Jute shares were depressed, and very little business was put through. Perhaps the only steady feature was New Central Jute which improved to Rs. 23.75.

In paper, Orient, on strong rumours of a possible rights issue, and on the publication of an excellent report, spurted from Rs. 40.80 to Rs. 42.10 but closed easier at 41.70. Shree Gopal were also taken at the higher rate of Rs. 25.50 and Sirpur at Rs. 18.62. In contrast, Titaghur were offered at the lower rate of Rs. 36.87 and India Paper Pulp were marked back to Rs. 19.62.

In sugar, Balrampur were slightly better at Rs. 3.19 and Ramnugger improved further to Rs. 27.75.

Among miscellaneous industrials, Alkali & Chemical were steady at Rs. 32.25 as were Angelo Brothers at Rs. 19.62. Britannia Biscuits were a firm feature at Rs. 38.37 and Dunlop Rubber were better at Rs. 41.50. Gwalior Rayon improved to Rs. 43.75 and Hindustan Aluminium, after being sold down to Rs. 7.50, recovered at the close to Rs. 8.12. Hindustan Motors met with keen enquiry and improved smartly from Rs. 18.94 to Rs. 20.12. Indian Aluminium met with good enquiry and rose from Rs. 27.56 to Rs. 28.50, as did Indian Cables from Rs. 33.75 to Rs. 34.12. Indian Oxygen improved by Re. 1 to Rs. 38.75. National Insulated Cables jumped from Rs. 29.87 to Rs. 31.62. There was a good enquiry for National Rolling Mills, which rose sharply from Rs. 16 to Rs. 18.12. Philips India were steady at Rs. 28.25 while Rohtas Industries were slightly better at Rs. 22.31. Union Carbide were unchanged at Rs. 50.50.

In the mining group, Indian Copper were fairly steady at Rs. 4.47 and Metal Corporation advanced to Rs. 10.75.

The outstanding features in the tea section were Gungaram and Hantapara, which advanced smartly from Rs. 122 to Rs. 135 and Rs. 122 to Rs. 134, respectively. Huldibari were better at Rs. 21.75 and Tezpore at Rs. 15.75.

Krishnabehari Tea

An ordinary dividend of 10 percent, subject to tax, (against 6 percent, tax-free) has been declared by Krishnabehari Tea Co. Ltd for the year ended December 1959. The profit has increased from Rs. 45,439 to Rs. 95,613. Depreciation is allocated Rs. 41,176 (against Rs. 45,847). Development rebate reserve is allocated Rs. 9,103. After making other necessary adjustments, there is a carry-forward of Rs. 2,619. Crop was 323,643 lbs, compared with 287,498 lbs. The average sale price amounted to Rs. 2.40 (against Rs. 2.29) a lb.

Western Bengal Coal-fields

The profit of the Western Bengal Coal-fields Ltd has increased from Rs. 5.27 lakhs to Rs. 7.60 lakhs for the year ended March 1960, after providing Rs. 3.27 lakhs (against Rs. 2.78 lakhs) for depreciation. An ordinary dividend of 6 percent, subject to deduction of tax, has been declared, against 4 percent, tax-free, in the previous year. Provision for taxation absorbs Rs. 2.84 lakhs (against Rs. 2.45 lakhs). Development reserve is allocated Rs. 1.73 lakhs (against Rs. 82,171). Making all adjustments, there is a carry-forward of Rs. 12,536, against Rs. 7,982 brought in.

Raisings increased from 254,969 tons to 262,176 tons, but despatches fell from 249,458 tons to 247,283 tons. The directors state that at the Moira

man's faith

Faith that makes man aspire, strive ...
awakening him to tasks in the early-glow of dawn,
That melts rock, shapes granite; transforms
still waters to surging power,

A faith in the living future:
in a world that offers a little more—
a little less of the care, a little more of the joy.
Faith that gives meaning to life.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Today and Tomorrow... Hindustan Lever serves the home

Bombay Market

PRICES IMPROVE ON HEAVY REPLACEMENT BUYING

OPERATORS REMAIN CAUTIOUS

Wednesday Evening.

THE Bombay stock market was steady during the past week and share prices improved on replacement buying, combined with short-covering. Reports of buying by the Life Insurance Corporation aided sentiment. The removal of deposits and margins from many shares helped broaden enquiry. Operators were nevertheless cautious in view of the growing tightness of money.

Steel shares were boosted, and Tata Steel improved to Rs. 144.75. Indian Iron were higher at Rs. 23.32 on strong support from Lyons Range. Engineering shares scored fractional gains. Tata Locomotive were quoted at Rs. 283, as were Alcock Ashdown at Rs. 258. Premier Construction came to hand at Rs. 307 and Larsen and Toubro were dealt in at Rs. 38. Motor shares were steady, and Premier Automobile improved to Rs. 173. Hindustan Motor were bought up to Rs. 20.08 on support from Calcutta interests.

Prices of selected cotton mill shares improved towards the close. Bombay Dyeing were quoted higher at Rs 64 and Century gained at Rs. 465.50. Svadeshi were placed at Rs. 241.50 and Kohinoor met with support at Rs. 289. Standard were sluggish around Rs. 1,160 on a report that the Company has obtained permission for manufacturing various chemicals, but this new business has to be done by forming a new company. The shares of the latter will have to be offered to the public for subscription. Finlay were dealt in at Rs. 347 and Khatau changed hands at Rs. 477.50. India United Ordinaries were sold at Rs. 12.52 and Apollo were available at Rs. 1.40.

Miscellaneous shares moved in pattern with the general trend. Among sugar shares, Belapur were steady at Rs. 375 and Phalton were done at Rs. 181. Mining shares were steady, and Shivrajpur Syndicate were in demand at Rs. 67. Steamship company shares scored small gains, and Scindia Steam were indicated at Rs. 13.96. Bharat Lines improved to Rs. 7.64, but Great Eastern Shipping were sluggish at Rs. 16.16. Among cement shares, Associated Cement were quiet at Rs. 147.25, as were Digvijay at Rs. 163. There was little interest in chemical shares, and Tata Chemical were transacted at Rs. 16.92. Indian Dyestuff were available at Rs. 556.25 and Polychem were quiet at Rs. 243.75.

National Rayon recovered to Rs. 484 on short-covering and Bombay Burmah had buyers up to Rs. 576.50. Voltas were bought at Rs. 265 and Tata Oil were supported up to Rs. 74. Ceat Tyre were quiet at Rs. 230, but West Coast Paper gained to Rs. 199.50. Gwalior Rayon improved to Rs. 42.50 on replacement buying.

Scattered interest was taken in bank shares, and Central Bank were quiet at Rs. 52. Bank of India were taken at Rs. 101.50. Insurance shares were quiet, and New India Assurance declined to Rs. 53.70. Vulcan fell to Rs. 17.65.

Electricity supply company shares were steady, and Tata Hydro came to hand at Rs. 102.50. Ahmedabad Electric were placed at Rs. 88.50 and Bombay Suburban were dealt in at Rs. 84.50.

Madras Market

STEADIER CONDITIONS FOLLOW QUIET START

L.I.C. BUYING REPORTS

Wednesday Evening.

AFTER remaining quiet earlier in the past week, the Madras stock market became steadier at the close. Higher advices from Bombay and Calcutta induced support, and trading in clearing and cash scrip broadened. Reports of buying by the Life Insurance Corporation were also interpreted bullishly. Government securities were quiet and sellers predominated. Except for scattered buying, public utilities were generally neglected. In the planting group, tea and rubber shares were selectively bought, but coffee scrip were sold at lower prices on fears of surpluses. Textile shares were steady and miscellaneous shares were bought selectively on good corporate news.

In the banking group, Indian Overseas were dealt in at Rs. 172 and Pandyan were done at Rs. 33. The amalgamation of the Indo-Commercial Bank with the Punjab National Bank has had no effect on shares.

Among public utilities, business passed in Salem-Erode at Rs. 12.50 on the payment of a taxable dividend of 12 percent. Tinnevelly-Tuticorin were bought at Rs. 12.50 on paying a taxable dividend of 10 percent. Vellore were done at Rs. 12.50 on the payment of a taxable dividend of 15 percent.

Sugar shares were quiet, and Deccan were sold at Rs. 15.60. Travancore were transacted at Rs. 12.10 and United Breweries were bought up to Rs. 114.50. There were buyers in E.I.D. around Rs. 44.

Among planting shares, Blue Mountain were sold at Rs 5.25 and Periakaramalai changed hands at Rs. 3.52. Cochin Malabar were bought up to Rs. 6.95, but Consolidated Coffee were offered freely at Rs. 23.50. Ouchterlony were available at Rs. 5.03 and Mysore Coffee were taken to Rs. 5.50 on paying a taxable dividend of 15 percent. Business passed in Balmadies at Rs. 2.36 and Chembra were indicated at Rs. 5.15. Cowcoody were quoted at Rs. 5.12 and Kil Kotagiri were bought up to Rs. 5.68. Nilgiri were done at Rs. 7.25 and Peermade were steady at Rs. 22.83. Teekoy declined to Rs. 6.03 and Twyford were offered at Rs. 11.90. In the textile group, Travancore Rayon improved to Rs. 33.60, as did South India Viscose to Rs. 166 on support from outside interests. Anglo-French were quiet at Rs. 114 and Buckingham were sold at Rs. 196. Kothari were quoted at Rs. 12.10 and Kasthuri at Rs. 22.10. Lakshmi were dealt in at Rs. 146 and Madura changed hands at Rs. 33.85. Premier were steady at Rs. 225 and Rajalakshmi were quoted at Rs 69.50.

Among miscellaneous shares, Aluminium Industries were quiet at Rs 23.10 and Ashok Leyland at Rs. 8.53. India Cement fell to Rs. 7.25 on the decision to issue rights ordinary shares. Enfield were quoted at Rs 15.20 and F.A.C.T. were sold at Rs. 10.70. Parry's Confectionery were steady at Rs. 4.42 and Singareni were transacted at Rs. 9.97. Spencer met with support at Rs 22 and Standard Motor were quoted at Rs. 17.12. Textool were placed at Rs 190 and Tube Investment were bought up to Rs. 317.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

WORLD COTTON CONSUMPTION RISES

There was a striking recovery in the volume of international trade in cotton during the 1959-60 season. The sharp increase in consumption in many countries, coupled with the crop failure in India which necessitated the greater use of cotton from abroad, created a greater demand for imports. Not all the exporting countries, however, were in a position to take advantage of the opportunities to increase foreign sales. In a review of supply prospects for the current season, the International Cotton Advisory Committee, dealing with the position in the non-communist countries, has suggested that total supplies will be much the same as in the previous three seasons, when they ranged between 47.8 million bales and 48.6 million bales. Stocks at the beginning of the season were about 1.3 million bales less than a year previously, and the latest estimate indicated that the U.S. crop would be about 100,000 bales less than last season's. There are reasons for believing, however, that production outside the United States will be larger this season. Larger areas have been planted in Egypt, Mexico, central America and Greece; it is thought that more land will be available for cotton in the Sudan and that farmers in Brazil and Argentina will switch some land to cotton from other crops; and it will be surprising if the Indian crop failed in two consecutive years.

Total supplies in the United States—as a result of a reduction of 1.4 million bales in the carryover and of the smaller crop—are estimated at about 1.5 million bales less than last season's. Outside the United States, the total carryover at 1st August was virtually unchanged, compared with a year previously, but with an important difference. Stocks in the countries which are net exporters fell by 800,000 bales during the season to 2.7 million bales—the lowest figure for many years—while those in the net importing countries rose by 900,000 bales to 6.2 million bales, compared with an average of 5.8 million bales for the previous three seasons. Unless, therefore, the improvement in textile activity is maintained, the net importing countries will not need to buy from abroad on the same large scale as in the last season, and the review regards it as probable that the volume of world trade will fall. In considering how a decrease in world trade will affect the net exporting countries, it must be borne in mind, first, that most of them have smaller carryover than they had a year ago, and secondly, that in many of them the increasing requirements of domestic textile industries restrict the quantity available for export.

IMPLICATIONS OF PUBLIC CAPITAL PARTICIPATION IN STATE CONCERNS EXAMINED

OFFICIAL STUDY GROUP FAVOURS LISTING OF SHARES ON STOCK EXCHANGES

(FROM OUR NEW DELHI CORRESPONDENT)

"We consider that if public participation in the financing of Government companies could be arranged in a suitable form and on a reasonably wide basis, accompanied by an imaginative programme of constructive public relations work, it may be an advantage to the working of these companies, if the general public could be associated with the Government in the management as co-partners, in the bearing of risks and uncertainties, and in the sharing of the toils and travails connected with expansion and development. Any proposal which has the effect of letting in an increasingly larger number of people into the activities of the Government will, it is hoped, generate better understanding and appreciation of the processes involved in the industrialisation of the country, and to that extent may help to promote and speed up industrial development."

This is the view of the study group which was set up by the Planning Commission to consider public participation in the capital of State enterprises. The group was headed by Mr. D. L. Mazumdar, Secretary to the Company Law Department, and included Messrs S. Bhoothalingam, Secretary, Central Ministry of Steel, S. Ranganathan, Secretary, Central Ministry of Commerce and Industry, and Tarlok Singh, Additional Secretary, Planning Commission.

The group in its report says: "One major issue of investment policy, however, confronted the group at the very outset of its deliberations, and it felt that much more close thinking on it was needed than had been so far attempted in current discussions on this subject. It is, therefore, proposed to deal with this issue at some length before we consider the other aspects of the proposal. This issue centres round the probable impact of the proposal on the total pool of investible resources and the flow of these resources as between the different sectors of the economy. If the general public are to be induced to participate in the financing of indstrial and commercial undertakings in the public sector, it seems to be clear that the average net rate of return on the capital invested by them in these undertakings should be such as to compare favourably with the average net yield on investments in similar undertakings in the private sector. Assuming that this can be ensured—no small assumption in the context of the objective conditions in which public undertakings have hitherto operated and are also likely to operate in the future—the question arises if the present proposal would not merely result in the diversion of investment from the private to the public sector. In the event of such diversion, there would, of course, be no increase in the total investible resources available for the two sectors jointly. On the contrary, if such diversion of resources takes place on a significant scale, it may entail competitive raising of the average net returns on investments in comparable undertakings in the private sector, at the cost of their undistributed reserves, which might otherwise be expected to be ploughed back into them. In that case, while distribution by the joint-stock companies concerned in the private sector would increase, there would be no compensating benefit to the companies, in as much as their investible resources would have been correspondingly reduced. Those who hold this view further argue that if investments in the public sector are made nearly as attractive as those in comparable private sector undertakings, one important effect of the proposal would be for people to divert their existing investments in Government securities, national savings certificates, etcetera, to Government industrial ventures.

Diversion of Resources

"In this view, even if the proposal to invite the general public to participate in the financing of Government undertakings were to be confined to a few selected Government companies and the possible diversion of investible resources thereby kept down to a minimum, its policy implications would still require very careful consideration. A whole series of special regulations govern the investment of funds in Government securities by banks, insurance companies, provident funds, etcetera. At present, all these institutions are required by law to subscribe to Government securities up to a proportion of their total funds. With the availability of a new type of investment in the form of shares or debentures of Government companies, presumably yielding a higher rate of return than now available on investments in Government securities, it is pointed out that the question might arise—why should these institutions be prevented from investing in Government enterprises in the public sector? It follows that it would be difficult to maintain the existing ban on the investment of the funds of these institutions in any but Government securities or other trustee securities. Those who fear diversion of resources from Government securities as a result of the proposal, further apprehend that if it were to be given effect to on any substantial scale, the pattern of yield rates likely to be set by the terms of the new type of investment might considerably disturb the market for Government securities. The risk would increase if a competitively attractive rate of return were to be offered to investors in the share capital of Government companies.

"It apppears to us, however, that it is possible to formulate this proposal in such a way that instead of merely diverting investments from existing securities, the scheme, in effect, makes some addition to the total investments in the public and private sectors. Recent events point to the existence of pools of resources, maybe of limited size, which now lie dormant both in the organised and in the so-called unorganised sector of the country's economy. It should be possible through a carefully devised scheme to draw upon these pools of resources, so that they may be utilised for participation in types of investment which provided a high degree of security, combined with a reasonable rate of return, although not necessarily a competitive rate. While in the absence of any systematic exploration of this new terrain, still inadequately surveyed from the point of view of its investment potential, it would be unrealistic to expect any large-scale additional investible resources from these scattered pools of savings, and the existence of these sources in the context of the present proposal should not be ignored. On the contrary, the new types of investment opportunity offered by the scheme envisaged by us may, under suitable conditions, succeed in activising these dormant pools and to that extent, act as a catalyst and help in the gradual transformation of our traditional capital market. Further, if the recent trends in the investment market portend some long-term changes in its structure and behaviour pattern, the relatively small but new class of operators in this market may also be attracted to the new type of investment made available by the unfreezing of portions of the share capital of selected Government companies. If this expectation materialises, we consider that the measure of diversification in the utilisation of the sources available to our investment market induced by the contemplated scheme may introduce a desirable element of dynamism into it. In any case, apart from all these considerations, the risk of diversification of resources from one sector to another or from one type of investment to another, in the same sector, which is apprehended by some people, and to which a reference is made in the above, need not necessarily be serious, if a proper scheme which takes note of this risk is carefully worked out.

Limited Experiment

"It now remains for us to consider the criteria for the choice of companies, the shares of which are to be offered to the public. If, as we have already explained, our basic approach towards the proposal is endorsed by the Government, the proposal will have to be tried out in the first instance as an experiment, and to be worked out on a limited basis. This necessarily restricts the number of companies where the experiment could be tried to two or three. The choice of companies is further limited to those which offer the maximum possibility of absorption of private capital. A company with an expansion of programme which may prove attractive to prospective investors will also come within this category. Although, normally, companies which are still in the construction stage and, therefore, unable to offer any return on the equity capital in the immediate future, are not expected to offer sufficient attraction for private investors, we do not rule out the possibility of such companies also inviting the general public to share in the burden and responsibility of promoting new lines of activity in the public sector even at the construction stage, depending on the measure of public interest in the ventures undertaken. If the experiment succeeds, the list could be progressively extended at the discretion of the Government. If we are to make any suggestion on this point, a start could perhaps be made with the following three companies: (a) Sindri Fertilisers and Chemicals Ltd, (b) Hindustan Machine Tools Ltd; and (c) selected State undertakings, namely, State road transport corporations.

"Some Government companies, by reason of the activities which they carry on, or for other reasons of administrative policy, may never be suitable for inclusion in the scheme under consideration. These companies would generally fall under the following broad categories: (a) companies engaged in the production of goods required for the defence of the country; (b) companies in which security considerations would not permit public participation; and (c) companies engaged in monopolistic and quasi-monopolistic ventures, comparable to the fiscal monopolies in some countries of the world, in which the Government may desire, as a matter of policy, to retain 100-percent control in its own hands.

"In order to enable persons of relatively modest means, including the employees serving in the undertakings, to subscribe to the shares of Government companies, it would be necessary to issue the shares in small denominations of, say, Rs. 100 each. One view strongly held is that it would be desirable to stipulate that the holding of these shares should be limited only to individuals holding them beneficially and not as nominees of others and that bodies corporate, whether in the public or private sectors, should not be permitted to acquire these shares, except with the approval of the Central Government. Further, a limit should also be laid on the maximum amount of shares which any single individual should be permitted to hold—say, shares of the face value of not more than Rs. 2,500 an individual. In order that these limits may not be disturbed after the first allotment has been made, the articles of Government companies concerned would have to be suitably amended to prevent the post-allotment acquisition of shares in excess of the prescribed limit.

Right of Transferability

"As against this view, however, it has been urged that such limitations, whether concerning the number of shares which any single individual should be permitted to hold or concerning the persons who can hold these shares, may render the scheme unattractive by indirectly limiting the right of transferability only to natural persons. Those who hold this view feel that, at least in the experimental stage, no such restrictions should be imposed and it should be left to the boards of the companies concerned to ensure equitable distribution of the shares by judicious exercise of their powers to approve of their allotment or transfer, as the case may be. The question whether these limitations should eventually form part of the scheme could be considered in the light of the experience of its working for some time. We have been unable to come to a definite conclusion on this matter in view of the divergent views expressed. In any case, if it is decided to exclude corporate bodies from the scheme, we suggest that co-operative societies should not be debarred from taking up the shares.

"If, as we have recommended, the Government accepts our view that for the present, at any rate, only a limited number of Government companies which are earning a profit should be selected for the participation by the public in a portion of their equity capital, the question arises as to the terms on which the shares of these companies should be issued to the public. It would seem to be equitable that having nursed these companies to their present position, the Government should be entitled to ask for a reasonable price for the portion of the equity of these companies which it proposes to transfer to the public. The price at which the shares should be issued would necessarily depend on the financial position of the companies concerned, their profit-earning capacity and their estimated prospects of growth about the time of the proposed issue, and would be determined on the basis of broadly accepted accounting principles relating to the valuation of shares. This will be a matter primarily for accountants and investment analysts, and, necessarily, the price of the shares would vary from company to company. It may be of interest to mention in this connection that when, in pursuance of their very different policy of denationalisation and 'privatisation' of some of the State undertakings in West Germany, in conformity with the principles of Soziale Marketwirtschaft (the social market economy), as adumbrated by Dr. Ludwing Ehrard in 1957, the West German Ministry of Federal Property decided to issue the share capital of some of these concerns to the general public, they did so, often at a considerable premium over the par value of these shares. For example, when Preussog, the State coal and oil company was denationalised and 'privatised' in 1959, its shares were offered to the public at a premium of 40 percent while the shares of the famous Volkswagen Works recently 'privatised' were issued at a premium of 100 percent.

"A question of some importance which was raised before the study group was whether the shares of the companies which the Government would decide to release to the general public, should be listed on the recognised stock exchanges or not. It was generally conceded that the listing of these shares on the recognised stock exchanges, by facilitating their transferability and negotiability, would render them more attractive to the public than they would otherwise be. Some members of the study group were, however, apprehensive that the listing of shares might subject them to undesirable manipulations by speculators or to equally undesirable cornering activities such as might endanger the basic objects underlying the scheme of public participation in the holding of these shares. We have given some thought to this problem, but feel that, on balance, it would be desirable not to impose any restrictions on the listing of these shares in the recognised stock exchanges or on their being dealt with in the same way as other shares. We would, however, add that the way these shares are dealt with in the exchanges after their listing would have to be carefully watched for some time to come, in consultation with the authorities of the recognised stock exchanges, so that market manipulations may not

thwart the basic objects underlying the experiment.

Legal Implications

"We now turn to some of the legal implications of the proposal, which follow more or less as a corollary to the recommendations we have made about the terms and conditions on which shares of selected Government companies may be offered to the public. (a) First, it would be necessary to convert the Government companies, selected for this purpose, into public companies as soon as the Government has decided to implement this scheme. Most Government companies are now incorporated as private companies, but this status of the Government companies would have to be altered. For the number of potential investors in these companies will necessarily exceed 50; and, in any case, the public could hardly be expected to acquire the shares of a private company, which would be neither freely transferable nor freely negotiable. It follows that the present restrictive clauses incorporated in the articles of the Government companies concerned, in terms of the requirements of the law relating to private companies, will have to be suitably amended by a special resolution of the companies concerned.

"(b) In accordance with the provisions of Section 44 of the Companies Act, the selected companies would have to file with the Registrar of Joint Stock Companies either a prospectus or a statement in lieu of prospectus, within a period of 14 days from the date of their conversion into public companies. While the requirements of the law would be met by filing a statement in lieu of prospectus, if the offer to the public is to be made by unloading a portion of the existing holdings of the Government in these companies, we suggest that, in accordance with good company practice, it would be desirable for these companies to issue a prospectus on the broad lines of Schedule II to the Companies Act, setting forth the particulars of the offer to the public for their information. In any case, this may be necessary if, as we are advised, the provisions of Section 64 of the Companies Act would be attracted to any offer of sale to the public proposed to be made out of the present holdings of Government companies. We do not see that these formal requirements of the law will present any practical difficulty either to the companies or to the Government.

Formal Legal Changes

"The conversion of the selected Government companies into 'public' companies will necessitate some consequential formal changes in their articles in order to enable them to fall in line with the provisions of the law relating to public companies. We should now like to draw attention to the more important of these changes.

"(a) At present, the directors of Government companies are all appointed by the President. Since, in the case of the Government companies selected for the purpose of the present proposal, the Government would be holding at least 75 percent of their equity capital, there should be no difficulty in complying with the requirements of Section 255 of the Companies Act which lays down that not less than two-thirds of the total number of directors of a public company should be persons whose period of office is liable to termination by the retirement of directors by rotation, and who should, unless otherwise expressly provided in the Act, be appointed by the company in general meeting. The voting strength of the Government even after a portion of the share capital of the selected companies has been offered to the public, would be sufficient to ensure that suitable directors are elected by the company in general meeting. If the Government further desires that a representative from the general public or the employees who may have participated in the share capital of these companies should be elected on the board, it should not be difficult for the Government to ensure this.

"(b) A suitable provision should be made in the articles of the selected Government companies, empowering the board of directors of the selected companies to refuse the transfer of any share, without assigning any reasons for such refusal, subject to the provisions of Section 111 of the Companies Act, unless the present articles of the Government companies already contain such a provision.

"(c) There should be no objection to the continued retention in the articles of Government companies of the usual provision contained in them, reserving certain powers to the President of India. If the Government so desires, further necessary powers can be similarly reserved, provided they do not contravene the provisions of the Companies Act or are otherwise inconsistent with or repugnant to their spirit.

"(d) It is hardly necessary to add that the conversion of the selected Government companies from private into public companies would not affect the present provision in their articles for the issue of directions by the President. We have considered it necessary to draw attention to these points because we find that there is a good deal of confusion and misunderstanding on the provisions of the law concerning private and public companies even in knowledgable circles, and that clear thinking on wider policy issues concerning Government companies is often impeded by vague fears and apprehensions about these relatively small matter.

Dividend Policy

"The dividend policy at present followed by Government companies will also need some further consideration. If a Government company, a portion of whose equity capital is offered to the public, has been following an ultra-conservative dividend policy in the past, it would be desirable for the Government, after a portion of the capital of this company has been offered to the general public, to review its dividend policy and to consider if this policy should not be brought in line with the best company practice in a comparable field. If, for reasons of wider economic policy, it is not considered desirable to change the dividend policy of such a company, we suggest that the management should take the non-official shareholders into confidence and explain to them the full implications of the wider economic policy implicit in the decision of the management relating to the dividend policy of the company."

Indo-Russian Trade

Some comments are now available on the Indo-Russian three-year trade plan, signed here recently. It will enable India to plan her imports of equipment, components and machinery which have to be brought from the western countries and the imports of which are being held for want of foreign exchange. On the export side, India would like to export her manufactures, such as rolled steel, and increase her exports of woollen goods. It may be added that the exports of woollen manufactures to Russia has actually improved the quality of Indian woollen goods.

During the six months ended June, the favourable balance of trade with the rupee payment area improved from Rs. 234 lakhs in 1959 to Rs. 1,361 lakhs in 1960 and with Russia from Rs. 609 lakhs in 1959 to Rs. 962 lakhs in 1960. Exports to Russia improved from Rs. 1,297 lakhs in 1959 to Rs. 1,505 lakhs in 1960, while they declined from Rs. 688 lakhs in 1959 to Rs. 543 lakhs in 1960.

Location of Public Projects

The Government of India has decided to determine the location of a project by reference to a committee whose report would ordinarily be accepted. The selection of sites for the heavy machine tool project and the alloy and tool steels project is largely responsible for this decision. Some State Governments, it is learned, have objected to Ranchi being selected as the site for the heavy machine tool project. As far as the alloy and tool steels project is concerned, as already reported, the consultants' first choice is Durgapur, Rourkela being the other suggestion. A selection committee in the Planning Commission, however, would like to locate the project in Bhadhravati, Mysore. The committee procedure could solve the problem, provided there is no ministerial interference with the recommendations. The case of the refineries in Assam is another example. The first committee recommended the refinery in Calcutta, and the second in Gauhati. But both these recommendations were rejected.

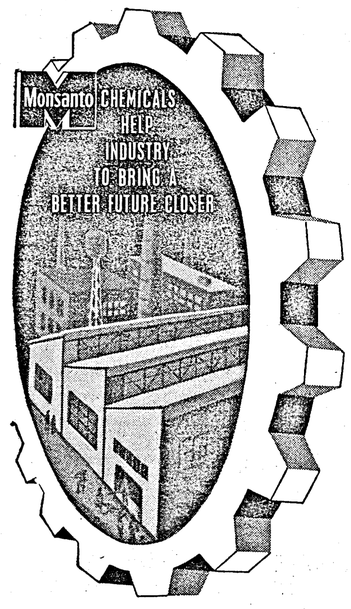
U.S. Loan for Indian Firm

The U.S. Government has announced a credit of Rs. 2 crores for the Seshasayee Paper and Board Co. Ltd of Madras State. The loan will be channelled through the U.S. Export-Import Bank and will be used to help finance the construction of a paper mill in Erode. The mill will use both bamboo and bagasse in its processes, and its location in Erode is near the sources of those raw materials. Plant equipment includes two paper making machines with bleaching and other facilities.

Proteins from Vegetable Matter

The Food Department of the Central Government has invited Dr. N. W. Pirie to visit India for about six months under the Colombo Plan to advise on certain aspects of the third five year plan programmes concerning subsidiary, supplementary and diversified foods, besides applied nutritions. Dr. N. W. Pirie is head of the Biochemistry Department of the Rothamsted Experimental Station in the U.K. and has done considerable work on the production of edible protein from vegetable matter. He is engaged in the search for new foods to offset the growing pressure of population on the land. He recommends that alongside the commendable efforts that are being made to increase food supplies by intensifying conventional farming and fishing, a more radical study should be undertaken in tapping the lush vegetation of the tropics as a new source of food.

Dr. Pirie has made a marked contribution to work on the recovery of edible protein from leaves and has developed machinery to produce about 100 lbs of protein material a day from leaves. Further work on these lines is expected to be undertaken during his stay in India. Dr. Pirie states that while vigorous attempts are being made along conventional lines to meet the demand for more food, it is doubtful whether these efforts can ever suffice to feed the world's growing population. Moreover, foodstuffs which are easiest to produce tend to contain a smaller percentage of protein than is needed for a balanced diet. In some countries, animal products with a higher ratio of protein to calories are used to redress the balance. As the demand for food increases, the number of animals is likely to diminish as the land would be needed for the cultivation of crops that people can eat directly. Another point in favour of vegetable proteins is that the amount of food eaten by animals is much greater than the amount they produce as meat. The animal uses much of its food to provide its energy and to construct body materials that are unacceptable as human food. It is, therefore, argued that man would profit much more by eating protein-rich plants than by eating the animals that eat the plants.



Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

Monsanto
chemicals for every industry.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

Monsanto Chemicals Limited, London. Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

I. 79

West German Agricultural Aid

A West German delegation of agricultural experts is now in India, discussing with the Central Government the modalities of a project of German technical aid in the development of agriculture in this country. It is headed by Dr. Koch, a leading official of the Ministry of Agriculture. The other experts are: Mr. Hinrichs, a well-known agricultural engineer, who has planned West German agricultural aid schemes in Pakistan, Tunisia, Ethiopia and South America. Mr. A. Messerschmidt is an animal product expert, with experience of this work in all parts of Africa. He is a former collaborator of Sir John Hammond of Cambridge; and Dr. J. H. Gwillis is a student of Professor Otto Schiller, West Germany's agricultural expert on east Asia, who has two years' experience in Indian agriculture. The West German project will be fitted into India's "intensive agricultural programme".

Tariff Enquiry into Woollen Goods Prices

The Government of India has asked the Tariff Commission to recommend fair ex-mill prices and wholesale and retail prices for all types of woollen, shoddy woollen and worsted yarn including hosiery yarn, and fabrics including hosiery goods and manufactures. The Commission has also been asked to recommend fair ex-mill prices and fair prices payable by consumers in various regions. The Government's decision adds that the Tariff Commission, in conducting its enquiries, would take into account the cost of raw materials, power, wages and other relevant factors. The decision to refer the question of fair prices to the Tariff Commission has been taken in order to ensure that woollen and worsted manufactures are made available to consumers at reasonable prices. During the last few months, the Government has been receiving reports that woollen and worsted manufactures have been selling at high prices, which cannot be justified by the cost of production of these goods. The manufacturers of hosiery goods, in particular, were experiencing great difficulty in obtaining their requirements of hosiery yarn at reasonable prices. After considering the matter, the Central Ministry of Commerce and Industry obtained a report from the Chief Cost Accounts Officer of the Central Finance Ministry on the price structure of worsted hosiery yarn. Maximum buying and selling prices for these were subsequently fixed statutorily on 2nd July this year.

Affairs of Sugar Industry Reviewed

The Central Minister for Industry, Mr. Manubhai Shah, recently reviewed the present position of the sugar industry. The production of sugar during the season 1947-48, he said, was 1,075,000 tons and there were 134 sugar factories, of which 65 were in Uttar Pradesh, 29 in Bihar, 14 in Bombay and 26 in other States. "Over and above the large-scale expansion of these old factories, more than 70 new factories are coming up. It is really gratifying that in the current year, the number of factories already working has increased to 168 in the country with 70 in Uttar Pradesh, 28 in Bihar, 26 in Maharashtra and 44 in all other States and about 36 are under construction. Of these, 25 are co-operative sugar factories. The total production of sugar has reached a record figure of 2.42 million tons in 1959-60. The target for the third five year plan was originally fixed at 3 million tons a year. However, taking into consideration the possibilities of export dictated by the necessity for earning the foreign exchange it is now being raised to 3.5 million tons. In order to achieve the target and successfully to meet internal demands and to cater for markets abroad, it is very necessary that there should be a greater all-round efficiency in the production of sugar.

"The industry, having taken its deep roots in these parts over the past several decades, has established itself firmly and has become an integral part of the economy of those parts. It is, therefore, very necessary that intensive work in each of these areas should be carried out in co-operation with the cane growers of that area and practical steps suggested for the improvement of sugarcane yields and quality. I feel it worth while to emphasise that unless the needs of the ordinary cane growers who form the backbone of this agricultural industry have been taken into consideration while suggesting improved patterns, no real and substantial improvements can be expected.

"When our low yields an acre are considered, it will be realised what great scope exists for an expeditious remedy for improving the situation. It is common knowledge that in most of the successful sugar producing areas in the world like Hawaii, the Philippines, Puerto Rico, etcetera, greatest attention is paid to development measures for improving the quantity and quality of cane. The truth of the statement that sugar is really made in the field cannot be over-emphasised. Any schemes suggested to achieve this objective will receive full co-operation from the State Governments concerned and the Central Government. The highest average yield of cane an acre in one of the best developed cane areas in the world (Hawaii) is 82 tons an acre a year, as against the Indian average yield of 11.2 tons an acre in Uttar Pradesh, 15 tons an acre in Bihar, 25.9 tons an acre in Maharashtra, 24.3 tons an are in Madras, 27 tons an acre in Mysore and 36.5 tons an acre in Andhra. These are, of course, the average figures, though there are numerous areas in different States in the country where the yields have registered very high records. If intensive research and development in cane production is carried out, there is no reason why these yields and sugar recoveries could not be greatly increased.

Demand for Sugar Machinery

"The fillip given to the industry by the decision of the Government to set up more number of plants during the second plan to achieve the targets naturally increased the demand for sugar machinery. Thanks to the co-operation of a number of private entrepreneurs, a good start is given to the machinery manufacturing industry and the present progress made in this direction holds out a really good hope for the future. While in the year 1956, the production of sugar machinery was only of the order of Rs. 32 lakhs, the production in 1960 will be over Rs. 350 lakhs. A notable landmark in the progressive record of this industry is the formation of two consortiums, the individual members of which have collaboration agreements with reputed foreign sugar machinery manufacturers. Today in the country the latest designs from firms like Mirrlees Watson and Craig of the U.K., Skoda of Czechoslovakia, Stork Werks-Poor of Holland, Buckau Wolf of West Germany and Fives Lille Cail of France are available in the country through Indian entrepreneurs.

"While in the earlier years a few firms were fabricating comparatively simple items of sugar mill machinery like crystallisers, juice heaters, vacuum pans, etcetera, today organised production of the more complicated items like the milling plants, high-speed electric and water driven centrifugals and boilers have been established. Very recently a scheme has also been licensed to take up the manufacture of prime movers like mill engines and turbines and sufficient capacity has also been licensed for the manufuacture of mill gears. The total capacity of manufacturers when full capacity is established in 1962, would be of the order of 12 complete sugar plants a year (of about 1,000 tons to 1,250 tons a day) and the equivalent of about nine complete plants by way of expansion and replacement requirements of the industry. For the 1960-61 season, four complete plants for the co-operative factories are to be supplied by indigenous manufacturers. As a result of the progress achieved by the sugar machinery manufacturers as well as the manufacturers of other indigenous machinery such as pumps, electric motors, switch-gear, etcetera, it has been possible to reduce the foreign exchange content a plant to only about Rs. 10 lakhs, out of the total value of Rs. 85 lakhs to Rs. 90 lakhs of machinery fo a standard plant of 1,000 tons to 1,250 tons a day."

Progress of Heavy Electrical Project

The official opening of the heavy electricals factory in Bhopal by the Prime Minister, Mr. Nehru, which is to take place shortly, will mark another major step in the development of this project, designed eventually to supply the bulk of India's needs of heavy electrical apparatus. Machine tools, plant, and manufacturing equipment are rapidly flowing into Bhopal—some £3 million (Rs. 4 crores) worth from Britain and much from India's new machine tool factories.

Two of the five—the maintenance building and the switchgear shop—have already been completed and commissioned. The transformer shop should be in production before the close of this year. The other two manufacturing buildings are expected to be completed towards the end of 1961. The output target for the factory was at first Rs. 12.5 crores a year, but it was progressively raised to Rs. 25 crores (expected to be reached by the end of the third five year plan) and later, to Rs. 50 crores (to be reached during the fourth plan.)

The maximum size of generators and transformers planned, has also been increased from the original 50,000 kW to 150,000 kW in view of the latest assessment of India's needs. Construction work is being carried out by Indian engineers and contractors with the advice of a group of Associated Electrical Industries' engineers, stationed in Bhopal. This group will later be supplemented by production engineers and demonstrators to help get production under way. Side by side with the construction of the factory, the associated township—expected to house a total of 32,000 employees eventually—is also growing apace. Already, 3,000 houses and flats have been occupied. The township has been planned on the best modern lines, with local shopping centres, schools, etcetera, and a central shopping and commercial area. Two other heavy electrical plants are being set up for the manufacture of steam turbines, high pressure boilers and other equipment with Russian and Czech assistance. These plants will entail an investment of about Rs. 60 crores and will produce Rs. 30 crores and Rs. 35 crores worth of equipment a year by 1965. Location surveys for the Russian and Czech plants are in progress A technical committee appointed plans to visit Uttar Pradesh, Punjab, Kerala, Madras and Andhra. One of the two plants will be located in the south.

U.K. Credit for Third Plan

Indications are that half of the £30 million credit promised by the U.K. towards the third plan will be used for financing the expansion of the heavy electricals project in Bhopal and a new fertiliser plant. The remaining £15 million will be used for financing projects now under discussion between the two Governments. In addition, £20 million have been earmarked for the expansion of the Durgapur steel plant. It is reported that this initial credit of £50 million is expected to go up to £250 million during the third plan period.

Quarterly Report on Use of New Capacity

The Government of India proposes to publish a quarterly report in the words of licensees on the progress of their projects for which licences have been granted. Criticism of unused licensing capacity was made at the recent meeting of the Central Advisory Council for Industries, particularly by Mr. G. L. Mehta. The official view is that the publication of a quarterly progress report should enable the aggrieved parties to bring to the notice of the Government if inaccurate and misleading reports have been made. It is proposed to make if a priced publication.

NEPAL BANK LIMITED

(Incorporated under Nepal Bank Act of 1994 (Sambat))

Central Office **Kathmandu, Nepal.**

Authorised Capital	N. C. Rs. 1 crore
Paid-up Capital	N. C. Rs. 25 lacs
Reserves and Exchange Fluctuation Fund	N. C. Rs. 44 lacs
(N. C. Rs. 160 = I. C. Rs. 100).

SIGNIFICANCE OF THE CUT IN U.K. BANK RATE

NO IMMEDIATE RELAXATION OF CREDIT SQUEEZE EXPECTED

(FROM OUR LONDON CORRESPONDENT)

THE recent Bank rate reduction from 6 percent to 5½ percent was in accord with City expectations, and was accompanied by an announcement from the U.K. Chancellor of the Exchequer that the move was not to be taken as meaning any relaxation of the credit squeeze. The fact is that the cut can now be made without any danger of giving a new impetus to the economy, for its effects have already been discounted. Indeed, Mr. Selwyn Lloyd has gone out of his way recently to emphasise that there is no possibility of any early change of policy. Both he and Mr. Cobbold, Governor of the Bank of England, made that clear at the Lord Mayor's annual dinner to bankers and merchants of the City. The U.K. Chancellor speaking there for the first time, said firmly that it was "too soon to talk of demand becoming insufficient." A great deal will depend, he added, on coming decisions taken about wages and prices and on the way exports develop. The Governor, making his thirteenth appearance, went so far as to say that the boom had gone "off the boil," but he added that business remains very active and demand for credit brisk. This fits in with the unemployment figures released recently, which at 1.5 percent still show overfull employment. A small rise in the number out of work during the four weeks ended 10th October was less than the normal seasonal increase, and a drop in unfilled vacancies was less than the normal seasonal fall.

Mr. Selwyn Lloyd was equally unyielding when he recently met a nine-man deputation from the motor-car industry. He told them he did not believe that a change in purchase tax on motor-cars should be made. He repeated that credit restrictions would be eased as soon as the U.K. Government thought it safe and, in particular, he would consider when it would be possible to make any modification of hire-purchase controls. Purchase tax, the U.K. Chancellor stated, "constituted such an important element in the national revenue that any change could only be considered in relation to broad and long-term fiscal objectives."

Engineering Orders Rising

The U.K. Board of Trade has just issued figures of output and order-books in the engineering industries which show that activity was still expanding briskly in that vital sector until the end of August at any rate. Production in the engineering and electrical goods industries in August was 8 percent more than a year earlier. At the end of August, the inflow of new orders was still expanding, and the order-book of the engineering group as a whole—particularly for capital goods—has increased substantially. The announcement of the U.K. Minister of Transport that the railways will have to cut their capital expenditure next year by 12½ percent will affect some sections of the engineering industry, although the effect of a cut of £20 million can only be modest. For the Transport Commission as a whole, the cut will be £25 million. The Minister affirmed that no contracts would be cancelled.

A report of the Purchasing Officers Association carries the boom story another month forward: by the end of September, it found that delivery delays showed no signs of shortening. The Association has reported, however, that a change set in during October. Firms supplying the motor-car industry no longer reported increasing orders and output. Industrial firms are reducing stocks of raw materials and components, and "the forecast of buyers is that this trend will continue." This indicates, buyers comment, that no new shortages of raw materials are anticipated. Engineering prices are now tending to increase all along the line. But if there is any slackening, it does not show up in quicker deliveries. Delays are still long for machine tools, commercial vehicles, industrial cotton cloth, box-board, and certain steel products, especially stainless and alloy steels.

Meanwhile, industrial building plans declined somewhat in the third quarter of the year, when certificates were issued for 760 schemes involving 21.8 million square feet, against 1,020 schemes with 23.8 million square feet in the second quarter. The fall probably reflects only the bunching of motor-car industry schemes in the earlier period. Third quarter "approvals" were still over 60 percent greater by factory area than the figures for the same period of 1959.

New Export Council

Exports seem to be the crux of the matter, and efforts to expand these are being intensified. Sir William McFadzean, president of the F.B.I., is to be the first chairman of a new Export Council for Europe—on the lines of the Dollar Exports Council—which is being formed to promote British exports to Europe. Established at the instance of the President of the U.K. Board of Trade, the new body will have a membership of 25 drawn from a wide section of industry. Sponsoring bodies include the F.B.I., the Association of British Chambers of Commerce, the National Union of Manufacturers, the T.U.C. and City representatives. The small costs are likely to be shared between the sponsors and the Government, and there will be a staff in London. Both Sir William and Mr. Maudling emphasised that although the Council's first attention would be for the countries of the E.F.T.A., the maintenance and development of markets in the six countries of the E.E.C. would also be a major objective. Finally, the U.K. Government has come round to the idea that the E.C.G.D. should be prepared to insure credit for longer periods than five years.

Fall in Exports to America

Detailed estimates made by the U.K. Board of Trade show that of the 5½-percent drop in British exports between the first and the third quarter of this year, about four-fifths was in sales to North America. Exports to the latter in the third quarter were 21-percent below the level of the same quarter of last year: those to the United States were down by 27 percent and to Canada by 10 percent. Out of a drop of £10 million in the monthly rate of exports to North America, motor-cars accounted for £4 million and metals for a further £3 million. Exports of machinery were down by more than £1 million, and whisky exports by £700,000.

There was also some fall in exports to the rest of the non-sterling world during the first nine months of this year. Exports to the sterling area were rising. Although the most marked fall in exports so far this year has been in motor-cars, none of the major commodity groups showed an increase between the first and third quarters. In September, motor-car exports fell by 11,229, from 41,024 in August to 29,795. For the fourth successive month, Britain's terms of trade—measured by the relation between import and export prices—were unchanged. In September, the import price index remained constant at 98 (1954=100), and although the export price index was 1 point up at 112, this was insufficient to alter the terms of trade, which remained at 88.

Road Haulage Dearer

British Road Services has announced that charges will be adjusted to obtain an overall additional revenue of 10 percent from 1st November. The National Conference of Road Transport Clearing Houses and the Road Haulage Association have already recommended a 10-percent increase. The last general increase in rates was on 20th May, 1957. B.R.S. says that costs, particularly wages, have increased considerably, and hauliers are now faced with new and substantial wage and salary awards. A spokesman of the National Union of Manufacturers recalled that the prices of coal, electricity, and rail transport had all been raised recently. Now public road transport had joined them. "The threat to the general stability of prices is obvious (he added) and the grave danger involved in any general rise in prices is equally obvious. The nationalised industries seem to be leading the way to a fresh inflationary spiral, as they have so often led in the past."

Demand for Assurance

Two points to emerge from the ordinary life assurance and pension figures for 1959, issued by the Life Offices Association and the Associated Scottish Life Offices, are a record number of new life assurance and annuity policies taken out and a slowing down of the advance in group life assurance and pension business. The slight fall in group pension business is probably explained by the uncertainty which surrounded the future of State pensions until the result of the general election. The number of employees covered for the first time by group schemes dropped from 573,000 in 1958 to 552,000 (49,000 overseas). In the U.K. alone, 804,000 new individual policies were issued and another 135,000 were issued overseas by British life offices; a total of 939,000, compared with 853,000 the year before. Taking both individual assurance and group business together, life offices had a record year. The total number of policies in force at the end of 1959 was 9,450,000 and the total sums assured under them (including bonuses in force) came to £8,029 million.

At the same date, the life and annuity funds held to meet the companies' future liabilities to their policyholders were £3,740 million—a rise in 12 months of £355 million. After relatively small adjustments, involving transfers to or from other reserve funds, this figure is a fair measure of new savings through the medium of life assurance made during the year. Accordingly, the net new savings arising from ordinary life assurance last year was of the order of £348 million, or £46 million more than in 1958. The president of the Institute of Actuaries, Mr. J. H. Dunlake, chose an appropriate moment to answer unfavourable criticism of the value to the economy of the invested funds of the life offices. Addressing the Institute the other day, he pointed out that life offices and self-administered pension funds are channelling more than £600 million of additional capital into the economy each year. This is a sizeable amount by any standard. It is open to doubt whether it would benefit the economy more if it were controlled by hands other than those of the insurance companies.

Shipyards at Their Slackest

Shipyards in Britain and Northern Ireland were slacker in the third quarter of this year than at any time since June 1946. The tonnage of ships under construction at the end of September had declined by 112,445 tons during the quarter to 1,753,843 tons. At its postwar peak of activity at the end of 1957, the shipbuilding industry was building 2,345,408 tons of shipping. These figures appear in the September returns of Lloyds Register of Shipping. Their subdued tone is echoed in the latest figures of shipbuilding orders issued by the Shipbuilding Conference. Thirty-eight ships of 63,000 tons were ordered from British shipyards in the third quarter and although the value of orders placed in the U.K. is around £525 million, the industry's outlook is "not reassuring." It is slowing down its building programme, but the rate of incoming orders is not enough to balance completed contracts.

Harrisons and Crosfield

The results of Harrisons and Crosfield are always difficult to forecast. Its activities are broadly based. Besides the plantation interests, the Company acts as insurance agents, general exporters and importers. Profits of some of these interests are liable to vary considerably. The results for the year ended 30th June are good and the directors recommend a final dividend of 9½ percent and a bonus of 2½ percent, making 15 percent, against the equivalent of 12 percent allowing for a two-for-three scrip issue. Group trading profit has increased by nearly £300,000 to £1,607,191 and the net profit from £572,345 to £655,015, excluding special credits and adjustments. This provides earnings of nearly 39 percent for the £2.5 million of equity, and the new dividend rate is covered 2.6 times.

Brooke Bond Pays More

Once again shareholders in Brooke Bond, the tea distributors, are to get a higher dividend. The directors have raised the final payment from 4 1/6 percent, tax-free, to 4 7/12 percent, tax-free, to bring the total for the year ended 30th June, 1960, up from 6¼ percent, tax-free, to 6 2/3 percent, tax-free. In gross terms, this is equal to an increase from 10 1/5 percent to almost 10⅞ percent for the year. The feature of the preliminary figures, however, is the buoyancy of world sales. For the first time, these have passed £100 million, with a rise of 12¼ percent from £91,106,000 in 1958-59 to £102,389,000.

Group trading profit shows only a small advance at £4,335,218, before tax, against £4,292,841, but this indication of lower margins is consistent with the comments of the board. It explains that about £5 million of the increase in turnover came from packed tea and coffee sales, the balance being largely from a substantial increase in the value of the group's bulk tea trade. Cover for the increased dividend is about 3¼ times. A pleasing aspect for many smaller investors is the rise in the "net U.K. rate" of tax applicable to the final dividend from 1s 9d to 3s 11d, giving greater scope for tax refunds.

NEW HIGH PRICES RECORDED IN WIDELY FLUCTUATING MARKETS

SHORTER WORKING HOURS RECOMMENDED FOR PAKISTANI MILLS

ONCE again during the past week, prices in the Calcutta raw jute and goods markets have fluctuated rapidly and new high levels have been recorded. Conflicting reports from Pakistan have had a considerable effect on markets here, and Calcutta speculators were quick to use any news to force up prices. At a recent meeting, the Pakistan Jute Mills Association committee recommended a restriction in the working hours of its member-mills. These were to be reduced to 96 hours a week, which in the case of some mills was a cut of anything up to 35 percent, because there are many which operate in three shifts. It was stated that Pakistani jute mills are finding operations uneconomic with the present abnormally high fibre prices, and with supplies virtually unavailable at Narayanganj and other baling centres. As far as can be ascertained, no definite date was suggested for the introduction of these shorter working hours, and the move does not appear to have found favour with mill owners. In fact, many of them have indicated that they intend to make no change in their present productive capacity. News from the main baling centres, however, may have a far-reaching effect, as it is reported that arrivals are very poor. In Narayanganj, imports were in the region of 15,000 maunds a day, which is very much lower than normal for the time of year. The condition of all parcels is disappointing, and the moisture content is higher than for several seasons.

A similar situation exists in India. Recent arrivals of raw jute at the mills have contained heavy moisture. As most of these deliveries are against low-priced contracts—some of them as much as Rs. 20 a maund below current rates—mills have tended to be lenient with their claims because in many cases they are glad to receive jute irrespective of its moisture content. There comes a point, however, where leniency can be carried too far, and many higher priced contracts have recently been reported to contain heavy moisture. As usual, the blame for this is handed down the line, through the various handlers to the farmer. But although this unfortunate individual is not blameless, he cannot be held responsible, as the various middle men would have one believe, for all the moisture. At each stage of the progress of the jute from field to mill a little more water is added to compensate the handler for the loss of weight sustained by having to buy wet jute. The mill eventually bears the brunt of it, and the problem of moisture in jute seems no nearer solution than before.

Official Talks

During the past ten days, several series of talks have been held between representatives of the I.J.M.A., the workers' unions, the Government of West Bengal and the East India Jute and Hessian Exchange Ltd. Topics ranged from the T.S.D. contracts to the recent sealing of looms by the mills. Most of these talks proved inconclusive. The State Government is most concerned about the present trend, and now the Central Government has called for talks on the subject. Over the next two days, a conference will be held in Delhi at which representatives of the I.J.M.A. will meet officers of the Commerce and Industry Ministry to discuss what should be done to ease matters. Meanwhile, no official crop estimate has been issued by the Government, and this has provoked more comment than would have occurred had a provisional one been issued however misleading it might have been. Unofficial estimates consider that the total yield, including mesta, will be about 5,500,000 to 5,700,000 bales. A recent newspaper report indicated that impartial observers consider the arrival of one million bales of jute in Calcutta between July and September this year (as against 1.2 million during the same period last year) to be satisfactory, and not such as to have caused a spurt in prices. If these figures are correct, then that assumption may be justified, but the official I.J.M.A. import figures from India and Pakistan for these particular periods happen to be a little over 800,000 bales for July-September 1960, and a little over one million bales for the corresponding period of last year. The discrepancy of 200,000 bales makes all the difference, although there is invariably an unaccountable quantity over and above the official estimate.

Pakistan Storm Damage

The recent cyclonic storm in East Pakistan—the second within a month—has created havoc with transport and communications, and it is thought that the movement of jute to India, particularly by river, may be temporarily held up. The various steps the I.J.M.A. has taken to bring down the price of raw jute, do not yet appear to have been particularly successful. During the current week, fibre prices rose to Rs. 55 a maund for Assam Bottoms, and although there has been a gradual decline since this level was reached, sellers' ideas remain steady. The quota system introduced last week was continued with another allocation before the week-end, and a little more general business than during the initial stages was introduced into the market. The emphasis was on quick shipment jute or price-to-fix consignments, but only limited quantities were on offer. Those mills owning agencies continued to take up their quotas from these sources, and that is one of the reasons why upcountry markets have not fallen as much as was originally expected. Arrivals in the Cossipore markets are well up to average for the time of year, but here again local purchases on behalf of mills have prevented any substantial reduction in rates.

Overseas buyers of jute goods have shown little or no interest during the week, and the only genuine activity was confined to local shipper covering. Speculative activity, however, was well to the fore, and during the week sacking prices were forced up by Rs. 120 a ton, and hessians by Rs. 157 a ton—a large local operator being a very prominent buyer of the latter. The current false high prices of jute goods was touched upon by the president of the Gunny Trades Association at the annual meeting on Friday, and he blamed these for India's inability to capture new export markets, as also the high price of raw jute.

THE JUTE MARKETS

Manufactured Goods: The opening sessions of the current week's activities were highlighted by some spirited speculative activity by a prominent operator who switched his interest from sacking goods to hessians and succeeded in raising prices in a series of erratic fluctuations. At one stage, hessians 40in. 10oz. jumped by over Rs. 2 in a single day's transactions. Most of the interest was in the forward section, and January-March hessians, after opening at a slight premium on the near deliveries, was forced into a Rs. 1.50 premium before the pressure was taken off, from whence it fell back to par with ready shipment. From Rs. 54.75 at the opening, January-March 40in. 10oz. raced up to Rs. 59 by Saturday morning, while the ready position moved from Rs. 54 to Rs. 57.75. Although there was a certain amount of activity in heavy goods, price movements in B Twills were mainly in sympathy with hessians during the opening stages. After opening at Rs. 171 for ready shipment and Rs. 164 for January-March shipment, rates were increased by Rs. 2 and Rs. 4, respectively, and the undertone became firm with little business passing. On Saturday, however, prices moved up sharply on reports from Pakistan that there may be a substantial reduction in the productive capacity of the mills there due to a recommended cut in the number of working hours. Ready B Twills advanced Rs. 6.50 to Rs. 180 and forward shipment rose to Rs. 174. The improvement continued over the week-end when a further Rs. 3 were added to B Twills indications. But conditions eased during the day as many holders indulged in profit-taking and emerged as sellers. Heavy goods prices dropped Rs. 4 to Rs. 4.50 and the undertone became quiet. Towards the close, activity was dull and there was little alteration in quoted rates.

On Wednesday morning opening quotations were as follows:

	Ready	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	43.50	43.50	43.50	43.50
40in 8oz.	46.50	46.50	46.50	46.50
40in. 10oz.	58	58	58	58
B Twills	179	177	175	173
Heavy Cees (plain)	177	177	175	173.50
A Twills	209	209	207	205
Liverpools	198	198	196	195
Cornsacks	187	188	183	178.50

Raw Jute: In spite of the fact that most agencies reported increased imports, the fibre markets remained firm at the opening last Thursday. This was due to the increased activity of upcountry agents. Opening quotations were based on Rs. 51 a maund for Assam Bottoms, but on Friday rates were increased partly in anticipation of the issue of fresh quotas to the mills, but mainly in sympathy with the goods market. The market became excited during the day and rates moved up rapidly keeping pace with the rise in jute goods. On Saturday morning Assam was quoted at Rs. 54, which was increased to Rs. 55 by Monday morning. Thereafter, indications showed a gradual decline, but these were purely nominal as there were few sellers at the quoted rates. Mills showed a little interest in jute during the week, but there were reports that some Indian mills were not sticking to their quota and these brought complaints from other groups.

Business was reported in Assam and Northern jute at Rs. 54 to Rs. 55 for ready shipment and ready bills of lading, and at Rs. 54.50 for Jiaganj-Cossimbazar Tossa. Selected Daissee was also done at Rs. 54.50 to Rs. 55 for seven to 15 days' shipment. Mesta from various agencies was also reported at Rs. 51.50 basis Bottoms.

At the close, the market was steady, and although quotations were reduced by Re. 1, they were purely nominal as there were no sellers. On Wednesday, opening quotations were as follows:

	Landed at mills (Basis Bottoms)		
	Rs. a 100 kilos.	Rs. a md.	Shipment
Assam	142	53	November
Northern	140.75	52.50	"
Purnea Desal	138	51.50	"
Daissee Selected	143.25	53.50	"
Assam Tossa	144.75	54	"
Mesta:			
Assam-Northern	135.25	50.50	"
Daissee	135.25	50.50	"
Jungli	132.50	49.50	"
Pakistani N. C.	265 a bale.		

THE FOREIGN JUTE MARKETS

FALL IN FIBRE PRICES ARRESTED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Dundee is still somewhat irregular. The fall in fibre prices, which everyone thought would be continuous until they came back to more reasonable levels, has been arrested. The withdrawal of holders of secured parcels has resulted in a firmer market and the value of Mill Lightnings—the grade on which the rise or fall is gauged each day in Dundee—is now lowest at £180, compared with £178 recently for November-December shipment, c.i.f. U.K.-Continent. The sellers who have been offering at about the E.P.C. level and not discounting the market as some have done, are all quoting higher prices, by as much as £5 a ton to £6 a ton in most cases.

Mill Firsts have remained unchanged for a few days at £189, Mill Hearts are now at £176 and Grade Hearts £172, with Grade Tossa-2/3 at £186, after being down to £184 and Tossa-4 at £182, after offers at £177 earlier in the week for November-December shipment, c.i.f. U.K.-Continent.

Dundee spinners are not interested in offers, and they are apparently determined not to buy until prices come back to normal levels. There

May we help you to export your goods?

Today, the word "Export" is very much in the air. But you need full details of your market before you can take any risk. Perhaps, our branches in Bangkok, Colombo, Hong Kong, Ipoh, Klang, Kuala Lumpur, Malacca, Penang, Rangoon and Singapore may be in a position to assist you.
Why not look us up?

you have just opened A METAL BOX CONTAINER!

The container in which your favourite vanaspati comes to you is specially designed to protect the contents from spoilage. The container is precision manufactured on specialised machines and the accurately fitting lid and diaphragm ensure that the contents remain free from contamination over long periods. For added protection, vanaspati containers are made pilfer-proof with the now-familiar aluminium foil diaphragm. An unbroken diaphragm is your guarantee that the vanaspati you are buying is genuine.

