for importing an additional 400,000 bales (of 400 lbs. each) of American cotton under P.L.480. It also disclosed that arrangements had been made to license the import of a further 200,000 bales from usual commercial sources. Two-thirds of the 400,000 bales to be imported under P.L.480 would be available in staple lengths below 1-1/16". This, obviously, is meant to make good the deficiency in indigenous supplies. The aforesaid 600,000 bales of cotton are over and above the 1.18 million bales already permitted for import during 1959-60, making the total for the season 1.78 million bales, as against the normal imports of 600,000 bales.

Some Difficulties

It is clear, therefore, that the Government's policy is to keep the ceiling price unchanged and, at the same time, liberalise imports further, so that, by easing the domestic supply position, prices could be kept under control. In the context of the Government's anxiety to control the general level of prices, this policy is understandable and perhaps, in the circumstances, the only feasible one. But it will not have its desired effect, if efforts are not made to expedite imports of cotton. One of the difficulties in importing cotton, over which the trade has of late been much worried, and to which Mr. Madanmohan Ruia, President of the East India Cotton Association, drew attention, in his address to this year's annual meeting of the Association held at Bombay last week, is the lack of fumigation facilities for U.S. cotton. Large imports of American cotton are said to have thrown fumigation arrangements at the ports of Bombay, Madras and Cochin out of gear. The trade and mills are facing difficulty in getting the cotton, as the bales remained in quarantine for a long time before they were fumigated. Large quantities of U.S. cotton are said to be lying uncleared in the ports. This not only involved additional cost to importers but considerably delayed the actual delivery of cotton to mills.

The delay in the issue of import licences is yet another difficulty. Although liberal quotas have been announced, unless licences are issued promptly and early shipment facilitated, mills cannot switch on to foreign cotton as and when indigenous growths become non-available. An idea of the extent to which actual shipments lag behind quota announcements, can be had from the fact that, though the quota announced so far in the season aggregates 1.78 million bales, the quantity licensed, till 7th July 1960 was of the order of 1.09 million bales and actual arrivals still lower at 701,810 bales. Consequently, mills have had to draw down their stocks heavily, with the result that the carryover at the end of the present season is expected to decline to 1.21 million bales, comprising 857,000 bales of Indian and 360,000 bales of foreign cotton which will perhaps be the lowest on record since 1947 and hardly sufficient for three months' consumption.

Assuming that there will be no decline in textile mill activity, all available domestic and foreign cotton of stapling 1" and below contracted for thus far will be consumed by the middle of November. New crops will become available only by the end of November or early December or even thereafter if the crop is delayed. This underlines the need for speeding up imports and to keep the supply lines full. Unless this is done, the price trend will continue to be firm and no amount of exhortation and threat of requisition of stocks will bring down prices.

WORLD COTTON FAMINE?

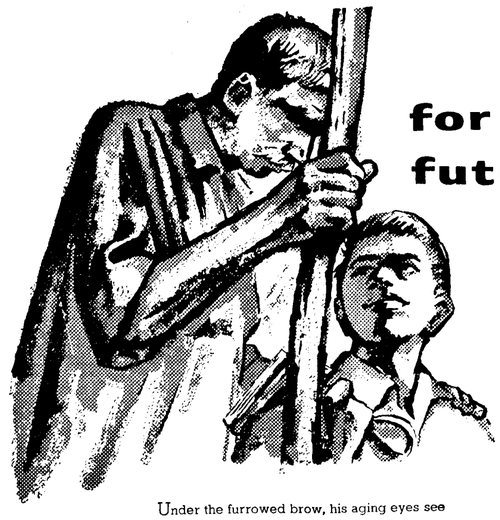
While the free world is still obsessed with the problem of cotton surplus, there are some who fear a cotton famine in the not distant future. A Manchester firm of cotton merchants has advanced a bold theory about future trend in raw cotton supplies. According to this firm, "in a few years' time, there will not be too much cotton in the world but too little." Posing the query as to whether cotton producing countries will have much for export after providing for their ever-expanding industries, it points out that Russia, Egypt, the Sudan, Iran and Peru are retaining more and India and Pakistan are only allowing exports of the lower grades.

With the marked rise in spinning and weaving capacity in numerous areas, which were at one time designated 'underdeveloped,' it is more than likely, according to the firm, that raw material supplies will be eagerly consumed within the country of origin, leaving a smaller residue for disposal abroad. In the circumstances, normal laws of supply and demand should lead to dearer rates for raw cotton. With so much Governmental interference and manipulation, adds the firm, it is hazardous to make more than a long-term guess at price prospects. But it feels that prices will probably be maintained for good quality cotton for another year, while supplies of poor character, which the spinners fight shy of, will be offered at bargain prices.

TEXTILE COMMISSIONER'S ORDER CHALLENGED

Verbal protest against the Cotton Control Order, issued by the Textile Commissioner in May last, prohibiting sale of cotton above the ceiling price and requiring sellers to apply to the above-mentioned officer for the nomination of buyers with effect from the 1st inst., having found to be of no avail, some traders are now turning to courts of law to get the order quashed. Admitting a writ petition, filed by a cotton merchant of Tirupur, Coimbatore district, Madras State, challenging the validity of the Textile Commissioner's notification issued through the Director of Handlooms, Madras, the Madras High Court ordered, on the 2nd inst., interim suspension of the notification. The petitioner contended, in his affidavit, that the notification affected his fundamental right to carry on trade. The affidavit said, *inter alia*:

"The Textile Commissioner issued a notification dated 13th May, 1960 under which all persons desiring to sell cotton to a manufacturer should apply to the Textile Commissioner for his nomination of a buyer. The notification requires the sale to be effected to the nominee at the maximum price determined by the Textile Commissioner's Appeal Committee. From this decision, no appeal has been provided. The conferring of powers determining the prices on a group which is exclusively representative of the buyers, and which is responsible to no person, and whose decision is final amounts to deprivation of property and imposition of unreasonable restriction, on the right and freedom of trade, and busines guaranteed under the Constitution. By the latest provision insisting on sales being made by stockists only to nominees of the Textile Commissioner, my entire trade, as also that of several others, is sure to be affected adversely."



for the future

Under the furrowed brow, his aging eyes see
his child grow to manhood. He gives his all: care
and protection, knowledge culled from experience.
And prepares him to meet the future.

Soon the youth will learn from life.
Soon will come the struggle to achieve.
Soon he will be part of the striving . . .

The striving and effort for a better world.
A world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . .
Tomorrow, when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow... Hindustan Lever serves the home.

INDIAN INSURANCE COMPANIES' ASSOCIATION

CHAIRMAN, MR. JAYANT DALAL, HIGHLIGHTS GENERAL INSURANCE PROBLEMS

SURVEYING the recent trends in general insurance business, Mr. Jayant S. Dalal, Chairman of the Indian Insurance Companies' Association, in the course of his address at the Thirty-second Annual General Meeting of the Association, held on the 2nd August 1960 at Bombay, observed that the slight improvement in the rate of growth in general insurance in relation to industrial production in the country, which had taken place in 1958, was heartening. But he felt that it was doubtful whether this improvement would be maintained in 1959, the final figures for which had not yet become available. A notable feature in the general insurance field in the 1953-58 period, he pointed out, was that the share of Indian insurers in the total business had steadily increased.

Mr. Dalal, however, felt that, in the last five years, the expansion in general insurance business had not, by and large, kept pace with the country's economic growth. Besides, the field was dominated by a few big units; the big-sized units were becoming larger and the growth of the small and medium-sized units was stunted. The larger and more powerful units, having the benefit of tied accounts, had, therefore, to adopt the principle of "live and let live" by concentrating their energies on creating new business. Such a gesture would have the salutary effect of reducing wasteful competition for business already on the books of companies and opening up new avenues in the larger interests of the market as a whole.

In the interests of creating strong groups of insurers, Mr. Dalal welcomed any movement towards voluntary amalgamation of insurance offices—that is, free from any official compulsion. Any attempt to thrust amalgamation on unwilling units would defeat the purpose it was intended to serve.

Conditions in the Market

Mr. Dalal called attention to the worsening of the situation in the insurance market, reflected in the closure of a number of companies in the past few years. If, in spite of the increased business potential, several companies had found it unprofitable to carry on, it could be only because of some basic disorder in the trade. He regretted that the endeavours made by the trade and the authorities to find a cure for the malady afflicting the trade had failed to produce any concrete result so far.

Code of Conduct

The Chairman next referred to the working of the Code of Conduct. Although it had led to some improvement in the trade, such undesirable features as wasteful competition and rebating still continued. He urged the reduction in the number of intermediaries between the client and the office and the setting up of an administrative machinery closely associated with the trade and comprising experienced personnel with sufficient authority to enforce the observance of the Code. The companies, on their part, should be prepared to accept any constructive suggestions or regulations that might be put forward in the interests of the trade as a whole. He felt that the existing formula for expenses of management under Section 40C of the Insurance Act and Rule 17E was a major factor responsible for the present scramble for business. Since even companies, well within the solvency margin and with large reserves, had received warnings for breach of the section, it was worth considering whether the right course would not be an increase in the limits prescribed under the Act or some new formula not necessarily co-related with the quantum of direct business.

Another Reinsurance Company

Welcoming the establishment of another reinsurance company, the Indian Guarantee and General Insurance Company Ltd., sponsored by the Life Insurance Corporation, Mr. Dalal said there was no doubt that the new company and the India Reinsurance Corporation would be able to provide larger reinsurance facilities than in the past. He advocated *inter se* exchange of treaties between companies. Insurers could create pools into which they might, on reasonable commission terms and with provisions for substantial profit commission, cede business either on priority basis or as a part of their first surplus. The management and retrocession of the business placed in such pools might be handed over to the two professional reinsurers in the country who might charge a small over-rider or take a small share of business. This scheme would help companies acquire full reciprocity out of quality business and also reduce the drain on foreign exchange. That such a scheme was workable was amply demonstrated by the example of the Japanese market, where the Japanese companies, through the medium of a reinsurance unit formed voluntarily, were now able to absorb almost 75 per cent. of their surpluses in Fire business and over 70 per cent. in the highly hazardous class of business like hull insurance. He appealed both to the Indian and foreign insurers in this country to give thought to this suggestion and work out some scheme in mutual consultation with the two professional reinsurers.

Tax-Free Reserves

Proceeding further, Mr. Dalal felt it was unfortunate that the authorities had not implemented the taxation Enquiry Commission's suggestion that the insurers should be allowed to add five per cent. of their annual premia to the reserves every year, free of tax, until the reserves reached 75 per cent. of annual premia in fire and miscellaneous business and 150 per cent. in marine and aviation hull business.

Commenting on the downward revision of fire insurance rates, Mr. Dalal said that it was true that fire insurance in this country had been reasonably profitable but the profits derived from this class of business were largely offset by the unfavourable experience of marine and accident business. A majority of Indian companies stood in need of strengthening their financial resources, and they would not succeed in doing so, unless they had a margin left from at least one class of business. It was surprising that, instead of encouraging the companies to increase the reserves by granting taxation relief as mentioned earlier, the authorities had compelled the trade to reduce the rates in the only class of business which was reasonably profitable and which was a source of financial strength to the companies.

Referring to the hardships experienced by insurance companies on account of restrictive policies followed by banks and other financing institutions in regard to acceptance of policies, Mr. Dalal said that while some improvement was noticeable as a result of the action taken by the Association, from time to time, the difficulties nevertheless still continued, to a certain extent. He cited the instance of the Madras Industrial Investment Corporation which insisted on companies investing a specified amount in the shares of the Corporation in order to ensure acceptance of their policies. The question was taken up with the proper authorities, pointing out the needless hardship caused to companies, in view of the large amounts remaining tied up on account of participation in the share capital of the Corporation, which many small and medium-sized units could not afford to do. It had, however, not been possible to persuade the Corporation to revise their attitude in this matter. One would have thought that a corporation operating under the aegis of a State Government would give a lead in such matters so that other institutions, who impose similar conditions hampering the growth of Indian insurance, could be prevailed upon to emulate their example by waiving the unreasonable conditions.

All-India Association

The Chairman emphasised the importance of an All-India Association of general insurers. Besides the Indian Insurance Companies' Association at Bombay, which had played a significant role in the growth of Indian insurance, there were a couple of similar bodies with a smaller membership functioning at other centres in the country. In this connection, he recalled that the Hon. Union Finance Minister, when he visited the Association at Bombay, had also stressed the need for a strong Association. He commended the suggestion for an All-India Association to the incoming Committee.

Concluding, Mr. Dalal stressed that a reorientation of outlook on the part of companies was absolutely necessary, if Indian insurance were to rise to its full stature and make its proper contribution to the task of nation-building. The larger and more powerful units, having the benefit of tied accounts, had to adopt the principle of "live and let live" by concentrating their energies on creating new business. This gesture would have the salutary effect of reducing wasteful competition for business already on the books of companies, on the one hand, and opening up new avenues of business, on the other. The acquisition cost of business must be brought down, in order that the resultant profits could be ploughed back to improve the financal position of companies. With the elimination of uneconomic competition and other undesirable features, it would be possible to offer more attractive terms and more efficient service to the insuring public.

4 PER CENT GUJARAT STATE DEVELOPMENT LOAN 1969

ISSUE PRICE Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTIONS ON 29th AUGUST 1960

The loan will be closed as soon as a total of approximately Rs. 500 lakhs has been subscribed, and in any case not later than the close of business on 3rd September 1960.

THE LOAN WILL BE UTILIZED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The applications will be received at offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore, and at branches of the State Bank of India and Treasuries and Sub-Treasuries in the State of Gujarat.

Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its branches within the State and forward to the nearest receiving office.

PRICE CONTROLS AND PRODUCTION TARGETS

ARE THEY COMPATIBLE IN AGRICULTURE?

By N. Chakravarty

IT has conventionally come to be believed that direct price controls on commodities are necessary in a country attempting a rapid development of its economy by comprehensive planning. In order to maintain a balance between the general price structure and income of the people during the period of planned growth, when large-scale investments are made and vast quantities of money are pumped into the economy, direct price controls have been thought essential. National development by extensive planning is an idea of this generation. An element of force is inherent in such a planned development. This force is necessary to quicken the pace of growth and progress. Forced growth involves national investment on an unprecedented scale which naturally gives rise to an inflationary condition in the economy. Certain forms of controls are, therefore, essential to keep inflation under restraint.

Experience gained during the last world war enhanced the faith in direct price controls as a measure to curb inflation. War finances and the conditions in which expansion takes place during war years are far from normal. Planning in war emergency is not always balanced and hence lopsided growth becomes inevitable. Prices as a result tend to fluctuate irregularly, making it imperative to enforce direct price control measures, which are negative in character, to keep the price level under check. But economic expansion in peacetime is planned on an altogether different basis and, therefore, a separate code of measures to control prices should be applied during such periods.

India has completed almost ten years of planned growth and, in this period, various forms of price controls on a wide range of commodities have been tried. The National Development Council, during its recent meeting, came to the unanimous conclusion that the third Five-year Plan could be formulated only on the basis that the price line would be held. It is, therefore, proper that, when we are on the verge of launching the third Plan, the situation is reviewed, particularly after studying the impact of price policy on production of commodities and on the economy in general.

Decade's Analysis

In order to have some idea of the results of ten years of planned development, it is necessary to analyse the trend of wholesale prices as also that of production of agricultural commodities and industrial goods in relation to the increase in the quantity of money in circulation. During this period (1952 to April 1960), the wholesale price index (1952-53=100) of food articles rose from 101.0 to 117.0, that of cotton manufactures from 104.0 to 125.0 and that of all commodities from 101.0 to 120.4. In the same period, industrial production index number (1951=100) of cloth rose from 102.0 to 105.4, finished steel from 102.4 to 201.8, sulphuric acid from 89.9 to 291.8, cement from 110.7 to 244.0 and the general unadjusted index from 103.6 to 175.0. There has thus been an all-round impressive rise in industrial production, except in cloth. This is so, because annual cloth production by textile mills has been restricted by the Government at the level of 5,000 million yards. (This policy has since proved to be short-sighted but is still being continued.) The output of agricultural commodities also shows a marked increase. Annual production of rice, wheat, jute and cotton has risen by almost 50 per cent. during the nine years beginning 1951, as will be evident from the following table:

(000 tons)

	1951	1956	1959
Rice	20,300	26,800	29,721
Wheat	6,400	8,600	9,694
Groundnut ..	3,430	3,860	4,812
Gram	3,600	5,300	6,826
Cotton*	2,910	4,000	4,704
Jute*	3,280	4,200	5,158

* Thousand bales of 400 lbs. each gross.

The production of these important agricultural commodities in 1959 was, however, lower than in 1958 and results for 1960 are again unsatisfactory, with foodgrains alone being the exception. The output in the agricultural sector seems to have stagnated at the current levels.

In the period under review (1952-60 both inclusive), the quantity of money in circulation has increased by 65.6 per cent., from Rs. 1,141.11 crores to Rs. 1,883.59 crores. This apparently compares reasonably well with the increase of 72 per cent. in the general industrial production index number, but is hopelessly unfavourable in relation to the (about) 50 per cent. increase in the output of principal agricultural commodities, especially when viewed against an increase of 16 per cent. in the population in the last nine years. The enormous population growth has, naturally, substantially neutralised the advantage gained by the increased production in both agricultural and industrial sectors. The resultant rise of 20 per cent. in the wholesale price index within this period is, therefore, understandable. It was, indeed, inevitable.

Differing Approaches

Notwithstanding the increases in our production, prices, in general, have been going up without respite. Since 1956, the wholesale prices have risen by about 23 per cent. and this rise is mainly due to the increase in prices of foodgrains. Events in the past few years have clearly established that high prices of foodgrains alone can cause a great imbalance in the economy. They have also shown that production in the agricultural sector has fallen far short of requirements. The foodgrains production target of 80.4 million tons, for example, in the second Five-year Plan has simply remained unattained. The industrial sector, on the other hand, has achieved greater success and production in many cases has almost reached the planned targets. Despite this, prices have been moving upwards, because demand has been running ahead of supply. In the field of agricultural production, India certainly could do better by more discreet utilisation of capital and labour and by a proper approach to the price policy. There seems to be some defect in our policy that makes ineffective all attempts at increasing the output in this sector. The price control policy in regard to a commodity is a factor that has an important say in the quantum of production, as price is a major consideration a cultivator will weigh in his mind. Imposition of a price schedule, laying down maximum rates at which agricultural commodities could be marketed, in an endeavour forcibly to keep prices low, could bring about an adverse effect on the drive for its greater production.

There is a significant difference in the approach in regard to price controls on agricultural commodities and on industrial manufactures. The output of foodgrains, cotton and oilseeds, for example, cannot be precisely ascertained in advance particularly as the unpredictable nature is a great element of uncertainty in the calculations. While maintenance of minimum support price level, as a measure of protection to growers, should be the proper approach, it is not a sound policy to attempt to enforce a price schedule limiting the maximum price of a commodity, the output of which cannot be predetermined. The production of industrial manufactures, on the contrary, can be anticipated with great accuracy, as the planning of all factors of production can be based on a large number of ascertained facts. Unlike agricultural production, the output in the industrial sector can be varied as circumstances require. Great uniformity in the price control policy cannot, therefore, be expected in economic development and hence generalisations should be made with caution.

Principal Objectives

The essential objective is to attain higher production in every sphere and to do it as quickly as possible, so as to be able to counter the inflationary forces. To achieve this end, positive measures must be adopted, by marshalling every factor that could contribute to increased production. More output and still more output alone can be effective in halting the corrosion of the economic system by inflation. We have examples of the methods adopted for the purpose of achieving a manifold increase in agricultural production in the United States and Russia. Both the countries have extensively mechanised farming and, while America increased its agricultural production enormously through a policy of strong price support to farmers, combined with a free market for agricultural commodities, Russia has achieved brilliant results through collectivisation and State farms. In India, a vigorous drive for increased productivity shall have to be through either of the above processes, since no third method could serve our purpose. It would mean tremendous acceleration of efforts in every direction, if we are to accept the first of the two approaches, which is the only one suited to the democratic set up of this country. Any direct price control policy, if put into action at this stage, will amount to introducing a negative force in the field which will tend to slow down the pace of growth in agricultural production. Such contradictory steps must, therefore, be avoided. Complete freedom from price restrictions is bound to act as a tremendous boost to production activity. When production increases rapidly, prices could be maintained stable at reasonable levels under immensely healthy conditions. This method of holding the price line must be preferred to the negative approach of direct controls by imposing ceiling price schedules. Such measures as movement control, improved means of distribution, an anti-hoarding law and a proper import policy can, however, be had as indirect price stabilisers whenever prices show an unduly upward trend. As a matter of fact, such measures have twin advantages: first, they will keep prices under check and, secondly, they will give the grower a free market which, in turn, will act as a stimulant for increasing production.

Efficacy in Doubt

There has been a perpetual dispute as to the line to be drawn between the proper sphere of Government action and that to be left to natural free play in the matter of commodity prices. There is no prejudice against Government regulations. People have become less hostile to Government actions in various forms. But the belief in the efficacy of regulations has declined. Unrestricted competitive price patterns, if allowed to function under the overall supervision of the Government, that is, with a minimum of directional controls, would certainly act as a great production intensifier. Price restriction of any form dampens enthusiasm and hampers the vigorous drive for higher output of both agricultural commodities and industrial manufactures. The aim is to achieve abundance and therefore all inducements must be provided to reach that stage. Inflation can only be checked by rapidly increasing the production and supply. Direct price control measures may hold the price level for a while, but it will certainly not be conducive to reaching the high production targets, particularly for the agricultural sector, set in the draft third Plan.

NEPAL BANK LIMITED

(Incorporated under Nepal Bank Act of 1994 (Sambat))

Central Office: KATHMANDU, NEPAL

Authorised Capital .. .. ..N.C. Rs. 1 crore
Paid-up Capital .. .. ..N.C. Rs. 25 lacs

4 per cent MAHARASHTRA STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE AT PAR

OPEN ON THE 29th AUGUST 1960

The loan will be closed as soon as total of approximately Rs. 1,000 lakhs has been subscribed and in any case not later than the close of business on the 3rd September 1960.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore,

(b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below,

(c) the branches and Treasury pay offices of the State Bank of Hyderabad within the State of Maharashtra,

(d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury pay office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

THIRD PLAN VIEWED AGAINST FIRST TWO PLANS

A BIRD'S-EYE VIEW OF THE DRAFT OUTLINE

By Prof. S. Kesava Iyengar

IT would require quite a volume to express one's reactions to the Draft Third Plan just published, but a few points are enumerated here with the object of provoking public thought. The draft has been presented as a tentative proposal, and more than six months are allowed for study, discussion and opinion both at home and abroad. This marks a healthy change from previous experience, when the first and second Plan-frames were released for the first time but in finality. At this juncture, it may be appropriate to recapitulate a few highlights from 1951-52 onward. The population which was 361.8 million in 1951 rose to 391.4 million by March 1956, and to 415.0 million by the end of 1958-59. By March 1961, the population is expected to increase to 434 million and to 480 million by 1965-66. The annual rate of increase, which was 1.9 per cent. of late, is calculated to stand at 2.14 per cent. in the near future.

Ambitious Targets

On achievements and targets, the Draft Third Plan is decidedly a rosy picture, but the thorns have been belittled. It has been claimed that the national income rose by 3.5 per cent. and 4 per cent. during the first and second Plan periods and the target is 28 per cent. for the five years of the third Plan, yielding an annual average of 5.6 per cent. These figures are, of course, based on data presented by the Central Statistical Organisation, but, when placed side by side with corresponding figures for the U.S.A. and Britain, a sceptic feeling becomes unavoidable. Colin Clark recently estimated that the annual average increase in levels of living in Britain was 1.3 per cent. and in the U.S.A. 2.3. Even according to published figures, Gross National Product and National Income in real terms rose, respectively, in recent years at 4.2 per cent. in the U.S.A. and 2.5 per cent. in Britain. Even optimists in the U.S.A. hope for increasing the rate from 2.3 to 4 per cent. only. The Draft envisages an increase in domestic savings from 8 to 11 per cent. and investment from 14 to 17 per cent. With regard to targets, it is all hyperbole: the following extract very much lowers the sense of responsibility of the Planning authorities:

"The Third Plan proposals envisage the extension of the community projects and co-operative movement to cover all the villages in the country; free and compulsory education for all children in the 6-11 years age group and the provision of minimum amenities to all rural areas including drinking water, roads linking each village to the nearest main road or railway station and a village school building which may also serve as a community centre and provide facilities for the village library."

All this is wishful thinking which should have no place in techniques of planning. The food prospect is no better than during the second Plan period, depending substantially on imports, internal movement controls, procurement and the antics of the State Trading Corporation. And yet, Mr. S. K. Patil is dogmatic about self-sufficiency in foodgrains by 1965-66! Other targets for the third Plan are provisionally put at 100-105 million tons foodgrains (about 30 million tons more per annum as compared with 1958-59). 19 million acres of additional irrigation, 11.8 million kw. of power, 90 million tons of coal, 8.9 million tons of finished steel, 1.5 million tons of pig iron, 1.5 million tons of chemical fertilisers, 2,000 additional miles of railways, 22,000 miles of surfaced roads, 1 lakh of automobiles and creation of additional employment for 13.5 million workers. Like the proverbial schoolboy, handing over to his elder brother a ten-rupee note and asking him to buy for him a motor bicycle and some good chocolates for the balance, the Planning Commission has projected 100 per cent. targets to be hit by 1965-66, and it is extremely humiliating that such impossible targets should have been aired for the consumption of ignorant nationals and critical foreigners.

Cost Inflation

In spite of declarations by Union Ministers, the indices of wholesale prices and cost of living are shooting up, and the third Plan targets of resources and outlay might accelerate the misery of lower middle and poor classes, through a further progressive depreciation in the value of the rupee. It is common knowledge that, during the last five years, both these indices have been going up on the average at 5 per cent. per annum: the general strike by a section of Central Government employees was due much more to the pinch of hunger than to communist inspiration. If only the Planning Commission cares to study similar indices in the U.S.A., West Germany and Britain, they are bound to admit that they have been admiring pinnacles in the air without due attention to foundations.

Financial and Administrative Devolution

It is a paradox that, while Central organisations are exercising dictatorial sovereignty, and village *panchayats* are proposed to be entrusted with financial and administrative powers, State Governments and State Legislatures continue to decorate the caravan as dummies: there is not even a hint about devolution of powers in their favour against the background of conventions that have grown up depriving the State units of any initiative or judgment. It is very strange that State Cabinets and Legislators are oblivious of this anomaly, but the explanation is that these authorities hang on the High Command for their present and prospective positions.

Resources

Table I below shows details with regard to original and revised estimates as also actual resources realised in the first and second Plan periods and expected resources for the third Plan. In the public sector, balance from current revenue (Central and States) was Rs. 574 crores, as against the original estimate of Rs. 570 crores during the first Plan period. In the second Plan, the original estimate was Rs. 1,200 crores but there is expected to be a shortfall of Rs. 300 crores, while the third Plan budgeted resources under this head are Rs. 2,000 crores (more than double the second Plan realisations)! This high target, if realised, is bound to result in less private investment and a downgrading in the real standard of life among the masses.

With regard to loans from the public and small savings, actual receipts during the first Plan period (Rs. 508 crores) proved larger than the original estimates (Rs. 385 crores). On the other hand, the second Plan estimate was Rs. 1,200 crores, while the actual realisation may be Rs. 1,170 crores. For the third Plan, loans are put at Rs. 850 crores and small savings at Rs. 550 crores, making a total of Rs. 1,400 crores. This estimate is quite modest, in the light of second Plan achievements. Railways contribution which was Rs. 115 crores in the first Plan and Rs. 130 crores in the first four years of the second Plan (1956-60), is put at Rs. 150 crores for the third Plan. Yield from other public enterprises is classed separately for the first time in the third Plan figures, at Rs. 440 crores. This may prove an ambitious estimate, because most of the public enterprises are still in their infant stage, requiring the bulk of profits to be ploughed back for the purpose of reinforcement. Provident fund and other like funds yielded only Rs. 80 crores in the first Plan, Rs. 78 crores in 1956-60, and the target for the third Plan has been fixed at Rs. 510 crores. To some extent, this comparatively high target may be justified on account of the nationalisation of life insurance and rapid expansion of provident fund and other funds, but actually it may result in erring on the high side.

Foreign aid did not play a prominent part in the first Plan, the actual figure having been Rs. 203 crores as against a target of Rs. 521 crores. But, in the second Plan, there was a substantial rise from Rs. 800 crores (target) to Rs. 982 crores. For the third Plan, the estimate is Rs. 2,200 crores. As the Franks Commission opined that more than Rs. 3,000 crores worth of foreign investment and aid could be reasonably expected (including the private sector), the Planning Commission's estimate of foreign aid is on the low side. This under-estimate has led to a provision of only Rs. 550 crores from deficit finance. As compared with foreign aid, deficit financing on a sizable scale will be risky, although this head had proved useful to some extent, in the past 10 years. During the first Plan, deficit finance was of the order of Rs. 532 crores as against the provision of Rs. 290 crores, the corresponding figures for the second Plan standing at Rs. 1,245 crores for the first four years and Rs. 1,200 crores, respectively.

The total figures pertaining to the first Plan show actual resources raised at Rs. 2,012 crores, as against the original figure of Rs. 2,069 crores. In the second Plan, there is expected to be a shortfall from Rs. 4,800 crores to Rs. 4,500 crores (revised) and Rs. 4,600 crores (actuals). From Rs. 2,012 crores to Rs. 4,600 crores and on to Rs. 7,250 crores cannot by any standards be considered as precipitous, and, with the very promising climate for foreign aid, actual resources for the third Plan may prove more than Rs. 11,250 crores and there may not be any need at all for deficit finance.

Outlay by Private Sector

The private sector was not allotted any any particular outlay during the first Plan, but allocated Rs. 2,400 crores for the second Plan period. For the third Plan, the private sector is provisionally allotted Rs. 4,000 crores, details of which are:

	(Rs. in crores)
Industry and minerals	1,000
Transport and communications and power	250
Village and small industries	275
Urban and rural housing	1,075
Inventories	600

The most important characteristic of the Draft is the definite and secure place for the private sector in the Indian economy. Rs. 4,000 crores allotted for the private sector is rather small, in view of the fact that the outlay in the private sector was Rs. 3,100 crores in the second Plan period, as against a target of Rs. 2,400 crores. At least, Rs. 5,000 crores should be earmarked for the private sector. The difficulty, however, will be that, through small savings, taxation and market loans, the public sector will sweep in practically all genuine savings, leaving the capital market fairly empty for the *entrepreneur*. One redeeming feature, however, is that Rs. 200 crores are proposed to be loaned out by the public to the private sector for the purpose of capital formation. The Plan is proposed to be over-officialised by the public sector, covering agriculture, community development, hand and small industries and road transport: this must lead to a considerable amount of confusion and overlapping, if not authoritarian rule.

Outlay by Public Sector

Table II in previous page summarises the Plan outlay on different heads of development, actual and proposed, during the three Plan periods. So far as agriculture is concerned, expenditure during the first four years of the second Plan 1956-60 has been Rs. 419 crores against the total provision of Rs. 568 crores for five years. This is not at all satisfactory. The present price spiral is mostly due to inadequate agricultural production which, in turn, has been the result of over-officialdom and lack of touch with the actual cultivating population. It is reported that the Ministry of Food and Agriculture made a minimum demand of Rs. 1,000 crores for the third Plan, but the proposed allocation is only Rs. 625 crores for agricultural programmes. The proposed outlay of Rs. 800 crores in the private sector is obviously confined to organised agriculture.

With regard to irrigation and power, from Rs. 585 crores in the first Plan to Rs. 666 crores in the four years of the second Plan and on to Rs. 1,575 crores connotes good progress, but, on account of the absence of development schemes, Government and private, the problem of unutilised water and installed capacity for electricity is bound to become more serious in the near future. The solution lies in mechanising agriculture and import of foreign capital for developing numerous industries capable of consuming electric energy.

Village and small industries cannot possibly be organised and managed by Government, and the speedy increase of expenditure from Rs. 44 crores in the first Plan to Rs. 146 crores in the first four years of the second Plan inevitably resulted in spoon-feeding and bad debt. Under this head, the allocation for the third Plan is Rs. 280 crores in the public sector and Rs. 275 crores in the private sector. Rather, the total of Rs. 525 crores ought to have been earmarked for the private sector only, particularly in view of the dangers of technological stagnation.

The first Plan gave a minor place to industry, with an actual outlay of Rs. 56 crores in the public sector against a provision of Rs. 138 crores, but outlay under this head exploded to Rs. 725 crores during 1956-60 of the second Plan period, the core of the Plan having been raised by Rs. 100 crores from the revised estimate, which showed an overall reduction of Rs. 300 crores from the original second Plan outlay. The proposed outlay for the third Plan is Rs. 1,500 crores and indicates the over-emphasis on heavy industrialisation which takes time to add to national income. It is very strange that, while under agriculture and community development, the outlay in the second Plan was transferred to Part B to the extent of Rs. 58 crores, the allocation under industry was raised by Rs. 100 crores.

Outlay on transport and communications was Rs. 532 crores during the first Plan period, is estimated at Rs. 1,062 crores during 1956-60, and the third Plan allocation is proposed at Rs. 1,450 crores. Progress of the second Plan outlay under this head has been satisfactory, in view of the wide area of the country and needs of economic development.

The mania for heavy industrialisation continues. In the third Plan, an additional allot-

UNIVERSAL FIRE AND GENERAL INSURANCE COMPANY, LIMITED

CHAIRMAN, MR. P. U. PATEL, REVIEWS COMPANY'S PROGRESS

ADDRESSING the Fortieth Annual General Meeting of the Company, held at Bombay on 30th July, 1960, Mr. P. U. Patel, Chairman, deplored the tendency of the Government to show pronounced partiality to Government-controlled companies in the matter of sharing of the business of the Insurance Companies' Pool. He said that such gross discrimination, which had been considerably agitating the minds of insurance executives in the private sector, could not inspire confidence in the future of insurance in the country. Mr. Patel regretted that certain concrete suggestions put forward for improving the general tone of the market did not find favour with the Executive Committee of the General Insurance Council.

The following are the extracts from Mr. Patel's statement:

"GENTLEMEN,

"To start with, I am indeed happy that, on this, the fortieth anniversary of the Company, we are able to present you a balance-sheet which must be considered satisfactory, viewed from any angle you like. For one thing, we have written in 1959 a larger net premium income than in any other previous year. My only regret is that we just missed the Rs. 40-lakh mark in our fortieth year. Secondly, the Directors have found it possible to recommend a gross dividend of 20 per cent., that is, Re. 1.40 nP net per share, for your approval. This is also an all-time record. Let me add that all this has been accomplished after increasing our departmental reserves by Rs. 2,40,000 and odd on the one hand and also after providing for and writing off bad debts to the tune of Rs. 77,941.86 nP. As an indication of the progress made by the Company during the past 10 years, may I mention that our departmental reserves, as at 31st December 1959, amounted to Rs. 20,34,960.95 nP, as against only Rs. 6,40,540.27 at the end of 1949?

"Our fire department, as usual, has disclosed a satisfactory profit. The net premium income also went up from Rs. 22,19,872.69 nP to Rs. 25,60,432.98 nP during the year. Unfortunately, our claims experience in the accident and miscellaneous departments worsened still further despite our fairly selective underwriting. Almost all the insurers are facing increased difficulties in this particular department because of higher costs of repairs, increasing claims-consciousness on the part of the insuring public and the growing tendency to prefer huge claims even for a comparatively insignificant damage to the person or property of third parties. What is worse, it is nowadays extremely easy for most people to file a petition in *Forma Pauperis* merely with a view to extracting as large a sum of money as possible, from the unfortunate insurer. I am not certain whether even a further increase in rates of premium would be of any substantial help in this particular department. Experience, the world over, points to the fact that the insuring public has a knack of getting back via claims, at least what they pay in the shape of increased premiums.

"Taking an over-all view, I am inclined to feel that we have acquitted ourselves fairly well in 1959. You may perhaps want me to express an opinion about 1960. While I do not know whether I can indulge in any prophecy at this stage, I would like to remind you of the further substantial reduction in fire premium rates which has taken effect as from 1st January 1960. The Tariff Committee had to agree to this reduction with a good deal of reluctance. Being myself a member of the Tariff Committee, I prefer not to offer any further comments in this connection.

"The rates for commercial vehicles are likely to be stepped up in the near future. But I doubt very much whether any such increase will bring us any substantial relief.

"I must also mention that, as per reports received so far, the British home business has gone very bad this year because of several huge fires and all of us who have intimate connections with the British market, are naturally worried on this account.

"Speaking at the annual general meeting in September 1957, I had mentioned that Government had then decided that 50 per cent. of the insurance business written by the Indian Insurance Companies' Association Pool would go to the Government-controlled companies, as from the 1st January 1957. As from April last, the share of the Government-controlled companies has been further increased to 75 per cent. and only the balance of 25 per cent. is to be shared amongst the insurers in the private sector. The same has been the case in regard to the Aviation Pool. There also, the share of Government-controlled companies has been increased to 75 per cent. Developments such as these have disturbed insurance executives in the private sector quite a lot. But we are helpless in the matter. The pronounced partiality for companies in the public sector cannot make for confidence in the future. The writing on the wall is there for anyone who cares to read it.

"Some time back, certain concrete and healthy suggestions were put forward for improving the general tone of the market. It is most unfortunate that these suggestions were not acceptable to the Executive Committee. What has only happened is that there has been a sort of patching-up according to certain preconceived notions. This has happened very often in the past and has led us nowhere. One does not know how long things will be permitted to keep on drifting in this manner. There is at least no immediate relief in sight."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Excellent cutting performance

SAP HACKSAWS

HACKSAW BLADES

Manufactured from high quality steel. They can be used for cutting all types of steel, brass, copper, aluminium, plastics etc.

STEEL ALLIED PRODUCTS LTD.
17, BRABOURNE ROAD, CALCUTTA-1

Sole Selling Agents:
VULCAN TRADING COMPANY (PRIVATE) LTD.

PROTECTION TO WOOD SCREW INDUSTRY WITHDRAWN

OUTPUT LAGS BEHIND DEMAND

THE 13-year period of tariff protection which the wood screw industry has enjoyed will come to an end on 31st December 1960. This follows the Government's acceptance of the Tariff Commission's report on the industry's case for protection. The present protective duty is 35 per cent. *ad valorem* or 35 nP per gross, whichever is higher. The Tariff Commission, in the course of its report recommending the withdrawal of protection to the industry, has, however, suggested that the Government may impose revenue duty at such level as it deems necessary for fiscal purposes, keeping in view the consideration that a common fastener of this type used in a number of industries should attract a low rate of duty.

At its last enquiry (1957), the Tariff Commission had estimated the demand for wood screws at 8 million gross (or about 3,650 tons) and expected that it would increase to 12 million gross (or about 5,450 tons) per year by 1960. At the present enquiry, the estimates of demand received by the Commission vary from 8.5 to 12 million gross for the year 1960 and from 11.4 to 16 million gross for 1963. The Development Wing places the demand in 1960 at 12 million gross, which, according to it, will increase by one million gross a year. It has, however, observed that it is not possible to estimate precisely the demand for a consumer item like wood screws. At the enquiry, it was generally agreed that it was not possible to make an accurate estimate of future demand which would depend on the growth of several consuming industries, notably building, furniture, and cabinet-making; no forecast of their growth was possible at this stage. The conclusion reached was that it would not be far wrong to place the demand for 1960 at 11 million gross. As regards the future, the Commission anticipates the demand to grow at the rate of at least one million gross per annum and reach a minimum of 14 million gross in 1963.

At present, the number of organised wood screw producing units, registered with the Development Wing, is 23. Their total capacity at the end of 1959 was 7.78 million gross (single-shift basis). Actual production in 1959 was 8.91 million gross, as against 6.79 million gross in the previous year. Besides these units, there are about 28 small-scale units, the production of which is placed at about one million gross. Taking the two sectors together, the total capacity on single-shift basis works out to about 9 million gross per year and production in 1959 to about 9.90 million gross, as against 7.66 million gross in 1958. As the domestic demand has not yet been met in full and the demand itself is likely to rise considerably in future years and as there is risk of quality going down for want of competition, the Commission has suggested that the Government might review the position and permit further expansion of existing units or establishment of new units.

Diversification

A notable trend in the industry is the attempts that are being made towards diversification of production. The Southern Industrial Corporation, which has already started producing Dowell screws, has plans for the manufacture of round head, Philips recess and electro-plated wood screws of various types. Guest, Keen, Williams Ltd. is equipped to make Dowell screws; it has plans for manufacturing galvanised cone head roofing wood screws. Jagjit Engineering Works has the equipment for producing all types of wood screws; it is prepared to undertake their manufacture, provided orders for reasonable quantities are placed with it.

Besides such consumable stores as high speed cutting steel, alloy steel and V.P.I. packing paper—all these three items are imported from abroad—lubricants and mill stores, the chief raw material for wood screws is hard bright mild steel wire. Manufacturers of wood screws obtain their supplies in the form of either wires or wire rods. Those who get their supplies in the shape of rods have their own arrangements for drawing them into wires. The Indian Steel and Wire Products Ltd., Jamshedpur, continues to be the principal supplier of steel wire to the wood screw industry. This unit has been granted licence for expansion of its capacity to 160,000 tons a year for wire rods and 75,000 tons a year for wire and wire products; the new capacity is expected to go into production in 1961. The National Rolling and Steel Ropes Ltd., which has a capacity to produce 250 tons of steel wires per month, utilises the major part of its capacity for the manufacture of rope wires; only a part of its capacity is used for the manufacture of mild steel wire rods and wires of tested or untested quality. The Government has licensed a few units for the manufacture of mild steel wires.

Raw Materials

The wood screw manufacturers continue to complain of shortage of raw materials and delayed deliveries. In the context of increased supply of billets to them, the wire manufacturers should be able to meet more fully and expeditiously the demand for raw materials by the screw manufacturers. Again, wood screw manufacturers are generally satisfied with the quality of wires and wire rods supplied by the Indian Steel and Wire Products Ltd. As regards supplies of wires and wire rods by the National Rolling and Steel Ropes Ltd., there was a general complaint that they were not properly drawn and that they snapped during drawing. The Commission recommends that the Company should take early steps to improve the quality of their rods and wires.

The Commission's recommendation for ending protection to the industry is based on its findings that the landed costs, ex-duty, of imported wood screws are higher than the fair ex-works prices of indigenous screws and that the margin in favour of the industry, after allowing for 10 per cent. return on capital employed, is of the order of 15.4 per cent. to 19.4 per cent. In addition, it is protected by severe restriction on imports. Considering the present balance of payments position, the Commission does not foresee any possibility of import control being so liberalised in the near future as to jeopardise the interests of domestic industry. The Commission has, however, impressed on the manufacturers that they should improve the quality of their products. A few consumers have pointed out that "some of the supplies received by them have been made from inferior quality of materials, causing the screw head to be sheared off when the screw is tightened, the gimlet point was not sharp, the threads were shallow and the heads and slots were not properly formed." The Commission is convinced that, in the absence of competition, there is little incentive for manufacturers to improve the quality of their product. It adds: "This is an unfortunate development and we impressed on the representatives of the industry who attended the public enquiry the importance of adopting quality control measures in their factories." It urges the Development Wing to arrange, in consultation with the Director General of Supplies and Disposals and the Development Commissioner for Small-scale Industries, for periodical inspection of screw factories and classify them with regard to the quality of their products.

RADIOISOTOPES IN MEDICINE

On 2nd August 1946, the first shipment of radioisotopes for medical purposes was made by the U.S. Atomic Energy Commission (A.E.C.). Fourteen years later, just what has been the effect of these new substances on the practice of medicine? How often and in what ways have they been used? Where? By whom? And what are the indications for future use?

The Office of Isotopes Development of the A.E.C. sponsored a search for answers to these and other questions regarding medical usage of radioisotopes. The investigation, conducted by nuclear industrial economist Richard R. Tarrice and senior health economist Mark S. Blumberg, M.D., under the auspices of the Stanford Research Institute, California, lasted one year and took the project team into hospitals, clinics, laboratories, and physicians' offices across the nation.

In general, they found that the use of radioisotopes in medicine has become widespread. About 400,000 administrations are given to humans annually; 85 per cent. of these are for diagnosis. Twenty different isotopes are used, with radioiodine being by far the most common. Others commonly used include radiophosphorus, cobalt 60, and chromium 51.

An average of three out of every 1,000 patients in clinics or hospitals undergo some type of diagnosis or therapy involving radioisotopes. This is about the same number as those who have fractures, appendectomies, or hernia repair. The number is more obviously significant when one considers that radioisotopes are chiefly used for relatively infrequent conditions—endocrine disorders and cancer.

Over 1,000 general hospitals in the United States offer radioisotope services, and they are also used in clinics and physicians' offices. At present, over 40 per cent. of hospitalised persons are in institutions offering these services.

These numbers should grow. A fairly comprehensive clinical radioisotope programme can be equipped for $7,000 to $10,000, which is within the range of most institutions that could make practical use of a programme. Therefore, the number of institutions using radioisotopes may well triple by 1965. Further, the number of physicians trained to use these still-new tools could increase as much as fivefold in the next ten years.

The study also considered cobalt 60 teletherapy units. It was found that such units or supervoltage X-ray units are located in medical service areas that contain two-thirds of the radiation specialists and over half the population. Projections on the number of units likely to be used in the future were made on the basis of cancer and population trends.

About 300 institutions are carrying on medical research with radioisotopes. Some 2,000 separate projects, using well over 100 different isotopes, are in progress. This represents over ten per cent. of all health research projects in the United States supported by the Federal Government or national foundations.

The coming trends in radioisotopes cannot be predicted with precision, because (1) there are no historical trends to analyse, and (2) any of a number of possible future applications could grow to exceed all current uses. However, the project team noted that the volume in the United States of current uses alone could grow to 700,000 administrations a year, if urban use-rate of isotopes were to become standard for the nation as a whole. Research in the field should also increase, leading to new uses.

Current health research investigations show potential applications in conditions far more frequently encountered than those providing bases for current applications. For example, studies of insulin metabolism using radioisotope-tagged insulin may provide important clinical data on diabetes. *In vitro* tests with radioisotopes are being studied for determining immunity to various contagious diseases, and these might find wide application for children. Or, another example, tests with radioisotopes may contribute to diagnosis of certain mental illnesses associated with metabolic disorders. If only one of these were to find acceptance, considerably more than 700,000 annual administrations might well be expected in coming years.

LOCOMOTIVES AND COACHES

The view that, on the Indian railways, the steam locomotive was likely to retain its "dominating position for a long time to come" was expressed by Mr. Karnail Singh, Chairman, Railway Board, in the course of a broadcast talk last week from New Delhi. The Indian railways have now over 10,000 locomotives. Approximately, 62 out of every 100 locomotives are broad-gauge, another 34 are metre-gauge and only four are narrow-gauge.

In replacement of worn-out engines and for additional traffic, Mr. Karnail Singh said, 250 steam locomotives would be required every year. All these locomotives were being produced in India. He said: "It is a matter of very great satisfaction to be able to say so, particularly if one remembers that only a decade ago India was not able to produce even an odd locomotive and yet was maintaining a fleet of 8,000 to 9,000 of them, each costing Rs. 5 lakhs or more. What a large sum of India's money must thus have been exported over a century of railway working in India!" In the Chittaranjan factory, according to Mr. Karnail Singh, locomotives were being turned out at the rate of 200 units per year. The factory was concentrating on the manufacture of heavy WG locomotives, each weighing 125 tons and capable of hauling a 2,000-ton heavy train at a speed of 35 miles an hour. On 16th April last, the factory delivered its 1,000th locomotive. The cost of production of a heavy WG locomotive in the factory was Rs. 4,80,000, or Rs. 50,000 less than the world price for a similar locomotive.

As regards coaches, Mr. Karnail Singh said there were now in use 40,000 coaches, in terms of four-wheelers; their price varied from Rs. 30,000 for a broad-gauge four-wheeler to Rs. 3 lakhs for an air-conditioned coach. There were wooden body coaches on steel underframes, steel body coaches on steel underframes and steel body coaches of the integral type without any underframe. In the integral type of coaches, which were now being produced in the Integral Coach Factory in Madras, at the rate of 41 per month, the main structure was a rectangular tube of a big size; the roof, side walls and floor formed an integrated tubular structure. Over 1,000 integral type coaches were now in use on the Indian railways. As compared with the conventional coach, which weighed 42 tons and carried 76 passengers, the integral type coach weighed 36 tons and carried 80 passengers. Mr. Karnail Singh observed that, with the rising cost of timber, its shorter life in usage, heavier cost of maintenance and greater liability to destruction in an accident, the use of wooden coaches was being progressively eliminated; they were being replaced by integral type coaches.

In conclusion, Mr. Karnail Singh said that, besides attaining self-sufficiency in the production of locomotives and coaches for all their requirements, the Indian railways had now capacity to assist the neighbouring countries in meeting the requirements of these two types of rolling stocks. They were also in a position to supply wagons for goods traffic and such articles of railway equipment as train lighting units, signalling equipment, cast iron sleepers and railway girders.

MEASURING THE SMALLEST WORLD

A hair's breadth used to be considered a pretty small distance. But engineers at Stanford Research Institute have designed and constructed a micro-manipulator that can move a point for a distance of about 34 Angstrom units, about one ten-millionth of an inch. One Angstrom unit equals approximately the diameter of an atom and compares with a hair's breadth.

The reason for development of the micro-manipulator is tied in with the studies of electronic micro-elements. These micro-elements—of which, theoretically, there can be 100 billion in a cubic inch—function as tiny electron tubes. In the usual tube, as found in home radios, electrons are emitted to complete a circuit by applying heat to a metal strip. In other words, the electrons are "boiled off," like steam from boiling water. However, at the unimaginably small size of the electron tubes in this study, heat could not be applied and adequately controlled. Therefore, another approach, called field emission, is contemplated. Here the electrons are drawn from the emitter by application of a high electrical field. The smaller the point of the emitter, the less electrical potential necessary to cause electron emission. Consequently, the micro-tubes proposed offer an excellent situation in which to try field emission.

Research engineer W. W. Hansen and his co-workers in the Stanford Research Institute are studying the characteristics of field emission under sponsorship of the U.S. Army Signal Research and Development Laboratory. They are particularly interested in determining the geometrical patterns produced by electron trajectories and the optimum conditions for operation of such minute field emission devices. They also are testing various materials for use in the tiny tubes.

The micro-manipulator was designed for the study. Three pairs of coarse- and fine-adjustment micrometers are arranged to work against cantilevers, so that the emitter tip can be displaced in three dimensions. The tip itself is enclosed in an ultra-vacuum chamber, its position can be adjusted by 34 Angstrom units. This is considerably smaller than the most sensitive optical microscope can detect—and is far less than a hair's breadth.

UTILITY AIRPLANE

A new airplane scheduled for production in Italy, Mexico and Argentina has successfully completed its first demonstrations in the United States. Designated the Lockheed *Lasa 60*, the new craft is heavy-duty single-engine utility transport for passenger, cargo, agricultural and ambulance use. Col. Alfonso Gandarilla, Chief Pilot of Lockheed-Azcarats S.A., the Lockheed affiliate in Mexico which will first produce the airplane at San Luis Potosi, flew the Model 60 on the first flight of a three-day demonstration programme in Burbank. Its appearance in the United States was part of a 25-city tour of north-western Mexico and California. The local showing was arranged by Lockheed Aircraft International, with headquarters in Los Angeles. Besides being built in the Mexican factory, the Model 60 also will be produced in Argentina and Italy. Aeronautica Macchi of Milan already is tooling up for production of the 165-m.p.h. airplane in Varese Avionos Lockheed-Kaiser S.A., a joint venture of Kaiser Industries and Lockheed interests in Argentina, will manufacture the airplane in Cordoba, about 400 miles from Buenos Aires. "Because this new airplane features simplicity of design and low cost dependability, it will also prove useful in Alaska, Canada and the United States," Col. Gandarilla said. He added: "It is a natural 'bush pilot's airplane' with high-lift wing and rugged tricycle gear that are ideal for North Country flying requirements."

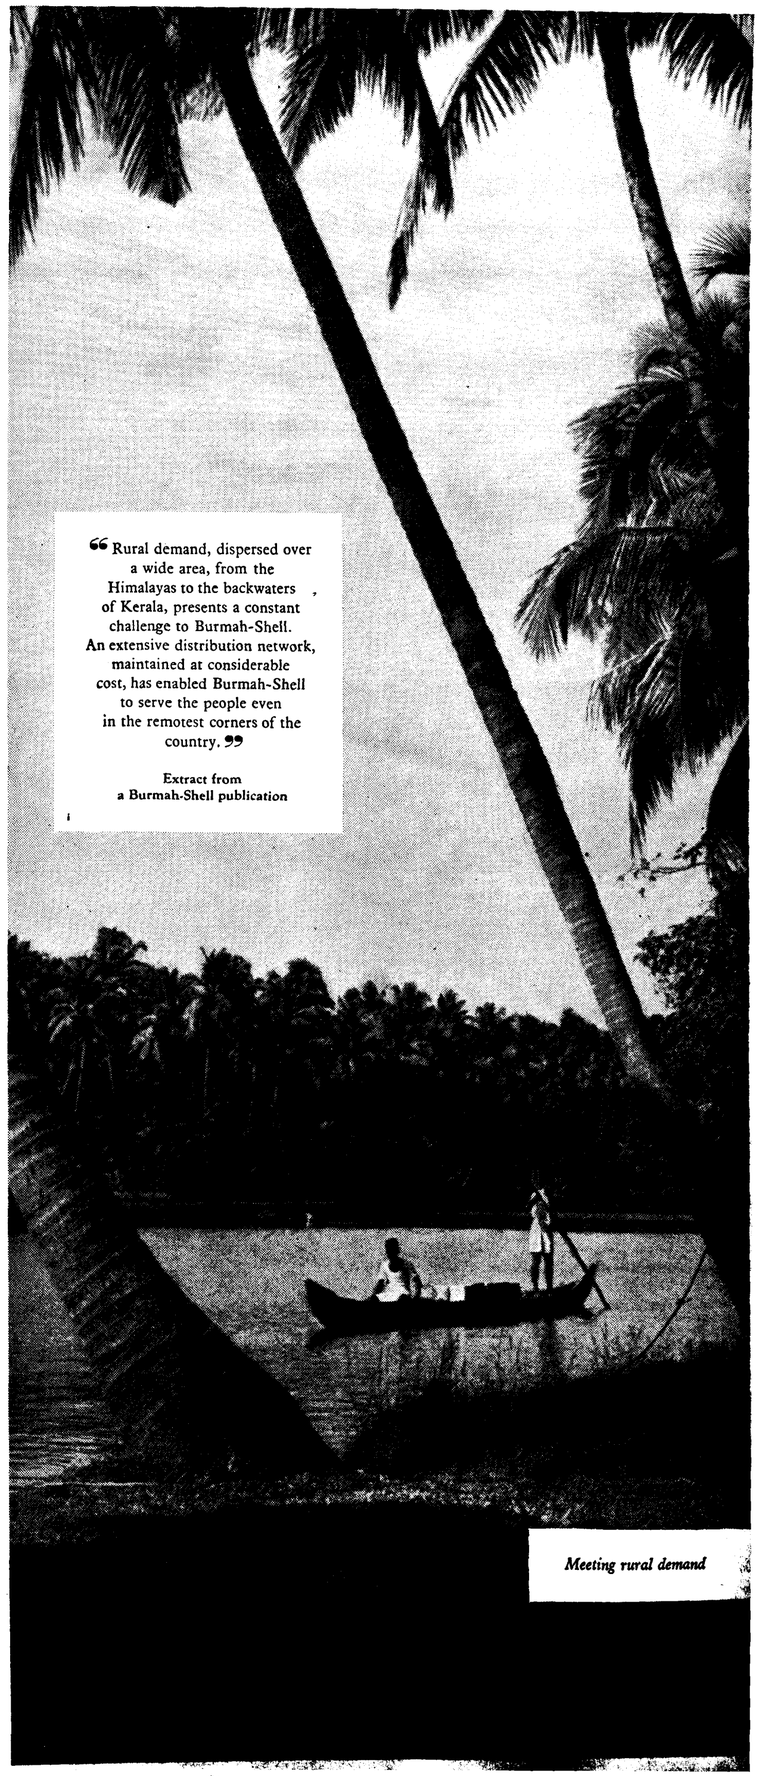
First deliveries for North America are scheduled for next January. While exact prices have not yet been established, it is expected to sell for approximately $22,000. The Lockheed Model 60, it is stated, is the only single-engine craft of new design that can carry up to 1,500 pounds of useful load—with seating for six people. Alternatively it can be used as a 1,000-pound cargo carrier, a two-patient ambulance with attendant, or as a crop-dusting or spraying airplane. It can be fitted with skis or floats.

FRENCH DESIGNS FOR SILOS

The importance of providing storage facilities for grain has induced engineers all over the world to devote their attention to the research on the subject of construction of silos. French engineers have now evolved and presented designs for polygonal steel silos. The bins forming these silos are octogonal or quadratic, with the former consisting of eight panels of variable height and width and the latter of four panels with a width of 13¾ feet and of variable height. Each panel is prefabricated from sheet-steel, with specially calculated ribbed profiles for maximum resistance to pressure on both faces. The silos increase the ultimate strength of the panels and appreciably decrease the wear from friction. The greater strength and lesser friction permit an appreciable reduction in the thickness of the steel panels. Designed according to a patented system, the structural columns are capable of resisting very high stresses.

A CAR WITHOUT WHEELS!

A car of the future, which slides on the air and uses no wheels, was demonstrated by the Ford Motor Company at New York. Called the "Levacar," the experimental vehicle is capable of attaining 200 to 500 miles an hour. During the demonstration, the vehicle was guided by a pair of steel tracks. A Worthington Corporation air compressor supplied jets of air which held the vehicle a fraction of air inch away from the top and side of the rails. Spokesmen for the Ford Company said that future vehicles based on the "Levacar" principle would attain incredibly high speed, because, with air suspension, there was no friction to overcome, only wind resistance.



NEW PRODUCTS AND PROCESSES

Man-made Material for Protective Clothing

AFTER two years of research and experiments in collaboration with outside manufacturers, a British firm has developed a new man-made material which will have a wide range of uses particularly in the protective clothing industry. The material is the result of an exclusive process of laminating specially constructed Terylene fabrics between two layers of flexible PVC sheeting. The manufacturers are already investigating the possibility of many types of end product including covers for sports grounds, awnings, garden furniture, swimming pool liners and tarpaulins. By using different formulations of PVC and incorporating different types of Terylene fabric, the firm can produce the material with physical properties to suit practically every requirement. The variations already being tried include special low temperature grades, flame resistant material (conforming to the British standard for flameproof industrial clothing), types with resistance to particular chemicals and a range of heavyweight laminates.

The firm says that one of the main advantages of the material is its "weldability." It has been particularly constructed so that it can be welded dielectrically. This means that end products are waterproof and have high strength of seams of very neat appearance. Other great advantages are its high strength/weight ratios which can be developed according to specifications; resistance to the majority of acids and chemicals; and its extensibility which even under low rates of loading provides "give" in the correct places—which adds greatly to the comfort of wearers in the case of industrial protective clothing. It has an attractive appearance and is easy to clean—a damp cloth will remove most marks and warm soapy water gets rid of any grime. The material is available in 50 in. wide rolls of 60 yards in a variety of plain clear colours and printed effects.

Machine to Copy Music

A machine which can quickly, cheaply and accurately reproduce copies of sheet music has been developed by a Melbourne inventor. World patents have been taken out, and negotiations are in progress for the machine to be manufactured under licence. The inventor, Mr. Murray Parker of Melbourne, is a producer for the Australian Broadcasting Commission. According to him, music copying, normally a painstaking procedure done by professional handcopyists, can be done expertly by machine by a girl with no knowledge of music. The machine is claimed to be the first successful machine of its kind in the world. Previous attempts failed because they were made either by musicians who knew nothing about engineering, or by engineers with no knowledge of music and who wanted to change the universal system of notation. Other methods have been adapted for typewriters, but these can produce only single copies at a time. The Australian-invented machine, on the other hand, has these advantages: It can cut stencils for reproducing duplicate copies—a quick and simple method of copying music for instrumental groups or choirs. It can print in the words of a song, or any other wording necessary. It can print any kind of music. Since the machine rules its own lines, it does not require pre-ruled music sheets. Its simple selector chooses the correct line or space for each music note.

New Instrument for Testing Textile Yarn

Physicists of the Australian Commonwealth Scientific and Industrial Research Organisation have developed a new instrument for testing the uniformity of textile yarns, which is to be commercially manufactured by Amalgamated Wireless Australasia Ltd., of Sydney. It is based upon a principle different from that usually utilised in electrical testing equipment. It is also said to be less expensive. In using the instrument, the yarn to be examined passes under constant tension between two metal pins about two inches apart. One of these is vibrated magnetically, so that the length of yarn between the pins also vibrates continuously. By means of a photo-electric control the magnetic vibrator is operated at the natural frequency of vibration of the test section, a frequency dependent on the weight of the yarn passing between the pins. Irregularities in the yarn, therefore, load to variations in the frequency. These variations are applied to operate a recorder, which in turn, produces a chart which gives a continuous record of the irregularities in the yarn. It also gives a direct indication of the average "count," or weight per unit length. Comparison of the results given by the instrument with those obtained by weighing lengths of yarn of known weights shows that it is capable of high accuracy. It is applicable to any type of textile yarn.

One-man Grain Cleaner

A simple grain cleaning system which can work at the rate of 3½ to 4 tons an hour, has been invented by a farmer in England. Running in a normal harvesting system, it allows one man to cut, pre-clean and store several tons of grain a day. The success of the cleaner has led a London firm to market it for world-wide sales. The grain cleaner comprises an ordinary length of metal tubing, about 4 inches in diameter, with a single spiral blade running through it. A centre section of the tube is enlarged to about 8 inches diameter and extends some 4 feet. The lower, or ground side of the enlarged section is formed by a metal screen containing several hundred drill holes. The end of the whole tube is placed in the storage bin containing the uncleaned grain and the spiral blade—an Archimedes screw—conveys it through the tubing. At the enlarged section, natural force throws the grain against the screened part of the tubing and the process separates the grain from husks, weed seeds and similar impediments. The firm which has taken up the invention for commercial production have fitted it into a system whereby the best quality clean grain comes through two hopper chutes and another chute deposits the lesser quality small grain separately. Another channel takes away the weed and grasses.

Push-button Telephone

Two types of a "remembering" telephone, which will automatically dial often-called numbers, are expected in the telephone world in the near future. One, to be attached to existing phones, is already offered for service in the U.S. The telephone company itself is developing the other. The one now ready keeps the numbers on a punched tape. The user turns a knob to bring the selected tape into position and then presses a button to start it through the pulsing device. The phone company's own development uses magnetic rather than punched tape and will be built into the telephone instrument. The method of using it is the same. But the company says that erasures and re-recording of new numbers is easier with the magnetic system. The extra cost of either system is expected to be around £3 10s. per month. Another type of push-button telephone is already in experimental use in some areas of the U.S. With this, the caller pushes a button for each figure in the phone number, instead of turning a dial to the number. The phone company reports that calling with the push-buttons is easier and that users in the "guinea-pig areas" like the new instruments.

Low-cost Illuminated Ceiling

A new low-cost illuminated ceiling, just announced by a U.K. firm, makes it economic for a luminous ceiling to be installed in a variety of industrial situations, while the attractive appearance favours its use in public areas such as shops, hotels and restaurants. The system—the latest in the range produced by the company—is based on three-foot square diffusing panels supported by a lightweight aluminium track suspended from the structural ceiling. Daylight from laylights, or artificial lighting from lamps in the plenum, is diffused through the panels so that the space below is evenly illuminated, without causing glare or shadows. The diffusing medium used in the three-foot panels is a translucent sheet of flexible p.v.c., specially developed to provide a stable and optically correct material. It is available in a range of qualities extending from high-efficiency daylight to non-glare, and in a variety of colours. The diffusers are supported on all four sides by the flanges of an aluminium track of inverted T-section, suspended from the true ceiling. The underside of the track, which is the only visible metal part of the Westminster ceiling, is attractively fluted. The complete ceiling weighs less than 7 oz. per square foot.

Humidity Control to Curb 'Flu

A General Electric scientist, K. H. Kingdon, says that 85 to 95 per cent. humidity is ideal weather for the spread of many infections. If his theory is proved correct, control of humidity in public buildings may help curb flu or cold epidemics. According to Mr. Kingdon, thousands of tiny droplets expelled by an infected person's sneeze stay in the atmosphere a long time when the humidity range is 85-95 per cent. At higher humidity, the droplets become larger and heavier in the water-rich atmosphere and settle to the ground. At low humidity, the moisture-hungry virus die of thirst. Statistics from big cities on the 1957 Asian 'flu epidemic confirm that large-scale outbreaks did not occur when the virus was widespread but several months later when the relative humidity rose to the 85-95 per cent. range.

New High-speed Computer

A data processing device, that can receive and record information sent over the telephone, has been shown by International Business Machines Corporation. Called 1001 Data Transmission System, the machine makes possible high-speed handling of a company's payroll, inventory, billing or other accounting operations. The multiple locations of an organisation from which information can be transmitted by the 1001 may be many field officers across the nation, or a few departments located in different parts of a single building. The system enables a company to send information on regular dial or leased telephone lines.

Heart Stoppage During Surgery

Four out of every 10 cases of heart stoppage during surgery may be caused by potassium poisoning. In the U.S., Dr. Harry Leveen and his research associates traced cardiac arrest to the liver which floods the system with potassium when rapid bleeding occurs, or to massive transfusions of blood high in potassium content in 40 per cent. of 157 cases. They recommended careful monitoring of blood loss. Coupled with use of fresh blood low in potassium for heavy transfusions, to reduce the chances of heart stoppage on the operating table. Fortunately, heart standstill during surgery happens only infrequently.

Unlocking Trapped Oil

An experimental electronic heater to melt oil reserves jellied deep inside the earth is under development by U.S. electronic tube manufacturers, the Raytheon Company. The device, only six inches in diameter but able to generate up to 10,000 watts of power in the form of very high frequency rays, will be tested in an unproductive well in Montana, U.S., later this summer. The generator operates on the principle of microwave heating widely used in high-speed ovens in U.S. restaurants. Perfecting devices to unlock trapped oil could increase the world's known reserves sevenfold, geologists estimate.

New Cable-making Process

Aluminium is applied to a steel core to form electrical cables in a new process developed in the U.S. The aluminium is applied as a powder to the steel while it is under tension. When the tension is released, the steel contracts, compressing the aluminium and forming a denser coating. The manufacturers claim that their cable has eight times the strength of pure aluminium wire and has a higher conductance and longer life than steel cable.

SIEMENS
INDIA

TROPODUR cables in rational metric sizes for service voltages upto 1.1 kV

* High electrical and mechanical strength
* Flame retardant
* Corrosion proof
* No indoor cable-end boxes required
* Easy to install
* Conform to ISS 1554-60 (under print) for PVC heavy duty power and control cables

a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories... manufacture plants for water treatment...supply paper for a variety of uses...make jute goods and steel castings and structurals...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

COLLECTIVE BARGAINING IN THE U.S.

WORKERS CONSIDER IT VITAL FOR PROGRESS

IN the context of the current shift of emphasis in trade union thinking in India in favour of the principle of voluntaryism in the settlement of industrial disputes, the experience of countries which have for long practised methods of settlement of disputes through mutual negotiation is of special interest. The U.S. is a country which has endeavoured to keep Government interference in labour matters, as in many others, to the minimum. Government, of course, has not been indifferent to labour-management relations. Its aim has been to encourage free, private collective bargaining between employers and representatives of employees.

The U.S. Congress, through its labour relations legislation, has endeavoured to balance voluntaryism and legal compulsion to encourage "practices fundamental to the friendly adjustment of industrial disputes arising out of differences as to wages, hours or other conditions of work and by restoring equality of bargaining power between employers and employees." The objective of Congress legislation has been to prescribe the legitimate rights of both employees and employers and to provide orderly and peaceful procedures for preventing the interference by either with the legitimate rights of the other. The function of policing violations of the law is left largely to employers, employees and unions; but once any of them has called in the Government, the case becomes primarily a public matter and only the Government can make a settlement.

Labour-management relations in the U.S. are closely interwoven with the fabric of the National Labour Relations Act, 1935, and the National Labour Relations Board. The Act and the Board, through administration and interpretation of the Act, have provided the framework and the ground rules for these relations in general and collective bargaining in particular.

It is now a quarter of a century since the U.S. Congress put its stamp of approval on collective bargaining as the preferred method for determining wages, hours and other conditions of work for American workers. The system has of late come in for much criticism and various suggestions have been put forward for modifying it. The merits and demerits of collective bargaining are being weighed and rated by both employers, employees and others interested in the subject. An article in a recent issue of *Labour's Economic Review*, published by the Research Department of the American Federation of Labour—Congress of Industrial Organisation (A.F.L.-C.I.O.) evaluating collective bargaining in the U.S. presents labour's point of view.

Unique in the World

Collective bargaining in the U.S., the author of the article points out, has taken a form and direction which is almost unique in the world. In most countries, collective bargaining arrangements are highly centralised in one or a few bargaining systems. Decisions made by a few unions and management associations become reflected throughout the country. Historically, in the U.S., the size of the country, the difficulties of communication and the varying industrial development tended to produce a larger number of unions and a more diversified industry.

Another distinguishing feature is that, in most other industrialised nations, unions developed as much for political as for economic objectives and the intense rivalries among religious and political groupings produced their counterparts in the structure of the labour movement. In the U.S., on the other hand, the labour movement has become oriented less towards political reform and more towards practical economic goals. Steps towards political democracy were taken at a relatively early stage of the country's history, leaving the unions more free to devote the large part of their energies to winning on-the-job improvement for its members. Although some union leaders preferred to emphasise broad political objectives, the more practical aspects of unionism became the dominant theme as collective bargaining proved a workable, effective means of achieving protection for workers and advancement of their economic well-being.

There are today in the U.S., over 125,000 separate collective bargaining relationships. The growth of unionism and the development of collective bargaining have taken different forms in different industries. The economic facts surrounding each particular industry have left their mark on the systems of collective bargaining which prevail today. There is no single or uniform bargaining procedure in the country but, rather, a host of variations developed by the special needs of individual circumstances.

The subject-matter of collective agreements too differs widely, although there are some subjects common to practically all agreements. The subject included and the degree of detail depend on the type of industry, company, and workplace concerned, the economic condition of employer, etc. To a far greater extent than in any other country, the results of each individual agreement reflect the conditions and requirements of the particular company and union involved.

Benefits Collectively Won

Among the benefits which collective bargaining has brought to American workers, the following are listed by the author of the article:

1. Collective bargaining has introduced the democratic process in industry. Because of a direct participation by workers through their unions, agreement reached as a result of bargaining receives a greater degree of acceptance by workers. To limit this freedom, it is felt, would limit the sense of worker participation and influence which is a key ingredient of healthy, productive labour relations in a democratic society.

2. Day-to-day collective bargaining procedures have made a valuable contribution to the orderly settlement of disputes between workers and employers.

3. Collective bargaining has made a major contribution to solving the problems of insecurity.

4. It has greatly changed the pattern of leisure time in the U.S. The three and even four-week vacation for intermediate and longer service employees have become far more common. The number of paid holidays recognised by industry has been increasing to the point where the majority practice is to observe seven, eight or more each year.

5. In addition to this, union efforts through collective bargaining to reduce the standard work week, have led, in a number of instances, to the 37½ and the 35-hour week. This has made available greatly increased leisure time.

6. Numerous other types of provisions in collective bargaining have yielded major benefits to American workers and have made important contributions to personal satisfaction and economic efficiency.

Demerits of Collective Bargaining

In spite of its many merits, collective bargaining has been sharply criticised. The criticisms are mainly two in number. First, it induces an inflationary process and, secondly, it impedes the introduction of technological changes and improvements in productivity. As regards the first criticism, it is admitted by unions that collective bargaining wage settlements have an impact on the incomes of workers and the cost of business. Wage price issues involved in this go to the heart of economic theory and analysis. Labour unions in the U.S. have made clear their attitude and thinking on this basic question. The object of the union, they argue, is to secure higher living for its members. A major way unions through which hope to accomplish this objective is by winning for their members wages and other monetary benefits higher than they would be able to obtain without union representation. The success of union efforts can be judged by the fact that, on a comparison of union and non-union wages in the same industry, and area of the country, in approximately 80 per cent. of the cases, wages on the union jobs are found to be higher.

It is labour's conviction that the results of union pressure for higher wages are of positive value to the American economy. The reasons it cites in support of this are:

(a) At this stage of its development, the American economy must place renewed emphasis on increasing the levels of purchasing power and consumption.

(b) Without union wage pressure, improvements in productivity would not be translated either into higher wages or lower productivity.

(c) Collectively bargained wage settlements have not been a significant factor in causing price increases in the post-war economy. Wage settlements in the post-war period, it is pointed out, have generally been in line with changes in the price level and changes in productivity of the economy.

Technological Change

As regards the second criticism, namely, that, through collective bargaining, unions interfere with technological change by opposing the introduction of labour-saving equipment and by insisting on obstructionist work rules which require the use of unnecessary personnel, it is pointed out that, since technological change is a question of direct concern to workers, it is only reasonable to expect them to be interested in the conditions under which labour-saving equipment is introduced and to be concerned about the pace at which they are required to work and hence the size of the work-force necessary to perform a particular task. The union's point of view, it is stated, has been to recognise the importance of technological change in maintaining a modern, efficient place of work. The alternative is that the business of the firm and the jobs of the workers will be lost to more efficient domestic or even foreign competitors. Unions can take this more enlightened approach to technological change precisely because, through collective bargaining, they have been able to develop a mechanism for easing any harsh effects that the change will cause. Through collective bargaining, arrangements can be made for the advance notice of automation or other labour-displacing equipment, the possible transfer and re-training of employees concerned, the observance of seniority and other objective criteria for making such transfers, together with adequate compensation to any workers who necessarily have to be released as a result of the change. Thus, it is argued, the effect of unionism and collective bargaining has been the working out of an acceptable set of rules for technological change.

Vital Force

Labour, of course, concedes that collective bargaining is not a smoothly functioning instrument. At times it must seem an awkward, illogical and haphazard way of handling industrial relations. To those unfamiliar with its functioning in the U.S., a system, which allows such vitally important questions as the level of wages, the degree of workmen's security and the amount of available leisure to be decided directly by workers and employers, might seem to invite uneven results and conflict. In fact, the occasional examples of serious strain to which collective bargaining has been subjected in recent years and the attacks that have been made upon it for other reasons are the factors that prompted suggestions for modifying its general character. Nevertheless, American workers believe that collective bargaining is a vital force for progress.

Their faith in collective bargaining has been emphasised by the author of the article in the following words:

"Unions will continue to give full support to free collective bargaining. It has proved its durability and adaptability to changing economic conditions. It has been the instrument for achieving a more equitable and wider distribution of higher living standards, for stimulating new technical advances, and for developing greater stability and maturity in labour-management relations.

"Labour does not defend collective bargaining unthinkingly. Often, unions are not satisfied with its results. There is always the temptation to invite Government tinkering in an effort to gain some advantage. But considered reflection directs the conclusion that any such advantage, for labour, for industry, or for other parts of the economy, would be short-run or illusory and would not be worth the price paid in terms of values lost as a result of curtailing the fundamentally free and adaptable bargaining process, no matter how frustrating that process may seem at times."

While labour in the U.S. has opposed, and will continue to oppose, any effort in peacetime to impose Governmental authority to negate the results of wage settlements arrived at through collective bargaining, it is not averse to constructive improvements being introduced into collective bargaining process. These improvements, the author of the aforesaid article suggests, should be directed at making the parties concerned more directly aware of the relation between their individual bargaining and the economy as a whole. In this way, broader economic considerations can become a more important factor in collective bargaining.

HOUSE-BUILDING IN W. EUROPE

W. Germany last year led other Western European countries in house-building, with 555,000 new dwellings, that is, 10.5 units per 1,000 inhabitants, according to a U.N. Survey. This number includes over 90,000 tax-privileged and 70,500 subsidised family homes. Second place is held by Sweden, with 9.4 flats per 1,000 inhabitants, followed by Norway (7.5), the Netherlands (7.4), France (7.1), and Finland and Switzerland (each 6.8).

Soviet satellites show a less advantageous picture, with Czechoslovakia building 5 flats per 1,000 inhabitants, Hungary and Rumania 4.7 each, Poland 4.5, and the Soviet Zone of Germany 2.8. The Soviet Union claimed 14.5 units per 1,000 inhabitants last year.

TWO MORE INDUSTRIES DEPROTECTED

TYRE INFLATOR AND CALCIUM LACTATE

FROM the beginning of 1961, two more industries will be taken off the protected list, in pursuance of the recommendation made by the Tariff Commission. These are the automobile hand-tyre inflator and the calcium lactate industries. These two industries have made substantial progress of late, reflecting broadly the general pattern of growth in the engineering and chemical industries, respectively. Although both the industries have given a good account of themselves, quantitatively and qualitatively, the Tariff Commission in its reports, has urged the manufacturers to spare no efforts for improving the quality of their products. The Commission has, no doubt, noted that most of the consumers, in the case of hand-tyre inflators, are satisfied with the quality of the product. But it has stressed that the Indian Standards Institution should formulate standards for seamless brass tubes of size 1⅜" outside diameter and 22 gauge wall thickness, required for the manufacture of inflators. In the case of calcium lactate, too, the Commission has pointed out the need for ensuring quality that will stand favourable comparison with that of the imported product.

Tyre Inflator

The automobile hand-tyre inflator industry, it may be recalled, has been enjoying tariff protection for the last six years, with rate of duty of 45 per cent. *ad valorem*. The Commission ascertained the landed cost, ex-duty, of the inflators made by the Dunlop Rubber Company of the U.K. and compared it with the fair ex-works price of indigenously made inflators. It found that, in terms of price, the indigenous product compared favourably with the foreign product. Thus, whereas the landed cost ex-duty of an inflator with complete connection was Rs. 11.61, the fair ex-works price was only Rs. 10.15, that is, Re. 1.46 or 12.64 per cent. cheaper. The landed cost with duty works out to Rs. 16.81. It may be noted here that, in working out the fair ex-works price, the Commission has allowed for a return of 10 per cent. on capital employed.

Rejecting the industry's claim for continuance of protection, the Commission observes:

"It will be recalled that, even in its report of 1957, the Commission had recommended a substantial reduction in the protective duty and it was only on revenue considerations that Government allowed the existing rate of duty to continue. The domestic industry has demonstrated its ability to put on the market a product of the required quality and its existing capacity is more than adequate to meet any likely rise in demand in the future, provided it is kept fully supplied with the necessary raw materials. Recent trends also make it clear that the hand-tyre inflator is required more as a stand-by than as a piece of equipment in regular and constant use and that, for this reason, the existing ban on imports is not likely to cause any inconvenience to the users of vehicles. It is clear from the evidence tendered in the course of the present inquiry that the industry feels more concerned about regular and sufficient supplies of its raw materials than duty protection and that the largest producer avowed his lack of interest in the continuance of protection."

There are at present four major and two small units engaged in the production of hand-operated-tyre inflators. One unit, namely, the Hindustan Industries and Machine Manufacturing Company, Kashi, suspended production from August 1958. But another unit, the Indo-Belga Engineering Company, Ahmedabad, came into existence in the meantime. The following table shows the (unit-wise) trend in the development of production and capacity, since the time of the previous enquiry:

(Figures in Nos.)

	Rated capacity		Production	
	1957	1959	1957	1959
Union Co. (Accessories) ..	15,600	15,600	28,400	26,940
Ahmedabad Star Engg. Works ..	36,000	24,000	2,582	3,293
Associated Engg. Works ..	12,000	12,000	2,254	1,403
Hindustan Industries and Machine Mfg. Co.	24,000	24,000	1,019	Nil
Indo-Belga Engg.	..	14,400*	9,256*	4,192*
Urban Engg.	..	7,200	1,719	7,375
West Bengal Corpn.	..	12,000	1,700	4,671
Total ..	87,600	109,200	46,930	47,784

* Figures include cycle pumps also.

It will be seen from this table that the total number of hand-tyre inflators produced in the country rose from about 46,930 in 1957 to about 47,784 in 1959, and the total capacity from 87,600 to 109,200 on single-shift basis. Although production has thus tended to go up, a substantial part of the installed capacity remains idle.

Each inflator is accompanied by connections, such as a foot-piece and tubes. The following table shows the volume of production and capacity of these pump connections in 1959, as compared with 1957:

(Figures in Nos.)

	Rated capacity		Production	
	1957	1959	1957	1959
Union Co. (Accessories) ..	60,000	60,000	62,158	42,590
Ahmedabad Star Engg. Works ..	60,000	24,000	6,011	4,128
Associated Engg. Works ..	12,000	12,000	3,569	2,188
Hindustan Industries	24,000	24,000	N.A.	N.A.
Total ..	156,000	120,000	71,738	48,906

Demand for Inflators

The Commission has estimated that the demand for hand-tyre inflators and connections in 1960 will be about 50,000 and 150,000, respectively, on the basis of the accepted ratio of three connections to one pump. It holds the view that demand will remain stable at this level in the coming years, with a slight upward trend. In making these estimates, the Commission has taken three major factors into consideration. First, producers of motor vehicles do not nowadays supply hand-tyre inflators as original equipment, except one manufacturer. Secondly, with the growth of service stations in urban and other areas, the pump is required only as a stand-by. Lastly, the increasing use of tubeless tyres will affect the demand for inflators.

The three principal raw materials of the industry, namely, solid drawn seamless brass tubes, bright free cutting mild steel rods and spring steel wire are still not produced in the country and continue to be imported. The scheme of the National Pipes and Tubes Company, Ltd. to install a tube processing plant has been delayed on account of non-issue of the necessary import licence, but Messrs. Devidayal (Sales) Private Ltd. has installed an extrusion press for non-ferrous tubes, with a capacity of 3,600 tons per annum which is expected to produce brass tubes of required wall thickness and diameter by the end of 1960. The Government has issued instructions to extend the validity of licences for import of raw materials to one year. It is clear that licences for import of raw materials are being issued for small quantities in driblets, making regular production difficult. The Development Wing has merely stated that the firms borne on its list are receiving regular licences, but the Commission insists that the Government should also take steps to see that manufacturers in a protected industry who have a programme of production and ask for necessary raw materials are not handicapped by delays or cuts in affording them licences. As domestic production of seamless brass tubes is to start within this year, it is to be hoped that this particular difficulty will not continue much longer.

Imports of hand-tyre inflators are subject to controls which are applicable to motor vehicle parts. They have not been on a significant scale. The value of imports of inflators has gone down from Rs. 1.36 lakh in 1957 to a mere Rs. 547 in 1959. Similarly, imports of its parts, etc., were lower at Rs. 15,997 in 1959, as against Rs. 33,619 in 1957.

While accepting the Commission's recommendation for withdrawing protection to the hand-tyre inflator industry, the Government has retained the import duty for revenue purposes, albeit at a lower level, namely, 35 per cent. *ad valorem*, as against 45 per cent. The new rate of duty came into effect from 22nd July 1960. The import restrictions will continue as before. Accordingly, the abolition of protection is only in principle.

Calcium Lactate

While rejecting the claim of the calcium lactate industry for continuance of protection, which it has been enjoying for the last ten years, the Commission has pointed out that the industry is now well established and stands in no danger of unfair competition from any foreign product. The price of the domestic product compares quite favourably with the imported product. Besides, "the domestic industry is protected more effectively by the severe restrictions on imports, which have now reached almost vanishing point." At the time of the last inquiry, there was a serious threat of low-priced imports from China, but this did not really happen. The industry has actually made good progress. It meets at present the entire domestic requirements of calcium lactate and its derivatives and is in a position to meet any likely rise in demand by increasing its output to the full installed capacity.

At present, Sarabhai Chemicals and the Calcutta Chemicals are the only two producers of calcium lactate in the country. Since the last inquiry, the industry has made considerable progress. Both units are engaged in the manufacture of a large variety of drugs, pharmaceutical products and fine chemicals and the production of calcium lactate represents only one per cent. in value of the total turnover of Sarabhai Chemicals and a fraction of the total sales of the Calcutta Chemicals. The major unit, Sarabhai Chemicals, has raised its capacity from 72 tons to 132 tons per annum which was 36 tons more than the projected expansion of 96 tons as originally envisaged. Both units have now diversified their production, by converting calcium lactate into calcium sodium lactate and calcium lactophosphate. The annual rated capacity of Sarabhai Chemicals is now 132 tons. It uses a part of its capacity for production of calcium sodium lactate and calcium lactophosphate which has steadily increased from 7.84 tons in 1957 to about 11.29 tons in 1959. The output of calcium lactate and its derivatives has progressively risen from 47.94 tons in 1957 to 92.99 tons in 1959, indicating utilisation of about 70 per cent. of its expanded capacity. The Calcutta Chemicals has reported that there has been no change in its annual rated capacity, but has represented that it should be taken as 49 tons for the production of calcium lactate conforming to I.P. specifications or 30 tons for calcium lactate of B.P. specifications. The Company has claimed that it produces calcium lactate of both B.P. and I.P. specifications as well as calcium sodium lactate and calcium lactophosphate. Its production of calcium lactate and its derivatives, however, is in small quantities, which utilises only about 10 per cent. of its rated capacity.

Capacity and Production

The following table shows at a glance capacity and production of calcium lactate in 1959, as compared with those in 1957:

(In tons)

	Capacity		Production	
	1957	1959	1957	1959
Sarabhai Chemicals	72	132	48	92
Calcutta Chemicals ..	30	49	5	6
Alembic Chemical Works* ..	60	..	..	..
Total ..	162	181	53	98

* This unit has not yet resumed production on a commercial scale.

According to the Commission, the domestic demand for calcium lactate is of the order of 105 tons in 1960 and will rise to 125 tons by 1962. It may be noted that, when the proposed scheme of the Calcutta Chemicals to manufacture 60 tons of lactic acid materialises, the demand for lactate is expected to go up to 150 to 175 tons.

The principal raw materials required for the manufacture of calcium lactate are (i) jaggery or sugar and (ii) lime or calcium carbonate. In addition, certain accessory chemicals like activated carbon, superphosphate, marmite, etc., are used as chemicals, filter-aids or nutrients. Both producers have been using indigenous raw materials to the maximum extent possible. The value of such materials to the total value of materials used in the production of calcium lactate accounts for 95 per cent. in the case of Sarabhai Chemicals and 85 per cent. in the case of the Calcutta Chemicals.

Fair Ex-works Price

As in the case of the hand-tyre inflator industry, the Commission has allowed, in fixing fair ex-works price of calcium lactate, a return of 10 per cent. on capital employed. The landed cost of imported lactate from West Germany is placed at Rs. 3.32 per lb. with duty at 40 per cent. *ad valorem* and Rs. 2.40 without duty. The latter is a little higher than the fair ex-works price, as worked out by the Commission, of Rs. 2.22 per lb. In other words, the domestic manufacturers have an advantage of about 7.8 per cent. over their foreign competitors.

As already pointed out, imports of calcium lactate have been rapidly declining. They amounted in value to Rs. 5,903 in 1959, as against Rs. 40,364 in 1958 and Rs. 88,100 in 1957. Australia, the U.K. and China were the main exporters. Some quantity was imported from the Netherlands also. It is said that Sarabhai Chemicals Ltd. has been trying to explore markets in foreign countries for calcium

Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

PHILIPS INDIA EARNS RECORD PROFIT

PLANS TO EXPAND DOMESTIC MANUFACTURE

A SUBSTANTIAL improvement in turnover, thanks to the progressive realisation of plans for manufacture in India and the sustained demand for all its products, a marked rise in actual profit, as well as in profit margin, and the maintenance of the net return to the shareholders are some of the main features of the results of Philips India Ltd. (Chairman and Managing Director: Mr. P. C. Vink, Calcutta) for the year ended 31st December 1959. Sales have gone up by nearly Rs. 43 lakhs to a peak of Rs. 4.91 crores, thus more than making good the decline in 1958. The gross profit has gone up to a record level of Rs. 72.59 lakhs, representing an increase of Rs. 11.01 lakhs over that for 1958. With this rise, the profit has not only maintained the upward trend since 1956 (the last full year of its working as a private concern—it was in October 1957 that the Company was converted into a public limited one) but has also recorded an increase of 50 per cent. over the last three years. The ratio of gross profit to sales, which had improved from 11.4 per cent. in 1956 to 13.7 per cent. in 1958, has further advanced to 14.8 per cent. in the year under review.

The net profit, too, has gone up from Rs. 25.80 lakhs to Rs. 33.36 lakhs. The appropriation to the reserves has, no doubt, been pruned from Rs. 7.30 lakhs to Rs. 4.25 lakhs, despite the fact that its reserves are too small as compared with the turnover and the paid-up capital employed in the business and need to be augmented substantially. The Directors have, however, set aside Rs. 2 lakhs to provide a nucleus for a staff gratuity fund. They have also recommended the payment of a dividend of 12 per cent., subject to deduction of tax, which is equivalent to a net distribution of 8.4 per cent., as against 8.5 per cent. free of income-tax paid for 1958. This requires Rs. 7.70 lakhs more than last year, and explains why a larger amount has not been set aside to the reserves. Referring to the implications of the new scheme of corporate taxation introduced in 1959 to the Company, the Directors observe in their latest report as follows:

"In making their recommendations, the Directors have considered the recent changes in tax regulations relating to dividends in the Finance Act 1959. It would be appreciated that, so far as the Company is concerned, the new scheme of taxation will adversely affect the liquid position required for the current and future expansion of the Company's operations, if the net cash dividend is to be maintained at the same level as that obtaining under the old scheme of 'grossing-up.'"

The Company's progress since 1956 is well illustrated by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sale proceeds	4,90.95	4,48.14	4,73.59	4,22.65

* Subject to deduction of tax.
† Includes an additional dividend of Rs. 3.08 lakhs at 14 nP. per share for the year 1957.
‡ For two months only.

The overall upward trend in the Company's sales during the past few years is encouraging, though this is mainly confined to the "entertainment group," such as radio, acoustics, etc. Notwithstanding the fact that the sales of industrial and professional articles continued to be adversely affected by import restrictions, it is gratifying to note that the Company was able to increase the sales of these articles, thanks to its successful efforts to assemble locally, among others, medical apparatus from indigenous components. Inadequate supplies of lamps resulting from the present restrictions imposed on the lamp industry are said to have hampered the improvement of sales in the Light group. The Directors fear that, unless the production of lamps is allowed to expand with the rise in demand, there is likely to be an overall shortage of electric bulbs in the country in the near future.

The most important event of the year under review was the commencement of production of radio sets in the Company's new factory at Loni, near Poona, and an appreciable increase in the supply of components from this unit. The factory in Calcutta continued to maintain a satisfactory level of production. The Directors, however, emphasise that production in general is being handicapped by inadequate supplies of imported raw materials. The efforts made by them in previous years to attain a better integration of the Company's manufacturing activities, no doubt, resulted in improving, to a certain extent, the position of supplies from local sources. These efforts are being continued, in order to augment indigenous supplies.

Along with the efforts being made to attain self-sufficiency in the production of radio sets, the Company has planned to extend the programme of local manufacture to other fields. Giving an idea of these plans, the Directors observe:

"Simultaneously with our efforts to attain self-sufficiency in the production of radio sets, it has been planned to extend the field of local manufacture to X-ray equipment, cinema projectors and electronic measuring instruments. As a first step, the assembly of operation lights, sterilisers, ultra-violet and infra-red apparatus and cinema projectors with the help of indigenous components, fabricated under our guidance by small-scale industries, has been undertaken. An increase in the manufacture of radio components to meet the demands of set-makers in addition to our own requirements is envisaged. The manufacture of photoflash bulbs and glow-switches for fluorescent lamp starters and the increased capacity for the production of radio sets are other notable features of our plans. In implementing these various plans we continue to endeavour to feed and develop ancillary and small-scale industries of the country which form an integral part of all our manufacturing schemes. A mention may be made of the fact that the proposal to produce radio valves has had to be abandoned following the Government's decision to manufacture these in the public sector in collaboration with N. V. Philips' Gloeilampenfabrieken, Holland."

The sustained expansion in the manufacturing activities of the Company is reflected in a capital expenditure of Rs. 32.15 lakhs during the year under review, on top of Rs. 33.88 lakhs in 1958 and of Rs. 29.07 lakhs in 1957, bringing the total capital expenditure up to the end of 1959 to Rs. 148.74 lakhs. This has been well written down to Rs. 99.91 lakhs. Besides this, the capital expenditure in progress stands at Rs. 3.05 lakhs. The total current assets aggregate Rs. 382.66 lakhs, having declined from Rs. 407.77 lakhs, thanks to a reduction in closing stocks of finished goods as a result of higher sales, and a decline in trade debts, which is reflected in an improvement in cash balances. As against these current assets, the borrowings and other current liabilities and provisions amount to Rs. 214.46 lakhs. The total net assets thus aggregate Rs. 271.16 lakhs, represented by a paid-up capital of Rs. 220 lakhs and reserves and surplus of Rs. 51.16 lakhs. Of these reserves, share premium (after writing off capital issue expenses) alone accounts for Rs. 38.67 lakhs. Thus, the amount ploughed back out of the earnings is no more than Rs. 12.49 lakhs.

The Company's Rs. 10 fully paid-up ordinary shares have been popular with investors and are being currently quoted at Rs. 31.50 *cum-div.*, as against Rs. 21 a year ago. At this rate and on an *ex-div.* basis, they provide a yield of no more than 2.7 per cent. per annum, free of tax, but this low yield is in consonance with the current yield pattern of first class equities, with growth prospects.

QUALIFYING EXAMINATIONS FOR COMPANY SECRETARIES

The rules for registration of students in connection with the preliminary and intermediate examinations, for qualifying as Company Secretary, have been published by the Department of Company Law Administration. It has been decided to extend the last date for registration of students for the intermediate examination upto 31st August. Candidates intending to appear for the examination, which will be held in February-March 1961, must first apply for exemption from the preliminary examination and then register themselves as students with the Department of Company Law Administration, if qualified for such exemption. Applications for exemption from the preliminary examination and for registration have to be made separately and candidates will have to pay the exemption and registration fees as prescribed under the rules.

Candidates for the preliminary examination are not required to register themselves as students, but have only to enrol themselves as candidates for the examination by submitting examination fee along with their applications.

A booklet containing the rules and subjects and syllabus for the two examinations has just been published and is available with authorised agents of Government publications.

SHORTAGE OF STEEL AFFECTS JESSOP

RETURN TO SHAREHOLDERS MAINTAINED

THE results of working of Jessop and Company Ltd., Calcutta, for the year ended 31st October 1959 provide an instance of how the progress of even well-established engineering units is being retarded by the short supply of steel and components and receipt of "non-matching" steel in more than adequate quantities. Jessop and Company Ltd. is one of those units which have substantially increased their capacities by expansions and alterations to meet the growing and changing needs of consumers, but their actual production falls short of the installed capacity on account of the aforesaid handicap. One of the important reasons for the shortage of steel supply during the year under review was the steel strike in the U.S., which resulted in most serious delays in deliveries of steel for railway coaches, wagons and bridge girders. Though the position has, in many respects, improved now, the Company is still feeling the effects of shortage in "matching steel." It is true that these are comparatively a few items, but it is stated that they are indispensable and work cannot be taken up without them.

Notwithstanding the handicap explained above, the Company's performance during the year under review was fairly encouraging. The gross profit, at Rs. 65.22 lakhs, represents a slight increase of Rs. 1.51 lakhs over that for 1957-58, in refreshing contrast to the sharp fall of Rs. 23.93 lakhs suffered in the previous year. This improvement is, of course, due to a fortuitous rise of Rs. 7.93 lakhs on the credit side of the profit and loss account, representing the increase in the value of closing stocks, following the switch-over from the old basis to the new basis of valuation. Even if allowance is made for this factor, one can draw comfort from the fact that the resultant contraction in profit is less sharp than in the previous year. The net profit, at Rs. 29.49 lakhs, is more or less unchanged at the previous year's level and the net distribution to ordinary shareholders has been well maintained at 6 per cent. The ordinary dividend has been grossed to 8.58 per cent., so as to leave in the hands of the shareholders a net return of 6 per cent. tax-free. The distribution on the 5 per cent. tax-free preference shares has also been likewise grossed, in order not to affect the net return provided in the Articles of Association. The net distributions to shareholders have, it may be noted, been well maintained only after ploughing back as much as Rs. 20.62 lakhs. Though this represents a cut of Rs. 6.93 lakhs from the amount added last year, it is still substantial, in that it represents 70 per cent. of the net profit and the Directors consider that "the production potential of the Company has increased so fast and so greatly that it is still essential to conserve its resources so as to meet the consequent increase in the demand for working capital."

The salient features of the Company's results for the year under review are compared with those for the previous three years in the following table:

(In lakhs of rupees)

	For the year ended 31st October			
	1959	1958	1957	1956
Sale proceeds	6,59.10	6,50.73	5,94.19	5,25.14

* Basis of valuation changed. † Subject to deduction of tax.

The increase in sales for the year under review does not fully reflect the expansion in works output. Despite several adverse factors, such as non-finalisation of the specifications of the new type of wagons by the railways and shortage of steel, the actual works output is said to have increased by Rs. 52.17 lakhs to Rs. 648.27 lakhs. This is, however, offset, to a large extent, by the drop of Rs. 43.80 lakhs in sales under agency business consequent on the discontinuance of this business and the total sales, therefore, show a net increase of only Rs. 8.37 lakhs.

The Company's new coach works came into production during the year under review and this enabled the Company to construct and deliver three electric multiple coach units to the railways by the end of October 1959. Up to the end of June 1960, the Company completed and delivered 14 such units. The three older works, namely, structural, mechanical and wagon, have been expanded and altered to enable the Company to undertake furnishing of metre-gauge coaches and to manufacture the new B.O.X. type of 8-wheeled bogie wagons, as also metre and broad-gauge bogie motor and parcel vans. The process of addition and alteration is still going on. To meet the growing demand for its products and also to diversify the Company's output, it has become necessary to modernise and re-equip the mechanical works, where much of the plant is, by modern standards, said to be of low productive capacity. This matter is said to be receiving the topmost attention of the Directors and immediate steps are being taken for the procurement of modern machinery. The Directors have under investigation two major schemes for the expansion of the Company's activities, but they have expressed their inability to disclose details at this stage.

The continued expansion of the works is reflected in a further addition of Rs. 24.07 lakhs to the block account during the year under review. This is on top of Rs. 83.72 lakhs added in 1957-58 and brings the gross value of the fixed assets to Rs. 277.48 lakhs. The net book value of the same is Rs. 193.17 lakhs and the capital works in progress is Rs. 15.23 lakhs. The current assets amount to Rs. 646.31 lakhs and exceed the borrowings from banks and other current liabilities at Rs. 629.68 lakhs. The total net assets thus aggregate Rs. 225.04 lakhs and are represented by a paid-up capital of Rs. 121.99 lakhs and reserves and surplus of Rs. 103.05 lakhs. Since the close of the year, the paid-up capital was raised by Rs. 102 lakhs by the issue of 1,020,000 ordinary shares of Rs. 10 each at a premium of Rs. 2 per share. The new shares qualify for dividend from the current year onwards.

As readers are aware, the Company is one of those which were heavily involved in the notorious Mundhra episode. A sum of Rs. 60.24 lakhs has already been written off to wipe out a doubtful debt given to Rameswar Daga & Co. for buying the shares of Richardson and Cruddas Ltd. The current assets mentioned above include investments to the tune of (book value) Rs. 72.71 lakhs to which the Company's title has not been established and the value of which is doubtful. Thus, the Company has still a long way to go to heal the wounds caused by Mr. Mundhra.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 25.12 *ex-div.*, at which rate and on the basis of the latest distribution, the yield works out to 2.59 per cent. per annum, free of tax.

U.K. LOAN TO E.I.D.

The Commonwealth Development Finance Corporation Ltd. (C.D.F.C.) has signed an agreement, with the East India Distilleries and Sugar Factories Ltd., of Madras, for a loan of £600,000 as part of the financing of a compound ammonium phosphate fertiliser plant to be erected at Ennore, near Madras. The plant will have an annual capacity of about 51,000 tons, and will contribute towards increasing the yields of food and cash crops in South India. Announcing the loan, a C.D.F.C. spokesman said: "The solution of India's food poblem is probably the most important matter facing the Indian Government today." The East India Distilleries plant has been designed, and is to be erected, by the British firm of Simon-Carves Ltd. It will be the first fertiliser factory in India to manufacture compound ammonium phosphates.

BENGAL POTTERIES LTD.

The year 1959 proved to be the most prosperous one for the Bengal Potteries Ltd. (Managing Agents: Messrs. Bharat Ram Bhagat & Company, Calcutta), thanks to a fairly substantial increase in production in both of its two factories and the larger demand for its products. Its sales show a rise of Rs. 45.63 lakhs to Rs. 166.29 lakhs and its gross profit recorded nearly a twofold increase from Rs. 17.17 lakhs to Rs. 33.91 lakhs, as also its net profit from Rs. 6.95 lakhs to Rs. 13.44 lakhs. Notwithstanding this substantial improvement in the results, the net dividend was only maintained at the previous year's level of 10 per cent. (14.29 per cent., subject to deduction of tax). It must, however, be noted that, while last year there was no distributable profit, consequent on the statutory obligation to set aside as much as Rs. 7.16 lakhs to development rebate (which was a shade more than the actual net profit) and the Directors had to pay the entire dividend out of the general reserve, this year the distribution was made fully out of the year's earnings, even after adding a sizable sum to the reserves. In fact, the gross distribution was Rs. 2.37 lakhs more than last year, consequent on the tax deductible at source, the burden of which the Company took upon itself in order to give the same net return to the shareholders. Thus, but for the change in tax law, the shareholders would have received more, as would be evident from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sales	1,66.29	1,20.66	1,06.23	91.13
Closing stocks	22.64	12.11	10.60	10.48
Raw materials consumed	25.29	17.46	14.25	12.60
Other expenses	1,08.43	86.79	77.93	62.36

* Subject to deduction of tax.

The performance of the Company would have been far more encouraging but for the fact that the production of high voltage electrical porcelain in the new factory (which began by the end of 1958) could not be brought to its rated capacity, on account of the paucity of gas supply from the Company's present generators. Orders have been placed for a large-size new gas generator and this is expected to be installed by early 1961. Till then, production in the new factory will be below the rated capacity.

The outlook for the Company is encouraging, as will be evident from the following extracts from the Chairman, Lala Shri Ram's speech at the recent annual general meeting:

"The demand in the country of both high tension and low tension insulators is increasing very rapidly on account of the tremendous increase of power generation capacity which has been planned by the Government. It is certain that both for the purpose of transmission lines and for rural electrification, the demand of electrical porcelain in the country will rise considerably in the years to come and the Planning Commission has made an estimate that the requirements of high tension and low tension insulators would be 10,000 tons or more per year in each case. Our Company has been a pioneer in the manufacture of insulators and our production is by far the largest in the country. In view of the prospective market, we are taking steps to increase the production of both high tension and low tension insulators considerably in the next two or three years.

"In the new factory, where we had taken up the manufacture of high tension insulators, we are expecting better results in the year 1960, in spite of the shortage of gas.

"The demands for our manufacture in the country itself are so large that we are just able to fulfil these with our present production. All the same, we are making attempts to export some of our goods and we are glad to say that we have made a small start in this direction by making arrangements to export certain articles to East Pakistan."

There is, however, one difficulty in the Company achieving its objects. This is the acute shortage of china-clay and good quality coal and coke, but the Company is making strenuous efforts to obtain as much as possible of these two raw materials from all possible sources.

The Company's latest balance-sheet shows that the financial position requires to be strengthened. The paid-up capital at Rs. 55.23 lakhs is supplemented by reserves and surplus amounting to Rs. 15.64 lakhs. The borrowings and other current liabilities aggregating Rs. 117.85 lakhs are more than the current assets which amount to only Rs. 83.36 lakhs. The gross block of the value of Rs. 157.36 lakhs has been written down to Rs. 105.36 lakhs. The substantial disparity between paid-up capital and block account suggests that the Company is undercapitalised.

The Rs. 2.50 fully paid-up shares of the Company are being currently quoted at Rs. 7 *ex-div.*, at which rate and on the basis of the latest dividend, the yield works out to 3.6 per cent. per annum free of tax.

ALUMINIUM LIMITED'S GHANAIAN AFFILIATE TO EXPAND

Aluminium Ltd., Canada, has announced that its associated company in Ghana, namely, Ghana Aluminium Products Limited, is to expand its operations at Tema by the installation of an aluminium rolling mill next to its existing factory. The new project will cost approximately $2½ million. The new rolling mill will be able to serve the entire market requirements of Ghana for aluminium sheet products. Production should begin early in 1962. The Ghana Aluminium Products Limited is at present jointly owned by the Government of Ghana (40 per cent.) and Aluminium Limited (60 per cent.). The additional capital for the rolling mill will be provided by Aluminium Limited, the Commonwealth Development Finance Company, Limited, the United Africa Company of Ghana Limited, the Union Trading Company Limited and Compagnie Francaise de l'Afrique Occidentale. The Government of Ghana will retain its existing investment. When the rolling mill is in full operation, the Company's shares will be available for investment by the Ghanaian public.

The Ghana Aluminium Products began production of corrugated aluminium roofing sheet at Tema in August 1959. The construction of a second factory to produce a wide range of aluminium products is already well advanced. The new rolling mill will be the third stage in the Company's expansion programme.

COMPANY MEETINGS AND DIVIDENDS

COORG TEA CO., LTD. Annual General Meeting, Coimbatore, 10th August 1960. Dividend: 20 per cent. or Re. 0.40 per ordinary share, subject to deduction of tax, payable on or after 10th August 1960. Transfer books remain closed from 1st to 10th August 1960, both days inclusive.

CHOONABHUTTI TEA CO., LTD. Annual General Meeting, Calcutta, 16th August 1960. Dividend: Rs. 30.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 2nd to 16th August 1960, both days inclusive.

SEEBPORE COAL CO., LTD. Annual General Meeting, Calcutta, 17th August 1960. Dividend: Rs. 3.00 per share (includes interim dividend of Re. 1.00 per share), subject to deduction of tax. Transfer books remain closed from 4th to 17th August 1960, both days inclusive.

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 18th August 1960. Dividend: 7½ per cent. or Re. 0.75 per ordinary share, subject to deduction of tax. Transfer books remain closed from 5th to 18th August 1960, both days inclusive.

COCHIN MALABAR ESTATES LTD. Annual General Meeting, Calicut, 18th August 1960. Dividend: 17½ per cent. or Re. 0.525 per ordinary share (includes interim dividend of 7½ per cent. or Re. 0.225 per share) subject to deduction of tax. Transfer books remain closed from 5th to 18th August 1960, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 19th August 1960. Dividend: 20 per cent. final. Transfer books remain closed from 1st to 19th August 1960, both days inclusive.

BRIDGE AND ROOF CO. (INDIA) LTD. Annual General Meeting, Calcutta, 19th August 1960. Dividend: 30 per cent. or Rs. 3.00 per share, subject to deduction of tax. Transfer books will remain closed from 10th to 19th August 1960, both days inclusive.

INDIAN DYESTUFF INDUSTRIES LTD. Annual General Meeting, Bombay, 19th August 1960. Dividend: Rs. 4.20 (net) per old ordinary share and Re. 1.30 (net) per new ordinary share, payable on 1st October 1960. Transfer books will remain closed from 12th to 25th August 1960, both days inclusive.

PULLANGODE RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Fort Cochin, 22nd August 1960. Dividend: 5 per cent. or Re. 0.10 per share, subject to deduction of tax. Transfer books remain closed from 6th to 24th August 1960, both days inclusive.

NEW INDIA ASSURANCE CO., LTD. Annual General Meeting, Bombay, 24th August 1960. Dividend: Rs. 5.70 per ordinary share (includes a bonus of Re. 1.20 per ordinary share), subject to deduction of tax, payable on and after 29th August 1960. Transfer books remain closed from 25th July to 23rd August 1960, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Tennur, Tiruchirapalli, 27th August 1960. Dividend: 9 per cent. or Re. 0.90 per ordinary share (includes interim dividend 4½ per cent.) subject to deduction of tax. Transfer books remain closed from 2nd to 27th August 1960, both days inclusive.

PHILIPS INDIA LTD. Annual General Meeting, Calcutta, 27th August 1960. Dividend: 12 per cent. or Re. 1.20 per share, subject to deduction of tax, payable on or after 26th September 1960. Transfer books will remain closed from 8th to 27th August 1960, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Annual General Meeting, Calcutta, 30th August 1960. Dividend: Re. 0.30 per share, subject to deduction of tax. Transfer books will remain closed from 16th to 30th August 1960, both days inclusive.

BAILY JUTE CO., LTD. Annual General Meeting, Calcutta, 31st August 1960. Dividend: Rs. 25.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 31st August 1960, both days inclusive.

BIRLA JUTE MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 31st August 1960. Dividend: Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 31st August 1960, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 2nd September 1960. Dividend: Rs. 400.00 per share (final), on whole ordinary shares, subject to deduction of tax, for the year ended 31st March 1960, payable on and after 3rd September 1960. Transfer books will remain closed from 8th August to 2nd September 1960, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 2nd September 1960. Dividend: Rs. 182.00 per share (final), subject to deduction of tax, for the year ended 31st March 1960, payable on and after 3rd September 1960. Transfer books will remain closed from 8th August to 2nd September 1960, both days inclusive.

SIMPLEX MILLS CO., LTD. Dividend of Rs. 5.25 (net) per share, for the year ended 31st March 1960. Transfer books will remain closed from 13th to 27th August 1960, both days inclusive.

EDWARD TEXTILES LTD. Net dividend of Rs. 12.60 per share, for the year ended 31st December 1959, payable on 12th September 1960. Transfer books will remain closed from 8th to 31st August 1960, both days inclusive.

KILLICK INDUSTRIES LTD. Interim dividend of Rs. 2.10 (net) per share, for the year ending 30th November 1960, payable on 13th September 1960. Transfer books will remain closed from 17th August to 8th September 1960, both days inclusive.

ENFIELD INDIA LTD. Dividend of 5 per cent. or Re. 0.50 per ordinary share, subject to deduction of tax for the year ended 31st December 1959. Transfer books will remain closed from 17th to 31st August 1960, both days inclusive.

SYNOPSES OF COMPANY REPORTS

Coorg Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Srinivas Agencies, Coimbatore) submit the audited accounts of the Company for the year ended 31st March 1960.

The result of the year's working after providing for depreciation on buildings, machinery, furniture, vehicles, etc., amounting to Rs. 23,489 (Rs. 22,787) and providing for Central income-tax and Mysore Agricultural income-tax amounting to Rs. 33,500 (Rs. 72,100) is a net profit of Rs. 1,13,081 (Rs. 1,13,139) to which must be added Rs. 4,249 (Rs. 2,735) brought forward from the previous year's account making a total of Rs. 1,17,330 (Rs. 1,15,874). The directors recommend the following appropriations:

To pay a dividend of 20 (20 per cent. free of tax) per cent. subject to tax, on the equity shares, absorbing Rs. 96,000 (Rs. 96,000) to pay a dividend of 7½ (6¼ per cent. free of tax) per cent. subject to tax, on the preference shares (subject to the change in the rate and terms of preference dividend being approved by the separate class meetings of shareholders for which notices are being issued), absorbing Rs. 18,750 (Rs. 15,625) and to carry forward to the current year Rs. 2,580 (Rs. 4,249).

Crop and price.—3,53,888 (4,12,070) lbs. of tea were produced during the year under report against the estimate of 3,50,000 lbs. The tea was produced at a cost of 162.86 nP per lb. against 151.59 nP for the previous year. The net average sale price realised works out to 228.35 nP per lb. compared to 214.18 nP during the previous year. The stock of tea remaining unsold as at 31st March 1960 was 84,246½ (98,357) lbs. the whole of which has been valued at all-in-cost of Re. 1.90 (Re. 1.70) per lb.

The estimate for the year ending 31st March, 1961 provides for a crop of 3,65,000 lbs. made tea to be produced at a cost of 149.07 nP per lb. and 4 tons coffee to be produced at Rs. 9,455. The estimate also provides for a capital expenditure of Rs. 59,124.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Pullangode Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Aspinwall & Co., Ltd., Fort Cochin) submit the audited accounts of the Company for the year ended 31st March 1960.

