NITROGEN PRODUCTION IN THE PRIVATE SECTOR

The East India Distilleries & Sugar Factories Limited, Madras, have completed their arrangements for the establishment of a factory to produce 51,000 tons of nitrogenous fertiliser (ammonium phosphate) per year, at Ennore, near Madras. A contract for all the machinery required has been placed with Simon-Carves Limited, Stockport, England, and Calcutta, and the factory is expected to go into production in June 1962.

The project will be financed by an issue of Ordinary Shares to the Company's existing shareholders at a premium of 10s. per Ordinary Share of £ 1 each. This issue will realise £825,000 (Rs. 110 lakhs), of which £282,000 (Rs. 37.6 lakhs) is subscribable in sterling by shareholders on the London register, and £543,000 (Rs. 72.4 lakhs) in rupees, by shareholders on the Madras register. In order to ensure the maximum accrual of sterling, it has been arranged that the London part of the issue shall be underwritten by S. G. Warburg & Co. Limited. Additionally, the Company has arranged loans of £600,000 (Rs. 80 lakhs) from the Commonwealth Development Finance Co. Limited, London, £250,000 (Rs. 33.3 lakhs) from Simon-Craves Limited, England, and Rs. 180 lakhs from The State Bank of India.

The Government of India has accorded all the necessary sanctions.

New Delhi

TAXATION OF PREFERENCE DIVIDENDS

LEGISLATION TO REMOVE AMBIGUITIES IN LAW

(FROM OUR NEW DELHI CORRESPONDENT)

A BILL clarifying the Government's intentions about the taxation of preference dividends is being prepared. It is expected that it will be enacted during the current session of Parliament. The Bill will specifically clarify the phrase, "free of or subject to income tax", used in Section 85 of the Companies Act. The tax in this section could only be the corporate income tax assessed on a company. It cannot mean the personal income tax assessed on an individual shareholder, because the tax-free preference shareholder was never indemnified by the company against his liability to income tax on the dividend received by him. Similarly, in the case of preference shares, subject to tax, the company deducted from the stipulated dividend the income tax to which the company was itself assessed on the amount of the dividend and not the income tax to which the particular shareholder was assessed. As far as the Companies Act is concerned, the position is quite clear that Section 85 contemplates preference shares free of or subject to the corporate income tax assessed on the company.

The grossing up of dividends and the corresponding credit given to shareholders was a concession allowed by the revenue authorities and had no relation to the company law. This grossing up benefit was, however, taken away by the current Finance Act, and the decision has been interpreted in a manner not equitable to the preference shareholders, as the following hypothetical case shows:

UNDER THE PREVIOUS TAX SCHEME

Profits before tax		Rs. 1,00,000
Taxation:		
I.T. at the rate of 31.5 percent	Rs. 31,500	
S.T. at the rate of 20 percent	Rs. 20,000	
W.T. at the rate of 5 percent	Rs. 5,000	
		Rs. 56,500
Distributable profits after tax		Rs. 43,500

Previous tax scheme

Shares	1 Net dividend rate	2 Total yield rate (grossed up dividend)	3 Total amount paid	4 Total yield to shareholders
	Rs.	Rs.	Rs.	Rs.
Tax-free preference	10.0	14.6	5,000	7,300
Taxable preference	6.85	10.0	6,850	10,000
Ordinary	21.1	30.8	31,650	46,200
			43,500	63,500

UNDER THE REVISED TAX SCHEME

Profits before tax		Rs. 1,00,000
Taxation:		
I.T. at the rate of 20 percent	Rs. 20,000	
S.T. at the rate of 25 percent	Rs. 25,000	
		Rs. 45,000
Distributable profits after tax		Rs. 55,000

Effect of the revised tax scheme

Shares	5 Total yield (net dividend rate)	6 Total yield to shareholders (Total amount paid)	7 Variations (Cols. 2 and 5)
	Rs.	Rs.	
Tax-free preference	10.00	5,000	—31.5 percent
Taxable preference	8.0 (10—T)	8,000	—20 percent
Ordinary	28.0	42,000	—9.1 percent
		55,000	

On the face of it, it could not have been the Government's intention to do this, when it gave tax relief last March to the ordinary shareholder at the expense of the preference shareholder. It is now proposed to make it clear that the grossing up of dividends permitted on the preference shares by the revenue authorities should continue and be made by the companies themselves.

Coal Output

The production of coal in India in 1955 was a little over 38 million tons. Out of this, about 34 million tons were raised in the private sector and the balance in the public sector. The public sector consisted of 11 State collieries, which formerly belonged to the railways; in it were also included the Singareni group in Andhra Pradesh. The target of coal production for the second plan is 60 million tons. This is an increase of 22 million tons over the production in 1955. Out of this additional output, 12 million tons stand allotted to the public sector (10.5 million tons to the National Coal Development Corporation and 1.5 million tons to the Singareni collieries), and 10 million tons to the private sector. The following table shows the progress achieved so far in the attainment of the targets in the two sectors:

Year	Private sector (in million tons)	Percentage increase over the 1955 production	Public sector (in million tons)	Percentage increase over the 1955 production	Total (in million tons)	Percentage increase over the total 1955 production
1955	33.816		4.397		38.213	
1956	34.750	2.75	4.683	6.2	39.433	3.16
1957	38.197	12.98	5.307	21.1	43.504	13.84
1958	39.544	16.93	5.774	31.3	45.318	18.64
1959	40.296	19.15	6.734	53.1	47.030	23.08
1960						
Jan.	3.45		0.66		4.11	
Feb.	3.66		0.63		4.29	
March	3.70		0.66		4.36	
April	3.70		0.67		4.37	

The production in 1959 could have been a little more but for the unusual severity of the monsoon in the regions where the major coalfields are situated. Analysing the above figures for the private sector, it will be seen that while production increased by about 700,000 tons in 1956 and 3.37 million tons in 1957, which is the highest figure recorded in any one year so far, the same tempo could not be maintained in the next two years. In 1958, the increase was only 1.35 million tons, and this came down to the phenomenally low figure of 750,000 tons in 1959.

The Government has received an assurance that the slow-down in expansion will be corrected and the industry will give certain quantities of both coking and non-coking coal additionally, in the short time between now and the end of the current plan. A working group has been set up, with the representatives of the industry as well as the Government, to examine the colliery-wise and grade-wise pattern of these additional raisings and to draw up a forecast of the quantities that will be available month by month. For its part, the Government has assured the industry that, short of a price increase, all possible assistance will be given to remove the difficulties and bottlenecks which may come in the way of increasing production.

Public Sector Production

The production of 6.75 million tons in the public sector in 1959 represents an increase of 53 percent over the figure in 1955. This includes 4.52 million tons raised by the National Coal Development Corporation from the 11 old State collieries and from eight of their ten new mines, which have begun production and have been brought on to the revenue account already; the balance of 2.23 million tons was raised by the Singareni collieries. In terms of additional production, the effort represents an achievement of 20 percent, against the target of 12 million tons assigned to the public sector.

The Corporation has been able to acquire and take physical possession of all lands necessary for the development of the collieries projected under the second five year plan. Land measuring 143,84.85 acres and mining rights over 14,724.62 acres have been duly acquired. Detailed drilling in the new areas had to be undertaken in conjunction with the Geological Survey of India and the Indian Bureau of Mines with a view to assembling geological data for drawing up the project reports and opening the mines.

Following the results of drilling and prospecting, detailed project reports were drawn up for each new colliery. All such project reports for the collieries to be developed during the second plan period were duly submitted to the Government, which has approved them. Machinery and equipment had to be ordered on a large scale and procured mostly from abroad. Orders covering the full allocation of Rs. 20.27 crores of foreign exchange for the purchase of machinery and equipment have already been placed. The value of plant and machinery actually received at site is Rs. 12.40 crores. It is expected that the balance will be received within the next two or three months.

It is hoped that in the last quarter of 1961, the National Coal Development Corporation collieries will yield a monthly output which will correspond to a rate of production of 11 million tons a year. With this object in view, monthly targets of production have been laid down for the individual collieries of the National Coal Development Corporation so that the progress of production is watched from month to month with reference to these targets and remedial measures to arrest any decline are taken, where necessary. The monthly targets for the individual collieries are shown below:

Name of colliery	Monthly production targets (in tons) by March 1961
Old Collieries	282,000
Bhurkhunda (new and old)	80,000
Kurasia (new and old)	100,000
Kathara	100,000
Gidi "A"	75,000
Saunda	100,000
Sayal "D"	45,000
Bachra	40,000
Gidi "C"	33,000
Korba	55,000
Korea block I	20,000
	930,000

This will mean a rate of production of 11.16 million tons a year, or in round figures, 11 million tons a year. The level of production of 11 million tons during the last quarter of 1960-61 means 2.5 million tons less than the target of 13.5 million tons. As for the Singareni collieries, starting with a production of 1.5 million tons in 1955, this group, owned jointly by the Governments of India and Andhra Pradesh, has been able to raise 2.23 million tons in 1959, against the target of 3 million tons by 1961-62.

The limiting factor is the availability of transport facilities, particularly the supply of wagons. As far as the wagon supply for the movement of coal is concerned, the total requirements during 1960 are estimated at 5,100 a day. Against this, the average daily loadings for each month of the current year have been reported as follows:

1960—Month	Daily average loadings (in wagons)
January	4,063
February	4,143
March	4,185
April	4,263
May	3,881
June	4,210 (up to 7th)

This shows that the supply of wagons is still insufficient.

Khadi for Uniforms

Notwithstanding its high cost, poor durability and unshapeliness, compared with mill-made cloth, *khadi* will hereafter be used for Government employees' uniforms. *Khadi* bed-sheets have been imposed upon travellers using air-conditioned railway coaches. Side by side, 50 of latest type of air-conditioned, fully built-up motor cars are being imported to stimulate tourist traffic in India. Sixty such motor-cars were imported in 1959. Another fleet of American cars were imported for the use of Governors.

Economics of Making Cheap Cars

It is proposed to set up a three-man technical committee including, if possible, a foreign expert to examine and report on the possibility of manufacturing an economy car, or to quote Mr. Manubhai Shah, a *Janata* car. It will scrutinise the necessary data to suggest whether it will be possible to place on the market a car whose price does not exceed Rs. 6,500 only. In case the committee comes to the conclusion that it is possible to manufacture such a car, it will also indicate how to secure Rs. 10 crores, including Rs. 5 crores in foreign exchange, to finance the project. While the Ministry of Commerce and Industry has been engaged in drafting a resolution on the Jha Committee's recommendations, and in finalising the personnel and terms of reference of the proposed committee, the Minister of Industry, Mr. Manubhai Shah, has addressed a letter to the Prime Minister seeking his approval to go ahead with the project as a public sector venture. His Minister, Mr. Lal Bahadur Shastri, is apparently too preoccupied with the rising trend in cloth prices, the rise being of the order of 40 percent over the normal. Of this, roughly 15 percent could be attributed to higher cotton prices and to the Wage Board award. The millowners, it appears, have decided to make a gesture by reducing prices by 10 percent, and they expect that the Government will make cotton freely available to them.

Move to Export Indian Sugar

The Food and Agriculture Minister, Mr. S. K. Patil, has made an approach for exporting Indian sugar to the U.S.A. Although the request is being considered on merits, Indian consumers may feel assured to know that the U.S. authorities do not intend importing Indian sugar until the Hindu festivals of Durga Puja and Diwali are over. In other words, sugar, if imported by the U.S.A., will only be from the new season's production, and not from the so-called carryover. Sugar in India has really become bitter. Some months

Tezpore—Rs. 17/12—17/19—17/06—17/19—(17/56).

NITROGEN PRODUCTION IN THE PRIVATE SECTOR

The East India Distilleries & Sugar Factories Limited, Madras, have completed their arrangements for the establishment of a factory to produce 51,000 tons of nitrogenous fertiliser (ammonium phosphate) per year, at Ennore, near Madras. A contract for all the machinery required has been placed with Simon-Carves Limited, Stockport, England, and Calcutta, and the factory is expected to go into production in June 1962.

The project will be financed by an issue of Ordinary Shares to the Company's existing shareholders at a premium of 10s. per Ordinary Share of £ 1 each. This issue will realise £825,000 (Rs. 110 lakhs), of which £282,000 (Rs. 37.6 lakhs) is subscribable in sterling by shareholders on the London register, and £543,000 (Rs. 72.4 lakhs) in rupees, by shareholders on the Madras register. In order to ensure the maximum accrual of sterling, it has been arranged that the London part of the issue shall be underwritten by S. G. Warburg & Co. Limited. Additionally, the Company has arranged loans of £600,000 (Rs. 80 lakhs) from the Commonwealth Development Finance Co. Limited, London, £250,000 (Rs. 33.3 lakhs) from Simon-Craves Limited, England, and Rs. 180 lakhs from The State Bank of India.

The Government of India has accorded all the necessary sanctions.

New Delhi

TAXATION OF PREFERENCE DIVIDENDS

LEGISLATION TO REMOVE AMBIGUITIES IN LAW

(FROM OUR NEW DELHI CORRESPONDENT)

A BILL clarifying the Government's intentions about the taxation of preference dividends is being prepared. It is expected that it will be enacted during the current session of Parliament. The Bill will specifically clarify the phrase, "free of or subject to income tax", used in Section 85 of the Companies Act. The tax in this section could only be the corporate income tax assessed on a company. It cannot mean the personal income tax assessed on an individual shareholder, because the tax-free preference shareholder was never indemnified by the company against his liability to income tax on the dividend received by him. Similarly, in the case of preference shares, subject to tax, the company deducted from the stipulated dividend the income tax to which the company was itself assessed on the amount of the dividend and not the income tax to which the particular shareholder was assessed. As far as the Companies Act is concerned, the position is quite clear that Section 85 contemplates preference shares free of or subject to the corporate income tax assessed on the company.

The grossing up of dividends and the corresponding credit given to shareholders was a concession allowed by the revenue authorities and had no relation to the company law. This grossing up benefit was, however, taken away by the current Finance Act, and the decision has been interpreted in a manner not equitable to the preference shareholders, as the following hypothetical case shows:

UNDER THE PREVIOUS TAX SCHEME

Profits before tax		Rs. 1,00,000
Taxation:		
I.T. at the rate of 31.5 percent	Rs. 31,500	
S.T. at the rate of 20 percent	Rs. 20,000	
W.T. at the rate of 5 percent	Rs. 5,000	
		Rs. 56,500
Distributable profits after tax		Rs. 43,500

Previous tax scheme

Shares	1 Net dividend rate	2 Total yield rate (grossed up dividend)	3 Total amount paid	4 Total yield to shareholders
	Rs.	Rs.	Rs.	Rs.
Tax-free preference	10.0	14.6	5,000	7,300
Taxable preference	6.85	10.0	6,850	10,000
Ordinary	21.1	30.8	31,650	46,200
			43,500	63,500

UNDER THE REVISED TAX SCHEME

Profits before tax		Rs. 1,00,000
Taxation:		
I.T. at the rate of 20 percent	Rs. 20,000	
S.T. at the rate of 25 percent	Rs. 25,000	Rs. 45,000
Distributable profits after tax		Rs. 55,000

Effect of the revised tax scheme

Shares	5 Total yield (net dividend rate)	6 Total yield to shareholders (Total amount paid)	7 Variations (Cols. 2 and 5)
	Rs.	Rs.	
Tax-free preference	10.00	5,000	—31.5 percent
Taxable preference	8.0 (10—T)	8,000	—20 percent
Ordinary	28.0	42,000	—9.1 percent
		55,000	

On the face of it, it could not have been the Government's intention to do this, when it gave tax relief last March to the ordinary shareholder at the expense of the preference shareholder. It is now proposed to make it clear that the grossing up of dividends permitted on the preference shares by the revenue authorities should continue and be made by the companies themselves.

Coal Output

The production of coal in India in 1955 was a little over 38 million tons. Out of this, about 34 million tons were raised in the private sector and the balance in the public sector. The public sector consisted of 11 State collieries, which formerly belonged to the railways; in it were also included the Singareni group in Andhra Pradesh. The target of coal production for the second plan is 60 million tons. This is an increase of 22 million tons over the production in 1955. Out of this additional output, 12 million tons stand allotted to the public sector (10.5 million tons to the National Coal Development Corporation and 1.5 million tons to the Singareni collieries), and 10 million tons to the private sector. The following table shows the progress achieved so far in the attainment of the targets in the two sectors:

Year	Private sector (in million tons)	Percentage increase over the 1955 production	Public sector (in million tons)	Percentage increase over the 1955 production	Total (in million tons)	Percentage increase over the total 1955 production
1955	33.816		4.397		38.213	
1956	34.750	2.75	4.683	6.2	39.433	3.16
1957	38.197	12.98	5.307	21.1	43.504	13.84
1958	39.544	16.93	5.774	31.3	45.318	18.64
1959	40.296	19.15	6.734	53.1	47.030	23.08
1960						
Jan.	3.45		0.66		4.11	
Feb.	3.66		0.63		4.29	
March	3.70		0.66		4.36	
April	3.70		0.67		4.37	

The production in 1959 could have been a little more but for the unusual severity of the monsoon in the regions where the major coalfields are situated. Analysing the above figures for the private sector, it will be seen that while production increased by about 700,000 tons in 1956 and 3.37 million tons in 1957, which is the highest figure recorded in any one year so far, the same tempo could not be maintained in the next two years. In 1958, the increase was only 1.35 million tons, and this came down to the phenomenally low figure of 750,000 tons in 1959.

The Government has received an assurance that the slow-down in expansion will be corrected and the industry will give certain quantities of both coking and non-coking coal additionally, in the short time between now and the end of the current plan. A working group has been set up, with the representatives of the industry as well as the Government, to examine the colliery-wise and grade-wise pattern of these additional raisings and to draw up a forecast of the quantities that will be available month by month. For its part, the Government has assured the industry that, short of a price increase, all possible assistance will be given to remove the difficulties and bottlenecks which may come in the way of increasing production.

Public Sector Production

The production of 6.75 million tons in the public sector in 1959 represents an increase of 53 percent over the figure in 1955. This includes 4.52 million tons raised by the National Coal Development Corporation from the 11 old State collieries and from eight of their ten new mines, which have begun production and have been brought on to the revenue account already; the balance of 2.23 million tons was raised by the Singareni collieries. In terms of additional production, the effort represents an achievement of 20 percent, against the target of 12 million tons assigned to the public sector.

The Corporation has been able to acquire and take physical possession of all lands necessary for the development of the collieries projected under the second five year plan. Land measuring 143,84.85 acres and mining rights over 14,724.62 acres have been duly acquired. Detailed drilling in the new areas had to be undertaken in conjunction with the Geological Survey of India and the Indian Bureau of Mines with a view to assembling geological data for drawing up the project reports and opening the mines.

Following the results of drilling and prospecting, detailed project reports were drawn up for each new colliery. All such project reports for the collieries to be developed during the second plan period were duly submitted to the Government, which has approved them. Machinery and equipment had to be ordered on a large scale and procured mostly from abroad. Orders covering the full allocation of Rs. 20.27 crores of foreign exchange for the purchase of machinery and equipment have already been placed. The value of plant and machinery actually received at site is Rs. 12.40 crores. It is expected that the balance will be received within the next two or three months.

It is hoped that in the last quarter of 1961, the National Coal Development Corporation collieries will yield a monthly output which will correspond to a rate of production of 11 million tons a year. With this object in view, monthly targets of production have been laid down for the individual collieries of the National Coal Development Corporation so that the progress of production is watched from month to month with reference to these targets and remedial measures to arrest any decline are taken, where necessary. The monthly targets for the individual collieries are shown below:

Name of colliery	Monthly production targets (in tons) by March 1961
Old Collieries	282,000
Bhurkhunda (new and old)	80,000
Kurasia (new and old)	100,000
Kathara	100,000
Gidi "A"	75,000
Saunda	100,000
Sayal "D"	45,000
Bachra	40,000
Gidi "C"	33,000
Korba	55,000
Korea block I	20,000
	930,000

This will mean a rate of production of 11.16 million tons a year, or in round figures, 11 million tons a year. The level of production of 11 million tons during the last quarter of 1960-61 means 2.5 million tons less than the target of 13.5 million tons. As for the Singareni collieries, starting with a production of 1.5 million tons in 1955, this group, owned jointly by the Governments of India and Andhra Pradesh, has been able to raise 2.23 million tons in 1959, against the target of 3 million tons by 1961-62.

The limiting factor is the availability of transport facilities, particularly the supply of wagons. As far as the wagon supply for the movement of coal is concerned, the total requirements during 1960 are estimated at 5,100 a day. Against this, the average daily loadings for each month of the current year have been reported as follows:

1960—Month	Daily average loadings (in wagons)
January	4,063
February	4,143
March	4,185
April	4 263
May	3,881
June	4,210 (up to 7th)

This shows that the supply of wagons is still insufficient.

Khadi for Uniforms

Notwithstanding its high cost, poor durability and unshapeliness, compared with mill-made cloth, *khadi* will hereafter be used for Government employees' uniforms. *Khadi* bed-sheets have been imposed upon travellers using air-conditioned railway coaches. Side by side, 50 of latest type of air-conditioned, fully built-up motor cars are being imported to stimulate tourist traffic in India. Sixty such motor-cars were imported in 1959. Another fleet of American cars were imported for the use of Governors.

Economics of Making Cheap Cars

It is proposed to set up a three-man technical committee including, if possible, a foreign expert to examine and report on the possibility of manufacturing an economy car, or to quote Mr. Manubhai Shah, a *Janata* car. It will scrutinise the necessary data to suggest whether it will be possible to place on the market a car whose price does not exceed Rs. 6,500 only. In case the committee comes to the conclusion that it is possible to manufacture such a car, it will also indicate how to secure Rs. 10 crores, including Rs. 5 crores in foreign exchange, to finance the project. While the Ministry of Commerce and Industry has been engaged in drafting a resolution on the Jha Committee's recommendations, and in finalising the personnel and terms of reference of the proposed committee, the Minister of Industry, Mr. Manubhai Shah, has addressed a letter to the Prime Minister seeking his approval to go ahead with the project as a public sector venture. His Minister, Mr. Lal Bahadur Shastri, is apparently too preoccupied with the rising trend in cloth prices, the rise being of the order of 40 percent over the normal. Of this, roughly 15 percent could be attributed to higher cotton prices and to the Wage Board award. The millowners, it appears, have decided to make a gesture by reducing prices by 10 percent, and they expect that the Government will make cotton freely available to them.

Move to Export Indian Sugar

The Food and Agriculture Minister, Mr. S. K. Patil, has made an approach for exporting Indian sugar to the U.S.A. Although the request is being considered on merits, Indian consumers may feel assured to know that the U.S. authorities do not intend importing Indian sugar until the Hindu festivals of Durga Puja and Diwali are over. In other words, sugar, if imported by the U.S.A., will only be from the new season's production, and not from the so-called carryover. Sugar in India has really become bitter. Some months

ago, there was also "a carry-over" and "an exportable surplus." Minor exports did materialise, leading to a phenomenal rise in domestic prices, which still continues.

Both cotton textiles and sugar have a great influence on the cost of living. Instead of negotiating with the U.S.A. to export sugar, the Ministry of Food and Agriculture should take effective steps to bring down the prices of sugar and cotton. This will relieve discontent in the country at least among fixed income earners like Government employees.

U.K. Credit for Durgapur Plant Expansion

The British Government has agreed in principle to arrange credit for the expansion of the Durgapur steel plant. Negotiations between the Indian Government and the British High Commission are proceeding to settle the details. This will be a part of the credit the British Government proposes to arrange to finance the third five year plan. An announcement is expected shortly. Meanwhile, the agreement for the £10 million credit, recently announced by the British Government, has just been signed.

Economic Envoys to Report

Besides Mr. T. Swaminathan, his counterpart in the U.S.A., Mr. B. K. Nehru, who arrived here from Washington on Monday for consultations, has brought with him the draft of the World Bank mission's report on India's economic development. The report contains an assessment of the prospects for the third five year plan. It follows the general pattern of the three international bankers' report, which holds that India's development is proceeding on the right lines. The third plan is realistic and capable of being implemented, and its demand on foreign resources is reasonable, the former report says. It will be discussed here, and later at a meeting of the Western Powers in Paris on 12th and 13 September. As already reported, the Commonwealth Finance Ministers will meet in London from 21st September. The meetings of the World Bank will commence in Washington on 26th September, and of the Development Assistance Group on 2nd and 3rd October.

Mr. Iliff Tries Again

The vice-president of the World Bank, Mr. A. B. Iliff, who has arrived in connection with the Indo-Pakistani canal waters dispute, is accompanied by two experts, namely Messrs. K. Guinness and Irving Lorber.

Coal Experts from U.S.A.

The high-powered coal mission sponsored by the U.S. Technical Co-operation Mission, which arrived here on 9th August, consists of Mr. Raymond E. Salvati, president, Island Creek Coal Company, Mr. Hervert E. Jones, president, Amherst Coal Corporation, and Mr. Edwin R. Phelps, president, Pittsburg and Midwag Coal Company. The mission will stay in this country until the middle of September. The Indian coal situation has already been examined by the British and West German experts. The report of the former is already with the Government of India.

Mr. Desai Reports on Foreign Tour

The Central Finance Minister, Mr. Morarji Desai, in a statement on his recent tour abroad, said in the Lok Sabha: "Our foreign exchange situation, as the House is aware, is of continuing difficulty. Our aim is to overcome it within a reasonable period of time by intensive efforts to develop our basic industries and to enlarge our capacity to produce the machinery and equipment that we need for further development. Meanwhile, there will be need for external assistance on a massive scale—as the draft outline of the plan has indicated. I was happy to discern in my discussions a sympathetic interest all round in our development programmes and a keen awareness of our problems and needs. I found in all the countries a desire for closer co-operation in trade, and willingness to assist us in our economic development programmes to the extent possible. The form and extent of such co-operation and assistance will have to be discussed in more precise terms and in greater detail from time to time."

Mr. Desai visited Yogoslavia, Poland, Czechoslovakia, West Germany, Russia, and the United Arab Republic.

Indo-Swiss Credit Agreement

The Governments of India and Switzerland have signed a credit agreement providing for the purchase of Swiss capital goods by India for this country's development programmes. The credit is for a period of ten years, covering transactions of the value of 100 million Swiss francs (Rs. 10.9 crores). Of this amount, a sum of 60 million Swiss francs will be made available immediately and the balance of 40 million Swiss francs later. The credit will be provided by a consortium of Swiss banks on mutually agreed terms. It will be guaranteed by the Swiss Government under the export risks guarantee law. The Indian imports of specified capital goods under this agreement will be in addition to normal imports.

S.U.N.F.E.D. Aid for India

The Governing Council of the United Nations Special Fund, at its session in May, approved assistance to the extent of $4,516,700 from the Fund for the following five Indian projects:

	Amount $
(1) The Higher Fisheries Training Institute	610,300
(2) The all-India scheme for the investigation of potential hydro-electric sites	2,361,400
(3) Survey and investigation of the water supply and sewerage scheme of greater Calcutta	324,100
(4) The Central Mining Research Station, Dhanbad, and	695,900
(5) The Central Public Health Engineering Research Institute, Nagpur	525,000
	4,516,700

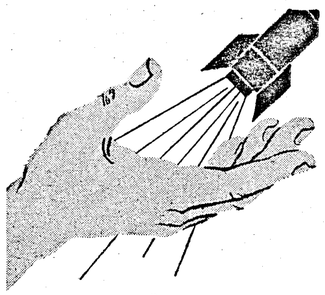
Foreign Loans for Second Plan

The following is an account of the loans from the United Kingdom, the U.S.A., Russia and Japan authorised for the second five year plan:

Name and Source of the loan	Amount authorised (Rs. crores)	Rate of Interest
United Kingdom:		
(1) Lazard Brothers—credit for the Durgapur steel plant	15.33	Bank of England official discount rate plus 1 percent subject to a minimum of 4½ percent
(2) The first Indo-British credit agreement, 1958, for the Durgapur steel plant	20.00	5¾ percent to 5-6/8 percent
(3) The second Indo-British credit agreement, 1958, for the import of machinery, etcetera. ...	38.00	4¾ percent to 5½ percent
(4) The U.K.-India (Oil Pipeline) Credit Agreement, 1959	4.00	—
(5) The U.K.-India Credit Agreement, 1959, for the import of machinery, etcetera	25.33	5½ percent to 6¼ percent
Total:	102.66	
U.S.A.		
(Loans repayable in foreign currency)		
(1) U.S. Banks' loan to Air-India International	5.33	5 percent
(2) Supplementary U.S. Banks' loan to Air-India International	0.57	6 percent
(3) Export-Import Bank credit for the import of capital goods	71.43	5¼ percent
Total:	77.33	
Loans repayable in rupees		
(4) U.S. development assistance loans	40.48	4 percent
(5) U.S. Development Loan Fund loans:		
(i) First railway loan	19.05	3½ percent
(ii) Loan for the motor-vehicle, jute and cement industries	16.67	5¼ percent
(iii) Second railway loan	16.67	3½ percent
(iv) Steel loan for public utility projects	8.57	3½ percent
(v) Steel loan for industrial enterprises in both public and private sectors ...	10.48	5½ percent
(vi) Loan for certain industries in the private sector	7.14	5¾ percent
(vii) Loan for power projects	4.76	3½ percent
(viii) Second steel loan for private sector industries	9.52	5¾ percent
(ix) Chandrapura power project loan ...	14.29	3½ percent
(x) Sharavathi power project loan ...	4.00	3½ percent
(xi) Barauni power project loan ...	1.81	3½ percent
(xii) Durgapur power project loan ...	9.52	3½ percent
(xiii) Road transport loan	6.24	5¾ percent
(xiv) Ahmedabad electricity project ...	1.86	3½ percent
(6) U.S. President's Asian Economic Development Fund loan for the Orissa iron ore project	9.52	3½ percent
(7) Loans under P.L. 480:		
(i) Agreement of 28th June, 1957 ...	107.74	4 percent
(ii) Agreement of 3rd November, 1958 ...	15.89	5 percent
(iii) Agreement of 27th April, 1959 ...	61.76	3½ percent
(iv) Agreement of 15th April, 1960 ...	41.19	4 percent
Total of U.S. loans repayable in rupees:	407.16	
Total of all U.S. loans	484.49	
(*These are rupee loans out of P.L. 480 rupee counterpart funds.)		
Russia:		
(1) Bhilai credit	64.38	2½ percent
(2) The 500-million roubles credit	59.53	2½ percent
(3) Drugs credit	9.52	2½ percent
(4) Barauni credit	11.91	2½ percent
Total of Russian loans:	145.34	
Japan:		
(1) The 18-billion yen credit for the import of capital goods	23.81	prevailing World Bank rate

Secrecy of Bank Reserves

The Finance Minister, Mr. Morarji Desai, introduced in the Lok Sabha a Bill to amend the Banking Companies Act. Its statement of objects and reasons explained: "As credit institutions dealing primarily with depositors' monies, banks have to make certain special provisions against emergencies or unforeseen contingencies as a matter of financial prudence. The legal position in the United Kingdom and certain other countries is that banks have been specifically exempted by law from disclosing information relating to these provisions. In India, the form of the balance-sheet and the profit and loss account prescribed for banks by the Banking Companies Act ensures that such provisions need not be disclosed. But a doubt has been felt whether, notwithstanding this, any tribunal or other authority could compel banking companies to disclose information relating to these reserves and provisions. As such reserves and provisions are for emergencies and unforeseen contingencies, it is not in the public interest or in the interests of the banking system of the country to disclose these particulars. It is proposed to insert a new section in the Banking Companies Act to make it clear that information, which according to the law is not required to be published in the balance-sheet or profit and loss accounts of a banking company, need not be disclosed to the various authorities under the Industrial Disputes Act. Although the secrecy of the special or inner reserves is thus proposed to be maintained, the various authorities constituted under the Industrial Disputes Act are being specifically empowered to call for reports from the Reserve Bank of India, as an expert authority, concerning the amount of such reserves which may be taken into account for the purposes of the proceedings under the Act."



New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.

Today, man has travelled far on the road of knowledge; today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

INDIAN OXYGEN LIMITED — Twentyfive Years' Service

IOAX-60

Replies from Ministers

Some replies in the Lok Sabha apparently did not give the full facts. Perhaps the Ministers responsible for them were not properly briefed. The Steel Minister, Sardar Swaran Singh, for example, informed the House that French and British teams of experts had been invited to advise on the efficient management and organisation of production at the Rourkela and Durgapur steel works and that "their work is not yet complete". As far as the British team was concerned, its report had been received much before the "notice period", and was being examined by the Government.

The Transport Minister, Mr. Raj Bahadur, visualised the further expansion of Indian shipping "in order to meet the situation arising out of the food agreement recently signed with the U.S.A." He said that the expansion had been suggested by the chairman of the National Shipping Board. He added that there was now a buyers' market in ships and they were definitely available at low prices, "but the question was how much the Government could spare to buy ships." The Food and Agriculture Minister, Mr. S. K. Patil, further added that under the American law, 50 percent had to be carried by American ships and the remainder was entirely at India's disposal. Neither Mr. S. K. Patil nor Mr. Raj Bahadur disclosed to the House what cargo the Indian ships would carry to the United States in order to bring the foodgrains and thereby save millions in foreign exchange.

Share Capital of State Concerns

A study group, consisting of officials, has been set up by the Planning Commission to examine the question of public participation in the capital of State enterprises. No formal terms of reference have been assigned to the study group, but it is expected to examine the question in all its aspects.

Mysore Wants Aluminium Plant

The Government of India has received a preliminary proposal for setting up an aluminium smelter in Mysore State. The actual location and the site are not finally indicated. Fuller details concerning foreign collaboration, power supply, etcetera, have not been received. The authorised, issued and paid-up capital of the proposed undertaking will be known after the proposal is finalised.

Fertiliser Factory for Assam

It has been decided to establish a fertiliser factory in Namrup in Assam, by using natural gas. Hindustan Chemicals and Fertilisers Ltd has been entrusted with the execution of the project. The Company is preparing a detailed project report.

Steel Imports

Steel imports in 1960, it is expected, will be of the order of 600,000 tons. Arrangements are being made for the import of steel from the rupee-payment-agreement countries, namely, Russia, Czechoslovakia, Poland, Hungary and Yugoslavia, according to the agreements concluded by the Government of India with these countries. Contracts for the import of 55,500 metric tons of steel from Russia and 500 tons of steel wire from Czechoslovakia have already been finalised. Imports of steel are also being arranged against the U.S. Development Loan Fund credits as well as barter imports from the U.K., the U.S.A., West Germany, Japan, Belgium, Holland and Australia.

Paints and Varnishes

As a result of the survey recently carried out by the Government, it is felt that for the present there is scope for the establishment of additional capacity for the manufacture of paints and varnishes in the northern region comprising the States of Uttar Pradesh, Punjab, Rajasthan, Jammu and Kashmir, Himachal Pradesh and Delhi, and in the southern region comprising the States of Madras, Andhra Pradesh and Kerala. The Government has, therefore, decided that as part of the expansion proposed during the third plan, fresh capacity of 10,000 tons will be installed in each of these two regions. No licence has been granted yet.

Recommendations of Cement Wage Board

The tripartite Industrial Committee on Cement, which met here this week, agreed that the period of operation of the recommendations of the Cement Wage Board should be five years from the date they come into effect. However, the matter could be reviewed by the Industrial Committee at the end of four years, if the workers' representatives so desired.

London

U.K. EXCHANGE RESERVES RISE IN JULY

GROWTH OF INDUSTRIAL OUTPUT EXPECTED TO SLOW DOWN

(FROM OUR LONDON CORRESPONDENT)

JULY was the first month of the adverse season for sterling—the average showing for the month over the last few years was a deficit of £14 million—so it would hardly have been surprising if the gold and foreign currencies reserve for July this year had followed the normal trend. Instead, there has been a gain of as much as £37 million to raise the total to £1,070 million. The real gain was even larger, for a debt repayment of £10 million to West Germany was made, although it was not due until 1st August, and in addition the usual monthly repayments to the International Monetary Fund and the creditors of the European Payments Union amounted to another £10 million. In ordinary transactions, therefore, the month's gain was as much as £57 million. On a comparable basis, the gain in June was only £21 million, while the true surplus in May was £15 million. The 6-percent Bank rate has done its job of propping sterling, for after allowing for the special payments, the July surplus was the largest since March 1958, when money was coming back to London in abundance after the sterling crisis in the autumn of 1957. It is now clear that the pound sterling has survived recent international tensions without any loss of confidence, and even though much of this success stems from "hot" money flowing in to take advantage of the benefits which London offers at the moment, it is a good thing that Britain has started the period of strain in a strong position.

Taking a longer view, the City appears to have decided that "the economy may get through the autumn without any further measures of restraint," to quote a brokers' circular. Recent evidence has suggested that consumer demand may be levelling off and that the U.K. Government's measures to prevent the threatened boom from boiling over are at last beginning to have some effect. On the other hand, incomes are still rising and with a further jump of 70,000 in June, the labour force is now the biggest ever employed, so the need for restraint is equally obvious.

Economic Expansion

The view that the present phase of economic expansion may have passed its peak is supported by the *Economic Review* published by the National Institute of Economic and Social Research. It suggests that in the months ahead, the rate of increase in industrial production is likely to slow down. Growth, it feels, will be slower and more uneven. It does not think that there will be any serious balance of payments trouble this year, mainly because imports are likely to drop. Analysing prospects for the second half of the current year, the Institute finds that exports may not rise much; current Government expenditure on goods and services is edging upwards, but is not an important expansionary force; the main sources of expansion now are fixed investment and consumer expenditure; investment in stocks is unlikely to go on rising and may well decline, but probably not so much as to outweigh the growth of fixed investment and consumption. It sums up that the total demand seems likely to go on rising, but more slowly than before.

Two months ago, in the previous issue of the *Review*, the National Institute said that the outlook was still for expansion and that the U.K. Government seemed "bound to follow a policy of wait and see for a time." Instead, the Government took immediate action to introduce measures of restraint. Now, the Institute has argued strongly that it would be a mistake to press home deflation in an attempt to improve the balance of payments. The effects on imports and exports are small; it is bound to disturb industrial confidence and to induce a decline in investment; and the check to growth is likely to make the real competitive position weaker and might have a bad effect in the future. Instead, it suggests a closer look at Britain's overseas investment policy and a new attempt to offload some external defence expenditure. Import restrictions are dismissed as unlikely to offer more than short-term relief. Curiously enough, no mention whatever is made of the ministerial appeals to business men to export more.

Machine Tool Orders

Against the assessment of the outlook must be considered the latest figures available on the economic front. Most encouraging are those issued by the Machine Tool Trades Association, which suggest that good times are returning to the industry since it suffered something of a setback last year. The figures are for May and they are in part estimated. They show incoming orders 66 percent greater than in May last year and a lengthening of the order-book since orders exceed deliveries. The latter were up by 7 percent compared with those of May 1959, although that month was affected by the inclusion of Whitsun. The value of outstanding orders at the end of May was £83.6 million, of which £20.1 million was for export. A year earlier, the corresponding totals were £41 million and £15.3 million. The opening months of this year saw orders coming in at a very brisk rate. The increase for the first five months, compared with a year earlier, was 125 percent. The inflow in May was slower than in the previous months, but this may not mean much. The actual figure was £12.37 million, against £12.43 million in the previous month, but only £7.45 million in May 1959.

In the last three months, new capital issues have moved at a high rate. In May, £52.546 million of new money was raised in the market, in June £55.645 million, and in July £55.913 million, according to the figures compiled by the Midland Bank. This brings the total for the first seven months of 1960 to £328 million, compared with £310 million in the same period of last year. Many further new issues are now coming along, and with the banks pressing customers to repay advances by making capital issues, the British banks are not likely to see much slackening in the demand for money from investors.

Industrial Production

The latest index number of industrial production, prepared by the Central Statistical Office, indicates that output remained at roughly the same level as in April, May, and June, although the average for the second quarter was about 2 percent higher than that of the first three months of the year and 9 percent higher than in the second quarter of 1959. The figures bear out the general assumption that last year's rapid expansion of industrial activity was exceptional and that the expanding industries have come near to the limit of their present capacities.

Just how much the statistics are distorted by the continued decline in coalmining and shipbuilding cannot be judged from the official figures. One clue, however, is given by the U.K. Treasury in its *Bulletin for Industry* for July. Production of capital goods, it states, is going ahead fast, but the phase of swift growth of consumer goods has come to an end. The *Bulletin* paints a fairly cheerful picture of the economic background. World economic activity is still rising, it points out, and although there has lately been some check to the growth of exports from west European countries, in most of these production is expected to go on rising. World trade should continue to grow at a slower rate than in past months.

Consumer Spending Rises

In the first quarter of this year, consumer expenditure in Britain showed a rise of 2 percent, compared with the final quarter of last year on a seasonally adjusted basis. The rise was from £4,005 million to £4,083 million. It consisted mainly of rises of 3 percent in expenditure on food and of 5 percent in spending on housing, fuel and light. Fixed investment also increased. After allowing for seasonal variations, it was about 3 percent up on the previous quarter and over 13 percent higher than in the first quarter of 1959. Public sector investment was actually a little below the rather high figure recorded in the fourth quarter of 1959, but private investment rose sharply.

Record Note Issue

For the third seccessive week, the note circulation has established a new record. The latest bank return shows another rise of £19.5 million, which lifts the active total to £2,319 million. This is about £102 million higher than the summer peak level of last year, reached in the last week of July. The latest bank return shows further transfers of £6.4 million of special deposits from the clearing banks to the Bank of England. Special deposits total now stands at £117.9 million. This may be compared with the total to be transferred by the London clearing and the Scottish banks by 17th August of about £150 million.

Cotton Scheme Confirmed

The U.K. Government's scheme for the finishing end of the cotton textile industry has now been confirmed by the Board of Trade, and it came into operation last week. It is now possible for companies in the bleaching, dyeing, raising and finishing and machine printing sections of the industry to make application for compensation grants, which are also available for the yarn processing section of the industry. No contribution towards scrapping plant and machinery will be paid by the Government unless a minimum target is reached. The initial "participation period" of three months runs from the date of confirmation by the U.K. Board of Trade, but may be extended by the Cotton Board. Compensation for scrapping will be equal to 50 percent of the written-down value of plant used or capable of being used at 24th April, 1959, plus 15 percent of turnover, less the cost of direct materials, of the last financial year ended not later than 31st October, 1959. Two levies are to be made on all firms in the industry, on a turnover basis.

COIR PRODUCERS UNABLE TO PAY MINIMUM WAGES

NEED TO CHECK PROFITEERING IN COCONUT HUSKS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Indian coir industry might not be facing a crisis, but it still has many serious problems. It is true that coir yarn prices have improved since 1957-58. The price of Anjengo, for example, which was Rs. 250 a candy of 6 cwts. in August 1958, has steadily improved to Rs. 280 on the Alleppey market. But in spite of the recovery in prices, producers are unable to pay the minimum wages fixed a few years ago by the Kerala Government—not because the wages are high, but because the price of coconut husks is out of all proportion to that of the finished product. Traders in husks, it is said, take away the benefits which accrue from an improvement in coir yarn prices, so a demand for controlling the price of husks was made in the State Legislature recently. But it is almost impossible to control the price of husks through legislation since they are produced and sold as a by-product of coconut by almost everybody who grows coconuts in Kerala. As long as there is no control over the production and distribution of coconuts, it is not possible to control the sale of husks effectively. Instead of attempting full-fledged and direct control, efforts may, therefore, be made to exercise an indirect check on husk prices by buying when prices are low and distributing retted husks to coir yarn producers at reasonable prices. Co-operative societies can play an important part in this matter. They alone can put an end to the activities of the unscrupulous profiteers among husk dealers.

Exports Decline

Coir yarn exports are gradually declining due to competition from such fibres as sisal, the deterioration in the quality of coir supplied to foreign markets and the changing consumer preferences in the western countries. The last two factors apply to finished coir goods like mats and mattings also. Producers say that mechanisation is the only solution. The antiquated methods of spinning coir yarn and manufacturing mats and mattings should be abandoned if the industry is to survive. The delegation sent out by the Coir Board to foreign countries last year to study the scope for the expansion of coir goods exports had emphasised the need for mechanisation in its report. The Board has accepted the recommendation of the delegation and has started taking measures to introduce gradual mechanisation. It is trying to popularise the treadle type spinning machine which can conveniently replace the existing age-old spinning wheels. Furthermore, the Coir Board has made provisions in its budget to install a matting plant, to be worked by power, in its research institute in Alleppey. It will help study the effects of mechanisation on coir manufactures.

Tax Relief for Agriculturists

The Kerala Government has given slight relief to low income-group agriculturists by raising the lower limit of taxation in agricultural income tax from Rs. 3,000 a year to Rs. 3,600 a year. The tax payable by agriculturists coming under the income slab of Rs. 3,600 a year to Rs. 5,000 a year will be compounded at Rs. 75. A Bill to amend the existing Agricultural Income Tax Act to give effect to the decisions of the State Government was passed recently by the Kerala Legislature. The concessions apply to individuals only and companies are excluded from the scope of the amendment Bill. The State Finance Minister's excuse for excluding companies is that they had been treated differently in the original Act.

New Plantation Tax

The new tax on plantations, announced by the Kerala Finance Minister in his Budget speech, is to have retrospective effect from 1st April, 1960. The Bill embodying the new proposal was passed by the State Legislature recently. The Kerala Government has so long collected a basic tax of Rs. 2 an acre from all landholdings in the State. The new proposal aims at collecting an additional plantation tax of Rs. 8 an acre from lands cultivated with such plantation crops as tea, coffee, rubber, coconut, arecanut, cardamom and pepper. All plantation holdings, measuring less than five acres, are exempted from the scope of the new tax. Non-bearing plantations are also exempted from the purview of the tax. For fixing the extent of the plantation held by a person, the following formula has been adopted. The total number of bearing plants on all the lands held by a person is taken into account and is divided by the figure fixed for every crop as the number of plants which can be grown on an acre of land. The result obtained by such division is taken to be the extent of plantation held by him for purposes of assessment of the tax. In the case of tea and cardamom, the actual extent of plantations is taken into account. The following formula is given in the Bill for computing the extent of a bearing plantation: 70 bearing coconut trees will make one acre of coconut garden, 600 arecanut trees one acre of arecanut plantation, 180 rubber trees one acre of rubber estate, 600 coffee plants one acre of coffee plantation, 330 pepper vines one acre of pepper garden.

Unrealistic Formula

In the course of the discussion on the motion for referring the Bill to a select committee, some members said that the formula is "absurd" and "unrealistic". With the exception of two members, one P.S.P. and another communist, others enthusiastically supported the plantation tax. The communist member, however, disagreed on some details and suggested the introduction of a slab system to "help" small planters. The communist member who criticised the Bill was the trade union leader, Mr. Balachandra Menon. He felt that any further taxation on the Kerala plantation industry will cripple it, apart from making it difficult for planters to implement statutory labour welfare measures. He made it clear that he was not opposed to taxing plantation owners since they could bear new taxes without difficulty. But he said that he studied the balance-sheets of some prominent Kerala planting companies and found that many of them were not making profits worth the name. So he pleaded that if the Government is keen on introducing the new tax, it should first make an enquiry as to which plantations could bear it. Mr. Menon thinks that no estates, other than the rubber ones, are capable of bearing any fresh taxation now. If the State Government introduces the tax without considering its implications, it will kill the goose that lays the golden eggs, he said. In response to the pleas from both sides of the House, the State Government has agreed to give some minor concessions to owners of coconut and pepper plantations by raising the number of yielding coconut trees and pepper vines an acre for the purpose of calculating the tax. Communist members urged that some concession be granted to small holders by introducing a slab system of taxation. But the Government refused to concede the demand, mainly on the ground that a slab system will lead to fragmentation of holdings. The communist demand that the tax should be shared between the landlord and the tenant was also rejected by the Kerala Government.

Amendments to Agrarian Bill Urged

The President has sent the controversial Kerala Agrarian Relations Bill of the previous communist Government, which has been awaiting his assent for the past one year, to the State Legislature for introducing necessary amendments. In doing so, he has recommended the following amendments: "The definition of a plantation in Clause 2(39) may be so modified as to include: (1) lands contiguous to or in the vicinity of or within the boundaries of the planted area not exceeding 20 percent of the area planted with such crops as are covered by the clause for purposes of expansion of the plantation, and (2) agricultural land interspersed within the planted area and necessary for the efficient management of the plantation, with the proviso inserted in a suitable place in the Bill stating that a tenant on such land shall be entitled to the benefits of the provisions relating to the fixity of tenure and fair rent, subject to the following conditions: (a) if the land in the possession of such tenant is required for purposes of the plantation, it may be resumed by the landowner subject to the payment of compensation and (b) if such tenant wilfully commits any act of waste in the plantation, he shall be liable for eviction, (3) a suitable explanation of the expression 'lands ancilliary to the cultivation of such crops for the preparation of the same for the market' occurring in the said clause." The President has also recommended the inclusion of plantation holdings in Clause 57 which provides for exemption from the ceiling.

Substantial Concession

These modifications will almost fully meet the demands of planters. Besides, the inclusion of plantations in the exemption clause will go a long way to dispel their anxieties. The exemption given in the original Bill was only partial. The inclusion of enclaves within the planted area in the definition of a plantation, in response to the demand from planters, is another substantial concession. But the retention of the 20-percent limit on lands reserved for future cultivation is a point on which they are unhappy since this will amount to a virtual ceiling on the expansion of the industry. The rubber planting industry will be especially hard hit, for it will be unable to undertake ambitious new planting programmes to meet the country's fast growing needs for the commodity. Planters have pointed out that the Kerala Government itself is committed to a programme of expanding rubber cultivation to 300,000 acres or 400,000 acres within the next five years with a view to doubling the present rubber acreage in the State. If the 20-percent limit on reserve land is maintained, the large-scale expansion of rubber cultivation which is at present being aimed at, will remain unrealised.

Tax Burden on Planters

The chairman of the Association of Planters of Kerala, Mr. M. K. Kuriakose, said at the annual general meeting recently that the new plantation tax is an "additional burden on an overtaxed industry". The planters heaved a sigh of relief when the communist régime in Kerala ended since it had threatened to disorganise the management of plantations by substituting the "rule of workers" for the "rule of law". Mr. Kuriakose added that "the new plantation tax of Rs. 10 an acre which the new Government is imposing, however, draws from us another sad and painful sigh". The law and order situation in Kerala plantations has improved considerably. In the field of labour relations, planters have had a comparatively quiet period for some time now, obviously because of the settlement of the bonus issue. But an employer whose profits are squeezed out by heavy taxation cannot afford to pay bonus or raise wages of workers. Referring to the Kerala Government's proposal to expand rubber cultivation, the chairman said that reports to the effect that the expansion programme is to be mixed up with the scheme of distribution of land in small bits of five or seven acres to landless people for rubber cultivation made him rather sceptical of its chances of success.

Self-sufficiency in Rubber

The rubber output for the year ended April 1960 amounted to 24,000 tons. The Rubber Board's estimate of production for 1960-61 is 26,400 tons. India's rubber requirements is steadily expanding. If self-sufficiency in rubber is to be achieved by, say, 1975, it will be necessary to bring under cultivation nearly 450,000 acres of land during the third plan period, according to Mr. Kuriakose who himself is a rubber planter.

OVERSEAS AND INDIAN GOVERNMENT ENQUIRIES LIFT SACKING PRICES

JUTE FIRM IN SPITE OF EXCELLENT NEW CROP PROSPECTS

DURING the past week, overseas buyers have shown more interest in the Calcutta jute goods market, and price fluctuations have to a large extent been governed by the enquiries they have made. Heavy goods, in particular, have been strong as business is reported in cornsacks with Australia and in heavy Cees with Indonesia. Hessians have been comparatively neglected, but their prices have moved up in sympathy with sacking. Towards the close, a Government of India tender for the supply of 14,333 bales of B Twills in October, and a further 3,333 bales in November, has been announced. Since this has coincided with fresh interest from Australia, the sacking market is very firm. Interest in forward shipment, after the end of the year, is negligible, and prices for that period are at a substantial discount.

The recent rise in raw jute and manufactured goods has once again revived the debate about whether the present level of prices is reasonable. Operators recall that the history of the Calcutta jute industry is marked by a constant alternation between over-production and shortage. Over the past year, hessian stocks have shown a substantial rise, even though burlap stocks in the United States have fluctuated only narrowly. As against this, sacking stocks have declined sharply. It is now considered likely that mills will try to transfer looms to sacking production in order to take advantage of the better prices and profits in heavy goods.

Crop Prospects Good

Crop prospects remain extremely good and fibre arrivals in all centres have been heavy. But raw jute prices have shown no signs of weakening. One of the main reasons is the heavy covering activity in the agencies, where prices are anything up to Rs. 2 higher than in Calcutta. Many sellers have business in hand against high-priced contracts; they are prepared to pay substantial premiums to ensure delivery, and are still left with a comfortable margin of profit. Much of the business credited to Calcutta mills is also of the covering variety, and although particular mills' names may be declared in many cases, they are showing no interest otherwise. This does not mean that mills in general are not keen to buy fibre; on the contrary, daily purchases for August and September shipment are tending to keep prices high, and the business for October-November, although limited, reflects the general stock position. Sellers are reserved for those periods, not only because agency prices are high, but also because so little business has been done for these periods that it is general knowledge that nearly all mills still have to cover their October-December requirements. The demand for cuttings has increased in recent weeks; those who a few weeks ago were offering ready cuttings for sale, have now changed their ideas and decided to hold on to their stocks. This is the result of a general switchover to sacking production, for which larger quantities of cuttings are required. With the arrival of new crop jute, there will also be less line cuttings available. So interest has revived particularly since it is rumoured that a further allocation will be issued in the near future.

Stocks of Jute Goods

The increase in stocks of manufactured goods held by mills reporting to the I.J.M.A. during July came as a surprise to the market, and prices reacted downwards. It is understood, however, that the large rise in sacking stocks has occurred mainly because a Government order for July has not, in fact, been lifted during that month. Another feature which has surprised gunny shippers is that, after heavy shipments of cotton bagging—a commodity which comes under the heading of "other goods"—stocks of the latter have shown an increase of 400 tons. The decrease in hessian stocks, the first in five months, has been very welcome and has tended to stabilise prices in that section. The overall increase in stocks is 6,400 tons, making the total 87,800 tons. This is the highest figure since July 1959. Sacking stocks have increased by 9,500 tons to 45,400 tons (51.7 percent); hessian stocks have dropped by 3,500 tons to 31,700 tons (36.1 percent); and stocks of other goods have risen by 400 tons to 10,700 tons (12.2 percent). Sacking stocks now are the highest since August 1959. In July 1959, total stocks of manufactured goods stood at 95,400 tons, made up of 57,400 tons of sacking (60.3 percent), 23,700 tons of hessians (24.7 percent) and 14,300 tons of other goods (15 percent).

by the East India Jute and Hessian Exchange for the period 3rd August to 9th August, were as follows:

	Hessians 40in 10oz. Nov. 1960		Sacking B Twills Nov 1960	Raw Jute Assam Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	49.47	45.24	126.15	90.29	33.70
Highest	50.04	45.76	127.10	91.93	34.24

Closing	49.78	45.52	126.45	90.45	33.76

Manufactured Goods: The market opened quietly last Thursday in the absence of overseas business, and there was very little change from the previous day's rates. B Twills were at Rs. 138.75 and 40in. 10oz. hessians at Rs. 46.50—the discount for October-December shipment being Rs. 9.75 in sacking and 70nP in hessians. Conditions improved after the opening on reports of business with Indonesia. This, coupled with speculative activity and local covering, caused a rise of Rs. 1.25 during the day in sacking. Hessians moved up in sympathy, but there was little activity. During Friday and Saturday, there was little change in the quoted rates, and a quieter tendency developed. On Monday, prices fluctuated narrowly as a result of activity in the futures market, and prices generally declined. The publication of the I.J.M.A. jute goods stock figures caused further losses. The slide was arrested on Tuesday afternoon following reports of a Government tender for a fairly large quantity of B Twills for October shipment, and a smaller quantity for November. Also, reports of fresh business from Australia pushed prices back

to the former levels, particularly in sacking. The market closed fully steady.

Opening quotations on Wednesday morning were as follows:

	Aug.	Sept.	Oct.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	35.00	36.00	34.75	34.50	33.85
40in. 8oz.	37.75	37.50	37.25	37.00	36.50
40in. 10oz.	47.10	47.10	45.60	46.00	45.20
B Twills	140.40	139.50	135.00	130.00	126.00
Heavy Cees (Plain)	140.00	140.00	135.50	130.75	126.00
A Twills	169.00	169.00	163.50	158.50	152.00
Liverpools	155.50	157.50	152.00	147.00	141.00
Cornsacks	149.50	150.00	142.00	134.50	128.00

Raw Jute: Fibre prices showed little change at the opening last Thursday, and a lower tendency developed as arrivals upcountry increased. Sellers were still reserved for quick shipment jute, but forward shipment was on offer at a favourable discount although there were no buyers. Assam Bottoms for September-October shipment were quoted at Rs. 36.75. On Friday, however, indications were raised by 50nP because of a fair amount of mill interest, and also because upcountry rates were considerably higher than local prices. This phase lasted over the week-end, and although the undertone was easier on Monday, there was little change in prices. A temporary reduction of rates on Tuesday morning was followed by a period of stiff opposition to lower prices by sellers. Encouraged by the steadier goods market and the continued disparity of agency prices, they raised their indications to the former levels. Arrivals in all upcountry agencies were heavy, and this was reflected by the slight increase in Cossipore where about 200 wagons were logged over the week. This figure was still well below the average for the time of year.

Business reported during the week consisted of Assam and Northern at Rs. 36.50 to Rs. 37 for September-October shipment and Tossa at Rs. 36.25 to Rs. 37.50 for October-November. Jungli white was done at Rs. 36 for September shipment. Jungli mesta was done from Rs. 32 to Rs. 32.75, and Daissee mesta at Rs. 33. Small lots of Pakistani cuttings were purchased at Rs. 103 to Rs. 106 for October-November-December shipment.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	100.50	37.50	Sept.-Oct.
Northern	99.25	37.00	,,
Purnea Desal	96.50	36.00	,,
Daissee Selected	101.75	38.00	Oct.-Nov.
Assam Tossa	101.75	38.00	,,
Mesta:			
Assam Northern	91.00	34.00	Oct.-Nov.
Daissee	91.00	34.00	,,
Desal	91.00	34.00	,,
Jungli	88.50	33.00	,,
Pakistani N. C.	106.00 a bale		,,

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July as follows :

Description	31st July, 1960 Lakh Yds. (000 Metres)	31st July, 1960 000 Tons (000 Metric Tons)	30th June, 1960 Lakh Yds. (000 Metres)	30th June, 1960 000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	Increase over (+) or decrease from (−) last month 000 Tons (000 Metric Tons)	31st July, 1959 Lakh Yds. (000 Metres)	31st July, 1959 000 Tons (000 Metric Tons)
	11,74	31.7	13,10	35.2	−1,36	−3.5	9,42	26.0
Hessian cloth and bag	(10,73,63)	(32.3)	(11,98,08)	(35.8)	(−1,24,45)	(−3.5)	(8,61,57)	(26.4)
	10.82	46.0	8,59	36.5	+2,23	+9.5	13,01	54.1
Sacking cloth and bag	(9,89,39)	(46.7)	(7,85,61)	(37.1)	(+2,03,78)	(+9.6)	(11,89,43)	(55.0)
		9.9		10.3		−0.4		12.7
Others		(10.0)		(10.5)		(−0.5)		(12.9)
Grand Total		87.6		82.0		+5.6		92.8
(000 Tons/Metric Tons)		(89.0)		(83.4)		(+5.6)		(94.3)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES RISE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

FIBRE arrivals during the past week have been fully normal, although this was not obvious a few days ago. Considering that the crop is late, it can even be said that the imports of 35,000 maunds to 40,000 maunds a day in the Narayanganj market are unusually large. Yet prices show no sign of coming down. Although the condition of the fibre has improved, many balers have bullish inclinations and have continued to buy throughout. Other balers have July and August contracts to fulfil both for their overseas customers and for local mills. They are, therefore, obliged to buy at any price. Further, the jute mills in Pakistan are still very short of jute. During the past week, they bought quite heavily both for ready and forward deliveries. It is interesting to note that the discount for forward sales has practically disappeared in all grades, reflecting the general bullish opinion.

The loose jute market has gone up by only about Re. 1 a maund in spite of the fact that imports have more than doubled in the last ten days, which normally brings prices down. Local interbaler business in pucca bales, however, has been restricted, but prices quoted are higher in sympathy with the loose jute market. The resistance of overseas buyers seems to be weakening, and they have begun to follow the rise. The present P.J.A. quotations, which have been increased, are in line with the overseas market. Here, too, the discount for forward delivery seems to be disappearing, and the position is that while overseas buyers are still trying to push down prices for September-October offers, they are obliged to accept practically any offer for early delivery.

This difficult position is made worse by the fact that some of the larger shippers feel that the market will rise even more, and are not prepared to offer at present. This is very disturbing when, in a difficult season such as the current one promises to be, a buyer has to be very careful and buy only from reputable parties. If, as appears likely, these high prices are maintained throughout the season, it will be extremely difficult for jute mills in foreign countries to compete with Indian and Pakistani jute goods. They may well be obliged to reduce their working hours, which will automatically increase the demand for Indian and Pakistani jute goods. This combination in a season when both the crops are smaller than usual, can result in high prices for both fibre and jute goods. Fears of floods have to some extent been allayed since the rivers are beginning to recede, but this may well have a bad effect on the quality of the white and tossa crop.

BRITISH TEXTILE REVIEW

CLOTHING SALES WELL MAINTAINED

SCEPTICS are continually amazed by the strength of the textile trade in Britain. They said last year that there was too much speculative buying, by converters and distributors, in anticipation of shortages which would not materialise, and that the mood would quickly change when the restoration of depleted stocks—undoubtedly a factor in the recovery last year—was completed. They did not take due account of the most encouraging factor of all, the increase in the final demand of consumers. Figures for the second quarter of this year are inadequate, but those for the first quarter show that retail trade in clothing was firmly maintained in that period, and there seems to have been some further increase since. It may be that the Government's restraints on credit have helped more than they have hindered trade in textiles. Two rises in Bank rate (in January and June) and two calls for "special deposits" (announced in April and June), restricting bank credit, have deterred stockholding, but restraints on hire-purchase (imposed in April) have shifted the demands of an "affluent economy" from durable goods to soft goods. Now many people engaged in the manufacture and merchanting of textiles believe that the boom will continue well into 1961.

Results published by textile companies, particularly those concerned mainly with cotton goods, show an even bigger improvement than had been expected, and both profits and dividends declared by such companies as Lancashire Cotton Corporation and J. and P. Coats have surprised the London Stock Exchange. Last year's profits benefited not only from the improvement in trade but also from the elimination of stock losses, which had seriously affected results in the period of falling prices. Chairmen have mentioned last year's wonderful summer as a factor in the improvement. The weather is not equally favourable this year, but there is evidence that the habits formed last year have not been forgotten. Particularly remarkable—in a country so conservative as Britain—is the change of taste in men's outerwear. It is reckoned that the number of men owning a lightweight suit has increased tenfold in the last three years—from only one in 300 of the relevant population to one in 30. Initially the demand was for informal wear, but this year the Wholesale Clothing Manufacturers Federation has reported a substantial demand for 8oz. and 10oz. suits for more formal occasions and for business.

Redundant Finishing Plant

Confidence in the U.K. cotton industry has naturally been strengthened by the measures to eliminate redundant spinning and weaving plant, now fully operative for more than a quarter of a year. Now the country is witnessing the sequel to those measures—the scheme to eliminate redundant plant at the finishing end of the industry. There are nearly 400 finishing works—about one-third of them for yarn, two-thirds for cloth. The new scheme is based on whole works, not on individual machines, as in the schemes for spinning and weaving. This difference sets a stern problem for some firms, for there are some with only one works, so that the choice for them is between ignoring the scheme and, alternatively, ceasing to operate as separate entities. It was possibly the planners' desire to persuade small firms to amalgamate, so that they could maintain their goodwill while concentrating their operations in the more efficient works in the larger groups so formed; but some that would have been willing to reduce their plant but not to eliminate it may prefer to remain as they are, hoping that the closing of works in bigger organisations will enable them to operate more profitably.

It is estimated that about 30 percent of the finishing capacity is surplus to needs. To qualify for the Government's financial aid at least 20 percent of the capacity in each section must be offered for elimination, but the actual proportions may, of course, be larger. In any case—and in this important matter the scheme differs from those for spinning and weaving—the U.K. Cotton Board will not indiscriminately approve applications for compensation, even if they are sufficient to bring the scheme into effect. If proposals to close mills in any category seem in the aggregate to threaten a deficiency of the capacity in that category, they will be pruned down. Thus the ultimate organisation of the finishing sections should be neater and more efficient than that of the spinning and weaving sections, which are certainly not perfectly balanced at present. But the most important consideration is, of course, the general balance of the industry. The difficulty of formulating any scheme at all for redundant finishing capacity (the plan for the finishing sections was scheduled to appear many months ago) was causing some concern. The main difficulty was to agree to a scheme based on machinery when the machinery used in these sections is so varied. Whole works are probably the only feasible basis.

Wool in the East

The wool industry is concerned not so much with its organisation as with its materials—which nowadays, of course, include various fibres besides wool. But wool is meeting, with energy and confidence, every challenge from those fibres which threaten mass-scale substitution. The industry was reminded of this at the second quinquennial Wool Textile Research Conference held recently in Harrogate. Indeed, the most striking fact that emerges from the 77 technical papers presented there is that wool itself is challenging cotton and man-made fibres in their own fields.

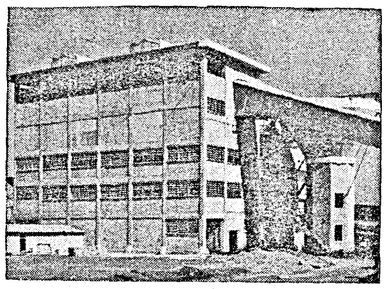
Of more serious concern to the Yorkshire industry as such are the implications of the recent moves to promote the use of wool in the Far East. That the people there should be more wool-conscious is, of course, desirable in principle from the point of view of Britain, as of the wool-growing countries. But the example of the cotton-textile trade is not ignored in Yorkshire. India and China, as well as Japan, could become major exporters of wool textiles. It may be symbolic that at the Australian wool auctions this year, Japan has, for the first time, displaced Britain as the principal buyer.

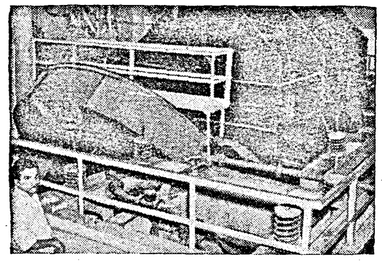
COMMONWEALTH FERTILISER OUTPUT RISING

PRODUCTION CAPACITY BEING INCREASED

PRODUCTION and consumption of commercial fertilisers in the Commonwealth have continued to expand in recent years, and the capacity for further growth in the output is being created as more large fertiliser plants are constructed in Commonwealth countries. This is shown in a study by the Commonwealth Economic Committee entitled *Fertilisers in the Commonwealth*, which summarises the main developments in production, consumption and trade since the Committee's previous report covering the early postwar years. It deals with the three main plant nutrients—nitrogen, phosphoric acid and potash. Setting the Commonwealth in the world picture, it draws attention to the striking rise in production and consumption in continental Europe and Japan, following the low levels ruling immediately after the war. Statistics of world trade in fertilisers show that exports come mainly from continental Europe, while Canada is the Commonwealth country with the largest export trade. Europe has been supplanted by Asia as the principal market for nitrogenous fertilisers, whereas the greater part of the trade in phosphatic fertilisers occurs within Europe. Most countries rely on

COAL WASHING CONSERVES INDIA'S COAL RESOURCES





The coal washery illustrated here, a unique feature of the Durgapur Steelworks, was designed and erected by Simon-Carves.

The washery is a part of the coal preparation plant which washes, blends and delivers 360 tons of 3"—0 raw coal per hour. The washery is the first in India to use Drewboy dense-medium separator, a device widely used in a number of coal washeries in the United Kingdom and Europe. The ½"—0 fraction of the coal is treated in an ACCO feldspar jig washer, while stocking, blending and reclaiming are carried out on the Robins Messiter system.

The Simon-Carves coal preparation plant at Durgapur is helping India to upgrade inferior coal and use it for metallurgical purposes — conserving India's rapidly dwindling high-grade coal resources—helping to get uniform quality coke for the finest iron and steel.

supplies of potash from France, Germany and Spain, but enormous deposits in Canada have been investigated. Although production was started only in 1958, exports began in 1959.

Technical Developments

The study shows that consumption of nitrogen and potash increased more rapidly than that of phosphates, although the proportion in which the three plant nutrients are applied varies widely from country to country. Technical developments in production of synthetic ammonia have enabled its manufacture to become more widely based, with the result that nitrogen is now produced in countries which were previously obliged to import. Another significant trend has been towards more highly concentrated fertilisers, with consequent savings in transport costs. The study contains a review of developments in each country of the Commonwealth, covering production, consumption and trade. Details are given of the new plants which have recently been completed or are under construction in a number of countries, including the United Kingdom, the Union of South Africa, India, Pakistan and the Federation of Rhodesia and Nyasaland. Changes in consumption include the growth of aerial top-dressing in New Zealand and the increased use of fertilisers in grassland in Australia. In Ceylon and Malaya, fertilisers have hitherto been used mainly for plantation crops, but significant consumption on food crops has been started.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 125.2 during the week ended 23rd July, 1960, against 125.1 for the earlier week. The index was higher by 1.9 percent and 7.1 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles stood at 125.0, against 125.1 for the previous week. The prices of milk in Calcutta (−25%), in Delhi (−15%) and in Ludhiana (−1%), eggs (−15%), and masur in Bombay (−7%), salt (−3%), gram, oranges and black pepper (−2% each) and wheat, jowar, bajra, bananas, tea and betelnuts (−1% each) moved down, while those of milk in Bombay (+49%), onions (+6%); masur in Calcutta and potatoes (+5% each), groundnut oil (+4%), turmeric (+3%), ghee (+2%) and arhar, mung, urad, mustard oil and coffee (+1% each) showed advances. The index for Tobacco remained stationary at the earlier week's level of 107.5. The index for the Fuel, Power, Light and Lubricants group stood unchanged at the previous week's level of 118.9, in spite of a fall in the prices of castor oil (−2%). The Industrial Raw Materials index advanced by 0.2 percent to 136.7 due to a rise in the prices of raw jute middles in Barpeta (+7%), rapeseed in Delhi (+5%), groundnuts and copra (+2% each) and raw cotton and lac (+1% each), although the prices of tanning materials (−10%), raw jute jungli middles in Barachakia (−7%), rapeseed in Kanpur (−5%), cottonseed (−3%), castorseed and raw hides (−2% each) and raw wool (−1%) showed declines. Higher prices of zinc (+4%), tin (+2%) and rayon yarn and coir yarn (+1% each) raised the index for Intermediate Products by 0.4 percent to 130.9, compared with 130.4 (revised) for the previous week. The index for Finished Products rose by 0.3 percent to 119.7 due to an increase in the prices of jute manufactures (+2%) and general chemicals and glass (+1% each). The prices of oilcakes (−1%), however, moved down.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

NEW WORLD BANK LOAN FOR INDIAN RAILWAYS

FURTHER AID FROM D.L.F.

THE World Bank has just given another loan amounting to $70 million to India for the improvement and expansion of her railways. The loan will cover the greater part of the foreign exchange requirements for the final year of the railways' second plan programme ended 31st March, 1961. Six private commercial banks are participating in the loan, without the World Bank's guarantee, to the extent of $2,050,000, representing the first maturity and part of the second which falls due between January 1964 and July 1964. The participating banks are the Chartered Bank (New York Agency), the First National City Bank of New York, Girard Trust Corn Exchange Bank, Irving Trust Company, Chemical Bank, New York Trust Company, and the Philadelphia National Bank. The World Bank has now lent $328 million for the Indian Railways, the largest amount it has ever lent for a single project. A loan of $33 million was made in 1949 for railway rehabilitation, and since then, seven loans, totalling $295 million, have been made to assist in financing the Indian railways' programme of expansion in the second five year plan.

Railway Development Programme

The five-year railway programme is being carried out to increase carrying capacity and improve operational efficiency. Its goal is to increase freight capacity from 114 million tons to 162 million tons a year, and to increase passenger capacity by about 15 percent. The most important objectives of the programme are the acquisition of 2,161 locomotives, 6,836 coaches and 111,739 wagons, the doubling of 1,300 miles of main-line track, the replacement of 8,000 miles of track, the construction of 830 miles of new lines to give access to coal and orefields and to areas lacking transport, the electrification of 886 miles of main lines in regions of high density passenger and freight traffic, particularly the Calcutta area and lines serving steel plants, the construction of bridges, and improvements in yards and signalling facilities.

By the fourth year of the programme, the amount of freight traffic originating in India had risen by one quarter to 145 million tons and passenger traffic had increased by 16 percent. By 31st December, 1959, the railways had received delivery of 1,817 locomotives, 5,700 coaches and 83,606 wagons. About 6,500 miles of track have been replaced, track doubling has been completed on 700 miles, 600 miles of new lines have been opened to traffic, the electrification of 675 miles was scheduled for completion in the first half of 1961 with the balance later, and final shipment of 110 electric locomotives in January 1961. One of the largest bridges in the programme, the Ganga bridge across the Ganges in Bihar State, was opened in May 1959 and carries 80 percent more traffic than the ferry service it replaced. Work on other bridges and on improvements in yards and signalling equipment is proceeding well.

The total investment in the railway programme in the first four years of the second five year plan is estimated at $1,827 million; and $483 million is expected to be expended during the current and last year of the plan. Of the total amount, foreign exchange requirements are now estimated at $718 million, of which 40 percent will have been supplied by the Bank and another 20 percent from other external sources including the U.S. Development Loan Fund. The original foreign exchange estimate was $893 million. This has been progressively reduced to the present figure of $718 million because of the increased availability of railway equipment from within the country. The railways estimate that $85 million in foreign exchange will be required for purchases in the last year of the programme. The World Bank loan will provide $70 million of this amount and will be used for the purchase abroad of rolling stock, track materials and other equipment.

Term of the Loan

The Bank loan is for a term of 20 years and bears an annual interest of 5¾ percent, including the 1 percent commission which is allocated to the Bank's special reserve. Amortisation will begin in January 1964. The consortium of Government representatives of Canada, West Germany, Japan, the U. K. and the U.S.A. first met, at the invitation of the Bank, in August 1958 to seek ways of helping India to meet the foreign exchange requirements of the remaining years of the second five year plan. At that time, the Bank indicated its intention of extending loans to India for an amount of $225 million for the two and a half years remaining of the plan. Total lending by the Bank for that purpose now amounts to $255 million, of which $225 million is expected to be disbursed when the plan period ends on 31st March, 1961.

The Bank has now made 24 loans totalling $662 million in India. In addition to the railways, the loans have been made for the expansion of iron and steel production and of electric power facilities, for the purchase of commercial aircraft, for the development of agriculture and ports, and for a development bank to lend to private industry.

More from D.L.F.

The U.S. Development Loan Fund, it is reported, has also approved an additional loan of $50 million (about Rs. 23½ crores) for India's railways, which will bring the total of such loans to $115 million. A formal announcement is expected shortly. The loan was negotiated in Washington by a two-member railway delegation from India, consisting of Mr. Karnail Singh, chairman, and Mr S. Jaganathan, Financial Commissioner of the Railway Board. The amount of the latest loan, together with those of the previous ones, will substantially cover the foreign exchange cost of the railways' second plan programme.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 7, held on 8th and 10th August, the 52,913 chests on offer at the Export auction met with a fair demand, which eased as the sale progressed, at generally lower rates, withdrawals once again being fairly heavy. Orthodox teas with bright liquors met with keen competition and sold well, but the more ordinary liquoring kinds were a weak feature. O.Fgs., however, received more support than similar B.O.P.'s, and although easier, did not depreciate to the same extent. Plain brokens were up to 20nP easier, while Fannings in this category were 10nP and up to 20nP lower. The very best bright liquoring C.T.C.'s were keenly competed for and were at times considerably dearer. Ordinary descriptions, however, met with only a fair enquiry and were generally substantially easier. Both orthodox and C.T.C. Fannings received more support than Brokens. Whole leaf grades came to a much easier market and the more stylish descriptions registered a decline of up to 50nP, while the ordinary kinds were up to 20nP easier. Brown Dooars received satisfactory enquiry, but were disposed of at generally 10nP below last rates. Darjeelings received fair enquiry, but also recorded a considerable decline in prices. Tippy teas were irregular and generally lower.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.55 to 5.75	2.00
Plain B.P.	4.35 to 4.55	1.80 to 1.84
Plain Fannings	4.30 to 4.50	1.92 to 1.96
Medium B.P.	4.90 to 5.10	1.98 to 2.06
Medium Fannings	4.90 to 5.10	2.10 to 2.20
Best Assam C.T.C. B.P.	9.50 to 10.50	3.10 to 3.40
Best Assam C.T.C. Fgs.	11.00 to 12.00	3.80 to 4.30

(Quotations are inclusive of excise duty)

At the Internal Sale, Dust offerings, which comprised 20,056 chests, met with a good general demand at easier rates. Brown Dooars were again well supported but generally at lower rates. Orthodox descriptions were readily taken up at up to 10nP below last rates, although some selected lines of bright liquoring kinds were firm. Medium C.T.C.s met with a fair enquiry but were up to 20nP to 30nP easier, while the best C.T.C. descriptions were irregular and often difficult to sell.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb.
Medium Dooars Dust	4.24 to 4.60	1.84 to 1.88
Medium Assam Dust	4.40 to 5.00	1.80 to 1.88
Medium Assam C. T. C. Dust	5.45 to 5.75	2.05 to 2.20
Best Assam C. T. C. Dust	5.90 to 6.25	2.80 to 3.00

(Quotations are inclusive of excise duty.)

Leaf offerings amounted to 242 chests. There was a good demand at about last rates. Green teas sold quite well.

LINSEED DULL

The market was dull in the past week and the price fell. Transactions were virtually at a standstill due to higher prices prevailing in upcountry centres. Arrivals were small. Crushers showed interest in ready and forward deliveries, but sellers were reserved. Trading in the oil market was slow. Buyers showed little interest in forward deliveries; sellers, too, were not inclined to do business at buyers' prices. The cake market was dull. The local demand has declined and the U.K. price, it is reported, is lower than the Indian one. Latest quotations are as follows: Ready Rs. 25.50 a maund and September futures Rs. 25.50 a maund.

HIDES AND SKINS QUIET

The market was quiet. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 2nd August and 8th August, 1960)

Cowhides: Wet salted (Ord.) 53,300 pcs. on the basis of Rs. 8.75 to Rs. 11.75 and Rs. 15; Wet salted (Slaughtered) 13,400 pcs. on the basis of Rs. 9 to Rs. 15 and Rs. 18 to Rs. 26; Wet salted (Ord.) 10,200 pcs. on the basis of 72nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 45,500 pcs. on the basis of Rs. 375 to Rs. 400, Rs. 410 to Rs. 440 and Rs. 480 to Rs. 510; Wet salted (he-killed) on the basis of Rs. 4.87 and (she-killed) on the basis of Rs. 4.62 a piece; Assam-Dinajpur 14,500 pcs. on the basis of Rs. 350 and Rs. 400 to Rs. 415; Purneah-Kissenganj 2,000 pcs. on the basis of Rs. 385.

Bazaar Stocks

(8th August, 1960)

Cowhides: Wet salted 164,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 40,500 pcs.; Assam-Dinajpur 77,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 208,500 pcs.

Books

MONETARY POLICY

The Reserve Bank of India and Monetary Management. By G. P. Gupta. (Published by Asia Publishing House. Price Rs. 16.50, pages 331.)

Broadly speaking, the two basic objectives which the Reserve Bank was expected to achieve were the integration of the money market and the removal of the highly seasonal character of the economy. These are still not within reach and subsequent events have added to the list of the Bank's activities, such as statutory inspection and control over the widening commercial banking sector, providing finance for short, medium and long-term needs of agriculture, and monetary control in the context of the plans which have strained the Government's financial resources heavily, so it has had to seek large sums through deficit financing. In the course of a dozen chapters, Mr. Gupta has narrated these various activities of the Bank. His verdict is generally favourable, although some of his suggestions in the last chapter to expand its functions may clash with his view that it is now overloaded with "onerous, varied and multifarious duties." Besides, some of his criticisms lack realism as well as rigorous technical analysis. The author's serious narrative is sometimes interrupted by general statements of little relevance. Thus, in discussing the wartime inflation and its connection with the Bank's obligation to provide rupees to the Government for sterling comes the following which is somewhat difficult to understand: "The war thus entered, as it were, a minus item of goods and a plus item of note issue in India's national balance-sheet and added, at the same time, a plus item of goods and minus item of currency circulation in England's national balance-sheet". No prizes are offered for sorting out the rigmaroles.

LABOUR LAW

Labour Decisions of the Supreme Court. By M. L. Shah. (Published by the Oxford Book and Stationery Company, Calcutta 16. Price Rs. 3, pages 43).

Labour law is a comparatively new subject in India and has assumed crucial importance in the period of planning. The Supreme Court has been confronted with new problems, apart from resolving the conflicts arising from differences in the State laws. Mr. Shah's pamphlet, being a digest of labour laws on a much smaller scale, will meet the needs of the layman and the business executive, although it will be equally helpful to students and busy practitioners. The decisions of the Supreme Court have been carefully chosen and cover a wide field. Besides, the pamphlet includes such controversial topics as social justice. Although attention has been mainly focussed on the decisions on the facts of each case, little space has been allotted to the principles underlying the decisions. The value of the publication could have been enhanced by including the names of cases reported, corresponding reference to other reports or at least to the official *Supreme Court Reporter*, and an index of cases and topics in greater detail.

INDUSTRIAL LABOUR

Industrial Labour in India. Edited by V. B. Singh and A. K. Saran. (Published by Asia Publishing House, Bombay 1. Price Rs. 18.50, pages 528.)

Nineteen experts have discussed in separate essays in this volume the problems of Indian industrial workers. The editors have grouped their essays into six sections. The first section includes two essays by Professor Maurice Dobb, and they deal with such subjects as theories of wages, the methods of wage payment, and the question of a proper wage policy in a planned economy. The second section discusses the various ideas about social security and the requirements of development planning. The third section deals with the problems of real wages and the development of Wage Councils. It is said in an article in this section that mine workers have suffered more severe losses in their real wages than factory workers. But the major defect of the study is that it relates to the pre-plan period. The fourth section is devoted to the discussion of social security and labour welfare. It contains a review of the legal machinery for maintaining industrial peace and gives the historical background of the Indian trade union movement. The last section is devoted to industrial sociology. It discusses the principles of industrial sociology and psychology, problems of personnel management, etcetera. In an objective essay in this section, Mr. Saigal has discussed the difficulties of personnel officers in India. Besides, the section contains an essay by Mr. V. K. R. Menon on the subject of India's relationship with the International Labour Office.

COTTON ANNUAL

Bombay Cotton Annual, 1958-59. (Compiled and published by the East India Cotton Association, Bombay. Price Rs. 6, pages 310.)

The cotton annual contains a comprehensive review of the market during the 1958-59 season. It discusses in detail the various branches of the cotton trade and contains statistical tables on crops, exports, imports, prices, stocks and consumption. Compiled by the East India Cotton Association, it is a dependable reference book.

COMPANY AND PUBLIC NOTICES

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the various departments of the Reserve Bank of India :—

(A) POSTS AND SCALES OF PAY

Research Officers :	Rs. 375-55-815 E.B. 55-925-60-1045
Probationary Assistants :	Rs. 250-25-450 E.B. 25-650
Economic Assistants :	Rs. 175-12.50-300 E.B. 20-440

Note :—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) AGE LIMITS AS ON 1ST AUGUST 1960

Research Officers	Candidates should not ordinarily be over 30 years of age but the age limit may be extended upto 35 years in the case of candidates with exceptionally good qualifications and/or research experience of value to the Bank.
Probationary Assistants	Between 21 and 25 years.
Economic Assistants	Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years in the case of

(i) candidates possessing special qualifications and experience of value to the Bank ;

(ii) candidates with approved war service ;

(iii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation ;

(iv) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges ; and

(v) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) QUALIFICATIONS

(i) Research Officers, Economic Department :

First or high second class Master's degree in Economics or Commerce of an Indian or foreign University, or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects : (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, and (d) Agricultural Economics. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a), (b) and (c) above and experience of agricultural surveys in respect of (d) above.

(ii) Probationary Assistants, Agricultural Credit Department :

First or high second class Master's degree of an Indian or foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification ; so also will be the experience gained in a responsible position in the Co-operative Departments of the States or in a co-operative institution. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

(iii) Economic Assistants, Agricultural Credit Department :

High second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or foreign University. Specialised study in Rural Sociology will be an additional qualification. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

Note : Experience in community development, small scale and cottage industries, marketing, training and publicity, co-operative societies, co-operative departments, etc. will be given due weightage for the posts in the Agricultural Credit Department and knowledge of regional languages such as Hindi, Bengali, Oriya, Gujerati, Urdu and Assamese will be an additional qualification.

(iv) Probationary Assistants, Legal Department :

Applicants should be Advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's Office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for all the above posts except Economic Assistants must remit with their applications a fee of Rs. 7.50 for each category of post in each department by cheque or bank draft on a Scheduled Bank payable at Bombay or by postal order. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. The application fee is in no case refundable. Bonafide refugee candidates not in employment applying through the Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Scheduled Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (originals should not be sent) of at least two testimonials, and copies of statements of marks secured in the Graduate and Post Graduate degree examinations should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 7th September 1960.

5. Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.

6. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

8. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

9. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

10. Canvassing will be regarded as a disqualification.

ROHTAS INDUSTRIES LIMITED

DALMIANAGAR (BIHAR)

THE Board of Directors have resolved to issue 25,08,000 new Ordinary Shares of Rs. 10/- each at par and offer the same to the registered holders of the Ordinary Shares in the Company as on 1st September, 1960 (with the right to the person concerned to renounce in favour of his nominee) in the ratio of one new Ordinary Share for one existing Ordinary Share held by such holders as on 1st September, 1960 (with option to such holders to apply for additional new Ordinary Shares) in terms of Consent No. R 183-CCI/59 dated 23-4-60 obtained from the Central Government.

Share Register and Transfer Books of the Company will remain closed from Thursday, the 25th August, 1960 to Thursday, the 1st September, 1960, both days inclusive for the purpose of aforesaid offer of right shares and for payment of dividends on Preference and Ordinary Shares for the year ended 31st March, 1960. The dividends when declared will be paid to those shareholders whose names appear on the Company's Register of Members on 1st September, 1960 or to their mandatees.

By Order of the Board,
SAHU JAIN LIMITED,
A. P. JAIN,
Director,
Managing Agents.

4th August, 1960.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT a Meeting of the Directors held on the 5th August 1960, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 21st September 1960, the payment of a final dividend for the year ended 31st March 1960, of 3% (subject to tax) on the issued Ordinary shares, payable on the 24th September 1960.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,41,62,230.

Two interim dividends, each of 2½% (subject to tax) amounting in total to Rs. 75,80,000 in respect of the year to 31st March 1960, were paid on the 28th September 1959 and the 20th April 1960 respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 63,437 to Capital Reserves, Rs. 5,07,057 to Development Rebate Reserve and Rs. 14,50,000 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 24,77,765.

The Directors also declared a first interim dividend of 2½% (subject to tax) in respect of the year to 31st March 1961, payable on the 24th September 1960.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 21st September 1960 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on the 23rd September 1960. The share transfer books of the Company will be closed from the 29th August to the 21st September 1960, both days inclusive, and transfers received in order at the registered office of the Company up to the 27th August 1960 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
J. R. BLAIKIE
Secretary.

Virginia House,
37 Chowringhee,
Calcutta.
6th August 1960.

THE INDIAN IRON AND STEEL COMPANY LIMITED

AT a Meeting of the Board of Directors of The Indian Iron and Steel Company Limited, held on the 9th August 1960, the Directors have declared an interim dividend in respect of the year ended 31st March 1960 of Rs. 1/50 gross per share on the Ordinary Share Capital being at the rate of 15 per cent. per annum. This action has been taken in order that shareholders shall not be kept waiting for their dividends in view of the closing of the Accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel and pig iron applicable for the period to the 31st March 1960. Allowing for loss of previous tax credit this present dividend represents in effect a "free of tax" dividend of 10.275% compared with the former rate of 10%.

The Directors wish to make it clear in this connection that this dividend although termed interim will in fact constitute the full dividend for the year and that no further distribution in respect of the year ended 31st March 1960 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified the Ordinary Share Register and Transfer Books of the Company will be closed from the 26th August 1960 to the 17th September 1960. Payment of this dividend will be made on or after the 21st September 1960 under deduction of tax at the prescribed rates to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 17th September 1960 or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta.
9th August, 1960.

THE GANGES ROPE COMPANY LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has recommended payment of a Dividend of 17½% on the Share Capital of the Company in respect of the year ended 31st March. 1960.

Payment of any dividend declared will be made on 30th August, 1960 to those Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions. The Register of Members will be closed from 20th to 30th August, 1960, both days inclusive.

OIL: PRICE CUTS AND THE INVESTMENT NEEDS

THE Government of India's decision last week not to import crude oil from Russia represents little more than a concession to the realities of the present situation. The main reason for the decision is that no refining capacity is available for processing the crude. That is why, although the crude will not be imported, refined petroleum products are being taken from Russia—these latter being mainly kerosene and diesel oil, both of which are in short supply in this country. The decision not to import Russian crude oil became virtually inevitable when the three western oil companies with refineries on the coast—Burmah-Shell and Standard-Vacuum in Bombay and Caltex in Visakhapatnam—refused to process it. Under the refinery agreements with the Indian Government, the companies cannot be compelled to refine any crude they do not wish to use. They are understandably reluctant to disturb their long-standing arrangements, especially at a time when there is a burdensome surplus of crude oil in the free world. The main advantages of the Russian offer apparently were that the Russian crude was appreciably cheaper; and the payment for it would have been made not in foreign exchange but in non-convertible rupees. No precise estimate is available about exactly how much cheaper the Russian crude was; it is reported that prices would have varied according to the grades and the quantities India agreed to take, but the discounts over the private companies' prices for crude might have been from 15 percent upwards. The price advantage of Russian crude, however, has been diminished to a large extent by the western oil companies' decision to reduce the cost of their crude supplies to India by more than 11 percent. It is possible that the cut in crude prices offered by the oil companies, negotiations for which had begun even before the Russian crude oil offer came, has had some minor influence on the Government's decision not to import the latter.

Looking ahead, it seems fairly certain that the Indian Government will not have the refining capacity for processing Russian crude for a long time to come. The new refineries it is building in Nunmati, Assam, and Barauni, Bihar, will be fully engaged in processing the crude oil expected from Assam. Even if their capacity were to prove partially surplus, it is doubtful whether they could use Russian crude; the problems of transporting the latter from Calcutta to the upcountry refining centres would be formidable. The Government might well be having second thoughts about the wisdom of surrendering to provincialist pressures in locating the refineries where they are to be now. In any case, these two refineries will not be ready for at least a couple of years hence, and the Central Oil Minister, Mr. K. D. Malaviya, has already stated that the Government of India is not thinking of installing any other refineries itself.

This intention may or may not last long. If some of the oil exploration programmes now being conducted prove a major success, and if the money can be found, the Oil Ministry's eagerness to expand refining capacity in the public sector may take more practical shape. What is certain is that, whether or not large indigenous oil reserves can be found, an expansion of refining capacity in India will be necessary in the years to come. The demand for oil is expected to rise from the present level of about 6½ million tons a year to nearly 14 million tons a year by the end of the third plan (the latter estimate was supported by Oil Ministry spokesmen until a few months ago, but has now oddly got transformed, without explanation, into "not less than 10 million tons" in the draft outline of the third plan). Visualising the rise in demand, at least one oil company has now offered to expand the capacity of its refinery and set up a lubricants plant; another has offered to set up a lubricants plant too. But these proposals have been hanging fire for some months, presumably because the aspiring Matteis of the Oil Ministry have hopes of setting up further new processing plants of their own.

Yet, the basic fact which the Indian Government has to consider is whether it has the resources greatly to intensify its oil exploration, production and processing programmes. If the oil companies are offering to invest more money in India, the investment should be welcome; the terms and conditions on which the investment should come are open to negotiation, and there is no reason why they should not be settled in a satisfactory manner. The search for oil within India deserves support; so does the search for cheaper oil from abroad. But the limitations within which this country, as well as the oil companies, have to work, have to be faced. In the world at large, the appearance of a buyers' market in petroleum products for the first time in the present generation is tending to reduce oil investment in the developing countries and causing a substantial diversion of capital to the already advanced economies. As the U.S. oil expert, Mr. Walter Levy, recently pointed out, "many companies are reviewing their capital budgets, and there is evidence of a shift in emphasis from production expenditures to outlays that contribute more to market strength." Since there is too much oil, the petroleum companies are naturally less anxious to find more. So they have to keep down their investments in countries which produce, or might produce, oil—which could entail a decline in the flow of capital to Latin America, Asia, Africa and the Middle East. Since the war, the outlay of the oil companies in those regions has been the biggest single contribution to private investment in the developing countries. It has been the reason why private western assistance to those countries has seemed fairly substantial, for once petroleum investment is excluded from the annual flow of international capital, the remainder is pretty modest.

That would be bad enough for the developing countries as a group, although one might say that it affects only a certain number of them. Yet there remains the other half of Mr. Levy's statement: the oil companies, which constitute the world's biggest source of investment capital, will not only reduce production outlays but must—in order to promote sales and defend themselves from competition—increase their investments in consuming regions. The increase would naturally be in the biggest consuming regions, especially those where the motor-car industry is flourishing and the demand for petrol increasing rapidly—that is, in the advanced economies and particularly in western Europe. The economic necessity of this type of investment is clear enough. To boost consumption, encourage the changeover from coal to oil and meet the competition of Russian and Saharan petroleum, the oil companies must develop all their treatment and sales facilities in the West, from refineries and pipelines to chains of petrol pumps. Hence the eager struggle for control of service-station networks on the Continent of Europe, and the race between Russian and western engineers to build pipelines to the heart of Europe from, respectively, the Urals and the Mediterranean.

To this economic necessity there is added what might be called a political necessity. One way of controlling a consuming market and keeping out Russian oil would be to build a commercial sales network which is too big for that market's present consumption and thus leaves no channel through which Russian petroleum can reach the consumer. The Russians have just found that because they have no refineries or petrol pumps in India, they can sell only limited quantities of refined products to the Government of India. The struggle is keener, and the capital outlays involved much larger, in European markets whose intake is many times India's. In Britain, the Russians have found that they cannot sell a gallon of fuel, no matter how much they undercut the private companies, because the storage and distribution network is not available. On the other hand, they can sell several million tons a year in Italy because the distribution network is State-owned. Plainly, one defence of the oil companies is to ensure that as many expanding markets as possible are in Britain's case, and as few as possible in Italy's.

Hence the increase, which is greater than purely commercial considerations would seem to make necessary, in investments in prosperous countries. The only way the Russians or other "freebooters" can retaliate is to undertake their own investments in those countries. This Russia is doing in its expensive pipeline project, which will bring its oil to within a few miles of the Ruhr and the French border. The upshot is that the rich countries, because they are rich, are attracting more funds from the biggest single group of private investors, while the backward countries are attracting less. Applying a "multiplier" to that, positive in the first case and negative in the second, one can see how this process exacerbates the tendency for the gap between advanced and developing countries to grow wider.

The world oil surplus may now cause a direct loss to the producing countries as the oil companies find themselves obliged to reduce the official posted prices on which is calculated the 50:50 share-out of profits between them and the governments of producing countries. On Tuesday last week, the Esso Export Company (subsidiary of Standard Oil of New Jersey) announced that it was reducing the posted price of crude in Middle Eastern ports by between 4 cents and 14 cents a barrel, or by 2.5 percent to 6 percent. The Royal Dutch-Shell group has followed suit and other companies are expected to do the same. The previous reduction had taken place in February 1959 and was of the order of 10 percent; and that had been the first time oil prices had varied since 1953.

This cut in the posted price is an attempt to bring the fictional price of oil into line with the actual prices at which the companies have been selling. They have had to offer discounts as high as 10 percent or even 17 percent. The oil companies had been trying to protect the Middle East governments from the effects of this weakening of oil prices, by regarding these forced cuts as "special discounts" and leaving untouched the posted prices, so that the governments would receive the same sum when profits were shared 50:50. They were thus making a gift to the Middle East governments, because they thought it was better to do this than have governments suffer a loss in revenues that might encourage them to call in question the sacred 50:50 principle. They seem to be abandoning this policy now because, they argue, the 13 percent rise in the volume of Middle Eastern oil output will save producer governments from financial loss even though oil is being sold cheaper. In fact, they have not yet brought their posted prices down to the level of actual market rates, which continue to fall each month. Further reductions in world oil prices can be expected in the months ahead. Unless there is a substantial rise in world oil consumption, the revenues of producing countries will go on declining.

How far the fall in the posted prices of Middle Eastern crude will benefit India is at the moment rather uncertain; it is reported that the recent reduction in the prices of crude supplied to the refineries in this country anticipated, and so took into account, the fall in posted prices. If the world crude oil market remains weak, it is possible that the Indian Government's pressure for further reductions will continue. While the search for more economical supplies is justified from this country's point of view, the obverse is represented by the fact that on the Government's general attitude will depend the scale of the investments the oil companies will be prepared to make. The importance of their investments was seen in bold relief during 1958, when almost the entire inflow of foreign private capital was neutralised by the disinvestment of the oil companies through a reduction of head office indebtedness—the latter being a direct response to the hostile policies adopted by the Indian Government. The oil planners may thus have to take a long view. The

current world surplus of petroleum notwithstanding, the oil companies with their far-flung interests have other attractive avenues of investment available to them, such as in consolidating their marketing organisations in western Europe. They wish naturally to share in the growth of the Indian market, but the strength of the wish will inevitably depend on the understanding they receive from the Government. The desire of the Government, on the other hand, to get oil more cheaply is also natural, especially since it has to be paid for in foreign exchange. The problem is to ensure that this desire does not upset the oil companies' plans to invest more in India—in an industry for which the Government's own financial and technical resources are extremely limited.

CHINESE SUPPLEMENTARY PLAN

THE results which, it is claimed, Chinese industry has achieved in the first six months of 1960 are such as to suggest that the targets set for this year as a whole will be easily surpassed. Already, at the end of the first quarter, 30 percent of the year's output, it was said, had been produced; since each quarter shows an improvement over the previous one, the year's results are not in doubt. The 1960 targets, admittedly, are more modest than the results attained in previous years. The gross national product was required this year to grow by 23 percent over last year's actual figure, whereas it rose by 31 percent in 1959 and by a spectacular 48 percent in 1958. The declining rate of expansion is not to be accepted by the *régime*, and Peking's planners are now at work on a "supplementary plan" to revise the targets for the last three years of the five year plan.

The supplementary plan was necessary anyhow because the unexpectedly fast progress in the first two years (1958 and 1959) of the five-year period, 1958-62, meant that numerous targets were already attained. The revised plan for this year, next year and 1962 will differ not only for its targets, but will probably take account of the advice given by Russian experts called in to assist Peking re-set its sights. The Russians, not surprisingly, have urged some of Mr. Khrushchev's favourite doctrines about *decentralisation*. They have recommended less intervention from the top in major industrial projects, and the actual handing over of smaller industrial projects to local bodies. Geographical diversification is to accompany administrative decentralisation: new industrial areas are to be developed, new mines and oilfields exploited. Among other advantages, this will relieve the strain on the nation's transport system, which has been the weakest aspect of recent industrial progress.

In the present phase of rapid expansion, known in official propaganda as "the great leap forward continued", industry is growing much faster than agriculture. This year the former's contribution to the national product will be 70.5 percent, against 67.6 percent last year and only 41 percent in 1952. Agricultural output this year will rise by a mere 12 percent, against 17 percent last year and 25 percent in 1958 (the year in which it was at first alleged to have doubled). This disproportion does not indicate any neglect of agriculture because much of the production of industry is being devoted to the plan to mechanise agriculture in ten years. This year, 55 new industrial enterprises will be set up to specialise in the manufacture of farm machinery, and Chinese factories will send on to the land 22,000 tractors (three times as many as in 1959) and a variety of equipment from harvesters to hydraulic motors. These domestic supplies will be supplemented by imports from other communist countries, which include tractors, fertilisers and everything liable to promote the mechanisation of farming. Official plans and reports do not omit the usual comic touch which makes some people doubt the seriousness of Chinese policy: it has just been solemnly declared that sparrows have been removed from the list of the Four Great Pests and replaced by fleas!

In between the efforts to develop industry and mechanise agriculture, the needs of the consumer are naturally being sacrificed. Light industry is neglected, and the official figures show that this year the output of cloth and sugar will be hardly higher than last year's, in spite of the intervening increase in population in a country where consumption is still at the subsistence level. Elsewhere, it is claimed that total wages will rise by 6 percent (against 5 percent last year), but this implies no general rise in living standards because the increases will not affect basic wages but only production bonuses and promotion differentials. Some savings are being made in defence and administration costs, which now claim a smaller fraction of the Budget; political ambitions are not forgotten, however, for this year's Budget shows that the entry "aid to foreign countries" has increased by a half.

Meantime, the conscription of the population into communes is proceeding. Most of the rural population is already organised in communes, and some surprise has been caused by the announcement that the system will be extended to the cities. The first attempt to set up urban communes in 1958 encountered much hostility, so it was assumed that the Chinese Government would follow the Party's advice and go slow. On the contrary, it has returned to the attack but this time following a different method. In 1958, it tried to shanghai reluctant city-dwellers into a regimented organisation whose advantages they did not see; this time it is arranging the amenities first—collective kitchens, laundries and *crèches*—and then "persuading" citizens to join. By the middle of the year, over 42 million city-dwellers (60 percent of China's urban population) were members of communes. It is claimed *that this has "liberated" about 6 million women* from household drudgery; they celebrated their liberty by going to work in factories.

BRITISH EXPORTS: HAVING FUN

THE effect of the British Government's export drive on this year's (or next year's) balance of payments is uncertain, but at least the campaign is clarifying business men's ideas on exporting. The U.K. Government has undoubtedly been startled by the vigour with which some of those ideas have been expressed, in letters to the Press and to the Board of Trade—particularly in relation to the Prime Minister's slogan (introduced at his celebrated export conference in July) that "exporting is fun". But the intensity of complaints that the Government's inertia in deeds is at variance with its encouragement in words shows that potential exporters are seriously considering the problems. One question in dispute is whether exhortation, without positive incentives, has any effect on exports. A retort to the sceptics is that British exports to the dollar markets were significantly increased in the 1950s, and that much of the rise could be attributed to propaganda. But the answer is not decisive. To divert exports from one export market to another is much easier than to divert goods from the home market to markets abroad, and the easier means was evidently adopted to get more dollar trade.

Again, the task is easier for firms which export a proportion of *their output than for those which* sell all their production at home. To increase exports through established channels is one thing; to begin exporting without established channels is another. The U.K. Board of Trade can provide valuable information, and the merchant banks can supply both information and practical assistance, to small firms which lack experience of the export trade. But it is undeniable that the multiplicity of small firms in Britain makes the nation's task more difficult. After the Prime Minister's talk to industrialists, Mr. Roger Falk, chairman of the British Export Trade Research Organisation, pointed out in a letter to *The Times* that a survey of Britain's export trade, carried out by B.E.T.R.O. two years ago, had shown a remarkable concentration of export trade. As few as 40 firms accounted for as much as 30 percent of the nation's exports of manufactured goods, which comprise most of its export trade; and only ten of those firms were responsible for more than half of that share. The Federation of British Industries comprises about 8,000 firms. Only about 400 of them, or 5 percent, employ more than 2,000 people, while more than 3,000 of them, or 40 percent, employ less than 100. An economy so organised is not properly adapted to exporting. Some firms are naturally small because their products are small and specialised; and some of them, in their special trades, are world-renowned exporters. But they are the exceptions which prove the rule. Because they are specialised, their market at home is small and their potential customers abroad can easily be contacted. A small firm supplying general goods to a large home market has neither the same incentive nor the same facility to export: if its output is a tiny proportion of the total production in its trade, it does not spread its output over many markets.

The Prime Minister's exhortations have been criticised on the grounds that for big firms they are unnecessary and for small firms they are ineffective. If exports are persistently inadequate, the Government must proceed from exhortation to action; and its actions may be such as will force many small firms to amalgamate with larger ones, or to go out of existence. Can exports be forced out of an economy by restricting its home market? If so, should they be so forced? These questions are debated. Restriction of the home market affects the profits of nearly all units in that market; but only the stronger firms have the resources needed to withstand a long period of restraint. A restrictive policy in the home market tends to eliminate the smaller units; and it may impel even large units to amalgamate.

This is not, however, the principal matter in dispute. More important is the question whether, in a general sense, it is more effective to increase exports by restriction of domestic trade rather than to increase exports by expanding capacity. The confusion of current thinking on this matter may be seen in the fact that the experience of West Germany has been cited as an argument both for a policy of restriction and for a policy of expansion. There are various factors in the success of that country as an exporter in recent years. Much of German industry was destroyed in the second World War. The financial and technical assistance of the victors rehabilitated West German industry, in a form more modern than most other countries'. Industrial capacity was expanded, by a general policy of expansion, to a point where in many industries surplus capacity arose. But was that surplus capacity a result only of the growth of capacity? Or was it a result equally of withholding demand which could have absorbed the increased output? The figures show that purchases of motor-cars and television sets, for instance, have been much larger in Britain than in West Germany.

The answer seems to be that the most effective incentive to export is surplus capacity which cannot be employed on domestic orders, and that it is not fundamentally important whether the surplus arises from restrictions on demand at home or from increases in productive capacity in excess of domestic requirements. But there is in Britain a feeling that the safer method is to increase industrial capacity as rapidly as possible; that the Government and the banking system should give definite priority to exporters, particularly in the matter of raw materials and credit; and (this idea originates, of course, outside of industry) that the stimulus of imports should be used to bring down domestic prices and costs, and therefore export prices. It is questioned, too, whether capital investment which emphasises services—such as retail stores, rather than production of exportable goods —is the kind of investment most appropriate to the present situation.

TRENDS IN COMPANY REGISTRATIONS

THERE has been a steady rise in the number of new company registrations in India during the past few years. This is natural since the economy is expanding. Business tends usually to be organised in the form of limited companies, in spite of the many cumbersome formalities which have to be complied with under the Companies Act. The number of new company registrations has increased from 1,095 in 1958-59 to 1,452 in 1959-60, but the authorised capital of these companies has fallen from Rs. 284.36 crores to Rs. 160.54 crores. The number of public limited companies has increased from 58 to 87 and their authorised capital from Rs. 58.67 crores to Rs. 67.19 crores. The number of private companies has risen from 1,037 to 1,365, but their authorised capital has declined from Rs. 225.69 crores to Rs. 93.40 crores. A noteworthy feature is that during the past few years, the average size of new public companies has steadily increased, while that of private companies has become smaller. The trend is not surprising in view of the fact that restrictions on the latter have become stiffer. If private companies are not allowed to enjoy the substantial immunities they used to, their popularity will inevitably decrease.

The predominance of industrial activities in new companies has been maintained. Companies engaged in processing, manufacture and commerce account for nearly 68 percent of the total number formed during 1959-60. This reflects the industrialisation of the economy. A striking feature is the shift in favour of management by directors in preference to other forms of management, such as through managing agents. Of the 1,452 new companies registered in 1959-60, 924 were to be managed by directors, 508 by managing directors and only 14 by managing agents. The drastic restrictions on managing agents, combined with the cuts in their remuneration, seem to have discouraged the appointment of managing agents. It is, nevertheless, worth bearing in mind that most of the well-managed companies at present are run by managing agents. During 1959-60, private entrepreneurs have promoted more of the bigger companies than the Government has. Of the 31 companies having an authorised capital of Rs. 1 crore or more, only seven have been formed by the Government.

Commenting on the trends in new company registrations during 1959-60, the Research and Statistics Division of the Department of Company Law Administration points to the steady progress in removing defunct companies from the registers. The total number of companies at work on 31st March, 1960, was estimated at 26,921, with a paid-up capital of Rs. 1,593 crores. Of these, 7,306 were public companies with a paid-up capital of Rs. 812 crores and 19,615 were private companies with a paid-up capital of Rs. 781 crores. On 1st April, 1956, when the new Companies Act came into force, the total number of companies at work was 29,874 and they had a paid-up capital of Rs. 1,024 crores. The policy of weeding out the defunct companies is good. The sooner they are eliminated, the better it will be, because their notional existence only increases departmental work without serving any useful purpose.

Current News and Comment

Gourepore and Nuddea Jutes

The Macneill and Barry group of jute mills have done well during the year ended March 1960. The directors, nevertheless, take a cautious view of the outlook for the current year, since the price of raw jute has increased and the manufacture of jute goods has become less remunerative. The directors think that the working during the current year may not be as favourable as in the past year. The trading during the first half of this period will not be greatly affected, but it is probable that profits will decline during the second half of the current year.

The production of carpet backing has contributed substantially to the earnings of the Gourepore Mills Co. Ltd. Providing Rs. 5.92 lakhs (against Rs. 5.97 lakhs) for depreciation, the profit has increased from Rs. 21.23 lakhs to Rs. 33.90 lakhs. An ordinary dividend of 30 percent, taxable, including an interim of 10 percent, has been declared. This offers a yield of 8.2 percent at the price of Rs. 364 a share and is covered more than four times. The ordinary dividend was 25 percent, tax-free, last year. Taxation is allocated Rs. 6.5 lakhs, development rebate reserve Rs. 3.05 lakhs (against Rs. 52,920) and general reserve Rs. 15.5 lakhs (against Rs. 6 lakhs). There is a carry-forward of Rs. 63,814, compared with Rs. 85,780 brought in.

The entire production capacity of the Nuddea Mills Co. Ltd has now been concentrated in the north mill. So the directors are considering schemes for using profitably the factory area released by this concentration. There is an increase from Rs. 11.77 lakhs to Rs. 18.45 lakhs in the profit, after providing Rs. 6.02 lakhs (against Rs. 5.95 lakhs) for depreciation. An ordinary dividend of 8 percent, taxable, including an interim of 2 percent, has been declared. This is covered more than three times and offers a yield of 7 percent at the present price of Rs. 57.50 a share. The ordinary dividend was 6 percent, tax-free, in the previous year. Allocations include Rs. 1.74 lakhs (against Rs. 83,987) for development rebate reserve and Rs. 9.5 lakhs (against Rs. 6.5 lakhs) for general reserve. The carry-forward is Rs. 49,497, against Rs. 15,981 brought in.

Thackersey Textiles: One Up, Two Down

The working results of the Thackersey group of textile mills—Hindoostan Spinning, Indian Manufacturing and Western India Spinning and Weaving—for the year ended March 1960 are far from satisfactory. Sales realisations are higher in all cases. Hindoostan has received Rs. 2.43 crores (against Rs. 2.13 crores), while Indian Manufacturing has improved its sales from Rs. 2.11 crores to Rs. 2.75 crores and Western India from Rs. 2.22 crores to Rs. 2.56 crores. But, in spite of the rise in sales, only Hindoostan Spinning has been able to report a larger gross profit—Rs. 17.03 lakhs, against Rs. 11.75 lakhs in the previous year. The gross profit of Indian Manufacturing is down from Rs. 19.31 lakhs to Rs. 13.84 lakhs and that of Western India from Rs. 14.2 lakhs to Rs. 10.63 lakhs. Even in the case of Hindoostan, which has done better than the other two, the gross profit works out to a mere 7 percent of sales. The figure for Indian Manufacturing is 5 percent, while that for Western India is only 4 percent. This is rather poor, particularly for a year when the textile industry did reasonably well and cloth was in a sellers' market. One wonders how these units will fare after the recent cut in cloth prices announced by the Indian Cotton Mills Federation.

After providing Rs. 7.98 lakhs (against Rs. 8.54 lakhs) for depreciation, Rs. 4.87 lakhs (against Rs. 2.12 lakhs) for development rebate, and nil (against Rs. 50,000) for taxation, Hindoostan Spinning shows a net profit of Rs. 4.18 lakhs, against Rs. 59,538 in the previous year. A final dividend of Rs. 400 has been recommended, making Rs. 500 for the year on each whole share, subject to deduction of tax. This works out to Rs. 350 net, which is the same as in the previous year. A sum of Rs. 6.54 lakhs (against Rs. 4.74 lakhs) has been transferred from dividend reserve account. After providing for the dividends and making other adjustments, a debit balance of Rs. 1.92 lakhs is carried forward.

Indian Manufacturing shows a net profit of Rs. 2.08 lakhs, against Rs. 1.32 lakhs, after providing Rs. 6.78 lakhs (against Rs. 7.46 lakhs) for depreciation, Rs. 37,141 (against Rs. 3.03 lakhs) for development rebate reserve and Rs. 4.61 lakhs (against Rs. 7.5 lakhs) for taxation. The proposed final dividend of Rs. 182 a share makes a total of Rs. 232 gross. A sum of Rs. 2.42 lakhs (against Rs. 3.33 lakhs) has been transferred from the dividend reserve account. After providing for the proposed dividend and making various adjustments, the balance of Rs. 10,633 has been carried forward (against Rs. 17,439 brought in).

Western India Spinning has reported a loss of Rs. 4.55 lakhs, compared with a net profit of Rs. 3.64 lakhs in the previous year. Allocations include Rs. 9.47 lakhs (against Rs. 9.12 lakhs) for depreciation, Rs. 5.51 lakhs (against Rs. 1.44 lakhs) for development rebate and Rs. 20,000 (against nil) for taxation. The final dividend of Rs. 364 makes a total of Rs. 464 gross, against Rs. 325 net in the previous year. A sum of Rs. 6.1 lakhs (against Rs. 4.44 lakhs) has been transferred from the dividend reserve account. After making various adjustments, there remains a debit balance of Rs. 21.91 lakhs, which is being adjusted against general reserve.

Birla Jutes: Two Up, One Down

The results of the Birla group of jute mills for the year ended March 1960 vary quite widely. Pointing to the high prices of raw jute due to shortages, the directors think that working during the current year may not be as good as in the past year. In fact, the Birla Jute Manufacturing Co. Ltd and the Bally Jute Co. Ltd have had to seal an additional 5 percent looms in order to overcome the temporary shortage of raw jute. But the loss in production will be made up as soon as adequate fibre supplies are available.

The Birla Jute Manufacturing Company has paid an ordinary dividend of 15 percent, taxable, against 10 percent, tax-free, in the previous year. The dividend absorbs Rs. 23.32 lakhs and offers a yield of 4.4 percent at the present price of Rs. 34 a share. The trading profit has amounted to Rs. 1.06 crores (against Rs. 74.36 lakhs). Depreciation is allocated Rs. 42.28 lakhs (against Rs. 17.69 lakhs), taxation provision Rs. 10.10 lakhs (against Rs. 5 lakhs), general reserve Rs. 7.5 lakhs (against Rs. 2.5 lakhs) and development rebate reserve Rs. 15.66 lakhs (against Rs. 33.28 lakhs). The carry-forward is Rs. 93,079, against Rs. 29,065 brought in. Gunny sales were Rs. 3.11 crores (against Rs. 3.32 crores) and closing stocks rose from Rs. 14.96 lakhs to Rs. 18.19 lakhs. The modernisation programme of the jute mills, it is expected, will be completed soon, so its benefits are likely to show in the current year. The production capacity of the calcium carbide factory has been increased to 25 tons a day. The capacity of the staple fibre spinning mill has been increased from 16,000 spindles to 30,000 spindles. The expansion programme of these divisions is likely to be completed by the end of 1960. The working of the cement plant in Sutna has been hampered by a mechanical breakdown; there was a total production of only 163,411 tons.

