The Minister who opposed the resolution on behalf of the Government, Dr. B. Gopala Reddi, struck one as being apologetic. He seemed to disagree with the mover of the motion only in the means advocated, not the ends in view. Admitting that there was disparity in income in the country, he said it was only a legacy of the past which was being ironed out through the Five-year Plans. He, however, did well to emphasise that wealth should be produced first before it could be distributed on an equitable basis—a principle which, unfortunately, is more honoured in the breach than in the observance, as witness the ruling Party's obsession with distributive justice to the detriment of production, and that when what there is for distribution is not sufficient to go round. The contention of the supporters of the motion, that, having accepted the principle of ceiling on land, Government could not escape imposing a limit on income, put the Government spokesman in an awkward position, for the argument is perfectly logical and it was difficult for Dr. Reddi to avoid giving the impression of straining at the gnat after having swallowed the camel. The concept of ceiling on land is itself ill-conceived. Two negatives make one positive but two wrongs do not make one right.

SCIENTIFIC FARMING

While the increase in the area devoted to agricultural crops can be an important factor in augmenting output over a period of time, utmost reliance will have to be placed on raising output from the existing area through scientific farming. This is exactly what has been done in the economically more advanced countries of the West. In India, too, the importance of scientific farming has been repeatedly talked about, but the progress actually achieved is negligible. No wonder that the per-acre yields of almost all agricultural crops continue to be woefully low as compared with several other countries. The average yield of rice per hectare (0.40468 hectare=1 acre) during 1957, for instance, was a bare 1,180 kilogrammes (1,016 kilogrammes=1 ton), as against 5,390 kg. in Australia, 4,740 kg. in Italy, 4,430 kg. in Japan and 3,590 kg. in the U.S. Similarly, the average yield of wheat was as low as 700 kg., as against 750 kg., 1,720 kg., 2,160 kg. and 1,460 kg., respectively, in the aforesaid countries.

Viewed thus, the recent meeting of the Crops and Soil Board of the Indian Council of Agricultural Research at Ranchi, specially to consider the question of stepping up the productivity of the soil, is of great significance. Appropriately enough, the Board made a number of recommendations relating to the different aspects of agriculture: immediate establishment of an all-India Board to ensure colonisation of all new irrigation project areas on sound lines; a detailed soil survey to ensure the best utilisation of water; avoidance of waterlogging by introducing volumetric system of water distribution and making construction of drainage channels obligatory on farmers; speedy development of fertilisers, pesticides, weedicides, agricultural machinery and other implements; stability of agricultural commodity prices at an economic level; provision of adequate and timely credit to farmers; and more effective enforcement of legislative measures by giving necessary powers to the State Directors of Agriculture.

All these are no doubt very valuable suggestions which, if given effect to in an energetic way, would go a long way towards putting the land to the best use. But they will not be of much avail, unless they are accompanied by measures to bridge the gap between scientific research and its application to agricultural operations. Mr. S. K. Patil, Union Minister for Food and Agriculture, certainly struck a note of realism when he declared, in his speech at the forty-third Agricultural College Day and Conference at Coimbatore the other day, that it was not enough if the benefits of agricultural research reached a handful of farmers; rather all the farmers would have to be enabled to derive advantage from such research work. "The extension service," to quote him, "must be made to function much more effectively than hitherto for which I am prepared to give lakhs and crores, if necessary. Agricultural graduates must go out and work in the field, as I feel that they cannot produce results simply by passing examinations with distinction. There must be co-ordination between the farmer and institutions like this."

The need for extension work which will take the results of research to the field of the farmer is urgent for augmenting agricultural production. Far more urgent is the need for adoption of rational official policies governing agriculture. This aspect needs to be specially stressed in the present context when the planners and the powers-that-be in the Centre and the State level are busy giving effect to such highly ideological schemes as ceilings on agricultural holdings and co-operative farming and talking of State trading.

MICA'S PROBLEMS

It is somewhat distressing to hear that the mica industry, which earns for the country quite a bit of foreign exchange every year, is passing through a period of crisis. The industry, according to the latest annual report (1959) of the Indian Mica Miners and Dealers Association, is today confronted with three serious economic problems. One, there is unscrupulous rate-cutting of mica prices, thanks to unchecked and unhealthy competition. Two, the continuance of mica exports on consignment basis leads very often to unjustified heavy rejections and consequent loss to shippers. Three, there has been a gradual decline in the offtake by countries that were hitherto buying considerably from India, following increased competition from Brazil and vigorous efforts to produce synthetic mica in several countries. The percentage share of the U.S. and the U.K., which consume the major portion of the mica exported from India, has declined from 55-50 and 30-35 upto 1951 to 35 and less than 20, respectively, in 1959. Alluding to this trend, the report says:

"....America, which is the principal buyer of Indian mica, is reported to have decided to import mica from Brazil and is also investing heavy capital for the development of mica industry there.... It has been found that the Western countries are in the search of mica; they are generally concentrating their vigorous efforts on the production of mica on a commercial basis and large quantities of synthetic mica of very improved standard in comparison to the high grade natural Indian mica. If these attempts continue by those countries, it is obvious that the Indian mica industry will face grave problems."

There has been a sharp fall in export prices of mica in the past few months. On an average, one cwt. of mica shipped abroad during the financial year 1959-60 fetched no more than Rs. 203, as against Rs. 243 in the previous year, representing a drop of over 16 per cent. Consequently, a larger quantity of mica had to be exported to gain a relatively modest rise in foreign exchange earnings. Thus, the aggregate quantity of mica actually exported rose from 396,451 cwts. in 1958-59 to 508,618 cwts.—an increase of nearly 30 per cent.—while the value improved from Rs. 9.66 crores to Rs. 10.31 crores, or a rise of just 7 per cent. In fact, the performance on the export front would have been very disquieting but for the emergence of Soviet Russia as an important buyer of Indian mica. It accounted for about seven per cent. of India's total mica exports in 1959-60.

The foregoing brief account will clearly serve to indicate that gone are the days when India can afford to be complacent merely because it has a near-world monopoly of mica and meets about 80 per cent. of world demand. It is true that there are good prospects of a continuously increasing demand for mica within the country in the coming years as a result of the expansion and development of industries manufacturing electrical instruments, appliances and apparatus. Even so, there will be left a sizable surplus available for export and every step must be taken to make mica earn for the country as much foreign exchange as possible.

In its report submitted in August 1957, the Export Promotion Committee put forward certain measures designed to remove some of the uncertainties involved in exporting mica. They covered stipulation of quality standards, avoidance of exports on consignment basis and introduction of pre-shipment inspection by the buyers' representatives at Indian ports, even if the cost of such inspection has to be borne by the Indian exporter. Although three years have elapsed since these suggestions were made, nothing worthwhile would appear to have yet been done. The Indian Mica Miners and Dealers Association has, indeed, done well to stress that the main solution to the problem of the mica industry lies in so organising the trade as to enable it to inspire confidence in overseas buyers. The need for implementing the aforesaid suggestions has been specially stressed. It is to be hoped that the Mica Export Promotion Council will address itself to this task in right earnest.

From the long-term point of view, there are some directions in which the economy of the mica industry as a whole can be improved to a significant effect. Mention, for instance, may be made of setting up plants in the mica producing areas for punch and trim functions, testing and other processing operations. It will be recalled that, at present, the profit accruing from these operations is being reaped by the overseas buyers, since the mica exported from India is largely in the form of blocks and sheets. Mention may also be made of using wastes in mica industry to manufacture ground mica as well as mica bricks, and of the need to amalgamate, wherever possible, a number of small units into large economic units.

STEEL PLANT FOR THE SOUTH

The prospects of locating a steel plant in the South now appear bright, thanks to encouraging results yielded by preliminary studies on using Neyveli lignite with iron ore available in Salem to produce iron and steel. The feasibility of commercial production, however, has yet to be confirmed by further geophysical investigation and commercial tests. From the statement of Mr. C. Subramaniam, Madras Minister, in the Legislative Assembly on the 11th inst., the setting up of a steel plant for producing iron and steel by this method, seems almost a certainty. It is, however, not on all fours with the observations made by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel in the Lok Sabha on the 17th inst. The latter gives one the impression that the question is as yet undecided. Mr. Subramaniam, for instance, said that all doubts whether the project was worth undertaking had been set at rest as its feasibility was confirmed by the technical committee appointed by the Government of India to study the question. But Sardar Swaran Singh observed that a final decision would be taken only after large-scale commercial tests were carried out and had definitely proved successful. These conflicting observations are intriguing.

It may be interesting to recall here that an East German team of experts, which was invited to advise the Government of Madras on the subject, thought that the proposition was an economical one. It had also asked for a representative sample of Neyveli lignite for further experiments to be conducted in East Germany, with a view to finding out the type of furnace that would be suitable to smelt the ore. Tests on Neyveli lignite are being conducted in the low shaft furnaces at Jamshedpur.

The proposal has evoked considerable interest in the South which, naturally, has been casting

envious eyes on the North which has had the good fortune of having all the three steel plants so far built in the public sector. In fact, there were as many as twenty-five queries in the Lok Sabha on this question. In view of this public interest, the Government should speed up the investigations, so that a final decision, if not already taken, could be made and announced early.

COPPER AND ALUMINIUM CONDUCTORS

The public enquiry into the question of continuance of protection to the bare copper conductors, A.C.S.R. (aluminium conductors steel reinforced) and A.A.C. (all alumini m conductors) industry beyond the current year was held by the Tariff Commission in Bombay on the 19th inst. The industry, which is an important component of the electrical e gineering industry, has been enjoying protection for the last ten years. It has now asked for extension of the period of protection for another three to five years on the ground, *inter alia*, that it has to depend on imports for their basic raw materials, the cost of which forms a major element in the price of the finished product. Despite this handicap, the industry, it is conceded, has made "satisfactory progress" in regard to production and quality. Prospects for the expansion of the industry in the coming years are also bright, in view of the increase in demand for cables and wires envisaged in the third Plan, which includes a provision for the generation of six million kw. of additional power. Transmission of such large quantity of power will call for much larger quantity of copper and aluminium conductors than is currently produced. The electrification of railways, as well as the development of telecommunications, will also enhance the demand for cables and wires.

The major hurdle in the way of development of copper and aluminium conductors industry is the lack of domestic sources of raw materials. It is common knowledge that India is unfavourably placed in regard to non-ferrous metals. Opening the public enquiry, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, however, struck a note of optimism when he observed that, so far as aluminium conductors were concerned, it might be possible to obtain the entire requirements of raw materials within the country in two or three years. The position in regard to copper, however, was not certain as India's known resources are limited. Another disadvantage, he added, was the highly fluctuating nature of its price in the world market. Mr. Aiyangar urged the industry to restrict the use of copper, which entailed a heavy demand on foreign exchange, to the most essential needs for which there was no other substitute. He wanted the manufacturers to adopt the techniques developed in countries like France which are similarly placed as regards copper, to switch over to aluminium, principally for use as conductors, etc., in the electricity and power industry. He hoped that the pace of development of aluminium in India will make such substitution possible.

At the time of the last enquiry, that is, in 1957, there were nine units manufacturing copper and aluminium conductors. Of these, four were producing only copper conductors, three only aluminium conductors and two both copper and aluminium conductors. Since the last enquiry, two new units, one of the Hindustan Electric Company at Ulhasnagar, and the other of Aluminium Industries at Hirakud, have commenced production of aluminium conductors. In 1957, the capacity for the manufacture of copper conductors was assessed at 11,900 tons a year on single shift and that for aluminium conductors at 6,360 tons. The present total capacity of the industry for the manufacture of copper conductors, registered under the Industries (Development and Regulation) Act, as furnished by the Development Wing, is 23,800 tons a year and that for aluminium conductors 19,300 tons, both on double shift. The production of aluminium conductors was 15,366 tons in 1957, 14,740 tons in 1958, 16,646 tons in 1959 and 6,805 tons in January-May 1960. A few more units are also expected to go into the production of aluminium conductors in the next few years. The production of bare copper conductors shows a distinctly declining trend. From 9,446 tons in 1957, it declined to 8,387 tons in 1958, 7,158 tons in 1959 and 3,364 tons in the first five months of the current year. Since 1958, imports of copper and aluminium conductors have been totally banned. There have, however, been some imports, presumably on licences granted prior to this date.

The trend in consumption (derived from sales of domestic products *plus* imports) of conductors has shown a downward trend. The consumption of copper conductors fell from 11,372 tons in 1957 to 9,356 tons in 1958 and 7,587 tons in 1959. The corresponding figures for aluminium conductors are 20,406 tons, 16,396 tons and 17,467 tons. The current demand for copper conductors is placed at 15,000 tons a year and this is not expected to increase before 1962-63. The current demand for aluminium conductors is placed at 20,000 tons; it is expected to rise to 22,000 tons during each of the years 1961-62 and 1962-63 and to 26,500 tons during 1963-64.

The main raw material for the manufacture of bare copper conductors is electrolytic copper wire bars. There is no domestic production at present and the entire requirements of the industry are met through imports. However, the Indian Copper Corporation has been licensed to produce 8,400 tons of electrolytic copper a year. This plant will go into production by 1962-63, provided it gets sufficient foreign exchange for the import of plant and machinery. The copper wire bar in which form electrolytic copper is at present imported is free of duty. As for manufacture of copper rods needed for wire drawing, there are five units in production. Their total capacity is 18,420 tons on single shift. Production of rods rose from 11,608 tons in 1957 to 11,817 tons in 1958 and 14,560 tons in 1959. One more unit, namely, Hindustan Transmission Products Ltd., New Delhi, has also been licensed recently for the manufacture of electrolytic copper rods.

The important raw materials for A.C.S.R. are conductor-grade aluminium ingot/bar or rod and high tensile galvanised steel wire. All aluminium conductors require only conductor-grade aluminium ingot/bar or rod. A good part of the conductor-grade aluminium is still imported. The Indian Aluminium Company, Ltd., Calcutta, is the only unit which at present produces electrolytic aluminium in the country. Its production rose from 2,338 tons in 1957 to 2,400 tons in 1958 and to 2,751 tons in 1959. But as new units have been licensed and con-

AMERICAN LETTER

A PROP TO THE FALTERING ECONOMY

OIL COMPANIES PERTURBED—BANKS INSTALLING COSTLY ELECTRONIC EQUIPMENT

From Our Special Correspondent

NEW YORK, 20*th August*

THE big news on the financial front here was the unexpected cut in the Federal Reserve discount rate from 3½ to 3 per cent. Some quarters called it an action to bolster a faltering economy. The Federal Reserve referred to it as no more than a technical market adjustment. As a result, the stock market perked up and showed the largest gain in two months. The faltering economy theory seems to have more validity than market adjustment. The last reduction in the discount rate occurred only in June. In addition, the Federal Reserve also reduced member banks' reserve requirements which will free $600 million of funds for lending or investment purposes.

The down-turn in steel production to the lowest level in any non-strike year, is the biggest factor in the faltering economy theory. It affects the entire economy. Particularly struck is the ferro-alloy industry. Ferro-alloys and made of manganese, chromium, vanadium and are added to steel to impart strength. Other mixtures with steel also give resistance to heat and corrosion, malleability and other qualities. Chromium and nickel are also affected, which go into the making of stainless steel.

Nearly one half of the steel industry is now idle and the ferro-alloys have taken a bad beating as a result.

Competition From Abroad

Foreign competition is another factor. During the last prolonged steel strike, shipments from overseas from Germany, Belgium, Britain, Japan and other steel producing countries increased sharply. Consumers here, in fact, were able to buy at lower prices in many instances than domestically. A good deal of the foreign market, therefore, has been retained. For the first time in many a moon, the U.S. management does not have it all their own way because of bigness. For the first time, they have to think and they are not used to it. A grave handicap is, of course, the constantly rising wage structure and the increase in prices which is pricing the U.S. out of many world markets.

In addition to competition from Western world nations, growing inroads are made in the world markets by the Soviet bloc. While the volume is still small, competition from Russian oil has been severe. The American Middle Eastern oil companies, for example, were forced to reduce prices by an average of about 10 cents a barrel, or 6 per cent.

The reduction, in effect, was the result of a squeeze play for the market in India. Because of Russian offers, the American companies were forced to slash their prices of crude oil by 12.5 per cent. which brought the price level far below the established market level. Russian competition is not always on a regular commercial basis. Often, they are on a barter basis. An example is Brazil, where Soviet oil is bartered against coffee. Most of these deals are based on politics rather than on economics and the private companies here cannot deal similarly.

Government Spending

There is also concern about Government spending. Budget Director Stans said that Congressional spending actions so far had already knocked a big hole in the $4,200 million Budget surplus projected for the fiscal year ending 30th June next. Spending measures passed would reduce the surplus $2,600 million, all other factors being equal.

Despite these gloomy aspects, the economy as a whole is in relatively good shape. Employment rose to a new high of 68,689,000 persons in mid-July, a gain of 110,000 above June. Unemployment fell 406,000 to 4,017,000. The Department of Labour noted, however, that joblessness among adults rose nearly 150,000, as a result of cutbacks in the steel industry and layoffs in automobile plants where model changeovers are under way.

Personal incomes rose to a new high of $405,800 million, as compared with $386,800 million 12 months previously. This is the reason why retail sales have been well sustained. Also, sales by merchant wholesalers in the first half of the year were 2 per cent. above the 1959 level. They were estimated at $63,100 million. Of this amount, durable goods accounted for about $26,700 million and non-durable goods for about $36,300 million.

Although the steel situation is highly unsatisfactory, there has been a modest gain in total output. The gross national product rose $3,700 million in the second quarter to a new high seasonally adjusted annual rate of $505,000 million, according to preliminary estimates by the Council of Economic Advisors. But the gain of only 0.7 per cent. was much smaller than the 3.1 per cent. spurt in the first quarter of the year.

Capital spending has not come up to expectations. Shrinking profit margins, declining stock market prices until recently and a quite pervasive mood of hesitation were the main causes. However, there is little, or no indication, that spending plans for plant and equipment by industry have been revised downward. The strongest likelihood still is that gently rising capital expenditures will give some support to the U.S. economy for the rest of the year.

Electronics in Banking

Electronic cheque handling is becoming a phobia with the U.S. banking fraternity. It is convenient for the banks, but causes inconvenience to the customer because he has to fill in account numbers which defy memory.

Numerous commercial banks have acquired such equipment and, in the next few weeks, five of the twelve Federal Reserve Banks will install pilot operations from various manufacturers to test operational feasibility. This development is prompted mainly by two factors - labour saving and by the fact that cheque clearings are running now at an annual rate of more than $3,000,000 million a year, an unbelievable figure.

For some years now, the banks here have offered accounts where no minimum balance is required and where the depositor just pays 10 cents for each cheque drawn. Nearly everybody pays his bills by cheque.

There are added expenses for banks in installing these systems, such as preprinting of the routing symbol-transit number in magnetic ink. There is also the question of encoding. But the experts maintain that the potential advantages of the widespread electronic cheque-clearing system far outweigh the probable cost of the programme.—*All Rights Reserved.*

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow, July 29, 1960

PRESS NOTE

4 per cent Uttar Pradesh State Development Loan, 1969

THE Government of Uttar Pradesh are floating a loan of Rs. 7 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscriptions on August 29, 1960, and will close on September 3, 1960, unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99-75 for every Rs. 100 of the loan applied for; the loan will have a currency of 9 years from August 29, 1960, and will be repaid at par on August 29, 1969; the loan will carry interest at the rate of 4 per cent per annum from August 29, 1960, payable half-yearly on February 29 (February 28, in case of non-leap years) and August 29, the payments being subject to tax under the Indian Income Tax Act, 1922. Subscriptions for the loan can be made in the form of cash or cheque or of securities of 3 per cent U. P. Loan 1960 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department notification No. B-6521/X– 88-60, dated July 29, 1960, copies of which, along with the application form are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh :—

Revenue Position—The revenue receipts and expenditure and the surpluses for the last fifteen years are as follows :

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1945-46	2,995	2,551	+ 444
1946-47	3,265	3,061	+ 204
1947-48	3,876	3,771	+ 105
1948-49	4,920	4,729	+ 191
1949-50	5,626	5,626	..
1950-51	5,189	5,184	+ 5
1951-52	5,556	5,550	+ 6
1952-53	6,483	6,483	..
1953-54	7,564	7,281	+ 283
1954-55	7,819	7,713	+ 106
1955-56	8,553	8,423	+ 130
1956-57	8,996	8,984	+ 12
1957-58	10,493	9,942	+ 551
1958-59	11,723	11,384	+ 339
1959-60	12,624	12,493	+ 131

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development Schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1959-60 were 310 lakhs in the U.P. Road Fund, 12 lakhs in the Hospital Fund, 49 lakhs in the Famine Relief Fund, 1,410 lakhs in the Revenue Reserve Fund, 2,412 lakhs in Zamindari Abolition Fund, 140 lakhs in the Depreciation Reserve Fund—Irrigation, 280 lakhs in the Depreciation Reserve Fund—Government Bus services, 432 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 124 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,190 lakhs.

Debt Position—On March 31, 1960, the debt of the Uttar Pradesh Government amounted to 25,369 lakhs consisting of 952 lakhs representing the consolidated debt due to the Central Government and 18,176 lakhs taken from that Government for development purposes and 453 lakhs for Relief and Rehabilitation Schemes, plus 5,334 lakhs representing the amount of public loans floated by this Government from time to time plus 145 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 209 lakhs from the Reserve Bank of India and 44 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 56 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1960 amounted to Rs. 7,402 lakhs. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds which amounted to 1,846 lakhs on March 31, 1960 are mostly invested in Government of India Securities. Besides this a sum of 1,366 lakhs is also available in the Sinking Fund built up for the amortization of loans obtained from Government of India, which are repayable in lump sums.

Assets of the Government—Against the outstanding debt of 25,369 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tube-wells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 21,369 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 4,858 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

FOOTNOTES—(1) The accounts for 1959-60 have not yet been closed finally. The figures for 1959-60 mentioned in the Press Note are based on the March (Final) 1960 Accounts.

(2) Adjustments have yet to be carried out in the accounts in respect of the capital assets relating to the Electricity Schemes transferred to the U.P. Electricity Board. The cost of such assets will be deemed as loans advanced by the State Government to the Board.

INSPECTION OF BANKING COMPANIES

GENESIS—PURPOSE—RESULTS

FOLLOWING the Palai Bank episode, there seems to be a lot of misunderstanding in this country about the purpose of inspection of banking companies by the Reserve Bank of India, despite the elucidation by Mr. H. V. R. Iengar, Governor of the Bank, last week, *vide* pages 328 and 359 of *Commerce* dated 20th August. It is wrong to think that merely because a bank is scheduled to the Reserve Bank or it has been examined by the Reserve Bank, it is the responsibility of the latter to ensure the safety of deposits. A more comprehensive account of the genesis, purpose and results of inspection of banks by the Reserve Bank was given by Mr. Benegal Rama Rau, a former Governor of the Bank, in a series of three lectures which he delivered at Madras in the second half of April 1960 under the auspices of the Sir Alladi Krishnaswami Aiyar, *Shashtiabdha Poorthi* Endowment. A brief reference to these lectures was made in the last two of our April issues, in which we highlighted their salient features. But public memory being short and there being a lot of ignorance on this subject even in quarters which ought to know better, we are reproducing below the relevant extract from Mr. Rama Rau's illuminating address. It will be seen from it that the Reserve Bank has spared no effort to improve the quality of Indian banking, without causing any major upheavals:

"My association with the Reserve Bank in 1949 almost synchronised with two outstanding events in the banking history of this country, namely, the nationalisation of the Reserve Bank and the passing of the Banking Companies Act, 1949, which gave the Reserve Bank comprehensive and effective powers of control and supervision over the entire banking system. The Government had also announced in the previous year that it was their intention to nationalise the Imperial Bank of India as early as possible.

"During the three months I was unofficially attached to the Bank before I became Governor, I had the opportunity of studying the economic developments in the country in the preceding years, during a considerable portion of which the country was almost completely absorbed in the war effort. Three outstanding features of the Indian economy prominently attracted my attention:

(a) the growth of a large number of unsound mushroom banks before the war, and the disturbing banking situation that had developed during the war years;

(b) the alarming inflationary situation that had developed as a result of war finance and concentration on war industries with the inevitable neglect of agriculture and consumer industries; and

(c) the almost total absence of banking facilities outside large towns and the almost complete dependence of agriculturists on moneylenders who charged extortionate rates of interest.

"We were then on the eve of an industrial revolution, and planned development of industry and agriculture had been announced as the official economic policy of the Government. Many of you are, I presume, students of economics and it is not necessary for me to emphasise that no rapid development of industry or agriculture is possible without adequate credit facilities and mobilisation of the savings of the people in a form that could be made available for development. One of the essential requisites for a widespread expansion of industries on a large-scale throughout the country is a sound and stable banking system. The new nationalised Reserve Bank which had been given extensive powers over the economic structure of the country would not have justified its existence if it did not make, so far as it lay in its power, a determined effort to remove the obstacles in the way of development and if it did not make a positive contribution to the planned development of the country.

Most Urgent Problem

"The most urgent problem was the rapidly deteriorating banking situation, which I shall deal with in my present lecture. The picture of banking in India as it emerged out of the war would perhaps be clearer if I presented it to you in a historical setting. India had had its own indigenous system of banking for centuries, which met the requirements of a primitive economy, but joint-stock banking on the basis of limited liability developed only after 1860. The earlier banks had their branches mainly in major ports and other economic centres, and they were primarily engaged in the financing of the internal and external trade of the country. Failures of banks were not uncommon in those early years. Nevertheless, the number of these banks rose from 2 in 1870 to 38 in 1934. After 1940, largely under the stimulus of the inflationary conditions created by the war, there was a phenomenal increase of the number of new banks and their branches. The development was absolutely uncontrolled and indiscriminate. Any financial adventurer who required money for a speculative venture or for financing a business in which he was interested, started a bank with many branches and collected substantial deposits by the offer of high rates of interest and by lavish advertisement. The total number of offices of banks rose from 1,951 in 1939 to the fantastic figure of 5,521 in 1946. One bank with a capital of less than Rs. 2 lakhs opened more than 75 branches. Another bank which described itself as 'millionaire bank' had a capital of less than Rs. 30,000. Actually, the Registrars of Companies were not even able to trace the whereabouts of many banks. Some of these new banks were managed by dishonest or inexperienced men. The funds deposited by the public were often utilised to acquire control over non-banking companies by the purchase of their shares at highly inflated prices. Other conspicuous features of these mushroom banks were the interlocking of shares between the banks and other companies in which the management was interested, large unsecured advances to persons connected with the management, advances against speculative shares when prices were very high and advances against immovable property, which could not be recovered easily in an emergency. After this hectic and uncontrolled expansion there was, of course, the inevitable crash. In West Bengal, the position was specially grave. Four scheduled banks and a large number of non-scheduled banks failed. The amount of money lost, mostly the savings of the middle classes, was over Rs. 26 crores. Between 1939 and 1949, as many as 588 banks had failed in the various States.

Legislative Control

"To deal with a crisis of this magnitude, the Reserve Bank had in the earlier years no adequate powers of control or regulation. Commercial banks were governed by the Company Law applicable to ordinary non-banking companies, and the permission of the Reserve Bank was not required even for the flotation of a new bank. My predecessors, Sir C. D. Deshmukh and Sir James Taylor, were, of course, fully aware of the dangerous situation that had been developing and had devoted considerable attention to the problem of the control and regulation of banking by comprehensive legislation. There had been sporadic failures of banks before the Reserve Bank had come into existence. Analysing the causes of these failures, the Central Banking Enquiry Committee which reported in 1931 had come to the conclusion that the provisions of the Indian Companies Act at the time were quite inadequate to deal effectively with banking malpractices and recommended comprehensive legislation covering the organisation, management, audit and liquidation of banks. The Companies Act was thereupon amended in 1936, and a separate chapter relating to banking companies was added. These provisions, however, proved ineffective and difficult to administer.

"As some of you in Madras may remember, the Travancore National and Quilon Bank failed in 1938 and the subsequent crisis in Southern India emphasised the urgency of more effective methods for the control of banking. The Central Board of the Reserve Bank submitted in 1939 proposals for legislation in the form of a draft Bill, which was subsequently circulated for public opinion. Some of the provisions, however, became controversial, and the Government decided not to undertake any comprehensive legislation during the war period when the entire energies of the Government were inevitably concentrated on the war effort. Certain interim measures were taken to regulate and control by legislation such of the banking malpractices as required immediate attention. New powers were given to the Reserve Bank under (1) the Banking Companies (Restriction of Branches) Act 1946, (2) the Banking Companies (Inspection) Ordinance, 1946, and (3) the Banking Companies (Control) Ordinance, 1948.

"Most of the provisions in these enactments were subsequently embodied in the Banking Companies Act in 1949, which I shall presently deal with. As I have stated, this Act gave the Reserve Bank very comprehensive and effective powers of supervision and control over the entire banking system. The tragic experience of the preceding years had clearly demonstrated that special powers were essential for the establishment of a stable banking system in India. It is not necessary for me to refer in detail to the provisions of this Act, which you will find described in any text-book on Indian banking. I will refer only to two or three important provisions, which have enabled the Reserve Bank to deal successfully with the problems arising from the chaotic condition in which the banking system had emerged out of the war period.

"Perhaps, the most effective of the supervisory powers conferred on the Reserve Bank is the right to inspect banking companies at any time. The Reserve Bank is empowered to inspect any banking company with the object of satisfying itself regarding the eligibility for a licence, opening of branches, amalgamation, compliance with the directives issued by the Reserve Bank, etc. Another important feature is the provision regarding licensing. The Reserve Bank is required before granting a licence, to satisfy itself by inspecting the books of accounts and methods of operation of the banking company, whether it is in a position to pay its depositors in full as their claims accrued and that its affairs were not conducted to the detriment of its creditors.

The Position in the U.S.

"The United States of America and some of the Western European countries had passed through similar crises in the past. I had been an Ambassador in America immediately before I took charge of the Reserve Bank, and I had the opportunity of studying the system of inspection which had been established in that country, and which had largely contributed to the establishment of one of the finest banking systems in the world. In the United States, the inspections of all national banks which include the majority of the banks belonging to the Federal Reserve System are conducted by the Comptroller of the Currency. The other banks which belong to the system are supervised by the State authorities and are inspected by them with the co-operation of Federal Reserve Banks. Banks that are not members of the Federal Reserve System, but are insured by the Federal Deposit Insurance Corporation, are examined by the Corporation and the State authorities. Every bank is subject to inspection, but in the course of years a high standard of integrity and sound banking practices has been established, and these inspections are now tending to be nominal in most cases.

"The banking situation in India obviously demanded drastic remedies. Although inspection was not a statutory obligation under the Banking Companies Act, 1949, I decided, soon after I took charge of the Reserve Bank in July 1949, to organise an efficient machinery for the systematic and periodical inspection of all banking companies in the country irrespective of their size and standing. This policy was announced in a Press *communique* issued on 29th July 1949. I explained in this *communique* that the intention was to inspect every bank at least once and to complete the first round of inspections of all the banks in the country as early as possible. The ultimate aim was to create an organisation for the annual inspection of every bank. These inspections were designed to be an integral part of the statutory function assigned to the Reserve Bank. It was made clear that the primary object of the inspections would be to assist the banks in the establishment of sound banking traditions by drawing their attention to defects or unsatisfactory features in working methods before they assumed serious proportions necessitating drastic action.

A Formidable Task

"The task of evolving an efficient machinery and organisation for conducting the inspections of all the banks was a formidable one. It is obvious that the inspections of banks, many of which are administered by eminent business men and financiers, required a staff possessing not merely adequate banking experience and knowledge but also a high standard of integrity and considerable tact in dealing with bank personnel. The problem, however, had to be faced. By a careful process of selection, qualified and experienced officers from some of the bigger and well-established commercial banks were recruited and specially trained. The work of inspection was also decentralised by the opening of offices at various important centres in the country, so that there could be continuity of contact between the inspectorate and the banking institutions. A very efficient organisation was thus created in the course of two or three years. If India has today a stable banking system which could compare favourably with that in many Western European countries, it is largely due to the efficiency of the inspection system. I may take the opportunity to pay a tribute to the members of the inspection staff, who have made a significant contribution to the development of sound banking in this country by the high standard of efficiency and integrity they have maintained. There have been comparatively few liquidations of banks since the inception of the inspection system. The great majority of the banks which have ceased to function during the last seven or eight years were deliberately put out of existence by the Reserve Bank by the refusal of a licence or other measures, since they failed to meet the statutory requirements of the Banking Companies Act. An eminent Indian industrialist who is also the head of a big bank once paid a high compliment to our inspection staff. He told me how grateful he was to these inspectors, for their reports gave him a great deal of important information about the working of the bank, which he was not in a position to acquire in the course of his daily association with the institution. A British banker also once paid a high tribute to the efficiency of our inspection system.

"I will explain to you briefly how by a judicious use of the powers of licensing and inspection, a large number of banks have been nursed patiently some time for years and restored to health. All the big established banks were, of course, given a licence at an early stage. In other cases, if serious defects were observed in the course of inspection, the banks were required to take appropriate action and submit periodical reports as to the progress made in the removal of these defects. In some cases, the banks were persuaded to appoint competent and experienced banking advisers to help them in the process of rehabilitation. In a few rare cases, banks were induced to retire senior executives guilty of unethical conduct. Under the Banking Companies Act, a bank can continue to function without a licence, unless and until a licence was definitely refused by the Reserve Bank. Only in cases in which a bank was unable to show any improvement was a licence refused. The inspection reports were always kept confidential and the bank was given every opportunity of reforming itself before this extreme step was taken. The Reserve Bank deliberately demanded a high standard of banking methods and working for the grant of a licence. You will be surprised to learn that at the end of March 1960, only 47 scheduled banks and 15 non-scheduled banks had received licences, but these licenced banks and four other banks which do not require a licence held 94 per cent of the total deposits of all banking companies in India.

Training College

"I must now make a brief reference to the Bankers Training College, which was instituted in 1954. The periodical and systematic inspections conducted by the Reserve Bank Inspectorate had revealed that many of the defects found in the working of the commercial banks were not in a large number of cases due to consciously practised dishonesty, but to lack of experience and a proper training in methods of banking. Many of the executives in charge of the smaller banks were ignorant of the recognised principles of sound banking and in many cases functioned as moneylenders. Apart from this, as well-established banks extended their activities and opened new branches, there was a demand for trained personnel. I informally discussed the question with the representatives of the Indian Banks Association and the Indian Institute of Bankers in 1956 and drew up a scheme for the establishment of a Staff Training College similar to the institutions attached to the big banks in the United Kingdom, Australia and other countries. The training was to be essentially practical in character. To ensure that the Training College was established and conducted on right lines, the services of two experienced experts from one of the 'Big Five' banks in the United Kingdom were secured under the Colombo Plan. The response from the banks to the establishment of this College was extremely encouraging. During the five years of its existence, the College has been in a position to afford training facilities not only to banks in India but also to banking institutions in neighbouring countries, such as Nepal and Burma. The scope of the activities of the College has been further developed by my successor, and an intermediate course is proposed to be started shortly for imparting training in internal banking accounts, audit, etc. I understand that in response to the suggestion made at the conference of representatives of the State Financial Corporations in November 1957, it has been decided that facilities should also be provided at the Training College for the training of the supervisory staff of these Corporations by the end of May 1960. The College has completed 27 courses of training of eight weeks each. The total number of candidates from commercial banks all over the country who were trained during these courses was 661."

SWISS CURB ON INFLOW OF HOT MONEY

The flow of "hot money" into Switzerland has been on such an embarrassing scale in recent months that the authorities have taken an unusual step of checking the inflow of foreign funds. The Swiss National Bank has asked the commercial banks to discontinue payment of interest on foreign deposits and foreign sight credits opened since 1st July and these will be frozen for a period of three months. These funds can, however, be used by the banks holding them for conversion into another currency and for subscription to foreign loans in Swiss francs issued in Switzerland or for investment in other countries. But the foreign funds cannot be used for investment in real estate or mortgages in Switzerland. The commercial banks have also been asked to charge a commission of one quarter of one per cent. every three months on foreign accounts. In other words, foreign funds coming into Switzerland can be used for investment in interest-bearing obligations of foreign countries that approach the Swiss capital market. Consequently, the Swiss monetary authorities have taken care to see that their country's position as an international lender is not adversely affected by the steps now taken by them.

The suggestions of the Swiss National Bank have been generally accepted by all the banks, except that a few of them are said to be reluctant to charge commission on foreign accounts. These restrictive measures on international capital movement of funds have been imposed by Switzerland for the first time in history and provide an alternative to the use of monetary weapon. These measures came into effect on the 18th inst. and are designed to safeguard the economic equilibrium of the country and the stability of the Swiss franc. The National Bank has, however, made some exceptions, in order not to disturb the traditional good relations existing between the banks and their pre-

REDUCTION IN CLOTH AND YARN PRICES

EXPORTS LIKELY TO BE BENEFITED?

THE latest directive of the Indian Cotton Mills' Federation to its member-mills to reduce the wholesale prices of cloth and yarn and also certain other measures taken by it to ensure adequate supplies to consumers at reasonable prices was the subject-matter of an interpellation in the Lok Sabha on Thursday last week. Answering supplementaries to the interpellation, Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, stated that it was too early for him to react to the move. He recalled how he had expressed his dissatisfaction about the earlier announcement of the textile mills to cut prices by 10 per cent. and how, subsequently, it was explained that the cut would, in effect, be much more—almost 14 per cent. This, the Minister said, had to be examined and its effect on the market watched before coming to conclusions. And he assured the House that the Government was watching how the millowners' proposals were reflected on the market and also assessing their implications.

The foregoing observations of Mr. Shastri suggest that the Government of India does not contemplate to take in the immediate future any action that would interfere with the existing mechanism for marketing piecegoods and yarn. It is now left to individual mills and traders to take every care they can to avoid artificial scarcity in supplies and high prices, particularly during the next few months which coincide with festivals. A special responsibility devolves on the traders, wholesale and retail, who it is that deal directly with consumers.

The decision of the Cotton Mills' Federation to lower prices of yarn by 5 to 10 per cent.—details are given in our Yarn Market report last week (*vide* page 356)—has been welcomed by the trade, though a section feels that the reduction should have been of the order of 10 to 15 per cent. Welcoming the decision, Mr. Kantilal Nahalchand, President of the Bombay Yarn Merchants Association and Exchange, declares that the revised prices are "fair and reasonable," in view of the currently ruling prices, and that they would "definitely give relief to consumers." Mr. Nahalchand has, however, urged that the reduction in prices should also apply to yarns on cones and cheeses, as well as folded yarns. He says: "There seems to be some discrepancy with regard to the price of 6 counts cotton yarn which is fixed at Rs. 13.57 (per bundle of 10 lbs.). This can only be the price of 6s cotton waste yarn, because the ruling price of 6s in October 1959 was Rs. 13.25—Rs. 13.50 and, if the envisaged increase of 27½ per cent. is added to it, it will come to Rs. 16.87. The above discrepancy has created some confusion among the traders and is likely to result in disputes between traders and consumers. In view of this, the Federation should clarify the discrepancy."

Traders' Complaints

With the reduction in the mills' wholesale prices of cloth for domestic consumption, the upward trend in exports noted during the first seven months of 1960 may be expected to gather momentum in the remaining part of the year, provided there are no adverse changes in the trend of world trade. The total quantity of mill piecegoods actually exported through the Bombay Port during January-July 1960 was 358.37 million yards (valued at Rs. 26.80 crores), which compares favourably with 330.36 million yards (Rs. 22.92 crores) in the corresponding period last year. The Bombay Port, it may be noted here, accounts for about 90 to 92 per cent. of the aggregate shipment of mill cloth from the whole of India. On an average, every yard of cloth exported from Bombay fetched 75 nP, as against 69 nP a year before. The higher earning must be attributed to the all-round rise in domestic prices and not to any marked improvement in the trend of world markets. This aspect needs to be specially stressed in the context of the keen competition faced by Indian cotton textiles in several overseas markets, reports from which indicate that new cotton mills are springing up and that textiles of countries like Hong Kong, Japan, Pakistan, China, Russia and other communist countries are being imported at lower prices than ours. Drawing attention to these reports in the course of a memorandum addressed recently to the Minister for Commerce and Industry, the All-India Exporters' Chamber observes:

"The policy of the Indian cotton textile manufacturers is shortsighted in the matter of exports. It is unfortunate that the export-consciousness of Indian manufacturers has not yet developed to the extent desired and, therefore, our country is facing the present crisis. Other countries are more export-conscious and always offer lower prices for their exports in comparison to their local prices, whereas, in our country, the manufacturers are tempted to quote higher prices for export. Incidentally, we would like to point out that some of the mills, after having sold for export, have gone back on their contractual obligations and have failed to give delivery of goods to the exporters concerned in stipulated time."

While the traders hold the mills responsible for the low level of textile exports, the industry throws the blame on the traders. This sort of charge and counter-charge has been going on ever since India emerged as an exporter of textiles. Whatever be the justification or otherwise of these charges, it must be emphasised that the Government's unhelpful policy continues to hamper progress on the export front. Not only has the Government not allowed the mills to expand their weaving capacity in time but it has also imposed restrictions on the manufacture of certain varieties of cloth, with a view to giving a sheltered market to the handlooms. Further, the adoption of unrealistic labour policies has been considerably obstructing the pace of modernisation of mills. Even the outmoded and absolutely unfit units are kept alive just for the sake of providing employment to a few thousand workers. And to make matters worse, the Government has imposed a system of taxation on mills that leaves little margin for further development.

Compulsory Exports Unrealistic

It may be true that some mills are not at all evincing any interest in the development of an export market for Indian textiles, inasmuch as they are making handsome profits in the internal market itself. But to suggest, as the All-India Exporters' Chamber has done, that the mills must be compelled to export upto 15-20 per cent. of their production is to ignore realities. That the scheme of compulsory exports may prove worse than the disease has been well brought out by Mr. Chinoobhai C. Javeri, one of the prominent members of the Chamber, in the course of an article contributed to *Commerce* sometime ago (*vide* page 433 of the issue dated 12th September 1959). It will be clearly evident from this article that the scheme, by compelling even mills which produce cloth of substandard quality, would invite complaints which would give India a bad name and foreign buyers would be prejudiced against Indian cloth in general. In order to sell cloth in competition, the non-exporting mills will be tempted to lower the quality and quote relatively lower prices. Again, foreign buyers, when they come to know that the mills are compelled to sell their production for export, would squeeze the mills and make capital out of them by procuring their requirements at unfair prices. Further, some mills which are working under loss on account of outmoded equipment will prefer to close down rather than suffer further losses on export business. The worst aspect of the compulsory export scheme is that other countries will use it as a plausible handle to agitate against import of Indian cloth on the plea of uneconomic prices or dumping.

Equally unrealistic is the other suggestion of the Exporters' Chamber that a levy may be imposed on the cloth for home consumption, the money so realised being used to encourage exports. Since cloth is an essential item of consumption, the imposition of any such levy will only enhance the cost of living, a most undesirable development especially when the country is already in the grip of inflation.

If the export trade in Indian cotton textiles is to be set on a sound and secure footing, it is of the utmost importance that the cost of manufacture must be brought down and quality improved. Surely, the industry will be able to achieve these, provided ample opportunities are given to them by the powers-that-be to modernise and rehabilitate its productive equipment as well as to introduce rationalisation of production methods.

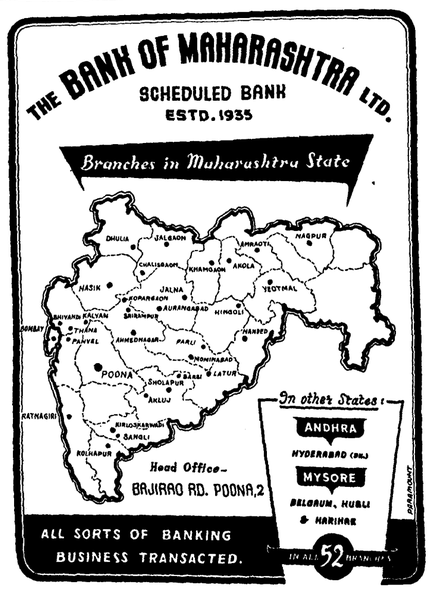
IMPORT OF U.K. TEXTILE MACHINERY ON DEFERRED PAYMENT

The Government of India has announced the grant of certain facilities for import of textile machinery from Britain on deferred payment basis. Accordingly, out of the total f.o.b. value of machinery imported, as much as 90 per cent. may be paid in equal half-yearly or annual instalments (inclusive of interest) over a period of five years from the date of shipment. Only five per cent. will have to be paid on order and another five per cent. on shipment, in addition to actual insurance and freight charges. The minimum value covering each order for import should, however, not be less than £20,000.

The foreign exchange allowed for import from Britain on these terms, it is stated, are intended to give those mills, which have already submitted their applications for import of textile machinery from countries other than the U.K. during the current licensing period (April-September 1960), an opportunity to change the country of origin, if they so desire. This means that no fresh applications for import from the U.K. will be entertained. The intending mills are required to signify the change of the country of origin to the Textile Commissioner before the end of this month. The *pro forma* invoices may be submitted later, but not later than 10th September 1960.

TEXTILE MILLS IN KANPUR

A special appeal to the cotton textile mills of Kanpur not to disturb the happy climate that exists in the industry following the unanimous decisions on the implementation of the Central Wage Board's recommendations, arrived at at the State Tripartite Labour Conference held at Naini Tal on 3rd July last, has been made by the Government of Uttar Pradesh. The appeal is a sequel to the move of certain mills to work out fresh piece-rates for workers on a certain percentage of efficiency, after taking into account the basic wage and the merged portion of dear food allowance. The result is, it is pointed out, that the total emoluments which the workmen would now receive, including the increase of Rs. 6 per month, will either be the same or even less than what were being received previously. The Government hopes that the mills will make payments to workers at the rates and on the basis indicated by the Wage Board.



SHIFT-WORK DIFFICULTIES IN MILLS

COTTON AND YARN PRICES EXPECTED TO RISE

From Our Special Correspondent

MANCHESTER, 16*th August*

MANCHESTER LETTER

STABILITY in prices is frequently a key factor in creating confidence among customers and thereby raising the temperature of trading. If stability is followed by a firm upward trend in values, the attitude of buyers usually becomes more buoyant. This was largely the case in the first half of the current year and resulted in a regular offtake and the placing of useful contracts in nearly every section of the market for cotton goods in Lancashire.

The subsequent phase of inactivity which, to a large extent, coincided with the arrival of the holiday season, was not caused by lack of confidence in the future movement of prices so much as the more uncertain tone which developed following the Government's measures to restrict credit terms, coupled with a deterioration in the international situation after the failure of the Summit Conference. The table below indicates the changes which have taken place in raw material rates and cotton yarn quotations since the beginning of the year.

,, 12 ..	22 75	35 25	43 00	62 80	58 30	86 25

Few traders believe that any substantial decline will occur in the near future in the general level of prices. In many directions, indeed, it is felt that higher rates are more likely to be quoted, particularly as many outside growths of raw cotton will be in short supply during most of the new season.

Backed by the comforting length of order lists, no weakening has been apparent in the stiff front presented by producers and there is no cause to anticipate such developments in the immediate future. Should a seasonal buying movement be encountered in the autumn, as often occurs, the strength of sellers will be even more sustained.

Bigger Plant Sales

British textile machinery makers, who should benefit substantially from the orders now being placed by many home producing units under the cotton reorganisation schemes, are also doing quite well on the export side. In the first half of 1960, total shipments of plant exceeded the comparable figures in both 1959 and 1958 by more than 100,000 cwts. The volume of business done with overseas outlets was 694,019 cwts., and the value, £26,344,313, a rise of £5,000,000 on last year's level.

The most significant item in the countries to which British textile machinery has been shipped is the quantity absorbed by the Soviet Union—now the biggest consumer with 79,587 cwts. India has taken 79,344 cwts. and Poland 41,438 cwts.

Indicative of the wide spread of the export trade now being conducted by makers of British textile plant is the fact that so many countries have taken more than 20,000 cwts. of machinery in the past half-year. They include South Africa, Pakistan, Australia, the Irish Republic, Western Germany, Italy, Israel, Japan, the Philippines and the United States.

A Man's Industry?

Just as the manpower strength of Lancashire mills was showing signs of recovery after the long period of running down, the trend has been reversed and a further 1,020 workers were lost in a five-week spell. But too much should not be made of it; the wastage coincided with summer holidays in a number of important production centres—mostly in the spinning area—and a seasonal setback at this time of year has for long been an accepted feature in an industry so heavily dependent for its workers on married women with families.

What is more to the point is: How hopefully can the industry look to a future in which the right sort of labour is available in the right sort of numbers? The reorganisation scheme has put the industry on its mettle in more ways than one. As mill machinery has been stripped out for scrapping, new industries—often cleaner and more congenial, although sometimes possibly more repetitive—have frequently moved into vacated mill premises. More developments of this kind are known to be pending.

New and thrusting competitors for local labour have arrived, almost literally, on spinners' and manufacturers' doorsteps—all this at a time when the cotton industry is under economic and other pressures to sweep away a traditional pattern of single-shift working in favour of double and treble shifts. It is not surprising that at least 30 mills were advertising for workers on one day alone during the past week in Bolton, Oldham and Blackburn.

Mr. W. T. Winterbottom, among others, has recently and rightly emphasised that shift-working is here to stay—if the reorganised Lancashire textile industry is here to stay. But, over the longer term, it seems clear that to reap the full benefits of shift-working, with continuity of manning and a degree of flexibility virtually unobtainable if the mills have to rely on working mothers and housewives, a fundamental change in the composition of the industry's labour force is essential.

Shift-work Difficulties

More men, and fewer women, will have to be attracted to the industry. Those firms which have tried to start night shifts, of course, have come up against the reality of the problem at the outset, since the employment of women on these shifts is prevented by law. In the whole of the weaving industry, for example, it is believed that there is at present only one firm which has been able to introduce a fully rotating three-shift system, as an alternative to tying its men down more or less permanently to the same shift.

The difficulties of introducing full shift-working are also underlined by the fact that, as a stopgap, dozens of Lancashire mills at the present time have had to re-start evening "housewives' shifts" to keep delivery periods within bounds. Quite apart from the question of economics, when these four-hour periods are matched against the full-scale shift-working of many of Lancashire's rival producers, it must be said that they have about them the stamp of a temporary expedient. All this underlines the need for a change in the balance of the industry's labour force, as between women and men, and focuses attention on the increasing importance of training and promotional opportunities in the future, if the textile industry is to secure its due quota of boys and men against the blandishments of the new light industries of the mill towns.

Future Labour Needs

The need gives an added topicality to a survey which the Cotton Board has been conducting to find out what the industry's requirements in terms of young workers are likely to be over the next five years. Firms have been asked to assess their forward needs under the headings of junior operatives, skilled workers and staff trainees. So far, the replies have not been fully analysed and the Board has not given any pointers to the information they contain.

But it will not be surprising if the industry's estimates of its future requirements of highly skilled people, as seen by individual firms, turn out to be narrower than they really ought to be at this time. It may be that, in the maelstrom of machinery scrapping and re-equipment, many firms have had little time to think ahead to 1965.

Big Mill Merger

The bid by J. and N. Philips, the Manchester drapery group, for the ordinary capital of Horrockses, Crewdson, spinners and manufacturers, of Preston, which it does not already hold, has now been accepted by holders of over 92 per cent. of nominal value of the stock for which the offer was made. The Philips' offer is one new ordinary share of 5*s.* each plus 32*s.* 6*d.* in cash for each £1 ordinary unit in Horrockses.

After an extraordinary general meeting of J. and N. Philips held last week at which a resolution increasing their capital was passed, the offer became unconditional. The date of acceptance of offer has been extended to the end of August.—*All Rights Reserved.*

WORLD COTTON PRODUCTION AND OFFTAKE ROUGHLY IN BALANCE

OUTLOOK FOR THE CURRENT SEASON

IN contrast to the poor indigenous cotton crop, tight supply and the consequent reduction in mill consumption and negligible exports during the current (1959-60) Indian cotton season, which will end on 31st August, the 1959-60 world cotton year, which closes a month earlier than the Indian season, was a unique one, with consumption, production and trade in the free world, all having reached record levels. The 1959-60 world marketing year marked a further step towards restoration of the balance between free world supply and demand for cotton, as it witnessed a significant reduction in supplies, thanks to increased consumption. In fact, the increase in consumption fully matched the rise in production and, in the opinion of the International Cotton Advisory Committee, Washington, it is doubtful whether there would have been any addition to stocks even if there had been no crop failure in India or if prices had not acted as a deterrent of producers in many countries. As it is, world stocks on 1st August are estimated to have been of the order of 16.40 million bales (of 478 lbs. each)—the smallest since 1953, as compared with 17.70 million bales a year ago. In view of this reduction in carry-over, the point was made at the nineteenth plenary meeting of the International Cotton Advisory Committee, held at Mexico in May last, that, though there was still a considerable surplus in the United States, it was doubtful whether this was so on a world-wide basis. It was pointed out that stocks in the U.S., estimated at a little more than 7.5 million bales by the end of July last, constituted a useful reserve against any dislocation of supply in the event of widespread crop failure. It was, however, conceded that any efforts to achieve a more even distribution of supply between exporting and importing countries would be in the interest of the world economy as a whole.

Stocks Rebuilt

According to the Committee, this objective would appear to have been realised, to some extent, in the 1959-60 season. With the price (and consumption) situation having been more conducive to the holding of stocks, importing countries, in all probability, must have rebuilt their stocks to more comfortable levels. In the U.S., the continued improvement in the cotton textile industry and heavy export shipments meant a further marked reduction in the end-season carryover. Conversely, however, many other exporting countries found themselves in the position of having little or no cotton remaining for sale and the total carryover in these countries at the end of the season is estimated to have dropped to one of the lowest levels in recent times—2.2 million bales, as compared with 3.5 million bales a year ago.

It was earlier thought that exports during the 1959-60 season would be around 14.5 million bales. But it now appears that exports will have exceeded 15 million bales to stand at an all-time record of 15.3 million bales, an increase of close to 4 million bales from the 1958-59 level. Of this, the U.S. is estimated to have accounted for 7 million bales, as against 2.8 million bales in 1958-59 and other exporting countries for 8.3 million bales, as compared with 8.8 million bales. The decline in exports from the latter countries is attributed to reduce supply. The high exports in 1959-60 indicate that shipments in 1960-61 will be less.

Production

Production of cotton in the free world in the 1959-60 season is estimated at 30.9 million bales, comprising 14.6 million bales in the U.S. and 16.3 million bales in countries outside the U.S. This compares with the previous season's output of 29.1 million bales, of which the U.S. accounted for 11.5 million bales and other countries for 17.6 million bales. The reduced output in the countries other than the U.S. during 1959-60 is due mainly to the sharp decline in production in India and also, to some extent, in Sudan.

Consumption during the season is expected to have equalled production. Estimated at 30.9 million bales, it represents a rise of 1.8 million bales over the previous season. Net export to Communist countries, at 1.2 million bales, was in line with that in the previous season. All told, disappearance will in all probability have aggregated 32 million bales, exceeding production by more than a million bales and bringing about a corresponding decline in end season stocks from 17.5 million bales on 31st July 1959 to 16.4 million bales on 31st July 1960.

The following table indicates the supply and disappearance of cotton during the period 1957-58 to 1959-60:

*Cotton Supply and Distribution**

(In million bales of 478 lbs. each)

	1957-58	1958-59	1959-60
Opening stocks—			
U.S.	14.4	8.7	8.0
Other net exporters	3.0	3.9	3.5
Net importers	6.2	6.1	5.3
Total	20.6	18.7	17.7
Production—			
U.S.	11.0	11.5	14.6
Other countries	16.9	17.6	16.3
Total	27.9	29.1	30.9
Total supply	48.5	47.8	48.6
Consumption—			
U.S.	8.0	8.7	9.1
Other countries	20.5	20.4	21.8
Total	28.5	29.1	30.9
Net exports to Communist countries	1.3	1.2	1.2
Destroyed	0.1	0.1	0.1
Total disappearance	29.9	30.4	32.2
End season stocks	18.7	17.5	16.4
Exports—			
U.S.	5.7	2.8	6.9
Other countries	6.9	8.8	8.1
Total	12.6	11.6	15.0

* Excluding Russia and the Communist countries.

As regards the outlook for the new season, namely 1960-61, which has just started, the chances are, according to the Committee, that both acreage and production will be higher. Planted acreage in the U.S. is up by three per cent. Mexican acreage is higher by 400,000 acres and a rise in planted area is expected in Central American countries. In Egypt, the first crop estimate shows one of the highest levels for many years and significantly higher than in the last season. Elsewhere in the Middle East, crop prospects at the moment are distinctly favourable. Sowing of new crop is in progress in India and Pakistan and acreage should at least be as high as during the last season. If yields return to normal in India, this alone would mean an increase in production by about one million bales. But against this must be set the much lower carryover stocks, so that supply may not be much different from last season. If total disappearance is maintained at anywhere near the last season's level, the statistical position would be roughly in balance.

Consumption and Trade Prospects

Most observers, according to the Committee, are of the opinion that consumption may decline in the United States in 1960-61 but that any decline should be relatively minor. In Western Europe, most countries report yarns and cloth sales well booked to the end of the year and little sign, at the moment, of any serious inventory accumulation. The textile situation in India is basically strong and even in Japan any increase in stocks of yarn and textiles has so far been moderate by comparison with the much higher level of production.

Trade prospects, too, the Committee feels, are quite favourable though there is reason for anticipating some reduction in exports from the record 1959-60 level mainly on the ground that, with a more comfortable carryover in importing countries, there may be less urgency to purchase over and above consumption requirements and on the assumption of a return to normal production in India. Exports may be less but so also may the amount available for export. Offsetting the prospects for increased production is the fact that carryover in countries like Mexico, Egypt, India and Pakistan are now extremely low and export availabilities in many cases will be no higher and may even be lower than in the 1959-60 season.

COTTON TRADE TO FEDERATE ?

Unlike the Bourbons who forget nothing and learn nothing, the cotton trade seems to have learnt much from the experience of the current cotton season. Its efforts to get the ceiling and floor prices of cotton raised having failed and protests against the prohibition of free trading in new cotton with effect from 1st August too having fallen on deaf years, the cotton trade is reported to be planning to establish an all-India federation to champion its cause more vigorously and to make the views of the trade heard in official circles. The lack of a fully representative all-India body, which can speak with authority and one voice for the trade as a whole, it is believed by those who have mooted the idea, is one of the reasons why its views have not received the attention, which it thinks, they deserved.

Representatives of the leading cotton trade associations in Bombay such as the East India Cotton Association and the Cotton Buyers Association, are reported to have already had preliminary discussions regarding the formation of the Federation, at which it was agreed to convene an all-India convention of various cotton interests some time this year to give final shape to the proposal. In the meantime, the sponsors will ascertain the traders' reaction to the proposal. The progress of the efforts in this regard will surely be watched with considerable interest.

COTTON BANK FOR MEXICO

The Mexican Cotton Producers Union recently made a proposal to President Lopez Mateos for the creation of a Mexican Cotton Bank, to be financed in equal proportion by the producers and the Government. This institution, the Union claimed, would permit the cotton industry to become independent of foreign financing. The draft law prepared by the Union provides that the Bank would be in a position within a period of five years to meet the credit needs in connection with the cultivation of cotton, which involves an annual investment of 2,500 million pesos. At present 60 per cent. of that amount is furnished by foreign firms operating in Mexico. By creating the Bank, the cotton growers aim at self-financing.

Sponsors of the Bill point out that the proposed institution would not only benefit cotton growers but other agriculturalists as well by virtue of freeing the State of the obligation of channelling a good portion of its farm credit capacity to cotton. Thus, it is said, the Government would be able to divert such funds to the production of other farm products such as corn, wheat, beans, etc.

It is proposed that the Bank's capital be made up of a contribution from cotton producers and the Government amounting to 100 pesos per bale, subject to reduction to 50 pesos, if circumstances so warrant.

Under this system, in normal seasons, the Bank would receive an average of 150 million pesos, annually. The first five years would be devoted, for the most part, to capital formation up to some 750 million pesos. Joint contributions from the State and the producers would continue until the figure of 3.0 billion pesos were reached—an amount which would afford absolute economic independence for the cotton industry.

The following three principal functions would be assigned to the Mexican Cotton Bank under the proposed Bill:

1. Credits for the cultivation of cotton and short- and long-term financing for the industrialisation process.

2. Advice for the producers in respect of their credit negotiations crop pledges, legal matters, organisation, economic studies, etc.

3. Control of all types of purchase-sales transactions directly related to the needs of the borrowers.

The Board of Directors would be made up of representatives of the Government and the growers, who would share equal rights and responsibilities.

The Bank would charge interest at rates at least 2 per cent. lower than those corresponding to private bank lending.

It is said that the desire to create the Mexican Cotton Bank originated two years ago when the foreign firms who supply 60 per cent. of the financing for Mexican cotton growers unilaterally restricted their activities, occasioning a drop in production from 2.3 million bales in 1958 to only 1.6 million bales in 1959.

Apart from being able to cope with eventualities, the Bank, according to its sponsors, would also undertake to organise all cotton producers for purposes of joint handling of exports and purchases, with the consequent reduction in production costs.

COTTON TEXTILE PRODUCTION AND STOCKS

The mill output of cloth during the month of July 1960 is provisionally estimated at 429 million yards, as against 420 million yards in the same month last year, and that of yarn at 145 million lbs., as against 146 million lbs. The total production of cloth and yarn during the seven months ended July 1960 was about 2,899 million yards and 987 million lbs., that in the corresponding period of 1959 being 2,865 million yards and 987 million lbs., respectively.

At the end of July 1960, the composite units of the cotton textile industry carried an estimated total stocks of 299,000 bales of cotton cloth (1 bale=1,500 yards), comprising 127,000 bales of unsold cloth and 172,000 bales of cloth sold but not lifted. The corresponding figures a year ago were 412,000 bales, the quantities unsold and sold but not lifted being 207,000 bales and 205,000 bales. The total stocks of yarn as on 31st July 1960 amounted to 30,700 bales (of 400 lbs. each), as against 38,700 bales a year before.

Studies on cotton at Coimbatore have brought to light five American types possessing a staple length of more than one inch. One Russ an variety, C1998, was found to be highly productive (1,220 lbs. per acre) and adaptable and comparable to MCU-1, a local variety. In most of the other economic characters. Spraying the cotton crop with endrex resulted in an extra yield of about 500 lbs.

Rugged hands on the plough of steel—steel biting the earth in furrows straight and deep—steel is preparing the land for the seed. Primitive? Primitive his method may be, but it has the new touch of steel—steel which has replaced the old wooden plough and is helping him to get a better yield for a little less labour.

Soon, he will have the surging power of tractor to work for him; soon his land will be yielding a harvest, more abundant than ever before. Soon all this will be his and ours, as there is a little more steel for each of us.

Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

SUGAR CO-OPERATIVES IN MAHARASHTRA

DEFECTIVE LOCATION HAMPERS WORKING OF JOINT-STOCK MILLS

IN the course of a special release issued on the occasion of Independence Day, the Maharashtra Government's Directorate of Publicity points out that the co-operative sugar factories have not only come to stay but firmly laid the foundation on which sugar industry would develop hereafter. The Directorate claims that sugar co-operatives are economically a sound proposition. This claim is supported on certain grounds. In the first place, it is pointed out that the sugar co-operatives have fared well in paying adequate return to the members on their produce; during 1958-59, for instance, the price paid for sugarcane ranged from Rs. 49 to Rs. 58 per ton, as against the minimum price of Rs. 47 fixed by the Government in respect of the cane purchased by joint-stock sugar mills. Again, the sugar co-operatives are said to have repaid a substantial portion of the loans taken from external sources; the *Pravara Sahakari Sakhar Karkhana* has fully repaid the loans on block capital. Attention is also drawn to the fact that they have incurred large expenditure of capital nature on creating such assets as guarantee for the staff, office buildings, godowns and machinery. Finally, it is stressed that the social and human aspect of the co-operative enterprise is most significant. The cane growers have their representatives sitting alongside the spokesmen of the Government, the Industrial Financial Corporation and the banks at the meetings of the boards of directors and other committees deliberating various matters relating to their organisation and taking decisions affecting the industry.

Premature Claim

It is too early to judge whether sugar co-operatives will be a success, if they are run purely as co-operatives. At present, they are co-operatives only in name; in actual fact, they are a hybrid of co-operation and State-ownership. It will be illuminating, if the economic status of cane growers who are members of the co-operatives is disclosed. Are they big landowners or small peasants? Of these two, who are in the majority? The purpose of this article, however, is not to raise the controversy joint-stock company sugar mills *versus* co-operative sugar mills. The Government is determined to go ahead with its policy of investing in sugar industry under the facade of co-operation, and there is precious little that one can do to stop it. But what one fails to understand is the policy of the Government to permit new co-operative mills to be started especially in areas where joint-stock factories are already operating. What is worse, these factories are not given adequate facilities and encouragement to function efficiently and, in some cases, even the plea for expansion of capacity has been turned down.

It is common knowledge that the setting up of new units entails much more capital outlay than what would be required to raise the capacity of the existing units. According to one estimate, the cost of creating an additional cane-crushing capacity of 1,000 tons per day in a sugar mill is no more than Rs. 30 lakhs, including a foreign exchange of about Rs. 6—12 lakhs, as against the huge outlay of Rs. 125 lakhs, including the foreign exchange component of Rs. 25 lakhs, required to put up a new sugar mill with a capacity of 1,000 tons. It is, of course, a different matter if the existing factories are not capable of creating additional production capacity. Further, the expansion of present capacity does not involve large additional expenditure such as that incurred by new units, owing to duplication of overhead capital expenditure on construction of roads, buildings, etc., as well as duplication of overhead revenue expenditure on management, administration and the like.

It is regrettable that the Government of India has allowed the setting up of some co-operative sugar mills in the very areas in which joint-stock mills are situated. Such location has adversely affected the joint-stock mills with regard to cane supplies. In the case of one factory, we are told, there has been a reduction of 25 per cent. in the crushing season, from 165 days in 1956-57 to 125 days in 1958-59. With the co-operative sugar factories imposing an obligation on the member to supply to them whatever cane he grows and in the absence of zoning, the availability of cane supply to joint-stock mills, is materially and permanently affected. The paucity of cane is aggravated further by the amendment of the co-operative units' by-laws which prohibits a member from selling even his unattached cane to any other factory without first offering it to his co-operative unit; any violation of this term will mean forfeiture of the value of his shares and rights attached thereto. When the State Government takes particular care to see that there is no overlapping of areas of operation between co-operative sugar mills *inter se* and that definite zoning as between co-operatives exists, the existence of joint-stock companies in the same region is totally ignored.

Financial Assistance

Be that as it may, there are at present in Maharashtra fifteen co-operative sugar factories, including two units which are yet to commence operation. These factories together account for a daily cane-crushing capacity of 15,000 tons which represents 50 per cent. of the aggregate capacity of all the 28 factories, namely, 30,000 tons. The total share capital of the co-operative factories comes to no more than Rs. 150 lakhs. In other words, a very large part of the capital outlay has been met out of the long-term loans granted by the Industrial Finance Corporation on the strength of the guarantee given by the State Government. The total of the loans is placed at Rs. 697.50 lakhs. Besides, the Bombay State Co-operative Bank has advanced to these factories a total sum of Rs. 845.00 lakhs as seasonal finance and Rs. 349.49 lakhs as medium-term loans for meeting their capital expenditure.

The number of co-operative sugar mills in Maharashtra is expected to increase from 15 at present to 25 at the end of the third Plan period (March 1966), with an aggregate annual production of about 400,000 tons. This, says the release of the Directorate of Publicity, will mean that, out of every six *seers* of sugar consumed in the country, one *seer* will have been produced by the sugar co-operatives in Maharashtra. The assumption here is that the total consumption of sugar in India will be at an annual rate of 2.4 million tons by the close of the third Plan, whereas, actually, the Draft Outline of the Plan expects the consumption to be of the order of three million tons.

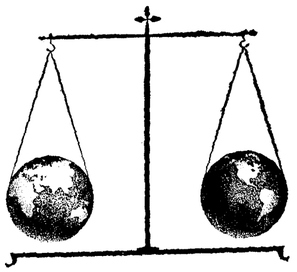
Of the proposals to set up ten new sugar co-operative mills in Maharashtra State, five are understood to have already been approved of by the Union Government. They will be located at Bidri (Kolhapur district), Kala (Kolhapur), Takli (Ahmednagar), Korhale (Poona) and Aklui (Poona).

Cane—Important Cash Crop

Apart from the active official encouragement and support, the favourable climate for raising sugarcane in the Maharashtra State has also been responsible for the organisation of sugar co-operatives. Sugarcane is one of the important cash crops of the State, as it provides the basic raw material for the manufacture of sugar, *gur* and *khandsari*. Excepting the three Konkan districts, cane is grown in almost all the districts. The major producing districts are Ahmednagar, Kolhapur, Poona, Nasik, North Satara, South Satara, Sholapur and Aurangabad which together account for about 200,000 acres under cane out of the total 304,000 acres devoted to the crop (1959-60) in the erstwhile Bombay State. Although the aggregate acreage under cane is comparatively small, the great importance of cane as a cash crop is chiefly attributable to the fact that both the per-acre yield and the sugar recovery of the Deccan cane are the highest in India as is shown below:

State	Per-acre yield (Tons)	Sugar recovery (Per cent.)
Maharashtra	28.20	11.70
Madras	28.60	9.16
Andhra	27.00	9.20
Mysore	25.00	9.10
Punjab	13.90	9.01
Uttar Pradesh	11.00	9.68
Bihar	8.50	9.36

In some regions of Maharashtra, the average yield of cane per acre comes to as much as 45 to 50 tons and recovery per cent. to 14-15. Credit for all this must unreservedly be given to the joint-stock sugar mills who it is that have spent a lot of money and effort on scientific cultivation of cane. As readers are aware, these sugar mills, unlike their counterparts in other States, have their own cane farms which supply them the bulk of their cane requirements. Several mills have also invested sizable sums of money for financing the cultivators to dig wells and to purchase engine and pumping sets. They have advanced loans against the cultivators' cane crop, amounting, in some cases, to Rs. 1,000 per acre. Viewed thus, it cannot be too strongly emphasised that, before the Government of India sanctions any new unit, the adequacy of cane supplies should be thoroughly gone into.



In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

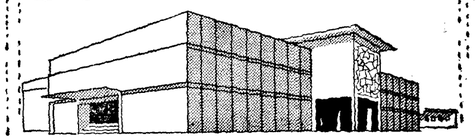
WATERTIGHT
Concrete
Construction



as only Impermo can make it

IMPERMO Cement Waterproofing Compound is available in powder form, convenient to use. IMPERMO is most economical: only 2% by weight need be added to cement to prevent the penetration of damp through cement mortar or concrete.

- IMPERMO renderings prevent dampness.
- Damp walls are cured by IMPERMO.
- Watertight joints can be ensured by using IMPERMO.
- IMPERMO is essential for producing water-repellent backings on which to apply coloured cement renderings.

Whatever your concrete construction, make it watertight as only IMPERMO can make it:
Tanks – Reservoirs – Basement Walls – Inspection Pits – Roofs – Cast Stone – Swimming Baths – Sewage Works – Floors – Conduits – Renderings, particularly backing coats of white or coloured cement finishes – Pools – Cellars – Garage Pits – Walls – and many others.

IMPERMO costs only Rs. 135.00 per case of 50 x 1 kilogram packets, i.e., approximately Rs. 48.00 to waterproof 100 cu. ft. of 1: 2: 4 concrete mix.

THE THIRD FIVE-YEAR PLAN

CERTAIN ASSUMPTIONS, PROMISES AND PROSPECTS

By T. P. Subramonian

THE Draft Outline of the third Five-year Plan promises a rise in national income of over per cent. per annum, for which it envisages a otal investment of the order of Rs. 10,200 crores. This Plan, like any other plan, rests on certain fundamental assumptions. Planning, by definition, cannot claim precision; and the future in human affairs has a large element of uncertainty. Nevertheless, past experience could help in avoiding pitfalls on the future path. It is from this angle that two major aspects of the Plan are examined below.

I

THE SIZE OF THE PLAN AND THE BASIC POSTULATES

The investment target of Rs. 10,200 crores for the third Plan has raised the eyebrows on many faces; and the question is sometimes raised, "Is not the Plan too big?" Let us examine the implications of this investment target.

(a) **The Long-term Rise in National Income:** The Draft Plan speaks of an increase of "over 5 per cent. per annum in national income." Thus, over the five-year period, the expected increase in national income could be put at "over 25 per cent.," that is, say, 27 per cent. This can hardly be criticised as ambitious. In the long-term projection contained in the second Plan report, it is envisaged that national income (at 1952-53 prices) would rise from Rs. 10,800 crores at the end of the first Plan to Rs. 13,480 crores at the end of the second Plan (an increase of 25 per cent.), and to Rs. 17,260 crores at the end of the third Plan (an increase of 28 per cent.). It is now admitted that the second Plan might bring about only a 20 per cent. increase in national income. National income (at 1952-53 prices) at the commencement of the third Plan would thus be only about Rs. 12,960 crores or, say, Rs. 13,000 crores. A 27 per cent. increase on it would mean an addition of Rs. 3,510 crores, thus raising national income to Rs. 16,510 crores at the end of the third Plan period, as against Rs. 17,260 crores envisaged in the long-term projection. This is on the assumption that the third Plan, unlike the second, will have a smoother sail. But that depends on certain assumptions turning out to be correct.

Let us look at it from another angle. According to the long-term projection contained in the second Plan report, national income would be doubled in 1967-68 in relation to 1950-51. This would require the elevation of national income (in 1952-53 prices) from about Rs. 13,000 crores at the commencement of the third Plan to about Rs. 18,300 crores in 1967-68—an increase of 41 per cent. over the course of seven years or an annual increase of about 6 per cent. The increase in national income now envisaged in the third Plan could be seen in this light and the conclusion is obvious.

(b) **Investment in Real Terms:** In the long-term projection referred to earlier, an investment of Rs. 9,900 crores was envisaged for the third Plan. The figure now suggested is Rs. 10,200 crores—more or less the same and, if anything, a little higher. But this Rs. 10,200 crores is in terms of current prices. And, as the price level has risen by about 20 per cent. since the commencement of the scond Plan, the value of Rs. 10,200 crores correspondingly deflated would amount only to Rs. 8,500 crores. In other words, if allowance is to be made for the rise in prices that has occurred, an investment of nearly Rs. 12,000 crores in terms of current prices would be the equivalent to the figure suggested in the perspective projection. The size of the third Plan is, to repeat, not too big.

(c) **The Capital-output Ratio:** A crucial determinant of the rate of economic development is the return by way of additional output on the investment undertaken. Realistic planning depends to a large extent on the assumption of an appropriate capital-output ratio. The ratio adopted for the third Plan is nowhere explicitly stated in the Draft Outline. But, if the investment of Rs. 10,200 crores is judged in relation to a 27 per cent. increase in national income, it gives an incremental capital-output ratio of 2.9 : 1. (The assumption here is that the 27 per cent. increase would mean an addition of Rs. 3,510 crores to the national income in 1960-61 estimated at Rs. 13,000 crores in terms of 1952-53 prices). The ratio given for the third Plan in the long-term projection of the second Plan report is 2.6:1. The comparison might suggest that the planners have now become a little more cautious and perhaps a little more realistic. But this apparent impression requires correction.

It may be recalled that the first Plan originally assumed a capital-output ratio of 3 : 1. On account of exceptionally favourable conditions and on account of the fact that the Plan was predominantly an agricultural plan, the results revealed a ratio much more favourable than originally assumed. Latest available data suggest a ratio of 2 : 1 for the first Plan. Encouraged by the experience of the first Plan, the second Plan assumed a capital-output ratio of 2.3: 1. Latest data on the performance of the second Plan, however, indicate a ratio of 3.1 : 1 —a ratio much more unfavourable than the one originally assumed.

It is, of course, difficult to be precise in the calculations of investment-output relations in a growing economy; but world experience suggests that the ratio becomes higher as the economy progresses on the path of industrialisation. In fact, the Planning Commission had itself realised this, when it stated, in the second Plan (page 9), that "as the shift proceeds further in subsequent Plan periods, the amount of capital required for unit of additional output should go up further." It is on the basis of this principle that, in the long-term projection, a progressive rise was indicated in the capital-output ratio over the course of the second, third, fourth and fifth Plans. As the second Plan has now revealed a ratio of 3.1: 1, one would have expected the Planning Commission to assume a slightly higher ratio for the third Plan, unless the pattern of investment embodies a drastic reversal of the trend of industrialisation. As the third Plan actually aims at a bold advance towards industrialisation, with an accent on basic industries, the assumption of a capital-output ratio lower than the one that prevailed in the second Plan appears to be an error on the side of optimism. In other words, for a 27 per cent. increase in national income, a larger order of investment than the contemplated Rs. 10,200 crores might be necessary.

We have assumed here that the Planning Commission's capital-output ratio for the third Plan is 2.9 : 1 and we have stated the basis of our assumption. On page 8 of the Draft Outline, however, there is a statement that "if national income is to increase from Rs. 13,000 crores in 1960-61 (at 1958-59 prices) to about Rs. 17,000 crores in 1965-66, net investment of the order of Rs. 10,000 crores has to be undertaken." This would suggest a capital-output ratio of 2.5 : 1, which is even more optimistic than the ratio of 2.9:1 which we have discussed above.

As the productivity of capital depends, besides the amount of capital, on a number of other factors, technological and organisational—and even sociological—the importance of appropriate steps to maximise productivity and eliminate waste from every sector of activity cannot be adequately emphasised.

(d) **Per Capita Income:** The ultimate indicator of economic growth is a progressive rise in *per capita* income. It is interesting to note that the Draft Outline now released makes no mention of the increase in *per capita* income postulated for the third Plan. No other omission could have been more significant. However, taking the population estimates of the Central Statistical Organisation and the increase in national income as outlined in (a) above, we may notice that *per capita* income may be expected to rise by about 14 per cent. over the course of the third Plan. In the long-term projection of the second Plan, the increase in *per capita* income envisaged for the second and third Plans were 18 and 20 per cent., respectively. The shortfall in the second Plan's achievement and the downward revision of the third Plan's target as regards *per capita* income are largely on account of the faster growth of population than originally assumed. While the situation undoubtedly calls for an effective policy of population restriction, the aim of reaching an annual increase of nearly 3 per cent. in *per capita* income, as envisaged by the third Plan, can by no means be considered an ambitious target.

In this connection, it might be relevant to mention that, when the Planning Commission speaks of a rise in consumption at a rate of over 4 per cent. per annum during the third Plan period (Draft Plan, page 44), the reference is to the rise in *national* consumption. *Per capita* consumption—which alone can indicate the improvement in standard of living—would rise only by about 10 per cent. over the period or by 2 per cent. per year.

In fine, the targets of increase in national and *per capita* income under the third Plan are anything but overambitious. But even to achieve these reasonable targets, a greater effort is needed than envisaged in the Plan.

II

THE MOBILISATION OF RESOURCES

Of the total investment of Rs. 10,200 crores envisaged for the third Plan, Rs. 6,200 crores will be in the public sector and Rs. 4,000 crores in the private sector. The total outlay in the public sector will be around Rs. 7,250 crores, made up of Rs. 6,200 crores of investment and Rs. 1,050 crores of current outlay. The following discussion relates only to the outlay in the public sector. As regards financing schemes in the private sector, the Plan can give only broad indications of possibilities.

The table presented below compares the scheme of financing the outlay in the public sector in the third Plan with that in the second:

(Amount in crores of rupees)

	Second Plan		Third Plan	
	Amount	%	Amount	%
I—*Budgetary resources:*				
(a) Surplus from current revenues	900	19.6	2,000	27.6
(b) Contribution of railways	150	3.3	150	2.1
(c) Other public enterprises	..	..	440	6.1
(d) Loans	800	17.4	850	11.7
(e) Small savings	380	8.3	550	7.6
(f) Provident funds and miscellaneous receipts	213	4.6	510	7.0
Total	2,443	53.2	4,500	62.1
II—*Deficit financing*	1,175	25.5	550	7.6
Total domestic resources (I+II)	3,618	78.7	5,050	69.7
III—*External aid*	982	21.3	2,200	30.3
Grand Total (I+II+III)	4,600	100.0	7,250	100.0

The first feature that strikes the eye is the heavy reliance of the third Plan on external assistance. Nearly one-third of the total outlay is expected to come from abroad. It is interesting to observe that the contribution of external aid to the public sector outlay has been steadily rising since planning began. From about 10 per cent. in the first Plan, it went up to about 20 per cent. in the second, and is now expected to go up to 30 per cent. in the third Plan. Thus, dependence on foreign aid for Plan finance has been increasing not only absolutely but also relatively to other sources. In principle, it is not wrong to formulate a plan with a heavy reliance on external resources. But three points may be taken note of. First, it is the rate of increase in domestic savings as a percentage of national income that is an indicator of the country's advance towards self-sustaining growth rather than the rate of increase in total investment as a percentage of national income. It is the increase in domestic savings that measures the community's will to develop and indicates the extent to which fundamental changes are occurring in the attitudes of the people and the institutions of the community. And it is only on these that the edifice of economic development could be securely erected. Secondly, in planning on the basis of foreign aid, although certainty is impossible, there should be a reasonable measure of assurance about the quantum of funds available; without such assurance, the Plan will be in constant danger of being upset. Perhaps, the help rendered by friendly countries to lift the second Plan out of the foreign exchange crisis and further indications of favourable attitudes abroad have encouraged the Planning Commission to take an optimistic view. Thirdly, in so far as assistance is in the shape of loans and deferred payments, the timing and quantum of servicing and repayments must not impose too heavy a strain on the country in the immediate future. The repayments of loans falling due during the third Plan period will it may be noted, amount to as much as Rs. [redacted] crores.

Among the domestic resources, it is gratifying to note that deficit financing as a method of Plan finance has fallen from grace, indicating that the second Plan's unpleasant lesson has not been learnt in vain. Its contribution to the total outlay has now been kept marginal.

Small Savings

The yield from small savings is expected to be about 45 per cent. more than that obtained during the second Plan. In view of the fact that the actual yield from this source during the second Plan (Rs. 380 crores) is much lower than the original estimate (Rs. 500 crores), it is important to think of more effective means of tapping small savings pockets, lest the experience during the third Plan should also turn out to be a disappointment. Small savings' contribution could be big, provided they are effectively tapped through efficient salesmanship of savings' instruments and persistent propaganda directed towards better Plan-consciousness.

Loans

A sum of Rs. 850 crores is expected by way of market loans during the third Plan. This compares with the second Plan yield of Rs. 800 crores. No doubt the latter figure is inclusive of purchases of Government securities by the State Bank out of P.L. 480 deposits, whereas the former is not. Nevertheless, a greater advance in the direction of borrowing than envisaged by the Planning Commission would be justified during the third Plan. A greater reliance on this source would also mean a more balanced ratio between taxation and borrowing than now seen in the Plan.

A significant new item among the budgetary resources is the profits of public enterprises other than railways. This is estimated to yield Rs. 440 crores. This is not merely a measure of the remarkable growth of the number and range of State enterprises in the country but indicates the official acceptance of the new policy that State enterprises also must work for profit.

Railways

The contribution from railways is put at Rs. 150 crores. This is surprising, as the amount expected during the second Plan is also put in the Draft Outline as Rs. 150 crores. Granting that the latter figure is correct, it suggests that the contribution from railways would remain static, notwithstanding the greater volume of goods and passenger traffic expected during the third Plan. What is equally surprising is that railways' contribution to the second Plan is now put at Rs. 150 crores (Draft Outline, page 47), whereas, in July 1959, the Planning Commission had estimated this figure at Rs. 250 crores. Considering the fact that, even in the first Plan, the railways had contributed as much as Rs. 115 crores, the estimation of the amount at Rs. 150 crores for the third Plan is intriguing. The Planning Commission will do well to shed some light on this question.

Additional Taxation

Among the domestic sources, maximum reliance is placed on the surplus from current revenues, indicating the orthodoxy of third Plan finance. In fact, the largest contribution is expected from this source, whereas in the second Plan this honour went to deficit financing. The figure of Rs. 2,000 crores suggested is made up of Rs. 350 crores, being the balance from revenues on the basis of existing taxation and Rs. 1,650 crores representing the amount expected from "additional taxation including measures to increase the surpluses of public enterprises." Presumably the Planning Commission has not yet made up its mind as to how much of this amount should come by additional taxes and how much by further enhancement of the profits of public enterprises.

Enhancement of the profits of public enterprises beyond Rs. 440 crores is of doubtful feasibility, and, even if deliberately attempted, it would raise a host of other problems. The profit-margin could be widened by the raising of selling prices and/or the lowering of costs. In fields where the State has a monopoly or at least price-leadership, the temptation to raise prices would be strong. But, as most of the productive enterprises of the State bring out capital and intermediate goods, higher prices for them would set up a chain-reaction on the prices of numerous other goods. Widening the profit-margin through the lowering of costs is, of course, desirable, though more difficult. Incidentally, it will provide a test of the efficiency of public enterprises.

Stupendous Effort

The third Plan calls for a stupendous tax effort. It is inevitable that, in a developing economy, tax revenues must go up not only absolutely but also as a proportion of national income. Success in this direction will depend not only upon larger tax collection but upon equally large allocation to the Plan. As regards direct taxation, the Planning Commission appears to feel that the limit has already been reached and expects to increase the yield mostly by tighter administration and other measures to check evasion. But a greater degree of sacrifice could certainly be expected from those classes in the community whose incomes have been abnormally rising in recent years. The heavy reliance on commodity taxation is no doubt inevitable. The traditional objection to commodity taxation that it violates the principle of ability to pay seems to have lost its hold. The more recent argument that it runs counter to the socialist ideal as it will hit the poor cannot be given much weight, as socialism cannot be built merely on the tears of the rich. Nevertheless the extent to which the Government could go in the direction of commodity taxation will be seriously limited by its effect on cost of living and, consequently, by the possibility of a wage-induced inflation. If this limitation is to be warded off, it would require, on the one hand, an efficient and wide network of physical controls and, on the other, a willing acceptance by the community of an appreciable degree of austerity. They both raise administrative and political issues.

It is also important to remember that larger tax collection does not automatically mean larger Plan finance. This is one of the major lessons of the second Plan. The recent report of the Estimates Committee on the growth of civil non-Plan expenditure shows that, while overall tax revenues have recorded a phenomenal increase during the second Plan period, the part actually made available to the Plan has been disproportionately low. While Defence is an imponderable item and has to be provided for at whatever cost, stricter control over non-Plan development expenditure and utmost economy in administrative expenditure are steps to be vigorously pursued, if tax revenues are not to be unproductively dissipated.

The order of taxation envisaged in the third Plan calls for considerable sacrifice on the part of the community; and one is not certain if the country is prepared for it. While a higher degree of tax effort is inevitable in the third Plan as compared to the second, a greater emphasis on the borrowing programme and a more reasonable expectation in regard to railways' contribution would perhaps help in avoiding disappointment on the tax front.

Summing up all that we have said above, the following conclusions emerge:—

(i) The overall targets are perfectly reasonable. But the size of investment considered necessary appears to be an underestimate, if judged in relation to the achievements envisaged.

(ii) The level of outlay envisaged even on this basis calls for a stupendous national effort for which the community must be prepared. To the extent to which foreign aid falls short of expectations, either the Plan will have to be cut or domestic effort will have to be stepped up. And the implications of this must be clear to the nation. Past experience does not encourage complacency.

An underestimation of the resources necessary and an overestimation of the resources mobilisable reflect a spirit of optimism; optimism is a desirable trait in a growing nation; but it could profitably be tempered with a little dose of realism. After all, the path of economic development is not strewn with roses.

FRENCH NATIONAL RAILWAYS

CONVERSION TO ELECTRIC AND DIESEL OPERATION IMPROVES EFFICIENCY

AMONG the world's national railways, few have earned a greater reputation for high efficiency than the French National Railways (S.N.C.F.). It was in 1938 that the French Government nationalised the private railroad companies, thereby paving the way for unified direction and control. The war naturally interrupted the progress of the railways. But, in post-war years, considerable improvement has been effected, particularly in the shape of electric and diesel operation. Replacement of steam traction by electric or diesel operation is justified by the greater efficiency of the latter, by the savings in manpower for operation and maintenance and by the fact that the daily mileage of such traction equipment is very high, thanks to the little servicing it needs before starting on the return run. It is, however, recognised that the two types of traction cannot indiscriminately replace steam. At equal performance characteristics, the initial and maintenance costs of the diesel locomotive, requiring an electric drive at high capacities, are higher. In other words, the quantum of traffic on a particular line should be sufficiently large to justify the use of electric or diesel traction.

Electric Traction

On 1st January 1960, the French railway system operated approximately 6,570 kilometres (4,200 miles) of electrified track out of a total track of 39,000 kilometres (25,000 miles). Year by year, the length of electrified track has increased. In 1938, it was no more than 3,340 kilometres. It was not much higher in 1948, when it was 3,660 kilometres. But since then, electrification has steadily increased. The length of electrified track moved up to 5,500 kilometres in 1956, to 5,750 kilometres in 1957, to 6,290 kilometres in 1958 and 6,570 kilometres in 1959. It has been found that electrification improved both overall operating efficiency and the capacity for transportation on any given line. For instance, it has been estimated that, if the traffic remains at the present level, the return on the capital investment in the recently completed Paris-Lille and the Paris-Strasbourg electric tracks will be 12 per cent., on the Lyons-Nimes line scheduled for completion this year, it may even reach 15 per cent. Indeed, the return may even reach higher levels, considering that experience shows that traffic tends to increase after the electrification of a track. The present programme, undertaken by the French railways, points to the eventual elimination of steam traction.

To the economic and financial advantages of electrification must be added the advantages from improved service which include greater flexibility of operation, greater speed, larger roads and greater regularity of schedules. Electrification enables the French National Railways to offer the public a range of 140 extra-fast trains, covering a daily total distance of about 50,000 kilometres (31,000 miles) at an average speed of 100 kilometres (62 miles) per hour and running on close schedule with a regularity which makes the French train service outstanding in the world. The greater speed also increases the turnround of the equipment and results in large savings. The increase in train-loads is equally striking. On the electrified Paris-Lyons line, trains are both faster and heavier, with an average train-load of 800 instead of the former 650 metric tons. On one of the steep-grade sections (Dole-Vallorbe) of the Paris Milan run, a single electric locomotive pulls 700 tons, where previously not only two steam locomotives were required for this load but the speed was less.

Weight

The first electric locomotive put into service on the Paris-Dijon run in 1950 weighed 142 tons with a nominal rating of 5,000 h.p. Some electric locomotives today move the fastest trains of that line without using their full capacity, thanks to the improvement in the technique of electric traction. In the case of some locomotives, the weight has been considerably reduced. Thus, with a weight of 105 tons, the prototype of the CC-7100 series develops 4,700 h.p. In March 1955, one of these locomotives established the world speed record on rails with 331 kilometres (205.6 miles) per hour; this speed was also attained by another prototype BB-9004 weighing 82 tons and developing 5,200 h.p. Designing engineers have evolved new types of locomotives which weigh 59 tons and have a continuous power output of 3,000 h.p. and an operating speed of 130 kilometres (81 miles) per hour.

Beginning in 1950, equipment designed to operate with 50 cps. alterating current was experimentally tested on a branch line with particularly difficult grades. Since results justified expectations, the French railways are now using in one line single-phase 50-cps. AC operation; CC locomotives (120 tons) are being used. They are also using BB-type, with a weight of 85 tons. These locomotives have given remarkable results; they are able to start a train of 1,650 tons on a grade of 1:100. The inter-connection of the French railroads with other European railroad systems electrified at different frequencies necessitated the development of double-frequency locomotives, able to operate both on the French 50-cps AC line and on Swiss tracks where 16⅔ cycles are used. Through its own investigations or by orders to specialised manufacturers, the S.N.C.F. continues to explore new techniques. The success of the research undertaken for developing better and cheaper rail traction has enabled French manufacturers to enter foreign markets. France now has orders from Russia for 50 electric locomotives, from China for 25 locomotives, from Luxembourg for 20 locomotives and from Colombia for 6 locomotives, operating on 50 cps AC current.

Diesel Locomotive

Experience suggests that diesel locomotives produce savings of 40 per cent. in operating costs. In recent years, the S.N.C.F. has put into service diesel-electric traction units of 800 h.p. for light passenger trains, of 2,000 h.p. for heavy freight trains, and of 1,800 h.p. for passenger or freight service. The most recent type, (04-ODG), has a single engine and an electric drive with a nominal rating of 1,300-1,400 h.p. and a weight of 72 tons, capable of reaching a speed of 105 kilometres (65.2 miles) per hour. The first diesel railcars appeared on the lines of the French railroad system in 1953. Recent advances in the design of diesel engines have produced a larger power output, improved efficiency and much larger life of the main components. At present, power output runs from 1,500 to 1,800 h.p.; it may reach 2,000 to 2,500 h.p. in the near future.

Railcars are widely used for local traffic, short-distance, through-traffic and for low-volume fast-train service. The railcar reduces fuel costs by about 70 per cent., and the average cost per mile by 66⅔ per cent. as compared with steam traction. In general service, the S.N.C.F. uses these types of diesel-powered units: 150-h.p. railcars with 63 seats, capable of 90 kilometres (56 miles) per hour and a weight of 17.5 tons; 300-h.p. railcars with 67 seats, capable of 120 kilometres (75 miles) per hour and a weight of 31.5 tons; railcars with two 300-h.p. engines each and 80 seats, also capable of 120 kilometres an hour. To attract tourist traffic, the S.N.C.F. has ordered and received a series of panoramic-observation railcars for service runs. A feature of these railcars is that the engine, the electric drive and the baggage compartment are all below the passenger compartment, in order to afford unobstructed view of the outside scenery from the car.

SLEEPER COACHES

It has been decided to introduce a new design three-tier type sleeper coaches with capacity for equal number of passengers to sit and sleep. Coaches of this description are being built by the railways, including the Integral Coach Factory, Perambur. This information was given by Mr. S. V. Ramaswamy, Union Deputy Minister of Railways, in a written reply to a question in the Rajya Sabha. Replying to another part of the question, Mr. Ramaswamy said that the three-tier new design sleeper coach had been introduced for providing sleeping accommodation without payment of any additional surcharge to passengers travelling over 800 kilometres. This, he added, would be in addition to the two-tier type of sitting-cum-sleeping coaches which would continue to be available on payment of surcharge for those who desired a greater degree of comfort in the sleeping coaches.

HOUSING SCHEMES

Central assistance to the tune of about Rs. 22 crores will be available to the States during the current year for various housing schemes under the second Plan. The assistance will be provided in the form of loans and grants. The largest allocation of about Rs. 7.80 crores is in respect of the subsidised industrial housing scheme. A sum of about Rs. 6.51 crores has been earmarked for the low income housing scheme, Rs. 3.24 crores for slum clearance, Rs. 2.38 crores for the village housing projects scheme, Rs. 2.33 crores for the land acquisition and development scheme and about Rs. 20 lakhs for the plantation labour housing scheme. Statewise, the largest allocation of about Rs. 5.90 crores for all the housing schemes is in respect of the erstwhile State of Bombay. The apportionment of this amount between the two States of Maharashtra and Gujerat is being determined in consultation with these States. Allocations to other States are: West Bengal Rs. 3.30 crores; Uttar Pradesh Rs. 2.40 crores; Mysore Rs. 1.76 crores; Bihar Rs. 1.53 crores; Madras Rs. 1.42 crores and Punjab Rs. 1.5 crores. As regards the remaining States, the funds earmarked for housing schemes are less than Rs. 1 crore in each case.

AUTOMATION IN STEEL INDUSTRY

One of Britain's biggest manufacturers of automatic control equipment, Associated Electrical Industries (A.E.I.), has joined with Davy and United Engineering Company, Sheffield, specialists in steel-making plant, in setting up a steel-works automation unit. An A.E.I. spokesman said they would study the application of more advanced techniques of automation control to steel production. The new unit, which will be based at Rugby, Warwickshire, is believed to be the first of its kind in the world. In a statement, the two organisations say that the unit will apply new techniques to the processing of steel and non-ferrous metals. The alliance was formed because the problems were too complex for any single existing firm. The unit will undertake "comprehensive automation projects which can be expected to offer considerable long-term benefits in improved productivity and economy of operation." Such projects will include "a combination of advanced servo controls with computers to ensure optimum performance of rolling mills and associated plant." The services of the unit will be available to both British and oversea steel concerns.

AUTOMATIC TRAIN SHUNTING

A system of automatic train shunting has been introduced at the Yasinovataya railway junction in the Ukraine (Russia). Mechanisation of this complex operation was made possible by an invention made by Prof. Alexander Dolaberidze, who developed automatic brakes to slow down rail cars at gravity yards.

The brakes work automatically, depending on the amount of rolling stock on the tracks; they slow down every next car to the required speed. As a result, cars rolling down the incline stop exactly next to each other and it remains only to couple them. All brakes installed on the tracks are controlled by one man from a central control panel who monitors the shunting on a television screen.

The Government of India has decided, in collaboration with the Government of Sikkim, to exploit the copper and other minerals in Sikkim area. This information was given by Mr. K. D. Malaviya, Minister for Mines and Oil, in reply to a question in the Lok Sabha. The Corporation, which had been set up for the purpose—the Sikkim Mining Corporation—had an authorised capital of Rs. 1 crore, consisting of 100,000 shares of Rs. 100 each, of which 49 per cent. will be held by the Government of India. So far, the Corporation had issued 10,000 shares only, out of which the Government of India had purchased 4,900 shares.

The Government of India has not yet received the survey report on the proposal to convert the metre-gauge section of the Poona-Kolhapur line into broad-gauge. The survey has been carried out for the conversion of the Poona-Miraj-Kolhapur section into broad-gauge. The Union Deputy Minister of Railways, Mr. S. V. Ramaswamy, stated in the Lok Sabha that, pending the receipt of the report, it was not possible to say whether the project would be recommended for inclusion in the third Five-year Plan.

The measures taken by the Government of India to increase the production of railway wagons, according to a reply given by Mr. S. V. Ramaswamy, the Union Deputy Minister of Railways, to a question in the Lok Sabha, are: (1) import of sections of steel not obtainable from domestic sources and (2) constant liaison with the Iron and Steel Controller and the producers. The wagon builders have already commenced producing certain new types of wagons which are expected to increase the rate of output.

A firm in Ludhiana has concluded an agreement with a Japanese firm for the manufacture of 50 c.c. and 78 c.c. scooterettes. Only Rs. 100-150 worth of components per scooterette will be imported. By the third year after the commencement of manufacture, imports will be negligible. The price of these vehicles will be less than that of scooters. Production is expected to commence within a year.

The commissioning of the first 800-ton hot metal mixer at the Durgapur steel works, with effect from 21st July last, has made it possible to charge molten iron directly into the open hearth furnaces. The mixer is a huge cylindrical steel shell (16 feet in diameter and 31 feet in length) with magnesite refractory lining. It is maintained at a temperature of 1,250 degrees Centigrade by coke oven gas.

Capital expenditure on the expansion of British steel industry is expected to aggregate £125 million this year, as against about £100 million last year. Next year, it is likely to go up to £150 million. The industry is now engaged in an expansion programme which will raise its capacity to 32 million ingot tons by 1965. Production this year is expected to reach a total of 24 million tons.

NEW PRODUCTS AND PROCESSES

Phenol from Benzene

HIGH yields have been obtained in the synthesis of phenol from benzene as a result of investigations conducted at the Central Fuel Research Institute, Jealgora. These investigations are said to be of special interest in the context of the large quantities of benzene—10 to 12 million gallons per year—likely to be available by 1960-61. The process followed in the investigations comprises two methods: Batch chlorination to chlorobenzene and hydolysis of chlorobenzene to phenol. The batch chlorination process has the advantage of higher yield compared to the continuous process. This process involves the passing of chlorine into benzene through a flow meter at a calculated rate and adding 1 per cent. iron powder (on the weight of benzene) after some time. The reaction is allowed to proceed till the requisite amount of chlorine is added. The reaction temperature should be kept below 40° C. (preferably 30-35° C.) and 60 per cent. of chlorine fed at 11 litres per hour for 5.2 hours. The products are shaken up with caustic soda solution and the ferric formed is filtered off. Ferric chloride has been found to be the most effective catalyst but it has to be finely dispersed in the chlorine benzene solution. Durez-Raschig continuous process has been applied with modified catalysts. Water and chlorine are fed independently through two inlets of a preheater. The mixed vapours then pass to the reactor containing the catalyst at a suitable temperature in a tubular furnace. The products are collected in a vessel through a water-cooled condenser. An ion-exchange process for the recovery of pyridine and substituted pyridines from crude benzole has also been worked out at the Institute. The efficiency of recovery of the bases attained is of the order of 98 per cent. While conventional processes are satisfactory in the case of tar or liquor, some modifications are necessary in the case of benzole. The usual processing technique for benzole consists in refining it by acid washing. Bases in benzole get concentrated in the spent acid and hence the recovery of bases has to be attempted from this source. But, because of the presence of high proportions of polymerized bodies and tarry matters formed during acid washing, at least 50 per cent. of these valuable bases cannot be recovered. On the other hand, if the modern method of benzole refining, namely, pressure hydrogenation, is employed, the bases are completely lost as ammonia.

Copper from Pyrophosphate Bath

Studies have been conducted on the electrodeposition of copper from pyrophosphate bath at the Electrochemistry Laboratory of the Indian Institute of Science, Bangalore.

The investigation was undertaken in order to make a detailed study of the effect of variables on electrodue efficiencies and potentials. Structure of deposits and throwing power of the plating solution has also been enquired into. The experimental results show that the pyrophosphate bath is suitable for the copper plating of steel. It possesses all the advantages of the acid and cyanide baths without their disadvantages. The effect of the variables on cathode and anode efficiency is not marked in this case unlike the cyanide bath where conditions have to be carefully controlled to obtain maximum efficiency. The pyrophosphate bath is also comparable to the high efficiency cyanide bath in all important characteristics. It has the advantages of low metal contents, stability and high limiting current density. The performance of this bath is much better than that of the ordinary type of cyanide copper bath.

Truck Crane

A new lightweight truck crane weighing but 100 pounds and now being distributed is capable of rotating a full 360° in its well and can also be locked in any one of 12 positions, so as to prevent rotation has been made by W. B. McGuire Engineering Co., Montreal, Canada. The well and crane can be located anywhere on the truck deck and occupies only 10 inches square of space. The well is taken off by simply removing the four attaching bolts. Extra wells are available for installation on other vehicles or for dock or floor mounting.

Industrial "Dry-Cleaner"

Described as a revolutionary maintenance tool, a new air gun, termed "The Industrial Dry Cleaner," now available operates on compressed air. This lightweight gun drives hardened steel needles with which their impact on a spring-loaded recoil action rapidly remove scale and rust, even from the most inaccessible points. An accessory kit includes interchangeable points and special chisels. This tool is manufactured by Jasons Equipment (Canada) 1956, Montreal, Canada.

Industrial Snippets . . .

A group of Moscow scientists have suggested the design of a pit without underground workers which will produce not coal, but something like gas consisting of tiny coal particles, for a thermal power station. The coal will be hewn by automatic coal cutters controlled from a central panel on the surface. Special jet engines will "mill" the coal into a gas-like mixture. The transportation of coal inside the pit and of the gas mixture to the furnaces of the power station will be done through pipelines by compressed air.

A method to determine oilfield porosity has been devised by Galina Logovskaya, an Azerbaijan (U.S.S.R.) geophysical engineer. She has proved that oil bed porosity—a key parameter for estimating the amount of oil present—can be identified by electric well sounding. This technique has been effectively applied in a number of Azerbaijan's newly-opened oil deposits. The new method, according to experts, would essentially increase the accuracy of oil reserve calculation and widen the range of oil prospecting techniques.

4 per cent MAHARASHTRA STATE DEVELOPMENT LOAN, 1969

ISSUE PRICE AT PAR

OPEN ON THE 29th AUGUST 1960

The loan will be closed as soon as total of approximately Rs. 1,000 lakhs has been subscribed and in any case not later than the close of business on the 3rd September 1960.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore,

(b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below,

(c) the branches and Treasury pay offices of the State Bank of Hyderabad within the State of Maharashtra,

(d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury pay office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

SIMPLEX MILLS COMPANY LIMITED

PRODUCTION HAS BEEN STREAMLINED

CHAIRMAN, MR. S. R. DAMANI, OPTIMISTIC ABOUT CURRENT YEAR

ADDRESSING the shareholders of the Simplex Mills Company Ltd. at their Forty-eighth Ordinary General Meeting held at Bombay on 16th August 1960, Mr. S. R. Damani, M.P., Chairman, disclosed that the Company had now streamlined its production, but a sufficient flexibility was being maintained to derive the maximum benefit. He was also confident that the results for the current year would be better than last year.

The following is the full text of Mr. Damani's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you today to the forty-eighth annual general meeting of the Company at the new registered office and thank you for having come all the way here.

"With your permission, I will take the Directors' report and accounts for the year ended 31st March 1960 as read.

Improved Working

"The working during the year has improved, although trading conditions in the first half of the year were the same as those prevailing during the previous year.

"The profit for the year ended 31st March 1960, after providing gratuity, normal depreciation and after making adjustment of excess provision for taxation in previous years, comes to Rs. 1,64,538, as compared to a loss of Rs. 5,14,171 in the previous year. Payment to staff and labour has substantially increased by Rs. 11.49 lakhs, mainly on account of working additional shift, higher dearness allowance and implementation of the Wage Board recommendations. The increased burden under the last two heads alone amounts to Rs. 2.80 lakhs and Rs. 1.39 lakhs, respectively. Consumption of stores and spare parts is up by Rs. 6.00 lakhs and liquid fuel, electric energy and water by Rs. 2.51 lakhs due chiefly to the progressive change in the pattern of production. Interest and depreciation have further increased by Rs. 1.11 lakhs and Rs. 3.00 lakhs, respectively.

Production

"During the year under review, exports have shown a significant rise from 8.14 per cent. in the previous year to 15.66 per cent. The production of wearable sorts has further risen by 4.05 per cent. The increased production enabled the Company to expand its activity in the yarn market, where the sale has jumped from Rs. 5.37 lakhs to Rs. 41.43 lakhs.

"The Company has now streamlined its production. About 40 per cent. capacity has been earmarked for industrial goods, viz., canvas, belting duck, filter cloth, etc., another 40 per cent. for wearable qualities and the balance for yarn. However, a sufficient flexibility is being maintained to derive the maximum benefit.

Capital

"Thanks to your co-operation, the 'right issue' of 16,800 equity shares was fully subscribed and there was an equally good response to the issue of 6½ per cent. registered debentures from the public and institutional investors. These enabled the Company to reduce its borrowings from the bankers. The Directors have now decided to issue the remaining 11,250 debentures of Rs. 100 each at par to be first offered to the shareholders in the ratio of one debenture for every five shares held by them.

Dividend

"This year also the Directors have transferred a sum of Rs. 7.56 lakhs from reserve account No. 1 to the profit and loss appropriation account, to declare a dividend of Rs. 7.50 per fully paid share of Rs. 50 each. This works out to Rs. 5.25 net per share after deduction of 30 per cent. as tax, as against Rs. 5 free-of-tax dividend paid last year.

Cotton

"The crop was low at 37.50 lakhs bales last year, as against the expectation of 48 lakhs bales. The carryover of 12 lakhs bales was probably the lowest in the post-independence history. In order to ensure higher output of cloth and yarn, the Government permitted import of cotton and only recently, it has permitted a further import of 6 lakhs bales of cotton from the U.S.A. under Public Law 480. This fresh import will enable mills to obtain cotton at favourable terms and increase production to meet the local demand.

Wage Board Recommendations

"The Company has paid a sum of Rs. 1.39 lakhs for the year in accordance with the Wage Board recommendations. The full impact of the increase in the wage bill will be felt in the current year. This will mean about 6 per cent. permanent increase in the wage bill, which will further increase by 1.5 per cent. from 1962. The corresponding responsibility of the workers is to improve the efficiency and production and facilitate implementation of the rationalisation schemes. Unless the workers honour their part, it would not be possible to bring down the cost of production and consequently the cloth prices. This would directly reflect in slowing down the process of modernisation which alone can ensure larger exports, higher wages to workers, reduced cost of production and low prices to the consumer.

Prospects

"The completion of the rehabilitation and expansion programme has proved beneficial and the working result for the first four months are really encouraging. I am happy to say that our new qualities of poplin, shirting and longcloth have been well received in the market. The Company is now endeavouring to enter a new field by processing outside cloth which will bring additional income.

"The recent announcement by the Indian Cotton Mills' Federation to reduce the cloth prices will not materially affect the Company and I can safely forecast much better result for the current year.

Industry and Third Five-year Plan

"You are aware that the Government has already released the draft of the third Five-year Plan which envisages a spending of Rs. 10,200 crores—Rs. 6,200 crores in the public sector and Rs. 4,000 crores in the private sector. The Government hopes to increase the national income by 25 per cent. and food production from 70 million tons to 105 million tons, which is the backbone of the cost of living index. The whole emphasis is on development of agriculture and heavy industries and it is proposed to spend about Rs. 1,675 crores on agriculture including irrigation works and about Rs. 1,500 crores on industry.

"Under this Plan the planners have placed the total output of cotton at 72 lakhs bales and cloth at 9,300 million yards per annum, consisting of 5,800 million yards of mill-made cloth and 3,500 million yards from the decentralised sectors, namely, the handlooms, the powerlooms and *khadi*. The Indian Cotton Mills' Federation has estimated the *per capita* consumption at 18.5 yards and, accordingly, the country will need 8.700 million yards per annum for the increased population of 470 million by 1966. Even if we provide 800 million yards for exports, as against 850 million yards per annum as provided by the Planning Commission, it would total to 9,500 million yards. The Indian Cotton Mills' Federation has suggested allocation of 6,200 million yards to the mill sector and 3,300 million yards to the decentralised sector. The production by the end of the second Five-year Plan of the mill sector is estimated at 5,000 million yards and it would not be difficult to increase the production by 1,200 million yards during the next five years, provided expansion is allowed. I do hope that at the time of finalisation of the third Five-year Plan, the Planning Commission would give due consideration to the suggestions put forward by the Indian Cotton Mills' Federation.

Managing Agents

"You are aware that, with effect from the midnight of 15th May 1960, Forbes Forbes Campbell & Co. Private Ltd. ceased to be Managing Agents of your Company. I will be failing in my duty if I do not convey thanks on behalf of the Company and myself for the valuable services rendered by them during their tenure as Managing Agents. Prominent persons from trade and industry have since joined the Board and I am sure the Company shall benefit by the experience and knowledge of the new Directors.

Staff

"The members of the staff of the mills and the selling agents, especially Shri Purushotam Ratilal, deserve praise and appreciation for their efficient work."

4 PER CENT
GUJARAT STATE
DEVELOPMENT LOAN 1969

ISSUE PRICE Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTIONS ON 29th AUGUST 1960

The loan will be closed as soon as a total of approximately Rs. 500 lakhs has been subscribed, and in any case not later than the close of business on 3rd September 1960.

THE LOAN WILL BE UTILIZED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The applications will be received at offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore, and at branches of the State Bank of India and Treasuries and Sub-Treasuries in the State of Gujarat.

Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its branches within the State and forward to the nearest receiving office.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE ABOVE OFFICES.

EVOLUTION OF MANAGEMENT IN PLANTATIONS

By W. Wilson Mayne

IT is an important fact of South Indian plantation history that the industry owed its origin to adventurous individualists who either had a little money to invest or sufficient persuasive powers to borrow it, with a view to making a living and possibly a fortune. Their motives were by no means as simple as Marxian theory would have us believe, and they had undoubtedly never heard of exploitation as a term of abuse. They were adventurers, looking for some new exciting endeavour as well as for wealth in developing an unused asset in the hills of Southern India.

The industry was thus founded on the basis of individual private proprietorship. It is significant that, even as late as 1893, it was possible for the representatives attending the Conference at which the U.P.A.S.I. was founded to guarantee personally the salary of the secretary. It is from such a background that the management of plantations has evolved. In this respect it differs greatly from plantations in some other parts of the world, where large companies have been engaged in pioneer development from the beginning such as Unilever in parts of West Africa, the United Fruit Company in the Caribbean and the great rubber companies in Brazil and Liberia.

Early Stages

It is very unfortunate that the early pioneers of planting in South India have left little or no records of their activities. Much therefore must be left to conjecture and to inference from surviving practice, and something to legend. The earliest developments of planting in South India were not in the uninhabited fastnesses of the Western Ghats, but in the Malnad of Mysore, Coorg and the Wynaad in the north and in the foothills of Travancore in the south. The pioneers took up land where there were long established settlements, so that, in the initial stages at least, there were local sources of labour upon which the budding planter could call.

Up to recent times, there were still small coffee plantations in Mysore whose permanent establishment comprised no more than an overseer and a watchman. When work was to be done, the news was passed around the hamlets in the vicinity, and, subject to the demands of the rice crop, workers arrived. When the immediate work was completed, they were paid and returned to their homes. It so happened that the work of opening up an estate and, in the early days, the cultural practices and harvesting of coffee fitted in well with the planting and harvesting of paddy in the Malnad.

At this stage there was no question of a permanent labour force under the control of the manager or owner of the property. The planter came to an arrangement with the local people to provide labour for a given task, in many cases through the village headman or similar local worthy. There were doubtless long and involved arguments as to the rate to be paid for the task and both the carrot and, at least metaphorically, the stick were invoked to get the work done as cheaply as possible. Nevertheless, the preservation of good relations was of the utmost importance, since the work on plantations was not an absolute essential to the neighbouring villagers, though no doubt the earnings were a welcome addition to their meagre cash resources.

It is obvious that, under such conditions, a prerequisite for success was the establishment of friendly relation with the local people. There was no question here of a master and servant relationship, there were no continuing obligations, and only persuasion and an adequate incentive could produce the workers. There was, of course, a darker side, when advances of cash were made, to be worked off by subsequent labour and the growth of indebtedness could lead to possibilities of coercion. It was, in fact, the problem of recovering debts from absconding labourers which gave rise to the formation of the U.P.A.S.I. in 1893, but this belongs to a later stage in the growth of the industry.

Many of the industry's pioneers came from rural Britain, with its background of feudal rights and obligations, who brought with them something of its sense of community responsibility. They also brought with them that supreme confidence in the superiority of their particular cultural pattern which was so characteristic of the nineteenth century Briton. The combination led to the development of patriarchal relationships with their local neighbours, in which from seats of Olympian detachment disputes were settled, simple medicaments distributed to the sick and punishments administered to the unruly.

Nowhere was the pattern more clearly indicated than in the inscription on a simple monument which once stood on the roadside near Kodlipet on the Coorg and Mysore border: "Sacred to the memory of William Hugh Orlebar, Lord of Kumbarahalli." As a system in its time, it worked with surprising satisfaction, as is evident from the appreciative memories of many of the pioneer coffee planters which persisted, long after their departure, among the villagers living around the properties they had owned and managed.

Emergence of Indigenous Planters

This simple system could not last. As the industry expanded, local sources of labour became entirely inadequate—many of the local workers had set up as coffee planters themselves, such was the force of example. It was one of the delegates to the Conference of planters in 1893, Mr. M. N. Subbia, who paid a tribute to the founding fathers of the industry:

"The kindness shown us at this Conference is most encouraging to the native planting community, in general, who, it must be understood, are following in the footsteps of their European brethren and whose success in this field is mainly due to the vast improvements suggested by them."

It was not long, therefore, before planters were recruiting labour from further afield, and there grew up the system of recruitment through labour suppliers which persisted until recent times. Such systems, which varied in detail were even more necessary in the new areas being opened up in virtually uninhabited tracts such as the High Ranges of Travancore and the Nelliampathy and Anamallai hills. The introduction of gangs of workers from more distant places brought with it a whole new series of problems—these workers had to be housed and fed and money had to be advanced for way expenses and other payments before they could undertake the journey to estates.

There was, however, little change in the basically paternal system of management, but the labourers were less independent and more readily subject to coercive pressures, which might be exercised by the estate management or the labour suppliers. At its worst, the system could be oppressive, but, as, for most of the time, labour was short, there was usually an escape, if conditions were too harsh, by moving on to some other estate. The proceedings of the early U.P.A.S.I. meetings are full of complaints about absconding workers who had left without liquidating the advances made to them and there were many disputes over crimpling of labour by one estate from another.

Manager—the Key Man

As estates grew in size and maturity, the immediate supervision of work fell more and more upon the labour suppliers or their representatives, but the overall control lay with the proprietor or his manager, and relations were very largely personal. Changes in ownership or management were infrequent and the relative difficulties of transport encouraged close and intimate relations between the manager and the worker. Conditions were often primitive and life was undoubtedly hard, but, to a considerable extent, its trials were shared. The planter treated his own malaria from the same bottle as he dispensed doses to the workers. He spent virtually all his time in the field with the workers, since, in those halcyon days, there were no insatiable demands for forms, returns and records which bedevil his present-day successor.

Discipline was undoubtedly strict and punishments sharp and immediate and, perhaps, none the worse for that. That injustices occurred is certain, but, generally speaking, the early planters earned a reputation for fair dealing and rough and ready justice in their relation with workers. There were exceptions, of course, where the power that circumstances gave to employers was abused and when for the worker the border-line between respect and fear was unhappily passed.

The general pattern of paternalist management continued up to the Second World War, though not entirely without change. With the development of the tea industry, the need for the assembly of larger financial resources than were normally available to individuals, led to the formation of planting companies. In most cases, these developed from individual private estates often by amalgamation, and the actual day-to-day management changed but little. There was inevitably an increase in office work and an elaboration of field records which necessitated the provision of a new level of staff to cope with it. The new posts of clerks, field conductors and tea makers were at first often filled from the ranks of the labour suppliers and sometimes from the labour, but, with the passage of time and the demands for higher educational standards, the situation changed and the intermediate staff constituted a separate class.

Although the management of estates became increasingly complex, little provision for specialist assistance developed except in relation to medical care. The planter continued to be a man of all work, ready to build houses, survey roads, lay out water-supplies, maintain machinery, settle labour disputes, keep increasingly complex accounts and deal with floods, epidemics, famines, as well as plan the agricultural operations required for the production of crops. He had to be a farmer, forester, engineer, accountant and, above all, a manager of men.

With these developments something was lost. There was inevitably a weakening of the personal relationship which had been the cement of earlier management. In the larger companies, managers were liable to transfer and lacking the time and leisure for learning to know their workers, tended to rely increasingly on their staff and labour suppliers for information about the needs and feelings of the workers. The gap between managers and workers widened. It is said of one general manager of a large company in South India that he did not encourage his managers to know the local language too well, as it interfered with the proper detachment required for the expeditious settlement of disputes!

Workers' Welfare

It is remarkable that when, some thirty years ago, large tea interests opened up in Mysore, providing workers' housing of unheard of standards, paying wages well above the prevailing coffee estate rates and arranging for hospitalisation and medical care on a lavish scale, the movement of local labourers to these amenities was negligible. Yet, perhaps, it was not so remarkable—the managers and assistants were strangers and changed rather frequently, the houses were cold at night and hot in the day, the welfare arrangements were impersonal. A friendly hovel seemed better than a hygienic tenement, a sympathetic manager with a bottle of fever mixture more comforting than a white-coated doctor with a hypodermic syringe.

There is no doubt that the increasing size of estates and complexity of their problems placed a strain on a system of management which had developed in simpler circumstances. That it lasted so long must be attributed to the persistence of a formal pattern of relationships in which the supremacy of the management was accepted unquestioningly by a conservative and backward community which had for centuries accepted its subordinate role in society as devinely ordained. The prestige attached to the manager largely ensured compliance with his orders. Of course, this did not entirely prevent trouble and the system never worked so perfectly as some of the reminiscences of the older hands would suggest. Violent attacks by workers on managers or assistants were not entirely new to the industry with the advent of militant trade unions.

The winds of change engendered by the Second World War did not leave plantation workers untouched. The attainment of independence and the adoption of universal adult suffrage gave them a new importance and leadership and control of this substantial body of people became of political significance. This

leadership came from outside in the form of trade union organisers, who made use of a variety of grievances to win the support of the workers and to create new allegiances. There was really nothing very remarkable about this, but it caught the industry, to a very considerable extent, unprepared. There is no doubt that there were real grievances—rising prices and food shortages in particular—but the situation was certainly aggravated by propaganda deliberately designed to undermine the authority of management.

To many older planters, the situation gave rise to what can perhaps be best described as resentful bewilderment. The best of them had looked after their workers and had assumed their loyalty as a matter of course. It was a bitter blow to find that these same workers were turning to other leaders, and forging new allegiances. There was much talk in managerial circles of the "disloyalty" of workers, the machinations of agitators and the weakness of the authorities, but little recognition that the problem was one of inevitable social change, requiring extensive re-thinking of the methods and functions of management.

There has been surprisingly little explicit discussion of the new problems presented to management by the changing outlook of the worker, but that has not prevented a gradual adaptation to the altered circumstances. It has been undoubtedly assisted by the fact that new entrants to management have had to face the situation as it exists without any background of the older relationships. The industry also gained from the number of its younger managerial staff who served as regimental officers in the army, for, despite much common misconception, the army had learnt a great deal about the problems of leadership.

Qualification for Leadership

The fundamental change has been that, whereas, in the past, leadership for productive activity on plantations was accorded to the manager without question, now that leadership has to justify itself to the workers. The distinction is not, of course, a sharp division between the old and the new. The old prestige of management has not disappered overnight to be replaced by a total rejection of managerial leadership, unless it can be earned by power of personality knowledge and devotion to duty alone. What is involved is a shift in emphasis, which becomes all the more extreme, when the manager relies too heavily on prestige and insufficiently on personality to maintain his authority.

The trend of public opinion and of legislation dealing with labour relations since the war has been to release the worker from any vestige of bondage to the employer and to build up his status as a free and independent person. For the plantation workers, the application of the Payment of Wages Act, the official recommendation for the abolition of the Kangany system, and the protection afforded by the Industrial Disputes Act and the Industrial Employment (Standing Orders) Acts were all directed to this end. While the results have, perhaps, not entirely fulfilled the intentions of the innovators, they have given the worker a new feeling of independence, a freedom which, in its first fruits, has at times, and not unnaturally, overflowed into licence.

These developments have placed a heavy burden on management. To replace an automatic authority by one which had to earn acceptance by force of character was no easy task. The attributes suited to the old pattern of paternalism were not those best adapted to the early stages of industrial democracy and it was essential for management to develop those skills and those virtues which would meet precisely such a situation. The requirements can be best summed up in the words used in the London *Times* in somewhat similar circumstances—"infinite patience and a steady nerve, combined with a liberal outlook, are required to surmount the next stage." These qualities have been reasonably conspicuous in the past fifteen years of change in the plantations of Southern India, though no one would claim that there have been no shortcomings and no forlorn rear-guard actions.

Frustrating Experience

To many of the older planters, the most frustrating experience has been the amount of time now absorbed in labour relations—dealing with complaints, enquiring into disciplinary infringements, establishing workloads and generally endeavouring to secure a reasonable return for the wages paid. There is consequently less time for the traditionally effective manure—the farmers' boots—to circulate around the fields, so that prompt action may be taken to maintain the health and welfare of the tea, the coffee or the rubber on the basis of close continuous observation.

This is not to imply that the older planters believed that plants were more important than people, but that their culture and care required more time and attention than was needed to deal with a system of human relationship which was taken for granted. One of the important lessons that had to be learnt was that the problems of the human relations could no longer be taken for granted and that time spent on them was not wasted time or squandered time, but the basis upon which all constructive activity depended.

There is no question that the burden of management has greatly increased in recent years, and the problem of how the many virtues of a system which has stood the test of many changes can be preserved in an age when the technical demands on management are so varied is becoming increasingly serious. It would be unfortunate if the close relationship between the manager and the workers should be broken by the proliferation of intermediate levels of management, but, at the same time, the need for specialised assistance has grown to a degree that overall efficiency is likely to suffer, unless this can be provided continuously within the management framework. So far, this specialised assistance has only been generally provided for in connection with the health and medical services of estates, but it seems likely that the extension of such assistance to the engineering and agricultural spheres might be of value in easing the planters' burden.

Art or Science?

It is still a matter of controversy whether management should be considered as an art or a science. As far as plantation management is concerned, it is largely the art of securing the co-operation of people in carrying out tasks, not in themselves inherently difficult or complex but in a certain sequence suited to the requirements of the crop being cultivated. The amount of specialised knowledge essential for success is not great, provided the manager knows where to get such information when it is required. The essentials are best acquired in the practice of planting under guidance of experienced seniors and is largely a matter of training in observation and reasonable deduction. All the knowledge is, however, of little value in the absence of qualities of leadership and responsibility which alone can command the willing co-operation of workers.

It is doubtful, if these qualities can be acquired by tuition, but they can certainly be developed when their importance is realised. The future of the industry depends on wise selection of men, with the basic qualities of leadership to fill the posts of management and on the nurture of those qualities in every possible way. The needs of the industry remain fundamentally the same as they always did, but the methods of satisfying them have had to change with the growth in status and self-realisation of the worker. At a time when so much attention is directed to training for management, it is vital that, in schemes for instruction in the techniques of management, the overriding importance of qualities of personality is not overlooked.

RUBBER RESEARCH—A MUCH NEGLECTED SUBJECT

SUCCESS OF REPLANTATION DEPENDS ON ADEQUATE RESEARCH

By Dr. C. K. N. Nair

PROFESSOR OF AGRONOMY, GOVERNMENT OF KERALA

THE planters of South India have built up a small but valuable rubber plantation industry in the country during the course of the last half century. The present area of the plantations is slightly under 300,000 acres. The production is about 25,000 tons of raw rubber per year. Until the last World War, most of the raw rubber produced in the country was exported. The few rubber factories which came into existence in the 1920s and 1930s consumed only a small proportion of the indigenous production. The World War, however, changed the entire situation. The existing factories were expanded and new factories started for the manufacture of essential and strategic rubber goods. These factories consumed practically all the raw rubber produced in the country. In the post-war years, the manufacturing industry expanded further.

Although the rubber plantation industry had also expanded considerably, production did not catch up with consumption. The deficit had, therefore, to be met through imports year after year. In 1940, the total production was over 16,000 tons, out of which 13,000 tons were exported. In 1950, the production amounted to 15,600 tons, consumption to 17,735 tons and imports to 1,082 tons. For 1960, the figures would approximately be, production 25,000 tons, consumption 65,000 tons and imports 40,000 tons. The gap between supply and demand is thus ever widening. With the demand for rubber in the country becoming frightfully disproportionate with the increase in production achieved, the rubber plantation industry has been understandably shaken by fear of its own future in the face of imminent competition from synthetic rubber. As long as rubber prices are protected by the Government, the industry may thrive. But the moment Governmental protection is lifted, the plantation industry may face a major crisis, if cheaper and more efficient levels of production are not achieved in the meanwhile.

Perennial Governmental protection for the plantation industry, which is at present privately owned, may not be feasible in the changing pattern of society in our country. Scientific methods of cultivation and competitive production must eventually reduce rubber prices, increase the overall output to the required national level and enable the industry to stand on its own feet.

The total world production of natural and synthetic rubber in 1957 was approximately 3 million tons. It is likely to be of about 3½ million tons or more in 1960. The U.S.A. alone is estimated to consume nearly half of the entire world production. Modest as our raw rubber requirements are, therefore, both as at present and in the foreseeable future, and possessing as we do sufficient productive potential, there is no reason why we cannot develop our plantation industry and make the country self-sufficient in this vital and strategic raw material.

Climatic Conditions

The ideal climatic conditions for the rubber tree, *Hevea brasiliensis*, to flourish are: a more or less uniformly, humid warm tropical condition and a rainfall of about 100 inches evenly distributed throughout the year. In most of the planting districts of South India, the climatic conditions do not approximate to this. There is, on the other hand, a pronounced dry season followed by a pronounced wet season. During the dry season, the growth of the tree is retarded and yield depressed. Even though the rainfall is more than adequate in the planting districts, most of it falls during the south-west monsoon in the months June to August. The continuous heavy rains during this season interfere with tapping and this results in considerable loss of the crop. The average yield per unit area in our plantations is much lower than in other countries like Malaya, where nearly ideal climatic conditions prevail.

Worn-out Rubber

About 80 per cent. of the total area under rubber in South India now consists of old, low-yielding trees. In more than half of this area, the trees have outlived their economic life and are degenerating rapidly. The larger estates are generally well organised and well maintained, but most of the medium-sized estates and small holdings are in a neglected condition. No attention is paid to scientific maintenance and management in these cases. Intensive tapping by unskilled tappers have, in most cases, damaged the trees permanently. Little or no attention has been paid hitherto to soil conservation and management, not only in small holdings but also in many of the medium-sized and large estates. As a result of this, and aided by heavy monsoon rains, erosion and soil-exhaustion have played havoc in a large proportion of plantation soils. To make matters worse, year after year, the trees get severe attacks of the secondary leaf-fall disease caused by *Phytophthora palmivora*, a serious disease peculiar to the monsoon climate. Small holdings and small estates seldom adopt any protective measures against this disease.

The cumulative effect of all the above-mentioned ecological and other factors have contributed to the very low yields of rubber being obtained in our country. Side by side with this tragic condition of old rubber, we have also the bright and hopeful picture of many scientifically maintained plantations of replanted and new-planted rubber, giving yields of the order of five to six times those of old rubber, on a commercial scale. This shows beyond any doubt that even most of the present low-yielding rubber areas could be transformed into high-yielding ones by replanting them with high-yielding strains of rubber and adopting modern methods of scientific management and maintenance.

Development Programmes for Rubber

The Central Government-controlled Rubber Board is charged with the national responsibility of rubber research and development. The Board operates under the administrative control of the Ministry of Commerce and Industry. The revenues of the Board are derived from two sources: (1) rubber cess levied on estate production, and (2) equalisation price levied on manufacturers on imported rubber. The first source brings an annual revenue of approximately Rs. 40 lakhs, while the revenue from the second source fluctuates, depending upon the quantity imported and the prevailing price in the world market. But, during the past few years, this source has brought in an income far exceeding the cess revenue and of the order of magnitude of more than a crore of rupees every year. The Rubber Act clearly envisages that the money thus collected by the Rubber Board must be spent back again on rubber research and development for the benefit of the plantation industry. Here thus we have our starting point to discuss rubber development plans, the near-pathetic state of a large proportion of our plantations and the fattening finances of the Board built up out of the scarce resources of the planters and the manufacturers alike.

Foundation-stone Gathering Moss

Year after year, during the last ten years, the Board has been surrendering their funds to the Government. An insignificant portion of the revenues collected only goes into rubber development. The result is that, while the rest of India has made phenomenal progress during the two Five-year Plan periods, the plantation country of South India has remained neglected, her valuable plantation potentials ignored, and the plantation economy brought to the threshold of impending disaster. Kerala, which produces 95 per cent. of the nation's rubber, has been the most hard hit. Scientific research and development in rubber, which was our most vital need, remained uncared for. The proposed Rubber Research Institute at Kottayam could easily have been planned to be one of India's National Laboratories. Instead, its foundation-stone, laid by the President of India in February 1956, has gathered moss during the last four years. Even now, the Rubber Research Institute has not been built. During the history of the two Five-year Plans, it is extremely doubtful whether a parallel case for a bigger instance of lethargy exists in the country. All these years, rubber research consumed none of the vast funds of the Rubber Board, nothing worth mentioning in any case, and the only research results we are applying today in our plantations, are results from Malaya and Ceylon for which we pay nothing more than the necessary postage. But our own peculiar problems are many, for which the solutions have to be found by ourselves. The approach to the question of developing the rubber plantation industry to achieve self-sufficiency of rubber, has to be made in the context of our own problems. The lack of enthusiasm on the part of planters in the Board's rubber replanting scheme, and the consequent non-achievement of the target areas under the scheme are the results of the failure of the Board to understand these problems. No attempt has been made to study the economic conditions of small holdings and their needs in relation to existing realities. No attempt has also been made to correlate the aid given with the requirements for scientific planting, maintenance and management.

One of the essential points to be borne in mind in any development plan for rubber is the close interdependence between research and development. In fact, no development plan for the plantations would be effective, except when conceived and executed in accordance with the results of researches available from our country. The Board, in first launching the replanting scheme, has in a way put the cart before the horse, and the only remedy now before us is to quicken the pace of rubber research to catch up with the needs of industry. Rubber has been planted in India in the past, not according to suitability of a particular area for the purpose, but according to the availability of some surplus land somewhere in the ownership of the planter. The result is that we have today plantations, in some cases on most unsuitable lands, replanting of which areas would be a national waste.

Dangerous Waste That Needs to be Avoided

We have our own peculiar soil and climatic problems, posing, in their wake, many serious pathological, nutritional, physiological and botanical problems in rubber growing. The mere introduction of improved Malayan clones or the blind acceptance of their methods and practices is not going to solve our difficulties. Our soil conditions and characteristics differ and the nutritional levels of the soils have never been correlated with the requirements of the rubber tree during its economic growth. The fertiliser practices for the replanted areas will depend on the chemical nature of the soils, their nutrient status and the conditions of nutrient availability obtaining in them. The maintenance of soil fertility in replanted areas is an important adjunct for the success of the replanting scheme. In most of the old rubber areas, all top soil has been washed off exposing the bedrock. Much research work has to be done on suitable soil covers for different localities, especially leguminous covers capable of building up soil fertility. Havocs due to erosion and washing have to be prevented by proper methods of mechanical conservation measure.

The latent dangers in the replanted areas are bound to become apparent sooner or later. The soils on which the rubber trees have been growing for several decades are fast deteriorating in respect of several vital plant nutrients, least suspected to be limiting factors in crop production at the present time. Among these can be mentioned calcium and magnesium and all the trace elements. It is possible that, in a few more years, these would become the major limiting factors in rubber production (from the nutritional aspect of the tree). It is, therefore, essential to initiate immediate research into such problems in the replanting of older rubber areas. I have only given an illustration how, without adequate research, the replanting scheme can flounder and become a national waste. There are many more similar situations, where no research has been done and no knowledge exists, so far as it relates to rubber.

Rubber is an agricultural crop of vital importance to the economy of South India, more especially Kerala. And yet, the agricultural authorities, both of Kerala and the Central Government, *have precious little to do* with the research and development programmes for the crop. The agricultural research programmes for rubber, tea and coffee are handled by the Ministry of Commerce and Industry. I think this is an entirely wrong approach. This approach becomes a positive menace to the development plans for the crops, especially if an initial mistake is committed in appointing a wrong person and vesting him with authority for developing research and evolving plans. Agricultural research and developments can be evolved and executed only by agricultural experts. A wrong person as the Director of Scientific Research can hold up the progress in the field for decades. Perhaps, rubber research would have progressed noticeably during the last 10 years, if the I.C.A.R. or the Ministry of Agriculture had taken over this responsibility. During the few years when the Council of Scientific and Industrial Research was establishing a chain of more than 17 giant National Laboratories all over India and the I.C.A.R. was launching colossal agricultural development and research schemes for the country, the Rubber Board, with its countless wealth earned from the tragedy of the industry, was sleeping soundly, instead of pondering whether or not they must embark on the rubber research scheme, which is only just as large as one of the hundreds of individual research schemes, sanctioned by the I.C.A.R. every year, for all other crops than rubber, tea and coffee.

Research Problems

There are many scientific aspects of rubber planting which have never been studied in this country. I shall list a few of the more important of them, which may vitally affect production in future years if we do not make a systematic study right from now. The foremost necessity is for a detailed study of the rubber soils, their characteristics and their degree of nutrient-exhaustion. It is necessary to survey the rubber-growing areas and classify the soils on the basis of their nutrient status. Fertiliser schedules have to be worked out for each region, based on plant requirements and the fertility status of the soils. A detailed investigation into the calcium and magnesium status of the soils, trace element deficiencies, and measures to combat them, have to be started. Diagnosis of nutrient deficiencies by plant-analytical techniques must be studied, in order that quick remedies may be suggested when plant abnormalities are discovered. The effect of trace element sprays, and the foliar feeding of other nutrient elements by means of foliar sprays, on yield and quality of rubber can be studied. Suitable leguminous covers for different regions and the extent of soil fertility built by them by the fixation of atmospheric nitrogen are other useful lines of investigation. The requirements of phosphates by rubber and the cumulative effect of application in our laterite soils are important fields of study. The extent of potash deficiency in rubber soils and the effect of potash application on resistance to diseases and increase in production are equally important fields of investigation. The nutrient requirements of rubber at different stages of growth needs study. In 1957, I had formulated a tentative fertiliser programme for rubber, which was officially issued by the Rubber Board. The programme gained immediate and immense popularity, because of the spectacular upward trend in production which resulted. This shows how starved the rubber soils were for nutrients, and how responsive these long-depleted soils are to fertiliser application. It is remarkable to note that, from less than 5,000 tons of total fertilisers used by the industry per year prior to 1956, the fertiliser consumption rose to 25,000 tons in 1958 by the rubber plantations.

Value of Research

A planned fertiliser programme for the industry is the very backbone of maximum production, and perhaps the only contributory factor that will help maintain the high yields over the years, after the trees reach the tapping stage. On the role of fertilisers in rubber production, I shall quote from the *Planters' Bulletin* of Malaya (January 1958) which summarises the results of a quarter century of researches on the subject, done in that country:

"Extensive long-term field experiments have now clearly demonstrated the value of sound manuring programmes in the cultivation of rubber on virgin land and in replantings. The benefits of manuring modern high-yielding rubber trees regularly with appropriate mixtures have been established with confidence on practically all soils on which rubber is grown in Malaya. Basic research over the past five years into the mineral nutrition of the rubber tree has provided reliable means for the diagnosis of nutritional disorder and points the way to further advances in cultivation."

Here, in India, the Rubber Board is still *groping in the dark on every aspect of rubber* research mentioned above.

An important line of useful investigations in rubber research will be the application of radio-active tracer techniques to the study of soils and mineral nutrition. Much valuable information can be obtained in the absorption and utilisation of nutrient elements by the rubber plants, their transport and disposition in the plant system and even the role some of these elements play in the synthesis of latex, by means of radio-active isotopes. For instance, most of the phosphorus applied to rubber plantations is in the form of rock phosphates. The phosphorus accumulation in our lateritic soils and the intricate reactions of reversion and fixation, may unfavourably affect the absorption of a number of other nutrient elements, *besides the absorption of phosphorus* itself, by the rubber tree. These reactions can best be studied by means of P-32. Such studies may have immense practical significance in effecting phosphate economy in the rubber plantations. Trace element absorption and the role that some of them undoubtedly play in the synthesis of latex can be investigated by means of radioactive tracer techniques.

Mutation studies in rubber seeds by means of nuclear irradiation provide a useful line of investigation for evolving high-yielding strains of rubber. Some work was initiated in this direction in 1957. With the newer and more powerful Experimental Reactors available with the Atomic Energy Department, it is very necessary to continue such investigation.

Weedicides

The development of new high-yielding clones from indigenous materials is a long-term research work of vital importance to the industry. This is a time-consuming work, requiring years of painstaking observations. Work on yield stimulants, new techniques in tapping practices and the effectiveness of chemical and hormonal weedicides are some other possible lines of useful research. Extensive *researches* on leaf dieases, as well as on diseases of the stem and the roots are required to be carried out. Much work has to be done to improve the quality of the marketable product currently produced by the industry. The conditions which control the coagulation of latex and the drying of rubber under Indian conditions of manufacture, need investigation. Bleaching processes for crepe, quality of latex concentrates and preparation of various forms of superior quality modified rubber have to be investigated.

The problems of the rubber plantation industry are thus numerous and inexhaustible, in the context of our own peculiar conditions. No one else is going to solve them for us. Where a band of 100 research workers and specialists are needed, the Rubber Board has just one or two. Research in the Rubber Board has been, and still is, under some evil spell and never moves forward. It is unfortunate, but nevertheless true.

Remedies

It is a welcome sign that the Government of Kerala is taking the lead in the matter. The Rubber Board has been talking for the last 10 years or so of converting the Andaman and Nicobar Islands into flourishing rubber plantations. None has come up so far. The Kerala Government's scheme of new planting is fast making headway and soon we may have several thousand acres added to our existing rubber areas. As the State Government's responsibilities in rubber development grow, rubber research is also bound to make headway as a matter of necessity. It looks to me that the State Government must impress upon the Government of India the need to hand over rubber research to our own Department of Agriculture. A fair proportion of the rubber cess collected from our planters must be given to the State Government for furthering rubber research. Kerala has 90 per cent. of the total rubber area of India and accounts for 95 per cent. of Indian rubber production. We have, therefore, to keep our eyes open, lest we may be rudely shaken one day by the sudden emergence of cheap synthetic rubber on the scene. That will be the collapse of our plantation economy. If such a thing happens, the Rubber Board does not lose, but only Kerala and its toiling planters. The Board may still be able to feed on synthetic rubber, and forget natural rubber research for all time to come.

THE HOME MARKET FOR TEA

SOME QUESTIONS ANSWERED

By J. G. Robinson

THE home market for our Indian tea is a very considerable factor in the national and the international tea trade. The size of India, its complexity and its population all combine to fox the statistician. So it is little wonder that estimates of our annual consumption of tea vary. The lowest I have seen for 1959 was 225 million pounds, the highest 255 million pounds. The official (Tea Board) figure is 243 million pounds (provisional).

All experts agree, however, that home consumption in India rose steadily in the 1950s, probably at an average rate of somewhat more than 10 million pounds a year. Will this rise be continued in the 1960s? Generally, expectations are that it will. Certain basic factors favour increasing home consumption of all commodities —for instance, rising population. Rising incomes as the third Five-year Plan gets going is another such factor and a considerable one at that.

Although the Central Government now appears rather lukewarm about tea promotion in India, it is likely that tea will secure its fair share of any such general increased consumption, mainly due to the efforts of individual distributors, large and small.

There is, however, a considerable body of opinion which holds that this cannot be accepted as a foregone conclusion. They point to changing habits, such as the marked rise in cold drinks sales. Such surveys as exist tend to indicate that the increased tea consumption is coming from hotels, restaurants and tea shops rather than from the home and is consequently more liable to change than if it were a deep-seated habit. Promotion, these *pundits* argue, must be continuous over a long period, particularly in those areas where the best results may be expected.

More Common With Men

Tea drinking in India is more common among men than among *ladies and children*, and, though this beneficial habit is widespread, consumption varies considerably from State to State. Gujerat, Kerala and Bengal are among the relatively heavy tea drinkers. Even here, however, *per capita* consumption scarcely reaches one-fourth that of an average Briton.

Much has been spoken, and some little written, in political, economic and trade circles, about our home market for tea. *It is customary* to describe it in wide generalisations, some of which are, unfortunately, not accurate. I think a useful purpose will be served by asking and answering a few common questions about the home market.

How Much Packet Tea is Sold in India?

Excise returns indicate about 120 million pounds annually. This *is about* half the total consumption in India; the other half is sold "loose," i.e., *in chests*, to shopkeepers who retail it in small quantities.

Is the Home Market Monopolised?

Emphatically not. It is true that there are several large packing firms, with wide interests, but none of these approaches a monopoly, even in the packet trade by *itself*, which, as mentioned above, is only half the home market.

Are Tea Auctions Really Free?

Yes. Any *bona fide* tea trader, satisfying certain reasonable conditions, can arrange to bid in the auctions either in Calcutta or Cochin and, in fact, the number of firms so bidding is quite large and keen competition is often seen.

Why is Tea in Shops Dearer Than Auction Prices?

Central, State and local taxes account for much of the difference. Freight and handling charges have to be met. In the case of packets, there is the cost of paper, etc.

Packet tea, in particular, has to pay a special excise, which many in the trade consider an unfair discrimination against progressive enterprise.

Profits in the tea distribution business are kept to very reasonable levels by the keen competition seen in every bazaar.

The Plantation Enquiry Commission, which conducted an enquiry in the middle 50s, confirmed that there was no profiteering.

Any attempt to restrict the home market would herald chaos; first on the estates whose production is mainly plain tea—perhaps half of the total, and then, swiftly following, repercussions on the international market where any such move would be most unwelcome and would drop prices to the floor, thereby probably more than eliminating any immediate foreign exchange gain.

It is nearer the truth to say that the home market and the export market are complementary. The home market assures a fairly stable basis for the product of those estates which, due to climatic and other factors, produce plain teas. It is generally accepted in the trade that a flourishing home market is the best assurance of stability for the industry.

How, Then, Can Exports be Increased?

This is an article about the home market, but the question is so vital that it must have a place.

The simple answer is by strict attention to quality, by keen and able trading and promotion, hampered as little as possible by regulations and taxation, and ultimately by larger crops.

The tea industry is at present beset with *many regulations*, all probably excellent in their

origin, whose cumulative effect is to limit expansion. A lot of these regulations were an integral part of the international agreement to regulate tea production, which expired some years ago and which it has proved impossible to revive despite well-directed efforts. Many people feel that the impossibility of international regulation must now be accepted and that our Indian regulations must be relaxed or transformed into a more positive form of planning. The recent announcement by Government of a scheme whereby the Tea Board will utilise its large surplus funds to finance hire purchase, so that the smaller estates can equip or re-equip themselves with modern machinery, is a great step forward.

Another farsighted plan was the scheme for guaranteeing the finance of hard hit gardens by the Tea Board. This has fallen upon administrative difficulties, but most people in the tea trade hope that it will eventually emerge.

This type of positive thinking and planning is essential, if our all-India tea crop is to be raised from the present 710 million pounds to the third Plan target of 850 million pounds.

The industry needs both its export and its home market and both must be developed, if the tea trade is to play its full part in the national economy.

If Regulations are Relaxed, is there not a risk of a Glut of Plain Teas?

This is the vital question. It must be faced honestly. The answer is: Yes, there is a risk.

All planning, particularly for consumer commodities, involves this particular risk. Experience shows that such gluts tend to occur in a single year rather than over a series of years. Even so, the weaker estates particularly would run into grave difficulties in any year during which glut conditions developed.

But, in the writer's humble opinion, the way to deal with this problem cannot be to plan on a basis of restriction, because a basis of expansion involves some risk. Surely, the right thing is to plan for expansion and, if glut conditions develop in any year, to deal with the position then, in the light of then circumstances.

The Central Government has many weapons to hand which could be counted on to give timely aid to any section of the industry or to the whole industry, if necessary. Reduction of the very high rate of taxation leaps to mind. Special steps directed towards special areas, like the existing fertiliser subsidy to the more inaccessible North Eastern areas, could be multiplied.

The aforesaid questions cover the main issues that are so frequently discussed, inside the trade and sometimes outside too, about the role of the home market in the Indian tea industry.

I hope this article has served to convince that the Indian tea trade is fortunate as compared with its foreign competitors in having a stable but lively home market of a size not disproportionate for a country that grows nearly half the world's tea.

Although the absorption of the home market is only about a third of the total national crop, it provides the gardens with an invaluable price support, especially for plain teas. The scores and scores of firms engaged in the home market provide the warmth, the healthy benefit and the social asset that goes with a cup of tea, not only in big cities but right into the smallest village. In doing so, they provide the Finance Minister with a handsome source of income, yet still the price of a cup of tea is within the reach of the humblest. This strikes me as no mean achievement.

One cannot close without paying tribute to the efforts of the Tea Board and its predecessors who between them did so much to foster tea drinking in India, but I am sure they would agree that little might have come from their task but for the ability and integrity of the tea merchants—large and small—whose initiative and capital have created and maintained our home market for tea.

JAY SHREE *TEA*

Rich in flavour - Rich in quality

The bracing breeze of the lofty Himalayas ... the snow cooled rays of the sun ... the chaste dew-drops of the early morning ... the freshness of the rain-bathed hills ... only fine Darjeeling teas grow in this high-altitude environment. That is why these packets contain quality tea that has a distinctive flavour and aroma.

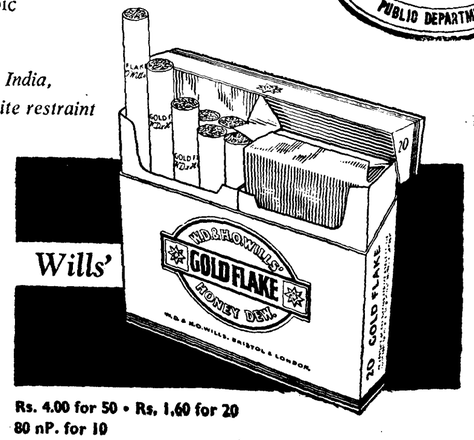
J5—159

Named after the ancient Chera Kings, Kerala dates back to a mythological past. This land of palmfringed lagoons and lush vegetation has a close-knit cultural heritage which is best expressed in its theatrical art. Every year the Velakkali dancers stage the battle of Kurukshetra in commemoration of the martial past of the country—elaborate dress, make-up and dance-drama are fused in an epic grandeur of mood and movement.

Diversity is the keynote of your journey through India, from the emotional grandeur of Kathakali to the exquisite restraint of the Manipuri Ras dance.

AND WHEREVER YOU GO, there is the full, rich flavour of WILLS' GOLD FLAKE to enhance the pleasure of travel.



Wherever you go . . . they're good

CHEMICAL INDUSTRY IN THIRD PLAN

SUBSTANTIAL EXPANSION OF BASIC CHEMICALS ENVISAGED

THE chemical industry in India is on the threshold of a new era of rapid development. The industry has made substantial progress during the first and, more particularly, second Plan periods and bids fair to make considerable headway during the third Plan. An agreement between India and West Germany just signed at Bonn for launching a manufacturing programme of basic chemicals and intermediates in this country is a significant pointer to the pattern and course of the development of chemicals in the coming five years. According to this scheme, the Basic Chemicals and Intermediates (B.C.I.) project, which will be in the public sector, will be located in the Aptakharpada area, near Panvel, Maharashtra State. The scheme provides for the manufacture of as many as 40 organic intermediates with an aggregate annual capacity to produce 25,160 tons. The capacity of the plant is proposed to be expanded at a later stage by 10,000 tons. The B.C.I. scheme is of special significance to the development of chemical industry in that it will serve as a link between organic hydrocarbons (such as benzene, toluene, naphthalene, anthracene and xylene) at one end and dyestuffs, plastics and drugs manufacturing plants at the other end. The project will be linked with the Synthetic Drugs Project proposed to be established near Sanatnagar, Hyderabad (Andhra Pradesh). Several basic inorganic chemicals will be consumed in the manufacturing operations, which include, *inter alia*, chlorination, sulphonation, alkalene fusion, nitration, reduction and oxidation. Production of some of these inorganic chemicals is also envisaged in captive plants within the project.

The recovery of organic hydrocarbons, such as benzene and toluene, is expected to be stepped up in the third Plan period, side by side with the increased coking of coal at the steel plants. Besides, the Government of India is planning to establish a plant for the manufacture of sulphur from pyrites at Amjor in Bihar. A plant, with an annual capacity of 30,000 tons of sulphur, will be set up for this purpose. The mining of the pyrites will simultaneously give rise to the production of fines which are expected to find an outlet in the manufacture of sulphuric acid. Another major scheme in the public sector relates to the development of essential drugs and surgical instruments in collaboration with the U.S.S.R. The scheme seeks to set up four plants. They are: (1) Synthetic Drugs Project at Sanatnagar, Andhra Pradesh, covering the manufacture of sulpha drugs, vitamins, phenacetin, other synthetic drugs (INH, luminal, chloroquin, etc.) and Intermediates (including ASC at 1,500 tons per year). (2) Antibiotics plant, near Rishikesh (Uttar Pradesh), covering the manufacture of penicillin, streptomycin, chloro and other tetracyclines, new antibiotics. (3) Phyto-chemicals plant in Kerala, covering the manufacture of caffeine, ephedrine, digitalis glycosides, Lanatazides, Ergot alkaloids, atropine, scopolemine, reserpine, papain, vitamin P. (4) Surgical Instruments plant, near Guindy, Madras, for the manufacture of 25 groups of instruments. On the implementation of these schemes, the availability of essential drugs at reasonable prices is expected to be ensured.

Fertilisers

The development of fertilisers, too, must be viewed as a part of the programme for the chemicals industry, since a wide range of basic chemicals are produced and finally transformed into fertilisers, for example, sulphuric acid, ammonia, nitric acid and phosphoric acid. Besides, some of the end-products of the fertiliser industry have also other uses as chemical raw materials, as, for example, urea for the manufacture of urea formaldehyde resins. It is proposed to secure by the end of the third Plan, production of nitrogenous fertilisers equivalent to one million tons in terms of nitrogen and of phosphatic fertilisers equivalent to 400,000—500,000 tons in terms of P_2O_5. This compares with a current consumption of less than 60,000 tons of P_2O_5 and an availability of 231,000 tons of nitrogen for consumption in 1959. It is at present contemplated that, in the public sector, capacity for nitrogenous fertilisers will be expanded to about 800,000 tons in terms of nitrogen and that the balance of 200,000 tons required to reach the target of one million tons will be provided by the private sector. The private sector is also expected to provide most of the increase in capacity needed for phosphatic fertilisers.

The existing capacity for nitrogenous fertilisers is 144,000 tons in terms of nitrogen. This is almost wholly in the public sector. It is expected to increase to about 234,000 tons by the end of the second Plan with the completion of the expansion of Fertilisers and Chemicals Ltd. (F.A.C.T.) and of Nangal Fertiliser Factory. Two other factories are under construction at Rourkela and Neiveli and tenders for plant and equipment have been invited for another factory at Trombay. The setting up of factories at Durgapur, Nahorkatiya, Kothagudium in Andhra and at a site in Rajasthan has been approved and sites for factories in Uttar Pradesh, Madhya Pradesh, Mysore and Gujerat are under consideration. One or two more additional factories will be needed to achieve the target of one million tons. High priority is being assigned to investments in this field in the next three years.

According to the third Plan draft, the tentatively accepted end-products pattern for nitrogen and complex fertilisers is as follows:

(Thousand tons of nitrogen)

End-product	(1965-66)
Ammonium sulphate	232.0
Ammonium sulphate-nitrate	211.0
Nitrochalk and nitro-limestone	160.0
Nitrophosphate complex fertiliser ...	74.0
Urea	206.0
Ammonium phosphate	67.0
Ammonium chloride	50.0
Total ...	1,000.0

It will be seen from the above figures that a significant portion of the additional output of nitrogen is being planned in the form of complex and/or compound fertilisers, so that a part of the phosphate (P_2O_5) requirements will also be met in this manner. This pattern of production is expected to keep within reasonable limits the dependence on sulphur and gypsum.

Share for Private Sector

Although the tentative share for the private sector in the development of nitrogenous fertilisers is placed at 200,000 tons, it may be permitted to expand further, if industrialists prepare appropriate plans. It may be noted, in this connection, that Mr. S. K. Patil, Union Minister for Food and Agriculture, while addressing the annual meeting of the Fertiliser Association of India last week at New Delhi, gave the assurance that, should the private sector be inclined to take up the prbduction of more than 200,000 tons of nitrogenous fertilisers, the Government would be willing to consider favourably any specific proposal. He observed that the target of 200,000 tons should not be considered as the ceiling for the production of nitrogen in the private sector. He, however, added that Indian industrialists would be expected not only to find the necessary rupee capital for the nitrogen factories but also enter into collaborative arrangements with foreign *entrepreneurs* so as to be able to obtain plant and equipment required for the factories without the expenditure of foreign exchange.

Apart from fertilisers, the private sector is also expected to take up the schemes for the development of heavy chemicals. In the sphere of inorganic chemicals, production of sulphuric acid which was 164,000 tons in 1955-56 is estimated to reach 400,000 tons by the end of the second Plan and 1.25 million tons by the end of the third Plan. The corresponding figures for the production of caustic soda are 35,000 tons, 125,000 tons and 400,000 tons, respectively. India is expected to achieve "near self-sufficiency" in this chemical by next year. The production of soda ash has already exceeded the second Plan target. The production target for soda ash is placed at 450,000 tons, as compared with the estimated production of 240,000 tons in 1960-61 and only 81,000 tons in 1955-56. The production of hydrogen peroxide, extensively used by textile and paper industries, was commenced in the country early during the second Plan period and has made tremendous progress.

In the sphere of organic chemicals, too, major developments in the private sector are envisaged, based on supplies of intermediates from the proposed Basic Chemicals and Intermediates Plant in the public sector, for instance, production of rubber, chemicals, A.S.C. and sulpha drugs from acetanilide and of phenolformaldehyde from supplies of phenol from the Government Intermediates Plant. Production of citric acid and oxalic acid is also envisaged for the first time. Large-scale expansion of acetic acid, acetone, formaldehyde and production of organic esters required as solvents, e.g., butyl acetate and phathalic esters, will further strengthen the organic chemical industry. The production of plastic monomers like vinyl chloride, styrene and of high polymers like synthetic rubber, currently under development, may also be mentioned in this connection. All these new products are expected to assist in bringing down the requirements of foreign exchange for maintenance in some of the major industries established in the post-war period.

In addition to these chemicals, considerable progress is expected to be made in the establishment of petro-chemical industry for which talks are going on at present between the Government and a leading firm of *entrepreneurs* in Bombay. Besides, by 1965, India is expected to become one of the largest industrial alcohol producing countries in the world, thanks to the abundance of molasses produced by it.

Impressive Progress

The Union Minister for Industry, Mr. Manubhai Shah, while addressing the 45th foundation-day meeting of the Calcutta Chemical Company, West Bengal, last week, gave a brief account of the impressive progress of chemical industry in India since planning began. He is entitled to a large measure of credit for India's achievement in this field, for he is really the person in the Government who gave the necessary push that has facilitated the growth of chemical industry in the past four years, in particular, and prepared the ground for further expansion in the coming years. If any proof were needed for substantiating this tribute to him, one could refer to his thought-provoking article on this industry contributed to our 1956 *Annual Number*. At the aforesaid meeting, Mr. Manubhai Shah described the latter half of the second Plan period as the dawn of the era of chemical industries. He pointed out that not only imports during this period had been very drastically curtailed, but, in many cases, capacities even in excess of the current requirements had been built up. He was confident that there were now possibilities for the promotion of export of some chemicals and chemical products. He appealed to each unit of chemical industry to plan its production programme in such a manner that it could export at least that much which was needed to meet its foreign exchange. He was hopeful of the plastics industry being one of India's leading foreign exchange earners. This industry, he said, was expected to produce Rs. 100 crores worth of plastic goods by 1965, as against only Rs. 10 crores worth of goods at the beginning of the second Plan.

FEDERATION'S SERVICE TO SMALL INDUSTRIES

Of late, several steps have been taken by Government to help the small industries, in the sphere of registration, finance, marketing, etc. Multiple agencies, as also authorities in both the Central and State Governments, are entrusted with the task of implementing these different schemes of assistance. This makes it difficult for small *entrepreneurs* to keep track of the aid given by the various agencies and to plan their production programmes accordingly. It is, therefore, gratifying to find that the Federation of India Chambers of Commerce and Industry, New Delhi, has brought out a booklet, entitled *Small-scale Industries—Procedures and Facilities* which seeks to provide a systematic account of the procedures to be followed by, and the facilities available to, small industries.

The booklet is divided into nine chapters. The first chapter deals with the definition of small industries (which has recently been amended as to include all units with a capital investment of not more than Rs. 5 lakhs, irrespective of the number of persons employed), as also the various authorities and agencies to be approached for setting up a small unit. The next chapter is devoted to a study of the registration and other procedures relating to the establishment of a small unit. The following two chapters are concerned with the position relating to scarce raw materials, and policy and procedure for the import of raw materials and machinery. The fifth chapter outlines the details of the scheme for hire-purchase of machinery organised by the National Small Industries Corporation. The sixth chapter covers the procedure for securing Government orders for the products of small industries. Of particular importance to small-scale *entrepreneurs* is the seventh chapter dealing with different credit agencies, as well as their terms and conditions. The eighth chapter gives an account of the available technical facilities and the final one the advantages offered by the Industrial Estates.