Manufacturing scientifically designed packages is the business of Metal Box, leaders in the packaging field. A result of years of research abroad and in India, the vanaspati container is another example of a Metal Box package that delivers the best in consumer goods to you.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.
COMPOSITE CONTAINERS of cardboard & metal

is a saying often repeated by Dundee dealers that "jute is dear at over £100 a ton for Mill Lightnings".

Little business was done in jute yarns and cloth, and the reduction of about £10 a ton on the prices for common qualities of yarns has not brought any new business. Hessian yarns were reduced from 25.75d a lb for 8 lbs C.H.W. *cops to 24.60d and from 26.89d for 8* lbs J.C.H. warp to 25.75d a lb from Wednesday, 26th October. Rove is down by £2 10s to £152 10s for 48 lbs and £121 for 200 lbs, while hessian cloth rates are down to 19.31d a yard for 40in. 10oz. and 16.55d for 8oz. from 20.57d and 17.16d a yard, respectively. All sacking, bagging and tarpaulin prices have been reduced accordingly.

Calcutta goods were again irregular last week. There was a steady undertone, and the mills were reluctant to lower their prices. Hessians were quoted from 83s 6d for 40in. 10oz. and 64s for 7½oz., October, 83s 9d and 64s 3d November, 84s 6d and 64s 9d December and 84s 9d and 65s January-March, with B Twills 266s 9d, 262s 3d, 258s 9d and 257s 3d, respectively, all f.o.b. Calcutta.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES RISE AGAIN

(FROM OUR EAST PAKISTAN CORRESPONDENT)

AFTER a period of almost two weeks of dull conditions in the jute market, prices are beginning to rise again. Meanwhile, the recent fall in prices locally, upcountry and overseas, has been quite considerable, and it is hard to understand this in a season when the crop is definitely short. The main causes responsible for the declining trend are the shortage of finance and the Pakistani Government's intervention to stop the sale of wet jute. At least two companies have lost their licences since they traded in wet jute, so many others as well as the middlemen have been frightened. Once the decline in prices started, balers, mills and overseas buyers all combined to push the market further down by holding off. Those who did not stop purchasing have earned profits by buying the market down.

Some of the mills could not stand the temptation and came in to buy. Furthermore, middlemen who had suffered quite large losses—not only because of the falling market but also through having to dry their jute—were not inclined to buy more in upcountry centres and, as a result, imports have dwindled. It is interesting to note that even some growers became frightened by the falling market and instead of selling to middlemen in the local bazaar, brought their small lots of two or three maunds of jute straight to balers in order to dispose of it before the market declined further. The harvesting of the large Aman rice crop will take place very shortly, and since a lot of labour will be required for this purpose, arrivals will not increase even if fibre prices rise. The small amount of interbaler business transacted has been restricted almost entirely to long jute with the result that cuttings did not show the same rising tendency which long jute did. The present position is that although the market is definitely steadier, the steadiness is more marked in the forward position than in the ready. The reason is that because of the shortage of finance, sellers are prepared to discount in order to get ready cash for their goods.

Overseas prices, which are always the first to take advantage of any decline, have fallen below E.P.C. levels, although the latter have come down by £9. Reports indicate that there have been some weak sellers. At present, sellers are more reserved and overseas buyers are generally trying to force prices down by sitting out of the market. It is possible that they may show this tendency for a few more weeks, but eventually they will have to come in, so the market will rise again, although not at the ridiculously rapid rates as in the last month. An indication of the dull conditions is the E.P.C. registrations for the first fortnight of October, which amounted to only 143,000 bales. Once again, the U.K. was the biggest buyer with 54,000 bales and Japan 12,000 bales while India only bought 7,200 bales. In spite of this, purchases this year have exceeded last year's by over 300,000 bales. Some balers are reported to be facing difficulties in fulfilling their commitments. The Pakistan Jute Association has cabled the London Jute Association asking it to approach buyers to induce them to be liberal in granting free extensions in order to protect their own supplies and help supplement internal efforts to eradicate moisture from imports and ensure the fulfilment of contracts.

The reasoning behind this telegram is not entirely clear. But it is surprising to hear that one argument, which is not necessarily the one accepted by the Pakistan Jute Association, is that free extension should be given in order to enable balers with commitments to turn over their stocks and make profits before fulfilling their prior commitments. If the overseas buyers agree to this proposal—which is unlikely—it may slightly delay the expected rise in local prices but will obviously put a premium on ready goods in the overseas market. So far, most purchases have been made for ready shipment or a month or two forward, but available reports indicate that Australia at least is now trying to take full advantage of the lull to buy as far forward as February. If she can find sellers, this will probably prove to be a wise move.

SPICES EXPORT PROMOTION COUNCIL OPENED

TRADERS URGED TO KEEP PRICES COMPETITIVE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Central Deputy Minister for Commerce and Industry, Mr. Satish Chandra, recently inaugurated in Ernakulam the newly constituted Spices Export Promotion Council. It will be concerned with the problems connected with the export of pepper, cardamom, ginger, turmuric, chillies, curry powder, etcetera. Spices constitute one of India's major foreign exchange earners, contributing as they do more than Rs. 10 crores to the exchequer each year. The Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, said in a message that spices could give a "substantial boost" to India's total exports. "We have to face keen competition from other countries, and we should prepare ourselves to meet this challenge". He said that schemes should be undertaken for the extension and improvement of the cultivation of spices. The Council will make a close study of the foreign markets and establish necessary contacts abroad. But it is equally necessary, he said, that prices should be kept at competitive levels.

Major Source of Supply

The East has been the traditional home of spices. In spite of the development of other sources such as Zanzibar for cloves and Jamaica and Sierra Leone for ginger, south Asia continues to be the major source of supply to the world market. India continues to be an important exporter of pepper, cardamom, ginger and other spices. But she cannot afford to be complacent. There was a time, the Central Deputy Minister said, when a spice-growing country could take things easy and watch prospective buyers compete among themselves. Time has, however, changed. The cultivation of spices in other countries and the development of synthetic substitutes now compel the spice-growing countries to woo the buyers in foreign markets. So the Council and its constituent panels will have to consider urgently the problems facing India's spice export trade. Although India grows the best pepper in the world, she is now facing severe competition from Indonesia and Sarawak, so the Council will have to take effective steps to ensure that foreign buyers continue to remain conscious of the superior quality of the Indian pepper. Mr. Chandra said that the streamlining of marketing arrangements as well as the preparation of oleoresins and other extracts from pepper of non-exportable quality would have to be investigated. Until recently India was the most important exporter of cardamom. But her supremacy is now being challenged by Ceylon and Guatemala. Meanwhile, at the instance of the trade itself, a voluntary quality control scheme has been initiated; it is for the Council to implement it. Mr. Chandra said that Indian ginger exports are facing competition from Jamaica and Sierra Leone. He, therefore, advised the Council to extend its co-operation for improving the quality of Indian ginger. The substitution of vegetable dyes by aniline ones has reduced the world market for Indian turmeric. New uses have, therefore, to be found for the latter. Exporters of chillies, too, have been faced with some difficulties, so they should receive some consideration from the Council.

Enforcing Quality Control

Both Mr. Chandra and the Kerala Governor, Mr. V. V. Giri, emphasised the need for enforcing quality control. No stable foreign trade can be built up without proper quality control, they said. So the Council will have to give its earnest attention to this matter. Mr. Chandra assured the Council that the Government would extend its co-operation and assistance to it in case of necessity.

New Scheme for Importing Copra

Kerala oil millers are apprehensive of the recently announced scheme for importing copra, according to which exporters of groundnut oil and cake will have the liberty to import copra and palm oil against their exports during the period ending 31st January, 1961. According to the president of the Indian Chamber of Commerce in Mattancherry (Cochin), any diversion of copra normally imported into Kerala for the benefit of exporters of groundnut oil and cake who are mostly established in States like former Bombay is likely to create "serious difficulties" for Kerala's oil milling industry.

The new scheme will result in a diversion of copra imports to places like Bombay. Copra produced in Kerala is not sufficient for the requirements of mills in the State which have increased considerably in number during the last few years. While Kerala millers have to depend on local production, some portion of the output there is purchased by mills in Bombay. Under the circumstances, the quantity of copra available for Kerala mills will be reduced considerably, according to the president of the Chamber. Mr. Satish Chandra, Central Deputy Minister for Commerce and Industry—in whose presence these apprehensions were expressed—has assured the members of the Chamber that any trader—whether he is an importer or crusher of copra or soap manufacturer or actual user—can take advantage of the new scheme. He said that in framing the scheme, the Central Government only considered the need for export promotion. There has been no territorial discrimination.

Wage Agreement in Mysore Plantations

A new wage agreement has been arrived at in Mysore giving a general increase to all categories of daily-rated plantation workers in the State. The negotiations have been going on for some time after the three-year agreement signed in May 1957 came to an end. The present agreement is for two years unless the proposed Central Wage Board for the Coffee Industry makes its recommendations before the expiry of the period. If the Board delays in coming to a decision, the agreement will continue until its decision is announced. A significant change brought about by the new agreement is that the different rates which existed between Coorg and old Mysore areas will end. But there will continue to be a difference between the small holdings of below 50 acres and the large ones. But workers in both categories will receive a wage increase. The adult male worker of a coffee estate measuring more than 50 acres will get a daily wage of Rs. 1.62, according to the new agreement. His counterpart in a small estate will get Rs. 1.53 a day.

The agreement is the second one since 1957 and the total wage for an adult male worker in Mysore coffee estates has been increased by 62 percent. The coffee industry is facing hard times due to a growing world surplus: India herself has increased her output by 176 percent to about 50,000 tons and has an exportable surplus of about 20,000 tons. The unsold stock with the Coffee Board at the beginning of October was over 25,000 tons and the new crop will be arriving in the markets from the latter half of November. Against Rs. 2.75 a point received in 1953, growers expect to get only Rs. 2.23 a point on the 1959-60 crop. In spite of this, the leaders of the coffee industry in Mysore have decided to arrive at an amicable settlement by mutual negotiations, although the Central Wage Board for the Coffee Industry, proposed to be set up by the Central Government, would enquire into the wage question. Mysore has about 160,000 acres under coffee and accounts for a total production of about 68 percent of India's output. The present agreement, it is said, will cover about 140,000 workers, and the annual increase in the wage bill for the industry is estimated at between Rs. 35 lakhs and Rs. 40 lakhs.

Pepper Exports and Production

India's pepper exports for the season ended October 1960 are estimated at 18,500 tons—the highest on record. The new season is opening with a very small carryover of about 1,000 tons. Estimates of the new crop range from 23,000 tons to 24,000 tons, indicating a mild setback over the last season's output. It is felt, therefore, that the supply position during the current season will remain tight, so the trade is facing the new season with confidence.

New Scheme to Help Coir Exporters

In order to enable exporters of coir products to import bailing accessories, dyes and chemicals and sisal fibre, the Government of India has worked out a scheme and has sent it to the Coir Board for its comments. It is now being considered by the Board. The idea of the scheme is to enable manufacturers and exporters of coir products to import goods which they require for increasing the production of exportable items.

COCHIN TEA SALES

At Dust Sale M, 230,000 kilograms of tea were on offer. There was a good demand. Prices were fully firm to dearer, particularly for residual grades which were 5nP to 10nP dearer. C.T.C. types were strong and dearer.

At Sale No. 42, 640,000 kilograms of tea were on offer. The market opened very strong but eased later. Plain and low mediums, particularly black leaf types, were 10nP to 20nP dearer. Mediums and good mediums were fully firm and occasionally dearer. High-growns were very irregular while C.T.C. and whole leaf types were stronger and dearer.

Here in January!

India's First Financial Daily Newspaper

THE FINANCIAL EXPRESS

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

BIRDS cover a wide field

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

Engineering and Transport

INDIA REMAINS BEST CUSTOMER OF U.K. AVIATION INDUSTRY

U.S.A. LARGEST PURCHASER OF AERO-ENGINES AND PARTS

INDIA retained her position as Britain's best customer for aircraft and parts during the first nine months of the year, according to export figures for the industry just released in London by the Society of British Aircraft Constructors. During September, India was also the leading buyer, with purchases worth £668,000. They brought Indian purchases for the year to a total value of £6,779,000.

The British aircraft industry's exports for the first nine months of the year represented an annual rate of about £145 million, compared with the record 1959 total of £156 million. The nine-monthly total for aero-engines—£54,928,732—"exceeded handsomely" every annual aero-engine export figure since the war, except for last year's record, £64,500,000. Exports in September totalled £9,904,191—some £250,000 more than in the same month last year. It consisted of: aircraft and parts, £4,657,024 (aircraft £3,133,714, parts £1,523,310); *aero-engines* and parts, £4,866,047; electrical appliances, £202,551; tyres, £64,390; and aeronautical instruments, £114,179.

After India as the leading buyer of aircraft and parts came the United States, with purchases totalling £243,624; Egypt (U.A.R.), £117,662; and West Germany, £92,325. The United States, with £1,072,966, was the best customer for aero-engines and parts. Canada came next, with £736,256.

I. A. C. INTRODUCES NON-STOP SERVICE TO KATHMANDU

The Indian Airlines Corporation has introduced this week non-stop flights to Kathmandu from Calcutta and Delhi. These flights, which will do away with the hitherto prevalent stops *en route*, will help further to encourage and promote tourist traffic to Nepal. The flying times between Calcutta and Kathmandu and between Delhi and Kathmandu will, respectively, be 2 hours and 45 minutes and 3 hours and 20 minutes. The timetable is arranged to provide convenient flights to Kathmandu in the morning, and from Kathmandu in the afternoon after lunch.

EUROPEAN AIRLINES INTRODUCE AIR CREDIT PLAN IN INDIA

Encouraged by the success of the "fly today pay later" scheme elsewhere in the world, the four pool partners, namely, Air France, Alitalia, Lufthansa and T.A.I., have inaugurated their "air credit plan" in India. Under this credit plan, the passenger is required to make a down payment of only 20 percent of the passage fare—the rest being payable in monthly instalments over a maximum period of 15 months, if so desired. This deferred payment scheme, which seeks to extend the scope of commercial aviation, is calculated to tap new business. The benefit of repayment in easy instalments over a period of three, six, nine, 12 and 15 months, is likely to appeal to a new class of travellers, who cannot always afford the large initial investment to buy an international air ticket.

B.O.A.C. TO FLY MORE COMETS ON EASTERN SERVICES THIS WINTER

In the winter schedule enforced since 1st November, B.O.A.C. will fly more *Comet* jetliner services to Singapore and Australia and will introduce a London-Karachi service. At present, there are two flights each week in each direction leaving London on Saturdays and Thursdays and Singapore on Mondays and Wednesday. The new service will leave London on Mondays and Singapore on Saturdays. The present five services in each direction between the U.K. and Australia leave London on Sundays, Mondays, Wednesdays, Thursdays and Fridays and Australia on Saturdays, Mondays, Wednesdays, Thursdays, and Fridays. The new service will leave London on Tuesdays and Australia on Sundays. The new Karachi service will leave London on Tuesdays and Karachi on Thursdays. In addition, the Corporation will operate a twice-weekly *Comet* service to the Persian Gulf on behalf of Middle East Airlines.

FIRST FLIGHT OF VERTICAL TAKE-OFF AIRCRAFT

The Hawker *P.1127* vertical take-off and landing fighter made its first flight recently. This aircraft, in which N.A.T.O. and the R.A.F. are showing keen interest, is a prototype of an operational fighter and, like the Short *SC.1*—Great Britain's other V.T.O.L. aircraft—represents a major technological breakthrough in its field. But the *P.1127*, unlike the *SC.1* which uses four downward-facing jet engines for vertical take-off and landing and a horizontally-mounted turbojet for forward propulsion, only uses one engine—the new Bristol Siddeley *BS.53* ducted fan jet engines to provide power for both vertical and horinzontal flight. The *BS.53*'s jet pipe has two nozzles which swivel to direct jet blast downwards for vertical flight and backwards for horizontal flight, and two nozzles leading off the "fan" at the front of the engine which serve a similar purpose.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) advanced by 1.0 percent to 126.9 during the week ended 15th October, 1960, compared with 125.6 (revised) for the earlier week. The index was higher by 1.4 percent and 5.8 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Lower prices of fish (hilsa) in Calcutta (−20%), rice in Balurghat (−7%) and in Dumka and Contai (−5% each), milk (−7%) and onions in Calcutta (−5%), cashewnuts (−4%), cummin (−3%), jowar, masur, groundnut oil and betelnuts (−2% each) and wheat, bajra, barley, ragi, mung, chillies and cardamoms (−1% each) brought down the index for Food Articles by 0.7 percent to 121.3, compared with 122.1 for the previous week, although prices of onions in Nagpur (+15%) and Delhi (+14%), fish in Tirur (+12%), eggs (+6%) and rice in Imphal, bananas and meat (+5% each), potatoes, oranges, gingelly oil, cloves and turmeric (+4% each), maize, arhar, urad, mustard oil, coconut oil, gur, coffee and black pepper (+1% each) showed a rise. The index for Tobacco remained unchanged at the earlier week's level of 103.7. The Fuel, Power, Light and Lubricants group index worked out to 119.5, against 119.6 for the earlier week. The price of castor oil (−1%) was marked down. A rise in the prices of raw jute (+16%), linseed, raw hides (+2% each), raw wool, copra, raw skins and tanning materials (+1% each) raised the index for Industrial Raw Materials by 3.4 percent to 150.2, compared with 145.3 (revised) for the earlier week. The prices of cottonseed (−4%) and rapeseed and lac (−1% each), however, moved down. In spite of a fall in the prices of brass (−1%), the index for Intermediate Products advanced by 0.5 percent to 130.1, against 129.4 (revised) for the earlier week, due to the increases in the prices of linseed oil (+2%) and cotton and coir yarn, zinc and copper (+1% each). The prices of jute manufactures (+10%), oilcakes (+2%), bricks and tiles (+1%) showed advances, while those of general chemicals (−2%) went down, and the index for Finished Products rose by 2.9 percent to 126.0, compared with 122.4 (revised) for the earlier week.

RAW COTTON PRODUCTION RISES

Some figures given in the *International Review of Cotton and Allied Textile Industries* call attention to an aspect of the supply and demand problem of raw cotton which is sometimes overlooked. In eight countries—Argentina, Brazil, Egypt, Iran, Mexico, Pakistan, Syria and Turkey—production increased to 8.846 million bales in 1959-60, compared with an average of 6.24 million bales for the four seasons ended 1938-39. Against this increase of 42 percent, there was a rise of 207 percent, from 1.453 million bales to 4.465 million bales, in consumption in those countries. Before the second World War, they used only about one-fifth of their own cotton production, whereas they now use fully one half. During the last season, Argentina's consumption exceeded its domestic production, while in the last few seasons India has become a net importer of the commodity. It remains to be seen whether the other countries will eventually reach a similar position but, meanwhile, their exportable surpluses are decreasing even though their total output continues to increase.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 17, held on 31st October and 2nd November, offerings at the Export auction totalled 71,057 packages. There was again a good general demand except for a few lines of plain liquoring Assam B.O.P.'s which were neglected, all other descriptions came to a satisfactory market. The trend of the sale, however, was somewhat irregular and any price change was generally in buyers' favour.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.40 to 5.70	2.04 to 2.08
Plain B.P.	4.50 to 4.65	1.88 to 1.90
Plain Fannings	4.70 to 5.00	2.04 to 2.12
Medium B.P.	4.70 to 5.00	1.90 to 2.08
Medium Fannings	5.00 to 5.30	2.14 to 2.24
Best Assam C.T.C. B.P.	6.20 to 6.60	2.60 to 2.80
Best Assam C.T.C. Fgs.	6.50 to 7.60	2.60 to 2.90

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings which comprised 21,693 packages again met with a good general demand. There was a fair enquiry for medium C.T.C. Dusts but they were mostly easier by 10nP or 15nP while the best C.T.C. kinds were also lower by up to 20nP. The smaller Brown Dooars Dusts were keenly sought after often at dearer rates while the grainy sorts sold 15nP to 20nP below last prices. Orthodox descriptions were well supported at about firm rates. The small quantity of Darjeelings on offer came to a strong market and were dearer.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.65 to 5.00	1.98 to 2.02
Medium Assam Dust	4.90 to 5.00	1.94 to 1.98
Medium Assam C.T.C. Dust	6.00 to 6.20	2.00 to 2.10
Best Assam C.T.C. Dust	6.30 to 6.50	2.50 to 2.80

(Quotations are inclusive of excise duty.)

A good demand prevailed for the 757 packages of Leaf on offer, which sold well.

LINSEED FIRM

The market was firm in the past week. Prices increased, but arrivals of seeds slackened off. Millers showed great interest for ready and forward deliveries, but business was on a very small scale. The oil market was firm. Stocks were low. Local buyers showed keen interest daily, but sellers were reserved. The tone of the oilcake market was firm on good local demand. Shippers showed no interest as prices were out of parity with foreign markets. The latest quotation is as follows: ready Rs. 25.87 a maund.

HIDES AND SKINS FIRM

The market in hides ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 25th October and 31st October, 1960)

Cowhides: Wet salted (Slaughtered) 5,500 pcs. on the basis of Rs. 11 to Rs. 12; Wet salted (Slaughtered) 15,600 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19.50 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 48,900 pcs. on the basis of Rs. 330 to Rs. 350, Rs. 360 to Rs. 390 and Rs. 465 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50; Assam-Dinajpur-Maldah 5,620 pcs. on the basis of Rs. 315 to Rs. 365; Purneah 14,200 pcs. on the basis of Rs. 350.

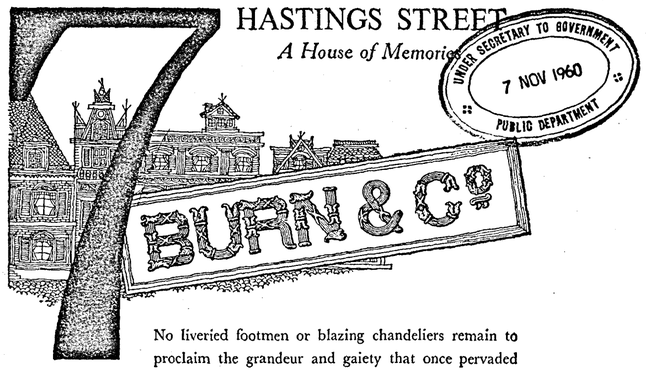
Bazaar Stocks

(31st October, 1960)

Cowhides: Wet salted 79,800 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 23,200 pcs.; Assam-Dinajpur 186,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 205,500 pcs.

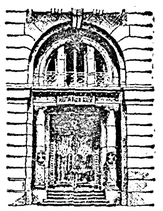
HASTINGS STREET
A House of Memories



UNDER SECRETARY TO GOVERNMENT 7 NOV 1960 PUBLIC DEPARTMENT

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.



Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

COMPANY AND PUBLIC NOTICES

JARDINE HENDERSON, LIMITED

Notice of Annual General Meeting.

NOTICE is hereby given that the Fourteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday, the 22nd December, 1960, at 11-15 A.M., for the following purposes :—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1960, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and to fix their remuneration.

Notice is also given that the Transfer Books of the Ordinary Shares of the Company will be closed from the 1st December, 1960 to the 22nd December, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row, Calcutta 1.
17th October, 1960.

DISHERGARH POWER SUPPLY CO. LTD.

NOTICE.

AFTER careful consideration of the provisions of the Preference Shares (Regulation of Dividends) Bill 1960, the Board of Directors have decided that they can recommend to the members of the Company the payment at this stage of only such dividends on the "A" and "B" Preference Shares as the Preference Shareholders are entitled to under the Company's Articles of Association and that, as soon as the Preference Shares (Regulation of Dividends) Bill 1960 becomes law, they will recommend the payment of such further dividends as may become due under the Act. Accordingly, the Board of Directors have today decided, in supersession of their previous resolution, to recommend to the forthcoming Annual General Meeting of members the following dividends in respect of the year ended 31st March, 1960 :

On the "A" Preference Shares Rs. 5/- per share.
" "B" Preference Shares Rs. 4-50 "
" Ordinary shares Rs. 10/- "

Tax will be deducted from these dividends before payment in accordance with the provisions of the Finance Act currently in force and the warrants for dividends, if declared, will be despatched to shareholders on the date on which the Annual General Meeting is held.

By Order of the Board,
DISHERGARH POWER SUPPLY CO., LTD.,
ANDREW YULE & COMPANY LTD.,
A. S. MacLaren,
Secretary,
Secretaries & Treasurers.

Calcutta, 1st November, 1960.

KARANPURA COLLIERIES LIMITED

AT the meeting of the Board of Directors held on Thursday the 27th October, 1960, the following dividends were recommended to be paid for the year ended 29th February, 1960.

On Preference Shares at the rate of Rs. 4.40 per share per annum (being Dividend at the stipulated rate of Rs. 5.50 per share less Income Tax at the Company's rate, viz 20% thereof) after deduction of Tax at source.

On Ordinary Shares at the rate of 7½% per annum subject to deduction of Tax at source.

THE KARANPURA COLLIERIES LIMITED

NOTICE is hereby given that the Forty-second Annual General Meeting of THE KARANPURA COLLIERIES LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday the 28th November, 1960, at 10.30 A.M. for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 29th February, 1960, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

AS A SPECIAL RESOLUTION

5. To consider and if thought fit, to pass with or without modification the following Resolution which will be proposed as a Special Resolution namely :—

"Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries & Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries & Treasurers and the Directors of the Company but so that the money lent shall not at any time exceed Rupees Two lacs in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries & Treasurers and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended".

The Share Transfer Registers of the Company will be closed from the 14th November, 1960 to the 28th November, 1960, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Calcutta, the 27th October, 1960.

Notes :—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 10th December, 1960, to those members so entitled whose names appear in the Company's books on the 28th November, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

With regard to item No. 5, it is pointed out that the Company may require temporary financial accommodation from time to time and as the Secretaries and Treasurers are prepared to lend money to it at a rate of interest which is more favourable than the Company could have obtained from its Bankers, it is proposed to take advantage thereof. Section 370 of the Companies Act, 1956, as well as relative clauses in the Articles of Association of your Company empower your Company to take loans from the Secretaries and Treasurers at a rate of interest to be agreed upon between them and the Board. The Auditors of your Company are of the opinion that granting of loans by the Secretaries and Treasurers constitute a service by them in terms of Section 360 of the Act and that such arrangement should be approved by the Shareholders by Special Resolution pursuant to the above Section. Counsel's opinion on the question is to the contrary but in order to remove any doubt in the matter it is proposed to pass a Special Resolution confirming the arrangement.

Sir Walter Michelmore, the Chairman of the Board of Directors and member of your Company, is also Managing Director of Messrs. Bird & Co. (Private) Limited, the Secretaries and Treasurers of your Company.

To the extent indicated above the Secretaries and Treasurers of the Company may be deemed to be interested in the business referred to in the resolution.

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LTD.

THE Directors of the above Company have decided to recommend payment of Dividend for the year ended 31st March, 1960, as under :—

On Ordinary Shares at the rate of Re. 1.00 nP. per share subject to deduction of Tax in accordance with the provisions of the Finance Act 1960.

By Order of the Board,
D. L. V. ROWE,
Chairman.

Chartered Bank Buildings,
Calcutta, 27th October, 1960.

JESSOP & CO. LTD.

NOTICE is hereby given that the Board of Management has sanctioned the payment of a Dividend for the half year ending 31st October, 1960 at Rs. 2.50 per share, less income tax and super tax at the rates prescribed by the Finance Act 1960, on 5% Cumulative Preference Shares.

The Preference Transfer Register will be closed from 11th November to 15th November, 1960, both days inclusive.

Dividends will be paid only to the registered Shareholders or their mandatees.

By Order of the Board
D. D. MARKAN,
Secretary.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary. Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LIMITS OF MONETARY POLICY IN INDIA

NOBODY is going to deny that the Reserve Bank's rôle as regulator of the country's money supply is not a difficult and complex one under existing economic circumstances. In fact, it is probably considerably trickier than is the case with the majority of central banks throughout the world, if only because inflation is endemic in India's present position and the number of vested interests in it seem to increase daily. Speaking in Madras last week, Mr. H. V. R. Iengar, Governor of the Reserve Bank, put up an excellent academic defence of current monetary policy. After reading it, no fair-minded observer can help but sympathise with his dilemma and admire his intellectual grasp of it. If, in fact, some of the Bank's policies are not always as effective as they might be, then clearly it is not because of any misunderstanding of the underlying problems. It is, of course, because Government policies are so often in conflict with the principles of maintaining monetary stability—a point Mr. Iengar did not fail to emphasise—and because the area in the economy over which control can be exercised is still woefully limited. There is not much can be done in the short run about this last point. But before any analysis is made or judgment passed on the Bank's policies as such, it is important to appreciate the political and economic—as distinct from the administrative and circumstantial—difficulties they are up against.

The fact simply has to be faced that in India today inflation has its friends, and that they are far from lacking in influence. The Government likes inflation: it swells tax receipts, it keeps down the cost of official borrowing, it prevents damaging but politically popular taxation policies from crippling the economy, and it makes possible high plan target figures, although not necessarily achievements. Private business likes it: profits are easy to make, there is no need to fight labour demands, efficiency can be ignored and expansion is facilitated. And the labour unions like it, because wages can be pushed up without too much effort and the popularity of the union leaders is thereby ensured. These elements comprise a formidable pressure group whose voice would certainly be heard, although perhaps not out-spokenly, if the Reserve Bank were ever to become too assiduous or effective in carrying out its policies. The fact that inflation is not particularly attractive to the general public—although individual members may derive some benefit in other capacities—does not seem to worry the Government a great deal, except possibly at election times, especially when the comparison of India's cost of living indices with those of other countries gives such an astonishing impression of well-being. Even the damage to savings (Mr. Iengar's point that deficit financing creates savings requires to be strictly qualified) and to the currency's reputation both at home and abroad, can often be conveniently ignored, especially when friendly foreign countries are prepared to help patch up the steady erosion of the external value of the rupee. The social consequences of inflation take a long time to develop, and it is even doubtful whether some of them—the annihilation of the middle classes, for example—are not in conformity with current socialist aims anyway. No; whoever finds himself fighting inflation in India today cannot expect his job to be an easy one.

To interpret the Reserve Bank's task under existing circumstances as that of regulating the money supply without damaging production, is probably broadly correct. And within that limited scope, its present policies deserve more success than in fact they have had. Exhortations to banks are notoriously unreliable. But they are a logical first step, and help to set the psychological climate for firmer measures later on. To reduce the Reserve Bank's accommodation of the demands of the commercial banks is a useful overall precaution as the next move after exhortation, but its advantages as a regulatory measure are probably rapidly counter-balanced by its indiscriminate impact on the economy, unless it is supplemented by selective credit controls. The latest moves, the quota scheme and dearer money, are no doubt the most effective of all, if used wisely, although it is important to understand what its various implications are likely to be. It would also help towards a better appreciation of the dearer money policy if it were not so often quoted in its favour that it curbs speculation in the share and commodity markets. From the present state of these markets it should be obvious that this claim is largely nonsense. But it continues to be made because it does not appear to be sufficiently recognised as yet that most of the speculation which takes place in this country is financed out of black-market or "tax-avoided" funds—for the existence of which, past and present Government policies are largely to blame—and that speculators make money on price movements, not on any particular absolute level of prices. What the introduction of a dearer money policy does is to favour one set of speculators—the bears—compared with the other. Whether it thereafter restricts the overall volume of speculative transactions is much more debatable.

But the important point to grasp about a dear money policy is that it is likely to be limited in its effect to the extent it is restricted to short-term borrowing and is intended to be only temporary in duration. There is a good deal to be said for a permanently dearer money policy in this country, one which involves a higher system of interest rates reaching right back to the longest-term borrowing. This would increase the cost of the national debt, but it would also do a great deal to encourage the small savings which the Government's tax policies have done so much to deter; and, if Mr. Iengar is correct in supposing that higher short-term rates do not seriously affect the small man, it would not harm this class of borrower much either. Its effect on long-term development investment could be debated indefinitely. But the prevailing opinion in other countries these days seems to be that no enterprise offering a promising rate of return is likely to be discouraged because of an extra one or two percent on the rate at which funds must be borrowed for it. If there is any doubt on this score, the phenomenon of West Germany, where internal rates of interest have been high throughout the post-war development period, might profitably be studied. What it would do, of course, is cut down to some extent the rate of increase in the volume of overall economic activity. But this effect may be no greater than that caused by the general uncertainty which successive applications of other, more-or-less ineffectual, policies can create.

The trouble with the kind of half-measure dear money policy which the Reserve Bank is working at the moment is its impermanence. Unless it is relaxed soon, the banking system will clearly not be able to cope with the demands of the busy season. Yet the mere arrival of the busy season itself does not signify the disappearance of all inflationary trends in the economy. One feature which must be borne in mind this year, of course, is the size of the harvests. This alone, as Mr. Iengar inferred, may be sufficient to transform the whole inflationary situation. But if it does, then the improvement can be attributed to an act of god, not of the Reserve Bank of India. The fact must be faced—and Mr. Iengar would no doubt be among the first to acknowledge it—that the efficacy of monetary policy in this country today is strictly limited, and everything that has happened since dearer money was introduced goes to prove the point. India is not Britain, where balance of payments problems or inflationary situations correct themselves after a few months of stringency. India is a "developing" economy as distinct from one which is simply growing, and inflation here is a built-in feature of present planning which it will take more than a limited credit squeeze to extirpate.

The immediate need, however, would seem to be for a measure of relaxation in the present policy. This is not necessarily because the banks are beginning to find the position something of a strain; the whole point, surely, is that they should be forced to borrow at higher rates of interest. It is simply due to the fact that this year's harvests promise to be an all-time record, and if the resulting welcome fall in food prices is transformed into a slump due to the continuation of monetary stringency, the chances of such a performance being repeated next year will be drastically reduced. It is possible that the problem of the next few months, thanks largely to natural causes, will be to keep prices from collapsing, not the other way round. But as soon as the busy season is over in the money markets the country is likely to be faced once again with the dilemma that although money for legitimate purposes is relatively hard to get and must guarantee reasonable returns, funds for speculation and other anti-social activities are available in abundance. And to prevent this situation, a re-application of the Reserve Bank's present dear money policy is likely to be as relatively ineffectual and embarrassing as it has been in the past few months.

WORLD TEA PROSPECTS

TEA shares have been quiet in the Calcutta stock market for some time now, because investors seem inclined to regard their prospects with caution. As for the profitability of tea companies during 1960, it looks as if gardens situated in northern India will not make the profits they did in 1959. Although the average prices of the commodity have so far been slightly higher than those of last year, most of the gardens will have a much smaller crop. Production was held up by drought in the earlier part of the season, but evidence indicates that no lasting damage has been done. Considering the changes in the system of corporate taxation, combined with the tax which is deducted from dividends at source, the dividend outlook cannot be said to be very encouraging.

Even on a longer view, the prospect is far from certain. The Food and Agriculture Organisation of the United Nations has recently produced an illuminating survey of the industry with comprehensive statistics concerning production, distribution and consumption. These figures produce an interesting projection of the outlook up to 1965. It is stated that world supplies may be around 910,000 tons that year. To this total, producers in Asia, excluding China and Russia, are expected to contribute 780,000 tons. Africa will supply 55,000 tons and Latin America 22,000 tons. Exports from China are expected to be about 50,000 tons. The F.A.O. survey points out that production in Asia is likely to increase by 2 percent a year, eventually reaching 780,000 tons. This would be about 1,000 tons more than the average annual output during 1956-58. Production during the past few years has increased due to technological improvements resulting in higher acreage yield rather than to expansion in acreage. The trend is likely to continue. The improvement in yields has been the chief factor in the increase of world supplies. There has also been steady progress in replanting, which raises yields as time goes on. It is common knowledge that a tea plant usually lives for 100 years or more, but that it is often more profitable to replant than to go on plucking old bushes. In India, nearly 30 percent of the tea bushes are more than 60 years

old. Replanting is, however, expensive and involves a temporary sacrifice of income for some years in each unit replanted. Against this background, it is necessary that tea gardens in India be provided with adequate financial facilities for replanting.

As for production in Africa, it appears likely to increase from the present figure of 34,100 tons to 55,000 tons when all bushes are in full bearing. This estimate ignores for the time being the possibility of an interruption in expansion because of political developments. Any estimate concerning supplies from China would probably be highly conjectural, as it is difficult to obtain reliable data from that country. Considering that China has greatly increased the production of many crops during recent years, there is no reason why she cannot improve her tea output at least in proportion. The claim to produce 332,000 tons in 1962 (against 141,500 tons in 1953) may, however, appear rather exaggerated. In any case, a substantial portion of her production is partly consumed internally and partly sent to Russia. On a conservative estimate, it is possible that her exports to world markets might be doubled to 50,000 tons by 1935. But this figure could easily be exceeded if China decided to sell more to foreign countries to earn foreign exchange. The F.A.O. survey estimates world consumption at 870,000 tons. It is, therefore, clear that there may be a world surplus of nearly 40,000 tons in 1965. But the gap between supplies and offtakes might be bigger if consumption rises less than estimated, or if China can export more than expected.

The surplus apart, a disturbing feature is that the trends show that over-production has taken place steadily in the category of common teas. During the past few years, the output of quality grades has been relatively less than that of plainer varieties. India's production of plain tea, for instance, constitutes nearly 60 percent of her total. Under the circumstances, the regulation of common tea production calls for attention, if a greater balance between supplies and consumption is to be achieved. If producers concentrate on quality production, total world supplies may be restrained to some extent. The scheme for raising the production of superior grades is reinforced by circumstantial evidence. Experience shows that increases in the production of quality teas can be sold profitably because the price factor is not usually of much importance as far as consumption of these grades is concerned. High-income countries generally drink better teas, and their consumption reacts very little to price changes. Producers, therefore, will find it worth their while to raise the output of quality grades.

To increase the consumption of cheaper grades, attention must be concentrated on low-income countries in which the per capita consumption is as yet very low. In spite of a steady increase in producing countries, consumption has not moved up in proportion to supplies. In contrast to the high-income countries, consumption where income is low depends to a great extent on the price of the commodity. It is, therefore, clear that prices must be held down if the consumption of cheaper teas is to be promoted. It is time the authorities in India thought of holding down costs of production by reducing fiscal levies and other unnecessary statutory charges. Developing markets for common teas, especially in producing countries, may not be as easy a proposition as would appear at first sight in view of the fact that improvements in the national incomes of under-developed countries will take time to bring about. Promotional activities designed to encourage tea-drinking habits must be pursued vigorously.

India, Pakistan and Japan are probably the biggest domestic markets in the tea producing countries of Asia. During 1955-56, Japan consumed 84 percent of her total production, Pakistan 66 percent and India 31 percent. The proportion of domestic consumption has probably increased since then. In Ceylon, for instance, domestic consumption went up to 11,000 tons in 1957, from 6,800 tons in 1955-56. The observation made in the F.A.O. report about the effects on tea consumption of the Common Market is striking. During 1955-57, the Six had a share equal to 3.6 percent of total world imports. Commenting on the changes in duty on tea imports, the survey concludes that the Six, all high-income countries, are not expected to react unfavourably to changes in prices of teas caused by higher duties, if the duty increases are spread over a number of years.

BRITAIN LOOKS FOR MARKETS

THIS is a busy month in the negotiation of Britain's trading relations with other countries. It began with a meeting of British and German officials in Bonn to explore the possibility of negotiating again between the European Economic Community and the European Free Trade Association. The programme for the second week was a series of discussions in London among Ministers and business men of the E.F.T.A. countries and, concurrently, of executives of the central Chambers of Commerce of these countries. The purpose of such gatherings of E.F.T.A. personnel is twofold: to develop the E.F.T.A. as an economic unit and to devise means of associating it with the E.E.C. But progress towards such association is still distressingly slow. While responsible people in both European groups regard the separation of these groups as economically unnatural and politically dangerous, their ideas on association are confused and ineffectual.

Mr. Paul Bareau, representing the London *Daily Mail* (he was City Editor of the London *News Chronicle* until that newspaper was absorbed by the *Mail*), has returned from a visit to Bonn to write a disturbing account of a long conversation with Dr. Adenauer. He found the West German leader "wholly preoccupied with political issues" and believing that the economic division of Europe was a comparatively trifling matter that could be left to the technicians. "The view which emerged after the Macmillan-Adenauer meeting last August that Britain was about to plunge into Europe must have been based on a very false interpretation of what passed between the two men", wrote Mr. Bareau in the *Mail*. The "unmistakable impression" that he carried away from a "somewhat disillusioning visit" to Germany was that the economic division of Europe would "persist for a few years at least". British Ministers, of whom most who are officially concerned with the problem have recently made public utterances concerning it, emphasise both the political importance and the economic difficulty of reaching a settlement. They do not, however, speak with one voice. Mr. R. A. Butler, present Home Secretary and former Chancellor of the Exchequer, and Mr. Reginald Maudling, President of the Board of Trade, seem more willing than Mr. Selwyn Lloyd, present Chancellor of the Exchequer, to recognise Britain's obligations to the Commonwealth and to the E.F.T.A.—and to British farmers—as obstructions in the path of negotiations with the E.E.C., while Mr. Edward Heath, the Minister specially responsible for European affairs, has hinted that Britain could subscribe to the Rome Treaty if it were amended.

The attitudes of Mr. Butler and Mr. Maudling are specially significant. When Mr. Butler said at the end of last month "there are, of course, many reasons why some agreement between the two groups is desirable—if not essential" he had already made it clear that in his mind "some agreement" did not mean anything like merging the two groups; for he could not envisage acceptance by Britain of a common external tariff (radically changing present trading arrangements within the Commonwealth) or of the arrangements for agriculture adopted by the E.E.C. Mr. Maudling's criticisms—also at the end of October—of those who urged that Britain should join the Common Market "irrespective of the consequences to the Commonwealth and to our own agriculture" have special significance now because no other Minister has in the past worked so hard to associate Britain economically with the whole European Continent. While the British Government seems confused and hesitant, events compel it to develop trade with the other countries of the E.F.T.A., and the group's discussions in London this month will probably strengthen it as a separate entity rather than impel it towards the rival group. At the same time, trade with the other countries of the Commonwealth is regaining its former importance in the official mind. During the rapid post-war development of Continental Europe the idea arose in Britain that the markets of the Commonwealth were not dynamic and that British exporters should make their main effort in Europe; but the subsequent difficulties were discouraging. The long-term potentialities of the Commonwealth markets are now stressed again; and efforts to sell in those markets seem particularly appropriate now because the deficits of the overseas sterling countries, resulting partly from increased imports from outside the sterling area, will seriously affect the position of sterling if they persist.

However, another possibility has attracted notice: not an alternative but a supplement to trade with western Europe and the Commonwealth. The Industrial and Trade Fairs Organisation has presented a most impressive progress report on the British Trade Fair which it is organising in Moscow; and a delegation from the Institute of Directors—six business men who direct some of Britain's biggest financial and industrial companies—has declared itself, in a report on a recent exploratory visit to the Soviet Union, "profoundly impressed" by the potentialities of that market. Sir James Hutchinson, President of the Association of British Chambers of Commerce (which, jointly with the All-Union Chamber of Commerce of the U.S.S.R, is sponsoring the Fair in Moscow, and a complementary Soviet Fair in London), explained that the British venture would be by far the largest foreign fair ever held in the Soviet Union. It is supported by more than 620 Britain firms and will take about 2,000 British personnel to Moscow before it opens next May. Specially significant is the fact that the British Government—though it accords its blessing to the venture and will be represented in an important exhibit by the Board of Trade—is not involved financially: the Fair will be a demonstration of unsubsidised free enterprise, undertaken by business men who expect to do substantial business, at first mainly in capital goods but increasingly also in consumer goods. Britain's traders are not disillusioned with the west European market, with the Commonwealth market, or with the north American market (despite its present decline), but they must look all over the world for outlets for their goods.

A BIGGER DEFICIT IN FOREIGN TRADE

INDIA has run a substantially bigger deficit in her foreign trade from April to September 1960 than she did in the corresponding six months of 1959. The provisional figures for September 1960, issued this week, complete the picture for the first half of the current financial year. They show that the increase in exports (including re-exports) of merchandise has been only fractional, whereas the increase in imports has been substantial, so the balance of trade has worsened. The provisional figures for April-September 1960 (with the revised figures for the corresponding period of 1959 in brackets) are as follows: exports, including re-exports, were Rs. 301.44 crores (against Rs. 297.64 crores); imports were Rs. 483.91 crores (against Rs. 468.01 crores); and so the trade deficit widened to Rs. 182.47 crores (from Rs. 170.37 crores). It is worth noting that, last year, the provisional figures for April-September exaggerated exports and under-estimated imports. When they were revised, the adverse balance of trade in merchandise turned out to be Rs. 170.37 crores, not the provisionally estimated Rs. 111.19 crores. It is to be hoped that the past half-year's provisional deficit of over Rs. 182 crores will not have to be increased similarly when the revised figures are compiled.

To some extent, an increase in the trade deficit for April-September 1960 was only to be expected. The import policy for the half-year was somewhat more liberal than that for the corresponding period of 1959. It had to be, since the pace of economic development was gathering momentum, and industrial requirements were rising with the growth of production. Yet, the deficit for the first six months of the current financial year does seem to be unusually large. The reason why it is so is that exports have been lagging. Years of homilies and speeches about export promotion have yielded the result that although industrial production has been substantially higher than in 1959, exports have increased by the negligible fraction of a little over 1 percent. The prices fetched by most of the major exportable commodities, such as jute goods, tea and cotton textiles, have probably been higher this year than they were last. It seems, therefore, that in some important cases, the volume of exports has shrunk considerably. This is certainly true of tea; the north Indian crop was not only delayed but also badly damaged by the drought earlier this year, to such an extent that the shortfall in exports from Calcutta could not have been made up by an increase in exports of south Indian tea from Cochin.

The outlook for India's foreign trade during the current six-monthly period (October 1960 to March 1961) is frankly discouraging. Commercial imports have already been cut under the import policy announced about six weeks ago. Further cuts may be in the offing, considering that Mr. Morarji Desai has been rather shy about telling the country approximately how much foreign aid he was promised for balance-of-payments support during his recent tour abroad. As for exports, there is little hope that the tea industry will be able to earn as much as it did a year ago; the shortfall in north Indian production will not be made up, and internal demand is strong, so no rise is likely in the volume of tea sold abroad. The jute industry, meanwhile, has been forced to cut its production because of the fibre shortage; its export earnings, however, may show a modest increase, since gunny prices are rather high—certainly higher than is good for the long-term health of the industry. Cotton textile exports have not been faring badly so far, but it is hard to believe that the Indian products can do as well if world markets become more competitive in the coming months. As for mineral ores, the State Trading Corporation's bungling continues to hamper exports.

Provided she can get the foreign aid, there is nothing inherently wrong in India going on importing more than she is exporting. It is arguable that an import surplus is a "built-in" feature of a developing economy. What is wrong is that this country's exports are lagging behind so badly. Trade and industry may be partly to blame, especially in the case of commodities to which the Government has handed a home market on a silver platter. But the fact is that the Government itself is not serious about increasing exports. No doubt many fine speeches are made on the subject, and challenging export targets are announced. But when it comes to taking firm decisions which can increase the sale of Indian products abroad, the Secretariats are found in deep slumber. It seems India's export drive will never succeed until somebody invents for the Commerce and Industry Ministry a massive machine which readily converts gaseous verbosity into positive action.

Current News and Comment

Isaac Holdens Offer

On 14th November, 1960, Isaac Holdens (India) Ltd is offering 292,500 ordinary shares of Rs. 10 each for public subscription at par. The present issue is of 470,000 ordinary shares of Rs. 10 each. Of this, shares worth Rs. 17.75 lakhs have already been earmarked for subscription. The present issued share capital is Rs. 28 lakhs divided into ordinary shares of Rs. 10 each. (Fuller details of the announcement appear on later pages in this issue). The Company has started to build a factory at the Anglo-India Jagatdal jute mill premises in West Bengal for the sorting, scouring and combing of wooltops on a tariff payment basis. It is not intended that the Company should buy wool or sell tops on its own account, but raw wool will be consigned to it by topmakers and others. It may be noted that wooltops are the principal raw material of the worsted spinning industry, and raw wool must be sorted, scoured and combed before use. Foreign collaboration has been arranged with Isaac Holden and Sons Ltd of Bradford, England. This concern has also subscribed for a fair quantity of ordinary shares in the Company. Messrs Duncan Brothers and Co. Ltd, a well-known Calcutta managing agency house, are the managing agents. The Anglo-India Jute Mills Co. Ltd will also participate in the project.

The prospects for the venture appear extremely bright. There is a good demand for wooltops in India. The consumption was more than 15 million lbs in 1959 and the total is expected to increase steadily. By undertaking production on a tariff payment basis, the Company has ensured reasonable profits for itself.

The factory has an installed capacity for producing 10 million lbs of wooltops a year and this production is intended to be achieved in two stages. The first stage is nearly completed at an estimated cost of Rs. 57.47 lakhs. Production will begin at the end of 1960. The cost of the second stage of development is estimated at Rs. 62.49 lakhs, to which the proceeds of the present issue will contribute. Steps have been taken for completing the second stage as soon as possible. The directors are optimistic about the prospect for profitable working when production begins.

Jay Engineering Pays More

The Jay Engineering Works Ltd has produced satisfactory results for the year ended March 1960. Providing Rs. 19.5 lakhs (against Rs. 25 lakhs) for taxation and Rs. 7 lakhs (against Rs. 5.04 lakhs) for development rebate reserve, the profit has increased from Rs. 14.18 lakhs to Rs. 25.44 lakhs, mainly due to a rise from Rs. 5.29 crores to Rs. 7.16 crores in sales. A taxable ordinary dividend of 17.15 percent has been declared. This is covered more than thrice and offers a yield of 6 percent at a price of Rs. 28.37 a share. The ordinary dividend was 12 percent, tax-free, in the previous year. General reserve is allocated Rs. 4.80 lakhs and the carry-forward is Rs. 6,322, against Rs. 4,647 brought in. Production of sewing machines and fans has increased substantially. Exports have also improved to a great extent.

National Insulated Cable Does Well

The report of the National Insulated Cable Co. of India Ltd for the year ended March 1960 is encouraging. Production has increased due to the expansion which has already been completed. The copper rod rolling mill has been installed and manufacture has begun. The directors are considering further expansion schemes; it is intended to make armoured cables for railway signalling and other purposes. The directors, nevertheless, point out that competition has increased with the setting up of other factories. The demand for A.C.S.R. products has been slack, but there is hope that it will increase as electrical generating capacity is expanded further. The directors expect that in the future there will be adequate demand to help in the fuller use of the installed capacity.

After transferring Rs. 3.87 lakhs (against Rs. 1.92 lakhs) for depreciation, the profit has improved to Rs. 70.74 lakhs from 36.78 lakhs, mainly because of a rise in sales to Rs. 3.49 crores from Rs. 1.92 crores. A taxable ordinary dividend of 25 percent has been declared. It is covered more than thrice and offers a yield of 7.9 percent at the price of Rs. 31.75 a share. The dividend was 20 percent, tax-free, in the previous year. Taxation is allocated Rs. 29.03 lakhs (against Rs. 20.11 lakhs), general reserve Rs. 6.5 lakhs (against Rs. 3.5 lakhs), bad and doubtful debts reserve Rs. 1.45 lakhs, dividend equalisation fund Rs. 6.5 lakhs and development rebate reserve Rs. 3.86 lakhs (against Rs. 49,725). The carry-forward is Rs. 86,389, compared with Rs. 46,185 brought in. It may be noted that 300,000 ordinary shares of Rs. 10 each have been issued, increasing the ordinary share capital to Rs. 90 lakhs. Reserves are Rs. 1.38 crores and current assets Rs. 2.88 crores. Fixed assets stand at Rs. 79.84 lakhs.

Ahmedabad Electricity Profit Up

The working of the Ahmedabad Electricity Co. Ltd for the year ended March 1960 shows a profit of Rs. 78.42 lakhs, against Rs. 68.99 lakhs in the previous year. The profit figure has been calculated after allowing Rs. 48.51 lakhs (against Rs. 45.33 lakhs) for depreciation. The Company earned Rs. 4.55 crores (against Rs. 4.93 crores) from the sale of energy. Allocations include Rs. 3.80 lakhs (against Rs. 3.69 lakhs) for contingency reserve, Rs. 6.50 lakhs (against Rs. 4.68 lakhs) for development reserve, and Rs. 1 lakh (against Rs. 74,894) for dividend equalisation reserve. The proposed dividends absorb Rs. 61.23 lakhs (against Rs. 59.04 lakhs). After making certain other adjustments, Rs. 638 is carried forward, against Rs. 4,298 brought in.

The directors state that 10,082 new consumers were given connections during the year, bringing the total to 71,983. Kilowatt-hours sold increased by 1.22 percent to 698,212,519. The total generating capacity of the Sabramati power-station is 157,500 kilowatts at present. The Company has taken a loan of $3.9 million from the U.S. Development Loan Fund authorities to cover the foreign exchange component of the new plant for expanding its generating capacity by 30 megawatts. According to the directors, the new Companies Amendment Bill, 1959, provides that the managing agents should not be entitled to appoint the chairman of the board of directors, so article 103 is being changed in anticipation of the provision being promulgated as law. The directors have decided to terminate the services of Nixon Forrest and Co. Ltd as the Company's London agents.

Good Results from Bombay Burmah

The Bombay Burmah Trading Corporation Ltd reports encouraging results for the year ended May 1960. The gross profit is Rs. 131.92 lakhs, or Rs. 37.90 lakhs more than in the previous year. Trading receipts increased from Rs. 4.45 crores to Rs. 4.92 crores. Of this, sale of tea accounted for Rs. 1.97 crores (against Rs. 1.84 crores), coffee for Rs. 26.98 lakhs (against Rs. 34.36 lakhs), manufactured goods for Rs. 48.33 lakhs (against Rs. 36.81 lakhs) and timber for Rs. 1.83 crores (against Rs. 1.39 crores). Dividends from subsidiary companies increased from Rs. 60,274 to Rs. 16.21 lakhs. The Company's tea estates in south India produced a record crop of 7.54 million lbs, against 6.96 million lbs in 1958-59. The unit cost of made tea declined from Rs. 1.38 to Rs. 1.324 a lb, and average gross returns from Rs. 2.36 to Rs. 2.336 a lb. As for coffee, the yield from the Coorg estates fell, but the decrease was partly offset by the bigger crops from new areas coming into bearing elsewhere. The total production from the south Indian estates amounted to 17,188 cwt, against 19,991 cwt, the fall being due mainly to adverse weather conditions. The production of cardamoms declined from 14,936 lbs to 9,812 lbs. North Borneo Timbers Ltd worked well during 1959. The opening up of the Queen cocoa estate continued, 275 acres having been planted by 31st May, 1960. A start was made towards the end of the year on timber extraction in new forest areas. At the Company's Wallace Bay branch in North Borneo, production and purchases of hardwood logs reached the high level of 125,131 tons, against 116,928 tons in the previous year. Surveys are now in progress in additional forest areas adjacent to the existing concessions. The directors state that the activities of Afco Private Ltd will be regrouped at the new Erangal site during the current year with a view to more effective working, although no immediate improvement can be expected. Trading in Burma remained restricted. The forest activity of the Joint Timber Co. Ltd, Thailand, in which Bombay Burmah Trading has 26 percent of the equity, was largely confined to felling in small residual areas. Working permits have expired and although negotiations for renewal continue, no progress has been made.

After providing Rs. 26.67 lakhs for depreciation (against Rs. 31.71 lakhs) and Rs. 48.20 lakhs for taxation (against Rs. 37.85 lakhs), the net profit of the Company amounts to Rs. 57.04 lakhs, against Rs. 24.44 lakhs in 1958-59. A sum of Rs. 1.83 lakhs has been transferred from reserves no longer required. Development rebate reserve absorbs Rs. 2.44 lakhs (against Rs. 3.70 lakhs) and dividend equalisation reserve Rs. 10 lakhs (against nil). Investment reserve gets Rs. 2 lakhs (against Rs. 7 lakhs) and dividends absorb Rs. 40.12 lakhs (against Rs. 25.41 lakhs). After making various adjustments, Rs. 1.47 lakhs is carried forward, against Rs. 67,223 brought in. The shares of the Company are quoted around Rs. 588, offering a yield of about 4.6 percent.

Hukumchand Jute Earns More

While the results of the Hukumchand Jute Mills Ltd for the year ended March 1960 are satisfactory, the directors take a cautious view of the prospects considering the raw jute shortage. They have set apart an amount of Rs. 70,000 for paying a further additional preference dividend

if the Preference Shares (Regulation of Dividends) Bill is enacted. The Company's profit has increased to Rs. 45.68 lakhs from Rs. 32.07 lakhs. A taxable dividend of 28½ percent has been declared. This gives a yield of 10 percent at the price of Rs. 21.50 a share and is covered more than three times. Development rebate reserve is allocated Rs. 3.90 lakhs (against Rs. 75,000), taxation provision Rs. 20 lakhs (against Rs. 17.28 lakhs) and general reserve Rs. 3.01 lakhs, (against Rs. 56,156). The carry-forward is Rs. 163,175, against Rs. 107,839 brought in. Sales of gunnies declined to Rs. 4.47 crores from Rs. 5.02 crores, but stocks increased to Rs. 38.61 lakhs from Rs. 33.97 lakhs.

Bigger Profit for National Rolling

The working of National Rolling and Steel Ropes Ltd has been satisfactory during the year ended June 1960. The expansion schemes have begun to show results. The modern high-speed rolling mill in Shamnugger is producing M. S. rods in coils. The supply of raw materials has improved and production has increased. The directors have asked the Government for permission to buy more equipment for the balancing plant in order to raise production further. After providing Rs. 8.78 lakhs (against Rs. 4.81 lakhs) for depreciation, the Company's profit has improved from Rs. 10.54 lakhs to Rs. 22.44 lakhs, mainly because of a rise in sales from Rs. 93.41 lakhs to Rs. 1.40 crores. A taxable ordinary dividend of 13 percent has been declared. It is covered more than four times and offers a yield of 7.2 percent at a price of Rs. 18.12 a share. The ordinary dividend was 10 percent in the previous year. Taxation is allocated Rs. 12.5 lakhs (against Rs. 1.60 lakhs) and general reserve Rs. 3 lakhs (against Rs. 3.5 lakhs). Bringing in Rs. 11.5 lakhs from general reserve, Rs. 10 lakhs has been transferred to capital redemption reserve fund and Rs. 1.5 lakhs has been used for paying the premium on the preference shares which have been redeemed during the past year. The carry-forward is Rs. 131,135, against Rs. 26,079 brought in.

Tube Investments Profit Up

Tube Investments of India Ltd has reported encouraging results for the year ended July 1960 in spite of a serious dislocation in the production of bicycles due to a prolonged strike and the short supply of raw materials. Sales have risen from Rs. 3.23 crores to Rs. 3.79 crores and the gross profit from Rs. 69.54 lakhs to Rs. 86.96 lakhs. Depreciation gets Rs. 19.50 lakhs (against Rs. 14.26 lakhs), development rebate reserve Rs. 16.83 lakhs (against Rs. 8.17 lakhs) and taxation Rs. 23 lakhs (same). No provision has been made for general reserve, dividend equalisation reserve and replacement and research reserve, which together claimed Rs. 8 lakhs in the previous year. The proposed dividends absorb Rs. 24.99 lakhs (against Rs. 16.34 lakhs), leaving Rs. 3.04 lakhs to be carried forward, against Rs. 41,074 brought in.

The directors state that development work is going on in all departments. Plant and machinery were received during the year for the manufacture of bottom bracket axles. Production has commenced and the axles will be available to dealers in substantial quantities by January 1961. The delay in the arrival of certain machinery hampered the completion of the chain project, for which the Company has sought the collaboration of a U.S. firm and a new company has been registered. The chains are expected to be in the market soon. The Company has also received the Government's approval for the manufacture of lamps for all types of motor-vehicles and bicycles. The second tube mill went into operation in August.

Ruia Textiles Earn More

The results of the Ruia group of textile mills—Dawn, Phoenix and Bradbury—for the year ended March 1960 are satisfactory. The gross profit of Dawn Mills has risen from Rs. 22.06 lakhs to Rs. 32.55 lakhs, and of Phoenix Mills from Rs. 18.75 lakhs to Rs. 31.28 lakhs. Bradbury Mills has turned the previous year's loss of Rs. 27,306 into a profit of Rs. 8.94 lakhs. Profits have risen even though there was no large increase in sales revenue. Bradbury's sales increased from Rs. 146 lakhs to Rs. 158 lakhs and those of Dawn from Rs. 174 lakhs to Rs. 181 lakhs. But in the case of Phoenix, sales fell by Rs. 2 lakhs to Rs. 297 lakhs. Gross profit as a percentage of sales works out to 18 for Dawn, 10 for Phoenix and 5.6 for Bradbury. It is difficult to explain these wide variations merely in terms of the pattern of production of different units.