The net profit for the year is Rs. 59,887 as compared with Rs. 94,604 for the past year. The decline in profit during the year was due mainly to the fall in crop, increased estate expenditure and an extra large number of tapping days lost through prolonged monsoon conditions. The necessary provisions for depreciation on buildings and machinery have been made, and unsold rubber on the date of closing has been valued on the basis of controlled rates.

Crops and costs.—The rubber crop figures have been shown in metric system of weights. During the year the crop harvested amounted to 2,61,973 kgs. as against the estimate of 2,60,815 kgs. or a shortfall of 32,068 kgs. over last year. The reason for the shortfall in crop is partly the fact that the whole area of 75 acres mentioned in the directors' last report as being replanted has produced no crop. In addition to this rain interfered with tapping to an abnormal extent. The Company is now experimenting with rain-guards, which, it is hoped, may prove an economic success. Expenditure and average sale prices are compared below:—

	Crop	All-in cost	Average sale price
	Kgs.	nP. per kg.	nP. per kg.
1956-57	2,77,598	307.17	340.74
1957-58	2,65,805	322.87	341.86
1958-59	2,94,041	313.90	339.71
1959-60	2,61,973	336.03	345.11

It is conservatively estimated that a crop of 2,81,227 kgs. of rubber will be collected during 1960-61 at an estate expenditure of 255.50 nP per kg.

Replanting.—The work on the replanting of 75 acres is progressing well. The further 100 acres now being slaughter-tapped will be replanted in 1961, and the directors have selected further 150 acres for slaughter-tapping and replanting in 1963. Out of the existing areas of immature budded rubber, a small crop will be harvested from the 1952-53 clearing (100.58 acres) during the current financial year.

Pepper clearing.—A more intensive policy of cultivation has been adopted, and when all the vines are mature, a useful addition to income may be expected from this source.

The controlled price of rubber remained unchanged throughout the year. In October 1959, the Tariff Commission conducted an enquiry on the price structure of rubber, and the Company's estate was one of the groups selected for examination of the cost of production. The publication of their report is still awaited.

With the previous year's brought forward the total available for distribution is Rs. 1,32,285 (Rs. 1,95,398). After deducting sales tax paid in respect of earlier years, Rs. 3,036 (*nil*) and dividend on preference shares, Rs. 12,855 (Rs. 9,000), there is a balance left of Rs. 1,16,395 (Rs. 1,86,378) which the directors recommend to dispose of as under:—

To additional provision for rubber rehabilitation Rs. 16,700 (Rs. 31,500), to dividend on ordinary shares at 5 per cent. (5 per cent. free of tax) subject to tax absorbing Rs. 82,500 (Rs. 82,500), leaving a balance to be carried forward of Rs. 17,195 (Rs. 72,398).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,00,000	Gross block	22,68,070
Reserves ...	2,29,315	*Less*—Depreciation	6,46,199
Provision for taxation ...	68,357		
Liabilities ...	2,66,340	Net block	16,21,871
Profit and loss account (surplus)	17,195	Stock-in-trade	1,45,190
		Stores, etc.	71,249
		Book debts	48,294
		Investments	2,03,361
		Cash ...	2,91,242
Rs.	23,81,207	Rs.	23,81,207

Seebpore Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 4,58,569 (Rs. 3,40,843) of which taxation provision requires Rs. 2,18,000 (Rs. 2,10,000) leaving a balance of Rs. 2,40,569 (Rs. 1,30,843). With the balance brought forward from last year of Rs. 43,951 (Rs. 48,188) there is a total amount available for appropriation of Rs. 2,84,520 (Rs. 1,79,031). The directors have transferred to development rebate reserve Rs. 15,087 (Rs. 2,526) and to general reserve Rs. 75,000 (Rs. 30,000) leaving a balance of Rs. 1,94,433 (Rs. 1,33,951 after transferring Rs. 12,318 to capital reserve and paying Rs. 236 being forfeited dividends paid). The interim dividends on preference shares at 3½ (2½ per cent. free of tax) per cent. absorbed Rs. 14,000 (Rs. 10,000) and on ordinary shares at Re. 1 (Re. 0.75 per share, tax-free) per share, absorbed Rs. 40,000 (Rs. 30,000). The directors now recommend payment of final dividends on preference shares at 3-9/14 (2¼ per cent. free of tax) per cent., absorbing Rs. 14,571 (Rs. 10,000) and on ordinary shares at Rs. 2 (Re. 1.00 per share, tax-free) per share, absorbing Rs. 80,000 (Rs. 40,000) leaving a balance to be carried forward of Rs. 45,862 (Rs. 43,951).

Although the Company's Articles of Association provide that the preference shareholders shall receive a fixed cumulative preferential dividend at the rate of 5 per cent. per annum free of Indian income-tax, it is now compulsory for income-tax to be deducted from all dividends. The Board have accordingly recommended that a final dividend of 3-9/14 per cent. be paid on the Company's preference share capital making, with the interim dividend of 3½ per cent., a total dividend for the year of 7-1/7 per cent. from which income-tax will have to be deducted in accordance with the provisions of the 1960 Finance Act.

Raisings for the year were 90,609 tons compared with 77,909 tons in the previous year, whilst despatches totalled 90,906 tons as against 80,894 tons.

Messrs. Andrew Yule & Co., Ltd., will cease to act as managing agents of the Company on 15th August, 1960 and their appointment as secretaries and treasurers of the Company for a period of five years from that date has been approved by the Central Government.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

		Stores, etc.	92,238
		Book debts	12,13,728
		Investments	1,32,269
		Cash ...	5,56,218
Rs.	29,85,070	Rs.	29,85,070

Estrela Batteries Ltd.

The directors of the above Company (Managing Agents: Messrs. Choonilal Manilal Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March 1960.

Production and sales reached a new high level with the result that the gross profit of the Company increased from Rs. 7,13,367 during the year 1958-59 to Rs. 11,11,796. Out of this, Rs. 2,95,328 is paid to the workers as arrears for the years 1956-57 to 1959-60 for the difference in wages for the scales fixed on the basis of the Award of the Industrial Tribunal as per the compromise arrived at with the workers' union, Rs. 17,326 is the contribution to the provident fund on the above arrears of wages. After deducting Rs. 46,716 (Rs. 31,993) as managing agents' remuneration, the amount of profit remaining thereafter is Rs. 7,52,426 (Rs. 6,66,651) to which is added Rs. 16,437 (Rs. 10,066) brought forward from the last year making a total amount of Rs. 7,68,863 (Rs. 6,76,717) available for distribution. The directors recommend to dispose of this amount as follows:—

To depreciation Rs. 1,51,338 (Rs. 1,26,838), to development rebate Rs. 47,230 (Rs. 18,483), to bonus to employees Rs. 1,75,440 (Rs. 1,35,000), to provision for taxation Rs. 1,71,188 (Rs. 1,90,000), to dividend on 5 per cent. tax-free preference shares at Rs. 3.57 (Rs. 2.50) per share, subject to taxation, absorbing Rs. 71,211 (Rs. 49,868) and to dividend on ordinary shares at Rs. 4.50 (Rs. 3.50 per share, including bonus, free of tax) per share, subject to taxation, absorbing Rs. 1,34,762 (Rs. 1,04,814) leaving a balance to be carried forward of Rs. 17,694 (Rs. 16,437).

No depreciation for instruments and apparatus was provided in the past accounts as it was not allowed by the Income-tax authorities, but was written off in the profit and loss account as and when the instruments and apparatus were found obsolete. Due to one of the recent judgments of the Bombay High Court on this subject, it is now presumed that 15 per cent. depreciation will be allowed by the Income-tax authorities and hence the directors thought it advisable to provide for it from the current year's profit.

The directors thought it desirable to compromise with the workers in the appeal made to the Supreme Court by the Company against the Award of the Industrial Tribunal, so as to maintain harmony, industrial peace and increase in better understanding. The grades and scales so determined, are now fully implemented and the directors hope that this gesture of the management will help considerably in achieving the above aims.

Marshall, Sons and Co., (India) Ltd.

The directors of the above Company [Managing Agents: Messrs. Marshalls (Direction) Private Ltd., Calcutta] submitted the audited accounts of the Company for the year ended 30th June 1959.

The profit and loss account shows a profit of Rs. 2,21,965 (Rs. 5,34,819). After adding to this the profit on sale of furniture and motor vehicles Rs. 6,679 (Rs. 11,687), dividend from John Fowler (India) Private Limited Rs. 6,210 (*nil*) and unclaimed dividends forfeited Rs. 23,467 (*nil*) there is a total sum of Rs. 2,58,320 (Rs. 5,46,506). The directors have provided for general depreciation Rs. 88,000 (Rs. 92,273), transferred to development rebate reserve Rs. 10,720 (Rs. 2,270), towards adjustment in respect of previous years Rs. 29,744 (Rs. 18,751) and to provision for taxation Rs. 1,00,000 (Rs. 2,75,000), leaving a net profit of Rs. 29,856 (Rs. 1,57,883 after paying forfeited dividends Rs. 330) with the previous years' balance brought forward of Rs. 83,657 (Rs. 1,35,774) there is a total available balance of Rs. 1,13,513 (Rs. 2,93,657). From this the directors recommend payment of a dividend of 10 (20 per cent. free of Indian income-tax) per cent. subject to deduction of Indian Income Tax, absorbing Rs. 1,05,000 (Rs. 2,10,000) leaving a balance of Rs. 8,513 (Rs. 83,657) to be carried forward.

The year under review has shown a reduction in turnover as compared with the previous financial year and there is a considerable decrease in the year's trading profit due to the reduced turnover as well as due to having to reduce margins of profit on a number of orders on account of the competitive market.

The chances of improving upon the margins of profit appear to be meagre as competition is increasing with the increase in the activities of the State Trading Corporation, who are importing machinery of the range in which the Company has been trading. The import restrictions are having their effect on the Company's trading and deliveries on indigenous products are not encouraging due to the reduction in the imports of component parts. The directors have had to take a greater interest in increasing the range of products for indigenous production and although the year 1959-60 will not be benefited it is expected that the year 1960-61 will show better results.

Expenditure has shown a slight increase due to the dearness allowance at all branches having been at the highest level possible as this is based on cost of living index. There is also an increase in overdraft interest on account of increased borrowing throughout the year and the directors are unable to effect any reduction on these two items as the cost of living and the interest rate are not likely to come down in the near future.

Since the Company has to set aside only a sum of Rs. 1,00,000 towards taxation as compared with as much as Rs. 2,75,000 for the previous year, and in view of the rather unsatisfactory results of the year under review, while the directors wish to be as considerate as possible towards the interests of the shareholders, they feel that a dividend of 10 per cent. is the utmost they can recommend. This will, of course, be subject to deduction of tax in terms of Section 18 (3D) of the Income Tax Act, 1922.

8 - AUG 1960

Jeewanlal (1929) Ltd.

The directors of the above Company (Managing Director: Mr. H. K. Shah, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

Sales, at Rs. 1,98,63,759 are slightly below the 1958 year's level of Rs. 2,28,69,738, for want of adequate supplies of raw materials at proper prices.

Gross profits during the year 1959, stood at Rs. 21,60,269 as against Rs. 18,80,683 in 1958. With miscellaneous income at Rs. 1,22,657 (Rs. 1,56,347) added to the gross profits, the total trading income amounted to Rs. 22,82,927 (Rs. 20,37,030), which reflects some improvement. In their last report to shareholders, the directors had assured that they will endeavour to stop the downward trends of profits and they feel satisfied that they have been able to achieve that objective to an extent although the improvement though encouraging cannot be considered quite satisfactory on the basis of current standards.

Inclusive of provision for depreciation and development rebate at Rs. 1,23,469 (Rs. 1,47,423) at rates prescribed by the Income-tax Acts, administrative and selling expenditures during the year amounted to Rs. 15,64,888 (Rs. 16,40,402), a drop of Rs. 75,514 (Rs. 39,661) in total expenditure mainly due to reduced interest charge.

The overall net results of the operators of the Company during the year 1959 are a net profit of Rs. 7,18,038 (Rs. 3,96,628). Out of this amount, provisions for taxes including wealth tax for the current year and for the adjustment in the provisions for taxes for previous years, whose assessments have been completed, have been made at Rs. 3,14,246 (Rs. 44,987). That leaves a net trading profit of Rs. 4,03,792 (Rs. 3,51,640). There is no more carry forward of losses to apply to reduce taxation liabilities. Full provision for taxes on income, has now been made on normal basis. During the current year, sale of redundant and surplus of the fixed capital assets, gave the Company a profit of Rs. 15,028 (loss of Rs. 70). The net result is a profit of Rs. 4,18,821 (Rs. 3,51,570).

In view of low profits and no surplus, no provision towards reserve for replacement of fixed capital assets has become possible to be made in traditions, the fixed capital assets have been maintained in good order at all centres and facilities are generally improved and enlarged.

As mentioned in their last report the directors are pleased to inform that they have succeeded in securing from the Government of India, Ministry of Finance, a relaxation in condition No. 6 of the Consent Order of the year 1951 imposed on the Company by the Controller of Capital Issues while authorising the issue of bonus shares. By this relaxation order dated 4th June, 1960, the Company has been permitted to pay, each year, a cash dividend, not exceeding 5 per cent., out of its annual profits, on condition that a sum not less than Rs. 64,000 out of its profits is transferred each year to its free reserves until such time, the prescribed reserve of Rs. 14,40,000 is fully built up.

A sum of Rs. 1,69,656 out of the net profit of Rs. 4,18,821 has been appropriated and applied to wipe out completely the carry forward of the past losses as they stood at end of 1958. Out of the balance of Rs. 2,49,165, Rs. 64,000 has been transferred to the free reserves as prescribed by the relaxation order referred to above and the directors recommend a very modest and token dividend of 2½ (*nil*) per cent. less tax for the year, which though small, will be received and appreciated by the shareholders with satisfaction and with their characteristic sympathetic attitude. The balance of Rs. 5,165 will be carried forward to the next year's accounts.

Despite manifold difficulties the directors have to contend with, the basic conditions for the Company's future are quite stable and full of hopes. The current operations are going on steadily and the directors expect that, in the developing economy of the country, the use of the Company's standard products will acquire added importance and volume at prices that will give better margin of profits.

The necessity to toil hard and to conserve and augment every source of revenue is admittedly obvious and remains ever uppermost in the minds of the directors. With a view to enable the Company to ensure its useful and honourable survival in the struggle of the time and circumstances and to make the Company's operations less dependent and economically more sound and stable, the directors have decided, with the technical help of the Aluminium Laboratories Ltd., of Montreal, on a substantial expansion, costing about Rs. 2 crores. There occur numerous procedural and other delays in bringing the proposed expansion into early production. The directors, however, are hopeful and feel certain that the same will be brought into production in 1962. This will open out a much brighter future for the Company and for all engaged in the task.

The world price of aluminium firmed up in the year 1959 as a result of rise in wage bills and on 16th December, 1959 the price was ruling at £186 per long ton c.i.f. with a firmer trend. On the date of this report, the price still rules at £186 per long ton c.i.f. The prices for semis have also gone up sharply in sympathy with the rise in prices of primary aluminium and also tight supply position owing to shortage of fabricating facilities falling short of rising demand. At the date of this report, the price of imported aluminium circles is quoted at £275 per long ton c.i.f. with scarce offerings for reasonable deliveries. Primary Producers of Aluminium in India have continued to enjoy tariff protection in the year under report. The question of the continuance of this protection beyond 1960 is engaging the attention of the Tariff Commission, which, it is hoped, will adequately consult all interests connected with the industry, while making its final recommendations to foster this young and strategical industry on developing lines.

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 80,833 (Rs. 33,306). Deducting this amount from the debit balance brought forward from the previous year of Rs. 1,05,735 (Rs. 1,39,041) there is a debit balance to be carried forward of Rs. 24,902 (Rs. 1,05,735).

Raising from the 15 seam quarry during the year amounted to 16,422 tons compared with 5,592 tons in the previous year whilst despatches totalled 16,042 tons as against 5,329 tons. An incline has now been driven to the 5, 6 and 7 seams in the rise area of Bhuggutdih property. Whilst this work has taken longer than originally anticipated, it is expected that coal raisings will commence within three months. Progress has been made in the arrangements to stow 10 seam.

Messrs. Andrew Yule & Co., Ltd. will cease to act as managing agents of the Company on 15th August, 1960, and, their proposed appointment as secretaries and treasurers of the Company for a period of 5 years from that date has been approved by the Central Government. Before the appointment can become effective it will have to be considered by the members in General Meeting and accordingly an Extraordinary General Meeting has been convened for the purpose.

Shree Digvijay Cement Co., Ltd.

The directors of the above Company (Managing Agents: Shree Laxmi Agents Private Ltd., Sikka, Gujrat) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit and loss account for the year [subject to provisions for depreciation, taxation and development rebate reserve] shows a profit of Rs. 46,02,878 (Rs. 41,02,354). To this is added the amount transferred from general reserve of Rs. 4,50,000 (Rs. 8,00,000) and the balance brought forward from last year's account of Rs. 58,077 (Rs. 2,23,855) making a total of Rs. 51,10,955 (Rs. 51,26,209). This amount the directors recommend to dispose off as under:—

To transfer to development rebate reserve Rs. 2,99,918 (Rs. 6,90,082), to provision for depreciation Rs. 19,41,330 (Rs. 20,43,363), to provision for taxation Rs. 10,40,000 (Rs. 7,25,000), to payment of dividends on 79,940 preference shares at Rs. 7.14 (Rs. 5.00 per share, free of tax)* per share absorbing Rs. 5,70,772 (Rs. 3,99,700) and on 1,34,444 ordinary shares at Rs. 9.00 per share (Rs. 9.00 per share, free of tax), subject to deduction of tax absorbing Rs. 12,09,996 (Rs. 12,09,987) leaving a balance of Rs. 48,939 (Rs. 58,077) to be carried forward.

The difficulties alluded to in the last report about adequate supply of raw materials have been substantially overcome through provision of mechanised means of reclaiming sand at islands and provision of additional barges for its transport. The output of clinker and cement during the year being 3.57 lakh tons and 3.91 lakh tons are nonetheless lower than the full rated capacity on which basis the price has been fixed by the Tariff Commission. The working results of the Company have accordingly not come upto desired expectations. In the meanwhile, costs under various heads have continued to increase and the Company has approached the Government for a suitable revision in the retention price of cement. The rainfall in Saurashtra has for the last few years been continuously increasing which dislocates the supply of raw material and causes consequent loss in production during the monsoon period. This hampers the achievement of present rated capacity and the matter has, therefore, been taken up with the Government to revise the rated capacity on realistic basis.

As part of expansion programme it was decided to install clinker grinding section with packers at Bombay and orders for necessary plant and equipments for the same have been placed. Land for location at Bombay has now been acquired the construction is expected to be commenced shortly.

The recommendations of the Central Wage Board for Cement Industry having been accepted by the Central Government, the Company is negotiating with the Union for the implementation of the recommendations which would substantially increase the pay bill. The Company hopes to get necessary increase in the retention price of cement on account of said increase. The important aspect of determining productivity of labour as dealt with in the Wage Board Report is being looked into by independent experts and efforts will be made to implement their suggestions in consultation with the Union.

*Subject to deduction of tax at source under Section 18 (3D) of the Indian Income-tax Act as amended by the Finance Act, 1959, and at the rates prescribed in Part II of the First Schedule of the Finance Act, 1960.

Accounts in brief are as under:—

		Miscellaneous expenses ...	50,000
Rs.	4,69,07,719	Rs.	4,69,07,719

Indian Galvanizing Co. (1926) Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) presented the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year (including items relating to previous years) was Rs. 90,167 (loss of Rs. 11,31,207). The Board has transferred Rs. 81,268 (*nil*) from the provision for doubtful debts to profit and loss account. After deducting these two items from the balance brought forward of Rs. 2,73,694 (credit of Rs. 4,22,513) and after payment of wealth tax amounting to Rs. 22,257 (nil), there remains a balance of Rs. 1,24,516 (Rs. 2,73,694 after transferring Rs. 4,35,000 from general reserve) at the debit of profit and loss account which it is proposed to carry forward.

Operations.—At the annual general meeting held on 29th May, 1959, resolutions were passed authorising the Board to enter into agreements with Industrial Containers Ltd. and Steel Containers Ltd. for the transfer to these companies of certain assets belonging to the Company. These Agreements were duly executed and the assets were transferred, in consideration for which, shares in these companies were issued to the Company, and in consequence Industrial Containers Ltd. and Steel Containers Ltd. have become subsidiaries.

Steel Containers Ltd. acquired the entire assets of the Company's branch at Bombay and since 1st January, 1959 has been fully operative and carries on the business of manufacture of steel drums formerly carried on by the branch.

Industrial Containers Ltd. acquired the assets of the Company formerly employed in the manufacture of 40/45 gallon steel drums in the Calcutta factory and these assets have now been installed in a new factory established at Paharpur, Calcutta. The factory is now complete in all respects and is in a position to commence production as soon as supplies of steel are forthcoming.

The licence for the establishment of the business to be carried on by Hope's Metal Windows (India) Ltd. has still not been obtained and in consequence it has not been possible to transfer to that Company the plant, machinery and stocks which are being retained by the Company for this purpose. A number of alternative schemes of foreign collaboration have been submitted to the Government of India and negotiations for the settlement of the terms of collaboration are still in progress. The present indications are that the licence will be obtained shortly.

During the year a large part of the Company's fixed assets not required for the purpose of the new companies were disposed of, notably the land and buildings comprising the southern portion of the Company's factory at Howrah. Negotiations are taking place for the sale of the remaining portion of the Company's land and buildings.

If the licence to establish the business to be carried on by Hope's Metal Windows (India) Ltd. is obtained shortly and the negotiations for the sale of the remaining assets of the Company are successfully concluded, it will be possible to proceed with the implementation of the plan to wind-up the Company, to repay the preference share capital and to distribute shares in the new companies to the members registered in respect of the ordinary shares. The indications are that it should be possible to do so in the near future.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,77,040	Gross block	5,76,360
Liabilities ...	99,423	*Less*—Depreciation ...	3,01,442
		Net block ...	2,74,918
		Stocks ...	5,37,336
		Loose tools ...	17,100
		Book debts ...	8,58,448
		Investments	17,17,140
		Cash ...	5,47,005
		Profit and loss account (deficit) ...	1,24,516
Rs.	40,76,463	Rs.	40,76,463

N.B.—Figures within brackets relate to the corresponding period of the previous year.

JESSOP AND COMPANY LIMITED

FURTHER ISSUE OF CAPITAL LIKELY

CHAIRMAN, MR. B. P. SINGH ROY'S REVIEW

SPEAKING at the Twenty-eighth Annual General Meeting of Jessop and Company Ltd., held at Calcutta on 29th July 1960, Mr. Bijoy Prosad Singh Roy, Chairman of the Board of Management, indicated that the Company had a very healthy order book and the demand for its products continued to be good. He added that the current year was expected to show considerably greater output and the next year a further substantial improvement. He confirmed that the Board was considering schemes of further expansion and these would require funds both for capital expenses and for working capital.

The following is the full text of Mr. B. P. Singh Roy's speech:

"GENTLEMEN,

"Once more I have pleasure in welcoming you here today at this the twenty-eighth annual general meeting of your Company.

"This meeting has unfortunately been delayed as just before the accounts, which are now before you, had reached the final stage of printing, non-compliance through oversight of certain provisions of the Companies Act was discovered. The matter was purely technical, but before publishing and presenting the accounts to you the Board of Management thought it proper to bring it to the Government's notice with a view to resolving any legal implications. The position has been fully explained in the Board of Management's report to you.

"The year ended 31st October 1959 was one of consolidation and of continued improvement to the manufacturing potential of your Company, and the results are even better than appear at first sight, as I think you will agree if you will bear with me.

Steel Shortage

"The shortage of steel referred to at both the last two annual general meetings continued with increasing severity during the year under review. It was thus exceedingly difficult to maintain production and the greatest credit is due to all those who not only maintained output but actually increased it in the face of this and other difficulties. The steel position is now improving, but this welcome change is having, initially, its disadvantages. For any contract steel is needed in a variety of sizes and shapes and it is not possible to start work on that contract until supplies of all those varieties are available in balanced quantities. We have for long been used to having the bulk of certain items of steel in hand and having to wait until the missing items, or 'matching steel' as we call it, come to hand. With the improvement in steel supplies we are now receiving more steel and the missing items are fewer, but they are still there and as important as ever. Thus, we find that funds locked up in materials have risen sharply, while production itself is still hampered by these shortages. We hope that now that indigenous steel is generally more freely available the Government will be able to concentrate on imports of those types and sizes which are in short supply and that the situation will improve. In fact, there are welcome signs to that effect.

"Last year, I was able to tell you that the major expansion schemes started in 1955 and 1956 had reached the productive stage and I can now tell you that all these have attained their full target rate of output. The quantum of imports required for these products also has been considerably reduced and the work done at Dum Dum has greatly increased, though this fact, involving as it does, the substitution of an item previously imported by one made by ourselves naturally does not show in the sales figures by which output is normally judged.

"We have now completed the first stage of our contract for electric multiple unit coaches and the last of sixteen three-coach units was handed over to the Eastern Railway early this month. For this stage we imported the motor coaches, one to each three-coach unit, in the knocked down condition and we assembled and finished it at Dum Dum. We made the two trailer coaches required for the train set. All the bogies, both for motor and trailer coaches, were imported.

"Work on the second stage of this contract is now in hand and the first of eighteen three-coach units will leave our Works for Bombay next month. For this second stage we are making all the motor coaches as well as all the trailers, the bogies still being imported. The quantum of work done at Dum Dum will be some fifty per cent. more than in the first stage, although its effect will not be reflected in the sales figures.

Further Contract

"I am glad to tell you that we have recently secured a further contract for this E.M.U. stock, again for Bombay, and this will keep the section of the Coach Works concerned busy until late in 1962. For this contract we will build all the bogies at Dum Dum. This will require an extension to the Coach Works which is already in hand.

"The furnishing and finishing of metre-gauge passenger coaches has now reached its target rate of 24 coaches a month, a coach every working day. We completed the first 150 of these coaches in June last and are now working on the next 300. We also have on our books a further order for 450 coaches and this will keep us busy until towards the end of 1962.

"The production of road rollers has also reached its target rate of 200 a year and we have fully implemented the terms of our manufacturing licence. The proportion of manufacture at Dum Dum has risen from about 35 per cent. in 1957 to about 63 per cent. today, an increase of 80 per cent. in the work done per roller quite apart from the increased number of machines turned out. The balance 37 per cent. consists of the engine, previously imported, but now made in Madras, and the transmission which is outside our present manufacturing licence.

"The manufacture of the new heavy eight-wheeled BOX wagon referred to in my last address was unfortunately delayed as the drawings and specifications were not finalised by the Railway Board until February of this year. As a result, it was not possible to despatch any wagons of this type until May of this year and production is still in the stage of being built up. This delay has been most unfortunate, for it has meant a long gap between the last of the old four-wheeled wagon and the first of the new. We estimate that production worth about Rs. 300 lakhs will have been lost during this long change-over period, and this fact must be borne in mind in considering the working results.

"Since the close of the year under review we have also established the manufacture of metre-gauge bogie motor and parcel vans, and the first deliveries were made in May this year. This is an entirely new design of vehicle having the dual purpose indicated by its name and designed to run with passenger trains.

Improvement of Facilities

"Since I last addressed you we have continued to add to and improve our facilities at Dum Dum and the results are already beginning to show. In the current financial year after a slow start due to shortage of steel and the hold-up on the new wagon, production has increased rapidly and is still increasing. We expect the current year will show considerably greater output than that you are now considering, and that next year will show a further substantial improvement. We have a very healthy order book and the demand for our products continues to be good.

"The greatly increased output now being achieved and the fact that it is still increasing means that your Company is maintaining its position in the engineering industry and that it is playing its part in the industrialisation of the country and in the saving of imports. It also emphasises the necessity, mentioned in the Board of Management's report, of strengthening the financial resources of the Company to meet the greater demand for working capital on account of increased output and for undertaking new and diversified lines of production besides expansion of the existing ones.

"In my last address I referred to the award of the Fifth Engineering Tribunal. On due clarification of the doubtful points, the award was fully implemented resulting in an average monthly increase of Rs. 13 in the basic wages and dearness allowance of the workmen in general. This increase has, amongst other things, had its effect on the profits of the Company.

"Thanks to your co-operation, the recent 'rights' issue of equity capital was fully subscribed and it has enabled your Board to reduce the ceiling limit of cash credit facility with the State Bank of India from Rs. 275 lakhs to Rs. 175 lakhs and to release the guarantee of the Central Government with which that accommodation had been secured. To meet the increasing needs of funds to finance the rehabilitation and expansion schemes, however, your Board has recently finalised arrangements with the State Bank for a 6½ per cent. debenture loan of Rs. 75 lakhs which takes the form of a second cash credit account and may be drawn upon as and when necessary. The Board intends to reserve this account, as far as practicable for capital purposes as distinct from day-to-day use.

More Finances Required

"As you will see from the foregoing and also from the published accounts, the Company's financial position is now greatly improved and for this due credit must be given to the sacrifices made by the shareholders. At the same time, output has risen and is likely to rise considerably in the future which will necessitate larger working funds. In an industry such as ours, also, it is necessary to plan well ahead and I would remind you of the earlier part of my address today in which I mentioned that major schemes started in 1955 and 1956 had come into full fruition only in 1960. As indicated in the report of the Board of Management, there are other schemes now under consideration and these too will require funds both for capital expenses and for working capital. It is doubtful whether the debenture issue already referred to will suffice to cover these extra demands. The whole matter is having the careful attention of your Board and we shall approach you at the appropriate time for your co-operation and support, should we find it necessary to raise further share capital.

"I think, gentlemen, that at this juncture you will expect me to say something about that thorny question, the rate of dividend on our preference shares. As you know, our preference shares are what is known as 5 per cent. tax-free, by which is meant that the dividend is free of any deduction on account of tax paid by the Company on its earnings. Last year, by virtue of Section 18 (3E) of the Income-tax Act, we were able to gross up the dividend on the preference shares, so that after deduction of tax at 30 per cent, it still left 5 per cent. in the hands of the shareholders. Unfortunately, with the deletion of that section by the Finance Act, 1960, this is no longer possible and the only way now to achieve the desired result would be to raise the rate of dividend which would require a change in our Articles of Association. This, in turn, would require the consent in writing of not less than 75 per cent. of both classes of shareholders, ordinary and preference, which is virtually impossible to obtain. We sympathise with the preference shareholders, but we are not to blame and we can do nothing unless the law is changed.

"Gentlemen, in recounting this story of solid achievement I am sure you will wish me to give full credit to those whose hard work has made this progress possible and I am sure that you will join with me in thanking the workmen and all the staff of the Company. In this connection you will be interested to know that the Board has, in principle, decided to introduce an incentive system at the Works as soon as possible. A firm of experts is already making a preliminary study, but it must be realised that in an organisation such as ours which handles a very wide range of products and which is continually venturing on new lines the introduction of such a scheme requires very careful consideration, though all agree that it will be greatly to the ultimate benefit of the workmen and the Company alike.

"Finally, I cannot close without mentioning the retirement last March of Mr. C. V. Graham, a member of the Board. Mr. Graham had been in the Company's employ for over 32 years and we will greatly miss his wide experience and his capacity for hard work. I am sure that you will all join with me in wishing him many happy years of leisure in England.

"In Mr. Graham's place the Government has been pleased to appoint Mr. M. Lall, who has had twenty-four years' service with the Company. I know you will all join with me in welcoming him to the Board."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Notices

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the Seventy-sixth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company 21, Netaji Subhas Road, Calcutta, on Friday, the 19th August, 1960, at 11.45 a.m., to consider the Accounts of the Company for the year ended 31st December, 1959, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolutions to be proposed as Special Resolutions:—

Milano,
Italy.

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of new Ordinary shares

NOTICE IS HEREBY GIVEN THAT THE extended period for submission of coupons in respect of the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 29th July 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite new Ordinary share coupons, the Directors have extended the period for submission of such coupons to 29th September 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 30th July 1960 upto but not later than the 29th September 1960 in respect of such coupons Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9 per cent. per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under:—

(i) For applications with new Ordinary share coupons from *resident* shareholders from 16th December 1959 to the date of payment; and

(ii) For applications with new Ordinary share coupons in the case of *non-resident* shareholders from 1st June 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of new Ordinary *shares* from the *non*-resident shareholders which was 29th July 1960 be extended upto 29th September 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9 per cent. per annum thereon (which the Directors have decided to charge) from 1st day of April 1960 to the date of payment shall be paid to the Company's bankers.

No application received from resident shareholders on and after the 16th December 1959 and from *non*-resident shareholders on and after the 1st June 1960 in respect of new Ordinary share coupons and no application received from non-resident shareholders on and after the 1st April 1960 in respect of rights to new Ordinary shares will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 29th September 1960.

The above extension of date does not apply to applications in respect of "A" Second Preference shares or "A" Second Preference share coupons, the last date for submission of which is 29th July 1960.

Dated at Bombay this 28th day of July 1960.

By Order of the Directors,
For and on behalf of
THE TATA IRON AND STEEL COMPANY LIMITED,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,

TRITON INSURANCE COMPANY LIMITED

with which is incorporated
THE EASTERN INSURANCE COMPANY

NOTICE TO MEMBERS

THE BOARD OF DIRECTORS OF THE *Triton* Insurance Company Limited hereby give notice that the ANNUAL GENERAL MEETING OF MEMBERS will be held at the Company's Registered Office, 4, Clive Row, Calcutta, on Wednesday the seventh day of September 1960, at 11-30 o'clock in the forenoon, to receive and consider the Audited Accounts for the year ended 31st December, 1959, the Balance Sheet as at that date, the Report of the Board of Directors and the Auditors thereon; to declare a Dividend; to elect Directors; and to appoint Auditors and to fix their remuneration.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy in his stead and such proxy need not be a Member of the Company.

The Share Transfer Books of the Company will be closed from 24th August to 7th September 1960, both days inclusive.

By Order of the Board,
(Sd.) D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA, 30*th July*, 1960.

BALLY JUTE COMPANY, LIMITED

THE BOARD OF DIRECTORS AT THEIR Meeting held on the 15th July, 1960, have decided to recommend to the forthcoming Annual General Meeting of the Company to be held on the 31st August, 1960 the following Dividends for the year ended 31st March, 1960, subject to deduction of tax under Section 18 (3D) of the I.T. Act:—

On Preference Shares @ 10 per cent. per annum.

On Ordinary Shares @ Rs. 25 per share.

Per Pro BIRLA BROS. PRIVATE LTD.,
G. MAKHARIA,
Secretaries and Treasurers.

CALCUTTA,
Dated the 29th July, 1960.

STRAW PRODUCTS LIMITED

THE BOARD OF DIRECTORS AT THEIR meeting held today have decided to recommend to the forthcoming Annual General Meeting of the Company payment of dividend at 15 per cent., subject to Income-tax, on 1,50,000 fully paid Ordinary Shares of Rs. 10 each bearing Nos. 1 to 1,50,000 in respect of the year ended 31st December, 1959.

The Annual General Meeting of the Shareholders will be held at the Company's Registered Office at Chola Road, Bhopal, on the 19th September, 1960, at 4 p.m.

The Share Transfer Registers will be closed from the 30th August to 19th September, 1960, both days inclusive.

Subject to the approval of the Shareholders, dividend will be paid on or after the 26th September, 1960, to those members whose names are on the Company's Register of Equity (Ordinary) Shares on the 19th September, 1960.

By Order of the Board,
J. K. AGENTS PRIVATE LTD.,
Managing Agents,
H. S. SINGHANIA,
Director.

The 28th July, 1960.

CHAIRMAN'S STATEMENT

ADVANCE INSURANCE COMPANY, LIMITED

EXTRACTS from the speech by Seth Basudevji Somani, Chairman, at the 17th Annual General Meeting:—

"I now stand before you, friends, with the balance-sheet of the Company as at 31st December, 1959, which, as anticipated, has shown better results and progress than those of 1958.

"The balance-sheet of the Company, as at 31st December 1959, speaks for the solidity of the Company and, I feel, I need not speak much about the same.

"The net premium income of the Company, which was Rs. 78,727 for the year 1957 and Rs. 15,76,392 for the year 1958 is Rs. 27,09,553 (including the net premium income of Rs. 6,88,485) derived from the business done outside India for the year 1959.

"Though it is well known that the insurance industry is passing through a period of crisis and the management of few big fullfledged insurance companies has thought it necessary to restrict and/or to wind up their insurance business activities, we, in spite of this, are advancing ahead and have been able to achieve good results in securing a good volume of business and also have shown a reasonably good profit even after creating sufficient reserves. I personally think that this should be considered a matter of pride for the Company.

"Scope for general insurance business is increasing day by day with the establishment of new industries in India and this must give necessarily a scope in turn to the Indian insurance industry for its further development. I may assure you that your Directors have been vigilant on this aspect of the organisation which is evident from the progress of the Company.

"Authorities deserve thanks from all concerned for their untiring labour in devising ways and means of stopping the much-talked alleged malpractices and I, in the interest of all concerned, wish them success in their task."

BIRLA JUTE MANUFACTURING COMPANY, LIMITED

THE BOARD OF DIRECTORS AT THEIR Meeting held on the 15th July, 1960, have decided to recommend to the forthcoming Annual General Meeting of the Company to be held on the 31st August, 1960 the following Dividends for the year ended 31st March, 1960 subject to deduction of tax under Section 18(3D) of the I.T. Act:—

On Preference Shares @ 7.50 per cent. per annum;

On Second Preference Shares @ 7.86 per cent. per annum;

On Ordinary Shares @ Rs. 1.50 nP per share.

Per Pro BIRLA BROS. PRIVATE LTD.,
G. MAKHARIA,
Managing Agents.

CALCUTTA,
Dated the 29th July, 1960.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS (RAILWAY BOARD)

THE last date for receipt of offers against the above tender has been extended to 1st September, 1960 instead of 16th August, 1960. Consequently the opening of the tenders will be at 2 p.m. on 1st September, 1960.

QURBAN SINGH,
Director, Railway Stores,
Railway Board

NEW DELHI,
Dated 30th July, 1960.

TREASURY BILL RATE DECLINES

(From Our Own Correspondent)

BOMBAY, *3rd August*

Notwithstanding the sustained decline in bank credit during the last few weeks and the increase in deposits with banks, conditions in the short-term money market are not as easy as they used to be or should be at this part of the slack season. Banks are, no doubt, not very keen borrowers in the inter-bank section, but the rate of interest for inter-bank call money stays put at the high level of 3½ per cent. per annum. Consequently, the other short-term money rates, too, are unchanged at 3¼-3⅜ per cent. for seven days' House money and at 3¼-3½ per cent. for one to six months' deposits.

There has, however, been a slight fall in Treasury Bill discount rate, which, after a sustained spell of twelve weeks, has declined from 2.745 per cent. per annum to 2.737 per cent. per annum. This is evidently due to the slightly larger offerings this week, amounting to *Rs.* 2.26 crores, than in the previous week, when the amount offered was no more than that invited. There were, however, *no sales* of Intermediate Treasury Bills during the period 27th to 30th July, but they are being offered this week from 3rd to 6th *August* at Rs. 99.326 per cent., that is, at a discount of 2.696 per cent. per annum.

There has been a contraction in active notes for the third week in *succession*. The latest Reserve Bank's statement for the week ended 29th July 1960 shows a fall of Rs. 21.38 *crores*. This *is on top of* a decline of Rs. 26.28 crores in the *previous* week and of Rs. 8.44 crores in the second week of July. Total *notes* issued, however, *show* a decline of only Rs. 13.32 crores during the week under review, consequent on a rise of Rs. 8.07 crores in notes held in the Bank Department. The contraction in total note issue is covered by a reduction of *Rs. 15 crores* in foreign securities and an increase of Rs. 1.68 crores in rupee coin. The fall in foreign securities in the Issue Department, *which* has occurred for the first time since the week ended 24th June 1960, has been offset to a large extent by the rise of Rs. 7.93 *crores* in balances held abroad, so that the total foreign assets, at Rs. 153.23 crores, are lower by only Rs. 7.07 crores over the week and by Rs. 24.60 crores as compared with the *position* a year ago. The deposits of the Central Government are higher by Rs. 14.60 crores, while those of the other Governments are lower by Rs. 9.46 crores. Deposits of banks have improved by Rs. 10.88 crores. Loans and advances other than to Governments have declined by Rs. 2.91 crores, *mainly due* to the reduction in advances to Scheduled banks against usance bills to the tune of Rs. 3.93 crores. Investments are a shade lower, while holdings of Government Treasury Bills are up by Rs. 9.46 crores.

Although the conditions in the short-term money market are still far from easy, the indications of the *changing* trend are provided by the Scheduled banks' statement for the week ended 22nd July 1960. For this discloses a rise of no less than Rs. 16.84 crores in the banks' demand deposits. The time deposits are, however, lower by Rs. 2.35 crores of the net rise of Rs. 14.04 crores in total deposits, the State Bank of India alone accounts for Rs. 10.77 crores. Borrowings from the Reserve Bank stand *reduced* by Rs. 17.16 crores and those from the State Bank by Rs. 1.03 crores. Advances have declined by Rs. 8.95 crores, of which the share of the State Bank is Rs. 5.75 crores. Investments have declined by Rs. 3.35 crores, thanks to a fall of Rs. 6.86 crores in the State Bank's portfolio. Cash balances are lower by Rs. 17.86 crores, of which the State Bank accounts for Rs. 13.16 crores, and balances with other banks by Rs. 5.58 crores, while money at call and short notice shows a *rise* of Rs. 3.07 crores.

Barring *some* selling pressure in the State loans section, the view of the forthcoming issues by the twelve States to the tune of Rs. 75 crores—the details of which were published on page 183 of our last week's issue—the *Gilt-edged* market is featureless and the volume of business is small. Conversion loan *is* a shade quiet at 3 per cent. Rs. 73.60, as also 3½ *per cent.* 1965 at Rs. 99.75. 4 per cent. 1972 is quoted at Rs. 101.25 *ex*-voucher and 4 per cent. 1973 is 5 nP lower at Rs. 101.15. The new Central loans 3½ per cent. 1966 and 4 per cent. 1980 are being quoted at their issue prices, namely, Rs. 99.75 and Rs. 99.90, respectively. 3 per cent. 1966-68 and 3 per cent. 1970-75 have, however, been marked up by 10 nP each to Rs. 95.95 and Rs. 99.90, respectively.

KIP EXPORT BUSINESS POOR

(From Our Own Correspondent)

MADRAS, *1st August*

The kip market remained unchanged during the week under review. Export business was poor, in view of the August holidays in the U.K. and the Continent. Arrivals of kips were of usual volume and clearance by merchants was good. Prices ruled firm. As the tannery arrivals yield very low percentage of top selections, shippers are unable to meet U.K. prices. There has been a revival of demand for lower grade kips light weights, for inland trade and prices in this section are hardening. Arrivals of buff hides were small and prices remained steady. Cow calf and buff calf remained dull.

There were scattered sales of top marks goat skins at unchanged prices, as also of middle class sheep; otherwise, the market remained unchanged.

As prices have touched sufficiently low levels in most of the lines, it is hoped that there will be a revival of interest after two weeks when the markets will reopen after summer holidays.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *3rd August*

The bullion market ruled firm during the major part of the week under review. The buying fervour was fanned principally by hopes of some relaxation in margin requirements. A deputation of the bullion trade waited on the Finance Minister of Maharashtra on Thursday, 29th July, and requested him to raise the exemption limits in silver and gold for margin purposes. The deputation is believed to have drawn the Minister's attention to the dwindling volume of business in bullion since the introduction of *ex parte* margins from 8th July. Reports regarding the seizure of large stocks of contraband gold and encouraging advices from upcountry centres also imparted strength to the market. Both gold and silver, as a consequence, recorded an improvement in values.

The Government of Maharashtra has, however, turned down the plea for relaxing margin rules. A communication to this effect was received by the Association just today.

The annual general meeting of the Bombay Bullion Association was held on Saturday. Addressing the meeting, Mr. Kantilal M. Sonavala, President of the Association, reiterated the plea for gold imports on loan basis from the U.S. or the U.S.S.R. or both. Such imports, he said, "had a double advantage of proving anti-inflationary and putting the entire economy on a firm footing." Reviewing the trend of the bullion market, Mr. Sonavala pointed out that the unprecedented rise in prices was not solely due to the speculative activities in the market, but extraneous factors such as curtailment of Kolar gold supplies, cessation of silver arrivals from Tibet and political developments also played a dominant role in moulding the pattern of the bullion market.

Both daily average arrivals and offtake of gold during the week were larger than in the previous week, being 3,750 tolas and 2,875 tolas, respectively, as against 3,600 tolas and 2,700 tolas. In the case of silver, however, they were comparatively lower: arrivals at 23 bars, as against 28 bars, and offtake at 6 bars, as against 8 bars. The floating stocks of gold are estimated at 25,000 tolas and those of silver at 300 bars.

Shravan (August) settlement in gold elicited enlarged buying enquiries and advanced from Rs. 129.56 on Wednesday last week to Rs. 132.71 today before finishing at Rs. 131.62. The net gain over the week was Rs. 2.06. Business in the *Bhadrapad* settlement commenced at Rs. 132.31 on Friday, 29th July. This settlement was well favoured and moved up to touch a high of Rs. 131.22 today. The closing rate was lower at Rs. 130.31. With the bulls tightening their hold on the maturing *Shravan* settlement, the backwardation rate, that is, the *badli* payable by bears forgetting the commitments transferred from this settlement to the *Bhadrapad* settlement, widened from just 19 nP early on Friday to as much as Re. 1.31 today.

Reflecting the above position, the premium commanded by ready gold over the *Shravan* settlement, which had declined from 81 nP on Wednesday last week to 37 nP on Saturday, 30th July, increased to 75 nP yesterday. Today, however, it was slightly lower at 63 nP. Ready gold began the week at Rs. 129.87, as against the previous closing of Rs. 130.37, and rose to touch a high of Rs. 133.15 today before finishing at Rs. 132.25.

In the silver section, *Shravan* settlement moved up from Rs. 219.22 to Rs. 221.62 on Saturday. *After declining* to Rs. 220.75 the same day on account of profit-taking, it recovered to Rs. 222.12 today, but closed lower at Rs. 221.50. *Bhadrapad* settlement fluctuated between Rs. 219.87 and Rs. 217.62 before winding up the week at Rs. 219.31. The rate for *transferring* commitments from *Shravan* to *Bhadrapad* settlement continued to be in favour of bulls throughout the week, the rate actually widening from Re. 1.25 on Wednesday last week to Rs. 2.25 yesterday and Rs. 2.15 today.

Ready silver improved from Rs. 220.50 to Rs. 222.94 on Saturday at which level it commanded a premium of Re. 1.32 over the *Shravan* settlement. Subsequently, however, not only was the premium completely wiped off but the ready metal was sold at a discount of 44 nP under the *Shravan* settlement, today's closing rate being Rs. 221.06.

Both ready and forward silver in the London bullion market remained unchanged at 79¼*d.* during the week under review, as also silver in New *York* at 91.375 cents. Ready gold in London improved from 250*s.* 1¼*d.* to 250*s.* 2¼*d.* The latest available world *price for gold* in *London* is $35.10⅛-$35.12⅛ per fine ounce, as against $35.09⅛-$35.11⅛ a week before.

The following table shows the trend of the market during the week under review:

	3-8-60 (closing)	High	Low	*27-7-60* (closing

OFFICIAL TRADING IN COTTON FUTURES RESUMED

(From Our Own Correspondent)

BOMBAY, *3rd August*

The commencement of August, the delivery month for the Jarilla August Contract, witnessed the shooting up of futures prices to the statutory ceiling of Rs. 820 on the very first day of trading. The first of August having been a holiday, official trading commenced on the 2nd inst. The Contract opened at Rs. 819 and immediately rose by one rupee to touch the ceiling. After declining by a like amount, on stray selling, the Contract firmed up to finish at Rs. 820. The fact that not a single bale was tendered on the first notice day, namely, 2nd August, imparted further strength to the market. In fact, the setback suffered by the contract in unofficial trading in the first half of the week, thanks to selling prompted by the announcement of the Government that there will be no change in the ceiling price of cotton for the new season and the release of a large import quota of 600,000 bales of cotton, was more than made up. The contract ruled at the ceiling rate today also.

In the spot section, with the Cotton Control Order, issued by the Textile Commissioner in May last, prohibiting sales above the ceiling rates and requiring sellers to apply to the Textile Commissioner for nomination of buyers, having come into force with effect from the 1st inst., free trading was at a standstill. The majority of spinners had covered their requirements to the extent their quotas permitted. Those mills, which had unutilised quotas, were interested in such varieties as 197/3, Moglai and Kala.

Demand for foreign cotton was good. New crop East African Mwanza was a favourite with mills. Sizable business was reported by Bombay and Ahmedabad mills who were regular buyers of this quality at prices ranging from Rs. 1,195 to Rs. 1.200. Prices of other East African varieties also were firm. B.P. 52 was done at Rs. 1,400. Sudan cotton also evoked interest.

Traders were awaiting the procedure for the import of 600,000 bales of cotton (400,000 bales from the U.S. under P.L. 480 and 200,000 bales from "usual commercial sources") against the quota announced this week. Meantime, they were perturbed over the reported barter deal, covering 50,000 bales of cotton, involving exchange of Indian ferro-manganese against American cotton. It is said that, although individual importers will be free to participate in this import, the whole deal will be channelised through the State Trading Corporation and that the cotton so received will be distributed to certain prominent exporting mills.

The resumption of rains in Gujarat, Vidarbha, Khandesh and other regions has allayed fears of damage to the crop. The crop in these regions are said to be progressing well. Punjab, Rajasthan and U.P. also reported satisfactory crop progress.

The following are the latest available quotation—in rupee per candy of 784 lbs.—from the spot market at Sewri:

Co2 1.220-1,240; Gadag Laxmi 1,070; American 1" middling 1,100; Sudan G3S 1,810; G2S 2,010.

Cotton futures in the Karachi market declined further during the week under review. Values gave way to speculative selling induced by favourable weather and encouraging crop news. Export demand for staple styles was dull. But *Deshi* varieties evoked inquiries from Japan. N.T.R.G. January receded from Rs. 69 last week-end to Rs. 67-11. The March contract dropped Re. 1-2 over the week, to Rs. 67-2. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 92; Punjab *Deshi* 89; 4F Punjab Roller 88-3; S.G. 93; L.S.S. Punjab Roller 90-5; S.G. 95-3; N.T. Roller 92-3; S.G. 96-3; 289F Punjab Roller 99-3; S.G. 104-3.

Easy conditions prevailed in the Alexandria cotton futures market during the week. Buying interest was at a low ebb. Crop news was the main factor influencing the market. A fairly good volume of speculative selling witnessed during the week was attributed to the good progress of the crop and the higher acreage under cotton this season. Both the Karnak and Ashmouni contracts were subjected to selling pressure. Their quotations consequently declined further. Latest quotations—in tallaris per lb.—*from* Alexandria are as under:

Karnak: November 73.06; January 73.15; March 73.35. *Ashmouni*: August 61.15; October 61.85; December 61.85.

Cotton futures in Liverpool ruled barely steady. A sizable volume of American long liquidation and hedge selling was absorbed in short covering and local trade buying on mill account. Prices fluctuated in a limited range, showing little change over the week. Reports from the yarn and cloth markets were unencouraging. Very little new business was reported in these sections. The latest available quotations—in pence per lb.—from Liverpool are given below:

American cotton one inch staple contract: October 22.65; December 22.40; March 22.45.

American cotton mixed growth contract: October 22.95; December 22.70; March 22.80.

Sudan: September, November, January 35.50.

Cotton futures in New York cotton futures declined further during the week, thanks to hedge selling and liquidation which were only partly absorbed in Commission House buying and mill covering. The prospect of a larger crop this season was the main influencing factor. The fall would have been more marked but for the buying support induced by the knowledge that the export subsidy

rate would be lower at 6 cents per lb., as against 8 cents, with effect from 1st August.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	2-8-60	26-7-60	19-7-60
Spot	33.10	33.60	33.95
October	30.97	31.14	31.18
December	31.18	31.28	31.33
March	31.55	31.72	—

ART SILK YARN IMPORTS BY S.T.C.

(From Our Own Correspondent)

BOMBAY, *3rd August*

Easy conditions prevailed in the yarn market during the week under review. Art silk yarns encountered selling on reports that the State Trading Corporation was importing from abroad a large quantity of yarn valued at Rs. 1.75 crore for *ad hoc* distribution to weaving interests. It was stated that about Rs. 20 to Rs. 22 lakhs worth of yarn had already arrived in the country. There were, besides, reports that offtake of art silk cloth was at a low ebb. Consequently, prices of art silk yarn tended to look down. Staple fibre yarns lacked support in the absence of encouraging demand from consuming countries. Cotton yarns, too, ruled easy, thanks to expectations of an improvement in output and fears of some official measures to bring down prices.

Cupressa Bemberg yarn (60 x 2) August delivery receded from Rs. 1,918 to Rs. 1,908, with October contract quoting at Rs. 1,941, as against Rs. 1,934. Spot cupressa dropped 6 nP to Rs. 8.94. 120 Italy fell by 19 nP to Rs. 5.81. 150 Italy was neglected at Rs. 6.19. 120 Japan, however, gained 2 nP to Rs. 5.61. 150 Japan was better by 4 nP at Rs. 5.94. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade declined by 8 nP to Rs. 5.16. 120 Bt. cone 1st grade eased by 6 nP to Rs. 6.06.

In the staple fibre yarn section, 40 x 2 August delivery shed Rs. 2 to Rs. 719. October delivery lost a rupee to Rs. 733. Spot Centurys were dull at Rs. 3.62. Citys and Kohinoors gained a naya paisa each to Rs. 3.76 and Rs. 3.77, respectively. 80×2 Paramounts (imported) were unaltered at Rs. 12.75.

Among cotton yarns, ten counts Podars decreased by 13 nP to Rs. 18.87. Gokaks were quiet at Rs. 19.25. Twenty counts Gokaks were dull at Rs. 24.50, while Moderns put on 25 nP to Rs. 25. Forty counts Maduras declined by 13 nP to Rs. 32.37. Minaxis, however, improved by 37 nP to Rs. 32.37. Sixty counts Finlays changed hands at Rs. 60.60, same as last week. Eighty counts Moderns receded by a rupee to Rs. 74. Mahendras fell by Re. 1.50 to Rs. 71. Finlays were unchanged at Rs. 82.82.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	3-8-1960	27-7-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
August	1,908	1,918
October	1,941	1,934
60/1 Cupressa Bemberg spot (per lb.) ..	8.94	9.00
120 Japan (per lb.)	5.61	5.59
150 Japan (per lb.)	5.94	5.90
120 Italy (per lb.)	5.81	6.00
150 Italy (per lb.)	6.19	6.19
Staple fibre yarn—		
40×2 August	719.00	721.00
October	733.00	734.00
40×2 City (per lb.)	3.76	3.75
40 x 2 Century	3.62	3.62
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.87	19.00
20s Gokak	24.50	24.50
40s Madura	32.37	32.50
60s Finlay	60.60	60.60
80s Modern	74.00	75.00

SEEDS DRIFT LOWER

(From Our Own Correspondent)

BOMBAY, *3rd August*

The easier trend noted at the close of the last week gathered further momentum during the week under review, with marked decline in values of seeds and oils. The crop prospects distinctly improved, with the revival of monsoon. This led to heavy bull liquidation in major seeds and oils. There was no notable improvement on the export front also. Crushers chose to wait and watch, rather than enter into fresh commitments, in a declining market. Easier conditions prevailed in the groundnut section. But official forward trading in groundnut continued to be suspended, since the ruling prices were well above the ceiling level. In the absence of any encouraging enquiries from overseas, castorseeds and oils met with selling pressure. Linseed and cottonseeds followed suit. A final decision, it may be noted, has not yet been taken by the Forward Markets Commission on the question of granting permission to start new deliveries in the case of groundnut, castorseed and linseed. Traders entertained hopes that at least new crop contracts in castorseeds and linseed would be permitted to begin next week. In view of the tight statistical position in groundnuts, the commencement of the new groundnut contract, however, is likely to be delayed.

Distinctly quiet conditions prevailed in the groundnut section on favourable weather reports from major producing centres. Operators were of the opinion that the break in the monsoon was not long enough to make any sizable setback in production. In fact, private crop estimates were revised upwards, with the onset of rains. Consequently, the buying spree, which was in evidence for the past few weeks, came to a halt. There were, on the contrary, signs of growing selling pressure in this section during the week under review. Although there were some unloading of stocks, overall supply position had not made any remarkable improvement. The August 1960 contract is quoted privately at about Rs. 223.50, just above the ceiling. Nizam Bold drifted lower by Re. 1.25 to Rs. 48. Khandesh quality lost Re. 1.75 to Rs. 48. Oil ex-mill declined by 25 nP to Rs. 25.12 and railway receipts by 50 nP to Rs. 24.62.

Bearish sentiment was in evidence in the castorseed section as well. The volume of export of castor oil was small. Operators noted in particular that the U.S. had been off the market for its requirements of castor oil for some time, presumably on account of Brazilian supplies. The demand from crushers was also at a low ebb; they were waiting for further decline in values, as it were. In these conditions, castorseed September 1960 contract, which had wound up last week at Rs. 174, after an initial spurt to Rs. 177.12, lost ground to close today at Rs. 173.75, with a net loss of Rs. 3.25. Ready Madras shed 13 nP to Rs. 34.87. Oil B.S.S. eased by 12 nP to Rs. 19.75.

In sympathy with the trend in other major seeds and oils, the linseed section remained subdued. Operator took note of the permission granted by the Argentine Government to its exporters to re-enter the world market as an exporter of grain linseed, after an absence of about 15 years. Till now, export of linseed was restricted in Argentine to protect the domestic crushing industry. The quantity available for export is expected to be of the order of 130,000 metric tons. The seed export, however, is clubbed with the export of linseed oil. It is stipulated that exporters will be required to show that they have sold for export an equivalent volume of linseed oil—of which Argentine has a heavy surplus. The present step is taken in view of the inability of the oilseed crushing industry to process last year's crop estimated at about 820,000 tons. In the linseed section, linseed September contract fell from Rs. 34.19 to Rs. 33.47 over the week. Bold ready closed lower at Rs. 33.37, as compared with Rs. 33.62 last week-end. Linseed oil dropped 7 nP to Rs. 17.12.

Cottonseeds were, however, steady. February 1961 contract, which had closed last week at Rs. 91.75, rose initially to Rs. 93, but gave way subsequently to finish at Rs. 92.50 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	3-8-1960	27-7-1960	20-7-1960
	Rs.	Rs.	Rs.
Groundnut			
August 1960	48.00	49.25	48.75
Nizam bold	48.25	49.75	49.25
Coromandel ready	48.00	49.75	49.25
Khandesh quality	25.12	25.37	25.50
Oil ex-mill ready*	24.62	25.12	25.25
Castorseed			
September 1960	173.75	177.00	181.00
Ready Madras	34.87	35.00	35.50
Ready Kanpur	33.75	34.00	34.50
Oil B.S.S.†	19.75	19.87	20.25
Oil commercial†	18.31	18.44	18.87
Linseed			
September 1960	33.47	34.19	34.56
Bold ready	33.37	33.62	34.00
Oil ready†	17.12	17.19	17.32
Cottonseed			
September 1960	—	—	—
February 1961	92.50	91.75	—
Niger seed	39.00	38.50	38.50
Kardi seed	25.00	25.00	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates of new cottonseed contract are per 250 kilograms.

BLACK PEPPER RECEDES

(Messrs. Parekh and Co.)

BOMBAY, *3rd August*

Malabar black pepper, which moved narrowly with a mixed tone last week, toppled down during the week under review, in sympathy with Singapore where holders were reported to be nervous, in view of first hands offering of new crop Lampong for September-October at $0.53. Singapore dealers were anxious sellers for nearby shipment at as low as $0.54. New York, as usual, refused to buy in weak market. Almost all offers of Lampong remained unsold. Cochin showed nervous liquidation in August delivery which once touched as low as Rs. 281. Ready garbled also gave way and some business was done at Rs. 280. October delivery was hard to sell, the nominal quotation being Rs. 295. Calicut was nominally quoted at Rs. 1,700 for ungarbled and Cochin at Rs. 1,625.

Singapore was reported to be weak, with sellers predominating. Black was quoted at Str. $185 and white at Str. $305. Bear and bull propaganda is going on in full blast, as most of the dealers there think that the propaganda, if well timed, can make or mar the market. In the past, such propaganda paid premiums both to bears and bulls. Nothing is definitely known regarding the size of the new crop of Lampong. But all pointers are to a better crop which may exceed 15,000 tons. The only relieving feature of the market is the unstable political and economic situation in Indonesia. There are reports that Sarawak crop is smaller than earlier expected, but, looking to the behaviour of the Singapore market, the trade in general is taking these reports with a pinch of salt.

The real rub in the entire picture of world pepper is the lack of consumer demand in both Europe and the U.S.A., autumn demand being already overdue. New York spot dropped to $0.55, as grinders refused to buy. They are filling their requirements from their old inventories and from consignments. Trade in the supplying market is mystified by such behaviour of the consuming countries.

The future of the market is uncertain. It is likely to go down slowly, barring some speculative manœuvring, as there will be no shortage of pepper in the world. Business in Malabar pepper with the U.S.A. is at present impossible, our price being very high. But it appears that, if East European countries and Russia do not come to the succour in time, the holders and grinders on the coast, who are sitting tight will become anxious to liquidate some time during the end of August or beginning of September, in view of the proximity of the new crop. If, by then, no support is forthcoming, there will be undercutting competition between India and Singapore where stock of Lampong is said to be comfortable. Ready pepper showed some revival following demand from Pakistan and the Middle East. But it proved to be a passing phase, as outside holders and investors who stocked pepper for making profit are now eager to liquidate.

Ready pepper in Bombay is quoted at Rs. 220 per Bengal maund.

STRONG DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *26th July*

Sale No. 29:—In sale No. 29 held on Tuesday, 26th July, there was a total of 1,659,000 lbs. on offer. Quality in general was similar to the last with the exception of some highgrown invoices which showed an improvement. There was a strong general demand at dearer rates. Best liquoring highgrowns sold at around last week rates, but the lesser kinds were often dearer by 10 nP to 20 nP following improved quality. There was better demand for good medium and medium brokens which generally advanced in price by 5 nP. Similar fannings, particularly those free from fibre, came to a higher market. Low medium brokens met with more competition and were dearer by 5 nP to 8 nP, whilst the fannings sold at 3 nP to 5 nP above last rates. Lowgrown and plainest sorts followed trend of the market. Black leaf brokens advanced 10 nP to 15 nP with similar fannings advancing 15 nP to 25 nP. Legg-cut and C.T.C. types sold well. Tippy teas were absorbed readily and were dearer. Whole Leaf grades sold at enhanced rates.

	1960	1959
	Rs.	Rs.
Low mediums	1.60-1.75	1.55-1.68
Mediums	1.75-1.85	1.70-1.80
Good mediums	1.85-2.00	1.95-2.20
Quality	2.10-2.72	2.05-3.15

The average price realised in Sale No. 29 was Re. 1.84 per lb., as compared with Re. 1.75 in the previous sale and Re. 1.85 in the corresponding sale of 1959.

Dust Sale 'BB':—A total of 650,000 lbs. was offered in sale 'BB', held on Thursday, 29th July 1960. There was a strong general demand at dearer rates. Highgrowns came to an irregular market and sold at around last prices. All mediums met with keen competition and were 5 nP to 8 nP dearer with Wynaad teas 10 nP dearer. Milled and Residual descriptions were also a strong feature. C.T.C. types and legg-cuts came to a strong market at dearer rates.

Export Quota:—There are sellers at 2 nP per kilo and business has been done in Calcutta at 1¾ nP per kilo.

Colombo:—Nearly 6¾ million pounds were again offered and met with a strong general demand. Uvas were again dearer following quality, whilst Dimbulas advanced 10 to 20 cents. Mediums were 5 to 10 cents, whilst lowgrowns were fully firm to 5 cents dearer. Plainest kinds were steady. All fannings came to a very strong and dearer market.

London: North Indian and other growths:—In Monday's auction, there was a good demand at firm to dearer rates. The best of the new season's Assams came to a strong market and were considerably dearer. There is no quotation for Plain B.P. as no suitable types were on offer.

Ceylon and South Indians:—On Tuesday and Wednesday, a total of 12,700 chests of South Indian teas was offered. Demand was good and prices were fully firm to dearer.

QUALITY TEAS KEENLY BID

(From Our Own Correspondent)

CALCUTTA, *2nd August*

Good general demand was noted at yesterday's export sales in tea. Quality teas once again met with keen attention and prices improved. Trade circles attributed this feature to the little carry-forward of quality teas from the last season, and also to the shortage of output in this season owing to drought conditions earlier in the season. Tea gardens can no doubt make good the production lost, but such an increase would be only in plain teas if finer plucking is not resorted to. The increase in output in North Indian gardens during the month of June is taken as proof of the industry's anxiety to make good the loss in production, though only in plain teas. For quality teas are usually harvested in the second flush during April and May. The possibility of the quality teas being in acute short supply thus explains why keen attention is being paid to these offerings in the auctions both here and at London. However, the loss in production in North-east India would not mean a loss to world output. Both Ceylon and South India are already ahead of last year, and it is more than likely that competition in world markets would be keener than last year, now that African as well as Chinese teas are being sent in greater quantities to the United Kingdom, the world's largest buyer of tea. So far, world production has aggregated 472.7 millions, representing an increase of 7.4 million lbs. as compared with the corresponding previous figure. Increases in production have occurred in South India, East Africa and Ceylon.

The above analysis shows that there is a distinct possibility of world production of plain teas far exceeding demand. There is, therefore, the need for the North-east Indian gardens paying more attention to finer plucking, so that the production of quality teas can be increased even at the cost of plain teas. The auction trend at Calcutta and London has indicated that, demand for quality teas being strong and unsatisfied, prices are bound to rise.

Meanwhile, the withdrawal of heavy quantities from auctions, which was again a feature yesterday, has been due to samples not reaching potential foreign buyers in time, following the recent transport and postal difficulties. Contrary to the general belief, there has not been any fall in demand.

Tea movements are still restricted and a shift to normalcy would take more time than earlier anticipated. The railways are now clearing the backlog. Sir Richard Duckworth, Vice-Chairman of the Indian Tea Association, has said that, judged against the background of earlier fears that larger quantities of tea would be held back, only a small quantity is prevented from reaching Calcutta. Referring to the recent disturbances in Assam, Sir Richard points out that, although there have been only a few cases of physical injury to the Bengali staff, they have been subjected to much intimidation, leading to flight and absenteeism among the Bengali staff.

London tea stocks declined to 113 million lbs. in the week ended 22nd July from 116 million lbs. previously. The need to replenish stocks explained the greater demand in the Mincing Lane auctions.

Dusts on offer during last week's internal sales amounted to 12,015 packages. Generally, there was good demand, and a strong feature of the sales was better demand for good medium and medium brokens which generally advanced in price by 5 nP. Similar fannings, particularly those free from fibre, came to a higher market. Low medium brokens met with more competition and were dearer by 5 nP to 8 nP, whilst the fannings sold at 3 nP to 5 nP above last rates. Lowgrown and plainest sorts followed trend of the market. Black leaf brokens advanced 10 nP to 15 nP with similar fannings advancing 15 nP to 25 nP. Legg-cut and C.T.C. types sold well. Tippy teas were absorbed readily and were dearer. Whole Leaf grades sold at enhanced rates.

Leaf on offer amounted to 205 chests. Demand was fairly good.

On export offer yesterday were 43,827 packages. The good general demand in evidence towards the beginning of the sales petered out as the auctions progressed. A strong feature was the dearer tendency in bright liquoring orthodox Assams, while the balance of this category met with a poor market and eased by 20 to 30 nP. Plain brokens were supported at rates lower by 10 nP. The plainer liquoring Dooars B.O.P. and O.F. were neglected, but legg-cut teas were irregular. The better descriptions of this category eased by 10 to 15 nP, while the lower-priced ones were dearer. Among C.T.Cs, the best liquorings added handsome gains, while medium C.T.Cs, despite better inquiry, eased slightly. The first flush teas also eased and were subjected to heavy withdrawals. Whole leaf grades ruled quiet, but clean black pekoes were better. Tippy teas met with good demand but at lower prices. Among Darjeelings, the flavoury teas were about steady, while the plainer teas were quiet and irregular. The quotations (inclusive of excise duty) are: best Assam C.T.C. fannings Rs. 10.00 to Rs. 10.50; best Assam C.T.C. B.P. Rs. 9.00 to Rs. 9.50; medium fannings Rs. 5.00 to Rs. 5.20; clean black pekoe Rs. 5.70 to Rs. 5.90; medium B.P. Rs. 5.10 to Rs. 5.30; plain B.P. Rs. 4.50 to Rs. 4.70; and plain fannings Rs. 4.40 to Rs. 4.60.

Export quota changed hands at 1¾ nP.

JUTES FIRM

(From Our Own Correspondent)

CALCUTTA, *2nd August*

Firm conditions were in evidence in the jute markets during the week under review. Goods were in modest support, and a fair quantity was bought on both commercial and Government accounts. Sacking goods rose, as covering business took place; 19,000 bales of B. twills were bought by the Government again against August-September delivery. Australian buyers paid more attention to offers of heavy goods following apprehensions of continued upward trend, as Chinese interest was expected to gather momentum. While heavy goods showed improvement, hessian constructions actually moved down. For U.S. buyers kept out of the market, and reports from the New York burlap market indicated hesitancy of buyers.

Opening on a steady note, fibre prices eased as the week progressed. The later trend followed reports of excellent weather conditions and the distinct possibility of a greater crop than last year. Moderate rains, mostly during nights, have been followed by bright sunshine in day-time, and such a phenomenon has done immense good to the plants and hastened growth. Accordingly, it is now expected that the delay in the new crop reaching mills' stations would be much less than apprehended at sowing time which was delayed by six weeks, as a result of the abnormal drought conditions in April and May. The reduction in the prices of Pakistani cuttings and the Government of India's liberal policy in regard to the issue of import licences heightened interest in Pakistani offers, and business took place. Business in recent weeks was estimated at about 200,000 bales. However, doubts whether all these commitments would be fulfilled by Pakistani sellers before December—was being expressed. However, if the delivery period was protected delivery period is July-December—was being longed and extended to the early months of 1961, there would be no difficulty in Pakistan meeting these commitments. In view of the expectation of higher crop in India, it would be prudent for Indian buyers to postpone further commitments in Pakistani cuttings.

On Tuesday last, ready B. Twills rose from Rs. 130.85 to Rs. 132.75. The rise followed the news of Government's acceptance of tender for 19,000 bales of B. twills for August-September delivery. Covering business in heavy goods was a feature, and overseas enquiries continued to be received. In sympathy, ready hessian 40″ 10 oz. at Rs. 44.90 put on a fractional gain. On Wednesday, more covering business in heavy goods took place, and ready B. twills jumped to Rs. 141.00. However, the more striking feature was the further strengthening of the November futures B. twills. A high of Rs. 125 was recorded, as against the opening of Rs. 123.60 and the closing of Rs. 124.75. Ready hessian 40″ 10 oz. at Rs. 45.10 added a fresh gain. At this stage, a reaction set in and, on Thursday, ready B. twills sagged to Rs. 139 and hessian 40″ 10 oz. to Rs. 45.05. However, near delivery goods were involved in covering business. On Friday, Thursday's gain in November futures B. twills was erased. Ready B. twills fell to Rs. 134.50 and hessian 40″ 10 oz. to Rs. 44.50. No business was done over the week-end, and the quotations for ready B. twills at Rs. 135 and hessian 40″ 10 oz. at Rs. 44.50 were nominal. The feature during yesterday's trading was the rise in hessian 40″ 10 oz. to Rs. 46, following keen Russian interest. The U.S.S.R. bought hessian worth about Rs. 1.5 crore. In sympathy, ready B. twills advanced to Rs. 138.25.

Earlier in the week, mills showed interest in near delivery new crop and the quotation gained Re. 1.50 per 100 kg. However, with the fall in jute goods prices, easier conditions were also in evidence in the raw jute market. Moreover, thanks to good weather reports from both Indian and Pakistani districts, mills slowed down the pace of entering into commitments. From Rs. 93.75, Assam bottoms for September-October gained to Rs. 95.25 per 100 kg. but the gain was soon lost. However, in sympathy with goods, the rate gained to Rs. 96.25. Similarly, October-November Daisssee bottoms, after being higher at Rs. 96.50, reacted to Rs. 95.00 before closing at Rs. 97.25.

METALS SUPPLIES TIGHT

(From Our Own Correspondent)

CALCUTTA, *2nd August*

After an early rise, metals reacted during the latter part of the week under review. However, at lower levels, firmness was a feature and this was reflective of the tight supply position of the main metals. On the London Metal Exchange, electrolytic copper opened at £250 a ton and, after rising to £254½, closed at £251½. The rise in London reflected the political situation in the Congo, but, as consumer demand did not pursue the rise, the prices gave way. Copper scrap in Calcutta followed the London trend closely. Utensil scrap hardened from Rs. 195 to Rs. 200 a cwt., but closed lower on balance at Rs. 190. Berry quality scrap finished at Rs. 200, after rising from Rs. 212 to Rs. 216. Tin, after being higher at Rs. 567, closed lower at Rs. 564. This lower trend, despite the tight supply position, was in accord with advices from the London Metal Exchange where the price closed lower at £815 a ton, as against the opening of £813¾. During mid-week, the price had hardened to £818. Electrolytic zinc opened here at Rs. 176.50 and, after jumping to Rs. 179, finished at Rs. 173.50. Demand was heavy, but not all buyers were satisfied with the quantity on offer. Considering demand, trade circles appealed to the authorities to liberalise imports. Following lack of consumer interest in London, the price closed lower at £87¾ a ton, as against the opening of £90¼. Virgin lead was quiet at Rs. 69 per cwt.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, *1st August*

Although activity was limited and the general condition of the linseed market was dull, prices were well maintained. Crushers were showing some interest in ready and forward deliveries of seeds, but sellers were reserved.

Trading in the linseed oil market was slow. Buyers were showing interest at lower prices, but sellers were not inclined to sell at a discount, as stocks were very limited.

Business in oilcake was negligible, with overseas buyers pausing.

Both ready and Sept. Futures were quoted at Rs. 26 per maund.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *1st August*

Quiet conditions prevailed in the foodgrains market during the week, thanks to poor demand and good *kharif* crop prospects following timely rains. Wheat at Rs. 17 a maund for average quality and upto Rs. 18.25 for superior farm produce were almost stationary at previous week's level. Daily arrivals of wheat were about 150 to 200 maunds which were being lifted by consumers. The U.P. Government, in order to curb a rise in wheat prices, has ordered free sale of wheat flour from the ration shops at Rs. 10 per head at the rate of 2 *seers* 6 *chattaks* per rupee and the quantity of daily sales on ration srops has been increased from 30 to 50 maunds in the whole of the State except some big towns.

Rice ruled quiet, with a modest fall in the inferior quality, as the supply position was quite satisfactory and local stock with trade were put at 20,000 maunds. Prevailing prices on Monday were: *sela basmati* Rs. 31 to Rs. 34; *raimunia* Rs. 25.50; *ramajwayan* Rs. 24.50; *mainpuri* Rs. 23.75; and *gadda* Rs. 21 a maund. After an early improvement on Punjab advices, gram sought lower levels towards the week-end, thanks to open sales of gram by the State Government to traders which was being quoted at Rs. 15 a maund, as against Rs. 15.25 a maund for gram owned by traders imported from Punjab, the stocks of which were put at about 34,000 maunds. Barley and *bejhar* continued to rule steady at Rs. 13 and Rs. 12.25 to Rs. 12.87 a maund, respectively. The crop conditions of early sown maize were very satisfactory, due to timely rains and large-scale sowings were also done during the week. Old stocks of about 8,000 maunds of maize were not attracting any demand. *Guwar* was quiet at Rs. 12.50 to Rs. 13 a maund and *jowar* was quoted at Rs. 13.50 to Rs. 14.50 a maund.

After an early fall, peas again recorded a modest improvement towards the week-end to Rs. 12.25 a maund for *dara* green quality and upto Rs. 13.25 to Rs. 13.50 for white farm produce, following revival of demand from east U.P. Daily arrivals were about 200 maunds and local stock ran down by one *khatti* to 87 *khatties*. Total arrivals of peas here during the current season were about 106,000 maunds, as against 126,200 maunds. *Arhar* ruled quiet at Rs. 13.62 to Rs. 14 a maund and, with daily arrivals almost *nil*, local *arhar* stock was put at 26 *khatties;* the corresponding stocks last year were: 30 *khatties* of *arhar* and 55 *khatties* of peas. Total arrivals of *arhar* in the current season were 21,650 maunds, as against 28,300 maunds. Other pulses were almost stationary: *urd* Rs. 19.50 to Rs. 20; *moong* Punjab Rs. 20; Rajasthan Rs. 21; *massor* Rs. 14.50 to Rs. 17 a maund.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, *1st August*

Sugar ruled depressed, thanks to easy supply position and slack demand. In view of the marked increase in crystal sugar production in the season and old surplus, it is gathered that negotiations with the United States were in progress for export of Indian sugar to the extent of 250,000 tons during the next two years. The question of decontrol of sugar has been shelved for some time. The latest prevailing prices in the Hapur market are: sugar Rs. 11.50 per bag; retail Re. 1.09 per *seer* in the open market, as against the controlled price of Rs. 108.50 per bag and retail Re. 1.01 per *seer*.

The Government of India has decided to release 200,000 tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and Punjab except a small quantity which will be released to each factory for sale to its employees.

Sugar prices declined by Rs. 2 to Rs. 3 per bag in the open market at Muzaffarnagar during the week to be quoted at Rs. 112 to Rs. 113 per bag. Apart from easy supply position, the imposition of ban on the manufacture of *boora* from crystal sugar acted as a damper. A large quantity of sugar out of the last releases has been lying with the Sugar Dealers Syndicate at Muzaffarnagar.

Sugar in the Kanpur market also declined to be quoted towards the week-end at Rs. 115.50 to Rs. 116 per bag, following easy supply position.

Khandsari ruled quiet, as, despite good buying enquiry from Saurashtra, Kutch and Gujerat, loading was restricted. Stocks left at the producing areas were also reported to be poor. At Muzaffarnagar, it was reported to be 48,000 maunds. The latest prevailing prices were: moist Rs. 30 to Rs. 32; superior Rs. 34 to Rs. 40.75; crystal *khandsari* Rs. 37 to Rs. 41.75 a maund.

Ready *gur* ruled quiet, as outside support was only for dry quality, the stocks of which were nominal and most of the local stocks at 15,000 maunds comprised *kotha* dry-wet quality which was not in request. Sugarcane prospects have very much improved, following timely rains. The cane acreage, too, is reported to rave touched a new high figure. The latest prevailing prices here are: *gur* dry best Rs. 17.12; *kotha* wet Rs. 16; *shakker* Rs. 19.25 a maund.

Owing to dwindling local stocks, *gur* ruled steady in the Muzaffarnagar market during the week under review. *Chaku* quality attracted demand from Gujerat, Madhya Pradesh and Punjab and prices improved fractionally. *Shakker* was much in request from Rajasthan, Punjab and South, while buyers from M.P., Punjab and Jammu and Kashmir were interested in *dana minja*. Stocks of *gur* left were about 70,000 maunds. The week-end prices were: *chaku* dry Rs. 21; *chaku* reprocessed Rs. 19.50 to Rs. 20; *chaku kotha* wet Rs. 16; *dana minja* Rs. 17 to Rs. 19; rusket *kotha* Rs. 8 to Rs. 10; *shakker dara* red Rs. 19.50 to Rs. 20; superior Rs. 21.50 to Rs. 22.50 a maund.

Gur futures were depressed during the week on reports of expectations of bumper cane crop. Fagun opened at Rs. 14.12 last Monday, touched the highest in mid-session at Rs. 14.30 and is quoted today at Rs. 14.06.

Notice

THE BENGAL PAPER MILL COMPANY, LIMITED

THE REGISTERED OFFICE OF THE COMPANY will be removed from 21, Netaji Subhas Road to 14, Netaji Subhas Road, Calcutta-1, with effect from 29th July, 1960.

All enquiries and correspondence should now be directed to 14, Netaji Subhas Road, Calcutta-1.

By Order of the Board,
H. P. DHANUKA,
Director.

GOOD ACTIVITY IN CASH LIST

(From Our Own Correspondents)

BOMBAY, *4th August*

NARROW movements in prices marked trading in the forward list on the Stock Exchange during the week under review. The uncertainty about the measures which the Stock Exchange President might take to check the excessive speculative activity was the main restraining influence on trading. Contrary to last week's reports, there was no meeting of the Governing Board of the Stock Exchange on Tuesday this week. It was later reported that the President would be given discretionary powers to deal with the situation and that he might announce such margins as he thought fit. These reports created an uncertain atmosphere, in which both buyers and sellers refrained from extending their commitments. Changes in prices over the week were small over a wide front, though a few selected counters continued to receive the special attention of operators and their prices were rigged up sizably. End-of-account considerations also acted as a damper, as tomorrow will be the last day of trading in the current settlement and the Stock Exchange authorities may announce stiffer special margins, if any, on that day.

Cash shares, however, continued to be in the limelight, with brisk activity and an all-round smart rise in quotations. The list of cash scrips in which business done during the week was pretty long.

In the steel section, the encouraging output figures of Tata Iron and Steel for July and the commissioning of the new merchant mill by the Company yesterday, which marked the completion of the last phase of the two-million-ton expansion programme, were noted with satisfaction. This mill has a capacity of 200 tons per annum, with provision for raising it to 330,000 tons. The output of saleable steel by T.I.S.Co. in July amounted to 96,000 tons, which compared favourably with 92,700 tons in the previous month. The production in the corresponding month of 1959 was, however, higher at 98,500 tons. On the Stock Exchange, Tata Ordinaries ruled very steady, creeping up from Rs. 159.50 to Rs. 162 before closing at Rs. 161.50. Indian Irons fell from Rs. 24.72 to Rs. 23.40, but, at the close, they recovered to Rs. 24.68. The Company's output in July 1960 was affected by the closure of one of the blast furnaces for purposes of relining and by the shortage of raw materials owing to Central Government employees' strike. The production of saleable steel fell from 53,737 metric tons in June to 40,897 metric tons.

Barring a few select scrips, the textile section was subdued, due to reports that millowners would soon be taking special steps to bring down the prices of cloth to reasonable levels. Centuries, were erratic, moving between Rs. 499 and Rs. 513, but closed at Rs. 510 with a gain of Rs. 4.50 over the week. Bombay Dyeings advanced earlier in the week from Rs. 70.10 to Rs. 71.20, but languished to Rs. 69.70 at the close. Central Indias gained Rs. 2 to Rs. 122, while Finlays were lower by a rupee at Rs. 349. Kohinoors gave way to Rs. 356 after an earlier rise from Rs. 358.50 to Rs. 363. Khataus were marked up by Rs. 7.50 to Rs. 370. Mysore Spinnings were conspicuous with a spurt of Rs. 8.50 to Rs. 98, while Simplex were quiet at Rs. 175. Standards were again in the forefront with a jump from Rs. 1,900 to Rs. 2.015 before closing at Rs. 1,985.

Sugar shares were featureless, presumably due to uncertainty about decontrol of sugar and exports thereof. Belapurs moved between Rs. 380 and Rs. 370; while Phaltans shed Rs. 4 to Rs. 185. Walchandnagars were a shade steady with a small rise of Rs. 2.50 to Rs. 307.50. Cements did not attract much support and the undertone was quiet. Associated Cements, after an initial improvement from Rs. 146.50 to Rs. 148, receded to Rs. 145.50. Digvijays were marked down by Rs. 5 to Rs. 170 and Orissa Cements by 16 nP to Rs. 14.

Engineering shares were featureless. Alcocks were Rs. 2 lower at Rs. 297, while Tata Locos closed unchanged at Rs. 321.50, after an initial hardening to Rs. 331. Premier Constructions were marked down by Rs. 2 to Rs. 358. Larsen and Toubros were steady at Rs. 51. Mahindras were taken up 24 nP higher at Rs. 23. Jost's Engineerings provided a prominent feature in the cash section with a smart rise of Rs. 48 to Rs. 130, while Structural Engineerings (old) gave way by Rs. 15 to Rs. 305.

Among shippings, Scindias were erratically lower at Rs. 15.52 after having gone up to Rs. 15.96. Great Easterns were listless at Rs. 17.44. In the auto group, Hindustan Motors were steady at Rs. 23.08 and Premier Automobiles at Rs. 184.

In the miscellaneous section, activity was more confined to cash counters, which recorded handsome gains. In the forward list, Bombay Burmahs Rs. 606 and closed with a loss of Rs. 5 over the week at Rs. 608. National Rayons, after being lifted up from Rs. 527 to Rs. 535.50, reacted to close at Rs. 518.50, while Gwalior Rayons (in the cash section) were unchanged over the week at Rs. 46 and Baroda Rayons improved by Rs. 12.50 to Rs. 150.50. Indian Rayons, too, were well favoured and the quotation was marked up by Rs. 3 to Rs. 71. After an initial improvement from Rs. 79 to Rs. 82.20, Tata Oils gave way to Rs. 79, despite the optimistic note struck by the Chairman about the Company's outlook at the annual general meeting on Tuesday this week. The working of the Company during the first four months of the current year, according to Mr. Tata, was satisfactory and the exports would be maintained. The management had under consideration various proposals for diversification of its products, such as toothpaste and talcum powder. Tata Chemicals were quiet at Rs. 20.28, while Voltas shot up by Rs. 11 to Rs. 294. Wimcos slipped down by Rs. 2 to Rs. 239. Amar Dyes advanced by no less than Rs. 32.50 to Rs. 492.50 and Anil Hardboards by Rs. 27.50 to Rs. 417.50. Asian Cables put on Rs. 6 to Rs. 86. Ceat Tyres Rs. 5 to Rs. 265 and Premier Tyres Rs. 8 to Rs. 106. Chase Bright Steels were in keen demand and rose by Rs. 6.24 to Rs. 20.24. Colour Chems had a gain of Rs. 20 at Rs. 445. Indian Dyestuffs (old) rallied by Rs. 62.50 to Rs. 832.50 and their new shares by Rs. 70 to Rs. 815. Poly Chems advanced by Rs. 20 to Rs. 285. Khandelwal Ferro Alloys were marked up by Rs. 17 to Rs. 123. The Company has decided to make a first call of Rs. 25 per Preference share of Rs. 100 each—Rs. 50 paid-up—and the payment of the call money is to be paid before 15th September. The Directors have declared a dividend of 7½ per cent. free of tax on the preference shares. They have also decided to increase the authorised capital of the Company from Rs. 2.50 crores to Rs. 5 crores. Philips Carbons improved by Re. 1.76 to Rs. 19.76. Sundatta Foods came to the limelight with a spurt to Rs. 68, representing a rise of Rs. 8.50 from last week's closing quotation.

Madras Stock Exchange

MADRAS, *3rd August*

Barring tea shares and a few miscellaneous industrials which met with some investment support, the Madras Stock Exchange ruled easy during the week under review. The firmness of tea shares was engendered chiefly by the report that the President had recommended exemption of plantings from the provision of ceiling in the Kerala Agrarian Relations Bill, as well as by bullish advices from tea auction centres. Coffees were subdued in the absence of fresh enquiries. Rubbers tended to look down due to selling by some operators who had bought sizable lots at higher levels last week. Textiles lacked support, as operators preferred to await the Central Govrnment's decision on measures of control on textiles and cotton prices. Sugars came in for selling. Among miscellaneous industrials, chemicals and cements drifted lower.

In the tea section, Parksides rose by 37 nP to Rs. 28.12. Peermades spurted by 35 nP to Rs. 23.60. Blue Mountains declined from Rs. 5.25 to Rs. 5.22 in the earlier session, but recovered later to close at Rs. 5.43 today, the net gain over the week being 18 nP. Nonsuch Teas and United Nilgiris improved by 15 nP each, the former to Rs. 28.15 and the latter to Rs. 22.35.

Coffee shares were dull. Coffee Lands lost 25 nP to Rs. 26. Ouchterlony Valleys, which had risen from Rs. 5.08 to Rs. 5.15 earlier, receded to Rs. 5.10. Cowcoodys shed a naya paisa to Rs. 5.80. Rajendras were quiet at Rs. 16 and Balanoors at Rs. 16.70. Ossoors were unchanged at Rs. 3.50. The Directors of the Company have declared a final dividend of 10 per cent., making a total of 15 per cent. taxable (equivalent to 10.5 per cent. tax-free) for the year ended March, 1960, as compared with 15 per cent. tax-free for the previous year. Consolidated Coffees, however, met with special support and hardened by 15 nP to Rs. 26.85. Wartyhullys gathered 5 nP to Rs. 3.60, notwithstanding the announcement of a lower dividend. The Company has declared a final dividend of 10 per cent., making a total of 15 per cent., taxable (equivalent to 10.5 per cent. tax-free), as against 15 per cent. tax-free for the previous year.

Among rubbers, Cochin Malabars suffered a setback of 24 nP, today's closing rate being Rs. 8.21. Midlands eased by 17 nP to Rs. 12.45. Kailas shed 3 nP to Rs. 5.60. Malankaras were neglected at Rs. 20.25 and Thirumbadis at Rs. 1.70. Vaikundams, however, rose by 15 nP to Rs. 30.50.

Textiles were generally featureless. Anglo-Frenchs were marked down by Rs. 2.50 to Rs. 125. Cannanores retreated by Re. 1.05 to Rs. 154. Kotharis lost Re. 1.25 to Rs. 23.50. Travancore Rayons declined by 50 nP to Rs. 37.75 and South Indians by 25 nP to Rs. 143.75. Bangalore Woollens were neglected at Rs. 198, Buckinghams at Rs. 206 and Metturs at Rs. 399.

In the sugar section, Cauverys were pushed down from Rs. 152.50 to Rs. 152. Travancores and Indias shed 10 nP each to Rs. 11.90 and Rs. 12.50, respectively. East India Distilleries were quiet at Rs. 61.75 and Mysores at Rs. 60.50. United Breweries, however, were well fancied, the quotation rising by Rs. 4 to Rs. 112.

Among miscellaneous industrials, F.A.C.Ts dropped by 55 nP to Rs. 12.65. Mettur Chemicals fell by 25 nP to Rs. 14.35. The Company has declared a final dividend of 6¼ per cent., making a total of 12½ per cent., taxable (equivalent to 8¾ per cent. tax-free) for the year ended March 1960, as against 8.8 per cent., tax-free, for the previous year. Mysore Chemicals were unchanged at Rs. 27. Mysore Fertilisers, however, strengthened by 35 nP to Rs. 10.60. Among cements, Dalmias were lower by 45 nP at Rs. 12.40. Orissas lost 5 nP to Rs. 13.95. India Cements fell from Rs. 7.10 to Rs. 7.08, but recovered later to touch the last week's level subsequently. Andhras, however, put on 15 nP to Rs. 11. Textools lost 50 nP to Rs. 189.50. Ashok Leylands were unaltered at Rs. 9.60. Western India Plywoods at Rs. 301 and Standard Motors at Rs. 16.70. Tube Investments jumped up by Rs. 12 to Rs. 337. Mysore Papers rose by 40 nP to Rs. 26.75.

WEEK'S STOCK EXCHANGE TREND

MARKET GOSSIP

(*Concluded from page 231*)

of this allegation. In all the three bodies mentioned above, the millowners are adequately represented and it is no secret that in none of them their representatives opposed the demand for higher ceilings. In fact, the Chairmen of both the E.I.C.A. and the Cotton Advisory Board are themselves leading cotton millowners. The cotton controls affect them as much adversely as they do the cotton merchants or growers. Accordingly, they too must be keen on their abolition or on such changes as would make their task of getting cotton easier. Indeed, why should they mind paying officially a little more for cotton which they have paid unofficially in the current season, so long as they can pass on the incidence to the consumer of cloth? Not in the least. The credit (or discredit?) for deciding to maintain the *status quo* must go to the Government, which has to bear in mind not only the interests of cotton growers, traders, and millowners but also those of domestic consumers and export markets. And the last two interests are important enough to justify the decision the Government took. That apart, the high prices realised by cotton growers this year are the result of an extremely short crop, brought about not by inadequate price incentive to cotton growers but by adverse weather conditions. Surely, an increase in ceiling prices cannot be based on such a fortuitous factor. Further, if a concession is made in regard to cotton now, it will have to be followed by similar concessions to other agricultural crops; this will be undesirable in the present context of inflationary conditions. And, finally, incentive to farmers for raising more cotton should be provided through higher floors, which will ensure for them a satisfactory minimum return, and direct service and financial facilities for improving the quality and quantity of cotton grown on every acre of land devoted to the crop. Another important thing which the Government must do is to spread cotton growing to areas which are less susceptible to the vagaries of monsoon. This means that irrigation facilities must be extended in those regions where the rainfall is less and the climate is favourable in other respects for cultivating cotton. And there are plenty of areas in India which fulfil this requirement.

Outlook for Sterling

The first seven months of the current year have been packed with quite a number of explosive situations in the political world, such as the riots in South Africa, collapse of the summit conference, threats by Soviet Russia of sending long-range rockets, the seizure of American properties in Cuba and the political upheaval in the Belgian Congo, but these have not ruffled the sterling. Not even the strain on the U.K.'s balance of payments in recent months, nor the recurrent rumours of a revaluation of the West German Mark have upset the pound. On the contrary, barring occasional flutters, sterling has been ruling firm, having crept up from 279.72-279.76 cents at the close of 1959 to 280.86-280.89 cents on 2nd August 1960.

Is this sustained strength of sterling real and will this continue in the coming months? Though it is generally expected that sterling will be able to withstand the seasonal pressure during the coming months without much difficulty, there is still an element of anxiety. No doubt, the firm monetary measure taken by the British Government since the beginning of the year have contributed to a large extent to the firmness of sterling, but this strength is considered more apparent than real. For it is felt that the Government's measures have not had any great impact on the economy as a whole. Except in certain sectors, particularly on those producing durable consumer goods, there are no signs of any slowing down of economic activity, which still continues to run at a very high level, as is borne out by some of the key economic indicators. Industrial production during the second quarter of the year was 2 per cent. higher than in the first quarter and 9 per cent. over that in the corresponding period of 1959. Unemployment at 1.3 per cent. of the labour force is at its lowest level for nearly three years. Unfilled vacancies are the highest in four years. Retail sales in June were as high as in April and May and were 4 per cent. above those in June 1959. Bank credit, after slowing down in May and June, has risen sharply by about £100 million during July. These data suggest that the official measures have not restrained the business activity. It must, however, be noted that the Chancellor of the Exchequer has made it clear, from time to time, that the object of his measures was only to check the growth of domestic demand. They were not intended to bring about a recession but only to keep the economic growth at a pace which would neither over-strain the national resources nor seriously undermine the balance of payments position.

As stated earlier, the present strength of sterling is considered more apparent than real, because of the fact that the wide gap in interest rates between the U.K. and other countries, particularly the U.S., following the increase in Bank rate in two stages from 4 per cent. to 6 per cent., has brought an appreciable influx of short-term funds from abroad into the U.K. These foreign funds invested in London are an unstable factor. A large part of them is invested without any forward cover and any large-scale withdrawal of these funds later on may affect the sterling area's reserves more than when these funds are fully covered.

The main criticism against the Chancellor's monetary measures is that they have failed to stop the deterioration in balance of payments of the country—one of the things which the Chancellor wanted to avoid. There is a large deficiency in the visible trade account. The trend of exports is said to be very disappointing. Though the exports are expected to improve in the current quarter, the increase may not be of such a scale as to remove the anxiety about the balance of payments and to enable the Chancellor to relax the restraints on economic expansion. This is particularly so because of the none-too-encouraging state of the U.S. economy. The business activity in the U.S., which is the main overseas market for the U.K., is slowing down and this may affect U.K. exports. The balance of payments position of the U.S. is also not free from concern. On top of this, that country is faced with a revival of drain of gold. In the last three weeks of July alone, the U.S. gold reserves fell by $158 million to $19,164 million, "a rate of erosion," to quote the *Financial Times*, London, "as rapid as that of the worst post-war year, 1958." Consequently, the U.S. may not be in a position to take steps which will allow more imports from the U.K. The U.S. steel and automobile industries have slowed down, owing to poor offtake of cars and heavy stocks with dealers.

Although there is no reason to take an unduly pessimistic view of the British economy, which is still quite healthy, the need for an improvement in exports is considered very essential. The U.K. is looking to the motor industry, described as one of the main props of the economy, to do its best in the sphere of exports. The industry in turn points out that it has initiated major expansion plans with heavy capital investment and that it can certainly be expected to discharge its responsibility, provided the Government came to its rescue in times of difficulty.

THIRD PLAN VIEWED AGAINST FIRST TWO PLANS

(*Concluded from page 251*)

ment of Rs. 250 crores is said to have been pushed in at the last moment. The third Plan provision for industries is proposed at Rs. 3,875 crores (including power, industry and minerals, and communications and transport), against an outlay of Rs. 2,580 crores during the second Plan period. This is in the usual cart track left behind by the U.S.S.R. and China: these countries have begun to become wiser, but our planners are evidently not benefiting by their experience. They want more and more of machine-building capacity, with no clear-cut programme for stimulating a corresponding increase in the propensity to consume capital goods and energy for further production.

The third Plan outlay on social services has been raised from Rs. 423 crores in the first Plan to Rs. 569 crores (1956-60) to Rs. 1,250 crores. The pace of progress is of a tortoise, if not of a snail, but, here again, it is not bad, although a much larger outlay would be warranted, if only resources were available. With regard to social services, financial and administrative centralisation is proposed at beyond the optimum point: it is no surprise that inefficiency marks our schools, hospitals and housing programmes.

As compared with China and the U.S.S.R., publicity for the Plan is very poor in this country. Even today, the villager in the nook and corner is blissfully ignorant of the ideals and benefits of the Plan. He is, therefore, quite indifferent to his share and duty in implementing the Plan. Radio broadcasts are somewhat like oases in the Sahara, and publicity otherwise is confined to Press releases and reports, and Planning Forums. Totalitarian propaganda methods may not be liked in India, but loudspeakers in all public places, in railway trains and in buses, in markets and in fairs, in temples and in pilgrim centres should go a long way in enthusing the average Indian about the Plan and enable him to consider it as his own.

On the whole, there was a shortfall of only Rs. 1 crore during the first Plan period between available resources (Rs. 2,012 crores) and actual outlay (Rs. 2,013 crores). During the first four years of the second Plan (1956-60), the anticipated outlay stands at Rs. 3,660 crores which level is more or less proportionate to the total second Plan outlay recently estimated at Rs. 4,600 crores by the Union Finance Minister. From the viewpoint of resources, the climate is much more congenial for the proposed third Plan outlay of Rs. 11,250 crores, particularly in the light of availability of foreign investment and aid, but it is most vital that the cost structure should be severely controlled. For this purpose, industrial raw material and consumer goods would have to be in plentiful supply. Unfortunately, the import policy persisted in by the Government of India, with the object of reducing the unfavourable balance of payments to a minimum, resembles the procedure of a valetudinarian person (Coverly Papers), who resorted to eating more or less without reference to appetite, according as the weighing machine showed his weight less or more, the individual collapsing in health in the course of a few weeks.

The Draft gives a second place to foreign capital, relying mainly on domestic investment: "the role of external assistance is to supplement domestic savings by bridging the gap between essential import requirements and export possibilities." With such a philosophy, Canada, Japan, West Germany and the Marshall Aid countries could never have dreamed of attaining their present standards of living. It may be modesty but not commonsense to proclaim lack of appetite with pangs of hunger inside.

In the foregoing paragraphs, quite a few merits and demerits of the third Plan draft have been scanned, and hope lies in public opinion contributing to upgrading the final third Plan to the proper standard.—*All Rights Reserved.*

COMMERCE AND INDUSTRY

(*Concluded from page 258*)

lactate. The Company has succeeded in exporting small quantities to Burma, Pakistan and Ceylon. Accepting the Commission's recommendation for deprotecting the calcium lactate industry with effect from 1st January 1961, the Government has notified the public that it will introduce the necessary legislation in due course. It is not known whether the existing rates of duty will be retained or reduced as a revenue measure or whether they will be completely abolished.

LAUSANNE NATIONAL FAIR

This important autumn fair in Switzerland, displaying in its 25 sectors the wares of over 2,300 exhibitors from all Swiss cantons, will open its gates for the 41st time in Lausanne from 10th to 25th September. Industry, agriculture, craftwork and trade are all on display in this vast synthesis of the main branches of national production, which has become so popular a commercial event that it regularly attracts more than a quarter of Switzerland's working population to Lausanne each autumn. Equipped for presenting both light and heavy exhibits in its various halls, the Lausanne Fair includes a remarkable joint display put on each year by the Swiss Association of Agricultural Machinery Manufacturers and Dealers. This year, a sector of particular importance for export shows the products of world-famous concerns and associations such as Brown Boveri & Co., the Oerlikon Battery Factory, the Berne Metallurgical Association, the Dornach Metallurgical Works, the Cossonay Cable and Wire Works, Landys & Gyr of Zug, the Standard Telephone and Radio Company of Zurich, Ebauches Co. Ltd., at Neuchâtel, and the Schindler Motor and Elevator Factory, to mention only the most representative stands in this extremely interesting sector.

Practising a certain liberalism in spite of its strictly national character, the Lausanne Fair will have the privilege of welcoming Australia as this year's guest of honour. This official participation, organised by the Australian Board of Trade, under the auspices of the Australian Embassy in Bonn, is of particular importance and significance as it is the first time that this far off continent has put on an exhibition of this kind in Europe.

Notice

THE SURAT ELECTRICITY CO. LTD.

NOTICE

AT A MEETING OF THE BOARD OF Directors of The Surat Electricity Company, Limited, held on 4th August, 1960, it was decided to recommend a Final Dividend for the half-year ended 31st March, 1960, during the year ended on 31st March, 1960, at the rate of Rs. 3.25 nP per Share on Preference Shares, free of Income-tax (deductible under Section 18 of the Indian Income-tax Act) and at the rate of Rs. 5.00 per Share (making 7½ per cent. for the year) on Ordinary (Equity) Shares, subject to deduction of Tax, to those Shareholders whose names stand on the Register on Thursday, 1st September, 1960.

Intimation of any change of address should be given to the Share Department of the Company immediately.

The Transfer Books of the Company will be closed from Wednesday, 17th August, 1960 to Thursday, 1st September, 1960, both days inclusive.

By Order of the Board,

FOR THE SURAT ELECTRICITY COMPANY, LIMITED,

KILLICK INDUSTRIES LIMITED,

A. N. HAKSAR,
Managing Director,
Managing Agents

KILLICK HOUSE,
HOME STREET, FORT,

VOL. CI. No. 2576 BOMBAY, 13th AUGUST 1960 PRICE Rs. 2

AFTERMATH OF GENERAL STRIKE

THE Government's case against the strike by its employees, happily withdrawn after a short duration, was ably presented in the Lok Sabha, this week, by all its principal spokesmen, Mr. Nehru, Mr. Pant and Mr. Nanda. In particular, Mr. Nehru raised the debate to a higher level of discussion by pointing to the wider national and international implications of the strike. Had the strike succeeded, he declared, there would be neither Government nor Parliament. It was, he said, "amazing and utterly astounding," and an "astonishingly irresponsible thing that could bring no benefit to the workers." He declared: "I do say with all the strength at my disposal that the general strike must essentially have far-reaching consequences and, therefore, it is a political strike in that respect and you cannot escape from that conclusion."

In retrospect, the nation has reasons to rejoice over the failure of the strike. From the very beginning, the strike lacked—though its blind leaders refused to recognise the point—public sympathy. It is not as if nobody sympathises with the lot of the ill-paid Government servants or that the public does not support the need for raising the emoluments of those who are pledged to serve it. But a strike by Government employees is, by its very nature, something of a mutiny, a prelude to a violent overthrow of established authority. It is a call to a revolution, to ending the rule by the elected majority. Anyone who slurs over this point, whatever the nobility of the motives which may prompt that, does no service to the country or its Constitution. Whichever way the matter is looked at, there is no getting away from the fact that a general strike by Government employees is an act of sabotage, of subversion, aimed at the overthrow of a lawfully constituted government. This is the legal, constitutional and political implication of the strike. The fact that the sponsors of the recent strike did not have such an aim in view is very much beside the point. In public affairs, "motives" are notoriously difficult to define. The only safe rule for judging the propriety of any action is whether, if everybody took that course, public good would be served. A public servants' strike is a contradiction in terms. It is a piece of constitutional monstrosity. Fortunately for the Frankensteins, the monster they created has been held. Had it got abroad, there would be no government today in the country. That, irrespective of the economic justification for the sense of grievance among Government employees, is the meaning of the strike.

The views expressed by the Congress Working Committee in the resolution adopted by it are certainly along right lines. The Committee said:

"The general strike was, in its very nature, not a normal industrial dispute, but had a political aspect and inevitably caused great inconvenience to the public and heavy loss to the Exchequer. Such a general strike raises vital issues which affect the Government, the public generally and those who participated in the strike. Because of such widespread and harmful consequences, a general strike of this kind cannot be accepted as a proper method of settling any dispute. It was, therefore, right and inevitable for the Government to declare the strike illegal. Even though the strike lasted only five days, it caused a great loss to the public and to the employees of Government who participated in it. The Committee have noted that the general public disapproved of the strike and that a number of employees' organisations, as well as a considerable majority of Government employees, did not participate in the strike and continued to discharge their duties with loyalty and efficiency. The Committee would like to express their appreciation of all such organisations and employees for their adherence to duty, in spite of pressures exercised against them. The Committee further express their gratification at the large number of volunteers from the public all over India who offered their services during the strike period and thus enabled the essential services to be carried on.... It should always be the policy of Government to develop harmonious relations in the Government services and to promote the well-being of employees. But Government employees have also to remember that they have certain special obligations to the public, which demand loyal and efficient service. By virtue of their service, they cannot be placed in the same category as normal industrial employees. Any step that is harmful to the public and is injurious from the point of view of the general good is a denial of those obligations and should not be permitted. A general strike which is meant to paralyse the life of a nation must necessarily be ruled out as a type of action even for the redress of grievances."

Despite Mr. Nehru's call for *Prayaschit*—this Sanskrit word means an act of atonement prompted by a voluntary acceptance of one's folly—there was little of any sense of repentance among spokesmen for the Opposition. It looked as though they were trying to be brave in the face of the failure of the strike, instead of being sorry for having led a strike against the Government. This is a deplorable trend in India's public life. After all, an Opposition in a democratic country should behave as a party that would, if the contingency arose, take over the reins of Government. In other words, it should behave with a becoming sense of responsibility. This was sadly lacking in the speeches of the members of the Opposition.

Just as a Government employee is at once an ordinary worker engaged in working for his living as well as a public servant, the Government has a double role: as an employer, it must undertake certain inescapable duties and, at the same time, it cannot overlook its wider responsibilities in relation to the country. The employees, on their part, will do well to recognise that, if their emoluments are lower than what they are elsewhere, they have certain privileges and concessions, like pensionary benefits and security of employment. Indeed, it is these benefits that induce a section of the employees in the private sector to ask for nationalisation of their industries and services. For once, the Government service is fast becoming a besieged fort, those in it trying to get out and those who are outside it seeking entry. Perhaps, it is not also an uncharitable comment on the Government servants' attitude towards their employers that they want the best of both worlds—security of employment which their position offers and the relatively higher scale of emoluments and the right to strike which employees in private sector have got. Be that as it may, the fact remains that salaries of Government servants are unduly low; in several categories, they are not sufficient to attract the best talent.

It is of the utmost importance that some machinery must be created for settling the differences between the Government and its employees. Mr. Nanda announced that the Government was thinking in terms of creating such a machinery. Mr. Nehru also referred to the need for adapting the Whitley type of machinery to Indian conditions. Surely, there is need for such a machinery, considering that the Government's role as an employer will grow with the passage of time. But there could be no compromise on the issue of strikes. At present, the position is somewhat vague. As the Pay Commission pointed out, there are certain classes of Government employees, to whom the Industrial Disputes Act is applicable, though they are also subject to the Central Civil Services (Conduct) Rules. The whole position deserves to be clarified in the interests of the public, the public servants themselves and the Government. It is gratifying to note that the Government is engaged in bringing forward appropriate legislation and it is to be hoped that this will be done promptly. Mr. Pant announced that "strikes are going to be banned in public services; neither the Railways nor Posts and Telegraphs can indulge in such a sort of suicidal and dreadful upheaval." It would appear that the formation of unions by Government employees will be permitted. But, according to Mr. Nanda, what is being proposed is the exclusion from these unions of the "part-time trade unionists and longer-time politicians." From this, it will be seen that the Government is proceeding along right lines. The details of the proposed legislation will certainly be awaited with interest. Those who seek public service as a career, as well as those who are in it, must be unambiguously told where they stand in relation to their employers, their rights and obligations.

CUBAN SEIZURE OF U.S. FIRMS

THE economic cold war between Cuba and the U.S., has now entered a fresh aggressive phase, with the Cuban Government's decision to nationalise the American-owned firms, namely, the Cuban Electric Company, the Cuban Telephone Company, Esso, Texaco and the Sinclair Oil properties and all the 36 sugar mills. Of the total U.S. investments in Cuba, valued at $950 million, about one-third had

been taken over by the Cuban Government earlier; the latest seizure affects over $500 million of American investments. Thus, the Castro Government, which struck its first blow by taking over the American-owned Esso and Texaco oil refineries and the British-controlled Shell refinery, has not been slow to answer the U.S.'s retaliatory measure in the shape of a 700,000-ton cut in the quota of sugar imports from Cuba. It is not as if Cuba was taken unawares by the American Government's reaction to its initial high-handed nationalisation measures. It knew that, as a measure of reprisal, the U.S. might cut its sugar quota; the U.S. accounts for 60 per cent. of its sugar exports which make up 80 per cent. of its export earnings. But it has been encouraged by the helpful Russian attitude; Russia has agreed to take the entire sugar now denied access to the American market.

Two vital issues in the cold war deserve notice. In the first place, Cuba has not come off very well in the bargain. Russia will purchase the 700,000 tons of sugar cut from the U.S. quota at 3.25 cents a pound, in addition to the one million tons to be purchased at prices between 2.78 and 3.06 cents a pound in each of the next five years under the Cuban-Russian agreement. Cuba will thus receive only just over half the subsidised price that it has been obtaining from the U.S. (5.50 cents a pound). Further, Cuba's economic relations with Russia cannot be entirely dissociated from their political implications which are not necessarily good for trade. It may be recalled that, at the time of the Suez crisis, whereas private oil companies did their best to supply their markets with oil, Russia cut off its supplies to Israel. Cuba can rely on Russian crude oil for its refineries only so long as it toes a line which Russia recognises as convenient to itself. Thus, the change in its trading partners, which Cuba has effected, may not turn out to be to its advantage.

Secondly, Cuba's action is certainly calculated to impede the free flow of international private capital. It offended the U.S. oil companies by interpreting the law on the subject of refining oil to its own advantage. The Law-Decree of 1954 specifically provides that the companies have a right to supply and refine their own crude oil. But Cuba invoked an earlier law, Mineral Law of 1938, under which refineries are obliged to refine State-owned crude oil. The companies rightly contended that this old law had been superseded by the later (1954) enactment and that, at any rate, the "State-owned" crude referred only to indigenous crude oil produced in Cuba. Again, the compensation provisions are specifically discriminatory and clearly expropriatory. The "National Defence" law, under which foreign properties have been taken over, provide for the creation of a compensation fund and the issue to owners of 50-year bonds carrying not less than 2½ per cent. interest per annum; payments to the fund will be made from 25 per cent. of dollar earnings received by Cuba in respect of sugar sales to the U.S. in excess of three million tons a year at a price of not less than 5.75 cents a pound. It is easy to see through this law, which, in effect, seeks to penalise the U.S. itself for any sanctions it may choose to impose against Cuba. The bonds are thus hardly worth the paper they are printed on. All this is a strange way of dealing with foreign investors. It is bound to scare away the already shy foreign capital from underdeveloped countries, the economic progress of which is intimately connected with the inflow of external resources. Cuba has ill-served the group of these countries to which, economically speaking, it claims to belong.