The breath of industry

Oxygen—feeding the flame that knifes through steel, welding enormous broken castings and bubbling through molten metal to make pure steel—the flow of Oxygen in modern industry never ceases. From tiny workshops to the great steel plants and shipyards, wherever there is metal to be worked, Oxygen is on the job.

BIRLA JUTE MAINTAINS PROGRESS

CEMENT UNIT ACCOUNTS FOR THE RISE IN EARNINGS IN 1959-60

THE growing diversification of activities of the Birla Jute Manufacturing Company Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta), necessitated by the vagaries of jute crop and demand for gunnies and the resultant uncertainty about the fortunes of the jute industry, has proved to be beneficial to the Company. In 1954, the Company set up a calcium carbide factory and in 1957 it extended its activity to manufacture of staple fibre yarn. This was followed by the establishment of a cement factory in 1958, which went into production in February 1959. The cement project has contributed not a little to the improvement in the profit of the Company during the year ended 31st March 1960. In fact, the rise in the gross profit for the year under review is mainly due to the earnings from cement.

The cumulative gross profit of the Company, which had touched a low of Rs. 27.01 lakhs in 1956-57, has successively grown to a high of Rs. 112.33 lakhs in the year under review, thus rising more than fourfold in three years. The increase in profit over that for 1958-59 is Rs. 31.89 lakhs, thanks to a profit of Rs. 35.31 lakhs earned by the cement department, as against a nominal one of Rs. 44,669 in 1958-59. The profits of other departments have been more or less maintained at the previous year's levels. Jute manufacture still constitutes the main activity of the Company, but the margin of profit on staple fibre yarn and cement have been relatively better than that on jute and calcium carbide, as will be evident from the following comparative table:

(In lakhs of rupees)

	1959-60	1958-59	1957-58	1956-57
Sales:				
Jute goods	311.25	332.45	387.50	395.13
Calcium carbide	41.39	27.71	31.56	29.29
Staple fibre yarn	114.83	114.52	67.00	
Cement	142.18	0.05		
Gross profit:				
Jute goods	47.95	48.66	28.52	16.08
Calcium carbide	4.81	4.95	7.75	6.14
Staple fibre	27.60	28.70	6.03	0.02
Cement	35.31	0.45		

The total net profit is, however, lower at Rs. 47.12 lakhs, as compared with Rs. 51.67 lakhs for the previous year, consequent on the substantial increase in the provision for depreciation and taxation. The transfer to the reserves has been reduced from Rs. 35.78 lakhs to Rs. 23.16 lakhs. Even so the amount ploughed back represents a substantial part (nearly 50 per cent.) of the net profit; in 1958-59 as much as 69.2 per cent. of the net profit was conserved.

Dividend

The Directors have recommended a dividend of 15 per cent., subject to deduction of tax, which is equivalent to a net distribution of 10.5 per cent. and represents a fractional increase over the tax-free dividend of 10 per cent. per annum, paid consistently for the previous six years. As regards the dividend on preference shares, the Company has got two classes of preference shares, 7½ per cent. (less tax) first preference shares and 5½ per cent. (free of income-tax) redeemable second preference shares. In the case of the first preference shares, the Directors have recommended deduction of tax as required under Section 18 (3D) of the Income-tax Act from the 7½ per cent. dividend, so that the net dividend will be only 5.25 per cent. However, as the tax deductible at source for the year under review is less than the rate of Company's income-tax which was being deducted all these years, the net return will be slightly higher than in earlier years. So far as the second preference shares are concerned, the holders thereof had been receiving a dividend of 5½ per cent. free of tax. The Directors feel that it would be unfair to these shareholders, if their dividend income were now to be reduced as a result of the abolition of the grossing under the new scheme of taxation. Further, the Finance Minister has, they say, also recommended that the dividend on tax-free preference shares should be so increased that the shareholders continue to get the same amount as before. Accordingly, the Directors have recommended a dividend of 7.86 per cent. on the second preference shares, so that, after deduction of tax at 30 per cent., a net dividend of 5½ per cent. will be left in the hands of shareholders. This is, however, subject to the approval of 75 per cent. of each class of shareholders.

The progress of the Company in recent years is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	5,89.65	4,74.73	4,86.06	4,23.42
Closing stocks of finished goods	26.38	21.49	10.59	29.53
Other income	23.95	18.55	15.92	8.60
Raw materials consumed	2,50.97	2,35.00	2,50.02	2,45.47
Other expenses	2,40.31	1,80.10	1,41.56	1,34.29

To reserves	23.16	35.78	0.64	
Dividends—				
Preference	9.63*	6.71	6.59	5.35
Ordinary	13.98	9.13	9.13	9.13
	(15%)*	(10%)	(10%)	(10%)
Carry forward	0.35	0.29	0.24	2.67

* Subject to deduction of tax.

The performance of the jute section would have been worse but for the improvement in trading conditions since June 1959, when demand for jute goods improved considerably and enabled mills to reopen the looms in stages. However, from the beginning of 1960, there was a steep rise in the price of raw jute due to shortage of the material.

The expansion of the calcium carbide factory was completed during the year under review and the new furnace with the rated capacity of 25 tons per day was put into commission from November 1959. In accordance with the Company's understanding with the Government, the benefit of higher production has been passed on to the consumers by reducing the Company's selling prices of carbide by Rs. 60 per ton.

The staple fibre section worked satisfactorily throughout the year.

The cement plant at Satna did not work smoothly during the year, due to several breakdowns and other troubles. The total clinker production amounted to 145,937 tons and the total cement output was 163,411 tons. Consequent on breakdowns, the machinery suppliers, too, have not been able to fulfil the production guarantee of 750 tons per day. They have, therefore, agreed to pay compensation according to the terms of contract.

Current Year's Prospects

The outlook for the current year is somewhat obscure. This is because of the diverse activities of the Company, in which the brighter prospects of one section may be counteracted by the adverse outlook of another. In the jute section, for instance, as a result of the sharp rise in price of raw jute during the last few months and the closing of the looms (it was 5 per cent. in the case of Birla Jute) from 6th June, the profit of jute mills this year may not be so good. The accumulated loom-hours to be recovered under the Working Time Agreement of the I.J.M.A. as on 31st March 1960 aggregated 303.170. The looms sealed in June 1960 will, no doubt, be reopened again, as soon as the new season's jute starts coming in plenty. The current season's crop is said to be good, though it will be delayed by two months. The modernisation programme of the jute machinery is expected to be completed by next month. The full benefits and economy resulting from this will be partly reflected in the results of the current year. The expansion programme of the staple fibre spinning mill, aimed at raising the capacity from 16,000 spindles to 30,000 spindles, is expected to be completed by November 1960. The effects of this are also likely to be reflected in the current year's results. Modifications and improvements have been made in the cement plant and better results are, therefore, expected this year. It will thus be seen that, but for the uncertainty about the jute section, one could clearly say that, in the current year, the Company would fare even better than in the past year. The long-range prospects are, however, promising. With an ever alert management looking out for opportunities for expansion, it is reasonable for one to assume that the Company will not be allowed to lag behind others.

The Company's paid-up capital is unchanged at Rs. 215.94 lakhs and is supplemented by reserves and surplus amounting to Rs. 283.18 lakhs, of which a sum of Rs. 145 lakhs represents capital reserve created out of revaluation of assets as early as in 1948-49. The borrowings of the Company have gone up from Rs. 130.22 lakhs to Rs. 154.05 lakhs, which include Rs. 33.30 lakhs being the outstanding borrowings from the National Industrial Development Corporation Ltd. The other current liabilities and provisions too show an increase from Rs. 66.55 lakhs to Rs. 94.14 lakhs. In pursuance of the programme of modernisation and expansion, the Company spent as much as Rs. 105.79 lakhs on additions to the block account during the year under review. This is on top of Rs. 236.17 lakhs expended in the previous year, bringing the gross value of the block account to Rs. 734.86 lakhs (including the value added by revaluation Rs. 145 lakhs in 1948-49). This has been written down to Rs. 508.50 lakhs. The capital expenditure in progress is Rs. 13.50 lakhs. The current assets amount to Rs. 228.74 lakhs, which do not adequately cover the current liabilities and provisions (including borrowings) aggregating Rs. 248.19 lakhs.

The current assets, it may be noted, include investments of the order of Rs. 78.42 lakhs, of which Rs. 23 lakhs are in the ordinary shares of India Linoleums Ltd., a wholly-owned subsidiary, Rs. 17 lakhs in Tata Steels (Ordinary), Rs. 7.95 lakhs in Century shares (Ordinary) and Rs. 7.88 lakhs in Titaghur Paper ordinary.

The current market value of the Company's Rs. 10 fully paid-up ordinary shares is Rs. 33 *ex-div.*, at which rate the yield on them is 3.2 per cent. per annum, free of tax.

UNION COOPERATIVE INSURANCE SOCIETY LTD.

Despite its small size and modest turnover, the working of the Union Cooperative Insurance Society, Ltd. (Manager and Secretary: Mr. D. N. Desai, Bombay) showed satisfactory results during the year ended 31st December 1959. Although both the marine and miscellaneous departments suffered underwriting loss, this was more than offset by the profit of fire business which continued to be the mainstay of the Company. In fact, out of the combined net premium income of Rs. 13 lakhs, as much as Rs. 10.16 lakhs were accounted for by the fire department, Rs. 2.68 lakhs by the miscellaneous department and only Rs. 15,954 by the marine department. It may be noted here that the Company started writing marine business only as late as 1958. Thanks to better claims experience in the fire department, the net profits showed a substantial increase to Rs. 2.46 lakhs from Rs. 1.86 lakhs in the previous year. The dividend has been stepped up from 5½ per cent. in 1958 to 6 per cent., tax-free, for the year under review. Bonus to policyholders has also been raised by 2 per cent. to 14 per cent. (taxable), as compared with 12 per cent., subject to tax, in the previous year.

The combined net premium from the three departments during the year amounted to Rs. 13 lakhs, as against Rs. 8.47 lakhs in the previous year. Claims that arose in the three departments together aggregated Rs. 2.59 lakhs, comprising Rs. 1.58 lakhs in fire, Rs. 94,632 in miscellaneous and Rs. 6,592 in marine department. Expenses of management and commission amounted to Rs. 9.63 lakhs. Expenses, according to the Directors, would have been lower but for the failure of the crop and late arrival of the season which affected insurance of grains and seed stocks. Since there is an element of uncertainty in regard to insurance of agricultural produce—the volume of business is dependent on the size of the crop which, in turn, is greatly influenced by weather—the Company proposes to place more reliance than hitherto on industrial assurance.

The departmental contributions to the credit of the profit and loss account, after providing for reserves for unexpired risks at the rate of 50 per cent. of premium income in the fire and miscellaneous departments and 100 per cent. in the marine department, is Rs. 1.87 lakhs. This, together with Rs. 59,936 being income by way of interest, dividend and rent, makes available Rs. 2.46 lakhs which sum has been appropriated as under:

Reserve for taxation Rs. 90,000, transfer to general reserve fund Rs. 15,125, dividend Rs. 36,000, policyholders bonus fund Rs. 95,000, reserve for education fund Rs. 2,500, reserve for bad and doubtful debts Rs. 8,000, and carried forward Rs. 1,484.50.

As for the financial position of the Company, besides a capital of Rs. 6.49 lakhs, it has reserves and surpluses aggregating Rs. 10.15 lakhs, inclusive of a fire fund of Rs. 5.08 lakhs, miscellaneous fund of Rs. 1.34 lakhs and marine fund of Rs. 15,954.

LARSEN & TUBRO LIMITED

The Directors of Larsen and Toubro Limited have decided to issue additional 3,00,000 equity shares of Rs. 10 each at par. The shares will be offered in the first instance to the equity shareholders of the Company in the ratio of three equity shares for every eight equity shares held. The Transfer Books of the Company will be closed for this purpose from 17th October, 1960 to 5th November, 1960. Notices of "right" shares will be posted to the shareholders at their registered addresses in December 1960.

INDIA PAPER PULP EARNS MORE

CURRENT YEAR'S OUTLOOK LESS SATISFACTORY

THE year ended 31st March 1960 has proved to be a most prosperous one for the India Paper Pulp Company Ltd. (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta). Its turnover has increased by nearly a crore of rupees over the year to a peak of Rs. 2.50 crores and its gross profit has gone up by 126 per cent., that is from Rs. 27.97 lakhs to Rs. 63.19 lakhs, which is also a record in the Company's history. This is due to an increase in production and the high prices of paper which prevailed till the end of 1959. With effect from 1st January 1960, however, the selling prices of paper have been reduced, in accordance with the recommendations of the Tariff Commission, the extent of reduction being particularly heavy in the case of quality papers, in the manufacture of which the Company has been specialising. The full effects of this cut will be reflected in the current year's results.

The net profit, too, at Rs. 22.77 lakhs, shows a marked rise, from Rs. 10.50 lakhs for 1958-59, even after setting aside a large provision for taxation (which was almost negligible in the previous year) and providing more for Managing Agents' commission and depreciation. A sum of Rs. 9.75 lakhs has been ploughed back to the development rebate reserve, as compared with Rs. 11.59 lakhs a year ago. No addition has been made to any other reserve since 1954-55. The Directors have recommended a dividend of 15 per cent., subject to deduction of tax, on the increased capital of Rs. 88.20 lakhs raised by a right issue of Rs. 25.20 lakhs. This is equivalent to a net dividend of 10.5 per cent., as compared with 10 per cent., free of tax, paid on the old capital for each of the previous two years. The Directors point out that, even in a year of comparative prosperity, the Company has been able to set aside no more than Rs. 9.75 lakhs for future development and to pay a dividend which represents only 10.6 per cent. on the amount invested by the shareholders in the Company by way of shares and premium thereon. The position will be worse, when the full effects of the new price structure are felt. The revised price structure, they say, does not give an adequate margin for the industry to provide the funds necessary for development either out of profits or by attracting new capital. Representations have accordingly been made to the Government of India on the effect of the Tariff Commission's recommendations.

The marked progress made by the Company in recent years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales of paper	2,50.58	1,54.75	1,05.86	99.10
Sale of by-products and other income	1.58	0.89	1.89	2.33
Closing stocks	7.99	11.02	3.72	4.54
Manufacturing expenses	92.88	62.98	37.02	39.34
Excise duty	32.17	20.20	14.55	9.47
Other expenses	63.03	44.49	41.60	38.70
Gross profit	63.19	27.97	14.57	18.22

	(15%)*	(10%)	0.29	0.33
Carry forward	0.40	0.55		

* Subject to deduction of tax. On a higher capital of Rs. 88.20 lakhs raised in September 1959 by the issue of 2,52,000 shares of Re. 10 each.

The rise in gross profit in the last two years is particularly striking and is chiefly due to the expansion in production, consequent on the coming into operation of the third paper making machine in June 1958.

The Company has deferred its proposal to set up a pulp mill, consequent on the dearth of bamboos in the areas leased by the Assam Pulp Mills Ltd. due to widespread flowering. The scheme may be revived only after the leased areas regenerate sufficiently to yield supplies of bamboo adequate to meet the mill's requirements or alternative areas are obtained.

The Company's financial position is quite impressive. The paid-up capital of Rs. 88.20 lakhs is supplemented by reserves and surplus aggregating Rs. 80.66 lakhs (including share premium amounting to Rs. 36.65 lakhs). Thanks to the improved prosperity, the outstanding borrowings (which had stood at Rs. 66.12 lakhs as at the close of 1958-59) have been entirely repaid. The current liabilities and provisions, at Rs. 47.01 lakhs, are covered by a wide margin by current assets aggregating Rs. 93.08 lakhs. A sum of Rs. 9.87 lakhs has been added to the block account during the year, raising the gross value thereof to Rs. 241.56 lakhs. This, however, stands written down at Rs. 122.79 lakhs.

The outlook for the current year does not seem to be very encouraging. Examining the position in the light of the Tariff Commission's recommendations, the Directors observe:

"Since the Tariff Commission's investigations, there has been a substantial increase in costs, partly as a result of the award of a labour tribunal and partly because of further increases in the prices of raw materials, chemicals, coal and stores. A particularly severe increase which your Company has had to bear is in rosin, the average price of which has risen by about 62 per cent. since 1958. Since 1st April 1960, there have been further increases in costs as a result of the 5 per cent. surcharge on railway freights which came into force from that date. Apart from its effects on manufacturing costs, this surcharge has increased the cost of outward freight which is borne by your Company on all despatches to the civilian market. Prospects for the current year are, therefore, much less satisfactory."

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 22.19 *ex-div.*, at which rate and on the basis of the latest dividend the yield works out to 4.7 per cent. per annum, free of tax.

BOMBAY FIRE AND GENERAL INSURANCE CO., LTD.

In spite of the higher net premium income written by the Bombay Fire and General Insurance Company Ltd. (Manager: Mr. K. K. Dastur, Bombay) and lower expense ratio, the accounts of the Company for the year ended 31st December 1959 disclose a lower net profit of Rs. 1.36 lakhs, as against Rs. 1.78 lakhs for 1958. This is due to the higher claims incidence, the ratio being 46.30 per cent., as against 39.10 per cent. in the previous year. Nevertheless, the dividend has been maintained at Rs. 7.25 per share on the Rs. 40 paid-up shares and Re. 1.81 on the Rs. 10 paid-up shares. Since these are taxable, the net return to shareholders, is, however, 30 per cent. less at Rs. 5.08 on the former share and Re. 1.27 on the latter.

Net premium in the fire department aggregated Rs. 11.98 lakhs. Claims amounted to Rs. 4.42 lakhs, being 36.91 per cent. Commission, expenses of management and foreign taxes amounted to Rs. 6.60 lakhs, that is, 55.06 per cent. of the premium. After strengthening the reserves for unexpired risks by Rs. 22,123, a sum of Rs. 92,193 has been transferred to the profit and loss account. The fire fund stands at Rs. 6.15 lakhs.

In the miscellaneous department, net premium and claims amounted to Rs. 4.65 lakhs and Rs. 2.53 lakhs (54.39 per cent.), respectively. Expenses of management, commission, etc., worked out to 44.65 per cent. of premium, that is, Rs. 2.07 lakhs. After maintaining the miscellaneous fund at Rs. 2.34 lakhs, that is, at over 50 per cent. of premium, the account shows a deficit of Rs. 27,985.

Net premium in the marine department showed a slight rise to Rs. 5.49 lakhs, as against Rs. 5.03 lakhs. Claims, too, went up from Rs. 2.85 lakhs in 1958 (56.78 per cent.) to Rs. 3.29 lakhs (59.92 per cent.) in 1959. Expenses of management and commission, etc., on the other hand, declined from 32.21 per cent. to 31.45 per cent. After earmarking a sum of Rs. 5.49 lakhs, being 100 per cent. of the premium, the account shows a surplus of Rs. 16,281, which has been transferred to the profit and loss account.

After closing the departmental accounts, the profit and loss account shows a credit balance of Rs. 1,35,565. This, together with Rs. 1.28 lakhs brought in from last year's account, makes a total of Rs. 2.64 lakhs. Out of this, Rs. 50,000 has been set apart as provision for taxation and a like amount transferred to the newly created staff gratuity account. This leaves a balance of Rs. 1.64 lakhs for distribution. The gross dividend of Rs. 7.25 per share on the Rs. 40 paid-up shares and of Re. 1.81 on the Rs. 10 paid-up shares absorb Rs. 76,040, leaving a balance of Rs. 87,621 to be carried forward.

(*Concluded from next column*)

ing Rs. 127.81 lakhs. The gross block of the value of Rs. 227.78 lakhs (including an addition of Rs. 10.86 lakhs made during the year) has been written down to Rs. 126.92 lakhs.

The Company has decided to issue a further 11,250 debentures of Rs. 100 each at par. These will be offered in the first instance to the existing shareholders in the ratio of one debenture for every five shares.

The Company's short-term outlook is, according to the Chairman, Mr. S. R. Damani, fairly good, as will be seen from the full text of his speech published elsewhere in this issue.

The Company's Rs. 50 paid-up shares have been a firm feature on the Bombay Stock Exchange and are currently being quoted at Rs. 173 *cum-div.* On an *ex-div.* basis, they offer a yield of 3.1 per cent. per annum, free of tax.

SIMPLEX MILL TURNS THE CORNER

NET DIVIDEND SHADE HIGHER

A SUBSTANTIAL improvement in the working of Simplex Mills Company Ltd. (Managing Director: Mr. S. R. Damani, M.P., Bombay) is disclosed by the accounts of the Company for the year ended 31st March 1960. Sales have expanded by Rs. 69 lakhs to Rs. 3.55 crores, thanks to an increase in production. Despite the sharp rise in costs on raw materials account, as well as wages and other items, the gross profit has more than doubled itself from Rs. 5.06 lakhs to Rs. 11.93 lakhs. This is in refreshing contrast to the successive setbacks in its working during the previous three years, resulting in the dwindling of its gross profit from Rs. 29.77 lakhs in 1955-56 to Rs. 5.06 lakhs in 1958-59. After providing the minimum managing agency commission of Rs. 25,000 and depreciation to the extent of Rs. 12.00 lakhs, the Company has suffered a negligible loss of about Rs. 32,000, which compares favourably with the loss of Rs. 4.76 lakhs in 1958-59. This, together with the accumulated deficit of Rs. 5.14 lakhs brought forward from the previous year, has been reduced to Rs. 3.50 lakhs, after making a small provision for staff gratuity, by writing back excess provision for taxation and this loss has been carried forward to the current year.

As in the previous two years, the Directors have relied on the general reserve No. 1 to pay a dividend of 15 per cent., subject to deduction of tax, which on a tax-free basis is equivalent to 10.5 per cent. and is a shade higher than that (10 per cent.) paid for 1958-59. The slightly higher dividend for the year under review is on an increased capital of Rs. 50.40 lakhs, raised by a rights issue of Rs. 8.40 lakhs during the year. This absorbs Rs. 7.56 lakhs and brings the total amount drawn from the general reserve No. 1 during the last three years for payment of dividend to Rs. 18.90 lakhs.

The encouraging performance of the Company during the year under review is well brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales (gross)	3,54.69	2,85.62	2,86.76	2,96.24

* Subject to deduction of tax.

The Company's exports are said to have fared well, having gone up from 8.14 per cent. of the total production to 15.66 per cent. Sales of yarn have also increased from Rs. 5.37 lakhs to Rs. 41.43 lakhs. The Company has streamlined its production. About 40 per cent. of its capacity has been earmarked for industrial goods, namely, canvas, belting duck, filter cloth, etc., another 40 per cent. for wearable qualities of cloth and the balance for yarn. However, sufficient flexibility is being maintained to derive the maximum benefit. At the same time, it must be noted that the progressive change in the pattern of production, the working of additional shift, the payment of higher D.A., and the implementation of Wage Board's recommendations have all considerably pushed up the Company's costs.

The issue of rights shares to the tune of Rs. 8.40 lakhs has raised the Company's paid-up capital from Rs. 42 lakhs to Rs. 50.40 lakhs. Consequent on the withdrawal of large sums for payment of dividend during the last three years, the reserves and surplus have dwindled to Rs. 15.54 lakhs. The Company issued during the year 6½ per cent. debentures 1969-74 to the tune of Rs. 60 lakhs. This, together with an increase in secured loan from its bank, has been utilised to reduce substantially its unsecured loans. The total borrowings (including debenture loan) stand at Rs. 144.04 lakhs and other current liabilities and provisions at Rs. 44.75 lakhs. The total current liabilities and provisions are not adequately covered by current assets aggregat-

(*Continued in previous column*)

SYNOPSES OF COMPANY REPORTS

Sri Ranga Vilas Ginning, Spinning & Weaving Mills Ltd.

THE directors of the above Company (Managing Agents: Messrs. P. S. Govindaswamy Naidu & Sons, Peelamedu, Coimbatore) presented the audited accounts of the Company for the year ended 31st December 1959.

The year's trading has resulted in a net profit of Rs. 88,501 (loss of Rs. 5,39,739), after providing for all the working expenses of the Company and after providing normal depreciation of Rs. 1,14,945 (*nil*) which the directors recommend to be disposed of as under:—

To pay a dividend of 5 (*nil*) per cent. subject to income-tax on the paid-up ordinary share capital of the Company absorbing Rs. 75,125 (*nil*) and to carry forward to next year Rs. 13,376 (debit of Rs. 5,27,606 which was written off against the general reserve).

During the year the mill has worked for 304 days in double shifts with an average of 31,212 spindles spinning cotton yarn of counts 2s to 80s and mostly confined to medium counts due to restrictions in the allotment of quota of the imported cotton. During the first nine months of the working of the mills, the Company could not earn any profit, since the parity in the prices between cotton and yarn was very narrow. With the raise in the prices of yarn spun out of the Indian cotton during the last quarter, the Company was able to earn the present profit. In spite of retrenchment of workers, the Company was not in a position to reduce the quantum of wages due to the increase in the rates of the dearness allowance and due to increase in the number of working days. Considering the age of the machinery and the prevailing conditions in the textile trade, the directors consider the profit earned by the Company as satisfactory.

During the year the Company has closed the weaving department which was working at a loss and has after the year of account dismantled the looms and other connected machineries and sold them.

The Central Government has been pleased to approve the re-appointment of the managing agents for a further period of five years from 15th August 1960 subject to a remuneration ranging from 10 per cent. to 4 per cent. on graduated scale on the net profits of each year with a minimum of Rs. 25,000 per annum in the event of absence or inadequacy of profits in any one year.

The rehabilitation scheme of the Company is receiving keen attention of the Board of directors and the managing agents. Arrangements are in progress for securing financial assistance from The Industrial Finance Corporation of India to an extent of Rs. 20,00,000 for the rehabilitation programme of the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,02,500	Gross block	58,07,042

Killcott Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts disclose a working profit of Rs. 5,12,074 (Rs. 1,36,245). On transfer of this sum to profit and loss account and after sundry adjustments, including the transfers of Rs. 25,000 (Rs. 50,000) to development rebate reserve and Rs. 1,30,000 (*nil*) to investment reserve, there is a balance at credit of the profit and loss account amounting to Rs. 1,99,815 (Rs. 5,87,908 after transferring Rs. 4,86,615 from depreciation reserve and Rs. 10,000 from development reserve). The directors recommend that a dividend of 17½ (7½ per cent. free of tax) per cent. be declared at the annual general meeting, leaving Rs. 42,315 (Rs. 34,408 after transferring Rs. 4,86,000 to buildings and machinery reserve) to be carried forward.

Tea crop was 11,43,263 lbs. as compared with 10,10,717 lbs. in 1958. The average selling price realised was Rs. 2.15 per lb. as against Re. 1.85 per lb. in the previous year.

Estimates for 1960 provide for a crop of 471,730 kilograms (10,40,000 lbs.) at an outlay of Rs. 18,94,175, including freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Gross block	24.52,378

A. V. Thomas and Co., Ltd.

The directors of the above Company (Managing Director: Mr. A. V. Thomas, Alleppey, Kerala State) present the audited accounts of the Company for the year ended 31st December 1959.

Taxation.—The income-tax reference pending before the High Court was heard in February last and the Company has just been advised that the reference had been answered against it. As soon as a certified copy of the judgment is available, the directors will consider the question of appealing to the Supreme Court in view of the important issues involved.

The working results of the year under report have been satisfactory. The net profit before providing for taxation is Rs. 1,80,157 (Rs. 2,26,086). After deducting the preference dividend of Rs. 7,272 (Rs. 7,272) paid (less deduction of tax) for the year and making a provision for taxation amounting to Rs. 72,000 (Rs. 1,25,000), the balance together with the amount brought forward from 1958 comes to Rs. 1,06,717 (Rs. 1,04,212). The directors recommend that this amount be disposed of as under:—

By payment of a dividend of 20 (25 per cent. free of tax) per cent., subject to deduction of tax on equity shares for 1959, absorbing Rs. 47,020 (Rs. 58,775), by transfer to general reserve Rs. 12,000 (Rs. 31,200), by transfer to staff pension and gratuity fund Rs. 2,500 (Rs. 8,405) and by transfer to jubilee celebration fund Rs. 18,000 (*nil*) leaving a balance to be carried forward of Rs. 27,197 (Rs. 5,832).

In accordance with the Companies Act, 1956 all the existing managing agencies would terminate on 15th August 1960 unless renewed before that date. All the Companies under this Company's management have obtained the approval of the Central Government for renewal of the managing agency for five years from 15th August 1960 and fresh managing agency agreements have been entered into.

The Company has completed successfully twenty-five years of useful service. It is expected that the next quarter century would be an equally successful and progressive period.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,56,300	Gross block	6,81,636

		Book debts	6.80,230
		Investments	1,35,660
		Cash ...	46,150
Rs.	16.31,957	Rs.	16.31,957

New Dooars Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit, after charging all expenses and crediting the amount of a claim under the hail insurance policy, of Rs. 8,51,630 (Rs. 6,94,734) of which taxation provision requires Rs. 3,60,000 (Rs. 3,25,000) leaving a balance of Rs. 4,91,630 (Rs. 3,69,734). To this is added the excess provision for wealth tax in previous years now written back of Rs. 1,046 (*nil*) and the balance brought forward from last year of Rs. 86,415 (Rs. 73,709) making a total amount available for appropriation of Rs. 5,79,091 (Rs. 4,72,682 including Rs. 18,000 transferred from investments realisation surplus and Rs. 11,239 being forfeited dividends). The directors have transferred to general reserve Rs. 50,000 (*nil*) and to development rebate reserve Rs. 3,365 (Rs. 5,267) leaving a balance of Rs. 5,25,726 (Rs. 4,49,415 after providing Rs. 18,000 for wealth tax). The directors now recommend payment of the following dividends:

On the preference shares at 9.30 (6.50 free of tax) per cent. per share, subject to tax absorbing Rs. 18,600 (Rs. 13,000) and on the ordinary shares Rs. 32.50 (Rs. 25.00 per share, free of tax) per share, absorbing Rs. 4,55,000 (Rs. 3,50,000) leaving a balance to be carried forward of Rs. 52,126 (Rs. 86,415).

A crop of 20,049 maunds was secured and sold at an average price of Rs. 2.32 per lb. which compares with a crop of 22,413 maunds in 1958, sold at an average of Re. 1.98 per lb. The fall in crop was due to severe hail damage, to which the directors referred in their last report.

Estimates for the current year have been framed for a crop of 21,000 maunds to cost Rs. 26,34,697 and by 14th July, 1960, 2,24,822 kgs. (6,196 mds.) had been manufactured compared with 1,86,879 kgs. (5,150 mds.) to the same date last year.

Capital expenditure during the year was Rs. 6,24,268, of which Rs. 1,44,688 represents the cost of implementing statutory welfare requirements in regard to labour and staff houses.

Although the Company's Articles of Association provide that the preference shareholders shall receive a fixed cumulative preferential dividend at the rate of 6½ per cent. per annum free of Indian income-tax, it is now compulsory for income-tax to be deducted from all dividends. The Board have accordingly recommended that a dividend of 9.30 per cent. be paid on the Company's preference share capital, from which tax will have to be deducted in accordance with the provisions of the Finance Act currently in force, giving in the case of a shareholder, who is resident in India, a net dividend of approximately 6.5 per cent.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Gross block	34,00,520

Ganges Rope Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1960.

The profit for the year after charging depreciation of Rs. 97,621 (Rs. 1,02,447) is Rs. 8,26,134 (Rs. 7,42,673). Adding thereto the balance brought forward from previous year of Rs. 22,805 (Rs. 32,966) and excess provision for taxation in respect of previous years no longer required of Rs. 60,713 (*nil*), there is an available sum of Rs. 9,09,652 (Rs. 7,97,951 including Rs. 325 being forfeited dividends and Rs. 21,987 being provision relating to previous years no longer required). And after deducting from this provision for taxation amounting to Rs. 3,85,000 (Rs. 4,18,000) and transfer to development rebate reserve of Rs. 9,000 (Rs. 4,121), there is available for distribution a sum of Rs. 5,15,652 (Rs. 3,75,830). This amount the directors recommend should be disposed of as follows:

By transfer to general reserve Rs. 2,00,000 (Rs. 1,00,000) and by payment of a dividend at Rs. 17.50 (Rs. 17.00 per share free of tax) per share for the year ended 31st March 1960, subject to deduction of tax, absorbing Rs. 2,45,000 (Rs. 2,38,000) leaving a balance to be carried forward to next account of Rs. 70,652 (Rs. 22,805 after paying Rs. 225 on account of forfeited dividends and providing Rs. 14,800 for wealth tax.

Production was maintained at a satisfactory level despite constant difficulties experienced in obtaining essential raw materials from indigenous and foreign sources.

Although competition continued to be severe the Company was able to maintain its share of available business. Owing to non-availability of imported raw materials in sufficient quantities a number of orders which would have otherwise added to the revenue of the Company could not be booked.

The rope industry, although small, is a vital industry for the economy of the country, particularly in view of its contribution towards the successful operation of shipping lines and other industrial undertakings. A representation to the Government has therefore been made through the Indian Rope Manufacturers' Association to treat rope as a separate industry and not link it with either the textile or jute industries in respect of foreign exchange allocations for the import both of raw materials and of machinery. It is hoped that Government will provide separate foreign exchange allocations for this industry and thereby encourage it to play its rightful role in the industrialisation of the country.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,00,000	Gross block	37,98,175
Reserves ...	13,48,121	*Less*—Depreciation ...	22.68,486
Provision for taxation ...	2,12,577		
Liabilities ...	29,68,124	Net block	15.29,689
Profit and loss account (surplus)	70,652	Stock-in-trade	17,87,424
		Stores, etc.	7,77,555
		Book debts	18,82,110
		Investments	4,500
		Cash ...	18,196
Rs.	59,99,474	Rs.	59,99,474

N.B.—Figures within brackets relate to the corresponding period of the previous year.

SURVEY

(*Concluded from page 367*)

siderable expansion of capacity of the Indian Aluminium Company itself is envisaged in the third Plan, it is reasonable to expect that the entire requirements of the aluminium conductor industry for electrolytic aluminium would be met from domestic sources. Although aluminium is a protected industry, with an import duty of 35 per cent. *ad valorem*, electrolytic aluminium ingot/bar used in the manufacture of A.C.S.R. is allowed to be imported at the concessional rate of 15 per cent. *ad valorem plus* a duty equivalent to the excise duty leviable on the domestic product. In 1957, there were two units producing aluminium rods. Two more units have gone into production since then and a third unit is on trial production. The total capacity of the five units is 9,120 tons on single shift but the actual production is small. It was only 3,281 tons in 1957, 1,606 tons in 1958 and 3,280 tons in 1959. Another raw material, high tensile galvanised steel wire, is also imported now. Three units, with a total capacity of 22,000 tons, have, however, been licensed for manufacturing these wires. A fourth unit is also negotiating with foreign firms for technical and other assistance. Clearly, the industry can consolidate its position only when adequate and regular supply of raw materials is assured.

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD.

TO MANUFACTURE BASIC CHEMICALS WITH STATE GOVERNMENT

DR. B. N. GHOSE LOOKS FORWARD TO THE FUTURE WITH CONFIDENCE

A SCHEME to manufacture some basic chemicals utilising the by-products of the Durgapur Coke Oven Project is being actively considered by the West Bengal Government in collaboration with a reputed foreign firm and the Bengal Chemical and Pharmaceutical Works Ltd. is joining hands with the sponsors of this project. Disclosing this at the Sixtieth Annual General Meeting of the Company, held at Calcutta on 18th August, 1960, Dr. B. N. Ghose, Chairman, said that the shareholders of the Company were likely to be given an opportunity to invest in the new Company to be formed for the purpose.

The following is the full text of Dr. Ghose's speech:

"GENTLEMEN,

"Before I take up the business on the agenda it is my melancholy duty to mention the death of our esteemed colleague, Shri Rajshekhar Bose, who passed away on 27th April 1960. Late Rajshekhar Bose joined the Company in the year 1903 as Manager and was associated with the Company as a Director till the last day of his life. Your Company is indebted to him for much of its present position. His death has left a gap in our midst. He was loved and respected by all. We all mourn his loss.

"May I move the following resolutions:

"'Shareholders of the Bengal Chemical and Pharmaceutical Works Limited place on record their sense of deep sorrow at the sad demise on 27th April, 1960, of Shri Rajshekhar Bose who had been associated with this Company for more than half a century and to whose untiring labour, energy and invaluable guidance the Company owes its present position.'

"'Resolved that a copy of the resolution be forwarded to the members of the bereaved family.'

"I would request you to stand in silence for one minute to pay respect and homage to the departed soul.

"Gentlemen, I have great pleasure in welcoming you on behalf of the Board of Directors and on my own behalf to the sixtieth annual general meeting of the Company. The Directors' report with the audited accounts for the year ended 31st March 1960 has been in your hands for some time and with your permission I will take them as read.

"It is with deep regret that we record the loss suffered by us by the passing away of Shri Rajshekhar Bose. The vacancy in the Board of Directors caused by the death of Shri Rajshekhar Bose has been filled by your Board of Directors by the co-option of Sjt. Sailendra Nath Ghosh, Electrical and Mechanical Engineer, whose knowledge and experience will be of help to us.

Successful Year

"Gentlemen, I may look back on the year under consideration as a successful one. There is an increase of more than 12 per cent. in sales over the previous year's figures and, although the overhead expenses and cost of raw materials continued to rise, the increase in volume of business has brought in larger profits. Judicious purchases of raw materials were our keynote. The increase in profits enables the Directors to transfer to the reserve fund Rs. 2 lakhs which is same as last year. The rate of dividend to all the different classes of shareholders has been maintained after deduction of tax on dividends as prescribed by the Finance Act, 1960.

"Gentlemen, this being the sixtieth year of our Company's existence, our Diamond Jubilee Year, your Board of Directors has recommended payment of half month's basic salary as special bonus to all employees who are eligible to get it. This is apart from any other bonus that your Board of Directors may be pleased to sanction later on after the annual general meeting. I hope the new era that dawns with the Diamond Jubilee will bring an atmosphere of continued industrial peace and harmony in the years to come.

"The centenary of Acharya Prafulla Chandra Ray is going to be celebrated in August 1961, and it is expected that it will be celebrated in a fitting manner. As you all know, Acharya Prafulla Chandra Ray was the founder of this institution and we will be failing in our duty if we do not play our part in paying due homage to his memory. You are expected to sanction a decent amount for the Centenary Fund. I hope you will give me your considered opinion about the amount to be donated to the Centenary Fund after the business of the agenda is over.

"Modernisation, expansion and increased production have been our motto all along.

Expansion Schemes Delayed

"Last year I referred to the expansion of our alum plant and erection of a bigger sulphuric acid plant. Immediately after the last annual general meeting, your Company prepared estimates, etc., for substantial expansion of alumina ferric plant and sulphuric acid plant and submitted applications in terms of the Industries (Development and Regulations) Act 1951, in early September, 1959. Although it was admitted in all quarters that there is shortage in production of alum and sulphuric acid in the country, the Company could get industrial licence for alum only in early March 1960, and that for sulphuric acid plant in April 1960.

"Application for import licence for foreign components of the plants were submitted by the middle of April 1960, but till today these have not finished their grindings through the various departmental processing machines. This is unfortunate.

"For these schemes and projects we need additional finance and your Directors have decided to raise a loan of Rs. 35 Iakhs from the Industrial Finance Corporation. We will have to invest some more money from our own resources. Gentlemen, we have high hopes and expectations about our expansions and future programmes, but there are risks and responsibilities also which we will have to face with courage and determination.

"Completion of our office buildings has also been taken up and is progressing satisfactorily.

"As I have mentioned in previous years our usual policy of gradual expansion will continue. We have taken up expansion of our plants for the manufacture of sulphone drugs (which is used for the treatment of leprosy), as we are not being able at present to meet the needs of the country. We have also taken up expansion of our caffeine, strychnine and brucine plants. Due to non-availability of sufficient quantity of tea-waste from the tea gardens, who were not very co-operative in the past, we could not produce caffeine in sufficient quantity. Due to large-scale export of nux vomica seeds we have also not been able to manufacture strychnine and brucine economically. Incidentally, caffeine, strychrine and brucine have very good export markets. We are also expanding our plants for the production of heavy, fine and pharmaceutical chemicals. A section has been set apart for the production of analytical reagents and laboratory chemicals to make the country self-sufficient in these vital products.

"Expansion of our Kanpur factory has been completed. Next year, we have in our mind to take up the production of ether in our Kanpur factory on a big scale. Alcohol which is required for the manufacture of ether is available in abundance at Kanpur and at a cheaper rate. Ether is at present being manufactured at our Panihati factory, but due to shortage of denatured spirit the production is far short of demand.

Export Business

"There is some increase in our export business. We had a good market for our pharmaceutical preparations and special medicines in Burma, but owing to introduction of new import policy there, our business has been hard hit. The Union Government of Burma have already started manufacture of drugs and medicines conforming to B.P. and B.P.C. standards and as such these are not being allowed to be imported there.

"There is also a considerable demand for our medicines in East Pakistan. But because of their import policy and quota system our business in that country was very poor. We, however, expect some business in the current year as the import policy has been relaxed to a certain extent. Ceylon market generally imports medicines, etc., from European countries. In spite of this we could do some business there. Owing to shipping difficulties in 1959 our products could not be shipped to Ceylon, as a result of which some amount of business was lost. After protracted correspondence with the authorities concerned the position has changed for the better. As regards our inland business, booking of goods in general was satisfactory, except for temporary restrictions in booking of goods in different railways from time to time. There were great difficulties in the movement of goods to stations in N.E. Railway (North Behar) and N.F. Railway (Part of East Behar and North Bengal) due to suspension of booking for major portion of the year. We availed of road transport services to some stations as the rate of freight was cheaper. As regards our business in Assam, sometimes due to heavy congestion at the sheds of the shipping companies shipments were delayed. Our maximum traffic is to Gauhati. About 50 per cent. of the consignments to this station was booked through private shipping companies. In general, our traffic to Assam was not affected.

Foreign Shipment

"There was no difficulty in shipping goods in Far Eastern ports, namely, Singapore, Penang, Bangkok, etc.

"It is no exaggeration to say that short supply of coal is affecting industrial output. In the latter part of last year and right up to this date there is short receipt of coal practically every month. Until and unless the wagon position improves this will remain a chronic problem. We are told that there is enough stock of coal at the pit-heads. No correct target of production can be obtained, while supply of coal is so irregular and uncertain. Any change-over to road transport, for supply of coal, however limited, will boost up the cost of production, which is not at all desirable. The railway authorities should ensure the supply of wagons in the best interest of the industry.

"During the year under review the stock of some of the principal raw materials in our Panihati factory became very acute on several occasions, affecting the production of alumina ferric and road tar. Our receipt of coal was 13 per cent. less and the receipt of bauxite was 25 per cent. less. Both the materials which are abundantly available at the source could not be despatched for short supply of wagons.

"Last year, crude coal tar receipts from different steel plants was only 7,400 tons, though our plants can distil 12,000 tons of crude tar annually. With the starting of tar distillation plant at Bhilai, Rourkela and Durgapur by the steel plants themselves, the supply of this material will be more uncertain, unless the Government takes some action and puts a ban on burning crude tar (which contains valuable by-products) as fuel by private sectors. The tar distillation industry in the private sectors will suffer and if burning of crude tar as fuel continues, the very existence of this industry will be at stake.

"Some of our perfumes, toiletries and cosmetics have good export potentialities and we are taking steps to assess them realistically under the export promotion scheme, but the restriction on the import of synthetic essential oils, etc., in keeping with the policy of the authorities, is a bar to any expansion in this respect. It will take a long time to duplicate certain special perfumery compounds and synthetic essential oils with their characteristics and distinctive keynotes.

Import of Essential Machinery Not Allowed

"With the accelerated pace of industrialisation of the country as envisaged in the second and the successive Five-year Plans of the Government, it is natural that machine and equipment industry in common with many others has been making appreciable progress, but we have to guard against over-zealousness in such a very specialised branch of manufac-

INTER-BANK AGREEMENT SLIGHTLY MODIFIED

(From Our Own Correspondent)

BOMBAY, *24th August*

Hardly within a week of the coming into force of the changes in inter-bank agreement, the Executive Committee of the Indian Banks' Association and Exchange Banks' Associations has found it expedient to amend the agreement further. The modification is in respect of "House" money at seven days' notice, on which the maximum rate of interest payable was reduced last week from 3½ per cent. to 3 per cent. The spirit of the agreement, however, was not strictly adhered to by some of the banks in respect of the short notice deposits. They were accepting 8 days' and 10 days' money, instead of seven days' money, at 3¼-3½ per cent. Consequently, the Committee of the Banks' Associations has revised the terms of agreement to close this loophole. Accordingly, the member-banks who are parties to the agreement cannot now pay more than 2 per cent. for any period upto one month. The rate of interest payable on deposits of one month and over are, however, unchanged. The amended terms of the agreement came into effect from the 22nd inst. and the rates of interest payable on the various classes of deposits are:

Period	Per cent. per annum
For term deposits under one month and for notice money	3
For term deposits of one month or over but less than three months ...	3¼
For term deposits of three months and over	3½

The short-term money market has turned a little comfortable this week, with most of the banks finding little difficulty in getting their requirements. Some banks are even said to have been left with some surplus at the end of the day. The inter-bank call money rate is, however, unchanged at 3½ per cent., as money is still readily usable.

The 91-day Treasury Bill rate is also unchanged at 2.540 per cent. per annum, to which level it had declined last week from 2.745 per cent. The amount offered at this week's sales was no more than Rs. 2 crores and represented only renewal of maturing bills. Sales of Intermediate Bills during the period 17th to 20th August amounted to Rs. 25 lakhs. They will be offered from 24th August to 3rd September at the same rate as last week, namely, Rs. 99.381 per cent., which amounts to a discount of 2.476 per cent. per annum.

A decline of Rs. 15.74 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 19th August 1960. Notes held in the Banking Department are, however, higher by Rs. 6.99 crores, so that the total notes issued are lower by Rs. 8.75 crores. This is covered by a decline of Rs. 9.93 crores in rupee securities and a small increase of Rs. 1.17 crores in rupee coin. While there is no change in foreign securities, balances held abroad have recorded a fractional rise of Rs. 26 lakhs, so that the total foreign assets now stand at Rs. 144.75 crores. The deposits of the Central Government show a rise of Rs. 9.75 crores and those of the other Governments Rs. 13.33 crores. Deposits of banks, too, are higher by Rs. 4.92 crores. A decline of Rs. 6.37 crores is noted in loans and advances to Governments and a rise of Rs. 2.19 crores in other loans and advances. Investments have dwindled by Rs. 7.62 crores and holdings of Government Treasury Bills by Rs. 3.16 crores.

The Scheduled banks' statement for the week ended 12th August 1960 shows a fall of Rs. 4.52 crores in bank credit, mainly due to a decline of Rs. 4.63 crores on State Bank's account. Deposits have gone up by Rs. 9 crores, of which the State Bank's share is Rs. 4.34 crores. Inter-bank borrowings are lower by Rs. 7.20 crores, borrowings from the Reserve Bank by Rs. 64 lakhs and those from the State Bank by Rs. 1.82 crore. There has been a decline of Rs. 4.82 crores in investments, consequent on the disinvestment of Rs. 5.26 crores in State Bank's portfolio. Cash balances and balances with other banks have declined by Rs. 50 lakhs, despite a rise of Rs. 9.73 crores in State Bank's balances. Money at call and short notice shows an increase of Rs. 1.15 crore.

The Gilt-edged market continues to be lethargic. Institutional support is still lacking, while medium and long-dated issues are on offer. 3 per cent. 1986 Conversion Loan has provided an exception, with a rise of 20 nP to Rs. 73.75. In the State loans section, 4½ per cent. 1970 issues have been marked down by 5 to 10 nP to Rs. 102, in view of the new issues, the lists for which will open on the 29th inst.

The rupee has weakened a little in terms of the U.S. dollar, in sympathy with a similar trend in sterling abroad. Banks' selling rate for U.S. T.T. ready has gone up from Rs. 476.25 to Rs. 476.50 per $100 and their buying rate from Rs. 473 to Rs. 473.25 per $100. In New York, after an initial improvement from 281.06-281.10 cents to 281.14-281.17 cents, spot sterling has given way to 280-91 280.94 cents. Three months' forward has declined over the week from 279.72-279.76 cents to 279.56-279.59 cents.

LINSEED WELL MAINTAINED

(Messrs. A. Bradley and Co.)

CALCUTTA, *22nd August*

Although activity in the linseed market has been limited and the general condition of the market dull, prices are well maintained and there is very little movement either way. Crushers have shown some interest in ready and forward deliveries, but sellers are reserved, as arrivals of seeds from upcountry have fallen off and stocks locally are very small.

Trading in the oil market has been slow and local buyers are showing some interest but at lower prices.

Business in oilcake has been negligible, with overseas buyers showing some interest for forward deliveries. Prices are, however, a shade lower.

The latest quotation for Ready and September futures is Rs. 25 per maund.

SIX-MONTHLY SETTLEMENTS IN BULLION PROPOSED

(From Our Own Correspondent)

BOMBAY, *24th August*

There will be a notable change in the system of trading in the bullion market, if the new scheme of hedge contract proposed by the Sub-Committee of the Bombay Bullion Association's Board is finally accepted and approved of by the Maharashtra Government. The salient features of the scheme are as follows:

The present monthly settlements in both gold and silver will be replaced by six-monthly contracts, one maturing in *Shravan* month (coinciding with the traditional slack season) and the other in the month of *Magha* (prior to the commencement of the busy season).

Delivery against settlements will be once a month but at the seller's option.

Traders who have made short-sales can get their commitments transferred from month to month till the settlement runs out by paying a fixed backwardation charge, namely, 25 nP per tola of gold and 50 nP per 100 tolas of silver.

The revision of the basis of trading in bullion is considered to be essential by a section of the market in order to ensure the continued importance of the local bullion market. Activity in the market, it is stated, has thinned considerably of late, thanks to margins, low level of free limits and heavy *budla* charges which have all led to a diversion of business to other centres. It is said that the Maharashtra Government is favourably disposed to the plea for a revision on these lines provided certain basic requirements are fulfilled. The new scheme of hedge contract is generally welcomed by the trade. It is, however, considered by some that the scheme as is now proposed gives ample opportunity to some persons who buy largely during the slack season and sit tight over their purchases during the busy season, thus creating artificial shortage and rising up prices. Stress is, therefore, laid on the need for making provision in the scheme to curb this tendency. One of the specific suggestions put forward relates to the fixing of ceilings on *budli* charges as well as on the quantum of purchases by a single operator during a particular period.

There is another section of the opinion which wonders whether there is any need at all for allowing forward trading in bullion, considering that the supplies of both gold and silver are not, unlike in the case of agricultural commodities, influenced by seasonal factors nor are the floating stocks of the metals subjected to any significant change in view of the continued ban on imports and exports and low level of domestic output. The production of gold in India during 1959 is estimated at no more than 165.396 ounces, as against 170,109 ounces in 1958, 179,000 ounces in 1957 and 239,168 ounces in 1954. The production of silver, though it was higher at 124,799 ounces, as against 109,827 ounces in 1958, was well below the level of output during 1954, namely, 161,000 ounces. In any case, the domestic producer of gold needs no hedging facility, as the entire production is being taken up by the Reserve Bank.

The bullion market had only four working sessions this week also, as it remained closed on Friday (Jain festival) and yesterday (*Mahavir Jayanthi*). The market put on a dull appearance on Thursday as well as on Saturday in the absence of any fresh support. Business put through was restricted with values moving narrowly, the general tendency being downward. A recovery was, however, in evidence on Monday the 22nd inst., following buying enquiries from upcountry operators, particularly from Indore. The recovery gathered momentum today, due to follow-up support. Over the week, gold was higher, while silver was practically unchanged.

The daily average arrivals of gold were 3.500 tolas, while the offtake was of the order of 2.650 tolas. The floating stocks of gold are estimated at 25.000 tolas. In silver, the daily average rate of arrivals and offtake was 39 bars and 17 bars, respectively. The floating stocks are reported to be around 400 bars.

A feature of trading during the week was that ready silver continued to be quoted on a par with the *Bhadrapad* settlement, while, in gold, the premium commanded by ready rate over the *Bhadrapad* settlement declined from 87 nP on Wednesday last week to 63 nP today.

The following table shows the trend of the market during the week under review:

	24-8-60 (closing)	High	Low	17-8-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	133.25	133.44	132.25	132.62

NEW CROP HEDGE CONTRACT

(From Our Own Correspondent)

BOMBAY, *24th August*

Prospects for futures trading in new crop to commence have improved following the finalisation, by the Sub-Committee appointed for the purpose, by the East Indian Cotton Association (E.I.C.A.) of the details of the new contract for the 1960-61 season. These will be placed before the Board of the E.I.C.A. on the 25th inst. for approval before being sent to the Forward Markets Commission. The main features of the contract as recommended by the Sub-Committee are:

1. The basis of the new hedge contract will be Moglai Jarilla Fine 25/32", the same as that of the present contract.

2. Minimum staple for tender will be 23/32" and maximum upto 1.5/32".

3. Cotton which is 1½ 'off' in grade will be rejected.

4. *Status quo* will be maintained in by-law 55 if the price of the contract is Rs. 750 or below. If, however, the price is above Rs. 750, the premium or discount for respective description tenderable would be fixed on the basis of the difference between the rate for basic cotton and the spot rate of the respective description of cotton, subject to an addition of maximum difference of Rs. 20 per candy, whichever is lower, as against Rs. 30 at present.

5. No change should be made in the penalty of Rs. 25 per bale for failure to tender.

The suggested alterations have been criticised in some quarters. According to the critics, the modifications will make the hedge contract weaker than the present contract which, it is said, has already a marked bearish slant. They point out two main defects in the new contract recommended by the Sub-Committee. They are: (a) Moglai Jarilla Fine 25/32" is not a suitable basic staple because of the extremely limited supply of this cotton and it cannot, therefore, be a good standard for determining the tendering differences. (b) The extension of the scope for tenders by lowering the minimum staple to 23/32" and raising the minimum to 1-5/32" will encourage mixing which will set at naught the efforts being made to improve quality of cotton.

The trade is optimistic about getting official sanction for the hedge contract. It hopes to be able to start trading in new crop on *Dussera* by which time a clearer picture of the crop will also be available. Present estimates are that, provided the weather is favourable, the crop may well exceed five million bales.

Undeterred by these developments, the Jarilla August 1960 Contract, which will go off the Board tomorrow, continued to rule officially at the ceiling price of Rs. 820. In private trading, the premium for the contract above the ceiling rate hardened from Rs. 10 last week-end to Rs. 18 to Rs. 19 during the week under review. The absence of tenders on the two notice days during the week, namely, 18th and 22nd, and the rejection of even the meagre quantity of 100 bales tendered on the 11th inst. in survey imparted further strength to the market. Persistent short covering pushed up premiums higher. Both the futures and ready markets were closed today as a mark of respect to the memory of the late Mr. Khimji Madhavji, partner of a prominent spot house.

Business in the spot market continued to be negligible during the week. Foreign cotton was in good demand and a sizable business was done. East African cotton was well favoured. Syrian and Sudanese growths also evoked attention.

The way for increased flow of U.S. cotton into India has been cleared, thanks to the insurance by the U.S. Department of Agriculture of purchase authorisation favouring India under P.L. 480 covering 330,000 bales (of 500 lbs. each) of U.S. cotton worth about $41.6 million. A part of this quantity, it is believed, will be cotton of staple length 1" and above. A corresponding announcement from New Delhi is awaited by mills and the trade, both of which expect to be able to participate in this import programme.

The following are the latest available quotation—in rupees per candy of 784 lbs.—from Sewri:

Mwanza 1,200; Busoga 1,365; Syrian 1,125; Sudan XG51 1,520.

Cotton futures in Karachi market declined during the week under review, thanks to speculative selling prompted by the excellent crop report. The slackening of export demand accelerated the downward trend. Domestic spinner interest was subdued. The January Contract receded from Rs. 68-1 last week-end to Rs. 67-12. The March Contract shed As. 7 to Rs. 67-2. Spot values, too, eased. Sind *Deshi* was quoted at Rs. 88 and Punjab *Deshi* at Rs. 85.

The following are the latest available rates—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 85-11; S.G. 89-11; L.S.S. Punjab Roller 87-11; S.G. 91-11; N.T. Roller 88-11; S.G. 92-11; L89F Punjab Roller 92-11; S.G. 97-11.

New crop has made satisfactory progress both in Sind and Punjab. Good rain in July and the subsequent clear, sunny weather have improved the prospects of bigger crop than in the past season.

After having ruled easy during most part of the week under review, cotton futures in Alexandria staged a smart recovery on short covering and speculative buying. The earlier weakness was due to lack of sufficient trade interest and export demand. Weather reports from upcountry centres indicated favourable weather and satisfactory crop progress. Over the week, while the long staple Karnak contract showed little change in prices, the Ashmuni contracts recorded modest gains. The discount rate on sales of Egyptian cotton was further reduced during the week to 9 per cent. with effect from the 22nd inst. The discount rate on new crop was unchanged at 6 per cent.

The latest available quotations—in tallaris per lb.—from Alexandria are as under:

Karnak: November 74.95; January 74.85; March 74.90; *May* 75.05.

Barring the Sudan cotton futures, which were quietly steady, the Liverpool cotton futures market ruled firm during the week. Hedging by commission houses in near and intermediate deliveries against forward sales found sellers reserved. Firm advices from New York and local trade buying imparted further strength to the market. As noted above, Sudan cotton futures were neglected, thanks to the generally low demand for this growth. The latest quotations—in pence per lb.—are given below:

American cotton one inch staple contract: October 22.70; December 22.25; March 22.30; May 22.35.

American cotton mixed growth contract: October 23.00; December 22.55; March 22.65; May 22.70.

Sudan: September 35.25; November 35.50; January 35.50.

New York cotton futures market presented a better appearance during the week. There was moderate buying in anticipation of Congress legislation for higher support prices. The market was also influenced by the increased mill interest in spot cotton attributed to the delay in crop movement. Favourable weather and dull conditions in the yarn and piecegoods market, however, acted as restricting influence.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	23-8-60	16-8-60	9-8-60
Spot	32.40	32.45	32.65
October	31.02	30.88	30.99
December	31.29	31.15	31.30
March	31.84	31.70	31.81

GROUNDNUT RECOVERS

(From Our Own Correspondent)

BOMBAY, *24th August*

Distinctly steady conditions prevailed in the oilseeds market during the week under review. Towards the close, however, pronounced weakness was in evidence. The groundnut section, which had tended to move down during the previous week, came in for renewed speculative support, following reports of unfavourable weather conditions from the major producing centres. In contrast, castorseeds, were subdued mainly on account of fears of large tenders against the maturing contract. Linseeds and cottonseeds made smart rally in the beginning, but lost ground subsequently.

For the major part of the week, groundnuts displayed distinctly firm conditions, thanks to bullish reports from producing centres. Weather reports from groundnut growing States in South India indicated scarcity of rains, which would affect the growth of groundnut crop in that region. Besides, weather reports from Saurashtra, too, were not altogether satisfactory, apart from rumours of damage to crops there due to insect. Floods in other parts of the country also influenced the behaviour of trading. Rumours regarding a fresh export quota for groundnut oil as well as the possibility of a reduction in the freight in oilcake by the Karmahom conference, imparted further strength. The subsequent decline in groundnut prices was the result mainly of some profit-taking, as also some slackening in the demand from crushers and *vanaspati* manufacturers. August 1960 contract, in which trading commenced last week after an interval of one month, once again pierced the ceiling level of Rs. 225, rendering any official transaction in this contract impossible. February 1961 contract, which had finished at Rs. 183.75 last week-end, rose gradually to Rs. 190 by yesterday, but it receded to Rs. 188.25 today. Nizam bold improved from Rs. 45.25 to Rs. 45.50. Coromandel moved up by 50 nP each to Rs. 46. Oil ex-mill was steady at Rs. 24 and railway receipts at Rs. 23.75.

In view of the sizable floating stocks of old crop, the castorseed section met with selling pressure. While there were good enquiries for oil from Communist countries, the U.S. and the U.K., they were not of such significance as to make any improvement in the sentiment. Fears of Brazilian supplies of castor oil in the American market further dampened the enthusiasm of bulls. In these conditions, September 1960 contract closed lower by Rs. 2.75 at Rs. 163.75, after fluctuating between Rs. 166.50 and Rs. 168.12 over the week. May 1961 contract fell from Rs. 166.25 to Rs. 165.62. Ready Madras lost 62 nP to Rs. 33. Oil Commercial dropped 18 nP to Rs. 17.69.

Owing mainly to the strength in the groundnut section, linseed was well maintained. The export outlook, however, continued to be none too bright, in view of the wide disparity in domestic and world prices of linseed oil. It may be noted in this connection that the Argentine Government has announced that henceforth a retention tax of 1,810 pesos a metric ton will have to be paid on linseed exports which is 20 per cent. of the index price of 9,050 pesos a metric ton and just below the world parity price. No index has been fixed hitherto as linseed exports have been banned until recently. In the local market, linseed September 1960 contract was marked up by 22 nP to Rs. 31.84. May 1961 contract rose by 53 nP to Rs. 32.53, after moving both ways between Rs. 31.84 and Rs. 32.19 over the week.

Dull conditions prevailed in the cottonseed section. The September 1960 contract gave way from Rs. 157.50 to Rs. 155. The February 1961 contract, however, put on 25 nP to Rs. 90.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	24-8-1960	17-8-1960	10-8-1960
Groundnut	Rs.	Rs.	Rs.
August 1960	—	221 00	—
February 1961	188 25	183 75	180 75
Nizam bold	45 50	45 25	47 75
Coromandel ready	46 00	45 50	48 00
Khandesh quality	46 00	45 50	48 00
Oil ex-mill ready*	24 00	24 00	25 12
Railway receipts*	23.75	23.75	24.75
Castorseed			
September 1960	163 75	166 50	169 37
May 1961	165 62	166 25	170 00
Ready Madras	33 00	33 62	33 87
Ready Kanpur	31 87	32 12	32 75
Oil B.S.S.†	18 81	19 00	19 25
Oil commercial†	17.69	17.87	18.00
Linseed			
September 1960	31 84	31 62	32 37
May 1961	32.53	32 00	33 81
Bold ready	31 87	31 87	32 50
Oil ready†	16.25	16.12	16.75
Cottonseed			
September 1960	155.00	157.50	—
February 1961	90.00	89 75	92 75
Niger seed	37.50	38 00	38 75
Kardi seed	24.50	24 50	24.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

COTTON YARN PRICES REVISED

(From Our Own Correspondent)

BOMBAY, *24th August*

Barring Cupressa Bemberg yarn (60 x 2) which continued to move upward on persistent buying orders, the yarn market presented a distinctly easy trend during the week under review. Imported and indigenous art silk yarns generally encountered selling, due to slackness in demand from consuming centres. In sympathy, staple fibre yarns tended to look down. Cotton yarns changed hands at lower prices, following reduction in ex-mill prices and expectations of higher output as a result of the improvement in cotton supply position, thanks to larger imports of foreign cotton and prospects of an appreciable rise in cotton crop in the ensuing season.

On the 17th inst., the Indian Cotton Mills' Federation announced yarn prices to be charged by mills in respect of some principal counts only. The Federation has now considered the matter further and fixed, in consultation with the Southern India Millowners' Association, Coimbatore, the net ex-mill prices for various counts of yarn for a bundle of 10 lbs. of single hank yarn made from Indian cotton only:—6s (manufactured from cotton waste) Rs. 13.57; 6s (manufactured from cotton mixing containing not more than 25 per cent. cotton waste) Rs. 15.75; 10s Rs. 17.98; 12s Rs. 18.75; 14s Rs. 19.75; 16s Rs. 21.46; 18s Rs. 21.71; 20s Rs. 21.90; 21s Rs. 22.15; 22s. Rs. 22.40; 24s Rs.. 23.20; 26s Rs. 24.30; 28s Rs. 24.90; 30s Rs. 25.44; 32s Rs. 26.19; 36s Rs. 27.80; and 40s Rs. 28.80.

Cupressa Bemberg yarn (60 x 2) August delivery was bid at Rs. 2,019, as against Rs. 2,012. October contract rallied from Rs. 2.034 to Rs. 2.055. Spot cupressa was fully maintained at Rs. 9.25. 150 Japan gathered 3 nP to Rs. 6.03. 120 Japan was unchanged at Rs. 5.59. 120 Italy dropped 19 nP to Rs. 5.62. 150 Italy declined by 6 nP to Rs. 6.19. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade and 120 Bt. cones 1st grade lost 6 nP each to Rs. 5.25 and Rs. 6, respectively.

In the staple fibre yarn group, 40 x 2 August contract receded by Rs. 5 to Rs. 715. October position eased by Rs. 8 to Rs. 729. Spot Kohinoors were dull at Rs. 3.78, as also Citys at Rs. 3.75 and Centurys at Rs. 3.62. 80 x 2 Paramounts (imported) fell by 25 nP to Rs. 12.50.

Among cotton yarns, ten counts Gokaks shed 25 nP to Rs. 18.50, while Podars hardened by 25 nP to Rs. 18.25. Twenty counts Moderns suffered a loss of 50 nP, today's closing rate being Rs. 24. Gokaks dropped 37 nP to Rs. 24. Forty counts Minaxis eased by 13 nP to Rs. 30.87. Maduras, however, picked up 25 nP to Rs. 31.50. Sixty counts Raghuvamshis declined by 60 nP to Rs. 60. Finlays were quiet at Rs. 63.50. Eighty counts Moderns were dull at Rs. 73.50, Finlays at Rs. 82.82 and Mahendras at Rs. 71.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week ago:

	24-8-1960	17-8-1960
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 Kg.)		
August	2,019	2,012
October	2,055	2,034
60/1 Cupressa Bemberg spot (per lb.) ..	9.25	9.25
120 Japan (per lb.)	5 59	5 59
120 Italy (per lb.)	6 03	6 00
150 Italy (per lb.)	5.62	5.81
	6.19	6.25
Staple fibre yarn—		
40 x 2 August	715 00	720 00
October	729 00	737 00
40 x 2 Kohinoor (per lb.)	3.78	3 78
40 x 2 Century	3.62	3.62
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18 25	18 00
20s Gokak	24.00	24 37
40s Minaxi	30 87	31 00
60s Raghuvamshis	60 00	60 00
80s Modern	73 50	73 50

TEAS WELL SUPPORTED

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *16th August*

Sale No. 32: Offerings in Sale No. 32, held on 16th August 1960, totalled 517,000 kgms. There was a useful selection on offer and some highgrowns continued to show improvement. Medium teas were often brighter in cup. The sale opened to a strong general demand with both exporters and internal buyers operating. Plainest kinds were well supported at firm to dearer rates. Improved low medium and medium brokens were 5-10 nP per kilo dearer, whilst similar fannings advanced by a wider margin. There was some competition for good medium types and these advanced in price according to quality. Best liquoring highgrowns were again dearer. Highgrowns of below best quality were 20-50 nP dearer. Black leaf teas met support at slightly easier rates but legg-cut and C.T.C. types again sold well and often advanced. Whole leaf teas were in strong demand and sold at enhanced rates.

	1960 Rs.	1959 Rs.
Low medium	3.75-4.05	3.25-3.52
Medium	4.10-4.30	3.52-3.85
Good medium ...	4.35-4.75	4.07-4.52
Quality	5.00-7.60	4.52-8.26

The average price realised in Sale No. 32 was Rs. 4.40 per kilo, as compared with Rs. 4.43 in the previous sale and Rs. 4.05 in the corresponding sale of 1959.

Dust Sale 'EE': 265.000 kilogrammes were on offer in Dust Sale 'EE' which was held on 18th August. Opening to a good demand, which eased towards the close, good liquoring medium dusts were up to 10 nP per kilo dearer. Highgrown dusts and C.T.C. types sold at firm to dearer rates, and there was a good enquiry for black grainy descriptions. Residual grades were rather weaker and easier but there was a much improved demand for fine dusts.

Export Quota: There are large sellers at 1½ nP per kilo with buyers still very scarce.

Ceylon and South Indians: In Tuesday's Ceylon and South Indian sale, there was a very strong demand and prices were 1d. to 2d. dearer for all descriptions.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 33: 600,000 kilogrammes. Very strong demand. Low medium and medium 10 to 20 nP dearer. Good medium irregularly dearer. Best liquoring advanced further with quality black leaf and whole leaf strongest features."

GOOD DEMAND FOR QUALITY TEAS

(From Our Own Correspondent)

CALCUTTA, *23rd August*

At the export auction held yesterday, quality teas continued to demand greater attention as in the previous week, while plainer teas eased noticeably. This trend fully reflected the course of movement of prices in London auctions, where bidders were anxious to cover as much of their requirements of good teas as possible; they anticipated that plainer teas would continue to be available in abundant quantities even later in the season.

A further decline in U.K. tea stocks during the week ended 12th August, from 110.4 million lbs. to 107.7 million lbs., was recorded. Prices of North Indian tea at last week's auction in Mincing Lane were fully steady. Note was taken of the modest gain in prices at auctions held at Colombo last week. In the Calcutta port, tea bookings have shown some improvement and the increased interest being shown by British interests is considered to be significant.

The insufficient support which common teas is meeting with is interpreted in trade circles here as being due to the belief among buyers that, as the season advances, production of these types would increase. They, however, point out that, considering that world production so far at 590.3 million lbs. is lower by 16.8 million lbs. as compared with last year, it remains to be seen whether the expectation of buyers will be fulfilled. North Indian and Pakistani production has been much lower than previously, the shortfall (including July production) being 30.7 million lbs. and 12.0 million lbs., respectively, whereas production in South India up to May has shown the substantial increase of 10.2 million lbs. to 74.8 million lbs. Including the figure for June, Ceylon has also shown a more or less similar increase at 238.4 million lbs. Indonesia and Africa have accounted for small increases only. Tea trade circles contend that the above figures cannot be taken as sufficient to support the view that common teas would be in abundant supply.

At the season's first Pakistani export auctions held at Chittagong on the 17th inst., demand was inadequate for offerings amounting to 4,951 chests, mostly thin liquorings, of which nearly a third had to be withdrawn without a bid. Prices declined by As. 2 to As. 3. The quotations were: O.P. Re. 1-12; B.O.P. Re. 1-10 to Re. 1-11. P.Fs and B.Ps were not quoted. Among legg-cut orange fannings, there was a small quantity of brighter liquorings.

The quantity on offer at the next export sale, scheduled to take place in Chittagong on 14th September, would be about 10,000 chests.

Dusts on offer at the internal sales held here in the last week aggregated 15,820 chests. Exporters paid keen attention to the exportable types. Legg-cut Dooars recorded a small addit on to price. The orthodox exportable teas met with good attention, but the smaller and brighter liquoring teas were firm only at previous rates. Best liquoring C.T.Cs were also firm. The medium C.T.Cs were about steady and the brighter lots recorded an addition to prices. The quotations (inclusive of excise duty) per 1 kg. were: best Assam C.T.C. Rs. 6.00 to Rs. 6.30; medium Assam C.T.C. Rs. 5.50 to Rs. 5.85; medium Assam Rs. 4.44 to Rs. 4.50; and medium Dooars Rs. 4.40 to Rs. 4.60.

Leaf on offer amounted to 451 packages. The poorest teas eased, while other descriptions were firm.

Notices

NATIONAL MACHINERY MANUFACTURERS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twelfth Annual General Meeting of National Machinery Manufacturers Limited will be held at Sir Vithaldas Chambers, 3rd floor, 16, Apollo Street, Fort, Bombay, 1, on 14th September, 1960, at 5.00 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December, 1959.
2. To appoint a Director in place of Mr. Krishnaraj M. D. Thackersey, who retires by rotation but who, being eligible, offers himself for re-election.
3. To appoint a Director in place of Mr. C. S. Tyabjee who retires by rotation but who, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. Neville N. Wadia, who retires by rotation but who, being eligible, offers himself for re-election.
5. To appoint a Director in place of Mr. P. V. Mackay who ceases to hold office under Article 134 of the Articles of Association and who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
6. To appoint a Director in place of Mr. Madanmohan Mangaldas who ceases to hold office under Article 134 of the Articles of Association and who is eligible for reappointment and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
7. To consider and, if thought fit, to pass the following Ordinary Resolution of which special notice as required under Section 281 of the Companies Act, 1956, has been duly received by the Company.

   "RESOLVED that Mr. Kasturbhai Lalbhai who has attained the age of 65 years and who retires under provisions of Section 280 of the Companies Act, 1956, be and is hereby re-elected as a Director of the Company and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
8. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,

For NATIONAL MACHINERY MANUFACTURERS LIMITED,

D. V. SHIVESHWARKAR,
Secretary.

BOMBAY, *10th August*, 1960.

Note:—(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) The Transfer Books of the Company will remain closed from 29th August, 1960, to 14th September, 1960, both days inclusive.

(c) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special business under items 5, 6 and 7 is annexed hereto.

EXPLANATORY STATEMENT

As required by Section 173 of the Companies Act, 1956, the following explanatory statement sets out all material facts relating to the special business under items 5, 6 and 7 mentioned in the accompanying Notice dated 10th August, 1960.

Item No. 5

Under Article 134 of the Articles of Association, Mr. P. V. Mackay was appointed a Director in the vacancy caused by the resignation of Mr. I. H. Cameron. In accordance with the said Article, Mr. P. V. Mackay retains his office only upto the date of the Annual General Meeting of the Company but is eligible for re-election. He is a businessman of wide experience and it is in the interest of the Company that he be reappointed as a Director.

Item No. 6

Under Article 134 of the Articles of Association, Mr. Madanmohan Mangaldas was appointed a Director in place of the late Sir Vithal N. Chandavarkar. In accordance with the said Article, Mr. Madanmohan Mangaldas retains his office only upto the date of the Annual General Meeting of the Company but is eligible for re-election. He is an industrialist of wide experience and it is in the interest of the Company that he be reappointed as a Director.

Item No. 7

Mr. Kasturbhai Lalbhai has now attained the age of 65 years. Under the provisions of Section 230 of the Companies Act, 1956, he vacates the office of Director at the conclusion of the forthcoming Annual General Meeting. The Company has received special notice from some members in accordance with the requirements of Section 281 of the Companies Act, 1956, Mr. Kasturbhai Lalbhai has been on the Board of the Company since its inception and with his wide and varied experience as a businessman and an industrialist has rendered valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services. The resolution of which notice is given to the members is commended for acceptance.

By Order of the Board,

For NATIONAL MACHINERY MANUFACTURERS LIMITED,

D. V. SHIVESHWARKAR,
Secretary.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE Forty-Ninth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on Wednesday, the 21st September, 1960 at 3-30 p.m., for the transaction of the following business:—

To receive and adopt the Accounts for the year ended 31st March, 1960 and the Reports of the Directors and Auditors thereon.

To declare a dividend.

To elect and re-elect Directors.

To appoint Auditors and fix their remuneration.

   (i) To appoint a Director in place of Sri V. T. Padmanabhan who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
   (ii) To appoint a Director in place of Sri K. Subbarao Ramaswamy, who retires under Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
   (iii) To appoint a Director in the vacancy caused by the sad demise of Capt. Rao Bahadur A. Thangavelu Mudaliar.
4. To appoint Auditors for the current year and fix their remuneration.

SPECIAL BUSINESS

5. To consider and if thought fit to pass the following resolutions as SPECIAL RESOLUTIONS with or without modifications:

   "RESOLVED that Clause No. V of the Memorandum of Association of the Company be and is hereby amended so as to read as follows:

   "The Share Capital of the Company is Rs. 1,50,00,000 divided into 15,00,000 Equity Shares of Rs. 10 each with power for the Company to increase or reduce the said Capital and to issue any part of its Capital, original or increased with or without any preference, priority or special privilege or subject to any postponement of rights or to any conditions or restrictions and so that unless the conditions of issue shall otherwise expressly declare, every issue of Shares, whether declared to be preference or otherwise shall be subject to the power hereinbefore contained."

   "RESOLVED that Article No. 12 of the Articles of Association of the Company be and is hereby amended so as to read as follows:

   "The Capital of the Company shall consist of Rupees One Crore and Fifty lakhs divided into fifteen lakhs Equity Shares of Rs. 10 each which said Capital may be increased, consolidated, decreased or divided in accordance with the regulations of the Company and the legislative provisions for the time being in force in that behalf."

Explanatory statement is annexed to the notice posted to the Shareholders separately.

The Share Transfer Books of the Company will be closed from 19th September 1960 to 7th October 1960 (both days inclusive).

Note: A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a PROXY NEED NOT BE A MEMBER OF THE COMPANY.

By Order of the Board,

C. V. RAMACHANDRA RAO,
Secretary.

ASIATIC BUILDINGS,
KEMPEGOWDA ROAD,
POST BOX NO. 570,
GANDHI NAGAR P.O.
BANGALORE, 9.
Dated: 2nd July 1960.

N.B.—The Board of Directors have recommended payment of dividend at 15 per cent. or Re. 1.50 subject to deduction of tax on every share of Rs. 10 for the year.

The Dividend when declared will be made payable at the State Bank of Mysore, Bangalore, or its branches on and after the 27th October 1960.

The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on 19th September 1960.

Shareholders, whose income is not taxable, are requested to obtain a Certificate from the Income-tax Officer of their respective circle and to send the same to the Company before 15th September 1960.

DUNCAN BROTHERS AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting being the Sixty-first Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Saturday the 17th September, 1960, at 11 a.m., for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1959.
2. To declare dividends on the Preference and Ordinary Shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer books of the Company will be closed from 5th to 17th September 1960, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,

DUNCAN BROTHERS & CO., LTD.,

K. P. GOENKA,
Director.

CALCUTTA, *19th August*, 1960.

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the 69th Ordinary General Meeting) of the Shareholders of the Company will be held at the Registered Office of the Company, 15, Taratola Road, Calcutta-27, on Wednesday the 21st September, 1960, at 10.30 a.m. for the following purposes:

To receive and consider the report of the Directors with Statement of Account and Balance Sheet and to read the report of the Auditors thereon, declare a Final Dividend, elect Directors, appoint Auditors and fix their remuneration.

The Transfer Register will be closed from the 14th September to 21st September, 1960, both days inclusive, and warrants for such Dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees, whose names appear in the Company's books on the 21st September, 1960.

By Order of the Board,

A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA-27,
20th August, 1960.

Note: (1) The Directors have recommended the payment of a Final Dividend on Ordinary Shares at 19 per cent. subject to deduction of tax, making, with the 6 per cent. interim dividend already paid on Ordinary Shares 25 per cent. for the year.

(2) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

THE ELLORE ELECTRIC SUPPLY CORPORATION, LTD.

(Registered Office: MADRAS)

NOTICE OF THE 26th ANNUAL GENERAL MEETING OF THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 26th Annual General Meeting of the Shareholders of the Ellore Electric Supply Corporation Ltd. will be held at the Registered Office of the Company at No. 20, Second Line Beach, Madras 1, on Monday the 3rd October 1960, at 12 Noon.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1960.
2. To consider the declaration of dividend.
3. (a) To elect a Director in the place of Mr. G. A. Krishnamurti retiring by rotation.
   (b) To elect a Director in the place of Mr. V. R. Ramanatha Iyer retiring by rotation.
4. To appoint Auditors for the current year and fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 27th September 1960 to 3rd October 1960, both days inclusive.

By Order of the Board,

For CHANDRIE & CO. (PRIVATE) LTD.,

S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS, *15th August* 1960.

Note:—(1) A member entitled to attend and vote is entitled to appoint a proxy and vote instead of himself and a proxy need not be a member of the Company.

(2) Dividend when sanctioned at the Annual General Meeting will be paid on or after 5th October 1960 to those members whose names stand on the Register of Members on the 26th September 1960.

THE GENERAL INDUSTRIAL SOCIETY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held at its Registered Office at No. 8, India Exchange Place, Calcutta, on Monday, the 26th September, 1960, at 2.30 p.m. for the following purposes:

1. To receive and adopt the Report of the Directors and the Audited Accounts for the year ended 31st December, 1959.
2. To declare dividend.
3. To elect Directors in place of retiring Directors.
4. To appoint Auditors and to fix their remuneration.
5. To transact any other business which may be brought forward at the Meeting with the permission of the Chairman.

The Share Transfer Book and the Register of Members of the Company will remain closed from the 16th September, 1960 to the 26th September, 1960, both days inclusive.

By Order of the Board,

For GENERAL INDUSTRIAL SOCIETY LIMITED,

K. C. BAGRI,
Manager.

CALCUTTA, *Dated 19th August*, 1960.

N.B.—(1) The Directors have recommended dividend on Ordinary Shares at Rs. 4 per share subject to deduction of tax under Section 18(3D) of the Income Tax Act. If dividend on shares as recommended by the Directors is approved at the meeting, the dividend will be payable only to such Shareholders whose names are on the Company's Register on the day of the Annual General Meeting. No application need be sent for dividend as relative Dividend Warrants will be posted to the Shareholders by the 18th October, 1960.

(2) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

NEW INDIA ASSURANCE COMPANY LIMITED

CHAIRMAN'S REVIEW

THE following is a summary of the speech delivered by Mr. A. D. Shroff, the Chairman, at the Forty-first Annual General Meeting of the shareholders of the New India Assurance Company Limited, at Bombay, on 24th August, 1960.

Mr. Shroff stated that the year 1959 presented a mixed picture for general insurers all over the world. In India, a basic problem was that the limits of management expenses fixed under Rule 17E of the Insurance Act, 1938, had become unrealistic and he hoped that the Department of Insurance would revise these limits to suit existing conditions.

Mr. Shroff recommended a number of measures to integrate and strengthen the insurance companies in India such as consolidation and integration through amalgamation and group working, rigorous implementation of the provisions of the Code of Conduct and a non-diversion agreement as an interim measure to change over from the present unsound conditions to a new order of soundness, etc. In his view both Government and industry should take concerted action to rebuild the market on these lines. In his opinion, such a plan called for guidance, as also some degree of purposeful and constructive direction, by Government.

Mr. Shroff further stated that one of the biggest problems facing the industry was the steady increase in motor repair costs and the rapid rise in the number of automobile accidents. A mere stepping up of the rates was no solution. He recommended, in this connection, the setting up of an efficient claims settling organisation. He also emphasised the urgent need to stamp out carelessness and inefficiency in regard to handling of goods and cargo at the railways and ports.

Mr. Shroff pointed out that the Government had, by their decision to concentrate in the four companies in the public sector 75 per cent. of the Government business handled through the Indian Insurance Companies' Pool and Indian Aviation Insurers' Scheme, practically withdrawn their support to the Indian insurance market. Also, as a result of this, Government were not utilising fully the underwriting capacity of the whole market and there was likely to be an increased drain of foreign exchange by way of reinsurance effected by the four companies. He pointed out that all the companies are voluntarily giving a 10 per cent. share of their business to "India Re." As such, he did not feel that any compulsion by the Government in the field of reinsurance was called for.

L.I.C. and Reinsurance

On the conversion of "Indian Guarantee," a subsidiary of L.I.C., into a reinsurance company, Mr. Shroff raised the doubt whether there was sufficient scope for two reinsurance companies to exist in the market. He thought that the objective of reducing the foreign exchange drain on reinsurance could be better achieved by encouraging private companies to obtain suitable reciprocity from abroad for the reinsurances they placed. He was of the view that the new reinsurance company could be a better source of strength to the market by specialising in granting reinsurance covers for insurance of growing crops, dairy animals, and hire-purchase business, and not by duplicating efforts already being made in the normal type of reinsurance.

Referring to the working of the Company, Mr. Shroff stated that the large-scale reorientation of the Company's organisation was only completed last year and the Company was able to concentrate its attention on the expansion of business. He also pointed out that the Company's investment policy was making its own contribution towards the development and expansion of industries in the country.

Dealing briefly with the trends in the Indian economy, Mr. Shroff pointed out that the country faced two serious problems, namely, (i) the continuous rise in the level of prices, and (ii) the progressive depletion of our foreign exchange balances. He felt that measures taken by Government in the monetary field were not likely to curb any rise in prices, so long as ambitious development plans, unrelated to our resources, continued to be imposed on the country. He expressed the fear that the stresses and strains, to which the economy is subjected, may well reach a stage where it may involve a large-scale breakdown of the economy.

Note.—This does not purport to be a record of the proceedings of the meeting.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales. If any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

N.B.—All dividends paid since 31st March, 1959 are shown as taxable.

MARKET REPORTS

(*Concluded from page 391*)

During yesterday's export offerings, some of the quality teas recorded a dearer tendency, while others eased sizeably. Offerings amounted to 47,479 packages. Legg-cut teas were in good demand, and the prices were often dearer, but the plainer teas found support at declined rates only. Medium C.T.Cs were irregular, but the very best C.T.Cs lost a rupee per kg. Darjeelings and tippy teas also eased, but fannings were paid more attention than brokens. Whole leaf grades sagged by 10 to 20 nP. Fannings among bright liquoring orthodox teas tended higher on moderate support, while plainer liquoring Assam B.O.P. teas eased up to 50 nP. The brighter liquoring Dooars B.O.Ps were fully steady and prov ded the strongest feature of the sale, but plain brokens and fannings gave way by 10 nP. The quotations per 1 kg. (inclusive of excise duty) were: best Assam C.T.C. fannings Rs. 11 to Rs. 12.00; best Assam C.T.C. B.P. Rs. 9.50 to Rs. 10.50; clean black pekoe Rs. 5.20 to Rs. 5.50; medium fannings Rs. 5.00 to Rs. 5.30; medium B.P. Rs. 4.90 to Rs. 5.20; plain B.P. Rs. 4.30 to Rs. 4.45; and plain fannings Rs. 4.20 to Rs. 4.60.

Export quota changed hands at ¾ nP per kg., subsequently declining to ½ nP.

BLACK PEPPER WEAK

(*Messrs. Parekh and Co.*)

BOMBAY, 24*th August*

Malabar black pepper, after moving narrowly without showing any definite trend during the week ended 17th August, developed an easier tone during the week under review, reflecting weakness in Singapore. The value for October delivery at Cochin toppled down to as low as Rs. 260, as against the highest level of Rs. 325, owing to nervous liquidation by bulls, thus affecting ready and the general morale of the market. The fall in price was so severe that the brokers in the Ring at Cochin informally decided among themselves not to do any business for October delivery below Rs. 265. This move was construed by many traders to mean that, if the market were to go down further, the Ring might declare the state of emergency or fix a floor price or order to square up the outstanding business at a certain limit. Such an action, however well intentioned, contributed to undermine the morale of the market, particularly of those traders and investors who were doing switching business for their spot holdings by transferring their sales from month to month for earning good return on their investment in pepper. The investors were frightened and were now more prone to sell ready pepper. Ready parcels of "garbled" at Cochin were done at as low as Rs. 252½, as against the highest at Rs. 345 per cwt. in last January. Ungarbled at Alleppey was done at Rs. 1,400 and Calicut at Rs. 1,475, as against the highest at Rs. 2,100 and Rs. 2,250, respectively, during January last.

Proximity of the new season in Malabar, the beginning of the harvesting in Lampong, a fair-sized floating stock with both dealers and growers on the Coast, the weakness in Singapore, the fear of impending arrivals of Lampong and Sarawak at that port, the resistance to higher price on the part of spice-mills in Europe and grinders in the U.S.A., the present slow demand both from Europe and the U.S.A. despite the fact that grinders should buy ere now for grinding and packing for the prospective sales to chain stores and other consumers for the coming autumn potential demand, the closure of Palai Bank which had about 90 branches all over Kerala (Malabar) and was considered one of the biggest banks and was financing various small banks in the area, and the heavy unsold consignments of pepper to the U.S.A. by Singapore interests are some of the facts responsible for the present unsatisfactory state of the market.

The noteworthy feature of the week was the recognition granted to Bombay by New Delhi for starting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge business" in pepper despite prostarting "hedge

MARKET GOSSIP

(Concluded from page 363)

companies had caused much concern and a committee, under the chairmanship of Lord Jenkins, was engaged in examining the problem. Mr. Shastri hoped that, against this background, there would be a better appreciation of the role of the Company Law Department in this country.

There is no doubt that the Company Law Department is carving out for itself an important place in the Government's system of economic administration. Already, by its system of supervision and its careful analysis, through its annual reports, of the problems of joint-stock companies which have come to light as a result of administration of the law, it is rendering much useful service. The consensus of opinion among the members of the Conference, it is stated, was that the existing powers of the Registrars and Regional Directors were, to a large extent, illusory, inasmuch as they lacked the necessary sanctions and could not be used except through dilatory procedures. The hope was expressed that, when the proposed amendments to the Act were enacted (these, it may be mentioned here, envisage powers for the Regional Directors to summon documents and of their seizure and powers for the Central Government to order special audit), they would help improve the administration of Company law. Nevertheless, it may be wondered whether, in the first place, such extensive powers are necessary, and, secondly, the mere assumption of these powers will automatically ensure better corporate administration. Experience in the working of banking and insurance legislations suggest that it is not the existence of statutory powers but their prompt and judicious use that will bring about better results.

Electricity Undertakings

A welcome increase in power supply in the Bombay region will take place with the commissioning of the 60,000-kw. generating unit in the Koyna hydro-electric power station in October 1961. The position, which has eased through the commissioning of all the three units in the Trombay power station, is expected to become easier next year. This casts a special responsibility on an undertaking like the Bombay Suburban Electric Supply Ltd., for it must keep itself in a state of readiness to pass on the benefit of additional supply of power to the consumers in the fast growing suburbs of Bombay in which quite a few industries, large and small, are being set up. Distribution of power, as is well known, implies availability of such materials as cables, transformers, switchgear and meters. A pointed reference to this aspect of the Bombay Suburban Electric Supply's services was made by the Chairman, Mr. A. N. Haksar, who, in the course of his speech at the latest annual meeting of the Company, said: "I refer specifically to this point, as we have had considerable difficulties in recent months to obtain import licences for items which indigenous manufacturers are unable to supply." It is to be hoped that imports of the necessary equipment will be made possible, for, as Mr. Haksar rightly pointed out, "power denied to a needy consumer is progress withheld—power denied to potential exporters will cost the country dearly."

Expansion in the activities of electricity undertakings involves the much wider problem of adequate financial resources. The heavy burden of taxation, together with the particularly inequitable manner in which the tax system operates in respect of electricity undertakings and the ceiling on return on capital have together made it difficult for power enterprises to generate internal savings or attract resources from outside. As Mr. Haksar said, "for some time, no electric supply company has had the confidence to enter the market for equity capital." The crux of the problem is that the new pattern of taxation, under which the "grossing up" of dividends in the hands of shareholders has been withdrawn, bears particularly heavily on the electricity undertakings.

By virtue of the stringent control applied under the Electricity (Supply) Act, the undertakings are not allowed to step up earnings to a level which would permit a higher rate of dividend. They cannot also divert to the investor the benefit of tax savings, as is possible in the case of other industries. It would appear that implementation of the proposal which contemplates the diversion to the investor of the tax difference between 51.5 per cent. (the old rate of tax) and 45 per cent. (the present rate) has met with unexpected legal difficulties. According to Mr. Haksar, efforts are still being made to obtain relief through a proposal which will permit a special appropriation representing the tax relief of 6½ per cent. to be used for "augmenting the machinery of production." It is to be hoped that it will be possible to implement this proposal. It should, however, be clear that the best way of rehabilitating electricity undertakings is through an adequate increase in the permissible rate of return, now pegged at the Bank rate plus two per cent. Mr. Haksar suggests that the margin over the Bank rate should be raised to 3 per cent. This is by no means an extravagant suggestion.

DECIMAL CURRENCY FOR AUSTRALIA

An independent committee appointed by the Australian Government has unanimously recommended the introduction of decimal currency in Australia. The members of the Committee were unanimous on all aspects of their recommendations, which covered: (1) advantages and disadvantages of a decimal currency, including an estimate of the annual saving in costs to the community; (2) unit of account and denominations of subsidiary currency, appropriate to Australia; (3) method of introduction which would minimise the cost and inconvenience of a changeover; and (4) estimated cost of replacement or adaptation of accounting machinery.

The Australian Cabinet will discuss the report shortly. The final decision will, however, await a detailed examination of the proposals by the Treasury officials. This is expected to take about two months. The changeover to decimal currency will commence a year or two from now, even if the Cabinet takes an early decision.

William Blake.

VOL. CI. No. 2579 BOMBAY, 3rd SEPTEMBER 1960 PRICE Rs. 2

INDIA'S OIL POLICY

THE two-hour discussion in the Lok Sabha on India's oil policy was disappointing, for it failed to bring out anything new. The observations of Mr. K. D. Malaviya, Union Minister for Oil and Fuel, clearly show that the misunderstanding, to use a milder term than cold war, between the three oil companies and the Government of India over the question of prices continues. He made it abundantly obvious that he was not satisfied with the recent reductions effected by the refineries, as they fell short of the price at which Russia was prepared to sell crude to India and that he was expecting a further reduction from them. After reiterating that it would be the Government's desire and endeavour to get the cheapest crude oil possible for refining in India, he even went to the extent of warning that, unless the oil companies were more accommodating than they had been, their future in India would be bleak. To quote his exact words: "I do hope that our friends, the foreign oil companies, will consider very seriously this matter of prices and find out ways and means of revising their entire thinking in this respect. I have been telling them, and I repeat it today in the House, that, in order to create better prospects for the international oil industry in India, it is high time that those who have been holding the monopoly of oil here should bring about a radical change in their approach. Unless they are conscious of the fast changing conditions in the country and the impact of the necessity of stepping up its economy and taking out the country from the morass where a few monopolised the oil industry, I do not see that the prospects will be very bright for the international oil industry and those who control it." This statement was received by the House with cheers. Admittedly, the members of Parliament were right in recognising the sharp vigilance with which Mr. Malaviya had been following the trend of world oil prices, so that he could ensure that the full benefit of a buyers' market in petroleum products was passed on to India by the oil companies. But, at the same time, it is necessary to make sure that the practice of bargaining for fair prices is so conducted that it does not come in the way of development of oil industry.

The question of oil prices has to be viewed against the long-term perspective of the country's needs. Hard bargaining may conceivably affect the flow of foreign private capital for further expansion of refining capacity and for prospecting. It is high time the spirit of cold war was ended and its place taken by confidence and faith in each other. The Government has already had one prolonged investigation into the affairs of oil companies. It has appointed another committee (consisting of Mr. K. R. Damle, a former Chairman of the Tariff Commission, Mr. P. N. Sapru, a Member of Parliament and a former Judge of the Allahabad High Court, and Mr. N. Krishnan, a distinguished cost accounts officer, who had examined the accounts and working of oil companies earlier) to go into the question of fixing fair oil prices. Surprisingly enough, Mr. Malaviya made no reference in his speech in the Lok Sabha to this development. Nor has the Government so far issued any Press communique on it, although the Committee has already framed and circulated its questionnaire to the companies concerned. It is to be hoped that this Committee will be in a position to iron out the differences between the Government and the companies and evolve a satisfactory basis for determining the prices payable to the companies, taking into account the variations in world oil prices.

Much of the criticism in the Lok Sabha of the refining agreements concluded with the foreign oil companies early in the fifties is based on hindsight. The greatest achievement of these agreements is that India possesses today three large modern refineries, two in Bombay and one at Visakhapatnam, which have enabled the establishment of a number of subsidiary industries and reduced the expenditure of foreign exchange on import of finished petroleum products. One has only to pause for a while and reflect a little on what would be the plight of this country today, if these refineries had not come into existence. It was India's good fortune that, at that time, it did not have a Minister in charge of oil who was so bargain-minded as Mr. Malaviya is now. In retrospect, it seems that it is more advantageous to have a Minister who is somewhat ignorant of many complicated details of oil economics and who does not mind losing a few pennies now in order to gain many pounds later, than to have one who is obsessed with good-for-nothing doctrinaire theories and short-term gains arising from day-to-day market fluctuations. It will be pertinent to recall here that, thanks to the dog-in-the-manger policy of the Oil and Fuels Ministry, the crude already discovered and proved in Assam is still remaining underground and the country is unnecessarily losing much precious foreign exchange. Similarly, the production of coal is lagging behind, resulting in a heavy loss of valuable production of power, iron and steel, etc. Again, the premature decision to nationalise the Panna Diamond Company has resulted in an annual loss of Rs. 4-5 crores worth of foreign exchange. It will take at least another four years for the projected public sector refineries in Assam and Bihar to go on stream. Had the Assam Oil Company and/or its associates been allowed to go ahead with the establishment of the refineries, there would have been a saving of Rs. 30-40 crores of foreign exchange per annum. Had the Panna Diamond Company been permitted to carry on the task allotted to it, this country would be producing and exporting Rs. 4-5 crores worth of industrial diamonds today. Had the Ministry of Fuel not restricted the scope for the private sector in coal, there would not have been that scarcity of coal which is now having a cramping effect on industrial and agricultural production. For all these avoidable losses to the country, Mr. K. D. Malaviya and his colleagues in the allied Ministries are directly responsible. Their contribution to the foreign exchange crisis that has been confronting the country for some time now is quite substantial. But for their dog-in-the-manger policy, the country today would have been better off by Rs. 40-50 crores per annum in its foreign exchange budget.

The water-tight compartment in which several members of our Government and Parliament view the economic problems of the country is something quite remarkable. Only a couple of days before the discussions on oil policy, there were meetings of the Import and Export Advisory Councils at which the Ministers for industry and trade and India's economic ambassadors abroad expressed great concern over the deterioration in India's foreign exchange position and highlighted the importance of foreign assistance for the success of the third Plan. And, yet, when the oil policy came to be discussed, the crucial importance of foreign aid and foreign private capital was ignored or forgotten by both official and non-official benches. Mr. Malaviya boldly reiterated that it was the declared policy of the Government to develop the oil industry in the public sector and retain the initiative in every sphere of oil industry. He added that it was his firm view that, unless there were more State-owned refineries, it would not be possible for the Government to control the country's economy. These are doctrinaire assertions, for which there is no real foundation. There are other countries in the world, where the Governments have not found it necessary to possess refineries and process crude oil, in order to keep prices under control. Similarly, there are other commodities in this country, the prices of which are regulated by the Government without necessarily having ownership and manufacturing responsibilities, and some of these products are being turned out by foreign capital. In any case, Mr. Malaviya has already been remarkably successful in bringing down the prices and profits of foreign oil companies, without having to invest much on refining and marketing. Further, if there is one commodity the supply of which could be had without much difficulty and the price of which to the consumer has remained steady, in refreshing contrast to the sharp rise in the cost of everything else, it is oil, we mean, mineral oil. It might have been a hard job for Mr. Malaviya to get a share in the foreign oil companies' profits enhanced by developments in the world oil market. But that does not necessarily mean that he should come to the conclusion that all further development in oil prospecting, refining and marketing should be done by the Government. If he thinks that what the country needs is more competition in oil, he could encourage the national private sector also to participate in this business.

The most important question, however, is the availability of finance, especially foreign exchange, and know-how. The country is lacking in both. Oil is one enterprise for which a lot of foreign private capital can be obtained from the free world. There is, therefore, every reason for facilitating the participation of such capital for the development of oil industry in this country. Even the latest World Bank Mission has come to the same conclusion. While the demand for oil is rapidly expanding, the plans for expansion are lagging behind for reasons just mentioned and also because of red-tapism inherent in the public sector. When viewed against this background, the proposal of Burmah-Shell Refineries Ltd. to expand its capacity from the existing 2.6 million tons to approximately four million tons and to add a lubricating oil plant sounds very attractive and timely. Mr. P. D. Tew, Chairman of the Company, has given, in his statement to shareholders, facts and figures that further strengthen the case for the acceptance of the proposal. The Company has expressed its willingness to find all the foreign exchange required and to consider further modification to the refinery agreement concluded in the past. It has not demanded any assurance of protection against competition, so that the public sector is free to expand as it likes and to put up its own refineries for converting crude from whatever source it finds profitable to buy. There are thus

good reasons for accepting the offer of Burmah-Shell Refineries and allowing the Company to expand its capacity without any delay. Similarly, the other foreign oil companies also could be invited to establish additional refining capacity at suitable sites. In view of the acute scarcity of foreign exchange and paucity of personnel, even the proposed medium-sized refinery in Gujarat can be established by the public sector in collaboration with one of the foreign oil companies. Given a practical bent of mind, it would not be difficult to work out a satisfactory arrangement for this purpose. If the country were to allow the public sector to do everything in the sphere of oil, it would have to wait for decades. It did so in the second Plan so far as fertilisers were concerned, with the result that hardly anything worthwhile has been done to raise the production of fertilisers. It must take care to see that this story is not repeated in the field of oil during the third Plan period.

S. I. PLANTATION INDUSTRY

FEW people of this country are aware of the full significance of the work done by the pioneers in plantation industry. To have opened new areas to plantations in inhospitable jungles, to have trained the men to man them and to have created a market for their output must have meant much patient toil. And, yet, planters never get the meed of praise due to them. They are not infrequently referred to as "exploiters" by men whose title to fame rests on a certain capacity to exploit the credulity of the masses. And even those who know the vital role of plantations to Indian economy cannot resist the political temptation to impose heavy burdens on the industry. The result is that plantations, in the words of the President of the United Planters' Association of Southern India, Mr. W. Wilson Mayne, who was addressing the annual meeting of the Association held at Coonoor this week, present a "picture of a progressively minded industry with an enviable record of increasing production struggling to provide a wide range of the amenities of a welfare State for its workers from its own resources against a background of rising costs and falling earnings, and an ever-growing weight of taxation."

As in other parts of India, or for that matter, in the underdeveloped world, the contribution made by the plantation industry in South India has been both remarkable and enduring. Over the past century, the industry has cleared over 750,000 acres of South Indian jungles replacing the trifling quantities of forest products by such produce as tea, coffee and rubber valued at more than Rs. 50 crores a year and thereby providing employment to some 400,000 agricultural workers. It must be remembered that the wages earned by these workers are much higher than those of the classes of society from which they are drawn. Year by year, production has been stepped up. Over the last three decades, the coffee crop has expanded from 15,000 tons to 49,000 tons (1959-60 estimate). Again, in less than two decades, the tea crop has increased by 50 per cent. to 150 million lbs. Similarly, the output of rubber has moved up from 16,500 tons in 1947 to 24,000 tons in 1959.

The industry's contribution to the country's economy should not be measured in terms of the monetary value of its output, though that is considerable. In stimulating better agricultural practices and in quickening the pace for rural medical service, the industry has set a model worthy of emulation on a wider scale. The per-acre consumption of fertilisers in plantations is several times higher than in other sectors of agriculture. The rubber and coffee industries have been the pioneers in control of plant pests and diseases through the device of spraying. The U.P.A.S.I.'s scientific department has developed the use of D.D.T. for the control of tea mosquito blight. New diseases are being mastered as they come. Improved varieties have been used to increase yields of plantation crops. In the sphere of public health, the industry has paved the way for the control of malaria. The U.P.A.S.I. was the first to realise the significance to malaria control of the work of Ronald Ross, a name to conjure with in the medical world. In many large plantations, infant mortality has always been significantly lower than the average for the neighbouring rural areas.

For an industry of its size, and economic and social significance, the plantations have by no means received any generous treatment. After analysing the results of the working of two reasonably representative plantation companies—a tea company and a coffee company—over two three-year periods 1951-53 and 1957-59, Mr. Mayne showed how the resources available to reward the shareholders for their investment in a risk equity and to provide funds for maintenance and development had been reduced by 40 per cent. in the case of the tea company and by 54 per cent. in the case of the coffee company. He said:

"We hear much these days about the need for incentives usually in relation to production by workers. I would submit that the same principles apply to corporate private enterprise. After all, business enterprises are run by people whose motives, hopes and fears are not essentially different from the other classes of people to whom Governments extend their benevolent solicitude. If they differ at all, it is precisely in those qualities of which the nation stands in need—thrift, vision and capacity for hard work. I do not think it wrong to say that the vast majority of those concerned with the management of the plantation industry are struggling with a sense of frustration as they see the pattern of performance that I have just outlined."

It is, of course, true that the current yields on equity shares in the plantation industry are high. Thus, in 1959-60, the yield on tea shares was 6.17 per cent., on coffee shares 6.06 per cent. and rubber shares 7.60 per cent. These yields are much higher than in other industries; for instance, the yield on cotton textile shares in 1959-60 was 3.97 per cent., iron and steel shares 3.89 per cent., basic industrial chemicals 4.14 per cent., and paper 5.01 per cent. But, as the Chairman of the U.P.A.S.I. pointed out, the high return on planting shares "does not indicate high prosperity but the investors' only too well founded fears." He said: "The crucial part in the statistics is the low value placed on plantation equities not the apparent high return. That value is a measure of the risk and uncertainty of investment and the lack of confidence of the investor." It is easy to explain this lack of confidence among investors. Apart from the natural risks inherent in our agricultural enterprise, there are the increasingly heavier levies on the industry. Essentially, they are of two kinds—the financial implications of the labour welfare measures and heavy taxation. The U.P.A.S.I. Chairman pointed out that the Plantation Labour Act 1951 had placed heavy additional burdens on the industry; in the case of housing, the time-table under the Act "would put to shame the efforts made elsewhere to meet what is a national problem." The financial position of the industry has changed considerably since the Act was placed on the statute book. This means that what might have seemed possible in 1951 could at best be regarded now as an ideal worth pursuing. Accordingly, the Chairman pleaded for "explicit recognition that the pace of development asked of us is beyond the industry's present or foreseeable future capacity." It is not as if the industry is not doing its best in the case of housing. Over the period 1954-58, the South Indian plantations, covering 185,000 acres and responsible for 300,000 people (workers and their families), spent Rs. 2½ crores on housing projects alone.

A no less intractable problem than the provision of costly welfare measures is the burden of taxation. Many and varied are the taxes imposed on the industry. They include the taxes collected by the Centre such as income-tax, excise and import duties and cesses and those by the State Governments such as agricultural income-tax, land tax, *panchayat* tax and sales tax; the North Indian plantations have also to pay carriage tax and entry tax. Mr. Mayne deplored that these levies were made "in an entirely uncoordinated manner and clearly without any real knowledge of the industry's capacity to bear them." There is also a certain element of double taxation in some of these lines. Thus, the *panchayats* collect taxes from the industry for purposes which they are meant to serve but which the industry is asked to undertake under the Plantation Labour Act. The net result of all these levies is that the total burden of taxation is so heavy that it prevents the industry from providing for development from its own resources and also discourages inflow of capital into the industry.

Turning to individual plantation products, Mr. Mayne felt that the future for tea was "disquieting." He drew this inference from the F.A.O.'s prediction of an excess of production of between 60 and 120 million lbs. by 1965 and of the possibility of some countries reducing their tea consumption in favour of more expensive beverages. Referring to the target fixed for tea industry, he felt that, although the industry was capable of achieving a higher target, there were other considerations which must "have higher priority than mere quantitative increase." In saying this, he was obviously inclined to throw his weight on the side of the present low target for tea in the third Five-year Plan, namely, 850 million lbs. by 1965. It is not clear why the industry should continue to suffer from the fears of possible recurrence of pre-war surpluses when all available evidence suggests the possibility of increase in both internal and external tea consumption. None in the world, excepting the planters in India, seems to believe that there would be a recurrence of the Great Depression of the 'thirties. Mr. Mayne was, however, on firmer ground when he said that the primary emphasis should be placed on improvement in quality and urged greater attention to publicity in old and new markets, regulation of exports through renewal of International Tea Agreement, expansion of internal markets and increase in per-acre output. What is required is an integrated policy that will embrace all these aspects of production and marketing of tea. As regards coffee, he drew attention to the fact that, whereas world coffee output in the 1955-59 period was 26 per cent. above that of 1950-54, consumption had increased by only 10 per cent. He warned that, although Indian coffee production was small and had a growing internal market, the commodity could not insulate itself from world trends. As in tea, market research and development must receive "utmost attention and energy." Discussing the question of raw rubber prices, Mr. Mayne pointed out how there was no question of protecting an infant industry; for sometime past, the price of rubber in international markets had been higher than the internal price fixed by the Government. He said: "What is required to produce the rubber the country needs is some incentive, not a price fixed according to some theoretical conception of what the producer's return should be, when everyone knows that next week, or next month, some wage demand, new tax imposition or rise in costs will cut into that return." The risks to which the Chairman referred are inherent in any scheme of price control. There is, however, no getting away from the fact that suitable incentives, whether in the shape of adequate subsidies or others of their kind, are virtually necessary to increase production of rubber, particularly because the soil and climatic conditions in India are less favourable for this commodity than in other major rubber-growing regions. And, what is more important, the incentive should be offered in such a way as to encourage plantations of economic size and not in the form of a premium on small, uneconomic holdings, the owners of which are either spendthrifts or incapable of adopting modern means of raising and nursing rubber plantations.

A major issue raised by the Chairman is the role of the commodity boards for the industry, of which there are now three. At first, these boards were compact bodies quite representative of producers and traders, with non-official chairmen and a few official representatives. All this was changed a few years ago by an overzealous Minister who considered himself to be the fountain of all wisdom and finally found himself out of the Cabinet. The boards have now become heterogenous bodies, in which producers and traders have become minority groups and "the management and control have passed into the hands of officials primarily answerable to the State, while their powers of intervention in the affairs of the industry have increased." It must, however, be remembered that the funds which these boards administer are drawn from the resources of the industry. Clearly, there are two vital questions. In the first place, if the industry and trade are reduced to a position of minority groups, can the boards be expected to reach sound decisions? Secondly, is it unreasonable to demand that the industry which pays the piper should have an adequate voice in calling the tune? It is true that a similar argument cannot be urged in the legislative functions of the Government; one cannot argue that income-tax payers should be allowed to determine tax rates or how the revenue from the tax should be spent. But, surely, commodity boards are not legislative bodies. Is it right they should exercise an increasingly wider measure of control over an industry which justly feels that it is not adequately represented on these bodies? These questions call for some impartial review and examination in the interests as much of the Government as of the industry; for both will be hurt through wrong decisions, or decisions which, in the opinion of the interests concerned, are manifestly unfair. Such a situation could be avoided, only if the boards are sufficiently representative of the industries which they are meant to serve.

MARKET GOSSIP

THE decline in India's foreign balances to very nearly Rs. 140 crores loomed large at the meetings of the Import and Export Advisory Councils at New Delhi early this week. The Minister for Commerce and Industry made it clear that some cuts in imports would be necessary, though he promised to do his best to see that they did not fall on raw materials and capital goods necessary for maintaining production. He further stated that he did not propose to delay the announcement of quotas for the next licensing period beginning from 1st October. Nevertheless, it seems inevitable that several industries based on imported raw materials will have to face a difficult time in the coming months, unless the efforts that are being made by the Government to obtain additional financial assistance from foreign countries prove successful. Mr. B. K. Nehru, India's special representative in Washington, who deals with economic matters, has stated that foreign aid can be had only for development and not for buying raw materials. This is not a convincing explanation, for it is a well-known fact that, when an economy rapidly expands, its requirements of raw materials also go up and that the developed countries which help the developing country must be willing to set aside some resources for meeting such current account needs also. This point was impressively driven home to the World Bank, when Mr. C. D. Deshmukh was the Finance Minister, and the World Bank did concede it in one of its annual meetings. If our memory is right, the Bank even raised the loan allocations for some of the railway and other public utility projects, after hearing his argument. Surely, there is no point in proceeding with investments on projects in the third Plan, if the productive capacity created during the first and second Plan periods cannot be kept fully employed. Such a policy may even adversely affect the export capacity of India and thereby aggravate the foreign exchange problem. It is to be hoped that Mr. B. K Nehru will be reminded of the points made by Mr. Deshmukh some years ago, so that he may not be found wanting in arguments when he meets the representatives of friendly foreign countries for putting forward India's case for a little more of "untied" loans.

A country from which India can legitimately expect a sizable amount of such assistance is West Germany. There are two good reasons for doing so. One, there has been a heavy adverse balance in India's trade with that country; and, two, West Germany has a larger gold and dollar reserve than any other Continental country, not excluding the U.K. By making available to India a substantial amount of "untied" loan, West Germany can bring about a healthy dispersal of a part of its external reserves. The bulk of the loan given to India will only go to the Western Continental countries. It can thus claim to play the role of a creditor country more effectively than its critics concede and also strengthen its case against the demand for a revaluation of the D. Mark which is being advocated by some of them.

T.I.S.Co. Repeats Dividend

The prolonged suspense in the share market over the T.I.S.Co.'s dividend for 1959-60 has at last been relieved, following the Company's announcement late on Thursday evening, without waiting any further for the Government's decision regarding the retention prices. The maket has also reason to feel satisfied with the dividend on ordinary shares which is being maintained at the previous year's level of Rs. 6.80 net per share, which, when grossed, would amount to Rs. 9.72 per share. A proportionate dividend of Re. 1.70 net per share, or Rs. 2.43 gross per share, is being given on the new ordinary shares with effect from 1st January 1960. The dividends on the 1st and 2nd preference shares (both of which are taxable) are Rs. 9 and Rs. 7.50 per share, respectively, subject to deduction of tax.

Along with the dividend announcement, the Company has also published a brief preliminary statement of financial results, a wholesome practice which this journal has long been advocating and which the Tata group of companies started following this year for the first time. A mere dividend announcement, unaccompanied by some idea of the profit and its other allocations, does not enable the operators in share markets to get a correct picture of a company's performance and those who are in the know of the relevant particulars take undue advantage of their privileged position. It is precisely for the reason that all must have equality of opportunity of trading that stock exchanges elsewhere in the world insist on the publication of a preliminary statement of financial results also along with the dividend announcement. It would be a good thing if all companies in India were to follow the example set by the Tata group of companies.

The T.I.S.Co.'s performance during the year ended 31st March 1960 is quite encouraging. The total turnover has recorded a rise of Rs. 20 crores to Rs. 73.47 crores, in line with the increase in production of saleable steel from 884,700 tons to 1,215,100 tons. The gross profit has gone up from Rs. 8.58 crores to Rs. 14.15 crores. It may seem disappointing to some that, despite the substantial improvement in earnings, the Directors have thought it fit only to maintain the dividend, unlike the Indian Iron and Steel Company, Ltd., which has actually stepped up the net dividend, albeit slightly. There are two reasons for this. First, on account of the new system of taxation, the dividend burden on the Company, even at the aforesaid rate, has gone up by Rs. 1.49 crore. Secondly, the sum available for distribution, after making provisions for depreciation and plant rehabilitation and development rebate reserve, does not provide adequate cover for the aforesaid dividend. The provision for depreciation has, however, been raised from Rs. 5.53 crores to Rs. 8.47 crores. There is, as in the previous year, no tax liability; only, the Company had to set aside last year Rs. 17 lakhs for wealth tax, which has since been abolished. The plant rehabilitation and development rebate reserve gets no less than Rs. 4.14 crores, as against Rs. 2.84 crores a year ago. These appropriations leave a net disposal profit of only Rs. 1.54 crore, but this compares very favourably with the meagre figure of Rs. 3.97 lakhs for 1958-59. In view of the adequacy of disposable profit, the Directors have transferred this entire sum to the general reserve No. 2 (representing untaxed profits) and have drawn the whole amount required to pay dividends (Rs. 3.76 crores) from the general reserve No. 1 (representing the taxed profits of previous years). This procedure was followed in the previous year, too, when a sum of Rs. 2.27 crores was drawn. The amount brought in from the previous year—Rs. 8.47 lakhs—is being carried forward. As the dividends are being paid out of the taxed profits of earlier years, the Company, it may be noted, is entitled to a tax credit equivalent to one-tenth of the dividends so paid under the Finance Act 1960. The Managing Agents have foregone their commission for the second year in succession.

Cloth Prices: A Queer Approach

Before these lines appear in print, the Committee of the Indian Cotton Mills' Federation will, perhaps, have made an announcement, indicating its final stand on the issue of cloth prices. This announcement will be a significant one, inasmuch as on the decision of millowners depends the answer to the crucial question whether statutory controls on prices and distribution of cloth will stage a come-back. That the final stand the Federation takes will seek to strike a *via media* between what it has offered by way of a further reduction in cloth prices and what the Government of India wants is, however, a safe guess to make. It would appear that neither the industry nor the Government wants to have such controls.

The respective viewpoints of the Federation of cotton mills and the Government of India are broadly as follows:

Federation: The schedule of wholesale prices announced on 11th August will be so revised as to effect a general 2 per cent. cut in prices and to refix the maximum prices on the basis of August 1959 contract prices, instead of on prices in October 1959. The revised schedules mean an increase of 25 per cent. in the wholesale prices of coarse cloth over the August 1959 contract prices, of 22 per cent. for lower medium counts, of 18 per cent. for higher medium varieties, of 11.5 per cent. for fine cloth and of 9 per cent. for superfine category. The corresponding percentage increases over October 1959 prices were 27.5, 24, 20, 12.5 and 10, respectively. The system of stamping prices on cloth is also accepted in principle.

Government: The rise in cotton prices and the extra financial burden imposed by the Wage Board award can justify at most a rise of 25 per cent. in cloth prices, as against the increase of 40 per cent. that has taken place in most cases since July 1959. The reduction in mills' wholesale prices should, therefore, be related not to October 1959 prices but to those prevailing in July 1959, when they were about 4 per cent. lower than in October. The reductions in prices already announced by the industry have remained largely unreflected in retail prices and so the Government is keen on going ahead with stamping of prices.

The way in which the Government is goading the millowners to give effect to its point of view reflects its determination to bring down prices. The fact that millowners, too, keep on conceding the Government's demand, albeit with a little margin in their favour, suggests that they dread statutory price controls and that they consider it worth paying some price for staving them off. It will be recalled that, on the 7th of last month, the Chairman of the Federation announced the industry's decision to effect a cut of 10 per cent. in cloth prices. Mr. Lal Bahadur Shastri, Minister for Commerce and Industry, immediately expressed his dissatisfaction at the cut proposed and threatened that, if the industry failed to respond adequately, the Government would not hesitate to take effective action to bring down the prices of cotton textiles. The Federation did pay heed to this warning. On the 11th inst., it announced reductions ranging from 10 to 27½ per cent. as compared with the October 1959 prices and assured that it would take effective measures to implement the decision. One thought that the Government was satisfied with this move. Actually, Mr. Shastri stated in the Lok Sabha on 18th August that it was too early for him to react to the move and that the effect on the market had to be watched before coming to conclusions. Just a week after this statement, Mr. Shastri told the representatives of the Federation who were at New Delhi then that the reductions announced by it fell short of the minimum needed by 5 per cent. and that July 1959, instead of October 1959, should form the basis for revising prices of cloth. And, more recently—on Tuesday this week—Mr. Nityanand Kanungo, Minister for Commerce, reiterated the threat of Mr. Shastri that, if the voluntary reduction in cloth prices to be effected by the textile industry was not satisfactory, the Government would have to take other steps—legal steps—to bring down the prices. He said: "The Government have not indicated their view to the Indian Cotton Mills' Federation, because we want the matter to be decided by themselves to our satisfaction. We do not like to bargain.... Normally, the Government are prepared for a rise of 25 per cent. and not more."

The main purpose of explaining all this in some detail is to bring out the fact that the Government wants the cotton textile industry simply to accept its terms: to reduce ex-mill prices of cloth by 15 per cent. and to stamp prices on cloth. The assumption here is that cloth prices during the period August 1959—July 1960 had risen by as much as 40 per cent. The millowners contend that this is an exaggerated claim. Our enquiries reveal that no more than 5 per cent. of the total cloth produced by mills are higher by 40 per cent.—even here, a large part of the increase has been due to malpractices indulged in by a sect on of wholesale and retail dealers—whereas, in all other varieties, the rise has been proportionate to the enhanced wage bill, increase in cotton prices, and rise in the cost of spare parts and other accessories used by mills.

Be that as it may, it is not quite clear how the Government expects retail prices to go down so soon as all that. For a retailer will not reduce his prices until he clears his existing high-priced stocks, unless, of course, there is a strong buyers' resistance, which does not seem to be there. Whatever steps mills take for bringing down prices, they will require an interval for making themselves felt on the retail market. Further, frequent cuts in prices by mills are liable to cause confusion among the wholesale dealers and unsettle the cloth market. If the Minister keeps on saying that he expects the industry to cut prices further and still further, no trader will lift the cloth from the mills until he is sure that there will be no more reduction in prices. This, in turn, will reduce the supply at the retail end and keep up the prices for consumers. It is quite probable that this is exactly what has been happening in recent weeks. If the Commerce and Industry Minister had felt that only a particular price was reasonable, he should have straightaway told the industry so, instead of allowing it to find out by a series of tests as to what exactly was passing in his mind. The method adopted by him is, indeed, an inexplicably queer one.

Anyway, now that the industry has agreed to cut the prices and the upward trend has been checked, there is no need for introducing statutory price controls. If the Government and consumers have some patience, the cloth prices can be brought under control without resorting to cumbersome, costly and unproductive statutory controls. After all, the Government has gone to great lengths in ensuring sufficient supply of cotton for mills in the coming months. It is worthwhile waiting to see the outcome of this solution. Although it is rather premature to be dogmatic, weather conditions so far have been favourable for a bigger cotton crop in the country and one can hope to see 5,000,000 bales of domestic cotton in the 1960-61 season. Export demand for cloth is also slackening. It is, therefore, unnecessary to rush in with more controls on mills and distributors. The best thing to do would be to wait and watch till the end of this year. If by then the cotton situation definitely turns out to be adverse again, the demand for cloth remains strong and the measures now being taken to step up production have not yielded results to the extent expected, the authorities can certainly review the situation and consider the future course of action.

More Controls on Cotton

The additional controls on the marketing of raw cotton in the 1960-61 season (commencing from Thursday, 1st September), which were announced by the Textile Commissioner on 31st August, have not taken the trade by surprise. For, line, and the distribution of cotton already being strictly controlled by the Government, with effect from 1st August, under the Cotton Control Order issued by the Textile Commissioner in May last, the trade was psychologically prepared for them. The new measures are the following:

(1) Purchase of *kapas* (unginned cotton) by mills owning ginning factories will be restricted to the level of their actual Indian cotton quota, under certain conditions. Mills are advised to ensure that they purchase *kapas* only at a price which will make the corresponding price of the ginned or pressed cotton not to exceed the maximum price fixed by the Textile Commissioner for the lint. Examination of the books of account of the mills will be made, if necessary. Such ginned or pressed cotton will also be surveyed by the appropriate authorities and the ceiling price, on the basis of such survey certificates, determined before the cotton is allowed to be consumed by mills.

2. All cotton marketed in the country, with effect from the 1st inst., will be compulsorily surveyed by the East-India Cotton Association Ltd., Bombay, or by any regional committee appointed for this purpose, with the concurrence of the Textile Commissioner. Certain conditions are prescribed for such survey and the maximum price is required to be indicated in the survey certificate for the appropriate staple and class of the cotton in accordance with the Textile Commissioner's notification in this regard. The object of this step is said to be prevention of any malpractices such as mixing of varieties and passing on inferior varieties as superior one, which were widely prevalent in the season just ended.

3. Mills and dealers will be compelled to submit returns on their deals for the purpose of cross checking and collecting information about the stocks with mills and trade. Failure to submit the returns, or supply of false information, will be viewed seriously and appropriate punitive measures taken.

In order to ensure that at no stage cotton is sold above the maximum prices fixed by the Textile Commissioner, cotton stocks will be requisitioned right from the beginning of the season, from mills

EQUITIES STEADY

CASH SHARES BRISK

(From Our Own Correspondents)

BOMBAY, 1st *September*

FOR the third week in succession trading on the Bombay Stock Exchange was interrupted by holidays. During the week under review, the Exchange remained closed for three days—on Friday, the 26th ult. on account of *Ganesh Chaturthi* and on the 30th and 31st ult. on account of Parsi New Year. During the greater part of this short week, the sentiment was better than in the previous week and equities staged a moderate recovery on revival of buying at lower levels. Today, however, there was profit-taking and equities drifted down, losing a good part of the earlier gains.

The debate on the draft outline of the third Plan did not cause any jitters for the market. Although Mr. Morarji Desai indicated that he would have to place greater reliance on taxation, particularly on indirect taxes, to raise the resources for the third Plan, the absence of any precise indication as to how the taxes were going to be raised and the feeling that the effects of the tax burden would be more than offset by the growth in production and turnover helped the sentiment. The uncertainty over the cloth price issue is still uncleared. It is the subject matter of further talks between the representatives of the mills and the Government. It is not unreasonable to expect a compromise to be arrived at (in view of the opposition of mills to further cuts in prices demanded by the Government), which would not affect the less economic units and would eliminate the need for enforcement of controls on prices and distribution. This assumption presumably accounted for the modest support to cotton mill shares in the earlier part of the week. Operators were, however, cautious and preferred to book their profits today, as the anticipated statement of the millowners giving out their final stand on the question did not come today. The report that the dividend of T.I.S.Co. would be announced today, even if the Government's announcement on the retention prices were not forthcoming, also steadied the sentiment earlier, but the uncertainty about the quantum of dividend induced profit-taking at the close.

A feature of the week's trading was the brisk activity in the miscellaneous section, particularly in cash counters, in distinct contrast to the subdued trend in the previous week, and many favourite scrips recorded smart rises.

Tata Ordinaries crept up from last week's closing of Rs. 160.25 to Rs. 161.75 before sliding back to Rs. 160.25 at the close. On good support from Calcutta, Indian Irons were steady, moving up from Rs. 25.55 to Rs. 26 and closing at Rs. 25.85.

Hectic movements in Khataus were the main feature of trading in textile shares. After a mild initial rise from Rs. 825 to Rs. 840 in continuation of last week's spurt, the scrip drifted down precipitously to Rs. 720, notwithstanding the Directors' recommendation to double the dividend for the year ended 30th June 1960 from 16 per cent. to 32 per cent., both subject to deduction of tax. The net dividend works out to 22.4 per cent., as compared to 11.2 per cent. paid for 1958-59. This setback is presumably due to disappointment over the absence of any announcement regarding rights issue, which the market had anticipated along with the dividend. Also, rumours regarding the prospect of this scrip being removed from the forward list induced bull liquidation. Bombay Dyeings recorded a rise from Rs. 67.30 to Rs. 68.60 before declining to Rs. 67.60. Centurys advanced from Rs. 507.50 to Rs. 514.50, but this gain was wiped out today when the scrip finished at Rs. 507.50. Kohinoors improved from Rs. 325 to Rs. 336.50 before being marked down to Rs. 330.50. Finlays were conspicuous with a rise of Rs. 18 to Rs. 370, and Swans gained Rs. 15 to Rs. 510, both on reports of buying by the L.I.C. The buying fervour in Gokaks noted last week appeared to have abated and the scrip scored a gain of only Re. 1 at Rs. 180. Morarjees stole the limelight, with a smart rise of Rs. 65 to Rs. 440. Svadeshis were marked up by Rs. 3.25 to Rs. 248.50, while Standards gave way to Rs. 1.975 on rumours that this scrip too would be transferred to the cash list, after an initial gain from Rs. 2.010 to Rs. 2.035. Simplex were a shade quiet at Rs. 174.

Electricity shares lacked support and small losses were recorded in most counters. Ahmedabad Electrics were done Re. 1.50 lower at Rs. 87.50 and Bombay Suburbans Re. 1 down at Rs. 84. Tata Hydros shed Re. 1 to Rs. 106 and Tata Powers Rs. 2.50 to Rs. 1,037.50. Andhra Valleys were, however, a shade better at Rs. 997.50.

Barring a rally in Digvijays from Rs. 163 to Rs. 173, cement shares were listless and fluctuations were narrow. Associated Cements moved between Rs. 145.25 and Rs. 143.50. Orissa Cements closed at Rs. 14 with no change over the week. Jaipur Udyogs were 60 nP lower at Rs. 13.40.

Belapurs were again conspicuous among sugar shares, following the confirmation of the reports about acquisition of a sugar mill, but the trend was erratic. The scrip advanced from Rs. 391 to Rs. 429, but soon drifted down to Rs. 402 on Saturday last. After a revival to Rs. 411, the scrip gave way to Rs. 403 at the close. Phaltans were in demand and rose by Rs. 2.50 to Rs. 136.50. Walchandnagars were unchanged over the week at Rs. 307.50, while Maharashtra Sugars, in the cash group, improved by Rs. 4.50 to Rs. 247 and Kesar Sugars jumped up by Rs. 25 to Rs. 350.

* * * *

Calcutta Stock Exchange

CALCUTTA, 31*st August*

In the absence of fresh incentives, quiet conditions were in evidence on the Calcutta Stock Exchange during the week under review. The volume of business fell, but prices were steady at lower levels. The continued quietness should be taken as proof that satiety of buyers at current levels had been reached. The Finance Minister's "assurance" in Parliament to raise direct and indirect taxes in order to secure resources for the third Plan was an indication that there was little chance for raising yield levels with increased industrial prosperity. Further, Mr. Morarjee Desai's statement that his officials would continue to scrutinise closely share market activity hung as a Damocles' sword, which restrained speculation and added a sense of reality to price levels. However, genuine support was not forthcoming since liquid funds were being kept aside for the new issues expected in the coming month. Early in the week, the undertone was steady and prices gained, following replacement buying on expectations of support from the L.I.C. Mr. L. B. Sastri's warning that if exports did not increase, imports would be affected introduced a sense of caution.

Sectionwise, textiles continued to be in bad weather following the chill wave caused by the cloth price controversy. Kesorams sagged to Rs. 30.65, but soon recovered to the opening rate of Rs. 31. Bowreahs were traded at Rs. 171, as against Rs. 180 previously. Basantis fell to Rs. 7.75 from Rs. 8.06. However, Bengal-Nagpurs recorded a fractional recovery to Rs. 5.06.

Coals idled around previous rates, reflecting the anxiety over the increasing pit-head stocks. Burrakurs hovered around Rs. 19.75, while Bengals, after falling to Rs. 338.50 from Rs. 342, closed higher on balance at Rs. 345. Raneegunges continued to change hands in large parcels and this led to suggestions that any change in management would follow. The rate was fractionally better at Rs. 16.81. Khatras Jherriahs were a shade better at Rs. 48.56. East Indias were quiet at Rs. 31.56, as against Rs. 31.44 previously. A strong feature was provided by the jump in New Beerbhooms to Rs. 25 from Rs. 22.69 previously, following the news of rights issue in the proportion of four for every five shares at present held. The issue is at a premium of Rs. 2.50 per share.

At lower levels, buying support was in evidence to jutes. Agarparas picked up 87 nP to Rs. 13.56. On interested buying, Aucklands hardened to Rs. 181 from Rs. 172 previously, while Unions receded to Rs. 193.50 from Rs. 202. Cheviots at Rs. 16 were fractionally higher, but Lawrences sagged to Rs. 144.50 from Rs. 153. Champdanies were unchanged at Rs. 117. Kinnisons dropped a rupee to Rs. 173. Kelvins changed hands at Rs. 154, as against Rs. 165 previously, while Northbrooks, at Rs. 23, were fully steady, as against Rs. 21.37 previously.

Engineering shares were about steady. Large blocks of Baartias changed hands giving rise to rumours of imminent change in management. The quotation was, however, quiet at Rs. 51.31 after being higher at Rs. 31.50. Indian Irons scored to Rs. 26.05 from Rs. 25.47, on expectations of an early announcement of retention prices. Texmacos recovered to Rs. 27.30 from Rs. 27.05, but Jessops in closing at Rs. 22.94 lost fresh ground. Hooghly Dockings changed hands at Rs. 123.50 against Rs. 125 previously. Chase Bright Steels were firm at Rs. 19.25.

Apart from a small recovery in the speculative counters, miscellaneous industrials were featureless. Dunlop Rubbers at Rs. 46.62 put on a point, while Martin Burns were quiet at Rs. 26.56. Indian Cables opened at Rs. 35.69 and closed at Rs. 36.87. Orient Papers, in modest support, were pushed up to Rs. 48.45 from Rs. 47. Aluminium Corporations were unchanged at Rs. 14.37, but Hindustan Motors recovered to Rs. 22.69 from Rs. 22.19. Philips Carbons, after recovering to Rs. 19.62, declined to Rs. 19.25. Bengal Assam Steamships were a favourite at Rs. 86.25.

Teas met with poor support. Jutlibaris receded to Rs. 24 from Rs. 24.50, and Brooke Bonds to Rs. 16.69 from Rs. 16.81, while Bishnaths regained to Rs. 24.06 from Rs. 23.31 to close at Rs. 23.50.

* * * *

Madras Stock Exchange

MADRAS, 31*st August*

An important development of the week in so far as the Stock Exchange is concerned was the move of the Exchange authorities to reduce margins on outstandings from 5 to 2 per cent. with effect from the 29th inst. and to allow brokers to transact business among themselves directly on the floor of the Exchange with their bids and offers, as is the practice in vogue in Bombay and Calcutta. Hitherto, the Secretary of the Exchange used to call out the names of shares one by one in alphabetical order and then leave it to brokers to conclude the deals. The relaxations in trading rules led to brisk activity, though several equities tended to move down in view of larger offerings. Textiles were distinctly easy, on fears of a further reduction in the prices of piecegoods and yarn. Teas were subdued, following reports that the preliminary estimate of tea production in South India for June 1960 showed some setback. Coffees were neglected owing to reports of sizable coffee surplus in world markets. Rubbers too came in for selling, notwithstanding the Central Government's decision to raise the rate of replanting subsidy, because operators thought that the *status quo* in raw rubber prices in the context of higher production cost would affect the finances of many estates. Sugars were generally weak, though a few shares elicited special support. Miscellaneous industrials ruled dull, barring chemicals which made a smart rally on investment demand.

In the textile section, Lakshmis dropped Rs. 2 to Rs. 155. Coimbatore Cottons and Coimbatore Pioneers fell by Re. 1.50 each to Rs. 170 and Rs. 350, respectively. Cannanores lost a rupee to Rs. 145, Coimbatore Spinnings and Dhanalakshmis declined by a like amount, the former to Rs. 350 and the latter to Rs. 228. Premiers changed hands at Rs. 237 *ex-div.*, as against Rs. 250 *cum-div.* last week-end. Loyals shed 75 nP to Rs. 35.75. Metturs were quiet at Rs. 396. Buckinghams were neglected at Rs. 206. The Directors of the Company have declared an interim dividend of 4 per cent., tax-free, for 1960.

Among teas, Haileyburias encountered selling pressure and fell by 75 nP to Rs. 15. Nonsuch moved down by 12 nP to Rs. 28. Parksides eased by 10 nP to Rs. 28.50. Periakaramalais declined from Rs. 3.90 to Rs. 3.83 before recovering to Rs. 3.87. Blue Mountains were subdued at Rs. 5.43. United Nilgiris were unchanged at Rs. 22.60. The Company has announced a final dividend of 15 per cent., taxable (equivalent to 10.5 per cent. tax-free) making a total of 21 per cent. taxable (14.7 per cent. tax-free) for the year ended March 1960, as against 19½ per cent., tax-free, for the previous year. In the coffee section, Coffee Lands were marked down by 40 nP to Rs. 24.70. Cowcoodys lost 10 nP to Rs. 5.65. Ouchterlony Valleys shed 7 nP to Rs. 4.93. Balanoors were dull at Rs. 16.70 and Rajendras at Rs. 15. Among rubbers, Kailasas dropped 19 nP to Rs. 5.05 and Midlands 12 nP to Rs. 12. Thirumbadis were lower by 4 nP at Re. 1.46. But Cochin Malabars hardened by 7 nP to Rs. 7.87.

Cauverys in the sugar section eased by Re. 1.50 to Rs. 151. Mysores decreased by 25 nP to Rs. 60.25. E.I.Ds and United Breweries were quiet at Rs. 38.25 and Rs. 114.50, respectively. But Travancores put on 25 nP to Rs. 12.35 and Deccans 10 nP to Rs. 16.40.

Among miscellaneous industrials, Dalmia Cements came down by 14 nP to Rs. 12.30. India Cements dropped 5 nP to Rs. 7.28. Orissas receded by 2 nP to Rs. 13.85. Travancores, however, gathered 23 nP to Rs. 9.10. Andhras put on 2 nP to Rs. 10.85. Among other scrips, Ashok Leylands lost 13 nP to Rs. 9.20. Aluminium Industries lost 10 nP to Rs. 25.15. But Tube Investments rallied by Rs. 25 to Rs. 375. Chemicals, as already stated, recorded an improvement in values, F.A.C.Ts rising by 75 nP to Rs. 13.60, Metturs by 25 nP to Rs. 15.10 and Mysore Chemicals by 25 nP to Rs. 27.75.

NEWS IN BRIEF

THE Indo-Italian trade arrangement, which expired towards the close of June last, has been extended upto the end of June 1961.

The effective income-tax arrears as on 31st March 1960 aggregated Rs. 133.61 crores, as against Rs. 152.36 crores a year before.

Two schemes for the manufacture of watches and five schemes for the manufacture of clocks in the large-scale sector have been approved by the Government.

A scheme for the installation of 200 power-looms in Rajasthan in the handloom sector within the co-operative fold has been sanctioned by the Government of India.

A cotton textile mill has been set up in Ethiopia by Messrs. Birla Brothers in collaboration with the Government of Ethiopia. The Raja of Faridkot proposes to start a cotton farm in Ethiopia.

The Government of India has approved of one scheme for the manufacture of small steel rolling mills. Another scheme is also under consideration. One mill will be set up at Jullundur and the other at Kanpur.

A new series of Re. 1 currency notes will be issued shortly by the Government of India. While the design will remain unchanged, the new notes will bear the signature of Mr. L. K. Jha, Secretary, Ministry of Finance.

There are at present four units manufacturing typewriters in the large-scale sector. In 1959 and 1960 (January-June), 21,437 and 8,207 typewriters, respectively, were produced. The production in 1961 is expected to be of the order of 36,000.

Under the second phase of the National Atlas Project, the main (English) edition of the Atlas showing the physical features of the country and containing socio-economic information on a district-wise basis is now under preparation.

A proposal to amend the Industries (Development and Regulation) Act 1951 so as to empower the Government to take over any industries closing down on account of bad management is under the consideration of the Government of India.

The proceeds of the sale of Prize Bonds will be shared equally between the Centre and the States concerned, the share of the State being advanced to it in the form of a loan for a period of five years, bearing simple interest at 3½ per cent. per annum.

The total amount of foreign exchange actually given to students going abroad during the years 1957-58, 1958-59 and 1959-60 was Rs. 326 lakhs, Rs. 367 lakhs and Rs. 415 lakhs, respectively. The number of students who took the amount was 3,463 in 1957, 3,107 in 1958 and 3,483 in 1959.

The Union Government has granted a licence to a firm to produce cheese at the rate of 20 tons a month, according to Mr. Manubhai Shah, Union Minister for Industry. Imports of cheese in 1958, 1959 and January-May 1960 amounted to Rs. 14.32 lakhs, Rs. 8.36 lakhs and Rs. 2.19 lakhs, respectively.

The public sector collieries produced 7.11 million tons of coal in 1959-60. Of this, the National Coal Development Corporation accounted for 4.85 million tons and Singareni group of collieries in Andhra Pradesh for 2.26 million tons. The target was 16.10 million tons, inclusive of 2.60 million tons for the Singareni collieries.

The one-ton-per-day capacity plant for production of multi-purpose food, now working in the Central Food Technological Research Institute, Mysore, will be transferred to Coimbatore shortly, where a private party has undertaken to run it, according to Dr. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs.

The Bhilai Steelworks has despatched 1,100 tons of steel billets for being exported to Britain, for the first time. About 8,000 tons of pig iron were exported to the U.K. sometime ago. Two blast furnaces and three open hearth furnaces are now in operation. The total production so far comes to 700,000 tons of pig iron and 200,000 tons of steel.

An exhibition of imported items used in the building of ships in India will be opened at Visakhapatnam, by Mr. G. L. Mehta, Chairman of the Hindustan Shipyard, on the 5th inst. The object of the exhibition is to stimulate interest of Indian industrialists in the production of these items within the country.

The Government of India has decided to set up an independent organisation exclusively for the construction of three new railway lines in the iron ore areas, namely, Sambalpur-Titilagarh BG 115 miles (at a cost of Rs. 14.58 crores), Bimlagarh-Kiriburu BG 28 miles (Rs. 6.5 crores) and Bailadilla-Kottavalasa BG 310 miles (Rs. 50 crores).

A second Indian Industries Fair, sponsored by the Federation of Indian Chambers of Commerce and Industry with the active support of the Government of India, is proposed to be opened at New Delhi on 14th November 1961. The first fair was held in 1955. In order to work out the details of the Fair, an executive committee has been constituted, with Mr. Madanmohan R. Ruia as chairman.

Production of copper ore during January-June 1960 was 219,464 metric tons. This represents an increase of about 10 per cent., as compared with 199,945 metric tons produced in the corresponding period of 1959. The entire production was reported from the Singhbhum District of Bihar State. Production of copper metal during January-June 1960 was 4,379 metric tons, as against 3,817 metric tons in the corresponding period last year.

The Government of India has decided, in consultation with the Board of Trustees of the Coal Mines Provident Fund, to grant interest to subscribers of the fund on their accumulations at the rate of 4 per cent. during the year 1960-61. The rate of interest for the year 1959-60 was 3¾ per cent. About 343,000 colliery workers in Assam, West Bengal, Bihar, Madhya Pradesh, Orrisa, Bombay, Andhra Pradesh and Rajasthan subscribe to the Fund.

The Union Minister for Commerce, Mr. Nityanand Kanungo, stated in the Lok Sabha that the Government of India was inclined to accept the suggestion of the Forward Markets Commission to set up a second forward market for pepper in Bombay on a trial basis for one year. According to him, the second ring will give a measure of strength and stability to the existing forward market at Cochin by providing operators there an avenue to cover their extra risks and, thereby, enable them to absorb larger orders.

The Indian Lac Exporters Association has decided to introduce a Rs. 38-lakh scheme to create a buffer stock of lac, with a view to eliminating wide fluctuations in the price of this commodity. The Association has authorised its committee to utilise its publicity fund and to impose, if necessary, an additional cess to implement the scheme. In 1958, the Association imposed a cess of Rs. 2 per maund on exports of shellac, Re. 1 each for publicity and research funds. Exports of lac during 1959-60 amounted to Rs. 6.8 crores.

The co-operative societies which have Harijans among their members will get preference over other co-operative societies in regard to disbursement of loans under the Low Income Group Housing Scheme. A recommendation to this effect, made by the Housing Ministers' Conference, has been accepted by the Government of India. The scheme provides for the grant of loans to State Governments to enable persons, whose annual income does not exceed Rs. 6,000, to build houses. The Government has also accepted the recommendation of the Housing Ministers that when loans are given under this scheme, the State Governments should release from within their quotas, the minimum requisite controlled building materials to prospective builders to enable them to construct their houses expeditiously.

A Central Wage Board for jute industry, with Mr. L. P. Dave as Chairman, has been set up. It has two independent members, Mr. G. Oza, M.P., and Dr. Parmanand Prasad. Mr. D. C. B. Pilkington and Mr. D. P. Goenka represent employers, while Mr. Indrajit Gupta, M.P., and Mr. Kali Mukherjee represent workers. Within two months from the date the Board starts its work, it will submit its recommendations regarding the demands of labour in respect of interim relief, pending submission of the final report. The terms of reference of the Board are: (1) to determine the categories of employees (manual, clerical, supervisory, etc.) who should be brought within the scope of the proposed wage fixation and (2) to work out a wage structure based on the principles of fair wages set forth in the report of the Committee on Fair Wages.

The Central Government has approved of the Broach (Narmada) project, which, on completion, will irrigate 962,588 acres of land annually in the Broach and Baroda districts of Gujarat. This project—a part of the multi-purpose development of the Narmada basin—envisages construction of a gravity dam, 4,600 feet long, with a maximum height of 220 feet above the foundation, across the Narmada river at Navgam in Rajpipla taluka of Broach district. The dam will divert the run-off of the river into a canal system, which will cover a total command area of about 1,300,000 acres. It is proposed to raise the height of the dam in stage II of the project, extend irrigation through the Narmada high level canal to Mahi and Sabarmati basins and use the waters for generation of hydro-power. The total cost of the first stage of the project is Rs. 43.10 crores.

From Abroad

The International Tin Council has decided to lift all restrictions on exports of tin for the next quarter commencing from 1st October.

The U.S. House of Representatives Foreign Affairs Committee has been asked to approve of authorisations amounting to $600 million for President Eisenhower's Latin American aid programme.

The number of foreigners employed in West Germany rose by about 70 per cent. over a year to 276,000 as at the end of July, or 1.4 per cent. of the total labour force of 20.3 million.

The Japanese steel industry proposes to treble the steel ingot output to 49 million tons per year by 1970. This will make Japan the world's third largest steel producer, after the U.S. and Soviet Russia.

The Italian State Oil Corporation, A.G.I.P., has reduced its price of petrol by 1½*d.* to 5*s.* 1½*d.* per gallon. This reduction is expected to be followed by similar cuts by other major oil companies operating there.

PERSONAL

MR. H. C. Kothari, a partner of Messrs. Kothari and Sons, Madras, has been elected President of the United Planters' Association of South India for 1960-61.

Mr. H. Sitharama Reddi, formerly Minister for Industries, Government of Madras, has been appointed Chairman of the Coffee Board for a period of two years *vice* Mr. Tenneti Viswanathan, who resigned sometime ago.

Mr. V. K. Krishna Menon, Union Defence Minister, will lead the Indian delegation to the 15th session of the U.N. General Assembly. Mr. Ali Yavar Jung, Ambassador for India in Yugoslavia, will be the Deputy Chairman of the Indian delegation.

A forecast that air fares will decline by about 20 per cent. and that air traffic will double by 1967 has been made by the International Civil Aviation Organisation, in its latest report on future prospects for air transport.

Wool production in the U.K. during 1959-60 at 32.9 million lbs. was the highest for the last twenty years. This was 4 per cent. more than the previous season's clip and 43 per cent. more than that a decade ago. With such a marked rise, the U.K. has become the largest wool producing country in Europe.

Under an agreement signed by the Governments of Iraq and Russia, the latter will provide technical and economic co-operation for the construction of a broad-gauge railway between Baghdad and Basra. A sum of 180 million roubles will be granted for the purpose. This line will replace the existing narrow gauge.

The scientists of the Beecham Group's laboratories in Britain have developed a new drug, superpenicillin, which is claimed to be capable of killing germs that are resistant to ordinary penicillin. The process for making the new drug is partly synthetic and partly extracted from a mould.

Soviet Russia will give 160 million roubles (about £14.5 million) to Ghana under an agreement signed at Moscow this week. The amount will be utilised to defray Soviet expenses in giving technical help. Russia has agreed to co-operate with Ghana in the exploration for minerals as well as in the establishment of industries, power dams and model State farms.

Russia has signed an agreement with the United Arab Republic to finance the second stage of the Aswan Dam project. The agreement provides for a loan of 900 million roubles (£81 million). Russia had supplied 400 million roubles (about £33 million) towards the cost of the first stage. The aggregate outlay on the project, which is to be completed in three stages before 1970, is estimated at £345 million.

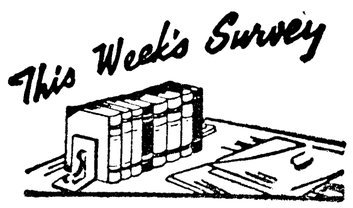
The first television camera with an integral zoom lens contained within the camera body has been developed jointly by the British Broadcasting Corporation engineering division and the Taylor, Taylor and Hobson division of the Rank Precision Industries. With a focal range of two to 40 inches, the camera will zoom from long-shots to a close-up that appears to bring an object 20 times nearer to the viewer.

The U.S. has reduced the railway freight rates to the Pacific coast by 50 per cent., with a view to stimulating sales of American wheat to Far Eastern countries. The new rate is about 12 cents a bushel to a Pacific port from points upto 1,600 miles. Reports from Canada say that this will adversely affect Canadian exports of wheat to Japan, its largest customer after the U.K. Canadian farmers are expected to ask its Government for compensating assistance.

A joint U.S. Senate-House Committee has agreed to a compromise Bill which provides $3,722.35 million in new funds for the U.S. foreign aid programme during 1960-61. This sum is lower by about $559.35 million, as compared with the amount requested by President Eisenhower. The compromise Bill includes $550 million for the Development Loan Fund, $150 million for technical assistance, $610 million for defence support for allied countries and $230 million for special economic assistance.

The U.S. Ford Foundation has announced a series of new grants to India amounting $2,376,315, including $525,000 to the University of Baroda and $170,000 to the Ahmedabad Municipal Corporation. The foundation has also announced a grant of $52,350 to the Council for Technical Co-operation in South and South-East Asia (the Colombo Plan) for a survey of technical education facilities in this region. These are among the latest grants by this U.S. philanthropic organisation to assist development programmes in Asia, the Near East, Africa and Latin America.

In order to finance the construction of the £58-million Volta River project, the World Bank has agreed to lend £14.3 million to Ghana. The U.S. and the U.K. have also granted loans amounting to £10.7 million and £5 million, respectively. The grant of all these loans is, however, subject to an agreement having been reached between the Valco (an international consortium of aluminium producers) and the Government of Ghana, on the sale of power to the Company and the construction by it of a smelter to convert bauxite into alumina. The project seeks to set up a dam over the River Volta with four (two to be added later) generators producing 120,000-130,000 kw. each. This dam will create the world's largest artificial lake, 150 miles long and 50 miles wide.



G.A.T.T.

ONE more tariff negotiating conference of the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.), the fifth of its kind to be held since the Agreement began in 1948, commenced at Geneva on Thursday this week. The Conference is being attended by representatives of India and thirty-six other countries which together account for nearly 80 per cent. of the total world trade, as well as by representatives of four nations which are in the process of acceding to the G.A.T.T. and several observer-members. At the previous tariff negotiating conference held at Geneva in 1956, it will be recalled, the import trade of the participating countries in the items affected by the concessions negotiated was estimated at about $5,000 million.

The Conference has been phased into two parts. During the first phase—this will last up to the end of December next—the Contracting Parties will renegotiate with the six member-States of the European Economic Community (E.E.C.) individual concessions which they feel obliged to alter owing to changing circumstances since they were first negotiated. The Parties will seek to ensure that the tariff as it emerges from their negotiations is in conformity with Article XXIV of the G.A.T.T. which lays down that the creation of a customs union should not produce higher trade barriers than those formerly in existence in the individual members of the union. The second phase (from the beginning of 1961 to the middle of that year) will be taken up by negotiations among Contracting Parties for new concessions (including negotiations with the E.E.C. for concessions in its common external tariff) and by negotiations between the Parties and the countries in the process of acceding to the G.A.T.T. The six E.E.C. countries have already expressed their readiness to negotiate on a reduction of 20 per cent. in their tariffs. Similarly, the U.S. has expressed its willingness to bring down trade barriers; the officials have authority to lower tariffs on individual items by up to 20 per cent. over four years, though this authority is severely circumscribed by "peril point" provisions on "sensitive items" such as woollen textiles, chemical and pharmaceutical products and bicycles. On its part, Great Britain, too, announced sometime ago that it was prepared to lower its tariffs substantially in return for concessions from its trading partners.

Two important considerations have a bearing on the agenda for the Geneva tariff Conference. One, the present powers of the U.S. President under the Reciprocal Trade Agreements Act, enabling that country to participate in tariff negotiations, will expire on 30th June 1962; this means, in practical terms, that, during the tariff Conference, there will be Congressional authority for the reduction, by negotiation, of individual duties by as much as 20 per cent. Two, there is the need for completing negotiations with the E.E.C. before the end of next year, when, according to the timing provided for in the Treaty of Rome, the "Six" will start bringing their existing national customs tariffs into line with their new common customs tariff.

It will be premature to forecast the extent to which the import trade of the participating countries will be benefited by the concessions that will be negotiated at the Geneva Conference in the next few months. Much will depend on how the Conference will get over what are called the "limiting factors." In the course of an interesting article contributed to *The Financial Times* of London, Mr. Eric Wyndham White, Executive Secretary, G.A.T.T., points out, for instance, that, to the extent that negotiations are successful, they will play a notable part in minimising the possible disruptive effects of the co-existence of two distinct trade groups (the Six and the Seven) and facilitate, at the same time, an ultimate closer *rapprochement* which seems to be increasingly desired on both sides. The limiting factor, however, is that any tariff reductions negotiated between the two groups have, under the most-favoured-nation rule, to be extended to all other G.A.T.T. members. This would mean, in particular, that considerable indirect benefits would accrue to the U.S. which is a substantial supplier of products entering into intra-European trade.

Mr. Eric Wyndham White also refers to the move of the agricultural exporters to seek in the tariff negotiations a greater degree of access to markets for their traditional exports. "Tariff concessions," to quote him, "will not be of great interest, unless assurances can also be obtained that the concessions will not be frustrated by quotas, subsidies, minimum price schemes and other non-tariff measures." He further refers to the possibility of the less-developed countries, hitherto somewhat indifferent to tariff negotiations, modifying their position if the negotiations promise real benefits for their exports. The demands of these countries are expected to relate mainly to reasonable terms of access for their agricultural as well as manufactured products to world markets; mitigation of the Rome Treaty provisions which give preferential advantages to the overseas territories of the Six; strong pressure from countries like India and Brazil for reduction of heavy consumption taxes on tropical beverages (tea and coffee, in particular); and modification of the industrialised countries' traditional policy of granting free entry or low rates of duty for primary products while maintaining high protection on semi-processed materials.

In view of the important issues that will figure in the current negotiations, Mr. Eric Wyndham White cautions that one must not expect too much from the Geneva Conference by way of immediate outcome. He is, of course, confident that there will be some progress in tariff reduction, but, in his opinion, the basic issues and the shape of future solutions can only be outlined during the negotiation.

THE CODE AND SANCTIONS

The working of the Code of Discipline in industry, the efficiency of the sanctions for its enforcement and the need for additional sanctions, if any, are expected to come up for discussion at the eighteenth session of the Indian Labour Conference scheduled to be held at New Delhi on the 24th and 25th inst. It is more than two years now since the Code was accepted by the central organisations of workers and employers. Although this is too short a period for a new concept, with far-reaching aims, in a difficult field, to get firmly established, periodic review of its working will bring to light its defects and shortcomings and enable remedial steps to be taken.

The experience of the working of the Code, from 1st June 1958, when it is deemed to have come into force, to the end of December 1959, for which period data are available, indicates that the Code has yielded encouraging results both by reducing the number of man-days lost through work stoppages and by bringing about a general improvement in the climate of industrial relations. But the sporadic outbreak of strikes, which, unfortunately, still marks the industrial scene, and the mutual distrust that still prevails among employers and workers, do not warrant the conclusion that the Code has achieved the aims it has in view.

Much store is set by the Code in the Draft Third Plan, not only for securing a place in industry but also for obtaining higher levels of industrial efficiency. The Code, being no more than a gentlemen's agreement, derives its strength from the fact that its acceptance is voluntary. Its sanctions too are those voluntarily agreed upon by the parties. In spite of the existence of a Central Evaluation and Implementation Division in the Union Ministry of Labour, charged with the task of ensuring the implementation of the Code, and machinery at level of States to supervise its working, there have been charges and countercharges from both sides (employers' and workers' organisations) of non-observance of the Code. This is, perhaps, the reason why the State Labour Ministers, at a conference held early this year, suggested additional sanctions for enforcing the Code. They are reported to have recommended that the unions refusing to accept the Code should be denied the benefits of recognition and that, unless it was compulsory under the law, the Government should suspend its assistance to the recalcitrant employers and unions. They had also suggested that acceptance of the Code should be brought about by persuasion at the time of registration of a trade union and that legal provision should be made for prosecution of the parties concerned for breach of the Code.

Both the employers' and workers' organisations are reported to have opposed the suggestion for additional sanctions, legal or voluntary. While the former contend that the existing sanctions have not been invoked against the workers' organisations, the latter complain that they have not been applied against employers. But both seem to agree that there is no need for additional sanctions. A pertinent point that deserves to be considered is whether resort to compulsion is advisable in an agreement which is entirely voluntary. Legal compulsion runs counter to the concept of voluntarism embodied in the Code.

AGRICULTURE: TWO COMMITTEES

The move of the Union Government to constitute an Agricultural Commodities Advisory Committee and a Farmers' Advisory Panel, though belated, must be widely welcomed. The proposed Committee, according to Mr. S. K. Patil, Minister for Food and Agriculture, will be a permanent official body, like the Tariff Commission, which will advise the Government not merely on the price policy for agricultural commodities but also on all matters having a bearing on the programme of agricultural production. Disclosing this in the Lok Sabha, Mr. Patil said that it would consist of a full-time chairman and members representing the Food and Agriculture Ministry, the Planning Commission and the Reserve Bank of India. But the Farmers' Panel would be a non-official organ, comprising representatives of States and some independent economists. Both the Committee and the Panel are expected to "work together." Replying to questions by certain members, Mr. Patil said:

> "We want the whole of the agricultural production to be under constant survey. This will include distribution of land for certain crops and settlement of acreage for competing crops. Fixation of prices is only one of the things to be settled. The two committees will give us all that we need, in order that the whole compass of agricultural production will be under review. I am always of the view that no agricultural production will increase, unless the farmers are taken into the fullest confidence. It will be my endeavour to see that the Panel is not officialised."

These observations clearly emphasise the utmost urgency which Mr. Patil attaches to the task of stepping up agricultural production. If only the same sense of urgency had permeated the rank and file of officials connected with agriculture at the Centre and in the States, the performance on the agricultural front would certainly have been much more encouraging than what it has actually been. Notwithstanding the implementation of two Five-year Plans, the country has still not got out of the woods of agricultural shortages, as witness the spending of several hundreds of crores of precious foreign exchange on imports of foodgrains, cotton, etc. It is, indeed, gratifying to note that, since Mr. Patil took over the portfolio of Food and Agriculture, the approach to agriculture is being reoriented, although it is too early to say whether he will win the battle, what with the heavy odds he has to face in the shape of such ideological schemes as State trading, co-operative farming and ceiling on agricultural holdings.

A special responsibility will devolve on the proposed Agricultural Commodities Advisory Committee and the Farmers' Advisory Panel, for their recommendations will form the basis of agricultural development in the coming years. Readers will recall that the Draft Outline of the third Plan envisages a rise of as much as 30-33 per cent. in agriculture output, or an average rate of 6 per cent. per annum. This is a stupendous task which calls for a thorough streamlining of the administrative and organisational set up. The importance of such streamlining was forcefully stressed by Prime Minister Nehru, as well as by Mr. Patil, Mr. Punjabrao Deshmukh and Mr. Shriman Narayan, Member, Planning Commission, in their speeches at the Agriculture Ministers' Conference held at New Delhi on 26th and 27th August.

It is somewhat distressing to learn that, though more than three months have passed since the States were requested by the Centre to send their proposals for implementing the recommendations of the Nalagarh Committee, only the Punjab Government has sent its proposals so far. Unless the other State Governments also attach "very high priority" to this aspect and take energetic steps to improve the administration of their respective Agricultural Departments on the lines indicated by the Nalagarh Committee, the pace of operations of development schemes is bound to be slow. This is an aspect which cannot be too strongly emphasised, especially in the context of the swiftly increasing trend of population at the rate of 2 per cent. per annum, and t[illegible]

of carrying out the large-scale programme of economic development. No less urgent is the importance of providing, as Mr. Patil aptly said, a margin against various emergencies and imponderables like vagaries of weather and inflationary pressures generated as a result of larger investment. After all, the development of agriculture holds the key to the rapid development of the country in all other fields. Mr. Nehru certainly struck a note of realism, when he declared that "agriculture and agricultural production have become the pivot of all our work, programmes and plans."

D.V.C. MUDDLE

A close scrutiny of the working of the Damodar Valley Corporation in West Bengal, fashioned on the T.V.A. model, reveals trends which are, to say the least, distinctly unhealthy. There have been several cases of laxity in the administration. It is amazing that pretty little has so far been done to remedy this state of affairs. The public at large have, in fact, become somewhat apprehensive about the prospect of this project. The latest report of the Public Accounts Committee (1959-60) of the Lok Sabha, dealing with the accounts of the Damodar Valley Corporation for the year 1957-58, only confirms some of the worst fears of the public. Several glaring instances of gross negligence, financial irregularities and administrative lapses have now been brought to light.