The Bally Jute Co. Ltd has made a trading profit of Rs. 24.40 lakhs, against Rs. 17.06 lakhs in the previous year. An ordinary dividend of Rs. 25, taxable, has been declared. It absorbs Rs. 5 lakhs, and offers a yield of 9.5 percent at the present price of Rs. 262 a share. The dividend was Rs. 10, tax-free, in the previous year. Depreciation is allocated Rs. 6.56 lakhs (against Rs. 3.5 lakhs), taxation provision Rs. 4.20 lakhs (against Rs. 7.31 lakhs) and development rebate reserve Rs. 7.50 lakhs (against Rs. 1.99 lakhs). The carry-forward is Rs. 28,486, compared with Rs. 4,265 brought in. Gunny sales amounted to Rs. 1.98 crores (against Rs. 1.95 crores) and stocks declined from Rs. 10.27 lakhs to Rs. 7.15 lakhs. The modernisation programme of the mills has been completed, and it is expected that its full effects will be reflected in the current year's working.

The trading profit of the Rameshwara Jute Mills Ltd has amounted to Rs. 6.27 lakhs, against Rs. 7.94 lakhs in the previous year. The arrears of preference dividends from 1st October, 1950 to 31st March, 1956, have been paid, but the ordinary dividends have again been passed over. Depreciation of Rs. 10.75 lakhs remains to be provided for up to the period under report and the contingent liability on account of preference dividends amounts to Rs. 2.40 lakhs. Depreciation is allocated Rs. 2.10 lakhs (against Rs. 72,662), taxation provision Rs. 45,142 (against Rs. 4,000) and development rebate reserve Rs. 24,653 (against Rs. 7,652). There is a carry-forward of Rs. 20,526,

against Rs. 2,706 brought in. Gunny sales increased from Rs. 94.27 lakhs to Rs. 1.01 crores, and stocks fell from Rs. 22.19 lakhs to Rs. 20.57 lakhs. It has been decided to modernise the mill equipment up to the spinning stage and orders for the machinery have been placed. The project, it is expected, will be completed by the end of 1961. At present, production is confined mainly to the manufacture of cement bags which are supplied to the factories in the A.C.C. group.

Andamans Timber Share Offer

The Andamans Timber Industries Ltd is offering 86,000 ordinary shares of Rs. 10 each for public subscription at par. Of these, 11,000 shares are being offered by the directors out of their own holdings. The Calcutta Stock Exchange has allowed the listing of the scrip in due course. The paid-up capital of the Company at present is Rs. 10 lakhs, divided into 100,000 ordinary shares of Rs. 10 each. The subscription list will open on 24th August. (Fuller details concerning the offer appear on a later page.) The Company has been set up mainly to work veneer mills and plywood factories. It has acquired two plywood units—the Kasipur Plywood Company and the Bose Wood Works Private Ltd—in Calcutta. It has also acquired the Andamans Industries Private Ltd which produces tea chests. When full production capacity is achieved, the Company will produce nearly 20 million square feet of tea chest, commercial and decorative plywood a year. It has already arranged to import plant and machinery for producing commercial plywood. This project is expected to begin production in 1961. Arrangements have been made to obtain an adequate supply of timber from the Andamans. The Calcutta factories expect to get veneers from there too. In order to finance the expansion, it is estimated that an outlay of Rs. 25 lakhs will be necessary. The Industrial Finance Corporation has agreed to give a loan of Rs. 13 lakhs. The directors take a fairly optimistic view of the prospects. The domestic demand for tea chest and commercial plywood is expected to increase in the future, so the Company should benefit.

Bigger Profit for Orissa Cement

Orissa Cement Ltd has declared an ordinary dividend of Rs. 1.10 a share for the year ended December 1959. The Company has asked the authorities to exempt a portion of the dividend from income tax. So the directors are unable to say what portion of the dividend will be exempted from the usual tax deduction at the present stage. The dividend absorbs Rs. 24.75 lakhs and offers a yield of 7.8 percent at the price of Rs. 14.12 a share. The ordinary share capital has been increased from Rs. 1.5 crores to Rs. 2.25 crores during the year. The previous ordinary dividend was Rs. 1.50, tax-free. The profit has increased from Rs. 25.68 lakhs to Rs. 27.15 lakhs, after increasing depreciation from Rs. 33.10 lakhs to Rs. 37.69 lakhs. Taxation is allocated Rs. 9.85 lakhs (against Rs. 15 lakhs). The carry-forward is Rs. 877,321, against Rs. 18,69,528 brought in. There was a decline in output because of mechanical breakdowns. The production of clinker fell from 315,315 tons to 284,871 tons and that of cement grinding from 349,092 tons to 258,615 tons. The directors are trying to increase the capacity for cement grinding. The refractory works are stated to be working fairly well.

Gwalior Rayon Fares Well

The preliminary figures relating to the working of the Gwalior Rayon Silk Manufacturing (Weaving) Company for the year ended March 1960 show that it has made good progress. The profit is Rs. 2.77 crores, after providing Rs 43.7 lakhs for depreciation. The profit in the previous year was Rs. 35.16 lakhs, but the provision for depreciation then was as high as Rs. 2.04 crores. With Rs. 12.63 lakhs brought in, the total available is Rs. 2.9 crores. From this, the directors have provided Rs. 1.12 lakhs (against Rs. 59.6 lakhs) for development rebate reserve, and Rs. 1.65 crores (against nil) for general reserve. It is said that the High Court has already upheld the Company's claim concerning exemption from income and super taxes, so no provision has been made for these items during the year under review. The directors have recommended a final ordinary dividend of Rs. 1.20 a share, making Rs. 2 for the year, subject to tax. The preference dividend is 8.57 percent, against 6 percent, tax-free, in the previous year. The preference dividend has been "grossed up" by amending the articles of association. The ordinary dividend absorbs Rs. 50 lakhs and the preference dividend takes up Rs. 12.92 lakhs. A sum of Rs. 40.22 lakhs has been provided for arrears of preference dividends, leaving Rs. 20.81 lakhs to go forward. Sales total Rs. 9.58 crores (against Rs. 7.42 crores). It is said that the Company has placed orders for most of the machinery for its Kerala wood pulp plant, the capacity of which is being raised to 150 tons a day.

Khandelwal Ferro Alloys Rise

The steady rise in the shares of Khandelwal Ferro Alloys on the Bombay Stock Exchange in the recent past closely follows the progress which the Company has made in putting through the work of its factory. The project has now reached the final stage of construction. Most of the civil and structural engineering work has been done, while the erection of the first furnace is nearing completion. Plant and machinery for the second furnace have already started arriving at the site, and the erection of this furnace has also begun. The directors expect production to start within the next six or eight weeks. The electrical equipment has already been installed, and the remaining work, which is progressing according to schedule, will be completed by the end of this month. About 8,000 tons of manganese ore, 3,000 tons of limestone and 2,500 tons of coke and coke breeze have been received at the factory site. Arrangements have been made for further timely supplies of raw materials. For limestone, a mine in Rajur has been taken over on lease and is being worked departmentally. Arrangements have also been made for regular supplies of manganese ore on a long-term basis at economic prices.

The Company has received an industrial licence from the Government of India for setting up a tube mill to manufacture 50,000 tons of steel tubes a year in sizes from ¼ inch to 3 inches in diameter. The directors say that they have made careful enquiries about the commercial prospects for the tubes and are satisfied that the scheme is financially sound. An internationally reputed firm of consultants has been asked to prepare a project report on the process to be adopted and the equipment to be procured. Further steps will be taken after hearing from the consultants. The directors propose to double the authorised capital of the Company to Rs. 5 crores in order to meet the cost of the expansion schemes. Although the time has not yet arrived for declaring the preference dividend, the directors say that in view of the obligation accepted by the Company to pay the existing preference shareholders 7½ percent, free of tax, on their present holdings, they will take all necessary steps to fulfil this obligation.

Seshasayee Paper and Boards

Fuller details are now available about Seshasayee Paper and Boards Ltd, the Company which has been formed to manufacture paper and paper pulp from bamboo and bagasse. The plant will have an annual capacity of 20,000 tons of paper, and will be located near Erode in south India. Raw materials, water and electricity are available in plenty, and production is expected to start by about the end of 1962. Seshasayee, Parsons and Whittemore will be managing agents of the Company, and Dr. C. P. Ramaswamy Iyer will be chairman. The authoristd capital is Rs. 10 crores, made up of Rs. 3 crores in 6½ percent tax-free redeemable cumulative preference shares of Rs. 100 each and Rs. 7 crores in equity shares of Rs. 10 each. The issued capital will be Rs. 3.5 crores, consisting of 3.5 million equity shares. Of this, the signatories to the memorandum (including the Company's foreign collaborators, Parsons and Whittemore of the U.S.A.), have together taken up shares worth Rs. 100.01 lakhs. The promoters and their friends have subscribed for shares worth Rs. 4.9 lakhs, while the Madras Industrial and Investment Corporation has taken up shares worth Rs. 1 crore, leaving the balance of Rs. 1.45 crores for public subscription. The public issue has been underwritten by the Life Insurance Corporation and by some leading banks and brokers. The Company is expected to enter the market some time in October. The capital outlay of the project, estimated at Rs. 6 crores, include Rs. 4.43 crores for machinery and equipment, Rs. 56 lakhs for land and buildings, Rs. 40 lakhs for engineering fee and supervision expenses, Rs. 3 lakhs for preliminary expenses, Rs. 8 lakhs for brokerage and Rs. 50 lakhs for working expenses. It is said that the entire foreign exchange component of the project will be met from the U.S. Export-Import Bank loan aid programme. Parsons and Whittemore will supply the machinery.

Bigger Profit for Mukand Iron

The Mukand Iron and Steel Works Ltd has done well during the year ended March 1960. Sales and net profit are higher; although the net dividend has been reduced, it should be satisfactory in view of the fact that the payment will be on increased capital. Sales are up from around Rs. 356 lakhs to Rs. 422 lakhs. The net profit is Rs. 18.24 lakhs, against Rs. 14.94 lakhs. Allocations include Rs. 5.36 lakhs (against Rs. 3.86 lakhs) for depreciation, Rs. 13.5 lakhs (against Rs. 15 lakhs) for taxation, Rs. 2.5 lakhs (against Rs. 2 lakhs) for development rebate reserve and Rs. 8 lakhs (same) for general reserve. The ordinary dividend is Rs. 1.20, subject to tax, or 84nP net, absorbing Rs. 5.37 lakhs. In the previous year, the ordinary dividend of Re. 1 accounted for Rs. 3.97 lakhs. Preference dividends absorb Rs. 49,000, while the deferred dividend takes up Rs. 2.1 lakhs. The carry-forward is Rs. 34,460. The expansion programme is making satisfactory progress. The shares of the Company have been in keen demand on the Bombay Stock Exchange and have risen from Rs. 17.64 at the beginning of the year to around Rs. 28 now.

Surat Electric Earns More

The Surat Electricity Company sold 52.84 million kilowatt hours of energy during the year ended March 1960, or 11.75 percent more than in the previous year—earning thereby Rs. 81.62 lakhs (against Rs. 74 lakhs). About Rs. 2.47 lakhs was earned from the hire of meters, etcetera. After charging Rs. 4.76 lakhs for depreciation and Rs. 4.22 lakhs for taxes on income and profits, there is a gross profit of Rs. 5.64 lakhs. About Rs. 3.4 lakhs is written back from the provisions made for additional income tax in the years ended December 1950 to December 1954, which have now become redundant as a result of the ruling given by the Supreme Court in a test case. After providing Rs. 37,903 for contingencies reserve, and Rs. 26,191 for development reserve, it is proposed to take Rs. 1.95 lakhs to dividend equalisation reserve. The interim dividend was Rs. 3.25 on the preference shares, net of tax at source; and Rs. 2.50 on the ordinary shares, subject to deduction of tax proportionate to the amounts called on the partly-paid shares. The final dividend on the preference shares is Rs. 3.25, net of tax at source. The final ordinary dividend is Rs. 5, making 7½ percent, subject to deduction of tax A sum of Rs. 4,844 is carried forward, against Rs. 5,210 brought in. The Central Government has agreed to the reappointment of Killick Industries as managing agents of the Company for a further period of five years from April 1960.

Jaipur Metals Expanding

The expansion programmes of Jaipur Metals and Electricals have been making satisfactory progress. The latest report, for the year 1959, indicates that the implementation of the scheme for the manufacture of Siemens type of meters is proceeding according to plan. Some items of machinery have been received. The major portion, it is expected, will be shipped in the current half of the year and production is expected to begin next year. Negotiations are going on for a further loan of Rs. 15 lakhs from the Industrial Finance Corporation for meeting the cost of expansion. Further research has been undertaken in the metals division and negotiations have been initiated for diversifying production and using the maximum capacity of the plant and machinery. Negotiations have also been started for foreign collaboration for the manufacture of special items. The directors hope that these efforts will materialise in the near future.

The sales of the Company are up from Rs. 120.15 lakhs to Rs. 142.37 lakhs, so the profit is Rs. 12.02 lakhs, against Rs. 9.77 lakhs in the previous year. The directors have provided Rs. 3.67 lakhs for depreciation, Rs. 99,369 for development rebate reserve, Rs. 3.6 lakhs for tax, and Rs. 50,000 for general reserve. The preference dividends absorb Rs. 38,400. The dividend is 8.5 percent on the ordinary shares and 19.9 percent on the deferred shares. The carry-forward is Rs. 7,498, against Rs. 10,348 brought in.

Selected Satgram Collieries

The Selected Satgram Collieries Ltd has been converted from a private into a public limited company during the year ended December 1959. The directors have taken steps to get the shares listed in the Calcutta and Bombay stock markets. There has been a substantial improvement in the working during 1959. Raisings have increased from 155,100 tons to 230,831 tons due to improved mechanisation. Despatches have also risen from 147,365 tons to 220,770 tons. Further depillaring is being done in order to raise production. The Company has acquired the Ikrab Nanda Colliery and changed its name to the New Jamuria Collieries. The raising contracts of the South Joyramdanga Collieries have been taken from the Dishergarh Coal Co. Ltd. So the prospects are considered encouraging. Providing Rs. 1.92 lakhs (against Rs. 1.38 lakhs) for taxation, the profit has increased from Rs. 1.25 lakhs to Rs. 2.19 lakhs. An

ordinary dividend of Rs. 16, taxable, has been declared and it absorbs Rs. 1.56 lakhs. General reserve is allocated Rs. 50,000 and land and mining reserve Rs. 15,000. There is a carry-forward of Rs. 2,609, against Rs. 4,543 brought in.

Nepa Chemicals: A New Company

A new company, Nepa Chemicals Ltd, has been formed to manufacture caustic soda and chlorine. The industrial licence has already been obtained. The plant is to be located in Nepanagar, Madhya Pradesh, and will have a daily capacity of 12 tons of caustic soda and 10 tons of chlorine. The Mettur Chemical and Industrial Corporation will act as technical advisers and consulting engineers. The newsprint mills will lift nearly 80 percent of the Company's chlorine and a substantial portion of its caustic soda output. Mr. Chunilal B. Mehta will be chairman of the Company and the V.C.S. Corporation will be its managing agents. The Company will have an authorised capital of Rs. 1 crore, consisting of equity shares, of which half are to be issued in the first instance. Only Rs. 26 lakhs worth of shares are being offered to the public, the balance being taken up by the promoters, directors and their friends. The Company is likely to be in the market for capital in October or November. The capital outlay for the project is estimated around Rs. 75 lakhs. The Company has asked the Industrial Credit and Investment Corporation for a foreign exchange loan of Rs. 40 lakhs to purchase machinery.

Leiner-Knit Gelatine Plant

A new Company for the production of gelatine and glue has been established in India by P. Leiner and Sons Ltd of the U.K., which is the world's largest producer of ossein gelatine. The name of the new Company is the Leiner-Knit Gelatine Co. Ltd, the shares being jointly owned by P. Leiner and Sons Ltd and K.N.I.T. (Kapurthala and Northern India Tanneries Ltd, Kapurthala). The authorised capital is Rs. 50 lakhs. The plant, a site for which has not yet been finally chosen, will be the first of its kind in India. It is expected to start production in six to nine months' time. Technical experts from the Treforest factory of P. Leiner and Sons Ltd will help in the organisation of the factory.

Using mainly sinews for raw material, the plant is expected to produce 2,000 tons a year of edible, pharmaceutical and technical gelatines. These will be initially for Indian consumption, but will be exported overseas should production warrant it. One of the main products of the new plant will be gelatine for the manufacture of bank-note paper in the mill being built by the Indian Government in conjunction with Portals Ltd. In addition, bone glue will be produced, mainly for exporting to the United Kingdom.

Orissa Government Loan

The Orissa Government will offer a 4 percent loan for Rs. 4 crores on 29th August, at an issue price of Rs. 99.50 for Rs. 10. The loan will be repaid in 1969. The proceeds will be used during the current year for financing various development schemes concerning electricity, mines, transport, ports, irrigation and forests in the State. Since the loan will mature after a period of nine years and the yield is attractive, it is expected that it will be subscribed without any difficulty. (Fuller details concerning the loan are published on a later page.)

Cloth Price Hopes

On 7th August, the Indian Cotton Mills Federation announced at a hurriedly called Press conference its decision to take immediate steps to cut the retail prices of coarse and medium cloth by 10 percent. Four days later followed another announcement, giving a broad outline of the new price structure and calling on the industry not to charge wholesale prices higher than a certain percentage over the October 1959 contract prices. These percentages are 10 for superfine, 12½ for fine, 20 for higher medium, 24 for lower medium and 27½ for coarse cloth. Deliveries against outstanding contracts also, it was stated, should not be made at prices higher than those indicated above. Mills have been asked to increase the production of those varieties of cloth which are in short supply. The decisions are in addition to the earlier recommendations about increasing supplies and displaying price lists at shops, in order to bring down retail prices soon.

The dramatic move of the Federation gives the impression that the industry has responded promptly to Mr. Lal Bahadur Shastri's call for bringing about a sizable reduction in cloth prices, which have been the subject of heated discussion in the Lok Sabha recently. Spokesmen for the industry claim that the new prices will represent a cut ranging up to 20 percent from the current levels, depending on the extent of the rise in different varieties. But a close study of the price list submitted by the Federation before the recent meeting of the Cotton Textile Consultative Board shows that the prices which the mills have now been allowed to charge from wholesalers will be lower than the June levels in only a few cases.

The Government contends that, between August 1959 and June 1960, the prices of coarse cloth have risen by 40 percent or 50 percent, of lower medium by 15 percent to 40 percent and of higher medium by 17 percent to 40 percent. The rise in fine and superfine varieties has not been much. According to the Central Commerce and Industry Minister, even after full allowance has been made for the unofficial premiums enjoyed by raw cotton during the season and the rise in wages and other costs, there is no justification for an increase of more than 12½ percent or 15 percent in the coarse varieties, 10 percent or 12 percent in the lower medium varieties and about 8 percent in the higher medium varieties. Prices in October 1959 were higher than in August and the cut announced by the Federation is from the October prices.

The Federation emphatically denies the charge of profiteering by the industry, and has offered to submit the audited accounts of the mills for the first six months to prove its contention. Critics, however, point out that the results of mills producing comparable qualities of cloth vary so widely that it is difficult to draw any firm inferences. It is conceded, nevertheless, that the profitability of the textile industry does not compare well with that of other industries. Few observers expect the reduction in prices by the mills to benefit the consumers while the unbalance between demand and supply exists. The pipeline connecting the producer and the consumer is long. Mills' retail shops can cater to the needs of only a small section of the community. It is possible, however, that the Government's warning against high prices and the action taken by the industry to check the rise might change the market psychology and bring an easier trend. Besides, there may be a sizable fall in cotton prices if the new crop is normal, especially since imports remain large.

Developing Reinsurance Facilities

Mr. J. S. Dalal, managing director of the Oriental Fire (a subsidiary of the L.I.C.) and also outgoing chairman of the Indian Insurance Companies Association, Bombay, could not in his presidential address resist the temptation of indulging in a little sales talk about the Indian Guarantee and General Insurance Company. The latter was originally a subsidiary of the Oriental, but was later converted into a full-fledged reinsurance company, with the additional capital subscribed entirely by the Life Insurance Corporation. Being, as he said, "an executive of an insurance company in the public sector", it was natural that he wished a professional reinsurer in his sector to succeed. Its private counterpart is the India Reinsurance Corporation, of which all the general insurers operating in India are members. They are bound by an agreement to cede compulsorily to the India Reinsurance Corporation a certain proportion of their reinsurances. The weightage gives the private body a competitive advantage over India Guarantee, which is a newcomer and has no initial premium support to serve as a base. Mr. Dalal, therefore, pleaded that insurers operating in India should use the large reinsurance facilities now provided and that these two companies should collaborate in handling a bigger volume of reinsurance business. It is essential, said Mr. Dalal, that the trade should support the two units so that foreign exchange expenditure is reduced, and the Indian market acquires greater strength.

The sale and purchase of reinsurance depend entirely on the terms and facilities offered. The Indian professional insurers will have to offer such terms and service that they can compete successfully with their foreign rivals. Merely appealing to national sentiment will not take them very far. Mr. Dalal advocated an exchange of treaties between companies inter se, with a view to retaining the maximum reinsurance business in the country. But that would depend on the terms of the sale, and the agreement of the buyer, whether in India or outside, to these terms. He suggested the formation of "pools", composed of cessions from both foreign and Indian companies. The management and retrocessions, said Mr. Dalal, could be entrusted to the two professional reinsurers for "a small overrider." What he had in view is nothing more than an exchange and clearing house of reinsurances. The proposal may seem superficially attractive, but it will prove acceptable to the management of an insurance company only when it offers the best terms possible. It is not clear why the advantages to be derived from such "pooling" should not be available to each of the ceding companies on their own without their having to enter the exchange. In his anxiety to provide business, in some way or the other, to the professional Indian reinsurers, it seemed that Mr. Dalal overlooked many administrative details and the real interests of the ceding companies.

A Cheap Housing Material

The housing shortage in India is acute, not only in cities but also in the rural areas where the people are becoming more conscious of the need for a better life. It is estimated that there are about 54 million rural and 11 million urban dwelling units in the country, or approximately one for every six people. During the decade preceding the second five year plan, only 1.2 million new units were built. The problem of urban housing in India has acquired greater urgency with the rapid movement of the population from the countryside to the towns; between 1941 and 1951, about 16.3 million people moved to urban areas. The number of new houses built in the cities in this period was only 1.7 million. One of the chief reasons for the slow pace of housing construction is the shortage of building materials, especially steel, but the problem can be eased if a housing material which is durable, strong and economical can be found in sufficient quantities. The National Building Organisation has been searching for indigenous sources of such material. It has surveyed the possibilities of using the reed (sarcanda) which grows abundantly in the Gangetic valley and Terai areas of U.P. and elsewhere in India. Crude boards made of these reeds, as well as the reed itself, have been widely used in housing construction in Punjab, Assam and parts of U.P. (Huts built of this material more than 50 years ago are still in use in Punjab.) At the instance of the National Housing Organisation, William Jacks and Co. Ltd has developed the manufacture of reed boards under the trade name of "Jaxboard", in collaboration with an Austrian firm. The factory is in Dhampur, U.P., and has an installed capacity of 3.6 million square feet of board a year. But due to the difficulties of reed procurement, output during the first 12 months will have to be restricted to 1 million square feet. The manufacturers claim that "Jaxboard" is not only a good construction material for a tropical country, but is versatile enough to have a wide range of applications. It can be used for the construction of storage platforms for various commodities, for cold storage, scaffoldings, gear-guards, interior decoration, false walls and as packing material for air-dropping supplies in inaccessible areas. "It has unique insulation properties that make the interior of Jaxboard-built houses cooler in summer and warmer in winter."

Zinc Strong, Lead Weak

The main feature of the Indian metal market recently has been the high price of free market zinc—whatever little of it is available—and the low price of lead. Zinc now rules at Rs. 172 a cwt, while lead is quoted around Rs. 66 a cwt. The development is particularly noteworthy in view of the fact that these two metals were fetching about the same price before the imposition of controls over zinc. The London Metal Exchange quotations, on which metal prices are based all over the world (including India), shows a difference of only £1 a cwt between zinc and lead. The imported price of zinc comes to about Rs. 70 a cwt. The high price of zinc stems from the fact that supplies in the free market are extremely scarce, and imports are limited to a fraction of the country's requirements. The Development Council for Non-ferrous Metals has estimated that India's annual consumption of zinc in 1960-61 will be 85,000 tons, whereas the actual imports in the first half of this year total up to only about 29,280 tons. Imports during the first half of 1958 were 36,810 tons, and 1958 was a year when the consumption was lower. With the growth of industries under the second plan, zinc consumption has gone up substantially. Judging by the current trend, zinc imports in 1960 will total only about 59,000 tons, leaving a gap of 26,000 tons between demand and imports. The progress of many industries will be hampered unless the Government licenses larger imports. As for lead, there is plentiful supply in the market, and even at Rs. 66 a cwt there are no buyers. Some foreign brands of lead are quoted at a premium of Rs. 3 a cwt.

U.P. Power Projects

Engineers at the Rihand dam site in Uttar Pradesh recently reported with some enthusiasm that the water level in the reservoir is 775 feet. This is 150 feet higher than the river bed level of 625 feet. For the next hundred years or so, the reservoir's water level is never expected to

fall below this level, which is the dead storage level for engineers. At the same time, the reservoir level is expected to rise continually due to silting. When the reservoir bed reaches 775 feet—which is likely to take about 140 years—the dam may have to be abandoned. For the time being, however, the major worry of engineers seems to be whether the vital pen stocks gates will arrive in time. If they do not, the commissioning of U.P.'s biggest power project may be delayed. The reservoir which is to be named Renuka Sagar, is the biggest man-made lake in India today with an area of 180 square miles. Nearly 50,000 people living in the villages adjoining the area had to be evacuated on 11th May when the reservoir gates were closed for storing water. Within three weeks, nearly 40,000 of them moved out. Most of them did not resist the eviction, although their rehabilitation has created a problem.

No doubt, they have received compensation and rehabilitation grants. They are also provided with free transport to their new places of residence. Besides, each family was alloted 6¼ acres of land, although the State Government was under no obligation under the law to do so as compensation was paid to them. The main complaint of the settlers is that the site for rehabilitation is forest land, so the virgin soil has to be upturned and the stumps of trees which are felled must be removed. It is estimated that for every acre of land there are about 180 stumps. Even if this work is done with the aid of machines, it will take about two years and cost Rs. 2 crores. As against this, total rehabilitation grants and compensation which have been distributed so far do not exceed Rs. 1.10 crores. Besides the Rihand hydel project, Mirzapur district will soon have a giant thermal plant of 450,000 kW in Singrauli. Russian experts who will survey the site are expected to arrive shortly. Thirty miles down the dam on the Rihand river, another hydro-electric station is also to be constructed in Obra during the third plan period.

Ten Commandments for Managers

Addressing the members of the Allahabad Rotary Club recently, Dr. R. J. Murphy, Professor of Business Administration in Michigan University, said that six Ms characterise any business enterprise. They are men, money, machines, materials, marketing and methods. The success of a business enterprise, he added, depends on the continuity of profit to the owner, continuous supply of satisfactory goods and services at fair prices to consumers, and favourable working conditions for labour. To those who think that the third condition does not matter, he pointed out that it has been established in the United States and other countries that unless workers are given a fair deal, the first two conditions cannot be fulfilled. A good business executive, Dr. Murphy declared, must win the workers' co-operation by leadership and not by dictation.

Dealing with the Ten Commandments of business administration, Dr. Murphy said that every organisation should seek (1) to have the most capable individual available in each position—many organisations fail because they ignore this aspect; (2) to train thoroughly each of those carefully selected so that he may become more efficient in his job; (3) to provide each employee with reasonable working hours, affording enough time for relaxation; (4) to pay each employee a fair wage for the work performed; (5) to provide for each employee security of job and income and some measure of protection against unavoidable periods of slack work; (6) to provide safe and orderly work places for each emplyee; (7) to furnish each employee with adequate knowledge of the organisation and what it is doing; (8) to provide each worker with opportunities to express his opinion freely on the organisation's policies, working conditions, production processes, etcetera (in India, he found complaint boxes in many places, but provision should also be made for suggestion boxes); (9) to provide for each employee an opportunity to be prepared in case of sickness, accident, disability or death, and to ensure an income for his declining years; and (10) to instil in each employee pride in the policies, product and progress of the organisation.

Regulating Jute and Gunny Futures

Speaking at the meeting of the general body of the East India Jute and Hessian Exchange Ltd in Calcutta last Thursday, Mr. R. Doraiswamy, chairman of the Forward Markets Commission, said that the success of the Exchange in arresting violent fluctuations and controlling unhealthy speculation has been limited. Over the last two and a half years, it has been found necessary to impose special margins on raw jute and jute goods, and to vary them on nine occasions. Even if slightly abnormal conditions prevailed on each of those occasions, an impartial observer cannot help feeling that the underlying forces responsible for the fluctuations have not been eliminated. The decisions taken by the board of the Exchange in May 1960 clearly showed that it had bowed to the wishes of operators, until a series of drastic steps had to be taken at the top of the boom. A situation developed in which the price of raw jute rose by Rs. 16 a maund, of hessians by Rs. 10 a 100 yards, and of B Twills by Rs. 17 a 100 bags within a week. This state of affairs, the chairman said, indicates that the spirit of the Forward Contracts (Regulation) Act has not yet been appreciated by the trade. Admittedly, there is an element of inherent instability in the jute economy, due to sharply varying crop reports, sudden damage to the crop caused by floods, and the unsteady export demand for jute goods. But the existence of these sources of instability should invite serious thought and constructive action in evolving a pattern of regulation which would lead to the long-term stability of prices and bigger jute goods exports.

Mr. Doraiswamy said that the membership of the Exchange indicates the predominance of brokers. His impression was that not only in numerical strength but in actual day-to-day regulation, brokers have exerted unreasonable pressure to trim the Exchange's policies according to their requirements. The board of directors has sometimes rightly resisted such pressure, but on many occasions proposals for imposing special margins have been opposed by the brokers' directors. Poor business and lower brokerage, Mr. Doraiswamy said, can hardly be offered as arguments for resisting action to meet emergencies. The decision to throw out "unceremoniously" the board's proposal to enhance the representation of the industry illustrates the need for brokers to change their attitude.

According to the Forward Markets Commission, the fact that transferable specific delivery contracts in raw jute and jute goods are not subject to detailed regulation is responsible for some of the basic maladies of the trade. The Commission has been informed that in times of a squeeze or bear raid in the futures market, the virtually free T.S.D.C. sector serves as a convenient outlet for squaring open commitments. Mr. Doraiswamy thought that there is no valid justification for exempting these contracts from the pattern of regulation which is applied to the futures contracts.

Establishing Industrial Estates

The establishment of industrial estates will be facilitated as the Central Government has worked out the financial aspects of the scheme in consultation with the Reserve Bank. It now rests with the State Governments to go ahead with them. The proposal is to organise about six such estates in various States either through private companies or through co-operatives of entrepreneurs. The main point of interest is the rôle which commercial banks are likely to play in view of the Reserve Bank's suggestion that there is no objection to commercial banks advancing, to a limited extent, term loans to companies and co-operative societies against the security of land and factory sheds and the guarantee of the State Government concerned, provided it does not adversely affect the financial position and the liquidity of the lending banks. It is pointed out that this fulfils, to some extent, the Government's desire that commercial banks should play an important rôle in the development of industrial estates.

The Central and State Governments attach importance to the development of industrial estates as part of the programme for promoting small-scale industries. The estates represent an attempt to provide economically within a marked area basic facilities to groups of small industrialists who otherwise may not individually be able to secure these facilities. The Central Ministry of Commerce and Industry has been working on several ideas. Some large establishments have already been approached directly to promote the establishment of small-scale feeder and ancillary industries. The other proposal now made is that a number of small industrialists could themselves take the initiative in organising such estates.

The Central Government has modified the recommendations of the standing committee of the Small-scale Industries Board. It has suggested that industrialists should raise by way of share capital one-sixth to one-fifth of the total amounts needed for industrial estate co-operatives, and one-fourth to one-third of the amounts for industrial estate companies. The balance may be advanced by credit institutions. The period of loan repayment may extend from seven to ten years. The Government, it is said, wants bank loans to be at the normal rates without any need for subsidies.

Copper and the Congo

The statistical position in world copper markets would justify a weakening of prices, whereas in reality they have been steady for months past. This is no doubt because the trade foresaw the danger of disruption in the Congo, and singularly in the copper-producing Katanga province, when that unprepared country was thrown feet-first into independence. The Congo's annual 280,000 tons, which was expected to rise to over 290,000 tons this year if all went well, puts her fifth among world producers, and any interrupion of work in the Katanga mines or any difficulty in exporting metal from that land-locked province would be immediately reflected in world markets. Operators took this possibility into account and have managed to keep prices firm at £280 a ton, against only £240 a ton in May (and a low of £160 a ton in February 1958). A rapid settlement in the Congo could change this position radically, for the fact is that world copper markets are threatened with overproduction. Last year output totalled 3.62 million tons, beating the 1957 record of 3.5 million tons, in spite of strikes in the United Sates and Chile. This year, given steady working and given too Peru's fast progress as a producer, world output could easily exceed 4 million tons. At that point, the markets will have difficulty digesting supplies. Stocks already increased by 70,000 tons last year. The most optimistic estimates of consumption for 1960 are 3.8 million tons or 3.9 million tons, and with the prospect of price falls, consumers will not be encouraged to stock copper. The main producers, principally Americans or U.S.-controlled, are willing to co-operate in restricting output, but this would take some time to have any effect because the copper-circuit is slow and there is always a lot "in the pipe". It seems that copper will be in easy supply for some years ahead, and producers may have to be content with prices around £240 a ton, which is high enough to ensure profitable operation and low enough to discourage users turning to substitute metals.

For a nominal charge. "Capital's" Statistical Department can provide you with a certificate of share prices.

THE GOOSERY COTTON MILLS

THE Directors, or rather the "Managing Committee," of the Goosery Cotton Mills Company have evidently read the parable of the importunate widow—perhaps the ubiquitous Mr. Mehta, in his capacity of Honorary Magistrate, has come across one—for they have bombarded the unfortunate shareholders with an importunity almost deserving of a better cause. Your money or your mills! We print in another column yet a further circular askng for 2 lakhs this time. It appears now to have dawned on certain cotton dealers, who represent the bulk of the unsecured creditors, that if the Company goes into liquidation, the mills at auction will probably not fetch much more than the mortgage debt, and thus they would lose their money; but that if the Company can be kept alive there is a chance of their getting something, however remote that chance may be. Hence they, have offered to take second debentures for the amount of their claims, and the Committee ask the shareholders to come forward this time with 2 lakhs of rupees as working capital. In view of the reception which previous piteous appeals have met with, we do not imagine that the shareholders will be hustled out of their money on the present occasion; and indeed in view of all the circumstances we are not now disposed to look on the investment as "desirable." We notice at the meeting, which has been convened for the 21st September, absent shareholders are invited to send proxies to Mr. R. B. Turner or Mr. R. D. Mehta, with a view to passing resolutions giving these gentlemen absolute power to dispose of the Secretaryship of the Company. This seems to us altogether too large an order; and we would advise the shareholders to think before they act. The Company's half-year closed on the 30th June, yet no report, balance-sheet and statement of accounts are forthcoming; so that the shareholders are absolutely in the dark regarding the position of the Company. We understand that the loss for the six months is about Rs. 85,000. It is also not quite clear why the cotton dealers should insist on the removal of Messrs. Robinson, Morrison and Co. only from the management, and not of those Directors also, who approved of their conduct in purchasing cotton to pledge immediately to the Bank of Bengal. The whole affair has a suspicious look of wire-pulling, and while we have no sympathy with Messrs Robinson, Morrison and Co., we do not see why they should be made the only scapegoats when there are other delinquents.

A Ditcher's Diary

THE SYSTEM OF "PERIODICAL INSPECTIONS" AND "constant supervision", said the Reserve Bank of India a couple of months ago, "has been yielding progressively satisfactory results and contributing to the stabilisation of the banking system as a whole." How satisfactory the results have been, and how admirably the stabilisation of the banking system has been promoted, is demonstrated by the closure of two scheduled banks within the past couple of months—the Laxmi in Maharashtra at the end of June, and the Palai Central in Kerala last week. Contrary to what various commentators have been saying these past few days, I do not believe that the birth or death of banks is cause for nationwide jubilation or despondency. Ten non-scheduled banks went into liquidation last year, without perhaps a murmur of protest from anybody apart from the stricken depositors. Why, then, might one ask, the current furore over the closure of the Palai Central Bank? Among the lesser reasons, one might be that its activities were centred in Kerala, a State whose political vociferousness has diminished only a little since the dethronement of the communist Ministry a year ago. Another may be that some members of Parliament, rarely unaware of the scope for provincialist or Party exploitation even of personal tragedies, have been deeply touched to see weeping widows, complete with babes in arms, among the heart-broken depositors outside the shut doors of the Bank's branch in Delhi. By far the most important reason for national anxiety, to my mind, however, arises not from the plight of the Palai Central depositors, but from the fact that the reputation of the Reserve Bank has suffered its worst disaster in the two and a half decades of its not always uniformly glorious history.

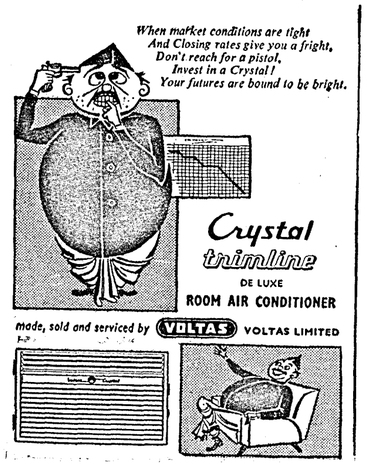
AMONG THE GENERAL POPULACE, THE IMPRESSION had prevailed that, under the Reserve Bank's lordly guidance, the Indian banking system had, during the past eight years, achieved a strength unknown before. It had been cleansed of its weaker elements by the purgatory fires of the partition disturbances in 1947 and the post-Korean war depression of 1952, during which periods many banks that had mushroomed in wartime died like flies, in West Bengal especially. Now, there comes the astounding revelation that, through nine years of constant errancy, the Reserve Bank was found to be doing little else apart from administering casual edicts to the Palai Central and regular bromides to itself. Need there be any surprise that, in a country with a central banking institution run in this manner, the Palai Central should have met the fate it did? It is not for me to testify to the worth of recommendations that bankers, central included, should take a little time off from foreign tours in order to study the Banking Companies Act and its appurtenances, which not all of them may have done with appropriate diligence yet. Nor is it for me to comment on the spectacle of the Prime Minister rushing in with a blanket denial of the Reserve Bank's negligence, and thereafter appending the soulful confession that he, in any case, knows very little about the Palai Central affair. It may not, however, be a wholly forlorn hope that Mr. Nehru has read his own colleagues' testimony to the fact that the Reserve Bank was aware of the Palai Central's "disquieting position" as far back as 1951; almost no improvement was noted by 1953, nor by 1956, nor by 1958—in each of which years further investigations were made by the Reserve Bank—until there came the year of grace 1960, when the Palai Central closure was considered inevitable. Over the eight years from 1951 to 1959, the Palai Central depositors had increased their savings in the worthy institution from Rs. 4.76 crores to Rs. 9.81 crores. Their faith was no doubt reinforced by the "progressively satisfactory results of the Reserve Bank's system of periodical inspections and constant supervision"—for whatever the system may now seem to have been worth.

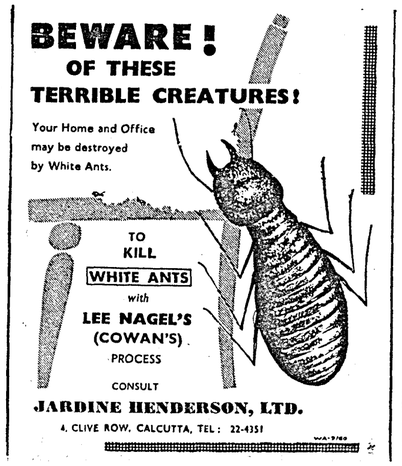
INDEPENDENCE DAY, AS MR. NEHRU REMINDED the country on Monday, is a day of dedication—dedication to the tasks of preserving the sovereignty won thirteen years ago and the unity which was among the finest legacies of the British *raj*. But freedom and unity do not depend on homilies alone, of which the President and the Prime Minister ensured there would be no shortage this week. In times like the present, they depend on the boldness of political leadership, in which department, many may feel, large parts of the country have been rather noticeably lacking. It is easy to criticise, as Mr. Nehru did, the fact that West Bengal's commemoration of Independence Day this year was undemonstrative and unenthusiastic; it is not so easy, however, to appreciate how demonstrations alone, including ministerial tea parties with sweepers and *durwans*, convey the genuine significance of a nation's sovereign status. Rather, in one important way, West Bengal managed to highlight the central problem of unity and independence in a large country like India: by reminding itself, and others, that the forces of provincialism and linguistic jealousy cannot be forgotten with the aid of gubernatorial receptions, the hoisting of flags and speeches from the great—which have been the previous, easily forgotten, symbols of Independence Day celebrations in Calcutta. Thanks to the Jan Sangh, in a less estimable way, West Bengal managed to highlight another of the important problems facing India as she enters her fourteenth year of independence: the violence which seems to be perennially immanent in the political life of urban agglomerations like Calcutta, and which, with the least excuse, or none at all, comes to the surface in clashes over unimaginable trivialities. The communalists' call for hoisting black flags in this city on Independence Day was a shame; it may, however, have symbolised the dangers to independence more impressively than all the uninhibited verbosity and celebrations noted elsewhere.

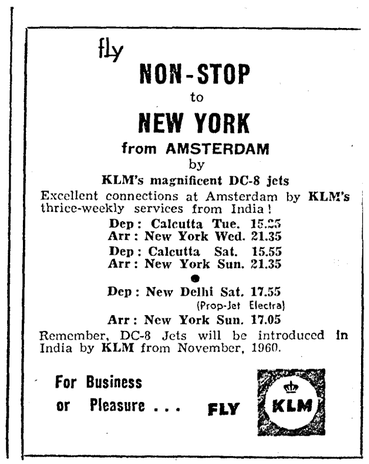
ONE REASON WHY THE CIRCULATION OF INDIAN newspapers is rather small, I have heard it suggested, is that their approach to the presentation of news and views is rather stuffy. There may be some truth in this, but I do not think that it is the major reason, for the latest annual report of the Press Registrar shows that the number and readership of newspapers have both been increasing, even though they continue to devote acres of space to perfectly uninteresting, and unimportant, events. The number of newspapers (including periodicals) has risen from 5,932 in 1957 and 6,918 in 1958 to 7,651 last year; the overall increase in circulation was just under 1 percent, 8.8 percent and 11.2 percent, respectively, in the three years—an acceleration of growth which should be reassuring, assuming that the circulation figures were not inflated in an attempt to benefit from the acute shortage of newsprint. I do not suppose that, with the rise in circulation, newspapers have become more profitable during these years—a fortunate few, of course, excepted. The improvement in trade and industry during the past year, although not in 1957 and 1958, might have brought them more advertisement revenue; but the prescription of minimum salaries for working journalists would probably have taken the majority a step nearer bankruptcy. My democratic susceptibilities notwithstanding, and realising the value of a Press that is freer and more diverse, I would not consider the expiry of some Indian newspapers an unbearable loss. Altogether too many of them seem to be run by tired gentlemen in unfamiliar places who have nothing in particular to say, or are too afraid to say it. An interesting feature of the Press Registrar's report is that the circulation of dailies and periodicals in almost all languages has increased—those of the English ones substantially. English-language journals, in fact, have the largest circulation, almost a quarter of the total, with Hindi a close second, followed by Tamil, Gujarati, Marathi, Urdu, Bengali, Malayalam and Telegu. Another interesting fact is that the number of newspapers owned by chains, in one form or another, has been rising. This is hardly a welcome development, I should say, but one that is perhaps inevitable at a time when more economical operation is possible only by the pooling of facilities.

FELLOW-CITIZENS WHO HAVE THIS PAST WEEK BEEN returning to dreary domesticity after a hard day's work may be consoled to know that melancholia in rain, which latter Calcutta has been having somewhat unpredictably and in excess, is fairly general. It was a great sage of this city who once declared, in words of unforgettable import now seared on every Ditcher's heart, "It's the humidity more than the heat that gets you down." A lesser sage, passing under the description of Miss Rosemary Timperley, novelist, playwright and author of the "personal advice" column in a British weekly newspaper, has now amplified the memorable apothegm in the following words concerning the correspondence she received after wet week-ends: "In wet, cold weather, it seemed that all the world sat down in their small back bedrooms or suburban sitting rooms and 'wrote to the newspapers' . . . . . Young men wrote that they were shy and had no girl friends.....Girls wrote that the boys they had their eyes on appeared unresponsive.....Wives wrote that their husbands were cold and cruel, earned too little or drank too much, were always going out or never went out and got under their wife's feet . . . . . And husbands wrote that their wives were over-talkative or too quiet, over-houseproud or sloppy about the house, over-vain or took no trouble over their appearance. In fact, it seemed from the letters that by some diabolical means of natural selection, all the wrong men had married all the wrong women."

THE DITCHER







(This is not a Prospectus but an announcement regarding issue of Prospectus. Application for shares may be made only on the basis of Prospectus and not this announcement. Copy of Prospectus may be obtained from the Company and/or the underwriters and Bankers)

A copy of the Prospectus has been duly delivered for registration to the Registrar of Companies, West Bengal.

The subscription list will open at the commencement of the banking hours on 24th August, 1960 and will close at the close of the Banking hours on 31st August, 1960, unless closed earlier at the discretion of the Directors but not before the 29th August, 1960.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to Public inspection at the Head Office of the Company. It must be distinctly understood that in giving the consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

THE COMMITTEE OF THE CALCUTTA STOCK EXCHANGE ASSOCIATION HAS GRANTED THE COMPANY ITS APPLICATION FOR ENLISTMENT SUBJECT TO THE OFFER NOW BEING MADE.

ANDAMANS TIMBER INDUSTRIES LIMITED

(Incorporated on the 17th June, 1959 under the Companies Act, 1956)

AUTHORISED CAPITAL

2,50,000 Equity Shares of Rs. 10/- each	Rs. 25,00,000/-

ISSUED, SUBSCRIBED AND PAID-UP

1,00,000 Equity Shares of Rs. 10/- each	Rs. 10,00,000/-

PRESENT ISSUE BY THE COMPANY

75,000 Equity Shares of Rs. 10/- each	Rs. 7,50,000/-

NOW OFFERED TO THE PUBLIC

(i) BY THE COMPANY:	
75,000 Equity Shares of Rs. 10/- each payable at par	Rs. 7,50,000/-
(ii) BY THE DIRECTORS OUT OF THEIR OWN HOLDINGS	
11,000 Equity Shares of Rs. 10/- each payable at par	Rs. 1,10,000/-
	Rs. 8,60,000/-

For the purpose of meeting the requirements of the Calcutta Stock Exchange Association the said 75,000 Equity Shares comprising the present issue and 11,000 shares out of the shares already issued and subscribed and held by the Directors and their friends and associates are offered at par payable in full on application.

RIGHTS ATTACHED TO THE NEW EQUITY SHARES

The new Equity Shares shall for all purposes rank pari passu with the existing Equity Shares of the Company.

UNDERWRITING

All the shares forming the present issue by the Company have been underwritten by Messrs. Banwarilall Pasari, Stocks and Shares Brokers of 9, Royal Exchange Place, Calcutta.

DIRECTORS

Name	Description	Address
1. Maharajkumar A.C. Mahatab of Burdwan.	Business	2, Judges Court Road, Calcutta.
2. Sri G. P. Khaitan	Merchant	2, Dalhousie Square East, Calcutta.
3. Sri B. K. Khaitan	Merchant	2, Dalhousie Square East, Calcutta.
4. Sri N. N. Bose	Business	9, Clive Row, Calcutta.
5. Sri A. K. Bose	Business	9, Clive Row, Calcutta.

BANKERS

1. The Central Bank of India Ltd.
2. United Bank of India Ltd.

SOLICITORS

Messrs. Khaitan & Co.,
1B, Old Post Office Street, Calcutta.

AUDITORS

Messrs. Lovelock & Lewes,
4, Lyons Range, Calcutta.

BROKERS

Messrs. Banwarilall Pasari,
9, Royal Exchange Place, Calcutta.

REGISTERED OFFICE

2, Dalhousie Square East, Calcutta.

FACTORIES

1. 34, Barrackpore Trunk Road, Calcutta-2.
2. Port Blair, Andamans.

OBJECTS

The Company was incorporated on the 17th June, 1959 with the objects *inter alia* of working and managing veneer mills and Plywood factories and to manufacture and deal in veneers, teachest, commercial plywoods, decorative boards, hard boards and chip boards, etc. The objects are fully set out in the Memorandum of Association of the Company.

BUSINESS

The Company has been carrying on business since January 1960. The Company has acquired plants and machinery, quota rights and manufacturing licensed capacities of the two plywood factories of Calcutta, viz., Messrs. Kasipur Plywood Co. and Bose Wood Works Private Ltd. Messrs. Kasipur Plywood Co. and Bose Wood Works Private Ltd. were licensed by the Government of India to produce 35,94,240 sq. ft. and 21,21,600 sq. ft. of Teachests and 38,73,870 sq. ft. and 17,72,163 sq. ft. of Commercial Plywood per annum respectively. These licenses have already been transferred to the Company. The Company has taken over plants and machinery from the said concerns. The Company has further acquired the licensed manufacturing capacity of Messrs. Andaman Industries Private Ltd., which stands at 6 million sq. ft. per single shift per annum. As a result of the amalgamation of capacities from the three factories the present capacity of the Company stands at 5.7 million sq. ft. of teachest, 23.5 million sq. ft. of Commercial Plywood and 1.2 million sq. ft. of chip board. The Company has already set up a factory at Port Blair, Andamans and the same is producing teachest veneers. The Company's factory at No. 34, B. T. Road, Calcutta is in production since January this year and teachests on a large scale are being manufactured in this factory. Arrangements are afoot to instal machinery for producing commercial plywood for which, in the opinion of the Directors of the Company, there should be a good demand in the country.

PLANT AND MACHINERY

The Company has already obtained an import licence to import Plant and Machinery worth about Rs. 7,72,000/- for manufacturing commercial plywood. One of the Directors of the Company with a technician has gone to U.K. and the Continent to negotiate, select and place orders for machinery. The Company is making every endeavour to set up the proposed factory as early as possible and it is expected, subject to machinery arriving in time, that the new plant will go into production by the middle of 1961.

RAW MATERIALS

Timber, the principal raw material for manufacture of teachests and plywood, is available in abundance from the forests adjoining the mill site in Andamans and the Andaman Authorities have agreed to make available the total requirements of timber to the company at reasonable prices. The company proposes to feed its Calcutta units by bringing veneers from Andamans which will place the Company at an advantageous position in comparison to other producers.

FURTHER CAPITAL REQUIREMENT

1. Land	..	Rs. 3,00,000/-
2. Building	..	Rs. 5,00,000/-
3. Plant & Machinery	..	Rs. 10,00,000/-
4. Working Capital	..	Rs. 7,00,000/-
		Rs. 25,00,000/-

SOURCES OF FUNDS

The above sum will be provided as under :

1. New Capital issue	..	Rs. 7,50,000/-
2. Loan sanctioned from Industrial Finance Corporation	..	Rs. 13,00,000/-
3. Other sources including Banks for working capital	..	Rs. 4,50,000/-
		Rs. 25,00,000/-

PROSPECTS

In recent years, the internal demand for Commercial Plywood has considerably increased and from latest figures it appears that whereas the production of commercial plywood was 8.592 million sq. ft. in 1948 the production increased to 40 million sq. ft. in 1959 and it is expected that the requirements would go up to 70/90 million sq. ft. by the end of third plan period. It can be reasonably expected that with the all round industrial expansion of the country, the uses of plywood will also increase and this Company's products would find a ready market.

SELLING ARRANGEMENT

Messrs. WILLIAMSON MAGOR & CO. LTD. are the Sole Selling Agents for the Company's products of teachest and commercial plywood.

PROFITS

The major plywood units in India have shown very good profits during recent years. The Company will be in a position to produce about 20 million sq. ft. of teachest, commercial and decorative plywood per annum after the present scheme of expansion programme of the company has been completed. On the basis of existing prices the Directors are of the opinion that in the absence of any unforeseen circumstances the company has a good future.

UNDERWRITING COMMISSION & BROKERAGE

An underwriting commission of 2½% on the nominal value of the said 75,000 Equity Shares underwritten will be paid to the underwriters.

Brokerage at the rate of Rs. 00.12 nP per share allotted will be paid to a member of the recognised Stock Exchange in respect of applications bearing his stamp.

APPLICATION FOR AND ALLOTMENT OF SHARES

Application must be made for a minimum of fifty shares or multiples of fifty shares.

Application for Equity Shares must be made on the Form accompanying the Prospectus, further copies of which may be obtained from the Registered Office of the Company, the Brokers and the office of the Bankers mentioned hereinafter. The remittance should be made by cheque or draft and should be made "Account Payee only". Each application must accompany a separate cheque or draft.

The form of application accompanied by the necessary remittance of Rs. 10/- per Equity Share should be delivered to any of the following addresses on or before the date of closing of the subscription list.

1. Andamans Timber Industries Ltd., 2. Dalhousie Squere East, Calcutta-1.
2. The Central Bank of India Ltd., Calcutta, Bombay, Delhi, Madras and Kanpur.
3. United Bank of India Ltd., Calcutta, Bombay, Delhi, Madras and Kanpur.

No cheque will be sent to bank for collection until an allotment is made on the applications. Cheques drawn on banks at places other than Calcutta must include bank charges at ¼ percent with a minimum of .75 nP.

Cheques or drafts delivered to the Company shall be drawn in the name of the company and those delivered to the Bank shall be drawn in the name of the respective banks together with the following words "A/C Andamans Timber Industries Limited".

Where no allotment is made the deposit will be returned in full and where a partial allotment is made, the unutilised balance will be refunded without any interest by a cheque on the Company's Bankers at Calcutta within 60 days from the date of allotment. The Directors reserve the right to refuse any application wholly or in part without assigning any reason.

The shares when issued shall be subject to the Memorandum and Articles of Association of the Company. Allotments when made shall be notified by the despatch of an allotment letter.

ISSUE OF SHARE CERTIFICATE

The share certificates will be issued within 6 months from the date of allotment.

FORM OF APPLICATION

To,
The Directors,
Andamans Timber Industries Ltd.,
2, Dalhousie Square East,
Calcutta-1.

Gentlemen,

Having paid to your Bankers the sum of Rs. being the amount payable on application for Equity Shares of Rs. 10 each as deposit at the Rate of Rs. 10 per share, by cash/cheque/draft, I/We apply for and request you to allot me/us that number of shares of the Company and I/We agree to accept such number of Equity shares or any smaller number that may be allotted to me/us upon the terms of the Company's Prospectus and subject to the Memorandum and Articles of Association of the Company and I/We authorise you to place my/our name(s) on the Register of Members of the Company as the holder(s) of such Equity Shares.

I/We hereby declare that I am/we are resident(s) of India, and I am/we are not acquiring the above mentioned shares as nominee(s) of any person(s) resident outside the Union of India.

Dated this——day of——1960.

THE CALCUTTA MONEY MARKET

ADVANCES FALL: INTERBANK CONDITIONS TIGHT

Wednesday, 17th August.

THERE was a slight decrease in the general level of advances in the Calcutta money market during the past week. Most of the fall was on account of sugar and foodgrain credit, although the accommodation given for jute was also less. Engineering advances increased substantially, and those offered to the cotton and other textile mills were slightly higher. In the interbank market, conditions were tight, so the call rate remained at 3¾ percent.

Extremely dull conditions prevailed in the exchange market, with very few tea or gunny bills passing. Remittance was also on a very small scale. Sterling was strong throughout the week.

BULLION WAS STEADY DURING THE PAST WEEK. The seizure of a large quantity of contraband gold in Calcutta induced bullishness. Silver advanced from the previous week's level of Rs. 220.50 to Rs. 221.75, quoted today for ready delivery. The forward rate was Rs. 222.50. The London and New York silver prices were shown at 79½d and 91-3/8 cents.

The price of gold rose from Rs. 134 to Rs. 134.75. The sovereign, at Rs 87.25, showed a gain of 25nP.

DURING THE WEEK ENDED 12TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 63,58,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 16th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 were accepted in full, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 22nd August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 17th August to 20th August at Rs. 99.38 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. The bills sold from 10th August to 13th August amounted to Rs. 1,10,00,000.

A REDUCTION OF RS. 5 CRORES TO RS. 123.01 CRORES in foreign securities held in the paper currency reserve was the outstanding feature of the return of the Reserve Bank of India for the week ended 12th August, 1960. So rupee securities were increased by an equivalent amount to Rs. 1,456.57 crores. Active notes fell by Rs. 19 lakhs to Rs. 1,812.13 crores, but the total note issue rose by Rs. 35 lakhs to Rs. 1,327.12 crores. Notes held in the Banking Department consequently increased by Rs. 54 lakhs to Rs. 14.99 crores. Deposits showed an all-round decline. Deposits of the Government of India fell by Rs. 1.39 crores to Rs. 55.99 crores, as did other Government accounts by Rs. 1.67 crores to Rs. 16.16 crores. Balances of commercial banks at Rs. 117.25 crores showed a decline of Rs. 1.20 crores. Balances held abroad rose by only Rs. 1.63 crores to Rs. 21.48 crores, after transferring Rs. 5 crores from the Issue Department. Other loans and advances declined from Rs. 122.05 crores to Rs. 116.39 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10.90 crores (Rs. 10.85 crores). Ways and means advances stood at Rs. 41.76 crores, against Rs. 37.17 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 5th August, 1960, shows a drop of Rs. 94 lakhs to Rs. 609.97 crores in total deposits. Investments in Government securities are up by Rs. 15.45 crores to Rs. 379.39 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 1.09 crores to Rs. 209.51 crores. Cash and balances are, in consequence, shown at Rs. 25.79 crores or Rs. 11.13 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 5th August, 1960, shows Demand and Time liabilities at Rs. 783.75 crores (Rs. 19.46 crores on account of borrowings from banks) and Rs. 1,220.11 crores (Rs. 28.45 crores), compared with Rs. 798.86 crores (Rs. 23,93 crores) and Rs. 1,215.04 crores (Rs. 27.72 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1 lakh and Rs. 5.77 lakhs to Rs. 43.42 crores and Rs. 113.36 crores, respectively. There is a rise of Rs. 14.05 crores to Rs. 738.11 crores in investments. Advances and bills discounted at Rs. 1,123.93 crores show an increase of Rs. 2.29 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 56.1 percent, against 8.1 percent and 55.7 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 19-8-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

Scruffy and Smarty

Scruffy: *"I am kicked out every time. How is it you are always received so well by the clients?"*

Smarty. "It is not that you are a bad salesman. But look at your clothes . . ."

Scruffy: *" What do you mean? I am here to sell my products and not my clothes!"*

Smarty: "But the client judges your product by his first impression of you. So you must dress well. Preferably with BINNY'S. They Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings look smart and last long."

BINNY—
a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussores - Union Fabrics - Towels - Silk Sarees - Rugs - etc. etc.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board.

Stocks and Shares

BULL LIQUIDATION REDUCES VALUES IN DULL TRADING

TATA STEEL DIVIDEND NEWS KEENLY AWAITED

Wednesday Evening.

THE past week was a period of dull trading on the Calcutta Stock Exchange. Most brokers complained of poor orders and investment support was almost negligible. Under these conditions, prices, with few exceptions, tended to give way on stale bull liquidation. The one ray of hope on the investment horizon was the forthcoming dividend announcement by the Tata Iron and Steel Co. Ltd. Many believed that, after the satisfactory dividend declared last week by the Indian Iron and Steel Co. Ltd, T.I.S.C.O. would also try to please shareholders by making a reasonable distribution on the increased ordinary capital. The view was strengthened by the fact that the Company's steel production in 1959-60 was substantially higher than in the previous year. But whether the Tata Steel dividend would help market sentiment in general was open to doubt, as the spate of new issues from next month would undoubtedly be immobilising large investment funds. In fact, the selling of existing high-premium shares for the purpose of applying for new issues could not be ruled out. The number of enquiries which brokers received from their upcountry clients about the forthcoming issues indicated that large funds had already been earmarked for subscription.

With the launching of the new State Government loans due on 29th August, the Government securities market continued to develop a weak trend. In the case of State Government loans, in particular, the losses ranged from 10nP to 25nP during the past week.

There was a keen demand for preference shares in view of the report that the Government was introducing a Bill in Parliament during the current session to clarify its intentions about the taxation of preference dividends.

In the banking section, the outstanding feature was United Commercial which improved from Rs. 79 to Rs. 80.50.

A huge block of Sone Valley cement shares changed hands today at Rs. 6.25. Except for isolated features, like Guest, Keen, Williams and Union Carbide, which advanced from Rs. 51 to Rs. 52 and Rs. 54.50 to Rs. 58.75, respectively, most other issues showed a downward trend, as will be seen from the following table of a representative list of shares:

	Opening 11th August Rs.	Closing 17th August Rs.
Bengal Coal	347.00	336.00
Equitable Coal	28.00	27.00
Kesoram Cotton	32.37	31.00

Dhelakhat Tea	24.00	23.87
Indian Copper	5.02	4.94
Indian Iron	25.60	25.54

Devashola Tea

After providing Rs. 30,517 (against Rs. 32,688) for depreciation, the profit of the Devashola (Nilgiri) Tea Estates Co. Ltd has declined from Rs. 3.08 lakhs to Rs. 2.30 lakhs for the year ended December 1959. A dividend of 25 percent, taxable, including an interim of 10 percent, has been declared, against 25 percent, tax-free, in the previous year. Provision for taxation receives Rs. 1.05 lakhs (against Rs. 1.56 lakhs). After various adjustments, there remains a balance of Rs. 1,259, which is carried forward, against Rs 5,663 brought in. The crop was 325,310 lbs, against 383,675 lbs. Estimates for 1960 provide for a crop of 350,000 lbs.

Ganges Rope

The Ganges Rope Co. Ltd has earned a profit of Rs. 8.26 lakhs for the year ended March 1960, against Rs. 7.43 lakhs in the previous year. An ordinary dividend of Rs. 17.50 a share, subject to tax, has been declared, against Rs. 17, tax-free. Allocations include Rs. 97,621 (against Rs. 1.02 lakhs) for depreciation, Rs. 3.85 lakhs (against Rs. 4.18 lakhs) for taxation and Rs. 2 lakhs (against Rs. 1 lakh) for general reserve. After making other adjustments, an amount of Rs. 70,652 is carried forward, compared with Rs. 22,805 brought in.

Clevedon Tea

There is a rise from Rs. 3.57 lakhs to Rs. 6.49 lakhs in the revenue profit of the Clevedon Tea Co. Ltd for the year ended December 1959. A dividend of 25 percent, subject to deduction of tax, has been declared. Revenue reserve is increased from Rs. 25,000 to Rs. 1.50 lakhs and development rebate reserve gets Rs. 1.000 (against Rs. 20,000). There is a carry-forward of Rs. 52,439, against Rs. 19,562 brought in. A crop of 498,560 lbs was secured, against 510,880 lbs. The average selling price realised was Rs. 2.86, against Rs. 2.15 a lb. Estimates for 1960 provide for a crop of 480,000 lbs at a cost of Rs. 7.88 lakhs.

Killcott Tea

The revenue profit of the Killcott Tea Co. Ltd has risen from Rs. 1.36 lakhs to Rs. 5.12 lakhs for the year ended December 1959. A dividend of 17½ percent, taxable, has been declared, against 17½ percent, tax-free, in the previous year. Provision for taxation absorbs Rs. 2.40 lakhs and investment reserve Rs. 1.30 lakhs. After making various adjustments, there is a carry-forward of Rs. 42,315, against Rs. 34,408 brought in. The crop increased from 1,010,717 lbs to 1,143,263 lbs. The average selling price realised was Rs. 2.15, compared with Rs. 1.85 a lb. Estimates for 1960 provide for a crop of 1,040,000 lbs at an outlay of Rs. 18.94 lakhs.

Bombay Market

QUIETER TREND FOLLOWS LONG LIQUIDATION

CLOTH PRICE CUTS WORRY OPERATORS

Tuesday Evening.

THE Bombay stock market was quiet during the past week, and share prices declined on long liquidation. Operators were worried about the possibility of further measures to restrain speculation. It was rumoured that many big holders had

4 per cent.
ORISSA GOVERNMENT LOAN, 1969.
ISSUE PRICE - Rs. 99.50
Open on the 29th August, 1960.

The loan will be closed as soon as a total of approximately Rs. 400 lakhs has been subscribed and in any case not later than the close of business on the 3rd September, 1960.

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore, at the Branch of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa.

Full particulars can be obtained at any of the Offices of the Reserve Bank of India, or Branches of the State Bank of India, or at any Treasury or Sub-Treasury in the State of Orissa.

been persuaded to sell in order to make the technical position healthier. There was a great deal of uncertainty concerning cloth prices, as it was thought that the Government might take steps to reduce these substantially if the industry did not do so voluntarily. It was reported that there would be many new issues in the coming weeks, so there might be no shortage of floating stocks. Meanwhile, money conditions had become stringent, so the stock market feared that it might not obtain enough support from banks.

Steel shares were steady on the hope that the Tata Iron and Steel Company would pay satisfactory dividends for the year ended March 1960, as the Indian Iron and Steel Company had done. Expectations of an early increase in the retention prices of steel and pig iron helped sentiment. Tata Steel closed at Rs. 161 and Indian Iron were maintained at Rs. 25.25. Among engineering shares, Tata Locomotive declined to Rs. 299 on pressure and Premier Construction were sold at Rs. 357.50. Alcock Ashdown were offered at Rs. 293 and Larsen and Toubro were quoted lower at Rs. 50. Mukand Iron came to hand at Rs. 27.75. In motor shares, Premier Automobile fell to Rs. 177, as did Hindustan Motor at Rs. 22.24.

There were widespread losses in the cotton mill group. Bombay Dyeing were available at Rs. 68.50 and Century fell to Rs. 504 on the payment of a lower interim dividend. Kohinoor were sold at Rs. 338 and Svadeshi were placed at Rs. 246. Khatau were transacted at Rs. 685 and Finlay were taken at Rs. 354. Standard were steady at Rs. 1,992 on prospects of a new share issue on convenient terms. Simplex were dealt in at Rs. 175. Apollo were offered freely at Rs. 1.58 and India United Ordinaries were quoted at Rs. 13.52.

Prices of miscellaneous shares fluctuated in line with the general trend. In sugars, Belapur were lower at Rs. 374 and Phalton were sold at Rs. 181. Walchandnagar Industries were available at Rs. 307. Among cement shares, Associated Cement were quietly steady at Rs. 144 and Digvijay were dealt in at Rs. 163.50. In the mining group, Shivrajpur Syndicate at Rs. 74.50 showed little change. Steamship company shares were quiet, and Scindia Steam declined to Rs. 15.36. Great Eastern Shipping were indicated at Rs. 17.44. Interest in chemical shares declined, and Tata Chemical were available at Rs. 19.84. Indian Dyestuff lost at Rs. 835, as did Polychem at Rs. 307.50. National Rayon reacted to Rs. 514 and Bombay Burmah were placed at Rs. 585. Ceat Tyre declined to Rs. 277.50 and Voltas were available at Rs. 282. Tata Mills were steady at Rs. 45, but Union Carbide improved to Rs. 60.50 on various corporate rumours. Hindustan Lever were transacted at Rs. 45.50.

Scattered interest was taken in bank shares on hopes of improved working. Bank of India were steady at Rs. 101 and Central Bank came to hand at Rs. 51.50. Insurance shares were quietly steady, and New India Assurance were transacted at Rs. 62.70. Vulcan were indicated at Rs. 19.25.

Among electricity supply shares, Ahmedabad lost at Rs. 87 and Bombay Suburban were sold freely at Rs. 89.50. Tata Power were bought at Rs. 1,082.50.

Madras Market

LESS BUSINESS AS NEW SHARE ISSUES AWAITED

ANXIETY ABOUT PALAI BANK CLOSURE CONTINUES

Wednesday Noon.

THERE was an appreciable decline in turnover in the Madras stock market during the past week. The fact that the Palai Central Bank had gone into liquidation continued to have a bearish effect. Business in clearing shares was restrained by talk of further measures against speculation. Investors became cautious and bought selectively in view of the fact that there would soon be many new share issues. They were inclined to conserve their resources for subscribing to the new shares. Business in Government securities was small because investors were inclined to hold their money for the forthcoming State loans, lists for which will open on 29th August. Sugar shares were quiet. In the planting group, selected tea and coffee shares were bought due to the improved marketing prospects. Rubber shares were quiet because investors were inclined to await the decision of the Government about the Tariff Commission's recommendations concerning the price of the commodity. Interest in textile shares declined due to uncertainties about cloth prices. Selected miscellaneous shares attracted interest on good corporate news.

In the banking group, Indian were transacted at Rs. 178 and Indian Overseas changed hands at Rs. 176. Pandyan were sold freely at Rs. 38, but Indo-Commercial attracted interest at Rs. 38.

Among public utilities, Ellore met with support at Rs. 13, but South Madras were sold at Rs. 10. Vellore were quoted lower at Rs. 11.50 and Cochin were offered at Rs 10.30.

Among sugar shares, Deccan were placed at Rs. 16.45 and E. I. D. were sold at Rs. 39.25. Mysore were dealt in at Rs. 60.50 and Travancore were transacted at Rs. 11.90. United Breweries were steady at Rs. 112, but Andhra were offered at Rs. 27.

In the planting group, Blue Mountain were steady at Rs. 5.30, as were Cochin Malabar at Rs. 8.12. Consolidated Coffee changed hands at Rs. 26.65 and Ouchterlony were transacted at Rs. 5. Periakaramalai came to hand at Rs. 3.80. Balmadies were transacted at Rs. 2.45 on the payment of a dividend of 7½ percent, taxable. Chembra were done at Rs. 5.15 and Coffee Lands were available at Rs. 25.50. Devashola met with demand at Rs. 31.50 on the payment of a final dividend of 15 percent, taxable. Emerald Valley were transacted at Rs. 5.67 and Kalasa were wanted at Rs. 4.78 on the payment of a dividend of 20 percent, taxable. Kil Kotagiri were steady at Rs. 5.69 and Lucky Valley were bought at Rs. 12.10. Midland were placed at Rs. 12.20 and Nilgiri changed hands at Rs. 7.75. Nonsuch were dealt in at Rs. 28.25 and Parkside came to hand at Rs. 28.50. Business passed in Peermade at Rs. 23.50 and Rajendra were quoted at Rs. 15.80. Teekoy were transacted at Rs. 6.75. Thirumbadi were done at Rs. 1.62. Vaikundam were steady at Rs. 31.25 on the payment of a dividend of 15 percent, taxable. Waterfall were quoted at Rs. 4.70.

Among textile shares, Madura changed hands at Rs. 34 and Travancore Rayon reacted to Rs. 36.75 on profit-taking. Business was done in Buckingham at Rs. 206 and in Bangalore Woollen at Rs. 199. Cambodia were done at Rs. 10 and Adoni were quoted at Rs. 9.75. Kothari were steady at Rs. 12.65 and Mettur were wanted at Rs. 398. Pankaja changed hands at Rs. 60 and Ramakrishna were done at Rs. 30.50. South India Viscose were lower at Rs. 141 on selling pressure and Vijayakumar were indicated at Rs. 130.

Among miscellaneous shares, Aluminium Industries were transacted at Rs. 25.20 and Ashok Leyland came to hand at Rs. 9.40. India Cement were quoted at Rs. 7.25 and Parry's Confectionery were bought up to Rs. 4.55 on the payment of a dividend of 30 percent, taxable. Madras Safe were steady at Rs. 47.50 on the payment of a dividend of 6 percent, taxable. Standard Motor were supported at Rs. 17.40 on the payment of a dividend of 9 percent, taxable. Andhra Scientific were done at Rs. 10.50, as were Binny at Rs. 196. Enfield were steady at Rs. 20.50 on the publication of a good report and F.A.C.T. were dealt in at Rs. 12.80. Mandya National Paper were quoted at Rs. 12 and Mysore Lamp were done at Rs. 25. Singareni were bought at Rs. 10 and Spencer were dealt in at Rs. 22.73. Textool met with support at Rs. 190.50 and Tube Investments were wanted up to Rs. 340.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

STOCK MARKET RISES

KEEN DEMAND FOR INDUSTRIALS

London, 17th August.

THE stock market has had one of its best weeks for some months, with almost all sections recording a broad and often appreciable advance. Industrial equities attracted the bulk of the buying and provided the outstanding feature of the week. Business here showed a marked expansion, and with the recent shortage of stock becoming more acute, prices forged ahead on a broad front to record widespread, and in many cases, substantial rises. The advance in the market was based mainly on a more optimistic view of the economic outlook and the flood of foreign money into the U.K. gold reserves. These two factors led to rising talk, stimulated by a reduction in U.S. discount rates, of the possibility of a cut in the U.K. Bank rate in the not-too-distant future. Hopes that European trade problems may be solved contributed to the more optimistic feeling while the improved trend on Wall Street also helped sentiment. The international situation was not a market factor, but developments in the Congo continued to restrain the African mining market. The advance in the industrial market embraced virtually all groups. A little profit-taking developed after the week-end, but this did no more than reduce the gains by modest amounts. Tea shares advanced helped by firm auction prices, while the rise in Ceylon issues was accentuated by the reiteration of the "no nationalisation" statement. Rubber shares were quiet, but after initial dullness, a slightly better tendency developed. Gilt-edged securities responded to talk of a lower British Bank rate, and prices improved on a small investment demand. In the foreign market, Greek bonds were strong on debt settlement hopes. Banking, insurance and hire-purchase finance issues were generally better. Tin shares moved erratically and showed very little change on balance. Oil shares were a dull and uncertain market, following the cuts in Middle-East crude prices.

The Money Market

The money market continued to operate under conditions of a tight supply position with the rate for day-to-day loans ruling firm at 5½ percent and 5¼ percent. Funds were barely sufficient to satisfy market requirements so that official intervention was provoked from time to time, which stopped the market going into the Bank of England to borrow at penal rates. The demand for bills remained good, but due to the tightness of money, the turnover was only fair with end-Octobers and early Novembers selling at 5½ percent and some business was done at 5¼ percent. The money market made no variation in its effective bid at last Friday's tender, but due to outside bids there was a slight fall in the Treasury bill rate to £5 11s 5.8d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "London gilts continue to be very steady. Industrials are still tending marginally upwards, although subdued on seasonal and political influences. Gold shares were very steady. Oils had an overdue technical rally, but rather specialised. Wall Street's rally in industrials, while not fully maintained, has held above the critical area, but the divergence in rails continues to disappoint. A defensive attitude persists in spite of further moves to ease credit. There is perhaps a possibility of gold losses stimulating further flight from Paper into real assets. London's recent firmness has occurred in the face of Wall Street's indecision and in the seasonally slack period. Guarded optimism seems justified, but without a decisive trend in the short run."

Press Comment on London Tea Prices

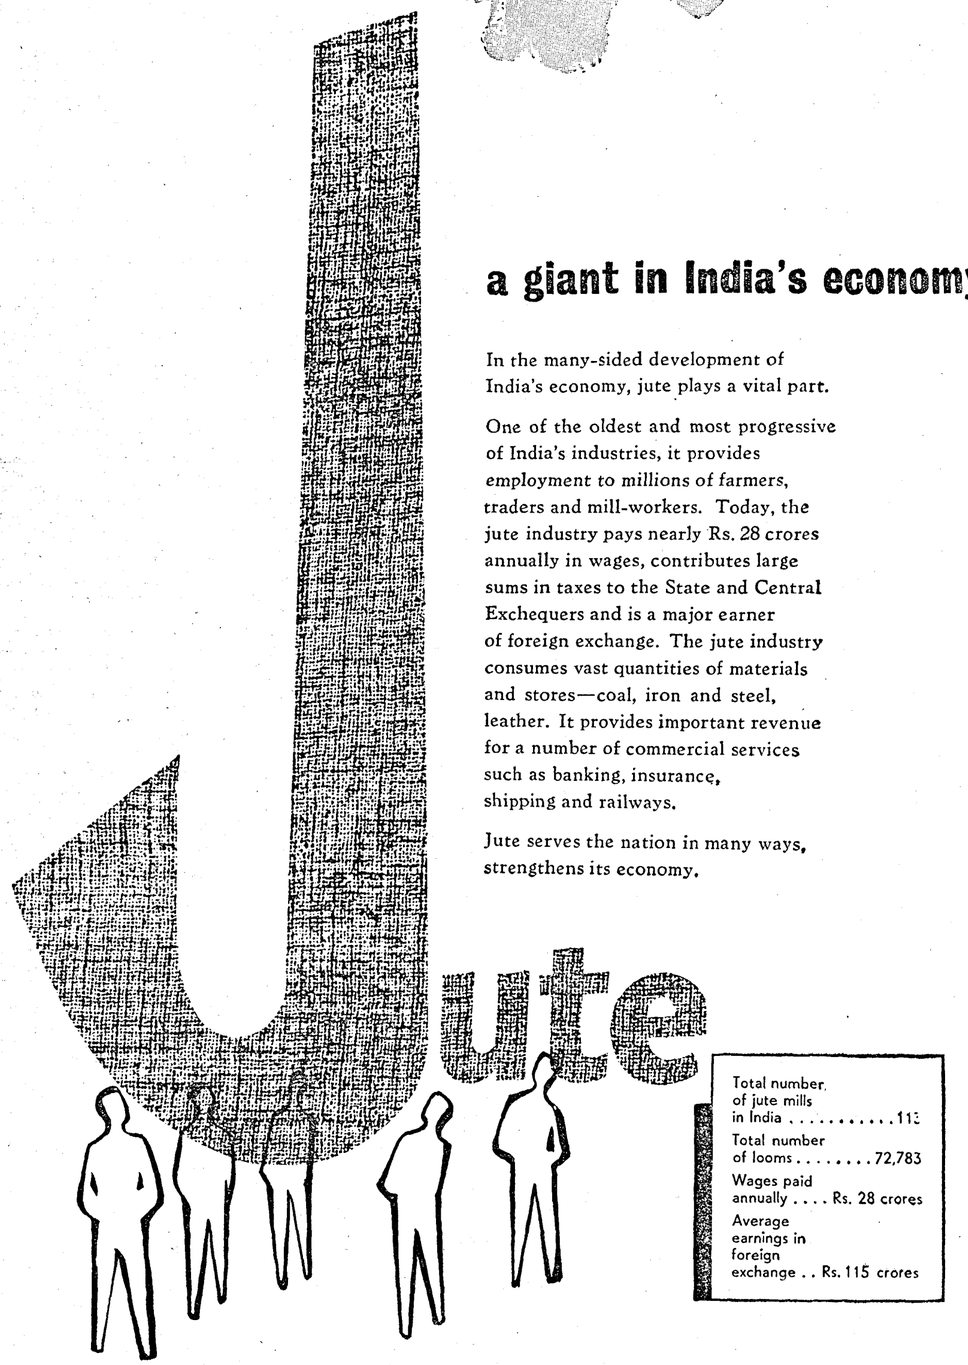
The *Financial Times*, commenting on tea prices and production in its issue of 15th August, said: "The prices paid at last week's tea auctions in London were the highest ever recorded in the United Kingdom, if some of the rarest tippy types which have occasionally fetched £1 a lb in the past are included. The teas concerned were some of the first of the fine north Indian teas to reach this country. The north Indian drought had delayed their growth, and riots between the local Assam population of the tea-growing areas and immigrant Bengalis had held up transport from the plantations to the ports, so that the teas were being impatiently awaited in London. The whole of the Indian crop was affected by this year's drought and Pakistan's crop has been drastically reduced. As a result of shortfall in these two areas, world production is now running about 15 percent below last year's levels and last year's production was only marginally greater than demand. During the rainy season, which lasts from August to October, tea plants grow so fast—the produce normally will be quality tea—that plantation owners close off part of their estates and concentrate on harvesting the rest. Any shortfall in plain tea production during the earlier part of the year can, therefore, be made up during the rainy season provided the extra labour is available."

a giant in India's economy

In the many-sided development of India's economy, jute plays a vital part.

One of the oldest and most progressive of India's industries, it provides employment to millions of farmers, traders and mill-workers. Today, the jute industry pays nearly Rs. 28 crores annually in wages, contributes large sums in taxes to the State and Central Exchequers and is a major earner of foreign exchange. The jute industry consumes vast quantities of materials and stores—coal, iron and steel, leather. It provides important revenue for a number of commercial services such as banking, insurance, shipping and railways.

Jute serves the nation in many ways, strengthens its economy.



Total number of jute mills in India 113
Total number of looms 72,783
Wages paid annually . . . . Rs. 28 crores
Average earnings in foreign exchange . . Rs. 115 crores

New Delhi

THE CONTINUING DEFICITS IN FOREIGN TRADE

PRICE POLICY FOR FERTILISERS TO BE ANNOUNCED SOON

(FROM OUR NEW DELHI CORRESPONDENT)

THE foreign exchange crisis has become extremely acute due to the adverse balance of trade which India has been running since the beginning of the first five year plan. The year 1957-58 was the most difficult, with imports rising to Rs. 1,034.9 crores. It also saw a fall in the country's exports. In fact, the record figure of Rs. 733 crores for exports with which the first five year plan was inaugurated, has never been reached since then. Two factors are responsible for the unsatisfactory performance in the export field. One is the exceptionally high rate of direct and indirect taxation. The second is the use of tariffs, import controls and exchange regulations which have almost completely insulated Indian manufacturers from competition. This has created an unsatisfied market in India, leading to a steep fall in exports and the balance of payments crisis. It is obvious that a manufacturer will not bother to export his products if he can sell them with a fair margin of profit in the home market. If exports in 1959-60 have improved by Rs. 80 crores over the previous year, it is because of the imports by the communist bloc of countries who are not dependable customers. The unbalance between imports and exports has led to India, for the last three years, largely relying on foreign aid to finance her imports.

Pressure on U.K. Government

In their report, the three international bankers, whose mission to India earlier this year was sponsored by the World Bank, have said that, like India, the aid-providing countries of the West are also democracies, whose Governments have to carry the legislatures with them. As the loans from the other countries are "tied" loans, the British Government has been under strong pressure from U.K. manufacturers to adopt a similar procedure for advancing credit to India. This explains why India's drawings on the sterling balances have been so heavy. The balances fell to Rs. 147 crores last week. New Delhi feels that the volume of U.K. aid during 1960 was not up to expectations. India is disappointed with the credit of £10 million which the U.K. Government is giving. West Germany also has announced its intention of advancing $30 million to India which has not yet been drawn. It is explained that the West German and U.K. credits can be used for payments falling due after June 1960. As already reported, the consortium of the chief creditor nations is meeing in Paris on 12th and 13th September, not only to have a look at the third five year plan, but also to implement the promise made at its first Washington meeting that India's foreign exchange deficit will be met by the member-countries.

The Indo-British £10-million credit agreement was signed on Wednesday. One-third of the credit is repayable in half-yearly instalments, beginning from May 1966, in ten years. The other two-thirds are repayable, also in half-yearly instalments, beginning from the same months in 1966 in 20 years. In other words, no repayments will fall due before the end of the third plan period. The rate of interest will be the same as that currently applied by the U.K. Treasury to a loan for a comparable period out of the U.K. Consolidated Fund on the same date, plus ½ percent for administrative charges.

Economics of Industrialisation

In New Delhi's view, India will have to cut down her imports further, if she fails to receive sufficient credit. This raises an important issue, namely, where will the cuts be made. By and large, India at present is importing capital equipment or industrial raw materials. It is time the Government appraised the economic consequences of its industrialisation policy. A rayon industry has been set up to produce luxury goods, the raw materials for which have to be imported. The issue of setting up a new industry cannot be judged in isolation, merely because it may provide employment or its equipment may be financed with deferred or long-term credits. The immediate need for its products and its dependence on imports for raw materials should be given weight in reaching a decision. It may be added that India has been repaying her drawings from the International Monetary Fund. Although this has increased her borrowing powers, she does not, for the present, propose to draw any more from the Fund.

Fertiliser Policy

As officially announced, the Deputy Minister for Commerce, Mr. Satish Chandra, went to the U.S.A. in search of collaboration from U.S. private interests in the setting up of fertiliser plants in India. In reply to a question in the Lok Sabha last week, he made the following statement: "It has been decided that during the third paln period, a limited number of fertiliser factories may be allowed to be set up by Indian firms in collaboration with foreign investors. Some Indian parties are exploring the possibilities of financial participation by U.S. firms in such joint ventures. Concrete proposals will be considered on merits as and when applications are received for the issue of industrial licences. No preconditions can be attached to such participation, but foreign investors desire to be assured of the payment of a reasonable price for their product."

The Central Minister for Food and Agriculture, Mr. S. K. Patil, said in New Delhi last week that during his recent tour abroad, he found keen interest among foreign entrepreneurs, especially in the U.S.A., to set up fertiliser factories in India. Much had been done to give the necessary assurances to intending investors, he said. The price policy to be followed for fertilisers during the operation of the Central Fertiliser Pool is being considered and an announcement will be made soon. When this policy is announced, Mr. Patil added, entrepreneurs keen on investing in fertiliser production will have no cause for fear that the price will work against their interest. The Minister, who was speaking at the meeting of the Fertiliser Association of India, said a target of 105 million tons of foodgrains has been fixed for the third plan and to achieve it, agriculture has to be reorganised. Fertilisers have to be used, but so far India has not been able to produce all the fertilisers she needs. Mr. Patil said that steps have already been taken to raise the capacity for the production of nitrogenous fertilisers from the present level of 144,000 tons to one million tons by the end of the third plan.

A State-owned Fertiliser Corporation of India is coming into being from 1st October as a result of the proposed merger of Hindustan Chemicals and Fertilisers and Sindri Fertilisers. The former has three projects under construction, namely, Nangal Fertilisers, which is nearing completion, the Trombay factory, for which global tenders have been received, and the plant in Assam, which is in an early stage of planning. As a preliminary step towards the merger of Hindustan Chemicals and Fertilisers and Sindri Fertilisers, both the State corporations will have an identical board of directors. They have been given draft orders on the merger, inviting objections if any. This is a formality to be observed under the company law before the merger takes place.

Steel Plant in Bokaro

Speaking in the Lok Sabha, the Minister for Industries, Mr. Manubhai Shah, made the following observations on the proposed fourth steel plant: "I should not let the idea go unreplied that Bokaro is going to be in the private sector. The Bokaro steel plant has been mentioned in the third plan as one to be developed by the public sector. And that is the final decision of the Government. Anything else, which is coming in steel and which has been sometimes announced by various leaders of public opinion, may be an additional steel plant, if at all it comes up. But, as far as Bokaro is concerned, we have developed it in the last five years and we hope to furnish it partially with some of the machinery—of course, that will not be very sizable—produced in the Ranchi project. In the fourth plan, we hope that the Ranchi project will place at the disposal of the country a large stock of industrial machinery which will go to establish future steel plants.

Mr. Chintamoni Panigrahi: Is there any possibility of a fifth steel plant coming in the private sector?

Mr. Manubhai Shah: No possibility can be ruled out in a big country like ours. We want more and more steel, and if good proposals come up, they will certainly be considered on merits.

Mr. Brij Raj Singh: The Policy Resolution prohibits it.

Mr. Manubhai Shah: That is not the point. Always the House can be taken into confidence, when any type of scheme is considered. We have no scheme so far. I wanted to clarify the Bokaro question, lest there be any misunderstanding that Bokaro—as mentioned by my honourable friend—is likely to go to the private sector. And it is going to be in the public sector.

It is not understood why Mr. Shah chose to reply on a subject which is the responsibility of Sardar Swaran Singh. Mr. Shah is not even a Cabinet Minister, and the principle of joint responsibility does not mean that one Minister should interfere with the affairs of another. The Prime Minister in this connection has given a different impression. Speaking at the Press conference on 18th March, he said: "I said that there should be a beginning with a new steel plant or plants, whatever it be. It is not merely a question of the third plan, but the basis for advance in the fourth plan will not be effective if we do not go forward. I do not wish to be rigid because our approach is always broadly pragmatic—how to get things done, and if we see there is some way of doing it effectively quickly in which we might relax other things we will relax".

Question: Does that mean modifying the Industrial Policy?

The Prime Minister: I think there is room for some slight variations here and there within the ambit of that resolution.

Question: Does it refer only to the application for further expansion of existing private sector units or even for new plant?

Answer: When I say new plant in steel it will not be, I presume, completely private sector plant, but may be a plant in which there is some kind of combination or something. I do not know. It depends on the terms.

Question: The American steel mission was here and there are some reports that they would prefer to give a steel plant in the private sector.

Answer: I did meet them, but the broad approach of ours is that we do not rule this out. It depends on the terms and conditions agreed upon between the parties.

Third Finance Commission

The Government has decided to set up the third Finance Commission and has selected Mr. G. R. Kamat, as member-Secretary. An official announcement about the full personnel will be made soon.

Heavy Electrical Equipment Plans

Towards the middle of 1959, India's total requirements of heavy electrical goods were reviewed and assessed at Rs. 80 crores a year. It was decided to double the output of the Bhopal factory to Rs. 50 crores a year and to set up two more factories—one in collaboration with Russia and another with Czech help. In the third plan, provision has been made for all these developments. It is, however, neither possible nor economic to have too large a concentration in Bhopal. So it is proposed to have an output there of about Rs. 30 crores to Rs. 35 crores, and to set up another unit elsewhere for a production of Rs. 15 crores to Rs. 20 crores worth of equipment. A committee of technical experts has already been constituted to discuss details concerning the production programme of the two new projects with Russian and Czech experts, and also to recommend suitable sites for the location of the factories. Preliminary project studies, it is expected, will be submitted by the experts shortly. They will be examined by the technical committee and recommendations will be made to the Government concerning the items to be manufactured, production, location of units, etcetera.

Manufacture of Photographic Paper

The Government has approved the scheme of New India Industries Ltd, Baroda, for the manufacture of 1.2 million square metres of photographic paper a year in collaboration with Agfa of West Germany. The production, it is expected, will start in another 18 months. The firm is also manufacturing box cameras since early this year in collaboration with Agfa.

Fall in Sindri Fertiliser Output

There has been a marked decline in the production of the Sindri fertiliser factory, from 330,122 tons in 1958-59 to 285,248 tons in 1959-60. The main reasons are the failure to get the right type of coal and the wear and tear of machinery.

Gunny Exports to China

The quantity and value of gunny bags and hessians passed for export to China during the months March to June 1960, were as follows:

	Quantity (tons)	Value (Rs.)
Sacking	16,367	2,09,50,719
Hessians	5,483	85,05,705

Machine-building and Coal Machinery Plants

According to the detailed Russian project reports, the capital costs of the heavy machine-building and coalmining machinery projects will be as follows:

	(Rs. crores)
Heavy machine-building plant (first stage 45,000 tons)	21.85
Foundry-forge plant (corresponding to the first stage of the heavy machine-building plant)	45.27
Coalmining machinery plant (30,000 tons)	13.10
	80.22

The above figures do not include several items of costs such as the cost of construction of structures outside the plant premises, namely, net works, water works, drainage, sewerage, electric supply, railway lines, motor roads, power engineering and telephone communications; the costs of the project report, working drawings, services of Russian specialists for rendering technical assistance during construction; the erection of plant and machinery; the construction of the township, its services and amenities; the construction of temporary storage sheds and other installations for construction purposes; Customs duty on imported machinery and equipment; the expenditure connected with the preparatory work preceding and required for putting the plant into production; the training of Indian personnel in Russia and in India; the cost of the services rendered by Russian specialists at the initial stages of production, technical documentation and the cost of

fabrication, etcetera. These are being worked out. The expansion of the heavy machine-building plant and the foundry-forge plant to the 80,000-ton stage and the coalmining machinery plant to the 45,000-ton stage will, it is expected, cost an additional Rs. 40 crores. The plants are likely to be completed during the latter half of the third plan period. The total expenditure incurred for the projects so far is about Rs. 3 crores. The orders placed by the Corporation with the Russian export organisation for the heavy machine-building plant come to Rs. 12.8 crores and for the coalmining machinery plant to Rs. 7.5 crores. The orders placed by the Corporation with the Czech organisation for the foundry-forge plant work out to Rs. 10.9 crores.

Loans for Rubber Growers

The Rubber Board's scheme visualises the grant of interest-free loans to growers at the rate of Rs. 750 an acre in six graded annual instalments, the loan being repayable in six equal annual instalments of Rs. 125 each, beginning from the tenth year of payment of the first instalment of the loan. This loan assistance, it is proposed, will be limited to 3,000 acres every year, beginning from 1960-61. The scheme has been included in the third plan proposals, which are being considered by the Government.

Exports of Handloom Fabrics

The main points in the report submitted by Professor Maria May, a West German fashion expert, on the promotion of the export of Indian textiles to West Germany, are as follows:

(1) The word "handmade" has not the same attraction in West Germany as it has in the U.S.A.

(2) Tie and dye fabrics of Orissa have export possibilities.

(3) Woollen materials like rugs and carpets will require proper finishing if they are to be exported to West Germany.

(4) Subsidies for the sale of handloom fabrics and the reservation of fields of production will be ineffectual.

(5) Handloom centres should be equipped with centrally-located finished installations and bleaching facilities.

(6) The export of silkworm cocoons (eri and muga) from Assam to Tibet and China should be prohibited.

(7) With West German assistance, a garment industry will have to be built up.

(8) There is an imperative need for quality control. Unhealthy and poor workshop conditions are responsible for bad quality. Production equipment is insufficient and badly serviced. Raw materials are not supplied in the right qualities and sufficient quantities. The artisans need leadership, guidance and development.

(9) Greater exports could be effected provided certain changes are made concerning colour, style and price. Above all, prices must be reduced.

(10) The various design centres (weavers' service centres and technological institutions) need improvement—versatility and flexibility in the curriculum is lacking, and proper teachers are not put in charge. The whole training system has to be reorganised. The first demand is training the trainers, which should be done at the most modern schools in the U.S.A. and Europe.

(11) The work of designers should be encouraged; contests and prize exhibitions should be organised.

(12) A "Handloom House" should be set up in Frankfurt or another centrally located city in West Germany.

(13) Interest in exports should be intensified by additional export premiums.

(14) West Germany can provide technical assistance—advising experts, establishing a sample market, scholarships and the exchange of teachers.

Report of Japanese Expert

The salient features of the recommendations made by a Japanese handicrafts expert are briefly as follows:

(1) The Government of India should consider inviting a team of Japanese designers in an effort to create novel designs and improve the existing ones in collaboration with Indian designers.

(2) Designers at various design centres should be encouraged to conduct analytical research into designs now in use and double their efforts to create new designs, combining the unique Indian motifs and the modern sense.

(3) Mechanisation of the basic work of handicrafts in the fields of fabrics, dyeing, woodwork, ivory, etcetera, can easily be accomplished. The All-India Handicrafts Board may send senior officers to Japan to study the possibilities of such mechanisation at various production stages.

(4) The All-India Handicrafts Board should give directives, exercise closer supervision and direct policies concerning various State Government centres receiving subsidies from the Central Government.

(5) Separate sections should be reserved in the emporia for the products of the trainees. The Handicrafts Board should form screening committees at producing centres and only those products which have passed these committee's screening may be sold with appropriate labels at the emporia.

(6) A system of putting marks for the guarantee of quality and industrial standardisation is necessary not only for the Indian buying public, but for the cultivation of overseas markets.

(7) It is advisable to set up State-run model workshops which may be modernised in industrial facilities and rationalised in factory and production management. The Handicrafts Board will do well to establish such State-managed workshops at major producing centres and then spread them to other places according to their results.

(8) It is necessary to preserve the artistic craftsmanship by making the artisans state their technique orally and keeping a record of what they relate. These records should be purchased by the State. The State should guarantee the livelihood of the selected craftsmen.

(9) Japanese craftsmen may be invited to India for exploring and discovering modern craft designs. Indian craftsmen should also be deputed to Japan to study handicrafts.

(10) A central handicrafts institute may be set up in India with the co-operation of the Japanese Government.

(11) A handicraft foundation to encourage the Indian handicrafts industry, with Japanese experts as advisers, may be established.

(12) Japanese experts may be invited to make arrangements to set up a central toy and doll institute.

Aid from U.S. Agencies

The principal lending agencies of the U.S.A. from which the Indian Government has received allocations are the Development Loan Fund and the Export-Import Bank, which allow credits for the import of capital equipment. The Government of India has also received aid from the International Co-operation Administration of the U.S. Government, partly as loans for various development projects covering the supplies of fertilisers, D.D.T., etcetera. In addition, it has received substantial allocations of wheat from the U.S.A. under special arrangements. The following are the details:

	(In million dollars)
Capital equipment including structural and other steel for development projects	247.78
Vehicle components for road transport development projects	18.09
Tubewell casings and equipment for community development	4.52
Fertilisers	8.85
D.D.T. and equipment for malaria eradication and filaria control	13.38
Wheat under loan arrangements	190.00

Government Guarantee for Foreign Loans

The Government of India has guaranteed the repayment of the following loans in foreign currencies taken by the private sector firms from the World Bank:

	(Rs. crores)
(1) T.I.S.C.O.-I	35.71
(2) T.I.S.C.O.-II	15.47
(3) I.I.S.C.O.-I	14.30
(4) I.I.S.C.O.-II	9.52
(5) Trombay-I	6.64
(6) Trombay-II	4.67
(7) I.C.I.C.I.-I	4.76
(8) I.C.I.C.I.-II	4.76

The guarantee covers the repayment of principal and payment of interest and other charges under the loan agreement between the borrowers and the World Bank.

Ropeways in Coalfields

Seven ropeway schemes in the Jharia and Raniganj are contemplated, four for the former and three for the latter. The Government has already received the project reports for one of the ropeways for Jharia and the three ropeways for Raniganj. The remaining project reports, it is expected, will be received shortly. A global tender enquiry for the award of a contract for the first ropeway in Jharia is to be put out by the Coal Board by about the middle of this month. Similar action for the other ropeways will be taken on the basis of the project reports. It is expected that all the seven ropeways will be commissioned by the end of 1962.

Increasing Coal Output in Private Sector

A working group, consisting of the representatives of the coal industry and the Central Government, was set up to make an assessment of the capacity of the private collieries for additional production, both in the short range and during the next plan period. The allocation of the target for the next plan, between the private sector and the public sector, will be decided by the Government, after taking into consideration the report of the working group. The group has already submitted its report concerning coking coal in the short range. The general policy of the Government is to confine the expansion of the private sector to areas immediately continguous to its working mines, and covered by the same mining lease. Exceptions to this rule are made only in individual cases, provided the areas involved are small and are not required for development in the public sector.

London

STATUS OF THE U.K. AS AN INTERNATIONAL CREDITOR

RISE IN OVERSEAS PRIVATE INVESTMENT

(FROM OUR LONDON CORRESPONDENT)

THE bank reviews may always be depended upon for worthwhile reading by those interested in economic affairs, and the latest batch is no exception. Of particular importance now is an article in the *Westminster Bank Review* by Mr. A. R. Conan (who was until recently Assistant Secretary of the Commonwealth Economic Committee) in which he has analysed figures and come to the conclusion that the United Kingdom may have regained its prewar status as a creditor country. He starts from the official estimate that gross capital exports since the second World War have been more than £4,000 million, compared with total U.K. overseas investment of £4,500 million in 1939. Then he makes his own estimates of the net total of long-term private investment, of net Government debt, and of the real balance between short-term liabilities and reserves. Although startling, his conclusions are reasonably convincing. First, he suggests that even after the losses of the war and postwar periods, the present value of overseas private investment can be estimated at about £7,000 million, well above the prewar total in money terms. Moreover, the figures make no allowance for any rise in the value of the prewar investments, half of which was in equities, nor for the 1949 devaluation, which increased the sterling value of dollar securities. The true total, therefore, may well be much greater. But foreign private investment in Britain, estimated at under £2,000 million, must be set off, making a net total of some £5,500 million.

Conventional Ideas

Government debt, after offsetting claims on other governments, is estimated at a net figure of £1,500 million. It is, however, in the third section—the balance between reserves and short-term liabilities—that Mr. Conan makes the greatest amendments to conventional ideas. In short, he argues that the so-called sterling balances are grossly overstated in official documents while the reserves of gold and international currency are greatly understated. The balances are recorded gross, and ought to be offset against the large working balances of British trading and financial concerns in foreign (non-dollar) currencies, the net balance of external commercial credit, and those portions of the colonial sterling balances which are, in fact, owned by the United Kingdom and not by colonial residents. The upshot is that the net sterling liabilities, far from the published total of £3,350 million (after deduction of acceptances), may amount to more than £2,500 million. The difference between these liabilities and the true reserves will then be only about £1,000 million, and the grand total will be a credit balance of at least £3,000 million. There is, of course, room for much argument about the individual estimates, but the figures, as presented, point strongly to the probability that Britain has regained its former international creditor status.

As far as Mr. Conan's general argument is concerned, there is support in a more conservative analysis of the same subject in the *Midland Bank Review* this month. In the course of the article, it is stated that "the relationship between sterling liabilities and the reserves, although far from satisfactory, is rather more favourable than the published statistics, taken by themselves, suggest." If only these favourable readings of the situation could be supported by official estimates, they certainly could not fail to strengthen world confidence in the potential future of Britain.

Steel Stocks Rising

Steel consumers are now putting steel supplies, including sheet, into stocks at a tremendous rate. According to a census taken at the end of June, stocks rose during the second quarter of this year by more than 8 percent, or about 270,000 tons of finished steel. This is the largest quarterly increase in steel stocks ever recorded and follows a rise of 175,000 tons in the first quarter. The largest previous movement was a reduction of 310,000 tons in the fourth quarter of 1958. The U.K. Iron and Steel Board has stated that deliveries of finished steel to using industries at home in the second quarter were at a weekly average of 300,700 tons, compared with 242,500 tons in the second quarter of 1959. It is clear that no less than 7½ percent of these deliveries have gone into consumer stocks. While there was no doubt some need for restocking to keep pace with expanding engineering activity, the point may not be far off when the size of stocks in the hands of consumers may weaken the demand for newly produced steel.

For the present, there is no sign of any decline in orders. The Board has estimated that in the second quarter of 1960, steel consumption at home amounted to 3,851,000 tons, compared with 3,793,000 tons in the first quarter. Seasonally corrected, the tonnage used in the second quarter was about 2½ percent above the first quarter and 12 percent above the second quarter of 1957. Production in July was, as usual, affected by the closing of works for summer holidays. Output of steel was at a weekly average of 391,400 tons, compared with 466,400 tons in June and 320,300 tons in July 1959.

Hire-purchase Sales Ease Off

Hire-purchase sales of durable goods, including motor-vehicles, fell in June, after a sharp drop in May due to restrictions introduced at the end of April. The U.K. Board of Trade has announced that the hire-purchase debt continued to rise, but by only £3 million, compared with £15 million in May and £29 million in April. Hire-purchase sales in June were about 19 percent on a year ago, compared with 3 percent in May and a 14 percent rise in April. Part of the June decline is to be discounted since sales were particularly high in June last year.

The downward trend was smaller in household goods shops than in finance houses (mainly motor-vehicles); but debt owed to finance houses continued to rise (by £7 million compared with no change in May). Business in household goods is low at this time of year, and the fall in this debt reflects the decline in May, which had not been fully reflected in previous estimates. Restrictions did not divert spending away from hire-purchase. Repayments were little affected, and down payments rose as people dug deeper into their pockets or savings to pay higher deposits. Nearly the whole rise in debt in the second quarter was for motor-vehicles.

Retail Trade Maintained

Retail trade during June kept up well, although it seems fairly clear that the rate of increase is slowing down. The U.K. Board of Trade's index figure of value was 111, compared with 108 a year ago and 103 in June 1958. Part of this rise must be attributed to an approximate advance of 1 percent in prices over the June 1959 levels. Durable goods sales, hit by credit restrictions, showed a significant decline, but trade in clothing and footwear continued at a high level with an increase of 11 percent on last year. Business of food shops also continued to advance, gaining 4 percent.

About 10 percent of Britain's 570,000 shops account for more than 50 percent of the £3,000 million or so of retail sales. This is revealed by the Board of Trade's census of distribution for 1957, just published. Concentration is greatest among the 700 department stores, where no less than 92 percent have an annual turnover of more than £100,000. At the other end of the scale, about half the butchers' and greengrocers' shops sell goods valued at less than £5,000 a year. Large companies—those with over ten shops—account for only 24 percent of retail turnover. Individuals and partnerships, owing less than 10 shops, make up 43 percent of retail sales in Britain.

E.F.T.A. Secretary-General

Mr. Frank Figgures, an Under Secretary to the U.K. Treasury, has been appointed Secretary-General of the European Free Trade Association. He will start work in Geneva next month. From 1948 to 1951, Mr. Figgures was Director of Trade and Finance at the Organisation for European Economic Co-operation. Later, at the U.K. Treasury, he was concerned with the negotiations on European trade questions, as a result of which the European Free Trade Association was established this year.

After graduating from Oxford, he went to the Yale Law School where he held the Henry Fellowship in 1933. He was called to the Bar at Lincoln's Inn in 1936, and in 1940 enlisted as an anti-aircraft gunner. Six years later, he was demobilised and became a Principal at the U.K. Treasury, where he took part with Sir Oliver Franks in the preparatory work on Europe's response to the Marshall Plan. He went to the O.E.E.C. in Paris in 1948 and played a leading part in the establishment of the European Payments Union and in the programme for the liberalisation of European trade.

Automatic Lighthouse for India

The first fully automatic lighthouse equipment for the Indian Government has been successfully tested at the Crawley works of Simon-Chance, Ltd. Apart from a six-weekly maintenance visit, the installation will be unattended. One hour before sunset the light starts to rotate, giving a double red flash; an hour after sunrise it switches itself off again. The main components are duplicated, and there is an automatic lamp-shanger in case the main lamp fails.

East India Distilleries and Sugar Factories

As already announced, the board of East India Distilleries and Sugar Factories has decided to erect a new compound fertiliser factory in Ennore in south India at a cost of about £3 million. As known, about one-fourth is to be financed by a rights issue of 550,000 £1 ordinary shares at 30s a share. The new shares are being offered to both preference and ordinary holders in the proportion of 11 ordinary shares for every 15 held. Net proceeds will be £818,250. The balance of the cos will be financed by the issue of £600,000 of 7 per cent debenture stock 1971-75 to the Commonwealt Finance Company; £250,000 from Simon-Carves, carrying interest at 5½ percent and repayable at par in ten half-yearly instalments; and Rs. 1,80,00,000 (equivalent to £1,350,000 sterling) from the State Bank of India at 6½ percent and repayable at par in seven half-yearly instalments. The directors anticipate maintained profits of about £732,000 for 1959-60, and forecast a final dividend of 14 2/7 percent for 1959-60 on the increased ordinary capital. An interim of 7 1/7 percent has already been paid on the existing capital. The 1958-59 total of 28 4/7 percent included a special additional dividend of 7 1/7 percent.

Enquiry into Rubber Companies

Inspectors of the U.K. Board of Trade are to investigate three more companies with which Mr. John Leonard Burden, a Wolverhampton chartered accountant, is connected. Four of his companies were named for investigation in May and July. The new companies are Selangor United Rubber Estates, Kali Glagah Rubber and Moccasin Shoemakers. All three were taken oven by Mr. Burden and his associates within the last 18 months. The inspectors, who will now look into the affairs of all seven companies, are Mr. Malcolm Morris, Q.C., and Mr. Duncan McKellar, chartered accountant. The companies named earlier were Val d'Or Rubber, Tremelbye (Selangor) Rubber, Anglo-Sumatra Rubber and Mambau (F.M.S.) Rubber.

GUARANTEEING LOANS TO SMALL INDUSTRIES

By R. M. Mitra

UNDER a recently published scheme, the Government of India has undertaken to guarantee a portion of the loss suffered by credit institutions on loans granted to small industries on or after 1st July, 1960, provided the total liability under the guarantee does not exceed Rs. 1 lakh in any particular advance. The Reserve Bank has been entrusted with the task of administering the scheme, and for this purpose will be called the "guarantee organisation". The scheme will be operated on an experimental basis, and will be subject to review in the light of its working over a period of two years. It will apply provisionally to the 22 districts selected for the purpose "on the basis of the relative importance of outstanding loans to small-scale industrial units and the potentiality for further expansion of such loans". A loan to be eligible for guarantee, will require to be made by an approved credit institution and to an industrial concern whose capital investment (including the value of rented premises, if any) does not exceed Rs. 5 lakhs. The loan will be payable either on demand or within a period not exceeding seven years. The benefit of the guarantee may also be extended to a loan given by a credit institution which is not on the approved list, if an approved credit institution participates in the loan to the extent of not less than 25 percent.

Although the Guarantee Organisation reserves the right to reject any proposal, it will normally rely "on the judgment and good faith" of the credit institution. The continuance of the guarantee, however, depends on the use of the loan money for the acquisition of fixed assets or equipment or its employment as working capital. A charge at the rate of ¼ percent a year on the sanctioned amount of advance is payable by the credit institution to the guarantee organisation. The charge is low compared with that made in, say, Japan, and the promoters of the scheme hope that its low incidence will encourage the expansion of credit facilities for small-scale industries. The Reserve Bank has assured the credit institutions that particular care will be taken to eliminate delays in settling a guarantee claim and to ensure its payment within 30 days of the evidence being furnished. It is stipulated, however, that the credit institution will continue to take such steps "as may be necessary or as may be required by the guarantee organisation", for the realisation of the loan even after the guarantee is discharged.

Conditions of Success

The objectives of the credit guarantee scheme are mainly to promote industrial activity which has a high employment potential, and to "assure a broad and decentralised base to the national economy". The draft outline of the third five year plan states that "with a view to obtaining larger funds from the banking institutions for the development of village and small industries, it is proposed to offer a government guarantee for loans to these industries". It follows that Government-guaranteed credit, as distinguished from Government-granted credit, is being deliberately organised so that larger funds may be made available to small industry, while the issue of fiduciary money involved in the process of direct Government financing may be kept under control.

But it seems that the guarantee scheme, as actually brought into operation, is not in harmony with the principal objectives. It is obvious that the success of a measure to encourage the development of small-scale industries with the main object of increasing employment opportunities and furthering the decentralisation of the economy, requires not only adequate credit facilities, but also the provision of an integrated market and facilities for training, research and surveys. The Planning Commission's proposal to develop small industries "as ancillaries or as feeders to large units", represents a proper move in the direction of organising the market for small concerns. It would, therefore, appear that the more purposeful basis for selecting the areas for the application of the scheme would be not the importance of outstanding loans, but the possibility of "developing small-scale units as ancillaries to large-scale units" and of "bringing about the dispersal of industries" in co-ordination with the plan programmes for extension services, training, research and surveys.

Again, the restriction of the guarantee to loans granted by, or in collaboration with, approved credit institutions seems to go against the object of securing guarantee *for loans to small industry* (as indicated in the draft plan), as distinguished from the guarantee to approved financial institutions for a specified class of loans (as provided in the actual scheme). It may be argued that in the initial stage it is necessary to limit the number of lending institutions with whom the guarantee organisation will deal, as the latter proposes to depend primarily on "the judgment and good faith" of these institutions. The object outlined in the draft plan would suggest that instead of depending on the judgment and good faith of the lender, a proposal for a loan should be examined by a body connected with the development of small industries, such as the National Small Industries Corporation. The proposal should be examined from the point of view of the requirements of the plan; then, if found acceptable in consultation with the guarantee organisation, it can be certified as eligible for guarantee. It would contribute to the smooth working of the scheme if it were left open to any credit institution to take up the requisite lending operation relating to a loan certified as eligible for guarantee.

This procedure would also avoid discrimination against the banks which are not included in the list of approved credit institutions. It is unfortunate that the guarantee organisation does not appear to have realised the harm likely to be caused to the reputation of the banks which have been excluded from the list. Until the relationship between the bankers in India can be organised on a basis similar to the U.S. system of "correspondent banking", there is little possibility of "participation" loans becoming popular, especially as the factors relating to "the dispersal of risk" and "pooling of resources" will not operate in the case of the loans contemplated under this scheme.

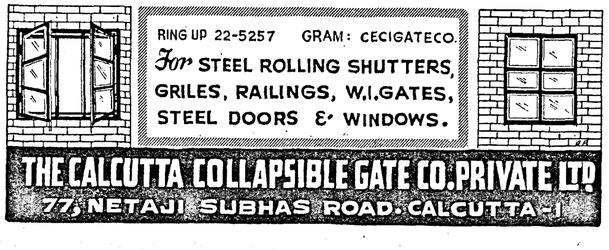
Joint Financing of Loans

It may, however, be possible to find an expedient to persuade an approved credit institution to join one excluded, particularly if the latter agrees that payments received in the enforcement of a guarantee will, in the first instance, be used towards the repayment of the former's 25 percent contribution. As the guarantee will normally exceed 50 percent of the loan amount, the effect will be to provide full guarantee to the approved credit institution. But such an arrangement for sharing losses between the participating banks will nullify the purpose of the guarantee organisation, as the approved credit institution will be inclined to relegate the functions of "judgment and good faith" to the partner, who in that case will be expected to bear much of the risk. It seems, therefore, not only essential but proper that the provisions discriminating between bankers should be immediately deleted; or, alternatively at least all the scheduled banks should be included in the list of approved institutions. A promotional measure in the field of small industry should not be so devised that it retards the development of small banks by creating suspicion among their clientele about their capacity for "judgment and good faith".

Technical Details

It is also necessary that the technical details of the scheme should be further clarified so that there may be no cause for disappointment or future misunderstanding. It may be useful to make it clear: (i) whether a small industrial unit working with hired machinery and having no capital investment, as defined in the scheme, comes within the purview of the scheme; (ii) whether, in case the loan money is used for an unapproved purpose, the guarantee will cease to operate for further funds advanced after the objectionable diversion is detected by the credit institution or only for the amount advanced after the guarantee is formally revoked, and (iii) whether the cost of the steps taken to recover a loan after the guarantee is discharged is to be borne entirely by the credit institution or whether the guarantee organisation will bear any excess over an agreed limit of the cost incurred in carrying out the directions of the latter concerning the steps taken to recover a loan.

It may also be conducive to the development of small industries if provision is made for a loan to be repaid in instalments, determined in accordance with the estimated progress of the borrowing unit (on the lines followed by the S.B.A. of the U.S.A.) so that the borrowing concern may have neither the temptation to over-extend nor to face the contingency of a sudden demand for repayment. A properly framed schedule of instalments may introduce a new liquidity factor in commercial banks' assets. Although care has been taken to point out that the present scheme of guarantee should be distinguished from a plan of insurance, and although the draft plan as well as the framers of the scheme emphasise only the promotional aspect of small industrial finance and make no reference to the need for protective measures to prevent economic disruption, it is to be hoped that the experience gained in the working of the present scheme will stimulate consciousness among the authorities of the need to provide built-in devices by which to make credit losses in a developing economy the collective responsibility of all credit institutions.



Jute

U.S. BURLAP CONSUMPTION FIGURES DISAPPOINT MARKET

FIBRE ARRIVALS INCREASING RAPIDLY IN UPCOUNTRY AGENCIES

THE United States is by far the biggest consumer of hessians, so it is only natural that the U.S. burlap stock and consumption statistics should exercise a powerful influence on the market in India. That has been well exemplified during the past week since the announcement that U.S. burlap consumption during July dropped to the very low level of 59 million yards. This is about 11 million yards less than in the previous month, 10 million yards less than during July last year, and the lowest monthly consumption figure since July 1955. Total consumption since the beginning of the year is now 503 million yards, and July's low figure brings the monthly average down to 71.7 million yards. Last year, consumption during the same period was 523 million yards, the monthly average being 74.6 million yards.

The current period is normally an off-season for U.S. consumption. But the favourable figures up to June gave rise to a certain amount of wishful thinking, so the large decline last month has had an even stronger reaction than normal. The significance of the fall is emphasised by the fact that stocks too have decreased—from 266 million yards to 265 million yards. However, in considering the U.S. figures and their influence on the market here, it is important to get them into the correct perspective. To do this, it has to be kept in mind that the "consumption" figures do not necessarily mean increases or decreases in the quantity of burlap actually used up. The figures show the quantity which has passed from the hands of importers to those of processors and retailers. Thus, when in January-July 1960 "consumption" averaged 71.7 million yards, against 74.6 million yards in January-July 1959, it was improbable that the quantity of goods actually consumed dropped to that extent. It is more likely that processors were resisting the high prices then prevailing, using up their stocks (which must be considered apart from the general stock position), not replacing them and also resorting to substitutes. An increase in production often indicates a reversal of that process when individual stocks have been reduced to the lowest safety level, or burlap again becomes competitive with substitutes. That is why increases or decreases in the consumption figures often surprisingly occur during periods of normally low or high actual consumption. With these considerations in view, the U.S. statistics should not be taken at their face value on a monthly basis, but rather over a specific period of time. The capacity of the U.S.A. to influence markets is very real indeed, but often originates in circumstances having little relationship to supply and demand. She now possesses growing alternative sources of supply and/or substitutes which have proved their value, with the help of which she can, as recently shown, resist speculative movements in Calcutta.