After providing Rs. 4.59 lakhs for depreciation (against Rs. 5 lakhs), Rs. 1.13 lakhs for development rebate (against Rs. 35,863) and Rs. 12 lakhs for taxation (against Rs. 9.80 lakhs), the net profit of Dawn Mills amounts to Rs. 11.92 lakhs, against Rs. 5.06 lakhs. The dividend of Rs. 15 a share, less tax, absorbs Rs. 8.4 lakhs. After making certain adjustments, Rs. 3,64,674 has been carried forward, against Rs. 12,102 brought in. Phoenix shows a net profit of Rs. 9.66 lakhs, against Rs. 1.56 lakhs, after providing Rs. 8.47 lakhs for depreciation and development rebate reserve (against Rs. 9.08 lakhs) and Rs. 10.50 lakhs for taxation (against Rs. 6.75 lakhs). The proposed dividend absorbs Rs. 7.20 lakhs (against Rs. 4.80 lakhs), leaving Rs. 2.82 lakhs to be carried forward, against Rs. 36,434 brought in. After providing Rs. 4.20 lakhs for depreciation (against 3.65 lakhs) and Rs 2.02 lakhs for development rebate reserve (against Rs. 2.35 lakhs), Bradbury Mills shows a net profit of Rs. 2.19 lakhs, against a loss of Rs. 6.54 lakhs in the previous year. The taxable ordinary dividend of Rs. 5 a share and the preference dividend absorb Rs. 2.03 lakhs, leaving Rs. 64,106 to go forward, against Rs. 47,570 brought in. All the units have made useful additions to their machinery. The value of the machinery installed by Bradbury is Rs. 7.79 lakhs and that installed by Phoenix is Rs. 6.67 lakhs. The figure for Dawn is Rs. 3.43 lakhs. The machinery consists mainly of high-speed combing sets. At their current prices, the shares of Dawn Mills yield 7.89 percent, and those of Phoenix 7.5 percent. The yield on Bradbury's shares is only 3.5 percent.

Ultramarine Blue Project

Ultramarine and Pigments Ltd is a new Company which will undertake the manufacture of ultramarine blue. The project has been sponsored by the Chemidye Trading Company of Bombay. The former Company has been registered in Bombay, but the factory will be located near Madras. The plant will have a production capacity of 100 tons of ultramarine blue a month. It is expected to go into production some time next year. Reckitt and Coleman of Calcutta, it is said, is the only concern producing ultramarine blue in India at present and the capacity of its plant is estimated at around 1,500 tons a year. When the proposed Madras factory goes into production, the two units will be able to meet the entire current demand of domestic and industrial consumers, which is estimated at between 2,500 tons and 3,000 tons a year. Ultramarine and Pigments Ltd has entered into a technical collaboration agreement with foreign interests. It will have an authorised capital of Rs. 50 lakhs, and is expected to enter the market with a public issue before the end of this month. The Industrial Credit and Investment Corporation of India, it is reported, has agreed to give the Company a foreign exchange loan of Rs. 7 lakhs for importing machinery. It will also participate in the share capital of the Company.

Licensing Cloth Exports to U.K.

Reliable reports indicate that representatives of the Indian textile industry have asked the Central Government to shift the licensing system for regulating the textile trade between India and the U.K. from Britain to India. Exports of cloth from India, Pakistan and Hongkong to the U.K. are regulated through voluntary restrictions. The export quota for India is fixed at 175 million yards a year. The restriction is being implemented through the licensing of imports by the U.K. Board of Trade. Representatives of the Indian industry complain that since licences in the U.K. are issued on the basis of past performance, a virtual monopoly of importers has developed in that country. The processors there cannot make any direct purchases from India. This puts the British importers in a strong bargaining position. It has also been pointed out that exports of made-up items like towels and napkins have been hit particularly hard. British wholesalers have begun to import these items from European countries, particularly Italy and Spain, instead of India, because imports from the Continent can be arranged without the trouble of securing import licences. The loss of the towel trade is reported to be considerable, although exports of grey cloth have risen recently. The question of shifting the licensing system from the U.K. to India is likely to be considered next month, when representatives of the British industry visit India to review the working of the voluntary restriction agreement.

Cotton Prices Rise

The April contract in the cotton futures market in Bombay touched a high of Rs. 610 last Friday. When hedge trading officially commenced on 18th October, the contract was quoted around Rs. 566 for three quintals. The sharp rise in the futures market reflects essentially the continued strength of the spot market. Only CO2 cotton is available below the ceiling rate; all other varieties are quoted higher, with premiums ranging from Rs. 10 to Rs. 45. New crop arrivals are reported to be satisfactory, but in view of the record low carry-over from the previous season, fresh supplies still cannot satisfy the normal mill demand. The authorities, however, seem to be determined to hold prices down. The Textile Commissioner has deputed officers to the growing areas of Punjab, Berar, Khandesh and Vidarbha; and mills have been asked to tell the Commissioner how much cotton they need from each of the areas where supplies have started moving. The quantity applied for requisitioning by mills up to 3rd November is estimated at around 30,000 bales. The Textile Commissioner is seeking the co-operation of the Indian Cotton Mills Federation in implementing the scheme. The Federation, it is said, has been asked to accept the responsibility for distributing the requisitioned cotton to needy mills. The trade has criticised the interference by the authorities in the normal functioning of the market, but when prices remain above the statutory ceiling requisitioning cannot be avoided if price control is to be successful. The trade's difficulties should prove temporary unless the general estimate of a 5-million-bale crop turns out to be too high.

Extensive requisitioning apart, the Textile Commissioner has said that no export quota will be issued for Bengal Deshi cotton until mills cover their requirements of this variety and its price stabilises below the ceiling. Of all the varieties, Bengal Deshi has been commanding the highest premium mainly because the overseas demand is good. There is no control over the price of cotton meant for export. Enquiries from the trade indicate that exporters have already sold about 80,000 bales of Bengal Deshi, subject to export quotas. The Government's anxiety to hold prices down is understandable. But since only a few mills are regular consumers of Bengal Deshi cotton, it seems unwise to delay the announcement of the export quota until they complete their purchases. Foreign buyers cannot be expected to postpone their purchases indefinitely. They will naturally try to secure supplies from other sources if the Indian Government does not release the export quota in time. If the Government wants to ensure that there are adequate supplies for domestic consumers, it can ask them to notify their requirements and requisition the cotton.

General Insurance Reforms

With the end of the statutory three-year period, the General Insurance Council of the Insurance Association of India is electing a new executive committee. The committee will have an important, and difficult, rôle to play in advising general insurers about improving their business standards and offering more efficient service to policyholders. One of its main problems will arise from the Code of Conduct formulated some years ago. The Code does not appear to have been particularly successful, and the fact was implicitly recognised when it was decided to appoint a sub-committee to "take stock of the present position of general insurance and to recommend the future course." The sub-committee's recommendations have not yet been published. It is believed that the executive committee has discussed them at two sessions, but nobody knows what positive results followed from the discussions. The new executive committee might not, therefore, find that it has a very pleasant task ahead of it. A fresh approach will be necessary if the condition of general insurance business is to be improved. The committee will also be expected to advise the Controller of Insurance about such matters as keeping a check on the expenses of insurers. Its advice has not been very effective in the past; the Controller has chosen arbitrary and theoretical ways of fixing the additional limits on expenses. He will have to be persuaded to give more attention to such factors as the increases in field expenses of insurers, in wages and in the cost of living. Greater agreement might be secured on these points if they are discussed fully before the Controller announces his final decision.

Negotiating Barter Deals

Rupee payment arrangements have helped balance India's trade with east European countries. So the possibility of negotiating similar arrangements with west European countries is being examined. Even before the Barter Committee was set up in August 1959, the Central Commerce and Industry Ministry sanctioned a few *ad hoc* barters to be processed by the State Trading Corporation for the import of potash against gunnies and steel against iron and manganese ores. The total number of barter proposals approved by the Committee until 1st August, 1960, was 31. Of this, eight proposals have been implemented. No action has been taken on five proposals because the parties concerned did not contact the S.T.C. for the execution of the barters. As for the remaining 18 cases, action has been initiated by the parties concerned to arrange for exports. The imports will include fertilisers, steel, art silk yarn, tyres, watches and aircraft. The exports will consist mostly of manganese ore, jute goods and vegetable oils.

The main guiding principle in approving barters is the "essentiality" of the imports and the "additionality" of the exports. The essentiality of the imports is easy to establish, but the "additionality" of exports is much more difficult to assess. Although the working of barter deals has highlighted many serious abuses, they are considered necessary when the price of the commodity is not competitive abroad and new items have to be introduced in foreign markets. Many useful suggestions were made at the last meeting of the Barter Committee for the efficient administration of barter deals. It was suggested that their negotiation should be left entirely to one organisation—the State Trading Corporation—and that the Ministry should confine itself merely to the approval of the barter proposals submitted by the S.T.C. Imports under barter deals should be limited to the essential items which have to be imported in any case. The Government should prescribe a limit up to which imports of such items may be negotiated under barter. This ceiling should be within the ceiling allowed by the Government for the item concerned. The State Trading Corporation should ensure that the matching exports are of such items as have not been previously exported to the destinations concerned. To ensure against re-export, the S.T.C. should insist not only on the production of landing certificates but also on exporters divulging the names of the actual consumers so that test checks can be made.

Slum Clearance in Madras

The clearance of slums in Madras city is the main aim of the programme recently framed by the Mayor. The latter expects that the City Council will put up tenements and offer them at lower rents to workers. During the recent cleanliness week in the city, some people criticised the standards of sanitation in Madras. But those who support the Corporation point to its slum improvement scheme to show that it is doing its best under difficult conditions. They add that the area of the city has been extended, and its parts do not yet enjoy the usual amenities in spite of increased taxes. The Corporation now wants a bigger subsidy from the Central Government and a reduction in its loan commitments. The social survey of the city carried out by Mr. C. W. Ranson in 1934 showed that the slum problem was not too great, although it has grown in proportions after the second World War. The Improvement Trust, meanwhile, has not been able to cope fully with the influx of villagers from nearby districts into the slums. This is a point which is likely to be made clear by the next census. As for tenements, slum-dwellers say that they are costly and the rent of Rs 12 a month cannot be paid by a worker. They add that employers who provide quarters to their workers charge much less. It is probable that the City Council as an employer will be bound to do the same in future.

Flood Havoc in U.P.

Floods in Uttar Pradesh are nothing new, but this year's unprecedented floods in Lucknow—the capital city—have worried the State Government. The Gomti which flooded the city has no pretensions to be a great river any more than the Cooum in Madras, but by inundating nearly three-fourths of the city, it has shown its power for mischief beyond doubt. Not only Lucknow but many townships on either side of the entire course of the river were mercilessly lashed by its waters. Secretariat *pundits* have referred to the Inter-Provincial Flood Conference in Lucknow in 1939 which stressed the utility of embankments as a protective measure against floods. It is on embankments principally that various flood control schemes in the State have been based, although raising the level of villages has also become fashionable. The levels of towns cannot, however, be raised as in villages. The common sense alternative is, therefore, to deepen the river-beds. A formidable case for this has emerged from the disclosure that the water-level in some of the towns upstream was a full 2 feet below that reached in the worst floods of previous years. If, however, the flood damage was unprecedented, it is because the silting of the rivers and the raising of the river-beds have made a difference. If a water-level of 360 feet was the danger level in 1923, it now spells greater danger with a level of even 350 feet. This is the obvious conclusion to which the experts are now slowly waking up. Past records of rainfall and water-levels need to be reinterpreted imaginatively if cities with large populations are not to be overtaken by floods without warning. A study of the damage caused by floods in U.P. during the period 1953-58 shows that the area affected varies from 2.3 million acres during low flood years to about 10 million acres during heavy floods. The average area affected by medium floods is about 8 million acres. U.P.'s Department of Irrigation has prepared a Rs. 54-crore plan to raise the level of 7,000 villages spread over a period of years. During the second plan period, a sum of Rs. 9 crores, it is expected, will be spent on marginal embankments. Normally, floods are greater in magnitude in the eastern districts where precipitation is generally heavier and the country slopes are poorer.

Tea in the Third Plan

The targets for tea production and exports set under the third plan are 850 million lbs and 600 million lbs, respectively. They are based on the recommendations of a Government-appointed Working Group, which has also suggested a scheme of development for the industry in a report submitted to the Planning Commission. The Commission, while accepting these targets, has not yet taken decision on the other measures which are needed to raise output and exports. In a pamphlet entitled "Place of Tea in Draft Third Five Year Plan and Possibility of Improving Export Earning of India by Exporting More Tea", the Indian Tea Planters Association of Jalpaiguri quotes extracts from the speech of Mr. Satish Chandra, Central Deputy Minister of Commerce, to show that the Government still does not take a realistic view of the industry's difficulties. Referring to the Deputy Minister's view that Indian tea must not get priced out of overseas markets, the Association points out that tea is not sold by direct negotiations between producers and buyers, but through public auctions where the latter dictate the price according to supply and demand. The buyer also takes note of the cost factor in fixing his prices. India's tea output consists of 40 percent of quality and medium grades and 60 percent of the common varieties. It is for the latter that India is at a competitive disadvantage due to production costs being higher than those of most other countries. The cost structure here is rigid because of statutory obligations, higher prices of raw materials and heavy taxation.

Dealing with Mr. Chandra's suggestions to improve quality, the pamphlet says no serious complaint has been received that the "quality of Indian tea is below the standard of other countries'." But if people abroad have been led to believe that the quality of Ceylon teas is better than the competing grades from India, it is because of the extensive propaganda which Ceylon does abroad. Mr. P. McGrath, chairman of the Tea Council of Ireland, during his recent visit to India remarked that if one went to England, one might get an impression that only Ceylon tea was imported in that country. An extensive campaign for sales promotion is, therefore, important. The pamphlet disagrees with the suggestion that India should expand her exports at the cost of internal consumption, if necessary. A strong home market promotes stability The need, instead, is for a big scheme for replanting as well as new planting.

E. E. C. versus E. F. T. A.

A close analysis of trade developments in the context of the split between the "Six" and the "Seven" in Europe is contained in the latest bulletin of the U. N. Economic Commission for Europe. It points out that rates of economic growth and trade expansion have been generally higher, for some years past, in the individual countries of the European Economic Community than in those of the European Free Trade Association. The rates have almost certainly so far been more important in the trade patterns than have the direct and indirect effects of setting up the two groups. The E.F.T.A. countries became increasingly dependent on the Economic Community both as a market and particularly as a supplier up to 1959. In the first half of 1960, however, exports from the E.F.T.A. to the E.E.C. group rose less fast than either the E.E.C.'s total imports from western Europe or intra-E.F.T.A. trade. E.F.T.A. imports from the E.E.C. area, meanwhile, increased faster than intra-E.F.T.A. trade.

The bulletin goes on to say: "Although exports of the E.F.T.A. countries to the E.E.C. group still

rose by 14 percent in the first half of 1960, and the fall in their share in total E.E.C. imports (and in total E.F.T.A. exports to west European markets) may have been due in part to special factors, it seems possible that these recent changes in trade patterns may be the first signs of a relative loss of ground by the E.F.T.A. countries in E.E.C. markets. If this should continue, the E.F.T.A. countries will tend to benefit less in future than in the past from strong economic expansion in the E.E.C. countries, while also becoming less susceptible to any recessionary influences which may appear from the same source. In the immediate future, the degree of diversion of the E.E.C. countries' demand for imports towards sources of supply within the area is likely to depend largely on the assumptions of European producers and traders about the future relations between the European Economic Community and the Free Trade Association. If the chances of an eventual merger of the two groups—or of an association which substantially reduces or eliminates trade discrimination by each against the other—should appear favourable, the actual degree of discrimination likely to come into effect during the next year or so will probably not be sufficient by itself to bring about large-scale diversion of trade."

The bulletin also reviews the increase in East-West trade, notably between Russia and Britain, West Germany and France. Here it indicates a greater expansion in 1960 than the 10 percent increase in value between 1958 and 1959. Eastern Europe, however, accounts for a very small proportion of the total trade of most west European countries. Big deliveries of industrial plant ordered by Russia in western Europe started in 1959 and have been accelerated in 1960. By means of such imports, Russia saves both time and scarce resources. The bulletin finds it hardly surprising—even in the face of relatively unfavourable price changes—that Russia and other east European countries should continue to increase imports of techniques in fields where the West is more advanced. U.K. exporters are now attaching more importance to east European markets, particularly Russia, the bulletin says. The first stages of implementation of the E.E.C. probably induced exporters in E.F.T.A. countries to make special efforts to increase trade with other markets, including eastern Europe. In the first half of 1960, Britain's deliveries of machinery to Russia were almost two and a half times greater than in the first of last year. The major items were textile machinery and equipment for plastics production and rubber-working. But French and West German exports of machinery to Russia also seem to be expanding fast in 1960.

U. S. Business Conditions

The business news of the past month tends to confirm that the sideways movement which lasted until late summer is giving way to a moderate downturn, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Whether the phase of the business cycle in which the United Sates now finds herself is labelled a readjustment or a recession is not very important. In any case, the slackening is mild. There has been no recession in the material welfare of the American people; *per capita* disposable personal income in real terms touched the highest level in history in the third quarter. Similarly, expenditures on goods and services for final use by consumers, business and the Government continued to rise during the quarter and promise to remain strong. However, the cessation of inventory accumulation has shifted the overall balance of the economy from expansion to contraction.

The cutback in goods going into inventory was instrumental in reducing industrial production by 2½ percent between July and September, and probably somewhat further in October. Adding to the uncertainty have been the failure of retail sales to show the expected autumn upturn and the drop in housing starts in September. The disappointing performance of profits presages a weakening of investment in new plant and equipment. Nothing in current developments contradicts the earlier expectation that the U.S. economy will set new records of performance in 1960. The most comprehensive measures of business activity will reach new peaks for the year as a whole. Nevertheless, disappointment is widespread. In anticipation of a strong catch-up period after the steel strike, and of crossing the threshold into the "Sizzling Sixties," sales budgets, production schedules and earnings expectations were simply set too high at the beginning of the year. The disparity between production and consumption, revealed as time went on in declining order backlogs and accumulated inventories, imposed the necessity for adjustments now under way.

Industrial production, as measured by the U.S. Federal Reserve index (seasonally adjusted, 1957 equals 100), fluctuated within the narrow range of 109-111 from December 1959 to July 1960—a period in which rising activity in some lines offset major adjustments in others. But in August, activity dropped below this range to 108 (revised from 109), and a further decline to 107 was estimated for September. This brought the index 4 points below the January peak. An analysis of the record of industrial production so far in 1960 shows contraction in durable goods industries (almost entirely due to the drop in steel output) offset through June by rising activity in non-durable goods manufacturing. In more recent months, both non-durable and durable goods industries have failed to achieve normal seasonal increases in order inflows and production. The tone for business in the third quarter—slightly weaker but still basically strong—was typified by the most comprehensive of economic measures, the gross national product (G.N.P.). Preliminary estimates by the Council of Economic Advisers indicate that G.N.P. eased during the third quarter to a seasonally adjusted annual rate of $503 billion, down $2 million from the record second quarter. In such a series, where revisions are large and frequent, a decline of only 0.4 percent may not be statistically significant. Later revisions may lessen the decline or wipe it out. But the story these estimates tell is that for the moment the expansion has run out of steam.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 85

Covenanted staff of Lloyds Bank Ltd, Calcutta.

Rs. 50 each

Carritt Moran and Co. Private Ltd, the Imperial Tobacco Co. of India Ltd, Kidderpore, Indian Copper Corporation Ltd, Forbes, Ewart and Figgis Private Ltd.

Rs. 37

Staff of the Associated Electrical Industries (India) Private Ltd.

Rs. 20 each

Associated British Machine Tool Makers (India) Ltd, W.J.W.

Rs. 15

D. A. Carlisle.

Rs. 10 each

Bithaldas Binani, H. K. Fitzgerald.

Rs. 5

B. L. Lahoty.

Rs. 2

S. R. Shroff.

Total Rs. 404.

Previously acknowledged Rs. 1,263.05.
Grand Total Rs. 1,667.05.

COMMERCIAL BANK OF INDIA

WE have seen that the Directors of the Commercial Bank of India, Ltd., which has been in existence for the past 16 years, propose to raise the capital by the further issue of Rs. 20,00,000, 6 percent Preference shares. The new money will, it is promised, at once place the Bank on a profit-earning basis and will give the Bank time to realise to advantage its present capital, the greater part of which is locked up in land in southern India and other properties, which, if sold now, owing to the low price of all securities, would probably result in a loss, but which are expected within a short time to realise full value. This addition to the Bank's capital will give to depositors much greater security, as the value of available assets will be over 1¼ times the present amount of deposits. This should result in an increase in deposits. The Preference shareholders also should be fully secured. The assets held against the shares will, we learn, amount to 250 percent. We understand that intimations have been received that the new shares will be fully applied for. The ordinary shareholders will no doubt welcome the addition to the capital, for with this addition the Bank will at once be placed on a profit-earning footing, in which they will participate. If the Directors' scheme is adopted by the shareholders, this Bank should occupy a very good position.

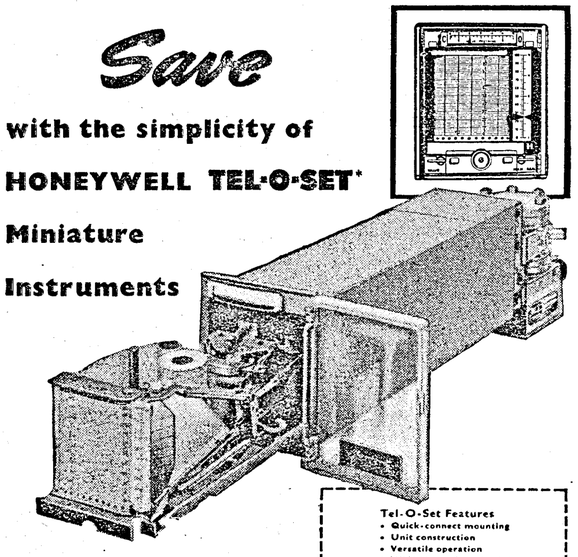
HONEYWELL TEL-O-SET*

Miniature

Instruments



Tel-O-Set Features
- Quick-connect mounting
- Unit construction
- Versatile operation
- Wide range of reset rates
- Low air consumption
- High precision
- Exceptional compactness
- Chart re-roll

NEW and improved *Tel-O-Set* miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell *Tel-O-Set* indicators, recorders and controllers are today's most advanced miniature instruments.

*Trademark of Minneapolis-Honeywell Regulator Co.

A Ditcher's Diary

SO SENATOR KENNEDY HAS MADE IT—IN SPITE OF MY support, in spite of his being a Catholic and in spite of Vice-President Nixon's knowing how to talk to Mr. Khrushchev. Mr. Kennedy knew how to talk to his people, especially on T.V.; and, as I write it, more than 20 million people have already voted for him. Mr. Cabot Lodge would perhaps have made a better Vice-President; but the electoral system of the United States does not permit that. Mr. Lyndon Johnson is not my favourite, but the Vice-President's powers are few—I never for a moment believed that Mr. Nixon really took part in any important decisions. Like Britain, India prefers the Democrats; it is not necessary to look closely into the reasons, if any. Who will be Mr. Kennedy's Secretary of State? Mr. Adlai Stevenson, or Mr. Chester Bowles? The latter is better known hereabouts, and I gather that he was "very popular" in New Delhi. I distrust that kind of popularity; but why not hope for a while that the new Administration will be friendlier towards India? Let us also hope that the friendship will not be only in the form of "advertising copy" (which Mr. Bowles wrote) but chiefly in the shape of dollar bills.

WHOEVER WON THE GAITSKELL-WILSON CONTEST, the Labour Party lost it. I like Sec's verse in a recent issue of the *Reporter*, which begins:

> When a fellow's got a job and a nice little house
> And his paycheck grows like a flower.
> The guy's going to live
> Conservative
> And stick with the party in power.

But that is only part of the story, that an affluent society has no time for idealism which is the Left's chief asset. The Labour Party's idealism today is of the wrong kind; and it simply does not represent the people of Britain. The British dislike a referendum; but if one were held I am sure the verdict would not be unilateralist. Politically unsubtle, almost pig-headed, the British may be—and look where political sophistication has taken the French—but they certainly have a political instinct. I simply do not understand how Britain can be in the Atlantic alliance and then renounce the bomb or bellyache about the Polaris anchorage. Airstrip No. 1 Britain might be; but can any Briton seriously believe that his island will be spared if he stays out of the American alliance? It is not for me to criticise Indian neutralism; but in the European context the concept is plainly irrelevant. It is extremely doubtful that India would be neutral if it were situated in Europe. But then, unilateralism was hardly the issue between Mr. Gaitskell and Mr. Wilson, for the latter is no unilateralist either. I know that various principles have been mentioned in the debate; but at bottom it was a struggle for power; and the Labour Party remains what Sec has called "a two-headed party with a playback mind". That is one head too many; and I cannot see the Party unifying while in the political wilderness—and, of course, it will not be back in power until it has achieved unity.

A SHANGRI-LA EQUIPPED WITH MODERN COMFORTS has, I imagine, long been a tourists' dream; and it is a tribute to the effectiveness of Nepalese publicity that on the basis of an illusion such as this, a rapidly expanding tourist trade is being built up in that country. I use the term "illusion" deliberately, for Nepal is neither a Shangri-la nor liberally provided with modern comforts; yet her success in advertising her exotic attractions has been remarkable. A colleague who visited Kathmandu last week on an invitation from the Indian Airlines Corporation, which has just inaugurated direct flights to the Himalayan capital from Calcutta and New Delhi, was told that the monthly flow of tourists into Nepal averaged about 600 last year, and is expected to reach 1,000 this year. The authorities are naturally overjoyed; the joy of the tourists themselves, however, may not be so unrestrained. Not in every case, perhaps, does the exotic appeal of the Kathmandu landscape, bordered by the majestic snow-capped peaks of the Himalayan ranges to the north, compensate for a rather noticeable lack of ordinary amenities. To those who care for temples and palaces, the capital alone has plenty to offer; the Hindu and Buddhist monuments indeed have a charm all their own. But my colleague tells me that Nepal has still a long way to go before she becomes the tourist resort she is cracked up to be. Even by Indian standards, good hotels in Kathmandu are scarce and almost unbelievably expensive; the evenings tend to be quietly spent, since electricity appears to be rationed and liquor imports are banned. Most serious of all, perhaps, is the shortage of transport, which makes it possible for only a lucky few to visit resorts in the surrounding hills that may have more to offer than the capital itself. The deficiencies are no doubt being corrected, but both organisation and capital are lacking. Shangri-las are subject to the law of diminishing returns, and Nepal may be well advised to seek foreign help and advice more freely if she is to build her nascent tourist trade on less ephemeral foundations.

TALKING OF TOURISM, I AM ALWAYS INTERESTED to hear a foreign visitor's impressions of India, and a good opportunity presented itself last week in the shape of Mr. Howard L. Clark, president of the American Express Company, who was in Calcutta along with some important colleagues. Mr. Clark confirmed my view that the tourist potential of this country is considerable, and is growing with the faster air travel made possible these days by jet aircraft, and with the efforts of the international airlines themselves to increase their tourist-passenger traffic. Of the 2 million or so Americans who go out every year on pleasure trips, or merely to see places, a large proportion have already visited Europe several times and would probably like a change for the Eastern countries, India especially, being one of the world's oldest civilisations. But what can be most discouraging factors are those irritating—although perhaps well meant—formalities which make this country appear less hospitable than it intends to be. I would mention only a few of the many instances quoted by Mr. Clark. In the first place, the tourist has to fill in forms answering such queries as where he spent the previous nine nights and how he intends to spend his money here. These, he feels, are an unnecessary intrusion on his privacy. The inadequacies of the country's transport system and hotel industry contribute to his discomfort, especially in view of the high standard to which the American tourist is used at home. India has some good hotels, but only in the larger cities; in most other places, the standards are unsatisfactory. I wanted to know how Prohibition might be affecting India's tourist traffic and what import the Frederic March incident of last year has had on U.S. opinion. Mr. Clark and his colleagues seemed reluctant to be drawn out, but after persistent questioning by the newsmen present, two important points emerged which I think are worth quoting: first, Prohibition affects the growth of the hotel industry adversely, and secondly, the American tourist will like to have a drink wherever he goes. "It's so nice to have one after each round of sight-seeing."

THE ART OF PHOTOGRAPHY HAS ALREADY DONE MUCH damage to that of conversation. We have all suffered dinner parties where the normal flow of discussion is suppressed while silent guests think desperately of something to say besides "Ah!" as they hand round the snapshots, solemnly wait their turn to see colour negatives through a viewer, or endure an amateur movie. The inroads of photography into social intercourse threaten to worsen, for I have just read of a U.S. camera company director forecasting the day when "most people will carry small, wallet-sized cameras, just as they now carry fountain-pens, to make photographic notes of the day's events". When that time comes, he added, "business men will simply snap pictures of people whose names they want to remember, and when they get home at night their wives will show, rather than attempt to describe, what the children have been doing all day". The prospect of a society where the "attempt to describe"—that is, conversation—has been given up as too difficult and where the question "What did you do today, dear?" leads to the silent display of a pile of snaps, surely deserves to rank with the horrors imagined by Aldous Huxley in *Brave New World*. The 52 million Americans who own cameras have already reduced talk of travel and holidays to that level; when asked what they saw abroad, most of them should honestly reply "the lens of my Kodak". The main obstacle to the spread of this vice has been the cost and complexity of developing film, but unfortunately this is being rapidly reduced. After the Land camera, which turns out a finished print in one minute by means of little pods of self-fixing developer in the film, the Americans are perfecting a superior process in which the negative is simply covered with polymer-coated paper and pressed with a flat iron to produce superb pictures without liquid chemicals or fixing baths. A one-minute technique for colour photographs is being developed; a kit enabling amateurs to make their own talkies "of Hollywood standard" is being marketed at $240; and at the annual meeting of a U.S. photographic company the other week, movies were taken of a shareholder asking a question and then shown as soon as he had sat down. Those who regard these advances in the dangerous art of photography as unalloyed progress should at least reflect that their main cause is espionage. It is American anxiety to photograph impenetrable Russia, whether by old-fashioned spies, from *U-2s* or from satellites, that is stimulating many extraordinary recent advances in the taking, developing and transmitting of photographs. It was no doubt American confidence in the vast lead acquired over other countries in this field that lay behind President Eisenhower's "open skies" plan.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any resposibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinion expressed with regard to them.

The Central Government have granted a licence (copy of which is open to public inspection at the Registered Office of the Company) for this industrial undertaking. It must be distinctly understood that in granting this licence the Government of India do not take and responsibility for the financial soundness of the undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, West Bengal.

Application will be made to the Calcutta and Bombay Stock Exchanges for permission to deal in and for official quotations of the Shares of the Company.

The subscription list will open at the commencement of banking hours on Monday, 14th November, 1960, and will close at the close of banking hours on Saturday, 19th November, 1960.

ISAAC HOLDENS (INDIA) LIMITED

(Incorporated as a 'private company' on 7th November, 1959, under the Companies Act, 1956, and converted to a 'public company' by a resolution of the Company passed on October 28th, 1960.)

AUTHORIZED CAPITAL — **Rs. 1,75,00,000**

Divided into

(i)	15,00,000 Equity Shares of Rs. 10/- each	Rs.	1,50,00,000
(ii)	25,000 Preference Shares of Rs. 100/- each	Rs.	25,00,000
		Rs.	1,75,00,000

No Preference Shares are proposed to be issued for the time being and they may only be issued with the rights approved by the Central Government.

ISSUED SHARE CAPITAL

2,37,151	Equity Shares of Rs. 10/- each, upon which Rs. 10/- per share is credited as paid up, payment having been made as follows:—	Rs.	23,71,510
63,806	shares of Rs. 10/- each for a consideration other than cash, viz for machinery supplied ...	Rs.	6,38,060
1,23,345	Equity Shares of Rs. 10/- each for a consideration other than cash, viz. for land and buildings for location of factory	Rs.	12,33,450
50,000	Equity Shares of Rs. 10/- each for cash	Rs.	5,00,000
		Rs.	23,71,510

The consents in writing of the above named bankers, solicitors, auditors and brokers to act in their respective capacities have been filed with the Registrar of Companies

APPLICATIONS AND SUBSCRIPTIONS

Application for shares by members of the public must be for a minimum of 100 shares or multiples of 100 shares but allotment may be made of less than 100 shares.

TERMS OF PAYMENT OF ABOVE SHARES

(a) On application	Rs.	5.00	per share.
(b) Balance	Rs.	5.00	per share payable on call or calls to be made not earlier than 4 months after allotment.
	Rs.	10.00	per share.

DIVIDEND AND CAPITAL

The Company in General Meeting may on the recommendation of its Board of Directors declare a dividend to be paid to the members according to their rights and interest in the profits of the Company and may, subject to the provisions of Section 207 of the Companies Act, 1956, fix the time of payment.

No dividend shall be payable except out of the profits of the Company during the year or any other undistributed profits or out of the monies provided by the Central or State Government for the payment of the dividend in pursuance of any guarantee given by such Government and no dividend shall carry interest against the Company.

MODIFICATION OF RIGHTS

Rights attached to equity shares preference shares and any other class of shares in the issued capital of the Company may be modified as permitted by Article 57 of the Articles of Association of the Company and the provisions of Section 106 of the Companies Act, 1956, or any statutory modification or re-enactment thereof for the time being in force.

CREATION OR ISSUE OF FURTHER SHARES

Subject to the Articles of Association of the Company shares in the capital of the Company for the time being shall be under the control of the Board of Directors, who may allot or dispose of them or any of them on such terms and conditions, either at par or at a premium or (subject to the provisions of Section 79 of the Companies Act, 1956) at a discount, as the Board may think fit. Provided that if at any time subsequent to the first allotment of shares it is proposed to increase the subscribed capital of the Company by the issue of new shares then subject to any direction to the contrary, which may only validly be given by the Company in General Meeting, the Board shall issue such shares in the manner set out in Section 81 (1) of the Companies Act, 1956, save that the Board may determine whether or not an offer of new shares shall include a right to renounce in favour of any other person.

VOTING RIGHTS

Articles 77 to 80 deal with the voting rights which members are entitled to exercise. The voting rights of members as fixed by the Articles are in accordance with the provisions contained in Section 87 of the Companies Act, 1956. Article 77 provides that subject to any restrictions for the time being attached to any class or classes of shares, on a show of hands every member present holding equity share capital in the Company has one vote and on a poll every member present or by proxy has one vote for every equity share held by him.

Article 78 refers to the voting rights to be exercised by a body corporate. The Article provides that a body corporate which is a member of the Company may by a resolution of its board of directors or any other governing body in accordance with the provisions of the Section 187 of the Companies Act, 1956 authorize such person as it thinks fit to act as its representative at any meeting of the Company. The Article further provides that the person authorized by such body corporate shall be entitled to exercise the same rights and powers, including the right to vote by proxy on behalf of the body corporate which he represents, as that body could exercise as a member of the Company

Article 79 refers to votes being exercised in respect of a deceased, insane or insolvent member. It provides that any person entitled under the transmission Article to transfer any shares may vote at any General Meeting in respect of such shares in the same manner as if he were a registered holder of such shares provided the requirements laid down in the said Article are fulfilled by such person.

Article 80 relates to the exercise of voting rights by members registered jointly in respect of a share. It provides that where there are joint registered holders any one of such persons may vote at any meeting either personally or by proxy in respect of such shares as if he were solely entitled thereto. If more than one such joint holder is present at a meeting either personally or by proxy, the member whose name stands first on the Register of Members in respect of such shares shall exercise the voting rights in respect of such shares.

Article 82 requires that the instrument appointing proxies must be in writing or, if the appointor is a body corporate under its seal or signed by an officer or a duly authorized attorney. A proxy need not be a member of the Company and any member may appoint more than one person as proxy to attend on the same occasion.

RESTRICTION ON THE RIGHT TO TRANSFER SHARES

No transfer will be registered unless a proper instrument of transfer duly stamped and executed by and on behalf of the transferor and the transferee in accordance with Article 37 of the Company's Articles of Association is delivered to the Company along with the certificate or, if no such certificate is in existence, the Letter of Allotment in respect of the shares duly endorsed by the allottee.

Subject to the provisions of Section 111 of the Act, the Board may without assigning any reason for such refusal, within two months from the date on which the instrument of transfer was delivered to the Company, refuse to register any transfer of a partly paid share upon which the Company has a lien.

No transfer may be made to a minor or person of unsound mind.

BORROWING POWERS

Article 58 provides that the Board may, from time to time at its discretion, subject to the provisions of Sections 292 and 370 of the Companies Act 1956 raise or borrow, either from the Directors or from elsewhere, and secure the payment of any sum or sums of money for the purposes of the Company.

Article 59 provides further that the Board may raise or secure the repayment of such sum or sums in such manner and upon such terms and conditions in all respects as it thinks fit and, in particular, by the issue of bonds (perpetual or redeemable), debentures or debenture-stock or any mortgage or other security on the undertaking of the whole or any part of the property of the Company (both present and future) including its uncalled capital for the time being.

The Board of Directors of the Company is by resolution of the Company passed on 22nd August, 1960 permitted to borrow monies from time to time for and on behalf of the Company, so that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is, reserves not set apart for any specific purpose.

OBJECTS OF THE COMPANY

The Company was incorporated on 7th November, 1959 with the objects mentioned in the Memorandum of Association of the Company and in particular to carry on the business of Processors, Wool Sorters, Scourers, Machine Combers, Recombers and Dyers of all types of fibres and materials, whether natural, artificial or synthetic, for the textile industry.

HISTORY OF THE COMPANY

The formation of the Company the first of its kind in India, is the result of collaboration between Isaac Holden & Sons Ltd. of Bradford, England, a leading firm of commission combers in the Bradford trade, Duncan Brothers & Co. Ltd. the well-known Calcutta Agency House and Anglo-India Jute Mills Co. Ltd. which is the largest Jute Mill Company in India, Duncan Brothers & Co. Ltd being its Managing Agents.

Woolltops are the principal raw material of the Worsted Spinning Industry and the raw wool must be sorted scoured and combed before use by that industry. It is not intended that the Company shall purchase wool or sell tops on its own account but raw wool will be consigned to it by topmakers and others for sorting, scouring and combing into wooltops on a tariff payment basis.

The Company has obtained permission to receive for processing raw wools being the property of topmakers resident overseas without Import-Export licence formalities other than that of accounting to the governmental authorities for the disposal of all wools so received.

India's consumption of imported wooltops during the last three years has been as follows:—

1957	..	16,266,075 lbs.
1958	..	15,399,480 ,,
1959	..	15,234,080 ,,

Wooltops may only be imported against licences and the shortage in foreign exchange has resulted in the supply of tops being much below the requirement of the spinning industry. The establishment of the Company's plant will assist in rectifying this position. The decision to proceed with the present scheme was taken by the promoters after visits by Mr. W. H. Robinson, A.T.I., A.M.B.I.M., now a Director of the Company, who has considerable experience in the establishment and operation of combing mills both in the U.K. and overseas and Mr. J. R. S. Raper, the Chairman of Isaac Holden & Sons Ltd., of Bradford, England, and the project has also received the close personal attention of Mr. K. P. Goenka, Chairman of Duncan Brothers & Co. Ltd., and of Anglo-India Jute Mills Co. Ltd. and a Director and Chairman of the Board of this Company.

Manufacturing Licence. The Government of India has issued under the Industries (Development and Regulation) Act, 1951 a licence No. L/23/3/N-13/59 dated 10th July, 1959 for a woolcombing plant of an installed capacity of ten million pounds of wooltops per annum. The attainment of this licensed production is planned to be achieved in two stages. First the installation of Noble Combs with necessary preparatory and ancillary machinery. Secondly, the installation of additional combs with necessary preparatory and ancillary machinery to achieve a total capacity of ten million pounds per annum. Ultimately the Company intends to install a dyeing plant.

The first stage is now in course of completion: one wash bowl unit and twelve combs with requisite machinery have been erected at the Company's factory as well as six carding engines given to the Company by Isaac Holden & Sons Ltd. (packing, carriage and freight from the U.K. being at the Company's expense) for use pending the arrival of the twelve new carding engines which are on order. Six additional combs, together with a wash bowl unit and machinery to complete the first stage are in course of transit, being supplied by Isaac Holden & Sons Ltd. in consideration of allotment of 42,849 equity shares awaiting issue. Production on that part of the first stage which has already been installed is due to commence before the end of 1960.

The proceeds of the present issue will largely be applied to financing the second stage of development. Import Licences for this stage have been applied for, it being the intention to install the plant and machinery as delivered and thereby achieve a gradual development of production up to the licensed capacity of ten million pounds per annum. The machinery to be installed will be of the most modern and up to date design available today and the directors consider that the prospects for profitable working are good.

PLANT SITE AND POWER, ETC.

The factory is located in premises formerly a part of the Anglo-India Jagatdal Jute Mill, which are suitable for the purpose and have been purchased by the Company. Accommodation for the staff and for the storage of raw wool is available on a rental basis from Anglo-India Jute Mills Co. Ltd. and certain essential administrative services are also available from that company.

Arrangements have been made with the Calcutta Electric Supply Corporation Ltd. for provision of the electric power required and an ample supply of water is available

ISAAC HOLDENS (INDIA) LIMITED—*Cont'd.*

VENDORS OF PROPERTY

The Company has acquired the following property for a consideration other than cash:—

1. (a)	Name:	Anglo-India Jute Mills Co., Ltd.
	Address:	31, Netaji Subhas Road, Calcutta.
	Occupation:	Public Company registered in India.
(b)	Amount Payable:	1,23,345 fully paid Equity Shares of Rs. 10/- each
(c)	Nature of the title or interest in property acquired by the Company.	Permanent Leasehold Land and Buildings thereon
(d)	Nature of the transaction:	The Company has acquired land and buildings consisting of part of the vacant property at Jagatdal Mill and as consideration has allotted 1,23,345 fully paid equity shares of Rs. 10/- each to Anglo-India Jute Mills Co., Ltd.
		Material particulars of the parts of the properties conveyed are as follows:
		Buildings—A block of buildings covering an area of 3.128 acres.
		Motor Alley—A two-storied building covering an area of .131 acres.
		Boiler House—Construction on an area of .058 acres.
2. (a)	Name:	Isaac Holden & Sons Ltd.
	Address:	Alston Works, Bradford 8, England.
	Occupation:	Public Company registered in the U.K.
(b)	Amount payable:	1,06,655 fully paid Equity Shares of Rs. 10/- each.
(c)	Nature of the title or interest in property acquired by the Company:	Absolute ownership of machinery comprising two wash bowl units and eighteen Noble Combs with necessary backwashing and gilling machines and punches, more particularly described in the schedule to the Agreement dated 13th January, 1960.
(d)	Nature of the transaction:	The Company has purchased machinery previously used by Holdens for the purpose of treatment and processing of wool as more specifically described in the Agreement hereinbefore referred to, and in consideration the Company has agreed to allot 1,06,655 fully paid Equity Shares of Rs. 10/- each to Isaac Holden & Sons Ltd., Bradford (U.K.). It was mutually agreed that shares should be allotted to Isaac Holden & Sons Ltd., Bradford (U.K.) against the rupee equivalent value of the machinery actually delivered to the Company in Calcutta. Accordingly 63,806 fully paid equity shares of Rs 10/- each were allotted by the Company to Isaac Holden & Sons Ltd., Bradford (U.K.) on 10th May 1960 against items of machinery delivered at Calcutta as aforesaid. The remaining 42,849 shares will be allotted when the balance of machinery now under despatch has been received by the Company.

Subject to the provisions of the Companies Act, 1956 and unless otherwise determined by the Company in general meeting each director or his alternate shall be entitled to receive Rs 100/- for each meeting of the Board or Committee of the Board attended by him. The Directors shall also be entitled to receive a commission of 1% of the net profits of the Company in any financial year divisible between them in such proportions as the Board may determine, or failing that in equal proportions. The Directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in consequence of their attending Board and Committee meetings or otherwise incurred in the execution of their duties as directors of the Company

Without prejudice to the generality of the foregoing Article, if any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a Committee of the Board then the Board may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise and such remuneration may be either in addition to or in substitution for any other remuneration to which he may be entitled.

INTEREST OF DIRECTORS

1. Mr. Keshav Prasad Goenka is Chairman and a Managing Director and a member of Duncan Brothers & Co. Ltd., the Managing Agents of the Company, Chairman and a Director and member of Anglo-India Jute Mills Co. Ltd. and also a Director and a member of the Bank of Baroda Ltd., which is one of the Bankers of the Company.
2. Mr. James Rhodes Stanley Raper is Chairman and Managing Director and a member of Isaac Holden & Sons Ltd., Bradford (U.K.), one of the promoters, and is therefore interested in the transactions with that Company.
3. Mr. William Henry Robinson is Director and General Manager of Holdens (Ireland) Ltd., Dublin, Eire in which company Isaac Holden & Sons Ltd., Bradford (U.K. have an interest, and is therefore interested in the transactions with that Company.
4. Mr Geoffrey Edward Hoare is a Departmental Manager and a member of Duncan Brothers & Co., Ltd., Calcutta the Managing Agents of the Company, and a member of Anglo-India Jute Mills Co., Ltd
5. Mr. Henry Joshua Silverston is a director and a member of Anglo-India Jute Mills Company Ltd., and a partner in Messrs Orr Dignam and Co., the Solicitors to the Company.
6. Mr David Henderson Adamson is Senior Mills Manager of Anglo-India Jute Mills Co., Ltd., one of the promoters and is therefore interested in the transactions with that company.

All the Directors will be interested to the extent of the shares in the capital of the Company subscribed or to be subscribed for and allotted to them and to companies in which they are interested.

TECHNICAL COLLABORATION

Isaac Holden & Sons Ltd., Bradford (U.K.) as Technical Consultants will for a period of ten years from November 7th, 1959 advise the Company on all technical matters relating to the erection, operation and maintenance of the Company's factory, instruct and train the Company's technical personnel in India and in the United Kingdom supply to the Company such technical experts and advisers as may reasonably be required on a reimbursement of expenses incurred basis, and act as procurement agents in the acquisition of raw materials or other commodities required by the Company.

As consideration Isaac Holden & Sons Ltd. Bradford (U.K.) will receive in Sterling in the United Kingdom payments as follows:—

A Royalty-cum-Technical Fee of 10% per annum of the net trading profits earned by the Indian Company (such net trading profits to be ascertained as prescribed in the Indian Companies Act, 1956) in each year up to the sixth year of actual production. Thereafter the Royalty-cum-Technical Fee will be reduced to 7½% of the net profits and all payments on this account will cease after the tenth year.

The minimum remuneration payable on account of the above will be Rs. 50,000/- per annum but if in any year the minimum remuneration specified is not earned by the English Company the minimum remuneration will be paid as specified but any excess payment over the actual sum earned will be adjusted against payments in subsequent years.

The Government of India have approved the foregoing collaboration as well as the issue of equity share capital to Isaac Holden & Sons Ltd., Bradford (U.K.) to which reference has already been made.

DIRECTORS

The Articles of Association of the Company provide that unless otherwise determined by special resolution the number of Directors shall be not less than six nor more than nine. Provision is also made in Article 102 for the appointment by the Board of an alternate for a Director absent for a period of not less than three months from the State in which the meetings of the board are ordinarily held

It is also provided that Isaac Holden & Sons Ltd., Bradford (U.K.) so long as they shall hold office as Technical Consultants and that Duncan Brothers & Co Ltd., as long as they are Managing Agents of the Company, shall each be at liberty to appoint one director of the Company and to remove any director so appointed and appoint another in his place. The directors so appointed shall not be liable to retire by rotation subject to the approval of the Central Government if required to Article 103.

Unless otherwise determined by the Company in general meeting a director is not required to hold any qualification shares.

Article 94 of the Articles of Association of the Company provides for the remuneration of the Directors

UNDERWRITING COMMISSION

Neither is any underwriting commission payable in respect of the present issue, nor has any such commission been previously paid by the Company.

BROKERAGE

Brokerage will be paid by the Company to the Brokers to the Issue mentioned in the Prospectus and to members of any recognized Stock Exchange and to Bankers at the rate of 15 nP per share in respect of the aforesaid such Equity Shares offered to the public for subscription and allotted in respect of applications bearing their stamps

PRE-INCORPORATION EXPENSES

The amounts of pre-incorporation expenses reimbursable to the promoters are as follows:—

Money

THE CALCUTTA MONEY MARKET

SLIGHT EASING OF INTERBANK FUNDS

Wednesday, 9th November.

THE total of advances has declined slightly in the Calcutta money market during the past week. The fall is accounted for by a reduction in demand from the cotton industry and the sugar mills. The requirements of the jute industry show a slight increase and those of the engineering, and iron and steel industries have recorded a substantial rise. The interbank market has become slightly easier, but as yet there is no reduction in the call rate which is standing at 4½ percent.

Once again, the exchange market has been slack, with a scarcity of both tea and gunny bills. Remittance has been poor. The pound has ruled firm on the London market, with net gains against all important currencies with the exception of the Canadian dollar.

BULLION WAS STEADY DURING THE PAST WEEK ON increased support, especially from upcountry centres. Silver rose from the previous week's level of Rs. 223.50 to Rs. 225.75, quoted today for ready delivery. The rate for forward delivery was Rs. 226. The London and New York prices were 79½d and 91.37 cents.

Gold was steady in sympathy with silver. The price increased from Rs. 137 to Rs. 137.25. The sovereign at Rs. 91.50 showed a gain of 75nP.

DURING THE WEEK ENDED 4TH NOVEMBER, GOVERNment of India Treasury bills for Rs. 106,28,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 8th November. The total amount offered was Rs. 2.20 crores. Tenders at Rs. 99.360 were accepted in full and those at Rs. 99.355 allotted approximately 83 percent, the average rate of acceptance being Rs. 2.565 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 14th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 9th November to 12th November at Rs. 99.376 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 2nd November to 5th November, amounted to Rs. 27,00,000.

A RISE OF Rs. 14.12 CRORES TO Rs. 1,808.30 CRORES in active notes marked the return of the Reserve Bank of India for the week ended 4th November, 1960, while the total note issue was Rs. 1.28 crores lower at Rs. 1,822.08 crores. Notes held in the Banking Department consequently fell by Rs. 15.40 crores to Rs. 13.78 crores. Deposits of the Central Government rose by Rs. 9.16 crores to Rs. 74.52 crores, but other Government accounts fell by Rs. 14.05 crores to Rs. 10.20 crores, presumably due to a transfer of funds to the Government of India. Balances of commercial banks at Rs. 103.80 crores showed a rise of Rs. 3.24 crores. Balances held abroad declined by Rs. 1.47 crores to Rs. 18.27 crores. Investments at Rs. 243.28 crores showed a decline of Rs. 18 lakhs. Other loans and advances rose from Rs. 115.87 crores to Rs. 122.75 crores, of which advances to scheduled banks against usance bills amounted to Rs. 5.82 crores (Rs. 6.54 crores). Ways and means advances stood at Rs. 34.96 crores, against Rs. 28.40 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 28th October, 1960, shows a rise of Rs. 4.29 lakhs to Rs. 583.17 crores in total deposits. Investments in Government securities are down by Rs. 5 crores to Rs. 335.38 crores, while other investments are up by Rs. 15 lakhs to Rs. 9.83 crores. Advances, including loans, cash credits, overdrafts and bills discounted have decreased by Rs. 15 lakhs to Rs. 216.06 crores. Cash and balances are, in consequence, shown at Rs. 25.43 crores or Rs. 2.11 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 28th October, 1960, shows Demand and Time liabilities at Rs. 797.20 crores (Rs. 20.03 crores on account of borrowings from banks) and Rs. 1,143.84 crores (Rs. 19.86 crores), compared with Rs. 785.11 crores (Rs. 15.48 crores) and Rs. 1,148.24 crores (Rs. 21.05 crores), respectively, in the previous week. Cash has increased by Rs. 35 lakhs to Rs. 48.69 crores, while balances with the Reserve Bank have decreased by Rs. 3.41 crores to Rs. 95.65 crores. There is a drop of Rs. 7.46 crores to Rs. 689.54 crores in investments. Advances and bills discounted and purchased show a decline of Rs. 5.11 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.4 percent and 57.2 percent, against 7.6 percent and 57.7 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of July 1960:

		Rs.
(1)	At the Reserve Bank of India in India	41,74,26,000
(2)	At treasuries in India ...	44,96,000
(3)	In England (sterling converted at 18d the rupee) ...	1,50,45,000
	Total ...	43,69,67,000

TREASURY BILL MATURITIES

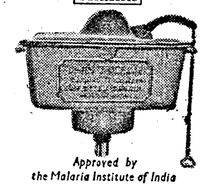
YOU CAN ALWAYS TRUST WHEN IT'S Shanks

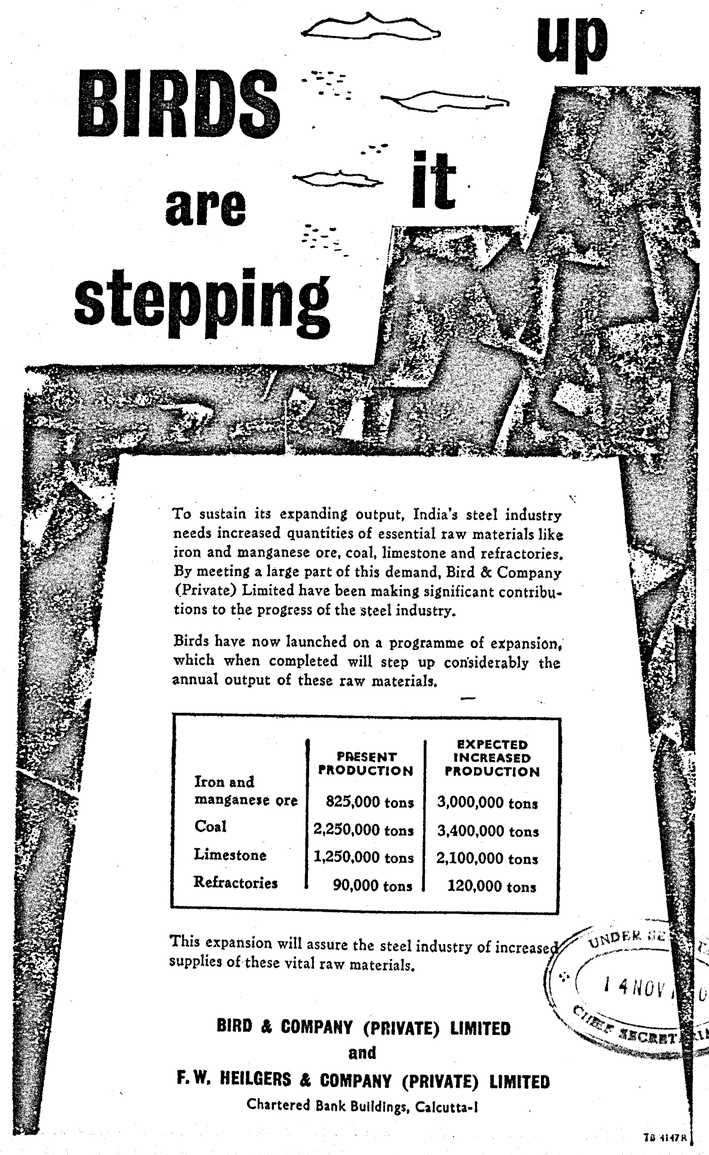


Approved by the Malaria Institute of India

SHANKS single-pull "NOMOS" Cisterns are mosquito-proof and work on the valveless syphon principle. They last long and outdo other varieties in working efficiency.

J. B. NORTON & SONS LTD.
STEPHEN HOUSE, CALCUTTA.

J6-6-59



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

Stocks and Shares

SETTLEMENT CONSIDERATIONS STOP RECOVERY MOVEMENT

NEW ISSUES STILL ACTIVE

Wednesday Evening.

LACK of follow-up and settlement considerations brought the recent recovery movement in the Calcutta share market to an abrupt end yesterday, and by the close of business today, most of last week's gains had been wiped out. Operators seem inclined to resign themselves to a phase of dull trading between now and the presentation of the Central Budget in February 1961. Whatever surplus investible funds are available at present are being mopped up by new issues which are following each other in quick succession. The last to be over-subscribed was the General Tyres issue, which closed yesterday. Rumours last week of a possible relaxation of the Reserve Bank's credit curbs have hitherto proved to be unfounded, and meanwhile, the money market is becoming tighter each successive week.

Strong rumours were circulating at the close of business today of an imminent announcement of an increase in steel retention prices, and certain knowledgeable parties have been making purchases of Indian Irons during the past 48 hours.

Government securities showed little sign of life and the downtrend continued. Most issues recorded fractional losses.

In the banking section, United Commercial were marked down by Re. 1 to Rs. 86.

In coal, Bengal were steady at Rs. 335 while Burrakur were marked back to Rs. 17.44. Raneegunge were unchanged at Rs. 16.37.

In electrics, Calcutta were softer at Rs. 14.94 and very little business was put through in this section.

Among cotton textiles, Dunbar were steady at Rs. 23 while Kesoram were marked down to Rs. 29.06 ex-dividend. Elgin Mills were quotably unchanged at Rs. 18.50.

Among engineering issues, Indian Iron & Steel fluctuated narrowly to close tonight at Rs. 23.30, which was the settlement rate. Guest, Keen, Williams were taken at Rs. 40.25 and Britannia Engineering were wanted at Rs. 14.19 ex-dividend. Braithwaites moved up from Rs. 31.50 to Rs. 32.25, while Jessops were steady at Rs. 21. Textile Machinery moved narrowly around Rs. 22.65.

Jute shares were dull and neglected due to the present trials and tribulations of the industry, but prices on the whole showed little change from last week's levels.

In paper, Orient, after being done up to Rs. 42.70, turned easier at the close and were quoted today at Rs. 41.70. Sirpur receded to Rs. 18.25 while Titaghur recovered to Rs. 37.25. Shree Gopal were steady at Rs. 25.87.

In sugar, Belsund were steady at Rs. 14 as were Dyer Meakin Breweries at Rs. 23.50.

Among miscellaneous industrials, there was a keen demand for Alkali & Chemical at the higher rate of Rs. 33. Bharat Commerce, after being done up to Rs. 19.62, closed easier at Rs. 19. Britannia Biscuits were unchanged at around Rs. 38.37. Dunlop Rubber eased to Rs. 41 as did Hindustan Aluminium to Rs 8.12. Gwalior Rayon, after being done up to Rs. 46.50, closed quiet at Rs. 44.50. Similarly, Hindustan Motors reacted from Rs. 20.56 to Rs. 19.94 on rumours of a possible strike at the Company's Uttapara works. Indian Cables were steady at Rs. 34.19 while National Insulated Cables eased to Rs. 31. National Rolling, after being done up to Rs. 18.50, closed lower at Rs. 18. Rohtas Industries were unchanged at around Rs. 22.37 and Union Carbide were marked at Rs. 49.50 ex-dividend..

In the mining group, Indian Copper were slightly easier at Rs. 4.44, as were Metal Corporation at Rs. 10.75. Karanpura Development were steady at Rs. 15.50.

Little business was done in tea shares and prices fluctuated narrowly.

Mozufferpore Electric

A taxable ordinary dividend of 12½ percent (against 10 percent, tax-free) has been declared by the Mozufferpore Electric Supply Co. Ltd for the year ended March 1960. The profit has increased from Rs. 1.08 lakhs to Rs. 1.91 lakhs. Depreciation absorbs Rs. 1.59 lakhs (against Rs. 1.31 lakhs). After making other adjustments, there is a carry-forward of Rs. 40,204, compared with Rs. 9,198 brought in. About 4,383,410 units were sold (against 3,927,202 units).

Gillapukri Tea

The Gillapukri Tea and Seed Co. Ltd has earned a profit of Rs. 2.60 lakhs for the year ended December 1959, against Rs. 2.72 lakhs in the previous year. A taxable ordinary dividend of 25 percent has been declared, against 25 percent tax-free. Allocations include Rs. 1.05 lakhs (against Rs. 1.29 lakhs) for taxation and Rs. 790 (against nil) for development rebate reserve. After making other adjustments, there remains a balance of Rs. 8,855 to be carried forward, compared with Rs. 19,662 brought in. A crop of 688,087 lbs was made, against 749,907 lbs.