CLOTH SITUATION

IMMEDIATELY after we went to press last week, the Indian Cotton Mills' Federation came out with a Press note, indicating broadly the steps which the industry should take to bring down the prices of cloth and yarn. In this note, the Federation called upon all millowners' associations to see that prices were not only held but progressively and firmly lowered and appealed to the public to postpone, where possible, the purchases of textiles for some time, till the industry geared itself to increase the production of those varieties the prices of which had been unduly high, due to short supply. The following six-point drive was commended for immediate launching by all mills:

1. The mills should arrange with their wholesalers to ensure that the cloth of their mills passes along the chain of distribution and reaches the consumer at reasonable prices.

2. Where mills have their own retail shops, such shops should be supplied with ample stocks. Mills should exhibit prominently in their retail shops a list of prices at which cloth is sold in those shops and copies of the list should be sent to the Textile Commissioner and the Federation.

3. Mills should also extend these arrangements to those retail shops not owned or conducted by them but over which the mills can exert their influence.

4. Similar arrangements should be made with regard to sales of yarn. So far as handloom weavers' co-operative societies are concerned, mills should, as far as possible, arrange to supply yarn direct to them at reasonable prices.

5. Mills should immediately arrange to increase their production, particularly in coarse and lower medium varieties. The short-staple American cotton which the mills will be getting should be used in coarse and lower medium counts only, so that the imbalance in the supply position of these categories of textiles should be set right.

6. Mills should immediately make a review of their price policy and ensure that whatever lies in their power is done right from the ex-mill stage upto the retail stage, so that the consumer should get his supply of cloth at a reasonable price.

Within twenty-four hours after the above statement was issued, that is on Sunday the 7th inst., the Chairman of the Federation, Mr. Krishnaraj M. D. Thackersey, hurriedly convened a Press Conference and announced that the industry would shortly effect a cut of 10 per cent. in the retail prices of coarse and medium varieties of cloth which are in short supply. He also announced that the proportion of direct sales of such qualities to retail shops would be stepped up to 15 per cent. While making these announcements, Mr. Krishnaraj said:

"The impact of the cut in prices would begin to be felt by the third or fourth week of this month. When the prices of coarse and medium varieties, which account for the bulk of the overall output are brought down, the prices of other qualities will also tend to move down. Cheaper cloth will be made available only to such retail shops as are willing to abide by the stipulations that would be made by mills. The retail shops will also be required to display prominently the revised price lists for the benefit of consumers. The Committee of the Federation would, at its meeting to be held in Bombay on Thursday (11th inst.), determine reasonable prices for various categories of cloth, taking into account the rise in the cost of production in recent months. It would ask the mills to effect an immediate cut of 10 per cent. in prices of certain categories supplied to the retail shops controlled by them. The Federation will also discuss at the meeting the price levels at which cloth is to be made available to the wholesale trade."

The foregoing account will clearly indicate that the spokesmen of cotton mill industry have lost no time in giving effect to the assurance they gave, at the meeting of the Cotton Textiles Consultative Board in New Delhi on 29th July, to the effect that they would ensure adequate supplies of cloth at reasonable prices and take all necessary steps in this regard in the next few days. It is, therefore, regrettable that Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, should have, instead of appreciating this move of millowners, scathingly attacked them for the present rise in prices. Replying to the one-hour discussion on the textile situation this week, Mr. Shastri is reported to have observed as follows:

"I share the members' concern over the rise in textile prices, for which *I hold the industry wholly responsible.* (Italics ours.—Ed.). Unlike last time when the wholesalers were trying to take undue advantage of a difficult situation, it is now the industry which is to blame.... There is no justification for an increase of 40 per cent. in the prices of coarse and medium cloth, even after allowing for the abnormal rise in cotton prices, a bigger wage bill and other factors. The Government's own calculation is that all these unforeseen circumstances would have led to an increase of 18 or 20 per cent. which will be the maximum I can agree to... I am not satisfied with the 10 per cent. cut in textile prices offered by the industry and I want further reductions. . . . If the industry does not adequately respond, the Government will not hesitate to take effective action to bring down the prices of cotton textiles."

Evidently, Mr. Shastri was prompted by the political consideration of giving the impression to members of Parliament that he is quite firm in handling the cloth situation. By making the industry the scape-goat for the crisis of high cloth and yarn prices, he is simply absolving the Government of all its sins of omission and commission. Although seven years ago the attention of the Government was drawn to the tendency of increasing pressure of demand on the available supplies of cloth, the Government did not pay heed to it. It is the Government's policy of not allowing the mills to expand their weaving capacity, the imposition of restrictions on the production of certain varieties with a view to giving a sheltered market to the handloom weavers, the obstruction to modernisation of mills caused by the adoption of unrealistic labour policies, the principle of keeping alive even outmoded and absolutely unfit units just for the sake of providing employment to a few thousand workers, and, above all, the enforcement of a system of taxation that leaves little margin for further development—it is all these acts of Government that have been cumulatively responsible for the failure of textile output to keep pace with the rising offtake for domestic consumption, as well as export.

Even with all these impediments, the mills continued, and still continue, to maintain production at as high a level as possible. Early in the year, the mills informed the authorities that the cotton crop would be substantially lower and urged them to allow liberal imports of foreign cotton. If only the authorities had conceded the plea and made the necessary arrangements in good time, the situation with regard to high cloth prices would not have been so bad as it is at present. It is a pity that the members of the Lok Sabha, who were most vocal during the discussion, should have been blind to all these factors and put forward such desperate suggestions as nationalisation of the textile industry and exercise of powers under the Essential Commodities Act, as if the implementation of these suggestions would step up supplies of cloth and reduce prices.

In his reply, Mr. Shastri asked the textile industry to undertake the responsibility for making available to the consumer cloth at fair rates by exercising sufficient control over the wholesale and retail dealers. The industry itself has recognised this to some extent and already taken a few regulatory measures. To expect anything more is to expect the mills to perform an impossible task. How can a hundred millowners control thousands of wholesale dealers and tens of thousands of retailers spread all over the country? It would be foolish on the part of industry to undertake a responsibility which it cannot fulfil to complete satisfaction. Mr. Shastri was certainly overgenerous to wholesalers and retailers and far from convincing when he absolved them of all the blame and held the millowners alone to be responsible for what has happened. He will do well to study the genesis of a boom in any free market and find out the extent to which cloth has already moved into the pipeline. It will also be interesting to enquire why the cloth dealers have been paying fancy prices and why they have been buying for forward delivery months ahead, if it was not their intention to squeeze the consumers.

The effective solution to the problem of high cloth prices lies, as has been pointed out on numerous occasions, in stepping up the rate of mill cloth output, especially that of coarse and medium varieties. Mr. Shastri is aware of this solution, as witness his call to mills to produce more of these varieties, since the Government has now arranged for the import of short-staple cotton. But this will take time. Not even half of the foreign cotton permitted to be imported has arrived and, of what has arrived, a sizable quantity is awaiting at the ports pending fumigation. Further, not all the mills are equipped to handle American cotton, which until recently formed only a small proportion of the foreign cotton consumed by the mills. Again, till recently, trade unions were not agreeable to the mills working third shift. There are several other practical difficulties to increasing production, some of which are Government's own creation, as, for instance, the virtual impossibility of retrenching excess labour when it arises. Then, there is the question of handlooms, which today account for more than a third of domestic consumption. Has there been no increase in the prices of handloom goods? In some cases, there has been a 50 to 75 per cent. rise in their prices. Who is profiteering in this case? Perhaps, the millowners deserve the digs they received in Parliament. Did they not compromise with the authorities in lowering the production targets for cloth and yarn, although they knew full well that that was not in keeping with the long-term interests of consumers? They should at least learn now from this latest episode and consistently strive to safeguard the interests of consumers through positive means that will yield sustained results. They should scrupulously avoid the temptation of toeing the line drawn by politicians, however influential they may be, when they know that it is not the right one. If the powers-that-be insist on following only that line, then they should warn the public clearly and firmly of the consequences of that policy, so that the industry might not be blamed later for what happens.

MARKET GOSSIP

THE dividend announcement of the Indian Iron and Steel Company Ltd. for 1959-60 is a cheerful event for the share markets. A net dividend of Re. 1.05 per share, as against only Re. 1.00 for 1958-59, and that, too, on a higher capital, has revived the confidence of investors not only in this scrip but also in that of Tata Steels. At the ruling market price, the proposed dividend gives a yield of a little over 4 per cent. per annum, free of tax. As the Company has not yet attained the full benefits of the expansion programme just completed, it should be able to fare better in the current as well as coming years, provided the Government fixes a fair retention price and other factors of production are normal. Further, one day, the Company will have to issue fresh capital. The satisfactory dividend of the I.I.S.Co. has raised the hope that the T.I.S.Co.'s net dividend, too, would be on that basis and the general expectation at the time of writing is that it would be Rs. 7 per share. The rationale for this hope is that the management of the T.I.S.Co. would not like to lag behind that of the I.I.S.Co., since the issue involves its prestige with investors. It is also believed by some that, since the T.I.S.Co.'s production of steel in 1959-60 was 37.5 per cent. higher at 1,215,100 tons, as against 884,700 tons in 1958-59, it should not be difficult for the Company to pay a net dividend of Rs. 7 per share, even though the capital to be remunerated is a little higher.

Palai Central Fails

A most distressing development of the week is the failure of the Palai Central Bank Ltd., involving the fortunes of many middle class families —small and big—in particular. The Bank ceased its operations on Tuesday the 9th inst., following the Kerala High Court's order of the previous day appointing a provisional liquidator, in response to a petition filed by the Reserve Bank of India under Section 38 of the Banking Companies Act of 1949. This is the second scheduled bank to be compulsorily wound up this year. Earlier, on 28th June 1960 to be precise, the Laxmi Bank Ltd., Akola, was ordered to be wound up by the Maharashtra High Court. The total deposits of the Laxmi Bank stood at a little over Rs. 3 crores as at the end of December 1959. It had a paid-up capital of Rs. 25 lakhs, a reserve of Rs. 6 lakhs, and as many as 40 offices. The deposits of the Palai Central Bank, as at the close of last year, amounted to Rs. 9.81 crores, though on the day it shut its doors they were, according to the Finance Minister's statement in Parliament on Tuesday, Rs. 8.50 crores. The Bank's paid-up capital was Rs. 24.31 lakhs, supplemented by reserves of Rs. 15.60 lakhs. It had 25 offices. The following table shows at a glance the progress of the Bank in recent years:

(In lakhs of rupees)

End of	Deposits	Advances	Gilt-edged and cash
1951	476	320	171
1953	505	328	183
1955	655	355	318
1957	792	423	386
1958	856	467	396
1959	981	527	433

The Bank had consistently paid a dividend of 6 per cent. per annum from 1939 to 1953 and that, too, on a growing capital in the intervening years. In 1954, however, it was reduced to 4 per cent., but raised to 5 per cent. in the following year. No dividend was paid for 1958 and for 1959. In 1959, the Bank suffered a loss of Rs. 13.69 lakhs, as against a profit of Rs. 3.78 lakhs in 1958.

The Palai Central Bank was established way back in 1927 as a small village bank, with resources just over Rs. 1 lakh, and had attained the status of the largest scheduled bank in the Kerala State. Its status, for purposes of emoluments to staff under the Award of the Appellate Tribunal, was that of a B class bank. Its advertisement campaign was a high order, in that it preached the virtue of thrift and savings in an eloquent manner. This seems to have had a telling effect, for its savings bank deposits always constituted a high proportion of its total deposits. This is true of its fixed deposits also. Even in those days when demand deposits stood first in the case of banks in general, the Palai Central Bank's fixed deposits were far larger than demand deposits. In 1951, for instance, when its total deposits were Rs. 476 lakhs, fixed deposits and savings deposits accounted for Rs. 238 lakhs and Rs. 142 lakhs, whereas the share of current accounts was only Rs. 96 lakhs. In that year, it may be noted, demand deposits represented 75 per cent. of the total deposits of all scheduled banks. At the time the Bank was closed down, the fixed deposits stood at Rs. 400 lakhs, savings deposits at Rs. 225 lakhs, and current deposits and other accounts at Rs. 225 lakhs. The high proportion of fixed and savings deposits suggests that personal deposits must have been the largest component and that the bulk of sufferers must be individuals. It is generally believed that the majority of them belong to the middle class—a section that can least afford to take a loss of this magnitude.

From the statements made by the Reserve Bank's representative (The Advocate-General of Kerala) in the Kerala High Court and the Finance Minister's brief statement in the Lok Sabha, the following facts emerge:

(1) An inspection of the Palai Central Bank made by the Reserve Bank in 1951 revealed "a disquieting position."

(2) A fresh scrutiny made by it in 1953 showed that the Palai Bank had done "hardly anything" to improve its position.

(3) Although the Bank's management had shown a loss in working only for 1959 in recent years, the Reserve Bank had reasons to believe that the Bank had been incurring losses for some years.

(4) The Reserve Bank's inspections in 1956 and 1958 also showed no change for the better in the Bank's practices; on the contrary, a further deterioration had been noted.

(5) The inspection made in the beginning of 1960 revealed that the position of the Palai Bank was going from bad to worse; instead of taking the steps advocated by the Reserve Bank, the Palai Bank gave more and more advances which were not recoverable.

(6) Later, the Reserve Bank appointed one of its own officers as the Chief Executive of the Palai Bank, apparently to set matters right. It is not known from published reports as to when exactly this action was taken.

(7) After trying his best, this officer, who held the position of General Manager, reported to the Reserve Bank that it was impossible to do anything about the Palai Bank and that the sooner it was liquidated the better.

(8) Even as late as on 24th June 1960, the deposits with the Bank stood at about Rs. 9.82 crores. A month later, they were Rs. 9.32 crores; and, by 3rd August, they had fallen to Rs. 8.50 crores;

(9) The decline in deposits since 24th June is attributed first to withdrawals, perhaps, by depositors with inside information, and then to a run on the Bank. The Bank had borrowed heavily against its liquid assets and, it was found, in the first week of August, that, as against a deposit liability of Rs. 8.50 crores, the Bank's liquid assets (cash and Government securities) were only Rs. 1.50 crore (that is, 23.5 per cent. coverage), that 38 per cent. of the Bank's advances were "irrecoverable" and another 20 per cent. "sticky," that the stage for rehabilitation was past and that, in order to ensure that all depositors got something out of what could be salvaged, it was necessary to take the Bank into liquidation. Failure to do so would have meant that only a few privileged depositors—that is, directors and their friends—would have drawn all their deposits, leaving little or nothing for the vast majority of depositors.

Misplaced Charity

The most outstanding impression that one gets from the aforesaid facts is that the Palai Bank ought to have been asked to wind up its affairs long ago; instead of doing so, the Reserve Bank gave it too much latitude and condoned the management's faulty methods of banking too many times. In its anxiety to prevent a sizable scheduled bank from going to the wall, it has been too soft to an erring bank. The explanation given by the Finance Minister in the Lok Sabha, namely, if liquidation had been forced on the Bank earlier, it would have adversely affected the other banks in Kerala, is not convincing. The damage that has now followed is far greater than it would have been, had the Bank not been allowed to accept deposits in 1953 itself, when the Reserve Bank's second inspection showed that its warnings and advice given in 1951 had fallen on deaf ears. In that year, the Palai Bank's deposits were only a little over Rs. 5 crores, as against nearly Rs. 10 crores in June last. And it is possible that the solvency of the Bank's assets in that year was better than it is found to be now. By postponing the evil day and by hoping against hope for the best, the Reserve Bank has only brought more misery to the people. Here is a clear instance of misplaced charity. Rectitude is the first prerequisite of the management of all credit institutions, more so of banks. There can be no ground whatever for accommodating those who are found lacking in this quality. It is surprising to learn that the Reserve Bank knew that the Bank's profit was cooked up and yet took no stern action. What was the auditor of the Bank doing? It would, therefore, be no exaggeration if one were to say that, in the case of the Palai Central Bank, the Reserve Bank deserves the charge of complacence, if not negligence. It should not have allowed the Palai Bank to be in existence for so long with all its faults; it should have either quietly replaced the Board of Directors with its own nominees, if there was a possibility of saving the institution, or forced it into liquidation.

One was inclined to think that, with such a comprehensive legislation as the Banking Companies Act to safeguard the interests of depositors and with regular inspection by the staff of the Reserve Bank, failure of a leading scheduled bank like the Palai was a thing of the past. It is now evident that mere legislative controls are of no avail, unless they are enforced firmly and judiciously. It must, of course, be said to the credit of the Reserve Bank that it has maintained law and order in the banking world better than, say, the Controller of Insurance has done in the sphere of life and general insurance. Nevertheless, an instance of this nature constitutes a glaring black mark.

Deposit Insurance

Reports have appeared in the daily Press vividly bringing out the sufferings of the Palai Bank's depositors—sobbing women with infants in their arms clutching the collapsible gates of the Bank's New Delhi office, a washerman who had deposited all that he had saved in life, several employees who had just credited their pay-cheques, retired officials who had placed their provident funds and gratuity in fixed deposits, etc. Undoubtedly, they will all get something by way of instalments at distant intervals, when the liquidator realises whatever he can from the assets of the Bank. But they will also have lost a good part of their deposits and, what is more, undergone mental torture. There have been cases in the past of people having suffered from mental derangement, as a result of bank crashes. Such tragedies need not occur at all, if insurance of bank deposits, as is obtaining in the U.S., is introduced in this country. Indeed, years ago, this journal had strongly advocated provision of this protection to depositors against bank failures. What a nice thing it would have been today, if this suggestion, which was supported in principle by the Shroff Committee also, had been implemented! Now that it has been forcefully established that no amount of check by the Reserve Bank can prevent bank failures, there could be no room for nursing the belief that insurance of bank deposits is a luxury that India can do without.

Oilseeds And Oils

The past few months have witnessed a steady rise in the prices of oilseeds and oils in India. The currently ruling prices are about 12 to 13 per cent. higher than those a year ago. The wholesale price index (base: 1952-53=100) of oilseeds for the week ended 23rd July 1960 stood at 152.1, as against 135.4 on the corresponding date in 1959 and 132 in December 1959. The index for edible oils stood at 150.0, as against 130.8 a year ago and 129 in December 1959. The increase in prices has been accounted for by all oilseeds and oils, with the exception of linseed, as is evident from the following figures which relate to the spot quotations in the Bombay market:

	Latest available	Three months before	End of 1959	A year before
Groundnut:	Rs.	Rs.	Rs.	Rs.
Bold ready	47.75	43.75	39.12	37.50
Khandesh quality	48.00	45.12	40.12	38.25
Oil ex-mill*	25.12	23.50	20.62	17.75
Castorseed:				
Ready Madras	33.87	32.94	33.12	30.56
Oil commercial†	18.00	17.75	18.19	15.50
Linseed:				
Bold ready	32.50	32.00	34.25	32.87
Oil†	16.75	16.00	16.37	16.25
Nigerseed (Madras)	38.75	33.87	31.75	31.00
Kardiseed (bold ready)	24.75	24.25	23.75	22.75

N.B.—Quotations for seeds are for cwt. and those for oil per quarter.

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

The upward tendency in oilseeds and oils prices is not surprising, in that supply is not keeping pace with the demand, which is progressively expanding. The estimated aggregate output of major oilseeds (groundnuts, castorseeds, linseed, sesame, rape and mustard) in the current season 1959-60 is no more than 6,327,000 tons (of 2,240 lbs. each), which is actually 592,000 tons smaller than 6,919,000 tons harvested in the previous season (1958-59). Barring linseed the production of which has improved from 430,000 tons to 500,000 tons (rough estimate only), the output of all the other oilseeds has declined: groundnut crop from 4,812,000 tons to 4,390,000 tons, castorseed from 112,000 tons to 108,000 tons, sesame from 511,000 tons to 392,000 tons, and rape and mustard (trade estimate) from 1,069,000 tons to 1,037,000 tons. The fall in production has occurred when the offtake of oil for both domestic consumption and export is expanding. There are no reliable estimates of the total quantity of oils consumed within the country. On a rough basis, however, it may be said that the rate of consumption must be greater in 1959-60 than in 1958-59, taking into account the rise in population and the increase in consumption of oils for industrial purposes. With regard to exports, there has been an improvement. During the first six months of 1960, shipments of castor oil from Bombay port amounted to 27,668 tons, as against 9,732 tons in the same period last year. Similarly, shipments of linseed oil and groundnuts (kernels) were higher at 3,620 tons and 12,276 tons, respectively, as against 1,868 tons and 5,500 tons. Exports of groundnut oil were, of course, lower at 1,934 tons, as against 2,324 tons.

Not only have larger quantities of oils been sold abroad but the prices realised have also registered an improvement, thanks to the firmness of the world oilseeds and oils market. The latest available quotation for Indian castor oil in London is £133 per ton, as against £113 a year before. Groundnut oil (British West Africa), linseed oil (crude) and groundnuts (Nigeria) are quoted at £122½, £112 and £73 per ton, the corresponding quotations a year before being £105, £99 and £63, respectively. The rate for linseed (Canadian No. 1) receded from £57½ to £49½, though it has recovered lately to £53½, which is the same as the quotation prevailing this time last year. There would, indeed, have been a more marked fall in prices (consequent on the relaxation of restrictions on export by the Argentina Government) but for fears of reduced crop in Canada owing to lack of rain in the main producing area, Saskatchewan. Coconut oil, however, has tended to recede, because of pressure of sales by Philippine shippers and Dutch mills.

The firmness of world oilseeds and oils persists, notwithstanding the upward trend of world output. The total world production of oils and fats in 1960 is estimated at a new peak of 32 million metric tons (2,204.62 lbs. each), a rise of 500,000 tons as compared with the production in 1959, with more cottonseed oil, soyabean oil and animal fats and the recovery in coconut and olive oils outweighing smaller production of groundnut and sunflower oils. This estimate was given by Mr. J. C. A. Faure of Unilever in the course of his speech at the Congress of the International

SHARE MARKET QUIET

STEELS, HOWEVER, STEADY

(From Our Own Correspondents)

BOMBAY, 11*th August*

A STEADY tone in steel shares was the only feature of trading in the forward section of the share market, which was otherwise quiet during the week under review and values of many a counter took a downward trend under the leadership of textile scrips. The announcement of a dividend of Re. 1.50 per share or 15 per cent., subject to deduction of tax, for the year ended 31st March 1960 by the Indian Iron and Steel Company Ltd. was well received by the market, as the net dividend at Re. 1.05 per share or 10.5 per cent. represents a slight increase over that (10 per cent.) for the previous year. Thus, the shareholders have been more than compensated for the deduction of tax at source. The Directors have declared the above dividend as an interim one, pending the finalisation of the accounts which awaits the announcement of the retention prices, but they have made it clear that this will constitute the full dividend for the year. The books of the Company will remain closed from 26th August to 17th September 1960, both days inclusive. The dividend will be paid on or after 21st September.

The announcement of a higher dividend by the I.I.S.Co. touched off some speculation during the last two days over the dividend of Tata Iron and Steel Company Ltd. which is long overdue. A section of market circles is inclined to take a favourable view of the dividend prospects in the light of the I.I.S.Co.'s gesture. The decision of textile mills to cut the retail prices of coarse and medium varieties of cloth by 10 per cent. and the announcement by the Union Minister for Commerce and Industry in the Lok Sabha that he was not satisfied with the 10 per cent. cut, followed by his warning that, if mills did not respond to his advice and bring down prices further, the Government would not desist from taking "effective" action, caused a setback in textile shares. There was selling pressure in engineering and miscellaneous shares too. The most notable development of the week was the reactionary trend in some of the cash counters on rumours about the prospect of an enquiry into cash dealings on the stock exchanges.

In the steel section, Tata Ordinaries were quiet in the earlier part of the week, moving down from Rs. 161.50 to Rs. 158.25, but soon gathered strength to touch Rs. 163.75 today. The closing was done at Rs. 163. Indian Irons improved from Rs. 24.68 to Rs. 25.60 on Monday and the announcement of the higher dividend on Tuesday pushed the quotation further to Rs. 26.10 yesterday. At this level, there was profit-taking, which brought the quotation down to Rs. 25.65 at the close today. The shares, however, gained 97 nP over the week.

In the textile section, Centurys gave way from Rs. 510 to Rs. 500 before recovering to Rs. 517 yesterday. But the announcement of a cut in the interim dividend from Rs. 11.50 per share, subject to deduction of tax, to Rs. 10 per share, subject to deduction of tax, depressed the shares to Rs. 500 today. The closing was done at Rs. 506. Bombay Dyeings opened on a firm note at Rs. 70, but receded erratically to Rs. 67.40 before staging a recovery to Rs. 69.40. Kohinoors suffered a marked fall from Rs. 356 to Rs. 335.50. Central Indias declined by Rs. 4 to Rs. 118, while Finlays gained Rs. 3 to Rs. 352 and Khataus Rs. 60 to Rs. 630. Shree Niwas Cottons shed Rs. 2.50 to Rs. 265.50 and Simplex Rs. 3 to Rs. 172. While Standards were unchanged over the week at Rs. 1,985 (the highest level touched was, however, Rs. 2,055).

A sharp rise of Rs. 2.30 to Rs. 75.80 in United Commercials was the highlight of the business in bank shares. Centrals were steady at Rs. 51.50, and their 'A' shares at Rs. 54. Barodas were a shade quiet at Rs. 81. Bank of Indias were done at Rs. 101 *ex-div.* and their 'A' shares at Rs. 103 *ex-div.* Punjab Nationals were a fraction better at Rs. 20.24.

Ahmedabad Electrics, which staged a spurt last week, lost some ground this week declining from Rs. 91 to Rs. 89. Bombay Suburbans were a shade quiet at Rs. 89.50, as also Surat Electrics at Rs. 88.50. Tata Hydros, however, recorded a gain of Rs. 2.50 to Rs. 108 and Andhra Valleys Rs. 7.50 to Rs. 1,027.50. Tata Powers were quiet at Rs. 1,083.75.

Sugar shares were subdued. Belapurs were marked down by Rs. 5 to Rs. 372, Phaltans by Rs. 5.50 to Rs. 179.50, Walchandnagars by Rs. 2.50 to Rs. 305 and Maharashtra Sugars by Rs. 4.50 to Rs. 236.

Cement shares too were listless. Associated Cements shaded off from Rs. 145.50 to Rs. 144. Digvijays were a shade quiet at Rs. 163.50 *ex-div.* Orissa Cements, however, improved by 32 nP to Rs. 14.32.

Tata Locomotives led the downward trend in engineerings, with a fall from Rs. 321.50 to Rs. 292 on Tuesday. Though, subsequently the shares moved up erratically to Rs. 304 at the close, the loss over the week was Rs. 17.50. Premier Constructions dropped from Rs. 358 to Rs. 345. While Alcocks were unchanged at Rs. 297, Larsen and Toubros gained a little even after being placed at Rs. 50 *ex-div.* Mahindras improved by a rupee to Rs. 24. Cooper Engineerings suffered a loss of Rs. 7.50 to Rs. 162.50 and Josts Engineerings Rs. 10 to Rs. 120.

Shippings and automobiles were quiet, in consonance with the general trend. Scindias were marked down by 20 nP to Rs. 15.52. Hindustan Motors lost 44 nP to Rs. 22.64 and Premier Automobiles were lower by Rs. 6 at Rs. 173.

Several leading counters in the miscellaneous section lost ground. Bombay Burmahs (old) were prominent among them with a drop from Rs. 603 to Rs. 591.50 (at one time they touched a low of Rs. 575). National Rayons gave way from Rs. 518.50 to Rs. 492, but improved briskly towards the close to Rs. 507.50. After an improvement from Rs. 46 to Rs. 48.50, Gwalior Rayons fell to Rs. 47.50. Baroda Rayons were somewhat erratic, but closed almost unchanged over the week at Rs. 150, while Indian Rayons gained Rs. 2.50 to Rs. 73.50. Voltas receded from Rs. 294 to Rs. 285. Tata Oils dipped from Rs. 79 *cum-div.* to Rs. 72 *ex-div.* Even on a *cum-div.* basis, this shows a loss of Rs. 2.98 over the week. Tata Chemicals were steady at Rs. 20.36, while Alembic Chemicals were marked down by Rs. 3.75 to Rs. 266.25. Amar Dyes by Rs. 2.50 to Rs. 490 and Colour Chems by Rs. 11.25 to Rs. 433.75. Indian Dyestuffs were, however, Rs. 2.50 better at Rs. 835 and their new shares Rs. 5 higher at Rs. 820. Polychems staged a spurt from Rs. 285 to Rs. 305, following the publication of an encouraging report. Another notable feature of this section was the marked rise in Union Carbides from Rs. 51.87 to Rs. 58. Anil Hardboards declined by Rs. 12.50 to Rs. 405, while Ceat Tyres improved by Rs. 10 to Rs. 275. West Coast Papers lost Rs. 2 to Rs. 221.

* * * *

Calcutta Stock Exchange

CALCUTTA, 10*th August*

Thanks to persistent rumours of Government measures to curb speculation, trading on the Calcutta Stock Exchange took a cautious turn during the early part of the week under review, but, as the week progressed, speculative counters attracted buying support and closed higher on balance. A feature of trading was the increased support extended to jutes and coals. Jutes moved up following Russian purchases of hessian and indications of further interest from that quarter. It was also thought that, as the season progressed, fibre prices would move down now that expectations of a higher crop had had a firm foundation. Long-term investors paid attention to coals, following increased prospects in the third Plan period.

Among cottons, Kesorams met with keen buying support at Rs. 33.75. Dunbars, after being lower at Rs. 228, recovered to Rs. 231, while Cawnpores declined to Rs. 7.50 from Rs. 7.87. Jayshrees opened at Rs. 17 and recorded a small gain to quote at Rs. 17.31.

Coals were steadier on interested support. Bengals rose to as high as Rs. 351 from Rs. 335, with Burrakurs being traded at Rs. 20.50, as against Rs. 20 earlier. Western Bengals were pushed up from Rs. 8.37 to Rs. 8.69 before closing at Rs. 8.50. Khatras Jherriahs from Rs. 40.75 advanced to Rs. 46. Amalgamateds were unchanged at Rs. 22.37, while East Indians, after a fall from Rs. 31.87 to Rs. 31.62, rose to Rs. 32.12. South Karanpuras fell by 63 nP to Rs. 12.12.

Jutes were better all round. Alliances were taken up to Rs. 113, as against Rs. 108 previously. At Rs. 231, Anglo-Indias added Rs. 13, with Champdanies forging ahead from Rs. 117 to Rs. 127 and Kinnisons from Rs. 181 to Rs. 187. Ballys hardened from Rs. 253 to Rs. 260, following satisfactory working results and higher dividend. Unions were raised to Rs. 205 from Rs. 196. Birlas, for which a dividend of 15 per cent. taxable, as against 10 per cent. tax-free, has been announced, was traded at Rs. 34.37, as against Rs. 31.37 previously. On keen support, Kankinarrahs rose from Rs. 84.50 to Rs. 96.50. Fort Glosters picked up Rs. 5 to Rs. 380. Kelvins had buyers at Rs. 165, as against Rs. 160 previously. At Rs. 57.50, Nuddeas were better by Rs. 3.50. Fort Glosters were a shade better at Rs. 27.62. Aucklands had buyers up to Rs. 180, as against Rs. 163 previously. At Rs. 23.50 Howrahs were also better, as were New Centrals at Rs. 30.44. Lawrences at Rs. 153 added 10 points.

Among engineerings, Indian Irons opened at Rs. 24.60 and, after declining to Rs. 24.47, recovered to Rs. 25.60 before closing at Rs. 25.34. The lower production figures for July—pig iron 72,502 tons, as against 80,127 tons in June, steel ingots 62,962 tons, as against 69,140 tons, saleable steel 40,897 tons, as against 53,737 tons—were forgotten on expectations of an imminent dividend announcement which, in fact, came yesterday. Market circles were visibly pleased with the dividend, which at 15 per cent. taxable works out to Re. 1.05 per share, as against Re. 1 paid in the previous year. Following a lower dividend, Texmacos declined from Rs. 28.70 to Rs. 28.20 but rose to close at Rs. 28.45, after being higher at Rs. 28.90. Jessop and Cos. were quiet at Rs. 24.87, following decline in profits and working results not being up to earlier expectations. Guest, Keen Williams continued to meet with inquiries and at Rs. 51.50 added a small gain. At Rs. 33, Braithwaites were better, while Chase Bright Steels gave way from Rs. 20.25 to Rs. 19.50.

Several features were recorded in the miscellaneous industrials section. Following the announcement of the rights issue at par for one ordinary share for every share held, Rohtas Industries rose from Rs. 40.50 to Rs. 41.47 to close at Rs. 40.44. The limited gain and the eventual closing lower on balance were due to earlier discounting. Interest in National Pipes revived and the rate was better at Rs. 17.81, as against Rs. 17.57 earlier. More support was accorded to Alkali and Chemicals and the scrip at Rs. 35.62 recorded a handsome gain. Indian Aluminiums moved upto Rs. 32.06 from Rs. 31.37. Dunlop Rubbers were maintained at Rs. 47, while Gwalior Rayons recorded a modest gain to close at Rs. 48. Dyer Meakins were bought at Rs. 23.50, as against Rs. 23.25 previously, with National Cables being better at Rs. 23.62. Hindustan Motors, after rising from Rs. 22.94 to Rs. 23.25 not only lost the gain but closed lower on balance at Rs. 37.32. Indian Cables were better by a rupee at Rs. 37.32, while Rallis, after being better at Rs. 142, receded to Rs. 141. The premium for Philips Carbons was Rs. 19.25, as against Rs. 14.37 earlier.

* * * *

Madras Stock Exchange

MADRAS, 10*th August*

Equities on the Madras Stock Exchange generally tended to move down during the week under review. Offerings of several scrips were somewhat large, while fresh buying support was slack. The statement of the Union Finance Minister in the Lok Sabha that several friendly countries were willing to extend economic assistance to India for the third Plan failed to enthuse operators. Textiles encountered selling induced by fears regarding imposition of controls over cloth and yarn. The fears stemmed from Mr. Lal Bahadur Shastri's assertion in the Lok Sabha that the present increase in textile prices was much more than what was warranted by the rise in cost of production and the warning that, if the industry did not take any concrete steps to reduce prices, the Government would not hesitate to take action. Teas were depressed due to the declining trend of India's tea exports to the U.S. in the five months of the current year, and an increase of over 10 million lbs. to 238.4 million lbs. in the production of Ceylon tea during the first half of 1960, as compared with the corresponding period last year. Coffee shares were weak, following fall in coffee prices in recent weeks. Rubbers lacked support. Operators preferred to await the Government's decision on the Tariff Commission's report on raw rubber prices. They noted the statement of Mr. Nityanand Kanungo in Parliament that the Government would soon announce its decision.

In the textile section, South Indias were subjected to selling pressure and fell by Rs. 5.y to Rs. 138. Lakshmis suffered a setback of Rs.id to Rs. 167. Vijayalakshmis were lower by Rs. 2.y at Rs. 90. Travancore Rayons lost Re. 1.25 r Rs. 36.50. Metturs moved down by a rupee r Rs. 398. Radhakrishnas shed 20 nP to Rs. 30.ve Maduras dropped 5 nP to Rs. 33.90. Buckingham were neglected at Rs. 154, Coimbatore Pioneers as Rs. 351.50 and Kotharis at Rs. 12.50. Premie however, elicited special support and improved ze Rs. 5 to Rs. 243.50. Dhanalakshmis rose by Rs to Rs. 229 and Coimbatore Cottons by Rs. 2. Rs. 175. Bangalore Woollens gathered 50 nP of Rs. 198.50. ut

Among teas, Nelliampathys were marked d te by 40 nP to Rs. 2.90. Peermades receded by se nP to Rs. 23.40. Blue Mountains softened by of nP to Rs. 5.26, Haileyburias by 10 nP to Rs. 1 and Periakaramalais by one naya paisa to Rs. to Neelamalais were quiet at Rs. 5, Kil Kotagir the Rs. 5.68 and Devsholas at Rs. 31.50. Kalasas the dull at Rs. 4.78 *cum-div.* The Directors of ake Company have declared a dividend of 20 per per taxable (equivalent to 14 per cent. tax-free what the year ended March 1960, as against 1 cent., tax-free, for the previous year. g at Parksides improved by 38 nP to Rs. 28.50. t all Nilgiris put on 10 nP to Rs. 22.45. Che ican picked up 5 nP to Rs. 5.20 *ex-div.*

In the coffee group, Consolidated C y a moved down by 30 nP to Rs. 26.55. Rajendras on 20 nP to Rs. 15.80. Ouchterlony Valleys, Co de lands and Cowcoodys declined by 10 nP ea h Rs. 5, Rs. 25.90 and Rs. 5.70, respect ac Balanoors were unaltered at Rs. 16.70.

Midlands, in the rubber section, came some selling and declined by 15 nP to Rs. 12.30. C for Malabars were lower by 11 nP at Rs. hin Thirumbadis dropped 9 nP to Rs. 1.66. Va th dams, however, rose by 50 nP to Rs. 31, follo for the announcement by the Directors of the pany of an interim dividend of 15 per cent., ble (equivalent to 10.5 per cent. tax-free) 1960. Kallas changed hands at Rs. 5.60 en Malankaras at Rs. 20.25. is

Chemicals were particularly weak in the ll- cellaneous section. Metturs lost 25 nP to Rs. 1 r- F.A.C.Ts and Travancore Chemicals declined 15 nP each to Rs. 12.50 and Rs. 18.10, respective Mysore Fertilisers were neglected at Rs. 10.60 Mysore Chemicals at Rs. 27. Among ceme India Cements shed 7 nP to Rs. 7.08. Orissas Travancores were quiet, the former at Rs. 13 and the latter at Rs. 8.25. Dalmias and Andhr however, rose by 10 nP each to Rs. 12.50 a Rs. 11.10, respectively. Among others, Parry Confectionery closed today at Rs. 4.55 *cum-di ex-right*, as against Rs. 5.65 *cum-right* last wee end. The Company has declared a dividend of per cent., taxable, (equivalent to 21 per cent. t free) for the year ended March 1960, which co pares favourably with 20 per cent. tax-free the previous year. Aluminium Industries w lower by 25 nP at Rs. 25 and Ashok Leylands 15 nP at Rs. 9.45. Tube Investments were ste at Rs. 337 and Western India Plywoods at Rs. Standard Motors, however, rose by 55 nP Rs. 17.25 *cum-div.*, following the announcement a dividend. Textools gathered 50 nP to Rs. 190

NEWS IN BRIEF

THE Government of India proposes to constitute three Wage Boards, one each for tea, coffee and rubber industries.

The report of the Joint Select Committee on the Bill to amend the Companies Act is expected to be presented to the Lok Sabha on the 16th inst.

The Government of India proposes to construct a 40-mile canal, to be known as "Chatra canal," in Nepal area from the Kosi project as a goodwill gift to that country. The estimated cost of the canal would be Rs. 3.23 crores.

The decision with regard to the site for the fourth steel plant and township at Bokaro in Bihar has now been finalised. Half of the selected area falls in the Hazaribagh district and the other half in the Dhanbad district.

As a measure of export promotion, the Government of India proposes to grant drawback of duty on raw materials used in the manufacture of fluorescent lamps at brand rates. In this respect, Government has issued a draft notification inviting objections, if any, by the 17th inst.

An additional loan of $50 million (about Rs. 23½ crores) for the Indian Railways has been approved by the U.S. Development Loan Fund authorities. With the receipt of this fresh loan, the Indian Railways will have received $115 million of loan assistance from the D.L.F.

A study team, with Dr. R. Nagan Gowda as leader, has been set up by the Committee on Plan Projects to make an appraisal of the schemes of seed multiplication that are being tried in the country and to make suggestions for ensuring the supply of pure seed of improved varieties to cultivators.

The proposal for the regulation of freight rates in overseas trades by securing statutory powers by the Government on the lines of the American law is still under the consideration of the Government of India, according to Mr. Raj Bahadur, Union Minister of State for Transport and Communications.

Out of about 1,244 different types of components required for the manufacture of coach shells in the Integral Coach Factory, only one component is said to be fully imported. About 1,000 components are manufactured in the factory itself, about 237 components are procured from indigenous sources and six components partially imported.

The British Government has agreed in principle to provide loan finance for the extension of the Durgapur steel plant to enable it to increase its capacity by 600,000 tons annually. The foreign exchange component for the extension is placed at £20 million. The U.K. High Commission and the Indian Government are currently discussing the details.

The Rubber (Amendment) Bill, which empowers the Government to collect cess on rubber from manufacturers, instead of from producers as at present, has been passed by the Lok Sabha. The Bill has also enhanced the permissible maximum rate of cess from one anna per pound to 50 nP per kilogram (1 lb.=0.45 kilogram), with a view to collecting more resources for the implementation of development plans for natural rubber.

A three-member official delegation, led by Mr. K. Swaroop, Chief Administrative Officer, Integral Coach Factory, Perambur, has gone to Ceylon to explore the possibility of finding a market for railway coaches, wagons and components manufactured in India. The Integral Coach Factory is at present producing 50 coaches per month on an average and it is claimed that the factory is in a position to export a good number of coaches.

Austria has agreed to grant a $14-million (about Rs. 7 crores) credit to India, following the recent talks which Mr. T. Swaminathan, India's Commissioner-General for Economic Affairs in Europe, had at Vienna with the representatives of the Austrian Government and leading bankers. The proposed credit will be made available for the purchase of equipments for te construction of electrical goods and steel mills. A 10-year agreement is expected to be signed shortly. Repayment of the loan will begin in the fourth year. The rate of interest has not yet been finalised.

The Railway Board has called for tenders from any country for the supply of 40 broad-gauge high-powered diesel locomotives of 2,600 h.p. each. These heavy diesel locomotives are required to cope with heavy increase in traffic anticipated during the third Plan period on certain sections where full capacity has already been reached with steam locomotives. Tenders have also been invited for supply of 75,000 tons of steel materials such as plates, sheets, etc. Other materials which the railways are planning to buy from abroad are 55,000 wheelsets and about 70,000 roller-bearing axle boxes in connection with the wagon-building programme within the country. The supply of axle boxes would be arranged on the basis of progressive manufacture within the country with Indian collaboration.

The Union Minister for Steel, Mines and Fuel, Sardar Swaran Singh, admitted in the Lok Sabha that the progress at the steel works at Rourkela was not according to the original time-table set for it. Among the factors which had contributed to the delay in commissioning the various units of the plant as per schedule, he mentioned the delay in "site formation" due to the rocky strata being higher than originally envisaged, delay in civil engineering work due to difficulties in finding suitable contractors with adequate equipment and organisation, labour strikes at the Calcutta port and erection sites, transport difficulties in the movement of plant and equipment and defective quality of the cement supplied and used for some time. He added that the delay in commissioning the plant could not, however, be attributed to the procedure for calling tenders.

From Abroad

Japan's foreign currency reserves at the end of July stood at the all-time record level of $1,505 million.

The World Bank has granted Israel a 25-year loan of $27.5 million for the construction of a deep sea port at Ashdod, near Tel Aviv.

Soviet ships called at 500 ports in 64 countries last year. Soviet merchant marine carriages to foreign countries increased fourfold, as compared with 1953.

Copper production in Chile during the seven months ended July 1960 was higher at 288,707 metric tons, as compared with 284,007 tons in the corresponding period last year.

The Lufthansa, the West German airline, is currently negotiating with the Chase Manhattan Bank of New York for an investment credit of $20 million. The credit will be used to extend its routes and introduce jet-powered aircrafts.

The number of bicycles exported from the U.K. rose from 617,090 valued at £6 million in January-June 1959 to 720,414 worth £6.8 million in the first six months of the current year, an increase of 16 per cent.

Sweden has virtually abolished restrictions on the imports and exports of gold manufactures. But domestic sales of gold either in bars or in raw or semi-finished forms will, however, continue to be subjected to restrictions.

West Germany has supplanted Holland as the main continental supplier of the U.K., whose imports from the former in the first half of this year rose by 38 per cent. to about £92 million. The U.K.'s imports from Holland amounted to £90 million.

In almost all West Europen countries, vigorous industrial expansion continued in the early months of this year, accompanied by a rapid growth of international trade, according to the latest bulletin prepared by the secretariat of the Economic Commission for Europe (E.C.E.).

The British Government has decided to grant aid amounting to £7.6 million to Singapore, of which £2.6 million will be in the form of grants. The bulk of the aid amounting to £6 million will be used for financing the development plan of Singapore.

Pakistan and Portugal have initialled an agreement for increased trade between Pakistan and Goa. Under the agreement, Goa has offered 20 items for export to Pakistan which include iron ore and machinery. Pakistan has offered to export to Goa 30 items, including cotton, jute and rice.

PERSONAL

MRS. Vijayalakshmi Pandit, India's High Commissioner in the U.K., has arrived in India on a two-month holiday.

Mr. Robert McDill Carr has assumed charge as American Consul-General in Bombay *vice* Mr. William Turner, who retired recently.

Mr. K. C. Mittal has been elected Chairman of the Hapur Chamber of Commerce for the year 1960-61.

Mr. Rao Raja Ramachandra Ganpat Rajwade, at present Ambassador of India to Sudan, has been appointed Indian Ambassador to Ethiopia. He will take charge of his new assignment in October next.

Mr. S. Khera, Secretary, Union Ministry for Oils, will shortly leave on a tour of Italy, France, the U.K. and the U.S. to enlist support from oil companies there for the exploration of oil resources in India.

The Italian Government has decided to step up import duty on cars and tractors in such a manner as to annul the 10 per cent. tariff cut recently enforced by the Common Market countries. The British, West German, French and U.S. exporters of cars are expected to lodge a protest with the Government of Italy, since the new measure is bound to affect adversely their exports to Italy.

Pakistan will adopt decimal coinage from 1st January 1961 when new coins of one paisa, five paisa and ten paisa denominations will be put into circulation. The new currency will have coins of only five denominations, as against seven denominations under the present currency. The four-anna, eight-anna and rupee coins will continue as at present for some time after the introduction of the decimal system.

There was a further loss of gold on U.S. foreign account to the tune of $20 million in the last week of July, which brings the total gold loss since January last to $312 million, thereby reducing the aggregate U.S. gold stock to just over $19.144 million, the lowest since early 1940. Foreign holdings in the U.S. short-term Treasury securities reached a record of $5,255 million at the end of last month.

The possibility of an increase in the prices of West German machine tools is forecast by experts in the industry. Such an increase is regarded as inevitable, because of the enhanced cost of raw materials, higher wages and shorter working hours. The experts, however, have not stated whether the anticipated increase in prices will apply to exports, in view of sharp foreign competition in the field.

The American Electric Power Company, Indiana, has put into operation the world's largest single electric power generating unit. The 475,000-kilowatt turbine-generator took three years to complete and is claimed to be capable of supplying the electric needs of more than a million homes. It is expected to burn 1.4 million tons of coal a year. The Company plans to open another unit of the same size later this year in West Virginia.

4 PER CENT GUJARAT STATE DEVELOPMENT LOAN 1969

ISSUE PRICE Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTIONS ON 29th AUGUST 1960

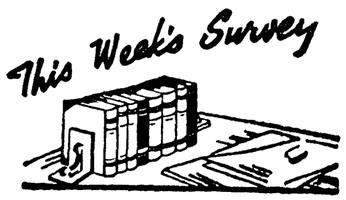
The loan will be closed as soon as a total of approximately Rs. 500 lakhs has been subscribed, and in any case not later than the close of business on 3rd September 1960.

THE LOAN WILL BE UTILIZED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The applications will be received at offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore, and at branches of the State Bank of India and Treasuries and Sub-Treasuries in the State of Gujarat.

Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its branches within the State and forward to the nearest receiving office.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE ABOVE OFFICES.



FOREIGN EXCHANGE REQUIREMENTS

IN his statement on his recent tour of foreign countries, made in the Lok Sabha last week, the Union Finance Minister, Mr. Morarji Desai, revealed that he discovered in his discussions with representatives of the European Governments a "sympathetic interest all round in our development programme and a keen awareness of our problems and needs." But, beyond a reference to the W. German aid, in the shape of the third and final instalment of $30 million of a total credit of $100 million promised in August 1958 and the four-year deferment of two-thirds of the liabilities under the Rourkela steel project maturing on 31st March 1961, the Minister did not throw any fresh light on the precise scope of foreign aid in the next few years.

It is, however, gratifying to note that Mr. Morarji Desai found in all countries a "desire for closer co-operation and willingness to assist us in our economic development programmes to the extent possible." This has been corroborated by other observers too. But it is necessary to point out that much planning and special effort will be needed to ensure that foreign interest in India's plans is translated into concrete assistance and, further, such assistance is availed of at the proper time and in a manner best suited to India's economic progress. As Mr. Desai himself indicated, "the form and extent of such co-operation and assistance will have to be discussed in more precise terms and in greater detail from time to time." In other words, the problem of meeting the country's foreign exchange requirements should be kept under constant scrutiny.

The requirements of foreign exchange for the current Plan period are being covered, thanks to sizable aid from foreign Governments and international financial institutions. It is true that India's foreign exchange reserves are now at a very low level. Thus, as on 5th August 1960, they aggregated some Rs. 148 crores, as against Rs. 213 crores as on 25th December 1959. But the foreign assistance that has been promised and continuing should be sufficient to ensure the expeditious completion of the second Plan projects. Only, imports must continue to be rigorously controlled and exports actively encouraged, so that the assumptions on which the foreign exchange deficit has been estimated do not go wrong.

The real problem, involving a fresh round of negotiations with foreign countries and world financial institutions, will arise when the country enters on its third Plan career. For the successful execution of the Plan implies, as is now well known, the availability of foreign exchange resources to the tune of Rs. 3,200 crores (inclusive of Rs. 600 crores by way of foodgrain imports under the recent Indo-American agreement) which is equivalent to nearly 32 per cent. of the total outlay of Rs. 10,200 crores. Although foreign aid of this magnitude is not beyond the capacity of India's friendly nations and international financial institutions, it has to be worked for, and "earned," in the sense that they must be convinced that it will be put to most profitable use.

SALES TAX IN GUJARAT

The Government of Gujarat is opposed to the extension of the principle of replacement of States' sales tax by Union excise duty. Inaugurating the first quarterly meeting of the All-India Manufacturers Organisation's Central Committee held at Ahmedabad on Saturday last, Dr. Jivraj N. Mehta, Chief Minister of Gujarat, appealed to the industry and trade not to press the Government to give up its powers in respect of a tax which, he stated, was the only flexible source of revenue available to the State and which yielded more than 30 per cent. of the State's total tax revenues. The Chief Minister alluded here to the need for finding funds for implementing a plan much bigger in size than the present one and said: "In this context, you will agree that a proposal, which is likely to have an adverse effect on the most important of the State's sources of revenue, must be considered with great caution and should not be pressed merely on theoretical grounds for the sake of convenience of the dealers only."

One will fully appreciate the anxiety of the Government of a newly born deficit State to raise as much resources as possible from sales tax, the most important source of revenue. In fact, no one will expect the Governments of Gujarat and other States to surrender their claim on sales tax completely to the Centre. But it would be wrong to oppose the extension of the above principle to commodities which are well suited for additional excise duties in lieu of sales tax. Such a change in fiscal legislation, as we mentioned in the course of an editorial only last week, possesses three distinct advantages: (1) maintenance of revenue at original levels; (2) minimisation of scope for evasion; (3) elimination of the relatively more onerous administrative complexities involved in the collection and payment of tax. What is more, the cost of tax collection, as Mr. G. V. Puranik, Chairman of the A.I.M.O. rightly pointed out, would, to some extent, be reduced, if excise duty and sales tax were amalgamated in the case of certain categories of goods.

In his speech, Mr. Puranik dealt at some length with a few aspects of the third Five-year Plan. In particular, he stressed the need for allowing more power generating and distributing agencies to function with more reasonable incentives than are allowed now, for adopting a more helpful policy towards transport, particularly in respect of taxation on road transport, and for providing the necessary facilities to machinery manufactures such as foreign exchange for installing equipment and importing components and raw materials. Given all these facilities, as well as less encroachment by the State in the legitimate fields of the private sector, there is no doubt that not only will the pace of economic development be greatly accelerated but the pattern of development also will be well balanced.

INDIAN INSTITUTE OF BANKERS

The latest annual report of the Indian Institute of Bankers for the year ended December 1959 provides interesting data relating to the growth of banking knowledge among bank employees during the last few years. The membership of the Institute has increased by 2,201 during 1959 to 18,425. This is perhaps the largest increase in any year. Since 1955, the membership has grown by more than 50 per cent., that is, from 12,239 to 18,425. A total of 12,887 candidates appeared for the Associate examination of the Institute during the year, representing an increase of 1,853 over those in 1958. In this respect, too, the pace of increase is more than that in any previous year. In 1950, only 5,970 candidates took the examination. The number declined to 5,525 in 1952. Since then, there has been a sustained rise. The increase in 1959 is more than 100 per cent. as compared with 1953 when 6,102 persons appeared for the examination. These data clearly show that, though the number of candidates wanting to take the Institute's diploma (C.A.I.I.B.) is only a small fraction of the total strength of banking employees in the country, there is clear evidence that the desire to strengthen their practical knowledge of banking by theoretical study is rapidly growing. This is undoubtedly a very encouraging trend. Equally encouraging it is to find that the Institute is making efforts to extend its facilities to as many candidates as possible, as witness the marked increase in the number of centres at which the examination is conducted; these have more than doubled, from 153 in 1950 to 340 in 1959, to be precise. A disquieting feature, however, is that the number of candidates who come out successful is depressingly low. But this is only due to the fact that the standard of theoretical proficiency expected of the candidates is of a high order, while the general educational background of bank employees in most of the banks is not of the desired level.

LAND REFORMS

Flexibility may be a virtue in democratic planning; fluidity is certainly not. When constant shifts and changes are made, not in minor matters of detail, but in fundamentals of policy, they cannot but throw out of gear the entire mechanism of planning. The changes in policy and practice in regard to such important matters as fixation of ceilings on land and payment of compensation, reported to have been suggested by the Panel on land reforms of the Planning Commission, at its meeting held on the 6th inst. at New Delhi, can only serve to make the confusion brought about by land reform legislation worse confounded. Although the suggestions, which have been made by the various committees of the Panel, will be finalised only in September before being presented for the consideration of the whole Panel in the following month, the trend of discussion indicated that the members were in favour of the proposed changes.

Three of the far-reaching changes suggested are: (1) partitions and transfers of land should be banned, after the publication of Bills on ceilings, so as to prevent circumvention of the provisions of law; (2) the basis of compensation be changed from the existing one of 20 times the fair rent payable in twenty instalments, to 40 to 50 per cent. of the market value, payable in easy instalments, with the proviso that compensation amounting to less than Rs. 5,000 be paid in lump sum; and (3) the fixation of ceiling should be per family of five and not in relation to individual, as most State Governments have stipulated in their Bills.

Quite apart from the merits and demerits of the suggested changes, one wonders how the Planning Commission and the Central Government propose to get them reflected in State legislation. Most States have either passed, or have introduced land reform Bills, based mainly on earlier directives. Do they have to recast their legislation, because the Panel thinks that it has suddenly seen the light of wisdom? And what are they supposed to do, if the Panel were to change its views again? The saner course would have been for the Planning Commission and the Union Government to make up their minds first and then ask the State Governments to legislate accordingly, instead of changing policies every now and then.

Be that as it may, the most surprising feature of land reforms measures in the country is that the Congress Government and the Planning Commission are treating imaginary diseases, while neglecting the real ones. It has yet to be proved that concentration of ownership in land is so heavy as to render other measures aimed at promoting economic and social equality meaningless or to thwart efforts at agricultural improvement. In fact, evidence is to the contrary, as is clear from the estimates of surplus land that would become available as a result of ceiling. The malady afflicting agriculture in the countryside is lack of irrigation and fertilisers, and credit and marketing facilities. Unless reforms are designed to improve this situation, no amount of expropriatory socialist legislation can make two blades of grass grow where only one grows now.

AN ABSURD RESOLUTION

The role of foreign capital in accelerating the tempo of economic expansion in a developing country like India cannot be over-emphasised. The major lacunæ in these countries, as is well known, are shortage of foreign exchange for procuring imports of capital goods, inadequate managerial skill and technical know-how, as well as low levels of domestic savings. Public memory may not be too short to forget the trying experience of India two years ago, when it was confronted with a serious balance of payments crisis. (An authentic account of the balance-of-payments difficulties in the first four years of the second Plan appears in the latest issue of the *Reserve Bank of India Bulletin*, a summary of which is given elsewhere in this issue.) But for the timely help offered by a few friendly countries, our planners would have scarcely saved their face. Now, the third Plan is in the offing. It envisages a far greater level of investment. The increase in exports, if any, can only be marginal; and they can in no case be relied upon to pay for the larger imports implied in the third Plan. Unless, therefore, alternative ways are found to foot the bill for imports of more and more of capital goods and raw materials, there is no doubt that programmes for industrial development will have to be pruned sizably. It is precisely to avoid this contingency that India is making efforts to secure foreign collaboration in capital and technical know-how, besides foreign loans on a Government-to-Government basis.

In this context, it was absurd that a Communist member, of the Lok Sabha, Mr. K. T. K. Thangamani, should have moved a resolution seeking to appoint a committee to review the working of the industrial policy resolution of 1956 and to "prevent inroads into our national economy of foreign private capital in collaboration with Indian interests or otherwise." As was only to be expected, the resolution was rejected by an overwhelming majority. One must, however, pause a while and think as to what prompted the Communist member to move a resolution of this nature, with wanton disregard for the basic needs of a developing democratic nation. It would be wrong to think that the member was innocent of the basic principles of economics. Those who are aware of the objectives of the Communist Party in India will be quick enough to realise that Communists want to scare away the existing and prospective foreign investors by hook or by crook. Invoking the bogey of foreign monopoly is a technique which comes handy to them for this purpose. No amount of sophistry can hide the fact that Communists want to choke the growth of the private sector by preventing foreign investors who are prepared to participate, mainly through collaboration with Indian capital, in India's economic development. Probably, it is to the advantage of Communists that the country should remain industrially backward. They know only too well that empty stomachs can seal the doom of democracy. Significantly enough, they had nothing to say on the assistance given by Communist countries to India.

The highlight of the discussion on the resolution was the spirited rebuttal of the Opposition's baseless allegations by Mr. Manubhai Shah, Union Minister for Industry. Mr. Shah affirmed that the Government would welcome capital from all parts of the world and would accord the foreign investors the treatment it gave to its own. He regretted—he wasted his time in doing so, for he was trying to convince those who do not want to be convinced—that there had not been a proper appreciation on the part of the Opposition of the role of foreign capital in the growth of an underdeveloped country. No country, particularly an underdeveloped country like India, which had "missed the chance of history of 200 years of industrial revolution," he added, could progress without foreign assistance. At the same time, he assured the House that the country was strong enough to resist any political pressure and to stand on its own feet.

Mr. Shah pertinently pointed out that the volume of foreign capital participation in India was rather small. Out of a total investment of about Rs. 7,000 crores in the second Plan, it is estimated that foreign participation will be of the order of Rs. 150 crores, as against the original target of Rs. 200 crores. In the third Plan period, an inflow of only Rs. 300 crores of foreign private capital is anticipated. This is just less than 3 per cent. of the total Plan outlay. The need of the hour is to create conditions that will be conducive to the flow of a larger volume of foreign capital into the country and not scares of the type which Mr. Thangamani sought to raise this week.

MOTOR TRANSPORT WORKERS' BILL

Barring certain provisions necessitated by the special conditions obtaining in the motor transport industry, the Motor Transport Workers' Bill, which was referred to a Joint Committee of the two Houses of Parliament on the 3rd inst., is in line with other welfare legislations enacted in the past. Moving the Bill for reference to the Joint Committee, Mr. Abid Ali, Union Deputy Minister for Labour, observed in the Lok Sabha that, this was the first time that legal protection was sought to be given to motor transport workers through independent legislation. On a rough estimate, about 200,000 workers, according to Mr. Abid Ali, will be immediately covered by the proposed legislation. With the rapid expansion in the motor transport industry envisaged under the Plans, more workers are expected to come under the purview of the legislation.

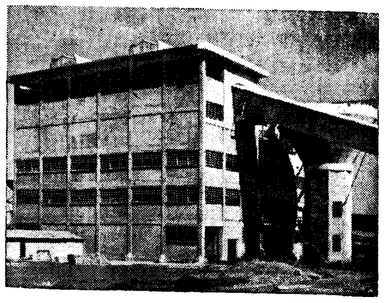
The question of central legislation for motor transport workers has been discussed at some length in the past few years. The Standing Labour Committee considered it at its 15th Session in 1956 and a special committee was appointed to work out the details of the provisions that should be embodied in the legislation. The report of the Special Committee was again scrutinised by the Standing Labour Committee. Although complete agreement could not be reached, there was unanimity of views in respect of most of the provisions. The proposals now incorporated in the Bill are largely those which have been agreed upon. Provisions in the Bill, on which agreement could not be reached, have been drawn up on the lines of other labour laws, keeping in view the special conditions of the industry.

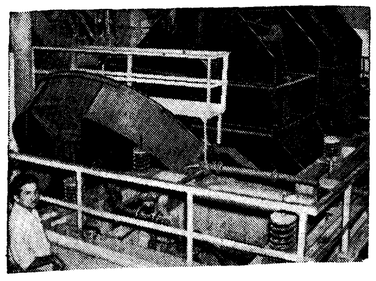
Just as the Factories Act is applicable to power-using factories employing 10 or more workers, the Bill also covers motor transport undertakings employing ten or more workers. This would, no doubt, leave out some workers from the scope of the proposed enactment. The State Governments have, however, been given powers to extend it even to undertakings employing five workers. The provisions relating to hours of work, rest interval, weekly holiday, annual leave with pay, welfare facilities, etc., are, by and large, similar to those contained in the laws for factories, mines and plantations. Such variations as are made, according to the Deputy Minister, are designed to suit the comparatively small size of the average undertakings. With a view to making the regulations fit in with the requirement of each type, services run by motor transport undertakings have been classified into three, namely, city service, long-distance passenger service and freight service.

It has been thought fit to refer the Bill to the Joint Select Committee, because, apart from its being a new piece of legislation, it incorporates provisions of a complicated nature calling for close scrutiny. The Joint Committee is expected to give them a simpler and workable form.

Motor transport is a widely scattered industry, operating even in remote corners of the country. Since the average size of units is generally small, it is difficult to enforce any legislation even in regard to wages, let alone welfare. The wisdom of the provision empowering State Governments to make the Bill applicable even to units employing five workers is therefore open to question. A good number of such units, especially in the remote parts of the country, are not within easy reach of the law.

COAL WASHING CONSERVES INDIA'S COAL RESOURCES





The coal washery illustrated here, a unique feature of the Durgapur Steelworks, was designed and erected by Simon-Carves.

The washery is a part of the coal preparation plant which washes, blends and delivers 360 tons of 3"—0 raw coal per hour. The washery is the first in India to use Drewboy dense medium separator, a device widely used in a number of coal washeries in the United Kingdom and Europe. The ½"—0 fraction of the coal is treated in an ACCO feldspar jig washer, while stocking, blending and reclaiming are carried out on the Robins Messiter system.

The Simon-Carves coal preparation plant at Durgapur is helping India to upgrade inferior coal and use it for metallurgical purposes — conserving India's rapidly dwindling high-grade coal resources—helping to get uniform quality coke for the finest iron and steel.

LONDON LETTER

THE POWER OF SIX PER CENT.

From Our Own Correspondent

LONDON, *5th August*

BEHIND the announcement that, at the end of July, the gold and currency reserves had risen by £37 million lies an interesting pattern of European cross currents. The U.K. reserves now stand at £1,070 million and this country shares with Western Germany and Switzerland the doubtful honour of enjoying mounting gold holdings. Doubtful because of the origin of the movements and doubtful also in duration. The movement of funds into Switzerland which has pushed up that country's reserves is largely a counterpart of the outflow of funds from Belgium, as a result of the Stock Exchange collapse there and the fear for the economic future of the country. For some weeks now, the Central Bank of Belgium has been busy supporting the Belgian franc at normal exchange, although it has been unable to do so at what is known as investment exchange. Before Congo independence, the rate of investment exchange was the same as that of normal exchange, namely, 140 Belgian francs to the £, but the quotation has now sunk to 150. Whether the rise in the Bank Rate from 4 per cent. to 5 per cent.—a level which the country has not suffered since the crisis days of 1929—will be sufficient to reverse the trend against the currency remains to be seen.

A part of the Belgian outflow is also going to swell the prolonged flow of funds into Western Germany, on the long-term gamble of a currency revaluation. And a part has joined the other European flow of funds into the U.K., merely attracted by high interest rates.

The London Bullion Market has enjoyed an unwonted activity for similar reasons. Gold has been in demand and turnover has risen, as Belgian funds have been poured into gold, and this gold has in turn supplied through a chain reaction from the United States, where the gold stock continues to decline; the fall now amounts to over £100 million (that is, over $280 million) since the beginning of the year.

The Bank Rate of 6 per cent. has, indeed, been as successful as Mr. Macmillan and Mr. Amory could have expected, and the inflow of hot money in the past month was £57 million, though this was partially offset by special payments to the International Monetary Fund and as part of the winding-up of the old E.P.U. It seems, therefore, reasonable to write off this month's increase as ephemeral. At the same time, there is a potential strength in it, which should not be overlooked. This strengthening factor is that the high Bank Rate, with its damping effect on borrowing, is causing a general running down of stocks. Such a movement must be invariably accompanied by a cutting down of import orders. Hence, the balance of payments may be expected to improve, even though exports continue relatively stagnant.

The index of industrial production has so far not reflected any damage to output as a result of dearer money. But the failure to rise over the past three months is a reflection of tighter credit since the Budget. Indeed, since the beginning of the year, the index has risen only 3 per cent., after allowing for seasonal variations. Last year, over the same period, it rose nearly 6 per cent. It is true that the index still stands between 8 per cent. and 9 per cent. higher than it did a year ago. But, obviously, it is the trend which needs to be studied and this is not encouraging.—*All Rights Reserved.*

The Katanga Plot

(From Our London Correspondent)

BRUSSELS, *31st July*

It would be dramatic to report that the atmosphere in Brussels was electric but, in fact, when your Correspondent arrived, the storm had already receded. At the airport, a plane load had just arrived from Leopoldville and there was nothing remarkable about the travellers. They seemed to be conventional family groups and the only distinguishing mark was the number of Belgian boy scouts and girl guides helping them with their luggage. But, a week earlier, planes had been bringing in more than 1,000 people a day, among them victims of the mutiny in the Congo. These were the days when the people of Belgium briefly demonstrated against the Government. But, now, the Belgian Parliament has risen and the stage is temporarily empty. In the wings, however, a fresh storm is gathering which may well bring about the downfall of the Government, when it reassembles after the holidays.

Brussels is a city of disillusionment and anger—anger that such a crisis of the Congo should have burst about them without any warning and with the Government utterly unprepared. That is the charge which is laid against the Government: that they had made inadequate preparation for independence and that, if, as they say, they were pushed by the African leaders to accelerate the date, that they had completely failed to foresee the consequences. But, of course, the charge lies deeper than that, though the Belgian people will not admit it. It is to be found in the word "Macaque." This is the name which the Belgians have given the natives of the Congo. Its nearest translation is "monkey men." Belgians have seemed quite unable to recognise these natives as human beings. They have denied them any positions of authority, whether in business administration or the army. And, then, they granted them independence in the pathetic belief that everything would go on as before after 1st July, with the Belgians remaining in control of everything other than the reins of Government. The immediate disillusionment came, when the negro army, the "Force Publique," decided not to obey its white officers. The revolt was immediate against the officers and their wives, and against the Missionaries and the Nuns, for the Catholic Church was as little loved as the Belgian administration. In the circumstances, the Belgians themselves marvel that the number of killed and injured has been insignificant.

But the economic results for Belgium are going to be hard. 50,000 Belgians have already come back from the Congo without jobs or prospects. To them must be added 80,000 workers directly employed in the export of goods to the Congo and another 100,000 involved in the Congo trade. For all the economic empire has crumbled and one cannot immediately see its restoration on any basis. Hence the talk of higher taxes and the talk of devaluing the Belgian franc. [Since writing this, the Bank Rate has been raised.]

But to the outside world there was offered a curious picture of the province of Katanga, seemingly immune from the Mutiny and the breakdown of economic life that ravaged the Congo. Here was the native Government working hand in glove with the Belgians and calm ruled. But, behind the scenes, the reality was different. The biggest battle which the Belgian troops fought was in Katanga against the mutineers. The whole Belgian force has been concentrated in that province, where Mr. Tschombe and his yes-men provided a dubious facade for the economic and financial power of Katanga, the great *Union Minière du Haut-Katanga*, the giant mining enterprise, which produced, last year, 280,000 metric tons of Copper (7½ per cent. of world output), 118,000 tons of zinc concentrates, 8,400 tons of cobalt, 148,000 kilograms of silver, 99,000 kilograms of cadmium, as well as gold, germanium oxide, uranium and other minerals. The market value of *Union Minière's* equity capital is placed at about £145 million.

The annual output of the Congo is estimated at 140,000 million Belgian francs. Of this, 60 per cent. comes from Katanga, which has only one-third of the population of the Belgian territories in Africa. But Katanga subsidises the rest of the Congo. It is undoubtedly an exaggeration to say—which some are repeating—that the Belgian Government deliberately allowed the Congo to breakdown, in order to retain the whole wealth of Katanga for that province and for Belgium alone. If this had been their deliberate policy, they would have taken measures to extricate their own population from the Congo before the Mutiny.

But what the Belgian Government could not do the *Union Minière* could. The economy might break down in the Congo proper; it would not break down in Katanga. The latter's financial resources and their negotiating skill set up the facade of native ministers who would do whatever the *Union Minière* and the Belgian Army told them to. Hence the demand for independence. Hence an urgent desire to keep out U.N. troops. If only this could be done, then, Belgium would be better off economically after Congo independence than before it. But no country outside has been prepared to play. The Belgians have had formally to accept that their troops must ultimately withdraw and the U.N. has arranged to send its troops in. Not even in Belgium do they now believe that the Katanga could be retained as an independent country in close association with Belgium.

The *Union Minière* (which be it noted is internationally and not merely Belgian-owned) and the Belgian Government will seek to save what they can and to hold a greater measure of independence for the province, if this is at all possible. What will matter is whether the Katanga will continue to subsidise the rest of the Congo and whether the same flow of wealth as heretofor will come through the *Union Minière* into Belgium. That the Belgians do not believe that the last can follow is evidenced by the dramatic fall of Stock Exchange values in Brussels.—*All Rights Reserved.*

OWNERSHIP OF BANK DEPOSITS

PACE OF INCREASE IN PERSONAL DEPOSITS SLOWS DOWN

THE years 1956 to 1959 roughly constitute the first four years of the second Five-year Plan, during which period the economy of the country as a whole has surged forward significantly. In consonance with this expansion, there has been a high rate of growth in monetary resources,* of which deposits of commercial banks form an important constituent. Thus, of the total expansion of about Rs. 970 crores in monetary resources* (excluding counterpart funds under P.L.480) during the four years 1956-59, the rise in total deposits of Scheduled banks (other than P.L.480 deposits amounting to Rs. 293 crores) alone is of the order of Rs. 544 crores. The expansion in deposits, including P.L.480 funds, over this period, it may be noted, is of the order of Rs. 837 crores. What is more significant is that the largest increase in monetary resources in any single year took place during 1959, namely, Rs. 322 crores, which was Rs. 109 crores more than the rise in 1958. The increase in Scheduled banks' deposits in that year was of the order of Rs. 289 crores (including P.L.480 funds), which compares favourably with the rise of Rs. 194 crores in 1958 and of Rs. 273 crores in 1957.

The mere physical growth is not the only feature of the expansion in deposits during 1959. The total number of deposit accounts also continued to rise. Similarly, the average amount per account increased further, and so also business and personal deposits. While personal deposits with Scheduled banks continued to account for the largest share, their proportion to the total deposits suffered a decline from 41 per cent. to 38 per cent. The proportion of business deposits to the total does not, however, show any change from 26 per cent. noted as at the end of 1958. These features of bank deposits are disclosed by the latest survey of ownership of bank deposits as on 31st December 1959 conducted by the Reserve Bank of India, the results of which are contained in the July 1960 issue of the Bank's *Bulletin*. The survey also reveals that the three largest banks—the State Bank, the Central Bank and the Punjab National—each with deposits of over Rs. 100 crores, account for about 46 per cent.—Rs. 133.39 crores to be precise—of the rise in total deposits, but this is mainly due to the accretion of large U.S. counterpart funds to the State Bank.

Before going into a detailed analysis of the ownership of deposits, it is worthwhile presenting to our readers a broad picture of the growth of deposits of Scheduled banks under the three classes of deposits during the last four years. This is done in the table appearing in the middle of the next column.

It may be noted that, for the first time in the history of banking in India, time deposits of Scheduled banks formed in 1959 over 50 per cent. of the total deposits. They also accounted for the bulk (Rs. 247.7 crores) of the rise in total deposits during the year under review. As in the previous two years, the placement of large funds by the U.S. authorities with the State Bank under P.L.480 agreement was an important contributory factor for this rise. However, even after excluding P.L.480 deposits, the rise was quite significant. Though the extent of accretion of the P.L.480 funds year after year is not disclosed, an indication of the net accretion of these funds over the last four years is available. Thus, while the total deposits went up by Rs. 837 crores between December 1955 and December 1959, the rise in deposits (excluding P.L.480 deposits), according to the Reserve Bank, during this period was Rs. 544 crores, which means that the net accumulation of P.L.480 funds was Rs. 293 crores.

The total number of deposit accounts with Scheduled banks went up by 512,055 (or 10.5 per cent.) to 5.38 million. This was on top of a rise of 485,136 (or 11 per cent.) in 1958. This brings the aggregate increase during the last four years to 1.66 million, of which the bulk (1.05 million) was in respect of savings bank accounts. While along with the increase in the number of accounts, the savings bank deposits have also grown, it will be noted that the share of savings deposits still constitutes a very small proportion of the total deposits. The proportion has actually declined from 17.1 per cent. as at the end of 1956 to 13.6 per cent., thanks to the sharp rise in time deposits. The proportion of demand deposits too shows a declining trend.

(No. of accounts in 000's) (Amount in crores of rupees.)

End of	Demand		Savings		Time		Total	
	No. of accounts	Amount	No. of accounts	Amount	No. of accounts	Amount	No. of accounts	Amount
1955	1,019	497.03 (50.0)	2,275	162.43 (16.4)	425	334.09 (33.6)	3,719	993.66 (100.0)
1956	1,076	522.21 (48.0)	2,465	183.65 (17.1)	482	368.95 (34.3)	4,023	1,074.81 (100.0)
1957	1,062	566.25 (42.0)	2,739	201.98 (15.0)	586	579.38 (43.0)	4,387	1,347.61 (100.0)
1958	1,124	550.93 (35.7)	3,027	221.97 (14.4)	722	768.43 (49.9)	4,872	1,541.33 (100.0)
1959	1,198	566.26 (30.9)	3,324	248.22 (13.6)	862	1,016.14 (55.5)	5,384	1,830.62 (100.0)

Note:—Figures in brackets are percentages to total.

An analysis of the deposits by size of Scheduled banks reveals that, while the three banks with deposits of Rs. 100 crores and over continued to account for the bulk (47 per cent.), the increase in deposits over the year of this class (Rs. 133.4 crores) was less than that (Rs. 154 crores) in banks with deposits between Rs. 25 crores and Rs. 100 crores. The steep rise in the deposits of the latter class of banks is due to the addition of two banks to this group, resulting in an increase of Rs. 60 crores. The deposits of banks with deposits between Rs. 5 crores and Rs. 25 crores show a fall of Rs. 3.42 crores, while smaller banks with deposits of less than Rs. 5 crores have increased their deposits by Rs. 5.32 crores.

The average amount of deposits per account, which had risen from Rs. 2,671.7 in 1956 to Rs. 3,163.7 in 1958, has further increased to Rs. 3,400.1 in 1959. A class-wise analysis of the average amount of deposits over the last four years shows that time deposits account for the largest increase. The number of time deposit accounts has more than doubled and the amount of such deposits has more than trebled, with the result that the average amount per account recorded an increase from Rs. 7,861 at the end of 1955 to Rs. 11,788 at the close of 1959. As in the case of time deposits, the number and the amount of savings deposit accounts have recorded a steady increase from year to year. At the same time, the average amount per savings account also rose from Rs. 714.4 at the close of 1955 to Rs. 746.7 at the end of 1959.

The table at the bottom of this page provides a detailed analysis of the ownership of deposits under the three classes of deposits. As will be seen therefrom, the business deposits, which had shown only a nominal rise of Rs. 3.21 crores in 1958, recorded the largest rise of Rs. 82.33 crores to Rs. 476.30 crores in 1959, bringing the aggregate increase over 1955 to Rs. 123.45 crores. The sharp rise in 1959 reflected the highly liquid position of companies. Of the increase of Rs. 82.32 crores, time deposits alone accounted for Rs. 63.25 crores or 77 per cent. Demand deposits also rose by Rs. 19.07 crores, whereas in 1958 they were almost unchanged. While the aggregate increase in business deposits was shared by all sub-groups the largest rise (Rs. 30.20 crores) was recorded in deposits of manufacturing concerns, followed by those of trading concerns (Rs. 20.29 crores) and those of financial concerns (Rs. 18.91 crores). It will also be noted that deposits of trading concerns, at Rs. 196.11 crores, continued to form the major component of business deposits, though their share in the total declined from 45 per cent. at the end of 1958 to 41 per cent. at the close of 1959.

As stated earlier, personal deposits (Rs. 695.62 crores) form the bulk of the deposits of banks. The drop in their proportion to the total from 41 per cent. to 38 per cent. is explained by the fact that the pace of increase in 1959 (at Rs. 65.44 crores or 10.3 per cent.) was less than that (Rs. 76.16 crores or 13.7 per cent.) in 1958. This bears out the truth that personal deposits are more susceptible to the changes in interest rates than other deposits. Obviously, the successive reduction in interest rates on deposits, once in October 1958 and again in September 1959, under the inter-bank agreement, must have impeded the growth of individual deposits. This is, again, substantiated by the trend of time deposits of individuals. As will be observed from the data given at the bottom of this page, the time deposits rose by only Rs. 38.44 crores in 1959, as against an increase of Rs. 70.46 crores in 1958 and of Rs. 49.04 crores in 1957. A gratifying feature of the trend in personal deposits is that savings deposits recorded a larger rise (Rs. 23.29 crores) in 1959 than in the previous year when they grew by Rs. 16.30 crores. Though the demand deposits of individuals also improved by Rs. 3.71 crores in 1959 in refreshing contrast to the decline of Rs. 10.60 crores in the previous year, their proportion to the total personal deposits continued to

(*Continued on page 319*)

**Monetary resources comprise currency with the public and deposits of commercial, co-operative and post office savings banks. The concept of monetary resources is wider than that of money supply which, by definition, excludes time deposits with banks and postal savings deposits. It gives a better indication of the state of liquidity from time to time, as well as the enlargement of the monetised sector in a developing economy.*

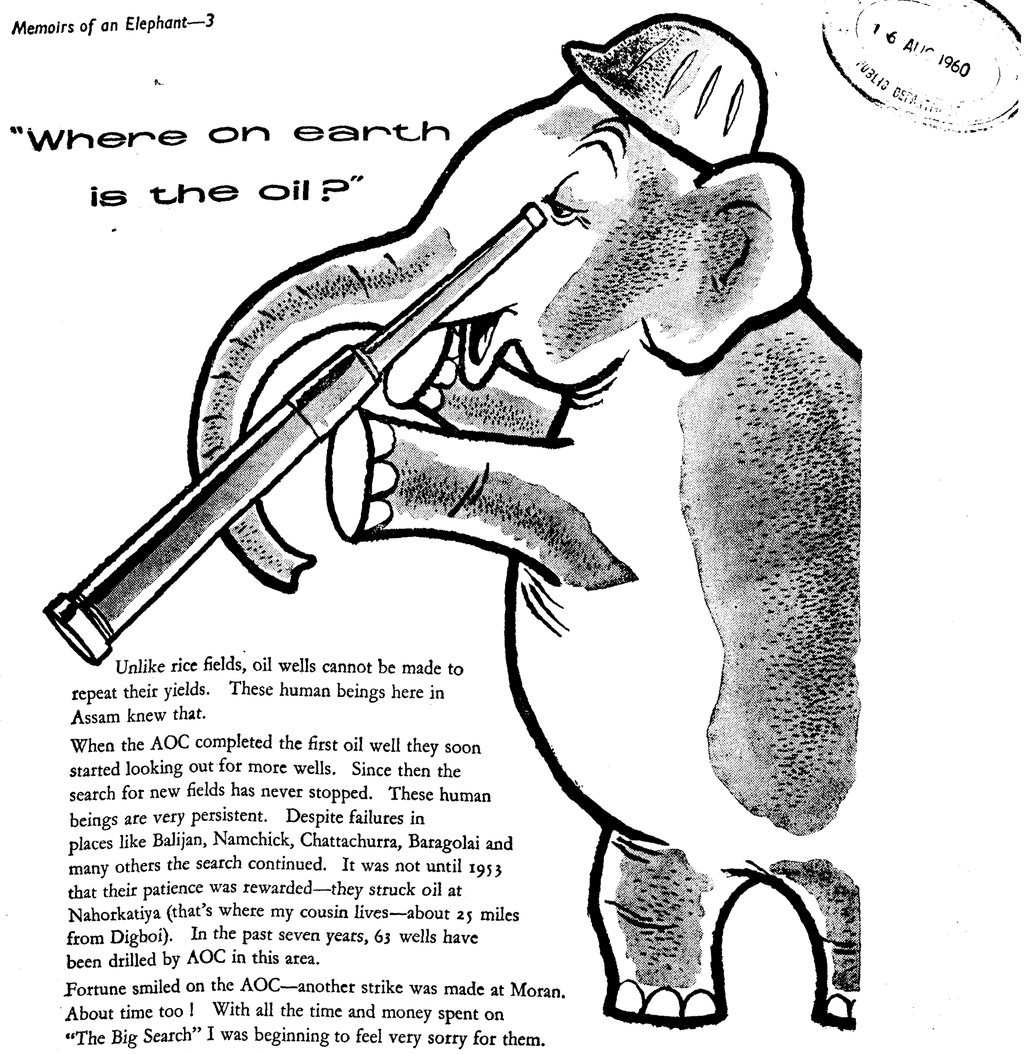
Memoirs of an Elephant—3



Unlike rice fields, oil wells cannot be made to repeat their yields. These human beings here in Assam knew that.

When the AOC completed the first oil well they soon started looking out for more wells. Since then the search for new fields has never stopped. These human beings are very persistent. Despite failures in places like Balijan, Namchick, Chattachurra, Baragolai and many others the search continued. It was not until 1953 that their patience was rewarded—*they struck oil at* Nahorkatiya (that's where my cousin *lives*—about 25 miles from Digboi). In the past seven years, 63 wells have been drilled by AOC in this area.

Fortune smiled on the AOC—another strike was made at Moran. About time too! With all the time and money spent on "The Big Search" I was beginning to feel very sorry for them.

Recently I asked one of the AOC chaps why he was *looking* so cheerful. He told me: "Look at Digboi . . . look at Nahorkatiya . . . and at Moran. These are the symbols of our efforts . . . the symbols of our experience . . . of our technical development".

MODERNISING TEXTILE INDUSTRY—II

I.L.O.'S FINDINGS ON INDIA

LAST week, we referred in these columns to the general observations of the International Labour Office (I.L.O.) on labour problems involved in the implementation of schemes for modernising the textile industry. This week it is proposed to cover the findings of the I.L.O. in so far as the textile industry in India is concerned.

The I.L.O. is of the opinion that the conflict between the advantages of efficient production with capital-intensive methods and the need for maximising employment opportunities by labour-intensive methods is exemplified in the case of India. In support of this view, the following figures are cited:

	Type of production			
	Large modern factory	Small-scale mechanical weaving	Automatic weaving in cottage industry	Hand weaving in cottage industry
Capital per worker (Rs.)	1,200	300	90	35
Production per worker (Rs.)	650	200	80	45
Capital per unit of production	1.9	1.5	1.1	0.8
Index of workers employed per unit of capital	100	400	1,300	3,400
Index of production per worker	1,440	440	180	100

It will be seen from the aforesaid figures that, when hand-weaving in cottage industry is replaced by a modern large-scale mill, the value of production per worker rises from Rs. 45 to Rs. 650, that is, more than fourteen times. Such replacement, of course, entails a large capital outlay estimated at about Rs. 1,200 per worker, as against Rs. 35. In other words, for the same amount of capital, thirty-four times more workers are employed in a hand-weaving cottage type industry than in a large modern mill. Nevertheless, it is recognised that, in order to compete with other textile manufacturers, particularly in the export market, in terms of both quality and price, efficient methods of production are essential. These conflicting factors, the I.L.O. says, explain India's cautious approach to modernisation. And it quotes the Union Finance Minister: "The pace of the replacement of obsolete and outworn machinery by improved machinery of higher productivity must be so graduated that the overall growth of employment opportunities more than keeps pace with the temporary consequent displacements occurring at particular points."

Need Keenly Felt

The need for changing old machinery is keenly felt in the cotton textile industry. The I.L.O. review recalls that, in its report submitted to the Government of India in July 1958, the Textile Enquiry Committee pointed out that a large majority of the machines in existence were installed more than forty years before, a situation which had led to low output, poor quality of products, engagement of a large number of workers and high cost of production. Out of the total 200,000 looms or so in place in India, only 16,000 are automatic. The typical staffing arrangement is one weaver to two ordinary non-automatic looms and one piecer to two sides of a ring spinning frame.

The introduction of automatic looms is considered essential for textiles intended for export, since the better quality of goods produced on automatic looms are preferred. The I.L.O. feels that modernisation is, in fact, proceeding in the cotton textile industry. It refers to the financial accommodation provided by the National Industrial Development Corporation to mills for the replacement of old and worn-out machinery. It has taken note of the Government of India's scheme for installing 7,500 automatic looms in replacement of the existing ordinary looms over a period of three years at the rate of 2,500 per annum, as well as of a phased programme of installing 3,000 automatic looms to be used only for pushing textiles for export. It refers to the reported comprehensive programme for modernising the entire cotton textile industry by the end of the third Plan. Under this proposal, a modernisation fund of about Rs. 80 crores is expected to be created in order to give loans to various mills for their research and renewal programmes.

In spite of all this, the I.L.O. observes, the scope for modernisation schemes in the textile industry is conditioned by the limitations of a labour-surplus economy. To quote it: "This has led, on the one hand, to insistence as a matter of policy that the implementation of such schemes should be regulated so as to cause the least displacement of labour and, on the other, to laying down detailed conditions for the installation of automatic looms or their substitution for ordinary looms. These conditions refer to such matters as security of employment for workers affected by modernisation at wages not lower than the current wages for a stipulated period, payment of compensation, and regulation of the recruitment of additional workers."

Supposition Unrealistic

The I.L.O. has highlighted the fact that increased production of cotton textiles can be achieved with fewer workers. An 'old' mill (consisting of 2,000 looms with the necessary spinning, bleaching, dyeing, printing, finishing, inspection, folding and packing operations and producing 40 per cent. grey cloth and 60 per cent. processed non-fancy goods of 20 counts average) required 7,000 workers for two-shift working in 1947, but only 3,200 workers in 1957 when it was modernised. It is estimated by some that the replacement of all the non-automatic looms by modern automatic looms in the cotton industry may make 160,000 workers redundant. But this estimate, the I.L.O. declares, is based on the unrealistic supposition that all the looms can be replaced at once and that the present ratio of ordinary looms to operatives will remain unchanged. Stating that an increased assignment of ordinary looms to one operative or partial modernisation of looms (with less looms per operative than is customary in certain industrially advanced countries) would make the change less drastic, the I.L.O. makes the following observations:

"A phased programme of modernisation was suggested by a textile inquiry committee which recommended, in 1954, the replacement of plain by automatic looms at the rate of 5,000 a year, so that one-half of the existing looms would be converted over a period of 20 years with a displacement of 80,000 workers (4,000 per year). The fear of unemployment appears to be the overriding consideration in modernisation schemes of this kind. A tripartite conference, convened in 1954 to discuss a scheme of rationalisation in the cotton textile mills in Kanpur, decided, for instance, that the introduction of rationalisation should not lead to any unemployment (i.e., any reduction in the number of workers except by retirement and natural wastage). The high labour turnover in the Indian textile mills should, to a certain extent, facilitate modernisation on this basis, although the problem of providing employment to those who seek jobs in the industry will still remain. The principles formulated at the Fifteenth Session of the Indian Labour Conference (New Delhi, July 1957) which govern the modernisation of the textile industry (including the introduction of automatic looms) also provided that there should be no retrenchment. Workers could, however, be provided with suitable alternative jobs in the same establishment or under the same employer, subject to agreement between the employer and his workers.

"An example of detailed statutory regulations embodying the same principles is found in the terms and conditions prescribed by the Government of Bombay in regard to the replacement of plain by automatic looms. For example, a notification issued by the Government in August 1957 provides that suitable working conditions must be arranged and additional workers likely to be employed in back processes like spinning must be recruited from the pool of those already in the industry. In the applicant mill, all persons employed on the date on which automatic looms are introduced, including those employed for the purposes of automatic looms and back processes, must be guaranteed employment for three years in other sections of the mill at wages not lower than their current wages and may not be allowed to become unemployed, except by natural separation, including resignation by the person concerned. In case retrenchment occurs within three years of introduction of automatic looms, the dismissed workers are entitled to retrenchment compensation at double the normal rate. These restrictive conditions have the effect of slowing down the pace of modernisation, while protecting the workers from its immediately adverse social consequences."

Inter-Departmental Transfers

The prohibition of retrenchment does not, however, preclude the transfer to other sectors of an undertaking of workers whose jobs are abolished as a result of modernisation, though the scope for such transfers is somewhat limited. In a mill in India which, as a result of improvements in working conditions, introduced a system of twelve automatic looms (instead of six looms) as a phased programme, it was possible to train battery fillers as assistant weavers and to give employment to turners on loom overhauling or similar work. But this will not be possible in the case of every mill or every worker. It involves many complicated factors, the most important ones being the aptitude and adaptability of workers. By way of general observations, the I.L.O. says:

"... If transfers are not to cause too great a disturbance, they should be planned in advance taking account of all the possibilities afforded by the range of jobs and skills involved in the operations of the undertaking. It is also desirable to have a system of job classification and job analysis, and to evolve a scheme of training which would enable workers to perform a number of different tasks. Transfers should not, if possible, result in downgrading. In fact, relevant agreements usually provide that workers transferred as a result of changes should not suffer any loss of wages. ... It is recognised that limiting the pace of modernisation so as to avoid retrenchment may not always be realistic since it means that modernisation can be effected only over a very long time. For example, in Mexico, it is reckoned that about 15,000 workers will be displaced by modernisation of the entire cotton textile industry; on the basis of normal turnover, this will have to be spread over 20 years to avoid redundancy entirely. But failure to modernise quickly enough may itself result in the closure of the mills concerned and in unemployment, owing to competition from more up-to-date units in the same or other countries. This risk should be set against the disadvantages of redundancy arising from modernisation.

"These considerations suggest that workers made redundant by modernisation in the textile industry should be transferred to other industries. Thus, the solution to this problem becomes linked with the overall industrialisation of a country. This was specifically recognised by the experts who studied problems of productivity in the textile industry in Latin American countries and recommended that modernisation of the industry should be integrated into national long-term industrial development plans, so as to allow a gradual and methodical transfer of surplus textile labour to the sections of industry that were expanding. Similar action may also be necessary in industrially advanced countries where, owing to long-term changes, the textile industry is declining (for example, in the New England region in the United States or in Lancashire). Other industries such as engineering, chemical and electrical industries have often developed in what used to be predominantly textile centres in these countries. Planned development and co-ordinated efforts are, however, necessary to ensure that these industries expand sufficiently and that displaced textile workers are, in fact, helped to enter them."

This is, indeed, the most rational approach to the problem of modernisation of the cotton textile industry. The I.L.O. has minced no words when it points out that the failure of developing countries (like India) to introduce mechanisation and improved methods of production would expose their textile industry to competition by more efficient units. And there is also considerable force in its statement that modernisation makes it possible to lower the prices of textile goods, improve their quality, and raise the working and living conditions of textile workers.

Notice

THE INDIAN IRON AND STEEL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors of The Indian Iron and Steel Company Limited, held on the 9th August 1960, the Directors have declared an interim dividend in respect of the year ended 31st March 1960 of Rs. 1/50 gross per share on the Ordinary Share Capital being at the rate of 15 per cent. per annum. This action has been taken in order that shareholders shall not be kept waiting for their dividends in view of the closing of the Accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel and pig iron applicable for the period to the 31st March 1960. Allowing for loss of previous tax credit this present dividend represents in effect a "free of tax" dividend of 10.275 per cent. compared with the former rate of 10 per cent.

The Directors wish to make it clear in this connection that this dividend although termed interim will in fact constitute the full dividend for the year and that no further distribution in respect of the year ended 31st March 1960 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified the Ordinary Share Register and Transfer Books of the Company will be closed from the 26th August 1960 to the 17th September 1960. Payment of this dividend will be made on or after the 21st September 1960 under deduction of tax at the prescribed rates to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 17th September 1960 or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 9th August, 1960.

COMPLAINTS OF PROFITEERING BY COTTON MILLS REFUTED

TEXTILE IMPORTS CONTINUE TO BE LARGE

From Our Special Correspondent

MANCHESTER, 2nd August

COMPLAINTS from outside the cotton textile industry that Lancashire millowners were profiteering and taking advantage of the situation following the redundancy programmes under the £30-million Government reorganisation scheme, were answered by Mr. William T. Winterbottom, Chairman of Fine Spinners and Doublers Ltd., at the annual meeting in Manchester. "It is strange how this cry always arises whenever Lancashire mills begin to show something approaching a normal commercial profit," he declared, and added: "It seems to be the view, in these quarters that Lancashire exists to be exploited, and that the long periods when we have in the past been unable to avoid selling below the real costs of production are normal."

MANCHESTER LETTER

The profitability of the cotton trade, Mr. Winterbottom continued, had been below that of other major industries in the country. One of the most unanswerable conclusions to be drawn from the results of the reorganisation schemes was that the closing down of so many mills showed clearly how unprofitable the industry had been in the past. It was particularly significant, he added, that the number of closures had been at least as great in the mills which were supplying sections of the economy whose prosperity had never faltered. The threat of price-cutting, because of redundancy, had been the industry's greatest problem, but, to a large extent, this threat was now reduced. He believed that further scrapping was necessary, but that it would take place alongside the installation of modern machinery.

Emphasising that shift-working was now an essential part of the cotton industry, Mr. Winterbottom said: "The position is quite simply that, if shift-working fails through inability to keep our mills up to date or through failure to attract operatives on a shift-working basis, then the Lancashire textile industry will cease to exist."

Shift-working in one form or another had already been introduced in over 90 per cent. of the units controlled by the group and, although full implementation was not being achieved because of labour difficulties, a high degree of success had been encountered.

Exports and Imports

The best that can be said about the export trade in cotton cloth during the first six months of 1960 is that shipments managed to keep pace with those for the same period twelve months previously. At the end of the half-year, the volume of overseas trade at 171,817,000 square yards was nearly 3,000,000 yards higher than in 1959. Cotton yarn exports were fractionally lower than at the same stage last year, the total of 11,564,000 lbs. being about 300,000 lbs. smaller than in 1959.

In both cloth and yarn, the results in June reflected the adverse conditions which had been encountered in overseas trade for months past. Shipments of fabric failed to reach 25 million square yards, the lowest total for a long time back, with the exception of September last. A similar situation arose in the yarn exporting branch, where the shipments of 1,620,000 lbs. were equally discouraging.

The main destinations of cotton cloth during the half-year were (in thousand square yards, with 1959 comparisons):—Australia 23,936 (26,768); South Africa 21,931 (20,212); Nigeria 16,948 (11,769); New Zealand 14,706 (12,912); Rhodesia and Nyasaland 10,922 (9,996); Ghana 10,768 (9,866) and the Belgian Congo 9,676 (6,773).

Concern Over Imports

The fact scarcely needs underlining that several of these major consumers of Lancashire cloth are, for the most part, in the troubled continent of Africa. Current events in these areas can hardly fail to have an important bearing on trade of this kind, particularly with European associations. Australia retains her position as the leading consumer of Lancashire-made cotton yarn having absorbed 4,653,000 lbs. during the half-year, as against 3,665,000 lbs. Only Canada among other countries bought more than one million lbs., having taken 1,365,000 lbs., as against 1,608,000 lbs. Other customers include New Zealand 907,000 lbs., the Irish Republic 847,000 lbs. and Pakistan 728,000 lbs.

While exports are just about holding their own, the import position continues to give cause for dismay in many directions. Arrivals of all types of foreign cotton cloth, either for retention in the home market or re-export, increased from 240,494,000 square yards in the first half of 1959 to 354,594,000 square yards this year, reaching an aggregate of more than double comparable shipments abroad. The cost of imports of cotton yarns and manufactured goods rose from £20,258,011 to £31,892,536.

Grey cloth imports for the half-year were some 85 million square yards higher than in 1959, the total being 291,031,000 square yards. They included 128,950,000 square yards from India, as compared with 80,140,000 square yards, and 22,029,000 square yards from Pakistan, as against 7,023,000 square yards. Purchases from Hong Kong decreased during this period, being only 44,388,000 square yards, as against 70,696,000 square yards in the first half of last year. In contrast, arrivals from "other foreign countries," believed to be mainly European in origin, advanced abruptly from only 6,244,000 square yards to 49,578,000 square yards.

Finished fabrics arriving from foreign sources also displayed a sharp upward tendency, being almost doubled at 63,563,000 square yards, as against 35,011,000 square yards. Imports of cotton yarn, too, were appreciably higher at 19,281,000 lbs., as against 11,248,000 lbs.

Lancashire millowners are being urged by the Manchester Cotton Association to arrange for shipments of raw cotton to be sent direct to the Port of Manchester, as part of a campaign to stimulate this business. "Over the years, there has been a good response to this call from spinners who realise the advantages of having their cotton brought to an efficient modern port, close to their mills," an official of the Association said. "In most seasons well over half the United Kingdom's imports of United States cotton come to the Port of Manchester."

The Lancashire cotton industry is now using raw material shipped from a very wide range of sources all over the world. The Association points out that nearly all these growths could be brought directly to Manchester. Spinners are urged to stipulate clearly "Shipment to Manchester," or at least, "Manchester preferred." "If enough spinners are insistent upon this point, regular savings can be introduced, even from places where the quantities of cotton involved are relatively small," the spokesman added.

Inbred Skills Not Enough

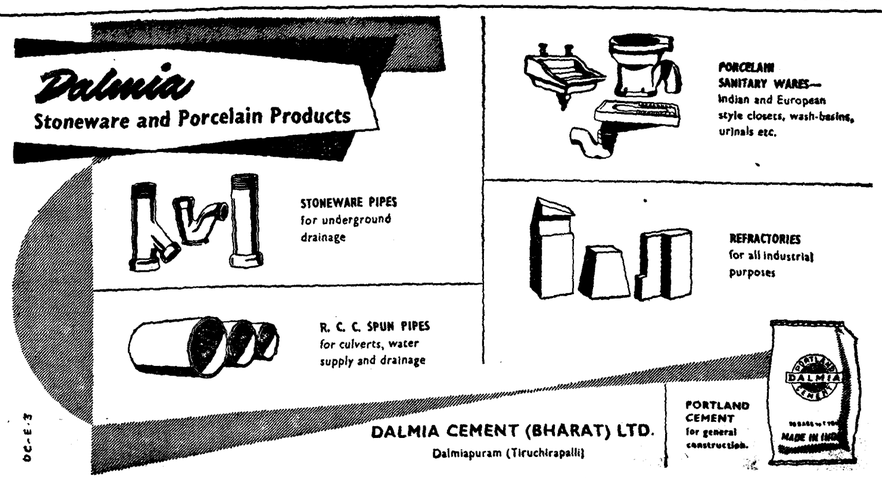
The Lancashire textile industry will have more and more need of scientific methods as the years go by, Sir Raymond Streat, former Chairman of the Cotton Board, told the annual meeting of Shirley Developments Ltd., the non-profit-making company set up to develop Lancashire textile machines. Sir Raymond, who is the Chairman, said that, as new fibres and new processing techniques become available they would stand or fall on one thing—the production at an economic cost of a product of the required quality. "The inbred skills which our operatives and managements possess will not suffice unless supplemented by instruments and machines which can deal with an ever-growing complexity of material and product." Sir Raymond said that he looked forward to an industry which would clamour for better methods and would be quick to take them up.

Another Russian Order

A Soviet order for £1,750,000 of textile machinery has been secured by Platt Brothers (Sales) Ltd., the Lancashire firm which is a subsidiary of Stone-Platt Industries. The contract brings the total value of Russian orders booked in the last few weeks to almost £2,500,000, for, earlier this month, a Soviet order for machinery worth £700,000 for producing synthetics was placed with the firm.

A large part of the equipment to be manufactured under the terms of the latest contract is for a complete worsted spinning plant which will be supplied by Platt's associate company Prince-Smith and Stells, Ltd., of Keighley. The contract covers, in addition, worsted finishing machinery and units of cotton spinning machinery. The machinery will be manufactured at Keighley, Accrington, Oldham, Morley and Huddersfield. Delivery will start early next year.—*All Rights Reserved.*

Sharp rises in the use of man-made fibres have highlighted a general rise in world consumption of apparel fibres in the past decade. This is revealed by the U.N. Food and Agriculture Organisation in a recent study, *Per Capita Fibre Consumption Levels* 1948-58. World consumption of apparel fibres rose from 8,848,000 metric tons in 1948 to 13,432,000 tons in 1958, representing a rise of 52 per cent. Consumption of synthetic fibres rose from 34,000 tons in 1948 to 423,000 tons in 1958, a rise of as much as 1,300 per cent.



COTTON SUPPLY POSITION

SHORTAGE LIKELY TO PERSIST IN THE NEXT SEASON ALSO

THE Standing Committee of the Cotton Advisory Board, which met at Bombay on the 5th inst., under the chairmanship of Mr. Ramnath A. Podar, discussed, *inter alia*, the present cotton supply situation and the supply prospects for the next season beginning on 1st September. Although full details of what transpired at the meeting are not available, it is understood that the Committee recommended liberal imports of cotton in the next season also, even if the crop turned out to be a good one. One report has it that the Committee suggested a firm figure of 900,000 bales of 400 each as the quantity to be imported during the next season.

Various measures for the enforcement of ceiling prices were discussed. Among them were: (1) prevention of hoarding of *kapas*, (2) survey of all cotton before it is delivered to mills, (3) allocation of quotas periodically to equate the demand to the available supplies during a particular period and (4) requisitioning of stocks. It was suggested that the enforcement measures should be announced before the season commenced and that they should be energetically implemented.

The Committee's recommendations were based on a detailed assessment of the present cotton supply situation and the probable trends in the next season. The Committee is reported to have estimated the carryover at the end of the current season at 1.4 million bales, comprising 1.05 million bales of Indian cotton and 350,000 bales (of 400 lbs. each) of foreign cotton, as compared with 2.07 million bales (1.85 million bales of Indian and 160,000 bales of foreign cotton) at the beginning of the present season. This estimate, it may be noted, is, if anything, on the high side. According to trade circles, stocks are not expected to exceed 1.22 million bales, made up of 857,000 bales of Indian and 360,000 bales of foreign cotton. Thus, in his speech at the last annual meeting of the East India Cotton Association, held a few days ago, Mr. Madan Mohan Ruia, President, gave the following figures:

(000's omitted)

	Indian	Foreign	Total
Supply:			
Carryover on 1st September 1959—			
With mills	12.79	1.60	14.39
With trade	5.68	..	5.68
Estimated crop	37.50	..	37.50
Estimated imports	..	8.50	8.50
Total availability ..	55.97	10.10	66.07
Distribution:			
Estimated consumption	44.75	6.5	51.25
Consumption other than by mills ..	.65	..	0.65
Estimated exports	2.00	..	2.00
Total ..	47.40	6.5	53.90
Carryover as on 1st Sept., 1960 ..	8.57	3.60	12.17

The Committee's suggestion that, imports would have to be allowed on a liberal scale during the next season is based on estimate of the probable mill requirements of cotton. Since some mills are expected to work extra shifts and increased spindleage, the total mill requirement of cotton is estimated at 5.4 million bales, of which 600,000 bales would be of staple length 1-1/16" and above, as compared with the estimated consumption of 5.12 million bales during the current season. Building up of stocks, which at the end of the season will be the lowest on record since Partition, to last season's levels will require at least 800,000 bales. Thus, to bring the supply position back to normal, fresh supply during the season should be of the order of 6.2 million bales. Even if the crop were to be a good one of, say, 5 million bales, imports to the tune of nearly one million bales would still be necessary, and that, too, after taking into account the import quota that would, in any case, remain unutilised at the end of the current season.

This points to the need for announcing the Government's import policy sufficiently early for the 1960-61 season, so that mills can plan their production and make purchases as and when the price trends in the world market are favourable. Past experience has shown that delayed and ill-timed quotas have cost the country dearly in terms of dearer cotton and larger foreign exchange outlay. Official action is often unrelated to market trends, with the result that much avoidable loss is incurred by the industry, in particular, and the country, in general.

The current season's experience has clearly brought out the need for advance planning of imports. Import quota announced during the season is of the order of 1.78 million bales, as against the normal imports of 600,000 bales, while the decline in the season's crop is of the order of one million bales as compared with the previous crop and 1.45 million bales as compared with the record crop raised in 1957-58. However, actual imports from the beginning of the season till 23rd July, aggregated only 738,037 bales, that is, just over 40 per cent. Even allowing for the accelerated shipments this month, imports might not exceed 815,000 bales for the whole season. Thus, actual arrival of foreign cotton during the season would be less than 50 per cent. of the quantity permitted. If the import announcements had been prompt and if shipments had been facilitated, perhaps, the shortage would not have assumed the acute form it took in the recent past and prices would have stayed at more reasonable levels.

Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, explained in the *Lok Sabha* on Monday why the Government could not act sufficiently early. He said that, on the basis of information given by the Ministry of Food and Agriculture, his Ministry could not anticipate such a precipitous fall in production as had occurred in the current season. Secondly, there was the problem of foreign exchange and it was difficult to persuade the Finance Ministry to sanction additional exchange.

This explanation, though belated, neither reflects credit on the policy-making machinery of the Government; nor does it give any solace. Could not something be done to enable the Ministry of Agriculture to estimate the size of the crop earlier than it does now and with a greater degree of accuracy? In fact, the Ministry does not seem to have any factual basis of its own for advice at all. The current season, will end by this month, theoretically, and sowing operations for the new season have advanced considerably. Still, no official estimate is as yet available as regards the size of the crop for the 1959-60 season. The latest official estimate is the fourth all-India estimate which gives only acreage and not production. It is a pity that the Governments, Central and State, with their agricultural departments and scores of officers, should have to rely on estimates by private trading firms which obviously have small resources and much limited facilities.

As regards the difficulty of persuading the Finance Ministry to sanction sufficient foreign exchange, it can only be said that better understanding and co-ordination of thinking of the two Ministries should improve the situation.

FLY NOW - PAY LATER

only 20% down for your BOAC air ticket!

...balance by easy instalments!

Now YOU too can afford to fly! The cost of your air ticket, with BOAC's Ticket Instalment Plan, reduces to small, easy-to-meet payments—and your ticket flies you by the world's finest jetliners—with BOAC's well-known *personal* service.

Boon to business men!
Especially for those in business on their own account. Useful contacts profitably established for very little outlay.

ALL INDIA GENERAL INSURANCE COMPANY

FURTHER RISE IN PREMIUM INCOME

FURTHER improvement in the aggregate net premium income is disclosed by the audited accounts of the All India General Insurance Company Ltd. (Joint General Manager: Mr. P. V. K. Shanmugam, Bombay) for the year ended 31st December 1959. The combined net premium income in the three departments, namely, fire, marine and miscellanous, rose from Rs. 12.96 lakhs in 1958 to Rs. 14.64 lakhs in 1959. Another noteworthy feature is that, thanks to cautious underwriting, the marine department, which showed a loss of Rs. 23,854 in 1958, was in the black during the year under review, with the accounts showing a small profit of Rs. 507. The miscellaneous department, however, continued to be in the red in 1959 also. But, due to better experience in the fire department, which made up to some extent the adverse results of the miscellaneous portfolio, the profit level is maintained at the previous year's.

Portfolio-wise, net premium in the fire department amounted to Rs. 8.69 lakhs. Net claims paid and outstanding aggregated Rs. 2.70 lakhs. Net commission and expenses were of the order of Rs. 4.85 lakhs. After transferring a sum of about Rs. 4 lakhs to the reserve for unexpired risks, being 46 per cent. of the premium, a sum of Rs. 65,043 has been transferred to the profit and loss account.

Net premium in the marine department aggregated Rs. 1.12 lakh and net claims paid and outstanding amounted to Rs. 55,109. Commission and expenses worked out to Rs. 50,176. After earmarking a sum of Rs. 1 lakh (90 per cent. of premium) as reserve for unexpired risks, the account shows a small surplus of Rs. 507.

In the miscellaneous department, net premium stood at Rs. 4.83 lakhs. Net claims amounted to Rs. 2.36 lakhs and net commission and expenses added up to Rs. 2.77 lakhs. After setting apart Rs. 2.22 lakhs as reserve for unexpired risk, being 46 per cent. of premium, the account shows a deficit of Rs. 74,768.

After crediting (a) Rs. 35,369, being interest and dividends, (b) Rs. 6,555 being profits of the fire and marine departments and (c) miscellaneous receipts of Rs. 1,055 and after debiting expenses of management, aggregating Rs. 18,664, not applicable to any fund or account and the loss of Rs. 74,768 from the miscellaneous department, the account shows a net profit of Rs. 8,543 to which is added Rs. 12,398 brought in from last year, making a total of Rs. 20,941. The whole of this amount has been carried forward. No dividend has been paid for the year under review also.

The capital and funds of the company as at 31st December 1959 aggregated Rs. 20.43 lakhs distributed as under:

	Rs.
Capital paid-up	10,00,000.00
Fire Fund	3,99,965.95
Marine Fund	1,00,808.00
Accident and Miscellaneous Fund	2,22,257.82
Capital Reserve Account ...	2,196.55
Investment Reserve Account ...	2,96,596.95
Profit and Loss Appropriation Account	20,941.30
Total ...	20,42,766.57

Mr. Podar's Speech

Reviewing the salient features of the working of the Company during the past year, Mr. Ramnath A. Podar, Chairman, observed, in his speech at the *sixteenth annual general meeting* of the Company, held at Bombay on Monday the 8th inst., as follows:

"I shall now make a few general observations about the working of the Company during last year.

"The total gross Indian and foreign premium income written by the Company amounted to Rs. 19,85,818 in 1959, as against Rs. 15,38,833 in 1958. The total expenses of management incurred during last year was Rs. 7,80,885, as against an expenditure of Rs. 5,88,033 incurred in the previous year. Every effort is being made to reduce expenses wherever possible, but, due to the prevailing market conditions, on the one hand, and the increase in the cost of living on the other, much headway could not be made in the matter of reduction of expenses.

"Coming to the departmental accounts, you will notice from the fire revenue account that there is an increase of over Rs. 79,000 in the net premium income written in the department.

"In the marine department, the current cargo rates, although slightly firmer than in the past, are still unrealistic. Keen competition continues to keep rates down to an almost uneconomic level. We are writing this class of business in a very restricted way.

"The net premium income written during 1959 in the accident department showed an increase of over Rs. 86,600 when compared to last year. The claim experience in this department still continues to be unsatisfactory. In fact, there was a deterioration in Ceylon during last year. Necessary measures are being taken to curtail our activities in that country with a view to avoiding further losses.