Easier Trend

In general, prices of manufactured goods have tended to fall during the past week, and many feel that with the increase in raw jute arrivals in all centres, rates will fall to a more natural level. But they reckon without the speculators, who appear to have a greater hold on the Calcutta markets than ever before. The main reason for the setback during the past week has been speculative profit-taking, and the fear, which has been prevalent for some time, that fresh margins, even on outside contracts apart from transactions done through the East India Jute and Hessian Exchange, may be imposed. Heavy goods have fallen by over Rs. 4 and hessians by Re. 1, but since then the bulls have again pulled the market back. There are no reports of fresh overseas business, but small shipper-covering in the near position has helped maintain the premium for ready goods. The indications are that overseas consumers, particularly U.S., are still holding out for lower prices.

Reports from all the main raw jute-receiving centres are very encouraging. Arrivals are very heavy, but the demand is such that no stock can be built up, as there are ready buyers for everything that comes in. High prices are being paid, far in excess of Calcutta indications, and this has prevented rates from falling. Some Calcutta mills are demanding quick shipment jute; ready bills of lading, often intended for other destinations against full August contracts, are being diverted to satisfy this demand, and fresh shipments made against the outstanding contracts. The transfer of production from hessians to sacking has become very apparent during the past week with the increased demand for cuttings. Ready cuttings are at a premium and up to Rs. 140 a bale has been paid, which is about Rs. 10 more than a week earlier. Holders of cuttings have just increased their indications by another Rs. 5. Shipment cuttings against licences have also been done at higher rates, and the cuttings market is very steady. Sellers continue to be reserved in anticipation of mill buying against their October-November requirements. In spite of the reduction in business, the undertone of the market is firm.

I.J.M.A. Production Figures

The total production of mills reporting to the I.J.M.A. during July 1960 amounted to 86,800 tons. This was made up of 34,300 tons of hessians (39.6 percent), 42,400 tons of sacking (48.7 percent) and 10,100 tons of other goods (11.7 percent). Compared with the previous month, total production was down by 2,300 tons despite the same number of working hours (200), but a comparison is unreal as the July figure represents the number of hours scheduled to be worked and does not take into account the hours lost due to the general strikes on 14th and 16th July. Hessian production was down by 3,100 tons and 2.3 percent, while sacking production was up by 300 tons and 1.4 percent. Other goods showed an increase of 500 tons and 0.9 percent. In July 1959, the total production was 89,600 tons in a 209-hour working month. This was made up of 40,500 tons of hessians (45.2 percent), 39,900 tons of sacking (44.5 percent) and 9,200 tons of other goods (10.3 percent).

Raw Jute Consumption

The estimated consumption of raw jute by mills reporting to the I.J.M.A. during July 1960 was 490,500 bales. In July 1959, the consumption was 518,000 bales.

THE JUTE MARKETS

There was brisk activity in the futures market during the past week. Rates, as given by the East India Jute and Hessian Exchange for the period 10th August to 16th August, were as follows:

	Hessians 40in. 10oz. Nov. 1960	Sacking B Twills Nov. 1960	Raw Jute Assam Dec. 1960		
	Rs. a	Rs. a	Rs. a	Rs. a	Rs. a
	100 metres	100 yds	100 bags	100 kilos	md.
Opening	49.78	45.52	126.50	90.55	33.80
Highest	49.78	45.52	127.00	90.55	33.80
Lowest	48.81	44.64	122.65	87.45	32.64
Closing	49.62	45.38	125.00	89.16	33.28

Manufactured Goods: Last Thursday the market opened on a steady note. Prices, particularly of heavy goods for near delivery, moved up rapidly. B Twills rose by Rs. 1.50 to Rs. 140 for August shipment, but January-March shipment dropped by Re. 1 to Rs. 125. Hessians were weak in comparison and showed little change, with 40in. 10oz. opening at Rs. 47 for August and Rs. 45 for January-March. Activity was confined to the near positions, where speculation was heavy. Operators were worried at this stage that fresh margin deposits might be imposed. Over the next two days, heavy selling pressure saw heavy goods rates fall by nearly Rs. 4. Hessians were quiet in sympathy and indications were lowered by about 75nP. Monday was a holiday because of Independence Day and the markets were officially closed. On Tuesday, however, prices rose sharply as a result of local shipper-covering in the near positions. There were also reports of enquiries from Australia for cornsacks and heavy Cees. B Twills advanced to Rs. 136.50 for August shipment and sacking prices continued to rise throughout the day. Hessians were completely neglected and showed minor losses.

At the close, the market was steady, and quotations on Wednesday morning were as follows:

	Aug.	Sept.	Oct.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	35.00	35.00	34.75	34.50	33.50
40in. 8oz.	38.00	37.75	37.25	37.00	36.25
40in. 10oz.	47.00	47.00	46.55	46.00	45.10
B Twills	140.00	139.00	134.00	129.00	124.25
Heavy Cees (Plain)	138.50	139.50	124.25	129.00	124.25
A Twills	168.00	168.00	162.50	157.50	150.00
Liverpools	159.50	157.50	151.00	145.00	140.00
Cornsacks	147.00	147.50	139.00	133.00	126.25

Raw Jute: There was little interest in the fibre market at the opening last Thursday and indications were more or less unchanged. The quieter gunny market had its influence on raw jute, and helped by the heavy imports in the upcountry agencies, rates began to fall. Sellers' ideas, however, showed little change, and although mills began to seek discounts, very little jute was offered at the reduced levels. From Rs. 37.50, Assam Bottoms dropped to Rs. 36.50, but after the week-end sentiment changed, and a steadier undertone developed. Rates moved back to Rs. 37 and business was done on the rise. A fair amount of covering business against previous high-priced contracts was reported, which made the total higher than the actual business transacted with mills.

Arrivals in Cossipore during the past week totalled 400 wagons which was double the number in the previous week. Stocks were very small compared with last year, and all arrivals found ready buyers.

Business was reported in Dhubri and Northern at Rs. 36.50 to Rs. 37 for August shipment. Ready bills of lading for these districts fetched Rs. 39 to Rs. 40. Desal was reported at Rs. 36.50 for 15th September, and jungli at Rs. 35.50. Ready cuttings were reported at Rs. 138 to Rs. 140 a bale, and October-December N.C.'s at Rs. 103 to Rs. 105 a bale.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	99.25	37.00	Sept.-Oct.
Northern	97.75	36.50	,,
Purnea Desal	95.00	35.50	,,
Daissee Selected	100.50	37.50	Oct.-Nov.
Assam Tossa	101.75	38.00	,,
Mesta:			
Assam-Northern	89.75	33.50	,,
Daissee	89.75	33.50	,,
Desal	89.75	33.50	,,
Jungli	87.75	32.75	,,
Pakistani N.C.	105.00 a bale		,,

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption last month was at the lowest level since July 1955. Compared with a year ago, piecegoods sales for industrial uses showed little change, and there was a drastic decline in bag cut-up. This seems to have been due to the sharp rise in burlap prices which started in April, reaching a peak in May when the Bemis burlap index soared to 21.41. There is evidence of the effect of abnormally high burlap prices on the use of bags in the U.S.A. U.S. burlap in stock and afloat at the end of July showed little change. At 265 million yards, 147 million yards were spots and 118 million yards were afloat. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

GOODS PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

A GOOD deal of irregularity was again noticeable in the Dundee jute markets during the past week. Since the spell of raw jute buying by the Indian Pakistani mills has subsided, fibre prices have displayed some weakness. Many sellers are still reserved but the majority are willing to discount prices in order to effect sales. Dundee spinners bought a fair quantity of fibre during the second week of the holidays which ended on 6th August.

On the resumption of business, the firm trend in fibre caused the authorities to advance prices for some jute yarns and cloth by about £5 a ton, which took effect from 9th August. Hessian yarns were raised from 17.15d a lb for 8 lbs C.H.W. cops to 17.73d and from 18.30d to 18.87d a lb for 8 lbs

J.C.H. warp, on spools, with 3 ply 8 lbs twist up from 20.22d to 20.79d a lb. Sacking yarns were raised from 13.09d to 13.67d a lb for 24 lbs weft, but the small yarns and fine qualities remained unchanged, as also did common rove.

Manufacturers always seem to sense that yarn prices are to be raised and they purchase freely before the rise is actually notified. The value of 40in. 10oz. hessians is now at 15.25d a yard and of 8oz. at 12.90d, compared with 14.87d and 12.60d, respectively.

THE PAKISTANI JUTE MARKETS

FIBRE INACTIVE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE Government has at last acted to check the malpractices of loose jute sellers, who have been taking advantage of the present high prices and adding a large percentage of moisture to the jute before selling it. There have been several raids on balers' premises for catching the *beparis* selling wet jute. This action is laudable, but it has unfortunately resulted for the time being in the withdrawal of raw jute from the market, and there has been a certain drop in arrivals. It is hoped that the authorities will intensify their efforts to prevent this malpractice. Once arrivals increase again, prices will begin to come down. The interbaler market in Narayanganj has not yet got into its stride. Most quotations, f.o.b. Narayanganj, are purely nominal and a large enquiry frequently carries its own price with it. There has, however, been practically no buying interest, and there is little selling interest except for the old crop, which has now been largely disposed of.

Overseas markets are again dull and inactive, after a burst of keen trading at enhanced prices. The present lack of interest is temporary, and is partly due perhaps to the holidays in Europe. It has resulted once again in offers from Pakistan at discount prices. It is reported that the difference between the lowest and the highest offers is as much as the difference between grades—that is to say, some Export Lightnings are being offered at the same price as Export Firsts.

The Government has issued statistics showing how the crop is expected to turn out in various districts. It maintains that the total crop this year will be 10 percent more than last year, but what is particularly interesting is the vast difference taking the districts individually. Some districts are expected to produce as little as 65 percent of last season's outturn, and one particular area is expected to produce 900 percent of last season's output. Total exports last season amounted to 4.7 million bales. The mills consumed 1.5 million bales. There was a carryover of 200,000 bales. Local consumption amounted to 200,000 bales, so the total was 6.6 million bales. Taking the carryover from 1958-59 at 1 million bales, the crop for 1959-60 comes to 5.6 million bales. Assuming that the Government's figures are correct, it means that the 1960-61 crop should amount to 6.1 million bales. The requirements during 1960-61 will be 1.8 million bales for the mills, 200,000 bales for local consumption, 4 million bales for overseas and a minimum of 500,000 bales for India. This amounts to a requirement of 6.5 million bales, compared with a supply of 6.1 million bales of new crop and 200,000 bales of carryover; this leaves a deficit of 200,000 bales, assuming that the 1960-61 crop is 10 percent larger than that of 1959-60. Not all balers agree with official estimates.

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods for July as follows:

Description		Quantity
1. Gunny Bags		
(a) Hessian	6,328 tons	(6,491 metric tons)
	2,01,0 lakh yds.	(1,83,80 thousand metres)
	94.4 lakh nos.	
(b) Sacking	41,666 tons	(42,335 metric tons)
	9,69.1 lakh yds.	(8,86.17 thousand metres)
	4,47.7 lakh nos.	
2. Gunny Cloth		
(a) Hessian	27,941 tons	(28,389 metric tons)
	10,75.7 lakh yds.	(9,83,65 thousand metres)
(b) Sacking	741 tons	(753 metric tons)
	17.6 lakh yds.	(16.06 thousand metres)
3. Other Manufactures	10,127 tons	(10,290 metric tons)
4. Total Production		
(All kinds)	86,963 tons	(88,358 metric tons)

Summary

	(00,000 yds. and 000 metres)			(000 tons and metric tons)		
	July '60	June '60	July '59	July '60	June '60	July '59
Hessian	12,77	13,79	15,19	34.3	37.4	40.5
	(11,67,45)	(12,60,86)	(13,89,15)	(34.9)	(38.0)	(41.1)
Sacking	9,87	9,71	9,33	42.4	42.1	39.9
	(9,02,23)	(8,87,86)	(8,52,85)	(43.1)	(42.8)	(40.5)
Others				10.1	9.6	9.2
				(10.3)	(9.8)	(9.4)
Grand Total				86.8	89.1	89.6
				(88.3)	(90.6)	(91.1)
Hours worked				200.0*	200.0	269.0

* This was the number of hours scheduled to be worked and does not take into account the hours lost due to the general strikes on 14th July and 16th July.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

It is said that it took 1,200 skilled workers almost twelve years to build the famous Konarak temple in the thirteenth century.

Judged by any standard, the building of such an edifice was a gigantic undertaking. It is easy to imagine that by expanding the demand for building materials and articles of daily requirements for an army of workers it must have stimulated the growth of a large number of industries.

Today, even as in the past, the operations of a large undertaking encourages the growth of many existing industries and the birth of new ones, triggering continued expansion in the economic field.

It has been the established policy of Standard-Vacuum to utilize local sources to the maximum extent possible, for the goods and services the organization needs for its operation. And in 1959, the value of such purchases in India amounted to Rs. 346 lakhs; of this, Rs. 289 lakhs represented the requirements of the Marketing Organization and Rs. 42 lakhs of the Refining Operations. The total requirements for all the three operations of Standard-Vacuum for the five years, from 1955 to 1959, was represented by Rs. 1,659 lakhs. Among the new lines of manufacture set up in India as a direct result of the demands generated by Stanvac's operation were drums and barrels for asphalt and other petroleum products; gasoline pumps and modern tank trucks and aircraft refuellers.

CALCUTTA TEA AUCTIONS IN JULY

PRICES OF QUALITY GRADES RISE

THREE sales were held in July in the weeks commencing 11th, 18th and 25th July. Offerings amounted to about 99,061 packages, of which 70 chests were of last season's manufacture, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. C. T. C. teas with bright liquors were a very strong feature throughout the month and were keenly competed for at enhanced rates. The more ordinary descriptions, however, declined steadily in each sale, and in the last two withdrawals were fairly heavy. Orthodox Assams were fully firm to dearer in the first sale but thereafter were easier except for the few types which possessed bright liquors. Plain brokens and fannings met with a satisfactory enquiry throughout the month at firm to dearer rates. Legg-cut teas were an irregular feature : in the first sale, they came in for better enquiry especially those with improved quality, but thereafter were easier. Darjeeling teas throughout the month received satisfactory enquiry and those with useful second flush quality came in for strong competition and sold at high prices, but the more ordinary descriptions declined progressively in each sale. Whole leaf grades were a comparatively strong feature, and in the final sale—as a result of overseas enquiry —prices advanced. Tippy teas came in for fair support but at irregular rates.

Leaf appearance of Darjeeling teas maintained a satisfactory standard and there were some well-made teas on offer. Cup quality was of a satisfactory description with quite an attractive selection of second flush teas and a number of "really" fine invoices. The dry leaf from upper Assam was satisfactory and some tippy invoices were seen with bright and brisk liquors. Teas manufactured by the C. T. C. process have been quite useful—both as for leaf appearance and cup quality—but was on the whole inferior to those of last year, this being due to climatic conditions. Teas from middle and lower Assam, however, were below average, and there was little tip in the leaf while liquors were of an ordinary description. Leaf appearance of Dooars and Terai teas was considered satisfactory, and some well-made teas with tip were produced. The liquors showed a marked improvement over the previous month and was described as being average for the district. Due to unfavourable climatic conditions, once again only comparatively few teas from Cachar and Tripura were seen, and they were below average, both in leaf appearance and cup quality.

Quotations

	1960-61 a kilo Rs. nP.	1959-60 a kilo Rs. nP.
Sale No. 3 Plain B.P. ...	4.60	3.63
Sale No. 4 " " ...	4.65	3.67
Sale No. 5 " " ...	4.65	3.72

(Inclusive of zonal excise duty.)

The Internal Market

Leaf offerings amounted to 712 chests. There was a good general demand, prices realised generally being above valuations.

Dust offerings amounted to 34,369 packages in the three sales held in July. There was a good active demand in all the auctions. Exportable kinds opened strongly but in the later sales a slight easing was noticeable. Legg-cut descriptions met with keen enquiry in the first auction but in the second, prices were only barely maintained; these types, however, closed on a rising market. The plainer C.T.C. teas found ready buyers at lower prices. The brighter types, however, were a strong feature of the sale. Darjeeling Dusts again sold following quality.

Quotations

	1960-61 Rs. nP. a kilo	1959-60 Rs. nP. a kilo
Sale No. 3 Clean Plain Dust	4.38	3.74
Sale No. 4 " " "	4.47	3.74
Sale No. 5 " " "	4.46	3.76

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 5 totalled 159,667 chests at an average price of Rs. 6.04, compared with 235,649 chests at an average price of Rs. 5.64 for the same period of the previous season. Internal sales at 693 chests of leaf and 45,927 chests of dust (average prices Rs. 4.26 and Rs. 5) go against 1,564 chests and 69,983 chests, respectively (average prices Rs. 3.73 and Rs. 4.32) of the corresponding period of the previous season.

The estimated north Indian crop to the end of June 1960 was 45.88 million kilograms, compared with 51.70 million kilograms to the same date of last year. The average figure at this date for the three years 1957-59 was 50.50 million kilograms.

The export quota market opened with business being done at 2nP at which price a steady trend was maintained until 20th July, when the price declined to 1⅞nP. Sellers quoted 2nP and closing business was transacted at this rate.

Arrivals (in chests) in Calcutta warehouses during the period 24th June, 1960 to 23rd July, 1960, with the corresponding period of the previous year in parentheses were: by steamer 223,373 (253,899), by rail 78,030 (82,855) and by air 5,372 (6,348), making a total of 306,775 (343,102) chests. From the beginning of the season 1st April, 1960 to 23rd July, 1960, arrivals have been: by steamer 311,391 (422,940), by rail 120,917 (160,325) and by air 11,591 (17,359), making a total of 443,899 (600,624) chests.

PEPPER MARKET REMAINS DULL

OVERSEAS DEMAND FALLS SHARPLY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

WITH overseas demand for Indian pepper declining sharply, the pepper market has remained dull in recent weeks, so only limited transactions have taken place. Prices too have come down: the latest quotation for ready ungarbled is Rs. 1,600 a candy of 6 cwts. on the Cochin market, against Rs. 1,750 a candy of 6 cwts. a month ago. The declining trend in prices is attributed to the move by Singapore traders to underquote India. They are keen on liquidating their stocks since they are expecting a bumper Lampong crop by September. The price in Singapore is 7 cents a lb lower than that in India. According to present indications, unless India lowers her price ideas, the prospects for foreign orders flowing in are not bright. Meanwhile, consumer demand in the United States—the largest market for Indian pepper—appears to be dull. The prospects for increasing exports to the European markets do not seem to be bright either, since the buyers there are awaiting further price cuts.

Uncertain Outlook

The immediate outlook for pepper is uncertain. Much depends on the pressure of supplies from Singapore. Conflicting reports are reaching the Cochin market concerning the size of the new Sarawak and Lampong crops. The majority of traders think that the Sarawak crop is likely to be smaller than the earlier estimates. Besides, the Lampong harvest may exceed 15,000 tons. These reports need not normally perturb pepper traders in this country because they do not find it difficult to dispose of stocks due to the high domestic demand. India was lucky enough to export as much as 15,320 tons from her current crop during the first seven months of this season, against only 6,556 tons during the same period of the last season. Market circles say that one can safely estimate the internal offtake between November last and August this year at 5,000 tons. If the current crop is of the order of 26,000 tons—as was estimated some time ago by certain trade sources—only about 3,000 tons or 4,000 tons are expected to be left behind. So this small quantity should not cause any panic among Indian pepper traders under normal conditions.

Palai Bank Crash

A section of pepper traders has been affected by the Palai Bank crash. It is, however, too early to assess its full impact on the Indian pepper market. The collapse of the bank and the rude shock it has given to Kerala's credit structure have affected, to some extent, the trade in cash crops like pepper, ginger, lemongrass oil and rubber—the commodities which are produced primarily in Kerala. Credit stringency which has been set in motion by this unfortunate incident is creating difficulties for growers and dealers who depend on the Kerala banks. It is feared that they may be forced to liquidate their stocks at unremunerative prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for July 1960:

Upper Assam: Outturn about normal; immediate prospects fair to good; weather seasonable.

Central Assam: Outturn generally poor; weather seasonable; heavy rain with floods reported from Moran; immediate prospects fair to good.

Lower Assam: outturn about normal; weather seasonable; immediate prospects fair.

North Cachar: Outturn very poor; weather abnormally wet; the outturn todate considerably below last year; immediate prospects fair; red spider blight and thrips are lifting in most districts.

South Cachar: Outturn poor; weather abnormally wet; outturn todate is considerably under last year; red spider blight and helopeltis prevalent in almost all the districts.

Eastern Dooars: Weather seasonable; outturn poor; black rot prevalent in Kalchini.

Central Dooars: Outturn poor; immediate prospects fair.

Western Dooars: Outturn normal to poor; weather favourable; black rot prevalent in Chalsa.

Darjeeling: Outturn poor; immediate prospects fair; weather seasonable; blister blight prevalent.

Terai: Outturn below normal; excessive rain, low temperature; red spider blight prevalent and persistent; prospects very poor.

COMMONWEALTH VEGETABLE OIL OUTPUT MAINTAINED

INDIA REMAINS LEADING PRODUCER

COMMONWEALTH countries accounted for 23 percent of the total estimated world supply of vegetable oils for 1959, India being the largest Commonwealth producer, says the Commonwealth Economic Committee's *Review of the Vegetable Oils and Oilseeds Industry*, just published in London. Commonwealth production was about the same as in previous years. Of the three main groups of oil, the Commonwealth accounts for the largest share in the edible-industrial group, where it provides nearly two-fifths of the total supply; for edible oils it accounts for one-fifth, and for industrial oils for one-quarter, the report says.

As a result of good crops harvested in 1958-59, Indian oilseed production was nearly 40 percent greater in terms of oil equivalent than before the war. Indian groundnut, sesame, rapeseed, and castorseed crops were all considerably greater than in the previous season, but harvests in 1959-60 seemed likely to be generally lighter, the report adds. "Commonwealth net exports increased in edible oils and, contrary to the general trend, in the edible-industrial oils; this was the result of large shipments of Indian groundnut oil and a marked recovery in supplies of copra and coconut oil from Ceylon. In the industrial group, however, larger Indian oil surpluses did not entirely offset the fall in Canadian linseed exports." Dealing with Commonwealth exports, it is stated that since 1955 there has been a fall, largely as a result of a reduction of supplies from India and the decline in shipments of copra and coconut oil from Ceylon—both because of the rising internal demand.

Raising Groundnut Production

In the section dealing with groundnuts, the report says: "The Commonwealth is of outstanding importance in groundnut production, accounting in 1954-55 to 1958-59 for an average of no less than 46 percent of the total world output. India is the world's largest groundnut producer, although in recent years the quantity of the crop entering international trade has been small. The Indian Government has made very marked efforts in recent years to increase the output of groundnuts in order to satisfy the rapidly rising internal demand of edible oils, and the success of these measures is revealed in the record 1957-58 and 1958-59 harvests. Although there has been a rising trend in the area under cultivation in recent years, the reduction in acreage in 1958 was accompanied by a marked increase in the crop, due to very favourable weather, particularly in Bombay and Madhya Pradesh, and yields were 12 percent greater than in the previous year; thus the 1958-59 crop exceeds the intended output of 4.7 million tons for the end of the second five year plan by 100,000 tons."

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) worked out to 125.3 during the week ended 30th July, 1960, against 125.1 (revised) for the earlier week. The index was higher by 1.4 percent and 7.2 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for July 1960 stood at 124.7, compared with 122.9 for June 1960 and 116.8 for July 1959. The prices of milk in Bombay (−31%), rice in Kotma (−12%), jowar in Rohtak (−7%), onions (−5%), bananas, groundnut oil and cardamoms (−2% each) and maize, ragi, masur, and black pepper (−1% each) showed declines, while those of wheat in Dhanduka (+14%), gingelly oil (+8%) and milk in Calcutta, eggs (+7% each) and jowar in Nagpur and Ujjain (+5% each), potatoes (+5%), tea and salt (+3% each), coconut oil, and gur (+2% each) and barley, gram, mung, coffee and betelnuts (+1% each) showed advance, and the index for Food Articles worked out to 124.7, against 124.8 (revised) for the earlier week. The index for Tobacco remained unchanged at the earlier week's level of 107.5. The Fuel, Power, Light and Lubricants group index stood at 118.2, compared with 118.3 (revised) for the previous week. Higher prices of tanning materials (+6%), raw jute, cottonseed and raw skins (+5% each) and copra (+2%) raised the index for Industrial Raw Materials by 0.8 percent to 137.8, compared with 136.7 for the previous week. The price of raw wool and rapeseed (−3% each) and castorseed and lac (−1% each), however, drifted down. The index for Intermediate Products advanced by 0.2 percent to 131.2 due to a rise in the prices of linseed oil, cotton yarn and coir yarn (+1% each), although the price of rayon yarn (−2%) showed a decline. The index for Finished Products rose by 0.3 percent to 120.1 due to an increase in the prices of oilcake (linseed) in Kanpur (+5%), general chemicals (+3%), jute manufactures (+2%) and bricks and tiles (+1%).

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 8, held on 16th and 17th August, offerings at the Export auction comprised 51,102 chests. These met with a good general demand which eased towards the close. The very best C.T.C. descriptions were keenly competed for and often sold substantially above last rates, some attractive prices having been realised. Medium C.T.C. teas received improved support, but were irregular, while the poorest sorts were generally easier. There was a good enquiry for bright liquoring orthodox teas; O.Fgs. especially sold well. Demand for the plainer sorts showed an improvement, but prices were again generally lower. Common brokens and Fannings received fair support and were mostly taken up at about last rates. Non-wither descriptions met with a fair enquiry, and were fully firm and sometimes up to 10nP dearer. Darjeelings were irregular and generally sold at discounted rates, there being some withdrawals. Whole leaf grades received only fair support at lower rates, while tippy teas were fairly readily taken up at irregular prices.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.40 to 5.60	1.98
Plain B.P.	4.35 to 4.55	1.80 to 1.84
Plain Fannings	4.30 to 4.50	1.94 to 2.04
Medium B.P.	4.80 to 5.00	1.92 to 2.06
Medium Fannings	4.90 to 5.10	2.04 to 2.14
Best Assam C.T.C. B.P.	10.50 to 11.50	2.85 to 3.16
Best Assam C.T.C. Fgs.	12.00 to 13.00	3.60 to 4.00

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings, which consisted of 15,820 chests, met with a strong general demand. Medium C.T.C.s were well supported at irregular rates, the brighter liquoring varieties being often dearer. The best C.T.C. Dusts were keenly competed for and generally appreciated in value. Orthodox exportable types were readily taken up at last rates, while the smaller better liquoring kinds were also fairly well supported. There was a good enquiry for non-wither teas at firm to dearer rates.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb.
Medium Dooars Dust	4.40 to 4.60	1.80 to 1.84
Medium Assam Dust	4.44 to 5.00	1.75 to 1.82
Medium Assam C.T.C. Dust	5.50 to 5.85	2.00 to 2.15
Best Assam C.T.C. Dust	6.00 to 6.30	2.70 to 2.95

(Quotations are inclusive of excise duty.)

A total of 451 packages of Leaf was on offer. There was a good demand at about last rates except for the poorest descriptions which were easier.

U.S. GRAIN RATES RISE IN FREIGHT MARKETS

SOME signs of revival were noted in American grain markets to various destinations, and in particular, the Pacific-India trade recovered to 52s 6d from the previous rate of 48s 9d. With Italian and German charterers reported to be in the market for tonnage, owners are holding for higher rates. Details were released of 16 fixtures of grain vessels from the U.S.A. to India, all for September loading and aggregating nearly 2000,000 tons of which about half will be carried by tankers. American flag tankers obtain $ (U.S.) 17.25 a ton North Pacific-Bombay against $ (U.S.) 6.60 for open market tonnage and dry cargo vessels of American flag receive $ (U.S.) 24.45 against 52s 6d for open market tonnage. Ore from Visakhapatnam to U.S.N.H. was done after a long interval at $ (U.S.) 7 for a 14,000 tonner, and the very low rate of 34s 6d f.i.o.s. was accepted for ore from Mormugao to Holland-Weser Range.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 9th August and 15th August, 1960)

Cowhides: Wet salted (Ord.) 2,800 pcs. on the basis of Rs. 8 to Rs. 15; Wet salted (Slaughtered) 15,700 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 51,900 pcs. on the basis of Rs. 350 to Rs. 370, Rs. 390 to Rs. 420 and Rs. 450 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 4.62 and (she-killed) on the basis of Rs. 4.37 a piece.

Bazaar Stocks

(15th August, 1960)

Cowhides: Wet salted 169,800 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 62,500 pcs.; Assam-Dinajpur 75,500 pcs. and Muzafferpore-Patna-Pakur-Purneah-Kissenganj 215,000 pcs.

EXPLANATORY STATEMENT

In the Special Notice given by the Company to the shareholdres, under item 3 of the annexed notice for the Annual General Meeting, intimation has been given of the intention to move a Special Resolution for the re-appointment to the Board of Directors of Mr. I. P. Goenka. Special Notice of such intention has also been given to the Company. Under the provisions of Section 261(1)(f) of the *Companies Act*, 1956, Mr. Goenka, who is an officer of the Managing Agents of the Company can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will therefore have to be by Special Resolution.

LODNA COLLIERY COMPANY (1920) LTD.

NOTICE is hereby given that the Thirty-ninth Annual General Meeting of the Members of Lodna Colliery Company (1920) Limited, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Friday, the 9th day of September 1960, at 12 A.M. for the following purposes:—

1. To receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors.
2. To consider and declare a dividend in respect of the year ended 31st December, 1959.
3. To appoint a Director in place of Mr. H. J. Silverston who retires in accordance with the provisions of Article 121 of the Company's Articles of Association and is eligible for re-appointment.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Register of the Company will be closed from the 30th August to 9th September, 1960, both days inclusive.

Warrants for the dividend, when declared, will be forwarded, in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
For and on behalf of
LODNA COLLIERY COMPANY (1920) LIMITED,
A. H HUME,
Director.

Calcutta, 8th August, 1960.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

THE ONDAL COAL COMPANY LIMITED.

THE Board of Directors have recommended the following dividends, subject to deduction of tax at source, be paid for the year ended 31st December, 1959.

On Preference Shares ... 6½% per annum
On Ordinary Shares ... 7 % per annum

By Order of the Board,
P. PRASHAD,
Chairman.

Chartered Bank Buildings,
Calcutta, 10th August, 1960.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COMPARISON OF PERCENTAGE GROWTH RATES

READERS of financial journals, and for that matter financial journalists themselves, scarcely notice the gradual change that occurs in the basic assumptions and vocabulary of economic discussion from one period to the next. At the present moment, for example, both popular and expert thinking about economics is dominated by the notion of growth rates or annual rates of expansion. This has reached the point where a country's whole situation and prospects are thought to be summed up in a single percentage figure : 2 percent for the United States, 10 percent for Russia, etcetera. The contrast between these two figures will in fact be much heard of during the current U.S. election campaign. Yet this faith in simple percentage expansion figures is a very new thing and, like the shibboleths that preceded it (cycles, full employment, etcetera), its days are probably numbered.

In the last great period of expansion before the present one, that of 1920-29, growth rates were seldom discussed and they were certainly not calculated from year to year and compared from country to country. It was not until that long boom was over that some economists thought of working out what growth rates had been. But even then most preferred to take some simpler index of prosperity than the annual rate of expansion of the national product. During the 1930's, growth rates were neglected or ignored for the good reason that no growth was taking place during those years of depression. When it was resumed, it was for the purposes of the war and, supposing that anybody had been interested in calculating wartime growth rates, the result would have had little general importance because most of the expansion was due to the production of military materials that were promptly blown up.

For many years after the war, reconstruction and its twin, inflation, were the dominant problems. Some economists thought, wrongly as events have shown, that the prewar preoccupation with the trade cycle would return to fashion. In fact, there have been no purely cyclical booms and slumps of any magnitude, though there have been major ups and downs due to such accidents as the Korean war and rearmament. It is notable that when the Charter of the United Nations was written, the objective of full employment was specifically mentioned because people were still thinking of the prewar slump. The objective of maximum expansion does not figure in that historic document, although today it is the main theme of most U.N. economic publications and reports.

Why was it that during the 1950's the obsession with growth rates became universal? A first reason was that postwar reconstruction was by then largely completed; until it was, there was no point in representing as secular growth what was still the repair of wartime losses. A second reason was increased confidence that the cyclical movement of the economy could be, in fact already was, mastered by techniques, Keynesian and others, discovered in the 1930's and popularised after the war. To attach any importance to growth rates means that one is thinking of a long period of regular expansion free of dramatic cyclical variations; a high expansion rate that was merely the upward phase of a trade cycle and was thus expected to be largely wiped out in the succeeding period of contraction would be of little interest, even if economists showed that through boom and slump the secular tendency was upwards. (This last is true of the capitalist economies from the nineteenth century till 1930, but it has only recently been calculated exactly.) A third reason is that the countries involved in the cold war, and that means all the advanced economies, got used to a large but fairly stable arms burden. An expansion like that of 1938-39 or of 1948-49 that was due to sudden rearmament has little general significance. It is only when military expenditure flattens out or at least continues to grow at the same rate as the rest of the economy that the overall expansion rate has a long-term meaning which people might think is politically important.

A fourth cause was undoubtedly the liberation of numerous under-developed countries, which at once wrote more or less realistic long-term plans and set out on the arduous task of catching up with the advanced economies. For them, the whole political and economic problem could be summed up in the one word "development". The reawakening of western conscience in the matter of international inequality, powerfully assisted by the political competition between the two blocs, made this seem the all-important problem of the century. So economists tended to forget about cycles, inflation and employment (although they had not really solved those problems satisfactorily) and devoted themselves to the problem of development. Every self-respecting school of economists today has to have its "development model" and its special criterion for measuring development progress. Yet a moment's thought will show that the vague notion of development is extremely difficult to measure and that the choice of one standard, such as the rate of growth of the national product in money terms, is perfectly arbitrary. This is nowhere more evident than in the developing countries, where development requires the solution of a host of social and institutional problems; progress or failure in solving such questions can find no reflection in a percentage figure for expansion. To say that the United States and Britain had the same annual growth rate might mean something (although as we shall see, it ignores important questions about the composition of production, new products, the quantum of building and social services); but to say that India and the United States had the same growth rate would mean strictly nothing and would certainly not indicate whether India was "developing" satisfactorily.

The fact is that the percentage growth-rate yardstick would never have been so widely accepted in the developing countries if it had not already become fashionable in the advanced western countries, and not vice versa. In the North American and west European economic journals nowadays, one finds numerous articles on the "development" of those countries that we think of as already "developed", and on the measurement of that development by annual expansion percentages. In popular newspaper polemics, the Eisenhower Administration or the U.K. Conservative Government or the Gaullist régime are judged, praised or damned in terms of simple percentages of annual growth. These are the shibboleths of the day, and their brevity suits them for political argument even when their value and meaning are not properly understood.

It is clear where the West caught this habit from. The communist economies have made immense propaganda use of their impressive growth rates. This was because the discrepancy between their growth rates and those of the richer capitalist countries was especially striking, for the simple reason that, starting from further back, they quickly achieved bigger percentage increases. An identical extra quantum of production in Russia and the United States looks the same when expressed in absolute terms, but looks to favour Russia when expressed as a percentage of smaller initial Russian output. It is well known that communist economic documents, until quite recently, rarely gave absolute figures for anything, but stated all plan targets and achievements in percentages.

Yet there is more in it than that. Even if we compare Russian growth, not with the United States or western Europe, but with a young capitalist country that is going through the same phase of early expansion (such as Canada or Australia), the Russian figure is the more impressive. That is because the communist method of expansion relies disproportionately, *in the first instance*, on just those forms of production that swell the annual expansion figure as conventionally measured. Targets are set and investments allocated with almost exclusive emphasis on heavy industry; everything else is accessory and other industries get what is left over, which is often not much. Non-productive investments, agriculture, consumer goods and social services are relatively neglected. It is not suggested that this is done merely to achieve a high figure for annual expansion. If that had been the communists' aim, they could in fact have done much better because some of their investment in heavy industry was ill-considered and was rarely decided after a strict accounting of input-output ratios. If they had paid more attention to profitability coefficients and had done something to reduce building costs (which are a large element in heavy industry investments, and have always been too high in Russia), they could have produced even more impressive growth rates. As it was, their over-emphasis on heavy industry produced a high growth rate, which their propaganda machine quickly publicised. Yet one would have to be hypnotised by figures to pretend that Russian "development", including in that notion all the things one knows are important to growing societies, has been more noteworthy than Canada's in the same period.

Having talked in season and out of season about their growth rate, and having persuaded western countries to attach importance to this concept, it now appears that the communist countries are abandoning this one-sided approach to economic development. The latest U.N. report on the world economy says, in the section on planned economies, that communist planners are replacing the criterion of "maximum growth rate" with that of "optimal growth rate". In other words, on the new view 10 percent might be the feasible maximum for annual expansion, but 6 percent would be the optimum rate—which is simply another way of admitting that the anxiety to increase growth rate is a mistake. The "optimal" rate is optimal on certain other considerations, and so those considerations are replacing the simple yardstick of expansion of the national product, or are at least complicating it. This was precisely the opinion of non-communist countries before they let themselves become involved in the propaganda competition about growth rates.

There is no mystery about why the communist planners should now cease to harp on growth rates. In the case of Russia, it is clear that the growth rate will henceforth decline, as the absolute volume of production becomes greater, as manpower shortages set limits to expansion and as, in general, the economy becomes more mature. Since, for contrary reasons, the Chinese growth rate will continue to increase, it would be a mistake to stress a criterion that would make Peking's brand of communism appear more successful than Moscow's. Next, the number of unexploited resources that can quickly be brought into production is diminishing, thanks to several decades of exhaustive prospecting and development, so the growth rate cannot show such spectacular jumps. Further, political pressure is making it necessary to satisfy long-starved consumer wants, and this, while it will undoubtedly make the Russian people happier, will not contribute to the growth rate as substantially as new heavy industries have done in recent years. So it will be better propaganda to advertise the number of shoes and radio sets produced, rather than the percentage figure for annual overall expansion. More generally, the task of Russian planners today is to diversify industry, improve quality, meet consumer preferences and produce new products—which is what the capitalist economy is doing all the time, and that is why its growth rate is often less impressive. Even so, the growth rate will not fall as much as it should in the European communist countries because it is not so much heavy industry that is being cut to meet these new needs, as transport and public utilities and ameni-

ties, a circumstance that will be disguised in overall percentage results.

The inference is that one should maintain a healthy scepticism about percentage expansion figures as the sole test of economic progress, most of all in developing countries like India. Caution is all the more necessary because certain economic institutes and financial journals in India have made a substantial intellectual investment in the technique of calculating the national product and its annual increases. They will be most reluctant to have this investment depreciated by public scepticism about the value of their results. In seeking to keep alive the conviction that growth rates are all-important, they will be assisted by that widespread indolence that prefers to bandy about a simple percentage figure rather than take account of all the multifarious elements that enter into national economic and social progress.

EXTERNAL PAYMENTS TRENDS

THE foreign securities in India's paper currency reserve were reduced by Rs. 20 crores to Rs. 123.01 crores recently. The total amount of foreign exchange and gold in the reserve has thus come down to Rs. 240.77 crores. The Reserve Bank is statutorily required to maintain this figure above a minimum of Rs. 200 crores. But the present holding cannot be run down further; if it is, international confidence in the Indian rupee will suffer. The statistical picture concerning India's balance of payments during the four years from 1956-57 to 1959-60, as given in the latest issue of the *Reserve Bank Bulletin*, suggests that the deficits in foreign trade will continue. The third five year plan, which will be inaugurated next April, will be far more ambitious than the second. Imports will rise, although their composition may change. The servicing of foreign loans already received will add to the strain on the balance of payments. Exports may not increase much, so the difficulties will be the greater since most of the foreign exchange reserves have already been used.

India is now virtually scraping the bottom of the barrel in order to meet sudden deficits. During the four years ended March 1960, the foreign exchange reserves declined from Rs. 902 crores to Rs. 363 crores, even though external aid in the form of grants and loans, inclusive of net drawings from the International Monetary Fund, received during this period amounted to Rs. 1,081 crores. The reserves have declined further since then. The foreign exchange reserves held by the Reserve Bank at present amount to only Rs. 144.49 crores. If the progress of the Indian economy is to be maintained, it is necessary to attract more financial assistance from abroad as quickly as possible. But although foreign assistance has to be secured, this does not mean that India can relax her efforts to earn more from exports. Ultimately, she will have to pay off the foreign loans from her own earnings. To the extent India can show that she is doing her best to improve the balance of payments position, foreign creditors will be encouraged to help her in her present difficulties.

Between 1956-57 and 1959-60, the deficit on current trading account amounted to over Rs. 1,490 crores, in spite of higher net receipts from invisibles (other than official donations) and moderately higher export earnings. Net receipts from invisibles (other than official donations) averaged more than Rs. 90 crores a year. Annual average export earnings were Rs. 607 crores. Import payments averaged Rs. 1,071 crores a year. Bigger imports were mainly responsible for the current account deficit. The trade deficit increased to Rs. 640 crores in 1957-58 from Rs. 464 crores in 1956-57, but it was reduced to Rs. 454 crores in 1958-59 and to Rs 300 crores in 1959-60. Receipts from official donations amounted to Rs. 40 crores in 1956-57 and have been steady around Rs. 35 crores a year since then.

Exports fell steadily from Rs. 635 crores in 1956-67 to Rs. 576 crores in 1958-59, but rose to Rs. 623 crores in 1959-60. The small improvement gives no ground for complacency because most of the important export commodities gave a disappointing performance. Current trends are also none too encouraging. Exports of jute goods and cotton manufactures fared badly during 1956-60, compared with those during the first plan period. Jute goods earned an annual average of Rs. 115 crores during 1956-60, against an annual average of Rs. 144 crores during 1951-56. Cotton manufactures brought in an annual average of Rs. 75 crores only, against Rs. 81 crores during the first plan period. The average annual earnings from tea rose from Rs. 106 crores in 1951-56 to Rs. 134 crores in 1956-60. These three commodities—jute goods, cotton textiles and tea—are now facing increased competition in world markets. In jute, the Pakistani mills have the advantage of modern equipment and better raw jute supplies, whereas the Indian jute industry is handicapped by a shortage of fibre. The Indian cotton textile industry has also been affected by the shortage of raw cotton. Indian teas, especially the plainer grades, are meeting with keen competition from the products of Ceylon, East Africa and China. If exports are to be promoted, it is essential to improve the quality and reduce the price. Producers have to be assured of adequate raw material supplies by encouraging domestic agricultural production. They should be allowed to improve their operational efficiency by modernisation and rationalisation.

Exports of metallic ores earned an annual average of Rs. 37 crores during 1956-60, compared with Rs. 30 crores during the first plan period. The improvement is small and is partly due to the special efforts to export iron ore. But a disturbing feature is the substantial decline in exports of manganese ore. The loss of foreign markets to competitive producers, such as Brazil and Russia, is due mainly to the intrusion of the State Trading Corporation. Foreign customers, especially in the U.S.A., are not keen to deal with an official body like the S.T.C. The offtake of oilseeds and oilcakes has improved during 1956-60. Considering the increase in world trade in these products, it is possible for India to boost her exports considerably in the future if measures are taken to raise the domestic output.

As far as imports are concerned, out of an average annual payment of Rs. 1,071 crores made during 1956-60, nearly Rs. 730 crores represented maintenance imports and Rs. 341 crores were developmental imports. The draft outline for the third plan estimates maintenance imports at an annual average of Rs. 714 crores and developmental imports at Rs. 385 crores. Most of the import cuts in recent years have affected mainly the private sector; Government imports for development purposes have been maintained at a fairly high level. Imports of consumer goods have been cut drastically. This has contributed to the price inflation because supplies of domestic goods are short of the demand.

On capital account, net capital receipts amounted to Rs. 89 crores in 1956-57, Rs. 251 crores in 1957-58 and Rs. 300 crores in 1958-59, but declined to Rs. 186 crores in 1959-60. Official capital was by far the most important item. On private account—representing mainly the transactions of oil companies and of the firms enjoying round-sum remittance facilities—there was a net outflow of Rs. 40 crores over the four-year period. During 1956-60, total official loan receipts, excluding the drawing of Rs. 95 crores from the International Monetary Fund, amounted to Rs. 550 crores. To these, the World Bank contributed Rs. 186 crores, the U.S.A. Rs. 128 crores, the U.K. Rs. 82 crores, West Germany Rs. 71 crores, Russia Rs. 63 crores, Canada Rs. 16 crores and Japan Rs. 4 crores. Outgoings under this head consisted of a loan of Rs. 15 crores granted to Burma in 1957-58 and the repurchase of Rs. 30 crores from the International Monetary Fund during the first and the fourth years of the second plan.

INSURANCE OF BANK DEPOSITS

THE closure of two scheduled banks—the Laxmi in Maharashtra at the end of June and the Palai Central in Kerala this month—has revived the old debate about the need to introduce a system for the insurance of bank deposits in India. Although the merits of deposit insurance are generally recognised, no concrete measures have so far been taken to implement any particular scheme. As soon as a bank failure takes place, thoughts turn to the subject, but any schemes emerging are soon afterwards put back in cold storage. Many, therefore, wonder whether deposit insurance will take practical shape this time. Apart from the personal distress which bank failures cause to depositors, their effects on the economy are extremely adverse. Bank deposits serve the purpose of money to a great extent, so a bank failure inevitably disturbs the country's money supply and affects the normal working of the economy. The repercussions of bank failures cannot be lightly ignored in a period of planned development.

Experience has shown that a system of deposit insurance in India may become necessary soon. By introducing such a system since the 1930s, the United States has reduced bank failures. If deposit insurance is started on the same lines in India, it may prove equally successful. By guaranteeing the security of deposits, it will increase confidence in the banking system; the working of banks may also improve because the insuring authority will have supervisory powers. In the United States, the Federal Deposit Insurance Corporation, which administers deposit insurance, has strengthened the banking system by its supervision, guidance and advice.

The initial financial requirements for establishing a corporation in India like the American F.D.I.C. have to come from the Government. Banks will have to pay premiums for insuring their deposits. It has been suggested that the premium should not exceed ½ percent of the total deposits; and if banks cut the interest they pay on fixed deposits by only ½ percent, the entire cost of the premiums can be met. So paying premiums should not be an excessive burden. An important point to bear in mind is that the entire deposits of the banks need not be insured. The coverage of insurance is limited to $10,000 in the United States. In India, the coverage may be Rs. 5,000 a constituent in the initial stages.

It is relevant to note that the average deposit amount an account of all scheduled banks has increased from Rs. 2,672 at the end of 1955 to Rs. 3,400 at the end of 1959. The number of time deposit accounts has more than doubled and the amount of such deposits has more than trebled. As a result, the average amount an account has increased from Rs. 7,861 at the end of 1955 to Rs. 11,788 at the end of 1959. The increase in the amount of demand deposits has not kept pace with the rise in the number of accounts, so the average amount of demand deposits an account has declined from Rs 4,878 at the end of 1955 to Rs. 4,727 at the end of 1959. The average amount a savings deposit account has increased from Rs. 714 at the end of 1955 to Rs. 747 at the end of 1959. The figures indicate that a coverage of Rs 5,000 an account under deposit insurance may be reasonably satisfactory.

It has been argued that some of the bigger banks, which enjoy greater confidence, might not wish to undertake the bother and expense of paying premiums for insuring their deposits. They might consider the premium expenditure unnecessary because deposit insurance may not do them much good. But this attitude will be short-sighted, considering that bank failures invariably inspire the claim for nationalising banks in order to protect depositors. This is clearly evident at the present time when leftist politicians are agitating for bank nationalisation following the failure of two important scheduled banks. If deposit insurance helps stabilise banking and mitigates the distress of depositors, it will weaken the demand for nationalisation. There has been a big increase in business and personal deposits during the past few years. Business deposits have increased from Rs. 352.85 crores in 1955 to Rs. 476.30 crores in 1959 and personal deposits from Rs. 440.63 crores to Rs. 695.62 crores. The need for protecting depositors fully has thus become extremely important.

REFORM OR REVOLT IN AGRICULTURE

PROFESSOR René Dumont of the National Agronomical Institute, in Paris, has started off several controversies this year, in India, Britain and France, with authoritative articles attacking this country's community development projects. The latest of them was summarised in *Capital* on 14th April. The Professor returns to the charge in a recent issue of a serious magazine directed by M. Mendès-France, *Les Cahiers de la République*, where he also announces the forthcoming publication of a long book on India's agricultural economy. This treatise, and its translation, will be awaited with interest here, for the learned French agronomist has shown himself to be both an enthusiastic partisan of the community development idea and an acute critic of the way that idea is (or is not) being put into practice in India.

To judge from his most recent study, he will be less concerned than before with the particular failings of the community development organisation (bureaucratisation, mistaken priorities, etcetera) than with the general weaknesses of the Indian agricultural system which limit the success of any attempt to expand rural output. These include, in his view, usury, share-cropping and the restricted scope of the land reform laws, which leave too many intermediaries to live off the labour of the peasant. Admittedly, foreign experts making their first acquaintance with the Indian countryside tend to under-estimate the difficulty of eradicating these immemorial injustices, and to minimise the progress which has been made in the last 15 years. On the other hand people in this country tend to imagine that they have already been eradicated by the proclamation of well-intentioned laws—and then they cannot understand why the peasant is indifferent to improvement projects which in theory benefit him, but which in reality benefit mainly the idle privileged who persist in spite of their legal disappearance. So it will always be a useful corrective to see it demonstrated that the maintenance of exploitation by certain privileged groups is among the main causes of slow agricultural progress.

For example, it is easy for Professor Dumont to show that the outlawry of caste privilege remains, at least in the rural areas, entirely theoretical. As long as it exists, there is an almost total paralysis of social mobility, which discourages economic activity from the start. Nothing the enterprising peasant can do will raise his stature in the closed village society, so he does as little as possible. As for the land reform laws (which up to the end of the first plan had cost Rs. 600 crores, or six times the public industrial investments in the plan), the Professor asserts that they have solved absolutely nothing. He reports counting in a West Bengal village 13 intermediaries between the tiller of the soil and the *zamindar*, and knows of cases where this figure reaches 40. In many rural areas, he found 15 percent or 20 percent of the population still living off rents and unearned income—living miserably, naturally, but enjoying the prestige of idleness. Share-cropping, he shows, continues to discourage land improvement. In Sahajapur (West Bengal) he found peasants receiving only one-third of the crop, while the proprietor took two-thirds on the pretext that he had provided a pinch of fertiliser. He quotes the accounts of a Madrasi share-cropper who came out loser after fertilising his land because the proprietor claimed, in addition to his normal share, half the increase due to the use of fertiliser; not surprisingly, the *ryot* concluded that he had made a mistake which was not to be repeated. This whole system, Professor Dumont summarises, is an obstacle to any and every effort towards agricultural progress.

His findings about the persistence of a ruinous usury will not astonish those familiar with the countryside. As long as only 3 percent of agricultural credit is provided by public organisations, and 15 percent by parents and friends, the farmer must find his capital where he can; that means from traders, shopkeepers and moneylenders. The former take their pound of flesh by fixing the prices of the goods they sell; the latter charge interest which, *with security*, amounts to anything between 19 percent and 75 percent a year, while without security it can reach astronomical proportions. Cases of 800 percent a year are not unknown, which means that after paying back in interest many times the principal, the borrower owes the capital all his life.

Recalling that in a good year the Chinese have 367 kilograms of foodstuffs a head a year, whereas Indians in a good year have only 193 kilograms, M. Dumont concludes: "This difference suffices to measure the depth of Indian poverty and distress. It is all the more insupportable in that, in the foreseeable future, there is absolutely no hope of escaping it with the present agricultural structure; the absence of hope brought the Chinese peasant to revolt in 1925-49. Will a 'Chinese situation' arise in India?" He evidently thinks it will, unless usury, share-cropping and the monstrous privilege they represent are eradicated, unless a radical non-totalitarian land reform is undertaken, and unless a "labour tax" (compulsory work on projects of immediate benefit to the conscripts) is imposed on the under-employed Indian peasant.

Current News and Comment

Zenith Steel Pipes Issue

Lists for the equity share issue of Zenith Steel Pipes Ltd will open soon. The Company has an authorised capital of Rs. 1 crore in ordinary shares of Rs. 10 each. The directors propose to issue shares worth Rs. 70 lakhs. Of this, the directors, promoters and their friends have taken up shares worth Rs. 28 lakhs, while the Industrial Credit and Investment Corporation has taken up shares worth Rs. 7 lakhs. The remaining shares worth Rs. 35 lakhs are offered for public subscription. The Company will manufacture steel pipes and tubes of all descriptions, particularly welded and galvanised pipes and fittings. It is negotiating with a leading foreign manufacturer of machinery and pipes for technical assistance. The I.C.I.C.I., it is said, has agreed in principle to grant the Company a foreign exchange loan of $850,000, or Rs. 40 lakhs, for importing machinery and capital equipment for the proposed factory, subject to the World Bank's consent.

Bengal Chemical Profit Up

The Bengal Chemical and Pharmaceutical Works Ltd has done well during the year ended March 1960. After providing Rs. 5 lakhs for depreciation, the profit has increased from Rs. 15.85 lakhs to Rs. 18.38 lakhs. Sales increased from Rs. 1.75 crores to Rs. 1.97 crores. An ordinary dividend of 7 percent, tax-free, has been declared. This is the same as in the previous year. Taxation is allocated Rs. 8.75 lakhs (against Rs. 8.10 lakhs), reserve fund Rs. 45 lakhs (same), dividend equalisation fund Rs. 20,000 (same) and debenture redemption fund Rs. 70,000 (same). The carry-forward is Rs. 13,89,610, compared with Rs. 13,80,395 brought in. In his address from the chair (details of which are printed on a later page of this week's *Capital*) at the annual general meeting in Calcutta last week, Dr. B. N. Ghose took a fairly optimistic view of the future. The Company's modernisation and expansion schemes have made satisfactory progress. But the expansion of the alum plant and the erection of a bigger sulphuric acid plant have been held up by difficulties concerning the import of equipment. In order to finance these projects, the directors have decided to take a loan of Rs. 35 lakhs from the Industrial Finance Corporation. The plant to produce sulphone drugs has been extended. Measures have been taken to increase the output of heavy, fine and pharmaceutical chemicals. The expansion of the Kanpur factory has been completed. It is proposed to undertake the production of ether there in view of the adequate supply of alcohol, which is the chief raw material, near the site. Dr. Ghose mentioned a scheme for manufacturing some basic chemicals using the by-products from the Durgapur coke oven project. This scheme, it is expected, will be sponsored in collaboration with a reputed foreign firm. He assured shareholders that they would be given an opportunity to participate in the share capital of the new project as soon as the details are finalised. Apart from the increased domestic sales, the Company's products have been sold in foreign markets. Dr. Ghose said that the prospects for increasing exports are good.

Katras Jherriah Coal Pays More

The Katras Jherriah Coal Co. Ltd has declared an ordinary dividend of Rs. 9.50 a share, taxable, including an interim of Rs. 3.50, for the year ended January 1960. This absorbs Rs. 4.75 lakhs. The dividend is to be paid on the old shares; the new shares issued after 1st February, 1960, do not qualify for it. In the previous year, the dividend was Rs. 6.50, tax-free. The profit has increased from Rs. 9.82 lakhs to Rs. 11.36 lakhs, after providing Rs. 1.24 lakhs (against Rs. 1.03 lakhs) for depreciation. Taxation is allocated Rs. 5.52 lakhs (against Rs. 7 lakhs) and general reserve Rs. 1.70 lakhs. The carry-forward is Rs. 1,31,658, compared with Rs. 1,27,146 brought in. Raisings declined from 344,864 tons to 337,071 tons. The raisings of Selected A grade coking coal from the Laikdih Deep colliery increased because of improved sand-stowing arrangements. The output of the Seebpore collieries declined due to the depletion of coal reserves. Despatches fell from 354,154 tons to 346,957 tons.

The directors state that on 21st January, 1960, they made an offer for the shares of the Kalapahari Coal Co. Ltd. Kalapahari Coal shareholders were asked to take either Rs. 27 a share in cash, or one share in Katras Jherriah for every share they held in Kalapahari Coal. The holders of 34,332 shares, representing 98 percent of the issued share capital of the Kalapahari Coal Co. Ltd, accepted the offer, and action was taken to acquire the remaining 668 shares. As a result, the Kalapahari Coal Co. Ltd is now a wholly-owned subsidiary of Katras Jherriah.

Mettur Chemical Earns More

The report of the Mettur Chemical and Industrial Corporation for the year ended March 1960 refers in detail to the expansion programme of the Company. The output of stable bleaching powder has now been raised following the doubling of the plant capacity. The capacity could meet the entire needs of the country but so far demand has not caught up with production. Orders for the entire plant and equipment for doubling the production of caustic soda to 40 tons a day have been placed in the United States with the assistance of the U.S. Export-Import Bank loan programme. Part of the equipment has already come and the plant is expected to be ready by the middle of 1961. To help the Company finance the scheme, the Industrial Finance Corporation has sanctioned a loan of Rs. 33 lakhs. The directors propose to issue further equity capital to the extent of Rs. 20 lakhs to cover the remaining costs. The Company is also considering many new schemes for diversifying its lines of manufacture.

The production of the main chemicals suffered a setback during the past year as the cells could not be operated at the full load of 10,000 amps due to power restrictions and failures. The lower production of caustic soda affected the production of liquid chlorine and bleaching powder. The output of stable bleaching powder was also affected, but to compensate for the shortfall in production, the Company was able towards the end of the year to commission the second stable bleaching powder plant imported from West Germany. The overall production of chemicals was, however, considerably higher than in the previous year. The production of vegetable oil products and soaps was satisfactory. The Company has made a net profit of Rs. 17.06 lakhs, against Rs. 15.07 lakhs, after providing Rs. 6.96 lakhs (against Rs. 6.55 lakhs) for depreciation and meeting other charges. With Rs. 18,969 brought in, the total available is Rs. 17.25 lakhs. The allocations include Rs. 2.7 lakhs for development rebate, Rs. 80,000 for general reserve and Rs. 4.75 lakhs for tax. The total preference dividend is 6 percent, tax-free, and the total ordinary dividend is 12½ percent, subject to tax.

Bombay Suburban Electric Expands

Speaking at the annual general meeting of Bombay Suburban Electric Supply Ltd in Bombay last week, Mr. A. N. Haksar, chairman, discussed the Company's rôle in supplying power to Bombay's suburbs. (A fuller version of the speech appears on a later page in this week's issue of *Capital*.) The growth of power supply in the area, Mr. Haksar said, has remained well above normal, and the percentage increases during the last three years have been 16.5, 19.5 and 21.4, respectively. Careful planning over the past decade has enabled the Company to anticipate load requirements. Besides, a lot of money has been spent on improving the mains network. Further development, the chairman said, is likely to be even more impressive. Power development in the Company's area of supply will require an investment of about Rs. 45 lakhs a year during the third plan period.

A part of this (Rs. 25 lakhs a year) will be met from internal resources, but the remaining Rs. 20 lakhs a year will still have to be found. At present, development capital is being provided through bank finance. This will enable the Company to carry on for about two years without tapping further sources of capital. The Company will later have to consider what can be done to raise new capital.

Dealing with the effects of the statutory controls imposed on electric supply undertakings by the financial provisions of the Electricity (Supply) Act and their impact on the problem of raising capital for power development, Mr. Haksar said that for some time no electric supply company has had the confidence to enter the market for equity capital. Furthermore, the effect of the new tax system on the electricity supply industry has been particularly severe. Because of the stringent controls applied under the Electricity (Supply) Act, companies are not allowed to raise earnings to a level which will permit a higher rate of dividend. They cannot even divert to the investor the benefit of tax savings as is possible in the case of other industries. "Our reasonable return, in other words the amount effectively available for distribution to shareholders, remains to all intents and purposes the same, whatever tax is payable." The best way to improve equity values which alone will attract development capital in the industry, is to raise the reasonable return from the present level of the Reserve Bank rate plus 2 percent to Bank rate plus at least 3 percent, Mr. Haksar said.

Bagalkot Cement Fares Well

Although the production of cement and clinker was lower than the rated capacity, the results of the Bagalkot Cement Company for the year ended December 1959 are satisfactory. The net profit is Rs. 8.75 lakhs, against Rs. 7.92 lakhs in the previous year. The directors propose an ordinary dividend of 8 percent, subject to deduction of income tax, absorbing Rs. 6.76 lakhs. The carry-forward is Rs 1,652. The production of clinker totalled 94,326 tons and that of cement was 96,717 tons, compared with 101,004 tons and 101,011 tons, respectively, in the previous year. Certain modifications were introduced in the chain zone recommended by the machinery manufacturers for the purpose of improving the performance of the kiln. The time involved in carrying out these modifications reduced production, but has yielded satisfactory results during the current year. The doubling of the Company's plant capacity in Bagalkot to 200,000 tons was completed in April this year. The directors say that certain difficulties were experienced during the initial running of the new kiln, but it is working satisfactorily now.

Bharat Line Suffers Loss

The Bharat Line has reported a sizable loss of Rs. 10.29 lakhs for the year ended December 1959. The list of reasons given in the directors' report is formidable, since trading conditions were unsatisfactory throughout the year. The availability of drafts in the Hooghly river continued to decrease, seriously affecting the quantity of cargo carried to and from Calcutta. The directors say that if the Government wants coastal shipping to survive, a policy decision should be made on the tonnage required in order to ensure the economic operation of the fleet. Referring to the controversy whether it is cheaper to transport coal by rail or sea, they say that the solution lies not in persisting with the controversy but in taking urgent measures so that the cost to the consumer of the commodity, whether transported by rail or sea, remains the same. The directors also say that the rate of Rs. 40 a ton for the Burma-India rice trade is uneconomic. It was hoped at one time that the Government would give some relief either in the rate or in the terms of carriage, but nothing has happened so far. The Government should allow an economic rate to the members of the Conference for the transport of rice. A sum of Rs. 3.18 lakhs brought in from the previous year has been adjusted against the loss, leaving a debit of Rs. 7.11 lakhs to go forward. No dividend has been recommended.

Cotton Hedge Contract

The uncertainty about the raw cotton hedge contract for the 1960-61 season has ended. The hedge contract sub-committee of the East India Cotton Association in Bombay finally settled all the details on 17th August. The sub-committee's recommendations have been approved by the Board. The contract is to be placed before the general body meeting of the Association for its final approval on 25th August. The Forward Markets Commission's sanction should follow soon. The prospect of forward trading in cotton is thus well in sight. The trade has had an extremely difficult time in the 1959-60 season because of the serious shortfall in the crop. But the outlook for the next season seems good, as weather conditions have been very satisfactory so far.

The basis of the new hedge contract will continue to be Moglai fine 25/32 inch. The minimum staple for tender will be 23/32 inch, instead of ¾ inch as at present; the maximum has been raised to 1-5/32 inches. Punjab American, Dholleras and Westerns, however, can be tendered only up to ¾ inch staple. Cotton which is 1½ "off" in grade will be rejected in tenders. The *status quo* will be maintained in by-law 55 if the price of the hedge contract is Rs. 750 or below. But if the price is above Rs. 750, the premium or the discount for the respective description tenderable will be fixed on the basis of the difference between the spot rate for basic cotton and the spot rate of the respective description of cotton, subject to the addition of a maximum difference of Rs. 20 a candy, whichever is lower (against Rs. 30 at present). The penalty for failure to tender has been kept unchanged at Rs. 25 a candy.

Those who wish well of the cotton trade will be disappointed by the new contract. The old contract was bearish and the changes which have now been recommended will make it still more bearish, thereby seriously undermining its usefulness as a hedge. A good hedge contract should move in line with the prices of ready cotton in order to protect cotton holders against price fluctuations. It should be broad-based and sound if it is to attract outside investors and thus help minimise the carrying charges. The adoption of Moglai Jarilla of fine 25/32 inch quality is notional since little or no cotton of this description is available. The Moglai crop is too small in relation to the quantitative coverage of the contract, and it is unwise to make this relatively unimportant cotton the criterion for tendering differences. Differences of other tenderable qualities can be manipulated. The vagaries of surveys further shake buyers' confidence. That is why the price of the hedge contract always rules considerably lower than that of even the inferior varieties. The narrow basis and lower standards of quality have continued to weaken artificially the intrinsic value of cotton and have tended to lower the quality by encouraging the mixing of longer with shorter staple cotton. Such a contract is opposed to the long-term policy of improving the standards of Indian cotton. It is widely thought that the new contract is good only for the speculators. It has little use for cotton growers and mills because it cannot be treated as a safe hedge. It is argued that only a bearish contract can function smoothly under conditions of scarcity. But that is quite a different matter. The important point is whether the contract can be considered a good hedge by all sections of the cotton trade.

U.P. Government Loan Offer

Subscription lists for the loan of Rs. 7 crores offered by the Government of Uttar Pradesh will open on 29th August. The loan will bear interest at 4 percent a year and is repayable after nine years. The issue price has been fixed at Rs. 99.75 for every Rs. 100. Subscriptions can be made either in cash or in the form of 3 percent U. P. loan 1960. The proceeds of the loan will be spent on development schemes concerning electricity, irrigation and industry. (Fuller details are published on a later page.) The revenue Budgets of the U. P. Government, it is claimed, have shown surpluses during the past few years. The surplus was Rs. 1.31 crores during 1959-60. The total debt of the U. P. Government amounted to Rs. 253.69 crores on 31st March, 1960. Sinking funds have been created for all the public loans, and the credit balances in these funds totalled Rs. 18.46 crores on 31st March, 1960. A large portion of the balances have been invested in Central Government securities. There is also a further amount of Rs. 13.66 crores in the sinking funds for the amortisation of loans obtained from the Government of India. The loans are adequately covered by assets. The latest loan offer is likely to meet with a good response as the terms and conditions are attractive. The yield is fair in relation to the maturity period.

Indian Cotton Federation

It is likely that cotton interests, such as growers, ginners, dealers, commission agents, and members of the futures markets and the industry, will soon get together to form an all-India organisation called the Indian Cotton Federation. The move originates from the recent crisis in cotton following the shortfall in the crop. The 1957-58 textile crisis led to the formation of the Indian Cotton Mills Federation. The proposed Cotton Federation is apparently its counterpart on the raw material side. It is believed that the initiative for the latter came during the general strike called by spot dealers to protest against the Textile Commissioner's order of 13th May for regulating the purchase and sale of cotton through the agency of the Commissioner. A preliminary meeting of the representatives of the East India Cotton Association, the Cotton Buyers Association and the Bombay Merchants and Muccadams Association discussed the organisational details. The meeting, it is said, agreed to call an all-India convention of the various cotton interests some time in October in Bombay. Meanwhile, the East India Cotton Association will ascertain from the various associations their views on calling the convention. Trade circles in Bombay generally welcome the proposal for a federation, since it will enable the trade to present a united front to the Government on various matters, such as price policy, sales tax, improved cultivation and the formulation of hedge contracts.

Developing Agriculture in Madras

The Governor of Madras discussed in detail the progress of farming in the State in his recent address to the Legislature. The production of foodgrains in Madras is likely to show a rise of 1.5 million tons a year during the third plan. The State Government has a scheme to disburse about Rs. 25 crores to farmers as loans. Co-operatives are to be entrusted with the task of distributing cheap credit to agriculturists. Besides, the rules for rural power supply are being relaxed with a view to helping cultivators. The State Government admits that the capital investment in land can be increased only if there is greater progress in the consolidation of holdings, but feels that the more urgent need is to conserve capital in the villages by reducing infructuous expenditure, such as on marriages. The construction of new wells on a large scale and the fall in rural indebtedness are rightly regarded as signs of growing prosperity in the villages. The increasing use of pump-sets in the rural areas has created an expanding market for electric motors and starters, so many factories have been established in the south to increase the production of these items. Meanwhile, the Madras Government feels that the extensive use of power may help raise average yields an acre, although many think that the extension of irrigation in the State has not increased the output of foodgrains.

British Insurance Results

Speaking at the annual general meeting of the British Insurance Association recently, Mr. H. A. Walters, chairman, said that the combined premium incomes of the 250 member-companies have risen to £1,520 million in 1959, or £95 million more than in the previous year. This represents a real growth of business in conditions of reasonably stable prices, and not an expansion which contains any marked element of inflation. The economic climate has been favourable, with production rising in Britain, the Commonwealth, western Europe, the United States and many other countries. There is an increased demand for insurance protection from people enjoying a higher standard of living and with more money to save, from industrialists with more valuable stocks and new factories to safeguard, and from traders with more goods to move around the world.

Life assurance has been particularly buoyant in 1959, and the premium income of the members in the ordinary branch has risen from £444 million to £485 million. In the industrial branch or "home service", it has gone up from £158 million to £165 million. Net new savings through life assurance during 1959 were a record £423 million, compared with £366 million in 1958. Thus life assurance has maintained its position as the largest single source of new savings in Britain in spite of the competition from national savings, building societies, unit trusts and other savings media. The invested assets of the insurance companies have risen from a total of £5,528 million in 1958 to £6,048 million in 1959, this latter consisting of two types of funds with very different purposes. The sum of £4,957 million represents the life funds which are very largely the savings of policyholders held by the insurance companies, and which are invested to produce the highest possible income consistent with the security of capital. The non-life funds, amounting to £1,090 million, constitute a pool out of which are paid claims under fire, accident, marine and other non-life policies. The size of this pool determines the capacity of the British market to accept the huge risks which it is called on to underwrite.

Mr. Walters deplored the exceptionally bad fire wastage in Britain in 1959, which at £44 million was the highest ever recorded. To this sum must be added a substantial amount for insurance payments under consequential loss policies, which help industries return to production after a fire. The previous highest total was £27½ million, while the figure for 1958 was £24 million. The drought was responsible for many more farm and heath fires, but a disturbing feature was that a large proportion of the total damage was caused by a few big factory fires. Three fires caused one-fifth, six caused one-fourth and 16 caused one-third of the total wastage. These large fires, according to Mr. Walters, are often the result of the increased capacity and activity of factories today, with their extensive unbroken areas which, attractive though they may be to the factory-owner as long as production goes on, create very serious problems for their insurers. The only relieving feature has been a material improvement in worldwide motor underwriting results. Premiums there have risen from £263 million in 1958 to £278 million in 1959, and the loss of £10 million in 1958 has been reduced to one of £1½ million in 1959.

Savings Survey in Madras

The National Council of Applied Economic Research has started a savings survey in Madras with the help of a few foreign experts. The third plan will require the mobilisation of domestic resources on a large scale, so the findings of the survey will prove useful to the Government. The Council's investigators will first concentrate on Salem district and the city of Madras, although they are not required to ascertain facts about the scope for increased taxation in this context. The survey, it is said, will be completed in four months. The pattern of savings may have changed greatly in Madras city; this is indicated by the preponderance of small shareholdings in many companies and the eagerness of middle-class people to obtain allotments of at least a few shares in promising new ventures. Some say that people in the cities nowadays are less attracted by such traditional sources of investment as gold and silver, although speculators with black money still favour investment in bullion.

Kanpur Mills Criticised

Cotton mills in Kanpur, the U.P. Government has complained, are attempting to circumvent the decisions of the State tripartite conference held recently in Naini Tal to fix the wages of textile workers in the light of the recommendations of the Central Wage Board. A Press note issued by the State Government says that some textile mills in Kanpur have worked out fresh piece rates on a certain percentage of efficiency, after taking into account the basic wage and the merged portion of the dear food allowance. According to the Government, the result is that the total emoluments which the workers would receive, including the increase of Rs. 6 a month, would either be the same or even less than what they were getting previously. The Press note says: "The Government Order of 18th July, 1960, envisaged that the earnings of the workmen engaged on a piece-rate basis should be calculated first on the existing basis and thereafter 75 percent of the dear food allowance should be merged with it along with the wage increase of Rs. 6 a month. Any change in the procedure would be contrary to the spirit of the recommendations made by the Wage Board and the assurance given by the employers at the State tripartite conference. It would also be against the terms of the order published in the Gazette Extraordinary dated 18th July, 1960, giving effect to the agreements reached at the Naini Tal conference."

It may be recalled that at this conference, which was held on 3rd July, 1960, employers of the textile mills in Kanpur had unanimously agreed to give effect to the Wage Board's recommendations from 1st January, 1960. The Naini Tal decisions, in the view of the Government, represent the largest measure of agreement and must be implemented if peaceful conditions in the industry are not to be disturbed. The Wage Board had recommended an increase of Rs. 6 a month for workers employed in the textile mills of Kanpur. It had also recommended consolidation of dear food allowance with the basic wage at an index which would yield an amount equal to three-fourths of the average dear food allowance of the first six months of the year 1959. This worked out to Rs. 44.71 in the case of textile mills in Kanpur. The remaining one-fourth of the dear food allowance was left to be flexible—rising or falling according to the cost of living index.

Molasses Sale Price

The U.P. Government has contradicted Press reports that there is a racket in the sale of molasses and that favoured sugar factories are allowed to sell their stocks in the open market at prices ranging from Rs. 2 to Rs. 4 a maund, against the controlled price of only 2 annas to 3 annas a maund for molasses supplied to the distilleries. The reports had also suggested that permits are given to individuals or private agencies for selling molasses in the open market and that the quantity involved in this racket runs to nearly 20 million maunds, fetching additional profits of over Rs. 2 crores beyond the scrutiny of the income tax department. The Government has declared that no permits for the sale of molasses are ever issued to any individuals. The correct procedure for disposal is laid down in the U.P. Molasses Control Act, under which distilleries are allotted their quotas according to their needs. Under the Act, molasses not required by the distilleries have to be released to the owner-sugar-factories for disposal in the open market at any price that can be got. "The price of molasses is controlled only to the extent it is supplied to the distilleries and ranges from 3 annas to 4 annas a maund, depending on the percentage of sugar. There is no price control in regard to sale of released molasses to the trade by the sugar factories." The total production of molasses in Uttar Pradesh has never been over 15 million maunds in any year. During the 1959-60 sugar season, the amount of cane crushed has been the biggest ever, but the quantity of molasses produced does not exceed 11.9 million maunds. Thus, it is argued, there could never be any question of releasing 20 million maunds of molasses in the open market.

New Co-operative Sugar Mill

The Central Minister for Food, Mr. S. K. Patil, recently inaugurated the Amaravathi Co-operative Sugar Mill which has a crushing capacity of 1,000 tons a day. He said that there is a big difference in the sugarcane yield in India and that in Java or Formosa. Sugarcane cultivation in south India has met with better results than in north India. But in spite of the low yield, India's sugar output is expected to rise considerably in the near future. It will then be possible to export about 500,000 tons a year. Much, however, depends on higher yields and lower production costs. Besides, manufacturers should be given greater incentives to increase output. Mr. Patil said that co-operative sugar mills have good prospects for expansion. The new Amaravathi factory has produced 24,000 bags of sugar since it started production and its cane supplies average 850 tons a day. Its main advantage lies in getting sugarcane supplies from Coimbatore district where there have been successful experiments on cane-breeding. The district has also had a rich cane crop because of adequate irrigation facilities. It has a long crushing season of 270 days in the year, and many *ryots* have secured high yields from their land.

U.K. Textile Machinery Exports

During the last few years, textile machinery has played a useful part in maintaining the British export trade. After rising from £20,397,000 in the first half of 1958 to £21,305,000 in the corresponding period of 1959, the value of U.K. textile machinery exports showed a further increase to £26,344,000 in the first six months of this year. Shipments to most of the larger markets have increased compared with last year, the greatest expansion being one to £3,371,000, against £1,061,000, in those to Russia, partly, no doubt, as a result of orders for plants for man-made fibres and tyre fabrics. India, which was the largest market last year, fell to second place this year, although it took £2,386,000, against £1,822,000. West Germany comes third with £1,821,000, against £1,027,000, with the United States fourth with £1,627,000, against £1,180,000, and Poland was fifth with £1,516,000, against £1,105,000. The heaviest fall was in exports to Iran, which took only £219,000, against £1,655,000, while Egypt's offtake fell to £316,000, against £820,000. France was one of the few European countries to take less, with £819,000, against £1,207,000. In the Far East, Hongkong took £103,000, against £217,000, although there was a sharp rise to £644,000, against £372,000, in shipments to Japan.

By weight the exports increased to 34,700 tons in the first six months of this year, compared with 29,400 tons a year previously. There were large increases in the volume of exports of machinery for extruding man-made fibres, for the processes preparatory to spinning, and for spinning fibres other than cotton and staple fibre. Automatic looms were exported in larger quantities, and there were increases also in bleaching, dyeing, printing and other finishing machinery. On the domestic market, re-equipment in the spinning, doubling and weaving sections of the Lancashire cotton industry, is no doubt providing the U.K. textile machinery industry with more domestic orders, and this business will help keep the works employed for the next two or three years.

INDIAN REVENUES

IT was the London *Times*, was it not, which a few months ago first discovered the quality of elasticity in Indian revenues? Since then, despite the very serious financial and economic evils which assail Indian prosperity on all sides, it has become quite the fashion among a certain kind of writers and speakers to roll forth sonorous sentences which ought to place the most depressed among us on the pinnacle of happiness. "Financial strength," "recuperative power," "tremendous natural resources," these and other cheering phrases of a like kind are showered on India with the comfortableness of benedictions, and the hope which seems to spring eternal in the Ministerial breast is made to soften the crabbed ruggedness of refractory facts and figures. It is just and right, no doubt to look at both sides of the account, to take note of the good as well as of the bad, but much of the optimism of today, where India is concerned, is not only quite unwarranted by plain facts, but has a tendency to obscure the facts themselves in a cloud of misty generalities. It is still possible in this prosperous country to find one of its chief commercial cities, Bombay to wit, in which the death rate tells upon the population with the devouring destruction of a big war. Last month namely 6,000 people died in Bombay city alone, against about 2,500 in the corresponding month of 1899 and something like the same number in 1898. At the present moment, the mortality in Bombay is steadily going up to the appalling number of something like 350 deaths per diem. This mortality, it should be noted, is largely what may be termed a poverty—indeed a beggary mortality, and a filth mortality—a mortality made possible by conditions of existence, which, whatever else they may be, cannot be described as being brought about by prosperity.

Named after the ancient Chera Kings, Kerala dates back to a mythological past. This land of palmfringed lagoons and lush vegetation has a close-knit cultural heritage which is best expressed in its theatrical art. Every year the Velakkali dancers stage the battle of Kurukshetra in commemoration of the martial past of the country—elaborate dress, make-up and dance-drama are fused in an epic grandeur of mood and movement.

Diversity is the keynote of your journey through India, from the emotional grandeur of Kathakali to the exquisite restraint of the Manipuri Ras dance.

AND WHEREVER YOU GO, there is the full, rich flavour of WILLS' GOLD FLAKE to enhance the pleasure of travel.

A Ditcher's Diary

WHEN THE RUSSIAN MILITARY COURT SENTENCED Francis Gary Powers to imprisonment for ten years, it was not the decision which surprised me but the speed with which it was reached. Whether brain-washing facilitated the customary confession of guilt from the *U-2* pilot, I would not know; but it seems likely that, without the confession, the trial would have lasted a little longer than it did, and ended in a more drastic verdict. Russian interest in the whole episode has inevitably centred on its propaganda value, especially on the attempt to show that Powers was basically no more than an ordinary, peace-loving American who innocently sold himself to the Pentagon militarists for $2,500 a month. In creating this impression, Powers's own testimony played a not inconsiderable part; yet it is hard to see what else could be expected from a man whose psychological unfitness for espionage had long been rather obvious. That the American Government's handling of the *U-2* affair was thoroughly inept is, I think, generally recognised by now. What is not so generally recognised, perhaps, is the inefficiency of Washington's methods in choosing its intelligence agents. The evidence given by Powers suggests that, even long after he was recruited, he was never quite sure that his obligations would be those of a spy; only later was it explained that one of the cardinal duties of an espionage agent, when apprehended, is to be prepared to destroy not only the evidence he carries but also himself. Having failed to do either, I suppose there would have been little point in Powers stoutly maintaining that his adventure into Russia was merely a matter of personal curiosity rather than connected with the aggressive designs of the Pentagon. Nobody would have believed any story other than the one he gave; and being adamant would only have won him a seat on the electric chair or a longer term of forced labour in the Siberian wastes. I am as sorry as anybody else about the fate which has befallen Powers; I am not so sure, however, whether the lenient attitude taken by the U.S. Administration towards the penitent spy is the ideal for future discipline in its espionage services.

OPINIONS WILL, I IMAGINE, VARY WIDELY ON THE precise value of the contribution to sociology made by the U.N.E.S.C.O. Research Centre on the Social Implications of Industrialisation in Southern Asia. In the four years since it was set up in Calcutta, it has, I am told, done useful work investigating the social and cultural factors affecting the productivity of industrial labour, the growth of steel towns, and the promotion of small-scale industries. But whether the returns have been commensurate with the money and effort spent, will probably never be very certain, at least not until the results of all the investigations are published. One reason for the Centre's limited achievements may be that it has been examining the social implications of industrialisation in an area where, India and Pakistan excepted, very little industrialisation has taken place. The decision now to widen its scope of activities to the sociology of economic development, and not of industrialisation alone, is therefore welcome. But less welcome, I feel, is the other decision, that the Centre should shift to Delhi from the beginning of next year. Delhi offers certain advantages for research, I suppose, but so also does Calcutta. It is hard to avoid the suspicion that the decisive factors responsible for the shift are political and personal, rather than related to plans for improving the Centre's usefulness. Although I am not inclined to over-estimate the U.N.E.S.C.O. body's contribution to social research, I feel that Calcutta's loss as a result of the shift will be considerable; having spent four years finding its feet, the Centre had only just begun to stimulate the academic life of this city. The notion that Delhi is an ideal hothouse of wisdom, whether political, economic or sociological, seems to me a trifle exaggerated; and it is a pity that U.N.E.S.C.O. should have been persuaded to subscribe to it. No part of India, or even southern Asia, provides a more fertile environment for sociological research than West Bengal, with its acute economic disparities and social tensions; the U.N.E.S.C.O. Centre may not have learnt much if it has failed to recognise the fact in deciding on the transfer to Delhi.

IT APPEARS FAIRLY CERTAIN THAT, ALTHOUGH THEIR tours were brief, the Law Minister and the Parliamentary delegation which recently visited Assam have been able to get a reasonably precise idea of the factors underlying the disturbances in that State. Their reports have not, of course, been published yet, but enough of the contents have appeared in driblets to indicate that the rôle of the Assam authorities has not been assessed in flattering terms. To my mind, the most disturbing fact which emerges is the strength with which provincialist jealousies cut right across Party affinities during the widespread rioting. As far as the leftist and communalist organisations are concerned, this does not cause me undue surprise; their political norms have always been rather flexible. It is the recognisable and widespread indiscipline of Congress elements which is the real cause for serious worry. The problem will not, I imagine, be new to the Congress High Command; the Assam branch of the Party is not the only one weighted with provincial fanatics. But the High Command may find that on the discipline it can enforce in Assam will depend the unity of the organisation in many other States. Although peace has slowly been returning to the disturbed areas, the problem of restoring amity among the different sections of the population will inevitably be a long-term one. I thought that a good start might have been made in dealing with it if Assam had itself been made to bear the cost of rehabilitating the homeless. It is a pity that this idea now seems likely to be dropped, and that the financial burden of rehabilitation will probably be borne to a large extent by the Central Government. One way of curbing the rioters responsible for the recent disturbances might have been to make them, and their supporters, pay for what they did.

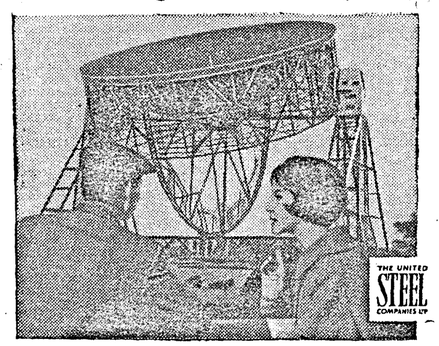
THE STORY THAT JAPAN'S INDUSTRIALISATION WAS based on a textile industry which used machines sold by Lancashire as scrap is probably apocryphal. There will still be a lot of interest in the Industrial Co-ordination Bureau formed by a Swedish business man as a non-profit organisation devoted to bringing together western manufacturers who want to modernise by selling obsolescent plant, and entrepreneurs in the developing countries who would be willing to open factories with that same plant. Mr. Hans Langenskiold of Stockholm, the organiser of the Bureau, expects that his enterprise will serve as a clearing centre for technologically-dated but fully-operative industrial equipment; it will furnish along with the machines the know-how to make them work. Since everyone has heard stories about skippers "sold" along with the sailing ships they refused to quit, and printers who went along as an "extra" with the press on which they were apprenticed, this last offer could indeed bring unfashionable but efficient experts. A correspondent in Europe tells me that the I.C.B. has been incorporated in Geneva, has founded its first operating centre in Stockholm and will begin work at the end of this year. By then, it hopes to have appointed regional inspectors in New Delhi, Bangkok, Lima, Beirut and Brazzaville. Mr. Langenskiold says the firm, whose financial resources so far consist of public and private donations but is expected to break even by matching fees with services rendered, will deal mainly with projects involving less than $50,000, which is too small to interest existing international organisations concerned with technical aid. The economic basis of this enterprise seems sound. The phenomenon of technological obsolescence is widespread in the West: machines which have by no means exhausted their useful span of years must be discarded in order to keep up with changes in fashion, taste or profitability. They could very well serve in developing countries where such considerations are much less important.

FOUR MONTHS AGO, THE INFORMATION AND Broadcasting Ministry took a modest step back towards rationality when it suggested that the price-page schedule, which had lain in the legislative incubator for at least three years, should not apply to daily newspapers costing more than twelve naye paise each. This week, it has resumed its inexorable march forwards to obtuse folly by drafting a schedule which would apply to newspapers costing up to twenty naye paise each. The purpose of the price-page schedule, as I have had occasion to mention before, is a simple and rather disreputable one. It is to compel the bigger and better newspapers either to increase their price or to carry fewer pages; the former would tend to reduce their circulation, and the latter their advertising. It is Dr. Keskar's simple-minded belief that, as a result, the poorer and smaller newspapers, especially the vernacular dailies, would benefit: they would get the readership and the advertisements which now go to the bigger newspapers. It may not have occurred to the Information and Broadcasting Ministry, however, that competition for advertising is not restricted to the newspapers alone. Advertisers have other media available, such as films, posters and hoardings; and they might well turn to these rather than waste their money on a rag-bag selection of third-rate dailies whose readership and influence are limited. In any case, it has never been very clear to me how the competition for advertisements among newspapers is any of the Government's concern. I should have thought that if a few newspapers manage to get a rather large number of advertisements, the reason is that they deserve to. If their less fortunate rivals wish to attract more advertisers, I am not aware that there is anybody stopping them from doing so. The main reason, of course, why they do not attract the advertisers is that their quality is poor. It is hard to see what Dr. Keskar can do to improve matters there.

THE DITCHER

United

You can't get far without Steel



"There are 1800 tons of steel work in that thing—and it all moves with astronomical precision!"

"What do you mean, 'astronomical precision'—like my wrist watch?"

"Er-yes! in a way; I suppose they both take their time from the stars. Incidentally, the same people who built the Jodrell Bank radio telescope also made the spring in your wrist watch."

"What, in the same works?"

"No, they have ironworks, steel works, engineering works, forges, foundries and various other kinds of works, and they make more kinds of steel than anyone else in the U.K.

"How on earth do you know?"

"I've been reading their advertisements!"

In addition to building radio telescopes and making springs for watches, United Steel make steel for nuclear power stations, for aircraft, automobiles, ships, railways, bridges, bicycles and almost everything else, as well as many chemicals, paints, fertilizers, bricks and roadmaking materials.

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LIMITED

CHAIRMAN, DR. B. N. GHOSE'S REVIEW

The following is the speech delivered by Dr. B. N. Ghose, Chairman, Board of Directors, Bengal Chemical & Pharmaceutical Works Ltd., at the Annual General Meeting of the Company held on 18th August, 1960.

Gentlemen,

Before I take up the business on the Agenda it is my melancholy duty to mention the death of our esteemed colleague Shri Rajshekhar Bose who passed away on the 27th April, 1960. The Late Rajshekhar Bose joined the Company in the year 1903 as manager and was associated with the Company as a Director till the last day of his life. Your Company is indebted to him for much of its present position. His death has left a gap in our midst. He was loved and respected by all. We all mourn his loss.

May I move the following resolutions—

Shareholders of the Bengal Chemical & Pharmaceutical Works Limited place on record their sense of deep sorrow at the sad demise on the 27th April, 1960, of Shri Rajshekhar Bose who had been associated with this Company for more than half a century and to whose untiring labour, energy and invaluable guidance the Company owes its present position.

Resolved that a copy of the resolution be forwarded to the members of the bereaved family.

I would request you to stand in silence for one minute to pay respect and homage to the departed soul.

Increase in Sales

Gentlemen, I have great pleasure in welcoming you on behalf of the Board of Directors and on my own behalf to the sixtieth Annual General Meeting of the Company. The Directors' Report with the Audited Accounts for the year ended 31st March, 1960 has been in your hands for some time and with your permission I will take them as read.

It is with deep regret that we record the loss suffered by us by the passing away of Shri Rajshekhar Bose. The vacancy in the Board of Directors caused by the death of Shri Rajshekhar Bose has been filled by your Board of Directors by the co-option of Sjt. Sailendra Nath Ghosh, Electrical and Mechanical Engineer whose knowledge and experience will be of help to us.

Gentlemen, I may look back on the year under consideration as a successful one. There is an increase of more than 12% in sales over the previous year's figures and although the overhead expenses and cost of raw materials continued to rise, the increase in volume of business has brought in larger profits. Judicious purchases of raw materials were our key note. The increase in profits enables the Directors to transfer to Reserve Fund Rs. 2 lacs which is same as last year. The rate of dividend to all the different class of sharcholders has been maintained after deduction of tax on dividends as prescribed by the Finance Act, 1960.

Gentlemen, this being the sixtieth year of our Company's existence, our Diamond Jubilee Year, your Board of Directors has recommended payment of half month's basic salary as Special Bonus to all employees who are eligible to get it. This is apart from any other Bonus that your Board of Directors may be pleased to sanction later on after the Annual General Meeting. I hope the new era that dawns with the Diamond Jubilee will bring an atmosphere of continued industrial peace and harmony in the years to come.

The centenary of Acharya Prafulla Chandra Ray is going to be celebrated in August, 1961, and it is expected that it will be celebrated in a fitting manner. As you all know Acharya Prafulla Chandra Ray was the founder of this Institution and we will be failing in our duty if we do not play our part in paying due homage to his memory. You are expected to sanction a decent amount for the Centenary Fund. I hope you will give me your considered opinion about the amount to be donated to the Centenary Fund after the business of the agenda is over.

Modernisation, expansion and increased production have been our motto all along.

Expansion of Alum Plant

Last year I referred to the expansion of our Alum Plant and erection of a bigger Sulphuric Acid Plant. Immediately after the last Annual General Meeting, your Company prepared estimates, etc. for substantial expansion of Alumina Ferric Plant and Sulphuric Acid Plant and submitted applications in terms of Industries (Development and Regulations) Act 1951, in early September, 1959. Although it was admitted in all quarters that there is shortage in production of Alum and Sulphuric Acid in the country, the Company could get Industrial Licence for Alum only in early March, 1960, and that for Sulphuric Acid Plant in April, 1960.

Applications for import licence for foreign components of the plants were submitted by the middle of April, 1960, but till today these have not finished their grindings through the various departmental processing machines. This is unfortunate.

For these schemes and projects we need additional finance and your Directors have decided to raise a loan of Rs. 35 lacs from the Industrial Finance Corporation. We will have to invest some more money from our own resources. Gentlemen, we have high hopes and expectations about our expansions and future programmes but there are risks and responsibilities also which we will have to face with courage and determination.

Completion of our office buildings has also been taken up and is progressing satisfactorily.

As I have mentioned in previous years our usual policy of gradual expansion will continue. We have taken up expansion of our plants for the manufacture of Sulphone Drugs (which is used for the treatment of Leprosy) as we are not being able at present to meet the needs of the country. We have also taken up expansion of our Caffeine, Strychnine and Brucine plants. Due to non-availability of sufficient quantity of Tea-Waste from the Tea Gardens, who were not very co-operative in the past, we could not produce Caffeine in sufficient quantity. Due to large scale export of Nux Vomica seeds we have also not been able to manufacture Strychnine and Brucine economically. Incidentally, Caffeine, Strychnine and Brucine have very good export markets. We are also expanding our plants for the production of heavy, fine and pharmaceutical chemicals. A section has been set apart for the production of analytical reagents and laboratory chemicals to make the country self-sufficient in these vital products.

Production of Ether

Expansion of our Kanpur Factory has been completed. Next year we have in our mind to take up the production of Ether in our Kanpur Factory on a big scale. Alcohol which is required for the manufacture of Ether is available in abundance at Kanpur and at a cheaper rate. Ether is at present being manufactured at our Panihati Factory but due to shortage of Denatured Spirit the production is far short of demand.

There is some increase in our export business. We had a good market for our pharmaceutical preparations and special medicines in Burma, but owing to introduction of new import policy there, our business has been hard hit. The Union Government of Burma have already started manufacture of drugs and medicines conforming to B.P. and B.P.C. Standards and as such these are not being allowed to be imported there

There is also a considerable demand for our medicines in East Pakistan. But because of their import policy and quota system our business in that country was very poor. We, however, expect some business in the current year as the import policy has been relaxed to a certain extent. Ceylon market generally imports medicines, etc. from European countries. In spite of this we could do some business there. Owing to shipping difficulties in 1959 our products could not be shipped to Ceylon as a result of which some amount of business was lost. After protracted correspondence with the authorities concerned the position has changed for the better. As regards our inland business, booking of goods in general was satisfactory except for temporary restrictions in booking of goods in different railways from time to time There were great difficulties in the movement of goods to stations in N. E. Rly. (North Behar) and N. F. Rly. (Part of East Behar and North Bengal) due to suspension of booking for major portion of the year. We availed of road transport services to some stations as the rate of freight was cheaper. As regards our business in Assam, sometimes due to heavy congestion at the sheds of the shipping companies shipments were delayed. Our maximum traffic is to Gauhati. About 50% of the consignments to this station was booked through private shipping companies. In general our traffic to Assam was not affected.

Foreign shipment—There was no difficulty in shipping goods in far eastern ports namely Singapore, Penang, Bangkok, etc.

Coal Shortage

It is no exaggeration to say that short supply of coal is affecting industrial output. In the latter part of last year and right up to this date there is short receipt of coal practically every month. Until and unless the wagon position improves this will remain a chronic problem We are told that there is enough stock of coal at the pit heads. No correct target of production can be obtained while supply of coal is so irregular and uncertain. Any change over to road transport for supply of coal however limited will boost up the cost of production, which is not at all desirable. Railway authorities should ensure the supply of wagons in the best interest of the industry.

During the year under review the stock of some of the principal raw materials in our Panihati Factory became very acute on several occasions affecting the production of Alumina Ferric and Road Tar. Our receipt of coal was 13% less and the receipt of Bauxite was 25% less. Both the materials which are abundantly available at the source could not be despatched for short supply of wagons.

Last year Crude Coal Tar receipts from different Steel Plants was only 7,400 tons though our plants can distill 12,000 tons of crude tar annually. With the starting of tar distillation plant at Bhilai, Rourkela and Durgapore by the Steel Plants themselves, the supply of this material will be more uncertain unless Government takes some action and puts a ban on burning crude tar (which contains valuable by-products) as fuel by private sectors. The tar distillation industry in the private sectors will suffer and if burning of crude tar as fuel continues, the very existence of this industry will be at stake.

Perfumes and Toiletries

Some of our perfumes, toiletries and cosmetics have good export potentialities and we are taking steps to assess them realistically under the Export Promotion Scheme but the restriction on the import of synthetic essential oils, etc. in keeping with the policy of the authorities is a bar to any expansion in this respect. It will take a long time to duplicate certain special perfumary compounds and synthetic essential oils with their characteristics and distinctive key-notes.

With the accelerated pace of industrialisation of the country as envisaged in the second and the successive 5-year plans of the Government, it is natural that machine and equipment industry in common with many others has been making appreciable progress but we have to guard against over-zealousness in such a very specialised branch of manufacture as the machine building industry. It pains us to find that in some cases application for import of machines which are urgently require as replacement and which we know for certain cannot be satisfactorily fabricated in India and delivered as per schedule is turned down and we have been asked to try some "so-called" indigenous manufacturers. Our production has thereby suffered. We hope the tendency to refuse or delay actual users' applications for import of machinery or for the matter of that other essential raw materials, without making adequate enquiries about the quality of the goods offered by indigenous manufacturers should be curbed in the wider interest of our country. Although difficulties are still there we must say that there has been appreciable improvement in the disposal of import applications.

Since I met you last, Port Commissioners have tightened the security arrangements with the result that there is less pilferage now but the heavy increase in the Port Commissioners' rent charges is causing anxiety.

The Customs Department is not as prompt as one should expect. There is room for improvement in the matter of releasing Bills of Entry.

Profit and Loss Account

The Profit for the year after providing for Depreciation, Bad Debts and all other charges is Rs. 18,38,274.01 nP as compared with Rs. 15,85,497.59 nP for the previous year. After distribution of profits and usual transfer to various funds, Rs. 9,215.25 nP has been carried forward in the Balance Sheet as undistributed profits. Your Directors have recommended a dividend of 10% on all classes of Ordinary Shares subject to Income-tax payable on Dividend @ 30% according to the Finance Act, 1960. Income-tax payable on the Preference Shares at the same rate has also been provided for in the same manner as in the case of Ordinary Shares. I hope this will receive your approval. Rs. 3,75,000/- has been transferred to Taxation Reserve.

Gentlemen, I believe with sympathetic help from the Government and co-operation from our employees we may with confidence look forward to better results in the future. Besides, gradual improvement in the standard of living of the people of our country will I hope bring with it increased demand for our products. A scheme to manufacture some basic chemicals utilising the by-products of Durgapur Coke Oven Project in this State is under active consideration of the State Government,and an Industrial licence from the Central Government for this project is awaited Your Company have always taken a leading part in providing raw materials for the industrial development of the country and have not lagged behind in this instance to join hands with the sponsors of the project which includes a reputed foreign firm.

Although it is premature to give you more information on the subject till it finally takes a concrete shape, I can assure you that your Company will try to give you an opportunity to invest in the new Company to be formed for the purpose.

I should finish my statement by expressing my grateful thanks to my colleagues for their help and guidance. I must also recognise the valuable co-operation that I received from the officers, staff and workers and above all our stockists and distributors without which the excellent results could not have been achieved.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

BOMBAY SUBURBAN ELECTRIC SUPPLY LIMITED

CHAIRMAN, MR. A. N. HAKSAR'S ADDRESS

The following is the speech delivered by the Chairman, Mr. A. N. Haksar, at the Annual General Meeting of the Company held on 17th August, 1960 :—

Gentlemen,

This General Meeting of your Company is the first to be held after the inauguration of the State of Maharashtra. We offer our felicitations to Mr. Chavan and his colleagues with the hope that their efforts on behalf of the new State will be amply rewarded. They have our full support and assurance that we shall do all we can to further the prosperity of the new State and its people.

This change in the political scene will mean greater potentiality for industrial development in the Bombay Suburban area—an area in which your Company is playing an ever increasing part. The rate of growth in power supply in the area has continued to be well above the normal, as will be seen from the percentages of increase during the last three years, which have been 16.5, 19.5 and 21.4, respectively. These are impressive figures and justify the confident hopes of those who had all along forecast rapid development in the Suburbs. Careful planning over the last ten years has enabled your Company to anticipate load requirements. A lot of money was spent on intensifying the mains net work and we are now reaping the benefits.

Future development is likely to be even more impressive. This will place a greater measure of responsibility on your Company, and there is no doubt that the bold planning of the past and the efficiency of our staff will ensure that we are not found wanting.

The tempo of power development in your Company's area of supply will require an investment of about Rs. 45 lakhs per year during the Third Five-Year Plan period. A part of this will be met by internal finance to the extent of Rs. 25 lakhs yearly, which will accrue by way of depreciation, consumers' contributions towards service line charges and the development reserve permitted under the Electricity (Supply) Act. This means that we shall need about Rs. 20 lakhs per annum during the next five years. At present development capital is being provided through Bank finance and this will allow the Company to carry on for about two years without needing to tap further sources of capital. Thereafter we shall have to consider what can best be done to raise new capital and it is to be hoped that by then the investment climate for Electricity undertakings is more favourable.

Statutory Control

This brings me straight to the effect of the statutory control imposed on Electric Supply Undertakings by the financial provisions of the Electricity (Supply) Act, and its impact on the problem of raising capital for power development. It is well known that for some time no electric supply Company has had the confidence to enter the market for equity capital. Furthermore, the position has worsened with the change in the tax pattern introduced by the Finance Act, 1959, whereby the facility of "grossing up" of dividends in the hands of shareholders was withdrawn. In addition, dividends paid to the shareholders have been made subject to deduction of tax at source at the prescribed rate of 30%. Although the new tax pattern applies to industry as a whole, its effect on our Industry has been particularly severe. For one thing, by virtue of the stringent control applied under the Electricity (Supply) Act, we are not allowed to step up earnings to a level which would permit a higher rate of dividend. Secondly, we cannot even divert to the investor, the benefit of tax savings as is possible in the case of other industries. Our Reasonable Return, in other words the amount effectively available for distribution to the shareholders, remains to all intents and purposes the same, whatever tax is payable. Thus we and the Industry as a whole are caught between the contradictory provisions of Income-tax Law and Electricity Supply Law.

It was hoped, by way of interim relief, to be able to divert to the investor in respect of the financial year ending 31st March 1960, the tax difference between 51.5% (the old rate of tax) and 45% (the rate at present in force). However, this suggestion has met with legal difficulties. Efforts are still being made to obtain relief in another form, and the most favourable proposal at present is to permit the Undertakings, for the financial year 1959-60, a special appropriation representing the tax relief of 6½% to be used for "augmenting the machinery of production". This interim relief, if it matures, is expected to be without strings and the incidental benefit to the investor although not significant in terms of cash relief, will still go some way to improve the equity value in the Industry.

However, any interim relief can at the best only be a sop and if the Electric Supply Industry—investment in which, at one stage, was regarded as gilt-edged—is to regain its place in the heart of the investor something more will need to be done. Ultimately the best way to restore equity values—which alone will attract development capital—in the Industry is for the Reasonable Return itself to be upgraded from the present level of the Reserve Bank rate plus 2% to at least the Bank Rate plus 3%. This proposal and other modifications to the Electricity Law which will bestow on the Industry some benefits, have been sponsored by the Federation of Electrical Undertakings of India and I can only hope that before the end of this year the Industry will see a Parliamentary enactment which will improve the investment climate.

Increased Power Supply

With all three units in the Trombay Thermal Station now in commission, the power supply position in the Bombay area has improved. With the expected commissioning of the first generating unit of 60,000 kW in the Koyna Hydro-electric power station by October 1961, the availability of power will become easier still, even allowing for rapid load development. This should mean that there will be progressive releases of bulk power to meet the requirements of industries and homes in Licensee's areas. As a result it will be necessary for your Company, in common with others, to obtain the necessary materials for development, such as cables, transformers, switchgear, meters, and so on in order to pass on power to the consumers. I refer specifically to this point, as we have had considerable difficulties in recent months to obtain import licences for items which indigenous manufacturers are unable to supply. There is a danger that the enormous increase in generating capacity in the country and the money spent on it, will not be used to the best advantage if the materials essential for distribution are not available to the Industry. Power denied to a needy consumer is progress withheld—power denied to potential exporters will cost the country dearly. One bright feature about this problem, however, is the very valuable assistance rendered by the Central Water & Power Commission to all power systems in obtaining much needed equipment. With power development having received a setback during the Second Five-Year Plan period because of the foreign exchange crisis, I hope that a greater measure of co-ordination will prevail during the Third Plan period at all stages of power development, so that available power reaches the consumer.

Shareholders may naturally be worried at the resolution adopted recently by the Bombay Municipal Corporation suggesting the municipalisation of the Bombay Suburban Electric Supply Ltd. This is no new development. The first time such a proposal was mooted was in 1953, and ever since, this forum of agitation by the Greater Bombay Municipal Corporation has tended to be a recurring feature. Agitation of this nature obviously carries political overtones, often clothed in unknown and untested economic advantages which, it is claimed, would accrue to the Suburban community. However, what is plainly not taken into account is the lower density of population in the suburbs, as compared with the City. This means that for a given amount of capital expenditure on power distribution, less units will be sold in the suburbs than in the City at the present. As development of the suburbs takes place, the disparity will narrow until offtake in both areas will be comparable When this happens our rates will compare very favourably with those charged in the City. I would remind the agitators, however, that our rates have progressively been reduced since 1947 and this process will continue as load development gathers momentum in the coming years.

In view of the regulations imposed on the Electric Supply Industry, nationalisation or municipalisation, as a doctrine, may not carry much weight in official circles at the present time. In fact, it is the proclaimed policy of the Central Government that Electric Supply Undertakings rendering valuable service should not be displaced merely for the sake of displacement. I hope I am right in saying, therefore, that the investor in the Corporate Sector of the Electric Supply Industry need not worry too much about premature acquisition.

Satisfactory Results

Turning to the Accounts, the printed Balance Sheet has been in your hands for some time, and I feel sure that you will agree that the results are satisfactory. I would like to add for your information that in accordance with the Financial Principles embodied in the Electricity (Supply) Act, the Clear Profit actually earned for the year is equal to the permitted Reasonable Return.

Another point of interest pertaining to the accounts on which I would like to make some observations is that, shortly before the Accounts for the year were due to be finalised, the Supreme Court judgments on the series of test cases filed by the Income-tax Department on the legality of additional Income-tax became available. These judgments ruled that the levy was not tenable. In consequence, the provisions in respect of Additional Income-tax made in the Accounts amounting to Rs. 3,28,073 for 1953-54 and Rs. 3,55,460 for 1954-55 have been taken to the Appropriation Account. However, at the same time, adjustments in terms of the Electricity (Supply) Act had to be made by reopening the computations for the respective years where necessary further appropriations have had to be made in accordance with law, to the Statutory Reserves. This means that not all the provisions, now written back, are available to the Company. However, I am sure that you will welcome the increase in the dividend this year, which has partly been due to the above-mentioned windfall. As last year, I regret that we must deduct Income-tax but as I have tried to explain, Electricity Companies are in a difficult position. We cannot charge up the Income-tax on your dividends to working as we could before.

A reference has been made earlier to the interim relief which the Electric Supply Industry may be able to obtain in respect of the financial year under review representing the tax saving of 6½% accruing to non-regulated industries as a matter of course. In your Company's Accounts for the year 1959-60, the appropriation seems feasible and consequently a sum of Rs. 1,06,860 has been set aside, subject to the requisite sanction being obtained from the State Government. The amount in question is icluded in the sum of Rs. 2,50,000 appropriated to the Dividend Equalisation Reserve. It is likely that the special appropriation may only be approved subject to the amount being retained in the business. If such a stipulation is forthcoming, it may have to be transferred to a Capital Reserve later. If for any reason the limited relief indicated above does not materialise, the Company will be obliged to write back the sum of Rs. 1,06,860 in due course.

During the year under review, Sir Chunilal V. Mehta resigned his seat on the Board of your Company and in May 1960, Mr. M. S. Captain did likewise. The services rendered by these two gentlemen to your Company have been very valuable and the Board have recorded their grateful thanks to them. I have no doubt that you, gentlemen, would wish to associate yourselves with the sentiments expressed by the Board.

The Report makes a reference to certain demands made by the Staff Union having been referred to the arbitration of Mr. H. R. Gokhale. The procedure of voluntary arbitration adopted by your Company in matters relating to disputes with the Staff Union has received wide appreciation.

Note : This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

STATE DEVELOPMENT LOAN, 1969.

ISSUE PRICE AT PAR.

Open on the 29th August, 1960.

The loan will be closed as soon as total of approximately Rs. 1,000 lakhs has been subscribed and in any case not later than the close of business on the 3rd September, 1960.

The applications for the loan will be received at —

(a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore,

(b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below,

(c) the branches and Treasury pay offices of the State Bank of Hyderabad within the State of Maharashtra,

(d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury pay office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

Money

THE CALCUTTA MONEY MARKET

MODERATE FALL IN ADVANCES

Wednesday, 24th August.

THERE was a moderate fall in the general level of advances in the Calcutta money market during the past week. Most of the decrease was in jute and sugar credit, but the accommodation given to engineering concerns and for foodgrains storage was also less. Advances to the textile industry showed little change. In the interbank market, conditions remained tight, and the call rate was unchanged at 3½ percent.

In the exchange market, the number of bills on account of gunny shipments increased, but tea bills were still far less than normal. Remittance was on a very limited scale. Sterling was steady during most of the week, but tended to ease towards the close.

BULLION WAS STEADY DURING THE PAST WEEK AS supplies were scarce. Silver advanced from the previous week's level of Rs. 221.75 to Rs. 222, quoted today for ready delivery. The rate for forward delivery was Rs. 222.25. The London and New York prices were 79¼d and 91⅛ cents.

Gold was steady in sympathy with silver. The price was quoted at Rs. 134 and the sovereign fetched Rs. 87.75.

DURING THE WEEK ENDED 19TH AUGUST, GOVERNment of India Treasury bills for Rs. 22,89,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 23rd August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 were accepted in full, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at Bombay and Nagpur up to 11 a.m. on 6th September and at other centres up to the close of business on 5th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 24th August to 3rd September at Rs. 99.381 percent, subject to the condition that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 17th August to 20th August amounted to Rs. 25,00,000.

DECLINES OF Rs. 15.74 CRORES TO Rs. 1,796.39 crores in active notes, and of Rs. 8.75 crores to Rs. 1,818.57 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 19th August, 1960. The currency contraction was adjusted by reducing rupee securities by Rs. 8.92 crores to Rs. 1,446.65 crores. In the Banking Department, deposits of the Central Government rose by Rs. 9.74 crores to Rs. 65.73 crores, as did other Government accounts by Rs. 13.33 crores to Rs. 29.51 crores. Balances of commerical banks at Rs. 122.17 crores showed a rise of Rs. 4.92 crores. Balances held abroad rose by Rs. 26 lakhs to Rs. 21.48 crores. Investments fell by Rs. 7.82 crores to Rs. 247.62 crores. Other loans and advances increased from Rs. 116.39 crores to Rs. 118.58 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10.85 crores (Rs. 10.90 crores). Ways and means advances stood at Rs. 35.39 crores (against Rs. 41.76 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 12th August, 1960, shows a rise of Rs. 4.34 crores to Rs. 614.31 crores in total deposits. Investments in Government securities are down by Rs. 5.27 crores to Rs. 374.12 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 4.64 crores to Rs. 204.87 crores.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 26-8-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
26-8-60	27-11-60	2,00,00	Rs. 2.540%
19-8-60	20-11-60	2,00,00	Rs. 2.540%
12-8-60	13-11-60	2,00,00	Rs. 2.745%
5-8-60	6-11-60	2,00,00	Rs. 2.737%
29-7-60	30-10-60	2,00,00	Rs. 2.745%
15-7-60	16-10-60	2,00,00	Rs. 2.745%
8-7-60	9-10-60	2,00,00	Rs. 2.745%
1-7-60	2-10-60	2,00,00	Rs. 2.745%
24-6-60	25-9-60	2,00,00	Rs. 2.745%
17-6-60	18-9-60	2,00,00	Rs. 2.745%
10-6-60	11-9-60	2,00,00	Rs. 2.745%
3-6-60	4-9-60	2,00,00	Rs. 2.745%
27-5-60	28-8-60	2,00,00	Rs. 2.745%

(Monthly Maturities 000's omitted)

August 1960	2,00,00
September 1960	8,00,00
October 1960	8,00,00
November 1960	8,00,00
Total	26,00,00

Cash and balances have consequently increased by Rs. 9.73 crores to Rs. 35.52 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 12th August, 1960, shows Demand and Time liabilities at Rs. 778.75 crores (Rs. 12.67 crores on account of borrowings from banks) and Rs. 1,126.92 crores (Rs. 28.04 crores), compared with Rs. 783.75 crores (Rs. 19.46 crores) and Rs. 1,220.11 crores (Rs. 28.45 crores) in the previous week. Cash has increased by Rs. 1.51 crores to Rs. 44.93 crores, while balances with the Reserve Bank have declined by Rs. 3.11 crores to Rs. 110.25 crores. There is a drop of Rs. 4.82 crores to Rs. 733.29 crores in investments. Advances and bills discounted at Rs. 1,119.40 crores show a fall of Rs. 4.53 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.7 percent and 55.8 percent, against 7.8 percent and 56.1 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of May 1960:

(1) At the Reserve Bank of India in India		66,56,48,000
(2) At treasuries in India ...		23,77,000
(3) In England (Sterling converted at 18d the rupee) ...		96,87,000
Total ...		67,77,12,000

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow July 29, 1960.

PRESS NOTE

4 Per Cent. UTTAR PRADESH STATE DEVELOPMENT LOAN, 1969.

The Government of Uttar Pradesh are floating a loan of Rs. 7 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscriptions on August 29, 1960 and will close on September 3, 1960 unless closed earlier. The main terms of the loan are that the issue price will be Rs 99.75 for every Rs. 100 of the loan applied for; the loan will have a currency of 9 years from August 29, 1960 and will be repaid at par on August 29, 1969; the loan will carry interest at the rate of 4 per cent per annum from August 29, 1960, payable half-yearly on February 29 (February 28, in case of non-leap years) and August 29, the payments being subject to tax under the Indian Income Tax Act 1922. Subscriptions for the loan can be made in the form of cash or cheque or of securities of 3 per cent U. P. Loan 1960 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department notification No. B-6521/X—88-60, dated July 29, 1960, copies of which, along with the application form are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh—

Revenue Position—The revenue receipts and expenditure and the surpluses for the last fifteen years are as follows:—

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus(+)
1945-46	2,995	2,551	+444
1946-47	3,265	3,061	+204
1947-48	3 876	3,771	+105
1948-49	4,920	4,729	+191
1949-50	5,626	5,626	...
1950-51	5,189	5,184	+5
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	...
1953-54	7,564	7,281	+285
1954-55	7,819	7,713	+106
1955-56	8 553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,493	9,942	+551
1958-59	11,723	11,384	+339
1959-60	12,624	12,493	+131

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development Schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1959-60 were 310 lakhs in the U. P. Road Fund, 12 lakhs in the Hospital Fund, 49 lakhs in the Famine Relief Fund, 1,410 lakhs in the Revenue Reserve Fund, 2,412 lakhs in Zamindari Abolition Fund 140 lakhs in the Depreciation Reserve Fund—Irrigation, 280 lakhs in the Depreciation Reserve Fund—Government Bus services, 432 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 124 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,190 lakhs.

Debt Position—On March 31, 1960, the debt of the Uttar Pradesh Government amounted to 25,369 lakhs consisting of 952 lakhs representing the consolidated debt due to the Central Government and 18,176 lakhs taken from that Government for development purposes and 453 lakhs for Relief and Rehabilitation Schemes, plus 5,334 lakhs representing the amount of public loans floated by this Government from time to time plus 145 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 209 lakhs from the Reserve Bank of India and 44 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 56 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1960 amounted to Rs. 7,402 lakhs. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds which amounted to 1,846 lakhs on March 31, 1960 are mostly invested in Government of India Securities. Besides this a sum of 1,366 lakhs is also available in the Sinking Fund built up for the amortization of loans obtained from Government of India, which are repayable in lump sums.

Assets of the Government—Against the outstanding debt of 25,369 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tubewells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 21,369 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 4 858 lakhs. Besides these there are a large number of buildings and roads for which no separate capital accounts are maintained.