What is more, the project has fallen far behind the purpose which it was originally intended to serve. In particular, the Committee has drawn pointed attention to the poor rate of utilisation of water for irrigation purposes. By 1958-59, the project was expected to irrigate 600,000 acres in the *khariff* season and 70,000 acres in the *rabi* season, according to the revised forecast of 1954. This target was drastically revised downwards in 1957 to 400,000 acres and 5,000 acres, respectively. Against this, the area actually irrigated in 1958-59 did not exceed 235,000 acres. The following table shows the forecasts made in 1954 and 1957 in respect of lands planned to be brought under irrigation during the second Plan period:

	Kharif (in acres)		*Rabi* (in acres)	
	1954 *forecast*	1957 *forecast*	1954 *forecast*	1957 *forecast*
1956-57 ..	200,000	45,000	20,000	..
1957-58 ..	400,000	75,000	50,000	..
1958-59 ..	600,000	400,000	70,000	5,000
1959-60 ..	800,000	600,000	100,000	20,000
1960-61 ..	840,762	800,000	130,000	40,000

In the light of this, it is difficult not to agree with the Committee when it asserts that "frequent revision in the targets of construction and provision of irrigation water is indicative of not only defective planning and insufficient application of the problems involved but also of inadequacy of measures adopted to reach the targets." The main difficulty in the way of utilisation of water, according to the D.V.C., is the absence of field channels, "a matter on which it had no control." The Committee has expressed surprise at the fact that the Secretary of the Ministry concerned was seized of this difficulty only at the sitting of the Committee. It has urged the Government of India to take up the matter with the State Governments concerned in regard to the early excavation of field channels. Emphasising the need for concerted efforts in this direction, it has reminded the State Governments that "the participating authorities have a responsibility to ensure that the objects for which the Corporation was set up are achieved."

Besides, the D.V.C. has not realised any irrigation revenue till the end of 1957-58. But it has claimed over Rs. 57.74 lakhs from the W. Bengal Government for the areas irrigated in 1957 and 1958. The Committee has given a timely warning that, if the matter is delayed further, the financial interests of the Corporation will be seriously jeopardised. No less deplorable is the fact that, though the project is in the final phase of its construction, the establishment expenditure has shown no corresponding reduction. Even at this stage, the administrative expenditure, according to the Committee, "persists in the upward direction, instead of registering a steep decline."

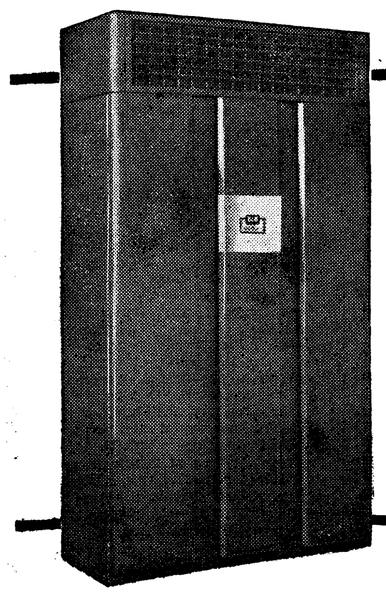
The report of the Committee contains a fairly long catalogue of infructuous expenditure incurred by the administration. Of these, mention may be made of the purchase of 300 rolls of recording tape for automatic recording, which was indented by a project manager at an estimated cost of Rs. 34,600 in June 1954. The indent was specifically marked 'immediate.' The supply of the tape was not made, however, until November 1955. The tape could not be used for the original purpose in Blow-know Batching plant, which was under construction at Maithon in 1954 itself. No doubt, the administration did use the tape in November 1957 for another work at Panchet, but "due to defective quality of the recording ink, the tape did not record readings satisfactorily and gave incorrect data." Yet another instance of ineptitude is that the actual working hours of about 100 machines used on the Panchet Hill Project between March 1956 and March 1958 were as low as 18 per cent. of the basic schedule hours. The percentage went down further to 8.09 in 1958-59. Obviously, the assumptions behind the calculation of basic schedule hours are unrealistic. In another case, the D.V.C. had to write off the entire cost of a jeep (Rs. 12,246) purchased in December 1950, which was stolen in October 1951. Although the jeep was insured, no policy had been issued by this time. The jeep was seized by the police subsequently. But, after protracted legal proceedings, the Corporation had to write off the value of the car, apart from spending Rs. 14,166 on legal and arbitration proceedings. The Committee feels that the case could have been handled in a more businesslike manner. It has also brought to notice several other cases involving mismanagement, faulty procedures in granting tenders, wastage on account of arbitrary decisions of officials and unsatisfactory nature of the accounts in certain respects, which are too numerous to enumerate.

The total capital expenditure on the main objects of the project, namely, power, irrigation and flood control, stood at about Rs. 116.20 crores at the end of 1957-58, the total amount being paid by the Central Government and the State Governments of West Bengal and Bihar. The participating State Governments have to make co-ordinated efforts at ensuring judicious use of the tax-payers' money. It is officially conceded in the Budget Estimates for the D.V.C. for 1960-61 that existing flood control capacity and water resources created by the D.V.C. is "inadequate to meet the current situation, as also the situation that can reasonably be envisaged to come into existence in the foreseeable future." In addition, one of the four proposed hydro-electric stations in the project has also been kept in abeyance for the present, even though it is now clear beyond doubt that there will soon be an acute power shortage in the D.V.C. area. It is regrettable that the project is nowhere near attaining the original targets in respect of irrigation, flood control and power. The earlier these defects are removed, the better.

RAILWAY RESEARCH

Research has an important part to play in the development of Indian railways. Indeed, in the context of the present foreign exchange difficulties, it is of crucial importance. By conducting tests on equipment and material for use by railways, investigating cases of operational failures and developing materials and processes for replacing expensive imports, the research wing of the Ministry of Railways can help increase efficiency and reduce operational costs as well as railways' dependence on imports. Since there is a large number of scientific research bodies in the country, both public and private, it is important to ensure that there is no duplication of work, for doing the same work in two different places is a waste of time, talent and financial resources. Avoidance of such duplication by proper co-ordination of efforts of the railway research organisation with other research bodies in the country is one of the principal objectives of the newly-constituted Central Board of Railway Research. The Board, headed by Mr. Karnail Singh, Chairman of the Railway Board, has 25 members, representing some of the national laboratories and scientific research bodies under the Central and State Governments, science faculties of Universities and private industries having research facilities. It proposes to bring together, from time to time, eminent scientists, whether they work for Government or private industries, for exchange of ideas and experiences.

Now made in India by
BLUE STAR
...the new WORTHINGTON
5-ton Packaged Air Conditioner



Supreme comfort for the home, office or shop! The new WORTHINGTON Packaged Air Conditioner incorporates all the most recent advances in complete packaged units: new compactness and beauty, greater silence, minimum maintenance, handy controls for fresh, clean air at all times. With optional accessories, it can even be used for heating purposes in cold weather.

Get complete details from BLUE STAR offices at

Lotus Court, Jamshedji Tata Road, Bombay 1
7 Hare Street, Calcutta 1
1/23B Asaf Ali Road, New Delhi 1

NO CHANGE IN RAW RUBBER PRICES

ADDITIONAL DEVELOPMENT CESS, HOWEVER, TO BE COLLECTED FROM CONSUMERS

THE Government of India has rejected the recommendation of the Tariff Commission for a slight reduction in the statutory price of raw rubber payable to the growers. It has decided that the price of R.M.A. grade I should continue to be maintained at Rs. 149.50 per 100 lbs. or Rs. 164.80 per 50 kilograms, f.o.b. Cochin, exclusive of the cess. Inclusive of the cess, the statutory price will continue to remain at Rs. 155.75 per 100 lbs. This price has been in effect from September 1955, following an increase of Rs. 5.75 per 100 lbs. granted in that month to cover the enhanced rate of cess, which was put up from As. 8 to Rs. 6-4 per 100 lbs. with effect from 1st August 1955. The price will continue to be in force up to 30th September 1963.

The Tariff Commission took up the enquiry in March 1960, following the Government's request in April 1959 on representations received from growers for a further rise in prices on the ground that the cost of production had increased considerably since 1955. The Commission recommended that the price of raw rubber R.M.A. grade I should be fixed at Rs. 146 per 100 lbs. or Rs. 160.94 per 50 kilograms, exclusive of cess and sales tax and that the prices of other grades, except that of preserved latex, should be fixed according to the grade differentials in force at present. The Commission also recommended that cess and sales tax, which had hitherto formed part of the statutory prices, should be excluded from the statutory prices, as these items are variable and do not strictly form part of the price. This is in deference to the representation made by the manufacturers. The Commission did not find any reason to change the present practice of fixing prices f.o.b. Cochin, as both the manufacturers and producers were satisfied with this practice.

The price recommended by the Commission (exclusive of cess and sales tax) would mean a reduction of Re. 1.50 per 100 lbs. from the present price of Rs. 147.50 per 100 lbs. (excluding cess and sales tax). If this recommendation had been accepted by the Government, it would have meant considerable hardship to the growers, however small the cut may be, in the face of rising cost of production and the upward trend in prices of rubber abroad. The growers will, therefore, be grateful to the Government, if not for not having received any increase in price asked for, at least for not having cut the price as recommended by the Commission. In rejecting the Commission's suggestion for a cut in price, the Government says:

"There is an imperative need to increase the production of raw rubber in the country by undertaking replantation on a large scale. In view of the widening gap between production and consumption and the prevailing price of rubber in the world market, any reduction in the price of raw rubber at this juncture, however small it may be, will have unhealthy repercussions on the industry."

The Commission's recommendation for excluding cess and sales tax from the statutory prices has not also been accepted *in toto* by the Government. It is proposed to exclude cess from the statutory price, but it will continue to form part of the statutory price for a short while until the Rubber Amendment Act 1960 is enforced. As regards sales tax, the Government considers that it will be in the interest of the producer and the manufacturer, if the price is fixed inclusive of sales tax.

In recommending a slight reduction in statutory price, the Tariff Commission was not unmindful of the need for a rapid increase in production of raw rubber and the possible effect the reduction in price would have on the expansion programme. It had, in fact, worked out that the amount required for replantation, in order to raise the average yield to 460 lbs. per acre in the immediate future, would be Rs. 16 per 100 lbs. at current costs. Out of this, Rs. 9 would be covered by the depreciation element, as against the present depreciation and rehabilitation allowance of Rs. 6.82. The Commission had recommended that the balance of Rs. 7 per 100 lbs. should be levied as developmental cess and recovered from the consumers, in addition to the existing cess. This additional developmental cess should be utilised for grant of substantial replanting subsidies by the Rubber Board. The Government has accepted this recommendation and, in fact, the necessary legislation to provide for the collection of additional cess has since been enacted.

In order to ensure that the additional development cess is properly utilised, the Commission has recommended that this amount should be funded and removed from the growers' control. This would also eschew any risk of misapplication. The Commission's apprehension may seem to be unjustified, but the experience elsewhere in the world, as well as in India during the last seven years, would appear to have confirmed the view that any excessive increase in price to the grower would retard the progress of replantation, particularly by the large section of small growers, as they would be increasingly reluctant to remove the existing over-aged trees.

The imposition of additional cess would mean an increase in the price which the consumer will be asked to pay, as will be seen from the following comparative table of net price receivable by the growers and payable by the consumers for R.M.A. grade I rubber (as recommended by the Tariff Commission):

(Rs. per 100 lbs).

	Estimate in 1952-53	*Present estimate for future*
Cost (including grade differential) ..	90.61	97.06
Less cess included	0.50	..
	90.11	97.06
Depreciation/rehabilitation	6.82	
Depreciation	..	9.00
	96.93	106.06
Interest on working capital	1.07	..
Return on gross block	37.50	..
Return on capital employed ..	..	40.00
	135.50	146.06
Ad hoc increase in 1955	12.00	..
Price receivable by growers	147.50	146.06
Sales tax	2.04	2.04
Cess (present)	6.25	6.25
Additional cess recommended	..	7.00
Price payable by consumer	155.79	161.35
or roundly ..	Rs. 155.75	161.25

Note: *For purpose of comparison, the element of sales tax has been taken on the same basis as in* 1952.

Explaining the apparent cut in price recommended by it for the producer of raw rubber, the Commission says that, even if the price retained by the grower appears to be less by Rs. 1.44 for the large units who pay tax on the present rehabilitation element of Rs. 6.82, there might even be a net advantage. It adds that the *ad hoc* price increase of Rs. 12 given in February 1955 gave a "comfortable cushion to the grower who had virtually received compensation in anticipation of cost increases which took place only by stages later on." "Taken in this context," it goes on, "the provision for the additional development cess of Rs. 7 is a liberal benefit to the growers."

So far as the consumer is concerned, the Commission considers the increase of Rs. 5.50 per 100 lbs. as a "reasonable premium for insurance of augmented supply of rubber at lower prices in future." It is of the view that the grant of a small increase in price for the consumer would not prove to be a burden either to the rubber manufacturing industries or their consumers. In order to satisfy itself on this point, the Commission had asked the manufacturers to evaluate the incidence of a hypothetical increase of, say, Rs. 10 per 100 lbs. in raw rubber prices on the cost of manufactures. It was found that, on the most important items, the increase in cost would be no more than 1½-3½ per cent. The incidence would, therefore, be much less on the basis of an increase of Rs. 5.50 per 100 lbs. recommended by the Commission. It is true that, on the basis of the price of Rs. 149.50 (inclusive of sales tax) to the grower, as fixed by the Government, the ultimate cost to the manufacturer of rubber goods would be Rs. 162.75 per 100 lbs., that is, Rs. 7 more than the present cost and Rs. 1.50 more than that recommended by the Commission. Even so, the incidence will not be heavy.

In working out the price payable for the grower, the Commission has taken into account a return of 12½ per cent. on the capital employed. This, it is convinced, should be adequate to provide for (1) managing agency commission, (2) taxation, (3) bonus, and (4) a fair margin for reasonable dividends. The Commission's estimates of future costs and profits are based on the actual production achieved in 1958-59 and, with the higher yield achievable during the price period, it feels that the industry should be able to get a better margin than the one which it has actually allowed.

THE STOCK MARKETS AND THE BANKS

From Our Own Correspondent

LONDON, *27th August*

LONDON LETTER

THIS week, the wheel has come round full circle in the stock markets from the high point at which it began to turn at the end of 1959. At that date, the *Economist* general stock market indicator registered an all-time high level, from which until early May this year a decline of nearly 12½ per cent. set in. From the low point of early May, the recovery has been, if initially erratic, continuous and the high point of eight months ago —involving a rise of 13½ per cent.—has been virtually recovered. At the latter part of the week, there was some recession and the market could stay dull in the absence of any fresh heartening factor, such as better trade returns.

The industrial share indices show virtually the same movement. That of the *Financial Times* recorded its highest point this year on 4th January at 343, whence it slumped four months later to 296, a drop of 13.7 per cent. The recovery at the middle of this week was to 337, a 14 per cent. rise. The *Financial Times* industrial share index actually recorded an all-time high in the middle of this week; its selection of 150 shares giving a higher reading than at the turn of the year.

The changes in the fortunes of the market over the past three and a half months have made extremely difficult the task of the joint-stock banks to restrict their advances in accordance with Government policy. It will be recalled that, as part of the Government's measures to restrict credit, they required the banks to deposit with the Bank of England 2 per cent. of their deposits, the intention being to force the banks to restrict advances, in order to maintain a sufficient proportion of liquid assets. In point of fact, the total of liquid assets has remained almost unchanged. A year ago, the figure was £2,280 million, against a total of gross deposits of £7,518 million. A month ago, the liquid assets had dropped to £2,259 million and the gross deposits to £7,247 million. Over the past month, gross deposits have dropped a little more and liquid assets have risen a fraction to give a 31.4 per cent. ratio.

The banks have, therefore, been successful in keeping the total of their liquid assets almost unchanged, although, over the past year, bank advances climbed from £2,615 million (mid-August, 1959) to £3,236 million in mid-July 1960. Nearly, £100 million of the jump was between June and July this year, at the very time when the Government was bringing pressure to bear to swing advances the other way. In the past month, advances have actually been reduced by about £40 million, but this is clearly not enough.

The Government could have applied its credit squeeze by direct injunction on the banks to restrict their advances. This method was repugnant to the banks and the Radcliffe Committee advocated its replacement by the technique of special deposits which would leave the banks free to set their cash ratios right with a little disturbance to business as possible. It was realised that the banks could always dodge a part of the pressure by selling Gilt-edged securities, in order to replenish their cash. It was not expected that they would, in fact, do so. Yet, in the event, this is exactly what has happened, the banks' holdings of Gilt-edged having been reduced over the past year from £1,685 million to £1,185 million. The unloading of Gilt-edged has been the means whereby the banks have been able to maintain their advances which in turn have helped to finance the private holding of stocks. Even, in the past month, the banks' holdings of Gilt-edged were reduced by a further £25 million and it seems pretty clear that the banks have felt under no obligation to squeeze their customers seriously. That was no doubt one reason for pushing up the Bank rate to 6 per cent., but, unless the banks take some more positive action, the Government will be constrained to adopt a tougher policy with them, unless, of course, the economic situation so develops that the Government will not want to restrict credit any further. In such an event, of course, the banks will enjoy the secret pleasure of considering the whole credit restriction policy unnecessary and their own practice better than the Government's theory!—*All Rights Reserved.*

EARNINGS AND EXPENSES OF BANKS

SPREAD BETWEEN LENDING AND BORROWING RATES STILL NARROW

THE reduction in interest rates on seven days' deposits and on 1-2 months' deposits effected by banks with effect from the 16th August once again raises the doubt whether this step alone, without an increase in the rates of interest on various types of advances, would help banks to improve their profit-margins. For the high-interest bearing deposits of banks are still growing at a rapid pace. The ratio of bank credit to deposits shows a fall from 70.8 per cent. at the end of 1956 to 52.2 per cent. as at the close of 1959. It has, however, risen since then to 57 per cent. as on 12th August 1960. What is more important is that the trend is somewhat vitiated by the flow of P.L. 480 funds into time deposits of the State Bank of India during the past two years. If allowance is made for this factor, the credit ratio of banks would be over 65 per cent. In spite of this high credit ratio, the earnings of Banks are not commensurate with the rising level of expenses, and do not enable them to earn a reasonable profit, which will allow them to build up their owned funds. This is because, despite the two cuts in interest rates on deposits, one in October 1958 and the other in September 1959, the spread between the rate of interest paid on deposits and the rate of interest charged on loans and advances has not widened to any worthwhile extent. This situation can be corrected only by a reasonable increase in the rates of interest on credit.

Profits Vitiated

It is true that the profits of banks, in general, for 1959 recorded a substantial improvement over those for the previous year, thus more than making good the setback witnessed in 1958. The apparent improvement in profits of banks does not, however, reflect the correct picture. It must be remembered that the year's profits include the tax paid at source at the rate of 45 per cent. on interest earned by banks on their investments, whereas the previous year's figures represented net interest earned. If allowance is made for this discrepancy, the increase in profits of banks would only be small, insufficient to make good the decline registered in the previous year. Even assuming that the profits for 1959 are comparable with those for the previous years, the fact remains that the pace of increase in profit was not commensurate with the growth of business. This is evident from a study of the earnings and expenses of banks from 1955 to 1959 contained in the *Statistical Tables Relating to Banks in India** for the year 1959 compiled by the Reserve Bank of India. This publication, which presents the statistics relating to individual banks and the banking system as a whole on the same lines as in the past issues, except that the data relating to co-operative banks have been reintroduced, provides a useful supplement to the *Report on Trend and Progress of Banking*, which was released in May last.

An analysis of earnings and expenses of banks shows that the cumulative net profit of Indian Scheduled banks, which had dwindled from Rs. 12.50 crores in 1957 to Rs. 10.50 crores in the following year, improved to Rs. 13.67 crores in 1959. The aggregate net profit of foreign Scheduled banks amounted to Rs. 2.64 crores, having risen from Rs. 2.19 crores to which level it had successively declined in 1958 from Rs. 3.54 crores in 1956; in 1957, the profit of these banks was Rs. 3.33 crores. While the current operating earnings of Indian Scheduled banks for 1959 rose by Rs. 11.37 crores to Rs. 83.17 crores as compared with 1958, the increase in current operating expenses (at Rs. 69.23 crores) was of the order of only Rs. 8.10 crores. In the case of foreign Scheduled banks, however, the profit rose, despite the fall in current operating earnings, as well as in expenses. This is because the fall in expenses was greater than that in earnings. Thus, their current operating earnings dropped by Rs. 66 lakhs to Rs. 15.32 crores, while the operating expenses declined by Rs. 1.22 crores to Rs. 12.86 crores.

A break-up analysis of the earnings given at the bottom of this page discloses that the bulk of the rise in current earnings of Indian Scheduled banks is accounted for by interest earned on investments, such having gone up by Rs. 6.70 crores to Rs. 22.09 crores, as compared with a rise of Rs. 4.65 crores recorded in 1958. The larger rise is, as already stated, mainly due to the fact that the earnings of 1959 include tax deducted at source at the rate of 45 per cent., whereas the previous years' figures represented the net earnings, though it cannot be denied that the substantial additions to the investment portfolio of banks during the year must have also contributed to the rise in interest earned. It will be interesting to note here that, but for the inclusion of tax deduction at source the rise in interest earned on investment would have been less marked. Interest, discount, commission, etc. earned on loans and advances and bills purchased and discounted also rose, but by only Rs. 3.86 crores (to Rs. 47.32 crores), as compared with the increase of Rs. 4.20 crores in the previous year, despite the substantially larger pace of increase in bank credit during the year as compared with 1958.

Expenses

On the expenses side, the interest paid on deposits, which had gone up by Rs. 7.09 crores in 1957 and by Rs. 9.17 crores in 1958, increased by a further Rs. 3.64 crores in 1959. The marked slowing down of the pace of increase on this account is attributed to the cuts in interest rates on deposits, once in October 1958 and again in September 1959 under the inter-bank Agreement. The effect of the cut in deposit rates would have been more favourable but for the continued expansion in deposits, especially in time deposits. Consequent on the increase in borrowings of banks, the outgo by way of interest paid on these, at Rs. 1.04 crores, shows a rise of Rs. 60 lakhs, in distinct contrast to the downward trend noted in the previous two years. The rising trend in establishment expenses was maintained, with a further increase of Rs. 2.89 crores (to Rs. 25.73 crores) during 1959.

A percentage-wise analysis of the earnings, expenses, net profit and allocations shows that the share of income from advances and bills of Indian Scheduled banks shows a decline from 60.5 per cent. of the current operating earnings to 56.9 per cent. This is the second year in succession to witness a fall in this ratio; in 1958, it had declined from 63.5 per cent. to 60.5 per cent., a trend which is distinctly contrary to the growth of bank credit. This clearly shows that the rate of interest on bank credit in this country is still very cheap and the profit margin of banks can be raised only by making borrowings from them dearer. Incidentally, it will also check borrowings for non-essential purposes. The corresponding ratio for foreign banks also shows a fall from 75 per cent. (in 1958) to 73 per cent. The share of interest earned on Government securities has increased from 19.2 per cent. to 24.1 per cent. in the case of Indian Scheduled banks and from 6.5 per cent. to 8.5 per cent. in the case of foreign banks. The share of earnings of Indian Scheduled banks from other sources (other than investments in shares and deposits with banks) continues to decline, having fallen from 20.4 per cent. in 1956 to 15.6 per cent. in 1959. This shows that there is scope for rationalisation of bank earnings in this direction.

Share of Interest Paid High

On the debit side, the ratio of establishment expenses of Indian Scheduled banks to their current operating earnings has fallen from 31.8 per cent. to 30.9 per cent., but this is obviously due to the marked rise in earnings, while that of foreign banks has risen from 30.4 per cent. to 31.1 per cent. The outgo by way of interest paid on deposits in the case of Indian banks, which had consistently gone up from 28.6 per cent. in 1955 to 42.4 per cent. in 1958, has shaded off to 41.0 per cent. in the year under review, at which level it is higher than that in any of the years preceding 1953. The fractional fall in the ratio during 1959 is due to the fact that the effect of the cut in interest rates on deposits has been offset, to a large extent, by the relatively larger growth in time deposits. Notwithstanding this decline, the bulk of the current operating earnings of Indian banks is taken away by interest paid on deposits, while it was not so until 1956. It is only during the last three years that the share of interest paid on deposits has exceeded that of establishment expenses and the spread between the two widened considerably in 1958. It, however, narrowed down by a fraction in 1959. This is not the case with foreign Scheduled banks, in which the ratio of interest paid on deposits to current operating earnings continues to be less than that of establishment expenses. The former ratio shows a slight fall in 1959 from 25 per cent. to 24.8 per cent.

Appropriation of Profit

The allocation pattern of net profit of Indian Scheduled banks shows that the provision for taxation constituted 29 per cent. of the net profit in 1959, as against 22.4 per cent. in 1958 and 32.6 per cent. in 1957. The transfers to general reserves was reduced from 14.9 per cent. in 1958 to 10.8 per cent., the share of dividend to shareholders from 31.3 per cent. to 28.5 per cent. and of bonus to employees from 17.2 per cent. to 14.5 per cent. while the allocation to other "special purposes" was raised from 13.1 per cent to 16.4 per cent.

That the rationalisation of interest rate structure of banks has been lopsided is evident from the following comparative statement of

(*Continued on page 444*)

TABLE I

Trend of Earnings and Expenses of Scheduled Banks

(In lakhs of rupees)

	Indian Scheduled Banks					Foreign Scheduled Banks

a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories ... manufacture plants for water treatment ... supply paper for a variety of uses ... make jute goods and steel castings and structurals ...

Birds have today launched on a programme of expansion to increase their output and service facilities ... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

EXPORT TRADE IN COTTON TEXTILES

MR. NEVILLE WADIA'S WARNING CAN BE IGNORED ONLY AT OUR PERIL

"THE trend of export trade in cotton textiles is disheartening"—thus described Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, in the course of his speech at the meeting of the Export Promotion Advisory Council held at New Delhi on Sunday last. This is a correct assessment. The actual shipments of piecegoods from India during the first half of 1960 were no doubt higher as compared with the corresponding half of 1959, being about 350 million yards, as against 306 million yards. But they are much below the level of exports, namely, 509 million yards, in the second half of 1959. Also, the exports in the first six months of the year were due, to a large extent, to the booking which took place towards the end of the year. In fact, the rate of textile export bookings in the first six months, according to Mr. Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, suffered a steep fall. Addressing the sixth annual general meeting of the Council in Bombay on Wednesday, 24th August, Mr. Wadia impressively highlighted some of the disquieting features in the textile export trade. He said:

"Foremost was our sharp setback in British West Africa, where we were down by almost 22 million yards (during 1959). Similar trends were noticeable in Ceylon, Indo-China, Indonesia, Madagascar and Morocco, although the quantum of drop was not as severe in these markets. Among the reasons attributable to this fall are the growth of local industries manufacturing the same bread and butter lines which we used to supply and the consumer demand shifting to finished goods. We must recognise the fact that we have not kept pace with the changing demands. The establishment of local textile industries is being vigorously pursued in Sudan, Ethiopia, British East Africa, New Zealand and Ceylon, with the avowed object of manufacturing mainly the essential requirements of these countries. In many cases, plans for self-sufficiency have reached advanced stages, as in the case of Ethiopia, and tariff walls are being raised to protect the nascent industry. These developments pose a challenge to the maintenance, let alone expansion, of our textile exports in the coming years and any complacency in our assessment of prospects will have disastrous results.

"At home, the situation has completely changed in 1960, due to the steep fall in the production of our cotton crop. The consequent rise in the prices of Indian cotton, together with the increased cost of production as a result of the Wage Board Award, has affected our competitive position considerably. This situation has been further aggravated by the unprecedented increase in the local prices of our textiles. Due to these reasons, the rate of bookings during the first half of this year has fallen steeply."

The Grim Fact

In the opinion of Mr. Wadia, exports of cotton textiles will suffer a serious decline during the remaining months of 1960 and it will be extremely difficult to forecast the figure of even 700 million yards which today seems optimistic. For, while India is likely to maintain its exports to the U.K. and the U.S. and probably Australia and Afghanistan, exports to the rest of the markets have been dwindling at a very fast rate; the troubled conditions in Africa "are bound to have their repercussions and the disturbing political and economic conditions are difficulties over which we have no control." To quote Mr. Wadia again:

"We can no longer expect to be competitive even in those countries where wages are very high and outmoded ways of production exist. This is a fact which cannot be too strongly emphasised, and Government, labour and millowners must recognise it and tackle the problem with determination. There is no time left for discussions. The facts are staring us in the face and, if we shut our eyes to them, we must accept the inevitable consequences."

This warning is not only timely but also very pertinent. It can be ignored only at our peril. The Indian cotton industry must either modernise and increase its productivity or face a shrinkage in the foreign exchange earned by it. The country surely cannot afford the latter. At no time in the economic history of India was the need for stepping up the export trade so urgent as it is today. With foreign exchange resources at a very low level (no more than Rs. 145 crores) and the pressing problem of financing the larger and larger imports required for economic development in the coming years, the export drive must be "aggressive," to borrow the phrase of Mr. Shastri. And cotton textiles constitute one of the three principal items (the other two being tea and jute textiles) which earn for the country much precious foreign exchange. Out of every Rs. 100 worth of goods exported in a year, cotton textiles account for as much as Rs. 10 -Rs. 11; the actual value of exports during 1959 was Rs. 66.14 crores, out of the total exports amounting to Rs. 615.78 crores (excluding re-exports). And for a long time to come, India will have to depend on its traditional exports for earning foreign exchange.

Mr. Wadia was right when he declared that India must be ready to meet the changing pattern of world trade in textiles by supplying its customers with ever-increasing quantities of finished cotton goods. The days when it can depend upon exports of greys will come to an end sooner or later. It would, therefore, be wise for the millowners to anticipate this event and prepare themselves from now on for facing that situation.

Why Separate Organisation?

Incidentally, Mr. Wadia revealed that the ways and means of setting up in Bombay an organisation to advise mills on latest trends were being considered by the textile interests. But one would ask: Where is the need for a separate organisation? Cannot the Export Promotion Council itself be entrusted with this task. In fact, one of the primary objects of the Council is to render such advice. Surely, the establishment of a separate organisation will entail duplication of effort and waste of expenditure.

Mr. Wadia, however, did well to stress that the most important factor governing export trade in cotton textiles pertains to price. He minced no words when he stated that, "while incentives have assisted us for the last 18 months, we must not rely upon them as a permanent solution to our problems; most important of all is to allow the industry to put its house in order —bring its machinery, plants, equipment and methods up to modern standards." It is disquieting to learn from Mr. Wadia that, although more than three years have elapsed since it was announced that the cotton mills could install 7,000 automatic looms for replacement and another 3,000 looms for expansion, barely a handful of looms out of these have been installed up-to-date and that, practically in every case, licences have not yet been issued. Some way must be found, as he rightly averred, "to clear the decks, so that automatic looms may be installed at the rate of at least 5,000 to 10,000 looms per annum, if we are not to harm our exports." In his speech at the meeting of the Export Promotion Advisory Committee, Mr. Shastri recognised the importance of introducing automatic looms in the textile industry, but he expressed himself in favour of linking up such introduction with the obligation to export a part of the production. We are tired of such verbiage, for this is not the first time Mr. Shastri has referred to this problem in this manner. The very fact that not much progress has been made with the installation of automatic looms calls for a fresh approach that would yield quick positive results. As the Minister in charge of textile industry since 1957, he has done precious little to rescue the industry from the rut into which it was placed by his predecessors.

Recent Trends

To revert to Mr. Neville Wadia's review of the recent trends in India's textile export trade. The review reveals that cotton textile exports during the year 1959, which were 814.60 million yards, have shown a very considerable improvement as compared with the 1958 figure of 587.22 million yards, an increase of 227.38 million yards. A number of factors helped India to achieve these results. The international trade itself increased marginally during this period. India's exports to the U.K. and the U.S. showed a marked improvement. The partial withdrawal of China from the international market, the 15 per cent. cut in the Japanese textile industry, the substantial fall in the exports of Britain and the U.S., the opening up of the Sudan, our second biggest market, the warm summer in Europe and the reorganisation of the Lancashire textile industry, all contributed to a larger demand for textiles from India in 1959. As compared with the first half of the year, when India exported 305.59 million yards, the second half was one of the brightest periods it has had. This was due to the upsurge in demand and, above all, to the increased incentives announced in May 1959. Without them, India would not have been able to take full advantage of the demand in the overseas markets.

During 1959, its biggest buyer was the U.K., to which destination it shipped 166.54 million yards. Last September, the textile industries of the U.K. and India entered into an agreement for limitation of exports from India to the U.K. The agreement was brought into operation from 1st January 1960 by the issue of licences for Indian cloth in the U.K. This agreement is co-related to a similar agreement entered into by the U.K. with Pakistan and Hong Kong. Under this agreement, the textiles to be exported to the U.K., which are to be retained within the country, are to be limited to 175 million square yards per annum. The agreement will be in force for three years, subject to the provision that a similar agreement operates for Pakistan and Hong Kong. India's exports to the U.K. in the current year have been ahead of the agreed quantum which has led to certain difficulties. Subsequent discussions have proved most helpful, with the result that the Cotton Board has agreed to implement clause 4(*d*) of the agreement and to issue 10 per cent. extra licences for 1960, which will solve the immediate problems to a certain extent. This quantity will have to be adjusted against next year's quota. India's total exports to Britain during 1960 are likely to be 250 million square yards, including cloth for processing and re-export.

India's second biggest market has been the Sudan. Upto July 1959, this market was virtually closed, but, when it was opened in the second half of the year, a large amount of exports took place. For the whole of 1959, India shipped to Sudan 149.62 million yards. However, in 1960, the offtake has been slow and it is facing severe competition in this market. Most disturbing is the fact that the Sudan Government is now permitting the import of Japanese goods below 35d. per yard. Hence, India must take steps to meet the resulting increased competition.

The third biggest market for India's cotton textiles is British East Africa. Though exports in 1959 were higher than in 1958, its share in the overall offtake of this market is steadily falling. Japan and other competing countries are meeting more and more of the requirements of this market. Further, the local production is replacing these goods which have been imported from India.

Australia

The Australian market, which stands fourth, has been steady throughout. The major difficulty in this market is the frequent reference to the Tariff Board of all textile items at the request of the local industry. Only recently, Mr. Wadia flew to Australia to give evidence before the latest Tariff Board Enquiry regarding the exports of sheeting and pillow cottons from India. However, it is hoped that India will be able to maintain its exports to this destination.

Burma has been a good market with 37.6 million yards. This year, however, India's exports have fallen, and are likely to be about half, unless there is some improvement hereafter. Malaya and Singapore have also been a good market during the year, the figures being better than those of 1957 and 1958. In Aden India has been going down over the years mainly due to the fact that Aden is losing its importance as an *entrepot* trade centre.

A very important market which was developed last year is the U.S. to which India was able to export 31.64 million yards. The previous best record was 4.10 million yards in 1956. Exports to this destination are being steadily maintained even during the current year. The millowners hope, therefore, to have entered this market in a promising manner and Mr. Wadia advised them to try hard and step up their exports to this market.

India's biggest loss has been in the British West African markets. Exports to these markets fell from 70 million yards in 1957 to 5 million yards in 1958 and still further in 1959 to 23.26 million yards. The reasons for this loss are: (1) a local mill supplying 60 per cent. of the grey baft requirements of Nigeria; (2) the loss of the grey baft and bleached shirting trade to China; (3) the loss of the drill trade to East Germany, and (4) the growing preference for finished goods and synthetic fibres. The Council, however, has decided that, with a view to developing the new and independent territories in Africa and markets like Libya and Tunisia, a delegation should be sent to these areas.

U.S. TARIFF ON TEXTILES

President Eisenhower has accepted the Tariff Commission's suggestion not to raise the existing tariff on imports of cotton textiles from India, Pakistan, Korea, Hong Kong and Japan. It will be recalled that the U.S. textile interests had pleaded for the imposition of an additional import tax of 8 cents per lb. on finished textiles to offset a subsidy of a like amount paid by the Department of Agriculture on exports of raw cotton.

TEXTILE DELIVERIES WELL TAKEN UP

EARNINGS OF MILLS EXPECTED TO IMPROVE NEXT YEAR

From Our Special Correspondent

MANCHESTER, *23rd August*

MANCHESTER LETTER

OFFICIAL figures showing the number of summer school-leavers who have taken jobs in the Lancashire cotton industry will be awaited with more than usual interest by employers and trade union representatives alike. With the "bulge" in school-leavers coinciding with the arrival of an increasing number of new industries in former cotton mills, thus intensifying the demand for young workers at a time when they are becoming more freely available, the extent to which the textile industry can attract boys and girls may well be a pointer to the attitude of parents towards the industry following the large-scale scrapping and subsequent re-equipment.

If the latest available figures are any guide, then the mills can look forward to an increasing number of young recruits. In the twelve months up to the start of the current holiday season, 2,539 school-leavers joined the industry. This was an increase of rather less than 200 on the previous twelve months. Trade leaders recognise that the improvement will need to be on a more substantial scale than this, if the industry's present lack of balance as between young workers and older workers is to be remedied.

Many firms in the industry are at present assessing their future needs of young workers. Since many of the new firms moving into Lancashire are engaged on a single-shift basis, and frequently offer prospects of employment in light and clean surroundings, cotton employers will need to campaign vigorously for their share of young workers and ensure that conditions and opportunities are appealing in a multi-shift industry.

Confidence in Current Conditions

Anyone whose duties call upon them to attend annual meetings of textile companies cannot fail to be struck at the moment by the confident tone of the speakers representing management. The results being discussed are certainly encouraging, after a year or two when the reports concerned have been less inspiring, but an underlying feeling of security which has often been absent in the past is now a feature of such gatherings.

The basic reason for this change of mood is, of course, the effective way in which redundancy has been tackled in the spinning and weaving branches, coupled with the large increase in activity which occurred last year. It is small wonder that company chairmen and their colleagues can afford to smile in the present circumstances when order lists are long, deliveries are well taken up and any clouds on the horizon are still no bigger than the proverbial man's hand.

According to the latest comparative returns covering the whole of the textile industry, including clothing, the volume of orders held at the end of the half-year showed a slight rise, but this is, to some extent, explained by the sharp reduction in deliveries during June caused by the Whitsuntide holidays. Production of made-up clothing in May and June increased by about 8 per cent. as compared with the previous year and this rate of improvement was maintained throughout the first six months of 1960. The Whitsun break was also responsible for a 5 per cent. drop in output in the cotton trade in June.

Thoughts on Supplies

Amid such an atmosphere of prosperity, it is hardly surprising that few voices are raised against the current mood of optimism, warning that the prospects may not seem quite as bright as they are painted. Mr. W. T. Shackleton, Vice-Chairman of the Taylor and Hartley group, without in any way prophesying a severe relapse, put a few thoughts into words at the annual meeting last week. His theme was the general increase in supply throughout the industry, not only arising from the anticipated improvement in output from modernised machinery but mainly due to the big rise in foreign cloth imports.

As is known, production of cotton and rayon fabric in this country was fully maintained during the first half of this year as compared with the same period in 1959. With the wider installation of modern machinery and the gradual introduction of shift-work, the volume of goods available should increase, despite the smaller labour force.

The vital factor is the additional cloth acquired from foreign sources. In the first six months this year, an extra 130 million yards has entered British ports and the quantity of cotton and man-made fibre fabrics now being imported is running at a rate of approximately 750 million yards a year. If this inflow is no more than maintained, the inevitability of available supplies exceeding the demand cannot be ignored. On the other hand, the rate of consumption could itself show an improvement in the future. Wage rates are increasing and the effect of the credit squeeze tends to divert surplus cash from some of the larger durable goods to the consumer range, including textiles.

No Effect on Output

Cotton Board returns confirm the established fact that, despite the large number of mills which closed their doors in the early part of the current year, output of yarn and cloth in Lancashire was not affected. Outsiders might have anticipated that the elimination of so much machinery would have resulted in a severe curtailment of production, but the switch to more efficient working has more than compensated for any stoppage of plant. In any case, a substantial proportion of the scrapped machinery was already idle.

The expansion in demand which occurred in the second half of last year had a great deal to do with the scale of output in the first half of 1960. The following table indicates the sectional position, with recent comparative figures:—

	1st half of 1960	*1st half of* 1959	*Total* 1959
Cloth (in million yds.)			
Cotton	674.61	680.33	1,336.80
Man-made	272.93	253.85	506.56
Mixtures	45.78	42.35	83.76
Total ..	993.32	976.53	1,927.12
Yarn (in million lbs.)			
Cotton	252.32	253.63	507.50
Spun rayon	58.52	51.92	106.30
Mixtures	16.64	18.32	37.76
Waste	58.07	53.94	106.53
Total ..	385.55	377.81	758.09

Such actual gains as have been recorded so far in 1960 as compared with last year have been admittedly in the man-made fibres branch, but the output of purely cotton yarn and cloth is only fractionally below the level ruling twelve months ago. It is reasonable to predict that this rate of output can be well maintained in the months ahead, provided demand is equally insistent. As mill managements move over to modernised equipment and shift-working is extended, the improvement in the overall production should reach a higher level.

At the end of the first six months of the current year, the total available manpower on the books of employers in spinning and weaving was 184,450, which represents a fall of over 17,000 as compared with twelve months previously. During the half-year, the drop in the labour force was approximately 8,000. The major decline occurred in spinning, where manpower has been cut by nearly 12,000 in the past twelve months, while, in weaving, the reduction has been 5,760. In both waste spinning and doubling, the numbers now available for employers are more than at the end of the first half of 1959.

Shareholders to Benefit?

An encouraging account of current conditions in the cotton industry led by Mr. W. T. Sutcliffe, Chairman of Taylor and Hartley (Textiles) Ltd., to predict that benefits would accrue to shareholders next year when he addressed the annual meeting at Westhoughton last week. "We can look forward with full confidence to a really successful year's trading," he said, and added: "I should say without doubt that there will be an increase in the current rate of dividend."

The scrapping of 40 per cent. of the firm's machinery under the redundancy schemes in the spinning and weaving sections of the cotton trade would not benefit the company financially from the compensation aspect, Mr. Sutcliffe said, as substantial sums would have to be paid out in levies. On the other hand, considerable gains would be derived from the better trading available for the reconstructed industry in its more efficient form.

Resolutions were approved at a special meeting, enabling a capital repayment of 1*s.* per share to be authorised.—*All Rights Reserved.*

RAW COTTON SITUATION IN COMMUNIST COUNTRIES

CHINA, WORLD'S SECOND LARGEST PRODUCER

IN spite of the limited trade between the free world and the communist countries in raw cotton, the raw cotton situation in the latter is of considerable importance to the former. Free world exports to communist countries, averaging about 1.5 million bales during the past few seasons, have been of mutual benefit. At the same time, it has also introduced an element of uncertainty in the free world cotton situation. The development of trade in cotton with communist countries has, in the past, been related to the tendency for consumption to exceed production in these countries. This imbalance is likely to persist for some time more. It is, therefore, essential, according to the International Cotton Advisory Committee, Washington, that the free world countries should be ever vigilant of the raw cotton situation in communist countries. It has a direct bearing on the trade in cotton of free world countries.

According to the Committee, raw cotton situation in the Soviet bloc is one of continued progress in all sectors. The increase in cotton production in the communist countries during the decade 1949-50 to 1959-60 has been phenomenal. At an estimated 16 million bales (of 478 lbs. each), production in 1959-60 was almost three times as much as in 1949-50. The U.S.S.R. and China produced between them as much cotton as all the rest of the world (excluding the U.S.) put together and 2 million bales more than the U.S.

It is incredible but true that communist China, with an estimated output of 9 million bales, has become the second largest producer of raw cotton in the world, next only to the U.S. China claims that cotton production in 1959-60 reached the target, despite the severe drought in the North Central region, wherein lies the main cotton growing areas. The target for 1962 is set at 11 million bales.

The expansion of cotton production in the U.S.S.R. has been almost as striking, with production in 1959-60 reaching a record 7.2 million bales, almost double what it was ten years ago. There has been, however, a noticeable loss of momentum in recent years and the annual rate of increase will have to be stepped up considerably, if future production targets are to be reached. Plans are for an increase in cotton production of between 20 and 30 per cent. from 1959 to 1965. Cotton production in the past has been encouraged by relatively high prices which have apparently acted as a disincentive for farmers to lower costs of production by such means as introduction of mechanical harvesting. Official thinking is currently in favour of cutting cotton prices, so as to stimulate production by inducing farmers to use machinery on a larger scale and more efficiently. Some progress along the latter lines became obvious in 1959, in which year about 330,000 tons of seed cotton in Uzbekistan, the main cotton growing republic, or 10 per cent. of the crop, were harvested mechanically, as against only 65,000 tons in 1958.

Expansion of the cotton textile industry in the communist countries over the last decade have been equally spectacular. Cotton consumption, now estimated at over 17 million bales, is 10 million bales more than in 1949-50. Consumption during 1959-60 is expected to have set new records in all countries. China claims that its consumption of cotton last year almost equalled that of the United States, while the U.S.S.R., it is said, now consumes more cotton than the United Kingdom, Germany, France and Italy taken together. Consumption in Eastern Europe is expanding every year and is approaching double what it was ten years ago.

The following table indicates the supply and distribution of raw cotton in the communist countries:

(In million bales of 478 lbs. each)

	1950-54 (average)	1957-58	1958-59	1959-60
Supply:				
Stocks	1.8	2.6	3.2	3.5
Production	10.4	13.8	15.7	16.3
Of which:				
U.S.S.R.	5.7	6.9	6.9	7.2
China	4.5	6.8	8.7	9.0
E. Europe	0.2	0.1	0.1	0.1
Imports	0.5	1.5	1.5	1.5
Total ..	12.7	17.9	20.4	21.3
Distribution:				
Consumption	10.8	14.5	16.5	17.2
Of which:				
U.S.S.R.	4.5	5.8	5.9	6.0
China	4.7	6.8	8.5	9.0
E. Europe ..	1.6	1.9	2.1	2.2
Exports	0.2	0.2	0.3	0.3
Total ..	11.0	14.7	16.8	17.5

All indications, according to the Committee, point to the continuance of the aforesaid trends in the foreseeable future. In the U.S.S.R., the current seven-year Plan, ending in 1965, envisages a substantial increase in textile production, of which 43 per cent. will originate in new plants. This, adds the Committee, explains Soviet Russia's concerted drive to buy textile machinery abroad.

Despite the increase in cotton production in the U.S.S.R., the expansion in textile production *plus* the continued heavy dependence on Russian cotton by Eastern Europe and exports of about 300,000 bales to other countries have compelled Russia to import a substantial volume of cotton from the rest of the world—about half a million bales in 1958-59, for example. The continuance of such imports, which has now become so important to cotton trade outlook of the supplying countries, will depend primarily on the relative growth of production and consumption within the U.S.S.R. Production is a key factor, in that, during the past few years, the rate of expansion in consumption in the U.S.S.R. has tended to exceed the rate of increase in production. As long as this situation persists, the Committee maintains, import of cotton by the Soviet Union from the free world countries will continue to be substantial.

In China, the targets for 1962 under the second Five-year Plan suggest that an increase of up to 10 per cent. in production is in prospect for both cotton yarns and piecegoods. The raw cotton situation in China, as it concerns the rest of the world, is enigmatic as ever and yet it is of vital importance to certain countries. During the 1958-59 season, China imported almost a quarter of a million bales of cotton from the rest of the world, mainly from Egypt and Pakistan and, to some extent, from Sudan, Mexico, and India. Imports during the 1959-60 season is expected to have been somewhat lower, although shipments from Egypt are expected to have been substantial.

Raw cotton production has a direct bearing on production and exports of cloth from China which has of late caused considerable anxiety to cotton cloth exporting countries like India. Exports of cotton piecegoods from China in 1958-59 were about three to four per cent. of total Chinese production and about five per cent. of the total world trade in cotton textiles. It is impossible to predict future trends of exports, especially of a country where normal interplay of supply and demand is subjugated to central direction. The rate of production of raw cotton may provide some indication of the probable trend of exports. If production continues to increase, there will be two alternatives for China: (1) to expand raw cotton exports or (2) increase domestic consumption. If the second course is resorted to and assuming internal rationing is not relaxed, more cloth will become available to continue the trade offensive in overseas markets. In any event, concludes the Committee, cotton situation in China will continue to merit the closest possible vigilance by the rest of the world. It may be noted that precisely the same conclusion was also reached by a special report on the world textile market considered by the G.A.T.T. early this year.

Some new varieties of cotton have been evolved under the Indian Central Cotton Committee's scheme for breeding some strains suited for the Tungabhadra Project cotton-growing tract. One of them is a strain highly resistant to the bacterial disease known as "blackarm." Though late-maturing and somewhat of a poor yielder, its ginning percentage and staple length is stated to be satisfactory. Another is a strain isolated from an interspecific hybrid obtained from Surat for its high resistance to jassid, combined with good staple and ginning.

The lands of the Tungabhadra Project ayacut contain 80 per cent. black soil and 20 per cent. red soil. Usually, under the uncertain rainfall conditions in these parts, emphasis is laid on the drought-resistant nature of the crops. But flow irrigation has changed the face of things and the cultivator, who concentrated on saving his crop from drought, is now to attune himself to the new set-up in cultivation. Attempts were made not only for breeding cotton suitable for cultivation but also to resist pests as well as "blackarm."

The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
M A D R A S-1.

Dear Sir,

There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-58. We are operating them on mofussil routes and none has experienced any major breakdown so far.

Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.

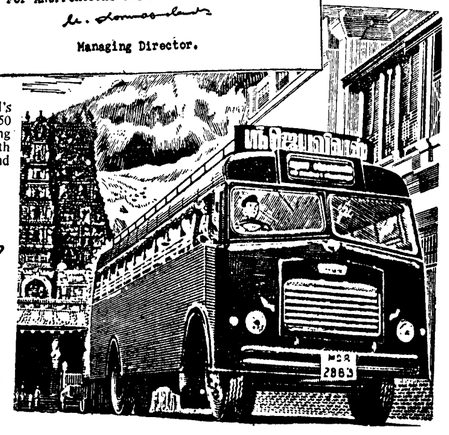
In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.

Thanking you,

Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,

Managing Director.

We thought you might like to read this



This testimonial explains Leyland's enormous popularity in over 50 countries in the world. The exacting standards of precision combined with fine craftsmanship makes Leyland the most wanted vehicle today.

NO DECONTROL OF SUGAR AT PRESENT

FOREIGN EXCHANGE REQUIREMENT GIVEN HIGHER PRIORITY

SUGAR will continue to be subject to distribution and price controls during the ensuing season also. Addressing a meeting of the Informal Consultative Committee of the Union Food and Agriculture Ministry at New Delhi on 24th August, Mr. S. K. Patil explained that, "for the present, it is desirable to retain the existing framework of controls, particularly in view of the possibility of export." He, however, added that the State Governments would be asked to review distribution arrangements with a view to liberalising the system within the overall framework of control. Echoing these words two days later—on 26th August—Mr. M. V. Krishnappa, Deputy Minister for Agriculture, rejected the plea for immediate decontrol of sugar. Replying to a question put by several members in the Lok Sabha, Mr. Krishnappa said:

"While production of sugar has increased by 500,000 tons during 1959-60, the question of decontrol is linked with that of exports. Other implications of decontrol will also have to be considered carefully before taking a final decision.... Although the Government is in a position to lift controls, there is need for caution. Among the factors to be considered are the possible production next year and also the success of the (standing) sugarcane crop.... The price of Indian sugar is much more than the international price. India has therefore, to look to countries which will be prepared to pay higher than the international rates."

The unwillingness of the Central Government to abolish controls on distribution and prices of sugar even with effect from the coming season is surprising. If the Government spokesmen had stated that it was too early to decide the issue of decontrol, one could appreciate their stand, but the categorical statement that there would be no decontrol even before knowing the size of sugarcane crop and other factors from which one can approximately estimate the production of sugar in the next season shows that the issue has come to be decided by considerations other than those pertaining to domestic demand and supply. The only consideration that weighed with the authorities in clamping down controls on sugar last year was the need to check the spiralling of prices as a result of the tight statistical position of sugar and the all-round increase in commodity prices. The question of sugar export had not arisen then. It will be recalled that, on more than one occasion in the recent past, Mr. Patil had reiterated his determination to end controls on sugar. Inaugurating the twenty-seventh annual general meeting of the Indian Sugar Mills' Association held at New Delhi on 31st March 1960, he clearly declared: "The sooner controls go, the better. When the time comes, controls will not remain for 24 hours."

Shift in Emphasis

This journal welcomed the aforesaid statement of Mr. Patil and pointed out that, since the time for decontrol of sugar during the 1959-60 season was over, controls must be done away with shortly after the commencement of the next crushing season (November 1960). The underlying idea in this suggestion was that decontrol would serve as an incentive to sugar mills to buy sufficient sugarcane in competition with *gur* and *khandsari* manufacturers and thereby raise their production further. We had also stated that, in the light of Mr. Patil's observations, the sugar industry could conveniently proceed on the assumption that sugar would be free from controls very soon after the beginning of next season, provided the cane crop position happened to be satisfactory. But now comes the statement of Mr. Patil that the existing framework of controls should be retained, particularly in view of the possibility of export. In other words, the Government has decided that, even in the matter of an essential item of food as sugar, exports should be given a higher priority than domestic consumption. Such is the serious plight of the country in regard to its balance of payments position.

There has been a marked improvement in the sugar supply position, thanks to the appreciable rise in output—from 1.91 million tons in 1958-59 to 2.41 million tons in 1959-60. The total closing stocks of sugar with mills at the end of the current season, that is 31st October 1960, are expected to be of the order of over 500,000 tons, as against 174,000 tons a year before. And, according to the Food and Agriculture Minister, the improvement in supply will gather further momentum in the coming season also. Speaking on the occasion of the first Farmers' Day celebration of Tiru Arooran Sugar Factory at Vadapattimangalam near Tanjore in the Madras State on 18th August, the Minister said: "... Before the end of the current year, I am sure of a further appreciable rise in our sugar surplus." When the Government of India is thus convinced about the highly encouraging sugar supply position, it must unhesitatingly announce decontrol at the opportune time. By doing so, it will surely ensure a larger availability of sugar for domestic consumption and enable the sugar mills to take full advantage of the freedom to buy cane in competition with *gur* and *khandsari* manufacturers. If the Government refuses to lift controls on sugar even during days of plentiful supplies and attempts to export the commodity, there will absolutely be no chance of the consumer getting his requirements of sugar at an economic price. For continued retention of controls restricts free movement of sugar from region to region and gives persistent scope for black markets, while sugar exports will impose an additional direct burden on the consumer because of the need to give a sizable subsidy on sales of sugar abroad in the form of higher internal prices.

No one will, of course, object to sugar exports, if the output is higher than domestic needs and if the commodity is in a position to compete in world markets from the point of view of both quality and price. Mr. S. K. Patil was, therefore, right in urging a higher target for sugar production in the third Plan. Speaking at Vadapattimangalam, he observed: "I would like the Planning Commission to revise the target of sugar production in the third Five-year Plan from three million tons to four million tons, since, with increased production, one can export sizable quantities of sugar to foreign countries and earn the much-needed foreign exchange to get adequate quantities of fertilisers which are in short supply in our country." Besides helping to promote exports, an upward revision of the production target for sugar is wanted for three other reasons: to meet fully the nutritional requirement of sugar estimated at 23.00 lbs. *per capita* (as against 13.87 lbs. assumed by the Planning Commission); to provide for a probable increase in consumption of sugar, if its price is brought down to a reasonable level; and to earmark a portion of sugar output for purposes of buffer stock.

Alongside an increase in the production capacity of sugar mills, energetic steps must be taken to augment productivity of cane lands. Mr. Patil did well to emphasise this aspect when he inaugurated the Amaravathi Co-operative Sugar Factory on the Udumalpet-Palni Road (55 miles from Coimbatore) a fortnight ago. He observed:

"Unless the sugar yield per acre is increased and brought to 3-4 tons—the present yield is only 1.45-1.50 ton—Indian sugar can never become saleable in the world market. In Java, sugar output per acre is five times and, in Formosa, it is four times that of India. Really the price of sugar there is half the cost of production in India. They pay for sugar what we pay for sugarcane in India. We have to sell sugar at a subsidised rate. We have to increase the yield by a liberal use of fertilisers which we do not use even to the extent of 25 per cent. of what is being done in America or Japan. We must use fertilisers scientifically."

If the price of sugar is to be lowered, it is imperative that the incidence of cane cost should be reduced partly by stepping up the per-acre yield of cane with richer sucrose-content and partly by replacing the present defective method of paying for cane on the basis of weight alone by a system which takes into account the quality of the cane also. It is equally imperative that the incidence of tax burden on sugar, which comes to as much as 35 per cent. of the cost to the consumer, must be brought down.

NEED FOR NEW THINKING ON PLANTATION HOUSING

By V. I. Chacko

A SENIOR estate manager complained the other day that a group of children roaming through his fields were found to have damaged the standing flush on his teas on both sides of the estate paths as long as their sticks would reach. But that was not all or by any means the first complaint of juvenile vandalism in plantations. Many new houses have been found with destroyed windowpanes, plantings in the nursery uprooted, shade baskets over plants removed and thrown away, taps left running, signboards damaged and senseless damage of various kinds done to plantation property. Where the offenders are caught red-handed, their parents have shaken their heads and pleaded inability to control their children. Of course, plantations are not the only places where children have become unruly and not amenable to parental or other discipline. But, there is a substantial difference between children roaming at will and doing such damage as their fancy takes on a plantation and they doing the same in their own houses or in the streets. Plantations are productive premises and are on par with mills or factories, although this fact is not commonly recognised.

Damage done to estate property by workers' children is not the only reason why many thoughtful men in the industry are venturing into fresh thinking on labour housing in plantations, as the increasing number of children on the estates and the difficulty of controlling them provide a starting point for this process. For the 151,305 workers covered by a recent U.P.A.S.I. study on plantation housing in South India, it was found that there were 138,804 dependents, most of them children residing with the workers on the estates.

Cost of Housing

The plantation industry has always provided housing facilities to its workers. The standards of these houses have varied from estate to estate or from district to district, but the managements have always taken the provision of this amenity as their accepted obligation. The houses they provided have invariably been of better standards than those commonly available for the same community of workers in their own villages. The ratio of workers to dwellings was 3.6 to 1, as compared with 5.6 per dwelling in the industry in 1951. But that is not saying very much for plantation housing, although it must be recognised that standards varied very widely in quality and size between the more advanced managements and the backward units. For the first time, a decision was reached in 1950 to provide housing of minimum standards specified for labour, with managements being left free to improve upon the standards. The cost of providing standard housing in the North and South Indian plantations during the past ten years is variously estimated at between Rs. 16 and Rs. 20 crores. This is a very considerable outlay, when it is realised that fresh investment inflow into this industry has not been a tenth of the sum expended on this one single amenity of better housing.

Plantations were originally opened up in areas with no settled population. The Kanan Devans, Anamallais, Nilgiris, O'Valley, Nelliampathis, etc., were unopened jungles a century and half ago. Workers recruited in the rural areas needed housing and the pioneering planters provided such shelter from the wind and cold as they could in the circumstances prevailing then. Every large estate of today was at one time a few acres of cleared land in the jungles. The workers' houses thus grew up along with the expansion of the plantations, haphazardly and with no planning in advance with any of the considerations that became general during the past twenty or thirty years.

During the last ten years, the question of housing in plantations became recognised as being closely tied to certain fundamental rights of the workers. The fact that the workers do not pay for their accommodation does not affect their rights. The location of the houses of workers within the operational premises of the undertaking has complicated matters. The workers claimed, and they could not, of course, be denied, the right of free movement within the plantations where they lived. Nor could the free and unfettered entry, movement and exit of their friends and relatives be denied. Their freedom of expression and their rights to propagate their views among the resident labour could not be denied. Not only meetings were formally held within the estate premises, outside of working hours, but quite frequently from house to house, at any time and any place. The breakdown of work discipline could not be corrected, because the defiance and challenge of management authority took place right within the estates. So long as workers had free movement within the estates, their entry and exit during any part or right could not be questioned. In many areas, this facilitates very considerable pilferage of crops and other goods and complicates the problem of detection. Domicile within the premises of a plantation would not take away from the workers rights to which they would have been entitled outside in their own homes. Employers' respect for this right could not but lead to what has now become a series of associated problems. The workers were entitled not only to the exercise of social freedom and political rights, but also to modern amenities prescribed by law or as a result of agreement reached between workers and management or enjoyed by convention. For instance, it has become quite common to find the planted area surrounding their houses retreating before the workers' vegetable patches, their cattle roam freely on the fields, damaging the plants, fences, roads and labour quarters, besides making their surroundings unsanitary.

The expansion of labour housing was an evolutionary process, keeping pace with the expansion of the estate concerned. The location of the workers' dwellings on estates, therefore, followed the pattern of field extension and the resulting spread of workers' quarters, scattered haphazardly over a whole estate, made medical supervision, environmental sanitation, water-supply, educational and creche facilities far more costly than they need have been. Estate managements cannot think of civic planning with labour houses so widely dispersed. On top of all this came the provision of educational facilities on the estates, influx of dependents from the plains, the non-employment of children and the supply to them of more calories than they could burn in their schools. This has brought to a head behavioural problems of the kind described at the beginning of this article.

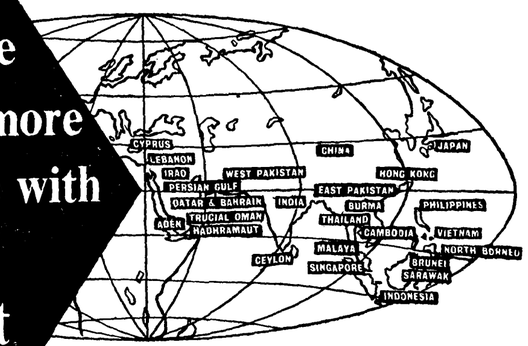
A Future Necessity

Labour housing in plantations is far superior to anything similar labour is offered elsewhere. The cost of housing per labour family fairly is upward of Rs. 2,500, without the cost of the land. During the last eight years, the industry has been diverting a good proportion of its substance to provide standard housing. A reorientation of housing policy would impose extremely heavy burdens. The haphazard growth of workers' housing and its high cost and inconveniences are recognised, but the acceptance of a new policy would involve not only cost and long-term planning, but new organisational patterns within the industry.

It is quite clear that the presence of cattle cannot be prevented as also damage to plants therefrom, so long as workers live within the estate premises. Similarly, encroachment on planted tea, utilisation of suitable planting land within the fields for labour house construction cannot be checked or avoided and control over environmental sanitation cannot be satisfactorily enforced so long as workers live within the planted fields. Apart from natural growth, there were other contributory causes for the rise of the system by which workers' quarters came to be scattered into different fields. But those considerations are no longer valid. The spread of individual estates and their location relative to their neighbours make joint planning in housing, education and medical facilities, community welfare measures, water-supply and lighting, the centre for infant care, etc., a future necessity.

Trade with Eastern countries is ever on the increase. An efficient world wide banking service with expert knowledge of market conditions is essential to develop trade. The associated banks, The Chartered Bank and The Eastern Bank Ltd. with branches in almost every commercial centre in the Middle East, South East Asia and the far East are fully equipped to provide complete Banking facilities to every trade and industry.

More and more trade with the East



Let your worry be our pleasure.

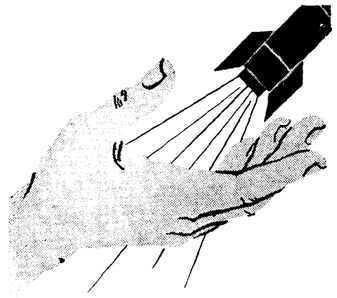
which together have a complete branch service in The East extending from Cyprus to Japan.



New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.

Today, man has travelled far on the road of knowledge: today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

FIBRES IN THE FIFTIES

MARKED GROWTH IN NEW FIBRES

[The story of growth of chemical fibres and their potentialities is a fascinating one, a subject in which India is vitally interested, as it is one of the largest producers of textile goods. Although this journal has carried articles on this subject from time to time, a comprehensive survey of the latest trends will still be found useful and interesting by its readers. Such a survey is provided by the Bank of Nova Scotia (Canada) in one of its recent issues of Monthly Review and is reproduced below, by the courtesy of the Bank. In this article, the Bank has described production and consumption trends of the main textile fibres during the decade of the fifties, discussed the growth of competition among the various fibres and the trend of prices, touched the recent technical progress in the industry and made a few observations about the shape of things to come. It will be noted from the article that increases in national incomes and living standards usually result in a larger demand for chemical fibres.—ED.]

THE phrase "miracle fibre" is disappearing from the textile vocabulary. Many of the newer man-made fibres have become almost as familiar as rayon. This is true not only of nylon, the first and still the most important of the true synthetic fibres, but of the polysters such as Terylene and Dacron, the acrylics such as Orlon and Acrilan, and textile glass. Total production of the group (excluding textile glass, for which complete figures are not available) has increased more than tenfold in the past decade (see Chart).

The true synthetics still, of course, make up only a small fraction of world output of the main fibres—4 per cent. in 1959 as compared with 10 per cent. for wool, 18 per cent. for rayon and acetate, and 68 per cent. for cotton, which is still overwhelmingly the most widely used of all. Nor have these older fibres been standing still while the synthetics have been forging ahead. For one thing, there are many less-developed parts of the world where an important element in rising standards of living is the increasing use of the older fibres and where such items as the nylon stocking are virtually unknown; and, even in the sophisticated North American market, the synthetics have by no means had it all their own way. Thus, during the fifties, world output of wool has increased by close to 40 per cent., output of cotton by about 50 per cent. and output of rayon by fully 100 per cent. Total world fibre output, which did not regain the pre-war (1937) peak until 1951, is now nearly 45 per cent. above it, having increased by rather more than 60 per cent. in the decade.

Inroads of Substitutes

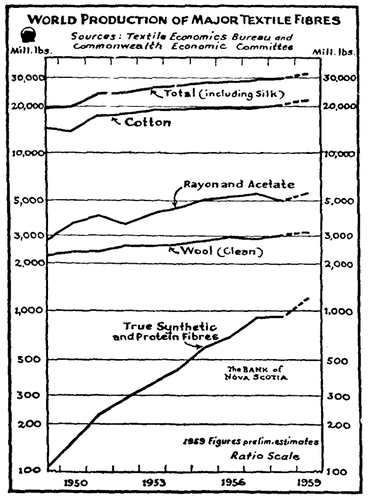
Striking as this gain is, it is worth remembering that various factors have been working to hold down total consumption of fibres. As incomes have risen in the industrialised countries, a smaller proportion has been spent on clothing, and a larger proportion on durable goods—cars, television sets, outboard motors—and on travel and a variety of other services. Also working counter to gains in fibre consumption has been the use of lighter fabrics in industrial applications and in clothing and home furnishings. The long-term trend to lighter clothing reflects such things as the population drift to the cities, heated automobiles, and changing styles, including the decline in popularity of the double-breasted suit and the vest. As long ago as 1955, the U.S. Department of Commerce said, "In the years before World War Two, it was a good rule-of-thumb estimate that a man's suit took 3½ yards of cloth. Now the same rough estimate is 3 yards." In home furnishings, the outstanding example of the trend to lighter products is the fast-growing market for the electric blanket—not only lighter in weight but serving in place of two or three wool blankets. Improvements in the qualities of fibres enable industrial yarns such as tyre cord to do a better job yet weigh less. At the same time, industrial uses have been particularly vulnerable to the inroads of substitutes such as paper and plastics.

Not only has substitution become more important and competition between man-made and natural fibres more intense, but, in recent years, "the battle of the fibres" has been fiercely waged among the newer man-made fibres themselves. In the struggle, some of them have achieved outstanding success, but there have been several disappointments: Dynel output has stayed very small and production of the protein fibres, Ardil and Vicara, has ceased in Britain and the United States.

In the decade before the war, production of rayon increased by leaps and bounds, and, by the early forties, when it accounted for 16 per cent. of total world fibre output, it had actually outdistanced wool. But, up to this time, production of the true synthetic fibres was negligible The advent of nylon in the late thirties and further advances in textile chemistry, combined with the destruction of a large part of world rayon capacity during the war, provided the background for the post-war upsurge in production of the newer man-made fibres. The shortage of wool and cotton following the Korean outbreak in 1950 was a further stimulus to the new fibres as well as to rayon.

At the end of the forties, only the United States had a substantial production of true synthetic fibres, her output accounting for over four-fifths of a world total of 104 million lbs. More than half the productive capacity is still in the United States (where synthetics now account for nearly 10 per cent. of total usage of the main fibres), but substantial industries have now been established in Japan, the United Kingdom, Russia, France, West Germany, Italy and Canada. And at least a score of other countries, particularly in Europe and South America, have some productive capacity. Nylon, of course, has prime position, but an increasing place is being won by the acrylics, the polyesters, textile glass, and other fibres.

Though the spread of the true synthetics to countries other than the United States has thus been one of the interesting developments of the 1950's, far more important in the world picture is the expansion of industries using the older-established fibres in countries striving for industrialisation. Much of the expansion has been in the two fibres which produce the cheapest textiles, rayon and cotton. This has been deflected



Figures are plotted on a ratio scale; equal distances on the vertical scale show equal percentage changes.

in the older industrialised countries in such developments as the spectacular decline in consumption of cotton by the British textile industry, and the falling profit margins and elimination of some productive capacity in the rayon industries of the United States, the United Kingdom and Canada.

Rayon output has continued to grow in India and in many other less-developed countries and even in some Western European countries such as Spain. On the other hand, output of many old-established rayon producers has tended to level off or even to fall. U.S. production actually reached a peak in 1951. Output in Japan, the second largest producer, has suffered a marked reduction in recent years, and that in the U.K. and in Canada (whose rayon capacity, incidentally, ranks 16th in the world) has also declined. Rayon producers felt the recessions of 1953-54 and 1957-58 with particular severity and both periods saw some quite substantial price reductions. The net result of divergent trends in various parts of the world has been the virtual cessation of growth in total output and consumption of rayon in the past few years.

In contrast, total world cotton consumption has continued to rise. In such sizable cotton-growing countries as Egypt and Turkey as well as in the Communist bloc, and in such less-developed countries in the Far East as India and Pakistan, Hong Kong, Taiwan and Korea, cotton textile industries have been expanded rapidly for domestic consumption and in many cases for export as well. The Japanese industry, though it is still using 25 per cent. less cotton than in the years just before the war, has doubled its consumption in the fifties, as its war-damaged industry was restored. This growth has more than offset concomitant declines elsewhere. The great British export industry, which at the beginning of the fifties was already using 25 per cent. less cotton than before the war, now uses 50 per cent. less. And in the past decade consumption has fallen in some other countries as well, for example, by 2 per cent., in the United States and by 17 per cent. in Canada.

Rising Yields

While world consumption of cotton has risen, world production has expanded even faster. Once the Korean emergency was over, the surplus problem reasserted itself, and, through most of the decade, there has been the paradox of burdensome surpluses in the United States and expanding production elsewhere, stimulated by high U.S. support prices, the dollar shortage and the drive towards self-sufficiency in many countries. Perhaps two-thirds of the gain of more than 50 per cent. in world cotton production over the decade has come from higher yields, resulting mostly from more intensive pest control, fertilising and irrigation. At the end of the decade, U.S. production was only 8 per cent. lower than ten years earlier, despite a 45 per cent. reduction in acreage. In Russia, a similar striking increase in yields occurred in the early 1950's, mainly because of the marked decrease in cotton cultivation on non-irrigated land. In most major producing countries, in fact, with the exception of India, rising yields have played the major role in increased output. In India, and in such other countries as Pakistan and Turkey, larger acreage has been mainly responsible.

With the U.S. share of world exports falling sharply, the U.S. Government in 1955 undertook to regain a "fair historical share" of the world cotton market by heavily subsidising exports. And these sales at substantially lower than domestic prices together with a programme of acreage restriction, have considerably reduced the U.S. surplus. But, although both U.S. and world stocks by the end of the current season are likely to be the smallest since 1953, they are still sizable; U.S. acreage is rising again with changes in the support programme; and prices, despite some firming recently, remain close to the lowest level in the decade.

In contrast to the surplus situation in cotton, wool has, on balance, remained in a fairly firm statistical position. Consumption has risen more or less in line with the increase of more than one-third in world wool production during the 1950's. This increase, which occurred despite a downtrend in wool prices, was fostered by improvements in pasture management and breeding methods, by the virtual elimination of the rabbit pest in Australia and by the strong demand for mutton and lamb. Also contributing to increased world production was a great expansion in Russian flocks, particularly in the new "virgin lands" of Kazakhstan and other parts of central Asia.

Wool

Of the older fibres, wool has been least affected by the changing pattern in the world textile industry. It is true that the chief wool-producing countries have been building up their wool textile industries and that consumption in the Communist countries generally has increased substantially, but this growth has not been accompanied by declining use to the same degree as in rayon and cotton in the countries that have traditionally been the big consumers. In the major Western European countries, consumption has been at least maintained, and in Japan it has risen very sharply since 1949, with continuing recovery from the war. This growth, with the rising consumption in the Communist bloc and elsewhere, has far more than offset the 16 per cent. decline in North American consumption resulting from the trend to lighter clothing and from the competition of synthetic fibres, plastics and imported woollen fabrics.

The trends in production and consumption of the various textile fibres underline what must be obvious to the most casual observer—the intense competition among them, especially in North America. The nature of this competition is vividly illustrated in the promotional campaigns for wool and cotton, including advertisements in the luxury magazines. It is shown by the development of "polished" and "drip-dry" cottons, of shrink-resistant and crease-retaining wools and of tri-acetate (Arnel, Trilan). It is shown also by the penetration of Orlon and other acrylic fibres into the sweater market, of Terylene into the blouse, dress and shirt markets, of Dacron into the men's suit market, and of rayon, nylon and other man-made fibres into the carpet market. And, finally, there is the increasing use of blends—cotton with rayon or Terylene, wool with Dacron or Orlon.

Of course, individual fibres have certain strongholds. Estimates for the United States show that, in one-third of its end-uses measured by weight, cotton has faced almost no competition from other fibres. Only 13 per cent. of wool use and less than 5 per cent. of the true synthetic use have been in this position, while rayon and acetate have no broad categories of end-use which they hold unchallenged. In quite a few next-to-the-skin and heavy-duty garments and in sheets and towels, man-made fibres and wool have not been able to compete with cotton's combination of good launderability, comfortable moisture absorption and durability. Nearly half of this "competition-free" cotton consumption has been for men's underwear, night-wear and work clothing. The areas in which wool has faced comparatively little competition are men's winter suits and overcoats. And, of course, nylon faces almost no competition in women's hosiery.

A good deal of the advance in the U.S. consumption of clothing fibres during the past decade has been in cotton and the true synthetics, while the use of rayon and acetate has declined. The post-war baby boom has brought a very large demand for many cotton items—diapers, coveralls, T-shirts and so on. Another large area of growth, particularly for cotton and the synthetics, has been the casual outerwear market. This reflects the trend to suburban living, the increase in teen-age purchasing, the change in women's daytime wear from street-and house-dresses to skirts, slacks, sweaters and blouses, and the increasing tendency for men to wear sports shirts and slacks both at home and in the factory.

Sweaters

Sweaters afford an interesting example of competition within the true synthetic group as well as between man-made and natural fibres. The use of nylon yarn in women's sweaters rose rapidly after the war—at the peak in 1951, 25 per cent of total U.S. sweater output was all-nylon. Thereafter, the acrylics took an increasing share and more recently nylon has staged a comeback in the form of Ban-Lon, Tycora, etc. In the process, wool's share of the total poundage of fibres used for sweaters in the United States has fallen from an average of over 70 per cent. in 1949-50 to approximately 30 per cent. in 1958.

In drapery, upholstery and other home furnishing fabrics, where demand has expanded rapidly because of rising incomes and the sharp uptrend in the number of households, every major fibre group except wool has shown decided gains during the decade. In carpets especially, wool usage has declined not only because of competition from man-made fibres in the woven pile carpet but, more importantly, because of the striking growth in popularity of the much cheaper tufted pile carpet, in which the use of wool became more practical only with recent technical advances related to tufting.

The pattern of U.S. fibre use for industrial products has been affected not only by inter-fibre competition like that between nylon and rayon tyre cord, but also by the shift from fibres to paper, plastics and other substitutes. This shift accounts for perhaps half of the appreciable drop in total industrial fibre usage since 1951. The remainder can probably be attributed to improvements in the fibres themselves and to economies in their use. Most of the drop in industrial use has been in cotton; meanwhile, consumption of the true synthetic fibres has been increasing, until by 1958 it made up about one-fifth of the total.

One of the areas of fiercest competition has been the tyre industry. Rayon won its long fight to displace cotton tyre yarn around 1952, but, by then, was being faced with growing competition from nylon which, employing a series of price cuts, subsequently boosted its percentage of the U.S. tyre yarn market from 4 per cent. in 1953 to 26 per cent. in 1958. Rayon producers have been fighting back in recent years with quality improvements, price cuts and a unified promotional campaign.

Another battleground has been the container market, where cotton bags have lost heavily through the substitution of the multi-wall paper bags and, more recently, through the increase in bulk transportation of commodities. The substitution of plastics as also affected textile fibres, for example, in slip-covers for car seats and in electrical insulation. A partial compensation, however, has been the development of an important market for textile fibres as reinforcing in paper, tape and plastics.

As has already been indicated, the intense competition of the fifties has been reflected in U.S. yarn and fibre prices. The most striking illustration is rayon and nylon tyre yarn but there are numerous other instances. Prices of Dacron and Orlon staple were cut 25 per cent. to 35 per cent. from late 1953 to the end of 1955 and then levelled out. Part of these declines may have reflected technological cost-saving which the producer was passing along to the consumer, but it was no accident that they coincided with the 25 per cent. to 30 per cent. drop in wool prices in the same period, as well as a smaller decline in the price of viscose rayon staple. Both rayon yarn and staple, as has been noted, felt the 1957-58 recession severely and wool and cotton prices have shown little buoyancy. Meanwhile, in Britain and in some other overseas countries as well as in North America, the true synthetics appear to have been finding progress somewhat less smooth and less dominated by the magic of the trade name.

Progress and Prospects

The remarkable progress in synthetic fibres during the 1950's reflects the snow-balling of knowledge acquired in many decades of research—particularly the advances in polymer chemistry that led to the discovery of nylon. To quite an appreciable extent, scientists now can change an existing fibre to achieve a desired result or "tailor" a fibre to meet specific requirements such as resistance to chemicals. For example, in the mid-fifties, processes were introduced that enabled synthetic yarn producers to duplicate the bulked and textured effects of natural fibres and the pile of a fur coat.

The emergence of the new synthetics, providing the consumer with fabrics that wash easily, dry quickly and do not have to be ironed, has given a powerful stimulus to improvements in the older fibres and to the development of blends which reduce costs, correct fibre defects or produce new characteristics. Initially, the blending or synthetic with natural fibres did not always give a satisfactory product, but from the trial-and-error period emerged such first-class blends as wool and Dacron, with its ability to retain a "permanent" crease. This blend in turn led to the discovery of at least two good processes for obtaining similar results in all-wool fabrics. Again, the moth-proof qualities of the synthetics made imperative the development of cheaper moth proof finishes for wool, while the "wash and wear" qualities of nylon, terylene, tri-acetate and the acrylics spurred progress in developing chemical processes to impart these qualities to cotton and viscose rayon.

Admittedly some of these finishes still leave much to be desired. Admittedly, too, there are definite chemical and economic limitations to the changing or tailoring of fibres. Scientists have not yet discovered a truly synthetic fibre with the moisture-absorbing capacity that makes cotton and wool so comfortable for many undergarments. And certain processes that make cotton, among other things, more rot-resistant are still too expensive for mass application. All this suggests that a large volume of scientific and technological research in textile fibres will continue (especially in the industrialised countries), that other difficulties will be overcome as was the obstinate problem of dyeing Orlon, and that more new fibres and finishes will emerge.

How rapidly or how far electronic automation, statistical quality control and other scientific aids will proceed in the textile industry is uncertain. These aids are already being used to quite a large extent, even in the processing of the natural fibres; but there is a persistent current of opinion in textile literature that the industry as a whole could be making still more use of modern techniques in control engineering and mechanical handling to reduce its dependence on costly specialised operative skills. Since World War II, there has been a growing use of automatic and "shuttleless" looms, which have reduced processing costs by increasing weaving efficiency and production. Progress is being made, too, in eliminating some of the steps in textile manufacture. For instance, the steps required to process wool tops into worsted yarn have been reduced from about a dozen to four or five. Nevertheless, the multiplicity of processes between the fibre and the finished fabric makes it unlikely that this oldest of all manufacturing industries will ever achieve the push-button control of an oil refinery.

MILL LABOUR DISPUTE IN WEST BENGAL

The chances of early implementation of the Central Wage Board's recommendations in the cotton mills of West Bengal are somewhat bleak, thanks to the failure of the tripartite conference held at Calcutta last week under the presidentship of the State's Labour Commissioner. The failure of the talks was due to the divergence of opinion between the representatives of millowners and workers on the two questions relating to basic wage and dearness allowance. The millowners' spokesmen reiterated their proposal to pay the flat average increase of Rs. 6 per worker per month, provided a tripartite committee was set up to determine the normal workload and to assist in the preparation of the rationalisation scheme. The labour, however, wanted an unconditional payment of the enhanced wages. With regard to dearness allowance, the millowners offered to pay a sum equivalent to 72 per cent. of the neutralisation of the rise in the living cost index, including the flat average increase, whereas the workers demanded 100 per cent. neutralisation as recommended by the Board, though it was agreeable to a compromise on this point, if there was an overall agreement on all other issues.

The Labour Commissioner has submitted to the Government his report on the results of the negotiations. The final decision of the Government has not been taken. The representatives of labour are considering what steps they should now take. It is said that the strike notice given in July still stands.

The cotton mill industry of West Bengal comprises 17 composite units and nine spinning establishments with a total labour force of over 40,000.

BURMAH-SHELL REFINERIES LIMITED

MR. P. D. TEW, CHAIRMAN, ANALYSES THE PROBLEM OF OIL INDUSTRY

MERITS OF EXPANDING INDIGENOUS CAPACITY EXAMINED

IT would be prudent for the oil industry in India to set its target high enough to cater to a demand of at least 14 million tons of refined products in 1966. This was the view expressed by Mr. P. D. Tew, Chairman of Burmah-Shell Refineries Ltd., in the course of his statement at the Seventh Annual General Meeting of the Company held at Bombay on 29th August 1960. He added that the task ahead was massive and offered a challenge to the private and public sectors alike.

The following is the full text of Mr. Tew's statement:

"The Directors' report and statement of accounts for the year are before you. The income from refining has increased from Rs. 9.68 crores to Rs. 10.91 crores, while the income resulting from duty protections declined from Rs. 3.41 crores to Rs. 1.86 crores; at the same time, despite the increase in throughput of 208,540 metric tons, expenditure has been reduced by Rs. 25 lakhs.

"Following on the new provisions included in the Indian Income-tax Acts of 1959 and 1960, your Company has had to set aside only Rs. 1.90 crores for taxation on 1959 profits, compared with Rs. 2.51 crores in total charged in the 1958 accounts and this fact coupled with the reduction in expenditure already mentioned, explains the apparent anomaly of a reduction in gross income of Rs. 39 lakhs, but an increase in net income of Rs. 41 lakhs.

Dividend

"An interim dividend of 15 nP per rupee was declared and paid in December 1959 on the paid-up ordinary share capital absorbing Rs. 207.3 lakhs and the Board now recommend a final dividend of 3 nP per rupee which will absorb a further Rs. 41.4 lakhs; income-tax at 20 per cent., subject to any relief which the shareholders will be due under Section 15(C), will be payable on these dividends and in increasing the dividend this year from the 15 nP paid in 1958, the Board have acted to leave approximately the same amount with shareholders as they obtained before the tax changes introduced in 1959.

"The year 1959 is the last year in which your Company will be able to benefit from Section 15(C) of the Indian Income-tax Act and it is appropriate to mention here the voluntary surrender of duty protections from 1st July 1959, which means there will be no further income from this source on products currently manufactured at the refinery. From 1960 onwards, therefore, the prosperity of your Company must depend largely on the income from refining and the efficiency of operation; in this respect, I am happy to be able to say that I am fully confident that we shall be able to maintain efficiency at a standard which has already been proved second to none.

"I do not think further remarks are required on the detail of our 1959 accounts which are set out fully in the documents already circulated to you.

"During this year there has been considerable speculation and comment in the Press on future refining prospects in this country and I should like to set before you the thoughts of your Board on some of these difficult and intricate problems.

Size of the Problem

"First and foremost, what is the size of the problem? How much petroleum will be consumed in 1966? To begin with, I suggest that by this date the range of petroleum products in India will have increased and a mathematical progression based on the existing offtake of existing products will by no means tell the whole story of future demand. Some of these products are refinery gas for petro-chemicals and fertiliser plants, naphthas for gasification for chemical and industrial use and perhaps alternative fuels for aircraft, automotive transport and railway engines. I would mention that your Company has already arranged to reserve for specific projects all available supplies of refinery gas, has arranged to supply up to 30,000 tons of naphtha in 1961 for a specific contract and can make available a further 100,000 tons of naphtha.

"In this context I think it is important to define the word 'demand.' The definition used by your Board is the total requirement in India of refined petroleum, that is, excluding natural gas, but including oil required at Indian airfields and ports for international aircraft and ships. With this definition the demand in 1955 was 4.67 million tons and in 1960 will be approximately 7.50 million tons; applying the same rate of expansion the demand should be 13.4 million tons in 1966. In the view of your Board this is a minimum figure, as apart from any new products to be introduced, it is felt that if, as we all hope, the vast and courageous third Five-year Plan is fully effective then the rate of expansion must in practice increase. I consider, therefore, that it would be prudent for the oil industry to set its targets to cater for a demand of atleast 14 million tons of refined products in 1966.

"There can be no question that the first priority should be the exploration and production of indigenous crude oil; it is significant that the Planning Commission have allotted considerable sums for this purpose and that the Government have stated that, if satisfactory agreements can be reached, they would welcome the entry of private companies into this field.

Cost of Additional Capacity

"The second priority must surely be to increase refining capacity in India. Existing capacity is estimated at around 6 million tons. To meet the balance of 8 million tons likely to be required by 1966 only the two public sector refineries estimated together at 2.75 million tons capacity have been sanctioned. This leaves a gap of some 5.25 million tons. Additional refinery capacity is likely to cost over Rs. 60 crores and, to the extent that Government agree to this being financed by the private sector, there is a corresponding relief to the public sector, already pressed for foreign exchange. Before summarising progress on the expansion proposal put forward by your Board last year to meet a part of this gap, I should like to outline your Board's views on the possible effects of not expanding refining capacity and leaving the gap unclosed.

"If local refining capacity is insufficient to meet the full product demand, there will have to be imports of finished products irrespective of the availability of indigenously produced crude oil. To cover these product imports either additional foreign exchange will have to be found or commodity exports may have to be diverted to barter deals at the expense of foreign exchange earnings. It is difficult to forecast average prices for imported petroleum products in 1966, but I believe Rs. 150 per ton may well be conservative and at this figure the cost of the products still to be imported will be over Rs. 75 crores a year in 1966. Today's landed cost of crude oil is about Rs. 65 per ton; so you can see the big reduction that can be made in the import bill by increasing refinery capacity and bringing in crude oil rather than products; even after making allowance for the foreign exchange needed to operate the additional indigenous refining capacity (mainly refinery fuel and unavoidable imports of stores and materials) and to service the additional foreign capital investment there should be an overall net benefit to the economy of some Rs. 25 crores per year by 1966, if refining capacity is increased in time.

"Against this background, it will be recalled that in return for conceding the duty protections amounting annually to over Rs. 3.5 crores the Government undertook to examine on its merits a proposal for an increase of approximately 1 million tons in refinery capacity and for the addition of a lubricating oil plant.

"Since that date, the Government have been advised that your Company could expand capacity to approximately 4 million tons within eighteen months and complete a lubricating oil manufacturing complex of between 60,000 and 100,000 tons annual capacity within a further year.

"There would be no request to Government for foreign exchange for this expansion.

"The net saving in foreign exchange would amount to approximately Rs. 6 crores per annum —effective from 1963 if early sanction to proceed is given.

"These then are the outline merits of the expansion case which Government have already undertaken to examine in exchange for our surrender of duty protection.

"At the moment, we are re-examining the physical aspect of our proposals and I feel there may be room for further modifications to the Refinery Agreement, provided your Company were permitted to go ahead with this proposed expansion.

"No discussion of refinery expansion in India is complete without reference to what is known as the imbalance problem. Forward estimates still show an imbalance between a demand for individual products and the yields of existing and projected refineries resulting in a surplus, for example, of motor gasoline. Ways and means of minimising these surpluses are engaging the Government's/industry's close attention and even if these measures do not meet with complete success, it is still felt that arrangements can be made to dispose of a fair portion of the remaining surpluses outside India. In the circumstances, it can be said that our expansion proposal will do nothing to aggravate the imbalance position in India—and promises to do much to alleviate it.

Technological Advance

"Earlier I referred to the high standard of efficiency which has been achieved, and I should like to make particular mention of one technological advance. Last year, your Chairman reported that the yield of gasoline had been reduced between 1956 and 1958 from 23 per cent. to 16.5 per cent., while middle distillate production had been increased from 31.8 per cent. to 34.6 per cent. Currently, the refinery is producing about 15.0 per cent. gasoline and 45.0 per cent. middle distillates, an outstanding achievement and a real milestone towards the objective of making refinery production conform to the product pattern requirement of India.

"I should also like to mention that every effort continues to be made through improvements in manufacturing technique and the removal of bottlenecks to maximise crude oil throughput of the refinery as it exists today. Admittedly, any increase achieved may throw up small extra quantities of motor gasoline for export, but so long as a home can be found for these exports, they earn welcome foreign exchange and increased crude throughput will, of course, reduce the import bill for most other products.

Massive Task Ahead

"The task ahead is massive; the demand for oil is built into the process of economic development and as India progresses to the stage of self-sustaining growth petroleum consumption in agriculture, transport and industry will advance. There is no alternative to this expansion of oil demand; it will continue through the third Plan period and beyond it, gathering momentum with time. The expansion is a challenge and a challenge that can only be met if there is unity of purpose and unity of effort inspiring every section of the industry. While the public and private sectors will, therefore, have to work in unison and at maximum tempo, there is clear and evident need for each sector to develop with a sense of partnership in a common endeavour.

"I should like once again to thank the Managing Director and all those who work for him for another year of high performance, unfailing ingenuity and the readiness always to find the answers to the new situations with which they are so constantly faced. On their good work the continuing prosperity of your Company depends."

FERTILISERS & CHEMICALS TRAVANCORE LTD

CAPACITY TO BE DOUBLED DURING THIRD PLAN

CHAIRMAN, MR. T. A. JOSEPH'S SPEECH AT SIXTEENTH ANNUAL MEETING

SPEAKING at the Sixteenth Annual General Meeting of the Fertilisers and Chemicals Travancore Ltd., held at Udyogamandal, Travancore, on 3rd August 1960, Mr. T. A. Joseph, Chairman, said that the first stage of the Company's expansion programme was nearing completion and that the second stage would be completed by the beginning of 1962. He also indicated that the Company's capacity would be doubled during the third Plan period.

The following is the full text of Mr. Joseph's speech:

"GENTLEMEN,

"I am glad to welcome you to this, the sixteenth annual general meeting of the Company and to present to you the accounts of the Company and the report of the Directors for the year ended 31st December 1959. As these have been circulated to all the shareholders, I presume they may be taken as read.

"Before I proceed further, I would like to express our deep sense of gratitude to the late Dr. John Matthai, who was your Chairman in the years 1957 to 1959. It was during the period in which Dr. John Matthai steered the activities of this Company with insight and imagination that this Company turned the corner and got on to the road to prosperity. In the death of Dr. John Matthai on 2nd November 1959 the country, in general, and we, in particular, have lost a leader and administrator equalled by few.

Power Cut

"During 1959 the Company had to face a power cut for two months in the summer. Very soon after, the ammonia plant had to be shut down for a period of four weeks for changing the catalyst. As a result, production of ammonium sulphate and ammonium chloride was lower compared to that in 1958. The production of superphosphate which is not dependent upon power to the same extent as ammonia, however, reached a new high of 35,000 tons in 1959 which was nearly twice the production of 1958. Production of fertiliser mixtures was also twice as much as in the previous year. But for the power cut, I am sure, the production of ammonium salts would also have been very much better. In spite of these setbacks which affected adversely the production of nitrogenous fertilisers, the Company, by stepping up its other lines of activity, particularly superphosphate production, maintained the profits at reasonable levels for the year, thereby enabling us to recommend a dividend of 6 per cent.

"During the first six months of this year, the Company has achieved in all the departments, production levels higher than those reached during any comparable period in the past. It can be reasonably expected that the same tempo of production will continue for the rest of the year.

"Industrial relations during the year were satisfactory. A long-term agreement was signed in April 1959, according to which a general revision of the existing pay scales was also made. Consequent on this revision, the permanent employees have had the benefit of an average increase of Rs. 390 per annum. Your Directors have also accepted the recommendations of the Industrial Relations Committee appointed by the Government of Kerala to link the minimum dearness allowance with the working class cost of living index. That sound industrial relations can help considerably towards achieving better productivity can be easily seen from the results of the first half of 1960, to which I have already referred to.

Expansion Programme

"Although all the works relating to the first stage of the Company's expansion programme are nearing completion, the Company could not take full advantage of this expansion as the State Electricity Board has not been able to assure the regular supply of power required for the new electrolytic hydrogen plant. According to the indications available now the State Electricity Board will be in a position to supply only a third of the additional power required by the Company. For the remainder, the Company may have to depend upon a possible loan from a neighbouring State. The fears expressed on this account by my predecessor in his last address to you have, I regret to say, proved to be too true. I hope that the Kerala State Electricity Board will take adequate measures to advance the completion of its projects, so that the power required by the Company will be made available as soon as possible. In the meanwhile, the Company will be able to keep some of its new plants only in partial production.

"The work relating to the second stage of expansion which involves the installation of an oil gasification plant is making good progress. Orders have been placed with foreign suppliers for the delivery of the plant and equipments and it is expected that the plant would go into production by the beginning of 1962.

"When the second stage of expansion is completed, the Company will be able to market nearly 100,000 tons of ammonium sulphate, about 35,000 tons of ammonium phophate (16-20 grade) and 8,000 tons of ammonium chloride in addition to considerable quantities of fertiliser mixtures.

"The Company proposes to expand its capacity during the third Plan. This expansion envisages the doubling of ammonia capacity existing at the end of the second stage and utilising the additional ammonia for increased production of ammonium phosphate. It is also proposed to increase the production of ammonium chloride to go in line with the expansion programme of our neighbouring factory of Travancore-Cochin Chemicals Limited which supplies us the hydrogen chloride.

Managing Agency

"As you might have seen from the draft resolution proposed for this general meeting, the Managing Agency agreement relating to this Company will be expiring on the 15th of August. Thereafter, the Company will be managed by the Board of Directors through a Managing Director. Messrs. Seshasayee Brothers Private Limited of Tiruchirapalli, an associate company of the present Managing Agents, was responsible for sponsoring and establishing this Company in this State with the active help and financial assistance of the Governments of the then States of Travancore, Cochin and Madras. Subsequently, Seshasayee Brothers (Travancore) Private Limited was registered in this State and consequently, the Managing Agency was transferred to this new Company.

"The formation, growth and the prese position FACT has attained is entirely due the untiring efforts and the hard work put by the Managing Agents. I would, therefo like to state here on behalf of the Board Directors and, with your permission, on yo behalf also that this Company has been fo tunate indeed in having as its Managing Agen such a highly reputable Company as Messr Seshasayee Brothers (Travancore) Priva Limited. It is only their initiative and ente prise and particularly that of their founde Chairman and Managing Director, the late S V. Seshasayee, that was responsible for th establishment of this industry in this State.

"I would like to express on behalf of yo all, our deep sense of appreciation of the con petent manner in which they have been ma aging the affairs of this Company throughou and our good wishes for their future endeav ours in the field of industrial development our country.

Fertilisers and Food Production

"As you are aware, agricultural productio is receiving priority in the third Five-ye Plan. Unless there is a substantial increase i food production in the whole of India includin Kerala, the success of the Plan is not assure The importance of fertilisers in increasing foo production has been well recognised. In Keral also, it is gratifying to note that the use of fe tilisers is becoming popular. I do, therefor expect that by the end of the third Five-yea Plan FACT will play a still more importar role in Kerala's agricultural economy. I als feel that even after the implementation of ou expansion schemes it may well be that deman exceeds our production. Considering the vit role that we have to continue to pla in this field in the future also, I feel it is ir cumbent on us to associate ourselves mo closely with the users of our products in th area. A start has already been made by FAC in this direction by providing technical info mation and advisory service by qualified fiel assistants on fertiliser application to differer types of soils and crops. I have no doubt tha this type of service will have to be expande in a larger measure in the years to come.

"I would also take this opportunity to ex press our thanks to the staff and other em ployees of FACT, who have by their hard wor and devotion to duty contributed towards th successful results of 1959 and I am sure the will rise to the occasion and be able to shoulde the heavy responsibilities which I feel ar going to devolve on them.

"I would now move that the Directors' re port and the audited statements of accounts fc the year ended 31st December, 1959 be and ar hereby adopted."

Note: *This does not purport to be a repo of the proceedings of the general meeting.*

KANDLA PORT AND THE FREE TRADE ZONE

VIEWS OF GUJARAT CHAMBER OF COMMERCE

AS a premier trade organisation of Gujarat, the Gujarat Chamber of Commerce is taking keen interest in the development of Kandla port and the establishment of the proposed Free Trade Zone. The Executive Committee of the Chamber appointed in June last a delegation to make an on-the-spot study of the development needs and problems of Kandla port. The delegation, in its report to the Committee, has recorded its findings and suggestions for converting the port into one of the major gateways of trade in the country. The Executive Committee of the Chamber also examined the question of creating a Free Trade Zone at the port and its views and recommendations have been submitted for the consideration of the Union Government.

The delegation points out that, despite the declaration in 1955 of Kandla as a major port and the spending of fifteen crores of rupees on development work, the fact remains that it has yet to become a major port *de facto*. It is true, according to the delegation, that Kandla is a well-equipped and modern port, having facilities comparable to those existing in other major, modern ports. But export and import of goods through the port have not increased to the extent they should have. The delegation has made the following recommendations for the integrated development of Kandla: (1) The Government should procure forthwith, on loan basis, a big dredger till the large dredger ordered for the port arrives, for removal of silting. (2) In order to encourage traffic through Kandla port, coastal and overseas steamer freight rates should be reduced. If the steamer companies are not willing to do so the Government should subsidise the same. Special reduced railway freight rates should also be offered in the case of specified commodities moving to and from Kandla. (3) A higher proportion of the import and export trade handled by the State Trading Corporation of India and the Government of India should be diverted to Kandla. (4) A national highway should be constructed between Kandla and Ahmedabad; construction of the proposed Zund-Kandla railway line should be expedited. (5) Since high land price in Kandla is an impediment to the development of the area, measures should be taken to bring down land values. (6) The installed and generating capacity for electricity should be raised so as to ensure adequate supply of power to the region. (7) In addition to constructing industrial estate and sheds, the Government should also undertake to erect buildings for residential, commercial and industrial purposes. (8) A survey of raw materials and minerals available in the port region should be undertaken so as to enable industrialists to assess the industrial potentialities of the region. (9) Arrangements should be made for easy availability of residential and other facilities in the area. Steps should also be taken to ensure adequate supplies of water, building materials, storage facilities, etc.

It is also suggested that the proposed Free Trade Zone should be suitably located so as to leave sufficient room for expansion. Restrictions that are proposed to be imposed within the Zone should be announced sufficiently in advance so that persons engaged in trade and industry in the zone will not be put to hardships later. Local committees appointed for dealing with the problems arising from time to time in the area should be vested with sufficient powers so that committees can function effectively by taking decisions promptly and implementing them without delay.

The trading position at the port should be published in foreign countries so as to attract large volume of trade. Kandla and Ahmedabad should be linked (via Rajkot) by air service as early as possible. In order to develop the hinterland of the port, Government should investigate the possibility of establishing one or more of the major undertakings proposed in the public sector in the region.

The delegation thinks that the Government's policy of recovering the expenditure incurred or to be incurred on the development of land at Kandla either from the land rates or in some other way is fundamentally wrong. According to it, such expenditure should be deemed a capital expenditure that will yield increased revenue in course of time.

The suggestions made by the delegation in regard to the free trade zone are only incidental. The Chamber's considered views and recommendations in this regard have been sent to the Government in a communication addressed to the Secretary, Ministry of Transport and Communications, New Delhi. The chamber has submitted therein that the proposed area of one-fourth of a square mile or 160 acres for the Zone is totally inadequate for the purpose, especially in view of the different industries proposed to be started there and the various types of goods that will have to be processed, packed and stored. It feels that the minimum requirement of land in the initial stages is between 1,000 and 1,200 acres. It has made among others, the following suggestions for making the proposed Free Trade Zone a beehive of industrial and commercial activity.

1. The Free Trade Zone should be initially located so as to leave no scope for goods that enter the Zone to get mixed up with articles that are imported on the customs territory.

2. Since industries in the region are established after undergoing the required formalities, should any changes in the schedule of imports be felt necessary in future, advance notice should be given so as to cause minimum disturbance to the industries already set up.

3. No time limit should be set for export of goods produced in the Zone as producers may not, sometimes, find it remunerative to export within the specified period.

4. Monetary incentives should be provided to attract new industries to the Free Trade Zone.

5. Although the Chamber sees no objection to the principle that imports to the Free Trade Zone should be paid for by exports, it feels that, in the initial period, a formula for enabling imports to be made without having to be compensated for with exports immediately, should be evolved.

6. Technical advice and service should be made available in the Zone to provide the necessary help and guidance to industries.

7. Latest information about trade trends, changes in tastes and fashions abroad, etc., should be supplied promptly and periodically by India's Trade Commissioners stationed in foreign countries. The Chamber feels that there is need for an efficient organisation which could not only supply up-to-date trade information but also give practical advice and guidance.

8. India should join the world pool for strategic materials like bismuth, mercury, silver, etc., so that these materials can be had in India at the pool price. This, the Chamber feels, will provide impetus to the development of chemical industries in the region.

The Chamber has also underlined the need for a well-conceived and carefully thought out plan for bringing into being the Free Trade Zone which, it believes, is capable of giving the necessary impetus to the development of the region and can provide larger employment and stimulate foreign trade. It is to be hoped that the Government will give the views of the Chamber the attention they deserve.

MULTI-PURPOSE BUILDING BOARD

One of the basic problems that an underdeveloped country like India faces today is the shortage of housing. There are estimated to be in India about 54 million rural and 11 million urban dwelling units, or approximately one to every six people. It has been calculated that, during the decade preceding the second Plan, about 1.25 million units have been built. Comparison with some advanced countries will be revealing. In the U.S.A., which has a population of about 40 per cent. of India's population, approximately 1.25 million houses are built every year, and in the U.K., with a population of only about 50 million, about 3 lakhs houses are built annually. Housing has such an important bearing on the morale, health and efficiency of the workers that its provision in the advanced countries is regarded as a form of investment in the human resources of the community.

In India, there is no gainsaying the fact that housing is one of the most important welfare needs. The needs of the people are increasing—in the rural areas because of an increasing consciousness for a better life and in the cities and towns because of the rapid rate of urbanisation. Between 1941 and 1951, about 16.3 million people moved to the urban areas. Urban housing, during this period, increased by only 1.7 million units. All this calls for increased facilities for housing.

Fortunately, there are a number of offsetting factors. First, it has been found that far more people can be acceptably housed in India for a given outlay than in more economically advanced countries. Secondly, four-fifths of India's population is still rural and improvement in rural housing can be attained very largely by the activities of the villagers themselves with little outside assistance.

In order to make the construction of more houses possible, one of the crying needs of the country today, is a building material that is economical, capable of being fabricated easily and quickly, without the services of highly skilled labour, and suitable for the housing needs in a tropical country.

The National Building Organisation (N.B.O.) at Delhi have been investigating, among other things, the possibilities of low cost housing in India, by utilising indigenous materials and developing the use of new materials appropriate to tropical conditions. The N.B.O. surveyed the possibilities of the utilisation of the reed (Sarcanda) which grows in lush profusion in the Gangetic valley and Terai areas of U.P. and elsewhere in India.

Crude boards made of these reeds and the reed itself in its natural form have been widely used in housing construction in the Punjab, Assam and parts of U.P. and huts built of reed more than 50 years ago are still in use in the Punjab. The method of manufacturing reeds into strong building boards, is an entirely new process, developed by Messrs. Ludwig Berger of Austria.

It was at the instance of the National Building Organisation that Messrs. William Jacks & Co., Ltd., undertook to develop the manufacture of reed boards in India. For this purpose, they entered into negotiations with the Austrian patentees of the new board-making process and obtained the right for its exploitation in India. They set up a factory at Dhampur in U.P., in the heart of reed growing region, to manufacture these boards to be marketed under the name "Jaxboard."

The factory was formally opened by Mr. Manubhai Shah on 23rd April 1960. It has an installed capacity of 36 lakhs sq. ft. of board a year. Due to the initial difficulties of reed procurement, however, production during the first 12 months will have to be restricted to 10 lakhs sq. ft. The Company, by utilising a jungle product which hitherto went largely to waste, will spend approximately a sum of Rs. 3 lakhs annually on reed procurement. The entire amount of this money will go to the villagers living in these neighbouring reed growing areas who have probably no alternative sources of income apart from tilling soil.

"Jaxboard" is said to be an ideal construction material for a tropical country and meets all the requirements for healthy, low cost housing in the rural areas, plantation and factory labour; for rehousing slum-dwellers and for lower income groups. Its range of application is wide. Its merit has been proven, so we are told, for economic construction of storage platforms for various commodities; for cold storage vaults; scaffoldings; gear guards, interior decorations and erection of false walls. It is also invaluable for being used as a packing material for air-dropping supplies by the military as well as civilian air forces in inaccessible areas.

This versatile board, it is claimed, promises to open a new horizon in the construction of rural and industrial housing and other types of structures in India; it is adaptable for walling, roofing, partitioning, shuttering, etc., and can be easily plastered with cement, lime or mud. It has unique insulation properties that make the interior of "Jaxboard" built houses cooler in summer and warmer in winter. Its durability and strength are proven by the fact that in India and elsewhere houses of reed boards, built 50 years or even a century ago, still stand intact. Other properties of "Jaxboard" are easy availability and light-weight which help to cut down construction and transportation costs.

TELEPRINTER FACTORY

The Government of India, in association with Olivetti, an Italian firm, proposes to set up a factory for the manufacture of teleprinter machines. An agreement providing for technical collaboration for a ten-year period, was signed by the representatives of the Government of India and Olivetti at New Delhi on 26th August. The factory, when it reaches full production by 1964, will produce about 1,300 complete teleprinter machines. Production of as many as 1,200 will be achieved by 1963. It will start with assembly of imported parts in 1961, during which year 160 machines will be turned out. Manufacture will commence in the following year when 470 machines are expected to be produced. It is estimated that long-term demand for teleprinters will not exceed 2,500 a year. This, it is said, the factory will be able to meet by working two shifts.

The total cost of the project is estimated at Rs. 1.20 crores, including working capital, the foreign exchange component being of the order of about Rs. 65 lakhs. The factory will give employment to 200 persons.

The agreement provides for the training of Indians in Italy. Italian technicians will also train workers in their jobs at the factory in India. The agreement permits India to export teleprinters after the ten-year period, if it so desires.

In both price and quality, the indigenous product, it is claimed, will compare favourably with imported teleprinters. The price of a complete machine, that can transmit message on pages, is expected to be about Rs. 3,800, as against Rs. 4,000 to Rs. 7,000 now being paid for imported machines.

The location of the factory is yet to be decided. Bombay, Poona, Hyderabad, Bangalore and Coimbatore are tipped as probable locations. Climate, availability of technical talent and facilities for sub-contracting, etc., are said to be some of the considerations that will be taken into account in making the final choice.

NEW PRODUCTS AND PROCESSES

Electroplating Stainless Steel

A U.K. company which has developed a revolutionary new technique for the electro-polishing of stainless steel, has won the electro-polishing contract for the largest stainless steel building in Europe, a 35-floor 367 ft. high office block, claimed to be the biggest in London, to be erected in Millbank. The scientist who developed the process Mr. P. Allan Cruickshank, a director of the firm, said that he had sought a way of polishing stainless steel by the reverse of electroplating. "The irregularities in the metal surface," he said, "are removed by electro-chemical solution instead of mechanical abrasion, to leave a smooth surface which by altering the processing conditions can be varied as required from a bright and highly lustrous, down to a matt silver finish.

"This is electro-polishing. It had already been done in the metallurgical laboratories for decades for the polishing of very small samples of metals and alloys. But this was an expensive process and the problem was to develop it in an economic way. I decided that the greatest scope for development lay with stainless steels and other stainless alloys because the mechanical polishing then necessary to produce the final polished surface was both costly in labour and unpleasant to perform. After considerable research the technique was developed and patented throughout the world. The stainless steel article is immersed in a chemical bath and an electric current is passed through it, but the process reverses that of the well-known electroplating bath, and a thickness of metal, usually less than one two-thousandths of an inch, is removed.

"Economically the process is the cheapest known method of polishing stainless steel; it is highly resistant to atmospheric corrosion (a test section has been weathering in London for two years); there is no limit to the size of the article to be electro polished. The process is now being used by the British car industry, for food and dairy equipment, for photographic equipment, chemical engineering and atomic energy fields and in almost every other industry."

Electronic Recording Device

A new electronic recording device is now being used by British Railways electrical and signal engineers to help in checking the performance and efficiency of new, high-voltage AC electrification schemes and equipment and associated signalling installations. One of these recorders will be demonstrated at the British Railways Electrification Exhibition, to be held in London, October 3-9. This electronic analysing recorder provides information about an electrified system on a scale that could not be otherwise achieved and, it is claimed, has never been possible before. This information will help engineers to improve the design of equipment for future electrification schemes and to predict requirements for lines to be converted from steam or diesel to electric traction. The recorders are being installed in electric trains and locomotives and at points along test sections of electrified lines, to record such data as the speed and position of trains relative to variations in electrical voltages and current consumption under varying load conditions, and the general effect throughout the power supply and in other related services. The recorders can be synchronised and operated remotely through a specially adapted "master" recorder, and coded time signals, issued by an electrical synchronous clock fitted to each recorder, ensure that groups of readings can be accurately compared. Based on the computer principle, the recorders will code and store information on punched tape which will be processed later by standard computers. The computers will automatically print characteristic features in a tabulated form.

Enzyme Depilant and Bates

A process for the manufacture of highly efficient enzyme depilant and enzyme bates based on indigenous raw materials has been developed at the Central Leather Research Institute, Madras. The process consists in thoroughly mixing together finely pulped animal pancreas and the mold *Aspergillus Oryzae*, *Aspergillus parasiticus* or *Aspergillus flavus*, developed on a culture medium containing wheat bran, tapioca flour, lactic acid and metallic salts, such as, calcium chloride, dipotasium hydrogen phosphate, sodium sulphate, magnesium chloride, manganese sulphate and zinc sulphate. The mixture of pancreas and mold together with the entire culture medium is dried and finely powdered. This product in admixture with common salt is used as enzyme depilant for skins and hides or common salt and different proportions of ammonium sulphate and ammonium chloride are added to the enzyme product for preparing different grades of enzyme bates for leather manufacture. Manufacture of enzyme bates and depilants has been studied on pilot plant scale and economics of the process worked out. The enzyme bate is produced in two grades, while the enzyme depliant is produced only in one grade. The yields of enzyme depilant and enzyme bates Nos. I and II are of the order of 70 per cent. 93 per cent. and 117 per cent. respectively, on the basis of dry weight of the culture medium used for growing the mold. About 800 lbs. of enzyme bates prepared at the Institute have been tested by some commercial tanneries and reported to be comparable with the imported material.

Textile Label Cutting and Folding Machine

Some years ago a textile mill at Heeze (Holland) designed for its own use a textile label cutting and folding machine. It has been patented in many countries and recently been considerably improved. The machine, which is now also supplied to others, is claimed to be highly useful both for the manufacture of textile labels and to manufacturers of ready-made clothing, ties, shirts, etc. A special operational feature of this machine is that textile labels of various widths and lengths can be cut and folded in a matter of moments and without the necessity of exchanging components. The machine can therefore practically be in continuous operation, in which case it has a capacity of about 5,000 labels per hour. The operation cycle of the machines is semi automatic and three-quarter automatic. In the case of the semi-automatic machines the labels have to be put under the shears by hand; with the three-quarter automatic machine cutting and folding as well as the feed are automatic. The only operation required of the operator is the insertion of a new roll of labels in the roll-holder in time. The dimensions of the machine are: height 20", width 12½", length 21". The net weight including the electric equipment is 176 lbs. for the semi-automatic and 286 lbs. for the three-quarter automatic machine.

Lathe Tool

A lathe tool, claimed to be the first with a reversible, positive rake throw-away tip, is being produced in a series of carbide cutting tools and tips by a Sheffield tool making firm. They take high tensile and alloy steel in their stride and can withstand the hammering from interrupted cuts such as gear wheels. The tips are available in triangular or square sections and are locked to the tool by a quarter turn with an Allen Key. Tips can be fitted, reversed or changed without removing the holder from the tool post, thus saving on re-setting time. The ready-formed chipbreaker of the tip has an 8 degree positive rake thus providing a nett 3 degree positive cutting edge with 5 degree front relief angle. Other advantages claimed for the series are that no grinding is required; six or eight cutting edges are available for less than the price of one regrind; many tips can be used with one shank, thus reducing tool costs and higher cutting speeds can be used.

Twist-free Hose

A "twist-free" first-aid hose has been produced by a North of England firm manufacturing fire-fighting equipment. A fundamental characteristic of wrapped ply hoses is the tendency to twist under pressure, and the means of neutralising this effect has so far eluded manufacturers. As a result of considerable research and development work, the firm has evolved a manufacturing technique which it is claimed is wholly successful in this. Specified requirements of first-aid hose are that the hose must not develop a twist of more than two turns in a 60-ft. length when subjected to an internal pressure of 150 p.s.i. The new hose is not expected to give a total twist of more than a quarter of a turn in a 60-ft. length of any diameter at working pressure and half a turn at double working pressure.

Combind Step-ladder and Transport Trolley

A commercial engineering firm at The Hague has put on the market a device for handling goods in warehouses. It consists of a step-ladder combined with a revolving transport trolley. Hence the ladder moves along with the trolley, thus being available whenever goods have to be transported. When the ladder is not used a spring gives it a slight ground clearance, but once in use its lower end rests on the floor, thereby ensuring stability of the trolley. The trolley has four ball-bearing wheels, two of which are designed as castors. The frame of the trolley is of tubular steel and the ladder of light metal. The ladder is designed in two standard models 1.75 m. (5¾') and 2.25 m. (7½') respectively in length. The dimensions and arrangement of the trolley can be adapted to the buyer's requirements.

Synthetic Lubricant

A new synthetic lubricating oil produced by Shell Mex and B.P. Ltd., will cut Birmingham Corporation's fuel bill for its 1,850 buses by nearly £16,000 a year. The City Transport Department after sixteen months of tests with this new rear-axle lubricating oil which, by reducing friction, cut the fuel consumption of 43 test buses by an average 1.6 per cent., have decided to use it in all their vehicles. The new oil was found particularly effective during the colder months, fuel economies of between 2.5 and 3 per cent. being recorded. Tests also showed a further saving in operating costs because the period between oil changes was three or four times longer than with existing axle lubricants. The new lubricant has been developed as the result of five years' work at the Shell Thornton Research Centre.

New use for Wood Wastes

Wood wastes and by-products are being put to a variety of uses. Adhesives, drugs and a growing number of other chemical products derived from bark, sawdust, chips, pulp mill wastes and small branches bring into the forest industry about $60 million a year—roughly one-third more than five years ago. From hemlock bark a new waterproof adhesive has just been marketed. Bark and sawdust is being converted into cyanide and other chemicals for textile dyes, blueprint paper, tanning and other uses. Fir bark is being turned into quercetin, a versatile chemical currently used experimentally in butter to improve its keeping qualities. Some wood chemicals find wider application in paint, plastics, agriculture and even on highways to hold down dust on unpaved roads.

Blood Preservative

A group of American Navy scientists has reported development of a method for safely preserving human blood for nearly four years. This new method, the scientists explained in an article in the current issue of the *Journal of the American Medical Association*, may revolutionise the operation of blood banks which now can store blood for not more than three or four weeks. The procedure involves the subjection of blood to deep-freeze temperatures, as low as 240 degrees below zero. The process, developed by researchers at the U.S. Naval Hospital, Chelsea, Massachusetts, promises to eliminate the present bottleneck of inadequate blood supplies needed for priming heart-lung machines in open-heart surgery and other operations requiring extensive transfusions.

Recording Fingerprints

An optical device, designed for immediate examination and recording of fingerprints, was displayed in Houston, Texas, U.S., by the electronics division of Chance Vought. The prints are said to be so clear that the pores in the ridge pattern may easily be seen. One possible use is for rapid identification in banks and other business establishments. A customer with a credit card bearing his fingerprint would put his finger on the device, which compares the prints electronically. The device can also project a new fingerprint for viewing on a screen or for photographing.

SECRETARY TO G... 5 ... SEP 1960 PUBLIC ...

CURING THE ILLS OF GENERAL INSURANCE

MR. A. D. SHROFF'S PRESCRIPTION

THE insurance fraternity in this country looks forward to the annual general meetings of the shareholders of the New India Assurance Company with eager anticipation. For it is used to hearing from the Chairman of New India, Mr. A. D. Shroff, a comprehensive analysis of the position and problems of insurance during the previous accounting year and an informed assessment of the future prospects. And rarely is it disappointed, for every year the Chairman's statement covers a wide field, ranging from a critical review of the economic and political situation in the national and international fields down to the Company's own operations. Insurance being a world-wide business, which is highly sensitive to shifting trade winds and unpredictable political gales, such a global perspective is essential for a correct understanding of the working of a company like New India whose business is spread over many continents.

This year, however, Mr. A. D. Shroff, the Chairman, preferred to be brief. His speech at the forty-first ordinary general meeting of the shareholders of the Company, held at Bombay on the 24th ultimo, was only half its usual length. The customary reference to the international economic and political situation was absent and the review of the economic trends within the country, which was shorter than it used to be, appeared at the end of the speech. Contrary to his usual practice, Mr. Shroff started straightaway with a resume of the problems of general insurers in the country. Perhaps, in his opinion, these are sufficiently important in themselves to warrant immediate and exclusive attention.

Three Problems

Three problems figured prominently in Mr. Shroff's speech. They were: (1) rising expenses of management, (2) unsound working conditions of companies, and (3) rating. The rising expenses and the consequent increase in expense ratios have been exercising the minds of insurers for quite some time. Appeals for the revision of the formula, in the light of the changed circumstances since 1950, when it was fixed, have been made by many insurance executives. Dealing with this problem, Mr. Shroff said that the mounting expenses seriously aggravated the position of companies. The number of companies that are unable to keep their management expenses within the limits prescribed under Rule 17E of the Insurance Rules 1939 has gone on increasing. This is not surprising, for these limits were fixed as long back as in 1950. Since then, the cost of every item constituting the expenses of management has gone up. There is, therefore, much force in Mr. Shroff's contention that the present limits, prescribed under the aforesaid rule, are stringent in some cases, even by the standard of expenses incurred in the U.K. by the larger British offices. The Indian Insurance Companies' Association and the Executive Committee of the General Insurance Council have already considered this matter and Mr. Shroff hoped that the Department of Insurance in the Central Government would give its sympathetic consideration to the recommendations of the Executive Committee and revise the limits to higher, realistic limits to suit present conditions.

Amalgamation

The problem of uneconomic working has been forced into the focus of public attention by the closure of a number of companies in recent years. This is closely linked with the stature, strength and size of the units constituting the insurance market. According to Mr. Shroff, it is imperative that consolidation and integration of existing units should be achieved through amalgamation and group working. In the present context of tremendous technological changes, inflation and rising wages, the units, if they are to be economic, have undoubtedly to be very much larger than the average unit in the country. In this connection, Mr. Shroff cited the example of the British insurance market which, despite the fact that its problems were less acute, ushered in a silent revolution by amalgamating even giant units. In contrast, Mr. Shroff pointed out, insurers in India were still leaving it to time and chance to effect a cure by slow and painful extinction of the uneconomic units. in spite of full awareness that there was no alternative to integrating the units by amalgamation or group working. He was strongly of the view that Government should take up this problem in right earnest, draw up a plan which would put the industry on sound and dynamic footing and implement this plan with initiative and determination. Unless insurance companies developed inherent strength, Mr. Shroff emphasised, built up organisations to deal with the problems of procuration and servicing of business and organised themselves more effectively through mutual understanding, the efforts of the Executive Committee to put the industry on a sound footing would find themselves faced with a climate of general laxity and helplessness on the part of the insurers to resist the demands of the insured or the insurance agent for excessive remuneration or rebating.

Only Solution

In Mr. Shroff's view, there was only one effective and quick solution to the problem of insurers and that was to take the following measures:

(a) The market, which is now constituted of about 90 Indian units, must be integrated into 15-20 units, not necessarily by amalgamations, but principally by group-working leading to amalgamation, with each unit functioning with a minimum of Rs. 50 lakhs portfolio.

(b) Every unit must follow rigorously the provisions of the Code of Conduct.

(c) The change-over from the present unsound conditions to a new order of absolute soundness must be bridged over by a non-diversion agreement amongst the members for a short period, so that every unit is able to readjust itself without any damage to its position.

A month ago we ourselves advocated amalgamation and integration of insurance companies into viable and stronger units. The idea, of course, was not anything new. As Mr. Shroff himself pointed out, the ideas and solutions outlined by him have been known to the insurers and the representatives of the Government. It is also realised that there is no other easier course. What is required now is action and a quick one at that. All those who have the legitimate interests of general insurance at heart will, therefore, support his suggestion that the Government and the industry should take concerted action to rebuild the market on the aforesaid lines, so that Indian insurance may be able to fulfil its growing responsibilities at home and have a bigger place in the foreign field.

Rating Problems

In the matter of rating also, there is no smooth sailing. Fire rates were reduced since 1st January 1960, the overall reduction having been of the order of 10 per cent. Mr. Shroff seemed to welcome the reduction, although, according to him, it would affect the industry in two ways—reduced volume of business and higher costs. He, however, felt that, despite the extraordinary difficult conditions through which the industry was passing, it was only fair that the insured paid reasonable rates. Certain adjustments in fire rates *inter se* between various sections of the textile and jute industries were, however, warranted and these were being made.

The steady rise in the cost of repairing automobiles and the number of accidents are a source of considerable anxiety to insurers. The experience in respect of commercial vehicles and motor scooters, in particular, has been quite adverse. Referring to this situation, Mr. Shroff said that a mere stepping up of rates is no solution. Various alternatives were being examined, including certain exclusions and franchise to control the excessive cost of claims, so that the good and honest insured would not be penalised. He also suggested that it would be necessary to set up an efficient claims settling organisation to render prompt service to the insured and to ensure fair and just settlement. Since Mr. Shroff delivered his speech, an enhancement of the premium rates on scooters and commercial vehicles, with certain changes in the basis of tariffs, has been announced. A separate reference to this development is made on this page.

Mr. Shroff shared the views of other insurance executives when he voiced disapproval of the Government's action in compulsorily raising the share of the Government-controlled companies in the Government business handled by the Indian Insurance Companies Association's Pool and the Indian Aviation Insurance Companies Scheme from 50 to 75 per cent. He said that, by this decision, the Government had practically withdrawn the support it was giving to the Indian insurance market. The business was so far being distributed though the two pools was mainly marine and aviation business. By giving such a large share of the business to four companies only, the Government had not utilised fully the underwriting capacity of the whole market. To that extent, it was necessary for the Government to verify whether it had not increased the drain on foreign exchange by way of reinsurance which would have to be effected by these four companies.

Reinsurance

Commenting on the conversion of the "Indian Guarantee," a subsidiary of the Life Insurance Corporation of India, into a purely reinsurance company, Mr. Shroff suggested that it should specialise in granting the types of reinsurance cover that were not readily available in this country. There was a great need to develop insurance of agricultural crops, dairy animals and hire-purchase business. This type of business, which was now necessary for the country, could be developed, according to him, provided adequate reinsurance cover was available. By specialising in this field, the new reinsurance company could be a source of strength to the market without duplicating the efforts already being made in the field of normal type of reinsurance business by the Indian Reinsurance Corporation—a co-operative venture of private insurers. All the companies were at present giving a 10 per cent. share of their business to this Corporation on a voluntary basis. To that extent, Mr. Shroff pointed out, the net outgo of foreign exchange was being reduced. He, however, expressed fear that the Government might ask for compulsory ceding of reinsurance to its newly-established company. Mr. Shroff felt that compulsion in the field of reinsurance was not called for, as the objective of reducing the foreign exchange drain could be better achieved by encouraging private companies to obtain suitable reciprocity from abroad for the reinsurances they placed.

Guidance and Direction

The reorganisation of the industry on the lines suggested by Mr. Shroff calls for guidance as also a degree of purposeful and constructive direction by the Government, especially in view of the conflict of interest involved. But it should not be difficult, as Mr. Shroff pointed out, to iron out the conflicts and discover the chords of unity. If managements of insurance companies are prepared to look beyond their immediate individual gains to the long-term interests of the industry, in particular, and the country, in general, they should be able to appreciate the value of Mr. Shroff's suggestions. Now that Mr. Shroff has retired from Tatas, we suggest that he should take the initiative in this direction and put forward a more detailed plan for placing general insurance on a sound footing before it is too late. Failure of insurers to unite and set their house in order carries with it the risk of nationalisation.

SCOOTER AND PUBLIC CARRIER INSURANCE RATES UP

The Insurance Association of India has announced a thirty per cent. increase in insurance premia on scooters and public carriers (commercial vehicles) in Bombay, Calcutta and Delhi regions, with effect from 1st August 1960. The revision in premia, however, does not affect the Madras region where the existing rates will continue to prevail. According to the enhanced rate, comprehensive cover on scooters will now cost Rs. 140 per year, as against the existing rate of Rs. 107.50 and that on an eight-ton public carrier will cost Rs. 350 more than the present rate of Rs. 1,010. Further, the owner has been made liable to bear every first claim of Rs. 50 in respect of a damaged scooter and every first claim of Rs. 500 in the case of a public carrier, as against the present limit of Rs. 100 only. No such clause existed in the case of scooters hitherto.

Insurers point out that the increase in premia has been forced on them by the high incidence of claims in regard to these vehicles. It is said that insurance companies have sometimes to pay as much as 500 per cent. of the premium as claims. Claims in respect of scooters all over India (excluding Madras) average nearly 100 per cent. Delhi has the worst record, claims in that region being of the order of 133 per cent. Bombay and Calcutta have a lower figure, 90 per cent. and 80 per cent. respectively, while Madras has the best claims record.

The insurers complain that they are not only not making any profit at all on insurance of scooters and public carriers, but that they are actually losing. The position, it is said, has been aggravated by the filing of inflated claims by owners in collusion with workshop owners. The profitability of the business is such that many companies are reluctant to insure scooters and public carriers.

ANNOUNCEMENT

The British India Corporation Limited is pleased to announce that with effect from 16th August 1960 the Central Government has approved their appointment as Secretaries and Treasurers of the following companies:—

(1) Elgin Mills Co. Ltd.
(2) Cawnpore Textiles Ltd.
(3) Cawnpore Sugar Works Ltd.
(4) Champarun Sugar Co. Ltd.
(5) Saran Engineering Co. Ltd.
(6) Brushware Limited.

The management of the above companies is being taken over by The British India Corporation Limited from their subsidiary, Messrs. Begg Sutherland & Company Private Limited. As the administrative set-up is the same as before, continuity of business policies and relationships is ensured.

RAMTIRTH

HINDI MONTHLY

Editor: YOGIRAJ SHRI UMESHCHANDRAJI

Published by:
SHRI RAMTIRTH YOGASHRAM, Bombay

• MORE THAN 130 PAGES PER ISSUE •

The main idea behind this magazine is to develop the physical, mental and moral aspect of the common man. Detailed information about the cure of diseases by naturopathy and yogic treatment is discussed also.

Annual Subscription **Rs. 4/-** only. Single Copy **40 nP** only.

Agents shall place their orders and requirements by 15th of each preceding month.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cools brain, improves system, and brings sound sleep. Most ideal for body massage. It is useful to every one in all seasons. Prices : **Rs. 4/-** for big bottle and **Rs. 2/-** for small. Available everywhere.

YOGASANA CHART

A Chart printed on Artglazed Paper and fully illustrated with attractive pictures is also available here. You can perform the Asanas shown therein at your home, which will keep you fit and healthy. Price: **Rs. 2.50** including Postage, to be sent by M.O. only.

YOGIC CLASSES are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Special classes for Ladies are also conducted. Lady teachers instruct Ladies.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company at Tiruchirapalli. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Madras Stock Exchange Ltd. has agreed to grant an official quotation for the shares of the Company and permission to deal in them on the Company complying with the usual and necessary formalities after the closure of the subscription list.

THE SUBSCRIPTION LIST WILL OPEN AT 10 A.M. ON WEDNESDAY THE 7TH SEPTEMBER 1960 AND WILL CLOSE AT 2-30 P.M. ON MONDAY THE 12TH SEPTEMBER 1960 OR EARLIER AS SOON AS SUBSCRIPTIONS APPROXIMATING TO THE AMOUNT ISSUED HEREUNDER TO THE PUBLIC HAVE BEEN RECEIVED, BUT NOT EARLIER THAN 2-30 P.M. ON SATURDAY, THE 10TH SEPTEMBER 1960.

SESHASAYEE PAPER AND BOARDS LTD.

(INCORPORATED UNDER THE COMPANIES ACT 1956)

THE COMPANY WAS INCORPORATED ON 22ND JUNE 1960.

IT HAS OBTAINED A CERTIFICATE TO COMMENCE BUSINESS ON 23RD JUNE 1960.

AUTHORISED CAPITAL

	Rs.	Rs.
3,00,000—6½% tax-free cumulative redeemable Preference Shares of Rs. 100 each	3,00,00,000	
70,00,000 Equity Shares of Rs. 10 each	7,00,00,000	
		10,00,00,000

ISSUED CAPITAL 3,50,00,000

Divided into 35,00,000 Equity Shares of Rs. 10 each, out of which

(1) 10,01,000 Equity Shares of Rs. 10 each have already been subscribed by the Promoters, the foreign collaborators, Directors and their friends and associates. Their friends have further agreed to subscribe for 49,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 4,90,000.

(2) 10,00,000 Equity Shares of Rs. 10 each have been subscribed by the Madras Industrial and Investment Corporation Ltd.

(3) The balance of 14,50,000 Equity Shares of Rs. 10 each are offered for public subscription.

The Amount payable in respect of the shares is as follows :—

On application Rs. 5 per share; on Allotment—Nil. The balance of Rs. 5 per share is payable and will be called up in two equal instalments at an interval of not less than three months between the calls, the first of such calls being not earlier than four months from the date of allotment.

The entire balance of issue, namely, 14,50,000 Equity Shares now offered to the public, has been underwritten as hereinafter stated.

No shares are issued for consideration other than cash.

The Life Insurance Corporation of India have agreed to underwrite Equity Shares of the face value of Rs. 25,00,000 and the Company has agreed to allot the said shares to them. Accordingly they will be entitled to preferential allotment of the same.

Equity Shares to the extent of face value of Rs. 4,90,000 agreed to be subscribed by the promoters and their friends as aforesaid will also be reserved for preferential allotment.

The Company has agreed that the Brokers to this issue will be given preferential allotments to the extent of Rs. 2,50,000 face value shares each in respect of specific applications submitted by them and marked for firm allotment.

OBJECTS

The Company was incorporated on 22nd June 1960 for the several purposes set forth in the Memorandum of Association. The main object of the Company is to set up an integrated Pulp and Paper Plant with a capacity of 20,000 tons per annum.

PROSPECTS

India is now going through a phase of acute shortage of paper of every description. Despite the recent increase in domestic production capacity a considerable gap remains between the supply and demand. While the annual demand at the end of the Second Five-Year Plan period was estimated by the Planning Commission at 3,50,000 tons, the existing mills in spite of their recent expansions have not been able to reach the above target. We are now on the threshold of the Third Five-Year Plan period and the Planning Commission has estimated that the country's needs will be of the order of 7,00,000 to 9,00,000 tons by the end of the Third Five-Year Plan. It is, therefore, imperative that new units to produce paper must be established in order to meet this urgent need and this is reflected in policy statements made by the Government from time to time, both in Parliament and in public platforms.

With the rapid rise in literacy and steady increase in industrial activity and in the field of organised commerce, more and more writing and printing paper will be needed and it will take a considerable number of years before production catches up with demand. In this context, the prospects for Paper Industry are very bright indeed.

This Company has been promoted by Messrs. Seshasayee Brothers (Private) Ltd.

SITE

The Pulp and Paper Mill will be located on the bank of river Cauvery at Cauvery Railway Station, about three miles from Erode Junction on the Southern Railway. The Pulp and Paper Mill will be located centrally to the various reserve forests wherefrom bamboo will be supplied. The Pugalur Sugar Factory, wherefrom sugarcane bagasse will be made available, is situated at a distance of only 35 miles. The main Chemicals such as Chlorine, Caustic Soda and Lime are available at Mettur within a distance of less than 50 miles. Being located on the bank of river Cauvery, unfailing and copious supply of water is ensured. The Cauvery Station is served by the main broad-gauge rail-road from Mettupalayam to Madras. The area is also well served by National Highways. Thus road and rail transport facilities for movement and transport of goods and materials are available in ample measure. Arrangements have been made to acquire sufficient land to meet not only immediate requirements, but also the needs of future expansion.

RAW MATERIALS

The two major fibrous raw materials, which will be used are bamboo and sugarcane bagasse. Bamboo is the traditional paper-making material in India. Sugarcane bagasse is being used successfully in many countries. The paper-making characteristics of these two fibres are such that their combination will produce excellent printing and writing papers of various types and varieties.

There are a number of reserve forests within a radius of 40 to 60 miles from the mill site which will yield an abundant supply of bamboo required for the factory. The Company intends to secure from the Deccan Sugar and Abkhari Company, Ltd., supply of adequate quantities of sugarcane bagasse at reasonable costs.

POWER AND WATER SUPPLY

As against a total power requirement of 4,500 kw., the Company proposes to generate about 2,000 kw. by utilising the steam that is employed for diverse processes in the Mill. The balance of power requirement can be obtained from the Madras State Electricity Board's Grid, in respect of which the necessary assurances have been received.

The river Cauvery will provide unlimited quantity of good water for meeting the requirements of the Industry.

MARKETS

There is no paper mill in the State of Madras. The demand in this State together with the demand in the two adjoining States of Kerala and Andhra will far exceed the production in this Mill. Thus no marketing problem is expected to arise.

PLANT AND MACHINERY

An agreement has been entered into by this Company with Messrs. Parsons and Whittemore South Asia Company Inc., by which they undertake the complete engineering, erection and commissioning of the plant, and procure the bulk of the machinery, which will be of the latest design from U.S.A.; items of machinery and equipment of indigenous origin being reserved to be procured in India. The Government of India have been pleased to provide for the entire foreign exchange required for the project from the Export-Import Bank Loan Aid Programme.

The agreement with Messrs. Parsons and Whittemore South Asia Company Inc., provides specifically for the procurement of machinery suitable for producing not less than 60 long tons of paper per day of continuous operation; and for the designing of the factory buildings and the engineering, procurement and installation of the plant and machinery and its commissioning and operation to reach the guaranteed production stage.

The agreement provides for the delivery of machinery in India within 24 months from the date of contract but Messrs. Parsons and Whittemore South Asia Company Inc. have agreed to use their good offices to accelerate deliveries so that the factory can come into production in about two years' time.

Messrs. Parsons and Whittemore South Asia Company Inc. are well known to the Paper Industry as the export arm of Messrs. Black Classon who have world-wide reputation as paper machinery makers with special knowledge in the working of bamboo and bagasse. They have built many factories in the United States, as well as Europe and South America and have currently on hand a world-wide construction programme.

Import Licence CCP. No. 998532/EXIM/60/HQ/CG dated 4th July 1960 has been obtained from the Chief Controller of Imports and Exports, Government of India, for the import of the above plant and machinery and an irrevocable letter of credit has been opened through the United Commercial Bank Limited, in favour of the aforesaid suppliers, viz., Messrs. Parsons and Whittemore South Asia Company Inc., U.S.A.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

In respect of the public issue under this Prospectus, the minimum subscription on which the Directors will proceed to allotment is Rs. Fifty lakhs being Five lakhs of Equity shares of Rs. 10 each.

The Capital required to reach the stage of production is estimated to be as follows:—

	Rs.
(1) Land and Buildings	56,00,000
Machinery and equipment including freight and erection charges	4,43,00,000
Engineering fee and supervision expenses.	40,00,000
	5,39,00,000
(2) Preliminary Expenses	3,00,000
(3) Brokerage and underwriting commission	8,00,000
(4) Working Capital	50,00,000
Total ...	6,00,00,000

It is proposed to provide the said sum of Rs. 6 crores as follows:

Out of the proposed issue of share capital of Rs. 3,50,00,000, the signatories to the Memorandum, the Madras Industrial Investment Corporation Ltd., and friends of the Directors and promoters of the Company have already subscribed and have been allotted 20,01,000 Equity shares of Rs. 10 each. Out of the balance, 49,000 Equity shares are reserved for further allotment to the promoters and their friends. The balance of Rs. 1,45,00,000 consisting of 14,50,000 Equity shares, is now offered for public subscription.

The sum of Rs. 2,50,00,000 (being the difference between the estimated capital requirements of Rs. Six Crores and the Equity share capital of Rs. Three Crores and Fifty Lakhs) as well as any increase, if any in the actual cost over the estimated cost of the plant, machinery and facilities and any amount by which the allotment to the public out of the present issue falls short of Rs. 1,45,00,000 will be raised to the extent required by loans from the Bankers and other financial institutions and if necessary from other sources.

ESTIMATE OF PROFITS

The Company intends to instal up-to-date machinery and equipment and utilise modern manufacturing processes. Based on market conditions, the Directors are satisfied that the operation of this Mill will yield a satisfactory return on the capital invested.

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate and depreciation; in addition, as a new Industrial undertaking, it will enjoy exemption from Income-tax for profits upto 6 per cent. on the Capital employed for the first five years of the Company's operation.

MANAGING AGENTS

The Company will be under the management of Messrs. Seshasayee, Parsons and Whittemore Private Limited, a private company formed jointly by Messrs. Seshasayee Brothers (Private) Limited of Tiruchirapalli and Messrs. Parsons & Whittemore Paper Mills Corporation, State of Delaware, U.S.A. Messrs. Seshasayee Brothers (Private) Limited are well-known industrialists and the Managing Agents of several successful industrial enterprises in South India. Messrs. Parsons & Whittemore have considerable experience in building and operating pulp and paper mills throughout the world. Their knowledge and know-how will be available to the Company for designing the plant and commissioning it. Their associate Company have subscribed Rs. 75,00,000 to the capital of the Company and thus have a substantial stake in its prosperity. The combined experience of these two organisations will ensure the speedy completion and successful operation of the Mill.

Articles 139 and 140 of the Company's Articles of Association provide for the appointment of Messrs. SESHASAYEE, PARSONS AND WHITTEMORE PRIVATE LIMITED as Managing Agents of the Company on the terms of a draft Managing Agency Agreement referred to therein. The Articles provide that subject to the approval of the Central Government, Seshasayee Parsons and Whittemore Private Limited shall be the Managing Agents of the Company on the terms of the draft agreement above referred to. The Managing Agents will be paid by way of remuneration a commission on the nett profits of the Company, at the following rates:—

10% on the first Rs. 10 lakhs or fraction thereof;
9% on the next Rs. 10 lakhs or fraction thereof;
8% on the next Rs. 10 lakhs or fraction thereof;
7% on the next Rs. 10 lakhs or fraction thereof;
6% on the next Rs. 10 lakhs or fraction thereof;
5½% on the next Rs. 25 lakhs or fraction thereof;
5% on the next Rs. 25 lakhs or fraction thereof;
4% on the balance of the net profits of the Company or fraction thereof.

In the event of inadequacy or absence of profits, the Managing Agents will be paid a minimum remuneration of Rs. 50,000 per annum. The expression "net profits" shall have the same meaning as defined under Sections 349 and 350 of the Companies Act, 1956.

DIRECTORS

The Articles provide that there shall be a minimum of six Directors and a maximum of twelve Directors including ex-officio Directors. The Articles further provide that the Board of Directors may at any time declare in respect of any Director that his continued presence in the Board is of advantage to the Company and that he shall not be liable to retirement by rotation. The maximum number of Directors not liable for retirement by rotation shall not exceed one-third of the total strength of the Board.

APPOINTMENT OF DIRECTOR BY THE MADRAS INDUSTRIAL INVESTMENT CORPORATION LIMITED

The Madras Industrial Investment Corporation Limited, so long as they hold equity shares of the face value of Rs. 30,00,000 in the capital of the Company, or so long as any monies are due by the Company in respect of any loan advanced by the Madras Industrial Investment Corporation Limited, or guaranteed by them, shall be entitled to appoint an ex-officio Director to the Board.

PRELIMINARY EXPENSES

The estimated amount of preliminary expenses (inclusive of about Rs. 1,00,000 towards expenses of this issue but exclusive of underwriting commission and brokerage) is Rs. 3,00,000 and will be paid and borne by the Company.

ISSUE OF SHARES

By a Resolution passed at an Extraordinary General Meeting dated 12th August 1960 directions have been given that the shares now issued need not be offered to the existing shareholders for subscription and that the Board of Directors shall be at liberty to offer and allot the whole or any portion of the issue for public subscription or allot in such manner as they deem fit.

UNDERWRITERS

The Company has entered into agreements with the Life Insurance Corporation of India, the following Banks and Brokers under which they have agreed to underwrite Equity shares of the face value set out respectively against their names.

Date	Name	Amount Rs.
16-8-1960 ..	Life Insurance Corporation of India, Bombay	25,00,000
Do. ..	The United Commercial Bank Ltd., Calcutta	25,00,000
Do. ..	The Bank of Baroda Ltd., Bombay	25,00,000
Do. ..	The Indian Overseas Bank Ltd., Madras	25,00,000
Do. ..	Devkaran Nanjee Banking Company Ltd., Bombay	15,00,000
Do. ..	Messrs. Chitra & Co., Madras ..	5,00,000
Do. ..	Messrs. Maconochie & Co., Madras	5,00,000
Do. ..	Messrs. Paterson & Co., Madras.	5,00,000
Do. ..	Messrs. P. R. Subramanyam, Bombay	5,00,000
Do. ..	Messrs. Lewis & Jones, Bombay.	5,00,000
Do. ..	Messrs. G. M. Pyne, Calcutta ..	5,00,000
	Total .. Rs.	1,45,00,000

The Directors are of opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

Under the said agreements, the Underwriters are entitled to an underwriting commission of 2½ per cent. of the face value of the shares respectively underwritten by them exclusive of brokerage, referred to below.

BROKERAGE

Subject to Clause 13 of the Articles of Association of the Company, brokerage at the rate of 1 per cent. will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to underwriters in addition to the underwriting commission, on allotments in respect of applications made or procured by them and bearing their respective stamps.

OTHER COMMISSIONS

The Madras Industrial Investment Corporation Limited will be paid commission at 2½ per cent. of the nominal value of the Equity shares subscribed by them.

INSPECTION OF DOCUMENTS

Originals and/or copies of the Memorandum and Articles of Association of the Company, Consent of the Controller of Capital Issues, Licence issued by the Government of India for establishing the industrial undertaking, Import Licence issued by the Chief Controller of Imports, Government of India, for the import of machinery, Auditors' Report, Contracts and agreements can be inspected at the Registered Office of the Company at No. 1, Alexandra Road, Cantonment, Tiruchirapalli-1, during the usual business hours on any business day for the period the subscription list remains open.

PROSPECTUS AND APPLICATION FORMS

Application for Equity shares must be made on the respective forms accompanying the Prospectus. Application should be for a minimum number of 100 Equity shares.

Copies of the Prospectus on the terms of which alone, applications will be considered and application forms may be obtained from the Registered Office of the Company, the Company's Bankers, the Underwriters and the Brokers whose names have been mentioned in the Prospectus.

DEVELOPMENT OF CHEMICAL FERTILISERS

PROGRESS MADE—PLANS FOR THE FUTURE

THE third Plan, now on the anvil, lays considerable emphasis on the promotion of agriculture. The total agricultural output is proposed to be raised by over 30 per cent. in the course of the next five years. As is well known, the scope for extending the area under cultivation is quite limited. In fact, in respect of land under cultivation, India occupies a leading position in the world, its cultivated area being about 158 million hectares, well over the total of all the European countries (excluding Russia) put together. Nevertheless, the per-acre production in India is deplorably low. This may be attributed to innumerable causes, such as poor production techniques, lack of adequate irrigation facilities and scarcity of fertilisers. It may be noted in this context that the Fertiliser Association of India, in its publication, *Fertiliser Statistics* 1959, has sought to make a special study of the contribution of fertilisers to the increase in production and to establish an interesting correlation between these two variables. Fertiliser consumption per-acre of agricultural land is no more than 1.17 lbs. in India, as against 190 lbs. in Japan, 182 lbs. in the Netherlands, 168 lbs. in Belgium, 133 lbs. in West Germany, 47 lbs. in the U.K. and 12 lbs. in the U.S. The low level of consumption of fertilisers in India explains, to a certain extent, the low productivity of its agriculture. The per-acre yield in respect of wheat is only 625 lbs. in India, whereas it amounts to as much as 1,927 lbs. in Japan, 3,542 lbs. in the Netherlands, 3,194 lbs. in Belgium, 2,810 lbs. in W. Germany, 2,846 lbs. in the U.K. and 1,302 lbs. in the U.S. This phenomenon is more or less true of other commodities also, as will be seen from Table I on this page.

Third Plan Target

Appropriately enough, the third Plan proposes to increase the consumption of nitrogenous fertilisers from about 360,000 tons at the end of the second Plan to one million tons in terms of nitrogen and of phosphatic fertilisers from about 67,000 tons to about 400,000-500,000 tons, by the end of the third Plan. (It may be recalled that a brief account of the programmes for fertiliser development in the third Plan appeared in these columns last week.) The straight chemical fertilisers consist of nitrogenous, phosphorous and potassic varieties. Table II shows the trend of progress in the utilisation of these fertilisers in India in recent years.

Of the above-mentioned three types of chemical fertilisers, nitrogenous fertilisers have been far more popular in India than others. The existing factories produce about 148,593 tons (in terms of nitrogen) of nitrogenous fertilisers. Factories under construction are expected to add 256,000 tons of N. It is expected to set up a few more units with an aggregate capacity to produce 602,500 tons of N. in the third Plan, making a total of over one million tons of N. The installed capacity of the existing units producing nitrogenous fertilisers is given in Table III.

The production of ammonium sulphate (in terms of nitrogen) rose from no more than 45,163 tons in 1952 to 78,738 tons in 1958, but declined to 76,412 tons in 1959.

Phosphatic Fertilisers

Among phosphatic fertilisers, the installed capacity of the existing factories producing superphosphate aggregated 80,752 tons in terms of P_2O_5. A few more factories with a total additional capacity of 60,552 tons have been licensed. Altogether, the total installed capacity of superphosphate will go up to 141,304 tons (in terms of P_2O_5) in the next few years. The production of superphosphate has been steadily rising from 7,464 in 1952 (in terms of P_2O_5) to 39,420 tons in 1959. It may be noted here that the current total installed capacity of sulphuric acid is 360,884 tons in India. The potassic fertilisers have not been produced indigenously. They are at present imported.

An interesting feature of the publication, *Fertiliser Statistics* is the inclusion of estimates of savings in foreign exchange that will accrue as a result of import of fertilisers or fertiliser plants, instead of foodgrains. For instance, it is computed that 250,000 tons of N. will produce about 2,500,000 tons of foodgrains. The foreign exchange cost of importing that much of foodgrains is estimated at as much as about Rs. 113.5 crores, whereas only Rs. 37.5 crores will be necessary if fertilisers are imported for raising the specified quantity of foodgrains. In fact, the import of a fertiliser plant that can turn out enough fertiliser to raise 2,500,000 tons of foodgrains will cost no more than Rs. 4.2 crores in foreign exchange. Table IV shows at a glance the saving that can be effected by the import of fertilisers and fertiliser plant, respectively, in the place of direct imports of foodgrains.

Fertiliser Statistics

A word about the *Fertiliser Statistics*. The present volume for 1959, which is priced at Rs. 5 per copy, is the fifth edition brought out by the Fertiliser Association of India. The object of the publication is to keep those engaged in the fertiliser industry and in the propagation of fertilisers informed of the various factors relating to the industry in India and abroad. The book is divided into two parts. Part I consists of fertiliser statistics and Part II of related statistics. Part I gives details regarding the industries concerned with the manufacture of straight and mixed fertilisers, installed capacity, production, consumption, prices, imports and exports, targets of consumption of nitrogen, phosphorus and potassium in the third Five-year Plan and world statistics. Certain useful information, such as the plant nutrients removed by crops and the average analyses of important fertilisers is also included in this part. Part II deals with land utilisation statistics, area and production of crops, irrigation, prices and world statistics.

In conclusion, it may be pointed out that side by side with the expansion of fertiliser industry, greater attention should be devoted to scientific research with a view to ensuring proper utilisation of fertilisers. This is of particular importance to India, with its different types of soil conditions, pattern of farming, etc. The findings of the research, it is needless to add, should be made available for the use of farmers in a manner that will be easily appreciated and assimilated by them.

TABLE I
Fertiliser Consumption and Yields

	Fertiliser consumption per acre (lbs.)	Yield per acre in lbs.						
		Paddy	Wheat	Maize	Barley	Grain*	Potatoes	Cotton (lint)

* Grain includes wheat, rye, barley, oats, maize, millets, sorgum and paddy.

TABLE IV
(Value in crores of rupees)

	Capacity of N. to be achieved	*Additional foodgrains	Foreign exchange required for import of		
			Foodgrains	Fertilisers	Fertiliser plant
	(Tons)	(Tons)			
1960	250,000	2,500,000	113.5	37.5	4.2
1961	350,000	3,500,000	158.9	52.5	9.8
1962	400,000	4,000,000	181.6	60.0	23.8
1963	400,000	4,000,000	181.6	60.0	39.2
1964	700,000	7,000,000	317.8	105.0	43.4
1965	1,100,000	11,000,000	499.4	165.0	28.0
1966	1,500,000	15,000,000	681.0	225.0	56.0
			2,133.8	705.0	154.0

* It is assumed that 1 ton of nitrogen (N.) gives 10 tons of foodgrains and 20 tons of straw.

N.B.—1. It is assumed that all N. will be used on foodgrains. 2. Cost of foodgrains taken at Rs. 400 per ton and straw at Rs. 27 per ton. 3. Cost of imported N. taken at Rs. 1,500 per ton. 4. It is assumed that capital investment required will be Rs. 3,000 per ton of nitrogen capacity per annum, the corresponding foreign exchange requirement being Rs. 1,400. During the gestation period between planning and reaching the production stage, the percentage of investment in each year is assumed at 10, 10, 30, 40 and 10, respectively.

COKE OVENS AT DURGAPUR

The speed with which the Government of West Bengal is pushing through the project for doubling the production capacity of the coke ovens at Durgapur to 2,000 tons per day is, indeed, commendable. Although the Centre expressed its inability to make available sufficient foreign exchange for the project, which is estimated to cost a total of Rs. 6 crores (including the outlay on a coal washery and a producer gas plant), the State authorities have spared no effort to arrange for external finance. Their attempts have met with success. Messrs. INGRA of Zagreb in Yugoslavia have undertaken to execute the project in association with the Durgapur Industries Board. The agreement to this effect received the approval of the West Bengal Government recently.

Payment for equipment supplied by Messrs. INGRA will be in non-convertible rupees which will be spent in India to purchase sewing machines and other industrial goods, as well as a few raw materials. In other words, no spending of foreign exchange is directly involved and the responsibility for converting the rupees into exportable Indian goods is left to the Yugoslav firm. Even the fee for the services rendered by the foreign company (15 per cent. of the total estimated cost) will be paid in non-convertible rupees. What is more, the Yugoslav firm will secure part of the essential equipment from European countries by paying them in their respective currencies.

The coke oven plant now being put up at Durgapur will consist of three batteries of 78 ovens each; the first battery was lighted on 24th August 1959. The proposed expansion of capacity, it is said, will make the plant an economic unit, the annual rate of coke output being of the order

(*Continued on page 444*)

ELECTRICALLY HEATED MUFFLE FURNACES FOR LABORATORIES & WORKSHOPS
Outstanding Features:
- Regulator with Scale Built-in Temperature.
- Built-in Thermocouple.
- Heating Muffle of High Quality Clay (Sillimanite) with Chrome-Nickel Heating Coils Embedded.
- Muffle can be changed while Furnace is still hot.
- Rapid Heating Time to Full Temperature in approximately 90 minutes.
- Uniform Temperature inside Heating Chamber.
- Excellent Temperature Regulation (± 10° C).
- Double Hinged Door.
- Modern Compact Design.
- Low Operating Cost.
- Ideal for Bench use for the Annealing, Tempering and Hardening of Metals.

ANOTHER YEAR OF BUMPER RESULTS FOR GWALIOR RAYON

CAPACITY OF THE WOOD-PULP PLANT TO BE RAISED BY 50 PER CENT.

THE recommendation of the Directors of the Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd. (Managing Agents: Birla Gwalior Private Ltd., Nagda) to raise the dividend on ordinary shares of the Company for the year ended 31st March 1960 from 10 per cent. free of tax (paid for 1958-59) to 20 per cent., subject to deduction of tax, or 14 per cent. tax-free, is fully justified by the excellent performance of the Company during the year. The production of staple fibre has gone up from 3.53 million lbs. to 4.61 million lbs. Thanks to a good demand, particularly for crimped and spun dyed staple fibres, the production of which was started last year, the sales have jumped up from Rs. 8.37 crores to Rs. 9.71 crores and the gross profit from Rs. 2.51 crores to Rs. 3.50 crores. The production, sales and gross profit are all at a new high. Along with the rise in profit, the ratio of gross profit to sales has also improved from 30 per cent. in 1958-59 to 36.1 per cent. in the year under review.

A sum of Rs. 29.34 lakhs has been provided for managing agency commission, as against Rs. 11.95 lakhs a year ago. This includes Rs. 6.33 lakhs being the additional commission due in respect of 1957-58 and 1958-59 following the finalisation of the managing agency remuneration with effect from 1st April 1957. Pending the finalisation of this, the Directors had made a provision in the previous year's accounts at the rate of 5 per cent. In the course of the year under review, the Government approved of a remuneration at 7½ per cent. Accordingly, the provision for managing agency commission for the years 1957-58 and 1958-59 has been brought up to 7½ per cent. The managing agency agreement has been renewed for a period of 10 years from 15th August 1960 at the statutory scales of remuneration.

As a result of the sharp cut in the provision for depreciation from Rs. 204.44 lakhs to Rs. 43.70 lakhs and in the absence of any provision for tax liability (for which a sum of Rs. 14.75 lakhs had been set aside for 1958-59), the net profit stands at Rs. 277.45 lakhs, as against Rs. 20.41 lakhs for the previous year. The Directors have not made any provision for taxation, because the Company's claim for exemption from income-tax and super-tax liability granted by the old Gwalior State Government for a period of 12 years, but not accepted by the Central Board of Revenue, has been upheld by the Madhya Pradesh High Court. However, the estimated liability in respect of 1959-60, should a liability be ultimately established, is Rs. 135 lakhs. This contingency is anticipated by the Directors and they have accordingly set aside to the general reserve Rs. 175 lakhs, made up of Rs. 165 lakhs from the year's profit and another Rs. 10 lakhs from the reserve for taxation, which will more than cover the contingent liability. The Company had also deducted last year Rs. 2.85 lakhs from the dividends on the then 6 per cent. taxable preference shares, and this would be refunded to the shareholders if the Company's claim for exemption from income-tax and super-tax for the period of agreement with the old Gwalior State Government is finally accepted. If the Company were to succeed in getting exemption from tax liability, the aforesaid allocation to the reserve would serve to strengthen considerably its financial position. In addition, the Directors have added Rs. 1.12 lakhs to the development rebate reserve; this is on top of Rs. 59.60 lakhs provided a year ago.

The arrears of preference dividends (including those in respect of the year under review) from 1st January 1955 have been cleared in full, absorbing Rs. 53.14 lakhs. It will be recalled in this connection that the Company's 6 per cent. taxable preference shares were converted into 6 per cent. tax-free 'A' preference shares with effect from 29th September 1958. The dividend on these, as well as that on the new 6 per cent. tax-free 'B' preference shares issued in 1958, was raised, in April 1960, to 8.57 per cent. gross, so that, after deduction of tax as provided in Section 18(3D) of the Income-tax Act, the shareholders would continue to get a net dividend of 6 per cent. The ordinary dividend at 20 per cent. (gross) absorbs Rs. 50 lakhs, leaving a surplus of Rs. 20.81 lakhs to be carried forward, including Rs. 12.63 lakhs, brought in, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March

* Subject to deduction of tax.

The Company's production capacity of staple fibre is being fully utilised now. An application for amending the industrial licence for the proposed wood-pulp plant in Kerala so as to permit an increase in its production capacity from 100 tons to 150 tons per day has already been made and is expected to be sanctioned shortly. Orders have been finalised for most of the machinery for the wood-pulp plant. The construction work at the site of the plant will be in full swing in a few months' time. The total capital expenditure for this project will, according to the Directors, be of the order of Rs. 7 crores. The Directors and the Managing Agents say that they do not anticipate any difficulty in providing the finances for this project. This means that they do not propose to issue any new shares for the present.

The Company's experiments for evolving a process by which the strength of the staple fibre in the wet stage could be improved are said to be heartening and further research on the subject is continuing. If ultimately the experiments prove successful, the staple fibre, it is stated, can easily replace the use of foreign cotton in a large variety of fabrics and will incidentally save a lot of foreign exchange which is being spent now on import of long-staple cotton.

Subject to the contingency regarding the tax liability referred to above, the Company's reserves and surplus stand at Rs. 260.28 lakhs, representing nearly 65 per cent. of the paid-up capital of Rs. 400.76 lakhs. The current liabilities and provisions aggregate Rs. 223.40 lakhs and these are covered by a large margin by cash balances alone which are standing at Rs. 378.37 lakhs, out of the total current assets amounting to Rs. 646.67 lakhs. The additions to the block account during the year under review amount to Rs. 26.51 lakhs, raising the gross value thereof to Rs. 642.53 lakhs. The depreciation written off up to the end of the year under review is Rs. 412.24 lakhs, so that the book value of the fixed assets is no more than Rs. 230.29 lakhs. The capital expenditure so far on the pulp project is Rs. 7.48 lakhs.

The recent sharp upward trend in the Company's Rs. 10 fully paid-up ordinary shares would appear to be largely justified by the impressive results for the year under review. For even at the current level of Rs. 45.50 *cum-div.*, the yield is 3.1 per cent. per annum, free of tax, and is in line with the current yield pattern of first class equities.