"You would notice from the accounts that, in accordance with the undertaking given under the Code of Conduct to the Executive Committee of the General Insurance Council, we have provided 46 per cent. in the fire and accident departments and 90 per cent. in the marine department as reserves for unexpired risks; as a result of this provision and due to the rise in the premium income written during last year, there is an increase of about Rs. 1,09,000 in the reserves for unexpired risks as compared with 1958. We are progressing satisfactorily in the development of our business. In spite of the curtailing of certain activities, we are able to show sizable increase in our gross and net premiums in all the departments. I am sure the results of the year under report will be considered satisfactory.

"One important event that occurred in the general insurance industry was the reduction of the fire rates, which came into effect early this year. It is early to say how this is going to affect small and medium-sized insurers like ourselves. Let me, however, hope that the reduction will not materially affect our working.

Banks' Attitude

"I would also like to refer to another matter of common interest to the general insurers, that is, about the acceptance of their policies by banks and other financial institutions. Some of the credit institutions insist on insurance companies lodging with them Government or other securities of certain amount for inclusion of their names on the approved list. It is regrettable that, in spite of the fact that insurance companies have to make a statutory deposit under the Insurance Act and they have also to satisfy the solvency test prescribed under the Code of Conduct, State and commercial banks operating in the country continue to take up this attitude even now. Insurers should have the utmost liquidity of their funds in their hands for meeting any emergency and the locking up of funds with banks is a handicap to their normal working and a hindrance for their further advancement. It is common knowledge that insurance and banking go hand in hand and it is very essential that, for the development of both insurance and banking, these important adjuncts to the national economy work in close harmony. I, therefore, fervently hope that the authorities concerned in the banking industry, both in the private as well as public sector, will reconsider their attitude towards their sister credit institutions and extend their fullest co-operation, which is very essential for the growth of industry and trade in the country.

"Gentlemen, you all know the third Five-year Plan is now before Parliament. As with the first and second Five-year Plans, emphasis has been truly laid in the third Plan on industrialisation, with a view to increasing production and raising the standard of living of the masses. Insurers have to play their part in this task of nation-building activity. We can, therefore, look forward to the future with confidence as with the increasing tempo of economic activity under the third Five-year Plan, there will be enough opportunities for development of the business of the Company.

"Let me now thank all the officers and staff for their co-operation. I also express my grateful thanks to all our valued clients, agents and field workers for their continued patronage."

UNION CO-OPERATIVE INSURANCE SOCIETY LTD.

CHAIRMAN'S REVIEW OF ACTIVITIES

THE Eleventh Annual General Meeting of the Union Co-operative Insurance Society Ltd. was held at Bombay on 28th June, 1960. Addressing the shareholders on this occasion, Mr. J. L. Mehta, Chairman, observed, *inter alia*, as follows:

"GENTLEMEN,

"Your Directors have great pleasure to submit their eleventh report on the working of the Society for the year ended 31st December 1959, together with the audited revenue accounts, balance-sheet and prescribed statements.

"In the year under review, the Society tried to intensify its activities in the new areas where offices were opened last year. The Society has also tried to expand its activities in the States of Assam and Kerala with the active support and guidance of co-operative institutions, co-operators and the departmental heads.

New Branches

"The new branches of the Society, which were opened during the years 1958 and 1959, are strengthening their position and we are sure that, within a very short time, those branches would compete in efficiency and business with our old units.

"The year under review, in the opinion of the Directors, has been uniformly satisfactory. Efforts are being made to intensify our activities in the States of Assam, Bihar, Punjab, U.P. and Mysore. We are sure, with the increased effort, we will be able to reach large number of societies and give them quick and efficient service. The Directors regret to inform that, in spite of repeated efforts, the Government of Bombay has still not decided about the business of co-operative sugar factories.

"We have pleasure to inform that during the year under review, Mr. D. N. Desai, our Manager and Secretary, was sent as a delegate to the International Co-operative Alliance, Insurance Section, meeting. He also attended the International Marine Conference as a delegate. The contacts made during the tour with various co-operative insurers and other organisations would definitely help the Society in reorganising the existing reinsurance arrangements and obtaining facilities in underwriting new classes of business."

Cattle Insurance

Giving analysis and the statistics of the working of individual departments, the Chairman said that during the year the Society issued about 24,000 policies and the net premium income underwritten amounted to Rs. 10,16,000. ..."You will welcome a change in our policy. The Society has started underwriting cattle insurance business on pilot basis this year. The marine insurance business for the second year was satisfactory. The net profit amounted to Rs. 2,46,000.

"The Directors propose to raise the dividend to 6 per cent., free of income-tax, for the current year, as also to recommend a higher rate of bonus to policyholders. We propose the bonus be paid at the rate of 14 per cent., subject to tax. We are still making every effort to make the bonus tax-free.

"The Directors also wish to record their appreciation of services rendered by the Manager, office staff, branch managers, organisers and other field workers."

THE MOGUL LINE

Under an arrangement recently concluded, the British India Steam Navigation Co. Ltd., and the Asiatic Steam Navigation Co. Ltd., both subsidiaries of the P. & O., sold their controlling interest in The Mogul Line Limited to the Western Shipping Corporation at a price of Rs. 360 per share. It was not possible at that time to afford similar opportunity of sale to the minority shareholders and their position has been under consideration by the P. & O. group. In order to place the minority shareholders on par with themselves, the P. & O. group now propose to make an offer to all the shareholders in the minority group to purchase from them approximately 80 per cent. of their holdings at a price of Rs. 360 per share. This will mean that all shareholders will have been given the opportunity of realising their holdings on similar terms, since after the purchase of shares now proposed by the British India and the Asiatic from the minority shareholders, the P. & O. group will be left with the same proportion of their original holdings as that left with the minority shareholders.

MUST SUGAR EXPORTS BE ALLOWED?

SOME VITAL CONSIDERATIONS

ONCE again, the issue of sugar exports has come to the fore, thanks to two important developments. One, the American Embassy at New Delhi is understood to have asked the Centre whether it can release some sugar for export to the U.S. in order to make up a part of the loss in supply following the cut in import quota for Cuban sugar. Two, a few leading sugar millowners of North India are believed to have urged the Union Food and Agriculture Ministry to take advantage of this opportunity of earning some extra foreign exchange for the country. Their plea, it would appear, is based on the ground that, since the international prices of sugar have registered a notable rise in recent weeks, India should certainly not miss this chance of exporting sugar without much loss to the country. Every ton of sugar sold to foreign countries is expected to yield more than Rs. 400. Exports of sugar at this juncture, so goes the argument, will not lead to any shortage of supplies for domestic consumption, because the sugar factories are carrying heavy stocks. In support of this view, the following figures are cited:

(In thousand tons)

	1959-60	1958-59
Opening stocks	174	336
Production	2,425	1,918
Total supplies ...	2,599	2,254
Exports	Nil	19
Supplies available for domestic consumption	2,599	2,235
Actual consumption	2,022*	2,061
Closing stocks as on 31st October	577*	174

*Estimates only.

N.B.—The total quantity of sugar actually held by mills on 30th June 1960 stood at 1,224,000 tons, as against 833,000 tons a year before.

The North Indian sugar millowners are also believed to have informed the authorities that the supply position will be even more encouraging in the next season (November 1960-October 1961). For they expect the coming season to witness a further notable increase in sugar production, following the Government's incentive scheme, expansion in the crushing capacity of the industry, and prospects of large sugarcane crop as a result of the rise in the area sown to the crop. They confidently point out that, inasmuch as the supply of sugar during 1960-61 will be appreciably higher than what is actually required to meet domestic requirements, the Government can now conveniently announce its decision to permit exports.

Pressure of Demand

No one will underrate the importance of earning foreign exchange from sugar exports, however small it may be. The question, however, is whether the country can afford to take a sudden plunge towards exports in the present context. It is true that the closing stocks of sugar with mills at the end of the current season (31st October 1960) will be quite sizable even after meeting the requirements of the 250,000-ton buffer stock which the Union Minister for Food and Agriculture has been wanting to build. But it is doubtful if these stocks will be sufficient to take care of the normal stocking requirements of the trade, assuming that the Government abolishes all controls on distribution and prices of sugar; as it is, there are hardly any stocks of sugar in the pipeline now. This aspect has to be specially stressed, because the pressure of demand for white sugar will definitely increase when there is free movement of the commodity from one place to another and no control is imposed on its price. The pressure will be all the greater in the coming years, in view of the rising trend of population, greater purchasing power in the hands of the people and growing preference for white sugar *vis-a-vis* brown sugars (*gur* and *khandsari*) as a result of urbanisation. It will not be out of place to state here that adequate provision should be made for a possible increase in the consumption of sugar, if its price is brought down to a reasonable level, as, indeed, it must be.

Viewed thus, it is not surprising that the Planning Commission itself has ruled out the question of sugar exports. The production target of three million tons (to be reached in 1965-66) fixed in the draft outline of the third Plan will not be sufficient to meet the estimated consumption needs. Even, according to the conservative estimate of the Development Council for Sugar Industry, the domestic consumption will be three million tons, made up of 2,506,000 tons for a population of 480 million at the existing rate of consumption plus 214,000 tons to cover increase due to changes in dietary habits and 251,000 tons to meet the demand emerging from the rise in the purchasing power of the people.

Be that as it may, so far as the coming sugar season is concerned, it is premature to forecast the trend of white sugar output. For that would depend not only on the size of the sugarcane crop harvested but also on the level of *gur* and *khandsari* prices. The acreage under cane may be larger than in the current season, but the actual yield will be influenced by climatic conditions. If there are heavy rains and floods in the next two months, a large part of the cane crop in States like Bihar and Uttar Pradesh will be seriously damaged. The one effect of such damage to the crop will be a marked rise in prices of *gur* and *khandsari*, the manufacturers of which will compete with the sugar mills for the available supplies of cane. In other words, the pace of crushing operations in mills will be slowed down.

Prices Must be Reduced

The Government of India should think of allowing exports of such an essential article of food as sugar only after assuring itself that the domestic consumer would get regular and adequate supplies of sugar *at a reasonable price*. We have advisedly italicised the words "at a reasonable price," inasmuch as the consumer of sugar has already made and continues to make a heavy sacrifice to nourish the development of the sugar industry. For nearly two decades, the consumer paid very high prices in the name of protection. After the sugar industry was deprotected, he thought that sugar prices would come down. But they did not, because the Government stepped up the tax burden under the pretext of finding funds for economic development. It is this heavy tax impost, together with the irrational policy of fixing cane prices on the basis of weight alone irrespective of quality considerations, that has been responsible for the continued high prices of sugar. Is the consumer not justified in asking for a reduction in prices now that the supply position has improved perceptibly?

Before the Government of India thinks of allowing sugar exports, it will have to examine very carefully all the issues mentioned above. For any hasty decision taken in the matter will be fraught with highly unfavourable consequences. It will be recalled that, two years ago, although this journal opposed the plan for building up an export trade in sugar and advocated, instead, the building up of a buffer stock to take care of possible shortfalls in production in any year for reasons beyond control, the authorities persisted in their attempts to export sugar through persuasion and compulsion on the manufacturers. No doubt, the actual exports were small, but the Government's policy had a psychological bullish effect on prices. Moreover, since Indian sugar prices are higher than world prices, sugar exports will be possible only at the cost of the exchequer as well as the domestic consumer. The Centre will have to grant full remission of excise duty on sugar exported, while the States will have to forgo the cess on cane used for producing sugar exported. On top of these remissions, a sizable subsidy will have to be given in the form of higher internal prices the incidence of which will fall directly on the consumer.

No Real Surplus

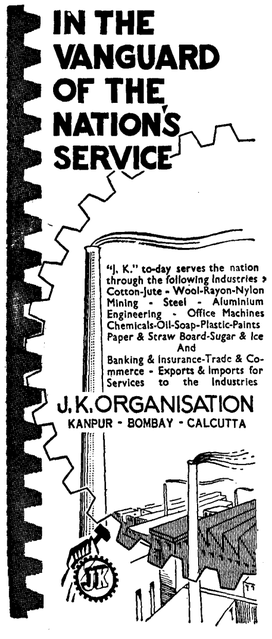
Some, however, point out that the loss on exports of sugar to the U.S. will not be as heavy as in the past, for the price payable by that country will, according to them, be the same as that paid to Cuba which is some 2.25 cents per lb. above the world free market price. Even so, the proposition is not attractive enough to miss the chance of building up buffer stocks and giving the industry, trade and consumer freedom from vexatious controls. Only four weeks ago, we stated in these columns that India had no *real* surplus of sugar for export, nor would it have any for some years to come. Nothing tangible has happened in the interval to warrant a change in that view.

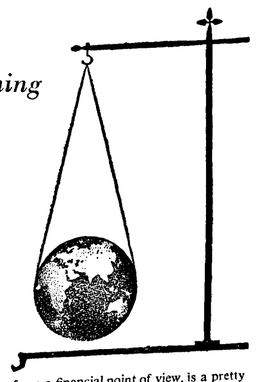
Those sugar millowners who are in favour of export of sugar may have their own reasons. Some of them may genuinely place the need for earning foreign exchange above that of the domestic consumer. If export is to be given that high priority, then they must be prepared for the continuance of controls, not of the existing variety, which is so loose that consumers in three-fourths of India are not getting even their minimum needs at controlled prices, but of a more stringent variety under which every one can have a little sugar at the price fixed by the Government. This would mean country-wide rationing, with all its concomitant evils *plus* the cost of administering such controls. Only if the Government and the people are ready for such a sacrifice and physical discomfort can an export of 150,000 tons to 200,000 tons be allowed. But are they prepared to accept these conditions? There are, however, some other sugar millowners who think that production in the coming season would go up so substantially that, unless an export outlet were found, there would be a surplus large enough to depress sugar and sugarcane prices to such an extent as to generate a cycle of lower production in the succeeding seasons. This fear is unwarranted, for the surplus will by no means be so heavy as all that. If prices of sugar go down, consumption will certainly look up and reduce the surplus. If, even then, there is a large undisposable surplus, there will be time enough to send some sugar to foreign countries. In any case, the risk of attaining a surfeit of sugar is worth taking for a country like India, already suffering from a high level of prices and falling purchasing power of the rupee, but not the risk of scarcity.

EXCISE ON SUGAR

The total revenue derived by the Union Government from levies on sugar other than *khandsari* and *palmyra* during the financial year 1959-60 amounted to Rs. 58.77 crores, as against Rs. 59.71 crores in the previous year. While collections of excise duty went up from Rs. 48.73 crores in 1958-59 to Rs. 49.78 crores in 1959-60, those of additional excise duty declined from Rs. 10.98 crores to Rs. 8.99 crores. According to 1959-60 Budget estimates, collections were placed at Rs. 57.4 crores. comprising excise duty of Rs. 44.72 crores and additional excise duty of Rs. 12.68 crores. Excise duty collections on *khandsari* sugar, however, fell much below expectations to Rs. 41.79 lakhs in 1959-60, as against Rs. 1.46 crore estimated in the Budget. Out of the actual excise duty collections from *khandsari* in 1959-60, excise duty accounted for Rs. 38.67 lakhs and additional excise duty for Rs. 3.12 lakhs, as against Rs. 1.28 crore and Rs. 18 lakhs, respectively, estimated in the budget.

Two important results of research on sugarcane in Bihar will be of great use to farmers in the State, according to the Directorate of Extension, Ministry of Food and Agriculture. First, the crop planted in autumn (October-November) not only yields higher than the spring (February-March) crop but also gives better quality canes; the autumn-planted crop gives at least five tons more of cane. Secondly, the best doses of fertilisers to be applied are 60 pounds of nitrogen and 75 pounds of phosphoric acid for sugarcane in North Bihar and 80 to 100 pounds of nitrogen with 60 pounds of phosphoric acid in South Bihar.





Weighing the world up...

...even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

MERE POLITICAL FREEDOM WITHOUT SOCIAL SECURITY IS MOCKERY

HENCE PLANNED POPULATION IS THE ANSWER

By Dr. S. Chandrasekhar

FROM the national point of view, the problem of family planning can be expressed in the form of four propositions—a kind of syllogism: (1) Our national level or of living in terms of food, clothing, housing, education, health and cultural amenities is very low; and everybody, from the President and Prime Minister down to the man in the street and the peasant in the village, is agreed that we should somehow raise this low level. (2) Our overall national death rates—infant mortality, maternal mortality and adult mortality rates—are incredibly high as compared with those of even certain backward countries in Europe and Latin America, not to speak of countries such as Australia, New Zealand, Holland and Scandinavia which have the lowest mortality rates. Here also, all of us are agreed on the need to reduce this high death rate. Once we do this through better public health and better diagnostic and curative medical services, more hospitals, doctors and wonder drugs, we shall prevent millions from dying (a very necessary task indeed) and add huge numbers to the existing population. (3) Our national birth rate is relatively high and the reasons for this are fairly well known. We add about six and a half millions every year to our population, that is the net annual addition. (4) The problem now is this: How can we raise the standard of living (which means more of everything—services and goods—for everybody) and cut down our death rate (which means saving more people who in turn will have babies) when we are unable to support the major part of the existing population even at a poor level of living, if, at the same time, our population continues to increase by about six and a half millions every year. It is realised that this formulation of our population problem is an oversimplification, but the true dimensions of the problem are something of this order. The answer, however, is simple. We cannot lower our level of living any further. We cannot raise out death rate and thus kill off more people! This is unthinkable. We can only stop the torrent of births, which means, of course, family planning.

The Ideal and Definition

Why then is the family planning habit not widely spread in our country? The prospects are bright with the present substantial support from the Government, but our low standard of living constitutes a great handicap. The present diaphragm and jelly method, involving a preliminary clinical consultation is by and large unavailable, and expensive and beyond the means of the average mother. It must be realised that a majority of our wives and mothers live in rural huts, far away from any clinic, doctor, running water, sanitation, and above all, far away from even the few rupees that are needed. Some of the middle and upper middle class families who can afford conventional contraceptives are using them. But, for the masses, what is needed is a cheap, reliable, harmless and acceptable contraceptive such as an oral or a biological one. We have today the foam tablets and these deserve a serious examination and experimentation. All that is needed is research into an ideal contraceptive from the point of view of Indian needs, particularly in the rural areas, on the one hand, and education and propaganda, on the other. A band of devoted workers, doctors, nurses, social scientists and educators are needed to carry this message to those of our mothers who suffer from improvident maternity.

Our ideal should be happy homes, of husbands and wives with two or three children, above the poverty line, and assured of the irreducible minimum decencies of civilised life. Let us remember that political freedom without economic amelioration or social security is a mockery.

What is family planning? The want of a precise definition and the lack of an understanding of the implications have led to a considerable amount of misunderstanding and unnecessary controversy. Family planning or planned parenthood or birth control or better conception control is a simple and yet revolutionary human device that separates the two basic human (and animal) impulses—the desire for mating and the desire for offspring. If human beings want mating as well as its natural consequence. children, both impulses work harmoniously and there is no problem. But sometimes, for economic, health or social reasons, people do not desire children, though they do not want to abstain from mating. If people yield to their desire for mating, they have to take their chance of offspring, wanted or unwanted. If they try to be governed by the desire not to have children, they have to face the renunciation of sex gratification. Children that you do not want or no sex pleasure that you do want! Birth control or family planning resolves this dilemma.

The dilemma need not arise at all or can be resolved through celibacy (perpetual *Brahmacharya*),postponement of marriage to a late age, moral restraint or continence (married but not mating), abortion or infanticide (both criminal); but these do not constitute birth control or family planning as the term is understood today.

Scientific birth control means contraceptives. Contraceptives are primarily of two kinds—mechanical and chemical. And a combination of these two methods (diaphragm and jelly) constitutes the best contraceptive technique yet known and is used all over Europe and America; in fact, all over the world. This method enables a couple to limit the number as well as space births.

Besides this, there is also the permanent method of conception control. This is achieved by a simple operation on the father (vasectomy) and a rather major operation on the mother performed usually after a delivery (salpingectomy). Once the father or the mother undergoes this operation, the couple cannot have any more babies at all. The reversal of this operation is well-nigh impossible.

Then there is the rhythm or the safe period method of birth control. Here there are no mechanical or chemical devices. Therefore, no expense is involved. All that is needed is a knowledge of the time of ovulation in the wife, and, having discovered her unsafe period, the wife must abstain from sexual intimacy during that time; that is, intimacy is restricted to the safe period, when the wife is temporarily sterile. The success of this method implies a certain amount of moral restraint which is not undesirable. But, unfortunately, it is difficult to calculate accurately the safe period and the inherent element of uncertainty renders this method unreliable.

Now that family planning has been defined, it will be seen that the usual uninformed criticism levelled against it becomes meaningless.

What is the need for family planning? The answer to this question can be given from two points of view—individual and national. A couple may want to space and limit the number of children for a variety of reasons. Since every husband and wife want to give the best they are capable of to their children and as they cannot afford (in our present economic context) to do this for six or eight children, they would like to have no more than two or three. Relative poverty or a low level of living and the desire for a better level are the major reasons. Secondly, the health of the mother may be poor or even bad and another pregancy may mean serious disability, if not death. In such cases, birth control is clearly indicated. There may be numerous other valid reasons, peculiar to each couple, for limiting the size of the family and in all such cases family planning is the only answer.

FAMILY PLANNING IN THIRD PLAN

From small beginnings during the first Plan, the family planning programme has expanded, so that, by 1961, there will be 676 urban centres and 1,121 rural centres engaged in family planning. The programme has been reviewed in detail by a special committee set up by the Ministry of Health to make proposals for the Third Plan. The committee's suggestions cover a large field, including the contents of programme, the agency for implementation, financial implications and issues such as, the place of sterilisation in family planning, the role of voluntary organisations, the production and supply of contraceptives and other aspects. These proposals are, at present, under consideration. Subject to the requirements of the detailed programmes, which may be formulated at this stage, an allotment of Rs. 25 crores had been proposed for family planning. Broadly, it is proposed to intensify and extend the present programmes, the main emphasis being on the following aspects: (1) wide-spread education to create the necessary social background for a large family planning programme; (2) integration of family planning activities with the normal health services; (3) provision of family planning services, including facilities for sterilisation, through medical and health centres and facilities for distribution of contraceptives; (4) development of training programmes in medical colleges and other teaching institutions; and (5) utilisation in the family planning campaign of local voluntary leadership to the largest extent possible.

This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink.. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized'.

These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for
·SANFORIZED·
REGD TO MK
on the label
and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

WORLD RESOURCES OF ENERGY

PROBLEMS OF GENERATION AND TRANSMISSION OF POWER IN LESS DEVELOPED AREAS

IT has long been known that there is a direct relationship between a country's national income and its *per capita* consumption of energy. Indeed, material progress is determined chiefly by the way the resources of energy are harnessed and applied. In an interesting and comprehensive article on world energy resources, contributed to the July issue of the *Far East Trade*, Mr. E. W. Golding, the chief of the Rural Electrification and Wind Power Department and Overseas Liaison Officer of the U.K.'s Electrical Research Association, has discussed the pattern of distribution of energy resources, production of electrical energy and problems of development of power in less developed areas. The article, in addition to its being a valuable contribution to the understanding of this complex subject, is particularly notable for the reason that it assumes little technical knowledge on the part of the lay reader.

Natural Sources

Mr. Golding prefaces his article with a description of the chief sources of energy. All the sources of energy, from which power is produced, are natural. They are the gifts of nature and can be regarded as national assets of first importance. They are: fossil fuels (coal, peat, oil, and natural gas); other fuels (wood and organic wastes); radioactive materials; hydraulic energy (from lakes and rivers, from the tides and waves), geothermal (heat from the earth) and atmospheric (solar radiation, wind, etc.). These sources of energy vary widely in their distribution throughout the world, in their characteristics and in their convertibility to forms of power which are usable, e.g., electric power. Africa has nearly 40 per cent. of the water power, and North America 40 per cent. of the coal reserves, while Australia has less than one per cent. of the water power and South America only one-tenth of one per cent. of the coal. As for the ease of conversion to electricity, coal has to be used to raise steam for a steam turbine which drives an electric generator, a waterfall drives a water-turbine-generator set, while solar radiation can (although the process is at present very expensive) produce electricity directly by photo-voltaic effect. The efficiencies of these conversions are, for a large modern coal-fired station, 30 to 35 per cent., for a hydro-power station 80 to 85 per cent. and for a photo-voltaic conversion about 15 per cent.

To form an impression of the relative degrees of effectiveness of different power sources, a man can do mechanical work at a rate roughly corresponding to that absorbed by an electric reading lamp (60 watts) so that, in a full year, he might be expected to have an energy output of some 150 kw.h. The energy contained in 1 lb. of coal is about 3 kw.h. and in 1 gallon of water at (say) a height of 1,000 feet there is a potential energy of just under 0.004 of a kilowatt-hour. Taking into account the efficiencies of conversion just mentioned, therefore, the work of a man for a full year can be produced by burning about 150 lbs. of coal in a thermal power station or by drawing down some 50,000 gallons (or 228 cubic metres) of water from a height of 1,000 feet. It is interesting to consider the efficiency of man himself, viewed as a machine. If we take his daily input of food as equivalent to 2,600 kilocalories (accepted by nutrition specialists as an average requirement), this is, in turn, equivalent to 3 kw.h. per day or 1,100 kw.h. per year. We have already taken a man's yearly output of useful work (of a purely mechanical kind) as 150 kw.h., so that his average 'machine' efficiency is 150/1,100 or just under 14 per cent.

Total Reserves

It is clear, from the very different characteristics of these resources of energy and the wide variation in the degrees to which these resources have been surveyed in different countries, that no exact assessment of their total can be made. Nevertheless, sufficient is known, on a world scale, to permit reasonable estimates of world energy resources to be made. In 1958, the probable total of world's coal reserves was placed at 4,033,000 million tons and of proved reserves at 935,000 million tons; for different continents, the respective totals (in million tons) are: Europe 1,501,000; 516,000—Asia 1,099,000; 9,000—Africa 47,000; 23,000—N. America 1,367,000; 380,000—South and Central America 2,000; 1,000 and Oceania 17,000; 6,000. The probable total of brown coal and lignite reserves in the world is 753,000 million tons and of proved reserves 109,000 million tons, while the probable total of peat is 119,000 million tons. World production of coal (including coal equivalent of brown coal and lignite) in 1958 was 2,110 million tons, including 1,252 million tons in Europe, 381 million tons in Asia, 43 million tons in Africa, 398 million tons in North America, 6 million tons in South America and 28 million tons in Oceania. Petroleum oil has been found in some 60 countries, but not always in significant quantities in all of them. About one-fifth of the earth's land surface is potentially oil-bearing and, of this, some 40 per cent. lies in the American continent, 30 per cent. in the U.S.S.R. and 15 per cent. in the Middle East. The approximate proved reserves of crude petroleum are 35,706 million tons; at the 1958 rate of production, their life is computed at 41 years. In 1958, world production of crude petroleum aggregated 904 million tons, of which North and Central America accounted for 40.5 per cent. Middle East and North Africa for 23.7 per cent., the U.S.S.R. and Eastern Europe for 13.9 per cent., and South America for 18.0 per cent. World production of natural gas in 1958 was 346,000 million cubic metres, of which the U.S. alone accounted for 312,000 million cubic metres.

Wood

At the beginning of the nineteenth century, wood provided over 90 per cent. of the world's energy needs. An estimate of the total area of the world's forests is 15 million square miles. World consumption of wood is placed at 45,000 million cubic feet per year, or an equivalent of 4,000 million tons of wood. Probably, 30 per cent. of the annual consumption is used as fuel. Because of its bulky nature, wood must be used close to its source; it is not very efficient, because of its low calorific value and high moisture content, and is often burned inefficiently.

The two fuels now regarded as most important for nuclear power production are the isotopes of uranium and thorium. Seven parts of the fissile isotope, uranium 235, are found in thousand parts of the natural metal. Nucleii of the remaining uranium 238 are non-fissile but are transformed into nucleii of plutonium isotopes which are fissile and can be used as a nuclear fuel. Another nuclear fuel, uranium 233, is produced by a breeding process from non-fissile thorium 232. One gram of material undergoing complete fission could release 24 mega-watt hours of heat. World reserves of uranium have been estimated to lie between 2 million and 10 million tons and those of thorium probably exceed 500,000 tons. Thorium occurs extensively in India, Canada, Australia, South Africa, Madagascar, the U.S., Brazil and areas of South-east Asia.

The quantum of electrical energy produced varies from country to country; so does the proportion of hydro power to the total power. Further, annual production of electrical energy is always less than the installed capacity. A 1,000 kw. plant could, if it were in continuous use throughout the year (8,760 hours), produce 8,760,000 kw.h. of energy. But this continuity is virtually impossible. Even though the demand for energy might justify full production, some "stand-by" capacity must always be installed to cater for periods of overhaul or of breakdown in service. When an electrical system is supplied from a mixed power plant, a combination of hydro and thermal power, there are usually good reasons for limiting, or controlling, the annual period of each plant. Lack of rainfall or of reservoir storage may be one of the reasons. Thus, the term "load factor" is important. This is the ratio of the actual total annual production of energy to that which would have been produced had the maximum power output (or maximum power demand on the system) been continued steadily throughout the year. The "load factor" varies from one system to another, but, as a general average figure, it can be taken as 0.5 or 50 per cent. World net installed capacity in 1958 was about 448 million kw., of which North America accounted for 178 million kw., Western Europe for 131 million kw., the U.S.S.R. for 53 million kw., Eastern Europe for 25 million kw., Asia (Middle East) for 2 million kw. Asia (Far East except Japan) for 11 million kw. and Japan for 18 million kw. Hydro-power forms some 30 per cent. of the total installed capacity. This proportion varies from a high of 58.5 per cent. in Japan to zero in South Africa. For other regions, the proportion of hydro-power to the total (in percentages) is: North America 24.9; South America 49.0; Western Europe 38.0; Eastern Europe 15.5; the U.S.S.R. 20.5; Oceania 32.8; Africa (except South Africa) 42.0; Asia (Middle East) 17.0; Asia (Far East except Japan) 21.0.

Consumption

There is a great disparity in the capacity of electric power available for the use of the population in various regions. This varies from 0.01 kw. (or 10 watts) in the Far East to 0.92 kw. (or 920 watts) in North America—a ratio of 1 to 92—and the world average is 0.16 kw. (or 160 watts) *per capita*. World consumption of electrical energy aggregates 1,836,000 million kw.h. (1958 figures); North America accounts for 821,000 million kw.h., Western Europe for 443,000 million kw.h., Eastern Europe for 111,000 million kw.h. and the U.S.S.R. for 233,000 kw.h. The annual consumption in kw.h. per head of population in different regions is: North America 4,276; Western Europe 1,517; Eastern Europe 867; the U.S.S.R. 1,131; Oceania 2,154; South Africa 1,500, Asia (Middle East) 79; Asia (Far East, except Japan) 27; Japan 924. While the more industrially advanced parts of the world have *per capita* consumption of 1,000 kw.h per annum or more, Africa and Asia (including South Africa and Japan) use well under 100 kw.h. per head. The total population involved in these areas of low consumption is just over 1,700 million, or 60 per cent. of the world's total population. Of the three sets of data, presented below for different groups of countries, the first represents average *per capita* consumption of electrical energy (in kw.h.), the second *per capita* annual income (in U.S. dollars) and the third a ratio derived by dividing annual *per capita* consumption by annual *per capita* income:

Canada, Luxembourg, Norway, Sweden, Switzerland and the U.S.A.	4,313	1,978	2.2
Australia, Austria, Finland, New Zealand, U.K. and W. Germany	1,900	923	2.06
Belgium, France, Italy Japan, Netherlands, and S. Africa	1,098	470	2.3
Denmark, Ireland, Israel, Puerto Rico, Spain and Trinidad	600	450	1.33
Argentine, Chile, Mexico, Portugal, Rhodesia, Nyasaland, and Yogoslavia	327	246	1.33
Algeria, Belgian Congo, Brazil, Lebanon Morocco, and Venezuela	149	161	0.92
Colombia, Equador, Ghana, Philippines and Turkey	79	169	0.47
Ceylon, Guatemala, India, Kenya, Nigeria, Peru, Tanganyika, Thailand, and Uganda	27	65	0.42

From the ratios of average annual consumption of electrical energy to average annual income, it can be seen that, in the groups for which the average consumption of electrical energy is high—over 1,000 kw.h. per head—this ratio is slightly over 2. This means that, in the more developed countries, people use 2 units of electrical energy for every dollar they earn. There is then another series of groups for which the ratio is round about 1, followed by those groups with a very low energy consumption when the ratio falls to under 0.5. This low ratio can perhaps be explained by the fact that, with very low incomes, people have to spend their little money on food and other absolute essentials with nothing to spare for electricity.

Transmission

Closely allied to the problem of generation of electric power is its transportation. In countries which are less advanced industrially, and in which the demand for electricity is at present mainly for domestic and agricultural purposes, the population is usually not evenly spread; there are heavy concentrations of people in a few large towns, while the rural areas are thinly populated. In such countries, power stations of relatively small capacity are established in the main towns, with a local network extending outwards into the country for a few miles, but there is no "grid" or interconnecting network linking those towns and therefore no possibility of electricity supplies being provided for the area as a whole.

Research on the high-voltage transmission of power has been very active during the last two or three decades. In the U.S., in Sweden, France and other European countries, electrical networks are operating at voltages up to 380,000. The possibilities of using up to 800,000 volts or even higher are being studied, and there is little doubt that transmission at these very high pressures will become possible before long. These transmission lines carry alternating current, but direct-current transmission, on which much research has been done since World War II, has some advantages for very

(*Continued on page 319*)

NEW PRODUCTS AND PROCESSES

Burglar-proof Electronic Lock

A NEW burglar-proof electronic lock for the bank strongroom or the safe in office or home has been made and patented by the experts of the United Kingdom Atomic Energy Authority. It is a good many years now since the now commonly-known combination lock was produced. But even with these locks the burglar knows how to go about the job. Now, the electronic locksmith has come into the picture. A rectangular panel carrying 12 press buttons is all that one would see if this lock were on a home safe or bank strongroom. To open the lock, all one needs to do is to press four of the buttons, in pairs and ignore the other eight. But which four, and how? Immediately you press a wrong one an alarm goes off! The combined odds against pressing the right two pairs are 4,356 to one. Even if by a miracle one presses the right pairs in the right order, the alarm goes off! That is because there is a pre-set time lag between the pressing of the buttons. If an oxy-acetylene cutter is used the heat reaches some ingenious contrivance and, once again, the alarm goes off!

Paint Hardener

A solventless liquid epoxide resin hardener system, which enables paint coatings of 0.010 inch to 0.015 inch thick to be produced in a single application, has been developed by a British manufacturer, Bakelite Limited, 12-18 Grosvenor Gardens, London, S.W.I. The coatings can be applied to structural steelwork, most metals, wood and concrete. Pigments can be incorporated in the system, and tests have shown that the hardener cures the resin under widely varying conditions of temperature and humidity, to yield tough, hard and chemically resistant films. On vertical surfaces the minimum amount of drainage occurs. Films incorporating the new compound will harden overnight under normal atmospheric conditions. The firm claim that the result is achieved by their particular mixture of a resin mixture with a hardener, but an important point to remember is that once the two have been mixed the pot life—as with the conventional solvent-containing epoxide coatings—is comparatively short; the mix must be used within 1½ to 3 hours depending on the quantity mixed and the ambient temperature. Both the resin and the hardener are comparatively new materials and it is not possible at this stage to specify shelf life, but they expect this to be approximately one year from the time of manufacture, in countries abroad, including those with hot climatic conditions.

New Life for 'Panting' Lakes

The use of compressed air for oxygenating the water in lakes, where far-reaching pollution is threatening to destroy fish and plant life, has been tried out in Sweden, according to a report by Atlas Copco, leading compressed-air specialists. The method resembles that adopted for keeping channels ice-free, pioneered by the company and now in use in such countries as Canada, and the United States. The experiment was carried out by Mr. Leif Bruneau of the Water Protection Bureau of the Federation of Swedish Industries, in a small lake which had gone sour. The dissolved oxygen content of the water was 0 per cent. Water with an oxygen content of less than about 17 per cent. will not support fish or plant life. Compressed air was introduced into the lake through a perforated plastic hose 500 metres long, which was laid at full length on the lake bottom from a rowing boat. A small air compressor consuming 8-10 h.p. supplied the air. After less than three weeks the dissolved oxygen content of the water had risen to 57 per cent. and new plant life was beginning to establish itself. One hazard to be guarded against is the release of hydrogen sulphide which may be present in the lower levels of stagnant water. To forestall this hazard, the water as a whole and particularly the bottom level should be carefully examined before the compressed-air method is tried. The results obtained to date are reported to have been so encouraging that the method will be tried in a number of Sweden's "panting" lakes. While emphasising that the case for compressed air should not be overrated, Mr. Bruneau says that he considers the method to be most useful in solving acute problems of pollution, especially if it precedes the construction of an efficient sewage purification plant.

Cation Exchange Resin

Regarded as the first important advance in the synthesis of cation exchange resins since polystyrene resins became available in 1946, Amberlite 200 is a standard sulphonated styrenedivinylbenzene copolymer, claimed to have remarkable chemical and physical stability built into the polymeric structure. It has been developed by the Rohm and Haas Company, of Philadelphia. Stability has been achieved by important changes in resin synthesis which are not related to the simple modifications hitherto employed for improving the physical and chemical stability of ion-exchange resins. Advantages appear to lie particularly in the prevention of decrosslinking of resins in the treatment of water supplies. Other advantages apply to the hot lime-zeolite process, the rejuvenation of plating solutions, sugar processing, and mixed-bed deionisation. It is also recommended in the treatment of highly aggressive solutions where high operating temperatures occur.

Asbestos Fire Protection on Steel Beams

Following the revision of B.S.S. 499, which makes allowance for greater working stress in beams, alternative forms of fire protection cladding have emerged as substitutes for dense concrete on steel beams. The Joint Fire Research Organization of the United Kingdom recently tested Asbestolux, an asbestos insulation board made by Cape Building Products Ltd., as a fire protection cladding for a steel stanchion 8 in. x 6 in. under load. The column was prevented from collapsing for 2 hours, and allowed the manufacturer to evolve specifications giving degrees of fire protection ranging from half to 4 hours. The system involves ¾ in. or 1 in. Asbestolux board cut on site to fit the steel section, allowing ¼ in. for horizontal cover fillets. The casing is fitted together and screwed at the edges with 2½ in. woodscrews or No. 8 P.K. At cross joints, ¾ in. cover fillets are inserted to prevent flame penetration at these points. The screw holes can be filled and rubbed down, leaving the surface ready for decoration immediately after priming.

Non-woven Fabrics

Non-woven fabrics, which first appeared about two years ago in the U.S., are now making their way into new fields of use. The fabrics are somewhere between a loom-woven cloth and felt. The textile fibres are matted together with a resin to hold them, rather than being beaten into a thick mat as in felting. The cost is low enough so they can be discarded after use. New uses for the non-woven fabrics include towels for hands, cloth for equipment cleaning, and a specially treated, flannel-like material for furniture polishing and dusting. The latter is treated with a fire-retardant material and a germicide.

Plastic Films with Metallic Coatings

Plastic films with metallic coatings are now being produced by E. S. and A. Robinson, Redcliffe Street, Bristol, a company engaged mainly in the packaging and paper converting fields.

The film is being marketed following two years of research into problems of metallisation —a technique of depositing a very thin layer of aluminium or other metal on to a component or surface of a material.

Metallised materials now available include unplasticised p.v.c. film, cellulose acetate film and cellulosic films and both packages and display material can be made from these. It is thought, however, that there will also be applications for the coated materials in industry generally.

Research is also continuing into methods of producing metallised papers. This, the company says, is still a difficult subject although some labels for cans have already been produced on a commercial basis.

One of the major problems to be overcome, it is added, is the maintenance of exacting standards in paper production as even a slight "gassing" of the paper can destroy the high vacuum necessary for efficient deposition of the metal.

New Steel-making Process

A new process which will, it is claimed, produce one ton of steel in half the time it has been possible to produce this previously, by means of the open-hearth production process, is being developed in Britain. Preliminary tests which have been carried out with the new process are said to have shown that about 100 tons an hour of high-quality steel can be produced from a 400-ton open-hearth furnace, as compared with 40 tons using conventional open-hearth techniques. Previously, the use of special oxygen-feed devices called "oxygen lances" have yielded increases in the speed of processing, to yield outputs of up to 40 and 60 tons per hour from a 400-ton furnace. The addition of burned lime in place of the usual limestone has led to further increases, and in some tests as much as 60 tons per hour of high-quality steel has been produced from a 200-ton furnace. Eventually, it is expected that markedly greater increases in both time of output and quantity of output will be achieved. The steel produced is said to have the same rolling and fabrication qualities. While the new process is still in an experimental stage, it is expected that it will be applied on a commercial basis in the fairly near future.

Cigarette by the Million

An advanced British cigarette making machine manufactured by Molins Machine Company Ltd., Evelyn Street, London, S.E. 8 turned out 13 million American cigarettes during the recent British Fair in New York. The American public saw how their cigarettes are made and packed and were surprised, it is said, to learn that the majority of their cigarettes are made on machines invented and made in Britain. The greatest impact on the spectators was the realisation of the ingenious devices, electronic and mechanical, that are embodied in these machines to achieve and maintain the quality of the cigarettes they produce.

Small Quench Furnace

New, smaller furnace equipment, built as an economic unit for firms with a smaller volume of work, has been produced by EFCO (Electrical Resistance Furnace Company, Ltd.), Netherby, Queens Road, Weybridge, Surrey. The equipment, which includes an atmosphere generating unit, and a small-size horizontal closed-quench furnace, is the type which is most essential in hardening processes where the quenching has to be done without exposure to air. It is mainly applicable to manufacturers of small gears, wheels and other small engineering parts. The new furnace, which is in design similar to the larger furnaces, accommodates a work basket 14 ins. long, 8 ins. wide and 8 ins. high. It occupies a floor space of 9 ft. 3 ins. by 3 ft. 9 ins., it has a working height of 3 ft. and requires a head room of 7 ft. 10 ins.

The controlled-atmosphere equipment will include an endothermic atmosphere generator with an output of only 100 cu. ft. an hour, and a mixer for the precision mixing of gas and air for use in atmosphere generators. The brazing paste applicator is a single unit designed to save time, labour and material when applying brazing materials used in paste form. It consists of a sheet metal cabinet housing a foot switch, air line and a paste container, and providing a working surface 3 ft. high. It is arranged for connection to a compressed-air supply. The paste is forced through a nozzle, mounted vertically above the top of the cabinet, by the operation of the foot pedal.

Storing Grains in Balloon

It often happens that it begins to rain when mountains of grain lie unprotected at threshing floors. An interesting solution of the problem has been suggested by Soviet engineers. Before the rain starts, a huge balloon is inflated and the grain is loaded into it by an air pump. When the thunderstorm breaks out all grain already lies safe in the balloon. Soviet collective farms and State farms, it is said, will be able to purchase such inflatable grain storages when harvest time comes. Made from a waterproof fabric, each of them holds up to 500 tons of grain. In the future, their capacity will be increased to 3,000 tons. Inflatable grain storages, which are very cheap, will enable peasants to save large amounts of materials used for building temporary shelters. They will be especially handy in the former virgin lands of Kazakhstan and Siberia, where extensive tracts of steppe land are sown to wheat.

TAX EVASION AND TAX AVOIDANCE

REASONS AND REMEDIES

By R. K. DALAL, B.Com., F.S.A.A., F.C.A.

THE subject of tax evasion and tax avoidance always looms large in any enactment dealing with taxes, for, just as to love and be wise is not given to man, so also to pay taxes and be elated is not given to any taxpayer.

What one does not like to pay, one avoids. And one tries to do so—

(1) by forging an income,

(2) by avoiding within the four corners of the law, and

(3) by infringing the law by malpractices.

The first category of avoidance is an avoidance which cannot be helped nor attacked. Neither the Government nor the society is in favour of such *fakirs* who will not own an income, nor pay any taxes.

The second class of avoidance results by the person so arranging his affairs within the four corners of the law that, while remaining within the law, he avoids its incidence. It is an ingenuity which the Government has to combat with not by odious epithets, but by plugging the loopholes or tightening up the provisions.

The last is the most obnoxious manner of tax evasion. It must be condemned out of hand as fraud, deserving the most drastic measure to curb, crush and kill. No Government worthy of its name can tolerate such flagrant abuse of law.

The very idea of evasion seems to create panic in this country. Evasion is everywhere in the world as an aftermath of war. Even in the best governed countries such as the U.K., the amount of evasion is colossal, as can be seen from the following quotation:

"The report of the Controller and Auditor General, Sir Edmund Compton, on Appropriation Accounts for the Revenue Department shows that investigations during the year ended 31st March 1958, into underassessment resulting from fraud and evasion of taxes on income and profits led to the discovery of £21,529,264, involving 14,593 cases."

And yet the U.K. Government has not enacted any such drastic provisions in the law as we find enacted under our Income-tax Act.

In any discussion about tax evasion and avoidance, one must not overlook the wide distinction between the two terms, namely, avoidance and evasion. Avoidance, as I have already mentioned, is legal. Evasion is illegal. Avoidance involves an exercise of ingenuity and is, therefore, commendable. Evasion involves a practice of fraud which is condemnable. One is justified, the other is not.

The Distinction

This reminds me of an incident that happened in the Legislative Assembly of the Government of India in pre-independence days of the British rule. The Income-tax Bill, 1939, was piloted through the Legislative Assembly by Sir James Grigg. Our Governor, Sri Prakasa, who was then one of the members of the Congress Party, rose from his seat and asked a very bold question: "May I inquire of the honorable member whether it is not a fact that all the best laid schemes of tax evasion and avoidance originated in his country?" and pat came the reply after a dramatic pause: "Yes, I agree. But in my country it is an art, here it is a business!"

Therefore, another fine distinction between tax avoidance and evasion is that, while one is a fine art, the other is a sordid business.

Coming to the causes of tax evasion and avoidance, I cannot help mentioning that one of the primary causes of tax evasion is very high, unconscionable rates of taxation. The rates are high and harsh. There is double taxation of the same income. There is taxation on accrual and also on its disposition in case of companies. Besides, tax is levied on unreal incomes, an income which does not exist apart from the paper it is written upon, because an assessable income is an income full of disallowables and incomes which are not really incomes. But the law disregards them as such.

The next cause to my mind is the very complicated provisions of the Act, for instance, Section 44D. If I may be allowed to mention a personal incident as regards this particular provision, it is this:

I had an occasion to consult a very leading British counsel of the Bombay Bar on the implication of this section. At the conference, the counsel read the provision twice or thrice and he found it so complicated that he murmured, in undertones of course, "What the hell does it all mean?" If a leading counsel of several years' standing has to utter these words, you can understand the feeling of an ordinary person trying to understand the Income-tax Act.

Unjust Provisions

Another cause to my mind is the several unjust provisions enacted in the law. Take, for instance, Section 10(2) (vii) which permits, by way of deduction, the difference between the sale price of an asset and its written down value. To this is attached the proviso that, when the sale price realised is higher than the written down value, then it shall be deemed to be profit of the year in which the asset is sold. To the proviso is added a very significant qualification, namely, "whether the business is carried on or not." The implication of this qualification is that, if the asset is sold after the business has ceased and a loss is suffered, the assessee will not be allowed the deduction on the ground that, since the business is closed, Section 10(1) is not attracted and, if Section 10(1) is not attracted, there is no deduction contemplated under Section 10(2). But, if the asset fetches a profit, the Government does not want to lose the tax thereon. Hence the precaution through the proviso "whether business is carried on or not." Is not this provision absolutely one-sided?

Another section, namely, 23A contemplates the factual distribution of assessable income. As I pointed out, assessable income is not real income such as always can be distributed, and yet the law says that, if you do not distribute something which is not distributable, you shall be punished, because you have failed to do the impossible.

Take another section, 2(6A)(e), under which, if a 23A company gives a loan to its shareholders, then to the extent of the accumulated profits possessed by the company, it shall be deemed to be a dividend and tax collected accordingly. Notwithstanding that the whole of such accumulated profits has been subjected to tax in the hands of one shareholder, it is capable of being subjected to tax again for the same amount when another loan next year is granted to another shareholder. In the words of the statute: "A company still continues to hold and possess the accumulated profits."

Do you call this a fair and just provision or a provision enacted only with an eye to revenue? It is only in the Income-tax Act that you find such unjust and unfair provisions. Look at Section 17 of the Estate Duty Act. Here, if a deceased has acquired shares of a company by transferring his assets, upon his death his estate shall be deemed to have possessed not only the market value of shareholding, but, according to Section 17, proportionate net assets of such a company as determined by the ratio of shareholders' average benefits over the average profits made by the company during the previous three years. Inasmuch as the benefits form part of the numerator, the benefits increase the numerator not only by benefits which have been actually received but which could have been received and have not in fact been received. Very often the numerator exceeds the denominator, with the result that the whole of the net assets of the company are deemed to have been passed on to the estate of the deceased. It is not an imaginary case I am quoting, but a factual one where the market value of the investments of a deceased shareholder was Rs. 7 lakhs and the actual value of net assets deemed to pass on his death was computed at Rs. 48 lakhs.

Lame Excuse

When I suggested to the Direct Taxes Enquiry Committee a modest amendment by way of a proviso on the lines of the proviso already existing under Section 44D of the Income-tax Act, namely, that the above section shall not apply if an assessee is able to satisfy the Estate Duty Officer that the transaction has not been tainted by any motive to avoid or reduce taxation, their reply was: "Look at our references. Such a question is beyond the terms of our reference." Yet this Committee had no compunction to suggest numerous amendments to the existing Income-tax Act, with a view to checking evasion or to bringing in a larger revenue.

The next cause is the general atmosphere of suspicion. Suspicion begets suspicion. Honest and dishonest assessess are suspected alike, with the result suspicion has greatly reacted upon the Department, as it can be seen from the fact that a higher officer suspects the lower and the lower suspects the tax-payer. Thus, the vicious circle goes on round and round.

Again, too many and too drastic penal powers, have been given to the officers on the ground that they need them to fight evasion. They have only encouraged abuse and corruption, instead of discouraging these evils.

Remedies

Briefly, the remedies that suggest themselves to my mind are as follows:

1. Make the laws simple. Scrap unjust provisions.
2. Learn to distinguish between honest and dishonest assessees.
3. Show by conduct that you are 'servants' and not "masters" of the public.
4. Create confidence in the taxpayer by fair treatment, by guidance, even if he is unaccompanied by tax consultants.
5. Administer the law in the spirit, not literally.
6. Do not be too anxious to punish—be too anxious to do justice—even if it be stretching a point or two in favour of the taxpayer.
7. Lastly, cases should not be reopened merely on suspicion, hearsay evidence or informers' instigation, but on tangible evidence in possession of the Department.

It is really a very good suggestion to educate the public by a campaign showing that all the taxes collected have been gainfully employed. But the following two quotations culled from the papers do not make encouraging reading:

"According to Mr. Sultan Alam Khan, Deputy Minister of Uttar Pradesh, only Rs. 92 were spent during the current financial year out of a total allotment of Rs. 56 lakhs for development of backward areas of the State. But, according to the Audit Report 1960, the losses due to embezzlements, remission of revenue and infructuous expenditure came to Rs. 98 lakhs in a single year, 1958-59."

Again—

"The Audit Report 1960 of the Bengal Government placed before the West Bengal Legislative Assembly on 4th April 1960, by the Chief Minister, B. C. Roy, lists 40,633 items of objections, the maximum being against the Food Department. The total value of 893 items alone comes to Rs. 25,06,91,000."

In conclusion, let me say that the Government must not get panicky at tax evasion. They must not mix up evasion with avoidance and deal with both in the same way. Reduce tax levels to make for incentive to earn and save honestly. Administer the law fairly and squarely, not with an eye always to collect taxes. Practise vigilance on expenditure. Show that revenue collected is gainfully employed and not embezzled or misappropriated or wasted. Study the problem in all its practical aspects, always conferring with the taxpayers' representatives and enact laws which are workable and are not harsh or arbitrary, based upon budget exigencies.

If only this attitude is accepted, one would soon see a change of heart both among the tax-payer and the tax-gatherer—a consummation devoutly to be wished by every man who has the interest of his country at heart.

WAGE BOARD FOR INDUSTRY

A CORNERSTONE IN THE DEVELOPMENT OF HARMONIOUS RELATIONS

By P. C. Roy

THE draft outline of India's third Five-year Plan envisages the extension of the principle of setting up of wage boards in industries according to circumstances. The institution of wage boards for individual industries as a more effective machinery than the industrial tribunals for the settlement of industrial disputes was suggested by the Planning Commission at the time they formulated the wage policy for the second Five-year Plan. Dwelling on the merit of the wage board system, the Commission observed:

"Statistics of industrial disputes show that wages and allied matters are the major source of friction between employers and workers. The existing machinery for the settlement of disputes, namely, the industrial tribunals, has not given full satisfaction to the parties concerned. A more acceptable machinery for settling wage disputes will be one which gives the parties themselves a more responsible role in reaching decisions. An authority like tripartite wage board, consisting of equal representatives of employers and workers and an independent chairman will probably ensure more acceptable decisions. Such wage boards should be instituted for individual industries in different areas."

Wage Boards Abroad

Wage boards had their origin in Australia, where, in 1896, the first wage boards were formed in the State of Victoria. Known as Special Boards, these bodies of employers and workers, with an independent chairman, were instituted in certain industries noted for sweating, with a view to affording protection to the workers employed in these industries. The success of the system led to its adoption in other Australian States. In 1909, the wage board system was adopted in England, followed later in the United States, Canada, Norway, South Africa and many other countries. In essence, it is a convenient way of bringing the representatives of workers and employers round a table, in order to resolve the conflict in a democratic manner and attain agreement between them by consent without compulsion on either side.

The wage boards normally determine the wage rates, after mutual agreement, and the rates become effective, generally, with the consent of the Government or the central authority which appoint them. In most of the countries, the practice is to appoint one board for each trade which fixes uniform wage rate in that trade throughout the country, though France, Germany, Norway and the Argentine have district boards, which recommend suitable wage rates for different districts, keeping in view the disparities which prevail in each geographical or economic region. The Government appoints a wage board, only when it chooses to do so, though very often representations from workers, employers or other interested sections influence the decision of the Government. In England, under the Wages Councils Act 1945, the Minister of Labour and National Service may act on his own initiative or the approach may come from a Joint Industrial Council. In either case, he refers the proposal to a Commission of Enquiry, before making a Wages Council Order to establish a new Wages Council. In the U.S. and Canada, there is a Permanent Commission which makes its own survey of employments and occupations and appoints a wage board wherever necessary on the basis of the findings made by the survey. It would also be arguable to say that there may be cases, where the workers are unorganised and sweated and the demand for a wage board may never be made. In such eventuality, the initiative and responsibility for setting up a wage board rest as a matter of course with the Government.

Composition and Functions

The composition of the wage board is more or less the same in different countries. The board usually consists of an equal number of representatives of employers together with independent members, one of whom is appointed to act as chairman. While the employers and workers have an equal say in the deliberations of the board, the independent chairman acts as an impartial guide and helps in arriving at a settlement. The number of representative members in some countries is fixed by the law itself. Sometimes, the maximum and the minimum limits only are prescribed. In England, membership consists of representatives of employers and workers in equal numbers, with not more than three "independent members," one of whom is appointed to act as chairman. The Minister is the appointing authority for all the members. The independent members are normally drawn from the legal profession, university professors and social workers, but the Minister has the right to choose anyone he considers suitable.

The law is not uniform in respect to the qualifications of representative members. In the Australian States, the law enjoins that the members must belong to the trade for which the board is to fix the wage rate. In England, "the Ministry endeavours, in so far as possible, to secure persons who are capable of speaking with direct and personal knowledge of (1) the principal centres and districts in which the trade is carried on; (2) the principal types or sections of work in the trade; (3) the principal grades of work in the trade, and (4) male and female workers separately." In Norway, the law, though not so rigid, provides that the representative should "as far as possible" belong to the trade in which the Board is intended to operate. The workers' and employers' representatives have no choice in selecting a chairman, because, in such eventuality no common agreement is likely to be reached. The chairman is a nominee of the Government either nominated from among the impartial members or a Government official. On occasions, a judge is appointed to act as chairman in France.

The primary function of the wage board is to fix wage rates, while other allied problems such as hours of work, holidays with pay, payment for a guaranteed week, sub-standard workers, etc., constitute the subsidiary functions. From country to country, the duties and powers entrusted to the boards vary. In Australia, the law itself prescribes the wide powers to which the boards are entitled. In the U.K., on the other hand, the Wages Councils Act 1945 merely lays down that they will only recommend measures to the Minister, relating to fixing the remuneration to be paid and the holidays to be allowed by the employers.

Merits and Demerits

The chief advantage of the wage board system lies in bringing together the representatives of the employers and workers for an amicable settlement on an equal footing. Persuasion, instead of coercion, provides opportunities to discover a meeting ground for supposedly hostile interests, often without the assistance of the nominated members. Speaking from his personal experience of the Australian system, Professor Hammond said:

"In spite of the fact that the meetings of the Boards are at times the scenes of outbreaks of passion, angry and insulting words passing back and forth across the table, there can be little doubt that the representatives of both parties go away from these meetings with an understanding of the problems and difficulties which the other side has to meet, which is usually lacking in trades where collective bargaining is not resorted to."

The wage board system is better than the fixed wage system. It looks into the wage rates of a particular industry, taking into account its capacity to pay and, at the same time, makes allowance of conditions of living obtaining in the region or regions in which the particular industry is situated. It is definitely better than the arbitration court system as a preventive measure, because the latter operates after the disputes has actually taken place, while the former meets before the zero hour reaches and suggests remedies, so that no contingency is likely to occur in future.

The drawback in the wage board system, however, stems largely from the determination of varying wage rates for different industries by separate wage boards. Workers as a class come to nurse a feeling of being discriminated against. A sense of heart-burning prevails, when workers of a particular industry receive less in wage than those working in another in the same region, as a result of the wage board dispensation. This is, however, an avoidable situation. If the wage boards operating in different spheres hold discussions regarding the wage rates they were to fix, there is, by and large, a likelihood of a uniform policy of wage regulation to emerge, making allowance for the dissimilar conditions obtaining in different industries. The wage boards have also been criticised for their lack of power to implement their recommendations. The boards are under the control of the Government and the rates fixed by them cannot be effective, unless approved by the Minister. In England, the Minister of Labour presides over the destiny of the wage councils in many ways. This defect was sought to be mitigated in America and Canada, where Central Commissions, consisting of employers', workers' and public representatives have been set up, vested with full powers and responsibilities.

Wage Boards in India

The principle of setting up tripartite wage boards for select industries, as recommended in the second Five-year Plan, was accepted by the Government of India and the wage board for the cotton industry was set up on 30th March 1957. Besides an independent member, the board consisted of six members, two each to represent the employers and workers connected with the cotton textile industry and two independent members. On the same lines, wage boards were formed for sugar (26th December 1957) and cement (2nd April 1959) industries. The boards were required to work out a wage structure on the principle of fair wages, as set forth in the Report of the Committee on Fair Wages (1949). It is evident that the wage board system has begun to strike root on the Indian soil. The Industrial Committee on Jute considered the question of setting up a wage board for the jute industry at its meeting held at Calcutta on 11th December 1959 and recommended the appointment of a wage board, which the Government of India have since agreed to. There have been suggestions for institution of wage boards for plantations, mines other than coal, engineering, iron and steel, chemicals and other industries.

The tripartite wage board for cotton textile industry, which submitted its report to the Government of India on 1st December 1959, divided the industry into two categories. The first category included the mills in Bombay City and island (including Kurla), Ahmedabad, Baroda, Billimora, Navsari, Nadiad, Surat, Phagwara, Hissar, Delhi, Modinagar, Calcutta city, the Madras State and Bangalore, while the mills in other centres were grouped in B category. Mill workers in the first category were to get an increase at the average rate of Rs. 8 per month with effect from 1st January 1960. The corresponding increase in the second category would be Rs. 6. Mill workers in both the categories were to be given a flat increase of Rs. 2 per month from 1st January 1962. The dearness allowance was linked with the cost of living index in all centres and in case any centre had no such cost of living index, the index of the nearest centre was to be taken for that purpose. The board also recommended that the merger of dearness allowance with basic wage in each mill should take place at an index which would be equal to three-fourths of the average dearness allowance of the first six months of 1959 and the remaining 25 per cent. of dearness allowance will continue and shall have a flexible character as a link with the rise and fall in the future cost of living. In lieu of the benefits, the board urged that there should be no claim for further revision of minimum wage by the employers and workers for a period of five years from January 1960 and progressive modernisation and rationalisation would take place without retrenchment and loss of earnings to the workers.

The wage board for cement industry in their report submitted in October 1959, recommended a total minimum wage of Rs. 94 per month for an unskilled worker. After deducting Rs. 3 as value of amenities provided by the employers, the balance of Rs. 91 is as follows:

Basic minimum wage	...	Rs. 52.00 nP
Dearness allowance	...	Rs. 31.50 nP
House rent allowance	...	Rs. 7.50 nP

An additional Rs. 7 was recommended for centres in Gujarat and Saurashtra, where the cost of living is higher.

The cement industry made out a *prima facie* case that it has not the capacity to pay as recommended by the board at the existing retention prices of cement. The Board sought to overcome the difficulties by suggesting these three following ways:

(1) increasing the price to the consumer;
(2) reducing the State Trading Corporation's profit and
(3) lowering the excise duty.

It, however, was not in favour of increasing the price of cement to the consumer and wanted the Government to decide from which source the extra expenditure was to be met.

The Government of India were in complete accord with the Textile Wage Board recommendations and urged the employers, workers and State Governments to take immediate steps to implement the recommendations. The emphasis was, once again, on discussion and persuasion in getting over the difficulties in implementation. The State Governments were to assist in ironing out differences between workers and employers in each mill. The Union Government also decided to appoint a National Tribunal to resolve any dispute, regarding the grant of dearness allowance in terms of the wage board. Should there be any serious difference of opinion in regard to interpretation of the recommendations or in implementation of the recommendations, the promise of setting up a suitable machinery was held out. The millowners in Bombay and Ahmedabad have agreed to implement the recommendations of the wage board. In view of certain special handicaps, centres in West Bengal, Uttar Pradesh and South India are showing reluctance, which is likely to melt away as a result of further negotiation.

The Cement Wage Board's report, which was not unanimous, was also accepted by the Central Government which noted the Board's view that the industry had not the capacity to pay and proposed to undertake a study of workload with an assurance that no increase in price to the consumer would take place as a result of the increase in wage.

New Basis

The application of the wage board principle in India has created a new basis for building harmonious relationship between labour and capital. Instead of strife and strike and without resort to a compulsory arbitration, which migh in certain respects be of dubious value to the parties in conflict, the employers and workers have now an opportunity to determine on their own not only the wages but rationalisation and modernisation of the industry also without inflicting hardship on the third party, the commoner. The first step has been taken to link the wage to a need-based minimum. As faith in collective bargaining grows, the dependence on statutory authority will diminish. The session of the Standing Labour Committee, held in January 1960, furnished evidence of the changing climate. When the question of enacting legislation to give statutory authority to the wage board recommendations came up for consideration, the consensus of opinion in the Committee was not in favour of such legislation. The Textile Wage Board ensures peace for a period of five years in the cotton industry. In lieu of the benefits conferred on them, the textile workers would make no demand for revision of wages for five years. They are, on the other hand, expected to lend their maximum co-operation in raising productivity. The stage has also been set, when the Government would be more than willing to strengthen the weak links in the chain of national industries by rendering assistance through agencies like the Industrial Finance Corporation. The wage board has become a cornerstone in the peaceful development of Indian industries in the days to come.—

RESULTS OF NEW INDIA ASSURANCE ENCOURAGING

BONUS TO SHAREHOLDERS OUT OF CAPITAL RESERVE

DESPITE the fact that 1959 was not a particularly good year for general insurers, it was a very satisfactory one for the New India Assurance Company Ltd. (Managing Director: Mr. B. K. Shah, Bombay), the premier general insurance office in the country. The combined net premium from the three departments, namely, fire, miscellaneous and marine, rose by as much as Rs. 1.33 crores to Rs. 8.86 crores, an increase of about 18 per cent. The miscellaneous department accounted for the bulk of the rise in premium, the exact increase being as much as Rs. 93 lakhs. The fire premium also rose by Rs. 39 lakhs, but the premium from marine business remained almost stationary. Claims experience in 1959 showed an improvement over that in the previous year, the claims ratio being lower at 50.2 per cent., as against 51.5 per cent. in 1958, thanks mainly to the favourable experience in the fire department. Commission, expenses and tax ratio, too, was lower at 36.4 per cent., as against 36.7 per cent. in the previous year. Reflecting the better claims experience, the underwriting profit increased to Rs. 72.94 lakhs from Rs. 55.9 lakhs in 1958. The net profit was also higher at Rs. 55.06 lakhs, as against Rs. 52.78 lakhs in the previous year.

Return To Shareholders

As far as the shareholders are concerned, the Directors have sought to maintain the net distribution at Rs. 3.99 per share of Rs. 15 each, as against Rs. 4 in the previous year. But this is being done in the form of dividend of Rs. 4.50 and a bonus of Re. 1.20, both subject to deduction of tax; the amount required to pay the latter, that is, Rs. 11.39 lakhs, is met from the reserve built out of the compensation received from the L.I.C. for its life business. The entire distribution costs Rs. 54.12 lakhs, as against only Rs. 37.98 lakhs in the previous year. How long can the Directors of the Company afford to follow the policy of rewarding the shareholders out of capital reserves? They are probably confident that the Company's business in the coming years will improve to such an extent as to pay a net dividend of Rs. 4 per share without having to dip into the reserves.

The following table indicates the salient features of the working of the Company during the three years ended 31st December 1959:

(Rs. in crores)

	1959	1958	1957
Fire:			
Net Premium	3.47	3.07	3.24
Claims paid and Outstanding	1.20	1.40	1.42
Commission, expenses, etc.	1.48	1.35	1.51
Fire fund	2.14	1.94	2.05
Miscellaneous:			
Net Premium	3.43	2.49	1.64
Claims paid and Outstanding	1.74	1.15	0.85
Commission, expenses, etc.	1.20	0.88	0.60
Miscellaneous Fund	1.92	1.45	1.02
Marine:			
Net Premium	1.97	1.97	1.42
Claims paid and Outstanding	1.51	1.33	1.01
Commission and expenses	0.54	0.53	0.36
Marine Fund	1.97	1.97	1.76
Net Profit	0.55	0.53	0.28
Drawn from Capital Reserve	0.11		
Dividend	0.54	0.38	0.21
Provision for taxation	0.38	0.13	0.12
Carry forward	0.01	0.01	0.01

Department Analysis

An analysis of the fire department's account shows that the premiums, at Rs. 3.47 crores, are higher by Rs. 39 lakhs, as compared with the previous year. Claims aggregated 34.6 per cent., as against 45.7 per cent. in the previous year. Although, on commission account, there has been slight rise, the percentage cost of the expenses of management, taxes and other charges, shows a decrease of 1.7 per cent. After taking credit for interest and strengthening the additional reserve by a sum of Rs. 4.3 lakhs, the account shows a profit of Rs. 66.2 lakhs or 19.1 per cent., as against Rs. 50.6 lakhs, or 16.4 per cent., in the previous year. The fire fund now stands at Rs. 2.14 crores, as against Rs. 1.94 crores and, in terms of the premium income, the fund works out at 61.7 per cent.

The miscellaneous department has shown a very substantial increase in business. The premium income has recorded an increase of Rs. 93.4 lakhs and now stands at Rs. 3.43 crores. The claims ratio has, however, shown an increase of 4.6 per cent. over the previous year. Although the commission cost records an increase of 1 per cent., the expenses of management, taxes and other charges have declined by 1.4 per cent. as compared with 1958. After taking credit for interest and strengthening the additional reserve by Rs. 9.7 lakhs, the department has earned a profit of Rs. 7.9 lakhs or 2.3 per cent., as against Rs. 8.0 lakhs or 3.2 per cent. in the previous year. The miscellaneous fund now stands at Rs. 1.92 crores, as against Rs. 1.45 crores at the end of 1958 and, in terms of the premium income, the Fund works out at 56.0 per cent.

The net premium income of the marine department remained at Rs. 1.97 crores, the same as in the previous year. Claims cost has, however, gone up by 9.0 per cent. to 76.7 per cent. As a result of the corrective measures that are being taken, it is expected that the claims cost would show improvement in 1960. The expenses of management, taxes and other charges have slightly gone up by 0.3 per cent. The commission cost also has risen by a like per cent. On the basis of 100 per cent. premium reserve for unexpired risks, the department, after taking credit for interest on departmental funds, has shown a small loss of Rs. 1.2 lakhs. The marine fund now stands at the same figure of Rs. 1.97 crores as last year.

After meeting claims and expenses of management and providing for reserves for unexpired risks and additional reserves in both the fire and miscellaneous departments, an underwriting profit of Rs. 72.94 lakhs is transferred to the profit and loss account. This, together with other incomes, less outgo, gives a gross profit, subject to tax, of Rs. 92.81 lakhs, as against Rs. 65.72 lakhs in the previous year.

Out of this, a sum of Rs. 37.75 lakhs is set apart as provision for taxation, leaving a net profit of Rs. 55.06 lakhs. The amount brought in from the previous year's account is Rs. 1.22 lakhs, making in all Rs. 56.28 lakhs. Out of this, a sum of Rs. 2 lakhs has been transferred to the reserve for doubtful debts, Rs. 7 lakhs have been earmarked for the exchange reserves and Rs. 3 lakhs for the investment reserve.

As a result of the year's operation, the total funds of the Company have increased by Rs. 1.03 crores to stand at Rs. 10.14 crores as on 31st December 1959.

Funds and Reserves

The following table indicates the progressive strengthening of the funds and reserves of the Company during the five years ended 31st December 1959:

	1959	1958	1957	1956	1955
Funds: (Rs. in crores)					
Fire Depart	2.14	1.94	2.05	1.88	1.81
Miscellaneous Dept.	1.92	1.45	1.02	0.92	0.74
Marine Dept.	1.97	1.97	1.76	1.65	1.56
Total	6.03	5.36	4.83	4.45	4.11
Free Reserves: (Rs. in lakhs)					
Capital reserves	53.8	51.6	51.6	—	—
General reserves	100.0	100.0	100.0	100.0	100.0
Premium on Shares	0.6	0.6*	36.2	36.2	36.2
Dividend equalisation reserve	30.0	30.0	22.0	22.0	20.0
Exchange reserve	15.0	8.0	5.0	5.0	5.0
Investment reserve	25.0	22.0	22.0	22.0	9.0
Total	224.4	212.2	236.8	185.2	170.2

*In 1958, a sum of Rs. 35.60 lakhs out of the 'Premium on Shares' was utilised for issue of 'Bonus' Shares.

The Company had claimed from the L.I.C. interest on compensation as the payment had been considerably delayed. The L.I.C., however, did not concede this claim, but made an *ex-gratia* payment of Rs. 2,19,600 which has been accepted in full satisfaction of its claims.

The Company's investments in shares and securities as at the end of 1959 stood at Rs. 6.72 crores of which nearly 50 per cent (Rs. 3.34 crores, to be precise) were in equities with a market value of Rs. 4.09 crores.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/- you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Indian Railways Conference Association Coaching Tariff No. 17.

The Station Master of the nearest station will give you detailed information if you contact him.

EXPORT PROMOTION OF LEATHER

IMPORT DUTY ON WATTLE BARK MUST BE ABOLISHED

INDIA has the largest livestock population in the world, which lends it an important place in the production and export of raw and tanned hides and skins as well as finished leathers. The quality of domestic hides and leather products, however, has not generally been quite satisfactory, mainly on account of the fact that the major part of hides are procured from "dead animals," and not from slaughtered ones as in foreign countries. Besides, the general health of Indian cattle is relatively poor, largely as a result of lack of organised animal husbandry on any significant scale. It is claimed that Indian manufacturers are devoting greater attention to improve the quality of their products and boosting their exports. But how far this is true one cannot say. A fundamental reform is required in animal husbandry if the aforesaid basic defect is to be removed. None has effectively answered the question whether such a reform will be feasible in this country, with its strong religious and cultural ties which are against slaughter of animals.

The export performance of the industry was quite impressive last year, but this must be attributed largely to favourable conditions of world trade. It would be a mistake to jump to the conclusion from this trend that the practices under which hides and skins are procured or leather is manufactured have undergone any definite improvement. The total foreign exchange earned from the export of hides and skins, leather and allied goods, including footwear rose from Rs. 28 crores in 1958 to Rs. 42 crores in 1959. Of this, leather alone accounted for Rs. 29 crores, as against only Rs. 18 crores in 1958. Exports of hides and skins fetched about Rs. 11 crores, as compared with Rs. 7 crores in the previous year. Export of leather footwear, too, made considerable headway, from Rs. 1.70 crores to Rs. 2.50 crores.

Growth of the Industry

The expansion in exports of leather goods reflects, in large measure, the trend in the growth of indigenous tanning and leather industry. Production figures relating to the organised sector of the industry are available, while there are no authentic data relating to small units engaged in the industry. In the organised sector, the production of vegetable tanned hides rose from 2.07 million hides (in terms of cow-hides—one buffalo hide is equal to two cow hides) to 2.42 million hides in 1959. The installed capacity increased from 3.86 million hides to 4.44 million hides. This was the result of the establishment of three more units, and also of better utilisation of the existing capacity. The production of chrome tanning of hides, however, declined from 678,000 to 610,000 in 1959, although the total capacity was steady at 1.6 million hides. The lag in the production of chrome tanning of hides was due to shortage of good quality raw hides, following the ban on cow slaughter enforced in a number of States. The production of western type footwear remained more or less steady at 4.2 million pairs. There was, however, an increase in the output of Indian type footwear, that is, from 3.29 million to 4.03 million pairs, thanks to better domestic demand. The production of glue showed an upward trend, but pickers suffered some setback. The output of myrabolan was, however, steady.

It may be noted, in this connection, that the programme of industrial development in the second Plan does not envisage a substantial expansion of capacity in the organised sector of tanning and footwear industries. The additional demand for the items is proposed to be met as far as possible by a further utilisation of the existing capacity in the organised sector and by development in the cottage and small-scale sector. But no such restrictions apply to the manufacture of industrial leathers, specially leathers and leather products. In pursuance of this policy, additional capacities for the manufacture of leather beltings, picking bands and leather boards have been licensed. Additional capacity has been licensed for picking bands. Besides, adequate capacity has been created for leather belting. As regards glue technical gelatine, the indigenous production with the creation of additional capacity is more than adequate to meet the internal demand. At present, only small quantities of special types of are imported in the country. Myrabolan extract industry is working below its installed capacity. The bulk of its production is exported.

It is only by ensuring a sustained increase in production that it will be possible to expand exports of leather. The major drawback in the way of increasing production is the shortage of raw skins of good quality. Drawing special attention to this defect, Mr. M. J. Jamal Moideen Sahib, Chairman of the Leather Export Promotion Council, stated, while addressing the third annual meeting of the Council at Madras a few days ago, that the supply of raw materials for leather industry could not usually be increased, as in the case of agricultural and mineral products, for the simple reason that "no animal will be killed for the sake of its skin or hide, since the value of the animal as a whole is many times more than its wrapper." The difficulty is particularly evident in the case of India, with a predominantly vegetarian population. Mr. Moideen Sahib, therefore, made a fervent plea to the Government to place the import of raw skins and hides from all countries under the O.G.L., in order to ensure regular supply of raw materials to the leather industry. He added that there was not much possibility of importing huge quantities under the O.G.L., since many countries did not have much exportable surplus. Only, it would enable the processors to buy their raw materials as and when conditions were favourable and some surplus was found somewhere.

With a view to helping the leather industry to secure its raw materials, the Government has been regulating the export of raw hides and skins. Thus, in pursuance of the representation made by the Council, the Government introduced a quota licensing system in respect of export of raw goat skins—a raw material vitally required by the tanning industry. The Council felt that this measure was not adequate and, therefore, once again approached the Government with a plea for restricting the export of raw goat skins to 50 per cent. of average of past quinquennium ending 1958. This suggestion was accepted by the Government of India and implemented with effect from the beginning of June 1960.

Wattle Bark and Extract

Another problem facing the industry, according to Mr. Moideen Sahib, is with regard to the import of wattle bark and wattle extract used by the industry. The Government has introduced an import duty of 5 per cent. and 10 per cent. on wattle bark and extract, respectively. Mr. Moideen Sahib wanted this duty to be completely abolished; for almost all wattle bark and extract was used by the East India tanning industry which was essentially established for catering to the foreign markets and which actually exported its entire production (except those which are found unfit for export after tanning, amounting to about 15 to 20 per cent.). He felt that import duty itself was fundamentally wrong and opposed to international procedures, as it was actually passed on to the overseas buyers. A committee had been set up for examining this question last year. It is to be hoped that the findings of the Committee will be announced without further delay. In this context, Mr. Moideen Sahib added that, although the Government had promised to allow a drawback of this duty on exports more than over three years back, nothing had been done to implement this scheme.

Competition from Pakistan

Pakistan has emerged as a strong competitor to India's exports of leather and leather goods, thanks to a large amount of subsidy and other active encouragement given by the Government of Pakistan. Alluding to this development, Mr. Moideen Sahib observed:

"I am rather reluctant to point out that our economy in skins and hides trade is being affected to some extent with the recent action taken by Pakistan, our neighbour. Pakistan, with a view to encouraging her export of tanned leathers, has offered to the local industries a 40 per cent. subsidy on the export of tanned leathers, including those even in wet blue condition, which is only a midway process. Before June 1957, as long as the import of raw skins and hides was on O.G.L., we used to get a good supply of raw hides and skins from Pakistan. Since the removal of imports of raw skins and hides from O.G.L., we have not been getting any of them, because, for one thing, Pakistan was forced to launch upon an industrialisation scheme and we were also denied the benefit of those raw skins and hides which used to be smuggled across the borders. Now I am afraid that, after the introduction of the subsidy by Pakistan, the position is reversed, that is, there is a possibility of some raw skins and hides being smuggled across the border from this side to earn foreign exchange for Pakistan. I am constrained to point out here that the levy of import duty on wattle bark and wattle extract and the sales tax on the tanning industry may help to some extent such unauthorised dealings. Of course, I cannot assure you that, if the import duty on wattle bark and wattle extract and sales tax either on the purchase or sales of hides and skins are abolished, it would encourage more export from India, but I can certainly say that such burden of taxation would encourage the flight of our raw material across the borders."

It is essential that the Government should assist, in all possible ways, an industry which earns substantial foreign exchange for the country, from falling a victim to unhealthy competition in world markets. Mr. Moideen Sahib urged the Government to subsidise, at least in a small way, the export of high class finished leathers and leather goods. He said that countries such as Pakistan and France had been resorting to subsidies, in spite of their being members of the G.A.T.T. He called upon the Government to come to the rescue of the industry and ensure its steady development.

THE TANNER ANNUAL

The annual number brought out for the first time by *The Tanner* (Editor: Mrs. L. S. Raja), the monthly journal devoted to the tanning industry, carries twenty articles on economic and technical aspects of tanning and allied industries, contributed by experts both in this country and abroad. Of particular interest is a review of the world supply position of hides and skins by Mr. Gordon Douglas. To quote Mr. Douglas:

"The hide supply position has undergone a major revolution in the past 25 years as many countries including India and Australia, previously large exporters of raw hides, now process increasing quantities to meet the major part of their own expanding leather requirements and export any surplus in the form of crust vegetable tanned or chrome side leather, etc. Countries which may be expected to increase their cattle population include Australia, the U.S.S.R. and China; this will ensure that within the next decade larger quantities of hides will be available to meet their own internal needs and also a surplus for export to other countries. . . . The pattern of the world tanning industry will show changes especially in the more undeveloped countries where, as industrialisation increases, greater demands will be made for leather with greater production in countries owning these primary products. At present, through natural and man-made defects the value of many hides and skins is considerably reduced. It is in the interest of both the primary producer and the tanner that more attention is given to their improvement. Simple and inexpensive methods are now available for better hide preservation and by their application in all producing countries; the number available could be greatly increased."

In an article on the problems facing the East India (E.I.) tanneries, Mr. R. Y. Gaitonde advocates a co-operative production programme for the small units concentrated in some parts of Madras, which he considers necessary to eliminate unhealthy competition among them. Among other articles, mention may be made of "Future of India's Leather Trade" by Mr. Michael George, "Petroleum Products for the Leather Industry" by Mr. T. V. Jagadisan, "Mechanisation in the Tannery" by Mr. H. S. Stebbing, and "Physics in Leather Technology" by Dr. N. Ramanathan. The number will be widely welcomed by those connected with tanning and leather industry and trade, no less than by students of leather technology.

BALANCE OF PAYMENTS IN THE FIRST FOUR YEARS OF SECOND PLAN

The view that balance-of-payments difficulties are inherent in the very process of economic development is expressed in an article reviewing India's balance-of-payments position during the first four years of the second Plan (1956-60) appearing in the July issue of the *Reserve Bank of India Bulletin*. In the course of industrial development in a country, its import requirements do not go down continuously, though the composition of imports may change radically. At the same time, the process of industrialisation does not necessarily produce an export surplus. This, together with the fact that world trade in primary commodities has not expanded in the last few years as much as in manufactures, places an underdeveloped country at a disadvantage. Consequently, according to the Reserve Bank's review, the reliance of developing countries on a large amount of foreign assistance becomes imperative for the implementation of their development programmes.

The review reveals that the actual imports were in excess of the original Plan estimates in the period under review. This was particularly so in 1956-57 and 1957-58. There was a decline in the following two years, owing to downward revision of the public sector outlay in 1958-59. The review points out that out of the average annual payment of Rs. 1,071 crores, about Rs. 730 crores or more than 70 per cent. represented maintenance imports, the remainder being imports for development purposes. In mid-1957, severe restrictions were imposed on imports on private account which consequently recorded a sharp decline in the second and third years of the second Plan. Imports, except for raw materials, all categories of private imports declined during the four years. Raw ma-

PROFIT OF HOWRAH JUTE SUFFERS A SETBACK

DIVIDEND PRUNED—SHORT-TERM OUTLOOK NOT FAVOURABLE

THE year ended 31st March 1960 has not proved to be a favourable one for the Howrah Mills Company, Ltd. (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta), notwithstanding the substantial improvement in offtake during the major part of the year and the reduction of mills' stocks of jute goods. In fact, mills had to unseal their looms by 4 per cent. in two stages to cope with the rising demand for gunnies. The favourable trend in offtake of jute goods was, however, offset by a disproportionate rise in prices of raw jute towards the end of 1959. In addition, the Company's working was adversely affected by the "intransigence" on the part of the labour force. "Persistent 'go-slow' tactics and acts of indiscipline, culminating in arson, involving the destruction of some of the stock in process in the batching department of No. 1 Mill," the Directors say, "forced the Company to declare a lockout on 14th January 1960. The mills were reopened on 18th January, in view of the assurances of good behaviour received from the works committee. These assurances were belied and the mills had to be closed again on 20th January and were not reopened until 18th February 1960."

The aforesaid adverse developments are duly reflected in sales, which have dropped from Rs. 3.77 crores to Rs. 3.40 crores and in the gross profit which has gone down from Rs. 31.48 lakhs to Rs. 27.50 lakhs. The profit would have been lower still but for some extraneous income to the tune of Rs. 7.52 lakhs representing profit on sale of fixed assets and stores, insurance claim, rent of leased premises, etc., in contrast to this, the "other income" in 1958-59 amounted to no more than Rs. 34,974. The net profit shows a fall from Rs. 16.73 lakhs to Rs. 14.06 lakhs.

In consonance with the trend in profits, the transfer to the reserves has been reduced from Rs. 8.08 lakhs to Rs. 3.87 lakhs and the net distribution to ordinary shareholders, too, has been pruned from 10 per cent. to 8.75 per cent. The Directors have recommended a gross dividend of 12.5 per cent., subject to deduction of tax. It will be recalled that the dividend on ordinary shares was resumed only last year after a lapse of two years, following the very encouraging results for 1958-59, but it has not been possible to maintain it in the very next year for reasons mentioned above. This only indicates how uncertain the fortunes of the jute industry are. The Directors have not followed the practice of many other companies of grossing the dividend on the tax-free preference shares, but have recommended the deduction of tax. Accordingly, the net return on the Company's 7 per cent. tax-free preference shares is only 4.9 per cent. The Directors say that they are advised that the effect of the amendment made under the Finance Act 1960 is that, notwithstanding the ...ing of the relevant clause in the Articles ... income-tax and, where appro... the prescribed rates have ...ross dividend of 7 ...preference share ...

...hows how ...ictuated ...

six months to end 3rd September 1960. The Directors, at the same time, successfully concluded negotiations for leasing the Company's No. 3 Mill, which has been lying idle since its closure in February 1957, to Remington Rand of India Ltd. for a period of twenty years, with break clauses after ten years and fifteen years, with effect from 1st September 1959.

Although there has been a gradual improvement in the efficiency of the Company's mills since their reopening in February last, the Directors do not take an optimistic view of the outlook for the current year, in view of the adverse disparity between the prices of raw jute and finished goods, due to the shortage of fibre. The Government of India no doubt granted licences for the import of a substantial quantity of cuttings from Pakistan. This was followed by the unsealing of a further 1 per cent. of the looms from 1st May 1960. "But it quickly became apparent," the Directors add, "that the supply of jute from the current season's crop was still considered inadequate and prices continued to rise to completely uneconomic levels." Consequently, the I.J.M.A. approved of voluntary sealing by such of those members who wished to do so with effect from 7th June 1960. The extent of the sealing was left to the discretion of individual mills according to their raw supply position. Accordingly, the Directors of the Howrah Mills closed down 5½ per cent. of the registered loomage with effect from that date, bringing the total sealed loomage to 14½ per cent. It remains to be seen how far these remedial measures will alleviate the adverse effects of the raw jute shortage.

Notwithstanding the heavy withdrawals from reserves in years of adverse results, the finances of the Company are still in fairly fine fettle. The paid-up capital of Rs. 91.87 lakhs is supplemented by reserves and surplus aggregating Rs. 40.68 lakhs. The borrowings from banks and others stand reduced from Rs. 89.29 lakhs as at the end of March 1959 to Rs. 31.72 lakhs. The other current liabilities and provisions amount to Rs. 44.83 lakhs. The gross block of the value of Rs. 224.88 lakhs has been written down to Rs. 89.03 lakhs. The current assets at Rs. 120.08 lakhs far exceed the current liabilities and provisions and include partnership capital (representing share of Jardine Mills agencies) amounting to Rs. 13.06 lakhs.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 23.37 *ex-div.*, at which rate the yield on them works out to 3.7 per cent. per annum, free of tax.

WEALTH TAX ASSESSMENT

In an order issued by the Income-tax Appellate Tribunal in the case of the Raipur Manufacturing Company, Ltd., Ahmedabad, in cross appeals against the order of the Appellate Assistant Commissioner, the Tribunal has held that:

(a) income-tax liability should be taken into account before ascertaining the net wealth;
(b) wealth-tax liability accrues on the valuation date and should, therefore, be excluded in arriving at the net wealth;
(c) for the purpose of arriving at the net value of the assets of a business, the Income-tax Officer should take the original cost price as shown by the books of account and deduct therefrom such depreciation as has been allowed under the Income-tax Act, and
(d) the Income-tax authorities are right in not taking into account the dividend declared after the valuation date as a liability or a debt of the assessee's busi...ss.

COCHIN MALABAR EARNS LESS

COSTS MOVE UP

THE lower earnings and heavier incidence of taxation have been cumulatively responsible for the cut in net dividend on the ordinary shares of the Cochin Malabar Estates Ltd. (Managing Agents: Messrs. Peirce Leslie & Co. Ltd., Calicut, Kerala) for the year ended 29th February 1960. The Directors have no doubt recommended a slightly higher gross dividend of 17½ per cent., as against 15 per cent. paid for the previous year. Since this is subject to deduction of tax, the net return works out to only 12¼ per cent. Even the proposed dividend is to be met partly by dipping into the general reserve. The Directors could have easily maintained the net dividend, despite the lower gross profit, but for the larger tax liability referred to below.

Notwithstanding a large crop harvested, namely, 978,827 kilograms, as against 899,559 kilograms in 1958-59, the gross profit of the Company has dwindled from Rs. 17.22 lakhs to Rs. 14.25 lakhs. The previous year's profit, it may be noted, included a profit of Rs. 1.29 lakhs on sale of movable assets of one of the Company's estates. Even after making allowance for this extra income, the Company's profit for the year under review is lower than that for 1958-59. The explanation for this is to be found in the fact that while the estate cost of production had gone up from 254.26 cents to 257.62 cents per kilogram and all-in-cost from 288.59 cents to 292.76 cents, the average price realised was a shade lower at 399.94 cents, as compared with 400.50 cents per kilogram. The decline in net profit is much steeper, such having fallen from Rs. 6.97 lakhs to Rs. 2.60 lakhs, the lowest level since 1949-50, thanks to the substantially larger provision that the Directors have had to make for taxation. Last year, it may be noted, they had provided Rs. 7.70 lakhs for the tax liability, but the Company had actually to pay Rs. 1.32 lakhs in excess of the provision, as a result of the disallowance of replanting expenses and a portion of the general charges on an acreage basis in the computation of Kerala agricultural income-tax relating to immature areas. This short-provision has had to be made good this year and this is included in the provision of Rs. 9.22 lakhs made for taxation in respect of the year under review. The net profit has been supplemented by the withdrawal of Rs. 2.25 lakhs from the general reserve to pay the ordinary and preference dividends, as will be seen from the following comparative table:

(In rupees)

	For the year ended February			
	1960	1959	1958	1957
Sale proceeds	49,09,453	47,42,057	37,70,080	37,70,066

* On the increased capital of Rs. 26.01 lakhs raised by the capitalisation of its 8.07 lakhs from the general reserve.
† Subject to deduction of tax.

The total area of the Company's properties is 7,997.19 acres, of which 4,734.55 acres are under mature rubber and 1,387.97 acres under immature rubber. Fifty-five acres were replanted during the year, as against 112.60 acres in 1958-59 and 4.68 acres of immature rubber were brought into tapping, the corresponding area for the previous year being 53.29 acres. 29.32 acres were newly planted. This brings the replanted area of the Company to 662.47 acres and new clearings to 725.50 acres.

The estimates for the current year indicate a crop of 1,117,531 kilograms to be harvested at an estate cost of 266.57 cents per kilogram and an all-in-cost of 292.08 cents per kilogram.

The estimated capital expenditure for the current year is Rs. 4 lakhs; this is on top of Rs. 2.63 lakhs spent during the year under review. The gross value of the block account as at the end of February 1960 is Rs. 52.56 lakhs and the book value thereof is Rs. 44.39 lakhs. The current assets amount to Rs. 18.61 lakhs exceeding the current liabilities and provisions,

(*Continued in previous column*)

EQUITABLE COAL CUTS DIVIDEND

PROFIT LOWER DESPITE HIGHER OUTPUT

THE Directors of the Equitable Coal Company Ltd. (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) have recommended a drastic cut in the dividend on ordinary shares of the Company for the year ended 31st December 1959 to 7½ per cent. after having maintained it at 15 per cent. for the previous five years successively. What is more, even this lower dividend is subject to deduction of tax, in terms of the Finance Act 1959, whereas the previous years' distributions were not so. However, as the Company had not been paying income-tax, the dividends of earlier years were taxable in the hands of the shareholders at the appropriate rates.

The proposed cut in dividend is in consonance with the decline in the Company's earnings. The gross profit, for instance, has dropped from Rs. 19.24 lakhs (in 1958) to Rs. 17.04 lakhs, the lowest level touched since 1954. It may be noted here that the setback in profit is in continuation of the downward trend since 1955, when the gross profit had stood at a high of Rs. 33.73 lakhs. Thus, in the course of the last four years, the Company's gross profit has dwindled by nearly 50 per cent. The net profit, too, which had successively fallen from Rs. 14.83 lakhs (in 1955) to Rs. 6.65 lakhs in 1958, has further receded to a low of Rs. 3.85 lakhs in the year under review. It may be of interest to note here that the Directors had followed a steady dividend policy during the last four years, despite the declining profit, but they have not been able to stick to this policy in respect of the year under review, as the net profit is not sufficient to maintain the dividend level.

After adding to the net profit a sum of Rs. 4.09 lakhs representing adjustments in respect of previous years and excess provisions written back—the corresponding additions in 1958 were Rs. 7.92 lakhs—the Directors have strengthened the reserves and provisions by Rs. 4.64 lakhs, as against Rs. 9.50 lakhs ploughed back a year ago. The Company is one of those which are deducting tax at source at the prescribed rates on the tax-free preference shares, instead of maintaining the net return by grossing the dividend and deducting the tax from the gross amount.

An anomaly of the Company's working during the year under review is that the profit has dwindled, despite an increase in output and despatches of coal, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956

* Subject to deduction of tax.

The additional production attained during 1959 has not, as might have been expected, resulted in an improvement in the Company's profit, as compared with the previous year. But this is not a peculiar feature of 1959 alone. As readers will observe from the table above, while output and despatches have increased over the last three years, the profit has taken a downward trend. The relations between labour and management were good throughout the year. Explaining the reasons for the adverse results for the year under review the Directors observe:

"The steady decrease in the quantity of selected grades of coal, particularly selected 'A' grade, being produced which has not been accompanied by a proportionate reduction in working costs is one reason for the deterioration in your Company's results. The abnormally heavy and concentrated rainfall towards the end of the 1959 monsoon season was also a contributory factor, as it brought about a considerable increase in pumping charges and an appreciable loss of production due to working places being restricted at most of your Company's collieries for varying periods upto six weeks and to Jamuria 5 and 6 Pits Colliery being closed completely for two months.

"The price increase of 50 nP per ton effective from 25th August 1959 and the enhancement of the ceiling limit for sandstowing assistance from Re. 1.50 to Rs. 2.00 per ton with effect from 1st September, both granted on the basis of the recommendations contained in the report of the Coal Price Revision Committee, were of considerable benefit to your Company, but did not offset the effect of the adverse factors obtaining during the year."

The Directors, however, point out that, with the further increase in coal prices and in the quantum of assistance for sandstowing which have been granted early in 1960, the Company's colliery costs have become more economic and the prospects for the current year are brighter.

The balance-sheet of the Company as at the end of 1959 shows that the Company continues to rely more on its internal resources and bank borrowings to finance its development expenditure than on capital issue. For the Company's paid-up capital has remained unchanged at Rs. 33.64 lakhs since 1940. The reserves and surplus (other than those for miners' amenities and workmen's compensation) amount to Rs. 101.22 lakhs and loans stand at Rs. 149.99 lakhs (inclusive of 5½ per cent. 1963-68 debentures amounting to Rs. 46.86 lakhs). The other current liabilities and provisions aggregate Rs. 115.99 lakhs. The total current liabilities and provisions thus amount to Rs. 265.98 lakhs, as against which there are current assets aggregating Rs. 257.13 lakhs. In pursuance of its programme of development, the Company spent during the year Rs. 25.47 lakhs on additions to the gross block. This was on top of Rs. 118.98 lakhs expended during the previous five years alone. The gross block at Rs. 477 lakhs has been well written down to Rs. 143.71 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 28 *ex-div.*, at which rate and on the basis of the latest dividend, they provide a yield of 1.9 per cent. per annum, free of tax.

BOOM ON GERMAN STOCK EXCHANGES

(By A Special Correspondent)

The basic capital of the 638 joint-stock corporations in the Federal Republic of Germany the shares of which are traded on German stock exchanges had a face value of DM 14,573 million by the end of 1959. At that time, these shares were quoted at DM 70,000 million and by June 1960, quotations had risen to an estimated DM 90,000 million. As at the end of June, the index of quotations of these shares, passed for the first time, the level of 700 (31st December, 1953=100). The special index for shares of the road vehicles industry even passed the 3,000-mark.

Apart from the general economic upswing, there are two main reasons for this rather amazing development and the discrepancy between face, and quoted, values. The first is the fact that German shareholders cashed no dividends at all for many years. While in 1938, the last peace year prior to World War II, average dividends in Germany amounted to 6.4 per cent. of the face value, they were practically zero from 1944 through 1952. Only in 1955, averaging 6.31 per cent., they somewhat approached the pre-war figure. Last year, the average of dividends paid in W. Germany was 10.63 per cent. There was nothing sensational about that. For, taking 1938=100, the average hourly wage of an industrial worker had reached 300 index points at the end of last year as compared with only 166 points for the average dividend. Also, payment of no, or small, dividends increased the internal value of the companies and was expressed in steadily rising quotations.

More decisive, however, is the second reason, namely, the scarcity of shares on the German stock exchanges. The basic capital of all W. German and W. Berlin joint-stock corporations had been increased by only 30 per cent. from 1954 to 1959. One of the reasons for the reluctance of German companies to issue more shares lies in tax legislation. Dividends are taxed twice—for the first time when the company pays taxes on distributed profits, and for the second time when the shareholder has to pay income-tax on his revenue from dividends. For the same reason, prior to temporary tax privileges for such issues, only small quantities of free shares were issued to old shareholders to adjust the basic capital.

It seems, however, that the situation on the stock market will be eased this year. While during last year's first five months, DM 323.4 million of shares, including DM 2.1 million free shares were put on the market, new issues during the same period this year aggregated DM 1,022.1 million, including DM 241.9 million of free shares. If, nevertheless, quotations still kept rising, it must be due to foreign purchases on German stock exchanges, after the recent Bundesbank's ban on the payment of interest on deposits of foreigners in German banks.

COMPANY MEETINGS AND DIVIDENDS

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 18th August 1960. Dividend: 7½ per cent. or Re. 0.75 per ordinary share, subject to deduction of tax. Transfer books remain closed from 5th to 18th August 1960, both days inclusive.

BALMER LAWRIE AND CO., LTD. Annual General Meeting, Calcutta, 19th August 1960. Dividend: 20 per cent. or Rs. 20.00 per share, final (making a total of 25 per cent.), subject to deduction of tax. Transfer books remain closed from 1st to 19th August 1960, both days inclusive.

HATTIKHIRA TEA CO., LTD. Annual General Meeting, Calcutta, 26th August 1960. Dividend: Re. 0.50 per share, subject to deduction of tax. Transfer books will remain closed from 18th to 26th August 1960, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 27th August 1960. Dividend: 11 per cent. or Rs. 5.50 per share, subject to deduction of tax, payable on and after 7th September 1960. Transfer books will remain closed from 20th to 27th August 1960, both days inclusive.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Tennur, Tiruchirapalli, 27th August 1960. Dividend: 9 per cent. or Re. 0.90 per ordinary share (includes interim dividend 4½ per cent.) subject to deduction of tax. Transfer books remain closed from 2nd to 27th August 1960, both days inclusive.

PHILIPS INDIA LTD. Annual General Meeting, Calcutta, 27th August 1960. Dividend: 12 per cent. or Re. 1.20 per share, subject to deduction of tax, payable on or after 26th September 1960. Transfer books will remain closed from 8th to 27th August 1960, both days inclusive.

BASANTI COTTON MILLS LTD. Annual General Meeting, Calcutta, 29th August 1960. Transfer books remain closed from 2nd to 29th August 1960, both days inclusive.

DHELAKHAT TEA CO., LTD. Annual General Meeting, Calcutta, 30th August 1960. Transfer books will remain closed from 16th to 30th August 1960, both days inclusive.

BALLY JUTE CO., LTD. Annual General Meeting, Calcutta, 31st August 1960. Dividend: Rs. 25.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 31st August 1960, both days inclusive.

BIRLA JUTE MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 31st August 1960. Dividend: Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 31st August 1960, both days inclusive.

SIRDAR CARBONIC GAS CO., LTD. Annual General Meeting, Bombay, 6th September 1960. Transfer books will remain closed from 27th August to 6th September 1960, both days inclusive.

POLYCHEM LTD. Annual General Meeting, Bombay, 7th September 1960. Dividend: Rs. 5.50 per ordinary share, payable on and after 21st September 1960. Transfer books will remain closed from 16th August to 7th September 1960, both days inclusive.

TRITON INSURANCE CO., LTD. Annual General Meeting, Calcutta, 7th September 1960. Transfer books will remain closed from 24th August to 7th September 1960, both days inclusive.

STRAW PRODUCTS LTD. Annual General Meeting, Bhopal, 19th September 1960. Dividend: 15 per cent. or Re. 1.50 per ordinary share, subject to deduction of income-tax, payable on or after 26th September 1960. Transfer books will remain closed from 30th August to 19th September 1960, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 21st September 1960. Final dividend of 3 per cent. or Re. 0.30 per ordinary share (making a total Re. 0.80 per share, for the year), subject to deduction of tax, for the year ended 31st March 1960. Transfer books will remain closed from 29th August to 21st September 1960, both days inclusive.

JEEWANLAL (1929) LTD. Interim dividend of 3½ per cent. or Re. 0.35 per ordinary share, subject to deduction of tax, for the year ending 31st December 1960, payable on or after 22nd August 1960. Transfer books will remain closed from 14th to 22nd August 1960, both days inclusive.

SURAT ELECTRICITY CO., LTD. Final dividend of Rs. 5.00 (making a total of Rs. 7.50 for the year), per ordinary share, subject to deduction of tax, for the year ended 31st March 1960. Transfer books will remain closed from 17th August to 1st September 1960, both days inclusive.

COMPANY REGISTRATIONS

LAWKIM PRIVATE LTD. Business: Manufacture of electric machines and equipments. Authorised capital: Rs. 25,00,000. Private company. Address: 16, Horniman Circle, Fort, Bombay-1.

SYNOPSES OF COMPANY REPORTS

Standard Coal Co., Ltd.

THE directors of the above Company (Secretaries: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The profit and loss account after providing for all charges and making a provision of Rs. 1,00,791 (Rs. 1,51,326) for taxation shows a profit of Rs. 130,646 (Rs. 3,26,238) to which is added the balance brought forward from the previous year of Rs 14,796 (Rs. 9,790) making a total of Rs. 1,45,442 (Rs. 3,36,028). The directors have transferred to general reserve Rs. 581 (Rs. 1,88,632) leaving a balance available of Rs. 1,44,861 (Rs. 1,47,396). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the ordinary shares at the rate of 15 (10 per cent. free of tax) per cent. per annum, subject to deduction of tax, absorbing Rs. 1,20,000 (Rs. 1,00,000) and by carrying forward a sum of Rs. 24,861 (Rs. 14,796 after making a provision of Rs. 32,600 for payment under labour dispute). The increased dividend has been recommended after taking into consideration the tax saved due to the present reduced rate of tax.

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 1,50,000 for which no quotation is available. The total of the market value of the investments as at 31st December, 1959, for which quotations are available together with unquoted investments as valued by the directors amounts to Rs. 30,84,496 (Rs. 28,37,956).

In order to bring the value of the building of the Company back to its actual written down value based on the original cost, the directors have authorised the writing down of the said asset by a sum of Rs. 15,863 by debiting the reserve for revaluation of fixed assets account in the year under review in the same proportion as the asset was written up in 1948.

Colliery.—The directors inform that the full sale value of the Sowardih Property has been received.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Gross block	1,53,707

		Cash ...	1,03,067
Rs.	27,50,809	Rs.	27,50,809

Choonabhutti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co. Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 5,61,617 (Rs. 4,63,372) of which taxation provision requires Rs. 2,36,000 (Rs. 2,15,000) leaving a balance of Rs. 3,25,617 (Rs. 2,48,372). To this is added the excess provision for wealth tax in previous years now written back of Rs. 657 (*nil*) and the balance brought forward from last year of Rs. 1,13,818 (Rs. 1,17,584) making a total amount available for distribution of Rs. 4,40,092 (Rs. 3,65,956). The directors have transferred to general reserve Rs. 50,000 (Rs. 60,000) and to development rebate reserve Rs. 2,864 (Rs. 4,420). The directors now recommend that the following dividends be paid.

On the preference shares 9.30 (6.5 per cent. free of tax) per cent. per share absorbing Rs. 18,600 (Rs. 13,000) and on the ordinary shares Rs. 30,00 (Rs. 22.50 free of tax) per share, absorbing Rs. 2,70,000 (Rs. 2,02,500) leaving a balance to be carried forward of Rs. 98,628 (Rs. 86,036). The dividends are subject to deduction of tax.

A crop of 13,761 maunds was secured and sold at an average price of Rs. 2.19 nP per lb. which compares with a crop of 14,667 maunds in 1958, sold at an average price of Rs. 2.07 nP per lb.

Estimates for the current year have been framed for a crop of 14,500 maunds to cost Rs. 18,25,525 and by 14th June 1960, 1,15,036 kgs. (3,170 mds.) had been manufactured compared with 88,149 kgs. (2,429 mds.) to the same date last year.

Capital expenditure during the year was Rs. 2,68,709 of which about a half represents the cost of implementing statutory welfare requirements in regard to labour and staff houses.

Messrs. Andrew Yule & Co., Ltd. will cease to act as managing agents of the Company on 15th August 1960 and their appointment as secretaries and treasurers of the Company for a period of 5 years from that date has been approved by the Central Government.

Although the Company's Articles of Association provide that the preference shareholders shall receive a fixed cumulative preferential dividend at the rate of 6½ per cent. per annum, free of Indian income-tax, it is now compulsory for income-tax to be deducted from all dividends. The Board have accordingly recommended that a dividend of 9.30 per cent. be paid on the Company's preference share capital, from which tax will have to be deducted in accordance with the provisions of the 1960 Finance Act, giving in the case of a shareholder who is resident in India a net dividend of approximately 6.5 per cent.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,00,000	Gross block	25,34,091
Reserves ...	13,87,365	*Less*—Depreciation ...	10,16,841

Edward Textiles Ltd.

The directors of the above Company (Agents: Messrs. Puranmal Bubna Sons, Bombay) submit the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year after making a provision for depreciation of Rs. 2,23,246 (Rs. 1,92,301) (including development rebate Rs. 29,254) amounts to Rs. 4,59,849 (loss of Rs. 5,19,780). Out of this amount the directors recommend payment of a dividend on ordinary shares at Rs. 18 (Rs. 15 per share, free of tax paid out of reserves) per share subject to deduction of tax, for the year ended 31st December 1959 absorbing Rs. 3,06,000 (Rs. 2,55,000) leaving a balance of Rs. 1,53,849 (debit of Rs. 5,19,780). This amount is adjusted against the loss brought forward from the last year's account of Rs. 16,34,876 (Rs. 11,15,096) leaving a debit balance to be carried forward of Rs. 14,81,027 (Rs. 16,34,876).

The cost of production rose during the year under review due to high price of raw materials and payment of increased dearness allowance to the workers.

Separate provision has not been made in accounts in respect of gratuity to employees governed by the Bombay Industrial Relations Act, payable as per Industrial Court Award. The contingent liability under this head is estimated at about Rs. 8,35,970.

No provision has been made for bonus in the accounts in the absence of any agreement for payment of bonus and as according to the formula prevalent for bonus computation, there is no available surplus out of which any bonus becomes payable.

The directors further state that the Central Government has approved of the re-appointment of Messrs. Puranmal Bubna Sons, as managing agents of the Company for a period of five years as from 16th day of August 1960.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34,00,000	Gross block	87,46,739

		Cash ...	86,672
Rs.	99,87,029	Rs.	99,87,029

* Reserves are shown after deducting the debit balance of Rs. 14,81,027 in the profit and loss account.

Chembra Peak Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Calicut) submit the audited accounts of the Company for the year ended 31st March 1960.

After providing for depreciation and all charges except taxation, the accounts show a profit of Rs. 6,56,961 (Rs. 5,72,641) to which is added the balance brought forward from last year of Rs. 75,555 (Rs. 75,291) making a total of Rs. 7,32,516 (Rs. 6,60,025 including Rs. 12,093 being excess provision for income-tax for the previous year written back). The directors have transferred to taxation reserve Rs. 3,00,000 (Rs. 2,74,000), to development rebate reserve Rs. 6,876 (Rs. 20,460 and to general reserve Rs. 1,00,000 (Rs. 1,50,000) leaving an available balance of Rs. 3,25,640 (Rs. 2,15,565). The directors recommend payment of a dividend of 20 (15 per cent. free of tax) per cent., subject to tax, absorbing Rs. 1,86,680 (Rs. 1,40,010) leaving a balance to be carried forward of Rs. 1,38,960 (Rs. 75,555).

Costs and Crops.—Tea crop for the year was 15,49,547 (16,86,963) pounds. The estate cost of production was Re. 1.20 (Re. 1.13) per pound. The all-in cost per pound of tea was Re. 1.31 (Re. 1.21). The average price realised per pound of tea was Re. 1.68 (Re. 1.35).

The coffee crop for the year amounted to 61,481 (273,877) metric tonnes. The average price obtained per metric ton of coffee was Rs. 2,339.99 (Rs. 2,477.24).

The Company was allotted 11,64,810 lbs. of tea, export quota for the year 1959-60 being 67 per cent. of the *best crop basis.*

Tea.—The crop estimate for 1960-61 is put at 16,30,000 lbs. to be harvested at an all-in cost of Re. 1.27 per lb.

Coffee.—The blossom estimate for 1960-61 was put at 244 metric tonnes, but some of the blossom has failed to set due to the unfavourable conditions at the time of blossom, and the estimate has now been reduced to about 178 metric tonnes.

An amount of Rs. 2 lakhs was estimated last year for factory extension and purchase of new machinery, of which Rs. 97,520 will be spent in 1960-61 to complete the work of factory extension and the cost of machinery on order.

Accounts in brief are as under:—

Tata Hydro-Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tata Hydro-Electric Agencies Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st March 1960.

The profits, after providing for depreciation, managing agents' remuneration and taxation amounted to Rs. 39,78,774 (Rs. 46,06,197). After adding amount brought forward from last year's accounts, and after adjusting the managing agents' remuneration in respect of previous years, Rs. 29,433 (Rs. 2,58,242), the amount available for disposal is Rs. 40,08,207 (Rs. 48,64,439). The directors have made therefrom the following appropriations: To *ad-interim* dividend on preference shares at 7 per cent. per annum for the half-year ended 30th September 1959 Rs. 3,12,480 (Rs. 3,12,480) and on ordinary shares at Rs. 3.00 (Rs. 3.00 free of tax) per share Rs. 7,20,000 (Rs. 7,20,000), to contingencies reserve Rs. 1,75,142 (Rs. 3,40,688), to arrears of depreciation Rs. 37,243 (Rs. 37,243), to write-off of intangible assets and other expenditure Rs. 90,959 (Rs. 89,356), to development reserve Rs. 1,90,194 (Rs. 8,59,376), to tariffs and dividends control reserve Rs. 22,214 (Rs. 83,785), to consumers' benefit account Rs. 22,214 (Rs. 83,785), to general reserve Rs. 7,80,000 (Rs. 8,00,161) and to proposed dividends Rs. 16,32,480 (Rs. 15,12,480) and leaving a balance of Rs. 25,281 (Rs. 25,085) to be carried forward. The directors recommend the following final dividends and bonus (subject to deduction of tax) for the year ended 31st March 1960, to be paid, if declared at the annual general meeting: A dividend at 7 per cent. per annum on preference shares for the half-year ended 31st March 1960, absorbing Rs. 3,12,480 (Rs. 3,12,480), a dividend of Rs. 4.50 (Rs. 4.50 free of tax) per share on ordinary shares, absorbing Rs. 10,80,000 (Rs. 10,80,000) and a bonus of Re. 1.00 (Re. 0.50) per share on ordinary shares, absorbing Rs. 2,40,000 (Rs. 1,20,000).

Accounts in brief are as under:—

Notice

ROHTAS INDUSTRIES LIMITED
DALMIANAGAR (BIHAR)

THE BOARD OF DIRECTORS HAVE resolved to issue 25,08,000 new Ordinary Shares of Rs. 10 each at par and offer the same to the registered holders of the Ordinary Shares in the Company as on 1st September, 1960 (with the right to the person concerned to renounce in favour of his nominee) in the ratio of one new Ordinary Share for one existing Ordinary Share held by such holders as on 1st September, 1960 (with option to such holders to apply for additional new Ordinary Shares) in terms of Consent No. R.183-CCI/59 dated 23rd April 1960 obtained from the Central Government.

Share Register and Transfer Books of the Company will remain closed from Thursday, the 25th August, 1960 to Thursday, the 1st September, 1960, both days inclusive, for the purpose of aforesaid offer of right shares and for payment of dividends on Preference and Ordinary Shares for the year ended 31st March, 1960. The dividends when declared will be paid to those shareholders whose names appear on the Company's Register of Members on 1st September, 1960 or to their mandatees.