Foot Notes—(1) The accounts for 1959-60 have not yet been closed finally. The figures for 1959-60 mentioned in the Press Note are based on the March (Final) 1960 Accounts.

(2) Adjustments have yet to be carried out in the accounts in respect of the capital assets relating to the Electricity Schemes transferred to the U.P. Electricity Board. The cost of such assets will be deemed as loans advanced by the State Government to the Board.

IRREGULAR TREND IN STOCK MARKET

INTEREST CENTRES ON INDUSTRIALS

London, 24th August.

INTEREST in the stock market during the past week was confined almost entirely to industrial equities. Other sections of the market were largely neglected and prices generally moved within narrow limits. After their sharp advance in the previous week, industrials reacted on profit-taking and lost further ground after the very disappointing July overseas trade figures were published. However this reaction did not go very far. Prices soon steadied at the lower levels and then started to recover. This recovery rapidly gathered strength and not only were the losses recouped, but fresh gains were recorded. On balance, prices in many cases were higher on the week. The basis for the renewed strength of industrials is the growing optimism concerning economic prospects—in spite of the overseas trade position—and the consequent hope of an easing of the credit squeeze and/or a reduction in the British Bank rate. The flow of money into the U.K. reserves has particularly encouraged hopes of a cut in Bank rate. It is known that there is a tremendous weight of money awaiting suitable opportunities for investment, and it would appear that some of this money has been coming into the market recently. The buying of industrials has not been heavy, but with little or no selling, an already chronic shortage of stock has become acute. Stores were particularly encouraged by the Woolworth's scrip issue and dividend forecast. Gilt-edged securities remained very quiet and prices showed little change, while the strength of Greek bonds on debt settlement hopes was the feature of foreign bonds. Insurance shares attracted good buying, while banking and hire-purchase finance shares improved. African mining shares were dominated by the Congo situation and both gold and copper shares were easier. Tin shares continued to fluctuate. Oil shares remained an unsettled market, and further losses were recorded. Rubber shares tended lower in sympathy with the fall in the commodity price. Tea shares were quiet and narrowly irregular.

The Money Market

Credit conditions in the money market over the past week remained difficult, and the rate for non-regular money ruled firm at 5¼ percent. The banks' lending power was restricted by the immobilisation of funds to the special deposit account so that their lending resources fell short of market needs. However, the authorities kept a watchful eye on the situation and gave assistance from day to day sufficient to keep discount houses from having to undertake penal borrowing. The recent good demand for bills continued, but the cash position kept the turnover to moderate proportions. End-October and early Novembers were discounted at 5¼ percent and also at 5⅛ percent. At last Friday's tender, there was a modest increase in the Treasury bill rate of approximately 3d to £5 11s 8.78d percent, the money market making no change in the joint bid of £98 12s 1d percent.

Activity on Wall Street

The U.S. bond market was described by dealers as hesitant during the past week. One trader's comment on the dull market for U.S. Government bonds was: "Everybody is waiting for some reason to buy or sell." Investment quality corporate issues were about unchanged on a limited stock market. In the foreign bonds section, Greek 6 percents at $68 were traded up to more than one point, and 7 percents at $64 were up over 2 points, on debt settlement hopes. The Republic of Cuba 4½ percents at $77 recovered some of the loss in the previous week, while the Union of South Africa 5½ percents had a steadier tone.

Bank Rate Cut in Japan

Japanese business men and newspapers are expecting the Bank of Japan to lower its official rediscount rate shortly. The new rate is expected to be 0.0190 yen a 100 yen a day, that is, 6.935 percent a year. At present, the Bank's official rate is 0.0200 yen a 100 yen a day or 7.30 percent a year. Japanese newspapers said that the Bank of Japan had come to the conclusion that Japan's national economy would continue to expand without danger of a new balance of payments crisis in the foreseeable future.

I.C.I. PROFIT-SHARING BONUS

Over 93,000 employees of Imperial Chemical Industries qualified for bonus in 1959 under the Company's profit-sharing scheme. The bonus amounts to £7,306,000 gross (average an employee £78 7s 4d), which, after deduction of personal income tax, is £5,523,000 (average an employee £59 4s 10d). The net bonus has been paid to the trustees of the scheme, who will use it to acquire £1,825,000 I.C.I. ordinary stock for employees. When an employee has 40 or more units or stock standing to his credit, arrangements are made for the stock to be registered in his name. This year £1,247,000 ordinary stock will be handed over to 23,000 employees. Nearly one-half of the stock handed over to employees in October 1959, has been retained by them.

Stocks and Shares

INVESTORS CONSERVING FUNDS FOR NEW ISSUES

SHARE PRICES RECEDE FURTHER

Wednesday Evening.

ANOTHER dull and dreary week was witnessed in the Calcutta Stock Exchange. In the absence of fresh investment orders, prices continued to fall. Among the factors responsible for the dull spell were fears about official measures to curb excessive speculation and the tendency on the part of investors to conserve their financial resources for the spate of new issues which will be launched from the beginning of September. The Finance Minister's recent statement in the Rajya Sabha has done little to dispel the uncertainty about the Government's intentions, but his remark that the trend of share prices was being "constantly watched" has had a restraining influence on bulls. The meeting of the Investment Committee of the L.I.C., due to be held on 22nd August, was postponed until today, and brokers are now awaiting the results of their offers. Large parcels of shares, it is believed, changed hands during the past week in two Companies—Raneegunge and Bhartia Electric Steel.

Hindustan Twyfords Ltd, an Indo-British venture, is expected to come to the market in the first week of September, with a public offer, at par, of 145,100 equity shares of Rs. 10 each and 20,000 7% tax-free cumulative redeemable preference shares of Rs. 100 each.

With the borrowing programme of the State Governments commencing from 29th August, existing securities, both Central and State, lost further ground. The exception was the 3% Conversion Loan 1986 which advanced over the week from Rs. 73.50 to Rs. 73.75.

In the banking section, United Commercial continued to attract buyers, and the shares improved further from Rs. 80.50 to Rs. 83.

With the exception of Bengal, which were higher at Rs. 342, coal shares were neglected and prices were marked down fractionally. Raneegunge, after spurting to Rs. 22, reacted at the close to Rs. 16.75.

In cotton textiles, Dunbar were marked down by Rs. 5 to Rs. 220, and Elgins receded from Rs. 20.25 to Rs. 19.50. Kesoram were unchanged at Rs. 31, with sellers over.

Very little business was reported in the electric supply section and prices were more or less unchanged.

In the engineering group, Indian Iron fluctuated narrowly around Rs. 25.50 to close tonight at Rs. 25.46, which was the settlement rate. Bhartia Electric Steel were marked down from Rs. 15.25 to Rs. 13.44, while Braithwaite met with some enquiry at the previous level of Rs. 32.62. Burn shed Rs. 4 to close at Rs. 481, while Guest, Keen, Williams were fairly steady around Rs. 51.75. Textile Machinery met with some profit-taking and closed lower at Rs. 27.05.

In the jute section, Agarpara met with some enquiry on rumours that the Company might change hands, and the shares improved from Rs. 12.75 to Rs. 13.50. Other issues in this section were marked down on a wide front in the absence of enquiries.

In papers, Bengal were easier at Rs. 100, as were Sirpur at Rs. 20 and Orient at Rs. 47.

Sugar shares were dull and neglected, with the exception of Dyer Meakin Breweries and Ramnugger Cane which were steady at Rs. 23.50 and Rs. 26.37, respectively.

Among miscellaneous industrials, Alkali and Chemical changed hands at Rs. 34.50 and there was some enquiry for Bengal Potteries at Rs. 7.31. British India Corporation were softer at Rs. 7.87 and Clive Row Investment were offered at Rs. 8.62. Dunlop Rubber were easier at Rs. 45.50 and Hindustan Motors were marked down from Rs. 22.75 to Rs. 22.19. Indian Cables moved down to Rs. 36.50 from an opening quotation of Rs. 37.06. India Steamship were done at Rs. 10.75 and Phillips Carbon Black were better at Rs. 19.25. Associated Battery met with some enquiry at Rs. 38.12. New Asiatic Assurance were marked down sharply to Rs. 4.94, while Shaw Wallace met with some investment enquiry and recovered to Rs. 26. Union Carbide were fairly steady at Rs. 57.50.

Little interest was shown in the tea section and prices fluctuated narrowly at around last week's levels.

In the mining group, Indian Copper were subdued at Rs. 4.80, as were Metal Corporation at Rs. 10.25 and Orissa Minerals at Rs. 41.50.

Investment and Finance

Providing Rs. 38,371 (against Rs. 46,121) for taxation, the profit of the Investment and Finance Co. Ltd has risen from Rs. 43,598 to Rs. 54,802 for the year ended February 1960. An ordinary dividend of 7½ percent, taxable, has been declared, against 5 percent, tax-free, in the previous year. With various adjustments, there is a balance of Rs. 24,168 to be carried forward, against Rs. 33,150 brought in.

General Investment

There is a decline from Rs. 22,839 to Rs. 16,928 in the profit of the General Investment and Trust Co. Ltd for the year ended February 1960, after providing Rs. 12,261 (against Rs. 17,681) for taxation. An ordinary dividend of 5 percent, subject to deduction of tax, has been declared, compared with 3½ percent, tax-free, in the previous year. After making various adjustments, there is a carry-forward of Rs. 8,066, against Rs. 15,535 brought in.

Hercules Insurance

The profit of the Hercules Insurance Co. Ltd has amounted to Rs. 10.16 lakhs for the year ended December 1959, against Rs. 10.28 lakhs in the previous year. A dividend of 20 percent, subject to deduction of tax, has been declared, against 20 percent, tax-free, in the previous year. The allocations include Rs. 15,252 (against Rs. 62,718) for depreciation, Rs. 4.12 lakhs (against Rs. 5.38 lakhs) for taxation and Rs. 1.14 lakhs (against nil) for general reserve. After making various adjustments, there remains a balance of Rs. 3,62,182,

Are You a Small-scale Industrialist?

This will interest you

To help small scale industries fulfil their role in the country's developing economy, the State Bank, in collaboration with other interested institutions, put into operation in 1956 a Pilot Scheme at a few selected centres to make available to them co-ordinated credit facilities.

The scheme has worked well and the Bank is now in a position to offer, at all its branches, liberalised facilities which were originally made available only at the Pilot centres.

If you require financial assistance, why not talk things over with the Agent of our nearest Branch? He will welcome the opportunity of assisting you and will be glad to forward your application, if need be, to the appropriate Governmental and other authorities.

which is proposed to be carried forward, against Rs. 3,50,838 brought in.

Oodlabari Tea

The Oodlabari Co. Ltd has increased its profit from Rs. 44,718 to Rs. 76,865 for the year ended December 1959, after providing Rs. 50,000 (same) for taxation. An ordinary dividend of 10 percent, subject to tax, has been declared, against 7½ percent, tax-free, in the previous year. Depreciation is allocated Rs. 49,116, against Rs. 53,708. Reserve fund absorbs Rs. 20,000. After making various adjustments, there is a carry-forward of Rs. 7,268, compared with Rs. 9,606 brought in. A crop of 7,546 maunds was manufactured, against 7,354 maunds. The average sale price was Rs. 1.75 a lb. Estimates for 1960 provide for a crop of 8,000 maunds at a cost of Rs. 9.92 lakhs.

Bombay Market

SHARE PRICES EASE IN RESTRICTED TRADING

RIGHTS FROM LARSEN AND TOUBRO

Wednesday Evening.

THE Bombay stock market was quiet during the past week and business in both clearing and cash scrip declined considerably. Except for a few bright spots, most share prices fell. Sentiment in steel shares was subdued by reports that the Tata Iron and Steel Company might not declare a dividend until the changes in the retention prices of steel and pig iron were announced. In cotton mill shares, operators were worried about the future of cloth prices.

Tata Steel were subdued at Rs. 160.25 and Indian Iron were quoted at Rs. 25.50 on lower advices from Lyons Range. Among engineering shares, Premier Construction met with support on rumours that the Company might soon proceed with the capital reorganisation scheme. Larsen and Toubro were quoted at Rs. 53 and the decision to issue rights shares had little effect. The Company has decided to issue 300,000 ordinary rights shares of Rs. 10 each at par to the existing shareholders in the ratio of three new shares for every eight held. Tata Locomotive declined to Rs. 285 on the view that the Company would not issue rights shares in the near future. The Company, it was believed, had asked the Government for permission to double the production of trucks to 24,000 a year. Alcock Ashdown were freely sold at Rs. 292 and Mukand Iron changed hands at Rs. 27.50. Motor shares were quiet. Premier Automobile were available at Rs. 174 and Hindustan Motors declined to Rs. 22.12.

In the cotton mill group, Bombay Dyeing were quoted lower at Rs. 67.80, as were Century at Rs. 504 on tired bull liquidation. Simplex were steady at Rs. 175 on the hope that the reduction in cloth prices might not affect the working of the Company. Khatau met with support at Rs. 682.50 and Standard improved to Rs. 2,040 on a rumour that the Company might be permitted to issue rights shares at par. Kohinoor were subdued at Rs. 331 and Svadeshi were sold at Rs. 242.50. Finlay were available at Rs. 352.50 and India United Ordinaries were available at Rs. 13.68 without meeting with much support. Apollo were placed at Rs. 1.58.

In the miscellaneous group, sugar shares were shaded in the absence of support. Belapur were quoted at Rs. 368 and Phalton came to hand at Rs. 179. Walchandnagar Industries were indicated at Rs. 305. Among cement shares, Associated Cement were dealt in at Rs. 143.50 and Digvijay were taken at Rs. 161.50. Steamship company shares were subdued and sellers predominated. Scindia Steam declined to Rs. 15.16 and Great Eastern Shipping were sold at Rs. 16.96. Mining shares were quietly steady, and business passed in Shivrajpur Syndicate around Rs. 74. National Rayon reacted to Rs. 509 on pressure and Gwalior Rayon declined to Rs. 45.50. Bombay Burmah were lower at Rs. 577. Ceat Tyre lost at Rs. 271.25 and Voltas were available at Rs. 279. Tata Mill were steady at Rs. 43.50, but Indian Dyestuff fell to Rs. 767.50. West Coast Paper were shaded at Rs. 211 and Tata Chemical were sold freely at Rs. 19.84. Polychem were dealt in at Rs. 306.25 and Colour Chem were offered at Rs. 435.

Bank shares were steady, and business was done in United Commercial at Rs. 79. Central Bank were quoted at Rs. 50 and Bank of India changed hands at Rs. 101. In the insurance group, New India Assurance were placed at Rs. 63 and Vulcan were done at Rs. 19.24.

Prices of electricity supply shares fell. Ahmedabad Electric were indicated at Rs. 86.80. Tata Hydro were dealt in at Rs. 106.25 and Bombay Suburban were bought at Rs. 89.

Madras Market

MODERATE DEMAND FOR TEA AND COFFEE SHARES

GENERAL UNDERTONE CAUTIOUS

Wednesday Evening.

THE Madras stock market was steady during the past week, but turnover was on a small scale. Operators were cautious as far as clearing shares were concerned, because a great deal of anxiety prevailed about official measures for restraining speculation. Investors bought shares discriminatingly. Scattered interest was taken in public utilities after the announcement of some good dividends. Among planting shares, tea scrip met with support due to the satisfactory prices realised at the recent auctions. Coffee shares were steady in view of the increased production, but rubber shares were quiet because it was reported that the Tariff Commission had not recommended any increase in the price of the commodity. Interest was taken in some miscellaneous shares on good corporate news. Selected textile shares were bought as it was thought that the recent cut in cloth prices might not affect profits much.

Business in Government securities was on a small scale because the subscription lists for various State loans will open on 29th August.

Among bank shares, Indian were steady at Rs. 179, as were Indian Overseas at Rs. 177. Indo-Commercial were transacted at Rs. 38 and Pandyan came to hand at Rs. 37.

Among public utilities, Ellore were quoted at Rs. 15 on the payment of a dividend of 20 percent, taxable. Kumbakonam were supported at Rs. 10.25 on declaring a dividend of 10 percent, taxable. Negapatam were dealt in at Rs. 9.86 on the payment of a dividend of 10 percent, taxable. Vellore were done at Rs. 11.50 and South Madras were quoted at Rs. 10.

Prices of sugar shares fluctuated narrowly, and Deccan were done at Rs. 16.30. Business passed in Cauvery at Rs. 152.50 and in India at Rs. 12.60. E.I.D. changed hands at Rs. 38.25 and Mysore were quoted at Rs. 60.50. United Breweries were steady at Rs. 114.50 and Travancore were done at Rs. 12.10.

In the planting group, Blue Mountain were quoted at Rs. 5.43 and Cochin Malabar were dealt in at Rs. 8.10. Consolidated Coffee came to hand at Rs. 26.25 and Ouchterlony were done at Rs. 5. Periakaramalai were bought at Rs. 3.90 and Warthuhully were transacted at Rs. 3.66 on declaring a dividend of 10 percent, taxable. Balmadies declined to Rs. 2.50 on reducing the dividend to 7½ percent, taxable. Mlamallay were bought at Rs. 42 on the payment of a dividend of 15 percent, taxable. Ossoor were dealt in at Rs. 3.66 on declaring a dividend of 10 percent, taxable. Puthutotam were transacted at Rs. 2.98 on the payment of a dividend of 12 percent, taxable. Kil Kotagiri were steady at Rs. 5.70, as were Lucky Valley at Rs. 12.10. Midland were quoted at Rs. 12.12 and Mysore Coffee were taken at Rs. 5.45. Nilgiri were placed at Rs. 7.80 and Nonsuch were wanted up to Rs. 28.12. Peermade were bought at Rs. 23.60 and Parkside were done at Rs. 28.60. Rajendra were transacted at Rs. 15 and Teekoy were quoted at Rs. 6.75. Travancore Rubber were sold at Rs. 12.30 and Twyford were taken at Rs. 12.90.

Among textile shares, Lakshmi were placed at Rs. 157 and Madura were transacted at Rs. 34.90. Business was done in Travancore Rayon at Rs. 37.30. Anglo-French were quoted at Rs. 127 and Buckingham changed hands at Rs. 206. Bangalore Woollen were done at Rs. 200 and Kothari were steady at Rs. 12.80. Mettur came to hand at Rs. 396 and Ramakrishna were done at Rs. 224. South India Viscose were indicated at Rs. 140 and Tirupati were dealt in at Rs. 10.

In the miscellaneous group, Aluminium Industries were steady at Rs. 25.25 on the payment of a final dividend of 9 percent, making 18 percent, taxable, for the year. Ashok Leyland were done at Rs. 9.40 and India Cement were taken at Rs. 7.38. Forest Industries were steady at Rs. 3.50 on paying a dividend of 20 percent, taxable, and Mysore Machine Manufacturing were quoted at Rs. 10 on declaring a dividend of 12 percent, taxable. United Fire Insurance were wanted at Rs. 7.75 on paying a dividend of 10⅝ percent, taxable. Brunton were steady at Rs. 5.10 and Enfield met with interest at Rs. 20.50. General Papers were dealt in at Rs. 13.60 and Madras Vanaspati came to hand at Rs. 15. Mettur Chemical were steady at Rs. 14.85 and Parry's Confectionery were bought at Rs. 4.78. Spencer were done at Rs. 23.12, as were Standard Motor at Rs. 17.40. Tube Investment were firm at Rs. 350 and Textool met with support at Rs. 190.

Refractories for all purposes...

The Kumardhubi range of refractories is now being increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.

Backed by over 50 years of manufacturing experience, Kumardhubi Fireclay and Silica Works contribute a vital operational requirement in a number of industries.

LONDON INSURANCE LETTER

RISK RATES FOR CONGO RAISED

REACTIONS in London to developments in the Congo were prompt. In the middle of July, the War Risks Rating Committee of the Institute of London Underwriters raised the rate for covering the risks of war and strike, riot and civil commotion to the port from 9d to 2s 6d a £100 and for such risks beyond the port from 2s 6d to 5s a £100. Besides, the Export Credits Guarantee Department refused to write any new business relating to the Congo until the position was stabilised. The total of E.C.G.D. cover for the Congo, at the time new business was stopped, was about £2 million. As an insurance territory, however, the Congo is not very developed and, having been under Belgian administration, it had not turned automatically to the British market during its colonial phase. Many of these upheavals, to which "emerging" countries particularly are prone, have more psychological than practical effect. In this case, they emphasise the risks involved in operating through a branch or a subsidiary in a foreign territory rather than through an agency or directly from the home office. However, insurance companies cannot adopt a rigid policy for their development abroad, if only because local laws are not uniform. For instance, a British industrial company with property abroad cannot always choose for itself whether it should insure the property in London or locally, for in some territories insurance of property, irrespective of the nationality of its owners, must be placed with local insurers. In some cases, local insurers may be British, but there are territories where British insurers are unable to operate.

Growing Business

It has surprised many people in the U.K.—perhaps because in this dreary summer they imagine that Britain has a monopoly of wet weather—to learn that insurance against rain, "Pluvius insurance", is transacted on a world-wide scale. For a company such as Eagle Star Insurance, which has most developed the business, this worldwide spread is important, for it would be difficult to establish rational premium rates in a territory as small as Britain, where the weather may be wet or dry all over. It is impossible to spread the risk locally, for heavy rain will automatically involve many claims—whereas the many accidents which occur on the roads every fine week-end in the summer, although partly due to the weather, do not inevitably result from it.

The original purpose of Pluvius insurance was to cover the risk of financial loss on outdoor functions, such as sporting events or fêtes caused by rain, but this year ordinary holidaymakers have been the most prominent applicants for cover. Since last summer, at home, was the best in living memory. It was not the recollection but the anticipation of some grim experience which aroused the public's interest. The anticipation was not faulty: this is one of the worst summers in living memory. The outcome of these factors, as reported recently by Eagle Star, is an increase of some 20 percent in premiums and of some 50 percent in claims compared with last year which was, admittedly, an exceptionally favourable year for claims. Personal contact will probably expand the business next year; for many of this year's cautious and informed victims of the weather must have remarked to others incautious or uninformed: "At least, I shall get £2 compensation for this rain, and £2 for several other days'". What premium he paid would depend on the resort he chose to visit. An average figure will be about 12s 6d a week. Against the broad background of insurance, this kind of business may seem trifling, but it is interesting if only because it is one of the more sophisticated forms of insurance. It is concerned with the inessential rather than the basic things of life. And it depends on "instrumentation"; on instruments which measure rain or sun—for sunshine deficiency, regardless of rain, can also be covered by insurance.

Investing in Insurance

It is instructive to view insurance companies from the viewpoint of investors, and the process has been facilitated by a London firm of stockbrokers, which surveys the insurance share market annually. The performance of these shares, in terms of capital appreciation, has been outstandingly good. The survey was able to show that over a period of 18 months, in which the value of industrial ordinary shares had risen by 38 percent, the value of insurance shares had risen by 65 percent. Good dividends, and the expectation of still better dividends, is the obvious explanation of the movement of insurance shares; but the same factors might be thought to apply with almost equal force to industrial shares. It seems that investors in insurance shares are not unduly worried by the possible effects of a recession in trade.

Most significant last year was the better underwriting experience of the composite companies, which had been relatively unfavourable for some years previously, particularly in North America. The Company which has benefited most from the improvement there is the Royal, which derives between a half and two-thirds of its premium income from the United States; its underwriting surplus was more than trebled in 1959. As far as the U.K. business is concerned, it may seem strange that investors are still confident of the composite companies when present indications suggest that the huge increase in fire losses last year may be followed by a comparable increase this year from £44 million to about £60 million.

New Delhi

DISCUSSIONS BEGIN ON THIRD PLAN OUTLAY IN PUBLIC SECTOR

HIGH-GRADE COAL AND IRON ORE SHORTAGE AFFECTS STEEL PLANT EFFICIENCY

(FROM OUR NEW DELHI CORRESPONDENT)

THE third five year plan provides for a total investment of Rs. 10,200 crores. Of this, investment in the public sector is placed at Rs. 6,200 crores. It is proposed that of the total outlay in this sector of Rs. 7,250 crores, expenditure of the order of Rs. 3,650 crores will be incurred on account of the plans of the States. The distribution of public sector outlay under different heads is as follows:

	Rs. crores		
	Total	Centre	States
Agriculture, minor irrigation and community development	1,025	175	850
Irrigation	650	5	645
Power	925	125	800
Village and small industries	250	100	150
Industries and minerals	1,500	1,470	30
Transport and communications	1,450	1,225	225
Social services ...	1,250	300	950
Inventories	200	200	—
Total ...	7,250	3,600	3,650

This distribution is based on the assumption that, as a general principle, all development schemes to be executed by State Governments will form part of their plans, and that only certain limited categories of schemes will be shown in the plans of the Central Ministries as being "sponsored" by the Centre, such as experimental schemes.

Two series of discussions are to be held, one concerning financial resources and the other relating to the plan proposals of State Governments. The first series of discussions has started from 10th August and will go on until 15th September; the second series will be arranged for the Union territories between 26th August and 15th September, and for the States between 17th September and 17th November. These discussions will also include consideration of the broad magnitudes, both for financial resources and outlays relating to the annual plan for 1961-62.

Local Participation

With a view to securing the largest measure of local participation and, in particular, the fullest use of the local manpower resources, it is proposed that some portions of the State plans should be formulated at the district and block level. These are, for instance:

(a) agriculture including minor irrigation, soil conservation, village forests, animal husbandry, dairying, etcetera;

(b) development of co-operatives;

(c) village industries;

(d) elementary education, specially provision of school buildings, land, equipment, etcetera, by local communities as their contribution;

(e) rural water supply and programme of minimum amenities including the construction of approach roads linking each village to the nearest road or railhead; and

(f) works programmes for the fuller use of manpower resources in rural areas, including (1) works projects in the State plans and local bodies which require skilled and semi-skilled labour, (2) works undertaken by the community or beneficiaries according to the obligations laid down by law, (3) schemes to enable the community to build up remunerative assets, and (4) supplementary works programme for areas in which there is a high incidence of unemployment.

The Planning Commission, it is complained, has not only lost its all-party constitution, but has also lost its vitality. It has practically ceased to be the brains-trust of India, since it has done little rethinking at least as far as the prospects for the third plan are concerned. For example, the Commission should have pointed out the mistakes made in the formulation or implementation of the second plan and should have suggested steps to avoid those mistakes. Take the case of one-teacher schools, for example. Has the experiment, made solely to relieve unemployment among the educated, been a success? The recruitment of clerks and even teachers through employment exchanges is another point for investigation. This practice, it is said, is responsible for lowering the standards of efficiency in offices and of teaching in schools

The community development programme is another such matter. Unless an evaluation team praises its work, its findings are always disregarded. There is the question of the functioning of the public sector. Ministers may derive satisfaction from the phenomenal rise in investment. The question is how the the public sector units are functioning. Will the Government, for example, publish the report on the working of Durgapur steel plant or the coalfields in the public sector? The fact is that there are no properly trained Indian technicians and other administrative staff to undertake the work, which is increasing fast.

Availability of Foreign Exchange

Lastly, there is the question of foreign exchange. How has the Planning Commission derived any lessons from the foreign exchange crisis in the second year of the second five year plan? The crisis, on the contrary, appears to have been regarded as a great blessing, without which the industrialisation of India would have been impossible, so attempts are perhaps being made to revive the crisis during the third plan. Inspired messages are put out that unless the consortium at its Paris meeting gives a large untied loan to finance imports to sustain the Indian economy, the Government will be compelled to resort to further curtailment of imports. Three years ago, a similar situation arose, and India's creditors were told that unless they accommodated this country, their own suppliers might have to suffer losses. On her part, India cut down the second plan to what was called the "hard core". The western countries and Japan came to India's assistance. As soon as the position improved, the Japanese yen credit was used for setting up a watch unit in the public sector. This was an item which was not included in the second plan, much less in the hard core.

On the one side, it is proposed to cut down imports, unless more aid is forthcoming. On the other, Dr. H. J. Bhabha is going round the world making arrangements for more than one atomic station, which will increase India's import bill. Apart from these considerations, no indication is given as to where the knife will fall on existing imports, which have already been cut to the bone. If it is going to be capital equipment, then it is no use drawing up big plans of industrial development.

Steel and Coal

Steel and coal dominated the proceedings in the Lok Sabha last week. The Central Minister, Sardar Swaran Singh, replied to a series of questions on the Rourkela steel works and coal, all of which are reproduced below:

Question: How many times did the blast furnaces of Rourkela stop during the period from April to June 1960? What were the reasons for the stoppage of production of pig iron in the blast furnaces; and what action had been taken by the Government?

Answer: There were three occasions when production in the blast furnace at Rourkela had to be stopped. The first was on 16th April, 1960, when the charge in the blast furnace No. 2 slipped after continuous working for several days. Due mainly to the excessive fines in the iron ore, the charge within the blast furnace becomes more sticky than it should be. This is called "hanging". The persistence of this led to the slipping of this mass on the melting metal below, causing some of the metal to splash and thereby choking the tuyeres through which hot blast enters. The blow pipes were completely filled up and had to be taken out and cleaned. The furnace was out of operation for four days.

The second interruption was on 12th May, 1960, when one of the tuyeres of the furnace got burnt out due to the choking of the cooling pipes. Before this could be detected, water got into the furnace which became chilled. The operation of the furnace had to be stopped for seven days.

The third stoppage occurred on 10th June, 1960. While flushing slag, some metal also rushed out burning the monkey and the coolers of the cinder notch and jamming the slag track. As a result, the furnace had to be shut down for about two days.

Hindustan Steel has taken up the presence of excessive fines in the iron ore with the suppliers. The two stoppages in April and May 1960 were entirely of an operational nature. No burning up of any tuyere had occurred previously. In this particular case, it has been stated that the operational staff did not detect the leaky tuyere and take steps to replace it in time.

Dr. Ram Subhag Singh: Has the attention of the Government been drawn towards an article published in *German International* in which Hindustan Steel Ltd has been held responsible for the deficiencies in the Rourkela steel plant; and, if so, what are the facts about the matter?

Answer: The article has commented about the rapid increase in the production of steel aimed at in the country without taking into consideration the availability of technical personnel. There is no denying the fact that there is a shortage of trained personnel, but efforts are being made to train suitable Indians for the steel plants which are now coming under operation or are likely to come in operation during the third five year plan. Side by side, the training of personnel and other organisational measures for running the steel plants in the public sector are also being undertaken and not much difficulty is expected.

Transport did present a problem in the initial stages of the Rourkela steel project. There was congestion of material during the winter of 1957-58. However, these difficulties were overcome and an orderly flow of equipment from the port to the right spots within the works site was arranged. Transport difficulties were also felt in other plants and are inevitable in a project of such magnitude. There was also some delay in laying the plant's foundations which involved enormous quantities of concrete. It is true that the local Indian firms did not have much experience of this type of work, but these difficulties were also overcome, and by and large, the Indian firms have done a good job.

The article discusses the nature of the Rourkela arrangement with a German combine of the two big firms—Krupp and Demag—acting as consultants to Hindustan Steel Ltd. In that capacity, they prepared the project report and on the basis of the project report, Hindustan Steel made direct contractual arrangements with over 30 important Germans firms, for the supply of equipment and erection of various parts of steel works. There is nothing inherently defective in this arrangement and the duties and responsibilities of every party are clear. While there are certain advantages in a "package deal" as in the case of Durgapur and Bhilai, it cannot be definitely said whether the package deal would have been equally effective in the case of Rourkela. The article itself points out that there is a divergence of opinion on this point. In spite of earlier difficulties, the progress of construction of the units already commissioned is due to teething troubles and such defects as they appear from time to time are being rectified with all possible speed.

Adequate care is being taken to build up sufficient stocks of spares for the running of the various units of the Rourkela project, and at the same time, the repair shop is also being strengthened to cope with the task for which it has been set up. The article in the *German International* is not so much a criticism of Hindustan Steel, but an analysis of the difficulties that are likely to arise in a country which starts on a new venture like steel-making. In fact, it is an indirect tribute to Hindustan Steel for having set up three steel plants in spite of such heavy odds.

Mr. Maheshwar Naik: Is it a fact that the third blast furnace of the Rourkela steel plant, though ready, will not go into production till some time next April; if so, what are the reasons? Is it also a fact that the two blast furnaces already commissioned are not being used to their rated capacities; and, if so, how is this non-utilisation accounted for?

Answer: The third blast furnace is ready and is expected to be commissioned by the end of the year. The main reason for not immediately commissioning the furnace is that Hindustan Steel wanted to build up sufficient stocks and a continuous flow of coal and iron ore required for operating all the three furnaces. Further, the steel melting shops and finishing mills will be ready to use all the iron only after a few months. It is expected that conditions for operating all the three furnaces to capacity will exist by the end of the year.

In supplementaries, the Minister admitted that there was a shortage of both coal and iron ore, which was responsible for the inefficient working of the steel plants. Such iron ore as was supplied was not of the requisite quality.

Side by side, the Deputy Minister for Finance, Mr. B. R. Bhagat said: "Assessment is made from time to time of the value of production of all public sector projects, whether they are financed from foreign loans or otherwise. There is no separate earmarking of resources from the additional production of public sector projects for the repayment of loans. Production from these projects increases foreign exchange resources either directly by earning or saving foreign exchange or indirectly by their effect on the strengthening of the economy. From the resources thus strengthened and augmented, the foreign loans will be repaid. All projects in the public sector are functioning well."

Shortfall in Coal Target

Sardar Swaran Singh said that the anticipated shortfall of 6 million tons in the production of coal by the end of the second plan period would be made up in a few months—by the end of 1961. The public sector collieries, which would account for 4.5 million tons of this shortage, he added, would have sufficient capacity created by the target date, and they would make up the deficit by the end of 1961 without any sizable fresh capital outlay. The second plan target is 60 million tons.

The Minister, who was replying to a discussion on the report of the National Coal Development Corporation for 1958-59, also indicated the allocation between the public and private sectors of the

additional output of coal visualised in the draft third five year plan.

The Minister pointed out that the draft plan had a target of 95 million tons, excluding the two million tons of metallurgical coal required for the Bokaro steel plant. Of the additional production of 35 million tons, his Ministry was proceeding on the basis that 15 million tons or 16 million tons would be in the private sector and about 19 million tons or 20 million tons in the public sector. Out of the allocation to the public sector, the share of the Singareni collieries would be between 3 million tons and 4 million tons. He was confident that adequate supplies of coking coal would be made available to the steel plants, the Sindri fertiliser factory and merchant cokeries. The requirements had been carefully assessed and steps taken to ensure adequate supplies, he said. He refuted certain Press reports that the shortfall of production in the Sindri fertiliser factory was due to the defective supply of coal.

Replying to another question, the Minister for Steel said that the by-products which are being or will be produced are coal tar and road tar; motor benzel; benzene; toluene; xylene; heavy solvent naphtha; light solvent naphtha; pitch; cresote oil; hot-pressed naphthalene; heavy anthracene oils; cresols; phenols; xylenol; fuel oil; light oils; ammonia or ammonium sulphate; and nitrogen for the fertiliser plant.

Prospects for Buffer Cotton Stock

There is little chance of India building a buffer stock of cotton with another P.L. 490 loan, it is learned here. The last foodgrain deal has already created some difficulties with friendly countries for the U.S. Government. A similar cotton deal will be resisted by the cotton-growing countries, particularly in Africa and Pakistan. The U.S. Government, furthermore, has some arrangements relating to cotton textiles. Cotton is loaned to Burma to help her get textiles manufactured in neighbouring countries. A deal with India may affect such arrangements.

Ford Foundation Offers Help

The Ford Foundation has addressed a letter to the Government of India, offering a number of experts to advise this country on setting up fertiliser plants. The offer is being considered.

Further D.L.F. Loans

The D.L.F. has announced its intention of granting the following loans to India:

	($ million)
For the Industrial Finance Corporation for relending to private sector industries	10
For the National Small Industries Corporation for purchasing equipment to be given to small industries on a hire-purchase basis	10
For the Kanpur and Barapani power projects	4.1
For the railway development programme	50

Another credit of Rs. 180 crores is expected from Russia, for which negotiations are in progress.

Austria has offered a credit of $14 million to India for the purchase of capital goods and equipment from that country. The terms and conditions of the credit are being negotiated.

Professor Erhard Recommends Aid

Referring to the recent visit of Mr. Morarji Desai, India's Finance Minister, to West Germany, Professor Erhard has said that, Mr. Desai conveyed India's desire for long-term credits as well as an arrangement for deferred payments for goods, repayable after a period of 20 to 30 years, and bearing an interest of 5 percent at the most, so as to enable the completion of India's third five year plan. This plan provides for development projects requiring foreign exchange to the extent of about 20 billion deutschemarks (Rs. 2,240 crores). As is well known, West Germany has contributed over 1 billion deutschemarks (Rs. 112 crores) for financing the second five year plan. Professor Erhard has also said that in view of the difficult situation India is facing, there is no other course before the free world, including West Germans, than to extend to India a part of the required credits under non-commercial terms.

International Development Association

The International Development Association will start its operations after 15th September, 1960. India's subscription for membership is fixed at $40.35 million (Rs. 19.21 crores), of which 10 percent will be payable in gold or freely convertible currency over a period of five years and the balance in rupees, also over a period of five years.

Spill-over Projects

The total investment on projects under execution at the end of the second plan and remaining to be undertaken mainly during the third plan, is estimated at Rs. 1,800 crores. This includes about Rs. 800 crores under industries and transport and about Rs. 700 crores under irrigation and power.

Marine Insurance Premiums

No marine insurance is effected when purchases are made on behalf of Government of India agencies. Details concerning such insurance effected by the private sector are normally not available with the Government. However, from an analysis of 252 private sector cases, it appears that the following premia have been paid;

(i) to U.S. insurance companies $4,656 (*i.e.*, Rs. 22,171).

(ii) to Indian insurance companies Rs. 6,04,861.

In other words, Indian companies should have little cause for complaint.

Diesel Rail Cars

Tentative proposals for the third five year plan of the railways visualise the procurement of 197 diesel rail cars in the following manner:

Gauge	Number	Estimated cost a unit
Broad gauge	67	Rs. 6.4 lakhs
Metre gauge	120	Rs. 3.3 lakhs
Narrow gauge	10	Rs. 2.5 lakhs

It is proposed to manufacture all these rail cars in the integral coach factory, Perambur. Designs to suit indigenous manufacture are being prepared.

West German Firms to Build Chemical Plant

A consortium of West German companies is to build a chemical factory near Bombay, under an agreement signed last week between the Government of India, and the four members of the consortium—Bayer, Badische Anilin, Hoechst and Friedrich Uhde. The factory, which is to cost about 35 million deutschemarks (£3 million), will produce chemical products and provide the basis for developing a pharmaceutical and plastics industry in India. Besides building the factory, the West German companies will send scientists and technicians to run it.

New Fertiliser Projects

The proposal to set up a fertiliser plant in Madhya Pradesh is being considered. As a pridifficult to specify the sector at this stage. The Government of India has agreed in principle to the proposal for establishing a fertiliser factory in Durgapur, West Bengal.

Indian Tea Exports to U.S.A.

During 1959-60, 23.26 million lbs of Indian tea were exported to the U.S.A., compared with 24.42 vate party has offered to take up this project, it is million lbs in 1958-59. India is a member of the U.S. Tea Council, which campaigns for increasing the consumption of tea in that country. Besides joint promotional efforts, a tea promotion officer has recently been posted in New York to look after Indian tea exports.

Employees Provident Fund

There is no scheme for widening the scope of the Employees Provident Funds Act. The Act is already wide enough to enable the Central Government to bring within its scope, through notification in the official gazette, any establishment or class of establishments employing 50 or more persons. Some of the industries and employments which are being considered for such notification are: (1) banks; (2) film industry; (3) hotels and restaurants; (4) cane farms owned by sugar mills; (5) rice, flour and dal mills; (6) pottery industry; (7) oil well cperations; (8) insurance companies; (9) general trading concerns; (10) transhipment establishments proposed by the Government of Assam; (11) cordials, marmalades, jams, squashes and syrups manufacturing establishments; (12) starch industry; (13) tanneries and leather products; (14) tobacco industry including beedies and cigars; (15) cashewnut; (16) cinchona plantations; and (17) air companies.

Officials Going Abroad

The Deputy Secretary of the Central Oil Ministry, Mr. S. K. Mukerjee, has been deputed to take six months' training with the World Bank. He will be leaving next month. The Joint Secretary to the Central Ministry of Works, Mr. A. D. Pandit, and Mr. B. N. Sarup have been selected for nine months' training at Harvard university. They will be leaving shortly. The Secretary to the Central Ministry of Mines and Fuel, Mr. S. S. Khera, is already in London. He will be in New York on 7th September to discuss matters relating to oil exploration by the private sector. While in New York, he will be assisted by Mr. Mukerjee.

DECLINE IN U.K. EXPORTS CONTINUES

TRADE GAP WIDENS FURTHER

(FROM OUR LONDON CORRESPONDENT)

PROVISIONAL overseas trade figures for July, just issued by the U.K. Board of Trade, show a further fall in exports. At £274.8 million, the figure is the lowest this year. Imports were also lower at £381.8 million in July, and re-exports were little changed at £10.9 million. Based on these figures, the trade gap during the month was just over £96 million, or about £3 million less than in June. But the true trend of trade is a good deal worse than that, as can be seen in the seasonally adjusted figures now made available by the U.K. Board of Trade. The corrected export figure for July is £272 million, compared with £288 million in June and £307 million in February, since when exports have been slowly falling. In the last three months, exports were 5 percent less than in the three months February to April. The corrected import figure is £388 million, compared with £370 million in June. Imports were 2½ percent more in May, June and July than in the previous three months. The average of exports in the first seven months of the current year was 6½ percent more than that for 1959; on the same basis, imports rose twice as fast—by 13 percent.

The official seasonally adjusted figures show the trade gap in a worse light: it widened from £71 million in June to no less than £104 million in July—the biggest for more than three years. Part of this gap is, of course, bridged by freight and insurance charges, which are included in the import but not in the export figures. It is understood that the dock and seamen's strikes have had only a small effect on either exports or imports. The recent arrival of *Boeing* airliners for B.O.A.C. added to the import figures in May, June and July, but did not materially alter the trade picture. The U.K. balance of payments position, taking invisible earnings into account, is better than the trade figures indicate, but the continued fall in exports is disappointing. The trade figures do not encourage hopes of any early relaxation in credit policy.

The Trading Background

The latest *Board of Trade Journal* states that the strong expansion in sterling area exports, which was maintained throughout 1959, was checked in the early months of this year. A continued rise in exports from the United Kingdom in the first quarter, was offset by a fall in those from the overseas sterling area. "Figures so far available for later months suggest a small fall in both cases in the second quarter, but sterling area exports in the first half of this year are unlikely to be much below the level of the second half of 1959, allowing for seasonal variations. Imports both into the United Kingdom and into the overseas sterling area, however, continued to expand in the first quarter of this year and show signs of further rise in the second quarter." Exports (including re-exports) from the sterling area, as a whole, were 18 percent higher than in the low of the first quarter of 1959. The rise in U.K. exports was 16 percent, and all but 2 percent was due to an increased volume. From the overseas sterling area, exports rose by 19 percent, but there was probably a larger element of price rise in this figure, and the increase in volume was most likely about the same as for the United Kingdom. Sterling area imports were 18 percent greater in the first quarter than a year earlier. The value of U.K. imports was up by 20 percent.

Retail Sales Higher

Provisional estimates of the U.K. Board of Trade show that retail sales continued at a high level in July. There were indications that clothing and footwear sales might not have shown quite so large an increase on last year as in recent months, while sales by durable goods shops might have recovered a little as far as furniture was concerned, from the decreases in May and June. The index of total sales in July, seasonally adjusted, was estimated at 112, compared with 111 in both May and June. Taking May-July together, the index was 111, against 110 in the preceding three months, which suggested that the underlying trend was still significantly upwards. Compared with July last year, sales are up by 4 percent, about a third of the increase being accounted for by higher prices and the rest by a higher volume of sale.

Farm Machinery Exports Rise

Home sales of all types of farm tractors and machinery fell in the first half of this year, but exports increased. The Agricultural Engineers Association has stated that home sales were 14 percent lower, compared with those of last year, the sales of combined harvesters being little more than half of last year's total. There was an overall gain of more than a third in exports, with good increase in sales to Europe in spite of the growing West German competition. The Association has stated that the change in the pattern of the industry's world trade is becoming obvious in the relative slackening of machinery exports to the Commonwealth. Exports of farm machinery to the sterling area increased by only 3 percent, compared with an overall increase in exports of 10 percent.

Jorehaut Output Down

Because of smaller crops with little prospect of the shortfall being regained, Lt.-Col. F. W. S. Roberts is cautious in his annual review with the full accounts of Johehaut Holdings, the tea plantation Company. The area in which most of the Company's estates operate has been affected by "unprecedented drought", and at the end of July the crop was down on that for 1959 by about 1.35 million lbs. In Ceylon, however, production is better than last year. The Company's east African subsidiary has done well.

Once again Lt.-Col. Roberts regrets the ending of the international tea agreement. But he admits that there are no bright prospects for its renewal. In spite of estimates of a tea surplus of up to 200 million lbs, the closing figures for 1959 did not suggest that supply was too far out of line with demand. The average price realised for the Company's crop was 5s 6.45d a lb, against 5s 6.32d a lb for the 1958 crop.

Recovery in Lloyds Business

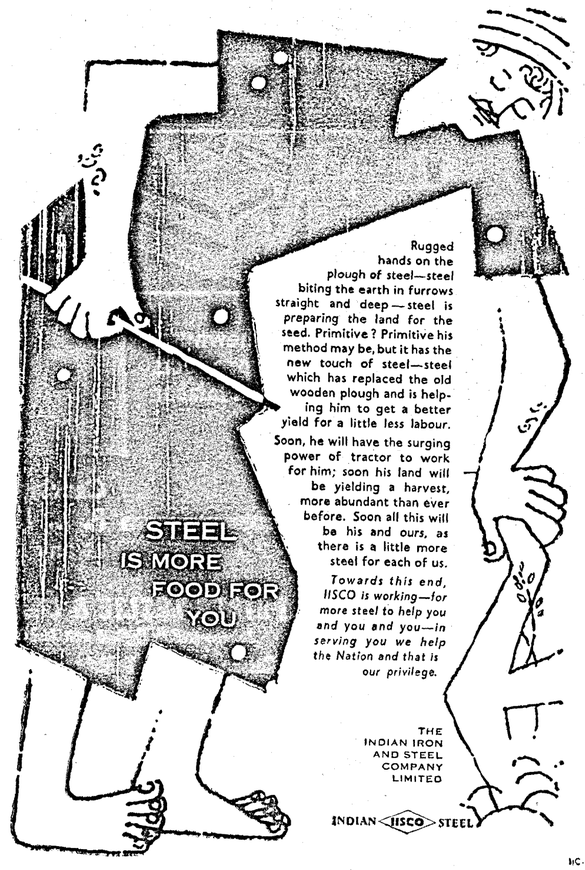
Last year the 4,000 underwriters of Lloyd's pulled out of the patch of bad luck they had struck in the previous three years. The three-yearly account for 1957 shows a profit of £9.7 million, or nearly 3½ percent on a total income of £282.5 million. The 1956 account yielded only 2.2 percent on a revenue of nearly £256 million. If the 1957 recovery is due to a better business situation rather than a run of better luck, Lloyd's will have regained about a third of the previous drop from the rate of 5.4 percent earned on the 1955 account.

The improvement occurred mainly in the fire and accident business which is the chief component of "all other insurance." Here premiums rose from £132 million to £150 million, while claims increased only from £128 million to £142 million. The gross balance thus rose from £3.7 million to £8.4 million. It is a fairly safe guess that this was largely due to the raising of premium rates on the U.S. business which had become heavily unprofitable. Marine business earned £4.7 million on the 1957 account, against £2.9 million in the 1956 account. In aviation insurance, a rise in claims reduced a small profit of £100,000 to a loss of £900,000. Motor insurance yielded exactly the same profit, that is, £2.2 million, on a larger business, premiums having risen to £9.8 million, against £8.7 million, and claims to £7.6 million, against £6.5 million. On the whole, it seems likely that the insurance business of Lloyd's is now on the way to recovery. But an overall yield of 3½ percent is still a thin recompense for the services that the institution offers to the world.

Automation in Banking

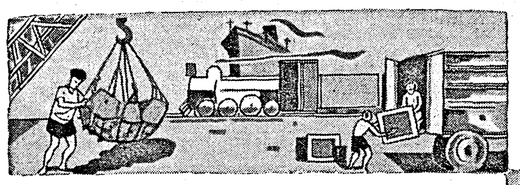
A new, fully automated machine which, it is claimed, will do the work done formerly by 70 ledger-clerks, was demonstrated in London the other day. The machine, which costs £12,500, is a further step in the automation programme of the National Cash Register Company. There is little doubt that it has really broken new ground. It combines, in a single function, the work of account posting and, without the assistance of an operator, simultaneously digests and prints details of credit and debit transactions on a ledger card and a statement and journal sheet.

It is not difficult to see that in these times of mass banking and mass credit, the need for such labour-saving appliances must increase. It is to meet this demand that the new machine has been developed. It is already in use in banks in the United States, and orders for its installation in Britain have already been placed by some U.K. bankers. Electronic devices in the machine and magnetic tape on the reverse side of the ledger-cards replace the eyes of the human operator and pass instructions to the arithmetical and printing parts of the machine. Other information is read from punched paper tape similar to that used in teleprinters. The ledger cards and statements are fed automatically into the machine and special devices look after the inspection and re-stacking. The machine is claimed to work quite free from errors since electronic checks ensure that a transaction cannot be entered into the wrong account, or that the balance figures will be misread. Such equipment to be economic must be fully occupied and in some American banks daytime work has been devoted to the collection of data, and its processing has been done during the night.



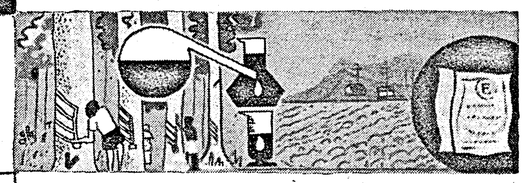
HC-71

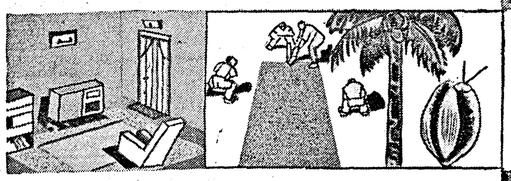
from estate to export it's P.L.& co. for service



Handling of all plantation crops for export by road, rail and sea.

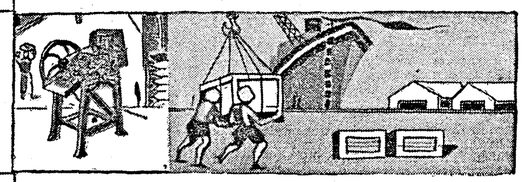
Fertilizers, straight and mixed, for all estate crops to meet every need in all seasons and soils. 50 years' experience counts!

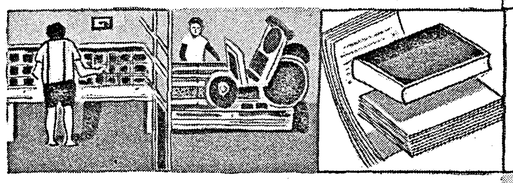




Coir products, to please the eye and suit the pocket for packing, domestic purposes and for the cricket pitch too!

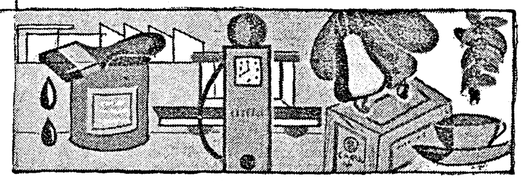
Imported machinery (Gordon's) for preparing Indian Coffee for the market at home and abroad.





Good printing to customer's orders. All Estate requirements attended to promptly.

P. L. & Co. also handle Cashewnuts, Coffee, Paints and Petroleum products and are also exporters of all Malabar produce.



Carriage, clearance and Insurance - P. L. & Co. will do the job efficiently at any port on the Malabar Coast.

THE VARIED FUNCTIONS OF THE U.P.A.S.I.

By P. S. Subramaniam

(Secretary, United Planters Association of Southern India)

SIXTY-SEVEN years ago—on 28th August, 1893, to be exact—a group of 22 planters meeting in a conference in Bangalore decided to form a "United Planters Association of Southern India" with the object of "protecting the interests of the planting community in southern India". Nineteen of them were Europeans and three were Indians. At that time the planters of the south, both European and Indian, were organised only at the "district level"; such associations had been in existence in Coorg, Wynaad, Nilgiris, Shevaroys, Nelliampathi Hills, Kanan Devan Hills and south Travancore. When the U.P.A.S.I. was formed in 1894, it functioned with its registered office in Madras until 1918. Later it moved into Coimbatore and then back again to Madras in 1924. In 1933, the U.P.A.S.I. acquired its own buildings in Coonoor known as the "Glenview" property which, ever since, has been the seat of its secretariat and the venue of its annual conference in August every year.

Although it began as a federation of district or regional associations, the constitution of the U.P.A.S.I. has undergone changes side by side with the changing pattern of plantation ownership and leadership. The original federal constitution gave place to a system of direct membership, which was later replaced by the present system which is a combination of both these forms. Today, the U.P.A.S.I. membership consists of 13 district associations, three State associations corresponding to the States of Madras, Mysore and Kerala, over 350 estate members including sterling and rupee companies and proprietors, and 50 firm members. Together, the 350 estate members own a total of 300,000 planted acres, of which one-half comprises tea and the remainder coffee, rubber and various minor products. The estate member with the largest area owns 41,160 acres and the smallest one acre. The district associations deal with matters concerning their districts. State associations deal with plantation affairs in the States and with the State Governments concerned, and the U.P.A.S.I. co-ordinates the industry's affairs for the whole of south India and deals with the Central Government. In other words, the U.P.A.S.I. is the central or apex body speaking with a responsible voice on all matters of industry-wide importance in the plantation enterprise of the south.

Fundamental Object

Its activities now extend in many directions, but the fundamental object remains largely the same as when it was formed in 1894, namely, the protection and promotion in all parts of the world of the interests of the various planting industries in south India. The machinery for carrying out this object has also undergone many changes, depending on the nature of the problems confronting the industry and the degree of attention required to be given to them. For instance, up to 1946, the business of the Association was largely confined to the commercial and economic aspects of the various plantation crops, and these were dealt with by the executive committee and product section committees. Since then the growth of trade unionism in plantations and the enactment of Central and State legislation on industrial relations have compelled the U.P.A.S.I. to devote special attention to this development and a separate organisation has been formed, within the constitution, known as the South India Estate Labour Relations Organisation. This organisation was retained as a separate entity during the first ten years of the rapidly growing trade union movement in the planting industry, but merged with the main body when its separate existence was no longer found necessary. At the present time, the affairs of the U.P.A.S.I. are managed by the members in general meeting and an executive committee consisting of the president, vice-president and representatives of the State associations of the planters of Madras, Mysore and Kerala. Representatives of the small grower members are also elected to the committee. The president is elected at the annual general meeting and, unless re-elected for a further term, holds office for one year only. The executive committee itself is reconstituted once a year at the conclusion of the annual general meeting.

The Executive Committee

The executive committee, meeting approximately once a month, disposes of matters of general application to the plantation industry as a whole as well as those pertaining to industrial relations. It does not, however, directly deal with matters of exclusive interest to the tea, coffee and rubber industries. These are looked after by sub-committees of the executive committee appointed for each of the three products. The subjects dealt with cover a wide field; for instance, the tea product sub-committee may consider all matters like crop regulation, fiscal reliefs, licensing rules, tea adulteration, tea propaganda, international agreements and scientific research. Similar matters come within the scope of work of the sub-committees for coffee and rubber. Decisions taken by these sub-committees should, of course, be ratified by the parent committee; but in practice, this is merely procedural and does not hold up prompt action by the secretariat, except in matters involving policy.

Other important statutory sub-committees include one dealing with the problems peculiar to small estate members and another with taxation and finance. The U.P.A.S.I. has a large number of small estate members who are defined as those owning up to 60 acres of tea, or 100 acres of coffee, or 120 acres of rubber. By the very fact of the small size of their holdings, these members have problems sometimes different from those owning large estates, especially in marketing, crop financing and the implementation of labour standards. The wing known as small growers sub-committee deals with these special problems.

The plantation industry is one of the most heavily taxed. There are taxes on acreage, on production, on income, on exports and on sales and purchases. These taxes and levies sometimes lead to anomalies and absurdities, not to speak of hardships to the industry, and call for expert attention. Sometimes a wrong step taken by a taxing authority has to be taken up and contested at all levels, up to the highest executive authority and even up to the highest courts in the country. It is the function of the taxation and finance sub-committee to study and scrutinise these problems and advise the executive committee.

Public Relations Machinery

In recent years, the U.P.A.S.I. has had to devote attention to a new problem—the problem of correcting wrong impressions and reports, and presenting the true facts about the plantation industry. The circulation of wrong reports and ideas among the general public, the Press and even the Legislature causes grave harm to the industry, so there is a duty cast upon an organisation like the U.P.A.S.I. to present the facts to all concerned. Realising the growing necessity for such action, a public relations department has been set up. This section has been actively engaged not only in contradicting wrong impressions, but also in promoting public understanding and goodwill and appreciation of matters pertaining to the industry. The department is also in charge of the Association's fortnightly journal, the *Planters Chronicle*, which has a very wide circulation, and has a reputation for authoritative opinion on all the current events affecting the industry.

Scientific research has always been a valuable and important field of activity in the U.P.A.S.I. At one time, it was carrying on research for all the three main crops—tea, coffee and rubber. Coffee and rubber research is at present in the hands of the respective commodity boards, so tea research continues to be directed by the U.P.A.S.I. For this purpose, it maintains an experimental research station in Devarshola in the Nilgiris, with a full complement of scientific officers and staff. Pest and disease control is an important function of this department and individual members can avail themselves directly of its advice and assistance. Recently, a major scheme for expansion of scientific research in tea has been approved and a new central research station and a sub-station are to be established shortly with the aid of a capital grant from the Tea Board. Control and direction of the department's work is in the hands of the Association's Tea Product Sub-Committee.

Service to Members

Until a short time ago, the U.P.A.S.I. also rendered service to individual members in conciliations and disputes before tribunals, labour courts, etcetera. This was one of the functions of the Labour Relations Department of the Association. The Department does not at present render individual service of this kind, but concerns itself mainly with the conduct of cases of industry-wide importance, labour legislation, labour statistics and the like.

The Association also looks after members' requirements of vital estate supplies like machinery, steel, cement and fertilisers by either obtaining bulk allocations and re-allocating among the members, or by acting as sponsoring authority for the members concerned. It maintains close and friendly relations with the Tea Board, Coffee Board and Rubber Board and makes representations to them, and sometimes through them, to the Government. Contacts are also maintained directly with the Ministries in the Central Government, particularly with those of Commerce and Industry, Labour, Finance and Agriculture, and opportunities are taken not only to present them with memoranda on matters of current importance, but also to send deputations to wait on them and explain the industry's case personally.

Annual Exhibitions

An exhibition, designed mainly to demonstrate the up-to-date developments in plantation machinery, tools, supplies and plant protection devices, has become an annual feature, and is held simultaneously with the annual conference of the U.P.A.S.I. From very small beginnings in 1948, this has now reached big proportions and is an event which attracts considerable public interest and attention.

In 1894, just before the U.P.A.S.I. was inaugurated, doubts were expressed as to whether it would be necessary to maintain a permanent association or an annual conference would do. Undoubtedly, those who raised the doubt could have little imagined the pace of events which were to follow, making it necessary not only to maintain a permanent association, but also gradually to widen its scope and to make it competent in every way to look after the affairs of the industry. At 67 years of age, the Association does not feel aged but appears more determined than ever to serve the industry as a strong central organisation for the formulation of south Indian plantation policy and the authoritative body to put forward the considered views of the industry before the Government and the people of the country.

For Packing and Roofing Needs

AVA WATER PROOF PRODUCTS

Registered with D.G.S. & D., New Delhi.

WAXED PAPER, THREAD LINED PAPER, OCEAN KRAFT PAPER, HESSIAN LINED PAPER, BITUMINISED HESSIAN and other water proof Materials offer a wide choice to meet your needs.

Mica Coated Roofing Felt — A heavy duty water proof fabric for all sorts of roofs and gutters, etc. and serves as underlays for concrete works.

TAX BURDEN ON KERALA PLANTATIONS

By J. B. Soutar

IN the latest Central Budget, the Finance Minister, Mr. Morarji Desai, said there was a possibility that something might be done to remove the hardships occasioned to the tea industry by the levy of a number of taxes at various stages by different agencies. It is heartening to know that the Central Government is considering such action. Many planters in Kerala live literally in the midst of a tropical rain forest—parts of which their predecessors turned into productive enterprise—and figuratively in a strangling jungle of taxation, which is slowly but surely killing their means of livelihood and that of their workers. The plantation industry is in serious trouble, so it must make its difficulties known to the public. The task is no easy one due to the complications to which the Finance Minister referred. These are such that no general survey of the incidence of taxation is possible in a short article. I shall, therefore, confine myself to the circumstances of my own Company—the Kana- Devan Hills Produce Co. Ltd.

The name may be familiar to the reader; it appeared frequently in the Press in October 1958 with reference to the violent communist-inspired strike which lasted for 26 days on its estates in that month. The Company has 25 estates in Kerala, comprising 23,920 acres of tea. It employs 26,000 workers. It is a sterling company, and has pursued a policy of ploughing back a very substantial part of its profits since its first planted acreage became productive more than 50 years ago. It plays a significant part in the tea industry's earnings of foreign exchange. In my opinion, the metaphor of strangulation which I have used is directly applicable to the present fortunes of the Company. I recall, at my Forensic Medicine class many years ago, being intrigued by facets of the art of murder until then unknown to me. Strangulation was described as a particularly effective operation, as the patient became unconscious at an early stage of the proceedings, and the operator could then apply further pressure at his ease until the desired end was attained. It seems to me that planters have now reached the point just before coma takes over. They have a dwindling, but still valuable, stock of enterprise, energy and hope. At this critical stage, it is necessary to make a protest before one reaches the point of no return.

Sterling Plantations

I referred to the strike in 1958. It was initiated by the Communist Party—then in power in Kerala—to destroy sterling planting interests in the State. The sequence of events was the following:

1. A pre-election promise by the Communist Party that sterling plantations would be nationalised.

2. A post-election realisation by the communist Government that naked nationalisation was not practicable,

3. Introduction of the openly discriminatory provisions of the Travancore-Cochin Agricultural Income Tax (Amendment) Act, 1957, which aimed at the taxation of sterling companies at the very high rate applicable to associations of persons.

4. Removal of the openly discriminatory provisions when these were shown to be blatantly anti-British, and substitution of another scheme of agricultural income tax, to be described later, which discriminated against large planting companies in the State. (The four largest planting companies in Kerala are sterling companies.)

5. Strike: having isolated sterling interests by this crippling taxation measure, the communist unions tried to arrange for a general strike on plantations, knowing very well that even the partial acceptance of their demands would destroy the large companies. The strike was not general, since non-communist workers refused to fall into the trap. It failed in its purpose, but it caused a loss to my Company alone of 3.5 million lbs of tea.

This narration serves to show how a taxation measure was used politically by the communists with the intention of placing sterling companies in a position so that they might have no resources left to improve the wages and conditions of employment of their workers. Their obvious motive was to foster industrial strife as a means to a despicable end. When the present Government took over power in Kerala, immediate representations were made to have the situation remedied. It was pointed out that a very dangerous situation had been created by the communists, whereby neither the sterling companies nor their workers could hope for any measure of prosperity. The planters were not sanguine of any spectacular success, but what happened was enough to startle the most convinced pessimist concerning industial progress in Kerala. Not only did the Government leave the agricultural income tax provisions as they were, but it announced its intention of increasing the land tax on plantation holdings from the basic rate of Rs. 2 an acre to a special rate of Rs. 10 an acre.

In his Budget speech on 24th June, the Kerala Finance Minister gave his reasoning for collecting an extra Rs. 80 lakhs from the plantation industry as: "It is a matter of common knowledge that the yield from plantations is several times that from ordinary land, and nobody will dispute the ability of plantation owners to contribute a greater share to the common pool of the Government's resources." I shall do my best to refute the State Finance Minister's second contention. As for the first statement, if paddy or tapioca are taken as crops representative of those grown on ordinary land, one has to agree at once that the yield from plantation land is greater If this were not so, the economy of Kerala would have been in an even more precarious condition than it now is. But, first of all, plantations are already taxed beyond their capacity to pay. Secondly, a village proprietor does not have to incur a capital expenditure of about Rs. 6,000 an acre to start a tea estate, wait ten years until his crop is developed to an economic stage, sell in a fiercely competitive overseas market, provide for his workers' housing, education and medical attention, and so on.

Taxation Structure

I like to state, without comment, that Mr. E. M. S. Namboodiripad "approves, in principle, of the Kerala Government's Budget proposals". My case is that the present taxation structure, as applied to my Company, is unprincipled, and destructive to the economy of the Company and its workers. It will help the reader to appreciate the thoroughness of the strangulation treatment if he bears in mind the technique and timing of the squeeze through the following methods:

1. Whether trading conditions are favourable or not, excise and export duties and sales tax are levied by the Central Government, and land tax and sales tax by the State Government, so that in a year of poor prices, loss is made or profits are insignificant.

2. When trading conditions are good, income taxes levied by the Central and State Governments at exorbitant rates ensure that a reasonable balance of profits is not permitted to be left in the Company's hands to compensate for the effects of a bad year.

Excise and Export Duties

I do not intend to err by overstating my case, so I accept at once that the levy of excise duty on all teas produced at 4nP a lb is reasonable. The levy of export duty at 24nP a lb is quite another matter, in my opinion. It is interesting to examine the authoritative reasoning given for this class of duty. The following is an extract from Page 272 of the report of the Government of India Taxation Enquiry Commission, Vol. II: "The general statement that, in normal circumstances, only moderate duties should be levied and that these should be restricted to monopoly and semi-monopoly exports seems unexceptionable as such".

The average price a lb obtained now for south Indian teas at the London auctions is 3s 8d, that is, Rs. 2.44 a lb. The Kanan Devan Company's average estimated cost of production now is Rs. 1.63 a lb. To this, for sale in London, freight charges, cost of marine insurance and London selling charges, totalling 31nP have to be added. The balance is 50nP a lb, but the incidence of export duty at 24nP a lb added to excise duty at 4nP a lb, results in the profit being only 22nP a lb. As we sell nearly half of our crop at London auctions, the situation can be taken as representative. It

I do not think that an export duty can be considered moderate which, when added to excise duty, aggregates more than the net profit left to the producer. This opinion is given in the context of the exhortations which are continually being made by Government spokesmen on the essential nature of export industries, and of the assurances given that these industries will be encouraged. The "monopoly and semi-monopoly" aspect has to be considered in relation to the following statement made on Page 275 of the Taxation Enquiry Commission's report:

> "The official team on the tea industry examined the export duty on tea and came to the conclusion that the duty was primarily paid by foreign buyers and that the position of the Indian industry was not adversely affected. It was of the view that Indian tea had special features concerning flavour, appearance, cup quality, etcetera, and there was little direct competition between tea of various countries. Quantities exported would not, in its opinion, vary significantly as a result of price changes. On the basis of the team's conclusion, the export duty on tea may be regarded as an instance of a revenue duty, the burden of which falls primarily on foreign buyers. In these circumstances, the duty may be held to ensure revenue without detriment to the trade."

Monopoly Theory

The statement has to be considered in relation to the widely held belief in India that prices for exported teas are determined by sellers. This idea appears to us so naive as not to require to be taken seriously, but it is only an extension of the "monopoly" theory which is here given official authority. There is some foundation for the monopoly theory, as far as teas produced in the quality season in Darjeeling, Assam and the Nilgiris are concerned. These particular teas command high prices for admixture with the generality of common teas produced throughout the world, so as to give a touch of quality to the common teas. There is no foundation whatsoever for the theory as far as teas produced in Kerala are concerned. These are sold in world markets in competition with similar teas from other producing countries. To base an export drive on the theory that quantities exported will not vary significantly as a result of price changes is to invite disaster.

Another quotation from Page 272 of the second volume of the Taxation Enquiry Commission's report is relevant:

> "The further argument of the Fiscal Commission, however, that a duty should not be imposed when the burden might fall on the Indian producer cannot be accepted without some qualification. It may well be that the Indian producers who pay the tax are relatively lightly burdened by other forms of taxation. The export duty would then ensure a suitable distribution of the total tax burden. Thus it may be that producers of commercial crops pay less land revenue in relation to income than producers of food crops. If the crops or manufactures from them are sold abroad in a competitive market, an export duty could not ordinarily be shifted to foreigners. The question is primarily one to be decided on the facts of each individual case, including the type of product, the nature and extent of competition in the export markets, the relative importance of domestic and foreign demand for the product and other factors. We recognise that the levy of an export duty may create specially difficult problems in uncertain conditions of international trade, and the psychological reactions of the importers in other countries to such duties needs to be taken into account. This does not, however, rule out the judicious use of export duties for revenue purposes."

Competitive Market

I shall show that planters are by no means "relatively lightly burdened by other forms of taxation". There is no doubt whatsoever that Indian tea is sold abroad in a very highly competitive market, and it follows that the export duty is not "shifted to foreigners" but is borne by planters. This is admitted on Page 275 of the Taxation Enquiry Commission's report: "The export duty on tea is a good example of a duty which has been levied primarily for revenue reasons." Central sales tax of 1 percent on Kerala teas sold to dealers in other States is the third item of the Central Government's taxation within the category of imposts which have to be paid whether or not they result in a loss to the producer. It also levies tea cess at the rate of Rs. 2 a 100 lbs of tea exported, to finance the activities of the Tea Board.

The Kerala Government has its own additions to this list, the first of which is sales tax at the rate of 5 percent. Article 286 of the Constitution seeks to prevent State Governments from imposing sales taxes which will affect the foreign trade of India. But all sales at the Cochin export tea auctions are subject to the local sales tax. It may be noted that the ordinary exemption from levy of sales tax the sale by an agriculturist of his own produce is not extended to the plantation owner. The recent Budget contains a provision to increase surcharge on sales tax from 2½ percent to 5 percent.

Direct Discrimination

Direct discrimination against plantations as a class is shown in the recent increase from Rs. 2 an acre to Rs. 10 an acre specially applied by the Kerala Government to land tax on plantation holdings. In 1946, the State of Travancore made a departure from the usual method of settlements and introduced a uniform levy of 14 annas an acre of land, irrespective of whether it was wet, dry, or garden land and of the tenure in which it was held. While this was the basic assessment, agricultural income tax was also introduced so that higher agricultural incomes would be called upon to contribute to the State exchequer. The basic rate of tax was since raised to Rs. 1-9 an acre, then to Rs. 2 an acre. If the Kerala Budget proposals are implemented, the original idea of a low uniform level of land tax plus a scheme of agricultural income tax will be perverted to the extent that the land tax paid by Kerala plantations will be the highest in India. Any apprehension on the part of the reader that I shall fail to point out later that the Kerala agricultural income tax is also the highest in India can be dismissed now. That concludes the list of taxes which have to be paid whether or not their payment results in tea plantations making a loss. These levies apply to all tea producers, and the Kanan Devan Company, as a sterling company, has no complaint that the taxes are not universal in their application. The same is far from true concerning the next category, which shows clearly that penal discrimination is exercised against sterling companies.

The following paragraph from the Taxation Enquiry Commission's report, Vol. I, Page 151 is interesting:

> "Another aspect of administrative efficiency which bears on the limits of taxation is uniform enforcement of tax obligations. The knowledge of widespread tax evasion undermines morale, puts a heavy strain on tax compliance by the honest taxpayer, and undoubtedly impairs taxable capacity."

The Central income tax is levied on 40 percent of the taxable income of a tea company, and the rate of tax is 63 percent. The reasoning behind the principle of differentiation between Indian companies and non-Indian companies is given on Pages 169 and 170 of Volume II of the report of the Taxation Enquiry Commission:

> "Although at first sight this appears to be a tax discrimination against foreign enterprise, no such discrimination is in fact involved. Before 1948, dividends distributed by a foreign company out of profits earned by it in India were deemed to be income arising in India; such dividends were to be 'grossed' in the hands of the shareholders, who were entitled to credit for income tax paid by the company and were liable to pay income tax and super tax at their personal rates on such dividends. In practice, however, it was found that it was difficult to serve notice on foreign shareholders who had large interests in such companies and to recover tax from them, while most of the smaller shareholders applied for and got refunds; thus a large part of the super tax which ought to have been recovered from the larger shareholders could not be collected. Since 1948, therefore, the process of grossing has been given up on such dividends, and they are no longer deemed to be income arising in India. In order to recoup the consequential loss of super tax, a small additional tax has been levied on these companies. This is not a novel principle, as the tax systems of several other countries also provide for the recovery from closely-held corporations of an additional tax in lieu of the super tax payable by their shareholders on their dividends. The additional tax on a company is rough-and-ready substitute for the super tax payable by its shareholders. We are satisfied that this involves no discrimination against foreign enterprise as such."

Small Additional Tax

The alteration made in 1948 cut both ways, as, while shareholders who had large interests no longer had to pay super tax, small shareholders could no longer obtain refunds. Accordingly, only a small additional tax was levied on foreign companies. According to a survey made by the Associated Chambers of Commerce and Industry, Indian company rates, including tax on excess dividends and wealth tax, averaged 56.15 percent for 1957-58, compared with 61½ percent payable by foreign companies, to which had to be added wealth tax at, say, 1½ percent. The differential was, therefore, of the order of, say, 7 percent, and this has been increased to as much as 18 percent, being the difference between 63 percent payable by foreign companies and 45 percent payable by an Indian company. This results in the rate of tax being far more than is paid in the U.K., and is a clear example of the deterrent effect of taxation on an export industry. The 18 percent extra can by no means be considered a small additional tax. It is evident that a heavy strain is being put on tax compliance by the honest taxpayer. In case the reader feels that he is becoming lost in the jungle, I erect a signpost at this stage:

Central excise duty at 4nP a lb, payable on all teas produced.

Central export duty at 24nP a lb, payable on all teas exported.

Central sales tax at 1 percent, payable on teas sold inter-State.

Central tea cess at Rs. 2 a 100 lbs, payable on all teas exported.

Kerala sales tax at 5 percent plus 5 percent surcharge, payable on teas sold in the State.

Kerala land tax, payable at Rs. 10 an acre.

Central income tax, payable at 63 percent on 40 percent of taxable income.

Before the communist Government amended the Travancore-Cochin Agricultural Income Tax Act, all tea companies paid agricultural income tax on 60 percent of their taxable income at the rate of 4 annas in the rupee, plus 2 annas in the rupee super tax, *i.e.*, a total of 37½nP in the rupee. The communists did not make the mistake of applying a uniform increase in agricultural income tax, which would have met with widespread opposition.

Amended Rates

The amended rates for companies with agricultural income up to Rs. 1 lakh were 25nP in the rupee as income tax and 12nP super tax. The surcharge of 5 percent of the total agricultural income tax and super tax imposed by the Kerala Surcharge on Taxes Act, 1957, made the new aggregate of taxes for small companies 38.85nP in the rupee. The Government did not employ half-measures in their isolation and crippling of the large sterling companies in the State. The new slab system increased taxation by stages so that when a company made over Rs. 20 lakhs as agricultural profit, the aggregate of the rates of income tax, super tax and surcharge was 65.1nP in the rupee. The resulting discrimination of 26.25 percent in taxation as between company income up to Rs. 1 lakh and income of over Rs. 20 lakhs has no justification whatsoever from a fiscal point of view. My authority is Professor Kaldor, who writes on Page 75 of his report to the Central Finance Ministry:

> "There can be little doubt that whether a corporation tax is levied by reference to the whole profit of companies or only on the undistributed part of the profit, it ought to be charged at a uniform rate independently of the total amount of profit assessed of a company. The considerations which require a rich individual to be taxed at a higher rate than an individual of more moderate means do not apply to comparisons between large and small corporations."

However, Karl Marx made the abolition of the existing property system the pre-condition of the establishment of a social order in which a single section of society would rule, and eliminate the rights of all other sections. It will help to make the position clear to show how taxation affects the Kanan Devan Company, taking last year's figures as the basis for calculation: The crop was 16.5 million lbs, and the pattern of sales was:

Exported directly ...	12 million lbs
Sold for export at Cochin auctions ...	500,000 lbs
Sold in Kerala for local consumption ...	1.5 million lbs
Sold in India outside Kerala for local consumption ...	2.5 million lbs

Flat rate imposts amount to:

	(In rupees)
Teas exported directly:	
Excise and export duty—12 million times 28nP: ...	33,60,000
Tea cess, at the rate of Rs. 2 a 100 lbs, on 12 million lbs: ...	2,40,000
Teas sold for export at Cochin auctions:	
Excise and export duty—500,000 times 28nP ...	1,40,000
Tea cess at the rate of Rs. 2 a 100 lbs, on 500,000 lbs: ...	10,000
Kerala sales tax at 5 percent on 500,000 lbs sold at an average price of Rs. 1.73: ...	43,250
Surcharge on sales tax at 5 percent	2,163
Teas sold in Kerala for local consumption:	
Excise duty—1.5 million times 4nP:	60,000
Kerala sales tax at 5 percent on 1.5 million lbs, average sale price Rs. 1.89: ...	1,41,750
Surcharge on sales tax at 5 percent	7,088
Teas sold in India outside Kerala, for local consumption:	
Excise duty—2.5 million times 4nP:	1,00,000
Central sales tax at 1 percent on 2.5 million lbs, average sale price Rs. 1.77: ...	44,250
Kerala land tax—23,920 acres at Rs. 10 ...	2,39,200
Total of flat rate imposts: ...	43,87,701

Income taxes are calculated on the estates' aggregate profits for last year of Rs. 38 lakhs. It may be noted here that eight of the Company's estates made a loss last year, primarily because of the after-effects of the 1958 strike. In order to arrive at the beginning of the income tax calculation, depreciation allowance at income tax rates has to be deducted. This amounts to Rs. 12 lakhs.

Forty percent of the balance Rs. 26 lakhs is subject to Central income tax, *i.e.*, Rs. 10,40,000.

The rate of tax for a sterling company is 63 percent; 63 percent of Rs. 10,40,000 is: Rs. 6,55,200.

The remaining 60 percent of the taxable income is subject to Kerala State agricultural income tax, and a rather complicated calculation is necessary because of the special discriminatory provisions in the Kerala tax structure against large companies.

60 percent of Rs. 26 lakhs is Rs. 15,60,000

The ordinary company rate of agricultural income tax is 25 percent.

25 percent of Rs. 15,60,000 is Rs. 3,90,000

Super tax is calculated as follows:

On the first Rs. 1 lakh at the rate of 12nP in the rupee	Rs. 12,000	
On the next Rs. 2 lakhs, at the rate of 19nP in the rupee	Rs. 38,000	
On the next Rs. 7 lakhs, at the rate of 25nP in the rupee	Rs. 1,75,000	
On the balance Rs. 5,60,000 at the rate of 31nP in the rupee	Rs. 1,73,600	
	Rs.	3,98,600
	Rs.	7,88,600

To this has to be added a surcharge of 5 percent.

5 percent of Rs. 7,88,600 is: Rs. 39,430

Rs. 8,28,030

Total income tax, Central and State: Rs. 14,83,230

Had the Company's crop not been affected by the strike, the amount of profit, subject to Kerala agricultural income tax, would have been over Rs. 20 lakhs, and the final step in the discriminatory super tax scale of tax at 37nP in the rupee would have applied to the balance profit over Rs. 20 lakhs.

	(In rupees)
The total of taxation, direct and indirect, is:	43,87,701
	14,83,230
	58,70,931
The Company is left with:	38,00,000
	14,83,230
	23,16,770

A sum of Rs. 12 lakhs has been mentioned as the depreciation allowance, calculated at income tax rates. In effect, the amount being spent this year on capital expenditure is Rs. 15,38,000. This expenditure, on staff and workers' houses, new water supplies, new machinery, and so on, will conventionally be regarded as necessary to maintain the Company's assets so that the estates can remain as revenue-earning entities. The unconventional part of the proposition is that, while the Central and State Governments obtain revenue of Rs. 58,70,931, the Company finds that it is only left with Rs. 7,78,770 once capital expenditure costs have been met from the net revenue of Rs. 23,16,770. Any possibility of maintaining the Company's old policy of ploughing back profits, expanding its activities, and so broadening the economic base of the country, can be dismissed at once. Nothing is available for an allocation to reserves so that the Company can strengthen its position and look forward with confidence to the continuation of its activities on its present scale. The shareholders own an asset of 23,920 acres of tea, with 22 factories, and ancillary features such as engineering workshops and a ropeway transport system. At a valuation of Rs. 6,000 an acre, the property is worth over Rs. 14 crores. A sum of Rs. 7,75,000 represents a return of just over ½ percent on this capital value. Expressed in another way, the return to the shareholders is Rs. 33 an acre, while the return to the Government is Rs. 245 an acre.

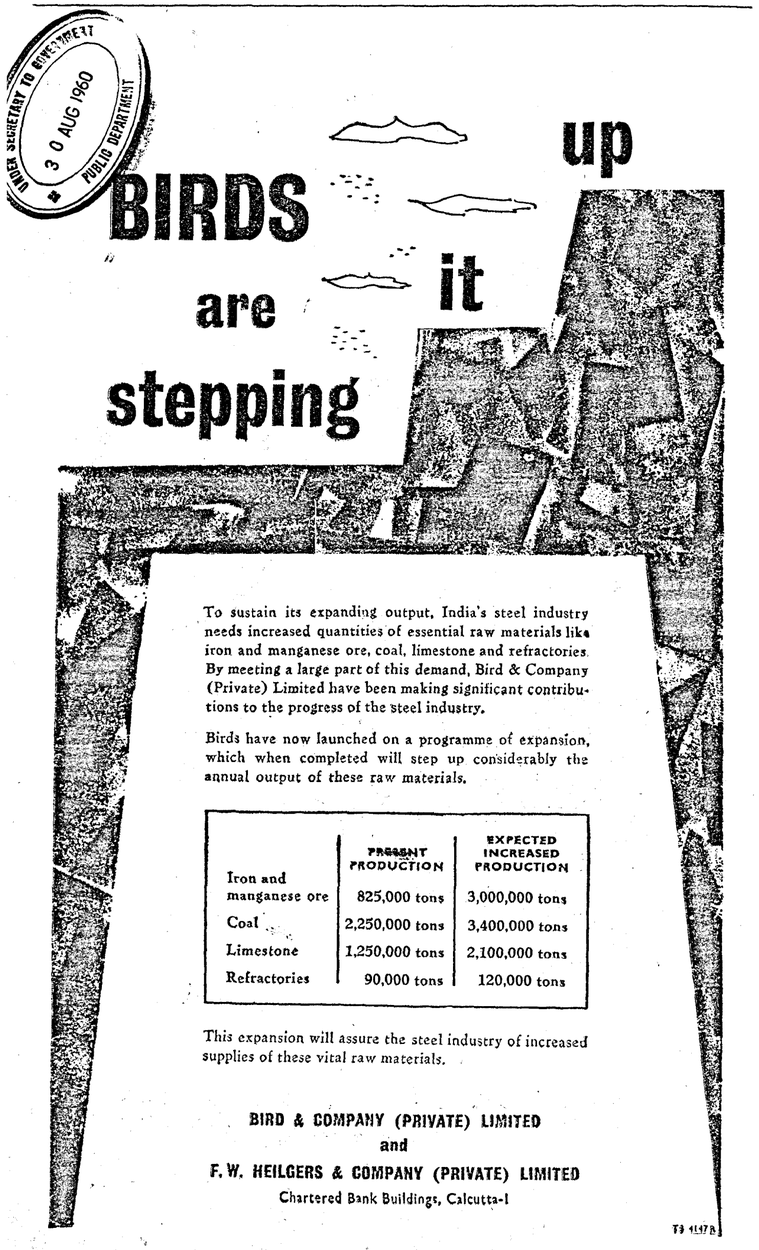
Wage Structure in Plantations

This situation has to be considered in the context of the establishment of boards by the Central Government to consider the wage structure in the plantation industries. It may well be that attempts will be made to maintain that taxation has nothing to do with wage levels, but the representatives of employers will have no option but to show that Government demands on the industry being excessive, it is impossible to pay more to workers. But in an inflationary economy, it is only reasonable that the real wages of workers should be maintained at a fair level. It is part of the Government's policy that, while sacrifices are required from all sections of the public so that successive five year plans can be financed, industrial peace

must also be maintained with a view to increasing productivity. How is this possible in our case?

Bonus Settlement

My Company took its place in the last industry-wide bonus settlement on plantations in Kerala applicable up to the end of last year, in the hope that the discriminatory taxation provisions imposed by the communist Government would be removed by the new Government. The impact of the enhanced taxation brings out a very large deficit when the "available surplus formula" is applied to last year's results. The Kanan Devan Company will be expected to participate in the next industrywide bonus settlement in the interests of industrial peace. Inevitably, application of the Supreme Court's formula will bring out another large deficit this year. The Supreme Court made the following observation in reviewing the "available surplus formula" in the Associated Cement Companies' case: "The formula is based on considerations of social justice and is intended to satisfy the legitimate claims of both capital and labour on the profits made by the industry in a particular year." As the prior charges considered to be essential by the Supreme Court for the maintenance of a concern in a healthy condition cannot be met, it follows that planters are being driven out of business by taxation. This article can thus be treated as the obituary notice of the Kanan Devan Company, to be put in the files for a few years until the jungle of taxation has completed its work.



Plantation Topics

REVISED PRICE FOR RUBBER EXPECTED SOON

GOVERNMENT URGED TO PROVIDE INCENTIVE TO GROWERS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Government of India, it is expected, will soon announce the revised tariff price for natural rubber. The revision will be largely on the basis of the Tariff Commission's recommendations. It will be recalled that the Commission made an enquiry last year into growers' demand for enhancing the existing price. If the impending revision is made purely on the "cost plus" basis as in the past, it will not provide sufficient incentive to increase production, growers say. The indigenous rubber production today is of the order of only 25,000 tons, against the requirement of manufacturers of about 50,000 tons. According to a recent estimate, India's rubber requirement will be about 100,000 tons, or double the present consumption, by the end of the third plan period.

Another point the Government will have to consider in this context is the recent five-fold increase of the basic tax on Kerala plantation holdings. The impact of the levy on the State's rubber planting industry is quite heavy. Planters say that in spite of some small concessions announced subsequently by the Kerala Finance Minister, the levy will increase the cost of production of rubber by Rs. 2.55 a 100 lbs. Meanwhile, a section of growers are worried whether the declining tendency in the world price of rubber will adversely affect the case for an upward revision of the Indian statutory price. The weakening of the world price—the duration of which might only be temporary—is attributed to Russia's reluctance to pay anything more than 28d a lb of natural rubber on the London market as well as the increased supply of the commodity. But some leading producers, such as Sir Eric Macfadyen, think that natural rubber is really in short supply at present, and that the market has been saved from an acute shortage only by substantial stockpile releases. So there might be fluctuations in the world rubber market during the current year too, although they are not expected to be steep. A section of producers think that 1960 will be as good a year as 1959 as far as the rubber market is concerned.

World Stocks Declining

The International Rubber Study Group's figures indicate that world stocks of natural rubber continue to decline. During the first five months of the current year, the natural rubber output amounted to 795,000 tons, against the world consumption of 837,500 tons. This has led to a fall of 22,500 tons in natural rubber stocks to 660,000 tons since January this year. The position concerning synthetic rubber is slightly different: stocks at the end of May stood at 335,000 tons—an increase of 25,000 tons over the January figure of 310,000 tons. In synthetic rubber, production continues to outstrip consumption.

Many Indian manufacturers of rubber products appear to be reluctant to use their import licences fully, on account of the higher world price for raw rubber, so the squeeze in the indigenous market is increasing. Buyers, meanwhile, are prepared to pay a premium for the locally available supplies. Many manufacturers, therefore, favour the introduction of a quota system for the distribution of indigenous rubber.

New Experiment

In the predominantly rubber district of Mundakayam in Kerala, it has now been appreciated that tea plantations yielding 500 lbs or less an acre are no longer an economic proposition. They are, therefore, being gradually converted into high yielding rubber holdings. These areas lend themselves admirably to interplanting with high yielding rubber—either with clonal or budded plants—as the remaining tea bushes provide a measure of shade to the soil as well as retain moisture throughout the long dry months.

The result is highly encouraging, according to Mr. A. V. John, chairman of the Mundakayam Planters Association. Addressing the recent annual general meeting, he complained that workers are not co-operating with the managements for producing more rubber. Planters in Mundakayam learned from the Malayan rubber delegation, which visited the area in April 1959, that the yield—especially from the old seedling areas—could be substantially increased by high level tapping. They point out that to introduce this system satisfactorily, workers' co-operation is necessary. "Far from extending any co-operation in the matter, a major union which claims to speak on an all-India basis, expressed the view that this system of high level tapping would be acceptable provided the task was reduced from 300 trees to 90 trees a tapper, that the fields concerned were downgraded and re-classified and that an extra payment was made for carrying the ladder. This is deliberate obstruction which takes no account of an increased wage which accrues to the tapper, of additional manpower employment, nor of India's crying need for more and more raw rubber".

Coffee Export Price Falling

The export price of Indian coffee is falling below the internal price. The average prices realised at the export sale held early this month were the following: Plantation A Rs. 201.11 a 50 kilos and Arabica Cherry Flats Rs. 155.28 a 50 kilos, against Rs. 223.19 and Rs. 178.52, respectively, at the internal pool sale. This largely reflects the present world trend in coffee prices. The total quantity sold by India out of her 1959-60 crop up to the first week of August is placed at 8,890 tons while tenders are due for another 1,449 tons. Excluding the quantities covered by tenders and retained for "monsooning", the balance to be sold for export is 9,392 tons. The internal offtake of Indian coffee in July amounted to 2,546 tons: this exceeded the offtake in July last year by 230 tons. The Coffee Board expects that the trend will continue during the rest of the current year.

COCHIN TEA SALES

At Dust Sale E, 265,000 kilograms of tea were on offer. There was a strong demand. Good liquoring mediums were irregularly 10nP dearer while residuals were weaker. Others were fully firm.

At Sale No. 32, 518,000 kilograms of tea were on offer. There was a strong general demand, particularly for improved high-growns which were dearer depending on quality. Others were irregularly 10nP to 15nP dearer. Whole leaf types were strong and dearer.

Jute

MARKETS FIRM AS RAW JUTE ARRIVALS DECREASE

OPERATORS SAY GROWERS ARE HOLDING BACK SUPPLIES

THE past week has seen a reversal of trends in both the raw jute and the gunny markets, which has taken many by surprise. The real strength has come from raw jute, where agency reports indicate that imports have been reduced by nearly half. This has greatly disappointed operators, as the previous week's indications of heavy and increasing arrivals in all centres gave rise to a feeling of well-being. As far as can be ascertained, imports have decreased not because of any breakdown in transport or flooding—although in some areas this has been reported—but for other reasons. Apart from the slow harvesting, which was anticipated, it now appears fairly certain that the growers have been withholding supplies in an attempt to get higher prices. All growers are not, of course, of one opinion and all the crop is not being held back. There is always the man who is satisfied with, or accepts, what he can get, and there is the man who sells lest, by waiting, he is forced to accept an even lower price. The general tendency, however, has been to withhold supplies.

Less Pressure to Sell

Until recent times, growers were compelled to market their crop soon after harvesting because they needed money. The pressure is not as marked now, although it does apply in many cases; the growth of co-operative societies and other allied institutions has made the growers more independent than they have ever been. Hence they have been able to feed the market at their own pace. In the circumstances, dealers who had made guaranteed shipment sales to Calcutta mills before the season really opened find that they cannot buy in the districts at the parity of Calcutta quotations. They have been forced to pay prices which, at times, have been about Rs. 2 a maund above Calcutta parity to make sure that they will not have their contracts cancelled.

The position now is that, because dealers in the mofussil have been holding back fibre so as to make as much profit as they can, Calcutta mills have not been able to make any substantial improvement in their stock position. Many of them, therefore, are forced to buy daily, and even if it is only a small quantity, it is sufficient to maintain the market. With this steady demand, and with prices in the mofussil above Calcutta parity, sellers are no longer willing to add to their bear accounts. Finding that they cannot cover recent sales without losses, they have stopped discounting and are asking for prices more in line with those in the mofussil. The quantity of jute on offer in Calcutta has been drastically reduced, and many sellers have withdrawn from the market. As many mills cannot remain out, they have been forced to concede higher rates.

Overseas Business Poor

The changed trend in raw jute has made mills more reserved in their selling policy. With a heavy bear account to be covered by local shippers, the downward tendency in manufactured goods has also been reversed. This has happened in spite of a general lack of interest from overseas. In hessians, the full impact of the low burlap consumption figures for the United States has still to be felt. In a recent report from the U.S.A., it was indicated that the decline of 11 million yards in consumption during July was far more than was generally expected. The fall was attributed to the high prices prevailing during the first quarter of 1960. This source says that the important lesson for Calcutta operators to learn is that paper has given the U.S. bag manufacturer a "hedge" against squeezes in Calcutta. Consumers are unanimous in emphasising the growth of competition from paper. They have now reached the stage where they are no longer willing to accept the problem presented by the short crop scare and the uncertainty in prices of packaging material. The danger signal is apparent in the precipitous fall in U.S. consumption last month, and may well be the thin end of the wedge.

Price movements in heavy goods during the past week have been erratic, covering a range of about Rs. 4. The last day for the submission of shipping instructions for August shipment goods fell during this period. It caused a heavy spate of local covering, which pushed up prices rapidly in the near delivery period. The premium for ready goods advanced to over Rs. 18 a 100 bales on the January-March positions in B Twills. The demand for cornsacks was also heavy, the premium here being about Rs. 21.

Raw Jute Arrivals

The publication of the figures for raw jute arrivals in Calcutta and mill stations during July contributed in no small way to the steadiness of the jute market. Although it was expected that arrivals would be small due to the crop being about a month late, the final figures came as a shock. Total arrivals were 177,650 bales, which was almost an all-time low for a single month. This was 125,350 bales less than in the previous month, and 158,350 bales less than during July 1959. The arrivals were made up of 140,000 bales from India, and 37,650 bales from Pakistan. The arrivals from India are the lowest since July-August 1951, when separate figures for Pakistan and India were first introduced.

THE JUTE MARKETS

Heavy speculative activity was a feature of the futures market during the past week, and prices moved through a wide range. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 17th August to 23rd August, were as follows:

	Hessians 40in 10oz. Nov. 1960		Sacking B Twills Nov 1960	Raw Jute Assam Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	49.05	45.40	125.45	89.59	33.40
Highest	50.25	46.10	126.95	95.00	35.45
Lowest	49.30	45.08	123.10	87.87	32.80
Closing	49.91	45.78	126.15	94.20	35.16

Manufactured Goods: The goods market suffered a sharp setback at the opening last Thursday on account of heavy selling pressure in the futures market. Heavy goods prices slumped by Rs. 1.25, for B Twills to open at Rs. 138.75 for August shipment and Rs. 122.50 for January-March. Hessians were quiet and moved in sympathy with heavy goods, with 40in. 10oz. opening at Rs. 46.85 for August and Rs. 44.90 for January-March. During the day, covering in the near position started. By Friday morning, sacking rates had advanced by Rs. 1.50, but hessians remained dull with prices virtually unchanged. There was very little change until Monday, when renewed speculative activity, combined with heavy shipper covering against due date shipping instructions, caused a Rs. 2 jump in B Twills, which stood at Rs. 142.60 for ready shipment. Hessians advanced to Rs. 47.20 for 40in. 10oz. in the near positions. On Tuesday, stronger advices from the jute section pushed ready B Twills up to Rs. 143.25 and speculative activity supported the rise. A slight reaction set in towards the close and prices tended to ease.

Opening quotations on Wednesday morning were as follows:

	August	September	October	Nov.-Dec
40in. 7½oz.	35.20 (38.37)	35.20 (39.48)	35.05 (38.20)	34.85 (37.99)
40in. 8oz.	38.50 (41.96)	38.25 (41.69)	37.60 (40.98)	37.35 (40.66)
40in 10oz.	47.15 (51.39)	47.25 (51.50)	46.80 (51.01)	46.45 (50.63)
B Twills	143.25	141.25	135.25	130.75
Heavy Cees (Plain)	140.50	140.75	135.25	130.75
A Twills	174.50	172.00	166.00	160.00
Liverpools	158.50	158.00	152.50	147.50
Cornsacks	149.00	149.00	140.25	134.75

Raw Jute: Throughout the past week, Calcutta mills showed interest in raw jute, and a fair quantity was purchased. A large percentage was covering against cancelled contracts which were due for guaranteed delivery on 15th August. Sellers were very reserved due to the decline in imports in most upcountry agencies, and also due to the disparity between Calcutta and mofussil indications. The week opened with Assam Bottoms quoted at Rs. 37 a maund, but thereafter rates advanced by 50nP a day. By Tuesday, they had reached Rs. 39 for September-October shipment. Sellers withdrew from the market at this stage in spite of the fact that business was done daily on the rise, and offers in Calcutta were negligible.

The scarcity of imports upcountry was not reflected in the arrivals in Cossipore, where a total of 550 wagons reached during the week. This was about 150 more than in the previous week, and only slightly below the average of previous years. All arrivals found ready buyers, and high prices were paid.

Good business was done in ready bills of lading for Assam and Northern jute at Rs. 39.50 to Rs. 40.75, and in selected Tossa at Rs. 38 to Rs. 38.50 for October. Sheoraphuli Daissee was done at Rs. 39 for September-October. Small lots of

THE FOREIGN JUTE MARKETS

FIBRE PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Dundee is steady, and sellers are making little change in their quotations from day to day. Spinners are apparently satisfied for the present. There is now no difference in the prices for white jute for quick shipment and those for later despatch. The scare over the fibre scarcity during this season appears to have ended.

Offers are quite freely made of Mill Firsts at from £122 a ton, Mill Lightnings from £115, Mill Hearts £111 and Grade Hearts £106, August-September and also September-October, c.i.f. U.K.-Continent. Dark jute is more freely mentioned now, with Grade Tossa-2/3 from £119 and fours £113, also Continental Tossa-2/3 (output) at £110, October-November, c.i.f. For a month earlier, £1 a ton is required to be paid extra.

Calcutta goods were again irregular, but prices were up a little last week at 7½s 3d for 40in. 10oz. hessians and 53s 3d for 7½oz., August and September, 69s 6d and 52s 3d October-December and 68s 6d and 59s January-March, with B Twills at 209s 9d, 208s 9d, 193s and 188s 3d for the respective months of shipment, all f.o.b., Calcutta.

Jute yarns are firm, and a quiet business continues to be done by those who were not prepared for the last rise in prices from 9th August. Although spinners are in a good position concerning sales for delivery over the next two to three months, there is not much difficulty in securing quick delivery. Hessian yarns are firm on the basis of 17.73d a lb for 8 lbs C.H.W. cops and 18.87d for 8 lbs J.C.H. warp, on spools. Hessian cloth is also firm at 15.25d a yard for 40in. 10oz. and 12.90d for 8oz.

A new scheme for the education and training of young people in the jute industry has recently been introduced in Dundee. It is the only one of its kind in Scotland, and in several aspects is unique in Britain. Its object is to raise standards and to meet conditions arising out of the increase in the number of school-leavers. The scheme is called "the junior textile operatives' course." It is open to boys and girls of 15 years and 16 years of age in non-clerical jobs. The syllabus is in four parts: written and spoken English, arithmetic, social studies and citizenship and factory induction.

THE PAKISTANI JUTE MARKETS

FIBRE CONTINUES TO FALL

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE Government's drive to stop the growing malpractice of selling and buying moist jute has been remarkably successful. In Narayanganj, which is the biggest trading centre and which was the first to be supplied with wet jute, matters have noticeably improved. Considering that during the worst period, some of the jute was sold with as much as 6 percent or 7 percent of excess moisture over normal, the Government's measures to check the malpractice are justified. However much it is dried, wet jute spoils the quality, so that quite apart from the loss to buyers, there is also a loss to Pakistan in terms of foreign exchange. The loose jute market continues quieter and, in fact, prices have been falling. Arrivals in Narayanganj have been slightly less, but, with the exception of the south-eastern part of the country, arrivals generally have been satisfactory.

The interbaler market in Narayanganj remains fairly dull and inactive. There is very little interest in long jute, except at a considerable discount for forward sales with no sellers. A little more business is being done in cuttings at higher prices. Overseas reports indicate that buyers are trying to hold off, encouraged by one or two discount sellers. For the present, however, in view of the fact that E.P.C. prices are higher than those quoted abroad, very little business is being transacted except for August guaranteed shipment. During the first fortnight of August, 246,626 bales were sold overseas and E.P.C.s registered. The biggest buyer was the U.K. with 67,434 bales. India bought 36,978, bales, Belgium 22,425, bales, Czechoslovakia 21,970 bales, West Germany 15,201 bales, France 13,320 bales and Japan just over 12,000 bales.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.2 percent to 125.6 during the week ended 6th August, 1960, compared with 125.3 for the previous week. The index was higher by 1.0 percent and 7.2 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles rose by 0.3 percent to 125.0, compared with 124.6 (revised) for the earlier week due to an increase in the prices of rice in Kotma (+17%) and in Kanpur (+6%), milk in Bombay (+17%), oranges (+6%), potatoes (+4%), eggs (+3%), mung, cashewnuts, tea (+2% each) and onions, bananas, coconut oil and chillies (+1% each), although the prices of jowar in Nagpur and milk in Calcutta (−6% each), rice in Nagpur and gingelly oil (−5% each), fish (−4%), maize, masur and turmeric (−3% each), gram (−2%) and bajra, arhar, urad, groundnut oil, coffee, black pepper and salt (−1% each) showed declines. The index for Tobacco stood unchanged at the earlier week's level of 107.5. The Fuel, Power, Light and Lubricants group index remained stationary at the previous week's level of 118.2, in spite of a fall in the prices of castor oil (−2%). Lower prices of groundnuts (−7%) and raw silk, linseed and lac (−1% each) brought down the index for Industrial Raw Materials by 0.4 percent to 137.5, when compared with 138.1 (revised) for the previous week. The prices of raw jute and castorseed (+5% each), gingellyseed and cottonseed (+2% each) and copra (+1%), however, moved up. The prices of brass and copper (+2% each) and coir yarn (+1%) showed advances while those of linseed oil, rayon yarn, zinc and tin (−1% each) declined, and the index for Intermediate Products worked out to 131.3, against 131.2 for the previous week. The index for Finished Products advanced by 0.4 percent to 120.6 as a result of an increase in the prices of jute manufactures (+4%), although those of general chemicals (−2%) and bicycles (−1%) showed a fall.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

COTTON CONSUMPTION SETS NEW RECORDS

A highly successful marketing year for cotton, with production, consumption and trade all at record levels, has been reported by the International Cotton Advisory Committee. One of the most important pointers to future trends in the trade is the significant reduction in stocks caused by higher consumption, in spite of higher production in the United States. The increase in consumption was fully matched by the rise in production, and it is doubtful whether there would have been any addition to stocks even if there had been no crop failure in India or if price had not acted as a deterrent to producers in many countries. Stocks on 1st August were *estimated at* 16.4 million bales, compared with 17.7 million bales a year ago. Total exports are now estimated at 15.3 million bales, an increase of nearly 4 million bales over the 1958-59 level. "The demand for cotton," says the report, "has been such that the United States has been able to export 7 million bales and thus dispose of well over 1 million bales of its surplus stocks. At the same time, most other producing countries have sold their entire crops and reduced their carryover to the barest minimum." Consumption during the year was influenced by the prospects for 1960-61, particularly in view of the probability of another large world crop. The U.S. planted acreage was up by 3 percent while the Mexican acreage increased by 400,000. Besides, a rise was expected in central American countries. The first estimate in Egypt shows acreage at one of the highest levels for many years and significantly higher than that of the last season. In India and Pakistan, acreage is expected to be at least as high as in the last season. If yields return to normal in India, this alone will mean an increase of about 1 million bales in her output. It seems probable, the Committee says, that both acreage and production will be higher during the 1960-61 season, but against this must be set the much lower carryover stocks, so that supply may not be much different from that of the last season, and the statistical situation of the fibre should be roughly in balance. It regards trade prospects as quite favourable, but there might be some reduction in exports from the record 1959-60 level because of the favourable carryover position.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, total sugar production for the 1959-60 season up to 31st July, 1960, was 2,401,500 tons, against 1,905,000 tons during the corresponding period of the last season. The offtake from factories during July 1960, was 171,000 tons, against 175,000 tons during the corresponding period of the last season. Total despatches up to 31st July, 1960, were 1,492,000 tons, against 1,577,000 tons by the same date of the last season. The total closing stock with factories on 31st July, 1960, was 1,054,000 tons, against 663,000 tons on the same date of the last season.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July 1960. As compared with June, the July Indices for Food and Clothing indicate rises of 9 points, and 4 points, while those for Fuel and Lighting, and Miscellaneous remain unchanged at 289 and 300 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 6 points during July 1960.

INDO-IRANIAN AIR AGREEMENT SIGNED

A.-I. I. TO INTRODUCE NEW FREIGHTER SERVICE TO EUROPE

(FROM OUR NEW DELHI CORRESPONDENT)

AN agreement between India and Iran for the operation of air services between the two countries was signed in Teheran recently. The Indian Ambassador, Mr. Triloki Nath Kaul, signed on behalf of India, and Mr. Abbas Aram, Minister for Foreign Affairs, signed for Iran. The agreement aims at developing the air traffic between the two countries. The airline to be designated by the Government of India is entitled to touch Iran in Teheran or Abadan and proceed, if desired, to points beyond Iran in both directions. Similarly, the airline designated by the Government of Iran is entitled to touch India in Delhi or Bombay and proceed, if desired, to points beyond India in both directions.

Second Pan American Service to Delhi

Pan American World Airways has begun the operation of a second New Delhi service from 18th August, 1960. The service operates from New York *via* Europe on Sundays and Thursdays, and to the U.S. west coast *via* Hongkong and Tokyo on the same days of the week.

European Airlines Extend Jet

K.L.M. will introduce Douglas *DC8* jets through India by the middle of November this year. In accordance with the Indo-Dutch air agreement, K.L.M. will then reduce its frequency from three to two a week, one operating through Delhi and the other through Calcutta. It will have a direct connection with New York and Canada. Air France is introducing *Boeings* on its eastern services by mid-November. According to the revised schedule, it will have four frequencies instead of three a week at present. Swissair has also been permitted to increase its frequency by one to three a week.

Air-India Freighter Service

Air-India International, it is expected, will shortly introduce its freighter service to Europe with reconditioned *Super-Constellations*.

I.A.C General Manager

The general manager of the Indian Airlines Corporation, Air Vice-Marshal P. C. Lall, has been given two years' extension. The Deputy Secretary to the Central Ministry of Communications, Mr. K. K. Unni, will take over as the Administrative Officer of Air-India International in place of Mr. Doraiswami who has been transferred.

Atlantic Service Pool

B.O.A.C., Air-India International, Qantas and T.C.A. will operate 200 flights a week in pooled services across the north Atlantic during the summer peak season, under a co-operative arrangement agreed upon earlier this year. B.O.A.C. alone is now offering 35 flights each way between New York and London, seven between Boston and London, 18 between Toronto, Montreal and London, and seven between Chicago and London *via* Detroit. In addition, the airline operates one flight a week between Trinidad and London for B.W.I.A. Air-India, which began its transatlantic service in May, is operating three flights each way between London and New York, Qantas twice weekly flights between the same points and T.C.A. 12 flights a week in each direction between Canada and Britain. The types of aircraft serving the route for the four airlines include Conway-powered *Boeing 707s, DC-8s, Comet IVs* and turboprop *Britannias*. B.O.A.C.'s pooling agreement with T.C.A. became effective on 1st March, and co-ordination with Qantas and Air-India International began on 1st April, on services between Britain, the Far East and Australia as well as across the north Atlantic.

New French Airline for Africa

Air France and U.A.T. have ratified the agreement on their African services, which involves the establishment of a new Company, Air Afrique, to operate regional and domestic African services, and offer assistance to the newly independent African States in organising their own airlines. Air France and U.A.T. will be equal partners in the new Company. The two airlines will pool their long-range services to and from African points and share *en route* technical facilities. U.A.T. will turn over three *DC-4s* it now has, and five more it will buy, to Air Afrique. It has sold its six *Noratlas* freighters to the Portuguese Army for transport duties in Africa.

Cheaper Air Flights

B.O.A.C., British United Airways, (formed through the merger of the Airwork group and Hunting Clan), Central African and East African Airways will begin co-ordinated low-fare "skycoach" flights on 1st October between Britain and the Rhodesias, Nyasaland and east African territories. Rates about 42 percent below the present tourist class fares will be available, but only to the residents of the U.K. and the African territories. *Britannias* and *Viscounts* will be used on fortnightly flights which will supplement economy-class services at greater frequencies.

Egyptian Airline to Serve Bombay

Misrair will open *Comet* services soon between Cairo and Bombay and probably extend them later to Delhi and Calcutta, according to Bombay reports. Air-India International now serves Cairo.

Czech Air Service to Djakarta

Czechoslovakia Airways will open a new service from Prague to Djakarta as soon as preparations are completed in the Indonesian capital. C.S.A. will operate the route *via* Cairo, Bombay and Rangoon, using *TW-104* jets.

Interchange of Sea and Air Traffic

New arrangements between airlines and steamship companies for the interchange of traffic now make it easier for travellers between north America and Europe and the Mediterranean to travel one way by ship and the other by air. A standard traffic handling air-sea agreement between the conferences of the two types of carriers has replaced a series of accords between individual airlines and shipping companies, and considerably extends their scope. Travellers over the north Atlantic receive a 10 percent round trip discount on both portions of the air-sea voyage, provided the sea portion of the voyage is taken during the "thrift season", when the steamship companies grant this reduction for round-trip sea voyages. The new arrangements permit member carriers of the International Air Transport Association (I.A.T.A.) and the Trans-Atlantic Passenger Steamship Conference (T.A.P.S.C.) to become parties to the standard agreement without the necessity of separate negotiations. To date, 23 T.A.P.S.C. lines and 33 I.A.T.A. airlines have subscribed to the agreement and more are expected to follow. In subscribing, each company designates the air or sea carriers with whom it elects to exchange traffic.

AVRO-748 WILL MAKE ITS DEBUT AT FARNBOROUGH SHOW

The first public demonstration flight of the new *Avro-748* aircraft, which has been described as the "work-horse of the air", will be a feature of the twenty-first flying display of the Society of British Aircraft Constructors in Farnborough, Hampshire, during the first week of September. The *Avro-748* is a 44-seat airliner which can be converted into a freighter or can carry both passengers and freight. It made its first flight in June. Already ordered by four U.K. civil operators, the new *Avro* is being built under licence in India as an Indian Air Force transport. Designed and built in the short space of 17 months, the aircraft is cheap, sturdy, efficient, and economical.

Several other aircraft will be making their first public demonstration flights at the Farnborough show. One is the *Short SC-1*. It will be the first public demonstration of vertical take-off and landing, and conversion to fast forward flight, by aircraft fitted with jet-lift engines. Another aircraft on display will be the de Havilland *Comet 4-C*. This is an intermediate-range version of the *Comet* with the larger *Comet-4* wing and the long *Comet-B4* fuselage. So far, 51 *Comet* have been sold, 23 to operators abroad. The Rolls-Royce Conway-powered Handley Page *Victor-2*, which first flew in February last year, will also be making its first appearance while, at the other end of the scale, the Lancashire *Prospector* (Series 2), with a Bristol Siddeley Cheetah engine, will make its Farnborough debut. The *Prospector* (Series 1) aircraft is already in service in Australia, New Zealand, Africa, Canada and Europe.

NAPHTHALENE PLANT COMMISSIONED AT DURGAPUR

The naphthalene plant, associated with the by-products plant at the Durgapur steel works, was commissioned recently. The naphthalene plant works in conjunction with the tar plant which produces the crude naphthalene oil. This is pumped from the storage tanks at the tar plant and delivered into crystallising trays at the naphthalene plant. The naphthalene oil is allowed to cool for four days to permit complete crystallisation and the oil drained off and pumped back to the tar plant for blending purposes. The solid naphthalene crystals are then transferred to the "hot press" unit for pressing into cakes of refined naphthalene. The cakes are delivered by conveyor belt to a crusher and bagging machine and then to storage for subsequent loading to road or rail transport. Naphthalene is one of the most versatile and important of the industrial organic chemicals, being an essential raw material for the preparation of many products. It is, for example, familiar to everyone in the form of moth balls. Its partial oxidation product, phthalic anhydride is used quite extensively in the preparation and production of resins, lacquers and plastics of various kinds and for dyestuffs for fabrics, paper and paint. Derivatives of naphthalene are used in the manufacture of explosives, soaps, photographic chemicals, wetting agents, insecticides, disinfectants and pharmaceuticals, synthetic tannins, oils, fuels and in organic syntheses, all of which represent only a part of its widespread potential application. The plant is designed to handle 36 tons a day of crude naphthalene oil to produce approximately 20 tons of refined naphthalene. It has been built by Messrs Simon-Carves Ltd, a member Company of I.S.C.O.N.—the British consortium constructing the steel works.

SHELLAC QUIET

During the week ended 23rd August, the market was quiet. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 88 sellers.
Lemon No. 1 Shellac	Rs. 85, 84 buyers; 88, 86 sellers.
Lemon No. 2 Shellac	Rs. 80, 78 buyers; 83, 81 sellers.
F.O. Superfine Shellac	Rs. 74, 72 buyers; 76, 74 sellers.
Standard One Shellac	Rs. 72 to 70 buyers; 73, 74, 72 sellers.
T.N. Pure Shellac	Rs. 66 to 64 buyers; 68 to 66 sellers.
Golden Kusmi Seedlac	Rs. 95 sellers.
No. 1 Kusmi Seedlac	Rs. 80 sellers.
No. 2 Kusmi Seedlac	Rs. 68, 66 sellers.
Golden Bysacky Seedlac	Rs. 72 buyers; 74, 75 sellers.
One B Seedlac	Rs. 66, 66.50, 66 buyers; 67 sellers.
Two B Seedlac	Rs. 59, 58 buyers; 60 sellers.
Manbhum Fine Seedlac	Rs. 64 buyers, 65 done, 63 buyers; 66, 65 sellers.
Fine Bysacky Seedlac	Rs. 61, 62, 60 buyers; 63, 62 sellers.
Genuine Bysacky Seedlac	Rs. 58, 56 buyers; 60 to 58 sellers.

Shipments during August until the 18th were 25,484 packages.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 9, held on 22nd and 24th August, offerings at the export auction comprised 47,479 chests, and these met with a good general demand, although generally at lower rates. Orthodox teas with bright liquors sold well, particularly Fannings which were sometimes dearer: Assam B.O.P.'s with plain liquors, however, were up to 50nP easier. Brighter liquoring Dooars B.O.P.'s and O.Fgs. were the strongest feature of the Sale, and appreciated in value, while plain Brokens and Fannings, though irregular, were generally easier by 10nP. Non-wither teas were well supported at fully firm and at times dearer rates, although the plainer varieties were sometimes lower. There was a good enquiry for medium C.T.C.'s which occasionally sold at dearer rates. The very best C.T.C. descriptions, however, declined markedly and were often easier by Re. 1 a kilogram. Darjeelings came in for a fair demand at mostly lower rates. Whole leaf grades were irregularly easier by up to 20nP, while tippy descriptions were fairly well supported, although generally at below last rates. Once again Fannings grades received more support than Brokens.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.20 to 5.50	1.92 to 1.94
Plain B.P.	4.30 to 4.45	1.80 to 1.84
Plain Fannings	4.20 to 4.60	1.96 to 2.04
Medium B.P.	4.90 to 5.20	1.94 to 2.04
Medium Fannings	5.00 to 5.30	2.08 to 2.18
Best Assam C.T.C. B.P.	9.50 to 10.50	2.70 to 3.00
Best Assam C.T.C. Fgs.	11.00 to 12.00	3.30 to 3.70

(Quotations are inclusive of excise duty.)