ALL INDUSTRIAL CHEMICALS

METTUR CHEMICALS DOES WELL

FURTHER CAPITAL TO BE RAISED

AN increase of Rs. 2.61 lakhs to Rs. 25.60 lakhs in gross profit is disclosed by the accounts of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Mettur Dam R.S.) for the year ended 31st March 1960. This improvement has not only more than made good the setback witnessed in the previous year but enabled the Company to earn a record profit, despite some adverse factors. The production of main chemicals, for instance, was affected by the interruptions due to power restrictions and failures, as well as heavy wear and tear of the plant. Besides, the Government of India, on the recommendation of the Tariff Commission, imposed ceiling prices for caustic soda, liquid chlorine and hydrochlorine with effect from 27th October 1959 which cut into the Company's profit-margin. If, however, the Company has been able to earn a higher profit than in the previous year, it is because of the higher production of chemicals than in 1958-59. In other words, the Company would have fared still better but for the adverse factors mentioned above.

The net profit, at Rs. 11.84 lakhs, represents an increase of Rs. 4.65 lakhs over that for the previous year. This increase is much larger than that in the gross profit, thanks to the cut in the provision for taxation from Rs. 7.25 lakhs to Rs. 4.75 lakhs, in view of the refunds due to the Company on account of exemption under Section 15(C) of the Income-tax Act. Of the net profit, a sum of Rs. 3.50 lakhs has been ploughed back and Rs. 34,311 has been utilised to write off the share and debenture issue expenses. A dividend of 12.5 per cent., subject to deduction of tax, on ordinary shares has been recommended by the Directors. This is equivalent to a tax-free return of 8.75 per cent. and is more or less the same as that (8.8 per cent.) paid for the previous year. It must, however, be noted that, of the dividend for the year under review, the final distribution, at 6¼ per cent., subject to tax, is on a higher capital following the issue during the year of fresh equity capital to the tune of Rs. 19.50 lakhs. With regard to the dividend on the 6 per cent. tax-free preference shares, the Directors have followed a rather unusual practice, not by design but by circumstances. The interim dividend of 3 per cent. was grossed and a deduction of 30 per cent. tax was made on the grossed amount, so that the shareholders got a net dividend of 3 per cent. This was in accordance with Section 18(3E) of the Income-tax Act. This section has since been deleted and the Directors have, therefore, been obliged to deduct tax under Section 18(3D) from the final dividend. They have, however, grossed the final dividend at the Company's rate of income-tax of 20 per cent. and then deducted the 30 per cent. tax from this grossed amount, so that the net final dividend is only 2.625 per cent. and brings the total preference dividend for the year under review to 5.625 per cent. (net).

The Company's progress since 1956-57 is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957

* Subject to deduction of tax.

The Company produced during the year 5,066 tons of caustic soda (as against 3,733 tons in the previous year), 4,489 tons (5,147 tons) of bleaching powder and 1,142 tons (*nil*) of liquid chlorine. While the overall production of chemicals was higher than in 1958-59, it is said to be below the target. As stated earlier, the Government of India fixed the ceiling prices for caustic soda, liquid chlorine and hydrochloric acid with effect from 27th October 1959. Since the close of the year (from 1st June 1960), the Government has imposed ceiling price for stable bleaching powder also, of which the Company is the only manufacturer in India. The ceiling price for stable bleaching powder is considered by the Company to be uneconomic. The Company has made strong representations to the Government for a suitable increase in price or a fresh enquiry into the cost of production of bleaching powder. The production of vegetable oil products and soaps is said to have been satisfactory and the selling prices have yielded a fair margin of profit.

The Company has, since the close of the year, stepped up the production of stable bleaching powder, consequent on the duplication of the plant. While the present capacity is sufficient to meet the entire requirements of the country, the demand is currently below production, consequent on the extensive use of bleach liquor and hydrogen peroxide in Bombay and other areas as a bleaching agent. The Directors, however, anticipate a better balance between demand and supply shortly. The scheme for doubling the production of caustic soda from 20 to 40 tons per day, with a corresponding increase in the output of chlorine, is going ahead. A part of the equipment has already been received. It is expected that the plant will be got ready for production in the first quarter of 1961-62. The entire expansion programme (including the duplication of the stable bleaching powder plant, now in commission) is estimated to cost Rs. 75 lakhs, of which capital to the extent of Rs. 19.5 lakhs was raised last year. Of the balance, the Industrial Finance Corporation of India has sanctioned a loan of Rs. 33 lakhs and it is proposed to issue further equity capital for Rs. 20 lakhs to cover the balance of the requirements. The additional equity capital will be issued towards the end of September to all the existing shareholders, preference and ordinary alike. The consent of the C.C.I. has already been obtained for this issue. Besides the expansion programme on hand, the Company is actively pursuing several new schemes for diversifying its lines of manufacture. These consist of polyvinyl chloride and other chlorine based products.

The present paid-up capital of the Company is Rs. 79.25 lakhs and this is supplemented by reserves and surplus aggregating Rs. 22.49 lakhs. The total outstanding borrowings as at the end of March 1960 are Rs. 34.54 lakhs, of which debenture loans account for Rs. 27.75 lakhs, including Rs. 15 lakhs raised during the year under review. The other current liabilities and provisions stand at Rs. 32.14 lakhs. The gross block of the value of Rs. 143.66 lakhs (including additions during the year amounting to Rs. 21.76 lakhs) has been written down to Rs. 70.23 lakhs. The current assets aggregate Rs. 100.20 lakhs and more than adequately cover the borrowings and other current liabilities. Of the current assets, investments in Travancore-Cochin Chemicals Ltd., under the same management, account for Rs. 10 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 14.70 *cum-div. cum-right.* On an *ex-div.* basis, the yield works out to 6.3 per cent. per annum, free of tax.

MANAGEMENT ACCOUNTANCY

The two-day seminar on management accountancy, held at New Delhi from 19th to 21st August, under the auspices of the Department of Company Law Administration, should turn the spotlight on accountancy as a management tool. The object of management accountancy, in the words of Prime Minister Mr. Nehru, who inaugurated the seminar, is "to supply, by scientific and well-thought-out methods, data for us to know what we have actually done and not what we have put down on paper, how we have done it and how we can improve doing it by raising productivity." The technique of management accountancy is based on the concept of promise and performance which sought to show the way to maximum efficiency and helped achieving the highest output at the lowest cost. It no doubt serves both as a check and a guide or aid to executives at all levels.

The seminar, in which experts from both the private and public sectors participated, was primarily meant for familiarising executives in both sectors with the principles of management accountancy. It may be recalled that the Government recently set up an advisory committee to collect the necessary information about the structure and organisation of accounting systems prevalent in the country.

Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, in his address at the seminar, called upon the undertakings in the public sector to give a lead to those in the private sector by adopting the system of management accountancy. Public enterprises, in this country at any rate, have yet to prove as readily receptive to new ideas as private firms. If, however, in response to the Minister's call, they were to show a new dynamism in giving the lead, companies in the private sector will only be too glad to follow suit. Let there be cordial competition between the two sectors in improving management efficiency. One, however, should not be surprised, if the competition were to end like the proverbial race between the hare and the tortoise.

BURMAH-SHELL REFINERIES

GROSS PROFIT DWINDLES

NOTWITHSTANDING an increase of 208,540 metric tons to 2,476,975 metric tons in throughput, thanks to the facilities provided by the Government of India for processing additional quantities of crude oil, the income from refining of the Burmah-Shell Refineries Ltd. for the year ended 31st December 1959 has declined and there is a corresponding drop in gross profit also. The income from refining has dropped by Rs. 32 lakhs to Rs. 12.77 crores, mainly due to the voluntary surrender of all remaining duty-protection on furnace oil, high speed diesel oil, light diesel oil and bitumen manufactured at the Refinery. Other income also shows a fall of Rs. 7 lakhs to Rs. 16.95 lakhs. The decline of Rs. 39 lakhs in the total income has, however, been offset to a large extent by the reduction of over Rs. 25 lakhs in expenses, at Rs. 5.72 crores, mainly on account of the saving of Rs. 27 lakhs on fuel and power.

The provision for depreciation is slightly higher at Rs. 1.72 crores, while that for taxation has been reduced from Rs. 2.51 crores to Rs. 1.90 crores, consequent on the reduction in the rate of tax and the changes in the methods of taxation introduced under the Finance Act 1959. This reduction in tax provision mainly accounts for the increase in net profit, at Rs. 3.60 crores, as compared with that (Rs. 3.13 crores) for 1958. Except for a sum of Rs. 9.12 lakhs added to the development rebate reserve, the Directors have not added anything to the reserves, which had received Rs. 93.60 lakhs a year ago including Rs. 3.60 lakhs transferred to the development rebate account. They have declared a dividend of 18 per cent., subject to deduction of tax, as against 15 per cent. per annum paid for the years 1958 and 1957. Income-tax at the rate of 20 per cent., subject to any relief which the shareholders will be entitled under Section 15(C) of the Income-tax Act, is payable on these dividends. In recommending the aforesaid gross dividend of 18 per cent., the Directors have borne this fact in mind, so that the shareholders might get the same net dividend as they obtained for 1958. The gross dividend for the year under review absorbs over Rs. 41 lakhs more than in the previous year. Even so, the surplus left to be carried forward is substantially large, at Rs. 1.55 crores including Rs. 54 lakhs brought in from the previous year, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Income from refining ..	12,76 91	13,08 84	14,07 29	16,47 22

Dividend	2,48 76 (18%)*	2,07 30 (15%)	2,07 30 (15%)	3,06 31 (21½%)
Carry forward	1,55 57	53 97	41 66	5 15
Throughput of refinery (metric tons) ..	2,476,975	2,268,435	2,333,614	2,398,291
Yield of finished products (metric tons)	2,429,528	2,225,910	2,283,876	2,233,050

* Subject to deduction of tax.

The year 1959 is the last year for which the Company will have the tax benefit under Section 15(C) of the Indian Income-tax Act. Also, consequent on the voluntary surrender of duty protection from 1st July 1959, there will be no further income from this source on products currently manufactured at the Refinery. The prosperity of the Company from 1960 onwards, therefore, depends largely on the income from refining and the efficiency of operation. In this respect, the Chairman of the Company, Mr. P. D. Tew, as will be seen from the full text of his statement published elsewhere in this issue, is fully confident that the management will be able to "maintain the efficiency at a standard which has already been proved second to none."

The Company's balance-sheet as on 31st December 1959 shows that the paid-up capital of Rs. 13.82 crores is supplemented by reserves and surplus aggregating Rs. 12.30 crores. The gross block of the value of Rs. 26.30 crores has been written down to Rs. 18.51 crores. Construction works in progress amount to Rs. 21 lakhs. The current assets aggregate Rs. 19.46 crores and more than adequately cover the current liabilities and provisions at Rs. 12.27 crores, including a debenture loan of Rs. 8 crores.

COMPANY MEETINGS AND DIVIDENDS

CLEVEDON TEA CO., LTD. Annual General Meeting, Calcutta, 5th September 1960. Dividend: 25 per cent. or Rs. 2.50 per share, subject to deduction of tax. The dividend will be paid when funds are available in India. Transfer books remain closed from 26th August to 5th September 1960, both days inclusive.

HANSQUA TEA CO., LTD. Annual General Meeting, Calcutta, 5th September 1960. Dividend: 17½ per cent. or Re. 1.75 per share, subject to deduction of tax. Transfer books remain closed from 25th August to 5th September 1960, both days inclusive.

A. V. THOMAS AND CO., LTD. Annual General Meeting, Alleppey, 7th September 1960. Dividend: 20 per cent. or Rs. 2.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 1st to 7th September 1960, both days inclusive.

HIGHLAND PRODUCE CO., LTD. Annual General Meeting, Alleppey, 7th September 1960. Dividend: 15 per cent. or Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 1st to 7th September 1960, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Annual General Meeting, Calcutta, 9th September 1960. Dividend: 7½ per cent. or Rs. 7.50 per ordinary share, subject to deduction of tax, payable on or after 23rd September 1960. Transfer books remain closed from 27th August to 9th September 1960, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Annual General Meeting, Calcutta, 9th September 1960. Dividend: 5 per cent. or Rs. 3.75 per ordinary share, subject to deduction of tax, payable on or after 23rd September 1960. Transfer books remain closed from 27th August to 9th September 1960, both days inclusive.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Annual General Meeting, Mettur Dam R.S., 12th September 1960. Dividend: 12½ per cent. or Re. 1.25 per ordinary share, subject to deduction of tax (includes interim dividend of 6¼ per cent. or Re. 0.625 per share). Transfer books remain closed from 27th August to 12th September 1960, both days inclusive.

NATIONAL MACHINERY MANUFACTURERS LTD. Annual General Meeting, Bombay, 14th September 1960. Dividend: Nil. Transfer books remain closed from 29th August to 14th September 1960, both days inclusive.

KATRAS JHERRIAH COAL CO., LTD. Annual General Meeting, Calcutta, 14th September 1960. Dividend: Rs. 9.50 per share (includes interim dividend of Rs. 3.50 per share) subject to deduction of tax. Transfer books remain closed from 1st to 14th September 1960, both days inclusive.

ONDAL COAL CO., LTD. Annual General Meeting, Calcutta, 16th September 1960. Dividend: 7 per cent. or Re. 0.70 per ordinary share, subject to deduction of tax, payable on or after 1st October 1960. Transfer books remain closed from 2nd to 16th September 1960, both days inclusive.

DUNCAN BROTHERS & CO., LTD. Annual General Meeting, Calcutta, 17th September 1960. Transfer books will remain closed from 5th to 17th September 1960, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Annual General Meeting, Calcutta, 21st September 1960. Dividend: 19 per cent. or Re. 1.90 per share, final (making a total of 25 per cent. or Rs. 2.50 per share, subject to deduction of tax, for the year). Transfer books will remain closed from 14th to 21st September 1960, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 21st September 1960. Dividend: Re. 0.30 per share, final (making a total of Re. 0.80 per share for the year ended 31st March 1960), subject to deduction of tax, payable on 24th September 1960. Transfer books remain closed from 29th August to 21st September 1960, both days inclusive.

PORT SHIPPING CO., LTD. Annual General Meeting, Calcutta, 23rd September 1960. Dividend: *Nil.* Transfer books will remain closed from 16th to 23rd September 1960, both days inclusive.

HINDUSTAN GEARS PRIVATE LTD. Business: Manufacture of gears and gear wheels of all kinds. Authorised capital: Rs. 5,00,000. Private company.

N.B.—All the above companies are registered in the State of Maharashtra.

SYNOPSES OF COMPANY REPORTS

Rameshwara Jute Mills Ltd.

THE directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1960.

The year's working shows a surplus of Rs. 6.27,477 (Rs. 7,94,577). Out of this, provisions have been made for depreciation, [including Rs. 1,25,000 (*nil*) on account of unabsorbed depreciation] amounting to Rs. 2,09,917 (Rs. 72,662), for development rebate reserve Rs. 24,653 (Rs. 7,652) and for taxation Rs. 45,142 (Rs. 4,000 for wealth tax) leaving a sum of Rs. 3,47.765 (Rs. 7,10,263). To this is added the credit balance of Rs. 2,706 (debit balance of Rs. 7,07,557) brought forward from the previous year making a total of Rs. 3,50,471 (Rs. 2,706). The directors now recommend payment of arrears of dividend, subject to deduction of tax under Section 18 (3D) of the Income-tax Act, on 70.000 cumulative preference shares of Rs. 10 each at 8.57 per cent. for the period from 1st October, 1950 to 31st March, 1956 (i.e., for 5½ years) absorbing Rs. 3,29,945 leaving a balance of Rs. 20,526 (Rs. 2,706) to be carried forward to the next account.

Further depreciation amounting to about Rs. 10.75 lakhs still remains to be provided for upto the end of the year under report. There also remains a contingent liability of about Rs. 2.40 lakhs in respect of arrears of dividend on cumulative preference shares upto 31st March 1960.

As a result of impetus given to agricultural production and industrial production by the Second Five-year Plan, internal demand for jute goods improved considerably during the year. The Company's production at present is confined mainly to the manufacture of cement bags, which are supplied to the factories under the A.C.C. group.

Prospects of the 1959-60 jute crop were good in the beginning, but as the season advanced, crop estimates were revised downward, the latest estimate being a crop of only 55 lakhs of bales for India. As a result of this expected shortage in the supply of raw jute, there was a steep rise in the price of raw jute in the beginning of 1960. The situation was further aggravated by an unprecedented drought in the jute growing belts during the months of April and May. Weather conditions, however, turned favourable from the fourth week of May 1960, and prospects for the 1960-61 crop are now considered good, although the crop will be late by about two months. As a measure to meet this emergency in raw jute supply on an industry-wise basis, the Indian Jute Mills' Association decided to allow its members to close down, with effect from the 6th of June 1960, as many looms according to their convenience and to allow the working-hours so lost to be made up at any time after the 31st of October 1960. Accordingly, under this scheme, the Company has also sealed temporarily some additional looms, but they will be opened again as soon as the new-season jute starts arriving in plenty.

These adverse developments have somewhat changed the favourable trading conditions, which prevailed in 1959 and the profit of this year may not be so good.

In order to improve its competitive position, the directors have decided to modernise the Company's mill machinery upto the spinning stage by installing the latest type of equipment, which will also result in economy in labour. Orders have accordingly been placed with the machinery suppliers and it is expected to complete this modernisation programme by the end of 1961. The total amount required to complete this modernisation scheme is estimated at about Rs. 35 lakhs.

Messrs. Birla Brothers Private Ltd., ceased to act as managing agents of the Company with effect from the close of 31st March 1960 and as on and from the 1st April 1960 Messrs. Hindusthan Investment Corporation Ltd., were appointed managing agents for a term of five years on a sliding scale of remuneration as approved by the Central Government. Their appointment was duly approved by the shareholders in the general meeting held on 28th August 1959.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	27,00,000	Gross block	33,96,467
Reserves ...	42,629	*Less*—Depreciation ...	12,06,763

	Rs. 50,82.980		Rs. 50,82.980

Ossoor Estates Ltd.

The directors of the above Company (Secretaries: Messrs. Peirce Leslie & Co., Ltd., Mangalore) submit the audited accounts of the Company for the year ended 31st March 1960.

The acreage figures are as follows: Arabica bearing 360 acres; robusta: bearing 150 acres; oranges: non-bearing 36 acres and jungle, waste land, wet land, etc., 264 acres. The total area is 810 acres. The small difference in the total acreage when compared to the figure given in last year's directors' report is due to the fact that an area of 16 acres was sold to the Coffee Board for purposes of a small research station.

After providing for depreciation and all charges except taxation the accounts show a profit of Rs. 2,02,526 (Rs. 1,24,592). To this is added the balance brought forward from last year of Rs. 4,161 (Rs. 12,069) making a total of Rs. 2,06,687 (Rs. 1,36,661). After deducting provision for taxation of Rs. 60,750 (Rs. 35,000), interim dividend of 5 (*nil*) per cent. paid Rs. 32,500 (*nil*) and transfer to general reserve of Rs. 6,000 (*nil*), there remains a balance of Rs. 1.07,437 (Rs. 1.01,661). The directors recommend payment of a final dividend of 10 (15 per cent. tax-free) per cent. subject to tax, absorbing Rs. 65,000 (Rs. 97,500) leaving a balance to be carried forward of Rs. 42,437 (Rs. 4,161).

Crop and Costs.—A total crop of 135,230 (110,471) metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.25 per point or Rs. 2,849 per metric tonne. A comparative statement of production and costs for the previous two years is given below:

Year	Crop (Metric tonnes)	Estate expenditure per metric tonne	All-in cost per metric tonne
1957-58 ..	217.596	Rs. 1,377	Rs. 1,563
1958-59 ..	110.471	,, 2,552	,, 2,914
1959-60 ..	135.230	,, 1,970	,, 2,225

Final payment on 1957-58 crop has been received making the total for the year Rs. 2.51 per point. This is equivalent to Rs. 3.395 per metric tonne. 1958-59 crop has been revalued at Rs. 2.40 per point being the figure so far declared by the Coffee Board and this is equivalent to Rs. 3,260 per metric tonne. The 1960-61 crop has been estimated at 140 metric tonnes and the all-in-cost of production at Rs. 2,107 per metric tonne.

A sum of Rs. 41,267 was spent on capital account during the year mainly on the construction of a new bungalow. Capital expenditure for the year 1960-61 is estimated at Rs. 25,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	6,50,000	Goods block	7,75,530
Reserves ...	5,71,464	*Less*—Depreciation ...	67,539
Provision for taxation ...	1,67,359		
Liabilities ...	2,09,263	Net block	7,07,991
Profit and loss account (surplus)	42,437	Stock of coffee	3,13,707
		Stores, etc.	30.227
		Book debts	13,460
		Investments	95,119
		Cash ...	4,80,019
	Rs. 16,40,523		Rs. 16,40,523

Wartyhully Estates Ltd.

The directors of the above Company (Secretaries: Messrs. Peirce Leslie & Co., Ltd., Mangalore) submit the audited accounts of the Company for the year ended 31st March 1960.

The acreage figures are as follows: Arabica: bearing 924 acres; robusta: bearing 50 acres; robusta: non-bearing 53 acres and jungle, waste land, wet land, etc., 170 acres.

After providing for depreciation and all other charges except taxation, the accounts show a profit of Rs. 2,78,222 (Rs. 5,69,643). To this is added the balance brought forward from last year of Rs. 1,56,211 (Rs. 2,77,068), making a total of Rs. 4,34,433 (Rs. 8,46,711). After deducting provision for taxation of Rs. 89.000 (Rs. 2,15,000), 5 (*nil*) per cent. interim dividend paid Rs. 60,000 (*nil*) and transfer to general reserve of Rs. 50,000 (Rs. 3,00,000), there remains a balance of Rs. 2,35,433 (Rs. 3,36,211). The directors recommend payment of a final dividend of 10 (15 per cent. free of tax) per cent. subject to tax, absorbing Rs. 1,20,000 (Rs. 1,80,000) leaving a balance to be carried forward of Rs. 1,15,433 (Rs. 1,56,211).

Crop and Costs.—A total crop of 171.045 (314.500) metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.25 per point or Rs. 3,363 per metric tonne. A comparative statement of production and costs for the past two years is given below:

Year	Crop (Metric tonnes)	Estate expenditure per metric tonne	All-in cost per metric tonne
1957-58 ..	372.468	Rs. 1,597	Rs. 1,764
1958-59 ..	314.500	Rs. 1,875	Rs. 2,095
1959-60 ..	171.045	Rs. 2,914	Rs. 3,260

Final payment on 1957-58 crop has been received making a total for the year Rs. 2.51 per point. This is equivalent to Rs. 3,778 per metric tonne. The 1958-59 crop has been revalued at Rs. 2.40 per point being the figure so far declared by the Coffee Board and this is equivalent to Rs. 3,509 per metric tonne. The 1960-61 crop has been estimated at 250 metric tonnes and the all-in-cost of production at Rs. 2,240 per metric tonne.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	12,00,000	Gross block	15,34,580
Reserves ...	11,90,982	*Less*—Depreciation ...	1,19,640
Provision for taxation ...	3,71,756		
Liabilities ...	3,63,386	Net block	14,14,940
Profit and loss account (surplus)	1,15,433	Stock of coffee	5,01,432
		Stores, etc.	15,936
		Book debts	47,568
		Investments	2,54,779
		Cash ...	10.06,902
	Rs. 32,41,557		Rs. 32,41,557

Mothola Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The accounts show a profit of Rs. 29,639 (Rs. 91,153) to which has to be added the balance brought forward from the previous account of Rs. 49.974 (Rs. 67,133) giving a total of Rs. 79,613 (Rs. 8.99.711 after including excess realisation on sale of fixed assets Rs. 6,41,425 and Rs. 1,00,000 being transfer from general reserve). From this has to be deducted provision for depreciation amounting to Rs. 109 (Rs. 26,312) and provision for taxation Rs. 11,500 (Rs. 1,22,000 including Rs. 7,000 for wealth tax) leaving for disposal a sum of Rs. 68,004 (Rs. 1.09.974 after transferring Rs. 6,41,425 to capital reserve).

This amount the directors recommend to be appropriated as under:—

To pay a dividend on 1,500 ordinary shares at Rs. 25 (Rs. 40.00 per share, free of tax) per share, subject to deduction of tax, absorbing Rs. 37,500 (Rs. 60,000) leaving a balance to be carried forward of Rs. 30.504 (Rs. 49,974).

The Company has started tea plantation under the name and style of "Shree Ganga Tea Estate."

The Company has recently acquired a plot of land on lease measuring 148.80 acres in addition to the 88.45 acres of land taken previously. The area so far planted with tea amounted approximately to 101 acres against the permits received for 122.35 acres. The balance of about 21 acres will be planted during 1960-61 cold weather. The directors hope that the tea planted in 69.78 acres, as stated in previous report, would start giving some yield from the season 1961-62. A small nursery was also put up.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Gross block	1,16,088
Reserves ...	13,65,825	*Less*—Depreciation ...	10,450
Provision for taxation ...	1,43,771		
Liabilities ...	2,23,947	Net block ...	1,05,638
Profit and loss account (surplus)	30,504	Stock-in-trade	22,704
		Book debts ...	7,25,688
		Investments	3,56 689
		Cash ...	7,03.328
	Rs. 19.14,047		Rs. 19.14,047

National Machinery Manufacturers Ltd.

The directors of the above Company (Chairman: Mr. Krishnaraj M. D. Thackersey, Bombay) present the audited accounts of the Company for the year ended 31st December 1959.

The year's working after meeting all expenses of operation and management and after providing for depreciation and development rebate reserve, shows a profit of Rs. 1,41,967 (loss of Rs. 19,76,920). To this has to be added excess provisions in respect of previous year not required Rs. 2,15,918 (*nil*), making a total of Rs. 3,57,885 (debit of Rs. 19,47,276 after deducting the credit balance of Rs. 29,644 brought forward from previous year). Against this amount is required to be set off: development rebate reserve for 1958 not provided in the previous year's account of Rs. 1,94,063 and expenses in respect of previous years Rs. 46.021 leaving a balance of Rs. 1,17,801. This amount the directors propose to adjust against the debit balance of Rs. 19,47,276 brought forward from the last year, leaving a debit balance of Rs. 18,29,475 (Rs. 19,76,920) to be carried forward to next year's account.

The results of the year's working were generally satisfactory. Although total sales were lower than in the previous year by about Rs. 8 lakhs, the margin of profit was increased due to high productions, reduction in the consumption of tools and equipment, and considerable saving in sales commission. The profits would have been materially increased if it had been possible to maintain the previous selling prices of ring frames. Due, however, to competition from other indigenous manufacturers it was considered necessary to effect a reduction of approximately 10 per cent. in order to maintain an adequate flow of orders and consequently the improvement effected in production costs have been to a large extent absorbed by the lower selling prices.

The production in general was handicapped by inadequate and irregular supply of imported raw materials and stores and although efforts were made to obtain supplies from local sources wherever possible, the position in this respect was not also very happy. Some of the important indigenous raw materials such as pig iron, hard coke, etc., were not only in short supply and irregular but were of quality which was far below the specifications required for producing machines acceptable by high standards. In fact, the supply position of imported bought-outs is still not very satisfactory and is one of the contributory factors for some of the production units not being worked to their full potential.

The negotiations with the Ruti Machinery Works Ltd. for the manufacture of automatic looms in collaboration with them, mentioned in the last year's report, have not yet been finalised. The delay was principally due to certain difficulties in finalising the terms of agreement but these difficulties have now been overcome and it is expected that the agreement would be signed during the course of the next few days.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,52,40,000	Gross block	2,90,88,350
Reserves ...	3,04,430	*Less*—Depreciation ...	99,51,776
Liabilities	2,30,87,050		
		Net block	1,91,51,776
		Expenditure in progress	21,983
		Stock-in-trade ...	1,45.00,318
		Stores, etc.	58.62.272
		Book debts	71,69,824
		Cash ...	95,834
		Profit and loss account (deficit)	18,29,475
	Rs. 4,86,31.480		Rs. 4,86,31.480

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE SWASTIK TEXTILE MILLS LIMITED

Sheikh Memon Street, Dubash Market, BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE THIRTEENTH ANNUAL GENERAL MEETING of the Company will be held at its Registered Office at Sheikh Memon Street, Dubash Market, Bombay 2, on Thursday the 22nd September 1960, at 5.00 p.m. (S.T.), to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December 1959.
2. To sanction declaration of Dividends.
3. To appoint a Director in place of Shri Parashuram Balwant Ganpule, who retires by rotation under Article 144 of the Articles of Association of the Company and is eligible for re-appointment and for that purpose to consider and if thought fit, to pass the following Resolution, of which Special Notice, as required under Section 281 of the Companies Act, 1956, has been received by the Company:

   "RESOLVED THAT pursuant to the provisions of Section 281 of the Companies Act, 1956, Shri Parashuram Balwant Ganpule, who is already over 65 years of age and who retires by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
4. To elect a Director in place of Shri Manharlal Dwarkadas Mehta, who retires by rotation under Article 144 of the Company's Articles of Association and being eligible offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 16th September 1960 to 22nd September 1960 (both days inclusive).

A Member entitled to attend and vote at the General Meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself. The proxy need not be a member of the Company.

By Order of the Board,

For P. KASHINATH & Co.,

S. P. DIVEKAR,
Partner,
Managing Agents.

BOMBAY,
Dated 23rd July 1960.

Note.—The Dividend, when sanctioned by the Members in the General Meeting, will be payable from 3rd October 1960 to those shareholders, whose names stand in the Register of Members of the Company on 22nd September 1960, to whom the dividend warrants will be posted.

ANNEXURE TO THE NOTICE

Explanatory Statement as required under Section 173 of the Indian Companies Act, 1956.

Item No. 3.—"Shri Parashuram Balwant Ganpule, who retires by rotation and is eligible for re-appointment, is already over 65 years of age and hence he cannot be appointed a Director of the Company except by a Resolution, in respect of which, a Special Notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a notice from some members notifying their intention to move the Resolution as set out in Item No. 3. Shri Parashuram Balwant Ganpule is a Director of the Company since its incorporation and has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a Member of the Board, it is desirable that he be appointed a Director of the Company."

THE KARANPURA DEVELOPMENT COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of The Karanpura Development Company Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday, the 26th September, 1960, at 11 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1959, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of Mr. D. C. B. Pilkington who retires under Section 260 of the Companies Act, 1956.
4. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being over 65 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit does not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act, is appended.

   To be proposed as an Ordinary Resolution:

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-appointed a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."
5. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

6. To consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution, namely:—

   "Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company but so that the money lent shall not at any time exceed Rupees One Lac in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended."

The Share Transfer Registers of the Company will be closed from the 16th September, 1960, to the 26th September, 1960, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

CALCUTTA, *25th August*, 1960.

Notes: (*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 12th October, 1960, to those members so entitled, whose names appear in the Company's Books on the 26th September, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENTS

In the special notice given to the Company of the resolution under item (4) of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should be appointed to remain in the Board of Directors of the Company and that the age limit should not apply to him.

With regard to item No. 6, it is pointed out that the Company may require temporary financial accommodation from time to time and as the Secretaries and Treasurers are prepared to lend money to it at a rate of interest which is more favourable than the Company could have obtained from its Bankers, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Secretaries and Treasurers at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Secretaries and Treasurers constitute a service by them in terms of Section 360 of the Act, and that such arrangement should be approved by the Shareholders by Special Resolution pursuant to the above section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Mr. D. C. B. Pilkington, the Chairman of the Board of Directors and member of your Company, is also Managing Director of Messrs. Bird & Co. (Private) Limited, the Secretaries and Treasurers of your Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolution.

THE BORREA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of The Borrea Coal Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday, the 26th September, 1960, at 10-50 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1959, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

AS A SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution, namely:

   "Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company but so that the money lent shall not at any time exceed Rupees One Lac in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers."

The Share Transfer Registers of the Company will be closed from the 16th to 26th September, 1960, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

CALCUTTA, *25th August*, 1960.

Notes.—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed hereto.

(c) The Dividends, if declared, will be paid on or after 12th October, 1960, to those members so entitled, whose names appear in the Company's books on the 26th September, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

With regard to item No. 5, it is pointed out that the Company may require temporary financial accommodation from time to time and as the Secretaries and Treasurers are prepared to lend money to it at a rate of interest which is more favourable than the Company could have obtained from its Bankers, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Secretaries and Treasurers at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Secretaries and Treasurers constitute a service by them in terms of Section 360 of the Act and that such arrangement should be approved by the Shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Mr. D. C. B. Pilkington, the Chairman of the Board of Directors and member of your Company, is also Managing Director of Messrs. F. W. Heilgers & Co. (Private) Limited, the Secretaries and Treasurers of your Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolution.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

REQUIREMENT OF WHEELSETS FOR ROLLING STOCK

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to obtain from established and reliable manufacturers Wheelsets as per schedule of requirements attached with Tender No. G.P. 24 of 1961-62.

Tender documents are obtainable from the Director General (M), Research Design and Standards Organisation, Ellerslie, Simla-2, and the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W-3, on payment of Rs. 2 per set. Relevant drawings can be had on additional payment of Rs. 15 per set from the two organisations mentioned above. The cost of the set of drawings if obtained from the Research Design and Standards Organisation, Simla, by post will be Rs. 16. The relevant Specifications can be had on additional payment either from the D.G., I.S.D., London, or the Manager of Publications, Civil Lines, Delhi,

Offers should reach the undersigned not later than 12 noon on 31st October, 1960.

QURBAN SINGH,
Director, Railway Stores,
Railway Board,
State Entry Road,
New Delhi.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

TENDER NO. S-9

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to purchase from established and reliable producers, a quantity of about 30,000 tons of Steel Rails.

The tender documents can be had on payment of Rs. 15 (or equivalent) per copy from any of the following offices during working hours on or after 30th August, 1960.

(1) The Director, Railway Stores, Ministry of Railways, Railway Board, State Entry Road, New Delhi.

(2) The Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London, W.3.

(3) The Director, India Supply Mission, 2536 Massachusetts Avenue, N.W. Washington, 8 D.C.

The tenders will be received by the undersigned upto 12.00 hours on the 11th October, 1960, and opened in the office of the Railway Board, State Entry Road, New Delhi, on the same day.

QURBAN SINGH,
Director, Railway Stores,
(Railway Board).

STATE ENTRY RD.,
NEW DELHI, *24th August*, 1960.

Dated 16th August 1960.

R. VENKATASWAMY NAIDU,
Managing Director.

STATE LOANS CLOSED

(From Our Own Correspondent)

BOMBAY, *31st August*

The opening of the lists for subscription of twelve State loans on Monday, the 29th inst., has had a pull on the short-term money market. Banks, the bulk of which had been lenders in the inter-bank transactions in the past week, have turned out to be keen borrowers, as their surplus funds have been invested in the new loans. Interest rates have, therefore, remained firm at 3½ per cent. for inter-bank call money. The other rates are also maintained at their ceilings fixed under the inter-bank agreement, namely 3 per cent. for house money at seven days' notice, 3½ per cent. for 1-2 months and 3¾ per cent. for three months and over.

There has been no sale of Treasury Bills by tenders this week, on account of the issue of State loans. Tenders for Rs. 2 crores have been invited for next week.

There has been a further contraction of Rs. 19.80 crores in notes in circulation during the week ended 26th August 1960. Disclosing this, the Reserve Bank of India statement for that week shows a rise of Rs. 6 crores in notes held in the Banking Department, so that the decline in total notes issue is of the order of Rs. 13.79 crores. This is covered by a fall of Rs. 14.99 crores in rupee securities and a rise of Rs. 1.20 crores in rupee coin. There is no change in foreign securities at Rs. 123.01 crores, but balances held abroad have gone up by Rs. 1.78 crores to Rs. 23.52 crores, so that the total foreign assets are now of the order of Rs. 146.53 crores. The deposits of the Central Government have declined by Rs. 3.06 crores, those of other Governments by Rs. 1.05 crores and deposits of banks by Rs. 6.43 crores. A drop of Rs. 7.58 crores is noted in loans and advances other than to Governments, of which advances to Scheduled banks against usance bills account for Rs. 3.59 crores. Investments are lower by Rs. 2.37 crores and holdings of Government Treasury Bills by Rs. 7.25 crores.

The Scheduled banks' statement for the week ended 19th August 1960 shows that the downward trend in bank credit is being maintained with a further fall of Rs. 8.36 crores during the week, of which the share of the State Bank is Rs. 3.41 crores. Investments, too, are lower by Rs. 3.64 crores, including a reduction of Rs. 1.97 crores on State Bank's account. Cash and balances with other banks show a rise of Rs. 5.80 crores, despite a fall of Rs. 3.86 crores in State Bank's balances. Demand deposits of banks have increased by Rs. 6.73 crores, while time deposits have declined by Rs. 10.95 crores. The net fall of Rs. 4.22 crores in total deposits is mainly due to the decline of Rs. 8.11 crores in the State Bank's portfolio.

The response to the 12 State loans for an aggregate sum of Rs. 75 crores which opened their lists on Monday this week, has not been very enthusiastic, except in the case of Andhra Pradesh. No doubt, all the States have got their requirements, but the total subscriptions in most cases do not far exceed the amount asked for. Thus, of the 12 loans, only five were oversubscribed and the remaining seven were only fully subscribed. While last year, out of the 13 loans for Rs. 61.50 crores, eleven were closed on the opening day itself and even the remaining two did not have to wait more than two days. Last year, the total subscriptions aggregated Rs. 100.27 crores and quite a large number of the States had to make only partial allotment. In contrast to that picture, this year, only three State loans, namely Maharashtra, West Bengal and U.P. for an aggregate sum of Rs. 24 crores were closed on the first day and the subscriptions received amounted to no more than Rs. 26.84 crores. Gujarat, Andhra Pradesh and Mysore loans for Rs. 18 crores were closed on the second day after receiving Rs. 23.91 crores, and the remaining six loans of Madras, Kerala, Madhya Pradesh, Bihar, Rajasthan and Orissa were closed only today. Only the loans of Maharashtra, U.P., Andhra, Mysore and Orissa were oversubscribed. Of these five loans, only the response to the Andhra loan was overwhelming, in that the subscriptions amounted to Rs. 13.23 crores, as against an invitation for Rs. 9 crores. The details of subscriptions to individual loans are as follows:

(In crores of Rs.)

State	Amount of loan	Amount subscribed	Allotment %
Maharashtra	10.00	10.98	100
West Bengal	7.00	7.02	100
U.P.	7.00	8.84	83
Gujarat	5.00	5.57	95
Andhra	9.00	13.23	72
Mysore	4.00	4.91	89
Madras	12.00		
Kerala	4.00		
M.P.	5.00		
Bihar	3.00	N.A.	N.A.
Rajasthan	5.00		
Orissa	4.00		

N.A.—Not available.

Meanwhile, the Gilt-edged market remains dull with very little activity. 3 per cent. 1986 Conversion Loan, however, continues to rule steady, with a further rise of 15 nP to Rs. 73.90 during the week. Among the State loans, 4 per cent. 1971 and 4½ per cent. 1970 issues were marked down, the former by 5 nP to 15 nP and the latter by 25 nP.

KIPS LISTLESS

(From Our Own Correspondent)

MADRAS, *29th August*

Small activity was witnessed in East India kips during the week under review. Lower ends of kips continued difficult to sell. Cow calf and buff calf ruled listless. Buffs continued to attract buyers and demand exceeds supply, with the result that prices remained steady to firm.

Business in tanned goat skins with the U.K.-Continent was poor. There was no demand for medium sheep skins either. For primes, demand was only selective and limited. Raw prices were easier.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, *31st August*

The bullion market ruled buoyant during the week under review, although today both gold and silver suffered a setback on account of profit-taking at higher levels. The buoyancy was engendered by sustained bull support, replacement buying and short-covering inspired by the firmness of commodity markets, particularly oilseeds. Also, advices from Calcutta and Delhi were quite encouraging. It was stated that a leading bear operator who had sold heavily a fortnight ago was an active buyer here in the beginning of the week. Gold evoked good enquiries, the daily average rate of offtake being of the order of 4,000 tolas, as against 2,650 tolas in the previous week. Values would have recorded a more handsome improvement but for enlarged arrivals—an average of 4,750 tolas per day, as against 3,500 tolas. Silver was strong, thanks to a reduction in arrivals; the daily average rate this week was 24 bars, that in the previous week being 39 bars. Offtake was, of course, lower at a rate of 5 bars, as against 17 bars. The floating stocks of gold and silver are estimated at about 25,000 tolas and 400 bars, respectively.

The *Bhadrapad* (September) settlement in gold was well supported, the quotation rallying from Rs. 133.25 on Wednesday last week to Rs. 134.56 on Saturday and, after easing to Rs. 133.44 on Monday, recovered to Rs. 134.31 yesterday. Today, it moved down to Rs. 133.37. The net gain over the week was 75 nP. Business in *Aswayuj* (October) settlement commenced at Rs. 133.12 on the 29th inst. The rate improved to Rs. 133.81 yesterday but declined to Rs. 133 towards the close today. The charge for transferring commitments from the *Bhadrapad* to the *Aswayuj* settlement was in favour of bulls to the extent of 37 nP.

Ready gold began the week at Rs. 133.44, as against the previous closing of Rs. 133.25, and, after advancing to Rs. 134.56 on the 27th inst., receded to Rs. 133.69 on Monday. It, however, rose again to touch a high of Rs. 134.31 today before finishing at Rs. 133.75. The premium commanded over the *Bhadrapad* settlement declined from 63 nP last week-end to 25 nP on Monday. Yesterday, the ready rate was on a par with the quotation for the *Bhadrapad* settlement, but today, the premium stood at 38 nP.

In silver, *Bhadrapad* settlement moved up from Rs. 222.68 to Rs. 225.19 yesterday. After declining to Rs. 223.94 today, it closed at Rs. 224. *Aswayuj* settlement fluctuated between Rs. 222.87 and Rs. 224.69 before finishing at Rs. 223.44, the rise over the week being Re. 1.19. The rate for transferring commitments from the *Bhadrapad* to *Aswayuj* settlement continued to be in favour of bulls throughout the week, the actual rate today being 56 nP, against 43 nP on Wednesday last week.

A feature of trading in ready silver was that the premium of 6 nP commanded over the *Bhadrapad* settlement on Monday was completely wiped out in the subsequent sessions. Actually, today it was quoted at a discount of 19 nP under the forward settlement. The closing rate today was Rs. 223.81, as against Rs. 222.68 on Wednesday last week, the highest and lowest levels touched during the week being Rs. 225.19 (yesterday) and Rs. 222.81 (today), respectively.

Both ready and forward silver in the London bullion market continued unchanged at 79¼d. per ounce during the week under review also. Silver in New York, too, was unaltered at 91.375 cents. Ready gold in London moved down from 250s. 11½d. to 250s. 1½d., owing to the firmness of the pound sterling *vis-a-vis* the dollar. The latest available world price for gold in London is $35.14-$35.16, as against $35.11½-$35.13½ a fortnight before.

The following table shows the trend of the market during the week under review:

	31-8-60 (closing)	High	Low	24-8-60 (closing)
GOLD				
Ready (.99 fine)	Rs. 133.75	Rs. 134.56	Rs. 133.44	Rs. 133.25
Forward:				
*Bhadrapad**	133.37	134.31	132.75	132.62
Aswayuj	135.00	133.81	133.00	133.50§
Sovereign	87.25	87.25	87.00	87.00
SILVER

New York:				
Silver	91⅛ cents	—	—	91⅛ cents

* 5th September settlement. † 6th September settlement.
§ As on 29th August.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *29th August*

Although there has been very little business to report in the linseed market, firm prices are maintained and slight advances have been recorded by seeds and oils. Fresh offers for seeds from the centres continue to be scarce, as crushers are operating on a very restricted scale with producing costs still uneconomical. Oil business is confined to retail sales in the local market where demand has improved owing to higher prices prevailing for mustard and groundnut oils.

The oilcake market has shown no change. There has been a small daily turnover at prevailing rates. Shippers are still out of the market, though there has been a reduction of 10*s.* in freight from 1st September.

The latest quotation for ready and Sept. futures is Rs. 25.25 per maund.

JARILLA AUGUST EXPIRES

(From Our Own Correspondent)

BOMBAY, *31st August*

The eventful career of the Jarilla August Contract came to an end on the 25th inst. when the Contract went off the Board at the ceiling rate of Rs. 820. In private dealings, the Contract commanded a premium of Rs. 25 over the ceiling 150 bales of Cambodia cotton were tendered on the last notice day, thus bringing total tenders against the Contract to a mere 250 bales.

The Contract, which appeared at the Board at Rs. 743 on 15th February, has never had to look back. Reflecting the acute shortage of cotton caused by the failure of the crop during this season, the Contract steadily climbed up, piercing the ceiling of Rs. 790 during the non-delivery period, to touch the statutory ceiling of Rs. 820, on 25th June, more than a month before the start of the delivery period. Official business remained suspended till 1st August, although trading continued to be done in private. As anticipated, no sooner the delivery period commenced on the 1st inst. than the Contract hit the statutory ceiling. It remained at that level till the close.

The 250 bales of Cambodia cotton tendered against the Contract, 100 bales on 11th inst. and the balance on the 25th inst., are the lowest on record. Of these, the earlier 100 bales were rejected in survey. The survey result of the second consignment is not known.

As new crop trading has not yet started, the expiry of the August 1960 Contract has left the operators in the futures section with nothing on hand. The E.I.C.A. has finalised the hedge contract for new crop and submitted it for the approval of the Forward Markets Commission. Although no one seems to have any doubt about getting the Commission's permission, the possibility of trading commencing at least before *Dussera* is generally ruled out.

Traders' attention is currently focussed on the trend of crop progress and the Government's policy in respect of the marketing of the crop in the new season. Announcement in this regard is expected soon.

The spot market had only three trading days during the week. Business continued to be confined largely to foreign cotton. There was improved demand for Sudan cotton, by upcountry mills. As a result, and also due to reports of sizable Russian purchase of Sudan cotton, prices of Sudanese varieties went up. Southern and Ahmedabad mills were interested in East African and Syrian cotton in which some business took place.

Among indigenous cotton, new crop Bengal *Deshi* was in good demand. Prices fetched were Rs. 730 per candy for December delivery and Rs. 720 per candy for January delivery. Activity in other growths was negligible. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—for a few popular varieties of foreign cotton at Bombay:

East African Busoga 1.450; Mwanza 1.190; Sudan G2L 1.670; American Middling 15/16" 1.015.

The Karachi cotton futures market firmed up during the week under review as a natural reaction to last week's fall. Good domestic mill demand and renewed export enquiries induced a general buying movement. In spite of reports of good crop progress, futures values improved. The N.T.R.G. January Contract, was marked up from Rs. 67-12 last week-end to Rs. 68-2. The March Contract too, improved by six annas to Rs. 67-8.

Cotton futures in Alexandria suffered a setback during the week under review, thanks to renewed selling prompted by bearish crop news. The news of large-scale purchase of Sudan cotton by Russia led to the fear that, to that extent, demand for Egyptian cotton would be affected. Both the long-staple Karnak contracts and the medium staple Ashmouni contracts receded. Towards the close of the week, however, a recovery was in evidence. A part of the earlier losses were made good and the contracts closed with only minor losses over the week.

The discount rate on export sales of Egyptian cotton was further reduced by ½ per cent. to 8½ per cent. with effect from the week which began on Monday. The rate for new crop was unchanged at 6 per cent.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: November 74.87; January 74.75; March 74.93; May 74.98.

Ashmouni: October 62.68; December 62.46; February 62.60.

Barring the near deliveries of both the American and American type contracts, the Liverpool cotton futures market ruled firm during the week. Trade support for the more forward positions was a feature of trading. The weakness in the near position was attributed to long liquidation and profit-taking. Sudan contracts were neglected. Values remained nominally unchanged. The latest available quotations—in pence per lb.—are as under:

American cotton one inch staple contract: October 22.60; December 22.40; March 22.40; May 22.40.

American cotton mixed growth contract: October 22.90; December 22.70; March 22.75; May 22.80.

Sudan: September 35.25, November, January 35.50.

Quiet conditions prevailed in the New York cotton futures market. Prices moved in a narrow range, showing little change over the week. The slow conditions was attributed to listless situation in the piecegoods market and favourable rain in the cotton belt. Speculative interest was absent, thanks to the dim prospects of Congress enacting new farm legislation in the near future.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	29-8-60	23-8-60	16-8-60
Spot	32.45	32.40	32.45
October	31.02	31.02	30.88
December	31.30	31.29	31.15
March	31.83	31.84	31.70

BEMBERG YARN RALLIES FURTHER

(From Our Own Correspondent)

BOMBAY, 31*st August*

There was a further sharp rally in prices of Cupressa Bemberg yarn (60×2) during the week under review. The rally followed hectic purchases by bulls who feared that an acute shortage of supplies would be felt in the next few months. The fear stemmed from rumours of a possible cut in the import quota for the coming half-yearly licensing period (October 1960-March 1961) in view of the continued tight foreign exchange position. In sympathy with Bemberg yarns, other art silk yarns ruled firm. Staple fibre yarns, however, came in for selling due to slack enquiries from consuming centres. Cotton yarns were dull, the general tendency in prices being downward. Business put through was restricted, as operators preferred to await a further reduction in yarn prices by spinners. The handloom and powerloom weavers were said to have postponed purchases on hopes of such a reduction. The market was closed today on account of Parsi New Year.

Cupressa Bemberg yarn (60×2) August delivery forged ahead from Rs. 2,019 to Rs. 2,053. October contract climbed up by Rs. 43 to Rs. 2,098. Spot Cupressa spurted by 19 nP to Rs. 9.44. Among foreign art silk yarns, 120 Japan rose by 3 nP to Rs. 5.62. 150 Japan gained a like amount to Rs. 6.01. 120 Italy was fully maintained at Rs. 5.62, as also 150 Italy at Rs. 6.19.

Staple fibre yarn (40×2) August contract encountered selling and receded from Rs. 715 to Rs. 707. October settlement fell by Rs. 7 to Rs. 722.

In the cotton yarn section, twenty counts Maduras were quiet at Rs. 23 and Moderns at Rs. 24. Thirty counts Simplex eased from Rs. 27.50 to Rs. 27. Forty counts Minaxis declined by 37 nP to Rs. 30.50. Sixty counts Raghuvamshis and Finlays were dull at Rs. 60 and Rs. 63.50, respectively. Eighty counts Moderns were done at Rs. 73.50, Finlays at Rs. 82.82 and Mahendras at Rs. 71.

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, 31*st August*

Boom-like conditions prevailed in the oilseeds market during the week under review, with groundnuts in the forefront. The announcement made by the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, in his address at the Export Promotion Council's meeting this week, that as part of a vigorous export drive, he intended liberalising the export of a number of goods, including miscellaneous seeds, led to considerable speculative support. On top of this came reports of unfavourable climatic conditions in the groundnut-growing areas in the South. The spurt in values was so pronounced that a special clearing had to be introduced yesterday. Towards the close, however, the rally was arrested, following reports of revival of rains in the South.

The groundnut section, which had maintained a firm front in the previous week, came in for sizable fresh support. Reports of drought in Andhra, Karnatak and Madras led the operators to believe that the production in the current season will fall by about 40 per cent. in this region. Bullish weather forecasts were also received from Saurashtra and other parts, where excellent weather had prevailed earlier and a bumper crop had been expected. Traders expected an improvement in the export position of groundnut oil, oilcakes and seeds, if the Government gave some assistance. Some of the traders, however, were of the view that, as there was a considerable disparity in Indian and foreign prices for oils, prospects for their exports would not be very bright. At the close, the sentiment was, therefore, rather subdued. February 1961 contract, which had wound up last week at Rs. 188.25, advanced by Rs. 13.50 to Rs. 201.75 by Monday. It, however, receded to Rs. 199 yesterday. The maturing contract continued to be well above the ceiling level of Rs. 225, and, therefore, there was no official dealings in this contract. In the ready section, Nizam Bold rose from Rs. 45.50 to Rs. 46.50. Oil ex-mill moved up by 75 nP to Rs. 24.75.

Distinctly cheerful conditions prevailed in the castorseed section. This was due mainly to expectation of better possibilities for the export of oils. There was, however, an element of caution in the behaviour of trading in this section, induced by reports of a sizable increase in Brazilian castorseed production. According to the latest U.S. estimate, the total production of castorseed in Brazil will go up from 160,000 short tons in 1959-60 to 203,870 short tons in the current season. A minority section of operators feel that the forecasts of the U.S. Agricultural Department should be taken with a pinch of salt, as they are liable to overestimate the crops. In addition, fears of heavy tenders also restricted the rise in prices. Consequently, the maturing contract registered a net rise of only a rupee to Rs. 164.75, after fluctuating between Rs. 163.75 and Rs. 169 over the week. May 1961 contract spurted from Rs. 165.62 to Rs. 174.25 on Monday, but closed lower at Rs. 171.87. Oil commercial closed higher at Rs. 17.94, as compared with Rs. 17.69 last week-end.

There was no significant development in the linseed section. In sympathy with other sections, linseed, too, moved up. Export outlook, however, continued to be discouraging, with the world prices for linseed oil ruling at a comfortably lower level. September 1960 contract improved from Rs. 31.84 to Rs. 32.25, but eased subsequently to Rs. 31.75. May 1961 contract rose by 59 nP to Rs. 33.12. Bold ready fell by 25 nP to Rs. 31.62, after touching Rs. 32. Linseed oil declined by 31 nP to Rs. 15.94.

Firm conditions prevailed in the cottonseed section as well. Cottonseed September 1960 contract improved from Rs. 155 to Rs. 156.50, after moving both ways in a narrow range. February 1961 contract wound up the week higher at Rs. 94.50, as compared with Rs. 90 a week ago.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	30-8-1960	24-8-1960	17-8-1960
	Rs.	Rs.	Rs.
Groundnut			
August 1960	—	—	221.00
February 1961	199.00	188.25	183.75
Nizam bold	46.50	45.50	45.25
Coromandel ready	47.75	46.00	45.50
Khandesh quality	47.50	46.00	45.50
Oil ex-mill ready*	24.75	24.00	24.00
Railway receipts*	24.62	23.75	23.75
Castorseed			
September 1960	164.75	163.75	166.50
May 1961	171.87	165.62	166.25
Ready Madras	32.12	33.00	33.62

Kardi seed	24.50	24.50	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

TEA DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 23*rd August*

Sale No. 33.—Approximately 599,000 kilograms were offered in Sale No. 33 held on 23rd inst. Quality was generally brighter with the exception of a few later highgrowns which showed a falling away. There was a strong general demand at firm to dearer rates. Best highgrown B.O.Ps came in for keen competition at higher rates and some attractive prices were realised; their fannings, however, were barely steady. Below best highgrowns with improved quality sold at dearer rates, but where quality showed no improvement they were about firm. Good medium and medium descriptions received good support and were irregularly dearer, whilst similar fannings met with better enquiry and inclined to be dearer by a greater margin. Coloury mediums were a very strong feature and advanced 10 nP to 20 nP per kilo. Low medium B.O.Ps realised prices which were dearer on last rates with buyers' emphasis on their fannings which appreciated further. Plainest sorts followed the general upward trend of the market. Whole leaf grades, with the exception of pekoes which were irregular, were sought after at considerably dearer rates. C.T.Cs and legg-cut teas met with improved demand at enhanced rates. Black leaf teas sold well.

	1960	1959
	Rs.	Rs.
Low medium	3.85-4.15	3.48-3.64
Medium	4.25-4.40	3.64-3.86
Good medium	4.50-4.90	4.41-4.74
Quality	5.00-7.75	4.84-7.93

The average price realised in Sale No. 33 was Rs. 4.58 per kilo, as compared with Rs. 4.40 in the previous sale and Rs. 4.05 in the corresponding sale of 1959.

Export Quota:—There are now sellers at 1 nP per kilo and business has been done at ¾ nP per kilo.

Colombo:—Approximately 6 million pounds were offered and met with a good general demand. Uvas were irregular following quality, whilst Dimbulas followed a similar pattern, but on average must be quoted easier, with the exception of their B.O.P.F. which were dearer. Medium brokens were fully firm and their fannings dearer. Lowgrowns came to a barely steady market.

London Auctions:—

North Indian and other growths:—In Monday's auction, there was a strong demand and best Assams realised high prices. Dooars and bright liquoring Africans were dearer, whilst all others were steady.

Ceylon and South Indians:—28,320 packages were offered in Tuesday's sale, of which 7,302 packages were from South India. The market met a very strong demand and prices were 3*d.* to 6*d.* dearer for all descriptions with the exception of plainest descriptions which were firm.

DEMAND FOR EXPORT TEA MODERATE

(From Our Own Correspondent)

CALCUTTA, 30*th August*

There was only moderate demand during the export tea sales held yesterday. Even for quality teas the demand has not so far come up to earlier expectations. This phenomenon has been a cause of great anxiety to trade circles, as, in view of the drought conditions, production of quality teas has been below normal and all expectations that the shortfall in quality production would be made good later in this season are disappearing on account of continued heavy rains. Preliminary information from gardens indicates that production in August would be notably lower than that in August of last year. It has been unfortunate that production has been affected at a time when the proportion of quality teas to common teas is usually high. One way of making good the fall in quality teas is by finer plucking in the coming months. How far this can be done without reducing the output of common teas cannot be forecast at present.

Against such a background, the cogency of the rhetoric of Mr. Lal Bahadur Shastri, the Union Commerce and Industry Minister, in his address to the Export Advisory Council on Sunday last that the fall in tea exports should be made good was not understood by trade circles here. Mr. Shastri said that in the first six months of this year, tea exports brought to the country foreign exchange amounting to only Rs. 35.64 crores, at which the fall as compared to the corresponding previous period was as high as Rs. 63 crores. He attributed this fall to the lower crop. Trade circles are, however, not agreed as to the cause for such a perceptible fall in exports, viz., "lower crop." A glance at the reports of the recent export auctions would show that demand for quality teas had not come up to earlier expectations, prices had been unsatisfactory, and there were also instances of withdrawals of large quantities without bid or as a result of bids falling below the invoiced prices. Mr. Shastri rightly said that, unless the fall in tea exports was arrested, it would have a telling effect on total foreign exchange earnings of the country. The trade would like to know apart from rhetorics and appeals based on abstract metaphysical considerations of national necessity, what concrete steps the Government would take in stepping up exports.

Mr. T. Swaminathan, India's Commissioner-General for Economic Affairs in Europe, who also addressed the Council was nearer the point when he said that keen competition from other producing countries had affected India's tea market abroad. As an instance, he said that low cost African teas were a formidable factor.

The only redeeming features in considering export possibilities are the low level of U.K. tea stocks and this week's noticeable improvement in tea bookings to the United Kingdom. Egypt has left feelers that it may be lifting more tea this year than last year. So far, the U.S.S.R. has been showing only paltry interest and it is possible its enquiries might increase in the coming months.

Dusts on offer during the sale for domestic consumption held on Wednesday last week amounted to 18,214 packages. The decline in prices was up to 8 nP, notwithstanding the good general demand. Darjeelings shared the general trend, and prices of medium C.T.Cs fell by 10 nP to 20 nP. An irregular tendency was recorded by the best liquoring C.T.Cs. A feature of the sale was the keen competition which the legg-cut Dooars met with and as a result of which prices hardened. Another strong feature was the dearer tendency in prices of the smaller and liquoring teas. The quotations per 1 kg. inclusive of excise duty, were: best Assam C.T.C. dust Rs. 5.90 to Rs. 6.30, medium Assam C.T.C. dust Rs. 5.50 to Rs. 5.80, medium Assam dust Rs. 4.45 to Rs. 5.00, and medium Dooars dust Rs. 4.40 to Rs. 4.60.

Leaf on offer totalling 412 chests met with good demand at higher prices.

The export sales held yesterday, when offerings totalled 53,073 chests, opened with poor demand, but as the biddings progressed demand developed to a satisfactory degree and bidders paid the keenest attention to quality. There was an improved enquiry in evidence for whole leaf grades, the prices of which, however, were irregular. Among C.T.Cs, the mediums gave way by 50 nP per 1 kg., and the very best lots by Re. 1. At declined rates, good support was accorded to tippy teas and Darjeelings. Prices for "teas for price" recorded moderate additions, and the bright liquoring Dooars B.O.Ps met a steady market. Good support was accorded to the bright liquoring Assam B.O.Ps and O.Fs, prices of which hardened. Medium B.Ps with brighter cup quality were a strong feature, as were black leaf O.Fs and fannings. However, plainer teas eased. Legg-cut descriptions were fully steady and occasionally were selling at higher prices. The quotations (per 1 kg.) inclusive of excise duty, are: best Assam C.T.C. fannings Rs. 10.00 to Rs. 11.50, best Assam C.T.C. B.P. Rs. 9.50 to Rs. 10.50, clean black pekoe Rs. 5.20 to Rs. 5.50, medium fannings Rs. 5.10 to Rs. 5.40, medium B.P. Rs. 4.90 to Rs. 5.30, plain B.P. Rs. 4.30 to Rs. 4.45, and plain fannings Rs. 4.20 to Rs. 4.70.

SPURT IN RAW JUTE

(From Our Own Correspondent)

CALCUTTA, 30*th August*

Following a steady, but substantial, rise in fibre prices caused by an abrupt and impressive fall in raw jute arrivals from harvesting areas to agencies, coupled with the acute shortage of ready jute with mills to maintain production at the present level—prices of manufactured goods soared during the week under review in the jute market. However, business passing with overseas buyers was limited, as they were disinclined to support the rising trend. They believed that, when once the greater emphasis on substitutes by overseas consumers began to be felt, sobriety would return to the goods market here. Advices from the new York burlap market were nevertheless steady during the week, but the extreme caution with which U.S. buyers accorded support was taken as an indication that burlap consumption in that country during this month would not show any great improvement. Trade circles were in fact alarmistic at this week's movement in prices: the marked fall in fibre arrivals was not understood here. For the transport is being well maintained and harvest

speculative consideration on the part of middlemen and the well-to-do among growers could be attributed for the spurt in prices.

It should be noted that mills were keen buyers of ready jute which should be taken to mean that their need for raw material for carrying on day-to-day production had been acute. However, when prices moved up rather too high, mills withdrew from the market. It was thought here that the spread of the co operative movement in the villages was weeding out the middlemen from the trade and that such of the traders who had contracts to fulfil had to pay prices, which were higher than the Calcutta parity. Thus, if prices continued firm at present levels, sellers who should meet commitments would entail losses. Weather conditions during the week continued excellent, as there were heavy showers interspersed by bright sunshine. Water levels in canals and tanks were satisfactory. Total arrivals of raw jute in the month of July were as low as 177,650 bales, of which 37,650 bales were from Pakistan. The balance of 140,000 bales, was indigenous jute. In view of the late crop, all concerned had anticipated low arrivals in July, but such a low figure as above had come as a great disappointment and aided the uptrend in the fibre market during the week. The July figure, as compared with 336,000 bales in July 1959 and with 303,000 bales in the previous month, represented a decline of 158,350 and 125,350 bales, respectively.

A feature in the goods market on Tuesday last was the fair amount of covering business that took place in heavy goods, as a result of which ready B. twills rose to Rs. 145.50 from Rs. 141.85. Australia purchased further quantities of cornsacks for September delivery. In the futures market, November B. twills moved up. Although in hessian, no interest was displayed by foreign buyers, ready hessian 40" 10 oz. moved up to Rs. 47.30 from Rs. 47.05, following the high prices for raw jute. On Wednesday, covering business in heavy goods continued and Australian buyers placed further orders for cornsacks against September-October shipment. Actual business in ready heavy goods being limited, ready B. twills eased to Rs. 144.15, while hessian 40" 10 oz. steadied around Rs. 47.50. Although on Thursday there was no fresh activity other than some covering business, the continued uptrend in fibre prices pushed up ready B twills to Rs. 145.20 and hessian 40" 10 oz. to Rs. 48.10. On the following day, while hessian 40" 10 oz. firmed up to Rs. 48.15, B. twills eased to Rs. 144.75 following profit-taking. Over the week-end also, the tendency for profit-taking continued to push down B. twills to Rs. 144.50. However, ready hessian 40" 10 oz. was unchanged at Rs. 48.15. The feature of yesterday's trading was selling pressure in the futures market, as a result of which the November position declined from Rs. 126.50 to Rs. 125.35 to close at Rs. 125.75. This was reflected in the ready B. twills falling to Rs. 143.20. However, hessian 40" 10 oz. was steady at Rs. 48.40.

Handsome gains were recorded in the fibre market. Keen support was forthcoming from mills earlier in the week, but since the uptrend was too abrupt and gains were sizable, mills withdrew. However, sellers were reserved, and reports from agencies indicated hold-up in harvesting areas in anticipation of higher prices. However, mills thought that in view of the good crop, arrivals were bound to increase sooner or later and that prices would stabilise at reasonable levels. Northern bottoms opened at Rs. 103 per 100 kg. for September-October delivery and steadily improved to Rs. 108.50. Similar rises were recorded in most constructions, daissee bottoms closing at Rs. 111.20 after being higher at Rs. 111.25, as against Rs. 104.50 earlier. Note was taken of the Commerce and Industry Minister's announcement at the meeting of the Import Advisory Council that import licences for 400,000 bales of Pakistani cuttings would soon be issued.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 29*th August*

Sugar ruled quiet at Rs. 111.50 per bag in wholesale and Re. 1.09 per *seer* in the open market, as against the controlled prices of Rs. 108.50 and Re. 1.01. The Union Food Minister has ruled out the possibility of sugar decontrol in the near future, as the country is likely to become a party to the International Sugar Agreement with a view to exporting a sizable quantity of sugar to the U.S. The State Governments, however, are being asked to review the distribution arrangement of sugar with a view to liberalising the system within the overall framework of control. It is gathered that the U.P. Government will agree to issue 50 per cent. of sugar quotas to dealers. It is further reported that the Union Government is planning to give some concessions to factories so that they may start crushing season earlier as in the current season.

Sugar improved slightly during the week in the Muzaffarnagar market, although the supply position was comfortable. Sugar allotment for June was cleared by the week-end and the new quotas for July and August remained to be delivered. The prevailing prices were Rs. 110 to Rs. 111 per bag.

Sugar continued to be subdued at Rs. 113 per bag in the Kanpur market, thanks to satisfactory supply position.

Khandsari eased by about Re. 1 to Re. 1.25 a maund during the week, as demand from consuming centres was dormant and loading facilities were restricted. Production from *galawayat* continued and stockists were reported to be anxious sellers. The prevailing prices were: *Galawayat* Rs. 25 to Rs. 28; inferior Rs. 28 to Rs. 30; superior Rs. 32 to Rs. 40; crystal *khandsari* Rs. 37 to Rs. 40; *boora* from *khandsari* Rs. 35 to Rs. 38 a maund.

Trading in *gur* was almost dormant, as wet quality stocks (about 11,000 maunds here) were wagons was under previous commitments. Cane crop prospects were considered to be fairly good following heavy rains in the last fortnight and early crushing was expected to commence. The prevailing prices were: *gur* Rs. 15.25 to Rs. 15.75, as against Rs. 21.50 on the corresponding date last year and Rs. 19.75 in 1958.

Booking restrictions accounted for a fall of 50 nP to Re. 1 per maund in *gur* prices in Muzaffarnagar during the week. Stockists with 50,000 maunds were anxious sellers, but trading was limited and prevailing prices were: *Chaku* dry Rs. 19.50; dry-wet Rs. 17.50; wet Rs. 14.25; *rusket* dry Rs. 9 to Rs. 10; *minja* Rs. 15 to Rs. 18; *shakker* red Rs. 19 to Rs. 19.25; white Rs. 21 a maund.

Gur futures turned bullish during the week on east U.P. and Agra support. Fagun opened at Rs. 13.52 on Monday last and was quoted today at the highest level of the week at Rs. 14.

HEAVY RAINS AFFECT "KHARIF" CROP

(From Our Own Correspondent)

HAPUR, 29*th August*

Modest gains were recorded in foodgrains prices during the week on reports that heavy rains had marred bumper *kharif* crop prospects. Arrivals of grains from growing areas were also small during the week. Despite some protests by some State Governments, the Union Government was reported to be firm on the issue of abolishing wheat zones. The building up of heavy reserves from imports and the measures to augment production, it was thought, augured well for the future. The U.P. Food Minister announced that the necessary buffer stocks having being built, the Ministry had lifted the procurement levy on wheat resulting in larger arrivals in the markets.

Wheat at Hapur registered a modest advance during the week to be quoted at Rs. 17 a maund for average quality and Rs. 18 for farm produce. The rates are much lower than the corresponding prices prevailing at this time last year, namely, Rs. 18.25 and Rs. 23.50. The sale of wheat and flour was being continued by the State Government through fair-price shops and sale of flour was done freely to every individual upto Rs. 10.

Rice was almost stationary with *sela basmati* quoting at Rs. 30 to Rs. 33; *mainpuri* at Rs. 22.50; *ramajwayan* at Rs. 24; *raimunia* at Rs. 25 and *gadda* at Rs. 19.50 a maund. Supply position of rice was reported to be satisfactory.

Gram recorded modest gains during the week to be quoted at Rs. 15.12 a maund for Punjab produce and at Rs. 14.87 a maund for old stocks sold by the U.P. Government. Steady Punjab advices and all-India final estimate of gram putting the current year's area and production at 25,046,000 acres and 5,390,000 tons which is an increase of 0.7 per cent. in area and a decrease of 21.7 per cent. in production over last year were the main bullish factors. The U.P. Government was busy making arrangements for selling its huge stocks of about 100,000 maunds of gram stocked here in East U.P. by sending it to Gorakhpur and Lucknow regions. Barley continued to rule quiet at Rs. 12.25 and *bejhar*, too, was quoted at unchanged prices of Rs. 11.75 a maund for inferior quality and Rs. 12.37 a maund for *moongia* variety. Harvesting of early maize crop is being done and new crop would begin to reach the market as soon as the weather turns bright. Damage to late sown maize crop is reported due to heavy rains in the last fortnight. *Jowar* continued to be quoted at Rs. 13 to Rs. 14 and *guwar* white at Rs. 12.50 to Rs. 13 a maund.

Peas, too, recorded a hardening trend on reports of *kharif* crop damage. About 4 to 5 *khatties* of old peas were purchased by Kanpur millers during the week at about Rs. 11 to Rs. 11.12 a maund. Peas recorded modest gains to be quoted at Rs. 11.87 a maund for green *dara* quality and at Rs. 12.75 for white farm produce. Peas *dal* was done at Rs. 13.25 a maund. *Arhar* stood at Rs. 12.75 and stock was unchanged at 25 *khatties* and peas stock was put at 76 *khatties*. Other pulses were quietly depressed—*urd* at Rs. 18.50, *moong* at Rs. 18.50 to Rs. 19 and *massor* at Rs. 14 to Rs. 17 a maund.

Notice

THE SINGARENI COLLIERIES COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-ninth Annual General Meeting of the Shareholders of The Singareni Collieries Company Limited will be held on Monday, the 26th September 1960, at 4-00 p.m., at the Registered Office of the Company, "Meher Manzil," Khairatabad, Hyderabad (A.P.) to transact the following business:—

1. To confirm the minutes of the Thirty-eighth Annual General Meeting of the Company held on 27th October 1959.
2. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1959.
3. To sanction the declaration of a Dividend.
4. To note the Charities and Donations paid by your Directors.
5. (*a*) To appoint Directors in place of Shriyuts M. R. Patny, R. Prasad and C. Damodar Reddy who retire in accordance with Section 256 (1) and (2) of the Companies Act, 1956 and Article 93 of the Articles of Association of the Company. The last two only are available for re-election, as Shri Patny is not standing for re-election although he is eligible.

   (*b*) To appoint Directors in place of Shriyuts N. C. Sen Gupta, S. N. Sehgal, Mahmood Butt and R. S. Krishnaswamy who retire under Article 98 of the Articles of Association of the Company and are eligible for re-election.
6. To note that the sanction of the Central Government, under Section 619(2) of the Companies Act, 1956, has been received for the re-appointment of Messrs. S. B. Billimoria & Co., as Auditors of the Company for the current year on a remuneration of Rs. 7,000, plus Travelling and other expenses as approved by the Board of Directors.
7. To pass the following resolution as an Ordinary Resolution:—

   "RESOLVED that the revised terms of appointment of Industries (IF) Department, Government of Andhra Pradesh, as Secretaries and Treasurers with effect from 1st January 1957 as approved by the Government of India be and are hereby confirmed and that any two Directors of the Company, as appointed by the Board for the purpose, are authorised to execute the fresh agreement embodying the said terms between the Singareni Collieries Company Ltd. and the Industries (IF) Department, Government of Andhra Pradesh."
8. To pass the following resolution as a Special Resolution:—

   "RESOLVED, that the acquisition of the following second-hand assets from Industries (IF) Department, Government of Andhra Pradesh, Secretaries and Treasurers of the Company, at the prices indicated against each be and is hereby approved:—

	Rs.
(1) 2 second-hand motor cars	7,000
(2) Cycles	135
(3) Table fans and other electric accessories	1,899
(4) Office equipment like Comptometer and Typewriters	3,010
(5) Office furniture	3,922
Total ...	Rs. 15,966"

9. To transact any other business that may be brought forward by the Chairman.

Notes: 1. The Transfer Books of the Company will remain closed for the purpose of Dividend from 13*th September* to 26*th September* (both days inclusive).

2. Subject to the Directors' recommendation being accepted, Dividend Warrants will be posted on 26th September 1960.

3. Shareholders are requested to give immediate notice to the Company of any change of address.

4. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself and that such proxy need not be a member.

By Order of the Board,
R. DWARKA PERSHAD,
Secretary,
The Singareni Collieries Co. Ltd.

"MEHER MANZIL",
KHAIRATABAD P.O.
HYDERABAD (A.P.).
Dated 27th August 1960.

Explanatory statements to the above Resolutions as required by Section 173 of the Companies Act, 1956 will be sent to all Shareholders separately.

MARKET GOSSIP

(Concluded from page 407)

the ginneries and the traders. All of them have, therefore, been advised to see that they purchase cotton at prices within the ceiling.

With the imposition of the aforesaid measures, the straight-jacketing of the cotton trade has become complete. All that the trade is free to do is to purchase cotton from the farmers—at their price, of course—and deliver it to the mills nominated for the purpose by the Textile Commissioner at the price fixed after a compulsory survey of the cotton. For this privilege, it is pointed out, it has to bear the additional burden of having to submit periodical returns of their turnover and stocks.

The problem that now remains is enforcement of the controls. Past experience does not warrant optimism that the Government will succeed in enforcing the controls in an atmosphere of shortage. In fact, the last season presented the sorry spectacle of the Control Order being more honoured in the breach than in the observance. And those who defied the Order seemed to have emerged better in the bargain than those who did not. Surely, nothing is more detrimental to good business morale than such a state of affairs. Nevertheless, it will be interesting to see how the whole thing works in the new season, for there is one difference between the old and the new season. Unlike in the past season, the controls are now being enforced right from the beginning of the season. The dealers and the mills have been warned and the Textile Commissioner can act with firmness, fully convinced of the justice of his case. But what will he do, if the farmers begin to hoard their crop? Will he dare to requisition it from them?

Another pertinent question that arises relates to futures trading. With all these detailed controls, how can a hedge contract function, unless it is reduced to the status of a gambling counter, as is now sought to be done by the bullion dealers? The present Textile Commissioner himself is an expert on this subject, having been chairman of the Forward Markets Commission for a number of years. He is competent enough to examine the question impartially and advise the Government correctly.

Most of the doubts raised above will dissolve themselves, if the current season's (that is, 1960-61) crop turns out to be well over five million bales. Let us, therefore, devoutly hope that Dame Nature will be merciful enough to ensure for this country a crop of at least 5.2 million bales, if not more, and thereby spare the Textile Commissioner, the mills, the cotton traders and the consumers of cloth the ordeal of physical and price controls.

First Paper Mill in Madras

The immense scope for expansion of paper industry in India is underlined by the fact that, despite the recent increase in domestic production capacity, there is a considerable gap between supply and demand, as is evident from the existence of price controls and fancy premiums paid in the black market. Again, though production has increased from about 192,000 tons in 1955 to 294,000 tons in 1959, it still lags behind the target fixed under the second Five-year Plan of 350,000 tons. The demand is expected to more than double itself during the third Plan period, as witness the target fixed by the Planning Commission for 1965-66 in the Draft Outline of the third Plan at 700,000 to 900,000 tons. With the rapid rise in literacy, multiplication of rules and regulations which aggravates the demand for paper, and the expansion in industrial and commercial activity, more and more writing and printing paper will be required, but it appears that it will be several years before production catches up with the demand. There is thus an urgent need for more paper mills in the country.

The development of paper industry has so far been somewhat lopsided. There is, for instance, no paper mill in the Madras State, in spite of the fact that there are a number of sugar mills in that State and the bagasse from these factories, which is an important raw material for paper making, is being used as fuel. Also, there are reserve forests where bamboo is available in adequate quantities. This gap in the industrial field of the State is sought to be filled by the Seshasayee Paper and Boards Ltd., a joint-stock company incorporated in June last and promoted by Messrs. Seshasayee Brothers Private Ltd., a managing agency house which has been responsible for the birth of many industrial undertakings in Madras and Kerala States. The Company will thus have the distinction of opening the first paper mill in the Madras State. The Managing Agents of the Company are Messrs. Seshasayee, Parsons and Whittemore Private Ltd.

The Company proposes to set up an integrated pulp and paper plant with an annual capacity of 20,000 tons. The estimated cost of the project, including working capital, brokerage and underwriting commission and preliminary expenses, is Rs. 6 crores. This is proposed to be met by a share capital issue of Rs. 3.50 crores and by loans from banks and others to the tune of Rs. 2.50 crores. The authorised capital of the Company is Rs. 10 crores and the issued capital is Rs. 3.50 crores, divided into 3.5 million equity shares of Rs. 10 each. Out of the issued capital, the promoters, foreign collaborators, Directors and their friends have already subscribed to the extent of Rs. 100.01 lakhs and have agreed to take up a further Rs. 4.90 lakhs. The Madras Industrial and Investment Corporation Ltd. has agreed to take up Rs. 1 crore worth of shares. The balance available for public subscription is only Rs. 1.45 crore. Even this has been fully underwritten by the L.I.C., four Scheduled banks, and six firms of brokers. The success of the issue is thus assured. The list for public subscription will open on the 7th inst. and will close on the 12th or earlier, but not earlier than the 10th inst. A sum of Rs. 5 per share is payable on application (which is to be for a minimum of 100 shares) and the balance is payable in two instalments as and when called up.

Apart from the favourable climate for paper industry, in general, for reasons outlined at the outset, the outlook for the Company, in particular, appears to be bright for several reasons. (1) The Government of India has agreed to provide the entire foreign exchange requirements for the project from the Export-Import Bank loan. (2) The Company has secured the technical collaboration of Messrs. Parsons and Whittemore South Asia Company Inc., U.S.A., who are well-known makers of paper machinery. (3) The situation of the factory is ideal from the point of view of easy accessibility to the sources of raw materials, transport facilities and power supply. (4) The paper-making characteristics of bamboo and bagasse, the supply of which has been assured to the Company, are such that their combination will help produce excellent printing and writing papers of various types and varieties. And, finally, there is no marketing problem, as the demand for paper in the State of Madras and the two adjoining States of Andhra and Kerala will far exceed the Company's output. The mill, which will be one of the most modern ones, is expected to go into production in two years' time. Based on current market conditions, the Directors are satisfied that the operation of this mill will yield a satisfactory return on the capital invested.

COMMERCE AND INDUSTRY

(Concluded from page 432)

of 2,839,000 tons on the assumption that the plant will work all the 365 days in a year. The total quantity of dry coal required to achieve this level of coke output is estimated at 4,161,000 tons. The gas evolved from the coal during its carbonisation will be treated in the by-product and tar-distillation plants.

The West Bengal Government's anxiety to expedite the expansion of the coke ovens' capacity has been prompted by the need to ensure adequate supplies of coking coal to the Durgapur steel plant, especially when its capacity is proposed to be stepped up in the third Five-year Plan period, as also by several other consuming industries in the State. Moreover, the entire gas to be produced from the extension of the project—18 million cubic feet—will be largely required by the fertiliser factory which the State Government has decided to establish in collaboration with foreign participants. Further, the expansion of the coke oven project holds out greater opportunities for manufacture of some basic chemicals utilising the by-products. A scheme envisaging such manufacture has already been submitted by the Bengal Chemical and Pharmaceutical Works. Addressing the recent annual meeting of the Company, Dr. B. N. Ghose, Chairman of the Company, disclosed that the scheme was now being actively considered by the West Bengal Government and that an industrial licence from the Centre was awaited. Dr. Ghose did not wish to give more information on the scheme until it took concrete shape, but he assured the shareholders that they would be given an opportunity to invest in the new company to be formed for the purpose.

GELATINE FACTORY TO BE SET UP AT NAGPUR

The Glamorgan (Wales) firm of P. Leiner and Sons—whose factory at Treforest is the largest single British producer of gelatine of any kind—is to establish a factory at Nagpur in association with Kapurthala and Northern Indian Tanneries (K.N.I.T.), of Kapurthala. The new company will be known as the Leiner-K.N.I.T. Gelatine Co., Ltd. The authorised capital of Rs. 50 lakhs will be held jointly by the two companies. Each will be represented by two directors. The production target of the new factory is 2,000 tons a year, including edible and pharmaceutical gelatines, and also bone glue, using sinews for the raw material.

This is the first venture of its kind in India, but Leiners are not new to the Indian industrial scene, for they have already established a bone-crushing factory at Jodhpur. Plans for the new factory are far enough forward for an estimated start of production in less than nine months. About three-quarters of the plant will be made in India and the remainder in Britain. Technical experts from Treforest will be in charge of the organisation of the new plant.

One of the main products, it is announced, will be gelatine for bank-note paper to be made at the new mill being built by the Government of India in conjunction with Portals Ltd. The greater part of the bone glue to be produced will, it is expected, be exported to the United Kingdom.

MANUFACTURE OF CAMERAS

An agreement was signed at New Delhi on 26th August between the Government of India and Messrs. Nippon Kogaku of Tokyo for technical collaboration in the manufacture of cameras in the Government-owned National Instruments Factory at Calcutta. Mr. D. Sandilya, Joint Secretary, Ministry of Commerce and Industry, signed on behalf of the Government of India, while Mr. N. Hamashima, Managing Director, signed on behalf of his firm. The agreement provides for a technical tie-up with the Japanese firm for the utilisation of their patents in the manufacture of cameras and other optical instruments at the option of the Government. It will be current initially for a period of 10 years. Technicians from the Company will visit India shortly and start training Indian engineers.

For the time being, it is proposed to commence manufacture of Nikkorex, the latest model which Nippon Kogaku are making in medium-priced cameras. This is a 35 mm. single lens (f/2.5) reflex camera with view finder and built in exposure meter. The National Instruments Factory is expected to reach an optimum production of 1,000 cameras per month within a period of two to three years.

BANKING

(Concluded from page 414)

average rates of interest on deposits and bank credit of all Scheduled banks given in the Statistical Tables Relating to Banks:

TABLE II

(Rate per cent. per annum)

	For the half-year ended			
	June 1958	Dec. 1958	June 1959	Dec. 1959
Deposits				
Current	0 184	0 179	0 124	0 124
Savings	1 882	1 952	1 906	1 944
Fixed	3 611	3 620	3 451	3 252
Bank Credit				
Loans and advances ..	5 505	5 685	5 579	5 705
Inland Bills	6 307	6 432	6 243	6 088
Foreign Bills	10 093	9 619	8 807	9 240
(i) Export Bills ..	8 777	8 691	8 009	8 676
(ii) Import Bills ..	12 462	11 801	10 958	11 345

It will be seen from the table that the reduction in interest rates on current and fixed deposits in 1959 was accompanied by only a fractional rise in average rate of interest on loans and advances and on savings bank deposits, so that the spread between the average rate paid on all deposits and that charged on loans and advances could not have improved by any significant extent. In the first half of 1959, in fact, there was a decline in the spread. The average rate of interest (discount) on bills shows a fall and this is more marked in the case of foreign bills.

The Statistical Tables contain an interesting table of advances of 15 selected Scheduled banks at various rates of interest as on the last Friday of each quarter of 1959. The banks selected for this study are representative ones, in that they account for 75 per cent. of the advances of all Scheduled banks. This study does not show any deviation from the previous year's pattern. For the bulk of the banks' advances continues to be lent at less than 6 per cent., of which 50 per cent. earns a rate of interest above 5 per cent., but less than 6 per cent. Hardly 20 per cent. of the banks' advances is being made at over 6 per cent. Nearly a quarter earns 4-5 per cent. Thus, the prime loan rate in India is 5-6 per cent., a rate which prevails in very few countries. Even in countries with developed money markets the common lending rate of banks is anything between 6 per cent. and 8 per cent., as readers would have noted from the table of prime loan rates in various countries of the world published in our issue of 6th August 1960 (vide page 231).

"QUICK" ESTIMATES OF NATIONAL INCOME FOR 1959-60

The National Income of India in real terms recorded a rise of 0.5 per cent. in 1959-60 over 1958-59 according to the "quick" estimates prepared by the Central Statistical Organisation on the basis of the trends disclosed by the current available data. There was a fall of 3.9 per cent. in agriculture (proper) the contribution of which accounted for 38.7 per cent. of the total national income in 1959-60, as compared to 40.5 per cent. in 1958-59. This fall in agriculture was, however, more than offset by increases in other sectors, which taken together, registered a rise of 3.4 per cent. in 1959-60 over 1958-59 bringing about an increase in the contribution of these sectors from 59.5 per cent. in 1958-59 to 61.3 per cent. in 1959-60. The present estimates are tentative, as they are based on certain advance information and may be revised in the annual paper on National Income for 1959-60. Contributions of some individual sectors to the overall percentage change in national income in 1959-60 over 1958-59 at 1948-49 prices are shown in the following table:

Sectors	Percentage contribution to total national income 1958-59	Percentage change in 1959-60 over 1958-59	Contribution to the overall percentage change in 1959-60 over 1958-59
Agriculture (proper) ..	40.5	— 3.9	—1.58
Mining and factory establishments	8.2	+ 8.1	+0.66
Communication	0.4	+ 4.0	+0.02
Railways	2.4	+ 5.7	+0.141
Organised banking and Insurance	0.9	+10.8	+0.10
Other commerce and transport	15.2	+ 1.7	+0.26
Other sectors	32.4	+ 2.8	+0.91
All sectors	100.0	+ 0.6	+0.51

The table below indicates the trend of national income and per capita income at 1948-49 prices during the quinquennium ending 1959-60:

Year (Financial)	National income (Rs. crore)	Per capita income (Rupees)
1955-56	10,480	273 6
1956-57	11,000	283 5
1957-58	10,850	277 1
* 1958-59 (Preliminary) ..	11,000	278 6
* 1959-60 (Provisional) ..	11,750	291 5

The figures show that the net rise in national income in real terms during the first four years of the second Plan, i.e., 1956-57 to 1959-60, was of the order of 12.1 per cent.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."

MORE POWER TO THE RESERVE BANK

It is heartening to find that the Reserve Bank, the Government, Parliament and the banking community, in general, are ready to profit by the lessons of the failure of the Palai Central Bank Ltd. The first three authorities are acting quicker than we expected, while the fourth, namely, bank managements, seem to be quietly reconciling themselves to the further curtailment of their freedom that is now taking place. Not a word has been said by the Indian Banks' Association or its spokesmen about the second amendment to the Banking Companies Act which has been accepted by the Lok Sabha and is now before the Rajya Sabha. The speed with which this amendment was drafted and placed before the House reflects the authorities' commendable response to public opinion, which was keen that something should be done to provide quick relief to the depositors of banks that fail. The fact that the Lok Sabha also promptly gave its consent to the amending Bill is a striking evidence of its appreciation of what is sought to be done for the benefit of depositors. Elsewhere in this issue appears a detailed account of the main features of the new Banking Bill. Suffice it to say here that its primary aims are three: (1) to expedite liquidation of banks that unfortunately fail; (2) to ensure a little preferential claim to small depositors after all the prior claims ranking above those of depositors have been met, and (3) to prevent, as far as possible, bank failures by rehabilitating in good time banks that are found wanting in some respect or other.

In addition to this legislation, the Reserve Bank is actively examining the case for insurance of bank deposits. It is believed to have sent a tentative scheme to the Indian Banks' Association for ascertaining the reactions of member-banks and one of the Deputy Governors of the Bank will make a special study of this insurance in the U.S., when he goes there to attend the forthcoming annual meetings of the I.M.F. and the World Bank. The preferential status that is now sought to be given to small depositors does not, in any way, obviate the need for insuring bank deposits, as the relief specified in this statute is very small, being no more than of a token nature. The sum of Rs. 250 which ranks for prior claim is, it may be noted, much less than the average amount per savings bank account. Even in the case of banks with less than Rs. 5 crores of deposits, the average amount per savings account in 1959 was Rs. 423, the average for the schedule banks as a whole being Rs. 747. This remark, however, does not suggest that we belittle the value of this safeguard. It is welcome for the reason that the smallest among the depositors should be given the highest priority in the settlement of claims and maximum protection.

The question of expediting liquidation of banking companies and the distribution of their assets had received expert attention in the past and suitable measures were introduced in the Banking Companies Act. An entire chapter on the subject was added to the Act in 1950 and, in 1953, this was further modified substantially and several sections were replaced in the light of the findings of the Banks Liquidation Proceedings Committee, presided over by Mr. Dhiren Mitra. Experience since then has shown that these provisions are inadequate in relation to the nature and size of the problem and that some more fundamental modifications are required, if depositors are to be enabled to get the maximum return with minimum delay. The present amendments are designed to serve this purpose. There is little in them to be criticised. An attempt at improving the law in the light of experience is not something to be decried. On the contrary, it deserves to be encouraged.

If there is an aspect of the present amendments that can be objected to, it is the one that invests the Reserve Bank with sweeping powers for enforcing amalgamations of banks and granting of moratorium on certain conditions. It may sound ironical that the failure of the Palai Bank should have secured more powers for the central banking institution, even though the episode was by no means due to want of sanctions. Despite all the explanations given by the spokesmen of the Reserve Bank and the Government, the fact clearly stands out that the Reserve Bank had enough powers to pull up the management of the Palai Bank and to prevent it from indulging in unsound banking practices. Equally clear is the fact that, for some mysterious reason, the Reserve Bank failed to exercise these powers effectively in good time. Accordingly, it can be argued that, when the existing powers are not judiciously used, there is no point in vesting the Reserve Bank with more and more powers. This is a negative criticism, which does not take into account the need for removing obstacles in the way of strengthening the banking sector. It is common knowledge that one of the weaknesses of Indian banking is the existence of a large number of small banks most of which cannot stand the test of sound banking canons. It is also widely appreciated that one of the effective solutions for this problem is to amalgamate the deserving units into viable institutions that can afford to employ competent staff, adopt modern practices and follow stricter banking codes. There has, however, been more talk than adoption of this solution. If left to voluntary effort, as has been the case so far, the present unsatisfactory state of affairs will persist for a long time. Something more effective must be done to solve the problem of the "problem" banks, to quote the apt description coined by Mr. H. V. R. Iengar, Governor of the Reserve Bank.

Why has the problem defied solution, though amalgamation as a remedy has been conceded to be an ideal one? What are the difficulties in the way of pursuing that course and can they be overcome? Mr. Iengar did some loud thinking on these questions when addressing a gathering of economists at Delhi last week. He said:

> "The question also arises in this context as to whether some powers of compulsion are required for effecting a merger in appropriate cases. The problem is undoubtedly beset with difficulties. For example, in connection with banks in the old Travancore and Cochin States, the Travancore-Cochin Banking Enquiry Commission pointed out that banks had been started as a result of competition between villages and often between families. Having regard to this, is there likely to be sufficient unity of purpose in a region which will enable banks which are very small in size to merge with others to become bigger units? And apart from the question of compulsion, would it be possible in practice to devise schemes which will allow fairly for the differences in the quality of banking assets arising from differences in the quality of managements? One cannot leave the problem alone merely because it bristles with difficulties. On all grounds it is desirable that we start afresh with a banking structure which is sound and sufficiently broad-based to take on the increasing responsibilities that will fall on it during the third Five-year Plan period. From this point of view clearly one could not contemplate with equanimity an indefinite or prolonged extension of tutelage for substandard banks in various stages of difficulty."

Even before the echoes of the series of questions posed by Mr. Iengar had died down, the Lok Sabha was presented with the Banking Companies Act Amendment Bill under reference, seeking to vest the Reserve Bank with powers for bringing about compulsory amalgamation of banks.

From the observations of the Finance Minister on the Bill, it is clear beyond doubt that amalgamation will be tried as a solution only in the case of banks that deserve to exist and have a useful role to play. While banks that are really bad will have to be liquidated, those that can be saved will be saved through reconstruction, and amalgamation with another, if need be. A problem bank can be reconstructed only if the depositors do not force its closure by hurried withdrawal of funds. It is in order to prevent such withdrawals that the amending Bill contains provisions for granting a moratorium for a period of six months on the recommendation of the Reserve Bank. It is just possible that, in many cases, mere reconstruction will be of no use, for, rarely, a credit institution like a bank, which depends on the confidence of depositors for its survival and vigorous growth, can hope to be successful after reconstruction. In such cases, their amalgamation into one strong institution or absorption by the big or medium-sized banks is the only way out. The new legislation, therefore, provides for such a course. It also provides for amalgamations straightaway without being preceded by any reconstruction. The initiative will, in all probability, be taken by the Reserve Bank and, on its advice, the Government can compel one bank to be amalgamated with another, even if the shareholders of both the banks, or of one of them, are opposed to the merger. Explaining why the Government was taking such drastic powers, Mr. Morarji Desai said:

> "In the case of credit institutions like banks, in which thousands of depositors unconnected with the shareholders are interested, the normal provisions of the Companies Act, which are applicable to industrial or commercial companies owned only by the shareholders, are out of place. While it is not my intention to belittle the extent of the shareholders' interest in the institutions with which they are concerned, and while we shall consult them wherever this is possible, or necessary, the initiative and responsibility for the reconstruction of financial and credit institutions like banks must remain largely with the Reserve Bank and the Central Government. We are making this quite clear in the relevant provisions of this Bill and I hope that, in actual practice, we shall be able to

use these new and amplified powers in a manner which will strengthen the banking and financial system of the country as a whole."

The aforesaid instrument means a further whittling down of the rights of shareholders of banks. But as banks have come to be regarded as public utility concerns, the rights and privileges of shareholders and their representatives on the boards of directors are inevitably receding to the background. While in theory this particular amendment confers on the authorities excessive power, in that the Reserve Bank and the Government can order any big bank to take over a small bank in the name of public interest, in actual practice such high-handed actions are unlikely. There is provision for receiving suggestions from, or hearing the objections of, the banks concerned, before the Reserve Bank finalises its scheme of amalgamation. Quite apart from this safeguard, there has so far been no instance of the Reserve Bank misusing the powers of control given to it or acting in a manner detrimental to the progress of banking. One can, therefore, safely proceed on the assumption that the new powers, too, will be wisely used for strengthening the banking system through elimination of some of its structural weaknesses.

A DOCTRINAIRE DECISION

THE Government of India has decided to go into the business of manufacturing small cars also, as though its hands are not full with commercial enterprises. In announcing its decisions, in the form of a resolution, on the recommendations of the Jha Committee appointed by the Commerce and Industry Ministry to enquire into the automobile industry, the Government has confirmed the announcements made by Mr. Manubhai Shah to the effect that the small cars would be made by the public sector. While an expert committee is proposed to be set up to consider the feasibility of manufacturing a low-cost car within a price range of Rs. 6,500, including taxes, transport charges and distributors' commission, or at an ex-factory price of about Rs. 5,000 per car, it has taken a policy decision that the manufacture of the proposed baby car "will be undertaken in the public sector," in case the Committee considers that the production of such a car will be possible within the price range indicated. This decision amounts to putting the cart before the horse. Why should the Government be in such a mighty hurry to decide as to which sector should make the car even before making sure whether the manufacture of such a car will be an economically feasible proposition for this country? It could have waited for the verdict of the proposed expert committee, which is expected to submit its report within a period of four months. There would be some justification for the public sector taking up this job, if the private sector were to express its inability to make this car within the stipulated price range, assuming that the expert committee finds the proposition to be a feasible one.

The Government has given no reason whatever as to why this manufacturing activity should be entrusted to the public sector and why not to the private sector. In a democracy, it is desirable for the Government to see that its policies and actions carry conviction to the public. In the absence of any explanation, one is constrained to come to the conclusion that, in this case, the Government does not care very much for public opinion and that its decision is based purely on doctrinaire considerations. The private sector claims that it has the capacity and resources to manufacture small cars of a durable and sturdy nature at an economic price. In his annual statement to the shareholders of T.E.L.Co., Mr. J. R. D. Tata observed: "....if it is true that the Government contemplate establishing the manufacture of a small car by the State and if, as rumoured, the two reasons advanced for such a proposal are that the cars proposed by established manufacturers are too expensive and that Government find it difficult to choose between many projects offered, I can only express concern and regret in regard both to the proposal and to the reasons advanced for it. With the existing automobile industry able and willing to undertake manufacture of a small car, there can be no possible reason for Government to allocate such a project to the public sector, except on grounds of socialist ideology or dogma, which Government spokesmen, including the Prime Minister, have repeatedly and unequivocally disavowed as playing any part in their policies." Even after such a categorical assertion by a distinguished leader of Indian industry, the Government has not cared to take the public into confidence as regards the reasons that prompted it to decide as it has done. If silence means consent, the answer is obvious.

It will be pertinent to recall here that even the Jha Committee had clearly expressed itself against the small-car project being undertaken in the public sector. The Committee held the view, very rightly, that it was undesirable to set up a new automobile unit for this purpose. We say very rightly, because the Indian market for cars, the existing and the prospective alike, is not large enough even for the existing manufacturers and the entry of another unit will only make matters worse. This view had been emphatically stated by the Tariff Commission also in the past but was quietly ignored by the powers-that-be when they permitted the Defence Department to undertake production of trucks. Although the Government has accepted almost all the other recommendations of the Jha Committee, it has unceremoniously rejected this particular suggestion, without even making reference to it in the resolution published in the *Gazette of India Extraordinary* of the 6th inst. The Government surely has enough work to do in the field of industries and agriculture. It has taken up so many heavy industries, including prospecting for oil, that it has neither the men nor the time to bother about manufacturing economy cars. These cars belong to the category of consumer durables and constitute, by Government's own definition, an item of luxury. They are not, in any case, an indispensable necessity to the common man. If the authorities think that the private sector will indulge in profiteering, they have only to remember that they have all the powers necessary for controlling prices and distribution alike. They are already exercising these powers not only in regard to the existing range of cars and commercial vehicles but even in regard to scooters. Is there, then, any practical reason why the manufacture of such an item should be undertaken by the public sector?

SMALL HOLDINGS IN RUBBER

THE problem of small rubber plantations owned mostly by individuals and families seems to be a perennial one. Despite their many drawbacks, the small holdings have been growing in number and have carved out for themselves an important place in the economy of Kerala State. Many may not be aware that holdings of 50 acres and below number about 50,000 and represent almost 99 per cent. of the total number of estates and holdings, big or small, and account for 25 per cent. of the total production. In area, they accounted for 162,361 acres or 56.7 per cent. in 1958, having grown from 69,604 acres or 40.3 per cent. in 1952, whereas, during these six years, the share of estates of over 50 acres declined from 59.7 per cent. to 43.3 per cent., though the area covered by them increased from 103,182 acres to 124,206 acres. The increase in area under this group, it will be noted, was very much smaller than that under the small estates. What is more noteworthy is that over 43,000 of these small holdings were less than five acres in size in 1958, as compared with only 11,000 in 1952.

Again, despite the increase in number, the acreage owned by the small holders has shown a smaller average per unit. It has also been found from experience that the output per acre of the small holdings is much smaller than that of estates of over 50 acres. Thus, while the average yield of holdings above 50 acres was 351 lbs. per acre in 1952, that of small holdings was no more than 175 lbs. Because of this low yield, the average for the industry as a whole was 279 lbs. per acre. By 1958, the average yield for holdings of over 50 acres increased to 419 lbs. per acre or a rise of 19.3 per cent., whereas that of small holdings rose by only 3.4 per cent. to 181 lbs. and the average for the industry as a whole by 12.5 per cent. to 314 lbs. Thus, not only the average yield of small holdings is now less than 50 per cent. of that of large estates but the improvement in yield over the last six years is also far from encouraging.

The yield is so low, particularly in holdings of five acres and less, that in most of the small holdings rubber offers a living only when it is grown along with other products, such as coconut, arecanut and pepper. It is said that the small holdings are seldom able to follow the standards or norms necessary for planting rubber with high yielding stands and for maintaining the plants properly till they are mature for tapping. Nor do they possess the knowledge and technique for improving the methods of tapping. Bad tapping practice affects the longevity and productivity of trees. Use of low yielding planting materials is probably one of the causes for the perpetuity of uneconomic holdings. It may be that the lack of finance prevents many a small grower from improving his methods of cultivation. For it is found that a few small holdings with adequate financial resources are being maintained so well that they do not unfavourably compare with large estates in the matter of productivity.

The two questions which are usually raised in any discussion on the problem of small holdings are: (1) What is the size of an "economic unit"? And (2) Can much reliance be placed on the small holdings for meeting the future needs of the country? Strangely enough, opinions on both are not unanimous and precise. The U.P.A.S.I. is of the view that an "economic unit" means a plantation acreage capable of supporting an efficient managerial sector, providing reasonable wages and living conditions to the employees and yielding a fair return on the investment. It would be difficult to lay down, on this basis, a standard for size, though, for practical purposes, 500 acres in the case of large plantations and 50 acres in the case of small holdings may be taken as economic units. The Rubber Board, however, feels that for small holdings the limit of five acres suggested by the Plantation Enquiry Commission can be regarded as sufficient for an economic unit. The Tariff Commission, which recently completed an enquiry on the raw rubber prices, has not given any clear verdict on this. "Without dogmatising on the point," it says, "we would only state that, at present, large holdings are in a better position to undertake economic production of rubber." This shows that the Commission, consisting, as it does, of eminent economists and able and experienced administrators, knows the answer, but does not want to spell it out.

On the second question, the Rubber Board has stated that it would be "unwise" to place too much reliance on small holdings for meeting the future needs of the country. The view of the Tariff Commission on this question is somewhat different. It says:

"As the small holdings play a significant role in the economy of Kerala by providing employment on a large scale, there should be no positive steps whether by agrarian reforms or otherwise to discourage them from continuing in production. They should continue to receive, where they are able to establish their ability to do so, subsidy and other financial aids from the Rubber Board for replanting with high yielding planting materials."

The Plantation Enquiry Commission had, however, offered a solution to this problem. It had suggested that the small holders should form themselves into co-operatives. In view of the several handicaps which individual small growers suffer from, the Plantation Enquiry Commission was of the view that there was great scope for co-operatives, especially service co-operatives or multi-purpose societies, to function actively. Surprisingly enough, there seems to be opposition to this suggestion from all quarters, including the small growers themselves. The Tariff Commission, which sought the views of different interests on this question, has received a "uniform reply" from the State Government, growers' associations and individual growers, large and small alike, to the effect that "co-operation will not work successfully among existing small holdings in conditions prevalent in the area." The Tariff Commission is, however, of the view that, with the increasing assistance from the Rubber Board, as well as from the State Government, to small growers, it should be possible for them to popularise the advantages of co-operation through the formation of service co-operatives and multi-purpose societies. In particular, the establishment of such agencies would, it says, contribute to the success of the scheme suggested by it for extending financial assistance for new planting to small and medium holdings, a scheme to which the Kerala State Government seems to have responded favourably. The Tariff Commission's suggestion deserves to be tried seriously. If it is properly explained to the small growers that it is not joint co-operative farming but only service co-operatives that are sought to be promoted in order to help them, they may be willing to join hands and work for their mutual benefit. The alternative is amalgamation of uneconomic units. But the success of this scheme also depends on the initiative and voluntary co-operation of small growers. In actual practice, amalgamation will be more difficult than service co-operatives, as it involves surrender of ownership of land to some big planter in each area who is prepared to buy the small holdings or to a corporate body, the shares of which they are prepared to hold or accept compensation in cash.

MARKET GOSSIP

THE bulls on the stock exchanges seem to have become tired. The success of Mr. Lal Bahadur Shastri in wangling a substantial reduction in the ex-mill prices of cotton cloth and yarn have proved to be a distinct setback to them. The only hope of improving the profit-margin of mills lies in the prospects of a better cotton crop in the current season. If the crop turns out to be a little over five million bales, the mills may fare better from December onwards, assuming that other things will remain the same. If exports of cloth, for instance, fail to improve, the mills may, once again, be faced with easier conditions in cloth market. Such a prospect cannot be ruled out, what with forecasts of an economic recession in the U.S. in 1961. In any case, the world trade in cloth is subject to periodical swings. Good years are invariably followed by bad ones and 1959-60 has been a good one.

The implications of the serious nature of the foreign exchange crisis to industries based on imported raw materials are gradually sinking in the minds of speculators. Will the rayon industries, for instance, be able to get all the foreign exchange they require for maintaining and increasing their production? Many have begun to wonder and, as the doubt spreads, selling pressure on rayon shares increases. National Rayon, Gwalior Rayon, Sirsilk, Century, Baroda Rayon, Indian Rayon and South India Viscose—all of them are now standing appreciably below the peak levels recently touched by them. It would be a good thing if the managements of these concerns—we refer here only to those that are in production—were to clarify the position in this respect. In any case, it will be worth watching the import quotas due to be announced in a few days.

Considerable misgivings have come to prevail in market circles, following the statements of the Prime Minister in Parliament in regard to the private sector and allied subjects, such as State trading, control on prices, concentration of economic power, uneven distribution of national income and so on. Is the leftist ideology of the Congress Party beginning to reassert itself once again in both ministerial pronouncements and policies? Is the influence of rightist-minded members of the Cabinet declining? The failure of the Swatantra Party to gather strength and the rightist doctrinaire approach of some of its leaders might serve as an encouragement to the Congress Party to return to some of its pet programmes which served to discourage the enthusiasm of private investors not long ago. There are, however, no signs of any immediate change in the official policy.

But the authorities may follow stiffer policies against speculation, including that in stocks and shares. Although the Finance Minister has stated that no impediments should be placed in the way of companies raising capital for approved industrial projects, the high premiums commanded by the shares of existing and new companies alike, the anxious, as well as critical, questions raised by some members at the meetings of the Consultative Committee of Members of Parliament last week, and the memoranda submitted by interested parties to the Government and Members of Parliament against the expansion schemes of some companies are beginning to influence official attitude. It is reliably understood that the authorities are now insisting on the issue of new shares of existing companies, even if they are for an entirely new project like petro-chemicals, at a very high premium. Also, in the case of issues of entirely new companies, the conditions are being tightened in regard to the shares allotted on a firm basis to the directors and their friends.

For the past two or three days, there have again been a revival of rumours of an impending increase in the Bank rate. With the borrowing programme of a dozen State Governments just completed, it is inconceivable that the authorities would put up the Bank rate so soon. If they do, it would be regarded by investors as breach of an implied faith by the Reserve Bank and shake their confidence. There may, therefore, be no rise in the Bank rate for some weeks to come. But it is a moot point whether the necessity for higher interest rates can continuously be postponed. Sooner or later, perhaps sooner than later, the intense pressure of demand on the restricted supply of capital is bound to make itself felt on the cost of money. Further, all teams of influential foreign monetary experts which have been visiting this country in the past one year are believed to be unanimous that the interest rates policy now being followed errs on the low side. Again, how long can a country like India, confronted with an acute balance of payments problem, afford to follow a policy of low interest rates?

Another factor that has forced the bulls on the stock exchanges to draw in their horns a bit is the absence of support by investors. The latter have, once again, become discriminatory and cautious in their purchases. The craze for quick capital appreciation is tending to subside to some extent. Quite a number of investors are said to be booking their profits, so that they may have sufficient funds for taking up new issues. Some very good ones are likely to be announced in October. They may include the long-awaited offer of Goodyear Tyre also. The prospect of bank credit becoming costlier when the traditional busy season starts should induce the prospective investors to build up their liquid resources for applying to these new issues, instead of complacently hoping that they can rely on cash credit and overdraft accounts with banks.

Although the Government has decided that the manufacture of people's car should be in the public sector, investors in the shares of existing automobile companies need not feel depressed over this development. There is plenty of scope for these companies to expand in their present line of manufacturing activities. In the resolution on the Jha Committee report, the Government has promised to render the maximum possible assistance to them for raising their existing range of production. In fact, it has urged them to go ahead with their expansion plans, so that the country's growing requirements of trucks, cars and jeeps in the third Plan period can be met to the fullest extent possible.

State Loans

The response to State loans, the full details of which are available only now, has been more satisfactory than expected. Some of the State loans, more notably those of Andhra and Uttar Pradesh, have been oversubscribed. Even the Kerala loan has been fully subscribed. The response to these loans has been so good that the Reserve Bank, which had prepared to take up a large block of them, found it unnecessary to invest anything more than Rs. 1 crore in all. It would, however, appear that some of the State Governments exercised heavy pressure on investors to go in for these loans. A number of these investors had to borrow from banks to oblige the officials and Ministers. Apparently, several of them are now selling the loans taken up by them, in order to repay the borrowings from banks. Consequently, the Andhra State loan, which was heavily oversubscribed by nearly 50 per cent., is now selling at a discount of 75 nP. A large block of U.P. State loan, which had also been oversubscribed, was taken up by a leading bank at a discount of Re. 1.50 today. The following table shows at a glance the collection results of State loans for this year, as compared with those for the previous three years:

(Amount in crores of rupees)

Year	No. of States	Amount of issues	Amount subscribed	Amount accepted	
				Cash	Conversion
1956 ..	15	64.00	74.23	66.53	2.18
1957 ..	2	9.00	12.52	8.58	1.33
1958 ..	11	50.00	65.84	40.18	5.24
1959 ..	13	61.50	100.35	66.85	0.57
1960 ..	12	75.00	85.33	78.80†	6.44

N.B.—The 1959 data do not include the second issue of Madhya Pradesh loan for Rs. 5 crores for which cash subscription received and accepted was Rs. 2.03 crores.

† Amount of cash subscriptions received. Figure of amount accepted not yet known.

It will be noted from the table that, though the State loans this year managed to fare better than expected, their success was by no means as spectacular as in the past year.

Section 23-A

Section 23-A of the Indian Income-tax Act is quite constitutional, inasmuch as the legislative competence to enact it "can be clearly upheld on the ground that it was to prevent evasion of income-tax." This is the judgment of the Supreme Court; it was pronounced by Mr. Justice A. K. Sarkar on Friday last, when he was disposing of the appeal of Sardar Baldev Singh, a former Union Defence Minister, against the order of the Income-tax Officer, Delhi, assessing him to an income of Rs. 5,27,417. Sardar Baldev Singh was one of the three shareholders of the firm Messrs. Indra Singh and Sons Ltd., Calcutta, and, since his holdings were equal to those of the other two, he was asked to pay, under Section 23-A of the Income-tax Act, income-tax on his share of the undistributed portion of the Company's assessable income amounting to Rs. 4,74,370 (the total was Rs. 14,23,110) which was declared as his income for the assessment year 1944-45. The amount was subsequently raised to Rs. 5,23,417 as a result of reassessment that followed the submission of a return by the appellant under protest. The order was confirmed by the Appellate Tribunal and the matter was brought to the Supreme Court by special leave. On behalf of Sardar Baldev Singh, it was contented that the Income-tax Officer, Delhi, had no jurisdiction to reopen the assessment and that Section 23-A was unconstitutional for the reason that "it is beyond the competence of the legislature that enacted it."

The appellant's contention was, however, dismissed on the following grounds:

The appellant could be properly assessed by the Income-tax Officer, Delhi, under Section 64(2), because he was working at Delhi at the time of assessment.

Section 34 of the Income-tax Act is applicable to the merits of the case; the income involved in the proceedings actually existed on the relevant date and, therefore, shall be deemed to have escaped assessment.

Seventy-five per cent. of the voting power of Indra Singh and Company lies in the hands of persons other than the public, that is, a group of persons allied together in the same interest. Section 23-A was enacted for preventing evasion of tax. When the management of a company decides not to declare a dividend, despite money being available, it does so, because it does not want to take the dividend. To quote Mr. Justice Sarkar: "By providing that, in the circumstances mentioned in it, the available assessable income of a company would be deemed to have been distributed as dividend and be taxable in the hands of the shareholders as income received by them, the Section would prevent the members of such a group from evading, by the exercise of their controlling power over the company, payment of tax on income that would have come to them. That being so, the Section would be within Entry 54 of the Government of India Act."

Whatever may be the constitutional status of Section 23-A of the Income-tax Act, the above case provides a good instance of the prolonged delay involved in the disposal of income-tax cases. The period that has elapsed between the date of first assessment (14th October 1944) and the date of final disposal by the Supreme Court (2nd September 1960) is as long as sixteen years! Such delays are due largely to the cumbersome nature of the Income-tax Act itself which prevents proper administration of a taxing statute. There is, therefore, no exaggeration whatever in the statement of the Law Commission, made in its twelfth report placed on the table of the Lok Sabha on Tuesday the 5th inst., that "there is hardly any act on the Indian statute book which is so complicated, illogical in its arrangement and in some respects so obscure as the Income-tax Act." The Commission has done well not merely to highlight the serious defects of a varied nature that abound in the Act and to urge the Government to revise the Act so as to make its provisions more intelligible but also to indicate the lines on which revision must be effected.

JAPAN'S TEXTILE EXPORTS

The pace of cotton textile exports from Japan seems to have slackened of late, as a result of the disagreement between the mills and the traders. The latter, according to a recent report from Japan, have urged the mills to reduce prices because of unfavourable export conditions. It is stated that, since the countries buying Japanese textile are constantly trying to beat down prices and the Communist Chinese textiles are again offering severe competition, the exporters have to accept orders from overseas countries at a rather considerable loss eventually. Attention is drawn to the failure of the export houses to put through a transaction covering 1.5 million square metres of cotton cloth (1 metre=1.0936 yard) for shipment to North Viet Nam and another for 3,000 tons of spun yarn (one ton=2,240 lbs.) to the Soviet Union. The plea for cut in prices is, however, firmly opposed by the mills on the ground that "such price reductions will establish a very bad precedent, in addition to affecting adversely the Japanese domestic textile markets."

Japan is the world's largest exporter of cotton goods. Last year, it exported 1,263 million square yards of cloth, a quantity which represents as much as 24 per cent. of the aggregate world shipments of cloth. The prosperity of the Japanese cotton textile industry rests largely on the export trade. Out of every ten square yards of piece-goods produced in Japan, nearly four square yards are exported.

EQUITIES WEAK

SELLERS PREDOMINATE

(From Our Own Correspondents)

BOMBAY, *8th September*

THE improvement in sentiment noted on the Bombay Stock Exchange last week proved to be short-lived and equities suffered an all-round setback in the week under review, on predominance of sellers. Intermittent short-covering and replacement buying on a selective basis failed to arrest the downward trend. The satisfactory dividend announcement of the Tata Iron and Steel Company, Ltd. late on Thursday last week failed to impress the market, except for a short-lived improvement on Friday last. The further cut in cloth prices ranging from 6 per cent. to 12½ per cent., depending on the varieties of cloth, announced by the Indian Cotton Mills' Federation on Saturday, bringing the aggregate reduction since 11th August when the first cut was announced to about 20 per cent. in the case of certain varieties of cloth, is expected to result in uneconomic working of several mills, particularly those producing coarse and lower medium cloth. The situation is likely to be worsened by the use of high-priced imported cotton. In the circumstances, mill circles are apprehensive of the ability of marginal units to maintain production. These fears are fully reflected in the sharp fall in textile shares.

While the decline in equity values is to be welcomed as a corrective reaction to the recent sustained and sharp rise, it is difficult to assess how long the reactionary trend will persist. One thing is, however, clear. The operators have become more cautious, now that they have caught the vigilant eyes of the Finance Minister, who recently announced that steps would be taken to check excessive speculation. Further, the operators are said to have begun feeling the pinch of the credit control measures and heavy margin payments. The Government's anxiety to hold the price line, the continued uncertainty over the steel retention prices and the growing raw material shortage which will hit many industries are some of the factors which have restrained the activity in the market. The spate of new attractive issues with good growth prospects—two of which opened their lists this week and more are to come in the coming weeks—has also diverted the attention of the operators. The undertone of the market is now quiet, despite the mild improvement at the close from the week's lows touched earlier today. The premium on several new issues has appreciably come down. A few are even quoted at a discount.

Steel shares lagged behind, Tata Ordinaries giving way to Rs. 155.75 after an initial gain from Rs. 160.25 to Rs. 162.75. The closing was done at Rs. 157.25. Indian Irons gained ground from Rs. 25.85 to Rs. 26.15 before receding to a low of Rs. 25. At the close, they made a feeble recovery to Rs. 25.20. Mukand Irons were heavily marked down from Rs. 27.60 to Rs. 25.75.

Losses in textile shares were widespread. Bombay Dyeings finished with a loss of Re. 1.20 at Rs. 66.40, after having gone down to a low of Rs. 65.80. Centurys declined from Rs. 507.50 to Rs. 482 before closing at Rs. 489. Kohinoors shed Rs. 7.50 to Rs. 323. Central Indias were lower by Rs. 6 at Rs. 113. Finlays lost Rs. 18 to Rs. 352, thus wiping out last week's gain. The downward trend in Khataus was maintained, with a further drop of Rs. 137.50 to Rs. 582.50, bringing the total fall in the last two weeks to Rs. 242.50. Morarjees failed to sustain last week's gain in the face of the general setback, and fell by Rs. 25 to Rs. 415. Standards continued to move down, falling from Rs. 1,975 to Rs. 1,545. Mysore Spinnings, Moderns, Podars, Shree Niwas, Svadeshis, Tata Mills, Sassoon Spinnings and Mafatlals were the other counters which sustained sharp falls. The exceptions to the general trend were provided by Swans and Gold Mohurs of the Finlay group.

Electricity shares shed further ground. Ahmedabad Electrics lost Re. 1 to Rs. 86.50, Bombay Suburbans Rs. 2.50 to Rs. 81.50. Tata Hydros dropped Rs. 2 to Rs. 104, Andhra Valleys Rs. 7.50 to Rs. 990 and Tata Powers Rs. 15 to Rs. 1,022.50.

The sustained rise in United Commercials in the bank section noted in the past four weeks, lifting them from Rs. 75.80 to Rs. 89.50, suffered a reversal this week when the scrips fell by Rs. 10.50 to Rs. 79. Centrals and Bank of Indias also were quiet with small losses.

A fall of Re. 6.50 to Rs. 166.50 in Digvijays was the only feature in the cement section, which was otherwise dull with narrow fluctuations. Associated Cements moved between Rs. 145.50 and Rs. 143 before closing at Rs. 144. Orissa Cements were unchanged over the week at Rs. 14.

Sugar shares were weak. Belapurs, which had attracted good attention in the last two weeks, were heavily marked down from Rs. 403 to Rs. 375, thus almost wiping out the net gain in the previous two weeks. Phaltans declined by Rs. 7.50 to Rs. 179 and Walchandnagars by Rs. 3.75 to Rs. 303.75.

Shippings were quiet, Scindias losing 48 nP to Rs. 14.64 and Great Easterns 68 nP to Rs. 16. Automobiles were affected by the report that the Government had decided to manufacture the proposed economy car in the public sector. Hindustan Motors shed Re. 1.12 to Rs. 20.88 and Premier Automobiles Rs. 15.75 to Rs. 163.75.

Engineering shares lacked support. Alcocks slipped down from Rs. 298 to Rs. 293. Tata Locomotives, after an initial rise from Rs. 307 to Rs. 312.50, receded to a low of Rs. 282.50. At the close, there was a mild improvement to Rs. 288. Larsen and Toubros were lower by Rs. 3.75 at Rs. 45.75. Premier Construc'ions gave way from Rs. 371.50 to Rs. 354.50. Texmacos lost Re. 1.25 to Rs. 26 and Voltas Rs. 7.50 to Rs. 279.

Miscellaneous shares too participated in the general decline, the fall in some of the cash scrips which had soared to new highs in recent weeks being particularly heavy. Bombay Burmahs (old) recorded a net loss of Rs. 18 at Rs. 571. Among rayon shares, National Rayons had a precipitous fall from Rs. 525 to Rs. 502. Gwalior Rayons were marked down by Rs. 2.75 to Rs. 43.25, Baroda Rayons by Rs. 8.50 to Rs. 141.50 and Indian Rayons by Rs. 16 to Rs. 70. Chemicals and Dyes, too, sustained heavy selling pressure. Tata Chemicals dropped by Re. 1.44 to Rs. 19.28, Alembics by Rs. 16.25 to Rs. 238.75, Amar Dyes by Rs. 30 to Rs. 450, Colour Chems by Rs. 40 to Rs. 410, Indian Dyestuffs old shares by Rs. 95 to Rs. 620 and new shares by Rs. 110 to Rs. 620 and Poly Chems by Rs. 11.25 to Rs. 290. Ceat Tyres were done Rs. 10 lower at Rs. 250, as also Premier Tyres at Rs. 95. Asian Cables changed hands Rs. 14.50 lower at Rs. 94. Hindustan Aluminiums closed at Rs. 3.72, with a loss of 76 nP over the week. Khandelwal Ferro Alloys were marked down by Rs. 14 to Rs. 105 and West Coast Papers by Rs. 13.50 to Rs. 200. Wimcos were, however, steady at Rs. 243.

• • • •

Madras Stock Exchange

MADRAS, *7th September*

Distinctly easy conditions prevailed on the Madras Stock Exchange during the week under review. Offerings of scrips were generally quite sizable, thanks to rumours of a possible official intervention to curb speculation in share dealings, while fresh buying interest was lacking. Consequently, values were pushed down. Textiles were weak on fears of reduced profit-margin of mills, following the move of the Indian Cotton Mills' Federation further to reduce prices of cloth and yarn. The decision of the Central Government to set up wage boards for plantation industry led to some selling in plantation shares. Teas were particularly depressed, due to reports of growing competition from East Africa in the London tea market. Coffee and rubber shares, too, lacked support. Miscellaneous shares drifted lower on selling pressure. A few sugar shares, however, proved an exception to the general trend and tended to move up under the impetus of investment support.

In the textile section, Lakshmis suffered a setback of Rs. 8 in the course of the week, today's closing rate being Rs. 147. South Indias fell by Rs. 6 to Rs. 136. Metturs were marked down by Rs. 4 to Rs. 392. Coimbatore Spinnings receded from Rs. 51 to Rs. 49. Buckinghams lost a rupee to Rs. 205. Dhanalakshmis declined by a like amount to Rs. 227. Travancore Rayons dropped 90 nP to Rs. 36.40. Maduras shed 20 nP to Rs. 34.90. Coimbatore Cottons were neglected at Rs. 170, as also Cannanores at Rs. 145, Premiers at Rs. 237. Metturs changed hands at Rs. 69 and Kotharis at Rs. 12.90. Bangalore Woollens, however, rose by a rupee to Rs. 208 on special enquiries.

A feature of trading in the tea section was the fall in the value of Twyfords from Rs. 12.50 to Rs. 11.65; the quotation was lower still at Rs. 11.50 yesterday. The fall followed disappointment of operators over the dividend of 10 per cent., taxable (equivalent to 7 per cent. tax-free), for 1959, as against 15 per cent., tax-free, for 1958. Haileyburias declined by 50 nP to Rs. 14.50, owing to selling induced by the announcement of a lower dividend of 12½ per cent. taxable (equivalent to 8.75 per cent. tax-free) for 1959 which compares unfavourably with 20 per cent. tax-free for the previous year. Blue Mountains were lower by 15 nP at Rs. 5.28 and Periakaramalais by 12 nP at Rs. 3.75. Waterfalls eased by 10 nP to Rs. 4.60. Kil Kotagiris dropped 6 nP to Rs. 5.63. Devasholas shed 5 nP to Rs. 30.45, Neelamalais lost 3 nP to Rs. 5.02, Peermades 2 nP to Rs. 23.63 and Chembras 1 nP to Rs. 5.05. Nonsuchs were quiet at Rs. 28. as also Parksides at Rs. 28.50. United Nilgiris, however, put on 5 nP to Rs. 22.65.

Among coffees, Consolidated Coffees came in for selling and decreased by 30 nP to Rs. 26.10. Coffeelands moved down by 20 nP to Rs. 24.50. Ouchterlony Valleys were easy at Rs. 4.75, as against Rs. 4.93 last week-end. Cowcoodys shed 5 nP to Rs. 560. Balanoors and Rajendras were unchanged at Rs. 16.70 and Rs. 15, respectively.

In the rubber section, Midlands receded by 40 nP to Rs. 11.60. Cochin Malabars declined by 32 nP to Rs. 7.55. Malankaras were dull at Rs. 20.55 and Kailas at Rs. 5.05. But Vaikundams picked up 10 nP to Rs. 31.45.

In the sugar section, Cauverys retreated by Rs. 5 to Rs. 146. Deccans shed 35 nP to Rs. 16.05 and Travancores lost 10 nP to Rs. 12.25. United Breweries were quiet at Rs. 114.50. East India Distilleries, however, advanced by 75 nP to Rs. 39. Mysores rose by 25 nP to Rs. 60.50. Indias gathered 15 nP to Rs. 13.25.

Fertilisers and Chemicals in the miscellaneous section provided a weak spot, the quotation easing by Re. 1.20 to Rs. 11.80 *ex-div.* Among other chemicals, Metturs declined by 10 nP to Rs. 15. Mysore Fertilisers were neglected at Rs. 10.70 but Mysore Chemicals hardened by 12 nP to Rs. 27.87. In the cement group, Andhras sagged by 45 nP to Rs. 10.45. Orissas receded by 10 nP to Rs. 13.75 and Travancores by 7 nP to Rs. 9.03. Indias, however, put on 7 nP to Rs. 7.35. Among other scrips, Aluminium Industries lost 65 nP to Rs. 24.50 and Ashok Leylands by 27 nP to Rs. 9. Mysore Coffee Curings declined by 30 nP to Rs. 16. The Company has announced a dividend of 14-2/7 per cent. taxable (10 per cent. tax-free) for 1959, as against 12½ per cent, tax-free for 1958. Textools were unchanged at Rs. 190, Tube Investments at Rs. 375 and Western India Plywoods at Rs. 300.

IS BANK RATE TOO HIGH?

FLOW OF HOT MONEY HEAVY

From Our Own Correspondent

LONDON, *2nd September*

LONDON LETTER

THE rise in the gold reserves of over £50 million in August—a month in which it is more usual for this country to lose gold than to gain it—would seem to be a matter for congratulation. In fact it is a pointer to a hidden danger, even though the Bank of England took this opportunity of advancing her repayments to the International Monetary Fund, made at the time of the Suez crisis four years ago. A sum of £75 million remained to be paid off, at £5 million per month, but, with mounting stocks, the Bank has anticipated the last five monthly payments for this year (£25 million), thus reducing the actual increase to £27 million.

In the face of the current trade figures, it is obvious that it is not a balance of payments gain which is being reflected by this rise. London has become one of the most attractive centres for hot money and, so long as the whole interest rate structure in the City stays where it is, money will continue to flow in. The Bank has argued that these funds are strengthening of Britain's short-term financial position—it is true they have a use as in enabling this advance repayment to the I.M.F.; but what sort of strengthening is it which could suddenly be countered by a rapid outpouring of funds on a scale which would create a quite unwarrantable lack of confidence in sterling?

It should be obvious that one can have too much of such a good thing as a hot gold reserve on account of the damage done when the flow is reversed. Fortunately, the timing is on this country's side—the U.K. is nearly through the worst payments on international trade account and the outflow, when it comes, may be at a time when the country's trade balance is in better shape. All this suggests that the time is very near when it might be as well at least to stop any more money coming in, if not to chase away what is already here.

Sterling Balances

The latest figures published by the Treasury show that the sterling balances had risen by the end of June to £4,275 million, as against £4,088 million a year ago. In this period, the Sterling Area countries have only increased their balances by £25 million (to £2,674 million). Non-sterling balances have increased during the same time by over £160 million, of which £118 million represents the increase in the second quarter of this year. And the balances have risen still further in the past two months.

Inside this general picture, there have been other interesting developments. The O.E.E.C. countries have actually increased their balances by £186 million in the past year and the Dollar Area countries and Western hemisphere countries by £66 million. On the other hand, other Non-Sterling countries have reduced their balances by a little over £40 million. Indeed, the Non-Sterling countries, taken as a whole, now hold more funds in London than at any time over the past ten years!

The Treasury is inclined to argue that the Bank rate was raised for internal reasons and must remain high for internal reasons—but if it is not careful it will find that the high rates have outlived their usefulness even in that sphere. Moreover, the Treasury has got to concern itself about the effects of high rates on the external position, and the question is therefore how long it can afford to keep its eyes shut tight and pretend that nothing is happening.—*All Rights Reserved.*

NEWS IN BRIEF

THE Bihar Government's Directorate of Mining and Geology has discovered a "large deposit" of iron pyrites near Sode village in the Ranchi district.

A new tubeline containing some rare variety of diamonds has been discovered by the Geological Survey of India in the Majhagwan diamond mines of the Panna district.

Soviet Russia has agreed to grant India a credit of Rs. 60 crores for financing the third Plan. This is in addition to the sum of Rs. 180 crores, in respect of which agreement has already been signed.

The Tariff Commission will shortly undertake a review of the cement industry, including the question of fair ex-works prices beyond 1st July 1961, when the duration of the existing price will expire.

As a measure of export promotion, the Government of India proposes to grant drawback of duty on certain varieties of tinplate products at the rate of Rs. 276.50 per ton of tinplate content, and on petrol pumps and gas plants on brand basis.

A five-member delegation of the Government of India, led by Mr. K. B. Lal, Additional Secretary, Union Ministry of Commerce and Industry, has left for Kathmandu to finalise negotiations on the revision of Indo-Nepalese treaty of trade and commerce signed in 1950.

A few more commodities are expected to be included in the Payments Agreement between India and Pakistan concluded in March last. The issue was examined at a meeting of the representatives of the two Governments held at Rawalpindi last week.

The Government of India has enhanced the statutory prices of coal and coke by 6 nP and 8 nP, respectively, in order to enable the collieries to meet their liability in respect of grades and time scales of pay for their workmen fixed recently under an arbitrator's award.

A scheme for the manufacture of chemically bonded basic refractories on a commercial basis has been finalised. The scheme envisages the establishment of one factory at Salem in Madras and another in Orissa. The outlay on these projects is estimated at Rs. 70-80 lakhs and Rs. 3.5 crores, respectively.

The Union Deputy Minister for Agriculture, Mr. M. V. Krishnappa, stated in the Lok Sabha this week that no subsidy as such was being given by the Centre to the State Governments in respect of foodgrains issued from Central stocks. The issue prices fixed for sale of foodgrains from Central reserve, however, included an element of subsidy.

An all-India seminar on industrial estates will be inaugurated at the Guindy Industrial Estate in Madras on the 20th inst. by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry. Ministers in charge of industries in the various States and representatives of several industrial estates will attend the seminar.

Plans to start a regular shipping service between India and Poland in pursuance of the shipping agreement recently signed between the two countries were finalised at a recent tripartite meeting of inter-Indian shipping lines—the State-owned Western Shipping Corporation and the two private lines of Scindia Steam Navigation and India Steamship Company. Each Indian shipping line will run one ship a month on the route.

It has been decided to merge the Hindustan Chemicals and Fertilisers Ltd. and the Sindri Fertilisers and Chemicals Ltd. into one single Corporation. The merger is said to be the first step in the implementation of the programme of bringing all fertiliser plants in the public sector under one management, with a view to ensuring better control, as well as more efficient and economic functioning of the various units.

The Law Commission, in its twelfth report presented to the Lok Sabha on Monday this week, has recommended the abolition of the Income-tax Appellate Tribunal. It has suggested that direct appeal on questions of fact as well as of law from the orders of the Appellate Assistant Commissioner should be made to the High Courts. The Commission has, however, felt that the Appellate Assistant Commissioners should continue to function under the Central Board of Revenue.

A new comprehensive Patents Bill will be introduced in Parliament early next year, with the object of encouraging the development and exploitation of new inventions and researches for industrial advancement in India. The Bill will be followed by a revision of the designs law as well. This was disclosed by Mr. Manubhai Shah, Union Minister for Industry, while addressing a meeting of the Trade Marks Association of India in Bombay on the 3rd inst.

During the month of August 1960, the Enforcement Directorate in the Union Ministry of Finance adjudicated 35 cases of contraventions under the Foreign Exchange Regulation Act and imposed an aggregate penalty of Rs. 44,102 on various parties, including proprietors and partners of firms, companies, etc. Foreign currency worth about Rs. 3,000 was confiscated to the Central Government.

The total value of automobile components manufactured in India, which was just Rs. 42.31 lakhs in 1951, rose to about Rs. 7.5 crores in 1959. In 1951, the production of components was confined to only tyres, tubes, battery and certain other minor components, whereas, in 1959, the production included items such as piston assembly, cylinder liners, thin-walled bearings, valves, fuel linings, clutch facings, clutch assembly, hydraulic brake assembly, leaf springs, spark plugs, dynamos and gaskets.

The Union Home Minister stated in the Rajya Sabha that Mr. Platt of the British Civil Service was invited by the Government of India to advise on the manner in which the Whitley Council machinery was functioning in England. Mr. Platt gave an account of the policy followed in the U.K. in regard to grievances and promotion procedures, wage claims and relationship with the staff associations in these matters. The Union Home Minister also informed the House that it had been decided to set up a joint consultative machinery and a detailed scheme was being worked out.

Crop insurance will be introduced in the Punjab from the next *rabi* season. The scheme, which will operate in six centres together consisting of 500 villages, will cover the four major crops—namely, wheat, cotton, sugarcane and gram, against all natural calamities, such as floods, hailstorms and locusts. Insurance will be compulsory for every cultivator in the area. The farmer will be entitled to compensation only if more than 25 per cent. of the crop is lost, the total amount paid in any case not exceeding 50 per cent. of the damage. The rate of premium will differ from region to region. The State Government has set apart a sum of Rs. 50 lakhs to begin the scheme, which will be extended to three more centres next year. It is also trying to get a Japanese expert on crop insurance.

Over 70 warehousemen and technical assistants are now being trained in a class organised by the Central Warehousing Corporation at New Delhi. The training class started on 16th August and will conclude on the 28th inst. After their training, the warehousemen and technical assistants will be posted to the new warehouses proposed to be opened by the Central and State Corporations. The Central Corporation has at present 29 warehouses and it intends to start nine more within the next month or so to coincide with the *kharif* harvest. Among the places where new Central warehouses are likely to be opened are Virudhunagar (Madras), Trichur (Kerala), Adoni (Andhra Pradesh), and Gulbarga (Mysore). Warehouses will also be opened in the new State of Gujarat and in Assam and West Bengal. The thirteen State Corporations have so far opened about 160 warehouses and they intend to open about 100 more warehouses during the remaining months of the current financial year.

In order to ensure an equitable distribution of scooters at fair prices, the Government of India has issued a statutory order under Section 18(G) of the Industries (Development and Regulation) Act, 1951, controlling the purchase and sale of scooters. The order stipulates that every applicant for a scooter should furnish a bank guarantee of Rs. 250 at the time of registration, the whole cost of the vehicle being payable when the scooter is actually delivered. In the case of customers whose names have already been registered with dealers, the guarantee may be furnished within 45 days from today. The dealers will have to sell the scooters strictly in the order of registrations and the register of orders will be open to inspection by members of the public as well as representatives of Central and State Governments. The order stipulates that no person who has purchased a new scooter in any calendar year can purchase another scooter in the same year except with the written permission of the Controller or an officer appointed for the purpose by the State Governments. In the case of companies or associations, however, they will be permitted to purchase upto a maximum of six scooters.

An Export Promotion Council for spices, the twelfth of its kind, has been formed, with headquarters at Cochin. The Joint Chief Controller of Imports and Exports, Madras, is the Chairman of the Council which will include a representative each of the Governments of Madras, Andhra, Kerala and Mysore, and the Agricultural Marketing Adviser to the Union Government. It will also have non-official members representing trade in pepper, cardamom, turmeric, ginger, chillies and minor spices. The promotion activities relating to pepper exports hitherto handled by the Cashew and Pepper Export Promotion Council will now be undertaken by the new Council. The problems facing the different spices are varied. In pepper, the export values have declined on account of the emergence of stiff competition from Sarawak and Indonesia during the post-war period. In the case of cardamom, besides competition from Guatemala, the main problem is the invention of synthetic substitutes. Ginger exports have declined since 1958, the main reasons being the import restrictions in West Asian countries, increasing competition from Jamaica and Seirra Leone and change in consumers' preference. The new Council will address itself to these problems and undertake market survey and research, send out trade delegations, prescribe quality standards and attend to importers' complaints, etc. In 1959, India exported spices worth Rs. 10.4 crores; pepper accounted for Rs. 4.3 crores, cardamom for Rs. 3.3 crores, ginger, chillies and turmeric for Rs. 50 lakhs, Rs. 30 lakhs and Rs. 26 lakhs, respectively. The balance was accounted for by minor spices such as celery seed and coriander seed.

From Abroad

The International Finance Corporation (I.F.C.) has decided to invest $280,000 in Mexico for the development of high-speed twist drills. The total cost of the project is estimated at $640,000. The I.F.C. investment will be in unsecured dollar notes bearing 7 per cent. interest payable in dollars and maturing between 1964 and 1970. It will receive a right to participate in profits.

The wheat crop in Canada this year is expected to go up by 14 per cent. to 472.51 million bushels, as compared with 1959.

President Eisenhower has vetoed a Bill which would have provided a subsidy for small producers of lead and zinc in the U.S. whenever prices fell below 17 cents and 14½ cents per lb., respectively.

The biggest shipyard in Denmark, Burmiester and Wain, has secured from Russia a contract for the supply of two 14,150-ton freight ships. The vessels will be fitted with the Danish company's latest six-cylinder engines, giving a speed of about 19 knots.

Nearly 90 per cent. of U.S. households now have television sets as against only 12 per cent. in 1950. The number of households with more than one set is also increasing, with 11 per cent. in this category in May this year, as compared with 8 per cent. in 1959 and 7 per cent. in 1958.

Following the decision of the International Tin Council to remove export restrictions with effect from next month, many mines in Malaya are expected to be reopened. During the period of restrictions, only the most productive mines were working. About 300 mines had been closed down in Malaya at the peak of restrictions.

The West German Government proposes to denationalise the U.T.G.—the biggest undertaking in Europe which hires out railway tank wagons. The Company is expected to be handed over to Preussag, the big mineral, mining and coal and oil concern, partly returned to private ownership last year. W. Germany restored to private ownership Volkswagen also some time back.

A century-old British firm is now working on a contract which will help the electricity power scheme at Harduaganj, Aligarh district, Uttar Pradesh. The firm—Samuel Jellyman & Co. Ltd.—is making special valves, water draining gates, and hydraulic ash-handling equipment to cope with the process of the disposal of ash from the coal-fired boilers.

The number of passengers flown on North Atlantic air services in the first half of 1960 was higher at 706,778, as compared with 560,000 and 500,000 in the corresponding periods of 1959 and 1960, respectively, according to the International Air Transport Association. This increase is attributed to the introduction of jet airliners and cheap fares. If this trend continues, it is said, the North Atlantic air traffic will reach a record level in 1960.

Rumania has agreed to co-operate with the Government of Indonesia in the development of petroleum industry. To begin with, it will train Indonesian students in Rumania and send its experts to study the prospects for further development in this field. With the exception of a small quantity of oil produced in the fields worked by the Government, practically the entire oil production in Indonesia at present is accounted for by Shell, Stanvac and Caltex.

Commonwealth Finance Ministers will meet in London on 20th and 21st September for their periodical review of economic and financial matters before going on to Washington for this year's meetings of the International Monetary Fund and the World Bank. The Finance Minister, Mr. Morarji Desai, will represent India. Subjects to be discussed will include prospects for world trade, sterling area balance of payments, European trade problems, and development questions.

The view that the U.S. is on the way to a recession next year has been expressed by a group of professional economists, according to an interview held by the U.S. publication, *Business Week*. Some opine that the U.S. is now living through the prelude to a genuine recession, probably the worst economic trouble it had known since World War II. Another group of economists feels that a recession has already begun in the U.S. from February last and is currently passing through a period of readjustment. This section believes that, by mid-1961, Government spending and monetary policy will have the economy [illegible] again.

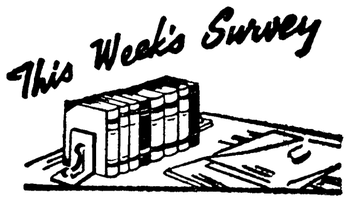
PERSONAL

MR. N. K. Dravid, I.C.S., has been appointed Vice-Chairman of the Maharashtra State Road Transport Corporation.

Mr. T. N. Kaul, Ambassador to Teheran, has been appointed Deputy High Commissioner for India in the U.K, *vice* Mr. Azim Husain, who has been appointed Ambassador to the United Arab Republic.

Mr. P. A. Gopalakrishnan, I.C.S., is the Chairman of the reconstituted Investment Committee of the Life Insurance Corporation. The other members are: Messrs. C. H. Bhabha, A. N. Shah, Ram Nath, A. M. M. Murugappa Chettiar, Dhiren Mitra and N. R. Mody.

Mr. R. K. Nehru, until recently India's Ambassador to the United Arab Republic, has arrived in India from Cairo to take charge of his new assignment as Secretary-General in the Union Ministry of External Affairs. He succeeds Mr. N. R. Pillai, who has proceeded on leave preparatory to retirement.



URBAN HOUSEHOLD SAVINGS

FOR the first time in this country, an all-India survey of urban household savings has been launched. It is being carried out by the National Council of Applied Economic Research, New Delhi, on behalf of the Planning Commission. So far, only five countries in the world have conducted such surveys—the U.S.A., the U.K., Japan, Yugoslavia and Israel. Only, recently, the Council completed its pilot study of household savings in Delhi City, and the success of this study has infused full confidence in the Council that it can very successfully undertake an all-India survey of household savings, urban as well as rural. At a Press Conference in Bombay on Tuesday last, Dr. P. S. Lokanathan, Director-General of the Council, revealed that the survey of urban household savings now launched would be completed by the end of this year and that a preliminary report would be released towards the close of March next. Simultaneously with this survey, a pilot study of the rural household savings in some parts of the Punjab will, we are told, be held, the results of which will also be made available along with the preliminary report. An all-India survey of rural household savings is proposed to be conducted later.

The results of the urban survey now launched will surely be awaited with much interest, in that they will indicate the magnitude of savings in India, the sections of people who save, the reasons and motivation for saving, and the proportion of personal income saved. All these are very important aspects on which the information actually available is neither adequate nor complete; in several cases, it is not authentic. It is a pity that, although nine years have elapsed since the era of planned economic development began in India, nothing has been done to assess the capacity of the people to save and the extent to which their savings can be tapped for fruitful investment. No wonder, therefore, that the resources estimates of the Planning Commission have been the weakest link in the chain of planning. If only the Commision had made arrangements for an all-India survey of household savings earlier, the third Plan could have been formulated on a more realistic basis. On the basis of the survey, the Council will not only estimate the total savings available, their main components and their utilisation but also attempt to evaluate the feasibility of stepping up the rate of savings and make recommendations as to the better mobilisation of the savings potential of the different communities for economic development.

For the present urban household savings survey, a multi-stage sampling scheme has been drawn up. The scheme covers seven cities, with populations more than 500,000 (excluding Delhi which has already been surveyed) and 23 towns, with populations ranging from 10,000 to 500,000, which together represent urban India; all the States are covered by the sample. Within each sample city and town, sample blocks and households in each block have been selected by the random procedure. In all, about 4,550 households situated in 437 blocks will be covered. The sampling, it is said, has been done on the most scientific basis and the whole survey will be conducted, according to Dr. Lokanathan, on an objective and rational basis. The Council has already given intensive training in both conceptual and operational aspects to 90 investigators from all parts of the country for the conduct of the survey. The investigators work under a survey team consisting of the Council's five senior statisticians and economists. Besides, the U.N. Technical Assistance Board has made available the services of a Yugoslav expert for a period of one year. Another expert from the Michigan University was available during the preparatory work for three months, while two others are expected to join the Council for the purpose of the survey.

From the aforesaid particulars, it looks as though the survey has been well planned. Its success seems promising. The results of the survey will, of course, depend on the co-operation and support of the public. All the households selected should willingly give the correct information to the questionnaire presented by the investigators. If even a little over 10 per cent. of the households fail to give any information, the object of the survey will be defeated. They should remember that they would be rendering a national service in truthfully answering the questions posed by the Council. Since the answers of individual households will be kept confidential, the respondents need not have any misgivings about their private affairs being exposed to public gaze.

SHIPBUILDING STORES AND EQUIPMENT

In achieving the long-range objective of self-sufficiency in shipbuilding, indigenous manufacture of general stores items is no less important than the construction of imposing shipyards. While it takes time for such items as engine and engine-room auxiliaries to be manufactured within the country, there is a large number of small stores and fittings, the production of which should not be difficult. The establishment of separate factories for this purpose may not always be feasible nor economical. But their production in existing factories could be attempted, if the manufacturers are familiar with the exact nature and type of the stores required by shipbuilders. The exhibition of shipping stores and equipment, opened by Mr. G. L. Mehta on the 5th inst. at the Hindustan Shipyard, Visakhapatnam, is, therefore, a good idea. The exhibition is meant to acquaint prospective manufacturers with details of the stores used in shipbuilding. A noteworthy feature of the exhibition is that it is a permanent one. It will last until such time as even a single item of equipment remains to be produced within the country, so that, industrialists, who happen to visit the shipyard in future, may have a first-hand idea of the type of articles required for building a ship.

The materials used in shipbuilding can be broadly classified into four categories, namely: (1) machinery and equipment, (2) steel, (3) timber, and (4) general stores items. At present, 80 per cent. of the materials used in the construction of ships are being imported. Apart from steel, which is the principal raw material, the imported element includes essential items like the main engines, auxiliaries for engine room and deck, electrical installations, ventilation piping and refrigeration equipment and precision instruments required for navigational purposes. So far as steel is concerned, the problem is not so much the lack of indigenous capacity for manufacture as the additional cost to the manufacturer of producing steel for shipbuilding when the demand is for small quantities in a large number of sizes. Since some quantity of steel was being imported in any case, it was considered reasonable to import till now almost the entire quantity of steel required for shipbuilding, instead of dissipating the steel capacity to uneconomic production. It is said that arrangements are now being made by the Ministry of Iron and Steel to produce shipbuilding steel at Rourkela. It is, therefore, reasonable to expect that, in future, most of the requirements of steel would be met from indigenous production. This in itself, according to Mr. Mehta, would help to bring down the foreign exchange content in the cost of a ship by about 10 per cent.

The largest single item of import amongst the materials used in shipbuilding is the main engine and the engine-room auxiliaries. They account for about 24 per cent. of the cost of a ship. While the production of these is not possible immediately, there is scope for the manufacture of a wide variety of items which are less complicated and specialised and, therefore, well within the capacity of Indian engineering units to produce.

One of the reasons that prompted the organisation of the exhibition, according to Mr. Mehta, is the failure of the yard's efforts to obtain indigenous substitutes for imported materials. Although a large number of engineering firms were contacted, the response was poor. One possible explanation is that they are unable to determine whether the plant and equipment available in their works would be suitable to manufacture the articles required. It is also possible that the requirements of the shipbuilding yard are not large enough to induce engineering firms to diversify their manufacturing activities. In order to solve this difficulty the Government of India appointed a standing committee of technical experts, under the chairmanship of Rear-Admiral T. B. Bose, to advise the Government on the development of ancillary industries related to shipbuilding and ship repairs. One of the specific tasks undertaken by the Committee is standardisation of equipment and fittings which would help in reducing the cost of their manufacture. The committee has already submitted an interim report, containing certain recommendations to achieve a planned programme of indigenous production of shipbuilding materials and equipment. The Small-scale Industries Corporation, too, can play a useful role in giving aid, technical and financial, and guidance to small engineering enterprises interested in this line.

Apart from self-sufficiency, which itself is a desirable objective, there is also the consideration that indigenous manufacture of as large a percentage of the materials required for shipbuilding as possible, will enable the cost of production of a ship to be brought down. Success in this direction will relieve the Government, in part at least, of the burden of subsidising the industry, which is being done to keep the price of India-built ships on par with those constructed abroad. The present basis for determining the quantum of subsidy to the Hindustan Shipyard is the cost of building a similar ship in Britain.

TRADE UNIONS ACT

The Bill to amend the Trade Unions Act 1926, which was passed by the Lok Sabha on 30th August, should go some way towards better organisation and management of trade unions in the country. For it introduces a measure of Government supervision and control in a field which has been a "no man's land." In fact, if the changes now effected had been made earlier, not only would trade unions in the country have been financially better off but they would also have been much stronger, organisationally.

The amendment empowers the Government to appoint Additional and Deputy Registrars of Trade Unions, whenever necessary, so as to obviate delays in the disposal of applications for the registration of trade unions. It also provides that, if the signatories to an application for the registration of a trade union were entitled to apply for its registration at the time of application, its registration should not be refused on the ground that any one or more of the signatories have ceased to be a member of such union. The amendment also makes it obligatory on trade unions to prescribe a minimum membership fee of 25 nP per month and empowers the Registrars of Trade Unions to inspect books of account, membership registers, etc., of trade unions.

These amendments are in pursuance of the recommendation made by the Indian Labour Conference at its sixteenth and seventeenth sessions. Although the House gave its approval to the amendments, some members of leftist persuasion were critical of the provision for inspection of books of account of unions and compulsory membership fee. The Communist members, in particular, opposed the first mentioned clause on the ground that the powers it conferred on the Registrar were so sweeping that he could demand for inspection even correspondence of a confidential nature. It cannot be denied that there is some justification for this misgiving, for politics rather than labour welfare dominates the affairs of most of the trade unions. And, in a free country, the Communists have a lot more to hide than any other political party. Mr. Abid Ali, Union Deputy Minister for Labour, was inclined to admit that the clause was not knave-proof. He, however, gave the assurance that the Government would issue clear instructions that no documents should be called for, unless they were relevant to the subject of investigation. It was not the intention of the Government, he emphasised, to compel trade unions to submit for inspection irrelevant, confidential documents.

The clause prescribing a compulsory, minimum membership fee is a salutary one, for it will help unions to raise some funds of its own instead of having to depend on outside help and also create for its members a stake, howsoever small, in the efficient management of the union's affairs. It cannot be argued that workers have not the capacity to pay the fee, for the minimum has been fixed as low as 25 nP. In actual practice, almost every trade union collects a membership fee which is not less than the minimum now prescribed. Only, the fee is not regularly collected and arrears pertaining to several years are not uncommon. Equally common is the practice of collecting fees with retrospective effect from those who want to avail themselves of the privileges of being a trade union member in the event of a dispute with their employers. All these irregularities can now be eradicated, provided the Registrar and his staff are active and conscientious in the discharge of their duties.

There is also a flaw in the amendment. Although in theory the new powers conferred on the Registrar will help him to pull up erring unions, it will, in the absence of penal provisions, as pointed out by one member, prove ineffective in practice. In the course of the debate many members expressed dissatisfaction with the existing Indian Trade Unions Act, which was enacted as early as 1926; some even called it "out-dated and out-moded." The Act has been criticised, time and again, by employers and employees alike. The time has come for it to be replaced by a comprehensive enactment which will take into account the changes that have occurred in the trade union movement and the altered political atmosphere in the country.

NATIONAL INCOME DATA

It is somewhat distressing that there was a "real" fall in per capita income in India during 1959-60—the fourth year of the second Plan—as compared with 1958-59. The "quick" estimates of national income for the year, published by the Central Statistical Organisation (C.S.O.) last week (*vide* page 444 of *Commerce*), place the per capita income (at 1948-49 prices) at Rs. 291.3, a drop of Rs. 2.3 over the previous year's level. The estimates are no doubt tentative, but, even so, the trend depicted is clear and that is that the total national income of the nation rose by a bare Rs. 60 crores and this meagre improvement was more than neutralised by the increase in population. In fact, the decline in per capita income will be even more marked, if account is taken of the actual increase in India's population during 1959-60. The net addition to the country's population assumed in the estimates is only 5.20 million (total population in 1959-60 is put at 403.36 million, as against 398.16 million in 1958-59). The growth rate thus works out to just 1.30 per cent., whereas that assumed in the C.S.O. estimates given in the Draft Outline of the third Plan is 1.91 per cent. for the period 1956-61. On this basis, the rise in population in 1959-60 comes to 7.62 million, from 398.16 million in 1958-59 to 405.78 million. If the aggregate national income of Rs. 11,750 crores (at 1948-49 prices) is divided by the population of 405.78 million, the per capita income in 1959-60 will come to no more than Rs. 289.6, a fall of Rs. 4 over the figure for 1958-59.

While the trend noted above is disquieting, the question is: Could the estimates of per capita national income as are currently presented be taken as a reliable guide to assess the rate of economic growth of the country? This question was well answered by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, when he inaugurated the second Indian Conference on Research in National Income held at the Institute of Economic Growth, Delhi, on Wednesday last week. The per capita income, Mr. Iengar declared, was inadequate and could be misleading. Here is what he said in support of his view:

> "It is conceivable that, while the per capita income is going up, the standard of living of large sectors of the population might be stationary or might even be going down. In fact, one of the criticisms sometimes made of our economic programme is precisely this that the figures showing a rise in per capita income disguise the fact of economic stagnation for the bulk of our rural population."

Mr. Iengar also stressed the obvious limitation in the interpretation of statistics of national income, even though the tools employed might be perfect, namely, the failure to give an idea of the *qualitative* aspects of sectoral components, except in purely monetary terms. He laid a special emphasis on this aspect because of "the vital importance of considering certain qualitative aspects outside the range of the statistician in the study of the totality of contribution made by certain sectors to national welfare." Elucidating this point, he said:

> "It seems essential...that statistics should give an adequate picture of the *distribution* of national income. Or, putting it another way, would not per capita consumption be a more reliable indicator of progress than figures of per capita income? The break-up of consumption expenditure would also help in the evolution of policy for controlling inflationary pressures in the economy and also for deciding on measures for channelling savings into investment."

The points raised by Mr. Iengar certainly provide much food for thought. And there is no denying that, "for a proper assessment in terms of economic growth, considerations other than the purely statistical contribution to national income should be taken into account." Nevertheless, the techniques of compiling national income are of the greatest importance for the planners as well as the administrators. For the National income data, as Dr. V. K. R. V. Rao, Director of the Institute of Economic Growth and President of the Conference, pertinently stated, must contain the relevant material for acquiring the knowledge of the structure of the national economy, which is an essential condition for economic planning. He emphasised that the first problem in the field of national income research was the compilation of reasonably accurate data on the basic statistics of the national income, since, without such data, it was not possible to give really useful estimates of either the gross national product or the domestic product at factor cost or the national income.

In particular, Dr. Rao put forward three important suggestions. One, a high priority should be given in the national income work to the compilation of more reliable estimates of agricultural output through bench-mark census by enumeration of all cultivated land, extension of estimation of output by crop-cutting on random basis to all crops, a more comprehensive and territorially well-distributed system of price reporting, and bench-mark surveys, on a sample basis, of complete villages. Two, adequate steps should be taken to minimise the element of guess work in arriving at estimates about small enterprises, profession and liberal arts, the estimates being placed on a reasonably sound statistical base. Three, national income work cannot be left solely to official agencies. Independent research institutions, university departments and semi-official agencies such as the Reserve Bank, the State Bank and the Life Insurance Corporation must be encouraged to take up the work of national income estimation and analysis. These are, indeed, valuable suggestions, which, if accepted and implemented, will enhance the reliability and utility of national income data, especially in the continuing context of our planned economy.

MADRAS STATE'S THIRD PLAN

An outstanding feature of the draft third Plan for Madras State, published this week, is the strong but cogent case built up by the State Government for the establishment of an iron and steel plant in the Salem District. The draft points out that plenty of iron ore is available at various places in the State, especially Nigiris, Salem and Tiruchirapally districts. The deposits at Salem alone, according to a report of the Director General of Geological Survey published as early as 1944, is placed at over 304 million tons. Most of the other raw materials required for making steel, such as limestone, dolomite, refractories, bauxite, chromite, water, power and fuel also exist, we are told, in adequate quantities within the State. The case for Madras having this heavy industry was, however, turned down in the first and second Plans, on the ground that the State lacks coking and other coals and that the cost of transporting them from Bengal-Bihar or Singareni coalfields would be prohibitive. The draft seeks to answer this point by pointing out that, with the discovery of lignite at Neyveli and the success of the high temperature carbonisation coke prepared from lignite as a reducing agent in the place of coking coal for reducing low-grade ores has "completely altered the situation." It is said that the technique of using lignite coke, produced from high temperature carbonisation, for reducing iron ore in low shaft furnaces has been successfully adopted in East Germany. It is also pointed out that the operation of Lauchhammer units in that country is quite economical. The iron ore employed by these units contains only 20 to 25 per cent. Fe, whereas the Salem ore is claimed to have a metal content of about as much as 36 per cent. Besides, it can be beneficiated by magnetic separation, enriching the ore to about 65 per cent. Fe. content.

It may be recalled that a team of East German experts, who visited Madras a few months back, has already submitted a preliminary report. In this report, the experts have suggested the location of an ore dressing plant at Salem, and a coking plant, a briquetting plant and an iron and steel works at Neyveli. They have also advocated the erection of low shaft furnace in two stages—350,000 tons capacity initially, to be raised to 540,000 tons pig iron annually in the second stage. The Sub-Group which drafted the third Plan has recommended that immediate steps should be taken to set up the low shaft furnace, as suggested by the East German experts. If the case for an iron and steel plant wins the approval of the Centre, it will herald the advent of a revolutionary era in the industrial annals of the State, and also of other neighbouring States. For it will serve as the nucleus for rapid industrial growth of the region as a whole.

The Neyveli Lignite Project is one of the two Centrally administered schemes in the Madras State, the other being the Integral Coach Factory at Perambur. It is expected to expose the lignite seam at Neyveli by next April and commence production at the rate of 3.5 million tons per annum. By that time, the other schemes of this integrated scheme, namely, a thermal plant with an annual capacity of 250 M.W., a fertiliser plant of 152,000 tons of urea 70,000 tons of fixed nitrogen) and a briquetting plant of 350,000 tons, will also be commissioned. Besides, a clay washing plant is proposed to be set up as part of the scheme. Lignite at pithead is expected to cost not more than Rs. 40 per ton. In other words, the cost of raw lignite equivalent to one ton of coal in thermal value, will be only about Rs. 25, as compared with the cost of Rs. 50.55 per ton of coal delivered in Madras from Bengal by the all-rail route and Rs. 70-80 by the rail-cum-sea route. In the third Plan, the Lignite Corporation proposes to expand output of lignite from 3.5 million tons to 6 million tons per annum. The additional quantity is expected to be used for (1) the generation of additional power of 150 M.W. to be fed into the Madras Electricity Grid and (2) for the production of 200,000 tons of high temperature for the reduction of Salem iron ore. The Sub-Group has recommended that the possibilities of stepping up the lignite production to nine million tons annually by intensive mining should be explored to meet the growing demand.

Among the other industrial schemes suggested for inclusion in the third Plan, mention may be made here of a few important ones. The Sub-Group has worked out the cost and other details of the various schemes. In view of the inadequate and irregular supply of good quality coke needed by engineering industries, it is proposed to set up a coke oven plant in the public sector, with a capacity of 375 tons of coke and by-product from 500 tons of coal per day. It is expected to involve a capital outlay of Rs. 2.50 crores. Another important suggestion relates to the setting up of an oil refinery in the public sector in Madras. Yet another proposal pertains to the establishment of a machine tools plant in the public sector, capable of producing tools worth Rs. 3 lakhs per annum. The cost of the machinery to be imported for such a plant is placed at Rs. 5 crores.