Sapoi Tea

After providing Rs 1.27 lakhs (against Rs. 1.24 lakhs) for depreciation, the profit of the Sapoi Tea Co. Ltd has risen from Rs. 2.93 lakhs to Rs. 3.09 lakhs for the year ended December 1959. An ordinary dividend of 20 percent, subject to deduction of tax, has been declared, against 15 percent, tax-free, in the previous year. Provision for taxation is allocated Rs. 1.27 lakhs (against Rs. 1.61 lakhs). Development rebate reserve absorbs Rs. 4,000 (against Rs. 17,000). After making other adjustments, there is a carry-forward of Rs. 20,393, against Rs. 22,075 brought in. The total crop was 1,406,594 lbs, against 1,256,988 lbs.

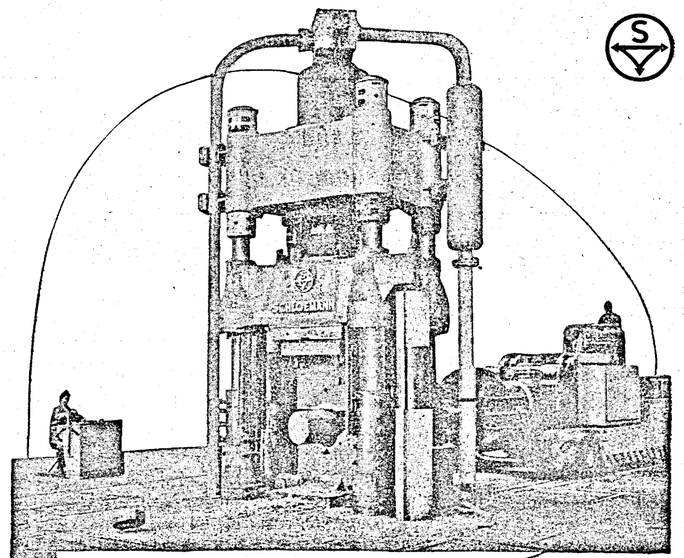
SCHLOEMANN



1,000-ton High Speed Forging Press of Welded Construction

Faster, more accurate forging at lower cost
with the SCHLOEMANN automatic high speed forging control

Stroke adjustable (⅞in. to 3¼in.) in ten to twelve stages by shifting the top dead centre during the automatic reciprocating cycle. Number of strokes adjustable (20 to 100 per minute) in ten to twelve stages with constant stroke through variable holding times at top dead centre during automatic reciprocating cycle. Precision adjustment of work level with constant stroke through shifting the top and bottom dead centres during the automatic reciprocating cycle. Coarse adjustment of work level through an intermediate stroke with automatically interrupted reciprocating cycle. Low power water consumption by adjustability of the shortest reciprocating stroke required for planishing and by adapting the number of strokes to the precise amount of idle time required to move the forging, without changing the stroke.

total approximate production of iron and steel at the steel works in Jamshedpur during October 1960 was: pig iron 145,900 tons; steel ingots 150,400 tons; semi-finished steel for sale 41,800 tons; and finished steel 72,400 tons.

Bombay Market

CHEERFUL CONDITIONS BRING GOOD SUPPORT

REPORTS OF L.I.C. BUYING HELP SENTIMENT

Wednesday Evening.

CHEERFUL conditions prevailed on the Bombay stock market during the past week and prices of leading shares improved substantially on fresh support. Bullishness was reinforced by reports of fair buying of ordinary shares by the Life Insurance Corporation after a long interval. Operators also hoped that the Reserve Bank might soon relax credit curbs to help finance the requirements of the coming busy season. The news of higher production of the Tata Iron and Steel Company in October assisted the recovery.

Tata Steel were quoted higher at Rs. 145.25 and Indian Iron were steady at Rs. 23.24, but Calcutta interests took a cautious view at the close on fears that the increase in steel retention prices might be lower than was expected earlier. Among engineering shares, Tata Locomotive were bought at Rs. 291 and Alcock Ashdown improved to Rs. 255. Premier Construction were dealt in at Rs. 305 and Larsen and Toubro were transacted at Rs. 36.50. Mukand Iron came to hand at Rs. 23.76. In motor shares, Premier Automobile improved to Rs. 172.50, as did Hindustan Motor to Rs. 19.63 on support from Lyons Range.

Selective support was forthcoming for cotton mill shares. Bombay Dyeing were placed at Rs. 63.50 and Century were quotably higher at Rs. 469. Kohinoor were steady at Rs. 233.50, as were Simplex at Rs. 162. Standard Mills changed hands at Rs. 1,165 and Finlay were done at Rs. 343. Svadeshi were taken at Rs. 232 and India United Ordinaries were transacted at Rs. 12.24. Apollo were freely offered at Rs. 1.26.

In the miscellaneous group, sugar shares met with support, and Belapur were bought up to Rs. 382.50. Business passed in Phalton at Rs. 181 and Walchandnagar Industries were steady at Rs. 301.50. Among cement shares, Associated Cement were dealt in at Rs. 145 and Digvijay were done at Rs. 161.50. Mining shares were steady, and Shivrajpur Syndicate were bought up to Rs. 67.50. Sellers predominated in steamship company shares, and Scindia Steam were sold at Rs. 13.80. Great Eastern Shipping were available at Rs. 16.04. Chemical shares were quietly steady, and Tata Chemical met with support at Rs. 16.72. Colour Chem improved to Rs. 347.50 and Dhrangadhra Chemical were transacted at Rs. 140.50. Bombay Burmah recovered to Rs. 585 on the publication of good results and National Rayon were quoted higher at Rs. 513.50. Voltas found sellers at Rs. 259 on rumours that the working results might not be as satisfactory as were expected earlier. Tata Oil were bought at Rs. 74, but Ceat Tyre were quiet at Rs. 242.50. Scattered interest was taken in West Coast Paper up to Rs. 204. Premier Tyre were quoted at Rs. 82.

Turnover in bank shares was small, but fluctuations were narrow. Central Bank were transacted at Rs. 55.50 and Bank of Baroda came to hand at Rs. 81. Insurance shares were quiet, and New India Assurance declined to Rs. 53.80. Vulcan were shaded at Rs. 17.

Electricity supply company shares were steady, and Tata Hydro were bought up to Rs. 104.50. Bombay Suburban were done at Rs. 85.70 and Ahmedabad Electric were dealt in at Rs. 88.50.

Madras Market

PROFIT-TAKING FOLLOWS STEADIER PHASE

CREDIT RELAXATION EXPECTED SOON

Wednesday Evening.

THE Madras stock market was steady during the earlier part of the past week on higher advices from Calcutta and Bombay. Selective buying was noticed in planting, textile and miscellaneous shares on good corporate news. Operators were inclined to take a constructive view of the future outlook, and it was thought that the Reserve Bank might soon relax credit restriction measures. Towards the close, share prices moved downwards on profit-taking.

Government securities were quiet with sellers predominating, and many State Government loans were available at substantial discounts. Interest in public utilities was subdued and scattered business was transacted. Berhampur were indicated at Rs. 6 and business passed in South Madras at Rs. 10. Vellore were dealt in at Rs. 12.50 and West Coast were done at Rs. 13.12.

In the banking group, Indian were bought at Rs. 171 and Indian Overseas met with support up to Rs. 173. Travancore Forward were quoted at Rs. 5.50.

In the sugar group, United Breweries were firm at Rs. 114.50 on paying a final dividend of 35 percent, making 60 percent for the year; the dividend is taxable. The Company proposes to issue 80,000 ordinary shares of Rs. 10 each, at par, to the existing shareholders. Deccan were quoted at Rs. 15.80 and E.I.D. were in demand up to Rs. 44.25. Mysore were dealt in at Rs. 60.50 and Jeypore were transacted at Rs. 17.87.

Tea shares were supported on hopes of increased exports. Blue Mountain were bought up to Rs. 5.15 on paying a taxable dividend of 12½ percent. The company proposes to issue bonus shares in the ratio of one new share for every five held. Waterfall were bought up to Rs. 5 on the payment of a taxable dividend of 12½ percent, and the Company will issue bonus shares in the proportion of one new share for every two held. Cochin Malabar were dealt in at Rs. 7.25 and Consolidated Coffee changed hands at Rs. 25. Business was done in Ouchterlony at Rs. 5.03 and Periakaramalai were steady at Rs. 3.55. Cowcoody were quoted at Rs. 5.15. The Company has declared a final dividend of 15 percent, making a total taxable dividend of 25 percent for the year. Kil Kotagiri met with demand up to Rs. 5.70 and Lucky Valley were transacted at Rs. 12.35. Mysore Plantations came to hand at Rs. 2.07 and Nilgiri were done at Rs. 7.25. Parkside were steady at Rs. 29.50 and Peermade realised Rs. 22.80. Teekoy were sold at Rs. 6.03 and Twyford came to hand at Rs. 12.

There was selective support for textile shares. Interest was taken in South India Viscose at Rs. 172.50 and Travancore Rayon were bought up to Rs. 36. Lakshmi were transacted at Rs. 150 and Madura were supported up to Rs. 33.90. Business was done in Bangalore Woollen at Rs. 196 and in Buckingham at Rs. 198. Kothari were steady at Rs. 12.20 and K. Rajendra were dealt in at Rs. 72. Rangavilas were transacted at Rs. 42 and Kadri were quoted at Rs. 124.50. Asher were placed at Rs. 212.80 on the publication of satisfactory results; a taxable dividend of 12½ percent has been declared.

In the miscellaneous group, Aluminium Industries were dealt in at Rs. 23.25, as were Ashok Leyland at Rs. 8.75. Business passed in Enfield at Rs. 15.20 and F.A.C.T. changed hands at Rs. 10.42. India Cement were steady at Rs. 7.15 and Kirloskar Electric met with interest up to Rs. 13.10. Mysore Paper were dealt in at Rs. 28.65 and Parry's Confectionery were indicated at Rs. 4.45. Singareni were taken at Rs. 9.97 and Spencer were bought up to Rs. 22. Standard Motor were steady at Rs. 17.25 and Textool were quoted at Rs. 190. Support was seen in Tube Investment up to Rs. 370.

Rajabhat—Rs. 15/25—15/31—15/25—15/31—(16/00).
Ranicherra—Rs. 17/12—17/25—16/87—16/87—(17/25).
Sungma—Rs 11/44—11/62—11/37—11/62—(16/25).
Tezpore—Rs. 15/94—16/06—15/94—16/06—(19/12).
Teesta Valley—Rs. 12/81—12/81—12/81—12/81—(18/81).
Teliapara—Rs. 113/00—114/00—113/00—114/00—(127/00).

DEBENTURES

4 % (1960-70) Calcutta Port Trust—Rs. 99/25—99/25—99/25—99/25.
5½% Howrah Jute—Rs. 93/50—93/50—93/50—93/50—(95/00).
6½% New Central Jute—Rs. 115/00—115/00—115/00—115/00.
6½% Dunlop Rubber—Rs. 104/50—104/50—104/50—104/50.

fair chance for young talent

Some 48,000 children are at school in Jamshedpur, where Tata Steel runs 34 schools—17 of them on two shifts—and assists 122 other schools with recurring or capital grants. Instruction up to matriculation is given in four languages to meet the needs of the cosmopolitan industrial community.

Employees' children are taught free or pay a concessional fee depending on the parents' income. Here, we see Shri Etwari of Monghyr, an operative in the steel works, and his son, Kameshwar Prasad. Kameshwar passed matriculation in the first division in 1959, qualifying for a university stipend and for a Tata Steel Jubilee scholarship of Rs. 75 per month which will see him through college without any strain on his father's modest resources.

Jubilee scholarships apart, Tata Steel provides assistance in several ways to enable deserving children to take up higher studies. Young talent is thus encouraged and nurtured at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

UNCERTAIN TREND IN STOCK MARKET

GILT-EDGED STEADY: INDUSTRIALS IRREGULAR

London, 9th November.

SENTIMENT in the stock market over the past week has been influenced mainly by company statements which have come from certain of the larger concerns, including Courtaulds, Tube Investments, Guest, Keen, British Motor Corporation, Rootes Motors and Marks and Spencer. The statement from Courtaulds with its forecast of lower profits depressed the shares of this Company and had an adverse effect on prices of many other leading stocks. There have been other adverse factors to contend with, such as a further fall in the hire-purchase debt and prospects of further cutbacks in motor-car production resulting in lay-offs. To some extent these depressing influences were offset by a further sharp rise in the October gold reserves and news of well maintained retail sales. A satisfactory level of business turnover and in spite of the obscure economic picture, investors remained reluctant to dispose of good class stock. Gilt-edged were a steady market with short-dated stocks meeting with a fair demand, particularly after the sharp fall in the Treasury bill rate on Friday last. Industrials encountered a selective demand, but the general trend of prices was undecided with the leaders inclined to ease. Steel shares attracted a good deal of attention on dividend hopes and stores were a good market helped by the Marks and Spencer interim statement which disclosed a sharp rise in turnover. Gold shares made a good showing, although the volume of business showed no marked expansion but demand at times was fairly general. There was a revival of interest in copper shares and prices advanced sharply. Tin shares also improved. Oil shares fluctuated narrowly and showed no definite trend. Rubber shares became a good deal steadier after their recent decline. Tea share prices fluctuated within narrow limits.

The Money Market

The feature of the money market last week was the further sharp fall in the Treasury bill rate at the weekly tender. The rate for 91-day bills fell around 4s to £4 17s 9.79d percent with a similar fall in 63-day bills to £4 4s 1.94d percent. Market portfolios were reduced to such an extent by heavy sales of bills to the banks that the discount houses were obliged to enter a bid which would obtain for them the greater number of bills. The credit situation in the money market during the past week was again one of restricted supplies and the market generally had to pay 4⅜ percent and 4⅜ percent for its day-to-day accommodation. Demand for bills was keen with the rate for January and hots up to the time of the tender being 5 1/16 percent and 5⅛ percent and after the tender, at 4 13/16 percent and 4 15/16 percent.

Activity on Wall Street

Activity in the New York bonds market was generally slow, reflecting the inclination of many investors to wait the outcome of next Tuesday's Presidential election. Most of the business in U.S. Government obligations centred in the short end of the list and was associated with the $10,800 million November refunding. Elsewhere, long-dated Treasury issues were a shade lower and intermediates slightly higher. High-grade corporates tended to drift, but encountered improved support at the end of the period. Convertibles were mostly higher, reflecting the improved trend in stock market values. In foreign dollar bonds, German nationals were soft with a couple selling at new lows, including the 4 percents of 1972 which fell five points. Belgian Congo 5¼ percents and Rhodesia 5¾ percents advanced two and 2¾ points, respectively, while Cuba 4½ percents eased over two to $34½ for a new low. Union of South Africa's lost a point. Japanese Governments were mostly higher with the 5½ percents of 1975 one point better. Italians generally gave ground with Republic 3 percents down a point. French Credit Fonciers 5½ percents and Chile 3 percents were fractionally lower.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "Some profit-taking in London gilts. In industrials, American uncertainties counteract the Bank rate benefit. After the recent vigorous thrust, gold shares may pause to consolidate. Wall Street has pre-election rally and monetary uncertainties. The Bank rate cut was prompted by external factors rather than any basic internal improvement. The market may anticipate the next relaxation which may mean rather more. Steels may be approaching a good buying opportunity ahead of their annual results."

NAMES AND DATES

Dr. Hans Reuter, president of Demag and member of the German Atomic Commission has arrived in India. During his two-week stay, he will visit Madras, Bombay, Calcutta, Jamshedpur, Rourkela and Delhi.

Mr. James Quinn, director of the British Film Institute, will arrive in Bombay on 13th November to begin a three-week tour of India.

New Delhi

ADDITIONAL CAPACITY LICENSED IN THE CEMENT INDUSTRY

THE PROBLEM OF MARKETING RUSSIAN OIL

(FROM OUR NEW DELHI CORRESPONDENT)

THE target for the cement industry under the second plan was fixed at 16 million tons. By about the middle of 1958, the total capacity approved by the industrial licensing authorities was about 14 million tons. In the latter half of 1958, however, when the installed capacity was 7.4 million tons a year, the demand for cement showed a tendency to lag behind production. So it was considered desirable to slow down the further expansion of the industry. At a meeting held on 17th March last year, the Licensing Committee decided not to allow further expansion for a period of 18 months, which expired on 17th September, 1960.

The installed capacity at present is 8.572 million tons, and an additional capacity of nearly 1.664 million tons is covered by import licences, making a total of 10.236 million tons. In addition, a further capacity of nearly 3.88 million tons is either covered by industrial licences or tentatively approved by the Licensing Committee. It is doubtful, however, whether all these schemes will materialise. Capacity for the manufacture of cement-making machinery is also to be established in the country by about 1962. Therefore, all the approved schemes, which have not been implemented, were reviewed in the context of the present pattern of demand and supply in each region and the transport position, with particular reference to the need to correlate further manufacturing capacity with the programme for the making of cement machinery in India. From the schemes already licensed and approved, those for a capacity of nearly 1.045 million tons have been tentatively selected for implementation on the basis of the indigenous machinery supply. Thus the capacity, on the basis of the import licences already granted and schemes so far selected for implementation on the basis of the local supply of machinery, it is expected, will now be 11.281 million tons.

With the demand for cement exceeding production, the need for allowing further expansion in the cement industry has become pressing. There is generally a time-lag of about two years between the sanctioning of a scheme and its actual completion. It would be necessary now to consider fresh applications so that the expansion of the cement industry keeps pace with the growing demand and is balanced and well spread during the third plan period. Applications for a total capacity of 1.009 million tons have been received from A.C.C. and other cement producers, to be implemented on the basis of indigenous plant and machinery.

The Associated Cement Companies have been permitted to expand their capacity as follows: the Madukkarai cement works in Coimbatore from 280,000 tons a year to 400,000 tons a year; the Banmor cement works in Madhya Pradesh from 60,000 tons a year to 100,000 tons a year; the Khalari cement works in Bihar from 100,000 tons a year to 170,000 tons a year; and the Kymore cement works in Madhya Pradesh from 573,000 tons a year (plus 25,000 tons a year of white cement) to 750,000 tons a year.

In addition, Panyam Cement and Mineral Industries Ltd, in Kurnool district in Andhra Pradesh, has a scheme to expand its capacity from 62,700 tons a year to 194,700 tons a year. The Birla Jute Manufacturing Company has a scheme to expand the capacity of the Satna factory (Madhya Pradesh) from 247,500 tons a year to 517,500 tons a year. Saurashtra Cement and Chemical Industries has a scheme to expand its factory in Ranavar, Gujrat, by 200,000 tons to 400,000 tons a year.

Motor-vehicle Targets

The targets for the third five year plan for motor-cars, jeeps and lorries are 30,000, 10,000, 60,000, respectively. The requirements of wheels for motor-cars and jeeps would be 200,000 and for commercial vehicles 400,000. At the current rate of production, the demand for motor-car and jeep wheels is 125,000 and for commercial vehicles 175,000. A Bombay firm, in collaboration with Joseph Sankey and Sons Limited of the U.K., proposes to set up a factory to manufacture 12,500 wheels on a single-shift basis during the first year and 18,000 wheels from the second year onwards. The factory will be located in Kurla, Bombay, at an estimated cost of Rs. 25 lakhs, of which Rs. 20 lakhs will be in foreign exchange. Guest, Keen, Williams, Ltd is already licensed to manufacture 50,000 car and jeep wheels and T. V. Sundaram Iyengar and Sons for 180,000 wheels a year for motor-cars on a single-shift basis.

Manufacture of Switches and Switchboards

The English Electric Company of India has established a factory in Madras for the manufacture of combination switches and switchboards. The Company now has an expansion scheme to increase the production of combination fuse switches by 9,180 a year and combination fuse switchboards by 240 a year. The Company is a subsidiary of the English Electric Company of the U.K.

Increasing Ferro-silicon Output

Demag of West Germany is likely to collaborate with an Indian firm to manufacture 7,200 tons of ferro-silicon. The Mysore Iron and Steel Works produces 5,000 tons of ferro-silicon a year and it is expected to expand its capacity to 20,000 tons a year. A Calcutta firm is also licensed to produce 5,000 tons a year. For a target of 10 million tons of steel in the third plan, the corresponding requirement of ferro-silicon is placed at 40,000 tons a year.

New P.V.C. Resin Factory

India Cements Limited, Madras, proposes to set up a new factory to manufacture P.V.C. resins-compounds—5,400 tons a year in terms of resin, working on a three-shift basis. The firm proposes to enter into an agreement with the B. F. Goodrich Chemical Company of the U.S.A. for collaboration and capital participation.

Production of Strips and Tubes

The production of strips for tubes in 1961-62 is estimated at 200,000 tons, rising to 250,000 tons in 1963-64 and 400,000 tons in 1964-65. Some schemes are being examined for the manufacture of steel tubes and pipes. One is for the manufacture of spirally welded pipes and the other for E.R.W. pipes, foreign exchange for which, it is proposed, will be met by a German firm's investment in an Indian company. The third scheme is for the manufacture of 48,000 tons each of steel tubes and seamless tubes a year.

Making Motor-vehicle Equipment

T. V. Sundaram Iyengar and Sons has entered into financial and technical collaboration with Lucas of the U.K. for the manufacture of electrical equipment, such as distributors and dynamos, for motor-vehicles. These would be largely used if Indian manufacturers of motor-vehicles standardise their products. It is a £1.5-million project, in which Lucas will hold 60 percent of the shares.

Japanese Steel Mission

A Japanese steel mission is here, primarily to study the working of the steel plants in the public and private sectors. Japan has decided to expand her steel production from 12 million tons to 18 million tons a year. A U.S. steel expert, the president of the Republican Steel Corporation has said, that Bhilai would be among the most up-to-date and modern plants. A British team, headed by Dr. Colclough, also visited the three steel plants earlier in the year, following the U.S. expert. The Japanese mission includes persons who might settle the price of iron ore for 1961, for which Mr. Poonacha is planning a visit to Japan. The ore used at Bhilai is similar to that exported to Japan.

Bhadravati Steel Works Expansion

Although included in the second five year plan, the contract for the expansion of the Bhadravati Steel Works from 30,000 tons a year to 100,000 tons a year was signed last week, the foreign collaborators being three West German firms, including Demag and A.E.G. The capital cost of the project is placed at Rs. 7 crores.

Controversy about Russian Oil

The Minister for Oil has been accusing the western oil companies of a rate war against the Government. In fact, when signing the oil agreement with the Russians, he himself started it. Almost a month after the unloading of Russian oil, a newspaper carried a story that the oil had been lying idle and unsold in Bombay. The other newspaper covered themselves up on subsequent days by explaining that the Russian oil had been lying idle because Standard Vacuum had undercuted the tender for oil required by the Bombay Transport Authority. The Minister of Oil also made a dash to the capitals of some of the States, in order to induce them to purchase Russian oil. This was followed by a conference of the managers of State transport organisations in Bombay, to consider the question from an all-India angle and secure the maximum benefit in prices. Side by side, a message was published that the oil companies had assured the Government that they had no intention of undercutting Russian oil prices and have even offered storage capacity for it. It was also disclosed that a branch office of the Indian Oil Company would be opened in New Delhi to enable the Minister to remain in close touch.

The Government's marketing and distribution organisation, called the Oil India Company Ltd, is a paper organisation without personnel or tankage. It does not even own a single pump. Soon after its incorporation, thanks to Mr. Krishna Menon, a dozen army men under Brigadier Luthra were sent to Russia for intensive training in marketing and distribution. The party has recently returned to India. The Russians are very keen to send their oil to India; the first consignment of 11,000 tons arrived earlier than scheduled. Here again, thanks to Mr. Krishna Menon's organisation, it was unloaded and stored in army tanks.

This is not in defence of oil companies, but the fact remains that they have been the traditional suppliers of oil to transport companies; the Government's policy has been and is to invite tenders, even global tenders in some cases. The Central Minister has to furnish a periodical statement to Parliament explaining why the lowest tenders, in some cases, were 'not accepted. It was through tenders that Standard Vacuum secured the contract in Bombay. Incidentally, Bombay is one place in India where the transport authority owns its own lorries for the transport of oil. It was because of this absence of marketing and distribution facilities that the Government of India had to request the Russian Government to postpone the shipment of oil to India, at least by four months.

It is argued that Standard Vacuum and Caltex were taking advantage of duty protection in undercutting the Russian oil prices. Yet the Government-owned oil marketing organisation did not even enter the Punjab market and allowed Burmah-Shell to secure the contract, although the latter had surrendered all duty protection. The Government, it will thus be seen, has been following a policy of wrong priorities. It should have either made arrangements with the oil companies for the marketing of Russian oil or perfected its own distribution and storage arrangements before importing it.

Curbing Speculation in Jute Goods

The Central Government has effected amendments to the bye-laws relating to transferable specific delivery contracts in jute and jute goods with a view to enabling the East India Jute and Hessian Exchange Ltd, Calcutta, to curb speculation in such contracts. These amendments which have been announced in a notification issued in the *Gazette of India Extraordinary* have been made, because under the existing bye-laws of the exchange, the board has not got adequate powers to take effective steps to curb speculation. The amendments empower the board to regulate trading in any delivery or deliveries in transferable specific delivery contracts in jute and jute goods; to evolve a scheme of registration of such contracts and the pucca delivery contracts issued against them; to restrict the number of transfers of pucca delivery contracts; to impose special margins on transferable specific delivery contracts; and to fix maximum and minimum prices and to vary them from time to time. All the above powers, as also the power to close outstanding transferable specific delivery contracts in jute and jute goods, will also be exerciseable by the Forward Markets Commission if it considers that the interests of the trade or the public interest so require.

Food Storage Accommodation

A joint organisation of the Central Ministries of Food and Agriculture and Works, Housing and Supply, will soon be set up for accelerating the construction of food storage accommodation in various parts of the country. A new wing of the Central P.W.D. under an Additional Chief Engineer has been created to deal exclusively with the planning and building of storage godowns. This decision is intended rapidly to augment storage capacity for the proposed buffer stock of 5 million tons. Government-owned and rented godowns at present accommodate 2 million tons of foodgrains. Further, the Food Department has finalised the programme for the construction of the balance capacity of 3 million tons. Of this, 1 million tons will be for bulk storage in the shape of grain elevators and flat storage godowns. In this connection, the Central Government proposes to appoint a firm of consulting engineers to advise on design and construction. By the end of the current year, storage capacity of about 50,000 tons will have been completed and additional godowns of 650,000 tons capacity will be ready during 1961. More godowns will be commissioned during 1962. Besides the 10,000-ton silo-*cum*-elevator in Hapur, another grain elevator of like capacity is being installed at Kidderpore Docks, Calcutta. Additional concrete bins to augment the capacity by 7,000 tons are being erected. It has been decided to erect concrete silos of a total capacity of 200,000 tons for the bulk storage of wheat at the ports of Kandla, Madras, Bombay and Visakhapatnam

Indo-Czech Trade Agreement

A new trade and payments agreement between India and Czechoslovakia has been concluded in Prague. The agreement, which comes into effect from 1st January, 1961, will remain valid for a three-year period. It provides a framework for expanding trade between the two countries on the basis of equality and mutual benefit. Both countries have agreed to grant each other most-favoured-nation treatment and other trade facilities to enable closer commercial and economic relations. Payments relating to commercial and non-commercial transactions between Czechoslovakia and India will be made in Indian rupees. Schedules listing the goods available for export from either country to the other have been included. Among the articles listed for export from India, are cotton textiles and fabrics, jute manufactures, coir yarn and manufactures, woollen textiles, vegetable oils and hydrogenated oils, spices, tobacco, tea and coffee, processed and semi-processed hides and skins, shellac and shellac products, mica, manganese and ferro-manganese, chemicals and pharmaceuticals, handicrafts and handlooms, tinned fruits, plastic goods, sports

goods, engineering goods, cashewnuts, deoiled cakes, cinematograph films, books, magazines and pictures, etcetera. The items of import from Czechoslovakia will be iron and steel products, special steel, alloy steel, writing and printing paper and newsprint, various types of machinery and machine tools, capital goods, dyes, intermediates and chemicals, diesel generating sets, tractor and tractor parts, ball and roller bearings, tyres and tubes, mild steel products, etcetera.

Working of Central Excise Department

The Government of India has constituted a seven-member committee to carry out a comprehensive examination of the working of the Central Excise Department and to make recommendations for its reorganisation. Mr. A. K. Chanda, until recently Comptroller and Auditor-General of India, is the chairman, the members being: Mr. Babubhai M. Chinai, M.P.; Mr. N. P. Nathwani, M.P., Mr. B. C. Ghosh, M.P., Mr. J. D. K. Brown, lately president of the Associated Chambers of Commerce; Mr. A. M. M. Murugappa Chettiar, president of the Federation of Indian Chambers of Commerce and Industry, and Mr. R. N. Misra, Director of Inspection, Customs and Central Excise. The last-named will also be the secretary of the committee.

The terms of reference of the committee will be: (1) to examine generally the organisational and administrative set-up of the Central Excise Department and advise the Government on such reorganisation as may be necessary for achieving maximum efficiency at minimum cost; (2) to review the Central Excise Act as well as the rules and procedures and recommend the steps required for their rationalisation, simplification and improvements, wherever necessary, so as to adapt the machinery better to the changing conditions; (3) to make any other recommendations germane to the objectives of the investigation.

The resolution of the Government of India, which announces the appointment of the committee, says there has been in the recent past a steady increase in the revenue realised from Central excise duties and the importance of these duties as a source of revenue is bound to grow in the years to come. It is, therefore, necessary that the organisation entrusted with the task of collecting excise duties and the procedures followed by it should be examined with a view to adapting it to its new rôle. This view was also expressed by the Estimates Committee of Parliament in its fifty-seventh report.

Contract Labour for Collieries

The Government of India has constituted a court of enquiry to examine the question of abolition of contract labour in the coalmining industry. Mr. G. Palit, Presiding Officer, Central Government Industrial Tribunal, Dhanbad, will be its sole member. The court of enquiry will examine whether the system of employment of labour through contractors in the coalmining industry can be abolished without impairing productivity and, is so, in which sectors of employment and within what period. It will also consider what measures, statutory or otherwise, should be devised to ensure fair wages and conditions of work to labour employed through contractors and sub-contractors, to the extent the contract system cannot be abolished in the industry. The court of enquiry has been constituted under Section 6 of the Industrial Disputes Act, 1947. The Act lays down that ordinarily a court of enquiry shall submit its report within a period of six months, besides laying down the procedure to be followed for the enquiry. The court of enquiry will be free to appoint one or more persons having special knowledge as assessors to advise it in its proceedings.

Winter Session of Parliament

The winter session of the Lok Sabha opens here on 14th November. Thirteen sittings have been planned for November and 17 for December, the session terminating on 23rd December. The Prime Minister's statement on his participation in the U.N. session and the Finance Minister's statemen on his visit to London and the U.S.A. will be the highlights. The Assam controversy is likely to creep in, so will the mishandling of the production and transport of coal. The session, however, may be dominated by "half an hour" discussions, 17 notices of which have so far been received by the Lok Sabha Secretariat.

Low-cost Car

There is a notice to discuss the Government's resolution setting up a committee for an economy car, the talking points of which are:

(1) the advisability of establishing a factory in the public sector and setting up of a number of ancillary units in under-developed areas;

(2) the method and extent of protection to be granted to the motor-vehicle industry;

(3) the level of indigenous content in case of certain motor-vehicle manufactures and measures to be taken to increase such content;

(4) the target for commercial vehicles at the end of the third five year plan;

(5) the urgency for the manufacture of cheap and strong cars of two types without delay and the need to reduce manufacturing costs, in collaboration with the Defence Ministry;

(6) the system of price fixing and the principle of fixed margins of profits for manufacturers;

(7) the question of price control for lorries and cars and the need for manufacturing more lorries and carriers; and

(8) the need for liberal provision of foreign exchange for the import of components.

Cotton Textile Wages

Another motion seeks to discuss the Government's decision on the recommendations of the Central Wage Board for the Cotton Textile Industry. The following points have been indicated by the members for discussion on the motion:

(1) the capacity of industry to pay increased wages and the impact of the recommendations on other industries and exports;

(2) discrimination in the wages suggested by the Board;

(3) merger of D.A. with the basic wage and neutralisation of dearness allowance;

(4) recommendations concerning gratuity;

(5) the financial effect of the various recommendations, their implementation in various States and effect on uneconomic units;

(6) the fixation of workloads and the rate of payment of wages;

(7) the progress of implementation of the recommendations in various States.

Inflation

The third important topic for discussion is the abnormal rise in the prices of commodities "throughout the country", the talking points of which, so far indicated, are:

(1) the impact of rising prices on the implementation of five year plans;

(2) the effect of prices on the standard of living and the need to check the rise in prices;

(3) the frustration among fixed income groups and salaried employees; and

(4) expansion in money supply.

Side by side, there is a notice to discuss the economy measures adopted by the Government, the points for discussion being:

(1) the need for adopting more stringent measures for economy and the scope of various measures for effecting economy; and

(2) the failure to implement various measures and mounting expenditure on administration and ceremonies.

Direct Taxes

The Tyagi Report on Direct Taxes is another subject on which discussion is sought along the following lines:

(1) incidence of direct taxation and the need for overhauling and rationalising the structure of direct taxes;

(2) increase in income-tax arrears and ways and means to collect dues from the assessees;

(3) prevention of tax evasion;

(4) increased punishment for tax-dodgers and firms and individuals black-listed for tax-dodging;

(5) abetment of tax evasion to be penalised;

(6) the need to evolve a simple procedure and to re-orientate the official machinery for effective implementation.

(7) the need for the independence of appellate tribunals; and

(8) the question of estate duty exemption certificates.

Sugar Industry

Sugar is yet another subject on which the following points have been indicated by the member concerned for discussion on the motion:

(1) the need for a change in the distribution system of sugar in view of the increased production;

(2) the profits which are being realised indirectly by several State Governments in the distribution of sugar;

(3) the integrated development of the sugar industry in the country;

(4) the country's capacity to export sugar;

(5) the need for the removal of all controls on the sugar industry; and

(6) proper and economical use of molasses.

Public Sector Industries

The public sector industries are not neglected. The talking points indicated are:

(1) the need to reduce heavy overhead costs and to run the undertakings in a profitable manner;

(2) fixing regulations to recruit personnel with due regard to the interests of local talent;

(3) profitable marketing of the products of the companies in the public sector;

(4) association of labour with management;

(5) need for imparting special training to staff and to run companies on commercial lines by cutting red-tapism;

(6) capital structure, depreciation policy, price policy, manner of calculating profits and building up of reserves:

(7) participation of private capital in the undertakings;

(8) undesirability of permitting haphazard growth of public sector undertakings as corporations;

(9) the need to restrict the number of corporations;

(10) ban on the employment of retired officers;

(11) the need to prescribe financial principles to govern (a) capital structure; (b) depreciation policy; (c) contribution by such corporations to general revenues; (d) manner of calculating net profits; (e) building up of reserves; (f) price control of commodities produced or services rendered by such corporations; and (g) other financial adjustments;

(12) parliamentary control with particular reference to (a) corporation budget; (b) laying down of policies; (c) changes in directorate; (d) control of capital issues; (e) prevention of monopolistic trends; and (f) audit control.

Industrial Finance Corporation

The Industrial Finance Corporation will have its share, time permitting. The following points have been indicated by the member for discussion on the motion;

(1) the need to give assistance to deserving industries, especially in the south;

(2) discrimination shown by the Corporation in giving assistance and the need to fix priorities for giving assistance;

(3) the need to simplify the procedure for giving loans and the actual payment of money;

(4) a review of the development of industries, particularly in the fields in which the Corporation has advanced loans.

(5) arrangement for the training for supervisory staff of State Finance Corporations;

(6) the need to grant loans to industrial co-operative societies and to promote small-scale industries;

(7) the necessity of introducing checks to prevent misuse of the loans granted; and

(8) steps for the realisation of overdue loans.

A discussion is proposed on the National Industrial Development Corporation, the points indicated being:

(1) the need for the development of industrially backward areas;

(2) the need for expanding the activities of the Corporation;

(3) review by the Government of the working and affairs of the Corporation and steps to be taken to improve them;

(4) schemes of financial assistance rendered to the industries and their result;

(5) schemes of rehabilitation, modernisation and expansion of industries;

(6) impact of these schemes on the economy of the country with particular reference to new industries and regional distribution of credit; and

(7) composition of the board of directors.

New Bills

In addition to 15 pending Bills, included in which is the Bill amending the Companies Act, 21 Bills have so far been proposed for the session. The list, however, does not include Bills to ban strikes of Government employees or anti-Indian propaganda on the borders. The following are the important new Bills, planned for the session: the Indian Telegraph (Amendment) Bill; the Indian Wireless Telegraphy (Amendment) Bill: (These bills seek to cover the licensing of T.V. sets possessed and/or worked in India.) the Constitution (Ninth Amendment) Bill. (This is to give effect to the transfer of certain terriories to Pakistan in pursuance of agreements entered into between the Governments of India and Pakistan.) The Acquired Territories (Merger) Bill provides for the merger with the States of Assam, Punjab and West Bengal of certain territories acquired as a result of agreements entered into between the Governments of India and Pakistan and for matters connected with them. The Slum Areas (Improvement and Clearance) Amendment Bill; it seeks to quicken the pace of slump improvement and slum clearance work in Delhi and to give protection to *Amledars* against eviction. The Specific Relief Bill defines and amends the law relating to certain kinds of specific relief obtainable in civil suits. The Limitation Bill seeks to consolidate and amend the law relating to limitation. There is a Bill to define the duties and powers of the Comptroller and Auditor-General of India. The marking of Heavy Packages (Amendment) Bill provides for the appointment of an authority for the enforcement of penalties under the Act. The Forward Contracts (Regulation) Amendment Bill will enable the Central Government and the Forward Markets Commission to keep a more effective watch over forward trading activities and also to remove difficulties which are experienced in the working of the Act. The Industrial Employment (Standing Orders) Amendment Bill extends the scope of the parent Act and provide for appointment of additional certifying officers, ecetera. The Preventive Detention (Continuance) Bill extends the life of the Preventive Detention Act, 1950, for a further period of three years.

Raw Materials Committee for Steel

The first meeting of the Raw Materials Committee for Steel was held here last week. The object of the Committee is to assess and advise on the immediate and long-term problems of the supply and movement of coal, iron ore, limestone, dolomite and other materials, including refractories, to the steel plants, so as to ensure efficient production and the optimum use of capacity. The coal shortage, as could be expected, came up for discussion by the Committee. The coal industry, it will be recalled, has been demanding a price increase in order to step up its production. This demand has been persistently turned down by the Ministry of Mines and Fuel. The Raw Materials Committee, it is believed, found a *via media* through the possibility of the payment of a bonus by the steel plants to collieries supplying coal with less than a stipulated ash content. The Committee endorsed the recommendation of the Vishnu Sahay Committee that the steel plants should be the first charge on the railways, as far as the transport of the raw materials is concerned.

Parliamentary Committees for Third Plan

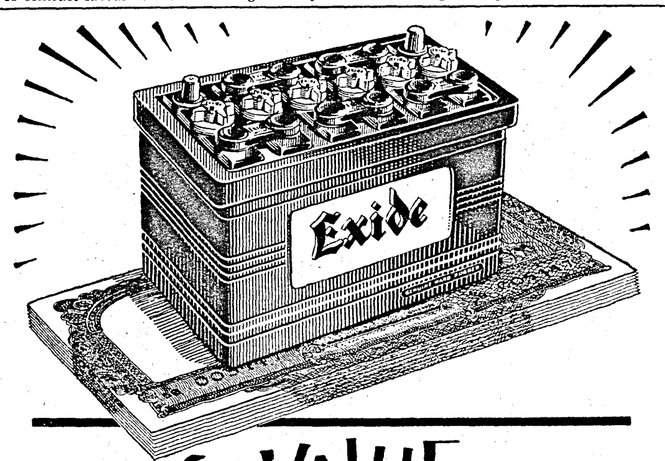
Four committees of Parliament dealing with the third five year plan are meeting here on 12th, 13th. 14th and 15th November. These bodies are like open houses, membership of which is open to all members of Parliament.

Visit of World Bank Representative

Mr. Stewart Mason of the World Bank is expected in New Delhi shortly to discuss the present and future lending programme of the Bank.

Montecatini Credit Offer

The Italian firm of Montecatini has offered a credit of Rs. 50 crores for setting up projects by mutual consultation during the third plan period. The firm is already collaborating in setting up a fertiliser factory in Neyveli and an aluminium plant in Madras.



BEST VALUE
FOR YOUR MONEY

A cheap battery may seem a bargain, but it is really costlier in the long run. The cheapest battery in the end is the one that gives the most in months of reliable service. The long-lived CB 95 alloy plates, the virtually indestructible Porvic separators and the shock-resistant hard rubber container all add up to make Silver Exide the cheapest battery in the long run. You get the best value for your money when you buy Silver Exide, the battery manufactured under strict Quality Control at every stage of production.

Silver Exide

Still keeps going when the rest have stopped

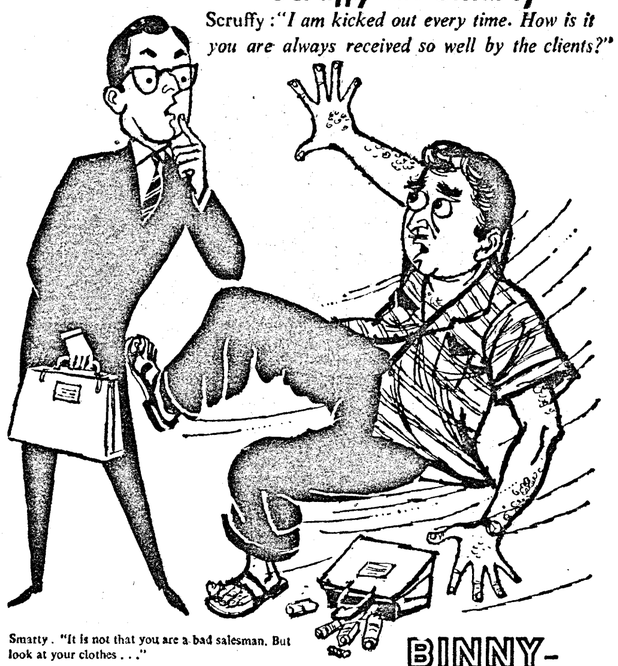
Scruffy and Smarty

Scruffy: *"I am kicked out every time. How is it you are always received so well by the clients?"*



Smarty. "It is not that you are a bad salesman. But look at your clothes..."

Scruffy: *"What do you mean? I am here to sell my products and not my clothes!"*

Smarty: "But the client judges your product by his first impression of you. So you must dress well. Preferably with BINNY'S. They Quality Control their production. Defects, invisible to the naked eye, that might have crept into the cloth are carefully eliminated at every stage of production. That is why BINNY'S suitings look smart and last long."

BINNY—
a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings - Khaki Drills - Bleached & Dyed Drills - Anticrease Suitings - Tussores - Union Fabrics - Towels - Silk Sarees - Rugs - etc. etc.

REMEMBER, you can buy all your requirements of BINNY'S fabrics at our controlled rates from authorised BINNY'S Stockists who display this Sign board.

London

U.K. GOVERNMENT CLEARS OFF DEBT TO I.M.F.

STERLING AREA RESERVES RISE IN OCTOBER

(FROM OUR LONDON CORRESPONDENT)

THE Treasury has announced that the U.K. Government has paid a final instalment of £30 million to the International Monetary Fund to wipe out the last of its debt of $561 million incurred in 1958 at the time of the Suez crisis. It was to have been repaid by the end of 1961 or earlier. In fact, accelerated repayments of $56 million in August, $56 million in September, and $83 million in October have now completed the transaction. They have incidentally helped ease the pressure on the dollar in a period of strain. In spite of the £30-million repayment and a further debt instalment of £5 million paid to European creditors, the gold and convertible currency reserves rose by £11 million and stood at £1,121 million on 31st October. Allowing for the repayments, the true inflow into the reserves during October must have been £46 million—an exceptionally large gain for the month. Much of it reflects the continued flow of U.S. and Continental money into London, not just for short periods to take advantage of the high interest rates current in the U.K., but also for solid investment in British industrial shares and even Government bonds. Recent U.S. buying of British War Loan has just been followed by the announcement that "American depository receipts" for 3½ percent War Loan are to be issued in New York by the Morgan Guaranty Trust. They will be available in sums of £20 each to American investors on the "over the counter" market in Wall Street.

Trustee Investments

The Queen's speech at the opening of the new session of Parliament contained no real surprises, but the U.K. Government is obviously planning a busy legislative session with no less than 19 Bills as probable starters. The only unexpected one—not already foreshadowed in Ministerial pronouncements at one time or another—is that to amend the law on the responsibility for repairs as between landlords and tenants on short-time tenancies as a measure of relief for the latter and a form of restraint against the greed of the former. An all-round increase of pension at a cost of £160 million in a full year is envisaged by another measure already available in a draft form. The basic increases are 7s 6d for a single person and 12s 6d for a married couple, with proportionate increases in other benefits under the insurance legislation and, at the same time, there is to be an increase of 1s 3d a week in both the employer's and employee's contribution. The increases will be effective from next April. Among other legislation proposed is a measure to give effect to the U.K. Government's proposed reforms for the Transport Commission following the recommendations of the Stedeford Committee. Another important Bill will be that to amend the Weights and Measures Acts, the revision of which was being considered ever since the Hodgson Committee reported nine years ago. Yet another Bill seeks to "reorganise and improve Covent Garden Market"—a subject which, it is expected, will give rise to not a little controversy. Land drainage is another subject which will come under review, and it has acquired considerable topicality by the floods which are now causing much distress and dislocation practically all over the country. Here also there is likely to be criticism, mainly because the proposals are not radical enough.

Not Yet Time to Ease Up

The time had not yet come when credit restrictions could be relaxed, Mr. Selwyn Lloyd, Chancellor of the Exchequer, explained to the Institute of Directors in London when referring to the ½ percent reduction in Bank rate. Some might wonder whether the cut was the first sign of a change in the policy of restraint and credit restriction. It was "nothing of the kind." A Bank rate of 6 percent now appeared unduly high in relation to rates overseas. Because of the high Bank rate, short-term funds had been coming into London.

Mr. Lloyd believed that the present restrictions were "the right weapons to use." He did not say that every wage rate, price and profit margin should be frozen in perpetuity. But if they move ahead in advance of increased productivity, there is bound to be trouble. Mr. Lloyd also asked where, if taxes were cut, the money would come from for expanding expenditure. "I am told that I should remove purchase tax. From my point of view, there are 535 million reasons why I should not. It brings in £535 million."

Banks and the Squeeze

In the latest monthly statement of the London clearing banks, there is clear evidence that in the face of the squeeze, the demand for credit is still running at a high level. Whereas between 17th August and 21st September, advances rose by only £1.6 million, the total increased between 21st September and 19th October by £32 million, lifting the figure to a new record of £3,345 million. Detailed figures do not suggest, however, that there has been any fresh upsurge in bank lending. Of the £32 million increase, the National Provincial Bank accounted for £17 million, and the Westminster for £7.6 million, advances of the other clearing banks showing only minor changes. It is worth noting also that borrowings of the nationalised industries rose by £3.9 million to £72.6 million, so that loans to the private sector increased by only a little over £28 million, which could easily be explained by seasonal and other special influences. Another feature of the October statements is the relatively small decline of only £8 million to £1,304 million in the banks' investment holdings following a drop of £4.8 million in the preceding five weeks. The average liquidity ratio of the 11 banks is 31.47 percent, which compares with 31.57 percent in September and 34.36 percent in October last year.

Rise in Output Stops

A U.K. Treasury statement announces that the latest adjusted figures of the index of industrial production suggest that production, as a whole, has now stopped rising. The index number of industrial production (1954 equal 100) is estimated provisionally at 105 for August, compared with 110 for July. Figures for the corresponding months a year ago were: July 103 and August 98. The figures were affected in both years by the annual holidays. There was no increase in industrial production in the third quarter of 1960, compared with the second, when there was a 1-percent rise, compared with the first quarter. In the first nine months of this year, the gain on the same period of 1959 was 8 percent, and the index averaged 120, compared with 111.

The index prepared by the Central Statistical Office of the Cabinet Office, states: "On the basis of information so far received, the index of all industries for September 1960, is expected to be 123 or 124. The index for September 1959, was 118." This relates to the unadjusted figure. The adjusted figure is shown in the index for September 1960, as 120 or 121, compared with 121 in July and August and 120 in June 1960.

New Issues in October

October was an unusually active month in the new issue market. Figures compiled by the Midland Bank show that the amount of new money raised in Braitain in October was £77.4 million, which is easily the highest monthly figure for several years. It raises the total for the first ten months of 1960 to £479.9 million, compared with £405.6 million in the corresponding period of 1959 and with only £300.7 million in the first ten months of 1958.

The signs point to an active new issue market in the coming months. The capital-spending programmes of the steel companies will have to be financed in part by the issue of further ordinary capital. Towards the same end, the U.K. Government has formally undertaken to sell prior charge stocks in steel held by the Iron and Steel Holding and Realisation Agency. Steel issues of any kind, however, will be postponed until after the announcement in a few weeks' time of dividends and profit figures for the 1959-60 steel year. Meanwhile, banks with a liquidity problem on their hands are putting pressure on some of their industrial customers to replace bank borrowings with permanent capital.

Investment Plans

The prewar problem of mass unemployment has gone, and with it the hallowed notion of variations in Government capital expenditure to forestall a slump and curb the excesses of a boom. This view is advanced in a Government White Paper on public investment in Britain, published recently. Its main purpose is to give an indication of the future capital spending of Government departments, local authorities, and the nationalised industries. Schemes already approved for 1961-62 will involve an expenditure of £1,730 million. This is the figure that the former U.K. Chancellor of the Exchequer had in mind for the current year when he undertook in June to keep public spending in 1961-62 within the 1960-61 limit. In the light of more recent knowledge, capital spending in this year is expected to be around £1,670 million, that is, £60 million below Mr. Heathcoat Amory's original estimate.

Since 1950, public investment has accounted for between 7 percent and 8¾ percent of the gross national product. In the last five years, it has remained fairly constant at around 7¾ percent. Private capital investment, in contrast, has been rising steadily since 1952 and in 1959 accounted for 10 percent of the gross national product. Capital investment, both public and private, has risen from less than 15 percent of the capital gross national product in 1950 to 17.6 percent last year. About two-fifths of all public investment is made by the nationalised coal, gas, electricity, and transport industries and the two air corporations. Electricity takes the largest single slice in this group (£337 million in 1960-61) followed by the British Transport Commission. Another two-fifths is spent by local authorities and the remaining one-fifth by Government departments.

Changes in Policy

Official policy on public investment as a method of keeping the economy in balance has changed since the famous 1944 White Paper on "employment policy" which maintained that "for the purpose of maintaining general employment, it is desirable that public investment should actually expand when private investment is declining, and should contract in periods of boom." The latest White Paper says: "The implication was that large and prolonged economic fluctuations—as had been experienced before the war—would call for equally large counter-variations in the level of public investment. In the event, however, the rôle of public investment in preserving the balance of the economy has changed from that envisaged in 1944. There are several reasons for this. The improved knowledge of the economic situation derived from the better statistics now available has been used in the development of counter-cyclical policy, and monetary and fiscal measures, complemented by only marginal adjustments of public investment, have proved sufficient to prevent variations in economic activity from getting out of hand."

Another lesson which has been learned since the drastic scaling-down of public spending on the nationalised industries and other Government projects in late 1957 and early 1958, is that sudden revisions promote inefficiency and waste. The U.K. Treasury now concedes that "once work has begun on a project, it is usually uneconomic to attempt either to accelerate or to retard it at short notice." The White Paper outlines how public investment is controlled. Each summer, the Government considers proposals for capital spending in the following financial year, in relation to the total outlay proposed and against the background of the economic situation. Expenditure is approved in the aggregate and under each separate programme. The experience of recent years has been that actual expenditure falls short of the amount approved in advance. Finally, the White Paper points out that only the programme of Government departments are the immediate responsibility of Ministers. Over the rest of the field, the immediate responsibility is widely diffused.

Inter-E.F.T.A. Trade

The new Export Council for Europe, and the forthcoming London meeting of the Political and Economic Conference of the Seven arranged by the U.K. Council of the European Movement have focused attention on the prospects of increased trade within the "Outer Seven." A reminder of the opportunities was given by the Governor of the Bank of England in a speech in Sheffield. He made a supplementary point: "There is a lot of know-how in the City of London on export business which does not seem to me to get adequately used." He mentioned specifically the clearing and merchant banks: the latter with their international connections and specialist knowledge are a resource that ought to be more widely tapped. They are not really as forbidding as they seem to be from Birmingham, Manchester, and Newcastle. The City has also to offer the "Amstel Club," a relatively new association of European finance houses through which sales on medium-term credit may be financed with a minimum of formality. The "import factoring service" offered through the London office of the First National Bank of Boston ought to be better known than it is.

The strengthening of market links within the European Free Trade Association will be the concern of representatives from Chambers of Commerce who will meet separately in London during the conference arranged by the European Movement. Visits of industrialists between the E.F.T.A. countries are already planned. As a further move, Chamber of Commerce Publications has brought out a new booklet entitled E.F.T.A. Markets. This briefly surveys business opportunities in Britain's six partner nations (it is obtainable from 68 Queen Street, London E.C.4, for 2s 6d). Like the Export Council for Europe, the Chambers of Commerce organisations in the seven countries are not exclusively concerned with trade within the group. They also see their closer association as a step towards discussion with the conference permanently established by Chambers of Commerce within the "Six".

Jute

TRADE UNIONS CONTINUE TO OPPOSE LOOM CLOSURE DECISION

FURTHER MEASURES TAKEN TO REGULATE BUSINESS IN T. S. D. CONTRACTS

DURING the past week, protracted negotiations between the I.J.M.A. and trade union representatives failed to settle the controversial subject of the sealing of looms. The I.J.M.A.'s view that the raw jute shortage necessitated a cut in gunny production was not accepted by the unions. The latter maintained that India's production of raw jute, including mesta, would not be less than 6.2 million bales. In view of this, the sealing of 10 percent more looms in October was unwarranted, and the I.J.M.A. was urged to restore the cut in production which, according to the trade unions, had brought unemployment to 15,000 workers. The I.J.M.A.'s official estimate of the number of workers affected by the sealing of looms, however, was only about 8,000. It is understood that it offered a compromise to the effect that it would reduce the proportion of looms sealed from 19 percent to 14 percent, on condition that the unions agreed to a cut in working hours from 48 to 45 a week. This was rejected by the trade unions; they calculated that it would, in effect, mean closing 20.5 percent of the mills' capacity, instead of 19 percent. A deadlock was thus reached.

The unions' estimate of the size of the current crop is generally considered in trade circles to be too high. On the other hand, many think that the trade's own estimates are too low. Government circles indicate that it will be about six weeks before they make another official estimate, so it will be too late to provide any guidance. Whatever the size of the crop, it appears to many that it is far too early at this stage to be emphatic in forecasting shortages. It is fairly obvious that growers have been withholding supplies. Until recent years, farmers were compelled to market their crop soon after harvesting because they needed the money. The pressure has not been so marked this year, mainly because the high prices ruling recently have made growers financially more independent than they have ever been. Hence they have been able to feed the market at their own pace. The position now is that because jute dealers delayed purchases as long as possible in the mofussil, the mills were not able to make any substantial improvement in their stock position.

Quota System

The quota system for the purchase of raw jute recently introduced by the I.J.M.A. appears to be working well, although it does not appear to have achieved one of its main objects—to reduce the price of the raw material. In fact, prices have, if anything, risen slightly since its introduction. This is due to the method by which many mills have taken up their quota. Those having their own agencies have not bought much jute under contract, but have purchased most of their requirements in the agencies; this has kept upcountry rates very steady. At present, prices in the main agencies—with few exceptions—are above the parity of Calcutta rates, and sellers are reserved. The backlog still to be delivered against low-priced contracts is gradually being reduced, and the mills have been very lenient, giving options and extensions far beyond the normal limit, and also giving the same sellers the benefit of high-priced contracts to help them cut their losses. The question of Pakistani cuttings is causing anxiety, as rates now are more than double what they were at the time the contracts were made, and sellers are finding it difficult even to procure small lots due to the strong internal demand in Pakistan. Some of the largest and most reliable parties have hinted at their inability to meet their obligations, and many of the smaller sellers have already repudiated theirs.

T. S. D. Contracts

The East India Jute and Hessian Exchange has recently made considerable efforts to solve the crisis in the jute and gunny markets. New regulations have been issued, and now all trading in transferable specific delivery contracts in both raw jute and gunnies has to be registered with the Exchange within three days of the transaction taking place. In this way, it is hoped to control overtrading and speculation, which in spite of the recent restrictions, continues to exert a considerable influence on prices. The move has the backing of the Forward Markets Commission, and many think that for this reason it may be more effective than previous edicts.

The lack of interest from overseas consumers is reflected in the small rise in the Indian mills' gunny stocks during October. In spite of production being cut by the sealing of looms, stocks have risen, which fact can only be attributed to the absence of foreign buyers. The latter are strongly resisting the high prices, and many markets are in danger of being lost completely to substitutes. Indian prices are not the only ones that are high. Spinners and manufacturers in Europe and the U.K. have had to increase their prices in line with the high rates they have paid for Pakistani jute. Overseas traders refuse to believe that there is any great shortage of fibre in Pakistan. Government assurances on this point seem to have had little effect internally, but many overseas buyers are under the impression that any shortage there is man-made.

Gunny Stocks Rise

During October, stocks of jute goods held by mills reporting to the I.J.M.A. amounted to 78,500 tons, consisting of 30,400 tons of hessians (38.7 percent), 39,700 tons of sacking (50.6 percent) and 8,400 tons of other goods (10.7 percent). The total was 700 tons more than in the previous month, and 6,500 tons more than during the corresponding month of last year. Hessian stocks increased by 900 tons and sacking stocks by 200 tons, but there was a drop of 400 tons in other goods.

THE JUTE MARKETS

Manufactured Goods: There were no reports of overseas business at the opening last Thursday. Local operators moved cautiously as they awaited the outcome of the trade's talks with the Government about the introduction of the new East India Jute and Hessian Exchange regulations. There was some selling pressure from holders, however, so heavy goods prices dropped by Re. 1. B Twills opened at Rs. 176 for November shipment and Rs. 171.50 for January-March. Hessians were also quieter and 40in. 10oz. lost 75nP, to be quoted at Rs. 57.25 in the near and forward positions. Over the next two days, prices fluctuated widely. Although transactions were small, the market reaction was large and mainly downwards. By Saturday morning, B Twills had dropped to Rs. 174 and 40in. 10oz. hessians to Rs. 56.50, but these losses were more than recovered later. Prices moved erratically in spite of the anxiety of operators over the outcome of the various meetings held to discuss the market crisis. There was little change in prices following the publication of the I.J.M.A. gunny stock figures. In the absence of genuine overseas business, rates were somewhat artificial.

On Wednesday, opening quotations were as follows:

	November	December	Jan.-Mar.
40in. 7½oz.	42.75	42.75	42.75
40in. 8oz.	45.75	45.75	45.75
40in. 10oz.	57.00	57.00	57.00
B Twills	177.00	173.00	171.00
Heavy Cees (Plain)	176.00	173.50	171.00
A Twills	207.00	205.00	193.00
Liverpools	196.00	194.00	193.00
Cornsacks	180.00	178.00	175.00

Raw Jute: There was little interest in the Calcutta markets at the opening of the past week and prices tended to ease. They were prevented from showing a substantial fall by the activity in the upcountry markets of mills buying in the agencies. Conditions became steadier on Friday without any appreciable alteration in rates, in anticipation of the issue of quotas. These were held back, however, until after the week-end, and were reported to be larger than previously, although it was suspected they may be for a longer period. Up to the week-end, Assam Bottoms were quoted at Rs. 52 a maund, but this was generally considered to be nominal as there were only isolated sellers on account of the very steady upcountry markets, where transactions were taking place daily. On Monday, local rates were increased by Re. 1 and for the remainder of the week, they showed little variation. Arrivals in Cossipore were slightly lower than in the previous week and 722 wagons were reported, but this was considered about average for the time of year. Arrivals in the upcountry agencies were about average for the time of year, but were increasing in the Daissee areas.