At the Inte nal Sale, there was good a general demand for the 18,214 packages of Dusts on offer. Medium C.T.C.s were well supported but were often up to 20nP easier while the best liquoring sorts were irregular. Non-wither descriptions were the strongest feature of the sale, and generally appreciated in value. Orthodox exportable Dusts were readily taken up at up to 8nP below last rates, while the smaller and brighter liquoring kinds came to a strong market and were often dearer. Darjeelings were weak, and there were quite a few withdrawals.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb.
Medium Dooars Dust	4.40 to 4.60	1.78 to 1.86
Medium Assam Dust	4.45 to 5.00	1.78 to 1.86
Medium Assam C.T.C. Dust	5.50 to 5.80	2.00 to 2.10
Best Assam C.T.C. Dust	5.90 to 6.30	2.65 to 2.90

(Quotations are inclusive of excise duty.)

Leaf offerings amounted to 412 chests. There was a good demand at firm to dearer rates.

LINSEED STEADY

The linseed market was steady during the past week. Activity was limited. Crushers showed some interest in ready and forward deliveries, but sellers were reserved as arrivals of seeds from upcountry declined. Stocks were small. Trading in the oil market was slow and local buyers showed interest at lower prices. Business in oilcakes was negligible with overseas buyers showing interest for forward deliveries at lower prices. The latest quotations are as follows: Ready Rs. 25 a maund and September futures Rs 25 a maund.

HIDES AND SKINS QUIET

The market was quiet. Stocks of hides were higher but those of skins were less than in the previous week.

Bazaar Sales

(Between 16th August and 22nd August, 1960)

Cowhides: Wet salted (Slaughtered) 13,900 pcs. on the basis of Rs. 8 to Rs. 16.50 and Rs. 19.50 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 76,700 pcs. on the basis of Rs. 350 to Rs. 370, Rs. 400 to Rs. 420 and Rs. 440 to Rs. 460; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 2,500 pcs. on the basis of Rs. 355; Purneah (heavy) 1,500 pcs. on the basis of Rs. 500 to Rs. 515.

Bazaar Stocks

(22nd August, 1960)

Cowhides: Wet salted 183,800 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 49,000 pcs.; Assam-Dinajpur 75,000 pcs.; Muzafferpore - Patna - Pakur-Purneah-Kissenganj 136,500 pcs.

COMPANY AND PUBLIC NOTICES

THE BRITANNIA BISCUIT CO., LTD.

NOTICE is hereby given that the Annual General Meeting (being the 69th Ordinary General Meeting) of the Shareholders of the Britannia Biscuit Company Limited, will be held at the Registered Office of the Company, 15, Taratola Road, Calcutta-27, on Wednesday the 21st September, 1960 at 10-30 A.M. for the following purposes:

(1) To receive and consider the report of the Directors with Statement of Account and Balance Sheet, and to read the report of the Auditors thereon.

(2) To declare a Final Dividend.

(3) To elect Directors.

(4) To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 14th September to 21st September, 1960, both days inclusive, and warrants for such Dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees, whose names appear in the Company's Books on the 21st September, 1960.

By Order of the Board,
A. P. CHANDA,
Secretary.

15, Taratola Road,
Calcutta, 20th August, 1960.

Note: (1) The Directors have recommended the payment of a Final Dividend on Ordinary Shares @ 19% subject to deduction of tax, making, with the 6% interim dividend already paid on Ordinary Shares 25% for the year.

(2) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

DUNCAN BROTHERS & COMPANY, LD.

NOTICE is hereby given that the Annual General Meeting being the Sixty-first Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Saturday the 17th September, 1960 at 11 A.M. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1959.
2. To declare dividends on the Preference and Ordinary Shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 5th to 17th September, 1960, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.,
K. P. GOENKA,
Director.

Calcutta, 19th August, 1960.

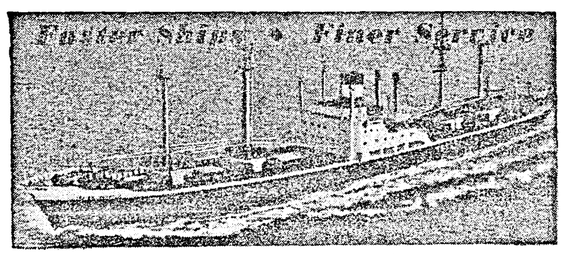
(o), taxable; Central Cachar Tea Co. Ltd—5 p.c., subject to tax; Britannia Biscuit Co. Ltd—19 p.c. (f) (o), subject to deduction of tax.

ALL-STEEL SUPERSONIC AIRCRAFT TO FLY AT END OF YEAR

The Bristol *T-188*, the first all-steel supersonic aircraft, is expected to make its first flight at the end of this year. It will fly at speeds of over 1,500 miles an hour. The aircraft, which has taken five years to develop, is now at the stage where the fuselage is nearly completed and the wings are in position. Its two de Havilland Gyron Junior engines, which together develop a 20,000 lbs weight-thrust, have yet to be mounted. The *T-188* will be the only conventional-type aircraft to achieve speeds which, unconfirmed reports say, will be around 2,000 miles an hour. The Bristol company says that the aircraft performance will be comparable with that of the American *X-15*, which has has to be launched from a parent aircraft in the air.



Our fleet of twenty modern freighters offers fast, regular and dependable service between

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Block Account Rs.	Reserve & other Funds Rs.	Acreage under Tea	Outturn and Average Price per lb realised for crop 1957 Lbs.	1957 Rs.	1958 Lbs.	1958 Rs.	Estimate 1959 Lbs.	NAMES	Accounts closed	Mg. Agts., Secretaries, etc.	Net profits including taxation Rs.	Dividends per cent 1956	1957	1958	Paid-up Share Rs.	Latest Market Quotations as available until 24-8-60 Rs.	17-8-60 Rs.	A year ago Rs.

OUTLOOK FOR THE SHARE MARKETS

THE stock markets have become distinctly easier during the past couple of weeks. The volume of trading has decreased, the prices of many speculative issues have fallen, and special interim clearings have had to be ordered in Calcutta this week in three shares—Hindustan Motors, Rohtas Industries and Indian Cables—on which the attention of the bulls had long been concentrated. The quieter trend cannot be surprising. The boom which was sparked off by Mr. Morarji Desai's Budget at the end of February, and which after a temporary relapse, was resumed from the middle of April, had run strongly for nearly four months. It took prices up to the point where the yields on many leading equities became less than those available on Government securities, even in cases where growth prospects were doubtful. The boom in the shares of newly-floated companies, in particular, was extraordinary: concerns which had still two or three years to go before they produced a single ounce of whatever they were supposed to produce, found their shares rising to many times the par values on speculative manipulation. The new issue boom has by no means petered out yet, but it is possible that if sobriety returns to the rest of the stock markets, it will not reach the proportions it has done in recent months. That would be no cause for regret; while it is gratifying that people are becoming readier to invest in new ventures, the indiscriminate support given even to doubtful ones promoted by well-known speculators cannot be conducive to the long-term health of the private capital markets.

There is probably no single factor which can explain adequately why the share boom should have lasted so long, or shown signs of fizzling out now. The boom originated from the belief that the prospects for the economy were extremely promising, as industrial production was rising and agricultural production was fairly maintained. In an atmosphere of expansion and inflation, it was thought that company profits would continue to rise, the impact of heavier taxation being disguised by an increase in turnover. The Central Budget of six months ago offered evidence that the Government's fiscal policy was becoming more realistic, in that most of the future increase in revenues was to be secured from indirect rather than direct taxation. As foreign aid remained liberal, many thought that the expansion of industry would not be interrupted by stiffer import restrictions, as it was in 1957 and 1958. Finally, there was clear evidence that investors abroad had also begun to view the prospects for the Indian economy with optimism; the large number of industrial ventures launched with foreign collaboration carried the promise of technical and managerial efficiency, and thus served to draw out the capital of Indian investors for equity investment.

None of these assumptions have been proven decisively wrong so far. But the easier undertone of the stock markets indicates that they are beginning to be questioned more closely. The immediate impetus for doing so comes from the fact that the outlook for some of India's major industries has become distinctly worse during the past few months. Among the older industries, the jute and cotton textile mills are faced with acute raw material shortages. The tea industry has suffered a drastic fall in production because of adverse weather conditions, and the fall has not been offset by any substantial rise in prices. The coal industry finds its expansion hamstrung by Government policy. The acute shortage of coal, in turn, is retarding the production and increasing the operating costs of the steel plants and numerous other enterprises. All these industries together represent a very large proportion of the total manufacturing investment in India, so their difficulties cannot fail to undermine the sentiment of the stock markets.

Until recently, the sentiment was buoyed by the fact that many other industries were doing well, especially the newer ones. That is why speculative support in the stock markets was diverted to cash scrip, especially in the miscellaneous sections. But now, even the prospects for many of the miscellaneous industries have been clouded by the threat that the sharp decline in the foreign exchange reserves will bring tighter import restrictions soon. It looks unlikely that India will get any substantial amount of foreign aid immediately in "untied" form to cover the large deficit in the balance of trade. Until the aid comes, imports will have to be cut. Official assurances to the contrary notwithstanding, the import reductions will affect not only expansion plans but also the current working of industry. The Government's reluctance to sanction adequate raw material imports for the jute and cotton textile mills indicates how acute the foreign exchange shortage is: the forthcoming import cuts may not be so small and so judicious as to have only a marginal effect on the normal working of industry.

Apart from the prospect that imports will be reduced soon, other important bearish factors for the stock markets have been the recent debates on the draft outline of the third five year plan. As might have been expected, the draft outline came in for very little criticism on the one ground on which it might have been assailed—that it is an imaginative departure from economic realities. Instead, the criticism was mainly in terms of ideology, not substance. So none of the Government spokesmen cared to explain in detail how the Rs. 1,650 crores of additional taxation (including the surpluses of State enterprises) would be raised. It was merely reaffirmed that the sum would be raised: that it was expected to come mostly from indirect taxation; that no further details could be given until the third plan was finalised after discussions with the State Governments; and that fiscal adjustments would have to be pragmatic and would be made "in the light of the developing situation." Investors are less inclined to take these vague assurances at their face value now than they were two months ago. The belief is gaining ground that raising Rs. 1,650 crores more would be not only a miracle but also a disaster: it would push up prices and costs to levels far beyond what the economy can bear, and make nonsense of all the current talk about expanding industry and holding the price line.

In the immediate future, it seems reasonable to expect that the stock markets will remain subdued. It is normal for activity to decrease with the approach of the long holidays at this time of year. After the holidays, if the import cuts are drastic, it may take the markets a long time to resume their former buoyancy. The working of the major industries is unlikely to improve much in the near future, since the jute, cotton and coal shortages have shown little sign of easing quickly. Furthermore, activity in shares will be restrained by the fact that conditions in the money market are already tight, in what is supposed to be the trough of the "slack season"; the onset of the "busy season" a month hence will make them tighter still. It is true that speculative activity in the stock markets does not depend greatly on the supply of bank credit, as the Reserve Bank could have discovered by now from the failure of its recent measures to restrict credit. But even so, the psychological effect of tighter bank credit may be greater if the investment climate generally becomes less favourable. The passing of the boom in the coming months need not be cause for undue regret; but it is important that the Government should be prepared to adjust its fiscal and import policies in such a way as to ensure that production does not suffer. There is no reason yet for the stock exchange authorities to relax the margin restrictions they have imposed. On the contrary, continued vigilance will be necessary, especially in centres where the authorities have been sluggish in dealing with speculation. Nowhere will the vigilance be more necessary than in dealing with new issues, which continue to meet with an extraordinary response regardless of their intrinsic merits. The stock exchange authorities have yet to recognise their responsibilities in this sphere; they can help ensure that applicants are fairly treated, and that speculation is discouraged by refusing to list shares before allotments are completed.

OPPORTUNITIES IN GENEVA

FOR many months from the beginning of September, the representatives of nearly 50 nations are re-negotiating tariffs. Interim news from Geneva on the tariff conferences of the General Agreement on Tariffs and Trade is sparse. Frequent bulletins on the discussions would probably do more harm than good, for resistance to demands to reduce tariffs makes an unfavourable impression on outside observers. This conference is specially significant because it bears on the problem of the division of western Europe and on the problem of the British Commonwealth's relations with Europe. If there were no tariffs, there would be neither European trading blocs nor Commonwealth preferences. If tariffs can be appreciably reduced, the problems associated with those phenomena will be lessened.

The negotiations are especially significant for Britain since her comparatively high average tariff on manufactured goods is now recognised as a cause of her relative weakness as an exporter. Britain's high tariff, set up mainly in the depression of the 1930s, is an anachronism in the prosperous conditions of a generation later. The idea that her tariff is high is sometimes disputed. On approximately three-quarters of Britain's import trade, it is pointed out, no duties at all are levied or the rates are very low. This situation is not really surprising, as the greater part of the import trade consists of raw materials and food, most of which are admitted duty-free or at a low rate of duty. Preferential rates on products of the Commonwealth increase the proportion of trade in the low-rate category, and important manufactures of the Commonwealth, notably textiles, are admitted duty-free. Still, on many manufactured goods—motor-cars, refrigerators, cameras and electric motors are examples—Britain's import duties are higher than those of either the United States or the European Common Market. In the case of some goods, notably cameras, optical glass, certain man-made fibres and tomatoes (in season), the actual protective rates are very high. There is plenty of scope for negotiating reciprocal reductions. As Britain is the principal partner in the European Free Trade Association (which is not, of course, committed to a common external tariff), her concessions are the most important in Europe outside of the Common Market's.

Mr. Selwyn Lloyd, the new Chancellor of the Exchequer, stated a few weeks before the G.A.T.T. conference began: "The Government will go into the G.A.T.T. negotiations with a desire to see a general reduction of tariffs and with a determination to offer substantial reductions in British industrial tariffs in exchange for proper concessions on the other side." As the Government would still be happy to participate in a European Free Trade Area in which nearly all protective duties on goods imported from western Europe would be abolished, it cannot logically adopt a less liberal policy at the conference than Mr. Lloyd outlined.

The United States delegation is forearmed with the weapons of negotiation—authority to concede

reductions not exceeding 20 percent in tariffs on individual goods. The value of this authority is debatable, because it is qualified by the familiar principle that no U.S. industry may be seriously threatened by imports (ideally, no doubt, imports should replace goods that might have been produced additionally in the importing market, but replacing domestic products is surely the main purpose of freeing trade). It appears that the Americans are so concerned with the possibility of losing trade in Europe that they will be willing to make important concessions in their negotiations with the Common Market and with the individual countries of the Free Trade Association. The conference will be dominated, through most of its course, by the negotiations between the major manufacturing countries. But the primary producing countries, and those that are developing into important manufacturers, will make their influence felt more than previously. It is now more widely understood that the provision of capital to enable the developing countries to produce more goods must be supplemented by facilities to enable these countries to sell abroad more of the goods produced, whether primary or manufactured products. Protection of domestic agriculture and preference for the primary products of the Common Market's associated territories are obstructions that many developing countries will try to reduce. But their attention will doubtless be directed at least as much against the higher duties which are generally levied on imports of manufactured goods. The duties which many countries impose on coffee and tea, not for protection but for revenue, will also claim attention.

If Britain grants important concessions in many of her individual tariffs, the value of the preferential duties on Commonwealth trade will diminish. The Commonwealth's relations with Europe are involved in this problem. It is surprising that no comprehensive survey of Commonwealth preference has ever been published, but Political and Economic Planning, a fact-finding body which has over the years investigated many of Britain's economic problems, has recently published a survey of the preference system in so far as it relates to imports into Britain. The general impression of this survey is that—partly because tariffs in general have been reduced, and partly because the value of specific duties has been reduced by rising prices—the preferential system as a whole is less effective than is usually supposed. There are, however, important individual exceptions, such as the textiles of India and Hongkong. Many people in Britain believe that a compromise enabling the Commonwealth to harmonise its trade with western Europe will be worked out—one of the main incentives bejng the desire of the overseas Commonwealth to participate in markets much bigger than Britain can provide. The United States likewise needs the European market; and Europe—it has realised perhaps more clearly this year—needs the vast market of the United States. However individual interests may oppose freer trade, the general climate of the negotiations in Geneva seems favourable.

PROHIBITION AMONG THE POOR

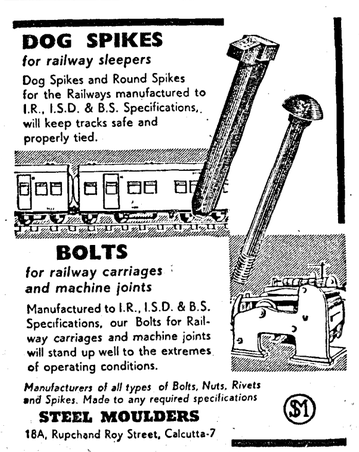
THE undiscriminating, and unsuccessful, policy of Prohibition enforced in some parts of India and in certain other developing countries has done much to discredit the campaign against alcoholism. Prohibition having become a political question, it is difficult to denounce the ravages of alcoholism without being taken for an apologist of that misguided and illiberal policy. Yet the disease and the damage it causes in most developing countries are certain facts. Prohibition is just a way of sweeping them under the carpet, and handing over a complex social problem to the repressive forces of the liquor police. Thereafter, either one pretends, falsely, that there is no longer a problem of alcoholism in, say, Bombay; or, if one admits there is, the only way to deal with it seems to be to call in the police. Either way, the real difficulties of eradicating the abuse of liquor are simply dodged.

Far from being the monopoly of French peasants and American business men, alcoholism is widespread in poor countries and its ravages are the greater because it affects populations which are often under-nourished and frequently exposed to endemic tropical diseases. Among such people, the development of tuberculosis and the extension of alcoholism go hand in hand. By its part in the causation and worsening of lesser illnesses, alcoholism is one of the main factors in low productivity, lack of initiative and political unrest. The last point is especially true in the swollen urban agglomerations set up by nodes of industrialism in backward countries. The abuse of liquor by Bombay cotton mill workers used to be notorious, and if Prohibition has made it less obvious, it has done nothing to remove the underlying social causes. A U.N. report has shown that in the Ivory Coast, city dwellers spend between 10 percent and 20 percent of their budget on liquor, while this proportion is said to rise to 25 percent in the Cameroons. Percentages of 7.5 are reported in Uganda (more than is spent on rent and as much as on clothing), and of 5.2 in Kenya (against 1 percent on rent and 2.5 percent on clothing).

Among peasants, the abuse of locally-produced alcoholic drinks ("country liquor") is common. The fermentation of cereals to produce millet-beer, etcetera, and the bleeding or destruction of palms to produce palm wine or "toddy", lead to a diversion of food resources which these regions can ill afford. In some parts of Africa, up to one-third of the millet crop is wasted in this way. The recent introduction of stills into many poor rural areas is encouraging the diversion. Naturally, the conditions of operation of these stills, especially where they are illegal, increase the toxicity of the liquor produced. To this indigenous supply of bad liquor has been added, notably over much of tropical Africa, imports of inferior wines and spirits dumped by Mediterranean producers. The Ivory Coast, which is one of the richest countries of Negro Africa, has seen its liquor imports soar from 3,000 tons in 1939 to 25,000 tons last year. The responsibility of the colonial *régimes* which have just quit those countries has been considerable in this matter; moreover, they have allowed disproportionately high investment in the brewing industry everywhere from South Africa to Morocco.

The liquor traffic and the slave trade always went together, and thus the exacerbation of native alcoholism was one of the first results of colonialism in Africa. In the last century, a number of efforts were made to limit or repair this damage, the most recent being the international treaty of Saint Germain-en-Laye, signed by the European Powers in 1919. This treaty acted as a brake for a time, but has unfortunately become a dead letter in recent years. In one way, it actually encouraged alcoholism: by exempting certain sections of the richer classes in colonial territories from control in the matter of liquor consumption, it gave drinking an extra prestige which it could have done without. The right to get drunk is now considered one of the rights of man in certain territories just emerging into independence. No one will have forgotten the bloody riots in Durban a short time ago, which had as their cause the claim to this right by African women in the most squalid slums of that city.

Now that almost all the territories covered by the treaty of Saint Germain-en-Laye have become sovereign States, there is a danger that the praiseworthy effort it represented will be simply forgotten. The European interests (notably French) responsible for the dumping of bad wine and worse spirits, and for the local brewing of beer, can claim that the fight against alcoholism now escapes all international co-operation and must be left to the young sovereign States themselves—knowing full well that those *régimes* are neither prepared nor equipped to fight it intelligently, and that their peoples remain exposed to prestige-invoking advertisements in favour of liquor. There is every reason why one of the organisations of the United Nations should continue the belated work of the former colonial administrations, and seek to interest these young governments in the struggle against alcoholism in developing countries. For that, it will be necessary to avoid like the plague any mention of Prohibition lest the complicated social problem of restricting the abuse of bad liquor be confused with the indolent and illusory resort to puritanical laws and police repression.



CLOTH PRICES AND THE COTTON CONTROLS

AT a time when activity in the cotton piecegoods market should be growing with the approach of the festival season, it has been paralysed by the uncertainty about cloth prices. Enquiries from the trade indicate a large accumulation of orders. Upcountry dealers have been in Bombay and Ahmedabad waiting for the price uncertainty to end before putting through business. This was only to be expected when the Government declared that it was not satisfied with the various reductions in prices announced by the industry recently. The Central Commerce Minister, Mr. Nityanand Kanungo, stated in the Lok Sabha a few days ago that the Government would take statutory measures to reduce cloth prices if the industry does not bring them down to a satisfactory level. The Commerce Minister did not, however, commit himself to any definite figure which the Government considers satisfactory.

The Indian Cotton Mills Federation announced on 7th August an immediate cut of 10 percent in the retail prices of coarse and medium cloth. On 11th August, it made another announcement urging the mills not to charge wholesale prices more than a certain percentage above the October 1959 contract prices. The percentages were 10 for superfine, 12½ for fine, 20 for higher medium, 24 for lower medium and 27½ for coarse cloth. When these steps failed to satisfy the Government, the Federation decided on 30th August to cut prices by a further 2 percent or 3 percent from the earlier schedule by re-fixing the maximum wholesale prices on the basis of the August 1959 contract prices. The revised percentages are 9 for superfine, 11½ for fine, 18 for higher medium, 22 for lower medium and 25 for coarse cloth. The August 1959 prices are said to be about 5 percent lower than the October 1959 prices. The spokesmen for the industry say that if the cut is larger, several marginal units will suffer losses, and that will adversely affect the production of cloth. Recent reports indicate that the Government is not satisfied with the Federation's latest proposal, but it has decided to allow the new price schedule to work for some time. It is hoped that the offtake of cloth will rise appreciably as the price uncertainty passes. But few observers expect that consumers will get cloth cheaply as long as the unbalance between demand and supply continues. The benefit of the reduction announced by the industry is likely to go only to the trade, which will continue to charge all that consumers can pay. The stamping of prices is unlikely to improve the situation. There is a real danger that the cloth produced by good mills might disappear from the market.

Meanwhile, the cotton policy for the 1960-61 season announced on 31st August reflects the Government's anxiety to keep down raw material prices. Restrictions on the purchase of *kapas* (unginned cotton), the ban on the sale of cotton by manufacturers, the filing of returns on the stocks held by merchants and mills, and the compulsory survey of cotton—all these measures are aimed at making price controls a success. During the last season, the controls were a complete failure. The black market thrived and unofficial premiums ranged up to Rs. 200 a candy. Mills owning ginning factories will now have to restrict the purchase of *kapas* to the level of their actual Indian cotton quotas. They have been advised to ensure that *kapas* is purchased only at a price which will keep the corresponding price of the ginned and pressed cotton within the ceiling. A compulsory survey of quality is being introduced in order to prevent malpractices, such as mixing varieties and passing off inferior cottons as superior. All cotton marketed after 31st August, whether of the 1960-61 or earlier crops, will have to be compulsorily surveyed by the East India Cotton Association, Bombay, or by any regional committee it appoints with the approval of the Textile Commissioner. The mills and dealers will be required to file periodic returns of the stocks they hold. The Textile Commissioner has also indicated the possible requisitioning of cotton stocks from mills, ginners and traders so as to ensure the supply of cotton at controlled prices. Although the prices for the 1960-61 season have been maintained at the old levels, modifications have now been made in the case of certain varieties. The "on" allowance for extra superfine grade in Surti, Punjab American L.S.S. Rgd and Sgd, Kalyan and Jayadhar has been increased by Rs. 5 a candy. The ceiling for Bengal Deshi has been raised by Rs. 25 a candy and the "on" allowance for the superfine and extra superfine grades has been increased by Rs. 5 and Rs. 15, respectively. The floor and ceiling prices for Western have been reduced by Rs. 40 each to Rs. 515 and Rs. 850, respectively. The ceiling for Kalyan has been reduced by Rs. 30. The schedule of varieties for which prices have been fixed has been re-classified. There will now be four classes of Jarilla and two types each of Surti, Vijay, Gaorani, Jayadhar and Laxmi. Cambodia is divided into three categories. These varieties existed even before, but they were not clearly stated in the price schedule.

The cotton policy statement contains few surprises. Prices continue to be quoted above the ceiling, the carryover of indigenous cotton is at a record low of about 900,000 bales and the new cotton is unlikely to become available in large quantities until about the middle of November. So it was almost taken for granted that the controls would not only be continued but tightened further. The various measures which have now been announced will be needed as long as prices remain above the ceiling rates. They will become unnecessary if and when prices fall substantially below the ceiling. The trade cannot hope to enjoy much freedom under conditions of acute scarcity; only when the supply position is comfortable will it have fewer worries. How the cotton market will fare in the new season, it is difficult to say. Much depends on the weather. Fortunately, the weather reports so far are fairly encouraging, except in certain areas of Punjab, where the crop damage is estimated at around 100,000 bales. The trade thinks that the crop will turn out to be around 5 million bales if the weather remains favourable. But this cannot be considered creditable, since the target for the second plan is 6 million bales. The expected imports in 1960-61 should help relieve the anxiety about supplies if the crop is good. New Delhi's firm attitude on cloth prices should discourage mills from paying fancy prices for raw cotton. It is natural for the trade to resent the various restrictions, but they can scarcely be avoided if the price controls over cotton are to be successful. The general feeling among the trade in Bombay is that business will be diverted from here to upcountry markets unless prices are kept well below the ceiling. Traders owning ginning and pressing factories alone are likely to benefit from the new regulations. Those acting as commission agents will be hard hit.

Current News and Comment

Tata Steel Maintains Dividend

The working results of the Tata Iron and Steel Company for the year ended March 1960, a summary of which was released in Bombay last Thursday, have had a mixed reception. The price of the shares experienced wide and erratic fluctuations on the kerb just before the results were published. The market criticised the delay in announcing the dividend—this time it was about four weeks late—but it is believed that the Company was waiting for the new retention prices to be notified. No announcement has come yet, and it is said that no credit has been taken for the increase in preparing the accounts for the past year.

The market is not quite happy about the bare maintenance of the dividend at Rs. 6.80, free of tax. Enquiries in official circles indicate that the Company will not be entitled to any benefit under Section 15C of the Income Tax Act. The market is happy, however, that the Company has been able to improve both production and earnings in line with the general expectations. The production of steel ingots rose from 1.15 million tons in 1958-59 to 1.53 million tons in 1959-60, and the turnover from Rs. 53.45 crores to Rs. 73.47 crores. After providing Rs. 8.47 crores for depreciation and Rs. 4.14 crores for plant rehabilitation and development rebate reserve, there is a net profit of Rs. 1.54 crores Nothing has been provided for tax (against Rs. 17 lakhs in the previous year). The net profit has been transferred to general reserve No. 2, representing untaxed profits. The directors have taken Rs. 3.76 crores from general reserve No. 1, representing taxed profits of previous years, for the purpose of meeting the liability on account of the proposed dividends. The dividends on the first and second preference shares are Rs. 9 and Rs. 7.50, respectively, subject to tax. The dividend on the "A" second preference shares is Rs. 1.875. The ordinary dividend is Rs. 6.80, free of tax, or a gross of Rs. 9.72 a share; and the dividend on the new ordinary shares is Rs. 1.70, free of tax, or a gross of Rs. 2.43. The carry-forward is Rs. 8.46 lakhs, which is same as the amount brought in. The annual meeting of the Company will be held on 6th October.

Borrea and Karanpura Coals

The results of the Borrea Coal Company and the Karanpura Development Company for the year ended December 1959 have been published. Both Companies are in the Bird-Heilgers group. The working of Borrea Coal was adversely affected by an illegal strike. So raisings declined from 171,109 tons in 1958 to 165,837 tons in 1959, and despatches from 174,148 tons to 164,090 tons. But there has been a considerable improvement in the labour situation since then and output has increased. The directors say that the irregular supply of wagons has prevented the full use of the mechanical screening arrangements.

Providing Rs. 99,499 (against Rs. 1.45 lakhs) for taxation, and Rs. 80,381 (against Rs. 72,707) for depreciation, and transferring Rs. 58,129 to general reserve, the profit of Borrea Coal has improved from Rs. 75,498 to Rs. 1.01 lakhs. An ordinary dividend of 10 percent, taxable, has been declared. This offers a yield of 4.5 percent at Rs. 22 a share and is covered more than three times. The ordinary dividend was 7½ percent, tax-free, in the previous year. The carry-forward is Rs. 19,830, compared with Rs. 20,179 brought in. The value of fixed assets has been reduced by Rs. 5.16 lakhs in order to bring them back to their actual written down value based on their original cost; their value was written up on revaluation in 1948.

The profit of the Karanpura Development Company is Rs. 97,237, against Rs. 1.39 lakhs. This is after providing Rs. 2.05 lakhs (against Rs. 2.28 lakhs) for taxation and transferring Rs. 1 lakh to general reserve. An ordinary taxable dividend of 5 percent has been declared. It absorbs Rs. 75,000, and offers a yield of 3.6 percent at Rs. 13.81 a share. The ordinary dividend was 5 percent, tax-free, in the previous year. The carry-forward is Rs. 261,729, against Rs 314.490 brought in. Raisings amounted to 1,530,850 tons and despatches to 1,527,476 tons. Compensation claims concerning nearly 10,000 bighas of land acquired by the Government of India in the Karanpura coalfields have been submitted to the National Coal Development Corporation.

Gillanders Teas: Mostly Better

Presenting the working results of the Gillanders Arbuthnot group of tea gardens in Assam for the year ended December 1959, the directors describe the current prospects as favourable. But a substantial increase in world production might depress prices, especially of common teas. So it is necessary to promote demand as far as possible. The Betjan Tea Co. Ltd has earned a trading profit of Rs. 4.93 lakhs, against Rs. 4.01 lakhs in 1958. The dividend of 25 percent, taxable, absorbs Rs. 1.60 lakhs, and offers a yield of 10.6 percent at the present price of Rs. 23.62 a share. The dividend was 15 percent in the previous year. General reserve and plant and building improvement are allocated Rs. 50,000 each. The carry-forward is Rs. 37,706, compared with Rs. 34,304 brought in. The crop was 10,439 maunds (against 10,802 maunds) and the average sale price increased from Rs. 2.55 to Rs 2.70 a lb.

There is a gross profit of Rs. 3.93 lakhs for the Tengpani Tea Co. Ltd, against Rs. 3.83 lakhs in 1958. The ordinary dividend of 17½ percent, taxable, absorbs Rs. 1.40 lakhs and gives a yield of 4.8 percent at Rs. 35.12 a share. The dividend for 1958 was 15 percent, tax-free. General reserve is allocated Rs. 25.000 and the carry-forward is Rs. 64.646, against Rs. 50.563 brought in. Production increased from 8.507 maunds to 8,625 maunds, but the average sale price declined from Rs. 2.80 to Rs. 2.59 a lb. The Company continued the orthodox manufacture of tea throughout the year.

The trading profit of the Jutlibari Tea Co. Ltd has declined from Rs. 3.62 lakhs to Rs. 2.40 lakhs. The dividend of 10 percent, taxable, absorbs Rs. 90.000, and offers a yield of 4.1 percent at Rs. 24.12 a share. The dividend was 10 percent, tax-free, in the previous year. The carry-forward is Rs. 51,110, compared with Rs. 53.022 brought in. The crop declined from 12,815 maunds to 11,371 maunds, but the average sale price increased from Rs. 2.42 to Rs. 2.47 a lb. The Company produced C.T.C. teas throughout the year.

The Ananda-Bag Tea Co. Ltd has increased its gross profit from Rs. 2.94 lakhs to Rs. 3.65 lakhs. A dividend of 17½ percent, taxable, has been declared. It absorbs Rs. 1.23 lakhs and offers a yield of 7.7 percent at the present price of Rs. 22.69 a share. The dividend was 10 percent, tax-free, in the previous year. General reserve is allocated Rs. 50.000 and the carry-forward is Rs. 54,204, against Rs. 45.005 brought in. The output declined from 8.424 maunds to 8.287 maunds, but the average sale price rose from Rs. 2.37 to Rs. 2.59 a lb.

Fort William Jute: Steel Ropes

The Fort William Jute Co. Ltd has been granted a licence to manufacture steel wire ropes. Negotiations for foreign collaboration in this project have been going on, and the terms of the collaboration have now been submitted to the Government for approval. The Company's profit has improved from Rs. 4.78 lakhs to Rs. 6.60 lakhs during the year ended March 1960, after providing Rs. 7.37 lakhs (against Rs. 5.30 lakhs) for depreciation and Rs. 6.95 lakhs (against Rs. 4.13 lakhs) for taxation. A taxable ordinary dividend of Rs. 2.25 a share has been declared. This offers a yield of 8.5 percent at the price of Rs. 26.62 a share and is covered more than two-and-a-half times. The ordinary dividend was Rs. 1.50, tax-free, in the previous year. Development rebate reserve is allocated Rs. 59,000 (against Rs. 22,948). The carry-forward is Rs. 194.869, against Rs. 166,649 brought in. Gunny sales declined from Rs. 2.04 crores to Rs. 1.98 crores and stocks rose from Rs. 5.54 lakhs to Rs. 9 lakhs. The Company has sealed a further 2½ percent of its total loomage from 6th June, 1960, in order to get over the shortage of fibre. It is expected that these looms will be opened again as soon as supplies of the new crop jute increase.

Bharat Nidhi Profit Up

Bharat Nidhi Ltd has produced satisfactory results for the year ended December 1959. The trading profit has risen from Rs. 27.44 lakhs to Rs. 31.08 lakhs. The directors have decided to pay the ordinary dividends in the form of shares of the Punjab National Bank Ltd at the rate of one fully-paid share of Rs. 10 each of the Bank for every 20 fully-paid or 80 partly-paid ordinary shares of Bharat Nidhi. Taxation is allocated Rs. 11.60 lakhs (against Rs. 16 lakhs) and the carry-forward is Rs. 27,745, against Rs. 35,598 brought in. The investment portfolio has benefited from an increase in the prices of many shares held by Bharat Nidhi. The rise in the total value of in-

vestments appears to be more than its ordinary share capital.

More Enfield Motor-cycles

In his address to shareholders at the annual general meeting of Enfield India Ltd last week in Madras, Mr. K. R. Sundaram Iyer, chairman, reported an improvement in both production and sales of the Company's motor-cycles. During 1959, output rose by 20 percent and sales were Rs. 20 lakhs higher at Rs. 91 lakhs. This has enabled the Company to declare its maiden dividend on the ordinary shares, "after writing off fully the balance of the preliminary expenses and brokerage on shares, and after providing for development rebate reserve and dividend on preference shares." (A fuller version of the chairman's speech appears on a later page). The gross block has increased from Rs. 39.4 lakhs to Rs. 48 lakhs, as further plant and machinery have been acquired and put into service.

The Company continued to make "rapid progress" in increasing the indigenous content of the product, "in spite of the several difficulties that industries having phased programmes of import substitution have to face." Mr. Iyer said that the phased programme would be substantially completed during 1960. Next year, only a negligible number of finished components will be imported—mostly proprietory or specialised components such as electrical equipment and carburettors. These are not in the manufacturing programme, and normally, vehicle manufacturers obtain them from specialists. Mr. Iyer expected that with the measures taken by the Government, industries manufacturing these specialised components would soon be established in the country.

Discussing the Company's expansion plans, Mr. Iyer said that with the steady increase in output, the need has arisen for more share capital. The directors have decided to make a further issue of equity capital to the extent of Rs. 10 lakhs, which will be offered in the first instance to ordinary shareholders on the register. The Company expects to start the production of scooters in the second half of 1961, for which a licence has already been obtained. The manufacture of scooters and motor-cycles involves similar plant and machinery, techniques and skill, so the Company is in an especially advantageous position to produce scooters by better use of existing equipment with suitable additions. Thus there will be considerable economy in capital costs. Simultaneously, the manufacture of Villiers road vehicle engines will be taken up. The same model of the engine, with small modifications, will be used on both the scooter and the light-weight motor-cycle. Plans are also being finalised to manufacture Villiers engines for industrial and agricultural uses.

Refractories from Orissa Cement

Presiding at the annual general meeting of Orissa Cement Ltd in Rajgangpur, Orissa, last Friday, Mr. J. Dalmia, chairman, said that the production of refractories has increased, and the prospects are encouraging. (A fuller version of his speech is printed on a later page of this week's *Capital*.) At present, the production of refractories is much lower than the demand. The latter is expected to rise steadily with the expansion of steel manufacture. By the end of 1966, the demand will increase to more than 1.3 million tons a year. So there is good scope for expansion. Mr. Dalmia said that the Company's working has been hampered by transport difficulties. In order to ensure the smooth working of the cement and refractory plants, it is necessary that railway transport be improved. Unless transport facilities are adequate, the supply of raw materials as well as the despatch of finished products will be hampered.

Straw Products Expansion Scheme

In their report for the year ended December 1959, the directors of Straw Products Ltd state that the fresh share capital issue of Rs. 2 crores was subscribed during the year. The proceeds of the issue will be used for financing the new paper mill project. Orders for the plant and machinery have been placed with a West German firm. The State Bank of India, it is reported, has given a guarantee for Rs. 3.54 crores of deferred payments to the foreign suppliers. Land has been acquired in Orissa for the mill and the Orissa Government has allotted forests which will provide raw materials for the Company. Production, the directors say, may begin before the end of 1962. The Company's accounts show a profit of Rs. 12.74 lakhs, against Rs. 2.79 lakhs in 1958. But depreciation has been reduced from Rs. 8.37 lakhs to Rs. 4.93 lakhs and credit has been taken for Rs. 6.86 lakhs by writing back development rebate. A taxable ordinary dividend of 15 percent has been declared, absorbing Rs. 2.25 lakhs. This offers a yield of 11.5 percent at Rs. 13 a share. An ordinary dividend of 12½ percent, tax-free, was paid in the previous year. General reserve is allocated Rs. 7 lakhs and taxation Rs. 3 lakhs (against Rs. 1.90 lakhs). The carry-forward is Rs. 53,430, compared with Rs. 4,919 brought in.

Textile Mills to Merge

The Shorrock and the New Shorrock Mills, both in the Mafatlal group, have decided on a scheme of amalgamation. The scheme, based on the joint report of the auditors of both Companies on a valuation of the assets, was discussed by the boards of the Companies at a meeting on 3rd September. Under it, shareholders of the Shorrock Mills will receive one ordinary share of New Shorrock for every two shares of Shorrock held by them. The proposed scheme, when approved by the High Court, will be effective from 1st January, 1961, subject to the approval of the Central Government being received. The shares issued by the New Shorrock Mills to shareholders of Shorrock will rank *pari passu* with the existing shares of New Shorrock from the date of the order of amalgamation passed by the High Court. Following the scheme of amalgamation, the board of directors of the managing companies have also decided to invite a joint report from their auditors for the amalgamation of Mafatlal Chandulal and Company (Ahmedabad) with Mafatlal Chandulal and Company, the managing agents of the New Shorrock Mills.

L.I.C. Growth and Efficiency

The Life Insurance Corporation celebrated its fourth birthday last Thursday with the satisfaction of knowing that it has done fairly well. Its new business has reached record levels. In 1958, the new business was Rs. 345 crores, or 22 percent more than in 1957. In 1959, it reached Rs. 429 crores, or 25 percent more than in 1958. This is a creditable achievement, and a further substantial increase is expected in 1960. There is perhaps little point in speculating now whether the former private companies might have done better, considering the rise in national income and employment. The Corporation, however, has still not solved the complex problems of integration.

The L.I.C. claims that its lapse ratio has been reduced. In 1955, during the company régime, the ratio was 7.6 percent of the business in force. By 1958, it has come down to 5.1 percent. This implies that there are more genuine policyholders than before. The renewal expense ratio has also fallen from 15.89 percent in 1957 to 15.46 percent in 1958 and 12.92 percent in 1959. The reductions, together with the extension of activity to areas which had never before been considered, are claimed to indicate the progress the L.I.C. has made. The new business from predominantly rural areas, it is stated, increased by 80 percent in 1959. The corresponding increase in exclusively urban areas was 43 percent. Under the company régime, similar rises may or may not have taken place. The L.I.C. has done well, but in more competitive conditions, the efforts would probably have been greater.

The Corporation has set itself a target of Rs. 1,000 crores of new business by 1963. So it has started a large number of offices in various parts of India, and is trying to improve its organisation. Unfortunately, it has not been able to provide as good a service to policyholders as the well-managed companies did in the past. Complaints from customers are frequent and the rather complicated procedure for settling claims has been strongly criticised. The Corporation, enjoying a monopolistic position, will inevitably continue to get new business. But unless it can improve its service to clients, and cut out red tape, its efficiency will always be questionable.

Cotton Season in Retrospect

The 1959-60 cotton season, which ended on 31st August, was an extremely difficult one for the trade. Bad weather played havoc with the crop. Against the target of 5.5 million bales for the fourth year of the second plan, the crop turned out to be only 3.75 million bales. Thus, in spite of improved cultivation methods, better seeds and fertilisers and increased irrigation facilities, the weather continues to determine production. The crop failed in a year when cloth was in a sellers' market. The industry did not worry much about the price of the raw material, as cotton prices skyrocketed. Most varieties rose above their ceilings very early in the season. Controls were tightened but that only made honest business impossible. The black market continued to flourish and unofficial premiums ranged up to Rs. 200 a candy.

While the Government could not enforce price control successfully, it did all it could to augment supplies through liberal imports. Against a normal annual import quota of 500,000 or 600,000 bales, it announced during 1959-60 quotas for about 1.87 million bales, of which 1.21 million bales are likely to be licensed by the end of the season. The final figures are not yet available but the actual arrivals of cotton are expected to total about 875,000 bales. For the first time, perhaps, short-staple cotton was also allowed to be imported. The carry-over on 1st September, 1959, consisted of 1,857,000 bales of Indian cotton and 160,000 bales of foreign cotton. With the crop estimated at 3.75 million bales and actual imports around 875,000 bales, the season's total supply came to 5,597,000 bales of Indian cotton and 1,035,000 bales of foreign cotton. Mill consumption in the first nine months of the season was 3,391,000 bales of Indian and 423,000 bales of foreign cotton. The respective totals for the season are placed at 4.4 million bales and 650,000 bales, compared with 4.62 million bales and 460,000 bales in 1958-59. Exports in 1959-60 totalled 200,000 bales, against 398,000 bales in the previous season. Making allowance for the consumption of factories other than mills and of the *ambar charkhas*, the total offtake in 1959-60 is estimated at 4,665,000 bales of Indian cotton and 650,000 bales of foreign cotton, leaving a carryover of 932,000 bales of Indian cotton and 385,000 bales of foreign cotton for the new season.

Trading in cotton futures in the 1959-60 season was allowed from 22nd June, 1959. Starting at Rs. 672.25 a candy, the March contract hit the season's low of Rs. 661.25 on 16th July. Thereafter, it rose gradually to end at the ceiling rate of Rs. 820. The August contract came on the board at Rs. 743 on 15th February, 1960. By 28th May, it rose to the pre-delivery ceiling rate of Rs. 790. It went off the board at Rs. 820. Unofficially, it was bid up as high as Rs. 839. Tenders against the March and August contracts totalled 4,450 bales and 350 bales, respectively. The futures market had a very short season since trading came to a standstill after 28th May. Besides, the volume of business was affected by the margins. Spot dealers fared worse than speculators because of the various controls.

Tourist Traffic Increases

Tourist traffic has brought India more foreign exchange during the past four years. In 1956, the income totalled Rs. 15.5 crores; it has steadily risen to a little more than Rs. 19 crores last year. The number of foreign visitors has increased from 20,000 in 1951 to 65,887 in 1956 and 109,000 in 1959. As far as Indians going abroad are concerned, the basic quota for holiday travel has been abolished since 1957. But foreign exchange is given for essential purposes like business, education, health and pilgrimage. Students get by far the largest percentage of the total. In 1956, Rs. 154 lakhs was given for education. In 1959, the figure was Rs. 402 lakhs, constituting 44.22 percent of the total. The allocation for business has risen from Rs. 41 lakhs in 1956 to Rs. 122 lakhs last year, which is 13.42 percent of the total. Haj pilgrims have taken Rs. 92 lakhs in 1959 (against Rs. 15 lakhs in 1956) while the outgo on home leave salary account, which was Rs. 49 lakhs in 1956, totalled Rs. 194 lakhs last year. The total allocated during 1959 was Rs. 909 lakhs, against Rs. 1,339 lakhs in 1956. The basic travel quota cost Rs. 976 lakhs in 1956 but since 1957 it has been nil. Official circles claim that in the anxiety to save foreign exchange, no check has been imposed on essential travel. If there is any relaxation in the basic travel quota now, the additional foreign exchange required will be much more than Rs. 10 crores, because of the pent-up demand and the increase in the number of people who can afford to go abroad. The Government feels that the country cannot relax the restrictions, particularly at a time when her foreign exchange resources are falling rapidly.

Tin Export Controls

The International Tin Council has lifted all controls on tin exports for the last quarter of this year. Thus, after two years and nine months of controlled supplies from the producing countries, the market will once again be free to operate—within the middle price range of the International Tin Agreement. But the freedom is limited: the buffer stock manager can buy from the market when the price falls below £780 a ton, and sell when it goes above £830 a ton. In practice, his operations will exert some influence on sentiment even when the price is a few pounds above the "floor" or below the "ceiling".

The Tin Council has decided to liberate the producing countries from quota restrictions "in view of the statistical position". The position has become satisfactory mainly because production in some countries has fallen, while consumption has risen. The quota for the current quarter was 37,500 tons, or about 95 percent of the amount exported before the restrictions were imposed towards the end of 1957. The lifting of the controls has been welcomed by producing countries, particularly Malaya, where a number of small and medium-sized mines had closed down after the restrictions were introduced. Apart from helping to revive some of the closed mines, the decision will bring to the market more of the stocks held by producers, particularly Malayan. Some tin from the Italian Government's stockpile will be offered in the internal market. Thus, for the next few months, supplies additional to the current production will be available. It remains to be seen whether world consumption will be high enough to absorb so much tin without depressing prices.

U.S. Business Conditions

The economy has moved along on an even keel during the summer months, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Slackening of activity during the vacation period fits the regular pattern, and seasonally adjusted indices are probably showing little change. However, business men are increasingly concerned over continued slackness in new orders and the pressures of costs and price competition on profit margins. A mild stimulus to the economy was provided in August by a series of Federal Reserve actions designed to increase the availability of credit. Attention is now focussing on the autumn, when production and trade will feel the force of seasonal expansion. The question is whether the expansion will fully measure up to past performance. Merchants look to the weeks after Labour Day for signs as to the probable dimensions of fourth-quarter trade. The mixture of strength and weaknesses in the current situation adds up to overall stability, but it also provides some striking contrasts. This summer, more Americans have held jobs, and enjoyed larger incomes, than ever before; yet there is a conspicuous lack of the buoyancy and enthusiasm which usually characterise prosperity. A high, stable level of business and steady growth in demand for goods and services by consumers, business and the Government have at times been crowded out of the limelight by the spectacular decline in steel mill operations or reports that unemployment had risen above 4 million through the sheer number of new entrants into the labour force. On balance, cut-backs have been offset by expansion elsewhere.

In August, industrial activity appears to have shown little change from July, which in turn was unchanged from June. In fact, the seasonally adjusted Federal Reserve index of industrial production (1957 equals 100) has been rocking along within the narrow range of 109-110 since February, following the shortlived spurt to a record 111 in January. This is all the more striking since the index of iron and steel production declined more than one-fourth from February to July. The offsetting upward movement has been broadly distributed among both durable and non-durable goods industries—a classic pattern of "rolling readjustment." The decline in steel output appears to have touched bottom in July. Mills boosted operations during August to an average of about 54 percent of rated capacity, against 50 percent in the preceding month. The rise was somewhat short of seasonal expectations, partly because of labour difficulties in the Pittsburgh area, but more basically because the anticipated increase in new orders failed to appear. Motor-vehicle producers and other steel users are still holding back on orders. Meanwhile, the best evidence is that consumption of steel has continued at a high level; metal-working activity in July, according to seasonally adjusted Federal Reserve indices, was off only about 2½ percent from its January peak. Yet steel orders continue to lag. The explanation is that users feel in no immediate danger of either shortages or price increases for steel and are reducing inventories to a minimum. The National Industrial Conference Board estimates that fabricators took delivery of 1 million tons less finished steel than they consumed during the second quarter. By the end of the third quarter, continued liquidation may bring fabricators' inventories down near the low level at the end of 1959. Yet, as long as mills have the spare capacity to make quick deliveries of large tonnages, there is little incentive for steel users to shift from their current hand-to-mouth buying policies or add substantially to stocks.

U.S. Commodity Assistance

U.S. commodity surpluses have been a useful source of aid for many under-developed countries, which need foodgrains for their growing population and raw materials for their industries. Substantial help has been available for economic development, as in India. Dr. S. R. Sen, Joint Secretary to the Indian Planning Commission, addressing the golden jubilee of the American Farm Economics Conference recently in Ames, Iowa, U.S.A., dealt in detail with the uses of commodity aid, with special reference to India. In accepting such assistance, he said, the Indian authorities have laid stress on three points from the beginning. First, the assistance should be on a programme basis and not on a project basis; it should be integrated with the country's own plan for economic development. Secondly, this country should not start any programme with P.L.480 assistance which it cannot carry out later with its own resources. Thirdly, there should be at least an informal understanding that the programme should continue for a certain minimum period, and should not be stopped half-way or without notice. "The American authorities appreciated these points and accepted more or less all of them. In consequence, the results of the surplus disposal programme have been very encouraging as far as India is concerned," Dr. Sen said.

U.S. commodity assistance to India has been very substantial since 1955. Four agreements were signed with the U.S.A. between 1956 and 1959 for varying amounts of aid. In spite of such large P.L.480 imports, India's purchases from other sources have not decreased, Dr. Sen claimed. In fact, her average annual imports of wheat outside P.L.480 during the period 1956-59 were 400,000 tons, compared with 280,000 tons in 1955-56. The share of wheat in the total amount of cereals consumed rose from 15 percent to 20 percent, without any fall in the consumption of other cereals. The experience of a number of other under-developed countries has been similar. P.L.480 sales have not had any appreciable effect on the "source pattern" of the international trade in wheat. The total volume of commercial sales has not been adversely affected. It is interesting that while the commercial exports of the U.S.A. have declined to some extent, those of the other exporting countries have increased. The points on the credit side of the surplus disposal policy, Dr. Sen said, are obviously substantial. "There is no doubt that if U.S. surpluses were thrown on the international market and prices allowed to crash, most other countries would have suffered serious losses. On the other hand, if P.L.480 supplies were not available, the programme for economic development in a number of under-developed countries would have been more modest, or their people would have to face much more stringent control over consumption than they have to do at present."

THE CURRENCY OFFICE

THE ways of the Currency Office may be described as like those of the heathen Chinese "peculiar", as we will endeavour to explain. A firm in this city lost four currency notes of Rs. 100 each on 30th March, 1900, and duly communicated the numbers to the Currency Office. One of these notes was cashed at Lahore on the 22nd May, and the Currency Office informed the losers on the 7th June. Another was presented to the Currency Office on the 28th August and cashed, and a memo was sent on 1st September to inform the merchants of the fact. These gentlemen naturally complained and pointed out, as indeed the fact was, that such notice was of absolutely no use. In reply, they received a letter from the Assistant Comptroller stating, "that as the notes tendered daily at this office by the Bank of Bengal are so numerous that they cannot be checked immediately on receipt with the list of notes reported lost and outstanding, and hence the delay complained of by you was unavoidable." Anything more ridiculous than this it is difficult to conceive. If a Bank of England note is lost and notice is given to the Bank, the moment it is presented the presenter is called to explain, and there is absolutely no reason on earth, why this should not be done at tht Currency Office, where notes are cashed much more slowly than at the Bank of England. A list of notes that are stopped, if properly compiled, would enable the cashier to see at a glance if a note presented was in it. We fancy that Mr. Cox can hardly be aware of this state of things.

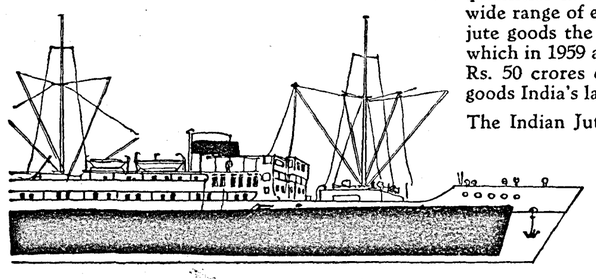
Jute

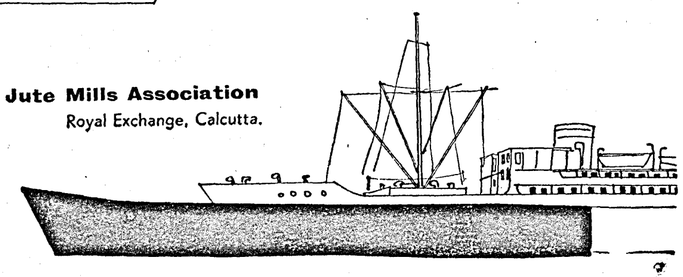
in the forefront of India's export trade

The Indian jute industry is essentially an export industry. Almost 80% of the industry's production—or about 900,000 tons of jute manufactures—is shipped to overseas markets; 55% of the jute goods used as packaging material throughout the world are supplied by India.

But jute no longer serves merely as the humble gunny or hessian bag. Today, jute fabrics are used in large quantities in industrial processes to give a remarkably wide range of end-products. From the massive export of jute goods the country earns valuable foreign exchange, which in 1959 amounted to Rs. 110.8 crores. Out of this, Rs. 50 crores came from the dollar area, making jute goods India's largest dollar-earner by far.

The Indian Jute Mills Association—the organisation of the industry—carries on extensive propaganda in several foreign countries to promote the exports of jute goods, undertakes research at home to widen the applications of this golden fibre.





Issued by the **Indian Jute Mills Association**

A Ditcher's Diary

WITH THE COLD WAR FROZEN, PROPAGANDA REMAINS about the only activity of its prime contestants; and this alone would appear to explain why Mr. Khrushchev has suddenly decided to lead the Russian delegation to the coming session of the U.N. General Assembly. It seems to me unlikely that he was expecting all others to follow suit, which would lead to a sort of a summit This presupposes that Mr. Khrushchev is anxious to meet the West, a proposition little supported by his performance in Paris only the other day In the West, there are some who think that if Mr. Khrushchev seeks to exploit the General Assembly for his propaganda, there should be someone from the West to answer it. It may be suggested that his insults are met better by Mr. Christian Herter than by Mr. Eisenhower himself. The theory seems to be: why not ask your valet to show the door instead of your going to the door yourself? Well, we shall see. Meanwhile, I expect some fellow-scribes to begin speculating whether internal stresses may not be making Moscow an uncomfortable place for Mr. Khrushchev so that he wants to travel. But if the other heads of governments decline to show up in New York, I can see the Russian Prime Minister changing his mind; for he can scarcely enjoy the company of second-rank representatives from other countries. Even if Mr. Khrushchev does not stay through the entire session, which seems improbable, he may yet go and make one great propaganda speech to the General Assembly. I am not sure that the game is worth the candle. Even the younger members of the world organisation must by now be so *blasé* about propaganda that they are not easily impressed; and since the newer members come mostly from Africa, the prospects are even less bright for Mr. Khrushchev. Sponsoring China's membership, a burden of which India is happily rid, will not resolve Russia's differences with China; and, in spite of Russian aircraft making ominous moves in the Congo, many Africans know that Russian support will not go beyond a certain point.

EVEN A FEW YEARS AGO, FLEET STREET WAS rarely news. The boys there wrote about everything and everyone else; about its own affairs, the industry preferred silence. It's all very different now. Not only has anonymous journalism given place to "stars" and *prima donnas*, with in my view little improvement in quality; we also know which combine is making, or losing, how much money. Mammon in the *Observer* has to take notice of what is happening to the newspaper industry; the *Investors Chronicle* is incomplete without a survey of the business. Mr. Francis Williams writes week after week on its ethics, or lack thereof; but the industrial status of newspapers is sometimes regretted by sentimentalists, who think no newspaperman (publisher or writer) works only for money. (This is partly true.) A Manchester evening daily has merged with another; and Mr. Roy Thomson, the Canadian who now has the Kemsley group, is credited with the desire to have a national daily. With the *Daily Herald* and the *News Chronicle* both losing money, there has long been talk of a merger. In spite of the complications of the Cadbury trust, financially this may be a feasible proposition. But editorially, a merger would create not a few problems. The *Herald* is now free of T. U. C. control; but the new paper—the *Daily Hericle* someone has called it—will be hard put to it to retain the disparate readership of both. Your paper is what you have got used to; it is a form of addiction. Changes, if fundamental, are resented; if not fundamental, unnoticed. A bit of both may be the mixture, but it may also lose among the loyal. Every newspaper has a personality, a character, of its own. Imitations rarely pay. I have never cared much for the *Herald*, although I respect it for its voice of dissent. The *News Chronicle*, I think, has a place in British journalism; and it would be a pity to see it die—or change too much. But newspaper economics are cruel these days, even when there is not a Dr. Keskar to make them crueller.

WITH A FEW NOTABLE EXCEPTIONS, INDIAN MOTOR-vehicle manufacturers had rather spoilt their case for producing "baby" cars in this country. A number of them said simultaneously that (a) the cars should not be built; and then (b) if it was nevertheless decided that a cheap car was necessary, their particular companies should be allowed to make it. The official decision this week that if a "baby" car costing the consumer Rs. 6,500 is to be produced at all, it will be produced in the public sector, cannot therefore be very surprising. Nevertheless, I cannot pretend that I am overjoyed, however eager I may be to see a vehicle in India selling at that price; my estimate of the efficiency of the public sector is rather less flattering than either Mr. Manubhai Shah's or Mr. Krishna Menon's, who are believed to have influenced the final decision. The Government's resolution says that of all the proposals submitted by private concerns, only five were worth considering; and they related mostly to cars which would ultimately have cost the consumer Rs. 9,000 or so. The contribution of taxes and duties to this total has not been mentioned; one or two of the proposals at least did contain the promise of a cheap and sturdy car, which, the tax-collectors willing, could have sold for about Rs. 7,000. Enjoying certain tax advantages, I suppose the public sector could, in theory, produce a car cheaper than the private companies; I am not so sure, however, whether hopes of manufacturing a "baby" car in the public sector for Rs. 5,000, and selling it for Rs. 6,500, is based on "a realistic assessment of production costs", which the official resolution strongly recommends as necessary. Perhaps the most important lesson of the whole episode is that, whether or not a "baby" car is ultimately produced, the private companies should start paying a little more attention to the quality of the cars they make already. Public criticism on this score may have had a decisive influence on the Government's plan to reserve small car manufacture for the public sector.

WHATEVER THE ENTHUSIASTS MAY SAY, THE VALUE of sport as a balm for political rivalries has often seemed a little doubtful; and the progress of the seventeenth Olympic Games has not done much to inspire the illusion that Mr. Khrushchev's forthcoming handshakes in New York will be the warmer for whatever cordial competition there may be between the Russian and American athletes in Rome. Innocent of political jealousies though sportsmen usually are, among many spectators and enthusiasts their achievements regrettably continue to be compared in cold war terms; and in the coming months, it is by no means unlikely that we will be offered a surfeit of learned essays pointing to the superiority or otherwise of communist training for particular competitions. In the first ten days, the Russians put the Americans in the shade by winning as many as nineteen gold medals, and, on present showing, it looks as if the American team may emerge second best, as it did at the Olympic Games in Melbourne in 1956. The latter has suffered many disappointments, especially in field competitions, not all of which may be attributable to the temptations of night life in hospitable Rome. To my mind, India's performance has been rather disappointing, although allowance must be made for the fact that this country could never have hoped to achieve very much with her present attitudes to sport. The soccer defeat at the hands of Hungary and Peru was only to be expected, and there is some consolation in the fact that the game with France was drawn—a distinctly better performance than India gave at the Melbourne Olympics. I hope the Indian team will be able to maintain its supremacy in hockey, even if the victory over Australia was disturbingly narrow. I feel, however, that nothing is more disappointing than Milkha Singh's failure in the 400 metres; I was among the many who hoped he might win India her first gold medal for a track event.

MOST WRITERS HAVE A HABIT OF BEING CRITICAL OF Hollywood; their masterpieces are always supposed to be vulgarised by it. It would be impolite to enquire too closely how many were real masterpieces but it is surely obvious that many writers owe their international reputation—and market—to Hollywood. This was not wholly true of Vicki Baum, who died recently at 64; but many must have heard of her first in connection with the film version of *Grand Hotel*, in which Greta Garbo played the most important feminine rôle. I will not claim to have ever been a "fan" of Miss Baum, and at least one of her admirers told me once that she always wrote the same book under different titles—"but how enchantingly!" It is rather as a phenomenon in best-selling that she interested me, for I never quite shared the superior disdain some affect about authors who sell by the million. It is difficult to write a good book, however you define it. It cannot be much easier to write a book that sells well. In *A Writer's Notebook*, Mr. Somerset Maugham ruefully records how he and a friend of his got together all the ingredients of a popular film, deriving hints from a large number of "hits", but failed to interest any producer in their script, the product of uninspired hard labour. Perhaps that is the point: even the most vulgar success must be inspired, and its author must believe it is the best thing ever written. Miss Baum found her level early on and rarely deviated from it, and so kept her readership. She did not care what highbrow critics said about her efforts. There is nothing more pathetic than a "popular" writer trying to be highbrow; he loses his loyal readers and gains only the derision of the intellectuals. (This has happened to Mr. Maugham, sometimes unfairly.) Miss Baum entertained many millions over a number of years; and I am never sure that this is necessarily an unworthier achievement than making thousands of readers share a writer's personal cynicism and misery and anger. This, I feel, is what many young writers today are doggedly engaged in.

'SHARP INCREASE IN TURNOVER'
MR. K. R. SUNDARAM IYER'S REVIEW

Presiding over the Fourth Annual General Meeting of the Company held on Wednesday, the 31st August, 1960, at Tiruvottiyur, Madras, Mr. K. R. Sundaram Iyer, Chairman, said :—

Gentlemen :

I have great pleasure in extending to you a cordial welcome to this Fourth Annual General Meeting of the Company. The Directors' Report and the Statements of Account for the year ended 31st December, 1959 have been with you for sometime and with your permission, I shall take them as read.

Satisfactory progress was made during the year in all directions. The production of vehicles was higher by 20 per cent and sales turnover increased from Rs. 71 lakhs to Rs. 91 lakhs. The profits rose to nearly Rs. 7 lakhs from Rs. 5 lakhs for the previous year, before providing for depreciation. This has enabled your Directors to recommend, after writing off fully the balance of the preliminary expenses and brokerage on shares and after providing for Development Rebate Reserve and dividend on preference shares, a maiden dividend on the ordinary shares.

Further plant and machinery were acquired and put into operation. The gross block increased from Rs. 39.4 lakhs to Rs. 48 lakhs. Your Company continued to make rapid progress in increasing the indigenous content of the motor cycles, in spite of the several difficulties that industries having phased programmes of import substitution have to face. I am now able to state with greater confidence than I was able to muster at the last Annual General Meeting that the phased programme will be substantially completed during the calendar year 1960, according to the original schedule. During 1961, we shall be importing only a negligible number of finished components and even these, mostly will comprise what are commonly known as proprietory or specialised components, such as electrical equipment, carburettor, etc. which are not in our manufacturing programme and which normally, vehicle manufacturers obtain from specialists. There is greater reason than ever to expect that, as a result of the measures that are being taken by the Government, industries for the manufacture of such specialised components would soon be established in the country, so that imports of even these proprietory items can cease in the coming years. Those who are already engaged in the manufacture of proprietory items and components in India have to play a vital role towards a rapid and smooth progress of the industries who depend upon such manufacturers for their original equipment requirements. Already many well-established manufacturers have given the highest priority for original equipment requirements. In the present critical stage of our having to achieve self-sufficiency, regulated deliveries are of paramount importance. I should not have referred to this but for the fact that there have been occasions when the only source of supply of some original equipment was the open market at unconscionable prices.

Need for Additional Capital

I must once again express our gratitude to the Government of India for their continued and active assistance and guidance in general and in particular for progressively increasing allocation of foreign exchange for imported raw materials. This, coupled with the increase in indigenous content and increase in productivity to which I shall refer later, will enable your Company to achieve a further increase during 1960 and a substantial increase in 1961, in production. With such a steady expansion of our production, the need for larger capital has become insistent. As it is, the imbalance between the paid-up capital and the capital employed in the conduct of our business is large. Your Directors have, therefore, decided to make a further issue of equity capital to the extent of Rs. 10 lakhs. This, will be offered in the first instance to equity shareholders on our register. You will get the Company's circular in this regard shortly.

Significant progress was made by your Selling Agents, The Madras Motors Private Limited, in sales promotion and rendering service-after-sales. Royal Enfield motor cycles are sold and serviced all over India by a net-work of dealers and sub-dealers, whose number has reached a record of 145 as against 91 at the time of the last Meeting. More Zonal and Service Representatives have been stationed to assist and guide the dealers. A separate organisation has been sponsored for providing hire-purchase facilities for our products. Training courses for service personnel of the dealers are being conducted with more intensity and with great advantage to the users of our products. A representative was deputed to the various countries in West Asia to make contacts and explore the possibilities for export of our products. With these various sales, service and export promotion arrangements and with the increasing use of motor cycles at home consequent on increased economic activity, your selling agents are well set to take care of the increasing output.

It is gratifying to note that an increased volume of orders was secured for and executed by the General Engineering Department. This has been a significant factor in reducing the overheads and the cost of production of motor cycles.

Visit of Foreign Collaborators

I would like to express my pleasure that Major Smith, Chairman of our U. K. Collaborators, The Enfield Cycle Co. Ltd., accompanied by Mrs. Smith and Major Mountford, Joint Managing Director, was able to visit your factory early this year. Major Smith is a leading personality in the motor cycle industry in the United Kingdom with over 50 years experience in the line. We are naturally gratified when he expressed his immense satisfaction at the progress which your Company has made and the quality of its production.

Expansion Plans

I would now like to say a few words about the expansion plans of your Company. During the second half of 1961, we expect to commence the production of Scooters for which, as you have perhaps seen from Press Reports, the Government has granted us a licence under the Industries (Development & Regulation) Act. Your Company has been the pioneer in the manufacture of powered two-wheeler transport in India. After bringing to a successful completion the phased programme for manufacture of motor cycles, it seems logical that your Company should take-up the manufacture of Scooters, which is another popular item of powered two-wheeler transport and for which demand in the country is growing fast. The Scooter Project will go a long way to further strengthen and consolidate the position of this Company. The manufacture of motor cycles and scooters involve, by and large, similar plant and machinery, techniques and skills. Therefore, we are in a specially advantageous position to achieve this expansion by better utilization of our existing equipment and with suitable additions to them. An entirely new scooter making plant would involve a substantially larger outlay of capital and this is where our existing set-up secures for the new programme considerable economy in capital cost. Simultaneously, your Company will be commencing the manufacture of the well-known Villiers Road Vehicle engines. A unique feature in this expansion programme is that the same model of the Villiers engine with small modifications will be used both on the scooter and the light-weight motor cycle. This should facilitate economies in the production of both the motor cycle and the scooter. Plans are also under finalisation for the manufacture of Villiers engine for industrial and agricultural uses. There is a fast growing demand in our country for such engines.

In March this year we had the pleasure of a visit by Mr. Farrer, Chairman of The Villiers Engineering Co. Ltd., U.K and an authority on engines, accompanied by Mrs. Farrer and Mr. Thornton, Export Manager. I consider that the collaboration arrangement with Villiers as an event of great importance to your Company. Mr. Farrers' visit at this preliminary stage and the first-hand impression he has gained of your Company have given a good start to this programme.

At the last Meeting, I referred to our intention to promote a number of small-scale ancillary units. A detailed scheme has been got ready for this including the formation of an Industrial Estate by the small entrepreneurs on a co-operative basis. Apart from the fact that your Company would be playing a wholesome role in helping small entrepreneurs to come-up, the scheme will be mutually beneficial.

Incentive Bonus Scheme

I must refer to some major steps that your Company had initiated during the year under review for increasing the efficiency of the Company's operations and thereby achieving higher productivity. Increase in the Nation's standard of living is, to a considerable extent, dependent on higher productivity. Even in some of the advanced Western countries the productivity movement is of recent origin. We are grateful to the Government of India, and in particular, to the Minister for Industries, for the stimulus given to the productivity movement in our country. As is known, productivity aims at achieving with a given set of facilities higher production of better quality at lower cost. This requires both increase in management efficiency and enthusiastic co-operation from the employees. Obviously, the fruits of higher productivity should be shared not only by the consumers, the Company and its shareholders but also by the employees. Otherwise, there is no motivation for them to take part in this important task. With the assistance of Industrial Engineering Consultants, your Company commenced during the year under review, studies of various departments for taking measures to increase management efficiency and to evolve a suitable scheme of incentives for the employees. As a result, an incentive bonus scheme was introduced in June this year. The Madras Chief Minister inaugurated the scheme and the Industries Minister presided over the function. By the end of the year most of the sections would have come under the incentive scheme and I have every hope that this scheme will play an important role in increasing the prosperity of your Company and its employees in the years to come. I wish to remind the shareholders once again that your Company is still in the midst of the phased programme which is scheduled to be completed by the end of this year and which involves considerable advance planning. The benefits that accrue from the above measures will be apparent only from the coming calendar year.

An important event in the labour-management relations since the last Meeting has been the merger of the two Trade Unions. This has further strengthened the cordial relationship between the employees and the management and eliminated to a considerable extent unhealthy rivalries. A start has been made to implement the scheme of joint consultation to improve productivity and on matters of performance standard, job evaluation and employees' grievances. An agreement has been signed with the merged union on the incentive scheme and bonus for 1958

I would like to take this opportunity to convey our gratitude to the Madras Government from whom we continue to receive assistance and guidance.

I wish to express our appreciation to our U.K. Collaborators, The Enfield Cycle Co. Ltd. who have continued to give unreservedly their co-operation.

I take pleasure in expressing the thanks of the Company to the Selling Agents, the dealers and sub-dealers, who have played an active part in the sales promotion and servicing of our products.

Last but not least, the workmen, staff and officers of your Company deserve appreciation for having contributed to the satisfactory results of 1959.

NOTE: "This does not purport to be a record of the proceedings of the above Fourth Annual General Body Meeting of the Company".

CHAIRMAN REVIEWS WORKING RESULTS

Speech of Mr. J. Dalmia, Chairman Board of Directors of Orissa Cement Limited, delivered at the Tenth Annual General Meeting of the Company held at Rajgangpur (Dist. Sundergarh, Orissa) on Friday, the 2nd September, 1960.

Gentlemen :

I have great pleasure in welcoming you to the Tenth Annual General Meeting of your Company. The Audited Statement of Accounts for the year 1959 and the Report of your Directors thereon, have been in your hands for some time now and I will not, therefore, make any detailed reference to them.

Your Company at present is mainly interested in two major industries (i) Cement and (ii) Refractories. I do not think any comments are necessary on cement industry except that it has suffered a lot due to inadequate movement of finished goods, which will be elucidated later in dealing with rail transport problem.

As regards refractories, the annual installed capacity of the refractory industry in our country has increased from about 4.44 lakh tons on 1st April, 1956 to somewhat over 8 lakh tons by 1st April, 1960. This substantial increase of some 3.56 lakh tons has, however, not proved adequate, partly because of the heavy constructional requirements of India's expanding steel industry in the Second Plan period and partly due to the expansion not being correlated fully to the increasing demand, with the resultant anomaly that while the production of refractories is very short in the field of special steel plant refractories such as blast furnace bricks, ladle refractories, basic refractories and the like, there has been, to some extent, a surplus capacity created in the manufacture of ordinary fireclay refractories. At your plant, care has been taken to concentrate more on the production of specialised refractories including basic, blast furnace, ladle and silica bricks and a measure of flexibility has been introduced in the plant which would permit the manufacture of newer and more specialised types of refractories as they are evolved and as the demand from the consumers may dictate.

On the assumption of the existing practice of using silica bricks in the roof of open hearth furnace in the steel industry continuing for some more years, and on a production target of 10 million tons of ingot steel and a separate production of about 2 million tons of pig iron per year being achieved in the Third Plan period and after allowing for the proportionate consumption of refractories in the non-steel sector, the demand for refractories is expected to reach a figure of over 16 lakh tons per annum by the end of the Third Five Year Plan. This would require an installed capacity of the Company's of 20 lakh tons. In the event of a switch-over by the steel industry to an all-basic roof for the open hearth furnace, the total demand for refractories would be less at about 13 lakh tons per annum with an installed capacity requirement of over 14.5 lakh tons. The need for further rapid expansion of the industry is thus apparent and Government's anxiety to achieve this is shown by their decision to licence additional capacity for the manufacture of refractories freely. Government will doubtless bear in mind the need for regulating the expansion of the industry in the proper directions so that the additional capacity which may be created will be correlated to the increased demand for certain types of refractories, wherever such demand cannot be met by the existing capacity.

Expansion of Industry

I feel sure that the Government are also aware that the expansion of this vital industry is being severely hampered by lack of foreign exchange. One may well consider the advisability, in the present circumstances, of giving preference to units already in production which, through the imports of some additional machinery at a comparatively small expenditure of foreign exchange, would be able to balance their plants for increasing the range and quantum of their production to a very appreciable extent.

For the satisfactory operation of the already existing plants and for the future growth of this vital industry, there is very great need for the proper exploration, utilisation and conservation of the essential raw materials required in increasing quantities for the manufacture of refractories. It is important that the industry, as a major actual consumer, should be given a measure of preference over others in obtaining and exploiting deposits of such raw materials.

It is heartening to observe the steps that Government have taken to standardise the specifications of various types of refractories, particularly those needed by the steel plants, several of whom had hitherto stipulated their individual specifications to meet the standards set by their foreign collaborators. The formulation and adoption of common standards would enable the indigenous industries to meet, to a large extent, the need for refractories for our expanding steel industry and this would be an important factor in stimulating a healthy growth of the refractory industry itself

You will thus be pleased to observe that the manufacture of refractories, on which your Company is now well and truly launched is important in the dynamic concept of our country's industrialisation and we hope that we shall be able to acquit ourselves creditably in this.

Transport Facilities

A major problem which has confronted your Company is the rail transport facilities to and from the factory. The situation has become particularly difficult since the last year Although the cement factory has a daily quota for the outward movement of cement under a preferential movement programme, this quota has been rarely met and the shortfalls in the supply of wagons have been very considerable. The position becomes particularly difficult during the rainy season when it is difficult to obtain the required number of water-tight covered wagons. This has resulted in accumulation of stocks of clinker at your Works over 50,000 tons. Moreover, the placement of empties by the Railway at the Company's sidings is sporadic and great difficulty is often experienced in managing labour and loading wagons during the night hours and during the allowable free time of only five hours. The Railways have been requested to revert to the pilot to pilot system and to run pilots to the cement sidings at least twice a day, once in the morning and once in the evening at regular times.

There is also very considerable difficulty in getting sufficient inward rail movement for transporting raw materials. It is to be hoped that due recognition will be given to the importance of the Refractory Industry by the Railways who should agree to a preferential movement programme being allotted to the Refractory Industry as well.

Transport facilities should be expanded to the extent necessary for moving the existing as well as expanding production in the country. If required, further resources may be transferred from other development plans for transportation, for, it is quite futile to develop industries after making heavy investments and then to have the frustrating experience that the output cannot be moved and production has, perforce, to be curtailed. A realistic and balanced plan, therefore, for the development of both rail and road transportation is of the utmost importance.

Company Act Amendment

I would say a few words in respect of the Companies Act Amendment Bill 1960 as it has emerged after the deliberations of the Select Committee and also in respect of some of the provisions as existing now. There are various provisions which need sanction of the Shareholders in General Meeting and also the approval of the Central Government. The procedure which companies are generally required to follow is to place the matter before the Shareholders first and if the proposal is adopted either by an ordinary resolution or by a special resolution, as required under law, then an application is submitted to the Central Government for approval. I would suggest that the law should be so amended that only matters of magnitude need be referred to Shareholders. For relatively minor matters, reference to Shareholders is a waste of money, time and energy, if without the approval of the Central Government, the same cannot be given effect to. After all, in giving their approval, the Central Government keep in view the interests of the Shareholders There are examples where for similar matters and which were not very vital, even after approval of the Shareholders, the Central Government have given approval in case of one but withheld the same in case of the other. Therefore, Companies should be required first to submit their application for approval to the Central Government and after a preliminary consideration of the proposal, the Central Government may decide whether it is vital to be referred to the Shareholders in which case the Company may be directed to do so and the application for approval may be kept in abeyance and considered after the decision of the Shareholders is communicated to Government. Convening of a Shareholders Meeting is an expensive affair. In companies like TISCO, it is said that the cost of holding Shareholders Meeting is in the order of Rs. 50,000/-. In your Company also the expenses are considerable although not as much as in TISCO. Therefore, keeping all these factors in view, Government should decide in each case on receipt of the application for approval, whether the matter is so vital that it should be referred to Shareholders

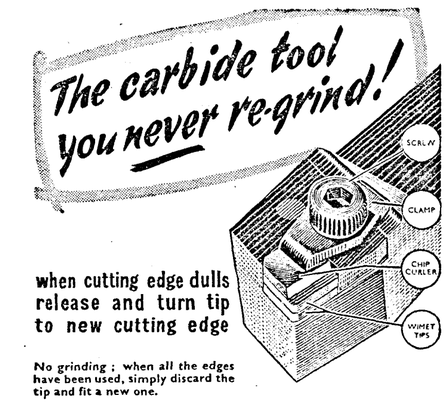
Another question is about the lost or destroyed share certificates The provisions as to penalties for issue of fraudulent duplicate certificate as proposed are very strict. The Shareholders are advised to keep their share certificates properly in safe custody. If the share certificate is lost or destroyed, unless satisfactory proof is produced, it would practically be impossible to issue duplicate certificate, unless it is clearly provided in the Act that an affidavit and indemnity should be accepted as adequate proof in this respect.

I am glad to inform you that after the prolonged strike which took place in March last year, there is now peace and good order at your Works. The workers and staff employed in connection with the Cement Industry will receive substantial increase in their salaries as a result of the recommendations made by the Central Wage Board for the Cement Industry. It is now essential that a drive be made to improve productivity and in this effort, workers should extend their full cooperation to the management. The Government of India has decided to institute workload studies at all the cement factories. I hope these studies will be carried out expeditiously and every assistance will be given for implementation of the recommendations.

In the end, I would like to express our appreciation of the services rendered by the officers, staff and workers of the Company during the year.

I have given you a brief review of the various aspects of the industries in which your Company is engaged. We would now proceed to consider the Annual Accounts and transact the rest of the business on the agenda.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Tenth Annual General Meeting of the Company held on the 2nd September, 1960.



when cutting edge dulls release and turn tip to new cutting edge

No grinding ; when all the edges have been used, simply discard the tip and fit a new one.

Leave the tool at its proper setting ; just change or re-locate the tip and save re-setting time.

INDUSTRIALS RESUME RISE IN STOCK MARKET

GENERAL UNDERTONE FIRM

London, 7th September.

FOLLOWING their reaction in the previous week, industrial equities resumed their advance in the stock market and more than recovered the ground lost during the reaction. Prices forged ahead to such an extent that the Reuter industrial ordinary share index reached a new peak of 418.0 (31st December, 1934 equals 100). The previous peak was 416.5 on 24th August. The resumption of the boom in industrials reflected renewed, but not really heavy, buying on local account and from the Continent, and to a lesser extent, America. The pace of the advance reflected a chronic shortage of stock in the market and there was a general reluctance to dispose of stock even at present prices. The buying appeared to be based on a generally optimistic view of the economic outlook in spite of the disturbing overseas trading situation. With interest centred mainly on industrials, there was not a great deal of business elsewhere, but the general tone was firm. Gilt-edged securities held steady to firm with sentiment assisted by the publication of the excellent gold reserve figures for August.

In the foreign market, Greek bonds improved on a small demand, but dollar stocks were mainly easier in sympathy with the uncertain performance on Wall Street. The gold share market was quieter, but the tendency remained firm helped by the reappearance of Swiss buying after a long absence. Copper shares improved, assisted by the gold quarterly profit figures of Oran Antelope and Rhodesian Selection Trust. Tin shares moved within narrow limits, following the previous week's sharp rise. Oil shares were quiet and narrowly irregular. Rubber shares continued to improve on small buying, encouraged by the recent advance in the commodity price. Tea shares were quiet and narrowly irregular.

The Money Market

End-of-the-month influences were responsible for a continuation of stringent credit conditions in the money market over the past week. With funds withdrawn on a heavy scale, money was in keen demand, the rate for day-to-day loans ruling firm at 5¼ percent. However, with the authorities' current policy not to let the market be forced into the Bank of England to borrow on penal rate terms, they gave a large amount of assistance, the money created with the banks being relayed into the market in the form of loans at 5⅜ percent. There was a continued good demand for bills by the banks, some of which, it is believed, were on behalf of foreign customers. End-Octobers were done at 5-15/32 percent and November and "hots" at 5½ percent. There was virtually no change in the week's Treasury bill rate which came out at £5 11s 9.33d percent.

Mixed Trend in Vegetable Oils

Linseed prices eased during the past week, but castorseed remained firm mainly on covering. Groundnuts were dull, while soyabeans were easier. Following good business in copra, sellers became more reserved at the close, and a partial price recovery ensued. Palm kernels lost further ground and were again almost neglected. Steady to firm conditions ruled in linseed oil. After more enquiry in the early stages, the demand for Indian castor oil faded almost completely. Part of the interim advance was lost, but prices remained about £3 above those of the previous week. In coconut oil, a further loss of £2 a ton brought in a rather better enquiry for Ceylon oil. Palm kernel oil was dull and easier, while the demand for soft oils remained limited.

Significance of U.K. Gold Reserve Rise

Sydney Gampell, Reuter's city correspondent writes: "The published gain of £27 million after the advance debt payments of £25 million to the I.M.F. is an extraordinarily good result for August which is normally the worst month in the year for sterling. In many years, it was August losses which brought on the September crisis. In previous Augusts, the published results have ranged from a gain of £10 million last year to a loss of £81 million in 1957. Without the debt payments, the true gain last month would have been £52 million which is not large by comparison with West Germany which in the single month of June gained more than £140 million after repaying a substantial debt to the United States Government which was not due until July. But it is very big by any previous British experience. Last month's £52 million was the best result in several years apart from two exceptions. Allowing for seasonal factors, it is the best result for any month in recent history without any exceptions."

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 7th September.

THERE was very little change in the overall level of advances in the Calcutta money market during the past week. The accommodation given to jute, sugar and engineering concerns decreased a little, but the fall was offset by an increase in credit for the storage of foodgrains and seeds. Cotton advances were virtually unchanged. In the interbank market, conditions remained very tight, and the call rate was 3¾ percent.

The exchange market was dull, with very few bills seen on account of either gunny or tea shipments. Remittance was poor. Sterling maintained a firm trend throughout the week.

BULLION WAS STEADY DURING THE PAST WEEK. Silver advanced from the previous week's level of Rs. 222.50 to Rs. 223, quoted today for ready delivery. The rate for forward delivery was Rs. 222.50. The London and New York silver prices were shown at 79½d and 91⅛ cents.

The price of gold increased from Rs. 135.75 to Rs. 137. The sovereign rose by 25nP to Rs. 89.25.

DURING THE WEEK ENDED 2ND SEPTEMBER, GOVERNment of India Treasury bills for Rs. 34,63,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 6th September. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 were accepted in full, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 12th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 7th to 10th September at Rs. 99.38 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There was no sale of these bills during 29th August to 3rd September.

THERE WAS A RISE OF RS. 18.74 CRORES TO Rs. 1,795.33 crores in active notes, according to the return of the Reserve Bank of India for the week ended 2nd September, 1960. The total note issue fell by Rs. 73 lakhs to Rs. 1,803.85 crores. Notes held in the Banking Department consequently declined by Rs. 19.48 crores to Rs. 8.51 crores. Deposits of the Government of India fell by Rs 9.77 crores to Rs. 52.90 crores, but other Government accounts rose by Rs. 18.22 crores to Rs. 46.68 crores. Balances of commercial banks at Rs. 110.40 crores showed a decline of Rs. 5.34 crores. Balances held abroad dropped by Rs. 3.18 crores to Rs. 20.34 crores. Investments increased by Rs. 2.39 crores to Rs. 247.64 crores. Other loans and advances rose from Rs. 110.99 crores to Rs. 150.97 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10.10 crores (Rs. 7.25 crores). Ways and means advances were Rs. 28.60 crores, against Rs. 36.54 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 26th August, 1960, shows a rise of Rs. 2.78 crores to Rs. 608.98 crores in total deposits. Investments in Government securities are up by Rs. 15.14 crores to Rs. 387.27 crores, while other authorised investments are down by Rs. 2 lakhs to Rs. 9.87 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 1.98 crores to Rs. 199.49 crores. Cash and balances are, in consequence, shown at Rs. 22.94 crores or Rs. 7.72 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 26th August, 1960, shows Demand and Time liabilities at Rs. 801.55 crores (Rs. 20.98 crores on account of borrowings from banks) and Rs. 1,212.09 crores (Rs. 26.66 crores), compared with Rs. 794.60 crores (Rs. 21.79 crores) and Rs. 1,215.39 crores (Rs. 27.46 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs 1.43 crores and Rs. 2.76 crores to Rs. 45.50 crores and Rs. 110.62 crores. There is a rise of Rs. 15.29 crores to Rs. 744.93 crores in investments. Advances and bills discounted at Rs. 1,103.64 crores show a decrease of Rs. 7.40 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 54.8 percent, against 8.0 percent and 55.3 percent.

TREASURY BILL MATURITIES

Stocks and Shares

BULL NERVOUSNESS BRINGS BIG FALLS IN SHARE PRICES

INVESTMENT DIVERTED TO NEW ISSUES

Wednesday Evening.

THE widespread fall in share prices during the past week brought heavy losses to the bulls. In an effort to restore the equilibrium of the market, the authorities of the Calcutta Stock Exchange decided on Monday to hold an interim clearing for three shares—Hindustan Motors, Rohtas Industries and Indian Cables. Making-up prices were fixed at Rs. 21.12, Rs 38.62 and Rs. 34.87, respectively. Lack of investment support rather than selling pressure was responsible for the fall. With the long Puja vacation only about two weeks ahead, the bulls were not anxious to extend their commitments.

Another factor responsible for the decline was that interest for the time being had once again shifted to the new issue market, which reopened early this month. Reports indicated that since Monday, heavy subscriptions had been pouring in for the Hindustan Twyfords and Seshasayee Paper issues. Existing shares were, in consequence, neglected. The ordinary and preference shares of the Raymon Engineering Works received official quotations yesterday, but no business was reported in them. Hindustan Aluminium met with some selling pressure, following the Company's decision to call up Rs 5 a share. Deliveries of the Rs. 2.50 paid-up shares will be valid only until 14th September. Calcutta Steel were a steady feature in an otherwise dull market, following the decision of the directors to offer rights shares to existing holders in the ratio of one for one.

The recent enquiry for preference shares increased after the introduction in the Lok Sabha yesterday of the Preference Shares (Regulation of Dividends) Bill.

Government securities were quiet due to the stringency in the money market. With few exceptions, the new State loans which were offered last week had sellers at or below the issue prices. It is reported that fairly large blocks of the new Andhra and Uttar Pradesh State loans changed hands at a substantial discount.

In the banking section, United Commercial were marked down sharply from Rs. 85 to Rs. 78. In coals, Bengal receded from Rs. 336 to Rs. 328, and Burrakur from Rs. 19.25 to Rs. 18.12.

Cotton shares were featureless and Kesoram eased from Rs. 29.50 to Rs. 29.

Electric supply shares were more or less neglected. U.P. changed hands at the previous rate of Rs. 126, and Calcutta were shaded at Rs. 14.25.

Engineering shares were comparatively steady, except for Indian Iron which were marked down from Rs. 25.93 to Rs. 25.02, and Textile Machinery, which fell from Rs. 27 to Rs. 26.20. Calcutta Steel spurted from Rs. 23.75 to Rs. 25.50.

Jute shares were softer and prices were marked down on a broad front. Anglo-India dipped from Rs. 215 to Rs. 211, and New Central from Rs. 28.12 to Rs. 26.75.

In papers, Orient receded from Rs. 47.55 to Rs. 46.30 and Sirpur were offered at the much lower rate of Rs. 18.50.

In sugars, Dyer Meakin Breweries fell from Rs. 23.25 to Rs. 22.75.

There were widespread losses in the miscellaneous section in the absence of investment support, as will be seen from the following table:

	Opening 1st Sept.	Closing 7th Sept.
Alkali and Chemical	34.62	33.62
Associated Battery	37.75	37.00
Dunlop Rubber	45.75	43.00
Hindustan Aluminium	4.56	4.00
Hindustan Motors	22.06	20.50
Indian Aluminium	30.50	29.31
National Insulated Cable	27.50	26.50
Indian Cable	35.81	33.87
Rallis India	132.00	127.00
Union Carbide	59.12	54.25
Rohtas Industries	40.00	37.87

In the mining group, Indian Copper were hammered down from Rs. 4.73 to Rs. 4.45, while Orissa Minerals dropped from Rs. 41 to Rs. 39.

Tea shares were dull and featureless and very little business was recorded.

Hansqua Tea

The revenue profit of the Hansqua Tea Co. Ltd has amounted to Rs. 2.54 lakhs for the year ended December 1959, against Rs. 3,013 in the previous year. An ordinary dividend of 17½ percent, subject to tax, has been declared, against nil in the previous year. Provision for taxation absorbs Rs. 1.20 lakhs (against Rs. 8,000). Development rebate reserve gets Rs. 5,000 (against Rs. 13,500). Investment reserve is allocated Rs. 50,000 (against nil). There is a carry-forward of Rs. 18,957, against Rs. 6,841 brought in. A crop of 601,231 lbs was manufactured, against 520,265 lbs. The average sale price was Rs. 2.08, against Rs. 1.74 a lb. Estimates for 1960 provide for a crop of 520,000 lbs at a cost of Rs. 9.48 lakhs.

Nazira Coal

The Nazira Coal Co. Ltd has made a profit of Rs. 1.29 lakhs for the year ended December 1959, against Rs. 44,651 in the previous year. A dividend of 10 percent, taxable, has been declared, against 7½ percent, tax-free. The provision for taxation is increased from Rs. 25,000 to Rs. 55,000. Reserve fund is allocated Rs. 20,000 (against nil). After making various adjustments, Rs. 17,140 is carried forward, against Rs. 24,346 brought in. Raisings amounted to 18,103 tons, against 13,795 tons, and despatches were 17,642 tons, against 14,854 tons.

Sutna Stone

There is a rise from Rs. 3.78 lakhs to Rs. 3.83 lakhs in the profit of the Sutna Stone and Lime Co. Ltd for the year ended December 1959. A dividend of 20 percent, subject to tax, has been declared, against 17½ percent, tax-free, in the previous year. Allocations include Rs. 1.72 lakhs (against Rs. 1.80 lakhs) for taxation, Rs. 80,000 (against Rs. 70,000) for development rebate reserve, and Rs. 480 (against Rs. 43,253) for general reserve account. After various adjustments, there remains a balance of Rs. 34,794, which is carried forward, against Rs. 30,880 brought in.

Gairkhata Tea

Providing Rs. 59,633 (against Rs. 91,068) for depreciation, the net profit of the Gairkhata Tea

THE PUNJAB NATIONAL BANK LTD.

(ESTABLISHED 1895)
HEAD OFFICE: NEW DELHI

Co. Ltd has increased from Rs. 5,646 to Rs. 2.67 lakhs for the year ended December 1959. An ordinary dividend of 12½ percent, taxable, has been declared, against nil in the previous year. The taxation provision is allocated Rs. 1.14 lakhs, (against Rs. 3,212). After making various adjustments, there is a carry-forward of Rs. 39,367, against a debit balance of Rs. 13,440 brought in. The total crop was 14,346 maunds, compared with 13,288 maunds. The average sale price was Rs. 2.05, against Rs. 1.94 a lb.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for August 1960 are published below, the figures for July 1960 being given in brackets.

Production :

Pig iron	*100,162*	*(72,502)*
Steel ingots	79,268	(62,962)
Saleable Steel :		
(a) Semis	22,438 (4,292)	} 60,899 (40,897)
(b) Finished	38,461 (36,605)	
Despatches :		
Saleable Steel	61,640	(40,287)

Tata Steel Output

Tata Industries Private Ltd, managing agents of the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during August 1960 was : pig iron 131,300 tons ; steel ingots 131,600 tons ; semi-finished steel for sale 32,000 tons ; and finished steel 70,400 tons.

Bombay Market

TAX TARGETS FOR THIRD PLAN WORRY MARKET

WIDESPREAD FALLS IN SHARE VALUES

Wednesday Evening.

TRADING in the Bombay stock market was affected by the holidays during the past week. The earlier steadiness was due mainly to the declaration of a satisfactory dividend by the Tata Iron and Steel Company for the year ended March 1960. A gross ordinary dividend of Rs. 9.72 a share has been declared, so shareholders will get the same net cash payment of Rs. 6.80 a share as before, after deducting the prescribed tax. Production has improved and the trading profit is much higher than in the previous year, but the disposable amount, after making the necessary allocations, is smaller. So the dividend has had to be paid by drawing on reserves. This seems to indicate that the present retention prices of pig iron and steel are not remunerative.

Towards the close, sentiment weakened and share prices declined on a broad front due to heavy selling pressure. Operators were worried about the prospects of increased taxation during the third five year plan period. It was also feared that many industries might suffer if imports of raw materials and equipment were cut further because of the foreign exchange shortage.

Tata Steel moved down to Rs. 157.25 and Indian Iron fell to Rs. 25.15 on lower advices from Lyons Range. Engineering shares showed losses on balance. Premier Construction were sold at Rs. 356 and Larsen and Toubro were shaded at Rs. 48. Alcock Ashdown were offered at Rs. 292 and Mukand Iron lost at Rs. 26.50. Tata Locomotive were steady and quoted at Rs. 293 on support from knowledgeable quarters. Motor shares were quiet due to reports that the production of small cars would be reserved for the public sector. Premier Automobile were transacted at Rs. 171.25 and Hindustan Motors declined to Rs. 20.76.

Cotton mill shares were traded cautiously as it was feared that the proposed cuts in cloth prices would affect profitability. In spite of doubling the dividend to 32 percent, taxable, Khatau declined to Rs. 630 because no decision had yet been made about the issue of rights shares. Bombay Dyeing were sold at Rs. 66.30 and Century were shaded at Rs. 494. Svadeshi changed hands at Rs. 246 and Standard were dealt in at Rs. 1,790. Simplex came to hand at Rs. 174 and Gokak made Rs. 174. India United Ordinaries were available at Rs. 13.04 and Apollo were offered freely at Rs. 1.46.

In the miscellaneous group, sugar shares were quietly steady, and Belapur were quoted at Rs. 380 on a report that the Company would soon acquire another sugar mill. Phalton were available at Rs. 183 and Walchandnagar Industries were taken at Rs. 303.75. Among cement shares, Digvijay were dealt in at Rs. 168 and Associated Cement were transacted at Rs. 143. Mining shares were quiet, and Shivrajpur Syndicate were done at Rs. 70. Steamship company shares were sold at lower rates, and Scindia Steam were transacted at Rs. 14.92. Business passed in Great Eastern Shipping at Rs. 18.68. Bombay Burmah reacted to Rs. 575 and National Rayon lost at Rs. 507. Gwalior Rayon were quoted at Rs. 45 and Baroda Rayon were offered at Rs. 150. Tata Chemical were steady at Rs. 19.52, but Alembic Chemical were easier at Rs. 242.80. Indian Dyestuff were available at Rs. 680. Ceat Tyre were marked down to Rs. 256.25, but *Premier Tyre were steady at Rs. 100* on the prospect that the production capacity for tyres and tubes might be doubled. West Coast Paper were bought at Rs. 204 and Voltas came to hand at Rs. 285.

Bank shares were quiet, and Bank of India were dealt in at Rs. 99.50. Bank of Baroda were quoted at Rs. 79. There was little interest in insurance shares, and New India Assurance were placed at Rs. 56.50.

Interest in electricity shares declined and prices fell. Ahmedabad Electric were traded at Rs. 86.20 and Bombay Suburban were indicated at Rs. 83.50. Andhra Valley were done at Rs. 1,002.50.

Madras Market

EARLIER STEADINESS NOT MAINTAINED

TEA, COFFEE AND RUBBER ISSUES EASE

Wednesday Evening.

THE Madras stock market remained steady earlier in the past week because of the liberalisation of the rules for trading. Margins were reduced, and brokers were given greater freedom to transact business. But there was a setback at the close due to lower advices from Calcutta and Bombay. Cotton mill shares were sold on reports of further cuts in the prices of piecegoods and yarn. Tea shares turned softer on fears of lower demand. Coffee shares were neglected following talk of a glut in world markets. The decision to increase the replanting subsidy had little effect on rubber shares. Miscellaneous shares were selectively bought on prospects of rights issues.

In the banking group, business was done in Indian Overseas at Rs. 176 and in Travancore Forward at Rs. 7.50. Canara Banking Corporation were dealt in at Rs. 81.50.

Public utilities were neglected and prices declined. West Coast were transacted at Rs. 11.75 and Cochin were offered at Rs. 10.15. Negapatam

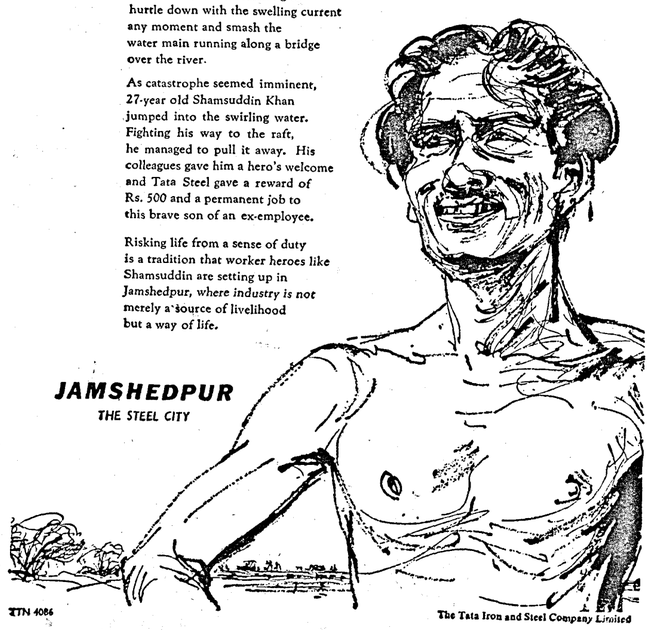
saving the city's water supply

On 1st October 1959, as rain and cyclone lashed Jamshedpur, a small group of Tata Steel workers hurried to a reservoir adjoining the Subarnarekha to save the city of Jamshedpur from a major disaster.

A raft, cut adrift by storm, stood poised on the very brink of a dam separating the reservoir and the river . . . threatening to hurtle down with the swelling current any moment and smash the water main running along a bridge over the river.

As catastrophe seemed imminent, 27-year old Shamsuddin Khan jumped into the swirling water. Fighting his way to the raft, he managed to pull it away. His colleagues gave him a hero's welcome and Tata Steel gave a reward of Rs. 500 and a permanent job to this brave son of an ex-employee.

Risking life from a sense of duty is a tradition that worker heroes like Shamsuddin are setting up in Jamshedpur, *where industry is not* merely a source of livelihood but a way of life.



JAMSHEDPUR
THE STEEL CITY

ETN 4086

The Tata Iron and Steel Company Limited

were sold at Rs. 9.05 and South Madras were indicated at Rs. 10.10.

Sugar shares were quietly steady, and Deccan were dealt in at Rs. 16.30. E.I.D. changed hands at Rs. 38.50 and Mysore were quoted at Rs. 60.50. United Breweries were steady at Rs. 114.50 and Travancore were bought at Rs. 12.45.

In the planting group, Blue Mountain were transacted at Rs. 5.32 and Cochin Malabar were taken at Rs. 7.65. Consolidated Coffee changed hands at Rs. 26.30 and Haileyburia were taken at Rs. 14.50 on paying a taxable dividend of 12½ percent. Business was done in Highland at Rs. 15.90 on the payment of a taxable dividend of 15 percent. Ouchterlony changed hands at Rs. 4.80 and Periakaramalai were taken at Rs. 3.78. Mysore Coffee were wanted at Rs. 5.55 on the payment of a dividend of 14-2/7 percent, taxable. Stanes Amalgamated were done at Rs. 16.25 on declaring a taxable interim dividend of 5 percent. United Nilgiri were wanted up to Rs. 22.65 on the payment of a dividend of 15 percent, taxable. Balanoor were quoted at Rs. 16.70 and Chembra were taken at Rs. 5.05. Kil Kotagiri were steady at Rs. 5.65 and Lucky Valley were dealt in at Rs. 12.40. Midland were done at Rs. 12 and Nilgiri were steady at Rs. 7.75. Business passed in Parkside at Rs. 28.50 and Peermade were taken at Rs. 23.63. Teekoy were quoted at Rs. 6.30 and Twyford were done at Rs. 11.50.

Among textile shares, Buckingham were bought at Rs. 206 and Bangalore Woollen at Rs. 206. Both the Companies declared tax-free interim dividends of 4 percent. Lakshmi were steady at Rs. 154 and Madura were done at Rs. 35. Travancore were bought at Rs. 36.50 and Vasanta were taken at Rs. 238.50 on the payment of a taxable dividend of 3¼ percent. Kothari were done at Rs. 12.90 and K. Rajendra came to hand at Rs. 76. Mettur were quoted at Rs. 392 and Premier were dealt in at Rs. 237. South India Viscose were indicated at Rs. 138 and Vijayakumar were placed at Rs. 125.

In the miscellaneous group, Enfield were bought at Rs. 20 on the decision to issue rights shares. Mysore Paper were steady at Rs. 30.18 on the publication of a good report. The Company also decided to issue rights shares for financing expansion. Aluminium Industries were steady at Rs. 25, as were Ashok Leyland at Rs. 9.12. India Cement were bought at Rs. 7.35 and McDowell were wanted at Rs. 36.75 on the payment of a taxable dividend of 15 percent. Standard Motors were steady at Rs. 17.60 on the payment of a taxable dividend of 9 percent. Textool were taken at Rs. 190 and Tube Investment were firm at Rs. 375. F.A.C.T. were quoted at Rs. 11.80 and Forest Industries came to hand at Rs. 3.37. Mandya National Paper were done at Rs. 12 and Parry's Confectionery were placed at Rs. 4.70. Business passed in Spencer at Rs. 23.12 and Singareni were indicated at Rs. 10.25.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

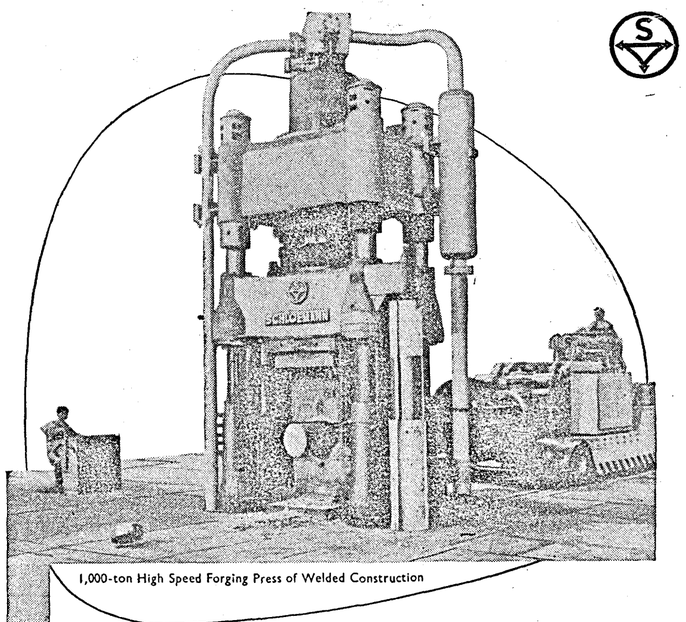
SCHLOEMANN



1,000-ton High Speed Forging Press of Welded Construction

Faster, more accurate forging at lower cost
with the SCHLOEMANN automatic high speed forging control

Stroke adjustable (⅞ in. to 3½ in.) in ten to twelve stages by shifting the top dead centre during the automatic reciprocating cycle. Number of strokes adjustable (20 to 100 per minute) in ten to twelve stages with constant stroke through variable holding times at top dead centre during automatic reciprocating cycle. Precision adjustment of work level with constant stroke through shifting the top and bottom dead centres during the automatic reciprocating cycle. Coarse adjustment of work level through an intermediate stroke with automatically interrupted reciprocating cycle. Low power water consumption by adjustability of the shortest reciprocating stroke required for planishing and by adapting the number of strokes to the precise amount of idle time required to move the forging, without changing the stroke.

Every new factory is a part of India's fast development...and Goodlass Nerolac are proud to supply the protective paints which help strengthen and preserve these factories, ensuring that they remain smart and productive for years!

With twenty-five years' manufacturing experience in India, backed by a century of technical and scientific development, Goodlass Nerolac manufacture all types of industrial paints...maintain a *free* technical *service to study customers' needs,* and supply *special* paints, *specially-formulated,* to meet these needs.

India's leading manufacturers of industrial paints and finishes

New Delhi

WORLD BANK MISSION ASSESSES THIRD PLAN PROSPECTS

CRUCIAL IMPORTANCE OF FOREIGN AID STRESSED

(FROM OUR NEW DELHI CORRESPONDENT)

THE report of the World Bank mission, which visited India earlier this year, is an encouraging document from this country's point of view. It should stimulate foreign interest in India's development plans. The mission believes "that India has demonstrated a capacity to make good use of foreign aid, and that the continuance of aid on a generous scale during the third plan can be justified on economic grounds. It is of the greatest importance that most of this aid should be extended in a form that does not add to the already heavy burden of debt repayment.

"India is struggling against heavy odds to achieve a revolutionary change in economic conditions by non-revolutionary means. There are few societies in which tradition and status count for more, and in which conservative habits of thought and action are more deeply ingrained. This makes for stability, and stability is not always an aid to economic growth. But new forces are emerging, new ideas are taking hold, and a new class of educated people is emerging which is more interested in the present and in the future than in the past. Change is in the air. No one can say for certain how deep its impact is."

Encouraging Climate for Business

Viewing the industrial scene as a whole, the mission considers it truly remarkable that so much progress has been made in so short a time and it finds the present climate of business highly encouraging. "Indian business men are becoming increasingly investment-minded, and there are signs of a gradual emergence of a new and forward-looking entrepreneurial class." The strategy of Indian development is based on the assumption that external aid will be forthcoming on a generous scale for at least the next ten years, and in the mission's view it may well have to be a good deal longer. If this assumption were to be invalidated, a totally different approach would have to be adopted to development, involving either a much slower rate of growth or drastically different methods of political and economic organisation or, quite possibly, both.

"External finance is unquestionably the key to the success or failure of the third plan. We do not under-estimate either the importance or the difficulty of mobilising the additional domestic financial resources required, but we believe that this will be a manageable problem if the foreign exchange can be found to cover the prospective gap in the balance of payments. While administrative limitations will be a critical factor affecting the growth of production, we do not visualise them acting as a brake on investment, except in agriculture. The investments proposed in the third plan depend on foreign aid for their realisation, since they involve large imports of capital equipment which India cannot pay for out of her export earnings, and there will be no further room for foreign exchange reserves to be drawn down. The five-year balance of payments deficit to be covered by foreign aid and private foreign investment is estimated at Rs. 2,600 crores (almost $5,500 million), excluding aid under P.L.480. If P.L.480 is included, the stated requirement is Rs. 3,200 crores ($6,700 million). Both estimates include about Rs. 500 crores (rather over $1,000 million) for repayment of external debts."

The mission has examined the import and export projections underlying these estimates. "We believe that exports could be expanded somewhat more than the plan assumes, but we believe that import requirements have probably also been under-estimated, and that the possible margin of error is greater for imports than exports. We find it impossible to accept the view that the third plan could at this stage be remodelled in such a way as greatly to reduce its dependence on external support, and yet to retain its identity. Marginal cuts could still be made in certain investment programmes without throwing the whole plan out of balance. The scope for flexibility has, however, been considerably narrowed by the fact that much of the foreign assistance (as well as the private foreign investment) received by India tends to be tied to large industrial projects for which the equipment is supplied by the aid-giving country.

Private Foreign Investment

"Manufacturing industry in India has been attracting a growing volume of private foreign investment in the past two years, and the Government has taken steps to encourage this trend, although more could still be done to help the foreign investor. There is a good prospect that the inflow of business capital will be larger in the third plan than in the second, but apart from oil, private foreign investment cannot be expected to make a major contribution to the financing of the plan—the amounts involved are still much too small. The policy pursued by the Indian Government over the past few years of excluding private capital from further investment in oil exploration and refining has added very considerably to the immediate pressure on India's foreign exchange resources. A change in this policy could free significant amounts of foreign exchange for other uses during the third plan by attracting additional foreign capital into the oil industry.

Additional Taxation

"Nearly one-third of the domestic resources for financing the public expenditure in the plan is to come from additional taxation. The Central Government has displayed considerable courage in raising taxes during the second plan, although the record of State Governments in this matter has been less satisfactory. We believe that, with firm political leadership, the target for the third plan can be attained. One of the key issues here is the readiness of State Governments to play their full part in making a success of the national plan. Particular attention should be given to increases in the taxation of land, to indirect taxes on semi-luxuries and to higher taxation of the middle income groups, including the better-paid industrial workers. Surpluses of the railways and other public enterprises are relied upon to contribute nearly one-sixth of the internal finance for the plan. We believe that the railways can reach their target, but we are doubtful about the contributions expected from the public steel and fertiliser plants and oil refineries. On the other hand, there is room for a larger contribution from State electricity boards than the plan allows for, and the Centre should press strongly for a general increase in power rates.

Coal Production

"Abundant deposits of coal are one of India's principal natural assets and the foundation of her programme of industrialisation. Steel production depends on coal, the railways are run almost entirely on coal and more than half of India's electricity supplies are generated from coal. In other countries, the growth of demand for coal has been slowed down by a shift to oil and gas as a source of fuel and power, but as long as India remains a net importer of oil, the scope for substitution will be very limited. It is, therefore, a matter of grave concern that production of coal, and particularly of metallurgical coal, is failing to keep pace with the rise in demand. Some steel production has already been lost because of the poor quality of the coal supplied, railway efficiency has been adversely affected, fertiliser production at Sindri has had to be curtailed, and valuable opportunities have been lost of earning foreign exchange from coal exports.

"During the second plan, coal production has increased at the rate of 7 percent a year. During the third plan, the rate of expansion required to reach the target will be 12½ percent a year. The target for the end of the third plan (97 million tons) is probably higher than can be justified by the probable increase in demand, unless coal exports can be stepped up considerably. For one thing, it assumes that crude steel production will rise to 9½ million tons a year by the end of the plan, and in the mission's view this is quite unrealistic. Nevertheless, at least 90-95 million tons of coal a year may well be required by the end of the plan to support the projected expansion of economic activity generally. The mission sees no prospect of production reaching this level unless there is a radical change in the Government's policy towards the industry.

"Of the 47 million tons produced in 1959, 40 million tons were raised by private collieries and 7 million tons by Government collieries. The Government plans to step up production in the public sector to 35 million tons by 1965-66, while production in the private sector is tentatively projected as rising to 60 million tons. No final decision has yet been taken, however, on the division of the increased production between the two sectors. The National Coal Development Corporation, which manages most of the public collieries, is a comparatively young organisation with very limited resources of managerial talent and skilled manpower. Arrangements for technical assistance are being made with a number of foreign countries, but even so, the Corporation will be hard put to it to quintuple its output in the short space of six years. It is relying predominantly on opencast nad horizon mining to develop large deposits of medium quality non-metallurgical coal and has as yet made few preparations for deep-mining operations, which will be needed to produce more metallurgical coal. The task of meeting the growing requirements of the steel industry will devolve mainly on the private collieries, which are at present responsible for practically all the metallurgical coal produced in the Bengal-Bihar fields.

Restriction on Private Collieries

"The expansion of the private sector has been restricted as an act of government policy, which has reserved the opening up of new areas to the public sector. Price control has also discouraged the private companies from investing more in the indust.y. It is possible to sympathise with some of the considerations underlying the Government's policy, and yet to feel that the way in which this policy has been applied is contrary to the nation's economic interests. As the mission sees it, the overriding need now is to get more coal quickly, and other considerations should be subordinated to this purpose. The private collieries should, therefore, be encouraged to raise all the coal they can, restrictions on the issue of new mining leases should be lifted, and prices should be adjusted to provide the industry with larger resources for reinvestment. The differential between prices of coking and non-coking coal should be increased. The Government has ample means of ensuring that price adjustments are not followed by unreasonable increases in dividends. A good case could be made out on economic grounds for the removal of price controls altogether.

Power Shortage

"Electricity ranks with coal as a present limitation on industrial output and a potential bottleneck to the expansion of the economy during the third paln. Travelling around India, the mission found evidence of power shortages in all the main industrial areas. Fairly successful efforts have been made so far to minimise the impact of these shortages by the staggering of working hours and restrictions on the installation of electric appliances, but such forecasts as are available of demand in relation to firm capacity suggest that the shortages will be intensified in the future. The outlook in the area served by the Damodar Valley Corporation is particularly disquieting, the gap between anticipated demand and firm capacity rising from 84,000 kWs in 1960-61 to 250,000 kWs in 1961-62 and 300,000 kWs in 1962-63. From 1963-64 onwards, supply begins to catch up a little with demand, but on present plans, there will still be a deficit of over 170,000 kWs in 1965-66.

"Abundant resources of high-grade iron ore in close proximity to coal deposits offer India great natural advantages for the manufacture of iron and steel, and it is regrettable that steps were not taken earlier to develop the industry on a larger scale. The development that has taken place during the second plan has been spectacular, but no country can quadruple its steel-making capacity from 1½ million tons of crude steel to 6 million tons in the short space of five years without running into difficulties of organisation and management. In India's case, these difficulties have been aggravated by a failure on the part of the Government to realise fully, and in time, the complexity of the problems involved in operating and maintaining plants of this description. It was assumed in the second plan that the three new million-ton Government plants would be running smoothly and near to full capacity in 1960-61, which was the year when construction was due to be completed. It now looks as if it will be another two or three years at least before full production can be reached and maintained.

Manning the Steel Plants

"This is not particularly surprising. Even a country with a highly developed steel industry would have difficulty in manning simultaneously three new million-ton plants. Indian workers and junior technicians have shown themselves remarkably quick in acquiring fresh knowledge and aptitudes, and extensive programmes have been arranged abroad to train personnel for jobs in the plants. But the supply of Indian managers, senior technicians and supervisors with experience of steel operations is in the nature of things extremely limited, since there have previously been only two major steel producers in the country, and even these have depended to an important extent on foreign personnel, although both plants have been in operation for several decades. The Government plants have recruited some of their staff from the private plants, but the cream of experience has had to be spread extremely thin—a good deal too thin for comfort—and there are still many senior posts for which no qualified Indians are available. Nor can they be expected to be available for another five or ten years at least, for time alone can qualify them.

"Arrangements are now being made with the countries which have helped in building the plants (West Germany, Russia and the U.K.) for experienced steel men to be loaned for varying periods to fill a limited number of key positions on the operating side. The most important needs of the Russian and British plants appear to have been taken care of for the time being; the arrangements for staffing the West German plant have still to be worked out. The mission is convinced that foreign personnel will have to be retained in responsible positions for quite a long time if the plants are to be operated efficiently and if full value is to be obtained from the huge sums invested. We do not question the importance of Indians taking over just as soon as they are qualified and we have no doubts about their capacity to acquire in time all the requisite skills and experience. But it would be a mistake to try to rush this process out of misplaced considerations of national prestige. Fortunately, the Government now recognises the need for the continued employment of foreign personnel and is concerned only to devise mutually satisfactory terms for their recruitment. This will not be easy in view of the low salaries paid to the Indians employed and the reluctance of the Government to pay much higher salaries to foreigners.