Several projects have been proposed for the private sector in the State's third Plan. These are: one unit for manufacturing 1,000 complete ring frames per annum, and another for manufacturing looms of all types, with an annual capacity of 10,000, apart from one or two more units for producing other textile machinery like paper cones, paper tubes, card clothing and rotary traverse drum winders. An aluminium plant will also go into production during the third Plan, for which a licence has already been granted to Mr. R. Venkataswami Naidu of Coimbatore. The original licence was for the establishment of a unit with an annual capacity of 10,000 tons of aluminium ingots and alloys. This was later modified, on the advice of the Italian consultants, Messrs. Montecatini, to make the plant an integrated project producing not only aluminium ingots, but also rolled products like sheets and rods. The estimated cost of the project is Rs. 12.9 crores, of which foreign exchange expenditure is of the order of Rs. 7 crores. It is clearly stated that the State Government proposes to assist industrial development in the private sector even by contributing to the share capital of new industries, wherever it is found necessary. This is bound to provide a new impetus to industrial growth in the State. It may be noted, in passing, that the State's draft Plan provides for a total outlay of Rs. 400 crores in the public sector, excluding the investments by the Centre in its own projects located in Madras. This is more than twice the size of the total outlay in the second Plan, now estimated at Rs. 190 crores.

AMERICAN LETTER

U.S. ECONOMY DEPICTS UNCERTAIN TREND

PRICES OF CONSUMER DURABLES CUT

From Our Special Correspondent

NEW YORK, 1st *September*

EVERYONE here is heartened by the behaviour of the stock markets in the last three weeks. Traditionally, there has always been a summer rally. It happened again this year. At this time, prices stand about half-way between the year's low and the previous high, as measured by the Dow-Jones averages.

Since stock prices are supposed to portray the economic future of the country, there is a logical question. Is there enough push to sustain a new bull market, or has this been just a passing fancy? There are market analysts who say "yes." Others are not so sure. The latter group thinks the summer rally is about over.

Softer Money

General business conditions have shown no change in several weeks. But there have been easier money conditions. The Federal Reserve discount rate has been reduced, and the commercial banks have finally seen fit to reduce the borrowing rate of loans to their prime customers —known here as the prime rate—from 5 to 4½ per cent.

These were psychological stimuli, but they do not always mean strong business. Orders on the books of manufacturers also count. That is not to say that tinkering with interest rates is not a powerful economic medicine, but it cannot do the whole job. Monetary policy in either direction also takes a long time to take effect on the economy.

Business might well be stimulated by softer money, but it does not happen tomorrow—it takes time. Softer money, *per se*, will not send business spiralling upward.

There should be some improvement in the heavy industries in the last quarter of the year. There should be stimulation from increased automobile production in the steel industry, which, at present, is only running at 54 per cent. of capacity. The automobile industry which had high hopes for 1960 now faces an 850,000 car inventory by the first of October, when the 1961 models will be coming out. The comparable figure last year was 612,000.

Household appliances of all kinds have gone through a series of price cuts in recent weeks—as much as 10 per cent.—but large unsold stocks of inventories are still the principal problem. It is impossible to make predictions. One can always forecast with some degree of accuracy the amount of Government spending, because it has been appropriated. One can always predict, up to a point, what business is going to spend on capital and equipment.

Unknown Factor

The only really unknown factor is the consumer. To be certain, there are surveys among families of all income groups by universities and other institutions. But there is one unpredictable link. That is the consumer reaction to the news of the day in America with its rigid communications' system—*via* the printed words through newspapers and magazines, *via* radio and television.

If the family gets scared by the day-to-day news—and this may be nobody's design or intention—the family will not buy a new automobile, or whatever was planned previously. Instead, they may decide to add to their savings account, or settle for a new dress or coat. While Government and business spending is terribly important, in the long run it is the individual consumer who determines the fate of the hard and soft goods industries in the U.S.

Despite an apparent stability in prices, costs of manufacturers here have gone up steadily. While commodity future prices have declined, other costs have been rising. The cost of living has been increasing. In other words, consumer prices have been rising in the face of declining commodity prices.

So far, the demand has been strong enough to balance out the supply of available goods, particularly in view of a rising population. Also, personal income has been going up. It is an anomaly. The index measuring prices of services has increased sharply—about 15 per cent. since 1954.

Supply More, Demand Less

The reason why commodity prices have been slipping is that there are more commodities than are needed immediately. The decline has come at the time when business should have been accumulating inventories in advance of the usual upturn in the autumn. But inventories have risen rather sharply of late and few manufacturers felt there was any point in increasing inventories any further.

Labour, taxes and socialism are pricing the United States out of the world markets. Labour costs continue to rise and there is no abatement in the increase of local taxes which provide schools, airports and so on. Depreciation allowances remain unrealistic, and there is much talk that the entire tax system of the U.S. will be overhauled by 1961.

Senator John Kennedy, the Democratic nominee for President, has promised to "spend the country out of all its ills." Vice-President Richard Nixon, the Republican nominee, has more conservative leanings, financially and economically. Both, however, have come out with not too dissimilar plans for providing Government aid for the aged, so far as medical expenses are concerned, in the face of longer longevity.

The opposing trend of commodity prices going down and costs going up, inevitably means lower profit margins for U.S. industry. It means loss of markets to foreign producers. It implies an additional drain on gold stocks. At worst, it could result in a renewed economic isolation of the U.S.

Farm Surplus

With another vast surplus crop of agricultural commodities at hand, there is much criticism again of the Department of Agriculture and the farm programme as a whole. The Department is accused by Congress of serious mismanagement and faulty practices by Congressional committees. The present cost of storing surplus commodities by the Government is given at $1.2 million a day.

At this writing, Congress is now in its final stretch before adjourning to January and the law makers are anxious to go home and mend their political fences for the elections in November. The only major Bill of importance is the one that seeks to provide for a modest gain in the coverage of the minimum wage law. The proposed amendment has *socialistic* implications. Thus, one Bill, supported by Senator Kennedy, would boost the current $1 hourly minimum wage to $1.25 over a period of years. A Congressional Bill, now under debate, calls for a single increase to $1.15.

There is much concern here over the developments in Cuba and over international friction, generally. The feeling here is that Premier Nikita Khrushchev has more reason to be afraid of Red China than of the West. The threat of Fidel Castro and his brother Raoul to the U.S. is real, except that there is still a very well equipped U.S. naval base in Cuba which is ready for action when the command is given. Soviet bases in Cuba could be quite dangerous to the U.S.—*All Rights Reserved.*

TUGS built by Mazagon Dock ...help save foreign exchange!

Tugs, built by Mazagon Dock during the last few years are today being used by Bombay Port Trust, Saurashtra Government and several other parties. Their performance compares favourably with the best in the world. Mazagon Dock have already built and have under construction several vessels of different types including tugs, dredgers, barges, survey launches, fire floats, etc.

Mazagon Dock help India save foreign exchange by building these vessels in India and also by providing reliable repair facilities for vessels which would otherwise be repaired in foreign countries. Mazagon Dock also earn foreign exchange by repairing vessels, owned by foreign shipping firms.

Jute

in the forefront of India's export trade

The Indian jute industry is essentially an export industry. Almost 80% of the industry's production—or about 900,000 tons of jute manufactures—is shipped to overseas markets; 55% of the jute goods used as packaging material throughout the world are supplied by India.

But jute no longer serves merely as the humble gunny or hessian bag. Today, jute fabrics are used in large quantities in industrial processes to give a remarkably wide range of end-products. From the massive export of jute goods the country earns valuable foreign exchange, which in 1959 amounted to Rs. 110.8 crores. Out of this, Rs. 50 crores came from the dollar area, making jute goods India's largest dollar-earner by far.

The Indian Jute Mills Association—the organisation of the industry—carries on extensive propaganda in several foreign countries to promote the exports of jute goods, undertakes research at home to widen the applications of this golden fibre.

RELIEF TO SMALL BANK DEPOSITORS

LOK SABHA PASSES AMENDING BILL

THE Bill to amend the Banking Companies Act, 1949, with a view to providing for expeditious payment of certain minimum amounts to depositors in the event of liquidation of a bank, for enhancement of the minimum payment to a saving bank depositor as preferential claim, for simplification of provisions relating to the grant of moratoria to banks in difficulties and for formulation and implementation of the schemes of reconstruction or amalgamation of banks, was introduced in the Lok Sabha on the 3rd inst. and was quickly adopted on the 6th inst. after a brief discussion. The salient provisions of the amendment Bill are:

1. The payment to be made to each saving bank depositor as a preferential claim from out of the assets of a banking company under liquidation is to be raised from the present level of Rs. 100 as provided in Section 43A of the Banking Companies Act, to Rs. 250.

2. Besides the above payment, the depositors, other than those with savings bank accounts, will be paid an amount equal to 50 per cent. of their deposits or Rs. 250, whichever is less, as a further preferential payment. This provision was subsequently amended during the second reading of the Bill, providing for payment to depositors, besides preferential claimants, Rs. 250 or the balance to their credit, whichever is less.

3. A time limit of three months from the date of the winding-up order of a banking company has been prescribed for the payment of preferential dues to the savings bank and other depositors. In case the winding-up order had been issued prior to the enforcement of the present Bill, payments will have to be made within three months from the date the Bill comes into force.

4. After the first two preferential payments have been made to the depositors, the remaining assets of the banking company will be utilised for payment, on a *pro rata* basis, of the debts of creditors and of further sums, if any, due to the depositors.

5. The Reserve Bank may apply to the Central Government for an order of moratorium in the case of a banking company where it appears to the Reserve Bank that there are good reasons to do so.

6. During the period of moratorium, which will not exceed six months, as is now provided under Section 37 of the Banking Companies Act, the concerned bank should not make any payment to any depositors or discharge any liabilities or obligations to any other creditors.

Reconstruction

7. During the period of moratorium, if the Reserve Bank is satisfied that it is necessary in the national interests or in the interests of depositors or in order to secure proper management of a banking company, it may prepare a scheme for (*a*) reconstruction of the banking company or (*b*) its amalgamation with another company. The scheme may contain provisions for the reduction of the interest or rights which members or creditors may have in or against the banking company before its reconstruction or amalgamation to the extent necessary in the public interest or in the interest of its members and creditors. It may also provide for the appointment of a new board of directors of the banking company on its reconstruction or of the other banking company with which it is amalgamated. The scheme of reconstruction or amalgamation prepared by the Reserve Bank will be open to suggestions or objections within a specified period by the banks concerned and, after considering these, the Reserve Bank will place the scheme before the Central Government for sanction with or without modification.

8. The Central Government will have power to get the promoters, directors or auditors of the banking companies concerned to be publicly examined by the High Court and, if the High Court finds, regardless of whether a fraud has been committed or not, that these persons are not fit to be directors or auditors, they can be removed from their positions by an order of the Central Government and debarred for a period not exceeding five years as may be specified in that order.

9. In order to enable the official liquidator to have in his custody or control in cash as much of the assets of the banking company as possible, the securities given to every secured creditor can be redeemed by the official liquidator thus:

Where the amount due to the creditor is more than the value of the securities as assessed by him or, as the case may be, as assessed by the official liquidator, on payment of such value;

Where the amount due to the creditor is equal to or less than the value of the securities as so assessed, on payment of the amount due.

The aforesaid amendments have been found necessary, because the procedure now prescribed under the Banking Companies Act, 1949, read with the Companies Act 1956, for the liquidation of banking companies is somewhat elaborate and, in the absence of any time schedule according to which payments have to be made, the depositors, will have to wait for considerably long periods for realising the dues to them. The Bill accordingly provides for the expeditious payment of certain minimum sums, which will provide great relief to small depositors. Thus, under the present Bill, all depositors with deposits of Rs. 250 and less will get back money in full within three months from the date of the winding-up order or from the date when the Bill comes into force, whichever is later.

Amplification of Powers

Moving the Bill for consideration, the Finance Minister said that, during the last ten years or so, when the Banking Companies Act of 1949 had been in existence, the Reserve Bank had succeeded in devising and enforcing a system of control which had led to the weeding out of the comparatively weak and inefficient institutions and improved the standing and credit worthiness of all the other banks. The present Bill was merely intended to amplify the powers of the Reserve Bank and the Central Government in certain directions to facilitate further the process of this improvement. Allaying all possible misapprehensions about the Bill, Mr. Desai assured the members of the House that the Bill "does not indicate the existence of any major weakness." The banking system in India, he asserted, was on the whole very sound. The Bill was only an attempt to "recast and modify the legal framework," within which the Reserve Bank was now required to function and discharge its duties. The failure of the Palai Central Bank provided an opportunity, as it were, and made it necessary to review the procedure for the liquidation of banking companies and the distribution of their assets. The Finance Minister was in favour of giving retrospective effect to the provision relating to the time schedule for liquidation and the initial payment to small depositors. But numerous administrative and practical difficulties stood in the way of doing so.

Bill Welcomed

While the provisions of the Bill were generally welcomed by all sections of the House, one of the members wanted the Government to undertake a thorough study of the banking industry and bring forward, if necessary, a comprehensive measure. Another member wanted the Reserve Bank to be clothed with more powers, in order to help banks in times of difficulties. He also wanted the system of appointing observers by the Reserve Bank to be replaced by Directors nominated by it on the boards of banking institutions with full powers to correct erring banks. Yet another member suggested that a banking commission should be appointed to ascertain the hold of a few big people in the country on banks. Two of the members wanted the preferential payment to depositors to be raised further.

Replying to the debate, Mr. Morarji Desai rejected the suggestion for a more comprehensive Bill on the ground that the Government did not want itself to be armed with omnibus powers for all time to come. For, in a developing economy, it was not possible to foresee all the contingencies that would arise. In 1956, if his predecessor had considered that there were sufficient powers, it was not because he thought that there would be no necessity for any powers in the future. It only showed the Government's anxiety not to take more powers than necessary. The present Bill, he said, sought no new powers but only amplification and extension of the existing powers. The Finance Minister was not in favour of raising the amount of preferential payment. The Government, he said, was trying to see that those who had not much with them were given fully and others on a *pro rata* basis when the assets were realised or ever earlier when it was ascertained how much could be realised.

U.S. AID TO LATIN AMERICA

The third meeting of the Inter-American "Committee of 21" to discuss ways and means o improving the economic lot of Latin American countries began its nine-day session in Bogota Colombia, on the 5th inst. The discussions wil centre round the U.S. aid plans for Latin America for which the U.S. Congress has authorised $500 million. Groups were set up to discuss an agend worked out by a sub-committee of nine American republics which met in Washington last June. A fifth working group, suggested by the U.S. Under Secretary of State, Mr. C. Douglas Dillon, wil consider the U.S. proposal for a special develop ment programme for Latin America in addition to any substitute proposals or suggestions which may come up at the meeting.

The following is the agenda prepared by the sub-committee which met last June:

(1) Reinforcement of the means of financing the development of Latin America, preferably through the Inter-American Development Bank; (2) technical planning and financing of agriculture and of industries for food products according to the conditions of each nation; (3) insuring satisfactory prices and market conditions for raw materials and basic products to assure economic and social stability of the Latin American nations; (4) financial and technical aid for a feasible plan for training technical personnel for economic development and for campaigns for literacy; and (5) financial and technical aid for creating an inter-American organisation for technological and productivity studies with the object of stimulating the industrial development of Latin America.

The new U.S. plan, which Mr. Dillon will unfold at the meeting, is understood to take all of the above points into account. Previous announcements regarding the plan indicate that the new funds will be channelled principally through the Inter-American Development Bank, which will go into operation on 1st October with a capitalisation of nearly 1,000 million pesos. All the 21 American Republics, except Cuba, have subscribed funds to this bank. The new U.S. aid plan is unusual not only because it calls for the co-operation of the other American Republics but because it outlines social improvement projects destined to convert the deepest aspirations of Latin America into reality. They are directed towards the following objectives: (1) Improvement of rural living conditions and land use; (2) improvement of housing and public services in the towns and villages; (3) improvement of education systems and teaching tools. The plan, according to Mr. Dillon, would require "specific standards and plans on the part of all the participating governments, particularly internal reforms." The U.S. is ready to "contribute capital and technical aid to support the efforts of Latin American countries which are prepared to adopt effective institutional reforms and measures of self-help in the field of social betterment."

U.S.S.R. OFFERS FURTHER CREDIT

The Soviet Government has expressed its readiness to grant India an additional credit of 500 million roubles (about Rs. 60 crores) for the third Five-year Plan. The Government of India has gratefully accepted this welcome assistance. The Soviet Government has already offered 1,500 million roubles (Rs. 180 crores) for the Third Plan. This information is contained in a statement laid on the table of the Lok Sabha last week by the Finance Minister, Mr. Morarji Desai, in reply to a short notice question by Dr. Ram Subhag Singh.

The following is the full text of the statement:

"As the House is aware, the Soviet Government offered a credit of 1.500 million roubles (Rs. 180 crores) in July last year as assistance for the third Five-year Plan and an agreement was signed on 12th September 1959. An additional agreement was signed with the Soviet Government on 12th February 1960 in regard to the projects to be financed under this credit. In my statement of 3rd August 1960 to this House on my recent tour abroad, I made a reference to the discussions I had with the leaders of the Soviet Government. During these talks in Moscow last July, the question of further Soviet economic assistance for India's third Five-year Plan was touched upon. The Soviet Government has considered this question and expressed its readiness to grant to India an additional credit of 500 million roubles (about Rs. 60 crores) to be utilised towards the implementation of the third Five-year Plan. The Government of India has gratefully accepted this welcome assistance.

The manner in which and the purposes for which this credit will be utilised will be further considered in consultation with the Planning Commission and discussed with the representatives of the Soviet Government."

All two-anna and half-anna coins of cupro-nickel composition (white in colour) will cease to be legal tender with effect from 1st October 1960. On that day, the demonetisation notification of the Government of India issued on 2nd March 1960 will come into effect.

These coins will, however, continue to be accepted for the next six months, till 31st March, 1961, at all offices of the Reserve Bank of India, at all agency banks of the Reserve Bank conducting Government business and all treasuries and sub-treasuries in payment of dues as well as for exchange.

CLOTH AND YARN PRICES CUT FURTHER

DECISION MAY ADVERSELY AFFECT MANY MARGINAL MILLS

WHAT had almost turned out to be a wrangle over the issue of cotton yarn and cloth prices has been happily ended, at any rate for the time being, thanks to the spirit of accommodation displayed by the millowners. On Saturday last, the Indian Cotton Mills Federation announced its final decision on the two questions pertaining to prices and stamping. The decision, we are told, has been approved by the Union Ministry of Commerce and Industry. In other words, both the cotton mill industry and the Government have sought to avoid imposition of statutory controls on prices and distribution of cloth.

The Federation has announced a new schedule of cloth and yarn prices with August 1959 as the base, instead of October 1959; the Government, it was reported in a section of the Press, had first suggested the basis of July 1959 contract prices. We now understand that this report was not correct and that the Government had not first suggested any basis at all. It was only telling the industry that it must do something more for bringing down the prices of cloth and yarn. After considerable discussion with the industry, it expressed its willingness to accept the contract prices of mills prevailing in August 1959 as the basis for calculating the increase considered reasonable. The mills have been asked not to charge more than the stipulated additional percentages over August 1959 contract prices of cloth, provided that, where the existing contract prices are lower for certain varieties, the varieties concerned will continue to be sold at the lower rates. The percentages of increase allowed are 25 for coarse cloth, 22 for lower medium counts, 18 for higher medium varieties, 11½ for fine categories and 9 for superfine goods. The corresponding percentages on the October 1959 contract prices fixed before were 27½, 24, 20, 12½ and 10, respectively. The revised prices apply to all cloth to be delivered henceforward regardless of the contract prices already concluded. The prices of yarn have also been revised as follows:

(In rupees per bundle of 10 lbs.)

Count group	Prices fixed now	Prices announced before	Market rate of yarn sold in the first week of August 1960
6s* ..	13.57	13.57	..
6s† ..	15.75	15.75	..
10s ..	17.75	17.98	19.75
20s ..	21.60	21.90	24.25
26s ..	24.18	24.30	26.25
30s ..	25.32	25.44	27.00
40s ..	28.75	28.80	30.50

* Manufactured from cotton waste.
† Manufactured from cotton mixing containing not more than 25 per cent. cotton waste.

The revised prices are the net mill prices of single hank yarn spun from Indian cotton. The prices for other counts and varieties of yarn will be announced later.

Stamping of Prices

In order to ensure that the price reductions are passed on to the consumer, the Federation has decided to stamp the new prices on the pieces of cloth and bundles of yarn with immediate effect. There will, however, be no stamping on cloth and yarn that have already been packed pending sale and/or awaiting delivery. In respect of cloth, retail prices will also be stamped, and these will be 15 per cent. over the ex-mill prices.

The Federation has changed the basis for allowing an additional percentage in the wholesale prices of cloth to account for the rise in cost of production from October 1959 to August 1959 only due to the pressure exercised by the Government. At their last meeting with Mr. Lal Bahadur Shastri and Mr. Nityanand Kanungo at New Delhi on 25th August, the representatives of the Federation explained why they had taken October 1959 and not August 1959 as the basis. The explanation was this: The cotton mills, particularly the units which had become financially weak owing to the continuing crisis from 1957, were making distress sales even in August 1959 and, if the industry was required to take this month as the basis and charge only the increase in costs that had occurred since then, the mills would again have to incur losses which they could ill afford to do. It was only since October 1959 that the upcountry mills had begun to sell at a price which, on an average, did not result in losses. The representatives further disputed the contention that the mills were making fabulous profits and even offered to the Government to submit duly audited accounts for the first half of 1960 to prove that the charge of profiteering against the industry was baseless. Mr. Shastri and Mr. Kanungo, however, urged the industry to shift the basis to August, 1959 and also to accept a lower percentage increase. They said: "It is imperative to hold the price line at any cost. The present economic conditions in the country are such that a reduction in the price of cotton textiles—the second most essential item after food—is called for even at some sacrifice."

In view of the firm stand taken by the Ministers thus, the millowners could not but bow down. In the Press note, the Federation of cotton millowners, for instance, says:

"The Committee of the Federation, at its meetings held on 29th and 30th August, considered the matter from all angles and decided to subordinate the industry's interests to those of economic necessities. This gesture on the part of the industry, the Committee hoped, would help the Government to reverse the general price trend and afford relief to the hard-pressed consumer, particularly as he would soon be making his purchases for the *Dassara*, *Divali* and *Puja* holidays. Mills are being urged to open retail shops in as many centres as possible, with a view to ensuring that the cloth actually reaches the consumer at the new prices. . . . The Committee of the Federation fervently hopes that the consumer and the Government would appreciate the context in which the industry has made this gesture, particularly in the background of the distress suffered by it in the course of the last three years."

Charge of Profiteering Denied

The latest revised prices of cloth represents a further cut ranging from 6 to 12½ per cent., depending on the varieties of cloth and the sources of supply. The total reduction in prices in the case of certain varieties, it is pointed out, will amount to as much as 20 per cent., 5 per cent. more than what even the Government of India wants. The extent of the reduction in prices was explained by Mr. Krishnaraj M. D. Thackersey, Chairman of the Federation, at a Press Conference in Bombay on Monday this week. Denying the charge that the industry as a whole was profiteering, he said:

"Taking the weighted average, cloth for internal consumption will be subject to an average increase of 19 per cent. over August 1959 prices. However, as we have decided that, where the existing prices are lower than those calculated under the formula, the lower prices are to prevail, the effective average increase over August 1959 prices will be less than 19 per cent., say, 16 per cent. If, as alleged, the mills were selling at 40 per cent. over August 1959, the reduction comes to about 24 per cent. and, in any case, it is over 21 per cent. The fact, however, is that the change of a 40 per cent. rise was unjustified. There is no complaint about prices of fine and superfine cloth. In the case of higher medium and lower medium cloth, the price rise ranges from 10 to 27 per cent., with stray cases on either side of this range. That leaves only coarse cloth which constitutes 9.4 per cent. of the deliveries for civil consumption. A good proportion of coarse cloth is produced for industrial use such as manufacture of tents and shoes. It is only a portion of the remaining cloth consumed by the general public which has registered a rise of 40 per cent. It will thus be clear that, taking all cloth, the allegation of a rise of 40 per cent. is true in respect of not more than 5 per cent. of the cloth consumed by the general public. This shows how far the charge against the industry of a general rise of 40 per cent. in prices is justified."

It is feared that the drastic cut in prices now effected will have a markedly adverse effect on the industry. The Federation's Press note clearly warns the public that the new price structure "will result in uneconomic working of several mills, particularly those producing coarse and medium cloth, and the fact that the industry will be forced to use more and more of high-priced imported cotton will aggravate this suffering." Considering the distress suffered by the industry from 1957 to 1959, the Federation has misgivings about the ability of the marginal mills to maintain production. The number of such units is said to be 150-175 which together account for 45 to 50 per cent. of the coarse and lower medium cloth produced in the country. It is apprehended that, as a result of the cut in prices, the production of these varieties of cloth may suffer a setback, because there is a limit up to which the marginal units can suffer losses. These units include about 12 of the closed mills taken over by the Government and reopened mainly with the object of providing employment to their workers.

Worst of Both Worlds

The Federation, however, hopes that, if the cotton crop of the current season turns out to be plentiful, the uneconomic working of the industry, which will result from the new prices, will become a temporary phase and the situation will rectify itself after the new crop begins to be available. It would be worthwhile recording here the pertinent observations made by Mr. Krishnaraj on the implications of the latest prices to the industry as a whole. He said:

"The industry was in a state of distress for a long period of three years. If, at that time, by a programme of stockpiling or otherwise, Government had enabled the industry to make profits at a level considered reasonable by Government themselves, there would have been full justification for Government, when times changed, to suggest that the industry should still sell at low prices. It is difficult to understand how mills producing coarse and medium cloth are expected to deal with their losses of 1957 to 1959, now that the profits of most of them would again be wiped out. This means that, in times of distress, the industry is to suffer from the disadvantages of a free economy; but, when the situation takes a turn for the better, we are to suffer from the disadvantages of a controlled economy. The cotton mill industry has thus to put up with the worst of both worlds. The industry would like the economists to coin a word for its status, which is a combination of bad features of the free economy and the controlled economy.

"The cotton mill industry has always been making the lowest profits among the organised industries, as has been proved by the Reserve Bank's studies into comparative profits of all industries. Because of its low profitability, the capital naturally runs away from this industry and this has resulted in a serious backlog of rehabilitation and modernisation. The officially appointed Working Group estimates the industry's needs for rehabilitation for the next five years at 180 crores. The current events are not calculated to help the industry to attract capital which naturally seeks avenues where the returns are better. Government, we are sure, would not be oblivious to the necessity of restoring proper health to this industry on which depend eight lakh employees and a countless number of others for their sustenance. The industry is also a very valuable earner of foreign currency. The industry, by making this gesture in spite of all that happened to it in the three years of 1957-59, has earned a right to seek Government's help, should it again come to grief, and we are sure the help when needed would be forthcoming from Government and the general public in a generous measure."

The final decision of the Federation on the issue of cloth and yarn prices and the Government's approval of the same will at least do one good thing. They will set at rest the uncertainty among the traders and consumers. This uncertainty had resulted in a fall in the offtake of textiles, as everyone thought that prices might be cut further as desired by the authorities. It is stated that there has been no delivery of cloth from the mills for a little over three weeks. Consequently, there has been an increase in the stocks of cloth lying with mills. The total of these stocks as on 15th August 1960 was about 450 million yards, as against 411 million yards at the end of April 1960 and less than 390 million yards towards the close of February 1960. The August-end figures, when published, are sure to show much higher stocks. Similarly, the retailers, too, have not been lifting cloth from the wholesalers. Consequently, many retail markets are starved of cloth now. And, with the *Puja* season due to commence very shortly, this shortage will be felt acutely in Bengal, Bihar, Assam and Orissa. With the removal of uncertainty regarding prices and the emergence of festival demand, however, there will be an increase in the rate of clearance of cloth and yarn stocks. It must be emphasised that, while the mills should faithfully implement the directives of the Indian Cotton Mills' Federation, the wholesale and retail dealers should see to it that the consumers get their requirements of cloth at the prices fixed as per the latest schedule announced by the Federation, even though it may take some time for the stamped cloth to reach the consumer-end.

On its part, the Government must give sufficient time for allowing the new arrangements to make themselves felt on the trend of cloth prices, before making any fresh move. Meanwhile, it must concede the industry's plea for an adequate expansion of the productive potential. Unless this is done "very quickly," a situation like the present will, as Mr. Krishnaraj has now warned and as this journal had warned even earlier, continue to recur, what with the increase in population and the rise in the *per capita* income generated by the Plans.

COTTON BOARD CONFERENCE AT HARROGATE

MORE EMPHASIS ON DISTRIBUTION

From Our Special Correspondent

MANCHESTER, 30*th August*

MANCHESTER LETTER

THAT distribution should be the focal point of this year's Cotton Board Conference at Harrogate in October is scarcely surprising. Production problems are still far from solved, even after the substantial changes which have taken place in the Lancashire cotton trade in the past twelve months, but the efficient offtake of goods has for long been one of the main stumbling-blocks encountered by those engaged in the industry.

In current circumstances where output is being rationalised and surplus capacity has, at least for the moment, been virtually eliminated, the need to secure a steady flow of material through the different processes and out into the wider sphere of merchanting is of paramount importance. Harrogate conferences in recent years have provided the setting for a clash of ideas between producers and distributors; now it is time that a truce was called and both sides joined in a concerted effort to bring more imagination and co-operation to the task of disposing of Lancashire textiles once they are woven. It is, therefore, to be hoped that the main sessions of the conference devoted to this topic, consisting of panels representing wholesale and retail interests, as well as producers and merchants, will be well attended and will throw up some illuminating ideas on how the job can be tackled.

Putting the problem in a nutshell, the Cotton Board's introductory note to the conference says: "Whilst the offtake of the industry's products by the final consumer remains remarkably stable from year to year, the industry itself is subject to very great variations in the volume of the orders it receives and the sections of the industry, are, in turn, subject to further variation between each other even when trade is either good or bad." On more general matters the usual "Question and Answer" session will be thrown open to delegates. Leading representatives of the different sections will again play "Aunt Sally" in replying to criticism and comment. Once more, the conference is to hear a new President of the Board of Trade. Mr. Reginald Maudling being the Government's speaker on the opening evening. Viscount Rochdale, the Cotton Board's Chairman, will sum up the proceedings and give a survey of the situation at the Sunday session.

The Mixture as Before

Adding emphasis to some recent fears expressed by forward-looking traders in Lancashire about the incidence of foreign cloth arrivals, the July Board of Trade returns gave further food for thought. It becomes almost monotonous to record month by month the widening of the gap between imports and exports; what perhaps is more significant now is the narrowing of the gap between imports and the production of local mills. At all events, it cannot be denied that last month's shipments of cotton cloth achieved the unenviable distinction of being the lowest since November 1945, while it was necessary to go back to April 1947, to find a smaller quantity of cotton yarn exported. Imports, too, showed a reduction compared with some earlier months in the year, but they continued to exceed twice the rate of comparable shipments abroad. At the end of seven months of 1960 the position can be summed up as follows:

Exports of cotton cloth—194,104.000 square yards, at a value of £25,873,000; imports—409,957.000 square yards costing £32,780,000: exports of cotton yarns—13,073,000 lbs., valued at £5,275,000; imports—22.811,000 lbs. costing £4.286,000; value of all cotton yarns and manufactured goods exported—£37,432,000; cost of imports of similar goods £37,065.000.

Eastern Arrivals

Purchases of cotton grey cloth from foreign outlets still accentuate the large arrivals from the East. India has already supplied 144 million yards and Pakistan nearly 25 million yards, as against 93 million yards and 10 million yards, respectively, at the same stage last year. Although shipments from Hong Kong have declined from over 82 million yards to 53 million yards, the big search for goods on the European Continent has resulted in a substantial rise in material originating in "other foreign countries" from 8 million yards to nearly 60 million yards.

These latest returns have coincided with a renewal of the agitation in Hong Kong for the abrogation of the voluntary pact which limits shipments to this country. Not for the first time representatives of the spinners and weavers in the Colony have complained about the effect of the arrangement, which certainly appears to have favoured their competitors, not only in the East, but more particularly in Europe. In addition to the growing opposition in Hong Kong to any extension of the pact, some of the louder voices are calling for its immediate cessation. Merchants on this side who feared a shortage of supplies earlier in the year found Hong Kong's delivery terms unacceptable and turned to other sources where goods were offered quickly.

The outward flow of Lancashire cotton cloth still rests mainly on sales to the bigger Commonwealth markets, where Australia, South Africa, Nigeria and New Zealand still lead the way. Only the Congo out of countries not linked to Britain has absorbed more than 10 million yards of cloth this year and in view of current conditions in Africa the future of this trade must be regarded as distinctly uncertain.

"Bonanza" Indeed

One of the more engaging characteristics of Americans is their readiness to introduce a slang expression at the appropriate moment, even in so staid a document as a report on raw cotton. So it is that the latest review of the world situation published by the International Cotton Advisory Committee describes the past season as being "a bonanza one." Record levels were achieved in production, consumption and trade, with prices now noticeably higher than twelve months ago.

Some indication of the change which has taken place in the output and use of the raw material is given in statistics quoted by the Manchester Cotton Association, which illustrate the remarkable growth achieved in a generation. Last season's estimated world cotton crop, for example, exceeded 47 million bales, whereas the five-year average immediately before the war was little more than 30 million bales. Consumption in the 1958-59 season neared 46 million bales, as compared with below 30 million bales in the pre-war average. Looked at another way, the rate of consumption of the cotton fibre per head, according to the Food and Agriculture Organisation of the United Nations, rose from 2.8 kilograms to 3.36 kilograms in the 20 years from 1938 to 1958. So far, in fact, cotton production, as the Manchester Cotton Association points out, has more than kept pace with the considerable increase in world population, while if all fibres are taken into account an even bigger rise in consumption has occurred.

Another important factor is the acreage involved in producing these very much bigger crops. The land under cultivation to cotton in the past season was 200.000 acres smaller than the average of the pre-war years, while the yield per acre in the same period increased from 180 lbs. to 277 lbs. Not only is much more cotton now available for use in clothing and industrial purposes, but land has even been released for food production and other uses.

Consumption the Key

During the course of the season just ended, the rise in consumption was the largest single factor accounting for the marked expansion in trade in the raw material. In the words of the International Cotton Advisory Committee: "It demonstrates that, far from being static, cotton can be as virile as any other industry under the right circumstances." Exports of over 7 million bales from the United States enabled the American cotton surplus to be reduced by well over a million bales. Other producing countries sold their entire crops and reduced their carryovers to the barest minimum. But already the old season recedes into the past and prospects for 1960-61 are being debated. Consumption is clearly the key to the outlook, as another large world crop is expected. Supplies in the United States, according to the first estimate, are a little lower than last year, but increased acreages in Mexico and Central America have been reported. Distinctly favourable crop prospects are evident in the Middle East and acreage in Egypt is at the highest level for many years. Given a return to normal yields in India, the area under cultivation should provide output of an additional one million bales.

Both acreage and production in the main cotton growing areas are expected to be higher during the 1960-61 season, but lower carryover stocks may bring the supply situation into line with last year. The maintenance of consumption at its current level would leave the statistical situation roughly in balance.—*All Rights Reserved.*

1959-60 COTTON SEASON IN RETROSPECT

SHARP RISE IN FOREIGN COTTON CONSUMPTION

AUGUST marked the end of an unhappy year in the history of Indian cotton. As a result of a sharp fall in production of cotton to a mere 3.75 million bales (of 400 lbs. each), the season experienced, notwithstanding liberal imports of foreign cotton, one of the most acute shortages of cotton in recent years, with prices of most varieties ruling well over the ceiling. The experience of the season also exposed the ineffectiveness of controls in a period of extreme shortage—when they are most needed —and the pathetic dependence of cotton on the monsoon and good weather after the rains, in spite of the improved irrigation facilities.

The season started, on 1st September 1959, with a carryover stock of 2,035,000 bales, comprising 1,850,000 bales of Indian and 185,000 bales of foreign cotton. Although the crop was estimated at as high as 5.4 million bales early in the season, the harvested crop turned out to be no more than 3.75 million bales, as compared with 4.8 million bales in the previous season. This sharp decline was due to the late arrival of the monsoon and the heavy downpours and floods when it actually did start, which played havoc with the crop. The fall in production was as much as 29 per cent. in the Bombay State, 25 per cent. in Mysore, 18 per cent. in Madhya Pradesh, 14 per cent. in Rajasthan and 11 per cent. in the Punjab.

To compensate for the fall in indigenous production, imports were allowed more liberally than in any previous seasons. In fact, even short staples, the imports of which were prohibited hitherto, were permitted to be imported to make good the deficiency in domestic supplies. Only, the authorities took a long time to make up their minds about the necessity for allowing imports. This delay not only led to a rise in the prices of indigenous cotton but also resulted in India having to pay a higher price for the same cotton. Total import quotas issued during the season were of the order of 1.78 million bales, as against normal imports of 600,000 bales. This total includes 600,000 bales of American cotton under P.L. 480 announced towards the close of the 1959-60 season but meant for the following season, namely, 1960-61. Actual arrivals during the season are expected to have been of the order of 875,000 bales, the figure upto 20th August being 870,859 bales, as against 482,008 bales in the corresponding period of the previous season. The following table gives the sources of imports.

Imports of Cotton

(In bales of 400 lbs. each)

Description	1959-60	1958-59
American	334,787	94,470
Sudan	111,972	118,344
Egyptian	207,735	67,659
East African	162,528	194,725
Pakistan	34,146	..
Other growths	19,691	6,810
Total ..	870,859	482,008

As will be evident from the above table, during the season just ended, the U.S. became the largest supplier of cotton to India, accounting for as much as 334,787 bales, as compared with a mere 94,470 bales in the same period of the previous season. Egypt occupied second place with 207,735 bales. East Africa, which had held the first place in the previous season, slid down to the third position. Quantitatively, imports from Sudan during the 1959-60 season were on a par with those in the 1958-59 season, although spatially, it occupied the fourth position, as against second in the previous season.

The small indigenous crop naturally left little cotton for export. Shipments of permitted varieties from the beginning of the season till 20th August are estimated at 194,530 bales, as against 382,882 bales in the previous season. Exports during the whole season are expected to have been equal to the quota of 200,000 bales permitted early in the season.

Mill consumption of raw cotton during the first nine months of the season, for which period only figures are available, aggregated 3,821,926 bales, comprising 3,393,472 bales of Indian and 428,454 bales of foreign cotton, as against 3,824,905 bales (3,491,576 bales Indian and 333,329 bales foreign) in the corresponding period of the 1958-59 season. On this basis, total consumption during the season is expected to have been of the order of over 5 million bales, which is about the same as in the previous season.

The share of foreign cotton in the total consumption is sure to have gone up during the last three months of the season, considering the heavy shortage of indigenous growths and larger arrivals of foreign growths during that period. In fact, this was evident in the provisional figures for June (the tenth month of the season), when mills consumed 320,000 bales of Indian cotton and 118,000 bales of foreign cotton. Indian cotton consumption in that month represented a drop of about 21,000 bales from the previous month and 88,000 bales from the highest monthly consumption in the season, namely, December 1959, when it amounted to 408,137 bales, while foreign cotton consumption recorded an increase of around 54,000 bales from the previous month's and 81,000 bales from the lowest November 1959 figure of 37,028 bales.

The following table gives the monthly trend of consumption during the first ten months of the year, the figure for the tenth month being provisional.

Consumption

(In bales of 400 lbs. each)

	1959-60		1958-59	
	Indian	Foreign	Indian	Foreign
September 1959 ..	396,354	42,154	382,499	42,554
October ,, ..	395,050	39,728	394,558	41,303
November ,, ..	383,961	37,028	363,650	35,644
December ,, ..	408,137	40,848	419,814	39,301
January 1960 ..	392,734	42,826	413,181	34,370
February ,, ..	369,175	45,383	376,105	31,580
March ,, ..	357,013	54,576	380,193	34,294
April ,, ..	349,563	61,499	382,238	36,225
May ,, ..	341,485	64,412	379,338	38,058
June* ,, ..	320,000	118,000	349,648	38,710
Total ..	3,713,472	546,454	3,841,224	372,039

* Provisional.

It is evident from the table that consumption of Indian cotton was progressively declining from December 1959 and the June 1960 figure was the lowest for the season. Foreign cotton consumption, on the other hand, was rising progressively, with the June figure being the highest so far for the season.

On present indications, the balance-sheet of cotton in the 1959-60 season looks as follows:

Supply and Distribution

(In bales of 400 lbs. each)

	Indian	Foreign	Total
Opening stocks ..	1,850,000	185,000	2,035,000
Production 1959-60 ..	3,775,000	..	..
Imports during the season	..	875,000	875,000
Total supply ..	5,625,000	1,060,000	6,685,000
Estimated consumption	4,400,000	750,000	5,150,000
Exports	200,000	..	200,000
Total disappearance.	4,600,000	750,000	5,350,000
End season stocks ..	1,025,000	310,000	1,335,000

As will be seen from the above table, stocks of Indian cotton at the end of the season are some 800,000 bales less than at its beginning. Although foreign cotton stocks are higher, the net drop in total stocks is no less than 700,000 bales. This will be more than covered by the 600,000 bales of U.S. cotton planned to be imported under P.L.480, the 35,000 to 40,000 bales to be brought in under a barter agreement by the State Trading Corporation of India and the unutilised balance at the end of the 1959-60 season, all of which together add up to over 800,000 bales. And if, as is optimistically expected, the crop turns out to be a normal one, the overall supply position during the new season will be quite satisfactory.

ROLLER *Vs.* SAW-GINNING

The turn of events that led to the changeover from the export of textiles to export of raw cotton from this country had also led to the foundation of a new industry, namely, the cotton ginning and pressing industry. With the increase in exports of raw cotton, ginneries and presses had cropped up in different cotton-growing States and flourished. It is well known that cotton, unlike other commodities, has to be processed before it is utilised and two important stages in processing are ginning and pressing. The grower as well as the manufacturer stand to benefit from better ginning—the former would obtain a better price for his cotton, while the latter obtains well-processed and good grade lint for spinning. The various other intermediary agencies between the grower and the manufacturer are also dependent upon this important process. The trade takes into account such factors as ginning preparation, nepiness, stringiness, roughness and presence of motes, etc., in fixing the price.

A recent economic and technical survey of the existing gins in India carried out by the Technological Laboratory of the Indian Central Cotton Committee revealed several factors which vitiated the quality of ginning that is at present being carried out in the different gins.

The Committee recently considered the question of the merits of saw-ginning *vis-a-vis* roller ginning. After a very careful consideration of the various factors involved, both economic as well as technical, it came to the conclusion that roller ginning is by far the more preferable processing method of raw cotton than saw-ginning, and recommended that the advances of roller ginning should be brought to the notice of the growers, ginners and manufacturers of cotton. A comparative study of the two methods of ginning of Indian cottons carried out at the Technological Laboratory gave the following results:

It was noted that each system of ginning had its own advantages as well as disadvantages, but the advantages of roller ginning, under the existing conditions obtaining in this country, outweigh those of saw-ginning. The results showed that saw-ginning gave a lower ginning percentage but the saw-ginned lint was usually somewhat stronger, regular, and tended to be finer than roller-ginned lint. No difference was, however, observed either in the Pressley strength index or in the surface structure of the fibres. The card waste and especially the fly, which consists of very short fibres, was lower and the yarn strength was higher for saw-ginned lint than for roller-ginned lint.

In comparison, the roller gin, of either single or double roller, is a very compact unit which is very easy to handle. It requires very low power for driving, as compared with the saw-gin unit. The mechanism being very simple, it can be easily set and operated by a normally experienced gin fitter, while the saw gin, having many complicated parts to be looked after, requires careful attention of an engineer in operation.

If the ginning saw angle and the sharpness of its teeth are not maintained properly in saw gins, the fibres are likely to be cut and serious damage to its quality may result. In the roller gins, on the other hand, the settings are not so critical and slight changes therein do not cause damage to the fibres. The ginning percentage obtained by ginning in roller gins was about one per cent. higher than that obtained in the saw gin.

Even though the saw gins produce cleaner lint, with a considerably higher output, the loss in ginning percentage, and formation of more neps in the lint counteract these advantages.

Moreover for the maintenance of saw-gin units, practically all the parts have to be imported. On the other hand, the spare parts of roller gins are manufactured in India and as such would have the added advantage of saving foreign exchange and encouraging Indian industries.

As between the single and the double roller gins, the former, it was found, is simpler in construction and easier for operation than the double-roller gin. While the parts are few and the setting easy in the former, the double roller gin is comparatively more difficult to set up and the efficiency of the gin depends upon the experience and technical knowledge of the gin-fitter. It has also more moving parts and unless proper attention throughout the process is given, the efficient working of it cannot be ensured. Against these drawbacks, it has the advantage of higher output and lower labour cost.

The greatest advantage of single roller gin is that it could easily be converted to single action gin and could be very efficiently used for ginning of extra long-staple cotton, especially those of the fuzzy varieties. Besides, the old gins could be very easily renewed and made up-to-date by converting their bush bearings into ball bearings. The noteworthy feature of the converted gins is that there is an increase in output and the settings remain undisturbed throughout the ginning process, thereby producing more uniform ginned cotton, besides saving in labour.

The Committee therefore thought it desirable that the ginning industry paid adequate attention to the settings, the knives and to the training of gin fitters in order that the efficiency of ginning in India could be improved so that the grower, the ginner and the manufacturer might benefit from the quality of the lint obtained.

IMPORTS OF RAW COTTON INTO U.K.

Availability of the raw material, together with the call for supplies, which is governed by the volume of demand for the finished product, provide the background for the quantity of imports in any given season. In the one just ended arrivals of raw cotton into the United Kingdom returned to the level reached in 1957-58, after a year in which purchases from abroad were severely curtailed. The downward trend in consumption which had been noticeable since the 1956-57 season was sharply reversed. The development was not altogether surprising in view of the keen rate of demand in Lancashire which was maintained practically throughout last season.

Whereas in earlier years there were marked changes in the volume of the raw material shipped from the different producing areas, the past season was notable for the maintenance of the general level of imports from the majority of countries. Only in the case of the American staple was there any sharp variation, although purchases from Mexico, which provides a similar product, declined to some extent. Shipments from India too declined sharply but, quantitatively. Indian cotton accounts for only a small percentage of total imports.

Imports of U.S. cotton, however, although more than double the quantity secured during 1958-59, are still well below the volume absorbed in the previous season and remain only half the huge total of over 1,000,000 bales which was shipped to the United Kingdom in the 1956-57 season.

SUGAR EXPORTS TO UNITED STATES

WHAT ABOUT INCENTIVE SCHEME FOR MAXIMISING PRODUCTION?

AN all-India conference of sugar dealers has been convened for the second week of next month—the date tentatively fixed is Saturday the 8th proximo—at New Delhi with the main object of reiterating the demand for the immediate decontrol of sugar. The conference is also expected to impress upon the Government that, though the need for earning foreign exchange is quite urgent in the present context, the question of sugar exports should be decided by the Government only after ensuring sufficient supplies for domestic consumption and stocks for taking care of any shortfall in production. The consensus of opinion among traders is that there should always be a minimum buffer stock of a quantity equivalent to three months' requirements of the country so as to ensure stable conditions in sugar markets. This aspect is specially emphasised, because of the uncertainty regarding the size of sugar output in future, as it depends on the size of the cane crop and the level of prices commanded by the two sugar substitutes, namely, *gur* and *khandsari*, as well as of the necessity to avoid any possibility of a rise in prices, what with the full play of inflationary trends in the country.

The Government of India, however, has made it clear that the existing controls on prices and distribution of sugar will continue. Only last week, we referred in these columns to the pronouncements made in Parliament by Mr. S. K. Patil, Union Minister for Food and Agriculture, and his deputy, Mr. M. V. Krishnappa, to the effect that the framework of controls would be retained in view of the possibility of export, though the State Governments would be asked to review distribution arrangements with a view to liberalising the system within the overall framework of controls. The Central Government's view would appear to have met with the general approval of the States. At their two-day conference held at New Delhi on 26th and 27th August, the Agriculture Ministers of the States decided that controls on sugar should continue and that sugar and other agricultural commodities which were available in surplus must be exported in order to earn the foreign exchange required for importing from abroad chemical fertilisers for supply to cultivators in India. Speaking to Pressmen at Madurai on his return after attending the Conference, Mr. Bhaktavatsalam, Minister for Agriculture, Government of Madras, said:

"There is no question of decontrol in respect of sugar.... Whenever we feel that control is unnecessary, we remove it and we keep it only to the extent it is found necessary. While asking for decontrol, we must consider all aspects of the question without looking at it from only one angle. ... The overall position of sugar indicates that there is a surplus and it has now been proposed to export sugar to conserve foreign exchange so as to facilitate the import of fertilisers. Since the cost of production of sugar in India is higher than that in other countries, the export of this commodity has to be subsidised by the Government."

Food Ministry's Scheme

That the Central Government wants to allow exports of sugar was clearly indicated, again, by Mr. Patil in the course of his speech at the inaugural meeting of the National Committee of the "Freedom from Hunger" campaign at New Delhi on 27th August. He said: "I am thinking of exporting sugar and the money thus earned will be used on fertilisers." In fact, a recent report from New Delhi avers that the Food Ministry has almost finalised its plan for exporting sugar. The scheme, it is said, provides for the sale of 150,000 tons of refined sugar to the U.S. But details regarding the price that the U.S. will pay and the actual period of shipment are not available. It may be noted here that, before sugar exports are effected to the U.S., India should necessarily have to become a signatory to the International Sugar Agreement and the Sugar Council will have to allot it a basic export quota. For the Agreement prohibits sale of sugar from a non-signatory to a signatory country.

The U.S. seems to be interested in buying from India large quantities of sugar not only in the current calendar year but also every year in future. This is due to the need for bridging the wide gap between the actual domestic requirements of sugar and the level of output which was being largely filled all these years by imports of raw sugar from Cuba. Two months ago, however, the U.S. Administration reduced Cuba's quota for 1960 by 25 per cent. and intends to cut the whole of the quota next year, in view of the anti-U.S. policies adopted by the revolutionary Government of Cuba. More recently, President Eisenhower has asked the American Congress for authority to cut off the purchase of 322,000 tons of sugar from the Dominican Republic also, under new arrangements made after the cutback in Cuba's quota, as well as for the extension of the Sugar Act beyond its present expiry date, that is, 31st March 1961. This move is a sequel to the decision of the Foreign Ministers of the Organisation of American States' meeting in Costa Rica to end diplomatic relations with the Dominican Republic and to interrupt partially normal economic relations.

Loss of Rupee Resources

It is, of course, true that the Indian sugar sold to the U.S. may fetch a price much higher than the world prices. The raw sugar bought from Brazil recently was paid at the high rate of 6.50 cents (about 31 nP) per lb., as against the currently ruling world price of 3.26 cents (15½ nP per lb.). Since Indian sugar is refined, it may get a still higher price. Even assuming that the price paid by the U.S. will be at the rate of 31 nP (6.5 cents) per lb., an export of 150,000 tons of sugar will fetch about Rs. 10.42 crores. This is quite a sizable amount of foreign exchange. But it must be borne in mind that, as against this receipt, sugar exports will entail much loss of rupee resources to the country. The total loss on the export of 150,000 tons will be of the order of Rs. 6.72 crores, representing the difference between the total price payable by the U.S. and the actual domestic level of price. Of this loss, the Government's share (by way of full remission of excise duty (Rs. 291.20 per ton) and cane cess (Rs. 50.91 per ton)) will be Rs. 5.13 crores, so that the balance of Rs. 1.59 crore will have to be subsidised, the incidence of which will fall on either the consumer in the form of high prices or on the sugar mills by way of lower profits.

Now that the Government of India has decided to continue controls on sugar and is determined to export a part of the surplus, there is the imperative need for increasing production to as high a level as possible in the ensuing season which is due to commence in a few weeks, on 1st November to be precise. Some sugar mill owners are of the view that the conditions of the cane crop as it stands at present and the expansion in the crushing capacity of the industry point to the possibility of the coming season's sugar output being higher than the current season's output by 200,000 tons, that is, at about 2.60 million tons. While it is rather too early to say whether this forecast will prove correct, there is no denying the fact that the Government of India should at least continue, if not improve, the present incentive scheme under which the sugar mills get a higher price for sugar to compensate for the increase in the minimum price of cane (from Re. 1.44 to Re. 1.62 per maund for delivery at the gate of a factory) and also a rebate of 50 per cent. of the basic excise duty (now Rs. 11.25 per cwt.) on sugar produced in excess of the average of production in the two seasons preceding the 1959-60 season. There is actually a good case for enhancing the scheme of incentives to the producer, as a much larger production of sugar has to be secured to take care of the ever-expanding domestic consumption and of the necessity for earning the badly required foreign exchange. The Government will do well to announce its sugar price policy for the coming season as early as possible.

SALE OF SUGAR

Mr. M. V. Krishnappa, Deputy Minister of Agriculture, stated in the Lok Sabha on the 5th inst. that the entire sugar produced during 1959-60 was likely to be sold and despatched by factories by February 1961 and that the finalisation of accounts would take a few months thereafter. The sugarcane growers, according to him, would be entitled to get the additional cane price due to them after accounts for this season had been finalised.

The Government of India has released 200,000 tons of sugar. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and Punjab except a small quantity which will be released to each factory for sale to its employees.

saving the city's water supply

On 1st October 1959, as rain and cyclone lashed Jamshedpur, a small group of Tata Steel workers hurried to a reservoir adjoining the Subarnarekha to save the city of Jamshedpur from a major disaster.

A raft, cut adrift by storm, stood poised on the very brink of a dam separating the reservoir and the river ... threatening to hurtle down with the swelling current any moment and smash the water main running along a bridge over the river.

As catastrophe seemed imminent, 27-year old Shamsuddin Khan jumped into the swirling water. Fighting his way to the raft, he managed to pull it away. His colleagues gave him a hero's welcome and Tata Steel gave a reward of Rs. 500 and a permanent job to this brave son of an ex-employee.

Risking life from a sense of duty is a tradition that worker heroes like Shamsuddin are setting up in Jamshedpur, where industry is not merely a source of livelihood but a way of life.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/- you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

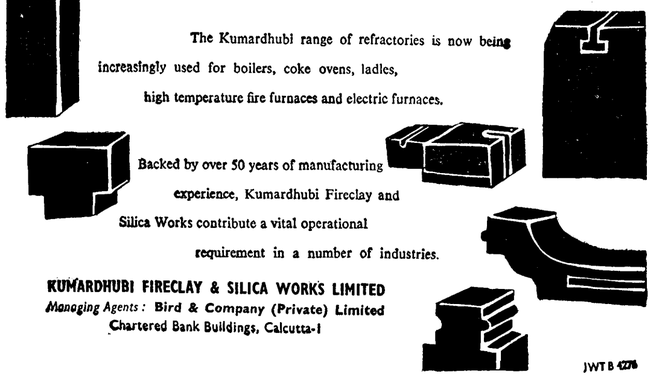
failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Indian Railways Conference Association Coaching Tariff No. 17.

The Station Master of the nearest station will give you detailed information if you contact him.

WESTERN AND CENTRAL RAILWAYS

Refractories for all purposes...

The Kumardhubi range of refractories is now being increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.



Backed by over 50 years of manufacturing experience, Kumardhubi Fireclay and Silica Works contribute a vital operational requirement in a number of industries.

TOTAL WORLD POPULATION APPROACHES THREE BILLION

ANNUAL INCREASE IS 48 MILLION PERSONS

TOTAL world population is placed at 2,900 million persons, according to a statistical study published by the United Nations. Reporting on some 270 separate geographic areas of the world, including every sovereign State and non-self-governing territory, the United Nations *Demographic Yearbook* 1959* lists mainland China with an estimated 669 million inhabitants as the country with the largest population. India follows with 403 million, the U.S.S.R. with 209 million and the United States (including the new States of Alaska and Hawaii) with 178 million. These four countries together total about 1,500 million and account for more than half of the world total. Next in size of populations are Japan, with 92 million, and Pakistan, Indonesia, Brazil, the Federal Republic of Germany and the United Kingdom, all with populations over 50 million.

On a world-wide basis, the rate of population increase during 1958 was about the same as for the previous seven years, namely 1.7 per cent., or 48 million persons a year, the equivalent of adding the inhabitants of a country the size of Italy to the world annually. This annual increase results from an estimated world birth rate of 35 per thousand, which adds about 100 million births a year, and an estimated death rate of 18 per thousand, which subtracts around 51 million from the total. This leaves a net annual population gain of something over 48 million persons, over 5,000 an hour or about 85 persons per minute.

Over half the world's population now lives in Asia and, by the year 2000, Asia will probably account for about 60 per cent. of the total. Only 14 per cent. of the world's population lives in Europe at present: if the current trends continue, this figure will decrease to 10 per cent. by the end of the century.

Variations in Population Density

In "city-states" such as Macau, Monaco, Gibraltar, Ceuta and Melilla, and Hong Kong, densities of population are shown to range from 2,000 to 14,000 persons per square kilometer. (One square kilometer equals about 0.4 of a square mile). High densities are found in many island areas, notably Bermuda with 814 persons to the square kilometer and Barbados with 544 persons per square kilometer, while Puerto Rico, China (Taiwan), Mauritius, Ryukyu Islands, Grenada and the Maldive Islands have densities of some 250 persons to the square kilometer. Of the countries which do not fall in either of the two categories mentioned above, the Netherlands has the highest population density—345 persons per square kilometer, with Belgium, England and Wales, and Japan following closely. At the bottom of the list are places with densities of two or fewer persons per square kilometer, such as Spanish Sahara, Bechuanaland, Mongolian People's Republic, Papua, Greenland, Australia, Canada and Iceland also appear in the group of sparsely populated countries. In the United States, which has been increased by the addition of Alaska and Hawaii, the previous density of 22 persons per square kilometer has changed to 19 persons per square kilometer as a result of a large increase in area, which has a relatively low density (now that Alaska and Hawaii have been included as States).

In terms of continents, Europe has the greatest population density, with an average of 85 persons per square kilometer. Central Europe, with a population total of 136 million as against 140 million in the Northern and Western segments, has a density more than double that of Northern and Western Europe—134 persons per square kilometer as against 62.

Asia as a whole is the second most densely populated continent, with 59 persons per square kilometer; the density in South Central Asia amounts to 105 persons per square kilometer.

In comparing densities in Europe and Asia, the statistics show that the population of Asia is increasing at the rate of 1.8 per cent. per year while Europe's rate of growth is only 0.7. Hence, the density in Asia will increase, while that in Europe is likely to remain relatively stable.

Fastest Increase in Middle America

The average world birth rate for the period 1954-1958 was estimated to be about 35 per 1,000 population. This rate has been derived from a study of the range of registered rates and such official estimates of natality as are obtainable from sample surveys, analyses of census returns, and the like. On a continental basis, Africa has the highest estimated birth rate—45 per thousand. Asia, the next highest continent, has an over-all rate of 39 per thousand. The highest regional rate occurs in both South-east Asia and Tropical and Southern Africa, namely 46 per thousand.

The region with the fastest rate of population increase, however, is shown to be Middle America, due to the fact that the relatively high birth rate of 42 per thousand is combined with death rates which have been substantially lowered in recent years. The lowest continental rate is found in Europe—19 per thousand—and, within Europe, the lowest regional rate—18 per thousand—appears in the Northern and Western region.

Recorded birth rates for some 200 areas of the world are presented in the 1959 *Demographic Yearbook* for the period 1920-1958, and more than half these areas are indicated to have data of a high degree of reliability. Some 50 per cent. of the world's recorded birth rates, reliable and unreliable, are found to be between 30 and 49 per thousand.

Of the reliable ones, the highest rate is shown for Guinea (62), with Guam (60) running a close second. Rates over 50 per thousand are shown also for Sudan, Ivory Coast, Ghana and Northern Rhodesia in Africa; and for Burma and Brunei in Asia. The lowest reliable rate (except for the city of West Berlin, with a rate of only 8.5) is given for Uruguay (11.4). Except for these two areas, rates of under 20 are found mostly in Europe, with the Isle of Man (12.1) and Sweden (14.2) at the bottom of the list. Japan, with a birth rate of 18.0 per thousand is also among the countries with low birth rates.

A comparison made for 64 countries of average birth rates for 1954-1958, with corresponding rates for 1945-1949 appears to show a tendency toward stabilisation, rather than a decided upward or downward trend. Twenty-eight of these 64 countries show 1954-1958 rates higher than those for 1945-1949, while 36 countries show lower rates.

Norwegian Babies Have Greatest Possibility of Long Life

Life expectancy at birth is still greatest in Norway, where, according to the latest life table, female babies have an average life expectancy of 75 years and males an average expectation of 71 years. In Sweden and the Netherlands, life expectancy is almost as high, being 74 years for females and 71 for males. The *Demographic Yearbook* gives recent life tables for more than 75 areas in all parts of the world. A total of 17 countries show life expectancy of girl babies exceeding 70 years, but in only three countries are male babies expected to live as long. The United States ranks fairly high on the list as regards life expectancy for girl babies (its average of 73 years being exceeded only by Norway, Sweden, Netherlands, England and Wales, Austria and Denmark). The average expected life span for United States male babies (66 years) is less than that in several European countries or in Australia, New Zealand, Canada, or for the Jewish population of Israel.

The shortest expectation of life (32 years) is still found in India. However, it is also one

(*Continued on page 491*)

*This issue of the *Demographic Yearbook*, an annual publication giving statistical information on population trends and shifts in all parts of the world, contains 719 pages, including statistics on area, population, births, deaths, marriages, divorces and migration. Natality statistics are presented in particular detail for the first time since 1954.

REASONS FOR THE FALL IN PRICES OF CRUDE OIL

REVENUE OF MIDDLE EAST GOVERNMENTS UNLIKELY TO BE AFFECTED

By Special Arrangement with PETROLEUM PRESS SERVICE

*[Competitive pressures generated partly from within the oil industry by an abundance of supplies have led first to abnormal discounting and then to cuts in posted prices of crude oils in the Middle East. These downward adjustments will have some adverse effect on the income of producing companies in the countries concerned, and on Government revenues in those countries. If the reductions are not followed in Venezuela, they will confer a further price advantage on Middle East oil for competitive delivery to the world's markets. There seems no early prospect that the potential over-supply of oil which has led to these changes will disappear.—*ED.]

FURTHER evidence of abundance in oil supplies has been forthcoming during the past month (August) in the shape of cuts in posted prices for Middle East crudes. This round of reductions, the first to affect crude oil postings in this area since February 1959, does not imply any sudden deterioration in the world market situation. It is the outcome of pressures which have been building up for months past—pressures reflected in the increasing prevalence of discounts off posted prices for crude oil. As we go to press it cannot be assumed that the process of adjustment is yet complete.

The downward movement was initiated on 9th August by Esso, whose reductions in Persian Gulf crude oil postings ranged from 4 cents a barrel for heavy Safaniya (Arabian) crude to 14 cents for lighter grades from Arabia; at the East Mediterranean terminals, Esso cut both Arabian and Iraqi crudes by 14 cents a barrel. Shell followed this lead four days later, back-dating its changes to 9th August. B.P., the main supplier of Middle East crudes, expressed regret that the reductions had been made, but later felt impelled to follow—though not to the full extent. B.P. lowered its prices by amounts ranging up to only 10 cents a barrel, effective 16th August. Reductions subsequently posted by the other major suppliers bring their new prices within the general range of the adjusted prices of Esso and B.P.

The evidence of the varying patterns of reductions suggests that, as might have been expected, there were different viewpoints among the main suppliers in regard to the need, the timing and the extent of the changes. For the time being, therefore, more than one price is being quoted for each of the main Middle East crudes, as the following table makes clear:

(Dollars per barrel)

	A.P.I. gravity	Before 9th August	Latest
Arabian (Safaniya) ex Ras Tanura..	27.0–27.9°	1.50	1.46–1.47
Arabian, ex Ras Tanura	34.0–34.9°	1.90	1.76–1.80
Arabian, ex Sidon	34.0–34.9°	2.27	2.13–2.17
Qatar, ex Umm Said	41.0–41.9°	2.05	1.91–1.95
Iraq, ex Tripoli and/or Banias:			
(i) N. Iraq, excluding (ii) ..	36.0–36.9°	2.31	2.17–2.23
(ii) Jambur/Bai Hassan blend ..	34.0–34.9°	2.17	2.03–2.09
Iraq-Basrah, ex Fao	35.0–35.9°	1.80	1.68–1.72
Kuwait, ex Mena al Ahmadi ..	31.0–31.9°	1.67	1.56–1.59
Iran, Light ex Bandar Mashur ..	34.0–34.9°	1.86	1.74–1.78
Iran, Light ex Abadan	34.0–34.9°	1.81	1.69–1.73
Iran, Heavy/Med. ex Abadan ..	31.0–31.9°	1.62	1.53–1.58
Iran, Gach Saran, ex Kharg Is. ..	31.0–31.9°	1.67	1.58–1.63

Sooner or later, competitive forces must be expected to iron out these differences. C.F.P.'s action in withdrawing its posting for Saharan crude ex Bougie (Algeria), followed by similar action by R.E.P.A.L., must likewise be expected to be temporary, pending reappraisal of the new competitive levels.

Competition

Posted prices for crude oil have tended to exhibit some degree of inertia (perhaps excessive) in responding to market trends, moving less frequently than product prices and then by bigger steps. Discounts off posted prices have traditionally been granted for special categories of business (particularly where new outlets were being opened up); but, in the competitive situation of recent months, discounts had been tending to increase in size and to become more widespread. In such a situation, there are many pressures operating to bring posted prices more into line with the general level of the market. The decision when to make a change, and by how much, is a matter of individual commercial judgment, often involving a compromise between conflicting considerations, which may have a different relative impact for different companies. By the end of July, Esso seems to have decided that, so far as their situation was concerned, the time was ripe to make a change.

The gradual lowering of average selling prices of crude oil which had resulted from more widespread discounting may be attributed to the persistent world surplus of producing capacity (actual and potential), aided by a surplus of refining capacity which sharpened competition in the final marketing of products from which crude oil buyers derive their income.

More and more concerns are engaging in the international oil business. Various countries are pressing the development of any oil resources they may possess. The restriction of imports into the U.S.A. has created serious sales problems for American companies which have succeeded in their quest abroad for cheaper crude for their home market. There has been pressure on oil importers in many parts of the world to build new refineries and to expand their existing capacity, and on new entrants to make refinery investments in marketing areas. In some markets, there has been growing competition from other forms of energy, while natural gas has become increasingly available. Throughout, the Governments of most of the main exporting countries have been pressing for bigger outputs. All this has meant intensely competitive market conditions.

One competitive factor specifically mentioned by Esso is Russia. Actual exports from the U.S.S.R. to the free world amounted last year to no more than 8 million tons of crude and 6½ million tons of products (under 4 per cent. of the oil entering international trade), but this year several new markets have been penetrated and Russian competition, or the threat of it, is having an increasing influence on markets.

Effect on Government Revenues

Turning to the effect of the past month's changes, the impact on company profits will doubtless differ considerably from one concern to another. Profits from Middle East production are calculated for tax purposes under the 50 : 50 arrangements on the basis of posted prices, and not of realised export prices. To the extent that prices actually realised by the producing companies (or the "trading companies" which sell all the crude for export) fully reflect the cut in postings, their net income, after tax, per barrel of oil sold will be reduced by broadly half the amount of the posted price reduction. This is the position in respect of by far the greater part of their total trade, since the prices applicable to sales to affiliated companies, and the prices realised under many sales contracts with non-affiliated customers, are based on and escalate cent for cent with posted prices at the time of lifting. Exceptionally, there may be sales contracts under which the level of actually realised prices is not affected by, or does not fully reflect, the cut in postings; and in respect of those sales the net income, after tax, of the company making the sale will be less adversely affected, or may even be marginally increased.

For fully integrated operators, however, profits are mainly dependent on three variables —turnover, total costs including tax, and prices realised for products in the consuming areas. Their income from the marketing of products in the main consuming areas supplied with oil of Middle East origin—particularly Europe—has been subject to gradual erosion under the impact of competition from many sources. But the tax element in these integrated costs, of which tax paid in the production areas is a large component, has not been reduced commensurately. The downward adjustments in posted crude prices will tend to impute a more realistic share of total integrated profits to the production stage. The resultant reduction in tax payable in the producing areas will provide a degree of relief for integrated operators which is only reasonable in the difficult current market situation.

So far as Middle East Governments are concerned, their revenues are bound to be adversely affected to some extent by the past month's changes; but the effect should not be exaggerated. On average, the crude oil price cuts are of the order of five to seven per cent., only half of which is relevant to the calculation of Government revenues. The latter benefit, moreover, from the steady rise in production. In the first half of this year, the output of Middle East oil was no less than 13 per cent. above the level of January-June 1959, following an increase of 7.7 per cent. in 1959 over 1958. If the production and disposal of Middle East oil continues to grow at this sort of rate, the benefit to Government revenues will far outweigh the loss attributable to the modest cut in posted prices.

Reaction on Venezuela

At the time of writing, Venezuelan postings, which were last reduced in April 1959, have not been adjusted in line with the latest changes in the Middle East. In Venezuela, the export income of the operating companies, from which the Government's share of profits is derived, is based on actual sales prices; for the greater part, these are not full posted prices, but reflect competitive market conditions. However, if Venezuelan posted prices are to preserve their status as indicators of the market value of Venezuelan oil, they too are due for downward adjustment to reflect the international trend.

In fact, with freight rates at their present levels, Venezuelan postings might be said to have overvalued that country's oil, in relation to Middle East crudes, even before the latest adjustments in the latter area. The comparison is not altogether straightforward, since no two crudes are identical, while there is a certain arbitrariness about the choice of freight rate to be included in the calculation. The following figures may, however, be taken as illustrative. Prior to the recent Middle East price cuts, Arabian light crude (34.0°-34.9°) was quoted at $1.90 a barrel ex Ras Tanura, while Tia Juana light crude of the same gravity was quoted at $2.61 f.o.b. Amuay. Calculating freight charges at the current A.F.R.A. figure (Scale minus 12½ per cent. for large tankers), the Arabian oil could have been delivered to New York for about $3.00 a barrel and the Venezuelan at about $2.90. But, if spot market rates are taken (say Scale minus 60 per cent.), the delivered prices become $2.40 for Arabian and $2.75 for Venezuelan.

This explains why the bulk of Venezuelan oil is not being sold at posted prices. Discounts offered by some of the smaller and newer producers have been considerably bigger than those normally given for large, or long-term, contracts—some marginal transactions having been reported at discounts ranging up to $1 a barrel. And the Chairman of Creole disclosed the other day that two-thirds of his company's output was being sold at discounts averaging about 10 per cent.

Dr. Perez Alfonzo, Venezuela's Minister of Hydro-carbons, has asserted that a fall in Venezuela's production would be preferable to a lowering of the price level. For months past, the Minister has been resisting offers by new entrants into Venezuela to sell crude at "abnormal" discounts, and has recently threatened that offenders would have their production suspended. He is, of course, known to favour some form of international pro-rationing scheme to relieve the pressure of supply potential on market demand—an aim with which, logically, it is possible to sympathise while recognising the practical difficulties of implementation. What is quite certain is that it will not be possible for Venezuela to maintain an effective price level for its crude oil out of line with that from the Middle East and at the same time to retain its present share of the world market. If Venezuelan oil is not to become even less competitive, then either still greater discounts will have to be conceded, or its posted prices will have to be adjusted.

Patent Rights of Revolutionary Invention for Sale

PATENT RIGHTS OF REVOLUTIONARY invention of great interest, specially to manufacturers of cycle, plastic torch, steel furniture or to all wishing to manufacture and market, is for sale on goodwill royalty terms. Please apply to Box No. 969, C/o "Commerce", Brady House, Veer Nariman Road, Fort, Bombay.

DAMLE COMMITTEE

After our leading article on India's oil policy had gone to press, Mr. K. D. Malaviya, Minister for Mines and Oil, gave some information to the Lok Sabha (on 2nd September) about the three-man expert committee, called the Damle Committee, to devise a scheme for determining fair oil prices payable to the companies from time to time. He stated the Committee was drawing up a detailed questionnaire, though even when we wrote our article the oil companies had received copies of it, requesting expeditious reply. The following are the terms of reference to the Committee:

(*a*) The cost at which crude oil and the various refined petroleum products can be imported.

(*b*) Whether the port charges element in oil prices can be adjusted on a flat basis irrespective of the particular port to which any supply area is linked.

(*c*) In keeping with the relevant clauses of the existing agreements relating to the establishment of the two refineries at Bombay and the refinery at Visakhapatnam, how should the ceilings be determined for the refinery prices of their products.

(*d*) Whether the time is opportune for evolving a railway freight pool system in respect of oil products.

(*e*) Whether along with such pooling, or irrespective of the same, for reduction of the imbalances in consumption particularly, principles can be evolved for having a common tariff of railway freight in respect of petroleum products, irrespective of whether they are of the dangerous or non-dangerous category.

(*f*) To what extent more efficient and economic arrangements can be introduced for unloading, storage and distribution of petroleum products in land.

(*g*) The best manner in which the oil industry can enlist service co-operatives in the marketing and distribution of such petroleum products as are in daily use in almost every household like, particularly, kerosene.

(*h*) In keeping with the needs of conservation of foreign exchange, stabilisation of prices, raising of internal resources and the overall development of the planned economy, to what extent the pricing mechanism in respect of petroleum products should be used for purposive influencing of production, transport, distribution and consumption patterns.

The Minister, who gave the aforesaid information in response to a question by a Member of the Lok Sabha, added that the Committee had been asked to report by the end of the year.

RADIOISOTOPES

A ten-day international conference on radioisotopes in the physical sciences and industry opened at Copenhagen, Denmark, on the 6th inst. The conference has been organised by the International Atomic Energy Agency, with the co-operation of the U.N.E.S.C.O. A brief account of the progress made in discovering a growing range of uses to which isotopes can be put in medicine, industry and agriculture will, therefore, be of topical interest.

As a uniquely powerful source of sub-atomic particles, the nuclear reactor speeds up fundamental research into the structure of matter, and provides a new and improved means of investigating the properties of particular materials and testing their purity. At the same time, both in the very process of fission and by transmuting substances deliberately subjected to its radiation, it creates new substances, sometimes new elements, but more often isotopes of known elements, namely, substances with the same chemical properties as some known substances, but differing in weight and usually in radioactivity. Most of these new substances are radioactive, and are known as radioisotopes. The nuclear reactor has greatly widened the range of radioisotopes, and is the principal or only sources of most of them. Some radioactive substances, however, occur naturally, and a few are produced in a cyclotron.

Radioisotopes are finding a vast and constantly growing range of applications. Their radiations have valuable curative, sterilising, and other physiological properties, and can be used in radiography or to disperse static electricity. Moreover, they can be used as "tracers" for the common substances with which they are chemically identical. Geiger counters, and other instruments sensitive to radioactivity, can detect and measure radioactive material in far smaller quantities than any chemical analysis, and can follow, stage by stage, their undisturbed passage through an enclosed process.

Tracer techniques have added precision to biological and medical research. By the use of radioactive carbon, radioactive iron, radioactive iodine, and other radioactive materials, medical research laboratories in Britain have discovered the structure of many organic compounds occurring in the body, and traced many of the processes by which these compounds, and particularly the fats, are built up; obtained new information on the secretions of the thyroid glands; and studied the activity of the chemical constituents of cell chromosomes during cell growth and division.

Tracer uses in diagnosis include measuring the survival rate of red corpuscles (with radioactive chromium), studying thyroid functions (with radioactive iodine), examining blood circulation (with radioactive sodium) and locating brain tumours (with radioactive phosphorus or radioactive arsenic).

For radiography and radiation therapy, artificial radioactive substances have the advantages of being handy, portable, and relatively cheap; they can be introduced into the organs of a body so as to obtain radiographs otherwise unobtainable, or to limit radiation effects on diseased tissues. In hospitals, radiation from radioisotopes is a cheap and efficient way of sterilising certain thermoplastic and rubber equipment which cannot stand high temperatures.

In industry, the use of radioisotopes is spreading rapidly with increasing realisation of their possibilities in research and control. It has been estimated that, in the United Kingdom alone, industry is saving at least £3,500,000 a year, and possibly £7,000,000, through their use. They are used for radiography, to test the quality of castings and welds. Incorporated in liquids, gases, or dusts, they can be used to trace flow, to spot leaks in supply systems and spillage from tanks, to check the evenness of mixing and the thickness of oil film, to measures filter efficiency, and to trace mud movements in estuaries. Incorporated in metal bearing, they make possible the measurement of wear, which is proportionate to the radioactivity of used oil.

Radioactive sources attached to instruments or moving parts operating out of sight can trace their movement, or indicate their present location. Gauges consisting of a radioactive source and a recording instrument can measure small variations in the thickness or composition of objects passed between the source and the recording instrument. Such apparatus can be used for checking the accuracy of production of continuous film or sheeting.

Some types of radiation can be used to counter static electrical charges arising in certain industrial processes in paper-making and textiles, and can thus reduce the risk of fire. In addition, radiation can initiate chemical processes; the physical properties of polythene, for example, can be improved by irradiation, which brings about a crosslinkage of molecules.

Recently, with large quantities of Cobalt 60 available, radiation is beginning to be used for bulk sterilisation of products after they have been packed and sealed.

Radioactive isotopes are being used at various agricultural research centres as tracers in studying plant and animal nutrition in assessing absorption of soil fertilisers or insecticides, and in following the stages in plant synthesis of complex sugars, starches, and proteins or in the formation of milk fat. Carefully controlled radiation is also used in the preservation of stored agricultural products—for example, to prevent potatoes from sprouting too fast—and for the disinfestation of stored products, particularly grain. Radiation has also been used in genetic experiments and practical breeding in an attempt to speed up the development of improved strains, both by inducing a higher rate of mutation (that is, of chance variations from inherited characteristics) and by breaking genetic links between wanted and unwanted qualities so that the unwanted can be bred out.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

CHAIRMAN, MR. K. A. P. VISWANATHAM'S SPEECH

THE Twentieth Annual General Meeting of the South Madras Electric Supply Corporation Ltd. was held at Tirchirapalli on 27th August 1960. Speaking on the occasion, Mr. K. A. P. Viswanatham, Chairman, said that the Company was doing its best to meet the growing demand for power supply, but its efforts were being hampered by the paucity of funds and shortage of materials and skilled man-power.

The following is the full text of Mr. Viswanatham's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in welcoming you to this twentieth annual general meeting of the Company.

"I believe you have studied the Directors' report and the balance-sheet and accounts which have been in your hands for some time. I shall take these documents as read, with your leave, and shall invite your comments on them later.

"This year too we have suffered from paucity of finance. A capital expenditure of Rs. 10.35 lakhs was incurred and 19 new villages were electrified in the Trichy and Tanjore areas. I must admit that this is far below the expectations of the large numbers of power supply applicants and, in spite of our anxiety, we could do no better.

"The share issue of Rs. 14 lakhs worth of equity shares made this year have been fully subscribed. Your Directors have sanctioned a comprehensive works programme, with due consideration to priority of applications, and it is expected that we may be able to execute about Rs. 15 lakhs worth of capital works before 31st March 1961.

"We have also been informed by the Government of Madras that a sum of Rs. 25 lakhs has been placed by them with the Madras State Electricity Board for disbursements as loans to licensees. We have submitted schemes to the Electricity Board and we expect they may give us our share of this loan, may be about Rs. 14 to 15 lakhs, before the end of March, 1961. Expeditious steps will be taken to utilise these funds for extensions in the year 1961-62.

Heavy Back-log of Works

"The back-log of works are heavy. Even about a crore of rupees will not suffice to completely satisfy the demands in our area of supply. And even if such a sum of money were made available, we will not be able to utilise the sum in a year for want of materials and adequate skilled man-power. It is my hope that, with our resources and loans from the Electricity Board, we may execute every year between Rs. 15 and 20 lakhs of new works, thus satisfying the consumers to the extent possible.

"Apart from our own difficulties, it is a well-known fact that adequate power supply is not available from the Electricity Board's existing power houses and grid. I expect it will easily take another two or three years for the supply to catch up with the demand, if the Kundah and Neiveli schemes get completed by then and the State Electricity Board is enabled to plan for the future in a broadbased way by supplementing existing resources with thermal and nuclear power stations.

"The revenue earnings this year have been satisfactory and we have been able to maintain the usual 9 per cent. dividend on equity shares. I believe this will nearly represent the position in future years. With the existing ramifications of the Electricity Supply Act nothing better could be expected.

Preference Dividends

"On preference dividends you are aware of the controversies created by the Finance Act. Your Directors have, under proper advice, decided the measure they have adopted as explained in their report. It has also been indicated to you that in due course your approval will be sought to change the dividend structure, to give the preference shareholder a 7 per cent. dividend from which the shareholder's tax will be deducted. This step appears to me to be equitable, from the point of view of all classes of shareholders. This change involves a complicated procedure of class meetings and an extraordinary general body meeting. These will be convened in due course, unless legislation anticipates us and makes the position easier for us.

"Among your Directors, Sri M. V. Krishnamurthi Rao resigned this year, to seek election to the State Legislature. I would like to tender to him on behalf of all of you and myself, my sincere thanks for his contribution to the development of the Company. In accordance with the policy enunciated last year and to comply with the requirements of the Electricity Supply Act, it has been recommended to you that this vacancy need not be filled up and the strength of the Board reduced accordingly. The suggestion is that the strength of the Board be reduced to ten members (excluding ex-officio Directors) by not filling vacancies as and when they arise.

Staff Relations

"I am glad to say that staff relations have been very cordial all through. The works committee is functioning usefully and responsibly much to the satisfaction of both the management and labour.

"Last year, I told you of the proposals put forward by the citizens of this city and the districts to have an engineering college here in memory of the late V. Seshasayee. Considerable progress has been made in this direction and I am hopeful that Trichy will have its Engineering College in 1961. At the appropriate time I am sure we will have your support.

"I now move that the Directors' Report and audited balance-sheet as on 31st March 1960 and the profit and loss account for the year ended 31st March 1960 be approved and adopted."

N.B.—*The above does not purport to be the report of the proceedings of the twentieth annual general meeting of the Company held on 27th August* 1960.

NEW PRODUCTS AND PROCESSES

Multi-storey Car Park

A MULTI STOREY car park—the biggest of its kind in the world—is to be built at the Austin Motor Company's Birmingham works to overcome difficulties which arise in accommodating the high output of vehicles from the factory. The building which will be in full operation by September 1961 is nine storeys high with ramped floors, and will house 3,300 vehicles. Cars will go there direct from the assembly lines to await collection for the export market. The works, claimed to be the largest integrated motor plant in Europe has a current capacity of over 8,000 vehicles a week, which under the £49 million B.M.C. expansion plan will rise to 10,500 a week by 1962. This creates a storage problem. Outside the factory there are usually long lines of cars waiting—however briefly—for collection. But the factory itself is expanding and reducing areas available for parking finished vehicles. By the second half of 1961 a vast new building for the paint, trim, finishing and final assembly of 2,500 vehicles a week will be in operation beside the existing car assembly building—on ground now occupied by vehicles on despatch. As there is no possibility of expanding outwards for parking space, the company must expand upwards. The proposed car park building is of reinforced concrete columns and slab construction and is 376 ft. long and 204 ft. wide. It uses the ramped floor principle of operation. All parking floors are ramped, and a double spiral system of floors enables upward and downward traffic movement to be completely segregated. Passenger lifts and staircases are provided at the four corners, and, in addition to car access by the ramped floors, two car lifts will be installed, principally to move cars above fourth-floor level.

Leak Detection With Radioisotopes

A method for detecting leaks at a rate of less than one sixty-millionth part of a cubic inch a day will be illustrated in the United Kingdom Atomic Energy Authority's exhibit at the Fifth International Instruments and Measurements Exhibition in Stockholm. The method, which uses a radioisotope technique, has been developed by the Wantage Research Laboratory. Corresponding to a cube of about one four-hundredth of an inch side, a sixty-millionth of a cubic inch appears to be a very small volume, yet it can contain seven million million atoms of the radioactive gas used in this particular application. Since, initially, some 16,000 of these atoms would decay and emit tell-tale radiation each second, detection of their presence and calculation of the rate of leakage can be carried out with comparative ease. To determine the rate at which leaks in sealed components would admit air or other gases, these are immersed in an atmosphere of radioactive krypton-85 gas which is raised to a known pressure for a fixed period of time. After the components have been removed from the gas, the amounts of krypton which have found their way into the objects under test are determined by measuring the emitted radiation with a counter. For outward leakage, the component is filled to the required pressure with a known specific activity of the gas. Then, either the escaping gas is collected and assayed with a counter, or measurements are made of the decrease over a period of time in the intensity of radiation emitted from the component. The latter is the most reliable method as a leak can become temporarily blocked. Tests of small articles such as transistors—whose life is shortened if oxygen or water vapour penetrates their containers—are best made by immersing them in the gas. Sensitivity is reported to be about 100 times better than with a helium mass spectrometer.

New Stimulator for Animal Growth

The new stimulator of growth, obtained by a Soviet Russian agro-chemist, Professor Jebrail Guseinov, through the treatment of oil waste with a solution of caustic alkali, favourably affects the organisms of animals. It is allied as regards its properties to such active biological substances as hormones and vitamins. Guseinov's preparation was initially used for stimulating the growth of plants, particularly cotton and certain vegetables. Good results were obtained in this sphere. Tests on its effect on animal organisms were conducted at the National University's Biological Department. Extensive experiments were carried out at the poultry farm in Baku. Inclusion of four to ten kilograms of stimulator in the daily ration of the birds made them gain 20 per cent. more weight than usual. Their egg-laying capacity increased by almost the same proportion. As distinct from penicillin, biomicine and other antibiotics used for stimulation purposes, the new preparation does not lower the organism's immunity. Its manufacture is very simple and cheap. One kilogram of the stimulator costs 10 copecks. The application of this stimulator to silk worms increased cocoon production 12 per cent. and in some cases even 17 per cent. Good results were obtained through the initial, so far laboratory, investigations of the stimulator's effect on animals—rabbits, sheep and large-horn cattle.

Paper Suits for Dirty Jobs

Paper suits are in use in at least one atomic plant in America to save the costs and dangers of laundering materials which are possibly radioactive. Costing about a dollar, they are worn once or twice and are then burned in a protected incinerator. The suits are also available for workers in the electronic and drug industries. They are made of nylon-reinforced paper which resists both fire and water. Safety engineers say they are better for personnel because the paper is more impervious than cloth and workers report that they are lighter, cooler and generally more comfortable. The suits, which come in various colours so workers of any crew can be easily identified, were developed because of the dangers of atomic waste products. Protective cloth clothing would have to be laundered in specially protected machinery so laundry workers would not be exposed to radioactive materials. Burning the paper suits avoids this danger and expense. Possible civilian uses would be for fishermen—throw them away when you've cleaned the fish—or for motor mechanics, avoiding the problem of getting heavy grease out of clothing in the home washing machine.

Quieter Gear Wheel

Recent trends towards more compact gear assemblies have stressed the need for greater precision in finishing gear wheels. On the other hand mass-production techniques often lead to the production of gear teeth with imperfections that cause noisy running in gear assemblies. Designed to resolve this difficulty is a range of compact honing machines newly introduced to the U.K. They can be used to treat all gears before assembly, eliminating, it is claimed, costly testing and hand grinding operations. Three types of honer, a standard semi-automatic model; a lower cost manual model; and a fully automatic machine with a magazine loader are available. The first two types have capacity for gears up to 12 inches pitch circle diameter and the automatic model can accommodate up to 4-inch size. The honing tool in these machines available from Precision Gear Machines and Tools, Red Ring Works, Bodmin Road, Wyken, Coventry, is a dimensionally-stabilised abrasive-impregnated plastic gear. It is manufactured to close tolerances and meshes with the workpiece in a "crossed axes" relationship.

Simple Fire-fighting Equipment

A new simple device, which can be incorporated in standard fire-fighting equipment and could greatly assist firemen in dealing with outbreaks in confined spaces where heat is intense, is being tested by the Essex County Fire Brigade in Eastern England. The device is a flanged disc of light metal that fits inside a normal small-bore nozzle and produces a fog of atomised water pumped through at the rate of 150 lbs. to the square inch. High pressure fog jets have long been successfully used, but the new device was designed by a fire officer of Colchester, following a serious school fire, to meet what he felt was a need for a means of producing efficient "fog" in places where large amounts of water are not immediately available. The device, produced in the Brigade's own workshops, has now been adopted on trial by the Chief Fire Officer of Essex in various parts of the county. Tests already made have shown it to be efficient. It can, it is said, be manufactured in the U.K. for as little as a shilling. Its advantages are that it conserves water and greatly reduces water damage and has the extinguishing power of much larger jets in confined spaces, and provides a good protective water screen.

A New Sweetener

Synthetic sweetening substances are not solely used as substitutes for sugar in times of penury; a great many people are obliged to abstain from the use of sugar, either because of their health or else for æsthetical reasons. A Swiss firm has put on market a new synthetic edulcorative preparation, called "Assugrine," the principal component being pure sodium cyclamate, and not containing—as is the case with other similar products—any admixture of saccharine. "Assugrine," is a product that is fifty times sweeter than cane sugar, it is claimed, is absolutely harmless and does not suffer any deleterious effects from cooking.

(Concluded from next column)

As a report of the Chief Inspector of Factories in the U.K. says, "managements must take as axiomatic that all workers—and young persons more often than others—are liable to do foolish things at some time or another." Improvements in the design of machinery can help; but they will take time; a wide programme of experiments will be required before the lines development should take become clearer.

Another aspect worth examining is whether the scheme depends for its success far too much on doctors and professional people and too little on the lay men and women who are, so to speak, its customers.

Now that what were hopes about wages are being achieved, some fundamental re-thinking of obligations by trade unions should be appropriate. They could tell members that a system of insurance, supported by subsidies from taxation, undermined the concept of benefits as a right acquired by contributions personally made; workers would then be less likely to look upon contributions as a series of crippling cuts. Authority's action does not absolve trade unions of the responsibility for raising the level of safety-consciousness in workers; some look upon sensible precautions as in some way effeminate. Experience abroad emphasises two points: that mechanisation of plant (in particular, mechanical handling) by reducing the number of operations (and hence the number of exposures to risk) has promoted safety; and that safety has also increased as a by-product of efforts to increase productivity. It is to these issues that the trade unions must now turn.—*All Rights Reserved.*

EMPLOYEES' STATE INSURANCE

IMPORTANCE OF SAFETY PRECAUTIONS

By B. Vasudevan

FROM small beginnings, the operations of the Employees' State Insurance Corporation have so broadened that about 1,451,000 workers now come under the umbrella. But, judging from some letters published in the daily Press, the plea of the West Bengal Provincial Trade Union Congress in October last for deferment of operations in Hooghly and 24 Parganas (reminiscent of "save us from our friends") and Mr. G. L. Nanda's remarks in Parliament (September 1959), the umbrella seems leaking in some places. Strangely, Dr. Lakshmanaswamy Mudaliar's report has not yet been released. Some of the shortcomings seem understandable, for so rapid has been industrialisation that social security, health and safety measures could not keep pace. But there are others avoidable and easier to overcome. The Estimates Committee's report makes distressing reading. For success, an essential preliminary is co-ordination of, and a change of outlook in, the five segments: the Government, the Corporation, doctors, employers and employees. Indeed, there is perhaps no aspect of industrial life on which it is more necessary for parties to work together; for only thus will it be possible to curb the high and rising trend of industrial injuries. (The increase in industrial accidents in West Bengal since independence is not exceptional.)

Efforts should not end with the setting up of a Corporation. Whether small industries require some relief in contributions is worth examining. As Dr. Douglas Ensminger (Ford Foundation) said recently, there is need "not only to help individuals in trouble but also to make such changes in society as would prevent them from getting into trouble." In the context of industrial expansion, the Ministries of Health and Labour assume adventitious importance. Together they can do much in setting up a comprehensive occupational health and safety service. They could examine how much of the knowledge in the West could be adapted to Indian conditions. Mere ratification of some I.L.O. conventions will not mean much. Another possible approach is to persuade the W.H.O. and the I.L.O. to set up in India (as they have done in collaboration elsewhere) an Institute of Occupational Health. It is worth enquiring how many of the doctors on the Corporation's staff have had the special training to diagnose and treat ailments caused, to give but one example, by the dust, fumes and chemicals workers encounter in some factories. The number is unlikely to be impressive. Nor has there been adequate medical research into the industrial causes of illness; a deficiency which slows down the pace at which preventive measures against hazards to health can be taken. This is not to minimise the very valuable work done by the All-India Institute of Hygiene and Public Health; the emphasis is on 'adequate' in relation to the country's requirements. Some broadening and intensification of the Institute's activities should help. Yet another handicap is that there are not enough statistics to give a clear picture of the occupations in which special risks to health arise.

Although not all the problems can be settled at the local level (as this might create awkward precedents), some decentralisation seems necessary; so also a simplification of procedures to ensure prompt service. Statistics of fresh coverage do not mean much, unless the scheme has been a success in areas already covered. A study of the Surveys of the Chief Adviser (Factories) of industrial hygiene should help locate occupational health hazards and devise proper control measures. Not only must the Corporation's inspectorate ensure that there is protection against preventable accidents, but that the workers are persuaded to use care and commonsense. Experience in Britain shows that adequate publicity to the causes of accidents has helped greatly in reducing recurrence. (The setting up of separate industrial medical units at the place of work must await much better days.) Alongside, but independent of, work on industrial injuries, there should be training in safety methods; a task in which employers' co-operation is essential.

Much can be done by employers at no great cost; there is inadequate awareness of the importance of proper machinery maintenance and the use of fencing and other simple safeguards.

(Continued in previous column)

WAGE COSTS IN EUROPEAN MANUFACTURING INDUSTRIES

A COMPARISON WITH THE U.S.

A STUDY of wage rates in selected manufacturing industries in the principal industrial countries of Western Europe made by the French National Institute of Statistics and Economic Studies has thrown interesting light on the comparative levels of wage costs in industries in these countries. It reveals that European hourly wage costs (including fringe benefits) are still far below the U.S. levels. The U.S. average of $2.68 per hour, compares with $1.08 for Sweden, which is the highest, and 57 cents for the Netherlands which is the lowest, in Western Europe. Another interesting point brought out by that study is that fringe benefits or social charges make up a larger part of the total cost of labour in Europe than in the U.S. In Italy, they account for more than 40 per cent. of the total wage cost. In addition to *fringe benefits* such as paid vacations, pensions and unemployment insurance, commonly paid in the U.S., European laws often prescribe such benefits as a family allowance based on the number of a worker's children. It may be noted here that, according to a study of 28 industries in India made by the Indian Institute of Public Opinion, the percentage ratio of fringe benefits to wages and salaries was as low as 3.3 in 1946 and even by 1956 they had moved up to 5.4 only.

French metal products industries, according to the aforesaid study, have among the lowest wage costs in the Common Market, although, spatially, the French average for all manufacturing units falls about in the middle. French labour costs in the printing industry, on the other hand, are the highest among the Six. British labour costs average lower than German but are higher in the mechanical, electrical, printing, leather, furniture and textile industries. The table above gives the comparison for eleven industries.

Average hourly wage costs in 11 industries

(In U.S. dollars)

Industries	Belgium	U.K.	France	W. Germany	Italy	Netherlands	Switzerland
Metals	1.01	0.95	0.84	1.01	0.81	0.87	N.A.
Mechanical and electrical	0.85	0.82	0.76	0.76	0.66	0.58	N.A.
Glass, ceramics and construction material	0.72	0.74	0.70	0.81	0.54	0.56	0.78
Chemicals	0.76	0.80	0.76	0.83	0.71	0.57	0.86
Food	0.67	0.66	0.62	0.67	0.51	0.54	0.71
Textiles	0.59	0.63	0.57	0.60	0.54	0.51	0.62
Clothing	0.52	0.53	0.54	0.54	0.43	0.35	0.57
Leather	0.57	0.67	0.58	0.61	0.47	0.46	0.68
Wood and furniture	0.56	0.73	0.59	0.62	0.43	0.53	0.74
Paper	0.73	0.68	0.66	0.68	0.61	0.52	0.74
Printing	0.80	0.89	0.94	0.79	0.72	0.58	0.93

The average hourly wage costs in manufacturing industries in W. Europe, as compared with those in the U.S., are given below.

Average hourly wage cost in manufacturing industries

Countries	Average hourly wage (in U.S. dollars)	Basic wage (Percentage of hourly wage)	Fringe benefits (Percentage of hourly wage)
U.S.	2.68	83	17
Sweden	1.08	87	13
W. Germany	0.78	69	31
Switzerland	0.77	87	13
U.K.	0.77	88	12
Belgium	0.74	76	21
France	0.71	66	34
Italy	0.61	57	43
Netherlands	0.57	77	23

N.B.—It may be noted here that the average hourly wage of an industrial worker in India is roughly 50 naye paise or 10 U.S. cents.

Implications

What are the implications of this study to American business men considering investments in Western Europe? This question has been examined by the Economic Research Department of the Chase Manhattan Bank, New York, in its latest (July 1960) bimonthly publication, *Report on Western Europe*. The authors of the article point out that prospective American investors should not be misled by the apparent great differences in wages in the U.S. and Western European countries, because they are just only one part of a cost analysis. While lower wage rates can help make it more profitable to produce some products in Europe than as compared with about five per cent. in the U.S. Besides, Western Europe has had more inflation than the U.S. So, when these rates are adjusted for changes in the cost of living, the spread in real wages is smaller, the increase being about four per cent. a year in the Six, as against three per cent. a year in the U.S. These overall figures, however, hide some important differences as between countries. Germany and France had much higher real wage increases than Italy and the Netherlands. Outside the Common Market other differences exist. The real wage increase in Sweden, for example, was 5½ per cent. a year, while, in Britain, it was only 1.3 per cent. The key question, therefore, is whether the trend towards faster wage increases in Europe will continue. The answer, according to the authors of the *Report on Western Europe*, depends on the attitude of European labour unions.

For an understanding of the behaviour pattern of European trade unions, it is important to know their genesis, and functional orientation. European unions, we are told by the economists of the Chase Manhattan Bank, are not set up to bargain for higher wages as effectively as those in the U.S. Traditionally inclined towards politics rather than collective bargaining, they tend to be organised around common political interests rather than by craft or industry. Their legal status is not so favourable as that of labour unions in the U.S. Also, lower income levels have kept them financially weaker than their American counterparts.

Labour unions in Europe are, however, acquiring a new look. The old-style unions were suitable to the relatively static, post-war economies. Union leaders thought that workers could not get a larger share of the economic pie without radical social reform, towards which they directed their main effort. But the post-war boom in Europe has shown that the economic machinery can work very well without a major overhaul. The trade union leaders are, therefore, shifting their attention to collective bargaining. They are tightening union organisation, building their financial resources and pressing harder for more pay and shorter hours. This pressure is building up at a time when unemployment is at a post-war low and when the high level of prosperity may make it more difficult for Governments and businesses to resist union demands.

Lesson for Indian Labour Leaders

The information contained in the aforesaid paragraph is something which should make the trade union leaders in India sit up and think afresh. The lesson to be learned by them is that they should concentrate on strengthening the bargaining power of their unions not by seeking political power and status, nor by demanding nationalisation of the private sector, but by working for a rapid economic development of the country. It is only when the economy is geared to a high rate of growth that the demand for labour will remain at a high level and the pressure of unemployment will decrease.

To revert to the review on Europe, it is stated that, notwithstanding the trade union's demand for more wages, Europe may still be able to keep wage increases roughly in line with the rise in output per worker. In the post-war years, large capital investment and technical advances have given W. Europe large increases in productivity—large enough in many industries to support the rise in wage rates and still give European producers a growing advantage in international markets. At the same time, monetary and fiscal authorities have also been perfecting controls to combat inflation. The record of the past few years suggests that vigorous attempts will be made to hold prices stable and keep European producers competitive in world markets.

Thus, concludes the Chase Manhattan Bank's Report, wage rates in Western Europe may well continue to rise more rapidly than in the U.S. But it will be a long time before they approach U.S. levels. It would, therefore, appear unrealistic for the U.S. manufacturers to count on a wage-price spiral to erode the vigour of West European competition in export markets. The Indian manufacturers, too, who are planning to compete with their European counterparts, will do well to take note of this conclusion and strive hard to raise their productivity.

MEMBERSHIP OF UNIONS

The verification of membership of the Central Labour Organisations, as on 31st March 1960 showed that the Indian National Trade Union Congress had a membership of 10,20,653, the All-India Trade Union Congress 5,07,654, the *Hind Mazdoor Sabha* 2,41,636 and the United Trade Union Congress 90,629. The I.N.T.U.C. had more membership than all the remaining three central organisations put together.

ANNUAL MEETING OF ORISSA CEMENT LIMITED

NEED FOR EXPANSION OF REFRACTORY INDUSTRY

MR. J. DALMIA'S PLEA FOR ALLOWING EXISTING UNITS TO EXPAND

ADDRESSING the Tenth Annual General Meeting of Orissa Cement Ltd. held at Rajgangpur (Dist. Sundergarh, Orissa) on 2nd September 1960, Mr. J. Dalmia, Chairman, pointed out that the annual demand for refractories was expected to reach over 1.6 million tons by the end of the third Plan, which would mean the establishment of an installed capacity of over 2 million tons, as compared with that of 800,000 tons at present. The expansion of this vital industry, he said, was being hampered by the shortage of foreign exchange. In the circumstances, he suggested that the expansion of the existing units could be undertaken at a comparatively smaller expenditure.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the tenth annual general meeting of your Company. The audited statement of accounts for the year 1959 and the report of your Directors thereon have been in your hands for some time now and I will not, therefore, make any detailed reference to them.

"Your Company at present is mainly interested in two major industries, (i) cement and (ii) refractories. I do not think any comments are necessary on cement industry, except that it has suffered a lot due to inadequate movement of finished goods, which will be elucidated later in dealing with real transport problem.

"As regards refractories, the annual installed capacity of the refractory industry in our country has increased from about 4.44 lakh tons on 1st April 1956 to somewhat over 8 lakh tons by 1st April 1960. This substantial increase of some 3.56 lakh tons has, however, not proved adequate, partly because of the heavy constructional requirements of India's expanding steel industry in the second Plan period and partly due to the expansion not being correlated fully to the increasing demand, with the resultant anomaly that, while the production of refractories is very short in the field of special steel plant refractories, such as blast furnace bricks, ladle refractories, basic refractories and the like, there has been, to some extent, a surplus capacity created in the manufacture of ordinary fireclay refractories. At your plant, care has been taken to concentrate more on the production of specialised refractories, including basic, blast furnace, ladle and silica bricks and a measure of flexibility has been introduced in the plant which would permit the manufacture of newer and more specialised types of refractories as they are evolved and as the demand from the consumers may dictate.

Future Requirements of Refractories

"On the assumption of the existing practice of using silica bricks in the roof of open hearth furnace in the steel industry continuing for some more years, and on a production target of 10 million tons of ingot steel and a separate production of about 2 million tons of pig iron per year being achieved in the third Plan period and after allowing for the proportionate consumption of refractories in the non-steel sector, the demand for refractories is expected to reach a figure of over 16 lakh tons per annum by the end of the third Five-year Plan. This would require an installed capacity of somewhat over 20 lakh tons. In the event of a switch-over by the steel industry to an all-basic roof for the open hearth furnace, the total demand for refractories would be less at about 13 lakh tons per annum with an installed capacity requirement of over 14.5 lakh tons. The need for further rapid expansion of the industry is thus apparent and the Government's anxiety to achieve this is shown by their decision to licence additional capacity for the manufacture of refractories freely. The Government will doubtless bear in mind the need for regulating the expansion of the industry in future directions, so that the additional capacity may be created will be correlated to the increased demand for certain types of refractories, wherever such demand cannot be met by the existing capacity.

Expansion of Existing Units

"I feel sure that the Government are also aware that the expansion of this vital industry is being severely hampered by lack of foreign exchange. One may well consider the advisability, in the present circumstances, of giving preference to units already in production which, through the imports of some additional machinery at a comparatively small expenditure of foreign exchange, would be able to balance their plants for increasing the range and quantum of their production to a very appreciable extent.

"For the satisfactory operation of the already existing plants and for the future growth of this vital industry, there is very great need for the proper exploration, utilisation and conservation of the essential raw materials required in increasing quantities for the manufacture of refractories. It is important that the industry, as a major actual consumer, should be given a measure of preference over others in obtaining and exploiting deposits of such raw materials.

"It is heartening to observe the steps that the Government have taken to standardise the specifications of various types of refractories, particularly those needed by the steel plants, several of whom had hitherto stipulated their individual specifications to meet the standards set by their foreign collaborators. The formulation and adoption of common standards would enable the indigenous industries to meet, to a large extent, the need for refractories for our expanding steel industry and this would be an important factor in stimulating a healthy growth of the refractory industry itself.

"You will thus be pleased to observe that the manufacture of refractories, on which your Company is now well and truly launched, is important in the dynamic concept of our country's industrialisation and we hope that we shall be able to acquit ourselves creditably in this.

Transport Problem

"A major problem which has confronted your Company is the rail transport facilities to and from the factory. The situation has become particularly difficult since the last year. Although the cement factory has a daily quota for the outward movement of cement under a preferential movement programme, this quota has been rarely met and the shortfalls in the supply of wagons have been very considerable. The position becomes particularly difficult during the rainy season when it is difficult to obtain the required number of water-tight covered wagons. This has resulted in accumulation of stocks of clinker at your works of over 50,000 tons. Moreover, the placement of empties by the railway at the Company's sidings is sporadic and great difficulty is often experienced in managing labour and loading wagons during the night hours and during the allowable free time of only five hours. The railways have been requested to revert to the pilot-to-pilot system and to run pilots to the cement sidings at least twice a day, once in the morning and once in the evening at regular times.

"The [illegible] considerable difficulty [illegible] Authority's [illegible] inward rail movement for of the [illegible] raw materials. It is to be hoped safet[illegible] recognition will be given to the im[illegible]ance of the refractory industry by the railways who should agree to a preferential movement programme being allotted to the refrac[illegible]y industry as well.

"Transport facilities should be expanded to the extent necessary for moving the existing, as well as expanding, production in the country. If required, further resources may be transferred from other development plans for transportation, for it is quite futile to develop industries after making heavy investments and then to have the frustrating experience that the output cannot be moved and production has, perforce, to be curtailed. A realistic and balanced plan, therefore, for the development of both rail and road transportation is of the utmost importance.

Company Law Amendment

"I would say a few words in respect of the Companies Act Amendment Bill 1960 as it has emerged after the deliberations of the Select Committee and also in respect of some of the provisions as existing now. There are various provisions which need sanction of the shareholders in general meeting and also the approval of the Central Government. The procedure which companies are generally required to follow is to place the matter before the shareholders first and if the proposal is adopted either by an ordinary resolution or by a special resolution, as required under law, then an application is submitted to the Central Government for approval. I would suggest that the law should be so amended that only matters of magnitude need be referred to shareholders. For relatively minor matters, reference to shareholders is a waste of money, time and energy, if without the approval of the Central Government, the same cannot be given effect to. After all, in giving their approval, the Central Government keep in view the interests of the shareholders. There are examples where for similar matters and which were not very vital, even after approval of the shareholders, the Central Government have given approval in case of one, but withheld the same in case of the other. Therefore, companies should be required first to submit their application for approval to the Central Government and after a preliminary consideration of the proposal, the Central Government may decide whether it is vital to be referred to the shareholders, in which case the Company may be directed to do so and the application for approval may be kept in abeyance and considered after the decision of the shareholders is communicated to Government. Convening of a shareholders' meeting is an expensive affair. In companies like T.I.S.Co, it is said that the cost of holding shareholders' meeting is of the order of Rs. 50,000. In your Company also the expenses are considerable, although not as much as in T.I.S.Co. Therefore, keeping all these factors in view, the Government should decide in each case, on receipt of the application for approval, whether the matter is so vital that it should be referred to shareholders.

"Another question is about the lost or destroyed share certificates. The provisions as to penalties for issue of fraudulent duplicate certificate as proposed are very strict. The shareholders are advised to keep their share certificates properly in safe custody. If the share certificate is lost or destroyed, unless satisfactory proof is produced, it would practically be impossible to issue duplicate certificate, unless it is clearly provided in the Act that an affidavit and indemnity should be accepted as adequate proof in this respect.

Labour Peace

"I am glad to inform you that after the prolonged strike which took place in March last year, there is now peace and good order at your works. The workers and staff employed in connection with the cement industry will receive substantial increases in their salaries as a result of the recommendations made by the Central Wage Board for the cement industry. It is now essential that a drive be made to improve productivity and in this effort, workers should extend their full co-operation to the management. The Government of India has decided to institute workload studies at all the cement factories. I hope these studies will be carried out expeditiously and every assistance will be given for implementation of the recommendations.

"In the end, I would like to express our appreciation of the services rendered by the officers, staff and workers of the Company during the year.

"I have given you a brief review of the various aspects of the industries in which your Company is engaged. We would now proceed to consider the annual accounts and transact the rest of the business on the agenda."

N.B.—*The above extract of the speech does not purport to be the report of the proceedings of the tenth annual general meeting of the Company held on 2nd September* 1960.

ANNUAL MEETING OF ENFIELD INDIA LIMITED

MR. K. R. SUNDARAM IYER'S REVIEW

EXPANSION PLANS ON HAND—ADDITIONAL CAPITAL TO BE ISSUED

THE Government of India has granted a licence to The Enfield India Ltd. for the manufacture of scooters. The production of these two-wheeler transport will commence in the second half of 1961. Simultaneously, the Company will start the manufacture of Villiers road vehicle engines. Disclosing this at the Fourth Annual Meeting of the Company held at Tiruvottiyur, Madras, on 31st August, 1960, Mr. K. R. Sundaram Iyer, Chairman, said that the Company would shortly issue additional capital to the tune of Rs. 10 lakhs.

The following is the full text of Mr. Sundaram Iyer's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to this fourth annual general meeting of the Company. The Directors' report and the statements of account for the year ended 31st December 1959 have been with you for sometime and, with your permission, I shall take them as read.

"Satisfactory progress was made during the year in all directions. The production of vehicles was higher by 20 per cent. and sales turnover increased from Rs. 71 lakhs to Rs. 91 lakhs. The profits rose to nearly Rs. 7 lakhs from Rs. 5 lakhs for the previous year, before providing for depreciation. This has enabled your Directors to recommend, after writing off fully the balance of the preliminary expenses and brokerage on shares and after providing for development rebate reserve and dividend on preference shares, a maiden dividend on the ordinary shares.

"Further plant and machinery were acquired and put into operation. The gross block increased from Rs. 39.4 lakhs to Rs. 48 lakhs. Your Company continued to make rapid progress in increasing the indigenous content of the motor cycles, in spite of the several difficulties that industries having phased programmes of import substitution have to face. I am now able to state with greater confidence than I was able to muster at the last annual general meeting that the phased programme will be substantially completed during the calendar year 1930, according to the original schedule. During 1961, we shall be importing only a negligible number of finished components and even these, mostly will comprise what are commonly known as proprietary or specialised components, such as electrical equipment, carburettors, etc., which are not in our manufacturing programme and which normally, vehicle manufacturers obtain from specialists. There is greater reason than ever to expect that, as a result of the measures that are being taken by the Government, industries for the manufacture of such specialised components would soon be established in the country, so that imports of even these proprietary items can cease in the coming years. Those who are already engaged in the manufacture of proprietary items and components in India have to play a vital role towards a rapid and smooth progress of the industries who depend upon such manufacturers for their original equipment requirements. Already many well-established manufacturers have given the highest priority for original equipment requirements. In the present critical stage of our having to achieve self-sufficiency, regulated deliveries are of paramount importance. I should not have referred to this but for the fact that there have been occasions when the only source of supply of some original equipment was the open market at unconscionable prices.

Need for Additional Capital

"I must once again express our gratitude to the Government of India for their continued and active assistance and guidance, in general, and, in particular, for progressively increasing allocation of foreign exchange for imported raw materials. This, coupled with the increase in indigenous content and increase in productivity to which I shall refer later, will enable your Company to achieve a further increase during 1960 and a substantial increase in 1961, in production. With such a steady expansion of our production, the need for larger capital has become insistent. As it is, the imbalance between the paid-up capital and the capital employed in the conduct of our business is large. Your Directors have, therefore, decided to make a further issue of equity capital to the extent of Rs. 10 lakhs. This will be offered in the first instance to equity shareholders on our register. You will get the Company's circular in this regard shortly.

"Significant progress was made by your selling agents, The Madras Motors Private Limited, in sales promotion and rendering service after sales. Royal Enfield motor cycles are sold and serviced all over India by a network of dealers and sub-dealers, whose number has reached a record of 145, as against 91 at the time of the last meeting. More zonal and service representatives have been stationed to assist and guide the dealers. A separate organisation has been sponsored for providing hire-purchase facilities for our products. Training courses for service personnel of the dealers are being conducted with more intensity and with great advantage to the users of our products. A representative was deputed to the various countries in West Asia to make contacts and explore the possibilities for export of our products. With these various sales, service and export promotion arrangements and with the increasing use of motor cycles at home consequent on increased economic activity, your selling agents are well set to take care of the increasing output.

"It is gratifying to note that an increased volume of orders was secured for and executed by the general engineering department. This has been a significant factor in reducing the overheads and the cost of production of motor cycles.

Visit of Foreign Collaborators

"I would like to express my pleasure that Major Smith, Chairman of our U.K. collaborators, The Enfield Cycle Company, Ltd., accompanied by Mrs. Smith and Major Mountford, Joint Managing Director, was able to visit your factory early this year. Major Smith is a leading personality in the motor cycle industry in the United Kingdom with over 50 years' experience in the line. We are naturally gratified when he expressed his immense satisfaction at the progress which your Company has made and the quality of its production.

Expansion Plans

"I would now like to say a few words about the expansion plans of your Company. During the second half of 1961, we expect to commence the production of scooters for which, as you have perhaps seen from Press reports, the Government has granted us a licence under the Industries (Development and Regulation) Act. Your Company has been the pioneer in the manufacture of powered two-wheeler transport in India. After bringing to a successful completion the phased programme for manufacture of motor cycles, it seems logical that your Company should take up the manufacture of scooters, which is another popular item of powered two-wheeler transport and for which demand in the country is growing fast. The scooter project will go a long way to further strengthen and consolidate the position of this Company. The manufacture of motor cycles and scooters involve, by and large, similar plant and machinery, techniques and skills. Therefore, we are in a specially advantageous position to achieve this expansion by better utilisation of our existing equipment and with suitable additions to them. An entirely new scooter making plant would involve a substantially larger outlay of capital and this is where our existing set-up secures for the new programme considerable economy in capital cost. Simultaneously, your Company will be commencing the manufacture of the well-known Villiers road vehicle engines. A unique feature in this expansion programme is that the same model of the Villiers engine with small modifications will be used both on the scooter and the light-weight motor cycle. This should facilitate economies in the production of both the motor cycle and the scooter. Plans are also under finalisation for the manufacture of Villiers engine for industrial and agricultural uses. There is a fast growing demand in our country for such engines.

"In March this year we had the pleasure of a visit by Mr. Farrer, Chairman of The Villiers Engineering Company, Ltd., U.K., and an authority on engines, accompanied by Mrs. Farrer and Mr. Thornton, Export Manager. I consider that the collaboration arrangement with Villiers as an event of great importance to your Company. Mr. Farrer's visit at this preliminary stage and the first-hand impression he has gained of your Company have given a good start to this programme.

"At the last meeting, I referred to our intention to promote a number of small-scale ancillary units. A detailed scheme has been got ready for this, including the formation of an industrial estate by the small *entrepreneurs* on a co-operative basis. Apart from the fact that your Company would be playing a wholesome role in helping small *entrepreneurs* to come up, the scheme will be mutually beneficial.

Incentive Bonus Scheme

"I must refer to some major steps that your Company had initiated during the year under review for increasing the efficiency of the Company's operations and thereby achieving higher productivity. Increase in the nation's standard of living is, to a considerable extent, dependent on higher productivity. Even in some of the advanced Western countries the productivity movement is of recent origin. We are grateful to the Government of India, and, in particular, to the Minister for Industries, for the stimulus given to the productivity movement in our country. As is known, productivity aims at achieving with a given set of facilities higher production of better quality at lower cost. This requires both increase in management efficiency and enthusiastic co-operation from the employees. Obviously, the fruits of higher productivity should be shared not only by the consumers, the Company and its shareholders but also by the employees. Otherwise, there is no motivation for them to take part in this important task. With the assistance of Industrial Engineering Consultants, your Company commenced during the year under review, studies of various departments for taking measures to increase management efficiency and to evolve a suitable scheme of incentives for the employees. As a result, an incentive bonus scheme was introduced in June this year. The Madras Chief Minister inaugurated the scheme and the Industries Minister presided over the function. By the end of the year most of the sections would have come under the incentive scheme and I have every hope that this scheme will play an important role in increasing the prosperity of your Company and its employees in the years to come. I wish to remind the shareholders once again that your Company is still in the midst of the phased programme which is scheduled to be completed by the end of this year and which involves considerable advance planning. The benefits that accrue from the above measures will be apparent only from the coming calendar year.

"An important event in the labour-management relations since the last meeting has been the merger of the two trade unions. This has further strengthened the cordial relationship between the employees and the management and eliminated to a considerable extent unhealthy rivalries. A start has been made to implement the scheme of joint consultation to improve productivity and on matters of performance standard, job evaluation and employees' grievances. An agreement has been signed with the merged union on the incentive scheme and bonus for 1958.

"I would like to take this opportunity to convey our gratitude to the Madras Government from whom we continue to receive assistance and guidance.

"I wish to express our appreciation to our U.K. collaborators, The Enfield Cycle Company, Ltd., who have continued to give unreservedly their co-operation.

"I take pleasure in expressing the thanks of the Company to the selling agents, the dealers and sub-dealers, who have played an active part in the sales promotion and servicing of our products.

"Last but not least, the workmen, staff and officers of your Company deserve appreciation for having contributed to the satisfactory results of 1959."

NOTE: This does not purport to be a record of the proceedings of the above Fourth Annual General Body Meeting of the Company.

IMPLICATIONS OF REGIONAL TRADE GROUPINGS TO G.A.T.T.

IMPRESSIONS OF AN INDIAN OBSERVER

IN the past two years, quite a few far-reaching developments have taken place in Europe and Latin America which will have a profound influence on world trade in the coming years. These were taken up for discussion at the last, that is, the sixteenth, session of the G.A.T.T. held at Geneva. Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industry, was one of the members of the Indian delegation to that session. He has given an interesting account of his impressions of the discussions at the G.A.T.T. meeting—on these developments in a report to the Federation. The report covers also other aspects of his nine weeks' tour of Europe and Russia. We give below an extract from Mr. Bansal's report pertaining to the discussions at the G.A.T.T. meeting, in which he has analysed the implications of regional trade groupings to the G.A.T.T. and the underdeveloped countries in this part of the Eastern hemisphere:

The representative of the European Economic Community, otherwise known as the Common Market of six, gave a review of developments within the Community over the last 12 months. According to him, production and trade had expanded, and more and more enterprises were planning production on the basis of the market comprising the six member-States. These States had also decided to accelerate the programme for reduction of internal barriers to their mutual trade and for the formulation of common tariff policies towards outside countries. A number of countries, including India, expressed disappointment at the fact that the member-States had not so far taken any action to ensure that the preferences in favour of imports from their overseas territories did not cause damage to the trade of third countries and that the progress in the elimination of quantitative restrictions on imports from these third countries continued to be slow and halting. Hope was expressed that, during the course of the forthcoming tariff negotiations, the member-States would offer substantial concessions on their common tariff in order to encourage larger imports, particularly from developing countries. The representatives of the Community gave an assurance that these points would be given sympathetic consideration.

European Free Trade Association

In March this year, the U.K., Sweden, Denmark, Norway, Switzerland, Austria and Portugal ratified the Stockholm Convention for the establishment of a Free Trade Area. In accordance with this Convention, industrial goods moving between these countries will be progressively freed of all tariff and quota barriers. Unlike the member-States of the European Economic Community, the E.F.T.A. countries will retain their individual tariff and commercial policies *vis-a-vis* outside countries. Moreover, the E.F.T.A. concessions do not extend to agricultural products, but a number of bilateral arrangements has been concluded between the member-States, permitting liberalisation of trade between two partners in items of mutual interest. The E.F.T.A. arrangements came in for discussion at the Session of the G.A.T.T. as, under Article XXIV of the G.A.T.T., any plan for the establishment of a Free Trade Area has to be submitted to the Contracting Parties for examination. A Working Party was set up to examine the Convention which held a number of meetings. On account of differences in the points of view, however, no agreed conclusions could be reached in regard to the compatibility of the E.F.T.A. with the provisions of the G.A.T.T. The matter was, therefore, postponed for further examination during the next Session. On behalf of India, it was pointed out that the establishment of E.F.T.A. would create new competition for Indian goods in Western Europe, unless the E.F.T.A. countries followed liberal trading policies designed to encourage imports not only of raw materials but also of semi-finished and finished goods.

Latin American Free Trade Area Treaty

This Treaty also came in for consideration. The provisions of the Treaty are calculated to establish a Free Trade Area within a period of 12 years through elimination of tariffs and other restrictions on the mutual trade of the member-States, broadly on the pattern of arrangements in Western Europe, but with some additional safeguards and a more flexible plan and time-table to deal with transitional problems. Among the special features of this Treaty, which is called Montevideo Treaty, are the provisions for mutual agreements for co-ordination of industrial programmes and for the grant of special concessions by the relatively more advanced to the relatively less advanced member-States in the matter of duties and other charges. Most of the Contracting Parties of the G.A.T.T., including India, expressed their sympathy with the aims and aspirations of the Latin American countries, but expressed the hope that they will continue to keep their markets open to imports from other countries outside the region, so that the Latin American development takes place in the context of a progressive expansion of world trade.

O.E.C.D.

In my opinion, an even more significant development that has taken place recently in the sphere of international commercial relations is the setting up of the Organisation for Economic Co-operation and Development (O.E.E.C.) and U.S.A. and Canada. The O.E.C.D. would be charged with the examination of trading problems concerning the whole Western European and North American region as well as the co-ordination of economic aid to less developed countries. As the G.A.T.T. is a world-wide organisation dealing with commercial relations between its member-Governments, the report of the four Experts who had prepared the framework of this organisation, came up for discussion in the session, during the course of which sentiments were expressed that the member-Governments of the new Body would refrain from vesting it with functions and responsibilities which may interfere with the role of G.A.T.T. Naturally, parallels were drawn between the obligations which the O.E.E.C. countries had undertaken *vis-a-vis* each other, which were not always compatible with the obligations of these countries under the G.A.T.T., and those that will now be undertaken by the O.E.C.D., and apprehensions were expressed that these would further undermine the position of the G.A.T.T. It was ultimately agreed that the views expressed at the G.A.T.T. meeting should be brought to the notice of the Special 20-Nation Committee which had been set up to finalise the organisation and structure of the new Body, and an assurance was received that the participating Governments would take due care to ensure that what they did in the new Organisation was in full conformity with their obligations under the G.A.T.T.

Implications To G.A.T.T.

Looking at these regional groupings, which now encompass almost the whole of the Western world, including North and South Americas, and the Super O.E.E.C., one cannot help feeling that the pattern of international economic and trading relations is entering an entirely new phase, which was certainly not foreseen by those who sat to draft the Havana Charter. Instead of one world-wide Organisation to take care of trading relations of the member-States, we have now three full-fledged groupings and the O.E.C.D. on top of them. One will have to be a great casuist indeed to succeed in establishing that the aims and objects of the Treaties establishing these groupings do not directly or indirectly—and in vital matters—go contrary to the broad objectives of the G.A.T.T. This was quite plain during the discussions on the E.F.T.A. Treaty.

The Montevideo Treaty, although having more or less identical objectives, was allowed to have a comparatively smoother sailing, mainly because of the sympathy of the developing nations to a group of nations more or less similarly placed, and because of the weak position of European countries which had already formed themselves into European Common Market and E.F.T.A. in criticising another set of countries following in their footsteps. The fact, however, remains that these groupings cannot but cut at the very root of the G.A.T.T. principles. The developing nations who are outside these groupings naturally find themselves in a great predicament, because, first, their bargaining power in the G.A.T.T. *vis-a-vis* the member-countries of these groups gets greatly reduced, and, secondly, there is already evidence that group rather than country-wise considerations are beginning to prevail in matters where such countries are affected.

The question as to what a country like India should do in a situation like this had been discussed informally on various occasions, and the only suggestion that emerged and that I would like to reiterate is that we should undertake at a high level a study of the repercussions of these groupings on other trading partners, particularly the developing nations, in order to make an assessment as to whether some of the countries, whose interests may be in danger of being adversely affected, should not think in terms of making some parallel arrangements of their own. I do not imagine that a common market comprising the developing nations or a payments union of these is straightaway possible, although the Afro-Asian Conference seriously thought on these lines. What, however, I do think is possible is the emergence of a well-knit block of the remaining member-nations of the G.A.T.T. and even those outside it, on the basis of mutually agreeable principles and objectives which may help in restoring the balance within the G.A.T.T., to start with. The whole question as to the utility

GROSS PROFIT OF IMPERIAL TOBACCO IMPROVES SLIGHTLY

MARKED RISE IN SALES—NET DIVIDEND LOWER

A SLIGHT increase of Rs. 9.30 lakhs to Rs. 342.65 lakhs in gross profit is disclosed by the accounts of the Imperial Tobacco Company of India Ltd., Calcutta, for the year ended 31st March 1960. While this is in refreshing contrast to the successive declines noted since 1955-56, from a peak of Rs. 415.71 lakhs in that year to Rs. 333.35 lakhs in 1958-59, the improvement does not even make good the drop suffered in the immediately preceding year and is also disproportionate to the sizable expansion in turnover. Value of sales, it may be noted, has grown by Rs. 2.60 crores during the year under review on top of an increase of Rs. 1.59 crores in 1958-59. The result is that the ratio of gross profit to sales, which had declined from 13.7 per cent. in 1955-56 to 9.7 per cent. in 1958-59, has dwindled further to 9.3 per cent. in the year under review.

The reasons for the declining profit margin are to be found in the mounting burden of customs and excise duties, the growing sales expenses to meet the increasing competition and the rise in prices of raw materials. The incidence of customs and excise duties which had increased from Rs. 11.59 crores in 1955-56, when it constituted 38 per cent. of the sales income, to Rs. 13.69 crores or 40 per cent. of the turnover in 1958-59, was higher still during the year under review at Rs. 15.47 crores or 41.9 per cent. of the sales. This was the result of the further increase in excise duty under the 1959 budget. It is not always possible to pass on entirely the burden of indirect taxes to the consumer and the manufacturers have often to bear a large part of the burden. It will be interesting to note that customs and excise duties constitute the largest element in the cost of production of the Company, as is the case with the other cigarette manufacturers, exceeding even the cost of raw materials consumed, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	36,88.07	34,20.40	32,01.20	32,11.58
Other income	54.46	63.96	66.16	60.84
Closing stocks of finished goods	2,29.51	2,56.92	2,92.07	2,53.65
Raw materials consumed ..	9,44.96	9,04.75	9,14.53	9,14.41
Customs and excise duties ..	15,47.27	13,69.15	12,99.13	12,73.80
Other expenses	9,07.60	8,76.29	7,56.87	7,08.11
Gross profit	3,42.65	3,33.35	3,56.79	3,76.05
Provision for—				
Depreciation	44.81	46.17	46.09	41.77
Taxation	1,56.22	1,72.20	1,78.58	1,96.33
Net profit	1,41.62	1,14.98	1,32.12	1,37.95
Transfer to reserves ..	20.20	23.42	27.00	31.72
Dividend	1,21.28	90.96	1,06.12	1,06.12
	(8%)*	(6%)	(7%)	(7%)
Carry forward	24.78	24.64	24.05	25.04

* Subject to deduction of tax or a net of 5.63 per cent.

The net profit has gone up by Rs. 26.64 lakhs to Rs. 141.62 lakhs, as compared with that for 1958-59, and this rise compares favourably with that in gross profit, thanks partly to the reduction in the rate of company taxation from 51.5 per cent. to 45 per cent., and the abolition of wealth tax on companies. The amount of wealth tax paid by the Company in respect of 1958-59 was Rs. 12.49 lakhs. The transfers to the various reserves have been reduced from Rs. 23.42 lakhs to Rs. 20.20 lakhs. Even so, the shareholders do not get the benefit of the increase in net profit, as ..s benefit, too, goes back to the Exchequer ne form of dividend tax. Thus, the Directo.. have recommended a dividend of 8 per cent. subject to deduction of tax, for the year under review, which, on a tax-free basis, is equivalent to 5.6 per cent. and is a shade less than that (6 per cent.) paid for 1958-59. As will be seen from table above, this is the second year in succession to witness a cut in the net return to the shareholders. It will be interesting to note here that the total tax payments (direct and indirect, including the tax deducted on dividend) made by the Company in respect of the year under review aggregate Rs. 17.40 crores, which represent over 47 per cent. of its sales revenue.

A striking feature of the Company's financial position is the high degree of liquidity. The large cash balances alone amounting to Rs. 3.13 crores more than adequately cover the current liabilities and provisions amounting to Rs. 2.88 crores. The other current assets (including investments in Government securities of the value of Rs. 72.50 lakhs) amount to Rs. 15.92 crores. The additions to the block account during the year are of the order of Rs. 60.17 lakhs, raising the gross value thereof to Rs. 6.41 crores (excluding the value of goodwill and trade marks at Rs. 4.90 crores). This has been written down to Rs. 3.53 crores. The total net assets thus amount to Rs. 24.60 crores, which are represented by a paid-up capital of Rs. 15.16 crores and reserves and surplus aggregating Rs. 9.44 crores.

The Rs. 10 fully paid-up shares of the Company are being quoted at Rs. 12.25 *ex-div.* At this rate the yield works out to 4.57 per cent. per annum, free of tax. The comparatively low premium thus commanded by the shares in the market is to be accounted for by the low rate of dividend which the Company has been paying. The Company cannot, however, afford to follow a more liberal policy on account of the huge capital which it has to feed. And, what is more, about 32 per cent. of the paid-up capital is represented by intangible and unproductive assets, namely, goodwill and trade marks. The only way in which the Company can raise its return to shareholders is through an increase in productivity and a reduction in its expenses. It is to be hoped that the Company's Chairman will throw some light on these questions in his forthcoming statement to shareholders.

MARKED RISE IN PROFIT OF STANDARD MOTORS

The working of the Standard Motors Products of India Ltd., Madras, during the year ended 31st December 1959, has been encouraging. Though there has been a further slight decline in sales, the gross profit has recorded a marked rise from Rs. 8.27 lakhs to Rs. 18.15 lakhs, thus more than offsetting the decline noted in 1958 when it had dropped from Rs. 15.30 lakhs earned in 1957. The provision for depreciation has been raised from Rs. 3.66 lakhs to Rs. 6.79 lakhs and a sum of Rs. 3.50 lakhs has been earmarked for taxation, as against *nil*. Even so, the net profit, at Rs. 7.86 lakhs, compares favourably with Rs. 4.61 lakhs for 1958. While there has been a slight cut in the amount ploughed back from Rs. 4 lakhs to Rs. 3 lakhs, it must be noted here that the sum of Rs. 4 lakhs added to the reserves last year included Rs. 3.76 lakhs transferred from the taxation reserve.

The Directors have recommended a dividend of 9 per cent., subject to deduction of tax, on ordinary shares, which is equivalent to 6.3 per cent. net and represents a cut from 7½ per cent. free of tax, paid for each of the previous two years. In other words, despite the improved results, the Directors have not been able even to make good the loss on account of the abolition of grossing of dividends. The dividend on the 6½ per cent. tax-free preference shares has been grossed, in order to maintain the net return to the shareholders after deduction of tax. The dividends absorb Rs. 5.03 lakhs, leaving a small sum of Rs. 3,869 to be carried forward, after bringing in Rs. 51,407 from the previous year.

During the year under review, the Company has had a large import licence and the production has been raised. It is now reaching 300 units per month.

The Company issued during the year under review additional capital to the tune of Rs. 42 lakhs, bringing the total issued capital to Rs. 1 crore, of which the paid-up capital is Rs. 97.41 lakhs, including application money amounting to Rs. 6.51 lakhs. The reserves and surplus as at the end of the year stand at Rs. 20.69 lakhs. The current liabilities and provisions, at Rs. 77.23 lakhs, are covered by current assets aggregating Rs. 108.23 lakhs. In pursuance of the programme of expansion, the Company spent during the year under review Rs. 18.53 lakhs on additions to the block account, bringing the gross value thereof to Rs. 117.02 lakhs. This has been written down to Rs. 86.54 lakhs.

The Company has received permission from the Government of India to increase the annual production of 10 h.p. cars from 3,000 units as at present to 6,000 units by 1963. It has also received sanction for the manufacture of one-ton trucks, making use of Vanguard engine, gearbox and 'differential.' The production of trucks is expected to be commenced by the middle of 1961. The Company's application for import of capital goods to implement the higher rate of production is awaiting Government's formal sanction. The cost of the extra equipment is estimated at Rs. 1.25 crores. The necessary finance for this purpose will be met by raising a loan or by issuing debentures.

The latest available market value of the Rs. 10 fully paid-up ordinary shares of the Company is Rs. 17.60 *cum-div.*, at which rate and on an *ex-div.* basis the shares offer a yield of 3.7 per cent. per annum, free of tax.

RESULTS OF TEXMACO LOWER

RAW MATERIAL SHORTAGE AFFECTS PRODUCTION

AN acute shortage of raw material, a break in the order position of broad-gauge wagons, a paucity of orders for jute spinning frames and some labour trouble in the first half of the year were the main factors which adversely affected the production and the profit of the Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Belgharia, 24-Paraganas) during the year ended 31st December 1959. The gross profit shows a drop from Rs. 109.34 lakhs for 1958 to Rs. 92.95 lakhs for 1959. The decline would have been more pronounced but for the satisfactory progress in the other sections, such as textile machinery division, sugar mill machinery, water tube boiler and steel foundry divisions.

The net profit is, however, a shade higher at Rs. 36.41 lakhs, as compared with Rs. 35.41 lakhs for 1958, mainly due to the cut in provision for taxation from Rs. 41 lakhs to Rs. 25.44 lakhs. This lower provision is the result of the fall in gross profit and reduction in company taxation. The allocations to various reserves and provisions have been reduced sizably from Rs. 11.40 lakhs to Rs. 3.50 lakhs and the saving on that account has been utilised to cover, to a large extent, the loss to the shareholders on account of the abolition of grossing of dividends. Even so, the net dividend on ordinary shares is less at 14 per cent. (on the basis of 20 per cent., subject to deduction of tax, recommended by the Directors), as against 15 per cent., free of tax, for 1958. The dividends on the 5½ per cent. and 6½ per cent. tax-free preference shares are proposed to be raised to 7.857 per cent. and 8.928 per cent. respectively, subject to deduction of tax, in order to remove all difficulties resulting from the divergent interpretation given to the changes in the Finance Acts of 1959 and 1960. Until the requisite modification is effected in the Articles of Association, the Directors have decided to pay dividends on these two classes of preference shares at the existing rates, subject to deduction of tax. Provision has, however, been made for the additional distribution in the accounts for the year under review and will be paid as soon as the proposed change is sanctioned by the shareholders. The 6½ per cent. tax-free preference shares are entitled to dividend only from 23rd November 1959. The dividend on the 5½ per cent. taxable preference shares will be paid subject to deduction of tax.

The progress of the Company since 1956 is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1959	1958	1957	1956
Sales and internal consumption.	6,14.06	5,83.84	4,53.36	3,68.47

* Subject to deduction of tax.

The salient features of the working of the various divisions of the Company during the year under review are as follows:

1. The textile machinery division remained fully booked and the working showed an improvement. The recession which had started in the cotton textile industry in 1957 was over and the cotton mills had embarked upon extensive modernisation and replacement of their plant and machinery. During the year under review, the Company booked a good number of orders for ring frames and carding engines. An order was also received from the Government of West Bengal for ring spinning frames for a cotton textile mill being set up at Kalyani. Production of ring doubling frames also commenced during the year and a number of them were supplied to textile mills.

2. Development of drawing frames is proceeding well. These machines are being made to the specifications of the foreign collaborators, Howa Machinery Ltd., Nagoya, Japan.

3. Carding engine production was satisfactory during the year. The Company has now been able to produce a higher percentage of its components in its works.

4. The Company's efforts for making exports proved successful and some ring frames were exported during the year under review. This is the first time that textile machinery has been exported from India.

5. The Company got sufficient orders from the railways so as to keep it busy for a pretty long time to come in the heavy engineering division. There was a break, however, in the order position of broad-gauge wagons during the year under review. Besides, there was also shortage of raw material in the wagon division. The output of wagons during the year, therefore, was not very satisfactory. The production of passenger coaching underframes which was taken in hand during the year was satisfactory.

6. Progress of sugar mill machinery and water tube boiler divisions was also maintained at a satisfactory level. The Company has got sufficient orders for these also in hand.

7. The erection work of the radial crest gates at the Panchet Hill Dam and the order from the Bhilai Steel Project were completed during the year under review. The Company secured another important order for the manufacture and erection of such gates at Rihand Dam in U.P.

8. Efforts are being made to diversify production in the heavy engineering division and, in fact, the Company was able to manufacture thermic syphons for locomotives for the first time in India.

9. The production in steel foundry division has improved. The major part of production in this division was for wagons and sugar mill machinery components required by the heavy engineering division.

10. On account of paucity of orders for jute spinning frames, the jute machinery division could not work satisfactorily during the year under review. The Company is, however, switching over the machines to other items of production.

Consequent on the issue of 100,000 6½ per cent. tax-free cumulative preference shares of Rs. 100 each, of which Rs. 50 were paid-up during the year under review, the paid-up capital of the Company has risen from Rs. 190 lakhs to Rs. 240 lakhs. The reserves and surplus aggregate Rs. 54.69 lakhs. Besides a debenture loan of Rs. 40 lakhs, the Company's borrowings amount to no less than Rs. 116.79 lakhs and other current liabilities and provisions to Rs. 380.62 lakhs. The total current liabilities are, however, more than adequately covered by current assets at Rs. 605.85 lakhs. The gross block of the value of Rs. 421.06 lakhs has been written down to Rs. 224.10 lakhs. The additions to the block account during the year aggregate Rs. 30.03 lakhs; this is on top of Rs. 36.91 lakhs expended in the previous year. The underwriting commission and other expenses on issue of preference shares yet to be written off amount to Rs. 3.75 lakhs.

The current market value of the Rs. 10 fully paid-up ordinary shares is Rs. 27.25 *cum-div.* On an *ex-div.* basis, the yield on the shares is 5.3 per cent. per annum free of tax.

CELLULOSE PRODUCTS OF INDIA

The cellulose Products of India Ltd. has received an industrial licence from the Government of India for setting up a plant for the manufacture of 7,200 tons per year of rayon grade dissolving pulp from cotton linters or cotton waste. The capital outlay of the project is placed around Rs. 1 crore. The various details of the project are yet to be finalised, after which the Directors will take a decision on the additional capital to be raised from the shareholders. Their proposals will be placed before the shareholders for consideration in due course. The Company is satisfied that there is sufficient demand for this grade of pulp, in view of the high percentage of its Alpha content. A technical and financial collaboration agreement will shortly be concluded with a leading foreign firm. The collaboration scheme for the manufacture of chemical cotton pulp will soon be submitted to the Government for its approval. The project will be implemented as soon as the necessary formalities are completed.

(Concluded from next column)

Alipore and Bombay factories are equipped with the most up-to-date automatic baking plants. With the commencement of the current year, the Company has embarked on an extensive programme of capital expenditure and orders have been placed for additional equipment which, according to the Directors, is, as far as possible, being manufactured in India to save foreign exchange. While the Company has a good internal market for its products, its progress in the export markets is still slow. Despite the heavily subsidised prices and other attractive concessions, it is finding increased competition from established foreign suppliers, whose ingredients and manufacturing costs are below those prevailing in this country. The Company has entered into an agreement with Messrs. Allen and Hanburys Ltd. for the production of the well-known Allenburys rusks for sale in India and overseas markets.

In view of the excellent record of the Company, it is not surprising that its Rs. 10 paid-up ordinary shares are commanding a high premium in the market. At the current quotation of Rs. 39.50 *cum-div.* and on an *ex-div.* basis, the yield is 4.6 per cent. per annum free of tax.

BRITANNIA BISCUIT PAYS MORE

UPWARD TREND IN PROFIT MAINTAINED

FOR the third year in succession, the Directors of the Britannia Biscuit Company Ltd. have recommended an increase in dividend on the ordinary shares of the Company. The dividend which had been successively raised from 10 per cent. for the year ended 31st March 1957 to 14 per cent. for 1958-59, all free of tax, has been stepped up to 25 per cent., subject to deduction of tax, or 17.5 per cent. free of tax, for the year ended 31st March 1960. This is only in line with the steady growth in the business of the Company and its earnings. A perusal of the Company's accounts for the past few years shows that the sales of the Company have expanded, without any break, from Rs. 98 lakhs in 1952-53 to a peak of Rs. 272 lakhs in 1959-60 and the gross profit has likewise maintained an upward trend, rising from a mere Rs. 5.72 lakhs in 1952-53 to a record level of Rs. 46.95 lakhs. What is more, the pace of increase in both sales and gross profit has gathered momentum in the year under review, the increase in sales over 1958-59 being Rs. 67.22 lakhs and that in gross profit Rs. 11.16 lakhs.

The continuous growth in sales of the Company is, as the Directors point out, "essentially the result of improved market coverage and better distribution." They add: "An increase in the *per capita* income has introduced our products to a wider section of the community, who now regard biscuits an integral part of the daily diet. Our modern equipment and technical skill are constantly being employed to improve still further the quality of the Company's products and our reputation in the consumer industry was never higher." Referring to the year under review, in particular, the Directors observe that it was a "period of outstanding activity." The record profit earned by the Company indicates that the Company is experiencing the benefit of research and capital expansion which has been carried out over the past ten years. It also confirms that the Company's policy of ploughing back a substantial portion of its earnings into development and modernisation is yielding good results.

The net profit shows an increase from Rs. 13.35 lakhs (in 1958-59) to Rs. 21.90 lakhs. In pursuance of their policy of ploughing back a sizable portion of the profit, the Directors have added to the various reserves no less than Rs. 10.42 lakhs or nearly 50 per cent. of the net profit. The increase in dividend recommended by the Directors more than compensates the loss to the shareholders on account of the abolition of the system of grossing dividends, as will be evident from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds	2,71.57	2,04.35	1,84.64	1,49.69

Carry forward	2.14	2.16	2.18	1.85

* Subject to deduction of tax or 17.5 per cent., free of tax.

The Company's financial position is encouraging. The paid-up capital of Rs. 46.12 lakhs (of which as much as Rs. 30.65 lakhs have been raised by the capitalisation of reserves, once in 1951 and again in 1954) is supplemented by reserves and surplus aggregating Rs. 57.64 lakhs. The current liabilities and provisions (including the 5½ per cent. debenture loan of Rs. 12 lakhs) at Rs. 69.99 lakhs are well covered by current assets amounting to Rs. 105.86 lakhs. The gross block of the value of Rs. 122.49 lakhs has been written down to Rs. 68.89 lakhs. It will be of interest to note here that the Company has been financing its capital expenditure through the debenture capital issued in 1953 and its own resources ploughed back year after year. It has not raised any fresh capital from the market in the recent past.

The Company has three factories in three different centres, one at Alipore (Calcutta), another at Delhi and a third at Bombay. The

JUTLIBARI TEA CO., LTD. Annual General Meeting, Calcutta, 22nd September 1960. Dividend: 10 per cent. or Re. 1.00 per share, subject to deduction of tax. Transfer books remain closed from 8th to 22nd September 1960, both days inclusive.

MYSORE STONEWARE PIPES AND POTTERIES LTD. Annual General Meeting, Bangalore City, 23rd September 1960. Dividend: 14-2/7 per cent. or Re. 1.428 per share, subject to deduction of tax. Transfer books will remain closed from 16th to 30th September 1960, both days inclusive.

HULDIBARI TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 23rd September 1960. Dividend: 22½ per cent. or Rs. 2.25 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 23rd September 1960, both days inclusive.

NEW CHUMTA TEA CO., LTD. Annual General Meeting, Calcutta, 23rd September 1960. Dividend: 15 per cent. or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 13th to 23rd September 1960, both days inclusive.

COMPANY REGISTRATIONS

SULPHUR MILLS PRIVATE LTD. (Managing Director: Mr. P. K. Javeri.) Business: Manufacturers of chemical and mineral products. Authorised capital: Rs. 10,00,000. Private company. Address: Shroff Mansions, 2nd Floor, 32, Princess Street, Bombay 2.

DYE-CHEM MANUFACTURING CO. PRIVATE LTD. Business: Manufacturers of dyestuffs, pigments and bases. Authorised capital: Rs. 5 00,000. Private company. Address: Navsari Chambers, Outram Road, Bombay 1.

MAHARASHTRA PLASTICS AND WIRE NAIL INDUSTRIES PRIVATE LTD. Business: Manufacturers of synthetic resins, all types of moulding powders, etc. Private company.

N.B.—All the above companies are registered in the State of Maharashtra.

SYNOPSES OF COMPANY REPORTS

Travancore Chemical and Manufacturing Co., Ltd.

THE directors of the above Company (Managing Director: Mr. P. Krishnamurthi, Alwaye, Kerala State) submit the audited accounts of the Company for the year ended 31st March 1960.

The profit for the year amounts to Rs. 4,84,761 (Rs. 3,14,951). Out of this provision for depreciation and development rebate, amounts to Rs. 1,40,372 (Rs. 1,45,811). Provision for income-tax and super-tax is Rs. 1,40,000 (Rs. 60,000). This leaves a balance of Rs. 2,04,389 (Rs. 1,09,140). With the balance brought forward from previous year of Rs. 22,062 (Rs. 1,672), there is an available balance of Rs. 2,26,451 (Rs. 1,10,812). The directors recommend payment of a taxable dividend of 15 (10 per cent. free of tax) per cent. on the ordinary shares and 8.93 (6¼ per cent. free of tax) per cent. subject to tax, on preference shares so as to yield 6¼ per cent. tax-free. This would absorb Rs. 1,54,286 (Rs. 88,750) leaving a balance to be carried forward of Rs. 72,165 (Rs. 22,062) to next year.

During the year, the production and sale of *copper sulphate* increased by nearly half over the figures for the previous year in spite of heavy competition. The production of another popular fungicide, *copper oxychloride*, was commenced during the year on a commercial scale. Another product which was also added on to the manufacturing programme was *sulphate of alumina*, iron-free quality, which finds a good market in South India.

The production of *chlorate of potash* at the Kundara factory was fairly satisfactory, but the cost of production increased due to higher rates for electricity which were brought into force during the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,00,000	Gross block	18,05,082
Reserves ...	1,07,599	*Less*—Depreciation ...	6,06,956
Provision for taxation ...	1,41,108	Net block ...	11,98,126
Liabilities ...	10,47,047	Raw materials ...	5,36,413
Profit and loss account (surplus)	72,165	Stock-in-trade	3,41,751
		Stores, etc.	41,063
		Book debts	5,18,193
		Investments	25,376
		Cash ...	6,997
Rs.	26,67,919	Rs.	26,67,919

National Screw and Wire Products Ltd.

The directors of the above Company (Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The profit for the year amounts to Rs. 6,11,993 from which the following provisions are made: Rs. 49,531.93 for depreciation, Rs. 2,54,000 for income-tax and Rs. 2,244 for development rebate reserve. The balance to the credit of the profit and loss account after adjusting the brought forward debit balance and after making other adjustments is Rs. 2,41,162, which the directors recommend to be dealt with as under:—

In payment of a dividend at 15 (*nil*) per cent. on the ordinary shares, subject to deduction of tax, absorbing Rs. 1,50,000 (*nil*), leaving a balance of Rs. 91,162 to be carried over to the next year.

The directors are glad to report that machinery for the manufacture of the *A.C.S.R. conductors* is under installation, and production is expected to commence shortly.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Gross block	12,42,651
Reserves ...	5,660	*Less*—Depreciation ...	6,86,289
Provision for taxation ...	5,79,893	Net block	5,56,362
Liabilities ...	17,86,016	Stock-in-trade	10,19,688
Profit and loss account (surplus)	91,162	Stores, etc.	52,211
		Book debts	18,14,751
		Cash ...	19,719
Rs.	34,62,731	Rs.	34,62,731

Bagalkot Cement Co., Ltd.

The directors of the above Company (Managing Agents: Tendulkar Industries Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1959.

After meeting all expenses of operation and management, and after providing for depreciation and bonus to employees, the working of the Company shows a profit of Rs. 8,75,194 (Rs. 7,91,680) which, by adding Rs. 1,146 (Rs. 779) being the amount brought forward from last year's account and Rs. 36,782 (*nil*), amount received in previous year for non-fulfilment of underwriting agreement comes to Rs. 9,13,122 (Rs. 7,92,459). The directors have made the following provisions:

To provision for balance of guaranteed dividend account to the Government of Maharashtra Rs. 99,999 (Rs. 1,50,000), to preliminary expenses written off Rs. 23,700 (Rs. 35,641), to commission and brokerage written off Rs. 88,313 (*nil*), to quarry development written off Rs. 20,000 (*nil*) and to dividends (Government guaranteed) paid in respect of previous years Rs. 3,458 (*nil*). This leaves a balance of Rs. 6,77,652 (Rs. 5,91,146 after providing Rs. 1,544 for wealth tax 1957 balance and writing off Rs. 35,641 for preliminary expenses).

From this amount, the directors recommend that the following appropriation be made:—

The provision for proposed dividend at 8 (7 per cent. free of tax) per cent. subject to deduction of income-tax, on the paid-up capital of the Company as at 31st December 1959 Rs. 6,76,000 and balance to be carried forward to next year's account Rs. 1,652 (Rs. 1,146).

No dividend shall be paid on new shares allotted and paid for in the year 1960.

Production and Despatches.—Production of clinker and cement during the year was lower than the rated capacity. It was 94.326 tons of clinker and 96,717 tons of cement against 1,01,004 and 1,01,011 tons, respectively, in the previous year. The despatch of cement amounted to 98,001 tons against 1,00,494 tons in 1958. The Company introduced certain modifications in the chain zone recommended by the machinery manufacturers for the purpose of improving performance of the kiln. The time involved in carrying out these modifications resulted in the shortfall of production in 1959 but has yielded satisfactory results in operation of the current year.

Expansion.—The expansion of the Company's cement plant at Bagalkot from one lakh tons of yearly capacity to that of two lakhs of tons was completed in the month of April 1960. Certain difficulties were experienced during the initial running of the new kiln. The plant has been working satisfactorily now. The expansion of the plant was delayed on account of transhipment difficulties of machinery from broad-gauge to metre-gauge at Hotgi. The operation of raw mill as well as of cement mill to the full capacity was held up as grinding media was not available.

The reappointment of Tendulkar Industries Private Ltd., as managing agents of the Company for a further period of five years with effect from 16th August 1960 has been approved by the Central Government.

The Central Wage Board for the Cement Industry submitted its report to the Central Government on 7th October, 1959 and the Government have broadly accepted the recommendations of the Wage Board. The Government of India propose to determine the extent of the increase in the ex-works price of cement payable to producers consequent on the implementation of the recommendations of the Wage Board and to grant such increase, with effect from the date when such recommendations are required to be implemented.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	84,54,023	Gross block	2,26,19,399
Reserves ...	66,000	*Less*—Depreciation	31,88,694

		Stores ...	20,13,153
		Book debts	10,70,771
		Investments	8,248
		Cash ...	68,213
		Miscellaneous expenses	4,65,689
Rs.	2,36,18,704	Rs.	2,36,18,704

Enfield India Ltd.

The directors of the above Company (Chairman: Mr. K. R. Sundaram Iyer, Madras) present the audited accounts of the Company for the year ending 31st December 1959.

The profit for the year after meeting all expenses of operation, management expenses and managing director's remuneration of Rs. 24,000 (Rs. 24,000) but before charging depreciation amounted to Rs. 6,98,787 (Rs. 4,92,040). After deducting normal depreciation of Rs. 3,63,601 (Rs. 2,67,799), the net profit for the year comes to Rs. 3,35,186 (Rs. 2,24,241). To this is added the balance brought forward from previous year of Rs. 3,930 (Rs. 5,110) and excess provision for dividend written back Rs. 1,006 (*nil*), making a total of Rs. 3,40,122 (Rs. 2,29,351). The directors propose to utilise this amount as stated below:

To writing off preliminary expenses Rs. 37,231 (*nil*), to writing off brokerage on shares Rs. 7,715 (*nil*), to transfer to reserve for development rebate Rs. 1,52,718 (Rs. 1,99,926) and to proposed dividend for the year 1959 on preference shares amounting to Rs. 63,402 (Rs. 25,495). As regards the dividends on preference shares, the Company would not be liable to income-tax on the profits for the accounting year 1959. Hence, the gross and net dividends on preference shares are one and the same; viz., 7 per cent. From this dividend tax at source at the rate of 30 per cent. under the provisions of Section 3 (d) of Section 18 of the Income-tax Act will have to be made; i.e., Rs. 2-10 nP per share will be deducted from the dividend and remitted to the Government to the credit of the respective shareholders and the balance of Rs. 4.90 nP will be paid to the shareholders by the Company direct). The directors also propose payment of a dividend at 5 (*nil*) per cent. subject to deduction of tax, in accordance with section 18 (3) (d) of the Income-tax Act on ordinary shares for the year 1959, absorbing Rs. 74,246 (*nil*) leaving a balance to be carried forward to next year of Rs. 4,810 (Rs. 3,930).

Operation and Development.—The working of the Company during the year under review has been quite satisfactory. The production of both vehicles and job orders have increased considerably. Further plant and machinery were installed during the year and put to use and satisfactory progress was made in increasing the indigenous content of the motor cycles manufactured.

The increase in the expenditure of factory and administrative wages and salaries reflects not only the increase in the number of employees required for increasing indigenous operations and the larger number of motor cycles produced, but also due to revision in wage and salary scales as per an agreement which the management concluded with the employees and to which a reference was made in the speech of the chairman at the third annual general meeting of the Company.

The directors wish to inform that the Company is still in the midst of the phased programme which is scheduled to be completed by the end of 1960 and which involves considerable advance planning.

During the year a number of major steps were initiated for expanding the activities of the Company, to provide aids for the anticipated rate of increase in the tempo of production and to achieve increasing efficiency of the Company's operations. The more important among these are—finalisation of agreements with foreign collaborators for the manufacture of Villiers road vehicle engines and Scooters for which the Company has recently received a licence from the Government of India under the Industries (Development and Regulation) Act, and the commencement of work study. Work study is a great aid in increasing management efficiency and also a prerequisite for working out a suitable scheme of incentive to motivate the workmen towards higher productivity. Another important scheme that was introduced during the year was for the training of apprentices to cater to the increasing needs of the Company for skilled workmen.

Sales and Market Development.—The Company's selling agents have taken further steps to enlarge the sales operations and after-sales service. In addition to stationing of more zonal sales and service representatives, a further 54 sales and service points have been organised, thus increasing the number in the various parts of the country to 145. Increased volume of orders was secured not only for motor cycles and three-wheelers but also for the general engineering department of the Company. As a result, the total turn-over increased from Rs. 71 lakhs to Rs. 91 lakhs. Among the other steps taken for sales promotion, are the sponsoring of a Company for giving hire purchase facilities for this Company's products and deputing a representative to West Asia to explore possibilities for export of the Company's products. The directors feel confident that with these various sales promotion activities, the demand for the Company's products will continue to increase at a rapid rate.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,98,950	Gross block	48,00,791
Reserves ...	3,52,644	*Less*—Depreciation	7,18,280
Liabilities ...	44,32,106	Net block	40,82,511
Profit and loss account (surplus)	4,810	Expenditure-in-progress	26,079
		Stock-in-trade	26,01,716
		Stores, etc.	54,608
		Book debts	4,60,350
		Investments	250
		Cash ...	62,996
Rs.	72,88,510	Rs.	72,88,510

Hattikhira Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

A crop of 17,826 maunds of tea was manufactured and disposed of for sale in Calcutta for export 15,071 maunds and for sale in Calcutta for internal consumption 2,755 maunds. The teas realised an average price of Re. 1.86 nP per lb. as compared with Re. 1.70 nP per lb. obtained for the previous season's crop of 22,163 maunds. The Company's export quota for season 1959 was 15,258 maunds.

The profit for the year amounts to Rs. 1,75,274 (Rs. 3,11,745). After adding to this the adjusted credit balance brought forward from 1958 of Rs. 75,567 (*nil*), Rs. 2,50,841 (Rs. 3,11,745). From this amount is deducted initial contribution to superannuation fund—final instalment Rs. 13,110 (Rs. 16,288) and short provision of labour bonus 1958 Rs. 14,514 (*nil*), leaving a credit balance of Rs. 2,23,217 (Rs. 2,95,457). The directors recommend that this balance be disposed of as follows:

By payment of a dividend of 5 (5 per cent. free of tax) per cent. for season 1959. subject to deduction of tax, absorbing Rs. 63,000 (Rs. 63,000), by transfer to reserve account Rs. 50,000 (Rs. 1,06,851) and by transfer to buildings and machinery reserve account Rs. 50,000 (Rs. 50,000) leaving a balance to be carried forward of Rs. 60,217 (Rs. 74,618 after deducting Rs. 988 on account of sundry adjustments).

The estimates for season 1960 provide for a tea crop of 20,000 maunds at a cost of Rs. 22,51,915. Owing to the severe drought experienced earlier this season it is unlikely that the crop originally anticipated will be harvested.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,60,000	Gross block	31,05,555
Reserves ...	13,00,000	*Less*—Depreciation ...	13,86,347

THE DALHOUSIE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE DALHOUSIE JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10.10 a.m., on Saturday the 8th day of October, 1960, for the following purposes:—

As Special Business:

To consider and if thought fit to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:

1. Resolved that with effect from the 16th day of August, 1960, the Company may borrow money from time to time from the Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company, but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers.

2. Resolved that with effect from the 16th day of August, 1960, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Secretaries and Treasurers in accordance with the terms of employment with such staff and the Secretaries and Treasurers and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Secretaries and Treasurers and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd., for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Secretaries and Treasurers.

It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business:

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.

4. To declare Dividends recommended by the Directors.

5. To appoint Directors in place of those retiring, including Mr. Gobind Lall Bangur, who having attained the age of 65 years is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below:

To be Proposed as an Ordinary Resolution:

"THAT the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. Gobind Lall Bangur, and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960, to 8th October, 1960, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA, *27th August*, 1960.

P.B.

Note: (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1, 2 *and* 5:—

As the shareholders will remember, at the last Annual General Meeting of the Company held on the 20th November, 1959, a Special Resolution was passed in terms of the resolution now before you whereby the Company was empowered to borrow money from the Managing Agents. As the Managing Agency contract terminated on the 15th August, 1960, by operation of law Messrs. Bird & Co. (Private) Ltd. have been appointed Secretaries and Treasurers of the Company and it is now therefore necessary to pass a similar special resolution to empower the Company to borrow from the Secretaries and Treasurers.

Similarly, the resolution No. 2 seeks to provide the Company with the benefit of the services of the administrative staff of the Secretaries and Treasurers and also to participate in the maintenance of a Pool Commission Account as had been done at the last Annual General Meeting when the Company had Managing Agents instead of Secretaries and Treasurers.