By Order of the Board,

SAHU JAIN LIMITED,
A. P. JAIN,
Director,
Managing Agents.

4th August, 1960.

NEW GREAT INSURANCE CO. OF INDIA LTD.

SPEECH OF CHAIRMAN, MR. TULSIDAS KILACHAND

MR. Jehangir P. Patel presided over the Seventeenth Annual General Meeting of the shareholders of the Company, held on the 30th July, 1960, at Baroda in the unavoidable absence of the Chairman, Mr. Tulsidas Kilachand, and delivered the speech prepared by the Chairman for the occasion. In his speech, Mr. Tulsidas referred to some of the problems facing the insurance industry.

Mr. Tulsidas Kilachand expressed his disappointment at the decision of the Executive Committee of the General Insurance Council to continue the *status quo* as regards the Code of Conduct which, he felt, would not help in improving the market conditions. Controls merely led to ingenuous methods to circumvent them and this was exactly what had happened in general insurance business, with the result that, after ten years of the code, we were witnessing the sorry spectacle of company after company closing down. The only course open to assist the industry was to remove all provisions of the Insurance Act restricting commission, cost, etc. As in the United Kingdom, companies, he said, should be free to operate solely on the motto of "Freedom and publicity."

Fire Premium Rates

Mr. Tulsidas went on to point out that, as was feared last year, the worst had happened and Government had finally decided to reduce the fire insurance rates from 1st January this year. He felt that it would have been more prudent had the rates been reduced wherever experience had shown favourable claim results. As it was, the indiscriminate reduction might well turn out to be a disastrous step from the point of view of the industry as a whole, particularly in the context of the large number of recent fires. He asked the insurers to adopt a firm attitude against any move for further reduction and also not to hesitate to make upward revision should the results warrant.

Government-controlled Insurance Business

The Chairman made a passing reference to the steps taken by Government to gradually deprive the non-governmental companies of their shares in the Government-controlled insurance business, which, he felt, was most unfair.

Company's Building

Mr. Tulsidas also took the opportunity of disclosing to the shareholders the happy news that the Company had taken up on hand the construction of the building on Backbay Reclamation which was expected to be completed in 1962.

Accounts

Dealing last with the departmental accounts, Mr. Tulsidas stated that the gross direct premium for the year 1959 was Rs. 38,08,922 in fire, Rs. 27,16,256 in miscellaneous insurance, and Rs. 34,42,771 in marine, whilst the net premiums were Rs. 35,87,510, Rs. 25,90,585 and Rs. 18,16,985, respectively. After providing for losses and expenses and reserves at, 50 per cent. in respect of fire and miscellaneous insurance, and 100 per cent. for marine, the net amount to the credit of the profit and loss account, in all, was Rs. 4,31,804. The Directors had transferred Rs. 40,000 to staff gratuity account, Rs. 1,00,000 to general reserve and Rs. 17,602 to investment reserve, and they proposed to pay eleventh dividend on ordinary shares at Rs. 2.50 per share, less deduction of income-tax, amounting to Rs. 2,50,000.

Note: *This does not purport to be a record of the proceedings of the annual general meeting of the Company.*

RECORD PROFIT FOR B.O.A.C.

B.O.A.C., which for the first time has carried more than half-a-million passengers in a year, made the highest operating profit in its history—more than £4,000,000—in the financial year ended last March, according to its annual report for 1959-60. Gross revenue from the Corporation's own operations, at £70,500,000, compared with £57,900,000 in the previous year, an increase of 22 per cent. Operating costs were about 6d. a ton-mile less than three years ago. During the year, costs were reduced by 2.6d. per capacity ton-mile, a reduction of 7.3 per cent.

During the year, delivery was completed of a fleet of 19 Comet 4 jet airliners which were introduced on the Corporation's main trunk routes and clearly demonstrated a strong appeal to passengers of pure-jet aircraft. Comets and Britannias carried the main weight of the Corporation's operations on scheduled services.

Notices

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the various departments of the Reserve Bank of India:—

(A) **POSTS AND SCALES OF PAY**

Research Officers: Rs. 375-55-815 E.B. 55-925-60-1,045

Probationary Assistants: Rs. 250-25-450 E.B. 25-650

Economic Assistants: Rs. 175-12.50-300 E.B. 20-440

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) **AGE LIMITS AS ON 1st AUGUST 1960**

Research Officers—Candidates should not ordinarily be over 30 years of age but the age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and/or research experience of value to the Bank.

Probationary Assistants—Between 21 and 25 years.

Economic Assistants—Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years in the case of

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) candidates with approved war service;

(iii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iv) personnel retrenched from Government offices after *at least* one year's service applying through Employment Exchanges; and

(v) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) **QUALIFICATIONS**

(i) **Research Officers, Economic Department:** First or high second class Master's degree in Economics or Commerce of an Indian or foreign University, or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects: (*a*) Monetary Economics, (*b*) Banking Theory and Practice, (*c*) International Trade and Finance, and (*d*) Agricultural Economics. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (*a*), (*b*) and (*c*) above and experience of agricultural surveys in respect of (*d*) above.

(ii) **Probationary Assistants, Agricultural Credit Department:** First or high second class Master's degree of an Indian or foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in the Co-operative Departments of the States or in a co-operative institution. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

(iii) **Economic Assistants, Agricultural Credit Department:** High second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or foreign University. Specialised study in Rural Sociology will be an additional qualification. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

Note:—Experience in community development, small scale and cottage industries, marketing, training and publicity, co-operative societies, co-operative departments, etc. will be given due weightage for the posts in the Agricultural Credit Department and knowledge of regional languages such as Hindi, Bengali, Oriya, Gujerati, Urdu and Assamese will be an additional qualification.

(iv) **Probationary Assistants, Legal Department:** Applicants should be Advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's Office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

2. Candidates who wish to apply for more than one category of posts must submit *separate* applications accompanied by separate application fees and *should clearly indicate the post and the department for which they have applied.*

3. Applicants for all the above posts except Economic Assistants must remit with their applications a fee of Rs. 7 50 for each category of post in each department by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by postal order. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. *The application fee is in no case refundable.* Bona fide refugee candidates *not in employment* applying through the Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Scheduled Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (*originals should not be sent*) of *at least* two testimonials, *and copies of statements of marks secured in the Graduate and Post-Graduate degree examinations* should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 7th September 1960.

5. *Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.*

6. *Candidates already in service must submit their applications through their employers.* Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact *prominently* in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

8. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

9. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

10. Canvassing will be regarded as a disqualification.

THE RAMESHWARA JUTE MILLS LIMITED

THE BOARD OF DIRECTORS AT THEIR meeting held on the 15th July, 1960, have decided to recommend to the forthcoming Annual General Meeting of the Company to be held on the 31st August, 1960, the following Dividend subject to deduction of tax under Section 18(3D) of the I.T. Act:—

On Preference Shares @ 8.57 per cent. per annum for the period from 1st October, 1950 to 31st March, 1956.

For HINDUSTHAN INVESTMENT CORPORATION LTD.,
R. K. CHHAOCHHARIA,
Managing Director,
Managing Agents.

CALCUTTA, *Dated. the 3rd August*, 1960.

Notices

THE SURAT ELECTRICITY COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN ANNUAL GENERAL MEETING within the meaning of the Companies Act, 1956, (being the Fortieth Ordinary General Meeting) of THE SURAT ELECTRICITY COMPANY, LIMITED, will be held on Thursday, the 1st September, 1960, at 4-30 p.m. at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st March, 1960.
2. To declare a dividend.
3. To elect a Director in the place of Mr. Kishore M. Premchand who retires by rotation but who offers himself for re-election.
4. To appoint Auditors until the conclusion of the next Annual General Meeting and to fix their remuneration.

SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"THAT pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of contracts or arrangements entered or being entered into with Bombay Garage Private Limited, who are or may be deemed to be Associates of Killick Industries Limited, the Managing Agents of the Company, for the supply of motor cars, motor lorries, motor car accessories, air-conditioners, domestic appliances and other articles sold by them or for the supply or rendering of any services as may be required by the Company from time to time upon the following terms:—

(a) That the prices or amounts charged to the Company are at rates which are not less favourable to the Company than the market rates or are otherwise reasonable;

(b) that the other terms and conditions of purchase of such motor cars, motor lorries, motor accessories, air-conditioners, domestic appliances and other articles sold by them or rendering of services shall be generally the same as those on which the Company can purchase such property or acquire such services elsewhere;

(c) that the said purchases or rendering of services shall be sanctioned by the Board of Directors."

By Order of the Board,
FOR THE SURAT ELECTRICITY COMPANY, LIMITED,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

BOMBAY, *4th August*, 1960.

N.B.—(*a*) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member. Under Article 96 of the Company's Articles of Association, the instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the Meeting at which the person named in the instrument proposes to vote and in default the instrument of proxy shall not be treated as valid.

(*b*) The Transfer Books of the Company will be closed from Wednesday, the 17th August, 1960, to Thursday, the 1st September, 1960, both days inclusive.

(c) The Dividend when declared, will be made payable at the Chartered Bank, Bombay, on and after Friday, the 2nd September, 1960, to those Shareholders whose names stand on the Register on Thursday, the 1st September, 1960, to whom Dividend Warrants will be posted.

ANNEXURE TO THE NOTICE

Explanatory Statement under Section 173 (2) of the Companies Act, 1956.

Item No. 5.—The Company at times has been purchasing, although not exclusively, motor cars and motor lorries, and also part of its requirements of motor car accessories, air-conditioners and other items from Bombay Garage Private Ltd. Under the Companies Act, 1956, however, Bombay Garage Private Ltd. are or may be deemed to be an "Associate" of Killick Industries Limited, the Managing Agents of the Company, by virtue of Mr. M. R. Chinoy becoming a Director of the Managing Agency Company from 22nd September 1959 and who together with his relatives as defined by Section 6 of the Companies Act, exercises more than one-third voting power in Bombay Garage Private Ltd. It is expedient, therefore, having regard to the provisions of Section 360 of the said Act, for the Company to approve, by a Special Resolution, the purchase of motor cars, motor lorries, motor car accessories, air-conditioners and other items and for the supply or rendering of any services as may be required by the Company. The Special Resolution is commended for acceptance.

Mr. A. N. Haksar is interested as a Director and Shareholder of Killick Industries Limited. Dewan Bahadur Natwerlal M. Jhaveri, Mr. Lalitmohan C. Gandhi, Mr. Kishore M. Premchand and Mr. R. R. Saraiya are interested as shareholders of Killick Industries Limited. Killick Industries Limited, who are Managing Agents of the Company and are Associates of Bombay Garage Private Ltd., are interested for these reasons and as Shareholders of the Company.

By Order of the Board,
FOR THE SURAT ELECTRICITY COMPANY, LIMITED,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

BOMBAY, *4th August*, 1960.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS HELD on the 5th August 1960, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 21st September 1960, the payment of a final dividend for the year ended 31st March 1960, of 3% (subject to tax) on the issued Ordinary shares, payable on the 24th September 1960.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,41,62,230.

Two interim dividends, each of 2½% (subject to tax) amounting in total to Rs. 75,80,000 in respect of the year to 31st March 1960, were paid on the 28th September 1959 and the 20th April 1960 respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 63,437 to Capital Reserves, Rs. 5,07,057 to Development Rebate Reserve and Rs. 14,50,000 to Fixed Assets and Stock Replacement Reserve, the amount carried forward will be Rs. 24,77,765.

The Directors also declared a first interim dividend of 2½% (subject to tax) in respect of the year to 31st March 1961, payable on the 24th September 1960.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 21st September 1960 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 23rd September 1960. The share transfer books of the Company will be closed from the 29th August to the 21st September 1960, both days inclusive, and transfers received in order at the registered office of the Company up to the 27th August 1960 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA.
6th August, 1960.

COMMERCE AND INDUSTRY

(*Concluded from page 300*)

rial imports were liberalised in 1959-60 to meet the maintenance needs of the economy. Imports of consumer goods had been very drastically reduced. Government imports were substantially higher in the last three years than in the first year of the second Plan (1956-57), though, in 1959-60, they showed a fall of over 20 per cent. from the 1958-59 level.

India's exports actually suffered some setback in the second and third years of the Plan, as a result of the 1957-58 recession in the West. But signs of recovery in exports were in evidence in the fourth year. Thus, exports aggregating Rs. 635 crores in 1956-57 declined to Rs. 594 crores in 1957-58 and still further to Rs. 576 crores in 1958-59, but recovered to Rs. 623 crores in the fourth year. As the second Plan progressed, a number of measures were taken to stimulate export earnings both by way of removal of existing restrictions (like export duties) and by the provision of export incentives and strengthening of commercial channels and exporting organisations. As a result of the various promotional measures and because of the revival of the economic activity abroad, the export earnings recorded a rise of Rs. 47 crores in 1959-60, but they were still Rs. 12 crores lower than in the first year of the current Plan.

Trade deficits increased from Rs. 464 crores in 1956-57 to Rs. 640 crores in 1957-58. but fell to Rs. 454 crores in 1958-59, largely because of the severe restrictions imposed on imports. There was a further fall in deficit to Rs. 300 crores in 1959-60, resulting from modest improvement in exports and a sizable decline of Rs. 102 crores in imports. Official donations amounted to Rs. 40 crores in 1956-57 and have since been steady at about Rs. 35 crores per annum. The net result was that current account deficits in the four years were Rs. 312 crores, Rs. 501 crores, Rs. 328 crores and Rs. 181 crores and averaged Rs. 331 crores per year.

Under capital transactions, there was a net outflow of Rs. 40 crores during the four years on private account. In the banking sector, there was a sizable outflow of Rs. 11 crores in 1957-58, when interest rates abroad were very high and, in the following two years, there were net inflows of Rs. 4 crores and Rs. 8 crores. The official sector, which is by far the most important component in the capital account, recorded average receipts of Rs. 218 crores per year. Total official loan receipts in 1956-60, excluding drawings of Rs. 95 crores from I.M.F., amounted to Rs. 549 crores, of which Rs. 186 crores came from the World Bank, Rs. 128 crores from the U.S., Rs. 82 crores from the U.K., Rs. 72 crores from West Germany and Rs. 63 crores from Russia. The World Bank loans of Rs. 66 crores in 1957-58 and Rs. 77 crores in 1958-59 provided the much needed resources before assistance from five friendly countries was organised at conferences that it convened in August 1958 and March 1959.

The gap between the current account deficit and capital receipts had to be met, says the review, by drawing down India's foreign exchange reserves which suffered drafts of Rs. 221 crores, Rs. 260 crores, Rs. 42 crores and Rs. 16 crores, respectively, in the four years. It may be noted that, in 1959-60, the reserves would have risen by Rs. 26 crores, instead of falling by Rs. 16 crores, had it not been for the special payments connected with India's increased subscription to, and repurchase of rupees held by the I.M.F.

The review draws attention to the fact that with the low level to which India's reserves have been drawn down, the balance of payments difficulties acquire a sharper edge and emphasise the need for vigorous efforts to promote exports and to keep imports to the minimum possible level, as well as the urgency to arrange for adequate and timely external assistance.

SOVIET RAILWAYS

In the U.S.S.R., steam locomotives are being substituted with up-to-date, highly efficient electrical and diesel locomotives. The tracks are also being thoroughly reconstructed. In 1960 electric traction will be introduced on many railways for a total length of 2,142 kilometres. The electrification of the Moscow-Irkutsk trunk line more than 5,000 kilometres long will be completed before the year is out. Another stretch on this line between the Chernorechenskaya and Bogotol stations has been commissioned a few days ago. A.C. current will be used on this lap.

The reconstruction of the Kuibyshev railroad, one of the biggest trunk lines of the Soviet Union, is proceeding full blast. This transport line is of great importance for the economic contacts of the central areas of the country's European part with the regions of the Urals, Siberia and Central Asia. The freight carriage of this rail-road in ton-kilometres equals that of the railways of Britain, France and Italy taken together. A 200-kilometre-stretch of the Kuibyshev line has been electrified. At present, the total length of the electrified sections exceeds 1,300 kilometres.

MONEY STILL STRINGENT

(From Our Own Correspondent)

BOMBAY, *10th August*

Barring an improvement in the supply of funds today, conditions in the short-term money market have been stringent throughout the week under review. The Exchange and big Indian banks are said to have been able to get their requirements easily in the inter-bank call money section and there is even a surplus of money left with banks. There is, however, no change in interest rates. Inter-bank call money is still being bid at 3½ per cent. among all sections of banks. House money at seven days' notice continues to be quoted at 3½-3⅝ per cent. and one to six months' deposits at 3¼-3½ per cent.

The 91-day Treasury Bill rate, which had declined last week from 2.745 per cent. to 2.737 per cent, per annum, has again hardened to 2.745 per cent, this week. The amount offered at this week's sale of these bills has not exceeded the amount invited. Sales of Intermediate Treasury Bills during the period 3rd to 6th August amounted to Rs. 16 lakhs, at a discount of 2.696 per cent. per annum. They will continue to be offered at the same rate this week also.

There has been an expansion of Rs. 18.32 crores in notes in circulation during the week ended 5th August 1960. Disclosing this, the Reserve Bank's statement for that week shows a fall of Rs. 19.95 crores in notes held in the Banking Department. The consequent decline of Rs. 1.63 crores in total notes issue is covered by a corresponding contraction in rupee coin. While there is no change in foreign securities, balances held abroad have declined by Rs. 5.37 crores, so that the total foreign assets have gone even below Rs. 150 crores to stand at Rs. 147.86 crores. Deposits of the Central Government and other Governments have declined by Rs. 9.67 crores and Rs. 4.77 crores, respectively. Deposits of banks, too, have gone down Rs. 6.29 crores. Loans and advances to Governments show a rise of Rs. 6.54 crores and other loans and advances Rs. 9.76 crores. Of the rise in the latter, advances to Scheduled banks against usance bills account for Rs. 1.73 crores. Investments show no worthwhile variation, while holdings of Government Treasury Bills are lower by Rs. 8.09 crores.

A slight increase of Rs. 2.26 crores in advances is disclosed by the Scheduled banks' statement for the week ended 29th July 1960. This is in contrast to the successive declines in the previous two weeks. Since there is a fall of Rs. 1.86 crores on State Bank's account, this means that the advances of other Scheduled banks have gone up by Rs. 4.12 crores. Deposits have declined by Rs. 4.59 crores, mainly due to the fall of Rs. 16.92 crores in State Bank's deposits. Inter-bank borrowings are higher by Rs. 2.68 crores, while those from the Reserve Bank are lower by Rs. 2.54 crores. Investments show a decline of Rs. 4.82 crores, of which the share of the State Bank is no more than Rs. 84 lakhs. Cash balances have, however, swelled by Rs. 9.19 crores and money at call and short notice by Rs. 4.12 crores.

The Gilt-edged market continues to be listless, with very little evidence of interest on the part of institutional investors, thanks to the persistent stringency in the short-term money market. It will be interesting to note here that between the end of April (which usually marks the close of the busy season) and the end of July, the Scheduled banks have actually disinvested Rs. 17.54 crores, while in the corresponding period of 1959 they had added no less than Rs. 90.76 crores to their investments. This shows how fully the funds of banks are employed even in the traditional slack period this year. The transactions are few and far between and, where done, the prices were in favour of buyers. 3 per cent. 1986 Conversion Loan has dropped by 10 nP to Rs. 73.50. 3½ per cent. 1963 and 1964 have been marked down by 5 nP each to Rs. 99.95 and Rs. 99.90, respectively. There is nothing of note in the State loans' section. While there are sellers in these loans, prices are unchanged in the absence of any buyers.

The sustained strength of sterling abroad is only partially reflected in the rupee-dollar cross rates. Thus, while banks' buying rate for U.S. T.T. ready has declined from Rs. 473.25 to Rs. 473 per $100, their selling rate is unchanged at Rs. 476.50 per $100. In New York, spot sterling has gained ground from 280.86-280.89 cents to 280.97-281.00 cents and three months' forward from 279.44-279.47 cents to 279.70-279.73 cents per £.

BASE METALS RECEDE

(From Our Own Correspondent)

CALCUTTA, *9th August*

Base metals reacted to lower advices from the London Metal Exchange during the week under review. Demand was on the decline, and trade circles anticipated a more liberal import policy for the latter six months of the current financial year. Considering the growing development of non-ferrous metals industry, the increasing nature of demand of such products as cables, brass and copper hollows and solids, and official permission to set up new units of production such as cable plants and extrusion presses, it was felt that higher import quotas of virgin metals would be a natural sequence. It was for this reason that there was no tendency for carrying higher stocks, and price movements here were determined by the movements in London prices.

In London, tin opened at £812½ a ton and, after moving up to £813, returned to close at £812. Locally, tin opened at Rs. 561 and, after being lower at Rs. 559, finished better at Rs. 562. The mid-week decline was due to more arrivals. Electrolytic zinc closed lower in London at £251½ a ton, as against the opening of £253½. Locally, although demand for copper scrap was little, prices firmed up by way of making good last week's losses. Thus, berry quality regained from Rs. 200 to Rs. 212 and utensil scrap from Rs. 190 to Rs. 200. Electrolytic zinc at Rs. 171 closed lower by Re. 1. Shortage was continued to be felt. In London, the price closed at £89½ a ton, after being higher at £89½ as against the opening of £88½. Virgin lead was quiet at Rs. 66 a cwt.

BULLION FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, *10th August*

Despite the Government of Maharashtra's refusal to relax margin rules, the bullion market put on a cheerful appearance during the major part of the week under review. Gold attracted good attention from operators who feared that the floating stocks of the metal would dwindle considerably in the coming weeks. This misgiving was based on the ground that, since the possibility of the sales of Kolar gold being resumed in the near future was remote, the usual seasonal demand for the metal would have to be met out of the available floating stocks. Reports regarding the seizure of about 7,000 tolas of contraband gold at Calcutta also imparted strength. Silver ruled distinctly firm, thanks to buoyant upcountry advices, especially from Delhi and Calcutta, and the tight hold of bulls on *Shravan* settlement till it went off the board on Monday the 8th inst. Even reports of continued large arrivals of both gold and silver did not have any effect.

The daily average arrivals of gold were of the order of 4,750 tolas, as against 3,750 tolas in the previous week, while the rate of actual offtake was slightly lower at 2,625 tolas, as against 2,875 tolas. The floating stocks of gold are reported to be around 25,000 tolas. The daily average arrivals of silver were also larger at 33 bars, those in the previous week being 23 bars, but offtake was stationary at six bars per day on an average. The floating stocks of silver are estimated at 300 bars.

In the gold section, *Bhadrapad* settlement (September), which had eased from Rs. 130.31 to Rs. 129.75 in the earlier sessions, was well supported subsequently and advanced to touch a high of Rs. 131.31 today. The closing rate was a shade lower at Rs. 131.25. The *Shravan* settlement went off the board at Rs. 132 on Friday the 5th inst., as against Rs. 131.62 on Wednesday last week. The rate for transferring commitments from *Shravan* to *Bhadrapad* settlement payable by bears widened from Re. 1.31 to Re. 1.69 on the opening day of the week but declined to Re. 1.54 the next day.

Ready gold began the week at Rs. 132.31, as against the previous closing of Rs. 132.25, and, after moving up to Rs. 132.56 today, finished at Rs. 132.50. There was a fall in the premium commanded over the *Bhadrapad* settlement from Re. 1.94 last week-end to Re. 1.25 today.

The *Shravan* settlement in silver ran off at Rs. 224.50 on Monday the 8th inst., as against Rs. 221.50 on Wednesday last week. The highest and lowest levels touched during the week were Rs. 224.75 and Rs. 221.31, respectively. The Bhadrapad settlement rose from Rs. 219.31 to Rs. 220.75 today, before closing at Rs. 220.50. Since some bulls were holding tight in the *Shravan* settlement, the backwardation rate (that is, the *budli* payable by bears to bulls to get the commitments transferred to the next settlement) widened considerably from Rs. 2.19 on Wednesday last week to Rs. 3.88 on Monday, when the *Shravan* settlement went off the board.

Under the impetus of good buying orders, ready silver rallied from Rs. 221.06 to Rs. 223.75 on Monday. Subsequently, however, it declined and stood at Rs. 221.25 at one time yesterday. Today, it again recovered to Rs. 222, before finishing at Rs. 221.75. The net gain over the week was 69 nP.

Silver in the London bullion market ruled quiet during the week under review, both ready and forward rates standing at the last week's level of 79½*d*. Silver in New York continued unchanged at 91.375 cents. Ready gold in London declined from 250*s*. 2½*d*. to 249*s*. 11⅞*d*. owing to the strength of the pound sterling *vis-a-vis* the dollar. The latest available world price for gold in London is $35.11½-$35.13½, as against $35.10½-$35.12½ a week before.

The following table shows the trend of the market during the week under review:

	10-8-60 (closing)	High	Low	3-8-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	132.50	132.56	131.31	132.25

BUOYANCY IN COTTON FUTURES PERSISTS

(From Our Own Correspondent)

BOMBAY, *10th August*

Cotton futures market continued to rule distinctly firm during the week under review also. The absence of tenders on the first three notice days imparted further strength to the market. Consequently, the August Contract remained at the ceiling level of Rs. 820. But in private, the Contract was quoted 8 to 10 rupees above the ceiling. The consensus of opinions among traders is that the Contract would go off the board without any tenders at all.

Interest is now focussed on new crop futures trading. Mr. Madanmohan Ruia, who was re-elected President of the East India Cotton Association last week, reassured the trade that there would not be any difficulty in obtaining permission from the Forward Markets Commission to commence futures trading if a suitable hedge contract were devised and trading done at prices within the ceiling limits set by law. For the purpose a Sub-committee was appointed by the Board of the E.I.C.A. to work out a hedge contract, after taking into account the changed pattern of cotton production in India.

It has been suggested, in some quarters, that the basis of the new contract should be 13/16" staple, with cotton of staple length between 11/16" and 1-1/16" allowed to be tendered against the Contract. This, these quarters think, will widen the scope for tenders which, it is said, is not possible under the existing hedge Contract, namely, Moglai fine Jarilla 25/32".

It is generally believed that it is possible to get futures trading in new crop started by the end of this month.

The view of the Sub-Committee of the Indian Central Cotton Committee, which met at Bombay on 9th August, that the third Plan cotton production target of 7.2 million bales could be reached, was noted with interest in trade circles. One of the means of achieving this was, in the Committee's view, the utilisation of the vast stretches of rice-fields which lay fallow after harvest. It was estimated that over one million acres of such rice-fields could be utilised in Andhra Pradesh, Madras, Mysore and Orissa and that an extra quantity of long and medium-staple cotton could be easily produced from them.

Weather news of late has been very favourable. Timely rains and shines are reported from Gujarat, Khandesh and Vidarbha. The crop in Punjab and U.P., is making satisfactory progress.

Activity in spot market during the week diminished to a trickle. The Textile Commissioner's order compelling sellers to sell cotton at the ceiling rate to mills nominated by him left little room for free trading in cotton.

Demand for foreign cotton was fairly good. Spinners showed interest in American cotton 1" staple and below. East African cotton evoked considerable interest. Syrian cotton also came in for business as it was considered comparatively cheaper. The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are as under:

B.P. 52 1,385; Syrian 1½" 1,125; Mwanza 1,190-1,200.

Cotton futures in the Karachi market lost further ground during the week. Speculative selling pressure, though less than in the previous week, still persisted. Buying support was feeble and evident only at lower levels. It, however, prevented a further fall in prices. Both the January and March contracts receded. In the spot section, while *Deshi* prices were well maintained, the quotations for most other growths declined. Sind *deshi* and Punjab *deshi* were quoted at Rs. 92 and Rs. 89 respectively, the same as last week-end rates. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton:

4F Punjab Roller 87-9; S.G. 92-9; 289F Punjab Roller 98-9; S.G. 103-9; L.S.S. Punjab Roller 90-9; S.G. 94-9.

In contrast to the easy trend noted last week, the Alexandria cotton futures market ruled firm. Speculative buying and investment support attracted by the recent fall in prices led to a smart recovery. Both the Karnak and Ashmouni contracts were marked up. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing quotations.

Karnak: November 74.10 (73.06); January 74.15 (73.15); March 74.30 (73.35). *Ashmouni*: August 60.60 (61.15); October 62.15 (61.85); December 62.20 (61.85).

The Egyptian Government has announced that its cotton policy for the new (1960-61) season would be the same as in the 1959-60 season, just ended. As in 1959-60, payment against cotton exports from Egypt would be accepted in hard currencies or against clearing account of the buying countries. Barter deals, as well as triangular accounts, are prohibited. Similarly, re-exports of cotton have been forbidden. Sanctions for defaulting exporters have been prescribed. They include debarring of such exporters from participating in the export trade. Egypt will stop exports to and imports from countries which re-export Egyptian cotton. Individual quotas of shippers from Egypt would be notified in the next two weeks.

Cotton futures in Liverpool market suffered a setback during the week. Both the American and American type contracts came under increased pressure, thanks to news of the shipment of a big consignment of U.S. cotton to Liverpool. The lack of spinner interest in ready cotton was another factor. The second official crop report of the U.S. Department of Agriculture had little effect on the market although the estimate fell short of

general trade expectations. The latest available quotations—in pence per lb.—are as under:

American cotton one inch staple contract: October 22.55; December 22.30; March 22.30; May 22.40.

American cotton mixed growth contract: October 22.85; December 22.60; March 22.65; May 22.75.

Sudan: September, November, January 35.50.

The crop reporting Board of the U.S. Department of Agriculture, in its second estimate of the 1960 crop, puts the area under cotton at 15.53 million acres and production at 14.47 million bales, as compared with the final estimate of 15.09 million acres and 14.55 million bales respectively, last year. The yield per acre is estimated at 447 lbs., as against 462 lbs. harvested last year. The Department's first estimate of the current season had put acreage at 16.03 million.

Trading in the New York cotton futures market during the week was cautious as most operators were awaiting the crop report which turned out to be somewhat smaller than expected. This inspired a general buying movement, with the result that futures prices improved. The belief, held in certain quarters, that the Congress might take some action to raise the support price for cotton also imparted strength to the market.

Spot prices, however, tended to recede, thanks to lack of mill buying.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	9-8-60	2-8-60	26-7-60
Spot	32.65	33.10	33.60
October	30.99	30.97	31.14
December	31.30	31.18	31.28
March	31.81	31.55	31.72

MODEST RISE IN PEPPER

(Messrs. Parekh and Co.)

BOMBAY, 10*th August*

Malabar black pepper during the week showed improving tendency in sympathy with Singapore where prices improved both in white and black following the news that the Singapore Syndicate has shipped from London to unknown destinations about 400 tons white from their stock of 700 tons stored in London. One of the London operators who sold short in expectation that the Syndicate would come out to sell, came out to cover. As a consequence, London improved from 67*d.* to 72*d.* Short sellers are reported to have bought in Singapore a sizable quantity of white at an improved price. It is now known that the Syndicate has already shipped 400 tons to Rotterdam or Hamburg where stocks are reported to be smaller and not to Singapore option Shanghai, as earlier reported. The Singapore bulls are trying to manipulate white as the world production of white pepper is likely to be smaller than estimated earlier. The present rise in black is more or less a sympathetic one. But, the fact that the cornering in white cannot prove successful unless price of black is proportionately raised should not be lost sight of. Short covering by bears in Singapore is also reported.

Ready in Cochin improved from Rs. 1,575 to Rs. 1,600. August rallied from Rs. 280 to Rs. 287½ and October from Rs. 295 to Rs. 302. Calicut is nominally quoted at Rs. 1,650. Cochin market has recently become most erratic in view of the proximity of the due date for August delivery and is moving up and down following buying and selling bouts of bulls and bears. Cochin, however, is not finding its feet as there are no foreign enquiries either from Russia or East European countries or New York. Business in Malabar black with New York is well-nigh impossible as our rates are higher than those ruling in Singapore. In short, our market is solely guided by Singapore as we have no strong bulls to manipulate the market as is the case in Singapore. Trade in general and bulls in particular are banking upon the development in autumn demand which is so far disappointing. Unless grinders in New York and on the Continent are forced to follow the rise, Malabar black pepper is likely to go down as the holders here are getting tired and are showing anxiety to liquidate owing to continuous absence of foreign demand. Stale bulls are liquidating at every rise.

Spot in New York improved from $0.55 to $0.59. Yet, the grinders are refusing to follow as they are getting supplies whenever required from the stocks afloat and stored consignments from the supplying markets.

The future of the market depends upon the success or otherwise of the manœuvring of the bulls.

Local demand in ready is slow, the nominal quotation being Rs. 215 per Bengal maund.

BEMBERG YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 10*th August*

A sharp rise in prices of Cupressa Bemberg yarn (60 x 2) was the feature of trading in the yarn market during the week under review. The rise followed hectic purchases by some prominent operators on expectations of a notable rise in demand from weaving mills during the next few months. Even reports that sizable quantities of art silk yarn were being sold by the State Trading Corporation—the Corporation has been granted a licence to import Rs. 1.75 crores worth of yarn—as well as by the indigenous producers failed to have any effect on the market. Nor were large arrivals of imported yarn during the month of July of much avail. Staple fibre yarns, however, were dull in the absence of any fresh support. Business put through was limited and values moved narrowly. Cotton yarns were also dull, thanks to reports that the handloom and powerlooms were buying on a hand-to-mouth basis on hopes of a drop in prices following improvement in production as a result of liberal raw cotton imports.

Imports of art silk yarn into Bombay port during July 1960, as already stated, were quite large, being 3,134,575 lbs., as against 2,509,382 lbs. in the previous month. Imports of synthetic yarn and cotton yarn aggregated 175,467 lbs. and 42,565 lbs., the corresponding figures for June being 187,490 lbs. and 19,335 lbs., respectively. Exports of cotton yarn from Bombay port during the month of July amounted to 322,272 lbs., as against 322,130 lbs. and those of cotton sewing thread were of the order of 33,341 lbs., as against 51,610 lbs.

Cupressa Bemberg yarn (60 x 2) August delivery met with excellent buying enquiries and climbed up from Rs. 1.908 to Rs. 1.952. October delivery rallied from Rs. 1.941 to Rs. 1.978. Spot Cupressa strengthened by 18 nP to Rs. 9.12. 150 Japan gathered 3 nP to Rs. 5.97. 120 Japan was fully maintained at Rs. 5.61, as also 120 Italy at Rs. 5.81. 150 Italy was done at Rs. 6.15, as against Rs. 6.19. Among indigenous yarn, National Rayons 150 Bt. cones 1st grade hardened by 3 nP to Rs. 5.19. 120 Bt. cones 1st grade was firm at Rs. 6.06.

Staple fibre yarn (40 x 2) August delivery encountered selling and declined by Rs. 3 to Rs. 716. October delivery eased by a like amount to Rs. 730. Spot Centurys were quiet at Rs. 3.62. But Kohinoors gained a naya paisa to Rs. 3.78. 80 x 2 Paramounts (imported) were dull at Rs. 12.75.

Among cotton yarns, ten counts Podars receded by 37 nP to Rs. 18.50. Gokaks lost 25 nP to Rs. 19. Twenty counts Moderns dropped 70 nP to Rs. 24.30. Gokaks were neglected at Rs. 24.50. Forty counts Maduras softened by 37 nP to Rs. 32 and Minaxis by 12 nP to Rs. 31.25. Sixty counts Raghuvamshis were unchanged at Rs. 60.60. Eighty counts Moderns were dull at Rs. 74, Finlays at Rs. 82.82 and Mahendras at Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	10-8-1960	3-8-1960
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 Kg.)		
August	1,952	1,908
October	1,978	1,941
60/1 Cupressa Bemberg spot (per lb.)	9.12	8.94
120 Japan (per lb.)	5.61	5.61
150 Japan (per lb.)	5.97	5.94
120 Italy (per lb.)	5.81	5.81
150 Italy (per lb.)	6.15	6.19
Staple fibre yarn—		
40×2 August	716.00	719.00
October	730.00	733.00
40×2 Kohinoor (per lb.)	3.78	3.77
40×2 Century	3.62	3.62
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.50	18.87
20s Gokak	24.50	24.50
40s Madura	32.00	32.37
60s Raghuvamshis	60.60	60.60
80s Modern	74.00	74.00

NEW SEEDS CONTRACTS

(From Our Own Correspondent)

BOMBAY, 10*th August*

The major development of this week in the oilseeds market was the commencement of trading in the 1960-61 season's hedge contracts of groundnut, groundnut oil, castorseed and linseed with effect from 5th inst., following the permission granted by the Forward Markets Commission. It may be recalled that the trading in the new crop cottonseed contract had commenced a fortnight ago. While granting permission to start trading in new contracts, the F.M.C. has announced its decision to abolish special margins in respect of castorseed and linseed. Trading in new contracts of groundnut and groundnut oil will, however, be subject to special margins as follows:—(*a*) the first and second marginal lines have been fixed at Rs. 190 and Rs. 215 per candy, as against Rs. 175 and Rs. 195 per candy, respectively, during last season (1959-60). This in turn works out to Rs. 187 and Rs. 212 per 250 kgs., in metric units. The rates of special margin payable by longs will be Rs. 20 per candy at the first marginal line of Rs. 190 and Rs. 60 per candy at the second marginal line of Rs. 215. (*b*) In respect of groundnut oil, the marginal lines have been fixed in parity with groundnut. The first and second marginal lines in respect of the Bombay Oilseeds and Oils Exchange will be Rs. 20.25 and Rs. 23 per qr., respectively, as against Rs. 19 and Rs. 21 per qr. during the last season 1959-60. The rates of margin will be Rs. 2.10 per qr. at the first marginal line of Rs. 20.25 and Rs. 6.30 per qr. at the second marginal line of Rs. 23. (*c*) The other provisions relating to special margins, which were applicable to the 1959-60 season's contracts, such as the payment of 50 per cent. special margin during delivery period, whenever prices ruled above the second marginal line, free limit of 300 candies to small operators holding a net long position of 500 candies and exemption to exporters from payment of special margins in respect of their export commitments, will continue as hitherto.

Corresponding marginal lines in respect of groundnut and groundnut oil traded at centres other than Bombay have also been fixed. The Commission has also given permission to the Saurashtra Oil and Oilseeds Association Ltd., Rajkot, the Om Oils and Oilseeds Exchange, Ltd., Delhi, the Adoni Groundnutseeds and Oil Merchants Association Ltd., Adoni, the Madras Oil and Seeds Exchange Ltd., Madras, the Spices and Oilseeds Exchange Ltd., Sangli, and the Ahmedabad Seeds Merchants Association Ltd., Ahmedabad, to trade in their concerned commodities in the respective new crop contracts for which they had applied for permission.

Metric system has been introduced as the unit of trading for the new contracts. The unit of trading in the case of castorseeds, cottonseeds and groundnuts has been fixed at 25 metric tons instead of 100 candies. The rate will be quoted per 250 kilograms weighing 551 lbs. and 4 ounces, instead of a candy. As for linseed, the trading unit will be 25 metric tons, instead of 25 tons. The rate will be quoted for 50 kilograms weighing 110 lbs. and 4 ounces, instead of one cwt. As for groundnut oil, the rate will be quoted for 10 kilograms weighing 22 lbs. and one ounce, instead of a quarter.

To revert to the review of the market. In the groundnut section, official trading in August 1960 contract continued to be suspended, since the contract was quoted well above the ceiling level of Rs. 225. Sentiment in other seeds and oils was somewhat irregular, with a subdued undertone. The favourable weather reports from producing centres coupled with lack of interest shown by *vanaspati* manufacturers and crushers in view of the declining trend in prices, led to some bull liquidation. The new contract, however, improved from Rs. 185.25 on the opening day to Rs. 186.75 today. Nizam bold lost 25 nP to Rs. 47.75. Coromandel, too, declined by a like amount to Rs. 48. Oil ex-mill was, however, unchanged at Rs. 25.12.

Distinctly easy conditions prevailed in the castorseed section. The maturing contract was particularly depressed in view of the pressure of arrivals. Thus September 1960 contract suffered a setback of Rs. 4.38 to Rs. 169.37. May 1961 contract, which had opened on Friday at Rs. 171.87, fell to Rs. 170, after moving in a narrow range. Ready Madras lost a rupee to Rs. 33.87. Oil Commercial shed 20 nP to Rs. 19.25.

In view of the protracted absence of overseas enquiries for linseed oil, the linseed section displayed dull conditions. Linseed May 1961 contract fell from Rs. 33.12 on Friday to Rs. 32.32 today. The maturing contract, however, was steady today on some fresh support, after remaining subdued for the major part of the week, and closed at Rs. 33.81, as against Rs. 33.47 last week-end. Bold ready declined by 87 nP to Rs. 32.50 and oil by 37 nP to Rs. 16.75.

In the cottonseed section, the February 1961 contract gathered 15 nP to close today at Rs. 92.75, after moving down in the initial stages. There was no transaction in the September contract.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	10-8-1960	3-8-1960	27-7-1960
Groundnut	Rs.	Rs.	Rs.
August 1960	186.75	—	—
February 1961	—	—	—
Nizam bold	47.75	48.00	49.25
Coromandel ready ...	48.00	48.25	49.75
Khandesh quality ...	48.00	48.00	49.75
Oil ex-mill ready* ...	25.12	25.12	25.37
Railway receipts* ...	24.75	24.62	25.12
Castorseed			
September 1960	169.37	173.75	177.00
May 1961	170.00	—	—
Ready Madras	33.87	34.87	35.00
Ready Kanpur	32.75	33.75	34.00
Oil B.S.S.†	19.25	19.75	19.87
Oil commercial†	18.00	18.31	18.44
Linseed			
September 1960	32.37	33.47	34.19
May 1961	32.81	—	—
Bold ready	32.50	33.37	33.62
Oil ready†	16.75	17.12	17.19
Cottonseed			
September 1960	—	—	—
February 1961	92.75	92.50	91.75
Niger seed	38.75	39.00	38.50
Kardi seed	24.75	25.00	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 784 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

STRONG GENERAL DEMAND FOR TEAS

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 2*nd August*

Sale No. 30:—A total of 475,000 kilograms was offered in Sale 30 on 2nd August—the first sale to be conducted under the metric system of weights. Quality continued to show an all-round improvement, particularly amongst the highgrown Nilgiri teas. From the outset there was a very strong general demand and buyers were quick to show appreciation of the improved quality teas. The activities of internal buyers continued unabated and there was a much improved enquiry for the lower fannings. Low medium and medium brokens were fully firm to dearer, but similar fannings advanced by 10-20 nP per kilo. Plainest types were well supported at dearer rates. Good medium teas sold well and those with improved quality advanced considerably. Highgrown Nilgiri teas met with keen competition from exporters and both brokens and fannings sold at much enhanced rates. Whole leaf teas sold well, pekoes and flowery pekoes were fully firm and orange pekoes were 10-20 nP per kilo dearer. The demand for clean black leaf teas was well maintained:

	1960	1959
	Rs.	Rs.
Low medium	3.60/3.90	3.48/3.70
Medium	3.95/4.05	3.85/4.07
Good medium	4.10/4.65	4.52/4.85
Quality	4.75/7.00	4.63/6.83

The average price realised in Sale No. 30 was Rs. 4.14 per kilo, as against Rs. 4.05 fetched in the previous sale and Rs. 4.18 in the corresponding sale of 1959.

Dust Sale 'CC':—There was a total of 575,000 lbs. in Dust Sale 'CC' held on Thursday, 4th August. This sale had been postponed, due to the strike, from 28th July. As the catalogues were in pounds, it was agreed to conduct this sale in pounds, although all subsequent dust sales will be in kilograms. From the outset there was a strong general demand. Medium dusts were a strong feature and were fully firm and often dearer. Highgrown dusts were irregular, but steady. C.T.C. types sold well at firm rates. Residual grades met a quieter market and were often easier.

The average price realised in Dust Sale 'CC' was Re. 1.80 per lb., as compared with Re. 1.90 in the previous sale and Re. 1.76 in the corresponding sale of 1959.

Export Quota:—There are now sellers at 1½ nP per kilo and some business has been done at 1¼ nP per kilo.

Colombo:—Just under 6¼ million pounds were offered and met with a very strong demand at dearer rates. Uvas were appreciably dearer following quality, whilst best highgrowns advanced 10 cents. The lesser highgrowns and mediums were irregularly 5/15 cents dearer and lowgrowns sold at 3/5 cents above last rates.

London:—There were no sales this week, owing to the August Bank holidays.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale* 31:—*560,000* kilograms. Strong and active market. Best liquoring highgrowns much dearer, following quality, particularly fannings. All others 10 to 20 nP dearer. Whole leaf very strong, particularly orange pekoes."

QUALITY TEAS STEADY

(From Our Own Correspondent)

CALCUTTA, 9*th August*

Fair general demand was in evidence during the export sales held yesterday, and prices of quality teas were fully steady, while the poorer teas recorded handsome losses. While demand during last week's internal sales was good, support was accorded at declining rates only.

The further perceptible fall in arrivals of tea from Assam and other regions caused much concern in trade circles. As a result, shippers felt much inconvenience for month-end bookings.

The fact that, despite a notable decline in arrivals, prices of tea had not improved to the extent desirable in export auctions was indicative of the keener competition in world markets. Such a trend was linked here to the increased imports of Chinese and African tea to the United Kingdom. In fact, Indian exports to that country had been gradually falling. The fall, noticeable in 1959, had continued in this year also. In the six months to June exports to the U.K. formed only 42.8 per cent. of total tea exported by India, against 46.8 per cent. in the corresponding period of last year.

Not only production has fallen due to drought conditions but the communal disturbances in Assam have slowed down tea movements from Assam to Calcutta port. Tea gardens have urged the Assam Government for safety measures, so that such of the Bengali employees who desired to return and resume work could do so early.

In the internal auctions held last week, offerings of dusts amounted to 18,519 packages. There was good demand at lower rates. Medium C.T.Cs gave way by 15 nP, but the poorer C.T.Cs came to a dearer market, and best liquoring C.T.Cs were irregular. Orthodox exportable teas lost up to 8 nP, but the brighter liquorings recorded handsome addition to prices. A firm trend was also in evidence in legg-cut Dooars. The quotations, inclusive of excise duty, per 1 kg. were: best Assam C.T.C. Rs. 6.00 to Rs. 6.50, medium Assam C.T.C. Rs. 5.60 to Rs. 5.90, medium Assam Rs. 4.50 to Rs. 5.10, and medium Dooars Rs. 4.40 to Rs. 4.64.

Leaf on offer amounted to 284 chests and met with good demand with green teas being a weak feature.

During yesterday's export auctions, the quantity on offer amounted to 52,913 packages. Demand was fairly good, but the support was mostly at lower levels. As a result, withdrawals were heavy. Among Darjeelings, the poor liquorings found support only at considerably reduced prices. On the other hand, there was keen competition for the very best liquoring C.T.Cs on offer and prices for these recorded handsome gains. Medium C.T.Cs eased. Among whole leaf grades, the poor liquorings eased by 50 nP and the more ordinary types by 25 nP. Tippy teas were irregular. Bright liquoring orthodox teas received good attention, while the plainer liquorings were in poor demand. Orthodox O.Fs and B.O.Ps eased, the decline in the latter category being greater than in the former. Plain brokens fell by 20 nP and fannings of the same category by 10 to 20 nP. Orthodox and C.T.C. fannings were about firm. Legg-cut teas eased by 10 nP.

The quotations per 1 kg. inclusive of excise duty are: best Assam C.T.C. fannings Rs. 11.00 to Rs. 12.00, clean black pekoe Rs. 5.55 to Rs. 5.75, medium fannings Rs. 4.90 to Rs. 5.10, best Assam C.T.C. B.P. Rs. 9.50 to Rs. 10.50, plain B.P. Rs. 4.35 to Rs. 4.55, plain fannings Rs. 4.30 to Rs. 4.50, and medium B.P. Rs. 4.90 to Rs. 5.10.

Export quota was quoted at 1½ nP, but no business was done.

JUTE GOODS DEARER

(From Our Own Correspondent)

CALCUTTA, 9*th August*

Very steady conditions were in evidence in both jute goods and fibre markets during the week under review. Following good support, handsome additions to prices were recorded, and a notable feature of this week was the Russian interest in hessian. Earlier, the U.S.S.R. purchased hessian worth Rs. 1½ crores for August-September shipment, and throughout the week Russian interest continued. U.S. buyers had been showing only limited interest during the past several weeks and although total American buying in any month was substantial, the fact that American buyers lifted hessian in paltry quantities now and then had been a factor which kept down hessian prices.

Against such a background, Russian interest in hessian for substantial quantities during this week and sufficient indications of continued interest from that quarter provided the signal for this week's steady rise. Small purchases were made by both the United Kingdom and the United States. Another factor which contributed to rise in prices was the news that the Argentine had released import licences for 10,000 bales for immediate shipment from India.

Australia and New Zealand continued to lift moderate quantities of heavy goods. The rise in prices was also in accord with the hardening trend in the fibre market. The fact that forward goods did not attract buyers was taken as an indication of the belief among foreign buyers that prices would move down when once the new crop began moving into mills' stations in larger quantities. Harvest has already commenced and new crop with a high moisture content has been arriving. Weather conditions continued most favourable, and expectations of a larger crop have gained ground. Reports indicated that the superior variety of the fibre would be more than half of the crop whereas last year it was only 35 per cent. Considering that the carry forward from the last crop was lower by 469,000 bales compared to last year, and that the mills needed immediate replenishment of stocks in an attempt to unseal the looms sealed for want of raw material, it would be a few months before the higher crop would have its effect on the fibre market.

On Tuesday last, ready hessian 40" 10 oz. hardened to Rs. 46.20 from Rs. 46 in the wake of Russian purchases totalling about 8,000 bales. However, some selling pressure developed in heavy goods at the higher levels, and as a result ready B. twills sagged to Rs. 136.25 from Rs. 138.25. At this stage, Australia turned buyer for cornsacks against September delivery, and covering business soon followed for forward and near deliveries. As a result, on the following day, ready B. twills picked up to Rs. 139. The good news that Argentina had issued authorisation for 10,000 bales of hessian sent up hessian 40" 10 oz. further to Rs. 46.65. On Thursday, heavy goods moved up to higher levels, following the expectation of an Indonesian order for a substantial quantity of heavy cees against September-December delivery. Ready B. twills put on two points at Rs. 141, but following profit-taking closed at Rs. 140 on Thursday. Hessian 40" 10 oz. closed higher at Rs. 47, as Russia desired to purchase more. At this stage, keen activity developed in the futures market, and on Friday ready B. twills were fully steady at Rs. 140.25, as were hessian 40" 10 oz. at Rs. 47. During the week-end, there was good business done with foreign buyers in both sacking constructions and hessian and B. twills closed better at Rs. 140.50 and hessian 40" 10 oz. at Rs. 47.25. Conditions for some time during yesterday's trading were steady, as covering business was being done. However, towards the close prices eased. Thus, ready B. twills finished at Rs. 140 and ready hessian 40" 10 oz. at Rs. 47.15.

Mills showed keen interest in near delivery new crop and prices improved. Northern bottoms moved upto Rs. 97.75 from Rs. 93.75 per 100 kg. September-October. Daissee bottoms scored to Rs. 100.50 from Rs. 97.75 against October-November delivery. New crop arrivals were on the increase, but sellers were reserved, and the uptrend in the prices of goods acted in sellers' favour. The Narayanganj market in Pakistan was steadier, and although arrivals increased they were much below the level at this time last year. Weather conditions were such that they did not rule out the possibility of floods.

EXPORT BUSINESS IN KIPS SMALL

(From Our Own Correspondent)

MADRAS, 6*th August*

There has been no change in the hides and skins market in the past week. Export business is small, due to August holidays in the U.K.-Continent. It is hoped that trading will improve after the holidays.

Shipments during July were: 2,223 bales cow hides, 157 cow calf, 28 buffs, 150 buff calf, 291 goat and 403 sheep to the U.K.; 5 cow hides, 44 cow calf, 53 buff calf, 559 goat and 204 sheep to the Continent; 57 buffs and 178 goat to the U.S.A.; 6 goat and 196 sheep to Japan.

FOODGRAINS DRIFT LOWER

(From Our Own Correspondent)

HAPUR, 8*th August*

Excepting wheat which continued to rule steady due to poor supply position, other grains and pulses drifted lower during the week under review. The downward tendency was due mainly to better *kharif* crop prospects because of timely rains. Inferior wheat recorded modest gains to be quoted at Rs. 17.37 a maund for average quality and upto Rs. 18.50 for superior farm produce. Daily arrivals in the market were about 100 to 150 maunds which were lifted by consumers. The U.P. Government has increased its daily sale quota through ration shops from 30 to 50 maunds. Wheat flour is also being sold to card holders and arrangements have been made to sell rice on ration cards.

Rice continued to rule quietly easy, thanks to satisfactory supply position. There was a fall of about Rs. 1 per maund in the quotation. The local stocks of rice with trade was put at 15,000 maunds and a heavy quantity on State Government account was awaiting despatch to deficit areas. The prevailing prices of rice here were:—*sela basmati* Rs. 31 to Rs. 34; *mainpuri* Rs. 23.50; *ramajwayan* Rs. 24; *raimunia* Rs. 25; and *gudda* Rs. 20.50 a maund.

Gram lost about 50 nP a maund during the week to be quoted at Rs. 15 a maund and old gram sold by the State Government to traders in order to curb the rising tendency in gram prices was being quoted at Rs. 14.75 a maund in the open market. The corresponding price of gram last year was Rs. 12.75 a maund. The fall in gram prices in the Punjab also acted as a bearish factor. Barley eased fractionally during the week to Rs. 12.75. *Bejhar*, too, was quoted lower at Rs. 12 a maund for inferior quality and at Rs. 12.75 for superior mongia variety. *Kharif* crops, mainly maize, were progressing under healthy conditions, due to timely rains and, barring scattered areas which were waterlogged due to heavy rains in early July, the maize crop prospects are very good. *Guwar* continued quiet at Rs. 12.50 to Rs. 13 a maund, as also *juwar* around Rs. 13.50 to Rs. 14.25 a maund.

Peas eased fractionally to Rs. 11.62 a maund for *dara* green quality and Rs. 13 for superior farm produce. Demand was slack and, with loading being restricted, the stockists were anxious sellers. The stocks of peas with trade were heavy at 84 *khatties*, as against 55 *khatties* on the corresponding date last year when peas *dara* was quoted at Rs. 12.25 a maund. *Arhar* also sought lower levels at Rs. 13.25 a maund and local stock with trade was put at 25 *khatties* and demand was almost dormant. The corresponding stock of *arhar* last year was 30 *khatties* and prevailing price then was Rs. 16.75 a maund. Other pulses were also depressed. *Urd* was quoted at Rs. 19.25, *moong* at Rs. 20 to Rs. 21.50 and *massor* at Rs. 14 to Rs. 17 a maund.

SUGAR EASES FURTHER

(From Our Own Correspondent)

HAPUR, 8*th August*

Sugar eased further during the week to Rs. 111.50 per bag in wholesale and Re. 1.09 per *seer* in the open market, as against the controlled prices of Rs. 108.50 and Re. 1.01. The supply position of sugar improved following the fresh release of 200,000 tons for sale and, although no free sales were contemplated in U.P., sugar supplies for ration mostly in rural areas were reaching the market for open sale. It is now almost certain that the Central Government is not conceding the traders' demand for immediate decontrol of sugar, despite an all-time record of sugar production at 2,425,000 tons and the expected surplus of over 500,000 tons. Exports, however, are contemplated to the extent of 150,000 tons immediately.

In the Muzaffarnagar market, also, sugar ruled easy, following comfortable supply position. Most of the quantity allotted for July allotment was not being lifted from the Sugar Dealers' Syndicate. The week-end prevailing prices were:—Rs. 111 to Rs. 112 per bag and Re. 1.12 per *seer* in the open market.

The Kanpur market was moderately active on revival of festive demand. The latest prevailing price was Rs. 114.50 per bag.

Khandsari continued to rule steady due to good demand from the consuming areas of the South but loading was still restricted. Stocks left with producers were now reported to be small. The week-end prevailing prices were:—*khandsari* inferior Rs. 30 to Rs. 32; superior Rs. 33 to Rs. 41; *khandsari* crystal Rs. 37 to Rs. 42; *boora* from *khandsari* Rs. 43 per maund.

Ready *gur* sought lower levels. Trading came almost to a standstill, as stocks left with the trade were only of wet quality which was not in request and loading was perfectly restricted for past some days. The cane crop here was reported to be in need of rains, although prospects were bright in other areas. Local *gur* stock left was put at 15,000 maunds, as against 33,000 maunds on the corresponding date last year. The week-end prevailing prices were:— *gur* Rs. 16.50; *kotha* wet Rs. 16; *shakker* Rs. 19 a maund.

Gur also sought lower levels in the Muzaffarnagar market during the past week, due to loading restrictions, though some demand was reported from the South. *Dana minja* was in request from Madhya Pradesh and east U.P. Local stock was put at 60,000 maunds and week-end prevailing prices were:—*Chaku* dry Rs. 20.50 to Rs. 20.75; *kotha* wet Rs. 15.75; *rusket kotha* Rs. 8 to Rs. 10; *Shakker dara* Rs. 20; *dana minja* Rs. 17 to Rs. 19 a maund.

Gur futures ruled bearish on continued bear pressure from Kasgunj and other operators. Fagun opened at Rs. 14.06 last Monday and was quoted today near the worst level of the session at Rs. 13.64.

CHEAP RADIO SETS

The Government of India has decided that production of 50,000 to 60,000 cheap radio sets should be aimed at annually. This was revealed by the Union Minister for Industry, Mr. Manubhai Shah, in reply to a question in the Lok Sabha last week. As a result of discussions at a meeting of radio manufacturers, convened by the Government in May last, it was decided that every manufacturer would produce cheap radio sets at least up to 10 per cent. of his production within the existing foreign exchange allocation; for every five per cent. additional production of cheap radio sets over the 10 per cent. the manufacturer would be given five per cent. additional foreign exchange for import of components and raw materials, subject to a maximum additional production of 20 per cent. sets. It had also been agreed that the manufacturers should make an all-out attempt to put cheap radio receivers in the market by December this year and that the sale price should be Rs. 125, including all taxes except the State sales tax. Mr. Shah further stated that no special foreign collaboration and technical assistance was necessary for the manufacture of cheap radio sets.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shownjas amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page 275*)

Association of Seed Crushers held at London a fortnight ago. Mr. Faure put the aggregate supplies available for export in 1960 at nearly 7.9 million tons of oils and fats, of which the U.S. alone accounts for as much as 2.5 million tons. The world exports of oils and fats last year were of the order of 7.7 million tons, as against 7.1 million tons in 1958. On this basis and assuming that imports into Western Europe will be lower as a result of a rise in production, especially of olive oil and butter, the apparent world surplus of all fats and oils is calculated at 350,000 tons.

The estimated world production of oils and fats in 1960, as given by Mr. Faure, is somewhat higher than the forecast made by the U.S. Department of Agriculture in May 1960. The output forecast by the latter is 34.2 million short tons (2,000 lbs. each) which is some 445,000 tons more than what was produced in 1959. So far as the trend is concerned, the estimates of both show an increase over the previous season. The following table, based on the U.S. Department of Agriculture's estimates, indicates the trend of world output of different oilseeds, oils and fats during the year 1960, as compared with 1959 and 1958:

(In million short tons—fat and oil equivalent)

	1960	1959	1958
Cotton seed	2.3	2.2	1.9
Peanut	2.4	2.5	2.5
Soyabean	3.7	3.7	3.2
Other edible vegetable oils	4.6	4.7	4.2
Palm oils	3.9	3.9	4.1
Linseed	1.1	1.1	1.1
Other industrial oils	0.4	0.4	0.4
Butter	4.2	4.1	4.1
Lard	6.7	6.5	6.0
Tallow and greases	3.7	3.6	3.3
Marine oils	1.1	1.0	1.0
Total	34.2	33.7	31.8

It will be seen from the above figures that marine oils and animal fats are likely to account for the bulk of the increase in world production and palm oil and industrial oils for a smaller amount, while the output of edible vegetable oils is estimated to have suffered a setback. In this context, it will be worthwhile to refer to the interesting analysis of the future trend of oils and fats consumption furnished by Mr. Ronald Brech of Unilever at the aforesaid Congress. His analysis reveals that, in underdeveloped countries, consumption of oils and fats will rise much more sharply than in industrial countries, partly because their population is growing at a faster rate and partly because consumption per head is more responsive to a rise in income in poor countries than rich ones (where it may even decline). As exporting countries will probably decline, while exports from Africa—though not Latin America—may increase, but not sharply. Russia may for a time become a bigger importer and China a bigger exporter. Thus, the growth in world supplies is likely to be greatest among the liquid oils, and the United States will become a still bigger supplier.

E.I.D. Rights Issue

The ordinary shares of the East India Distilleries and Sugars have sustained a sizable fall of 9 per cent. after they became *ex-div. ex-right* on the 5th inst., the rate declining from Rs. 43.70 on that day to Rs. 40 on the 10th inst., due to selling pressure from certain quarters, despite the announcement of the details of the attractive rights issue and good prospects for the Company. For some weeks past, it may be noted, the shares had been held at Rs. 61.75 *cum-div. cum-right*. The rights are being currently quoted at Rs. 19.50. The proposed right issue is to provide a part of the capital cost of the new compound fertiliser factory at Ennore, near Madras.

As readers are already aware, the Company proposes to issue 550,000 new ordinary shares of 20s. each at a premium of 50 per cent., that is, at 30s. each to the members on the London register and at Rs. 20 per share, the corresponding rupee equivalent, to the members on the Indian register. They will be offered

MORE ON PALAI BANK EPISODE

THE collapse of the Palai Central Bank Ltd. has, fortunately, not had any adverse economic repercussions. There has been no run on any other bank. Nor has any industry or trade come to grief. There is nothing surprising about this, for the Palai Bank, though big in its way in the Kerala State, was a relatively small one, with its deposits (Rs. 9.80 crores) accounting for only 0.5 per cent. of total deposits (Rs. 1,931 crores) of all scheduled banks and with no widespread ramifications. But its failure has evoked a political storm of a magnitude which is out of proportion to the economic importance of this sad episode. When another scheduled bank in Maharashtra, the Laxmi Bank, shared the same fate about a couple of months earlier, not a dog barked. This bank was, of course, smaller than the Palai, but it had more branches and its failure must have badly affected an equally large number of small middle-class people. The reasons for the contrast are simple. Politically, Kerala has been a sick State of the Indian Union and the Palai Bank held an important position in that State. It is also alleged that the Bank was involved in the political wranglings in the State. Even if this is not true, the political leaders will have been quick, as, indeed, they have been, to seize this opportunity for raising their stock with the public by championing the cause of the ill-fated depositors and employees. Secondly, the Bank's two branches in Delhi seem to have been quite popular, especially with Government employees of all classes, and gathered a large amount of deposits. Naturally, when they shut their doors, the poignancy of depositors in these branches became quite conspicuous. Thirdly, Parliament was in session when the event took place, thereby enabling the Opposition to draw the attention of the country to it in a spectacular manner by moving an adjournment motion. A Bill to amend the Banking Companies Act that came up before both the Houses also provided a first class occasion for the members interested in this subject to highlight the event. And, fourthly, the Prime Minister's periodical Press conference took place within a few days of the Bank's closure, and the representatives of the Press were alert enough to get his reactions. While all this vigilance by the Press and Members of Parliament speaks highly of the vitality of democracy in this country and reflects the anxiety of our leaders to safeguard the interests of innocent people who trustingly place their savings with banks, it would not augur well for the future of this country if attempts were made to build political capital out of such unfortunate developments or to exaggerate them in a dramatic way, in order to create a climate in favour of nationalisation of banks. It is a sad commentary on the political state of affairs in this country that some leaders should be indulging in this very undesirable game now. Their object is not to safeguard depositors, or to foster the banking habit, but to give a boost to their political ideals.

The failure of one or two scheduled banks accounting for a negligible percentage of total deposits does not justify the cry for nationalisation of banking. Those who have raised this cry now are talking in two voices, because they have also criticised the Reserve Bank in the same breath as being inefficient and incapable of protecting the interests of depositors. In the event of nationalisation of commercial banks, it is the very same Reserve Bank that will be in charge of the nationalised banking service, which will be a monolithic organisation with some 5,000 branches spread all over the country. If banking is nationalised, there will, of course, be no failure of banks and loss of deposits, but this does not mean that there will be no losses. Only, instead of a few individuals suffering on their capacity as depositors, all will suffer in their capacity as taxpayers. Since public memory is short, one has to recall the fact that the Mundhra episode inflicted upon the Life Insurance Corporation more losses than, perhaps, those suffered by life insurance companies when they were under private enterprise. Wholesale national

scrutiny. Incidentally, the fact that a lot of time is being taken to meet the challenge of those who have questioned the veracity of facts given by the Finance Minister last week suggests that the authorities had not fully anticipated the reactions which would follow their step against the Palai Bank. This undoubtedly reflects their poor judgment of political forces. They should have made adequate preparations before initiating the step they took and marshalled all the facts in anticipation of all probable criticisms, so that there could be no room for doubt about such issues as the quantum and type of liquid assets.

The Governor of the Reserve Bank has explained, in his address to the annual meeting of the Indian Institute of Bankers, extracts from which are published elsewhere in this issue, the difficulties of the Reserve Bank in ensuring the operational efficiency and integrity of commercial banks. He has also brought out the fact that taking action against an erring bank is a very delicate job, as it involves careful balancing of a number of considerations. These are genuine difficulties. As he aptly remarked, "the Reserve Bank's powers of control are not and cannot be a substitute for the efficiency and integrity of the management themselves." And such integrity and efficiency do exist in the case of the vast majority of our banks. Otherwise, Indian banking could not have attained the stature that it enjoys today. But the main criticism against the Reserve Bank, in the context of what has happened to the Palai Bank, is that, though it had watched and scrutinised the affairs of the Palai Bank, it had failed to take effective measures which would have either improved its affairs or forced it to go into liquidation years earlier, thereby minimising the scope for losses to depositors. In any case, the Reserve Bank should strengthen its inspection staff and not slacken its efforts at checking the affairs of each and every bank to the best of its ability.

As there are limits to which controls and scrutiny by the Reserve Bank can avert bank failures, the monetary and fiscal policies should be suitably attuned to facilitate the growth of banking on sound lines. The policy of cheap money in times of inflationary conditions is totally unsuited for this purpose, as it tempts depositors to go to small banks that offer high rates of interest, encourages several undesirable business practices which in turn result in bad advances, and keeps the banks' margin of profit at inadequate levels, a state of affairs which will place honest bankers at a disadvantage *vis-a-vis* dishonest bankers. Gresham's law still holds good in this country, as the planned economy that it is having is not of a totalitarian variety. Unfortunately, there is a lot of loose thinking in this country on the subject of appropriate interest rates for this country and even the Governor of the Reserve Bank, with all the expert advice at his command, is not free from this defect. The exigencies of immediate needs seem to cloud one's vision and make it impossible for the policy-makers to judge the issues from the long-term point of view. The way in which the Governor has tackled the case for a higher Bank rate clearly shows that he is unable to make up his mind. Well, events will ultimately do that for him. But a prudent central banker will always believe in looking ahead and taking events by the forelock.

PORT DEVELOPMENT

IN recent years, port development has attracted considerable public attention. The situation created by the congestion in the ports in the early years of the second Plan, the deterioration of the river Hooghly in Calcutta and strikes by dock labour have all combined to invest the development of ports with a new significance. There is now a much wider realisation of the general economic importance of ports which are well equipped to handle expeditiously the steadily increasing quantum of cargo. Realising the importance of providing increased facilities in ports, the authorities have installed additional mechanical appliances and berthing capacity in different ports. The result has been an increase in the total capacity of the major ports. From 20 million tons in 1950-51, it moved up to 25 million tons by 1955-56. In 1957-58, the traffic handled at major ports touched a peak figure of 31 million tons; by the end of the third Plan, a total capacity of 41 million tons is expected to be reached by these ports.

In the third Plan, the total allotment to port development is placed at Rs. 85 crores, as against Rs. 60 crores in the second Plan. Major ports will receive Rs. 75 crores—Calcutta Rs. 29 crores; Bombay Rs. 26 crores; Madras Rs. 7 crores; Cochin Rs. 1.7 crore; Vizag Rs. 6.3 crores and Kandla Rs. 4.3 crores. The main objective in the third Plan, according to the Draft Outline, will be to maintain and improve the existing port facilities rather than to increase port capacity. In the course of his speech at the ninth meeting of the National Harbour Board, held at Bombay last week, the Union Minister for Transport and Communications, Dr. P. Subbarayan, explained that, in the third Plan, emphasis would be laid on the early completion of the carry-over items and schemes necessary for maintaining existing services and also on essential improvement schemes. Among the essential services which a modern port should render mention must be made of the establishment of repair facilities. The Board, it is stated, was generally satisfied with the action taken towards the implementation of the recommendations of the Ship Repairs Committee. In particular, it was pointed out, on behalf of the Bombay Port Trust, that no ship needing repairs was denied accommodation; during 1958 and 1959, as many as 396 ships were afforded repair berths facilities aggregating 2,706 "ship days."

Among the major ports, Calcutta has been a source of great concern to all interests connected with it. The deterioration of the Balari bar and of the Ninan, Nurpur and Eastern Ghat bars has been the root of the problem of this port. Intensive dredging, according to the Union Minister, is being continued in the worst affected parts of the river. Although the situation has improved of late, complacence, as the Minister said, must be ruled out. An expansion of dredging fleet is necessary. A second-hand dredger, *Maitena*, has been purchased, a new dredger is under construction and another old dredger is being renovated at a cost of Rs. 40 lakhs. The Port Commissioners, it is stated, are of the view that they should have the services of two large-size dredgers exclusively for the estuary. This matter is said to be under the consideration of the Government. Meanwhile, U.N. experts are engaged in a study of the problems involved in the provision of increased port facilities at Haldia which could take a part of the burden off the Calcutta port. The experts have now held that Haldia is the best site for the location of a deep water port in the Calcutta region. The preparation of a detailed project report for the construction of the port is said to have already been taken up by the Calcutta Port Commissioners.

The main features of the Rs. 8.4-crore modernisation scheme for the Bombay Port (with a foreign exchange component of Rs. 1.5 crore) are the provision of a wide communication passage between the Victoria Dock and the Alexandra Dock and the deepening of the berths in the Victoria Dock to 30 feet. It will give five additional deep drafted berths. It has been preferred to the so-called "minimum scheme," because the latter was not calculated to provide any additional berths, although its cost was as high as Rs. 20 crores, with a foreign exchange component of Rs. 5 to 7 crores. Satisfactory progress is being made in the scheme relating to the dredging of the entrance channel to the port. Another important scheme in the Bombay Port is a new berth at the Ballard Pier extension. After the naval authorities complete the extension, the Bombay Port Trust will undertake the work of deepening the berth, widening the approach channel and equipping the berth with cranes, cables, oil pipelines and other services; the liability of the Port Trust in this project is about Rs. 2.5 crores. All these schemes are part of the third Plan, though work on them will commence in the current year. The World Bank will presumably be approached to meet the foreign exchange component of the total expenditure on the development schemes.

Much progress has been made by the Madras and Cochin ports in their respective schemes of development; preliminary work has been completed on the Visakhapatnam port development scheme. In Madras, the construction of the wet dock has made good progress. The coal and ore yards have been nearly completed. In Cochin, the second coal berth has already been completed and opened to traffic. The construction of the four-wharf berths in the Ernakulam channel at an estimated cost of Rs. 2.24 crores is nearing completion. At Visakhapatnam port, the revised estimates for the construction of four additional berths requiring Rs. 2.8 crores have been sanctioned; tenders for the work will be invited shortly. Two other schemes at the port are the lengthening and deepening of the existing dry dock and the renovation of the breakwater, of which the former has been sanctioned and the latter is under the Government's examination.

Although Kandla is the youngest of India's major ports, its progress has greatly exceeded the expectations of its early planners. The volume of traffic passing through the port in 1959-60, the third year in its career, was about 1.1 million tons, as against 350,000 tons which it was originally expected to handle annually in the first five years of its establishment. The port authorities, it is stated, are tackling the problem of maintaining sufficient depth for deep drafted ships in the approach channel of the port. A dredger from the Visakhapatnam port has been pressed into service. The aim is to have a depth of 12 to 13 ft. at low tide in the new channel, so that ships requiring drafts of 28 to 29 ft. can enter the port during most days in a month. A major problem in the development of the port is the establishment of road and rail facilities which will connect the port with its hinterland. The construction of the national highway between Kandla and Ahmedabad is now in hand. Some sections of the highway are ready, but a number of major bridges, including the one over the Rann of Kutch, have yet to be built. The construction of the highway should be expedited. So far as railway facilities are concerned, the broad-gauge link between Kandla and Jhund has been included in the third Plan; the final location survey has been completed.

What invests Kandla with a special significance is the proposal to create a free trade zone in the port. A free trade zone, as is well known, is a segregated area where foreign goods can be brought for storage, sorting, grading, blending or manufacturing without the intervention of customs formalities and duties and the finished goods could then be exported. The creation of the free trade zone such as this will provide opportunities for the employment of Indian technical and commercial skill and for expansion of export trade.

Next in importance to major ports are the intermediate and minor ports. Dr. Subbarayan on his part did not throw much light on the individual problems of these ports. It may be mentioned here that a provision of Rs. 10 crores has been made for minor ports in the third Plan; this presumably includes the allocation to intermediate ports too. The possibility of a larger allocation, according to the Minister, is also being examined. In the second Plan period, the expenditure on minor ports was Rs. 3.5 crores, as against the allotment of Rs. 5 crores. An important limiting factor in the development of minor ports is stated to be the inadequacy of the requisite type of technical assistance for the preparation of designs and the actual execution of works. This difficulty is expected to be overcome when the Government constitutes a Central Technical Assistance Board to advise the Central and State Governments and port administrations on problems concerning major and minor ports and inland water transport.

It is, however, disappointing to note that the Minister did not clarify the Government's attitude towards Mangalore and Tuticorin. It may be recalled that, in May last, the Intermediate Ports Development Committee submitted its report recommending a Rs. 38-crore scheme for improving Tuticorin, Mangalore, Pradip and Porbandar. Under the scheme it recommended for those ports, the development of Tuticorin (Rs. 10 crores and of Mangalore Rs. 13 crores) was to receive first prior ty and that of Pradip (Rs. 9.5 crores) as well as of Porbandar (Rs. 5.25 crores) was to receive second priority. One naturally expected that Mangalore and Tuticorin would receive top priority in the third Plan. It would, however, appear that the Planning Commission has decided to postpone the development of Tuticorin and Mangalore as deep-sea harbours. Dr. Subbarayan on his part said: "I need hardly assure you that I am very much conscious of the genuine claims of Tuticorin, Mangalore and some other ports for development." Apparently, the scheme for the development of these ports is in danger of being abandoned for the present because of paucity of funds. It is not clear whether, in view of the definite advantages in developing these ports, some re-allocation of the overall target of expenditure for transport and communications cannot be made so as to release additional funds for their development. It is also worth investigating whether the State Governments concerned cannot share a part of the expenditure involved in upgrading the capacity of the two ports. They may do well to adopt for this purpose the technique practised by Rajaji for raising the funds required for financing the Manimuthar irrigation project.

MARKET GOSSIP

THE all-India inter-bank agreement on rates of interest on deposits, which was "voluntarily" entered into by banks in October 1958, has been modified for the second time. The first modification was in September 1959 and the latest one has come into effect from the 16th inst. The agreement fixes ceiling rates of interest for all forms of deposits, excluding inter-bank call money. When it was first concluded, the ceilings were 3½ per cent. per annum for seven days' deposits as well as for deposits for less than three months and 4 per cent. for deposits for three months and over. A rate of 4½ per cent. could be paid only in respect of cash certificates for five years and more. In other words, the ceiling of 4 per cent. was applicable even to deposits of three years' duration, as also to cash certificates for a period of three to five years. The ceiling for savings bank accounts was fixed at 2½ per cent. Under the first modification, which took effect from 1st September 1959, the rates of interest on cash certificates and savings bank accounts were left unchanged, but the ceilings for all other deposits were subjected to a uniform reduction of ½ per cent., so that the ceilings were 3½ per cent. for deposits for three months and over and 5¾ per cent. for deposits for less than three months and seven days' money. Now the Indian Banks' Association, which fathered this agreement, has done a little refinement. The rate for three months and above remains unchanged at 3½ per cent., while that for less than three months has been lowered by ½ per cent. to 3½ per cent. What is even more important, the rate for seven days' money has been brought down by ⅜ per cent. to 3 per cent. And the rates for cash certificates and savings bank accounts continue to be the same as those fixed in October 1956.

The idea behind this agreement is to keep down the cost of deposits. It is with this basic idea the revisions, too, have been made. The banks have been wise in not reducing the rates of interest on deposits for three months and over. The lower rates fixed for deposits for less than three months and for seven days will do no serious harm to the growth of deposits. On the contrary, the banks could have fixed the rate for seven days' House Money at a much lower level, say, at 1½ or 2 per cent. and for deposits upto three months at 2 or 2½ per cent. A part of the saving in cost thus effected could have been passed on to deposits of longer duration. The rate for deposits of 12 months and over, for instance, could have been enhanced to 4 per cent. and that for 6 to 12 months to 3¾ per cent. Similarly, a rate of 3 per cent. on savings bank account would be ideal. Changes on these lines will be more in keeping with the long-term interests of banks. Equally beneficial for them would be to raise their rates of interest on loans, advances and overdrafts by one to two per cent. While the banks have been able to get together and reach an understanding that has forced the depositors to accept lower rates of interest, they have failed to do so in regard to their charges for credit. The fault is as much theirs as of the Reserve Bank, which is yet to appreciate the value of letting money also to find its appropriate cost.

Prospects For Shipping

To the general upward trend in equity values currently being witnessed, shipping shares are a striking exception. Not only have the latter not kept pace with the former but they have actually followed the opposite trend. This is clearly reflected in the index numbers of security prices computed by the Reserve Bank of India. Thus, while the index of equities (1952-53=100) has gone up by 35.6 per cent. in cotton textiles during the period 1st August 1959 to 30th July 1960, by 17.6 per cent. in paper, 12 per cent. in sugar and 8.8 per cent. in cement, it has declined by 13.6 per cent. in the group "shipping" and other transport." Shipping shares have been under strain for quite some time now, thanks to the lower dividends announced for the past year and reports that the operating results for the current year, too, are unlikely to be any better, as a result of the spiral of increasing costs and wages, depression in the world freight market which rendered freight rates uneconomic, and lack of adequate cargoes in coastal trade. It will be recalled that the Scind a Steam, the Great Eastern and the India Steam all reported lower profits for their last accounting year. The India Steam and Great Eastern maintained their dividend only by drawing on reserves. The Scindia Steam, on the other hand, cut its net dividend from 6.25 per cent. to 4.55 per cent. The Bharat Line, it is now reported, has actually skipped over the dividend for 1959.

The aforesaid trend is not confined to this country. Shipping being a truly international industry, the experience of Indian shipping is only a manifestation of a world-wide phenomenon. The latest reports from London about the world shipping industry are somewhat encouraging. It looks as though the three-year-old depression has gradually begun to wane. There are at present unmistakable indications of an uptrend in tramp freight rates. The present seasonal summer recession shows signs of terminating much earlier than even the most optimistic prediction. Freight rates in some trades, especially in the North Atlantic grain trade, have already risen sharply. Possible shortfalls in European harvests are expected to speed up the recovery.

The fact that the tramp freight rates did not fall this spring as low as they did last year was the first sign of better times ahead. This was confirmed by the late start of the summer recession which, as noted above, will end much earlier than expected. Another noteworthy feature is that the summer recession is milder, in spite of the larger number of ships retained in service, as compared with the previous year, in anticipation of the autumn revival. For instance, tramp tonnage laid up has shown a substantial decline from 4.4 million tons last October to 1.65 million at present. Consequently, the tonnage that would be brought to operation will be smaller and its pressure on freight rates in the coming autumn will be correspondingly less. There are, however, other factors which might work in the opposite direction. There is, for instance, no knowing how many of the laid up vessels have been scrapped and how many would be pressed into service at short notice. New tonnage is being added faster than a year ago and it remains to be seen whether world trade, though still climbing up, will keep up the pace. Nevertheless, London advices say that the prospective recovery will be more than seasonal. Indian tonnage also might benefit from the upturn in freight rates, as well as from the large volume of U.S. wheat, rice and cotton to be brought to this country under the latest P.L. 480 agreements. One can, therefore, hazard the guess that, in the near future, shipping shares may be able to emerge from the doldrums.

T.E.L.Co.

The one question on which the shareholders, who attended the annual meeting of the Tata Locomotive and Engineering Company Ltd. last week, were keenly interested in getting a reply from Mr. J. R. D. Tata, pertained to issue of fresh capital. This was natural, because the Company's shares had been boosted on the Stock Exchange by a handful of speculators by creating an impression that a new issue was imminent. Some of them also tried their best to extract from the Chairman information about the profit-margin of the Company, the likely profit it could make next year and detailed answers about its expansion programme. Mr. Tata was shrewd enough to realise that these shareholders were endeavouring to get information which might aggravate speculation in the Company's shares. He clearly stated that he would not like to say things that might lead to more speculation.

The scheme for raising the Company's output of trucks from 12,000 to 24,000 per annum is only tentative. It has yet to receive the sanction of the Government. Mr. Tata, therefore, made it clear that it was premature to make any categorical statement about the issue of new capital and other ways of financing the scheme. His rough estimate of the capital cost was Rs. 14 crores, of which the foreign exchange component might be about Rs. 8 crores. Much, however, would depend on the source of supply of plant and machinery, which, in turn, would depend on the availability of foreign credit. If credit could be found in West Germany, instead of in the U.S., the capital cost would be considerably lower. One of the shareholders, who is a leading sharebroker, asked the Chairman whether he was right in assuming that the Company would not call for any fresh capital during the current year. Mr. Tata replied that he saw nothing wrong with that assumption. Considering that the scheme might require well over a year to take concrete shape, we will not be surprised if the Company makes no call for additional capital for at least another 12, if not 18, months.

Synthetics and Chemicals

The allotment results of Synthetics and Chemicals Ltd. have now been announced. The capital issue of this new company, as readers are already aware, created a record, by evoking the largest response from investors in one's living memory. The Company received 274,805 application forms for 9,962,750 shares of Rs. 100 each, on which only Rs. 25 was payable with application. The issue was over-subscribed by as many as 60.17 times. The manner in which the allotment has been made is stated to be as follows:

"For applications between 5 shares to 210 shares, the allottees were determined by drawing lots, and each successful applicant has been allotted 5 shares. Applications for 215 shares and above have been allotted shares on the following basis, subject to some adjustment and grouping of applications.

215 to 300	... ...	5 shares each
505 to 1,000	... ...	10 " "
1,005 to 1,800	... ...	15 " "
1,805 to 2,000	... ...	20 " "
2,005 to 3,000	... ...	25 " "
3,005 to 3,300	... ...	30 " "
3,305 to 3,890	... ...	35 " "
3,895 to 4,400	... ...	40 " "
4,405 and above	...	50 " "

About 57 per cent. of the capital offered to the public is being allotted to applicants for less than 200 shares."

Although the major portion of the shares offered to the public was set apart to small applications, the unsuccessful applications are as many as 246,000. The Company has rightly given priority to them in returning their funds. Letters of regret and refund orders will, we are told, be posted from 24th August 1960. Even if some 10,000 letters were posted per day, it would take the Company four weeks to complete the lot. The successful applicants will have to wait a little longer, as the Company proposes to post the letters of allotment and refund orders from only about the middle of September 1960.

Having regard to the tremendous rush for the shares of Synthetics and Chemicals, as will be evident from the data given above, it must be conceded that the management of the Company has done their best to expedite the procedure connected with allotment and rejections. Applications were received, we understand, from all parts of India and the first two weeks must have gone in realising the cheques of a large number of applicants. The Company's management must now take prompt steps for getting the scrip listed on the leading stock exchanges.

Recent Trends in Bank Rates

There have been quite a few changes in the central bank discount rates abroad in the last two weeks. As many as four countries (Belgium, South Africa, Rhodesia and Canada) have raised their Bank rates, while one (U.S.) has reduced it. Curiously enough, while the first three have taken this step to arrest the flow of funds out of their country resulting in a drain of their gold reserves, as a result of the high rates of interest prevailing in the U.K. and certain other Continental countries, the U.S. has resorted to this measure, despite the continued decline in its gold reserves. The first one to make a move in this direction was Rhodesia which stepped up the rate by ½ per cent. to 5 per cent. on the 2nd inst. The Belgium National Bank increased its rate by one per cent. to 5 per cent. with effect from the 3rd inst. This is the first change in Belgium's Bank rate this year so far and is on top of a rise of ½ per cent. brought about on 24th December 1959, bringing it to the highest rate in the last one decade. The latest rise was intended to arrest the run on the Belgian franc. The troubles in the Congo, as our London Correspondent pointed out last week, has given rise to flight of capital from Belgium and buying of gold by Belgian residents. The increase in the Bank rate is designed to correct these trends.

The move of Rhodesia was followed by its neighbour, the Union of South Africa, which raised its Bank rate by ½ per cent. to 4½ per cent. with effect from the 10th inst. This is the first change since January 1959, when the Bank rate was lowered from 4½ per cent. to 4 per cent. The increase in South African Bank rate did not come as a surprise, as the Union has been losing its gold reserves heavily. An increase in the rate was expected soon after the rise in the British Bank rate in June last when there was a gap of 2 per cent. between the two countries' rates. The sudden fall in South Africa's gold reserves in the first week of August and the rise in Rhodesian Bank rate served to soften the resistance to a higher Bank rate in that country. Following the disturbances at Sharpeville in March last, the Union's reserves are said to have declined from £153 million to a little over £104 million as on 5th August. This fall is probably the combined effect of sale of Union securities by foreign investors and the flow of short-term funds consequent on the rise in the British Bank rate in June last to 6 per cent. The increase is, however, a modest one, as even the enhanced rate is still 1½ per cent. below the British Bank rate.

The Bank of Canada's interest rate, which is of a floating nature linked to the Treasury Bill rate, rose sharply last week to 3.16 per cent. from 3.08 per cent. the week before.

The only exception to the general trend was provided by the U.S., where four of the Federal Reserve Banks in New York, Richmond, Kansas City and Cleveland were authorised, on the 12th inst., to cut their discount rates by ½ per cent. to 3 per cent., bringing them down to the lowest level since May 1959, when it was raised from 3 per cent. to 3.50 per cent. The other Federal Reserve Banks will soon follow suit as they have always done in the past. In addition, the Federal Reserve Board has liberalised the reserve requirements of commercial banks, with a view to enabling them to lend more and stimulate business activity. These two steps provide an indication that the U.S. authorities are worried more about the trends in their domestic economy than about the increase in the flow of gold to foreign countries. Even before the latest cut in the discount rate, the disparity between the high rates of interest in the U.K. and other European countries and the low rates in the U.S. was high enough to cause a heavy drain on the latter's gold reserves. During the last one month or so, the decline in U.S. gold reserves was of the order of £80 million. The further widening of the disparity as a result of the latest cut in Federal Banks' discount rate can only be expected to give fresh momentum to the outflow of gold. Why then did the Federal Reserve Board authorise last week a further cut in discount rates? One explanation is this: the U.S., which still holds half of the world's gold reserves, is not very much worried by the current outflow of reserves, as it is probably the result of the flow of "hot money," a temporary factor. It is more concerned about preventing loss of confidence in the dollar, as a result of a slackening of the country's economy. It has accordingly decided that its monetary policy should be governed mainly by the domestic economic situation.

The flow of "hot money" into London from the U.S. and other centres, followed by a cut in U.S. discount rate, has touched off speculation in London whether the U.K. Bank rate would be lowered. In fact, talks about this possibility have attracted some support to the Gilt-edged market in London. The main arguments in favour of a lowering of the British Bank rate are: (1) the country's gold reserves are rising at a rate beyond expectations; (2) the large-scale flow of "hot money" as a result of the high rate of interest is not healthy; and (3) it would be embarrassing to the U.S., the U.K.'s political partner, to keep the rate at such a high level. The arguments against the lowering of the rate are: (1) the rate was raised (in June) not with a view to attracting "hot money" but purely on domestic economic considerations; (2) that being so, a cut in the Bank rate will be warranted only when there are signs of a business recession; (3) the restraints imposed

EQUITIES SUBDUED

ACTIVITY THINS DOWN

(From Our Own Correspondents)

BOMBAY, 18*th August*

THIS week's review of the Bombay Stock Exchange covers only three sessions, in view of the public holiday on the 15th inst.—Independence Day—and the absence of any trading yesterday and today, as a mark of respect to Mr. F. J. Guzdar, Vice-President of the Stock Exchange, who died in Bombay on Tuesday. While the Exchange was officially closed yesterday, the jobbers refrained from doing any business today.

The undertone of the market was subdued and, barring a few selected counters, the trend of prices was downward. Fears of further official measures to restrain speculation through credit restrictions constituted the main deterrent factor. The delay in the announcement of retention prices of steel and the consequent delay in the declaration of dividend by the T.I.S.Co. also restrained the enthusiasm of operators. This was reflected in the reversal of last week's upward trend in steel shares. Most of the cash scrips, which had been very active in recent weeks, were listless. The general turnover disclosed a sizable fall.

The unusual delay in the announcement of dividend caused some selling in Tata Ordinaries which, as a result, were marked down from Rs. 163 to Rs. 161. Last week's rise in Indian Irons was not sustained. On the contrary, the scrip fell from Rs. 25.65 to Rs. 25.25.

Textile shares presented a mixed trend. Despite the cut in cloth prices, some of the counters looked up, presumably on expectations that the reduction in prices might not affect the mills' profits for the current year. An indication to this effect was given by the chairman of the Simplex Mills at the annual general meeting of the Company held on the 16th inst. He envisaged an improvement in the results of the Company in the current year, thanks to the beneficial effects of the rehabilitation programme and the streamlining of production. He felt that the cut in cloth prices would not materially affect the working of the Company. On the Exchange, the scrip scored a gain of Rs. 3 over the week to Rs. 175. Among the other counters which recorded a rise, albeit small, are Kohinoors, which improved by Re. 1.25 to Rs. 336.75, Central Indias by Rs. 2 to Rs. 120, Finlays by Rs. 2 to Rs. 354, Gokaks by Rs. 4 to Rs. 158, Standards by Rs. 7 to Rs. 1,992, Svadeshis by Re. 1.50 to Rs. 246 and Tatas by Re. 1 to Rs. 45. Centurys were erratically lower at Rs. 504, after an earlier rise from Rs. 506 to Rs. 510. Bombay Dyeings were marked down from Rs. 69.40 to Rs. 68.50. Mafatlal Fines shed Rs. 20 to Rs. 1,215, New Greats Rs. 5 to Rs. 185 and Sassoon Spinnings Re. 1.50 to Rs. 66.80.

A further marked rise of Rs. 3.20 to Rs. 79 in United Commercials was the only notable feature of trading in bank shares. The other scrips were conspicuously dull, some of them disclosing fractional losses.

A quiet tone prevailed in the electricity section, Ahmedabad Electrics were marked down by Rs. 2 to Rs. 87. Tata Hydros shaded off from Rs. 108 to Rs. 106.50. Andhra Valleys were subdued at Rs. 1,022.50 and Tata Powers at Rs. 1,082.50.

Sugar shares maintained a steady tone and most of them recorded modest gains. Belapurs improved by Rs. 2 to Rs. 374, Phaltans by Re. 1.50 to Rs. 181, Maharashtra Sugars by Rs. 3.50 to Rs. 239.50 and Walchandnagars by Rs. 2 to Rs. 307. Cement shares were extremely dull, with very little movements in quotations. Associated Cements fluctuated within a small range between Rs. 145.25 and Rs. 143.75 and closed at Rs. 144, with no change over the week. Digvijays, too, were unchanged at Rs. 163.50. Orissa Cements were a shade lower at Rs. 14.20.

In an otherwise quiet engineering section, Premier Constructions were conspicuously firm, with a sharp rise of Rs. 12.50 to Rs. 357.50 on renewed expectations of an early announcement of the long expected capital reconstruction scheme. Alcock Ashdowns were marked down by Rs. 4 to Rs. 293. Tata Locomotives gave way from Rs. 304 to Rs. 299, presumably due to the Chairman's disclosure at the annual meeting that there would not be a rights issue for some time to come. He, however, announced that the Company would shortly seek the permission of the Government to double the output of trucks from 12,000 to 24,000 units per annum. The capital cost of the scheme is estimated at Rs. 14 crores. Cooper Engineerings, however, recovered a part of their last week's loss, with a rise of Rs. 2.50 to Rs. 165. Jost's Engineerings gained ground by Rs. 12.50 to Rs. 132.50. While Larsen and Toubros were unchanged over the week at Rs. 50, Mahindras shed Re. 1 to Rs. 23.

Shippings and automobiles were colourless. Scindias were, however, steady at Rs. 15.36 and Great Easterns at Rs. 17.44. Hindustan Motors were lower by 40 nP at Rs. 22.24 and Premier Automobiles by Re. 1 at Rs. 177.

In the miscellaneous group, Bombay Burmahs had a further small setback this week from Rs. 591.50 to Rs. 585. After maintaining an upward trend during the major part of the week, moving up from Rs. 507.50 to Rs. 519, National Rayons slided back to Rs. 514. Gwalior Rayons were maintained at Rs. 47.50, while Baroda Rayons shed a rupee to Rs. 149. Voltas recorded a further loss of Rs. 3 to Rs. 282. Tata Oils were maintained at Rs. 72, while Tata Chemicals declined by 52 nP to Rs. 19.84. The downward trend of Alembic Chemicals was maintained when the quotation dipped this week by Rs. 6.25 to Rs. 260. Amar Dyes fell by no less than Rs. 17.50 to Rs. 472.50. Colour Chems, however, gained Rs. 3.75 to Rs. 437.50 and Poly Chems Rs. 2.50 to Rs. 307.50. Adarsh Chemicals advanced by Rs. 10 to Rs. 95. Indian Dyestuffs were stagnant at Rs. 835 and so also Ceat Tyres at Rs. 275, while Premier Tyres shed a rupee to Rs. 105 and Union Carbides suffered a similar loss to Rs. 57. Khandelwal Ferro Alloys were maintained at Rs. 126. Chase Bright Steels gave way from Rs. 20 to Rs. 19.52.

* * * *

Calcutta Stock Exchange

CALCUTTA, 17*th August*

The decline in the volume of business put through on the Calcutta Stock Exchange during the week under review would suggest that the speculative elements had realised at long last that the uptrend had been over-done and that investors were not likely to support these rates, which, to a large extent, had ignored yield considerations. Also investors would appear to be setting apart funds for several new issues, expected in the course of the next few months. The reports from New Delhi that the authorities were considering measures to restrain the speculative frenzy had a sobering effect on the market. This explains why the uptrend in Indian Irons following the higher dividend was not sustained and that buoyancy was not reflected in other speculative counters. There were other factors why bulls became cautious during the week. Indications were that the money market would continue to be tight. Also, State loans opening at the end of this month would claim a good portion of the funds seeking investment.

Sectionwise, coals tended quiet following the Ministerial announcement in New Delhi that, as a rule, expansion of private collieries would be permitted in areas immediately contiguous to their working mines. There was also profit-taking. From Rs. 348, Bengals shaded to Rs. 334. Burrakurs opened at Rs. 20.31 to close lower at Rs. 20. Equitables moved down fractionally to Rs. 26.81, but recovered to close at Rs. 27.25.

Following the increase in gunny stocks with mills, jutes also participated in this week's general quietness. Earlier, however, there were a few selected rises. Thus, while Howrahs declined to Rs. 23.25 from Rs. 23.50, Chitavalsahs had gained to Rs. 15.12 from Rs. 14.69 previously. At Rs. 21.75, Northbrooks recorded a fractional gain, while Birlas slided to Rs. 34.12 from Rs. 34.50. Ganges were quiet at Rs. 11.81, as were Fort Williams at Rs. 27.56.

Among engineerings, Guest Keen Williams were keenly sought at on hopes of rights issue and gained to Rs. 52 from Rs. 50.46. Indian Irons opened at Rs. 25.44 and after hardening to Rs. 25.73 met with profit-taking to close at Rs. 25.38. Texmacos continued to fall and closed at Rs. 27.50, as against the opening of Rs. 28.58. Jessop & Cos. were quiet at Rs. 23.69. Braithwaites were crossed at Rs. 32.87, as against Rs. 33 previously. Dalmia Irons were firm at Rs. 13.37 for some time, but closed lower at Rs. 12.94. After being higher at Rs. 5.19, Marshalls gave way to Rs. 4.87.

Selected features were recorded in miscellaneous industrials on interested buying. Union Carbides were shown good attention, and steadily rose to Rs. 58.50 from Rs. 55. Rohtas Industries, after rising to Rs. 41.37 from Rs. 40.50, closed firm at Rs. 40.75. Alkali and Chemicals continued to enjoy modest support and rose to Rs. 36.12 from Rs. 36, but during yesterday's trading were pushed down to Rs. 35. Dyer Meakins were firm at Rs. 23.75, as against Rs. 23.50 earlier on hopes of a good dividend. Titaghur Papers, after encountering support at Rs. 42.37, closed lower at Rs. 41.44. Associated Batteries were quiet at Rs. 37.50, as against Rs. 37.87 previously. Dunlop Rubbers eased by Re. 1.37 to Rs. 45.75 and Hindustan Motors gave way to Rs. 22.50 from Rs. 22.87. Indian Aluminiums realised earlier Rs. 32.06, but closed lower at Rs. 31.12. Likewise, Orient Papers closed lower at Rs. 45.90 after changing hands at Rs. 46.60 earlier.

Teas were neglected in reflection of the alarming trend in export auctions here. Brooke Bonds changed hands at Rs. 16.81, as against Rs. 17 previously. Dhelakhats were unchanged at Rs. 23.87. Banarhats, after being lower at Rs. 334, regained the previous rate of Rs. 335 while Bishnaths were better at Rs. 23.06. Dibrugarhs were pushed down to Rs. 22.75 from Rs. 23 and Naga Hills to Rs. 26.25 from Rs. 26.50.

* * * *

Madras Stock Exchange

MADRAS, 17*th August*

A moderate improvement in values over a wide front was noted on the Madras Stock Exchange during the week under review, in contrast to the easy trend that prevailed last week. There was good investment support, while floating stocks were scarce. Tea shares put on a cheerful appearance, thanks to reports of firm prices fetched for tea at the recent auctions. Rubbers were well favoured on renewed hopes of higher prices for raw rubber. In sympathy with teas and rubbers, coffees were held firm, though a few scrips encountered selling. Sugars were also well fancied. Textiles elicited enlarged buying enquiries notwithstanding the downward revision in mills' wholesale prices of cloth as a result of the Indian Cotton Mills' Federation's call and the proposed cut in the rates for yarn. Miscellaneous industrials, particularly chemicals and engineerings, generally tended to move up.

In the tea group, Nonsuchs met with good support and rose by 25 nP to Rs. 28.25. Haileyburias hardened by 20 nP to Rs. 15.60. Blue Mountains advanced by 11 nP to Rs. 5.37. Peermades improved by 10 nP to Rs. 23.50 and United Nilgiris by 5 nP to Rs. 22.50. Periakaramalais gathered 5 nP to Rs. 3.85. Neelamalais picked up 3 nP to Rs. 5.03. Kil Kotagiris were fully steady at Rs. 5.68, Devasholas at Rs. 31.50 and Parksides at Rs. 28.50. Chembras, however, shed 10 nP to Rs. 5.10.

Among coffees, Consolidated Coffees spurted by 10 nP to Rs. 26.65. Mysore Coffees scored a gain of 5 nP to Rs. 5.45. Sheveroys gathered a naya paisa to Rs. 2.06. Ouchterlony Valleys were maintained at Rs. 5, as also Balanoors at Rs. 16.70, and Cowcoodys at Rs. 5.70. Balmadies were unchanged at Rs. 2.45. The Directors of the Company have declared a dividend of 7½ per cent., taxable (equivalent to 5¼ per cent., tax-free), for the year ended May 1960, which compared unfavourably with 7½ per cent., tax-free, for the previous year. Coffee Lands, after remaining steady at Rs. 25.90 in the initial sessions, gave way to Rs. 25.30. Rajendras declined by 30 nP to Rs. 15.50.

In the rubber group, Vaikundams went up by 25 nP to Rs. 31.26. T.R. and Teas strengthened by 10 nP to Rs. 8.20. Malankaras rose by 15 nP to Rs. 20.40. Cochin Malabars were higher by 2 nP at Rs. 8.12. Midlands, however, declined by 15 nP to Rs. 12.15 and Kailas by 5 nP to Rs. 5.55.

A feature of trading in the sugar section was the rise of Rs. 2 registered by Cauverys which stood today at Rs. 152. Deccans improved by 34 nP to Rs. 16.40. Indias gathered 4 nP to Rs. 12.60. United Breweries changed hands at Rs. 112, Mysores at Rs. 60.50 and Travancores at Rs. 11.90. East India Distilleries, however, were marked down by 75 nP at Rs. 39.25.

Among textiles, Premiers spurted by Rs. 2.50 to Rs. 246. South Indias moved up by Re. 1.50 to Rs. 139.50. Lakshmis rose by a rupee to Rs. 158. Bangalore Woollens increased by 50 nP to Rs. 199. Maduras were higher by 35 nP at Rs. 34.25. Travancore Rayons rallied from Rs. 36.50 to Rs. 36.75. Buckinghams were firm at Rs. 206, Coimbatore Pioneers at Rs. 351.50, Coimbatore Spinnings at Rs. 53, Dhanalakshmis at Rs. 229 and Metturs at Rs. 398. But Cannanores suffered a setback of Rs. 4 to Rs. 150. Coimbatore Cottons lost Rs. 3.50 to Rs. 171.50. Kotharis eased by 5 nP to Rs. 12.65.

Tube Investments provided a bright spot in the miscellaneous section, the quotation jumping up from Rs. 337 to Rs. 340. Among chemicals, Mettur Chemicals rose by 35 nP to Rs. 14.45. F.A.C.Ts hardened by 30 nP to Rs. 12.80. Mysore Fertilisers were fully maintained at the last week's level of Rs. 10.60, as also Mysore Chemicals at Rs. 27 and Travancore Chemicals at Rs. 18.10. Among cements, Travancores advanced by 62 nP to Rs. 8.87. Indias improved by 17 nP to Rs. 7.25. Dalmias were unchanged at Rs. 12.50. Andhras, however, dropped 20 nP to Rs. 10.90, and Orissas 8 nP to Rs. 13.87. Among other miscellaneous industrials, Mysore Papers spurted by a rupee to Rs. 29. Textools increased by 50 nP to Rs. 190.50. Aluminium Industries were better at Rs. 25.30, as against Rs. 25. The Directors of the Company have declared a dividend of 9 per cent., taxable, making a total of 18 per cent., taxable (equivalent to 12.6 per cent. tax-free) for the year ended March 1960, as against 12.5 per cent. for the previous year. Spencers picked up 13 nP to Rs. 22.73. Ashok Leylands were fancied at Rs. 9.45. Mysore Machine Manufacturings were steady at Rs. 10. The Directors of the Company have announced a dividend of 12 per cent., taxable (equivalent to 8.4 per cent. tax-free) for 1959, which compares favourably with 7 per cent., tax-free, for 1958.

Notice

A. V. THOMAS & COMPANY, LIMITED
ALLEPPEY

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting will be held at the Registered Office at Beach Road, Alleppey, on Wednesday, the 7th September, 1960, at 11 a.m., to transact the business as set out in the notice sent to the members of the Company.

The Share Transfer Books will remain closed from 1st to 7th September 1960 (both days inclusive).

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member.

By Order of the Board,
(Sd.) K. SRINIVASAN,
General Manager.

ALLEPPEY, 5*th August* 1960.

Note:—The Directors have recommended a dividend of 20 per cent. on Equity Shares for 1959 subject to deduction of tax and the same, if approved, will be paid to members on the register as on the date of the meeting.

NEWS IN BRIEF

INDIA exported engineering goods worth Rs. 3.76 crores during the first half of the current year, as against Rs. 2.31 crores in the corresponding period last year.

The executive committee of the Indian Tea Planters' Association has decided to set up a research station at Malbazar in the Dooars for studying agronomical and botanical problems of common tea of Dooars and Terai.

The International Development Association Bill, which seeks to ratify the agreement providing for the creation of the I.D.A. to grant liberal assistance to underdeveloped countries, has been passed by the Lok Sabha. India is a signatory to the agreement.

The Hydrographic Branch of the Indian Navy will undertake special surveys off the Narbada river delta, in connection with the oil exploration work now in progress in the Gulf of Cambay. The surveys are to be carried out according to the requirements of the Oil and Natural Gas Commission.

The President has given assent to the Madhya Pradesh Agricultural Produce Markets Bill, 1960, which seeks to introduce in the State a uniform law on the regulation of markets for agricultural produce. At present, there is no law in force in the Bhopal and Vindhya Pradesh regions, while in other regions of the State different laws prevail.

The Planning Commission has reconstituted the Panel on Housing and Regional Planning with Mr. G. L. Nanda, Union Minister for Planning, as the Chairman. The Panel will review the progress of plans in the field of housing and regional planning and advise the Commission on programmes relating to the third Plan.

The Deputy Minister for Railways, Shri Shah Nawaz Khan, stated in the Rajya Sabha last week that the Government of Pakistan had forwarded a proposal to the Government of India to have a rail link between East and West Pakistan through the Indian territory. He added that this matter was under the consideration of the Governments of India and Pakistan.

A Bonus Commission will be appointed shortly, irrespective of employers' opinions, to evolve norms in regard to payment of bonus, according to Mr. Abid Ali, Union Deputy Minister for Labour. The Commission will consist of four or five members—a Chairman, a representative each of the employers and employees, an economist and possibly an independent member.

The Central Food Technological Research Institute, Mysore, has developed processes for the manufacture of substitute and supplementary foods, such as tapioca-macaroni, multipurpose food, enriched flour, blended flour, edible groundnut flour and vegetable milks. The Institute is currently conducting consumer acceptability trials. The total amount spent on the Institute up to the end of March 1960 is put at Rs. 148.79 lakhs.

The naphthalene plant, an associate of the by-products plant of the Durgapur Steel Works in W. Bengal, was put into commission on the 10th inst. Designed to handle 36 tons of crude naphthalene oil per day to produce 20 tons of refined naphthalene, the plant works in conjunction with the tar plant, which produces crude naphthalene oil. Naphthalene is used as a raw material in the manufacture of a variety of products, such as moth balls; resins, lacquers, plastics and dyestuffs.

The three-member Indian delegation, which visited Ceylon to explore the possibility of exporting railway wagons and coaches, has returned. It is learned that the Ceylon Government proposes to call for global tenders for railway rolling stock, soon after it secures a loan from the U.S. for this purpose. The chances of India getting the tender in its favour are said to be bright because its quotations are quite competitive. The estimated requirements of Ceylon are about 1,000 goods wagons and about 100 railway coaches.

India's first escalator is expected to be installed later this year at the Delhi station. Designed entirely by Indian railway engineers, fabrication work on the escalator is already in progress at Northern Railway's workshop at Amritsar. The escalator will have a carrying capacity of 8,000 persons per hour. The steps will move at a speed of 90 feet per minute and will be 48 inches wide between the two-side railings. This will enable two adults with an arm-load of luggage to stand comfortably side by side on each step. The escalator can be switched on to move in the upward or downward direction, depending on the flow of traffic.

Nearly 500 factories, employing about 10,000 persons, are now functioning in the industrial estates completed so far. The total investment on these estates is about Rs. 5 crores. The value of annual production is about Rs. 10 to Rs. 11 crores. Out of 100 estates sanctioned in the second Plan, 58 have been completed, or are nearing completion. The other estates are in different stages of construction. These facts were disclosed by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, at a recent meeting of the Informal Consultative Committee of Parliament.

An agreement between India and Iran for the operation of air services between the two countries was signed at Teheran last week. The agreement is designed to promote the development of air traffic between India and Iran. Under this agreement, the airline to be designated by the Government of India is entitled to touch Iran at Teheran-Abadan and proceed, if desired, to points beyond Iran, in both directions. Similarly, the airline designated by the Government of Iran is entitled to touch India at Delhi-Bombay and proceed, if desired, to points beyond India, in both directions.

The Employees' State Insurance Scheme has been extended to cover Adoni and Kakinada in Andhra Pradesh and Udaipur and Bharatpur in Rajasthan from the 13th inst., bringing within the scope of the Scheme 5,250 more factory workers. The total number of workers covered by the Employees' State Insurance Act has now gone up to over 1.55 million. The families of insured workers at Adoni, Kakinada, Udaipur and Bharatpur will also be entitled to medical care 13 weeks after the Scheme has been made applicable to the workers. Medical care in these areas will be provided by the respective State Governments under the service system, for which five whole-time dispensaries—two at Adoni and one each at Kakinada, Bharatpur and Udaipur—have been set up. For payment of cash benefits, two local offices—one each at Adoni and Kakinada—and two sub-local offices—one each at Bharatpur and Udaipur—have also been set up.

From Abroad

The Japanese Government proposes to impose an import duty on synthetic rubber with a view to protecting the domestic industry.

Japanese exports in July touched $346.82 million—the second highest monthly total since the end of the war. This amount represents an increase of about 10 per cent. and 18 per cent., as compared with June 1960 and July 1959, respectively.

The recent decision of the U.S. aluminium industry to raise prices to overcome high labour costs and declining profits is expected to encourage the steel and rubber industries to follow suit, probably before the year-end, according to *Purchasing Week*, the McGraw-Hill publication.

A group of Western countries—the U.S., U.K., Canada and West Germany—and Japan will confer with the representatives of Pakistan, in Washington, on 3rd October next, about external aid requirements for Pakistan's second Plan. The conference will be held under the auspices of the World Bank.

Outlining the economic policies of the new Government in Ceylon, the Governor-General, Sir Oliver Goonetilleke, in his address to Parliament, revealed that life insurance in Ceylon would be nationalised. He, however, stated that the Government was not in favour of nationalising estates and plantations.

The Australian Decimal Currency Committee will shortly submit its report on the desirability of introducing decimal coinage in the country. It is learned that the Committee has supported the switch-over. If the Committee's report is accepted, decimal coinage will be in the form of 100 cents to the pound or 100 cents to 10*s*.

The U.S. Development Loan Fund has approved of a $700,000-loan to the Ariana Airlines Company of Afghanistan to assist in the procurement of a DC-6C aircraft with related spare parts, tools, ground support equipment and services. This is the first D.L.F. loan granted to Afghanistan and would supplement other American economic and technical assistance extended to that country.

PERSONAL

MR. Arun Kumar Roy has assumed charge as the Comptroller and Auditor General of India *vice* Mr. A. K. Chanda who has retired.

Mr. Jonkheer Gerard Beelaerts van Blockland has been appointed Ambassador of the Netherlands in India.

Dr. Shaukatullah Shah Ansari, at present Chairman of the International Commission for Supervision and Control, Saigon, has been appointed Ambassador of India to Sudan. He will take up the new assignment in October next.

Mr. A. D. Shroff, a Director of Messrs. Tata Sons Ltd. for twenty years, has retired from the firm with effect from the 15th inst. He will, however, continue for the present to be associated with the financial and philanthropic activities of the firm as the Managing Director of the Investment Corporation of India and as a Trustee of the Sir Dorab Tata Trust.

The Government of Chile is currently negotiating with three major U.S. copper companies over the question of investing $400 million in the Chilean copper industry to double its output to one million tons. The Kennecots plan to invest $200 million and Anaconda and Cerro de Pasco $100 million each, subject to the Chilean Parliament's approval of a Bill giving them fresh taxation concessions or at least freezing current rates for 20 years.

The U.S. balance of payments deficit declined from $4,200 million during January-June 1959 to $3,000 million in the first half of 1960. The surplus of U.S. civilian exports over imports rose to a seasonally adjusted annual rate of $3,700 million in the second quarter of 1960, as against $3,000 million in the previous quarter. However, payments to foreign countries for services, Government assistance and private capital movements apparently matched the rise in receipts from merchandise.

The Government of Pakistan has announced its decision to introduce a prize bonds scheme from October next. The bonds will be issued in the denomination of Rs. 10 and they will be encashable at par at any time after issue. They will not bear any interest and lots will be drawn quarterly for prizes on the 1st of January, April, July and October every year. The first draw will be held on 1st July 1961. Each bond sold will be eligible for a prize in all the draws held after the expiry of six calendar months from the month of its sale.