Business was done at Rs. 54 for Northern and Assam bills of lading, and Rs. 53 for 15 days' shipment. Tossa and Daissee passed at Rs. 53 to Rs. 54. Some interest developed in mesta. Assam and Daissee mesta was done at Rs. 50 and jungli at Rs. 49.50.

On Wednesday morning, the market was unchanged and opening quotations were as follows:

	Landed at mills (Basis Bottoms) Rs. a 100 kilos.	Rs. a md.	Shipment
Assam	142.00	53.00	November
Northern	139.25	52.00	,,
Purnea Desal	136.75	51.00	,,
Daissee Selected	143.25	53.50	,,
Assam Tossa	144.75	54.00	,,
Mesta:			
Assam-Northern	135.25	50.50	,,
Daissee-Desal	134.00	50.00	,,
Jungli	132.50	49.50	,,
Pakistani N. C.	235 a bale		

THE FOREIGN JUTE MARKETS

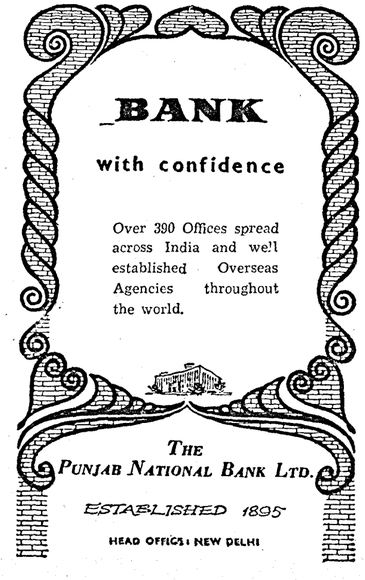
SPINNERS COMPLAIN OF HIGH PRICES

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute sellers in Dundee are reluctant to allow fibre prices to decline. They went up fast enough, but are slow in coming back to much more reasonable levels. Meanwhile, consumers of jute yarns, cloth and bags are grumbling seriously about high prices, so they are refusing to pay them, except for the most urgent needs. Actual business is confined to small lots for delivery as early as can be given, and unfortunately there are too many sellers able to deliver promptly. Unless matters improve, there must be a good deal of short-time working in Dundee in the near future. Both spinners and manufacturers are now waiting anxiously for prices to weaken in order to bring down the rates for yarns and cloth to a more reasonable level.

Fibre prices were irregular last week, ranging from £200 for Mill Firsts to £210, while Mill Lightnings were quoted from £193 to £200 and both Mill Hearts and Grade Hearts were scarce at £189 and £185, respectively, for November-December, c.i.f. U.K.-Continent. There were buyers of the Hearts afloat but no sellers. Grade Tossa-2/3 is now quoted at £198 and fours at £193, with Continental Tossa-2/3 at £190, same shipment. Very little business is being done in fibre. Spinners are pretty well bought, since they purchased when prices were really reasonable. Figures show that the U.K. has bought about 100,000 bales more this season than in the last. Spinners are busy enough at present, but since no fresh business is coming in, order-books might quickly grow thin.

Calcutta goods are irregular, but there was a reduction last week to 87s 3d for 40in. 10oz. and 65s 9d for 7½oz., November to March, with B Twills at 268s 6d November, 265s 3d December and 262s 3d January-March, all f.o.b., Calcutta. Jute yarn prices have shown no change at 24.60d a lb for 8 lbs C.H.W. cops and 25.75d for 8 lbs warp a lb with 3 ply 8 lbs twist at 27.67d a lb and 48 lbs rove at £152 15s a ton. The cloth end of



the trade is quiet but steady at 19.81d a yard for 40in. 10oz hessians and 16.55d for 8oz.

THE PAKISTANI JUTE MARKETS

BUYING INTEREST IN FIBRE DECREASES

(FROM OUR CORRESPONDENT IN EAST PAKISTAN)

THE loose jute market is very steady and the prices paid are not only higher than E.P.C. rates (when converted to a c.i.f basis), but are even higher than those of pucca bales in the Narayanganj market. This is most unusual. The pucca bale market cannot be called really steady, although some fancy prices have been paid. The steadiness in loose jute merely reflects the smallness of arrivals, which is due partly to middlemen's losses and partly to the harvesting of the very large rice crop. Furthermore, the rivers have fallen considerably and there is always the interim period when jute cannot be brought by water because the waterways have dried up. The roads are still too muddy for bullock carts to move. This restricts arrivals. It is not correct, therefore, to judge the jute market by the present prices of loose jute. Imports are small, but prices have risen by only a few rupees, which indicates at least a lack of buying interest.

Interbaler business has been restricted mainly to mill buying. As this has been spasmodic, it is hard to quote genuine pucca bales prices. The rates depend on whether on one particular day the mills are in the market, and the sale prices also vary from baler to baler. Apart from a few larger balers, there is a certain eagerness to sell which accounts for the price disparity of as much as Rs. 10 a bale in one day. Most of the mills are no longer interested in cuttings, but as there have been fairly large arrivals of Pakistani cuttings in Calcutta, the cuttings market has not reacted quite as much as long jute.

Overseas prices rose when the E.P.C. levels were raised by £9. After the first spurt of business, however, overseas interest has died down; although buyers are paying fairly high prices, there are very few buyers, and indications are that there are more sellers. While there is no doubt that there is a short crop and that a long position will pay a dividend in the long run, it is likely that there may be yet another price drop, before the final rise comes. In about 15 days, the muddy tracks will have dried up and bullock carts will find it easier to move. Shortly after paddy harvesting, labour will once again be available for bringing in jute to baling centres. There is at present a serious financial squeeze, which not only encourages balers to sell where possible, but also restricts them in their buying. The proportion by which banks have increased facilities to their clients this year is much too small in relation to the rise in prices. Added to this is the chaos caused in Chittagong by the cyclone which will delay shipments and, therefore, payments. A pause is, therefore, expected in the market, possibly even a drop in prices, which will no doubt encourage buyers overseas to sit out awaiting better prices while trying to live on afloat jute.

E.P.C. registrations for the second half of October amounted to 113,698 bales. Egypt was the largest buyer with 26,000 bales, the U.K. took 22,000 bales, Burma 15,000 bales and Poland 12,000 bales.

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October as follows:

Description	31st October, 1960 Lakh Yds. (000 Metres)	31st October, 1960 000 Tons (000 Metric Tons)	30th September, 1960 Lakh Yds. (000 Metres)	30th September, 1960 000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	Increase over (+) or decrease from (−) last month 000 Tons (000 Metric Tons)	31st October, 1959 Lakh Yds. (000 Metres)	31st October, 1959 000 Tons (000 Metric Tons)
Hessian cloth and bag	11.21 (10,24,34)	30.4 (30.9)	10.82 (9,89,57)	29.5 (30.0)	+39 (+35,27)	+0.9 (+0.9)	10.49 (9,58,89)	29.1 (29.5)
Sacking cloth and bag	9.40 (8,59,94)	39.7 (40.3)	9.52 (8,70,56)	39.5 (40.1)	−12 (−10,62)	+0.2 (+0.2)	7.63 (6,97,29)	32.5 (33.1)
Others		8.4 (8.6)		8.8 (8.9)		−0.4 (−0.3)		10.4 (10.6)
Grand Total		78.5		77.8		+0.7		72.0
(000 Tons-Metric Tons)		(79.8)		(79.0)		(+0.3)		(73.2)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

MONETARY POLICY

Some Reflections on Monetary Policy. By Sir Oliver Franks. (Published by Asia Publishing House, Bombay. Price Rs. 4.25, pages 72.)

Asia Publishing House must be congratulated on bringing out Sir Oliver Franks's three lectures delivered under the auspices of the Dorab Tata Fundation. Sir Oliver cautioned the audience of his preoccupation with the British monetary system only, based on the Radcliffe Committee's findings. The three lectures were : objectives of monetary policy, how that policy works, and its international implications. The first stresses that the U.K. Government has explicitly taken responsibility for broad decisions of policy affecting the general health of the economy—particularly employment, prices, foreign reserves and economic growth. Unlike in the past, the Government and economists in Britain now realise that the desirable policies for these different facets of the economy may come into conflict. In his second lecture, Sir Oliver stresses the special features of the British economy in the 1950's, including the legacy of the second World War. Perhaps a major finding of the Radcliffe Committee was the wide range of financial institutions and of assets a borrower in the U.K. can successively fall back upon to finance his projects as market conditions change. This has led to two negative discoveries —first, the prime instrument of Government policy is not the mere control of the supply of cash, and secondly, the supply of money too is not the chief regulator of monetary policy because of the wide range of entities which are and are not money. A further lesson of the postwar years is that changes in interest rates have only a gradual effect.

As for the international aspects of monetary policy, perhaps the key is supplied by Britain's exceptional dependence on international trade for her prosperity. Sir Oliver cites some interesting findings of the Radcliffe Committee on the likely magnitude of foreign resources on which Britain could fall back, if needed. These add up to considerably more than the traditional foreign exchange reserves. He has also shown that between 1949-59, including £337 million of foreign aid, the U.K. earned a payments surplus of £1,572 million, of which as much as £1,486 million was invested abroad. Two ideas were placed before the audience to deal with the problem of international liquidity—raising the dollar price of gold, and a gradual transformation of the International Monetary Fund into a Central Bank of central banks. Sir Oliver favours the latter as an objective of official policy but dismisses the former since it introduces instability in a sphere where stability is vital.

JOBS FOR THE MILLIONS

Unemployment, Full Employment and India. By Nabagopal Das. (Published by Asia Publishing House, Bombay. Price Rs. 8, pages 91.)

This is the third edition of Dr. Das's book. With but few exceptions, it is eminently readable, as his writings often are. But that seems to be its only merit. Few among us can do justice to this important subject within the compass of a slim volume. In the first part, the evolution of a social conscience concerning unemployment has been traced—in Britain particularly—and the conclusions of the Keynesian analysis given, which refused to blame fate for unemployment. The book summarises the available surveys and estimates of unemployment to assess the problem in India, and then follows a discussion of employment exchanges. It is stated that an employment policy for India really started with her first plan. Dr. Das realises—and credits the Government too with realising—that the country's financial resources are totally inadequate to deal with the problem expeditiously. The eight-page chapter on the "programme for the future" is perhaps the most disappointing. Undoubtedly, "what is needed is a grim determination to embark on a policy of such outlay as would absorb the available manpower". He even advocates, if needed, employment in relatively "useless" occupations and goes on to suggest "extended" public works to employ the 10-million persons whom the third plan will fail to employ, at one rupee a day for 300 working days a year, involving an outlay of Rs. 1,500 crores! Where is this to come from? "..... drastically reduce—at least for the third plan period—some of the other so-called desirable schemes which do not have much employment potential". Suggestions of this nature surely merit no comment from a reviewer.

FOR THE INVESTOR

Money at Work. Edited by Milton Grundy. (Published by Sweet and Maxwell Ltd, London. Price 18s 6d, pages 254.)

The second edition of this book is likely to prove as useful as the first. The difficulties and complexities of investment are well known. Once a person makes up his mind to invest his money, many experts are available for advising him how to do it best. But an expert can hardly advise him on general policy. An investor, for instance, has to choose whether he wants to invest his money in land, shares or Government securities. This book is likely to be of great help in making such general choices.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) declined by 0.7 percent to 126.1 during the week ended 20th October, 1960, compared with 127.0 (revised) for the previous week. The index was higher by 0.3 percent and 6.1 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The prices of maize in Bhilwara and eggs in Bombay (−6% each), jowar in Jhalawar, salt in Cuttack and fish (−5% each), bananas (−4%), bajra, oranges and groundnut oil (−3% each), urad and gingelly oil (−2% each) and rice, mung, ghee, gur and coffee (−1% each) declined, while those of onions (+17%) and maize in Ludhiana (+14%) and in Khagaria (+12%), eggs in Calcutta (+14%), jowar in Rohtak (+13%), salt in Tuticorin (+11%), cashewnuts and tea (+5% each), potatoes (+4%), chillies (+3%), gram and cardamoms (+2% each) and barley, arhar, coconut oil and turmeric (+1% each) moved up, and the index for Food Articles stood at 121.4 against 121.5 (revised) for the earlier week. The index for Tobacco remained stationary at the previous week's level of 103.7. The index for the Fuel, Power, Light and Lubricants' group worked out to 120.0, compared with 119.9 (revised) for the earlier week. The prices of castor oil (+1%) moved up. The index for Industrial Raw Materials receded by 1.8 percent to 147.5 due to a fall in the prices of raw jute (−5%) and copra and lac (−1% each), although those of raw hides (+7%), rapeseed (+3%), tanning materials (+2%) and raw silk, linseed and castorseed (+1% each) showed advances. Higher prices of linseed oil, rayon yarn and copper (+1% each) raised the index for Intermediate Products by 0.4 percent to 130.6, compared with 130.1 for the earlier week. The prices of zinc (−1%), however, moved down. The index for Finished Products fell by 1.7 percent to 124.0, against 126.1 (revised) for the previous week. Items which showed variations during the week were jute manufactures (−6%), cotton cloth (mills) (−2%) and general chemicals (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base 1952-53=100)

Pardon our Presumptuousness..... but.....

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living....

Today, on the eve of the Third Five Year Plan, we of the Raza Buland Sugar Co. Ltd. believe that 25 years' useful service to the Nation is something to talk about, but we will rest contented by narrating a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past 12 months.

At the close of the last crushing season we ....

Crushed.....Over 1,13,00,000 maunds of Sugarcane
Bagged.....Over 10,93,000 maunds of Sugar
Paid to Cane-growers.....More than Rs. 1,76,00,000
Paid to Workers.....Over Rs. 17,70,000

And expect to pay to the Government and National Exchequer as Excise and Taxes Over 1,55,00,000 Rupees.

On the occasion of our Silver Jubilee celebrations recently almost a hundred of our oldest workers who had served the Raza Buland Factories for over 25 years were awarded silver medals, and cash awards.

These are our humble contributions towards the cherished targets and goals of

DECISION ON COPRA IMPORT LICENCES RESENTED

KERALA GOVERNMENT URGED TO INTERCEDE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

COCONUT oil millers in Kerala apprehend that the Central Government's recent proposal to grant copra import licences to exporters of groundnut oil as a part of its export promotion scheme will ruin them. They have, therefore, requested the State Government that it should come to their rescue and persuade the Central Government to drop the proposal since it will strangle an industry which provides employment for about 40,000 persons and contributes a substantial amount to the State exchequer by way of sales tax. The Kerala Government had agreed to interfere, and the Chief Minister, Mr. Thanu Pillai, is stated to have told the millers' deputation that he will take up the matter with the Central Government. The latter's decision to "subsidise groundnut oil exporters with copra import licences" will affect the Kerala oil milling industry in the following manner, according to millers in the State. Out of the total import quota worth Rs. 8.52 crores for every half-year, Kerala gets licences worth Rs. 1.47 crores or 17 percent of the total foreign exchange made available by the Government. There is no groundnut oil exporter in Kerala, so if the new scheme is put into effect, the State will not get any portion of the imported copra and the entire import will be diverted to places like Bombay and Calcutta which are the important groundnut oil exporting centres. If Kerala loses her quota of imported copra, her oil milling industry will be practically paralysed, millers say.

Prices Rise

For the past three years, prices of indigenous copra have been steadily rising, mainly due to the conditions attached to the import of Ceylon copra. According to the present arrangement, the quantity of copra which a Kerala miller can import is 12 percent of the actual indigenous copra crushed by him. The price of Ceylon copra being relatively low, local millers purchase indigenous copra at an "artificially high price" so that they may be able to crush a high quantity of indigenous copra and thus become entitled to a higher quantity of Ceylon copra.

Most of the millers outside Kerala are scheduled units and imported copra is allotted to them not on a crushing basis but on the basis of their imports. A good proportion of total imports is allotted to them irrespective of the quantity crushed by them. But as the demand for copra is high, millers outside Kerala used to buy it from Kerala as well. Millers in the State fear that if the Central Government's scheme comes into effect, all the imported copra will flow into the hands of their counterparts in Bombay, Calcutta and other places. Kerala's main market for coconut oil is north India. If the entire imported copra is made available to millers in Bombay, Calcutta and other such places, more mills are likely to be started there. Kerala millers say, therefore, that there is no possibility of their getting any portion of the imported copra even if they are willing to buy from groundnut oil exporters.

Keen Competition

Furthermore, it will not be possible to run the mills on the indigenous copra alone except at a great loss, since the mills in Kerala will have to face keen competition from those in north India which get Ceylon copra at a low price. Until now, the loss sustained by them on account of using indigenous copra was being made good by the margin derived from Ceylon copra. If imported copra is denied to Kerala millers, the mills numbering about 1,500 will have to close down gradually. This has been pointed out by the millers' association in a memorandum to the State Government. Besides, it is doubtful how far the system of subsidising exports is a sound policy. The recent trend of groundnut oil prices confirms this belief among millers in Kerala. The price of the commodity in India has been steadily going up following the announcement that its export might be subsidised. Prices in the foreign market, on the other hand, have gone down in view of the possibilities of larger exports. So the tendency of the internal and foreign prices to move in the opposite direction may wipe off the incentive provided by the new scheme. Groundnut oil exporters may, therefore, be forced to ask for more subsidies. Exporters of several other commodities, too, have started asking for similar subsidies. The new export promotion scheme will, therefore, ultimately do more harm than good to this country.

Domestic Consumption

It has been pointed out that huge exports of edible oil should not be encouraged, since it will seriously affect domestic consumption. Prices of almost all edible oils have risen steadily. So informed sources believe that the Central Government might proceed cautiously in granting quotas to groundnut exporters in view of the recent rise in the price of the commodity. Although tenders submitted might total well over 100,000 tons, New Delhi is not expected to allow exports exceeding 20,000 tons by January 1961.

Raising Tea Production and Exports

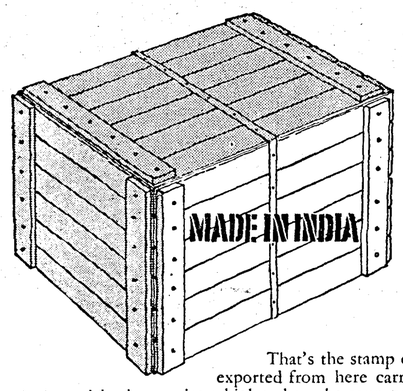
The Central Deputy Minister for Commerce and Industry, Mr. Satish Chandra, recently told the United Planters Association that the Finance Ministry is at present working on a scheme for consolidating various taxes on tea into one single levy. The Government has accepted the scheme in principle. Mr. Chandra appealed to planters to increase tea production and exports. World supply is lagging behind demand, so India can take advantage of the prevailing situation. As for coffee, the Minister felt that the Coffee Board should become more export conscious and make bigger export allocation for the Plantation variety. India is facing a foreign exchange crisis, so maximum exports are the need of the hour. Mr. Chandra said that efforts should be made to diversify India's export markets, apart from maintaining the traditional ones. Referring to incentives asked for by planters, he said that these could only be temporary expedients. Figures with the Finance Ministry on profits, overseas remittance and dividends declared by plantation companies showed that the level of prosperity in the industry is satisfactory, he added.

The chairman of the United Planters Association, Mr. H. C. Kothari, enumerated the incentives required to fulfil the production and export targets for the third plan period. He emphasised the need for expanding the internal market for tea and for adequate fertiliser supplies at the right time. There is also a need for reducing the tax burden which will release funds for development expenditure planned phasing in the implementation of the provisions of the Plantation Labour Act and a cut in Kerala sales tax. Besides, the export duty should be reduced so that Indian teas might improve their competitive position in the world markets. Other spokesmen at the meeting referred to the falling export prices for coffee and pleaded for the setting up of the right machinery to deal with the increased production.

COCHIN TEA SALES

At Sale No. 43, 558,000 kilograms of tea were on offer. There was a strong general demand. Plain and low mediums were 10nP dearer while mediums and good mediums were fully firm to dearer. Best liquoring high-growns were very irregular. Black leaf grades, particularly fannings, were the strongest feature of the sale and were sometimes 50nP dearer. Whole leaf grades were strong and dearer.

ASP EEPC 9



That's the stamp each article exported from here carries. With it the article also carries a high stake—the country's prestige. If the article is below standard quality—if it does not conform to specifications or supplies are not according to approved sample, down goes India's prestige.

Let's give no occasion for the door to be slammed by others on further exports. One manufacturer's fault may spoil other's market as well and all goods "Made in India" get the blame.

Keep the country's reputation high—preserve the confidence which goods made in India have gained. Help the country to earn the much needed foreign exchange. Let your transactions be clean in letter and spirit and your manufactured articles maintain the highest standard. Strict quality control and adoption of modern techniques will enable your goods to compete in world markets

Deliveries on schedule and arrangement for Service after Sale will ensure repeat orders.

MORE CARGO HANDLED AT BOMBAY PORT

REVENUE SURPLUS BIGGER THAN ESTIMATES

THE Bombay Port Trust's administration report for the financial year 1959-60 says that the weight of cargo handled at the docks and bunders during the year amounted to 13,146,207 d.w. tons, an all-time record. Compared with the traffic of 1958-59, there is an increase of 1,394,606 d.w. tons. This also shows an increase over the figure for 1957-58, which was 13,110,500 d.w. tons.

The general account for 1959-60 closed with a surplus of Rs. 2,42.56 lakhs, compared with a surplus of Rs. 77.41 lakhs visualised in the budget estimates, 1959-60, and Rs. 94.30 lakhs in the revised estimates. The pilotage account showed a surplus of Rs. 10.28 lakhs, compared with the estimated surplus of Rs. 7.26 lakhs forecast in the budget estimates, 1959-60, and of Rs. 9.27 lakhs in the revised estimates. As far as the general account was concerned, the improvement over the revised budget was due to an increase of Rs. 63.06 lakhs in receipts and a shortfall of Rs. 85.20 lakhs in expenditure. The increase in receipts was mainly due to higher recoveries under various heads. The shortfall in expenditure was chiefly the result of the slow progress of repairs and maintenance, new minor works and dredging and less expenditure than anticipated on medical aid, water charges and the Chief Engineer's workshops, docks manager's and station establishments. The total actual expenditure on capital account was Rs. 1,53.17 lakhs, compared with the revised estimate of Rs. 2,46.43 lakhs. The withdrawals from the general reserve fund and the renewals and replacements fund for capital expenditure came to Rs. 53 lakhs and Rs. 79.57 lakhs, respectively, compared with Rs. 1,03.15 lakhs and Rs. 96.51 lakhs, respectively, visualised in the revised estimates.

Capital Expenditure

The total expenditure on capital account since the institution of the Trust amounts to Rs. 45.18 crores, from which a sum of Rs. 2.68 crores has to be deducted, being the book value of assets, which are extinct and have been written off. The cost of the Kennery and Dolphin Lighthouses and certain other properties originally made over to the Trustees by the Government free of charge are not included in this amount. Expenditure of a capital nature amounting to Rs. 87.16 lakhs is also not included as it was met from revenue. As against the net expenditure of Rs. 42.50 crores, the outstanding debt is Rs. 19.03 crores. The difference of Rs. 23.47 crores is due to repayment of debt, appropriations from revenue to capital and certain other adjustments.

Higher Import Volume

The volume of imports increased from 3.70 million tons in 1958-59 to 3.96 million tons and the volume of exports from 1.64 million tons to 1.80 million tons. The total traffic aggregated 5.76 million tons, compared with 5.34 million tons in the previous year. From the point of view of revenue earned, machinery formed the largest single item in the foreign import trade passing through the docks. The other important items, in the order of revenue earned on them, were grains (in bulk), iron and steel, vegetable and mineral oils, cement and cotton. In the export trade, important items, in the order of revenue earned on them, were oilcakes, piecegoods, manganese ore, iron, vegetable oils and cotton. There was a rise in the overall volume of dry cargoes imported and exported, the rise being marked in imports. The piece-work scheme, introduced with effect from 3rd March 1956, continued in force. The aggregate labour cost (including the cost of ancillary labour) for the year amounted to Rs. 98,12,767, compared with Rs. 93,50,631 during the previous year. The total tonnage handled by departmental labour was 3,450,830 tons, compared with 3,374,949 tons in the previous year, the average labour costs being Rs. 2.84 and Rs. 2.77 a ton, respectively. The measures previously taken to relieve congestion in the docks remained in force during the year. The policy of giving relief by remitting and writing off Port Trust charges in special circumstances was continued. The total amount of docks charges remitted and forgone during 1959-60 was Rs. 4.51 lakhs approximately. The volume of imports handled at the bunders, including Butcher Island, increased from 4.71 million tons in 1958-59 to 5.46 million tons and that of exports from 1.70 million tons in 1958-59 to 1.93 million tons. The total traffic aggregated 7.39 million tons, against 6.41 million tons in 1958-59. The increase, both in imports and exports, was chiefly under bulk mineral oils.

Port Improvement

Further progress was made with the various spill-over and new development and other schemes, included in the second five year plan. On the recommendation of Mr. Posthuma—the U.N. expert—it was generally accepted that the width to be dredged should be reduced from 3,000 feet to 1,200-1,500 feet in the middle portion and the depth from 34 feet to 32 feet below datum, so as to admit all vessels drawing up to 31 feet at any stage of the tide, except on rare occasions. Consequent on this, it would be necessary to take other measures, such as the provision of an additional number of harbour tugs. The quantity of silt to be removed was estimated at about 10.56 million tons, against 30 million tons originally envisaged.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 18, held on 7th and 9th November, the 70,836 packages for Export on offer met with a strong general demand. "Teas for price" and plain B.P.'s generally sold at about last rates. Dooars B.O.P.'s met with keen competition while black clean Fannings were the strongest feature of the sale and appreciated in price. Medium Assam B.O.P.'s and O.Fgs. met with a fair enquiry, but were irregular and sometimes easier. The B.P.'s in this category showed a further decline in prices, but Fannings were at times dearer. Stylish well-twisted whole leaf grades met with good support, but the poorer descriptions were occasionally easier. Legg-cut teas met with fair enquiry and were firm on last rates. C.T.C. teas were irregular; a few selected lines of Fannings, however, met with keen competition and were considerably dearer. The better Darjeelings met with more enquiry and generally sold well, although the poorer types were easier. Tippy teas were fairly well supported, but were a little irregular.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.30 to 5.70	2.04 to 2.10
Plain B.P.	4.50 to 4.65	1.86 to 1.90
Plain Fannings	4.80 to 5.10	2.04 to 2.10
Medium B.P.	4.65 to 4.95	1.90 to 2.08
Medium Fannings	5.00 to 5.40	2.12 to 2.20
Best Assam C.T.C. B.P.	6.10 to 6.50	2.60 to 2.60
Best Assam C.T.C. Fgs.	6.50 to 7.00	2.60 to 2.80

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings totalling 23,191 packages met with a good general demand. Plainer orthodox kinds sold at firm to dearer rates but the brighter and smaller Assams were generally lower. Legg-cut Dooars were irregular and slightly easier. Best and medium C.T.C. teas met with less demand and declined by 10nP or 20nP.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb.
Medium Dooars Dust	4.70 to 5.10	1.98 to 2.04
Medium Assam Dust	4.00 to 5.50	1.94 to 2.00
Medium Assam C.T.C. Dust	5.95 to 6.10	2.00 to 2.12
Best Assam C.T.C. Dust	6.20 to 6.40	2.50 to 2.80

(Quotations are inclusive of excise duty.)

There was a good general demand for the 416 packages of Leaf on offer.

GRAIN RATES RISE IN FREIGHT MARKETS

DURING the past week, slight improvements in rates have been seen mainly in Australian and North American grain business which dominated the market. In the coal trade, Hampton Roads-Japan paid slightly better rates of $(U.S.) 8.40 with 1,000 tons discharge free. Cuban sugar shippers accepted the unchanged rate of 93s for November-December loading to south China. In the Far East, fixtures of miscellaneous characters were reported. Some 9,500 tons of sugar in bulk Mackay-U.K. paid 87s 6d, 20,000 tons of rice from Shanghai-Whampoa to Ceylon was fixed at 34s f.i.o. stowed; Indian ore charterers paid 42s f.i.o. and trimmed for 9,000 tons of iron ore West Coast-Constanza-Rejeka. Pig iron shippers from Visakhapatnam-Japan paid 38s 6d f.i.o. trimmed against 47s 6d paid last May. Charterers are offering 4,000 tons to 5,000 tons of coals for movement from Calcutta to one port in East Pakistan, November shipment, ideas 22 shillings f.i.o. owners trimming. The Ceylon Government has concluded its tender for 140,000 tons of coals December 1960-September 1961 and half of the quantity has been awarded to South African shippers while balance 50 percent has been placed with China. Unconfirmed reports state that South African shippers covered freight at the rate of 50s f.i.o. trimmed Calcutta coal shippers were again in the "also ran" position, although it is understood that they had cover for tonnage at the rate of below 40s f.i.o., trimmed.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st November and 7th November, 1960)

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE is hereby given that the Ninety-seventh Annual General Meeting of the Shareholders of the Corporation will be held at the Sheth Goculdas Tejpal Auditorium, Gowalia Tank T.T., Bombay 7, on Friday the 2nd December, 1960, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May, 1960.
2. To sanction the declaration of a dividend.
3. To elect a Director in place of Mr. Pratapsinh Mathuradas, who retires by rotation and being eligible offers himself for re-election.
4. To elect a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and being eligible offers himself for re-election.
5. To elect a Director in place of Mr. Neville N. Wadia, who retires under Section 260 of the Companies Act, 1956, and being eligible offers himself for re-election.
6. To appoint Auditors for the period until the next Annual General Meeting of the Corporation and to fix their remuneration.
7. To appoint Branch Auditors at a remuneration to be fixed by the Board.
8. To consider and if thought fit to pass the following ordinary resolution:

   "That the Corporation hereby approves of the appointment and consents to the continuance of Messrs. Montague L. Meyer (Australia) Ltd., as Sole Selling Agents of the Corporation's Timber in South Australia and the Northern Territory of Australia for a period of one year commencing from 1st July, 1960 and thereafter for such further period or periods as may be deemed fit not exceeding in the aggregate five years from 1st July, 1960, on a commission of 3 per cent on C.I.F. prices, provided that the rate of commission may be decreased or increased by 1 per cent at the discretion of the Corporation and the Agent to conform with prevailing market conditions, and provided further that the maximum commission shall not exceed 4 per cent on the C.I.F. prices."

By Order of the Board,
WALLACE & CO.,
Secretaries and Treasurers.

Bombay, 18th October, 1960.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation.

Warrants for the dividend, if declared, will be posted to Shareholders on the 5th December, 1960 and will be payable on and from that date.

The Transfer Books of the Corporation will be closed from the 1st November, 1960 to the 22nd November, 1960, both days inclusive.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

The Corporation, seeking to increase its sales of Timber in Australia, has appointed Messrs. Montague L. Meyer (Australia) Ltd., as its Sole Agents in South Australia and the Northern Territory for a trial period of one year, which may be extended if considered desirable. Trading conditions there are likely to vary from time to time and it is therefore thought necessary to keep the commission rate flexible; but it would generally be payable at or about 3 per cent on C.I.F. prices and would in no case exceed 4 per cent.

Section 294 of the Companies Act, 1956, requires the approval of the Corporation to this appointment, which is proposed as a Resolution under item 8 of the business of the Meeting.

FIRST V.H.F. RADIO-TELEPHONE FOR INDIAN TRAINING VESSEL

The first v.h.f. (very high frequency) radio-telephone service in India for communication between a ship in harbour and the shore recently went into operation, Pye Tele-communications Ltd, of Cambridge, England, has announced. The equipment—a Pye 20-watt f.m. ranger duplex installation—connects the training-ship *Dufferin*, which is permanently anchored in Bombay harbour, and the Nautical and Engineering College on shore. Ancillary equipment at the Nautical College allows calls to be put through the Bombay public telephone system. In addition, a mobile radiotelephone set, which can be taken on board a launch or pilot vessel, will provide direct communication with the *Dufferin*. Opening the service, Captain Harvey, captain superintendent of the training-ship, said the installation of the radio-telephone had fulfilled a long-felt need. Hitherto the only communication with shore was by means of signalling lamps—which was both slow and unsatisfactory—and men of the *Dufferin* had to make a 15-minute trip by launch to the shore to make a telephone call. Forbes, Forbes, Campbell and Co. Private Ltd, distributors in India for Pye Telecommunications, were responsible for installing the system.

LINSEED FIRM

The linseed market was firm in the past week. Crushers showed interest in ready and forward deliveries, but there was little response from sellers. Arrivals of seeds declined. The oil market was steady. There was an improvement in the local demand due to steady prices in groundnut and mustard oils. Oilcake was also steady due to good local demand. The latest quotation is as follows: Ready Rs. 26.12 a maund.

SHELLAC QUIET

During the week ended 8th November the market was steady. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 80 buyers; 83, 82 sellers.
Lemon No. 1 Shellac	Rs. 82 done and buyers; 85, 83, 84 sellers.
Lemon No. 2 Shellac	Rs. 76, 77 buyers; 79, 78, 79 sellers.
F.O. Superfine Shellac	Rs. 72 buyers; 74, 73, 75 sellers.
Standard One Shellac	Rs. 69, 68, 69 buyers; 71, 70, 71 sellers.
T. N. Pure Shellac	Rs. 60, 61 buyers; 64, 63, 64 sellers.
Golden Kusmi Seedlac	Rs. 95 sellers.
Golden Kusmi Seedlac New Crop	Rs. 100 buyers.
No. 1 Kusmi Seedlac	Rs. 75, 72, 75 sellers.
No. 2 Kusmi Seedlac	Rs. 62, 65 sellers.
Golden Bysacky Seedlac	Rs. 68 buyers; 72, 70, 72 sellers.
One B Seedlac	Rs. 64 done, 63, 65 buyers, 65, 64, 66 sellers.
Two B Seedlac	Rs. 55 done and buyers, 55, 56 buyers; 56, 58 sellers.
Manbhum Fine Seedlac	Rs. 62, 64 buyers; 63, 65 sellers.
Fine Bysacky Seedlac	Rs. 57, 55, 57 buyers; 58, 57, 59 sellers.
Genuine Bysacky Seedlac	Rs. 53, 52 buyers; 54, 53, 55 sellers.

Shipments during November until the 4th were 11,750 packages.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production for the season 1959-60 as on 30th September, 1960, amounted to 2,415,000 tons, against 1,914,000 tons during the corresponding period of the last season. The offtake from factories during September 1960, was 181,000 tons, against 179,000 tons during the same month of the last season. Total despatches up to 30th September, 1960, were 1,849,000 tons, against 1,922,000 tons by the same date of the last season. Total closing stocks with factories on 30th September, 1960, were 729,000 tons, against 337,000 tons.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

1 NOV 1960 CHIEF SECRETARIA

INVITING PRIVATE CAPITAL FOR STATE CONCERNS

DURING the second plan period, the private sector was expected to invest Rs. 2,400 crores; it will actually have invested somewhere near Rs. 3,100 crores. During the first half of 1960, despite successive doses of heavier taxation each year, the stock markets were booming, and nowhere was the boom more spectacular than in the shares of newly-formed companies. These two facts seem to be at the root of the interest the Government has shown in recent months in the question of inviting the general public to contribute capital directly to State-owned concerns. The question has just been examined in some detail by a study group set up by the Planning Commission under the leadership of Mr. D. L. Mazumdar, Secretary to the Department of Company Law Administration. Extracts from the study group's report have appeared in the newspapers from time to time, and from these it appears that two fundamental conclusions have been reached. The first is that the idea is a good one; the public should be invited to contribute capital to State enterprises. And the second is that the approach should be cautious and tentative; only a few enterprises should be chosen for the experiment for a start, and the amount of capital any single individual can invest in them should be relatively small. On the face of it, both conclusions seem reasonable. If a State enterprise can persuade people voluntarily to give it their money, it will make fewer demands on the Government's limited resources and the money thus saved could perhaps be used to better purpose elsewhere. Public interest in the efficient working of State-owned concerns will also increase. Hitherto that interest has rarely gone beyond narrow-minded, desultory and ineffective debates in Parliament on the basis of reports submitted by such bodies as the Estimates Committee.

It is important, however, that the object of inviting people to contribute capital to State-owned concerns should be clearly delineated from the start. Politically, the object is hard to see; the injection of private capital into nationalised industry may not be in conformity with the nebulous norms of the socialist pattern of society. In psychological terms, there may be modest advantages: the managers of State enterprises, as well as the general public which keeps them alive by paying taxes, may be induced by closer scrutiny into taking a greater interest in their efficiency. It is in relation to the economic objectives, however, that the value of the proposal will be finally judged. And the main economic objective must be to increase the sum total of savings available for investment in industry. A subsidiary objective might be to establish some sort of a norm whereby the performance of private and State enterprises can be compared, the comparison providing a spur to improvement for whichever is lagging. If the comparison is to be fair, however, one of the first prerequisites is that the accounting procedures of the two should be made fairly similar. At present, the depreciation and reserve-building policies of State concerns not only vary widely, but are arbitrary and whimsical. The profits they make, and the returns they offer on the capital invested, cannot be compared even superficially with the profits and returns in private concerns.

It is debatable whether State-owned concerns, by inviting the people to subscribe capital, can mobilise more savings for industry. The study group takes the view that they can, and is entitled to its opinion. From the published extracts, however, it seems to be remarkably vague about where the extra savings will come from. It says that "recent events point to the existence of pools of resources, maybe of limited size, which now lie dormant both in the organised and in the so-called unorganised sector of the country's economy. It should be possible, through a carefully devised scheme, to draw upon these pools of resources, so that they may be utilised for participation in types of investment which provide a high degree of security, combined with a reasonable rate of return, although not necessarily a competitive rate." That there are very substantial resources in the economy which could—theoretically, at least—be mobilised for investment in industry, few will deny. The money which flows into bullion hoards, or into commodity speculation, is enough to excite any planner's envy. Presumably, however, the study group does not have this money in mind when it talks about "dormant pools of resources". It probably knows that the money is so speculative that it would never go into State enterprises of its own accord.

What the study group seems to have in mind are the little sums that are held by small savers throughout the country, but which are never invested because the savers think that secure investments yield too little, and acceptable returns are available only from the risky investments they do not want. The study group discusses the problem in fair detail. But, unfortunately, at the end it leaves one no clearer as to where exactly the shares and debentures of State-owned concerns would fit in the general pattern of the investment market. In other words, beyond an expression of faith that a suitable scheme can be worked out, it does not say what precise blend of security and returns State-owned concerns should offer if they are to mobilise more capital than is already going into the public and private sectors. On one point especially, the study group could well have been more categorical. It is that if State-owned concerns are allowed to offer guaranteed returns which are more attractive than those available on gilt-edged securities, there will be a major diversion of resources from the latter to the former. Institutional investors in the fields of insurance, banking and provident funds will, therefore, have to be firmly prevented from moving their money out of Government securities into State-owned industry.

The deficiencies and evasions in the study group's report apart, it is to be complimented on having supported the idea of inviting the public to contribute capital direct to State enterprises. Probably too much stress has been laid on the possibility that if State enterprises issue equity shares, the shares may be subject to manipulation and cornering. With judicious management, the manipulation can easily be countered. As for cornering, anybody attempting it would be foolish if the Government holds, and intends to go on holding, well over 50 percent of the capital. To restrict the transferability of the shares may not, therefore, be wise; one hopes the directors of State enterprises will have better things to do than go about examining the antecedents and intentions of gentry who might have bought the shares. In any case, not all shares these days are held in the names of those who have paid for them; there is no reason to believe that State enterprises will do better than anyone else in checking *benami* purchases.

The study group goes off the rails when it suggests first that the shares should be issued in "small denominations" and then that the denominations could be of Rs. 100 each. The conscientious research workers of the Department of Company Law Administration should have been able to find out by now that shares these days are usually issued in much smaller denominations; Rs. 10 each would be a perfectly satisfactory figure, especially if the aim is to attract the small investor. It is essential that if shares are issued to the public, they should be listed on the recognised stock exchanges. Only in this way can their merits be properly judged, and their marketability ensured for small investors to whom liquidity is an extremely important consideration. The study group's critics can be told that shares which are not listed on the stock exchanges are susceptible to as much manipulation as those which are.

Recent reports from New Delhi suggest that the Department of Company Law Administration is trying to persuade State enterprises to present their profit-and-loss accounts and balance-sheets in a better and more uniform way. An appropriate start in this direction might well be made by the enterprises which are to initiate the experiment of offering their capital for public subscription. (The ones suggested by the study group are Sindri Fertilisers and Chemicals Ltd, Hindustan Machine Tools Ltd, and some State undertakings, such as State road transport corporations.) Accounting procedures in most Government industrial undertakings at present are extremely unsatisfactory. It is not known whether the study group has considered the matter, but to offer shares without improving the accounting procedures would amount to perpetrating a fraud on the public. It should be ensured that depreciation is provided for adequately, and no special concessions are given which are not available to ordinary private concerns. The computation of profits is often open to a good deal of jugglery. One way of ensuring that State enterprises do not set a bad example in this sphere is to subject them to the same penalties and privileges as those which apply to private companies under the law of the land.

DRASTIC STEPS IN JUTE

IF the object of the Forward Markets Commission in announcing special margins for certain deliveries of raw jute and jute goods on Transferable Specific Delivery Contracts (T.S.D.s) was to reverse the situation created in the gunnies market by recent speculation, then it would appear to have been remarkably successful, at least for the time being. From a quotation of Rs. 185 a 100 bags on the Friday evening, ready B Twills fell to Rs. 176, nominal, by the close of business on Saturday; prices of other deliveries of heavy goods declined proportionately. Ready hessians, over the same short space of time, dropped from Rs. 58.75 a 100 yards to Rs. 57 nominal. Certainly the bull speculators, who have had the market in their grip for so long, took a sharp knock when the new measures were announced. Whether they will cut their losses at this point is, of course, another matter, and is likely to depend on the view taken, firstly, of the longer-term effectiveness of the provisions, and secondly, of the determination of the Forward Markets Commission to enforce them rigorously and even supplement them if necessary. In the meantime, speculation has been halted in midstride and a useful interval for calmer reflection has been gained. The question now is whether the gunnies markets will be able to function properly if it is found advisable to maintain these measures in force for a long period.

The steps announced by the Forward Markets Commission follow closely on those taken by the East India Jute and Hessian Exchange to enforce the registration of T.S.D.s and provide comprehensive control over trading in them. In both cases the measures taken verge on the drastic, and responsible opinion in the jute trade and industry is in serious doubt about the general effect on overseas trading. Any powers taken to curtail the speculation which has been damaging jute's reputation in world markets, and has brought genuine foreign buying to a virtual standstill, are certainly welcome in principle, but great care will have to be taken to see that they do not create more problems than they solve. There is an obvious danger in far-reaching and drastic measures, introduced to combat an acute situation, being found unworkable in the context of the market's normal functioning. The expected visit to Calcutta in the near future of the Forward Markets Commission's chairman could usefully be made the occasion for a thorough review of these crisis measures, and any others held in readiness to deal with a worsening of the situation, to ensure their full efficiency in

all circumstances with which they are designed to cope. One factor should receive immediate attention and that is that no market can function properly when plagued by uncertainty; a clarification of all future aims and intentions is needed without delay.

What makes these new measures, severe as they may be, almost welcome to the industry, is the fact that all those taken previously, either officially or otherwise, seem to have been equally unsuccessful. Yet the need remains to reduce prices in both the raw jute and the gunnies markets far below their present levels. One of the steps the industry has taken is the quota scheme for the purchase of raw jute; this has so far worked well but has not brought prices down even if it has helped to keep them from rising further. Another is the voluntary sealing of a further 10 percent of loomage, making 19 percent in all. Now this is being relaxed in response to pressure from labour. The final outcome of the agreement arrived at last week in New Delhi will not be clear until the terms have been worked out here in Calcutta. But it is established that the industry has conceded 2 percent unsealing; the actual amount of unemployment relieved will now depend on what reduction in working hours the mill labour unions are prepared to accept. The workers would seem to have a choice ranging between 17 percent of looms sealed on the basis of the present 48-hour week, down to 12 percent on the basis of a 45-hour week. In the absence of any alternative and reliable estimate of the fibre crop other than its own, the industry is no doubt being as generous as it is possible for it to be, and it is difficult to understand the attitude of the unions in attributing the absence of even greater concessions to ulterior motives. It must be obvious to the most bigoted labour leader that mills cannot go on producing gunnies at prices which will not repel world buyers, from fibre they are unable to acquire except at prohibitive expense. A limited amount of unemployment or short-time working is periodically the alternative in most manufacturing industries to disastrous losses and large-scale contraction. An example to prove this point is the motor-car industry in the U.K., and a much more prosperous one than Indian jute goods. If the unions are really interested in safeguarding the interests of their members, they should use their influence with the Central and State Governments to ensure that in future the raw jute crop is adequate and the fibre plentiful and cheap.

This often emphasised truth about raw jute supplies is undoubtedly the lesson to be learned from the events of the past few months. The industry has already announced its plans for the future—which include the holding of a buffer stock of the raw material—and these should be useful. But it is scarcely possible that they will always prove effective unless the maximum co-operation is obtained from the various governments concerned, the only bodies who have it in their power to transform the raw jute situation in the space of a single season. There is every incentive for them to make the efforts; the damage done to the jute industry's markets by recent high prices of goods is not easy to estimate, but it is probably considerable. News from the United States—India's largest market for hessian, and the one where buyers enjoy easiest access to substitutes—is specially disconcerting. It is extremely difficult to sell goods at all there now, and as any dealer will confirm, a customer once lost to substitutes, especially bulk handling, is seldom regained. The scars caused by this season's high prices will be with the industry's market for some considerable time, if indeed—considering the precarious nature of the expansion in world demand for jute goods—they ever leave it. The only way to prevent similar damage in future years is to ensure an adequate crop, and interim measures notwithstanding, this is the subject on which the efforts of all concerned with the health of the industry, should be concentrated.

THE GOVERNOR OF THE BANK

THE appointment of a new Governor of the Bank of England has revived a controversy that had been dormant for about a year—since the report of the Radcliffe Committee suggested that the Bank's position as subordinate to the Treasury should be more clearly defined. It is argued that the Governor wields too much authority, and that he can, if he thinks fit, apply policies that are at variance with the Government's. Britain is not the only country where the head of the central bank is thus criticised. One of the first acts of Britain's Labour Government after the second world war was to nationalise the Bank of England, and thereby, at least in form, to subordinate its Governor. His power had previously been restricted after a crisis in the first world war. For centuries before then he had exercised authority independently of the Government, virtually dictating policy in an important segment of the nation's affairs. But the conduct of Lord Cunliffe, as Governor of the Bank, in the first world war was more than a war-harassed Prime Minister, Lloyd George, and Chancellor of the Exchequer, Bonar Law, could tolerate. Fearing a German invasion, Lord Cunliffe sent most of the gold reserve to Canada; he refused to allow the Treasury to draw on it, even for essential purposes; and when the Treasury attempted, nonetheless, to use it, he transferred the reserve to Morgans, the bankers, in the U.S.A.

Lord Cunliffe was forced to resign; but the authority of his position was not permanently affected by this crisis. In the era of political and financial turmoil between the wars, Montagu Norman exercising an almost mystical influence in finance and politics, was in effect more powerful than any member of the Government—and his policies were, to say the least, debatable. The politicians resented this extra-governmental power, and when the House of Commons voted on the Bill to nationalise the Bank in 1946, not even Winston Churchill, then leader of the Conservative Opposition, voted against it. Cameron Cobbold, the present Governor, bears no resemblance to Lord Cunliffe or Montagu Norman. He has not withdrawn into the sanctum of the City, as an *éminence grise* with whom no ordinary mortal could make contact, nor concealed the workings of his institution behind an elaborate *mystique*. He has frequently made speeches, not only about the nation's affairs but also about the Bank; he has even appeared in people's homes, through the medium of television, and explained, in general terms, what the Bank is and does.

Yet the critics of the governorship of the Bank of England do not entirely absolve Mr. Cobbold. Subordinate as he is in principle to the Chancellor of the Exchequer, in practice, they say, his advice to the Chancellor is so authoritative that he, rather than the Chancellor, makes policy, and his policy, they say, is essentially restrictive. They recall how at the beginning of 1930 Ministers promised prosperity, how a few weeks later Mr. Cobbold hinted that expansion should be curbed, how a few weeks later, again, the Chancellor, then Heathcoat Amory, imposed the first of a series of restraints when—as was seen later—deflationary influences were already at work. They attribute entirely to Mr. Cobbold the responsibility for raising Bank rate to 7 percent in 1957. They blame him for the "stagnation" of the British economy during most of the period since the end of 1955. When Mr. Cobbold submitted his resignation, the Chancellor of the Exchequer, now Selwyn Lloyd, praising him for his services as Governor during more than 11 "arduous years", remarked: "You have helped to sustain confidence in the handling of our financial affairs and the strength of our currency, and you have enhanced the high standing of the Bank of England." To the extent that Mr. Cobbold restored confidence in the pound—which was devalued a few months after he took office—his policies are vindicated, in most people's minds.

However, the appointment of Lord Cromer, with effect from the middle of next year, raises other questions, or old questions in new forms. Lord Cromer is "the City's man", a member of the family of Baring, from which Baring Brothers, the famous merchant banking house, derives its name. From 1947 to 1958 he was a director of this house, and since then he has performed valuable official services, as British Economic Minister and chief delegate of the U.K. Treasury in Washington and as U.K. executive director of the International Monetary Fund and the International Bank. But it has been questioned whether this experience qualifies him for the particular responsibilities of a Governor of the Bank of England. A Governor must have, as Lord Cromer has, intimate knowledge of the ordinary business of the City; he must be, as Lord Cromer is, acquainted with the workings of public institutions, both national and international. The doubt that at present surrounds Lord Cromer is whether he has those special qualities that would enable him to advise on matters of high policy, on methods of economic control, on the subtler implications of (for instance) variations in Bank rate. A few months as part-time director of the Bank, before he takes Mr. Cobbold's place at the end of June, will not allow much opportunity to study the inner workings of that institution.

So the critics focus their attention on the fact that the governorship has reverted to the merchant banking community, in line with an ancient, and (they say) antiquated, tradition. "The Bank of England", commented *The Times*, "is not a business." Particularly now, when the whole method of economic regulation is being reconsidered, it may be unwise to consolidate orthodoxy. The most serious criticism of Governors is, perhaps, that they think of every national monetary problem in terms of orthodox monetary controls—and when Mr. Cobbold has said that these controls are not properly effective because the Government spends too much, he has implied criticism of the Government, not of orthodox controls. The trend of thinking in Britain now—among economists, if not bankers—is rather towards fiscal regulation, applied mainly through the Budget. An orthodox Governor of the Bank of England could impede the necessary process of experimenting with new methods.

THE ROLE OF INVESTMENT TRUSTS

IN a developing economy such as India's, the need for diversified investment institutions to channel savings into productive activities cannot be exaggerated. In fact, there is evidence that a large amount of the country's savings remains completely untapped. It is common knowledge that the planned prosperity of the past few years has benefited the agricultural sector more than the urban, and that most of the savings in the rural areas are being immobilised in bullion hoards. In the agricultural sector, small savers predominate and there are no worthwhile institutions for pooling these resources. The small savings schemes have only touched the fringe of the problem because of organisational limitations.

Quite apart from this, industrialised countries have found it beneficial to set up special investment institutions in the form of trusts for promoting investments. According to a study published in the October issue of the *Reserve Bank of India Bulletin*, an investment trust is best described as an agency for the co-operative buying and selling of securities for a group of associated investment beneficiaries. Its main advantage is that it helps an investor, through a single commitment, to diversify investments over a large number of securities thereby reducing his risks of capital depreciation and smaller dividend returns to a bare minimum. Investment in industrial securities is not as easy as it looks at first sight. In order to ensure against the loss of money, it is necessary to possess a fair technical knowledge concerning the various types of investments which are ordinarily available. It is not always possible for a small investor to have the necessary expert knowledge, nor is it easy for him to spread his risks by diversifying his investments. A big investor can always go in for greater diversification because of the larger quantity of resources at his command. Investment trusts, therefore, can offer attractive services, specially to the small investors, by giving the advantages of expert knowledge and diversification of investments.

Investment trusts are broadly of two types, management trusts and unit trusts. The former are usually set up as companies. Being managed and run as companies, they are not trusts in the legal sense of the term. Their capital structure is similar to that of an ordinary company, they may even have debentures. The managements of these trusts invest their funds in various securities, Government and industrial, at their discretion. The income derived from investments constitutes the profits, after meeting all expenses. Dividends to shareholders are usually paid out of the profits made, although, like other companies, they rarely distribute all their profits. The balance is generally ploughed back in the business. As with the shares of other companies, the scrip of investment trust companies are valued in the open market according to the laws of supply and demand.

A unit trust is however, a trust in the strict sense of the term. It exists and functions by virtue of a trust agreement, which also provides for regulating the powers of the management. There are three parties involved in this kind of trust. First, the creator, who is usually called the depositor, and who chooses the corporation form of organisation for setting up a trust and selling to the public the participation in the trust itself. Secondly, the trustee, who is a trust company or a bank which holds the securities or cash and authenticates and delivers the participating certificates to the depositor. Thirdly, by buying these certificates from the promoters or depositors of the trust, the owners of the participating certificates become automatically parties to the agreement under which the trust is formed. A unit trust may be fixed or flexible. In the former, the first block of securities deposited with the trustees forms the first unit. This first unit is sub-divided into a number of smaller ones. The promoters or depositors offer to the public these small sub-units for sale, but they take the risk of profit or loss until they are sold. Provision is usually made in the trust agreement for the creation of further units and sub-units at the request of the managers and against the trustees receiving from the managers further blocks of securities identical with those constituting the first unit.

The formation and organisation of flexible unit trusts is almost similar to that of fixed trusts. But provision can be made for the expansion of the former by the issue of additional sub-units to the managers for sale to the public against deposit with the trustees by the managers of cash or securities. Before the creation of additional units in the case of fixed trusts, managers are required to buy fixed amounts of the specified securities. So the managers of fixed trusts have virtually no discretion in investing the funds. The price at which the sub-units of a unit trust are offered for sale to the public is based on the prices of the securities held on the day of the sale of the sub-units. The price, of course, includes all expenses such as stamp duty, brokers' commission and the remuneration of the management during the tenure of the trust. In contrast to investment trust companies, there is only one type of capital in a unit trust. This is composed of the sub-units or the certificates of participation. A unit trust cannot have any borrowed capital. The ownership in a unit trust is directly vested in the participating certificates representing corresponding shares in the holding securities. After meeting all expenses, the entire income of a unit trust is distributed to sub-unit holders. Investment trust companies are perpetual in character, but a unit trust is formed to last for a specified period which can be extended if necessary.

Both investment trust companies and unit trusts are widespread in industrialised countries. In spite of the earlier development of investment trust companies in India, their progress has been extremely slow. The few trusts which exist have been formed essentially by vested interests in order to diversify their own investments. Being closely associated with big industrial groups they have more often than not invested their funds mainly in concerns in which the managements are interested. They have so far shown little enterprise in attracting public funds. As for unit trusts, they have not yet been established in this country.

In the above-mentioned issue of the *Reserve Bank Bulletin* a case is made out for the formation of investment trust companies and unit trusts in this country. Considering the warm response which has been given to shares issued by both old and new companies during recent years, it is clear that investment interest is broadening steadily. If investors are helped, it is necessary that more investment trusts should be formed.

In view of the existence of many small savers, it is thought that unit trusts may be an excellent medium for attracting funds. As these units are not likely to be run economically unless they are equipped with a widespread organisation, important industrial houses, broking firms, banks and insurance companies would make the best sponsors. If they are to be promoted, they should be given some fiscal advantages. Considering that many small savers will be investing in these institutions, it is reasonable that the income of a unit trust should enjoy tax exemption. This should be of help in offering attractive yields to prospective investors. At the same time, it is appropriate to stress the importance of laying down rules and regulations for administering these trusts in such a way that the highest integrity is maintained.

Current News and Comment

Bigger Profit for Orient Paper

There has been steady support for the ordinary shares of the Orient Paper Mills Ltd during the past week or so, following the publication of a satisfactory report for the year ended March 1960. The directors take an optimistic view of the future. The Company's working is expected to become better, with the improvements in the soda recovery plant and the renovated board machine. The directors think that the increase in production costs can be offset by greater efficiency and bigger output. As for expansion, the Government has permitted an increase in the licensed capacity of the paper mill to be set up in Amlai to 150 tons a day, from 100 tons a day. The Company has applied to the U.S. Export-Import Bank for a foreign exchange loan. Negotiations have, it is believed, been finalised for buying equipment from the Beloit Iron Works, Beloit, Wisconsin.

After transferring Rs. 72.50 lakhs (against Rs. 51 lakhs) to depreciation, Rs. 17 lakhs (against Rs. 37 lakhs) to development rebate reserve and Rs. 40 lakhs (against Rs. 30.65 lakhs) to taxation, the profit has improved from Rs. 28.77 lakhs to Rs. 55.44 lakhs. A taxable ordinary dividend of 22½ percent has been declared. This gives a yield of 5.6 percent at the price of Rs. 40.50 a share and is covered more than thrice. The ordinary dividend was 15 percent, tax-free, in the previous year. Contingencies are allocated Rs. 10 lakhs and general reserve Rs. 3 lakhs. The carry-forward is Rs. 428,620, against Rs. 169,091 brought in. Sales increased from Rs. 6.03 crores to Rs. 6.79 crores.

Calcutta Electric Sells More

Commenting on the prospects for power supplies in Calcutta and its adjacent areas in his address from the chair at the annual general meeting of the Calcutta Electric Supply Corporation Ltd in London last week (the full text of the speech is published on a later page), Sir Harry Burn gave a mild warning that some restrictions on supplies might become necessary in the near future. The demand for power continues to grow steadily at the rate of nearly 7½ percent a year, compound, and the trend is likely to continue. The Government has not allowed the Corporation to expand its old generating capacity in the future. During the last decade and a half, the C.E.S.C.'s generating, transmission and distribution capacity has been expanded with an investment of nearly £24 million. The Corporation some years ago negotiated an agreement to obtain bulk supplies from the Damodar Valley Corporation. The supply began in 1957. The initial arrangement was to start with a supply of 45 MW, which would be increased from year to year, but Calcutta Electric has not so far obtained all it wanted. It is hoped that as soon as the D.V.C. installs more plant, it may be possible for it to increase the supply to 100 MW. Although a supplementary agreement has been made with the D.V.C. to supply power in excess of 100 MW, the West Bengal Government has now asked Calcutta Electric to take the bulk supplies of power in excess of 100 MW, which were to be obtained from the D.V.C., from the West Bengal Government's installation. The C.E.S.C. has been given to understand that under the latter arrangement, the West Bengal State Electricity Board will be able to provide a supply of 40 MW by June 1963, rising to 60 MW in June 1964, and more can be given later.

During the year ended March 1960, there has been a substantial increase in the energy sold by the C.E.S.C. Industrial as well as domestic demand has risen. As the clear profit for the year falls short of the reasonable return to which the Corporation is entitled, the shortfall has been made good by a transfer from special reserve. A final ordinary dividend of 4 percent net has been declared, making 7½ percent for the year, against 7 percent in the previous year. In view of the increase in demand, it is estimated that the Corporation may have to go in for a capital expenditure of not less than £1¼ million a year over the next four years.

Progress of Calcutta Tramways

In his address from the chair at the annual general meeting of the Calcutta Tramways Co. Ltd in London last week (a fuller version of which is printed on a later page), Mr. David Webb said that efforts are now being made to eliminate the backlog of maintenance and renewals of cars and the permanent way. The backlog has resulted from the shortage of funds caused by uneconomic fares. The fares were increased only from the beginning of November 1959. Since then, the maintenance and renewals programmes have been making progress. It is, nevertheless, difficult to say at the present stage whether the increase in fares permitted to the Company will provide enough funds for the purpose. Referring to the realignment in the Dalhousie Square area, the chairman mentioned that it has cost the Company more than £73,000. Although the current assets position is far from satisfactory and the Company will derive little benefit from the realignment, the work has had to be done on a request from the West Bengal Government. Calcutta Tramways' operating surplus has risen from £130,000 in 1958 to £206,000 in 1959, but this is mainly because the working was not interrupted by strikes last year. After meeting various charges, a tax-free dividend of 3½ percent has been declared, against 2½ percent in the previous year.