Mr. D. C. B. Pilkington, a Director and member of your Company, is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Secretaries and Treasurers of the Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolutions.

In the Special Notice given to the Company of the Resolution under item 5 of the above Notice it has been stated that the services of Mr. Gobind Lall Bangur have been proved most useful to the Company and as he has experience and considerable knowledge of the affairs of the Company he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE NORTHBROOK JUTE COMPANY LIMITED

FINAL DIVIDENDS FOR THE YEAR ENDED 31st MARCH, 1960

AT A MEETING OF THE DIRECTORS HELD on 27th August, 1960, the following Dividends were recommended subject to deduction of Tax.

On Cumulative Preference Shares @ 3.929%, making a total of 7.858% per annum.

(b) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

THE LANSDOWNE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE LANSDOWNE JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11 a.m., on Saturday the 8th day of October, 1960, for the following purposes:—

As Special Business:

To consider and if thought fit to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:

1. Resolved that with effect from the 16th day of August, 1960, the Company may borrow money from time to time from the Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to land, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company, but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers.

2. Resolved that with effect from the 16th day of August, 1960, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Secretaries and Treasurers in accordance with the terms of employment with such staff and the Secretaries and Treasurers and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Secretaries and Treasurers and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd., for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Secretaries and Treasurers.

It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business:

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.

4. To declare Dividend recommended by the Directors.

5. To appoint Directors in the place of retiring Directors.

6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960, to 8th October, 1960, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA. *27th August*, 1960.

P.B.

Note: (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1 *and* 2:

As the shareholders will remember, at the last Annual General Meeting of the Company held on the 20th November, 1959, a Special Resolution was passed in terms of the resolution now before you whereby the Company was empowered to borrow money from the Managing Agents. As the Managing Agency contract terminated on the 15th August, 1960, by operation of law Messrs. Bird & Co. (Private) Ltd. have been appointed Secretaries and Treasurers of the Company and it is now therefore necessary to pass a similar special resolution to empower the Company to borrow from the Secretaries and Treasurers.

Similarly, the resolution No. 2 seeks to provide the Company with the benefit of the services of the administrative staff of the Secretaries and Treasurers and also to participate in the maintenance of a Pool Commission Account as had been done at the last Annual General Meeting when the Company had Managing Agents instead of Secretaries and Treasurers.

Mr. D. C. B. Pilkington, a Director and member of your Company, is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Secretaries and Treasurers of the Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolutions.

NOTICE

THE ALEXANDRA JUTE MILLS LIMITED

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 13th September, 1960 to 26th September, 1960, both days inclusive.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

UNION JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of UNION JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-20 a.m., on Saturday, the 8th day of October, 1960, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in place of those retiring, including Mr. Gobind Lall Bangur, who having attained the age of 65 years is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below:

To be proposed as an Ordinary Resolution—

"THAT the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. Gobind Lall Bangur, and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960 to 8th October, 1960, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,

Managing Agents.

CHARTERED BANK BUILDINGS,

CALCUTTA, *27th August*, 1960.

Note:—(*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the Special Notice given to the Company of the Resolution under Item 3 of the above Notice it has been stated that the services of Mr. Gobind Lall Bangur have been proved most useful to the Company and as he has experience and considerable knowledge of the affairs of the Company he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE STANDARD JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE STANDARD JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11.20 a.m. on Saturday, the 8th day of October, 1960, for the following purposes:—

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolution which will be proposed as a Special Resolution, namely:—

1. Resolved that the existing maximum lending facility of Rs. 20,00,000 to the holding company The Kinnison Jute Mills Company Ltd. be increased to Rs. 30,00,000 on the same terms and conditions as at present.

AS ORDINARY BUSINESS

2. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960 to 8th October, 1960, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,

Secretaries and Treasurers.

CALCUTTA, *27th August*, 1960.

Note:—A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Resolution No. 1

It is expected that the Company will have further surplus funds during the current year and the Directors consider it desirable that the Company should be authorised to increase the existing maximum limit of loan on short notice to its holding Company, The Kinnison Jute Mills Company, Ltd., from Rs. 20,00,000 to Rs. 30,00,000 on the same terms and conditions.

Resolution No. 1 is placed before the Shareholders as a Special Resolution to conform to the provisions of Section 370 of the Companies Act.

CALCUTTA, *27th August* 1960.

THE BOMBAY STATE CO-OPERATIVE BANK, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Ordinary General Meeting of the Bank will be held at the Registered Office of the Bank, Sir Vithaldas Thackersey Memorial Building, 9, Bakehouse Lane, Fort, Bombay, on Saturday, 24th September 1960, at 3 p.m. (S.T.), to transact the following business:—

Dated 16th August 1960.

R. VENKATASWAMY NAIDU,
Managing Director.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *7th September*

The pressure on the short-term money market, created by the issue of State loans last week to the tune of Rs. 75 crores, for which subscriptions (other than conversions to the extent of Rs. 6.44 crores) aggregated Rs. 78.89 crores, has not been relieved to any perceptible extent. No doubt, funds are returning to banks from upcountry centres, but the pace of their inflow is not sufficiently large to ease the position. Consequently, interest rates continue to hold their ground at their peak levels. Inter-bank call money is being bid at 3½ per cent. among all sections of banks. House money at seven days' notice fetches no less than 3 per cent. Short-term deposits for one to two months are being offered at 3¼ per cent. and for three months at 3½ per cent.

The sale of 91-day Treasury Bills has been resumed after a week's break, but, in view of the prevailing conditions in the money market, it is not surprising that the support for these bills continues to come only from special quarters and that too against maturities. The amount offered at yesterday's sale was no more than that (Rs. 2 crores) invited. The average rate of tenders accepted was 2.540 per cent. per annum, the same as that two weeks ago. Tenders for next week are unchanged at Rs. 2 crores. There were no sale of Intermediate Treasury Bills during the period 29th August to 3rd September. They will, however, be offered at the same discount of 2.476 per cent. per annum during the period, 7th to 10th September.

There has been an expansion of Rs. 18.74 crores in notes in circulation during the week ended 2nd September 1960, in contrast to the successive declines in the previous three weeks. Disclosing this, the Reserve Bank of India statement for the week shows a fall of Rs. 19.47 crores in notes held in the Banking Department. For the third week in succession, there has been no change in foreign securities, but the improvement in balances held abroad is being maintained with a further rise of Rs. 3.17 crores during the week under review, so that the total foreign assets stand now at Rs. 146.53 crores. Deposits of the Central Government are lower by Rs. 9.77 crores, while those of the other Governments have improved by Rs. 18.22 crores. Deposits of banks have declined by Rs. 5.34 crores. Loans and advances to Governments show a fall of Rs. 7.94 crores, while other loans and advances have gone up by no less than Rs. 39.98 crores, of which advances to Scheduled banks account for Rs. 2.85 crores. Investments have risen by Rs. 2.38 crores, but holdings of Treasury Bills show a marked fall of Rs. 11.82 crores.

The Scheduled banks' statement for the week ended 26th August 1960 shows that there has been a further addition of Rs. 7.76 crores in demand deposits of banks and a further decline of Rs. 2.51 crores in time deposits. Of the net accretion of Rs. 5.25 crores to the total deposits, the State Bank of India accounts for Rs. 2.78 crores. Consequent on the increase in deposits and additional borrowings from the State Bank to the tune of Rs. 2.50 crores, the banks' borrowings from the Reserve Bank stand reduced by Rs. 7.96 crores. Advances and bills have declined by Rs. 7.40 crores, of which the share of the State Bank is no more than Rs. 1.98 crores. Investments are, however, higher by Rs. 15.29 crores; almost the whole of this rise is accounted for by the State Bank. Cash balances and balances with other banks have dwindled by Rs. 3.51 crores, consequent on the fall of Rs. 8.71 crores on State Bank's account. Money at call and short notice, too, has shrunk by Rs. 2.01 crores.

Since our last report, the details of the subscriptions to the remaining six State loans have been announced. The amount subscribed to each of the 12 loans and allotment are as follows:

(In crores of rupees)

State	Amount of loan	Amount subscribed	Allotment per cent.
Maharashtra ...	10.00	10.98	100
West Bengal ...	7.00	7.02	83
U.P.	7.00	8.84	95
Gujarat	5.00	5.77	72
Andhra	9.00	13.23	89
Mysore	4.00	4.91	100
Madras	12.00	12.18	100
Kerala	4.00	4.08	100
M.P.	5.00	5.16	100
Bihar	3.00	3.21	100
Rajasthan	5.00	5.05	89
Orissa	4.00	4.90	100

Barring a further improvement in 3 per cent. 1986 Conversion Loan on continued buying enquiries, the Gilt-edged market is listless, with very little activity. Some of the medium-dated loans are, however, on offer and their quotations have been marked down. The proximity of voucher and persistent buying have lifted up 3 per cent. 1986 Conversion Loan by 35 nP to Rs. 74.25. 3 per cent. 1966-68 has declined by 5 nP to Rs. 95.90, 3½ per cent. 1967 and 1968 by 10 nP each to Rs. 99.45 and Rs. 99.40, respectively. 4 per cent. 1960-70 which is due for redemption on 15th September, has fallen by 20 nP to Rs. 100.10. There is little of note in State loans. The new 4 per cent. 1969 issues are quoted at their issue prices.

There has been a hardening of the rupee in terms of the U.S. dollar, thanks to the improvement in sterling abroad. This is more reflected in the banks' selling rate for U.S. T.T. (ready) which has declined from Rs. 476.25 to Rs. 476 per $100, than in their buying rate which is holding its own at Rs. 472.75 per $100. In New York, spot sterling has gained strength from 281.07-281.10 cents to 281.17-281.20 cents and three months' forward from 279.55-279.58 cents to 279.65-279.68 cents.

BULLION MARGIN RULES RELAXED

(From Our Own Correspondent)

BOMBAY, *7th September*

Bullion traders have welcomed the Government of Maharashtra's decision to permit the Bullion Association to start trading in *Kartik* (November) settlement in gold and silver, as well as to relax margin rules in respect of that distant settlement. Not only have the rates of margin been lowered as compared with the *Bhadrapad* (September) and *Aswayuj* (October) settlements but the closing rates of both the precious metals for purposes of margin have also been raised. Thus, the revised rates of margin are Rs. 40 per tola in gold when the closing price is above Rs. 130 per tola and Rs. 2,000 per bar in silver when the price exceeds Rs. 218 per bar. The rates currently applicable to *Bhadrapad* (September) and *Aswayuj* (October) settlements are Rs. 60 in gold and Rs. 3,000 in silver when the prices exceed Rs. 127 and Rs. 213, respectively. The margins will, of course, continue to be on *ex-parte* basis, that is, on entire purchases without offset of sales. The limits of exemption have been fixed at 2,500 tolas for gold and 50 bars for silver.

The Board of the Bombay Bullion Association met on Saturday the 3rd inst., to consider the date of commencement of trading in *Kartik* settlement in gold and silver. It, however, postponed the decision, in order to enable the Association to finalise arrangements for the switch-over from the existing system to the metric system of weights and measures. With effect from 1st October next, the price of gold will be quoted per gram instead of tola, the trading unit being 3,000 grams, and that of silver per kilogram, the trading unit being 30 kilograms.

The aforesaid relaxation in margins, together with reports of encouraging offtake in several centres, imparted considerable strength to the bullion market. Buying support was quite good, with gold and silver both recording an improvement in prices. The net rise over the week would have been more marked but for intermittent profit-taking and some selling against option deals, particularly on Monday. Reports of larger arrivals also checked the rising trend of prices. The daily average rate of arrivals during the week was 6,250 tolas of gold and 43 bars of silver, as against 4,750 tolas and 24 bars, respectively, in the previous week. The offtake of gold and silver was at an average rate of 3,000 tolas and 7 bars, the corresponding rates for the previous week being 4,000 tolas and 5 bars. The floating stocks are estimated at about 25,000 tolas of gold and 400 bars of silver.

A feature of trading during the week was the decline in the premium commanded by ready gold and silver over the *Aswayuj* settlement, the former from 75 nP on Wednesday last to 47 nP today and the latter from 37 nP to 10 nP. The charge for transferring commitments from the *Bhadrapad* to *Aswayuj* settlement in both gold and silver continued to be in favour of bulls throughout the week. The actual rate in gold widened from 37 nP on Wednesday last week to 56 nP on Monday when the *Bhadrapad* settlement went off the board, while that in silver declined from 56 nP to 31 nP yesterday when the *Bhadrapad* settlement ran out.

The following table shows the trend of the market during the week under review:

	7-9-60 (closing)	High	Low	31-8-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	134.37	134.62	133.41	133.75
Forward:

New York:				
Silver	91⅛ cents	—	—	91⅛ cents

* 4th October settlement. † 5th October settlement.
§ As on 8th September. §§ As on 6th September.

The upward trend of gold and silver prices was the subject matter of a question by a member of the Rajya Sabha on 31st August 1960. Replying to the question, the Union Deputy Minister for Finance, Mr. B. R. Bhagat, stated that the main factors affecting the price movements of gold and silver were: (i) the continued ban on the imports of the two metals, (ii) more effective steps against smuggling of gold, and (iii) a marked reduction in the arrivals of Tibetan silver coins. He said that the Bombay Bullion Association had been raising from time to time the margin requirements for trading in gold and silver. The Government, the Minister added, received market quotations for gold and silver regularly; the average price of sovereign in the Bombay bullion market during May 1960 was Rs. 86.17 as against Rs. 77.94 in May 1959.

Replying to another question, Mr. Bhagat revealed that about 29,930 tolas of gold valued at Rs. 38.07 lakhs had been seized during the first seven months of 1960.

At a meeting of the Consultative Committee of members of Parliament held on 30th August, it was suggested by a member that forward trading in bullion should be banned. Mr. Morarji Desai said in reply that this was an old suggestion and that the whole issue had been under consideration for some time. He did not say what was the outcome.

Ready gold in the London bullion market firmed up from 250*s.* 1½*d.* to 250*s.* 4*d.* due partly to the easiness of the pound sterling *vis-a-vis* the dollar and partly to rumours of a possible increase in the dollar value of gold after the U.S. Presidential election is over. In many countries, demand for private hoarding of gold would appear to have not registered any increase. To quote a report, "Even the Middle East and the Far East have not cared to convert their funds into gold as yet. The demand is now largely confined to the central banks of some countries. They are converting a portion of their foreign exchange holdings into gold, so that they might not be embarrassed if the dollar value of gold is increased later." The latest available world price for gold in London is $35.15½-$35.17½ per ounce, as against $35.14-$35.16 a week before and $35.11½-$35.13½ two weeks before. Both ready and forward silver, however, continued unchanged at 79½*d.* per ounce, as also silver in New York at 91.375 cents.

BUSINESS IN COTTON AT A STANDSTILL

(From Our Own Correspondent)

BOMBAY, *7th September*

With business in new crop hedge contract yet to be permitted by the Government and little free trading possible in ready cotton, thanks to the vigorous controls imposed by the Government, both the futures and spot sections of the cotton market presented a deserted appearance during the week. The announcement made by the Textile Commissioner on Wednesday, 31st August, outlining the cotton policy for the new season, disappointed the trade, although it did not contain any big surprise.

Under that policy, mills, which do not own ginning factories, have been generally discouraged from buying *kapas*. Even those that do have ginning factories, will be allowed to purchase *kapas* only to the extent of the quota granted to them. They have also been asked to ensure that the prices paid for *kapas* were such that the price of the lint will not exceed the ceiling prices fixed for that variety. Every bale of cotton sold during the season will be compulsorily surveyed and prices fixed before it is permitted to be consumed. Periodical submission of returns of sales and stocks by the trade and mills have been made compulsory, with a penalty for non-compliance. These restrictions, together with those already in force, have made the usual type of business in cotton extremely risky. In fact, turnover in the spot market during the week dwindled to a mere trickle, with only stray demand for a few varieties. The general feeling among trade quarters is that, in view of the restriction, business will shift to upcountry centres and that Sewri will become active again, if ever it will, only when the bulk movement of new crop starts.

Presently, developments in new crop are the focus of attention of the trade and industry. For the trade, the good crop, is essential for its survival, for otherwise, the Government would not give permission for trading in the new crop hedge contract. For the industry, it means an easing of the raw cotton supply position and perhaps lower prices also.

In view of the crucial importance of the size of the crop during this season, the wet spell in the Punjab and the reported damage to the crop by floods in parts of the Punjab are looked upon with much concern. Although the extent of the damage has yet to be assessed, initial estimates range from 50,000 to 60,000 bales. The Punjab was earlier expected to produce 1.15 million bales of cotton this season. Fortunately, crop progress in other regions are reported to be good, though Mysore and Andhra are also said to be experiencing drought. Considering the uncertainty regarding crop, none is willing to hazard an opinion whether permission for futures trading in cotton will be given or not.

Mills showed good interest in foreign cotton during the week. East African growths were in the limelight. B.P. 52 was done at Rs. 1,390 per candy and Mwanza at Rs. 1,195. Selected Sudan cotton, too, attracted their attention. Sudan G2S was transacted at Rs. 1,951 per candy by some local mills.

Moderate export interest was noted for Bengal *Deshi*, but, in the absence of quota, no business could be put through. There were rumours of the possibility of a quota of 50,000 bales being released in October or November.

Cotton futures in the Karachi market succumbed to speculative selling and liquidation during the week under review. Weather news was the main influencing factor. Reports of excellent progress in the Punjab and Sind indicated the possibility of a good crop and abundant supplies. N.T.R.G. January receded from Rs. 68-2 last week-end to Rs. 67-8. The March delivery shed seven annas to Rs. 67-1. In the spot market, barring *Deshi* cotton, which attracted some export interest, other growths received only routine inquiries. Prices held on the last week's levels. The latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton, prevailing at Karachi, are given below:

Sind *Deshi* 87; Punjab *Deshi* 83; 4F Punjab Roller 83-11; S.G. 87-11; L.S.S. Punjab Roller 86-11; S.G. 90-11; N.T. Roller 87-11; S.G. 93-11.

The downward trend noted in the Alexandria cotton futures market last week gathered further momentum during the week under review. Bearish crop news and poor export inquiries prompted selling. Both the long-staple Karnak and medium-staple Ashmouni contracts were marked down. The discount rates for both old and new crops were unchanged at 8½ per cent. and 6 per cent., respectively for the week which began on Monday last.

Reports from Alexandria indicated satisfactory crop progress in Upper Egypt. In Lower Egypt, insect infection is said to be somewhat heavy, but the crop is not expected to be very much affected by it.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end closings:

Karnak November 74.46 (74.87), January 73.97

(74.74). March 74.50 (74.93). *Ashmouni* October 62.62 (62.68), December 62.30 (62.64), February 62.30 (62.60).

Cotton futures in Liverpool recorded handsome gains during the week, thanks to the improved trade support and occasional commission house buying which absorbed the light hedge selling. Prices generally tended to be firm. News of crop damage in the U.S. and Mexico, which later proved to be exaggerated, and signs of a general improvement in world offtake, imparted strength to the market. Both the American and American type contracts were priced higher. Sudan cotton contracts at Liverpool were neglected and their quotations were nominally unchanged.

The latest available quotations—in pence per lb.—from Liverpool are as under:

American cotton one inch staple contract: October 22.65; December 22.55; March 22.55.

American cotton mixed growth contract: October 22.95; December 22.85; March 22.90.

Sudan September 34.50; November 34.75; January 34.75.

Cotton futures in the New York market ruled steady during the week. Although the market showed signs of firmness early in the week, on news of extensive damage to the crop in some parts of the cotton belt, it was not sustained, because private advices did not confirm the report. Consequently, speculative interest receded. Renewed inter-month switchings and evening up operations characterised trading towards the close. Over the week prices showed little net change.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	6-9-60	29-8-60	23-8-60
Spot	32.45	32.45	32.40
October	31.09	31.02	31.02
December	31.29	31.30	31.29
March	31.82	31.83	31.84

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, *7th September*

Owing to intervening holidays in New York, Singapore and India, the business was thin with undertone discouraging. Malabar black showed further erosion in the values on nervous liquidation by stale bulls and holders and in sympathy with Singapore, London and New York.

Prices in Singapore gave way, black and white being quoted at Str. $170 and Str. $265, respectively. In London, white dropped to 62d., the highest being 73d. Spot in New York climbed down to $0.52 under pressure of heavy arrivals of both sold and unsold consignments from Singapore. Garbled at Cochin sagged to Rs. 233¾. Ungarbled was done at Rs. 1,350. Calicut is quoting at Rs. 1,400-Rs. 1,450. October delivery, after dropping to Rs. 237½, is now hovering around Rs. 241½. Trading in December has started officially, but no business worth noting has been listed, since buyers are awaiting new developments. Tired holders are continuous sellers for ready, while speculators are trying to support October delivery in the ring by way of short-covering and fresh buying in the expectation that, as the market has gone down rather abruptly, the reaction may ensue giving them an opportunity to resell with profit. India is following the lead of Singapore. Unless Singapore shows improvement, our market is likely to go down, though slowly, as, the holders having seen very high prices during the earlier part of the year, the present prices seem to them rather low. They are, therefore, trying to resist downward trend, but, so far, all their efforts have proved abortive. News from Singapore are discouraging, as arrivals of New Lampong have started. About 1,000 tons are reported to have already arrived. With the advance in the harvesting season of Lampong, Singapore is expecting the arrivals to increase from week to week. Sizable parcels of white pepper reshipped from Europe are reported to have arrived in Singapore. Future of white pepper hangs on what attitude the holders of these parcels choose to take. The drop in prices of spot pepper to a new low of $0.52 in New York has so far failed to encourage any increased interest among the grinders. Labour day holidays having been over, it remains to be seen how the demand from the grinders develops. In ordinary course, the demand after the labour day should pick up, but American dealers as well as grinders never buy in the declining market. As such, the chances of an improvement in demand are thin unless the primary markets stabilise. Dealers in New York are reported to be quoting to buy Lampong at $0.46, but the acceptance of lower bids, however small, is likely to scare away the prospective buyers. Although inland ready demand is lagging behind, there are some inquiries from Pakistan and the Middle East. Trade generally expects an improvement in inland demand, but the tempo in demand is not likely to take place unless prices stabilise at a certain level. There has been some buying from exporters who are said to have sold about 150 tons to

YARNS DULL

(From Our Own Correspondent)

BOMBAY, *7th September*

The yarn market ruled dull during the week under review. Business put through was restricted and values moved narrowly. Art silk yarn was quiet, notwithstanding *(a)* the appreciable increase in the premium commanded by import licences from 80-85 per cent. to 100-105 per cent. during the last three weeks on fears of a cut in import quota for the ensuing half-year (October 1960—March 1961) and *(b)* the suspension of the issue of import licences for yarn against exports of art silk cloth to Afghanistan, one of India's principal customers. For enquiries from consuming centres were slack. It was reported that the handlooms and powerlooms were buying art silk yarn on a hand-to-mouth basis. A sizable switch-over in consumption from art silk yarn to cotton yarn in view of the reduction in the latter's prices was also feared. For these very reasons, staple fibre yarn, too, ruled quiet. Quotations for cotton yarn were lower than those prevailing last week, owing to the further downward revision in the mills' wholesale prices announced by the Indian Cotton Mills' Federation on Saturday the 3rd inst.

Cupressa Bemberg yarn (60 x 1) October delivery was subject to nervous liquidation by bulls who had bought heavily in the past few weeks and fell from Rs. 2,098 to Rs. 2,078. December contract was done at Rs. 2,085 today, as against Rs. 2,105 on Saturday the 3rd inst. Spot Cupressa dropped 7 nP to Rs. 9.37. 150 Japan was neglected at Rs. 6.06, as also 120 Italy at Rs. 5.62 and 150 Italy at Rs. 6.19. 120 Japan, however, picked up 7 nP to Rs. 5.69. Among indigenous yarns, National Raymonds 120 Bl. cones 1st grade declined by 6 nP to Rs. 5.94. 150 Bt. cones 1st grade was quiet at Rs. 5.30.

In the staple fibre yarn section, 40 x 2 October delivery receded by Rs. 11 to Rs. 711. December position was quoted at Rs. 721. Spot Citys were unaltered at Rs. 3.74 and Centurys at Rs. 3.56. But Kohinoors gained 2 nP to Rs. 3.78.

Cotton yarn prices, as stated earlier, were lower than those a week ago. Ten counts Podars shed 8 nP to Rs. 18.25. Gokaks were dull at Rs. 18.37. Twenty counts Moderns lost 50 nP to Rs. 23.50 and Gokaks 25 nP to Rs. 23.25. Forty counts Minaxis and Maduras declined by 25 nP each to Rs. 30.25 and Rs. 31, respectively. Sixty counts Finlays dropped 88 nP to Rs. 62.62. Raghuvamshis receded by a rupee to Rs. 59. Eighty counts Finlays moved down by Rs. 2.02 to Rs. 80.80. Moderns were quiet at Rs. 73 and Mahendras at Rs. 71.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days ago:

	7-9-1960	30-8-1960
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 Kg.)		
October	2,078	2,098
60/1 Cupressa Bemberg spot (per lb.) ..	5.69	5.62
120 Japan (per lb.)	6.06	6.06
150 Japan (per lb.)	5.62	5.62
120 Italy (per lb.)	6.19	6.19
150 Italy (per lb.)		
Staple fibre yarn—	711.00	722.00
October	3.78	3.76
40×2 Kohinoor (per lb.)	3.56	3.56
40×2 Century		
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.25	18.37
20s Gokak	23.25	23.50
40s Minaxi	30.25	30.50
60s Raghuvamshis	59.00	60.00
80s Finlay	80.80	82.82

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *7th September*

Firm conditions that had been witnessed in the oilseeds market in the previous week gained further momentum during the week under review. Towards the close of the week, however, the rally was arrested, and, in fact, values in all the sections, except those of groundnuts, were well below the level of last week-end. The pace and pattern of trading were dictated mainly by reports of weather conditions in major groundnut producing centres. There were no signs of improvement in the initial stages in the dry spell noted in Andhra and Mysore. But tables were turned as the week advanced, with reports of beneficial rains received from the South. The operators in the groundnut section noted the concern expressed in Parliament regarding the rise in prices of basic necessities, in the course of the discussion on the draft third Plan. This imparted a sense of caution among the speculators. Another development of interest to groundnut traders was a communication sent to the Union Ministry of Commerce and Industry by Mr. Rai Bahadur G. V. Swaika, Member of the Indian Central Oilseeds Committee and Indian Council of Agricultural Research, representing the Federation of Chambers of Commerce and Industry, in which he is stated to have advocated the immediate suspension of forward market operation in groundnut. Unless this was done, he maintained, it would be difficult for the industry to hold the price line. The current artificial spurt in prices of groundnut, even though the new crop had not come to the market. Mr. Swaika added, would make abortive whatever incentive may be given to groundnut oil exporters.

To revert to the market trend. As already pointed out, groundnuts staged a smart rally in the beginning, but gave way subsequently. Apart from reports of revival of rains in producing centres, the enthusiasm of bulls were dampened by rumours of a possible reduction in *vanaspati* prices. In anticipation of further fall in prices, local crushers and *vanaspati* manufacturers chose to wait and watch rather than enter into fresh commitments. The February (1961) contract, which had wound up last week at Rs. 199, spurted to Rs. 205.75 on Thursday 1st September—an unusual increase in the new contract for this time of the year—on account of widespread speculative buying. Thereafter, the contract moved both ways between Rs. 204 and Rs. 205.75, and closed on a subdued note at Rs. 204 today—a gain of Rs. 5 over the week. Nizam Bold moved within a narrow range and closed higher today at Rs. 46.75, as against Rs. 46.50 a week ago. Oil ex-mill rose by 12 nP over the week to Rs. 24.87, after fluctuating between Rs. 24.75 and Rs. 25.12.

Castorseeds suffered a distinct setback towards the close, after ruling firm in the initial sessions in sympathy with the groundnut section. The fear of heavy tenders against the maturing contract acted as a damper as the week drew to a close. Besides, there were rumours of increasing pressure of supplies of Brazilian castor oil in the U.S. The actual overseas business in castor oil put through was also quite limited. Castorseed September 1960, which had finished last week at Rs. 164.75, advanced to Rs. 168.50 on Thursday 1st September, but lost ground subsequently to close today at Rs. 163.87, or 88 nP lower than the last week's level. The May (1961) contract finished today Rs. 2 lower at Rs. 169.87, after touching a high of Rs. 174.62. Oil Commercial rose initially from Rs. 17.94 to Rs. 18.19, but receded later on to close the week at Rs. 17.75.

Steady conditions prevailed in the linseed section in the first half of the week, in sympathy with other seeds and oils. But it encountered selling pressure subsequently. The September contract was particularly weak on considerations of large tenders. The export front continued to display dull conditions, owing to the sizable disparity in Indian and world prices for linseed oil. The September (1960) contract declined by 63 nP to Rs. 31.12, after touching Rs. 32 earlier in the week. The May (1961) contract came down from Rs. 33.12 to Rs. 32.75, but not before touching Rs. 33.44. Linseed bold ready declined by 37 nP to Rs. 31.25. Linseed oil, however, closed 12 nP higher at Rs. 16.06.

Dull conditions were in evidence in the cottonseed section. The September 1960 and February 1961 contracts fell from Rs. 156.50 and Rs. 94.50 to Rs. 153.50 and Rs. 92.75, respectively.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	7-9-1960	30-8-1960	24-8-1960
	Rs.	Rs.	Rs.
Groundnut			
February 1961	204.00	199.00	188.25
Nizam bold	46.75	46.50	45.50
Coromandel ready	46.75	47.75	46.00
Khandesh quality	46.75	47.50	46.00
Oil ex-mill ready*	24.87	24.75	24.00
Railway receipts*	26.62	24.62	23.75
Castorseed			
September 1960	163.87	164.75	163.75
May 1961	169.87	171.87	165.62
Ready Madras	33.12	33.12	33.00
Ready Kanpur	32.00	31.75	31.87
Oil B.S.S.†	18.94	19.12	18.81
Oil commercial†	17.75	17.94	17.69
Linseed			
September 1960	31.12	31.75	31.84
May 1961	32.75	33.12	32.53
Bold ready	31.25	31.62	31.87
Oil ready†	16.06	15.94	16.25
Cottonseed			
September 1960	153.50	156.50	155.00
February 1961	92.75	94.50	90.00
Niger seed	37.75	37.50	37.50
Kardi seed	24.50	24.50	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

QUALITY TEAS FETCH MORE

(From Our Own Correspondent)

CALCUTTA, *6th September*

Conditions during yesterday's export sale were fully steady, as buyers paid more attention to quality teas, prices of which rose. Bookings of tea to the United Kingdom registered a further improvement, and the quantity of tea arriving in Calcutta from upcountry also increased. These two factors contributed to better sentiment during yesterday's sales. It is thought that the U.K. has now commenced replenishing of its stocks, depleted considerably during recent weeks, as a result of poor arrivals from India. This inference is also aided by the prevalence of good demand during last week's sales in London, where the quantity on offer was affected by the labour unrest in London docks. The best C.T.C. Assams and second flush Dooars were in the forefront in the London sales, and note was taken here of the good attention received by African teas.

That there is the need for renewed propaganda for Indian tea in the United States is in evidence from an analysis of the export figure for 1959-60. Compared to the previous year, exports, at 23.26 million lbs., fell by 1.16 million lbs.

Following strong demand, prices of dusts during last week's internal sales rose. Dusts on offer amounted to 19,946 packages. A strong feature of the sale was the rise by 30 nP per kg. in the price of poorer C.T.Cs. Another equally strong feature was provided by orthodox exportable teas, prices of which hardened by 25 nP to 40 nP. Although irregular, medium C.T.Cs and liquoring C.T.Cs advanced. Keen attention was paid to legg-cut Dooars, prices of which recorded handsome additions. Darjeelings were the only teas which, contrary to the general trend, were weak. The quotations (including excise duty) per 1 kg. were: best Assam C.T.C. dust Rs. 6.30 to Rs. 6.60, medium Assam C.T.C. dust Rs. 5.80 to Rs. 6.15, medium Assam dust Rs. 4.90 to Rs. 5.40, and medium Dooars Rs. 4.70 to Rs. 5.00.

Leaf on offer amounting to 143 packages was fully steady.

Offerings amounting to 57,885 packages during yesterday's export sale met with good general demand, with buyers following quality. Prices of quality teas registered advances, but those of others gave way. Stylish B.P.Ss provided a strong feature and prices advanced impressively. Keen competition was in evidence for bright liquoring Assam B.O.Ps and O.Fs. Prices for the latter improved and those for the former were fully firm. However, the price of the plainer orthodox Assam B.O.Ps eased up to 50 nP. The poorest C.T.Cs were also a strong feature as the price tended higher. However, medium C.T.Cs met an easier market and subsequently several lots had to be withdrawn. Best C.T.Cs, following quality, were *in good demand*, but others eased up to Re. 1 per 1 kg. Tippy teas were extremely quiet, and Darjeelings met with interest at lower rates. The stylish whole leaf grades eased by 20 nP to 50 nP, and the more ordinary kinds by 10 nP to 15 nP. Legg-cut Dooars were better, as were plain brokens. The quotations per 1 kg. inclusive of excise duty are: best Assam C.T.C. fannings Rs. 9.00 to Rs. 10.00, best Assam C.T.C. B.P. Rs. 9.00 to Rs. 9.50, medium fannings Rs. 5.20 to Rs. 5.50, clean black pekoe Rs. 5.20 to Rs. 5.50, medium B.P. Rs. 4.90 to Rs. 4.30, plain fannings Rs. 4.35 to Rs. 4.75, and plain B.P. Rs. 4.30 to Rs. 4.45.

Export quota was quoted ½ nP per 1 kg. However, buyers offered only ¼ nP, and no business was reported.

DUST TEA HARDENS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *1st September*

Dust Sale 'FF':—A total of 284,000 kilograms was offered in Dust Sale 'FF' held on Thursday, 1st September 1960. The market met with a strong general demand and prices were generally dearer for all descriptions. Plainer and low mediums met with good support and advanced by 10 nP to 20 nP with improved colour. mediums meeting stronger enquiry were fully dearer by 20 nP and in some cases more. High-growns were well supported and were irregularly dearer following quality. There was keen competition for residual grades which were also 10 nP to 20 nP dearer. There was improved demand for C.T.C. and legg-cut types which are quoted firm to dearer. Black grainy descriptions also shared in upward trend of the market.

The average price realised in Dust Sale 'FF' was Rs. 4.21 per kilo, as compared with Rs. 3.98 in the previous sale and Rs. 3.83 in the corresponding sale of 1959.

Export Quota:—At present there are sellers at ¼ nP with probable buyers at this price.

Colombo:—6½ million lbs. were offered this week. The market met with a good general demand, but buyers followed quality closely. Dimbula and Dickoya brokens were irregularly easier, whilst medium teas declined by 5 cents to 10 cents per lb. There was a strong demand for low-grown teas, although these sold at easier rates.

London:—North Indian and other growths:—The market met a very strong demand on Monday and prices were dearer for all descriptions. Buyers showed keen interest for the very best teas which sold well at dearer rates.

Ceylon and South Indians:—On Tuesday, 25,648 packages were offered of which 8,422 came from South India. The market continued strong and prices were generally dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 34:—780,000 kilograms. Very strong active market. Low medium and medium upto 20 nP dearer. Good medium advanced irregularly 10 nP. Best liquoring irregular following quality."

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, *6th September*

Fully steady conditions were in evidence in both the jute goods and fibre markets during the week under review, and prices added further gains. The fall in the arrival of the new crop was the main bullish factor for the rise. The quality of the new arrivals had been far from satisfactory, in view of the higher moisture content and the inadvisability of their storage for future use. The demand for fibre has reached a high proportion. The position of several mills has reached a hand-to-mouth position, and hence it is not surprising that whatever jute is offering in whatever condition is meeting with ready buyers. As a result, proper attention is not being paid for drying after retting. A redeeming feature, however, is that reports from growing areas indicated the satisfactory progress of harvesting, and the hope that, in view of the cash needs of growers for the forthcoming *Poojas* there would be good releases of the crop in the coming weeks was expressed by trade circles here. The report that more rains were required and that the level of seeping water in tanks and canals was not encouraging was ignored here, as it was believed that these rumours had originated from interested quarters with a view to pushing up prices. Rains during the week were again heavy, and there were plenty of breaks with bright sunshine.

Another bullish factor which pushed up prices of goods was the keen demand in the futures market. Prices of hessian reached a high level following purchases on behalf of the United States earlier in the week. U.S. buying had aggregated 5 million yards. Sacking was being sent to other regions of the country *via* coastal shipping, in view of the major railway break in Orissa. Australia was among the other major supporters of heavy goods. Recent reports, based on the low burlap consumption in the U.S.A. in July, apprehending that substitutes were gaining in popularity among consumers at the cost of hessian were not considered significant, as New York values were steady during the week. There was no doubt reluctance among primary consumers to

(*Continued on page 491*)

INDIAN MERCANTILE INSURANCE CO., LTD.

MR. K. M. D. THACKERSEY'S SPEECH

THE undesirable practice of rebating, heavy procuration costs, etc., disquieting effect of the reduction in fire rates, hardship caused by double taxation of pool business, increase in cost of repairs and rising number of claims preferred for large amounts for comparatively small damage, and difficulty in complying with the provisions of Section 40C and Rule 17E of the Insurance Act 1939 in view of the rising expenses and the consequent increase in expense ratio—all these problems confronting insurers received the attention of Mr. Krishnaraj M. D. Thackersey, Chairman of the Indian Mercantile Insurance Company Limited, when he addressed the Fifty-second Annual General Meeting of the shareholders of the Company held at Bombay on Tuesday, 6th September 1960. Mr. Krishnaraj urged that, if the insurance industry was to retain its good name and play the role assigned to it in the economy of the country, it must reorient its approach, in order to devise a well-planned and co-ordinated effort "suitable to the genius of the people." The following are extracts from his speech at the meeting:

"I have great pleasure in welcoming you to this fifty-second annual general meeting of our Company. Before I proceed to comment on individual departmental accounts, I take this opportunity to make some general observations about some problems which the insurance industry is facing today.

Code of Conduct

"The voluntary effort, namely, the revised Code of Conduct which came into operation sometime in 1957, though it appears to have made certain improvements in the prevalent conditions in the market, has not achieved the desired results, with the result that the insurance industry still continues to face the thorny problems of undesirable practice of rebating, heavy procuration costs, etc. The time has come, if the insurance industry is to retain its good name and play the role which is legitimately assigned to it in the economy of the country, for a reorientation in its approach in order to devise a well-planned and co-ordinated effort suitable to the genius of the people avoiding pitfalls. To continue to drift by maintaining a *status quo* cannot augur well. The administrative machinery also needs to be considerably strengthened and associated with the trade to ensure smooth and effective working.

Fire Insurance Rates

"You will recollect that, last year, I had referred to the move on the part of the Government of India for a reduction in our fire rates. The said reduction has been implemented with effect from 1st January 1960 and, though it is stated that the overall reduction in rates will amount to about 10 per cent., in some areas it is actually more. This is a second reduction in fire rates made during the last five years and it has been brought about with a view to curbing the practice of unhealthy competition among insurers. Having regard to the past experience, one may not be quite certain about achieving the desired result. However, the repercussions of the said reduction are likely to be of a far-reaching character when it is known that the profits of this section has been a stabilising factor for the working of companies in India and the business of other motor and marine sections have been generally unprofitable.

Indian Insurance Companies' Association Pool

"Hitherto after nationalisation of 'Life' business, all Government business was distributed at 50 per cent. among insurance companies on an agreed basis via Indian Insurance Companies' Association Pool. With the beginning of the financial year, the Government have decided to reduce the share of non-Governmental companies to 25 per cent. The same has been the case in so far as the Aviation Pool business is concerned. This development has been very much disturbing to the insurers in the private sector as they have been given a very raw deal, even though the formation and stabilisation of the Pool have been largely the outcome of their efforts. Another disturbing factor about this Pool business is the taxation liability of the said business, as it is reported that the business of the Pool is liable to tax over a number of past many years, in spite of the fact that each of the individual participants in the Pool business has paid tax on his share of business. I am sure that this problem will be examined properly by the management of the Pool and effective steps will be taken in right earnest to mitigate the hardship which will be caused by double taxation of the Pool business.

"Another problem facing the insurance industry is the steady increase in cost of repairs and increasing number of claims preferred for large amounts for comparatively small damage to the person or the property of third parties. This situation is further aggravated by allowing, by and large, the applications for such claims *informa pauperis* and generally ignoring the limitation period provided under the rules. How far the stepping up of rates in premium can render substantial help to stabilise the working of this particular department is problematic. Further, if this tendency to prefer claims for highly inflated amounts is to be arrested to some extent, it is very necessary that *forma pauperis* applications are dealt with in a manner so as to restrict the claims preferred to reasonable amounts. This could also be achieved by enacting a suitable legislation on the lines of the Workmen's Compensation Act or, alternatively, by fixing maximum amounts payable for different types of injury.

Formula for Expenses of Management

"The compliance with the provisions of Section 40C and Rule 17E of the Insurance Rules 1939 by the insurers is increasingly becoming difficult, in view of the rising expenses and the consequent increase in expense ratios. The Blue Book points out that the number of companies which are unable to keep their management expenses within the prescribed limits under Rule 17E of the Insurance Rules 1939 is on the increase. These limits for expenses were determined and fixed as far back as 1950. It is a well-known fact that, since 1950, every item constituting management expenses has gone up and these expenses now embrace expenses like bonus and gratuity which have come to stay and were not visualised when the expenses of management formula was devised in 1950. These socio-economic development expenses, together with rising cost of expenses of management as contemplated under the Insurance Act, will virtually create a situation when there will hardly be left any insurer who will be complying with the provisions of Section 40C. It is a moot point as to how far such a situation can be looked upon with equanimity and, therefore, it is all the more necessary to revise the prescribed limits for expenses of management. In this connection, I hope that the recommendations of the Indian Insurance Association and Executive Committee of the General Insurance Council will receive the sympathetic consideration by the Department of Insurance and steps will be taken to bring about a revision in the prescribed limits for expenses of management to suit realistic conditions as they obtain now.

"I shall now come to the review of our operations during the year. As a result of our operations during the year under review, our consolidated Indian gross and net premium income amounted to Rs. 31.19 lakhs and Rs. 36.07 lakhs, respectively, as compared with Rs. 29.73 lakhs and Rs. 30.91 lakhs, respectively, in the previous year. Our total gross premium for the year amount to Rs. 33.80 lakhs. Thus, our both gross and net premium incomes have registered an increase over last year. As a result of increase in our net premium income, we have transferred a sum of Rs. 3,02,251 to the departmental reserves and, consequently, our profits amount to Rs. 4,05,098.

"On the disbursement side of the year's premium income, claims absorb 47.4 per cent., as against 39.9 per cent. last year. The commission and expenses of management account for 38.9 per cent., as against 44.9 per cent. last year. Further, there has been a strain on the departmental reserves to the tune of 8.4 per cent. Thus, there has been an increase of 7.5 per cent. in the claims cost and decrease of 6 per cent. in the commission and expenses of management. Consolidated departmental profits, inclusive of interest on reserves for unexpired risks in the departments, amounted to Rs. 2,20,573, as against Rs. 2,54,509 last year.

"As a result of the year's operations, the total funds of the Company now stand at Rs. 62,81,470. The total assets exceed Rs. 88 lakhs.

"The Directors recommended payment of the dividend at Rs. 5.35 per share less deduction of tax, amounting to Rs. 2,26,640."

Note.—*This does not purport to be a report of the proceedings of the Annual General Meeting.*

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published *half-yearly*. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of *shares*—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the *months* of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales. If any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a Year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly *dividends shown* are for their financial year.

COMMERCE AND INDUSTRY

(*Concluded from page 470*)

and effectiveness of the G.A.T.T. as an International Organisation in the face of these regional groupings, from the point of view of developing nations, has also to be considered.

At the XVth Session of the G.A.T.T. held at Tokyo, the United States Delegation had put forward a proposal that something should be done to avoid market disruption on account of low-cost imports from certain countries, such as Hong Kong, Japan, and in the case of some commodities, India. The stand that the Indian Delegation had taken there was that no country, and much less the highly developed countries, could justify discrimination on the ground that imports from certain countries were cheaper than from some others. If anything of this type was attempted, it would make it even more difficult for the developing nations to develop, inasmuch as their balance of payments position will be further worsened. At the Tokyo Session, all that was done, therefore, was that the G.A.T.T. Secretariat was asked to study as to whether this problem of market disruption existed at all, and suggest, in case it was felt necessary, further course of action. In the Geneva Session, the U.S. Delegation reiterated its original stand and expressed concern at the growing competition that was being faced in the home markets of some countries from goods of low-cost origin. While the Indian Delegation strongly stuck to the position it had taken in Tokyo, and placed its viewpoint on record in no uncertain terms, it was agreed to set up a Working Party which would study the specific problem of disruption and recommend multilaterally acceptable procedures for dealing with it. It was also agreed to undertake a long-term study of the various factors which determine the competitive position of goods in international trade.

This development by itself should not have caused anybody any worry. But when one sees that highly developed countries like West Germany and France continue to maintain war-time discriminatory restrictions on some of the products from developing countries, it becomes a matter which cannot be brushed aside lightly. In the consecutive Sessions of the G.A.T.T. the Indian Delegation has been facing the uphill task of getting these countries relax their restrictions which they continue to maintain on exactly the same grounds which is now being made the subject of a study by a duly constituted Working Party of the G.A.T.T.; and it was our fear that the position will remain the same indefinitely on the main more or less the same indefinitely on the plea that the subject was under study. This development, therefore, has to be watched closely by India. I may state here that, as a result of constant pressure that was brought to bear in the G.A.T.T. on West Germany, that country has recently announced some liberalisation of imports from certain countries.

WORLD POPULATION

(*Concluded from page 462*)

of the very few areas in the world where the expectation of life for males is greater than that for females. In addition to India, low values are shown for most of the areas in Africa, for Greenland, Guatemala, Haiti and Brazil. Mexico also shows low values but these may not be currently representative, since the latest available life table relates to the year 1940 for this country. More than half of the countries shown expect males to live less than 50 years on the average, whereas only 20 per cent. have values of this order for females.

Most Popular Ages for Marriage

Marriages by age of bride and by age of bridegroom for the latest available year are shown for 110 areas. According to a study made in 1959, the average age of all brides in the world is about 24 years, while that of grooms is 27 years. Marriages take place at younger ages in the United States, the average being 22 for brides and 24½ for grooms. It was found that average ages of brides range from 19 to 31 years, the youngest brides being found in the Fiji Islands, Albania, the Egyptian region of the United Arab Republic, the Philippines, Costa Rica and Honduras; the oldest in French Guiana (31 years?), Macau and the West Indies.

The Fiji Islands also provide the youngest grooms whose average age is 23. Young grooms are also found in the Philippines, Mexico and Bulgaria the oldest ones—like the oldest brides are found in French Guiana and the West Indies.

The difference between the age of brides and grooms range from one to eight years, the average being 3.5. The largest differences are found in the Egyptian region of the United Arab Republic, Mauritius, Morocco, Spanish Guinea and Venezuela, while brides and grooms are closer to the same age in Bermuda, the Canal Zone, East Germany, Hawaii and Gibraltar.

A definite trend to younger age at marriage is suggested in the data for industrialised countries, while an increase appears to be taking place in other areas.

MARKET REPORTS

(*Concluded from page 481*)

enter into large commitments in view of the lack of a stabilised trend in Calcutta. Dealers in New York thought, not without reason, that values required a careful watch, in view of the approa

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CI. No. 2581 BOMBAY, 17th SEPTEMBER 1960 PRICE Rs. 2

RETREAT TO REALISM

MUCH water has flowed under the bridge since the Nagpur Congress, and the great debate on co-operative farming does not seem to have been in vain. Even hard critics of the joint-farming idea may draw some comfort from the resolution, passed early this week, by the National Development Council at New Delhi. This resolution, which has accorded approval to the rather cautious recommendations of the Working Group (headed by Mr. S. Nijalingappa) on Co-operative Farming, does represent a retreat from the Council's original stand which appeared inflexible. Any interpretation that this may only be a tactical retreat because there is no immediate prospect of a total withdrawal would be less than fair to the Council which has now taken up an even more cautious position than that of the Working Group. Surely, that famous dictum of Lenin, "one step backward, two steps forward," does not apply here.

What indeed the latest N.D.C. resolution means would need to be more fully appreciated. For one thing, while accepting the Working Group's recommendation that 320 pilot *joint-farming* projects (representing 3,200 societies, as one project covers 10 societies) be undertaken, the Council has not laid down a specific deadline for their organisation. It may be that this will still be done in accordance with the Working Group's scheme of phasing of the pilot projects. Since, however, the agricultural year 1960-61 would now have to be ruled out for obvious reasons, the pilot programme itself may well be rephased as under:

1961-62	... ...	40 pilot projects
1962-63	... ...	60 " "
1963-64	... ...	90 " "
1964-65	... ...	130 " "

Such rephasing would, in turn, mean that, by the end of the third Plan, the success or otherwise of joint farming in two years of continuous working will have been known only in respect of 190 pilot projects representing 1,900 societies.

For another, the N.D.C. resolution has virtually rejected the Working Group's suggestion (which, too, is not a 'firm' recommendation) that 2,000 additional co-operative farming societies be formed in 1962-63, 3,000 in 1963-64, 5,000 in 1964-65 and 10,000 in 1965-66. Here, the Council's considered view is that no specific targets are necessary for the "expansion programme"—a view which, in effect, means that the Working Group's assumption that the successful working of a pilot society in two successive years will have provided an impetus, by example, to the organisation of more co-operative farms has probably been rejected by implication. As the "demonstration" value of a pilot project cannot be taken for granted, the Council has wisely refrained from committing itself to the suggested targets of the "expansion programme." Even if, by any chance, the Council had accepted the expansion targets, that would not have meant much for the simple reason that a rephasing of the "expansion programme," as a sequel to the rephasing of the "pilot programme," could lead to the creation of only 10,000 additional societies by the end of the third Plan.

The implication of the N.D.C. resolution, thus, is that the "demonstration" value of the pilot projects may not be of such rapid significance as to bring about any spectacular voluntary expansion of joint farming by the end of the third Plan. If the Council had thought that two years of working might not provide any conclusive proof of the superiority of joint farming over individual farming in terms of productivity and the like, it would have been eminently in the right. Where even the Working Group which consisted of experts took a cautious view of "expansion" possibilities, the National Development Council was not to be expected to adopt a more optimistic approach by laying down specific targets therefor. The Council's general statement that "the objective should be to build up some foundations for the development of co-operative farming, so that, over the next ten years or so, a *substantial* (italics ours) portion of the agricultural lands would be cultivated on co-operative lines," has necessarily to be vague in the circumstances. The word 'substantial' need frighten nobody, for it may mean anything or nothing. In absolute terms, three million acres, for example, may be substantial, but that extent would represent only about one per cent. of all cultivated lands in the country.

Even in the best of circumstances visualised both by the Working Group and the N.D.C.—circumstances such as the location of pilot projects in the Community Development areas where the co-operative movement is presumed to have already made considerable strides, special assistance to joint farming societies, etc.—the most that is hoped for is no more than a few thousands of societies by the end of the third Plan. This cautious approach is of a piece with the other recommendation of the Council that "the policies for promoting co-operative farming and service co-operatives at the primary level should not cut across one another, but should be visualised as a stage in co-operative development and not as a programme isolated from the normal pattern of growth of the rural economy." The consequential recommendation that, "where a group of cultivators in the village formed a co-operative farming society, the society should be a member of the local service co-operative" is also understandable, if the implication of the Council's current approach is that joint farming cannot stand on its own feet without special assistance and inducements and without its being organically tied to service co-operatives. This itself is an implied admission of the probable fruitlessness of the entire joint farming enterprise.

Where so much store is set by service co-operatives covering credit, marketing, supplies, etc., as in Japan, where even according to the report of the Patil Delegation which visited that country too in the latter half of 1956, such co-operatives have obviated the need for joint farming, the path of prudence would seem to lie in bringing all the advantages of "scale" to individual farmers without persuading them to pool their lands. Joint farming of ridiculously uneconomic holdings, in terms of the recommendation of the Kumarappa Committee which reported in 1949, may, however, commend itself for consideration on the ground that farming units could be rendered more economic as work-units. But, if the same objective can be achieved by the possible purchasing out of some sub-marginal holders, there would be no need for joint farming in the case of even ridiculously uneconomic holdings. Even in the case

investors and their Indian associates are the largest owners of these industrial property rights. But as more and more industries are established, and more Indian inventions take place, the interest of indigenous manufacturers in trade marks and patents legislation and the problems involved in their administration will grow. Meanwhile, the Government is actively trying to see to what extent the existing laws and practices pertaining to the ownership and leasing of these property rights need improvement, in order to promote speedy industrialisation and to regulate the price that is being paid to foreign owners from the point of view of saving foreign exchange. The keen interest displayed by the Government in this matter is borne out by the fact that Mr. Manubhai Shah, Union Minister for Industry, himself chose to attend the seventh annual meeting of the Trade Marks Owners' Association and reply in great detail to the several points raised by its Chairman, Mr. K. T. Chandy, in his speech.

Some of the issues discussed by Mr. Chandy are of great importance to business men, especially those who are exploiting foreign patents and processes through special arrangement with their owners. These issues arise from the recent amendments to the Trade Marks Act and the Government's decision to amend the existing Law of Patents and Designs. The Association, since its last meeting in November 1959, had a variety of problems to discuss with the Government and the Trade Marks Registry concerning the rules framed under the Trade and Merchandise Marks Act, the procedure and principles governing Registered User arrangements, rules pertaining to the proper indication of the country of origin of merchandise and the proposed reforms in Patent Law.

It may be recalled that the former Merchandise Marks Act of 1889 was revised and incorporated in the newly enacted Trade and Merchandise Marks Act 1959. The rules under the Act were recently finalised and issued. One of the main purposes of these rules is to ensure that the country of origin is clearly indicated in the labels and cartons affixed to various articles. Too often the country of origin is indicated in very small letters which often misleads the consumer. The rules now provide for a minimum size for lettering in the labels, so that the consumer could see at a glance whether the product was made in this country or elsewhere. Mr. Chandy seemed to feel that the rules were capable of further improvement and indicated that they were being taken up with the Joint Registrar of Trade Marks. He wanted the Government to give sufficient time to the industry before finalising the relevant rule and enforcing it, as the matter was not of small importance. He hoped that the practical difficulties in redesigning the containers and labels of various sizes, on which a lot of information has to be given, would be borne in mind by the Government, not to mention the substantial expenditure that would be involved in carrying out this reform. His suggestion that the Development Council for each industry may be asked to go into this issue and put forward its recommendations sounds reasonable. Only, care must be taken to see that this procedure does not result in any prolonged delay.

The subject of Registered User arrangements, by which the owner of a registered trade mark can permit its use under certain conditions by others is indeed very important and somewhat controversial. Its importance resides in the fact that many foreign manufacturers of repute get their trade marks registered and pass them on to Indian concerns in return for large royalties. Of the total number of 3,600 registered trade marks for which registration of registered users has been made so far, 96 per cent. belong to foreign proprietors. While there is nothing wrong with such leasing arrangements, the royalties payable involve the crucial question of drain on India's foreign exchange reserves, which are by no means plentiful. In the case of one well-known trade mark in the textile trade, for instance, the royalties paid by the textile industry to a foreign concern run into several lakhs of rupees. It is provided in the amended Act that the existing Registered User arrangements would lapse in November 1962, but the Trade Marks Registry would entertain applications forthwith for continuation of these arrangements which, in many cases, form a part of the terms of foreign collaboration. Mr. Chandy urged that the Government should complete its review of these arrangements as early, and with as little disturbance as possible. It is likely that for this purpose the Government would require not only a copy of the agreement between the foreign registered proprietor of the trade mark and the registered user in India but also many other vital details. Section 49 of the Act and Rule 85 stipulate the nature of such information, while Rule 83 lays down the items that should be specifically covered by the agreement between the parties. Evidently, the trade is a little anxious that, when Registered User arrangements are permitted hereafter, there would be a tightening of the rules in such a manner that it might affect foreign collaboration. Mr. Chandy advised the Government to ensure that fairness, cordiality and the success of such collaboration were maintained undisturbed. The Government is likely to keep a little discretion to itself in this important matter, but it should enunciate at an early date, as suggested by Mr. Chandy, the general principles that would guide the use of such discretion. It must, however, be conceded that, unless the parties concerned promptly respond to the Controller-General's request for details of the terms of agreements and their working, the Government cannot be expected to act quickly.

Reform of the Patent Law in this country has been hanging fire for more than a decade now. In 1950, as a result of the Teckchand Report, certain amendments were made to the original Act. In 1953, an elaborate Bill was presented to Parliament and finally allowed to lapse even after a Select Committee had scrutinised it. In 1957, Mr. Justice Rajagopala Iyengar of the Supreme Court was appointed to review the matter and, in February 1960, his report was made public. The chambers of commerce and other interested institutions have sent their views on his recommendations and the whole matter is before the Government of India. The report of Mr. Justice Rajagopala Iyengar has received, to quote Mr. Manubhai Shah, "very high encomiums from knowledgeable persons both in India and abroad" and "the Royal Commission of Canada, in its report on patents, submitted three months ago, has independently reached conclusions similar to those of the Judge on many points." The Union Minister, however, conceded that the problem of reconciling national interests with those of foreign concerns owning patent rights in India was a complicated one and called for "judicious balancing of various approaches, particularly in an underdeveloped country like ours."

Put in brief, in revising the Patent Law, the whole object of the Government should be to encourage Indian industry to forge ahead, without imposing at the same time undue handicaps on the owners of patents abroad. In order to achieve the former object, it would be necessary to have a position in which the industry in the private sector, or the Government in the public sector, would have fair access to the new processes and manufacturing techniques. The protection granted to an inventor in the form of a patent is primarily intended to enable him to get the reward for his efforts by giving him the exclusive right to use his invention for a certain period. But it may well be that an important discovery of a technique is in the hands of a patentee who will not put it to any use himself for various reasons, nor would he allow anyone else to work it, even if the latter were prepared to pay a reasonable fee. In such a case, industrial progress may be hampered. Hence, commercial utilisation of a patent by others should be permitted, in fit and proper cases, subject to payment of suitable compensation or royalties to the inventor. In the context of national planning, in particular, the State which runs many public corporations and public enterprises such as steel projects, telephones, electronics, and locomotives should have an overriding right to take over and utilise an invention patented by anybody, subject to minimum safeguards. It must, however, be added that, without proper compensation, any such action by the State would savour of expropriation.

India's point of view on this subject was ably stated by Mr. Manubhai Shah in his address at the Association's annual meeting. He observed:

"In any revision of the Patent Law, the patent system and the laws relating to industrial designs, the most important thing that we have to bear in mind is that the law should be conducive to the development and growth of indigenous research, on the one hand, and rapid industrial development of the country, on the other. The patent, whether foreign or indigenous, which seeks to restrict or tends to restrict the benefits of science and inventions to an individual or a group of people against the whole community, should not be allowed to receive any protection or support. Therefore, in considering any patent law or regulations, we have to take all sides of this picture into full consideration. While there are some good features in protecting scientific knowledge and research in which individuals or corporate bodies have spent considerable experience and money, it should also be remembered that such protection should not militate against the general public good and should not hamper or stifle the work of our scientists and research workers in the country. Therefore, the patent system, throughout its historical growth in many countries of the world, has undergone evolution and changes to suit the social and economic pattern of every society and every country. We, in India, who are underdeveloped in many ways and yet where scientific talent is growing at a rapid rate, would have to evolve a patent system to suit our own requirements and our genius."

It is to be hoped that the aforesaid consideration would engender sober thoughts in foreign patentees and make them more reasonable in their demands on the Indian use of their patented processes. It should also encourage them to set up industries in this country to exploit the benefits of their patents. The field of foreign collaboration has been widening and more and more industries are being set up even in the public sector with such assistance, both financial and technical. Where there is a clear failure to utilise the patent within a reasonable period and its utilisation is also a demonstrable fact, there ought to be a provision in the new law for a licence being issued in respect of that patent to those who are ready to use it, provided suitable compensation is paid. The matter is, of course, complicated in actual working, but the underlying principle is reasonably clear.

Mr. Chandy was at great pains to show that an underdeveloped country like India should not reduce the area of patent protection. His reasons are as follows:

"It is a recognised fact that the facilities for research, in terms of equipment, trained manpower and finances, are at present limited in our country. These limitations determine the scope and volume of the inventions that may be made in this country, which, in the circumstances, cannot but be limited for the present, though, in course of time, we ought to and shall overcome these limitations. At no time has scientific advancement been the fruit of the efforts of any one country or persons of any one nationality. The maximum amount of interchange of information about progress in science, industrial techniques and about new inventions, is, therefore, necessary for any country, be it highly developed or substantially undeveloped, and more so, for the undeveloped and underdeveloped countries. One of the best ways in which this exchange can be promoted is a Patent System, which removes the fear that the inventor who discloses his achievement will be deprived of the fruits of his efforts and ability. In the absence of such protection, many an advance can remain as secret know-how, a tradition with which we are only too familiar in India, where many inventions and useful knowledge tended to be zealously guarded as family secrets. I would, therefore, respectfully submit that the existence of foreign patents is not a thing of which we are to be alarmed. It is not true nationalism which hinders the free flow of technical knowledge."

Surely, the Government of India could be trusted to play fair in this matter, considering the zeal with which it has all along protected the interests of foreign capital in this country. The large consumer potential of the Indian market and its economic buoyancy are factors that should *prima facie* stimulate exchange of technical know-how and proper use of patents. And the Government, on its part, need not burden the patent system with any serious disincentives. It has, of course, a duty to weigh carefully the rights of patentees, on the one hand, and ensure equitable terms for their utilisation, on the other. Indeed, if the socialist pattern of society, the declared goal of national planning, is progressively achieved, the State would come to use all patents. The *entrepreneurs* may, however, take comfort in the thought that India is still a mixed economy and that there is room for them to participate in the industrialisation of this country by using of their patents. No national Government will be worth its salt, if it allows its patent system to be misused and abused to the detriment of its industrial progress. Foreign concerns owning, or wanting to own, patent rights in India will be moving with the times, if they refrain from demanding unreasonable terms for authorising the use of their patents.

MARKET GOSSIP

Preference Dividends

THE introduction of a Bill in the Lok Sabha on the 6th inst. to regulate dividends on preference shares represents the Government's recognition of the need for official intervention in this respect, in view of the divergent practices followed by joint-stock companies, as a result of the new scheme of company taxation introduced in the Finance Act 1959 and modified in the Finance Act 1960. It is also a reversal of the view expressed by the Finance Minister in his Budget speech in February this year that "the Government would not like, as the current Finance Act implies, to make any assumptions" regarding the amount of dividends which companies were required to pay and that he would leave the actual amounts of these dividends for the companies themselves to decide. Such a reversal of opinion has evidently been prompted by the fact that the Government itself, as one of the largest shareholders (through the L.I.C.), stands to suffer.

The Government had, of course, realised as early as in April last that it might have to intervene. In his reply to the debate on the Finance Bill, for instance, Mr. Morarji Desai had stated (*vide* page 687 of *Commerce* dated 23rd April 1960) that, if, after watching the situation for some more months, it was found that companies did not make "suitable provisions in this regard," the Government might have to bring in "suitable legislation, with a view to securing to the preference shareholders a suitable increase in the dividend." It would appear that, though several companies were willing to abide by the spirit of their undertaking to preference shareholders, the legal requirements were so complicated that they found it practically impossible to fulfil them. Legislation was, therefore, found to be the only way out.

The Bill, while prescribing a uniform rate of increase in each class of preference dividends, does not seek to compensate fully the loss as a result of the tax changes introduced under the Finance Act 1959. For both the classes of preference shareholders (that is, tax-free and taxable) will continue to get less than what they were getting before the Finance Act came into force. It, however, provides a fair compromise between the position that existed before the Finance Act of 1959 and the confusion created as a result of it. Further, both the classes of preference shareholders will be equally benefited by the present Bill. The main features of the Bill are:

1. The provisions apply only to preference shares issued and subscribed before 1st April 1960. In respect of preference shares issued and subscribed after 31st March 1960, the companies and the shareholders are fully aware of the legal position and it is up to the companies to clarify to the new shareholders their right as to the amount of dividend payable to them.

2. All preference shares, the dividends on which were being paid before 1st April 1960 without deduction of tax, whether specified to be tax-free or not, will, after the commencement of the Act, be entitled to an increase of 25 per cent.

3. All preference shares, the dividends on which were being paid before 1st April 1960, after deduction of income-tax payable by the company, whether specified so or not, will be entitled to an increase of 7 per cent.

4. An additional dividend will have to be paid in respect of preference dividends declared after 31st March 1959 and before the commencement of the Act, which are not entitled to the benefit of "grossing" under the provisions of the Income-tax Act and the dividends already declared are less than the dividends provided for under the Bill.

5. Where only a part of the company's income is chargeable to income-tax, only a proportionate increase is allowed on tax-free or taxable preference dividends.

6. The provisions of the Bill will not be applicable to the additional dividends which a participating preference shareholder is entitled to along with the ordinary shareholder in addition to the fixed preference dividend.

7. A company may, however, increase the amount of dividend on preference shares beyond the limit specified under the Bill, in the manner provided in Section 108 of the Companies Act, that is, with the consent of the majority of its shareholders.

As stated earlier, under the present Bill, both the classes of shareholders will stand to benefit, as compared with the present position in the case of those companies which are not able to maintain the previous practice or does not wish to do so as the letter of the Act is in their favour. This will be clear from the following illustration:

7 Per Cent. Tax-free Preference Share

Present position	Rs.	*After the Bill comes into force*	Rs.
Dividend	7.00	Dividend	7.00
Less : I. tax at 20% ..	1.40	*Add :* 7%	0.49
	5.60		7.49
Less : Tax at 30% ..	1.68	*Less :* I. tax at 20% ..	1.50
			5.99
		Less : Tax at 30% ..	1.80
Net dividend	3.92	Net dividend	4.19

The net increase in the case of tax-free preference dividend is 25 per cent. and that in the taxable preference dividend is 7 per cent. So far as the companies are concerned, the Bill implies that the incidence of the aforesaid changes in preference dividends will be 25 per cent. more than what the companies had to bear prior to the Finance Act 1959. Thus, in the case of 7 per cent. tax-free preference shares, the Company concerned will have to pay Rs. 8.75 per share, an increase of Re. 1.75 per share or 25 per cent. On a 7 per cent. taxable preference share, the Company was paying Rs. 4.80 per share (that is, Rs. 7.00 *less* income-tax and super-tax at 31.5 per cent.= Rs. 2.20). It will have to pay hereafter Rs. 6 per share (that is Rs. 7.49 *less* income-tax at 20 per cent.=Re. 1.49). This represents an increase of Re. 1.20 per share or 25 per cent. Thus, though the increase in dividend permitted on taxable preference shares is only 7 per cent., as against 25 per cent. in the case of tax-free preference shares, the actual increase which the companies are asked to make in either case is 25 per cent.

This 25 per cent. represents the actual saving in company taxation, as a result of the reduction in income-tax on companies and the abolition of wealth tax and excess dividend tax. This is arrived at as follows:

	Formerly nP per rupee	*At present nP per rupee*	*Saving to the Company*
Income-tax, super-tax, etc...	51.5	45.0	..
Wealth tax and excess dividend tax	4.5	..	..
	56.0	45.0	
Retained by the company	44.00	55.00	11 nP per rupee or 25 per cent.

It will thus be seen that the Bill makes it obligatory on companies to pass on to both the classes of preference shareholders the benefit of saving they have had in their taxation. The Government has tried to follow a definite basis that makes no discrimination between the tax-free and taxable preference shares. Nevertheless, the gross return to both the classes of preference shareholders under this arrangement will be 14 per cent. less than what they were getting prior to the abolition of "grossing." Thus, the 7 per cent. tax-free preference shareholders who were getting Rs. 10.22 per share, as a result of grossing, will receive only Rs. 8.75 and the 7 per cent. taxable preference shareholders will be entitled to only Rs. 6 per share (including the tax refund), as compared with Rs. 7 they were getting before.

In other words, the Bill, as mentioned at the outset, does not seek to restore the position that was prevailing before the new system of corporate taxation came into being. It gives only partial relief to preference shareholders. It, of course, permits those companies which wish to fulfil the spirit of their undertaking to their preference shareholders to do so. All that they have to do is to amend their Memorandum and Articles of Association, as required under Section 106 of the Companies Act of 1956. Only a few companies have so far done so. Some companies have promised to do so and it remains to be seen whether they will fulfil this promise, now that the Bill is in their favour. The vast majority of companies were waiting to see in what way the Finance Minister would give statutory sanction to his appeal to company managements to play fair to preference shareholders. How many of them will now take the trouble of amending their Articles, so that they can pay the tax-free preference shareholders what they had intended to pay? Some companies may want to pay, but may not succeed in getting the requisite majority votes for amending their Articles. Further, the Bill does not protect the net return of preference shareholders against any future increase in the rate of tax deductible at source. And to this extent investment in preference shares has lost the charm it had before.

There will also be two types of tax-free preference shares; fully tax-free and partly tax-free, depending on which of the two courses a company chooses to follow. Consequently, before buying a tax-free preference share, an investor will have to take the additional trouble of finding out the exact position of the dividend right. This will render investment in the existing tax-free preference shares a complicated business.

Oil Prices

As is only to be expected, the conference of the five oil-producing nations in the Middle East (Saudi Arabia, Kuwait, Qatar, Persia and Iraq) and Venezuela in Latin America, which began at Baghdad on Saturday the 10th inst., has aroused world-wide interest. These countries together account for nine-tenths of the aggregate world reserves of oil and 40 per cent. of actual world output. And, naturally, any decision taken at the conference will have far-reaching international repercussions. No details of the deliberations at the conference are available up to the time of writing. The discussions are supposed to be secret. It is not even known whether the conference is still in session. The only news appearing in the Press is simply this: On their arrival in Baghdad, all the delegates unanimously expressed their grave concern at the recent cuts in posted prices for Middle East crude oil, the conference opened in a militant mood, and important decisions are expected to be announced within the next few days.

Thanks to the initiative taken by the Government of Iraq, the Baghdad conference was hurriedly convened, though the Arab Oil Congress is due to be held at Beirut in a month's time, from 17th to 22nd October next. The Iraq Government wants to adopt what is called "a united attitude" against the reductions in the prices of crude oil effected by the leading oil companies operating in the Middle East. The Governments of the Middle East countries consider that the price reductions have been made "unilaterally and without consultations." Some in Saudi Arabia even accuse the oil companies of their "desire to recoup losses arising from Venezuelan tax increase, the loss of Cuban holdings, increased Basrah port dues, etc., by shifting profits from production to marketing and refining, from which the producing countries receive no share." Attention is drawn to the fact that, since Saudi Arabia derives 60 per cent. of its national income from petroleum, Venezuela 60 per cent., Iraq 47 per cent. and Iran 27 per cent., these countries must be insulated as far as possible from fluctuations in oil prices. It is argued that the Middle East oil producing countries lost $150 million as a result of the price cuts in February 1959 and the loss of a similar amount will be suffered from the recent cuts. "This," to quote a report, "amounts to a reduction of three or four per cent. in their national income—comparable, say, to the effect on Belgium of the loss of the Congo—and it has happened suddenly, without warning." To quote another report: "The importance of the posted prices is that, in the Middle East (unlike Venezuela), they provide the basis for the 50 : 50 profit-sharing arrangements between companies and Governments, and any reduction means smaller revenues for the Governments concerned." It was this consideration that prompted Mr. Abdullah Taraki, Saudi Arabia's Director of Petroleum Affairs, to propose an international oil pro-rationing scheme early this year. The scheme, which has received full support from Venezuela and a few Middle East countries, envisages the gearing up of oil production to market demand, each nation's percentage of the market depending primarily on the size of its proven reserves.

The Arab countries are said to be not particularly happy with India over the 11 per cent. cut it forced in the price of crude oil delivered to it. Nor are they happy with the Soviet Union, as they feel that India was able to exert pressure on the Western oil companies mining Middle East oil because of Russa's offer of cheaper crude oil.

The concern of the Middle East countries over the reductions in oil prices is understandable. It must, however, be emphasised that oil production in this region has been rising rapidly enough to offset the price reductions. May be, their revenues would have been larger if the prices had not been lowered, but are the consuming countries like India and Pakistan not justified in asking for a reduction in oil prices when the world price of this commodity goes down? Do our neighbours in West Asia pay anything more than the world price when they buy goods from India and Pakistan? There is, therefore, no point in their getting sore with India. If they wish to have a larger share of profit on the crude oil extracted from their fields, they have to negotiate with the oil companies amicably and reach an understanding. Why drag in this poor country into the controversy? Is it the contention of the Middle East countries that other consuming countries such as the U.K., West Germany, Italy and France, to mention only a few, have not taken steps to reap the benefit of lower world oil prices? Has not the U.S. sought to protect its domestic oil producers by placing restrictions on imports of oil from abroad and has not that action led to a fall in the prices of crude produced elsewhere in the world? Surely, it is absurd on the part of anyone, be they the oil companies or the Middle East Governments, to lay the blame on India for their discomfiture.

Coal Shortage and Steel Production

It is, indeed, a sad commentary on planning to be told almost at the end of a decade of "planned" development that the live-wire industries of the country are suffering from a shortage of raw materials. Engineering industries do not have enough steel to keep to their production schedules, gunny manufacturers are held to ransom by speculators due to a shortfall in raw jute output, and cotton textile manufacturers complain that the high prices of cloth are due, among others, to the inadequacy of indigenous cotton and the consequent hardening of prices thereof. Coal, fertilisers, and chemicals are among the other scarce commodities which are hampering industrial production. The more painful aspect of the whole problem is the Government's refusal, for reasons best known to itself, to take note of the warning given well in advance by those who are in the know of things about the prospect of production being affected by raw material shortages.

One may argue that, to the extent that raw material shortages are due to failure of monsoon and other adverse weather conditions, they cannot be regarded as an aspersion on India's planners and administrators. This is, of course, true, but only to some extent, for one of the objectives of planning is to redure the dependence on the vagaries of Nature. To give an instance, if the plans to control and regulate floods, and to prevent waterlogging had been effectively implemented, the damage to agricultural production would have

(Continued on page 531)

FURTHER SETBACK IN EQUITIES

HEAVY SELLING AT CLOSE

(From Our Own Correspondents)

BOMBAY, 15*th September*

THE share market has had a further setback during the week under review and equities have been marked down heavily over a wide front. A slightly steady tone was noted on Tuesday and Wednesday and values showed a tendency to stabilise. But this was short-lived and today there was a fresh wave of selling, on renewed reports from New Delhi that the Government was considering measures to check excessive speculation. Even if the Government is actually formulating steps in this direction, it will be some time before any statutory measures are taken, as the Finance Minister will be away at Washington to attend the World Bank and I.M.F. meetings and the Prime Minister also is likely to leave for New York to attend the U.N. General Assembly session after his return from Pakistan. However, the bears have seized the opportunity to depress the market and this has induced some bull liquidation as well.

A notable feature of the week's trading was the sharp fall in leading cash shares. Indian Dyestuffs, Colour Chems, Poly Chems, Anil Hardboards, Ceat Tyres and Premier Tyres were prominent among these. Evidently, the operators are cashing the sizable gains in these counters in order to subscribe to the issues of new companies and rights issues of well-established companies.

Among the rights issues announced this week are those of the Sirur group of textile mills and the Gokak Mills Ltd. The Modern Mills proposes to issue shortly a further equity capital of Rs. 46.47 lakhs to the existing shareholders in the ratio of one share for every ordinary held. The additional capital is to finance the renovation and expansion programme. The Minerva Mills will shortly issue 6 per cent. tax-free redeemable convertible preference shares of the value of Rs. 10 lakhs, in order to augment the Company's working capital. The Company proposes to embark on a programme of renovation and expansion and a loan is being sought for this purpose from the National Industrial Development Corporation Ltd. The Mysore Spinning and Manufacturing Company, Ltd. proposes to issue further equity capital of Rs. 9.93 lakhs to the existing shareholders in the ratio of one ordinary share for every three shares held.

The Directors of the Gokak Mills propose to issue, subject to the sanction of the Controller of Capital Issues, 24,405 new ordinary shares of Rs. 100 each at par to the existing shareholders in the ratio of one new share for every two shares. The new issue is to enable the Company to repay its borrowings.

To revert to the trend of the market, steel shares succumbed to selling pressure, Tata Ordinaries falling from Rs. 157.25 to Rs. 155.75. The decline in Indian Irons was much sharper, the scrip having been pressed down from Rs. 25.20 to Rs. 24.

Textiles suffered widespread losses. Centurys gave way from Rs. 489 to Rs. 479 and, after a short-lived recovery to Rs. 487, lost ground to Rs. 481.50. Bombay Dyeings shed 40 nP to Rs. 66. Kohinoors were marked down by Rs. 7.50 to Rs. 315.50. Standards provided the lead, with a fresh fall, this time of Rs. 235 to Rs. 1,310. Finlays, Morarjees, Mysore Spinnings, Swans were among the other scrips which suffered sizable losses. Khataus provided a notable exception with a rise of Rs. 22.50 to Rs. 660, following encouraging Directors' report.

Bank shares displayed a firm tone, in refreshing contrast to the general trend. Central Banks added Rs. 2 to Rs. 49.50 and their new shares Rs. 3.30 to Rs. 52.80. Bank of Indias gained Re. 1.50 to Rs. 101 and their new shares Rs. 2 to Rs. 103.

Digvijays returned to favour among cement shares and rose by Rs. 7.50 to Rs. 174. Other counters were listless, A.C.Cs moving between Rs. 146.25 and Rs. 144. Orissa Cements were quiet at Rs. 13.84.

In the sugar group, Belapurs staged a recovery earlier in the week from Rs. 375 to Rs. 383, before shading off to Rs. 374 at the close. Phaltans were lower by a rupee at Rs. 178, while Walchandnagars were unchanged at Rs. 303.75.

Engineering shares lacked support, presumably on fears that shortage of steel and components might hamper the industry's growth. Alcocks lost Rs. 2 to Rs. 291. Larsen and Toubros were marked down by Rs. 3 to Rs. 42.75, Premier Constructions by Rs. 17.50 to Rs. 337 and Tata Locomotives by Rs. 10 to Rs. 278. Voltas met with pressure at the close, the shares finishing at Rs. 273 with a loss of Rs. 6 over the week. Josts Engineerings dropped Rs. 12.50 to Rs. 152.50 and Mahindras Re. 1.72 to Rs. 21.52.

Shippings and automobiles provided no exception to the general trend. Scindias were a shade quiet at Rs. 14.52 and Great Easterns at Rs. 15.64. Premier Automobiles dipped from Rs. 163.75 to Rs. 157 and Hindustan Motors from Rs. 20.88 to Rs. 18.

Losses in miscellaneous counters were not uncommon, but they were more pronounced in cash scrips. Bombay Burmahs were, however, erratic, moving between Rs. 595 and Rs. 572, but they finished on balance Rs. 10 higher at Rs. 581. National Rayons, after being marked up from Rs. 502 to Rs. 518.50, suffered a setback to Rs. 499.50. Gwalior Rayons at Rs. 39.50 *ex-div.* were Rs. 2.91, lower. Indian Rayons lost Rs. 10 to Rs. 60 and Baroda Rayons were done Rs. 12.50 lower at Rs. 129. Tata Oils and Wimcos also provided exceptions, with a rise of Rs. 3.50 to Rs. 76 in the former and of Rs. 8 to Rs. 251 in the latter. Anil Hardboards fell by Rs. 32.50 to Rs. 357.50, Ceat Tyres by Rs. 20 to Rs. 230 and Premier Tyres by Rs. 14 to Rs. 81. Indian Dyestuffs (old) declined by Rs. 90 to Rs. 530 and their new shares by Rs. 95 to Rs. 525. Colour Chems were depressed to Rs. 380, representing a loss of Rs. 30 over the week. Poly Chems shed no less than Rs. 35 to Rs. 255. Amar Dyes, Dharamsi Chemicals, Chase Brights, Khandelwal Ferro Alloys, Phillip Carbons, West Coast Papers and Raymond Woollens were among the other counters which suffered sharp losses.

Madras Stock Exchange

MADRAS, 14*th September*

For the third week in succession, equities on the Madras Stock Exchange ruled distinctly easy, thanks mainly to persistent rumours of possible official intervention to curb speculation on stock exchanges. Besides, in view of the tight foreign exchange situation, operators feared further curtailment of imports of capital equipments and raw materials, which would, in turn, affect adversely the growth prospects of industries. There were also rumours regarding an increase in Bank rate. All these factors led to sizable liquidation in several counters and, consequently, prices continued to move downward. Teas were particularly depressed on reports of growing foreign competition in world tea markets. Rubbers too came in for selling. Coffees were quiet. Textiles encountered selling on apprehension of decline in the profit margin of mills as a result of the recent reduction in prices of piecegoods and yarns. Sugars, chemicals, cements and other miscellaneous industrials lacked support.

In the tea section, Nonsuch Teas declined by 50 nP to Rs. 27.50. Devsholas moved down by 20 nP to Rs. 30.25. Waterfalls dropped 13 nP to Rs. 4.47. Blue Mountains gradually drifted downwards from Rs. 5.28 to Rs. 5.18. United Nilgiris and Chembras shed 5 nP each to Rs. 22.60 and Rs. 5, respectively. Peermades were lower by 3 nP at Rs. 23.60. Haileyburias rose initially from Rs. 14.50 to Rs. 14.85, but fell back to Rs. 14.50 in the subsequent sessions. Kil Kotagiris, however, gathered 2 nP to Rs. 5.65.

Among coffees, Consolidated Coffees, after rising from Rs. 26.10 to Rs. 26.20 earlier, receded to Rs. 26 towards the close. Ouchterlony Valleys eased by 2 nP to Rs. 4.77 before recovering to Rs. 4.75. Coffee Lands were neglected at Rs. 24.50, as also Cowcoodys at Rs. 5.60 and Rajendras at Rs. 15. Amalgamated Coffees were dull at Rs. 13.85. The Directors of the Company have announced a dividend of 10 per cent., taxable (equivalent to 7 per cent. tax-free) for the year ended March 1960, as against 7.5 per cent. tax-free for the previous year.

In the rubber group, Cochin Malabars fell from Rs. 7.55 to Rs. 7.35 before closing at Rs. 7.40. Midlands were lower by 10 nP to Rs. 11.50. Highlands and Kailas dropped 5 nP each, the former to Rs. 14.70 and the latter to Rs. 5. Malankaras were neglected at Rs. 20.55, following the announcement of a lower dividend. The dividend for the year ended March 1960 has been placed at 15 per cent., taxable (10.5 per cent. tax-free), which compares unfavourably with 16 per cent. tax-free for 1958-59.

Bangalore Woollens in the textile section climbed down by Rs. 4 to Rs. 204. Coimbatore Pioneers were lower by Rs. 2.50 to Rs. 347.50. Cannanores sagged by a rupee to Rs. 144. Coimbatore Spinnings lost a like amount to Rs. 48. Maduras eased by 75 nP to Rs. 34.15. Kotharis and Loyals shed 25 nP each to Rs. 12.65 and Rs. 35.50, respectively. Buckinghams changed hands at Rs. 205, Coimbatore Cottons at Rs. 170 and Dhanalakshmis at Rs. 227. Travancore Rayons, however, rose by 45 nP to Rs. 36.75, after an initial fall (from Rs. 36.30) to Rs. 36.

In the sugar section, Cauverys shed Rs. 2 to Rs. 144. Travancores eased by 15 nP to Rs. 12.10. Deccans closed 10 nP lower at Rs. 15.95, after fluctuating between Rs. 15.85 and Rs. 16.10 during the week. Indias were unchanged at Rs. 13.25 and Mysores at Rs. 60.50. East India Distilleries, however, hardened by 75 nP to Rs. 39.75; they were higher still at Rs. 39.87 yesterday.

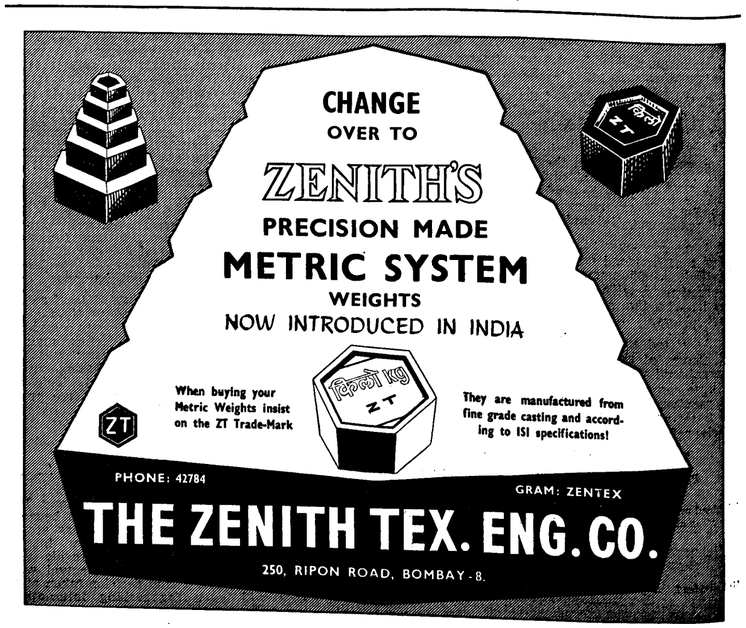
In the miscellaneous section, Mettur Chemicals encountered selling and fell by 46 nP to Rs. 14.56. Among other chemicals, F.A.C.Ts lost 13 nP to Rs. 11.67 and Mysore Fertilisers 5 nP to Rs. 10.65. Mysore Chemicals were quiet at Rs. 27.87. In the cement group, Orissas fell by 25 nP to Rs. 13.50 and Travancore Cements by 23 nP to Rs. 8.80. India Cements sagged by 10 nP to Rs. 7.25. Andhras, however, put on 10 nP to Rs. 10.50. Among other scrips, Textools and Western India Plywoods decreased by Rs. 2 each to Rs. 188 and Rs. 298 respectively. Ashok Leylands shed 22 nP to Rs. 8.78. Aluminium Industries were dull at Rs. 24.50. Mysore Lamps were unaltered at Rs. 26.25. The Company has declared a dividend of 20 per cent., taxable (equivalent to 14 per cent. tax-free) for the year ended March 1960, as compared with 16 per cent. tax-free for the previous year.

ZENITH STEEL PIPES LTD.

The Zenith Steel Pipes Ltd. has announced the details of its proposed equity issue to provide a part of the finance required for its steel pipe project. Of the issued capital of Rs. 70 lakhs (in 700,000 ordinary shares of Rs. 10 each), the promoters, Directors and their friends have already taken up Rs. 28 lakhs and the Industrial Credit and Investment Corporation has agreed to subscribe for Rs. 7 lakhs. Only the balance of Rs. 35 lakhs will be available for public subscription, the list for which will open on 21st September and close on 29th September 1960. A sum of Rs. 2.50 per share is payable on application and the balance of Rs. 7.50 in one or more calls after allotment, but not earlier than three months therefrom.

The main object of the Company is to manufacture steel pipes and tubes of all descriptions, but mainly welded and galvanised pipes and fittings. Its factory, which will be the first of the five to be set up under the third Plan, will have an annual capacity of 24,000 tons of welded steel pipes and will be set up near Bombay. The Company is negotiating with leading foreign machinery and pipe makers for technical collaboration. The project is estimated to cost Rs. 1.25 crores, of which Rs. 70 lakhs will be provided by the equity issue and the balance of Rs. 55 lakhs by foreign exchange and rupee loans from the I.C.I.C. The foreign exchange component of the loan will be the equivalent of Rs. 40 lakhs.

The Company has an influential board of directors. Judging from the recent trend in capital market and from the good outlook for the industry and considering the fact that the proposed issue is a relatively small one, there is every reason to expect that the issue will be a notable success. That the promoters are confident of the response from investors to their issue is evident from the fact that it has not been underwritten. On the basis of the existing prices and after making allowance for costs, overheads, depreciation and other foreseeable contingencies, in so far as these can be estimated at present, the Directors are of the view that the Company will be able to pay "a reasonable dividend on the equity shares."



NEWS IN BRIEF

THE Heavy Electricals Plant at Bhopal will be inaugurated by Prime Minister Nehru on 1st November next.

The first consignment of 11,000 tons of kerosene from Russia is expected to be received in the first week of next month, according to Mr. K. D. Malaviya, Union Minister for Mines and Oil. One consignment of Russian diesel oil has already been received by the Indian Oil Company, Bombay.

A new trade and transit treaty between India and Nepal was signed at Kathmandu on the 11th inst. This will come into force on the expiry of the current treaty at the end of next month. The treaty provides for a progressive increase in trade and economic relations between the two countries.

By contributing as much as Rs. 1.41 crore to the small savings scheme during August, Greater Bombay has achieved 60 per cent. of this year's target of Rs. 11.50 crores during the first five months of the current financial year. The city has collected more than Rs. 1 crore every month this year so far.

The proposal of the U.S. Lockheed Corporation to set up an aircraft manufacturing plant in Hyderabad is still under the consideration of the Government. Disclosing this, the Deputy Minister for Civil Aviation, Mr. Ahamed Mohiuddin, stated in Parliament that the proposed plant was expected to be in the public sector.

Air-India International has announced the introduction of a regular scheduled weekly service from Bombay to Kuwait in Persian Gulf with effect from 4th October 1960. The flights, which will be operated by Superconstellations and call at Karachi and Bahrein, cover the 1,700-mile route in about 7-8 hours.

The Constitution Bench of the Supreme Court has upheld the constitutional validity of seven schemes of the Andhra Pradesh Government for nationalising motor transport in West Godavari district. A number of writ petitions challenging the validity of the schemes have been accordingly dismissed.

The Government of Kerala has been assured by the Centre that the decision to set up a second forward market for pepper in Bombay would be reviewed at the end of the trial period of one year, if the apprehension of the State Government and local operators about the possibility of unhealthy speculation in the proposed ring in Bombay were to prove correct. During the trial period, the Forward Markets Commission will keep a close watch on the trend of the pepper markets.

The view that the occurrences of iron and bauxite in the Shevroy Hills in Salem and Nilgiris in Madras are fairly widespread and offer good scope for their commercial exploitation has been expressed by Mr. Lawrence Blade of the U.S. Geological Department, who has made an on-the-spot-study of these areas in the last few days. He has come to India under a T.C.M. Project to investigate the possibilities of commercial exploitation of base metals in the country. Besides Madras, he has visited Himachal Pradesh and Madhya Pradesh.

The All-India final estimate of tobacco for 1959-60 puts the current year's area and production of tobacco at 934,000 acres and 281,000 tons, respectively, as against the partially revised estimates of 897,000 acres and 261,000 tons for 1958-59. This shows an increase of 37,000 acres or 4.1 per cent. in area, and 20,000 tons or 7.7 per cent. in production, as compared with the previous year. The yield per acre of tobacco obtained during 1959-60 works out to 674 lbs., as compared with 652 lbs. last year, thus showing an increase of 3.4 per cent.

Over 5,000 refund orders involving a sum of Rs. 1.68 crores were issued by the Income-tax Department in Bombay City during the "Refund Week" observed by the Department, from 29th August to the 3rd inst. Orders for refund of income-tax in 5,186 cases were issued by the Department during the week. This figure is about 20 per cent. of the total number of refund cases normally dealt with by the Department in one year. The value of refund issued during the week alone amounted to nearly 15 per cent. of the average amount refunded in a whole year.

The Government of India has decided to raise the quantum of loan from Rs. 1,500 to Rs. 2,000 per house under the village housing projects scheme. Till the end of June 1960, nearly 3,000 villages had been selected by the State Governments and Union Administrations for development under the scheme. Loan of Rs. 143 lakhs had been sanctioned in 700 villages for the construction of about 11,000 houses under the scheme, out of which a sum of Rs. 90 lakhs had been disbursed to the beneficiaries till the end of June 1960. Nearly 1,300 houses had been completed and another 6,800 houses were under construction.

The Lok Sabha passed the Drugs (Amendment) Bill on the 6th inst. The Bill empowers the Government of India to control manufacture of drugs and to appoint inspectors and analysts to ensure the quality of drugs. The provisions in the Bill are in line with the recommendation of the Pharmaceutical Enquiry Committee that the drugs standard control as are now exercised by State Governments should be centralised for more effective enforcement. The Bill provides for a minimum punishment of one year's imprisonment and fine for the manufacture and sale of certain mis-branded drugs.

It has been decided by the Government of India that distribution of fertilisers and improved seeds should be handled by service co-operatives, instead of by the technical staff of the Agriculture Departments in States. This decision has been taken to relieve the Agricultural Departments of the distribution work and to enable the staff to devote their concentrated attention to the more important extension and technical functions, namely, to broad-base the activities of the village co-operatives which so far have been providing production credit, and also to achieve better co-ordination between credit and the production programmes of the village by extending credit in kind.

As many as 626,866 workers are entitled to medical care in Bombay and 30,770 in Vidarbha area under the Employees' State Insurance Scheme in the Maharashtra State. During the financial year 1959-60, the cash benefits paid to the insured workers amounted to Rs. 1.15 crores. This was stated at the second meeting of the Maharashtra State Regional Board of Employees' State Insurance Corporation held at Bombay on the 12th inst. The question of extension of the scheme to Sholapur, Poona and other industrial centres was considered at the meeting. The scheme is to be extended to the members of the workers' families from 1st November next to Nagpur, to begin with.

An ad hoc committee of fountain pen manufacturers has been formed, at the instance of the Government of India, to look into the problem in the industry created by the manufacture of substandard products by ill-equipped small-scale units. It is stated that the possibilities of obtaining the service of some foreign expert to help the industry in this regard is being considered. India exported fountain pens worth Rs. 2 lakhs in 1959. There is stated to be a large demand for Indian manufactured fountain pens in South-East Asia. The industry is also stated to be in a position to meet practically the entire domestic requirements. Production in 1959 was of the order of 15 million fountain pens. Most of the parts, including the gold-plated nibs, are now manufactured within the country.

A conference on labour research has been convened by the Union Ministry for Labour and Employment at New Delhi on the 22nd inst. to consider a proposal to set up a Central Labour Research Organisation. The need for such an organisation has been felt, as, in India, very little attention has been paid to organised research on labour problems and the consequent dearth of reliable and up-to-date data makes it difficult for the administration to formulate labour policies on a scientific basis. The main objectives of the proposed Central Labour Research Organisation will be to conduct research in various aspects of labour economics, with a view to evolving guiding principles and norms for formulation of policy, suggest ways and means to remove defects in existing labour statistics and co-ordinating research conducted by various agencies on labour matters. It is intended that the Organisation should work along with the Central Labour Institute, which, when fully set up, will also be conducting studies on labour productivity, industrial psychology, safety, health and hygiene.

* * * *

From Abroad

World production of natural rubber in the first half of 1960 amounted to 960,000 tons, whereas consumption was higher at about 1.02 million tons, according to the International Rubber Study Group. Consequently, stocks of natural rubber fell by 75,000 tons to 677,500 tons.

A long-term trade agreement covering the years 1961 and 1965 has been signed between the Soviet Union and the Guinean Republic. Under the terms of the agreement, each side will grant the other side most-favoured-nation treatment in all matters relating to trade, navigation and other economic relations.

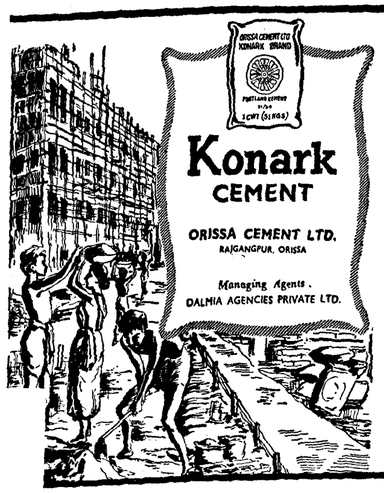
A national menu study by the Market Research Corporation of America reveals that coffee is now the most popular food item in U.S. homes. The study, sponsored by representative food manufacturers, also shows that 97 per cent. of U.S. families use coffee at some time or other in the home. An increasingly popular form of coffee is the instant type, which in 1959 accounted for 33.4 per cent. of all U.S. coffee sales. Popularity of instant coffee is expected to grow further.

The largest railroad system in the U.S., the Pennsylvania Railroad, resumed normal operations on the 13th inst., following settlement of a 12-day shut-down caused by a labour-management dispute, the first in the 114-year history of the Company. The dispute between the Company and the Transport Workers' Union, which actually began three years ago, did not concern wages. Work rules and job security for 20,000 maintenance (non-operating) employees were the major issues.

The manufacture of a new type of furniture, called magic-wedge, which can be put together in minutes without the use of nails, glue or tools and requires no hardware, has been started by a firm at New York. The magic-wedge is made of "Westvaco Flakeboard," a warp-proof product manufactured by the West Virginia Pulp and Paper Company. The secret of magic-wedge is the close-fitting wedge which interlock to form a strong, sturdy bond, resulting in furniture that can be speedily put together or taken apart.

The World Bank has approved of a loan equivalent to $27.5 million to Israel to help build and equip a sheltered deepwater port on the Mediterranean Sea at Ashdod. When construction is finished (by 1965), the new port will be able to handle 900,000 tons of general cargo a year. The total cost of the project is estimated at $54.7 million. The Bank loan will cover all the foreign exchange requirements as well as a part of the local currency costs; the remainder will be met by the Israeli Government.

The employment situation in the U.S. deteriorated sharply during August 1960, as a result of the continued slump in steel industry and the unusually early model change over in automobile industry. The proportion of unemployed (after seasonal adjustment) to that of labour force in that month stood at 5.9 per cent., the highest level touched since the steel strike in the closing months of 1959. The number of persons out of work, however, actually fell by 229,000 to 3.8 million and the number of those employed was still at the record level of 68.3 million.



Build a Better To-morrow

Improving living conditions in the rapid expansion of the country is now the primary need—all these call for better schools, better hospitals, better roads and better homes. KONARK Cement is playing a leading role in building this better to-morrow.

DR. M. VISVESVARAYA

THE very mention of the name Dr. M. Visvesvaraya, who entered on his hundredth year on Thursday the 15th inst., is bound to thrill those who have had the opportunity of reading, or hearing about, his colourful career, in that it will vividly bring to one's mind the remarkable achievements of this eminent personality. Few in India can be credited with as much and as varied a service to the country as Dr. Visvesvaraya. The engineering world, which claimed his services first, the industrial world, which was not slow to follow, and, for that matter, the world of Indian economy as a whole have each, in fact, as much, if not a greater, claim on him as any other. His hundredth birthday is, therefore, of national importance. Truly, it was most fitting that the hundredth birthday celebration was inaugurated at Bangalore by Prime Minister Nehru who, it will be recalled, was the only other person to share, along with Dr. Visvesvaraya, the nation's highest honour of *Bharat Ratna*, conferred for the first time in September 1955. It is equally in the fitness of things that the Government of India should have decided to mark the occasion by issuing commemoration postage stamps in the most popular denomination of 15 nP bearing the latest portrait of this engineer-*cum*-statesman.

Dr. Visvesvaraya is one of those rare men who cast not shadows but light. His greatness as an engineer, statesman and industrialist and his farsightedness and vision are so immeasureable that it is hardly necessary to speak of them. The several achievements of his will fill a bulky volume, but the most important of them include his work on a number of irrigation schemes, flood control measures, drainage and water works, rural development, town planning, and industrialisation. The block system of irrigation on the Nira Canal in Bombay, the Sukkur Barrage in Sind, the Krishnarajasagar Dam in Mysore, the Hindustan Aircraft Factory at Bangalore, the Iron and Steel Works at Bhadravati (Mysore), and the establishment of the automobile industry, to mention only a few—all these are an expression of Dr. Visvesvaraya's genius and faith in India's capacity to do great things, given the opportunity. The committees on which he has served either as chairman or as member and the reports he has submitted are too varied and numerous to be catalogued in this brief sketch meant to pay our tribute to him. Special mention may, however, be made of his work in connection with the Bombay Irrigation Enquiry Commission, the Committee on Technical and Industrial Education in Bombay, the Backbay Reclamation Committee, the Capital Enquiry Committee and the Indian Economic Enquiry Committee. He has also been actively associated with institutions like the Institute of Engineers and the Indian Institute of Science. And the Jayachamarajendra Occupational Institute, Bangalore, owes its birth to him, as it was built out of the munificent gift of Rs. 1.5 lakh he made.

Dr. Visvesvaraya is one of the few pioneers in Indian thought on planning. His book, *Planned Economy for India*, published as early as in 1934, was an excellent treatise on planning with reference to Indian economic development. Neither in this book nor in the course of his speeches made on several occasions has Dr. Visvesvaraya preached any gospel or raised ideological bogeys. All that he has sought to stress, and continues to do so even now, is that one should take a broad appreciation of the urgent needs of the economy and a commonsense view of resources, that the objective of planning should be a "self-developed India," and that it is the job done which is important and not who does it, the State or the individual. It is a pity that several of his pertinent observations have lost their force now, not so much because the bureaucracy has a large say in many matters as because mediocrity has come to prevail in the name of democracy.

In conveying our best wishes to Dr. Visvesvaraya on the occasion of his hundredth birthday, we devoutly pray to Providence that he be spared for many more years to come. This is not a formal wish which is customary on such occasions. It is something much more than that. A cynic may wonder as to what contribution a man of hundred years has to offer to humanity. But Dr. Visvesvaraya is no ordinary man. He is a living symbol of what a man can achieve by self-discipline and systematic living. His continued presence in our midst will be a source of inspiration and guidance to those who wish to lead a useful life. There is a lot that the present and future generations can learn from his method of work and living.

POST MORTEM OF A STRIKE

The report on the enquiry conducted by Mr. R. L. Mehta, Joint Secretary, Union Ministry of Labour, into the prolonged strike, which occurred two years ago in Premier Automobiles Ltd., Bombay, now published, has exposed the festering sore that eats into the vitals of the trade union movement in the country. Mr. Mehta's findings prove that Lord Acton's dictum, "all power corrupts; absolute power corrupts absolutely," is as much true of trade union leaders as of politicians. The extent to which personal issues and prestige considerations enter into important policy decisions of unions is illustrated by this strike. It is now clearly shown that this strike, which lasted for about four months in two stages, was over a "personal issue and not over any industrial question of wages or bonus or similar claim." Such events are inevitable when the executive of a union, instead of being the representative and humble servant of its members, assumes the role of master and dictator. Here is the inquiry officer's comment on how the Secretary of the Engineering *Mazdoor Sabha*, which called and directed the strike, went about his job: "Not only in day-to-day matters, but also in major issues like giving a strike notice, signing an agreement, launching a strike or calling it off, Mr. R. J. Mehta (Secretary of the *Sabha*) acts independently of all authority. When so much power is concentrated in a single person, the plural society which a trade union represents perishes to give way to the monolithic."

Both the management and the Union, according to the report of the enquiry, are guilty of violation of the provisions of the Code of Discipline in industry, but the Union's share of infringements, it is conceded, is greater. The management must be blamed for not providing enough staff for dealing with the day-to-day problems of workers and for failure to implement agreements expeditiously. It was also guilty of refusing arbitration which the Code specifically enjoins on it to accept. But the management, according to the investigator, was perfectly justified in withdrawing the facilities to the Secretary of the Union, who abused the privileges granted to him and persisted in the policy of keeping alive an atmosphere of restlessness and discontent among the workers by making one set of demands after another and playing to the gallery by shouting abuses at the management and using intemperate language in which "threats, innuendoes and even contumely were indiscriminately mixed."

The Union, or rather, Mr. Mehta, its Secretary, was wrong in calling a strike on the ground that the facilities he had been enjoying were withdrawn. The first strike which lasted from 5th to 8th April 1958 was against the Code. It was illegal, because it was over a personal issue, and took place at a time when an adjudication reference was pending before an Industrial Tribunal.

The second strike, which lasted for 110 days from 11th April to 29th July, was prompted by the discharge of 10 workmen for repeated absence from duty. This dismissal, the officer says, was an "untimely and unwise act" on the part of the management. To single out some workers, from among many, for exemplary punishment, he adds, is against the Code. Nevertheless, this was no justification for the Union to call an instantaneous strike. The workers, the investigating officer points out, could have appealed to the higher authorities or they could have sought redress by approaching the conciliation machinery in the State. The strike should have come after all these steps had been tried and found wanting. What followed, he says, violated all canons of the Code. There were acts of violence, coercion and intimidation.

The Labour Department of the Bombay Government, too, we are told by Mr. Mehta, was not entirely blameless in the matter. Its avowed policy of non-interference in a labour dispute in which the parties have already entered upon a trial of strength and its failure to "set right shortcomings in the existing arrangements for the administration of labour laws as required under the Code of Discipline," resulted in the situation deteriorating from bad to worse.

Striking a balance-sheet of the strike, Mr. Mehta points out that, on the debit side, the management lost production and sales worth Rs. 5 crores and the workers were poorer by Rs. 30 lakhs, being wages and salaries lost during the period. On the credit side, there was nothing for the strikers; their surrender was unconditional and even the Secretary of the Union agreed to give up his office if that would rehabilitate the Union and bring about reconciliation with the management. There is a soul of goodness even in things evil. The strike, which did nothing but harm to workers, would not have been in vain if the workers were to learn the most obvious lesson of it, namely, they should not allow themselves to be used as a lever for an outsider's personal aggrandisement.

INDIA AND W. EUROPE

The misgivings of India—as, indeed, of any other underdeveloped country in Asia—about the formation of the regional economic blocs in Western Europe (the six-member Common Market and the Outer Seven Free Trade Area) are generally on two grounds. One, exports from India may suffer a distinct setback in the coming years. Two, the European capital which might have come to India will now go elsewhere. It is rather difficult to say how far and to what extent these misgivings are justified, in the absence of an expert study of the whole issue. But some in the West feel that the Indian fears regarding the disquieting consequences of economic integration in Europe are exaggerated. In a comprehensive report, entitled *The Commonwealth and Europe*, prepared for Britain in Europe Ltd., an influential non-official body in London, the *Economist* Intelligence Unit, for instance, points out that the apprehensions of European economic blocs hampering India's interests are probably groundless, because the country is not likely to be affected very much one way or the other.

In the opinion of this special study, India can put up a stronger political claim to financial assistance from foreign Governments than almost any other underdeveloped country, and the small inflow of private capital is unlikely to be much influenced by changes in Europe. It feels, too, that very little of India's existing export trade will be damaged by the common external tariff of the European Economic Community, even though over two-fifths of identifiable exports to the area will be subject to tariff changes. In support of this view, it says that almost all raw material exports from India enter the Common Market duty-free and will continue to do so. The position in respect of the more important items of Indian exports is summed up as follows:

Tea: Some cheaper grades of Indian tea may be displaced by tea from Belgian Congo; on the other hand, there is a prospect of substantial increase in Indian sales, if the Common Market can be persuaded to reduce internal taxes on this product.

Jute and cotton textiles: Indian sales to the C.M. are very small and are unlikely to be much affected by the change in tariff levels, though they can be wiped out by unfavourable quota treatment.

Coffee and tobacco: These items are in a more vulnerable position, but they are safeguarded against French African competition because of their superior quality.

Pepper, cashewnuts, castor and linseed oil: There is no competition in the markets for these commodities by French Africa.

The *Economist* Intelligence Unit has also assessed the implications of Britain joining the Common Market from India's point of view. The effect on raw material exports, according to it, would be negligible and, in the case of tea and tobacco, the loss of Imperial Preference will not matter, since it will be shared by all the chief competing countries. It, however, admits that the really difficult problem is with regard to manufactures. For it says: "Indian goods other than jute textiles are not sufficiently competitive to maintain their footing in the U.K. market. They have to sell across a tariff on equal terms with China and Japan, and meet duty-free competition from the Continent." Stress is, therefore, laid on the need for some special arrangements to safeguard India's interests, for example, in the form of giving India a duty-free quota for grey cloth sold to the U.K. and liberal quota treatment on the Continent for jute manufactures to offset the loss of trade with Britain in other goods.

The *Economist* Intelligence Unit observes that the effects of European economic integration fade into insignificance in the context of India's current problems and that "only when India begins to come to grips with the task of increasing export earnings will European trade policies impinge sharply on Indian development." But one would ask whether such a position is not already obtaining at present. The heavy imbalance in India's trade with the West European countries continues to persist. During the first five months of 1960, the trade deficit with the O.E.E.C. countries was to the tune of Rs. 60.28 crores, of which the "Outer Seven" bloc (including Britain) accounted for Rs. 29.36 crores. The deficit may be expected to widen still further in the third Plan period, what with the contemplated huge inescapable imports of raw materials, intermediate products, foodgrains by way of normal marketing, capital goods for replacement, etc., amounting to as much as Rs. 3,570 crores in five years. It was only three weeks ago that Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, emphasised, while addressing the meeting of the Export Promotion Advisory Council at New Delhi, that "we have to discover ways and means of balancing our overall trade by exporting more to this area (Common Market) or, alternatively, we may have to cut down our imports from this group of countries." Viewed thus, the *Economist* Intelligence Unit has, indeed, done well to advise the advanced countries that they must resign themselves to losing much of their share in world trade in cheap, simple manufactures to India and other Asian nations and to letting more Asian goods into their own home markets.

SEMINAR ON IRRIGATION AND POWER

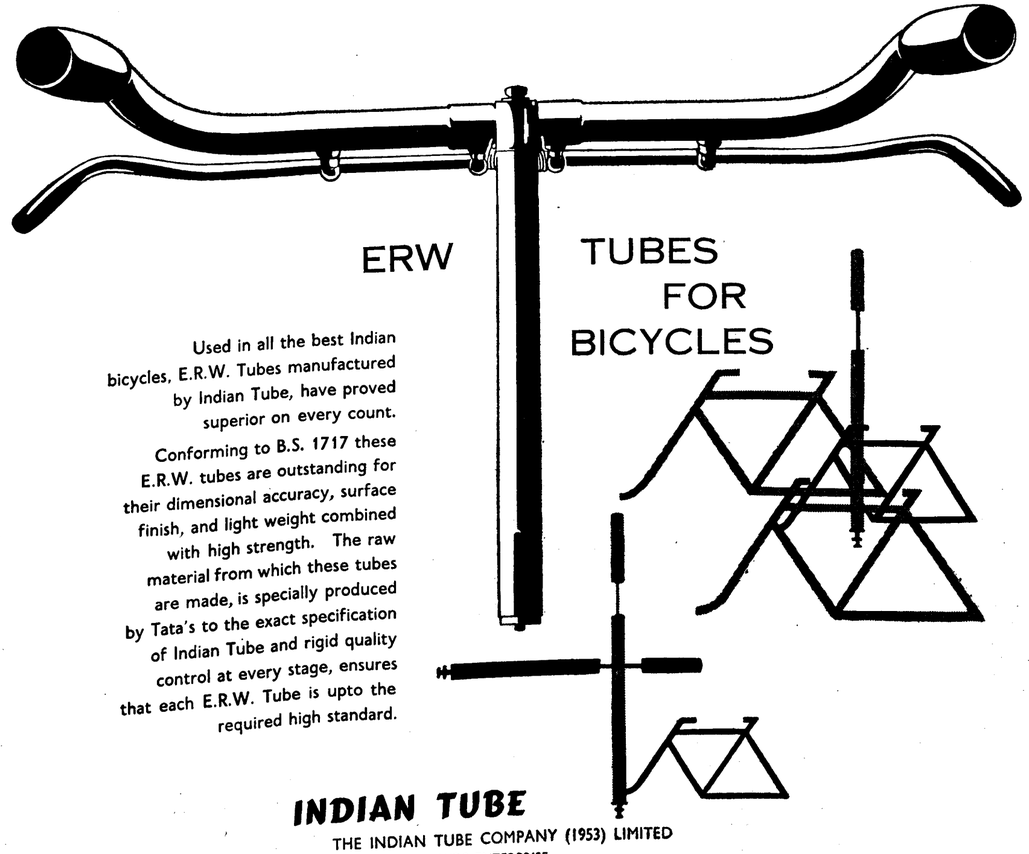
Three important subjects formed the main agenda of the seventh seminar on irrigation and power held at Bangalore this week. They were (1) establishment of a national grid system for distribution of electric power, (2) apportionment of cost and allotment of reservoir storage space for power, irrigation and flood control in multi-purpose projects, and (3) rationalisation of procedures in regard to disposal of surplus machinery on the projects. The seminar, which was inaugurated by the Governor of Mysore, was attended by nearly 250 delegates from the various States and projects in the country, senior officers of the Union Ministry of Irrigation and Power and the Central Water and Power Commission. Three separate sub-committees dealt with the three subjects and then reported their conclusions to the seminar.

The seminar is not merely of academic interest. The Ministry of Irrigation and Power and the Central Water and Power Commission attaches considerable importance, and gives serious consideration, to its recommendations. The present one is the seventh in the series. Some of the more important recommendations made by the previous seminars were not only accepted but substantially implemented with the co-operation of the State Governments and the project authorities. In fact, in order to give earnest consideration to, and implement, to the extent possible, the accepted recommendations, a Co-ordination Board of Ministers had been constituted. This Board also held its fourth meeting simultaneously at Bangalore. It is in the fitness of things that the meeting of the Co-ordination Board of Ministers should coincide with the seminar, for it will enable the Board to get firsthand knowledge of the recommendations of the seminar and also to evaluate how far follow-up action had been taken on past recommendations by the Central and State Ministries concerned. The decisions taken at this meeting, as well as by the seminar, are not available at the time of writing and have, therefore, to be left over to be covered in our next issue.

In his presidential address to the seminar, Mr. Hafiz Mohammed Ibrahim, Union Minister for Irrigation and Power, reviewed the progress of irrigation and power development in the first two Plans and outlined the goals set under the third Plan. The target for irrigation in the third Plan is an increase of 41 million acre feet and, if this were achieved, utilisation of water resources at the end of the Plan period would be about 35 to 36 per cent. of the utilisable resources of 450 million acre feet (1950 estimates) out of a total of 1,350 million acre feet. Till 1951, only 76 million acre feet had been utilised and it is expected that, by the end of the second Plan, utilisation will increase to 119 million acre feet. Accordingly, at the end of the third Plan, it is expected to be 160 million acre feet.

As regards power, at the beginning of the second Plan, the total installed generating capacity was 3.4 million kw. This was originally planned to increase to 6.9 million kw. during the Plan period, but, due to foreign exchange shortage, the actual capacity is now expected to rise to 5.8 million kw. only. The third Plan envisaged an increase to 11.8 million kw. for which an outlay of Rs. 925 crores has been proposed, as against Rs. 670 crores during the first and second Plans combined.

Considering that irrigation and power have been swallowing up a good portion of the limited resources available, it is essential that steps should be taken to effect the utmost economy in expenditure and ensure maximum benefit. The seminar is meant to suggest ways and means of doing this. With this object in view, the Minister himself underlined, in his opening address to the Co-ordination Board of Ministers, the need for detailed preparation of projects and prior investigation of their feasibility, preparation of a comprehensive, basin-wise proposal for flood control and drainage and proper utilisation. Referring to what he called the "vexed problem of utilising irrigation facilities," Mr. Ibrahim said that this was a matter of considerable importance which was discussed at every seminar, except the first one. The most important step necessary to speed up utilisation, he observed, was the completion of watercourses and field channels along with the completion of canals for distribution. There is nothing new in this advice. Everyone concerned knows the solution to the problem. What is wanted is its effective implementation which is mainly the responsibility of State Governments. Some means must be found whereby the latter will be more prompt than they have been so far. One of them will be to relate the grants by the Centre to actual performance by the States in this sphere.



FOOD SUPPLY AND POPULATION IN DEVELOPING COUNTRIES

CONCERN IN THE WESTERN WORLD

ALTHOUGH the Malthusian theory of population, published in 1798, was laughed out of court subsequently, it at least did one good thing; it stimulated widespread interest in the theme of the relationship between population and food supply. Progress of science and technology has, no doubt, made it possible to increase the yield from land phenomenally in many parts of the earth, thereby disproving the assumption of diminishing returns from land. In recent years, especially in the latter half of the 'fifties, world food production has tended to increase at a slightly faster pace than world population. But, as production increases have not been uniform in all regions, large parts of the world are still without adequate food. Again, while food production is running ahead of population growth in statistical terms, the production is unrelated to nutritional requirements, so that over half of the world's population is suffering from varying degrees of under-nourishment and malnutrition. It is, of course, true that, in the past one decade, nutritional levels in most of the developing countries have crept up slightly, but they are still distressingly low. While each developing country has to do its best and help itself, the removal of these deficiencies requires world-wide effort. It is, therefore, a matter for gratification to find that concerted efforts to mobilise resources, both men and materials, on an international scale to fight poverty and disease the world over are being continued. The meetings of the International Congress on Nutrition at Washington and the British Association for Advancement of Science at Cardiff held in the last fortnight are instances of collective effort by the various countries to find the requisite food supply for the rapidly growing population. Both the gatherings were attended by experts from a number of countries.

Washington Meet

Inaugurating the fifth session of the International Congress on Nutrition at Washington, President Eisenhower observed that "our age is the first to be deeply concerned about the quality as well as the quantity of food supply." For the first time in history, he added, man's ancient enemies—hunger and malnutrition—were on the defensive. "They are not whipped. But ours is the first generation to catch the scent of victory." Proceeding, President Eisenhower pointed out that the supply of food surplus from the U.S. to the needy nations was a part of the free world's campaign "to lift the scourge of hunger." He suggested increased use of United Nations as the agency for the distribution of surplus crops which would avoid any disruption of markets. The U.S. Secretary of Agriculture, Mr. Ezra Taft Benson, stated in his speech that, since 1953, about 9,000 million lbs. of U.S. surplus foods, valued at about $1,500 million, had been donated and distributed overseas. In the same period, the U.S. had supplied reserve farm products worth $8,500 million to other countries under various special Government programmes. This was in addition to commercial agricultural exports, valued at about $18,000 million sold for dollars. Besides this, 1,200 U.S. agricultural technicians are working in many of the newly developing countries, spreading the U.S. farming know-how among them. Last year, the U.S. loaned over $265 million abroad to build irrigation projects and fertiliser plants and to improve transportation facilities. In addition, large amounts of foreign currencies generated by P.L.480 are being loaned to foreign Governments for economic development, including agricultural development.

Technical Possibilities

Dr. B. R. Sen, Director-General of the U.N. Food and Agriculture Organisation, said that the F.A.O. was currently concerned with measures to increase yields from land already under cultivation. Alluding to the increases in yields obtained in various places through such methods as better utilisation of water resources, plant improvement and preservation of soil fertility, he stated that technical possibilities for increasing yield from land were tremendous. In this fifth International Congress on Nutrition, about 2,500 research scientists from 60 countries participated. About 400 research papers were read. These included several by Indian participants, including one on proteins and amino acids in nutrition by Dr. M. V. Radhakrishna Rao, Chief of the Department of Nutrition at the Haffkine Institute, Bombay.

Cardiff Meeting

To turn to the meeting at Cardiff. Speaking at the symposium on world food supplies and growth of population, Dr. Norman C. Wright, Deputy Director General of the F.A.O. pointed out that world food production was currently increasing at a slightly faster rate than world population. He conceded, however, that this increase in production was not uniform in all regions. For every future increase of 100 million in population, Dr. Wright said, the world would have to provide for about 13 million tons of additional cereals and about 14 million tons of animal products—milk, meat, eggs and fish. According to him, to bring world diets upto a reasonable level, by 1980 there must be an increase of at least 33 per cent. in cereals production and 100 per cent. in animal products. This estimate is based on the assumption that world population will go up to 4,000 million by 1980. By the year 2000, the world population may touch 6,000 million and, according to Dr. Wright's calculation, if this U.N. forecast were to materialise, a 100 per cent. increase in the output of cereals and 200 per cent. increase in animal products would be required. It is no doubt true that the world surplus of grain today is at the unprecedented level of 124 million tons, a saving of 8 to 10 years. But, once this surplus is exhausted, the annual surplus out of current production will perhaps be 10 million tons, which, in the opinion of Dr. Wright, will be found insignificant. "The only effective long-term solution," said Dr. Wright, "is to secure, by widespread application of scientific and technical advances, an increase in food production within the less developed countries."

Of particular importance was the speech of Sir Alexander Fleck, a former Chairman of Imperial Chemical Industries, on the role of chemical fertilisers in raising yield from land. Although world production of nitrogenous fertilisers had increased and was now running at an annual rate of 10 million tons, he said, the fixation of nitrogen for human well-being still ranked as one of the "under-exploited chemical discoveries of all times." He called for efficient utilisation of natural gases, which went to waste now in the Middle East and Venezuela, to the production of fertilisers. In the Middle East alone, five million tons of nitrogen fertilisers could be made a year, albeit at a huge cost of £1,000 million. He held the view that, however important the part machinery played in the "sophisticated" agriculture of the West, the call for fertilisers and water was far more urgent in the developing countries. Equally impressive was his advice to British scientists. "We British scientists and technologists," he remarked, "should avoid becoming too self-centred. We should be prepared to co-operate even in technical problems not directly relevant or profitable to ourselves in Britain."

Dr. H. L. Richardson stressed in his address that food production could be doubled in most of the underdeveloped countries, without increasing the sown area, by the use of fertilisers and other immediately available techniques "suitable even for primitive cultivators." He was not against the extension of the cultivated area, but this would depend more on social, financial and educational influences than on technical limitations. He thought that, "for the underdeveloped countries, almost any Government willing to make a sufficient effort could double home production of food in less than a generation. Such an achievement would suffice to take care of current rates of population increase." He was optimistic that, as farming became far more intensive and farmers more skilled, it would progress to a point at which the land of the less-developed countries would be capable of producing at least three or four times its present yield of food crops an acre. These conclusions, Dr. Richardson added, ignored the possible effects of knowledge and techniques yet to be

prestressed concrete for clear space construction

Uninterrupted Working Space at a Milk Factory, Calcutta

A roofing area of 24,000 sq. ft. was completed in about four months and no shuttering for roof slab was used. Seven 100 ft. long and eight 75 to 80 ft. long precast and prestressed concrete 'I' section girders spaced at 20 ft. apart were employed. On the top flanges and spanning between the girders, were placed 2½" thick x 14" wide precast prestressed concrete planks, over which 2" of in-situ concrete was laid, forming a composite flat roof slab of 4½" thickness. The roof was waterproofed with Stp "Tarfelt" treatment.

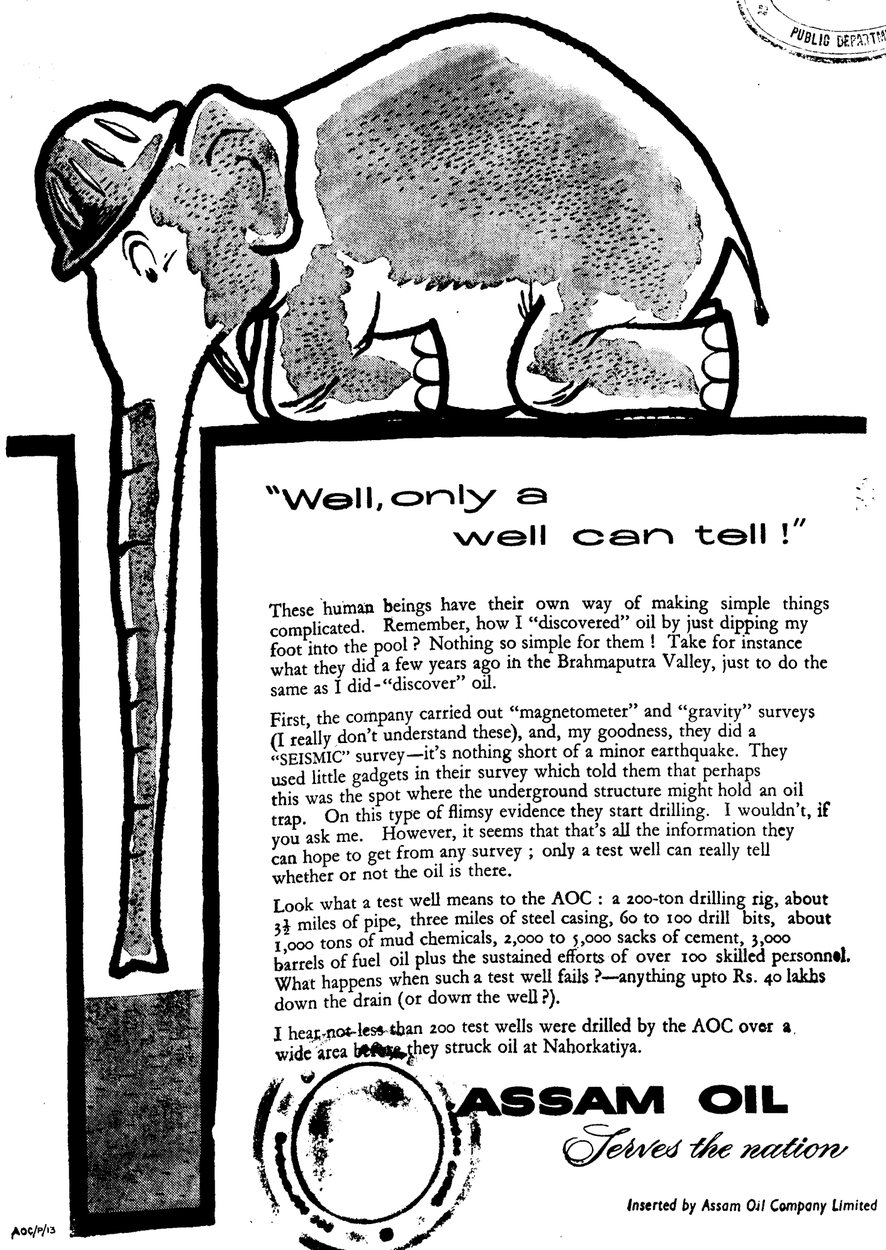
Memoirs of an Elephant—4



"Well, only a well can tell!"

These human beings have their own way of making simple things complicated. Remember, how I "discovered" oil by just dipping my foot into the pool? Nothing so simple for them! Take for instance what they did a few years ago in the Brahmaputra Valley, just to do the same as I did-"discover" oil.

First, the company carried out "magnetometer" and "gravity" surveys (I really don't understand these), and, my goodness, they did a "SEISMIC" survey—it's nothing short of a minor earthquake. They used little gadgets in their survey which told them that perhaps this was the spot where the underground structure might hold an oil trap. On this type of flimsy evidence they start drilling. I wouldn't, if you ask me. However, it seems that that's all the information they can hope to get from any survey; only a test well can really tell whether or not the oil is there.

Look what a test well means to the AOC: a 200-ton drilling rig, about 3½ miles of pipe, three miles of steel casing, 60 to 100 drill bits, about 1,000 tons of mud chemicals, 2,000 to 5,000 sacks of cement, 3,000 barrels of fuel oil plus the sustained efforts of over 100 skilled personnel. What happens when such a test well fails?—anything upto Rs. 40 lakhs down the drain (or down the well?).

I hear not less than 200 test wells were drilled by the AOC over a wide area before they struck oil at Nahorkatiya.

DIRECT TAXES ADMINISTRATION

GOVERNMENT'S DECISION ON TYAGI COMMITTEE'S REPORT

THE administration of the direct taxes of the Central Government involved some complicated problems, leading to large-scale tax evasion, as also inconvenience to the assessees. The administrative organisation and procedure necessary for implementing the integrated scheme of direct taxation, therefore, needed some urgent reforms. Accordingly, the Government of India appointed in June 1958, a Committee, called the Direct Taxes Administration Enquiry Committee, under the chairmanship of Mr. Mahavir Tyagi, M.P., to examine this problem and advise the Government. The Committee submitted its report on 30th November 1959. On 9th September 1960, that is, after a lapse of over nine months, during which period the Committee's bulky report was under the scrutiny of the Government, the Union Finance Minister laid on the table of both Houses of Parliament a statement giving the Government's decision on the major recommendations of the Committee.

There are on the whole 367 recommendations, of which 59 do not, according to the Finance Minister, call for any action, as they are merely observations of a general nature or refutations of suggestions put forth by witnesses who appeared before the Committee. The balance of 308 recommendations reduce themselves to only 289, when slightly rearranged, after grouping together recommendations having the same effect. Of these, the Government has been able to take final decisions on 205 recommendations, the rest being still under consideration.

The Government's statement falls into two parts—Part I containing the recommendations accepted fully or with modifications, and Part II containing recommendations which the Government has been unable to accept. The Finance Minister disclosed that the accepted recommendations would be implemented either immediately or in due course. Those which called for amendment of the law would be implemented through a comprehensive codification Bill.

The following are some of the important recommendations of the Committee and the Government's decisions thereon shown in italics.

I

Recommendations which Have Been Accepted either Fully or with Modification

Assessees having income from business, profession or vocation should be statutorily required to file the returns of income within four months after the close of the accounting year or by 30th June following that year, whichever is later. For all other assessees, the last date for filing returns should be 30th June, regardless of their accounting year. In suitable cases, where the accounting period for business profession or vocation ends after 31st December, the assessing officer should be empowered to grant, on his own, appropriate extensions of time for filing the return, up to a date not exceeding beyond a period of six months from the end of the accounting year. In any other case, extension should be granted by him only after obtaining the previous permission of the Commissioner and on conditions which might include the furnishing of adequate security for the tax that might become due. In all cases of extension, the levy of interest at six per cent. per annum on the tax that would become payable on assessment should be compulsorily and statutorily laid down. Assessees who do not file the returns by the prescribed or the extended date should be subjected to deterrent penalties which should vary according to the period of default.

Accepted with the modification that interest will run after a period of grace which will be up to 30th of September of the financial year.

The statutory provision, under Section 22(1) of the Income-tax Act, for the issue of a general public notice should be deleted. Instead a simple advertisement should be issued in the beginning of each assessment year, reminding the public about their liability to file their returns within the prescribed dates.—*Accepted.*

As a matter of convenience, the Department should send return forms to the existing assessees by ordinary post under a general certificate of posting.—*Accepted.*

The amount of time and labour devoted to cases of different categories should bear relation to their revenue potential. The time and the energy being spent on small cases appears to be totally disproportionate to the revenue yields therefrom. The Department must get out of the present grooves and make a bold departure in respect of the assessment of small income cases. In such cases the income returned should be generally accepted after preliminary scrutiny and the assessment made under Section 23(1) of the Income-tax Act without calling the assessee to the tax office. Detailed examination of accounts and other scrutiny would be made only once in four years. The new approach will have a psychological effect and improve the relations between the Department and nearly five lakhs of assessees.

Accepted in principle. The actual procedure to be adopted is under examination.

Cases of large income group assessees should be segregated, wherever possible, and entrusted to experienced and competent officers.—*Accepted.*

Before finalising an assessment, the assessing officer should make a tentative computation of the total income, wealth, etc. Where the additions or disallowances proposed to be made are of small amounts only, he may discuss them orally with the assessee and/or his representative and record the result of the discussion on the order sheet. However, where substantial additions are proposed, he should allow an opportunity to the assessee, in writing, to give his point of view within a fortnight.—*Accepted in principle.*

Precautionary assessments should be made only in exceptional cases where there is a likelihood of irretrievable loss to revenue.—*Accepted.*

The condition that for the allowance of development rebate, the asset should not be sold or otherwise transferred to any person other than the Government for a period of ten years needs to be relaxed. This period should be reduced to eight years. The restrictions should not apply to transfer or sale of assets to Government companies, statutory corporations and public utility companies, and those resulting from the absorption of one company, by amalgamation or otherwise, by another company.

Accepted, subject to the provision of suitable safeguards.

If a firm which had been allowed development rebate in respect of certain assets converts itself into a private limited company within the period prescribed for allowance of such rebate, and the share capital of the partners of the erstwhile firm in the company remains either the same or is more and the amount of development rebate kept in reserve by the firm is transferred *en bloc* to the company which also keeps it under the same conditions as would have applied to the firm, had it continued, the rebate should not be forfeited.—*Accepted.*

Assessing officers should not disallow the claim of a bad debt on purely technical grounds. If the officer is satisfied about the genuineness of a bad debt, he must allow it either for the 'previous year' in respect of which it is claimed or for any of the earlier 'previous year' in which according to the officer, the debt has actually become bad, provided that such earlier 'previous year' is not more than four years anterior to the 'previous year' in which the debt is claimed to have become bad and actually written off.—*Accepted.*

Once a firm is registered, there should be no obligation on it to apply for renewal of registration every year, provided the firm files a declaration along with the return of income to the effect that there had been no change in its constitution. —*Accepted.*

Assessing officers should point out factual errors, if any, in a partnership deed, or application for registration and offer the partners of the firm an opportunity to rectify such technical defects within a month.—*Accepted.*

The proposal for adopting in the Indian Income-tax Act the provisions of U.K. Income-tax Act in regard to taxation of non-residents is not favoured. Executive instructions issued by the Central Board of Revenue regarding the interpretation of the term 'business connection' and in respect of the provisions for the taxability of non-resident should be widely publicised both within and outside the country.

Accepted. In a pamphlet issued for the public by the Board recently, named, "Outline of Direct Taxes" this subject has been adequately dealt with.

There should be a statutory time-limit of four years from the date of filing of the return for the completion of an estate duty case. Where assessments are made *ex-parte*, the time-limit should be four years from the date the return was due.

Accepted with the modification that the time-limit for completing ex-parte assessments where returns are not filed, the time-limit should be five years.

Where an accountable person discharges the debts or other liabilities of the deceased and the Department is satisfied that such discharge is *bona fide*, such debts should be allowed to be deducted from the value of the life interest in the trust or other property.—*Accepted.*

The Appellate Tribunal is a necessary and suitable organisation and should continue.—*Accepted.*

The Department or the assessee may be permitted to file a memorandum of cross objections against so much of the order of the Appellate Assistant Commissioners as was against the Department or the assessee in instances where one of them might have gone in appeal.—*Accepted.*

The measures adopted by the Central Board of Revenue with regard to disposal by Appellate Assistant Commissioners have proved effective, but the matter must be kept under constant review and the pendency of the appeals should be brought down to some four months workload. If found necessary, the number of Appellate Assistant Commissioners should be increased.—*Accepted.*

On a question of law involved in an appeal before the Appellate Tribunal, if varying judgments had been given by different High Courts, the President of the Tribunal may, on a request made to him, refer the question directly to the Supreme Court for a decision.—*Accepted.*

The Wealth-tax and Expenditure-tax Acts should be amended to provide both for a system of provisional assessments on the lines of Section 23B of the Income-tax Act, and a system of self-assessment under which assessees would pay tax along with the returns as per their wealth or expenditure declared in them.—*Accepted.*

In all cases a month's time from the date of service of notice should be given for payment of taxes.

Accepted with a slight modification that the period may be reduced with the previous approval of the I.A.C. where the I.T.O. is satisfied that it would be detrimental to revenue if the full period is given.

Without prejudice to Section 46(1) of the Income-tax Act and to corresponding sections of the other direct taxes Acts, the Acts should be amended to allow for automatic accrual of interest at six per cent. where taxes are not paid on the due dates.

Accepted with the modification that the rate of interest proposed to be charged is 4 per cent., instead of 6 per cent.

The law should be amended to secure that where the Commissioner is satisfied at any time that an assessee is trying to alienate his assets to defraud the State of its revenue, he may direct the Income-tax Officer to assess immediately the total income of the assessee from the expiry of the last previous year to any such date, as well as for the years not assessed, on the lines of Section 24A (1) of the Income-tax Act.—*Accepted.*

Where it is not possible to recover taxes from the assessee in respect of the income aggregated under Sections 16(1)(c) and 16(3) of the Income-tax Act, the Department should have the right to proceed against the legal owner of the assets in respect of the share of tax payable on account of the inclusion of the proportionate income from such assets.—*Accepted.*

A self-contained Central Revenue Recovery Code, complete in all respects, should be enacted for the purposes of effecting recoveries of direct taxes levied by the Central Government.

Accepted in principle. The code will be incorporated in a schedule to the Income-tax Act as suggested by the Law Commission.

The Department should pay to the assessees interest at six per cent. per annum on the amount of refunds due in respect of direct refund claims payment of which is delayed beyond six months from the date of the refund application, unless the applicant is himself mainly responsible for the delay. Interest at a similar rate should be payable in cases where the payment of the refund resulting from appellate or revisionary orders, etc., is delayed beyond one month from the date of the receipt of the order concerned by the assessing officer. In cases where settlement of the refund claims is being held up due to non-co-operation from the claimant, a written intimation should be sent to him warning that a settlement of his claim for refund is being held up on account of his non-compliance with the Department's requirements (which may be specified therein) and that no interest will be payable to him for the consequent delay in the issue of refund.

Accepted with the following modifications:—

(1) *For both direct refunds and refunds arising from appellate orders, interest should be payable, if the refund is not granted within six months from the date of the claim or the appellate order, as the case may be.*

(2) *The interest should be 4 per cent., instead of at 6 per cent.*

(3) *The interest will be calculated on the amount of refund ultimately due.*

As quick disposal of refund claims is an important means for establishing good relations with the tax-payers, greater importance than at present should be given for disposal of refund applications.

The principle of according highest priority for disposal of refund applications is accepted.

The new scheme of taxation of companies and their shareholders as laid down in the Finance Act, 1959, is sufficiently simple and easily workable. In order to avoid any difficulty to the shareholders, the Department should issue exemption certificates freely.—*Accepted.*

The currency of the refund orders should be the same as for treasury cheques, that is, three months, instead of one month which obtains at present.—*Accepted.*

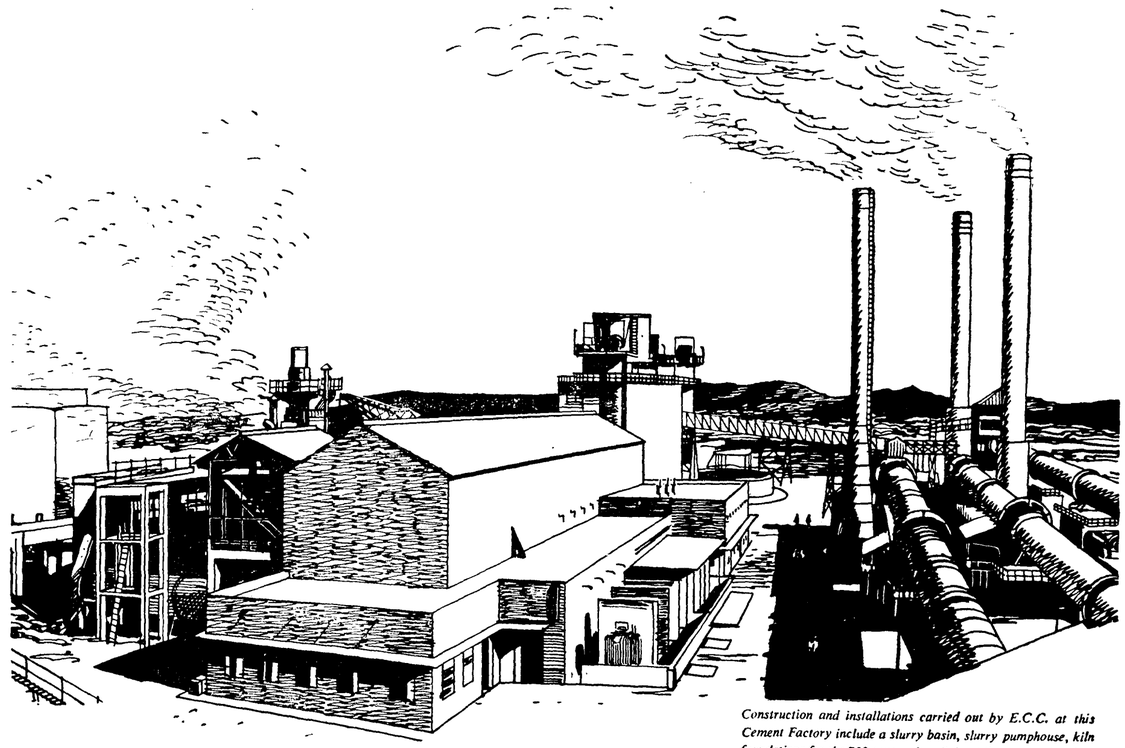
More importance should be given to external survey work, by reorganising the Survey Circles and augmenting the staff in them.—*Accepted.*

It is necessary that the activities of the various revenue departments in checking evasion of taxes should be properly co-ordinated, and that, for this purpose, there should be a regular and systematic exchange of the useful information available with the various departments. The existing liaison arrangements between the various departments should be improved and placed on a more systematic footing.—*Accepted in principle.*

The Department should be provided with the power to grant immunity from penal proceedings or prosecutions to those who having abetted an offence in this respect, come forward to give evidence against an assessee.—*Accepted.*

A detailed schedule of penalties should be drawn up and incorporated in the statute book in place of Section 28 of the Income-tax Act and

(*Continued on page 526*)



Construction and installations carried out by E.C.C. at this Cement Factory include a slurry basin, slurry pumphouse, kiln foundations for the 750-tons-a-day clinker kiln, smoke chamber, 200-foot high RCC chimney, clinker conveyor bridge, four cement silos, packing house, elevator, crane gantry and overhead tank

REVISION OF CLOTH AND YARN PRICES

TARIFF COMMISSION ENQUIRY CONTEMPLATED

IT was only last week that we stated in these columns that the virtual wrangle over the issue of cotton yarn and cloth prices had been happily ended, thanks to the spirit of accommodation displayed by millowners. And as our last issue was in print—on Thursday the 8th inst.—Mr. W. R. Natu, Textile Commissioner to the Government of India, had informed a joint delegation of the Bombay and Ahmedabad cloth trade representatives, who met him in Bombay, that the Indian Cotton Mills' Federation had announced the revised cloth prices with the approval of the Central Government. But on the very next day, the Union Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, declared in the Lok Sabha that, in the matter of revising cotton textile prices, the Federation "has not gone so far as the Government wanted them to go" and that the Government "is not fully satisfied with the extent of reduction offered." Mr. Shastri disclosed that the question of referring to the Tariff Commission the mills' cost of production, prices of cloth and other aspects of the cotton textile industry was under consideration of the Government. "It seems necessary," he said, "that an expert study should be made on the subject, with a view to deciding the Government's policy on such an important consumer goods industry in the very near future." In this connection, he observed:

"Because the Government wants to hold down the price line, it has not yet any time asked the industry to reduce prices to a level which will be lower than reasonable levels. . . . In respect of the prices that they (the millowners) themselves have agreed to, I hope the Federation will now make every effort to bring them into immediate effect. Every section concerned, including the wholesale and retail trade, will support the scheme of things which should be brought into operation immediately. . . . The latest decision is a considerable improvement on the Federation's earlier offer and the Federation has also agreed to extend the new prices to deliveries under subsisting contracts and to stamp the ex-mill and retail prices. . . . The consumer will have to be vigilant in ensuring conformity with the stamped prices. . . . With the greater availability of short-staple cotton hereafter, the production of coarse and lower medium varieties of cloth will be increased and the situation in the cloth market will consequently improve."

The statement of Mr. Shastri to the effect that he is still not satisfied with the extent to which cloth and yarn prices have been reduced is rather surprising, especially as it comes after the convincing, lucid exposition of the whole issue by Mr. Krishnaraj M. D. Thackersey, Chairman of the Federation, at a Press Conference in Bombay on Monday the 5th inst. A detailed reference to the observations of Mr. Krishnaraj has been made in our last issue, so that it is unnecessary to refer to them again. It will be clearly evident from his observations that whatever steps the Federation could take for ensuring adequate supply of cloth and yarn at reasonable prices have been taken. Indeed, the new price structure will adversely affect many marginal mills, particularly those producing coarse and medium cloth.

Cost Inflation

If the cotton mill industry is not in a position to effect a further cut in cloth and yarn prices, it is because of the cost inflation over which it has no control. This cost inflation is the result of the marked rise in raw cotton prices, enhanced wages and dearness allowance, and higher cost of stores and other accessories. The currently ruling prices of cotton, for instance, are generally 20 per cent. higher as compared with those prevailing a year ago. Similarly, the average wage cost of a mill in Bombay City has gone up by about 14 per cent., following payment of higher basic wages and dearness allowance. The industry would have certainly borne the incidence of additional production cost if the authorities had enabled it to reduce the unit cost of output by expanding its weaving capacity, modernising plant and machinery, rationalising methods of production and producing popular varieties of cloth. The Central Wage Board has studied the different aspects of the industry in considerable detail and the officially appointed Working Group has assessed the industry's requirements of rehabilitation for the next five years. The facts are crystal clear and there is absolutely no need for a fresh enquiry by the Tariff Commission into the affairs of the textile industry. Instead of ordering such an enquiry, involving unnecessary waste of time and resources, the Government will do well to give, as we stressed last week, sufficient time for allowing the new arrangements to make themselves felt on the trend of cloth and yarn prices and adopt a positive policy that will lead to an increase in production and competition which alone can bring down prices to reasonable levels.

In fairness to the industry, however, it must be said that it is not opposed to the issue of fair prices being referred to the Tariff Commission. On the contrary, it had volunteered to subject itself to such an examination with two objects in view, to vindicate its claim that only a few units had indulged in charging excessive prices and to show that the extent of reduction in prices which it has made is more than what the Commission itself would regard as reasonable. In other words, the industry feels that it would get a better deal than it has had now if its case were referred to the Tariff Commission and that, once price controls are enforced with the backing of the Tariff Commission's formula, it could not be subjected to charges of profiteering. Indeed, the leading spokesmen of the industry are so conscious of the need for a favourable public opinion that they themselves have advocated statutory price controls. Mr. Krishnaraj made it clear at the aforesaid Press Conference that the Federation would welcome statutory enforcement of the reduced prices announced by it. The Government, however, is reluctant to plump for such drastic controls.

Giving Effect To Reduction

Nevertheless, the Cotton Mills' Federation is determined to give effect to the reduction in prices of cloth and yarn to the best of its influence. This is evident from the circular issued by it to all the member-associations of cotton mills. If any member-mill chooses to challenge or defy this directive, the Federation has no sanction to enforce it. As this journal has pointed out on earlier occasions, there are serious limitations to voluntary price controls.

In its circular dated the 7th inst., the Federation has urged upon its members that the revised prices must apply to all cloth and yarn delivered from the 4th of this month, regardless of the contract prices with some exceptions, and that all the mills should start stamping prices on cloth from Saturday the 10th inst.: the cloth and yarn already baled by mills need not, however, be opened and stamped. The following are the exceptions:

Goods for which payment has been received on or before 10th August and which have been held by mills on merchants' account are to be delivered at the contract prices.

Goods for which payment has been received on or after 11th August and which are held on merchants' account should be delivered at prices calculated on the 11th August formula, provided that, where the contract prices are lower than October 1959 prices plus the appropriate percentage, the lower prices prevail.

Goods invoiced on or before 10th August but not paid for should be delivered at prices calculated on the 11th August formula, provided that, where the contract prices are lower than October 1959 prices plus the appropriate percentage, the lower prices prevail.

Goods invoiced on and after 11th August should be delivered at prices calculated under the latest formula, that is, August 1959 price plus the appropriate percentage or the contract price, whichever is lower.

Where the existing contract prices are lower than those under the new formula, the contract prices are to be stamped as the ex-mill prices, the retail prices being stamped by adding 15 per cent., and then the excise duty, additional excise duty and handloom cess must be added together. The price stamping is to be per yard. In respect of yarn, only the ex-mill price is required to be stamped; no retail price need be stamped. The following are the net ex-mill prices to be charged for the principal counts of yarn:

(In Rs. per bundle of 10 lbs.)

6s (manufactured from cotton waste) 13.57; 6s (manufactured from cotton mixing containing not more than 25 per cent. cotton waste), 15.75; 10s, 17.75; 12s, 18.50; 14s, 19.50; 16s, 21.15; 18s, 21.40; 20s, 21.60; 21s, 21.90; 22s, 22.20; 24s, 23.05; 26s, 24.18; 28s, 24.78; 30s, 25.32; 32s, 26.10; 36s, 27.75; and 40s, 28.75.

The differentials to be added to these prices for the use of foreign cotton, for yarn on cones and for doubled yarn have also been fixed as under:

Use of foreign cotton:

Count group	*Use of 100% foreign cotton*	*Use of 50 to 55% foreign cotton*	*Use of 25 to 30% foreign cotton*
20s to 24s	1.50	0.75	0.40
26s to 28s	1.40	0.70	0.35
30s to 38s	1.25	0.60	0.30
40s	1.00	0.50	0.25
Yarn on cones:			
10s to 16s			2.25
18s to 26s			2.85
28s to 36s			3.20
40s			3.50
Doubled yarns:			
2/10s			2.50
2/14s			3.00
2/20s			3.10
2/24s			3.25
2/30s			3.90
2/40s			4.50

The member-mills have been asked to give details of reduction in their sales realisation following the application of new prices to outstanding contracts and also to indicate the new contract prices along with the contract rates of pre-11th August 1960 period for as many varieties of cloth as possible. In respect of varieties for which no contract prices for August 1959 are available, either because the varieties were not sold in that month or because they were not manufactured then, as well as the new qualities to be introduced hereafter, prices must be fixed in parity with the price level indicated therein. The mills are required to work out for such qualities in prices which would have been applicable in August 1959 on the basis of the contract prices of comparable qualities sold in that month and then the appropriate percentage is to be added to arrive at the maximum price permissible under the new formula. The member-associations have been called upon to pursue vigorously the arrangements for opening more retail shops which may be the mills' own shops or approved retail shops, so that cloth at the new price will reach the consumer very quickly preparatory to the sales for *Dassara*, *Puja* and *Diwali* festivals.

The Millowners' Association, Bombay, has already sent out letters to the member-mills, appealing to them to abide strictly by the Federation's decisions on cloth and yarn prices. Incidentally, it has told them that it will shortly be authorising about 50 to 60 retail shops in Bombay as approved retail shops.

The 15 per cent. margin on ex-mill prices of piecegoods allowed to the trade has, however, caused disappointment to wholesale dealers. The margin, it is pointed out, is unremunerative particularly when cloth has to be sold in places which are far away from the manufacturing centres. A deputation of cloth dealers of Bombay and Ahmedabad recently met the Textile Commissioner and complained that, in view of the increase in freight, cartage, godown and other charges, the 15 per cent. margin will be too inadequate to clear the goods with reasonable rate of return especially as the retailers' share out of this 15 per cent. is as high as 12 per cent., or four-fifths. It is reported to have pleaded for the enhancement of the margin or, in the alternative, grant of concession on account of the railway freight. It is also reported to have expressed its misgivings about the stamping of cloth prices. These views, however, are understood not to have found favour with the Textile Commissioner.

PERUVIAN COTTON

Cotton production in Peru during 1959-60 is estimated at 516,000 bales, which is slightly lower than the 1958-59 crop of 518,000. The decline occurred in areas producing Pima and Karnak, thanks to disease and unfavourable weather. Production of Pima and Karnak was around 114,000 bales during 1959-60, as compared with 120,000 bales a year earlier, while 1959-60 production of Tanguis, Acala and Aspere aggregated 402,000 bales, as against the previous year's crop of 398,000 bales. The 1960-61 crop of Pima and Karnak, most of which is harvested during July and August, is reported to be about equal to last seasons crop.

Consumption of cotton in Peru amounted to an estimated 70,000 bales during 1959-60, eight per cent. higher than the 65,000 bales consumed a year earlier. The higher rate of consumption was due to higher domestic demand and increased duties on imported textiles.

WOOL TEXTILE OUTPUT DURING 1959

There was a sharp drop of 21 per cent. in the production of mill-made wool cloth during the year 1959, although yarn output was slightly higher than in 1958. The production of woollen and worsted fabrics declined by 11 and 26 per cent., respectively, while the mixed fabrics output showed a rise of 13.8 per cent. The production of blankets and rugs, hosiery goods, shoddy and other items fell by 25 per cent. The following table gives the details of production during the years 1959 and 1958:

(In linear yards)

	1959	1958
Woollen:		
Suitings	1,531,800	1,729,826
Uniform cloth ...	1,013.782	1,200,963
Lohis	154,039	110,768
Total	2,699,621	3,041,557
Worsted:		
Suitings	4,339,001	5,518,825
Uniform cloth ...	277,964	348,703
Lohis	354,893	861,750
Total	4,971,858	6,729,278
Mixed fabrics:		
Suitings	536,124	487,344
Uniform cloth ...	348,937	168,547
Lohis	231,541	336,208
Total	1,116,602	992,099
Blankets and rugs ...	3,014,017	4,117,647
Hosiery goods	401,919	999,134
Other items	2,979,880	3,296,108
Shoddy	40,851	189,846
Total	6,436.667	8,602,735
Grand Total	15,224,748	19,365,669

The production of woollen and worsted yarn (combined) at 29.5 million lbs. was 1 per cent. higher than a year earlier. The production of woollen yarn rose by 12 per cent., but that of worsted yarn fell by 8 per cent. The States of Bombay and the Punjab recorded an increase of 7 and 29 per cent., respectively, while there was a fall of 5 per cent., 10 per cent., 13 per cent. and 39 per cent. in the States of Uttar Pradesh, West Bengal, Jammu and Kashmir and Mysore, respectively.

The production of woollen and worsted yarn (in lbs.) during 1959 was: woollen yarn 11,968,812; worsted yarn for weaving 8,232,518; worsted hosiery yarn 3,460,301; worsted knitting yarn 3,223,085; carpet yarn 2,607,885; Total 29,492,601.

PAKISTAN COTTON

The Government of Pakistan has announced that the rate of export duty on staple cotton for the new season which started on the 1st inst. shall remain unchanged at Rs. 75 per bale. The export duty on *Desi* varieties grown in West Pakistan shall also remain unchanged at Rs. 40 per bale. The export duty on Comilla cottons of East Pakistan has, however, been reduced from Rs. 40 to Rs. 20 per bale. The reduction has been made, claims the Government, not only to increase the competitiveness of Comilla cotton with Assam/Comilla varieties grown in India, on which presently no export duty is levied, but also to encourage greater cultivation of this variety in East Pakistan which is recognised to be one of the finest of the harsh short-staple growths, and in particular, to promote its cultivation on a more regular basis. The Government, it has also been made known, has no intention of restricting exports of cotton during the season in any way.

As regards the crop situation in Pakistan, according to the first official estimate, released at the end of the last month, the area under 1960-61 crop cotton in Pakistan is 3,198,000 acres, which compares with 3,305,000 acres last year. The area under cotton has generally declined in almost all major cotton growing areas of West Pakistan mainly owing to a shortage of canal water and lack of rainfall before and during sowing time.

NEW WOOL COMBING PLANT

The new commission woolcombing plant of Messrs. Isaac Holdens (India) Private Ltd. will commence operation early next month. In the first few months, only botany wools that are comparatively free from burr will be combed. A progressively wider variety of types will be accepted as the establishment develops. Crossbred wools will be accepted with effect from February 1961. The plant is equipped with Noble combs; French combing machinery will be installed next year.

With the putting up of this plant, the Indian spinners and manufacturers will be able to buy Indian-combed tops from foreign suppliers, or they may buy raw wool and arrange combing themselves. (Woolsorting facilities, however, will not be available for some months.) In either case, the manufacturer saves the foreign exchange represented by combing charges. There will be no restriction on the re-export of wool, tops or by-products owned by foreign topmakers, but the present licensing regulations, slightly modified, will still apply to Indian firms. A tariff of woolcombing charges has been issued. This is higher than that of the Commission Woolcombers Association of Bradford, England, where most of the tops now imported into India are bought. But it appears that this extra cost of converting raw wool to tops will be more than offset by savings in ocean freight and insurance.

Quality in Sahu Cement is the result of specialised knowledge and experience of measured controls and continuous testing.

COTTON INDUSTRY SURVIVES A TRYING PROCESS OF CONTRACTION

NO EARNEST DESTOCKING IN TEXTILES YET

From Our Special Correspondent

MANCHESTER, *6th September*

MANCHESTER LETTER

ONLY a year ago, so swiftly does time fly, the attention of virtually every trader in Lancashire was centred on the situation arising from the response to the redundancy schemes in spinning and weaving. The time was, indeed, a moment of decision for the industry. Facts and figures had been stated, but rumours were then abundant and all sorts of misapprehensions were evident about the effect of the project. It was scarcely surprising that conflicting opinions were everywhere to be found. In such circumstances, chaos and confusion are invariably encountered and it takes time for any industry to settle down after such an upheaval. As the months have slipped by, however, so last year's apparent disorder can be seen in its true perspective.

The subsequent complications resulting from the withdrawal of many firms from the trade, and the problems thrown up by the new relationships which had to be established between suppliers and customers, were gradually solved. Although some unevenness may still exist, the industry, in general, has survived a very trying process of contraction.

Two points of view can be held as to whether the extreme urgency of the search for supplies created by fears of shortages helped or hindered the situation. Producers had to cope with an enormous influx of demand at a time when physical scrapping of machinery and respacing and replacing of plant had to be supervised. The merchants' problems were multiplied by the threat of scarcity and the necessity to discover alternate sources for the provision of goods when old-established contacts were severed.

Exaggerated Fears

Twelve months ago, it was suggested that many of the allegations then being made about such matters as unemployment and need for staggering mill closures would prove to be exaggerated in the long run. There is no need to withdraw our opinions, as they have been well substantiated by subsequent events.

The pressure for additional workers has within the past few days been described as "a panic hunt for scarce male labour," by Miss Alice Foley, the Bolton Weavers' Union Secretary. Even now, after the experience of the months between, Miss Foley is one of those who regards the reorganisation scheme as too drastic. She complains that, instead of finding their way into reorganised mills, many of the older operatives who were declared redundant took the chance to retire, while the younger ones left the industry.

Mr. Roland Thomas, President of the Manchester Chamber of Commerce, has appealed to 5,000 member-firms to intensify their sales efforts in overseas markets in response to the special call made by Britain's Prime Minister. Recalling that Mr. Macmillan had asked whether he could count on British industry to do this, Mr. Thomas said in a message: "Manchester's answer must surely be 'yes.'" The Chamber was appointing a "well-informed" committee to study the problems involved and to recommend what positive steps should be taken as well as any impediments that needed to be removed.

Mr. Thomas said that the Chamber was hoping to set up an advisory service with the object of linking the export skill and experience of some of Manchester's old-established merchant firms, which in their time had built up the textile industry to the world's largest export industry, with the new export goods of today. "Many of these great merchant houses still flourish, with all their accumulated and intimate knowledge of the world's markets," he said, and added: "There must surely be scope for bringing together these reserves of exporting skill and a host of new products which so far have been confined to the home trade."

Changing political opinions on the controversial topic of European industrial integration have obscured, to some extent, certain underlying problems which have a vital bearing on the future of any fresh trading relationships between the countries involved in such a fundamental conception. The possibility that the two distinct groups which have arisen in Europe may merge their interests as a result of negotiations which are still in progress has caused further argument between the supporters of what amounts to a European Federation and those who contend that Britain's participation in such a project would be disastrous.

From the outset of the discussions surrounding this venture into collaboration, one of the main stumbling-blocks has been the ties between the United Kingdom and the British Commonwealth. Attention has been centred on the effect of the scheme to eliminate trade barriers on the agricultural aspect. The links between the Commonwealth and Britain in this sphere are so traditional that many people regarded their maintenance as more essential than a new alignment with countries across the Channel.

What has so far escaped public notice is that the British Government's adherence to the policy of non-interference with imports of cotton and other goods from Commonwealth sources has been equally disturbing to Continental manufacturers when any suggestion of merging "the Six" with "the Seven" has been put forward. European millowners have watched the progress of negotiations between Lancashire trade leaders and their counterparts in Hong Kong, India and Pakistan with close attention. Few of the older cotton industries have escaped the threat of large-scale imports of grey cloth from the countries which are relative newcomers to the scene. Their anxiety is understandable.