The Government of Ceylon has decided to increase import duties on luxury goods, including motor cars, station wagons, petrol, air-conditioning equipments, floor coverings and tapestries, fountain pens and parts, furniture and fixtures, photographic and cinematographic appliances, watches, cosmetics and horses. The rate of interest payable by commercial banks to the Central Bank on advances secured by pledge of Government securities to cover importation or hire-purchase of specified non-essential goods has also been raised from 2½ to 4 per cent.

FOOD ZONES

IT is now reasonable to assume that foodgrains will be free of distribution controls in the not too distant future. This, at any rate, is the impression one gets from the perusal of the statement which Mr. S. K. Patil, Union Minister for Food and Agriculture, made in the Lok Sabha during question-hour last week, as well as from the decision of the U.P. Government to permit free movement of wheat within the State. The working of the zonal system, Mr. Patil said, was under constant observation and, in view of the large stocks of wheat available, there was no reason to continue the zonal restrictions, continuance of which might even cause prices to rise. Replying to a question on the zonal system, Mr. Patil said: "So far as wheat is concerned, I will be in a position to state within a few days whether the zonal restrictions will be discontinued. I am looking forward to a day, when prices will go down and we will have to protect the farmers and, for this purpose, something else will have to be done. I am confident that such time will come soon."

Just two days prior to Mr. Patil's statement, that is, on Monday the 8th inst., the U.P. Government announced the immediate suspension of the wheat levy order. Under this order, it will be recalled, no wholesale transactions of more than ten maunds of wheat could be made at a time and anybody bringing in more wheat in the market had to surrender 50 per cent. of it to the Government at a fixed rate.

The justification for the continuance of restrictions on both inter-State and intra-State movement of foodgrains, especially wheat, seems to have become weak. The supply position of foodgrains has improved perceptibly, thanks to the bumper crop in 1958-59, namely, 75.50 million tons (according to Mr. M. V. Krishnappa) and the forecast of a fairly large crop in the current year (estimated at 71.75 million tons), as well as next year (75.0 million tons), as against 62.51 million tons in 1957-58, 68.75 million tons in 1956-57 and 65.29 million tons in 1955-56. The fairly encouraging production performance, together with imports of large quantities of grains from the U.S. under the P.L. 480 agreement, has not only wiped off the net deficit in grains but has actually resulted in sizable surplus over and above the normal requirements.

In view of the comfortable supply position thus, the present time is quite opportune for doing away with artificial controls and zonal barriers. Unless normal forces of supply and demand are allowed to operate in the foodgrains markets, the chances of the consumer benefiting from improvement in supplies will be extremely slender. This aspect would be appreciated better if one were to take into account the failure of the zonal scheme for foodgrains to ensure supplies at reasonable prices. Although the scheme has been working for many months now, prices of most grains continue to rule high as is evident from the following table giving the average wholesale rates for some grains prevailing at Hapur in Uttar Pradesh:

(In rupees per maund)

	Latest available	Early in April, 1960	End of Dec., 1959	A year ago
Rice	32.50	32.50	30.00	34.50
Wheat	17.37	18.12	18.62	18.25
Jowar	14.50	12.25	11.50	14.00
Barley	12.62	10.75	11.75	12.75
Gram	14.87	12.37	12.68	12.75
Behar	12.31	11.00	11.37	12.44
Guwar	12.75	12.75	11.75	12.62
Peas (dara green) ..	11.68	10.12	10.00	11.37
Arhar	13.00	14.25	15.00	15.62
Moong	20.50	19.75	18.00	19.50
Masoor	15.50	14.00	14.62	16.37

On more than one occasion, the attention of the Government has been drawn to the persistence of large-scale smuggling of foodgrains across the zonal borders, thereby creating problems somewhat similar to what one sees on the prohibition front. We cannot but quote here again what the Executive Committee of the All-India Foodgrains Dealers Association observed a year ago: "Large resources of the Government in the shape of police and other forces are diverted to watch the zonal borders, adding thereby to the cost of administration, apart from encouraging and increasing the unsocial elements in the country to have full sway in these activities and elimination of all legitimate and honest trade from the food sector."

Viewed thus, the contemplated move of the Union Government to withdraw zonal restrictions on the movement of wheat, as indicated by Mr. Patil, must, indeed, be widely welcomed. And it is to be hoped that this freedom would soon be extended to rice and other grains, too. By doing so, the Government will doubtless pave the way for the restoration of a rational structure of prices of important foodgrains as between the deficit and the surplus areas. Some may fear that, once the zonal restrictions on movement of foodgrains are abolished, prices will shoot up. But the fear is exaggerated. For the Government is having in its reserve large stocks of foodgrains which can always be rushed to areas experiencing shortage and rise in prices. The Government can also build up reserves in the larger cities and towns. The Union Food Ministry has already finalised a programme envisaging expansion of storage capacity from the existing two million tons to five million tons in the next three or four years. The programme covers construction of two godowns in Bombay and Calcutta, with a storage capacity of 100,000 tons and 250,000 tons, respectively, provision of additional facilities for storing grain at four or five major Indian ports (including Kandla on the west coast and Madras and Vishakapatnam on the east coast), and erection of silos with electrically operated elevators.

L.I.C.'S BONUS

The inordinate delay that has occurred in distributing to policyholders the surplus disclosed by the first actuarial valuation of the Life Insurance Corporation of India as on 31st December 1957, is inexcusable. Fifteen months have now elapsed since the L.I.C. published the first valuation report and declared provisional rates of differential bonus. The valuation results were announced with much fanfare and publicity. The policyholders of private insurance companies, which were taken over by the Corporation, were happy that the announcement, though delayed, was at last made. Those to whom the Corporation itself had sold policies were delighted to have the sum assured as per their policy raised by the addition of the bonus. But, so far, the allocation has not been made; Mr. Morarji Desai confirmed this in the Lok Sabha on the 11th inst. The 4,170,325 policyholders entitled to bonus are still living only on provisional, tentative promises.

Conceding that the classification of policies issued by the Corporation and by private insurers and the computation of a system of differential bonus which is fair and equitable to all classes of policyholders is a difficult job, it is hard to believe that finalisation of the provisional bonus figures already worked out and distribution of the surplus on that basis should take so much time. There are insurers in other countries who declare bonus every two years and distribute it no sooner it is announced. It should not be difficult for the Corporation, with the very large number of actuaries in its service, to speed up computation. There is a moral obligation on the part of the L.I.C. to expedite the allocation, because the provisional bonus is being used as an additional selling point by agents when, in fact, the distribution has not been made, except, perhaps, in the case of claims that actually arise which are settled on the basis of the provisional figures.

FISCAL SECRECY

Moving the Taxation Laws (Amendment) Bill for consideration in the Lok Sabha last week, the Union Minister for Revenue and Civil Expenditure, Mr. B. Gopala Reddy, defended ably though not convincingly the clause in the Bill providing for the abandonment of the secrecy provisions in the existing Act governing the relations between an assessee and the taxing authorities. This is by far the most controversial part of the Bill, the main features of which were discussed in our issue dated 14th May, 1960 (*vide* page 841). Briefly, the Bill provides for the publication in the official *Gazette* of the names and other particulars of persons on whom a penalty amounting to not less than Rs. 5,000 or such lower amount as may be fixed by the Central Government has been imposed. Further, any person may obtain through payment of a prescribed fee information as to the amount of tax determined as payable by any assessee.

Mr. Gopala Reddy, who turned down the modest request for a reference of the Bill to a Select Committee, argued that there was no reason why persons who commit offences against the tax laws of the country should be regarded as a privileged class as compared with those who commit offences against the other laws of the country. In viewing the question in this manner, the Minister has apparently missed the essential point in the existing secrecy provisions. Their intention is not the provision of protection to tax offenders. If the law, as it stands, provides for secrecy, it is because its framers realised that publicity for offences against the tax laws would unduly depress the credit of the assessees, expose them to their rivals and eventually make it even more difficult for them to be prompt in their payment of tax or to enhance their taxable capacity. In other words, the State has a certain vested interest in seeing that the credit of the assessees remains unimpaired. Further, tax offences may be purely technical and unintentional. The assessee, on whom a penalty has been imposed, may find it too irksome and costly to fight his case against what may well be an unjust penalty. It must, however, be conceded that there is some mitigating factor in the amendment in that the information to be disclosed is only the amount of tax and not details leading up to the computation of the tax.

The line of reasoning adopted by the Minister cannot, however, be applied to the defence of the clause in the Bill which provides for disclosure of information to a third party. The facility for fiscal eavesdropping, now provided, may conceivably open the way for envy, blackmail and vituperation, characteristics which the State should never encourage. Clearly, the clause does not serve any public interest. The Government has unfortunately created the impression that, in its anxiety to curb tax evasion, it does not hesitate to throw all established canons of fiscal secrecy to the winds.

The Bill, it may be noted, has been passed by the Lok Sabha and is before the Rajya Sabha.

SHIPPING TARGET

The National Shipping Board, as was only to be expected, has expressed its concern over the drastic cut in the allotment to shipping under the third Five-year Plan, as compared with what it had proposed earlier. In a resolution adopted at its sixth meeting, held at Bombay last week under the Presidentship of Mr. G. L. Mehta, Chairman of the Board, it noted "with regret that, in the draft outline of the third Five-year Plan, provision for shipping is limited to Rs. 55 crores only, as compared to a plan outlay of Rs. 104 crores recommended by this Board to the Planning Commission and to the Government of India."

The Board has drawn attention to two considerations which deserve notice. In the first place, whereas the conclusion of the recent 17-million ton foodgrain agreement with the U.S. calls for expansion of Indian shipping designed to carry the foodgrains to India—this is over and above the normal expansion in foreign trade that may be anticipated in the next Plan period—the allotment to shipping is less than even the modest levels proposed by the Board. Secondly, the present allotment would permit a net acquisition of only 200,000 tons by Indian shipping. This is even less than the 500,000 tons which it will have acquired over the second Plan period, at the end of which it is expected to have a total of 900,000 tons. In other words, the pace of expansion in the third Plan will be much less than that in the second. Accordingly, the Board has unanimously expressed the view that a "reconsideration of the proposed financial outlay on shipping is essential." It has urged the Government "to give a higher priority to shipping than has apparently been accorded at present and to increase the allocation to a sum of Rs. 104 crores as was recommended by this Board earlier." It has authorised the Chairman to take such further action as may be desirable to represent its point of view adequately to the Government.

Surely, it is reasonable to expect the Government to ensure that Indian tonnage, which forms less than one per cent. of world tonnage, does not further lose its position in the shipping world. A general call for "every effort" to build and purchase ships and thereby increase Indian shipping tonnage has been made by the Congress Parliamentary Party itself. It is to be hoped that the Government and the Planning Commission will raise the allotment to shipping to the levels recommended by the National Shipping Board, which has been described in official pronouncements as the "highest policy-making body" in relation to shipping.

A NEW FORM OF ASSISTANCE

The British Government has announced a new scheme of financial assistance to its dependent territories that are now rapidly advancing towards self-government and independence. Under this scheme, the Government will help these countries to retain British civil servants in service until the transition from colonial to independent status is over and the emergent States are capable of standing on their own feet politically, economically and administratively. The British Government has committed itself to £10 to £20 million a year, over the next ten years, which will be utilised for making up the difference between the local rates of pay of British officers so retained and the supplementary pay and allowances which form part of the inducement to British officers to serve overseas. This is in addition to the undertaking, which the United Kingdom Government has already given, that, when a territory becomes self-governing, pensions and conditions of service will be safeguarded and compensation will be paid to officers retiring prematurely. These two steps together will give British public servants in these territories a greater sense of security. At the same time, the territorial Governments will be relieved of the burden of the extra pay which is necessary to attract men to serve away from their home surroundings.

There are at present 25,000 British officials in service in various dependent territories of the U.K. Unlike in India, where Britain could transfer power and the reins of administration to competent and well-tried hands, in the case of these countries, on foreign personnel largely depend not only the smoothness of the transition to independence but also the assurance that the achievement of self-rule will not be followed by deterioration in administrative efficiency. Localisation of public service will take time to accomplish, even assuming that it will be possible to find enough material and man-power resources to train local talent. The solution to the problem lies in the retention and recruitment of foreign administrative and technical personnel.

The territories concerned themselves recognise the value of these very necessary corps of public servants, as is evident from their keenness to retain their services or re-employ them. There are, for instance, 3,000 British officers in Ghana, 1,000 in Malaya and nearly 3,000 in Nigeria. But these men have not been keen to continue in service. In fact, their number has of late begun to dwindle too quickly and new recruits have become less willing to come forward. The cumulative effect would be disastrous in territories which are counting on these men to help them through to the time when they have enough trained men of their own. The scheme, now announced by the British Government, is to prevent such a situation developing and help the countries to establish a good administration and a sound economy.

REGIONAL DEVELOPMENT

New industries have a natural tendency to gravitate to regions which are already well developed. This process, if unchecked, will pave the way for excessive concentration of industries in a particular area, with unwelcome consequences, both in the social and economic fields. What is more, it will perpetuate the backwardness of other regions. It is, therefore, essential that the development nuclei must be diffused as widely as possible. A greater awareness of this aspect of development on the part of planners is evident from the fact that a separate section on balanced regional growth is included in the chapter on "Policy and Organisation" in the Draft Outline of the third Plan, unlike in the previous Plans. It is stressed that, while, in the selection of sites for basic capital and producer goods industries, proximity to raw materials and other economic factors generally have to be decisive, there is a wide range of consumer goods and processing industries in which it is possible to foster a regional pattern of development. Examples are cotton textiles, sugar, light engineering industries such as bicycles, sewing machines, electric motors, radio receivers, manufacture of finished products from aluminium ingots, plastic moulding powder and further processing of intermediates and bulk drugs.

Appropriately enough, Mr. B. D. Somani, in his presidential speech at the meeting of the Association of Indian Industries held at Bombay last week, stressed the need for putting the problem of balanced regional growth on "a special footing to be tackled more speedily." He was referring in particular to the problems of, and prospects for, the rehabilitation of the backward regions within the Maharashtra State. No doubt, the new State was "considered comparatively one of the well-developed States." But, he added, if one excluded the metropolitan centres such as Bombay, Poona, Kolhapur and Sholapur, the remaining hinterland was comparatively very much underdeveloped. He rightly observed that this lopsided development had been mainly due to certain specific advantages enjoyed by these developed areas, such as the availability of reasonably cheap electric power, water-supply, railway transport and banking. On the contrary, most of these facilities were not readily available in the underdeveloped hinterland. Therefore, in order to attract industries to the interior, he emphasised that Government should provide a number of additional incentives such as lower electric tariffs, water-supply, combined rail-road facilities, liberal credit, easy procurement of land for factory accommodation and for housing, and supply of machinery on hire-purchase terms. He also suggested that the Government should give concession in sales tax for a period of at least 10 years and exemption from payment of local taxes, etc., for a limited period for new development activities. Mr. Somani hoped that the State Government would give greater attention to small-scale industries. In this connection, he welcomed the recent statement of Mr. G. D. Patil, State Deputy Minister for Industries, that there would be concessional rates and adequate provision for electric power for attracting and developing new industries in the underdeveloped regions of the State.

According to Mr. Somani, the obstacle in the way of development of small industries, in particular, is the limited knowledge of small

MR. MACMILLAN'S SIGNIFICANT MOVE

(From Our Own Correspondent)

LONDON, 13*th August*

LONDON LETTER

IT is said that Lord Home, the Foreign Secretary, melted the heart of Dr. Adenauer by describing how, if Britain joined the Common Market without special provision for the Commonwealth, New Zealand would be bankrupted, Australia ruined and Canada would receive a "hard knock." It all seems a little melodramatic, especially as it is difficult to imagine these dreadful things happening, unless there were no further demand for the products of the Commonwealth and Europe miraculously became self-sufficient! Denmark, for example, sells her butter to Western Germany and to Britain and in smaller parcels elsewhere. Britain cannot exist without New Zealand butter and, if a tariff were to be put on that butter equal to the tariff on Danish butter, then New Zealand would still be able to get her price from this country for the very good reason that her supplies are irreplaceable. But the British public would have to pay more, unless that unpalatable result were avoided by injecting a subsidy equal to the duty. The subsidy would cost the taxpayer nothing, because the customs would have collected the same amount at the port of entry. Thus, the only effect would be to put the suppliers of butter on a par as regards competitive entry into the U.K. market. The same points are broadly true of the other foodstuffs and raw materials which the Commonwealth supplies to the U.K.

But whether Dr. Adenauer was impressed or not by the arguments of the Foreign Secretary, it is certainly true that the Prime Minister's trip to Bonn to try to negotiate a measure of closer association between Great Britain and the Six has been successful.

Only a little while ago, the President of the Board of Trade was saying that there was no hope in trying to negotiate further with the Six. The Prime Minister has been more realistic. Up to now, the U.K. has preferred to discuss these matters either in open conference or primarily with the French. It is General de Gaulle, oddly enough, who is prepared to see a self-contained Western Europe, excluding the U.K., unless the U.K. comes in entirely on France's terms—that is, exactly the same basis as the other members of the Six. One of the things which has turned Mr. Macmillan towards direct negotiation with Germany has been the failure of Mr. Macmillan's open negotiations with Mr. Krushchev. It is this time Mr. Macmillan who has lost heart in ending the cold war easily. And he has, therefore, turned in despair rather than hope towards Dr. Adenauer, who has rejoiced to find the British prepared to be more intransigeant towards Russia.

So out of this political fraternisation has been born this commercial hope. Both Germany and France see in the Common Market the beginnings of a closer political union for the countries concerned. Dr. Adenauer, at least, considers that, if a closer political unity could be bred with the U.K., it is worth a commercial price.

The immediate results have been twofold. In the first place, it has been agreed that negotiations between the Six and other countries desiring closer commercial association will be at Ministerial rather than Secretarial level. The new European Civil Servants, as the Secretariat may be regarded, has leaders who are somewhat fanatically bent on welding the Six together without adding to the complications by importing any recruits not exactly on the same basis. But henceforth Ministers will determine the politics of the terms of entry. Of course, Dr. Adenauer will have to carry General de Gaulle with him, and this brings us to the second result of the meeting, namely, tripartite talks between Britain, France and Germany, to consider ways in which Commonwealth free entry into the U.K. market could be maintained if Britain joins the Six. As for the domestic agricultural problems with which the U.K. was also concerned, these seem to have slipped more into the background—very properly since they can be relatively easily handled as purely domestic matters. It must, of course, be appreciated that this prospect of Britain coming into the Six and still remaining with the Seven has still to be discussed with France, but, with the powerful support of Dr. Adenauer, it is clear that the French cannot escape such a consultation, and the likelihood seems at the moment that France will at least have to show goodwill in helping towards the sort of solution which Dr. Adenauer envisages.

entrepreneurs about the various incentives offered and formalities involved in making use of them. He advocated the establishment of a Small Manufacturers' Advisory Council, for rendering them direct assistance, such as giving information on plant sites and buildings, sources of raw materials and marketing of finished products and finance.

The Chief Minister of Maharashtra, Mr. Y. B. Chavan, who inaugurated the meeting, observed that the State Government had been very much alive to these problems, and was keen on making available to all parts of the State, particularly those that are amenable to industrial growth, all facilities to ensure the advancement of these regions. He added that a number of schemes for establishing industrial estates in various parts of the State were under way. He thought that much progress could be achieved in this sphere, provided adequate co-operation was forthcoming from industrialists.

Russia has chartered an Italian 17,000-18,000-ton tanker for 12-months' consecutive voyages on a world-wide basis. This is believed to be the first important Western charter arranged by Russians, since the Standard Oil of New Jersey announced a month ago—following the Cuban take-over of refineries—that it would take into consideration in future chartering whether tanker owners or brokers had contracted to carry Russian oil.

ROLE OF MONETARY POLICY

RESERVE BANK GOVERNOR'S OBSERVATIONS

[*In his speech at the thirty-third annual general meeting of the Indian Institute of Bankers held at Bombay on Thursday this week, Mr. H. V. R. Iengar, Governor of the Reserve Bank of India and President of the Institute, covered a wide range of economic problems. In particular, he emphasised the need for a high level of investment with a view to accelerating the tempo of economic activity and dealt at some length with the recent strike of Central Government employees. After indicating how the diversion of large sums to salary increases would necessarily slow down the very process of development, Mr. Iengar lucidly explained the role of the monetary policy in carrying out the objectivities of the Five-year Plans and the responsibility of the Reserve Bank in the matter of the operational efficiency and integrity of commercial banks. The following are extracts from his speech pertaining to the last mentioned two important issues.*—ED.]

"THE task of the Reserve Bank is to so shape monetary policy that the pressure of monetary demand is not excessive in relation to the trend of production—a task of very great difficulty because a uniformly deflationary policy would be damaging to the economy. Credit must be made available to productive sectors and denied to sectors which are unproductive. The operational methods required for achieving this result are necessarily somewhat complicated.

"A point that is sometimes made is that the Reserve Bank's measures of monetary restraint should be given up as ineffective, because the fiscal policy of Government has the contrary effect of continually injecting more money into the economy. I do not accept the argument. Assuming the basic premises for the time being, if everybody took up the position that he would do nothing till everybody else did something, the result would be that nothing would ever get done. The correct policy is for the Reserve Bank to take such action as it considers proper within its jurisdiction and to leave it to Government to take appropriate action in the fiscal and administrative fields. But it must not be forgotten that the problem of development with reasonable stability is not a matter merely for the Government and the Reserve Bank; it is a matter in which the people have a vital part to play.

Scope for Monetary Action

"A more pertinent question is whether monetary policy is likely to be effective in assisting the process of accelerated economic development without excessive price distortion. The limitations of monetary policy in achieving this result are recognised even in many advanced countries and they are more operative in a semi-developed economy such as ours which is still characterised by the prevalence of a fairly large non-monetised sector. Very rough estimates indicate that about 35 per cent. of the total national income is outside the purview of monetary transactions. Within the monetised sector, the estimates regarding the size of the organised money market are still more tentative. Many years back, the Central Banking Enquiry Committee hazarded the estimate that the unorganised sector of the money market in India financed about 90 per cent. of the total internal trade. However, in the three decades since the Central Banking Enquiry Committee published its report, there has been a steady growth of commercial and co-operative banking, and it would appear likely that today about 50 per cent. of the financing of industry and trade is done by the organised sector of the money market. Further, there is a sub-area of contact between the unorganised and the organised sectors. This means that the scope for monetary action is expanding and is at present by no means insignificant.

a giant in India's economy

In the many-sided development of India's economy, jute plays a vital part.

One of the oldest and most progressive of India's industries, it provides employment to millions of farmers, traders and mill-workers. Today, the jute industry pays nearly Rs. 28 crores annually in wages, contributes large sums in taxes to the State and Central Exchequers and is a major earner of foreign exchange. The jute industry consumes vast quantities of materials and stores—coal, iron and steel, leather. It provides important revenue for a number of commercial services such as banking, insurance, shipping and railways.

Jute serves the nation in many ways, strengthens its economy.

DEPRECIATION OF MONEY IN FIFTIES

PAKISTAN RUPEE FARES BETTER THAN INDIAN RUPEE?

ONE of the interesting and widely appreciated features of the *Monthly Letter* of the First National City Bank of New York is a table, published from time to time in the past, showing the depreciation of money in recent years in the U.S. and about three dozen countries. In India, for instance, both the Governor of the Reserve Bank and the Finance Minister have relied on this table to counter the criticisms of those who were inclined to believe that the rupee had suffered a heavy depreciation in its purchasing power and to support their contention that the fall in the value of the rupee was relatively small as compared with even some of the leading currencies of the world. The latest evaluation of world currencies is carried out by the *Monthly Letter* in its July issue and the relevant table is given below:

	Indexes of Value of Money			Annual Rate of Depreciation (Compounded)		
	1949	1954	1959	1949-54	1954-59	1949-59
				%	%	%
Portugal	100	103	95	—0.6	1.5	0.5
Switzerland ..	100	94	90	1.2	1.0	1.1
Germany	100	99	88	0.2	2.2	1.2
Ecuador	100	85	86	3.2	—0.2	1.5
Venezuela	100	92	85	1.6	1.5	1.6
Belgium	100	91	83	2.0	1.7	1.8
Pakistan	100	90	83	2.0	1.6	1.8
India	100	99	82	0.1	3.7	1.9
U.S.A.	100	89	82	2.3	1.7	2.0
Canada	100	86	79	3.0	1.7	2.4
Italy	100	84	76	3.5	1.8	2.7
Japan	100	78	75	4.9	0.7	2.8
Netherlands ..	100	79	70	4.6	2.5	3.6
South Africa ..	100	78	70	4.7	2.4	3.6
Denmark	100	82	68	3.9	3.6	3.7
U.K.	100	78	68	4.9	3.2	4.1
Sweden	100	78	65	4.9	3.4	4.2
Norway	100	71	62	6.6	2.8	4.7
New Zealand ..	100	72	61	6.2	3.3	4.8
Spain	100	82	55	3.9	7.6	5.8
France	100	69	54	7.0	5.0	6.0
Greece	100	63	54	8.9	3.0	6.0
Austria	100	69	53	10.1	2.2	6.2
Finland	100	69	53	7.2	5.1	6.2
Australia	100	61	52	9.4	3.1	6.3
Mexico	100	71	48	6.6	7.4	7.0
Peru	100	66	45	8.1	7.1	7.6
Colombia	100	67	45	7.8	7.6	7.7
Turkey	100	88	45	2.4	12.7	7.7
Uruguay	100	66	31	7.8	14.4	11.2
Brazil	100	51	19	12.5	18.3	15.5
Argentina	100	39	9	16.7	25.9	21.6
Paraguay	100	10	5	37.5	12.9	26.2
Chile	100	27	4	23.1	30.1	26.7
Bolivia	100	11	1	35.7	40.4	38.3

Note:—Depreciation computed from unrounded data and measured by reciprocals of official cost-of-living or consumer price indexes.

It will be seen from the table that the ten-year span has been subdivided into two five-year periods. Analysing the table, the *Monthly Letter* observes as follows:

"Portugal, Switzerland, and Ecuador, as in our previous tabulation for 1948-58, continue to be among the countries with the best records, Ecuador providing a rebuttal of the idea that economic development requires inflation. In Germany, rising price pressures have recently become more apparent but the ten-year experience of only 1.2 per cent. per annum depreciation is still among the best in the world.

"In the United States, the rise in consumer prices has been retarded since 1954, paring the annual rate of dollar shrinkage for the decade to an even 2 per cent. The record in Canada is rather similar. Among other industrialised nations, the progress of inflation has been decisively curbed in Japan, Italy, the Netherlands, and the United Kingdom, although rates of currency depreciation for this group of countries over the ten years still range from 2.7 to 4.1 per cent. In France, where the annual rate over the decade works out to 6 per cent., the benefits of President de Gaulle's *reforms* do not clearly show on the record up to 1959, since they involved removals of cost-of-living subsidies that concealed what was happening to the franc.

"In nine of the thirty-five countries, the shrinkage in the value of money over the decade average between 6 and 8 per cent. a year; in six others, beyond 10 per cent. In all these cases, efforts have been or are being made, usually with the aid of international institutions, to restrict Government spending and overabundant money supplies. Sometimes these efforts have done no more than keep inflation from running completely out of control and reducing money to worthlessness. In other instances, as in Austria and Greece, they have succeeded in sharply reducing the rate of shrinkage of money. In still other cases, as with such Latin American countries as Argentina, Chile, Colombia and Peru, the record of the 1949-59 decade shows the background of inflation which stabilisation programmes are resolutely combatting with good promise of success."

The *Monthly Letter* has made no special reference to India in its analysis of the table. It will, however, be noted that, under its method of comparison, the rupee has emerged more favourably than the currencies of the vast majority of countries. This conclusion, however, may not carry much conviction to a large number of people in this country, for it does not somehow agree with the impression that the rupee has suffered a heavier fall in its purchasing power than those indicated by the aforesaid figures. They will still consider it as a sort of statistical trick. There is, however, at least one prominent economist in India who will disagree with this popular impression. And he is Dr. M. H. Gopal. In a comprehensive article to *Commerce 1959 Annual Number*, he stated, in effect, that there had been more inflationary feeling than actual inflation itself. To quote from his article:

"What is more important is the psychological factor. A large part of the price rise and 'inflation' are partly the consequence of a crowd mentality, i.e., when once the idea gets going that prices are rising, panic sets in and makes the price position worse than it need be. A price rise is exaggerated, when it succeeds a low price period. Thus, when the price index touched the lowest level in 1953-54, a price recovery from that level was severely felt. Moreover, while the economist looks to all-round price changes for inflation, the common man is influenced by the rise in the few commodities that affect him, particularly the necessaries, specially foodgrains like rice and wheat whose prices have considerably gone up and in particular local regions. These factors accelerate the inflation scare."

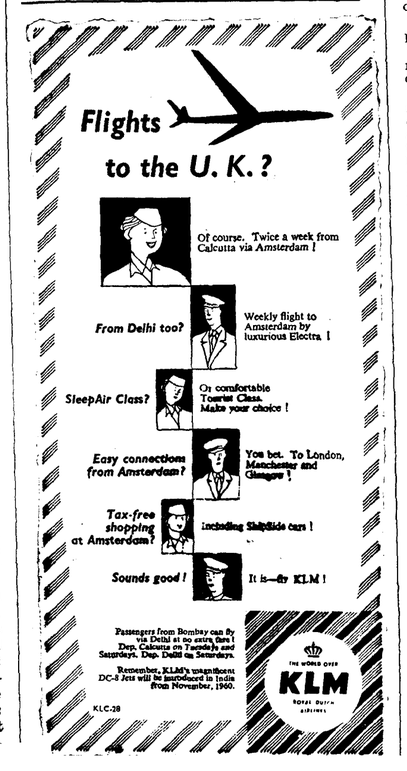
Are the people wrong, then, in feeling that there has been heavy inflation in this country? They are not, because the capacity of Indian people to suffer even the inflation that has taken place is not strong. Even a modest rise in price levels has a telling effect on the standard of living of the vast majority of people of this country.

An Intriguing Feature

It is rather intriguing to find from the data published by the *Monthly Letter* that the depreciation in the value of the Pakistan rupee is less than that of the Indian rupee. This conclusion, too, is not in accord with the impression gathered from other sources. Indeed, it is unbelievable. It will be pertinent, in this connection, to invite the reader's attention to pages 774 and 775 of *Commerce* dated 7th November 1959, on which appears an article entitled "Inflation and Economic Development," prepared by the Research Department of the Federal Reserve Bank of New York and published in its *Monthly Review* of August last. In this article, the authors included two charts, one pertaining to economic growth in countries with relatively stable prices and another to economic growth in countries with rapidly rising prices. The period covered by these charts was 1951 to 1957. And in them, while India figured in the group of countries with relatively stable prices, Pakistan was in the opposite group. The *Monthly Letter* of the First National City Bank of New York, of course, gives more up-to-date data than the *Monthly Review* of the New York Federal Reserve Bank. But that makes little difference to the point raised by us.

It will be seen from the aforesaid table that it shows the annual rate of depreciation of the Pakistan rupee in the second five-year period to have been no more than 1.6 per cent. as compared with 3.7 per cent. in the case of the Indian rupee. Similarly, over the decade as a whole, the extent of depreciation of the Pakistan rupee is shown as having been smaller than that of the Indian rupee. All this sounds strange to us, for, unit for unit, most of the consumer goods and food articles used to cost more than in India during the period under review. It is common knowledge that one of the factors that facilitated imposition of military dictatorship in Pakistan in October 1958 was strong inflation, resulting in impoverishment of the masses. Indeed, it was even reported in the early months of post-*coup d'etat* that the then Administration seriously considered the question of demonetisation of currency on the lines followed by the Low countries of Western Europe shortly after the war and that this was dropped purely on political considerations.

To return to the data pertaining to India. It will be observed from the statistics included in the table that the rate of depreciation in the value of our rupee in the second half of the fifties was heavier than in the first half. This point deserves to be carefully borne in mind by our policy-makers while penalising the investment programme in the third Plan.



BANKING COMPANIES ACT AMENDED AGAIN

The Bill to amend the Banking Companies Act, 1949 has been passed by both Houses of Parliament and will now go to the President for his assent. The Bill empowers banks to withhold information about their inner reserves from an industrial court or tribunal. The relevant clause of the Bill reads as follows:

"34A. (1) Notwithstanding anything contained in Section 11 of the Industrial Disputes Act, 1947, or any other law for the time being in force, no banking company shall, in any proceeding arising therefrom or connected therewith, be compelled by any authority before which such proceeding is pending to produce, or give inspection of, any of its books of account or other document or furnish or disclose any statement or information, when the banking company claims that such document, statement or information is of a confidential nature and that the production or inspection of such document or the furnishing or disclosure of such statement or information would involve disclosure of information relating to—

(*a*) any reserves not shown as such in its published balance sheet; or

(*b*) any particulars not shown therein in respect of provisions made for bad and doubtful debts and other usual or necessary provisions.

(2) If, in any such proceeding in relation to any banking company other than the Reserve Bank of India, any question arises as to whether any amount out of the reserves or provisions referred to in sub-section (1) should be taken into account by the authority before which such proceeding is pending, the authority may, if it so thinks fit, refer the question to the Reserve Bank and the Reserve Bank shall, after taking into account principles of sound banking and all relevant circumstances concerning the banking company, furnish to the authority a certificate stating that the authority shall not take into account any amount as such reserves and provisions of the banking company or may take them into account only to the extent of the amount specified by it in the certificate, and the certificate of the Reserve Bank on such question shall be final and not be called in question in any such proceeding.

(3) For the purposes of this section, banking company shall have the meaning assigned to it in the Industrial Disputes Act, 1947."

The primary object of the Bill is to fill a lacuna in the existing law about the disclosure of certain reserves and provisions made by the banking companies. Thus, under Section 29 of the Banking Companies Act and the form of the balance-sheet and profit and loss account prescribed under it, banking companies are not required to disclose the provisions made by them for bad and doubtful debts and other usual and necessary provisions. The banking companies also have certain reserves which they do not show in their balance sheets. While the law thus provides for the non-disclosure of these reserves and provisions in the balance-sheet and profit and loss account, there is some doubt whether similar protection is available in other contingencies, such as when the matter is taken before an industrial court or a tribunal. The latest Bill gives, in such cases, the same protection to banks from non-disclosure of the secret reserves as they otherwise enjoy. In other words, an industrial court or a tribunal cannot compel a banking company which is a party to a dispute, to disclose its inner reserves. An industrial court or a tribunal can, however, call for a certificate from the Reserve Bank regarding the amount of such inner reserves which can be taken into account for the purpose of fixation of wages or bonus as the Reserve Bank specifies.

It is said that it took 1,200 skilled workers almost twelve years to build the famous Konarak temple in the thirteenth century.

Judged by any standard, the building of such an edifice was a gigantic undertaking. It is easy to imagine that by expanding the demand for building materials and articles of daily requirements for an army of workers it must have stimulated the growth of a large number of industries.

Today, even as in the past, the operations of a large undertaking encourages the growth of many existing industries and the birth of new ones, triggering continued expansion in the economic field.

It has been the established policy of Standard-Vacuum to utilize local sources to the maximum extent possible, for the goods and services the organization needs for its operation. And in 1959, the value of such purchases in India amounted to Rs. 346 lakhs; of this, Rs. 289 lakhs represented the requirements of the Marketing Organization and Rs. 42 lakhs of the Refining Operations. The total requirements for all the three operations of Standard-Vacuum for the five years, from 1955 to 1959, was represented by Rs. 1,659 lakhs. Among the new lines of manufacture set up in India as a direct result of the demands generated by Stanvac's operation were drums and barrels for asphalt and other petroleum products; gasoline pumps and modern tank trucks and aircraft refuellers.

MEETING THE TEXTILE SITUATION

MILLS' FEDERATION ANNOUNCES DETAILS OF CUT IN WHOLESALE PRICES

ON Thursday the 11th inst., the Committee of the Indian Cotton Mills' Federation held its meeting in Bombay and gave detailed consideration to the textile situation. The most important decision that emerged from the deliberations of the meeting related to the downward revision in wholesale prices of all the varieties of cloth. The mills were called upon not to charge wholesale prices higher than the stipulated percentages on the October 1959 contract rates. The percentages are 27½ for coarse cloth, 24 for lower medium counts, 20 for higher medium, 12½ for fine categories and 10 for superfine varieties. It was firmly announced that the deliveries to be made henceforward against all outstanding contracts should be made at prices not higher than those indicated regardless of the contract prices. The Committee made it clear that the Federation, through its member-associations, would "take effective measures to implement the above decisions."

It is rather difficult to say how far and to what extent the aforesaid move of the Federation to reduce cloth prices will succeed. Only last week, we posed, in the course of an editorial, the question as to how a hundred millowners could control thousands of wholesale dealers and tens of thousands of retailers spread all over the country. The arrangement has all the weaknesses of a gentlemen's agreement and may fail to work satisfactorily, unless the supply of cloth is quickly stepped up or sizable consumer resistance develops. Even a section of the millowners may be greatly reluctant to give effect to the Federation's call. In fact, several mills in Gujarat, Uttar Pradesh, Rajasthan and Madhya Pradesh are reported to have been dissatisfied with the proposed cut in prices. It is stated that the spokesmen for these mills who attended the Federation's meeting opposed the price reduction on the score that it would have disquieting effects on the finances of their mills. But the opposition was of no avail, as the majority among the Committee members held that the cut in prices was inevitable. Apparently, they must have been influenced by the warning of the Union Minister for Commerce and Industry, given in the Lok Sabha last week, that, if the cotton mills did not adequately respond to his call for further reductions over and above the 10 per cent. proposed earlier, the Government would not hesitate to take effective action to bring down the prices of cloth.

Reductions Reasonable

The reductions in wholesale prices of cloth, ranging from 10 to 27½ per cent. now announced by the Federation's call, appear to be quite reasonable. The figure of a rise of 40 per cent. in the prices of coarse and medium cloth mentioned by Mr. Lal Bahadur Shastri is somewhat exaggerated. We are told by the Federation that the selling prices of not more than five per cent. of the total cloth produced by mills are higher by 40 per cent., whereas, in all other varieties, the rise has been much less. This misunderstanding has given rise to complaints of profiteering by mills. That these complaints are not justified will be clearly evident from the following observations made by the Federation in the Press note issued after the end of the meeting on Thursday last week:

"The industry is prepared to place before Government audited accounts for the first six months of any of the mills to prove conclusively that the industry has not indulged in profiteering. The Federation had already announced, in two Press statements, the various steps taken by the industry with a view to bringing about a reduction in cloth prices. If the Federation's announcements were studied more carefully, it would have been observed that they were exactly in line with what the Hon'ble Minister (Mr. Shastri) himself wanted the industry to do. The cuts proposed by the Federation on those coarse and medium varieties where the price rise had been abnormal related to the current prices. With a 40 per cent. rise over 100 in such abnormal cases, today's price comes to 140, and a 10 per cent. reduction therefrom means a reduction of 14 which brings down the price to 126; and this is just one per cent. more than what the Government considers justified."

The significance of the Federation's call to mills to reduce prices of cloth is now being carefully examined by the traders, wholesale and retail. The consensus of opinion among the traders, however, seems to be that the actual fall in prices may not be more than 15 per cent. from current levels in the case of coarse cloth and 10 per cent. in that of lower medium varieties, with no significant change in the prices of higher medium, fine and superfine counts. The trade claims that it also recognises the need for ensuring cloth supplies to consumers at reasonable prices. In the course of a statement issued to the Press, the Bombay Piecegoods Merchants *Mahajan*, for instance, has appealed to all dealers to co-operate in giving immediate effect to the reduction in cloth prices in accordance with the proposal by mills. Assuring the Government, the consumers and the industry of its full co-operation in keeping down the price level, the *Mahajan* hopes that "both the industry and the trade will join hands to see that there is no re-inflation in prices and that consumers get their requirements at reduced prices."

The mere appeal to cloth dealers not to sell at high prices will, however, not be of much avail, unless it is backed by some concrete steps. It will be worthwhile to refer here to a formula evolved by the West Bengal Textile Dealers' Association. The formula lays down that the mills should effect a cut of 10 per cent. in the rates at which last contracts were entered into and make available adequate supplies to local shops which will eliminate the wholesalers' margin of about 10 per cent. and that the retailers must make a 2 per cent. reduction in their profit margin. The formula thus seems to lower prices by 15 per cent. from the existing levels.

Output Must Be Raised

It will be interesting to watch the trend of piecegoods markets in the light of the Cotton Mills Federation's decision to reduce mills' wholesale contract rates, as well as its move to make more supplies available to retail shops and to put up price lists in retail shops—all aimed at bringing down the retail prices. While the prices of cloth may fall to some extent, there will be an acute shortage of supplies sooner or later, if energetic action is not taken now to step up cloth output. The Federation has done well to reiterate the request already made to mills to increase the production of those varieties which are in short supply by utilising the American cotton of 1" and below for producing goods of lower medium varieties. It observes: "In view of the easier cotton position that will result from the arrival of 400,000 bales of American cotton and the availability of new Indian cotton crop, mills should, wherever possible, step up their production by the introduction of third-shift working."

The foregoing account pertains only to cloth prices. The Federation is expected to announce its yarn price policy shortly. The policy, it is said, will be based largely on the views expressed by the Southern India Millowners' Association which has now joined the Federation as a full-fledged member. This Association, it will be recalled, was hitherto keeping itself aloof from the activities of the Federation, owing to the divergence of opinion on the Federation's attitude towards the handloom sector. The Southern mills, since they are predominantly spinning units, were advocating the need for active encouragement and assistance to the handloom industry, while the Northern mills were generally opposed to such assistance. The Federation has assured the Southern Association that its views on all matters relating to yarn will be given due consideration.

COMMONWEALTH WOOL MARKETING SEASON

With the wool sales which ended in Australia on 14th July, the 1959-60 Commonwealth wool marketing season came to its formal close with values on the somewhat firmer basis established during the preceding few days. The season ranks among the more successful of recent years for the three principal wool exporting countries of the Commonwealth—Australia, New Zealand and South Africa—each of which marketed probably the largest clip in its history. Wool was in steady demand at prices considerably better than those of the preceding season. An outstanding feature was the remarkable steadiness in demand, with the result that clearances were excellent and price fluctuations within unusually narrow margins.

Final figures for the season are not yet available but it is already apparent that the net return to Commonwealth growers may be up to 20 per cent. more than in the 1958-59 season. Over the calendar year 1959, world wool consumption increased by about 12½ per cent., and a corresponding rate of usage extended over the first quarter of 1960. Except for New Zealand crutching sales opening later this month, and a two days' sale in West Australia early in August, the Commonwealth wool marketing season is now at its between-seasons standstill until the main 1960-61 marketing season opens in Australia late this month.

EMPLOYMENT POSITION IMPROVES

JAPANESE STUDY OF CHINA'S TEXTILE INDUSTRY

By A Special Correspondent

MANCHESTER, *9th August*

MANCHESTER LETTER

AMONG the reactions to the redundancy schemes in the producing sections of the industry was the oft-repeated fear of the trade unions that unemployment would soar as a result of the closing of many mills. On the face of official statistics, this unwelcome development has not occurred and the number of jobless in the early part of the year, when machinery scrapping was at its height, did not reach unmanageable proportions.

According to figures drawn up by the Ministry of Labour, unemployment in the cotton industry increased during the six months when closures were being effected, the low point being October, when 4,506 operatives were out of work, up to a peak of 8,278 in March. As the table below shows, this figure has subsequently been reduced, so that the jobless total at the end of the half-year was only slightly more than in January:

	Spinning	*Weaving*	*Finishing*	*Total cotton and rayon*	*Total N.W. Region*
1960					
January ..	3,732	2,093	469	6,294	73,863
February ..	3,974	2,910	432	7,316	70,967
March ..	4,002	3,844	432	8,278	67,002
April ..	4,091	3,703	389	8,243	65,043
May ..	3,627	3,178	408	7,211	58,713
June ..	3,396	2,733	443	6,572	53,433

It is worth recalling that, in February 1959, more than 20,000 cotton operatives were unemployed, but the total of those out of work in the North-West region was then over 100,000. It is also fair to add that, as trade union officials have pointed out, the actual returns disguise the situation, because so many operatives have left the trade and have not taken up fresh employment. This applies particularly to married women who refused to join another mill after spending most of a working lifetime at a particular set of machinery. Whether these trusted servants of the industry can be attracted back on evening shifts or part-time work is one of the main problems now facing managements. In numerous areas, their skill is badly needed, but many are adamant in their decision to remain at home.

Trend of Cloth Values

Snipers are always ready to "have a go" at the cotton industry. Those who complain about overcharging have been answered by Mr. W. T. Winterbottom in no uncertain terms. Members of Parliament are not averse to adding their voices to the clamour, and suggestions that the machinery scrapping scheme should itself be scrapped because of the "prosperity" of the trade have recently been put forward at Westminster. Fortunately, the President of the Board of Trade was in no mood to accept such a frivolous idea, particularly as a substantial proportion of the compensation had already been paid out to those eligible. The instigators of such campaigns need no encouragement and, whether the spate of orders secured during the past year or so was the result of the scheme or partly a coincidence, it would have been a fatal step for the Government to draw back after the plan had been so successful in eliminating surplus machinery.

It has not been denied that prices have risen since last autumn, but the circumstances in which trading has been carried on have fully justified the movement which has taken place. The Board of Trade index numbers, based on the annual average of 1954 as 100, show the situation in cotton cloth and the comparable figures for rayon fabric in the following table:

1959	*Cotton Cloth*	*Rayon Cloth*
January	91.8	100.6
April	87.0	100.6
July	87.3	100.6
October	93.0	101.0
1960		
January	98.9	108.8
February	99.8	108.8
March	101.9	113.9
April	102.6	113.9
May	102.9	113.9
June	103.7	113.9

Only a few days have elapsed since firms in the finishing sections of the Lancashire cotton industry were invited to apply for forms to take part in the reorganisation scheme, yet already the applications are coming in. Everything points to a more leisurely decision by finishing firms on whether to participate than was the case with spinning and weaving mills. For one thing, they do not qualify for a 5 per cent. bonus on top of their compensation, if they decide to scrap plant within a month, they have a full three months to make-up their minds.

Another factor likely to influence the speed with which firms earmark the amount of plant they intend to throw out is that they must make a complete unit redundant. Spinners and manufacturers, on the other hand, could enter just as much or as little machinery as they wished. Informed trade circles in Manchester, however, are confident that the scrapping targets in the finishing section will be reached.

Textile Industry in China

The emergence of China as a manufacturer and shipper of cotton cloth to many other countries has been of recent origin and in line with Iron Curtain practice has been shrouded in mystery and often conflicting reports. Being geographically near at hand, some of the most convincing evidence about textile activity in China has come from research workers employed by the Japanese cotton industry. A lengthy assessment of current conditions in Chinese mills and their prospects has been drawn up by the All-Japan Cotton Spinners' Association, in which some of the Chinese claims have been critically examined. In particular, the statement that raw cotton production increased by 15 per cent. last year over 1958 is regarded with suspicion, in view of previous indications of lack of experience in harvesting an obviously expanding crop. The Peking Government's estimate of the 1959 cotton crop was 11,115,000 bales, against 9,680,000 bales in the previous year.

It is not unknown for gaps to arise between targets set by authorities and actual performance. Ambitious plans to increase spindleage in China by as much as 7,500,000 in the two years to the end of 1959 appear to have been well beyond the capacity of the plant manufacturers. The latest estimates are that 10,000,000 spindles were at work at the end of last year, a rise of about 2,000,000 spindles during 1959.

Production goals were also gradually scaled down, the targets for both yarn and cloth production being reduced as the year went on. Preliminary output figures for 1959 issued early this year amounted to 8,250,000 bales of cotton yarn and 7,500 million metres of cotton cloth. According to the Japanese investigators, both these figures are much less than the original targets, but slightly more than the reduced targets for the year.

The rate of the domestic cotton cloth ration in China was raised at the end of 1958 from six metres to eight metres per head. Mathematical calculations based on production estimates and home consumption lead to the conclusion that the cotton cloth demand and supply situation in Red China last year must have been difficult to co-ordinate. All the factors indicate that the Chinese Government could not afford in 1959 to increase exports from the level of about 400 million metres sold abroad in the previous year.

Erratic Exports

Imports of Chinese cotton cloth in the 11 major markets of the free world in the first half of 1959 were running at a rate of approximately 240 million square metres, about 20 per cent. less than in 1958, but at nearly the same level as in the previous year. The report points out that exports from Communist China are frequently erratic, with a temporary rush to exploit certain markets, so that the volume of shipments often differs widely from quarter to quarter.

Summing up, the Japanese probe contends that the threatened export drive under which the Chinese attempted to sell cotton cloth in alarming quantity and at uncommercial prices during 1957 and 1958 to South-East Asian markets and elsewhere encountered a setback last year. This was partly attributable to the restrictive measures taken by certain importing countries and resistance from buyers due to complaints over the quality and delivery of Chinese products.

At the same time, output increased by well over 30 per cent. as compared with 1958 and a further expansion of around 10 per cent. can be expected during the current year. "Communist China is a country of Socialist-planned economy," the report warns. "If Peking deemed it necessary to increase exports, they would not hesitate to intensify the export offensive even at some sacrifice. We must pay the greatest concern over the development of the cotton industry in mainland China."—*All Rights Reserved.*

4 PER CENT
ORISSA GOVERNMENT
LOAN, 1969

ISSUE PRICE: Rs. 99.50

OPENS ON THE 29th AUGUST, 1960

●

The loan will be closed as soon as a total of approximately Rs. 400 lakhs has been subscribed and in any case not later than the close of business on the 3rd September 1960.

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore, at the Branch of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India, or Branches of the State Bank of India, or at any Treasury or Sub-Treasury in the State of Orissa.

STEPPING UP COTTON PRODUCTION

APPOINTMENT OF A COMMITTEE FOR DECIDING FAIR PRICES ADVOCATED

THE sharp decline in cotton production during the current (1959-60) season and the resultant high level of prices and tight supply position, coupled with the inroads made on cotton by other competing crops such as groundnut owing to their being more remunerative and the yawning gap between plan targets and production, invested the deliberations of the eighty-second meeting of the Indian Central Cotton Committee held at Bombay on the 12th inst. with an unusual sense of urgency. Meeting at a period of acute cotton shortage and high prices, the Committee, naturally, devoted special attention to the question of stepping up cotton production.

Mr. S. K. Patil, Union Minister for Food and Agriculture, who inaugurated the meeting, said that the Government had accepted the production target of 7.2 million bales to be achieved by the end of the third Plan period, as suggested by the Committee, and that every effort had to be made to reach the target by placing the necessary facilities at the disposal of the cultivator. The draft outline of the third Plan, he pointed out, had prescribed four principal measures for raising agricultural production in general. They were: (1) irrigation, (2) soil conservation, dry farming and land reclamation, (3) supply of fertilisers and manures, and (4) better ploughs and improved implements. In non-irrigated areas, large-scale soil conservation and dry-farming were proposed to be undertaken, with mass participation. Flood control, drainage and prevention of waterlogging were also recommended.

The Minister felt that the seed required for each village should be multiplied in the village itself from the foundation stocks supplied by the seed farm located in every Community Development block. The draft outline of the third Plan also sought to increase substantially the production of fertilisers, both nitrogenous and phosphatic. He hoped that, with these facilities, the third Plan should show a better performance in raising the yield of cotton. He referred to the low yield of cotton per acre in India, as compared with that in Egypt, U.S.A. and the U.S.S.R., and commended the efforts of the Committee to raise the yield per acre. Higher yield was possible, according to him, by such methods as irrigation, use of better seeds and fertilisers, improved cultural practices and plant protection measures.

Cost of Production and Price

Mr. Patil emphasised the need for the development of speedier ways and means of getting the cost of production of cotton down, thus making cotton competitive both in price and quality. Perhaps, this is his solution to the problem of the encroachment, on the area sown to cotton, of other crops like groundnut and sugarcane, to which attention was drawn by Dr. M. S. Randhawa, the President of the Committee, in his speech delivered at the meeting. A comparative study of the trend of prices of cotton and competing crops led Dr. Randhawa to the conclusion that, during the year ended February 1960, while cotton prices rose by 12.9 per cent., prices of groundnut increased by 19.2 per cent. Cotton was not, therefore, as remunerative a crop as groundnut. This, he maintained, partly explained the stagnant level of area under cotton during the past few years. Apart from groundnut, sugarcane and even banana cultivation, he pointed out, had been making inroads into cotton acreage. As the cultivable area remained more or less the same, shifts took place from one crop to another according to the price-level, the more remunerative crops, naturally, claiming greater acreage. He did not say what measures the Committee proposed to take to check this trend or what it wanted the Government to do. The recent decision of the Government not to raise the floor and ceiling prices of cotton, in spite of the unanimous appeal from many quarters, including the Committee, was sufficient proof that the Government did not favour raising cotton prices even as an inducement for higher production. Mr. Patil's advice to the Committee to help the cultivator to bring down the cost of cultivation of cotton, so as to make it competitive, is perhaps an indication of the official line of thinking in regard to cotton price policy.

Reviewing the development of Sea-Island cotton, the President said that the progress, though slow, was steady. During 1959-60, the total area covered under this variety of cotton was 3,966 acres (3,055 acres in Kerala and 911 acres in Mysore) and the total area available for harvest was estimated at 2,461 acres. The total quantity produced was 494 bales and the highest price fetched was Rs. 2,250 per bale. During the next season (1960-61) about 10,000 acres would be sown with this variety of cotton out of which 6,000 acres would be in Kerala, 2,670 acres in Mysore, 400 acres in Madras and about 400 acres in Araku Valley in Andhra Pradesh. This cotton was now in the initial stages of development. Dr. Randhawa suggested that a floor price of Rs. 2,000 per candy should be ensured for it, so that it could hold its own against competing crops. Unless this was done, according to him, there was a danger that all the efforts put in might go waste. He urged the State Governments concerned to exempt income from this cotton from the levy of agricultural income-tax. He also suggested that loans in kind such as fertilisers and pesticides should be given to the growers of this variety of cotton.

Targets and Performance

Analysing the reasons for the fall in cotton production during the current season, Dr. Randhawa said that not only did the monsoon start late, but it commenced with heavy downpours and floods which played havoc with the crop. The decline in production was as much as 29 per cent. in Bombay, 25 per cent. in Mysore, 18 per cent. in Madhya Pradesh, 14 per cent. in Rajasthan and 11 per cent. in the Punjab. During the next season, that is 1960-61, cotton production might, according to him, be of the order of five million bales, provided there was not excessive rainfall in the month of October.

Dr. Randhawa outlined the measures on which attention required to be concentrated in order to achieve the plan targets. They were: (1) supply of improved seeds, (2) more irrigation facilities, (3) growing of cotton in rice fallows, and (4) special attention to cotton growing in Rajasthan.

The progress in respect of provision of improved seeds so far, Dr. Randhawa confessed, was slow. Out of a total acreage of 14.5 million in 1950-51, the area under improved varieties was 7.24 million acres. By 1956-57, it rose to 13.6 million acres, that is, 68 per cent. of the total, and in 1958-59 it had risen to 70 per cent. The cause of this slow progress during the last three years was worth investigating. This might be due, he said, to the fact that most of the improved varieties could be grown only under irrigated conditions. However, there was considerable scope for increasing the area under improved varieties in Maharashtra.

Irrigation

As regards irrigation, by the end of the third Plan, 20 per cent. of the total area under cotton would be irrigated, as against 12 per cent. at present. Still, 80 per cent. of the area would be dependent on rainfall and this would always provide an element of uncertainty, as was the case during the last many years. Against a target of 58,000 tons, only 27,000 tons of fertilisers were made available in 1959-60, of which 9,000 tons were consumed in Maharashtra area, 6,600 in the Punjab and 5,800 tons in Mysore State. Application of fertilisers was one of the major measures which could give increased production of cotton. He expressed the hope that, with the setting up of new fertiliser factories, the position would get easier.

Growing of cotton in rice fallows held out considerable promise. In Madras, Mysore, Andhra Pradesh and Orissa, it had been estimated that an area of about 1.15 million acres under rice fallows was available, which, if cultivated under cotton, could give an additional production of 500,000 bales of medium and long-staple cotton. Trials with the Punjab-American variety, 216P, had already proved a success in Cauvery delta area of Madras. This area, he said, required intensive attention. The Committee proposed subvention trials in Orissa under which seeds, fertilisers and insecticides will be given to the cultivators. It was also proposed to develop marketing and ginning facilities which if not available prove as bottlenecks.

An interesting information disclosed by Dr. Randhawa was the development of chemical plant growth regulators. The successful development of chemical plant growth regulators in respect of pineapples, tomatoes, grapes, citrus, apples and others had encouraged such work on cotton as well. It had been recognised that growth factors within the plant control shedding and are not necessarily related to uncontrollable external production factors and this had focussed attention on the chemical treatment as a means of increasing yield. A chemical, called gibberellins, had been found to promote growth and flowering in some plants. Recent research showed that, of all the chemicals tested for reducing shedding in cotton, this was perhaps the best. In California, according to Dr. Randhawa, 0.00000001 of a gram of gibberellin, applied topically per boll, increased retention by 50 per cent. In terms of this calculation, only 10 lbs. of gibberellin would be required to add one million bales to California's annual cotton crop. The treatment increased the size of the plant also and this indirectly enhanced the yield.

The need for research along these and other lines, including evaluation of new chemicals, cannot be too strongly stressed. This is important for developing generally applicable methods of fruiting control in cotton in this country. Work on these lines will be very helpful, as it will supplement information for stepping up production. Considering the limited scope for extensive cultivation, increased research efforts and speedier flow of their results to the grower should form one of the major planks in the programme for increasing cotton production in the country.

Recommendations

After reviewing the aforesaid problems and in the light of the observations of Mr. Patil and Dr. Randhawa, the Committee arrived at the following conclusions:

(1) It is necessary to complete the Rajasthan Canal at an early date, as this would enable irrigation of about 3.5 million acres in a region of very high fertility.

(2) The Committee expressed great concern at the shortfall in cotton production during 1959-60 and noted that it was chiefly due to the unfavourable seasonal conditions which almost set at nought the vigorous efforts made for augmenting production. In this connection, it was observed that cash crops like groundnut, sugarcane and bananas being more remunerative were replacing cotton. This gave rise to the vital factor of commodity prices and, whilst, on the one hand, the Government were anxious to hold the price line, it was considered expedient to take steps to ensure a reasonable return to the cotton grower to serve as an incentive to grow this crop. The Committee, therefore, recommended that a High Power Committee should be constituted to look into the question from all the angles and to make suitable recommendations from the national standpoint. The Committee also felt that, ultimately, it was a problem of increasing yield per acre, for which more intensive efforts were necessary by way of application of fertilisers, irrigation and plant protection.

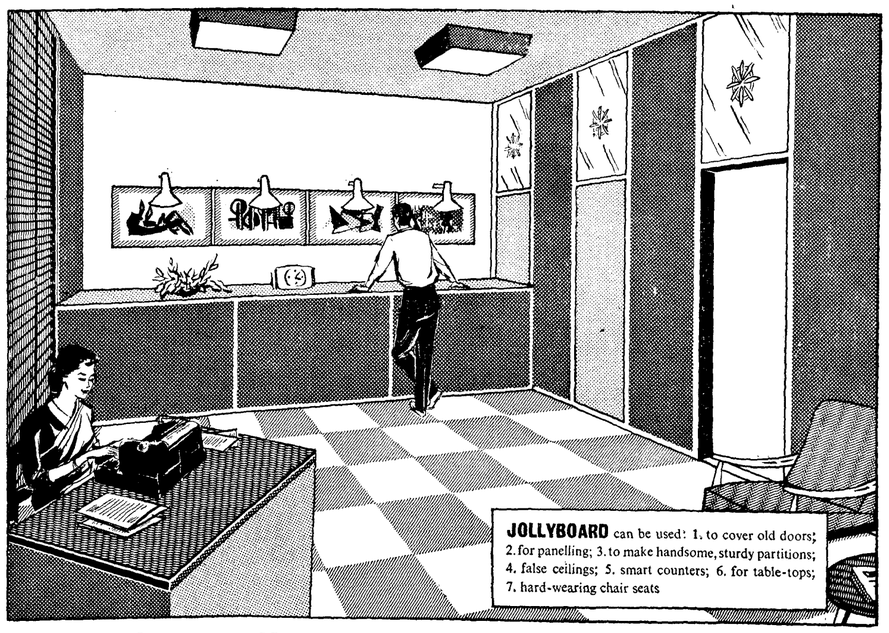
(3) The Committee approved of the extension of 17 existing schemes, as also six new schemes for evolving new cottons superior to the existing ones. The Committee further approved of a model co-ordinated agronomic scheme to be taken up in all the major cotton growing tracts of all the States on the most important varieties of cotton, with a view to collecting comprehensive data on the agronomic requirements of cotton crop in the different areas for recommending their adoption by the cultivators for maximising yields. The Committee decided that Poona, where work on screening of varieties for resistance to the serious disease in cotton, namely, wilt, was in progress for the past 23 years, should be developed as a national centre for such work in view of its great importance.

(4) The Committee noted with satisfaction the increase in acreage under the Sea-Island 'Andrews' cotton and recommended the exemption from tax of the agricultural income accruing to the farmer from cultivation of the Sea-Island cotton. It further recommended that, with a view to assuring the Sea-Island cotton growers of a minimum return, a floor price of Rs. 2,000 should be fixed. It agreed with the suggestion that greater efforts should be made to try this delicate crop on the irrigated lands where adequate humidity and other climatological conditions were suitable, particularly in States like Madras, Andhra Pradesh and Orissa, besides Kerala and Mysore.

(5) The Committee was of the view that given the proper facilities in regard to supply of improved seeds, adequate quantities of fertilisers and pesticides, the country would be able to produce the targeted quantity of 7.2 million bales at the end of the third Five-year Plan. The Committee was also of the view that one of the means of achieving the target was by utilising the vast stretches of rice-fields which lay fallow after the harvest of paddy.

(6) The Committee accepted the amendment suggested by the East India Cotton Association, in the Cotton Ginning and Pressing Factories Act and decided to send it to the State Governments for further action. It was also decided that committees at the State level might be established on the lines of the Punjab for survey of facilities for ginning and pressing of cotton.

JOLLYBOARD the multi-purpose material



JOLLYBOARD can be used: 1. to cover old doors; 2. for panelling; 3. to make handsome, sturdy partitions; 4. false ceilings; 5. smart counters; 6. for table-tops; 7. hard-wearing chair seats

several attractive surfaces— in full supply everywhere

GET smartness like this for your shop or office; whatever the improvements you have in mind, JOLLYBOARD can make them look far better, last far longer, at about the same cost. For JOLLYBOARD is India's top-quality hardboard—the modern building and decorating material—at prices as low as, if not lower than, inferior substitutes.

AT SURPRISINGLY LOW PRICES!

JOLLYBOARD • Very strong, light and durable; is made from wood-fibre, compressed into solid sheets—to British Standard Specifications. • Comes in many sizes, thicknesses and attractive surfaces; a versatile building and decorating material. • No laminations, plies or knots; won't split or crack. • Easily sawn to any shape, easily affixed to any surface. • Quicker to work with, finer in finish. Takes paint, varnish or polish perfectly. • Certified by the Government Test House, Calcutta.

Thicknesses: 3 mm, 4.5 mm, 6 mm
Sizes: 12"x4', 8"x4', 6'x4', 4'x4'
Insulation Board will be available soon

TRENDS IN WORLD SUGAR

CONSUMPTION GROWING FAST

THE world's appetite for sugar is growing faster than that for all other foods. This is the interesting conclusion arrived at by the International Sugar Council in a recent study of the trends and forces in world sugar consumption during the ten years ended 1958. The quantity of sugar actually consumed in 1958 is estimated at as high as 44.5 million metric tons (of 2,204.62 lbs. each), which represents an increase of 60 per cent. as compared with the consumption of 16.5 million tons in 1948. The average annual rate of increase thus works out to 6 per cent. The improvement in the aggregate world consumption of sugar must be attributed partly to the rise in population and partly to the expansion in *per capita* intake in a number of countries. The estimated total world population in 1958 was about 2,800 million, as against 2,440 million ten years before and the average *per capita* consumption stood at 34.10 lbs., as against 25.96 lbs. The following table indicates the *per capita* consumption of sugar in some of the countries during 1958, as compared with that in 1948-49 and 1937-38:

Per Capita *Sugar Consumption*
(In lbs. per year refined or consumption value)

Countries	1958	1948-49	1937-38
India	32.0	26.5	18
Australia	120.8	130.0	117
Denmark	119.0*	99.0	121
United Kingdom ..	106.9	90.0	111
New Zealand ..	98.6	119.0	N.A.
Switzerland	97.5	90.0	93
South Africa ..	95.9	99.0	61
U.S.A.	95.5	115.0	95
Canada	95.5	101.0	101
Sweden	94.2	102.0	106
Brazil	79.0	70.0	52
Norway	77.0	60.0	74
Belgium	76.1	60.0	70
Cuba	75.7	168.0	80
France	68.9	55.0	55
West Germany ..	67.1	44.0	59
Mexico	63.6	56.0	33

* 1957. N.A.—Not available.

The upward trend of world sugar consumption has been rendered possible by two notable factors. One, the production of sugar has expanded faster than population; it amounted to 42.8 million tons in 1957-58, as against 28.9 million tons in 1949-50, or a rise of 50 per cent. Two, the "real" price of sugar has gone down in most of the countries, though the price varies enormously from country to country, due mainly to Government imposts of one kind or another. Taking 50 countries, which together account for nearly three-fourths of world consumption, the price of sugar relative to other foods was 11 per cent. cheaper on an average in 1957 than in 1938. The prices in 1957 were 22 per cent. cheaper in 38 countries, while they were dearer in eleven countries. An idea of the retail sugar prices prevailing in a few important countries as on 1st January 1959 and 1st January 1958 can be had from the figures given below:

Retail Prices of Sugar
(In U.S. cents per lb.)

Countries	As on 1st January	
	1959	1958
India	10.2	9.6
Australia	9.3	10.2
Belgium	11.0	10.9
Ceylon	11.6	10.9
Cuba	7.0	8.9
Dominican Republic	11.8	13.60
France	9.9	13.5
Germany (West)	13.5	13.0
Hungary	20.5	20.5
Italy	17.9	16.8
Japan	17.0	19.6
Philippines	10.2	10.0
Sudan	17.4	14.5
Turkey	16.4	35.4
United Kingdom	10.0	7.1
U.S.A.	11.1	11.1
Yugoslavia	25.6	21.9

The fastest growth in sugar consumption, it is said, has occurred in poorer countries, where demand for sugar responds to changes in income, unlike in the case of rich countries where the per capita consumption of sugar rises slowly with increasing incomes and may even decline. Before the war, half the world's population consumed only 10 per cent. of sugar supply and four-fifths of the population ate just two-fifths of the total supply. By 1957, half the world's population accounted for 14.5 per cent. of all the sugar consumed and four-fifths for 50 per cent.

The world as a whole, according to the Sugar Council, will go on eating more and more sugar in the coming years. It is estimated that, by 1965, the aggregate world consumption of sugar will be between 46 and 58 million tons. The estimate is made after applying the calculated elasticities of demand to an annual rise in real income per head at the rate of 3.1 per cent. of the increase in income (the average for 42 countries during the period from 1951 to 1956) and assuming a rise in population of 1.45 per cent. a year and no change in prices.

It is difficult to be categorical about the level of world sugar prices in the next few years, inasmuch as it will be influenced by the trend of production in several countries, especially Cuba which is the world's largest exporter of sugar. If past experience be any guide, the upward trend of output may be expected to persist in future also, what with the proposed addition to the capacity of sugar industry in a number of countries. The aggregate world production of sugar has touched an all-time record of 50.93 million tons (raw value), as against 50.91 million tons in 1958-59, 46.60 million tons in 1957-58 and 31.25 million tons in 1949-50. The net rise in output over the ten-year period from 1949-50 to 1959-60 comes to 19.68 million tons. The rise is accounted for by both cane sugar and beet sugar. The production of cane sugar has gone up from 20.83 million tons in 1949-50 to over 31.17 million tons in 1959-60 and that of beet sugar from 10.44 million tons to 19.78 million tons (it was higher still at 20.38 million tons in 1958-59). The statement below compares the estimate of sugar production in the most important countries during 1959-60 with the partially revised estimate for 1958-59 and the actual for 1957-58 and 1949-50:

Trend of Sugar Output
(In thousand tons—raw value)

Countries	1959-60 (estimated)	1958-59 (partly estimated)	1957-58	1949-50
Cane Sugar				
India	7,579	7,113	6,871	4,938
Cuba	5,780	5,870	5,689	5,470
Brazil	2,987	3,173	2,621	1,350
Mexico	1,688	1,458	1,304	640
Philippines ..	1,386	1,350	1,230	625
Australia	1,240	1,412	1,293	937
Puerto Rico ..	1,116	971	821	1,148
Hawaii	951	871	683	858

East Germany ..	600	918	838	545

Whatever may be the trend of production, the world sugar market will be influenced predominantly by Cuba. This aspect has to be specially stressed now because of the U.S. Government's reduction in import quota allotted for Cuban sugar. In view of such a reduction and if the U.S. refuses to continue payment of a high subsidised price, then Cuba will suffer a considerable loss of foreign exchange. Naturally, Cuba will try its best to make up this loss by fixing the basic minimum price of sugar at the existing level of 3.25 cents per lb. Even this minimum might, in fact, be raised if the U.S. Government were to effect a more drastic cut in Cuban quota in the coming and subsequent years. It is the level of sugar prices fixed by Cuba and the pressure it exerts on the International Sugar Council that will influence the working of the World Sugar Agreement in future. It may be noted here that, in order just to accommodate Cuba, the Sugar Council recently stepped up the export quotas of member-countries for 1960 to 105 per cent. of their basic tonnages, as against 87.5 per cent. to which they had been cut in the earlier months of the year. This decision of the Council, according to sugar circles in London, has placed Cuba in a dominating position in the world sugar market. It is expected that Cuba will use its strong position to maintain prices or drive them upward, rather than decide to unload all its sugar production at prices below the basic minimum price of 3.25 cents which is less than the average cost of production, namely, 3.50 cents per lb.

GROWTH AND YIELD OF SUGARCANE

Physical environment, growth and yield of two varieties of sugarcane grown at Shakkarnagar in Andhra Pradesh in two types of soil, namely, medium heavy black soil and sandy loam red soil for the last six years, have been studied. One variety, CO 419, was found to give more yield than POJ 2878 and, even within each variety, the yield from season to season was appreciably different. There was no appreciable difference in the yield of varieties grown in the two types of soil. Nevertheless, the relative performance of the two varieties in these types of soil as well as for the six seasons (first order interaction) are significantly different. The sugarcane crop grown in black soil appears to be influenced, to a greater extent, by weather than that grown in red soil. The average yield of POJ 2878 variety of cane grown in black soil is also comparatively very low.

From a closer examination of weather during the various phases of the crop, it has been observed that (i) excess of rainfall before the commencement of germination depresses germination, (ii) clear day with low mean air temperature during tillering phase is conducive for better tillering, and (iii) the rainfall along with irrigation and temperature at this station are quite sufficient for the successful cultivation of the cane.

SUGAR WAGE BOARD

The attention of the Government of India has been drawn to a news items published in a section of the Press, purporting to convey the recommendations of the Sugar Wage Board regarding wage rates for employees of the sugar industry. The Government declares that the Board is still in the midst of its deliberations and that no final decisions in regard to the wage rates of workers have been taken by the Board so far.

4 PER CENT
ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1969

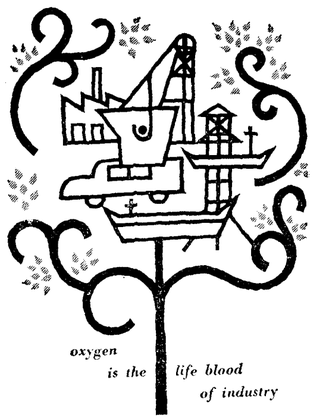
ISSUE PRICE Rs. 99.75 PER CENT

OPEN ON THE 29th AUGUST, 1960

The loan will be closed without notice as soon as the subscriptions amount to Rs. 900 lakhs approximately, and in any case not later than the close of business **ON THE 3rd SEPTEMBER, 1960.**

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore; at the branches of the State Bank of India and the branches and Treasury Pay Offices of the State Bank of Hyderabad within the State of Andhra Pradesh, and the Government Treasuries and Sub-Treasuries in the State of Andhra Pradesh at places where there is no branch of the State Bank of India or branch or Treasury Pay Office of the State Bank of Hyderabad.

Full particulars can be obtained at any of the Offices or Branches mentioned above or at any Treasury or Sub-Treasury in the State of Andhra Pradesh.



oxygen is the life blood of industry

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of *India's industrial development*, our products and prompt technical service ensure the most modern means and methods of metal *fabrication*.

Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

EXCESSIVE SPECULATION IN JUTE TRADE

F.M.C. CHAIRMAN HINTS AT POSSIBILITY OF OFFICIAL INTERVENTION

THE general body meeting of the East India Jute and Hessian Exchange Ltd., held at Calcutta on the 11th inst., provided an opportunity to the Chairman of the Forward Markets Commission, Mr. R. Doraiswamy, to share a few thoughts with the members of the trade and industry and to think aloud on some of the important problems of regulation of forward trading in raw jute and jute goods. This Exchange was recognised on 29th March 1958 as the only body to conduct futures trading in raw jute and gunnies, in pursuance of the Central Government's acceptance in 1954 of the Jute Enquiry Commission's recommendation. The Commission had recommended that a body with a broad-based constitution representing all interests and with wider bases for business and necessary checks against speculation could be formed by the voluntary co-operation of those in the trade interested in forward business.

High hopes were entertained at the time of inauguration about the future working of the Exchange, but the experience of the last two and a half years would appear to have shown that they have not been fully realised. While admitting that some useful work has been done during its short history, Mr. Doraiswamy candidly disclosed that "the assessment of knowledgeable quarters is that the success of the Exchange in damping down violent fluctuations in prices and controlling unhealthy speculation has been very limited indeed." He, however, admitted that the Exchange had also to face transitional difficulties like all recognised associations elsewhere in the country which were brought under the purview of the Forward Contracts (Regulation) Act very much earlier.

Unlike other recognised bodies, the E.I.J.H.E. has the unique privilege of deciding what action should be taken from time to time to control bouts of speculation. In fact, it imposed special margins on raw jute and jute goods and varied them from time to time on not less than nine occasions. The steps taken by the Board of the Exchange had given rise to feelings of frustration and resentment among certain sections of the trade. Mr. Doraiswamy accused the Board of bowing to the wishes of the operators in the market and of taking a series of drastic steps only at the top of the boom in May 1960, when raw jute prices shot up to the highest level since the Korean war. The hectic movements in prices of raw jute and gunnies, as were witnessed in May last, lead, according to the F.M.C. Chairman, to two conclusions, namely, (1) the spirit of the regulatory provisions of the Forward Contracts (Regulation) Act has not yet been properly assimilated by the trade, and (2) a proper place has not been given to national interest in all the dealings on the Exchange.

It is evident from Mr. Doraiswamy's speech that three main reasons were responsible for the "limited success" of the regulations to check excessive speculation in raw jute and jute goods, namely, (1) the considerable element of "inherent instability" in the jute economy, (2) the "great predominance" of brokers in the membership of the Exchange, and (3) a large and wider sector of forward trading—transferable specific delivery contracts (T.S.D.C.)—is left out of the detailed regulation. The first cause is a fundamental one and speculation would automatically sober down, if this is corrected. The sharply varying crop figures between the official estimates and trade estimates, sudden damages to crop due to floods, etc., and unsteady export demand for jute goods are some of the adverse factors which affected the jute economy. Mr. Doraiswamy stressed that the very existence of these sources of instability should cause serious thought and call for constructive action in evolving a pattern of regulation which would at least stabilise, if not improve upon, the quantum of jute goods exports. "What we actually witness today," he added, "is that the industry goes on working down stocks, reduces its stocks of raw material to the minimum—and not even the minimum on occasions—and, generally, a situation is reached in which instability of prices becomes endemic. Such a state of affairs naturally becomes the happy hunting ground of speculators who, *ex-hypothesi*, experience difficulties in balancing between self-interest and national interest even in emergencies." While the damage to crop on account of natural causes is beyond the control of anybody, the abnormal situation, as was witnessed in the 1959-60 season, when the shortfall in 1959-60 crop and the expectations of a further fall in crop during the 1960-61 season on account of drought conditions led to hectic movements in prices, which could have been restricted, to a large extent, by the timely action on the part of the Government in allowing imports of cuttings from Pakistan. It was only after much damage had been done that the Government issued import licences for Pak cuttings. An earlier action would have restrained the rise in prices of jute goods and would not have affected the export demand.

As regards the second factor, Mr. Doraiswamy complained that "not only in numerical strength but in actual day-to-day regulation, the brokers as a body have not refrained from exerting unreasonable pressure to trim the policies to suit their requirements." Though such pressure is said to have been resisted sometimes by the Board, it is stated that the Board has had to bow to the wishes of the general body. An instance in point was the throwing out recently by the General Body of the Exchange of the Board's proposal to give more representation to the mills on the Board. The F.M.C. Chairman stressed the need for a change in the attitude on the part of brokers. He made it clear that the Commission could only "follow a policy in terms of which, other things being equal, interests who actually handle the goods in question and who have a far more direct stake in the trade and in the industry should receive encouragement as against the needs or the wishes of brokers." In the light of this warning, it can be expected that the representation of the mills on the Board will soon be increased.

In regard to the transferable specific delivery contracts (T.S.D.C.), there has so far been no regulation worth the name in these contracts, although technically Section 15 of the Forward Markets (Regulation) Act has been applied to these contracts and the T.S.D.C. by-laws contain adequate provisions for introducing a measure of discipline in this "some chaotic sector" of the trade. Consequently, there has been a lot of abuse of this freedom. In times of squeeze or bear raid in the futures market, it is stated that the virtually free T.S.D.C. sector serves as a convenient outlet for the squaring up of open commitments. The F.M.C. would appear to have taken serious note of this development. "After a careful study of the character of these contracts," Mr. Doraiswamy said, "I, for one, cannot see any valid justification for exempting these contracts from the same pattern of regulation which is applied to the futures contracts. In fact, a beginning in that direction is overdue." It may be recalled that the Forward Markets Commission (under the chairmanship of Mr. W. R. Natu), in its report on the recognition of associations in respect of forward contracts in raw jute and jute goods submitted in 1956, had expressed its view that "it is necessary for the success of any association to be recognised under the Forward Contracts (Regulation) Act, 1952, that it should cover *all* transferable specific delivery contracts, including those conducted on the basis of the contracts of the I.J.M.A." If the abuse of the exemption given to T.S.D.C. by the trade continues, the day may not be far off when these contracts are also brought within the purview of the Forward Markets (Regulation) Act. It is reported that the Commission has had a series of talks with the I.J.M.A. on this point.

While the success of the E.I.J.H. Exchange in controlling excessive speculation has so far been very limited it will be interesting to note, on the F.M.C. Chairman's own admission, that the Commission has "always acquiesced in the action taken by the Board." It may, therefore, be pertinently asked as to why the F.M.C. had refrained from intervening all these days and had approved of the steps taken by the Board of the Exchange. The possible explanation for this is that the Exchange, unlike the other recognised bodies, has been given the freedom to take whatever action it deems fit—a liberty which the F.M.C. obviously did not like to curtail, if it could. Now that it has been found that the Exchange has not lived up to the earlier expectations and that it continues to be dominated by brokers, thanks to inadequate representation to manufacturing interests, the F.M.C. feels that it may have to intervene, if adequate steps are not taken by the Exchange itself to curb speculation in raw jute and jute goods and to improve its representative character.

U.S. HESSIAN IMPORTS

Imports of Indian hessian into the U.S. have received a severe setback during the current year, as a result of high prices, according to information received in Calcutta. India supplied to the U.S. only 15,200 tons of hessian in April 1960, as against 17,600 tons in the previous month and 22,900 tons in April last year. In the first four months of the current year, imports of Indian hessian in the U.S. aggregated 64,000 tons, as against 77,900 tons in the corresponding period of last year. Hessian supplies from Pakistan during January–April 1960, also declined to 6,200 tons from 7,900 tons, but other countries were able to increase their supplies from 5,700 tons to 6,100 tons. India, it may be mentioned here, supplied 218,200 tons of hessian to the U.S. during 1959, as against 186,900 tons in 1958.

Notices

KHANDELWAL FERRO ALLOYS LIMITED

NOTICE TO MEMBERS

THE SECOND ANNUAL GENERAL MEETing of Khandelwal Ferro Alloys Ltd. will be held at the Registered Office of the Company, "Khandelwal Bhavan," 166, Dr. Dadabhai Naoroji Road, Bombay 1, on Wednesday the 14th September 1960, at 4 p.m., to transact the following business:

(1) To receive and adopt the Directors' Report and the Audited Balance Sheet as at 31st December 1959 and Profit and Loss Account for the year ended 31st December 1959.

(2) To elect a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who retires by rotation and to consider, and, if thought fit, to pass the following Resolution for which Special Notice as required under Section 281 of the Companies Act, 1956, has been received by the Company:

"RESOLVED that Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has already attained the age of 65 years and who retires by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

(3) To appoint a Director in place of Shri Madanmohan Ruia who was appointed an additional Director of the Company and who holds office up to the date of the Annual General Meeting of the Company and is eligible for re-election.

(4) To elect a Director in place of Shri R. J. Eagle who retires by rotation and being eligible offers himself for re-election.

(5) To elect a Director in place of Shri H. T. Niblette, who retires by rotation and being eligible, offers himself for re-election.

(6) To appoint Auditors and to fix their remuneration.

(7) To consider and if thought fit to pass the following Resolution as a Special Resolution with or without modification:—

"RESOLVED that the Authorised Capital of the Company be increased from Rs. 2,50,00,000 divided into 1,50,000 Equity Shares of Rs. 100 each and 50,000 7½% tax-free Redeemable Cumulative Preference Shares of Rs. 100 each and 50,000 tax-free Redeemable Preference Shares of Rs. 100 each at rate of dividend not exceeding 7½% as may be sanctioned by the Controller of Capital Issues, to Rs. 5,00,00,000 divided into 3,50,000 Equity Shares of Rs. 100 each, 50,000 7½% tax-free Redeemable Cumulative Preference Shares of Rs. 100 each and 1,00,000 tax-free Redeemable Cumulative Preference Shares of Rs. 100 each at such rate of dividend as may be sanctioned by the Controller of Capital Issues, subject to the rate of dividend not exceeding 7½% per annum."

(8) To consider and if thought fit to pass the following Resolutions as Special Resolutions with or without modification:—

(a) "RESOLVED that the following be substituted in place of Article 6 of the Articles of Association:—

'The Authorised Capital of the Company is Rs. 5,00,00,000 divided into 3,50,000 Equity Shares of Rs. 100 each and 50,000 7½% tax-free Redeemable Cumulative Preference Shares of Rs. 100 each and 1,00,000 tax-free Redeemable Cumulative Preference Shares of Rs. 100 each at such rate of dividend as may be sanctioned by the Controller of Capital Issues but not exceeding 7½% per annum.'"

(b) "RESOLVED that the following be substituted in Article 7 of the Articles of Association of the Company:—

'The Preference Shares aforesaid shall confer the right to a fixed preferential Cumulative Dividend at the rates at which they are issued free of tax on the capital for the time being paid up thereon'

in place of the following in Article 7:

'The Preference Shares shall confer the right to a fixed cumulative Preferential dividend at the rate of 7½ per cent. per annum free of income-tax on the capital for the time being paid up thereon.'"

By Order of the Board,

For & On behalf of
KHANDELWAL FERRO ALLOYS LTD.,
KHANDELWAL INDUSTRIES PRIVATE LTD.,
Managing Agents,

RAMPRASAD KHANDELWAL,
Director.

BOMBAY, *dated 10th August* 1960.

Note: (1) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

(2) The relative Explanatory Statements pursuant to Section 173 of the Companies Act 1956 in respect of the special business set out above are annexed hereto.

(3) The Register of Members of the Company will be closed for transfers from the 10th day of September 1960 to the 15th day of September 1960, both days inclusive.

An Explanatory Statement as required under Section 173(2) of the Companies Act, 1956, in respect of the aforesaid Special Business is annexed to the convening Notice issued to Members of the Company.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

METTUR DAM R.S.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE register of members and share Transfer Books of the Company will be closed from 27th August 1960 to 12th September 1960, both days inclusive, in connection with the Twenty-third Annual General Meeting of the Company convened to be held at the Registered Office of the Company at Mettur Dam R.S. on Monday, 12th September 1960, at 3 p.m. to transact the ordinary and special businesses set out in full in the notices of the meeting, which have been posted individually to the Members.

The Directors at their meeting held on 31st July 1960 have recommended the payment of the following dividends to the members for the year ended 31st March 1960.

6¼ per cent. subject to tax *final dividend* on equity shares, which with the 6¼ per cent. subject to tax interim dividend already paid makes a *total dividend of* 12½ per cent. subject to tax on equity shares.

3 per cent. tax-free (3⅜ per cent. gross) final dividend on Preference shares which together with the 3 per cent. tax-free interim dividend already paid makes a total dividend of 6 per cent. tax-free on Preference shares.

Members are requested to attend the meeting either in person or by proxy. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

WORKING OF INDIA'S TRADE AGREEMENTS

EXPORTS OF NON-TRADITIONAL GOODS HAVE NOT IMPROVED

By K. Murti

RECOGNISING the importance of an increase in mutual exchanges for the expansion of trade and closer economic and industrial co-operation between nations, India has been entering into a series of trade agreements with a number of foreign countries ever since she attained independence. The trade agreements in most of the cases cannot be strictly called bilateral in the sense that the value of imports into India is set off against the value of exports from India to any particular country in a given time. The agreements with Pakistan and Roumania, however, stipulate in unequivocal terms that the total value of imports would be equal to the value of exports effected by either country. Thus, India's trade agreements are bilateral only in the sense that they are between two countries. From India's point of view, they are at best trade arrangements evolved to fit in with her programmes of industrial development. Indeed, the schedules to the agreements comprising commodities to be imported and exported are modified or revised periodically in the light of the changing needs of the country.

At the end of the year 1959, India had trade agreements with twenty-six countries. In addition, negotiations for the renewal of agreements with three countries were in progress. Of these agreement countries, including the three countries with whom agreements were to be renewed, seventeen countries are in the European continent, seven in the Near and Far East, two in the Middle East, two in Africa and only one in the South American continent. The total trade of these 29 countries amounted to Rs. 147 crores (Rs. 82 crores imports and Rs. 65 crores exports) for undivided India in the pre-war period 1937-38. Trade with these countries witnessed a rising trend, the total trade being Rs. 389 crores (Rs. 204 crores imports and Rs. 185 crores exports) in 1952, Rs. 459 crores (Rs. 312 crores imports and Rs. 147 crores exports) in 1958 and Rs. 504 crores (Rs. 314 crores imports and Rs. 190 crores exports) in 1959. Of India's trade with all countries, it is, however, seen that the share of trade with the 29 countries dropped from 40 per cent. in 1937-38 to 28 per cent. in 1952. The position, however, improved in subsequent years, the share being 31 per cent. in 1958 and 35 per cent. in 1959. India's rising requirements of industrial and processed materials and investment goods needed to sustain industrial and agricultural expansion led to larger imports, which, in the case of agreement countries, constituted 35 to 36 per cent. of the value of India's imports from all countries during 1958 and 1959. Exports of goods to agreement countries kept pace with the general trend of India's exports to all countries. Thus, they declined from 34 per cent. in the pre-war year 1937-38 to 26 per cent. of total exports in 1958, but went up to 30 per cent. in 1959.

Government's Concern

The general trend of imbalance in India's foreign trade during the last decade has been found very much pronounced in respect of agreement countries. Indeed, the concern of the Government of India over the disequilibrium in the balance of trade with some of the agreement countries, particularly West Germany, is running through and through in the protocols to some of the agreements. The result is that the concerted export drive launched in recent years is slowly yielding results and has brought down the trade deficits in 1959.

Among the agreement countries, those in the European continent have been contributing substantially to India's foreign trade, their share being about 60 per cent. of India's trade with agreement countries. Areawise, the value of India's trade with agreement countries is given in Table I on this page.

India's large-scale requirement of plant, machinery, technical training facilities and know-how for the progressive economic development during the second and third Five-year Plan periods have led her to look more and more to the industrially advanced countries in the European continent for substantial assistance and co-operation. The result is that nearly three-fourths of imports from the agreement countries into India during 1959 were from the Continental countries. Imports from West Germany were by far the largest from the agreement countries, having amounted to Rs. 119 crores. The high tempo of industrial development attained by West Germany and further substantial aids expected of her in fulfilling India's future Five-year Plans are bound to give her an unassailable position in India's trade set-up. Indeed, more than a fourth of the total trade of the agreement countries is accounted for by West Germany, and it is of interest to note that, if India's deficit with West Germany is excluded, India's trade imbalance with other agreement countries, with the exception of one or two O.E.E.C. countries, pales into insignificance (*vide* Table II).

In the distribution of trade in 1959, among the continental countries outside the Communist bloc, the principal sources for India's imports, besides West Germany, were Italy (Rs. 26 crores), France (Rs. 19 crores), Sweden (Rs. 11 crores), Switzerland (Rs. 8 crores), Finland (Rs. 3 crores), and Austria, Norway and Yugoslavia (Rs. 2 crores each). Imports from agreement countries in the Communist bloc were valued at Rs. 31 crores, the chief sources being the U.S.S.R. (Rs. 17 crores), Poland (Rs. 4 crores), Czechoslovakia (Rs. 4 crores), East Germany (Rs. 3 crores), and Hungary (Rs. 2 crores). Of the countries in the Far East, Japan was the largest exporter to India, shipping as much as Rs. 41 crores worth of goods. Burma, Ceylon and China exported goods valued at Rs. 13 crores, Rs. 6 crores and Rs. 5 crores, respectively. Among the rest of the agreement countries, arrivals from Egypt were notable, having amounted to Rs. 8 crores.

Importance of Russia

As regards exports from India in 1959, the U.S.S.R. was the single largest customer among agreement countries in the European continent absorbing Indian goods worth Rs. 30 crores. West Germany with Rs. 19 crores came next in importance. France (Rs. 8 crores), Italy (Rs. 6 crores), Czechoslovakia and Poland (Rs. 4 crores each), East Germany, Roumania and Yugoslavia (Rs. 2 crores each) and Norway and Switzerland (Rs. 1 crore each) were the other important importers of Indian commodities. In the Far East, Japan's offtake of Indian goods amounted to Rs. 34 crores. Burma, Ceylon and China absorbed Rs. 13 crores, Rs. 22 crores and Rs. 8 crores worth of goods from India, respectively. Other important agreement countries to which India exported goods were Egypt (Rs. 9 crores), Pakistan (Rs. 6 crores), Indonesia (Rs. 4 crores), Afghanistan (Rs. 4 crores), Iraq (Rs. 3 crores) and Ethiopia (Rs. 2 crores).

Two Classes of Articles

Breakdown of comparative trade figures according to commodities under agreement and non-agreement articles is available for eighteen countries for the years 1958 and 1959. In view of the omnibus nature of the trade agreements with some of the countries, particularly Japan, separate statistics could not possibly be compiled on the basis of agreement and non-agreement articles. The Indo-West German Trade Agreement provides that both the Governments will facilitate import and export of all commodities from each country to the other. It is, therefore, considered unnecessary to specify the commodities to be exchanged in terms of the agreement, and the two Governments have affirmed their determination to improve two-way trade. In this analysis, therefore, the imports from and exports to West Germany have been categorised *in toto* under agreement articles.

Of the eighteen agreement countries for which detailed statistics are available, eleven are in the European continent of which seven are in the Communist bloc, five in the Far East, one in Africa and one in South America; and the share of their trade with India works to two-thirds of the trade of all the agreement countries. In terms of value, the imports from the eighteen countries totalled Rs. 226 crores and exports Rs. 128 crores during 1959, as against Rs. 229 crores and Rs. 96 crores, respectively, in the preceding year. During the pre-war period 1937-38, they were valued at Rs. 56 crores and Rs. 39 crores, respectively. These figures reveal that India was running deficit in her trade with the eighteen agreement countries. As mentioned earlier, in case West Germany's trade is excluded from the analysis, the trade deficit with other agreement countries, excluding perhaps one or two O.E.E.C. countries, is almost negligible.

The movement of trade with agreement countries reveals that trade has taken place considerably more in articles figuring in the schedules to the agreements than in non-agreement articles. However, the agreement with Ceylon being limited in nature—the import into India under the agreement comprising only Jaffna tobacco and export to Ceylon comprising *bidis* and handloom towels—the value of articles falling outside the scope of the agreements has been quite substantial. Likewise, the imports of chemicals and base metals from China and Hungary outside the purview of the agreements have swelled the imports of non-agreement articles. The distribution of trade with agreement countries classified under agreement and non-agreement articles during 1959 is shown at the foot of this page.

The movement of trade tilting very heavily on the side of agreement articles—in the case of European continent being a lion's share and in the case of Egypt and Chile the entire imports—poses the following questions: Has there been any shift in the pattern of India's import and export trade? Have the commodities which before the conclusion of trade agreements figured generally in India's foreign trade, been merely included in the schedules to the agreements or new commodities brought in? Would it have been possible that, but for the agreements, trade would have moved normally in the commodities which have been now included in the schedules? Has any benefit accrued to India from these agreements and is any reorientation in the policy of trade agreements called for? An answer to these questions may be found if we make a comparative study of the foreign trade of India with the agreement countries according to broad commodity groups. A study of the pattern of import trade as obtained now and as prevailed in the pre-war period reveals a significant change. It is a welcome feature that the agreements in respect of imports into India take into accounts India's requirements of industrial and processed materials and investment goods needed to sustain industrial and agricultural expansion. This is reflected by the fact that, while in the pre-war year 1937-38, capital goods comprising machinery, iron and steel manufactures, transport equipment, etc., constituted only 14 per cent. of the value of imports from these eighteen countries, their share has been quite considerable in recent years. Particularly West Germany, Italy and the U.S.S.R. together supplied a bulk of the manufactured articles including plant and machinery and metal products. Burma and Egypt are the other two important agreement countries, their main imports in 1959 being rice from Burma (Rs. 9 crores) and raw cotton from Egypt (Rs. 7 crores). Rice and raw cotton were traditional imports even in pre-war years from these markets. In the context of the rising tempo of economic development in the country which needs large imports of capital goods and in view of the fact that imports from the agreement countries which, albeit small in number, supply more than a third of India's total imports from all countries and also a substantial portion of capital goods, there can be no gainsaying about the utility or effectiveness of the trade agreements from the point of view of imports.

Traditional Goods Dominate

A look into the movement of export items to agreement countries, however, raises a flutter in the dovecots. India's export trade moves in the same beaten path and no great shift has taken place in the pattern of trade, notwithstanding efforts taken to reorientate the structure of export trade. The following figures show the approximate share of traditional commodities in the exports to agreement countries in the pre-war year 1937-38, 1958 and 1959:

(In percentage)

	1937-38*	1958	1959
1. Food, drink and tobacco ..	6.0	27.8	22.2
2. Raw materials and semi-manufactures ..	29.0	12.3	19.1
3. Manufactured articles ..	18.6	18.0	16.3
4. Total of traditional articles (1+2+3)	53.6	58.1	57.6
5. New articles		0.9	3.8
6. Agreement articles in total exports (6 over 7)		70.2	77.0
7. Total exports of agreement and non-agreement articles.	100.0	100.0	100.0

* Relating to undivided India.

The above figures are revealing, in that India's exports of traditional commodities were quite large and account for nearly three-fifths of the exports to agreement countries. Of the value of agreement exports, about three-fourths were traditional articles, such as tea, spices, non-essential vegetable oils, mica, iron and manganese ores, textiles and coir products. The share of exports of new items in the total value of exports to agreement countries works to about 4 per cent. only. These items consist of sports goods, light engineering goods, tea chests, handicrafts, etc. A glance at the export schedules to the agreements will, however, reveal that a large number of new articles as also articles in which export to the agreement countries had not taken place in the past, have been included. Before inclusion, India and the agreement countries are presumed to have given considerable thought to the marketing possibilities of these products in the importing countries. Owing, however, to many reasons yet to be explored, exports in many of these items have been either nil or insignificant. It is highly imperative that detailed examination into the causes for the non-movement or slow movement of exports in these commodities needs to be undertaken and remedial measures taken. It is likely that the scope for further exports of many of the traditional commodities to the agreement countries is limited. If the deficit in India's foreign trade is to be narrowed down, vigorous drive is to be launched in promoting exports of such items as figuring in the list of agreement articles and in which export has been so far negligible or nil. Indeed, in some of the trade agreements, the grave concern of the Government of India has been expressed over the increasing deficit in India's trade with the contracting countries which have therefore been persuaded to make positive endeavours to increase their offtake of Indian exports. The various market surveys for Indian commodities undertaken in foreign countries and the trade delegations which visited overseas territories have suggested effective measures for promoting exports from India. The Government of India have given various inducements, incentives and facilities from time to time for increasing exports. Periodical appraisal of the export performance of each item entering our exports and launching of corrective measures in case of any shortfall either in standard, quality or volume will go a long way towards keeping up exports.

New Era

The export trade and the interests concerned do not appear to have made full use of the trade agreements to increase the country's exports and bring in much needed additional foreign exchange. This need not be taken to dub the trade agreements as unrealistic or disadvantageous to India. It has, in fact, been expressed in some of the agreements that, in view of India's requirements of plant, machinery, technical training facilities and know-how for progressive economic development in the remaining years of the second Plan period and during the period of the third Five-year Plan and the need to service loans and credits received by her, it may not be possible to redress fully the Indian deficit in the immediate future in the course of normal trade. It has, therefore, been considered essential for all concerned to strive for the development and expansion of India's external resources by the development of overseas sales and expansion of earnings from invisible sources. The rising possibilities offered by the overseas markets in the context of the growing volume of industrial activity and the rising level of personal consumption in the industrially advanced countries should be fully explored to increase Indian export items.

It cannot, however, be denied that the trade agreements have ushered in a new era in the history of India's foreign trade. For the first time, they have helped to enable contacts between policy-makers of foreign trade in India and those in agreement countries. Prior to India attaining independence, such contacts did not exist. They have fostered India's imports and played a commendable part in broad-basing sources of imports of capital goods and other essential requirements for the working of India's planned projects. They have enabled both the Governments of both contracting countries to review the movement of trade periodically and, in case of any general decline either in exports or imports or both, promotional measures can be taken to rectify the shortfall. If a decline is noticed in the import of any specific commodity, the attention of the importing country is drawn. For example, when there was a drop in the import of iron ore into Austria, the Government of India drew the attention of the Austrian Government and suggested direct contact between the State Trading Organisation of India and the Austrian steel industry. Although the importing country expressed, in specific terms, its inability to intervene in private trade, assistance as far as possible in achieving the objective was however promised.

Value of State Contacts

The inadequacy of contacts between Indian and foreign trade organisations and business men has been a major obstacle to developing trade. The Governments of the agreement countries are persuaded to use their best endeavours to foster contacts between their industrial firms and organisations and their Indian counterparts. In respect of some countries, particularly those in Eastern Europe and China with whom Indian business men have contacts few and far between, trade negotiations on State level enable promotion of contacts and, in turn, commerce.

The regulations relating to the control of imports and exports as established by contracting Governments for each period are being made known to the interested parties through public notices. Further, all possible facilities for publicity in the respective countries to the commodities available for export in the other country are given. These enable direct contacts being established between Indian firms and foreign business men and encourage direct sales.

Some of the industrially advanced countries extend facilities and assistance to Indian export promotion organisations. They provide technical advice on market intelligence from aids of their own. They facilitate exchange of visits by Indians and their experts, with a view to furthering the prospects of Indian goods. They further provide training of Indian executives in business administration and related fields of activities.

The close technical co-operation that exists between India and some agreement countries since coming into force of the trade agreements is being made use of in exploring possibilities of setting up projects for more efficient utilisation of the resources available in India with a view to augmenting India's export surpluses and sales to agreement countries, and for collaboration between Indian extractive and processing industries and the more industrially advanced agreement countries for extraction and processing of raw materials in India for sale in agreement countries.

Concession for Concession

The agreements with certain countries extend concession for concession. Thus, for purposes of import and export control, India treats all countries in the O.E.E.C. as falling within the soft currency area and in return these countries extend to India the liberalisation measures they have adopted or will be adopting to imports from other members of the O.E.E.C.

Payments are to be made for goods imported or exported in accordance with the trade agreements. They are also to be made for commercial transactions and covering insurance, freight, port charges, storage, forwarding expenses, bunkering, consular taxes, transit and transhipment.

JOB EVALUATION AND WAGE STRUCTURE

A STUDY OF THEIR RELATIONSHIP

AT a time when attempts are being made to relate worker's wages more directly to efforts put in, job evaluation, which aims at providing a more systematic and objective basis for the comparison of job contents and serves as an aid for establishing a rational and equitable wage structure, is of more than academic interest. In both the theory and practice of wage determination, the problems of defining and fixing suitable wage relationships are of considerable importance. The technique of job evaluation has been applied to deal with problems of comparative equity in wage level. Although experience of the application of job evaluation techniques is too limited to warrant a positive assertion, it is believed to be helpful in reducing dissatisfaction so often arising from existing wage differentials, or the absence of it, and thus contributing to more harmonious human relations in industry.

Though job evaluation is still a relatively new technique, there has of late been increasing interest in it as a means of establishing a wage structure that is acceptable to both management and labour and is, at the same time, fair and equitable. The application of job evaluation for this purpose has been stimulated by the war and post-war abnormalities of the employment market, accompanied, in some countries, by the freezing of wages or by repeated wage adjustments to changes in the cost of living and, frequently, by labour shortages. For instance, wage control by the National War Labour Board in the U.S. was a strong stimulant to the increased application of job evaluation in the U.S. Manifest anomalies and inequities in the wage structure were often admitted as a ground for approving wage increases and job evaluation could be used to demonstrate the existence of such anomalies. Similarly, under the post-war system of wage control in the Netherlands, job evaluation was accepted and encouraged by the authorities as a means of making appropriate wage adjustment for particular jobs or industries, without upsetting the general objective of maintaining substantial stability in the national wage level as a whole. In Germany, too, job evaluation received wider application in the course of the Second World War and during the first few post-war years, when wage control continued to be applied.

Satisfactory Results

Job evaluation has, in many cases, been applied with satisfactory results; but the method is still not universally regarded as a useful aid in designing rational wage structures. Its proponents and opponents are to be found in the ranks of both employers and workers. A structure of wage differentials, which broadly satisfied workers, has obvious advantages to workers and employers over one that does not do so; it reduces grievances and disputes and generally makes workers feel happier. To the extent that job evaluation can help in establishing such a wage structure, the method should be welcomed. The reason why, in some cases, it is not enthusiastically welcomed, or is even emphatically rejected, is ignorance concerning its precise nature and utility. Viewed against this background, the monograph* on the subject, prepared by the I.L.O. makes an important contribution to the wider understanding, on the part, especially, of employers and trade unionists, of the meaning and general principles of job evaluation. The study is not intended as technical handbook for the training of job evaluation technicians; nor is it a plea for the universal adoption of job evaluation. It is only meant to stimulate discussion as a first step towards understanding and agreement.

Definition

Job evaluation, according to the I.L.O. study, may be defined simply as an attempt to determine and compare the demands which the normal performance of particular jobs makes on normal workers, without taking account of the individual abilities or performance of the workers concerned. Individual abilites or efforts may, of course, also be taken into account and reflected in the workers' earnings, for example, under a system of payment by results or of merit-rating, but this is something entirely different from the rating of the job with which job evaluation is concerned. Job evaluation, as the term suggests, rates the job, not the man. Job evaluation and collective bargaining are not mutually exclusive. In fact, they are two entirely different concepts. Job evaluation is concerned with the problems of relative remuneration only; it has nothing to do with the fixation of absolute wage levels or, for that matter, absolute wage differentials between evaluated jobs. Even if both parties have agreed to apply job evaluation and to use its results as a basis for wage determination, wage levels and the absolute amount of wage differential remain to be negotiated. Each and every step involved in the introduction and administration of job evaluation system can be fitted into the framework of joint consultation and collective bargaining. This has often been done in practice.

There are four main types of job evaluation schemes, based on four different methods, namely, the ranking method, the grade or classification method, the factor comparison method and the point-rating method. The first two are usually referred to as "non-analytical" methods, while the latter are known as "analytical" (or quantitative) method. The point-rating method is the most widely applied.

Some Common Principles

Job evaluation can be applied in different ways with varying degrees of detail. Underlying different systems, there are, however, certain broad, common principles. First of all, it is necessary to be quite clear as to the criteria to be applied. Under all methods, except the simple, ranking method, it is necessary to define either the grades in which jobs will be placed or factors in terms of which they will be evaluated. These criteria must be defined in clear, unambiguous terms. The next step consists of a more or less thorough examination, and description, of the jobs to be assessed in terms permitting them to be evaluated according to the grade or factor descriptions established for the purpose. Then the jobs have to be compared with each other or with some other job. Finally, the jobs have to be arranged in a certain order or "ranked."

A decision to introduce job evaluation may be taken by management as a management task and, perhaps, as a starting point for negotiation with trade unions with or without the approval of the union. Similarly, the implementation of this decision may or may not involve trade union participation, depending, *inter alia*, on the wishes of both the parties. Whether or not there is trade union participation, outside consultants may be called in to advise on the technical problems involved. The second decision concerns the choice of the system to be applied. Sometimes, an entirely new scheme has to be developed for the plant concerned: in other cases, an existing scheme, suitably adjusted to the special needs and conditions of the plant, can be used. Once it has been decided what system is to be used, the most important next steps are description, analysis and rating of jobs. This work is often entrusted to committees, particularly in the larger firm. Whereas job description can be left to technicians, final decisions as regards the contents, rating and the classification of jobs are, in many cases, taken by the committee which might be a joint body when there is union participation.

Conversion

Once job evaluation has been completed, there remains the question of applying the results of evaluation to the fixation of wage rates by converting points into wage rates. This transplantation of the evaluated job structure into a structure of wages is a decisive one, for it determines whether the resulting wage structure is rational and equitable. The requirements which such a wage structure should meet are: (1) The rates should stand in a suitable relationship to comparable rates paid by other employers, and (2) they should have an acceptable relationship to each other.

In principle, the conversion of the evaluated job structure into a wage structure is achieved by adding to a certain minimum wage rate an amount which is determined on the basis of point value allotted to each job. There is an infinite variety of possible functional relationship between points and wage rates. The most widely used method is that of assigning for each point a fixed and uniform amount of money.

When all jobs have been rated and their ranking has, through some appropriate collective bargaining procedure, been converted into a structure of wages, the change-over from the old to the new wage structure could be accomplished.

It may be noted that job evaluation does not preclude the adoption of incentive wage schemes. Job evaluation is concerned with the rating of jobs, not of the work of particular persons. Individual effort and performance may, but need not, be rewarded separately through a system of merit-rating or payment by results. The requirements of normal performance on any job can be defined and rated according to some system of job evaluation as a basis for rate-fixing. Performance which is above or below can be rewarded or penalised according to a system of premium payments which will necessarily affect earnings.

Inquiries conducted into the functioning of actual schemes in the United States, where job evaluation plays an important part, revealed interesting results.

Case Study

One of the most comprehensive surveys of job evaluation schemes was undertaken by the Industrial Relations Section of the Department of Economics and Social Institutions of Princeton University. This survey covered 73 companies, many in the metal trades, employing from 278 to 140,000 workers. Of the 73 companies surveyed, 41 reported general satisfaction with their job evaluation schemes, 11 reported definite dissatisfaction and 12 felt that they had had both satisfactory and unsatisfactory experience. The nine other companies could not express an opinion, as their schemes had not been operating long enough. Some companies reported on more than one scheme. Of 20 schemes which had proved unsatisfactory (including discontinued schemes), 14 had been established in 1939 or earlier. It appeared, therefore, that the longer a scheme had been in operation the greater the chances were that difficulties would arise which would require the scheme to be discontinued or completely revised. On the other hand, there was evidence that a large number of job evaluation plans, which had been established in 1939 or earlier, were still proving satisfactory.

Two other surveys, one by the Industrial Relations Centre of McGill University, of the experience of 96 companies in the Montreal area, and the other, by the Dartnell Corporation of Chicago, concerning the experience of 75 companies, also reported many cases of improved industrial relations as reflected in smoother collective bargaining and a reduction in wage grievances. A survey covering 23 aircraft manufacturing companies throughout the U.S. yielded a large number of favourable reports. Most of the companies stated that they were highly satisfied with their schemes, while slightly less than one quarter said that their schemes were satisfactory and only one that its scheme was fairly satisfactory. None reported that its scheme had proved unsatisfactory.

Interesting experiences were also revealed by the study undertaken by the High Authority of the European Coal and Steel Community on the application of job evaluation in the steel industries of the member-countries.

Merits

The extent to which job evaluation finds practical application will depend, in the long run, on the balance of advantages and drawbacks of the method. These differ as between different undertakings, industries and countries. On the basis of past experience, the following merits of job evaluation are listed in the I.L.O. study:

1. Job evaluation is a logical and, to some extent, objective method of ranking jobs relatively to each other. It may thus help in removing inequities in existing wage structures and in maintaining sound and consistent wage differences in a plant or industry. It may also result in a simpler wage structure than the existing one, more easily understood and accepted by the workers.

2. It helps in removing grievances over relative wages and thus may improve labour-management relations and workers' morale, in addition to reducing the time that management and trade union officers have to devote to such grievances, thereby enabling them to deal with other important matters. In providing a yardstick by which workers' complaints or claims can be judged, the method simplifies discussion of wage demands and enables differences in wages to be explained and justified.

3. It replaces the many accidental factors occurring in less systematic procedures of wage bargaining by more impersonal and objective standards, thus establishing a clearer basis for negotiations.

4. The method may lead to greater uniformity in wage rates, thus simplifying wage administration. If widely applied in an industry, it also tends to facilitate wage comparisons between geographically separated employment markets, which, again, may be helpful for certain bargaining purposes.

5. The information collected in the processes of job description and analysis may also be used for the improvement of selection, training, transfer and promotion procedures on the basis of comparative job requirements.

6. Such information also reveals often that workers are engaged on jobs requiring less skill and other qualities than what they possess, thereby pointing to the possibility of making more efficient use of the plant's labour force. More generally, inefficiencies in the organisation and methods of work and possibilities of improving working conditions and reducing job hazards, may be discovered.

Not a Panacea

Job evaluation is not a panacea. The scope of its useful application is limited by a number of factors of which the principal ones, according to the I.L.O. study, are:

1. However logical and consistent a system may be, account has to be taken of various limits to the possibility of changing apparently illogical elements in an existing wage structure. Certain external rates may have to be paid for "hiring jobs" whether they are compatible with the job evaluation system or not; traditional wage relationships, however inconsistent they may be, cannot always be altered.

2. When job evaluation results in substantial changes in the existing wage structure, the possibility of implementing these changes in a relatively short period may be restricted by the financial limits within which the firm has to operate.

3. When there is a large proportion of incentive workers, and, especially, when incentives have to be changed frequently, it may be very difficult to maintain a reasonable and acceptable structure of relative earnings.

4. In any case, job evaluation does not provide a complete answer to the wage problem. It has nothing to say about the absolute wage level and little about the absolute size of the wage differentials appropriate to the evaluated job structure. It is not concerned with questions of rewarding loyalty, seniority or merit, and its consistent application may be very difficult in cases where payment by results is applied.

5. In particular, the process of job rating is, to some extent, arbitrary because few of the factors and degrees can be measured with great accuracy. This process can certainly not be regarded as "scientific" and it can be considered "objective" at best, in the sense that, under ideal conditions, it is free from deliberate bias. All that can be expected to emerge from the process is a well-considered and honest, but basically subjective, evaluation of jobs.

6. Job evaluation takes a long time to install, requires specialised technical personnel and may be quite costly. One Canadian estimate put the cost of installing a scheme at $45 per job evaluated and maintenance charges at about 25 cents per employee per month.

7. The drawing up of job descriptions tends to formalise job contents, which may lead to abuses by workers who acquire a vested interest in maintaining the requirements for certain jobs.