Organisation and Management

"The present organisation of the publicly-owned steel industry is felt to be unsatisfactory by many

of those responsible for trying to make it work. It certainly satisfies few of the criteria that have been found elsewhere to be applicable to the efficient operation of public enterprises, and the mission believes that it ought promptly to be re-examined. There is now a three-tier structure, with the Ministry on the top in New Delhi, the board of the Hindustan Steel Company in between and awkwardly located in Ranchi, and the plant managements at the bottom, in Durgapur, Rourkela and Bhilai. Lines of responsibility are blurred. Those responsible for the technical aspects of operations feel that their viewpoint is either unheard or misunderstood by those responsible for administrative decisions, namely, the hiring and emoluments of key personnel. Much time is spent in communication. There seems to be insufficient delegation of authority down the line.

"The individual plants have few incentives to efficiency, particularly as they are not responsible for selling their products. Little attention has been given to costs and selling prices. Indeed, the accounting system so far applied is incapable of producing cost data, being simply an adaptation of accounting practices used in Government departments, such as the post office, and totally unrelated to the requirements of steel manufacture. The problems involved in moulding thousands of wage and salaried employees into a loyal, orderly and effective work force have hardly been recognised, much less tackled at the professional level. In short, the whole range of problems generally subsumed under the heading of 'management' will have to be dealt with very much more effectively before the publicly-owned steel plants can hope to play the rôle in India's development that the country has been led to expect from so much investment.

"The expansion of the three Government plants would raise steel-making capacity to a litle under 6½ million tons in terms of finished steel. Doubts have been expressed as to whether the demand for steel will be sufficient to justify expansion of capacity above the level of 4½ million tons of finished steel which will be reached on completion of the second plan projects. It is difficult to be sure about this because no one knows what the present level of demand for steel is. Even the figure for actual consumption is uncertain. If, as we believe, consumption is running at around 3 million tons of finished steel a year, and assuming that there is an unsatisfied demand for at least another 500,000 tons and probably more, capacity for the production of 6½ million tons of finished steel by the end of the third plan would not appear excessive, especially when it is unlikely that full capacity production will be achieved within this period.

Fourth Steel Plant

"The case for the construction of a fourth steel plant in the public sector is much more debatable and must rest in the last resort on the arrangements made for running it when it is completed. India will certainly not be able to spare from her own resources the managerial and technical skills required without detriment to the operations of the other steel plants. The shortcomings in the organisation of the existing Government plants anyhow suggest that special arrangements might with advantage be made to secure foreign management for the fourth plant. Nor do we feel that the case for having the plant in the public sector can be established until alternative possibilities of obtaining a further expansion of production in the private sector have been thoroughly explored. This does not yet appear to have been done.

"Scarcity of experienced managers, technicians and supervisors is one of the factors most inhibiting to the growth of Indian industry. Full utilisation of capacity in the steel industry has been delayed on this account and we anticipate similar difficulties in the case of other industries which are being newly developed or rapidly expanding. The problem is common to private and public enterprises. If it is more acute in the latter case, it is because many of the largest and most complex industrial units are being established in the public sector and because the Government refuses to pay high enough salaries to attract the best talent available.

"Almost all industrial plants in India have more workers than they need, and very many more than a comparable plant operating in countries where there is no problem of surplus labour. As a result, labour costs a unit of output are usually much higher than the level of wage rates would suggest. In fact, some old-established industries in India maintain that their labour costs are higher than those of their competitors in other countries. This may well be true, for example, in the cotton textile industry where productivity is surely low. It may also be true in jute manufacturing, where it is claimed that the industry could be run with half its present labour force. Again, the numbers employed in the existing private steel plants and in the Sindri fertiliser plant are more than twice as large as should be necessary to run plants of this kind.

Family Concerns

"A broad distinction can be drawn between the older industries and the newer ones. In the former, surplus labour has long been accepted as a fact of life, there is a deep-seated horror of retrenchment, and the whole concept of relating wages to output is alien to the thinking of workers and managements alike. Management is usually a family affair, promotion at lower levels goes by seniority rather than merit, and there is strong opposition to the idea of formal management training. Working conditions in these industries are frequently bad, wage rates are low, plant layout is inefficient and much of the equipment is out of date.

"By contrast, conditions in some of the new plants in both the public and private sectors would be envied by many workers in the United States and Europe. The plants are excellently designed and equipped with the most up-to-date machinery, and they are operated on modern lines. Wage rates are comparatively high and extensive amenities are provided for the workers, often including subsidised housing. Productivity in this modern sector is generally much higher than in the traditional industries. For example, in a number of factories set up by European firms, the mission was told that output a worker engaged in productive operations was at least 75-80 percent as high, job for job, as in the European countries concerned. However, more supervisory staff and indirect labour have to be employed in an Indian factory.

"One of the problems that Indian industry faces at this early stage of its development is a lack of common servicing facilities and ancillary undertakings which limits the scope for division of labour and necessitates a high degree of vertical organisation. Motor-vehicle producers, for example, have to make for themselves many of the components and ancillaries that in other countries would be bought in. Setting up a new plant often involves creating a whole new township, and the concern has to carry on its payroll a large staff which is engaged in administrative duties not directly connected with production.

"As for tariffs, the general view seems to be developing that, when costs are no more than, say, 25-40 percent above the imported price of comparable products, there is reasonable hope that, as the market grows, the particular product can ultimately be produced competitively within India. There is definitely an attitude that tariffs should be a temporary phenomenon, and in most instances they are set for a specific period of time, after which a review of production costs takes place. There is always the danger, of course, that tariffs will be used to maintain in existence uneconomic types of production. There are a number of instances, such as apark plugs, caustic soda, some types of sheet glass and calcium carbide, where domestic costs are far above the landed cost of imports (excluding duty). The mission feels that this is an area where constant vigilance is necessary, but we have been rather fabourably impressed by the action so far taken by the Tariff Commission to reduce or eliminate duties when they are too high.

Prejudice against Profits

"The idea that large profits are immoral has wide currency in political circles in India and has been encouraged by the poor reputation which the Indian business man has gained for himself in the past and by the concentration of big business in comparatively few hands. Measures to restrict profits through taxation and price controls have accordingly become a prominent feature of the Government's industrial policy. These measures have undoubtedly been necessary up to a point, but they are in danger of being pressed to extremes which, in the mission's view, would have a cramping effect on the future expansion of industry.

"The mission was particularly concerned at the extension of the price-fixing activities of the Tariff Commission. Industries which have been referred to the Tariff Commission for price enquiries in recent years include iron and steel, paper, sugar and cement. In various other industries, prices have been fixed incidentally to the grant of tariff protection; examples are motor-vehicles, dyestuffs, non-ferrous metals and electric motors. Coal prices are also strictly controlled, although this is not done by the Tariff Commission. The primary purpose of the Tariff Commission's enquiries is legitimate enough—namely, to prevant industries which are to be granted protection against imports from exploiting their monopoly position at the expense of the consumer. The trouble is that price-fixing has come increasingly to be regarded as a desirable end in itself, and the arbitrary methods employed in deciding what the limits to profits should be are liable to discourage investment. Thus, prices are normally fixed on the basis of an allowance for profits ranging from 8 percent to a maximum of 12 percent of capital employed. As a result, after dividends have been paid, there is very little left for financing expansion. The mission believes it generally desirable that a larger proportion of industrial profits should be retained in future in the business. This is especially important if private industry is to expand sufficiently to utilise the industrial materials and semi-manufactures which are to be produced by the heavy industrial plants in the public sector.

Government Regulations

"An inordinate amount of time and energy is spent by the management of enterprises—public as well as private, small as well as large—in negotiating their way through Government regulations. Many of the main controls, including those over investment and imports, unquestionably have to be continued for the time being in view of the overall shortage of resources. On the other hand, the mission has the impression that the multiplication of controls has been carried in recent years to quite unnecessary lengths, and that many of the exising controls do not contribute materially either to the better functioning of the economy or to the fulfilment of the Government's social objectives. The experience of other countries has shown the damage that can be done by excessive controls exercised by remote Government officials over the operations of business enterprises, even though each regulation, taken by itself, can be justified in terms of public policy. One of the most harmful effects of controls in India is that they are particularly discouraging to small enterprises. The big industrialist can always, if need be, fly up to New Delhi to present his case for obtaining the licence he wants. The small man is liable to become hopelessly enmeshed in the coils of petty bureaucracy.

"The mission suggests that the chances for the success of the third plan in industry would be greatly improved if the Government were to institute promptly at the enterprise level an objective and thorough examination of the impact of controls on the efficiency of management. There should be two objectives for such a review. The first should be to relieve management of the burden of complying with unnecessary, obsolete and trivial controls and formalities. The second should be to reexamine the case for price controls and the base on which prices are fixed in different industries to ascertain whether, on balance, the industry's development, and the growth of the economy generally, is being helped or hindared by the present arrangements. The mere announcement of the Government's determination to institute such a review should have valuable psychological effects on the progressive forces in the Indian business community."

Arbitration Clause in Indo-U.S. Trade Contracts

The Federation of Indian Chambers of Commerce and Industry and the American Arbitration Association have agreed to recommend to the firms engaged in Indo-American trade the insertion of the following arbitration clause in their contracts: "Any dispute or claim arising out of or relating to this contract shall be settled by arbitration. If the arbitration is to be held in India, the dispute shall be submitted to the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry and shall be conducted in accordance with the rules of that Tribunal. If the arbitration is to be held in the United States of America, it shall be conducted in accordance with the rules of the American Arbitration Association."

They have further agreed that if the parties do not designate the place of arbitration or are unable to agree on it within 30 days after the demand for arbitration has been made, the place of arbitration will be determined by a joint arbitration committee of three members, one to be appointed by the Arbitration Sub-Committee of the Federation, another by the American Arbitration Association and the third of a nationality other than that of any one of the parties. Moreover, the party demanding arbitration, according as he is resident in India or the U.S.A., will give notice to the Arbitration Tribunal of the Federation or the American Arbitration Association, as the case may be.

Manufacture and Sale of Scooters

Automobile Products of India Ltd, Bombay, is manufacturing Lambretta scooters. Bajaj Auto Private Ltd, Bombay, has recently taken up the production of Vespa scooters. Their installed capacities are 12,000 and 6,000 vehicles a year, respectively, including mopeds and three-wheelers. According to their approved programmes, the former is to achieve 87 percent indigenous content by the middle of 1961, and the latter has to achieve 75 percent in four years. In order to ensure equitable distribution at fair prices, the Government has issued a statutory order controlling the purchase and sale of scooters. It stipulates that every applicant for a scooter should furnish a bank guarantee of Rs. 250 at the time of registration, the amount being payable when the scooter is actually delivered. In the case of customers, whose names have already been registered with dealers, the guarantee may be furnished within 45 days. The dealers will have to sell the scooters strictly in the order of registration, and the register of orders will be open to inspection by members of the public as well as representatives of the Central and State Governments.

The order also stipulates that no person who has purchased a new scooter in any calendar year can purchase another scooter in the same year, except with the written permission of the Controller or an officer appointed for the purpose by State Governments. Companies or associations, however, will be permitted to purchase up to a maximum of six scooters. The re-sale of scooters is prohibited before the expiry of one year from the date of its purchase, except under a permit from the Controller or an officer appointed for the purpose by State Governments.

Pearl Scooters, Ludhiana, has concluded an agreement with Yamaha Motor Company of Japan for collaboration in the manufacture of scooterettes. The firm intends to manufacture 50 c.c. and 78 c.c. scooterettes. The proposal does not involve any down payment or royalty for obtaining the technical know-how. The firm desires to import only Rs. 150 worth of components a scooterette during the first year, Rs. 100 worth of components during the second year, and practically nil, or a negligible quantity, during the third year. There is provision for the training of Indian technicians with their principals in Japan. Japanese technicians will assist in the manufacture of scooterettes in the initial stages.

Chemically-bonded Refractories

Two proposals have been finalised for the manufacture of chemically-bonded basic refractories on a commercial basis. One will be located in Salem, Madras State, and the other in Belpahar, Sambalpur district, in Orissa. The outlay on one project will be between Rs. 70 lakhs and Rs. 80 lakhs. That on the second has been estimated at a minimum of Rs. 350 lakhs.

Production-cum-Training Centres

There is a proposal to set up two production-cum-training centres, one for the leather industry and the other for fruit canning, in collaboration

with the Yugoslav Government. The details of these schemes have not yet been finalised. As such, it cannot be said at this stage whether machinery worth Rs. 50 lakhs will be coming from Yugoslavia and where the centres will be located.

Ownership of Tea Gardens

The number of tea gardens owned by foreign concerns in India is as follows:

North India	...	298
South India	...	109
Total	...	407

The number of tea factories owned by foreign concerns in India is as follows:

North India	...	289
South India	...	100
Total	...	389

The number of tea gardens owned by Indians is as follows:

North India	...	2,285
South India	...	5,376
Total	...	7,661

Viscose Rayon Yarn Manufacture

The Government has granted a licence under the Industries (Development and Regulation) A[illegible] to the Baroda Rayon Corporation for the manufacture of viscose rayon yarn. It is understood that the Indian firm has entered into a contract with a Japanese firm for the purchase of machinery for the project. The latter proposes to take up equity shares to the extent of about 7 percent in the Indian firm as part payment for the machinery. The Government is not financially participating in the scheme.

Licence for Zinc-Smelter

A licence under the Industries (Development and Regulation) Act, 1951, has been granted to the Metal Corporation of India Ltd, Calcutta, to set up a zinc smelter with an installed annual capacity of 15,000 tons of zinc near Udaipur (Rajasthan), based on the ore deposits of the Zawar mines. These ore deposits are lead-zinc-silver combined. The scheme includes the production of 25,000 tons of sulphuric acid (for the manufactue of superphosphates) and 70 tons of cadmium a year. The firm already has plants for refining lead and silver in Tundoo. The present scheme also includes increasing the capacity of these plants to 9,000 tons and 540,000ozs. a year, respectively.

The Indian firm will have the technical and financial collaboration of Krebs and Cie, Paris, in association with Société Miniere et Metallurgique de Penarroya of Paris. The Government has approved the proposal to import the plant and machinery for the zinc smelter valued at about Rs. 268 crores under the Indo-French economic agreement. The issue of capital has also been approved. The scheme is expected to materialise during the second year of the third plan.

Foreign Exchange for Motor-vehicle Producers

The foreign exchange allocations made to the motor-vehicle and automotive diesel engine manufacturers for the import of components during the 18-month period April 1959 to September 1960 are given below:

	Rs. lakhs
Hindustan Motors Ltd, Calcutta	10,14.90
Premier Automobiles Ltd, Bombay	8,50.34
Standard Motor Products of India Ltd, Madras ...	1,71.62
Mahindra and Mahindra Ltd, Bombay	4,78.10
Tata Locomotive and Engineering Co. Ltd, Bombay	10,21.00
Ashok-Leyland Ltd, Madras	5,50.94
Simpson and Company Ltd, Madras	2,70.36
Automobile Products of India Ltd, Bombay	98.12
Total	44,55.38

Coal Mining Machinery

It has been decided to expand capacity of the coal mining machinery plant in Durgapur from 30,000 tons to 45,000 tons of machinery items a year. The expansion programme will include the production of 25 tons of light drilling rigs annually and will be in addition to the 5,500 tons of heavy oil drilling rigs. Orders have been placed with Prommashexport, Moscow, for the import of machinery and equipment for the heavy machine building plant (45,000 tons) and the coal mining machinery plant (30,000 tons).

Permissible Indian Investment

In view of India's shortage of foreign exchange, investment abroad is not permitted except when it is limited to (i) the value of the Indian machinery exported from India; and (ii) the value of free shares, if any, allotted by way of technical fees or payment for "know-how", etcetera.

Refinancing through Banks

It has been decided in principle to extend refinancing facilities to certain selected scheduled banks and financial institutions without requiring them to become shareholders of the Refinance Corporation, to give the discretion to the Corporation to determine, within the broad framework of the five year plans, the eligibility of any particular industry for assistance, and to increase the maximum period of the loans eligible for being refinanced from seven to ten years.

Use of Yen Credit

Some details of the manner in which the yen credit from Japan has been used were available last week. "Power and shipping", it was pointed out, are the principal beneficiaries of the Rs. 23.8 crores credit given by the Japanese Government two years ago. Tractors form an important part of equipment ordered. In the private sector, the rayon industry has been allocated Rs. 4.13 crores, of which Rs. 3 crores worth of equipment is being ordered. Similarly, allocations totalling roughly Rs. 3 crores have been approved for the import of paper mill machinery.

At the Washington meeting of the countries helping India, the Government of India gave a list of projects which were included in the hard core of the plan. This list did not include the watch, rayon and paper mill industry. As for the watch manufacturing project, the Minister for Industry, Mr. Manubhai Shah, told Parliament last week that it was proposed to permit three units in each State for the manufacture of watches in the small-scale sector. Four applications have so far been received and are being examined. On being asked by Mr. Niranjan Singh whether a proposal to establish a watch factory in Mussoorie with Russian collaboration has been finalised by the Government, Mr. Shah replied that there was no such proposal. It is claimed that Russia manufactures some good watches. A watch unit in the public sector might have saved foreign exchange if set up with Russian collaboration.

Payment to Bank Depositors

The Finance Minister, Mr. Morarji Desai, last week introduced in Parliament a bill to amend the Banking Companies Act. It is explained in the statement of objects and reasons: "The procedure now prescribed under the Banking Companies Act, 1949, read with Companies Act, 1956, for the liquidation of banking companies is somewhat elaborate, and in the absence of any provisions in the law indicating the time-schedule according to which certain payments may be made to the depositors, a great deal of hardship is caused to such depositors, who have to wait for considerably long periods for realising the sums due to them. In order to facilitate the expeditious payment of certain minimum amounts in such cases, it is proposed that the procedure relating to the liquidation of banking companies should be suitably modified. Section 43A of the Banking Companies Act now provides for the payment of a sum of Rs. 100 in the case of each savings bank depositor as a preferential claim from out of the assets which are available for distribution among the creditors of a banking company generally. In view of the rise in prices since the relevant provision was first incorporated in the Act, it is considered desirable that this minimum payment should be increased to Rs. 250. It is also proposed that after this payment has been made, the depositors other than those with savings bank accounts should be paid an amount equal to 50 percent of their deposits or Rs. 250, whichever may be less, as a further preferential payment." The opportunity provided by these amendments has also been used for simplifying the provisions of the law relating to the grant of moratorium to banking companies which may be experiencing difficulties, and to facilitate the formulation and implementation of schemes of reconstruction or amalgamation concerning such companies.

LARGE FLOW OF FOREIGN FUNDS TO U.K. CONTINUES

GROWTH OF INDUSTRIAL PRODUCTION SLOWS DOWN

(FROM OUR LONDON CORRESPONDENT)

THE heavy influx of foreign funds to the London exchange market continues. It is understood to be the intention of the U.K. Government to lump together the next four monthly repayments to the International Monetary Fund. In spite of the £20 million which this will involve, it is still anticipated that the gold reserve figures will prove most satisfactory. Later, when the gold reserve position might be less comfortable, the strain imposed by the Fund repayments would be correspondingly eased. This is, of course, pure window-dressing, but if it happens to suit the U.K. Treasury's book and will undoubtedly be welcomed in the United States, it seems to be a sound procedure. There is no doubt that the psychological factor plays a big part even in the economic sphere. With further indications that the credit squeeze is beginning to make itself felt more widely, the Government is wisely arming itself with greater scope for manœuvre in the future. At the same time, the U.K. Government has taken a small step towards counteracting the contention of industrialists that it has done nothing to foster exports directly by its decision to grant a £2-million loan to the Chilean Government. This is prompted mainly by humanitarian considerations, but it will not go unnoticed that the loan will be used for U.K. goods and services.

Brake on Production Increase

Industrial production has not been expanding since March, according to revised figures just issued by the Central Statistical Office. The monthly index number since April has been revised downwards as a result of further information. The U.K. Treasury, in a comment on these revisions, states that the increase in industrial production has "very much slowed down in recent months." The early estimate for July is put at 120-121 after allowing for seasonal factors. On the same basis, the figures for March to June now average just over 120 and those for January and February averaged 119. The July figure was still 8 percent up on a year earlier. This means that the peak of the industrial recovery was reached in March, since when there has been virtually no further expansion.

A similar trend is indicated by the latest engineering statistics published by the U.K. Board of Trade. In May and June, production in the engineering and electrical goods industries was 8 percent up on the same period of 1959; but in the first four months of the year, the output had been 13 percent more than a year earlier. The U.K. Board of Trade observes that the figures show "a marked slackening in the rate of growth." The main reason is, of course, the drop in demand for durable consumer goods which occurred in the first quarter and became more marked in the second. In these industries, there is certainly no sign of any actual decline. New orders continued to exceed deliveries in May and June, but they were not quite as heavy as in the first four months of the year.

This is one of the three items of evidence suggesting that the boom is being brought under control. The first is the drop in bank advances announced recently, and referred to in more detail below, and the second the moderate rise in unemployment. Neither of these is very convincing, perhaps, but they are given additional importance by the fact that they are now supported by the downward revision of production figures.

Bank Advances Drop

Bank advances dropped by nearly £45 million in the four weeks ended 17th August, according to the combined monthly statement of the 11 clearing banks. It is the first reduction for two years and follows a steady rise in bank lending by almost £900 million since the autumn of 1958 when the credit squeeze was lifted. The banks themselves are not quite sure whether the August drop should be taken as the beginning of a fall in credits. In a comment on the figures they say that the drop "does no more than reflect normal fluctuations which inevitably occur in lending from month to month."

Just over £5 million of the reduction was due to repayments by the nationalised industries. In spite of the caution of the official banking comment, the City regards the figures as clear evidence that the credit squeeze is now working, and informed opinion would be much surprised if the rise were resumed. The banks have, of course, tried to restrict their lending for some months past, but it takes time to make such a new policy stick. Many overdraft agreements lay down upper limits which are only gradually taken up, and during that period total outstanding credit inevitably goes on rising.

Terms of Trade Steady

Any ideas that July's widening of the visible trade gap might have been accentuated by a deterioration in Britain's terms of trade are dispelled by the official figures of import and export prices for July. These show that the import price index (1954 equals 100) was unchanged at 98, and the index for export prices was also steady at 111. In consequence, the terms of trade, reflecting the ratio of import to export prices, showed no change at the low level of 88 ruling in the preceding month. On the import side, there was a slight fall in the basic materials group, but this was counterbalanced by a rise in the prices of imported manufactured goods. Among the export categories, higher prices were recorded for metals and for textiles but these were counterbalanced by lower export quotations in the engineering field.

More Sterling Debt

The latest figures from the U.K. Treasury (published in the August *Economic Trends*) show a rise in the second quarter of £96 million to £4,275 million in overseas sterling holdings. This compares with a drop of £32 million in the March quarter, but in the comparable quarter last year the rise was £213 million. The total is now nearer the post-war peak of £4,495 million reached in the June quarter of 1951. The upward trend may be read as demonstrating growing confidence in sterling (part of the rise is accounted for by shifts of foreign capital to London) or as delaying the ultimate solution of the problem worrying Britain since the war, that is, too many liabilities and too few assets.

Sterling balances of the rest of the sterling area have risen by £5 million: colonial balances dropped by £21 million to £874 million, while sterling holdings of other sterling area countries rose by £26 million to £1,800 million. The run down in the colonies' holdings is probably associated with their increased imports from outside the sterling area as their own export earnings have risen. Nevertheless, the net movement of £5 million is considerably smaller than the year before. Sterling holdings of the non-sterling countries went up appreciably from £822 million to £940 million. The holdings of both American and European countries have risen sharply and much of the explanation can be found in the heavy shifts of foreign capital which have been and are such a feature of the international capital market this year.

School-leavers Swell Unemployment

Figures issued by the U.K. Ministry of Labour show that unemployment increased last month for the first time since January. The rise is largely accounted for by school-leavers. The total of registered unemployed on 15th August was 321,288—a net rise of 29,337. On 11th July, it was 291,951 and, in August 1959, 426,932. Expressed as a percentage of the estimated number of employees, unemployment was 1.4, against 1.3, in July and 2 percent a year ago. Between July and August, there was a rise of 26,690 in the number of unemployed school-leavers. Most of these registered for work shortly before the count was taken and may have found employment since. Apart from school-leavers, but including some boys and girls under 18, the number of wholly unemployed increased by 4,931 which is below the normal seasonal increase of about 6,500. The number temporarily out of work fell by 2,284 to 7,960. In the five weeks before 10th August, employment exchanges filled 194,759 vacancies. The number notified to exchanges but remaining unfilled on that date was 355,645, which was 24,130 fewer than in July. In August last year, there were 263,393 unfilled vacancies.

Progress of Wool Industry

Britain's wool textile industry, according to a report which discusses its working for the first six months of 1960 just made available in Bradford, continues its record of achievement. In some sectors, production did not reach the levels of the first half of 1959, but that was a period of peak activity. Following the trade recession of 1958, there was a rebuilding of the industry's stocks of semi and fully manufactured products last year, and this was continued in the early months of 1960. This movement now appears to have terminated and in the last three or four months there has naturally been a levelling out of the industry's machinery activity to the extent of about 4 percent. At the end of June, the overall volume of wool textile shipments was 9 percent higher than last year, and improved prices combined with larger quantities led to a 15-percent increase in export earnings during the first six months of the year. The comparable figure for all exporting industries in the United Kingdom was less than 12 percent. The total amount of foreign exchange earned by wool textile exports during the period was about £70 million, of which a quarter was in dollars.

A noticeable feature of the figures for the first half of 1960 was the large quantity of man-made fibres consumed in the worsted sector. The weight used was more than 14 million lbs, although this was only 11 percent of the total use of the fibre. In the European Common Market countries, wool textile exports held their ground and were indeed nearly £2 million higher than last year at the end of June. It is forecast that the total volume of British wool textile exports in 1960 might well be somewhat better than last year which, with the higher prices prevailing, would lead to a further increase in the industry's export earnings.

Steady Demand for Oil

Oil consumption in Britain, which reached the record figure of 36.5 million tons in 1959, again increased substantially in the first six months of 1960. Total deliveries from January to June were 21.2 million tons, 18.7 percent more than in the first half of 1959. This was a slightly larger proportionate rise than in the whole of 1959, when consumption was 17½ percent higher than in 1958. As in previous years, much of the new increase was due to enlarged consumption of fuel oil, which accounts for more than one-third of total oil sales. The increase for this product was as high as 29 percent, much of it resulting from increased demand by electrical power-stations, which took 35 percent more than in the previous year.

Sales of motor spirit were 8.5 percent higher than in 1959 at 3.6 million tons for the six months. Deliveries to garages for sale to the public were 11.2 percent higher than in 1959, and there was a fall of nearly 1 percent in sales to commercial consumers, who are increasingly preferring diesel-engined vehicles. Premier grades of petrol, which have been growing in popularity, again increased their share of the trade and were in demand both from the motoring public and from commercial buyers. The consumption of Derv transport fuel rose by 14.6 percent, but sales of burning oil for heating were only slightly higher than in 1959 because of the mild winter.

Labour Earnings

Average earnings of men in industry in the last pay week of April were £14 2s 1d, compared with £13 11s 1d last October and £11 15s 4d in April 1956. Since October they have increased by 4 percent and by 20 percent since 1956. The final results of the Ministry of Labour's twice-yearly enquiry into earnings have been published in the Ministry's *Gazette*. In addition to the preliminary figures given last month, a breakdown by industry is provided. It shows that earnings (after overtime, before tax) were the highest in the motor-car industry (£17 10s 3d) and the lowest in public administration (£10 15s 6d). In general, earnings in the publicly-owned industries and services appear lower than those in private manufacturing industry, although the hours worked tend to be slightly longer. In the textile industry, men were earning £12 18s 6d a week and women £7 8s 3d. Hours worked were 48 for men and 41 for women, compared with national averages of 48 and 40. In agriculture, earnings averaged £9 19s 7d in the year ending in March. Of all regular agricultural workers, 59 percent were earning below £10 a week.

Share-owning Spreads

More than half the equity capital of quoted companies is held by individuals and over 10 percent by insurance companies and pension funds. These facts are revealed in a study of share ownership published in the summer issue of the *Stock Exchange Journal*. There are now probably about 2 million shareholders in Britain, each with a stake in several different companies. There is a high proportion of women shareholders in some, if not all companies.

Brevities

Mr. H. F. Bateman has resigned from the boards of Assam Frontier Tea and Budla Beta Tea Companies.

The directors of Amalgamated Tea Estates, Anglo-American Direct Tea Trading, Consolidated Tea and Lands, and Kanan Devan Hills Produce have sent circulars to shareholders to ascertain their views on the elimination of interim dividend payments.

A £130,000 order for carrier transmission equipment has been given to Associated Electrical Industries by Murphy Radio. The equipment will from part of an extensive radio network for the 720-mile oil pipeline project in north India and will be used to keep a constant check on the flow of oil.

Barclays Bank D.C.O. has produced three booklets containing economic surveys of Ghana, Libya and Uganda. The new studies, which are intended primarily for the use of business men visiting or conducting trade with these countries, contain up-to-date accounts of the production and trading position and of exchange control and taxation arrangements. Copies of the booklets may be obtained from Barclays Bank D.C.O. at 54, Lombard Street, London, E.C.3, or through branches of the bank.

Jute

MARKETS RISE DUE TO FIRMNESS OF UPCOUNTRY FIBRE PRICES

DELAY IN ISSUING CUTTINGS LICENCES CRITICISED

EXCEPTIONALLY firm conditions have persisted in the upcountry raw jute markets during the past week. Prices have risen so much that any further increase would be highly damaging to the long-term interests of the jute and jute goods trade. Still, buyers have been showing renewed interest at the higher rates. Fibre arrivals in Calcutta have been slower than in previous years, and all along it has been reported that upcountry markets have been very firm, but no one has paid much attention to these circumstances. Much is now being made of the fact that the mills have received considerably less jute than by this time last year, but it must be borne in mind that their purchases have also been much smaller. Many of them have been depending on the stocks built up earlier, but the stocks have now decreased to levels where they have ceased to be able to check the rise in prices. It is hardly to be wondered, then, that so many "guaranteed shipment" contracts have gone unfulfilled. Although the mills have obtained their jute eventually at the original rate through market difference bills, that has not got them the fibre at the time when it was probably needed most.

Effects of Floods

The floods in many jute-growing areas have undoubtedly made the market firmer, but most reports say that the effect has been grossly exaggerated. Only in Orissa is the flood position serious and the extent of the damage to the crop still unknown. The percentage of jute derived from this State, however, is small. The increased rainfall in all other areas has probably been beneficial in that it has relieved the shortage of steeping water. Although raw jute prices have advanced, many are wondering how long upcountry holders can hang on to their jute. The Puja festival is in the offing, when cash will be required; in that case, the high prices prevailing now may encourage upcountry interests to release more supplies.

From all this, it might appear that the mofussil markets are dominating the trend of jute in Calcutta. But the domination would not have been so great without the speculative activity in the jute futures market. Upcountry advices indicate that the bullishness there is encouraged to a very large extent by the fatka prices telegraphed and telephoned to the mofussil by Calcutta merchants. The local futures market is thus not helping to check the violent fluctuations which are so detrimental to the trade's interests. The activities of bull speculators are turning jute into what was once described by a well-known legislator of bygone years as "the principal sport of the gambler, with its disastrous effect on growers and the legitimate trader".

Uncertain Outlook

The outlook for the markets has been extremely uncertain. Sellers are reluctant to offer discounts; frequently, there have been no sellers at even Re. 1 or Rs. 2 above the officially quoted rates. The price advances in cuttings have been especially rapid. The delay in issuing licences at the office of Joint Chief Controller of Imports has led to a great deal of dissatisfaction. Under the existing rules, mills have to furnish sellers with the licence number and the necessary letter of authority to import within a certain period, limited by the date of the contract and its expiry period. As a result of the late issue of licences, many mills have been put in an embarrassing position. It is understood that in some cases, licences for the current import period were only recently issued, which gives very little time for all the formalities to be completed. The delay in issuing allocations and licences against the latest quota of 100,000 bales of cuttings for import from Pakistan has, to a great extent, led to the price increases. During the past week, N.C.'s have jumped up by Rs. 20 a bale. The cuttings position is very tight, and one prominent seller has now indicated that he has nothing to sell, but is in fact prepared to buy for all deliveries up to the end of the year. Prices in Pakistan, which are the main controlling factor, have advanced recently because of the increased demand, and are now about Rs. 105 or Rs. 108 a bale, which means about Rs. 130 a bale landed in Calcutta.

Manufactured Goods: Prices fluctuated violently in the jute goods market during the past week. Although a certain amount of support came from overseas, the main reason for the rise and fall was speculative activity. Heavy goods covered the widest range. From an opening last Thursday of Rs. 144.25—which was 75nP less than on the previous day—B Twills recorded a steady rise, and by Saturday were Rs. 1.50 up at Rs. 145.75. Hessians also came in for support, and 40in. 10oz., after a quiet opening at Rs. 48.60, suddenly advanced on the report that the Argentine Government had sanctioned import licences for hessians. By Saturday, 10oz. rates were Rs. 1.10 higher, the largest price variation in this section for some time. Stronger advices from the raw jute section helped lift rates, and the market closed over the week-end on a very firm note. Speculative activity and the lack of overseas business induced a quieter undertone after the opening on Monday, so there was a drop of-Rs. 1.75 in B Twills and of 30nP in hessians. Although the fibre market was easier at this stage, there was little business, and with activity restricted in the futures market due to an early closure on account of the lunar eclipse a dull period developed. Lack of interest in both jute and gunnies, and speculative profit-taking, forced prices down rapidly on Tuesday. B Twills dropped to Rs. 141.50, which was about Rs. 4.50 below the week's highest and Rs. 2.75 below the week's opening quotations. In sympathy with raw jute, further losses were recorded before the close and a quieter undertone developed.

Opening quotations on Wednesday morning were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	36.30	36.10	35.90	35.25
40in. 8oz.	39.50	39.00	38.50	37.85
40in. 10oz.	48.55	48.15	47.85	47.15
B Twills	140.75	136.60	131.10	127.75
Heavy Cees (Plain)	138.50	135.25	131.00	127.50
A Twills	170.50	164.50	160.50	155.00
Liverpools	158.00	153.50	149.00	144.50
Cornsacks	143.75	138.50	134.00	129.50

Raw Jute: Quiet conditions prevailed at the opening last Thursday, and interest was very limited. Prices were unchanged, and remained at Rs. 40 a maund for Assam Bottoms for September-October shipment. There were very few sellers at this rate, and their ideas remained firm. Reports of heavy rain in some agencies and minor flooding, combined with renewed interest from the mills in quick shipment jute, caused prices to advance rapidly over the next two days, until Assam Bottoms reached Rs. 42. Even at this price, there were very few sellers and only small business was reported. In anticipation of cuttings licences being issued in the near future, there was a fair amount of activity in this commodity, and rates improved by about Rs. 10 a bale. After the week-end, the market became easier as reports of bigger imports were received from upcounrty agencies. Sellers were also relieved when it was learnt that many of the guaranteed delivery contracts for the end of August had been granted limited extensions.

Wagon arrivals in Cossipore during the past week were very poor for the time of year and only 400 wagons were reported. This was 100 less than in the previous week and 120 less than in the corresponding week of last year. All the figures were well below the normal weekly average for September. Mill agents and representatives were very active in Cossipore and some good prices were paid.

The market was quiet on Wednesday morning and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	111.25	41.50	Sept.-Oct.
Northern	108.50	40.50	,,
Purnea Desal	105.75	39.50	,,
Daissee Selected	111.25	41.50	Oct.-Nov.
Assam Tossa	111.25	41.50	,,
Mesta:			
Assam-Northern	99.25	37.00	,,
Daissee	97.75	36.50	,,
Desal	99.25	37.00	,,
Jungli	96.50	36.00	,,
Pakistani N. C.	125 a bale		

THE JUTE MARKETS

Prices in the futures market fluctuated rapidly because of speculative activity. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period from 31st August to 6th September, were as follows:

	Hessians 40in. 10oz. Nov. 1960		Sacking B Twills Nov. 1960	Raw Jute Assam Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	50.91	46.56	126.15	97.52	36.40
Highest	52.27	47.80	128.00	101.27	37.80
Lowest	50.78	46.44	125.70	96.07	35.86
Closing	51.34	46.96	126.10	98.70	36.80

THE FOREIGN JUTE MARKETS

FALL IN FIBRE PRICES EXPECTED

(FROM OUR DUNDEE CORRESPONDENT)

A GOOD deal of uncertainty prevails in the Dundee jute market, and buyers are rather puzzled about the trend of prices. With fibre prices remaining about unchanged from day to day with no sign of weakness, and Calcutta hessians becoming steadily dearer, prices appear to have as much chance of going dearer as they have of tending lower. Fibre imports from the upcountry markets in Pakistan have been increasing lately, after a spell of small arrivals. Dealers think that when the weight of new crop fibre is felt, which it is almost bound to be sooner or later, prices will slightly decline. Meanwhile, market circles feel that raw jute is too dear, so sellers must make reductions. Prices rose in the early part of the current season because of a potential scarcity—due to drought during the sowing time. But now that the Pakistani authorities are assuring the trade that there are ample fibre supplies to cover all requirements during this season, consumers should be excused for waiting for cheaper prices

Occasionally, there are sellers who discount the E.P.C. prices by 20s or so, and Mill Firsts are offered at £123 a ton, Mill Lightnings at £117, Mill Hearts at £113 and Grade Hearts from £106 for September-October shipment, while Grade Tossa-2/3 is quoted at £123 10s and fours at £117 10s, with Continental Tossa-2/3 from £113, October-November, all c.i.f., U.K.-Continent.

The Calcutta goods market has firmed up recently, and hessians are dearer at 74s 9d for 40in. 10oz. and 56s for 7½oz., September, 74s and 55s 9d October, 72s 3d and 55s November-December and 71s 6d and 53s 9d January-March, with B Twills at 215s 3d, 206s 3d, 195s 6d and 193s 6d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth prices remained unchanged last week. Business was quietly steady, and spinners and manufacturers were moderately busy. No short time or curtailment of production was reported from any of the mills and factories.

THE PAKISTANI JUTE MARKETS

FIBRE STEADIER ON FOREIGN BUYING

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE local loose jute market has followed the steady trend overseas over the past week. In Narryanganj, prices are steadier, as arrivals have been small mainly due to the fear of selling wet jute. Upcountry, however, where Government control is handicapped by lack of transport and staff, the market has improved considerably, and moisture is once again appearing in the jute. The arrivals in the upcountry stations, it is reported, are not as big as may be expected; perhaps the sellers are holding back for better prices.

The steadiness in the overseas markets, reported in the previous week, which coincided with a temporary drop in local prices, induced some sellers to come forward. Foreign buyers were, therefore, able to cover a fair quantity at E.P.C. prices, but with the firming up of the local market, sellers have withdrawn. Consequently, foreign buyers are not able to get jute on their terms as before.

As anticipated, the Indian authorities have issued import licences for cuttings; it is rumoured that the Indian crop will not amount to 6.2 million bales but to 5.6 million bales. This, coupled with reports from jute inspectors in Pakistan, increases the fear that the total production of India and Pakistan will be considerably less than the world demand. It has been suggested that the position will not be so difficult as feared, because overseas buyers will only take about 3.7 million bales instead of 4 million bales, and Indian mills in June next year will work their stocks down. That is looking rather far ahead, but even then, the total production cannot be expected to do more than barely meet the needs of the world. The following is an estimate of the global requirements during the current year:

	(Million bales)
Pakistani mills ...	... 1.8
Indian mills ...	... 6.6
Overseas ...	... 3.7
Total	... 12.1

As against this, supplies may be estimated as follows:

Pakistani crop ...	... 6.2
Indian crop ...	... 5.6
Total	... 11.8

The difference of 300,000 bales may be made up from the stocks with the Indian mills, which are supposed to be in the region of 1.2 million bales, or about seven weeks' consumption.

In Narayanganj, E.P.C. prices for the higher grades have been reduced. This does not affect the market very much, since so little business is done in the crack market. As a result of reports that India is issuing import licences, Pakistani cuttings have risen from Rs. 80 a bale to Rs. 95 a bale, and purely on this the E.P.C. prices for cuttings have been raised by £3 or £4 a bale for exports. Since overseas buyers have not followed the local rise in cuttings, this will be rather hard for those consumer countries other than India which have from time to time bought cuttings.

The Pakistani Jute Association at a recent meeting decided to reduce the local brokerage from 1 percent to a round figure of Re. 1 a bale on pucca bales and 8 annas a bale on cuttings. As a protest against this reduction, which it was alleged was made without consulting them, the Narayanganj brokers have gone on strike. It is reported, however, that business is still being done.

Engineering and Transport

PRODUCING MATERIALS FOR SHIPBUILDING IN INDIA

EXHIBITION ORGANISED FOR LOCAL MANUFACTURERS

THE growth and maintenance of a strong merchant navy is directly linked with the existence of a virile and self-sufficient shipbuilding industry. As many as 20,000 items of materials are used in the construction of a ship since, apart from the mechanical devices employed for its propulsion, a modern ship is in effect a mobile township and requires to be provided with practically every amenity needed for day-to-day existence and house-keeping.

At present, except for a few items of stores like electrodes, rivets, paints, gases, etcetera, the bulk of the materials and equipment which go into the construction of a ship is imported from abroad. Apart from a substantial portion of the steel which incidentally is the principal "raw material" in shipbuilding, the imported element includes the main propelling machinery, engine-room auxiliaries like generators, steering gear, deck auxiliaries like derricks, winches, windlass, ventilation, piping and air-conditioning equipment, the entire electrical installations and the whole host of navigational instruments, etcetera. Until recently a substantial part of the timber was also imported. Materials alone account for about 55 percent of the cost of a ship and the imported element (which is about 80 percent of the total materials) represents about 45 percent of the cost.

High Cost

While the cost of shipbuilding in India is higher than in many countries, one of the important factors which contribute to the high cost is the present dependence on imports for the bulk of the materials and the consequent incidence of freight, insurance and handling expenses. Both from the point of view of reducing costs and in order to be self-sufficient in these supplies, particularly in a strategic industry like shipbuilding, it is imperative that indigenous capacity for the materials and equipment used in shipbuilding should be developed in the country as rapidly as possible. The single largest item of import at present is the propelling machinery. This cannot but be imported until the new marine engine factory proposed in the public sector is established and commissioned. As for steel, the Rourkela steel plant which is designed to produce shipbuilding plates is expected to meet most of the steel requirements within a short time. The imported timber used in shipbuilding till recently has now been practically replaced by indigenous substitutes. A concentrated drive has recently been undertaken by Hindustan Shipyard to explore the possibilities of using indigenous substitutes practically for every item of material which is now being imported from abroad.

The real difficulty in this field is the absence of ancillary industries, catering specifically to the needs of shipbuilding. This, of course, is understandable as the growth of ancillary industries depends on a sufficiency of offtake for the products which is not assured at present. Thus the problem must be tackled for some time to come only with the aid of industries which are already existing. The engineering industries, which are engaged in the manufacture of allied products, should try to cater to the needs of shipbuilding by a little diversification of their production programme. It is necessary to ensure, however, that the materials supplied for shipbuilding purposes conform to certain standards of quality and specifications laid down by the Lloyd's Register of Shipping and the regulations of the Mercantile Marine Department. Some progress has already been made in this direction and orders have already been placed with indigenous manufacturers for certain materials such as parts of rudder, stern frame, etcetera, engine-room crane trollies, sidelights, marine cables, sanitary fittings and equipment, metallic bunks, etcetera. The general outlook is quite encouraging.

Help Offer by Shipyard

With a view to focussing the attention of Indian manufacturers on such items of imported materials as could be produced in India, the Hindustan Shipyard has organised in the recent past two exhibitions at which such materials were displayed. On the occasion of the launching of the latest vessel in Hindustan Shipyard, a similar exhibition on a much larger scale has been planned and organised. The exhibition was opened on 5th September, by Mr. G. L. Mehta, chairman of Hindustan Shipyard. Hindustan Shipyard is willing to help prospective manufacturers with the supply of specifications of materials together with other related information and also afford such other assistance as it may be in a position to give. It may be worth while for intending manufacturers to approach the Development Wing of the Ministry of Commerce and Industry and the Small Scale Industries Corporations in the various States with a view to taking advantage of the financial and other aids available under the special schemes administered by these organisations.

BUREAU OF PETROLEUM INFORMATION

The Bureau of Petroleum Information is an unofficial and non-profit-making organisation which has recently been set up to encourage interest in the petroleum industry. Its premises are on the ground floor of the National Insurance Building, Parliament Street, New Delhi. Specific enquiries are dealt with by specialist staff, and callers are free to study books, works of reference, journals, explanatory charts and other published material on the oil industry, both in India and elsewhere in the world. The Bureau is equipped to provide information and elucidation about oil industry operations. It maintains a comprehensive clipping service and intends to hold film shows relating to the oil industry. It is also issuing a digest of articles on petroleum. The intention is to provide only factual information about oil and the international oil industry, not to express opinions about the operations and activities of particular operators.

STANVAC PROPOSAL TO EXPLORE FOR OIL IN RAJASTHAN

The Standard-Vacuum Oil Company has submitted proposals to the Indian Government for exploring for oil in the Jaisalmer area of Rajasthan. This follows the official statement in the Lok Sabha recently that the Government of India is at present studying the proposals submitted by a foreign oil company for exploration in the Rajasthan area. Asked to comment on this statement, a Standard-Vacuum spokesman said that the new proposals had been submitted before the formalities were completed for the termination of the oil search in West Bengal under the Indo-Stanvac project. The proposals were submitted in response to the Government of India's appeal to foreign oil concerns to engage in the search for oil in India. Recalling that the abandonment of the search for oil in West Bengal had meant a loss to the Company of crores of rupees, the spokesman went on to say that it in no way affected Stanvac's intention to look for oil elsewhere in India.

Calcutta Markets

QUALITY GRADES PREFERRED AT TEA EXPORT SALE

RISING TREND IN DUSTS

AT Sale No. 11, held on 5th and 7th September, the 57,885 chests on offer at the Export auction met with a good general demand with buyers once again following quality closely. Bright liquoring Assam B.O.P.s and O.Fgs. continued to be in strong demand and the former were firm while the latter increased in price. The more ordinary Assam B.O.P.s, however, were up to 50nP lower. Plain brokens were fully firm while Fannings were irregular with some lines being dearer. Stylish B.P.s were keenly competed for and were dearer. Legg-cut teas met with improved support and were firm to dearer. The very best C.T.C. teas were very irregular, those with quality selling well, but the remainder were from 50nP to Re. 1 a kilo easier. Medium C.T.C.s were a weak feature with many lines being withdrawn, but the poorest teas in this category were well supported and were sometimes dearer. Stylish whole leaf grades were from 20nP to 50nP lower, while the more ordinary kinds were 10nP to 15nP easier. Tippy teas were irregular and generally easier. Darjeelings met with a fair enquiry at lower rates, the expensive kinds registering the greatest decline.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.20 to 5.50	2.40 to 2.80
Plain B.P.	4.30 to 4.45	2.80 to 3.20
Plain Fannings	4.35 to 4.75	1.90 to 1.94
Medium B.P.	4.90 to 5.20	1.82 to 1.86
Medium Fannings	5.20 to 5.50	1.98 to 2.08
Best Assam C.T.C. B.P.	9.00 to 9.50	1.98 to 2.08
Best Assam C.T.C. Fgs.	9.00 to 10.00	2.10 to 2.24

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 20,901 chests of Dusts on offer met with a strong general demand. Medium C.T.C. teas met with a strong enquiry, and advanced in price by 20nP to 30nP. The brighter liquoring lines were sometimes dearer. Best C.T.C. Dusts also sold at dearer rates following quality. Legg-cut Dooars Dusts met with keen competition, and sold at considerably enhanced rates. Orthodox teas with good liquors sold well but the remainder in this category were 20nP to 30nP easier. Darjeeling teas once again came to an easier market.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.60 to 4.75	1.86 to 1.94
Medium Assam Dust	4.70 to 5.20	1.84 to 1.90
Medium Assam C.T.C. Dust	6.00 to 6.30	2.00 to 2.10
Best Assam C.T.C. Dust	6.40 to 6.90	2.55 to 2.80

(Quotations are inclusive of excise duty.)

Leaf offerings amounted to 184 packages. There was a good demand at firm to dearer rates.

SHARP RISE IN GRAIN FREIGHT RATES

A FURTHER sharp advance in the rates for grain from Pacific Coast to India was conceded last week in the freight markets with five fixtures at 56s 3d for October loading, which represents a gain of 3s 9d a ton over the last rate paid. Fertilisers from Italy to Cochin paid 40s f.i.o.s. and to Bombay 38s f.i.o.s. A good number of vessels were taken on time charter for trips, or two to three months' trading, including the *Corona* 9,050 d.w. spot Calcutta at a lump-sum of $(U.S.) 25,000 for the trip across to U. S. Gulf The *Valentina Frias* was fixed for ore from Calcutta completing Visakhapatnam to U. S. N. H. at $(U.S.) 7.50 Calcutta, $(U.S.) 8 Visakhapatnam on liner terms with $(U.S.) 1.30 discharge.

HIDES AND SKINS STEADY

The market was steady. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 30th August, 1960 and 5th September, 1960)

Cowhides: Wet salted (Ord.) 75,000 pcs. on the basis of Rs. 12 to Rs. 14.50; Wet salted 12,300 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs 28; Wet salted (Ord.) 25,000 pcs. on the basis of 58nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 42,600 pcs. on the basis of Rs. 350 to Rs. 370, Rs. 390 to Rs. 420 and Rs. 450 to Rs. 480; Wet salted (hekilled) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 15,300 pcs. on the basis of Rs. 340 to Rs. 335; Assam-Kissenganj 5,000 pcs. on the basis of Rs. 360 to Rs. 380; Patna-Pakur (Ord.) 35,700 pcs. on the basis of Rs. 300 to Rs. 340; Patna-Muzafferpore 9,500 pcs. on the basis of Rs. 350 to Rs. 365; Purneah (heavy) 1,500 pcs. on the basis of Rs. 500.

Bazaar Stocks

(5th September, 1960)

Cowhides: Wet salted 160,500 pcs.

Goatskins: Wet salted (Patna, Daissee. Kustia, Killed) 17,200 pcs; Assam-Dinajpur 114,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 200,500 pcs.

MOVE FOR NEW PEPPER MARKET IN BOMBAY RESENTED

KERALA TRADERS URGE CENTRE TO REJECT PROPOSAL

(FROM OUR SOUTH INDIAN CORRESPONDENT)

KERALA traders are worried over reports that a forward market in pepper might soon be established in Bombay. They think that with the opening of a fresh market in Bombay, their monopoly in the trade will be lost since the business will gradually concentrate in the hands of Bombay dealers. Members in Parliament from Kerala have strongly criticised the proposal, and newspapers there have launched a tirade against it. Kerala dealers have requested the Centre to reject Bombay's demand for a new pepper forward market. Political parties in the State, especially the Communist Party, have also protested against the move to end the monopoly of Kerala traders. The Communist Party has gone to the extent of interpreting the move as another instance of "north Indian efforts to ruin Kerala".

But there is no reason why traders should be panicky. It is true that Kerala produces almost 90 percent of India's pepper, and the bulk of it goes to foreign countries through the Cochin port. The argument that a forward market should be located in the area of production is not in conformity with modern thinking on marketing techniques. Bombay is an important distribution centre for pepper, and the export houses there handle about 40 percent of India's shipments of the commodity. Besides, with the emergence of Russia and other east European countries as important buyers, export deals nowadays are made in big lots. Bombay firms which get most of these orders have often complained that they have been unable to make effective use of the Cochin market through their branch offices.

Limited Capacity

Bombay dealers add that the Cochin market has only a limited capacity for absorbing bulk orders, so there is a need to establish a second market. It is also necessary, they say, for broad-basing the market and for strengthening its risk-bearing capacity, which was stressed by the Forward Markets Commission. The Central Government is apparently inclined to accept this view and establish a second forward market for pepper in Bombay, according to the Central Minister for Commerce, Mr. Nityanand Kanungo. Kerala's opposition to the proposal is largely due to a fear complex. A second market will reduce price fluctuations which more than once necessitated the suspension of transactions in the Cochin market during the past three years. It might also restore some strength and stability to it by giving operators an opportunity to cover extra risks. They may, therefore, be able to absorb large orders in the future, so an additional market will prove useful in the long run. If it does not, those who are aggrieved can always demand its closure. The Government, meanwhile, intends to open a market in Bombay on an experimental basis for one year from October 1960.

Government Decision on Rubber Price

The Tariff Commission's recommendation to reduce the statutory raw rubber price from the present rate of Rs. 147.50 a 100 lbs to Rs. 146 a 100 lbs (exclusive of sales tax and cess) is unfair, according to south Indian rubber growers. The Commission, they say, was "completely prejudiced" against them; otherwise, they would not have recommended the reduction. Besides, tax has been increased by many times, and prices of stores and supplies, which the rubber planting industry needs, have gone up since the Commission fixed the last statutory price. There has also been a rise in the wages of labour. The latter alone justifies an enhancement in price, planters say. They are grateful to the Government for not making the reduction recommended by the Commission, although it was only nominal. But this does not mean that they are happy, since there is a good case for enhancing the price. They point out that the Government's decision to maintain the price is a short-sighted one, especially when a scheme has been prepared to raise production to 155,000 tons by 1975, against 25,000 tons at present. The only way to achieve the objective is to provide an incentive price. Planters say that if internal production is allowed to stagnate, the country will require a lot of foreign exchange for importing rubber.

Replanting Subsidy Raised

Growers have welcomed the Government's decision to enhance the replanting subsidy to Rs. 1,000 an acre, against the existing rates which vary from Rs. 250 to Rs. 400 an acre. The increase in the rate will admittedly give a stimulus to replanting. The scope for increasing production through replanting is not, however, as wide as through new planting. The Government should, meanwhile, announce its decision on the growers' demand for a new planting loan.

COCHIN TEA SALES

At Dust Sale F, 284,000 kilograms of tea were on offer. There was a strong general demand and prices advanced by 10nP or 20nP for everything.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base year ended March 1953=100) declined by 1.0 percent to 124.0 during the week ended 20th August, 1960, compared with 125.2 for the previous week. The index was lower by 0.9 percent when compared with the corresponding week of the previous month but was higher by 6.0 percent than that of a year ago. The index for Food Articles receded by 1.8 percent to 122.4 due to a fall in the prices of milk (−12%), potatoes in Shillong (−10%), bananas and tea (−3% each), wheat, mung, masur, groundnut oil, black pepper and cardamoms (−2% each) and barley, maize, urad, gingelly oil, mustard oil, and coconut oil (−1% each). The prices of jowar in Coimbatore (+13%) and in Rohtak (+6%), potatoes in Farrukhabad (+9%), onions (+8%), fish (+5%), oranges and cummin (+4% each) and cashewnuts, eggs, coffee, chillies and betelnuts (+1% each), however, moved up. The index for Tobacco fell by 3.9 percent to 103.0 as a result of a decline in the prices of raw tobacco (−5%). The index for the Fuel, Power, Light and Lubricants group stood at 118.1, compared with 118.0 for the earlier week. The prices of raw hides (−5%), raw skins (−4%), cottonseed (−3%), linseed (−2%) and raw jute, raw silk, groundnuts and gingellyseed (−1% each) moved down, while those of tanning materials (+4%) and raw cotton and lac (+1% each) showed advances, and the index for Industrial Raw Materials declined by 0.8 percent to 135.8, against 136.8 (revised) for the earlier week. The index for Intermediate Products worked out to 130.0, compared with 129.9 for the previous week. The prices of linseed oil and coir yarn (+1% each) and zinc (−1%) showed variations during the week. The index for Finished Products advanced by 0.3 percent to 121.1 due to a rise in the prices of cotton cloth (mills), jute manufactures and soap (+1% each), although the prices of silk and rayon manufactures (−1%) moved down.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 20-8-60	13-8-60	22-8-59

*=Estimated R=Revised

WORLD RICE EXPORTS RISE

Exports of rice so far recorded in 1960 have shown a substantial increase over last year. There has been a rise in consignments from Burma, the United States and south Viet-Nam, says the Commonwealth Economic Committee's latest *Rice Bulletin*, just issued in London. On the import side, the report says in its general review of exports and imports that India, Ceylon and Indonesia have each made large purchases, but Japan has reduced her imports. "Thai export prices showed a sharp rise during early August following the reports of substantial purchases; prices in Cambodia also rose in July, but the market in Burma was quiet. Quotations for U.S. rice showed little movement up to the end of July." The report's revised estimate of the paddy output in Ceylon is now placed at 712,000 tons, compared with 738,000 tons a year earlier. The lower outturn was mainly due to a fall of 60,000 acres in the area harvested. Dealing with exports, the report says: "There was a marked falling off in rice exports from Burma in May, reflecting a shortage of supplies. Nevertheless, total shipments during January-May, at 1,103,000 tons, were some 460,000 tons larger than in the corresponding period of 1959. Almost every important market has taken considerably more, especially those countries with which Burma has government-to-government contracts; Indonesia and India have been the largest outlets so far this year, with Ceylon in the third place, while Pakistan and Japan also took increased amounts."

RISE IN BAISAKHI LAC CROP ESTIMATED

According to the final forecasts for the Baisakhi lac crop of 1960, issued by the Indian Lac Cess Committee, total production of lac during 1960 has been estimated at 895,000 maunds, compared with the revised estimates of 800,000 maunds and the preliminary estimates of 820,000 maunds. The final estimates of the crop for last year were 650,000 maunds, and the normal output (based on average production for ten years preceding 1959) was 730,000 maunds. The estimates have been increased since it is reported that due to low prices, arrivals in the markets have been slow, and that substantial stocks have been held back in anticipation of better prices. The increase in output is reported mainly in Bihar, Madhya Pradesh and Uttar Pradesh.

EASTERN RAILWAY

CLAIMS PAMPHLET

A small pamphlet which embodies important rules and procedure for the preferment and disposal of claims on the railways is available for sale in English, Bengali and Hindi versions at 15 nP. per copy. Copies may be purchased at important stations of this Railway as also from the Information Bureau, Fairlie Place, Calcutta.

Books

ECONOMIC SURVEYS

Economic Surveys in Underdeveloped Countries—A Study in Methodology. By P. K. Mukherjee. (Published by Asia Publishing House. Price Rs. 18.50, pages 263.)

Mr. Mukherjee's book is a methodological work, an earlier draft of which was approved by the Oxford University for the award of a D.Phil. degree. It is divided into three parts, namely, "historical and descriptive", "economic concepts and their measurability" and, lastly, "practical aspects of statistical measurement." It is the second part, covering well over one-half of the book, which will be of considerable interest to readers. Economic surveys of India's agricultural sector have been undertaken by various individuals and institutions for a long time, but the author feels that they suffer from one or more of the following six defects (1) divergent definitions of certain concepts, (2) difficulties in the collection of data mentioned but not satisfactorily solved, (3) methods of individual studies are rarely discussed unambiguously, (4) the selection of village or homogeneous tract is often biased, (5) insufficient realisation that the traditional schedule or questionnaire method is not always suitable for India's illiterate agricultural population and, (6) little progress has been achieved in methods of investigation and analysis. Many of these defects are perhaps due to the existing economic situation in rural India, the often insoluble difficulties which any analysis must face because the so-called non-monetised sector is in close relationship with the monetised one, and the force of centuries-old customs and traditions. The author has discussed these issues competently in the second part of the book, although one feels at times that he has not always kept in mind the specific objective of laying down broad rules of procedure for conducting different types of surveys. The third part, namely, "the practical aspects of statistical measurement," should be amplified in a subsequent edition since it is mainly concerned with some purely mechanical issues, such as the tabulation of data.

BUSINESS ORGANISATION

Business Organisation and Management. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Bombay 2. Price Rs. 14, pages 412.)

Fundamentals of Business Organisation and Management. By B. V. Narayanaswami Naidu and H. K. Datta. (Published by M. Seshachalam and Company, 7 Sunkurama Chetty Street, Madras 1. Price Rs. 12.50, pages 788.)

Neither of these publications can be considered erudite nor are they original. They are mainly meant for commerce students preparing for the B.Com. or M.Com. examinations of Indian universities. Business organisation, as the name implies, is mainly concerned with the organisation and management of business concerns. Constant revision is, therefore, necessary to make the contents up-to-date. Efforts have been made in the first book, published by Vora and Company, to keep pace with developments, especially in the sphere of company legislation and labour. Some of the chapters are informative, but not enough attention has been given to the growth of public enterprises in India. The same deficiency is noticeable in the work by Messrs Naidu and Datta, but it is probably more suitable as a text-book, especially for B.Com. students. The chapters on joint-stock companies and their management are well written.

INDUSTRIAL PROGRESS

Industrial Growth in South India. By George B. Baldwin. (Published by the Free Press, Glencoe, Illinois, U.S.A. Price $6, pages 339.)

Mr. Baldwin's book comprises case studies of industrial enterprises in south India, especially those in Mysore. Its central theme is the growth of an under-developed area where the prospects for industrial progress appear to be favourable. One section of the book deals exclusively with private enterprise while another is concerned with private companies which have received official assistance. A separate section is devoted to the growth of public enterprises in south India. The 37 case studies included in the book give a fairly comprehensive picture of industrial progress in the region, while the growth of a few enterprises has been sketched only briefly. The studies point out the problems in accelerating industrial expansion and emphasise the Government's rôle in this context. Their value lies in pointing out the rôle of the entrepreneur since Government assistance will scarcely suffice if a firm does not have the right men in right places. Besides, the case studies are valuable for the wealth of information they contain. The chapter on Indian business men will clear many misconceptions about them among foreign investors. Dr. Baldwin says that the economic policy of the Central Government has been more pragmatic than doctrinaire. Although there is scope for controversy on the subject, the author's incisive vision and grasp enlivens his discussion. Sponsored by the Centre for International Studies at the Massachusetts Institute of Technology, the book is a welcome addition to the literature on economic development.

COMPANY AND PUBLIC NOTICES

RUBY GENERAL INSURANCE COMPANY LIMITED

NOTICE is hereby given that Twentyfourth Ordinary General Meeting of the Company will be held at 8, India Exchange Place, Calcutta, on Friday, the 23rd September, 1960 at 3-30 P.M. for the following purposes :—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ending 31st December, 1959.

(2) To declare dividend.

(3) To elect two Directors in place of Sarvashri R. L. Nopany and R. K. Kanoria, who retire by rotation but being eligible offer themselves for re-election.

(4) To appoint Auditors for the current year and fix their remuneration.

(5) To transact any other business that may be brought before the meeting.

The Share Transfer Books of the Company will remain closed from 10th September, 1960 to 23rd September, 1960, both days inclusive.

By Order of the Board,
B. K. SETALVAD,
General Manager.

"India Exchange"
Calcutta-1
The 29th day of August, 1960.

Note :—1. A member of the Company who is entitled to attend and vote at the Meeting may appoint a proxy to attend and vote instead of himself. The proxy need not be a member of the Company.

2. The dividend if sanctioned will be payable to the shareholders whose names appear in the Company's Register of members on the 9th September, 1960 or to their mandataries on or after 12th October, 1960.

BHAGWATI PRESSING COMPANY LIMITED

Notice to Shareholders.

NOTICE is hereby given that the Annual General Meeting of the shareholders of the company will be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta, on Monday, the 26th September, 1960 at 4-30 P.M. for the following purposes :—

1. To receive and pass the Report of the Directors and Audited Accounts for the year ended 31st December, 1959.
2. To declare dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors.
5. To transact any other business that may be brought before the meeting.

Dividends if declared will be paid to registered shareholders only.

The Share Transfer Books of the Company will be closed from the 16th September, 1960 to 26th September, 1960, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

Calcutta, 2nd September, 1960.

A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE ORISSA MINERALS DEVELOPMENT CO. LTD.

Notice of Interim Dividend.

THE Board of Directors has sanctioned payment of an Interim Dividend on the Ordinary Shares @ 15% in respect of the year ended 30th June, 1960, subject to deduction of Tax. This dividend will be paid on or after 18th October, 1960, to those Shareholders (or their mandatees) whose names appear in the Company's books on the 6th October, 1960, as the registered holders of these shares.

The Share Transfer Register of the Company will be closed from 23rd September, 1960 to 6th October, 1960, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 26th August, 1960.

THE GROB TEA COMPANY LTD.

THE Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a Dividend of 14% for Season 1959 *payable after deduction of Tax.*

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 7th September, 1960.

THE GROB TEA COMPANY LIMITED.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Saturday the 1st day of October 1960, at 11-40 A.M., for the following purposes :—

(1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1959.

(2) To declare a dividend.

(3) To elect Directors in place of the retiring Directors. In this connection. Special Notice is hereby given of the intention to move the following Special Resolution at the meeting, that is to say—

"That Mr. P. Banyard who retires by rotation be and is hereby appointed a Director of the Company."

(4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 19th September, 1960 to 1st October, 1960, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
I. P. GOENKA,
Managing Director,
Managing Agents.

Calcutta, 7th September, 1960.

NOTE :—A Member of the Company entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT.

In the Special Notice given by the Company to Shareholders, under item 3 of the annexed notice for Annual General Meeting, intimation has *been given of intention to move a Special* Resolution for the reappointment of Mr. P. Banyard who will retire in rotation at the meeting. Special Notice of such intention has also been given to the Company. Since Mr. Banyard is also a Director of Messrs. Carritt Moran & Co. Private Ltd., who are the brokers of the Company for the sale of their tea, it is considered desirable that he should be appointed to the Board by Special Resolution.

(The Company Notices and Dividends Table appear on page 352)

THE ALEXANDRA JUTE MILLS LIMITED

Annual General Meeting
NOTICE

NOTICE is hereby given that the Share Transfer Books of the Company will be closed from 13th September, 1960 to 26th September, 1960, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta 1,
1st September, 1960.

UNION JUTE COMPANY LIMITED
CORRIGENDUM

IN our notice dated 29th August, 1960, which appeared in "Capital" on page 322, there was a mistake in connection with the declaration of Dividend on Ordinary Shares. Our previous Notice should, therefore, be read as :

"On Ordinary Shares at Rs. 18 per Share making a total of Rs. 25 per annum."

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 29th August, 1960.

LINSEED FIRM

The market was firm during the past week. Small business was reported. There was keen demand from crushers for both near nad forward position, although turnover was disappointing in the absence of sellers. The oil market was steady. Stocks were limited, and small lots changed hands at the prevailing rates. Sellers were reserved for forward deliveries. The oilcake market was steady. There was local demand, but shippers were not interested at the present high prices. The latest quotations are as follows: Ready Rs. 25.25 a maund and September futures Rs. 25.25 a maund.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PREFERENCE DIVIDENDS: THE PUZZLE WITHOUT CLUES

THE most that can be said for the Preference Shares (Regulation of Dividends) Bill, which was introduced in the Lok Sabha a few days ago, is that it goes some way towards ending the confusion over the position of preference shareholders under the new system of company taxation. That a definitive ruling on so important a matter should have taken a year and a half to appear, and that it should have been preceded by so much floundering, are a result of the tendency to introduce complex fiscal experiments without clearly appreciating their implications. It is ironical that the changes which have enmeshed accountants, lawyers and Government officials in a maze of technicalities were the outcome of attempts to simplify the tax structure. With the passing of the Bill, companies and preference shareholders will know where they stand in relation to each other. But whether its provisions are fair to holders of preference shares is quite another matter, on which controversy will continue.

The Bill provides that where the stipulated preference dividend is specified as free of income tax (or was being paid before 1st April, 1960, without deduction on account of the income tax payable thereon by the company), the shares will carry a preferential right to be paid, free of income tax, such amount as would exceed the stipulated dividend by 25 percent thereof. This will apply also in the case of preference shares issued and subscribed for after 31st March, 1959, where the stipulated dividend is free of income tax, and the company, besides paying the stipulated dividend to the holder of such shares, pays to the Government on his behalf any sum on account of income tax payable thereon. Where the stipulated preference dividend is specified as subject to income tax and a deduction is made from it on account of the income tax payable by the company (or where payment was made subject to such deduction before 1st April, 1960, even though the stipulated dividend was not specified as taxable), the shares will carry a preferential right to be paid such amount, subject to the deduction, as would exceed the stipulated dividend by 7 percent thereof.

For sake of simplicity, the assumption in all the examples which follow is that the preference shares, tax-free or taxable, are of Rs. 100 each, and that the dividend stipulated on them is 10 percent —or Rs. 10. Thus, a 10 percent preference dividend, either expressly specified as tax-free or one which, before 1st April, 1960, was paid without deduction of company income tax (that is, virtually all preference dividends except those specified as taxable) is to be increased by 25 percent, to Rs. 12.50. This gross dividend of Rs. 12.50 will, of course, be subject to deduction at the prescribed rates, by way of advance payment of shareholder's income tax under Section 18 (3D) of the Income Tax Act. The rate for deduction at source is now 30 percent, for both individuals and companies. The shareholder will receive a dividend of Rs. 12.50, less a 30 percent deduction. He will thus receive Rs. 8.75 and, in addition, a tax credit of Rs. 3.75.

The intention of the authorities apparently is that preference shareholders, whose dividends were automatically tax-free under the old system of corporate taxation with its provision for "grossing," should be compensated for the loss resulting from the introduction of the new system. This compensation is not complete. Under the old system, a Rs. 10 tax-free preference dividend was really a gross dividend of Rs. 14.60. Now it will be Rs. 12.50. The shareholder's gross dividend is thus Rs. 2.10 less than before, a difference which will perhaps be explained by pointing to the fact that the company's rate of income tax has been reduced from 31.5 percent to 20 percent. It is this 20 percent which the shareholder is not required to pay by virtue of the tax-free status of his preference share. The stipulated dividend rate of Rs. 10 is now to be increased to Rs. 12.50. The extra Rs. 2.50 represents the 20 percent of Rs. 12.50, which is the extent of the benefit he derives because the shares are tax-free. But the fact remains that the preference shareholder has suffered a loss, not because of any alteration in the terms of his contract with the company but as a result of a change in the company's rate of income tax. It seems to be implied that, henceforth, every change in the rate of company's income tax will involve a corresponding adjustment in the effective rate of the tax-free preference dividend, the stipulated rate being increased or decreased by such an amount that, after deduction of the company's income tax, the balance would equal the stipulated rate. It would be interesting to know if this is the Government's intention.

Much of the misunderstanding and confusion that has arisen over this matter has resulted from the failure to grasp clearly two points. Firstly, a tax-free preference dividend does not, and cannot, mean that the dividend income is exempt from income tax in the hands of the shareholder. All it can mean is that the shareholder will not be required to bear the company's income tax on that part of the company's income which is represented by his dividend. Secondly, the rate of 30 percent, prescribed for the purpose of advance payment or deduction at source under Section 18(3D) of the Income Tax Act, makes no difference whatever to the final tax liability of the shareholder. It is only an advance payment, for which he gets full credit in his tax return. Even if no such deduction were made, the shareholder's total tax liability would be the same. The only difference would be that, instead of paying part of the tax in advance, through deduction at source, he would be liable to pay the full tax at the time of his assessment. The rate of 30 percent is therefore irrelevant, except that the shareholder suffers a loss of interest on the amount paid as advance and that the Government probably secures some additional revenue, through the failure of some shareholders to claim the tax credit to which they are entitled.

The position of preference shares which are specified as taxable is somewhat more complex. Under the old system, a Rs. 10 taxable preference dividend would suffer a deduction of Rs. 3.15, representing the company's income tax of 31.5 percent. The shareholder would receive a net dividend of Rs. 6.85, and, in addition, a tax credit of Rs. 3.15, making his gross dividend Rs. 10. It is now provided by the Bill that in the case of taxable preference shares, the stipulated dividend should be increased by 7 percent. A Rs. 10 dividend would thus be increased to Rs. 10.70. This will be subject to a 20 percent deduction on account of the company's income tax, i.e., Rs. 2.14 will be deducted, leaving a balance of Rs. 8.56. That Rs. 8.56 will be the gross dividend. A further deduction of 30 percent will be made by way of advance payment under Section 18 (3D); but as the shareholder can claim a corresponding tax credit, this deduction will not affect the quantum of his gross dividend and may, therefore, be ignored in calculating the tax liability. Compared with the old system, the shareholder is worse off by Rs. 1.44. There is no indication how the Government arrived at the figure of 7 percent by which the stipulated dividend is to be increased.

Most companies, however, have recently not been deducting the 20 percent company income tax from their taxable preference dividends. They have usually made only the 30 percent prior tax deduction. If they continue to follow this procedure, the correctness of which is still in dispute, the taxable preference shareholders will be better off. Formerly, they got a taxable preference dividend of, say, Rs. 10 gross, which left them with Rs. 6.85 net in their hands. Now they will get a gross dividend of Rs. 10.70; after the prior tax deduction of 30 percent, they will be left with a net payment of Rs. 7.49 in their hands. If this conforms with the Government's intentions, it means that New Delhi wants tax-free preference shareholders to get slightly less, and taxable preference shareholders to get slightly more, than before. The matter will presumably be open to much learned disputation in coming months.

In attempting an assessment of the adequacy or otherwise of the increases in the stipulated rates of preference dividend proposed in the Bill, it is useful to consider separately the two changes that may be taken as affecting the situation. In the first place, the legal fiction whereby shareholders were deemed to have paid the company's income tax has ended; and, with it, the practice of grossing. To this extent, shareholders are worse off. Secondly, the rates of taxation of company profits have been reduced and the wealth tax and supertax on excess dividends have been abolished. To that extent, companies are better off and able to make up to shareholders the loss suffered by them under the first head. If only the first of these changes had taken place, that is, if grossing had been abolished and the old tax system retained, a tax-free 10 percent preference shareholder would have received a gross dividend of Rs. 10. Compared with the earlier system, he would have been worse off to the extent of Rs. 4.60. He is now to get an extra Rs. 2.50, so the loss is reduced by Rs. 2.10. Taxable preference shareholders might have received Rs. 10, less Rs. 3.15—which is Rs 6.85. Since no grossing would be allowed, this Rs. 6.85 would be the gross dividend. They would be worse off by Rs. 3.15. They now get an extra Rs. 1.71, which reduces the loss to Rs. 1.44.

It thus appears that preference shareholders, whether tax-free or taxable, whose shares were issued and subscribed before 1st April, 1960, will not get the return on their capital which they were receiving previously. Speaking in the Lok Sabha on 20th April this year, the Central Finance Minister, Mr Morarji Desai, said: "The Government would like to make it clear that when it reduced the effective rate of tax on companies, it had expected that the benefit thus derived by the companies would be passed on to all the shareholders, preference as well as ordinary. While no special action is required for passing on the benefit to the ordinary shareholders, special action will have to be taken by the companies in order to give suitable increases to the dividends received by preference shareholders." It is, to say the least, doubtful whether the Preference Shares (Regulation of Dividends) Bill, in its present form, will succeed in realising this objective. The switchover to the new system of corporate taxation has almost certainly made shareholders as a whole, whether ordinary or preference, worse off. Ordinary shareholders may, however, expect to share in the benefits of economic development, through higher dividends as well as capital appreciation. Preference shareholders, who are limited to a fixed rate of return on their capital, can entertain no such hopes. Their only advantage is security of income, and those who hold preference shares are presumably those who prize this above all other considerations. It is particularly hard on such shareholders that the return on their capital should be whittled down through the vagaries of fiscal policy.

The conclusion which emerges is that the new Bill is completely arbitrary. It tries to compensate preference shareholders. But it does not know what it should compensate them for, and by how much. Some people said that the compensation should be approximately equal to the former 31.5 percent company income tax. Others said that the compensation should be equal to the present 20 percent company income tax, since this has now been made non-refundable. Yet others said that no specific figure for compensation would be reasonable; after all, taxable preference shareholders at least were never given immunity against changes in the company income tax rate. Furthermore, tax rates for particular dividends varied widely, depending on the type of investor and company. Return to the *status quo ante* thus looked impossible. The new Bill does not bring preference shareholders back to the same position as they were in before, which the Finance Minister once implied was his intention, and which the Life Insurance Corporation felt itself obliged to

fight for. Some believe that much the simpler way would have been to make it easier for companies to amend their articles of association for the express purpose of compensating their preference shareholders. Moral pressure, combined with legal facility for changing the articles of association, might have done the preference shareholders more justice than the new Bill will.

REFORMING COMPANY LAW

THE Joint Committee of Parliament which has been considering the Bill to amend the Companies Act, 1956, has recommended some important changes. The main aim has apparently been to reduce the hardships and increase the protection for shareholders. But cynics will feel that in spite of volumes of legislation, the interests of shareholders will never be suitably served as long as the Department of Company Law Administration does not discharge its responsibilities more efficiently. The Companies Act, as it stands, contains numerous provisions which are difficult to implement fully. Unless the Department of Company Law Administration has the qualified personnel, many provisions are likely to remain ineffective.

The Joint Committee has recommended greater flexibility concerning provisions for depreciation. The original amending Bill said that companies should deduct depreciation only in accordance with the method prescribed under the Indian Income Tax Act, 1922. The Committee recommends that companies should also be allowed to provide for depreciation in accordance with other recognised methods. In view of the sharp increase in the cost of replacing equipment during the past few years, it is not possible to finance replacements by normal depreciation only. So companies should be permitted to provide for more depreciation than is allowed under the Income Tax Act. The Committee has also recommended that, under special circumstances and with the previous approval of the Central Government, companies should be permitted to pay dividends without providing for depreciation. But this particular recommendation is difficult to support. The importance of depreciation in corporate finance is vital; distributing dividends without providing for depreciation virtually amounts to the erosion of capital assets. The Central Government can hardly take on the responsibility of deciding whether a company should fritter away its resources in this manner. It is doubtful whether it has the expert knowledge to decide such issues correctly.

The Committee thinks that the present penalty —a fine of up to Rs. 1,000—is not a big enough deterrent for preventing the fraudulent duplication of shares, especially when substantial amounts are involved. It, therefore, recommends that whenever duplicates are issued for a fraudulent purpose, the penalty should extend up to a fine of Rs. 10,000 in the case of a company. Any officer of the company who is responsible for issuing the duplicates should suffer a fine of up to Rs. 10,000 or imprisonment of up to six months, or both. The heavier punishment seems justified after certain recent scandals; the only question is whether even the punishment now suggested will be severe enough to discourage fraudulent practices.

The Joint Committee has rightly recommended that new shares issued by an established company should ordinarily be offered to the existing shareholders on a *pro rata* basis. They may also be offered to outsiders if a special resolution is passed by the shareholders in a general meeting authorising the company to do so. The Committee also recommends that the directors should be authorised to offer the new shares to outsiders if the shareholders authorise the company to do so by a resolution passed by only a majority of votes, provided the Central Government gives its consent to the issue. Considering that the passing of a special resolution may not always be possible, especially when some recalcitrant shareholders decide to oppose the measure, the recommendation should prove helpful. Under the circumstances, it is necessary to permit the directors to proceed provided their proposals are considered beneficial for a company.

The recommendation about enabling a company to draw up its balance-sheet either in the form set out in the Companies Act, or in such other form as may be approved by the Central Government, is a move in the right direction. The change will enable progressive companies to adopt advanced methods for presenting their accounts. Unfortunately, at present, most companies do not give as much information as they should; unless they do, shareholders cannot judge the prospects correctly.

The Joint Committee thinks that the Central Government should be authorised to order a special audit of the accounts if it has reason to believe that the affairs of the company are not being managed soundly. The recommendation appears to be rather far-reaching, since, under the Companies Act, the accounts of every company have to be audited by a qualified auditor. The Companies Act provides for penalties if there is any default in the work of an auditor. So the present recommendation might involve legal complications; it might put the Government in an embarrassing position, especially when audited accounts need to be reaudited. At the same time, no soundly managed company need be worried about the recommendation. It has also been suggested that the Central Government should be authorised to call for information concerning the terms and conditions of the appointment of selling agents of a company when it has more than one selling agent for any area. The recommendation has obviously been made in order to find out whether any of the selling agents is in fact the sole selling agent of the company for such an area. If the Central Government declares any agent as the sole selling agent of the company, it may change the terms and conditions of his appointment. No great hardship is likely to be caused if the Government can be judicious in this matter.

U.K. ECONOMIC POLICY: A CHANGE OF TUNE

THE editorial committee of the London and Cambridge Economic Service is a body of responsible and respected economists. Their reviews of Britain's economic position, published quarterly in *The Times Review of Industry*, have an important influence on financial opinion in Britain. In the London and Cambridge Economic Bulletin last June, the committee wrote: "On balance, it is very doubtful whether the measures taken since Bank rate was raised in January can have done sufficient to eliminate the likelihood of inflationary developments in the latter part of the year." It may be recalled that those measures included restraints on hire-purchase, and that soon after the comment was published Bank rate was raised from 5 percent to 6 percent. "With a great deal of luck", the committee had written, "the Government might win through to the latter part of the year without having to turn the screw further. But the probability is that it will not have such luck." In the event, the Government did not rely on its luck.

Three months later, in the September Bulletin, the committee was writing in a very different vein. "The case for removing the hire-purchase controls seems strong. . . . . Continuance of controls is likely to produce a loss of output which may not be absolutely large, but which is out of proportion to any benefit to other national objectives." It added that "a Bank rate as high as 6 percent seems under present circumstances to bring no benefit sufficient to justify the extra cost which it entails on sterling balances." It may be thought that the London and Cambridge economists were concerned not with the Government's policy but with techniques —particularly hire-purchase control and Bank rate —associated with that policy. Indeed, in both June and September, the committee's comments inclined towards the Budget. In June, it said: "The failure to take appropriate fiscal action is most regrettable." In September, it declared: "If it should emerge that general demand were rising too fast in relation to productive power, a reduction should be imposed on consumption rather than investment. Moreover, it should be done through the Budget rather than hire-purchase controls."

By September, however, these economists were no longer sure that the "inflationary developments" which they had foreseen in June would materialise. They had perceived in the meantime another danger. "As the effect of restrictive policies is delayed, the question arises whether there is a danger of demand failing to grow sufficiently to permit the potential output to be absorbed." And "dumping down activity in the U.K. below what it could be is a very expensive way of gaining some relief; it may even discourage the developments which might offer a long-term solution." Thus, the London and Cambridge economists, who had not previously seemed sympathetic to the expansionist ideas of Sir Roy Harrod, of the sister University of Oxford, had tacitly aligned themselves with him. And it is not without significance that *The Times*, commenting on another article in the London and Cambridge Economic Bulletin, by two American economists, Professors M. W. Reder and L. Tarshis, of Stanford University, California, compared Britain's position with America's: Britain's "sluggish growth, the precariousness of her foreign balance in relation to her liabilities, and the signs of weakness in the competitiveness of her industry, are in some ways parallel."

The inertia of the American economy this year has compelled the U.S. Administration to adopt a more expansive policy. Britain must be more cautious, as her international commitments are, relatively, more onerous. But the Government cannot complacently watch the British economy stagnating while most other European economies advance. "Stagnation" is perhaps too strong a word to apply to the present situation, and the comparison between the British and the U.S. economies is not in this way exact. About the same time as it was reported from the U.S.A. that the capital spending of U.S. industry was no longer rising—the Commerce Department's September forecast for 1960 was reduced to $36,400 million, some $600 million less than its initial forecast for the year, which was the same as the peak figure of 1956—the U.K. Board of Trade forecast that private capital spending in Britain in 1960 would be not 16 percent, as initially estimated, but 20 percent more than in 1959. This figure was not available to the London and Cambridge economists when they made their last survey, but in any case it would probably not have altered their conclusions. They remarked that the engineering industries' outstanding orders, although increased, were still very moderate in relation to output, and that if ordering continued in the latter part of 1960 at the same rate as in the earlier part, the ratio of outstanding orders to output would probably still be lower than in 1958.

There is no counterpart in the U.K. to the low level of activity in the steel industry of the U.S.A., and there is not in general much unemployed capacity in the U.K. as there is in the U.S.A. But the lack of growth in production generally in 1960 is characteristic of both countries. It has been suggested that the causes are quite different: not enough demand to increase production in the U.S.A., and not enough industrial capacity and labour to increase production in the U.K. But the London and Cambridge economists (like their expansionist colleague of Oxford) are evidently now convinced that sufficient resources are available and that they will be under-employed unless economic policy is adapted to a changing situation. The most significant change is not in Britain's economy but in America's. The depressive effects of an American recession, although exaggerated in some minds in the past, cannot be ignored. Already the inertia of the American economy is perceptibly affecting commodities, and therefore the earnings of primary-producing countries. Recession in the United States and Europe simultaneously could have grave implications for the under-developed countries.

BANK AMALGAMATION AND LIQUIDATION

THE Bill to amend the Banking Companies Act, 1949, which was passed by Parliament last Friday, is inspired by two main aims. The first is to reorganise the smaller and weaker banks by amalgamation. The second is to give speedier payments to depositors when a bank is liquidated. There are many small banks which need careful nursing if their stability is to be ensured. Some of them have become uneconomic units as the cost of administration has increased greatly in recent years. Others have not been conforming to strict banking standards in doing business. Because their size is small, it is doubtful whether they can become economic. It is, therefore, proposed to give more power to the Reserve Bank to reorganise them by amalgamation. As soon as the Reserve Bank starts sounding any bank about a merger proposal, it is possible that depositors will become panicky. So the new law rightly seeks to authorise the Reserve Bank to declare a moratorium after obtaining the approval of the Central Government. This provision is likely to be of great help because, during the moratorium, no creditors, including depositors, need be paid. If the Reserve Bank can improve the weaker banks by amalgamation, the banking system as a whole will benefit greatly. The failure of a bank, however small it may be, invariably means that the general confidence is disturbed. The consolidation of the weaker units is likely to facilitate the introduction of a deposit insurance scheme, such as is now being considered. When the scheme is introduced, banks will want to take cover in order to secure the depositors' confidence. But the insurer will be chary of accepting bad risks. So the sooner the small banks are reorganised by mergers, the better it will be for the economy.

At the same time, the fact is that bank failures cannot be always prevented. So it is appropriate that the new law seeks to streamline the procedure for liquidating banks. The procedure was improved in 1952 by amending the Banking Companies Act, 1949. Since then, court liquidators have been appointed in Calcutta and Ernakulam for handling banks in liquidation. The former system of getting the liquidation work done by private liquidators has been dropped. In Bombay, a court receiver and liquidator has been looking after liquidated banks for many years. The results of the reform have been fairly satisfactory. The court liquidator in Calcutta, for instance, has so far collected more than Rs. 3 crores of the assets of the banks in liquidation. More than Rs. 1.60 crores have already been paid in the form of dividends to the depositors of 36 banks. Depositors have benefited because they were paid much smaller dividends when the liquidation work was done by private liquidators. The work of the court liquidator has been facilitated by the Reserve Bank placing at his disposal the services of its own officers. The liquidation of banks is a highly technical job. Not only are borrowers reluctant to repay their debts once a bank fails; the realisation of the assets of liquidated banks involves intricate questions of banking and law. So it is necessary to associate persons having expert banking knowledge with liquidation work.

Hitherto, each savings bank depositor of a liquidated bank had a claim to receive up to Rs. 100 in preference to the claims of other creditors. The new law will increase this amount to Rs. 250. As soon as their claims are satisfied, depositors other than savings bank depositors will have a preferential payment of up to Rs. 250, or 50 percent of their deposits, whichever is less, before any other creditor can be paid. This is considered fair, since it is essential to give relief to depositors with smaller resources when banks fail.

Current News and Comment

Tata Steel: Teething Troubles

The year 1959-60 has been a significant one for the Tata Iron and Steel Company. It saw the completion of the biggest expansion programme undertaken in its history and the introduction of an entirely new wage structure. About half of the plant is now modern. The additional capacity of 1 million tons has, it is claimed, been created quickly and at a relatively low cost. The Company has spent about Rs. 106 crores, and even if the total cost comes to Rs. 110 crores, it will still work out to only Rs. 1,100 a ton of ingot capacity. The same capacity in an entirely new integrated plant would have cost at least Rs. 1,800 a ton, or over 65 percent more.

Reviewing the working results for the year ended March 1960, the chairman, Mr. J. R. D. Tata, says in his statement issued along with the report of the directors that the Company has not been able to reach a rate of production nearer the planned capacity of the expanded plant. But there is no cause for anxiety. In spite of difficulties, production has been maintained at around 80 percent of the full capacity. In most countries, an average output of this order would be considered good. The difficulties which the Company still has to overcome relate to the deterioration in the quality of coal and iron ore, delays and irregularities in the transport of raw materials, and the need for certain modifications and additions to the ore crushing and screening plant and to a steel melting shop. Remedial action, the chairman says, has been initiated or is being planned. The immediate short-term programme, which is likely to be completed in a year or so, is mainly for wet screening at the ore crushing and screening plant in Jamshedpur. The long-range plan will take about four years to complete. It consists of two projects. One is for a detailed geological survey of the main mines and the possible construction of ore beneficiation plants in Noamundi and Joda. The other is for providing full facilities in Jamshedpur for unloading, stacking and blending ores and other raw materials received from the mines. The cost of the immediate programme will be something under Rs. 1 crore, while that of the other will depend on surveys and tests. The chairman says that whatever the ultimate figure, there is no doubt that it will yield a worthwhile return by way of higher production and lower costs. In order to increase the output of steel melting shop No. 3, it has been decided to use oxygen on a large scale in the open-hearth furnaces. It is expected that the modifications and additions will be completed in two years. These measures, when completed, will enable the works to achieve, and possibly exceed, the full target output of 2 million tons of ingots, or 1.5 million tons of saleable steel.

There has been a delay in the publication of the directors' report and the reason is that the Government's decision on the question of retention prices has not been announced. The accounts for the year ended March 1960 do not take credit for the increase which has been claimed. Apart from mentioning the rise in costs, the Company has told the Government that over the five-year period, for a variety of reasons, the Tariff Commission's price scheme has not resulted in any accretion to the internal resources of the Company towards the financing of its 2 million ton programme, although this was visualised both in the agreement between the Government and the Company as well as in the Tariff Commission's formula of prices. The Company has also told the Government that the price structure from the current year should be revised to fit in with the realities of the situation, taking into account the higher depreciation and interest charges which the Company has to bear and the increases in costs under various heads not falling within the scope of the escalator clause as hitherto interpreted by the Tariff Commission and the Government.

Tata Steel's gross block totals Rs. 177.92 crores and the net block is Rs. 122.95 crores. Sales were Rs. 73.47 crores and the net profit of Rs. 5.68 crores works out to 7.73 percent of sales. The percentage of net profit to capital employed is 3.97. In the previous year, the corresponding figures were 5.39 percent and 2.05 percent. Borrowings from banks total Rs. 66.06 crores and special advances from the Government are Rs. 10 crores. The Company's net worth is Rs. 66.06 crores, represented by Rs. 38.97 crores of share capital and Rs. 27.09 crores of reserves. The capital employed totals Rs. 143.14 crores, against which the net block is Rs. 122.95 crores, investments are Rs. 8.84 crores and net current assets are Rs. 11.35 crores.

Hooghly Docking Earns More

The Hooghly Docking and Engineering Co. Ltd has produced satisfactory results for the year ended December 1959. The value of work billed increased from Rs. 81.84 lakhs in 1958 to Rs. 98.18 lakhs last year. There has been a rise from Rs. 6.60 lakhs to Rs. 8.67 lakhs in the gross profit. The work-in-progress was Rs. 81.10 lakhs at the end of December 1959, compared with Rs. 74.43 lakhs a year earlier. The net profit has improved from Rs. 1.85 lakhs to Rs. 2.51 lakhs, after transferring Rs. 2.78 lakhs (against Rs. 2.70 lakhs) to taxation and Rs. 1.54 lakhs (against Rs. 1.41 lakhs) to depreciation. An ordinary dividend of 12 percent, taxable, has been declared, against 10 percent, tax-free, previously. The dividend offers a yield of 9.7 percent at a price of Rs. 123.50 a share and is covered more than three times. A provision of Rs. 1.5 lakhs has been made to cover the taxation liabilities of previous years. The carry-forward is Rs. 7,047, against Rs. 9,214 brought in.

Hastings Jute Earns Less

Reporting the results of the Hastings Mill Ltd for the year ended March 1960, the directors say that the plant for manufacturing carpet backing cloth has begun production. It is expected that the installation of 20 looms in this unit will be completed soon. As far as the production of gunnies is concerned, a further 2½ percent of the total loomage has been sealed since 6th June, 1960, but it will be reopened when bigger supplies of raw jute become available. The directors think that there will be adequate supplies of fibre during the current season.

The Company's profit has declined from Rs. 7.09 lakhs to Rs. 6.95 lakhs, after reducing depreciation from Rs. 8.44 lakhs to Rs. 7.69 lakhs and transferring Rs. 6.25 lakhs (against Rs. 8.80 lakhs) to taxation provision. An ordinary dividend of 6 percent, taxable, has been declared. This offers a yield of 4.8 percent at a price of Rs. 125 a share and is covered more than five times. The ordinary dividend was 6 percent, tax-free, in the previous year. General reserve is allocated Rs. 2.5 lakhs (against Rs. 3 lakhs) and investment reserve Rs. 9 lakhs. The carry-forward is Rs. 285,690, against Rs. 298,603 brought in. Gunny sales increased from Rs. 2.42 crores to Rs. 2.59 crores. Stocks declined from Rs. 13.72 lakhs to Rs. 11.35 lakhs. The Company holds 144,610 ordinary shares in its subsidiary, the Fort William Jute Co. Ltd. The silk department of the Hastings Mill, it is believed, is doing well.

Good Results from Khatau Textile

The working results of the Khatau Makanji Spinning and Weaving Company for the year ended June 1960 are good. Sales totalled Rs. 5.12 crores, against Rs. 4.92 crores, and the gross profit was Rs. 100.19 lakhs. The directors have recommended a dividend of Rs. 32 a share, subject to tax, on the ordinary capital. After providing Rs. 14.74 lakhs (against Rs. 14.73 lakhs) for depreciation, Rs. 34.2 lakhs (against Rs. 18.9 lakhs) for tax and Rs. 4.14 lakhs (against Rs. 5.28 lakhs) for development rebate reserve, there is a net profit of Rs. 38.53 lakhs, which is more than double the previous year's figure of Rs. 19.21 lakhs. With Rs. 23,727 brought in, the total available is Rs. 38.77 lakhs. From this, the directors have provided Rs. 17.52 lakhs for general reserve (against Rs. 8 lakhs in the previous year). The preference dividend of 4 percent, free of tax, absorbs Rs. 1.7 lakhs and the ordinary dividend takes up Rs. 19.15 lakhs. The carry-forward is Rs. 38,751. The directors say that new machinery valued at Rs. 26.34 lakhs was received during the year and orders worth Rs. 59.02 lakhs were placed for replacement and renovation. The Khatau Mills shares, which had been marked up to Rs. 825 in August, have recently come down to Rs. 600.

Better Profit for McLeod

The latest results of McLeod and Co. Ltd for the year ended December 1959 show that the revenue from the jute, tea, engineering and miscellaneous departments has improved. The profit has amounted to Rs. 19.74 lakhs, against Rs. 18.78 lakhs. An ordinary dividend of 15 percent, taxable, has been declared. This is covered more than six times and gives a yield of 7.1 percent at the present price of Rs. 211.50 a share. The previous ordinary dividend was 12½ percent, tax-free. Taxation provision is allocated Rs. 6.65 lakhs (against Rs. 8 lakhs), investment reserve Rs. 1 lakh and convertible notes redemption reserve Rs. 2 lakhs (same). Transferring Rs. 15 lakhs from general reserve, goodwill has been written off by an equivalent amount. The carry-forward is Rs. 242,718, compared with Rs. 249,742 brought in.

General Industrial Pays More

There has been a rise from Rs. 4.78 lakhs to Rs. 8.03 lakhs in the profit of the General Industrial Society Ltd for the year ended December 1959,

after providing Rs. 4.60 lakhs (against Rs. 2.64 lakhs) for depreciation and Rs. 2 lakhs (against Rs. 5 lakhs) for taxation. An ordinary dividend of 40 percent, taxable, has been declared. It is covered more than twice and gives a yield of 8.7 percent at the present price of Rs. 46 a share. The ordinary dividend was 20 percent, tax-free, in the past year. Development rebate reserve is allocated Rs. 4.68 lakhs (against Rs. 1.5 lakhs). The carry-forward is Rs. 53,435, against Rs. 151,070 brought in. The directors stated in their report that a further 5 percent of the jute looms were sealed after 6th June, 1960, but they have been reopened since 8th August, 1960. The prospects for the current year are not considered very encouraging in view of the high prices of raw jute. The cast iron foundry has been remodelled. It produces the mills' requirements in castings and sells the surplus to outside customers. Gunny sales declined from Rs. 2.32 crores to Rs. 2.08 crores and stocks from Rs. 5.33 lakhs to Rs. 3.43 lakhs.

Share Offer from Escorts

It is believed that Escorts Ltd will shortly announce an offer to the public of shares worth about Rs. 41 lakhs—Rs. 17 lakhs in equity shares of Rs. 10 each being issued at a 50 percent premium and Rs. 25 lakhs in redeemable cumulative preference shares of Rs. 100 each carrying a 6.3 percent tax-free dividend. The present paid-up capital of Escorts is Rs. 47 lakhs. Escorts has for over a decade been functioning as a representative of well-known firms like M.A.N. and A.E.G. of West Germany, Massey-Fergusons of the U.K. and the Westinghouse Electric International Co. of the United States. It also has exclusive representation for India of Koel diesel engines of over 100 h.p. made by Kirloskars under a M.A.N. licence, and cranes of all types manufactured by Hindustan Motors Ltd, also under a M.A.N. licence. During the last three years, Escorts and its subsidiaries have established their own manufacturing plants for pistons, piston rings, sleeves and razor blades. The new capital is required for establishing three more factories. The first will manufacture X-ray equipment with the technical collaboration of the Westinghouse Electric International Co. of the U.S.A. The second will make railway shock absorbers with the technical collaboration of Rheinmettall G.m.b.H., West Germany. The third will produce heating elements for electrical appliances with the technical collaboration of Eltra K.G., West Germany.

Assam Hard Boards

A new Company, Assam Hard Boards Ltd, has been formed for setting up a hardboard plant in Assam. The industrial licence, it is claimed, has been obtained. The Company plans to manufacture multipurpose hardboards, and is negotiating for U. S. collaboration.

Fair Results from Stanvac Refining

The report of the Standard-Vacuum Refining Company of India for 1959 is satisfactory. The volume of crude oil processed and product sales were slightly lower than in 1958, but this was because the refinery was shut down twice during the year—once for normal inspection and the second time because the new equipment installed in the combination unit was not meeting the Company's quality specifications. An average of 33,812 barrels a day was processed during 1959, compared with 33,890 barrels in the previous year, resulting in a total production for the year of 411.1 million imperial gallons. Total sales of all refined products during 1959 amounted to 397.54 million imperial gallons, of which 351.74 million gallons were sold in India. The balance of 45.8 million gallons, consisting of motor gasoline, was surplus to the requirements of the country; it was exported to Australia and New Zealand, earning India Rs. 249 lakhs of foreign exchange.

Gross income has moved up from Rs. 28.17 crores in 1958 to Rs. 30.07 crores last year, and the net income from Rs. 1.1 crores to Rs. 1.33 crores. The 1959 profits represent a return of 4.44 percent on gross income and 6.58 percent on the average capital employed, compared with 3.9 percent and 5.69 percent, respectively, in 1958. However, the excise demands which have unexpectedly come from the Central excise authorities subsequent to the closure of the books would reduce the net income of Rs. 1.33 crores to Rs. 79.86 lakhs. The report says that all phases of the refinery expansion programme have been completed with a capital expenditure of Rs. 102 lakhs. The Company has started supplying asphalt and other additional products required in India. This will help save foreign exchange. It is claimed that the excise demands arise from a difference of opinion over the interpretation of the agreements between the Company and the Government. Discussions are in progress.

Buffer Stocks of Shellac

The shellac market has been bearish for some weeks, and the pure T.N. grade has fallen to Rs. 60 a maund. This is because supplies are more freely available this year, since the Bysakhi crop is nearly 7,000 tons larger than in 1959. The Siamese crop is also reported to be nearly 8,000 tons bigger. So total supplies in world markets are likely to be about 15,000 tons larger, but the demand does not appear to have increased proportionately. The Indian Lac Exporters Association has, therefore, decided to build buffer stocks immediately. It is proposed to buy 60,000 maunds through the members of the Association and hold the stocks in Calcutta. The cost of the scheme is estimated at Rs. 38 lakhs and the monthly expenditure for carrying the buffer stocks may be Rs. 80,000. Considering that the floating stocks in India are now about 250,000 maunds, it is thought that the buffer stock scheme will help stabilise internal prices. The proposal to buy a further quantity of 60,000 maunds, if necessary, is also being considered. The Association has been collecting funds for the buffer stock plan since 1958, by imposing certain fixed and fluctuating levies on exports.

The buffer stock plan has apparently been inspired by the successful operation of price support schemes in the export trade. Maximum and minimum export prices have been fixed during the past two years or so, and they have helped stabilise export prices. Whether the buffer stock scheme will stabilise internal prices, only time will show. There is, nevertheless, a case for trying to stabilise the trade, if possible. The commodity is mainly agricultural in character, so production varies widely from year to year due to climatic conditions. The crop has varied from 1.8 million maunds in one year to 700,000 maunds in another. The domestic demand is only about 5 percent of the total supply, so most of the production has to be sold in foreign markets. The foreign demand is extremely erratic, as lac is used in many industries. Prices are, therefore, governed largely by the movements in international trade. Most of India's output comes from numerous small producers who have little holding power when prices decline.

A striking feature is that the foreign demand is very seasonal in character. The annual average of exports is estimated at 360,000 bags, but the monthly offtake ranges from 55,000 bags to 15,000 bags. Production is also seasonal, considering that there are four crops in a year, but the difficulty is that foreign buying rarely coincides with the supply pattern. As a result, there are excessive supplies, especially at harvest time. It is, therefore, argued that buffer stocks will help mitigate fluctuations when excessive supplies appear. The proposed buffer stock scheme will be reinforced by price support schemes in the export trade, and it is hoped that the stocks can in this way be sold more conveniently to foreign markets at the appropriate time. The buffer stock scheme will operate in Calcutta, so it might not by itself ensure the stability of prices in upcountry areas. It is, therefore, considered necessary that similar buffer stocks be built in the producing areas. The Indian Lac Cess Committee might consider this point carefully.

Shah Construction Share Offer

The Shah Construction Company of Bombay has decided to release 12,000 ordinary shares from the holdings of the directors and their friends. The offer is being made so as to secure a wider distribution of the shareholding, and then presumably to get the Company's shares quoted on the Stock Exchange. At present, the Company has only 326 shareholders, of which about 30 are believed to be owning about 80 percent of the total capital. The Rs. 100 shares will be offered to the public at a premium of Rs. 50. Lists will open by about the end of the month. Arrangements have been made with the Ahmedabad Stock Exchange for listing the shares. The shares now released will participate fully in the dividend for the year ended June 1960. It was only a few months ago that Shah Construction was converted into a public limited Company, the issued and paid-up capital being raised from Rs. 10 lakhs to Rs. 40 lakhs. The authorised capital is Rs. 50 lakhs. The assets are valued at around Rs. 65 lakhs. With a paid-up capital of Rs. 10 lakhs, the Company earned a gross profit of Rs. 6 lakhs during the year ended October 1959, and paid an 18 percent dividend.

Oriental Fire and General

The working results of the Oriental Fire and General Insurance Company for the year ended December 1959 show a substantial increase in premium income and underwriting profit. The net premium income is up from Rs. 74.84 lakhs to Rs. 108.66 lakhs. Fire premiums have risen from Rs. 28.62 lakhs to Rs. 37.02 lakhs, and miscellaneous premiums from Rs. 27.29 lakhs to Rs. 56.22 lakhs, but marine premiums have fallen from Rs. 18.93 lakhs to Rs. 15.42 lakhs. The overall claims ratio for the three departments has declined from 50.3 percent to 48 percent. Commission and management expenses, as a percentage of net premiums, have also fallen by 0.2 percent. After increasing the underwriting reserves of the Company by Rs. 17.66 lakhs, the underwriting profit of the three departments is Rs. 12.39 lakhs, against only Rs. 10,000 in the previous year. An additional reserve of Rs. 2.5 lakhs has been created in the marine department. Taking credit for Rs. 4.73 lakhs, being the interest derived from funds not allocated to any particular department, a sum of Rs. 7.25 lakhs has been set aside for tax reserve, Rs. 1 lakh for dividend equalisation reserve, Rs. 25,000 for investment reserve and Rs. 1 lakh for staff gratuity fund. The directors have declared a dividend of Rs. 30 a share, subject to tax. Funds have gone up from Rs. 1.31 crores to Rs. 1.58 crores.

Saving Foreign Exchange on Reinsurance

In recent weeks, the spokesmen of the general insurance industry have talked often about the outflow of foreign exchange on account of reinsurance overseas. Various reasons have been offered to explain the outflow. Mr. A. D. Shroff, chairman of the New India Assurance Co. Ltd, referred to the heavy weightage given to the Government's subsidiary companies in the distribution of Government business. By giving such a large share of the business to four companies, Mr. Shroff stated, the Government has not fully used the underwriting capacity of the whole market. To that extent, it is necessary to examine whether the Government has increased the expenditure of foreign exchange on the reinsurance which will now be effected by the four companies. Mr. J. S. Dalal, a public sector official, significantly did not discuss these points in his address as chairman of the Indian Insurance Companies Association. He pleaded, on the other hand, for support for the Indian Guarantee and General Insurance Co. Ltd, a new professional reinsurer in the public sector. Pointing to the foreign exchange expenditure, he said that the trade should support the India Reinsurance Corporation and Indian Guarantee. The Central Minister for Revenue and Civil Expenditure, addressing the Rajya Sabha during the debate on the question of nationalising general insurance, stressed the need to do as much reinsurance as possible within the country. Speaking in the same context, Mr. Dalal pleaded for the creation of pools to which the companies may cede business. He suggested that the management and retrocession of business placed in such pools could be handled by two professional reinsurers with a small payment for their services and labour.

In his statement to shareholders of the India Reinsurance Corporation, the chairman, Mr. A. D. Shroff, has now again referred to the outflow of foreign exchange on account of reinsurance, but this time for different reasons. Mr. Shroff says that the drain would represent the ultimate profit paid to the foreign reinsurer as a result of reinsurances placed and/or exchanged with him, after taking into account the premiums, losses and commissions paid or received. Three main categories of business result in a drain of premiums outside India. They are aviation hull and other related liabilities, marine hull business and fire insurance business. The capacity of the Indian market to absorb hull insurance is limited. As the business emanating from other markets is marginal, Mr. Shroff says, reciprocal exchanges leave a large margin of profit for foreign reinsurers. In fire insurance, the drain arising from reciprocal treaty exchanges cannot be considerable. All companies in India, particularly branches of foreign companies, should exchange as much of their surplus in all departments as is possible in India, so that the drain can be minimised. Mr. Shroff endorses the suggestion of Mr. Dalal about forming pools to protect and redistribute Indian business. But he suggests distribution in the ratio of business received from each participant. According to him, the business so pooled and processed can be retained in India. The India Reinsurance Corporation, he says, can establish and administer such pools if the members so desire. Mr. Shroff has not, however, offered any concrete suggestion about how the foreign exchange outflow in hull business can be reduced

It is unfortunate that as chairman of the India Reinsurance Corporation, Mr. Shroff does not view with favour the emergence of Indian Guarantee as a competing professional reinsurer. He criticises the statement attributed to the sponsors of Indian Guarantee that the problem of strengthening the Indian market has not been satisfactorily solved by establishing the India Reinsurance Corporation. This might appear somewhat parochial. The emergence of Indian Guarantee as a competing professional reinsurer should help reduce the foreign exchange expenditure. The India Reinsurance Corporation should be able to welcome the flotation of a rival reinsurance company. The hopes of domination now figuring largely in the minds of certain big insurers in this country find expression also in the chairman's note. He suggests the amalgamation of units to reduce the cost of handling business, but many think that India can afford to support two or more professional reinsurers. Several professional reinsurers function effectively in other countries, particularly in the U.K., and it seems somewhat uncharitable that Mr. Shroff should harbour a grievance at the emergence of Indian Guarantee as a competitor.

The India Reinsurance Corporation has made a net profit of Rs. 5.23 lakhs in 1959, which is slightly larger than in the previous year. A dividend of Rs. 25 a share, subject to tax, has been recommended. Total net premiums rose from Rs. 1.26 crores to Rs. 1.82 crores, and a large part of the increase was on account of Indian fire business. Claims paid and outstanding totalled Rs. 98.41 lakhs, against Rs. 75.2 lakhs in the previous year. Net fire premiums were Rs. 91 lakhs, against Rs. 56 lakhs. Marine premiums rose from Rs. 30.16 lakhs to Rs. 39.23 lakhs and miscellaneous premiums from Rs. 39.94 lakhs to Rs. 51.99 lakhs. Total reserves increased from Rs. 55.15 lakhs to Rs. 86.72 lakhs.

Draft Third Plan for U.P.

The draft outline of the third plan for Uttar Pradesh, which has just been released, provides for an outlay of Rs. 693.46 crores. Agriculture and allied sectors have received an allocation of Rs. 265.63 crores. A sum of Rs. 206.4 crores has been earmarked for industries and power projects, Rs. 184 crores for social services (including education and health), and Rs. 37.42 crores for roads and communications. The spillover schemes from the

State's second plan have received Rs. 153.37 crores. Discussions between the Planning Commission and the U.P. Planning Department on the draft outline are expected to begin on 22nd September. The State's requirements of foreign exchange add up to Rs. 101 crores. Agriculture has been assigned top priority, but at the same time, emphasis has been laid on creating conditions conducive to the industrialisation of the State, particularly for power development, growth of industrial areas and estates, technical education and craftsmen's training.

Many new projects are proposed in the draft plan. Dealing with physical targets for power and industrial development, it says that the additional demand for power is likely to be 1,458 megawatts. The outlay proposed for medium and large industries includes Rs. 1.64 crores for manufacturing new items at the Government Cement Factory, Churk, and over Rs. 1 crore on the expansion of the Government Precision Instruments Factory in Lucknow. The major new irrigation scheme is the Sarju canal, which will benefit the heavily populated eastern districts of the State. It will cost Rs. 10.78 crores, but it is stated that the waters of the Sarju river will not be available for utilisation during the third plan period. Thirty-nine new medium irrigation schemes costing Rs. 28.57 crores are also contemplated. The State's target for additional food production is being kept at 5 million to 5.5 million tons. It is estimated that at the end of the third plan, the State's food requirements will be 13.5 million tons. With provision for storage losses, fodder and seed, total requirements will amount to 19.64 million tons. Food production in 1960-61 is estimated at 13 million tons, leaving a target of over 5 million tons to be achieved during the third plan period.

Draft Third Plan for Madras

The draft third plan for Madras points out that the State Financial Corporation has not so far provided risk capital for any venture, so steps should be taken to remove the defect by allowing the State Government to provide share capital for new concerns. It is suggested that the concentration of industry in Madras, Madura and Coimbatore should be avoided. It will be recalled in this context that Mr. L. B. Green suggested in 1940 that Mettur on the Cauvery river is the best centre for starting new industry. The new Mettur tunnel hydro-electric scheme, which was inaugurated recently, will help increase power supply for starting new enterprises. The draft plan compares direct Government investment in Mysore with Madras. Mysore's income from Government investment is not adequate and only hydro-electric power-stations contribute to its revenues. It no doubt has an iron and steel works, which Madras does not, but it is usually forgotten that it was run at a loss for two decades. The Madras Chief Minister recently said that existing industries in the private sector would be allowed to develop and that the Government would not normally interfere with their activities.

World Population Growth

Total world population has increased to 2,900 million, according to the U. N. *Demographic Year Book, 1959*. It lists mainland China, with an estimated population of 669 million, as the country with the largest number of people. India follows with 403 million, Russia with 209 million and the United States (including the new States of Alaska and Hawaii) with 178 million. These four countries together total about 1,500 million and account for more than half of the world total. Next in size of population are Japan with 92 million, and Pakistan, Indonesia, Brazil, West Germany and the United Kingdom, all with populations of over 50 million. On a worldwide basis, the rate of population increase during 1958 was about the same as for the previous seven years, namely, 1.7 percent, or 48 million persons a year. The annual increase results from an estimated world birth rate of 35 a 1,000, which adds about 100 million births a year, and an estimated death rate of 18 a 1,000, which subtracts around 51 million from the total. This leaves a net annual population increase of over 48 million persons or over 5,000 an hour or about 85 persons a minute.

Over half the world's population now lives in Asia, and by the year 2000, Asia will probably account for about 60 percent of the total. Only 14 percent of the world's population lives in Europe at present, if the current trends continue, the figure will decrease to 10 percent by the end of the twentieth century.

In "city-States" such as Macao, Monaco, Gibraltar, Ceuta and Melilla, and Hongkong, densities of population are shown to range from 2,000 to 14,000 persons a square kilometre. High densities are found in many island areas, notably Bermuda with 814 persons to the square kilometre and Barbados with 544 persons a square kilometre, while Puerto Rico, Taiwan, Mauritius, Ryukyu Islands, Grenada and the Maldive Islands have densities of some 250 persons to the square kilometre. Of the countries which do not fall in either of the two categories mentioned above, the Netherlands has the highest population density—345 persons a square kilometre, with Belgium, England and Wales, and Japan following closely. At the bottom of the list are places with densities of two or fewer persons a square kilometre, such as Spanish Sahara, Bechuanaland, Mongolian People's Republic, Papua and Greenland. Australia, Canada and Iceland also appear in the group of sparsely populated countries. In the United States, which has been increased by the addition of Alaska and Hawaii, the previous density of 22 persons a square kilometre has changed to 19 persons a square kilometre as a result of a large increase in area with a relatively low density. In terms of continents, Europe has the greatest population density, with an average of 85 persons a square kilometre. Central Europe, with a population of 136 million, against 140 million in the northern and western segments, has a density more than double that of northern and western Europe—134 persons a square kilometre as against 62. Asia, as a whole, is the second most densely populated continent with 59 persons a square kilometre; the density in south-central Asia amounts to 105 persons a square kilometre. In comparing densities in Europe and Asia, the statistics show that the population of Asia is increasing at the rate of 1.8 percent a year while Europe's rate of growth is only 0.7 percent. So the density in Asia will increase while that in Europe is likely to remain relatively stable.

The average world birth rate for the period 1954-58 was estimated at 35 a 1,000 population. On a continental basis, Africa has the highest estimated birth rate—45 a 1,000. Asia has an overall rate of 39 a 1,000. The highest regional rate occurs in both south-east Asia and tropical and southern Africa, namely, 46 a 1,000. The region with the fastest rate of population increase, however, is shown to be middle America, due to the fact that the relatively high birth rate of 42 a 1,000 is combined with death rates which have been substantially lowered in recent years. The lowest continental rate is found in Europe—19 a 1,000—and, within Europe, the lowest regional rate, that is, 18 a 1,000, is for the northern and western regions.

EXPORTING TO U.S.A.

WE published last week a circular letter from the United States Consulate embodying the latest demand which the American State Department makes on the long suffering foreign merchant. Perhaps one "solemn and true declaration" the more does not matter, but it certainly appears unkind to require the Indian exporter, who has "imperilled his immortal soul" in a "true and full statement of the time when, the place where, and the person from whom" his merchandise was purchased to give also "the name of the resident of the United States by whom the purchase was made in the foreign country either directly or by agent." Now much business with the States is transacted through the medium of dealers in London or other European centres, and, again, much merchandise goes forward to the States unsold. But the American State Department, like Government Departments all the world over, has no thought for these ordinary incidents of business. It insists that all goods must have a purchaser resident in the States and no doubt the much worried merchant, with a curse at the stupidity of State Departments in general, will obligingly furnish the required information, which will doubtless be as interesting and reliable as that concerning the "time when, the place where, etc." But in this closing year of the 19th century, is not such nonsense being carried a little too far? A State Department endowed with ordinary common sense would restrict its interference to seeing that current values were put upon all merchandise imported and would know full well that merchants capable of cheating in this respect would not be in any way hampered by the necessity for producing information of the childish nature referred to above. But, then, where shall we find a State Department in which common sense prevails?