"Normal" Competition Pledge

Representatives of the French cotton industry have lately called on their Government to take action to protect the mills against abnormal competition. In this category are placed low wage standards, State monopoly regimes and countries where multiple exchange rates exist. In a report to the Minister of Industry, the French trade urged the establishment of a co-operative system with European countries and others regarded as normal competitors to maintain strict bonds between each other and avoid the provision of loopholes which would encourage the importation of larger quantities of foreign cloth.

The French Government, it is felt, has opened the door to a flood of imports by extending the quota and tariff concessions arranged with its partners in the European Common Market to the member-countries of the G.A.T.T. Britain is singled out as an example of the way in which one country can be used as an entry into another for the Eastern yarn and cloth now reaching European ports in ever-increasing quantities.

Lancashire traders who have discussed this matter with European cotton manufacturing interests have been left in no doubt as to the attitude which Continental millowners take up on this question. The British Government's stubbornness in refusing to enter into what has in the past been regarded as an industrial affair may have to be relaxed, if any agreement is to be reached between the two collateral trade groups in Europe.

Trade Cycles—Which Way?

Without wanting to gratify the beliefs of some of the incurable pessimists in Lancashire trade circles, it cannot be denied that some concern is being expressed about the time-honoured topic of the stocking and destocking cycle. Certainly the phase of stocking went on merrily in the six months which covered the final quarter of last year and the first quarter of 1960. Destocking has not yet begun in earnest, and may well be delayed, if a further buying movement is soon encountered, but the ups and downs of textile production and distribution offer a threat to those engaged in both forms of activity. The following table, which sets out the volume of available cotton and rayon goods from domestic and foreign sources from which exports are substracted, gives a relative guide to the current situation by turning the spotlight on the balance which remains on offer for home trade distribution; comparisons between the position in recent years and today are shown below:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade

Lancashire's own production of cotton and rayon cloth is now very much smaller than even a few years ago, although output more than held its own with the 1959 level. Arrivals of foreign cloth, however, have to some extent neutralised this fall, while the small quantities of goods being exported has resulted in a return to a similar level of cloth being available as in the first six months of 1957 and 1955. A year ago, when the same table was drawn up, it was possible to forecast the future with some optimism, our comment being: "In view of the substantial clearances which took place in distributing houses during the earlier months of the year, there would appear to be scope for steady replenishment purchases in the not too distant future."

This prediction was borne out to a very remarkable degree, the demand which followed the response to the redundancy schemes in spinning and weaving exceeding all expectations. The enthusiasm to buy which

DEVELOPMENT OF PATENTS IN 1959

INDIAN INVENTORS' CONTRIBUTION SMALL

A COMPREHENSIVE legislation designed to protect the interests of inventors and to stimulate industrial research is expected to be introduced in the next session of Parliament. It will be largely based on the recommendations made by Mr. Justice N. Rajagopala Ayyangar in his Report on the Patent Law Revision submitted to the Government a year ago—14th September 1959 to be precise. Presumably, the Government has not so far finished its consideration of the Report. Mr. Justice Ayyangar, in his report, has stressed the need for mending, rather than ending, the existing patent system, which has been working in India for well over a century, notwithstanding all the difficulties and handicaps which are involved in its application in an underdeveloped country like India. He has advocated the revision of the law in such a way as to make it in conformity with the special industrial and technological conditions of the country. In particular, he has sought to impress on the authorities the need for introducing special provision in the statute to minimise the abuse of patent monopoly and to ensure compulsory working of patents in this country.

The proposed legislation is bound to make a signal contribution to the development of a judicious patent system, which at present is governed by the Patents and Designs Act, passed as early as in 1911. The number of patents originating in India is distressingly small. In 1959, according to the Annual Report of the Patent Office, the total number of applications received by the office was 3,965. An overwhelmingly large number of them—3,239 or over 80 per cent.—had their origin in foreign countries. India accounted for only 726 applications, including 55 submitted by foreign residents in India. Indian contribution is thus less than 20 per cent. The relatively low level of industrial development, and lack of facilities for research and also adequate funds by and large restrict the growth of Indian patents. It is, however, gratifying to note that the rate of growth of patents of Indian origin showed some improvement in 1959, as compared with that in the previous year. The following table shows the trend of applications for patents from persons both in India and abroad since 1947:

	1959	1958	1955	1951	1947
Indians	671	529	403	422	222
Other residents in India	55	73	43	42	45
Foreigners	3,239	2,970	2,290	1,644	2,103
Total	3,965	3,572	2,736	2,108	2,370

Out of the 726 applications which originated in India, (undivided) Bombay contributed 252, followed by West Bengal, Delhi, Uttar Pradesh, Madras, Mysore, the Punjab, Bihar, Kerala and Andhra Pradesh with 156, 128, 37, 32, 30, 29, 17, 17 and 10 to their credit, respectively, the remainder being contributed by the other States. As compared with 1958, there was an appreciable increase in the number of applications originating from India, Switzerland, the U.S., the U.K., the Netherlands, Germany, Sweden, Russia, Israel and Luxembourg. The number of applications originating from Canada, Norway, Australia, Japan, Austria, Rumania, Portugal, Yugoslavia, Southern Rhodesia and certain other European, Asian and Latin American countries also recorded a slight increase. There was, however, a noticeable decline in the number of applications coming from Czechoslovakia, Italy, France, Leichtenstein, Spain and Brazil.

As in the last few years, the majority of the inventions for which patents were applied this year related to chemical industries. In the field of organic chemistry, inventors showed interest in the manufacture of dyestuffs, particularly azo-dyestuffs, anthraquinone dyestuffs and phthalocyamine dyestuffs. A new field of interest to inventors was the preparation of steroids. Inventions relating to synthetic resins were mainly for the preparation of polyolefins, including polypropylene and polythelene. In this field, Indian inventors showed increased interest; their inventions related to the preparation of substituted benzene sulphonyl alkyl ureas, substituted benzene sulphonamido pyriadazines, copper complex biguanide derivatives, ethylene dichloride, furocoumarines, phenols from coal tar, citric acid from sugarcane molasses, etc. In the inorganic field, a large number of inventions were concerned with nuclear reactors, particularly fuel elements, heat exchangers, core elements, etc. Inventions by Indian inventors related to preparation of nickel sulphate from hydrogenation catalyst waste, ammonium sulphate from iron and steel industry waste, metallic halides, alumina, soluble silica from alkaline solutions, sulphuric acid and soda from ammonium sulphate and manufacture of salt from sea water by solar evaporation.

Iron and steel industry continued to command a fairly large number of inventions originating from foreign countries, particularly the U.K., West Germany and the U.S. They mostly related to steel manufacture in open-hearth furnaces and improved processes in oxygen blowing. Only a few inventions originated in India which related to beneficiation of manganese ores, manufacture of ferro-manganese, production of iron from low grade ferruginous clay and manufacture of basic and acid steels. Inventions relating to non-ferrous metal extraction and refining were mostly of foreign origin, and related to processes of extraction and refining of manganese, uranium, separation of niobium from tantalum, reduction smelting of chromium-bearing ores, recovering metal from scrap, recovering zinc, and pneumatic refining of metals. There were a few inventions relating to introduction of magnesium into molten cast-iron and gold extraction which originated in India.

In the sphere of food and agriculture, too, most of the inventions were accounted for by foreign countries. Domestic inventions were concerned with pressure and steam cookers, tiffin carriers, kerosene oil stoves, domestic water heaters, sugarcane mills, as also rice shellers, ploughshares, tractor attachments, cultivating implements and preparation of fertilisers. The other inventions were in the sphere of civil, mechanical and electrical engineering, textile technology, health and sanitation and miscellaneous appliances and processes. Most of them originated from abroad.

So far as designs are concerned, most of the applications for registration were of Indian origin. Out of the total number of 5,175 design applications, 5,145 applications were submitted by Indians. The number of applications for Indian designs was only 4,114 in 1958. This increase in 1959 was mainly shared by (undivided) Bombay, West Bengal and Madhya Pradesh. Over 85 per cent. of these applications related to textile designs, with the (undivided) Bombay contributing as many as 3,961 applications. Applications from overseas designers actually declined from 44 in 1958 to 30 in 1959. Out of this, the U.K. accounted for 22 applications, as against 21 in the previous year.

CONVERSION TABLES

The introduction of metric system for weights and measures is an important landmark in the history of weights and measures. Hitherto, each State had its own units of weights and a reform in the direction of adopting a common unit of weight was long overdue. The authorities, in their wisdom, decided that metric system was the only one that would suit the purpose in view, as it simplified the task of calculation and as it was being followed by most of the other countries in the world. Accordingly, the system was introduced in this country and is being gradually adopted by the various sectors of the economy. By 1st October, its adoption is being made compulsory in several sectors.

In view, however, of the wide variety of units of weights used in the country, their conversion to the metric system is rather complicated and is not easily grasped by the layman without the use of a ready reckoner. Further, having been accustomed to the present system for ages, one cannot even easily remember the new units of measurement. Most people will, therefore, find it necessary to carry with them always a ready reckoner. Mr. A. C. Lakhani, who has wide experience (of about 38 years) in compiling conversion tables, has done a signal service in publishing the *Metric Weights and Measures—Conversion Tables* in a pocket size booklet. The concise booklet is a unique one, in that it gives all the existing Indian weights and measures with their corresponding metric standards and *vice versa*, ranging from the smallest weights, such as grain, ratti and carat, to the heaviest weights, such as maunds and tons, and from an inch to a mile. Another unique feature of this publication is the comparison and conversion factors for capacity measures. Factors for comparison and conversion from one system to the other are given up to six decimal figures, with a view to helping minutest calculations. Fractional conversion tables, price parities, sterling-rupee exchange table and a perpetual calendar from A.D. 1855 to 2000 are additional features which will be found very useful for people in all walks of life. Despite the heavy work involved in the compilation, the publication is priced low, at 60 nP including postage, to suit all pockets. Hindi edition of this booklet is also available and a Gujarati one is under preparation. Copies of this useful publication are available from Lakhani Publications, Shree Vishnu Bhawan, 21, Bhahmanwada Road, Bombay 19.

SEALING OF JUTE LOOMS TO CONTINUE TILL THE END OF NOVEMBER

I.J.M.A. TO EMBARK ON JUTE DEVELOPMENT PROGRAMME

MEMORIES of the boom conditions in the raw jute market seen towards the close of the 1959-60 season (which ended on 30th June) have been revived by the recent spurt in raw jute prices and the sympathetic rise in jute goods. Although the current prices are well below the peak levels touched in May last, widespread concern is expressed by the industry over the long-term implications of the frequent rise in prices of jute goods on the overseas demand for Indian gunnies. While the good shipment figures for August and September, coupled with the low stocks of jute goods, are responsible to some extent for the recent rise in prices of gunnies, it is admitted on all hands that the main reason for the high level of prices is the inflated price of raw jute due to fears that supplies will be inadequate for the industry's requirements in the 1960-61 season also.

The Central Supervisory Body for Jute, at its meeting early in July last, had estimated a total crop of 6.2 million bales for the current season, 4.7 million bales of raw jute and 1.5 million bales of mesta. This total compared favourably with the aggregate output of 5.7 million bales in the 1959-60 season. At that time, even this estimate was considered as somewhat conservative in some quarters, which thought that the crop might rise to 6.6 million bales. The favourable weather conditions during the growing period went a long way in alleviating the earlier fears about the effect of a prolonged drought which had delayed sowing. But the optimism has proved to be short-lived and the latest ideas about the prospect of raw jute supplies during the current season have changed for the worse. Crop reports from the various districts vary from one another. But the general feeling is that the crop will be smaller than expected and that imports from Pakistan must be liberally allowed. To alleviate the position, the Union Ministry of Commerce and Industry announced recently that about 400,000 bales of jute cuttings would be imported from Pakistan. The announcement was vague, in that it was not clear whether this represented an extra allocation or whether the cuttings already imported were included in this quota. Meanwhile, the political disturbances in Assam and the heavy floods in Orissa have disrupted transport and the arrivals of raw jute into Calcutta have dwindled to disquietingly low proportions, as compared with the corresponding period of last year. In the circumstances, the issue of import licences for only 100,000 bales of cuttings from Pakistan out of the proposed quota of 400,000 bales is being widely criticised.

An Incongruity ?

Reviewing the whole position, in the course of a lengthy statement issued a few days ago, the Indian Jute Mills Association says: "With regard to the current season's crop, it is as yet too early to make a firm estimate of the quantity of jute that will be available, but it is certain that the Government of India's recent policy decision with regard to the import of cuttings from Pakistan will provide a welcome addition to the indigenous production and the question of applying for licences for the import of long jute also is now being considered." While it is a moot point whether the Government will consider favourably the import of a larger quantity of jute from Pakistan than it had announced earlier, the I.J.M.A. has made it clear that "the industry does not intend to be held to ransom for its raw material supplies this year in the manner that occurred towards the end of last season." It adds:

"As soon as the crop can be estimated with reasonable accuracy, the Association will decide to what extent it is necessary to adjust production to ensure that the available raw material will be adequate for the industry's needs with reasonable carryover into next season. In the meantime, the disturbances in Assam and the floods in Orissa have delayed the arrival of jute in Calcutta and it may be necessary to extend the voluntary sealing scheme for a further month, that is, upto 30th November 1960."

The I.J.M.A.'s decision may seem somewhat incongruous in the present context, with prices of jute goods ruling high and the shipments of gunnies encouraging. But what is the alternative? Stating that its decision to adjust production according to the availability of raw jute is a purely short-term solution to the problem, the I.J.M.A. adds:

"It is to be hoped that a reduction in raw jute prices will eventually lead to a reduction in the price of finished goods and the prime objective of the Association at this juncture is to take all steps necessary to ensure that raw jute prices are brought down with the maximum speed to a reasonable and economic level. The one certain means of attaining this objective is to ensure that the percentage of looms sealed is such as to avoid any danger of the raw material supplies being inadequate for the industry's needs. This policy is, however, essentially short-term and the only real solution of the industry's current difficulties is for India to become fully self-sufficient in raw jute on a long-term basis."

While the aforesaid explanation has its validity, it does not answer the question as to how the I.J.M.A. will ensure that the low level of production of jute goods does not lead to a rise in their prices. What if the mills and traders try to push up the prices of goods unduly? What action does the I.J.M.A. propose to take in order to prevent such a development?

Raw Material

At present, the work of increasing the production of jute is being done by only the Central and State Governments. There has, no doubt, been an overall improvement in the production of jute, but this is more due to the extension of the area sown than to improvements in the average yield per acre, which is still very low. In the 1959-60 season, for instance, the yield was 2.66 bales per acre, which compared unfavourably with that of 3.90 bales per acre in East Pakistan. There is considerable scope for both increasing the acreage yield and improving the quality of the jute fibre grown in India. What is more important is that these twin objectives should be achieved as soon as possible. It is gratifying to note, in the circumstances, that the I.J.M.A. has come forward to supplement the efforts of the Central and State Governments with a jute development programme of its own. Outlining the main steps it proposes to take in this direction, the I.J.M.A. says:

"Recent experience has shown how vulnerable the industry's position is when the demand for raw material outstrips the supply in India. It is essential, therefore, that urgent steps be taken to create conditions under which the growers will earn more from the land put under jute, through rationalisation of their methods of production, and the manufacturing industry will have guaranteed supplies of good quality jute at reasonable and stable prices. For this purpose, the I.J.M.A. proposes as a first step to set up Demonstration Blocks in selected districts in West Bengal to educate the cultivators in the use of modern farming techniques and demonstrate what these can achieve. This pilot project will be extended to other States in due course. At the same time, surveys of seed and fertiliser requirements will be carried out by the Association in each of the jute growing States and the machinery for their distribution reviewed. Consideration will also be given to a seed multiplication project for the complete saturation of all the jute growing areas over the next few years. Another important aspect from the point of view of fibre quality is the retting process, and the Association proposes to undertake a survey of the retting facilities in each area with a view to bringing these up to the required standard where necessary."

It is true that the various measures mentioned above will take some time to come to fruition and yield tangible results. But the I.J.M.A. is convinced that the expenditure on this project will be a very sound investment in the long term. At the same time, it has made it clear that its measures can only be complementary to, and not in substitution of, similar work by Governmental agencies. This implies that the ultimate responsibility for increasing the jute output by every possible means lies squarely on the Government, though the industry, on its own part, will not spare its efforts to supplement the official steps.

ASP/LIC-E.17

TOP MANAGEMENT

WILL WISH TO LISTEN TO THIS

All over the world, Insurance protection for employees while in service and satisfactory benefits on retirement have become accepted features of sound business management. Life Insurance and retirement incomes are indeed being regarded as a primary need as essential as food, clothing and shelter.

Progressive employers in our country are realising that the introduction of such employee benefits results in improved employer-employee relations, higher efficiency and increased production. An ever-increasing number of prudent employers are adopting the Group Insurance and Superannuation Schemes—employee Insurance and retirement schemes streamlined and perfected by the Life Insurance Corporation of India.

Today top management wants to know what exactly these Schemes can do for them, what the financial implications are likely to be and what precisely is the nature and scope of the benefits offered.

Broadly, the Schemes fall into two categories:

Group Insurance Scheme: offers low cost Life Insurance coverage on a Group basis to employees and gives real security to their dependants.

Superannuation Scheme: provides a source of steady and life-long pension to employees after their retirement (with or without Life Insurance cover).

Some features common to both Schemes are:

1 They can be instituted without any extra cost to the employer
2 Employers' contributions to such Schemes are allowed as normal business expenses for the purpose of income tax
3 Most of the administrative work with regard to these Schemes is done by the Life Insurance Corporation of India

Special features of Group Schemes:

1 For groups of prescribed size, attractive reduction in premium rate is allowed
2 All the members are covered under a single Master Policy
3 Flexibility—the benefits can increase from year to year.

The Group and Superannuation Schemes create a new atmosphere of employee loyalty and a sense of gratitude. They operate like a voluntarily organised Social Security Insurance in miniature.

Please let our Group Representative come and explain the details to you without any obligation whatsoever.

APPLICATION FOR SHARES

All applications must be for a minimum of 50 shares or a multiple thereof. Applications for shares should be made on the application form attached to the prospectus (or on a printed copy thereof) and delivered, accompanied with proper payment, before the close of the subscription list to any of the Company's Bankers at their BOMBAY, CALCUTTA, DELHI, AHMEDABAD, RAJKOT AND MADRAS Main Offices between 10-30 a.m. and 2-30 p.m. on working days. Further copies of the prospectus and application forms will be available during office hours on working days from the registered office of the Company, above stated offices of the Company's Bankers and the Brokers to this issue named below. Where no allotment is made, the application money in full, and where the number of shares allotted is less than the number applied for the balance of the application money, will be returned by Company by a cheque on their Bankers at Bombay, within two months from the date of the closing of the list.

The Directors do not bind themselves to allot full number of shares applied for and reserve the right to reject any application wholly or in part without assigning any reason thereof. Failure to pay any amount due on the shares allotted, when due, will render the shares and previous payments made thereon liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company.

The Share Certificates will be issued within six months from the date of the allotment.

BOARD OF DIRECTORS

SHRI B. K. BIRLA, 8, India Exchange Place, Calcutta.

SHRI R. L. KIRLOSKAR, Yantrapur, Harihar, Mysore State.

SHRI KISHORE M. PREMCHAND, 63, Apollo St., Fort, Bombay.

SHRI S. G. NEVATIA, Industry House, Churchgate Reclamation, Bombay-1.

BANKERS

THE UNITED COMMERCIAL BANK LTD., Dr. Dadabhoy Naoroji Road, Bombay-1.

THE CENTRAL BANK OF INDIA LTD., Mahatma Gandhi Road, Fort, Bombay-1.

THE BANK OF BARODA LTD., 12, Apollo Street, Fort, Bombay-1.

BROKERS TO THE ISSUE

M/S. NAVALCHAND T. SHAH AND CO., 102, Stock Exchange, Bombay-1.

„ **RASIKLAL MANEKLAL AND CO.**, 1, Old Stock Exchange Building, Bombay-1.

„ **CHIMANLAL J. DALAL AND CO.**, Old Stock Exchange Building, Bombay-1.

„ **DHIRAJLAL MAGANLAL PURUSHOTAMDAS**, Stock Exchange, Bombay-1.

„ **BATLIVALA AND KARANI**, Union Bank Building, Dalal Street, Bombay-1.

„ **NAROTTAM B. JAVERI**, 35, Stock Exchange New Building, Bombay-1.

„ **G. M. PYNE**, Allahabad Bank Building, 14, India Exchange Place, Calcutta-1.

„ **HARBANS SINGH MEHTA AND CO.**, Parliament Street, New Delhi-1.

„ **KOTHARI AND SONS**, Orient Buildings, Armenian Street, Madras.

AUDITORS

M/S. DALAL AND SHAH, 34, Apollo Street, Bombay-1.

REGISTERED OFFICE

INDUSTRY HOUSE, CHURCHGATE RECLAMATION, BOMBAY-1.

The consents of Auditors, Bankers and Brokers to this issue to act in their respective capacities have been obtained.

BROKERAGE

A brokerage of 12 nP per Equity (Ordinary) Share is payable to certified Brokers and Bankers on the nominal value of the said 3,50,000 Equity (Ordinary) Shares for applications received and allotted bearing their stamps.

OBJECTS OF THE COMPANY

The Company was incorporated on 5th August 1960 with the objects mentioned in the Memorandum of Association. The main objects are to manufacture and sell steel pipes and tubes of all description, particularly welded and galvanised pipes and fittings.

The Government of India has issued an Industrial Licence under Industries (Development and Regulation) Act 1951 to Shri S. G. Nevatia, one of the promoters of the Company to manufacture 24,000 tons of welded steel pipes a year (basis double shifts working). The Government of India has amended the licence making it in favour of the Company.

COMMENCEMENT OF BUSINESS

The Company has obtained the Certificate of Commencement of Business dated the 17th August 1960 from the Registrar of Companies, Bombay.

PROSPECTS FOR STEEL PIPES INDUSTRY

The use of steel pipes is an important index of a rising standard of living. Steel pipes are required not merely for their use as carriers of water but also as carriers of liquids of various kinds in domestic and industrial establishments. It is well-known that there is at present an increase in demand for such pipes to carry water, gas and liquids both in urban and rural areas. With the increase in industrialisation of the country, which has now assumed a considerable tempo, the use of steel pipes will be correspondingly increased. The steel production in the country is increasing rapidly and there are plans for further expansion of steel production. This will obviously need fabrications of various kinds and the manufacture of steel pipes will be an important item of such fabrication. In view of the anticipated increase in demand, the Government of India has planned for increase in indigenous production and this factory has been licensed to be established in the State of Maharashtra for the capacity stated above.

FOREIGN EXCHANGE AND RUPEE LOAN

The Industrial Credit and Investment Corporation of India Ltd., Bombay, have agreed in principle to grant to the Company a foreign exchange Loan of the equivalent of U.S. $8 50,000 (about Rs. 40 lakhs) to pay for the cost of the imported machinery and capital equipment for the proposed factory, subject to the consent of the International Bank for Reconstruction and Development and a further rupee loan of Rs. 15 lakhs to meet part of the cost of capital expenditure. The I.C.I.C.I. loan will be secured by a first mortgage on immovable and movable properties of the company subject to the hypothecation to secure bank borrowings for working capital.

TECHNICAL COLLABORATION

The Company is negotiating with leading Foreign Machinery and Pipe Makers for technical assistance in the form of design and layout of the complete plant, detailed plans for the equipment to be made in India, technical know-how of production of steel pipes, training of Company's employees abroad and in India through foreign technicians for the necessary period and making available technical personnel for erection of the plant and supervision of the initial operations of the plant.

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sums required to be provided as per paragraph 5 of the Schedule II to the Companies Act, 1956 and upon which the Directors will proceed to allot shares is Rs. 35 lakhs.

RESOURCES AND DISBURSEMENTS

The total funds available with the Company will be as follows:—

	Rs.
Share Capital proposed to be subscribed by the Directors, Promoters, their friends and associates and I.C.I.C.I.	35,00,000
Capital to be raised by this issue	35,00,000
Foreign Exchange and Rupee Loan to be obtained from The Industrial Credit and Investment Corporation of India Ltd.	55,00,000
Rs.	1,25,00,000

This amount of Rs. 1,25,00,000 will be utilised approximately as under:—

	Rs.
Cost of land, development thereof, construction of factory, office and residential buildings, roads, etc.	20,00,000
Cost of plant and machinery and equipment both imported and indigenously made including freight, insurance, import duty, clearing charges, erection, technical fees, training of technical staff, pre-operative expenses, etc.	90,00,000
Preliminary expenses, brokerage, advertising charges, etc.	1,25,000
Margin for Working Capital	13,75,000
Rs.	1,25,00,000

Note:—Additional finance required for working capital, when the factory goes into production will be available by way of loans from the Banks and other sources.

PRELIMINARY EXPENSES

Preliminary expenses incurred in respect of procurement of Industrial Licence, making necessary investigations, carrying negotiations with suppliers and financiers, are estimated at Rs. 35,000 including expenses towards registration of the Company.

MANAGEMENT AND REMUNERATION OF DIRECTORS

Management of the Company is vested in the Board of Directors of the Company. The Board is authorised to appoint Managing Directors. The Directors shall be entitled to receive fees and travelling expenses, etc., for attending Board or Committee meetings as provided in Articles of the Company. The Directors (including the Managing Director, if any) shall also be paid such further remuneration (if any) as the Company in General meeting may from time to time determine.

LAND FOR FACTORY

Lands suitable for proposed factory in the vicinity of Bombay have been examined and negotiations with the owners thereof are going on to acquire the same, which are expected to conclude soon.

PROFITS

On the basis of the existing prices and after allowing costs, overheads, depreciation and other foreseeable contingencies, in so far as these items can be at present estimated, the Directors are of the opinion, that in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividend on the issued equity shares. The other factories engaged in similar production are making good profits.

TAX BENEFITS

The Company will get the benefit of the Development Rebate and Exemption from tax under Section 15C of the Income Tax Act and the shareholders would also be exempt from Wealth Tax on their holdings for a period of five years, under clause XX of sub-section I of Section 5 of Wealth Tax Act.

NO PAYMENT TO PROMOTERS

No payment is made or proposed to be made to the promoters of the Company, except for reimbursement of actual preliminary expenses incurred by them and no profits or benefits have been given to any other person as promoters of the Company.

RESTRICTIONS IN RESPECT OF RIGHTS TO ATTEND, SPEAK AND VOTE OF MEMBERS

By Article 112, subject to any rights or restrictions for the time being attached to any class or classes of shares on a show of hands, every member present in person or if a body corporate through a representative appointed under the provisions of Section 187 of the Act and Article 113 or by proxy shall have one vote and on a poll the voting right of such member whether present in person or by representative or by proxy shall be in proportion to his share of the paid-up equity shares capital of the Company.

RESTRICTIONS ON TRANSFER OF SHARES

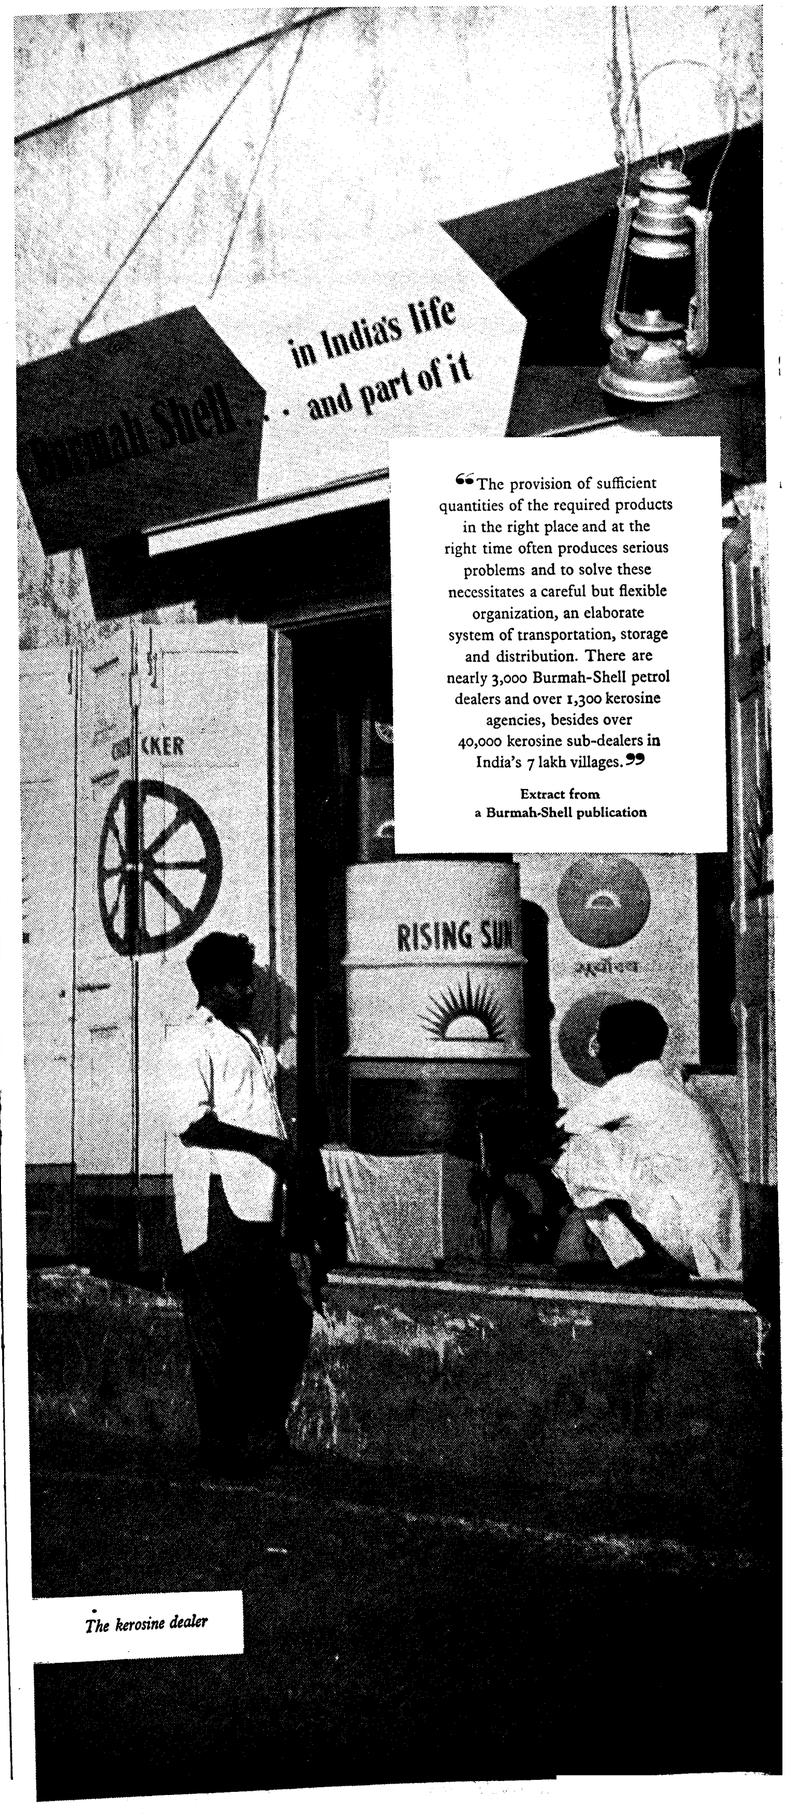
The Directors may, subject to the right of appeal conferred by Section 111 of the Act, decline to register any transfer of shares to a transferee of whom they do not approve.

CONSIDERATION FOR PROCURING SUBSCRIPTION

Up to the date of this prospectus, no commission, discount, brokerage or other payments have been made to any person in connection with the issue or sale of any stock, shares or securities of the Company.

NATURE AND EXTENT OF THE INTEREST OF DIRECTORS

No director of the Company is interested in any manner except as a shareholder and Directors' remuneration as herein stated.



MONETARY AND CREDIT POLICY

OBSERVATIONS OF RESERVE BANK'S CENTRAL BOARD

THE annual reports of the Reserve Bank of India Central Board of Directors are notable not merely because they contain an excellent review of the recent developments in the country's economy but also because they pinpoint the defects, if any, in the economy and suggest measures for removing the same. The latest report, that covering the year 1st July 1959-30th June 1960, is no exception. Some of the observations made in this report are of special significance in the present context when the planners and the powers-that-be are busy giving the final shape to the third Five-year Plan.

The Reserve Bank's Central Board of Directors are of the view that "monetary policy, despite its recognised limitations generally and especially in a semi-developed economy like that of India with a substantial currency component of money supply has a positive role to play in facilitating the attainment of growth with stability." They have, however, qualified this statement by saying that "the techniques of credit regulation have to be modified to suit the changing outlook of the economic scene, bearing in mind the needs of a developing economy."

It would be worthwhile to recall here that, during the year July 1959-June 1960, the Reserve Bank adopted a series of measures designed to ensure credit restraint in the economy which reflected a substantial increase in the rate of growth of industrial production, some decline in agricultural output, a modest improvement in aggregate investment, a further marked advance in the general price level, a rise in the rate of expansion of money supply and bank credit, an intensification of the stock market boom and a further, though small, fall in the foreign exchange reserves. The monetary measures included continuance (with suitable modifications) of selective controls in respect of foodgrains, sugar and groundnuts, extension of these controls to cover all other oilseeds, except cottonseed, resort to instrument of variable reserve ratios alongside other measures, including a ban on direct financing by banks of *budla* transactions, minimum margins in respect of bank advances against ordinary shares and a ceiling on clean advances, further restriction of banks' borrowings under the Bill Market Scheme, and continued employment of the Reserve Bank's open market operations to siphon off the excess liquidity in the economy.

Working of Credit Restraint Measures

Pronouncing their verdict on the working of these measures, the Directors say:

"While thus, in particular sectors, the credit curbs seemed to have worked in the desired direction, the impact of the variation in reserves on total bank credit has so far been limited. Although, immediately following the raising of the reserve requirements in mid-March, the expansion of bank credit in the peak of the busy season was arrested, subsequently in the traditional slack season, the rate of contraction has so far been very small. An important objective of the measure, namely, a reduction in the excess liquidity of the Scheduled banks was achieved, but its effect was largely neutralised by the changes in the other assets and liabilities, that is, by a smaller reduction in borrowing from the Reserve Bank than is usual during this period and also by much smaller investment in Government securities. Between 18th March and 5th August, the aggregate rise in Scheduled banks' total liabilities amounted to Rs. 66 crores; as against the rise in total reserve requirements of Rs. 42 crores, the banks increased their balance with the Bank by Rs. 13 crores, the balance of Rs. 9 crores having been absorbed by a reduction in excess reserves to Rs. 10 crores. Simultaneously, their cash on hand was reduced by Rs. 19 crores. Thus, the free cash reserves of the Scheduled banks (i.e. cash in hand plus excess reserves) declined by Rs. 29 crores. During the same period, the banks' borrowings from the Reserve Bank declined by Rs. 43 crores, but this was somewhat lower than the decline of Rs. 57 crores achieved in the corresponding period last year; also, the outstanding of such borrowing on 5th August 1960 at Rs. 34 crores was about Rs. 30 crores higher than a year earlier. Moreover, the rise in investments in Government securities during this period was very small, being only Rs. 9 crores, as compared to a rise of Rs. 100 crores in the corresponding period in the previous year. The lower rate of rise in Scheduled banks' investments during this period was largely accounted for by a net decline in P.L. 480 funds in Government securities. However, after making allowance for this factor, there would have been net disinvestment by banks of Government securities in the current year. In the circumstances, although the liquidity position of the Scheduled banks became tighter, the rate of contraction of credit has been smaller in the current slack season. Scheduled bank credit increased during the period 18th March 1960 to 5th August 1960 by Rs. 9 crores, as against a decline of Rs. 43 crores and Rs. 72 crores, respectively, in the corresponding periods of last year and the year before last. This is to be explained by the fact that the contraction of bank credit in the current slack season upto 5th August 1960 has been of the order of only Rs. 6 crores, as against Rs. 67 crores in the corresponding period of 1959. The contraction of credit against seasonal commodities has been the same as in the last season, and, in fact, should have been larger but for the lengthening of the crushing season of sugar, which is an important seasonal item of credit. On the other hand, in contrast to last busy season, there has been a steep rise in credit against non-seasonal items this year, mainly on account of the substantial rise in the rate of growth of industrial output."

Banks Should Act

While conceding that "the commencement of either the busy or slack season does not move in a set pattern from year to year" and that one may not expect "the decline in the slack season to be spread over evenly during the period," the Directors view with concern "the rather slow contraction of credit in the 1960 slack season." They have, therefore, urged the banks (*a*) to take energetic steps to bring about a satisfactory contraction of credit, so that they may be in a position to meet the requirements of the next busy season without undue strain, and (*b*) to reduce their access to the Reserve Bank, if the recent credit restraint measures are not to be nullified.

Commenting on the effectiveness of monetary policy, the Directors observe that it cannot be assessed precisely by reference to the behaviour of general and sectional price levels which are dependent upon a variety of other factors bearing on both aggregate and individual demand and supply position. Take, for instance, the curb on bank advances against foodgrains stocks. To the extent these stocks are self-financed or privately financed, the role of bank finance is comparatively negligible. However, even after taking into account the existence of a substantial non-monetised sector and a fairly large unorganised sector of the money market, monetary policy has, the Directors aver, a useful role to play in the maintenance of price stability. This aspect has to be specially stressed in view of the fact that the inflationary potential inherent in the total investment of as much as Rs. 10,200 crores envisaged in the third Plan Draft Outline is considerable and that, unless it is held in check by suitable techniques of credit regulation, the functioning and progress of essential productive sectors of the economy are bound to be jeopardised.

Fiscal and Economic Policies

Whatever may be the types of monetary policy chosen and however efficient is the way in which the policy is administered, it will not be of much avail if it is not accompanied by the adoption of suitable fiscal and economic policies. Indeed, these policies are, as the Directors rightly observe, even more crucial to the successful implementation of planned development. It is on their success that depends the answer to the question: Will the rate of savings to national income increase in the third Plan period from 8 to 11 per cent. so as to match the proposed rise in the rate of investment to national income from 11 to 14 per cent.? It is true that a larger amount of foreign aid than in the current Plan will have to be secured. Even so, the comparatively low level of foreign exchange resources and the inadequacy of earnings from exports even to finance the maintenance of imports impart utmost urgency to the problem of mobilising internal resources to the maximum extent possible. There is certainly no exaggeration whatever in the remark of the Reserve Bank Board of Directors that "this problem poses a challenge to the nation, especially as it is manifest that the volume of deficit financing has to be restricted to the level envisaged in the Draft Outline, namely, Rs. 550 crores, as against the likely actual of Rs. 1,175 crores in the second Plan." Appropriately enough, the Board says:

"A bold investment plan requires an equally bold and determined savings effort which, in concrete terms, means sacrifice by the community through postponement and curtailment of consumption. The precise manner in which this sacrifice is brought forth is a matter for careful consideration, but, clearly, it will involve a much larger tax effort, as also larger investment in securities and savings instruments issued by Government as well as private sector. The necessary corollary of this is economy and austerity in both public and private spending. The stabilisation of the cost of living is also imperative both for domestic reasons as well as for ensuring a cost-price structure which will enable exports to be maintained at a level necessary for the Plan. All this has wide implications for general economic policies which will require to be assiduously worked out.

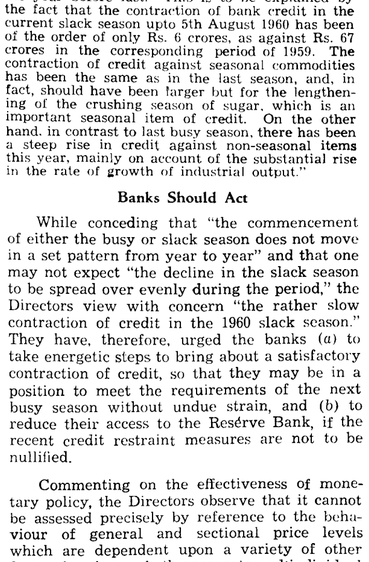
"The institutional machinery for maximum mobilisation and canalising of savings into productive channels also needs to be continuously strengthened. The Reserve Bank is aware of the immensity and urgency of the problem. The Bank has initiated action in this sphere in the past, but further steps will be necessary to adapt the machinery to the larger tasks ahead."

The foregoing observations constitute a broad generalisation of the issues involved and is more or less on lines mentioned in the Draft Outline of the third Plan. Surely, this is not what is expected of the Directors of the Central Board of the Reserve Bank. It would be more in the fitness of things, if they had clearly stated whether or not the assumptions made in the Draft Outline in regard to the resources were realistic. With a large number of economic experts employed by the Reserve Bank, it would have been possible for the Board of Directors to be more specific in their appraisal of the third Plan, if only they had the will. After all, the Reserve Bank, it has been claimed, is not a department of the Finance Ministry, or a wing of the Planning Commission, but an autonomous institution, free to put forward its point of view for the benefit of the Government and the public alike.

The review of the developments in Indian economy as made by the Reserve Bank Board of Directors reveals certain disturbing trends. The price situation, for instance, continues to cause concern. Further, the industries are generally faced with rising raw material prices and growing pressure for wage and salary increases which, to quote the Board, "may seriously affect their competitive capacity in export markets." Again, the capital market has been unusually ebullient, reflecting partly unhealthy speculative activity.

Banking Developments

According to the Board's survey of banking developments during the year July 1959-June 1960, the Reserve Bank continued to play a prominent part in the development of institutional credit for agriculture and industry. The State Bank opened 105 branches, raising the total number since its constitution to 416, thus exceeding the statutory target of 400 additional branches within the period July 1955-June 1960. With the establishment of the State Financial Corporations in Jammu and Kashmir and Gujarat, each of the 15 States in India has now its own Corporation. A notable development in the sphere of financing of small-scale industries was the formulation by the Government of India, in consultation with the Reserve Bank, of a scheme for the guarantee of advances to small-scale industries with a view to providing a measure of protection to lending institutions against possible losses in respect of such advances. The scheme came into force on 1st July 1960 and will be reviewed after two years. Its administration has been entrusted to the Reserve Bank as the agent of the Central Government. It will initially cover 22 approved districts and the guarantee facilities will be available to specified scheduled banks, State Financial Corporations and State Co-operative Banks and other specified institutions. The Refinance Corporation for Industry has formulated certain proposals, for consideration by the Government of India and the Technical Co-operation Mission, which include extension of refinance facilities to a larger number of banks and industries and greater discretion to banks to fix the lending rate subject to its approval. The Corporation has also made arrangements with the International Finance Corporation, Washington, and the Commonwealth Development Finance Company, Ltd., London, and the Industrial Credit and Investment Corporation of India for grant of foreign currency loans.



Co-operative Development

The main feature of schemes for co-operative development for 1960-61 drawn by the State Governments related to State participation in certain categories of co-operative institutions, revitalisation of smaller credit societies, organisation of marketing and processing societies, construction of godowns and provision of staff for co-operative departments and institutions. The Report of the Government of India's Committee on Co-operative Credit, appointed on 5th September 1959 to examine and make recommendations, among other things, in regard to measures necessary for increasing the borrowing power of primary credit societies and the desirability of State participation in the share capital of village societies, was submitted to the Government of India in May 1960 and is under examination. The conclusions of the Conference of State Ministers held in June 1960, in which the Reserve Bank also participated, which covered, among other things, the Report of the Government of India Committee on Co-operative Credit and of the Working Group on Co-operative Farming and Co-operative Development under the third Five-year Plan, are also under examination by the Government of India.

There was a further increase in the volume of finance provided by the Reserve Bank to the co-operative sector. Thus outstanding loans to State Co-operative Banks for financing seasonal agricultural operation and marketing of crops recorded a rise of Rs. 21.92 crores to Rs. 78.19 crores. The Bank continued to subscribe to the debentures floated by the central land mortgage banks, besides giving advice in regard to the terms and timing of such flotations. Credit limits aggregating Rs. 2.45 crores were sanctioned to 12 State co-operative banks at 1½ per cent. below the Bank rate for financing the production and marketing activities of weavers' co-operative societies.

Development of Banking

The Reserve Bank continued to give close attention to the development of the banking system on sound lines through supervision and regulation of commercial and co-operative banks. During the year, 71 scheduled and 238 non-scheduled banks and 256 co-operative banks were inspected, as also 144 large-sized co-operative credit societies and two apex handloom weavers' societies. The total number of offices of scheduled banks rose during the year by 259 to 4,060 and, of the new offices, 87 were opened at places not formerly served by commercial banks.

The Bank sponsored appropriate training courses for different categories of personnel for commercial banks and co-operative institutions and also organised the third Central Banking Course, commonly called the SEANZA Course, for executives of central banks in South-East Asia and the Commonwealth countries.

There was a general deterioration in the employer-employee relations in the banking industry and the Government of India referred the disputes in the industry, including those concerning employees of the Reserve Bank of India, by its notification of 21st March 1960, under the Industrial Disputes Act, 1947 to a National Tribunal for adjudication.

During the year under review, the Bank's income after making statutory and other provisions amounted to Rs. 47.57 crores and expenditure to Rs. 7.57 crores. The net profit available for payment to the Central Government in terms of Section 47 of the Reserve Bank of India Act was Rs. 40 crores, same as in the previous year.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them — in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

ENGINEERS' STEEL FILE INDUSTRY

PROTECTION TO BE CONTINUED, BUT AT A LOWER RATE OF DUTY

IN pursuance of the recommendation made by the Tariff Commission, the Government of India has ordered that the protective duty on engineers' steel files be reduced to 35 per cent. *ad valorem*, with effect from 7th September 1960. The rate of protective duty before that date varied from Rs. 7 per dozen for files of not less than 3¾" in length but not exceeding 5½" to Rs. 34 per dozen for files of length between 14 and 18 inches. The new rate of duty represents a reduction in the quantum of protection and is equal to the rate applicable to the files not included in the protected category. Some of the other recommendations of the Commission, which have been accepted by the Government, are:

1. Protection to the engineers' steel file industry should be continued for a further period of three years, that is, up to 31st December 1963.

2. The duty concession enjoyed by the industry in respect of its raw material should be continued, until steel file sections of the requisite quality, type and sizes are indigenously produced in sufficient quantity and at reasonable prices.

3. The Government should take steps to ensure that the industry's requirements for file steel, grinding wheels of bigger sizes and consumable stores are licensed in full.

4 The Government should consider sympathetically applications from the industry for import of equipment for adjusting production to suit the changing pattern in demand.

5. Since the import of old steel files as industrial scrap has created a loophole for import of serviceable files and a threat to the domestic industry, the Government may consider the question of enforcing stricter control on their imports with a view to stopping this malpractice.

The Commission has also called upon the industry to keep itself abreast of the latest developments and try to introduce them for improving quality of product and cutting costs. The producing units have been urged to improve their technique of manufacture and to tighten inspection procedure, in order to improve the quality so as to avoid complaints in this regard. Sub-standard files should be stamped as second quality. No third quality files should be put on the market.

Five Years of Protection

The Commission's recommendations are based on a comprehensive enquiry into the affairs of the industry. It will be recalled that the engineers' steel files industry was granted protection for the first time in 1955, after a Tariff Commission enquiry, by levying specific protective duties ranging according to sizes of the files from Rs. 7.00 to Rs 34.00 per dozen. The scheme of protection, which provided for a review of the adequacy of the rates of duties after two years, was to remain in force upto 31st December 1959 and covered engineers' steel files (including saw files) and rasps of lengths ranging from 4" to 13". It excluded precision files such as needle files (jewellers' files, watchmakers' files), mill tooth files, rotary power files and ampoule files. In 1958, the Commission received reports to the effect that certain importers were circumventing the protective duties by importing files slightly smaller than standard sizes and clearing them at the lower rate applicable to the next smaller size. There were also complaints that fairly large quantities of undersized files had been imported to the detriment of the domestic industry. It was, therefore, decided to re-examine the entire scheme of protection and, after a detailed inquiry, the Commission reclassified the files according to sizes and recommended appropriate rates of duty which were to remain in force upto 31st December 1960. It had recommended the discontinuance of protection to rasps. These recommendations were accepted by Government.

Present Position

The present position of the industry is that it consists of five units, which is the same as at the time of the last enquiry in 1958. Three are in Bombay and two in Calcutta. These are: (1) J. K Engineers' Files, (2) Hakimari Jaichand, (3) John Baker and Sons—all in Bombay, (4) Hindustan Files and (5) Harbanslal Malhotra and Sons Private Ltd., both in Calcutta. There is, however, according to the Commission, the prospect of a sixth unit going into production near Surat by the end of 1960. Further, a licence to set up a factory, with an annual capacity of 90.000 dozen files on single shift in the premises of Shri Ram Mills in Bombay, has been received by a firm, Bhogilal Menghraj & Co. Private Ltd., which intends to manufacture rasps and special types of files. The annual rated capacity, which at the time of the last enquiry was 318.000 dozen, has now gone up to 330,000 dozen on single-shift basis. When the additional capacity already sanctioned is established, the total installed capacity will rise to 702,000 dozen. After taking into account the possibility that some units may not install the capacity sanctioned for them, the Commission estimates that the installed capacity of the industry, on a single-shift basis, may be only 528,000 dozen a year in 1960 and 552.000 dozen a year within the next three years. It, however, feels that, if the industry is helped to adjust its production to suit the changing pattern in demand and also to work double shift, it should be able to meet the domestic demand in full not only for the current year but also for the next three years.

Estimates of demand vary considerably from 400,000 dozen to 600,000 dozen for 1959 and one million dozen for 1962. Following the method of adding the sales of domestic product to imports of the protected categories of steel files, the Commission estimates that the demand for steel files in 1959 must have been of the order of 420,000 dozen, which figure was raised to 500,000 dozen after discussions with representatives of producers, consumers, etc. The demand in future, it is estimated, would rise by 20 per cent. to 600,000 in 1960, 700,000 in 1961 and 800.000 in 1962.

Production

The production of engineers' steel files of all qualities rose from 206,160 dozen in 1957 to 245,363 dozen in 1958 and 279,256 dozen in 1959, representing a rise of 35 per cent. during the three-year period 1957-59. The spokesmen of the industry had stated that there was considerable idle capacity and that, given raw materials, they would be able to meet the demands of the country in full, both quantitatively and size-wise, not only for the current year, that is, 1960, but also for the future. The demand for protected categories of steel files, as noted above, is estimated to rise to 800,000 dozen by 1962. Since import of such files has been banned, the present apparent surfeit of supply will disappear and the increased demand will have to be met entirely from indigenous sources. The domestic industry will, therefore, have to plan production in such a way that no shortage occurred either now or in future. The Commission has, therefore, urged that the industry's requirements for file steels, grinding wheels of bigger sizes and consumable stores should be licensed in full. Further, since there has been a shift in demand to smaller files and half-round and round files, the industry may need to import some equipment for adjusting its production accordingly. The Commission has, therefore, stated that sympathetic consideration of application from the industry for import of such equipment should be given by the authorities concerned.

Quality

As regards the quality of the product, the Commission remarks that it had received divergent views from consumers. While some consumers, including a few large industrial units, have no complaints to make, others have contended that the quality of indigenous files is not on par with imported files, especially Nicholson files. The general complaints are: the indigenous files do not give the required finish; they wear smooth even before five days' use; hardening and tempering are not uniform, so that the quality files even in one box varies from one another; the serrations get blunt within a short period: the surface is generally warped; and cutting efficiency is still low. But it is satisfied that, barring two units, one in Calcutta and another in Bombay, the other three units have taken steps to improve the quality of the product. The Commission feels that most of the complaints regarding quality could have been avoided, if the inspection procedures of the manufacturers were stricter.

On a comparison of the fair ex-works prices of indigenous steel files with the c.i.f. prices and landed costs ex-duty of the imported products, the Commission has found that, barring smaller files of 4" to 10" in length, the other sizes of engineering steel files, commonly manufactured in the country, are not in need of protection. The smaller files are at a disadvantage and the duties required to equate their fair ex-works price with landed cost ex-duty of corresponding imported products, vary from Rs. 3.80 per dozen for 4" files to Re. 0.28 for 10" files.

Quantum of Protection

For the purpose of determining the quantum of protection required, the overall advantage and disadvantage have been taken as the criterion. On this basis, the Commission estimates, the industry has a nominal advantage of 70 nP per dozen. However, after taking into consideration the handicaps under which it has to operate such as dependence on imported raw material, the progress made by it so far under the protective umbrella, and the need for encouraging the industry to go in for the production of rasps, precision files, etc., the Commission has recommended continuation of protection for a further period of three years, that is, up to 31st December 1963. But, in view of the price advantage which the domestic product enjoys over the imported ones, and the massive protection which the industry has lately received from complete ban on imports, the Commission does not see any justification for maintaining the existing high rates of duty. Consequently, it is satisfied that no harm would be done to the domestic industry, if the protective duty is reduced to 35 per cent. *ad valorem* which, as already stated, is equal to the rate applicable to the files not included in the protective category. This recommendation is, however, based on the assumption that the Government will accept the suggestion regarding import of equipment, files steel, grinding wheels and consumable stores and that the rate of duty at present leviable on raw materials and consumable stores will not be altered. This recommendation, as noted above, has been accepted by the Government and it has made it known that the existing concessions will be continued for the present.

BALL BEARINGS INDUSTRY

The Tariff Commission has taken up for investigation the question of continuance of protection to the ball bearings industry. Protection to the industry was first granted for a period of two years, with effect from 1953, as per an enquiry undertaken in the previous year which was subsequently extended for a like period. A second enquiry was conducted in 1956 and the Commission recommended extension of protection for another four years, that is, till 31st December 1960. The present rate of duty is 95 per cent. *ad valorem*, both on adapter bearings as well as on ball bearings not exceeding 2" bore diameter.

A high precision product, used in a variety of machines, ball bearings is a key product without which there can be no industrial progress. The premier producer of ball bearings in the country, the National Engineering Industries, Jaipur, which enjoys a virtual monopoly in production, has asked for protection to the industry at the existing rate of duty for a period of 10 years. Has the progress of the industry during the eight years it has been enjoying protection been sufficiently satisfactory? Has the quality of the product improved? Is the price comparable to those of foreign manufactured bearings? What are the problems of the industry? Has the industry passed its infancy and reached a stage when it can stand on its own legs against foreign competition? If not, how long should protection be continued and at what rate? To what extent has the industry benefitted from the restrictive import policy? These questions are germane to the issue of continuance of protection.

Opening the public enquiry held at Bombay last week, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, reviewed the progress of the industry, the present position in respect of production and demand, the probable future trends and the steps taken and the results thereof, to improve the quality of ball bearings indigenously produced. The principal producer of ball bearings is, as noted above, the National Engineering Industries. Its capacity is reported as 0.9 million on single shift and 2.4 million on three shifts. The actual production of bearings upto 2" bore diameter was 1.6 million in 1957, 2.1 million in 1958, 1.7 million in 1959 and 1.3 million during January-June 1960. Two more units have been licensed for the manufacture of ball bearings, one at Poona and the other at Bombay, having a capacity of 1.5 million and 1.6 million respectively on double shift. But these units have yet to establish their factories. However, a small unit with a capacity of 25.000 bearings a year has been set up at Lonavla, near Bombay, but it is producing at present only thrust bearings. There are as many as 14 small units in the Punjab producing ball bearings.

As is usually the case, the demand estimates vary very widely. At the time of the enquiry in 1956, the domestic demand for ball bearings upto 2" bore diameter was estimated at 1.6 million. It was envisaged that the demand would increase to 2.5 million by 1960-61. The Development Wing places the current demand at 4 million and expects it to increase to 11.68 million by 1965-66. The latter figure is based on the targets fixed for the third Plan and includes the demand for both original equipment and replacement. The National Engi-

NEW PRODUCTS AND PROCESSES

Testing Machine for Roller Bearings

A TESTING machine for large roller bearings—such as those used in steel-rolling mills, ore-crushing plants, sluice gates, etc.—has recently been installed in the SKF Central Laboratory. Entirely of SKF design, it is, as far as is known, the only one of its kind in the world. It will test bearings supporting a load of up to 600 tons and having a maximum external diameter of 36 inches. The new testing machine, R5, offers an opportunity to check in the laboratory whether the theoretically calculated bearing properties, evolved by the Swedish enterprise some ten years ago and subsequently recognised internationally, apply to the largest dimensions. The testing machine incorporates many new and interesting features. It is intended exclusively for radial load tests and is designed to test simultaneously three bearings mounted on a common shaft. The load, which is exerted hydraulically, is applied from below against the centre bearing housing (which is larger than the other two). To ensure that the load is constant a sensitive pressure regulator consisting of a weighted piston which also acts as a valve is incorporated in the hydraulic system. If the volume of oil in the system is increased because of a rise in temperature, for example, the piston in the regulator lifts, and oil is released. If the volume is reduced, the piston falls and opens a duct through which oil is forced into the hydraulic system by means of a compressed-air driven pump. The pump delivers oil at a pressure of about 6,000 lb./sq. in., which is nearly 30 per cent. higher than that required for the hydraulic system. The load on the piston of the pressure regulator is only 1/10,000th of the load on the centre bearing. This wide gear ratio may cause even a very slight amount of friction on the regular piston to affect the load on the test bearings. However, friction is avoided by rotating the piston by a small electric motor so as to ensure that a permanent film of oil is formed round the whole periphery of the piston. Any necessary cooling is effected by circulating oil through the bearing housings and the shaft. The oil is in turn cooled by a heat exchanger. All the oil circulating systems are regulated from a central instrument panel, on which the recording instruments and controls are grouped.

Parking-machine

A new type "parking-machine" system which is claimed to increase substantially the effective parking space in large garages or parking buildings was recently demonstrated in Stockholm. Developed by a Swedish technician, with the financial support of the Swedish Inventors' Office, the system is claimed to involve a considerable improvement on similar earlier designs. The new method, which has been called XY-parking after the co-ordinate system in mathematics, is claimed to make it possible to utilise 85-90 per cent. of the parking space in a garage or parking building. The inventor believes that it would be most rationally utilised in multi-storey parking buildings, whether below or above ground. His designs include specially constructed, automatically controlled lifts. The parking takes place on plates arranged in rows close to each other over the entire floor space. Only one lane is uncovered. The simple movement schedule enables quick and safe operation, and the inventor states that a car can be taken out in less than one minute. Through servo-units the cars can be brought into or be taken out of the garage by pushing a signal button having the same number as the parking plate. A big garage of about 300 cars should be able to be supervised by one single man, it is claimed. The XY-garage is also cleaned fully automatically. The platforms on which the cars are parked are shaped so that melting snow and rainwater are collected in their middle and emptied through drain pipes. Sand and gravel are carried away by air- or water jets. The model shown was in full scale. Tests have been made for the planned manufacturing in series of standard units. Standard production is expected to make the building of XY garages considerably cheaper than that of conventional types, and operating costs should be proportionately lower.

Dictating Pool

Pick up your telephone, dial a number, and you can be connected to a dictating machine which is completely under your control—you can start, stop, or 'play back' at will. This was the aim which led a British firm to develop the dictating machine pool system—already in operation in many big commercial houses throughout the world—so that it can be completely controlled by the dictator. The control equipment is installed with standard dictating machines, and with any existing internal equipment which is based on private automatic switchboard systems. The manufacturers claim their equipment—"centradict"—gives complete control by the dictator over a normal telephone set, and that their system is foolproof against mis-operation, either by the dictator or the operator. But the biggest advantage, they say, is in the flexibility and speed of operation. Standard dictating machines are grouped in pairs, each pair having a remote control apparatus common to the two. A feature of the unit is that it is controlled by a typist who can transcribe from either machine whilst the other machine is being used for dictation and can switch the dictator from one to the other without a break in the recorded letter. The units are connected directly to the private internal automatic telephone exchange and use the automatic 'hunting' services available on the exchange. This enables dictation to be made from any telephone on the system simply by dialling a pre-determined number, and, where several units are used, the 'hunting' facility searches and finds a free unit, thus distributing the work evenly over the typing pool.

Radar for the Blind

A radar obstacle detector for blind people, enabling them to detect objects including curbs up to 20 ft. away was one of the novelties at this year's Radio Show at Earls Court, London. Not much bigger than a box camera it is hand-held and emits a narrow beam of highpitched sound which rebounds when it strikes an obstruction and warns the holder. It is at present only in the prototype stage but promises a valuable new aid to sightless people. After carefully analysing the signal radiated by bats and porpoises, it was considered probable that as some animals can move freely without visual aid the same type of signal could be reproduced electronically and used with suitable equipment by blind people as a practical means for moving about unaided. The Sondar signal—as it is called—consists of short bursts at a fairly high audio frequency. The repetition rate of the bursts is in the region of 50 to 100 per second. The actual pulse, in order to be audible to the human ear is modulated at a frequency of about 10,000 c/s. The required signal is obtained from power transistors which operate from a dry battery or accumulator of 9 to 12v. As the transmitted power is in short bursts, a relatively high peak output of 20 watts is obtained for an average battery drain of only 1 watt. The correctly shaped output is fed to a high frequency loudspeaker beamed by means of a suitably shaped horn. In practice the signal reflected by objects at a distance of up to about 20 ft. changes the tone of the signal which to the suitably trained user will convey the distance and location of obstacles.

TV Zoom Camera

A television camera believed to be the first in the world with an integral zoom lens contained within the camera body has been developed jointly by the B.B.C. Engineering Division and a firm of optical specialists owned by Rank Precision Industries Ltd. It has an unprecedented focal range of 2 ins. to 40 ins. and can zoom from long-shots to a close-up that apparently brings an object 20 times nearer to the viewer. Its development became possible through the revolutionary optical design of the lens. In its more conventional form this lens was first used operationally at Princess Margaret's wedding in Westminster Abbey and is being used by the Italians to televise the Olympic Games. In its new form it has been modified to give a wide range of viewing angles required both for outside broadcasting and in the studio. The problem of getting it inside the camera was overcome by using mirrors to fold the path of light behind the lens. This enables the lens and the image orthicon pick-up tube with its electronics to lie side by side. Consequently the layout is compact and keeps the overall length of the assembly down compared with the normal 'in line' arrangement. The achievement of the built-in lens cuts out the numerous normal type lenses that have previously had to be changed for different visual effects. One camera can now produce all the variations of picture scale normally resulting from a complicated system involving many cameras and crews.

Waterproofing Fabrics

Following close on their development of a new synthetic process for the production of a top grade ultra lightweight raincoat fabric, a British firm is now operating another new waterproof process which allows fabrics to "breathe." And at the same time the fabric will withstand a waterproof head of between 15 and 22 ins. applied at the rate of 10 ins. a minute—the average rainproofed and showerproofed gaberdine usually withstands a waterhead of 8 ins. before penetration. The process produces a hard-wearing lightweight material with a compromise between complete waterproofing properties and air permeability which has good flexible and draping qualities and does not subject the wearer to any of the discomforts experienced through excess body heat. The process can be applied to most materials, particularly gaberdine and Duveteen, and allows the passage of air at the rate of 150 cubic centimeters a minute.

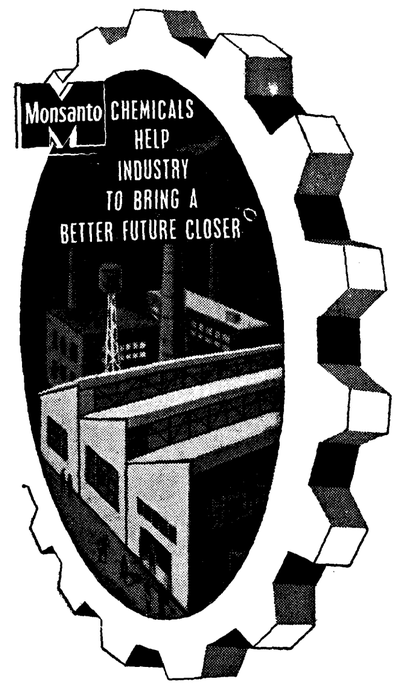
(Concluded from previous page)

neering Industries, however, has estimated the current demand at 3.45 million and anticipates that it will increase to 5.96 million by 1963. On the basis of sales of bearings produced in the country and imports, consumption works out to 2.36 million in 1957, 2.5 million in 1958 and 2.34 million in 1959. The value of imports was over Rs. 1 crore in 1957, Rs. 61.12 lakhs in 1958 and Rs. 48.29 lakhs in 1959. The main sources of imports are West Germany, Sweden, the U.K., Italy, U.S.S.R. and Austria.

Among the problems of the industry, dependence on imports for raw materials such as H.C.I. steel bars, tubes and wires is the principal one. Although small quantities of steel billets are available in the country, there has been complaints that the steel bars that are available required further annealing and straightening. The cost is also said to be high. At present, H.C.I. steel bars are exempt from import duty while H.C.I. steel tubes are assessed to a duty of 20 per cent. *ad valorem* and steel wires to a duty of 25 per cent. *ad valorem* plus Rs. 35 per ton standard and 25 per cent. *ad valorem*, preferential. The manufacturers have put in a strong plea for exemption of duty on H.C.I. steel tubes and wires also.

There have been complaints from consumers regarding the quality of indigenous bearings. They are said to have such defects as noise level in the bearings and tolerance of dimensions. Bearings produced in India are also less durable than the imported ones. The National Engineering Industries, however, claims that it has introduced quality control and installed machines for testing the products at every stage of manufacture.

The price of indigenous bearings, it is alleged, are higher as compared with the corresponding imported type of bearings even after the payment of the heavy duty. This is a point which needs to be thoroughly investigated. A study of the cost structure of the unit should indicate where the disadvantage of the domestic industry in regard to cost lies *vis-a-vis* imported products. Steps should then be taken to correct it so that the price can be brought down to reasonable levels. As Mr. Aiyangar pointed out, the National Engineering Industries Ltd. has a special obligation to consumers in meeting their needs by supplying good quality bearings at reasonable prices, as it is a protected unit enjoying a virtual monopoly in the field.



Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

Monsanto Chemicals Limited, London. Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

I. 79

PROGRESS OF REINSURANCE ENCOURAGING

NEEDLESS COMPETITION FROM THE PUBLIC SECTOR

REFLECTING the improvement in general insurance, the business of the India Reinsurance Corporation in 1959 recorded a remarkable rise. Having been, until recently, the only professional reinsurance company in India (with effect from 1st January 1960, the Indian Guarantee and General Insurance Company, a subsidiary of the Life Insurance Corporation of India, was converted into a purely reinsurance company), the working results of "India Re" can be taken as indicative of the general trend of reinsurance business in the country.

The experience of general insurers last year was better than in the previous one. Fire, hull and miscellaneous business all yielded excellent results. In keeping with this trend in general insurance, the business of "India Re," which, as all reinsurance business generally do, has, by and large, followed the fortunes of the direct-writing companies. The Corporation wrote a total gross premium from members and others of Rs. 3.55 crores in 1959, as against Rs. 2.84 crores in the previous year. Out of this, Rs. 84.36 lakhs was retroceded to members in fulfilment of its obligation and, after taking into account the premium otherwise retroceded, the aggregate net premium worked out to Rs. 1.82 crores, as against Rs. 1.26 crores in 1958. Claims, commission and expenses of management were lower at 53.94 per cent., 33.00 per cent. and 1.9 per cent., respectively, as compared with 59.46 per cent., 33.68 per cent. and 2.58 per cent., in that order, in 1958. As a result of this, the Corporation was able to show an underwriting profit of Rs. 74,446, as compared wtih a loss of Rs. 67,706 in the previous year. After taking into account interest and dividends and other income and outgo, and after earmarking Rs. 2.80 lakhs as provision for taxation, there is a net profit of Rs. 5.23 lakhs, as against Rs. 5.15 lakhs. In view of this improvement in business and the prospects for better results in future, the Directors have recommended a maiden dividend of Rs. 25 per share of Rs. 500 paid-up, (5 per cent.), subject to deduction of tax. This dividend would absorb Rs. 5 lakhs, leaving a balance of Rs. 23.885 to be carried forward.

Chairman's Statement

The salient features of the working of the Corporation and the progress and problems of reinsurance in the country are outlined by Mr. A. D. Shroff, Chairman, in his statement to shareholders circulated along with the report. Dealing with the departmental results, the Chairman observes that, in the fire department, both the premium and profits have substantially increased, mainly as a result of the revision in the underwriting pattern which has enabled the Corporation to step up its retained Indian premium income. The Corporation has also been successful in getting a very satisfactory premium reciprocity which, on the basis of normal pre-1957 results, would have given back to the Corporation profits more or less at par with the profits ceded by the Corporation. Unfortunately, overseas treaty results have shown progressive deterioration from 1957 onwards. The year 1959 was particularly disastrous for fire business in the U.K. The experience in the early part of 1960 is even worse. Because of the extremely adverse cycle through which foreign business is passing, the profit exchange on the Corporation's overseas trading is still unbalanced.

The Chairman has expressed satisfaction that the Corporation is able to secure an increased share in Indian companies' treaties, apart from the business it received from them as "agreed cession." This portfolio, according to Mr. Shroff, has gradually expanded and more and more companies are extending their support. This is largely due, perhaps, to the more advantageous terms offered by the Corporation to these companies than they used to get from overseas reinsurers, and also because it gives them reciprocity with a substantial element of Indian business. In the marine department, the bulk of the Corporation's retained premiums consisted of cargo business which has registered a small loss. The Corporation has secured additional participation in the Indian hull business from some of the member-companies. The reciprocity secured against retrocession of this business is shared with them. While it is too early to comment on the results of this reciprocal business, taking into account past performance and present trends, there are reasons, according to Mr. Shroff, to be optimistic about the ultimate outcome. The Corporation's experience in the miscellaneous department last year, though less favourable than in the previous year, was satisfactory. Arrangements have been made to retain almost the entire business on net account with suitable protection and this is expected to improve the profit position of the miscellaneous portfolio.

The facultative business of the Corporation continues to grow steadily. The Calcutta branch of the Corporation, which was established in 1958 to render reinsurance facilities to companies in that region, has been making good progress. The Corporation, says Mr. Shroff, is now in a position to provide large facultative covers in all branches of insurance. He wants all the member-companies of the Corporation to approach the Corporation whenever they are in need of facultative cover, including specialised types of insurances.

The Reinsurance Exchange started by the Corporation is working satisfactorily. The Exchange could become a much more effective instrument for increasing the volume of premium retained in the Indian market if all the companies were to utilise it for their facultative placings, reciprocal or otherwise. This will not only increase the net capacity of the Indian market but will also help non-Indian members to convert a larger portion of their Indian gross premium into net premium. Its ultimate effect would be to increase profits in India with a corresponding decrease in the drain on reinsurances. Mr. Shroff has appealed to all members, particularly non-Indian members, to support the Exchange by making use of the facilities offered by it.

Hire-purchase Cover

An important event during the year was the growing demand for guarantees in connection with hire-purchase transactions in motor vehicles. In order to give proper service to members, the Corporation undertook a detailed study of this new, and highly specialised branch, especially keeping in view the conditions in the country. With the co-operation of leading companies, which transact this type of business in India, uniform procedures, policy wordings, ratings, etc., are being formulated. The Corporation has made available to its members sufficient reinsurance facilities for hire-purchase guarantees which has been particularly helpful in view of the very limited overseas reinsurance market for this class of business. The Corporation has checked, Mr. Shroff claims, reinsurance drain not only by improving its underwriting and granting more reinsurance facilities to the companies in India but also by doing publicity work in foreign centres about the scope of the Indian market and also through personal discussions at international conferences. This, we are told, has created a climate of understanding and sympathy for Indian insurance in international markets like London.

It is clear from the aforesaid account that the Corporation has been doing its best to make available all types of reinsurance facilities available in India and to reduce the reinsurance drain. Nevertheless, there would still be some drain, because of the ultimate profit going to the foreign reinsurer as a result of reinsurance placed and/or exchanged with him, after taking into account premiums, losses, commission, etc., paid or received. At present, this drain occurs mainly in respect of (1) aviation hulls and other relative liabilities, (2) marine hulls, and (3) fire. Explaining the position in respect of these businesses, Mr. Shroff says:

"If all companies in India and particularly the branch offices of foreign companies exchange as much of their surplus in all departments as is possible to exchange in India, the drain could be minimised. Another way of saving this drain would be to form Pools of Indian business suitably protected, in which each insurer would contribute from its surplus upto a defined maximum liability per risk and to redistribute the business in the ratio of business received from each participant. Business so pooled and processed could be retained in India. The Corporation would be willing to establish and administer such pools if the members so desire.

"The various steps taken by the Corporation to achieve the end the promoters had in view include stepping up of retained premium income on Indian business by suitable underwriting arrangements, securing of increased reciprocity both in respect of premium and profits, from the overseas reinsurers, and formulating schemes for exchange of treaty and facultative business among local companies, so as to increase the volume of premium retained in the country. These measures, have already begun to yield the expected results. I trust that, once the adverse cycle on foreign business turns favourable, and normal experience on overseas business is realised, the arrangements now made will enable the Corporation to achieve its objective substantially."

Indian Guarantee

It is against this background that the creation of another professional reinsurance company in the public sector has to be viewed. Refuting the contention of the sponsors of the Indian Guarantee and General Insurance Company that the problem of strengthening the Indian market was not satisfactorily solved by the establishment of the India Reinsurance Corporation and that it cannot be solved unless a reinsurance market was created within the country which it was the object of the Indian Guarantee to do, Mr. Shroff points out that the Corporation has made reinsurance facilities available to all companies in the Indian market on the same terms and advantages as obtained elsewhere and that a number of companies have started placing a portion of their reinsurances with the Corporation. Apart from enlarging the reinsurance market by starting the Reinsurance Exchange, the Corporation has also made successful efforts to handle its portfolio of business in the most advantageous manner. In reply to the charge of slow progress of reinsurance, Mr. Shroff observes:

"I am unable to understand in what way the Corporation has failed to strengthen the Indian market by creating a reinsurance market in the country or how the creation of a second reinsurance company would improve the position. The present-day trend in the insurance industry in most countries is towards amalgamation of separate units, in order to reduce the cost of handling the business. From this point of view, one reinsurance corporation supported by the whole industry would serve the purpose better than having two corporations working separately. If the Government wants certain measures to be adopted in order to strengthen the Indian market from the reinsurance angle, this Corporation would always be used as a medium and I assure the Government of our fullest co-operation."

The Solution

The suggestion made by Mr. Shroff himself, in his address to the shareholders of the New India Assurance Company Ltd., seems to be the ideal solution to the situation created by the coming into existence of two reinsurance companies. The Indian Guarantee could specialise in providing the type of reinsurance cover that are not readily available now. At the present stage of the country's development, insurance of agricultural crops, dairy animals and hire-purchase business, etc., have an important role to play. This type of business could develop only if adequate reinsurance cover is available. By specialising in such hitherto unexplored lines, the newly-formed company could be a source of strength to the market without duplicating the commendable efforts already being made by the Corporation in the field of normal type of reinsurance business. Moreover, since the Corporation is a co-operative venture of the private companies, it cannot be regarded as being run for the benefit of any particular individual or firm. Its success will strengthen the insurance market in the country which, in turn, will help the growth of agriculture, industry and commerce.

INDIAN MERCANTILE INSURANCE CO., LTD.

1959 was a year of fairly satisfactory working results for the Indian Mercantile Insurance Company, Ltd. (Manager and Secretary: Mr. C. M. Telivala, Bombay). The progress of the Company, which has been in existence for fifty-two years, having been established as far back as 1907, has been very satisfactory. During the last ten years, 1950-59, the premium income of the Company increased by more than one hundred per cent. Its assets too almost doubled during this period. The dividend record has been uniformly good. In spite of the difficult times through which general insurance is passing, the Company has been paying dividend every year during the last ten years.

The following table gives an idea of the Company's progress during 1950-59:

(In lakhs of rupees)

Year	Net premium	Reserves and funds	Assets	Dividend
1950	17.57	26.04	48.44	1.00
1955	25.95	36.68	71.69	1.26
1957	27.21	32.58	80.70	1.49
1958	30.91	35.76	86.70	1.58
1959	36.07	38.92	88.96	2.37

Continuing the upward trend, the aggregate net premium from all the three departments, namely, fire, miscellaneous and marine, for the year ended 31st December 1959, increased by Rs. 5.16 lakhs to Rs. 36.07 lakhs. The rise in net premium in the fire department was marked, from Rs. 15.89 lakhs in 1958 to Rs. 20.77 lakhs in 1959. Marine premium, too, increased but only less than proportionately,

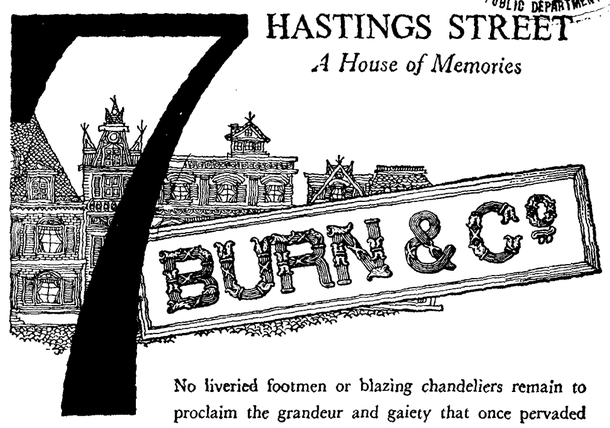
HASTINGS STREET

A House of Memories



No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

FOREIGN TRADE CONTROL IN 1959-60

EXPORT RESTRICTIONS RELAXED FURTHER

A SUCCINCT account of the operation of foreign trade controls in India is given in the Administration Report of the Import and Export Trade Control Organisation for the year ended March 1960. By and large, there was no material change in the foreign trade policy during the year under review. The import policy continued to be restrictive, as the foreign exchange situation warranted it. Certain measures were, however, taken with the primary objective of (*a*) conserving foreign exchange resources for essential imports and (*b*) enabling indigenous industry to maintain production at the maximum level so as to sustain the tempo of economic development. In the licensing period April-September 1959, an effort was made to adjust quotas of 93 items "in a manner which would give relief and improve supplies where urgently necessary" by saving foreign exchange. With this end in view, while quotas were reduced in the case of 40 items, they were somewhat increased in respect of another 53 items. List of goods licensable to actual users was also expanded. Another important development of a procedural kind which took place during this period was the inauguration of a scheme to issue licences to certain scheduled industries for the import of raw materials and components on the basis of advance allotments over and above their normal half-yearly quotas. This move was designed mainly to ensure continuity of supply of raw materials to some major industries. Except for certain readjustments, the policy for the second half-year (October 1959-March 1960), was substantially the same.

With a view to promoting exports and earning more of foreign exchange, the import policy followed during the two half-years (1959-60) made special provision for the grant of export promotion licences. Broadly speaking, export promotion licensing was done in respect of the following schemes of export promotion: (1) schemes for the grant of import licences to manufacturers borne on the books of the Development Wing and covering certain export industries; (2) special schemes evolved by the Directorate of Export Promotion in the Ministry of Commerce and Industry; (3) schemes applicable to certain exportable commodities, such as shoes, ropes, fishing rods, manufactures of ivory, coral, etc., and (4) the export incentive scheme for cotton textiles. During the year under review, a number of important export, industries continued to enjoy preferential treatment in accordance with their export performance. The list of items under the Export Promotion Scheme was also expanded.

The other features of the import licensing policy was the issue of "repeat" licences and the facility afforded to importers to utilise soft currency licences for imports from hard currency areas, except in the case of capital goods.

Pattern of Imports

The total imports amounted to Rs. 887 crores in 1959, as compared with Rs. 878 crores in 1958. Despite this overall increase, the percentage of capital goods in the aggregate imports went down from 15.45 in 1958 to 14.25 in 1959, and that of consumer goods (excluding foodgrains) from 10.75 to 10.71. The share of industrial goods (including raw materials), however, rose from 56.74 to 61.60. In absolute terms, the first group accounted for Rs. 126 crores, the second for Rs. 94.77 crores and the third for Rs. 545 crores, their corresponding totals for 1958 being Rs. 133 crores, about Rs. 94 crores and Rs. 488 crores, respectively. The share of foodgrain imports was Rs. 118.97 crores (13.44 per cent. of the total), as against Rs. 146.67 crores (17.06 per cent.) in 1958.

On the export front, the policy of progressive relaxation of control and of organised export promotion consistent with the demands of the internal economy, was continued during the year under review. Altogether as many as 72 items were liberalised in 1959-60. The important features of the liberalisation measures were: (1) a large number of commodities were placed on the free licensing list, as, for example, imported paper and pasteboard, fish meal, leather meal, fish guano, cigarette paper, maple stumps, sillimanite ore, chrome ore, kyanite ore, pickled goat skins, etc.; (2) export quotas in respect of H.P.S. groundnuts in shells and maple wood, which were not allowed for export previously were also released; (3) export of electric control and transmission gear, motors, diesel engines, celery seeds, cover crop seeds other than green manure seeds, dhoob grass seeds, forest seeds including tree seeds and hedge seeds but excluding tarwar seeds, vegetable seeds, silver ores and concentrates and silver bullion, metal and alloys, and certain wild life (dead or alive or part thereof or produce therefrom) were decontrolled.

Apart from decontrol and liberalisation of curbs on the export of a number of items, the Government instituted certain special schemes, which involved the linking of the imports of raw materials and components to the export performance of exporters. For instance, a scheme was drawn up to provide incentive to cotton textile industry to step up exports by granting licences for the import of coal tar dyes, textile chemicals, and colours and raw cotton upto the specified percentages of exports. The list of items of raw materials for which licences could be issued under this scheme was also extended.

Although there was no marked change in the pattern of India's export trade in 1959, the share of exports in the group of food, drink and tobacco, went down from 38 per cent. of the aggregate exports to 31 per cent. The share of raw materials and other manufactured articles went up from 22 per cent. to 26 per cent. and there was a modest increase in the proportion of exports of manufactured goods as well.

According to the aforesaid report, with the industrial development of the country, applications for import licences for raw materials, capital equipment, etc., have been increasing. The number of import licence applications received during the second half-year (October 1959-March 1960) touched a record of 210,197, as against 177,970 in the first half year. It would appear that, although the volume of work of the Trade Control Organisation increased, there was no corresponding increase in staff. Efforts were, of course, made to devise ways and means to simplify the procedure in handling the receipts. The disposal of applications took place at a satisfactory pace. The carry-over of applications at the end of the year was 2.2 per cent. of the intake.

The following table shows the trend of receipts and disposals of applications for both export and import licences over the past eight years:

Licensing period	Receipts	Total (including carry-forward)	Disposals	Percentage of undisposed applications
January-June 1952	61,663	70,886	61,649	14.9
July-December 1952	49,526	58,763	42,487	32.9
January-June 1953	79,852	96,128	88,436	9.6
July-December 1953	79,843	87,535	86,254	1.6
January-June 1956	149,800	150,305	150,128	0.1
July-December 1956	183,645	183,822	183,622	0.1
January-June 1957	138,607	138,807	138,514	0.2
July-September 1957	27,795	28,088	27,733	1.3
October 1957-March 1958 ..	135,875	136,230	135,833	0.3
April-September 1958	141,963	142,360	141,681	0.4
October 1958-March 1959 ..	173,894	174,513	173,721	0.4
April-September 1959	177,970	175,762	176,663	1.2
October 1959-March 1960 ..	210,197	212,296	207,633	2.2

While there was a substantial increase in the fees earned from licensing of imports in 1959 over the previous year, those from export licences tended to decline, following the relaxation of export restrictions. The following table shows the amounts credited to the Government on account of trade licences during the two half-yearly periods in 1959-60, as compared with the corresponding periods in 1958-59:

(Values in lakhs of rupees)

	Import licence fee	Export licence fee
April-September 1958	17.79	3.97
October 1958-March 1959	30.77	8.17
Total ..	48.56	12.14
April-September 1959	31.12	3.00
October 1959-March 1960	36.68	7.25
Total ..	67.80	10.25

The total expenditure of the Import and Export Control Trade Organisation aggregated Rs. 76.73 lakhs, as compared with Rs. 69.96 lakhs in 1958-59. The increase in expenditure, we are told, is a result of additional duties and responsibilities shouldered by the Government. It may be noted, in passing, that, during the year under review, as many as 109 firms were blacklisted and another 240 firms were placed on the suspense list for malpractices. As many as 114 cases were handed over to the Special Police Establishment of the Government of India and convictions were given in 42 cases, while 309 cases were disposed of departmentally during the year without being handed over to the S. P. Establishment.

INDIA'S FOREIGN TRADE IN JULY 1960

India's exports aggregated Rs. 48.54 crores in the month of July, according to provisional figures just released. This compares rather unfavourably with exports valued Rs. 48.94 crores in the previous month and Rs. 50.86 crores in the corresponding month of last year. Imports at Rs. 73.70 crores, while being lower as compared with those in June 1960 when they were Rs. 84.95 crores, showed an increase of about Rs. 6.22 crores over July 1959. The balance of trade continued to be adverse. It amounted to a deficit of Rs. 25.16 crores, as against Rs. 36.01 crores and Rs. 16.62 crores in June 1960 and July 1959, respectively.

The following table shows at a glance the trend of trade in the first seven months of 1960, as compared with that in the same period of 1959.

(Value in crores of rupees)

	Imports	Exports (including re-exports)	Balance of trade
1960			
January	62.68	53.06	— 9.62
February	69.12	49.81	— 19.31
March	75.67	53.37	— 22.30
April	82.00	48.58	— 33.42
May	82.77	50.74	— 32.03
June	84.95	48.94	— 36.01
July	73.70	48.54	— 25.16
Total ..	530.89	353.04	—177.85
1959			
January	80.24	45.16	— 35.08
February	71.02	42.16	— 28.86
March	73.39	46.95	— 26.44
April	91.84	44.65	— 47.19
May	73.37	44.05	— 29.32
June	81.32	42.92	— 38.40
July	67.48	50.86	— 16.62
Total ..	538.66	316.75	—221.91

The overall trend in exports during the current year so far has been better than that in the corresponding period last year. Thus, during the first seven months of 1960, exports aggregated Rs. 353.04 crores, as against only Rs. 316.75 crores in the same period 1959. At the same time, imports declined from Rs. 538 crores in January-July 1959 to Rs. 530.89 crores. On account of the expansion of exports and the decline in imports, the adverse trade gap was lower at Rs. 177.85 crores, as against Rs. 221.91 crores. Notwithstanding this, the foreign exchange problem is being felt more acutely today than a year ago. The reason for this is to be found in the fact that the level of foreign exchange reserves has come down to an irreducible minimum and the flow of promised aid from the friendly foreign countries is slower than expected.

INDIA'S EXPORTS TO WEST ASIA AND AFRICA

The view that there is vast scope for increasing India's exports to West Asia and Africa, provided adequate attention is given to the question of prices, packing, publicity and promptness in delivery, is expressed in a booklet, brought out by the World Trade Department of the Indian Chamber of Commerce, Calcutta. The countries covered in this report are Aden, Afghanistan, Iran, Iraq, Pakistan, Saudi Arabia, Turkey, Egypt and Syria (U.A.R.), Sudan and Ghana.

India's exports to West Asian countries, at present, are relatively negligible. Out of India's total exports of Rs. 616 crores in 1959, the share of West Asia was only Rs. 40 crores. Out of the total imports of Rs. 887 crores, imports from West Asia were not more than Rs. 80 crores. India's exports to Africa last year amounted to just about Rs. 40 crores and its imports from this area to Rs. 45 crores. India's main exports to these regions are cotton manufactures, jute goods, tea and tobacco, and main imports raw cotton, raw jute, fruits and petroleum products.

Apart from providing an excellent analytical study of the pattern of trade in these countries against the background of exhaustive data, the booklet furnishes a brief account of the import policy and procedures prevailing in the countries concerned.

T.I.S.CO. EARNS RECORD PROFIT

T.M.P. TO COST MORE—CHAIRMAN VIEWS THE FUTURE WITH CONFIDENCE

THE year ended 31st March 1960 was a notable one for the Tata Iron and Steel Company Ltd. (Managing Agents: Tata Industries Private Ltd., Bombay), in that it was the first full year of operation of the expanded plant after the completion of the two-million ton expansion programme (T.M.P.). Although it may be somewhat disappointing to find that the Company has not been able to reach during the year under review or even up to this day a rate of production nearer to the planned capacity of the expanded plant, the Company's performance on the whole should be considered satisfactory, considering the various difficulties with which the Company is still faced.

The salient features of the Company's results for the year under review, as compared with the previous year, are:

1. The production of saleable steel was 38 per cent. more than that in the previous year and nearly 60 per cent. higher than the average output during the period preceding the expansion of the plant.

2. Sales (after allowing rebates payable to the Government under the steel control) show a rise of Rs. 20 crores.

3. Thanks to the increased production and the consequent reduction in cost per unit, the gross profit has risen by Rs. 5.55 crores, or 65.9 per cent., to a peak of Rs. 13.97 crores, thus more than making good the successive declines in the previous three years.

4. The provision for depreciation, on the flat rate basis (introduced last year) of 6¼ per cent. on the original cost of the assets, has gone up by Rs. 2.93 crores to Rs. 8.46 crores, in consequence of the new plant having, for the first time, operated for a full year.

5. No provision for income-tax has been made for the second year in succession. It may be noted here that for 1956-57, the year before the commencement of the two-million ton expansion programme had reached the implementation stage, the Company had set apart Rs. 2.71 crores for taxation out of a gross profit of Rs. 11.76 crores.

6. The net profit has more than doubled itself from Rs. 2.72 crores to Rs. 5.51 crores.

7. With the addition of income-tax recovered on preference dividends, the net profit available for appropriation amounts to Rs. 5.68 crores, as compared with Rs. 2.89 crores for 1958-59, at which level it bears a ratio of 7.73 per cent., having recovered from 5.39 per cent., to which level it had declined in 1958-59 successively from 14.84 per cent. in 1955-56. The ratio of net profit to capital employed, which had likewise declined from 12.83 per cent. in 1955-56 to 2.05 per cent. in 1958-59, has improved slightly to 3.97 per cent. in the year under review.

8. Although no provision for taxation has been made, the allocation to the plant rehabilitation and development rebate reserve has been stepped up from Rs. 2.84 crores to Rs. 4.14 crores, consequent on the substantial addition to the fixed assets during the year.

Net Profit Inadequate

9. In spite of the completion of the huge expansion programme, the net profit at the Company's disposal for distribution is no more than Rs. 1.63 crores, which is totally inadequate in relation to the magnitude of the Company's operations, its share capital and the profits earned in the past years.

10. Out of the aforesaid distributable profit, a sum of Rs. 1.54 crores, which is not taxable, has been transferred to general reserve No. 2, which is made up of allocations from untaxed profits.

11. The entire dividends on ordinary and preference shares are being paid out of the general reserve No. 1 which is made up of taxed profits of earlier years.

12. The liability for dividends has risen by Rs. 1.11 crore, as a result of the new issue of capital and the dividend tax of 30 per cent., which the Company has borne. The Company is, however, entitled to a tax relief of 10 per cent. in respect of dividends payable out of past taxed profits. The abolition of wealth tax and excess dividend tax also has brought about some saving in tax liability. Consequent on these changes in taxation, the net additional burden amounts to only about Rs. 62 lakhs.

13. Under the formula for calculating the profit for the purpose of managing agency commission, the Company has incurred a loss, as in the previous year, after deducting interest charges and depreciation at income-tax rates, as required under the Companies Act. Consequently, no managing agency commission is payable for the second year in succession.

In recommending a dividend of Rs. 6.80 per share tax-free on the old ordinary shares and a *pro-rata* dividend at the same rate on the new shares for three months, the Directors have fulfilled the assurance given by the Chairman last year that the dividend for 1959-60 would be tax-free and have also carried out in full the assurance given in 1956 of maintaining a return of Rs. 10.50 on the old ordinary shares, while providing a fair return on the new ordinary shares also.

The following comparative table provides at a glance an idea of the Company's progress since 1956-57:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sale proceeds (less rebate)	73,46.54	53,45.01	45,40.49	41,78.75
Other income	2,81.24	2,66.93	2,58.77	2,54.95
Raw materials consumed	14,13.99	11,01.62	9,89.22	32,27.05
Other expenses	48,16.40	36,68.25	28,23.89	
Gross profit	13,97.38	8,42.07	9,86.15	11,76.65
Managing Agents' commission			33.07	31.77
Provision for—				
Depreciation	8,46.72	5,53.44	3,90.53	2,47.43
Taxation		17.00	90.00	2,71.56
Net profit	5,50.66	2,71.63	4,71.96	6,25.89
Recovery of income-tax on preference dividends	17.81	17.81	17.81	14.84
Transfer from reserves	3,76.47	2,27.08	2,23.43	8.60
Transfer to reserves	5,68.32	2,84.00	2,79.00	4,40.18
Provision for bad and doubtful reserve	0.15	1.47	0.17	8.49
Dividends—				
Preference	63.47	56.54	56.54	56.54
Ordinary (old)	2,98.37	1,22.16	1,06.91	1,22.07
Rate per share of Rs. 75	(9.72)‡	(6.80)	(8.25)	(9.50)
Ordinary (new)	14.62†	86.57*	90.09*	32.03*
Rate per share	(2.43)‡	(6.80)	(7.56)	(2.54)
Carry forward	8.47	8.47	4.50	4.15
Ratio of net profit to sales	7.73%	5.39%	11.37%	13.66%
Ratio of net profit to capital employed	3.97%	2.05%	4.47%	8.44%
	(In metric tons)			
Production of—				
Pig iron	1,591,000	1,149,000	1,109,000	1,169,000
Steel ingots	1,555,000	1,166,000	1,122,000	1,088,000
Saleable steel	1,237,000	899,000	790,000	812,000

* Includes interest at 4 per cent. per annum paid out of capital
† Proportionate dividend for three months on the new ordinary shares from 1st January 1960.
‡ Subject to deduction of tax.

An outstanding feature disclosed by the aforesaid table is that, despite all the modernisation and expansion of the Company's steel works involving heavy capital expenditure, its gross profit is up by only a little over Rs. 2 crores, as compared with that for 1956-57, while the net profit, which is what matters from the point of view of shareholders, is actually lower. This shrinkage in the Company's profit-margin reflects partly the rise in cost of production, unaccompanied by a corresponding rise in the ex-mill prices of its products, and partly the failure of the expansion programme to yield the full rate of expected production.

Output Short of Capacity

Thus, notwithstanding the increase during the year under review, the Company's output of saleable steel was still 20 per cent. short of the planned maximum capacity of the expanded plant. This is attributed by the Company's management largely to "difficulties relating mainly to the deterioration in the quality of coal and iron ore, to delays and irregularities in the transportation of raw materials to Jamshedpur over a heavily strained railway system, as well as to the need for certain modifications and additions to the ore crushing and screening plant and to steel melting shop No. 3." The Chairman, however, has given an assurance in his statement to the shareholders that there is "no cause for either worry or despondency," for two reasons. First, in spite of all the difficulties, the production has been stabilised at about 80 per cent. of full capacity. "The continuous operation of a steel plant at its maximum capacity," he adds, "depends on such perfect balance and co-ordination between diverse elements of production, transport, labour and management, covering the operation of so many separate departments and units of plant that it is rarely achieved on a year-round basis. In fact, in most countries an average rate of production of 80 per cent. would be considered quite good." Secondly, the difficulties which are to be overcome are quite clear and the remedies well understood.

Long-range Plan

The immediate short-term programme, which has been initiated and is expected to be completed in a year or so, will, apart from some additions to mining equipment and to the old washing plant at Noamundi, consist mainly in the provision of wet screening at the ore crushing and screening plant at Jamshedpur. Outlining the long-range plan and the cost of the two plans, Mr. Tata says:

"The long-range plan, which will take about four years to complete, will comprise two main projects. One to be undertaken at the mine will consist of a detailed geological survey of our main mines, large-scale washing tests of ore and, based on such survey and tests, the possible construction of ore beneficiation plants at Noamundi and Joda. The other will provide at Jamshedpur complete facilities for unloading, stacking and blending ores and other raw materials received from the mines.

"The cost of the immediate programme will be something under a crore, while the expenditure to be incurred on the long-range plan will depend to a large extent on the survey and tests mentioned above. Whatever the ultimate figure, there is no doubt that it will yield a worthwhile return by way of higher production and lower costs.

"In order to increase the output of steel melting shop No. 3 it has been decided, in line with the latest and growing practice in other countries, to use oxygen on a large scale in the open hearth furnaces to reduce the time taken from one furnace charge to the next. This will require changing the present silica brick roofs of the furnaces to basic roofs and the installation of a large tonnage oxygen plant. These modifications and additions to S.M.S. No. 3 are expected to be completed within two years."

Mr. Tata is confident that the various measures outlined above will, when completed, enable the works to achieve, and possibly exceed the full target output of two million tons of ingots and 1.5 million tons of saleable steel.

It will be observed from the foregoing account that, in effect, the cost of T.M.P. will be very much higher than originally anticipated. But Mr. Tata feels it worthwhile to spend this additional sum. The Company has already spent Rs. 106 crores on the T.M.P. and even assuming that the ultimate cost (including that of proposed modifications and additions outlined by Mr. Tata) comes to Rs. 110 crores, it will still amount, according to the Chairman, to only Rs. 1,100 per ton of ingot capacity. If, on the contrary, the Company had decided to go in for an entirely new integrated steel plant of the same capacity, the cost per ton would have been Rs. 1,800 or over 65 per cent. more. The amount spent so far, namely, Rs. 106 crores, represents an increase of Rs. 11 crores over the cost submitted to and approved by the World Bank. Even on the basis of the ultimate cost of Rs. 110 crores, the excess expenditure would work out to Rs. 15 crores, of which Rs. 6 crores represent increase in import duties on plant and equipment, manufacturers' escalations and increases in the initial provisioning of spare parts. Excluding these items, the excess of expenditure over estimates comes to only about 10 per cent. This, according to Mr. Tata, is, by any standard, "a low figure for a project of this magnitude and complexity."

In assessing the outlook for the Company, one must, however, take note of the increased cost, which will be of the order of Rs. 28 lakhs per annum, of labour as a result of the settlement reached in March last between the unions and the Company.

Balance-sheet Analysed

The Company has made a capital expenditure of Rs. 17.35 crores during the year under review, bringing the total up to the end of the year to Rs. 177.92 crores, of which a sum of Rs. 54.97 crores has been written off, leaving the net cost of the block account at Rs. 122.95 crores. The investments show an increase of Rs. 2.90 crores, reflecting mainly the additional investment in the Indian Tube Company (1953) Ltd. to the tune of Rs. 1.02 crores and the acquisition of a 54 per cent. interest in the Belpahar Refractories Ltd., a new company formed for the manufacture of refractories in collaboration with a German firm. The other current assets aggregate Rs. 11.35 crores, having increased from Rs. 9.93 crores at the end of 1958-59. The total assets thus amount to Rs. 170.17 crores. On the liabilities side, borrowings from banks and others amount to Rs. 67.08 crores, representing a decline of Rs. 6.70 crores over the year; special advance from the Government is unchanged at Rs. 10 crores; and other current liabilities aggregate Rs. 27.03 crores (as against Rs. 31.35 crores), bringing the total liabilities to Rs. 104.11 crores. The net worth of the Company (that is excess of assets over liabilities) is thus Rs. 66.06 crores and this is represented by a paid-up capital of Rs. 33.97 crores and reserves and surplus of Rs. 27.09 crores. The ratio of share capital to gross block as on 31st March 1960 was 1:4.6, as against 1:5.6 a year before and that of share capital to net block was 1:3.2, as against 1:4.1. The capital employed (other than the special advance from the Government) is more or less equally shared by the shareholders' equity and borrowings, while the corresponding shares a year ago were 44 per cent. and 56 per cent., respectively, and at the end of 1955-56, they were 93 per cent. and 7 per cent., respectively.

At the current market value of Rs. 157 *cum-div.*, the yield on the Rs. 75 fully paid-up ordinary shares of the Company is of the order of 4.5 per cent. per annum, free of tax.

MYSORE PAPER'S PROFIT BETTER

EXPANSION SCHEME ON HAND

AN increase of 9 per cent. in production, despite considerable difficulties in obtaining continued supplies of coal and chemicals, has been responsible for the improvement in the earnings of the Mysore Paper Mills Ltd. (Chairman and Managing Director: Mr. M. D. Shivananjappa, Bangalore) for the year ended 31st March 1960. The gross profit, for instance, has recorded a rise of Rs. 6.43 lakhs to a high of Rs. 23.71 lakhs, thus more than making good the successive declines in the previous two years, when the profit had dwindled from Rs. 20.26 lakhs to Rs. 17.28 lakhs. The profit would have been far more encouraging but for the reduction in prices of paper with effect from 1st January 1960. The full effect of this cut will be felt during the current year. The provision for depreciation has been reduced from Rs. 8.94 lakhs to Rs. 7.63 lakhs. After a break of a few years, the Company's profit for the year under review has become liable for taxation and, accordingly, a sum of Rs. 8 lakhs has been set aside for this purpose. Though there was no tax liability in respect of the previous years, the Directors had been making small provisions for future tax liability. In respect of 1958-59, for instance, they had set apart Rs. 70,000 for income-tax, besides providing Rs. 30,000 for wealth-tax liability.

Consequent on the large provision for taxation, the net profit shows only a fractional improvement from Rs. 7.34 lakhs in 1958-59 to Rs. 8.07 lakhs. Out of the net profit, a sum of Rs. 3.64 lakhs has been ploughed back. The rate of gross dividend is proposed to be raised from 12.5 per cent. (inclusive of a cash bonus of 2.5 per cent.) for 1958-59 to 15 per cent. for the year under review, but, as the latter is subject to deduction of tax, the net distribution at 10.5 per cent., represents a cut of 2 per cent. from the previous year's dividend. It is, however, a fraction higher than that paid for 1957-58, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1960	1959	1958	1957
Sales	1,41.31	1,25.35	1,08.53	1,06.35
Other income	1.06	1.76	1.85	1.50
Closing stocks	1.96	4.01	3.13	3.56
Raw materials and stores consumed	60.44	56.05	46.03	44.05
Other expenses	59.12	53.79	44.54	43.53
Gross profit	23.71	17.28	19.81	20.26
Provision for—				
Depreciation	7.63	8.94	10.00	10.50
Taxation	8.00	1.00	1.30	0.25
Net profit	8.07	7.34	8.51	9.51
To reserves	3.64	3.24	5.42	5.00
,, gratuity fund	0.60	0.80	0.80	2.00
Dividend	3.75	3.12	2.50	2.50
	(D. 15%)*	(D. 10% + B. 2½%)	(D. 10%)	(D. 10%)
Carry forward	0.52	0.44	0.27	0.48

* Subject to deduction of tax.

It will be noted from the table that, notwithstanding a sizable increase in sales over the past three years, the ratio of gross profit to sales has dwindled from 19 per cent. in 1956-57 to 16.8 per cent. in 1959-60, consequent on the rise of over 37 per cent. in the cost of raw materials and stores consumed and of nearly 36 per cent. in other expenses.

The Company completed during the year under review the scheme of renovation, replacements and improvements, as a result of which the first paper machine has been reconditioned and many of the worn-out parts have been replaced, thus helping secure increased production. Orders have been placed for a recausticising" unit for improving the working of the soda recovery plant and the bamboo pulp plant. The work in this connection is expected to be completed at an early date.

The Company has a major expansion scheme on hand, which seeks to raise the production capacity from the present level of 8,000 tons to 18,000 tons. The scheme has been generally approved by the Government of India and the Directors are confident of securing the necessary licences for the purpose at an early date. Meanwhile, negotiations are in progress with the foreign suppliers of plant and machinery for procuring suitable equipments and with credit institutions for securing the necessary finance for both foreign purchases and local expenditure. The scheme will be financed partly by borrowings and partly by the issue of fresh capital. In order to enable the latter, the Company proposes to raise its authorised capital from Rs. 25 lakhs to Rs. 1.50 crores. The terms of the issue are yet to be finalised and are subject to the approval of the Controller of Capital Issues.

The present paid-up capital of the Company is Rs. 25 lakhs and this is supplemented by reserves and surplus aggregating Rs. 37.95 lakhs. The Company repaid, during the year, Rs. 16 lakhs to the Industrial Finance Corporation of India, thus reducing its borrowings from the latter to Rs. 4 lakhs. The total current liabilities as at the end of the year under review are Rs. 48.78 lakhs and these are more than adequately covered by the current assets at Rs. 61.70 lakhs. The gross block has been written down from Rs. 154.04 lakhs to Rs. 50.08 lakhs.

In view of the good outlook for the Company and its highly satisfactory financial position, it is not surprising that its Rs. 10 fully paid-up ordinary shares command a high premium at the current market value of Rs. 30.18 *cum-div.* At this rate, the yield on them is 3.6 per cent. per annum, free of tax.

STAN-VAC REFINING COMPANY

The working of the Standard-Vacuum Refining Company of India Ltd. (Managing Director: Mr. J. C. Howard, Bombay) during the year ended 31st December 1959 has resulted in a higher profit, despite a decline in the volume of crude oil processed, as well as in the sale of products, consequent on the fact that the refinery was shut down twice during the year, once for normal inspection and the second time because the new equipment installed in the combination unit was not up to the Company's own quality specifications. The average quantity of oil processed per day was 33,812 barrels, as compared with 33,890 barrels per day in 1958. Sales show a decline from 409.27 million imperial gallons to 397.54 million gallons, thus offsetting to a large extent the increase in the previous year from 384.77 million gallons (in 1957). While sales in India have recorded an increase from 311.80 million gallons to 351.74 million gallons, exports had necessarily to be curtailed from 97.47 million gallons to 45.81 million gallons.

The gross profit has gone up from Rs. 292.64 lakhs in 1958 to Rs. 346.84 lakhs. After raising the provision for depreciation from Rs. 76.39 lakhs to Rs. 87.12 lakhs and that for taxation from Rs. 81.15 lakhs to Rs. 100.84 lakhs, the net profit is still higher at Rs. 158.88 lakhs, as compared with Rs. 135.10 lakhs for 1958. Out of this net profit, the Directors have set aside Rs. 24.91 lakhs for statutory reserve for development rebate and self-insurance reserves (the corresponding amount set aside last year was Rs. 24.75 lakhs), leaving a profit available for disposal of Rs. 133.44 lakhs, which compares favourably with Rs. 109.82 lakhs for the previous year. Since the closing of the accounts for 1959 the Central excise authorities have made some unexpected demands amounting to Rs. 97.41 lakhs, which, if provided for in the accounts, would have resulted in a reduction in the net profit after allocating to the statutory development rebate reserve and self-insurance reserve, to Rs. 79.86 lakhs. "These demands," the Directors point out, "arise from a difference of opinion in the interpretation of the agreements between the Company and the Government. Discussions on this are still in progress." Meanwhile, the Directors have placed the aforesaid net distributable profit to the general reserve No. 2, representing the taxable profits, and have not recommended any dividend on the ordinary shares. As in the previous year, the dividend on the preference shares is being paid out of the general reserve No. 2.

The net distributable profit (of Rs. 133.44 lakhs) represents a return of 4.44 per cent. on gross income and of 6.58 per cent. on the average capital employed, as compared with 3.90 per cent. and 5.69 per cent., respectively, for 1958. However, the excise demands referred to earlier would, if conceded, reduce the profit to 2.66 per cent. of the gross income and 3.99 per cent. on the average capital employed.

All phases of the refinery expansion programme have been completed during the year under review, resulting in a capital expenditure of Rs. 1.02 crores, and the Company has started supplying asphalt and other additional products required in India, thus resulting in additional foreign exchange savings to India. It may be interesting to note here that the Company's exports during 1959 resulted in a foreign exchange earning for the country of Rs. 2.49 crores, bringing the total of such earnings (including export earnings) since the refinery went into operation in 1954 to Rs. 7.92 crores.

The Company's paid-up capital of Rs. 3 crores is supplemented by reserves and surplus aggregating Rs. 8.26 crores. Besides the debenture loan of Rs. 4 crores, the Company's liabilities amount to Rs. 6.10 crores. The gross block of the value of Rs. 15.95 crores has been written down to Rs. 11.80 crores. The current assets (excluding debenture issue expenses amounting to Rs. 4.74 lakhs) at Rs. 9.56 crores, provide more than adequate cover for the current liabilities other than debenture loan.

ESCORTS LTD.

Escorts Limited, which has its head office in Delhi, will shortly announce public issue of about Rs. 41 lakhs, consisting of Rs. 17 lakhs in equity shares of Rs. 10 each at 50 per cent. premium and Rs. 24 lakhs in redeemable cumulative preference shares of Rs. 100 each, bearing a guaranteed 6.3 per cent. tax-free dividend. The preference stock shareholder will be provided with a certificate of payment of 2.7 per cent. of income-tax paid by the Company on behalf of the shareholder, being deduction at source. The present paid-up capital of Escorts is Rs. 47 lakhs and, after the new issue is fully subscribed, the paid-up capital of the Company will be Rs. 88 lakhs. The Company now has Rs. 16 lakhs in general reserve and share premium account.

For over a decade, Escorts have been functioning as representatives of world-renowned firms like M.A.N. and A.E.G. of West Germany, Massey-Fergusons of U.K. and Westinghouse Electric International Co. of United States. Since Escorts re-established themselves in Delhi, after the partition of India, the Company has arranged sales, erection, service of heavy and light machinery including agricultural equipment of over Rs. 80 crores. Besides representing foreign firms, Escorts have also exclusive representations for India of Koel Diesel Engines over 100 h.p. made by Kirloskars under M.A.N. licence, and cranes of all types manufactured by Hindustan Motors Ltd., also under M.A.N. licence.

During the last three years, Escorts and its subsidiaries have successfully established their own manufacturing plants for pistons, piston rings, sleeves and razor blades. Piston rings and pistons are being manufactured under the technical and financial collaboration agreement with Goetze-Werke. Burshied (West Germany) and Mahle Komm-Gas. Piston rings, sleeves and razor blades are being manufactured by the substantially owned subsidiary companies under the name of Messrs. Goetze (India) Private Ltd., and Sharpedge Private Ltd. respectively. It is said that the automobile ancillary equipment manufactured by Escorts has been well received in the market and has been adopted by the original equipment manufacturers of automobiles and engines. All the teething troubles in the manufacture have been overcome and all these factories are well on the way to earning profits.

The proposed new issue of the Company is for financing establishing of three more factories, that is, X-ray equipment manufacture under the technical collaboration of Westinghouse Electric International Company of U.S.A., railway shock absorbers under the technical collaboration of Rheinmettall G.m.b.H., West Germany and heating elements for electrical appliances under the technical collaboration of Messrs. Eltra K.G., West Germany. Industrial licences have been obtained, land has been purchased, building plans are in progress, import licences for capital equipment are under issue for all these projects.

Practically the entire preference capital issue of Rs. 24 lakhs has been underwritten by the Life Insurance Corporation of India and the National and Grindlays Bank Ltd., New India Assurance Company Ltd., and National Employers' Mutual General Insurance Association Ltd., and the foreign collaborators like M.A.N., Westinghouse and Rheinmettall, G.m.b.H., etc. The Company has maintained attractive dividends on its equity capital for the past several years: the last dividend was 26 per cent., less tax, for 1959.

ASSAM HARD-BOARDS

A new company, Assam Hard-Boards Limited, has been formed for setting up a hardboard plant in Assam. An industrial licence for setting up such a plant has already been obtained by the promoters of the Company. Under the proposed scheme, the Company will undertake manufacture of multipurpose hardboards, with a wide range of applications, based on the last process, with the help of most modern machinery and equipment to be supplied by U.S. collaborators for which final negotiations are in progress.

One of the promoters of the Company, Mr. L. R. Periwal, undertook a world tour recently, in order to have a firsthand knowledge of the latest process of manufacturing of hardboards. One of the special advantages of the proposed plant will be its location in Assam, where abundant supply of raw materials as also cheap power and steam in the form of natural gas will be available. It is said that the cost of production of this unit will be much less than that of the other unit now operating in India. The capital outlay on the project is estimated at Rs. 1 crore.

REVENUE COLLECTIONS UP TO JULY 1960

The revenue realised from important dutiable items in the first four months of the fiscal year 1960-61 amounted to Rs. 230.14 crores. Of this, Rs. 57.16 crores were collected during July, 1960. The corresponding figures for the first four months of the fiscal year 1959-60 were Rs. 199.84 crores and Rs. 51.40 crores for July, 1959. Details under various heads are as follows:

(In crores of rupees)

	July		April-July	
	1960	1959	1960-61	1959-60
1. Customs	12.63	12.52	49.36	47.50
2. Union Excise Duties (excluding Coal cess and Salt cess)	33.20	29.51	130.43	111.21
3. Corporation Tax	3.63	1.39	19.12	8.19
4. Income Tax	7.09	6.16	24.92	25.95

SYNOPSES OF COMPANY REPORTS

India Cements Ltd.

THE directors of the above Company (Managing Agents: Messrs. Essen Private Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March 1960.

After meeting all the expenses of operation and after providing for bonus and depreciation, the Company has made a profit of Rs. 47,99,859 (Rs. 29,49,132). To this has to be added the amount brought forward from the previous year of Rs. 70,205 (Rs. 71,092); excess provision for liabilities in the previous year now written back Rs. 5,065 (*nil*) and transfer from dividend equalisation reserve of Rs. 5,00,000 (*nil*), making a total of Rs. 53,75,129 (Rs. 30,20,224). Out of the above amount, appropriations have been made as under:

To donations paid Rs. 69,280 (Rs. 4,38,250), to reserve for development rebate Rs. 33,37,100 (Rs. 21,000) and to investment reserve Rs. 50,000 (*nil*) leaving an available balance of Rs. 19,18,749 (Rs. 14,60,974 after providing Rs. 11,00,000 for taxes). The directors now recommend payment of dividends for the year ended 31st March 1960 as follows:—At 7½ (7½ per cent.) per cent. per annum, less tax, on preference shares, absorbing Rs. 2,27,977 (Rs. 2,23,874) and at 11 (9 per cent. free of tax) per cent. per annum, less tax, on equity shares, absorbing Rs. 16,11,276 (Rs. 11,66,895) leaving a balance of Rs. 79,496 (Rs. 70,205) to be carried forward to next year's account.

During the year under review there was no power cut with the result the factory worked to its rated capacity. The erection of the third unit. 750 tons plant, in Talaiyuthu was completed according to schedule and it was put into commission in the third week of August last year. The sales have been very satisfactory during the year, exports to Ceylon being 28,413 tons. The arrangement with the Cement Marketing Company of India Private Limited, for the sale of the Company's cement is working satisfactorily.

The Company's application to the Industrial Finance Corporation of India, for a loan of Rs. 130 lakhs and guarantee of Rs. 35 lakhs for plant and machinery to be imported from abroad was sanctioned in October 1959. Only a part of the loan, i.e., Rs. 50 lakhs has been so far availed of and the total outstanding to the Industrial Finance Corporation of India now stands at Rs. 85 lakhs. The directors have made arrangements to repay the entire loan outstanding to the Industrial Finance Corporation.

Regarding Vizag Scheme the directors regret to state that the matter of grant of mining lease is still pending with the Andhra Pradesh Government.

As decided at the Extraordinary General Meeting of the Company held on 31st July 1959, an application to the Government of India was made for the appointment and continuation of Messrs. Essen Private Limited as managing agents of the Company for a further period of five years commencing from 15th August 1960. The consent of the Government of India to the same has been received.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Mysore Stoneware Pipes and Potteries Ltd.

The directors of the above Company (Managing Agents: The Mysore Industrial Development Co., Bangalore) submit the audited accounts of the Company for the year ended 31st March 1960.

The surplus available for the year is Rs. 1,10,054 (Rs. 1,51,900), after providing Rs. 51,507 (Rs. 62,864) towards depreciation, development rebate according to income-tax rates and Rs. 1,05,833 (Rs. 1,66,000) towards taxation. Including a sum of Rs. 7,937 (Rs. 6,037) brought forward from last year, the total sum available for distribution is Rs. 1,17,991 (Rs. 1,57,937). The directors recommend the following appropriation:

To declare a dividend of 14-2/7 (10 per cent. tax-free) per cent. or 1-3/7 (Re. 1.00) rupee per share (taxable) on 60,000 shares of Rs. 10 each, absorbing Rs. 85,715 (Rs. 60,000), to transfer to reserves for replacement and rehabilitation of plant and machinery Rs. 10,000 (Rs. 75,000) and to transfer to the gratuity fund Rs. 15,000 (Rs. 15,000), leaving a balance to be carried forward to next year of Rs. 7,276 (Rs. 7,937).

The provision of Rs. 85,715 for payment of dividend will enable the shareholders to get 10 (10) per cent. net dividend and the balance amount will be paid as tax.

The sales were satisfactory. There were difficulties in importing spares, supply of coal of quality and in time and differences with the labour. But for these reasons, production would not have fallen from the normal level. An agreement was reached with labour during the year settling all outstanding issues, including gratuity. On account of these and other payments, the profit is reduced considerably. Therefore, no additions to the general reserve and dividend equalisation fund have been made this year.

The demand for the Company's products, both pipes and firebricks continues to be keen. Old Pipe Kiln No. 5 standing for the last 20 years was demolished towards the end of the year and was rebuilt and put into service by the end of June, 1960.

The expansion of the factory for increasing the output of S.W. pipes and firebricks are progressing satisfactorily. The entire machinery has been imported from U.K. and U.S.A., and except one unit, all of them are installed. The remaining unit is also under installation. The expansion would have been over by now but for the delay in securing steel.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Gross block	13,40,693

Western India Tanneries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Pratap Pandit & Co., Bombay) present the audited accounts of the Company for the year ended 31st December 1959.

The gross profit for the year amounts to Rs. 12,19,699 (Rs. 11,44,163). After deducting agents' commission, staff salary and general charges amounting to Rs. 5,71,697 (Rs. 5,24,729), the profit amounts to Rs. 6,48,002 (Rs. 6,19,434). From this profit is deducted gratuity amounting to Rs. 3,912 (Rs. 5,469), depreciation written off for the year 1959 Rs. 36,975 (Rs. 43,786), bonus to the Company's staff and workmen for 1959 Rs. 66,997 (Rs. 64,948) and development rebate reserve of Rs. 3,500 (Rs. 16,700), leaving a balance of Rs. 5,36,618 (Rs. 4,88,531). To this is added the balance brought forward from last year of Rs. 7,659 (Rs. 9,128) making a total of Rs. 5,44,277 (Rs. 4,97,659). This amount the directors propose to dispose of as follows: To provision for taxation Rs. 2,49,566 (Rs. 2,90,000), to payment of a dividend at Re. 1.20 and Rs. 2.40 per share of Rs. 5 and Rs. 10 paid up respectively subject to taxation absorbing Rs. 1,68,000 (Rs. 1,40,000), to transfer to general reserve Rs. 1,14,734 (Rs. 50,000), to general reserve for gratuity Rs. 5,000 (Rs. 10,000), to reserve for dividend equalisation fund Rs. 1,360 (*nil*) and to carry forward to next year's account Rs. 5,617 (Rs. 7,659).

The actual number of days the tannery worked during the year ended 31st December 1959 was 306 (306). The directors have paid a bonus at the rate of three months' basic salary to the members of the staff and three months' basic wages to the workmen of the Company out of the profits for the year ending 31st December 1959.

The Board has been building up the general reserve to meet the large outlay which may be necessary when the Municipal Corporation of Bombay enforces removal of tanneries and tanning establishments from Dharavi to Deonar as a part of its scheme to shift the slaughter house from Bandra to Deonar.

The Central Government has approved of the re-appointment of Messrs. Pratap Pandit & Co., as the Company's managing agents for a period of five years with effect from the 16th August 1960.

Accounts in brief are as under:—

Straw Products Ltd.

The directors of the above Company (Managing Agents: Messrs. J. K. Agents Private Ltd., Bhopal) present the audited accounts of the Company for the year ended 31st December 1959.

The working result of the Company after meeting all the expenses and charges and taking into account bonus to workers and staff, remuneration to directors and commission to the managing agents shows a profit of Rs. 10,80,569 (Rs. 11,16,274) which together with the balance brought forward from the previous year of Rs. 4,919 (Rs. 3,212) and development rebate written back of Rs. 6,85,659 (*nil*) comes to Rs. 17,71,147 (Rs. 12,19,486 including Rs. 1,00,000 transferred from general reserve). After providing for depreciation Rs. 4,48,306 (Rs. 7,86,588) and for development rebate reserve Rs. 44,410 (Rs. 50,479), there is left a balance of Rs. 12,78,431 (Rs. 3,82,419). The directors recommend this amount to be appropriated as under: To provision for taxation Rs. 3,00,000 (Rs. 1,90,000), to payment of a dividend at 15 (12½ per cent. free of tax) per cent. subject to income-tax, on 1,50,000 ordinary shares of Rs. 10 each, fully paid up, absorbing Rs. 2,25,000 (Rs. 1,87,500) and to transfer to general reserve (*nil*) leaving a balance to be carried forward to next year of Rs. 53,431 (Rs. 4,919).

During the year both the plants have worked satisfactorily, and the Company has manufactured different qualities and varieties of board commanding best prices and best competitive value. The Company's gross sales have increased to Rs. 90,70,000 from Rs. 65,46,000 of last year, but due to further increase in the excise duty which affected nine months' production, the Company had to pay Rs. 15,07,000 as against Rs. 9,88,000 last year for excise duty and therefore the net retention of profit did not increase in proportion to higher sales.

The relation between the management and the labour has continued to be cordial.

Paper Mill.—During the year under review, to finance the paper mill of the Company—J. K. Paper Mills—to be established at Jaykaypuram, near Rayagada, in the State of Orissa, the Company issued fresh share capital of Rs. 2 crores. Industrial Finance Corporation of India and The Industrial Credit and Investment Corporation of India Limited had underwritten new capital to the extent of Rs. 50 lakhs each and the subscription of the remaining capital was guaranteed by J. K. Agents Private Limited, the managing agents of the Company and by Sir Padampat Singhania, Kt., Shri Lakshmipat Singhania, and Shri Harishankar Singhania, three of the directors of the Company. The new issue of capital was fully subscribed.

As already reported last year, order for plant and machinery for the paper mills has been placed with Messrs. J. M. Voith, G.m.b.H., West Germany, who have arranged for supply of various units of the paper mill from reputed manufacturers such as Siemens for electrical machinery, Steinmuller for boilers and recovery furnace, Roca for vacuum evaporating plant and Dor Oliver for recoausticising plant. Necessary guarantee to the foreign suppliers for Rs. 3,53,50,000 for deferred payments of the plant and machinery together with interest payable thereon has been issued by the State Bank of India, on the 14th April, 1960. This plant as it stands is expected to be a most modern and up-to-date plant by incorporation of a number of devices which will improve the quality. Land required for the paper mills has been acquired by the Government of Orissa and handed over to the Company. The Company has entered into an agreement with the Government of Orissa for supply of necessary electrical power from the Machkund Grid. The Government of Orissa has already allotted forests to the Company on long leases to ensure continuous supply of raw materials to the mills. The directors are confident that under normal circumstances the paper mill will go into production before the end of 1962.

*Reserves include a non-distributable amount of Rs. 60,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1955.

Jaipur Metals and Electricals Ltd.

The directors of the above Company (Managing Agents: Messrs. Poonamchand & Brothers Private Ltd., Jaipur) submit the audited accounts of the Company for the year ended 31st December 1959.

The profits for the year amount to Rs. 12,03,142 (Rs. 9,76,663) to which is added the amount brought forward from last year's account of Rs. 10,348 (Rs. 3,296), excess provision for sales tax in previous years Rs. 24,566 (*nil*) and excess provision for wealth tax in previous year Rs. 113 (Rs. 12,701 income-tax refund) making a total of Rs. 12,38,169 (Rs. 9,92,660). Out of this amount, the following appropriations have been made: To provision for depreciation for the year Rs. 3,67,068 (Rs. 2,46,651), to development rebate reserve Rs. 99,369 (Rs. 1,75,276), to managing agents' remuneration Rs. 89,782 (Rs. 81,291), to provision for taxation Rs. 3,60,000 (Rs. 3,20,000), to gratuity reserve Rs. 20,000 (Rs. 25,000) and to general reserve Rs. 50,000 (*nil*), leaving a balance of Rs. 2,51,950 (Rs. 1,11,166 after providing Rs. 4,402 for wealth tax in respect of the years 1956 and 1957 and Rs. 28,874 for additional bonus for the year 1957). From this amount the directors recommend the payment of dividends subject to deduction of tax as follows: 6 per cent. less tax on cumulative preference shares, absorbing Rs. 38,400 (Rs. 22,880), 8.5 (6 per cent, free of tax) per cent. on ordinary shares, absorbing Rs. 1,66,252 (Rs. 67,938) and 19.9 (*nil*) per cent. on deferred shares, absorbing Rs. 39,800 (*nil*) leaving a balance to be carried to next year's account of Rs. 7,498 (Rs. 10,348).

Operations.—The working of the Metres Division during the year under review has shown an all round marked improvement over previous years. The production for the year has been 100,500 Nos. of metres as compared to 87,909 Nos. of metres produced during the previous year. This is the highest ever attained in the Metres Division so far. The Company has now almost reached the target production as licensed by the Government. Efforts are being put in by the Company to obtain Government approval and get a still higher production to meet with the increasing demand for the "Jaipur" House Service Electricity Metres.

46,363 cwts. of material were produced in the Metals Division during the year under review as compared to 44,424 cwts. during the previous year. This aggregated to the total sales turnover of Rs. 1,00,88,042 as compared to Rs. 80,58,775 of the previous year. The rise in the production is more significant as it has been achieved against the continuous adverse supply of raw materials. More efforts are being made to obtain adequate supply of raw materials to achieve continuous increased production.

The directors are pleased to report that the implementation of the scheme for manufacturing Siemens type of metres is progressing satisfactorily. Some items of machinery have been received recently and the major portion of the machinery is expected to be shipped in the later half of 1960. It is hoped that the production of Siemens type of metre will commence during the year 1961. Negotiations were carried on for a further loan of Rs. 15 lakhs from the Industrial Finance Corporation of India to meet the financial requirements of implementing the scheme for the manufacture of Siemens type of metre which has now been sanctioned.

Further research and negotiations were undertaken during the year under review to diversify the production and to utilise maximum capacity of the plant and machinery. Negotiations were also carried on for foreign collaboration for production of special items and it is hoped that these efforts would materialise in near future.

Sutna Stone and Lime Co., Ltd.

The directors of the above Company (Secretary: Mr. S. N. Beri, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1959.

The Company's profit for the year is Rs. 3,82,681 (Rs. 3,78,081). After providing taxation amounting to Rs. 1,72,000 (Rs. 1,80,000) there remains Rs. 2,10,681 (Rs. 1,98,081). To this is to be added the amount of unclaimed dividend forfeited Rs. 480 (*nil*) and the amount brought forward from the previous year of Rs. 30,880 (Rs. 30,734) making a total of Rs. 2,42,041 (Rs. 2,28,815). From this amount the directors have transferred to equalisation of dividend account Rs. 30,000 (*nil*), to development rebate reserve account Rs. 80,000 (Rs. 70,000) and to general reserve account Rs. 480 (Rs 43,263) leaving a real reserve account Rs. 480 (Rs. 1,15,552). Out of this balance of Rs. 1,31,561 (Rs. 1,15,552). Out of this amount the directors recommend payment of a dividend of 20 (17½ per cent. free of tax) per cent. subject to deduction of income-tax, absorbing Rs. 96,768 (Rs. 84,672) leaving a balance to be carried forward of Rs. 34,793 (Rs. 30,880).

The demand for both lime and limestone during the year was satisfactory but the profit in relation to sales had contracted due to stiff competition consequent upon the free sale of cement. The cost of raising limestone and manufacture of lime has also gone up due to periodical rise in the price of coal, stores as also due to increase in the railway freight.

Accounts in brief are as under:—

Nuddea Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The profit for the year before charging depreciation amounts to Rs. 23,69,489 (Rs. 17,27,647). Adding thereto adjustments on account of previous years amount to Rs. 78,055 (Rs. 43,989), there is a total sum of Rs. 24,47,544 (Rs. 17,71,636). From this amount is to be deducted depreciation for the year of Rs. 6,02,170 (Rs. 5,94,794). wealth tax for 1959-60 Rs. 43,881 (Rs. 40,659), reserve for major overhauls of machinery Rs. 73,513 (Rs. 64,596), reserve for doubtful debts Rs. 35,631 (*nil*) and development rebate reserve of Rs. 1,74,473 (Rs. 83,987). This leaves a credit balance of Rs. 15,17,876 (Rs. 9,87,600). With the amount brought forward from the previous year of Rs. 15,981 (Rs. 79,151) there is an available balance of Rs. 15,33,857 (Rs. 10,66,751). The interim dividend on the ordinary shares at Re. 1 per share, absorbed Rs. 1,33,590 (Rs. 1,33,590) leaving a balance of Rs. 14,00,267 (Rs. 9,33,161). The directors propose that this sum be dealt with as follows: By payment of a final dividend of Rs. 3.00 (Rs. 2.00) per share [this together with the interim dividend paid makes a total of Rs. 4.00 (Rs. 3.00) per share or 8 (6) per cent. per annum] for the year ended 31st March 1960, absorbing Rs. 4,00,770 (Rs. 2,67,180) and by transfer to general reserve Rs. 9,50,000 (Rs. 6,50,000) leaving a credit balance of Rs. 49,497 (Rs. 15,981) to be carried forward.

Trading.—The production of the mills continues to be governed by the working time agreement, in so far as it relates to the restriction of output through the compulsory sealing of looms. During the year under review this was mitigated to some extent by the working of purchased current loom hours and allowing for this, the average percentage of the mills total complement of looms sealed was 8.2 per cent. only.

The industry was fortunate in enjoying favourable trading conditions for the greater part of the year. Prices for jute remained at levels which, taken in conjunction with those attainable for finished goods, allowed mills a reasonable profit. At the same time consumers of jute goods through the world received their goods at rates sufficiently attractive to withstand competition from other packaging materials. Overseas and internal demand ran at a high level enabling the industry to adopt a cautious but flexible policy towards the unsealing of silent looms. The mills shared fully in these improved trading conditions.

With the entire productive units now situated in the North Mill, the directors are considering schemes designed to utilise to the best possible advantage the factory area released by this concentration.

Katras Jherriah Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st January 1960.

The accounts show a profit, after charging all expenses, of Rs. 11,35,741 (Rs. 9,81,905). Of this taxation provision requires Rs. 5,52,000 (Rs. 7,15,500 including Rs. 15,500 for wealth tax). *Less*: excess provision for taxation in previous years now written back of Rs. 50.000 (Rs. 27,000) amounting to Rs. 5,02,000 (Rs. 6,88,500) leaving a balance of Rs. 6,33,741 (Rs. 2,93,405). With the balance brought forward from last year of Rs. 1,27,146 (Rs. 1,68,572) and unclaimed dividends forfeited under Article 158 of Rs. 37,816 (*nil*), there is a total amount available for appropriation of Rs. 7,98,703 (Rs. 4,77,477 including a transfer of Rs. 500 from capital reserve and Rs. 15,000 being investment realisation surplus). The directors have transferred to development rebate reserve Rs. 21.945 (Rs. 25,147), to capital reserve Rs. 100 (*nil*) and to general reserve Rs. 1,70,000 (*nil*) leaving a balance of Rs. 6,06,658 (Rs. 4,52,146 after paying Rs. 184 on account of forfeited dividends). An interim dividend of Rs. 3.50 (Rs. 3.00 per share, free of tax) per share, was paid on 14th January 1960, absorbing Rs. 1,75,000 (Rs. 1,50,000). The directors now recommend payment of a final dividend of Rs. 6.00 (Rs. 3.50 per share, free of tax) per share, absorbing Rs. 3,00,000 (Rs. 1,75,000), leaving a balance to be carried forward of Rs. 1,31,658 (Rs. 1,27,146). The dividends for the year 1960 are subject to deduction of tax.

As already advised to members in the Notice dated 2nd February, 1960, the shares in the capital of the Company issued after the 1st February, 1960, do not rank for dividend declared in respect of the Company's financial year ended 31st January, 1960. Accordingly, the above dividend will be payable to holders of ordinary shares Nos. 1 to 50,000.

Raisings for the year were 3,37,071 tons compared with 3,44,864 tons in the previous year. As a result of the improved sandstowing arrangements at Laikdih Deep, the raisings of selected 'A' grade coking coal from this colliery improved over the previous year. The output from Seebpore colliery, however, continued to decline with the progressive depletion of its reserves of coal. Despatches, which included purchased coal, amounted to 3,46,957 tons as against 3,54,154 tons.

On 21st January, 1960, the Board made an offer to the members of The Kalapahari Coal Co., Ltd., to acquire their shares giving them the option of payment in cash at Rs. 27 per share, or the issue of one share in this Company for every share which they hold in The Kalapahari Coal Co., Ltd. The holders of 34,332 shares representing 98 per cent. of the issued share capital of The Kalapahari Coal Co., Ltd., accepted the Company's offer, and action was taken in terms of Section 395 of the Companies Act, 1956, to acquire the remaining 668 shares. As a result of The Kalapahari Coal Co., Ltd., is now a wholly-owned subsidiary of this Company.

The Central Government have approved the reappointment of Andrew Yule & Co., Ltd., as managing agents of the Company for a period of 10 years from 15th August 1960.

LEDO TEA CO., LTD. Annual General Meeting, Calcutta, 1st October 1960. Dividend: *Nil*. Transfer books will remain closed from 19th September to 1st October 1960, both days inclusive.

APOLLO MILLS LTD. Annual General Meeting, Bombay, 1st October 1960. Dividend: *Nil*. Transfer books will remain closed from 22nd September to 1st October 1960, both days inclusive.

BROACH ELECTRIC SUPPLY AND DEVELOPMENT CORPORATION LTD. Annual General Meeting, Bombay, 3rd October 1960. Transfer books remain closed from 12th September to 3rd October 1960, both days inclusive.

POONA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 3rd October 1960. Transfer books remain closed from 12th September to 3rd October 1960, both days inclusive.

TATA IRON AND STEEL CO., LTD. Annual General Meeting, Bombay, 6th October 1960, at 4-30 p.m. (S.T.). Dividend: Rs. 9.72 per share, on ordinary shares (gross) or Rs. 6.80 per share, free of tax, payable on and after 7th October 1960. Transfer books were closed from 20th June to 14th July 1960, both days inclusive.

INDIAN CABLE CO., LTD. Annual General Meeting, Calcutta, 28th October 1960. Dividend: Rs. 2.25 per share, subject to deduction of tax. Transfer books will remain closed from 14th to 28th October 1960, both days inclusive.

DIRECT TAXES ADMINISTRATION

(*Concluded from page 502*)

corresponding sections of the other direct taxes Acts. The schedule should make distinction between cases of deliberate concealment or gross or wilful neglect and others which are not due to fraud, gross or wilful neglect, the levels of penalty for the latter category being much lower than those for the former. The maximum penalty leviable for concealment or deliberate furnishing of inaccurate particulars should continue to be 150 per cent. of the tax sought to be evaded as at present.

Accepted with the modification that minimum and maximum penalties should be prescribed for various types of offences.

The prior approval of the Inspecting Assistant Commissioners for the levy of penalty should be obligatory only in cases of more serious offences, where the quantum of penalties leviable are heavier. Further, the inspecting Assistant Commissioners should be statutorily required to give a hearing to the assessees before according his approval to the levy of penalty in such cases. The law should be amended requiring the completion of the penalty proceedings within one year of the passing of the relevant assessment order or of the appellate order of the Appellate Assistant Commissioner or the Appellate Tribunal or of the revision order of the Commissioner, as the case may be.

Accepted with the following modifications :—

(1) *In cases of concealment where the minimum penalty leviable is in excess of Rs.* 1,000, *the I.A.C. should not only hear the assessee, but also pass the order of penalty.*

(2) *The penalty proceedings should be completed within two years of the completion of the assessment proceedings.*

Provisions of Section 28(4) of the Income-tax Act and the corresponding provisions of the other direct taxes Acts which bar prosecutions in respect of the same facts on which a penalty has been imposed, should be deleted.—*Accepted.*

Abetment of evasion of tax should be made punishable under the tax laws. A provision similar to the one contained in the Income-tax (Amendment) Bill, 1951 should be introduced in all the direct taxes Acts.

Accepted, subject to the modification that for the present it is not necessary to provide for prosecution for this offence.

The existing provisions relating to exemption of the income of charitable trusts under Section 4(3) (i) of the Income Tax Act should be amended as follows :

* * * *

(b) A charitable trust carrying on a business, which is not in the course of carrying out the primary object of the trust itself, should not be entitled to the exemption under Section 4(3)(i) of the Income-tax Act and this should be made clear in the substantive part of the Section itself.

(c) Where a trust deed contains a clause that the funds of the trust should also be utilised for the relations and family members of the donor or that in carrying out the charitable objects of the trust priority should be given to such relations or members, exemption should not be available under Section 4(3)(i) of the Income-tax Act.

* * * *

(e) As regards the other incomes of the trust, they will be exempt if the conditions under Section 4(3)(i) of the Income-tax Act are fulfilled, but if more than 25 per cent. of such income of a trust is set apart for being spent subsequently for charitable purposes, the amount set apart in excess of 25 per cent. should be taxed in the year in which it is so set apart.—*Accepted.*

A provision similar to Section 16(3) of the Income-tax Act should be made so as to cover cases of assets transferred by wife to the husband. A further amendment may also be made to Section 16(3) of the Income-tax Act so as to cover transfers of assets to minor children by the mother.—*Accepted.*

Section 9(2) of the Income-tax Act should be suitably amended so as to provide that in cases where, after transferring the ownership of a residential property to his wife or minor child, without adequate consideration, the transferor continues to reside in it along with the transferee, there is no escapement of proper tax liability.—*Accepted.*

The law should be so amended that even on the assessee's cessation of his business, etc., or retirement from profession or death, income received after such cessation, retirement or death would be taxed.—*Accepted.*

In the case of companies in which the public are not substantially interested, set off of the earlier years' losses against subsequent profits should be allowed only if the shareholders in the year in which the income is earned are substantially the same as those in the years in which the losses were incurred.—*Accepted.*

In view of the deterrent effect it would have on attempts at evasion, the names of all persons in whose cases penalties have been imposed for Rs. 5,000 or more for the concealment of income, wealth, expenditure, etc., should be published by the Commissioners, in the *Gazette*, as well as in the Press, giving details of their names, addresses and amounts of penalties. If the assessee concerned is a company or firm, the names of all the directors of the company or partners of the firm, as the case may be, should be published, unless it has been established that only a particular director or partner was responsible for the evasion. The publication should be made only after the penalty has become final in appeal and reference. The Central Board of Revenue should have discretion to withhold the publication of names in suitable cases, but the number of cases in which such information was withheld, and the reasons therefor, should be given in the annual administration report, but without mentioning the names of such persons.

This recommendation has been implemented with modification by Clause 9 *of the Taxation Laws (Amendment) Bill,* 1960 *introducing Section* 59A *of the Income-tax Act.*

The following measures may be useful in arousing public conscience against tax evasion :—

(i) People should be educated with regard to the real object of the collection of direct taxes through press, radio, and films.

(ii) Steps should be taken to convince the taxpayers that the money collected through taxes is not spent wastefully but put to proper use.

(iii) No official patronage or recognition or awards should be given to persons who have been penalised for concealment or in whose case prosecution proceedings have been taken. Such a person should not be allowed to become a member of any Committee or Commission appointed by Government.

(iv) Tax evaders should be strictly dealt with and brought to book by the Department in future so that the widely-held feeling in the minds of the public that evasion pays and that evaders are treated lightly is removed. Prosecution proceedings should be launched wherever necessary.

(v) The co-operation of the chambers of commerce and other professional bodies such as Bar Associations, Medical Associations, etc., should be enlisted in the matter of wiping out evasion.

(vi) A special drive should be undertaken to rouse public conscience by enlisting the co-operation of leaders in the various walks of life.—*Accepted in principle.*

The existing three Directorates of Inspection should be recognised into the following four Directorates:

(*a*) Directorate of Inspection.

(*b*) Directorate of Investigation and Intelligence.

(*c*) Directorate of Vigilance.

(*d*) Directorate of Training, Statistics, Research and Publications.

Accepted with the modification that there should be only three Directorates, viz.

(1) *Directorate of Inspection.*

(2) *Directorate of Investigation and Intelligence.*

(3) *Directorate of Training, Statistics, Research and Publications.*

An Annual Administration Report should be published by the Department and laid on the table of Parliament.—*Accepted.*

The Class II cadre of the Income-tax Officers should continue.—*Accepted.*

The present sanctioned strength of Inspectors should be increased by 250.—*Accepted.*

No direct recruitment need be made to the cadre of Class II Income-tax Officers.—*Accepted.*

Undue importance, particularly in a taxing department, should not be attached to anonymous and pseudonymous complaints and nothing should be done to disturb the morale of the officers in the discharge of their duties.—*Accepted in principle.*

If a tax expert is finally convicted for evasion of tax as a result of prosecution under the provisions of the direct taxes Acts, he should be straightaway disqualified from the tax practice and his name removed from the register. Similarly, the conviction of a tax expert under the direct taxes Acts on charges of abetting or aiding his clients in tax evasion, should result in automatic disqualification from tax practice. Any tax expert who is penalised under the direct taxes Acts for concealment of income, wealth estate, gift or expenditure should be disqualified from representation after the penalty proceedings have become final. However, the usual disciplinary procedure should be followed in such cases of penalty and disqualification should not be automatic.

Accepted with the modification that the disqualification may be for such period as may be determined by the Commissioner of Income-tax.

All complaints of inconvenience in the tax offices should be quickly remedied. Adequate and proper amenities, such as waiting rooms, furniture, reading material, cool drinking water, canteens, public telephones, sanitary arrangements, parking space, etc., for the assessees and their representatives should be provided in all tax offices. —*Accepted.*

Greater attention should be paid to organised departmental publicity, and more tax literature in the form of pamphlets, booklets, etc., dealing with the various branches of taxation should be issued. Detailed explanatory notes about the various forms of returns should also be made freely available to the public.—*Accepted.*

The modern media of communication with the public such as radio, motion pictures and other visual aids, should be regarded as essential in the programme of developing public relations.—*Accepted.*

In places other than those where public relations officers function, enquiry counters, should be responsible for assisting the assessees in filling up various return forms, explaining their difficulties and doubts, answering their various queries and guiding them in all possible ways.—*Accepted.*

The public relations officers can prove very useful and helpful in promoting better relations between the department and the public. There should be a whole-time public relations officer in the charge of each Commissioner of Income-tax.—*Accepted.*

A Direct Taxes Central Advisory Committee should be set up for the Headquarters organisation under the Chairmanship of the Union Minister for Revenue and Civil Expenditure. In addition, similar Committees should be constituted separately for the various regional organisations under the chairmanship of the Commissioner concerned. These Committees should fully represent the important interests and viewpoints, and consist of Members of Parliament, representatives of Central and/or State Governments, commerce, industry and other organisations, and professional tax experts. They should advise the Administration on measures for developing and encouraging mutual understanding and co-operation between taxpayers and the Department.

Accepted in principle and a start will be made by constituting a Central Advisory Committee.

II

Recommendations Not Accepted by the Government

1. Basic rates of income-tax should be incorporated in the Income-tax Act.

2. To meet the budgetary requirements, variations may be made in the rates of surcharges through the annual Finance Acts.

3. Such of the existing surcharges as go to the divisible pool should be merged to the basic income-tax rates.

4. In the case of company taxation, the effective rates of tax for the various types of companies should be specified in the Act itself, instead of prescribing the ceiling followed by several rebates.

5. A simpler formula to be specified for allowing rebates to partners of registered firms of income exceeding Rs. 40,000 taxed directly.

Appellate Assistant Commissioners should be transferred from the control of the Central Board of Revenue to that of Ministry of Law.

The Appellate Tribunal should not be granted enhancement powers under the Income-tax Act. Enhancement powers now vested in it under the other direct taxes Acts should be withdrawn.

Provisional assessment under Section 23B of the Income-tax Act should generally be confined to cases where the income returned is above Rs. 20,000.

Section 18A(5) and Section 23B of the Income-tax Act should be amended to allow for provisional refund of advance tax paid where assessments are not completed within three months of the date of receipt of return or alternatively allow interest at 6 per cent. on the amount refundable from the date of filing a return to the date of the issue of refund order.

Powers of settlement available at present to a limited extent under the Income-tax Act for specified types of cases should be enlarged and the Central Board of Revenue should be authorised to arrive at a settlement with the assessee at any stage of the proceedings under the Direct Taxes Acts.

The Government should take a policy decision so as to prevent the officers of the Department, who leave Government service prematurely for joining private employment.

Provisions analogous to Sections 13(3), 7(7) and 50(1) of the U.K. Income-tax Act should be incorporated in the direct taxes statutes.

Notice

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Third Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 12-00 noon on Friday the 7th October 1960, for the following purposes:

(1) To receive and consider the Audited Accounts for the year ended 31st March 1960, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring.

(3) To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 1st October to the 7th October 1960, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

D. FORDWOOD,
Secretary,
Managing Agents.

CALCUTTA 1, 29*th August* 1960.

MONEY IN ACUTE SHORTAGE

(*From Our Own Correspondent*)

BOMBAY, 14*th September*

Conditions in the short-term money market continue to be stringent. The stringency is due fundamentally to the acute shortage of floating funds rather than to any broadening of demand for credit. The withdrawal of Rs. 75 crores from the institutional funds for subscription to the State loans has proved to be too heavy for the market which was fairly tight even before. Return of funds to banks from upcountry centres continues to be small, so that banks still figure as borrowers in the market. Interest rates are, therefore, held firm at the previous week's levels. Inter-bank call money is being bid at 3½ per cent. among big, as well as small, banks. House money at seven days' notice is offered 3 per cent. One to two-month deposits are quoted at 3¼ per cent. and deposits of three months and over at 3½ per cent.

There has been no change in the Treasury Bill discount rate either (at 2.540 per cent.). The sale of these bills on tenders is no more than of nominal interest, in that they are being taken up by special quarters against maturing bills. The bills sold this week amounted to Rs. 2 crores. There were no sales of Intermediate Treasury Bills during the period 7th to 10th September. These are, however, likely to be offered this week at the self-same discount of 2.476 per cent. per annum.

There has been a further expansion of Rs. 12.88 crores in notes in circulation during the week ended 9th September 1960. Disclosing this, the Reserve Bank of India statement for that week also shows a rise of Rs. 6.21 crores in notes held in the Banking Department, so that the total note issue has increased by Rs. 19.09 crores. This is covered by a rise of Rs. 20 crores in rupee securities and a small contraction in rupee coin. There is no change in foreign securities at Rs. 123.01 crores, while balances held abroad have suffered a slight drop of Rs. 84 lakhs to Rs. 22.67 crores, in contrast to the successive additions noted in the previous four weeks. The total foreign assets now stand at Rs. 145.68 crores. Deposits of the Central Government are up by Rs. 9.73 crores, while those of other Governments have declined by Rs. 19.43 crores. Deposits of banks have increased by Rs. 5.27 crores. Loans and advances other than to Governments show a decline of Rs. 2.40 crores. Investments are also lower by Rs. 44.87 crores, while there has been an addition of Rs. 21.45 crores to the holdings of Government Treasury Bills.

A marked fall of Rs. 6.64 crores in demand deposits and of Rs. 11.37 crores in time deposits is disclosed by the Scheduled bank's statement for the week ended 2nd September 1960, as compared with that for the previous week. Almost the entire decline in total deposits is accounted for by banks other than the State Bank. Such a large-scale withdrawal of funds, presumably for subscription to State loans, is accompanied by a much sharper rise in advances, which have gone up by no less than Rs. 25.61 crores, of which the share of State Bank alone is Rs. 14.54 crores. Consequently, there have been heavy borrowings from the Reserve Bank and the State Bank; those from the former have risen by Rs. 37.80 crores and from the latter by Rs. 3.83 crores. The changes in the investment portfolios of the Scheduled banks as a whole and of the State Bank, in particular, do not fully reflect the response from the banks to the State loans. For, whereas the investments of all Scheduled banks have risen by only Rs. 3.56 crores, those of the State Bank have actually declined by Rs. 1.81 crores. Very little variation is seen in cash balances, while the State Bank's cash has risen by Rs. 4.23 crores.

The Gilt-edged market has turned a little weak, on account of persistent stringency in the short-term money market and predominance of sellers. The weakness is more pronounced in the State loans section, where 1968, 1970 and 1971 issues have been subjected to heavy selling pressure. The new 4 per cent. 1969 loans are being quoted at large discounts from their issue prices, ranging from 25 nP to 75 nP. Among the Central loans, 3 per cent. 1986 Conversion Loan has declined by 40 nP to Rs. 73.85, despite the proximity of interest payment. 3 per cent. 1970-75 has been marked down by 25 nP to Rs. 90.70 and 3 per cent. 1966-68 by 10 nP to Rs. 95.80. 3½ per cent. 1969 has shed 5 nP to Rs. 99.05.

The persistent firmness of sterling abroad has strengthened the rupee also in terms of the U.S. dollar. This is reflected in the drop in the banks' selling rate for U.S. T.T. (ready) from Rs. 476 to Rs. 475.75 and in their buying rate from Rs. 472.75 to Rs. 472.25 per $100. In New York, spot sterling has shot up from 281.17-281.20 cents to 281.43-281.46 cents and three months' forward from 279.65-279.68 cents to 279.87-279.90 cents.

LINSEED SUPPLIES SCARCE

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 12*th September*

Owing to continued scarcity of supplies, the undertone of the linseed market was very firm throughout the week under review, though only small business was reported in seeds and oils, as buyers and sellers were both reserved.

The oilcake market remained unchanged, only local business passing. India is still out of parity with the U.K. and Continental markets.

The latest quotation for ready and September futures is Rs. 25-50 per maund.

MARGIN ON BULLION REDUCED

(*From Our Own Correspondent*)

BOMBAY, 14*th September*

A notable development of the week under review in the bullion market is the Maharashtra Government's decision to relax margin rules in respect of *Aswayuj* (October) settlements also as in the case of the *Kartik* (November) settlements. Thus, with effect from Friday the 9th inst., the rates of margin are fixed lower at Rs. 40 per tola of gold and Rs. 2,000 per bar of silver, as against the previous rates of Rs. 60 and Rs. 3,000, respectively. A free limit of 2 500 tolas of gold and 50 bars of silver has also been granted. Further, the closing prices for the application of margins have been raised from Rs. 127 to Rs. 130 in the case of gold and from Rs. 213 to Rs. 218 in respect of silver; the corresponding rates fixed for the *Kartik* settlement are Rs. 130 and Rs. 218.

Immediately after the relaxation in margin rules was officially announced on Friday, there was emergence of fresh bull support which lifted up the values of both the metals. The firmness gathered further momentum on the following day. On Monday the 12th inst., however, a sagging tendency developed, following profit-taking at higher levels and reports of larger arrivals of gold and silver. The tendency persisted practically till the close today. Nevertheless, the closing rates were markedly higher than those at the end of last week.

The average daily arrivals during the week were 6,000 tolas of gold and 40 bars of silver, as against 6,250 tolas and 43 bars, respectively, in the previous week. The offtake of gold and silver was at an average rate of 3,250 tolas and 6 bars, the corresponding figures for the previous week being 3,000 tolas and 7 bars. The floating stocks are reported to be around 25,000 tolas of gold and 400 bars of silver.

The Mysore Gold Mine in the Kolar Goldfields of Mysore State will not be closed. This was stated by Mr. K. D. Malaviya, Union Minister for Mines and Oil, while replying to a question in the Lok Sabha on the 9th inst. The Minister, however, admitted that efforts to strike new gold reefs in the mine had not succeeded. Owing to non-availability of ore reserves in that area, it was quite possible that large-scale retrenchment would have to be undertaken, but efforts were being made to transfer surplus workmen of the Mysore mine to the other two mines.

The Board of the Bombay Bullion Association has not yet decided the date for the commencement of trading in the *Kartik* settlement.

In gold, *Aswayuj* settlement began the week (on Friday, since the market was closed on Thursday as a mark of respect to Mr. Feroze Gandhi, M.P.) at Rs. 133.56, as against the previous close of Rs. 133.75, and rallied to touch a high of Rs. 133.75 on Saturday. After declining to Rs. 134.94 on Monday, it recovered to Rs. 135.81 today before finishing at Rs. 135.62. The net gain over the week was Re. 1.78.

The *Aswayuj* settlement in silver was well supported, the quotation spurting from Rs. 224.40 to Rs. 227.12 on Saturday. At this level, profit-taking set in and the settlement moved down, the rate having touched a low of Rs. 226.12 at one time. But towards the close, it was a shade better at Rs. 226.56.

A feature of trading in ready gold and silver during the week was that both the metals were quoted throughout the week at a discount under the forward. The actual discount today was 43 nP in gold and Re. 1 in silver. Today's closing rates were Rs. 135.19 per tola of gold and Rs. 225.06 per 100 bars of silver, as against Rs. 134.37 and Rs. 224.50, respectively, prevailing a week ago.

Ready gold in the London bullion market improved further during the week from 250*s.* 4*d.* to 250*s.* 5½*d.* The rise followed the firming up of the world price for gold from $35.15½-$35.17½ to $35.21-$35.23, owing to Middle Eastern and Continental demand. A recent report from New York avers that the U.S. Administration is still unperturbed over the continued outflow of gold which, it feels, is only a short-term phenomenon and will be reversed in due course. The surplus gold over legal requirements for currency and Federal Reserve deposits is said to be around $7.4 billion. Satisfaction is expressed over the move of foreign banks to build up their investments in U.S. Government securities or in bank balances rather than in gold, although the traditional policy on the part of many central banks to buy gold is fully recognised. Both ready and forward silver in London continued unchanged at 79¼*d.*, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	14-9-60 (closing)	High	Low	7-9-60 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	135.19	135.56	133.44	134.37

LIMITED TRADING IN COTTON

(*From Our Own Correspondent*)

BOMBAY, 14*th September*

Conditions in the cotton market during the week under review remained practically unchanged from what it was last week. There was no business in the futures section, while the spot market reported only limited trading, with dealings in domestic cotton confined mainly to old crop Co2 and new crop Cambodia. Mills were not inclined to purchase cotton at prices above the ceiling rate. The trade was anxiously watching how the controls were going to be enforced. The reported deputation by the Textile Commissioner of an Officer to watch the trend of prices in Pandharpur-Baramati area, where the crop is being marketed, with powers to requisition cotton, if need be, did not surprise traders. Yesterday it was reported that a sizable quantity of cotton grown in this area was requisitioned by the Officer for delivery to nominated mills in Bombay. This has adversely affected the trading in upcountry centres. The possibility of the appointment of such vigilance Officers in other areas, as and when required, is not ruled out.

The trade is becoming more vocal and vehement in its criticism of control measures. The provision requiring compulsory survey of cotton by sworn surveyors of the E.I.C.A. has been subjected to bitter attack. It is said that there is wide variation between the valuation given by the surveyors and that by the *ad hoc* Appeal Committee. This, it is pointed out, has caused considerable uneasiness among sellers.

Typical of the trade point of view is the memorandum submitted to the Textile Commissioner by the Ahmedabad Cotton Merchants' Association which claims to represent 173 members, about one-third of whom have been in the trade for over thirty years. The Association points out that survey of every lot is a genuinely difficult task and will be impracticable. Apart from entailing heavy expenses, and waste of time, since the surveys are to be done at a large number of places by different surveyors, malpractices, it is said, are bound to occur. It has, therefore, pleaded that, as in the past seasons, surveys should be made compulsory only when a price above the basic maximum is demanded by a seller. The Association has also submitted that there is no justification for reducing the basic maximum ceiling price of fine Kalyan 25/32″ staple from Rs. 870 per candy to Rs. 840 per candy for the current season.

While trading in the spot market is thus in a state of flux, the E.I.C.A. has finished its job of preparing a new hedge contract for the current season. The main features of the hedge contract are the following:

(1) The trading ceiling within the ceiling rate during non-delivery period is removed;

(2) Deposits on the net open position shall be payable during the delivery period at the rate of Rs. 100 or Rs. 75 per bale when the prices reach certain levels below or above the ceiling or floor levels respectively;

(3) All descriptions of cotton included in the Hedge Schedule shall be tenderable upto 2/32″ "off" in staple except in certain varieties and upto 1″ class "off" the basic fine grade for grade in all descriptions. The minimum staple tenderable is upto 23/32″ in the case of "Dholleras" and the maximum upto 1-5/32″ in the case of "Cambodia (A)" cottons;

(4) There shall be two delivery months, namely, April and August;

(5) Some changes have been introduced in the by-law regarding fixation of tendering differences when the price of the hedge contract is above Rs. 212 per quintal on the day of fixation of tendering differences. Similarly some changes have also been made in the provisions for invoicing back cotton rejected in survey;

(6) The price quotations will be based on a unit of 3 quintals (300 kilograms).

The necessary amendments to the E.I.C.A.'s By-laws will be submitted for consideration and approval of members on the 21st inst.

Meanwhile, mills have welcomed the Government's announcement detailing the procedure for import of 412,000 bales of U.S. cotton under P.L. 480. Of this amount, 275,000 bales is cotton of staple length 1″ and below but not less than 13/16″. The balance is to consist of cotton within the staple range 1-1/16″ and 1-3/16″. Following the aforesaid announcement, there was good demand from spinners for both higher and lower grades of U.S. cotton. Californian 1-5/32″ G.M. was done at Rs. 1,245 per candy for October-November delivery. Lower grades changed hands at prices ranging from Rs. 1,010 to Rs. 1,025. Southern mills were interested in East African growths. B.P. 52 found buyers at Rs. 1,390. Mwanza fetched Rs. 1,195. Sudan G25 was purchased by some Bombay mills at Rs. 1,951 per candy.

Weather and crop development continue to be watched keenly. Fortunately, the present trend is encouraging. To quote one report: "The rains in the Punjab have stopped; the weather now is quite clear with bright sunshine; westerly winds are proving very helpful in drying and soaking the water from the fields. The damage is much less than the earlier expectations. Andhra and parts of Mysore had the much-wanted rains. The weather in Gujerat and Saurashtra remains partly cloudy with some rains, providing the necessary nourishment to the plants. Berar, Khandesh and Madhya Pradesh also report rains which have proved very helpful to the crop. Further small rains would be very welcome in these areas. On the whole, the crop condition is very good."

Cotton futures in the Karachi market fluctuated within a narrow range in thin trading. Values showed little change over the week. The announcement of the cotton policy for the 1960-61 season, which began on the 1st inst., fell flat on traders as there is nothing in it to enthuse them, except perhaps the assurance that the Government had no intention of restricting exports of cotton in any way

during the current season. The rates of export duty on staple cotton and *Deshi* style were kept unchanged at Rs. 75 and Rs. 40 per bale, respectively. The duty on Com lla cotton of East Pakistan was, however, reduced from Rs. 40 to Rs. 20 per bale. This reduction, it was claimed officially, was made not only to increase the competitiveness of Comilla cotton with the Assam Comilla produced in India, on which there is at present no export duty, but also to encourage its cultivation.

In the futures market, N.T.R.G. January Contract receded slightly to Rs. 67-5 from Rs. 67-8 last week-end while the March Contract was quoted an anna higher at Rs. 67-2. Spot prices remained, by and large, unchanged. Sind *Deshi* was done at Rs. 87 per maund, the same rate as last week. Punjab *Deshi* changed hands one rupee lower at Rs. 82. The following are the latest available quotations—in rupee per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4F Punjab Roller 83-3; S.G. 87-3; L.S.S. Punjab Roller 86-3; S.G. 90-3; N.T. Roller 87-3; S.G. 92-3; L89F Punjab Roller 90-3; S.G. 95-3.

In sharp contrast to the easiness noted last week, the Alexandria cotton futures market ruled distinctly firm during the week under review. The reported damage to the Menoufi crop at a time when foreign demand was becoming stronger touched off a wave of speculative buying. Both the Karnak and Ashmouni contracts came in for active trading. Their quotations, consequently, rose. Spot premium too hardened. The latest quotations—in tallaris per lb.—from Alexandria are as under, the figures in brackets being last week-end rates:

Karnak: November 75.38 (74.46); January 75.30 (73.90); March 75.48 (74.50). *Ashmouni*: October 64.07 (62.62); December 63.80 (62.30); February 63.85 (62.30).