8. Trade unions often regard the method with suspicion and in some cases with hostility. In such cases, job evaluation may still be useful in helping management to clarify its own ideas as to what is to be regarded as a suitable wage structure, but the possibilities of using the results of the method in actual wage negotiations and in the settlement of grievances will be limited.

While it cannot be said that employers generally are strongly in favour of job evaluation, there appears to be little opposition by them to this method. The position, however, is different on the trade union side. There is a great deal more in the way of frank opposition to the method than among employers. At the same time, there are also unions who have taken a less critical view of job evaluation. For instance, the United Steel Workers of America extended its wholehearted support to the job evaluation plan introduced in the U.S. steel industry which eliminated many current and prospective wage grievances.

Trade union opposition is sometimes based on the fear that job evaluation limits, or does away, with collective bargaining, a fear which, as noted above, is unfounded. Sometimes, the opposition springs from general problems such as the novelty of job evaluation, its complexity and the unpredictability of its results or from specific problems of the union, especially of the newly founded ones, such as its preoccupation with organisational matters, etc., which makes it difficult for the union to commit itself to job evaluation.

Prerequisites for Success

There are, however, certain conditions which would make union participation in job evaluation easier. They are: (1) The union should be well established, so that it would be easier for union leaders to commit themselves to any scheme when the organising phase of its development is over. (2) The scheme adopted should be as simple as possible, so that the individual worker can understand it. (3) Once the job evaluation system is accepted by a union, it should be implemented as a truly joint undertaking. Suitable procedures should be devised and genuinely applied for consultation at all stages, including, particularly, that of job-rating. Individual workers should also be given a suitable measure and sense of participation. (4) The system should be designed and operated in a flexible manner, enabling a larger number of special considerations to be taken into account.

A great deal of irritation and suspicion in regard to job evaluation can be avoided, if the plan is administered in a spirit of understanding and goodwill. Unions will find it easier to accept such a system, if they feel assured that employers are willing to have it administered in such a spirit.

INCENTIVE WAGE PLAN IN U.S.

One in every four working in production and related departments of U.S. manufacturing industries in 1958 was paid on an incentive basis, according to a survey conducted by the U.S. Labour Department's Bureau of Labour Statistics (B.L.S). The B.L.S. study—its first comprehensive one in more than a decade—showed that 27 per cent. of manufacturing industry's 11.3 million workers were under some form of incentive pay plan.

As compared with a similar survey made in 1945-46, there has been no significant gain in the proportion of workers who receive extra pay for extra efforts. B.L.S. officials say that there is no reason to expect this comparatively stable situation to change during the next five years. Wider use of labour-saving equipment will increase the number of incentive-plan workers in some fields, reduce the number in others, with a net balancing effect.

Generally, the survey found, the industries in which a relatively high proportion of time is spent handling materials are likely to use incentive pay; control over production rests, to a considerable degree, with the worker. On the other hand, the extent of incentive pay plans is usually low where output is machine-spaced and incentive pay would hardly increase production, whether it be in the United States or in the U.S.S.R. where incentive pay plans were adopted in the late 1930's.

The extent of incentive pay plans in the United States has a high degree of uniformity in some industries, not much in others. Sewers in the garment industry are under incentive pay plans; cutters are not. In other industries, notably metal-working, there is little uniformity. Practices depend on such factors as the degree of standardisation of products and work processes, management views on incentive pay, and—most important—union-management relations.

According to the B.L.S. study, incentive wage plans most commonly in use are based either on piece-rates or production bonuses. Piece-rate plans link earnings directly to the total number of units produced by an individual or the group in which he works. The production bonus system provides an extra payment for production that exceeds a quota or that is done in less than a standard time. It, too, can be on either an individual or a group basis. Incentive coverage usually is limited to workers who are engaged in direct production. However, some group bonus plans are now extended to give a share of extra earnings to workers who are only indirectly connected with production, such as maintenance and custodial employees. Nearly all incentive plans include a rate guarantee if production standards are not met.

The survey reported that the number working under incentive plans ranged downward from about 70 per cent. in the men's and boys' apparel industry and the leather footwear industry to fewer than 10 per cent. in a number of large industries, including aircraft and aircraft parts manufacturing. The use of wage incentives is comparatively high in the cigar industry, in knitting mills, in part of the women's apparel industry, and in the steel industry's furnaces, works, and rolling mills. Of about 408,300 workers in the steel industry in mid-1958, about 245,000 were paid under incentive plans. On the other hand, only a mere 2 per cent. of the workers in automobile assembly plants were paid on an incentive basis. In companies where the trade union has a labour contract with the management, the rates of incentive pay are negotiated by collective bargaining as is the case in respect of basic wage scale and working conditions.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common : every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia : these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 *with Limited Liability.*
HEAD OFFICE : 7 King William Street, London E.C. 4.
BOMBAY OFFICE : 314 Dr. Dadabhai Navroji Road, Fort, Bombay.
Tel. Add.: BACTRIA. Telephone : 25-2267
Capital and published reserves £4,375,000

THE BANK OF IRAN AND THE MIDDLE EAST
Capital Rials 250,000,000
HEAD OFFICE : TEHERAN, IRAN (PERSIA). (P.O. BOX 1680)

FUTURE DEMAND FOR FINISHED STEEL

RESULTS OF SPECIAL STUDY BY THE NATIONAL COUNCIL OF RESEARCH

IN a study of India's steel needs,* based chiefly on the end-uses of steel, the National Council of Applied Economic Research (Director-General: Dr. P. S. Lokanathan) places the requirements of finished steel by 1965-66 (the end of the third Five-year Plan) at 7.2 million tons, as against 3.61 million tons for 1960-61. On the basis of an estimated population of 480 million in 1965-66 the *per capita* consumption will work out to 34 lbs., as against 19 lbs. in 1960-61, when the population is about 430 million. Projecting the estimates into the period of the fourth Plan, the Council places the requirements of steel in 1970-71 at 12.9 million tons which will give, for a population of 528 million in that year, a *per capita* consumption of 56 lbs.

Of the total demand for 7.2 million tons in 1965-66, large and medium-scale industries are expected to account for 50.2 per cent., small-scale industries for 6.3 per cent., transport and communications for 21.1 per cent. and housing construction for 8.8 per cent., the share of these sectors in the total anticipated demand of 12.85 million tons in 1970-71 is placed at 62.0 per cent., 6.2 per cent., 15.5 per cent. and 6.4 per cent. The following table gives the demand pattern, as drawn up by the Council, in 1960-61, 1965-66 and 1970-71:

Requirements of Steel by Consuming Sectors

(In thousand tons)

Consuming sectors	1960-61	1965-66	1970-71
Transport and communications	772	1,515	1,993
	(21.4)	(21.1)	(15.5)
Large and medium-scale industries	1,571	3,599	7,970
	(43.4)	(50.2)	(62.0)
Small-scale industries	300	450	800
	(8.3)	(6.3)	(6.2)
Housing and construction	350	632	821
	(9.6)	(8.8)	(6.4)
Power projects	107	266	379
	(3.0)	(3.7)	(3.0)
Irrigation projects	158	221	208
	(4.4)	(3.1)	(1.6)
Agriculture	320	435	610
	(8.9)	(6.1)	(4.7)
Others	35	50	75
	(1.0)	(0.7)	(0.6)
Grand total	3,613	7,168	12,856
	(100.0)	(100.0)	(100.0)

Figures in brackets are percentages.

The following table gives the estimates of the requirements of categories of finished steel in 1960-61, 1965-66 and 1970-71:

Requirements of Finished Steel by Categories

(In thousand tons)

Categories	1960-61	1965-66	1970-71
Heavy structurals	270	500	874
	(7.5)	(7.0)	(6.8)
Light structurals	330	640	1,202
	(9.1)	(8.9)	(9.4)
Rails and fish plates	311	700	931
	(8.6)	(9.9)	(7.2)
Sleepers and sleeper bars	98	215	249
	(2.7)	(3.0)	(1.9)
Tin plates	140	250	400
	(3.9)	(3.5)	(3.1)
Sheets	583	1,051	2,336
	(16.1)	(14.7)	(18.2)
Plates	300	666	1,274
	(8.3)	(9.3)	(9.9)
Bars and rods	1,097	2,176	3,918
	(30.4)	(30.3)	(30.5)
Wire and wire products	126	212	346
	(3.5)	(2.9)	(2.7)
Special steel (including tool and alloy steel)	107	276	514
	(3.0)	(3.8)	(4.0)
Skelp	168	330	590
	(4.6)	(4.6)	(4.6)
Wheels, tyres and axles	43	72	102
	(1.2)	(1.0)	(0.8)
Hoops and strips	40	80	129
	(1.1)	(1.1)	(0.9)
Total	3,613	7,168	12,856
	(100.0)	(100.0)	(100.0)

Figures in brackets are percentages.

Railways

In the transport and communication sector the railways account for the major share of the demand for steel. Indeed, they are the largest single consumer of steel. Their total requirements of steel are placed at 653,530 tons in 1960-61, 1.32 million tons in 1965-66 and 1.69 million tons in 1970-71. This is based on an analysis of the increase in the volume of traffic the railways will have to handle and their programme for rolling stock and track renewal and new track. By 1965-66 and 1970-71, the long-distance traffic, according to the Road Development Plan, is expected to move up to 300 million tons and 440 million tons, respectively; the corresponding estimates made by the Council are 276 million tons and 429 million tons. The share of the railways in this traffic, according to the Road Development Plan, is placed at 228 million tons in 1965-66 and 305 million tons in 1970-71; the corresponding estimates of the Council are 221 million tons and 322 million tons. It is on the basis of its estimate of prospective traffic that the Council has envisaged the railways' demand for steel. Other consumers of steel in the transport and communications group include roads and bridges (65,000 tons in 1965-66 and 105,000 tons in 1970-71), shipping, shipyards and ship repairs (67,400 tons in 1965-66 and 110,000 tons in 1970-71) and ports and harbours (30,000 tons in 1965-66 and 40,000 tons in 1970-71).

The requirements of the large-scale and medium industries in 1965-66 and 1970-71 are estimated at 3.60 million tons and 7.98 million tons respectively. Of this, the share of the industries in the public sector will be 49 per cent. and 57 per cent. in 1965-66 and 1970-71 respectively, as compared with 35 per cent. in 1960-61. The steel requirements of the industries in the public sector will increase as greater emphasis is laid on developing basic industries in this sector. The demand for steel by the small-scale industries in 1960-61, 1965-66 and 1970-71 is placed at 300,000 tons, 450,000 tons and 800,000 tons, respectively. The requirements of steel for power projects in 1965-66 are estimated at 266,000 tons (255,000 tons in the public sector and 11,000 tons in the private sector) and at 379,000 tons in 1970-71 (357,000 tons in the public sector and 22,000 tons in the private sector).

Irrigation

Irrigation projects are also large consumers of steel. On the basis of the trends in consumption in recent years and the proposed allotment to irrigation in the third Plan, the Council places the requirements of irrigation projects at 221,000 tons in 1965-66 and 208,000 tons in 1970-71. The agricultural sector is a larger consumer of steel than irrigation projects. The total requirements of steel in this sector have been classified under such heads as machinery and implements, fencing, plant protection and equipment and building construction. On the basis of investment proposed in the third Plan, the Council places the requirements of steel in the agricultural sector at 435,000 tons in 1965-66 and 610,000 tons in 1970-71.

On the basis of the actual steel consumption in the public and private sectors, the steel requirements in 1960-61 for housing and construction work out to 350,000 tons. For the third and fourth Plans, the outlay on housing and construction by the public sector has been taken to be Rs. 1,212 crores and Rs. 1,640 crores, respectively, and that by the private sector is placed at Rs. 1,350 crores and Rs. 1,720 crores respectively. The requirements of steel have been worked out on the basis of the steel norm for housing as observed during the second Plan, suitably modified to take account of the greater needs of modern housing in the future, particularly during the fourth Plan period, when the required categories of steel are likely to be available in sufficient quantities. The estimated requirements of steel for housing and construction, as defined here, thus come to 632,000 tons and 821,000 tons by the end of the third and fourth Plan periods, respectively.

Finished Steel

The total requirements of finished steel, as stated at the outset, are 3.61 million tons, 7.17 million tons and 12.86 million tons in 1960-61, 1965-66 and 1970-71; these are in long tons. The corresponding figures in metric tons are 3.67 million, 7.28 million and 13.06 million. In terms of crude steel, the total requirements are placed at 4.82 million tons, 9.56 million tons and 17.14 million tons in 1960-61, 1965-66 and 1970-71, respectively. Basic pig iron required to correspond to those quantities in the three years under discussion are 5.88 million tons, 11.29 million tons and 20.26 million tons. If to these estimates are added the requirements of foundry-grade pig iron, the total requirements of pig iron come to 7.14 million tons in 1960-61, 13.62 million tons in 1965-66 and 24.26 million tons in 1970-71. If the requirements of steel in 1965-66, as estimated in this study, are to be met from domestic sources of supply, the capacity of the steel industry, it is stated, has to be increased from 6 million ingot tons to about 9.6 million ingot tons. This additional capacity is expected to produce about 2.6 million tons of finished steel, which represents the difference between the requirements in 1965-66 and the supply from existing plants at full capacity production. The Council recommends that, if there is surplus in any category of steel, the manufacture of engineering goods based on the surplus categories should be undertaken with a view to exports rather than exporting the finished steel categories themselves. In planning the production programme for expansion of the steel industry, special attention should be paid, according to the Council, to increasing the capacities of flats and rounds, wire, skelp and special steel.

Micro-approach

It will be seen that, in estimating steel requirements, the Council has, by and large, adopted the micro-approach involving the study of the end-uses of steel. In his preface, Dr. Lokanathan observes: "Production in economic as well as other affairs, is obviously fraught with risks and no less so, even in the short-term, when the prophecy is too near the event." The Council notes that the demand for steel in the next ten years will depend on the economic development of the country, which, in turn, will be shaped largely by the third and fourth Plans. It is possible that some changes in the programmes will be made. It is impossible at present to know, says the Council, how far the estimates made in this study must eventually be modified by policy changes in the future. Further, changes in production techniques and the pace at which they are introduced will also influence future patterns of steel demand. For instance, it has been assumed that the demand for electric locomotives will be largely met from imports in the third Plan period; if it is decided to use more diesel and electric locomotives than steel locomotives, it is likely to alter the demand for different categories of steel, shifting it from boiler plates, tubes, etc., to high quality rolled steel bars, thin flats, etc.

Changes in the rate of growth of population are also likely to affect the estimates, particularly for consumer goods industries, the targets for which are usually made to depend on the growth of population. The Council records that a limitation in its study has been the comparative lack of data in many sectors of the economy. Thus, no information is directly available on the consumption of steel by various sectors of the economy. Accordingly, it has recommended that an organisation be set up to collect all information in respect of production and consumption of steel both by the public and private sectors and to publish them periodically as is done at present by the U.K. Iron and Steel Board and the American Iron and Steel Institute. Further, there should be, according to the Council, periodical studies of the demand for and supply of steel, category-wise, through a realistic appraisal of different industries and sectors.

**Appraisal of Steel Demand: Report of the National Council of Applied Economic Research.* Published by the Council of Scientific and Industrial Research, New Delhi. Price Rs. 10.

STEEL IN THIRD PLAN

Characterising the emphasis given to steel and heavy engineering in the third Five-year Plan as "excessive," Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company Ltd., said that it was very difficult to make a precise estimate of the country's steel requirements five years hence although it was possible to assess the needs of major users like the railways, it would be difficult to assess the demand when it came to house building and a hundred other activities. Mr. Tata, who was speaking to Press men who had gathered at Jamshedpur last week for the opening of Tisco's new merchant mill—the mill has an annual capacity of 220,000 tons which can be increased to 330,000 tons—pointed out that Japan in 1958-59 had used 7.6 million tons of finished steel. He was struck by the fact that Japan had a far higher output of goods and products made out of steel than India planned to have at the end of the third Plan period with a steel target bigger than Japan's current level of production.

Mr. Tata observed that, while a million-ton steel plant would cost roughly Rs. 150 crores, it would yield an output of Rs. 45 crores in value whereas the same investment in engineering industries would generate wealth almost equal to the total investment. Reckoned in terms of foreign exchange, a million-ton steel plant would require an expenditure abroad of Rs. 75 crores; the plant would save, on the basis of full capacity production, only Rs. 45 crores. Against this, the foreign exchange saving in the case of engineering industries was likely to be much greater. Further, with the exception of petro-chemical industries, steel provided the lowest employment per rupee of investment. A Rs. 150-crore steel plant was unlikely to give employment directly to more than 8,000 to 10,000 men even by the Indian standards of manning steel plants, whereas the same investment in secondary industries would create at least four times greater employment opportunities. Again, there was the need to set their raw material position right before planning for new plant; this was causing some headache even with their present capacity. As for the argument that, if there was a surplus of steel in the country the material could be exported, Mr. Tata asked whether it would be more advantageous to sell steel at Rs. 600 a ton after making all the enormous investments than earn eight to ten times that amount by selling finished steel goods produced by industries which needed less investment and employed more people. Accordingly, he pleaded for re-thinking on steel, keeping in mind the severe scarcity of funds, both internal and external.

NUCLEAR STATION

The first atomic power station in India will be located at Tarapore, a village on the west coast of Bombay State, between Bombay and Ahmedabad. This was announced by Mr. Nehru who was replying to a two-hour discussion, in the Lok Sabha last week on the report of the Atomic Energy Establishment for the year 1959-60. Mr. Nehru said that the place had been chosen entirely from the point of view of the facilities it offered. Describing atomic energy development as something deeper than the establishment of a power station, Mr. Nehru said that they were determined not to lag behind in the use of the new power. Citing extracts from the British White Paper and other articles on the subject to show that in other countries, atomic energy had been believed to work out cheaper than conventional power, he said that India was favourably situated in the development of atomic power, so far as the cost of the element for the generation of power was concerned. He was confident that nuclear power would soon definitely become an economic proposition in India. A station, started now, would take four years to become ready. It would supply power to Maharashtra and Gujarat alike. The Government was also considering the establishment of two more power stations. Mr. Nehru paid a tribute to the "brilliant set of scientists" in the Establishment. He said India was among the few countries which had developed the technique of fabricating fuel elements. A plant set up at a cost of Rs. 81 lakhs, of which the foreign exchange component was Rs. 40 lakhs, was saving the country annually Rs. 45 lakhs in foreign exchange. He also drew attention to the development of electronics division in Trombay.

The location of the plant in Tarapore follows the systematic examination of the west coast region by a project team set up in August 1959 under the leadership of Mr. M. N. Chakravarti, a former member of the Railway Board. The major factors which should be taken into account in the choice of a site for atomic power, are stated to be: (1) engineering requirements with particular reference to cooling and foundation conditions, (2) considerations affecting the despatch of power to load centres and (3) health and safety considerations. The atomic power station at Tarapore which is expected to have a capacity of 300,000 kw. (two reactors of 150,000 kw. each), will be the biggest of its kind in Asia. It is provisionally estimated that it will cost Rs. 51 crores.

NUCLEAR FUEL-PROCESSING PLANT

Inaugurating the work on the Eurochemic nuclear fuel-processing plant, Dr. Erik Svenke, Chairman of the Board of Directors of Eurochemic, recalled how the preliminary studies made by a Study Group within the organisation for European Economic Co-operation paved the way for a joint undertaking by 13 countries, called the "European Company for the Chemical Processing of irradiated Fuel" or "Eurochemic." Dr. E. Svenke, in his address to the Board at Paris last month, stated that the venture was located at Mol in Belgium, a central point in Europe where it was readily accessible to all participating countries. Emphasising the significance of the new venture, he said that it arouse from the fact that atomic fuel could not be completely used up in one stage. The spent fuel, therefore, contained burnable material. It also contained new fissionable material which had been created in the reactor. By reprocessing irradiated fuels, it was possible to recover the valuable elements in the fuel with such purity that they could be used again.

The technical basis of the recovery of the valuable elements, it is stated, is a series of chemical processes. When one tries to apply these processes to highly radioactive substances, one meets problems completely new to conventional chemical industry. The specifications of the products from the process are very strict and the process uses dangerous mixtures of nitric acid and organic chemicals. To this is added the problem of dealing with the large amounts of highly radioactive substances. These conditions make it necessary to install all equipment in radiation-shielded cells surrounded by thick concrete walls. The processes must be remotely controlled by instruments since no human being can be allowed to come close to the equipment during operation. The main part of the radioactive waste comes out in the form of a concentrated liquid which has to be stored for a long time in shielded steel tanks. Another problem for the chemical engineer is how to avoid criticality, that is the equipment and the

ESTRELA BATTERIES LIMITED

MR. PANNALAL BANSILAL PITTY'S SPEECH

THE Twenty-first Annual General Meeting of Estrela Batteries Ltd. was held in Bombay on 12th August 1960. Addressing the shareholders on the occasion, Mr. Pannalal Bansilal Pitty, Chairman of the Company, observed that the demand for the Company's radio batteries which were introduced last year was encouraging. He visualised a "very heavy demand" for this product in the near future.

The following is the full text of Mr. Bansilal Pitty's speech:

"FRIENDS,

"I have great pleasure in welcoming you all at this twenty-first annual general meeting of your Company. The audited statement of accounts, together with the Directors' report thereon, is with you for sometime and I, with your permission, take them as read.

Financial Picture

"The financial picture, as presented in the Directors' report, is quite promising. Another milestone in our march of progress was achieved during the year by increase in sales from Rs. 90.43 lakhs to Rs. 110.95 lakhs. This resulted in the profit for the year, before recommended appropriations, of Rs. 8.15 lakhs as compared with Rs. 7.23 lakhs during the year ended 31st March 1959.

"The later part of the year was marked with the introduction of radio batteries in the market. The demands are quite appreciative and encouraging. We hope to produce more quantities during the current year. Due to the increase in the standard of living of the people, it is visualised that there will be very heavy demand for this product in the near future.

Tax Savings

"The tax savings arising from a lowered rate of company tax on 1959-60 profit have not been sufficient to compensate shareholders fully by way of dividends. Even though it has been possible for the Directors to recommend payment of a higher rate of dividend on equity shares—the highest so far in the history of the Company—the net receipts in the hands of the shareholders are less, because of the new base of tax policy. While in the case of preference shareholders, representations were received by the Company from preference shareholders stating that they should receive the same net amount of dividend as they were getting in previous years, and with a view to meet their wishes, your Directors thought it desirable to recommend higher dividend of Rs. 3.57, so that they may get the same net amount as they got in previous years. However, the Company may revise the mode of payment of dividend to them as and when the ambiguity in the law is cleared.

"To help in pushing our products and for creating a demand in various markets of rural areas, five more vans for advertisement purposes were purchased. Due to the largeness of the country and to exploit the potentialities of various rural markets and with a view to enabling us to give effective service to the trade, the movement with vans seems to be vital for the desired results, and we may purchase a few more vans for the uncovered markets in the future.

Training

"The training of the personnel at various levels of the organisation is as vital as use of the modern equipments. This is an age when initiative and leadership are in demand at various stages. New philosophies and techniques are growing and developing at all times. With a view to developing these qualities, training programmes for the staff at various levels are conducted. These trainings are proving of great benefit as they develop confidence in them to face the difficult situations. The Company's officers are taking part in various conferences, seminars, residential courses, etc., conducted by various associations, so that they can keep in touch with the latest developments in managing the industries.

Canteen

"The appeal to the Supreme Court filed by the Company against the Award of the Industrial Tribunal was withdrawn, as a compromise was arrived at with the workers' union after lengthy negotiations. The grades and scales as outlined in the Award of the Industrial Tribunal were implemented in a most co-operative spirit and cordial atmosphere. Further, to improve the conditions of service and to facilitate the employees to have their meals with satisfaction and comfort, a good canteen was constructed during the year, costing approximately a lakh of rupees.

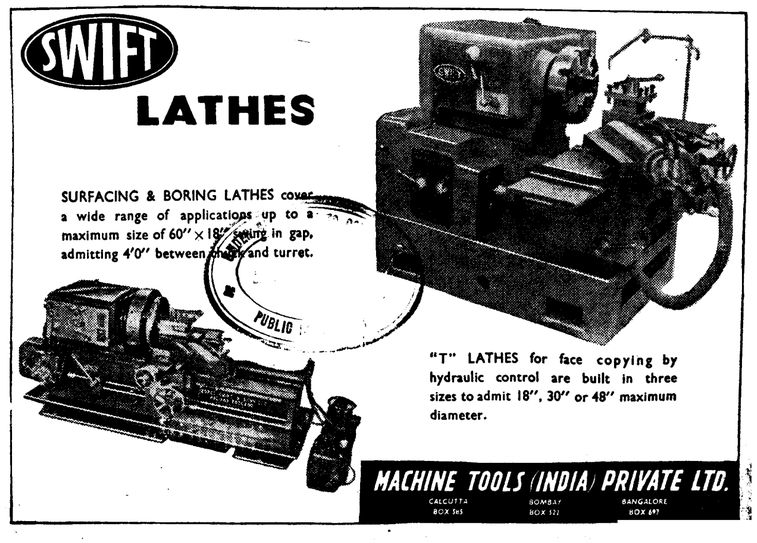
"As mentioned to you in the Directors' report, Bombay, Saurashtra, Gujarat and Sangli agents are converted into commission agents with practically the same terms.

Staff

"I am sure you will wish to join me in recording our appreciation of the valuable services rendered by my co-Directors, Managing Agents, General Manager and all employees, whose combined efforts in a difficult year have achieved the results you see before you, and which, I consider, can be regarded as remarkably satisfactory.

"I shall be glad to answer any questions or will explain any query that you have.

"Thank you."



NEW PRODUCTS AND PROCESSES

New Home Bottling Equipment

ONE of Australia's largest fruit preserving companies, Fowlers Vacola Manufacturing Company Ltd. of Melbourne, has produced a new home bottling outfit that is all electric and operates automatically, with thermostat control. Housewives in Australia are said to have found the unit ideal for home preserving of fruit and vegetables. Fowlers Vacola Ltd. produces a complete and compact patented home equipment for preserving food in self-sealing vacuum bottles after sterilisation by heat. The equipment is available in seven sizes ranging from those holding 12 x 11 lb. bottles to larger units sterilising 55 x 21 lb. bottles in one operation. The smallest outfit is used in cookery classes in schools and colleges.

Adhesives in Automobiles

The trend towards greater automative use of aluminium will lead to the increasing use of adhesives for joining structural parts of cars, according to experts of Messrs. A. F. Thomson and A. F. Martin of the Minnesota Mining and Manufacturing Company. Structural adhesives are particularly suited to compete with present bonding methods for nonferrous materials, and in some cases they're the only sensible joining methods. Adhesives permit the use of lighter gauge metals, as the load can be spread over a larger area. In addition, adhesives provide a way to join dissimilar metals without fear of galvanic action, and provide a happy solution to the problem of joining aluminium either to itself or dissimilar metals. It is said that adhesives can be used as a combination seal and bond.

Cheaper Bookbinding

Bigger output, lower costs and less fatigue for the bookbinder—these are the advantages claimed for a revolutionary new turning-in machine developed in Britain which is intended for the large number of publishers, casemakers and loose-leaf manufacturers for whom costly automatic machines are not an economic proposition. The result of three years' development, the machine is extremely simple without motors, springs, treadles or levers. It works on the principle of two opposed clamping jaws linked together, travelling rearward with the work and progressively pressing the material from the edge onwards. Even an inexperienced operator can turn in a complete case (four sides and four square corners) in 15 seconds and it is claimed that the result is often better than the work of a skilled bookbinder as the material cannot be stretched. Adjusting the machine for different thicknesses of board takes only 10 seconds.

New Aid for Blind 'Phone Operators

Following a suggestion from the Royal National Institute for the Blind, Mullard Research Laboratories have produced a design for an acoustic lamp reader that enables blind operators to man the newer types of telephone switchboard on which the signalling is visual. The devices, intended for use on private branch exchanges, uses a photo-electric cell, a transistor oscillator and a loudspeaker to convert the light output from the signalling lamps to an audible tone. It can be fitted without modifications to the board. The photo-cell is mounted on a small carriage which is attached magnetically to metal rails already existing on the board. When the carriage is moved by hand along the rails the photo-cell passes over each signal lamp in turn, and any active lamp causes the cell to respond, producing a tone from the loudspeaker. The blind operator can thus locate any line needing attention, and determine the state of the board at any moment without interrupting the traffic.

New Timber Hauling System

The method of dragging timber by means of a radio-steered winch, introduced in Sweden a couple of years ago, has, after years of practical testing, become firmly established. The inventor of the manpower and time-saving system, Mr. Gunnar Peterson, was awarded the Andrée Plaquette in Bronze and a Prize for the best silvicultural invention by the Swedish Society of Inventors recently. The method makes possible considerable rationalisation of forest transportation work. The machinery consists, in brief, of a motor-driven winch born on sled runners equipped with a radio receiver and a separate radio transmitter. The winch sled can be used both for dragging the logs to the desired place and for moving itself to another location by means of a system of attaching the wire to a convenient tree or tree stub. The winch has a dragging capacity of one ton, and the wire has a speed of 50 metres (165 feet) per minute. It also performs the gripping and depositing of the logs. The latest model of the winch weighs just short of 400 lbs.

Waterproofing Leather

An Australian research team is reported to have evolved a cheap, efficient method of waterproofing leather. In overcoming a problem which has always faced the leather industry, it has—as "by-products" of the research—increased the wearing qualities and making-up characteristics of leather. The new method was evolved by the Australian Leather Research Association. Dr. G. E. Cunningham, Director of the Association, emphasised that the process is extremely simple and completely practical in the tannery.

The Australian process has been given the name "Alrapruf" and has been provisionally patented. The method calls for a combination of polyisobutylene rubber and a special blend of low melting waxes. According to Dr. Cunningham the treated leather has the appearance of ordinary bark-tanned leather. Tests have shown that the treated leather lasts three times as long as untreated. It machines remarkably well, is easily stitched and finished, and cleared leather can be cemented easily. The Association has already arranged for an Australian chemical firm to blend the impregnant and market it.

Timber That Beats Steel

Laminated timber arch beams, evolved by Ralph Symonds of Australia have been used in a very graphic demonstration to support the roof of the company's 14½-acre building in Sydney. The building—1,150 feet long and 525 feet wide—is claimed to be the largest clear-span factory in Australia. Under its roof, 750 people are employed on a single floor. The laminated arches are said to have proved stronger, yet lighter than the steel type previously used in this style of construction.

The big factory also incorporates several other unusual designed aspects which have intrigued engineers. Rain water, for instance, is carried from the roof by means of a box gutter, at roof-valley level and passes into drain pipes designed to act as structural columns. The water is then fed into large-diameter, concrete pipes, cast integrally in the concrete floor of the building and fed into Homebush Bay or the adjacent Parramatta River. The unique roof design overcame formidable problems because the 18-acre roof would have become a vast water catchment area if conventionally planned.

New Principle in Weaving

The introduction of a basic new principle is bound to be a rare occurrence in a trade that has for some thousands of years been spinning wool fibres into yarns and interlacing these with each other to form a woven fabric. Such an invention has, however, been recently developed at Torridon, the Leeds headquarters of the British Wool Industries Research Association.

The W.I.R.A. Full-width Temple embodies an entirely new principle in weaving. Its main object is to reduce the breakage of warp threads during weaving caused by the additional strain imposed on them when each new weft thread is beaten into place by the reed. By holding the cloth firmly across its full width, the new device virtually eliminates the additional strain and thus also the warp breakage. The principle is a new one. The increase of tension in the warp threads has been replaced by a decrease of tension in the cloth, which achieves the same effect, allowing the new weft thread to assume its correct position in the cloth. Other advantages are that certain imperfections in the cloth associated with ordinary temples are eliminated, and that conventional looms can be given greater versatility. With the new temple some clothes can be woven on looms that would otherwise be considered unsuitable for them. The new temple can be fitted to any ordinary loom, and its cost is low—about £25: more than one manufacturer has estimated that the initial cost would be recovered in a few months.

repetition confirms confidence

The greatest indication of a customer's confidence in a product is his repeat order for it. Mysore Kirloskar Lathes bought one after the other by factories and workshops all over the country are an expression not only of satisfaction with but also of continued confidence in the sterling qualities of these machine tools made by the pioneers in this industry in India.

Fully Instrumented Forge Furnace

A new fully instrumented experimental forge furnace has just been completed in the Energy Section of the British Iron and Steel Research Association, Battersea, London. The furnace will be used to investigate the thermal efficiencies attainable in batch type heating processes. It is designed so that the material of construction can be varied, as can the heating schedule, type of fuel and furnace load, re-circulation and waste heat recovery techniques. The heat capacity of the chamber can be altered by the provision of two alternative roofs, one of fire-brick and the other of high temperature insulating brick. Oil or gas firing is provided for by means of three burners firing tangentially above the ingot and two below. The effects of convection and radiant heating can be studied. Comprehensive instrumentation allows calculation of complete heat balances at short intervals throughout the heating cycles.

New Electronic Computer

Atlas—the electronic digital computer now under development at Manchester University—is expected to be the ultimate in present generation digital computers and will operate at speeds approaching that of light. Information in the machine is represented by electrical impulses which are transmitted through wires at near-light speeds, but they still take an appreciable time compared to the speed of operation of the machine itself.

As no information can be transmitted faster than the speed of light, Atlas is pressing on this "light barrier" which will prevent any machine operating on present-day principles from going any faster. To minimise this problem Manchester University and Ferranti engineers have so designed the machine that the length of wires for carrying pulses will be as short as practical. This is a significant stage which has been reached in computer design—and a remarkable one when it is realised that the computer industry, a post-war development, is still only in its infancy.

Atlas will be one of the world's two fastest and most powerful computers. The only other machine comparable in performance is a giant U.S. computer which will cost considerably more than the British machine, which will be about £1 to £3 million, depending on the size of the installation. The computer will be approximately one thousand times faster than the world's first commercially available computer built by the same firm ten years ago, and 100 times faster than Mercury, currently Europe's fastest computer.

Beryllium Monitor

The Beryllium Monitor designed and developed by the United Kingdom Atomic Energy Authority is claimed to be the most completely automatic, accurate and rapid instrument yet. Designed for the detection of beryllium aerosols, it visually records on a graph every 60 seconds the beryllium content of a fresh sample of the atmosphere in which the instrument is present. It is essential to the health of persons employed in workshops and laboratories using beryllium, its ores and alloys, that the beryllium concentration should not exceed two millionths of a gram per cubic metre. Also, unlike in previous methods of analysis, which were time-consuming, it is essential that sudden, or unexpected increases in beryllium concentration should be quickly indicated, as with this new instrument and, automatically some kind of warning given. The monitor gives quantitative results over the range of 1 to 75 millionths of a gram per cubic metre, irrespective of the particle size or chemical composition of the beryllium atmospheric dust.

Novel Friction Hoist

What is believed to be the first pushbutton-operated friction hoist in the world, working with induction-motor drive and dynamic braking has recently been supplied by the Swedish Asea Company to the National Coal Board of Great Britain. The hoist has been installed in a 1,850 ft. deep shaft at the Seafield Colliery, East Fife, Scotland, and forms part of an order for four multi-rope, hoists for various British collieries, reports the Asea Journal. Three of the new units, all delivered to Scotland, are driven by three-phase induction motors. Due to the working conditions, induction-motor drive could only be adopted when combining it with d.c. braking. The installation is designed for both manual and pushbutton operation. The latter operating system is used for all transport of material, whereas service hoisting is controlled by an engineman, owing to the present British Mine Safety Regulations in force. Usually the speed in induction-motor mine hoists is regulated by the service brake in combination with the reconnection in steps of the secondary resistor of the motor. In the case of high speeds and large loads the energy which has to be absorbed by the brakes leads to excessive heating. Should it be desired to employ induction-motor drive also for this type of service, retardation with the service brake must be replaced by electrical braking.

PROBLEMS OF PLASTICS INDUSTRY

NEED FOR SELF-SUFFICIENCY IN RAW MATERIALS

THE imperative need for encouraging production of raw materials for the plastics industry within the country and, thereby, relieving it of its dependence on imports, was stressed by Mr. Krishnaraj M. D. Thackersey, in his presidential address at the All-India Plastics Manufacturers' Conference held at Bombay on the 10th inst. The present import cost in respect of plastics raw materials was estimated at Rs. 4 crores. The aim should be to manufacture all the raw materials within the country. He realised, however, that this would depend on the development of basic chemicals industry, which alone could ensure regular and adequate supply of such materials as benzene, alcohol, phenol, urea formaldehyde, calcium carbide, ethylene, acetic acid and pthalicanhydride. During the second Plan, he conceded, a start had already been made to manufacture some of these raw materials from imported intermediates. Where basic chemicals were available, some progress had been made in the manufacture of raw materials from indigenous materials too. Instances of these were polyethelene, polystyrene, phenol formaldehyde and urea formaldehyde. The quality of these raw materials, too, according to Mr. Krishnaraj, compared favourably with the imported ones. But their production was inadequate. Further, their cost, he added, was higher than that in world markets, "owing to production capacity still being comparatively small." He hoped that manufacturers would be able to bring down the price of raw materials, when their production expanded. If manufacturers of raw materials required by the finished plastics goods themselves started processing them, it caused nervousness among the producers of finished goods who were mostly small people. With a view to minimising the pressure on the available supplies of raw materials and ensuring a healthy growth of the industry, Mr. Krishnaraj advised the manufacturers of raw materials to follow the example of foreign countries in using their own raw materials in large quantities only when their supply was abundant.

Import Licences

The Government of India, no doubt, has been trying to help the processing industry to secure necessary raw materials. After various representations made by the industry, the Government has decided to issue import licences to actual users in respect of two raw materials, namely, polystyrene and polyethelene. Mr. Shadilal Jain, in his welcome speech, welcomed this gesture. But he added that this was a belated measure; for, by the time the licences were granted and imports took place, at least five to six months would have elapsed. He, therefore, wanted the Government to take timely action, in future, and thereby "avoid unnecessary dislocation in production."

The Chief Minister of Maharashtra, Mr. Y. B. Chavan, who inaugurated the conference, observed that the State Government was fully aware of the difficulties in regard to the supply of raw materials required by the industry. The manufacturing licences were granted by the Central Government. He assured, however, that the State would be prepared to recommend applications for manufacture of polyethelene, polyvinyl chloride and grant them other assistance whenever suitable schemes came up. Mr. G. D. Patil, the State Deputy Minister for Planning, Industries and Labour, who spoke on the second day of the conference, namely, on the 11th inst., expressed the view that, in view of the substantial expansion of basic chemical industry envisaged in the third Plan, the plastics industry would be able to procure more and more of raw materials.

Apart from raw materials, the industry has been relying on imports for its requirements of machinery as well, except for some small capacity machines, which are manufactured in the country. Mr. Krishnaraj emphasised the need for manufacturing indigenously standard types of machinery with foreign collaboration. He called upon established engineering concerns in the country to take the necessary steps to manufacture at least 50 per cent. of the plastics industry's requirements in the third Plan.

As regards moulds and dyes, most of the larger units are capable of producing their own requirements. Small units, however, are still finding it difficult to get well-designed moulds. Mr. Krishnaraj felt that the requirements of moulds during the third Plan period would be quite substantial. He, therefore, thought that it was necessary to establish at least five to six well equipped tool rooms for manufacture of all types of moulds for plastics industry. These tool rooms could also be utilised for the manufacture of other accessories and spare parts for the industry as well as embossing and printing rollers required by the leather cloth and P.V.C. (unsupported) industry.

While the dependence on imported raw materials and machinery is the major difficulty facing the industry, its healthy growth is also hampered by the relatively less attention now devoted to research in this country. Mr. Chavan did well to draw the attention of manufacturers to this important, though neglected, aspect of the development of the industry. To quote him:

"Modern plastics industry is an integration of many different and unrelated bodies of knowledge. One part of the development is derived from the fundamental investigations which were made into chemistry, physics and biology. I am referring to this aspect of the industry, because I want that the manufacturers should also develop a research wing for the betterment of the products. In fact, development of plastics as a commercial product was made possible by the research work and by the scientists who applied their mind to its development. For instance, the so-called "safety film" for photographic use is the product of this discovery. There is wide scope in the manufacture of moulding composition, particularly phonographic recording from shellac. It is accepted as an ideal plastic binder for certain type of electrical equipment and communication instruments."

It is not impossible to fill in the gaps in the sphere of plastics industry, provided concerted efforts are made by manufacturers, the Government and technologists. Despite various difficulties, the industry has given a good account of itself in recent years and has now plans for substantial expansion in the third Plan, an elaborate account of which appeared on page 1090 of *Commerce* dated 18th June 1960. The immense growth potential of the industry has now come to be appreciated by investors, as is evident from the spectacular response to the capital issues of both the existing and new companies engaged in this manufacturing business. Finding the necessary capital is, therefore, not a big problem. This a distinct advantage for the development of plastics industry. If *entrepreneurs* come forward with well prepared plans in collaboration arrangements with well-known manufacturers in the U.S., the U.K. and West Germany, they are assured of excellent support from the investing public—a factor which was absent four years ago.

Prospects for ensuring self-sufficiency in respect of raw materials for the industry would be distinctly better, if the development programme for basic chemicals envisaged in the Draft Outline of the third Plan were to be successfully implemented. In that event, the plastics industry could hope to attain a substantial volume of basic raw materials, such as industrial alcohol, benzene, phenol formaldehyde, urea, chlorine, calcium carbide and sulphuric acid. Under the third Plan, it is proposed to increase the power and industrial alcohol capacity from 45 million gallons in 1960-61 to 60 million gallons in 1965-66. Polystyrene manufacture, which at present depends upon the import of styrene monomer, can also be made self-sufficient as availability of benzene at reasonable cost increases, the ethylene requirements being provided from the industrial alcohol. Besides, the recovery of organic hydrocarbons, for example, benzene, toulene, naphthalene, etc., is expected to be stepped up in the public sector *pari passu* with the increasing coking of coal at the steel plants. A major scheme visualised as a link between these products at one end, and the dyestuffs, plastics and drugs manufacturing plants, at the other, is the Basic Chemicals and Intermediates (B.C.I.) project, proposed to be located in the Aptakharpada area, near Panvel, in Maharashtra State. As a result of this project valuable technical know-how in a virgin field is expected to become available during the third Plan period and may meet, to a certain extent, the technological requirements of the plastics industry also. The manufacturing programme, under the B.C.I. project, covers the manufacture of as many as 40 organic intermediates with an aggregate output of 25,160 tons, with a provision for further expansion by about 10,000 tons.

The supply position of another important raw material, namely, urea formaldehyde, is also bound to improve, when the programme for the expansion of fertiliser industry materialises. It is estimated that 206,000 tons of urea will be available by 1965-66, and, with the use of synthetic methanol—a by-product of the fertiliser factories—it will be possible to manufacture urea formaldehyde for the use of plastics industry. In addition, chlorine will be available in large quantities from the caustic soda industry, the capacity of which is proposed to be stepped up from about 150,000 tons in 1960-61 to 400,000 tons by 1965-66. Besides, the capacity for calcium carbide, too, will go up from 28,000 tons to 67,000 tons. Further, in view of the rapid development of mineral oils and natural gases proposed to be undertaken in the third Plan, two other raw materials, namely, propane and butane gases, will become available, in large quantities, to the plastics industry from petroleum refineries.

INDIA'S FOREIGN TRADE IN THE FIRST HALF OF 1960

Despite some hesitation in the U.S., world economic activity in the first half of 1960 was at a high level, thereby keeping up the marked recovery witnessed in 1959. In the first quarter, world trade rose further substantially and this trend was fairly well maintained in the second quarter also, though at a slower pace than in the first quarter. Both industrial and non-industrial countries shared in the increase. India, too, profited from this favourable world position.

Preliminary trade figures show that India's total exports at Rs. 305 crores in the first half of this year were higher by Rs. 39 crores, or 15 per cent., as compared with the same period of 1959. Imports, however, receded slightly from Rs. 47 crores in January-June 1959 to Rs. 457 crores—a drop of just 3 per cent. Following this decline and the expansion in exports, there was a notable improvement in the overall balance of trade position, in that the adverse balance narrowed down by Rs. 52 crores, from Rs. 205 crores to Rs. 153 crores. There is, however, no room for any complacency, because the adverse balance is still very heavy and India's foreign assets have fallen to a very low level; as of a fortnight ago, they are less than Rs. 150 crores.

The following table shows at a glance the trend of trade in the first six months of 1960, as compared with that in the same period of 1959:

(Value in crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
1960			
January	62.68	53.06	— 9.62
February	69.12	49.81	— 19.31
March	75.67	53.37	— 22.30
April	82.00	48.58	— 33.42
May	82.77	50.74	— 32.03
June	84.95	48.94	— 36.01
Total	457.19	304.50	—152.69
1959			
January	80.24	45.16	— 35.08
February	71.02	42.16	— 28.86
March	73.39	46.95	— 26.44
April	91.84	44.65	— 47.19
May	73.37	44.05	— 29.32
June	81.32	42.92	— 38.40
Total	471.18	265.89	—205.29

ELECTRICALLY HEATED MUFFLE FURNACES FOR LABORATORIES & WORKSHOPS

Outstanding Features :

- Regulator with Scale Built-in Temperature.
- Built-in Thermocouple.
- Heating Muffle of High Quality Clay (Sillimanite) with Chrome-Nickel Heating Coils Embedded.
- Muffle can be changed while Furnace is still hot.
- Rapid Heating Time to Full Temperature in approximately 90 minutes.
- Uniform Temperature Inside Heating Chamber.
- Excellent Temperature Regulation (± 10° C).
- Double Hinged Door.
- Modern Compact Design.
- Low Operating Cost.
- Ideal for Bench use for the Annealing, Tempering and Hardening of Metals.

RAMTIRTH

HINDI MONTHLY

Editor: YOGIRAJ SHRI UMESHCHANDRAJI
Published by:
SHRI RAMTIRTH YOGASHRAM, Bombay
* MORE THAN 130 PAGES PER ISSUE *

The main idea behind this magazine is to develop the physical, mental and moral aspect of the common man. Detailed information about the cure of diseases by naturopathy and yogic treatment is discussed also.

Annual Subscription **Rs. 4/-** only. Single Copy **40 nP** only.
Agents shall place their orders and requirements by 15th of each preceding month.

RAMTIRTH BRAHMI OIL
Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices : **Rs. 4/-** for big bottle and **Rs. 2/-** for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: **Rs. 2.50** including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

SALES AND PROFIT OF NATIONAL TOBACCO GROW TO RECORD LEVELS

NET DIVIDEND SLIGHTLY HIGHER

A RISE of Rs. 1 crore to a record level of Rs. 9.35 crores in sales and of over Rs. 6 lakhs to Rs. 71.12 lakhs in gross profit, also a new high, are the main features of the working of the National Tobacco Company of India Ltd. (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) during the year ended 31st December 1959. The upward trend noted during the previous years has thus been maintained. It must, however, be noted that the pace of expansion in turnover and profit shows a slowing down. The rise in sales was of the order of Rs. 1.81 crores in 1958 and of Rs. 1.38 crores in 1957. Similarly, the gross profit had gone up by about Rs. 20 lakhs in 1958 and by Rs. 11.50 lakhs in 1957. The slowing down in the rate of growth in 1959 was on account of several factors. These were: (1) keen competition from other producers of cigarettes, (2) fall in exports of unmanufactured tobacco, due to lower crop and competition from other tobacco growing countries, (3) enhancement of excise duty on cigarettes under the Finance Act of 1959, which the Company could not pass on in full to consumers, and (4) higher expenses on account of greater sales effort and a rise in cost of production.

If the Company has been able to show better results during the year under review, notwithstanding the handicaps just mentioned, such is due to rising trend in consumption of cigarettes—clearances from the Company during the year under review were 6½ per cent. more than in the previous year—and introduction of a variety of new products and packages to suit the consumers' tastes and preferences.

The net profit also has risen from Rs. 23.21 lakhs to Rs. 30.95 lakhs, the rise being more pronounced than that in gross profit, thanks to a slight reduction in the provisions for depreciation and taxation—the latter being accounted for partly by the reduction in the corporate tax under the Finance Act 1960. Almost the entire rise in net profit, along with the refund of pension fund contribution amounting to Rs. 3.03 lakhs, has been utilised to increase the allocations to the reserves. The total amount ploughed back is thus Rs. 21.56 lakhs, representing an increase of Rs. 10.02 lakhs over the year, which is only in consonance with the Company's policy of retaining in the business a high proportion of net earnings to provide for future expansion and financing. The dividend on ordinary shares, which had been successively raised from 7 per cent. (for 1956) to 11 per cent. for 1958, has been stepped up further to 11.2 per cent. (net) for the year under reviw, thus more than making good the loss on account of tax deduction at source. The distribution of a gross dividend of 16 per cent. (11.2 per cent. net) recommended by the Directors requires Rs. 12.79 lakhs, that is, Rs. 4 lakhs more than last year. The 5 per cent. and 4½ per cent. tax-free preference shareholders have, however, had a raw deal, in that their dividends have not been grossed to compensate for the loss of tax deduction. On the contrary, they stand to lose. For, as in the case of many other Calcutta companies, the Directors of the National Tobacco, too, have recommended payment of the preference dividends after deduction of tax, on the suggestion of their legal advisers.

The following comparative table shows at a glance the progress of the Company since 1956:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sales	9,35.17	8,35.10	6,53.77	5,15.64
Closing stocks	66.37	59.84	50.30	45.16
Raw materials consumed	1,88.86	1,95.82	1,73.79	1,60.49
Stores and spares consumed	1,92.18	1,63.99	1,20.26	84.91
Customs and excise duty	3,27.85	2,65.18	1,93.28	1,29.64
Other expenses	1,96.70	1,71.64	1,40.21	1,24.86
Gross profit	71.12	66.03	45.20	33.70

The most notable feature disclosed by the table is the further sharp rise of Rs. 62.17 lakhs in customs and excise duty, on top of the increase of Rs. 66.90 lakhs and Rs. 68.74 lakhs in the previous two years, as a result of the enhancement of the excise duty last year. Thus, in the last three years alone, the amount of customs and excise duty paid by the Company has risen by over 150 per cent. That the manufacturers are not always able to pass on the higher incidence of excise duty to the consumers is illustrated by the continued rise in the ratio of customs and excise duty to sales in the case of National Tobacco from 25 per cent. in 1956 to 35 per cent. in 1959. In 1958, it was 32 per cent. The Company has, however, been able to overcome the effect of the rise in costs on this and other accounts by increasing its turnover.

The Company has been able to install some of the most modern processing machinery in the world, but these, according to the Directors, have been mainly replacements of outdated worn-out equipment. There is urgent need, they say, for additional machinery "to reduce the round-the-clock working," to which the Company's installation is subject to. This has been represented to the Government, which is considering the request.

Notwithstanding the competition, the Company's trading results during the "first months" of the current year are said to be satisfactory and the Directors are hopeful of maintaining this position.

The Company's financial position is quite satisfactory. The paid-up capital of Rs. 124.95 lakhs is supplemented by reserves and surplus amounting to Rs. 109.18 lakhs. The borrowings (including a loan of Rs. 12 lakhs secured by 4 per cent. debentures) have been reduced from Rs. 65.10 lakhs to Rs. 33.54 lakhs. The other current liabilities and provisions aggregate Rs. 122.33 lakhs and these are covered by a very large margin by current assets at Rs. 330.98 lakhs. The fixed assets of the value of Rs. 136.72 lakhs (including additions to the tune of Rs. 8.68 lakhs during 1959) have been well written down to Rs. 61.03 lakhs.

The current market value of the Rs. 10 fully paid-up ordinary shares of the Company is Rs. 23.25 *ex-div.* At this rate and on the basis of the latest dividend, the yield works out to 5.1 per cent. per annum, free of tax.

POLYCHEM DOES EXCEEDINGLY WELL

The spurt in the value of ordinary shares of Polychem Ltd. last week, in the face of a general setback, stemmed from the encouraging results of the Company for the year ended 31st March 1960, which have enabled the Directors to step up the dividend from the maiden distribution of 6 per cent. (paid for 1958-59) to 11 per cent. (subject to deduction of tax). The sales of the Company have increased by Rs. 47.40 lakhs or about 45 per cent. to Rs. 153.12 lakhs and gross profit has nearly doubled itself from Rs. 24.77 lakhs to Rs. 48.20 lakhs. The net profit, too, has recorded a rise of Rs. 11.04 lakhs to Rs. 26.13 lakhs, even after setting aside more for depreciation and taxation. The provision for depreciation has been raised from Rs. 3.93 lakhs to Rs. 4.57 lakhs and that for taxation from Rs. 5.75 lakhs to Rs. 17.50 lakhs.

As much as Rs. 13.63 lakhs of the net profit has been ploughed back. While the addition to the development rebate reserve has been reduced from Rs. 7.21 lakhs to Rs. 1.53 lakhs, Rs. 12 lakhs to the general reserve and Rs. 10.000 to the dividend fund, none of which had received anything in the previous year, have been provided. A sum of Rs. 5 lakhs has been utilised, as against Rs. 1 lakh last year, to write off completely the cost of polymerisation technique and know-how formulæ. The Directors have declared a dividend of 11 per cent. As this is subject to deduction of tax, the net dividend works out to 7.7 per cent. Even so, it is higher than that paid for 1958-59. The dividends on ordinary and 7½ per cent. (taxable) preference shares absorb Rs. 4.40 lakhs, leaving a surplus of Rs. 27,844 to be carried forward including Rs. 18,183 brought in from the previous year. The shareholders, it may be noted, are entitled to a tax refund on 20 per cent. of the dividend, as the Company enjoys the benefit of tax holiday under Section 15C.

The encouraging results of the Company for the year under review are due to the rapidly increasing demand for polystyrene in the country. The Company commissioned into production during the year under review the plant for manufacturing an improved quality of high impact polystyrene under the trade name "Styron 475." Other formulations have been expanded to meet the growing demand of the industry. The Company's polystyrene plant is said to have adequate production capacity to meet the growing demand, but the plant is being operated around 60 per cent. of its rated capacity, due to shortage of raw materials. While the Company's representations to the Government of India for additional licences have not been successful, the Government has decided to issue *ad hoc* import licences for polystyrene during the current licensing period. Expressing their regret at this decision of the Government, the Directors point out that "if the Government had released additional foreign exchange to your Company for import of raw materials, it would have resulted in a production of a larger quantity of polystyrene for the same foreign exchange." The shareholders will, however, be glad to note that the Company has already taken steps to produce raw materials and has obtained a licence for the manufacture of the basic raw material, styrene monomer. A site for setting up the plant has been purchased at Trombay. An agreement is being finalised for this project with Dow Chemie A.G. Switzerland, a subsidiary of the Company's associates, the Dow Chemical Company U.S.A. The plant is expected to go into production in 1962.

The establishment of the new plant requires additional finance, a part of which will be obtained by the issue, subject to the sanction of the Controller of Capital Issues, of 80,000 new ordinary shares of Rs. 50 each to the existing ordinary shareholders in the ratio of 1:1. The balance of the finance required is being arranged with banks.

The existing paid-up capital of the Company is Rs. 79.90 lakhs and this is supplemented by reserves and capital aggregating Rs. 21.24 lakhs. The current liabilities and provisions, at Rs. 38.54 lakhs are more than adequately covered by current assets amounting to Rs. 93.23 lakhs, of which cash balances alone account for Rs. 33.33 lakhs. The gross block, at Rs. 58.52 lakhs, including the additions during the year amounting to Rs. 8.62 lakhs, has been written down to Rs. 46.54 lakhs.

At the current market value of Rs. 310 *cum-div.* and on an *ex-div.* basis, the Rs. 50 fully paid-up ordinary shares of the Company provide a yield of 2.5 per cent. per annum, free of tax.

KHANDELWAL FERRO ALLOYS

Investors in Khandelwal Ferro Alloys Ltd. have some good news from the Company. Not only will the factory be in production within the next few weeks, but the Company has decided to expand its activities by setting up a steel tube mill. The ferro alloy project at Kanhan near Nagpur, has now reached, according to the second annual report of the Directors for the year ended 31st December 1959, its final lap of construction. Most of the civil and structural engineering works have been completed, while the erection of the first furnace is nearing completion. The plant and machinery for the second furnace have already started arriving at site and the erection of the furnace is also being taken in hand. The Maharashtra State Electricity Board has agreed to supply the electric power for operating the first furnace by the end of August 1960.

As regards supply of raw materials, the Company has already received 8,000 tons of manganese ore, 3,000 tons of limestone and 2,500 tons of coke and coke breeze at the factory site. Procurement action has already been taken to ensure further timely supplies of raw materials. To meet the Company's requirements of limestone, it has taken over a mine at Rajur. Arrangements are being made for securing regular supply of manganese ore on a long-term basis at economic prices.

The Company has incurred, up to the end of the year under review, a total net expenditure of Rs. 8.53 lakhs, of which a sum of Rs. 8.40 lakhs has been capitalised and the balance of Rs. 12,618 has been carried forward. Although the time has not arrived for the declaration of dividend on preference shares, the Directors are of the opinion that, in view of the obligation accepted by the Company to pay the existing preference shareholders dividend at the rate of 7½ per cent., free of tax, on their present holdings, they would take the necessary steps in their power to fulfil this obligation.

In pursuance of its decision to expand its activities, the Company has obtained an industrial licence for setting up a steel tube mill to manufacture 50,000 tons of steel tubes per annum in sizes ¼" to 3" diameter. The Directors are satisfied with the soundness and remunerativeness of the scheme, after making full enquiries regarding the commercial prospects of this venture, with due regard to the country's future requirements of pipes *vis-a-vis* the production capacity of the existing mills. With a view to finding adequate capital resources to meet the expansion plans, the Directors have decided to double the authorised capital of the Company from Rs. 2.50 crores to Rs. 5 crores. Out of the present authorised capital of Rs. 2.50 crores, made up of 150,000 equity shares of Rs. 100 each and 100,000 7½ per cent. (tax-free) preference shares of Rs. 100 each, the Company has issued 100,000 equity shares of Rs. 100 each, Rs. 50 called-up and 50,000—7½ per cent. tax-free preference shares of Rs. 100 each, Rs. 50 called up. The C.C.I. has sanctioned the issue of the balance of 50,000 equity shares of Rs. 100 each and 50,000 tax-free preference shares of Rs. 100 each. He has fixed the dividend on the latter at 6¾ per cent. per annum, free of tax. The Company has, however, applied to the C.C.I. for permission to raise the rate to 7 per cent.

HINDUSTAN ALUMINIUM

Hindustan Aluminium Corporation Limited, a joint venture sponsored by Birlas and Kaiser Aluminium and Chemical Corporation of Oakland, California, U.S.A., has been granted a licence by the Government of India for construction of an aluminium fabricating factory. The licence confers on the Company the rights to construct a mill with a production capacity of 15,000 tons annually of rolled, drawn and extruded aluminium products.

S.M. ELECTRIC SUPPLY CORPORATION

GOOD PROGRESS IN 1959

THE results of the South Madras Electric Supply Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Tiruchirapalli) for the year ended 31st March 1960 disclose good progress in the working of the Company. Sales of energy have increased by 8.12 million units to a record level of 89.88 million units, the income from sale of energy by Rs. 20.64 lakhs to Rs. 89.93 lakhs, also a new high, and the gross profit has jumped up by Rs. 5.53 lakhs to Rs. 25.69 lakhs, thus maintaining the upward trend noted for some years past. With this rise during the year under review, the gross profit of the Company has reached a fresh high. The net profit, too, has improved by Rs. 2.64 lakhs to Rs. 9.89 lakhs even after raising the provision for depreciation from Rs. 7.61 lakhs to Rs. 8.20 lakhs and that for taxation from Rs. 4.50 lakhs to Rs. 6.80 lakhs.

Consequent on the improved results, there has been no necessity for the Directors to draw anything from the reserves, as they did in the previous year when the clear profit for the year was below the reasonable return, as calculated under the provisions of the Electricity Supply Act. On the contrary, they have now raised the allocations to the various reserves and provisions from Rs. 1.57 lakhs to Rs. 2.60 lakhs.

The dividend, however, is not in consonance with the higher profit. The Directors have recommended a distribution of 9 per cent., subject to deduction of tax, on the old capital of Rs. 56 lakhs and a *pro rata* dividend at the same rate on the new capital of Rs. 14 lakhs issued last year for the period covered by the allotment. This will mean a net dividend of 6.3 per cent., as against 9 per cent. free of tax paid for 1958-59. As regards the dividend on the 5½ per cent. tax-free (1st and 2nd) preference shares, the Directors have followed an unusual practice. The interim distribution was made after grossing it and deducting from the grossed amount the tax at 30 per cent. "This," the Directors say, "was in accordance with Section 18(3E) of the Income-tax Act, which was applicable at the time of payment of interim dividend." As this section has since been deleted and only Section 18(3D) now prevails, the Directors have not grossed the final dividend of 2¾ per cent., but have recommended a deduction of 30 per cent. therefrom, so that the net final dividend will only be 1.925 per cent. and the total net dividend for the year 4.675 per cent. While appreciating the view that this will mean a serious cut in the income of many shareholders, the Directors explain the steps they propose to take to compensate them, thus:

"The Directors have given serious consideration to the dividends payable to preference shareholders. They feel that a 5½ per cent. dividend less 30 per cent. deduction of tax, though perfectly legal, would seriously cut into the earnings of many shareholders who may not claim and receive back from the income-tax authority the tax component paid on their behalf. Nor can the Company pay a net dividend of 5½ per cent. to the preference shareholder, by grossing the dividend and paying the tax to the taxation authority. This would seriously cut into the dividends payable to the equity shareholders, especially in view of the serious limitations placed by the Electricity Supply Act on companies like ours to pay dividends from out of the trading profits earned by them.

"As a compromise and on grounds of equity and fairplay, your Directors propose to recommend, to the various classes of shareholders, after securing due sanction from the Government of India, that the preference shareholders may be paid a 7 per cent. dividend which will be subject to deduction of tax at such rates as the Government may prescribe from time to time and which at present is 30 per cent. This will mean a payment of 4.9 per cent. directly to the preference shareholders and a payment of 2.1 per cent. on their behalf to the taxation authority which when refunded will make up the dividend to 7 per cent. We trust this suggestion will meet with your approval. We shall be proceeding with all formalities necessary to bring about this change, shortly, so that this will become effective for the accounting year commencing with 1st April 1960."

The result of the aforesaid procedure is a deflation in the net rate of preference dividend from 5½ per cent. to 4.9 per cent. They have to suffer this cut for no fault of theirs—a cut which is not in consonance with the spirit of either the Company's undertaking or the Finance Minister's assurance in Parliament.

The Company's progress in recent years is fully reflected in the comparative table given at the foot of the previous column.

The Company has added 15 miles of H.T. lines and 55 miles of L.T. lines during the year under review and has electrified 19 more villages. The number of new service connections added during the year was 3,899, as against 3,730 in 1958-59. The total capital expenditure incurred during the year for rural and urban extensions amounted to Rs. 10.35 lakhs. It was in order to finance this development programme that the Company issued, in August 1959, additional capital of Rs. 14 lakhs. It is expected that this amount will be fully utilised in capital works by the end of March 1961. The Company's application for a loan from the State Electricity Board has not yet been sanctioned. However, a sum of Rs. 25 lakhs is said to have been earmarked for disbursement as loans to the licensees in the State. The Company expects to get a substantial allotment out of this. Meanwhile, the Company has submitted to the State Electricity Board development schemes covering an investment of Rs. 35 lakhs, from which the Board will select the schemes to be executed from out of the loan to be granted by it. The Company has also requested the Board to enhance the loan.

The final compensation due to the Company from the State Government on account of the acquisition of East-Ramnad and Pudukottai licences and the purchase of Manapparai enclaves and Paramakudi buildings has not yet been settled and is still the subject matter of correspondence with the Government.

The Rs. 10 paid-up ordinary shares, now quoting at par, *cum-div.*, give a yield of 6.5 per cent. per annum, free of tax.

ORISSA CEMENT'S PROFIT SLIGHTLY LOWER

OUTPUT DECLINES

THE setback in production and despatches of cement for reasons beyond the control of the management has been responsible for the decline in gross profit of the Orissa Cement Ltd. (Managing Agents: Dalmia Agencies Private Ltd., Rajgangpur, Orissa) for the year ended 31st December 1959. The profit, which had successively gone up from Rs. 47.73 lakhs (in 1956) to Rs. 84.42 lakhs, has dropped to Rs. 80.15 lakhs, a fall of Rs. 4.27 lakhs or 5.5 per cent. Even so, the performance of the Company should be considered satisfactory. It is pointed out that even during the period of strike from 21st March to 28th July 1959, that is, for over four months, the production did not suffer much, but it was in the subsequent period that the output and despatches were adversely affected by some breakdowns and mishaps.

The incessant heavy rains in August 1959, submerging the electrical equipment in the coal mills, the breakdown in the crane and cement mill, and other mechanical troubles in the kiln, resulted in a decline in output of cement from the record level of 349,092 tons touched in 1958 to 258,615 tons and in despatches thereof from 343,504 tons to 260,054 tons. The despatches were also affected by the slackness in demand for cement. For some time the kilos were full and production had to be curtailed. Due to the decline in cement despatches in 1959, the closing stocks of clinker at the end of the year rose by nearly 40,000 tons. The Directors point out that the results would have been better if it had been possible to convert the accumulated clinker into cement and market it. Another factor which affected the profit was the payment of commission to stockists to stimulate sale of cement. This amounted to Rs. 1.25 lakhs during the year.

The net profit, however, shows a slight increase from Rs. 25.67 lakhs to Rs. 27.54 lakhs, mainly due to the cut in tax provision from Rs. 19.87 lakhs to Rs. 9.85 lakhs, in view of the eligibility of the Company for exemption from taxation in respect of a portion of its profit under Section 15C of the Income-tax Act. The allocations to the reserves have been nearly halved, thanks mainly to the cut in development rebate reserve from Rs. 20.85 lakhs to Rs. 10.42 lakhs. The dividend on ordinary shares has been cut from 15 per cent. to 11 per cent. As this is subject to deduction of tax, the net dividend is only 7.7 per cent., but this is on a higher capital of Rs. 2.25 crores, raised during the year by the issue of 750,000 ordinary shares of Rs. 10 each.

It is stated that, for the year 1959 the income-tax authorities have fixed Rs. 5.68 lakhs as the income of the Company exempt from tax under Section 15C of the Indian Income-tax Act, subject to modification at the time when final assessment for the year 1960-61 is considered. This works out to slightly more than 20 per cent. of the total profit for the year 1959. Accordingly, 80 per cent. of the dividend will be subject to tax deduction and 20 per cent. will be exempted from tax. To this extent, all shareholders will get a refund of tax deducted at source. The dividend on ordinary shares absorbs Rs. 24.75 lakhs. As this is not fully covered by the available profit for distribution after transferring Rs. 10.96 lakhs to the reserves and paying preference dividend, the Directors have had to draw nearly Rs. 10 lakhs from the previous year's surplus, as will be evident from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sale proceeds (including internal consumption)	2,74.09	2,81.50	2,02.82	1,38.85

In order to utilise the accumulated stocks of clinker, the Company proposes to install addi-

(Continued in previous column)

(Concluded from next column)

tional cement grinding and packing capacities. It awaits the grant of import licence for the necessary equipment. The basic plant of the Company's refractory works was commissioned towards the middle of 1959, but teething troubles continued till the end of the year. Production from fireclay and silica sections, though improved during the year, could not reach the rated output on account of insufficient experience of the staff and workers. With the help of technical collaborators, however, these troubles are being gradually overcome.

There has been an addition of Rs. 68.43 lakhs to the block account during the year, bringing the gross value thereof up to the end of the year to Rs. 539.55 lakhs. This has been written down to Rs. 353.05 lakhs. Expenses on construction in progress amount to Rs. 16.36 lakhs. The current assets aggregate Rs. 280.17 lakhs, of which unquoted investments in joint stock companies account for Rs. 15.07 lakhs. The current liabilities and provisions amount to Rs. 312.18 lakhs, including borrowings to the tune of Rs. 152.06 lakhs. The net assets thus amount to Rs. 337.39 lakhs, and are represented by a paid-up capital of Rs. 265 lakhs and reserves and surplus of Rs. 72.39 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 14.20 *cum-div.* On an *ex-div.* basis, they give a yield of 5.7 per cent. per annum, free of tax.

CAPITAL ISSUES IN 1959

According to preliminary official data, the total capital raised by all non-Government companies through shares (other than bonus) and debentures during 1959 amounted to Rs. 65.2 crores, which was as much as 18 per cent. higher as compared to Rs. 55.2 crores in 1958. The preliminary figures for 1959 is likely to be revised upwards and it seems likely that the amount of capital raised in 1959 would exceed that in 1957 also (of Rs. 68 crores). Two-thirds of the amount for which consents were given accounted for by initial issues (that is, issues of new companies) which rose steeply from Rs. 18.5 crores in 1958 to Rs. 49.1 crores in 1959, their share in total consents rising from 28 to 44 per cent.

SYNOPSES OF COMPANY REPORTS

Kumardhubi Engineering Works Ltd.

THE directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 30th November 1959.

The profit and loss account, after providing for all charges and making provision of Rs. 3,22,000 (Rs. 4,35,000) for taxation, Rs. 847 (Rs. 48,000) for wealth tax in respect of previous years and Rs. 4,42,626 (Rs. 3,04,562) for depreciation, shows a profit of Rs. 6,08,701 (Rs. 5,10,184). To this is added the amount transferred from reserve for bad and doubtful debts of Rs. 2,564 (Rs. 187) and the balance brought forward from the previous year of Rs. 1,00,074 (Rs. 22,949) making a total of Rs. 7,11,339 (Rs. 5,33,320). The directors have transferred to reserve for bad and doubtful debts Rs. 6,010 (Rs. 1,626), to statutory development rebate reserve Rs. 2,11,900 (Rs. 1,87,300) and to debenture redemption reserve Rs. 1,00,000 (nil) leaving a balance of Rs. 3,93,429 (Rs. 3,44,394 after providing Rs. 1,88,926 to reserves). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the cumulative preference shares at the rate of 7.143 (5 per cent. free of tax) per cent. per annum, subject to deduction of tax in accordance with the provisions of the Finance Act, 1960, absorbing Rs. 85,716 (Rs. 60,000), by payment of a dividend on the ordinary shares at the rate of 30 (30) naye Paise per share, subject to deduction of tax in accordance with the provisions of the Finance Act, 1960 absorbing Rs. 2,76,480 (Rs. 1,84,320) and by carrying forward Rs. 31,233 (Rs. 1,00,074). The directors have recommended a dividend of 30 naye Paise per ordinary share on the increased share capital of the Company. It will be recalled that 3,07,200 ordinary shares of Rs. 2 each were issued and subscribed during the year bringing the ordinary share capital from Rs. 18,43,200 as at 30th November, 1958 to Rs. 27,64,800 as at 30th November 1959.

The liquidity position still needs to be watched and the directors are pleased to report that the managing agents have once again signified their consent to treat their commission as an interest-free loan to the Company until the cash position improves. A similar gesture was made by the managing agents last year and in view of the improvement shown earlier this year, the directors refunded in January the interest-free loan granted by the managing agents in 1959.

Revaluation of Fixed Assets.—It will be observed in earlier balance sheets the qualifications which the auditors have been making on depreciation on the amount by which fixed assets were written up on revaluation in 1948. In order to remove the cause of these qualifications and to bring the fixed assets of the Company back to their actual written down value based on their original cost, the directors have authorised the writing down of the assets by a sum of Rs. 12,93,000 by debiting the reserve for revaluation of fixed assets account in the year under review in the same proportion as the assets were written up in 19148.

As indicated in the directors' previous report a shortage of steel sections and severe competition materialised during the financial year under review and profits were again slightly reduced compared with the previous year.

Various economy measures were introduced about the middle of 1959 at which time the fall in demand, severe competition and shortage of steel sections were having the maximum effect. Fortunately demand slightly increased and steel became more readily available towards the end of 1959 and these changes materially assisted in improving the results for the year. Notwithstanding these better trends, the directors feel that really substantial improvements may not materialise until later in 1960 or even in 1961, so far as the steel foundry is concerned. It is expected that steel sections from the new steelworks will become more readily available towards the end of 1960 and results from this department should continue to improve.

Accounts in brief are as under:—

Bengal Paper Mill Co., Ltd.

The directors of the above Company (Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year [including items relating to previous years] was Rs. 49,05,060 (Rs. 34,67,784) from which is deducted depreciation amounting to Rs. 4,84,372 (*nil*) and taxation Rs. 18,48,187 (Rs. 17,67,176) leaving a balance of Rs. 25,72,501 (Rs. 17,00,608). To this is added the *balance brought forward from 1958 of Rs. 92,500 (Rs. 66,840) and redemption of 100 debentures Rs. 10,000 (Rs. 10,000) making a total of Rs. 26,75,001* (Rs. 17,77,448). Out of this total the Board has transferred *Rs. 10,000 (Rs. 10,000)* to capital reserve, Rs. 7,00,000 (Rs. 4,08,923) to general reserve, Rs. 2,09,503 (Rs. 1,14,025) to development rebate reserve and has paid an interim dividend of Rs. 6,30,000 (Rs. 4,41,000) [cumulative preference shares Rs. 10,000 (Rs. 7,000), "A" cumulative preference shares Rs. 20,000 (Rs. 14,000), "B" cumulative redeemable preference shares Rs. 60,000 (Rs. 60,000) and ordinary shares Rs. 5,40,000 (Rs. 3,60,000)] on 11th January 1960, leaving a balance of Rs. 11,25,498 (Rs. 8,03,500) available for distribution, which it is recommended be dealt with as follows:—

To payment of a final dividend on cumulative preference shares at the rate of 5 per cent. per annum Rs. 10,000 (Rs. 7,000), to payment of a final dividend on "A" cumulative preference shares at the rate of 5 per cent. per annum Rs. 20,000 (Rs. 14,000), to payment of a final dividend on "B" cumulative redeemable preference shares at the rate of 3 per cent. per annum Rs. 60,000 (Rs. 60,000) and to payment of a final dividend on ordinary shares of 20 (14) per cent, Rs. 9,00,000 (Rs. 6,30,000) leaving a balance carried forward of Rs. 1,35,498 (Rs. 92,500).

In declaring an interim dividend on the cumulative preference shares and the "A" cumulative *preference shares, the provisions of Section* 18 (3E) of the Indian Income Tax Act, 1922, were applied and the amount of dividend paid was the gross amount which after deduction of tax at 30 per cent. amounted to the dividend ordinarily receivable free of tax. As a result of the deletion of this Section by the Finance Act, 1960, the matter is not now free from doubt but the Board has decided to recommend a similar final dividend on the cumulative preference shares and the "A" cumulative preference shares.

Operations.—The Mill closed down partially for one-and-a-half months due to a major breakdown in the turbine, which resulted in loss of production and profit. However, the results for the year are better than those for 1958. Production during the year was 15,927 tons against 14,826 tons produced during last year and 12,874 tons during 1957.

As a result of the recommendations of the Tariff Commission accepted by the Central Government in December 1959, with effect from 1st January 1960, the selling price of paper was substantially reduced. This will affect the profit of the industry in coming years. A memorandum on revision of prices has been submitted to the Government by the Association on behalf of the industry. It is expected that this Company will be able to meet the effects of the Tariff Commission during the current year by modernisation and more production.

The Company has formulated a scheme to expand and modernise its existing plant for increasing the daily production capacity to 100 tons. The scheme has already been approved by the Central Government and the necessary expansion licence has also been obtained. Steps are being taken to finalise orders for plant and machinery.

Balmer Lawrie and Company Ltd, resigned its office of secretaries and treasurers of this Company with effect from 28th April 1960. The Board of Directors express their deep sense of appreciation of the valuable services rendered by Balmer Lawrie and Company Ltd.

Accounts in brief are as under:—

Kumardhubi Fireclay and Silica Works Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st December 1959.

The profit and loss account after providing for all charges and making provision of Rs. 8,45,025 (Rs. 9,40,000) (including Rs. 5,025 in respect of the previous year) for taxation and Rs. 5,44,602 (Rs. 5,72,994) for depreciation and writing back a provision in respect of the previous year of Rs. 443 (Rs. 400) for wealth tax shows a profit of Rs. 9,76,701 (Rs. 7,77,086). To this is added the balance brought forward from the previous year of Rs. 30,092 (Rs. 53,076) making a total of Rs. 10,06,793 (Rs. 8,30,162). From this is deducted the amounts transferred to statutory development rebate reserve of Rs. 55,000 (Rs. 10,000), to reserve for plant renovation Rs. 2,50,000 (Rs. 2,50,000) and to debenture redemption reserve Rs. 1,00,000 (Rs. 1,00,000) leaving a balance of Rs. 6,01,793 (Rs. 4,20,162 after providing Rs. 50,000 to general reserve). The directors propose to dispose of this amount as follows:—

By payment of a dividend on the redeemable preference shares of 5½ per cent. per annum, subject to deduction of tax in accordance with the provisions of the Finance Act, 1960, absorbing *Rs. 22,000 (Rs. 15,070), by payment of a dividend on the ordinary shares at the rate of Re. 1.80 (Re. 1.25 per share, free of tax) per share subject* to deduction of tax in accordance with the provisions of the Finance Act, 1960, absorbing Rs. 5,40,000 (Rs. 3,75,000) and by carrying forward Rs. 39,793 (Rs. 30,092).

The demand for refractories of all kinds continued at a satisfactory rate during the year under review, although at one time it was apprehended that the demand for firebricks would fall to a serious extent. Fortunately this fall in demand did not materialise while the demand for silica bricks continued to be very heavy during the year under review.

Production at the works was maintained at a satisfactory level during the year and towards the end of the year, it was decided to install additional production capacity for silica and sillimanite bricks, to meet the very high demand which is expected to continue for some years to come.

Devashola (Nilgiri) Tea Estates Co., Ltd.

The directors of the above Company (Chairman and Managing Director: Mr. R. A. Jenkins, Coonoor R.S., Nilgiris) present the audited accounts of the Company for the year ended 31st December 1959.

Crop.—The crop harvested during the season amounted to 3,25,310 lbs. of made tea as against 3,83,675 lbs. during the previous year and the output was affected by want of timely rains as was the case with adjoining estates and many other estates in the Nilgiris. The all-in-cost of production, after taking into account all estate and head office expenses including the heavy provision for taxation of Rs. 1,04,500 was Rs. 2.28 per lb. as against Rs. 2.09 last year and the income per lb. of tea was Rs. 2.66 as against Rs. 2.49 last year resulting in a net profit of Re. 0.38 nP per lb. The slight increase in the cost of production was on account of the lower crop this year.

With the shortfall in crop to the extent of 58,365 lbs. made tea and with no appreciable increase in tea prices, the net profit in the year under review was not nearly as high as was anticipated. However, with a substantial increase in crop obtained by us during the first half of 1960, viz., 81,004 lbs. made tea over the same period in 1959 and with the completion of the work now on hand regarding the installation of the high power motors, etc., for pressure rolling, the adoption of which has enabled many other Nilgiri estates to obtain better prices for their teas, the directors expect more successful seasons in future. In view of this and with the substantial reserves which the Company has already built up amounting to 80 per cent. of the paid-up capital, the directors feel that the dividend level of the Company should as far as possible be maintained at *not less than* 25 per cent. and they recommend the payment of a final dividend of 15 per cent. making in all 25 per cent. for 1959 by drawing Rs. 15,000 out of the Rs. 30,000 remaining in the dividend equalisation reserve.

The net profit on the season's working after writing off depreciation on buildings, machinery, etc., and providing for taxes and other overhead charges including the additional bonus of Rs. 6,832 due to staff for the years 1953 to 1955 amounts to Rs. 1,25,313 (Rs. 1,52,396). This amount together with the sum of Rs. 5,663 (Rs. 3,352) brought forward from last year and the excess provision of Rs. 7,603 (*nil*) transferred from taxation reserve and the sum of Rs. 15,000 (*nil*) drawn from the dividend equalisation reserve totals Rs. 1,53,579 (Rs. 1,55,748). After setting apart Rs. 2,320 (Rs. 85) for development rebate reserve, the balance comes to Rs. 1,51,259 (Rs. 1,55,663). Out of this an interim dividend of 10 per cent. absorbing Rs. 60,000 (Rs. 60,000) was paid in March 1960 and there remains a balance of Rs. 91,259 (Rs. 95,663) which the directors recommend should be appropriated as under:—

To pay a final dividend of 15 (15) per cent. [making in all 25 (25) per cent.] absorbing Rs. 90,000 (Rs. 90,000) and to carry forward to next season Rs. 1,259 (Rs. 5,663).

The Finance Act, 1959, has set out an obligation on the part of companies to deduct tax at source from dividend payable to shareholders and pay it to Government. This is only on a line with the advance collection of income-tax for which the shareholders will get a credit adjustment in their individual assessments or a refund on application.

Tea crop and export licences granted for the estate year ended 31st December:—

	1957	1958	1959
Made Tea from Estate leaf ... ... lbs.	332,056	383,675	325,310
Export Licence granted..	210,330	222,132	254,547*

* This represents quota issued to 31st March 1960, i.e., 67 per cent. of crop basis of 379,923 lbs.

Crop Estimate for 1960.—This conservatively may be taken as 350,000 lbs.

A provisional expenditure of Rs. 60,000 is estimated for the construction of workers' quarters, additional equipment for the factory, etc.

Accounts in brief are as under:—

Jaybirpara (Dooars) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses, of Rs. 1,14,278 (loss of Rs. 34,854) from which is deducted the debit balance brought forward from last year of Rs. 60,919 (Rs. 62,442) leaving an available sum for appropriation of Rs. 53,359 (debit of Rs. 97,296). The directors have transferred to development rebate reserve *Rs. 2,097 (nil). They now recommend that a dividend of 50 (nil) nP per share, subject to deduction of tax* be paid, absorbing Rs. 35,000 (*nil*) leaving a balance to be carried forward of Rs. 16,262 (debit of Rs. 60,919 after adjusting Rs. 21,377 being dividends forfeited and Rs. 15,000 being excess tax provisions not required). The levy of West Bengal entry tax during the year amounted to Rs. 29,398.

A crop of 6,711 maunds was secured and sold at an average price of Rs. 2.17 per lb. which compares with a crop of 6,362 maunds in 1958, sold at an average price of Re. 1.85 per lb.

Estimates for the current year have been framed for a crop of 7,000 maunds to cost Rs. 10,15,574 but there has been a poor start to the season owing to shortage of rain and by 14th July 1960, 60,180 kgs. (1,658 mds.) had been manufactured compared with 81,465 kgs. (2,245 mds.) to the same date last year. Capital expenditure during the year was Rs. 8,925.

Messrs. Andrew Yule & Co., Ltd. will cease to act as managing agents of the Company on 15th August 1960 and their appointment as secretaries and treasurers of the Company for a period of five years from that date has been approved by the Central Government. At an extraordinary general meeting held on 6th July 1960, the members formally appointed Andrew Yule & Co., Ltd., as Secretaries and Treasurers of the Company with effect from 15th August, 1960.

National Ekco Radio and Engineering Co., Ltd.

The directors of the above Company (Managing Agents: The Investment Corporation of India Ltd., Bombay) present the audited accounts of the Company for the year ended 31st December 1959.

During the year under review, the Company made a profit of Rs. 13,30,747 (Rs. 11,81,293) after providing for depreciation on fixed assets for 1959, payment of royalty to E. K. Cole Ltd., interest to The Investment Corporation of India Ltd. on loan advanced by them, managing agency commission, development rebate on new plant and machinery, bonus to employees and provision for doubtful debts. This amount has been utilised to write off the debit balance in the profit and loss account amounting to Rs. 2,99,279, past arrears of depreciation Rs. 9,40,000, deferred revenue expenditure Rs. 44,260 and part of development expenditure of previous years Rs. 45,804 leaving a balance of Rs. 1,404 to be carried forward.

Messrs. E. K. Cole Ltd. have very kindly agreed to accept £10,000 only as maximum royalty for the year 1959. The directors are grateful to them for this kind gesture.

The expectation expressed by the Board in their last report of the Company's working for 1959 was justified. Production of National-EKCO radios was higher than the 1958 figure which had established a record. Simultaneously, sale of radios kept pace with the increased production. The directors are satisfied that the results of 1959 represent a substantial improvement over the previous year in regard to production, sales and profits.

Efforts are being continuously made to increase production for 1960, with due regard to the anticipated increase in demand, quota of foreign exchange made available to the Radio Industry and the restricted space in the Company's existing premises.

The new Plastics division established in late 1958 continued to work three shifts during 1959 and in spite of initial difficulties is gradually making a steady progress in satisfying the Company's requirements of Bakelite Cabinets.

Accounts in brief are as under:—

Carron Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts disclose a working profit of Rs. 2,44,298 (loss of Rs. 1,28,815). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 1,00,000 (Rs. 1,10,000) to revenue reserve and Rs. 6,000 to development rebate reserve, there is a balance at credit of profit and loss account amounting to Rs. 1,11,500 (Rs. 2,16,411 after transferring Rs. 2,01,552 from depreciation reserve) the directors recommend payment of a dividend of 15 (*nil*) per cent. leaving Rs. 21,500 (Rs. 6,411 after transferring Rs. *2,01,000 to buildings and machinery* reserve and Rs. 9,000 development rebate reserve) to be carried forward.

Tea crop was 7,20,002 lbs. as compared with 4,65,018 lbs. in the 1958. The average selling price realised was Rs. 2.09 as against Rs. 1.72 per lb. in the previous year.

Estimates for 1960 provide for a crop of 2,70,000 kilograms (600,000 lbs.) at an outlay of Rs. 11,52,345, including inland freight and sale charges.

Accounts in brief are as under:—

Emerald Valley Estates Ltd.

The directors of the above Company (Chairman: Mr. P. Srinivasan, Madras) submit the audited accounts of the Company for the year ended 31st December 1959.

The result of the year's working, after provision for depreciation on buildings, machinery, furniture etc., amounting to Rs. 5,090 (Rs. 3,723) and providing for income-tax and sales tax Rs. 40,238 (Rs. 50,654) is a net profit of Rs. 28,121 (Rs. 33,720) to which must be added the balance of Rs. 2,706 (*nil*) brought forward from the previous year's account, making a total of Rs. 30,827. A sum of Rs. 6,500 (*nil*) has been transferred from dividend equalisation reserve to profit and loss appropriation account, thus making a total of Rs. 37,327 (Rs. 33,720) available. The directors recommend the following appropriations:

To pay a dividend at 8 (6 per cent. free of tax) per cent. on the equity shares for the year, subject to deduction of tax, absorbing Rs. 28,000 (Rs. 21,000), to provision for taxation of earlier years Rs. 7,300 (*nil*) and to carry forward to the next year Rs. 2,027 (Rs. 2,706 after transferring Rs. 10,014 to general reserve).

The tea crop for the year was 1,12,936 (1,28,145) pounds. The all in cost per pound of tea was 238.42 (206.23) cents.

Estimates for 1960 provide for a crop of 1,35,000 lbs. tea to cost 171.31 cents per lb. f.o.b. Besides this, capital expenditure, on new lines and factory lean-to, has been estimated at Rs. 9,600.

Messrs. Parkins Private Ltd. have intimated the Company that they do not seek re-appointment after the expiry of the term allowed for the existing managing agents under Section 330 of the Indian Companies Act, namely 15th of August 1960. *The Board have considered the matter and propose to appoint Sri K. N. Krishna Iyer as managing director of the Company for a period of five years from 16th August 1960, on the terms and conditions incorporated in the agreement to be* entered into with him, subject to the approval of the Central Government and the General Body.

The Board have also proposed to increase the authorised capital of the Company from Rs. 5 lakhs to Rs. 15 lakhs, in the form of 3 lakhs equity shares of Rs. 5 each. As this would amount to a change in the memorandum and articles of association of the Company, a special resolution is being proposed in this regard for adoption by the shareholders.

The crop as on 30th June 1960 was 65,000 lbs. which is 14,353 lbs. more than same date last year. Therefore better results can reasonably be expected during the coming financial year.

Highland Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) present the audited accounts of the Company for the year ended 31st December 1959.

A total tea crop of 11,57,700 (12,71,700) pounds was harvested during the year against an estimate of 11,30,000 lbs. is satisfactory. Of this crop the share of Pasuparai Estates was 4,39,100 (5,06,500) pounds and Carady Goody Estates 7,18,600 (7,25,200) pounds. In comparison with last year's crop however, there is a shortfall of 1,14,000 lbs. due to severe drought in the early part of the year and general adverse weather conditions in all tea-planting districts in South India and the policy of *fine plucking adopted by the Company.*

The f.o.b. cost for the year was maintained at the previous year's figure of Rs. 1.28 per lb. as against an estimate of Rs. 1.18 and the all-in-cost was Rs. 1.58 per lb. against last year's figure of Rs. 1.54. The net average sale price realised was Rs. 2.08 per lb. as against Rs. 1.83 for last year. The increase in cost is mainly accounted for by the shortfall in crop and the better prices realised have compensated for these shortcomings.

Cardamom: The quantity of cardamom harvested during the year amounted to 19,410 lbs. as against 11,140 lbs. in the previous year. The cost of production for the year was Rs. 2.81 per lb. as against Rs. 511 for last year and the average sale price realised was Rs. 8.11 per lb. as against Rs. 7.43 for 1958. The crop during the year has been good due to favourable weather conditions and the increase in yielding acreage.

The net profit for the year amounted to Rs. 3,91,236 (Rs. 2,60,875) after providing for depreciation on buildings, machinery, etc. and after reserving a sum of Rs. 2,000 (Rs. 3,500) towards development rebate and a sum of Rs. 3,75,000 (Rs. 2,30,000) for income-tax. The profit, together with the amount brought forward from previous year of Rs. 21,458 (Rs. 48,583) makes a total of Rs. 4,12,694 (Rs. 3,09,458). No preference dividend has been declared for the year in accordance with the decision to pay preference dividends annually at the time of the annual general meeting. It has now been decided to pay the preference dividend at 6 per cent. subject to deduction of tax, which would leave a balance of Rs. 3,94,694 (Rs. 2,91,458) for appropriation. The directors recommend that this amount be disposed of as under:—

By payment of a dividend on equity shares at 15 (15 per cent. free of tax) per cent. for 1959, subject to deduction of tax, absorbing Rs. 2,70,000 (Rs. 2,70,000), by transferring to dividend equalisation reserve Rs. 50,000 (*nil*), to building reserve Rs. 50,000 (*nil*) and by carrying forward Rs. 24,694 (Rs. 21,458).

Crop Estimate—1960:

	Tea (lbs.)	Cardamom (lbs.)
Pasuparai ...	4,50,000	—
Carady Goody	6,80,000	15,500
Total	11,30,000	15,000

The directors' policy in resorting to fine plucking has justified itself and the Company's profits have been maintained at a satisfactory level in spite a shortfall in crop which was general throughout the district. The Company is also sending regularly every month a few invoices for sale in London and also in America.

Messrs. A. V. Thomas & Co., Ltd., have been reappointed as managing agents for 5 years from 15th August 1960 as per the decision of the General Body, and a fresh managing agency agreement has been executed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Gross block	31,48,370
Reserves ...	9,86,043	*Less*—Depreciation ...	6,93,094
Provision for taxation ...	4,04,531		
Liabilities ...	5,92,621	Net block	24,55,276
Profit and loss account (surplus) ...	24,694	Stock-in-trade	2,45,540
		Stores etc. ...	2,43,299
		Book debts ...	1,08,269
		Investments	3,81,248
		Cash ...	6,74,257
Rs.	41,07,889	Rs.	41,07,889

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

EMERALD VALLEY ESTATES LTD. Annual General Meeting, Madras, 16th August 1960. Dividend: 8 per cent. or Re. 0.40 per ordinary share, subject to deduction of tax, payable after 16th August 1960. Transfer books remain closed from 5th to 15th August 1960, both days inclusive.

BADRA COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 27th August 1960. Dividend: 15 per cent. or Re. 0.30 per ordinary share, subject to deduction of tax, payable on 29th August 1960. Transfer books will remain closed from 22nd to 27th August 1960, both days inclusive.

KADUR COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 27th August 1960. Dividend: 7½ per cent. or Re. 0.15 per ordinary share, subject to deduction of tax, payable on 29th August 1960. Transfer books will remain closed from 22nd to 27th August 1960, both days inclusive.

EDWARD TEXTILES LTD. Annual General Meeting, Bombay, 29th August 1960. Dividend: Rs. 18.00 per share, subject to deduction of tax, payable on 12th September 1960. Transfer books remain closed from 8th to 31st August 1960, both days inclusive.

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 31st August 1960. Dividend: Rs. 32.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 17th to 31st August 1960, both days inclusive.

NATIONAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 31st August 1960. Dividend: 16 per cent. or Re. 1.60 per ordinary share, subject to deduction of tax. Transfer books remain closed from 10th to 31st August 1960, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 1st September 1960. Dividend: Rs. 5.00 per share, final (making a total of Rs. 7.50 per share, for the year), subject to deduction of tax, payable on and after 2nd September 1960. Transfer books remain closed from 17th August to 1st September 1960, both days inclusive.

PERIA KARAMALAI TEA AND PRODUCE CO., LTD. Annual General Meeting, Coimbatore, 7th September 1960. Dividend: 13¾ per cent. or 27 nP per share, subject to deduction of tax, for the year ended 31st March 1960. Transfer books remain closed from 17th August to 7th September 1960, both days inclusive.

KHANDELWAL FERRO ALLOYS LTD. Annual General Meeting, Bombay, 14th September 1960. Dividend: *Nil*. Transfer books will remain closed from 10th to 15th September 1960, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Interim dividend of Re. 1.50 per ordinary share, subject to deduction of tax, for the year ended 31st March 1960, payable on or after 21st September 1960. This dividend although termed interim will in fact constitute the full dividend for the year. Transfer books will remain closed from 26th August to 17th September 1960, both days inclusive.

KOHINOOR MILLS CO., LTD. Ad-interim dividend of Rs. 5.00 per share, subject to deduction of tax, for the half-year ended 30th June 1960, payable on and after 28th September 1960. Transfer books will remain closed from 16th August to 3rd September 1960, both days inclusive.

GOUREPORE CO., LTD. Final dividend of 20 per cent. or Rs. 20.00 per ordinary share (making a total of Rs. 30.00 per ordinary share, for the year), subject to deduction of tax, for the year ended 31st March 1960, payable on 31st August 1960. Transfer books will remain closed from 24th to 31st August 1960, both days inclusive.

NUDDEA MILLS CO., LTD. Final dividend of 6 per cent. or Rs. 3.00 per ordinary share (making a total of Rs. 4.00 per ordinary share, for the year), subject to deduction of tax, for the year ended 31st March 1960, payable on 31st March 1960. Transfer books will remain closed from 24th August to 31st August 1960, both days inclusive.

CENTURY SPINNING AND MANUFACTURING CO., LTD. Dividend of Rs. 10.00 per ordinary share, subject to deduction of tax, for the half-year ended 30th June 1960.

KILCOTT TEA CO., LTD. Taxable dividend of 17½ per cent. for the year ended 31st December 1959.

ALUMINIUM INDUSTRIES LTD. Final taxable dividend of 9 per cent. (making a total of 18 per cent. for the year) or Re. 0.90 per share, for the year ended 31st March 1960.

STANDARD MOTOR PRODUCTS OF INDIA LTD. Taxable dividend of 9 per cent. or Re. 0.90 per share, for the year ended 31st December 1959.

PARRYS CONFECTIONERY LTD. Taxable dividend of 30 per cent. for the year ended 31st March 1960.

MYSORE STONEWARE PIPES AND POTTERIES LTD. Taxable dividend of 14-2/7 per cent. for the year ended 31st March 1960.

MLAMALLY TEA ESTATES LTD. Taxable dividend of 15 per cent. for the year ended 31st March 1960.

COMPANY REGISTRATIONS

INDO NIPPON CHEMICAL CO., LTD. (Managing Directors: Mr. Indulal D. Bhuva and Mr. K. Ohmori.) Business: Manufacture of chemical products. Authorised capital: Rs. 50,00,000. Public company. Address: Alice Building, Dadabhoy Naoroji Road, Fort, Bombay.

AGRO CHEMICALS AND FERTILIZERS LTD. Business: Manufacturers of pharmaceuticals. Authorised capital: Rs. 1,00,00,000. Public company registered in the State of Maharashtra.

GHATGE PATIL INDUSTRIES PRIVATE LTD. (Managing Agents: Messrs. Vajra Gunak.) Business: Manufacturers of electrical products. Authorised capital: Rs. 25,00,000. Private company registered in the State of Maharashtra.

BOMBAY REFRIGERATORS INDUSTRIES PRIVATE LTD. Business: Manufacture of electrical products. Authorised capital: Rs. 4,50,0000. Private company registered in Maharashtra. Address: 119, Bhavani Shankar Road, Dadar, Bombay 28.

ENGINEERING

(*Concluded from page 345*)

processes must be designed in such a way as to prevent absolutely a nuclear chain reaction of the same type as in a reactor. It is thus evident that nuclear fuel reprocessing involves difficult and new technical problems and requires careful arrangements to eliminate any health hazard to the people working in the plant or living in the surroundings. Today, however, the safety and health problems are quite possible to master.

Reprocessing has also very important economic aspects. The successful reprocessing of fuel is vital to almost all reactor systems so far considered for industrial purpose. The ultimate cost of nuclear power depends largely on the cost of the complete fuel cycle and the expenditures for reprocessing constitute a considerable part of these fuel cycle costs. If the methods by which irradiated nuclear fuel elements are reprocessed can be improved, an essential part of overall nuclear power costs is affected, and any decrease in reprocessing cost will have significant results on the competitiveness of nuclear power as a source of energy for the future. This will perhaps explain the incentive to form the Eurochemic company. Reprocessing involves difficult technical and economic problems, the solution of which requires vast research and extensive development costs. This makes the field especially attractive to a joint undertaking where the costs and also the results and experiences are shared.

RAILWAY COACHES

The Hindustan Aircraft Factory at Bangalore is understood to be making rapid progress in the manufacture of "all steel lightweight integral type broad-gauge railway coaches." The production now has reached a level of 22 coaches per month. It had been envisaged that peak product on of 25 coaches per month would be attained in progressive stages by October-November 1961. But this target is now expected to be achieved one year ahead of schedule. With the progressive development in the manufacture of integral coaches, the production of the old conventional type coaches in the factory has been tapered down and the last coach of this type is expected to move out in September 1960, that is a month from now.

As early as 1948, the Factory developed its own design for manufacturing "all-steel" lightweight railway coaches adopting more or less the same constructional features as applied to manufacture of aircraft. These coaches have become very popular. In October 1956, the Factory, in consultation with the Railway Board, entered into a collaboration agreement with Messrs. M. A. N., a leading railroach manufacturing firm in West Germany, to start manufacture of all-steel lightweight integral type broad-gauge coaches using steel available within the country.

One of the special features of the integral coaches turned out by HAL is their excellent riding quality, mainly due to a new type of bogie, which has been incorporated in them. This has not been used in India before and this bogie is, in fact, the most modern type even in the West. The trials carried out by the Railways Research Centre have already confirmed the supremacy of these new bogies as compared to any other type of bogie now in use on the Indian railways.

The interior fitting and furnishings of these new integral coaches incorporate all modern amenities and ensure travel in comfort for the third class passengers and particularly, for long-distance passengers. The interior colour scheme of the coaches is so designed as to give a pleasing appearance and better effect to interior lighting.

AID FOR BLIND

Following a suggestion from the Royal National Institute for the Blind, Mullard Research Laboratories have produced a design for an acoustic lamp reader that enables blind operators to man the newer types of telephone switchboard on which the signalling is visual. The device, intended for use on private branch exchanges, uses a photoelectric cell, a transistor oscillator and a loudspeaker to convert the light output from the signalling lamps to an audible tone. It can be fitted without modifications to the board. The photocell is mounted on a small carriage which is attached magnetically to metal rails already existing on the board. When the carriage is moved by hand along the rails the photo-cell passes over each signal lamp in turn, and any active lamp causes the cell to respond, producing a tone from the loudspeaker. The blind operator can thus locate any line needing attention, and determine the state of the board at any moment without interrupting the traffic.

COMMERCE AND INDUSTRY

(*Concluded from page 348*)

It will be noted that, in the month of June, exports declined from about Rs. 51 crores in May to about Rs. 49 crores, though they compare somewhat favourably with the figure of Rs. 43 crores in the corresponding month last year. Imports in June touched the highest for any month in the first half of the current year, as also the corresponding period last year (except in April 1959, when they touched Rs. 92 crores). The balance of trade continued to be unfavourable. In fact, this was the largest trade gap in any month in the first half of the current year. But this was considerably smaller, as compared with the corresponding month of 1959. Another point to be noted is that imports have been progressively rising since the beginning of the year, while this is not true of exports. Indeed, in the second quarter, the monthly average of exports was smaller than in the first quarter. If this trend were to continue in the current half-year, the trade gap would widen and 1960 might end no better than 1959.

INDO-U.K. TRADE

India's exports to the U.K. rose by about £9 million to about £70 million in the first half of the current year, as compared with the corresponding period in 1959. Its imports, however, declined from £82.8 million to £78.6 million. Consequently, India's adverse trade balance with the U.K. was narrowed down substantially, that is, from as much as about £21.7 million to no more than about £8.6 million.

Tea continued to be by far the largest individual item among India's exports to the U.K., its earnings from this source being higher by about £2.5 million at £20.71 million during January-June 1960. Similarly, there was a notable increase in the exports of textiles, leather and tobacco. Among India's imports from the U.K., machinery (including electric) fell by about £4.2 million to £31.2 million. Another major item of imports was road vehicles and aircraft, the intake of which was lower by £2 million at £11.6 million.

The following table shows at a glance the trend of India's exports to, and imports from, the U.K. during January-June 1960, as compared with the corresponding period last year as also full year 1959:

(Value in millions of £)

	Jan.-June 1960	Jan.-June 1959	Full year 1959
Exports (total)	70.01	61.14	142.63
Of which:			
Tea	23.22	20.71	65.13
Tobacco and manufactures	7.35	6.65	8.12
Leather and manufactures	7.52	5.76	13.66
Cotton yarns and woven fabrics	7.94	4.86	10.67
Imports (total)	78.80	82.79	171.27
Of which:			
Machinery (including electric)	31.17	35.45	75.03
Road vehicles and aircraft	11.61	13.70	26.73
Chemicals	7.15	8.15	15.67
Balance of trade	—8.59	—21.65	—28.64

The U.S. is spending, through Government, industry and educational and technical institutions, a sum of more than $10 000 million on research every year. In America, research is the backbone of industry, and has been responsible for finding new and cheaper products and evolving new processes and industries. It has been a vital factor in the expansion of its system of mass production, and has helped in the organisation of production and distribution.

Notices

THE ONDAL COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAVE recommended the following dividends, subject to deduction of tax at source, be paid for the year ended 31st December, 1959.

On Preference Shares—6½% per annum

On Ordinary Shares—7% per annum.

By Order of the Board,
P. PRASHAD,
Chairman.

CHARTERED BANK BUILDINGS,
CALCUTTA, 10*th August*, 1960.

THE GWALIOR RAYON SILK MANUFACTURING (WEAVING) COMPANY LIMITED

THE BOARD OF DIRECTORS AT THEIR meeting held on 13th August 1960, have recommended the dividend on equity shares @ Re. 1.20 nP subject to deduction of tax for the year ended 31st March 1960.

Register of Members and Share Transfer books of the Company will remain closed from 1st September 1960 to 14th September 1960, both days inclusive.

By Order of the Board,
V. N. BAGRODIA,
Secretary.

BIRLAGRAM, NAGDA,
16*th August* 1960.

BANKS CUT RATES OF INTEREST ON DEPOSITS

(From Our Own Correspondent)

BOMBAY, 17*th August*

The most outstanding development of the week was reduction in the maximum rate of interest paid by banks on short-term deposits, according to a revision in the inter-bank agreement, which is of a voluntary nature. The modified inter-bank agreement for effecting the cut came into force with effect from yesterday, the 16th inst. The maximum rate of interest for seven days' money has been reduced from 3½ per cent. to 3 per cent, and that on deposits for periods under three months from 3½ per cent. to 3¼ per cent. There is, however, no change in the rate of interest on deposits of three months and over, which is 3½ per cent. These rates are applicable only to banks with deposits of over Rs. 5 crores. As at present, the smaller banks, that is those with deposits of Rs. 5 crores and below, are entitled to pay ¼ per cent. more than the aforesaid revised rates.

Meanwhile, conditions in the short-term money market show no sign of slackening. The trend of bank advances during the "slack" season so far has not dropped to any worthwhile extent. Thus, since the end of April, the total Scheduled bank credit has declined by only Rs. 5.88 crores, representing a mere fraction of the extent by which the Reserve Bank Governor wanted the banks to bring their advances down during the slack season. There are only ten weeks more for the 1960-61 busy season to start and, judging from the present conditions, it is unlikely that the wishes of the Reserve Bank Governor would be fulfilled. Banks, particularly the smaller ones, continue to be borrowers in the short-term money market. Inter-bank call money rate (which is not covered by the inter-bank agreement) continues to fetch 3½ per cent.

The Treasury Bill discount rate has recorded a sudden drop from 2.745 per cent. to 2.540 per cent. per annum this week. The amount offered at Rs. 2 crores was, however, no more than that invited. In consonance with this trend, the Reserve Bank has reduced the discount at which the Intermediate Treasury Bills will be offered this week from 2.696 per cent. to 2.476 per cent. The sales of these bills last week (between 10th and 13th August) amounted to Rs. 1.10 crores.

The Reserve Bank's statement for the week ended 12th August 1960 shows no worthwhile variation in either notes in circulation or notes held in the Banking Department. Foreign securities have dropped by Rs. 5 crores, while rupee securities show a corresponding increase. The fall in foreign securities is offset, to some extent, by the rise of Rs. 1.63 crores in balances held abroad. The total foreign assets now stand at Rs. 144.49 crores. Loans and advances other than to Governments are lower by Rs. 5.66 crores. Investments have declined by Rs. 3.16 crores, while holdings of Government Treasury Bills have risen by Rs. 4.44 crores.

A marked fall of Rs. 10.65 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 5th August 1960. These deposits have however, gone up by Rs. 4.34 crores, so that the net decline in total deposits is of the order of Rs. 6.31 crores. This is mostly accounted for by banks other than the State Bank of India. Inter-bank borrowings have been reduced by Rs. 3.75 crores, while borrowings from the Reserve Bank have gone up by Rs. 9.35 crores. Advances have risen by Rs. 2.28 crores, of which the share of the State Bank is Rs. 1.07 crores. Investments have gone up by Rs. 14.05 crores, mainly due to the increase of Rs. 15.45 crores in the State Bank's portfolio. Cash balances (including balances with other banks) have dwindled by Rs. 8.62 crores, following the drop of Rs. 11.13 crores on State Bank's account. Money at call and short notice has also declined by Rs. 3.46 crores.

The Gilt-edged market continues to be listless. While sellers predominate, in the absence of buyers, prices are unchanged over a wide front. 3 per cent. 1986 Conversion Loan has, however, gained 5 nP to Rs. 73.55. Among State loans, 4 per cent. 1971 issues (with the exception of Bombay) have been marked down by 5 nP to Rs. 99.70.

The changes in the rupee-U.S. dollar cross rates during the week are in consonance with the fluctuations in the sterling-dollar rates. On balance, the rupee shows a slight gain. After a decline from Rs. 476.50 to Rs. 476, banks' selling rate for U.S.T.T. (ready) moved up to Rs. 476.25 per $100. Their buying rate closed at Rs. 473, after a fall to Rs. 472.75 from Rs. 473 per $100. In New York, spot sterling continued its upward trend with a further rise from 280.97-281.00 cents to 281.15-281.18 cents before shading off to 281.06-281.10 cents. Three months' forward also gained from 279.70-279.73 cents to 279.77-279.80 cents, but closed a little lower at 279.72-279.76 cents.

KIPS IN GOOD DEMAND

(From Our Own Correspondent)

MADRAS, 13*th August*

There was some activity in E.I. kips light weights single tannages during the week under review. Top class tanners were all in a well sold forward position in lights as well as mediums. Lower selections, however, were difficult to sell. Inferior fifths were taken up for local consumption at above U.K. prices. Heavies were in good request with meagre supplies.

Tanned cow calf and buff calf ruled quiet. All available quantities of buffs found ready clearance.

Trading in tanned goat and sheep skins was dull, due to August holidays. Raw prices eased considerably.

BULLION BULLISH

(From Our Own Correspondent)

BOMBAY, 17*th August*

The bullion market had only four working sessions during the week under review, as it remained closed on Saturday (*Gokulastami*) and Monday (Independence Day). This brief period witnessed a firm trend in both silver and gold, though there was some technical setback to values today. The firmness was due to the manipulation by the bull syndicate which continued to sit tight over its holidays after having paid the stipulated margins. Fortunately for the syndicate, arrivals from up-country centres were smaller than those in the previous week—3,835 tolas of gold and 25 bars of silver per day on average, as against 4,750 tolas and 33 bars, respectively. The bulls noted with great satisfaction reports regarding the seizure of a large quantity of contraband gold at Calcutta last week. The daily average offtake was no doubt small, being 2,500 tolas in gold (as against 2,625 tolas last week) and 4 bars in silver (as against 6 bars), but there were hopes that it would broaden in the coming weeks, resulting in the depletion of the floating stocks from the present levels of 25,000 tolas of gold and 250 bars of silver. In particular, the demand from Gujarat side was expected to increase considerably, following the State Government's decision to exempt, with effect from the 2nd inst., sales of bullion and specie, as well as articles made of gold and silver (of fineness not less than 75 per cent.) from the retail sales tax. Such exemption will not, however, be granted to articles made of gold and silver containing precious stones or pearls (whether real, artificial or cultured) of a value not exceeding one-tenth of the value of such articles.

The *Bhadrapad* settlement (September) in gold met with good support and advanced from Rs. 131.25 on Wednesday last week to Rs. 132.25 on Friday and yesterday. It, however, eased to Rs. 131.62 today before recovering to Rs. 131.75 towards the close. The net rise over the week was 50 nP.

Ready gold moved up from Rs. 132.50 to Rs. 133.12 yesterday and, after declining to Rs. 132.50 today, finished better at Rs. 132.62. The premium commanded over the *Bhadrapad* settlement today was, of course, lower at 87 nP, as against Re. 1.25 last week-end.

In silver, *Bhadrapad* settlement (September) ruled distinctly firm, the quotation rising from Rs. 220.50 to Rs. 223.81 yesterday. At this level, profit-taking set in and the settlement fell to Rs. 222.62 today. The closing was a shade higher at Rs. 222.68. Business in *Aswayuj* settlement (October) commenced at Rs. 222.62. The settlement fluctuated between Rs. 222.68 and Rs. 222.12 before finishing at Rs. 222.19.

Ready silver began the week at Rs. 221.31, as against the previous closing of Rs. 221.75, and strengthened to touch a high of Rs. 224.31 yesterday. After moving down to Rs. 222.68 today, it finished better at Rs. 222.68. The net rise over the week was 93 nP. In view of the bull grip over the *Bhadrapad* settlement, not only was the premium commanded by ready silver over this settlement wiped off during the week but the ready rate was on par with the forward rate today.

Both ready and forward silver in the London bullion market continued unchanged at 79¼d. during the week under review also. Silver in New York, too, was unaltered at 91.375 cents. Ready gold in London eased from 249s. 11½d. to 249s. 10d., owing to the renewed firmness of the pound sterling *vis-a-vis* the dollar. The latest available world price for gold in London is $35.11½-$35.13½, same as last week.

The following table shows the trend of the market during the week under review:

	17-8-60 (closing)	High	Low	10-8-60 (closing)
GOLD				
Ready (.99 fine)	Rs. 132.62	Rs. 133.12	Rs. 132.00	Rs. 132.50
Forward:				
*Bhadrapad**	131.75	132.25	130.94	131.25
Sovereign	87.00	87.00	86.62	86.62
SILVER				
Ready (.996 fine)	222.68	224.31	221.12	221.75
Forward:				
Bhadrapad†	222.19	223.81	220.19	220.50
London:	16-8-60			9-8-60
Silver Ready	79¼d.	—	—	79¼d.
Silver Forward	79¼d.	—	—	79¼d.
Gold	250s.10d.	249s.11½d.	249s.9½d.	249s.11½d.
New York:				
Silver	91¼ cents	—	—	91¼ cents

* 5th September settlement. † 6th September settlement.