Brown Recording-Integrating Flow Receiver

What is the cost of process flows for the various production departments of your plant? You must have accurate records of the quantities of steam, water, air, chemicals, fuel oil and other fluids supplied to each department to know where your money goes and why. Honeywell Flow Meters aid cost accounting by providing the information you need.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.

Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.

Precision electronic instruments and control systems for aircraft and missiles.

A Ditcher's Diary

WELL, WELL, MR. KHRUSHCHEV DEMANDS A SUMMIT at Lake Success with 80-odd heads of government attending—and there is going to be one, almost. General de Gaulle, who has been taking an increasingly unkind view of the United Nations, is unlikely to move. But second thoughts seem possible in other unwilling capitals. It is not easy to see the point of it all, although Mr. Nehru and the other leaders from Asia and Africa must be terribly worried about the Congo getting involved in the cold war, and probably feel that they have a special contribution to make on the issue. It will be great if they can persuade Mr. Khrushchev to lay off that country. But when even summits of four end amid rancour and bitterness, I do not see how a gathering of thirty or forty, let alone eighty, can achieve anything. Who is going to listen to whom? For it must be remembered that all heads of government are, by definition, more used to talking than listening. I simply cannot see Messrs Nkrumah, Soekarno, Nasser and Castro quietly sitting in the General Assembly and listening to Mr. Khrushchev lecturing on peace and co-existence. And when any of the listed gentlemen get up and say something, there may be fireworks—especially when Mr. Castro rises. I am inclined to agree that peace is too serious a thing to be left to Messrs Eisenhower and Khrushchev alone; and Mr. Macmillan did succeed in bringing the two together in Paris. But we all know what happened. The presence of Mr. Nehru may conceivably be a sobering influence; and he certainly has much wisdom that some world leaders would be better for partaking of. But if the Americans refuse to negotiate with Mr. Khrushchev, in a large crowd or small—which they have a right to do, for Mr. K. cannot have a summit just when he wants it—then it is difficult to see how any amount of talk among the others is going to solve anything. But New York is a pleasant place in September; and most world leaders deserve a holiday now and again, I suppose.

AS FAR AS I CAN SEE, NOTHING VERY TANGIBLE has lately happened in Dandakaranya; but the new full-time chairman, Mr. Sukumar Sen, appears to have introduced some optimism in the air—of New Delhi. Where a little more enthusiasm would be more appreciated is in Dandakaranya itself; and Mr. Mehr Chand Khanna gave up pretending long ago that everything there was just fine. It is not on the politicians, even when they are called Ministers, that I place much reliance. Their contribution to the project so far has been negligible, and that is putting it mildly. Dandakaranya is a job to be executed; and officials and engineers are the people who can do that. These latter have in the past complained that they have had to cope with too much interference from the Ministry; but in his statement in June, Mr. Nehru promised greater autonomy for the Authority. It is to be hoped that Mr. Sen will not be made to suffer from the sort of frustration Mr. Fletcher was up against—never mind whose fault it was. In the final analysis, however, it is for the East Pakistan refugees to make or unmake Dandakaranya; and while all organisational deficiencies should certainly be removed as early as possible, I am not sure that the refugees have done their best. I can think of people, Jews in Israel for instance, who have gone to more inhospitable places and "made the desert bloom". And Dandakaranya is no desert. Nor is there a Mr. Nasser next door with his gun trained. What is lacking is the pioneering spirit, which years of camp life have done nothing to induce in refugees. There has been, for political reasons, a tendency to spoon-feed refugees; and nobody has told them any unpleasant truths. I would not have made this harsh remark either, if I were not convinced that the "soft" attitude has done more harm to the refugees themselves than to any other party involved. It pains me to see such a large number of men and women pitied daily; and only pitied they are by all our silver-tongued politicians.

THE END OF THE OLYMPIC GAMES FINDS INDIA licking her wounds; and the wounds have indeed been deep, with the defeat in the hockey final following Milkha Singh's failure to win even a bronze medal in the 400 metres. I suppose there will be much learned disputation in coming months about the reasons for Pakistan's hockey success. But I am glad that this country's spokesmen have had the good grace to start the debate on the right note—by conceding that the Pakistanis won because of one main factor, and that was the superiority of their team. The tally of goals scored by the Indian and Pakistani hockey-players in successive games is partial proof of the superiority; and nowhere was the latter more apparent than in the strength of the Pakistani forward line, in terms not only of team-work but also of individual skill. I would not claim to know whether the Pakistanis had the advantage of greater experience, especially against international teams; I should imagine not. But I do suspect that they manage to get better practice at home, in so far as the gap between their first- and second-rank players may not be as wide as it is in India. Pakistani satisfaction over having wrested the world hockey championship from India will, I imagine, be minor compared with the Russians' pleasure at having maintained their supremacy in the Olympic Games generally, as they did at Melbourne four years ago. The Russian achievement has not been altogether a surprise to me—not, that is, since reports began leaking out from Rome about the Americans' sportive pastimes off the field. The main surprise was Italy's ascent to third place, which may be a tribute not only to the Italian sportsmen, but also to the morale-boosting quality of spectator applause from Rome's patriotic and uninhibited citizens.

ALLOWING FOR THE FACT THAT HOMILIES ABOUT national and Party unity are the growing fashion these days, it is hard to see what purpose has been served by the Congress Socialist Forum's three-day deliberations on the subject last week. The omelette of contradictory ideas issued in a statement on "practical steps to strengthen national unity" might have appeared more sincere if the Forum itself was not among the more disruptive influences in the Congress Party, which it urges should set the example for others by becoming a symbol of unity. There is justice in the Forum's complaint that the Congress is threatened by groups and factions based not on ideology, but on personal, caste and other narrow predilections. It might not, however, have been wholly beside the point to enquire to what extent the Forum itself is guided by different, and worthier, influences. The results of the enquiry, if properly digested, might have discouraged the call for "a national agreement not to resort to short-cuts to popularity and to conform to certain norms of political conduct"—an agreement which, if it were to be implemented, could decimate the membership of the Forum perhaps a little sooner than that of many other groups and Parties. It is on the language question, however, that the Congress leftists' ideas seem to be moving far out of touch with political realities. That linguistic jealousies are becoming increasingly serious, few would deny; but the Forum seems reluctant to recognise that probably nothing has done more to accentuate them than the attempt to impose Hindi on people who do not wish to speak it. It recommends that more should be done to develop the use of Hindi; and that those who do not speak Hindi should learn it, in return for which the Hindi supporters should learn another Indian language. On this recommendation, Hindi would sneak its way to national dominance by being the only common language, which one should have thought was precisely the prospect that the people of the south and the east were not prepared to countenance. My own view is that the problem of Party or national unity today centres on the readiness to enforce discipline; in the Congress Party, that may imply the dissolution of "ginger groups" like the Socialist Forum.

MORT SAHL IS, APPARENTLY, ALL THE RAGE IN THE United States at the moment; and I must say the man has made quite a few fairly amusing observations on the contemporary American scene. (I liked that one about Kennedy trying to buy the country, and Nixon trying to sell it. Also the remark before his thirty-third birthday: "Look at Castro, *He's* thirty-two and he has a country. It kills me.") Sahl is certainly a very refreshing change after McCarthy; and he may well be more interesting than the humourless A.Y.M.s we hear so much about. The man at least has wit, even if sometimes he is only rude As Vicky wrote in the *New Statesman* a few weeks ago, it is rather strange that America should have produced a political satirist when in England this kind of entertainment is hardly known today. The Fifth Republic does not perhaps provide the best stage for political satire; but many must be familiar with the political music halls of Paris. In West Berlin, the Porcupine is doing quite well. Why not in London? I do not know the answer. Has India known much political satire? A Bengali friend tells me that in the 'twenties and the 'thirties there was some, although it had to be very crude or very subtle not to attract the attention of the political police. A little irreverence, even a little flippancy, never did the political climate of any country much harm; and I am hoping that some Indians will direct their talent one of these days to political satire. The present times, I am afraid, are not entirely propitious, for who dares crack a joke at Mr. Nehru? But I have a notion that Mr. Nehru would be among the first to welcome some genuine political satire, in writing if not on the stage yet. It is strange that a people so politically obsessed as the Indians have kept politics out of their creative work. I am told that there are not many political novels either in the Indian languages; England has produced at least some.

THE KINNISON JUTE MILLS COMPANY LIMITED

CHAIRMAN'S STATEMENT TO SHAREHOLDERS

The following statement by Mr. D. C. B. Pilkington, chairman, has been circulated to the Shareholders of The Kinnison Jute Mills Co. Ltd. The Annual General Meeting will be held on 8th October, 1960.

Dear Sir/Madam,

In view of the fact that for a variety of reasons only a very small percentage of the Shareholders of the Company find it possible to attend the Annual General Meeting in person, it has been decided as an experiment to produce in the case of your Company a more elaborate set of accounts with photographs, etc. and to enclose therewith a statement by the Chairman, which provides more detailed information with regard to the Company and the Industry as a whole than has been the practice in the past. Any comments that Shareholders care to make on this revised procedure will be welcomed as it will give your Directors a guide as to whether or not they should continue to present the accounts on this basis in future years.

As will be seen from the Directors' Report and Accounts, the results for the year ended 31st March, 1960 show a substantial improvement over those of the previous year. It must be admitted, however, that taking into account the number of looms in operation, they do not compare favourably with the profits earned by certain other companies in the Birds/Heilgers Group. Among a variety of factors responsible for this, a degree of lack of co-operation by certain elements in the labour force must be mentioned. It is, therefore, gratifying to report that since June, 1960 there has been a marked improvement in the overall efficiency of the Mills and the number of spindles being operated per loom now stands comparison with other units in the Group. Provided this improvement is maintained, the future can be faced with confidence, given overall trading conditions that are not unduly unfavourable for the industry as a whole.

Prospects

The current year has seen a reversion to the unhappy state of affairs in which for considerable periods simultaneous business has involved trading at a loss. To make profits has, therefore, involved taking a correct view of the market as regards the raw material and the finished product—and to do this with unfailing success is virtually an impossibility. It is, therefore, satisfactory to report that those responsible for managing your company's affairs have correctly assessed future market trends, with the result that profits for the first nine months of the current year should only show a moderate reduction from those for the year the accounts for which are now being presented.

Modernisation

With the installation of new Sacking Weft machinery in No. 1 Mill and the placing of orders for a small quantity of additional machinery on the fine side, the modernisation programme as regards the preparing and spinning sections of the mills is completed for the time being. In No. 2 Mill the spinning and preparing machinery installed in 1949 has now been working double, and latterly treble shift, for 11 years, but it is satisfactory to report that due to careful and regular maintenance, it continues to give excellent service.

There is, however, no question of standing still in the matter of modernisation and your Directors will be giving careful consideration to the possibility of introducing new types of machinery into other sections of the Mills, particularly on the weaving side.

Unlike the earlier part of this century, this is a period of great fertility of ideas among the manufacturers of jute mill machinery and it is essential that the Indian industry should take full advantage of those which have proved successful under local conditions—failure to do so will gravely handicap Indian mills in a harshly competitive market. India's grave shortage of foreign exchange is the main obstacle to the industry obtaining all the modern machinery it requires and the growing scale and pace of indigenous manufacture is, therefore, welcomed by the industry as much as by the Government of India. Such schemes for local manufacture do, however, take a considerable time to come to fruition and it is to be hoped that Government will in the intervening period be as generous as possible in the matter of foreign exchange to an industry which is itself one of the country's largest earners of foreign currency—and in 1960 looks like earning more foreign exchange than for many years past.

It must also be borne in mind that despite the growing scale of indigenous manufacture, there will always be the necessity for the import of certain types of machinery, the demand for which does not justify local manufacture and for prototypes of new equipment that have to be proved under Indian conditions.

Wide Looms

The wide looms installed in No. 1 Mill have made a considerable contribution to the year's profits. It has, however, been necessary recently to reduce production due to stocks of rolls accumulating in overseas markets. While the tufted carpet industry shows every sign of continued growth over future years, the scale at which additional wide looms are being installed would appear to indicate the likelihood of world supplies of backing cloth outstripping the demand in the relatively near future.

Labour

The Government of India has now announced the setting up of a Wage Board for the Jute Industry and as no doubt this body will be reviewing all outstanding labour issues in the near future, it would be inappropriate to touch on these in any detail in this statement. Two general comments may, however, be of interest. Firstly, although much play is made of the minimum wage in the jute mill industry, in fact only 8% or thereabouts of the labour force is on the minimum wage. Secondly, since the 1955 Tribunal Award, those sections of the labour force that are on piece rates have increased their average earnings very substantially indeed—in all cases to well over the target earnings indicated by the Tribunal. This is largely due to increasing modernisation and the benefits arising therefrom such as more level yarn. As an export industry in a fiercely competitive market, increases in labour costs without a corresponding increase in productivity can only result in the loss of business to rival packaging mediums such as bulk handling and paper, not to mention to rival jute industries such as Pakistan's, whose wage rates are already a good deal lower than in India. At the same time, the desirability of raising the annual income and the standard of living of Indian jute mill workers cannot be questioned. In this situation, there would appear to be every justification for both employers and trade unions carefully examining the practicability and implications of extending piece rates or modifications thereof to a larger percentage of the labour force—at present about 40% are remunerated on a piece rate basis.

Raw Jute

The quality of the 1959/60 Indian jute crop was not up to the standard of 1958/59, but taking this into account, the quality of deliveries to the Mills was satisfactory.

For the first part of the 1959/60 jute season, prices while economic to both cultivators and the Mills ruled relatively steady at a reasonable level. In early 1960, however, growing apprehension developed that with a combined jute and mesta crop of between 53 and 55 lakh bales, there would be a shortage of raw material for the Mills even allowing for the substantial carry forward from the 1958/59 crop. Speculation also played its part and was greatly assisted by the prolonged lack of rain in April and May, which threatened to damage the 1960/61 crop seriously and a best could only mean that new crop deliveries would be delayed. The sorry outcome is only too well known—jute prices up to Rs. 58/- per maund, heavy losses incurred by those Mills short of jute and buyers of jute goods dismayed, not to say angered at the rapid rise in goods prices that they largely attributed to speculative activity. Looking back on the situation, one cannot but be thankful that rain did fall in early June enabling sowings to be resumed and that the monsoon did not arrive until there had been an adequate growth of the young plants. But for this belated kindness on the part of nature, the levels to which prices had been pushed by speculators could have been justified and more with the most serious implications for the industry's future. Another important factor in the return to relative sanity in the raw jute market was the decision of the I.J.M.A. to permit members to seal looms voluntarily—the hours to be made up after the 1st November, 1960—rather than be held to ransom for the supplies of jute needed to keep their full complement of looms on a 9% sealed basis in operation.

Your Company has held substantial stocks of jute throughout the year and has, therefore, been relatively immune from the harsh experience that has befallen a considerable section of the industry—and with jute prices increased by over 100% while goods prices rose only 40%, the mills suffered to an even greater extent than overseas buyers.

What is important now is to devise a policy that will ensure that the unfortunate events of this year are not repeated—and with a crop subject to the vagaries of nature, this is not a simple task; in short, a policy or policies that will ensure India's self-sufficiency in jute not just for one year but for the foreseeable future. The importance of achieving success in this direction is indicated by the fact that whereas for many years past the volume of production has been dictated by the level of overseas demand, today the main determining factor is the availability of raw material.

In giving effect to such a policy, both the Governments of India and of the jute growing states and the industry have their parts to play. As regards the governmental side, real drive must be imparted to the distribution of fertilisers, improved seeds and the dissemination of knowledge of modern technique in jute growing and retting. Increased yield is basically the answer to the problem rather than increased acreage—and with it must come attention to an improvement in the colour and quality of Indian jute, which today compares unfavourably in both respects with the produce of its neighbour and rival country.

As regards the industry, it must ensure that prices do not in future fall to a level that makes the growing of jute unattractive to the cultivator—that this did occur in 1958/59 was one major factor responsible for the poor crop in 1959/60. It is therefore, satisfactory that the I.J.M.A. has agreed with the Government of India that it will put into effect a buffer stock scheme in the event of a surplus of jute occurring—this should give the cultivators a confidence that has been lacking to date, while the Mills should be happy to have in a buffer stock a protection against the vagaries of nature and all that is implied in living from hand to mouth for supplies of raw material.

The industry can also play a part in supplementing governmental work in spreading "know-how" among the cultivators and it is understood this is now under active consideration. This in a sense would be no new development as some 30 years ago the I.J.M.A. did commendable work in distributing jute seed from Bihar to cultivators elsewhere and bore the cost of so doing.

However successful the above policy proves, and successful it must be, India will still require to import cuttings from Pakistan until it has a crop, quality and quantity wise, large enough for it to develop a really sizeable export trade in raw jute.

In concluding this subject, I would express the opinion that while far from the only problem facing the industry, the real key to the Indian Jute Mills future lies in ensuring adequate supplies of raw material of the right quality at a price economic to both growers and the Mills—and that with the minimum of delay.

Jute Goods

The policy of selling up and down the market in small lots was continued during the year with generally satisfactory results.

Long term prospects for the industry depend on maintaining jute goods characteristics of being a cheap packaging medium and combining with this steadiness of prices. This has unfortunately not proved to be the case during 1960 due to the raw jute situation, but must continue to be the objective of the industry. A well regulated futures market can assist towards this end, but while the East India Jute & Hessian Exchange has done its best to curb undue speculation, it cannot be said to have fully succeeded and such success as had been achieved has been partly at the expense of making the Exchange valueless to genuine shippers as a hedging medium.

Despite the recent rise in prices, prospects for jute goods over the Third Five Year Plan period appear promising, giving adequate supplies of raw material. Competition from Pakistan with its increasing loomage is possibly the main single danger, but bulk handling and paper sacks must not be ignored. Against this must be set the growth of world population and trade, the increased demand within India for jute goods and the increased diversification of lines of production, particularly of industrial uses for jute products. Fortunately, the outlook of those responsible for operating the industry has greatly changed in recent years and there is today a welcome keenness to venture into new markets and develop specialised products for new uses.

Given, therefore, the prerequisite of cheap and steady prices, there is no need for pessimism as to the future.

Quality of goods is another important factor and while this is within the competence of the Mills as regards certain points, improved quality raw material would do more than anything else to remove complaints on this score. As regards your Mills, a start has been made on introducing statistical quality control and this will be steadily extended.

Subsidiary Company—The Standard Jute Co. Ltd.

While continuing with the manufacture of jute goods on a limited scale, this Company has now accumulated fairly substantial liquid funds, as will be seen from the Balance Sheet attached to the parent company's accounts. These funds are at present being loaned to Kinnison at a rate advantageous to both companies, but it is hoped to utilise them in due course in such a manner as to secure a diversification of interests beyond the jute mill industry, which in essence is speculative in nature.

Staff

This statement would not be complete without a tribute to the staff both at the Mills and in Head Office. The jute mill industry in India has never been an easy life with the long hours involved, the high temperature at certain times of the year and for those in positions of major responsibility the strains inherent in being compelled on occasion to take speculative views of the market, in jute and/or goods. To this has been added in recent years the introduction of treble shift operation with all that is involved, the heavy work of modernisation and the introduction of new lines of production. Shareholders do, therefore, I feel owe a real debt of gratitude for the successful results to all concerned.

Money

THE CALCUTTA MONEY MARKET

SMALL INCREASE IN ADVANCES

Wednesday, 14th September.

THERE was a slight increase in the general level of advances in the Calcutta money market during the past week. This was mainly due to a large rise in engineering credit. Accommodation on account of jute and sugar decreased, and there was also a slight fall in advances against foodgrains. Cotton credit was virtually unchanged Conditions in the interbank market remained tight, with the call rate at 3¾ percent.

The exchange market was lifeless. The very few bills seen were mostly on account of gunny shipments, and remittance was on a negligible scale. Sterling remained firm.

BULLION WAS STEADY LAST WEEK ON STRONG upcountry support. Silver rose from the previous week's level of Rs. 223 to Rs. 223.75, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 223.25. The London and New York prices were 79¼d and 91⅜ cents.

Gold was firm on shortages of supplies, but the price reacted at the close on profit-taking. The price declined from Rs. 137 to Rs. 136.25. The sovereign at Rs. 89 showed a fall of 25nP.

DURING THE WEEK ENDED 9TH SEPTEMBER, Government of India Treasury bills for Rs. 19,84,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 13th September. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 were accepted in full, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day bills will be received at all centres up to the close of business on 19th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 14th September to 17th September at Rs. 99.381 percent, subject to the conditions that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 7th September to 10th September.

RISES OF RS 19.09 CRORES TO RS. 1,822.94 CRORES in the total note issue and of Rs. 12.89 crores to Rs. 1,808.22 crores in active notes were notable features of the return of the Reserve Bank of India for the week ended 9th September, 1960. The currency expansion was adjusted by increasing rupee securities of the paper currency reserve by Rs. 10 crores to Rs. 1,451.66 crores. In the Banking Department, deposits of the Central Government rose by Rs. 9.73 crores to Rs. 62.63 crores, but other Government accounts fell by Rs. 19.43 crores to Rs. 27.25 crores. Balances of commercial banks at Rs. 110.40 crores showed a decline of Rs. 5.28 crores. Balances held abroad gained Rs. 2.53 crores at Rs. 22.67 crores. Investments fell by Rs. 44.87 crores to Rs. 202.77 crores. Other loans and advances declined from Rs. 150.97 crores to Rs. 148.57 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10.07 crores (Rs. 10.10 crores). Ways and means advances were Rs. 29.18 crores, against Rs. 28.60 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 2nd September, 1960, shows a rise of Rs. 88 lakhs to Rs. 609.86 crores in total deposits. Investments in Government securities are down by Rs. 1.81 crores to Rs. 385.46 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances, including loans, cash credit, overdrafts, and bills discounted and purchased, have increased by Rs. 14.49 crores to Rs. 213.38 crores. Cash and balances are, in consequence, shown at Rs. 27.18 crores or Rs. 4.24 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 2nd September, 1960, shows Demand and Time liabilities at Rs. 796.09 crores (Rs. 22.96 crores on account of borrowings from banks) and Rs. 1,193.75 crores (Rs. 25.50 crores), compared with Rs. 801.55 crores (Rs. 20.96 crores) and Rs. 1,212.09 crores (Rs. 26.66 crores), respectively, in the previous week. Cash has increased by Rs. 2.54 crores to Rs. 48.04 crores, while balances with the Reserve Bank have decreased by Rs. 3.02 crores to Rs. 107.60 crores. There is a rise of Rs. 3.56 crores to Rs. 748.49 crores in investments. Advances and bills discounted at Rs. 1,129.25 crores show an increase of Rs. 25.61 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.8 percent and 56.7 percent, against 7.8 percent and 54.8 percent.

THE REVENUE REALISED FROM IMPORTANT DUTIABLE items in the first four months of the fiscal year 1960-61 amounted to Rs. 230.14 crores. Of this Rs. 57.16 crores were collected during July 1960 The figures for the first four months of the fiscal year 1959-60 were Rs. 199.84 crores and Rs. 51.40

Stocks and Shares

DOWNTREND IN SHARE PRICES CONTINUES

OPERATORS FEAR IMPORT CUTS AND CREDIT STRINGENCY

Wednesday Evening.

SEVERAL factors have combined to bring about the serious decline in share prices for the third consecutive week. In fact, the quotations of several shares have fallen to levels from where the post-Budget boom started in March this year. That a corrective decline to more realistic levels was long overdue, cannot be denied. But many blue chips have now become attractive on yield considerations. Operators hope, therefore, that no further credit curbs will be introduced by the Reserve Bank at this stage.

The implications of the foreign exchange crisis are now being widely realised. It is feared that many industries which depend on imported raw materials may have to cut production. This apart, stock market operations on overdraft account may be severely curtailed, as with the onset of the busy season, bank credit is likely to become costlier in the coming months. Furthermore, pressure from the World Bank and foreign monetary experts may force the authorities to accede to the view that there should be a departure from the low interest rate policy followed hitherto in this country. Thus, it is said, the prospect of an increase in Bank rate cannot be ruled out.

The Preference Shares (Regulation of Dividends) Bill has created some confusion. The matter is discussed in the leading article in this issue of *Capital*. The Calcutta Stock Exchange will be closed for the Puja holidays from 26th September to 5th October, both days inclusive. The duration of the new settlement period, which commences from tomorrow, will be three weeks instead of a fortnight. The heavy fall in prices since the last settlement, which was three weeks ago, has eliminated most of the weak holders. If there are no payments difficulties, it is hoped that the stock market will be stripped of it speculative fat, thereby improving the technical position.

The following table of representative share prices illustrates the trend of the market:

	Opening 7th September. Rs.	Closing 14th September Rs.
3% Conversion Loan 1986	84.25	73.85 (cum voucher)

Ellenbarrie Tea

The Ellenbarrie Tea Co. Ltd has earned a profit of Rs. 90,333 for the year ended December 1959. A dividend of 5 percent taxable, has been declared, against nil in the previous year. Revenue reserve absorbs Rs. 50,000 and development rebate reserve Rs. 9,000. After making various adjustments, there is a carry-forward of Rs. 22,233, against Rs. 5,900 brought in. A crop of 453,408 lbs was made, against 450,526 lbs. The average sale price was Rs. 2.07, against Rs. 1.75 a lb. Estimates for the current year provide for a crop of 203,210 lbs at a cost of Rs. 8.22 lakhs.

Indian Trade and General

The Indian Trade and General Insurance Co. Ltd has made a profit of Rs. 1.25 lakhs during the year ended December 1959, compared with Rs. 1.18 lakhs in the previous year. A dividend of Rs. 2 a share, less tax, has been declared. After making various adjustments, Rs. 28,760 is carried forward. The net premium in the fire department amounted to Rs. 37.44 lakhs (against Rs. 31.53 lakhs). The net premium in the marine department was Rs. 24.32 lakhs (against Rs. 23.26 lakhs), and in the miscellaneous department, it was Rs. 29.93 lakhs (against Rs. 28.36 lakhs).

Roopacherra Tea

After providing Rs. 52.518 (against Rs. 47,202) for depreciation, the profit of the Roopacherra Tea Co. Ltd has amounted to Rs. 18,293 for the year ended December 1959 against Rs. 24.352 in the previous year. The dividend has been passed over. After making various adjustments, there is a debit balance of Rs. 76.413, which is carried forward. The crop was 7.950 maunds. against 8,657 maunds. The average sale price was Rs. 2.09. against Rs. 1.93 a lb. Estimates for the 1960 season provide for a crop of 8,800 maunds at a cost of Rs. 11.33 lakhs.

Kettlewell Bullen

An ordinary dividend of 7 percent, subject to tax, has been declared by Kettlewell Bullen and Co. Ltd for the year ended December 1959, against 6 percent, tax-free, in the previous year. The profit has increased from Rs. 4.27 lakhs to Rs. 6.46 lakhs, after providing Rs. 3.85 lakhs (against Rs. 3.30 lakhs) for taxation and Rs. 15,400 (against Rs. 14,809) for depreciation. General reserve is allocated Rs. 2 lakhs (against Rs. 50.000). After making other adjustments, there is a carry-

The Sales Manager,
Messrs. Ashok Leyland Limited,
Bank of Mysore Buildings,
N.S.C. Bose Road,
MADRAS-1.
Dear Sir,
There are fifteen Ashok Leyland Comets in our fleet of 51 buses. The first Comet was put on the road on 1-1-53. We are operating them on mofussil routes and none has experienced any major breakdown so far.
Considering the mounting passenger traffic on the one hand and the indifferent road conditions on the other we unhesitatingly say that the 203" wheelbase Leyland chassis is ideally suited to tackle both the problems. It is the only chassis available in India with the largest seating capacity (we are able to seat 66 persons in all) and it withstands the severe running strain over long distances.
In fact the dependability and economy of the Ashok Leyland Comets are so convincing that we are thinking of replacing the existing vehicles with them.
Thanking you,
Yours faithfully,
For ARUPPUKOTTAI SRI JAYA VILAS (P) LTD.,
Managing Director.
We thought you might like to read this
This testimonial explains Leyland's enormous popularity in over 50 countries in the world. The exacting standards of precision combined with fine craftsmanship makes Leyland the most wanted vehicle today.

Bombay Market

WIDESPREAD FALLS IN SHARE PRICES

OPERATORS WORRIED ABOUT IMPORT CUTS

Wednesday Evening.

THE Bombay stock market was quiet during the past week, and share prices declined on a broad front due to tired bull liquidation. Operators were worried about the near-term outlook in view of the possibility of further import cuts. It was feared that the working of many industries might be affected by the shortage of imported raw materials and spare parts. The prospect of further taxation during the third five year plan period was bearish. A section of the market thought that the Government would adopt sterner measures to restrain speculation, especially in new shares. The stringency of credit called for caution.

Tata Steel declined to Rs. 155.50, and Indian Iron to Rs. 24.68 on pressure due to disappointment over the delay in the publication of the new retention prices for pig iron and steel. Engineering shares were shaded on balance in the absence of support. Tata Locomotive declined to Rs. 282 and Mukund Iron were quoted lower at Rs. 26. Premier Construction were sold at Rs. 343 and Larsen and Toubro lost at Rs. 46. Alcock Ashdown were freely offered at Rs. 293. Motor shares were quiet, and the decision to reserve the production of small cars for the public sector weakened sentiment. Hindustan Motor fell to Rs. 19.56 and Premier Automobile were available at Rs. 160.25.

The reduction in prices of cloth and yarn, combined with the shortage of raw cotton, induced pressure in textile shares. Bombay Dyeing were dealt in at Rs. 66.30 and Century were transacted at Rs. 481. Finlay came to hand at Rs. 358 and Standard fell sharply to Rs. 1,500 on the belief that the rights share issue might be delayed. Khatau were sold at Rs. 632.50. Simplex were taken at Rs. 172 and Kohinoor changed hands at Rs. 320. India United Ordinaries were freely available at Rs. 12.24 and Apollo were indicated at Rs. 1.28.

Prices of miscellaneous shares moved downwards in sympathy with the general trend. In the sugar group, Belapur lost at Rs. 375 and Walchandnagar Industries were quoted at Rs. 302.50. Phalton changed hands at Rs. 180. Among cement shares, Associated Cement declined to Rs. 145 and Digvijay were indicated at Rs. 175.50. Mining shares were quiet, and Shivrajpur Syndicate were offered at Rs. 72. Steamship company shares were quiet and buyers were difficult to locate. Scindia Steam were available at Rs. 14.72 and Great Eastern Shipping declined to Rs. 15.76. Fears of cuts in imports of raw materials induced selling in rayon shares. National Rayon fell to Rs. 511 and Gwalior Rayon were quoted at Rs. 42. Chemical shares declined, and Tata Chemical were offered at Rs. 19.48. Indian Dyestuff lost at Rs. 620, as did Polychem at Rs. 290. Voltas were sold at Rs. 277, but Tata Mills attracted support at Rs. 42.50 from knowledgeable quarters. Ceat Tyre were lowered to Rs. 245 and West Coast Paper were sold at Rs. 199.

Routine business was transacted in bank and insurance shares at lower rates. Among banks, Bank of India were available at Rs. 101 and Central Bank came to hand at Rs. 48. New India Assurance were quoted lower at Rs. 54 and Vulcan changed hands at Rs. 18.25.

There was a predominance of sellers in electricity supply shares. Ahmedabad Electric declined to Rs. 86.20 and Bombay Suburban were offered at Rs. 84. Tata Power were indicated at Rs. 1,027.50.

Madras Market

SHARE PRICES EASE AFTER STEADY START

INTERIM BUDGET RUMOURS DISTURB MARKET

Wednesday Evening.

THE Madras stock market showed mixed trends during the past week. Replacement buying helped lift share prices earlier, and operators were encouraged to do more business in view of the liberalisation of trading rules and regulations. Towards the close, sentiment deteriorated and share values declined on pressure. Rumours about the possibility of an interim Budget demoralised sentiment further. Investors were believed to have sold some of their holdings in order to obtain funds for subscribing to new issues. The offer of shares by Seshasayee Paper and Boards Ltd was reported to have attracted large subscriptions.

Central as well as State Government securities were sold at lower rates and buyers were fewer. Turnover in public utilities was limited. Karaikkal were sold at Rs. 9.75 and Kumbakonam were offered at Rs. 10. Business was done in South Madras at Rs. 10 and Vellore changed hands at Rs. 11.50.

Bank shares were quiet, and Indian Bank were quoted at Rs. 181. Indian Overseas were dealt in at Rs. 175 and Pandyan came to hand at Rs. 35.50.

Except for scattered interest in E.I.D. at Rs. 39.87, sugar shares eased. Deccan were done at Rs. 16.10 and Cauvery were dealt in at Rs. 146. Business passed in Mysore at Rs. 60.50 and Travancore were quoted at Rs. 12.25. United Breweries were quietly steady at Rs. 114.50.

Sentiment weakened in planting shares following the report that a wage board might soon be set up for the industry. Blue Mountain were dealt in at Rs. 5.22 and Cochin Malabar were taken at Rs. 7.45. Consolidated Coffee were done at Rs. 26.20 and Ouchterlony changed hands at Rs. 4.75. Periakaramalai were transacted at Rs. 3.60 and Nilgiri were taken at Rs. 7.80 on the payment of a taxable dividend of 8 percent. Business passed in Amalgamated at Rs. 13.85 on the declaration of a taxable dividend of 10 percent. Badra were done at Rs. 3.84 and Chembra were taken at Rs. 5. Cowcoody were quoted at Rs. 5.60 and Haileyburia were taken at Rs. 14.50 on the payment of a taxable dividend of 12½ percent. Kil Kotagiri were quietly steady at Rs. 5.67 and Mysore Coffee came to hand at Rs. 5.55. Peermade were bought at Rs. 23.63, but Twyford were sold at Rs. 11.65. United Nilgiri were offered at Rs. 22.60 and Teekoy were sold at Rs. 6.50.

Textile shares were generally quiet, but Bangalore Woollen attracted interest at Rs. 204, as did Buckingham at Rs. 205. South India Viscose were lowered to Rs. 131 on discouraging prospects concerning the rayon industry. Lakshmi were dealt in at Rs. 147 and Madura were sold at Rs. 34.25. Travancore Rayon were quiet at Rs. 36.75 and Anglo-French were sold at Rs. 121. Dhanalakshmi were quoted at Rs. 227 and Kothari were done at Rs. 12.65. Loyal were dealt in at Rs. 35.50 and Pankaja came to hand at Rs. 69. Vasanta were sold at Rs. 238.50 and Rangavilas were quoted at Rs. 43.

There was scattered interest in India Cement at Rs. 7.28 on hopes of a rights share issue. Prices of other miscellaneous shares declined in the absence of interest. Aluminium Industries were sold at Rs. 24.75 and business passed in Ashok Leyland at Rs. 8.85. Mysore Coffee Curing were placed at Rs. 15.50 on the payment of a taxable dividend of 14-2/7 percent. Enfield were done at Rs. 19.65 and F.A.C.T. were offered at Rs. 11.80. General Papers were transacted at Rs. 12.37 and Kirloskar Electric were quoted at Rs. 13.30. Mettur Chemical were quiet at Rs. 14.80 and Mysore Paper were sold at Rs. 30.12. Parry's Confectionery were dealt in at Rs. 4.70 and Singareni were quoted at Rs. 10.25. Spencer were indicated at Rs. 22.70 and Standard Motor were offered at Rs. 17.60. Textool came to hand at Rs. 190 and Tube Investment were bought at Rs. 375. Aspinwall were done at Rs. 6.70.

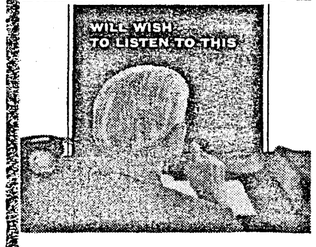
TOP MANAGEMENT



All over the world, Insurance protection for employees while in service and satisfactory benefits on retirement have become accepted features of sound business management. Life Insurance and retirement incomes are indeed being regarded as a primary need as essential as food, clothing and shelter.

Progressive employers in our country are realising that the introduction of such employee benefits results in improved employer-employee relations, higher efficiency and increased production. An ever-increasing number of prudent employers are adopting the Group Insurance and Superannuation Schemes—employee Insurance and retirement schemes streamlined and perfected by the Life Insurance Corporation of India.

Today top management wants to know what exactly these Schemes can do for them, what the financial implications are likely to be and what precisely is the nature and scope of the benefits offered.

Broadly, the Schemes fall into two categories:

Group Insurance Scheme: offers low cost Life Insurance coverage on a Group basis to employees and gives real security to their dependants.

Superannuation Scheme: provides a source of steady and life-long pension to employees after their retirement (with or without Life Insurance cover).

Some features common to both Schemes are:

1 They can be instituted without any extra cost to the employer
2 Employers' contributions to such Schemes are allowed as normal business expenses for the purpose of income tax
3 Most of the administrative work with regard to these Schemes is done by the Life Insurance Corporation of India

Special features of Group Schemes:

1 For groups of prescribed size, attractive reduction in premium rate is allowed
2 All the members are covered under a single Master Policy
3 Flexibility — the benefits can increase from year to year.

The Group and Superannuation Schemes create a new atmosphere of employee loyalty and a sense of gratitude. They operate like a voluntarily organised Social Security Insurance in miniature.

Please let our Group Representative come and explain the details to you without any obligation whatsoever.

There is no substitute for LIFE INSURANCE

Elgin—Rs. 18/12—18/37—18/12—18/12—(15/50).
Jayshree—Rs. 15/00—15/31—14/31—14/31—(10/19).

THE STOCK MARKET FALLS

INDUSTRIALS LOSE: RISE IN GILT-EDGED

London, 14th September.

CONSIDERABLY quieter conditions developed in the stock market after the recent sustained advance, and following a period of narrow irregular movements in prices, during which period the tone remained satisfactory, the market turned distinctly easier in most cases to record losses on the week. Interest continued to be centred on the industrial market where most of the recent buying had been concentrated. Losses of 1s or more were recorded in the leading industrials and there were some larger falls elsewhere. Good features were not lacking although these mainly reflected specific factors. Recent buyers of industrials continued for a while to ignore the adverse news, but after the week-end, a distinctly more cautious attitude became apparent and prices receded. The chief reasons for concern were the international situation, increasing nervousness concerning the future performance of Wall Street and the U.S. business outlook. The U.K.'s overseas trading position remained a restraining influence and the August trade figures were awaited with a good deal of interest, and it is possible that these figures which are due this week, will dictate the immediate course of the market. While the industrial market turned downwards, gilt-edged securities fully maintained their present firm tendency and further modest gains were recorded. Foreign bonds and rails attracted very little attention but there was a steady decline in dollar stocks in sympathy with Wall Street. Gold shares went ahead on Johannesburg, London and some Swiss buying, but subsequently reacted and the initial gains were lost. Coppers also reacted after early firmness. Tin shares were dull. Oil shares were dull and uncertain pending the outcome of the Baghdad conference of oil producing nations. Rubbers turned dull after initial firmness. Ceylon tea shares were easier, but Indian issues held steady.

The Money Market

Extremely difficult conditions were experienced in the money market during the past week with the official policy of making money scarce showing little sign of easing. There has been quite a heavy calling by the banks, and the discount houses have at times been compelled to pay a fairly high price for fresh accommodation, rates of 5¼ percent and 5⅝ percent being conceded on most days. The authorities assisted in various ways at intervals, but on Saturday, this was not forthcoming and there was the very unusual situation of three or four discount houses having to borrow direct from the Bank of England on full Bank rate terms. The demand for bills has been on a good scale, but discount houses have not always been in a position to meet it. In the weekly tender for Treasury bills, the market obtained a quota of 61 percent of the £290 million bills offered against 49 percent in the previous week.

Limited Trading in Vegetable Oils

Demand for linseed on U.K. account was mostly for the early shipment positions, but with freights difficult to arrange, the business last week was limited. In groundnuts, France was said to be enquiring for early shipments of Nigerian with Italy reported to be a good buyer of forward shipments. Demand for castorseed was quieter and prices declined. Most of the demand for linseed oil was for the earlier delivery position and prices gained, reflecting the firmer market in Rotterdam. Good business was effected in the Argentine oil. After the earlier recession in prices, demand for groundnut oil expanded, but the market finished lower on balance. In castor oil, only limited business was seen.

Free Philippine Peso

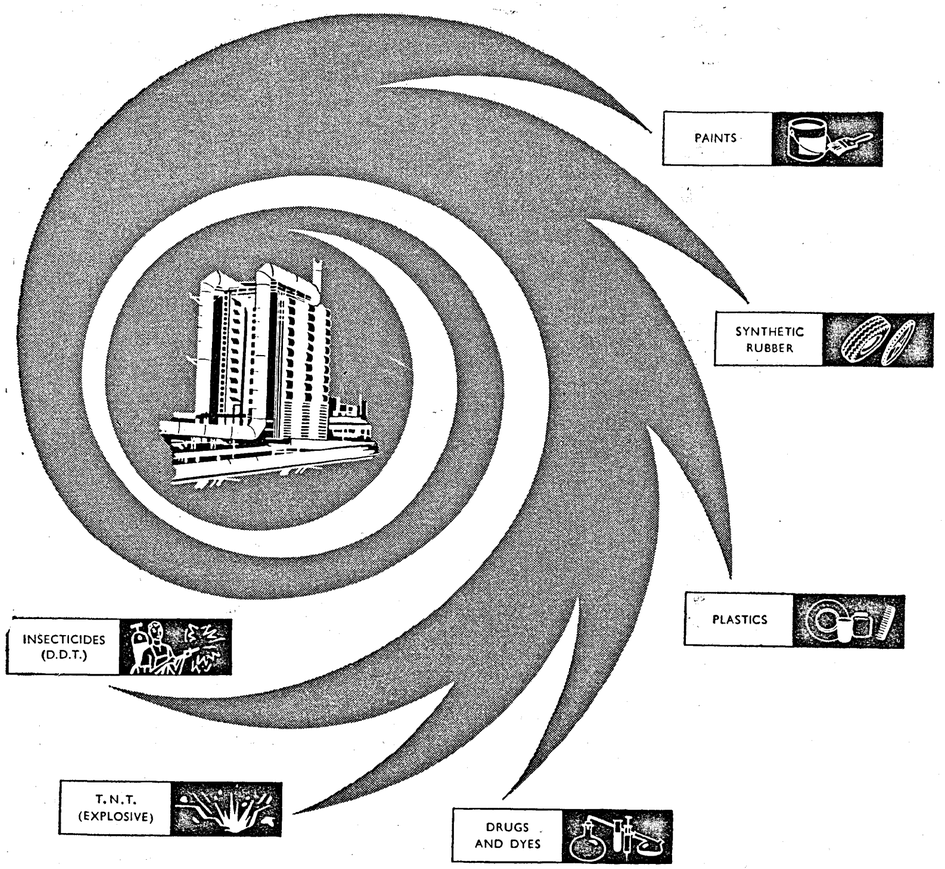
The Philippine Central Bank has announced the adoption of a new free market rate of 3 pesos to $(U.S.)1. The previous rate of 3.20 pesos to the dollar had been in effect since the Philippines enforced gradual decontrol last April. Local exporters were than allowed to convert 25 percent of their foreign exchange receipts at the old free market rate and 75 percent at the official rate of 2 pesos to $1. Under the new rulings, exporters can convert 30 percent of their foreign exchange receipts at the free market rate of 3 pesos to $1 and the rest at the official rate.

Railway Strike Affects U.S. Steel

The Brotherhood of Railroad Trainmen's strike against five U.S. Steel Corporation subsidiaries continued through the week-end. This was in spite of last Thursday night's agreement ending a separate 22-day A.F.L.-C.I.O. steelworkers' strike. Negotiations between the trainmen and the Company collapsed on Friday afternoon when a Brotherhood official walked out of a brief bargaining session. No further meetings have so far been held, although some sources close to the dispute are hopeful that a settlement would be reached this week. The strike, begun on 2nd September, has halted iron production and cut deeply into coke and steel output at U.S. Steel's Pittsburgh area mills as well as hampering operations at its Cleveland and Lorian Ohio units. Plants with some 14 million tons of annual steel-making capacity have curtailed output. However, several of the steel furnaces have been idle.

A SIDELINE OF STEEL

... By-product Coal Chemicals



A steel plant is a many-sided affair. Various iron and steel products are, of course, the main items and their effects on the economy are there for all to see. Billets from Bhilai, for instance, have already toned up an important industry in the country—the Re-rolling Mills.

But the steel plants at Rourkela, Bhilai and Durgapur have another way—somewhat indirect, but no less important—of influencing the country's economy. What may be called a sideline of steelworks, the By-product Plants attached to the coke ovens produce a variety of coal chemicals from the coke oven gas and crude coal tar obtained during the carbonisation of coal into coke. When they go into full production, these By-product Plants, set up at a cost of Rs. 20 crores, will be the biggest chemical production complex of their kind in the country.

Producing eleven different varieties of chemicals, worth Rs. 5 crores a year, the By-product Plants will stimulate a wide range of manufacturing activities. Benzene will, for instance, go into the manufacture of plastics and insecticides like DDT and will feed the proposed synthetic rubber project in Uttar Pradesh. Increased supply of creosote oil, now in short supply, will enable the Railways to treat more wooden sleepers for railway lines. The proposed intermediate dye project and the synthetic drug manfacturing projects are primarily based on by-product coal chemicals from Hindustan Steel. Other industries to be served by these chemicals are paints, disinfectants, aluminium smelting and explosives.

The coal chemicals from three plants :

BENZOL PRODUCTS	ESTIMATED ANNUAL OUTPUT
Benzol/Benzene	6 million gallons
Toluene	1½ million gallons
Xylene	500,000 gallons
Solvent Naphthas	300,000 gallons
TAR DISTILLATION PRODUCTS	
Naphthalene (Hot Pressed)	9,000 tons
Anthracene (Crude)	3,000 tons
Phenol—Pure	1,000 tons
Cresol—Pure	500 tons
Xylenol—Pure	150 tons
Creosote Oils	10,000 tons
Road Tars and Pitches	50/80,000 tons

New Delhi

CREDITOR COUNTRIES ASSESS INDIAN FOREIGN AID NEEDS

GOVERNMENT ANNOUNCES DECISIONS ON TYAGI COMMITTEE REPORT

(FROM OUR NEW DELHI CORRESPONDENT)

SIR DENIS RICKETT of the U.K. Treasury led the British delegation to the meeting of the chief creditor countries convened in Paris on 12th September by the World Bank for a preliminary discussion of financial aid for India's third five year plan. Mr. J. Burke-Knapp, vice-president of the Bank, guided the deliberations. Other Governments represented were those of Canada, West Germany, Japan and the United States. The I.M.F. and Italy sent observers. The participants reviewed the present economic and financial situation in India, considered the need for further external assistance during the current year, that is, the final year of the second plan, and made a preliminary assessment of the requirements of the third plan commencing in April 1961.

In his last Budget speech, the Finance Minister, Mr. Morarji Desai, indicated that India needed a further Rs. 140 crores to implement the "hard core" of the second five year plan. Since then, the foreign exchange position has taken a turn for the worse. To meet the acute shortfall in raw cotton supplies, in spite of the proposed import of 400,000 bales of cotton under P.L. 480 from the U.S.A., India may have to spend nearly Rs. 30 crores more on these imports during the current year. The total import bill, it is expected, will go up by Rs. 171 crores, of which nearly Rs. 128 crores worth of imports are covered by P.L. 480 agreements. Exports, particularly of tea, are likely to fall short of the target by Rs. 6 crores. In short, India needs nearly Rs. 60 crores immediately to meet the payments which are falling due.

Promised Aid

At the first meeting of the chief creditor nations, India was promised credits amounting to $950 million. The following table gives their breakdown (in million dollars) and the receipts by India up to 31st March, 1961 :

	Promised	Allocated
Canada	35	35
West Germany	123	123
Japan	10	10
U.K.	189	189
U.S.A.	291	165
World Bank	255	212
	903	734

As already reported, western aid given to India so far for the second five year plan falls short of the promised amount by nearly $200 million.

Simplifying Tax Collection Procedure

A simplified procedure for collecting tax from small assessees, retention of the Income Tax Appellate Tribunal and withdrawal of income tax exemption from certain types of charitable trusts, are among the major decisions taken by the Government on the report of the Direct Taxes Administration Enquiry Committee. A statement containing these decisions was placed last week on the table of the Lok Sabha by Mr. Morarji Desai, Finance Minister. There are, however, still some recommendations of the Committee on which decisions have not been reached.

The Committee, which was headed by Mr. Mahavir Tyagi, suggested that the Income Tax Department must make a bold departure in the assessment of small income cases. The income returned in such cases should be generally accepted after preliminary scrutiny and the assessment made under Section 23(1) of the Income Tax Act without calling the assessee to the tax office. A detailed examination of the accounts and other scrutiny will be made only once in four years. The new approach, the Committee said, would have a psychological effect and improve the relations between the Department and nearly 500,000 assessees. This recommendation has been accepted by the Government in principle. The actual procedure to be adopted is being examined.

It has been decided to amend the Income Tax Act on the following lines, as suggested by the Tyagi Committee :

(a) A charitable trust carrying on business which is not in the course of carrying out the primary object of the trust itself should not be entitled to exemption under Section 4(3)(i) of the Income Tax Act and this should be made clear in the substantive part of the section itself.

(b) Where a trust deed contains a clause that the funds of the trust should also be used for the relations and family members of the donor, or that in carrying out the charitable objects of the trust priority should be given to such relations or members, exemption should not be available under Section 4(3)(i) of the Act ;

(c) As for the other incomes of the trust, they will be exempt if the conditions under Section 4(3)(i) of the Act are fulfilled, but if more than 25 percent of such income of a trust is set apart for being spent subsequently for charitable purposes, the amount set apart in excess of 25 percent should be taxed in the year in which it is so set apart.

While accepting that the Appellate Tribunal is a necessary and suitable organisation and should continue, the Government has rejected the Committee's proposal that it should be transferred from the control of the Central Board of Revenue to that of the Law Ministry.

Suggestions not Accepted

A number of suggestions of the committee have not found favour with the Government. For example, the former's proposal that the abetment of evasion of tax should be made punishable under the tax laws has been accepted, subject to the modification that for the present it is not necessary to provide for prosecution for this offence.

The following are the other important recommendations of the Committee which have been accepted by the Government :

(a) The new scheme of taxation of companies and their shareholders, as laid down in the Finance Act, 1959, is sufficiently simple and easily workable. In order to avoid any difficulty to the shareholders, the Income Tax Department should issue exemption certificates.

(b) The Department should be provided with power to grant immunity from penal proceedings or prosecutions to those who, having abetted an offence, come forward to give evidence against an assessee.

(c) The Wealth Tax and Expenditure Tax Acts should be amended to provide both for a system of provisional assessments on the lines of Section 23B of the Income Tax Act and a system of self-assessment under which assessees would pay tax along with the returns concerning their wealth or expenditure declared in them.

(d) On a question of law involved in an appeal before the Appellate Tribunal, if varying judgments are given by different High Courts, the President of the Tribunal may, on a request made to him, refer the question directly to the Supreme Court for a decision.

The Government has also accepted in principle the various measures for arousing public conscience against tax evasion. These include steps to convince the taxpayers that the money collected through taxes is not spent wastefully, a special drive against evasion through the co-operation of leaders in various walks of life, and the various chambers of commerce, professional bodies such as bar and medical associations and education of the people through the Press, radio and films about the real objects of collecting direct taxes.

U.S. Law on Sugar Imports

The existing U.S. law regulating imports of sugar is due to expire on 31st March, 1961. Congress will shortly examine legislative proposals to replace the Act. India may get a quota under the new law. In any case, there is no possibility of India exporting sugar to the U.S.A. until 1st April, 1961. As already reported, there is also a technical difficulty. The U.S.A. generally imports brown sugar, which is refined in the country itself. As far as the Indian consumer is concerned, the Food and Agriculture Minister, Mr. S. K. Patil, does not hold out any hope of cheaper sugar in the near future. He contends that any lowering of sugar price would affect its production. A spokesman of the Planning Commission has even described sugar as a luxury. It may be added that sugar is an integral part of the cost of living index and any rise in the price of sugar necessarily has an impact on it.

Aid Promised and Received

The following statement shows the amount of aid promised to India and used by her so far :

	Amount authorised (In crores of rupees)
P.L. 480	
Total rupee funds which will accrue on account of all the P.L. 480 agreements signed so far	1,088.13
Amount which will be available to the Government of India for financing mutually agreed projects which promote balanced economic development :	
as loans	506.63
as grants	364.82
(Out of the sum earmarked for loans and grants to the Government of India, an amount of Rs. 26.19 crores is reserved for being re-lent to private enterprise in India through banking channels)	
Amount earmarked for being lent, subject to the approval of the Government of India, by the Export-Import Bank, Washington, to U.S. business firms and their Indian affiliates	76.19
For other U.S. uses	140.49
Amounts disbursed to the Government of India so far :	
For the Refinance Corporation (loan)	5.00
For river valley projects (loan)	45.09
For malaria eradication (grant)	0.29
P.L. 665	
Amount available under P.L. 665 aid	32.23
Amount disbursed so far for the Rihand valley development (loan)	12.00

(The P.L. 665 funds are available to the Government of India as loans and grants for mutually agreed development projects.)

	Amount authorised	Utilisation up to end of 1959-60

Total	281.94	186.00

Investment Centre

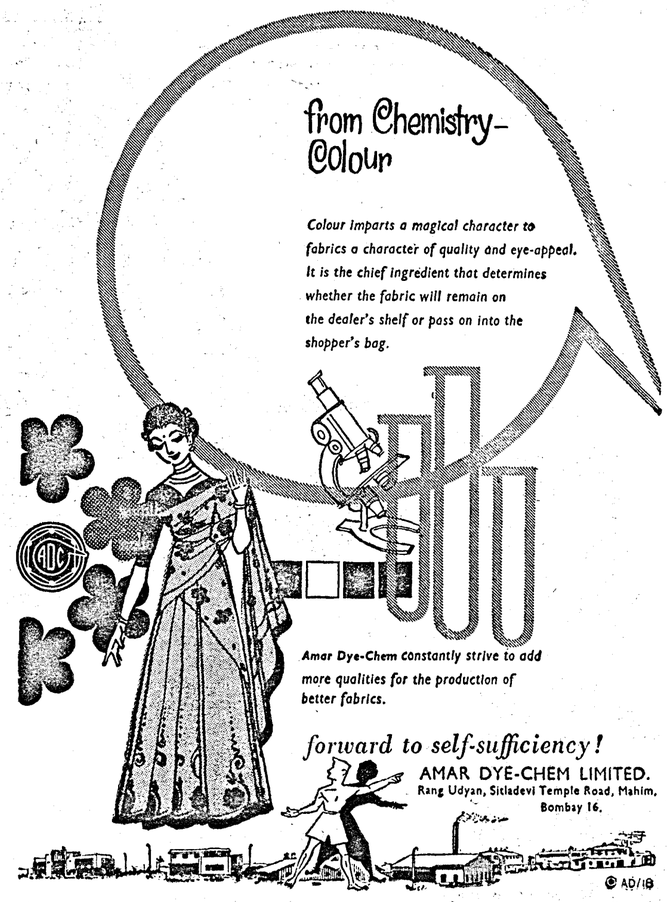
It has been decided to set up the Indian Investment Centre as a registered society with a governing body which will consist mainly of non-officials connected with banking and industry. On 20th June, two project agreements were signed between the Government of India and the U.S. Technical Co-operation Mission to assist in the establishment and initial operation of the Centre.

Gratuity for Government Employees

Gratuity received by employees in the private sector is taxable in their hands under the Indian Income Tax Act under the head "income from salaries". However, if the gratuity relates to past services for a period of not less than five years, certain relief is granted to the assessee under the provisions of Section 60(2) of the Indian Income Tax Act, and the tax is charged at a concessional rate. Payments of death-*cum*-retirement gratuity received after 16th April, 1950, by employees of the Central Government under the revised pension rules and also gratuity received by the employees of a State Government under a scheme similar to that of the revised pension rules are exempt from income tax. The death-*cum*-retirement gratuity given by the Government is part of an integrated pension scheme which is based on the assumption that the gratuity will not be taxable. The law has specifically been amended in order to secure this result.

Discrimination against India

The following Commonwealth countries are imposing higher import duties on Indian goods than those imposed on British goods in some cases, in pursuance of bilateral agreements involving the exchange of tariff preferences between them and the United Kingdom: (1) Australia; (2) the Federation of Rhodesia and Nysaland; (3) Pakistan; and (4) South Africa.



U.S. Price for Indian Ferro-manganese

The price obtained for Indian ferro-manganese in the U.S.A. is $205 a long ton. f.o.b. railcars U.S. port. Wheat will be bought at prices applicable to the purchase of P.L. 480 wheat. About 24,089 tons of ferro-manganese has been exported. The import of wheat is being arranged.

Report on Heavy Machine Tools Plant

Messrs Technoexport of Czechoslovakia submitted to the Indian Government a preliminary project study for the proposed heavy machine tools plant towards the end of March 1960, visualising a production programme of five families of machines consisting of 17 individual items of such machines. The project study was considered by a committee of technical experts appointed by the Government, and an agreed production programme visualising seven categories of machines and 22 individual items was drawn up in consultation with the Czech experts within a month's time. The preparation of the detailed project report for the plant, it is proposed, will be entrusted to Technoexport.

Methanol Project

On the basis of the reports of a technical committee and Russian experts submitted in 1956, it was decided that the existing and anticipated demand for methanol in the country would justify the installation of one more unit and operating it for half the year for the production of methanol. In response to an invitation to some firms of technical consultants, Messrs Basf of Germany, the original owners of the methanol plant, furnished a project report early in 1960, after getting the equipment inspected by their technicians in March-April 1959. While the report contained an estimate of the probable cost of the additional equipment required to install a complete methanol plant, it did not contain a quotation for the execution of the work as a turn-key job. Messrs Basf have just informed the Government that it will not be possible for them to make such an offer. The matter will have to be examined again for further action.

Power Project Contract for U.K. Firm

A British firm is now working on a contract in connection with the electricity power scheme in Harduaganj, Aligarh district, Uttar Pradesh. The firm—Samuel Jellyman and Company Ltd—is making special valves, water draining gates, and hydraulic ash-handling equipment to cope with the process of the disposal of ash from coal-fired boilers. The Indian contract is expected to be completed by the end of this month.

Reappointment of Managing Agents

The Government of India has clarified that where the proposals for the reappointment of the managing agents have been rejected by it or where the companies did not appoint their managing agents before 15th August, 1960, as required under the Companies Act, the terms of office of such managing agents would be deemed to have expired on 15th August, 1960. In such cases, the boards of directors of the companies concerned will carry on or arrange to carry on the affairs of the company, until such time as the managing agents are either appointed again or other alternative forms of management have been adopted. Where, however, it is proposed to appoint a director-in-charge, or managing or whole-time director or a director as manager or a committee of directors, the Central Government's approval will be required.

Minimum Wages for Farm Labour

The Central Ministry of Labour can boast of equality in legislation with the most advanced countries of the world, as far as industrial labour is concerned. It has prescribed norms for a need-based wage for industrial labour, which now embraces "white collar" workers as well. As far as agricultural labour is concerned, the Ministry's attitude was explained to the Lok Sabha by its Deputy Minister, Mr. Abid Ali, in the following words: "The attainment of a living wage is a gradual process, the first step being the securing of a minimum wage. Under the Minimum Wages Act, all State Governments (except the State of Jammu and Kashmir, to which the Act has not yet been made applicable) have already fixed minimum wages in agriculture, either for a part of the State or for the entire State." In 1956-57, the estimated number of agricultural labourers was 33.2 million, composed of 18.5 million men, 12.1 million women and 2.6 million children. According to the second agricultural labour enquiry, the average *per capita* income of agricultural labourers in 1956-57 was Rs. 99.4. Figures for 1959-60 are not available.

Marine Diesel Engine Project

The marine diesel engine project has been included under category D in the draft third five year plan. Category D includes those projects on which preparatory work is less advanced and for which no foreign credits have yet been arranged. No definite decision has yet been taken about the inclusion in the plan of projects falling in this category. They will be worked out in fuller detail and may, in due course, be considered for inclusion in the plan in substitution of some other projects, or even otherwise, if the necessary external and internal resources can be made available and other circumstances are favourable.

Loan to Joint Steamer Companies

It has been decided in principle to give a loan of Rs. 2 crores to the Joint Steamer Companies, subject to certain conditions, to enable them to rehabilitate their obsolete fleet for the maintenance of essential I.W.T. services on the Calcutta-Assam route.

U.K. Expert to Advise on River Project

Captain J. R. Davies, R.N.R. (retired) of Britain will advise the Government of India on the navigational requirements of the Sethusamudram project. This project includes the construction of a canal to connect the Palk Strait with the Gulf of Mannar, and the development of Tuticorin in south India as a deep-water port. The Captain is the Deputy Principal Officer, Marine Survey Office, Ministry of Transport, London District. His visit to India has been arranged through the Technical Co-operation Scheme of the Colombo Plan.

Proposed Import of Spanish Merinos

India is to import Spanish merinos for experimental breeding in the Himalayan region for improving the wool yield of indigenous sheep. Spanish sheep possess smaller bodies and lighter fleeces than the highly developed sheep of Australia as they are raised under poorer conditions. The Australian sheep have not yielded very good results in the past and it is believed that Spanish merinos may thrive better in the Himalayan region. Fat-tailed Gulzoi and Arabi sheep of Afghanistan will be imported to improve the meat yield of Indian sheep. Initial trials will start during the third five year plan and larger imports will follow if satisfactory results are achieved.

Systematised wool marketing features prominently in the sheep and wool development programme for the northern region of India during the third five year plan. Improved methods of shearing, grading, clearing and baling will be introduced in Rajasthan, Punjab, north Gujarat and Uttar Pradesh. This is expected to bring better returns to the growers for their produce. Co-operative organisations for primary wool producers will be encouraged through loans. These organisations will open warehouses where shearing and grading facilities will be provided. Raw wool exports from India during the first quarter of 1960 fell by 2.4 percent, compared with the corresponding quarter of 1959. Exports of woollen and carpet rugs rose by 3,000 square yards. Imports of raw wool rose by 93.4 percent over January-March 1959, the main suppliers being Australia and the U.K. This sudden rise signifies that either the existing combing capacity of Indian mills is being used to a much greater extent than in the past, or that the trend to make more woollen yarn and less worsted continues. Probably a combination of these two is the correct explanation.

Wool top imports recorded a fall of 9 percent during the quarter. These were, however, up by 30.7 percent over the previous quarter. Output of woollen yarn in the first quarter of 1960 at 3.92 million lbs was 21 percent more than a year ago, but that of worsted yarn fell by 16 percent to 2.55 million lbs. The total yarn output was 12 percent less. At 3.47 million linear yards, the woollen and worsted fabrics output was 12.6 percent more than in the corresponding quarter of last year.

BIRDS
cover a
wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

U.K. MANUFACTURERS PLAN BIGGER CAPITAL EXPENDITURE

FURTHER INCREASE FORECAST FOR NEXT YEAR

(FROM OUR LONDON CORRESPONDENT)

A RECORD increase in industrial spending on new factories, plant and equipment is now indicated for 1960. The U.K. Board of Trade has just issued new estimates which show that manufacturing companies have revised their spending plans sharply upwards for the current year. They now expect to spend 25 percent more in 1960 than in 1959, when capital expenditure by manufacturers was 8 percent down on the previous year. The original forecast made by companies just over a year ago suggested a slight reduction in capital expenditure this year. Towards the end of the year, the U.K. Board of Trade made another enquiry and found that manufacturers expected to spend about 14 percent more in 1960 than in 1959. This has now been increased to 25 percent. Moreover, early forecasts suggest that manufacturing industry will spend another 20 percent more in 1961 than in 1960. The largest contributions to these increases are being made by the steel and motor-car industries, paper and printing, and the chemical industry.

Capital expenditure of "other industries and services," which is spent largely on new shops and office buildings, construction and communication equipment, etcetera, had been rising steadily for the past five years, but in the summer of 1959 these trades forecast no further rise in 1960. Then in the winter they had changed their mood and predicted a rise of 20 percent in 1960 capital outlays. Now the estimate has been moderated to a 16-percent rise in 1960, and no further increase is at present expected in 1961. These revised estimates mean that manufacturers are buying this year over £1,000 million worth of new buildings, plant and equipment, and vehicles—an increase of £200 million which is largely concentrated on plant and equipment. Orders for 1961 are expected to show a similar rise, so it is fairly certain that a state of high activity in the construction and capital goods industries is assured for more than another year. The concern which was occasioned by the credit squeeze, as far as its effect on capital spending was concerned, was obviously unjustified, and the investment market may be expected to take full advantage of the optimistic view which industrialists appear to take of the immediate future.

Wage Rates Rising

It is evident that after a year of comparative stability, a significant upward trend in wage rates has appeared in the first half of 1960. In June, the *Guardian* wage index stood at 178.1 for men and 178.2 for women. In the case of the former, this represents an increase of 4.6 points in 12 months, of which 3.6 has occurred since the turn of the year. Another important change shown over the same period is that women are now outstripping men in improvements in their wage rates. The rise in the wage index understates the increase in actual earnings, which have been influenced considerably by reductions in the working week and the consequent increase in overtime working. Even so, the change is substantial when compared with the rise of only 1.5 points in the retail price index published by the U.K. Ministry of Labour during the 12 months ended June. Expressed as percentages, the rises were 2.1 percent for wages and 1.5 percent for retail prices. The disparity will probably be further emphasised by the final outcome of the current widespread demand for further wage increases and/or a shorter working week.

Increase in Reserves

The rise of £27 million (to an end-month total of £1,097 million) in the gold reserves in August is £10 million smaller than the improvement in July, but it is £17 million more than the gain in August last year, and against the frightening loss of £81 million in August 1957, it looks impressive. Indeed the figure of £27 million understates the true position: last month Britain repaid £25 million to the International Monetary Fund, and the Bank of England is believed not to have credited the whole of August's gain to that month. The I.M.F. payment included £20 million due in equal instalments during the next four months. The amount still outstanding of the sum drawn in December 1956 (after the Suez affair) is £50 million, and it is conceivable that an early opportunity may be taken to clear this debt and its unfortunate overtones.

So far, in the first two months of the worst quarter sterling has ever had, the reserves have risen by £64 million and, in addition, £45 million of debt has been repaid. This performance is not due to outstanding progress in exports but to an inflow of short-term foreign capital from abroad that has more than made up for gold lost through an unbalance between exports and imports. The reserves are held up at their end-August total of £1,097 million by money which may flow out as quickly as it came in. There is no reason for general rejoicing, but some cause for satisfaction, because in crossing an awkward gap in the year sterling has been saved from falling into an autumn crisis. From October, trade payments normally travel Britain's way and by then, the reserves will be in a better position to withstand withdrawals of short-term capital from London if they occur. The powerful attraction is the high return available in the U.K. on Treasury bills and other short-dated investments of first-class standing. It has been augmented too by the relatively good yields offered by U.K. industrial equities.

Hire-purchase Sales Drop Halted

The decline in hire-purchase sales in May and June, which followed the introduction of restrictions at the end of April, was halted in July, the U.K. Board of Trade has announced. Credit sales by household goods shops recovered in July, and they were 6 percent above the June level—much the same increase as between June and July in 1958 and 1959. New business done by finance houses (mainly for motor-cars) was at about the same level in July as in June but this was still about 17 percent less than it was in July 1959, while household goods sales on credit were nearly 30 percent down on the year.

What this means is that the shock of the April restrictions is wearing off and people are able to produce more cash. In July, only 26 percent of all household goods sales was on credit, against 34 percent a year ago. The total hire-purchase and other instalment debt owed to household goods shops has slowly declined since May, but the debt owed to finance houses has continued to rise, so the total outstanding instalment debt at the end of July stood at the record figure of £971 million —an increase of over 30 percent.

Motor-vehicle Sales

Hire-purchase activity in the motor-car trades held up well in August, in the face of the usual holiday influences. According to *Hire-purchase Information*, total contracts for the month was 130,471—a decline of 12,711 on the July figure, but 4,780 more than the total for August last year. Contracts for new motor-cars amounted to 10,458, against 14,807 motor-cars in July and 6,848 motor-cars in August 1959. Deals in new commercial vehicles followed a similar pattern, but the total of used car transactions, at 65,286, was almost unchanged in July and about 9 percent up on the corresponding month of last year. Instalment sales of new motor-cycles and scooters were well down in August 1959, at 10,112, compared with 15,716, although contracts for used machines, at 22,361, showed little change. Deals in new caravans were also lower, at 1,408, against 1,598 in July and 1,549 in August 1959, although the weather may have been a factor here.

Consumer Spending

Final retail sales figures for July show that credit difficulties have not stopped the upward trend in consumer spending. In the first seven months of the year, the value of retail sales had been running steadily about 4 percent higher than in 1959, and reports from traders indicate that this trend has continued in August. The more expensive durable goods are certainly still selling much less than a year ago, but radio and furniture sales are recovering. Meanwhile, more is being spent on food, clothing, and foot-wear, although the bad weather has had an adverse effect.

Zinc Stockpile Sales

Continuing their programme of disposals from the British stockpile, the U.K. Board of Trade is offering for sale by tender about 1,600 tons of zinc for delivery and pricing between October and March 1961. About 1,000 tons consist of special high-grade and 600 tons of high-grade zinc. At the beginning of March this year, it was announced that the Board had about 53,000 tons of zinc for disposal, of which 41,000 tons would be offered back to the original suppliers or their agents. This left about 12,000 tons available for sale by open tender. About 3,100 tons have already been disposed of, so it appears that under present arrangements there will be about 7,300 tons left for sale by tender after March. Of the original 53,000 tons total, 35,000 tons was high-grade zinc, 12,750 tons special high-grade and 5,250 tons good ordinary brand.

In arranging its disposal, the U.K. Board of Trade has been anxious not to disrupt the market and has been maintaining contact with other countries. From its high point of £95 10s early this year, the market price of spot zinc has receded to just below £86 a ton, but is still above the average of any of the last three years.

You can bank on The Bank of Baroda for really first class service!

We offer complete banking service:

Current Accounts • Savings Bank and Recurring Deposit Accounts • Fixed Deposits • Loan, Overdraft and Cash Credit Accounts • Discount of Bills and Hundis • Safe Custody • Foreign Bills and Letters of Credit • Travellers Cheques and Cash Certificates • Demand Drafts • Telegraphic Transfers • Executor and Trusteeship • Safe Deposit Lockers

Offices—at home and abroad:

Jute

NO SIGN OF PRE-PUJA FALL IN JUTE PRICES

TRADE CONSIDERS OFFICIAL CROP ESTIMATES TOO HIGH

A CRITICAL period concerning raw material supplies for the Indian jute industry is fast approaching. In September and October, the bulk of the jute crop is harvested and comes on the market. In these two months, the selling pressure is usually the greatest, particularly since the Puja holidays cause growers, middlemen, etcetera, normally to prefer cash in hand to stocks in the godowns. It is reasonable, therefore, to expect a substantial fall in the price of raw jute at this time of year. But the fall has not yet taken place, and the fact has caused considerable comment in jute circles. So it is interesting to examine the developments leading up to this state of affairs. Initially, of course, the weather was the main cause of the sharp rise; the prolonged drought delayed sowings, making the crop a month late. Mills were not unduly perturbed about this, as the overall stock position was such as to ensure no major closures. Nevertheless, they parried for a time by voluntarily sealing looms to conserve stocks. Prices still did not fall, and mills delayed purchases, hoping for lower prices, but eventually they had to follow the market. There has been so little buying, however, compared with previous years that their stocks must be running low. It is generally thought that they must buy fair quantities in the near future to allow for the lapse of time before arrival of the jute at its destination. With this in mind, sellers are holding back supplies and keeping prices high.

Crop Estimates

The main bullish features, however, are the crop estimates for the current season. The official crop figures are notorious for their inaccuracy, and the trade places little faith in them. In normal circumstances, their effect is limited, as the carry-over from the previous season is usually large enough to counteract speculation. The carryover into the current season, however, is extremely small, so the crop estimates have taken on a new significance. Considerable scepticism has again been expressed about the official estimates for the 1960-61 season, and there is a general belief that the forecast has been prepared for purposes of propaganda. As against an official estimate of 6.2 million bales for the Indian crop, many observers believe that a figure of 5.5 million or 5.7 million bales may be nearer the mark. It is also suggested that the Pakistani crop may not be as large as was originally thought, in spite of the withdrawal of restrictions in the border areas. With a smaller crop from India, the balance will have to be made up by imports from Pakistan; it is ironical that the industry is falling back to a position of dependence on Pakistan, from which it so recently emerged.

Sacking Firm

The rise in jute prices have lifted the jute goods market. Mills have not been slow to take advantage of this position, and fair sales of gunnies have been made at high prices. Sacking goods have shown the largest rise, and are now yielding a modest profit. For this reason, many mills have been transferring looms from hessian to sacking manufacture. This is clear from the I.J.M.A. gunny production figures for August. They show that output has risen by 7,400 tons, compared with July, but 5,900 tons of the increase is in sacking. Much of the rise can be accounted for by the larger number of working hours; but the most significant factor is that the proportion of sacking has increased from 48.7 percent to 51.3 percent—an increase of 2.6 percent, which is almost equal to the percentage fall in hessian production. Furthermore, it is reported that during the latter half of August, many mills unsealed some of the looms which were voluntarily sealed from 6th June and put them on sacking production.

Demand for Cuttings

The increase in the percentage of sacking produced will, of course, increase the consumption of jute considerably, particularly of cuttings. This makes the question of importing cuttings from Pakistan more important now than it was a month ago. They are required not only to supplement mills' supplies of sacking quality jute, but as a buffer against further rises in the price of loose jute. Calcutta mills are still waiting for licences to import the cuttings promised by the Government; the delay, it is believed, has arisen in the office of the Joint Chief Controller of Imports. Mills cannot make commitments subject to the issue of these licences, as under the present ordinance in Pakistan, sellers cannot register E.P.C.s without furnishing the licence number. Meanwhile, cuttings prices continue to advance. Pakistani mills are keen buyers of cuttings for their own consumption. High prices have been paid for the limited quantity available, and they are keen to cover their own requirements lest the increased demand from India causes a shortage. Cuttings prices in India have now advanced to about Rs. 130 a bale, but there are no sellers even at this price. It is probable that the demand for loose jute may increase if the Indian crop turns out to be as small as some predict. Considering Pakistan's other overseas commitments, this may create a squeeze.

The Calcutta jute goods market has been dull during the past week, and most price movements have been in sympathy with the fibre section. Overseas buyers have shown little interest, and local operators are waiting for the publication of the U.S. burlap stock and consumption figures for August. Towards the close, the market has revived with the announcement of a Government of India tender for the supply of 19,000 bales of B Twills for November shipment. Heavy goods have moved up sharply, and speculative activity has increased.

I.J.M.A. Production Figures

The total production of mills reporting to the I.J.M.A. during August 1960 amounted to 94,200 tons. This was made up of 35,100 tons of hessians (37.2 percent), 48,300 tons of sacking (51.3 percent) and 10,800 tons of other goods (11.5 percent). Compared with the previous month, total production increased by 7,400 tons—by 5,900 tons in sacking, 800 tons in hessians and 700 tons in other goods. An increase in working hours from 200 in July to 208 in August was partly responsible for the increase in production, but the transfer of looms to sacking manufacture and the unsealing of some looms which had been voluntarily sealed earlier also had some effect on the figures. In August 1959, the total production during a 200.5-hour working month was 86,900 tons. This was made up of 37,600 tons of hessians (43.2 percent), 41,900 tons of sacking (48.2 percent), and 7,400 tons of other goods (8.6 percent).

Raw Jute Consumption

The estimated consumption of raw jute by mills reporting to the I.J.M.A. during August 1960 was 521,000 bales. The total estimated consumption during July and August 1960 is now 1,011,500 bales. The consumption was 502,000 bales in August 1959, and 1,020,000 bales in July and August 1959.

THE JUTE MARKETS

There was a fair amount of activity in the futures market during the past week, business becoming brisk towards the close. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 7th September to 13th September, were as follows:

	Hessians 40in. 10oz. Nov. 1960	Sacking B Twills Nov 1960	Raw Jute Assam Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds	Rs a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	51.07	46.70	125.95	98.38	36.72
Highest	51.44	47.04	126.95	98.43	36.74
Lowest	50.76	46.42	124.55	96.45	36.00
Closing	51.32	46.94	126.65	97.15	36.26

Manufactured Goods: The market was quiet at the opening last Thursday, as both mill and overseas interest was poor. B Twill rates were slightly lower at Rs. 140.50 for September shipment, and Rs. 127.50 for January-March. Hessians dropped to Rs. 48.10 for September and Rs. 46.85 for forward shipment. In response to lower advices from the raw jute section, goods prices soon declined. The news of a substantial decrease in stocks of jute goods during August failed to arrest the fall. Heavy goods dropped by Rs. 1.50 and hessians by 70nP. Conditions were dull on the following day, but an increase in speculative activity soon caused most of the previous losses to be made up, so by Saturday morning the market opened fully steady. Over the week-end and on Monday, prices continued to rise on reports of tenders from the Sudan. The approach of the mid-month "alongside" date caused a spate of covering business, which by Tuesday raised ready B Twills to Rs. 140.75. On top of this, the Government of India invited tenders for 19,000 bales of B Twills for November shipment. The wave of speculative activity then forced prices up to new high levels.

The market was very steady on Wednesday morning and opening quotations were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	36.40	36.20	35.00	35.60
40in. 8oz.	39.50	39.00	38.50	38.10
40in. 10oz.	48.60	48.30	48.05	47.50
B Twills	142.00	136.25	132.75	130.00
Heavy Cees (Plain)	137.75	136.00	132.50	130.00
A Twills	169.00	164.50	160.00	156.00
Liverpools	159.00	154.00	150.50	147.50
Cornsacks	143.00	138.75	135.25	131.75

Raw Jute: There was far more interest in the fibre market during the past week. Mills followed the rise in prices because many of them had no option but to replenish stocks. Sellers and buyers agreed that the current rates were too high, and many sellers were losing heavily on deliveries against cheaper contracts. Upcountry markets remained steady in spite of the increase in imports, because demand also rose sharply. Good business was done in Daissee for fairly quick delivery; although arrivals were increasing the demand was very heavy. In the Sheoraphuli districts, imports rose to about 1,000 maunds a day.

Opening quotations of Assam jute were based on Rs. 41 a maund basis Bottoms, but this was reduced by 50nP in the early stages, when interest was slight. After the week-end, rates began to advance, and prices rose by Re. 1 a maund to Rs. 41.50. A fair amount of business was done on the rise. The Cossipore market remained firm throughout because of steady buying by mill agents. Wagon arrivals showed a slight improvement, and 465 wagons were reported. This was still below the average for the time of year.

Business was done in Assam and Northern at Rs. 40.50 for September-October shipment. Ready bills of lading fetched Rs. 41.50 to Rs. 42. Daissee and selected Daissee passed at Rs. 41 to Rs. 41.50, while selected Murshidabad Tossa was reported at Rs. 39.50 to Rs. 40.

The market was very steady on Wednesday morning and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	111.25	41.50	Sept.-Oct.
Northern	109.75	41.00	"
Purnea Desal	107.25	40.00	"
Daissee Selected	112.50	42.00	Oct.-Nov
Assam Tossa	112.50	42.00	"
Mesta:			
Assam-Northern	101.75	38.00	"
Daissee	100.50	37.50	"
Desal	101.75	38.00	"
Jungli	99.25	37.00	"
Pakistani N. C.	130 a bale		

IMPROVING JUTE YIELDS AND QUALITY

I.J.M.A. MEASURES TO HELP RAISE FARMING STANDARDS

THE Indian Jute Mills Association is embarking on a jute development programme to supplement the work at present being done in this direction by the Central and State Governments. While the general trend of jute production in India has been upward, this has been due more to an extension of the area sown than to improvements in the average yield an acre, which is still very low. There is considerable scope for both increasing the acreage yield and improving the quality of the jute fibre grown in India, and it is of vital importance to the manufacturing industry, as well as being in the wider interests of the national economy, that these twin objectives should be achieved as soon as possible.

Recent experience has shown how vulnerable the industry's position is when the demand for the raw material outstrips the supply in India. It is essential, therefore, that urgent steps be taken to create conditions under which the growers will earn more from the land put under jute, through rationalisation of their methods of production, and the manufacturing industry will have guaranteed supplies of good quality jute at reasonable and stable prices. For this purpose, the I.J.M.A. pro-

I.J.M.A. STOCK FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total stocks of jute goods at the end of August as follows:

Description	31st August, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st July, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (—) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st August, 1959 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)
	11.50	30.9	11.73	31.7	—23	—0.8	9.03	24.8
Hessian cloth and bag	(10,51.13)	(31.4)	(10,72.98)	(32.3)	(—21,85)	(—0.9)	(8,25.39)	(25.2)
	10.26	43.0	10.97	46.5	—71	—3.5	10.94	45.7
Sacking cloth and bag	(9,38.31)	(43.6)	(10,03.01)	(47.2)	(—64.70)	(—2.6)	(10,00.34)	(46.5)
		9.4		9.9		—0.5		10.7
Others		(9.5)		(10.0)		(—0.4)		(10.3)
Grand Total		83.3		89.1		—4.8		81.2
(000 Tons/Metric Tons)		(84.6)		(89.5)		(—4.9)		(82.5)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhoy with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

poses as a first step to set up demonstration blocks in selected districts in West Bengal to educate the cultivators in the use of modern farming techniques and demonstrate what these can achieve. This pilot project will be extended to other States in due course. At the same time, surveys of seed and fertiliser requirements will be carried out by the Association in each of the jute-growing States and the machinery for their distribution reviewed. Consideration will also be given to a seed multiplication project for the complete saturation of all the jute-growing areas over the next few years.

Retting Process

Another important aspect from the point of view of fibre quality is the retting process, and the Association proposes to undertake a survey of the retting facilities in each area with a view to bringing these up to the required standard where necessary. It will clearly take some time for these various measures to come to fruition and yield practical results, but the Association is convinced that the expenditure which will be incurred will be a very sound investment in the long term, although it can only be complementary to and not in substitution of similar work by Governmental agencies.

As for the current season's crop, it is as yet too early to make a firm estimate of the quantity of jute which will be available, but it is certain that the Government of India's recent policy decision concerning the import of cuttings from Pakistan will provide a welcome addition to the indigenous production and the question of applying for licences for the import of long jute also is now being considered. It is, however, desirable that it should be realised in all quarters that the industry does not intend to be held to ransom for its raw material supplies this year in the manner that occurred towards the end of last season. As soon as the crop can be estimated with reasonable accuracy, the Association will decide to what extent it is necessary to adjust production to ensure that the available raw material will be adequate for the industry's needs with a reasonable carryover into next season. In the meantime, the disturbances in Assam and the floods in Orissa have delayed the arrival of jute in Calcutta and it may be necessary to extend the voluntary sealing scheme for a further month, i.e., up to 30th November, 1960.

Inflated Raw Material Prices

With goods prices at present levels, it may appear to overseas buyers illogical to talk in terms of reducing the level of production. While, however, it is admitted that good shipment figures for August and September, coupled with low stocks of jute goods, are partly responsible for the recent rise in prices, it is generally felt that the main reason for the current high level of prices is the inflated price of the raw material due to fears that supplies will be inadequate for the industry's requirements. It is, therefore, to be hoped that a reduction in raw jute prices will eventually lead to a reduction in the price of finished goods, and the prime objective of the Association at this juncture is to take all steps necessary to ensure that raw jute prices are brought down with the maximum speed to a reasonable and economic level. The one certain means of attaining this objective is to ensure that the percentage of looms sealed is such as to avoid any danger of the raw material supplies being inadequate for the industry's needs. This policy is, however, essentially short-term and the only real solution of the industry's current difficulties is for India to become fully self-sufficient in raw jute on a long-term basis.

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods for August as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4,790 tons (4,867 metric tons)
	1,56.9 lakh yds. (1,43,47 thousand metres)
	84.9 lakh nos.
(b) Sacking	47,430 tons (48,191 metric tons)
	11,13.9 lakh yds. (10,18,58 thousand metres)
	5,20.7 lakh nos.
2. Gunny Cloth	
(a) Hessian	30,353 tons (30,840 metric tons)
	11,57.4 lakh yds. (10,58,20 thousand metres)
(b) Sacking	840 tons (853 metric tons)
	19.8 lakh yds. (18,07 thousand metres)
3. Other Manufactures	10,749 tons (10,922 metric tons)
4. Total Production	
(All kinds)	94,162 tons (95,673 metric tons)

Summary

	(00,000 yds and 000 metres)			(000 tons and metric tons)		
	Aug. '60	July '60	Aug. '59	Aug. '60	July '60	Aug. '59
Hessian	13.14	12,77	14,24	35.1	34.3	37.6
	(12,01.77)	(11.67.45)	(15,01,92)	(35.7)	(34.9)	(38.2)
Sacking	11.34	9.87	9,80	48.3	42.4	41.9
	(10.36.65)	(9,02,23)	(8,96,24)	(49.0)	(43.1)	(42.6)
Others				10.8	10.1	7.4
				(10.9)	(10.3)	(7.5)
Grand Total				94.2	86.8	86.9
				(95.6)	(88.3)	(88.3)
Hours worked				208.0	200.0*	200.5

* This was the number of hours scheduled to be worked and does not take into account the hours lost due to the general strikes on 14th and 16th July.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

THE FOREIGN JUTE MARKETS

FIRM TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market is firm, and Pakistani shippers are maintaining their prices at a high level. The feeling is gaining ground in Dundee that fibre values are unlikely to be cheaper for some time to come. It looks as if there will be a shortage of jute to meet the demand this season, especially in India, which will compel the mills there to purchase from Pakistan. The Government of the latter has stated that there will be ample supplies to meet all requirements during this season. Imports from the upcountry markets in Pakistan are not, however, large for the time of year, and growers are apparently withholding their jute in order to force up prices. This tendency is against the industry's interests, and dealers have already seen the unfortunate effects of too high rates for the raw material.

Mill Firsts are now quoted at £124 lowest, Mill Lightnings £119, Mill Hearts £115 and Grade Hearts £108 10s for September-October shipment, with Grade Tossa-2/3 at from £124, and fours £118, also Continental Tossa-2/3 from £114, October-November, c.i.f. U.K.-Continent. Dundee spinners showed a good deal of interest in fibre during the past week, but not so much as some of the Continental firms which are reported to have secured fair quantities.

It is rather strange that one should see a marked weakness in prices for Calcutta hessians and sackings at a time when fibre prices are firm. This apart, stock figures of the mills show a fall of 800 tons of hessians and 3,500 tons of sackings at the end of August, with "others" 500 tons down.

Quotations for 40in. 10oz. hessians are 72s and for 7½oz. 54s 9d September, 72s and 54s 6d October, 71s 3d and 54s November-December and 71s and 53s 6d January-March, with B Twills at 212s 3d, 205s 3d, 195s 9d and 193s 6d for the respective positions of shipment, all f.o.b., Calcutta.

There were plenty of enquiries going around for yarns and cloth in Dundee, and a quiet steady business was done. But buyers were reluctant to go any distance ahead for delivery. Prices were firmly maintained all around.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES RISE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE Narayanganj brokers' strike, as expected, was short-lived. They eventually accepted the reduced local brokerage rates and came back to work. The settlement was reached just in time when a considerable amount of business was about to be done, especially by the mills. Some 50,000 bales of cuttings have changed hands during the past week at prices ranging up to Rs. 107 a bale which represents a substantial increase. The mills have also bought large quantities of kutcha bales at higher prices. Simultaneously, the Narayanganj loose jute market has firmed up considerably and has risen by as much as Rs. 2 a maund over the previous week. A combination of steady prices and heavy rains has reduced arrival in the upcountry centres, but it is expected that as soon as the weather improves, imports will increase again.

Unfortunately, wet jute is again appearing in most markets, as it always does when prices rise suddenly. One wonders whether it will ever be possible to stamp out this malpractice. Business is reported in the Narayanganj market at Rs. 230 for Export Firsts, Rs. 220 for Export Lightnings and Rs. 210 for Export Hearts, with sellers reserved. Overseas buyers have shown more interest and have been obliged to pay considerably higher prices. E.P.C. rates have shot up to £125 for Mill Firsts, £120 for Export Firsts, £116 for Export Lightnings and £109 for Export Hearts. Tossa marks have similarly been raised in price. Overseas buyers continue to try to depress the market by buying only from hand to mouth for early shipment, but it is unlikely that they will succeed in doing that.

E.P.C. figures for the last fortnight of August were slightly larger than before at 242,302 bales. India was the biggest buyer with 79,165 bales, a part of which, it is reported, was for ready shipment, since some of the July contracts have not yet been shipped. The U. K. and Egypt bought 24,000 bales each, Belgium 20,000 bales and South Africa 17,640 bales, while West Germany and France bought 12,000 and 11,000 bales, respectively. Although most countries are slightly behind last season in their purchases, it is noteworthy that Canada and the United States have so far this season bought much less than last year, the latter having bought only 11 percent of last year's purchases and Canada next to nothing. This is rather in line with the fall in their burlap consumption, but it is probable that good stocking of jute by American mills last year is the reason for the delay.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.7 percent to 124.9 during the week ended 27th August, 1960, compared with 124.0 for the earlier week. The index was lower by 0.4 percent when compared with the corresponding week of the previous month, but was higher by 7.1 percent than that of a year ago. The monthly average for August 1960 worked out to 125 against 124.7 for July 1960 and 117.1 for August 1959. Higher prices of bananas in Tiruchirapalli (+16%), onions in Calcutta (+11%), ghee in Kaithal (+9%), milk (+8%) and rice in Nagpur and wheat in Dhanduka (+6% each), eggs (+5%), groundnut oil, fish and cardamoms (+3% each), masur and cummin (+2% each) and gram, oranges, cashewnuts, gur, tea for internal consumption and coffee (+1% each) raised the index for Food Articles by 0.9 percent to 123.5, although the prices of wheat in Kanpur (−17%) and in Rajkot (−6%), onions (−15%) and bananas in Nagpur (−8%), ghee in Madras (−5%), cloves (−4%), gingelly oil (−3%), maize, potatoes, mustard oil and meat (−2% each), bajra, barley, arhar, mung and urad (−1% each) showed declines. The index for Tobacco receded by 0.6 percent to 102.4 due to a fall in the prices of raw tobacco (−1%). The Fuel, Power, Light and Lubricants group index worked out to 119.4, against 119.5 (revised) for the earlier week. The prices of tanning materials (galnuts) (+9%), raw jute (+6%) and groundnuts (+1%) moved up, while those of lac (−3%), cottonseed (−2%) and raw cotton and castorseed (−1% each) declined, and the index for Industrial Raw Materials advanced by 1.0 percent to 137.2, compared with 135.9 (revised) for the previous week. The index for Intermediate Products receded by 0.6 percent to 129.2 as a result of a decline in the prices of zinc (−4%), rayon yarn (−2%) and linseed oil, brass and tin (−1% each). The index for Finished Products rose by 0.4 percent to 121.6, against 121.1 for the earlier week. Items which showed variations during the week were: jute manufactures (+3%), general chemicals (+1%), bricks and tiles (−2%) and glass (−1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

*=Estimated R=Revised

ACREAGE AND OUTPUT OF TOBACCO RISE

The all-India final estimate of tobacco for 1959-60 puts the current year's area and production at 934,000 acres and 281,000 tons, respectively, against the partially revised estimates of 897,000 acres and 261,000 tons for 1958-59, according to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture. This shows an increase of 37,000 acres or 4.1 percent in area and 20,000 tons or 7.7 percent in production, compared with the previous year. The yield of tobacco an acre obtained during 1959-60 works out to 674 lbs, compared with 652 lbs last year, thereby showing an increase of 3.4 percent. The overall increase in area during the current season has been shared mainly by Andhra Pradesh, Maharashtra and Gujarat and to a lesser extent by Bihar and Madras. It has generally been attributed to favourable climatic conditions during the sowing time. The increase in production is shared mainly by Andhra Pradesh and Maharashtra and Gujarat, and is attributed partly to an increase in acreage and partly to the increased yield an acre as a result of favourable climatic conditions during the growing period.

GAP BETWEEN RUBBER OUTPUT AND CONSUMPTION GROWING

PRODUCERS CRITICISE OFFICIAL DECISION NOT TO RAISE PRICE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IN spite of the increase in production of raw rubber in India, the gap between production and consumption of the commodity is widening steadily. The country produced 9,858 metric tons of raw rubber during the first six months of the current year, the period for which the latest official figures are available. Consumption during this period amounted to 21,753 tons, so the gap has had to be covered through imports. Manufacturers are optimistic of getting more supplies in the future, mainly because of two favourable factors. First, the rubber price in Singapore is moving down to the Indian level. Secondly, Indian dealers and growers are willing to part with their stocks for the statutory price following the Central Government's recent decision not to enhance the existing price. A large stock was apparently held by speculaters who anticipated an upward revision of the statutory price.

The disappointment of rubber growers on account of the Government's reluctance to enhance the statutory price of raw rubber has been great, so they think that the drive for the expansion of rubber cultivation will suffer a major setback in the future, especially in Kerala where rubber producers' profit margins have been further reduced by a five-fold increase in the land tax. The State, incidentally, is the producer of 90 percent of India's rubber.

World Coffee Surplus

The world coffee surplus is growing alarmingly. The 1960 crop is estimated at 76 million bags, against the requirement of less than 44 million bags. The problem created by overproduction has grown worse this year. The International Coffee Agreement, which was recently renewed for another term ending 30th September, 1961, provides only for the control of exports from producing countries which are signatories to the Agreement. But it does nothing to curb production—the key to effective regulation of the crop. Brazil, the largest world producer, is expected to harvest during the current season, which began in July, about 42 million bags, against 18 million bags during the corresponding period in 1956-57. Furthermore, against an increase of 69 percent in the world output in the four-year period from 1956, Brazil's production moved up by 136 percent. The country's share in the world coffee crop advanced from 40 percent four years ago to 56 percent at present. The Indian crop, which is to be harvested from November next, is estimated at about 850,000 bags. Out of this, about 560,000 bags might be consumed locally, leaving an exportable surplus of 290,000 bags.

Disease Affects Crop

A disease called "die back" has been reported from coffee estates in Mysore. Arabica coffee plants in all parts of the State are reported to have been affected. The crop has seriously suffered in some estates. Branches carrying crops have been affected by the disease. It can be noticed by the uneven development of berries which indicate the likelihood of a serious fall in the crop, especially in the blossom estimates. The Robusta coffee plants, too, have been attacked, but not to the same extent as Arabica plants. The disease, planters say, may reduce the size of the next season's coffee crop, although the Research Department of the Coffee Board is trying to check it.

Pepper Forward Market for Bombay

The Central Government has turned down the representations made by the Kerala Government against the opening of a second forward market for pepper in Bombay. It has told the State Government that a new pepper market will prove useful since the export houses in Bombay account for as much as 40 percent of total exports from India. Besides, a new market is necessary due to the emergence of Russia and other east European countries as important buyers of the commodity. The Centre has, however, assured the Kerala Government that the market will be opened on a "trial basis" for one year and that it will review the situation if the Kerala trade is adversely affected. Political parties as well as commercial interests in Kerala expressed their opposition to the opening of a second market in Bombay on the ground that it would adversely affect Kerala's interests since the State enjoys a near-monopoly in the production and distribution of pepper in India. The State Government made two representations urging the Central Government to desist from establishing the new forward market in Bombay.

Important Distribution Centre

The Central Government has stated in its latest reply that the importance of Bombay as a distribution centre has increased since the first forward market was established in Cochin in 1957. The arrival of pepper in that centre has doubled from 3,000 tons in 1953-54 to about 6,000 tons in 1958-59. Besides, Bombay accounts for roughly 50 percent of the internal trade in the commodity. The Bombay dealers, it is pointed out, have not been able to make effective use of the Cochin market. They have also felt the absence of hedging facilities acutely, so the Central Government has upheld the view that it is necessary to establish a second forward market in Bombay. The Kerala Government is, however, taking up the matter again with the Centre, it is officially stated.

CALCUTTA TEA AUCTIONS IN AUGUST

PRICES RISE TOWARDS CLOSE

FIVE sales were held in August. The demand was fairly good except for the second sale when there was only a fair volume of enquiry, and there were a number of withdrawals. Offerings amounted to about 249,394 packages, say Messrs Carritt Moran and Co. Private Ltd, in their monthly tea market review. In the first three sales, the peak C.T.C. teas were offered, and they were strongly competed for at fully firm and, at times, considerably dearer rates; thereafter with quality they declined sharply and were generally easier. Medium C.T.C. teas were an irregular feature and were generally easier, while in the second sale they registered a greater decline but thereafter there was a better enquiry. Bright liquoring orthodox teas sold well and were firm to dearer, but the plainer liquoring types registered a decline in each sale and the bulk of withdrawals comprised this category. Plain brokens and fannings declined steadily, but in the final sale came in for better enquiry and were firm and sometimes dearer. Legg-cut teas during the earlier sales were easier. Thereafter, they were firm and occasionally dearer, depending on quality. Flavoury Darjeelings, which were on offer during the early part of the month, were well supported and sold well but the plainer liquoring types registered a decline. Whole leaf grades sold well in the first sale and were firm to dearer. But in the next three sales, there was less enquiry, and they were easier to buy, although there was once again better enquiry, in the last sale of the month. Tippy teas met with a fair demand.

(Inclusive of zonal excise duty)

The Internal Market

Less than 1,500 packages of internal leaf teas were offered in August. Demand in all the sales was good, and prices generally registered a rise. Less than 90,000 packages of dusts were offered in the five sales held during the month. In all auctions, a good general demand prevailed, although the prices during the first four sales for orthodox exportable descriptions were generally slightly lower, except for the smaller and brighter liquoring kinds which sold well. In the final sale, however, prices for all descriptions registered a marked increase, and orthodox descriptions sold at 25nP to 40nP above the rates ruling in the earlier auctions. Legg-cut Dooars dusts met with active support in all the sales, and prices registered a progressive advance, with the final quotations closing at up to 50nP above the rates ruling during the previous month. Plainer medium C.T.C. kinds were irregular, and in the early sales prices were generally slightly lower; in the final sale, however, increased demand led to a rise by fully 30nP.

UNDER SECRETARY TO GOVT. 2 OCT 1960 PUBLIC DEPARTMENT

Quotations

		1960-61 A kilo Rs. nP	1959-60 A kilo Rs. nP
Sale No. 6	Clean Plain Dust ...	4.46	3.85
Sale No. 7	„ „ „ ...	4.42	3.98
Sale No. 8	„ „ „ ...	4.50	4.33
Sale No. 9	„ „ „ ...	4.50	4.16
Sale No. 10	„ „ „ ...	4.85	4.09

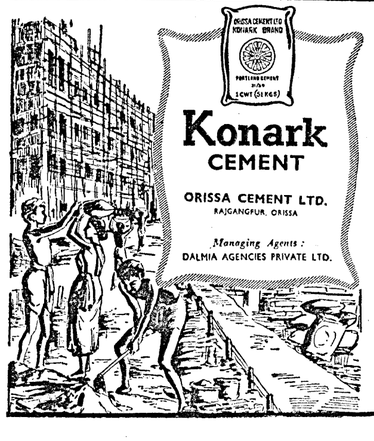
(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 9 totalled 329,683 chests at an average price of Rs. 6.03, compared with 436,010 chests at an average price of Rs. 5.62 for the same period of the previous season. Internal sales at 1,889 chests of leaf and 114,290 chests of dust (average prices Rs. 4.26 and Rs. 5.03) go against 3,750 chests and 145,405 chests, respectively (average prices Rs. 3.79 and Rs. 4.39) of the corresponding period of the previous season.

The estimated north Indian crop to the end of July 1960 was 78.31 million kilograms, compared with 92.21 million kilograms to the same date of last year. The average figure at this date for the three years 1957-59 was 89.98 million kilograms.

A declining tendency was noticeable in the Export quota market throughout the month. The quotation during the first week was 1½nP a kilogram at which rate business was done. During the second week, however, an easier trend became noticeable, and the price eased to 1nP, and in the final weeks it registered a further decline. Sellers quoted ½nP towards the close with buyers quoting ¼nP at which rate some business was transacted.

Arrivals (in chests) in Calcutta warehouses during the period 24th July, 1960 to 23rd August, 1960, with the corresponding period of the previous year in parentheses were: by steamer 292,861 (488,307), by rail 114,208 (146,306) and by air 10,308 (9,078), making a total of 417,377 (643,691) chests. From the beginning of the season 1st April, 1960 to 23rd July, 1960, arrivals have been: by steamer 604,252 (911,247), by rail 235,125 (306,631) and by air 21,899 (26,437), making a total of 861,276 (1,244,315) chests.



Build a Better To-morrow

Improving living conditions In the rapid expansion of the country is now the primary need—all these call for better schools, better hospitals, better roads and better homes. KONARK Cement is playing a leading role in building this better to-morrow.

USING WATER RESOURCES FOR IRRIGATION

POWER GENERATION FALLS SHORT OF TARGET

IN his presidential address to the Seventh Irrigation and Power Seminar, held last week in Bangalore, the Central Minister for Irrigation and Power, Hafiz Mohammed Ibrahim, said that the target for irrigation in the third plan was 41 million acre feet. The available river water resources of the country were estimated in 1950 at 1,356 million acre feet. Because of physiographical conditions, it is unlikely that more than 450 million acre feet can be used for irrigation. Some 76 million acre feet had been utilised until 1951, and it is expected that by the end of the second plan, this would increase to 119 million acre feet.

The major and medium irrigation schemes included in the first and the second plan were estimated to cost about Rs. 1,400 crores; the actual expenditure up to the end of the second plan would probably be about Rs. 780 crores. Out of the balance of Rs. 620 crores required to complete these schemes, Rs. 470 crores were likely to be provided during the third plan period. In addition, it is proposed to provide Rs. 80 crores for flood control, anti-waterlogging and anti-sea erosion, and Rs. 100 crores for new schemes.

The stress laid on industrialisation during the second plan, the Minister said, has led to a considerable increase in the demand for power. At the beginning, the total installed generating capacity was 3.4 million kilowatts and an increase to 6.9 million kilowatts was contemplated during the five years. But it is now expected that mainly due to foreign exchange difficulties, the actual capacity would rise to 5.8 million kilowatts only. The third plan contemplates an increase to 11.8 million kilowatts. The total outlay on power schemes in the public sector during the first two plans, it is expected, will come to Rs. 670 crores. The third plan proposes an outlay of Rs. 925 crores in the public sector.

Inter-State Rivers

The various schemes in the irrigation and power sector, the Minister observed, were consuming a substantial portion of the resources. The major rivers flowed from one State to another, and the most obvious sites for multi-purpose river valley projects have already been fixed. Future projects would need careful planning, and the Government is examining whether the problems that might have to be faced cannot be adequately tackled by the river boards under the River Boards Act, 1955, or by adjudication, as provided in the Inter State Water Disputes Act, 1955. Instances might also arise where, because of some regional or local considerations, the most suitable sites might, sometimes, not find favour with some States. Such situations have to be avoided. It would obviously not be wise for each State Government to try and separately develop its own projects within its own boundaries, when a combined project could economically serve the interests of more than one State Government.

Dealing with the first item on the agenda for the seminar, namely, the apportionment of cost and allotment of reservoir storage space for hydel power, irrigation, navigation and flood control schemes in multi-purpose projects, the Minister said that during the third plan, it is expected that there would be many projects of a multi-purpose and inter-State character. It was, therefore, essential that an appropriate system of apportioning the cost and the storage capacity of a reservoir should be developed. On the second subject—establishment of super grids and organisational procedure for their control—the Minister said that the location of the major power projects and their transmission lines depended on physical features and boundaries of the State concerned, but the time had come when efforts have to be made to use the power generated, for maximum benefit, irrespective of district or State boundaries. The question of the operation of supergrids would have to be studied in detail.

WORLD RUBBER CONSUMPTION EXCEEDS PRODUCTION

Preliminary figures issued by the International Rubber Study Group show that natural rubber consumption was still running ahead of production in June this year. In the case of synthetic rubber, the position was the reverse. The world output of natural rubber during the month was estimated at 160,000 tons, and consumption at 177,500 tons (including estimated imports into Russia of 15,250 tons and into communist China of 13,500 tons). Production for the first half of 1960 was estimated at 950,000 tons, and consumption at 1,015,000 tons. Natural rubber stocks at the end of June were placed at 677,500 tons—a fall of 7,500 tons since the beginning of the year.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 12, held on 12th and 14th September, there was a good general demand for the 73,375 chests on offer at the Export auction, with buyers following quality closely. Bright liquoring Assam B.O.P.'s met with satisfactory support, but the plainer kinds, together with Dooars, B.O.P.'s and O.Fgs., were easier. Medium B.P.'s were irregular, while the Fannings in this category generally showed a decline. Plain Brokens and Fannings were fully firm and generally dearer, while Legg-cut teas met with good demand and were also dearer. The poorer whole leaf grades were a strong feature and appreciated in price, but the better kinds were again easier. Best and medium C.T.C. teas were again very irregular and prices generally declined by 50nP to Re. 1. The poorer sorts were well supported, but irregular and usually easier. Darjeelings met with fair demand at lower prices, while tippy teas were again irregular and generally easier.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.30 to 5.55	1.91 to 1.98
Plain B.P.	4.40 to 4.55	1.84 to 1.86
Plain Fannings	4.45 to 4.75	2.00 to 2.10
Medium B.P.	4.80 to 5.30	1.94 to 2.04
Medium Fannings	5.10 to 5.40	2.16 to 2.26
Best Assam C.T.C. B.P.	8.00 to 9.00	2.50 to 2.70
Best Assam C.T.C. Fgs.	8.00 to 9.50	2.70 to 3.10

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 21,133 chests of Dusts on offer met with a strong general demand. Orthodox teas, suitable for export, sold at slightly easier rates but the smaller bright liquoring descriptions met with keen competition and were firm to dearer. Best liquoring C.T.C. Dusts were irregular with buyers following quality closely. Medium C.T.C. teas, however, were generally sold at slightly lower rates except for the brighter teas which were firm and sometimes dearer. Legg-cut teas met with a keen enquiry with prices advancing by 15nP or 20nP a kilo.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.65 to 4.80	1.90 to 2.00
Medium Assam Dust	4.80 to 5.40	1.88 to 1.96
Medium Assam C.T.C. Dust	6.00 to 6.25	2.00 to 2.05
Best Assam C.T.C. Dust	6.40 to 6.80	2.50 to 2.70

(Quotations are inclusive of excise duty.)

A good general demand prevailed for the 470 packages of Leaf on offer.

LINSEED FIRM

The market was firm in the past week due to the shortage of supplies. Small business was reported in seeds and oils with buyers and sellers reserved. The oilcake market showed little change, and only routine business was transacted. The price was higher than that in foreign countries. The latest quotations are as follows: Ready Rs. 25.50 a maund and September futures Rs. 25.50 a maund.

HIDES AND SKINS QUIET

The market was quietly steady. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 6th September and 12th September, 1960)

Cowhides: Wet salted (Slaughtered) 7,100 pcs. on the basis of Rs. 8 to Rs. 16 and Rs. 19 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 31,600 pcs. on the basis of Rs. 340 to Rs. 350; Rs. 380 to Rs 410 and Rs. 440 to Rs. 460; Wet salted (he-killed) on the basis of Rs. 4.37 and (she-killed) on the basis of Rs. 4.12 a piece; Assam 1,500 pcs. on the basis of Rs. 320; Purneah-Kissenganj 5,000 pcs. on the basis of Rs. 350 to Rs. 375; Patna-Pakur 5,000 pcs. on the basis of Rs. 360 to Rs. 375; Patna-Pakur (Ord.) 4,000 pcs. on the basis of Rs. 300 to Rs. 350; Patna-Muzafferpore 8,000 pcs. on the basis of Rs 350 to Rs. 375.

Bazaar Stocks

(12th September, 1960)

Cowhides: Wet salted 159,500 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 61,700 pcs.; Assam-Dinajpur 107,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 201,000 pcs.

COMPANY AND PUBLIC NOTICES

RAJNAGAR TEA COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Company will be held at the Registered Office 4, Bankshall Street, Calcutta-1, on Friday the 7th day of October, 1960, at 3-45 P.M. to consider and if thought fit to pass the following resolutions which will be proposed as Special Resolutions:

1. "That the Articles of Association be amended in manner following:

(a) Article 124 shall be deleted and there shall be substituted the following:

"124. Shaw Wallace & Company Limited are the Managing Agents of the Company in terms of a separate Agreement entered into between the Company and the said Shaw Wallace & Company Limited dated the third day of August, 1960."

(b) Article 127 shall be deleted and the following substituted:

"127. Subject to the provisions of Sections 198 and 348 of the Act, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Act) or in respect of any part of such a financial year,

(a) a sum of, or in respect of any period of less than a year, calculated, at the rate of Rs. 10,000/- per annum, and

(b) such further sum, if any, as together with the said sum of Rs. 10,000/- shall make up an amount determined in accordance with the following scale on the net profits of the Company computed in the manner laid down in Sections 349 and 350 of the Act for such Financial year namely:

(i) 10 per cent of the first Rs. 10 lacs of the net profits or fraction thereof;

(ii) 9 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iii) 8 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iv) 7 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(v) 6 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(vi) 5½ per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(vii) 5 per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(viii) 4 per cent of the net profits exceeding Rs. 1 crore.

Provided that where such further sum is payable in respect of a period of less than a full year the amounts of net profits set forth above shall be reduced to amounts which bear the same ratio to the full amounts as the said period bears to the period of one year.

The said sum of Rs. 10,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year than to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rupees 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in general meeting.

No payment shall be made by the Company to the Managing Agents and/or any associate or associates (as defined in Sub-Section (3) of Section 2 of the Act) by way of Commission or otherwise for Guaranteeing or providing any security in connection with any loans or advances obtained by the Company from Banks and other parties without obtaining the approval of the Central Government in that behalf.

2. "That Special Resolution No. 2 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled and revoked."

3. "That Shaw Wallace & Company Limited the Managing Agents of the Company be and they are hereby authorised to provide the Company with suitable office accommodation in Calcutta and also if so required by the Company, at any other place or places in which Shaw Wallace & Company Limited may be able to provide such accommodation and the Company shall pay to the Managing Agents such portion of the rent and outgoings payable by Shaw Wallace & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

4. "That Special Resolution No. 3 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled and revoked."

5. "That it is hereby approved that the Company enter into a contract with effect from 15th August, 1960, with Shaw Wallace & Company Limited the Managing Agents of the Company on the terms following:

(1) Shaw Wallace & Company Limited agree to lend money to the Company.

(2) Money lent by Shaw Wallace & Company Limited to the Company which shall not at any time exceed Rs. 3,00,000 in the aggregate may be repaid by the Company without notice and shall be repaid within three days of demand.

(3) Shaw Wallace & Company Limited shall from time to time and at any time at the request of the Company notify the Company of the amount which it will lend to the Company as interest.

(4) In respect of money lent by Shaw Wallace & Company Limited to the Company, the Company shall pay to Shaw Wallace & Company Limited interest at the rate of 1% over the State Bank of India rate for the time being subject to a minimum of 6% per annum such interest to be calculated with monthly rests.

(5) If the Company is able to provide Shaw Wallace & Company Limited with security for money borrowed it shall notify Shaw Wallace & Company Limited of particulars of the security offered and permit of such inspection or examination thereof as Shaw Wallace & Company Limited may desire and shall comply with all reasonable demands and formalities which Shaw Wallace & Company Limited may require to bring the security into full charge and effect.

(6) The foregoing shall be without prejudice to the right of the Company to borrow money from any person other than Shaw Wallace & Company Limited.

(7) It is hereby expressly declared that any interest received by Shaw Wallace & Company Limited from the Company on or in respect of a loan made pursuant to the foregoing shall not be deemed to be remuneration paid by the Company to Shaw Wallace & Company Limited as Managing Agents of the Company within the meaning of Sections 198 and 348 of the Companies Act, 1956.

(8) Any contract made in conformity with the foregoing shall be valid for a maximum period of 5 years from the 15th August, 1960, unless previously terminated by either party giving to the other one month's notice in writing."

The Share Transfer Register will be closed from the 1st October, 1960 to 7th October, 1960, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, the 7th September, 1960.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Pursuant to Section 173(2) of the Companies Act, 1956.

Special Resolution No. 1.

Following the re-appointment of Shaw Wallace & Company Limited as Managing Agents of the Company under a fresh Agreement certain consequential amendments are necessary to the Articles of Association setting forth the terms on which the Managing Agents hold office and the Special Resolution provides accordingly.

Special Resolutions Nos. 2 and 3.

On 16th April, 1958, a Special Resolution was passed approving of the provision by the Managing Agents of office accommodation for the Company. Since that Resolution made specific reference to the terms of the old Managing Agency Agreement it is considered desirable that it should be cancelled and a fresh Resolution passed. Special Resolution No. 2 accordingly is proposed to cancel the earlier Special Resolution and the terms on which the Managing Agents will provide office accommodation for the Company are specified in Special Resolution No. 3.

Special Resolutions Nos. 4 and 5.

As a condition of approval of re-appointment of the Managing Agents, Government stipulated that no payment of commission for guaranteeing loans should be made to the Managing Agents or any associate without its prior consent. There is in force a contract relating to loans and the provision of guarantees by the Managing Agents which was entered into pursuant to a Special Resolution passed on 16th April, 1958. This contract has now been terminated and it is proposed by Special Resolution No. 4 to cancel the earlier Special Resolution. Special Resolution No. 5 is proposed to authorise a new contract relating to loans by the Managing Agents and the terms on which loans may be made which are identical with those in the former contract are set out in the Special Resolution itself.

TEZPORE TEA COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Company will be held at the Registered Office 4, Bankshall Street, Calcutta 1 on Friday, the 7th day of October, 1960 at 3-55 P.M. to consider and if thought fit to pass the following resolutions which will be proposed as Special Resolutions:

1. "That the Articles of Association be amended in manner following:—

(a) Article 124 shall be deleted and there shall be substituted the following:

"124. Shaw Wallace & Company Limited are the Managing Agents of the Company in terms of a separate Agreement entered into between the Company and the said Shaw Wallace & Company Limited dated the third day of August, 1960."

(b) Article 127 shall be deleted and the following substituted:

"127. Subject to the provisions of Sections 198 and 348 of the Act, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Act) or in respect of any part of such a financial year,

(a) a sum of, or in respect of any period of less than a year, calculated at the rate of Rs. 25,000/- per annum, and

(b) such further sum, if any, as together with the said sum of Rs. 25,000/- shall make up an amount determined in accordance with the following scale on the net profits of the Company computed in the manner laid down in Sections 349 and 350 of the Act for such Financial year namely:

(i) 10 per cent of the first Rs. 10 lacs of the net profits or fraction thereof;

(ii) 9 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iii) 8 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iv) 7 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(v) 6 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(vi) 5½ per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(vii) 5 per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(viii) 4 per cent of the net profits exceeding Rs. 1 crore.

Provided that where such further sum is payable in respect of a period of less than a full year the amounts of net profits set forth above shall be reduced to amounts which bear the same ratio to the full amounts as the said period bears to the period of one year.

The said sum of Rs. 25,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year than to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rupees 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting".

It is hereby agreed that any payment by way of commission or otherwise to the Managing Agents or any associate or associates (as defined in sub-section (3) of Section 2 of the Act) for guaranteeing or providing any security in connection with any loans or advances obtained by the Company from Banks or other parties shall not in any year exceed one tenth of the remuneration payable to the Managing Agents under (b) above by way of commission on net profits provided that the total of such remuneration payable to the Managing Agents and any associate or associates inclusive of any payment to the Managing Agents and/or any associate or associates as aforesaid for guaranteeing or providing securities as aforesaid shall not in the aggregate exceed 10 per cent of the net profits of the Company for that year determined in accordance with the provisions of Sections 349, 350 and 351 of the Act."

2. "That Special Resolution No. 2 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled and revoked".

3. "That Shaw Wallace & Company Limited the Managing Agents of the Company be

and they are hereby authorised to provide the Company with suitable office accommodation in Calcutta and also if so required by the Company, at any other place or places in which Shaw Wallace & Company Limited may be able to provide such accommodation and the Company shall pay to the Managing Agents such portion of the rent and outgoings payable by Shaw Wallace & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided".