Great Eastern Shipping Earns Less

The Great Eastern Shipping Co. Ltd has made a gross profit of Rs. 83.57 lakhs during the year ended June 1960. This is Rs. 2.59 lakhs less than in the previous year, but can be considered satisfactory in view of the crisis in the freight markets. The tonnage in actual operation increased from 118,560 to 131,443—by 10.86 percent. The gross freight and charter hire earnings increased from Rs. 2.75 crores to Rs. 3.30 crores—by about 30 percent. After providing Rs. 61.76 lakhs for depreciation (against Rs. 50.99 lakhs), the surplus amounts to Rs. 19.86 lakhs (against Rs. 31.57 lakhs). On allocating Rs. 32.85 lakhs to development rebate reserve, there is a deficit of Rs. 12.98 lakhs. After adding Rs. 3.34 lakhs brought forward from the previous year and Rs. 11 lakhs transferred from deferred taxation reserve, and making other adjustments, there is a surplus of Rs. 1.32 lakhs, which the directors, subject to the tax position of the proposed dividends on the preference shares, propose to carry forward. On legal advice, Rs. 10.05 lakhs has been transferred from general reserve and Rs. 5.59 lakhs from dividend equalisation reserve to the reserve for exempted profits under Section 15C. This reserve included an amount of Rs. 5.11 lakhs, being the unused portion of Section 15C profits in relation to the financial year 1957-58, as computed by the Company. It is, therefore, subject to final determination by the income tax authorities. The reserve, totalling Rs. 15.64 lakhs, represents profits exempted under Section 15C of the Indian Income Tax Act.

The directors have recommended a dividend of 10 percent on the fully-paid as well as the partly-paid shares, against 15 percent, gross, in the previous year. The preference dividend recommended is 5.5 percent, free of tax. Clarifying the position about this dividend, the directors point out that, according to the legal advice given to them, no tax is payable by the shareholders, nor does it need to be deducted by the Company at source, since the distribution is being made out of the Section 15C reserves. However, there is a difference of opinion with the Income Tax Department on the interpretation of the Act, which prevents the necessary certificate being issued to that effect. Under the circumstances, the question of deduction of tax will be considered later. If the stand taken by the Company is not upheld and it is asked to bear any additional liability in connection with the taxation on the preference dividend

under the law prevalent at the time of paying, the dividend will be paid out of the surplus of Rs. 1.32 lakhs which it is proposed to carry forward. The managing agents of the Company have emphasised that the release of the present report is subject to any changes that might be necessitated in that part which deals with equity and preference dividends and the use of Section 15C profits for the purpose in the light of the legal opinion which is being sought by them. The ordinary shares of the Company are quoted around Rs. 15.50. They touched a high of Rs. 28.35 in 1958 but the best level in 1959 was Rs. 25.

Bishnauth Tea Pays Again

The Bishnauth Tea Co. Ltd has paid a taxable ordinary dividend of 13 percent for the year ended December 1959. The dividend absorbs Rs. 4.29 lakhs, and offers a yield of 6.3 percent at the price of Rs. 20.75 a share. The dividend was passed over in the previous year. The revenue profit has increased from Rs. 2.77 lakhs to Rs. 8.95 lakhs. Taxation is allocated Rs. 5.60 lakhs (against Rs. 80,000). Building reserve receives Rs. 2 lakhs and repairs and renewals reserve Rs. 1 lakh. The carry-forward is Rs. 3,83,877, against Rs. 5,50,293 brought in. The crop declined from 3.9 million lbs to 3.4 million lbs, but the average sale price increased from Rs. 2.44 to Rs. 2.75 a lb. The crop estimate for 1960 has been reduced to 3 million lbs in view of the drought this year.

Karanpura Collieries Earns More

The Karanpura Collieries Ltd has declared a taxable ordinary dividend of 7½ percent for the year ended February 1960. The dividend is covered more than four times and offers a yield of 4.1 percent at the price of Rs. 185 a share. A preference dividend of Rs. 4.40 a share has been paid on the 5½ percent preference shares, after deducting the company income tax of 20 percent. This dividend is subject to tax deduction at source, but the directors say that steps will be taken for paying such additional dividends as may be required when the Preference Shares (Regulation of Dividends) Bill is enacted.

The Company's profit has increased from Rs. 1.47 lakhs to Rs. 1.84 lakhs, after providing Rs. 3.18 lakhs (against Rs. 2.30 lakhs) for taxation, Rs.35,700 (against Rs. 48,000) for development rebate reserve, Rs. 1.50 lakhs for siding reserve and Rs. 1.86 lakhs (against Rs. 1.75 lakhs) for depreciation. The carry-forward is Rs. 11,141, compared with Rs. 20,442 brought in. There has been an improvement in wagon supplies, so despatches have risen from 172,923 tons to 210,536 tons. Raisings have increased from 171,391 tons to 207,846 tons.

Colour-Chem Makes Fair Progress

Colour-Chem Ltd has made fair progress during the past accounting year. After providing Rs. 4.66 lakhs for depreciation and Rs. 6 lakhs for development rebate reserve, the profit is Rs. 91,391. This, when set off against the loss of Rs. 1.34 lakhs brought in, leaves a debit balance of Rs. 42,985 to be carried forward. Operations last year were on a restricted scale and total sales amounted to Rs. 36.93 lakhs. The directors state that the construction of the factory buildings has now been almost completed. The production of pigment emulsions started in May 1959, of binder materials in September 1959 and of pigment powders in March 1960. Since then, the production of the various items has been proceeding according to schedule. The shares of Colour-Chem, which were bid up to Rs. 525 in July, are currently quoted around Rs. 340. It is rumoured that the Company might soon raise about Rs. 10 lakhs of fresh capital through a rights issue.

Sifco Alarm Clock Project

Sifco—a product of Swiss, Indian and French collaboration—is the name of a Company which has been registered in Bombay to undertake the manufacture of alarm clocks. The factory will be the first of its kind in the country. The Company has been licensed to manufacture 10,000 alarm clocks a month. The factory will be located in Hyderabad. The Company has offered to produce 85 percent of the components in the first two years and up to 95 percent from the third year onwards. Apart from alarm clocks, it will also manufacture precision instruments in course of time.

The famous French firm, Jaz, is participating in the project and will be responsible for the technical assistance and direction. The Swiss firm, Favre-Leuba, will help with capital participation and distribution techniques. The foreign equipment will be mainly French, and partly Swiss and German. It is estimated to cost about Rs. 9 lakhs, which will be found from an I.F.C. foreign exchange loan of Rs. 4.75 lakhs and from the capital contribution of Rs. 5 lakhs by Favre-Leuba and Jaz. The foreign firms will be paid a royalty which, subject to Indian taxation, will be ¼ percent on the first 100,000 pieces, 2 percent on the next 400,000 pieces and ½ percent on all subsequent production. The Government of India, it is reported, has approved these arrangements. The sanction of the Controller of Capital Issues has been secured and the foreign exchange loan has been approved by the I.F.C. Orders for machinery are to be placed soon. Production is likely to start before the end of next year. The alarm clocks will be sold under the trade name of Jaz-Favre-Leuba.

United Dyestuff Industries

A new Company known as United Dyestuff Industries has been registered in Ahmedabad to undertake the manufacture of vat dyes and allied products. The factory will be located in Gujarat. The Company will have an authorised capital of Rs. 2 crores, of which only Rs. 50 lakhs will be issued at first in the form of 50,000 equity shares of Rs. 100 each. The promoters and their friends are likely to take up shares worth Rs. 25.5 lakhs and the remaining 24,500 shares will be offered to the public. The capital intended for public participation has, it is reported, already been underwritten. The production of vat dyes in 1959 totalled 325 tons, and the country's requirements are expected to increase to 1,200 tons.

Dishergarh Power Does Well

The Dishergarh Power Supply Co. Ltd has produced excellent results for the year ended March 1960. About 119.28 million units were sold, against 103.44 million units in the previous year. The Company bought only 3.48 million units from the Damodar Valley Corporation during the year ended March 1952, but purchased 73.91 million units in the past year. As the Damodar Valley Corporation cannot supply enough power, consumption has had to be restricted. The D.V.C. is expected to increase its supply as soon as another thermal generating plant has been installed. So the shortage of power may end soon, but the directors are concerned about the long-term outlook, because the Corporation has so far been unwilling to enter into fresh commitments until 1964.

The Company's profit has increased from Rs. 9.52 lakhs to Rs. 14.63 lakhs, after transferring Rs. 2.58 lakhs (against Rs. 2.50 lakhs) to depreciation. A taxable ordinary dividend of 10 percent has been declared This offers a yield of 10.3 percent at a price of Rs. 97 a share and is covered more than thrice. The dividend was 7½ percent, tax-free, in the previous year. Taxation is allocated Rs. 5.60 lakhs (against Rs. 4.28 lakhs) and general reserve Rs 2.50 lakhs (against Rs. 5 lakhs). It may be noted that Rs. 1.09 lakhs has been included in reserves because this amount has been yielded by the changes in the system of corporate taxation. The inclusion of the amount in reserves is subject to the approval of the Governments of West Bengal and Bihar. There is a carry-forward of Rs. 438,960, against Rs. 377,066 brought in.

Bank Deposit Rates Revised

The inter-bank agreement restricting the maximum rates of interest on deposits has been modified. The revised agreement, which came into force last Monday, allows banks to offer ¼ percent more on all term deposits maturing after two months. The old agreement provided for the payment of interest at the rate of 3 percent on deposits

DEEDS
....Not merely words
PERFORMANCE
.....Not only promises

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living . . .

Today, on the eve of the Third Five Year Plan, we of Dalmia Cement (Bharat) Ltd. believe that almost 23 years of useful service to the Nation is something to talk about. Here are a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past few years.

For building the India of our dreams, the richer and prosperous India, there is little room for preaching by mere words and what are needed are DEEDS . . . DEEDS, in the terms of rebuilding of our nation, including higher production of some of the essential commodities like

CEMENT

the great modern material of building construction

In 1947, we had placed at the Nation's disposal over 67,000 Tons of Cement
In 1950, we had produced over 1,64,000 Tons of Cement
In 1954, we produced over 2,70,000 Tons of Cement
In 1957, our production reached nearly 2,80,000 Tons of Cement
And This Year, . . . in 1960
We expect to place at the nation's disposal over 4,25,000 Tons of Cement

BECAUSE WE NEED MILLIONS of TONS of CEMENT
for building the richer and prosperous India of our dreams . . . .

DALMIA CEMENT (BHARAT) LTD.
Dalmiapuram (Madras State)

A National Enterprise in Nation's Service

for under one month, 3¼ percent on deposits of one month and over but less than three months, and 3½ percent on deposits of three months and over. There were only three categories of term deposits under the previous agreement, but there will be as many as eight slabs under the new arrangement. The revised interest rates are 3 percent for deposits of 22 days and over up to and including 30 days; 3¼ percent for 31 days to 60 days; 3½ percent for 61 days to 12 months; 3¾ percent for 12 months to 24 months; 4 percent for 24 months to 48 months; 4¼ percent for 48 months to 60 months; and 4½ percent for 60 months and over. The rate of interest for notice money and term deposits for up to 21 days has been fixed by the Reserve Bank at 2 percent. The new agreement has reduced the minimum period for a term deposit from seven days to three days, and also the minimum notice period for the withdrawal of notice money. Another important change is that banks are now free to accept deposits for any length of time. Hitherto they could only sell savings certificates if they wished to raise funds for periods longer than two years. Banks having deposits of less than Rs. 25 crores are allowed to offer ¼ percent more than the prescribed rates.

The decision to raise deposit rates seems to have been prompted by the fear of a possible breakdown of the old agreement under the pressure of acute monetary stringency during the current busy season. The money market, which showed very little slackness during the traditionally slack period, is likely to develop serious stringency during the busy season because of the larger demand for funds for financing increased production, both agricultural and industrial. There is a case for raising deposit rates, particularly after the increase in the interest rates on advances under the Reserve Bank's directive. But it is doubtful whether the ¼ percent rise will help attract more deposits.

Fixing Minimum Price for Cane

The Joint Sugarcane Board for U.P. and Bihar, which met in Lucknow on 8th November, has decided to recommend to the Central Government that Rs. 1.75 and Rs. 1.62 be fixed as the respective minimum prices of cane a maund for gate and outstation deliveries for the 1961-62 season. The Chief Minister of U.P., Dr. Sampurnanand, who presided, made a reference to the price-linking formula which the Tariff Board is considering. He said that much trouble could be saved if an outright increase is given as a substitute for the formula which, in spite of simplification, will not be easily understood by the growers. According to him, when the industrialists themselves have agreed in principle to profit-sharing, the solution he proposes should not prove difficult to adopt. He laid particular stress on the payment of the deferred cane price. This issue, he said, has been a perpetual thorn in the side of the industry, and pending a final decision by the Tariff Commission, industrialists should agree to make an *ad hoc* payment as a gesture of goodwill. In spite of the support thus extended by the Governments of U.P. and Bihar, it is significant that the farmers, under the instigation of the Socialist Party of Dr. Lohia, the Praja-Socialist Party and the Communist Party, threaten to launch an agitation for further increases in the cane price. In two eastern districts of U.P., namely Gorakhpur and Deoria, the agitation has taken the form of a threat to stop supplies of cane to the mills unless prices are increased. Over the past few years, the Opposition parties have made the cane price a political issue.

At the meeting of the Sugarcane Board, Dr. Sampurnanand disclosed that since the Central Government has approved only four sugar factories in the co-operative sector out of the eight recommended, there is scope for four in the private sector. The Central Government, he added, has relaxed its policy concerning the licensing of new sugar factories in the private sector. A Press note issued after the meeting said that the Board is in favour of a uniform policy of control on sugar prices. The control which is in force in the northern region alone should be either lifted or imposed on an all-India basis.

Pilot Paper and Pulp Plant

A pilot pulp and paper plant with a capacity of six tons a day has been set up by the Paper and Cellulose Branch of the Forest Research Institute in Dehra Dun. The plant, which was recently inaugurated by Mr. M. V. Krishnappa, Central Deputy Minister for Agriculture, was first thought of in 1946, when the cost was estimated at Rs. 20 lakhs. By 1958, the cost rose to Rs. 60 lakhs, but part of the increase, namely Rs. 20 lakhs, was met by the T.C.M. According to Mr. Krishnappa, the plant will help confirm the results of laboratory research carried out at the Forest Research Institute in recent years. Among other things, the Institute is investigating new cellulosic raw materials for paper manufacture, development of new pulping processes, application to Indian raw materials of pulping processes developed abroad, and production of pulps of high purity for specific purposes. Paper and cellulosic materials are needed not only for writing and printing, but also for clothing the population. Mr. Krishnappa said that the demand for pulp and paper products would go up by two and a half times within ten years. The present production of rayon grade pulp is nil—40,000 tons of it being imported. At the end of the third plan period, about 110,000 tons will be required.

The pilot plant in Dehra Dun will use wattle and spent lemon grass at present used as fuel, bagasse, jute sticks, and other mixed wood species for manufacturing writing, printing, wrapping, kraft, grease-proof and machine-glazed papers, besides simplex and duplex boards. India has rich reserves of conifers in the Himalayas, but due to their inaccessibility and prohibitive cost of transport, these resources cannot be used for paper production. The Forest Research Institute has, therefore, decided to try a mixture of all available species, particularly the broad-leaf varieties, to manufacture new types of paper not made in the country hitherto. The plant will also train Indian paper makers in new methods.

Marine Insurers Meet

National and international legislation and draft conventions concerning liabilities arising out of nuclear fission, the container shipment of ocean cargoes, the towage of "giant" carriers and the claims experience on the St. Lawrence Seaway were among the subjects on which useful papers were submitted at the annual conference of the International Union of Marine Insurance in Washington recently. There were reports on hull insurance from the U.S., Japanese, Indian, Norwegian, Swedish, Danish, Dutch, French, German, Spanish, Italian and Yugoslav markets. The British market did not present a detailed report, but Mr. G. W. Hogsflesh made some comments about the general experience in recent years. The United States reported "reasonably satisfactory" underwriting results on ocean hulls, although there was some concern over the risk potential in super-tankers and carriers, especially in case of breakdown at sea or if they are stranded. The cost of repair index, based on wage rates and the cost of materials, has increased since 1959 by approximately 2 percent to 131.77 percent (base year 1955 equals 100). India reported another excellent year, with a loss ratio of 16.42 percent of gross premiums, against 23.85 percent in 1958 and 21.17 percent in 1957. The good experience was attributed to a complete absence of laid-up tonnage and a high proportion of new tonnage. The rating and renewal of Indian fleets was fixed in consultation with London reinsurers and in accordance with the joint hull formula. There was some rise in repair costs but the general level of such costs was below that of most other countries.

Country damage on cotton was one of the problems covered comprehensively in the report of the cargo loss prevention committee. Together with the supplementary remarks by the chairman, Mr. Harold Jackson of New York, it was a most important contribution to the conference. A detailed paper on the container shipment of ocean cargoes was presented by Mr. Thomas M. Torrey of New York. He described the equipment used and discussed the types of cargo suitable, economic factors, labour problems, legal aspects and underwriting considerations. The general view of U.S. underwriters is that claims of most types would be reduced by using containers, as long as these are well-designed and maintained in good condition and are handled and packed properly. Mr. Torrey believed that "containerisation" would become more and more the standard practice, but he warned that this might be accompanied by

Our Railways have another responsibility . . . of protecting costly equipment against scorching heat, lashing rain and gruelling service.

GOODLASS NEROLAC Paints share the Railway's responsibility of protecting the nation's property. Again and again, the Railways choose GOODLASS NEROLAC Speciality Paints, and Special Paints made to ISI Specifications, to preserve hundreds of coaches, wagons, bridges, signal towers and stations.

GOODLASS NEROLAC — the Paint Specialists — have twenty-five years' manufacturing experience in India, backed by a century of research in paint technology. And each year GOODLASS NEROLAC's scientists are perfecting better protective paints for every type of industry.

deterioration in the quality of export packaging. Failure of the container might, therefore, result in water damage, breakage and other losses. These losses would also occur when packages are taken out of the container at the port of discharge and shipped to the interior. It is hoped that the present favourable experience will continue, but a great danger appeared to be the tendency to consider all container operations as substantially identical. This is not the case; each needs to be rated and underwritten on its own merits.

Oilseeds Trade Warned

The Forward Markets Commission seems to be greatly worried about the firm trend in oilseeds prices. Excessive speculation, the evasion of special margin restrictions and option trading are blamed for the rise. The Commission says that when it relaxed the special margin for trading in groundnut futures (new crop contract), it intended to help the trade. But prices are being pushed up even when groundnut arrivals at the terminal markets are good and are steadily increasing. The removal of the special margin for castorseed has also been exploited by speculators, although no great demand has developed for the new crop. The Commission finds no justification for the prevailing high prices of rapeseed and mustard seed futures. The supply of mustard seed for the November 1960 delivery is thought to be adequate in relation to the effective demand, and no demand has yet been established for the May 1961 delivery. The Commission has, therefore, warned the trade that it will "resort to severe measures to stamp out illegal trading and arrest the rise in prices" if immediate steps are not taken to end "unhealthy speculative activity, evasion of special margins and option trading."

Groundnut futures (February contract), which were bid up to Rs. 214.25 for 250 kilograms in Bombay on 1st November, are quoted around Rs. 210 now. Never perhaps has the price been so high so early in the season. But the rise can scarcely be attributed to speculation alone. The new groundnut crop is estimated at around 2.35 million tons Although it is a little bigger than in the previous year, it is still small in relation to the rapidly growing internal requirements. Besides, the Government is anxious to export more groundnut oil. If the flow of new crop arrivals has not had any noticeable effect on prices, it cannot be very surprising. The market did not carryforward any large stocks from the previous season, so the arrivals, although quite normal, are barely sufficient to meet the current demand. Few observers expect any substantial fall in prices even when the crop movement gets into full swing, especially if the Government allows a large quantity of oil to be exported.

While one can appreciate the Commission's anxiety about the high prices of groundnut and groundnut oil, since they affect the cost of living, its concern over the trend in castorseed prices seems quite unwarranted. Castorseed is quoted at about Rs. 34 (for 250 kilograms) lower than groundnut; it has often fetched a higher price in the past. Castor is largely an export commodity, and a rise in its price should normally be welcomed unless, of course, it adversely affects exports. But exports of castor oil this year have already established an all-time record. Shipments by the end of December are likely to total 53,000 tons, against the previous record of 43,100 tons. There will thus be hardly any carryover left from the current year and the new crop will be in the market only after about the middle of February. The outlook is not encouraging because of the partial failure of the new crop in north Gujarat on account of insufficient rain. Few expect the crop to exceed 105,000 tons, against 135,000 tons in the previous season. This will virtually offset the increase in Brazil's castor crop, thereby leaving the world supply about the same as in 1959-60. Record oil exports and the prospect of a much smaller crop explain the firm tendency in castorseed, even though fresh export business in castor oil remains restricted.

Vegetable Oil Exports

Addressing the annual general meeting of the Bombay Oilseeds and Oils Exchange last week in Bombay, Mr Ramdas Kilachand, president, suggested that the target of 9.5 million tons fixed for oilseeds in the third five year plan is too low. It should be raised to at least 10.1 million tons. This is necessary to meet the rising internal demand for vegetable oils and to sustain the export drive which has been launched. Discussing the Government's export policy for vegetable oils, Mr. Kilachand said that almost all the oils and oilcakes can be freely exported, excepting H.P.S. groundnuts and groundnut oil. The policy concerning these latter is subject to periodical review because of their growing consumption at home and the consequent need to maintain stable prices. This, however, has had an unfavourable effect on exports. The incentive announced by the Government last year, that for each ton of groundnut oil sold overseas, the export of 3½ tons of expeller cake would be allowed, has failed to produce the desired result. The trade feels that groundnut oil should be allowed the same incentives as are given to *vanaspati*, since the latter is only groundnut oil in hydrogenated form.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 250
Mrs. Sarala Devi Birla.

Rs. 240

TEA EXPORTS TO U.S.A.

IN our last paper we alluded to the failure of India to secure the American market, pointing out that the basket fired teas of Japan, Java and China still held their ground in the States; we now put it to producers whether it would not be prudent to adopt to some extent the same method of manufacture, which was in vogue before the present baking process. There is no doubt that when uniformity was adhered to in the sixties, the successful introduction of our teas was mainly due to following the Chinese method of curing, then universal in Assam, and for such properties as can still command a supply of charcoal roasting by direct heat, would place before the public in the States a class of tea they have been accustomed to. As a matter of fact, some small estates working on the old plan have been almost unaffected by recent market exigencies. It would seem, therefore, that it would pay to revert to the former method for the spring crops, up to the middle or end of May, solely for the American market; afterwards, when the usual increase of leaf begins, the present means of dealing with it may be pursued. The immediate remedy for the present state of the industry lies in restriction of output. That this means curtailment of income need not necessarily follow, for both funds and labour can be diverted into other channels quite as profitable as tea. If it were possible for a congress of shareholders to agree so to restrict output as to establish something approaching an equilibrium between it and the probable demand, there is no reason why the uncropped land should remain unutilised, as enumeration of the range of plants that could replace tea either permanently or as simple annuals, would fill a full column. The province of Assam with its plains and mountains, as also in its dry and humid zones, presents an epitome of soil and climate for the production of every kind of plant known; yet tea proprietors have clung to one object until it is rapidly losing its character of, as a sentimental Lieutenant-Governor once described it, the rejuvenator of a long lost land and assuming that of its curse. Unless output is curtailed and the accommodation of our teas to the taste of some 80 million people in the State is adopted, as far as we can see, a crisis is approaching, in which a large amount of sunken money will be lost beyond all hope of recovery, the only gainer being the Assam Government, which will obtain several thousand acclimatised cultivators without expending a penny in immigration.

A Ditcher's Diary

NO DOUBT THE POINT WAS NOT CONSIDERED AT THE time, but these new parking arrangements in the Dalhousie Square area are helping to improve my waistline; I now get much more exercise walking the extra distance to where I have had to leave my car. That, one might say, is a development gratefully to be welcomed. Possibly. But this is the cold weather and what may be an enjoyable stroll now can become an uncomfortable nuisance when it gets hotter. That is why I can see little virtue in the proposal to divert some of the centre-city car parking to the Maidan on either side of Mayo Road. This is not intended for the casual parker, of course, only for the all-day species about which something certainly ought to be done. But how is it proposed the Maidan parker should get to his office after depositing his vehicle; does one detect the cloven hoof of the State Government's public transport department in all this? At the very least it would require a special bus service to lift parkers into the city centre, and what an incommodious waste of valuable time and money that would be. I know that the strength of any complaint I may make is weakened by the fact that I have no alternative suggestions to offer—unless a bright idea I have for turning the whole area underneath Dalhousie Square into a vast underground car park has any practical merit. But before anything rash is done about this Maidan parking scheme may I suggest a trial period covering the six months from April to October during which the cars at present left in those carefully-guarded, corrugated-iron eyesores opposite Writers Buildings are diverted to the Mayo Road and the space left vacant turned over to the unfortunate city parker. This way, I suggest, the whole idea would have a fair and genuine try-out. If it is adopted after that, then I shall be willing to cooperate with all the cheerfulness I can muster. And could I, before leaving the subject, put in yet another plaintive plea for leaving the Maidan alone altogether. What with the depredations of the military and the negligence of the West Bengal Government, there is precious little of it left as it is.

ARTHUR KOESTLER'S ESSAY ON ZEN BUDDHISM IN *Encounter 85* is great fun, yet full of information on a subject affecting a whole inscrutable and energetic people. I am not so opinionated as to think that anything I do not understand is nonsense; that, I regret to say, would place some of the greatest scientific truths in such a category. But the mental processes of a Zen Buddhist, I must confess, beat me completely. Some of the *koans*, riddles, are to me the ultimate in incoherence. I will quote one: *Question*, How is my hand like the Buddha's hand? *Answer*, Playing the lute under the moon. Or take this proposition: Tajima no kami thinks that the seeing must first take place in the mind, and then it is transmitted to the eyes, and finally to the body and limbs. Or this: A horse eats in Tokyo and a horse in Osaka is no longer hungry. After all this I accept the Japanese assertion that they can understand the western mind, but no westerner can understand their mind. The second proposition is perhaps truer than the first; for when the Japanese say they understand, I shudder to think what they really consider the whole truth to be. Mr. Koestler explains something when he says that Zen is the philosophy of "Don't think. Act." Now I begin to understand the *Kamakazi* squads. But why Zen should have appealed so much to the *beatniks* of San Francisco and elsewhere still remains a puzzle. Perhaps, as Mr. Koestler suggests, Zen began as a revolt against the feudal rigidities of mediaeval Japan; and *beatniks* being the latest rebels in the West, they believe they have something in common. It is difficult to think of anything more wrong-headed. Whatever the rebels of Japan may have been up against can hardly resemble anything the angries dislike in our time; and no European or American youth should need to be reminded that only a few years ago the abdication of reason, accompanied by an emphasis on instinct, led to the ugly fascism of Germany and Italy. My admiration for the Japanese must, I fear, ever be mixed with some mistrust.

THERE WAS A *Nation* BEFORE MR. KINGSLEY Martin joined it 30 years ago; and there will be a *New Statesman* after 31st December, 1960. There were Ditchers before me; and I'm sure there will be Ditchers after me; one can never be an editor or columnist to end all editors and columnists. But even if Mr. John Freeman does not introduce sudden changes, which he is under no obligation to do, the *N.S.* will not be quite the same. Every good newspaper, even so institutionalised a one as *The Times*, carries the imprint of its editor's personality; as Mr. Martin charmingly says in his message, in his diary as Critic he certainly expanded his ego. Many were the occasions when I gnashed my teeth and quoted James Agate: "All my eye and Kingsley Martin!" But it is not often that I missed my "Nagger and Stagger", as the weekly was sometimes irreverently referred to even by its admirers. Under Kingsley Martin, the paper was never dull; and its political influence on many leaders in the new nations of Asia and Africa was perhaps second only to Harold Laski's. Whether either has been altogether a healthy one is another matter Mr. Martin enjoys travelling, and I have no doubt at all that he will be of great use to the paper as editorial director looking mainly after overseas affairs. It had not occurred to me that the overseas circulation of the *New Statesman* was as much as a quarter of the total. May it increase, for with a few exceptions American exports in the field of periodicals are deplorable. But I hope this will not change the character of the *New Statesman* which, to be useful, must retain its British character. To write what overseas readers would like to read would be to surrender the rôle Mr. Martin has given the paper he has edited so brilliantly for 30 years. For all my appreciation of the *New Statesman*, I am unable to say that it always correctly reflected the British mood; that is where ideology and commitment came in to distort vision. On Suez and unilateralism, for instance, the weekly represented only a minority opinion, which all overseas readers may not have recognised as such. Mr. John Freeman has a tough assignment ahead of him—at once a challenge and an opportunity.

THE EXPRESSION "STATUS-SEEKERS" HAS BARELY been incorporated into the language when its author, Vance Packard, coins a new one, the "waste-makers" to describe contemporary U.S. society. This is the title of his second book, which is an attack on the economic, rather than social, foundations of that society. Packard—how aptly his name suggests status and big spending—here shows the American nation being hoodwinked by hidden persuaders and planned obsolescence into buying lots of things they do not need, which cost too much and which soon wear out or become old-fashioned, so that they just have to buy, on credit, shiny new things that are just as unnecessary and shoddy. He says this waste-based system is leading to Cornucopia City, a crazy utopia where motor-cars are made of plastic that melts after 4,000 miles, where shoppers spend hours a day in push-button supermarkets buying stuff on electronic life-time credit cards, where factories are built on cliffs so that unsold surpluses are easily dumped and where repairing anything is unpatriotic if not illegal. Many features of this caricature already exist in the America of gigantic tailfins, of annual models for refrigerators and TV sets, and of unwanted dinners taken just in order to flourish a credit-card. Unfortunately for Packard, his book comes out just when the U.S. recession is putting a brake on this extravagance. The tailfin has gone, the "insolent chariots" of Detroit are being replaced by the compact car, Ford has extended the guarantee on its motor-cars from three to 12 months, and Kelvinator has stopped making annual models. Many critics have, therefore, jumped to the conclusion that Packard's book is already out of date, that it is the victim of "unplanned obsolescence", because the Frantic Fifties were based on passing inflation and what the U.S.A. is suffering now is not just another recession but a return to permanent prudence and sobriety. Maybe. I would rather wait and see if the Americans can beat this recession otherwise than by a return to the conspicuous waste that Packard denounces. Naturally, in discussing U.S. wastefulness, you have to count in the U.S. Government and its expenditure on such extravagant tailfins of the Free World as Chiang Kai-shek, Syngman Rhee, Menderes and Batista.

THE GOVERNMENT OF INDIA HAS, I UNDERSTAND decided to give a repeat performance of the highly successful tour organised for British financial journalists in the cold weather of 1956-57 and a party of well-known city editors and economic writers will be arriving in our midst very early in December. They are not to be confused with the army of special correspondents, radio commentators, cameramen and the like who will be coming with Her Majesty the Queen in January next. The financial journalists are specialist writers who presumably are being invited to make their own assessment of the Indian economy as the second five year plan draws to a close and the curtain rises on the third plan, for whose support foreign public opinion, as well as foreign exchange, is urgently required. The Government has shown a good sense of timing in organising such a tour early in what promises to be a busy and exciting cold weather. Among those who are understood to have accepted the invitation to visit India are Mr. William Clark, the city editor of *The Times*, Mr. Roland Bird, deputy editor of *The Economist*, Mr. Richard Fry of the *Manchester Guardian*, Mr. Fisher of *The Financial Times* and Mr. Sidney Gompel, Reuter's economic editor. There are others too.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

INCREASED SALES TO ALL CLASSES OF CONSUMER

DEMAND CONTINUES TO EXPAND

CHAIRMAN, SIR HARRY BURN'S REVIEW

The Sixty-third Annual General Meeting of The Calcutta Electric Supply Corporation Limited was held on November 10 in London.

Sir Harry Burn, K.B.E., F.C.A., the Chairman, presided.

The following is his review, which had been circulated with the report and accounts :—

Industry continues to expand throughout the whole of the licensed area, and housing development proceeds in Calcutta and its suburbs to remedy the shortage of dwelling space for all classes of the population.

The demand for energy grows, and I am able to report increased sales to all classes of consumers during the year ended March 31, 1960. The total energy sold increased by 140 million units to 1,817 million units. The major portion of the increase in demand came from industry.

Energy sold for power purposes refers principally to industrial demand, which accounted for 90 per cent of these sales. The balance covers public water works and domestic power, the latter being mostly for air-conditioning and refrigeration. All the principal classes of industrial consumer recorded higher consumption than in any previous years. The jute industry, our largest consumer, increased their demands by 18 million units to 430 million units. Further progress in modernization and rationalization of jute mill machinery has helped to improve trading conditions for this industry, whose exports were the highest for 10 years. Next in importance are rolling mills and engineering workshops, whose consumption increased by 32 million units to 243 million units. Expansion will continue when supplies of steel improve. Of the remainder of our industrial consumers the most important are cotton mills, chemical works and paper mills.

Further expansion took place in the demand for low tension industrial power, sales increasing by 14 million units to 114 million units and the number of consumers again increasing by over 1,000 to more than 15,500. Public water works and sewage pumping stations consumed 90 million units, an increase of 8 million units. Half of this increase was from the Calcutta Corporation, which is expanding its water supplies, and the remainder was from the State Government's Sonarpur-Arapanch Drainage Scheme. There was again a large increase in domestic power sales, which rose by 5 million units to 61 million units. The larger demand is mostly due to air-conditioning units, which are being manufactured locally.

Sales of energy for lights and fans rose by 16 million units to 243 million units. There has been an appreciable increase in residential buildings in our area of supply and greater use of fans resulting from improvements in the standard of living of many middle-class families.

Public lighting sales increased by one million units, which was almost entirely due to additional street lighting by the Calcutta Corporation.

The only consumer for traction purposes is the Calcutta Tramways Co. Ltd. Their consumption, which rose by 3 million units to 46 million units, shows some recovery in their operations, which were disrupted by labour troubles during the previous year. Provided that their operating conditions remain stable, consumption during the current year should reach that for the year ended March 31, 1958, of more than 49 million units.

There are seven distributing undertakings taking bulk supplies from the Company. Five of these undertakings are owned by the State Electricity Board, which was thus responsible for over 92 per cent of the total sales of 66⅔ million units and almost entirely for the increase of 3½ million units during the year.

Two-thirds of the sales under special contracts were at our special tariff to owners of large office and residential buildings, public institutions, cinemas, and hotels. Sales to these consumers increased by 5 million units to 61 million units during the year. The remaining consumers under special contracts are the Central and State Governments, the Calcutta Corporation, and the Calcutta Port Commissioners ; consumption improved in each case.

Revenue Account

The effect of the increase in the demand for energy is shown in the revenue account, where it will be seen that the receipts from sales of current have risen by over £700,000 to approximately £9,000,000. Interest received amounts to £43,727, an increase of £24,858 over the previous year, and is attributable to the return on Treasury bill investments and interest on bank deposits. As a corollary to the higher demand on the system the cost of generation and distribution increased by £534,000 to £4,560,000, and of this expenditure the cost of coal, including handling and ash disposal charges, amounted to £2,826,000, an increase of £373,000 for the year. This major item of outlay represents 80 per cent of the total operating cost of generation. The cost of power purchased from the Damodar Valley Corporation shows a slight increase of £11,000. Increases in wages and costs in respect of materials are commensurate with the expansion of the Company's system.

The depreciation charge has risen by £29,000 to the figure of £929,000. The wealth tax, to which I made reference in last year's review, was not in fact abolished until April 1, 1960, and has thus entailed a charge of £99,700 in the revenue account. This final instalment has been calculated with reference to the values of the Company's assets at March 31, 1959, in accordance with the Indian Wealth Tax Act. The net revenue after taking into account the depreciation charge has increased by £200,000. Sales of energy for the current year show a satisfactory expansion and conform with our forecast of future demands.

I will now deal with the net revenue account. As regards the Indian tax position I am glad to say that settlement has been reached in respect of the appeals which were pending a year ago and to which I made a reference in last year's review. The charges for United Kingdom and Indian taxation adjust the position up to March 31, 1960, but no relief is available in the tax element of the preference dividend for the year.

The clear profit for the year falls short of the reasonable return to which the Company is entitled by the sum of £67,353, and this has been made good by a transfer from special reserve.

It will be convenient here to explain how the special reserve, which stood at the figure of £961,113 on March 31, 1959, has been dealt with in this year's accounts. In order to meet an anticipated shortfall between the clear profit and reasonable return the State Government was asked to approve of an appropriation from this reserve for this purpose. In acceding to this request Government directed that the reserve should be allocated in accordance with the provisions of Clause II (1) of the Sixth Schedule of the Electricity (Supply) Act, 1948. Effect has been given to this decision relating the appropriations required to the reasonable returns of the periods of account concerned, i.e., the calendar years 1949 to 1952. Tariffs and dividends control reserve and consumers' benefit account receive allocations of £349,404 and £349,403 respectively, and a balance of £262,306 remains in the reserve which is available for meeting shortfalls between clear profit and reasonable return.

After providing for the shortfall disclosed in the accounts the reserve stands at £194,953, which amount, together with the tariffs and dividends control reserve, is to be set off against any future shortfalls of clear profit.

The allocation to the consumers' benefit account has been given effect to through the net revenue account as it is an appropriation which is not in the nature of a reserve and is in fact a charge related to the reasonable returns of the accounting periods to which I have made reference.

The allocation for the contingency reserve fund has been made as required by the Act and it is proposed to make the customary contribution to the retiring gratuity fund. Provision has been made for debenture interest and sinking fund charges, in view of the continued expansion of the company's operations it is essential to conserve our finances to meet the consequent capital expenditure. The board, therefore, have deemed it advisable to appropriate a sum of £575,000 to special appropriations for plant expansion and replacements. Dividends on the preference stock amounting to £65,075 have been paid and it is proposed to pay a final dividend of 4 per cent (actual) on the ordinary stock making 7½ per cent (actual) for the year. The net earnings for the year have enabled the Company further to strengthen its internal finances and also permit of an increase in the final dividend on the ordinary stock. The balance left to be carried forward on net revenue account is £108,138.

The balance-sheet shows an improvement in the cash position in the form of treasury bills and deposits with bankers. This accumulation of funds is in part being applied in payment of Indian tax now falling due on settlement of the appeals against which deposits are held with our bankers in Calcutta. Dividend payments are also covered and funds have been made available to meet commitments in respect of plant and other expenditure in the United Kingdom.

Capital Expenditure

Capital expenditure during the year amounted to £1,160,000 and was almost entirely for our transmission and distribution systems. By far the greater part of the expenditure was on mains and service connexions. As a provision for capital expenditure during the year and pending at March 31, 1960 (£595,000) there was available the sum set aside for depreciation of £929,000 and the allocation to special appropriations for plant expansion and replacement amounting to £575,000 thus making a total provision of £1,504,000. During the period January 1, 1951 to March 31, 1960, capital expenditure totalled £11,925,000 and the depreciation provisions, together with reserves and special appropriations during that period, amounted to £12,140,000. These figures follow on those given in the 1959 review and demonstrate what has been accomplished during recent years, within the limits permitted by the reasonable return on the capital base, to provide internal finance for the expansion of the Company's undertaking.

The forecast of capital expenditure over the next four years based on the anticipated increase in demand indicates an annual outlay of not less than £1¼ million on our transmission and distribution systems.

In February of this year Sir William Lamond visited Calcutta and was there for a period of three weeks. During his visit he met the chairman of the State Electricity Board and the chairman of the Damodar Valley Corporation to discuss the Company's future power requirements. He also had the pleasure of meeting Dr. Roy, the Chief Minister, and discussed with him questions of interest to the Company. Dr. Roy and the chairmen of the State Board and the Damodar Valley Corporation are fully acquainted with our problems. He also took advantage of the opportunity to meet the leaders of commerce and industry in Calcutta. He found, as usual, that our officers and staff continue to devote great care and attention in promoting the interests of the Company and maintaining efficiency.

I attach importance to the training of young Indian engineers for employment in our Company. Under our technical training scheme, which has been in operation for nearly 14 years, young Indian graduates are chosen by a selection committee in Calcutta for a short period of training in our undertaking. Thereafter they are brought to the United Kingdom for further training and on their return to Calcutta they are taken on to the permanent staff. In addition to this scheme we have a phased programme for bringing to the United Kingdom various members of our permanent staff for further training and for refresher courses. We are grateful to the Electricity Council, the area boards and the various manufacturing companies who provide the facilities.

Power Situation

I should like in this review to include a note of explanation with regard to the future supply of power within the Company's licensed area. In the decade and a half that has elapsed since the end of the War the demand on the system has increased from about 150 MW sent out in 1946 to the present figure of 390 MW. To cater for this growth has entailed constant expansion of the Company's generation, transmission and distribution capacity involving an investment during the period of some £24m. This expansion has proceeded in accordance with a coordinated plan of development designed to bring additional plant into commission before the load outstripped the capacity of existing plant and included 110 MW of new generating plant at New Cossipore and 60 MW at Mulajore ; in addition certain modifications at our Southern Station increased its capacity. These additions, which added some 180 MW of generating capacity at a cost of over £10 million would, it was anticipated, have sufficed to satisfy the demand in the area until the year 1955/56 by which date our plan of development provided for the construction of yet another station adjacent to our existing Southern Station. The arrangements for the design and construction of this station were in an advanced stage when we were informed by the West Bengal Government that they would prefer us instead of take a bulk supply from the Damodar Valley Corporation which it was then considered would have a surplus of power available for export to Calcutta. The Company were naturally prepared to defer to Government's wishes in this regard and, as stockholders will be aware from my reviews of previous years, an agreement was negotiated with the Damodar Valley Corporation providing for an initial supply of 45 MW to be increased from year to year as might be required on the tendering by the Company of appropriate notice. Supply from the Damodar Valley Corporation was connected in April, 1957, and, although that Corporation has not thus far been able to supply the Company with all the power it has required, we have been able by keeping certain of our older and less economic plant in commission to meet all demands made on us without load shedding. It is anticipated that by the end of this year the Damodar Valley Corporation will have brought into service additional plant which will enable them to increase their supply to the Company to 100 MW.

The Company's understanding of the arrangement with the Damodar Valley Corporation has been that the latter would be responsible for meeting all the Company's requirements of power in excess of that provided by its own capacity and, in fact, at the beginning of last year a supplemental agreement was completed with the Damodar Valley Corporation to govern supplies in excess of 100 MW. The Company has, however, now been advised by the West Bengal Government that it is not their policy that the Company's off-take from the Damodar Valley Corporation shall exceed 100 MW and that its import requirements in excess of that figure will be provided through the agency of the West Bengal State Electricity Board, first from the latter's new station at Durgapur and thereafter from a super-station which they propose to build at Bandel on the north bank of the river above Calcutta. The Company has been given to understand that under this arrangement the State Board will be able to afford it a supply of 40 MW by June, 1963, rising to 60 MW in June, 1964, and that shortly thereafter all the Company's requirements can be met. I need hardly say that the State Board will have the Company's full cooperation in bringing this plan to the earliest possible fruition and in this connexion negotiations are already in train for the siting of the necessary supply points, &c.

Meantime, the demand on the Company's system continues to grow at a rate of some 7½ per cent per annum compound, and it is feared that some restriction of supply to the public may occur before the State Board's supply is fully available. Should any such restriction become necessary it will, needless to say, be kept to the absolute minimum, and will be done under direction of Government acting under the powers conferred on it by the Indian Electricity Act, 1910.

With regard now to any possible expansion of the Company's own generating capacity, Government's policy, as communicated to the Company some years ago, was that, although the Company would not be permitted to increase its capacity, we should be allowed to replace certain obsolete plant in our Old Cossipore Station by the addition of one further 50 MW Set at New Cossipore. It was, however, only this year that we could see our way clear to doing this and, in collaboration with our consultants, a plan was worked out to put in this machine and at the same time keep 30 MW of plant at the Old Station in commission for peak load operation. On putting this plan to Government, however, we have very recently been advised that, having regard to their own plans, they no longer consider this to be necessary and in consequence we have had to abandon this project.

Throughout this Company's long existence our earnest endeavour has always been to make available the necessary supply of power to run the wheels of industry and transport and meet the ever increasing domestic requirements of our area ; thus contributing towards the prosperity, comfort and happiness of those who dwell and earn their livelihood in the City of Calcutta, its suburbs and in the industrial areas and municipalities which lie adjacent to the city. We have so far accomplished our aim and have at no time had to restrict supply. Having set out the power position in the light of a growing demand, we will continue to travel hopefully and, within the means at our disposal, do all that is possible for those whom we serve.

Tribute to Staff

I desire to express our thanks to the staff in Calcutta. The growth of the Company's operations and the work entailed in the implementation of same bears witness to the interest and zeal taken in the Company's affairs by members of the staff and employees. Mr. Henderson, our agent in Calcutta, has carried out his responsible duties ably and efficiently. To him and all members of our organization we express our high appreciation of the sound and loyal services rendered during the year. I also wish to record the board's appreciation of the able manner in which Mr. Collev has discharged his responsible duties as secretary.

The reports and accounts were adopted.

Note : The above statement is not a report of the proceedings of the Annual General Meeting referred to.

QUEEN ANNE

RARE SCOTCH WHISKY

THE CALCUTTA TRAMWAYS COMPANY LIMITED

BACKLOG OF MAINTENANCE AND RENEWALS A FORMIDABLE TASK

CONSTRUCTIVE AND CONCERTED EFFORT NOW POSSIBLE

CHAIRMAN, MR. DAVID WEBB'S SPEECH

The Annual General Meeting of The Calcutta Tramways Co. Ltd was held on November 8th. at 30, Cursitor Street, Chancery Lane, London, E.C., Mr. David Webb, F.C.A., Chairman of the company, presiding.

Mr. B. H. Clark, representing the secretaries, Messrs. Hays, Akers & Hays, read the notice convening the meeting and the report of the auditors.

The Chairman said :—

Gentlemen,—At the beginning of November, 1959, your Company increased its fares, both first and second class, by one naya paisa. This was, in the case of the second class, the first increase in fares since 1921. These increases were the result of the findings of the Tribunal set up by Government under the Industrial Dispute Act which found inter alia that the Company had insufficient revnues to maintain the undertaking.

All concerned with the future welfare of public transport in Calcutta must be thankful that at last some concrete measures have been taken to enable this undertaking to make a constructive effort to overtake the backlog of maintenance and renewals of permanent way and cars. The belatedness of their willingness to allow the Company to put into effect an increase in fares is outstandingly emphasized by the campaign which has been waged almost continuously in the press against the state of the permanent way and the roads in Calcutta.

The management of your Company are determined to make every possible effort to put matters right as soon as possible but they are under no misapprehension as to the size of the task. For seven long years we have been fighting to be allowed to preserve the standard of efficiency of this public service. It must seem unbelievable to many that this fare increase, amounting to less than 4th of a penny per mile, could have been the subject matter argued before so many tribunals and giving rise to so much ill feeling and bitter comment. I doubt very much whether in all the increases in the cost of living that have taken place since the war, there has ever been one so small which was of such paramount importance to the great majority of persons living within the boundaries of Calcutta.

Formidable Task

The task which faces us at the present time is, indeed, a formidable one. Even with unlimited funds it would be severely testing, for it is not only the willingness to tackle a major problem, it is the actual impossibility of being able to tackle too much at the same time. There are the problems of traffic congestion, of police control, and the period of the monsoon to mention only three. However, plans are beginning to show results now, and we hope by the beginning of the next monsoon that the concerted effort being made will be apparent for all to see. Whether the present increase in fares will produce sufficient funds it is till too early to say. Unfortunately it is always the case that where a backlog of expenditure has accumulated, out of the funds available considerable sums have to be used on additional maintenance arising from that same backlog. As a result, the final date on which the backlog will eventually be overtaken is delayed.

The Accounts

Turning to the accounts, it must be remembered that these do not reflect to any extent the increase in fares, but show a slightly improved picture over 1958 by reason of the fact that there was no six-week strike in 1959. You will see that the operating surplus in Calcutta rose from £130,000 to £206,000. The increase of more than £250,000 in traffic receipts was largely offset by increased expenditure. Even so, if one bears in mind the strike in 1958, during which time it was not possible to carry out any maintenance on the undertaking, the actual expenditure on maintenance per month showed a further reduction. This emphasizes only too clearly once again the effect of strikes and shortage of funds on an undertaking such as ours. It is the normal standard of maintenance which suffers, and this, of course, directly affects efficiency.

After charging London office expenses and transferring £90,000 to renewals and replacements account, there is a surplus on general revenue account of £105,000 against £17,000 last year. Of this, some £42,000 is required for Indian taxation, £22,000 for debenture stock interest, and the balance of £41,000 is carried to shareholders account.

After paying the dividend on the preference shares and setting aside £7,560 for the second debenture stock redemption account a dividend of 3½ per cent free of income tax is recommended by your directors. This would leave £1,400 to be added to the total carried forward on shareholders account.

The balance-sheet shows the full cost of the re-alignment of Dalhousie Square at £73,783. This re-alignment was carried out at the request of Government and financed on a loan from Government. The Company will derive little benefit from it. The first instalment of £25,000 for the repayment of the loan becomes due in January, 1961, and this will, of course, remove funds from the Company which could otherwise be used to such advantage in speeding up the maintenance and re-equipment programme. The current asset position is still far from satisfactory but shows a slight improvement on the previous year.

Wage Increase

As a result of the award of the Tribunal in October, 1959, our staff in India were to receive a smaller increase to their emoluments than the increase which the board had earlier suggested in September, 1958, and which would have been implemented on the introduction of increased fares at that time. Accordingly the Unions were informed that the increases in November, 1959, would be brought up to the 1958 suggested level. We believe that our conditions of employment compare favourably with most other undertakings in the country and we sincerely hope that we shall have a long period of steady working so that our staff may reap the benefit of them. Strikes benefit no one and the hardships they cause both to the workers and the travelling public last long beyond the period of the strike. Increased wages, in the same way as increased expenditure under any other heading, can only be financed from increased funds resulting from the greater productivity of each employee or from greater receipts resulting from increased fares. There are no other funds out of which such increases can be met.

Chairman's Tribute

Once more I would pay tribute to the services rendered by our agent and senior staff in Calcutta. Many of the worries which they have to overcome in controlling the undertaking in difficult and exceptional periods are hard to imagine unless one is there to see them for oneself. We are very fortunate in the untiring service we receive. There are times when they must face a deal of unjustified criticism and still preserve a cheerful front. There are times when they are called upon to work long hours under depressing conditions. They take it all as part of their responsibility. I know you would wish me to let them know that we are grateful to them and to wish them all success in their endeavours.

The report and accounts were adopted.

Note : The above statement is published for information and does not purport to be a report of the proceedings of the Annual General Meeting referred to.

INDIA STEAMSHIP COMPANY LIMITED

CHAIRMAN, SIR A. RAMASWAMI MUDALIAR'S REVIEW

The following is the speech delivered by Sir Ramaswami Mudaliar, K.C.S.I., D.C.L.(Oxon.), Chairman of the India Steamship Co. Ltd., at the Annual General Meeting of the Shareholders held on 14th November, 1960:

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31, 1960, have been in your possession for some time. With your permission, I shall take them as read.

The Directors' Report shows that the freight earned during the year was Rs. 8,38,59,427 as against Rs. 8,04,04,160 in the previous year. The total number of liner voyages during the year was 47.5 compared to 39 voyages in the previous year. Though the freight earned was higher than last year, I regret to state that the net result is a substantial loss to the Company. It is necessary that you should be informed of the reasons for the loss and the steps that are being taken by the Company to remove some at least of the factors that produced this result.

Overseas Trade and Freight Rates

I had referred last year to the decline in international trade and to its effect on international shipping which is always extremely competitive. During the year under review, the liner trade had to face aggressive competition from tramps which, scouring the seas for decreasing volume of commodities, offered rates of freight which made many shippers divert their custom from their usual liner companies. In spite of the Conferences reducing freights to meet this fierce competition particularly in commodities which could form bulk cargo the lines were heavily handicapped. Your Company has felt the effect of this competition both in the outward and inward trade. Your ships had to call at an even greater number of ports than usual, to secure the cargo and had necessarily to incur heavy expenses for port dues and other similar charges.

The first factor which affected your Company's net earnings and which perhaps was common to many other lines in this trade was the reduced rates of freight. A second and more serious factor which affected your Company was the unhealthy and unfair competition to which it was subject from some of the liner companies which are its colleagues in the main Conferences of which it is a member. It must be recorded, however unpalatable the fact, that competition by undercutting the freight rates through larger rates of rebate to shippers than permissible by Conference rules, has been freely resorted to by some lines in a desperate attempt to secure the freight at any cost. Other forms of evasion of rules have come to notice and their effect has been equally disastrous.

The system of entrusting the booking of cargo by shippers to institutions named 'Forwarding Agents' is a useful and well recognised system and has been of equal help to shippers and shipping companies. But unfortunately during the last two years, even this system has come to be misused by some forwarding agents on the Continent of Europe who, by illegitimate means, have influenced the direction of cargo to the ultimate detriment of both the shipper and the lines concerned. It is unnecessary to refer in any detail to the methods adopted by these few Forwarding Agents and the harmful effects of such practices. In addition to some lines adversely affected by such practices, the Central Government has also been thwarted in its attempts to conserve foreign exchange and the authorities are generally aware of the position.

A Likely Solution

Your Company, along with some others, have given most anxious consideration to means whereby these evils can be reduced, if not eliminated. They have realised along with some of their colleagues that the Conference system itself will be seriously jeopardised if these conditions continue. It is unnecessary to dilate on the salutary purpose which the Conference system serves. Contrary to the notions of a few shippers who sometimes feel that it restricts their freedom of choice of ships, it is of at least equal value to shippers as to shipping companies. The suggested solution, which is now engaging the serious consideration of the lines, is the allocation of the total freight earnings of all the shipping lines of a Conference in certain proportions over a term of years, providing at the same time for the growth and development of the fleets of underdeveloped countries, through a defined and reasonable increase in the rate of allocation during the years comprised in the stated term. Your Directors have, after very anxious consideration, put forward proposals in this regard jointly with the sister Indian Company, the Scindia Steam Navigation Company Ltd. and are expecting that an arrangement would be agreed upon by all Companies, members of the Conference in the India/U.K./Continent trade, very shortly. I do not wish to deny that there are some disadvantages in any practicable arrangement that may be arrived at, but your Directors after weighing both the disadvantages and the advantages have come to this decision. It will eliminate those unworthy charges of Flag discrimination which really reflect on the fair and equitable judgment of those who level such charges. Above all, the evil practices that I have referred to will be greatly minimised. If contrary to expectations an arrangement on the above lines is not arrived at and that very shortly, the Indian lines are prepared to adopt other measures in consultation with their Government to secure their right.

It should not be imagined that, if a pooling arrangement of freight earnings is adopted, Indian companies can sit back and calmly await the result of the allocation of the pool amount. Your Company cannot relax its efforts to carry a fair amount of freight in either direction and shippers whether in the private sector or in the public sector will, I hope, fully co-operate in developing National Shipping by a fair allocation of cargo to Indian shipping companies. I may, in this connection, be permitted to express my concern and disappointment at the manner in which the State Trading Corporation in its chartering section has been functioning. It may be that, owing to the rigidity of financial regulations, it has had to pursue a policy which, at least among Indian shipping companies, has not found a supporter. There are more far-reaching aspects of chartering than the consideration that a cheap freight can be had from an over-tonnaged tramp fleet or a distress charter vessel. Foreign exchange earnings for which an intensive drive is being made by the Central Government should be, one would have thought, a formidable corrective to an over-simplified calculation of a low freight charge. I still hope that the Charter Committee will be reconstituted on a broader and firmer basis and its policy better clarified.

Port Delays

A severe handicap particularly to Indian shipping is the condition of some of the Indian ports and the substantial delay in the turn-round of ships both at Indian and foreign ports. I have stated at successive annual meetings that ships earn only when they are voyaging on the high seas and that more time is spent in ports in a year than on the high seas. During the year under review, the drafts in the port of Calcutta showed further deterioration and in many cases ships were unable to lift even the decreased cargo that was offered owing to draft restrictions. I must however, in fairness to those in charge of the port, state that conditions have considerably improved during the current year and that, thanks to their sustained effort and the interest taken by the Transport Ministry, more permanent improvement is in the offing. While we are thankful for these improvements in the major Indian ports and for the greater awareness which the Government and the port authorities are showing in the modernisation of our ports, we must also express our regret at these beneficial results being nullified by the attitude of labour at some of these ports. Unauthorised strikes by Dock labour unions and lightning strikes such as the strike of Tug Operators are causing loss and damage to shippers and shipping companies, the extent of which is not properly understood or appreciated. The recent Tugmen's strike in Bombay paralysed the work of the port for many days with considerable financial loss to all concerned. But what is not apparent is the adverse effect it has on other ports when the strike is over, by the bunching of ships at these ports and consequential delays in obtaining berthing facilities. It is not in Indian ports alone but even more in foreign ports and particularly in the U.K. ports of London and Liverpool that this evil of undeclared and unauthorised strikes is manifesting itself all too frequently. Unless remedial measures are adopted, such chaotic conditions will lead to harmful results to all concerned.

The Future

I have given a faithful picture of conditions that existed during the year. I confess however that there may be overtones in the picture presented and that it may lead you to the belief that the future is one of unrelieved gloom. I do not hold to that belief myself. International shipping is notoriously subject to fluctuations, sometimes violent fluctuations. I consider that we have passed through such a period and that it will not be unreasonable to look forward to a less anxious future. Your Company in particular is firmly established and rests on a solid basis. The eagerness and enthusiasm which its officers of all ranks and the staff show is unabated. The interest that is taken by the authorities in the development of Indian shipping is gratifying and encouraging. The National Shipping Board, under its Chairman, Mr. G. L. Mehta, continues to take an increasing interest in the development of Indian shipping. The present Minister of Transport, Dr. Subbaroyan, and the Minister of Shipping, Mr. Raj Bahadur, are evincing keen interest in the problems of Indian shipping. Mr. Raj Bahadur has devoted himself to a study and understanding not merely of the major but even of the minor problems of Indian shipping. The Ministry of Transport, through its Secretariat, the Director General of Shipping and the Senior Deputy Director and other officers, have been in constant touch with Indian shipping companies and have greatly helped them with advice and assistance. The establishment of the Shipping Co-ordination Committee holds out promise of fair treatment to Indian shipping. When the Chartering Section of this Committee is properly organised and broadbased, it should help the development of Indian tramp shipping, so badly needed by the country. Above all, the development of shipping in the public sector, insofar as it is within proper limits, is in my opinion a help and not a hindrance to the development of Indian shipping in the private sector. It will present to the authorities more directly and more vividly the difficulties and handicaps which it suffers from and thereby will increase still further the awareness of problems of Indian shipping by the authorities I therefore take a fairly optimistic view of the future of Indian shipping and of your Company in particular.

Tribute

In spite of the financial results of the year, I feel it my duty to pay a tribute to the devoted services which the officers, both ashore and afloat, and the staff of the Company have rendered during the year. In the face of exceptional difficulties, they have spared no pains to achieve results such as they are. I must also convey the thanks of the Board to the shippers who have extended their continued and firm support to us and to the Brokers and Forwarding Agents who have shown confidence in us and in the standard and quality of our shipping service.

Note: This is not a report of the proceedings at the above Annual General Meeting.

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 16th November.

THE past week has seen little change in the advances outstanding in the Calcutta money market. A substantial increase was recorded in the credit requirements of the jute industry, but those of the sugar mills declined along with the call for accommodation against foodgrains storage. Demand from the cotton mills and the engineering, and iron and steel industries remained relatively unchanged. There is still no sign of the normal seasonal upturn in demand. The interbank market remains tight and there has been no reduction of the call rate from 4½ percent.

For the third week in succession, the exchange market has remained dull. A few tea bills were seen, but gunny documents were conspicuously absent. The pound was firm in the London money market early in the week, but weakened slightly towards the close and finished the period with fractional losses against most important currencies.

BULLION WAS QUIET IN THE ABSENCE OF SUPPORT. Silver declined from the previous week's level of Rs. 225.75 to Rs. 225, quoted today for ready delivery. The rate for forward delivery was Rs. 225.25. The London and New York prices were shown at 79½d and 91.375 cents.

Gold declined in sympathy with silver from Rs. 137.25 to Rs. 136.75. The sovereign, at Rs. 91, showed a fall of 50nP.