COTTON FUTURES FIRMLY STEADY

(From Our Own Correspondent)

BOMBAY, 17*th August*

Conditions in the cotton futures market remained unchanged over the week. The Jarilla August Contract continued to rule at the ceiling level of Rs. 820, although, in private, it was priced nine to ten rupees higher. For the first time, on the 11th inst., the fourth notice day, 100 bales of Cambodia cotton were tendered against the Contract. This had practically little effect on the price trend.

Attention of traders was focussed on the prospects of trading in new crop futures. The deliberations of the Sub-Committee appointed by the E.I.C.A. to evolve a balanced hedge contract for the new season beginning on 1st September were followed with interest. Although no final decision was announced, it was reported that, contrary to the expectation in some quarters, the Sub-Committee was in favour of keeping the basic staple length of the new contract the same as that of the current contract, that is, Moglai Jarilla 25/32".

The general disappointment of the cotton trade over the decision of the Government to maintain the *status quo* in respect of the floor and ceiling prices of cotton in the next season also, was given expression to by Mr. Madanmohan Ruia, President of the E.I.C.A., at the 82nd meeting of the Indian Central Cotton Committee held in the city this week. He made a vigorous plea for considering cotton price policy from a purely practical angle, namely, increasing the cotton production in the coming years.

In the spot market there was very little activity so far as indigenous growths were concerned, thanks to the prohibition of mills buying direct from stockholders. Moderate turnover was, however, reported in foreign styles. Spinners showed interest in L.S. cotton stapling 1" and 1⅛" to 1-5/32". East African B.P. 52, Mwanza and Syrian growths. Stray interest was also noted in Sudan cotton.

Provisional figures relating to consumption of cotton in the month of June show that Indian mills consumed 320,000 bales of Indian cotton and 118,000 bales of foreign cotton. The Indian cotton consumption figures show a drop of around 21,000 bales from the previous month and around 88,000 bales from the highest December figure of 408,137 bales. Foreign cotton consumption shows an increase of about 54,000 bales from the previous month's figure and 81,000 bales from the lowest November consumption of 37,028 bales. Total consumption of cotton during the 10 months of the season aggregated 4,259,926 bales—3,713,472 bales Indian cotton and 546,454 bales foreign—as compared with 4,215,263 bales during the same period last season.

Crop reports from the growing areas are very favourable. Gujarat, Khandesh, Berar, Moglai and Madhya Pradesh have had rains with breaks enabling farmers to carry on weeding operations. But sunshine for about a week to a fortnight would considerably improve prospects. So far the condition of the crop is excellent. Punjab and U.P. report almost dry and hot weather which has been very helpful for crop development; a small instalment of rains now, it is said, will accelerate the progress, which has been good so far.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

B.P. 52 1,400; El Paso 1,415; Mwanza 1,205; Syrian 1,125-50.

The Karachi cotton futures market after ruling distinctly firm during the first half of the week, turned easy in the later half. The earlier strength was due to speculative buying based on better export prospects and investment support induced by the low level of prices. The January contract rallied from Rs. 67-2 last week-end to Rs. 69-1 on the 12th inst. The March contract rose from Rs. 67-8 to Rs. 68-3. In subsequent sessions, however, futures came under pressure, banks to profit-taking and liquidation induced by bearish weather reports. Part of the earlier gains were wiped out and the Contracts closed showing net gains, over the week, of 9 to 15 annas. The January contract is currently quoted at Rs. 68-1 and the March contract at Rs. 67-9.

Cotton futures in Alexandria scored handsome gains during the week. Excellent spot advices and local trade covering were the strong points of bulls. Futures values improved in active trading.

Crop reports continue to indicate good crop progress and ideal weather conditions; water-supply is said to be adequate and insect infection negligible.

The latest available quotations—in tallaris per lb.—are as under:

Karnak: November 75.20; January 74.85; March 74.90; May 75.00.

Ashmouni: August 62.50; October 62.93; December 62.75; February 62.85.

With the 1959-60 cotton season almost at its end—the new season opens on 1st September—it is now possible to assess the result of the Egyptian authorities' efforts to balance sales between the East and West blocs. Over the last three years, the greater part of these exports have gone to Communist bloc countries.

Estimates are that in the current season, about 57 per cent. were taken by East bloc States, as compared with 67 per cent. last season. In the first half, as much as 55 per cent. was shipped to Western countries, but the proportion subsequently swung the other way through heavier purchases by the East, particularly the Soviet Union.

Overall sales are well up on last season: export commitments to end-July were 9,256,913 million kantars (a unit of approximately 100 lbs.), which was more than 1.25 million kantars above

last season's total. The greater part of this increase comprised sales to non-Communist countries, especially India, which this season is Egypt's third customer for cotton, after the Soviet Union and Czechoslovakia. Estimated total value of exports is about £E130 million, in which the proportion of processed cotton, in the form of yarn, piece-goods and textiles, has risen to more than £E7.5 million, about one-sixth up on last season.

The discount to be allowed on the new crop to purchasers paying in hard currencies is 6 per cent. A year ago, it was 28 per cent., but during the season it has been gradually reduced to 10 per cent. and 9½ per cent. this week.

While the 6 per cent. rate means that Egyptian cotton may be rather dearer than Sudanese, demand appears to be such that the authorities are confident that this rate is realistic. If bulk buying by the Soviet bloc in the new season were to send prices above competitive levels, this could be countered—at least in theory—for Western customers by manipulating the discount. Another official aim is reported to be to unify the regulations that control cotton-growing, marketing and selling in Egypt and Syria. A draft of proposed unified regulations is being prepared by the U.A.R. Ministry of Agriculture, in Damascus.

Futures values in the Liverpool cotton market receded during the week under review. Buying support was lacking, thanks to the small spot offtake and lower New York advices. Both the American and American type contracts declined in quiet trading marked by little outside interest. Trading in Sudan contracts was featureless. Prices remained unchanged. The latest available quotations—in pence per lb.—are as under:

American cotton one inch staple contract: October 22.40; December 22.15; March 22.15; May 22.25.

American cotton mixed growth contract: October 22.70; December 22.45; March 22.50; May 22.60.

Sudan: September 35.25; November 35.50; January 35.50.

After a slight advance, soon after the publication of the August crop report on the 8th inst., cotton futures in the New York market declined. The belief that there would not be any shortage of cotton induced a general selling spree. Reports that some mills were curtailing operations and excellent crop progress imparted further weakness to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	16-8-60	9-8-60	2-8-60
Spot	32.45	32.65	33.10
October	30.88	30.99	30.97
December	31.15	31.30	31.18
March	31.70	31.81	31.55

GROUNDNUT EASY

(From Our Own Correspondent)

BOMBAY, 17*th August*.

Distinctly easy conditions prevailed in the oilseeds market during the week under review. An important feature of trading was the halt in the rally of groundnuts and groundnut oil witnessed in the past several weeks. In fact, they suffered a distinct setback during the week, thanks mainly to persistent reports of quite favourable weather conditions in all the major producing centres and the consequent lull in the bullish fervour. The official trading in groundnut August 1960 contract, which had been suspended for the last one month —from 19th July to be precise—was revived with effect from the 16th inst., following drop in values below the ceiling level of Rs. 225. The trading in groundnut oil hedge contract, however, continued to be at a standstill. Conditions in the castorseed section were dull. Although there were stray export enquiries, the comfortable supply position and fears of heavy tenders against the maturing contract dampened the enthusiasm of operators. Linseed moved down, in view of the protracted absence of any encouraging overseas advices. Cottonseeds, too, moved down in sympathy.

During this week, the official crop estimate for linseed for the year 1959-60 has been published. The production of linseed fell by about 5 per cent., that is, from 454,200 metric tons in 1958-59 to 431,800 metric tons. The total area under linseed declined from 1.60 million hectares to 1.59 million hectares—a drop of just 1.1 per cent. The decrease in area during the current year has been reported mainly by U.P., Madhya Pradesh, and Bihar and is attributable to unfavourable seasonal conditions at sowing time. This decrease has been offset to some extent by the increase in area reported mainly from W. Bengal and Maharashtra. The decline in production during the current year has been reported by all the States except Madhya Pradesh. It is attributed partly to the decrease in area and partly to unfavourable weather conditions during the period of growth of the crop this year, as compared with last year. With this, official estimates of all the five major oilseeds are now available. Thus the total production of the five major oilseeds in 1959-60 was lower at 6.35 million tons, as compared with 6.91 million tons in 1958-59. To a large extent this decline in output accounted for the sharp increase in oilseed prices.

In the groundnut section, as already pointed out, conditions were depressed. It was reported that groundnut sowing this year was higher by about 25 per cent., as compared with last year. Weather conditions continued to be distinctly favourable in groundnut growing areas. At the same time, crushers and *vanaspati* manufacturers sought to buy only limited quantities, in view of the possibility of a further decline in prices. In these conditions, groundnut August contract, which was privately traded above Rs. 225 last week, came down subsequently; official transactions commenced on Monday at Rs. 224. Today they fell further to Rs. 221. February 1961 contract, which had wound up the week at Rs. 186.75, gradually drifted lower to Rs. 183.75. Nizam bold suffered a setback of Rs. 2.50 to Rs. 45.25. Coromandel also lost a like amount to Rs. 45.50. Oil ex-mill fell by Re. 1.12 to Rs. 24, after moving both ways in a narrow range.

Castorseed remained subdued mainly on account of the pressure of old floating supplies. Reports of some enquiries for castor oil from the U.S., the U.K. and some Communist countries did not, however, make any improvement in the sentiment. Castorseed maturing contract fell from Rs. 169.37 to Rs. 166.50. May 1961 contract was marked down by Rs. 3.75 to Rs. 166.25. Ready Madras receded by 25 nP to Rs. 33.87. Oil Commercial closed lower at Rs. 17.87, as against Rs. 18 last week-end.

Dull conditions prevailed in the linseed section. Linseed September 1960 contract reacted by 75 nP to Rs. 31.62 and May 1961 contract by Re. 1.81 to Rs. 32. Bold ready was lower by 63 nP at Rs. 31.87. Linseed oil fell from Rs. 16.75 to Rs. 16.12.

In the cottonseed section, cottonseed February 1961 contract, which had finished at Rs. 93.75 last week-end, lost ground subsequently to close today at Rs. 89.75.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	17-8-1960	10-8-1960	3-8-1960
Groundnut	Rs.	Rs.	Rs.
August 1960	221.00	—	—
February 1961	183.75	186.75	—
Nizam bold	45.25	47.75	48.00
Coromandel ready	45.50	48.00	48.25
Khandesh quality	45.50	48.00	48.00
Oil ex-mill ready*	24.00	25.12	25.12
Railway receipts*	23.75	24.75	24.62
Castorseed			
September 1960	166.50	169.37	173.75
May 1961	166.25	170.00	—
Ready Madras	33.62	33.87	34.87
Ready Kanpur	32.12	32.75	33.75
Oil B.S.S.†	19.00	19.25	19.75
Oil commercial†	17.87	18.00	18.31
Linseed			
September 1960	31.62	32.37	33.47
May 1961	32.00	33.81	—
Bold ready	31.87	32.50	33.37
Oil ready†	16.12	16.75	17.12
Cottonseed			
September 1960	157.50	—	—
February 1961	89.75	92.75	92.50
Niger seed	38.00	38.75	39.00
Kardi seed	24.50	24.75	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 500 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

BEMBERG YARN MOVES UP FURTHER

(From Our Own Correspondent)

BOMBAY, 17*th August*.

There was a further marked rally in Cupressa Bemberg yarn (60×2) during the week under review, thanks to buying spree which stemmed from hopes of an appreciable increase in prices in the next few weeks. The hopes were based on the news that several handlooms and powerlooms were currently consuming more of this yarn in the place of other synthetic fibre yarns. Reports regarding a cut in supplies of art silk yarn by indigenous producers also fanned the bullish fervour in Bemberg yarn. In sympathy with art silk yarns, staple fibre yarns also tended to look up. Cotton yarns, however, encountered selling on fears of a downward revision in the mills' wholesale prices as a sequel to the efforts of the Indian Cotton Mills' Federation.

The Federation has, in consultation with the Southern India Millowners' Association, Coimbatore, fixed new prices for yarn as is indicated below:

(In Rs. per bundle of 10 lbs.)

Count group	*Net ex-mill prices of single hank yarn*	*Market rate of yarn sold in the 1st week of August* 1960	*October* 1959 *rate*
6s	13.57	..	10.65
10s	17.98	19.75	14.50
20s	21.90	24.25	18.25
26s	24.30	26.25	20.25
30s	25.44	27.00	21.85
40s	28.80	30.50	25.60

The revised prices are nett ex-mill and are for yarn spun from Indian cotton. They also apply to all outstanding contracts against which deliveries have not so far been made. The Federation has not fixed prices for fine and superfine counts, in view of the fact that the ruling prices are lower than those prevailing in October 1959. For yarn of the above counts spun from imported cotton or mixture of Indian and imported cotton, the prices have to be fixed by individual Associations in consultation with the Federation.

Under the impetus of buying orders, Cupressa Bemberg yarn (60×2) August delivery forged ahead from Rs. 1,952 to Rs. 2,012. October contract jumped up from Rs. 1,978 to Rs. 2,034. Spot Cupressa registered a rise of 13 nP, today's closing rate being Rs. 9.25. 150 Italy advanced by 10 nP to Rs. 6.25. 150 Japan gathered 3 nP to Rs. 6. 120 Italy was firm at Rs. 5.81. 120 Japan was done at Rs. 5.59. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade strengthened by 15 nP to Rs. 5.34. 120 Bt. cones 1st grade was fully maintained at Rs. 6.06.

Staple fibre yarn (40×2) August contract improved by Rs. 4 to Rs. 720. October position put on Rs. 7 to Rs. 737. Spot Kohinoors and Centurys were fully steady at Rs. 3.78 and Rs. 3.62, respectively, as also 80×2 Paramounts (imported) at Rs. 12.75.

In the cotton yarn section, ten counts Podars receded by 50 nP to Rs. 18. Gokaks dropped 25 nP to Rs. 18.75. Twenty counts Gokaks declined by 13 nP to Rs. 24.37, while Moderns met with special support and rose by 20 nP to Rs. 24.50. Deals were put through in forty counts at lower prices. Maduras easing by 75 nP to Rs. 31.25 and Minaxis by 25 nP to Rs. 31. Sixty counts Raghuvamshis and Finlays were dull, the former at Rs. 60.60 and the latter at Rs. 63.50. Among eighty counts, Moderns shed 50 nP to Rs. 73.50. Finlays were neglected at Rs. 82.82 and Mahendras at Rs. 82.82.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	17-8-1960	10-8-1960
Art silk yarn	Rs.	Rs.
60/1 Cupressa Bemberg (100 Kg.)		
August	2,012	1,952
October	2,034	1,978
60/1 Cupressa Bemberg spot (per lb.) ..	9.25	9.12
120 Japan (per lb.)	6.50	6.61
150 Japan (per lb.)	6.00	5.97
120 Italy (per lb.)	5.81	5.81
150 Italy (per lb.)	6.25	6.15
Staple fibre yarn—		
40×2 August	720.00	716.00
October	737.00	730.00
40×2 Kohinoor (per lb.) ..	3.78	3.78
40×2 Century	3.62	3.62
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.00	18.50
20s Gokak	24.37	24.50
40s Madura	31.25	32.00
60s Raghuvamshis ..	60.60	60.60
80s Modern	73.50	74.00

LESS DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *9th August*.

Sale No. 31.—Approximately 546,000 kilogrammes were offered in Sale No. 31 held today. Quality from the Nilgiris was fully maintained, whilst from other districts a few brighter invoices were seen. There was less general demand than last week. Best liquoring and improved quality highgrowns met with keen competition and sold at considerably dearer rates, but where quality was unchanged prices were firm. Good mediums and mediums were firm, but where quality showed an improvement they were dearer by 5-10 nP per kilo. Low mediums received good support at firm to dearer rates. The plainest types were irregular and generally slightly easier. Black leaf teas were well supported. Whole leaf grades sold well with O.Ps, highgrown F.Ps and pekoes dearer. C.T.Cs and Legg-cut teas received satisfactory support, but at slightly lower rates.

	1960	1959
	Rs.	Rs.
Low medium	3.65-4.00	3.48-3.59
Medium	4.00-4.15	3.75-3.97
Good medium	4.10-4.55	4.41-4.74
Quality	4.75-7.60	4.63-5.40

The average price realised in Sale No. 31 was Rs. 4.43 per kilo, as against Rs. 4.14 in the previous sale and Rs. 4.03 in the corresponding sale of 1959.

Dust Sale "DD".—A total of 204,548 kilogrammes were offered in Sale "DD" held on Thursday, 11th inst. There was good demand. Highgrowns were irregular, but sold well. Cleanly-sorted mediums were in demand at firm rates, but those with fibre received less attention and were easier. Residuals came to an irregularly easier market. C.T.C. types were sought after, but sold at lower rates.

Dust Sale "DD" fetched an average price of Rs. 4 per kilo, which compares favourably with Rs. 3.96 realised in the previous sale and Rs. 3.88 in the corresponding sale of last year.

Export Quota.—There are now sellers at 1½ nP per kilo with buyers scarce.

Colombo.—Just over 6 million lbs. were offered and met with a very strong demand. Dimbulas and Uvas, especially those below best quality, were 10-30 cents dearer. Mediums advanced 10-15 cents, whilst lowgrowns were 2-5 cents dearer. Plainest teas were steady.

London—North Indian and Other Growths.—In Monday's sale, high prices were paid for best liquoring Assams, but new season's Dooars came to a lower market. African teas were about steady.

Ceylon and South Indians.—There was a strong demand and prices were generally 1*d.* per lb. dearer for everything.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 32.—518,000 kilograms. Strong general demand, particularly for improved highgrowns, which are dearer with quality. Others irregularly 10 to 15 nP dearer. Whole leaf very strong and dearer."

TEA DUSTS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, 16*th August*.

Easier conditions prevailed during last week's sales for internal consumption. Dusts on offer totalled 20,056 packages. Prices for medium C.T.Cs declined by 20 to 30 nP. The best C.T.C. received little attention of buyers and prices were irregularly lower. Orthodox exportable teas gave way by 10 nP, but selected lots of the smaller and brighter liquoring teas met with good demand. Prices of legg-cut teas also gave way, although support was good. The quotations per kg., inclusive of excise duty, were: best Assam C.T.C. Rs. 5.90 to 6.25, medium Assam C.T.C. Rs. 5.45 to 5.75, medium Assam Rs. 4.40 to 5.00, and medium Dooars Rs. 4.34 to 4.60.

Leaf on offer amounting to 242 chests met with good demand at firm rates. Green teas were steady.

It had been earlier anticipated that the gardens in North-east India would make good the earlier loss in production on account of drought, in the subsequent months. In fact, when in June production showed a satisfactory improvement compared to May, encouragement was derived and the hope that as the season progressed the earlier loss would be wiped out was entertained. However, when the July output was known, it came as a rude shock, as it was as low as 71.51 million lbs., compared to 89.31 million lbs. in July 1959. In the four months to July, production totalled 172.65 million lbs., the shortfall compared to the corresponding period of the previous season being 30.63 million lbs. It was believed that the heavier rainfall contributed to the fall in July output. So far in the current month, rainfall has continued to be heavy.

In the week ended 5th August, U.K. tea stocks were 110 million lbs., representing a decline of 3½ million lbs. compared to the previous week. Now that tea arrivals from upcountry stations into Calcutta have started improving, trade circles looked forward to better conditions in the export auctions here. In fact, the decline in shipments to the U.K. in recent weeks has caused much inconvenience to loaders.

The weaker conditions in export auctions held here during recent weeks are in sharp contrast to the strong demand in Colombo auctions. In the last auctions held in Colombo, prices added substantial gains; the quality was also better. This contrast—in the last two export auctions here withdrawals were heavy—would suggest keener competition in the world market, and that export to the U.K. already on the decline, would continue to be so. Lower production in North-east India would not affect world output, as production so far in Africa, Indonesia, Ceylon and South India has already made good the loss in North-east India.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 16*th August*.

The feature of trading in the jute markets during the week under review was the welcome decline in prices of both goods and fibre. For the major part of the week, hessian was maintained firm, following the disclosure that the stocks of hessian as at the end of July recorded a handsome reduction. Buyers on behalf of both the United States and the United Kingdom accepted small quantities of hessian for prompt shipment. The Argentine lifted 10,000 bales against immediate shipment and Australian buyers also showed interest. The initial reaction in market circles to the very substantial increase in overall stocks of jute goods as at the end of July was one of shock. At 87,600 tons, the rise was as much as 5,600 tons. The break-up analysis disclosed that, while hessian fell by 3,500 tons to 31,700 tons, sacking goods rose by 9,500 tons. Miscellaneous goods, at 9,900 tons, recorded a fall of 400 tons. The interest shown by the U.S.S.R. contributed to the fall in hessian stock while the substantial rise in sacking was due to a Government order for July not having been lifted at that time. Following this information, prices of heavy goods after an initial fall recorded a modest recovery; but since activities in the futures market developed a strong bearish tendency prices for ready goods closed substantially lower on balance.

Hessian prices were steady for most part of the week; but the week-end news that U.S. burlap consumption in July at 58.9 million yards was lower by as much as 11.6 million yards compared to June affected sentiment, and over the week-end prices moved downwards. However, the reduction in prices was fractional, as it was thought that the U.S.S.R. would continue to show interest in hessian. The decline in stocks of other constructions by 400 tons was, it was thought, due to satisfactory shipments of cotton baggings. As the week progressed, July output figures were also re-leased. At 86,800 tons, the overall output was lower by 2,300 tons. Hessian production at 34,300 tons declined by 3,100 tons, but that of sacking, tons declined by 3,100 tons, but that of sacking, at 42,400 tons, rose by 300 tons. The number of hours worked remained the same, that is, 200. The increase in stocks in the face of a fall in output suggests that the offtake must have declined. It was noted that July-end burlap stocks in the United States totalled 265 million yards representing a marginal reduction of 1.2 million yards compared to June-end. At the present rate of consumption, that would be sufficient for three to four months.

The fact that an increase in stocks took place, despite a fall in output, brings to the forefront the need for a reduction in prices of goods as well as fibre. Prices of goods are high as prices of new crop fibre are high. Market circles, however, hope that provided the good weather conditions continued, the crop would be a bumper one, and that as the season advanced arrivals would substantially increase and that prices would give way. In fact, certain quarters are inclined to think that, considering the size of the crop, fibre prices would decline in such a way as to force the Government to formulate a price support scheme by permitting some exports as was done last year. Already arrivals in upcountry agencies are on the increase.

On Tuesday last, conditions in the goods market became strong as business in sacking took place with Australian buyers. Also, there was the announcement of a Government tender for 14,333 bales of B. twills in October and 3,333 bales in November. These two features eclipsed, to a certain extent, the news of the increase in sacking stocks. In consequence, ready B. twills were firm at Rs. 139.75, and following the substantial decline in hessian stocks with mills, ready hessian 40" 10 oz. was maintained at Rs. 47.25. On the following day, Australia continued to show interest and bought cornsacks for September. Ready B. twills scored to Rs. 140.40, while hessian 40" 10 oz. declined to Rs. 47.05. On Thursday, buyers were few and far between, on expectations that following increased fibre arrivals in the agencies fibre prices were bound to fall. B. twills declined to Rs. 140 and hessian 40" 10 oz. to Rs. 47. On Friday, Government accepted the tender, called earlier, to the extent of 18,000 bales. Since, however, bearish conditions prevailed in the futures market, prices for ready goods also gave way. Thus B. twills gave way to Rs. 138.40 and hessian 40" 10 oz. to Rs. 46.50. Over the week-end, the news of the fall in burlap consumption in the U.S.A. forced down hessian 40" 10 oz. to Rs. 46. B. twills eased to Rs. 135.75. The market was closed yesterday on account of Independence Day.

Following the news of increased arrivals in the agencies, fibre prices gave way. Also weather conditions continued to be good. October-November daissee bottoms closed at Rs. 99.25 per 100 kgs. against Rs. 101.75 earlier. September-October Assam bottoms at Rs. 97.75 were lower by Rs. 3.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 14*th August*.

Foodgrains sought lower levels during the week under review, following the U.P. Government's order suspending the wheat levy scheme and expectations of an early removal of zonal restrictions on wheat by the Centre. Slack demand and good *kharif* crop prospects also acted as bearish factors.

Wheat at Hapur eased by about 25 nP per maund to be quoted at Rs. 17 a maund for average quality and upto Rs. 18.25 for superior farm produce. Daily arrivals were slowly mounting, as a result of suspension of the wheat levy scheme, but arrivals were being hampered due to rains. Other State Governments, including the Punjab Government, were expected to withdraw restrictions on movement of and procurement for wheat.

Rice also sought lower levels, thanks to easy supply position and bearish trend in prices of other grains. The week-end prevailing prices were: *Sela basmati* Rs. 31 to Rs. 34; *ramajwayan* Rs. 24; *raimunia* Rs. 25; *mainpuri* Rs. 23; *gadda* Rs. 20.25 a maund.

Gram eased fractionally to be quoted now at Rs. 14.87 a maund. The old stocks sold by State Governments were quoted at Rs. 14.62 a maund. The main influencing factors were easy advices from Punjab, good *kharif* crop prospects and heavy local stock with trade estimated at 30,000 maunds. Barley was quoted 13 nP per maund lower at Rs. 12.62 and *bejhar*, too, was easy at Rs. 12 a maund for inferior quality and Rs. 12.62 for *moongia* variety. Maize crop prospects were very good and early crop harvesting would begin after a fortnight. *Guwar* was depressed at Rs. 12.50 to Rs. 13, while *jowar* continued to be quoted at Rs. 13 to Rs. 14 a maund.

Ready prices eased fractionally, as demand was almost dormant and, the local stock being heavy at 83 *khatties*, stockists were anxious sellers. Loading conditions were also restricted. *Arhar* eased by about 25 nP a maund and local stock of 25 *khatties* was lying flat. Other pulses were also quoted lower. The week-end prevailing prices were: Peas *dara* Rs. 11.63; farm white Rs. 13; peas *dal* Rs. 13.37; *arhar* Rs. 13; *arhar dal* Rs. 17.50 to Rs. 18.25; *urd* Rs. 19; *moong* Rs. 19 to Rs. 20; *massoor* Rs. 13 to Rs. 14 a maund.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 14*th August*.

Sugar ruled quiet during the week to be quoted at Rs. 111.50 per bag and in retail at Re. 1.09 per *seer* in the open market. The Government was reported to be in favour of keeping the *status quo* in regard to sugar control. Sugar output in 1959-60 at 2,425,000 tons is an all-time record for the industry and the Government was likely to allow 150,000 tons for export.

Sugar continued to rule quiet around Rs. 111 to Rs. 112 per bag in the open market at Muzaffarnagar, thanks to easy supply position following ban in crushing it to *boora*. The sugar allotted for ration was not being fully lifted.

Sugar was also subdued at Rs. 113 per bag in the Kanpur market, due to satisfactory supply position.

Khandsari was quiet during the week. Although demand was reported from the consuming areas of the South, loading facilities continued to be restricted. Stocks with producers were also poor. The week-end prevailing prices were: *Khandsari* inferior Rs. 30 to Rs. 32; superior Rs. 33 to Rs. 40.25; crystal Rs. 37 to Rs. 41; *boora* Rs. 37 to Rs. 40 a maund.

Trading in *gur* was almost at standstill, as there was no demand for wet quality stored in *kothas* and stockists were anxious sellers. Further, loading was very much restricted and, though local stock was modest at about 15,000 maunds, heavy stocks were reported in nearby smaller markets. The cane crop prospects were very bright, following recent rains in some areas, while, in other areas, rainfall was said to be deficient for the crop. The prevailing week-end prices were: *Gur* Rs. 16.12; *shakker* Rs. 18.50 per maund as against the corresponding price of Rs. 21.50 a maund a year before.

Gur was depressed in the Muzaffarnagar market also. Stocks were put at about 60,000 maunds, but demand was poor and loading was restricted. The cane crop in the region was good and week-end prices were: *Chaku* dry Rs. 20 to Rs. 20.25; *kotha* dry-wet Rs. 17.50 to Rs. 19; *chaku* wet Rs. 15.50 to Rs. 16; *rusket kotha* Rs. 8 to Rs. 10; *shakker* Rs. 19.50 to Rs. 20; superior Rs. 21.50 to Rs. 22; *dana minja* Rs. 16.50 to Rs. 19 a maund.

Future *gur* moved both ways during the week in heavy speculative bouts. Fagun opened at Rs. 13.64 on Monday last and after touching the highest and lowest at Rs. 13.79 and Rs. 13.47, respectively, closed at Rs. 13.68.

WORKING OF INDIA'S TRADE AGREEMENTS

(*Concluded from page* 341)

ment charges. Technical assistance, tours of a commercial or cultural nature, official delegations, maintenance of embassy, consulates and commercial representatives are also to be paid for. The trade agreements provide arrangements for effecting payments between contracting countries. A number of agreements provide for the payments in Indian rupees. The National Bank of the foreign countries concerned maintain rupee accounts with the Reserve Bank or the State Bank of India and several Indian commercial banks authorised to deal in foreign exchange.

No doubt the new trade and payment agreements recently entered by India are on a new pattern. They aim at correcting the persistent imbalance in India's trade with the agreement countries. The fact that a good proportion of exports to these countries is in traditional items and that exports in many of these items would have taken place even without these agreements should, however, be an eye-opener to India's foreign trade policy makers, when a review of the agreements comes up again. Such of the traditional items in which India has an assured market in agreement countries need to be kept outside the export schedules and their exports allowed in the normal trade channels, unless any of them find impediments in its movement. New items should be increasingly included in the schedules and the movement of their exports greatly encouraged. Causes for non-export or insignificant export of the innumerable items which are present in the export schedules should be explored, their exports given a fillip and their future performance kept under constant watch. By endeavouring the export promotion of new and non-traditional items, it may be expected that the present level of trade with the agreement countries will be significantly increased.—*All Rights Reserved*.

MEASURES TO RECOVER INCOME-TAX ARREARS

The total effective arrears of income-tax as on 1st April 1960 were Rs. 133.60 crores. This information was given in the Rajya Sabha last week by the Deputy Minister of Finance, Mrs. Tarkeshwari Sinha, in reply to a question. The Deputy Minister also placed the following statement on the table of the House, describing the measures introduced by Government to realise the arrears:

For the recovery of arrear taxes from the defaulter assessees, any one or more of the following steps, as provided in the Income Tax Act has been or is being taken, where necessary depending upon the facts and circumstances of each case:

(1) Levy of penalty under Section 46(1); (2) issue of a certificate under Section 46(2) of the Income-tax Act to the Collector who, on receipt of this, proceeds to recover the arrears of tax as if they were arrears of land revenue; (3) attachment of the defaulter's moveable properties by issue of distress warrants in big cities, where there is a provision for recovery of municipal taxes in this manner; (4) issue of a notice in writing under Section 46(5) asking the disbursing officer to deduct the arrears of tax from the salary of the defaulter at the time of payment thereof, if the defaulter happens to be a salaried employee, and (5) the issue of a notice in writing under Section 46(5A) asking any person from whom money is due or may become due to the defaulter to pay the I.T.O. forthwith, so much of the money as is sufficient to satisfy the arrears of tax mentioned in the notice.

For facility of recovery of arrear taxes by issue of certificates under Section 46(2) of the Income-tax Act, as indicated in (1) above, the Central Board of Revenue has taken steps and made arrangements with the State Governments for the appointment of Special Revenue Officers exclusively for income-tax collection work.

The world production of wool will go up by about one per cent. to 5,625 million lbs. (on greasy basis) in 1960, as compared with last year, according to the estimates of the U.S. Department of Agriculture. A small decline in the Australian and South African clips is expected to be more than made good by a record output in New Zealand.

The Pakistan Government proposes to establish, in co-operation with the International Monetary Fund and other agencies giving foreign aid, a "standby foreign exchange reserve fund" to meet emergencies. It also proposes to introduce some sort of foreign exchange budgeting for the period covering the Five-year Plan, in order to ensure an equitable distribution of scarce foreign exchange in the private sector.

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD.

CHAIRMAN, MR. A. N. HAKSAR'S SPEECH AT ANNUAL MEETING

PLEA FOR TAX RELIEF AND BETTER RETURN

HOW the electric supply undertakings had been caught between the contradictory provisions of the Income-tax Law and the Electricity Act was described by Mr. A. N. Haksar, Chairman of the Bombay Suburban Electric Supply Ltd., in the course of his speech at the Company's Annual General Meeting held at Bombay on Wednesday, 17th August 1960. The industry, Mr. Haksar declared, was not allowed to step up earnings to a level which would permit a higher rate of dividend, nor could it divert to the investor the benefit of tax savings as was possible in the case of other industries. Consequently, the amount effectively available for distribution to shareholders (reasonable return), he added, remained to all intents and purposes the same irrespective of the tax payable. Mr. Haksar emphasised the need for finding more funds to expand power production capacity and urged adequate tax relief and an upward revision of the reasonable return from the present level, namely, the Reserve Bank rate plus 2 per cent., to at least the Bank rate plus 3 per cent.

The following is the full text of Mr. Haksar's speech at the meeting:

"GENTLEMEN,

"This general meeting of your Company is the first to be held after the inauguration of the State of Maharashtra. We offer our felicitations to Mr. Chavan and his colleagues, with the hope that their efforts on behalf of the new State will be amply rewarded. They have our full support and assurance that we shall do all we can to further the prosperity of the new State and its people.

"This change in the political scene will mean greater potentiality for industrial development in the Bombay suburban area—an area in which your Company is playing an ever-increasing part. The rate of growth in power supply in the area has continued to be well above the normal, as will be seen from the percentages of increase during the last three years, which have been 16.5, 19.5, and 21.4, respectively. These are impressive figures and justify the confident hopes of those who had all along forecast rapid development in the suburbs. Careful planning over the last ten years has enabled your Company to anticipate load requirements. A lot of money was spent on intensifying the mains network and we are now reaping the benefits.

"Future development is likely to be even more impressive. This will place a greater measure of responsibility on your Company, and there is no doubt that the bold planning of the past and the efficiency of our staff will ensure that we are not found wanting.

Funds for Expansion

"The tempo of power development in your Company's area of supply will require an investment of about Rs. 45 lakhs per year during the third Five-year Plan period. A part of this will be met by internal finance to the extent of Rs. 25 lakhs yearly, which will accrue by way of depreciation, consumers' contributions towards service line charges and the development reserve permitted under the Electricity (Supply) Act. This means that we shall need about Rs. 20 lakhs per annum during the next five years. At present, development capital is being provided through bank finance and this will allow the Company to carry on for about two years without needing to tap further sources of capital. Thereafter, we shall have to consider what can best be done to raise new capital and it is to be hoped that by then the investment climate for electricity undertakings is more favourable.

"This brings me straight to the effect of the statutory control imposed on electric supply undertakings by the financial provisions of the Electricity (Supply) Act, and its impact on the problem of raising capital for power development. It is well known that, for some time, no electric supply company has had the confidence to enter the market for equity capital. Furthermore, the position has worsened with the change in the tax pattern introduced by the Finance Act, 1959, whereby the facility of 'grossing up' of dividends in the hands of shareholders was withdrawn. In addition, dividends paid to the shareholders have been made subject to deduction of tax at source at the prescribed rate of 30 per cent. Although the new tax pattern applies to industry as a whole, its effect on our industry has been particularly severe. For one thing, by virtue of the stringent control applied under the Electricity (Supply) Act, we are not allowed to step up earnings to a level which would permit a higher rate of dividend. Secondly, we cannot even divert to the investor the benefit of tax savings, as is possible in the case of other industries. Our reasonable return, in other words, the amount effectively available for distribution to the shareholders, remains to all intents and purposes the same, whatever tax is payable. Thus, we and the industry as a whole are caught between the contradictory provisions of Income-tax Law and Electricity Supply Law.

Tax Relief

"It was hoped, by way of interim relief, to be able to divert to the investor, in respect of the financial year ended 31st March 1960, the tax difference between 51.5 per cent. (the old rate of tax) and 45 per cent. (the rate at present in force). However, this suggestion has met with legal difficulties. Efforts are still being made to obtain relief in another form, and the most favourable proposal at present is to permit the undertakings, for the financial year 1959-60, a special appropriation representing the tax relief of 6¼ per cent. to be used for 'augmenting the machinery of production.' This interim relief, if it matures, is expected to be without strings and the incidental benefit to the investor, although not significant in terms of cash relief, will still go some way to improve the equity value in the industry.

"However, any interim relief can at the best only be a sop and, if the electric supply industry—investment in which, at one stage, was regarded as gilt-edged—is to regain its place in the heart of the investor, something more will need to be done. Ultimately, the best way to restore equity values—which alone will attract development capital—in the industry is for the reasonable return itself to be upgraded from the present level of the Reserve Bank rate plus 2 per cent. to at least the Bank rate plus 3 per cent. This proposal and other modifications to the electricity law, which will bestow on the industry some benefits, have been sponsored by the Federation of Electrical Undertakings of India, and I can only hope that, before the end of this year, the industry will see a Parliamentary enactment which will improve the investment climate.

Power Supply

"With all three units in the Trombay thermal station now in commission, the power supply position in the Bombay area has improved. With the expected commissioning of the first generating unit of 60,000 kw. in the Koyna hydro-electric power station by October 1961, the availability of power will become easier still, even allowing for rapid load development. This should mean that there will be progressive releases of bulk power to meet the requirements of industries and homes in licensee's areas. As a result, it will be necessary for your Company, in common with others, to obtain the necessary materials for development, such as cables, transformers, switchgear, meters, and so on, in order to pass on power to the consumers. I refer specifically to this point, as we have had considerable difficulties in recent months to obtain import licences for items which indigenous manufacturers are unable to supply. There is a danger that the enormous increase in generating capacity in the country and the money spent on it will not be used to the best advantage, if the materials essential for distribution are not available to the industry. Power denied to a needy consumer is progress withheld—power denied to potential exporters will cost the country dearly. One bright feature about this problem, however, is the very valuable assistance rendered by the Central Water and Power Commission to all power systems in obtaining much needed equipment. With power development having received a setback during the second Five-year Plan period because of the foreign exchange crisis, I hope that a greater measure of co-ordination will prevail during the third Plan period at all stages of power development, so that available power reaches the consumer.

Municipalisation

"Shareholders may naturally be worried at the resolution adopted recently by the Bombay Municipal Corporation suggesting the municipalisation of the Bombay Suburban Electric Supply Ltd. This is no new development. The first time such a proposal was mooted was in 1953 and, ever since, this form of agitation by the Greater Bombay Municipal Corporation has tended to be a recurring feature. Agitation of this nature obviously carries political overtones, often clothed in unknown and untested economic advantages which, it is claimed, would accrue to the suburban community. However, what is plainly not taken into account is the lower density of population in the suburbs, as compared with the city. This means that, for a given amount of capital expenditure on power distribution, less units will be sold in the suburbs than in the city at the present. As development of the suburbs takes place, the disparity will narrow until offtake in both areas will be comparable. When this happens, our rates will compare very favourably with those charged in the city. I would remind the agitators, however, that our rates have progressively been reduced since 1947 and this process will continue as load development gathers momentum in the coming years.

"In view of the regulations imposed on the electric supply industry, nationalisation or municipalisation, as a doctrine, may not carry much weight in official circles at the present time. In fact, it is the proclaimed policy of the Central Government that electric supply undertakings rendering valuable service should not be displaced merely for the sake of displacement. I hope I am right in saying, therefore, that the investor in the corporate sector of the electric supply industry need not worry too much about premature acquisition.

Accounts

"Turning to the accounts, the printed balance-sheet has been in your hands for some time, and I feel sure that you will agree that the results are satisfactory. I would like to add for your information that, in accordance with the financial principles embodied in the Electricity (Supply) Act, the clear profit actually earned for the year is equal to the permitted reasonable return.

"Another point of interest pertaining to the accounts on which I would like to make some observations is that, shortly before the accounts for the year were due to be finalised, the Supreme Court judgments on the series of test cases filed by the Income-tax Department on the legality of additional income-tax became available. These judgments ruled that the levy was not tenable. In consequence, the provisions in respect of additional income-tax made in the accounts amounting to Rs. 3,28,073 for 1953-54 and Rs. 3,55,460 for 1954-55 have been taken to the appropriation account. However, at the same time, adjustments in terms of the Electricity (Supply) Act had to be made by reopening the computations for the respective years where necessary further appropriations have had to be made, in accordance with law, to the statutory reserves. This means that not all the provisions, now written back, are available to the Company. However, I am sure that you will welcome the increase in the dividend this year, which has partly been due to the above-mentioned windfall. As last year, I regret that we must deduct income-tax, but, as I have tried to explain, electricity companies are in a difficult position. We cannot charge up the income-tax on your dividends to working as we could before.

"A reference has been made earlier to the interim relief which the electric supply industry may be able to obtain in respect of the financial year under review representing the tax saving of 6¼ per cent. accruing to non-regulated industries as a matter of course. In your Company's accounts for the year 1959-60, the appropriation seems feasible and, consequently, a sum of Rs. 1,06,860 has been set aside, subject to the requisite sanction being obtained from the State Government. The amount in question is included in the sum of Rs. 2,50,000 appropriated to the dividend equalisation reserve. It is likely that the special appropriation may only be approved subject to the amount being retained in the business. If such a stipulation is forthcoming, it may have to be transferred to a capital reserve later. If for any reason the limited relief indicated above does not materialise, the Company will be obliged to write back the sum of Rs. 1,06,860 in due course.

"During the year under review, Sir Chunilal V. Mehta resigned his seat on the Board of your Company and, in May 1960, Mr. M. S. Captain did likewise. The services rendered by these two gentlemen to your Company have been very valuable and the Board have recorded their grateful thanks to them. I have no doubt that you, gentlemen, would wish to associate yourselves with the sentiments expressed by the Board.

"The report makes a reference to certain demands made by the Staff Union having been referred to the arbitration of Mr. H. R. Gokhale. The procedure of voluntary arbitration adopted by your Company in matters relating to disputes with the Staff Union has received wide appreciation."

Note: This does not purport to be the proceedings of the annual general meeting which can be seen by any shareholder on request.

MARKET GOSSIP

(Concluded from page 323)

by the Chancellor have been fairly successful in "reducing the overstrain on labour and capacity, without inducing a recession;" and (4) there is still a boom in the capital market and unemployment is almost negligible. In fine, if a cut in the British Bank rate is at all effected, it will only be to oblige the U.S. in helping it to arrest the drain on gold reserves. Some, however, argue that such a gesture is likely to be interpreted as an unwarranted exaggeration of the U.S. difficulties.

Quality Of U.S. Cotton

The promptness with which the U.S. cotton trade has responded to complaints, voiced in some importing countries, that the quality of U.S. cotton is deteriorating, is an example worthy of emulation in every country that has something or other to sell. Steps have already been initiated by the American Cotton Shippers' Association to remedy some of the defects detected in their cotton by spinners and other users. Reports from Memphis state that seldom has the cotton trade as a whole been more determined on a project than is now the case—that every possible step should be taken to improve the quality of the American staple. Every one is talking about it and at the same time doing something.

Action is being channelled through a special quality improvement committee, set up by the aforesaid Association. It is recognised that the complaints received have been too numerous for the trade to offer excuses. Nearly every American cotton man, who has visited Europe this season, it is said, has been assailed by merchants and spinners, who have been "very disappointed" at the character and grade of the raw cotton received from the U.S.

Most of the complaints are that the fibre had been damaged by poor harvesting and ginning operations. On this account, the National Cotton Council is giving high priority to programmes aimed at solving these particular problems. Agricultural colleges, private research groups, machinery manufacturers and others are collaborating in an effort to improve the general level of mechanisation, which is held to be responsible for the faulty fibres.

The Council has issued a leaflet, entitled "Quality is U.S. Cotton's Biggest Asset—It must be protected," which sets the problem fairly and squarely before the farmer and the ginner. In a competitive world, where many other countries are now treading the cotton growing path on the heels of the United States, it says, the American producer can no longer rest on his laurels.

ROLE OF MONETARY POLICY

(Concluded from page 328)

"In order to reduce the pressure of monetary demand, the Bank has adopted both general and selective credit controls. The effect of these on the price level should not be overemphasised. Mere monetary techniques cannot basically solve the situation created by a shortage of supply in relation to demand. But it would not be correct, on the other hand, to take the view that monetary controls have no effect in preventing an aggravation of the price situation. In so far as inflationary pressures are generated by the speculative holding of stocks of strategic commodities like foodgrains by dealers, middlemen and even producers, with the assistance of bank finance, as was our experience in India in the last few years, any restriction on the availability of bank credit to those sectors would prevent a continuing distortion of the price level. It is true that there is always the possibility of a switch-over of speculative credit demand from the bank to non-bank sources; but the entire chain of credit joining the wholesalers, retailers and so on is getting more and more linked up with the flow of credit from the banks. In the recent past, the Reserve Bank has taken a fresh series of credit restraint measures. While continuing the selective controls on advances against foodgrains and groundnuts, modified in the light of trends in production and prices of these commodities, the Bank invoked, for the first time on 11th March 1960, its powers to vary the reserve requirements and asked the scheduled banks to maintain with it additional balances equivalent to 25 per cent. of the increase in their total deposit liabilities since that date. These reserve requirements were further raised with effect from 6th May to 50 per cent. of the increase in demand and time liabilities since that date. Being the first occasion on which this particular technique has been used, it is not surprising that there are loose ends still to be tied up. Moreover, banks could not be expected to welcome a measure which hampers them operationally at a time when demand for credit is high. But, in general, it could be said that there is ample justification for the use of the instrument of varying reserve ratios for the short-term purpose of reducing the pressure of monetary demand. The special advantage of this instrument is that it is flexible and capable of easy variation or reversal in the light of developing circumstances.

Bank Rate

"The question has recently been discussed in financial journals and newspapers as to why the Bank rate did not figure in the 'package' of measures initiated by the Reserve Bank in recent months. As a subject for discussion in public by a person holding the Governorship of the Reserve Bank, the question has obvious embarrassments. But I think it might be useful if I offered some general remarks. For the considerations in reaching a decision in this matter are somewhat more complex than is generally supposed. I propose to set out only the most important of these, and only very briefly; for, obviously, I could not use this forum for a discourse on the Bank rate in India.

"The traditional primacy of the Bank rate as a weapon of the central bank rests on its effectiveness for regulating the movement of foreign short-term funds and on its efficacy as a pace-setter for other market rates of interest—both short- and longterm rates—on which the decisions to invest both in fixed assets and inventories are supposed to depend. It is also regarded as a warning signal to the banking system, in particular, and to other financial institutions, in general, regarding the state of the economy and the direction of official thinking, so that the financial institutions might suitably modify their lending policies. There has been a great deal of controversy about the efficacy of the Bank rate in western countries; even expert bodies like the Radcliffe Committee have not spoken unequivocally about it. Sometimes emphasis has been laid on the effects on the domestic economy of changes in Bank rate, but, more often, the impact is considered to be more significant on the external accounts of a country, especially as regards the movement of international funds.

"In India, the Bank rate instrument is of relatively small significance so far as the movement of foreign short-term funds is concerned. As regards the impact on the domestic economy, it has to be noted that a large segment of fixed investment under the Five-year Plans is undertaken in the public sector. While it is no doubt true that an upward adjustment in Bank rate would raise the cost of Government borrowing, it does not necessarily follow that the increased cost of funds for the Government would tend to reduce public investment for the simple reason that this is governed primarily by the larger planning strategy implicit in the acceptance of certain objectives relating to growth. On the other hand, it is not unlikely that, with a different complex of interest rates, the pattern of Government investment, as distinct from its total size, might turn out to be somewhat different. The fixed investment in the private sector, too, is not very much influenced directly by changes in the Bank rate, though probably the effect is more pronounced than in the case of public sector investment. Moreover, there are direct physical means of controlling overinvestment in the private sector such as the use of the Capital Issues Control and Industries (Development and Regulation) Act, as well as certain fiscal devices.

Usefulness of the Weapon

"The usefulness of the weapon of the Bank rate under Indian conditions is, perhaps, of greater significance in its impact on inventory accumulation, as a not inconsiderable amount of bank credit is utilised for that purpose. However, the effect of a variation in the Bank rate in this sphere is largely conditioned by the general outlook or prospect regarding the future course of prices; and the Bank rate itself may not be expected to achieve significant results.

"The above arguments which have been set out only in the briefest outline merely come to this: that, in a planned economy which has a large public sector of investment and where Government have a battery of powers of direct regulation of investment, the efficacy of Bank rate changes is far less clear than it is in industrially advanced countries with a 'free' economy. But it would be fallacious to argue that changes in Bank rates are out of place in Indian conditions. These conditions themselves, from the point of view of monetary control, are undergoing steady change partly because of an increase in monetisation and an extension of the organised money market and partly because changes are constantly taking place in the demand for money and its supply with repercussions on the general structure of interest rates both long-term as well as short. In a mixed economy, which is moving with some speed, it would be a mistake to adopt rigid attitudes on measures of monetary control. All I am concerne to point out is that the issues are less clear c than in the highly developed and integrated mon tary economies of the West, and decisions w have to be taken very carefully in the light situations from time to time, often on a balance considerations not all of them mutually compatibl

Commercial Banks

"I will now deal with one or two problem more specifically concerning commercial bank Since we last met, a few banks have closed the doors. This, unfortunately, is not unusual, f every year, some banks have been failing. Th banks that have closed their doors have been sma banks and, purely statistically, the situation ha not been alarming; but the statistics, of course do not tell the whole story. For, whenever a ban fails, even a very small one, a certain amount o human distress is bound to be caused. This pro blem has now acquired considerable public atten tion, because, recently, there have been two ba cases and one of them has been the worst failur since 1947.

"I do not think it would be appropriate to us this forum to discuss the development of Reserv Bank policy in regard to a particular banking in stitution, but I think it would not be out of plac if I made some general remarks about the respon sibility of the Reserve Bank in the matter of th operational efficiency and integrity of commercia banks. The Reserve Bank has been given pretty wide powers to inspect, give advice and issue directives. All this, however, is no substitute for operational responsibility. Commercial banking consists in the acceptance of deposits and their outlay, largely in advances to customers. This involves, among other things, assessing the creditworthiness of individual constituents, keeping track of their business, checking securities by, for example, inspecting stocks in workshops and godowns and generally enforcing numerous internal controls and checks. I do not suppose anyone suggests that the Reserve Bank should carry out these responsibilities over nearly 4,000 branches in the country; apart from the sheer physical difficulty, that would be taking over a direct and continuous administrative responsibility which rests on the commercial banks.

"The Reserve Bank's powers of control are not and cannot be a substitute for the efficiency and integrity of the management themselves. The need for efficiency and integrity can be forcefully pointed out and they can be encouraged and sustained, but they cannot be created by orders of the Reserve Bank. In the final resort, if a management does not listen to advice and chooses to be recalcitrant, and it is felt that continued pressure would be useless, the Reserve Bank would have no option but to force the bank to close down in the interests of the depositors. But this decision involves a very delicate balancing of several factors, some of them operative and some psychological, and timing is particularly important. It is easy enough to be drastic. But, surely, it is better to nurse an institution and bring it to a healthy state if there is any reasonable hope of doing so. It has, in fact, happened in a number of cases that persuasion and pressure applied persistently over some years have resulted in a bank reforming its ways and putting its house in order. Thus, a Board of Directors who had implicit confidence in a Chief Executive or had allowed him largely to run the institution has realised, as a result of Reserve Bank inspection, that the affairs were getting out of hand and has taken earnest steps to put them right. Such a reform takes patience and time, for the recall of weak advances is a time-consuming process. In some cases, a Board has itself been guilty of mismanagement and pressure has proved useless. There are cases in between. Moreover, the gravity of cases varies a great deal. In some cases, the deposits are intact; only the capital and reserves have been eroded, partly or wholly. In some cases, in addition to the loss of capital and reserves, deposits have been affected to the extent of less than 5 per cent. In some cases, the percentage may be even somewhat higher. There is, in other words, a considerable variation of pattern, and there can be no automatic or rule-of-thumb formula in the matter of the precise action that should be taken or its timing. I should like to make it clear, lest all this sounds alarming, that I am talking only of those banks which are not satisfactorily run and that, in terms of total deposits, such banks form only a very small fraction of the Indian banking system.

Deposit Insurance

"The question of protecting the interests of the small depositors who are specially hard hit by bank failures naturally causes a great deal of concern. The provisions of the Banking Companies Act are unsatisfactory if only because it has been found in practice that liquidation proceedings are unduly prolonged. It has been suggested from time to time in certain quarters that it would be useful to introduce in our country the system of deposit insurance which was introduced in the U.S.A. after the extensive bank failures in the early 'thirties. In that country, banks even now fail, in spite of inspection by several agencies, but the failure is today wholly insignificant or even microscopic in relation to the banking structure as a whole. A system of deposit insurance for India was recommended in principle by the Rural Banking Enquiry Committee in 1950. In 1954, the A. D. Shroff Committee on the financing of private industry recommended that the system should be adopted if, after detailed examination, there was consensus of opinion amongst banks in the matter. The view then adopted by the Reserve Bank was that the time was not yet ripe for introducing a system of deposit insurance. Whether the suggestion should now be implemented is a question that is being examined again by the Reserve Bank in consultation with the commercial banking community."

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 12th August, 1960

BANKING DEPARTMENT

Liabilities	Rs.
Capital paid-up	5,00,00,000
Reserve Fund	80,00,00,000

William Blake.

VOL. CI. No. 2578 BOMBAY, 27th AUGUST 1960 PRICE Rs. 2

COMPANY LAW AMENDMENT

MUCH public interest attaches to the decisions of the Joint Committee on the Companies Act (Amendment) Bill not to make any changes in the clause in the original Bill relating to contribution by a joint-stock company to any political party or fund. There has been considerable opposition to this provision, which permits companies to contribute to political parties, for it is held that it will vitiate the successful working of democracy. Nearly all the minutes of dissent from members who represent different shades of political opinion have unanimously held that companies should be prohibited from making such contributions. In the interests of political and constitutional justice, as well as the future of free economy itself, it seems necessary that the question should be examined in an impartial manner.

The ball of controversy over the aforesaid question was set rolling three years ago, when Mr. Justice Tendolkar permitted the Tata Iron and Steel Company, Ltd., to alter its Memorandum of Association so as to enable the management to contribute to the funds of political parties. Examining the contention of a shareholder, who opposed the change on the ground that it was contrary to public good and good government, His Lordship said that the shareholders were the best judges of their interests and they had passed a special resolution sanctioning the alteration without dissent. Discussing the larger issues of public policy, His Lordship conceded that the power of making contribution to political parties was obviously capable of being used to corrupt political life in the country. But His Lordship drew a line of distinction between supporting a candidate or party with whose policy the company was in substantial agreement and supporting a party or candidate who would, for a consideration in the shape of the contribution from the company, support the policy of the company irrespective of the view of the party or the candidate concerned. To give publicity to the amount of donations to political parties, His Lordship said, was a wholesome safeguard against the tendency to corrupt political life in the country. This decision was later upheld by the Chief Justice, Mr. M. C. Chagla, and Mr. Justice Desai who observed that a company could contribute to funds of political parties, if, in its opinion, such parties served industry in general and the industry of the company, in particular. At the same time, Their Lordships drew the attention of Parliament to the danger inherent in permitting companies to make contributions to political parties. Their Lordships held that the least that Parliament could do was to require the companies to get the court's sanction before making contributions to political funds. This was an odd view and it amounted to conferring unnecessary powers on the judiciary.

The Companies Act Amendment Committee (Chairman: Mr. A. V. Viswanatha Sastri), on the report of which the present Bill is based, discussed the question at some length. It rejected as undesirable the suggestion that companies should be called upon to seek prior approval of the court to make any contributions which they may like to give to the funds of any political party. It said: "Such application would be a source of embarrassment to the judges and it is also not desirable that courts should get involved in political or quasi-political controversies." On the wider political significance of the contributions, it said:

"Whether lobbying and financing of political parties or candidates for elections should be prohibited in the interests of the public is a broad question of public policy. It has been the subject of special legislation in America. The case of companies could not be considered in isolation and contributions from other sources, such as bodies corporate, partnerships, societies, trusts, trade unions and even from individuals might have to be regulated or prohibited by a comprehensive enactment. This, however, is a matter which falls outside the scope of the Companies Act."

Accordingly, the Committee recommended that "full information relating to contributions with particulars as regards the parties or organisations to which such contributions are made and the amounts of such contributions should be incorporated in the accounts and circulated to the members before their next general meeting." This view is reflected in the present Bill which provides that every company should disclose in its profit and loss account any amount contributed by it under Section 293(1)(e) to any political party or for any political purpose to any individual or body during the financial year to which that account relates, giving particulars of the total amount contributed and the name of the party, individual or body or to whom such amount has been contributed; this provision is also made applicable to private companies. Briefly, Section 293(1)(e) provides that the board of directors of a public company or of a private company which is a subsidiary of a public company shall not, without the consent of the company concerned in general meeting, contribute to charitable or other funds any amount exceeding Rs. 25,000 or five per cent. of its average net profits as determined by Sections 349 and 350 during the three financial years immediately preceding, whichever is greater.

The Bill thus incorporates the need for publicising contributions to political parties, a point emphasised first by Mr. Justice Tendolkar and later reiterated by the Viswanatha Sastri Committee. It, therefore, appears to us that the majority of the members of the Joint Select Committee have done well to leave unimpaired the existing provisions in the Bill. It is true that money can corrupt political parties. But the danger can be easily overemphasised. In the first place, it is not money alone that can corrupt a political party. Power corrupts it even more. In a democracy, the power of the purse is less dangerous than low of power. Political power is ultimately derived from mass support. It is idle to pretend that a little more money can help a party win it or a little less will ruin altogether a party's chances of victory in the hustings. In any case, the obvious remedy for any tendency to corrupt political parties through contributions is to give ample publicity to the whole arrangement, leaving it to the public to judge whether the amounts are large enough to corrupt parties. There is, however, a case for specifically preventing credit institutions, like banks and insurance companies, from contributing funds for political purposes, because the resources of these institutions are derived mostly from either depositors or policyholders as the case may be. It is needless to add that Government-owned companies should be barred from making such contributions. Another safeguard to be made is that, in the case of companies in which the Government has representation or the Life Insurance Corporation has a say, the power for voting on the relevant resolution should be confined only to private sector shareholders.

Secondly, it is stretching the scope of the Companies Act a little too far to expect it to perform the task of safeguarding democracy through prevention of political corruption. Democracy is a way of life too rich to be contained in a simple isolated piece of legislation. A better procedure, as the Viswanatha Sastri Committee suggested, will be to bring in comprehensive legislation which will embrace all aspects of the problem of preventing political corruption, including the diversion of trade union funds for extra trade union purposes and the receipt of funds from foreign countries for seemingly innocent but really subversive purposes. Thirdly, any prohibition against contributions by companies implies that shareholders and the managements are not the best judges of what is good for them. Cannot the board of directors be trusted to do what, in its judgment, is best for the company? If it feels that it is desirable that it should contribute to the funds of a political group which will serve industrial progress in general and its own industry in particular, why should it be prevented from supporting that group, subject, of course, to the consent of shareholders? Finally, if political parties genuinely feel that corporate funds will corrupt them, they can, instead of merely raising the cry of "democracy in danger," evolve for themselves a code of political conduct which could eradicate the corrupting influence of such contributions. The remedy lies in their hands.

In the welter of public controversy over contributions of funds to political parties, the serious inroads into corporate independence contemplated by the Bill have received less notice than they deserve. The amended Bill provides for power to the Central Government to order a special audit of a company's accounts in case the affairs of that company have not been managed in accordance with sound business principles. As Mr. M. R. Masani, in his minute of dissent points out, the power to appoint a special auditor is unnecessary, apart from being unjustified, because, under various sections of the Act, the powers of investigation of companies, the right of minority shareholders to approach Government in matters of management and the very wide powers conferred on registrars, coupled with the audit by the company's own auditors, fully safeguard the business interests of the companies. Again, although the normal business of an investment company is to buy and sell shares, such a company is sought to be prevented from making investments in other bodies corporate in the "same group" beyond 20 per cent. of the subscribed capital. Further, the amended Bill empowers the Government to call for information regarding the terms and conditions of appointment of selling agents of a company where it has more than one selling agent in any area. Referring to this amendment, Mr. Masani says: "This is really a form of bureaucracy run amuck and places Indian industry in an unenviable position, particularly as foreign competitors may appoint selling agents on more realistic terms and thereby capture the trade to the detriment of Indian industrial interests." Clearly, the whole philosophy behind these and other changes made by the Select Committee is that the shareholders and the management know less about what is good for them than the Government. But this is a philosophy which is not conducive to the development of an investing class with a certain maturity in economic judgment and a willingness to face risks.

SCHEME FOR INSURANCE OF BANK DEPOSITS

By S. J. Utamsing, M.Com., C.A.I.B. (London)

THE recent failure of the Palai Central Bank Ltd. has raised a host of problems for both the depositors and the Government. It has caused considerable distress to the depositors and has led to political repercussions and consequent pressure on the Government to come to the succour of the Bank's creditors. The Opposition has used it as a weapon against the Government and has criticised the Reserve Bank of India, which has wide powers under the Banking Companies Act, for its failure to take any steps to help rectify the affairs of the Bank during the several inspections conducted in the course of the last ten years, when irregularities came to their notice and for their failure to render assistance to the Bank and prevent its closure.

It is good bankers, not merely good laws, that constitute sound banking. The powers in the hands of the Reserve Bank of India cannot alone lead to sound banking. It is the directorate, the executives and the personnel running the affairs of a bank, who can ensure the safety of the depositors' funds and the solidity of the bank. No amount of laws or powers, however wide they may be, can be a substitute for good management. An unscrupulous board of directors and a dishonest management can ruin any institution. The legal powers in the armoury of the Reserve Bank of India and the moral persuasion that the latter brings to bear on some of the institutions do help, but, in the case of a persistently erring management, these will prove futile, as they have been shown to be ineffective in the case of the above-named bank. Proper selection of borrowers and an honest and vigilant management, coupled with existence of good laws, can ensure a smooth and efficient working of banks in the country.

The economic growth of the country very much depends on the safety and soundness of its banking organisation. It is the banks that nurse industry and commerce. It is, therefore, the duty of the Government or the Reserve Bank to protect the banks not only for safeguarding the interests of depositors and keeping the lifelines of commerce and industry open, but for maintaining its economy in a healthy state. For achieving these objects, nationalisation of banking is not the answer, for banking flourishes best under private enterprise, which generates incentive and directs individual skill and energy into the business of banking rather than under controlled and planned methods which distort and prevent its free and full growth.

The insurance of bank deposits is a suggestion which is worthy of consideration for the protection of the interests of depositors. The fundamental object is to inspire confidence among the people in the banking structure and also create a psychological effect in the mind of the depositor about the safety of his deposits by offering him protection against loss in the event of bank failure. Deposit insurance operates not only to protect the insured depositors but, what is more, to make their deposits promptly available on the closure of banks. At present, depositors of failing banks suffer heavy losses and any realisation, partial or full, is effected after a prolonged period necessary for liquidating the assets. In the meantime, it causes considerable distress to the average depositor. Introduction of bank deposit insurance on a nation-wide basis will provide a high degree of protection to depositors previously unknown in the history of Indian banking.

Indian banking has had an unplanned and unco-ordinated growth. Its structure has been hybrid. Besides a monolithic organisation like the State Bank of India and its eight subsidiaries in the public sector, there are several Exchange banks and Indian commercial banks in the private sector. Among the Indian banks, except for the big and a few other banks which are run on sound lines, many of the smaller banks are not conducted on right lines. The major cause of deterioration among the latter banks is mismanagement and the unscrupulous policies followed by them in the matter of advances and investments, inadequacy of capital and poor asset conditions resulting in erosion of capital and reserves and even, to some extent, of deposits. For rectifying these defects, the Reserve Bank of India will have to assume larger powers, if necessary, to deal with recalcitrant elements which do not heed the warnings administered to them. Other measures like the amalgamation of weaker units with the stronger banks like the State Bank of India or the large commercial banks on a certain basis will also have to be considered, in addition to the scheme for insurance of bank deposits.

The Rural Banking Enquiry Committee and the Committee on Finance for the Private Sector (1954) considered the question of introducing deposit insurance scheme in India, but it was felt that the scheme was premature and therefore it was dropped. It is common knowledge that, in a country like the United States of America, there is a scheme of deposit insurance which is worked under the ægis of the Federal Deposit Insurance Corporation created by the Banking Act of 1933. If in such a rich country insurance of deposits is found necessary, it is much more so in a country like India, where bank failures are frequent. A vast majority of the depositors in India are middle-class people and failure of a bank involves thousands of families into ruin and exposes them to disturbing leftist forces. A contented man with security of savings is a very active and stabilising force in the economic and social structure of the country. Besides, bank failures or closures create economic disturbances which shake public confidence in the financial structure of the country and do not augur well for the promotion of savings and capital formation which are so essential during the periods of the Five-year Plans. A scheme is, therefore, necessary to save the public from any catastrophies of the type created by the closure of the Palai Central Bank.

For the purpose of this article, we shall confine our main attention to the insurance of bank deposits. The following scheme is suggested and many of its features are based on the model adopted by the American banking system:

In the U.S., the Federal Insurance Corporation was created by the Banking Act of 1933, following numerous bank failures during the Depression preceding it and earlier. The Corporation started functioning from 1st January 1934, with a capital of $289 million, of which $150 million were subscribed by the Government and $139 million by the Federal Reserve Banks. The capital stock was subsequently retired in full in 1948 from its earnings. The Corporation has even now the power to borrow up to the extent of $3 billion from the U.S. Treasury, though there has been no need to resort to such borrowing, as they have a Fund of approximately $2 billion.

A special corporation should be floated, say, the Deposit Insurance Corporation of India Ltd., as an independent agency of the Government of India, with a capital stock of Rs. 5 crores, subscribed by the Government, the State Bank of India, the commercial banks, the Life Insurance Corporation of India and the apex co-operative banks. The Corporation should have the power to borrow up to Rs. 10 crores, if necessary, from the Government. The management of the Corporation should vest in a Board of Directors derived from the above subscribers and two representatives of depositors. The Chairman of the Board of Directors may be appointed by the President of India and should be a nominee of the Government.

The deposits of all the scheduled banks must be insured and should be entitled to the benefits of insurance under this scheme.

The deposits of all the insured banks will be insured up to a Rs. 10,000 limit for each depositor, including the first Rs. 10,000 in excess of deposits of Rs. 10,000. This will cover the bulk of the total deposits of all the banks. The non-scheduled banks may be admitted to the benefits of the scheme, if they comply with the requirements of the Deposit Insurance Corporation of India with regard to fundamental rules about the conduct of the banks, liquidity ratios, adequacy of capital, quality of management, types of advances and investments, etc. The membership of the non-scheduled banks should be voluntary, but, once admitted to membership, they would have the status of insured banks.

A premium at the rate of one-tenth of one per cent., that is, at 10 nP per Rs. 100, of all the deposits insured should be levied by the Corporation. The insurance cost should be borne by the banks and not passed on to the depositors. This will result in a slight increase in the cost of borrowing of such banks to the extent of the insurance premium paid by them in addition to the interest allowed on deposits. With rising profits of the banks owing to increased industrial tempo in the country and the larger deposits accruing to the banks, it should not be difficult for the banks to absorb the little extra charge by way of payment of premium. The depositors in India are a mute class. They are an unorganised and amorphous group of persons, distributed all over the country, without any organised association to press their claims on the banks, with the result that they do not share in the benefits of larger profits, though the deposits constitute a principal source of revenue to the banks. It is only appropriate that the banks should do something for them and a beginning can be made, if the banks bear a little burden in the form of payment of premium to the Corporation on deposits up to Rs. 10 000 per depositor. In course of time, when the Corporation has steadily built up its income from the premium, the capital subscribed by the banks and Government may be retired and the rate of premium recovered from the banks may be reduced, so that the incidence of the burden on the banks may be lowered.

The Corporation should have supervisory jurisdiction over insured banks and should have a system of annual inspection intended to ensure that the interests of the depositors are properly safeguarded. The Corporation should have also power to terminate the insured status of any bank at any time, if the policies adopted by the bank are against the canons of sound banking or infringe any laws and regulations or are not conducted according to healthy principles and practices of banking or the bank's advances portfolio has predominantly undesirable features. It should have summary powers for removing any bank from the list of insured banks.

The Corporation should invest its surplus funds in Gilt-edged securities and should have power to borrow against securities should a need arise to enable it to meet the claims of depositors of a bank which may have closed its doors. It should be made incumbent on the Corporation to ensure that payment of the claims of a closed bank are effected within a period of one month from the day it stopped payment.

On notification of the closure of an insured bank by a competent agency like the Reserve Bank of India, the Corporation would send its representative to the office of the failed bank to make investigation into the accounts. The ownership of all accounts up to Rs. 10 000 will be determined. The deposits held in the same right and capacity will be added up and from this will be deducted any borrowings, to arrive at the net figure of liability per depositor. If a depositor is holding an account in the personal name as well as in joint names, he is entitled to insurance up to Rs. 10.000 for each of the accounts. If the depositor is having accounts in two banks with balances under Rs. 10,000, he is insured in each bank separately up to this figure. As soon as the ownership is determined, the Corporation should send out its claim agent to the office of the failed bank for payment of the amounts up to Rs. 10,000. In the case of balances in excess of Rs. 10,000, the depositor will share proportionately in the proceeds from the liquidation of the assets of the institution in due course. The depositor of the distressed bank is to be either paid directly by the claim agent of the Corporation or, in case the failed bank is absorbed by another bank will be entitled to the ownership of the deposits in the absorbing bank. The absorbing bank will take over only sound assets of the failed bank and the balance of the claims over the sound assets of the failed bank will be met by the Corporation.

The Corporation should have a right of inspection over the insured banks. This inspection should only be carried out, if they find it necessary and should be supplementary or additional to the usual inspection of the Reserve Bank of India.

This scheme will create a favourable psychological effect in the public mind, inasmuch as it will minimise the risk of loss of deposits and provide a high degree of protection at no cost to the depositor and at relatively little cost to the bank, with satisfaction to the bank that something has been done for the benefit of the depositors. The creation of the Corporation will also mitigate the disastrous effects of bank failures on the public, restore complete confidence in the solidity of Indian banking structure, strengthen the banking system and lead to its consolidation.

MARKET GOSSIP

FOR some time past, there have been reports in the share market that the Belapur Company Ltd. would be expanding its activities in various ways. It is now reliably learned that the Company has acquired the majority interest in the capital of a newly established neighbouring sugar company in the Deccan, known as the Gangapur Sugar Mills Ltd. The necessary agreement was finalised and signed on the 24th inst., subject to the consent of the Industrial Financial Corporation which, as a leader of long-term capital, has some say in this matter. This, however, is only a formality. In any case, the I.F.C. must only be glad at this development. Of the Gangapur's share capital of Rs. 47 lakhs, the Belapur Company is acquiring Rs. 26 lakhs at a premium of 15 per cent.—shares of Rs. 100 each are being taken over at Rs. 115 each. In other words, a little over 55 per cent. of the Gangapur's capital will be held by the Belapur Company. The crushing capacity of Gangapur's plant is 1,000 to 1,250 tons of sugarcane per day. It has freehold land of 4,000 acres, sufficient to grow all its requirements of sugarcane. At present, the factory is dependent upon outside supply of cane which is said to be readily available.

Palai Bank Crash and After

The closure of the Palai Central Bank is still holding the stage. The Lok Sabha had a four-hour debate spread over two days (Monday and Tuesday). Earlier, on Saturday, the Finance Minister made a detailed statement clarifying the position of the Bank, in the light of details available to him since his first statement some two weeks before. Quite a large number of Members of Parliament participated in the debate. The Kerala Ministers, too, have sought to do their best for the grief-stricken depositors, by persuading the Central Government to try and save the Palai Bank. The Chief Minister, the Home Minister and the Finance Minister of Kerala paid flying visits to New Delhi to apprise the Central Government of the feelings of the people in their State. The Governor and Deputy Governor of the Reserve Bank and the Chairman of the State Bank of India also had been to New Delhi for consultations. There was a meeting last week of the Central Board of Directors of the Reserve Bank to consider the situation. There has thus been no lack of consideration and sympathy for the unfortunate depositors of the Palai Bank. It will be no exaggeration to say that no other bank failure in the past quarter century, not excluding the Travancore National and Quilon Bank, has evoked so much public attention and concern in official circles as that of the Palai Bank.

Almost every one who took interest in this sad event has been keen on reviving the Palai Bank. But mere desire, or abundance of goodwill, is of no use in a situation such as this. After carefully considering all aspects, the Government has come to the conclusion that the revival of the Bank is out of the question. This was also the view of the Central Board of the Reserve Bank. The fresh data given by the Finance Minister this week show that, only if somebody was prepared to face a loss of Rs. 3 crores, could the Bank be restored to health and that, too, as a subsidiary of some big bank. Now, no commercial bank could afford to pay such a heavy price for the pleasure of acquiring the goodwill, staff and premises of the Palai Bank. The Finance Minister even went to the extent of saying that, even if any bank was prepared to take the risk, the Reserve Bank would not consider the proposition with favour. After this statement, the prospect of any bank coming forward to shoulder the responsibility is practically *nil*. Several members of Parliament suggested that the State Bank of India could take over the Palai Bank and underwrite full payment for the depositors of the latter. An ex-Minister, Mr. Mahavir Tyagi, is reported to have remarked that there was no question of a loss to the taxpayer, if the State Bank could somehow manage to salvage the Palai Bank. Surely, the State Bank has not been established to take over badly managed banks. If the State Bank incurs a loss in this process, the taxpayer undoubtedly loses, for, after all, 94 per cent. of the share capital of the State Bank is owned by the Government through the Reserve Bank. It is unrealistic to expect the Government to pay the aggrieved depositors from its resources, owned directly or indirectly. It cannot make any exceptions; if it does that for one bank, it will have to do so for all other banks that have failed or will fail in future. The Union Finance Minister was, therefore, perfectly right when he firmly rejected such suggestions.

The only things that one can expect of the Government in this direction are these: (1) To find out ways and means of paying in full small depositors. The Government has decided that small depositors should be paid in full upto Rs. 250 each. This means raising the limit of Rs. 100 now allowed under the Law. Mr. Morarji Desai has promised to bring forward the legislation necessary for this purpose. (2) To speed up the liquidation of Palai Bank and realise the maximum amount on the assets and investments of the Bank, so that the depositors and other creditors could get as much compensation, and as quickly as possible, after the claims of preferred creditors and small depositors, mentioned above, are met. Mr. Morarji Desai has given a satisfactory assurance on this also. The job of expediting liquidation will most probably be entrusted to the State Bank of India. (3) To mete out severe punishment to the directors and other members of the management of the Palai Bank who have been responsible for all that has happened. No political considerations should be allowed to stand in the way. The Finance Minister has given the solemn assurance that those who are guilty will be punished. But vigorous action is necessary in this direction, before it becomes a case of birds having flown away.

The Finance Minister's statements disclose that, though more than 50 per cent. of advances of the Palai Bank had been sticky for a long time, the Reserve Bank was hoping against hope that the position could be gradually improved and that what ultimately forced it to decide upon liquidation as the only solution was the run that started in the last week of June and continued right through July and early August. The Palai Bank was losing deposits at Rs. 5 lakhs a day on an average. Between 1st July and 5th August, Rs. 136 lakhs had been withdrawn by the depositors, of which Rs. 25 lakhs were on 5th August alone. If there had been no run at all, the Reserve Bank might not have applied for its closure. When the run continued and large sums were being withdrawn, the Reserve Bank had to act quickly and precipitately, in order to protect the interests of the remaining depositors. This explanation is satisfactory so far as it goes. But it leaves unanswered the question as to why action was not taken against the Palai Bank earlier, even though all inspection reports had disclosed an unsatisfactory state of affairs. In the last 10 years, the Palai Bank has had four thorough inspections, that is, in 1951, 1956, 1958 and 1960 and two quick inspections, one in 1953 and another in 1955. The Union Finance Minister, of course, tried to answer this key question. He said:

"The defects noticed in these inspections were taken up with the management and, over a long period, the Reserve Bank made patient and continuous efforts to make the management rectify the defects, and secure a more efficient functioning of the institution. It is tragic that these efforts proved of no avail. While during this period there had been a progressive deterioration in the Bank's position, the Reserve Bank considered, and I think it was right in this view, that drastic action such as refusing a licence or putting the Bank into liquidation should not be taken, until it was clear beyond doubt that there was no hope of rehabilitating it and that the interests of the depositors were in immediate jeopardy.

"If the recent run on the institution had not taken place, even then, it would have required many years of patient effort to put this Bank on its feet. But the loss of confidence in the institution evidenced by the run and the large sums suddenly withdrawn from it ruled out any hope of rehabilitation and left the Reserve Bank with no option but to ask for a winding-up in the interests of the remaining depositors.

"If action had been taken earlier, it might have been open to the criticism that sufficient time and opportunity had not been provided for those controlling the Bank to set their house in order. If it had been deferred, there was every chance of preferred creditors and those with demand liabilities getting away with what was readily available, leaving the other creditors to face a dead loss. One has to balance nicely the various conflicting considerations and with full knowledge of all the factors involved. I have little doubt that the action taken by the (Reserve) Bank and its timing were appropriate."

The aforesaid explanation shows that the Reserve Bank authorities gave too long a rope to the management of the Bank, with the result that it is the depositors and staff who have had to suffer serious consequences. Further, it is not clear, from what the Finance Minister said, why no effective action was taken against the Directors of the Palai Bank at least in 1957, that is, immediately after the amended Banking Companies Act, with more drastic powers for the Reserve Bank, had come into force. Had the Reserve Bank done so, at least some Rs. 3 crores worth of deposits, if not the whole of Palai Bank, could have been saved.

There is another aspect of the Palai Bank affair which has received very little attention. The Finance Minister has explained how this Bank continued to show a fictitious profit in its statement of accounts year after year and declare a dividend, even after the Reserve Bank had drawn the attention of its Directors to this defect. The Palai Bank's management was guilty of misleading the shareholders and the public not only by treating bad and doubtful debts as good debts, but also by including in the revenue account unrealised interest on those sticky advances. We are surprised to hear that such a fraud was being perpetrated right under the nose of the Reserve Bank. Why did the latter allow the Palai Bank to publish such a misleading and fraudulent statement of accounts? And how did the auditor of the Bank certify it as being correct and in accordance with the law? If such things could happen even in a bank, how could one place any reliance on audited accounts? This is surely a matter which the Council of the Institute of Chartered Accountants of India should look into.

There are several important lessons to be learned from the failure of the Palai Bank. The first and the most important of them is that the Reserve Bank should expedite the issue of licences to those banks which have not yet been licensed. Incidentally, it is now stated that the Palai Bank was never licensed at all. It is amazing that a bank of this size remained unlicensed. If there are any banks that are not fit enough to be licensed, they should be asked to improve their affairs quickly and their failure to do so should be a sufficient reason for stopping their business. Secondly, some effective method must be found for implementing the much-discussed, age-old suggestion of amalgamating the deserving small banks with either big banks or by taking them in groups. Thirdly, small banks must not be allowed to open too many branches and spread out too far to the length and breadth of India. It would be better to encourage them to grow slowly and steadily into sound and solid regional banks. Fourthly, banks should be debarred from contributing to the funds of political parties or even indirectly supporting them. Fifthly, the public must exercise greater caution than they do now before choosing their bankers. And, sixthly, steps must be taken for insuring deposits with banks on lines outlined in an article on the previous page.

Last week, the Governor of the Reserve Bank of India stated that the question of insuring bank deposits was being considered. It would appear that there have already been some informal discussions on this subject both within and outside the Reserve Bank. The latter has appointed a special committee of its own officials to study the various aspects of this remedy for safeguarding the interests of depositors. An urgent circular has been sent to all banks, asking them to furnish data of all their deposit accounts in four slabs—accounts with balances of Rs. 1,000 and less, of over Rs. 1,000 but not exceeding Rs. 2,000, of over Rs. 2,000 but not exceeding Rs. 5,000 and of over Rs. 5,000. The Reserve Bank has requested the banks to send their reply by 6th September, that is, in about a fortnight's time. This shows that it has taken up the suggestion in right earnest and is giving it a high priority. It would, however, appear from the highest slab that the Bank is thinking on more modest lines than necessary. The maximum amount of deposit to be insured by an individual with each bank should at least be Rs. 10,000, if the scheme is to cover a substantial number of depositors. It would, therefore, have been better if the Bank had sought data on the number of deposit accounts with balances of over Rs. 5,000 but not exceeding Rs. 10,000 and of over Rs. 10,000, too. Even now, it is not too late for the Bank to make the necessary arrangements.

Ceylon Copies India

It is, indeed, flattering to our national ego to note that the underdeveloped countries of Asia and Africa tend to look upon India as their model in many respects. Not only our foreign policy, but even our domestic economic and fiscal measures have found approval in these countries, judging by the readiness and speed with which some of the legislative enactments passed in this country are being copied by them. One of our admiring neighbours is Ceylon, which has now become the cynosure of the whole world, thanks to the ascendancy of Mrs. Srimavo Bandaranaike to the Prime Minister's *gadi*.

In quite a few spheres, Ceylon has been following the trail blazed by India. It has adopted, *mutatis mutandis*, our fiscal pattern and even some of our tax laws. And now comes news that Ceylon proposes to nationalise life insurance, much as we did back in 1956. Although no definite date would appear to have been fixed for carrying out this reform, it is reported that the first move will be made in the next financial year which starts on 1st October. It would, however, be pertinent to draw attention to the difference in approach. Whereas life insurance in India was nationalised overnight by staging a *blitz* over the management of insurance companies, without any prior warning, the Ceylon Government has given long notice of its intention. It would be interesting to watch whether the management of insurance companies in Ceylon will not take advantage of this interval to suit their ends.

Nationalisation of insurance, or any other trade or industry for that matter, is a purely internal matter of Ceylon; but, to the extent the Life Insurance Corporation of India has a stake in that country, the move is of direct interest to India also. It may be noted here that, for some time past, the L.I.C. has not been writing new life business in Ceylon, as also in Pakistan and Burma. A policy decision to this effect was taken when the question whether the L.I.C. should do new business in foreign countries was considered. Its interest in Ceylon is, therefore, confined only to the business it took over from the Indian insurance companies there and the assets and liabilities attached thereto. The latest position regarding the extent of L.I.C. interest in Ceylon is not available. The figures that could be had relate to 1958. As on 31st December 1958, the total number of L.I.C.'s policies in force in Ceylon was of the order of about 40,000, assuring a sum of Rs. 12 crores. Annual premium income on these policies is estimated at roughly Rs. 68 lakhs.

Estimates are that life insurance companies, including Ceylonese and foreign concerns, operating in the island number about fifty, of which the majority are non-Ceylonese. In 1958, foreign insurance companies in Ceylon had assets valued at Rs. 147·4 million, including loans granted on policies of Rs. 23·9 million, on shares or debentures of Rs. 2 million and on mortgages of Rs. 1·4 million. Of these assets, Rs. 50·4 million were in Government securities, Rs. 11·9 million in cash, Rs. 2·1 million in real estate, Rs. 1·8 million in agents' balances, Rs. 1·5 million in interest and dividends and Rs. 5 million in other assets. Assets of Ceylonese companies aggregated Rs. 34·8 million.

British insurance companies seem to have by far the biggest stake among foreign companies in Ceylon. The annual premium income of the U.K. insurance companies in Ceylon is estimated at £1 million per annum. Their total assets are placed at about Rs. 15 million. Since 1958, all insurance companies in Ceylon have been asked to retain their life funds in Ceylon only.

If the proposed nationalisation comes off, there is no alternative for foreign companies but to submit to the national law and retire gracefully. For India, this will involve a loss of foreign exchange earnings on invisible account equivalent to the annual premium income forfeited. But this country has no grounds to criticise Ceylon, for it has itself set the precedent.

Company Registrars

A major conclusion which emerged from the deliberations of the Conference of the Registrars and Regional Directors of Companies, held at New Delhi last week, was the need for co-ordination in Governmental control and regulation of corporate enterprises. From a stage where the Company law was a most underadministered aspect of Governmental activity, the country is moving forward to a stage where many aspects of corporate enterprise are coming under the constant purview of the Government. This calls for imaginative vision on the part of those who are charged with the task of administering Company Law and also for a great measure of co-ordination between several departments, each of which deals with a particular branch of the work of joint-stock companies. Appropriately enough, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, in the course of his inaugural address at the Conference, stressed the need for co-ordination, not only as between the Central Department of Company Law Administration and the State Governments, but also among the different Central Government departments such as the Industries Department, Economic Affairs Department and the Company Law Department. At the end of its two-day session, the Conference felt that all activities relating to the working of joint-stock companies such as industrial licensing, capital issue control, regulation of stock exchanges and the working of the financial institutions operating in the corporate sector should all be administered in accordance with a coherent and integrated policy, in order to ensure the achievement of desired results.

Mr. Shastri did well to emphasise that the aim of the Company Law Department was to see that the companies were run on sound lines, both managerially and from the financial point of view. He added that the financial position and the level of management of the companies could influence the economy one way or the other, involving not only the interests of the shareholders but the people as a whole. He urged those who thought the Department was an "unnecessary encumbrance" to remember that, even in a predominantly capitalistic country like the U.S., there were stringent laws against monopoly. In the U.K., the complicated nature of Indian company investment and diversification of activities by

SHARE MARKET QUIET

KHATAUS AND BELAPURS SPURT

(From Our Own Correspondents)

BOMBAY, 24*th August*

THE share market had another quiet week. Trading was listless in the absence of any support, due to extreme cautiousness on the part of bulls. Sellers, too, were reserved. Values drifted down, except in a few counters, which recorded smart gains on special considerations. While the general apathy served as a respite to the recent hectic bullish activity in the market, operators did not fail to take note of the report that the authorities at New Delhi were keeping a close watch over their activities. In reply to a question by a member, the Union Finance Minister said in the Rajya Sabha on the 18th inst. that the trend of prices in share markets was being continually watched, in order to ensure that speculative activity did not cause an unhealthy rise in prices. After recounting the various measures that were being taken to restrain excessive speculation, Mr. Desai observed that, if further measures were necessary to ensure steady conditions in the share market, the Government would not be slow in taking them.

The Prime Minister's indication, in the course of his speech in the Lok Sabha initiating the debate on the draft outline of the third Plan on Monday, that an expert probe might be made into the distribution of the increase in the national income during the last one decade, with a view to preventing an accumulation of wealth and economic power in a few hands, also acted as a damper.

Although these bearish news did not cause any jitters, values of most counters moved down, by way of a corrective reaction to the recent bullish trend. Even investment support was lacking. Many of the cash scrips, which had attracted much attention in recent weeks and made hectic rises, failed to sustain the trend. Presumably, some investors were cashing the gains and conserving their resources for subscribing to the spate of new issues ready to be offered in the next few weeks. Gokaks, Khataus and Standards among textiles, Belapurs in the sugar group, and Premier Constructions and Larsen and Toubros in the engineering section provided some of the notable exceptions to the general trend.

The reports that the Directors of the T.I.S.Co. were not likely to take a decision on the dividend this week also and the delay on the part of the Government in announcing the retention prices of steel subdued the tone of Tata Ordinaries. The shares closed around Rs. 160.25, as against Rs. 161 a week ago. It was, however, reported that the Directors might not indefinitely await the announcement of steel prices for deciding the dividend. It appears most likely that the dividend would come on the agenda of the Directors' meeting on Thursday next week. Indian Irons were steady at Rs. 25.55.

Notwithstanding the widespread belief that the cut in cloth prices might not adversely affect the current year's profits of mills, textile scrips generally lacked support. A gloomy picture of the outlook for cloth exports was painted by Mr. Neville N. Wadia, Chairman of the Cotton Textile Export Promotion Council, at the annual general meeting of the Council held in Bombay today. He was of the view that exports were dwindling at a rapid pace during the current year. In view of the plans for self-sufficiency in most of the overseas countries and the change in consumer demand, he said, India would not be able to maintain its exports of cloth, let alone expand them in the coming years.

Khataus stole the limelight in this week's trading in textile shares, with a hectic rise from Rs. 655 to a peak of Rs. 850 on sustained buying inspired by rumours about diversification of the Company's activity and issue of right shares. At the higher level, there was some profit-taking and the shares closed lower at Rs. 825, a rise of Rs. 140 over the week. Gokaks also attracted good attention and scored a gain of Rs. 21 to Rs. 179. Standards were pushed up from Rs. 1,992 to Rs. 2,055 before they finished at Rs. 2,010. Centurys were somewhat erratic moving between Rs. 512 and Rs. 499, but closed on balance higher at Rs. 507.50. Bombay Dyeings were marked down by Re. 1.20 to Rs. 67.30, despite the fact that the dividend for the half-year ended 30th June 1960 had been maintained at Re. 1 per share, subject to deduction of tax. Kohinoors lost Rs. 7.75 over the week to Rs. 329. Finlays shed Rs. 2 to Rs. 352.

In the banks section, United Commercials staged a further smart rise of Rs. 4 to Rs. 83, while the rest of the shares were quiet.

Notwithstanding the prospect of growing demand for cement, cement shares were cheerless, though the undertone was fairly steady and fluctuations in prices were narrow. A.C.C. moved between Rs. 144.25 and Rs. 143. Digvijays looked up a little towards the close to Rs. 163, but over the week they showed little change.

Revival of rumours about acquisition of fresh interests caused a spurt today in Belapurs to Rs. 397, before closing at Rs. 391; the shares had declined earlier in the week from Rs. 374 to Rs. 368. Phaltans gained Rs. 3 to Rs. 184, while Walchandnagars were steady around Rs. 307.50.

Shippings and automobiles remained subdued.

In the engineering section, renewed hopes about capital reconstruction induced fresh buying in Premier Constructions, which as a result, shot up from Rs. 357.50 to Rs. 381, before closing lower at Rs. 375 on profit-taking. Larsen and Toubros attracted good support, following the Directors' decision to issue right shares at par in the ratio of three shares for every eight shares. The shares shot up to a high of Rs. 56 from last week's closing of Rs. 50 and finished at Rs. 52.50. Alcocks were quiet at Rs. 291, as also Tata Locomotives at Rs. 289 *ex-div.*

Miscellaneous shares, the bulk of which are listed in the cash section, showed sizable losses. Bombay Burmahs, a forward scrip, were subdued at Rs. 581.50, as against Rs. 585 a week ago. Rayon shares lagged behind owing to fear of a cut in the import of raw material (rayon grade wood pulp), due to acute scarcity of foreign exchange. National Rayons were a shade lower at Rs. 513, while the losses were more marked in Gwalior Rayons and Baroda Rayons. The former was done Rs. 2.50 lower at Rs. 45 and the latter Rs. 3 down at Rs. 146. It was reported that one of the general insurance companies was unloading a large block of Gwalior Rayons. Indian Rayons, too, shed Rs. 2 to Rs. 71. Notwithstanding the encouraging long-term outlook, Indian Dyestuffs met with selling pressure and declined by Rs. 90 to Rs. 745. The Company's Chairman said at the annual general meeting held on Friday last that the Company's expansion programme would be completed by the middle of 1962 and that the cost of it would be Rs. 3.50 crores. In reply to the demand for higher dividends, he emphasised the need for conserving the earnings of the Company. Amar Dyes, Colour Chems, Poly Chems and Dhrangadhras were all marked down. Ceat Tyres declined by Rs. 12.50 to Rs. 262.50 and West Coast Papers by Rs. 7.50 to Rs. 211.50.

Madras Stock Exchange

MADRAS, 23*rd August*

The Madras Stock Exchange ruled steady during the week under review, barring rubber shares, which came in for selling in view of the reported decision of the Central Government not to raise the existing statutory price of raw rubber. The Union Finance Minister's statement in the Rajya Sabha on the 18th inst. that the Government was keeping a close watch on the trend of prices in share markets and that, if further measures were necessary, it would not be slow in taking them, did not have any perceptible impact on the market. Sugars were well maintained on reports of a marked rise in production in many of the sugar factories. Teas were firm, thanks to reports of strong general demand for teas at Cochin auctions. Coffees were steady in the initial sessions, but were weak towards the close. Textiles were generally well fancied on hopes that the adverse effect of reduction in prices of cloth and yarns would be made good, to a large extent, by the consequent increase in their demand and larger output. Among miscellaneous shares, chemicals, in particular, came in for good attention.

In the sugar section, United Breweries spurted by Rs. 2.50 to Rs. 114.50. Cauverys advanced by 50 nP to Rs. 152.50. Travancores put on 20 nP to Rs. 12.10. E.I.Ds, however, met with selling pressure and declined by a rupee to Rs. 38.25. Deccans shed 10 nP to Rs. 16.30.

Among teas, Haileyburias elicited good support and rose by 25 nP to Rs. 15.75. Parksides and Peermades moved up by 10 nP each to Rs. 28.60 and Rs. 23.60, respectively. Blue Mountains hardened by 6 nP to Rs. 5.43 and Periakaramalais by 5 nP to Rs. 3.90. Nilgiris were higher by 5 nP at Rs. 7.80. The Directors of the Company have declared a dividend of 8 per cent., taxable (equivalent to 5.6 per cent. tax-free) for the year ended March 1960, as against 5 per cent., tax-free, for the previous year. Nilamburs, however, declined by 25 nP to Rs. 19, following the announcement of a lower dividend by the Company at 15 per cent., taxable (equivalent to 10.5 per cent. tax-free) for 1959, as compared with 20 per cent., tax-free, for 1958. In the coffee group, Cowcoodys gathered 5 nP to Rs. 5.75. Shevroys picked up one naya paisa to Rs. 2.07. Ouchterlonys were firm at Rs. 5. But Consolidated Coffees lost 40 nP to Rs. 26.25 and Coffee Lands 20 nP to Rs. 25.10. Among rubbers, Kailasas fell by 31 nP to Rs. 5.24. Cochin Malabars receded by 2 nP to Rs. 8.10.

Premiers in the textile group spurted by Rs. 4 to Rs. 250. Bangalore Woollens gained a rupee to Rs. 200. Maduras rose by 65 nP to Rs. 34.90 and Travancore Rayons by 55 nP to Rs. 37.30. Cannanores, however, were marked down by Rs. 4 to Rs. 146. Lakshmis fell by a rupee to Rs. 157.

A feature of trading in the miscellaneous section was the increase of Rs. 10 registered by Tube Investments which were quoted today at Rs. 350. Among chemicals, Mysores rose by 50 nP to Rs. 14.85. F.A.C.Ts gathered 5 nP to Rs. 12.85. Among cements, Indias put on 8 nP to Rs. 7.33, while Andhras eased by 7 nP to Rs. 10.83 and Dalmias by 6 nP to Rs. 12.44.

INVESTA MACHINE TOOLS & ENGINEERING

Investa Machine Tools and Engineering Company, Ltd. has received permission from the Controller of Capital Issues to issue to the holders of the existing ordinary shares further equity capital of Rs. 15,00,000 in the proportion of 1 : 1 at par. The Directors propose to close the transfer books of the Company for the purpose of issuing letters of offer to shareholders from 6th September, 1960 to 13th September 1960 (both days inclusive). On the 15,000 new ordinary shares a sum of Rs. 25 is payable on application, Rs. 25 on allotment and the balance of Rs. 50 as and when called up by the Directors. The Company has also received from the Central Government a licence under the Industries (Development and Regulation) Act for effecting substantial expansion of its undertaking at Chinchwad near Poona. Effective steps have already been taken to acquire land and place orders for construction of the Company's factory. Orders for the major part of plant and machinery have been placed from rupee payment sources and indigenous sources, and the plant and machinery is expected to arrive by early next year. The new factory at Chinchwad is expected to be gradually put into commission from April 1961.

THE "SILLY SEASON" IS ON

TRADE FIGURES CAUSE CONCERN

From Our Own Correspondent

LONDON, 19*th August*

THE middle of August is conventionally the silly season—the Prime Minister is on the Derbyshire Moors shooting game. Other Ministers have seized a few days' respite at home or abroad and are ready to gather together in case of need while still hoping the need will not arise. As far as the London Press is concerned, they have had quite enough to pursue—what with the Congo, the shipping strikes, which are playing havoc with British Passenger Merchant Shipping, and the trial of the American pilot in Russia.

LONDON LETTER

The Merchant Shipping strike, however, looks like coming to an early end, with two of the principal sailings uninterfered with—the *Queen Elizabeth* for America and Britain's newest passenger liner, *The Windsor Castle* for South Africa.

The only disturbing feature on the domestic horizon has been the July trade figures. For three months, the trade figures had worsened and the latest is the worst. On a seasonally adjusted scale, May showed exports and re-exports at £309 million and imports at £389 million—a visible deficit of £80 million. In June, exports and re-exports had dropped further to £299 million but imports had fallen as well to £370 million, giving a deficit of £71 million. At the end of July, the total of exports and re-exports hit the lowest for this year at £284 million, while imports were as high as ever at £388 million, giving a deficit of the horrifying figure of £104 million.

Equally, on a seasonally adjusted basis, the monthly average of the total for the first seven months of this year was £307 million exports and £377 million imports; thus, the deficit comes to £70 million per month, or an annual rate of £840 million. Even when one has allowed for the conversion of imports from the c.i.f. basis given in these figures to f.o.b.—say, £40 million per month—the remaining deficit will swallow up the greater part of the country's invisible income.

This is not to say that the U.K. is running a deficit, but it is likely that it is not piling up *sufficient net* overseas income to pay off its current overseas investment.

The high and rising gold reserves (it will be recalled that they reached a total of £1,070 million at the end of July) merely reflect the inflow of hot money, the result of high domestic interest rates and tight credit.

Those Ministers charged with the Treasury and the Board of Trade will certainly have to study this question of Britain's export and her trade balance when they get back from their brief vacation, because, at the present rate, the autumn, when the trade balance traditionally turns against the country, may be a very difficult time.

Their difficulty will be that exports, considered by themselves, have not made a bad showing. For the first seven months of this year, they were 6½ per cent. up on the whole average of last year. The trouble has been with imports, where the first seven months' average was 13 per cent. more than the average for last year. Ministers will say that they have already taken all reasonable steps to damp down home demands. With credit tight and the stock market cautious, with the banks already having put in £150 million of special deposits to the Bank of England, namely, 2 per cent. of their total deposits, what more can the City be reasonably expected to do? The end of the holiday season will find eager searchers for answers to that question.—*All Rights Reserved.*

NEWS IN BRIEF

ABOUT 100 cases of violation of foreign exchange regulations were registered every month in the financial year 1960-61.

The proposals for introducing a bus service linking India with the U.K., Russia and Yugoslavia, submitted by six private parties, are being examined by the Government of India.

The 10,000-ton calcium carbide plant, erected at Talayuthu, Tirunelveli (Madras State), by Industrial Chemicals Ltd., was inaugurated on the 17th inst. The plant has been set up in collaboration with the Norwegian firm, the Electrokemist.

An official Bill seeking to establish a State Housing Board has been introduced in the Madras Legislative Assembly. The proposed Board will be entrusted with the task of implementing housing and improvement schemes throughout the State.

As a measure of export promotion, the Government of India proposes to grant drawback of duty on instant coffee on brand basis. In this connection, the Government has issued a draft notification, inviting objections, if any, by 1st September 1960.

The Railway Board has rejected the request of the Assam Oil Company to take crude oil pipeline of Oil India Limited over the new Brahmaputra bridge under construction, since it is not considered safe to lay the oil pipeline over this important rail-cum-road bridge.

The next meeting of the National Development Council will be held at New Delhi on 12th and 13th September under the chairmanship of the Prime Minister. The Council will consider the Draft Outline of the third Plan and general questions relating to State plans.

The Government of India has agreed in principle to the West Bengal Government's proposal for setting up a fertiliser plant at Durgapur, in collaboration with a Japanese firm. The necessary steps are being taken by the State Government and negotiations are in progress with the Japanese collaborators concerned.

The Rajasthan Government proposes to give assistance to private stud sheep farmers who are prepared to develop recognised sheep breeds in the State. The Government will provide to the registered sheep farmers technical advice, veterinary aid and also supply breeding rams at subsidised rates from Government farms.

Fairly large deposits of iron ore, estimated at three to five million tons, have been located along the ridges of Boredgudda and Arabadagudda, about 60 miles from the Mangalore port, in Mysore State. Disclosing this in the Lok Sabha, Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, stated that the possibility for commercial exploitation required further exploration.

The blower of the first cupola at the Heavy Electrical Plant, Bhopal, was switched on last week. The three-ton cupola, from which molten metal is tapped, will be utilised for making cast iron components for switchgear, transformers and workshop construction. One more cupola will be installed shortly. The Heavy Electrical Plant is expected to be inaugurated by Prime Minister Nehru on 20th October.

Two plants for the production of edible groundnut flour, one each at Bombay and Madras, are expected to be installed in collaboration with existing oil mills. The individual capacity of both the plants will be 10 tons per day. This was disclosed by Mr. A. M. Thomas, Union Deputy Minister for Food, in the Rajya Sabha. He stated that the project, which envisaged collaboration between private and public sectors, would produce high-quality edible groundnut flour at a reasonable price.

Madhya Pradesh will agree to be associated in a food zone with Gujerat and Maharashtra, only if it is assured that speculative activity in rice and wheat markets will be prevented and that intermediaries will "behave properly," according to Dr. K. N. Katju, Chief Minister of Madhya Pradesh. Dr. Katju has alluded to the formation of the West Bengal-Orissa food zone which, he says, has brought just a rupee more per maund to the cultivator, but consumers have to pay Rs. 5 more for the same quantity.

The Japanese firm which had offered capital participation and technological assistance to a firm in Kerala for the manufacture of cables, has since withdrawn the offer of capital participation as the scheme has been delayed beyond expectations. It is, however, willing to offer technical collaboration. The licence for setting up the cable plant was given in 1958. The Government of India proposes to grant a further extension till December 1960. It is also considering the Kerala *entrepreneur's* application for import licence to obtain capital equipment from Japan.

The Government of India has decided to establish joint consultative machinery to settle matters pertaining to the welfare of Government employees. The model of the British type of Whitley Councils will be kept in view in this matter. There will be three "parallel councils," one for the Railways, including workshops, one for other workshops, and another for all other services. The proposed machinery is expected to settle matters pertaining to the welfare and other things concerning the services by the process of consultation, negotiations and where necessary even by reference to arbitration.

The first Russian tanker bringing high speed diesel oil for the Indian Oil Company from Russia, reached Bombay on the 17th inst. In pursuance of the trade agreement between the Governments of India and Russia, a contract was signed in July last between the Indian Oil Company and V/o Sojuznefteexport (Russian Export Agency) for the import of superior kerosene, jet fuel and high speed diesel against rupee payment. The first tanker contains about 11,000 tons of high speed diesel oil. As soon as the discharge operations are completed, the Indian Oil Company will commence supplies to consumers, especially the Indian railways, transport undertakings, consumers' co-operatives, Defence forces and others.

A co-ordinating committee to consider the overall problem of industrialisation, development of natural resources and regional planning of the Cambay area in Gujerat has been constituted by the Union Government. The Committee will advise the Government on the location of industries in the Cambay region, particularly in the areas with which the Oil and Natural Gas Commission is concerned in its exploration for, and development of, oil and gas. It will also consider matters relating to the acquisition of lands, buildings and construction of roads for the Oil and Natural Gas Commission in Ankleshwar and Cambay regions. Besides, it will advise the Government on problems relating to transportation of oil and gas for refining or other uses. The Chief Secretary to the Government of Gujerat is the Chairman and the Convenor of the Committee.

The jute workers' union in West Bengal—the Bengal Chalkal Mazdoor Union—has demanded three months' wages as bonus and immediate implementation of the recommendations of the State's Special Committee on Jute. The Committee has suggested, among others, that the *budli* list of workers should be frozen to make a large number of such employees permanent, fixation of permanent complements at three workers per loom and no further extension of double room operation for three years. In a memorandum submitted to the State Government, the Union has urged that the Government should see that all mills declare their actual raw stocks and submit plans of loom sealing for approval to a tripartite committee. The memorandum says that the Indian Jute Mills Association's decision to seal any number of looms with effect from 6th June constitutes a flagrant breach of the code of discipline.

The Industrial Finance Corporation has, at the instance of the Union Transport and Communication Ministry, agreed to advance loans to hotels. Loans will be available to hotels constituted as public limited companies or co-operative societies. There will be no floor limit for loan applications. The Hotel Standards and Rate Structure Committee, which reported in 1958, had recommended financial assistance to the hotel industry in order to promote tourism. Another recommendation of the Committee—classification of hotels capable of catering to foreign tourists on the basis of the internationally-accepted Star System—will be implemented next year. The hotel industry will be consulted in the matter. The Ministry has also decided to sponsor legislation to have more effective control over and, in fact, to help the better type of hotel establishments, travel agencies, guides and shikar outfitters, as against those who do not maintain high standards.

The recommendations of the Committee, appointed by the Communist Government of Kerala in 1957, to evolve a wage structure and a formula for the payment of bonus for plantation workers in the State, have now been published. The report, it may be recalled, had been submitted to the Government in February 1959. The report has recommended minimum time rates allowance of Re. 1.75 for men field workers and Re. 1.34 for women of tea estates of 100 acres and above and rubber estates of 200 acres and above. For factory workers in these estates, the report has recommended Re. 1.91 and Re. 1.41 for men and women, respectively. For other tea and rubber estate field workers, it has recommended a wage rate of Re. 1.67 for men and Re. 1.28 for women. The report has suggested distribution as bonus to workers of 25 per cent. of the available surplus profit after providing for depreciation, renovation of buildings, machinery, etc., taxation and return on paid-up and working capitals.

From Abroad

Oil companies operating in Pakistan are reported to have offered to reduce the prices of their products by 7 per cent.

The Government of Israel has decided to grant a loan of £3 million to Nigeria, a part of which will be in the form of goods.

The U.S. Government proposes to impose an *ad valorem* duty of 38 per cent. on wool imports in the place of the present tariff quota system.

The U.S. Development Loan Fund has approved of a $3.2 million loan for Ceylon to help finance the construction of an international airport at Katunayake.

The Ghana Airways has placed an order for four Russian Ilyushin IL-18 Moskova turbo-prop airliners which will be pressed into its African, Continental and inter-continental services. The details of the contract are not available.

West Germany produced 1,169,424 cars and lorries in the first seven months of 1960, an increase of about 24 per cent., as compared with the corresponding period of 1959. Of the total production, about 48 per cent. was exported, as against 51 per cent. last year.

PERSONAL

DR. Ricardo Florencio Mosquera has been appointed Ambassador of Argentine to India.

Mr. Raden Moekarto Notowidigdo has been appointed Ambassador of Indonesia to India.

Mr. Lalit Narayan Mishra, M. P., Parliamentary Secretary to the Minister for Labour, Employment and Planning, has been appointed Union Deputy Minister in the same Ministry.

Mr. R. B. Turakhia has been elected President of the All-India Plastics Manufacturers' Association for 1960-61. Mr. Shantilal Jain and Mr. C. M. Srimal have been elected Vice-Presidents.

Mr. P. E. H. Alexander arrived in Bombay on the 24th inst. to take up his new assignment as Manager of the British Bank of the Middle East, Bombay, *vice* Mr. P. L. Sandeman, who has been transferred to Beirut.

Mr. David Blickenstaff, at present Director of the U.N. Information Centre in India, has been appointed the Resident Representative of the U.N. Technical Assistance Board in India. He succeeds Mr. James Keen, who will take up another important post with the Board. In addition to his duties on behalf of the Expanded Programme of Technical Assistance, Mr. Blickenstaff will also represent the Managing Director of the U.N. Special Fund and will continue to head the Information Centre at New Delhi.

Mr. A. M. Thomas, Deputy Minister for Food, and two senior officials of the Ministry of Food and Agriculture, Mr. B. P. Bagchi, Joint Secretary, and Mr. B. L. Sahney, Deputy Secretary in charge of grain imports, left this week for Canada where they will make an extensive tour as guests of the Canadian Government. During a three-week stay, they will examine methods of handling, inspection, storage and distribution of grain, in order to ascertain the extent to which the Canadian experience in these matters can be adapted to Indian conditions. Before returning to India, the mission will also visit Washington and London to take up with Indian representatives in those cities questions relating to India's foodgrain import programme.

Total exports from Canada rose by 8.4 per cent. to $2,602 million during the first half of 1960, as compared with the corresponding period last year. Imports also rose but by only 2.1 per cent. to $2,811.5 million. Consequently, the adverse balance of trade declined from $352.1 million to $209.3 million.

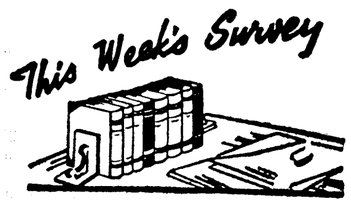
Hitachi, a leading heavy machinery concern in Japan, has signed a contract with the Alweg Corporation of West Germany for supply of technical information on manufacture of Alweg-type monorail trains and construction of elevated rails. Hitachi intends to build Japan's first six-mile monorail train link between the centre of Tokyo and the international airport.

A leading U.S. firm, Hertz American Express International and the Italian motor car manufacturing company, Fiat, have formed a new company called Hertz-Italiana S.P.A., with headquarters at Rome. The new company, of which Fiat will own 25 per cent., will provide car hire service in all major cities throughout Italy and Sicily. It proposes to operate over 1,000 vehicles by the 1961 tourist season.

In an effort to increase development aid, the Federation of German Industries has urged the ten Federal States of West Germany to give the expected property tax surplus this year to funds for developing countries. In view of the general boom, the ten Laender are expected to cash in DM 1,000 million more than last year. Similar requests have been made by leading German business men to members of Parliament as far as the increase of federal revenues are concerned. Government circles, however, are said to have warned against undue optimism since it will remain difficult for some time to come to obtain the necessary guarantees for investments overseas.

What is claimed to be the largest Microflake cigarette tobacco factory in the world outside of the U.S. will be built by the Italian Tobacco Monopoly at Adria, Italy, under a contract signed with a U.S. company, the American Machine and Foundry. Under the contract, A.M.F. will receive more than $7.3 million for equipping the plant and in royalty payments for the A.M.F.'s Microflake tobacco sheet process. Microflake cigarette filler is tobacco made in sheet form by an A.M.F. developed and patented process which bonds together minute particles of clean, ground high quality tobacco. The process, utilising tobacco that would otherwise be lost to the cigarette manufacturer, is claimed to yield a high quality product and results in substantial savings to the manufacturer.

The Government of Ceylon has warned that it would import petrol and kerosene oil from Russia and impose price control, unless the British and American oil companies in Ceylon agreed to reduce oil prices. The Government has also asked the oil companies to bear a substantial portion of the recent increase in the import duty by 40 cents a gallon. The oil companies have already voluntarily reduced the price by 7 cents a gallon, but announced that the reduction was not a sequel to the increase in duty. It was the result of the price decline in the Persian oil market. The Government maintains, at any rate, that local prices of petrol and kerosene are comparatively above world market prices. The oil companies, according to the Government, can continue to make reasonable profits without passing on the increased duties to the consumer.



CEILING ON INCOMES

THE fact that within the short period of a week two unofficial motions seeking to fix a ceiling on incomes (salary) was rejected by the Lok Sabha is sufficient proof of the unpopularity of the proposal. But the pity is that the rejection of the first motion did not deter the Honourable Member, who brought in the second one, from seeking the House's approval on an identical issue. Much valuable time of the House could have been saved had the member accepted the earlier verdict of the House as reflection of the view of the majority of the elected representatives of the people. The Lok Sabha did well to reject the motion, for it only aims at pushing the concept of ceiling, which, in its application to land, has been accepted by the Congress Party in a fit of ideological over-zealousness, to ridiculous limits.

The argument put forward in favour of the move by those who supported it was not only quixotic but pernicious in its implication. One supporting member laboured the point that, in spite of the increase in national income, during the two Plan periods, the conditions of the poor remained miserable. According to him, the real earnings of agriculturists and industrial workers had been steadily declining since independence, while the turnover of some private concerns increased by leaps and bounds. It is not known whether the member attributed the alleged fall in earnings of workers to the rise in the business of private firms, but he left no doubt that he wanted those who were responsible for the success of the private concerns to be penalised by putting a ceiling on their income.