4. "That Special Resolution No. 6 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled".

5. "That it is hereby approved that the Company enter into a contract with effect from the 15th August, 1960, with Shaw Wallace & Company Limited the Managing Agents of the Company on the terms following:

(1) Shaw Wallace & Company Limited agree to lend money to and contract as guarantor or provide security for money borrowed from third parties by the Company.

(2) Money lent by Shaw Wallace & Company Limited to the Company which shall not at any time exceed Rs. 4,00,000 in the aggregate may be repaid by the Company without notice and shall be repaid within three days of demand.

(3) Loans from third parties to the Company guaranteed or secured by Shaw Wallace & Company Limited shall not exceed at any time Rs. 20,00,000 in the aggregate.

(4) Shaw Wallace & Company Limited shall from time to time and at any time at the request of the Company:

(a) notify the Company of the amount which it will lend to the Company at interest; and

(b) notify the Company of the limit up to which it will guarantee a loan made to the Company by any other person.

(5) In respect of money lent by Shaw Wallace & Company Limited to the Company, the Company shall pay to Shaw Wallace & Company Ltd. interest at the rate of six per cent such interest to be calculated with monthly rests, and in respect of any guarantee effected as aforesaid a commission of 1% in each financial year of the Company shall be paid by the Company to Shaw Wallace & Co. Ltd. calculated upon the maximum amount guaranteed from time to time in such financial year. Provided that the amount of such commission in respect of any guarantee or security provided shall be limited in the manner prescribed for the time being in clause 5 of the Managing Agency Agreement dated the third day of August 1960 or any modification thereof for the time being in force.

(6) If the Company is able to provide Shaw Wallace & Company Limited with security for money borrowed or in respect of any contract of guarantee effected it shall notify Shaw Wallace & Company Limited of particulars of the security offered and permit of such inspection or examination thereof as Shaw Wallace & Company Limited may desire and shall comply with all reasonable demands and formalities which Shaw Wallace & Company Limited may require to bring the security into full charge and effect.

(7) The foregoing shall be without prejudice to the right of the Company to borrow money from any person other than Shaw Wallace & Company Limited and to secure the guaranteeing of a loan made to it by any person willing to guarantee the same.

(8) It is hereby expressly declared that any interest or guarantee commission received by Shaw Wallace & Company Limited from the Company on or in respect of a loan or guarantee made pursuant to the foregoing shall not be deemed to be remuneration paid by the Company to Shaw Wallace & Company Limited as Managing Agents of the Company within the meaning of Sections 198 and 348 of the Companies Act, 1956.

(9) Any contract made in conformity with the foregoing shall be valid for a maximum period of 5 years from 15th August, 1960, unless previously terminated by either party giving to the other one month's notice in writing."

The Share Transfer Register will be closed from the 1st October, 1960 to 7th October, 1960, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, the 7th September, 1960.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Pursuant to Section 173(2) of the Companies Act, 1956.

Special Resolution No. 1.

Following the re-appointment of Shaw Wallace & Company Limited as Managing Agents of the Company under a fresh Agreement certain consequential amendments are necessary to the Articles of Association setting forth the terms on which the Managing Agents hold office and the Special Resolution provides accordingly.

Special Resolutions Nos. 2 and 3.

On 16th April, 1958, a Special Resolution was passed approving of the provision by the Managing Agents of office accommodation for the Company. Since that Resolution made specific reference to the terms of the old Managing Agency Agreement it is considered desirable that it should be cancelled and a fresh Resolution passed. Special Resolution No. 2 accordingly is proposed to cancel the earlier Special Resolution and the terms on which the Managing Agents will provide office accommodation for the Company are specified in Special Resolution No. 3.

Special Resolutions Nos. 4 and 5.

As a condition of approval of re-appointment of the Managing Agents Goverment stipulated that any payment by the Company to the Managing Agents or any associate by way of commission or otherwise for guaranteeing or providing security in connection with loans should not in any year exceed one tenth of the remuneration payable under the Managing Agency Agreement for that year by way of commission on net profits and further that the aggregate of such commission for guaranteeing loans and Managing Agency remuneration should not in any year exceed one tenth of the net profits of the Company for that year. There is already in force a contract relating to loans and the provision of guarantees by the Managing Agents which was entered into pursuant to a Special Resolution passed on 16th April, 1958. This contract has now been terminated and it is proposed by Special Resolution No. 4 to cancel the earlier Special Resolution. Special Resolution No. 5 is proposed to authorise a new contract relating to loans and the provision of guarantees and security by the Managing Agents for loans taken by the Company from third parties and incorporates by reference to clause 5 of the Managing Agency Agreement (see Special Resolution 1b) the limitation of the Central Government with reference to the amount of commission payable for guaranteeing loans. The terms upon which loans and guarantees are providable and remunerated are set out in the Special Resolution itself.

THE NEW SAMANBAGH TEA COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Company will be held at the Registered Office 4, Bankshall Street, Calcutta, on Friday the 7th day of October, 1960, at 3-50 P.M. to consider and if thought fit to pass the following resolutions which will be proposed as Special Resolutions:

1. "That the Articles of Association be amended in manner following:

(a) Article 124 shall be deleted and there shall be substituted the following:

"124. Shaw Wallace & Company Limited are the Managing Agents of the Company in terms of a separate Agreement entered into between the Company and the said Shaw Wallace & Company Limited dated the third day of August, 1960."

(b) Article 127 shall be deleted and the following substituted:

"127. Subject to the provisions of Sections 198 and 348 of the Act, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Act) or in respect of any part of such a financial year,

(a) a sum of, or in respect of any period of less than a year, calculated at the rate of Rs. 30,000/- per annum, and

(b) such further sum, if any, as together with the said sum of Rs. 30,000/- shall make up an amount determined in accordance with the following scale on the net profits of the Company computed in the manner laid down in Sections 349 and 350 of the Act for such Financial year namely:

(i) 10 per cent of the first Rs. 10 lacs of net profits or fraction thereof;

(ii) 9 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iii) 8 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iv) 7 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(v) 6 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(vi) 5½ per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(vii) 5 per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(viii) 4 per cent of the net profits exceeding Rs. 1 crore.

Provided that where such further sum is payable in respect of a period of less than a full year the amounts of net profits set forth above shall be reduced to amounts which bear the same ratio to the full amounts as the said period bears to the period of one year.

The said sum of Rs. 30,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year than to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rupees 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in general meeting".

No payment shall be made by the Company to the Managing Agents and/or any Associate or Associates (as defined in Sub-Section (3) of Section 2 of the Act) by way of commission or otherwise for guaranteeing or providing any security in connection with any loans or advances obtained by the Company from Banks and other parties without obtaining the approval of the Central Government in that behalf.

2. "That Special Resolution No. 2 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled and revoked".

3. "That Shaw Wallace & Company Limited the Managing Agents of the Company be and they are hereby authorised to provide the Company with suitable office accommodation in Calcutta and also if so required by the Company, at any other place or places in which Shaw Wallace & Company Limited may be able to provide such accommodation and the Company shall pay to the Managing Agents such portion of the rent and outgoings payable by Shaw Wallace & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided".

4. "That Special Resolution No. 4 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled and revoked".

5. "That it is hereby approved that the Company enter into a contract with effect from 15th August, 1960, with Shaw Wallace & Company Limited the Managing Agents of the Company in the terms following:

(1) Shaw Wallace & Company Limited agree to lend money to the Company.

(2) Money lent by Shaw Wallace & Company Limited to the Company which shall not at any time exceed Rs. 10,00,000/- in the aggregate may be repaid by the Company without notice and shall be repaid within three days of demand.

(3) Shaw Wallace & Company Limited shall from time to time and at any time at the request of the Company notify the Company of the amount which it will lend to the Company at interest.

(4) In respect of money lent by Shaw Wallace & Company Limited to the Company, the Company shall pay to Shaw Wallace & Company Limited interest at the rate of 1% over the State Bank of India rate for the time being subject to a minimum of 6% per annum such interest to be calculated with monthly rests.

(5) If the Company is able to provide Shaw Wallace & Company Limited with security for money borrowed it shall notify Shaw Wallace & Company Limited of particulars of the security offered and permit of such inspection or examination thereof as Shaw Wallace & Company Limited may desire and shall comply with all reasonable demands and formalities which Shaw Wallace & Company Limited may require to bring the security into full charge and effect.

(6) The foregoing shall be without prejudice to the right of the Company to borrow money from any person other than Shaw Wallace & Company Limited.

(7) It is hereby expressly declared that any interest received by Shaw Wallace & Company Limited from the Company on or in respect of a loan made pursuant to the foregoing shall not be deemed to be remuneration paid by the Company to Shaw Wallace & Company Limited as Managing Agents of the Company within the meaning of Sections 198 and 348 of the Companies Act, 1956.

(8) Any contract made in conformity with the foregoing shall be valid for a maximum period of 5 years from the 15th August, 1960, unless previously terminated by either party giving to the other one month's notice in writing".

The Share Transfer Register will be closed from the 1st October, 1960 to 7th October, 1960, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, the 7th September, 1960.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Pursuant to Section 173(2) of the Companies Act, 1956.

Special Resolution No. 1.

Following the re-appointment of Shaw Wallace & Company Limited as Managing Agents of the Company under a fresh Agreement certain consequential amendments are necessary to the Articles of Association setting forth the terms on which the Managing Agents hold office and the Special Resolution provides accordingly.

Special Resolutions Nos. 2 and 3.

On 16th April, 1958, a Special Resolution was passed approving of the provision by the Managing Agents of Office accommodation for the Company. Since that Resolution made specific reference to the terms of the old Managing Agency Agreement it is considered desirable that it should be cancelled and a fresh Resolution passed. Special Resolution No. 2 accordingly is proposed to cancel the earlier Special Resolution and the terms on which the Managing Agents will provide office accommodation for the Company are specified in Special Resolution No. 3.

Special Resolutions Nos. 4 and 5.

As a condition of approval of re-appointment of the Managing Agents, Government stipulated that no payment of commission for guaranteeing loans should be made to the Managing Agents or any associate without its prior consent. There is in force a contract relating to loans and the provision of guarantees by the Managing Agents which was entered into pursuant to a Special Resolution passed on 16th April, 1958. This contract has now been terminated and it is proposed by Special Resolution No. 4 to cancel the earlier Special Resolution. Special Resolution No. 5 is proposed to authorise a new contract relating to loans by the Managing Agents and the terms on which loans may be made which are identical with those in the former contract are set out in the Special Resolution itself.

THE KINNISON JUTE MILLS COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE KINNISON JUTE MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-35 A.M., on Saturday, the 8th day of October, 1960, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960 to 8th October, 1960, both days inclusive.

By order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
CALCUTTA, 27th August, 1960.

NOTE:—(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

THE STANDARD JUTE COMPANY, LIMITED

New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.

Today, man has travelled far on the road of knowledge; today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

of each financial year of the Company (as defined in Section 2 (17) of the Act) or in respect of any part of such a financial year,

(a) a sum of, or in respect of any period of less than a year, calculated at the rate of Rs. 1,000/- per annum, and

(b) such further sum, if any, as together with the said sum of Rs. 1,000/- shall make up an amount determined in accordance with the following scale on the net profits of the Company computed in the manner laid down in Sections 349 and 350 of the Act for such Financial year namely:

(i) 10 per cent of the first Rs. 10 lacs of the net profits or fraction thereof;

(ii) 9 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iii) 8 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(iv) 7 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(v) 6 per cent of the next Rs. 10 lacs of net profits or fraction thereof;

(vi) 5½ per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(vii) 5 per cent of the next Rs. 25 lacs of net profits or fraction thereof;

(viii) 4 per cent of the net profits exceeding Rs. 1 crore.

Provided that where such further sum is payable in respect of a period of less than a full year the amounts of net profits set forth above shall be reduced to amounts which bear the same ratio to the full amounts as the said period bears to the period of one year.

The said sum of Rs. 1,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year than to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000/- the remuneration payable under (a) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting."

2. "That Special Resolution No. 2 passed by the Company in General Meeting on 16th April, 1958, be and the same is hereby cancelled and revoked."

3. "That Shaw Wallace & Company Limited, the Managing Agents of the Company be and they are hereby authorised to provide the Company with suitable office accommodation in Calcutta and also if so required by the Company, at any other place or places in which Shaw Wallace & Company Limited may be able to provide such accommodation and the Company shall pay to the Managing Agents such portion of the rent and outgoings payable by Shaw Wallace & Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

The Share Transfer Register will be closed from the 1st October, 1960 to 7th October, 1960, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, the 7th September, 1960.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Pursuant to Section 173(2) of the Companies Act, 1956.

Special Resolution No. 1.

Following the re-appointment of Shaw Wallace & Company Limited as Managing Agents of the Company under a fresh Agreement certain consequential amendments are necessary to the Articles of Association setting forth the terms on which the Managing Agents hold office and the Special Resolution provides accordingly.

Special Resolutions Nos. 2 and 3.

On 16th April, 1958, a Special Resolution was passed approving of the provision by the Managing Agents of office accommodation for the Company. Since that Resolution made specific reference to the terms of the old Managing Agency Agreement it is considered desirable that it should be cancelled and a fresh Resolution passed. Special Resolution No. 2 accordingly is proposed to cancel the earlier Special Resolution and the terms on which the Managing Agents will provide office accommodation for the Company are specified in Special Resolution No. 3.

UNION JUTE COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of UNION JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-20 A.M., on Saturday, the 8th day of October, 1960, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in place of those retiring, including Mr. Gobind Lall Bangur, who having attained the age of 65 years is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below:

To be Proposed as an Ordinary Resolution—

"THAT the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. Gobind Lall Bangur, and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation."

4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960 to 8th October, 1960, both days inclusive.

By order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
CALCUTTA, 27th August, 1960.

NOTE:—(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the Special Notice given to the Company of the Resolution under Item 3 of the above Notice it has been stated that the services of Mr. Gobind Lall Bangur have been proved most useful to the Company and as he has experience and considerable knowledge of the affairs of the Company he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE RELIANCE JUTE MILLS COMPANY LIMITED

Notice of Annual General Meeting

NOTICE is hereby given that the One Hundred and Third Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 12-00 noon on Friday, the 7th October, 1960, for the following purposes:

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1960, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring.

(3) To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from the 1st October to the 7th October, 1960, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,

THE DALHOUSIE JUTE COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE DALHOUSIE JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-10 A.M. on Saturday the 8th day of October, 1960, for the following purposes:—

As Special Business:

To consider and if thought fit to pass with or without modification the following Resolutions which will be proposed as Special Resolutions namely:

1. Resolved that with effect from the 16th day of August, 1960, the Company may borrow money from time to time from the Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company, but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers.
2. Resolved that with effect from the 16th day of August, 1960, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Secretaries and Treasurers in accordance with the terms of employment with such staff and the Secretaries and Treasurers and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Secretaries and Treasurers and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd. for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Secretaries and Treasurers.

   It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business:

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividends recommended by the Directors.
5. To appoint Directors in place of those retiring, including Mr. Gobind Lall Bangur, who having attained the age of 65 years is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below:

To be Proposed as an Ordinary Resolution—

"THAT the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. Gobind Lall Bangur, and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation."

6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960, to 8th October, 1960, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Chartered Bank Buildings,
CALCUTTA, 27th August, 1960.

NOTE:—(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1 and 2:—

As the shareholders will remember at the last Annual General Meeting of the Company held on the 20th November, 1959, a Special Resolution was passed in terms of the resolution now before you whereby the Company was empowered to borrow money from the Managing Agents. As the Managing Agency contract terminated on the 15th August, 1960, by operation of law Messrs. Bird & Co. (Private) Ltd. have been appointed Secretaries and Treasurers of the Company and it is now therefore necessary to pass a similar special resolution to empower the company to borrow from the Secretaries and Treasurers.

Similarly, the resolution No. 2 seeks to provide the company with the benefit of the services of the administrative staff of the Secretaries and Treasurers and also to participate in the maintenance of a Pool Commission Account as had been done at the last Annual General Meeting when the Company had Managing Agents instead of Secretaries and Treasurers.

Mr. D. C. B. Pilkington, a Director and member of your Company, is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Secretaries and Treasurers of the Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolutions.

In the Special Notice given to the Company of the Resolution under item 5 of the above Notice it has been stated that the services of Mr. Gobind Lall Bangur have been proved most useful to the Company and as he has experience and considerable knowledge of the affairs of the Company he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED

(Incorporated in England)

Liability of Members Limited.

DIVIDENDS.

THE following Dividends have been recommended in respect of the year ended 31st March, 1960, payable on the 2nd November, 1960:—

On the Preference Shares 5% (Five Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

On the Ordinary Shares 30% (Thirty Shillings per share) less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on the 26th October, 1960 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

The Share Transfer Books will be closed from the 13th October, 1960, to 26th October, 1960, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Agents.

4, Clive Row,
Calcutta, 9th September, 1960.

THE INDIAN CABLE COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Fortyfirst Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Friday, the 28th October, 1960, at 11 O'clock in the forenoon, for the following purposes:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1960.
2. To declare Dividends.
3. To re-appoint a Director who retires by rotation.
4. To re-appoint the firm of Messrs. Lovelock & Lewes of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

As Special Business:

5. To consider resolutions in relation to the following matters and things:—
   (a) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Factory at Tatanagar and the Branch offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.
   (b) In pursuance of Section 228(1) of the Companies Act, 1956, to appoint the firm of Messrs. Fraser & Ross of Madras for the purpose of auditing the accounts of the Branch offices of the Company at Madras, Bangalore and Coimbatore, and to fix their remuneration.
   (c) To determine that the accounts of the Branch office of the Company at Karachi be not audited under the provisions of Section 228(1) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from the 14th October, 1960 to the 28th October, 1960, both days inclusive.

Dividends, if any, declared at this meeting will be payable to Shareholders registered on the Company's Books on the 28th October, 1960 or their mandatees.

By Order of the Board,
B. J. WOODLEY,
Chairman.

9, Hare Street.
Calcutta, 26th August, 1960.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE DUFFLAGHUR TEA CO. LTD.

THE Directors of the Company have decided to recommend a Final Dividend of 20% on Ordinary Shares, subject to deduction of tax, for Season 1959 for declaration at the forthcoming Annual General Meeting of the Members of the Company.

The Report and Accounts for Season 1959 and the Notice of the Annual General Meeting will be sent to Members of the Company in due course.

THE LANSDOWNE JUTE COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE LANSDOWNE JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11 A.M., on Saturday, the 8th day of October, 1960, for the following purposes :—

As Special Business :

To consider and if thought fit to pass with or without modification the following Resolutions which will be proposed as Special Resolutions namely :

1. Resolved that with effect from the 16th day of August, 1960, the Company may borrow money from time to time from the Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers and the Directors of the Company, but so that the money lent shall not at any time exceed Rs. 15,00,000 in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers.

2 Resolved that with effect from the 16th day of August, 1960, the Company agrees to pay the remuneration of such administrative staff that may be placed at its disposal by the Secretaries and Treasurers in accordance with the terms of employment with such staff and the Secretaries and Treasurers and in particular to make contribution to a Pool Commission Account maintained by the Jute Mills within the organisation of the Secretaries and Treasurers and their associates, Messrs. F. W. Heilgers & Co. (Private) Ltd. for disbursement amongst such staff in terms of their agreement based on a percentage of the net profits of each company or a minimum contribution in the absence of or insufficiency of profit as may be agreed upon from time to time between the Directors of the Company and the Secretaries and Treasurers.

It is further resolved that if at the end of each financial year there is any balance left in the Pool Commission Account after disbursement to the staff, such balances are to be refunded to the Company in proportion to the contribution made by the Company as heretofore.

As Ordinary Business :

3. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
4. To declare Dividend recommended by the Directors.
5. To appoint Directors in the place of retiring Directors.
6. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 22nd September, 1960, to 8th October, 1960, both days inclusive.

By order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Chartered Bank Buildings,
CALCUTTA, 27th August, 1960.

NOTE :—(a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 22nd October, 1960, to those shareholders whose names appear in the Company's books on the 8th October, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

Resolutions Nos. 1 and 2 :—

As the shareholders will remember at the last Annual General Meeting of the Company held on the 20th November, 1959, a Special Resolution was passed in terms of the resolution now before you whereby the Company was empowered to borrow money from the Managing Agents. As the Managing Agency contract terminated on the 15th August, 1960, by operation of law Messrs. Bird & Co. (Private) Ltd. have been appointed Secretaries and Treasurers of the Company and it is now therefore necessary to pass a similar special resolution to empower the company to borrow from the Secretaries and Treasurers.

Similarly, the resolution No. 2 seeks to provide the company with the benefit of the services of the administrative staff of the Secretaries and Treasurers and also to participate in the maintenance of a Pool Commission Account as had been done at the last Annual General Meeting when the Company had Managing Agents instead of Secretaries and Treasurers.

Mr. D. C. B. Pilkington, a Director and member of your Company, is also a Managing Director of Messrs. Bird & Co. (Private) Ltd., the Secretaries and Treasurers of the Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolutions.

BANK CREDIT: PREPARING FOR THE SQUEEZE

THE Indian economy has been remarkably buoyant during the past year. But the buoyancy now seems to be gradually fading. The annual report issued a few days ago by the central board of directors of the Reserve Bank of India, covering the year ended June 1960, presents a competent, if familiar, review of the progress of the economy. But the value of the review is undermined by the traditional timidity in assessing the prospects for the future. The period covered by the report was notable primarily for a smart, although sectional, recovery from the difficulties experienced in the earlier years of the second five year plan. The production of foodgrains, which rose to a record level of 73.5 million tons in 1958-59, declined only fractionally last year. Agricultural production as a whole showed a fair decrease, mainly because of the serious shortfall in the cotton and jute crops. The most encouraging feature was the sharp upsurge in industrial output—which was 8.2 percent higher in 1959 than in 1958, and which during the first quarter of 1960 was running at a level 13.7 percent higher than in the corresponding period a year earlier. The growth of industry partly inspired a stock market boom. But commodity prices rose and the foreign exchange reserves fell—the former because inflationary financing continued and the latter because the external trade deficit remained large. In the banking sphere, the outstanding feature was that credit remained tight in spite of the operation of selective credit controls, indicating that banking funds were not growing as fast as the need for them.

Of all these factors, the one which seems to have worried the Reserve Bank most is the increase in prices. And well it might, considering that the index of wholesale prices (base year 1952-53 equals 100) rose by 6.3 percent to 122.9 during the year ended June 1960, after having increased by 2 percent in the previous year. It is noteworthy that food prices rose relatively little, presumably because imports were on a fairly liberal scale and the State trading schemes which had spawned widespread profiteering earlier were gradually dismantled. Most of the increase in prices was due to industrial raw materials, especially the shortage of cotton and jute, and to manufactured goods. The main lesson which emerges is that although price stability depends to a large extent on the supply of foodgrains, it can be seriously jeopardised by an increase in industrial costs, especially raw material costs. The euphoria about being able to hold down prices, now that 17 million tons of foodgrains will be coming from the United States over the next four years, is to that extent unjustified. The Reserve Bank directors make the point with admirable, if rare, bluntness when they say that industry "is faced with the problem of rising raw material prices and the growing pressure for wage and salary increases, which may seriously affect costs and thereby its competitive capacity in export markets. The scope for rationalisation and modernisation of industry needs to be thoroughly explored and implemented. It is also important to ensure that wage increases are commensurate with productivity, and that at the same time the cost of living is held down."

The Reserve Bank's own efforts to check the rise in prices have unfortunately not yielded spectacular results. The directors' report recalls that the policy of selective credit controls has been intensified. A check has been kept on particular commodity advances; the direct financing of *budla* transactions by banks has been banned; banks have been told to keep certain minimum margins on advances against ordinary shares; a ceiling has been prescribed for clean advances; and, most important of all, the system of variable reserve ratios has been used for the first time, by ordering the banks to hand over to the Reserve Bank a stipulated proportion of the increase in their deposits after certain dates. The report claims that all these measures have served to ensure an adequate flow of credit for productive purposes, particularly to sectors which need special assistance. But the claim is doubtful, considering that the boom in the commodity and share markets has continued long after the restrictions were imposed. The fact is that selective credit controls have a chance of working if the general economic environment is favourable. The environment can hardly be favourable if the Government goes bravely ahead with inflationary financing; if a large proportion of the money supply remains outside the banking system; if speculators do not have to depend on institutional credit, but can resort to hidden hoards of black money; and if growing shortages offer the promise of large capital gains. In such circumstances, the effect of selective credit controls can, at best, be only marginal. While hampering speculation, they may also hamper trade and production, so the doubt arises whether the game is worth the candle. The Reserve Bank apparently believes it is; and in regard to certain controls, such as those affecting unproductive share and *budla* transactions, it may well be right. It is extremely doubtful, however, whether blanket restrictions, such as the deposit impounding scheme, have been equally useful.

The point is of special interest now, since the next few months will call for some crucial rethinking on the adjustment of credit controls. The directors' report recalls that a little over four months ago, the Governor of the Reserve Bank asked banks to reduce credit by Rs. 110 crores during the current slack season. In fact, the decline in scheduled banks' advances since then has been only Rs 13.37 crores—from Rs. 1,139.62 crores to Rs. 1,126.25 crores. And this is at a time when the slack season will soon be nearing its end. The directors' report admits that "the contraction of credit against seasonal commodities has been the same as in the last season, and in fact should have been larger but for the lengthening of the crushing season of sugar..... On the other hand, in contrast to last busy season, there has been a steep rise in credit against non-seasonal items this year, mainly on account of the substantial rise in the rate of growth of industrial output." The Reserve Bank thus seems to be aware that the demand for bank credit is being maintained largely by industrial requirements. It should not, therefore, be unduly dismayed if the decrease in advances has fallen far short of the Rs. 110 crores it had in mind. The latter was apparently an arbitrary figure, which ignored the point that, with the industrialisation of the economy, credit demands are becoming increasingly perennial rather than seasonal.

The Reserve Bank directors nevertheless reiterate that "the rather slow contraction of credit in the 1960 slack season is a matter for concern, and it is imperative that banks take energetic steps to bring about a satisfactory contraction so that they may be in a position to meet the requirements of the next busy season without undue strain." Unfortunately, the report does not amplify what are the sorts of advances which the Reserve Bank thinks can still be reduced; it leaves the uncharitable impression that the Reserve Bank itself does not know. It is true that the high level of bank advances has been maintained by running down cash balances; by putting less money in investments; and by repaying less of the borrowings from the Reserve Bank. But there is no evidence that the advances are being used for the wrong purposes, especially with the close check the Reserve Bank claims to keep. If, therefore, credit is large because industry needs it so, arbitrary pleas and measures to reduce it will only serve to hamper industrial production.

There is a fair chance that bank credit will become tighter still in the coming months. When the demands of agriculture supervene on those of industry, the banks may face acute embarrassment in dealing with borrowers, since the scope for increasing advances is very limited. The position might not be so difficult if the import cuts promised recently slow down the growth in industrial production. But, even so, the prospects are that the deposit base will be too small to permit an adequate increase in advances. It is perhaps time, therefore, that the Reserve Bank should start thinking seriously about liberalising, or even abolishing, the scheme for impounding part of the new deposits. The experience of the past few months has shown that the effectiveness of the scheme in checking speculation has been marginal, if not negligible. The time is now coming when its effectiveness in checking the growth of genuine trade and industry may become quite serious. The directors' report gives no indication about what is to be done with the scheme, apart from issuing platitudes to the effect that "the techniques of credit regulation have to be modified to suit the changing outlook of the economic scene, bearing in mind the needs of a developing economy." But it does mention the need for mobilising savings, in which banks will be expected to play a major part. They cannot do so unless their earnings first increase, and then those earnings are invested in branch expansion. Measures like the deposit impounding scheme serve only to restrict earnings, especially if they are continued into the busy season. In proposing their continuance or otherwise, the Reserve Bank will have to decide whether their doubtful usefulness in restraining speculation is worth while even though the growth of trade, industry and banking may be restricted.

—

TRADE INSTEAD OF AID

AT a time when the Development Aid Group, the Aid India Group, the annual meeting of the International Bank, and bilateral arrangements between donor and recipient countries, are emphasising aid to the under-developed countries, discussion of these countries' problems is inclining towards a different idea, that they should be allowed to earn more foreign currency by selling more goods. Especially significant is the contribution to this discussion by Mr. A. J. Hayes, president of the International Association of Machinists in America, published in the official organ of the American Federation of Labour and Congress of Industrial Organisations, the *Industrial Union Department Digest*. Although organised labour, in America as elsewhere, is traditionally hostile to foreign competition, Mr. Hayes has argued unequivocally in favour of reciprocal trade.

The case against free importing is usually based on the fact that wages differ widely between one country and another. In the textile trade, for instance, Americans protest that they cannot hope to compete with low-wage Europeans, and Europeans protest that they cannot hope to compete with low-wage Asians—and Britons, apparently, perceive no inconsistency in their attitude when they demand restrictions on Asian goods, yet appeal to the United States to import more liberally. The U.S. Commission on Foreign Economic Policy has estimated that if import duties on goods entering the United States were entirely abolished, possibly less than 250,000 and certainly less than 500,000 American workers would be displaced. But the U.S. Department of Labour has estimated that as many as 4.5 million American workers depend on exports Mr. Hayes has deduced that reductions in tariffs would affect few workers, whereas increases in tariffs, probably provoking retaliation, would affect many.

This is a sociological argument. Economists say that re-deployment of labour in response to reductions in tariffs implies that the tariff-reducing

country is benefiting from international division of labour, and that the benefits are more if many workers change their jobs. Mr. Hayes argues as an economist when he observes that low-paid labour is not necessarily cheap labour—indeed, everyone knows that the productivity of American labour is exceptionally high. The main economic asset of the under-developed countries is an abundance of low-paid labour. Since these countries are, by hypothesis, under-capitalised, they cannot compete internationally unless their goods are accepted as low-wage products. If one related tariffs and quotas strictly to wage rates, the absurd position would result where only those countries whose need was least—the most developed countries—had free access to world markets.

There is, in fact, a tendency in this direction now. Europe, particularly, is freeing trade within its territory, and trade with the dollar area, more than it is freeing trade with the under-developed countries. The United Kingdom is in a special position, as the principal market in Commonwealth of Nations, with a tariff structure that was formed when the other members' exports of manufactured goods were insignificant. Although the less developed members of the British Commonwealth can, and do, restrict imports of British goods by tariffs, Britain admits their manufactures duty-free. There is no logical limit to the variety of goods that can eventually be produced in the Commonwealth overseas, and the pressure to sell in the British market will become more and more intense if it remains the one market where the newly developed goods are admitted freely. Therefore, all the countries of the Commonwealth, not least Britain, hope that other countries, particularly on the continent of Europe, will liberalise their policies towards the less developed countries' goods.

However, in the meantime; these unrestricted imports may be a more important factor in the British economy than is generally realised. A hint of their effects may be observed in a recent remark by Mr. Peter Runge, vice-chairman of Tate and Lyle, about jute. Tate and Lyle is one of the world's greatest traders in sugar, much of which is transported in jute bags. Jute goods are an exception to the rule that goods manufactured in the Commonwealth (apart from Canada, where the particular problem of dollars is involved) are admitted into Britain unrestricted. The restriction in this case—by a Government-operated monopoly of imports, which are sold in the U.K. market at prices that are deliberately higher than the free market prices of the goods—is indirect but nonetheless effective. The benefits of cheap goods are thus denied to British users of these goods; and Mr. Runge complained that his Company, which exports a third of its output, had to buy sugar bags at prices quoted by the protected industry in Dundee.

Many of the imports from the developing countries are, and others will be, for final consumption in the countries that receive them. But even if no indirect re-exporting is involved, their low prices are important. Already cheap textiles from India and Hongkong have helped to stabilise the cost of living in Britain, and a widening range of cheap imports will have perceptible deflationary effects. Many countries are, slowly, becoming aware that low prices are beneficial; that local industries are forced to improve their efficiency when they must contend with low-priced imports; and that a country's economic position is ultimately strengthened, not weakened, by free trade. The developed countries are becoming aware—although more slowly, perhaps—that the less developed countries must supplement aid with trade, and that protective tariffs, although justifiable in the period of development, should be relaxed later. It would be logical to discriminate in favour of the goods of low-wage countries rather than against them, because those countries particularly need a growing export trade to finance the imports required for their further development.

PROMOTING ENGINEERING EXPORTS

THE prospects for the engineering industries are being assessed carefully in view of two important developments. The first is that much of the investment in various units has been lying idle. Most units can work only one shift, mainly because of the shortage of raw materials. The second development is that the foreign exchange shortage might bring further cuts in imports of raw materials and spare parts. Unless the industry can expand production, its profitability will suffer. It is appropriate, therefore, that more attention should be focussed on increasing exports of engineering goods. Exports have amounted to Rs. 3.76 crores during the first half of 1960, compared with Rs. 2.31 crores in the corresponding period of 1959. The improvement offers no grounds for complacency because it is necessary to promote exports on a much bigger scale if the long-term stability of the industry is to be ensured.

In a statement made at a Press conference in Calcutta last Friday, Mr. B. S. Agarwal, chairman of the Engineering Export Promotion Council, pointed to the difficulties of the industry. Costs of production have risen in recent years due to the increase in labour emoluments and fiscal levies. There has also been a considerable rise in railway freight rates. Indian goods have to compete in foreign markets with the products of countries which enjoy the advantage of long-established contacts. Yet Indian prices are generally much higher. If exports are to be promoted, vigorous steps will have to be taken to reduce prices. Mr. Agarwal mentioned some ways in which this can be done. The prices of steel, pig iron and tinplate have to be reduced, and freight rates should be cut. Considering that steel and pig iron might become more easily available in the near future, their prices would normally have tended to move down. But they are being artificially maintained at a high level by the control system and by exorbitant fiscal levies. As much of the pig iron and steel will soon be coming from the Government plants, it is doubtful whether a reduction in prices is likely to be favoured in official quarters. The keenness to increase railway revenues might stand in the way of cutting freight rates.

Mr. Agarwal suggested certain other ways of promoting exports. It was stated that imports of raw materials could be entrusted more and more to those who actually export engineering goods. But considering that the number of exporting firms and the variety of engineering goods exports are small, it may not be appropriate to confine imports to a few hands. The recommendation that domestic raw materials should be sold to the industry at concessional prices is academic; a discriminatory price policy will be difficult to implement and also unfair. Nevertheless, much can be done to promote exports if the Government takes certain measures. Exporters should be allowed to get their raw material requirements from abroad more liberally. The tax burden on exported goods can be reduced, as in some other countries. Indian exporters need bigger credit facilities; many countries are promoting their exports by offering liberal credits.

RAW JUTE SUPPLIES FOR THE INDIAN MILLS

THE report of the Kinnison Jute Mills Co Ltd for the year ended March 1960 has attracted attention because two useful features have been introduced. Firstly, the presentation of the accounts is more comprehensive. Secondly, an informative statement by the chairman, Mr. D. C. B. Pilkington (a full text of which was printed in last week's *Capital*), has been circulated along with the report. Mr. Pilkington makes a fairly detailed assessment of the prospects for the industry in general, and for Kinnison in particular. He takes a moderately optimistic view of the future. The demand for jute goods is expected to increase with the growth of world population and international trade. In India itself, the consumption of jute goods has risen steadily during the past few years. Not only have the industrial uses been increased and diversified; various new uses are being investigated and steady progress has been made in this direction.

At the same time, the industry has to face increased competition from substitutes like bulk handling and paper. The Indian mills also have to face stiffer competition from the Pakistani mills, which enjoy the advantages of cheaper labour and superior raw jute. The long-term interests of the Indian industry can be served if jute goods prices are low. Since jute is used mainly as a packaging fabric, its cheapness is essential for broadening sales. As Mr. Pilkington says, given "the prerequisite of cheap and steady prices, there is no need for pessimism as to the future". The progress of the industry depends to a great extent on whether adequate supplies of raw jute can be obtained at reasonable prices. It is, therefore, important that efforts be made to increase fibre supplies. This can be done best by increasing yields an acre rather than bringing more areas under cultivation. In order to supplement the efforts of the Government, the industry has decided to take active measures to improve the production of raw jute.

Experience shows that jute cultivation has often been hampered by the wide fluctuations in fibre prices. If the prices are not favourable, cultivators grow less jute. So to ensure reasonable prices is extremely important for increasing production. The decision of the I.J.M.A. to start a buffer stock scheme for raw jute, if supplies become excessive, is likely to help. If the excess in supplies is taken into the buffer stock, the prices will be maintained at a satisfactory level and the mills will be assured of adequate supplies when shortages develop. The buffer stock will thus help balance supply and demand. As long as India does not produce enough raw jute, a certain amount will have to be imported from Pakistan. During the current season, India will not be able to grow as much as the mills could consume. It is, therefore, essential that the additional quantity required is imported from Pakistan. It is unfortunate that in spite of verbal assurances, the issue of licences for bringing Pakistani cuttings into India is not prompt enough. The need for issuing licences quickly is obvious from the way the prices of cuttings in Pakistan have increased recently. Most of the Pakistani mills have become eager to cover their requirements as soon as possible. Unless the Indian mills can get what they need from Pakistan in time, they may be forced to pay higher prices later.

As for Kinnison Jute, its prospects for the current year are considered fairly encouraging. Although trading conditions have been difficult because of the fibre shortage, the Company's working during the first nine months of the current year may show profits nearly equal to those earned during the corresponding period a year earlier. This satisfactory result will be achieved because of the correct view the management has taken concerning movements in the prices of raw jute and manufactured goods. The operational efficiency of the mills has improved. The preparing and spinning sections in the No. 5 mill have been fully modernised by the installation of the new sacking weft machinery. The spinning and preparing machinery of the No. 2 mill is working satisfactorily. The directors are now thinking of modernising the weaving side. Wide looms have so far produced satisfactory profits, but there is evidence that supplies of the constructions manufactured on them may become excessive. Mr. Pilkington refers to the efforts to improve quality by introducing statistical quality control. He also says that the directors are exploring the possibility of diversifying activities beyond the jute industry by using the surplus funds of the Standard Jute Co. Ltd, a subsidiary.

Current News and Comment

Bird-Heilgers Jute Results

A number of jute mills in the Bird-Heilgers group have paid bigger ordinary dividends for the year ended March 1960 as their results have been better. The prospects for the current year are uncertain because trading conditions have become difficult with the rise in raw jute prices. Much depends on whether adequate supplies of fibre will be available at reasonable prices. Providing Rs. 6.64 lakhs (against Rs. 68,000) for taxation and Rs. 7.94 lakhs (against Rs. 8.88 lakhs) for depreciation, the profit of the Kinnison Jute Mills Co. Ltd has increased from Rs. 9.94 lakhs to Rs. 19.80 lakhs. A taxable ordinary dividend of 20 percent has been declared, including an interim of 7 percent. It is covered more than twice and offers a yield of 11.8 percent at a price of Rs. 170 a share. The ordinary dividend was 10 percent, tax-free, in the previous year. Machinery replacement reserve is allocated the same amount of Rs. 3 lakhs and general reserve receives Rs. 3 lakhs. The carry-forward is Rs. 87,502, against Rs. 51,370 brought in. The fixed assets have been written down by Rs. 45.28 lakhs in order to correct the revaluation made in 1948.

The carpet backing looms of the Northbrook Jute Co. Ltd worked to capacity and another 18 wide looms have been installed since then. Orders have been placed for automatic weaving machinery, which is expected to improve the quality of goods and reduce the cost of production. The profit has improved from Rs. 8.41 lakhs to Rs. 13.54 lakhs, after transferring Rs. 10.57 lakhs (against Rs. 39 lakhs) to taxation and Rs. 4.86 lakhs (against Rs. 5.68 lakhs) to depreciation. An ordinary dividend of 30 percent, taxable, including an interim of 7½ percent, has been declared. It gives a yield of 13.3 percent at the present price of Rs. 22.62 a share and is covered more than four times. The ordinary dividend was 12½ percent in the previous year. Important allocations include Rs. 2 lakhs for jute revaluation reserve, Rs. 3 lakhs (same) for machinery replacement reserve and Rs. 7 lakhs for general reserve. There is a carry-forward of Rs. 27,631, compared with Rs. 35,452 brought in.

The Auckland Jute Co. Ltd has placed orders for more machinery in order to complete the modernisation of its mills. It has decided to change over from "short" to "long" draft for increasing the efficiency expected from the new machinery. Steps have been taken to modernise the sacking weft section. Orders have also been placed for automatic weaving machinery. The carpet backing looms worked to capacity during the past year, but one shift has been closed since then due to reduced offtake. There is an increase from Rs. 14.60 lakhs to Rs. 16.40 lakhs in the profit, after providing Rs. 12.65 lakhs (against Rs. 52,000) for taxation and Rs. 6.68 lakhs (against Rs. 7.05 lakhs) for depreciation. A taxable ordinary dividend of 27 percent, including an interim of 7 percent, has been declared. This offers a yield of 15 percent at a price of Rs. 172 a share and is covered more than twice. The ordinary dividend was 20 percent in the previous year. Machinery replacement reserve is allocated the same amount of Rs. 3 lakhs and general reserve gets Rs. 1 lakh. The carry-forward is Rs. 34,111, against Rs. 43,140 brought in.

The fixed assets of the Union Jute Co. Ltd have been written down by Rs. 21.98 lakhs in order to correct the revaluation which was made in 1948. Silver spinning frames have been installed. The premises of the Company in East Pakistan have been leased out at a rent of Rs. 4,000 a month. The lessees have the option to buy the entire premises for Rs. 2.5 lakhs at any time during the tenure of the lease. The fourth instalment of the sale price of the South Mill has been received. This leaves an oustanding amount of Rs. 6 lakhs payable during the next two years, carrying interest at 5 percent a year. The profit has declined from Rs. 15.36 lakhs to Rs. 11.26 lakhs, after transferring Rs. 9.40 lakhs (against Rs. 4.33 lakhs) to taxation and Rs. 4.08 lakhs (against Rs. 4.47 lakhs) to depreciation. A taxable ordinary dividend of 25 percent has been declared, against 20 percent, tax-free. The dividend is covered more than twice and offers a yield of 13.3 percent at a price of Rs. 188 a share. Machinery replacement reserve is allocated Rs. 1 lakh and general reserve Rs. 1.5 lakhs (against Rs. 3.5 lakhs). There is a carry-forward of Rs. 35,993, compared with Rs. 75,586 brought in.

L.I.C. Bonus Awaited

In an announcement on 20th June, 1959, the Life Insurance Corporation declared the results of the first valuation of its assets and liabilities as on 31st December, 1957. It was stated that pending the finalisation of the scheme for differential bonus, bonus at the rates declared would be payable only on policies which had become claims by death or maturity after the date of valuation and before the final scheme was approved by the Government. The Corporation expressed the hope that it would be able to work out the final scheme of differential bonus soon and get the Government's approval for it. Only after the Government's approval was obtained would the bonus, according to the approval scheme, vest in the policies. Policyholders all over India are, therefore, disappointed to learn that the approval has not yet been obtained, so the scheme for the allotment of bonus has not been finalised. The declared bonus has thus still not reached the policyholders.

Thousands of them all over India are understandably worried. They want to know the reasons for the inordinate delay, and whether there are any basic differences between the L.I.C. and the Government over the scheme. Informed circles say that although the Life Insurance Corporation Act gives the Corporation the power to classify policies for the purpose of declaring differential bonus wherever necessary, the Government has objected to the Corporation's method of grouping the policyholders of different companies. Thus ordinary individuals, who are not professional actuaries, would be interested to learn the basis on which policies issued by the Corporation after 19th January, 1956, could qualify for placement in Group I, earning Rs. 14 on endowment assurances and Rs. 17.50 on whole life assurances, when the policies were barely a year old by 31st December, 1957, and thus could hardly expect to earn a return as big as Group I bonus. The Government, it is reported, takes the view that if the scheme for differential bonus is adopted, grouping is not enough; each company's policies have to be treated separately and the bonus fixed according to the returns earned on the company's policy fund In its report to the units dated 18th June, 1959, the Corporation has conceded that a system of distributing profits among individual policyholders can claim to be good if it is equitable and practicable. The problem of classifying policyholders according to their companies may be complex and difficult. But there is no reason why the Corporation, with the actuarial strength at its command, should not do this work if it really wants to evolve a good system. Meanwhile, according to Section 26 of the Life Insurance Corporation Act, the second valuation fell due on 31st December, 1959. No result concerning it has so far been announced.

The Government, it is reported, has made a number of other objections, including one concerning the valuation base. The fact that the valuation has been done by the Corporation's own salaried actuaries exposes it to a measure of criticism which could have been avoided if the valuation had been carried out by an independent actuary. Public interest demands that the person entrusted with actuarial investigation should be independent of any control or influence from the Corporation and the Central Government. The Government might bear this in mind while scrutinising the valuation report. Meanwhile, policyholders will await further news of the much-publicised bonus.

McLeod Tea Companies

The results of the McLeod group of tea companies for the year ended December 1959 have now been published. The Bhatkawa Tea Co. Ltd, a Dooars garden, has made a profit of Rs. 1.95 lakhs, against a loss of Rs. 6,469. A taxable ordinary dividend of 10 percent has been declared, absorbing Rs. 90,000. The dividend for 1958 was nil. The latest one offers a yield of 4.3 percent at the price of Rs. 23 19 a share. Taxation provision is allocated Rs. 86,700. The carry-forward is Rs. 6,018, against a debit balance of Rs. 22,959 brought in. The crop increased from 14,048 maunds to 14,977 maunds, and the average sale price rose from Rs. 1.98 to Rs. 2.08 a lb. Estimates for 1960 have been made for a crop of 16,000 maunds at a cost of Rs. 19.70 lakhs.

The Baghmari Tea Co. Ltd, an Assam garden, has declared an ordinary dividend of 15 percent, taxable, against 15 percent, tax-free, in the previous year. The latest dividend gives a yield of 5.9 percent at the price of Rs. 25.37 a share and absorbs Rs. 82,500. The profit has amounted to Rs. 2.35 lakhs, against Rs. 1.27 lakhs in the previous year. Buildings and machinery reserve is allocated Rs. 50,000 and taxation provision Rs. 83,000. The carry-forward is Rs. 19,953, compared with Rs. 21,708 brought in. Production increased from 9,018 maunds to 10,000 maunds, and the average sale price rose from Rs. 2.29 to Rs. 2.36 a lb. Estimates for 1960 are for a crop of 10,000 maunds at a cost of Rs. 14.58 lakhs.

The Margaret's Hope Tea Co. Ltd, a Darjeeling garden, has made a profit of Rs. 73,692, against Rs. 63,806. A taxable ordinary dividend of 10 percent has been declared, absorbing Rs. 40,000. The dividend was 10 percent, tax-free, in the previous year. The yield works out to 7.2 percent at the price of Rs. 13.87 a share. The carry-forward is Rs. 72,659, against Rs. 67,668 brought in. The crop increased from 4,535 maunds to 4,600 maunds, but the average sale price fell from Rs. 3.36 to Rs. 3.01 a lb. Estimates for 1960 have been made for a crop of 4,700 maunds at a cost of Rs. 9.75 lakhs.

The profit of the Amluckie Tea Co. Ltd, an Assam garden, has amounted to Rs. 5.74 lakhs, against Rs. 3.33 lakhs. A taxable ordinary dividend of 15 percent has been declared, absorbing Rs. 66,855. This offers a yield of 5.7 percent at the present price of Rs. 26.25 a share. The ordinary dividend was 15 percent, tax-free, in the previous year. Taxation provision is allocated Rs. 2.18 lakhs and buildings and machinery reserve Rs. 2.22 lakhs. Production increased from 9,989 maunds to 12,016 maunds, and the average sale price rose from Rs. 2.48 to Rs. 2.51 a lb. Estimates for 1960 have been made for a crop of 11,000 maunds at a cost of Rs. 14.91 lakhs.

Sirur Textile Capital Plans

The Sirur group of textile mills—Mysore, Modern and Minerva—have decided to raise capital in order to finance their modernisation and expansion programmes. The Mysore Spinning and

Weaving Company has embarked on an extensive scheme of expansion. It has purchased from the Minerva Mills the bleaching and dyeing house and adjuncts, together with the dyeing and bleaching machinery, for a sum of Rs. 8.88 lakhs. The Company has been granted permission to install 144 automatic looms and also a waste spinning plant. To finance part of this capital expenditure, the Company proposes to issue shortly further equity capital to the extent of Rs. 9.93 lakhs. This will be offered at par to the existing shareholders in the proportion of one share for every three ordinary shares held on a date to be decided later by the directors.

Minerva Mills proposes to raise its authorised capital by Rs. 20 lakhs. Efforts are being made to put the Company's mills on a sound profit-making basis. It is said that the steps taken to diversify production and achieve economies in working have begun to show results. The programme of renovation and modernisation will be taken up as soon as funds become available from the National Industrial Development Corporation. The directors have also decided to issue in the near future 6 percent tax-free redeemable preference shares for Rs. 10 lakhs. Modern Mills has a scheme for installing 144 automatic looms and the overall capital expenditure is estimated at Rs. 50 lakhs. The directors propose to issue fresh capital to the extent of Rs. 46.47 lakhs in the ratio of one share for every share held.

Bharat Bijlee to Expand

The directors of Bharat Bijlee Ltd have decided to offer to the public 7,649 equity shares of Rs. 100 each. The Company manufactures electric motors and transformers. It was incorporated in 1946, but in the latter half of 1955, there was a substantial change in the shareholding, following which the managing agents resigned. Since then, the Company has been managed by a board of directors. It has been making steady progress as sales have gone up from Rs. 8 lakhs in 1955 to Rs. 52 lakhs during the year ended June 1959. The present issued and subscribed capital of the Company is Rs. 10 lakhs, of which Rs. 7.3 lakhs is in equity shares and Rs. 2.7 lakhs in preference shares. It is understood that steps are being taken to convert the preference shares into equity shares. The gross block of the Company is around Rs. 21 lakhs, while the net block is Rs. 14 lakhs. The object of the present issue is to finance the scheme for increasing the manufacturing capacity of transformers and electric motors. It is also proposed to manufacture specialised and more remunerative kinds of motors. The Company has entered into an agreement with the Siemens Engineering and Manufacturing Company of India, which has got the patent and manufacturing rights from Siemens Schuckertwerke A. G. of West Germany for the whole range of motors and transformers to be manufactured. The Siemens Engineering and Manufacturing Company of India has been appointed sole distributor for the products of Bharat Bijlee.

Sundatta Foods and Fibres

Sundatta Foods and Fibres is to raise its authorised capital from Rs. 25 lakhs to Rs. 1 crore. Subject to the consent of the Controller of Capital Issues, the directors propose to issue 30,000 equity shares of Rs. 50 each. Out of this, 4,000 shares will be issued to the Pacific Vegetable Oil Corporation of the United States for the purchase of a used cottonseed plant. The remaining 26,000 shares are to be offered at par in the ratio of one new equity share of Rs. 50 each for every two equity and/or preference shares held. The Company has received a licence for expanding the capacity of its present cottonseed plant to 130 tons a day in Hubli and to process 9,000 tons of groundnuts a year. A new plant is to be established in Hubli for distilling 900 tons a year of fatty acids and the Company has plans for another plant for compound cattle-feed. New industrial undertakings will be built in Mysore State for the manufacture of 4,800 tons a year of rayon grade linter pulp and 5 million lbs a year of cuprammonium rayon yarn.

India Fire Bricks Venture

The India Fire Bricks and Insulating Company has been promoted for the purpose of manufacturing fire bricks and high alumina insulating bricks. The preliminary arrangements have been completed and the prospectus is likely to be published soon. The factory, in Ranchi Road, will have an annual capacity of 72,000 tons. Ranchi has been chosen because it is near the raw material zone. The plant is likely to go into production by March 1962. Foreign collaboration for the scheme will come from the well-known U. K. firm of Thomas Marshall, which will provide the usual technical know-how and participate in the capital of the Company. Over Rs. 50 lakhs of foreign exchange for the plant and machinery, it is said, has already been sanctioned. A contract for the supply of machinery has been signed with a well-known West German firm. The capital of the Company will be Rs. 1 crore—Rs. 75 lakhs in ordinary shares and Rs. 25 lakhs in preference shares. The face value of the ordinary shares is Rs. 10 and of the preference shares Rs. 100. The whole of the capital will be issued straightaway. Underwriting arrangements have been made and the foreign collaborator will take up Rs 5 lakhs of ordinary shares and Rs. 10 lakhs of preference shares.

Carbide from Travancore Electro-Chemical

It is reliably understood that the Central Government has granted the Travancore Electro-Chemical Industries Ltd an industrial licence to manufacture 10,000 tons of calcium carbide a year. The Company has been inactive for some time, but is now taking steps to establish a modern plant in Kerala for the manufacture of calcium carbide from sea shells by using charcoal. It is reported that an agreement has been reached with D.I.A. Invest, manufacturers of calcium carbide in East Germany, for the supply of plant and technical know-how. The scheme involves a capital outlay of Rs. 40 lakhs, consisting of Rs. 25 lakhs for plant and machinery, Rs. 5 lakhs for buildings, Rs. 2 lakhs for technical fees and about Rs. 8 lakhs for working capital. An import licence for Rs. 17 lakhs has, it is said, been granted for buying machinery on a rupee-payment basis. The production of calcium carbide is expected to commence in early 1962. It is reported that the Kerala Government has bought shares worth Rs. 5 lakhs and that the foreign suppliers of machinery have extended a credit of Rs. 13.5 lakhs. The Company is expected to raise Rs 2 lakhs by selling forfeited shares at par and about Rs. 9 lakhs from banks. Ordinary shares worth Rs. 10 lakhs are to be offered to the public, but after giving preference to the existing shareholders.

Manufacture of David Brown Tractors

David Brown's plans to manufacture tractors in India have been given a new impetus by the Government of India's decision to allow the British Company to build up to 3,500 tractors a year—nearly three times the output permitted under the initial manufacturing licence granted last year. The licence, which covered the manufacture of only the 14 horse-power David Brown 2-D, has now been amplified to cover the manufacture of the latest David Brown 850-D and 950-D implematic tractors, of 35 horse-power and 42.5 horse-power, respectively. Manufacture will be carried out by David Brown-Mahindra Tractors (Private) Ltd, a Company jointly owned by the British Company and its Indian distributors, Mahindra and Mahindra Ltd, of Bombay.

A new factory is now being built near Bombay to undertake the production of the three types of tractors and implements. Until the premises are ready, part of the existing Mahindra and Mahindra plant is being used for assembly and distribution. The first consignment of semi-knocked-down (S.K.D.) tractors was shipped from the United Kingdom recently. Tooling equipment for the manufacture of 2-D tractors has been supplied by the David Brown factory in Huddersfield, Yorkshire, which is now preparing detailed plans for the provision of the extra plant needed for building the 850-D and the 950-D implematic tractors in India. These will initially be shipped S.K.D., but eventually it is planned to manufacture up to 66 percent of the components in India. A higher percentage of indigenous manufacture may be feasible ultimately, provided local industrial development reaches the stage visualised under India's current development plans.

In preparation for the official inauguration of the scheme next month, a training school conducted by David Brown technicians from the United Kingdom is being established in Bombay, where service engineers and demonstrators nominated by Mahindra and Mahindra Ltd and their branches in Delhi, Calcutta, and Madras will be trained in tractor servicing and operational techniques. The newly trained Indian technicians will then be formed into field units which, under the supervision of their British instructors, will subsequently carry out a series of countrywide demonstration tours. *En route* they will also conduct training courses for dealers' representatives in selected provincial centres.

This once-smart private secretary will soon be joining the typists' pool. Her appearance is no longer an asset. Not that she doesn't wear the right clothes. She has taste in colour and design, but her chic summer cottons look like hand-me-downs after the first wash. Maybe someone should warn her to look for the label 'Sanforized' on all cotton fabrics and ready-made cotton garments.

Look for the label 'Sanforized' on every yard of cotton material and your clothes will never shrink out of fit.

Look for

Gujarat Financial Corporation

With the bifurcation of Bombay State into Maharashtra and Gujarat, the latter is to have its own financial corporation, the prospectus of which has just been published. The structure of the Gujarat Financial Corporation is almost similar to that of the other State corporations. It will have a capital of Rs. 50 lakhs to begin with, in shares of Rs. 100 each. The State Government will hold 18,000 shares, the Reserve Bank 10,000 shares, scheduled banks, etcetera, 20,000 shares and the rest 2,000 shares. The shares are guaranteed by the State Government for the payment of principal as well as a minimum annual dividend of 3½ percent. There is a statutory maximum limit of 5 percent on the dividend. Meanwhile, work is proceeding on the division of the assets and liabilities of the Bombay State Financial Corporation. Full details of the scheme are not yet available, but reliable sources say that the division will be on the basis of population. It is believed that Gujarat will be allocated one-third of the assets and liabilities.

Housing Improvements in Asia

Suggestions for improving housing policies and conditions in Asia have been made by a group of Asian housing experts after completing a three-month study tour of European countries. The housing and building materials study tour of Europe was approved by the 1959 session of the U.N. Economic Commission for Asia and the Far East, and accordingly was sponsored jointly by E.C.A.F.E. and the U. N. Bureau of Technical Assistance in co-operation with the U. N. Economic Commission for Europe. Housing experts from 12 Asian countries carried out their observations in Czechoslovakia, Denmark, West Germany, the Netherlands and the United Kingdom. Members of the group concentrated their attention on questions like housing policy, construction and design, building materials and building research.

The group has suggested that the Governments of the E.C.A.F.E. region should be encouraged to establish Ministries for Housing and Town and Country Planning, if they have not already done so. Existing small towns in Asia should be re-vitalised: the private sector should participate more fully in housing development side by side with co-operative and self-help housing schemes. Suitable land policies should be adopted and housing loans and small savings encouraged. About construction itself, overcrowding should be avoided, planning should be compact, building materials improved and equipment standardised. The use of existing, traditional building materials should be encouraged and the building materials industry should be left in the hands of the private sector. Research and construction should be more fully co-ordinated and facilities for studies and tests improved. The group, in its report, also concludes that "the time is not yet ripe for full, large-scale prefabrication of houses in E.C.A.F.E. countries. However, prefabrication of flooring and roofing components should be encouraged."

Investment Income Liabilities Abroad

The latest issue of the *Reserve Bank of India Bulletin* contains an interesting study of the trends in India's investment income liabilities abroad during 1953-58. The income payable to non-residents on their investments in India constitutes a major debit item in the country's international accounts. The debit consists of income actually transferred abroad and profits ploughed back in business. The Reserve Bank's balance of payments statistics, which are compiled from the exchange control records, show investment income payments mostly on the basis of actual transfers of income abroad. They do not take into account profits ploughed back into business, which, although not involving any immediate charge on the foreign exchange resources of the country, nevertheless represent a future claim leading to an increase in the long-term foreign liabilities. The value of the Bank's study lies in supplementing the information available from official records with data collected from the special returns obtained from companies about their annual assessments of foreign investments in India. These returns show both income earned and retained in business by non-residents.

India's liabilities on investment income account aggregated Rs. 55.3 crores in 1958, against Rs. 49.2 crores in 1957 and Rs. 57.2 crores in 1956. The annual average for 1953 to 1955 was Rs. 47.4 crores. The liabilities accrued mostly in the non-official sector, but there was a steady rise in the payments of the official sector. The share of the official sector, which was about 9 percent of the total in 1956, rose to 24 percent in 1958. However, judged by the share of the official sector in the country's total indebtedness abroad, which at the end of 1958 exceeded 50 percent of the estimated total of about Rs. 1,300 crores, the income payable by this sector is still small. Official borrowings are mostly fixed-interest obligations and they usually carry an interest charge which is lower than that paid by the non-official sector. The full-scale servicing of many foreign loans has yet to start, since they have been negotiated only recently. Foreign investments in the non-official sector have very largely been in the form of branch enterprises or equity holdings in rupee companies, where the return on capital has tended to be higher than in the case of fixed-interest obligations.

Although the overall trend has been upward, the investment income payable abroad on non-official account during 1953-58 shows wide fluctuations. The fluctuations are accounted for largely by the shifts in the income payable on investments in the tea industry. The earnings of this industry are influenced mainly by the state of foreign demand. Excluding the tea group, total incomes payable abroad have increased from Rs. 23.7 crores in 1953 to Rs. 36.9 crores in 1958—a rise of about 50 percent. Among individual groups, manufacturing industries have shown an almost uninterrupted increase from Rs. 8.2 crores in 1953 to Rs. 17.1 crores in 1958. This is in keeping with the rate of inflow of foreign investments in this group, the outstanding investments having risen from Rs. 126 crores in 1953 to Rs. 220 crores in 1958. The earnings of the petroleum group, which had risen from Rs. 6.8 crores to Rs. 16.4 crores between 1953 and 1956, declined to Rs. 11.1 crores in 1958, reflecting mainly the surrender of duty protection on motor spirit by two of the companies after 1960.

An interesting aspect of companies having direct investments relates to the allocation of their profits. Tax provision as a percentage of profits before tax increased from 56 percent in 1956 to 58 percent in 1957 and 1958. Tax provision includes taxes actually paid and reserves created for this purpose. After providing for taxation, the profits of foreign-controlled companies amounted to Rs. 48.8 crores in 1956, Rs. 38.7 crores in 1957 and Rs. 39.8 crores in 1958. Since profits distributed remained at about Rs. 29 crores or Rs. 30 crores during each of the three years, retained profits fluctuated with the changes in total profits. In 1956, profits retained in the business amounted to 40 percent of profits after tax; the proportions in 1957 and 1958 were around 25 percent. A country-wise analysis shows that the share of the U.K. declined from about 75 percent of the total in 1956 to 56 percent in 1958, while that of the United States rose from 15 percent to 23 percent. This was due to the larger dependence on the United States for official borrowings and an expansion of private investments from that country.

Patents, Designs and Trade Marks

The new Trade and Merchandise Act, passed by Parliament in 1958 and brought into force on 25th November, 1959, has introduced many important changes in the Indian trade mark law and practice. Zonal offices of the Registry have been set up in Bombay, Delhi, Calcutta and Madras, to provide better facilities for the registration of trade marks. To ensure better co-ordination of the different branches of the law on industrial property, the Trade Marks Registry and the Patent Office are to be combined into a single organisation under the Controller-General of Patents, Designs and Trade Marks. The Trade Marks Register is now divided into two parts—A and B —the latter to enable the registration of many valuable trade marks which are in use, but which did not qualify for registration under the old Act of 1940. The test to qualify for registration in part B of the Register has also been made easier. This, it is claimed, will remove the difficulties which Indian merchants experience in obtaining registration in foreign countries, where a certificate of home registration is generally required before registration is permitted. It will help in the promotion of exports.

On the legal side, criminal and civil laws relating to trade and merchandise marks have been consolidated. Mr. Manubhai Shah, Central Minister for Industry, in his address at the annual general meeting of the Trade Marks Owners Association of India Ltd, held recently in Bombay, said that, apart from this consolidation, many changes have been made in the provisions of the criminal law as applied to trade and merchandise marks. For example, the definition of "false trade description" has been enlarged, and the law now provides for stiffer punishment. Offences relating to spurious drugs and articles of food have been made cognisable on grounds of public health and public interest; the punishment for them can involve imprisonment of up to three years. In the licensing of trade marks, changes have been made concerning registered users. The power to accept or reject applications for trade mark licences now vests in the Government, and steps are being taken to eliminate the prevailing system of unrestricted licensing. For offences concerning goods other than drugs and food, the aggrieved party has to take suitable action against the offender. In the case of those relating to false trade description "as to the trade origin or nature of goods, or failure to indicate the country of origin," the prosecution will be launched by the Central and State Governments. Improper representation of a trade mark as "registered" when it is not, is also considered an offence.

Dealing with the revision of the law on patents, Mr. Shah said that an enquiry committee, appointed 12 years ago, had gone into the question with a view to recommending modifications or changes. It felt that the Indian patents system had failed to stimulate invention among Indians and "to encourage the development and adoption of new inventions for industrial purposes", so a thorough change was required. The Government, however, has had the question examined afresh by Mr. Justice Rajagopala Ayyanger, of the Supreme Court. The judge has already submitted his report, which is a comprehensive document dealing with all aspects of the question. "I am glad to say that this report has received very high encomiums from knowledgeable persons, both in India and abroad, and it is of interest to note that the Royal Commission of Canada, in its report on patents submitted three months ago, has independently reached conclusions similar to those of the judge on many points." A comprehensive Bill will soon be drafted on the basis of Mr. Justice Ayyanger's report. A revision of the designs law will follow.

Kanpur Electric Supply

The Kanpur Electric Supply Administration, a U.P. Government undertaking, produced 227.5 million units of electricity and earned a revenue of Rs. 2.22 crores during the year ended March 1960, according to its annual report. It was faced with a demand for additional electricity last year totalling 35,000 kilowatts. Since then the demand has increased still further, and the total is estimated at 700,000 kilowatts. The rise in demand, the report says, indicates that many subsidiary industries, have been set up, so it is proposed to establish a major thermal power-station in Kanpur during the third plan period. In 1956, the K.E.S.A. undertook a project for the installation of a 15,000 kilowatt generating plant. While it had completed all preliminary arrangements and orders were about to be placed in 1958, the progress was arrested due to the difficulty in obtaining foreign exchange. Subsequent efforts to get foreign exchange, the report adds, proved successful, so the project has been revived. Orders for plant and equipment have been placed, and it is expected that the project will be commissioned in 1962. The plant replacement project, comprising one 15,000-kilowatt turbo-alternator, two 15,000 lbs an hour boilers and auxiliary equipment, is nearing completion. The boilers and auxiliary equipment have already been commissioned. The question of commissioning the turbo-alternator soon has been taken up at the highest level with the manufacturers. Commissioning of the plant on order will provide some relief to the existing plant, which has operated under extreme pressure. Much of the plant in the power-house has long since outlived the maximum economic life of 25 years prescribed in the Electricity (Supply) Act, 1948. Referring to the cost of production, the report points out that it has increased from 5.11nP a unit in 1948-49 to 5.46nP a unit in 1959-60. The increase in some of the years has been due to exceptional factors. The controlled price of coal, plus railway freight, delivered to site increased from Rs. 26.40 a ton in 1947-48 to Rs. 38.75 a ton in 1959-60. This, the report observes, "is a substantial burden on the cost of production as, in a thermal station, the expenditure on coal accounts for a substantial part of the total cost of generation." The increase in works cost of power delivered to consumers over the past 12 years has, the report claims, been relatively small.

Sugar Output in Madras

According to an official statement, sugar production in Madras reached 75,000 tons in 1959-60, although the State could not attain self-sufficiency. So it has asked for a small quota to supplement the available supplies. The increase in the number of sugar mills, as well as the growth in cane cultivation, has helped Madras to raise output. When more new units are commissioned, the State will probably overtake Mysore in sugar production. The Government is trying to ensure larger and regular cane supplies. The stock market, which reflects this hopeful outlook, has been partial to sugar shares for over a year. This is shown by the improvement in the quotations of the

three Parry shares—Cauvery, Deccan and E.I.D.S.F. It is believed that the older companies will continue to obtain good results, while the newer concerns, too, will be able to show some profit. The sugar mills in Andhra Pradesh are, to some extent, better placed, and their operating results remain good. Many companies there have done well by introducing a measure of diversification.

Petroleum Institute

Details now available concerning the Rs. 2.7-crore Petroleum Research Institute being set up in Dehra Dun show that the syllabus and the work programme are likely to be chalked out by 1962. An agreement about the project has been reached between the Governments of India and France. Two experts of the French Institute of Petroleum, it is expected, will arrive in India soon. The agreement provides that 13 French experts will be deputed to the Indian Institute, which will have a complement of 145 technical and scientific personnel. The former will also undertake the training of Indian officers, the bulk of the expenditure being borne by the French Government. With the completion of the Nunmati and Barauni refineries, oil in the public sector may begin to be produced by about 1962, so the demand for trained oil technologists will increase. In particular, measures to increase the production of middle distillates are visualised.

Railway Electrification in South

The Central Deputy Minister for Railways, Mr. Shah Nawaz Khan, said recently that Neyveli would provide power for electric traction on the railways in the future. It is reported, however, that the implementation of the scheme will be delayed since electric locomotives are hard to obtain at present. Besides, it is not known yet whether all the power required for this purpose can be obtained from Neyveli in 1961. Some estimates have been made on electric traction on the broad-gauge lines: on an investment of Rs. 9 crores on the Madras-Arkonam double-line section, the return will be only 5 percent, but its extension up to Jalarpet with an outlay of Rs. 17 crores will raise the return to 13.5 percent. The increase in passenger traffic is stated to be the reason for introducing heavier locomotives in the south. The Minister said that heavier trains are now being hauled by the diesel locomotives which have recently been introduced on the South Eastern Railway. Besides, the lack of steam coal in the south strengthens the case for the conversion of steam locomotives to diesel ones. But the high hopes about electrification seem to be premature because of many limiting factors.

Prospects for Industrial Growth

In his address at a recent meeting of the Hindusthan Chamber of Commerce in Madras, Mr. G. L. Mehta said that no industry dies merely because of competition unless it is inefficient. State aid to industry has been liberal, and cheap loans to shipping companies is part of the "new positive industrial policy." Investment in the private sector during the second plan has already exceeded the target. Import controls have also helped the development of industry. The increase in capital issues is a sign of industrial growth in recent years, and investors have taken keen interest. Discussing the difficulties of private industry, Mr. Mehta said that lack of finance is not the only handicap. Technical knowledge and raw materials have been in short supply, and power and transport difficulties have persisted. In fertilisers, the private sector has been allowed to launch new schemes, but it is possible that, as in the case of steel, there will be competition between State and private concerns for raw materials and markets. The foreign exchange shortage has been affecting even essential imports. An encouraging feature, however, is that foreign firms are more inclined to participate in schemes for the local manufacture of their products in association with Indian ventures, Mr. Mehta said. The Industrial Credit and Investment Corporation of India will grant loans to promising ventures. It is hoped that the Corporation will get a fresh loan from the Government, as well as assistance from the U.S. Development Loan Fund, to augment its resources.

Racket in Fertilisers

The fertiliser racket, about which a motion was recently tabled in the U.P. Legislature, is altogether a new one. On the admission of the Minister for Agriculture, ammonium sulphate is being diverted for the production of liquor. With the current craze for Prohibition, such a novel use for fertilisers may be expected to increase, particularly as it has now been widely publicised. But the larger racket, according to the Minister, consists in the smuggling of the commodity to other States where it fetches high prices up to Rs. 40 a maund, compared with Rs. 16 a maund in U.P. He has made the allegation that other State Governments not only know of this smuggling, but are actively encouraging it. He also says that officials of the U.P. Department of Agriculture are involved. The U.P. Government may be powerless against its counterparts in other States, but it must be presumed to have some control over its own officials. Yet consignments are frequently taken out of U.P. under forged documents, so the State Government has asked the Centre to impose a ban on all inter-State movement of fertilisers. It is interesting to note that the Madras Government, on its part, has been demanding a ban on even the inter-district movement of fertilisers. Its anxiety probably derives from the fear that fertilisers intended for districts chosen under the "package programme" may find their way elsewhere. The question of racketeering in fertilisers was raised in the Lok Sabha, but Mr. Patil merely said that no responsible State Minister should have made the statement that other State Governments are interested in buying fertilisers in the black market. The Central Food Minister, however, did admit that there is some blackmarketing in the commodity and that he is trying to stop it. While he is favourably inclined towards the Madras Government's request for banning the inter-district movement of fertilisers, he said that the Central Government would also consider U.P.'s request for a ban on inter-State movement.

Shortfall in U.P. Food Production

The official review of U.P.'s second plan says that food production in the State is expected to fall short of the 14 million-ton target by 1 million tons. A number of reasons have been given for the unsatisfactory performance. An important problem, it is stated, is the shortage of foreign exchange which has held up many irrigation, power and industrial schemes. Another is the delay in the supply of vital materials for construction work. The Centre has also been blamed for delayed sanctions. It has become a settled habit with most State Governments to attribute their failures to the shortage of capital funds, but the introduction of more efficient techniques and organisational methods does not necessarily depend on increasing fixed capital. A useful clue to the low levels of agricultural production lies in the uneconomic size of holdings. According to the eighth round of the National Sample Survey, about three quarters of the country's cultivators do not own more than five acres of land. The Zamindari Abolition Committee in U.P. pointed out ten years ago that 85 percent of the State's cultivators own uneconomic and fragmented holdings. The Planning Commission as well as the National Development Council see in co-operative farming the ultimate solution to the problem of small and uneconomic holdings. To entrust the *panchayats* with the task of energising the peasantry may read well on paper, but in actual practice, these agencies are not of much use.

Second Heavy Electrical Project

While Mr. Nehru is expected to inaugurate India's first heavy electrical factory in Bhopal on 1st November, a team of official experts from the Central and U.P. Governments has recommended Jwalapur, near Hardwar, as the site for the second factory which is to be established with Russian aid. When completed, it will employ 25,000 people. Jwalapur was selected after a land contour and sub-soil water survey. Two other U.P. towns, namely, Moradabad and Roorkee, were earlier visited by the team, but the choice ultimately fell on Hardwar, the U.P. Government having assured the necessary power supplies from the Pathri power house which is about seven miles away. The factory will be supplementary and along the lines of the Bhopal plant. It will, in the beginning, manufacture switchgears, power transformers, turbines and control gears. Production will later be extended to other lines. The draft outline of the third plan makes provision for one more heavy electrical factory, bringing the total to three, which are together designed to ensure from indigenous sources a wide range of electrical equipment sufficient to enable power generation to be increased at an annual rate of 2 million kilowatts a year from 1971 onwards.

PUJA HOLIDAYS

On account of the Puja holidays, there will be no issue of CAPITAL on 29th September, 1960. The first issue to be published after the holidays will be dated 6th October, 1960.

FLOOD DAMAGE IN CALCUTTA

WE are glad to see that an influential meeting was held at the Bengal Chamber of Commerce on Monday to organize measures for the relief of the distress in Calcutta occasioned by the recent floods. As Mr. Sutherland puts it, and the entire Press endorses, whatever we do let us do quickly. This being the expression of the President of the Chamber, we are rather surprised to find that no list of subscriptions was published up to Wednesday morning by the Secretary. We trust that as in the case of the first jute forecast, it is Mr. Parsons who is to blame and not the merchants of Calcutta. There is nothing like promptness in publishing a list of those received to induce further subscriptions, and delay in this matter is often fatal to success. We notice that at the meeting, the Lieutenant-Governor stated that the building provisions of the New Municipal Act would remain in abeyance in the case of the rebuilding of houses damaged by the rain. With every sympathy with the kindly feeling which induced the Lieutenant-Governor to make the statement, we are inclined to think that it was a mistake. Apart from this, the Municipal Act is now the law of the land. The Lieutenant-Governor may, of course, consider himself above the law, but it is not a nice thing to see the governor of a province ready to ride roughshod over Acts of the legislature; and if the new building regulations are required they should be put in force at the earliest possible moment. We would advise a study of Sections 567 and 568 of the Act. There is a procedure to be adopted in such cases.

A Ditcher's Diary

I MUST CONFESS I AM BEGINNING TO DEVELOP some sort of a perverse admiration for Mr. Lumumba. He has, as I have heard it said in Hollywood films, got something that others haven't. Look at the way he is there, and then isn't, and then he is there again. Not entirely without reason, the West and perhaps some others would obviously have liked to see the back of him finally. What sustains him, I imagine, is this very thing—his being hated by the West. If I know anything at all of African politics, his repeated appeals to the Soviet Union sent a shiver down several African spines. All of Africa wants western domination ended; most of it does not want it replaced by communist domination. But in so far as it frightens, or annoys, the West, Russian assistance, or promise thereof, is welcome to Africa. The latest resolution bars unilateral foreign assistance; and it seems possible that Russia will do nothing rash, or its representative at the United Nations would hardly have sobered down so tamely and suddenly. But the sponsors of that resolution will now insist that, if Russian help to Mr. Lumumba stops flowing, so must Belgian (and perhaps other) help to Mr. Tshombe. Belgium has already yielded much ground under U.N. pressure; but there in Katanga some Belgians are not quite so amenable to reason as seen by Brussels. I am sorry to have to say that Belgian cowardice in the Congo has done the mother country's reputation little good; and it is significant that some former Nazis were trying to come to fight on the side of the Union Minière—this shows Katanga's political complexion. But the test of the United Nations' rôle in the Congo will be whether the African representatives in Leopoldville, Ghana's Mr. Djin in particular, are able to effect some sort of a conciliation among all those politicians and soldiers. Characteristically, at the time of writing, Mr. Lumumba claims a settlement which all others repudiate. My man hasn't done his last act yet.

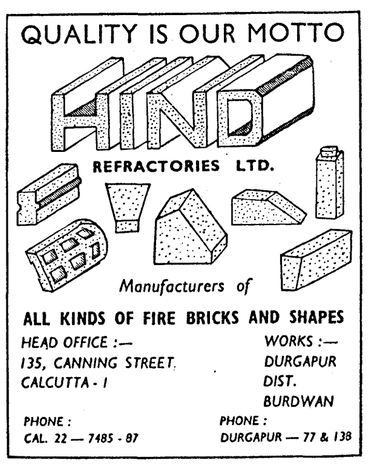
I WILL NOT CLAIM TO HAVE READ THE FULL TEXT of the canal waters treaty between India and Pakistan. But if it is all right for Mr. Nehru and President Ayub Khan, as it apparently is, I say it's all right for me too. I am heartily glad that a 13-year-old dispute is at an end, and that Mr. Nehru is in Pakistan, amid obvious popular approbation. That the World Bank played a key rôle in these protracted negotiations, and not by promising funds alone, is generally acknowledged, although politicians may still not concede that business men handle delicate talks better than they themselves. But, whatever the skill of the World Bank mediators, the ultimate settlement would hardly have been possible without the politicians' final assent; and this is what is so promising for the future of Indo-Pakistani relations. I am not so simple-minded as to believe that a Kashmir solution is round the corner; the financial arguments will also take a long time to sort out. But what the recent treaty has demonstrated is that, once Mr. Nehru and President Ayub Khan are willing, the bureaucrats down below will not be so busy discovering, or inventing, "good reasons" why no solution is possible or desirable. The canal waters dispute was one of the most tangled; the settlement is not a simple document either; but if it could be solved, so can the rest of the quarrels between the two countries. After years of uncertainty, Pakistan now has a government that really governs and seems to have popular consent. It can do things ordinary politicians would not dare—and that has been true of Mr. Nehru also all these years. This combination of circumstances and personalities seems to me an entirely happy augury; and friends of the two countries must hope that both leaders will make the most of the ice broken by the canal waters treaty. I am in no doubt at all that when President Ayub Khan comes to India, he will receive at least as warm a welcome as Mr. Nehru has been given in Pakistan.

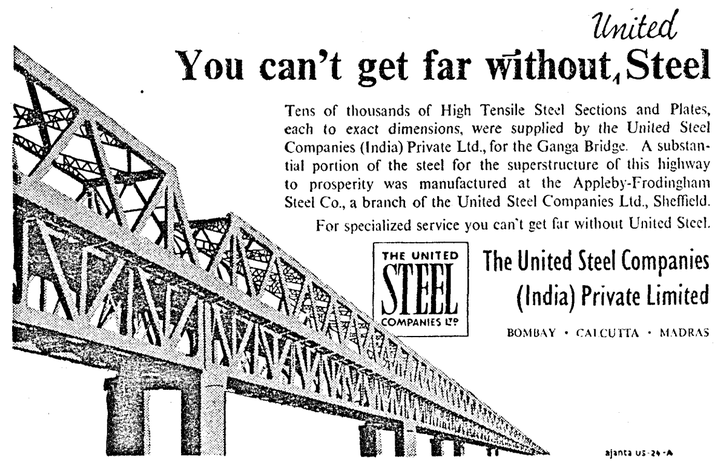
TO LIVE TO BE A HUNDRED, IN MY SOMEWHAT pessimistic view of life, is a greater burden than I would like to carry. But Dr. M. Visvesvaraya appears to have enjoyed every minute of his 100 years, and will, I hope, enjoy many more. Merely running the course, however, is only an exercise in endurance and, by itself, no great feat; what Dr. Visvesvaraya has achieved is far more important. Britons were, of course, justifiably proud of the administration they had set up in the provinces; what surprised me often was that even Indians saw nothing good in the few princely States where the administration was better than in some of the provinces. Dr. Visvesvaraya in Mysore seldom allowed himself to be completely involved in the political frustrations of the country at the time. He must have faced considerable opposition from those who believed that India needed no heavy industry; but he dedicated himself to doing what was possible, and even nationalists who might have thought he was wasting his time fifty years ago have recently paid him the homage he deserves. I will not go into the argument whether patriotism at that time resided more in going to gaol or in doing the sort of constructive work Karve, Visvesvaraya and Tagore (among others) went on doing. This must be a matter of opinion; and I do not hold the facile view that those who courted imprisonment did nothing useful. What is increasingly being realised is that at least free India has greater need of men like Visvesvaraya, men who do things and leave behind them solid achievements in the shape of factories and institutions which directly contribute to the well-being of the people. Mr. Nehru has described dams and steel plants as the new temples of free India. When Dr. Visvesvaraya started some of these temples, he was practising a heresy which has since become the official religion of India's secular State.

EXPERIENCE SUGGESTS THAT CREDITORS ARE USUALLY a happier lot than debtors, but the Paris meeting of the "Aid to India Club' seems to have left a feeling of general well-being in only one capital, and that is New Delhi. Although reports about the meeting have been remarkably patchy, nothing I have read so far indicates that India will be getting all the foreign aid she requires over the next six months. Perhaps the delegates who went to Paris were not armed with the authority to declare categorically how much assistance their countries would give; but if the aid required does not materialise within the next few weeks, many may view the parlous state of this country's foreign exchange reserves with alarm. The main difficulty, I have heard it said, is that most of the help India is getting from abroad is "tied" to specific projects or to purchases from the particular country giving the aid. While I see the point that India needs some aid for supporting the general balance of payments, it might not be wholly beside the point for this country to enquire how far it is itself encouraging the tendency towards "tied" credits. The Government has just promised that Indian watches will be on sale by the end of 1962, without anybody having cared to explain whether it is necessary to spend foreign exchange on manufacturing watches in a country which has absolutely no advantages to offer for such a project. The case of watches, in fact, also illustrates how easily industrial priorities tend to be shuffled about by the personal predilections of those in authority. Three years ago, when imports in general were drastically slashed, those of watches came under an almost complete ban—implying that they were a rather superfluous luxury in a country where punctuality in any case hardly seemed to matter. Not having read the World Bank mission's report in full, I do not know what it has to say about frilly and pretentious schemes like these. But I do feel that the publicity they get abroad do this country's case for foreign aid more harm than any inherent stinginess on the part of the nations giving the aid.

PROBABLY NO CITY IN INDIA HAS DECAYED AS FAST during the past few years as Calcutta; and the deterioration has not been confined to the metropolis alone, but has spread also to the vast hinterland it serves. The World Bank economic mission has done a major service by highlighting the appalling conditions of life and work; and it is reasonable to argue that the first step towards improving them lies in rehabilitating the refugees. A certain excitement was, therefore, understandable when the *Statesman* published the story last Thursday that Dr. B. C. Roy and Mr. Ellsworth Bunker, the U.S. Ambassador, had suggested the use of P.L. 480 counterpart funds for a massive plan to rehabilitate refugees and improve conditions in this State. My first reaction to the story was one of pleasure; the prompt and categorical denial which followed from the Finance Ministry does not remove my suspicion that the report was not wholly baseless. There is substance in the Finance Ministry's argument that such expenditure may be inflationary—but only if it is assumed that the P.L. 480 funds held by the U.S. Embassy will be kept permanently immobilised, and never spent. From what we know, such an assumption would be mistaken; in that case, if the funds are to be used, there can be few causes more worthy of support than the rehabilitation of West Bengal's refugees. The Finance Ministry's opposition to the proposal will not win it much sympathy in this State; yet, many may feel that the handicaps in rehabilitating refugees, and in developing West Bengal more vigorously, are organisational rather than financial. The Dandakaranya scheme, for instance, has got bogged down in personal disputes and inter-State rivalries of the sort which could never have been resolved, regardless of how much money, P.L. 480 or other, had been available. The refugees undeniably deserve stronger financial support; but Dr. Roy's claim for it might have been conceded more readily if he could have shown that the money already given has been well spent. I am not so sure that he can.

THE DITCHER





first step towards India's self sufficiency in NON-FERROUS METALS

LEAD & ZINC

THE METAL CORPORATION OF INDIA LTD.

with technical collaboration & financial participation of

KREBS & CIE PARIS AND SOCIETE MINIERE ET METALLURGIQUE DE PENARROYA, PARIS

ARE UNDERTAKING

further MINE DEVELOPMENT & INSTALLATION of an ELECTROLYTIC ZINC SMELTER AT UDAIPUR, RAJASTHAN with its ancillary plants having capacities as under

ZINC	... ...	**18,000 Tons/Year**
CADMIUM	... ...	**75 Tons/Year**
SUPERPHOSPHATE FERTILIZER	...	**75/80,000 Tons/Year**

(UTILISING BY-PRODUCT SULPHURIC ACID TO BE PRODUCED AT THE SMELTER)

LEAD Production will Increase from 3,700 Tons/Year to 9/10,000 Tons/Year

SILVER Production will Increase from 100,000 Ozs/Year to 300,000 Ozs/Year

THE PROJECT IS BASED ON THE UTILISATION OF LEAD AND ZINC ORES OF ZAWAR MINES, UDAIPUR, THE ONLY ONE OF ITS KIND NOW BEING WORKED IN INDIA, POTENTIAL ORE RESERVE OF WHICH IS ESTIMATED TO BE VAST ACCORDING TO FOREIGN EXPERTS. PRODUCTION OF SIMPLE SUPERPHOSPHATE FERTILIZER WILL BE PARTICULARLY ECONOMIC, BEING BASED ON UTILISATION OF BY-PRODUCT SULPHURIC ACID. THE INSTALLED CAPACITY WILL MEET MAJOR PART OF THE DEMANDS OF PHOSPHATIC FERTILIZER FOR RAJASTHAN AND OTHER ADJOINING STATES WITHIN A RADIUS OF 5/600 MILES OF UDAIPUR.

Money

THE CALCUTTA MONEY MARKET

SUBSTANTIAL INCREASE IN ADVANCES

Wednesday, 21st September.

THERE was a substantial increase in the general level of advances in the Calcutta money market during the past week. Most of the increase was in engineering credit, although jute and foodgrain advances also showed a minor rise. Accommodation for cotton was virtually unchanged, while that for sugar decreased a little. In the interbank market, conditions remained tight, and the call rate was generally quoted at 3¾ percent.

The exchange market was slightly more active, mainly because the supply of tea bills improved. Bills on account of gunny shipments remained scarce. Remittance was on a moderate scale. Sterling was firm at first, but a somewhat easier tendency developed towards the close.

BULLION WAS STEADY IN THE PAST WEEK. SILVER advanced from the previous week's level of Rs. 223.50 to Rs. 224, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 223.50. The London and New York silver prices were shown at 79¼d and 91⅜ cents.

Gold was quietly steady in sympathy with silver and the price rose to Rs. 137. The sovereign was quoted at Rs. 89.25.

DURING THE WEEK ENDED 16TH SEPTEMBER, Government of India Treasury bills for Rs. 148,73,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 20th September. The total amount offered was Rs. 2.50 crores. Tenders at Rs. 99.365 were allotted approximately 80 percent, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 26th September.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 21st September to 24th September at Rs. 99.331 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 14th September to 17 September, amounted to Rs. 15 lakhs only.

THERE WERE DECLINES OF Rs. 15.62 CRORES TO Rs. 1,792.60 crores in active notes and of Rs. 8.69 crores to Rs. 1,814.25 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 16th September, 1960. The currency contraction was adjusted by reducing rupee securities by Rs. 9.94 crores to Rs. 1,441.72 crores. In the Banking Department, deposits of the Government of India rose by Rs. 19.09 crores to Rs. 81.72 crores, as did other Government accounts by Rs. 8.25 crores to Rs. 55.50 crores. Balances of commercial banks at Rs. 99.62 crores showed a fall of Rs. 16.06 crores. Balances held abroad increased by Rs. 77 lakhs to Rs. 23.44 crores. Investments at Rs. 226.37 crores showed a rise of Rs. 23.60 crores. Other loans and advances fell from Rs. 148.57 crores to Rs. 137.11 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10.96 crores (Rs. 10.67 crores). Ways and means advances stood at Rs. 28.67 crores, against Rs. 29.18 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 9th September, 1960, shows a drop of Rs. 4.74 crores to Rs. 605.12 crores in total deposits. Investments in Government securities are down by Rs. 17.55 crores to Rs 367.92 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances, including loans, cash credits, overdrafts, bills discounted and purchased, have decreased by Rs. 1.17 crores to Rs. 212.81 crores. Cash and balances are, in consequence, shown at Rs. 35.01 crores or Rs. 7.83 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 9th September, 1960, shows Demand and Time liabilities at Rs. 774.92 crores (Rs. 14.94 crores on account of borrowings from banks) and Rs. 1,193.65 crores (Rs. 24.57 crores), compared with Rs. 796.89 crores (Rs. 22.96 crores) and Rs. 1,193.75 crores (Rs. 25.70 crores), respectively, in the previous week. Cash has declined by Rs. 1.18 crores to Rs. 46.86 crores, while balances with the Reserve Bank have increased by Rs. 4.19 crores to Rs. 111.79 crores. There is a drop of Rs. 9.44 crores to Rs. 736.05 crores in investments. Advances and bills discounted at Rs. 1,126.25 crores show a fall of Rs. 3 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.1 percent and 57.2 percent, against 7.8 percent and 56.7 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outsanding with the public on 23-9-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
23-9-60	24-12-60	2,00,00	Rs. 2.540%
16-9-60	17-12-60	2,00,00	Rs 2.540%
9-9-60	10-12-60	2,00,00	Rs 2.540%
26-8-60	27-11-60	2,00,00	Rs 2.540%
19-8-60	20-11-60	2,00,00	Rs 2.540%
12-8-60	13-11-60	2,00,00	Rs 2.745%
5-8-60	6-11-60	2,00,00	Rs 2.737%
29-7-60	30-10-60	2,00,00	Rs 2.745%
15-7-60	16-10-60	2,00,00	Rs 2.745%
8-7-60	9-10-60	2,00,00	Rs 2.745%
1-7-60	2-10-60	2,00,00	Rs 2.745%
24-6-60	25-9-60	2,00,00	Rs 2.745%

(Monthly Maturities 000's omitted)

September 1960	6,00,00
October 1960	8,00,00

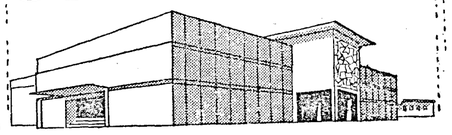
WATERTIGHT Concrete Construction



as only Impermo can make it

IMPERMO Cement Waterproofing Compound is available in powder form, convenient to use. IMPERMO is most economical: only 2% by weight need be added to cement to prevent the penetration of damp through cement mortar or concrete.

- IMPERMO renderings prevent dampness.
- Damp walls are cured by IMPERMO.
- Watertight joints can be ensured by using IMPERMO.
- IMPERMO is essential for producing water-repellent backings on which to apply coloured cement renderings.

Whatever your concrete construction, make it watertight as only IMPERMO can make it:

Tanks – Reservoirs – Basement Walls – Inspection Pits – Roofs – Cast Stone – Swimming Baths – Sewage Works – Floors – Conduits – Renderings, particularly backing coats of white or coloured cement finishes – Pools – Cellars – Garage Pits – Walls – and many others.

IMPERMO costs only Rs. 135.00 per case of 50 x 1 kilogram packets, i.e., approximately Rs. 48.00 to waterproof 100 cu. ft. of 1 : 2 : 4 concrete mix.

Impermo

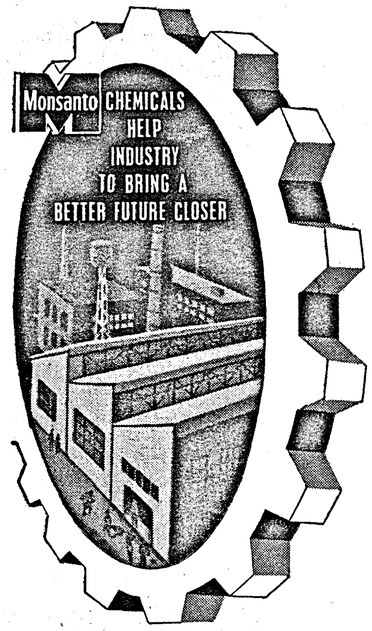
IMP.6.8



Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

Monsanto Chemicals Limited, London, Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

Stocks and Shares

DOWNTREND IN SHARE PRICES CONTINUES

GUEST, KEEN, WILLIAMS RIGHTS ISSUE DISAPPOINTS

Wednesday Evening.

THERE was a further deterioration in trading conditions on the Calcutta Stock Exchange during the past week. Although fears of fresh credit curbs did not materialise, the downtrend in share prices continued. Finally, on 15th September, the Stock Exchange authorities were forced to apply bye-law 77 of the Association and prohibit sales of clearing shares until further notice, except for the purpose of squaring up. Business virtually came to a standstill and a state of uncertainty existed. With the Puja holidays due to commence next Monday, the prospects of an early recovery appeared dim.

The new issue market is now in full swing and that is one reason why existing issues are being neglected. Meantime, shareholders of Guest, Keen, Williams are disappointed by the decision to make a rights issue (which was originally to be at a premium of Rs. 10) at a premium of Rs. 18.50. The shares were marked down immediately after the announcement from Rs. 49 to Rs. 44, with sellers over. It is feared that the Government may insist that all future rights issues should be made at high premiums.

Government securities ruled very quiet and except for near-dated issues, most medium and long-term loans were freely offered without attracting buyers. The depression in State issues continued.

The recent enquiry for preference shares petered out, as it now seemed almost certain that holders of tax-free and taxable preference shares would be worse off than under the previous system, when "grossing" was permitted.

Bank shares were more or less unchanged. In coals, Burrakur recovered to Rs. 16.87 from Rs. 16.12. Other issues in the latter section were practically unchanged.

In cotton textiles, Dunbar were slightly better at Rs. 20. as were Kesoram at Rs. 25.87 and Elgin at Rs. 18.

Electric supply shares were unchanged.

In the engineering group, Indian Iron at one time recovered to Rs. 24.50, but declined at the close to Rs. 24.18. Jessop were subdued at Rs. 20.75 and Textile Machinery were quietly steady at Rs. 23.55 ex-dividend. Braithwaites changed hands at the previous quotation of Rs. 31, while Britannia Engineering, following the news of a strike at the Company's works, receded to Rs. 13.50.

Prices of jute shares showed little change, but sellers predominated.

In papers, Bengal were marked down by Re. 1 to Rs. 95, and Orient were quiet at Rs. 43.40.

In sugars, Ramnugger were easier at Rs. 25.75, as were Dyer Meakin Breweries at Rs. 22.37.

Among miscellaneous industrials, Alkali and Chemical changed hands at Rs. 31 and Britannia Biscuits were easier at Rs. 38. Dunlop Rubber recovered to Rs. 41.50, while East Anglia Plastics were quiet at Rs. 11.75. The Hindustan Aluminium Rs. 7.50 paid-up shares were marked at Rs. 8.75. Indian Cables were easier at Rs. 31.87, while Jaipur Udyog recovered from Rs. 11 to Rs. 11.87. Rallis India were slightly better at Rs. 118, while Union Carbide were softer at Rs 49. Sirsilk were marked down from Rs. 10 to Rs. 9.65 and Rohtas Industries were quiet at Rs. 22.81 ex-rights-*cum*-dividend.

In the mining group, Indian Copper recovered to Rs. 4.35, as did Metal Corporation to Rs. 9.50.

Business in tea shares was on a restricted scale, and prices moved narrowly.

New Chumta Tea

The profit of the New Chumta Tea Co. Ltd has risen from Rs. 1.78 lakhs to Rs. 2.24 lakhs for the year ended December 1959. An ordinary dividend of 15 percent, taxable, has been declared, against 10 percent, tax-free, in the previous year. Allocations include Rs. 63,243 (against Rs. 42,398) for taxation, Rs. 78,516 (against Rs. 76,368) for depreciation and Rs. 2,800 (against Rs 15,400) for reserve for development rebate. After making all adjustments, an amount of Rs. 62,229 is carried forward, against Rs. 59,723 brought in. A crop of 5,88,580 lbs was made. The average sale price was Rs. 2.06, against Rs. 1.86 a lb. Estimates for 1960 have been made for a crop of 7,200 maunds at a cost of Rs. 10.18 lakhs.

Rungamattee Tea

An ordinary dividend of 7½ percent, taxable (against 2½ percent, tax-free) has been declared by the Rungamattee Tea Co. Ltd for the year ended December 1959. The profit has amounted to Rs. 1.55 lakhs. Taxation absorbs Rs. 2,787. Revenue reserve receives Rs. 45,000. Development rebate reserve is allocated Rs. 13,500 and investment reserve Rs. 16,000. After making all adjustments, there is a carry-forward of Rs. 41,094, against Rs. 1,700 brought in. A crop of 606,803 lbs was made, against 553,446 lbs. The average sale price was Rs. 2.07, compared with Rs. 1.75 a lb. Estimates for the current year provide for a crop of 640,000 lbs at an outlay of Rs. 11.51 lakhs.

Nagaisuree Tea

The Nagaisuree Tea Co. Ltd has earned a profit of Rs. 5.82 lakhs for the year ended December 1959. An ordinary dividend of 17½ percent, subject to deduction of tax, has been declared, against 5 percent, tax-free, in the previous year. The provision for taxation is allocated Rs. 2.47 lakhs. Development rebate reserve receives Rs. 23,000 and investment reserve Rs. 1.45 lakhs. After making various adjustments, there remains a balance of Rs. 28,611, which is carried forward, against Rs. 19,884 brought in. The crop was 1,139,230 lbs, compared with 868,614 lbs. The average sale price was Rs. 2.20 against Rs. 1.85 a lb. Estimates for 1960 provide for a crop of 960,000 lbs at an outlay of Rs. 18.39 lakhs.

Rampur Distillery

The Rampur Distillery and Chemical Co. Ltd has earned a profit of Rs. 1.34 lakhs for the year

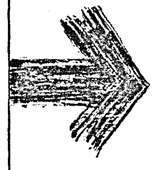
How to get the most out of your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a *current account* with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A *savings bank account* enables you to earn interest. It permits the facility of withdrawal once a week; at some offices the system of withdrawal by cheque is already in force.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.



The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

STATE BANK OF INDIA
INDIA'S LEADING BANK

SISTA'S-SB-16

ended March 1960, compared with Rs. 58,726 in the previous year. A dividend of 4 percent, subject to tax, has been declared, against 3 percent, tax-free, in the previous year. Taxation absorbs Rs. 14,000 (against Rs. 11,000). General reserve receives Rs. 30,000 (against nil). Depreciation is allocated Rs. 71,358 (against Rs. 61,016). After making other adjustments, there is a carry-forward of Rs. 2,192, against Rs. 788 brought in. The distillery had a run of 214 days and processed 326,405 maunds of molasses. The average daily production achieved was 2,895 bulk gallons, compared with 1,948 bulk gallons in the previous year. The yield a maund of molasses was slightly better, resulting in an overall production of 620,889 bulk gallons.

Gielle Tea

The Gielle Tea Co. Ltd has made a profit of Rs. 66,644 for the year ended December 1959. The dividend has been passed over. After making various adjustments, the debit balance is reduced to Rs. 82,998, which is carried forward. A crop of 251,120 lbs was made and the average sale price was Rs. 2.99, against Rs. 2.86 a lb. Estimates for 1960 have been made for a crop of 3,300 maunds at a cost of Rs. 7.12 lakhs.

Bombay Market

DOWNWARD TREND IN SHARE PRICES

CALCUTTA SELLING DEPRESSES STEELS

Wednesday Evening.

THE Bombay stock market was quiet during the past week. Share prices drifted downwards due to the absence of buying interest. Operators feared that the Government might take further steps to curb speculation. The imposition of heavy premium on the new rights issue of Guest, Keen, Williams weakened sentiment. There was no inclination to extend commitments, so any favourable news was ignored. The prospect of better relations between India and Pakistan had no effect.

Except for temporary steadiness on the decision of the Calcutta stock market to prohibit further selling in clearing shares, steels declined. Tata Steels were quoted at Rs. 155.25, but Indian Irons fell sharply to Rs. 24.08 on pressure from Calcutta interests. It was thought that the working of the steel companies might be affected by the coal shortage. Engineering shares were sold freely on fears of further import restrictions. Tata Locomotives were quoted at Rs. 283.50 and Premier Construction fell to Rs. 360. Larsen and Toubro were available at Rs. 44.25 and Alcock Ashdown declined to Rs. 290. In motor shares, Hindustan Motors fell to Rs. 18.96 and Premier Automobiles were dealt in at Rs. 164.

There were widespread losses in cotton mill shares. The Sirur group announced some rights share issues. The Modern Mills proposes to issue rights ordinary shares in the ratio of one for one in order to finance renovation and expansion. The Minerva Mills will issue 6 percent, tax-free, redeemable convertible preference shares for Rs. 10 lakhs. The Mysore Spinning and Manufacturing Company proposes to issue rights ordinary shares in the proportion of one for one. Bombay Dyeing were shaded at Rs. 66.10, as were Century at Rs. 483. Simplex were transacted at Rs. 171 and Finlay were available at Rs. 352. Kohinoor were sold at Rs. 316.50 and Standard declined sharply to Rs. 1,400. Khatau were steady on the publication of a good report.

Prices of miscellaneous shares declined in sympathy with the general trend. In cements, Associated Cement were quoted at Rs. 144 and Digvijay came to hand at Rs. 174. In the sugar group, Belapur were quietly steady at Rs. 373 and Maharashtra were taken at Rs. 262.50. Phalton were offered at Rs. 179.50. Mining shares were quiet and Shivrajpur Syndicate were dealt in at Rs. 70. Sellers predominated in shipping shares and Scindia were available at Rs. 14.63. Great Eastern Shipping came to hand at Rs. 15.60. Bombay Burmah were transacted at Rs. 587 and National Rayon fell to Rs. 504. Tata Chemicals were quiet at Rs. 18.92. Prices of cash scrip declined sharply, with sellers over. Indian Dyestuff were quoted at Rs. 610 and Colour Chem were offered at Rs. 400. Wimco attracted scattered interest on hopes of a better dividend.

Bank shares were steady and Central Bank were bought at Rs. 50.50. Bank of India came to hand at Rs. 101. Insurance shares were quiet and New India Assurance were sold at Rs. 54. British India General were dealt in at Rs. 12.75.

Electricity supply shares were offered freely at lower rates. Ahmedabad Electric were placed at Rs. 88 and Bombay Suburban were dealt in at Rs. 84.50. Tata Power were indicated at Rs. 1,032.50.

Madras Market

PRICES EASE IN QUIETER TRADING

TEA AND RUBBER ISSUES DECLINE

Wednesday Evening.

QUIET conditions prevailed in the Madras stock market during the past week. Business in clearing and cash shares was limited, so prices declined. Government securities were neglected because it was thought that a few attractive issues would soon be made by some electricity boards. Tea shares weakened on fears of excessive supplies in world markets. Rubber shares were quiet because it was thought that there might be enough supplies from other countries. Textile shares were traded in cautiously in view of the cuts in cloth and yarn prices. Sugar and miscellaneous shares were neglected in the absence of support.

In the banking group, business passed in Indian at Rs. 181 and in Indian Overseas at Rs. 175. Pandyan were transacted at Rs. 35.50 and Travancore Forward at Rs. 5.50.

Public utilities were dull. Routine business was transacted in South Madras at Rs. 10 and in West Coast at Rs. 11.87. Karaikal and Negapatam were offered at Rs. 9.75 and at Rs. 9.05.

Among sugar shares, E.I.D. were steady at Rs. 40.25, but Deccan were sold at Rs. 19.95. Business was done in Andhra at Rs. 29 and in Cauvery at Rs. 144. Mysore were done at Rs. 60.50 and United Breweries were steady at Rs. 114.50.

In the planting group, Blue Mountain were dealt in at Rs. 5.08 and Cochin Malabar at Rs. 7.30. Consolidated Coffee were sold at Rs. 26.12 and Ouchterloney were done at Rs. 4.75. Periakaramalai were placed at Rs. 3.54 and Amalgamated were bought at Rs. 13.85 on paying a taxable dividend of 10 percent. Malankara were indicated at Rs. 20 on the payment of a taxable dividend of 15 percent. Balanoor were offered at Rs. 16.70, as were Chembra at Rs. 5. Kil Kotagiri were steady at Rs. 5.67 and Lucky Valley were done at Rs. 12.25. Mysore Coffee were sold at Rs. 5.55 and Nonsuch were transacted at Rs. 27.25. Peermade were sold at Rs. 23.55 and Teekoy were done at Rs. 6.05.

Except for scattered buying in P. Andavar at Rs. 250, prices of other mill shares declined. Business passed in Bangalore Woollen at Rs. 200.50 and in Buckingham at Rs. 205. Kothari were offered at Rs. 12.65 and Lakshmi were done at Rs. 141. Madura were available at Rs. 33.75 and Travancore Rayon declined to Rs. 35.90. South India Viscose were offered freely at Rs. 124 and Venkatesa were dealt in at Rs. 171.50.

Among miscellaneous shares, Aluminium were shaded at Rs. 24.10 and Ashok Leyland at Rs. 8.70. India Cement changed hands at Rs. 7.19 and Mysore Lamp were taken at Rs. 26.25 on declaring a taxable dividend of 20 percent. Enfield were transacted at Rs. 15.79 and F.A.C.T. were sold at Rs. 11.25. Parry's Confectionery were dealt in at Rs. 4.70 and Singareni were transacted at Rs. 10.25. Spencer came to hand at Rs. 22.13 and Standard Motors were taken at Rs. 17.60. Textool were done at Rs. 188 and Tube Investments were bought at Rs. 350.

UNSETTLED CONDITIONS IN STOCK MARKET

INDUSTRIALS FALL

London, 21st September.

GENERALLY unsettled conditions have persisted in the stock market over the past week with prices mainly moving in a downward direction. There has been little to induce buyers to re-enter the market while adverse factors were by no means lacking. The international political situation has been an important factor, but this has now taken second place to the recession on Wall Street which on 19th September gained considerable momentum with the Dow Jones industrial average falling by 15.42 points, which was the sharpest break for five years, and the index is now at its lowest since early in 1959. Sentiment has also been affected by the uncertain economic outlook with the trade figures still causing concern even though those for August showed some improvement on the previous month. Dealers have not had great many selling orders, but there has been a marked slackening of interest on the part of buyers and the volume of business has steadily contracted. Industrials have been the chief sufferers and falls in some cases have been fairly sharp. The gilt-edged market has stood up quite well but with hopes of an early relaxation of the credit squeeze now fading, the small investment demand appears to have dried up, and consequently, prices have drifted lower in the past few days. Dollar stocks moved to lower levels on most days and the marking down was heavy following Monday's slide on Wall Street. Among commodity shares the highlight was the surprise statement that British Petroleum had approached Apex Trinidad with a view to an offer being made. Apex Trinidad issues immediately responded with a jump of nearly £1 and other Trinidad issues were marked up in sympathy. Leading oils, however, have remained unsettled although they were helped at one time by news of a rising demand for tanker chartering. Gold shares have moved erratically with finance house issues attracting some attention at one time on consideration of their holdings of oil shares. Coppers have also moved irregularly and tin shares drifted lower. There was very little interest in tea and rubber shares.

The Money Market

The action of the discount houses at the previous Treasury Bill tender in bringing the bill rate lower was not in full accord with the authorities' policy of maintaining the credit squeeze. The authorities' disapproval of this was emphasised by forcing the market into the Bank of England to borrow marginal amounts at the penal Bank rate term of 6 percent on two days when monetary conditions were less stringent. However, on days when there was a serious shortage of funds due to heavy calling by the banks, the authorities gave assistance in full. Generally there has been no easing of the supply position and under the stress of demand, the rate for day-to-day money ruled firm at 5½ percent and 5⅝ percent while 5½ percent was conceded for the money created by the authorities. The demand for bills was restricted by the cash position with December and hot bills changing hands at 5-7/16 percent. Discount houses made no further alteration in their joint bid at the weekly Treasury bill tender and the rate was virtually unchanged at £5 10s 2.14d percent.

Jute packs a world of goods

Australian wool, Burmese rice, Cuban sugar, Egyptian cotton, Canadian wheat, Chilean nitrate...these are only a few of the commodities that travel to the markets of the world packed in jute cloth. By providing the cheapest heavy-duty packaging material known, jute plays an important part in international trade.

India produces 55% of the world's jute goods. The Indian jute industry provides employment to millions of farmers, traders and mill-workers in the country...earns on an average about Rs. 115 crores annually in foreign exchange.

Jute serves India in many ways, strengthens her economy.

Issued by the **Indian Jute Mills Association**
Royal Exchange, Calcutta.

New Delhi

N.D.C. LEAVES ISSUE OF STATE TRADING IN FOODGRAINS STILL OPEN

TAX EFFORTS OF STATES FOR SECOND PLAN DISAPPOINTING

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Development Council, at its latest quarterly meeting, discussed many issues, but as usual, no definite conclusions emerged. For example, it was not able to settle the issue of State trading in foodgrains, which has been hanging fire for over a year. For some States such as Madhya Pradesh. State trading in food has become an additional source of revenue. They are almost profiteering at the expense of deficit States. Yet the Prime Minister is all for State trading while the Food Minister is not. The issue of holding the price-line was also discussed. Here again, the officiating deputy chairman of the Planning Commission, who is also the Central Labour Minister, is committed to setting up wage boards, particularly for industries which have an export potential.

The Council discussed the draft outline of the third five year plan. No serious question was raised whether the necessary finances would be found. It is claimed that the Planning Commission has learnt from its past mistakes. What lesson it has learned from the stubborn refusal of the States to mobilise their allotted share of resources by additional taxation is not clear. The first plan was largely financed by the Centre and so also was the second plan. There is no reason to believe that the States will fulfil the financial targets set for them under the third plan. Each one seems to be interested in producing a big plan for itself and then leaving its financing to the Centre.

Greater Share from Tax Pool

The second plan outlay in the public sector was placed at Rs. 4,800 crores. As matters stand, the achievement is much less, particularly because of the poor performance of the States. They were expected to find Rs. 1,053 crores—Rs. 853 crores from their own resources and Rs. 200 crores as their contribution to the gap. It should be remembered that the Finance Commission gave them a sum of Rs. 180 crores in addition to the Rs. 96 crores they had as their share of the additional taxation levied by the Centre, compared with the original estimate of Rs. 57 crores. Their withdrawals from the reserves amounted to Rs. 163 crores. This comes to Rs. 382 crores. Actual additional taxation by them is placed at Rs. 244 crores, which is well below the revised figure. The response to the borrowing programme has, on the whole, been good. The availability of P.L. 480 funds with the banking system for investment in gilt-edged securities has helped the borrowing programme of both the Centre and the States. Small savings have lagged behind. The share of the States was originally estimated at Rs. 186 crores on the basis of the then existing formula, which was revised subsequently in favour of the States. In consequence, the share of the States is now estimated at Rs. 232 crores. The total collections, which were estimated in the plan at Rs. 500 crores, will, however, be around Rs. 380 crores. There is a large outflow, namely, Rs. 163 crores, under the balance of miscellaneous capital receipts over non-plan capital disbursements. Several developmental programmes, not all of them small, were undertaken outside the plan. Although some of them were later brought in, they could not all be accommodated within the plan ceilings.

On the whole, the picture that emerges from a review of the second plan finances of State Governments is that in spite of (i) a sizable increase in taxation, (ii) substantial transfers from the Finance Commission, (iii) more liberal sharing of small savings and (iv) a larger drawing down of cash balances and/or securities, the States will have found rather less than 50 percent of the resources for their plans and more than 50 percent will have been financed by Central assistance. Certain estimates of the States' resources for the third plan were worked out in March 1960, in the light of discussions held earlier with them. On these estimates, the likely contribution of the States to the financing of their plans was about Rs. 1,200 crores. The gap between the States' plans and their resources—even on the assumption of the full target of additional taxation being realised—will be somewhat over Rs. 2,300 crores.

Pattern of Fresh Taxation in States

In the second plan, additional taxation of Rs. 244 crores had been assigned to the States from different sources. The pattern of this taxation has turned out to be different from what was visualised, as the following table indicates:

FIVE-YEAR YIELD FROM ADDITIONAL TAXATION UNDERTAKEN BY THE STATES IN THE SECOND PLAN PERIOD

(Rs. crores)

Items of taxation	As proposed in the plan	As estimated now
General sales tax including sales tax on motor spirit	112	88
Inter-State sales tax		66
State excise duties	—	4
Agricultural income tax	12	6
Land revenue and irrigation rates	48	11
Betterment levy	16	—
Electricity duties	6	13
Tax on motor-vehicles and on passengers and goods	14	37
Stamp duties, court fees and registration	—	6
Others	13	13
	221	244

It will be observed that while sales taxes, taxes on motor-vehicles and taxes on passengers and goods have done well, the contribution from the agricultural sector has lagged far behind the initial expectations. For land revenue and irrigation rates, the target was Rs. 48 crores; the estimated receipts over the second plan period are Rs. 11 crores. From the betterment levy, the States were expected to raise Rs. 16 crores for their own retention and Rs. 31 crores towards the reduction of capital cost of multipurpose projects—a total of Rs. 47 crores; the actual collections have been negligible.

It is necessary to consider, in the light of this experience, what the pattern of additional taxation in the States for the third plan should be, in particular, how the estimate made earlier of an increase of Rs. 250 crores in land revenue, including water rates, etcetera, can be realised. It might also be mentioned that while some of the States have indicated their targets for additional taxation during the third plan, no precise picture is yet available of the lines along which this is to be done.

In estimating the non-plan capital outlay, the Planning Commission has been requesting the State Governments to keep such outlays down to the minimum. Administrative buildings, it has been decided, are to be outside the plan. Provision for these is being made—although rather too much in some cases and perhaps too little in some others. Very little, if anything, is being provided for non-plan developmental outlays.

Higher Rebates for Khadi

The following Press release was issued last week: "On the occasion of Gandhi Jayanti, the Khadi and Village Industries Commission has announced a special additional rebate of 6nP in the rupee on the sales of cotton *khadi* up to 31st October. In West Bengal, this concession will be available up to 21st October, as it was made applicable there at an earlier date. A rebate of 19nP in the rupee is already available to the purchasers of cotton *khadi* and this additional concession would bring the amount of rebate to 25nP in the rupee. Over and above this, during this period, local *khadi* institutions will be offering a rebate of 6nP in the rupee, so that the total rebate on the purchase of cotton *khadi* will be 31nP in the rupee." This should indicate the "immense popularity" of *khadi*. On the one side, the cotton textile industry was threatened with drastic action if prices were not reduced. On the other side, 31 percent is given as rebate on *khadi*, presumably to clear off accumulated stocks. Incidentally, the Central Labour Ministry has not yet enforced the Wage Board's award to *khadi* workers, who, it is well known, are very poorly paid.

Sugar Released for Export

After taking note of the trend of production, consumption and the supply position of sugar, the Government of India has decided to release 50,000 tons for export through the Indian Sugar Mills Association.

Paris Meeting of Chief Creditors

The Paris meeting of the creditor countries has not proved satisfactory from India's point of view. The joining of the Netherlands was a bright feature but France and Italy appeared to be in two minds whether or not to extend further aid to this country. The meeting also failed to respond to the Indian Finance Ministry's scare over foreign exchange difficulties. The Government of India wanted Rs. 70 crores immediately, and the remainder of the $2 million by 31st March, 1961. It has made it known in India as well as abroad that unless this bare minimum of Rs. 70 crores is forthcoming, India will be compelled further to cut down her imports. The Paris meeting appears to have virtually told the Indian Government that it might cut its imports if it chose. The latter is having second thoughts on the subject. What repercussions Mr. Khrushchev's impending visit to the U.N. had on the Paris meeting is not clear. What is understandable is that any attempt by India at world peace-making, which will have the result of enhancing Mr. Khrushchev's hold on the newly independent African nations or on Asia, may not help this country getting more aid from the West. The repercussions, if any, of the proposal to establish a baby car unit in the public sector may have been adverse.

Wage Rise in Jute Industry