DURING THE WEEK ENDED 11TH NOVEMBER, Government of India Treasury bills for Rs. 63,47,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 15th November. The total amount offered was Rs. 2.24 crores. Tenders at Rs. 99.360 were accepted in full and those at Rs. 99.355 allotted approximately 68 percent, the average rate of acceptance being Rs. 2.565 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 16th November to 19th November at Rs. 99.376 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 9th November to 12th November amounted to Rs. 31 lakhs.

RISES OF RS. 19.64 CRORES TO RS. 1,841.72 CRORES in the total note issue and of Rs. 18.92 crores to Rs. 1,827.22 crores in active notes were notable features of the return of the Reserve Bank of India for the week ended 11th November, 1960. The currency expansion was adjusted by increasing rupee securities of the paper currency reserve by Rs. 20.03 crores to Rs. 1,472.06 crores, through a transfer of securities from the Banking Department. In the latter, investments consequently fell by Rs. 20.26 crores to Rs. 223.04 crores. Deposits of the Government of India rose by Rs. 20.91 crores to Rs. 74.52 crores, as did other Government accounts by Rs. 4.66 crores to Rs. 14.86 crores. Balances of commercial banks at Rs. 105.09 crores showed a rise of Rs. 1.29 crores. Balances held abroad fell by Rs. 17 lakhs to Rs. 18.10 crores. Other loans and advances increased from Rs. 122.75 crores to Rs. 125.99 crores, of which advances to scheduled banks against usance bills amounted to Rs. 8.15 crores (Rs. 5.82 crores). Ways and means advances stood at Rs. 34.81 crores, against Rs. 34.99 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 4th November, 1960, shows a drop Rs. 3.95 crores to Rs. 579.22 crores in total deposits. Investments in Government securities and other authorised investments have increased by Rs. 10.30 crores and Rs. 12 lakhs to Rs. 345.68 crores and Rs. 9.94 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 1.94 crores to Rs. 214.12 crores. Cash and balances are, in consequence, shown at Rs. 25.41 crores or Rs. 2 lakhs less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 4th November, 1960, shows Demand and Time liabilities at Rs. 790.62 crores (Rs. 19.55 crores on account of borrowings from banks) and Rs. 1,143.86 crores (Rs. 20.54 crores), compared with Rs. 797.20 crores (Rs. 20.03 crores) and Rs. 1,143.84 crores (Rs. 19.86 crores), respectively, in the previous week. Cash has decreased by Rs. 1.61 crores to Rs. 47.08 crores, while balances with the Reserve Bank have increased by Rs. 9.01 crores to Rs. 104.66 crores. There is a rise of Rs. 9.43 crores to Rs. 698.97 crores in investments. Advances and bills discounted at Rs. 1,109.61 crores show a drop of Rs. 1.57 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.3 percent and 57.4 percent, against 7.4 percent and 57.2 percent.

TREASURY BILL MATURITIES

Quality. Something intangible. Yet it is present in any form of human activity where certain standards are maintained.

Take everyday commerce, for example. There are many goods in the market which are not made to any standard. And yet, if they could be, they would have the assurance of quality.

Today, there are relevant standards, prescribed by the Indian Standards Institution, for the manufacture of many consumer and industrial products. On application, and after exacting tests and examinations, ISI also gives its certification mark to those manufacturers whose goods conform to specified standards. The ISI mark is the guarantee of quality.

Once the licence to use the mark is granted, ISI maintains a constant vigil to see that the quality of the products continues to be maintained and the mark is not misused in any way. For, its integrity must always be safeguarded.

STATEMENT FROM NEW U.S. PRESIDENT-ELECT BOOSTS MARKET SENTIMENT

GILT-EDGED SLIGHTLY BETTER

Wednesday Evening.

THE statement made by Mr. Kennedy, U.S. President-elect, on India's economic development, was well received in market circles today. Hopes of more foreign aid for the third plan have now increased considerably, and his reported statement that the goal of the next U.S. Administration will be to turn India into a showpiece of democracy has acted as a tonic for the bulls. The publication of the preliminary results of the Indian Iron & Steel Company for the year ended March 1960, the increase in steel retention prices, and the slight relaxation of the Reserve Bank's credit curbs, also helped, to a limited extent, to impart some cheer to the market. The increase in the average retention price of steel by Rs. 4.85 a ton for the five-year period ended March 1960, is considered to be routine in character. But market interest in the subsequent increase in retention prices, which is to be decided later for the period subsequent to 1st April, 1960, is expected to be keener.

The minor modifications in the recent credit curbs had little effect on share prices, as the view was taken that the changes in themselves were unlikely to improve the flow of funds for stock exchange operations. The details of the changes were, that with effect from 11th November, banks will no longer be required to lodge with the Reserve Bank any portion of further increases in deposits. Furthermore, the impounding scheme, with reference to earlier increases in deposits, will continue, except that the proportion has been reduced to 25 percent from 50 percent. One fact, however, emerges from the Reserve Bank's latest announcement, namely that the dear money policy will not be carried to the point where it is likely to become a serious hindrance to business activity.

Following a slight easing in the money market, Government securities recorded fractional gains particularly 4% State loans. The 3% Conversion Loan closed slightly higher at Rs. 74.25.

Bank shares were quiet with Punjab National unchanged at Rs. 19. United Commercial were marked Re. 1 lower to Rs. 85.

In coal, Bengal were steady at Rs. 340 while Burrakur fluctuated narrowly around Rs. 17.56. Karanpura Collieries met with small enquiry at Rs. 185.

Cotton shares were listless and very little business was put through. The same is true of electric supply shares.

In the engineering group, Indian Iron & Steel improved from Rs. 23.22 to Rs. 24.01 which was tonight's closing quotation. Braithwaites were shaded at Rs. 32.12 and Guest, Keen, Williams were softer at Rs. 40. Indian Standard Wagon advanced from Rs. 87 to Rs. 89 and Textile Machinery were quietly steady around Rs. 22.70. Britannia Engineering were better today at Rs. 14.50.

Little or no business was reported in the jute section owing to the difficult trading conditions being experienced by the industry, and prices moved within narrow limits.

In paper, Orient advanced to Rs. 40.80 and Sirpur to Rs. 18.44.

Sugar shares were dull and featureless with the exception of Dyer Meakin Breweries and Ramnugger Cane, which were better at Rs. 23.50 and Rs. 27 respectively.

Among miscellaneous industrials, Alkali & Chemical moved further ahead to Rs. 33.50, as did Aluminium Corporation to Rs. 18. Indian Aluminium, on rumours of a possible rights issue, moved up to Rs. 29.44 against an opening price of Rs. 28.12. Associated Batteries were easier at Rs. 36.87. Dunlop Rubber were better at Rs. 42 while Gwalior Rayon receded to Rs. 44. Indian Cables were higher at Rs. 33 and India Steamship were marked at Rs. 9.35 ex-dividend. National Insulated Cables moved lower to Rs. 30.75 while National Rolling Mills improved from Rs. 18 to Rs. 19. Rohtas Industries were subdued at Rs. 22.06 while Rallis India rose by Re. 1 to Rs. 125. Union Carbide were steady at around Rs. 49.62, as were Walford Transport at Rs. 3.

In the mining group, Karanpura Development met with some enquiry and improved to Rs. 16.75 while Indian Copper were unchanged at Rs. 4.45.

Tea shares ruled quiet with Dufflaghur being marked down to Rs. 36.75 and Gungaram to Rs. 136.

Salem-Erode Electricity

A taxable ordinary dividend of 12 percent (against 10 percent, tax-free) has been declared by the Salem-Erode Electricity Distribution Co. Ltd for the year ended March 1960. The profit has amounted to Rs. 7.02 lakhs, against Rs. 3.57 lakhs. Depreciation absorbs Rs. 2.01 lakhs (against Rs. 1.90 lakhs). The provision for taxation is increased from Rs. 1.19 lakhs to Rs. 2.41 lakhs. Bringing in Rs. 28,100 and making other adjustments, there is a carry-forward of Rs. 32,709. About 21,730,401 units were sold by Salem (against 17,752,997 units), and 9,794,129 units by Erode (against 8,610,622 units).

Tinnevelly-Tuticorin Electric

After providing Rs. 1.64 lakhs (against Rs. 1.53 lakhs) for depreciation, the profit of the Tinnevelly-Tuticorin Electric Supply Co. Ltd has risen from Rs. 2.41 lakhs to Rs. 3.85 lakhs for the year ended March 1960. A taxable ordinary dividend of 10 percent has been declared, against 10 percent, tax-free, in the previous year. Taxation is allocated Rs. 1.30 lakhs (against Rs. 66,000). After making various adjustments, there is a balance of Rs. 29,745 to be carried forward, against Rs. 30,338 brought in. About 22,289,786 units were sold, compared with 19,846,763 units.

Bombay Market

STEADY PRICES MAINTAINED IN CAUTIOUS TRADING

CLOTH RATIONING FEARS SLOW RECOVERY

Wednesday Evening.

THE Bombay stock market was steady during the past week, but trading was done on a cautious scale because operators were worried about the future cloth prices. It looks as if these

service with a smile... and it certainly is a pleasure to know that so many wise motorists use Caltex petrol and oils regularly. I can almost 'tell-at-a-glance' when an engine's got the well-cared for look that regular use of Caltex petrol and oils give it. Sure, it's service with a smile, and a real pleasure to know so many motorists *care* for their car with Caltex.

Care for your car—
***with* CALTEX**

CALTEX

prices will be fixed on the recommendations of the Tariff Commission. It is also feared that some kind of rationing of cloth may be introduced because the Government thinks that the present prices are rather too high.

There was nevertheless little indication of any selling pressure. Moderate carryforward charges for the new account were interpreted bullishly. Operators were also encouraged by the decision not to enforce margin deposits on buying, especially in some selected scrip. The latest increase in the retention price of steel appears to have disappointed many operators who thought that it would not cover the rise in costs of many items which are not covered by the escalator clause. The relaxation of the deposit impounding scheme by the Reserve Bank was well received. There was an inclination to take a constructive view in the light of improved prospects for obtaining financial assistance from the U.S.A.

Tata Steel were quoted at Rs. 143.75, but Indian Iron were firm at Rs. 23.88 on strong support from Calcutta interests. Among engineering shares, Alcock Ashdown were transacted at Rs. 257 and Premier Construction were dealt in at Rs. 312. Tata Locomotive found support up to Rs. 294, but Larsen and Toubro declined to Rs. 38.25 on profit-taking. In motor shares, Premier Automobile benefited from talk of expansion and the price was quoted at Rs. 175. Hindustan Motor were bought up to Rs. 19.84 on paying a higher ordinary dividend.

Except for interested support in Century and Standard, cotton mill shares drifted lower. Century realised Rs. 472.50, as did Standard Rs. 1,185. Gokak were steady at Rs. 165, but Bombay Dyeing reacted to Rs. 63.80. Central India lost at Rs. 107 and Svadeshi declined to Rs. 232. India United Ordinaries were sold at Rs. 12.16 and Apollo were freely offered at Rs. 1.34.

In the miscellaneous group, cement shares were quiet, and Associated Cement were available at Rs. 146.50. Digvijay were placed at Rs. 161. Among sugar shares, Belapur were prominent at Rs. 387 on dividend prospects. Phalton moved down to Rs. 181.25, as did Walchandnagar Industries to Rs. 298.75. Shipping shares were quiet, and Scindia were dealt in at Rs. 14.20. Great Eastern Shipping were lower at Rs. 15.80. Bombay Burmah were supported up to Rs. 591, as were National Rayon at Rs. 529. Gwalior Rayon declined to Rs. 44 and Tata Oil were quoted lower at Rs. 74. Chemical shares were weak, and Tata Chemical were indicated at a lower rate of Rs. 17.20. Indian Dyestuff fell to Rs. 530. Ceat Tyre lost at Rs. 233.75 and West Coast Paper were available at Rs. 199. Asian Cable met with scattered support at Rs. 100 on prospects of a new share issue for financing expansion.

Bank shares were steady on optimism concerning the future outlook. Central Bank improved to Rs. 55.50, as did Bank of India to Rs. 105.50. Insurance shares were quietly steady, and New India Assurance were transacted at Rs. 54.80. British India General made Rs. 12.25.

Electricity supply company shares were steady, and Tata Power were wanted up to Rs. 1,042.50. Ahmedabad Electric were bought up to Rs. 88.80 and business passed in Bombay Suburban around Rs. 85.20.

Madras Market

BETTER OUTLOOK BRINGS IMPROVED PRICES

TEXTILE INVESTORS OPTIMISTIC

Wednesday Evening.

THERE has been an improvement in the Madras stock market during the past week due to many favourable developments. Firstly, the relaxation of the credit curb measures by the Reserve Bank induced mild support. Secondly, the textile interests were fairly optimistic about the cloth outlook, as they thought the Tariff Commission would fix prices of cloth and yarn at more realistic levels. Thirdly, operators were inclined to think that the present foreign exchange shortage would be soon overcome with generous financial assistance from abroad.

Government securities met with scattered interest due to the absence of institutional selling pressure. Selected sugar shares met with support on good corporate developments. In the planing group, tea shares were bought on hopes of increased prices for common teas. Rubber shares were supported on the view that replanting would be promoted by official measures. Coffee shares were, however, sold freely on fears of surpluses. Cotton mill shares were selectively bought and miscellaneous shares attracted attention on corporate news.

In the banking group, Punjab National were steady at Rs. 19.10 on prospects of a rights share issue at par. The Bank proposes to issue rights ordinary shares in the proportion of three new shares for every five held. Indian Overseas were placed at Rs. 173 and Pandyan were quoted at Rs. 33.

Among public utilities, Ellore were bought up to Rs. 17.25 on paying a taxable dividend of 10 percent. Business was done in South Madras at Rs. 10 and in West Coast at Rs. 13.40.

In the sugar group, United Breweries were firm at Rs. 114.50 on the decision to issue 80,000 new ordinary shares at par to the existing shareholders. Deccan were done at Rs. 15.70 and E.I.D. came to hand at Rs. 44.25. Mysore were steady at Rs. 16.50 and Andhra were transacted at Rs. 28.

Among planting shares, Blue Mountain were steady at Rs. 5.06 and Cochin Malabar met with support at Rs. 7.35. Consolidated Coffee were easier at Rs. 23.85, but Periakaramalai were supported up to Rs. 3.54. Ouchterlony were sold at Rs. 5.05. Parkside met with support at Rs. 29.75 on the decision to issue bonus shares in the ratio of one new share for every ten held. Panchura Plantations were bought up to Rs. 5 on paying a taxable dividend of 40 percent and Talayar Plantations were wanted up to Rs. 1.75 on declaring a taxable dividend of 8 percent. T.R. and T. were steady at Rs. 9.20 on interested support. Travancore Rubber were steady at Rs. 11.50 and United Nilgiri changed hands at Rs. 21.62. Coffee Lands were sold at Rs. 23.75, but Kil Kotagiri were in demand up to Rs. 5.66. Nilgiri were done at Rs. 7.35 and Peermade met with support up to Rs. 22.80. Waterfall were quoted at Rs. 4.90.

In the textile group, Travancore Rayon improved to Rs. 35.60 on shortcovering and business was done in South India Viscose up to Rs. 167. Lakshmi were transacted at Rs. 155.50, as were Madura at Rs. 34.30. Buckingham were steady at Rs. 198 and Bangalore Woollen at Rs. 196. Kothari came to hand at Rs. 12.15 and Rajalakshmi were in demand up to Rs. 74.50.

In the miscellaneous group, Aluminium Industries were placed at Rs. 23.05 and Ashok Leyland were taken at Rs. 8.80. India Cement were bought up to Rs. 7.10 and Mysore Paper were steady at Rs. 28.40 on prospects of expansion. Parry's Confectionery changed hands at Rs. 4.45 and Spencer were quoted at Rs. 22.25. Business passed in Standard Motor at Rs. 17.10 and Textool were dealt in at Rs. 190. Tube Investment met with support up to Rs. 305 and Enfield were placed at Rs. 15.20. Singareni were done at Rs. 9.97 and Kirloskar Electric were steady at Rs. 13.10.

THREE-HUNDREDTH DURGAPUR TRAINEE FOR U.K.

The 300th Indian to be selected for specialist training in Britain for an assignment at the Durgapur steel works left India for London on 9th November. He is 25-year-old Kripa Shanker Misra, of Kanpur, a graduate in chemical engineering from Banaras Hindu University. Mr. Misra will be trained in the techniques of gas control and, on his return to India, will take up a supervisory position in the Energy and Economy Department of the Durgapur steel project. Mr. Misra will be accompanied by 30 other engineers. Together they comprise the 11th group of Durgapur trainees selected for training in the U.K. under the Technical Co-operation Scheme of the Colombo Plan. In all, 350 Indian steelmen are to be trained in the U.K. for service at the Durgapur steel works, which has been built by I.S.C.O.N., a consortium of 13 British firms. The No. 1 blast furnace at the steel works was inaugurated at the end of December 1959 by the President of India, and steel-making began on 25th April this year, ahead of the target date.

a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories... manufacture plants for water treatment... supply paper for a variety of uses...make jute goods and steel castings and structurals...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

GILT-EDGED RISE ON HOPES OF BANK RATE CUT

U.S. ELECTION RESULT HAS LITTLE EFFECT ON SHARES

London, 16th November.

THE past week was an eventful one in the stock markets, the two major influences coming from the United States. First there was the U.S. Presidential election, which really had little effect in London. Later came the news of the bid by Ford of America for those shares of Ford Motor of the U.K. which were not already held by the U.S. parent company. The price of the shares were marked up sharply, but it remained to be seen whether the necessary Treasury consent for the deal would be forthcoming. The expected cut in the West German Bank rate materialised. This gave rise to talk of a further reduction in the British Bank rate in the near future. Gilt-edged securities made steady progress under this influence. Company news was somewhat mixed. Reports from the motor-car industry were an unsettling influence, although there was a general improvement in the shares following the Ford statement, on the view that some of the money received for the Ford shares would find its way into other motor-car shares. Steels were occasionally supported on dividend hopes and stores responded to news of good retail sales. Buying of industrials generally, however, was restrained by the marked widening of the U.K. trade gap during October. With the London price of gold steadily drifting back each day, interest in gold shares was reduced and prices fluctuated less. There was a certain amount of selective buying in response to favourable Press comment. Coppers went strongly ahead at one time, but the trend was reversed later, partly reflecting the fall in the price of the commodity which followed the settlement of the Chilean strike. Tin shares were helped by some satisfactory dividend payments, but lead and zinc shares were dull. Oils were quiet and narrowly irregular. The downtrend in rubbers came to a halt and a quiet demand for a number of the better-class issues was responsible for some recovery. Very quiet conditions prevailed in tea shares.

The Money Market

Stringent conditions continued to prevail in the money market during the past week. The market was forced into the Bank of England on one day for a fairly large amount. The rate ruled firm at 4⅞ percent to 4⅞ percent, but towards the end of the week, after the Treasury bill tender, there was an easing to 4⅞ percent and 4⅞ percent. This was because there was a further fall in the Treasury bill rate of approximately ¼ percent to around 4⅞ percent. The demand for bills remained keen. The market was losing too many by sales to the banks, so it made a further revision in its bid, paying more and pulling down the Treasury bill rate still further. The rate fell to a level which made it seem inevitable that the U.K. Bank rate would be reduced in the very near future. Other factors which indicated an imminent change were the recent strength of British funds and the cut in the West German Bank rate. Sales of bills by discount houses to the banks last week were done at 4⅛ percent and 4⅛ percent for end-January and "hots".

Activity on Wall Street

U.S. Government obligations drifted in irregular fashion in slow and largely professional dealings in Wall street during the past week. Long-dated issued staged a modest post-election day rally, attributed to easier money prospects, but were unable to maintain all the gains due to lack of interest. High-grade corporates turned firm following an early spell of softness, reflecting quicker investment demand. Convertibles improved following initial irregularity in sympathy with the upsurge in the security market. Foreign dollar bonds were mixed. Cuba 4½ percents attracted increased buying interest, moving up eight points. Japanese Governments were lower, with the 5½ percents giving up over a point. Chile 3 percents held steady.

Paris Gold Hesitant

The Paris gold market during the past week was less active than in previous weeks, but heavy business was noted in 1 kilogram ingots. French hoarders were hesitant and showed little inclination to commit themselves. In contrast to previous expectations, the U.S. Presidential election victory of Senator Kennedy had little effect. While there was an upward trend in the earlier stages, prices declined later and fluctuations became narrow. Prices resisted any major drop, however, because certain financial quarters felt that a rise in the international price of gold was possible in the not-too-distant future.

NAMES AND DATES

Mr. P. C. Neogi, formerly Director-General, Research, Design and Standardisation Organisation, Ministry of Railways, has assumed charge as general manager of the Durgapur steel project. He has taken over from Mr. K. Sen, I.C.S.

The cornerstone of the new Goodyear Tyre and Rubber Company factory in Ballabgarh, Punjab, was laid by Mr. Manubhai Shah, Central Minister of Industries, on 12th November.

New Delhi

EXPANSION OF ELECTRIC MOTOR AND POWER TRANSFORMER INDUSTRIES

LIMIT FIXED FOR CLOSURE OF ADDITIONAL JUTE MILL LOOMS

(FROM OUR NEW DELHI CORRESPONDENT)

AT the beginning of the second five year plan, there were 12 units manufacturing electric motors with an annual installed capacity of 263,000 horse power. Since then, eight new units have gone into production and substantial expansion has taken place in some of the existing units, leading to an additional capacity of 339,520 horse power. Thus, at present, there are 20 units manufacturing electric motors with an annual installed capacity of 602,520 horse power on a single-shift basis. The Statewise distribution of the installed capacity is as follows:

State	No. of units	Annual installed capacity (horse power)
Maharashtra	5	199,600
West Bengal	6	174,320
Madras	7	36,000
Mysore	1	160,000
Punjab	1	32,600
	20	602,520

A further capacity of 886,320 horse power has been licensed, for the establishment of 29 new units and for effecting substantial expansion in 14 existing units. This capacity is in the process of being installed, and with the implementation of the schemes, there will be 49 units with an annual installed capacity of 1,488,840 horse power on single shift. The Statewise distribution of this capacity will be as follows:

State	No. of units	Annual capacity (horse power)
Maharashtra	9	423,600
West Bengal	8	368,240
Madras	23	231,000
Mysore	2	240,000
Punjab	4	206,200
Gujarat	1	1,800
Kerala	1	3,000
Himachal Pradesh	1	15,000
	49	1,488,840

Besides the above capacity, the heavy electrical equipment project, Bhopal, will also produce 50,000 horse power a year of electric motors of 200 horse power and above. It is not known how many of these will be in the range of 200 horse power to 300 horse power, but some motors within this range are likely to be produced.

Demand During Third Plan

The Development Council for Heavy Electrical Industries has estimated that the demand for electric motors of 300 horse power and below would rise to 2.5 million horse power a year by 1965-66. The Council has recommended that capacity of 3 million horse power should be established to achieve this production. The Planning Commission has tentatively accepted these targets. As for the future development of the industry, a capacity of about 1.5 million horse power for the manufacture of electric motors of 300 horse power and below on single shift, it is expected, will be achieved on the completion of the schemes now being implemented and these include the heavy electrical equipment project in Bhopal. *Prima facie*, production corresponding to the estimated demand of 2.5 million horse power a year by 1965-66 can be achieved with this capacity by operating all the units on double shift. There would thus seem to be little scope for further expansion of the industry in the immediate future. At the same time, it may not be desirable to put a complete embargo on the further expansion of an industry like electric motors which, without heavy investment, is capable of considerable development on a decentralised basis. In view of these considerations, it is suggested that further licensing up to a capacity of 400,000 to 500,000 horse power might be considered during the later part of the third plan period.

The existing capacity is mainly concentrated in Maharashtra, West Bengal, Madras, Mysore and Punjab. In allowing further capacity, it is suggested that applications from States like Assam, Orissa, Bihar, Uttar Pradesh, Rajasthan and Andhra Pradesh, where there are no units at present, and from Kerala, Gujarat and Madhya Pradesh, where there is little capacity, may be given preferential consideration. There does not seem to be any necessity for further expanding the capacity in Maharashtra, West Bengal, Madras, Mysore and Punjab.

More Distribution Transformer Units

At the beginning of the second five year plan, there were 13 units manufacturing power and distribution transformers with an annual installed capacity of 657,000 kVA. Since then, three new units with an annual capacity of 45,000 kVA have gone into production and substantial expansion has taken place in some of the existing units leading to an additional capacity of 542,000 kVA. Thus at present, there are 16 units manufacturing power and distribution transformers with an annual installed capacity of 1,244,000 kVA on single shift. The present Statewise distribution of the installed capacity is as follows:

State	No. of units	Annual installed capacity (kVA)
Maharashtra	5	419,000
West Bengal	5	388,000
Madras	3	168,000
Mysore	2	259,000
Kerala	1	10,000
	16	1,244,000

Further capacity of about 707,800 kVA, consisting of one new unit and eight substantial expansions, is in the process of being installed. With the implementation of these schemes, the Statewise distribution of the industry will be as follows:

State	No. of units	Annual capacity (kVA)
Maharashtra	5	574,000
West Bengal	5	488,000
Madras	3	400,800
Mysore	2	379,000
Kerala	1	50,000
Bihar	1	60,000
	17	1,951,800

The Development Council for Heavy Electrical Industries has recommended targets of capacity and production for power and distribution transformers of 33 kV and below as 4 million kVA and 3.5 million kVA, respectively, for the third five year plan. The Planning Commission has tentatively accepted the targets. A capacity of about 1.95 million kVA on single shift, it is expected, will be achieved on the completion of the schemes so far licensed. *Prima facie*, production corresponding to the estimated demand of 3.5 million kVA can be achieved with this capacity by operating all the units on double shift. There would thus seem to be little scope for further expansion of the industry in the immediate future. The demand for transformers is linked with the power development of the country, and since the estimated installed capacity of power, it is expected, will increase from 5.8 million kW at the end of the second plan to 11.8 million kW at the end of the third, the demand for transformers will grow in all the States proportionately with power generation. Therefore, it may not be desirable to put an embargo on the further expansion of the transformer industry which, without heavy investment, is capable of considerable development on a decentralised basis. It is, therefore, suggested that further licensing up to a capacity of 400,000 to 500,000 kVA might be done during the third plan period.

It will be seen that the existing capacity is mainly concentrated in Maharashtra, West Bengal, Madras and Mysore. In allowing further capacity it is suggested that applications from States like Assam, Orissa, Uttar Pradesh, Punjab, Rajasthan, Madhya Pradesh, Gujarat and Andhra Pradesh, where there are no units at present, and from Kerala and Bihar, where there is little capacity, may be considered preferentially. There does not seem to be any necessity for further expanding the capacity in the States of Maharashtra, West Bengal, Madras and Mysore where sufficient capacity has alreay been created.

I.J.MA.-Government Discussions

At the two-day discussions held between the representatives of the Indian Jute Mills Association and the Central Government last week, it was decided that the curtailment of production by the jute mills should be limited to the equivalent of an additional 8 percent of the loomage, besides the 9 percent looms sealed earlier. The Indian Jute Mills Association agreed to accept the decisions of the Government on the volume and method of regulating production. In the course of the discussions, questions relating to the supply of raw jute and maintenance of the production of jute goods were examined. It was agreed that production should be maintained at stable levels and as high as possible, taking into consideration the supply of raw jute, both local and imported. It was also considered necessary that the prices of raw jute and jute goods should not be allowed to go up unreasonably as a result of speculative activities. In this connection, a reference was made to the measures taken by the Forward Markets Commission for restraining such activities. It was felt that the present prospects of the jute crop in India and Pakistan are not unfavourable, compared with last year. Some regulation of production would, however, become necessary in order to maintain stability. The prices of raw jute would now be sought to be maintained at reasonable levels through a regulated programme of buying by the jute industry and other necessary measures. The I.J.M.A. representatives have agreed that jute goods for the export markets should have a reasonable relationship with raw jute prices and should not rule unduly high.

Steel Retention Price Raised

The Central Government has decided to increase the average retention price for steel payable to the Tata Iron and Steel Company and the Indian Iron and Steel Company by Rs. 4.85 a ton for the period 1955-56 to 1959-60. This will be the final adjustment under the escalator clause for the five-year price period ended 31st March, 1960.

The increase will enable the Tata Iron and Steel Company to increase the contribution to its development fund by Rs. 2.22 a ton, that is, to the level of Rs. 52.22 a ton for the period 1955-56 to 1959-60, and the Indian Iron and Steel Company to maintain its contribution of Rs. 7 a ton for the same period. The present retention price of steel, including excise duty, payable to the Tata Iron and Steel Company and Indian Iron and Steel Company is Rs. 470 a ton.

Unbalance in Oil Consumption Pattern

The Oil Advisory Committee, which met here last week, recommended that immediate steps should be taken to remove the unbalance in the consumption pattern of petrol and diesel by way of adopting technological and chemical devices in the processes of consumption and supply. A committee consisting of the representatives of the Central Ministries of Finance, Commerce and Industry, Transport and Communications, and Steel, Mines and Fuel and the oil producing and refining companies in India, it was suggested, should be set up to recommend a definite data from which a mixture of motor-spirit and diesel should be adopted and enforced in this country.

Indo-Burmese Trade Talks

Discussions between the Burmese trade delegation and the Government of India have begun in New Delhi. The Burmese delegation indicated that, besides selling rice to this country, that country is willing to purchase from India a number of commodities such as light machinery, electrical goods, textiles, coal, jute goods, dry prawns, yarn and pulp.

The leader of the Indian delegation, Mr. B. B. Ghosh, told the visitors that India attached much importance to her trade with Burma. Apart from the import of rice, this trade is of mutual interest and India even hopes for expansion. Reviewing the crop situation in India, Mr. Ghosh said that rice production was definitely improving and existing prices were the lowest in the past few years. The present was comparatively "a time of ease". Stating that Burma too had a good rice crop this year, U Hla Gyaw said that his delegation's purpose was not only to sell rice to India, but to make a number of purchases from this country.

Development of Intermediate Ports

The main recommendations of the Intermediate Ports Development Committee were adopted by the National Harbour Board at its special meeting last week. Dr. P Subbarayan, Central Minister for Transport and Communications, presided. The Intermediate Ports Development Committee sug-

Plan to Expand Indian Explosives

Indian Explosives Ltd has put up a scheme to carry out expansion as follows:

Name of product	Present annual capacity	Expansion proposed	Annual capacity after expansion
Safety fuse	5.6 million coils	4.4 million coils	10 million coils
Military fuse	—	100,000 coils	100,000 coils
Military powder	—	36 short tons	36 short tons
Fuse powder	—	Sufficient capacity to cover production of 10 million coils of safety fuse.	

The firm is already engaged in the manufacture of blasting explosives. The Central Government holds 20 percent of the equity capital, while 80 percent is held by Imperial Chemical Industries (India) Private Ltd. The capital requirements of the scheme are Rs. 53 lakhs and this will be available from the existing resources of the concern.

gested first priority for the ports of Paradip, Kakinada, Masulipatam, Tuticorin, Neendakara, Beypore, Kozhikode, Mangalore, Karwar, Bedi, Ratnagiri, Veraval, Porbandar, Okha, Sikka and Bedi at an estimated cost of Rs. 6.11 crores. Second priority for schemes costing Rs. 4.22 crores was given to the ports of Paradip, Kaikinada, Masulipatam, Cuddalore, Nagapattinam, Tuticorin, Beypore, Kozhikode, Karwar, Ratnagiri, Broach, Bhavnagar, Veraval, Porbandar, Okha and Bedi. Third priority for the ports of Cuddalore, Nagapattinam and Bhavnagar, at an estimated cost of Rs. 42.50 lakhs, was also recommended. The development of Tuticorin and Mangalore as all-weather deep-draft ports was urged on a first priority basis. In the second priority category for development as all-weather, deep-draft ports, Paradip and Porbandar had been placed.

The Board urged the need for developing Tuticorin and Mangalore as deep-draft, all-weather ports. It was pointed out that Tuticorin at present was already handling about 900,000 tons of cargo which, it was expected, would rise to about 1.5 million tons in the fourth plan. Mangalore was expected to handle traffic of 2 million tons of iron ore, in addition to general cargo of about 600,000 tons with the development of the port and the construction of the Mangalore-Hassan line. The Board recommended that the allocation of Rs. 15 lakhs for Ratnagiri port be increased to Rs. 35 lakhs, so as to make a beginning for the development of the port (at Mirya Bay site) as an all-weather one. The Board also recommended the development of Porbandar as an all-weather port during the third plan period, provided a review of its potential traffic, to be undertaken forthwith, is placed at 500,000 tons a year.

Fertiliser Units in Private Sector

The Central Government has set up a committee consisting of the Commerce and Industry Secretary, Mr. S. Ranganathan as chairman, and Secretaries of Industries, Mr. K. B. Lall, Economic Affairs, Mr. L. K. Jha, Agriculture, Mr. Damle, a representative of the Planning Commission, Mr. Moon, and Mr. B. C. Mukherjee to examine and recommend applications for fertiliser units to be set up in the private sector. The committee recently examined five applications for a fertiliser plant in Visakhapatnam, but has asked the applicants for some details and whether they, as an alternative, are prepared to take up a project in another State.

New Concern for Ball-bearings

The Swedish firm of S.K.F., known for manufacturing ball-bearings, is entering into collaboration with Tatas to set up a unit in India. The former will hold 60 percent of the share capital while the rest will be held by local interests.

Scientific Instruments Organisation

Primarily with Swiss assistance, but with the collaboration of the United Nations Special Fund, a Central Scientific Instruments Organisation, it is proposed, will be set up in India. The Swiss Foundation for Technical Assistance has worked out this scheme to provide training for precision mechanics. The Swiss Foundation will provide equipment costing about one million Swiss francs and make available to the institute a principal and seven other experts. It is a five-year scheme costing the Swiss Foundation four to five million francs.

The Centre will serve the following objectives: (1) practical and theoretical training of apprentices recruited from all parts of India with sufficient educational background in three-year courses to become precision mechanics. The apprentices should as a rule be of the age of 18 to 19 when they begin their training at the Centre. (2) Specialised training for the instrument manufacturing industry of selected craftsmen already working in industry. This training will be given, as the Centre progresses, in special courses, the length of which will be determined by the administration of the Centre. (3) Carefully selected instrumtnts of proven reliability can be produced in the training workshop, as far as the training programme permits. Other job orders can also be executed, if they fit into the training programme. (4) The Swiss personnel of the Centre will also, within the scope of its activities and in so far as the teaching of the trainees permits, render consultative and advisory services to units of the Indian instrument industry.

At the end of the training period, there will be a rigid trade test on the basis of which certificates will be awarded. In some cases, the Swiss Foundation will provide training in Switzerland to specially talented Indian technicians. It may also offer scholarships for advanced and vocational training in Switzerland to Indian trainees. An allocation of $850,000, it is expected, will be made towards this Centre by the United Nations Special Fund to provide research facilities.

Woollen Mills Cut Output

The production of the main woollen mills in India is being severely curtailed by the raw material shortage. The manufacturers say that due to the delay in issuing licences for the import of wool and tops, they have insufficient stocks to keep going until new supplies arrive from abroad. The Raymond Woollen Mills of Bombay, it is learned, has served notice on 300 employees that the third shift will be closed from 15th November. Working on the other two shifts will also be affected. It is reported that Oriental Carpet Manufacturers of Amritsar, the Cawnpore Woollen Mills and the New Egerton Mills of Dhariwal anticipate severe curtailment in their production. Smaller units have also been affected. The final basis for the issue of licences has not yet been established by the Government. *Ad hoc* licences have been issued against "essentiality certificates" from the Textile Commissioner.

Wool Fabric Exports to Russia

Wool fabrics will again be exported to Russia. This was revealed in a joint statement issued by Mr. Lal Bahadur Shastri and the Russian Minister of Foreign Trade, Mr. N. S. Potelivech, who visited India recently. India has an annual trade of Rs. 50 crores with Russia and it is likely to rise to Rs. 100 crores a year during the coming three years. This will bring Russia fifth on the list of India's customers—after the U.K., the U.S.A., West Germany and Japan.

New Tyre-making Plant

A multi-million dollar tyre manufacturing plant, a joint Indo-American project which will manufacture passenger and lorry tyres and tubes, is being set up by the Goodyear Tyre and Rubber Company of India, 21 miles south of New Delhi. Out of the total investment of $12 million involved in the project, the U.S. Government will advance a loan of $4.5 million, to be administered by the U.S. Export-Import Bank. Funds for the U.S. Government loan were derived from the sale proceeds of U.S. agricultural products to India under Public Law 480. The plant is scheduled to have a capacity of 750 tyres and tubes a day. About 500 labourers, it is expected, will be employed at the factory at the start. Since the manufacturing process involves the meeting and merging of many materials at different stages, like rubber, textiles, chemicals and steel, the new venture will form the nucleus of many new trades and skills. Small investors in India will have the opportunity to participate in the undertaking by subscribing to the Company's shares.

U.S. Concern Collaborates with Paper Mills

The Parsons and Whittemore Lyddon Organisation is collaborating with the Mandya National Paper Mills Limited, which was floated with a capital of Rs. 4,50,00,000, to start a paper mill in the State of Mysore. The mill will manufacture printing and writing paper from sugarcane bagassee which is available in plenty in that State. The progress of the establishment of the mill is according to schedule. The factory is expected to be ready by the middle of next year, and the technical staff and the machinery are on their way. The mill will go into commission by October 1961, or earlier, if power is available in time. The U.S. company proposes to invest Rs. 60 lakhs in the project.

This U.S. concern has also completed arrangements for the erection of a plant for Seshasayee Paper and Board Limited, in Erode, Madras State. This plant is to produce 60 tons of writing and printing paper a day from bamboo and bagasse. It is expected to go into production by the middle of 1962. The capital issue of Rs. 3.5 crores has been recently completed which was subscribed by the Indian public. The total capital required for this project is Rs. 6 crores. The chairman of the board of directors of Parsons and Whittemore Lyddon, who was in New Delhi last week, told newsmen that his organisation was planning to set up a plant to manufacture paper-making machinery in India.

GOODYEAR

Corner stone of GOODYEAR'S new plant laid

On November 12th, at a sober, yet impressive ceremony, Shri Manubhai Shah, India's Minister for Industries laid the corner stone of Goodyear's new plant at Ballabgarh.

The new Factory, which involves the large investment of 6 crores of rupees, latest and modern techniques and equipment, and many years of experience will be the 59th in the series of Goodyear enterprises all over the world. When it goes into production in 1961, this factory will employ several hundred workers, and manufacture Passenger, Truck and Farm Tyres for original equipment and replacement—testimony of Goodyear's confidence in the industrial development of India.

SECURING UNITY BETWEEN EUROPEAN TRADE GROUPS

U.K.-SPONSORED CONFERENCE OF E.F.T.A. MEMBERS APPOINTS ACTION COMMITTEE

(FROM OUR LONDON CORRESPONDENT)

An effort to secure the economic unity of Western Europe was the keynote of three days of discussion in London last week at an European Free Trade Association political and economic conference, sponsored by the U.K. Council of the European Movement. In all, there were 155 delegates and as many as 300 observers, and the public sittings were addressed by Ministers from all the seven E.F.T.A. countries. Mr. Macmillan set the theme of the discussions when he addressed a dinner preceding the opening, and the working sessions heard of what Britain was doing from Mr. Selwyn Lloyd, Chancellor of the Exchequer, and Mr. Edward Heath, Lord Privy Seal, while Mr. Reginald Maudling, President of the Board of Trade, brought the proceedings to a close.

The main work of the conference was done by four commissions, set up at the start, which met privately and whose conclusions were finally placed before the whole conference in reports by the respective chairmen. The underlying theme was the need to find a bridge between E.F.T.A. and the Common Market "Six." The commissions studied the relations of the E.F.T.A. with the Common Market; commercial and economic development within the Seven; investment, financial and monetary policy within the Seven; and labour and social problems. It was decided to form an action committee comprising the chairman and rapporteurs of the four commissions to hammer out a policy for uniting the Seven and the Six and improving trade between the Seven. The first meeting of the committee will probably be held in January. Other points the action committee will consider are: co-ordination in the field of investment and capital movement; the standardisation of markings and packages to show E.F.T.A. origin; a common policy on patents; increasing trade missions; and special E.F.T.A. fairs and exhibitions and a publicity drive.

The report of the commission which studied commercial and economic development within E.F.T.A. said the British Government might well take steps to discuss with the Commonwealth countries the extent to which a closer trade link is practicable. One of the aims of this link would be to place the Seven in a stronger bargaining position in future negotiations with the Common Market countries. Details of the plan will be considered by the action committee. A recommendation made early in the conference that a development fund be set up to help small countries to start industrial projects was rejected. There was, instead, agreement that international development finance is best left to those organisations already established to deal with it.

New Markets for Capital Goods

Sir William McFadzean, president of the Federation of British Industries, suggests eight countries to which British exporters of capital goods should turn their attention. They are Libya, Mexico, Burma, Thailand, Spain, Malaya, Persia, and Greece. Many of the "emerging territories" are making strong bids for a greater share of world prosperity, Sir William says in the November issue of the *Mercantile Guardian*, and they will provide an evergrowing outlet for capital goods. He mentions Libya as a good example; a poor country now intending to move forward "on the tide of oil royalties." Changes in Africa would also bring with them growing markets for capital goods. Mexico had a growing market for machinery and equipment, and Britain's present share of this was disappointing. Similarly in Greece, which was making a particularly determined start on modern industrial development.

Industrial Assurance in 1959

Policyholders in the industrial branch of the insurance business are increasingly attracted to endowment assurance when taking out life cover. This is one of the trends disclosed by the annual report for 1959 of Sir Cecil Crabbe, the Industrial Assurance Commissioner. The report deals with the industrial assurance business transacted during the year by 14 companies and 93 collecting societies. This branch of insurance, frequently known nowadays as "home service" assurance, is the business of effecting assurances on human life where the premiums are payable at short intervals and are received by house-to-house collectors. New policies effected during 1959 were lower at 6,078,000 (6,421,000 in 1958), but new business sums assured reached a new record figure of £379,460,000. The average sum assured on the new policies was also a record at £62 9s (£56 6s). An analysis of figures shows that policies containing an endowment element accounted for 62.9 percent of the total number of new assurances. 74.9 percent of the total sums assured and 77.9 percent of the premiums payable.

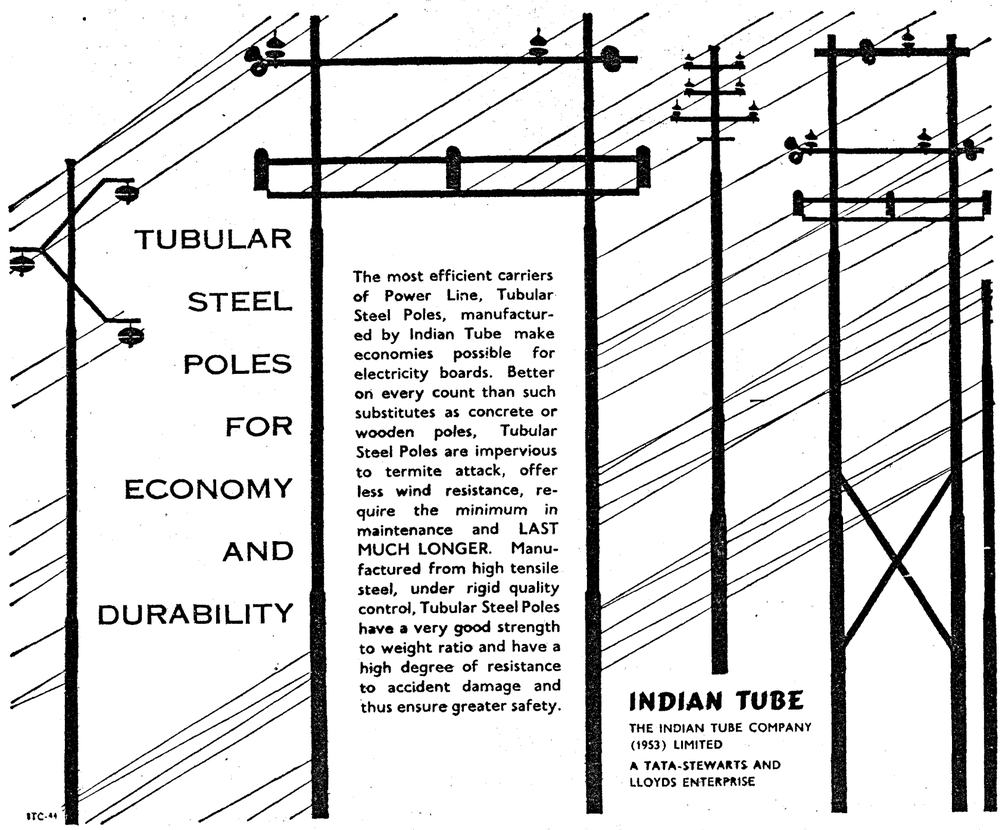
Atlantic Freight Rates to be Raised

As a result of the recent increase in seamen's wages which followed the unofficial seamen's strike and the increasing trend in operating costs, which have risen substantially since the end of the war, transatlantic shipping companies are to increase their freight rates by 10 percent from 1st February, 1961. The companies concerned are the 11 in the North Atlantic American Shipping Conference, which include the Anchor Line, the Bristol City Line, the Cunard, the Ellerman Line, the Furness Withy, Manchester Liners, and the United States Lines, and the two in the North Atlantic Canadian Shipping Conference, the Canadian Pacific and the Donaldson Line. It is expected that companies in other shipping conferences, whose ships trade to other parts of the world, will also raise their freight rates. The Glasgow City Line has not yet determined whether its rates will go up, but an official of that company said that several shipping companies were to increase their rates next month.

Brevities

British firms have obtained a £2 million machinery order for four new jute mills to be built in East Pakistan. The biggest share goes to James Mackie and Son, Belfast, while £500,000 is being spent in the East of Scotland, divided between Thomas C. Keay and its subsidiary Lawside Engineering and Foundry Company, Dundee, James E. Low and Company, Monifieth (Angus), and Giddinga and Lewis-Fraser, Arbroath. Delivery will begin next summer.

The International Development Association (I.D.A.), a new affiliate of the World Bank for the financing of economic growth in the less developed countries, is now organised and ready for business. So far, 22 countries, including Britain, have accepted membership and many others have completed various stages of the membership procedure.



TOWARDS ACHIEVEMENT

In three brief years a wilderness of swamp and paddy fields has been transformed into the giant steelworks at Durgapur. This remarkable achievement has been made possible by ISCON—a consortium of thirteen leading British firms who are responsible together for the construction of the steelworks. When completed, the steelworks will have a capacity for one million ingot tons of steel and a wide range of end products for the industrial markets of India.

RESTRICTIONS IMPOSED ON BUSINESS IN T. S. D. CONTRACTS

GUNNY PRICES EASE AS TRADING SHRINKS

ACCORDING to one experienced observer, the present crisis in the jute trade is really no different from the many that have preceded it; it is different only in the sense that never has so much happened in such a short time. Many of the difficulties, it is said, are man-made. There is a strong belief in some quarters that "too many cooks are spoiling the broth." Certainly, the number of interests conducting negotiations is large, and the various schools of thought larger still. But the liaison between them is better than before, although still far short of the ideal.

During the past week, the East India Jute and Hessian Exchange, with the concurrence of the Forward Markets Commission, has issued orders nearly every day. The amount of paper work involved in complying with the regulations and submitting returns—which are now called for daily—has put a strain even on many over-staffed offices. No one denies that many of the restrictions are necessary, and through them an effective curb has been placed on the unscrupulous speculator. It is a pity, however, that a number of clauses in the orders are not clearly amplified, and as such compliance in some cases is difficult.

Special Margins

The special margin deposits now imposed are heavy and have virtually brought business to a stop. The margins take effect immediately. For 40in. 10oz. hessians in November 1960, December 1960 and January-March 1961 deliveries, margins on Transferable Specific Delivery contracts are payable at the rate of Rs. 30.50 a 100 metres on transactions above the marginal line of Rs. 55.77 a 100 metres. For 40in. 7½oz. hessians, the margin deposit stands at Rs. 24 a 100 metres for transactions above Rs. 42 a 100 metres. In heavy goods, for B Twills and heavy Cees for the same shipping periods, the margin is Rs. 86.50 a 100 bags for contracts above the marginal line of Rs. 140 a 100 bags. In the case of Australian cornsacks, the margin rises to Rs. 94.50 for transactions above Rs. 144.50. For raw jute, the margin has been fixed at Rs. 72.35 a 100 kilograms (Rs. 27 a maund) for transactions above Rs. 116.55 a 100 kilograms (Rs. 43.50 a maund) in the November 1960 and November-December 1960 deliveries in Transferable Specific Delivery contracts in all varieties of raw jute and mesta. The special margins are not payable on transactions made by member-mills, either through direct purchases, or purchases made through members or licensed brokers, up to the extent of the actual quotas sanctioned to them under the quota system of the Indian Jute Mills Association. However, to gain exemption, these transactions have to be registered with the Exchange immediately, supported by all relevant documents.

Anticipation of these orders had a disturbing effect on the jute goods market. Violent fluctuations of several rupees occurred daily. Prices fell sharply once the margins were fixed, and forward heavy goods dropped by nearly Rs. 10 overnight. No overseas interest was reported. In addition to the margins on T.S.D. contracts, the Exchange extended the prohibition of fresh transactions in hedge contracts from 15th November to 29th November. The maximum prices already in force on trading in hedge contracts for November were extended for a similar period. Thus, speculative activity, for the first time in many years, has virtually ceased.

Loom Sealing Controversy

The controversy about the sealing of looms remains one of the main topics of conversation in market circles. Talks with the West Bengal Government, in the context of the agreement reached between the I.J.M.A. and the Central Government, have taken place in Calcutta. This agreement, as reported in the local Press, was extremely ambiguous. Even many people in the trade were not sure at the outset whether 2 percent or 8 percent of the looms were to be sealed. It is now stated that 8 percent are to be sealed and working hours reduced. The local trade unions, after summarily dismissing the I.J.M.A.'s proposal to reduce working hours last week, have now advised Dr. Roy, West Bengal's Chief Minister, that they will agree to a reduction of working hours from 48 to 45 and the sealing of only 1 percent of the looms. This, in effect, is a consequential sealing of about 3 percent looms, and is not considered by the I.J.M.A. to be nearly enough to see the industry through the present crisis.

Raw Jute Easier

The price of raw jute has shown a small decline over the past week. With the arrival in Cossipore of several flatloads of jute from Assam, more sellers have come into the market and offers are plentiful. The upcountry markets, however, were firm at the beginning of the week as most of the business under the quota system was conducted in the agencies. In many cases, mills paid higher rates than were obtainable in Calcutta. This prevented local prices from falling, which they should have done in view of the limited business passing. Sellers with stocks in Cossipore are now prepared to sell at a small discount, as they do not want to pay heavy godown charges. Towards the close, agency prices have dropped to parity and below Calcutta rates.

The question of cuttings has again been commented on. A newspaper report claims that the Central Government has promised licences for importing about 450,000 bales of jute cuttings from Pakistan, with further allocations if necessary. The report does not make it clear whether cuttings already sanctioned are part of the 450,000 bales. But it is unlikely that the issue of further licences will arouse much interest. For reducing raw jute rates, Pakistani cuttings are now useless. Mills will not pay Rs. 225 a bale—or more than Rs. 46 a maund—for them, when they can buy Indian jute at very nearly the same price. As it is, a very large percentage of the cuttings bought against previous contracts at prices ranging from Rs. 100 to Rs. 160 are still undelivered. If mills make fresh contracts, they will, in effect, be buying jute which should have been delivered to them under earlier contracts. The chances of their getting delivery against the low-priced contracts will thereby be reduced. Mills may, however, agree to give high-priced contracts to sellers who have low-priced contracts with them, in the hope that this will cut the sellers' losses and induce some deliveries against the previous contracts. The system is working well for Indian jute, but it is doubtful whether it could be carried through for Pakistani cuttings, as many think that not enough cuttings are available to meet even the current commitments.

I.J.M.A. Gunny Production

During October, member-mills reporting to the I.J.M.A. produced 84,500 tons of jute goods. The output of hessians was 33,000 tons (39 percent), of sacking 45,200 tons (53.6 percent), and of other goods 6,300 tons (7.4 percent). The total was 4,900 tons less than in the previous month in spite of the fact that the number of working hours increased by 16 to 208. The fall in production was due to the sealing of looms. Hessian production showed a slight rise of 500 tons and the output of "other goods" dropped by 2,700 tons. The percentage of sacking remained the same but the tonnage dropped by 2,700 tons. Average production an hour showed a considerable drop to 406 tons, mainly due to the increase in the percentage of lighter fabrics and the sealing of looms. The figure was nearly 60 tons an hour less than in the previous month. Total production for the period from July to October 1960 stood at 354,900 tons, made up of 134,900 tons of hessians, 183,800 tons of sacking and 36,200 tons of other goods. During the corresponding period of last year, mills produced 357,000 tons—152,000 tons of hessians, 176,600 tons of sacking and 28,400 tons of other goods.

During October, the estimated consumption of raw jute by mills reporting to the I.J.M.A. amounted to 477,500 bales, bringing the estimated total consumed during the period from July to October 1960 to 2,032,500 bales.

THE JUTE MARKETS

Manufactured Goods: There was very little interest in the gunny market at the opening of the past week, and business was negligible. Overseas buyers stayed out completely, and local operators were quiet, awaiting fresh Government action. B Twill prices were unchanged at Rs. 177 for November, with January-March shipment at a discount of Rs. 6. Hessians 40in. 10oz. also showed little change at Rs. 57 for both the near and ready positions. As the day progressed, however, prices advanced rapidly on renewed covering by those who had sold earlier in anticipation of Government action. Heavy goods advanced by Rs. 5 and hessians by about Re. 1. On the following day, prices collapsed due to reports about the fixing of special margins on T.S.D. contracts in certain items of manufactured goods for deliveries right up to March 1961. B Twills for forward shipment lost about Rs. 10 and hessians about Rs. 1.50. Trading virtually ceased at this stage, although prices, particularly of heavy goods, continued to fluctuate erratically. Towards the close, an easier tendency developed in sympathy with the quieter fibre market, and movements were generally in a downward direction. But in the absence of any business, either local or overseas, prices could be considered purely nominal.

On Wednesday morning, opening quotations were as follows:

	November	December	Jan.-March
46in. 7½oz.	41.00	40.75	40.75
46in. 8oz.	44.00	43.75	43.75
40in. 10oz.	54.50	54.50	54.50
B Twills	170.00	164.00	160.00
Heavy Cees (Plain)	168.00	164.00	160.00
A Twills	206.00	203.00	196.00
Liverpools	193.00	188.00	185.00
Cornsacks	169.00	168.00	164.00

Raw Jute: Once again, there was very little to report from the fibre market. The I.J.M.A. continued to issue quotas to all mills, but only small quantities were purchased under contract in spite of the increased allocations, and most of the business was conducted in the agencies. This caused upcountry markets to remain firm and slightly above Calcutta parity. With the increase in arrivals at the main receiving centres, however, agency prices began to fall, and towards the close, began to show a discount on Calcutta indications which allowed a considerable reduction in local rates. In Cossipore also, arrivals rose, and rather than stock the jute, sellers offered it at a ready discount. Arrivals totalled 800 wagons, which was about 80 more than in the previous week. Opening quotations for Assam jute were based on Rs. 53 a maund, and this price ruled until the week-end. There followed a slight easing of the market, until Rs. 52 was quoted on Tuesday. Prices continued to fall in the absence of business, and offers became more plentiful.

Assam jute was reported done at Rs. 51.50 to Rs. 52, and Tossa and Daissee at Rs. 53 to Rs. 53.50. Small lots of mesta were also reported at Rs. 50.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilo	Rs. a md.	Shipment
Assam	136.75	51.00	November
Northern	134.00	50.00	,,
Purnea Desal	131.25	49.00	,,
Daissee Selected	139.25	52.00	,,
Assam Tossa	139.25	52.00	,,
Mesta:			
Assam-Northern	131.25	49.00	,,
Daissee-Desal	131.25	49.00	,,
Jungli	128.50	48.00	,,
Pakistani N. C.	225 a bale		

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of jute goods for October as follows:

Description	Quantity	
1. Gunny Bags		
(a) Hessian	2,656 tons	(2,698 metric tons)
	92.1 lakh yds	(84.24 thousand metres)
	56.0 lakh nos.	
(b) Sacking	44,043 tons	(44,750 metric tons)
	10,32.5 lakh yds.	(9,44.13 thousand metres
	4,85.2 lakh nos.	

THE WEALTH OF INDIA
Industrial Products
Part V (I-L)

2. Gunny Cloth			
(a) Hessian	30,393 tons	(30,881 metric tons)	
	11,48.0 lakh yds.	(10,49.75 thousand metres)	
(b) Sacking	1,128 tons	(1,146 metric tons)	
	24.1 lakh yds.	(21.99 thousand metres)	
3. Other Manufactures	6,272 tons	(6,373 metric tons)	
4. Total Production			
(All kinds)	84,492 tons	(85,848 metric tons)	

Summary

	(00,000 yds and 000 metres)			(000 tons and metric tons)		
	Oct. 1960	Sept. 1960	Oct. 1959	Oct.1960	Sept.1960	Oct.1959
Hessian	12.40	12.24	13.47	33.0	32.5	36.4
	(11,32.59)	(11,19,33)	(12,31.59)	(32.6)	(33.0)	(37.5)
Sacking	10.57	11.25	16.71	45.2	47.9	46.9
	(9,66,12)	(10,23,79)	(9,79,35)	(45.9)	(48.7)	(46.7)
Others				6.3	9.9	5.5
				(6.4)	(9.1)	(5.6)
Grand Total				84.5	93.4	87.9
				(85.9)	(90.8)	(89.3)
Hours worked				208.0	192.0	200.5

I.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures and those of length, being based on the actual (detailed) figures, are more precise.

THE FOREIGN JUTE MARKETS

FIBRE QUIET, BUT RATES RULE HIGH

(FROM OUR DUNDEE CORRESPONDENT)

THE whole of the jute market here could not be quieter than it has been over the past week. Spinners are not interested in raw jute which has been quoted at practically unchanged prices daily. These are far too dear by spinners' ideas, in spite of the fact that a number of persons are spreading theories of raw jute scarcity for the current season with big price advances in the offing yet. Certainly sellers are not reducing their terms to any extent and Mill Firsts are still named at £200 lowest, with Mill Lightnings ruling lowest at £190 for secured lots to £195 quoted by some of those shippers who have been quoting high prices all the season for November-December *shipment, c.i.f. U.K.-Continent.* Mill Hearts are offered at from £185 and Grade Hearts £183, with Grade Tossa-2/3 from £194 and fours £189, also Continental Tossa-2/3 from £188, same shipment. These are the lowest prices quoted, but there are others who are asking several pounds a ton more.

The Calcutta goods market, it is reported, has been firm on account of some agreement having been reached between the Indian Jute Mills Association and the Government. It is believed that the mills will continue to restrict the production of goods by keeping their looms sealed at the present rate of 19 percent of the total, in order to conserve raw jute supplies in case of any scarcity of the fibre by the end of the season. Prices quoted on 10th November were 89s for 40in. 10oz. hessians and 66s 9d for 7½oz., November and December, and 88s 6d and 66s 9d for January-March, with B Twills at 277s 6d, 273s and 239s for the respective months of shipment, all f.o.b., Calcutta.

Very little business is taking place in jute yarns and cloth here, and buyers are purchasing only trifling lots for prompt delivery, which is easily obtainable to satisfy immediate requirements. Buyers are very reluctant to believe that raw jute prices can be maintained even at their present level. Prices are all firm and unchanged, with a scarcity of orders for wide widths the worst feature. More firms are expected to be working short time in the near future unless trade improves.

THE PAKISTANI JUTE MARKETS

FIBRE WEAKENS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

A STATE of indecision prevails in the Narayanganj market. The cause of this is a combination of shortage of finance in many circles and the hesitancy of buyers. In fact, the indications are that but for the small arrivals, due to paddy harvesting, the market would be considerably weaker. In the interbaler market, very little business is passing and for some time now, the prices have varied from purchase to purchase since business is so irregular. In all agencies where there are balers with money, the market is steady and the weaker agencies are those where the balers are feeling the financial strain. Little or no business is reported overseas except for afloat sales and occasional purchases of tossa.