A further rise in futures values was recorded in the Liverpool cotton market, thanks to the speculative buying and mill covering against sale of yarn. The former was induced by the September U.S. crop forecast falling short of expectation of traders in Liverpool who were counting on a substantial rise in the estimated crop this month. Under pressure of buying both the American and American type contracts advanced. Sudan cotton contracts, too, improved on reports of keen Russian demand for Sudan cotton at Khartoum. The following are the latest quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 22.70; December 22.70; March 22.70; May 22.75.

American cotton mixed growth contract: October 23.00; December 23.00; March 23.05; May 23.10.

Sudan: September 34.75; November 35.00; January 35.00.

The most important development of the week, as far as the New York cotton market was concerned, was the publication, on the 8th inst., of the third Government crop report for the season. The Crop Reporting Board of the Department of Agriculture estimated the 1960-61 cotton crop at 14.58 million bales (of 500 lbs. each), as against last month's estimate of 14.47 million bales and the 1959-60 crop of 14.55 million bales. The yield per acre was estimated at 451 lbs., as against 447 lbs. in the estimate a month ago and last season's harvested yield of 462 lbs.

The latest crop estimate, though it was in line with that of a leading spot house, was still somewhat below the trade expectation. This strengthened the belief that supplies would get tighter as the season advanced and that, if consumption were maintained at present levels, stocks would have to be drawn down. The possibility of an acute shortage was, however, ruled out. Reflecting this, cotton futures values in New York recorded a perceptible improvement during the week.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	13-9-60	6-9-60	29-8-60
Spot	32.45	32.45	32.45
October	31.36	31.09	31.02
December	31.35	31.29	31.30
March	31.81	31.82	31.83

BOOMLET IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 14*th September*

Malabar black pepper witnessed a boomlet during the week under review, in sympathy with New York and Singapore. New York dealers who were hesitating to buy Lampong around $0.50 during the last week were reported to have bought a sizable quantity at progressively high price from Singapore from $0.51 to $0.53. New York dealers raised their buying limits for Malabar too. They started bidding around $0.53/54, but very few parcels were reported done, as short sellers and speculators boosted the prices so as to make export impossible. The rise in New York at once reflected on Singapore and India, where technical reaction was reported overdue after the recent decline. The present rise in New York, Singapore and India is reported to be due to the following among other reasons:

1. Detention of a sizable quantity of Lampong at the Port of New York.

2. Short-covering by bears in Singapore and India who took short positions during the decline.

At Cochin garbled rose to Rs. 255. Ungarbled was in request at Rs. 1,450. Calicut was quoting at Rs. 1,550. Sellers in Tellicherry area were more stiff when compared with those in Alleppey.

Singapore was firm to steady under buying enquiries from New York, the latest prices for White and Black being Str.$280 and Str.$175, respectively. London refused to follow the present rise, white after having improved to 64½d. declined to 63d. Nervousness among Singapore dealers during the last week seems to have subsided, though temporarily, in view of the sizable support by New York and the resistance to lower prices by stockholders.

Spot in New York rallied from $0.52 to $0.56 as tight position in ready was created by the detention of Lampong ex-two/three steamers from Singapore. It is said in some quarters that the detention can be managed by asking for a second analysis, if the buyers want to pass time for taking delivery for some reason or other. There are unconfirmed reports that some stock of pepper in New York is damaged by the recent heavy rains and gale. Yet, the behaviour of the market there denotes that it is more or less a bull propaganda.

The future of the market depends upon the selling policy of Singapore and Lampong exporters. But the accumulation of stock at ports in Indonesia and the regular weekly arrivals of sizable quantity of Lampong from Indonesia in Singapore will sooner or later have their effect on the market, unless some manœuvring is done in the meantime by strong bulls both in Singapore and New York.

Though the stockholders and dealers in India are bearishly inclined, outside speculators are bullish. It remains to be seen how Indian market behaves in the coming two or three weeks at the time of the maturity of October Contracts in the Cochin Ring and in face of pressure of arrivals at Singapore. Interested parties are floating rumours every now and then that one or other East European countries are in the market for Malabar pepper, with a view to encouraging and sustaining the spirit of the bull speculators.

Ready pepper in Bombay is nominally quoted at Rs. 197 per Bengal maund. At the time of writing, the market is quiet after the recent rise.

BEMBERG YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 14*th September*

Renewed rumours regarding a possible cut in import quota for art silk yarn and hopes of enlarged demand from consuming centres led to a virtual buying spree in Cupressa Bemberg Yarn (60 x 1) during the week under review. The stringency in the money market had no effect. Nor were reports of heavy arrivals of imported yarn during the month of August 1960 of any avail. Consequently, values recorded a distinct improvement. Staple fibre yarn attracted good support on expectations of better enquiry. Imported and indigenously produced art silk yarns, however, tended to move down on account of selling induced by reports of encouraging supply position as a result of heavy imports. Cotton yarns ruled dull. Business put through was limited, with values moving narrowly.

The quantity of foreign art silk yarn that actually arrived in Bombay Port during August 1960 was 4,920,955 lbs., as against 3,134,575 lbs. in the previous month. Imports of synthetic yarn and cotton yarn amounted to 236,879 lbs. and 42,341 lbs., respectively, the corresponding figures for July 1960 being 175,467 lbs. and 42,565 lbs. Exports of cotton yarn from Bombay Port during August aggregated 427,508 lbs., as against 322,272 lbs. and those of cotton sewing thread were of the order of 33,341 lbs., as against 43,634 lbs.

Cupressa Bemberg yarn (60 x 1) October delivery jumped up from Rs. 2,078 to Rs. 2,124. December delivery advanced by Rs. 42 to Rs. 2,127. Spot Cupressa spurted by 13 nP to Rs. 9.50. 150 Japan gathered 3 nP to Rs. 6.09. 120 Italy, however, declined by 6 nP to Rs. 5.56. 120 Janan and 150 Italy lost 4 nP each to Rs. 5.65 and Rs. 6.15, respectively. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade receded by 10 nP to Rs. 5.84. 150 Bt. cones 1st grade dropped 4 nP to Rs. 5.26.

Staple fibre yarn (40 x 2) October delivery evoked good enquiries and recorded a rise of Rs. 18 over the week, today's closing rate being Rs. 729. December contract hardened by Rs. 15 to Rs. 736. Spot Centurys put on 10 nP to Rs. 366. Citys increased by 7 nP to Rs. 3.81. Kohinoors gathered 6 nP to Rs. 3.84.

In the cotton yarn section, ten counts Podars shed 25 nP to Rs. 18. Gokaks were quiet at Rs. 18.37. Twenty counts Moderns were dull at Rs. 23.50, as also Gokaks at Rs. 23.25. There was practically no change in the quotations for sixty and eighty counts. Forty counts, however, met with special support. Minaxis improved by 50 nP to Rs. 31.75 and Maduras by 37 nP to Rs. 31.37.

The following table gives prices of rayon, staple fibre and cotton yarns quoted today, as compared with those eight days ago:

	14-9-1960	7-9-1960
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 Kg.)		
October	2,124	2,078
December	2,127	2,085
60/1 Cupressa Bemberg spot (per lb.) ..	9.50	9.37
120 Japan (per lb.)	5.65	5.60
150 Japan (per lb.)	6.09	6.06
120 Italy (per lb.)	5.56	5.62
150 Italy (per lb.)	6.15	6.19
Staple fibre yarn—		
October	720.00	711.00
December	736.00	721.00
40 x 2 Kohinoor (per lb.)	3.84	3.78
40 x 2 Century	3.66	3.56
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	18.00	18.25
20s Gokak	23.25	23.25
40s Minaxi	30.75	30.25
60s Rachuvamshis	59.00	59.00
80s Finlay	80.80	80.80

HIDES AND SKINS BEARISH

(From Our Own Correspondent)

MADRAS, 12*th September*

The tanned hides and skins market seems to be passing through a difficult period. E.I. tanners are not able to sell their output at replacing costs. Importers overseas are not keen to buy except against specific orders and do not seem to have confidence in the prices at origin. Export business has been patchy and small.

The tone is bearish all round—in hides and skins. E.I. tanners hope that the current low level of prices would attract regular and steady business, ere long.

In the tanned skins public auctions held in Germany last week, 40 per cent. of the quantities offered was sold at good prices—sometimes at 9d. over current c.i.f. levels. It must be admitted that most of the parcels were not of the types that were currently required by the German trade.

The next London tanned skins public sales take place on the 26th inst. when 200,000 goat skins and 150,000 sheep skins will be available for sale. Demand is likely to be selective.

GROUNDNUTS MAKE FURTHER HEADWAY

(From Our Own Correspondent)

BOMBAY, 14*th September*

Distinctly buoyant conditions continued to prevail in the oilseeds market during the week under review also. The Prime Minister's call for an all out bid to promote exports by "sending out not merely what we can spare, but by tightening the belt," in his address at the National Development Council, led to considerable speculative buying. Operators believed that fresh export incentive schemes would be brought into force. A section of them, however, continued to be apprehensive about the prospects for exports since they thought that the undue spurt in prices would naturally make the Indian oilseeds and oils uncompetitive in world markets.

In the groundnut section, the firmness displayed in the previous weeks gathered further momentum on sustained bull support during this week, after remaining somewhat subdued in the initial sessions. Despite reports of some improvement in the drought conditions in certain parts of Andhra and Mysore, as also Saurashtra, operators tended to believe that the total production would be smaller than in the previous season. Added to this, there were hopes of more attractive incentives for exports seeds, oils and oilcakes. The spot section, however, remained depressed mainly on account of new crop arrivals on a sizable scale. The support extended by the *vanaspathi* manufacturers was only moderate. The February 1961 contract which had closed at Rs. 204 last week-end spurted to Rs. 207.25 today, after fluctuating between Rs. 202.25 and Rs. 208. Nizam bold, however, suffered a setback of Rs. 2 to Rs. 44.75. Coromandel eased by Re. 1.25 to Rs. 45. Oil ex-mill lost 37 nP to Rs. 24.50.

The castorseed section put on a cheerful appearance during the week, despite protracted absence of enquiries from the U.S. for castor oil. Even the fear of heavy tenders against maturing contract had no effect. The strength in this section was due mainly to the long-term outlook for castor oil exports. Operators expected that the Government might come to the assistance of the trade for promoting exports of oil. The distinct improvement in the volume of castor oil exports so far this year also gave them room for optimism in regard to the scope for prompting castor oil exports. Reports of unfavourable weather conditions from Gujerat was another factor that imparted some strength to this section. The maturing contract forged ahead from Rs. 163.87 to Rs. 177.75 by yesterday. It, however, declined to Rs. 170 today on profit-taking. The May 1961 contract, too, rose from Rs. 169.87 to Rs. 176.75 by yesterday, though it closed little lower at Rs. 175.50 today. Ready Madras also hardened by a rupee to Rs. 34.12. Oil Commercial put on 25 nP to Rs. 18.

In sympathy with other major oilseeds and oils, linseed also ruled firm. While the outlook for export of oil continued to be dismal, there were hopes of new incentives for promoting its exports. The linseed September contract rose from Rs. 31.12 to Rs. 32.06. May 1961 contract was higher by 59 nP at Rs. 33.34. In the ready section, bold ready gathered 87 nP to Rs. 16.62. Linseed oil closed higher at Rs. 16.62, as against Rs. 16.06 last week-end.

The cottonseed section remained subdued, after displaying some strength early in the week. The February 1961 contract improved from Rs. 92.75 to Rs. 93.50 by Friday but gave way subsequently to wind up the week at Rs. 92 today.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	14-9-1960	7-9-1960	30-8-1960
Groundnut	Rs.	Rs.	Rs.
February 1961	207.25	204.00	199.00
Nizam bold	44.75	46.75	46.50
Coromandel ready	45.00	46.75	47.75
Khandesh quality	44.75	46.75	47.50
Oil ex-mill ready*	24.50	24.87	24.75
Railway receipts*	24.19	26.62	24.62
Castorseed			
September 1960	170.00	163.87	164.75
May 1961	175.50	169.87	171.87
Ready Madras	34.12	33.12	33.12
Ready Kanpur	32.87	32.00	31.75
Oil E.S.S.†	19.31	18.94	19.12
Oil commercial†	18.00	17.75	17.94
Linseed			
September 1960	32.06	31.12	31.75
May 1961	33.34	32.75	33.12
Bold ready	32.12	31.25	31.62
Oil ready†	16.62	16.06	15.94
Cottonseed			
September 1960	—	153.50	156.50
February 1961	92.00	92.75	94.50
Niger seed	37.00	37.75	37.50
Kardi seed	24.50	24.50	24.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are in terms of candy, except linseed, which is in cwt. A candy is 560 lbs., except in the case of cotton seed, for which it is 784 lbs. Spot quotations of seeds are for per cwt. and those for oil per quarter. Rates for 1961 delivery contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms.

EXPORT TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, 13*th September*

Good demand was in evidence in the export auctions held yesterday, but prices disclosed a mixed trend. There was a further improvement in tea bookings to the U.K., and there was no difficulty in getting bookings. Reports from most districts from North East India have indicated poor outturn in August, but immediate prospects were considered fair.

Strong general demand was in evidence at the internal sales held last week, when dusts on offer totalled 20,901 packages. Prices followed a two-way trend. Thus, while medium C.T.Cs added 20 to 30 nP and brighter liquorings from the same category recorded even a bigger rise, orthodox teas declined by 20 to 30 nP. All liquoring teas sold well, and the appreciation in the prices of best C.T.Cs varied, depending on quality. Keen competition was offered to legg-cut Dooars and prices were considerably higher. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. dust Rs. 6.40 to Rs. 6.90, medium Assam C.T.C. dust Rs. 6.00 to Rs. 6.30, medium Assam dust Rs. 4.70 to Rs. 5.30, and medium Dooars dust Rs. 4.60 to Rs. 4.75.

Leaf on offer amounting to 184 packages met with good demand, and prices appreciated.

Offerings during yesterday's auction's totalled 73,375 packages. Depending on quality, there was good demand, but prices were irregular. A strong feature was provided by whole leaf grades which were quoted higher, while the better teas of this kind eased liberally. Prices for best and medium C.T.Cs eased by 50 nP to Re. 1. Although the poorer C.T.Cs met with good support, prices were irregular and more often easy than dear. Tippy teas and Darjeelings declined. Keen competition was offered to plain brokens and fannings and prices rose. Legg-cut teas were also in good demand at hardened rates. Bright liquoring Assam B.O.Ps were about firm, while the plainer liquoring B.O.Ps, better Dooars B.O.Ps and O.Fs eased. Fannings eased, but medium B.Ps were irregular. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 8.00 to Rs. 9.50, best Assam C.T.C. B.P. Rs. 8.00 to Rs. 9.00, clean black pekoe Rs. 5.30 to Rs. 5.55, medium fannings Rs. 5.10 to Rs. 5.40, medium B.P. Rs. 4.80 to Rs. 5.30, plain fannings Rs. 4.45 to Rs. 4.75, and plain B.P. Rs. 4.40 to Rs. 4.55.

Export quota was quoted at ½ nP, but buyers were prepared to offer only ¼ nP. No transactions took place.

GOOD SUPPORT FOR SOUTH INDIAN TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 6*th September*

Sale No. 34:—Offerings in sale No. 34 held on 6th September 1960 totalled 780,000 kilograms. *Quality from the Nilgiris and Anamalais was* rather irregular, but from the other districts was well maintained. With good support from both exporters and internal buyers, there was a very strong active market. Prices were generally dearer for most descriptions. Buyers showed keen interest in low mediums and mediums which were up to 20 nP dearer with their fannings sometimes advancing more. There was good demand for good mediums which were irregularly dearer by 10 nP. Highgrowns met with an irregular enquiry. Best highgrowns with improved quality faced keen competition and advanced in price, whilst others came to an irregular market following quality. Demand for C.T.C. and legg-cut teas continued strong and these teas are quoted firm to dearer. There was good support for whole leaf grades at advancing rates.

	1960	1959
	Rs.	Rs.
Low medium	4.00/4.25	3.52/3.74
Medium	4.30/4.55	3.85/4.07
Good medium	4.55/5.15	4.63/4.85
Quality	5.10/8.10	5.07/7.82

The average price realised was Rs. 4.80 per kilo, as compared with Rs. 4.58 in the previous sale and Rs. 4.48 in the corresponding sale of 1959.

Dust Sale 'GG':—294,000 kilograms were offered in sale No. 'GG' held on 8th September 1960. Quality was well maintained. There was a strong general demand and prices were firm to dearer for all descriptions. Coloury mediums, particularly powdery descriptions, were in keen demand and advanced by 10 nP to 20 nP. There was good support for the plainer sorts and low mediums at firm to dearer rates. Highgrowns were well supported, although these sold at irregular rates following quality. C.T.C. and legg-cut types ruled steady on last week's rates. Black grainy descriptions sold well.

The average price realised was Rs. 4.35 per kilo, which compares favourably with Rs. 4.21 fetched in the previous sale and still more favourably with Rs. 4.07 realised in the corresponding sale of 1959.

Export Quota:—No business has been done over the past two weeks and, owing to the further shortfall in the North Indian crop, we think it unlikely that any will be done.

Colombo:—Just over 5¾ million pounds were offered and met with a strong general demand. Best Dimbulas advanced 20 to 30 cents, whilst those below were irregular, but up to 25 cents dearer. Mediums inclined 5 to 15 cents, whilst lowgrowns were steady.

London: North Indian and other growths:—In Monday's auction, there was a strong demand and the best Assams realised attractive prices. Dooars and African teas were dearer.

Ceylon and South Indians:—In Tuesday's sale, 21,026 packages were on offer. Out of this quantity 6,318 packages were from South India. There was a good demand and prices were firm for all descriptions with the better types selling at rates dearer over the previous week.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 35:—561,000 kilograms. Market very strong and dearer. Low medium and medium brokens up to 20 nP dearer. Similar fannings up to 40 nP sometimes more. Good medium advanced irregularly 10 nP. Best liquoring much dearer where quality improved. Tippy teas neglected."

RAW JUTE RECEDES

(From Our Own Correspondent)

CALCUTTA, 13*th September*

Although new fibre arrivals continued to be restricted during the week under review, mills were reserved and as a result prices for fibre declined. A decline in prices of goods followed. Market circles made significant note of the interest shown by U.S. buyers towards the end of the week. Support for heavy goods from buyers on behalf of several countries was steady, and mention should be made of the continued Australian buying of cornsacks. As much as three vessels were loaded with cornsacks for Australia. With speculation holding sway in the goods market, the announcement of a decline in stocks of goods with mills as at the end of August did not receive much attention. Moreover, some decline had been anticipated following good month-end business. The stocks of gunnies, amounting to 83.300 tons, were lower by 4.800 tons. The largest fall was recorded in sacking which dropped by 3,500 tons to 4,300 tons. Hessian went down by 800 tons to 30,900 tons and miscellaneous constructions by 500 tons to 9,400 tons.

A factor, which contributed to arrest the upward trend in raw jute was the reserve which mills put up. For it was realised that prices of goods must go down, if steady support should be forthcoming from foreign countries. The fall in fibre prices was significant against the background of rumours spread by bulls that the heavy rains of this week caused floods and that standing crops had been affected. These rumours had been spread by interested quarters, but in fact the splendid rains of this week raised the water levels in canals and tanks and these are now adequate for retting.

It has been a good sign that fibre prices have commenced moving down. The upward trend had been the work of speculators, and the low stocks with mills and the Government of India's delay in the issue of licences for the import of cuttings from Pakistan paved the way for the speculative elements.

On Tuesday, offers of jute goods met with no response, and this was followed by profit-taking by speculators. Moreover, in the futures market there was selling pressure. As a result, in the ready goods section, B. twills fell to Rs. 141.50 from Rs. 143. On the following day selling pressure continued in both ready goods and in futures, and at lower levels some buying was in evidence. However, overseas buyers kept away. Thus, ready B. twills sagged to Rs. 140.80 and hessian 40" 10 oz. to Rs. 48.35. The announcement in the fall in goods in stock with mills was made on Thursday, but, despite this, prices fell as foreign buyers thought that rates must move down further before they extended support. B. twills fell to Rs. 139.75 and hessian 40" 10 oz. to Rs. 47.75. At this stage, buying developed in the futures market, but profit-taking was also in evidence. Thus, November B. twills futures moved up to Rs. 125.80 after opening at Rs. 124.90 to close at Rs. 124.95. Fractional losses were recorded in ready goods on Friday, when B. twills declined to Rs. 138 and hessian 40" 10 oz. to Rs. 47.50. Over the week-end, some interest was shown by the U.S., and hessian 40" 10 oz. hardened to Rs. 48.15. In sympathy, B. twills improved to Rs. 139.65. Prices hardened by a little yesterday, and B. twills closed at Rs. 140.50 and hessian 40" 10 oz. at Rs. 48.25.

Fibre prices moved down, owing to the poor interest shown by mills. However, arrivals in agencies continued to be poor, and sellers were also reserved. This phenomenon even on the eve of the *Poojas*, when growers would be requiring ready cash, added emphasis to the oft-repeated hypothesis that prosperity among growers had considerably added to their holding power in recent years. No doubt, middlemen were also on the stage, but mills confidently expected that the crop being undamaged, a bumper crop would pull down prices as the season progressed. Daissee bottoms October-November declined to Rs. 109.75 per 100 kgs. from Rs. 113.75 and northern bottoms to Rs. 105.75 from Rs. 110.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 12*th September*

Sugar ruled quiet during the week at Rs. 111.50 per bag in wholesale and Re. 1.09 per *seer* in the open market, as against the controlled prices of Rs. 108.50 per bag and Re. 1.01 per *seer*. Supply position was reported to be easy and another monthly quota of 200,000 tons has been released by the Government for sales, but distribution would remain controlled in the U.P., the Punjab and Bihar as before. It was revealed that about 33 per cent. out of the 25,000 tons monthly quota allotted to U.P. was not being lifted, despite increase in per unit quota from 1½ *seer* to 3 *seers* per month.

After an early rise to Rs. 113 to Rs. 114 per bag, sugar declined to be quoted towards the week-end at Rs. 112 to Rs. 113 per bag in the Muzaffarnagar market, thanks to satisfactory supply position. The mills in the district were said to be preparing to begin their crushing season early in November.

Sugar continued quiet at Rs. 113 per bag in the Kanpur market during the week under review.

Khandsari, after ruling quiet during the major part of the week, improved by about Re. 1 per maund towards the week-end, as superior quality was in request from Saurashtra and Kutch, while buyers from the Punjab and Rajasthan were interested in inferior quality. Following heavy rains, *khandsari galaputi* was quoted lower and week-end prevailing prices were:—*galawat* Rs. 23 to Rs. 27; inferior Rs. 29 to Rs. 31; superior Rs. 32 to Rs. 40.50; crystal *khandsari* Rs. 36 to Rs. 41.50 a maund.

Ready *gur* ruled quietly steady, as demand was reported only for dry quality, the stocks of which were very small. The coming cane crop prospects were considered to be bright and crushing operations for *gur* were expected to begin early next month. The prevailing prices were: dry *gur* Rs. 16.25; *kotha* Rs. 15; *shakker* Rs. 17.50 a maund.

Gur was quoted 25 nP to Re. 1 per maund lower in the Muzaffarnagar market during the week, due to poor demand. Stockists were anxious sellers and crushing for new season would commence shortly. A small quantity of new *gur* reached Meerut market which was lifted at Rs. 17 to Rs. 18 a maund. The latest prevailing prices in the Muzaffarnagar market were:—*Chuk* dry Rs. 19.50; *kotha* mixed Rs. 17; *dana minja* Rs. 15 to Rs. 18; *shakker kotha* Rs. 14 to Rs. 15 a maund.

DAMAGE TO FOOD CROPS FEARED

(From Our Own Correspondent)

HAPUR, 12*th September*

Steady to firm conditions prevailed in the food-grains market during the week, as reports of losses to crops were received from the Punjab and some districts of U.P. following recent floods. Wheat at Hapur continued to rule steady at Rs. 17.25 a maund for *dara* quality and at Rs. 18.25 for farm produce. Daily arrivals of wheat were modest, at an average of 150 maunds, which were being lifted by consumers. Sales of wheat and flour were being continued through Government sponsored fair-price shops.

Rice continued to rule quiet during the week. *Sela basmati* was done at Rs. 30 to Rs. 33, *mainpuri* at Rs. 22.75, *ramajwayan* at Rs. 24, *raimunia* at Rs. 25 and *gadda* at Rs. 19.75 a maund. The supply position of rice in the country was reported to be satisfactory, with the present stocks put at 1.2 million tons by the Central Government and Government proposed to build a buffer stock of two million tons. It was said that a fresh five-year agreement would be entered into with Burma to import rice as current agreement was about to end and that negotiations were being held with Thailand to import 50,000 tons of rice.

Gram, after an appreciable advance to Rs. 16 for Punjab variety and Rs. 15.75 for old stuff, registered a halting trend, as the U.P. Government sold its stocks of about 100,000 maunds to traders which were being resold in the market at Rs. 15.31 a maund. Heavy losses to crops in the Punjab were reported. Waterlogging in flooded areas of Punjab and U.P. would also adversely affect *rabi* sowings which would be delayed in most of the areas and, in some cases, no *rabi* sowings would be possible. Barley improved fractionally to Rs. 12.75. *Bejhar*, too, was quoted higher at Rs. 12.25 a maund for inferior quality and at Rs. 12.75 for *moongia* variety.

Preparation of land for *rabi* sowings is in full swing. Apart from some tracts of land which would be waterlogged, all available land vacated from maize and fodder crops would be available for such sowings.

BETTER DEMAND FOR METALS

(From Our Own Correspondent)

CALCUTTA, 13*th September*

Following an improvement in demand, steadier conditions were in evidence in the metal market during the week under review, with prices registering modest gains. Tin opened at Rs. 555 a cwt. and shot up to close at Rs. 563. Demand outpaced supply, and shortage was felt. Trade circles were anxious about the acute foreign exchange situation, but thought that, in view of the importance of metals in industrial development, adequate quotas would be maintained in the important metals. Although reports from Singapore were not encouraging, a dearer trend was in evidence on the London Metal Exchange, where the price rose from £801½ to £803 per ton. During mid-week, however, a low of £798 was touched. Electrolytic zinc was another item which moved up here. At Rs. 175 per cwt., the week's net gain was Re. 1; earlier, the rate had moved down from Rs. 177.50 to Rs. 167 which was the highest level for the week. In London, the price closed substantially higher at £87 a ton, after opening at £85½. The upward trend in London was attributed to the reserve of buyers on the eve of the study group conference on zinc and lead at Geneva.

Copper scrap was in more demand here, in view of resumption of normal railway link through Orissa and accumulated demand from that area and/or from areas linking Calcutta through Orissa. At Rs. 202 per cwt., utensil scrap gained Rs. 2 and the berry quality remained unchanged but firm at Rs. 216 a cwt. The bigger consumers were believed to have adequate stocks of the virgin metal imported on "own" account. The fall in London from £235 to £234½ a ton was due to the better world supply situation. Rhodesian copper has now commenced to flow again to world markets after the termination of the labour dispute. Any possible shortfall in Chile in the event of the disturbed labour situation taking a worse turn there is not considered to affect the balance between world supply and demand. Virgin lead was unchanged at Rs. 66 a cwt.

MARKET GOSSIP

(Concluded from page 495)

been less. Similarly, if production of fertilisers had been given a high priority and stepped up, more crops could have been harvested. If the irrigation and power projects had been carried out to the fullest extent or even if the water resources that have already been conserved are fully used, there would have been a marked rise in farm output. Such instances can be multiplied. Suffice it to say that, due to administrative inefficiency, faulty planning and passionate adherence to socialist ideologies, the country's economic difficulties have been needlessly aggravated.

As far as the steel industry is concerned, nearly a year ago, Mr. Biren Mukerjee, Chairman of the Indian Iron and Steel Company, Ltd., had indicated that production of steel was being threatened by the alarming position that had been "allowed to develop in the country in regard to the supply of coking coal." Consequent on the delay in the establishment of coal washeries in the public sector and the commissioning of the coke ovens of the steel plants in the public sector, he added, the demand for coking coal had increased to a point beyond the availability of coal without excessive ash content. A few months later (in January last) Mr. Jehangir Ghandy, Director-in-charge, Tata Iron and Steel Company, Ltd., also drew pointed attention to the inadequacy of good quality coal and its possible repercussions on steel production. It was feared that, from the middle of 1960, all steel plants would have to accept large quantities of poor varieties of coal. "Given this coal supply," Mr. Ghandy warned, "the result inescapably will be both curtailment of production and increase in costs."

Unfortunately, these prophecies have come true, as witness the statement, in the Lok Sabha, of Sardar Swaran Singh, Minister for Steel, Mines and Fuel, in reply to a call attention notice on the low production of pig iron and steel in Rourkela and Bhilai. The Minister, who is in charge of both steel and coal, admitted that production in both these plants had been affected to some extent by the shortage of coal. He coolly added that the commissioning of the third blast furnace in each of these two plants would be delayed, unless "a reasonable and steady supply of coal to the steel plants" was assured. The following are the production trends in the two plants:

(In metric tons)

	Rourkela		Bhilai	
	Pig iron	Steel	Pig iron	Steel
Upto the end of March 1960	273,000	68,000	487,000	92,000
April 1960	32,787	15,625	55,539	23,761
May "	26,005	13,369	56,180	21,538
June "	26,191	14,360	46,507	22,034
July "	30,599	15,360	49,095	26,027
August " (till 29th)	31,877	16,392	50,712	23,914
Total	147,456	75,106	258,033	117,874

The comparatively low production of pig iron in Rourkela has not been due, according to the Minister, to the shortage of iron ore, the stocks of which have been adequate. It is due to other reasons, of which shortage of coal is only one, and that too only during May and June. During these two months, he said, the supply of dhanla coals was unsatisfactory. As against a monthly programme of 66,000 tons, receipts were only about 34,700 tons in May and 32,000 tons in June. The stocks of coal, which were about 69,000 tons in January 1960, had fallen to about 37,000 tons at the end of August. "The effect of poor receipts of coal," the Minister observed, "has not been as much on current production as on the delay in commissioning the third blast furnace. This furnace can be lighted only after sufficient stocks are built up and steady supplies of coal are ensured."

The Minister, however, expressed satisfaction at the overall performance of Bhilai. Explaining the drop in production in June and July, he observed that, following low stocks of iron ore and poor receipts of coal, the working of coke ovens and, in turn, of the blast furnaces, had to be restricted. The stocks of iron ore went down to a low of 30,000 tons in the middle of July. The trouble had not been due so much to the lack of ore as to the non-availability of transport for bringing the ore from the mines to the rail-head. Rail transport to Bhilai had also been interrupted. As a result of subsequent measures taken, the stocks of iron ore had improved to 63,000 tons by the end of August, and those of coal from 28,800 tons at the end of July to 32,300 tons as on 4th September 1960. But this was far from satisfactory. The Minister assured the House that all possible measures were being taken to improve the transport of coal by pressing more wagons into service and by improving the turnround.

Two points emerge from the aforesaid statement. One, steel production is being adversely affected by shortage of both coal and transport. Second, when the blast furnace in Durgapur is ready for production next month, these difficulties will be aggravated and much capital spent on the erection of these productive assets will remain idle, instead of yielding the badly needed goods and revenue. This gives rise to a chain of reactions, one interlinked to another. The failure of coal production to come up to expectations has an adverse effect on the efficiency and capacity of railways. Both together has a telling effect on steel production. Shortage of steel and scarcity of certain essential imported components on account of foreign exchange difficulties, aggravated by the lag in agricultural output, keep down wagon production and this in turn hampers transport of raw materials to factories and of manufactured goods to consuming centres. The cumulative result of all these forces is further strength to the spiral of inflation. The problem is, therefore, one of coordination of efforts and harmonising the different phases of production. This is no small task, but it will be rendered less difficult, if the Government recasts its industrial policy beginning with coal production. Let the private sector do more and let the public sector take on less responsibility for production. In fine, let each sector work according to its capacity. The Government should not stand on prestige at this critical juncture. A more broadminded policy will certainly earn better dividends in the long run.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1958. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'F' are not intended. —Commenced from 2nd Jan., 1959. K—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of May 1960 amount to 1.89 lakhs of rupees.

*WEEK'S STO

FOOD SUPPLY AND POPULATION IN DEVELOPING COUNTRIES

(*Concluded from page 500*)

acquired and evolved. Even higher yields should eventually be possible. Many countries, both intensively and less intensively developed, had recorded yields on individual fields approximating to five tons of foodgrain an acre—two or three times the best national averages. The potential of scientific method was so great that it should eventually be possible to produce such yields to order, with the help of fertilisers, among other things, on a large part (if not all) of the cultivated land.

Dr. H. L. Kay, a former Director of the National Institute for Research in Dairying, too, was of the view that, in underdeveloped countries, increase in food production could be far greater than 50 per cent. Large amounts of extra food could be produced without a single new scientific or agricultural discovery, provided advisers were available to spread the knowledge, sufficient practitioners were able and willing to make use of it, finances permitted it, and the social resources of the country encouraged it. These provisos are important and should provide much food for thought and action by the Central and State Ministers in India. One of the chief reasons for the failure of Indian agriculture to come up to expectations is the non-fulfilment of these provisos which in turn is largely the result of ministerial incompetence and administrative inefficiency.

Birth Control

Quite a number of the participants at the Cardiff meeting stressed the importance of restricting the growth of population. Sir George Thomson, the retiring President of the British Association for the advancement of Science, for instance, observed that, in the long run, the only possible answer to the problem of feeding the increasing world population was the voluntary restriction of births to match the falling death rate. The yearly increase of the world's population was roughly equal to the population of the U.K. This was very largely the result of medical science greatly reducing many diseases which killed. It was, therefore, peculiarly the duty of scientists to find remedies for the difficulty they had caused—the difficulty of feeding a rapidly-increasing multitude of which even now a terribly large proportion was under-fed.

Prof. D. V. Glass of the London University, who dealt with limitation of population by birth control, said it was tempting to believe that, in underdeveloped societies, the spread of birth control and of the small family could be made much more rapid. He was fully in favour of the spread of birth control knowledge and techniques. "But I doubt," he cautioned, "if there is, as yet, much basis for expecting the rapid adoption of birth control and of the small-family pattern in many undeveloped societies." It was by no means certain that, if expert advice and assistance were available, many societies would ask for it in the very near future, for fertility, virility, and national pride still tended to be linked. Finally, even if birth-control policies were adopted and assistance requested and obtained, it would be unwise, he went on to add, to assume any sharp change in levels of fertility. Accordingly, he suggested that the world must be prepared for a very massive underpinning of planned economic and social change, with provision of more ample food supplies as an essential basis. He thus came to the conclusion that, while efforts should be made to restrict population growth through family planning, the problem of raising agricultural production must also be vigorously tackled.

MANCHESTER LETTER

(*Concluded from page 506*)

then became apparent is still being reflected in extended order books and long deliveries. It should not, however, be taken for granted that the change in availability of cloth must necessarily mean a reversal of the trading conditions which were encountered at the end of last year. Autumn usually brings a swing to more activity, and the movement of supplies through the centres of distribution this summer has not been unduly affected by the disappointing weather. Sales recorded by the Wholesale Textile Association for the first half of 1960 compared favourably with those for the same period last year, being up by over 10 per cent.

The strength of demand is so often governed by external circumstances that it is difficult to assess the outcome at any particular moment. The concentration of the industry, following the scrapping of large quantities of machinery, has provided a better background for spinners and manufacturers to dispose of their products. The changing economic scene can have a pronounced bearing on consumption, but unless there is a startling alteration in the position within the next few weeks, consumers will need to put down continuity orders to follow on current contracts.—*All Rights Reserved.*

INSURANCE

(*Concluded from page 518*)

from Rs. 5.80 lakhs to Rs. 6.68 lakhs. The rise in premium in these two departments was, however, offset, to some extent, by the decline in premium in the miscellaneous department from Rs. 9.22 lakhs in the previous year to Rs. 8.61 lakhs. Nevertheless, the net aggregate premium was higher as noted above.

The rise in premium income was, however, accompanied by an increase in claims ratio from 39.9 per cent. in 1958 to 47.4 per cent. Portfolio-wise, claims in the fire department worked out to 30 per cent., as against 23.0 per cent. in the previous year, to 64.8 per cent. in the accident department, as against 47.4 per cent. in 1958, and to 79.3 per cent. in the marine department, as compared with 72.4 per cent. The steep rise in claims in the accident department was due to the adverse experience in East Africa and also the bad results within the country as a result of group working. Consequently, this department showed a loss of Rs. 51,247, as against a nominal profit of Rs. 15,363 in 1958. The marine revenue account continued to be in red, the loss having risen from Rs. 1.25 lakhs in 1958 to Rs. 1.76 lakhs in 1959. These losses were more than made good by the profits of the fire department which showed a handsome improvement from Rs. 3.65 lakhs to Rs. 4.47 lakhs. This is an indication of the extent to which fire business subsidises the other unremunerative risks. No wonder, Mr. Krishnaraj M.D. Thackersey, Chairman of the Company, expressed apprehension about the repercussions of the cut in fire insurance premium by about 10 per cent. with effect from 1st January 1960, on the Company's profit margin. The net departmental profits, inclusive of reserve for unexpired risks, were, however, lower at Rs. 2.21 lakhs as against Rs. 2.54 lakhs in 1958. As a result of the need for making a larger provision for reserves, thanks to the rise in net premium—Rs. 3.02 lakhs were added to the departmental reserves—the net profit shrank to Rs. 4.05 lakhs from Rs. 4.67 lakhs in the previous year. This, together with the net balance of Rs. 2.91 lakhs brought in from last year's account, makes available Rs. 6.96 lakhs which has been appropriated as under. Dividend for 1959, at the rate of Rs. 5.35 per share, less deduction of tax, Rs. 2.27 lakhs. This works out to a net return per share of Rs. 3.75, the same as in the previous year. A sum of Rs. 52,500 has been set apart as bonus to staff. The balance of Rs. 4.17 lakhs, subject to tax for the years 1956 and 1959, has been carried forward.

As a result of the year's operations, the total funds of the Company have increased to Rs. 62.81 lakhs comprising, among others, capital of Rs. 16.92 lakhs, fire fund of Rs. 12.38 lakhs, miscellaneous fund of Rs. 4.31 lakhs and marine fund of Rs. 6.68 lakhs.

PENSIONS IN U.K.

On an average, nearly 12,000,000 benefits and allowances are paid out by Britain's Ministry of Pensions and National Insurance each week, according to the Ministry's report for 1959, just published. At the end of last year, the cost of all payments was at the rate of about £1,200 million a year. The Ministry's staff-training branch gave help and information to over 90 visitors from 37 countries, including India. A large number of visits lasted several weeks, and the longest was for six months. Programmes were arranged to meet individual requirements, and included visits to regional and local offices.

An important feature of this part of the Ministry's work is a training course arranged twice a year under the auspices of the Colombo Plan. At courses held during the year, oversea students—mainly from South-East Asia—received comprehensive instruction in the work and organisation of the Ministry. During the year 1959 comprehensive reciprocal agreements on social security were negotiated with Denmark, Finland, the Irish Republic, the Federal Republic of Germany, and Turkey, and a supplementary one with Switzerland, all of which have been signed. The agreements with Denmark, Finland, and the Irish Republic are already in operation.

At the end of last year, the Ministry was paying, in Britain, about 750,000 war pensions; family allowances to nearly 3,500,000 families with over 9,000,000 children; and—under National Insurance schemes—nearly 5,500,000 retirement pensions, over 540,000 widows' benefits and guardians' allowances, and about 160,000 industrial disablement pensions. Mainly due to the influenza epidemic in February and March 1959, claims for sickness benefit during the year (8,750,000) were nearly 900,000 higher than in the previous year. Claims for unemployment benefit totalled 3,000,000; for maternity benefits 880,000; and for industrial injury benefit about 830,000.

JAYANT PAPER MILLS LTD.

There was very good response from the investing public to the equity issue of Jayant Paper Mills Ltd. As against 12,500 shares offered to the public, there were applications for 638 073 shares, that is, 51 times more than the actual issue. A detailed list of applications has been forwarded to the Bombay Stock Exchange. A scheme for the allotment of shares will be prepared by the Board of Directors of the Company in consultation with the Stock Exchange. This is expected to be done at an early date.

Notices

THE INDIAN CABLE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-first Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Friday, the 28th October 1960, at 11 o'clock in the forenoon, for the following purposes:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1960.
2. To declare Dividends.
3. To re-appoint a Director who retires by rotation.
4. To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

5. To consider resolutions in relation to the following matters and things:—
   (a) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Factory at Tatanagar and the Branch offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.
   (b) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Madras, Bangalore and Coimbatore, and to fix their remuneration.
   (c) To determine that the accounts of the Branch office of the Company at Karachi be not audited under the provisions of Section 228(1) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from the 14th October 1960 to the 28th October 1960, both days inclusive.

Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 28th October 1960 or their mandatees.

By Order of the Board,
B. J. WOODLEY,
Chairman.

9, HARE STREET,
CALCUTTA, *26th August* 1960.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

MARTIN BURN LIMITED

CONVERTIBLE NOTES

NOTICE IS HEREBY GIVEN THAT interest for the half-year ending 30th September, 1960, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1960, or in accordance with their instructions.

L. K. SEN CHOWDHRY,
Acting Secretary.

12, MISSION ROW,
CALCUTTA.
10th September, 1960.

COMMERCE

Who else must sweat and toil and gain but scanty fare."*
William Blake.

VOL. CI. No. 2582 BOMBAY, 24th SEPTEMBER 1960 PRICE Rs. 2

INDUS WATER TREATY

EXACTLY eight days before its fifteenth annual meeting due to be held at Washington early next week, the World Bank has been successful in adding one more feather to its cap. The feather has been drawn from the Indian sub-continent and is made up of the Indus Water Treaty 1960 and the Indus Basin Development Fund, the two agreements which have put an end to the 13-year-old dispute between India and Pakistan over the sharing of the waters of the Indus System of rivers. The World Bank has had to labour hard for nearly eight years, exercise enormous patience and find a lot of money to liquidate one of the toughest and frustrating disputes that have been standing in the way of friendship and peace between India and Pakistan. High in the list of persons, to whom both India and Pakistan are thankful for bringing about this peaceful solution, are Mr. David Lilienthal, a former Chairman of the Tennessee Valley Authority, and Mr. Eugene R. Black, President of the World Bank. It was Mr. Lilienthal who propounded the idea (in 1951) of a comprehensive engineering plan for the development of the waters of the Indus basin, on a joint basis, to be implemented with financial assistance from the World Bank. Mr. Black was taken up by this idea, because he had the foresight to realise the threat to the peace and prosperity of this sub-continent, in particular, and the world, in general, held out by this dispute. He suggested to the Governments of both India and Pakistan that, with the good offices of the Bank, they might be able to resolve their differences and his suggestion was accepted in March 1952. He then organised a team of engineers under the leadership of General Raymond A. Wheeler, spared one of the Bank's Vice-Presidents, Mr. Iliff, for conducting the delicate negotiations between the two countries, and sought and obtained the help of six members of his Bank—Australia, Canada, Germany, New Zealand, the U.S. and the U.K.—for financing the project. The World Bank itself has agreed to provide substantial monetary assistance for implementing the Plan. It has also undertaken to supervise the execution of the various projects in Pakistan. The leaders of Indian and Pakistan delegations—Mr. N. D. Gulhati and Mr. G. Mueenuddin—also deserve the thanks of the peoples of both the countries for their ceaseless and painstaking work during the four years of discussion and negotiation on the World Bank plan. All this would, of course, have been of no avail had there been no sincere desire and determination to reach an agreement on the part of the leaders of India and Pakistan. And here comes the crucial role played by our Prime Minister Nehru and President Ayub Khan of Pakistan. Both of them are rightly entitled to the handsome tributes paid by the leaders of the free world on the conclusion of the Treaty.

There are precedents in the world where major riverine disputes between two riparian sovereign States have been settled through peaceful negotiations. There is the classic agreement between the U.S. and Canada relating to the St. Lawrence Waterway, an agreement that has proved beneficial to both the countries. The agreement regulating the use of the Rhine and Danube rivers in Europe is another example. But the settlement of the Indo-Pakistan dispute over the Indus waters is unique in international relations in one important respect. There is no precedent where six foreign countries have come forward with large financial contributions to facilitate the promotion of an agreement of this nature. Collectively, the six countries mentioned above have agreed to contribute to the Indus Basin Development Fund as much as $640 million (about Rs. 308 crores), all by way of grants and not loans, in addition to the World Bank loan of $80 million (about Rs. 38.5 crores). Of this total of $720 million, all but the equivalent of $235 million are in convertible currencies, the $235 million representing a part of the U.S. counterpart funds held in Pakistan. What is it that has impelled these countries to make this sacrifice? Not the prospect of getting a few sizable engineering contracts, for there is little business gain for the nations concerned. It is their sincere desire to remove sources of threat to world peace that has been the motivating factor. It is this very consideration that has prompted India also to contribute to the Development Fund a sum of $174 million (Rs. 83 crores) in ten annual instalments of equal amount, besides agreeing to a number of conditions which are on the whole economically disadvantageous to it. If, however, the expectation that the end of the water dispute will lead to better relationship with Pakistan and help solve the other disputes turns out to be a mirage, the sacrifices which India and others have agreed to make will have been in vain. But faith and confidence are prerequisites for finding a way out of the Indo-Pakistan impasse. In resolving the water dispute, the vicious circle has been broken at a strategic point. Inasmuch as the Treaty guarantees the unhindered flow (except for essential, though relatively minor uses specifically laid down in the Treaty) of all the waters of the rivers which pass through Kashmir into Pakistan, it should serve to remove the doubts and suspicions of those in Pakistan who contend that India's position as an upper riparian in Kashmir poses an economic threat to their country. If only leaders of Pakistan appreciate this point, a workable solution for the Kashmir problem also can be easily and speedily found.

The Treaty between India and Pakistan is a comprehensive document and provides for all contingencies, leaving nothing to chance, so that there may be no breakdown and revival of the dispute in future. The quantum of water that India can draw from the upper reaches of three western rivers that are allotted to Pakistan and the purposes for which it can be used are clearly specified. Similarly, the quantum of water that India must supply to Pakistan from the three eastern rivers allotted to it during the next 10 to 13 years is also unambiguously laid down. There will be a Permanent Indus Commission consisting of an Indian and a Pakistani Commissioner, representing the interests of their respective countries. They will be responsible for ensuring the smooth working of the Treaty. They are entitled to the privileges of a U.N. representative when they visit each other's territory in connection with the implementation of the Treaty. If they are unable to iron out any differences between the two States, there is provision for calling a neutral expert to whom differences of a technical nature would be submitted for decision. Any major dispute on the interpretation of the Treaty will be left to a court of arbitration. There is also provision for future co-operation between the two countries for building specific projects by one in the territory of the other for such purposes as flood controls and drainage. This comprehensive Treaty ends the Indo-Pakistan Agreement of May 1948 and the charges due from Pakistan under this agreement have been settled at the consolidated figure of Rs. 58 lakhs which will be set off against India's contribution to the Indus Basin Development Fund. Finally, it is "expressly understood" that the Treaty governs the rights and obligations of each party with respect only to the use of the waters of the rivers and that "nothing contained in it shall be construed as constituting a recognition of waiver" of any other rights or claims of either party. The parties are further agreed that neither of them shall invoke the Treaty in support of its own rights or claims pertaining to other matters that are in dispute between them. It will thus be seen that every possible precaution has been taken to ensure the smooth working of the Treaty. There is no doubt that, given goodwill on both sides, the Treaty would be a success.

The greatest beneficiary, in material terms, of the settlement of the Indus water dispute is Pakistan. There is no doubt on that point. About 900 million dollars will be invested in Pakistan in about ten years from now. This will cover the cost of (*a*) link canals to enable Pakistan to replace the water which it is now getting from the eastern rivers with water from the western rivers that is now going waste, (*b*) building two large reservoirs which will provide the water-storage potential to meet, on a firm basis, the irrigation supplies of Pakistan canals during critical periods of fluctuating short-flow supplies and also enable substantial new irrigation development, (*c*) power stations with a capacity of 300,000 kilowatts, (*d*) works for integrating the present canal and river system into the new inter-river link canals, (*e*) remodelling five existing barrages and eight existing canals, and (*f*) sinking some 2,500 tube wells and building drainage works aimed at overcoming waterlogging and salinity in irrigated areas aggregating 2.5 million acres. When all these projects are carried out, the responsibility for which rests with the Water and Power Development Authority of West Pakistan, there will be a tremendous improvement in the range of production and productivity of Pakistani agriculture. No sensible Indian will grudge this economic growth in his neighbouring country. But he will be justified in expecting the Pakistan Government to be prompt in

settling the debts due to India on which it has been consistently defaulting for a number of years now.

As compared with the large benefits that will accrue to Pakistan from the settlement under review, the gains to India will be relatively small and even that can be realised only after a long period. In the short-run, India is a loser. Even though it is suffering from an acute shortage of foreign exchange, a difficulty which is likely to last for a decade, it has agreed to foot the cost of constructing the replacement link canals amounting to Rs. 83 crores, at the rate of Rs. 8.3 crores per annum. It should have at least insisted on adjusting this amount against the debts due from Pakistan, but, in its anxiety to settle the dispute, the Government has yielded on this point, too. It has also agreed to let Pakistan have water from the eastern rivers for a further period of 10 years. Although this will be at a diminishing scale, it will delay the development of parts of East Punjab and Rajasthan which are badly in need of the water from these areas. It is true that, in order to alleviate this hardship of India, the U.S. Government and the World Bank have agreed to lend India $33 million (Rs. 15.70 crores) and $23 million (Rs. 11 crores), respectively, which will cover the foreign exchange cost of a large earth-fill dam on the Beas river, with a live capacity of 5.5 million acre-feet and a hydro-electricity potential for generating 200,000 kilowatts of power. But these are loans and not grants. Besides, the quantum of assistance is negligible, as compared with what Pakistan is getting. And, what is more, the construction of this dam will take time and till then the completion of Rajasthan canal will have to wait. Surely, India is paying a big price for this deal. Here is one more convincing proof, if any proof were needed, of its sincere desire to live in peace and friendship with its neighbours.

PLAN DEBATE AND AFTER

WITH the completion of its recent consideration by Parliament and the National Development Council, the Draft Outline of the third Five-year Plan has now entered the stage of finalisation. And so the debate thereon in the Press has also entered its final phase. Although already the Planning Commission is known to have sifted and studied carefully the Press comments on the Draft Outline, it may be that the final debate, too, will have served some purpose. For it is not too late for critics to hope that some constructive ideas of theirs may yet gain acceptance at the hands of planners who, with all their bureaucratic propensities, are not wholly irresponsive to public criticism of which this article, incidentally, is but a modest part.

No apology is required for limiting this article to an examination of the most relevant or controversial issues raised in the debate in Parliament and the National Development Council. First and foremost among these issues is the one concerning the distribution of additional incomes generated under the first two Plans. This issue, which is not basically controversial for the simple reason that a study of income distribution is a legitimate statistical exercise germane to perspective planning, has unfortunately been raised and spotlighted in a form that does not augur well for its unprejudiced academic investigation.

The Prime Minister, for example, has propounded the thesis that the success of recent company flotations is attributable to the existence of "a small group of really affluent people." This diagnosis, which may well prejudice the labours of the Distribution of Income Committee, since set up under the Chairmanship of Prof. Mahalanobis, has at least the saving merit of recognising that, "apart from the members of the narrow affluent society in India, there are others today below that scale but in the well-to-do class, much larger in numbers than previously." The relatively far greater increase, since 1954, in the number of income-tax assessees in the lower income brackets than in the upper also bears out in a way Mr. Nehru's latter impression. That a wider and more equitable distribution of the additional incomes generated under the Plans has probably taken place may also be postulated with a measure of confidence in the background of what the Draft Outline of the Third Plan has to say on the question of reduction in inequalities. Here is the relevant quotation from the Outline:

"In a number of directions, measures have already been taken whose total effect in reducing economic and social disparities has been significant. In some of these, a greater advance is anticipated during the third Plan. Thus, within the rural economy, land reform has been a major factor in reducing inequalities. Security of tenures and reduction in rents have been largely achieved. In the course of the next two or three years, the legislation relating to ceilings on agricultural holdings will be implemented. The vast body of cultivators will also become owners of land in their own right. The expansion of irrigation, specially in areas which have in the past suffered from scarcity conditions, contributes to the raising of levels of living for some of the poorest sections in the rural community. Programmes relating to the welfare of backward classes—scheduled tribes, scheduled classes and others—are intended to benefit sections of the population who, in the present conditions, are not able to derive all the benefits due to them from the general plans of development. The extension of elementary education, which will become universal during the third Plan for the age group 6-11 years, the increase in scholarships and other assistance which is contemplated, the establishment of primary health centres, the provision of drinking water supply in almost all rural areas, the eradication of diseases like malaria and the extension of welfare activities of voluntary social service organisations, specially for women and children, go a long way to create the preconditions for equality of opportunity within the community. Increasingly, the community development movement is being required to place greater emphasis on measures to raise the levels of living and to provide work opportunities for the less privileged sections. In many areas, the provisions made for rural industries and rural electrification will also increase opportunities of productive employment. As these various measures are implemented with wider support and understanding from public opinion, their impact will steadily extend to the great majority of the population. Fiscal measures, undertaken with a view to finding resources needed for rapid development and based on the principle that burdens shall be equitably distributed, will also greatly assist the process of reducing old inequalities and preventing new ones arising from the very process of growth."

This is by far the fairest presentation of the real benefits that have materialised and are expected to materialise under conditions of planning. Any statistical appraisal of income distribution would need to take into account this wider diffusion of plan benefits and opportunities. The dependability of any such evaluation cannot, however, be taken for granted, if the inadequacy of imported statistical tools in their applicability to Indian conditions of social and economic stratification is not rectified in time to facilitate more scientific sample enquiries and the like. So long as the scientific complexion of the Mahalanobis Committee is less in evidence than its political overtones, there is bound to be a suspicion that it may start with some preconceived notions about income distribution and provide ammunition for witch-hunters. One has only to recall, in this connection, Mr. G. L. Nanda's remark, in the course of his reply to the Lok Sabha debate on the Draft third Plan, that "what they needed was an enquiry about wealth obtained by black marketing." Any such suggestion of black marketing in an economy which has luckily not been subjected to full-fledged controls as in war time is out of place in the context of the proposed investigation by the Mahalanobis Committee. It is to be hoped that this possible bias will not get into the investigation and distort the goal of objective appraisal of real benefits, besides additional money incomes, which have accrued and are accruing to wide sections of the population.

So much about the issue of income distribution—an issue which has been concretised in an enquiry committee. Other issues, which have figured in the parliamentary debate, have been raised rather feebly and all but forgotten. One such issue is greater reliance on indirect taxation than on direct taxation. While the stress on indirect taxation has been appropriately justified by Mr. Nanda on the ground that direct taxes touch only a smaller number, the debate has left the public no wiser on how more revenue is proposed to be raised through indirect taxes without unduly inflating consumer prices. The question whether the larger part of the additional taxation of Rs. 1,100 crores proposed to be levied by the Centre during the third Plan period has a reasonable chance of being accounted for by indirect taxes on a wide range of newer commodities remains to be answered. The related question whether the rates of excise duties now levied on a wide range of commodities of universal consumption can be steeply increased without any risk of curtailing their consumption and, in the final analysis, their production, has also not been answered. Whether the States can successfully compete with the Centre and raise, by way of indirect taxes, the larger part of the additional taxation of Rs. 550 crores which they are expected to levy, is another unanswered question. If these questions had been squarely faced in the debate and discussed, the need for reducing the excessively high target of additional taxation might well have been recognised by the planners.

Another disappointing outcome of the debate in Parliament is on the score of price stability. Mr. Nanda's assurance that the Government would do everything possible to stabilise the prices of essential commodities has not gone far enough, for he has said in the same breath that "what exactly would be the measures in this connection would depend upon situations and circumstances." Since the idea, canvassed by Mr. S. K. Patil, for a high-powered committee to fix the prices of agricultural commodities has been rejected by the Union Cabinet, any kind of logic or uniformity in the present regime of "partial" food controls is out of question. While it stands to reason that a structure of foodgrain prices, fair alike to the producer and the consumer, in the restraining context of the buffer stocks that are being built up with P.L. 480 food, may work well in practice, it is amazing that the Government still cling to a system of complex "partial" controls on movement, distribution, prices, and so on, which have thus far failed in the sense that they have not prevented the ever-rising trend in prices. The Government's approach, which has since been confirmed by the National Development Council at its latest meeting, does not thus have the merit of at least being a compromise; it is merely a continuation of the discredited old policy of "partial" controls.

This failure on the part of the National Development Council to take a more practical stand on the food prices question is, of course, nothing like a surprise. What is, however, surprising—and that too agreeably—is that the Council has retreated from its original dogmatic stand on co-operative joint-farming. The implications of the Council's cautious approval to the Nijalingappa Committee's recommendations on co-operative farming would need to be more fully appreciated (*vide* the leading article entitled "Retreat to Realism" in our last issue). Otherwise the Council's discussions on the Draft Outline have made no significant contribution in terms of policy-making. While the impossible demands of more than one Chief Minister for bigger State Plans have been rightly rejected by the Council, the State Plans, as they are, with their accent on agricultural production, employment-oriented construction schemes and priority attention to the less-developed areas in each State, have been rightly approved.

It only needs to be added that, even within the accepted framework of outlays under the State Plans, accounting for an aggregate of Rs. 3,650 crores over the third Plan period, there will be considerable scope for less expensive but immediately productive schemes of a labour-intensive character in agriculture, irrigation, soil conservation, road-making, and so on. If, under the dynamic impact of the Union Food and Agriculture Ministry's present production-oriented policies, the States assume the fullest responsibility for executing the relevant schemes, the country may well be out of the wood in the matter of food and agricultural raw materials by the end of the third Plan. This will be quite on the cards, if, at the same time, greater attention is devoted to the rural areas than to the urban in the matter of propagating family planning practices as much to reduce the income disparities between the agricultural and the non-agricultural classes as to reduce appreciably the present birth rate of 40 per thousand which currently involves an annual rate of increase of something more than 2 per cent. in the country's population. The mounting population pressures call for more energetic action, but it is surprising that the National Development Council has not issued the requisite call.

MARKET GOSSIP

A FRESH dose of credit restraints has been administered to the money and capital markets by the Reserve Bank of India in a bid to keep the price levels under check and to ensure economic development with stability. The Bank is convinced that there has been, in recent months, a large expansion in the supply of money and that this is due, to a substantial extent, to an increase in bank credit. It has also reasons to feel that this expansion is responsible, to some extent, for the rise in prices which has been of the order of 8 per cent. in the past one year. Accordingly, it wants to make sure that the supply of credit is restricted, albeit in a manner which will not affect production and employment. There are already a series of credit controls such as selective controls on foodgrains, sugar, groundnut and other oilseeds except cottonseed, special deposit system (variable reserve ratios), ban on direct financing by banks of *badla* transactions in shares, high minimum margins in respect of banks' advances against shares, a ceiling on clean advances, more restrictions on banks' borrowings under the Bill market scheme and so on. Apparently, the Reserve Bank feels that even the cumulative effect of these restraints on price levels has not been adequate and some more restrictions should be placed. A broad hint to this effect was given in the latest annual report of the Central Board of Directors of the Reserve Bank, published last week. After drawing attention to the fact that a part of the reduction in the excess liquidity of scheduled banks had been neutralised by changes in other assets, the report expressed concern over "the rather slow contraction of credit in the 1960 slack season" and exhorted the banks (*a*) to take energetic steps to bring about a satisfactory contraction of credit, so that they may be able to meet the requirements of the next season without undue strain, and (*b*) to reduce their access to the Reserve Bank, if the recent credit restraint measures are not to be nullified. These lines must have been drafted some time ago and the trend of money and capital markets since then shows that the Bank's expectations are not being fulfilled.

The usual busy season will commence in a month from now, but there has hardly been any contraction in the scheduled bank credit. The total of bank credit stands as on 9th September at Rs. 1,126.25 crores, a drop of only Rs. 3.55 crores since 29th April. During the same period of last year, it had come down by Rs. 96 crores. The ratio of credit to deposits is still as high as 58.39 per cent., as against 59.25 per cent., the peak in the last busy season, and 51.58 per cent. a year before. The total borrowings from the Reserve Bank against usance bills and Government securities as on 9th September are Rs. 52.04 crores; a year ago, they were no more than Rs. 1.79 crore. The maximum level of these borrowings was Rs. 79.44 crores during the last busy season and Rs. 61.86 crores in the 1958-59 busy season. There has also been a net disinvestment of investments in Government securities over the year. An important point that deserves to be noted in this context is that, so far during the current slack season, the deposits of scheduled banks have actually declined, from Rs. 1,929.95 crores to Rs. 1,928.75 crores, whereas, during the same period of 1959, they had risen by Rs. 105 57 crores to Rs. 1,794.66 crores. This development, coupled with the introduction of special deposits and heavy borrowings by the State Governments last month, has been mainly responsible for the high level of borrowings from the Reserve Bank, while the continued high level of bank credit must be attributed to larger industrial production, flotation of a large number of new companies and the higher level of wholesale prices. These are developments over which the banks have no control. The Reserve Bank is aware of this. It is also aware that, in the coming busy season, the demand for bank credit will be greater than in the past busy season and that the banks' call on it for assistance will be quite big.

Describing the new credit restraints, a Press note issued by the Reserve Bank says:

"The borrowing of banks from the Reserve Bank at Bank rate will be limited to certain quotas, above which further borrowing will be permitted only on payment of certain penal rates of interest. Each scheduled bank will be allotted a quota for borrowing from the Reserve Bank equal to 50 per cent. of the reserves required to be maintained by it with the Reserve Bank in terms of Section 42, sub-section 1 of the Reserve Bank of India Act (i.e., 5 per cent. of demand liabilities and 2 per cent. of time liabilities). The schedule of charges for borrowing from the Reserve Bank will be as follows:

(1) Scheduled bank borrowings (against Government securities as well as bills) upto 100 per cent. of the quota as given above—at Bank rate.

(2) Scheduled bank borrowings over 100 per cent. but not more than 200 per cent. of the quota—at 1 per cent. above Bank rate.

(3) Scheduled bank borrowings over 200 per cent. of the quota—at 2 per cent. above Bank rate.

In view of the new system of penalty rates, the ceiling limits of borrowing from the Reserve Bank of India, fixed for individual banks under the Bill Market Scheme, will, for the time being, not be operative.

"With a view to ensuring a levering up of the lending rates of banks and avoiding undue distortion in the present pattern of lending rates, the Reserve Bank has also issued a directive to the scheduled banks, requiring them to adhere, effective 1st October 1960, to a *minimum* lending rate of 5 per cent. on all advances, whether existing or new, whether clean or secured, with the exception of advances to other banks, including co-operative banks. Where the minimum lending rates of banks are 5 per cent. or more, the banks should, effective the same date, viz., 1st October 1960, raise the structure of their interest rates further so as to ensure an increase in their average lending rate by at least half a per cent.

"In respect of some very short-term rates on deposits, the Bank has also directed that no scheduled bank shall, effective 1st October 1960, pay interest at more than 2 per cent. below Bank rate, on any deposit (other than inter-bank deposit) repayable on notice or on the expiry of a period not exceeding 21 days from the date of deposit."

In the last few months, some banks have been gradually and quietly stepping up the rates of interest on their loans and advances, but the movement has not been general. The attempts made to secure a general increase in the lending rates of banks through inter-bank agreement did not succeed, largely because the State Bank of India was not willing to toe the line. Now, the Reserve Bank itself has forced them to charge more on their advances. The insistence on a minimum rate of one per cent. above the basic Bank rate will have a profound effect on the State Bank and some of the big banks, as they have been lending money to quite a number of big borrowers at 4½ per cent. In addition, the banks will also find it necessary to restrict the expansion in their advances during the coming months to a considerable extent, as their deposits are not growing fast enough. Most of them will, of course, try to reduce their investments in Government securities by selling them to the maximum extent possible. Indeed, this may be their first action in their attempts to increase cash resources, for borrowings from the Reserve Bank will cost more once their quota is exceeded. Even now, the total of their borrowings from the Bank is well above the quota specified above. According to the formula laid down by the Reserve Bank, the quota of their borrowings at the basic Bank rate of 4 per cent. is about Rs. 32 crores, as the statutory reserve is about Rs. 62 crores. So, on the balance of Rs. 20 crores of their current borrowings from the Bank, they will have to pay now at the rate of 5 per cent. If the total deposits of banks go down in the coming months, as they may well do, what with P.L. 480 funds not flowing into the State Bank, the basic quota also will shrink, so that, in the forthcoming busy season, the proportion of borrowings from the Reserve Bank that will be charged at 5 per cent. may conceivably be greater than that at 4 per cent. If that happens to be the case, the effective Bank rate will be 5 per cent. rather than 4 per cent.

The extent to which banks can unload their investments in Government securities will doubtless depend on the willingness of the Reserve Bank to support the Gilt-edged market. Since the main reason for not raising the Bank rate straightaway seems to be a desire to keep down the cost of borrowings by the public sector and avert a sizable fall in the value of Government securities, consistent support to the Gilt-edged market at current levels is implied. Accordingly, the Reserve Bank may be dumped with large parcels of Gilt-edged securities. In other words, in order to support the basic Bank rate at four per cent., it may have to buy from the banking system Rs. 100-150 crores worth of Government securities in the next six months, which means that there will have been no net borrowings by the Government this year. It is possible that the Reserve Bank may try to dissuade the banks from selling Government securities by gradually reducing its buying price. That this is possible is already evident from the drooping trend of the Gilt-edged market. On the very next day following the announcement of credit curbs, several banks were anxious sellers. This is only to be expected, for they will all try to cash in their investments in Government securities at the best possible rate well before the situation deteriorates. If the Reserve Bank wishes to avoid this rush, it will have to give an undertaking that it will support the Gilt-edged securities at their current value. Since there is a limit upto which the Reserve Bank can support these securities, the basic Bank rate itself will have to be raised sooner or later. It is almost certain now that, next year, the Government will not be able to borrow at the same rate of interest at which it has done this year.

The new credit restrictions announced this week are, of course, novel to this country but not to the rest of the world. The practice of central banking institution lending to commercial banks at varying rates of interest above a specified limit prevails in Japan, France, Greece and some Latin American countries. The complex system which the Reserve Bank has now adopted seems to be patterned after the Japanese system, though the latter is a little more complex. The only other difference is that, in Japan, the basic Bank rate itself is much higher and more closer to the lending rates of commercial banks than in India.

Sugar Exports

Soon after we went to press last week, the Union Food and Agriculture Ministry announced its decision to allow sugar exports. The relevant Press note issued on Saturday the 17th inst. is a very brief one, containing just two sentences: "The Government of India, after taking note of the trend of production, consumption and the supply position of sugar, has decided to release a quantity of 50,000 tons for export. Exports will be made through the Indian Sugar Mills Association." The Press note does not mention the names of countries to which sugar exports will be allowed; the Food Ministry is believed to have in mind Malaya, East Africa, Persian Gulf and some Middle East countries. An official spokesman is, however, reported to have stated at New Delhi that no part of the release of 50,000 tons would be shipped to the U.S. and that talks in regard to exporting sugar to that country were still in progress.

The Press note does not also explain the procedure governing sugar exports. There is, of course, no need for such an explanation, because of the permanent statutory enactment—the Sugar Export Promotion Act, 1958. This Act, it will be recalled, imposes a compulsory obligation on the part of all the sugar mills to surrender to the nominated Export Agency Division of the Indian Sugar Mills Association a portion of the output for export purposes, the loss on sale being borne by the mill concerned. Under the Act, the Centre can, by an order in writing, apportion the quantity of sugar fixed from time to time for export purposes among the various mills in proportion to the quantity of sugar produced by them during a particular season.

The primary consideration which has weighed with the Government in deciding to allow export of sugar is undoubtedly the pressing need for earning foreign exchange in the present context of the none-too-happy balance of payments position. On the basis of the currently ruling prices of sugar in world markets—approximately Rs. 400 per ton—the export of 50,000 tons is expected to fetch a foreign exchange of about Rs. 2 crores. But, as against this, there will be quite a sizable loss of rupee resources to the country—to the tune of Rs. 3.15 crores—in view of the wide disparity between Indian and world prices. The currently ruling wholesale price of sugar in India is about Rs. 1,030 per ton, as against the average world price of Rs. 400, or a difference of as much as Rs. 630 per ton. This difference represents the loss that will have to be borne not only by the State and the industry but also by the consumer.

On an export of 50,000 tons, the Central Government will lose by way of full remission of excise duty (at Rs. 291.25 per ton) about Rs. 1.46 crore and the State Governments by way of remission of cane cess (at Rs. 50.91 per ton) nearly Rs. 26 lakhs. Even after the full remission of excise duty and cane cess together amounting to Rs. 342 per ton, the net export price of sugar (without taking into account the freight rate of Rs. 68 and handling charges of Rs. 35 per ton) will work out to Rs. 688, that is, Rs. 288 more than the world price. The loss on 50,000 tons comes to Rs. 1.44 crore. This amount will have to be subsidised, the incidence of which will fall either on consumers in the form of high prices or on sugar mills by way of lower profits. If the loss were to be spread over the stocks of sugar lying undelivered with mills, estimated at about 720,000 tons, the sugar price would have to be enhanced by Rs. 20 per ton or about one naya paisa per lb. till such time that this quantity is sold out.

The heavy loss on sugar exports is due to the fact that the world prices are currently ruling much lower as compared with those prevailing three years ago. Readers are, perhaps, aware that there was a substantial increase in world prices of sugar from 3.7 cents to 6.7 cents per lb. towards the end of 1956 and the first half of 1957. It was this factor which enabled India to export a fairly large quantity of sugar—147,381 tons valued at Rs. 11.76 crores—during the calendar year 1957. But the position has since changed and the world prices are ruling low.

The Government's decision to release 50,000 tons of sugar for export, of course, has so far not had any effect on the internal sugar markets. This is not surprising, for, apart from the comfortable supply position, the distribution of practically the entire quantity of sugar produced continues to be under official regulation and there is control over the prices at which sugar is sold in the country.

Baghdad Oil Talks

Three important decisions were taken by the Baghdad Conference of six of the world's major oil-producing countries (Saudi Arabia, Kuwait, Qatar, Persia, Iraq and Venezuela) which ended on Wednesday the 14th inst. and to which a reference was made in these columns last week. First, it was unanimously and firmly agreed that all possible steps must be taken to raise the prices of crude oil to the level existing prior to the recent cuts, as well as to ask the companies to maintain staple prices. Secondly, the principle of consultation among the participating countries and oil companies in future developments was accepted, and all the countries agreed to study matters that might so stabilise prices and limit production as to guarantee a stable, regular income to them. Finally, it was decided to form a special body, called the Organisation of Petroleum Exporting Countries, with the object of "unifying and co-ordinating policies at times and eventualities concerning oil production." This Organisation is expected to meet at Baghdad on 15th November to prepare for a second conference at Caracas on 15th January next.

The oil companies must be gratified at the fact that the Baghdad conference did not, as had been feared before, decide to abandon either the 50-50 profit-sharing arrangements between them and the Governments of the producing countries or the system of posted prices. Equally gratified they must be over the postponement of issues like oil pro-rationing scheme, referred to in these columns last week. There is, however, no denying that the oil companies will henceforth "be confronted by something approaching collective bargaining on the part of producing States." At the same time, the oil-producing countries must have noted with satisfaction the decision of oil companies not to make any further cut in posted prices. In fact, ESSO, which had reduced its Middle East crude prices to a greater extent than the other companies, has raised its posted price to the level of the latter.

Outlook for Tea

The tea auctions in London during the last few weeks have witnessed a firm trend in prices of plain teas, contrary to the earlier expectations that the drought in North-east India, which had pushed up the prices of top quality teas, would not have much effect on the plainer varieties. This has been due to the fact that the effects of the drought have proved to be much greater than anticipated. It is now stated that the prolonged drought has not only greatly reduced the early pickings but also caused damage to some gardens to such an extent that there is little hope of recovery in the rest of the season. It is also feared that the later "rain" crops in some of the areas will also be greatly reduced. Supplies of North Indian teas to London auctions were considerably affected by the sharp fall in crop up to the end of August. It is reported that the quantity of tea offered in London in the first week of September was not more than about a third of the amount offered in

EQUITIES RECOVER

CREDIT RESTRAINTS HAVE LITTLE EFFECT

(From Our Own Correspondents)

BOMBAY, 22nd *September*

THE share market maintained a steady tone during the week under review. Prices over a wide front recorded a recovery and, in some cases, the improvement was sizable. Nevertheless, the volume of business was somewhat low, as the operators preferred to be cautious. The fear that the authorities might soon take fresh steps to check excessive speculation was still lingering in the minds of operators. An indication of the possible official move was provided by the fixation by the Controller of Capital Issues of as high a premium as Rs. 18.50 per share for the proposed rights issue of Guest, Keen, Williams to be offered in the ratio of one ordinary share for every share held. This premium, it may be noted, is very much higher than that (Rs. 10) collected when the Company first issued shares to the public in November 1956. This instance led to the fear that the authorities would insist on other companies also collecting high premiums on their rights issues.

The foregoing development was followed by further credit restraints by the Reserve Bank to keep down inflationary pressures. The two measures announced by the Bank yesterday were: (1) to make bank credit dearer by asking banks to charge a minimum interest of 5 per cent. on their advances and also to raise their lending rates by ½ per cent. on an average above the minimum rate and (2) to restrict banks' own borrowings from the Reserve Bank by levying penal rates of interest on excess borrowings above a fixed limit. These measures, which will be effective from 1st October 1960, did not have any serious adverse effect on equities, because of the feeling that the increase in the cost of borrowings was only small. After the initial flutter in the kerb on Wednesday evening, most of the speculative counters managed to regain their poise.

Narrow movements were noted in steel shares. Tata Ordinaries moved between Rs. 157 and Rs. 154.50 before finishing at Rs. 155, as against last week's closing of Rs. 155.75. Indian Irons, after an earlier improvement from Rs. 24 to Rs. 24.60, gave way to Rs. 23.92. Mukand Irons, however, recorded a slight improvement over the week at Rs. 25, reflecting the encouraging outlook indicated by the Directors' report.

Barring a few scrips, the textile section displayed a better tone and prices showed a sizable improvement. Bombay Dyeings were slightly lower at Rs. 66.60, after an early rise from Rs. 66 to Rs. 66.60. Centurys were erratically lower at Rs. 477.50, a loss of Rs. 4 over the week. Kohinoors hardened from Rs. 315.50 to Rs. 323 before drifting down to Rs. 314.50 towards the close. Morarjee Mills suffered a fall of Rs. 39 to Rs. 363, despite the Directors' decision to maintain the dividend for the year ended 30th June 1960 at Rs. 15.05 per share, free of tax (Rs. 21.50 gross). Finlays, however, recorded a rise of Rs. 2 to Rs. 352. Gokaks gained Rs. 2 to Rs. 177 and Khataus Rs. 10 to Rs. 570. Standards staged a marked recovery of Rs. 95 to Rs. 1,405, Svadeshis advanced by Rs. 14.50 to Rs. 260 and Tata Mills by Re. 1.25 to Rs. 43.25. Simplex, too, rose by Re. 1 to Rs. 171.

A mixed trend was noted in sugar shares, presumably due to the fact that a clear picture of the effect of the proposed sugar exports on companies' profit was not available. Belapurs, after moving up from Rs. 374 to Rs. 379, gave way to Rs. 370, while Phaltans improved by Re. 1 to Rs. 179 and Walchandnagars by Rs. 5 to Rs. 298.75.

Cement shares were featureless with hardly any fluctuations. A.C.Cs were unchanged at Rs. 144, Digvijays were dull at Rs. 173.50 and Orissa Cements at Rs. 13.96.

Activity in shipping shares was far from lively. Scindias moved between Rs. 14.80 and Rs. 14.52. Great Easterns recorded a small gain at Rs. 15.80. Among automobiles, Hindustan Motors gained 60 nP to Rs. 18.60 and Premier Automobiles Rs. 3.50 to Rs. 160.50.

Engineering shares were steady. Tata Locomotives were erratic moving between Rs. 288 and Rs. 279, but they closed on balance Rs. 3 higher at Rs. 281. The announcement by the Premier Construction Company of its decision to issue bonus shares lifted the scrips from Rs. 337 to Rs. 365, but much of the gain was wiped out today when they reacted to Rs. 345. The Company proposes to convert the 35,000 promoters' shares of Rs. 3.75 each into 11,666 ordinary shares of Rs. 30 each by capitalising Rs. 2.19 lakhs. It will then issue one bonus share for every two ordinary shares by capitalising a part of the general reserve and capital reserve. The conversion scheme is to be approved separately by the promoter-shareholders and ordinary shareholders, as also by a joint-meeting of all the shareholders and sanctioned by the High Court. Alcocks were a shade lower at Rs. 290. Cooper Engineerings were marked down by Rs. 6 to Rs. 159.50 and Josts Engineerings by Rs. 52 to Rs. 100.50. Larsen and Toubros were a shade quiet at Rs. 42.25, while Voltas gained Rs. 5 to Rs. 278.

In the miscellaneous group, Bombay Burmahs (old) gained on balance Rs. 6 to Rs. 587. Rayon shares were firm, National Rayons advancing by Rs. 7.50 to Rs. 507. Gwalior Rayons were done Re. 1.75 higher at Rs. 41.25. Baroda Rayons, which have now been made fully paid-up at Rs. 100, were done at Rs. 155. Indian Rayons picked up Rs. 8 to Rs. 68. Fears about the prospect of a cut in dividend pushed down Tata Chemicals by Re. 1.08 to Rs. 17.80, while Alembics staged a sharp rise of Rs. 16.25 to Rs. 251.25. Adarsh Chemicals rose by Rs. 5 to Rs. 78.50. While Amar Dyes suffered a drop of Rs. 20 to Rs. 425, Colour Chems advanced by Rs. 20 to Rs. 400. The announcement by Polychem Ltd. that 14.18 per cent. of the dividend declared for the year ended 31st March 1960 would be exempt from super tax and income-tax under Section 15C(4) of the Income-tax Act pushed up the Company's shares from Rs. 255 *cum-div.* to Rs. 270 *ex-div.* Indian Dyestuffs improved by Rs. 50 to Rs. 580 and their new shares by a like amount to Rs. 575. Expectations of a higher dividend lifted up Wimcos by Rs. 11.50 to Rs. 262.50. Ceat Tyres gained Rs. 5 to Rs. 235 and Premier Tyres Rs. 10 to Rs. 91. Philips Carbons changed hands Re. 1.48 higher at Rs. 17. Khandelwal Ferro Alloys improved by Rs. 8 to Rs. 101. West Coast Papers were a bright feature with a rise of Rs. 6 to Rs. 196.

Calcutta Stock Exchange

CALCUTTA, 21st *September*

Each day of trading on the Calcutta Stock Exchange during the week under review forced the recession in equity prices to take deeper roots and in the process many of the weak holders were eliminated. Thus the overbought position following the post-budget boom has been largely corrected, and measured by the yardstick of yield consideration equity values have put on the grab of reality thereby paving the way for genuine investment activity. However, with considerable part of funds lying blocked up in new issue applications, genuine buying was limited. Now that corrective force has originated from within, further official curbs on speculation are ruled out, although whether the Bank rate would be raised on the eve of the forthcoming busy season has become a matter of conjecture. With a view to ensuring that the demoralising effect of the present recessionary phase does not go beyond a stage greater than necessary, the authorities of the Exchange have taken measures to bring about stability in the market. Accordingly, it was announced during the week that no fresh sales in cleared securities, except of a squaring-up nature should take place until further notice.

Coals continued to search lower levels with Burrakurs touching a low of Rs. 16.62 after opening at Rs. 17.87. Central Indias, however, closed higher on balance at Rs. 10.59 after opening at Rs. 10 and after declining to Rs. 9.81. At Rs. 11.12, South Karanpuras were lower by one point. Western Bengals, after being lower at Rs. 6.75, recovered to Rs. 7.12.

The rapidly-easing trend in jutes reflected the anxiety entertained by mills with regard to the raw material situation. At Rs. 162, Aucklands accounted for a loss of Rs. 12. Unions slipped to Rs. 184 from Rs. 198. Kinnisons receded to Rs. 161 from Rs. 170, while Dalhousies at Rs. 125 were lower by only one point. Alliances were hammered down to Rs. 104 from Rs. 113 previously.

Engineering shares led the general declining tendency. The announcement that the rights issue by Guest, Keen Williams in the proportion of one for one ordinary share would be at a premium of Rs. 18.50 per share disappointed market circles and the share touched a low of Rs. 43.87, as against Rs. 49.75 earlier. Indian Irons touched a low of Rs. 23.92. Texmacos gave way to Rs. 23.10 from Rs. 25.40.

Miscellaneous industrials recorded a lower volume of business at declining rates. Hindustan Motors fell to Rs. 18.31 from Rs. 19.12. Rohtas Industries were lower at Rs. 22.37, as against Rs. 24 earlier. Dunlop Rubbers moved down to Rs. 40.50 from Rs. 41.75.

* * * *

Madras Stock Exchange

MADRAS, 21st *September*

Equities suffered a further setback during the week under review, following reports that the Government of India was considering various measures to curb speculation in stock exchanges. It was said that the Government would not permit companies with a good record of dividends to raise fresh capital by issuing new shares at par, but would insist on some premium being collected. It was also said that the Government was making efforts to ensure greater co-ordination among the Company Law Administration, the Controller of Capital Issues and other official bodies controlling stock exchanges and banks, with the object of checking any undue spurt in share values. Today there were strong rumours of the Reserve Bank announcing several measures to restrict credit expansion. Tea shares ruled easy as fresh support was lacking. Coffees were weak on reports of Uganda's move to stabilise exports of coffee. The unofficial estimates of lower coffee crop in Brazil did not have any effect. Rubbers were also depressed. Textiles, sugars and miscellaneous industrials were all subdued.

In the tea section, Hallevburias came in for selling and fell by 25 nP to Rs. 14.25. Nonsuchs lost a like amount to Rs. 27.25. Waterfalls receded by 22 nP to Rs. 4.25. Parksides were lower by 15 nP at Rs. 28.35. Blue Mountains declined by 10 nP to Rs. 5.05. Peermades and United Nilgiris shed 5 nP each, the former to Rs. 23.55 and the latter to Rs. 22.55.

Among coffees, Rajendras retreated by 50 nP to Rs. 14.50. Cowcoodys eased by 30 nP to Rs. 5.30. Consolidated Coffees dropped 5 nP to Rs. 26.05. Ouchterlony Valleys were unchanged at Rs. 4.75. Coffee Lands, however, elicited special support and rose by 30 nP to Rs. 24.80.

Rubber scrips were easy. Malankaras declined by 55 nP to Rs. 20 and Cochin Malabars by 12 nP to Rs. 7.28. Kailas shed 5 nP to Rs. 4.95. Kalpettas changed hands at Rs. 12.35. The Company has announced a dividend of 12.5 per cent., taxable (equivalent to 8.75 per cent. tax free), for the year ended April 1960, as against 12.5 per cent. tax-free for the previous year. Vaikundams were quiet at Rs. 31.45, as also Thirumbadis at Rs. 1.45.

In the textile section, Lakshmis suffered a setback of Rs. 6 over the week, today's closing rate being Rs. 141. Bangalore Woollens moved down by Rs. 3.50 to Rs. 200.50. Coimbatore Cottons fell by Rs 3 to Rs. 167. Travancore Rayons lost 85 nP to Rs. 35.90, after fluctuating between Rs. 35.75 and Rs. 36.75 in the earlier sessions. Maduras receded by 30 nP to Rs. 33.85. Loyals were lower by 25 nP at Rs. 35.25. Buckinghams were neglected at Rs. 205. Coimbatore Pioneers at Rs. 347.50, Coimbatore Spinnings at Rs. 48 and Dhanalakshmis at Rs. 227.

Among sugars, Indias were marked down by 25 nP to Rs. 13.05. Deccans decreased by 15 nP to Rs. 15.80, and Travancores by 10 nP to Rs. 12. Cauverys were subdued at Rs. 144 and United Breweries at Rs. 114.50. East India Distilleries, however, hardened by 50 nP to Rs. 40.25 on enquiries by certain interests.

In the miscellaneous section, cements were particularly weak. Dalmias eased by 15 nP to Rs. 12. Indias shed 6 nP to Rs. 7.19. Andhras lost 5 nP to Rs. 10.45. Orissas were neglected at Rs. 13.50 and Travancores at Rs. 8.80. Among chemicals, F.A.C.Ts declined by 67 nP to Rs. 11. Metturs closed at Rs. 13.25 *ex-div. ex-right*, as against Rs. 14.56 *ex-div. cum-right* last week-end. Mysore Fertilisers changed hands at Rs. 10.65 and Mysore Chemicals at Rs. 27.87. Among other scrips, Western India Plywoods suffered a loss of Rs. 8 to Rs. 290, following the announcement of a lower dividend at 10 per cent. taxable (equivalent to 7 per cent. tax-free), for the year ended March 1960, which compares unfavourably with 10 per cent., tax-free, for the previous year. Aluminium Industries gave way from Rs. 24.50 to Rs. 23.90.

ANUH PHARMA LTD.

It is not often that a manufacturer of indigenous medicine in this country seeks to raise capital by public subscription. Anuh Pharma Limited, a public limited company, registered on 19th February 1960, which has purchased the partnership firm of Messrs. Anuh Pharma, manufacturers of such indigenous drugs as "Rudanil," "Sisanal" and "Ugratin", has announced that it proposes to raise Rs. 10 lakhs for continuing the production and marketing of the products and to attempt the manufacture of new pharmaceutical preparations from indigenous drugs, hitherto known or unknown.

The proposed issue consists of 100,000 equity shares of Rs. 10 each. Out of this, 10,000 shares, of the total face value of Rs. 1 lakh, are being allotted to the partners of "Anuh Pharma" in part payment of the price for the sale of "Anuh Pharma" to the Company. The Directors and their friends have agreed to subscribe to another 10 000 shares. The balance of 80,000 equity shares of the total face value of Rs. 8 lakhs will be offered to the public shortly.

The subscription list will open on 8th October and close on 17th October or later at the discretion of the Directors but not earlier than 12th October 1960. Applications should be for a minimum of 50 shares or multiples thereof. A sum of Rs. 2.50 per share is payable on application and an equal amount on allotment. The balance of Rs. 5 per share will be called in two instalments of Rs. 2.50 each, at the discretion of the Directors at intervals of not less than three months between each call.

The Board of Directors of the Company consists of Mr. P. R. Subramaniam (Chairman) and Messrs. P. V. Pakvasa, N. T. Khandwala, Seventilal K. Shah, Dr. G. Krishna Murty, Dr. S. C. Sheth, Dr. V. P. Bhat, Messrs. M. V. Patnak and V. M. Shah. The Company proposes to manufacture "ethical pharmaceutical preparations" according to scientific standards, for the medical profession. The promoters claim that the products of "Anuh Pharma" are already popular with the medical profession. The raw material, which consists of indigenous herbs and fruits, is said to be available in plenty in the country. As such, the shortage of foreign exchange poses no problem to the Company.

ROHIT PULP AND PAPER MILLS

The Rohit Pulp and Paper Mills Ltd., Bombay, has been granted an industrial licence as well as a import licence for Rs. 1,85,000 under Japanese yen credit. Orders for the machineries have been already placed. It is proposed to manufacture fine qualities of writing and printing papers from rice straw and yarn rags. The Company's mills are to be established in Gujarat State near Pardi. Sixty acres of land have been acquired and 1,000 kv. power has been sanctioned by the Gujarat Electricity Board.

The authorised capital of the Company is Rs. 1 crore and, at present, it is proposed to issue 25,000 equity shares of Rs. 100 each of the total value of Rs. 25 lakhs. Necessary permission to issue the capital has already been received. Out of the above issue, the Directors and their friends have agreed to purchase 12,750 shares. The balance of 12,250 shares will be offered to the public shortly.

NEWS IN BRIEF

OUTPUT of pepper in India in 1959-60 was lower at 508,000 cwts., as compared with 510,000 cwts. in 1958-59 and 532,000 cwts. in 1957-58, according to the Commonwealth Economic Committee's *Tropical Products Quarterly*. The decline is attributed to bad weather.

The State Trading Corporation is contemplating to set up a subsidiary for handling exclusively exports of minerals (iron ore and manganese ore), which are now routed through the S.T.C. and also to amalgamate the Handicraft Development Corporation and the handloom export organisation into one subsidiary organisation.

A Bill to extend the Employees Provident Funds Act to establishments employing 20 or more persons was introduced in the Lok Sabha on the 9th inst. The Act at present applies to 43 industries and establishments and provides the benefit of compulsory contributory provident fund to over 2.6 million workers. It is now applicable to establishments employing 50 or more persons only.

The U.S. Government has approved of a $5 million (Rs. 2.38 crores) loan to the Industrial Credit and Investment Corporation of India (I.C.I.C.) for the purpose of relending the funds to private Indian industries. The loan is from the Development Loan Fund. Details of the credit remain to be negotiated. The industrial categories to be assisted through this loan have been mutually agreed upon by the I.C.I.C. and the D.L.F.

The Railway Board has sanctioned the traffic survey for the construction of a 32-mile Diva-Panvel-Uran broad-gauge line on the Central Railway. The survey will be carried out by the Central Railway Administration. The proposed line is expected to help the economic growth of this underdeveloped Konkan region on the Central Railway and also help relieve congestion in railways around Bombay arising from industrial development.

India is to import Spanish merinos for experimental breeding in the Himalayan region for improving the wool yield of indigenous sheep. Spanish sheep possess smaller bodies and lighter fleeces than the highly developed sheep of Australia, as they are raised under poorer conditions. The Australian sheep have not yielded very good results in the past and it is believed that Spanish merinos may thrive better in the Himalayan region.

An agreement between India and Czechoslovakia for the operation of air services between the two countries was signed on Monday this week at Prague. Air-India International has been operating air services through Czechoslovakia since 1956 and the Czechoslovak Air-lines began operating a service to India in August 1959. The air services by the two airlines, which were being operated under temporary authorisations, would now be placed on a formal basis with the signing of the agreement.

An official Bill seeking to impose ceiling on existing landholdings and on future acquisition of lands in Gujerat has been moved in the Legislative Assembly. The Bill seeks to impose ceilings on perennially irrigated land at 14 to 33 acres and on dry crop land at 56 to 132 acres. Gujerat is the ninth State to sponsor such legislation. It is estimated that about 200,000 acres of land out of about 25.5 million acres of cultivable land in the State will be available as surplus land. There are 250,000 landless families in the State.

Nearly 676 million tons of coal in two seams with an area of 6.3 sq. miles in the recently-discovered Singrauli coalfield in Madhya Pradesh have been proved by the Geological Survey of India. The Singrauli coalfields extend over an area of 800 square miles. The geology of the area indicates that the seams are likely to extend over a larger area and, therefore, the potentiality of the coalfield as a whole is considered fairly substantial. It is proposed to raise 2.5 million tons of coal during the third Plan period from the Singrauli coalfield which will be run by the public sector.

The U.S. Export-Import Bank has approved of a transaction for the purchase by Air-India International of one Boeing 707 commercial jet airliner. The Bank will assist in the sale by extending a credit of $4.1 million to India. The total U.S. dollar cost of the airplane will be $6 million, including airframe spares, ground support and ground handling equipment and personnel, ground and flight training. Following the Bank's formula for the financing of export sales of this type, the Air-India International will pay 20 per cent. of the dollar cost before delivery, the Boeing Airplane Company of Seattle will finance 12 per cent. and the Bank the remaining 68 per cent.

The Government of India has decided to extend the procedure under Rule 191A of the Central Excise Rules, 1944, for export out of India of articles under claim for rebate of duty on the excisable goods used in their manufacture to yard material, commercially known as dress material, as well. This procedure is already applicable to ready-made apparel, tents, cotton bags, umbrellas, *chaddars*, pillow cases, table covers, cotton handkerchiefs and several other articles. The Government has also decided to permit the manufacture in bond of yard material for the purpose of export, under Rule 191B of the above-mentioned Rules.

Work on the construction of the watch factory proposed to be set up at Bangalore as an adjunct to the Hindustan Machine Tool Factory will commence next month, according to Mr. M. K. Mathulla, Managing Director of the H.M.T. Mr. Mathulla has just returned from Japan, after having detailed consultations with the collaborating firm, the Citizens Watch Company of Japan. The watch factory is scheduled to go into production by the end of 1962, with an initial annual capacity of 360,000 watches. The average cost per watch is expected to be less than Rs. 100. The factory is estimated to cost Rs. 2 crores. The Japanese Government has agreed to provide the necessary foreign exchange.

A three-man official delegation, consisting of Mr. K. B. Mathur (Chairman of the Heavy Electricals), Mr. M. Hayath (Chairman of the Central Water and Power Commission) and Dr. B. D. Kalelkar (Senior Industrial Adviser to the Government of India), will shortly leave for a tour of Russia and Czechoslovakia to finalise arrangements for the establishment of two heavy electrical projects during the third Plan period. The two countries have already offered help for these projects. The Indo-Soviet project will produce 750,000 kw. hydro and thermal generating units and high power motors for the steel works. The projects with Czechoslovak collaboration will manufacture thermal units of 600,000 kw. capacity and about 19,000 tons of high pressure boilers. Both projects will produce other matching equipment and have sufficient scope for expansion.

About 26,000 tons of sodium sulphate, an important industrial chemical, can be obtained annually from Sambhar Lake bitterns in Rajasthan by a new process developed at the Central Salt Research Institute, Bhavnagar. The commercial feasibility of the process has been established as a result of pilot-plant trials conducted at the Institute. The new process makes use of the plentifully available "bittern"—about 250,000 tons a year—obtained during the extraction of common salt from the Sambhar Lake brine, the largest single salt production centre in the country. It has been estimated that an industrial plant producing 14 tons of sodium sulphate daily will require an investment of Rs. 9.6 lakhs. About 20 tons of high grade common salt will be obtained as by-product. The return on the total investment is estimated at 31 per cent.

The papers prepared by the Central Statistical Organisation on labour costs on the cotton textiles, cement, jute and sugar industries were discussed by the Steering Group on Wages, at its meeting at New Delhi on the 21st inst. The Group was set up by the Union Labour Ministry in December 1957 to give adequate attention to the question of wages and related issues which have a bearing on labour-management relations. The Group also considered the findings of the report of the National Council of Applied Economic Research on depreciation and replacement practices. The other items considered related to the effect of industrial wages on agricultural prices and the survey of the pattern of absenteeism among colliery workers in the Jharia coalfields.

A central mechanised unit will be established in each State to ensure maximum efficiency and utilisation of construction equipment available at irrigation and power projects within its territory. This is one of the decisions taken at a meeting of the Co-ordination Board of Ministers, held at Bangalore last week, under the chairmanship of Mr. Hafiz Mohammed Ibrahim, Union Minister for Irrigation and Power. The functions of the mechanical units include planning the requirements of construction plant and machinery required for all minor, medium and major projects, except in respect of those major projects which are administered by control boards or corporations. The units will also procure new machinery and ensure that effective use is made of declared surpluses. They will supervise operation and maintenance of equipment as well as planning of major repairs and reconditioning of equipment surplus to the requirements of some projects. They will further lay down proper schedules for census of machinery, history sheets, log books, maintenance sheets, standard system of stores and other records and prepare lists of spare parts and their procurements.

The Seminar on Irrigation and Power held at Bangalore last week recommended, *inter alia*, that the cost of multipurpose river valley projects should normally be allocated to the three main functions —irrigation, power and flood control. Other functions, such as water-supply for domestic and industrial uses, navigation, pisciculture and preservation of wild life should be included in one of these main heads. It also suggested that, in the apportionment of cost of river valley projects, "the use of facilities method," under which the reservoir capacity and the quantity of water utilised will be the basis for calculations, should be adopted. The distribution of costs, it was felt, had to be done for each unit, such as dam, canal, weir, etc., and not for the project as a whole. Suitable adjustments should also be made in cost allocation, wherever necessary, and a review made when there was a significant change in the use of facilities by the various functions. During the construction stage of a project cost allocation, it was recommended, should be done on the basis of proposals to be immediately implemented. Reallocation could be done when the scope of the project was modified. The basis of allocation would continue to be the same whether the beneficiary was one or more States.

The Government of India has appointed experts to assist the Technical Committee which is now examining the question whether the provident fund rate should be increased from 6¼ per cent. to 8⅓ per cent. in certain industries. The Committee was appointed by the Labour Ministry in May last, with Mr. N. R. Meher as Chairman, to examine, in the first instance, six industries—cement, cigarettes, electrical and mechanical or general engineering products, iron and steel, paper and textiles. Following are the experts appointed for each of these industries: Mr. I. M. Mouhdin, Dalmia Cement Workers' Union, Dalmiapuram (cement), Mr. J. D. Harvey, Financial Accountant, the Imperial Tobacco Company of India Ltd., Calcutta, and Mr. Jagannadha Rao, President, I.N.T.U.C., Andhra Branch, Hyderabad (cigarettes), Mr. R. D. Trivedi, Director, Messrs. Jeewanlal (1929) Ltd., Calcutta (electrical, mechanical or general engineering products), Mr. V. V. Ranade of the Indian National Trade Union Congress, Bombay, Mr. R. S. Pande, Agent, the Tata Iron and Steel Company, Ltd., Jamshedpur (iron and steel), Mr. V. G. Gopal, General Secretary, Tata Workers' Union, Jamshedpur (iron and steel), Mr. Dhuleswar Bastia, Rourkela Mazdoor Sabha, Orissa (paper), Mr. M. L. Zutshi, Shri Gopal Paper Mills Ltd., Calcutta (paper), and Mr. G. Ramanujam, Vice-President, I.N.T.U.C., Coimbatore (textiles).

From Abroad

Russia has agreed to supply Ceylon as many planes as it needs for civil aviation either on an easy long-term basis or under barter arrangements.

The French Government has relaxed restrictions on the imports of a number of commodities, including tea, cashewnuts, manganese ore and frozen seafoods.

The British National Coal Board has raised the pithead prices of all types of coal by an average of 6s. 8d. a ton. The increase, the first in the last three years, is expected to yield an additional annual revenue of £60 million.

The Government of Cuba has nationalised three U.S. banks in the country, namely, the First National Bank of Boston, the Chase Manhattan Bank and the First National City Bank of New York. Earlier, it took over the entire tobacco industry under the pretext that the owners were openly hostile to the economic development of Cuba.

Under a barter deal signed between Hungary and Holland, the N. V. Werkspoor of Utrechit will supply Hungarian railways 380 freight trucks worth about Fls. 6 million for delivery by 1962. In return, Hungary will supply light and heavy industrial machinery. This is the biggest transaction between Hungary and any other country in Western Europe since 1956.

The Combined Policy Research Association, an influential advisory body in Japan, has suggested the possibility of raising Japanese passenger car production from 80,000 in 1959 to 1.2 million by 1970. It has urged the industry to export at least 500,000 cars by 1970. Japan's automobile production is now fast rising and is expected to offer severe competition to the U.S., the U.K. and West Germany.

The world's entire productive capacity for newsprint, about 15 million tons per annum, now seems to be fully utilised, according to a survey made by the Swedish Holmen group of industries in Norway. The reason behind this encouraging development is the unexpectedly large increase in consumption practically all over the world. According to international estimates, productive capacity and consumption are likely to be 17.7 million tons in 1965 and 26 million in 1975.

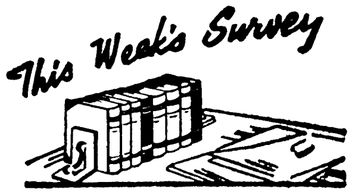
The U.S. Tea Council opines that current record tea imports into the U.S. indicate that tea drinking is growing in popularity in that country. Tea imports rose to a record figure of 73.5 million pounds during the first seven months of 1960, an increase of 7 million over the corresponding period of the previous year. Total tea imports of the year are expected to reach a record of 117 million pounds, as compared with about 108 million tons last year.

President Eisenhower has signed legislation making it easier for U.S. corporations operating in more than one foreign country to take advantage of the full U.S. tax credit due to them. The measure permits U.S. firms to elect whether to compute their foreign tax credit against the U.S. 52 per cent. levy on an overall or a per-country basis. Under the 1954 code, it was mandatory for U.S. firms to calculate their foreign tax credits on a per-country basis. Many instances arose where a company was unable, under this provision, to get the full U.S. credit for foreign taxes paid.

PERSONAL

MR. G. L. Mehta, Chairman of Industrial Credit and Investment Corporation, has been appointed Chairman of the third Finance Commission. Mr. G. R. Kamat, I.C.S., will be the Member Secretary.

Mr. Morarji R. Desai, Union Finance Minister, left Bombay for London on the 17th inst. to attend the Commonwealth Finance Ministers' Conference there. He was accompanied by Mr. M. V. Rangachari, Deputy Governor of the Reserve Bank of India, Mr. V. V. Subramaniam, Deputy Secretary to the Union Minister for Finance, and Mr. V. Y. Tompe, Personal Secretary to the Finance Minister. From the U.K., Mr. Morarji Desai will proceed to the U.S. to attend the annual general meeting of the Board of Governors of the World Bank and the I.M.F.



CEYLON'S CRISIS BUDGET

THERE is something that is commendable but much else that is condemnable in the Budget proposals, announced on 15th inst., by Mrs. Bandaranaike's Government in Ceylon. The good and the bad alike in the proposals, viewed against the background of a crisis or near-crisis in that country's foreign trade sector, with its repercussions on the Government's finances and the domestic economy in general, may seem to be both logical and necessary. But the crisis, which has manifested itself in a depletion of the country's foreign exchange reserves to the level of about Rs. 55 crores in recent weeks—a depletion which has necessitated some very drastic import curbs well in advance of the Budget—and in an anticipated deficit of Rs. 47 crores in the Government's finances, may only partly explain, but not wholly justify, the bad proposals in particular.

The least desirable of these proposals are a tax of Rs. 400 per annum on every foreign resident visa-holder whose stay in Ceylon exceeds three months, and an annual registration fee of Rs. 1,000 for every business, big or small, carried on by non-nationals, either individually or in partnership with Ceylonese nationals. These levies, which have probably no precedent elsewhere, are most likely to have the effect of squeezing thousands of Indian nationals out of Ceylon. One estimate, in this connection, is that there are now 35,000 resident visa-holders among the Indian nationals—the barest minimum, according to the Indian Mercantile Chamber of Ceylon, required for posts of trust and confidence in Indian business establishments. Since 150,000 Indian nationals have left Ceylon in the last ten years on account of the refusal of the immigration authorities to renew their resident visas and about 800,000 persons of Indian origin have been rendered Stateless following the rejection of their claims to Ceylon citizenship, the intended or unintended effect of the present iniquitous levies becomes unmistakably clear. It is a determined attempt to give effect to the Government's policy of Ceylonisation of trade and occupations that offer self-employment. If the remaining visa-holders, most of whom are accountants, trustees, salesmen, petty shopkeepers, and even tailors, barbers and dhobis and whose annual savings are probably very little, cannot manage to pay the proposed annual visa fee and, wherever it applies, the annual registration fee for business, they will have to quit Ceylon for good. Even if some of them hope to be able to pay the levies, the apprehended treatment of children under 16 (who are now included in the single resident visa of their parents) as separate entities for the purpose of levying the visa fee may provoke second thoughts in them. Unless the visa fee and the annual business registration fee are drastically reduced, if not abolished, it is difficult to see how anything more than a few hundreds of substantial Indian business men, who can manage to pay both the registration fee and the visa fee on behalf of their employees, can continue to remain in Ceylon for their living. An estimated annual revenue of even upto Rs. 2 crores from these levies cannot justify their imposition in view of the human factors involved.

If these twin proposals are undesirable from the point of view of Indian nationals, there is one other tax proposal which may be deemed to be equally undesirable from the point of view of the entire private industrial sector in Ceylon. The proposed annual levy of Rs. 50 for every Rs. 10,000 nominal share capital of companies registered under the Companies Ordinance looks very much like a capital levy, or like the wealth tax on companies, now abandoned in India. The proviso that the new levy will not apply to "industrial or manufacturing corporations approved by Government" is by no means clear; if it means that public sector undertakings will be exempted from the levy, it will be patently discriminatory in so far as the private sector is concerned. It will be doubly so in the context of the Ceylon Government's industrial policy under which such industries as iron and steel, cement, chemicals, fertilisers, textiles, tyres and tubes for motor vehicles, sugar and by-products, mineral sands, salt, ceramics, plywood, leather footwear, paper, roofing tiles and ayurvedic drugs are reserved for the expansion of the public sector.

This industrial policy, incidentally, leaves very little scope for expansion of the private sector. What is worse, it cannot also hope to expand in collaboration with foreign private capital in certain fields, because it is proposed to attract foreign investments only to new fields of industrial activity and to fields where the private sector has not already established itself. In the result, the fields open to foreign investors are probably very few; this may be even more true, if it is remembered that, generally speaking, foreign private investors are chary of collaborating with the State in the establishment of industries exclusively reserved for the public sector. The countries that will probably benefit most from the policy adopted by the Ceylon Government are those that belong to the communist world.

In the aforesaid context, the concessions and assurances held out in the Budget to attract foreign investments may not be of much avail in actual practice. The concessions now offered are besides the tariff and tax concessions already available to local Ceylonese enterprises, and include free permission for repatriation of dividends and the eventual repatriation of assets, free permission for bringing in all necessary technical and managerial personnel, permission to such personnel to remit a part of their earnings abroad and avoidance of double taxation. These are good in so far as they go. It may be that foreign collaboration, if it comes forth, will be productive of good in terms of foreign exchange earnings where the enterprises concerned cater to export markets. But the proposal that every case of foreign investment will be submitted to Parliament for approval defies one's understanding. The Ceylon Finance Minister's view that "this would be the best safeguard as far as security of foreign investment is concerned" does not stand to reason, not only because a collaboration agreement between the foreign investor and the domestic investor is a private affair, subject only to some degree of administrative control and having a legal validity of its own, but also because there will be greater, not less, insecurity for foreign investments when they are periodically scrutinised by a Parliament whose political complexion will be changing from time to time. Ceylon's economic crisis would appear to suggest the need not for such devices of doubtful utility but for more forthright guarantees to foreign capital, preferably within a regional framework covering other underdeveloped countries in South-East Asia.

INDUSTRIAL WAGES AND PRICES

At a time when the reliability of national income statistics has been questioned by no less a person than the Governor of the Reserve Bank, it is odd to be told that an official paper with a bearing on wage and price policies has been based on some Central Statistical Organisation surveys done within the framework of those very statistics. If, however, it is taken that the basic data are dependable for this purpose even as they have been deemed to be so all along for other purposes, the conclusions of the official paper would bear examination. The main conclusion that a 20 per cent. increase in the wages of workers employed in large-scale manufacturing industry will result directly in increasing the price level in that sector by 3.71 per cent. is a disquieting confirmation of the extent to which wage-cost inflation can bring about price inflation. That the same percentage increase in wages will result directly in increasing the price level only by 0.05 per cent. in the agricultural sector, by 0.61 per cent. in the small-scale manufacturing sector, by 0.17 per cent. in the mining sector and by 0.28 per cent. in the tertiary sector, cannot, however, be taken to justify any indiscriminate wage increase in the industrial sector without regard to the paying capacity of individual units, especially the marginal and sub-marginal ones, and to the growth of *per capita* national income in the earlier stages of industrialisation.

An increase of 3.71 per cent. in the price level of the large-scale sector, brought about by a 20 per cent. increase in wages, is in any case substantial. Here, it is only the initial effect that has been appraised, for the spiral effect of the increased prices of the products of other sectors entering the large-scale manufacturing sector have not been taken into account. Although wage income represents only 25.7 per cent. of the gross domestic product at factor cost in the economy as a whole, the corresponding percentage in the case of large-scale manufacturing is as much as 48.2. When this factor is considered along with the aforesaid spiral effect, the tendency to discount the inflationary consequences of steep wage increases not related to productivity will have been checked. These are only general comments on some conclusions of the official paper. Further comments have necessarily to await the publication of the relevant surveys made by the C.S.O. and the Indian Statistical Institute. The official paper, however, does highlight the wage-cost side of price inflation—a side which is no less important than its monetary side—but this is more implicit than explicit.

TOURISM

In deciding the quantum of allocation for the development of tourism in the third Plan, the Planning Commission was unwisely niggardly. A sum of Rs. 5 crores provisionally provided for in the Draft Outline for an industry which ranks as the sixth largest foreign exchange earner, can hardly be regarded as adequate, even conceding the existence of other pressing claims on the limited resources. Considering the fivefold rise in foreign exchange earnings from tourism in a period of ten years and the possibility of further increase in future, one cannot help feeling that the Planning Commission was penny-wise and pound-foolish. The present allocation is but an insignificant fraction of the total outlay of Rs. 11,250 crores envisaged in the Draft and too small in view of the growing importance of tourism both as a foreign exchange earner and a potent instrument for promoting international goodwill and understanding. Surely, to an industry, which earned for the country foreign currencies to the tune of Rs. 21 crores in 1959 and which is expected to yield Rs. 90 crores in all during the second Plan period as much as Rs. 200 crores in the third Plan, a more generous provision will have been fit and proper. The flow of foreign tourists to this country, which has been steadily mounting year after year since 1947, is likely to spurt in the next few years as a result of the new impetus which the "Visit Orient Year" and "Visit India" year, due to be celebrated in 1961, is sure to give to tourism. To cope with the increased tourist traffic and to create facilities to attract more foreigners to India's shores more money and better spending of it are called for.

The All-India Tourist Development Council, therefore, did well to appoint, at its meeting held this week in Shillong, a committee, headed by Mr. Shankar Dayal Sharma, Madhya Pradesh Minister for Tourism, to secure from the Planning Commission an increased allocation by taking such steps as the committee deemed fit, including, if required, waiting in deputation on the Prime Minister whose keen interest in tourism is well known. In a persuasive speech delivered at the meeting, Mr. Homi J. H. Taleyarkhan, Maharasthra's Minister for Tourism, told the Council that the sum of Rs. 5 crores proposed for tourism by the Planning Commission was too little, in view of the growing importance and consciousness of tourism. He was of the view that the foreign exchange earnings could be more than doubled, if the Plan allocation itself were doubled to Rs. 10 crores. It is needless to add that the aforesaid committee must work out a detailed project to prove this claim, if it is to carry conviction to the Planning Commission.

The Council also appointed another committee under the chairmanship of Mr. Taleyarkhan to make a detailed survey and assessment of the various requirements of the tourists, both home and foreign, in respect of accommodation, transport, communication, guidance and other facilities and to suggest measures for providing these facilities. The survey is expected to provide a complete picture of the position as it is today, of the gaps that exist and the quickest and most inexpensive means of filling it up. The committee is expected to submit its report before the next meeting of the Council in May next.

While we do not propose to anticipate the findings of the committee nor to visualise its recommendations, attention may be drawn to some of the most glaring shortcomings and lacunæ in the existing tourist arrangements. Provision of adequate hotel accommodation and cheap, comfortable transport facilities are two prerequisites for making the stay of foreign tourists in the country enjoyable. On both these counts, there is still much to be done. Recognising the need for encouraging the establishment of more hotels in the country, the Tourist Development Council has recommended the provision of Government lands to the hotel industry at reasonable market rates. It would be a good thing if foreign hoteliers are invited and encouraged to invest in hotel industry in this country either in partnership with private hoteliers, or with Government. The Pan American Airways had some time ago made an offer to collaborate with the Government of India in the establishment of luxury hotels in Calcutta, Bombay and Delhi and in-type hotels (that is, hotels having well-appointed private rooms but no public rooms) in Madras, Agra, Benaras and Jaipur. It is not known what has become of this offer. If the Government is not in favour of itself being the collaborator in this project, it can invite private hoteliers so inclined to do so. The hotel industry should also be given suitable financial assistance to help it to speed up the construction of hotels.

As regards transport, the present arrangements, though much better than what they were before, leave much to be desired. The Council's suggestions for licensing medium-sized cars as luxury taxis, the provision of self-driven taxis for foreign tourists, evolution of a code of conduct for taxi operators and relaxation of mileage restriction on railway travel, are all well worth consideration. The elimination of irksome custom formalities, abolition of begger nuisance, issue of liquor permits valid in all the States by Indian missions abroad and tourist departments in the country, well-directed and imaginative propaganda in foreign countries, etc., are other matters which, though apparently trivial, are essential for enhancing the tourist attractions of our country.

EXPORT OF ENGINEERING GOODS

A feature of industrial development in India during the last few years is the steady expansion of engineering industries. Despite shortage of raw materials, skilled labour, technical know-how and other handicaps, the industry has given a good account of itself and, what is more, it has made a promising beginning in the sphere of exports, too. The total exports of engineering goods rose by as much as about 60 per cent. to Rs. 3.76 crores in the first half of 1960, as compared with the corresponding period last year. While this growth is not insignificant for a beginner, the share of engineering goods in India's total exports is deplorably small, being no more than 1.25 per cent. In the third Plan, its authors have envisaged a five- to six-fold increase in the export of engineering goods. They have been optimistic enough to aver that the supply position of pig iron and steel is bound to improve with the commissioning of the new steel plants and that this will give a fresh impetus for the development of engineering industry.

Unlike the traditional export items of India which have, by their very nature, limited competition from other countries, engineering industry is a comparatively new comer in the field. Besides, it has to compete with engineering goods made by well-known firms in such countries as the U.K., West Germany and Japan. It is, therefore, essential to make an all-out effort to strengthen the competitive position of the domestic engineering industry, if it is to make any significant impression in world markets. In this context, Mr. Agarwal, Chairman of the Engineering Export Promotion Council, in a Press conference at Calcutta, did well to draw particular attention to the various problems facing the industry and their solutions. The main difficulties of the industry stem from declining industrial incomes due to the high cost of raw materials, increasing wage bills and overheads. Besides, there is considerable idle capacity in the industry. In fact, most units worked only one shift. The productivity of the domestic industry, too, is lower, as compared with foreign countries. According to Mr. Agarwal, these factors as well as the absence of the advantages which exporters from other countries enjoy have placed Indian exporters in an unfavourable position in foreign markets. It is obvious that, in this sphere, India has had to start from scratch and can build up its reputation only on the basis of price and quality. Every machine that comes out of the factory must be subjected to strictest check and inspection in order to ensure that there are no defects in it. Even if there is the slightest defect, it should not be allowed to go out of the assembly line.

The steps that Mr. Agarwal suggested to stabilise Indian exports in overseas markets included giving the exporter favoured treatment as against the non-exporter. For instance, the suppliers of raw materials could extend concessional rates to them. Another important measure suggested was the provision of incentives for more manufacturers to enter the export field—today 50 per cent. of the engineering goods exported were confined to about 20 items manufactured by about 30 firms, whereas there were as many as 3,000 units in the country, employing 20 or more men. In order to improve the present situation, Mr. Agarwal urged the Government to reduce the price of steel, pig iron and tin-plates, to give a rebate in income-tax as is being allowed in Japan, and sizable concessions in shipping and railway freights. These suggestions deserve the serious consideration of the Government, as, apart from the compelling urgency to secure larger foreign exchange earnings, exports of engineering goods will serve the object of diversifying the pattern of India's foreign trade. Care must, however, be taken to see that such assistance is rendered only to the deserving units which are progressive and quality-conscious. It is important to make sure that Government help in any form does not encourage inefficiency among manufacturers.

NATIONAL POWER NETWORK

One of the main recommendations of the seventh Seminar on Irrigation and Power held at Bangalore last week was that a separate unit should be created in the Central Water and Power Commission to formulate plans for the establishment of super-grids on a zonal basis, keeping in mind the need for their gradual integration into an all-India grid. The Seminar suggested that plans for this purpose should be drawn up in consultation with the State Electricity Boards, public electricity undertakings and corporations in the country. The consensus of expert opinion at the Seminar was that super-grids should be planned, designed, constructed and operated by a central agency for each zone. A central generating agency for generation and transmission of power to super-grid receiving stations was also deemed necessary. The unit to be set up in the Central Water and Power Commission was asked to study the organisation, finance, construction, operation, and maintenance of super-grids and submit its proposals at the next Seminar. It was also required to suggest appropriate voltage for each zonal grid, taking into consideration the technical requirements and the economics of the system. It was emphasised that, in planning the super-grids, care should be taken to see that large generating stations were established at the most economical sites in the region as a whole.

This suggestion of the Seminar is in line with the view of the Union Ministry of Irrigation and Power which favours the linking of State transmission systems and the gradual evolution from these systems of a national network or super-grid for the whole country. The proximity of State networks and the power imbalance in certain regions have brought to the fore the importance of a co-ordinated operation of the State power systems by means of suitable interconnections. Writing in a recent issue of *Bhagirath*, a journal of the Central Water and Power Commission, Mr. Hafiz Mohammed Ibrahim, Union Minister for Irrigation and Power, pointed out the advantages of such a power network. A combined and co-ordinated hydro and thermal grid system, according to him, has a greater capacity for firm supply than the sum of individual stations, operating independently. The installed capacities of power stations can be used more effectively, thereby minimising spare generating units and effecting substantial economies in capital cost, operation and maintenance. The frequency and voltage of inter-connected systems are less susceptible to variations arising from sudden changes in load and faulty conditions than in the case of independent and small power systems. The trend in all States has so far been towards inter-connection of important generating stations, hydro and thermal, only within their boundaries. And there is no significant expansion of State grids across the boundaries, except the Damodar Valley Corporation transmission system which covers Bihar and West Bengal and the Chambal system encompassing Madhya Pradesh and Rajasthan.

The Power Development Committee of the Southern Zonal Council has, however, reached some broad conclusions on some inter-State links for the adjustment of power supply to the mutual advantage of the States concerned. This, if implemented, may lead to the establishment of a super-grid system covering the four Southern States, namely, Madras, Mysore, Andhra Pradesh and Kerala. The Union Minister feels that similar super-grid systems would be necessary in future in other zones too.

To refer to the Seminar's recommendations. The establishment of super-grids and their control, it was suggested, should form part of a master plan for power development. The formulation of such a plan should be preceded by a fresh power load survey. It may be noted that the need for such a survey was also endorsed by the Co-ordination Board of Ministers—a high-powered body responsible for policy matters and expeditious implementation of the recommendations of the Seminar—which also met at Bangalore last week. The Board adopted a resolution to the effect that a detailed load survey should be carried out jointly by the State Electricity Boards and the Central Water and Power Commission in order to facilitate the drawing up of a scheme of power development in co-ordination with the general development programme. As the latter is flexible, the power loads also are subject to change. This means that the load survey should be a continuous one.

Construction of super-grids is in keeping with modern trend in power development in advanced countries where not only is bigness in current fashion but super-power stations are also sought to be linked together for economic working and utilisation. A recent example is the project for linking the national electricity systems of Britain and France by means of submarine cables across the English Channel.

TACKLING COAL SHORTAGE

Several measures to meet the acute shortage of coal that is being experienced by various industries, particularly by the steel plants, and to avoid the recurrence of a similar crisis in future have been announced by the railways. These are the outcome of top level discussions between the Railway Minister and the Minister for Steel, Mines and Fuel, during the last few days. The two main factors which have been responsible for the short supply of coal to various industries are (1) the failure of coal production to come up to expectations and (2) the shortage of haulage capacity to move the available coal. While a scheme is being worked out by the Government to raise coal output, the railways have now announced measures to press more wagons into use and have also appealed to all industrial users of coal to build up stocks whenever wagons are readily available.

According to a spokesman of the Railway Board, the following steps are being taken to ease the present tight wagon position:

(1) The periodic overhaul of rail wagons is to be deferred for six months. This will make available an additional quantity of 1.5 per cent. of the wagon fleet.

(2) 4,500 old wagons have been pressed into service for the period of the emergency.

(3) Wagons, which are normally due for discarding, are being retained but these will be operated for short hauls and at low speeds.

(4) The wagon-building programme is being accelerated, with the aid of 100,000 tons of steel which will shortly be imported. This, it is hoped, will help raise the wagon production capacity to 24,000, as against the present output of 15,000 per annum. It may be noted here that the 24,000 wagon manufacturing capacity was the target fixed for the second Plan, but it is now expected to be reached only in the first year of the third Plan.

(5) Coal loading will proceed on the basis of a seven-day week and the needs of steel plants will be met with the daily allocation of about 1,400 wagons.

(6) Quicker turnround will be arranged at the steel plants.

It is stated that the wagon capacity during the first six months of the year was 4,150 per day, while the demand was for 4,550 wagons. It is not clear whether this shortfall can be made up by emergency measures of the type mentioned above. As these old wagons can be used only for short hauls and at low speed, the pressing into service of these wagons may involve delay in the receipt of coal by the consuming centres, not to mention larger expenditure. It also entails the risk of breakdown of services. In the circumstances, it is doubtful whether the stockpiling of coal by the steel plants, let alone by other industries, to such an extent as would ensure a steady and uninterrupted production will be quite successful.

LONDON LETTERS

LABOUR TRAVAIL

From Our Own Correspondent

LONDON, 17*th September*

THE Trade Union Congress, meeting for its annual debates in the Isle of Man, has been made to look completely devoid of policy, at least so far as the general Press, popular and top, is concerned. And the whole Labour movement inevitably appears to be in similar confusion.

Although the general impression has been to discount the possibility of another Labour Government for an indefinite time, on the ground that a party so divided, so lacking in coherent direction, could not possibly win the votes necessary for power, yet it would be unwise to underestimate this party of six million adherents. This is so, even though the *Daily Telegraph*, the leading Conservative newspaper, has urged the party to put itself out of its misery by painless liquidation as early as possible.

Interest in the Trade Union Congress deliberations has centred on two issues, the first of which has attracted most publicity: this is the issue of *defence policy*, whether the country should have its own "nuclear deterrent," or whether it should depend on America, or whether it should not have one at all. The T.U.C. got itself out of its dilemma at the expense of provoking mirth at its inconclusiveness —that is by apparently voting for all three policies at once. In the general argument which has followed this breathtaking approach to the dilemma hardly anyone has pointed out that the Government of today, although they do not talk about it so much, are really in a similar dilemma—for they have decided to rely upon their own deterrent, but they have not got one, and it now seems unlikely that the one they had expected to get will ever materialise. But although the Conservative Party do not parade their difficulties and differences to the same extent as do the Labour, they, being the Government, must be presumed to have a policy, and any changes they make in their policy are made quietly behind the scenes and duly announced with an air of complete unanimity. The Labour Party and Trade Unions, not being in power, can allow themselves the luxury of hammering out very difficult problems of defence, out of which, no doubt, in due time coherence will emerge. It is at least to their credit that they are not afraid to think of all the complications of any policy decided upon.

The second issue, on which confusion again rears its head, is the economic one of State control in the future. Mr. Gaitskell, the leader of the party, declared a year ago that the famous Clause 4, in the Labour Party's constitution, which committed the party to nationalisation as a means of production and distribution, is out of date and must be re-drafted. The Trade Union Congress has now announced its intentions to Mr. Gaitskell and, with dissent, declares both that Clause 4 must remain unchanged *but* that Mr. Gaitskell's thought on amendment of it should be given due weight when it comes to applying the policy of Clause 4. This may sound contradictory but in fact it is the only way in which the party could ever evolve its economic doctrines. No one can ever say in advance how much nationalisation is necessary or what other forms of State control may be more desirable from time to time. The Conservative Party itself is not averse to State control for specific purposes, but not being burdened with a written constitution or with the need to define economic policy in doctrinal terms, it can quietly adapt itself to the economic needs of the time with the minimum of fuss.

The Trade Union Congress has stirred up a great debate, but one should not make light of the fact that all that has emerged is a realisation of the problems about which all citizens need to think, if this country is to make economic progress and hold its own in the balances of world power.

Pattern of European Trade

LONDON, *9th September*

Until recently it was assumed that in spite of credit restrictions production had been rising healthily and steadily throughout this year. But every month the indices are revised, and this month the figures for May and June have been drastically reduced so that the hitherto satisfactory picture has now become dull and foreboding.

For the first quarter of this year the production index stood at 123, and for the second quarter at 121½, while the July figure is estimated at about 110. But these are unadjusted figures, and when allowances are made for holidays and so forth the picture becomes for the first quarter 119½, and for the second quarter 120½, with no change in July. In effect, instead of the rising production trend, production has flattened out.

This disconcerting fact is obviously going to bring the Government's policy of credit restriction into question, and if production is not going up and exports are going down, then a little bit of reflation might do no harm.

But it will probably take time to influence the Treasury by such arguments, because so far as exports are concerned, they cling to the theory, which has a good deal to commend it, that if you make it harder to sell at home you stimulate sales abroad. Moreover, the Board of Trade Investments Forecast, compiled from returns made by a number of businesses, show no depression about the future. On the contrary, manufacturers who earlier this year said they would be spending 14 per cent. more in investment than last year, have this summer revised their estimate to 25 per cent. It is true that non-manufacturing concerns have revised their estimates downwards, 20 per cent. to 16 per cent., but over all industry and commerce the general expectation has improved: from an originally estimated increase over 1959 of 16 per cent. to no less than 20 per cent.

And looking ahead to next year, the general business forecast is that investment will rise a further 12 per cent. over this year. Moreover, this general pattern is heavily weighted by basic industries such as iron and steel, motor vehicles and chemicals, which are also big export industries. The authorities have some excuse therefore for saying that since industry sees the future as requiring more and more investment it cannot find the present conditions of tight credit too restrictive. But of course industry does not think that way at all. It lives in the belief and expectation that before long the Government will have to do some pump priming and take the checks off demand. But while the domestic market and the general level of production may be stimulated by some reflationary exercise, what is the prospect for exports? Figures just published by O.E.E.C. hold a tiny germ of consolation for the United Kingdom in showing that it is not alone in its recent decline. France, Germany and indeed the whole of the Common Market countries have exported less in the second quarter of this year than they did in the first.

And the rate of decline is very much the same as for the U.K. But whereas U.K. exports now stand at only some 200 million dollars higher on the quarter than the figures for the first three months of 1959, those of Germany stand at some 500 million dollars higher and so do those of France. These countries had indeed enjoyed a far more rapid rise in their exports over the past eighteen months than had the U.K.

Figures published by the Common Market countries also show that the trade between these countries has greatly increased over the past year. They are to a considerable extent insulating themselves from world conditions. Very different is the picture of the British Commonwealth, which because of its Imperial Preference enjoys comparable advantages to the Common Market. But within this group of countries exports have in fact declined.

Next week the Commonwealth countries will begin discussions in London on their mutual economic problems. While the provision of development assistance for Asiatic and African Commonwealth countries is tabled over a number of sessions, the shorter time initially allocated to European trade problems is likely to be very intensively used. The U.K. has to continue its enquiries as to the attitude of the other Commonwealth countries to closer links with the Common Market—closer links not only for the U.K. but also for the Commonwealth—if this is going to be feasible. The idea of closer links between the Commonwealth countries themselves appears still-born.—*All Rights Reserved.*

Exports from Britain rose by £25 million to £297 million in the month of August, as compared with July (on a seasonally adjusted basis). Imports fell by £3 million to £385 million. Allowing for re-exports, the adverse trade gap was reduced to £74 million, as against £104 million in July. Taking the first eight months of the year together, the U.K. exports were 6.5 per cent. higher than the average for the whole of 1959 and imports were 13 per cent. higher.

AMERICAN LETTER

ILLUSION OF RECESSION

EXPORTI FAIL TO PICK UP

From Our Special Correspondent

NEW YORK, 15*th September*

THE big economic news in recent weeks was the liberalisation of credit. The Federal Reserve system reduced its rediscount rate and individual commercial banks reduced their lending rates as well. The overall business picture remains spotty. Inflation has not progressed as rapidly as in other eras. The conservatives point with pride to this achievement of their Administration, while the free-spending Democrats deplore it as lack of progress. The steel industry continues to operate at the lowest capacity in a non-strike year. Automobiles have been below expectations. The highway programme has been lagging and so have housing starts.

Despite all these obstacles, there are bright angles. Personal income is at the annual rate of $407,000 million. This is a new record and it compares with $386,800 million 12 months previously. Overall employment has also increased. It is now nearly 69 million, as against 67.6 million a year ago. Inventory and purchasing policies have been quite cautious and this has had a moderating effect on business. Production is abundant and there is no fear of shortages. What is not provided by U.S. industry is supplied by imports. All this makes for relative price stability.

Price stability is bothersome to some so-called progressive observers of the economic scene. There has been no relative price stability in the U.S. for so long that for the "progressives" it conjures up the spectre of another recession, or depression. This is true up to a point, of course. Human affairs go in ups and downs, but the more the heights and intensities of the ups and downs can be softened, relative stability can be achieved.

Seasonally adjusted patterns show no striking changes. With a few exceptions, there are very few real economic setbacks. In other words, the U.S. economy is proceeding at a relatively even keel. While factory employment has declined, employment in the service industries has gone up. The United States' share of the export markets has, however, shrunk to a dangerously low point. The export trade drive, as advocated by the President of the U.S., has been stymied by lack of appropriations by Congress. Trade balance deficits were $3,400 million in 1958 and $3,700 million last year. Projections for 1960 are that the deficit will again be above $3,000 million. Said Philip A. Ray, U.S. Under-Secretary of Commerce, the other day: "Even a few years of such deficits could prove to be intolerable and would have disastrous effects domestically and on our world position."

Congressmen went home after a very poor session, following the Republican and Democratic conventions which selected the respective Presidential candidates. About the only new Bill of any substance to make the statutes was a measure to protect Negro voting rights. Nothing at all was accomplished in such fields as Government aid to education, new minimum wages and farm legislation. Medical expenses for the aged came under review by Congress, but the measure fell far short of expectations.

In the face of all these obstacles, the summer rally in the stock markets did not last. Forecasters predict a better tone for the autumn and the winter.

Particularly heartening has been the sale in retail stores. It got off to a much faster start than expected. Schools here usually reopen shortly after the first few days of September. The volume is headed for a greater rise this season than the increase in school population would indicate normally.—*All Rights Reserved.*

The total investment of U.S. companies in foreign countries will go up by 15 per cent. to $2,400 million in 1960, according to a study made by the McGraw-Hill's Department of Economics. This amount relates only to those companies covered by the study; but they accounted for about 60 per cent. of such investment by the U.S. industry. These industrial concerns have plans to expand their overseas investments by another 6 per cent. in 1961. The striking feature of regional pattern of U.S. investment abroad is the shift to Common Market countries, the share of which is expected to go up from 17 per cent. of total U.S. investment abroad in 1959 to 24 per cent. in 1960 and 27 per cent. in 1961. Europe as a whole will account for 50 per cent. of the planned outlays abroad of American manufacturers by 1961.

Jute packs a world of goods

Australian wool, Burmese rice, Cuban sugar, Egyptian cotton, Canadian wheat, Chilean nitrate...these are only a few of the commodities that travel to the markets of the world packed in jute cloth. By providing the cheapest heavy-duty packaging material known, jute plays an important part in international trade.

India produces 55% of the world's jute goods. The Indian jute industry provides employment to millions of farmers, traders and mill-workers in the country...earns on an average about Rs. 115 crores annually in foreign exchange.

Jute serves India in many ways, strengthens her economy.

FOREIGN ASSISTANCE FOR INDIA

PARIS MEETING OF "AID CLUB" ENDS WITHOUT FIRM COMMITMENTS

BUT for the loose assessment of the resources position when the second Plan was drafted and the failure to regulate imports of non-essential goods during the years 1955 to 1957, India's foreign exchange difficulties would probably have been less serious than they are today. The total deficit in balance of payments on current account over the entire second Plan period was first put at no more than Rs. 1,100 crores and was subsequently raised to Rs. 1,700 crores. As against this revised figure, the external aid actually made available and promised upto June 1960 is Rs. 2,206 crores (including the first Plan carry-over of Rs. 191 crores). In addition, there has been a depletion of foreign exchange assets to the tune of Rs. 600 crores; these assets currently aggregate about Rs. 146 crores, as compared with over Rs. 746 crores at the end of the first Plan period (30th March 1956). In other words, the total of available foreign exchange resources comes to Rs. 2,806 crores, that is, Rs. 1,106 crores more than the revised estimate of the gap, namely, Rs. 1,700 crores. Nevertheless, the planners and the powers-that-be say that there is still an uncovered deficit of Rs. 65 crores! And Mr. Morarji Desai, Union Minister for Finance, has described the present foreign exchange situation as critical. Factually, this description is correct, for none can deny that the country is now at the end of its foreign exchange tether. Apparently, not all the aid promised has materialised and a part of the aid allocated is not readily available to meet the aforesaid gap.

It is reported that Mr. Desai, before his departure from New Delhi for London and Washington, sent "personal letter" to his Cabinet colleagues, exhorting them to exercise utmost economy in foreign exchange expenditure and great care in making arrangements for foreign credits in future. The Press version of the relevant contents of the letter is this: "The country's foreign exchange resources have dwindled to the lowest level and cannot be drawn upon further until they are replenished by fresh foreign assistance.... All commitments involving foreign exchange should be deferred until my return next month."

The Finance Minister would, perhaps, not have felt the need for addressing this letter to his Cabinet colleagues if only the "Aid-India Club"—a new phrase coined in the place of Consortium of five friendly countries in the free world—which concluded a three-day session behind closed doors at Paris on Wednesday the 14th inst., had come out with a firm offer of fresh assistance in the form of untied loans. The meeting of the Club, held under the auspices of the World Bank, was attended not only by the representatives of the Governments of Canada, Britain, West Germany, Japan and the U.S., the five countries that have pledged to grant aid to India for development purposes, but also by observers from Italy, the Netherlands (this country has expressed its desire to join the Club as a full member) and the International Monetary Fund. The Government of France, it is said, had declined the World Bank's invitation to attend the meeting either as a full member of the Club or as an interested observer under the pretext that it already had heavy aid obligations towards other countries, particularly in Africa. Mr. J. Burke Knapp, Vice-President of the World Bank, presided over the meeting. No official *communique* was issued after the meeting. All that the Club did, it is said, was to review the present economic and financial situation of India, to consider the need for further external assistance during 1960-61 (the last year of the second Plan), and to give preliminary consideration to the requirements of the third Plan commencing in April 1961. To quote a Press despatch from Paris:

"The aid group did not attempt to give a collective assurance to India that so much more money would be forthcoming in the next few months for the completion of the second Plan. They left it to the Wor'd Bank—and India herself—to work out the figure on the basis of the pending bilateral aid programmes. Similarly, no definite conclusions were reached regarding external assistance for the third Plan. The aid group merely decided to meet again in six or seven months' time, after the respective Governments had made up their minds about the extent of assistance they could conveniently offer for the third Plan."

The foregoing account and the preoccupation of the U.S. Administration with the ensuing Presidential elections rule out the possibility of India getting any fresh foreign aid during the remaining period of the second Plan. Before the Paris meeting, it was generally expected that the Consortium sponsored by the World Bank would extend loans amounting to about Rs. 143 crores ($300 million) for the current year in order to meet a substantial part of the Rs. 150-crore deficit in respect of commitments already made. Stress is, therefore, laid on the need for the members of the Consortium eliminating processing delays and relax restrictions on tied-to-project aid, so that a substantial part of the pending credits may be released for use by India in the next few months. It will be recalled that, at their meeting in Washington in August 1958, the Consortium estimated the aid needed for the completion of the second Plan at Rs. 446.49 crores ($938 million), but made specific promises in respect of aid amounting to Rs. 166.60 crores ($350 million), which were followed, in March 1959, by further offers aggregating Rs. 119.00 crores ($250 million), or a total of nearly Rs. 286 crores ($600 million). This left a gap of Rs. 161 crores which one thought would be filled in 1960. It is not yet known as to how much of this will be forthcoming in the remaining months of the current fiscal year. Further, since some of the credits are "tied" to particular projects and in view of the processing delays, the earlier calculations have gone awry. The question as to how India will meet its urgent requirements of foreign exchange thus remains unanswered. It remains to be seen whether Mr. Morarji Desai will be able to get something done during his current visit to London and Washington.

As for the foreign exchange needs of the third Plan, serious consideration is likely to be given at the next meeting of the Aid-India Club. This, according to Mr. B. K. Nehru, India's Commissioner-General for Economic Affairs, will take place in March, perhaps at Washington. If that is so, how will India be able to finalise its third Plan in good time? It looks as though this job will have to be delayed by quite a few months, for, unless the quantum of foreign aid is firmly decided, the Plan cannot be proceeded with. Almost every project in that Plan depends on the availability of foreign exchange. The World Bank Mission (leader: Mr. Michael Hoffman) which recently visited India has endorsed the Planning Commission's estimate that, even after the P.L. 480 aid amounting to Rs. 607.62 crores already secured, India would need foreign assistance amounting to Rs. 2,600 crores in the third Plan period. The assistance firmly committed so far is just Rs. 296.45 crores. The whole of this amount represents promises by the Communist countries in Europe—Rs. 240 crores by Russia, Rs. 23.10 crores by Czechoslovakia, Rs. 19.05 crores by Yugoslavia and Rs. 14.30 crores by Poland. It would appear that the prospects of Russia offering any large-scale additional aid are not bright, so that the major portion of the foreign exchange requirements of the third Plan will have to be met by the free world countries.

An idea of the magnitude of the whole problem was given by Mr. Nehru at a Press conference in Paris after the Aid-India Club completed its deliberations. He is reported to have observed:

"In view of the country's poverty, the estimated increase of 5 per cent. each year in the *per capita* income throughout the country in the third Plan is a "minimum." Failure to reach it will mean India's slow disintegration. Of the $21 000 million required for the third Plan, $16.000 million will be raised by India herself, leaving a gap of $5,000 million to be found abroad. We need this aid, because of India's insufficient resources. If we can get it, we should be able to maintain the rate of growth we have envisaged ourselves under the Plan.

"If aid of this order is not forthcoming from members of the World Bank, India will be obliged to turn to other countries, including the Soviet Union. If we do not get foreign capital, the Plan collapses.... We place no limitations on the origin. If the Soviet Union wants to finance the whole thing, it is welcome. We need this aid. We want it from wherever it comes."

In this connection, Mr. Nehru recalled that a World Bank mission recently visited India when it made a critical appraisal of the Plan and said: "Their report certified that the Plan was all right. Thus, we have international endorsement that what we are trying to do is sensible and capable of being done. In the past, India had been accused of trying to do too much. This time, foreign missions have said not only that the Plan is not too ambitious but that it is a minimum for the country."

The case for foreign aid presented thus by Mr. B. K. Nehru is, indeed, quite impressive. It must, however, be emphasised that it is not so much the quantum of aid as the manner in which it is actually made available that is important. There is, for instance, the need for granting aid on a long-term basis, because the burden of debt repayment in the next few years is heavy and cannot be increased. The repayment of the loans and credits needed for the third Plan will have to be spread over a number of years, say 20 to 25, and the first instalment should fall due well after the Plan ends. India, on its part, must not seek aid for projects that are not included in the third Plan. It must also adopt right economic and fiscal policies, so that domestic production can be increased at the optimum rate and the inflow of foreign private capital can be accelerated.

INSURANCE COVER FOR BANK DEPOSITORS

A novel scheme to attract deposits has been announced by the Export Bank of Israel. Under this scheme, holders of all types of accounts—including current accounts—will be given automatic life insurance cover equivalent to the amount standing to their credit 90 days before their death. The scheme does not involve any additional burden on the depositors, because the premium will be paid by the Bank. There will be no limitations on the drawing of cheques. It will not affect the normal payment of interest which range from ½ per cent. on current accounts to as much as six per cent. on deposits of one year.

The scheme is applicable to anyone between the ages of 18 and 59. A ceiling has, however, been fixed on the maximum amount of insurance payable upon the death of the account-holder at £1,000. Thus, the beneficiary of an account holder, with a balance of £500 to his credit prior to his death, will get, without production of the deceased's will, an additional £500 while the beneficiary of anyone holding £1 000 or more will not get more than £1,000 in addition to his deposit amount.

Eric builds up your business abroad— the safest way

Losses Covered. Eric policies protect you against risks flowing from political or commercial factors.

New Buyers, New Markets. Eric policies help you offer credit terms to your overseas buyers—sometimes better than those arranged by your competitor from another country.

Finance Facilities. Eric policies are treated as additional security by banks—a vital factor when you negotiate bills.

And Information. Eric has status collecting Agencies in all parts of the world and is in an exceptionally favourable position to obtain reliable information about the financial standings of overseas buyers.

PROTECTION FOR COTTON TEXTILE MACHINERY

TARIFF COMMISSION INQUIRY

IN a little over three months from now—after 31st December 1960—the protection enjoyed by cotton textile machinery will expire, unless the Tariff Commission recommends continuance of protection beyond that date and the Central Government accepts the recommendation. The Commission is currently examining the question, a public inquiry into which was held at Bombay on Friday the 16th inst. This is the sixth inquiry for this industry; the first one was held as far back as 1947. Spinning ring frames, spindles, spinning frames have been enjoying protection from foreign competition through an import tariff since 17th December 1949, while protection for tin rollers was discontinued from 1st January 1955 and for ordinary looms (first granted with effect from December 1950) after the end of 1957.

The industry has pleaded for extending the period of protection by three to five years on the ground that, if protection is withdrawn without strict control on imports, the industry will have to face severe competition from foreign sources; the existing rate of duty on the protected items is 10 per cent. *ad valorem*. It is said to have drawn the pointed attention of the Commission to the acute raw material supply position, especially in respect of iron and steel, and consumers' resistance due to prejudice against indigenous machinery.

Since the last enquiry by the Tariff Commission in 1957, the cotton textile machinery industry has made modest progress. The annual rated single-shift capacity for the manufacture of spinning ring frames, according to the data given by Mr. K. R. P. Aiyangar, Chairman of the Commission, in his speech at the public inquiry, has gone up from 804 in 1957 to 1,020 at present, of spindles from 780,000 to 1,180,000, of spinning rings from 570,000 to 1,080,000 and of fluted rollers from 260,000 to 330,000. The capacity of automatic looms, however, continues to remain the same as in 1957, namely, 1,560. There are now 13 units manufacturing protected items of textile machinery—six in Maharashtra, three in Gujarat, two in Madras, and one each in West Bengal and Madhya Pradesh. The geographical distribution of the units producing the different items is as follows:

Maharashtra: Spinning ring frames 1; spindles 4; spinning rings 1; fluted rollers 3. *Gujarat*: Spindles 2; spinning rings 1; fluted rollers 1. *Madras*: Spinning ring frames 2; spindles 2; spinning rings 1; fluted rollers 2. *West Bengal*: Spinning ring frames 1; spindles 1; spinning rings 1; fluted rollers 1. *Madhya Pradesh*: Automatic looms 1.

The actual trend of output of different items since 1950 is indicated below:

Items	1959	1957	1954	1950
Spinning ring frames	1,077	1,304	356	186
Spindles	540,000	690,000	570,000	140,000
Spinning rings	670,000	740,000	730,000	180,000
Fluted rollers	150,000	150,000	240,000	70,000
Automatic looms	356	311	Nil	Nil

The production of automatic looms would appear to have improved lately. The number actually produced in the first quarter of 1960 was 1,957. The National Machinery Manufacturers Ltd., Bombay, and Cooper Engineering Ltd., Satara, have been licensed to produce automatic looms in collaboration with foreign firms. They are expected to commence production by about the middle of next year, when the annual capacity for the manufacture of automatic looms will increase to 3,660.

There are varying estimates of demand for the different items of cotton textile machinery prepared by the Textile Commissioner, producers, consumers and consumers' associations. Having regard to the targets of yarn and cloth production and the need for rehabilitation and expansion of plant in the industry to attain the targets, the Textile Commissioner, according to Mr. Aiyangar, has estimated the annual domestic demand over the Plan period at 1,800 spinning ring frames, 850,000 spindles, 1,000,000 spinning rings, 310,000 fluted rollers and 6,000 automatic looms. The Millowners' Association, Bombay, however, places the demand at 2,008 for ring frames and 9,500 for automatic looms. In 1957, the Tariff Commission had estimated the annual demand at 2,810 ring frames, 780,000 spindles, 2,340,000 spinning rings, 310,000 fluted rollers and 8,500 automatic looms.

Thanks to the expansion of capacity and upward trend in output, on the one hand, and strict regulation of imports, on the other, there has been quite a sizable amount of saving in foreign exchange. The total value of imports of spinning ring frames, spindles, spinning rings, fluted rollers and automatic looms in 1959 was Rs. 23.35 lakhs, as against Rs. 178.66 lakhs in 1957. The item-wise imports are given below:

Items	Quantity		Value (Rs. lakhs)	
	1959	1957	1959	1957
Spinning ring frames .. (Nos.)	1	10,108	0.13	87.83
Spindles .. .. (Nos.)	273,567	327,959	2.64	12.70
Spinning rings .. .. (Nos.)	482	993	2.79	5.93
Fluted rollers .. .. (Nos.)	103	716	0.86	3.80
Automatic looms .. (Nos.)	159	2,946	16.93	69.30
Total ..	..	..	23.35	178.66

No licences have been granted since April 1958 for import of ring frames, spindles and fluted rollers, while those for spinning rings were issued on an *ad hoc* basis during April-September 1958 period only. Import licences for automatic looms were also issued on an *ad hoc* basis after April 1958, subject to the condition that installation of these looms will be for producing cloth for export and for such replacement of existing looms as were duly permitted by the Textile Commissioner.

It is, indeed, gratifying to hear from the Textile Commissioner that the quality of spinning ring frames has considerably improved and that of spindles, spinning rings and fluted rollers is satisfactory. He has, however, received complaints against the quality of automatic looms, but it is stated that the producing unit has taken effective steps to rectify the defects noticed so far. With the technical collaboration with a Japanese firm, the Central India Machinery Manufacturing Company, Mr. Aiyangar opined, should be able to improve the quality of its products. In this connection, Mr. Aiyangar alluded to the complaint made by one of the consumers' associations to the effect that the indigenous looms are definitely inferior to the imported ones due to poor casting, absence of precision, defective drop box system, lack of positive let-off and take-up motion, etc. To quote him: "It is further reported that, in spite of the fact that these defects were brought to the notice of the manufacturers, there has been hardly any improvement in quality."

The assessment of the raw material position as made by the Tariff Commission's Chairman reveals that the principal raw materials required for the manufacture of cotton textile machinery are pig iron (No. I and II grades), mild steel, free cutting steel, alloy and tool steel, hard drawn bright steel, tin plate and coke.

This is the hallmark of

QUALITY

This is the certification mark of the Indian Standards Institution. It is given to many consumer and industrial articles manufactured or processed according to relevant Indian standards.

The ISI mark has many advantages. To the manufacturer it means increased demand through customer satisfaction, and protection from unfair competition. To the consumer it offers an assurance of quality of goods and services purchased, and better value for the money spent. The granting of the licence to use the ISI mark is a trust placed with the manufacturer. ISI maintains a constant vigil to see that it is not misused in any way, for the interest of the consumer has to be safeguarded.

TREND OF WAGES IN TEXTILE INDUSTRY

NEW SET OF OFFICIAL STATISTICS PRESENTED

From Our Special Correspondent

MANCHESTER, 14*th September*

MANCHESTER LETTER

FOLLOWING the negotiations which took place at the beginning of the year, wage rates for Lancashire cotton operatives were advanced by 7½ per cent. early in March. As the general level of earnings prior to this application was already at the highest point yet recorded, the new lift made pay packets reach a fresh peak. This has been duly reflected in the latest returns for wages in manufacturing industry issued by the Ministry of Labour. The figures presented apply to the final week in April this year, but fundamental changes in the tables make it impossible to give a direct comparison between the current figures and those recorded for the past twenty years.

One of the omissions in the new set of tables is the composite average drawn up for earnings obtained by all workers in the particular section. The new statistics merely give the payment secured by men, youths, women and girls. This in itself would not preclude comparisons, but the sub-divisions within the main heading of textiles have also been revised. Whereas the earnings of cotton operatives were previously shown separately, they are now combined with those engaged in the production of yarn from flax and man-made fibres and the weaving of cloth in the linen and man-made fibres branches.

The latest figures to be produced by the Ministry of Labour in this connection are given below:

	Men (21 and over)	Youths (under 21)	Women (18 and over)	Girls (under 18)	All workers
	s. d.	s. d.	s. d.	s. d.	s. d.
October 1950	219 10	126 2	139 11	111 3	163 8
Cotton spinning ..	230 7	129 0	147 9	109 7	174 3
Cotton weaving ..	224 7	124 0	143 2	110 8	168 4
Total cotton ..	247 7	115 7	151 11	101 5	188 10
Rayon weaving ..	247 7	123 3	129 4	96 7	207 4
Textile finishing ..					
April 1960					
Man-made fibre output ..	284 0	133 9	144 8	100 0	..
Spinning and doubling ..	236 9	126 8	146 8	109 0	..
Weaving ..	247 11	120 2	154 4	101 2	..
Hosiery and knitwear ..	297 9	125 1	146 5	98 0	..
Narrow fabrics ..	247 6	117 8	132 10	93 4	..
Made-up textiles ..	230 6	110 4	114 5	83 4	..
Textile finishing ..	250 11	127 6	130 6	98 7	..

Operatives engaged in the cotton industry in October last year were working on average just over 44 hours a week. In April 1960, men in spinning and doubling were working 48.3 hours, although the figure for women was only 41.9 hours. In the weaving section, the latest returns show men operating looms for 45.9 hours and women 41.8 hours. In the textile finishing section, the average hours worked by men had increased to 51 in the week concerned.

Wholesale scrapping of mule-spinning machinery in the Lancashire cotton industry under the Government's £30,000,000 reorganisation scheme has resulted in over 4,500 experienced workers in this branch being forced out of their normal occupations or out of the industry altogether, according to Mr. James Whitworth, Secretary of the Operative Spinners' Amalgamation. In his quarterly report, he says that the small minority of operatives who have accepted re-engagement in the trade have suffered appreciable down-grading in job levels. He fears an added drift of skilled labour from the mills when acceptable alternative work becomes available outside the cotton trade.

A warning to Lancashire millowners that imports of foreign yarn are just as much a problem as the large-scale arrivals of cloth from abroad is also contained in the report. Arrivals of cotton yarn increased from 11,200,000 lbs. in the first half of last year to 19,200,000 lbs. in 1960.

"Whilst imports of cotton cloth are limited by a ceiling under agreements with India, Pakistan and Hong Kong, no such arrangements control the yarn situation," says Mr. Whitworth. "The spinning side of the industry would do well to watch this development carefully, the grave danger being that when the cloth inlet is closed, this means of import would still be open."

Prices and Supplies

There was a time when the eighth day of the month towards the end of the year meant something in the world of cotton. Estimates of the progress of the United States crop then published were of fundamental importance to traders. While the reports are still issued, interest in their contents has declined with the growth of cotton cultivation in other areas, and the artificial conditions now ruling in the markets for the raw material.

Although immediate interest in the crop prospects has slackened, those engaged in the cotton industry at every level cannot afford to ignore the general trend of supplies, for it continues to have a direct bearing on the outlook when fresh business comes up for consideration. At such a moment as the present, when order lists in Lancashire are still fairly extensive and when customers are wondering whether the time is ripe to increase their commitments after a phase of inactivity, the price factor is all-important.

Values of American raw cotton in Liverpool have been relatively steady throughout the year, the spot quotation for one-inch middling having varied from 23.25d. to a low point of 22.20d. at the end of May, and subsequently rising to 22.75d. A firmer tendency in futures during recent weeks has been duly noted by customers, whose intentions to put down further contracts must be governed by sentiment of this kind.

Although stocks are about 1,300,000 bales smaller at 16,400,000 bales as compared with a year ago, the prospects of bigger output in areas outside the United States should offset any decline. On the basis of current returns, stocks plus production in the United States this season should be around 22,000,000 bales, compared with 23,500,000 bales last year.

An indication of the way in which political influences can have important repercussions on trading relationships is given in the annual report presented by Mr. Myles L. Cooper, Chairman and Managing Director of Stavert Zigomala & Co. (Holdings) Ltd., the Manchester merchanting group. "For more than a century Cuba has been an extremely important export market of the textile export section," Mr. Cooper points out.

In the later months of 1959, an excellent order book for Cuba had been built up for delivery in the first quarter of 1960, but, from December onwards, the news went from bad to worse. It began with the virtual stoppage of imports of cotton piecegoods among many other things and culminated in doubts as to the payment of invoices for goods shipped before the introduction of restrictions.

"We have had to face the loss of potential profit on our order book, writing down of unpaid accounts, writing off goods for Cuban orders now disposed of elsewhere and heavy writing down of specialised goods which we will hold for some time to come in the hope that times may change in Cuba," he adds. Mr. Cooper says that some of the blame for the present situation must be put down to American policies, "it now remaining to be seen if dollar diplomacy can salvage a situation where reciprocal trading inaugurated by other great powers may be the beginning of new systems."

INTERNATIONAL COTTON INDUSTRY MEETING IN HOLLAND

The annual meeting of the International Federation of Cotton and Allied Textile Industries will be held at the Royal Institute for the Tropics in Amsterdam, Netherlands, from 26th September to 1st October 1960, at the invitation of the Dutch Vereniging Katoen-, Rayon- en Linnenindustrie and the De Vereeniging voor den Katoenhandel (The Rotterdam Cotton Association). Dr. W. T. Kroese of Koninklijke Textielfabrieken Nijverdal-Ten Cate N.V. in Almelo, Netherlands, President of the International Cotton Federation, will be in the chair. More than 100 delegates from all Western European countries, the United Arab Republic, Japan and the U.S. will attend.

At this meeting, a detailed survey of the present state of trade and future prospects of the cotton and allied textile industries in the chief producing centres of the world will be made. The Federation's Raw Cotton Merchants' Committee, under the chairmanship of Mr. H. A. J. J. Schaer of Rotterdam, will discuss quality aspects of raw cotton and current problems connected with cotton marketing. The meeting will also hear a progress report on the U.S. cotton quality. The recommendations of the Federation's Technical Committee on fibre testing and introduction of TEX, the new universal yarn count numbering system, will be considered. The Federation's Committee for Market Research and Sales Promotion will hold a special meeting under the chairmanship of Mr. Alfredo Sedó (Spain) to discuss possibilities for international action in the field of cotton textile market research and sales promotion. The meeting will also hear a report by the Chairman of the Federation's Committee for European Affairs, Kommerzialrat Rudolf Seidl (Austria), on latest developments regarding the European Economic Community and the European Free Trade Association and their implications for the cotton and allied textile industries in Western Europe. The other items on the agenda include the study of the possibilities for adopting rules of fair trading regarding textile designs, a discussion on moisture content in cotton yarns and various administrative matters.

DRAFT THIRD PLAN X-RAYED—I

APPROACH AND PERSPECTIVE

By J. M. Lobo Prabhu

THE ends and means of the third Plan are a mixture like a cocktail, as heady and, may be, as dangerous. The first end is stated to be a socialist pattern of society. If by socialism is implied the welfare of the whole people, this is coincident with the sovereignty of the people in a democracy and with the basic law of economics that as the poor get rich, the rich get richer. If by socialism is implied, according to the current communist pattern, the sovereignty of the State in production and the subjugation of the people in consumption, the welfare of the people is neither a logical nor a factual consequence. The Planning Commission seems to have realised this and to have proposed three modifications: first, that the private sector, which is also composed of "millions of farmers, artisans, traders and small industrialists" may co-exist with the public sector, provided it accepts its discipline; second, that the co-operative sector is a reconciliation between the public and private sectors, and third, that existing economic and social institutions should be related to national development.

On the co-existence of the public and private sectors there may be no dispute, but the question is whether they should co-operate or compete with each other. In principle, by the Industrial Policy Resolution and the legislation based on it, and in practice by reservation of priorities for transport, power, markets, the public sector has left the private sector to co-exist only on the leavings as a camp follower. The question, therefore, resolves itself to this, which should come first, the public or the private sector. The inherent advantages of the private sector are: first, it capitalises, in a natural and age-old way, the enterprise and energies of millions; secondly, it has the natural and general incentive of legitimate gain; and thirdly, being close, on the one hand, to raw materials and to markets, on the other, it works precisely on the law of supply and demand, in the only self-generative way possible. The public sector not only lacks these advantages but is subject to certain disadvantages. In the first place, for its capital, its subjects the common people to loans, taxes and prices in replacement of investment and revenues of those able and willing to contribute them. Secondly, by reason of inexperienced, indifferent and frequently not incorruptible management, State enterprise, particularly in the absence of competition, works at a loss, not having made one naya Paisa of profit in the second Plan, in spite of an aggregate investment exceeding that of the private sector. Thirdly, it has problems of its own size, as, for instance, the recent strike, which nearly paralysed the country. Fourthly, its political affiliations frequently conflict with its economic interests, without the public being aware, except through the taxes and prices they pay.

Private Sector

The third Plan, therefore, should reverse the position, the field being offered to the private sector for as much as it can manage, the public sector being subsequent and complementary. Even before it steps in, the public sector should test the potentials of the private sector by offering participation loans and subsidies, because these reduce the burden on the taxpayer of the full cost of State enterprises. So far, the Public Sector has been the Public Dessicator, drying the people of what little they have, through taxes and prices, only for disengaging private capital and enterprise.

The Commission defends its second aim, co-operative enterprise, as combining individual initiative and small-scale pattern to secure the advantages of large-scale management and organisation. The Commission has obviously ignored the findings of its own Study Team, the Nijalingappa Committee and the public statements of the Governor of the Reserve Bank. The latter found that, while the Reserve Bank had increased its credit from a few lakhs in 1947-48 to Rs. 70 crores in 1958-59, A and B class societies, which can be considered to be reasonably well run, were decreasing while C class societies functioning in a weak and haphazard way, were increasing. Two recent reviews of the Reserve Bank on the working of co-operation in 1956-57-58 disclose that co-operative credit has not been linked with production and marketing and that it is serving mostly clubs of well-to-do farmers in their consumption expenditure, when not used for hoarding grain. If the co-operative pattern is to have any meaning, it should not be imposed from above but should emerge from below, out of a real community of interests for improvement. The sum of Rs. 7 crores in the first Plan and of Rs. 47 crores in the second Plan, which Governments have spent on co-operative administration, have been a waste. Their recovery is fictitious now and will be impossible in the future. It is the common people who have to pay, through taxes and inflation, for this misuse of public funds and credit.

New Vested Interests

The institutional changes in the name of socialism have also been in the interests of only small sections of the people. The abolition of landlords which has piled up a debt of Rs. 600 crores has brought no relief in rent to the cultivators while the change of ownership has only been to indifferent and frequently corrupt officials whose severity has increased the extent of fallows. The favoured treatment extended to factory workers has increased prices for the remaining 90 per cent. of the population, reducing at the same time both production and consumption. Dearness allowances have also favoured a small section of the population being responsible for stabilising prices at rising levels for the rest of the population, vastly greater, not receiving such allowances. Co-operation, as already explained, has made the whole country to support clubs of well-to-do farmers and white-collared employees. Community Development and Social Welfare Projects have not been successful even as show-pieces, because the little that has been attempted by them has not caught on. The multitudinous schemes which the Central Government is always spawning have quadrupled Government employees who largely create work for one another, absorbing, even according to the Congress Parliamentary Committee, the entire tax increase of the last three years. Such institutional changes which adjust relations between two parties, ignore the larger, third party, which has to pay for the consequences. It is the immaturity in thinking of the Government which the Planning Commission naturally reflects that has sacrificed socialism for selectionism.

As a subsidiary aim, the Commission hopes to reduce the population dependent on agriculture from the present level of 70 per cent. to 60 per cent. The Commission obviously ignores that the legislation for ceilings on land, by reducing the size of holdings, will increase the number who will cling to the life-line of agriculture.

The Commission seems to consider that socialism can be measured by the average national income. It suggests that this will rise