A reduction in E.P.C.s or concerted efforts on the part of buyers to sit out could well push the market down further. A revival of overseas buying interest or the long awaited appearance of the Chinese or Russian buyers, on the other hand, could push up the market considerably. Most balers appear to be square or slightly long and are watching the market closely, selling wherever possible, but for the time being refusing to discount prices and buying in the cheapest market, mainly Tossa, which appears to be more easily available than white at present. Thanks to the prompt steps taken by the Provincial Government, Chittagong port, which suffered very severely from the recent cyclone, is now practically normal again. The jute market has not, therefore, been affected by serious shipment delays.

The age-old custom of ceremonial tree-planting is much more than a colourful ritual.
It is an expression of faith in a worthy enterprise—no matter how modest the beginning.
It symbolises faith in the future—faith in growth.

Everything which is vital grows—a seed into a tree, an idea into an enterprise,
a school of thought into a way of life. Each adds to it carefully
with the passage of years. Often, the transformation of an idea into reality can be
accelerated by deliberate direction and effective planning.

Standard-Vacuum's Executive Development Programme is a case in point. It began as an idea more than fifteen years ago to increase the number of Indians in management positions. At the time there were only three Indians of this category with the Company. How quickly the idea has developed into reality can be seen from the fact that at the end of last year in Stanvac's Marketing Organization alone there were 897 Indians in management positions. Another 113 Indians were holding similar positions in the Stanvac Refinery. Adding the number of Indians in management positions in the Indo-Stanvac Project, the total for 1959 came to 1040.

As more and more Indians qualify for management positions, the number of overseas personnel (who at one stage held an over-whelming majority of senior jobs) continue to decline.

Plantation Topics

SCHEME TO EXTEND RUBBER ACREAGE IN KERALA

STATE GOVERNMENT MAY PLANT SOME AREAS DIRECTLY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Kerala Government's proposal to extend the rubber area in the State by another 200,000 to 300,000 acres during the third plan period, has received the approval of the Planning Commission, according to the Industries Minister of Kerala. This forms part of the State's third five year plan. The latest estimate of the State Government is that at least 225,000 acres can be converted into rubber estates during the next six years. Out of this, about 65,000 acres are likely to become available by conversion of fallow land or land at present cultivated with less remunerative crops. The balance of 160,000 acres will have to be found from Government or private forests. It is felt that the planting of inferior forests with rubber will result in very much better use of land, which is already getting scarce in Kerala.

An advantage of the rubber planting industry is that it is highly labour-intensive and capable of making a substantial contribution towards the solution of Kerala's acute unemployment problem. The capital spent on these plantations will be an income within the State, as much of it goes as wages to labour.

According to Kerala's draft third plan, this scheme for planting 225,000 acres with rubber will involve a capital outlay of approximately Rs. 33 crores until all the new plants reach the yielding stage. During the five-year period, the outlay will be about Rs. 10.5 crores. As capital formation in Kerala is poor and the savings available with the investing public is small, the State Government feels that to get such a large planting programme going, it will be necessary to provide equity capital on a large scale. It may also be necessary for the Government directly to invest in rubber plantations in order to relieve the private sector of the responsibility to find all the capital required. At present prices, the Government feels, rubber is such a paying industry that the entire capital invested to develop a plantation can be got back as profits in the first two years of maturity provided high-yielding planting materials are used.

Government Participation

The State Government proposes to plant directly 60,000 acres of the Government lands available for rubber cultivation. It is proposed to set up corporations and co-operatives of smallholders in which the Government will hold the majority of shares. The area to be planted directly by the Government will be shared equally between its Agricultural and Forest Departments. It is stated that State-sponsored corporations will require Government contribution to the extent of 51 percent of their share capital. The Plantation Enquiry Commission has suggested the organisation of State-assisted smallholders' co-operatives for the development of rubber. These co-operatives require assistance from the Government by way of share capital contribution and loans for development work. The share capital assistance can be recovered after the eighth year in instalments, according to the Government. In addition, it is proposed to give a development loan of Rs. 750 an acre spread over a period of six years to small co-operatives. Rubber planting in private forests also will require loan assistance. No form of assistance will be provided for planting in private lands other than private forests. It will be necessary to create a suitable organisation for dealing with clear-felling and handling of Government lands to be planted with rubber. It is also necessary to create special land assignment and loan units. Provision has been made for these organisations also in the third plan draft.

In the meanwhile, some progress has been made towards the implementation of this big scheme. Rules for the assignment of Government lands are almost ready. A senior Government official has been appointed special officer for this scheme, with his office in Trivandrum. A survey of the land available for rubber cultivation also is in progress. The State Government has approached the Reserve Bank for assistance, and the latter's reaction, it is stated, is favourable.

Development of Coir Industry

The provisional schemes for the development of the coir industry in India which are to be included in the third plan, visualise a total outlay of Rs. 576 crores in all, out of which Rs. 2.87 crores will be for State schemes and Rs. 2.88 crores for Central projects to be implemented by the Coir Board. The continuation schemes in the Central sector (Rs. 1.26 crores) includes fundamental research to acquire scientific data and knowledge of chemical, biological and other basic properties of coir fibre and yarn, applied research and studies of various methods of fibre extraction, improved pedal-operated spinning machine sponsored by the Board, work on the use of coconut pith and coir waste, studies in the dyeing of coir yarn and fibre, working of the branch research institute, statistical and economic research, show rooms, etcetera. New schemes (Rs. 1.62 crores) include the installation of rope-making machines in the Central Coir Research Institute, a pilot plant for the manufacture of mattings on power looms, curled fibre and rubberised articles, staff quarters for Central Coir Research Institute, establishment of a design centre and dye house, distribution of pedal-operated machines and grant of loans to private manufacturers. The Kerala Government proposes to continue its efforts to organise the coir industry in the State on a co-operative basis during the third plan also. It has schemes to supply improved spindle wheels which can be worked within the cottages so as to enable the workers to spin yarn throughout the year. Arrangements are also proposed for the production of coir yarn through primary societies and for its marketing through marketing societies The latter will be given financial assistance by way of loans and grants for setting up of godowns, collection depôts, purchase of baling presses, etcetera. On the manufacturing side, co-operatives of small units making mats and mattings, ropes and bristles fibre will be established, it is proposed. Under the first and second five year plans, 140 coir primaries, 28 husk societies and two central marketing societies were organised in Kerala. These societies were given financial assistance by way of grants and loans. The expenditure on these items including the cost of the departmental administration was shared equally by the State and Central Governments. The second plan provision for coir development was Rs. 1.5 crores. It was subsequently reduced to Rs. 83.7 lakhs. It is hoped that this target will be reached.

Stagnation in Exports

The condition of this industry which depends largely on the export market cannot be considered satisfactory. There is a virtual stagnation in the export front. Within a period of 30 years ended 1959-60, India's annual export of coir goods could register only a mild improvement of 9,770 tons, from 64,440 tons to 74,210 tons. There has been no satisfactory progress in exports during the past three decades. The performance of the finished products like mats and mattings was really distressing. In 1936-37, India exported mattings to the tune of 25,978 tons. Exports have gradually declined and reached 21,915 tons in 1959-60. Instead of heading for an increase, the export of manufactured coir goods has lost ground over a period of years. This is in sharp contrast to the export performance of Ceylon's coir industry. In 1938, Ceylon exported 40,745 tons of coir goods. By 1958, her exports had gone up to 76,771 tons. The bulk of Ceylon's exports is in the form of coir bristle and coir mattress and only very little in the form of yarn and other manufactured products.

It will be interesting to examine what are the factors which are responsible for keeping India's coir industry in stagnation in the export field. According to the chairman of the Coir Board, Mr. P. V. S. Sarma, the basic cause is that the industry does not give up traditional methods of production, nor does it try to find diversified uses for husks. "We had more or less a monopoly in this field, but we do not have a monopoly of all competing hard fibres. We seem to have developed a smug feeling that the consumer will take whatever we produce. We do not seem to have made any effort to manufacture products which the consumer wants. On the spinning side, it is necessary that we should improve the quality of the yarn spun and vigorous measures will have to be taken in this direction," he said at a recent meeting of the Coir Board.

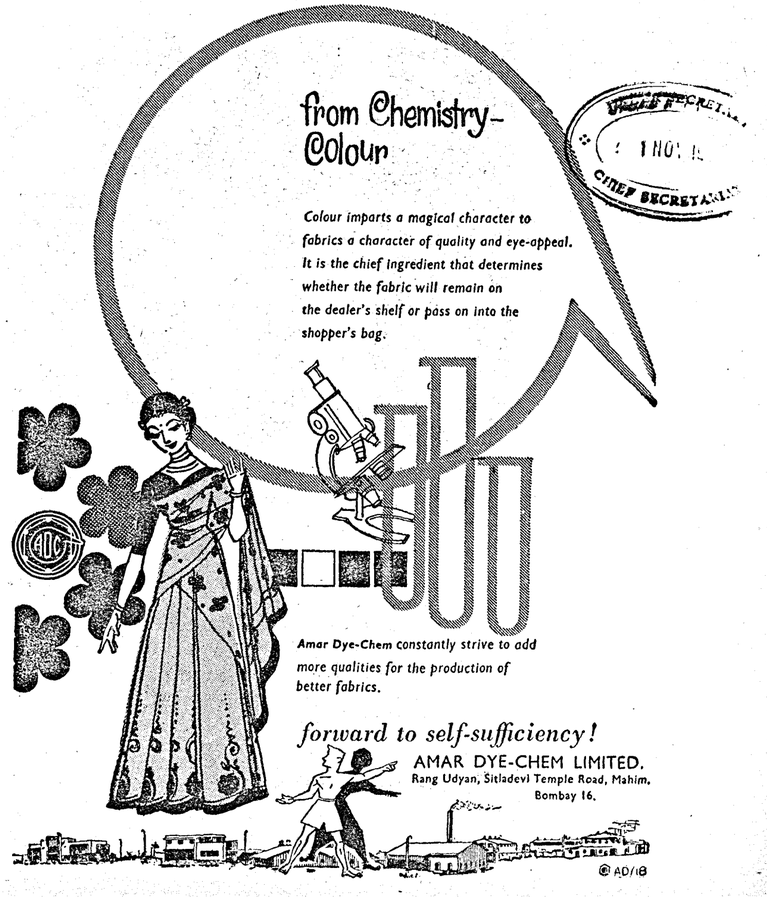
The Need for Mechanisation

In any industry which is catering for the export market, a certain degree of mechanisation of the manufacturing process is inevitable. "If we refuse to mechanise and carry on production in the traditional antiquated way, the result will be that we might be squeezed completely out of the foreign markets. We cannot fashion consumer preferences. On the other hand, we should adapt ourselves to his preference and manufacture what the consumer needs", he added. Mechanisation is at present hindered by fears of labour unemployment which might follow. But the alternative is to face gradual elimination from overseas markets, in which case unemployment will result anyhow. At present, Kerala is the only State in India where coconut husk is put to industrial use in a good measure. Efforts may be made to use the husks available in other coconut-growing States, such as Madras, Andhra, Mysore, Bombay, Orissa and West Bengal, for producing bristle fibre which can be exported as profitably as Ceylon is doing.

COCHIN TEA SALES

At Dust Sale O, 247,000 kilograms of tea were on offer. There was a strong and excited demand. Coloury mediums were 10nP to 15nP dearer while others rose by about 20nP. High-growns were irregularly 10nP to 20nP dearer. Residual grades were the strongest feature of the sale.

At Sale No. 44,500,000 kilograms of tea were on offer. There was a general demand for plain grades, and low mediums were 10nP to 20nP dearer. Good mediums and high-growns were irregular and easier. Orange pekoes were very strong.



Coming

THE FINANCIAL TIMES OF INDIA

a project of prime importance to every businessman and student of economic affairs in India!

The Times of India Group takes pride in announcing the addition, in the near future, of a full-fledged daily financial newspaper, *The Financial Times of India,* to bring its readers a comprehensive and sustained flow of news and comment on the country's business life.

COMPREHENSIVE EDITORIAL COVERAGE

The newspaper will contain:

- economic news and comment of world-wide and Indian interest
- complete coverage of all six stock exchanges in India and of the London and New York Stock Exchanges
- spot news on planning and development from regional economic bureaux, and news about aid and collaboration from foreign correspondents
- extensive reporting on the hundreds of commodity markets spread all over the country
- periodical economic newsletters from State capitals done by trained editorial staff
- exclusive information from India and abroad for import and export trade
- investment guidance by experts on the editorial staff
- critical analysis of company balance sheets
- industrial surveys and research
- statistics, tables and graphs on economic trends
- articles on current topics by well-known economists
- informed leading articles

VITAL TO BUSINESSMEN

This is vital information for every modern businessman, business house, investor, banker, planner, and student of economic affairs. To satisfy their diverse requirements, The Times of India Group will devote space, talent, and money on a scale never before attempted,

DISCUSSION OF ECONOMIC PROBLEMS

The publishers feel this effort is more than justified by the need to facilitate intelligent discussion on economic problems which have assumed a new dimension and significance in India today.

LATEST REPORTS AND REVIEWS

With a decade of planned development behind us and with a much bigger Plan in prospect, *The Financial Times of India* will enable readers to keep a finger on the pulse of business, trade, industry, and agriculture in India and abroad.

RELIABILITY & INTEGRITY

The Financial Times of India will be a newspaper that no businessman can afford to go without. And it will, of course, carry the stamp of reliability and integrity associated with the Times of India Group of Publications.

Watch for further announcements about The Financial Times of India.

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base : year ended March 1953=100) stood at the previous eek's revised level of 126.4 during the week end- d 29th October, 1960. The index was higher by 9 percent and 6.3 percent, respectively, when com- ared with the corresponding week of the previous onth and that of a year ago. The monthly average r October 1960 worked out to 126.2, compared with 25.3 for September 1960, and 119.3 for October 59. The index for Food Articles stood at 121.6 com- ared with 121.5 (revised) for the earlier week. ems which showed variations were : eggs in adras (+11%), jowar in Hyderabad (+9%) and Ujjain (+6%), maize in Dohad (+8%), potatoes Farrukhabad (+8%) and in Patna (+7%), anges (+6%), barley in Jaipur, ghee in Madras nd gur (+5% each), meat (+2%), wheat, gram, rad, milk, mustard oil and betelnuts (+1% each), aize in Ludhiana (−14%), eggs in Calcutta (−8%), owar in Rohtak and potatoes in Shillong (−7% ach), barley in Motihare and onions (−5% each), ish (—4%), bajra, arhar, chillies and turmeric −3% each), groundnut oil, gingelly oil and tea −2% each) and rice, mung and masur (−1% each), he index for Tobacco declined by 0.5 percent to 17.5, compared with 118.1 (revised) for the pre- ious week, due to a fall in the prices of raw obacco (−1%). The index for the Fuel, Power, ight and Lubricants group worked out to 119.9, gainst 120 for the earlier week. The prices of astor oil (−1%) showed a fall. The prices of raw wool, raw silk, linseed and rapeseed (+1% each) moved up, while those of cottonseed (−6%), raw jute (−4%), groundnuts and lac (−2% each) and gingellyseed and tanning materials (−1% each), showed declines and the index for Industrial Raw Materials stood at 147.1, compared with 147.0 (re- vised) for the previous week. An increase in the prices of linseed oil, rayon yarn, coir yarn and tin (+1% each) was neutralised by a decline in the prices of zinc (−4%), lead (−3%) and brass (−1%) and the index for Intermediate Products remained stationary at the earlier week's level of 130.6. The index for Finished Products worked out to 124.2, compared with 124.1 (revised) for the previous week. Items which showed variations were: dye- ing materials and bricks and tiles (+2% each) and general chemicals (−1%).

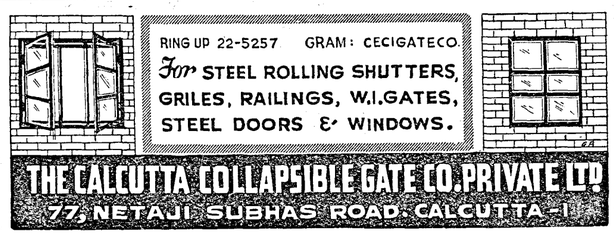
F. K. F. Nariman,
General Manager.



you have just opened

A METAL BOX OPEN TOP CAN !

Simple though it looks, the 'Open Top' Can in which processed fruits, vegetables, fish, milk or butter comes to you is a container scientifically designed to protect and preserve perishables over long periods. The Open Top Can allows processing of the contents *after* they are hermetically sealed, thereby killing all disease-carrying and other germs. Wherever necessary, Open Top Cans have an inner coating of a chemically inert lacquer that effectively prevents interaction with the metal of the container itself. Thus, Open Top Cans prolong the life of perishable products, allow round-the-year selling, encourage wide distribution and thus help to stabilise prices.

Metal Box, leaders in the packaging field, have been supplying Open Top Cans in India for nearly a quarter of a century. This is only one example of their wide range of scientifically designed containers that deliver consumer goods to you.

MB

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. S. PILFER-PROOF AND OTHER CLOSURES** for bottled products • **COMPONENTS** for radio, automobile and electrical industries • **PUBLICITY MATERIAL** including advertising tablets and calendars • **PLASTIC PRODUCTS** including Diothene bags, foil laminate pockets and injection mouldings • **HARDWARE** including trays and table mats **MACHINERY** Can Closing and Reforming and Bottle Sealing Equipment

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST RATES FALL

AT Sale No. 19, held on 14th and 16th November, offerings at the Export auction amounted to 70,850 packages for which there was a strong and general demand. Best C.T.C.'s were well supported, but were irregular while the poorer sorts received fair support and were about firm. Fannings grades, however, received more support than Brokens. Black, clean, plain and low medium B.O.P.'s met with strong competition and were firm and often dearer, but the better medium B.O.P.'s were irregular and easier. Orthodox Fannings, however, of all descriptions were again a strong feature of the sale and fared well. Medium B.P.'s were at times a little easier. "Teas for price" and plain B.P.'s were well competed for and were often dearer. Legg-cut teas came in for satisfactory support and often sold at dearer rates. Leaf grades met with good demand and were about steady. Darjeelings were generally a little easier, although there was fair enquiry for the better descriptions. There was a good demand for tippy teas.

Quotations

	Rs a kilo
Clean Black Pekoe	5.30 to 5.70
Plain B.P.	4.55 to 4.65
Plain Fannings	4.90 to 5.10
Medium B.P.	4.65 to 4.35
Medium Fannings	5.10 to 5.40
Best Assam C.T.C. B.P.	6.10 to 6.50
Best Assam C.T.C. Fgs.	6.50 to 7.00

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings comprised 22,928 packages, and these met with a good demand, although generally below last rates. There was a fair enquiry for medium C.T.C. dusts, but they were mostly lower by up to 20nP, while the best kinds also came to an easier market. Brown Dooars were well supported, but prices followed an easier trend. The clean orthodox descriptions sold readily, but the better liquoring Assams were irregularly lower.

Quotations

	1960 Rs. a kilo
Medium Dooars Dust	4.70 to 5.10
Medium Assam Dust	4.90 to 5.40
Medium Assam CTC Dust	5.80 to 6.00
Best Assam CTC Dust	6.15 to 6.30 (nominal)

(Quotations are inclusive of excise duty.)

A good demand prevailed for the 666 packages of Leaf offered, with green teas again a strong feature.

LINSEED FIRM

The linseed market was firm throughout the past week, but business was restricted because arrivals of seeds from the centres were small. Both ready and forward prices moved steadily upwards and millers showed interest. The oil market was firm and prices moved up further. Local buyers showed interest and business was done daily at the prevailing rates, as prices were high for mustard and groundnut oil. The oilcake market was steady. Small local business was done daily. The latest quotation is as follows: Ready Rs. 26.50 a maund.

HIDES AND SKINS STEADY

The hides market was steady. Stocks of hides were less, but those of skins were higher than in the previous week.

Bazaar Sales

(Between 8th November and 14th November)

Cowhides: Wet salted (Slaughtered) 16,400 pcs. on the basis of Rs. 10 to Rs. 13.50, Rs. 16 to Rs. 16.50, Rs. 19.50 to Rs. 27, and Rs. 29 to Rs. 30.

Goatskins: Wet salted (Patna, Daissee, Kustia) 33,600 pcs. on the basis of Rs. 325 to Rs. 350, Rs. 360 to Rs 380 and Rs. 410 to Rs. 420; Wet salted (he-killed) on the basis of Rs. 4.50 and (she-killed) on the basis of Rs. 4.25 a piece; Assam-Dinajpur-Malda 12,500 pcs. on the basis of Rs. 300 to Rs. 365; Patna-Muzafferpore 30,700 on the basis of Rs. 360; Bhagalpur (heavy) 1,800 pcs. on the basis of Rs. 425.

Bazaar Stocks

(14th November)

Cowhides: Wet salted 74,800 pcs.

Goatskins: Wet salted (Daissee, Killed Kustia) 20,000 pcs; Assam-Dinajpur 102,000 pcs., Muzafferpore-Patna-Pakur - Purneah-Kissenganj 191,500 pcs.

COMPANY AND PUBLIC NOTICES

THE TITAGHUR PAPER MILLS CO. LTD.

AT a meeting of the Board of Directors of the above Company held on Wednesday, the 9th November 1960, the following final dividends, subject to tax deduction u/s 18(3D) of the I. T. Act, were recommended to be paid for the year ended 31st March, 1960.

On First Cumulative Preference Shares—8% per annum,

On Second Cumulative Preference Shares—4½% per annum,

NOTICE
IN THE MATTER OF
MESSRS. RICHARDSON & CRUDDAS LIMITED

BY an Order of the Calcutta High Court made on the 4th July, 1960, leave was given to the undersigned to file with the Registrar of Companies, West Bengal,

1. the audited Balance Sheets and Profit and Loss accounts of the Company with Auditors report thereon and other annexures thereto for the years ending 30th June, 1956, 1957, 1958 and 1959, without holding a meeting of the shareholders of the said Company.
2. to keep the Register of shareholders of the said Company as prepared under his superintendence subject to rectification, if any, that may be ordered by a Court of competent jurisdiction.
3. to file with the said Registrar of Companies, West Bengal, a list of the shareholders of the said Company made out under his supervision from the Register of shareholders as aforesaid.
4. to make an additional report in respect of certain shares of the said Company.

Pursuant to the said Order, copies of the audited Balance Sheets and Profit and Loss Accounts, etc. for the years as stated above and a list of shareholders of the said Company made out from the Register of shareholders as aforesaid have been filed with the Registar of Companies, West Bengal.

The undersigned states for the information of persons holding shares or claiming to hold shares in the said Company that the Register referred to and the list aforesaid are provisional and subject to rectification.

The audited Balance Sheets and Profit and Loss accounts with Auditors report, etc. for the said years are being printed and printed copies will be available at the Bombay Office of Messrs. Richardson & Cruddas Limited, Byculla Ironworks, Bombay 8, from the 28th November, 1960 on payment of Rs. 5-50nP. Free copies will be mailed to persons whose names are borne on the provisional Register.

Inspection of the Register will be allowed on working days beginning from the 1st December, 1960, at the Registered Office of Messrs. Richardson & Cruddas Ltd., Hindusthan Buildings, 4, Chittaranjan Avenue, Calcutta 13, during usual office hours by appointment. Subject to the permission of the Court being obtained arrangement may be made for inspection of the provisional Register at the Bombay Office.

DHIREN MITRA,
Special Officer.

November 14, 1960.

JUBBULPORE ELECTRIC SUPPLY CO. LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 10th December, 1960, at 11-10 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1960, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.

   In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

   "That Mr. S. K. Sinha, a retiring Director, who has attained the age of 65 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 3rd December, 1960 to the 10th December, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

HIGHER PRODUCTION FOR INDIAN IRON AND STEEL

THE report of the Indian Iron and Steel Company Limited, for the year ended March 1960, has been well received in the share markets; operators have noted with approval that the beneficial effects of the recent expansion scheme are now being reflected in the Company's working. There has been a substantial improvement in overall production. The output of steel ingots, at 827,072 tons, was 218,867 tons higher than in the previous year and that of salable steel, at 662,113 tons, was 164,562 tons more. Production at the Kulti foundries improved by 19 percent, compared with that of the year before. As a result, total profit increased from Rs. 17.49 lakhs to Rs. 2.04 crores. Out of this, taxation absorbs Rs. 64.28 lakhs and plant rehabilitation reserve Rs. 51.15 lakhs, compared with Rs. 45.10 lakhs last year. A sum of Rs. 30.51 lakhs, compared with Rs. 24.79 lakhs, is transferred to extensions special reserve, Rs. 2.59 crores, against Rs. 3.15 crores, to development rebate reserve and Rs. 1.11 crores to general reserve. An interim taxable ordinary dividend of 15 percent has already been paid, and this is to be regarded as the full dividend for the year. This dividend offers a yield of 6.3 percent at a price for the share of Rs. 23.74, and is covered more than two and a half times. Last year's dividend was 10 percent, tax free. The increase in the dividend is designed to compensate shareholders for the loss of their grossing privileges. As far as the preference dividend is concerned, payment has been made at 5 percent as stipulated in the Company's articles of association, but the directors hope that suitable adjustments in this dividend will be made when the Preference Shares (Regulation of Dividends) Bill becomes law. The directors are willing to compensate preference shareholders as they have done in the case of the equity holders.

It may be noted that a sum of Rs. 1.03 crores has been written back from general development rebate reserve in order to bring down the transfer to development rebate reserve to a figure equivalent to the actual tax remission amounting to Rs. 1.56 crores; Rs. 13 lakhs have been brought in from taxation contingencies reserve. The carry-forward is Rs. 11,49,767, compared with Rs. 10,26,568 brought in. The major items of plant installations scheduled under the 1953 and 1955 expansion programmes have now been commissioned, but it will still take some time before the extended capacity can be fully employed. It is an encouraging feature that there are reserves and surpluses of more than Rs. 20.90 crores, excluding a share premium account of Rs. 35.53 lakhs, against an ordinary share capital of Rs. 12.44 crores. Fixed assets total more than Rs. 56.98 crores and capital work in progress amounts to Rs. 3.89 crores. Current assets stand at Rs. 22.03 crores.

The strong financial position of the Company is evident from the balance-sheet figures. Shareholders are well justified in taking an optimistic view of the equity scrip. Not only is the dividend yield attractive at the present price, but the fact that dividends are adequately covered by earnings inspires the hope that eventually shareholders may be rewarded more handsomely as circumstances improve. For the time being, a substantial portion of the earnings must be ploughed back into the business as a result of the debts incurred for financing the expansion programme. Production seems likely to improve steadily as soon as all subsidiary facilities are complete and it is possible to run the plant at optimum capacity. The arrival of this date depends to a considerable extent on the availability of adequate raw materials. This apart, it is expected that the earnings of steel companies generally will improve when the new retention prices are fixed for the five-year period from April 1960. In fixing these prices, adequate notice will need to be taken, as the Company's chairman, Sir Biren Mookerjee, has pointed out, of the increased costs of production. In any case, the authorities would do well to fix these prices on the basis of actual production instead of against the theoretical background of installed capacities. From the growth point of view, the prospects for Indian Iron are encouraging. As soon as a large portion of the Company's indebtedness can be liquidated, the dividend outlook should be greatly improved and shareholders can look forward to some reward for years of waiting.

The question of costs is one which will eventually decide whether or not India is ever going to be able to compete as a steel producer on world markets, and on this subject Sir Biren was his usual explicit self. His comments on the coal supply situation in particular deserve the Government's careful attention if it is hoped to increase the output of the country's steel plants to the maximum; it may be true that the present position is the result of past mistakes, but there are still numerous ways in which improvement can be expedited. Work could be pushed ahead on the coal washeries programme, for instance; an ash content of 32 percent in coking coal, such as appears sometimes to have been the case, is worse than useless, it is positively damaging. This problem is now one of urgency; it is no more possible to produce good iron from poor ash than it is to raise enough coal by using impracticable ideology. The Government has recently made concessions on the policy for coal generally which, grudging and overdue though they may have been, should ensure that future supplies will be adequate to keep the steel industry working at reasonable capacity. But on the question of the quality of coal, at least the private sector of the industry has legitimate grounds for anxiety. Unless a decision is made soon and the work put in hand, the Government can scarcely reserve the right to insist on further expansion.

The problem of labour costs, too, is now an acute one, and Sir Biren is posing the question asked by all private industrialists when he enquires as to why the Government should apply different standards when dealing with its own employees from those it expects of private industry. There can be nothing but admiration for the firmness shown when the civil servants were misguided enough to jeopardise the country's interests for political reasons. But surely the production of steel is no less vital than the shuffling of files, and to conduct official labour policy as if it were, is to deny the vital nature of industrialisation. Now the Government has taken courage to deal firmly with its own strikers, it would seem reasonable enough to urge that it should at least refrain from making the private sector's life more difficult by encouraging unrealistic demands and undisciplined conduct elsewhere in the economy. It is scarcely appreciated to what extent mischief makers can hold the country to ransom by concentrating their influence in such strategic industries as steel, and now the Government is itself an employer of steel workers it would do well to study current labour trends in this industry very carefully indeed. Sir Biren's example of the No. 1 blast furnace—which lost the country some 39,000 tons of production, the Company Rs. 121 lakhs, the export effort Rs. 93 lakhs, and the tax collector an indeterminate but considerable sum—should be enough to cause any government to reconsider its attitude towards the private sector's labour problems.

The plea for lower selling prices for steel products is one we have heard from Sir Biren before. But that is not to imply that the case has lost any of its merits, especially at a time when the internal price level is a matter of such concern to the planners. The original purpose of the fund supplied from the differential between selling and retention prices—to subsidise imports—has now almost disappeared, and will probably go altogether in the next year or two. If it is intended from then on simply to use the fund as a supplement to taxation on the industry, then the decision is a regrettable one, although no doubt the public-sector steel plants will welcome the opportunity provided by the continuance of the differential for operating at higher costs. But unblessed as he is with the kind of guaranteed market the public steel makers can confidently expect, Sir Biren has every reason to plead for measures to increase the use of steel in the economy and to encourage exports. There may be no question of competition in the Indian steel industry at the moment, but there is no reason why prices should not be reduced to more competitive levels against the day when it may be found necessary to expand the market. Cheap steel is as essential to a developing economy as plentiful steel; yet whereas the Government seems prepared to tax the country to the limit to ensure the one, it does not appear even to have considered the possibility of the other.

COMPANY LAW REFORM

THE speculative activity which featured in the stock markets during the first six months of this year is now bringing its retribution in the sphere of company law. Nowhere was the speculation concentrated more strongly than on the share flotations of new companies. The speech made by the Central Commerce and Industry Minister, Mr. Lal Bahadur Shastri, in the Lok Sabha last Friday indicates that certain new restrictions are to be imposed on such flotations. Replying to the general debate on the Companies (Amendment) Bill, he outlined two main restrictions. The first is that the promotion expenses of new companies which are run by managing agents will have to be limited to 1.5 percent of the cost of the venture; in the case of companies managed by boards of directors, the proportion will be 2 percent. The second is that companies that wish to get their shares listed on a stock exchange will have to complete their share allotments within three months. Complaints will no doubt be heard that these restrictions are too stiff. The ceiling on promotion expenses, for instance, is likely to worry many entrepreneurs, especially the smaller and relatively unknown ones who have to spend more in order to attract interest to their ventures. Yet it is the unhealthy practices followed by some company promoters in recent months which have forced the Government into a difficult position. Capital has sometimes been raised for doubtful ventures by spending large sums on publicity among gullible investors, or on brokerage and underwriting commissions. Although the ceiling might prove harsh and rigid, it may serve to check extravagance among company promoters of uncertain reputation who could never hope to raise much capital without first incurring heavy expenditure on luring inexpert investors.

It would be wrong, however, for the Government to think that by this means unhealthy practices can be checked to any great extent. Unless the Controller of Capital Issues and the Department of Company Law Administration do their work more conscientiously, no major improvement can be expected. Hitherto, their achievements have been confined to building monumental files out of the returns they get from time to time, without bothering to analyse the information; or to fiddling around with the premiums on rights issues. Mr. Shastri's assurance that henceforth there will be greater co-ordination in company matters between the Commerce and Industry Ministry and the Finance Ministry is welcome; hitherto, the co-ordination has been badly lacking. It is to be hoped that one result will be that Government interference in company affairs will become more prompt, expert and selective. Instead of compelling companies to waste their time submitting useless information, attention will need to be concentrated on actual malpractices. Some have occurred in the recent past in the allotment of shares by new companies. The Department of

Company Law Administration has done precious little about it; and the latest provision about completing allotments within three months, if the shares are to be listed on a stock exchange, may strike many as unnecessarily lenient. If companies can be persuaded to close their subscription lists soon after their share issues are oversubscribed, they will be in a position to complete allotments much more quickly. There will then also be less scope for misusing the subscription money; and the incentive to collect huge sums can be reduced if the payment of interest on refunds is made compulsory. In relation to the needs, the changes proposed in the law concerning new flotations appear to be half-hearted and tardy.

The proposal that the Government should have the power to order a "special audit" for a company whose affairs it thinks are being badly mismanaged seems rather drastic at first sight. It came in for strong criticism from Mr. M R. Masani but its usefulness or otherwise will depend mainly on how the power is used. It is essential that wherever a "special audit" is ordered, it should be done by independent auditors. The purpose of the proposal, as Mr. Shastri said, may be to make an example of a few companies whose affairs are in a very bad state. But the scope for abuse will still be considerable, so it is only fair that the company should be given a prompt opportunity of answering criticisms in the "special audit" report.

Although the changes proposed in the company law will inevitably be controversial, ultimately what will matter is not so much the intention of the law, but the way it is administered. On this point, Mr. Shastri had remarkably little to say. The operation of the Companies Act which was passed four years ago has been far from encouraging. The time and labour spent by well-managed companies in complying with the formalities has increased enormously, without bringing any noticeable benefit to anybody. On the other hand, less reputable concerns have continued to go their merry way without bothering too much about either their shareholders or the Government. The Department of Company Law Administration is now getting into the habit of confining its pinpricks to sound concerns which may have inadvertently committed minor deviations from the letter of the law. At the same time, major malpractices in other, lesser-known concerns often go unnoticed. No amount of amendments to the company law can cure this deficiency. Yet the Government thinks that the easy way out is to go on making the legislation increasingly restrictive in character. The time has, therefore, come when it should be seriously considered whether it is more important to implement the law which already exists, rather than add to it provisions which the company law authorities will never be capable of enforcing uniformly.

AMERICAN CAPITAL "INVASION"

THERE has been more heat than light generated in the controversy provoked by the British Ford Motor Company's announcement that its American parent intended to make an offer for the British company's ordinary stock that it did not already own. The proportion involved—some of it owned by American investors—was 45½ percent; so there was no question of a change of control, which was already firmly in American hands. The thoughts that aroused so much emotion were that the biggest motor-car and tractor company in Britain would be wholly owned by an American company, and that this American company, Ford, and another, General Motors (through its wholly-owned British subsidiary, Vauxhall Motors), would own rather more than half of one of Britain's principal industries. The affair gained importance from the fact that the sum involved, £129 million, was the biggest ever offered for a British company's shares. Yet the difference between control by majority shareholding and total ownership with thereby more effective control is a difference in degree, not in kind. A much deeper principle would have been involved if—as some people in Britain feared a few years ago, when steel shares were cheap—an American company had bid for United Steel Companies or some other British-owned steel group.

Anyway, the whole problem of foreign participation in national companies has been brought into prominence again, and it would be helpful if all the relevant facts could be published, so that the problem could be studied in its proper perspective. The first difficulty is that little is known of the true value of American assets in Britain—or of British assets in America. Different calculations yield startlingly different results, but it appears from last-published balance-sheets (notoriously uninformative documents) that the value of American companies' direct investments in Britain is of the order of £1,000 million, and that the value of British companies' direct investments in the United States is not much less. However, figures tell only part of the story. They show that American companies control only a few percent of the British economy—and British companies only an insignificant proportion of the American economy. But American capital in developed countries such as Britain is a more powerful influence than its size alone indicates. Wholly or partly-owned American companies in Britain number hundreds, but most of the capital is concentrated in the hands of a few American giants—Standard Oil, Vacuum Oil, Ford, General Motors, Monsanto Chemical, Procter and Gamble, Woolworth, Kodak, Hoover, Heinz, and a few more—operating almost entirely in the most rapidly developing sections of the economy. They are a big element in particular industries, and they have certainly strengthened those industries, but foreign control of an important part of an industry could in imaginable circumstances, particularly if it is an export industry, be against the national interest.

If the principle of foreign control—whether by partial or by total ownership—is accepted, there remains the problem of remittances. As the assets and the earnings from them grow, the remittance of profits will be an increasingly important factor in the foreign-exchange markets. The flow of dividends into the United States has recently exceeded the outflow of American capital for direct investment, and it is possible that the inflow of remittances will increase—at least temporarily—more than has been generally assumed. Particularly significant are some figures published recently by the U.S. Department of Commerce. The Department has estimated the book-value of direct American investments abroad as approximately $30,000 million—much more than the value of the gold reserve at Fort Knox. But not nearly all of this huge capital has been transferred from the United States. The Department has analysed, for the first time, the methods of financing increments to the foreign assets of American companies. In respect of American manufacturing companies the increment in 1959 has been estimated at $2,382 million, and of this total only $469 million was transferred from the United States: depreciation and depletion allowances ($695 million), retained earnings ($665 million), and capital provided by foreign investors and creditors ($553 million), accounted for the rest.

When Mr. Franz Pick, the American expert on currencies, was in London recently, the financial columnist of the London *Financial Times*, "Lombard", took the opportunity to interview him, and Mr. Pick put forward some ideas that are decidedly relevant to this matter. He suggested that American companies operating overseas had been inclined to conceal some of their earnings acquired abroad, that they had retained in foreign countries more than they wished to reinvest in fixed assets in those countries, because they wished to defer repatriation of some of their uncommitted profits. Mr. Pick, as adviser on matters of currency to some major American companies, is in a good position to observe such facts or tendencies. The "surplus" retained earnings are short-term assets held outside the United States, and they may be substantial. If remitted gradually they will cause no serious trouble—though, even so, if the policy were changed the increase in the flow of remittances would be perceptible. But the process could become "explosive", "Lombard" pointed out, if the currencies were realigned and, thereby, all doubt about the stability of the dollar were removed; then these concealed assets, as well as ordinary short-term funds, might suddenly rush out of the countries where American capital was invested. The remittances are already a considerable factor in Britain's balance of payments. A recent survey by the U.K. Board of Trade showed that earnings of offshoots of American companies in Britain in 1958 amounted to £95 million, whereas in the same year offshoots of British companies in America earned only £17 million. Although Britain is still a big exporter of capital for direct investment, the currency that will benefit most from world-wide direct investment in the coming years is not the pound but the dollar.

PERSPECTIVE PLANNING FOR ENGINEERING

THE engineering industry has made rapid progress during the major part of the second plan, in spite of the steel shortage. The draft outline of the third plan has emphasised the need for laying the foundations for rapid industrialisation in order to pave the way for a self-generating economy. This is as it should be, for no industrial progress is possible unless the foundation is firmly laid for the rapid growth of capital and producer goods industries. The major defect of planning in India today is the excessive emphasis on the infra-structure of the economy, at the expense of much that is immediately urgent, does not necessarily absorb much investible resources, but yields quick returns all the same. There are obvious examples of lop-sided planning in the engineering sector which have been the subject of a memorandum recently submitted to the Planning Commission by the Engineering Association of India.

Nobody should have any reason to complain about the Government's objective of rapidly building up machine-making industries since it is only natural for an under-developed country aspiring to attain industrial prosperity to aim for self-sufficiency in basic components. But the pre-condition for the rapid progress of the engineering industry is the availability of an adequate supply of steel. The Association has rightly pointed out that there will inevitably be a considerable time lag between the installation of steel plant capacity and output materialising on the basis of that capacity. So all discussion about India having an exportable surplus by 1966 is of only academic interest. Besides, there is reason to worry about whether engineering concerns will get the required steel in quantities and categories to keep them fully engaged by 1966. As is usual with official proposals, there have been many contradictions in New Delhi's policy of encouraging engineering expansion. The chairman of the Indian Iron and Steel Company, Sir Biren Mookerjee, has repeatedly stressed the short-sightedness of pitching steel prices higher by levying an exorbitant surcharge. That on pig iron is not nominal either, so expanding engineering concerns find it difficult to reduce production costs. If it were the Government's policy to encourage engineering companies to diversify their activities, the most essential pre-requisite would be to supply adequate quantities of steel at reasonable prices.

But the basic defect in the Government's policy—because of its tendency towards megalomania—has been to build huge steel plants with scarcely any thought about their costs of production. The latter inevitably depends on the nature of the plant design adopted, and it would be too much to claim that this issue received careful attention from planners when the Rourkela, Bhilai and Durgapur steel plants were proposed. The discussions at a symposium on the iron and steel industry in Jamshedpur last year highlighted the various aspects of plant design which might have a bearing on capital costs and operating expenses under Indian conditions. Furthermore, the working of steel plants in India has been affected by the high ash content of coke, which both Sir Biren Mookerjee and the Engineering Association of India have discussed in detail while referring to its dangerous implications. The most urgent need during the third plan, according to the Association, will be to allow the steel plants to expand their production further because nobody now seriously believes the assumption that India will be unable to absorb the iron and steel produced during the third plan.

The country has been passing through a fairly long period of scarcity, and there is apparently much pent-up demand which will absorb a large quantity of steel during the initial years of the third plan. The Association has pointed out that the worries about over-production have arisen because there is a tendency in this country to accept consumption figures as those representing demand. The recent appraisal of steel demand, made by the National Council of Applied Economic Research, has shown convincingly that it will not lag behind supplies. In fact, the production target of finished steel, at 6.9 million tons by 1965-66, compares with one of 7,168,000 tons which the Council thinks the country will need by the end of the period.

It is not without reason, therefore, that the engineering concerns are worried as to whether the right quantities of steel in appropriate categories will be available during the third plan. In spite of the increase in domestic production, imports might be necessary to meet what the Association calls "maintenance requirements" of iron and steel, that is to say, the quantity required to meet the current demand of industries already established. But the foreign exchange position being what it is, it would be too optimistic to assume that steel would be imported liberally during the third plan to meet the expanding needs of engineering concerns. As it happens, Mr. Morarji Desai told the Lok Sabha on Monday that "over the entire period of the third plan it is going to be a continuing and difficult quest for foreign exchange resources to match the external costs of projects included in the plan and to meet other commitments." The further cut in import quotas announced recently is also an indication that it will not be easy to adjust the foreign exchange budget in spite of massive foreign aid during the third plan period. Meanwhile there is idle capacity in the engineering industry which cannot profitably be utilised unless steel supply is both adequate and cheap. Besides, New Delhi has under-estimated India's requirements of alloy, tool and special steels during the next quinquennium. There is obviously a strong case for making an upward revision of the third plan target of 200,000 tons and for inviting the private sector to set up production capacity to meet the rising demand.

Current News and Comment

British Paints Offer Soon

It is reliably learnt that British Paints (India) Ltd will soon offer some Rs 10 ordinary shares for public subscription at a premium of Rs. 5 a share. The present subscribed capital is Rs. 28.37 lakhs, divided into ordinary shares of Rs. 10 each. It is proposed to issue another 216,346 ordinary shares of Rs. 10 each, of which a portion will be used for financing a substantial extension of the Company's activities. Some shares are being offered to the public in order to give Indian investors an opportunity of participating in the capital of this well-known concern. The Company is a leading paint manufacturer, and was incorporated in Bengal in 1923. A controlling interest in it was acquired by British Paints (Holdings) Ltd of the U.K. in 1947, and the name was changed from Hadfields (India) Ltd to British Paints (India) Ltd in that year. Since then, the Company has made rapid progress. Sales have improved from Rs. 38.56 lakhs in 1948 to Rs. 1.67 crores in 1959.

In view of the steady rise in the demand for industrial paints, the Company has decided to expand. Nearly two years ago, it started to manufacture synthetic resins. A substantial part of the synthetic resins which paint factories require are now manufactured in this unit. It is proposed to expand the unit in view of the growing demand for the commodity. The British Paints factory is situated near Calcutta. The directors are confident about the remunerative employment of the resources in development plans and expansion projects. They think that adequate profits will be earned for paying a taxable ordinary dividend of at least 12½ percent on the increased capital. When the new issue is subscribed, the total paid-up capital will be Rs. 50 lakhs, supported by reserves of more than Rs. 35 lakhs. Considering the present returns and the growth prospects, the response to the issue should be satisfactory.

India Steamship Disappoints

The India Steamship Co. Ltd has incurred a substantial loss during the year ended March 1960, although freight earnings have risen from Rs. 8.04 crores to Rs. 8.39 crores. The reasons for the disappointing results were explained by the chairman, Sir A. Ramaswami Mudaliar, in his address at the annual general meeting held recently in Calcutta. (The full text of the speech was printed in last week's issue of *Capital*.) Sir Ramaswami pointed out that competition in the international freight market has become stiffer. The competition from tramps has increased substantially, so freights have had to be cut. The difficulties are accentuated by the unhealthy and unfair practices which some liner companies have adopted in violation of the Conference rules. In many instances, freight rates have been undercut unofficially. Costs have risen due to the unsatisfactory conditions at Indian ports. There have been delays in the turn-round of ships. The drafts in Calcutta port have deteriorated, and because of the draft restrictions, ships cannot lift the cargo which is offered. Sir Ramaswami said, however, that some improvement has occurred lately. He hoped that the modernisation schemes for Indian ports would make steady progress.

Some reforms are being discussed by the Conference lines for checking the malpractices in the freight market. It is proposed to allocate the total freight earnings of all the shipping lines of a Conference in certain proportions over a term of years, providing for the development of the fleets of under-developed countries. India Steamship, along with other Indian companies, has approved of the measure, because it will eliminate many unworthy charges which are now made concerning flag discrimination. In spite of the reform, Sir Ramaswami felt that greater attention should be paid to developing Indian shipping by allocating larger cargoes to it. The State Trading Corporation has not been of much help in this matter. In spite of India Steamship's unsatisfactory performance during the past year, the chairman took a more cheerful view of the future. The shipping business is usually subject to fluctuations, so there might be a turn for the better soon.

Central Coalfields Pays More

The working of the Central Coalfields Ltd during the year ended March 1960 has improved. Raisings increased from 316,881 tons to 374,738 tons and despatches from 306,540 tons to 373,884 tons. The working of the Orient colliery has been satisfactory, but difficulties have arisen at the Pure Chirimiri and Khas Badjna collieries. The profit has increased from Rs. 4.20 lakhs to Rs. 6.19 lakhs, after increasing depreciation from Rs. 2.68 lakhs to Rs. 5.04 lakhs and taxation from Rs. 3.05 lakhs to Rs. 4.91 lakhs. A taxable ordinary dividend of 80nP a share has been declared. It is covered more than two and a half times, and offers a yield of 7.2 percent at the price of Rs. 11.12 a share. The ordinary dividend was 50nP tax-free, in the previous year. Development reserve is allocated Rs. 1.25 lakhs (against Rs. 1.74 lakhs) and contingencies reserve Rs. 75,000. The carry-forward is Rs. 27,542, against Rs. 7,059 brought in.

Lloyds, National and Grindlays Bank

The agreement between Lloyds Bank Ltd and National and Grindlays Bank Ltd, for amalgamating the business of Lloyds Bank's eastern branches in India, Pakistan and Burma with that of National and Grindlays Bank, has now been confirmed. This was done by shareholders of National and Grindlays Bank at an extraordinary general meeting held in London last week. The issue of 1,520,700 shares of National and Grindlays to Lloyds Bank was approved. These shares represent nearly 25 percent of the issued share capital of National and Grindlays. Lloyds has agreed to transfer the additional reserves appropriate to the business of the eastern branches. The number of shares to be issued for the business has, therefore, been increased. The profits of Lloyds Bank's eastern branches for the year ended December 1960 will be retained by Lloyds. The latter's new shares in National and Grindlays will not participate in any dividend for the year ended December 1960.

Lloyds will exchange the direct banking responsibility hitherto exercised through its branches in India, Pakistan and Burma for an indirect and substantial interest, in the form of its holding in the share capital of National and Grindlays. The acquisition of this shareholding will increase the overseas interests of Lloyds, because in addition to 32 of its branches in India, Pakistan and Burma, National and Grindlays Bank already has more than 80 branches and sub-branches in Ceylon, Aden, Somalia, the east African territories and Rhodesia. National and Grindlays at present has a link with the National Provincial Bank Ltd, following the acquisition of Grindlays Bank Ltd in 1948. With the new merger, there is now a close connection with Lloyds. The issued capital and reserves of National and Grindlays will amount to more than £7.5 million on 1st January, 1961. Its deposits will be considerably in excess of £200 million, out of which Lloyds Bank's eastern branches will provide more than £50 million.

The substantial increase in resources available to the amalgamated bank will strengthen its position and enable it to play a more active part in financing the expanding economies of the countries in which it operates. It is the intention of the amalgamated bank to continue each former branch of Lloyds Bank with the same staff, under the title of "National and Grindlays Bank Ltd, Lloyds Branch," so that the long-established connections of Lloyds in India, Pakistan and Burma will be maintained. Lloyds Bank, London, will also have representation on the board of National and Grindlays. National and Grindlays was formerly the National Bank of India Ltd. The latter changed its name on amalgamation with its wholly-owned subsidiary, Grindlays Bank Ltd, three years ago.

Nil Again from Bararee Coke

The results of the Bararee Coke Co. Ltd for the year ended March 1960 are disappointing. Production has been interrupted by the extensive reconstruction of the ovens, but the directors say that the entire scheme will be completed within the next few months. Thereafter, the working results are expected to improve. It is expected that the results for the current year will be better in view of the reconstruction and overhauling of the coke oven battery and its by-products plant. But competition from sales of coke oven by-products by the steel factories has increased. A loss of Rs. 3.37 lakhs has been incurred, after providing Rs. 44,787 for depreciation. Bringing in a debit balance of Rs. 235,349, there is a total debit balance of Rs. 5,53,532 to be carried forward. The dividend has been again passed over.

Belapur Sugar Raises Dividend

The directors of the Belapur Co. Ltd have recommended a dividend of Rs. 29 a share, subject to deduction of tax, for the year ended September 1960. This works out to a net dividend of Rs. 20.70, which compares very favourably with the preceding year's net dividend of Rs. 14.70 (Rs. 21 gross). The cut imposed last year has thus been more than restored. In 1957-58, the Company paid a record dividend of Rs. 20 a share, tax-free, including a bonus of Rs 4. The dividend proposed for 1959-60, therefore, sets a new record. The working results have yet to be published, but reliable reports indicate that the net profit for 1959-60 will be nearly double the 1958-59 figure. Belapur shares shot up from Rs. 382 to Rs. 410 following the

announcement of the higher dividend last week, but later receded to Rs. 396 on profit-taking.

Asian Cables to Expand

The Asian Cables Corporation Ltd, which was formed early this year to manufacture electric cables, is ready with plans to expand, particularly in the direction of manufacturing high-tension paper-insulated power cables and enamelled copper wires. The expansion programme is to be financed by raising fresh capital early next year. The Company has asked the Controller of Capital Issues for permission to raise its issued capital from Rs. 50 lakhs to Rs. 2 crores. It has decided to increase its authorised capital from Rs. 1 crore to Rs 5 crores, and an extraordinary general meeting of the shareholders has been called on 7th December to approve the proposal.

It is reported that negotiations for technical collaboration as well as financial participation, with the Phelps Dodge Copper Products International Corporation of the U.S.A., jointly with the present British technical collaborators, Enfield Cables Ltd, have reached an advanced stage. Of the new issue of Rs. 150 lakhs, it is proposed to raise Rs. 100 lakhs from the existing shareholders, and the foreign collaborators will take up shares worth Rs. 50 lakhs. The Company has secured an industrial licence for its expansion plans. The agreement for technical and financial collaboration will, it is expected, be finalised next month. Work on the first plant is progressing well and it is likely to be commissioned by June 1961. The shares of the Company have improved from Rs. 91 to Rs. 107 since the announcement of the expansion programme.

Indian Hume Pipe Suffers

The working of the Indian Hume Pipe Co. Ltd for the year ended June 1960 has resulted in a gross profit of Rs. 35.37 lakhs, which is Rs. 16.53 lakhs less than in the previous year. Sales are down from Rs. 2.45 crores to Rs. 2.32 crores. The net profit is Rs. 11.49 lakhs, against Rs. 17.41 lakhs. This has been calculated after providing Rs. 8.45 lakhs (against Rs 8.52 lakhs) for depreciation, Rs. 3.43 lakhs (against Rs. 5.96 lakhs) for development rebate reserve and Rs. 12 lakhs (against Rs. 19 lakhs) for taxation. The debenture redemption reserve absorbs Rs. 2 lakhs (against Rs. 3 lakhs) and rehabilitation reserve Rs. 1 lakh (against Rs. 3 lakhs). The ordinary dividend has been maintained at Rs. 13 a share, taxable, on the increased capital. (The Company issued 30,000 new equity shares during the year.) The proposed dividends absorb Rs. 8.12 lakhs, leaving Rs. 70,946 to be carried forward, against Rs. 84,342 brought in. Secured loans have increased from Rs. 44.25 lakhs to Rs. 82.26 lakhs; the funds have been raised mainly to finance fixed assets and expenditure at factories. The gross block is up from Rs. 192.07 lakhs to Rs. 225.73 lakhs.

The trading results are unsatisfactory, but the outlook may improve since the Company is going ahead with expansion plans. An order has recently been secured for the supply of steel penstocks worth about Rs. 67 lakhs for the Sharavathi hydro-electric project in Mysore State. These will be manufactured at the factory in Hadapsar. The Company has also secured an order from the Maharashtra State Electricity Board for 40,000 prestressed concrete poles for the transmission of Koyna power. It is erecting a new factory in Karad to manufacture the poles. An order has been obtained for the supply of steel penstocks worth Rs. 1.32 crores for the Koyna hydro-electric project. The shares of the Company are now quoted around Rs. 174, yielding a little over 5 percent.

Gokak Mills to Raise Capital

The Gokak Mills Ltd proposes to increase its authorised capital from Rs. 50 lakhs to Rs. 100 lakhs by creating 50,000 new equity shares of Rs. 100 each. The directors have also decided to issue 24,405 equity shares of Rs. 100 each at a premium of Rs. 15 a share to the existing shareholders in the ratio of one share for every two already held. An extraordinary general meeting of shareholders has been called on 12th December to approve the decisions. The new equity shares are not entitled to any dividend declared at or prior to the annual general meeting to be held in 1961. Thereafter, they will rank *pari passu* with the existing equity shares. The additional capital will be used for repaying part of the existing loans taken from bankers for the rehabilitation and expansion programme. The Company has been borrowing large amounts to meet the heavy capital expenditure and to provide working capital; the amounts are far in excess of the paid-up capital. The directors think it necessary to reduce the disparity between the paid-up share capital and the block account of the Company in which the bank loans have been largely invested. In spite of the weakness in textile shares over the past few months, Gokak have remained steady. They are quoted around Rs. 170, which is not much below the 1959 high of Rs. 182. The strength is due partly to the prospect of a rights issue, and partly to hopes that the Company's working results for the current year will show an appreciable improvement.

Smith Stanistreet Sells More

The sales of Smith Stanistreet and Co. Ltd have increased from Rs. 1.50 crores to Rs. 1.72 crores during the year ended June 1960. The directors think that they will rise further soon in view of the rationalisation of the sales organisation. The strychinine plant has produced more as supplies of raw materials have been bigger. The profit has increased from Rs. 9.84 lakhs to Rs 10.88 lakhs. A taxable ordinary dividend of 25 percent has been declared—the same as in the previous year. This offers a yield of 10.5 percent at the price of Rs. 12.12 a share, and is covered more than two and a half times. Taxation is allocated Rs. 4.90 lakhs (against Rs. 4.37 lakhs), development rebate reserve Rs. 37,000 (against Rs. 13,000), general reserve Rs. 50,000 (same) and doubtful debts reserve Rs. 50,000 (same). There is a carry-forward of Rs. 98,591, compared with Rs. 75,219 brought in.

The Company proposes to double the authorised share capital to Rs. 40 lakhs by creating more ordinary shares. It has already offered to the existing shareholders 100,000 new ordinary shares of Rs. 5 each for subscription at par in the ratio of one new share for every three held. The money will be used for holding bigger stocks of goods in view of the expansion in sales. There is also a programme for exporting extracts of crude drugs, and for developing new products in the Company's laboratories. Substantial sums will be required for modernisation and for the construction of better production units.

Tractors (India) Earns More

Tractors (India) Ltd has reported satisfactory results for the year ended June 1960. Sales have increased from Rs. 86.10 lakhs to Rs 89.01 lakhs. After providing Rs. 63,603 for depreciation (against Rs. 66,041), the profit amounts to Rs. 23.62 lakhs, against Rs. 22.4 lakhs. Taxation absorbs Rs. 10.63 lakhs (against Rs. 10.9 lakhs) and the allocation to general reserve has been maintained at Rs. 2.5 lakhs. The taxable dividend of Rs. 3 a share takes Rs. 6.86 lakhs (same). A sum of Rs. 14.13 lakhs is carried forward, against Rs. 10.67 lakhs brought in. The Company has, in association with Steel and Co. Ltd of the U.K., promoted Coles Cranes of India Private Ltd, which will manufacture mobile cranes for the first time in India. The new factory is expected to go into production by the third quarter of 1961. Tractors (India) has acquired a substantial interest in Willcox (Buckwell-India) Private Ltd, New Delhi, which holds a franchise for lines similar to those handled by the Company in northern India. Further negotiations are in progress with some of the overseas principals for the manufacture of their products in India. The shares of Tractors (India) are quoted around Rs. 29, offering a yield of a little over 7 percent.

Kothari Sugars and Chemicals

Kothari Sugars and Chemicals Ltd is a new company which has been formed with an authorised capital of Rs 5 crores and an issued capital of Rs. 80 lakhs. It will offer equity shares to the public soon. The Company will set up a sugar factory in Trichinopoly, with a crushing capacity of 1,000 tons to 1,250 tons a day. The plant and machinery will be manufactured by Binny's Engineering Works of Madras in collaboration with Mirrless Watson and Co. Ltd of Glasgow. The Company is being floated by Kothari and Sons of Madras and the factory is expected to go into production by December 1961. Of the capital issue of Rs. 80 lakhs, the Industrial Investment Corporation of Madras has agreed to subscribe for Rs. 15 lakhs. The Life Insurance Corporation is subscribing for another Rs. 15 lakhs. The rest of the issue has been underwritten.

Shock Absorbers from Gabriel India

Gabriel India (Private) Ltd is a new Company which has been formed in Bombay to undertake the manufacture of automotive shock absorbers. The project is a joint venture of the Gabriel Company of Cleveland, Ohio, and Anand Automobiles. The plant, which is being erected in a Bombay suburb, will have an initial capacity of 120,000 shock absorbers. The factory is expected to go into production early next year. It is the second unit to be set up by the Gabriel Company outside the U.S.A within the past two years.

A.C.C. Shareholders Want More

Over the past few years, the shares of the Associated Cement Companies have suffered sizeable losses in spite of the improvement in the stock markets. From a high of Rs. 167 in 1958, they were sold down to Rs. 141 in 1959. In March 1960, they could be had at Rs. 138. They were quoted around the same price in September. Recently, however, the quotation has improved to Rs. 147. Shareholders have suffered in spite of the steady improvement in the Company's financial position. In a memorandum to the chairman and board of directors, shareholders of the A.C.C. have pointed out the steady erosion of the capital value and have pleaded for a larger dividend for 1959-60 in order to help restore the shares to their old popularity. The memorandum, released through the Bombay Shareholders Association, says that although the production has gone up from 2.5 million tons in 1955 to 3.44 million tons in 1959, the dividend has gone down from Rs. 10, tax-free, in 1954 to Rs. 11, taxable (or Rs. 7.70 net) in 1959. The memorandum urges the directors to increase the dividend to 10 percent, tax-free, particularly since the profits this year are likely to be much larger.

Stanvac Surrenders Duty Protection

Mr. J. W. Sinclair, general manager of the Standard-Vacuum Oil Company, announced last week that the Company has decided to surrender the duty protection on all products covered by the refinery agreement. The duty protection on gasoline was surrendered three years ago. It was granted through the agreement under which the Stanvac's Bombay refinery was constructed. The purpose was to encourage outside investment in a growing industry, and to protect it in its initial stages.

Meanwhile, it has been announced in New York that the joint ownership of the Standard-Vacuum Oil Company by the Standard Oil Company (New Jersey) and the Socony Mobil Oil Company Inc. is being terminated. The international petroleum interests of Standard-Vacuum will be divided between them. Jersey Standard and Socony Mobil, two of the world's largest companies, originally formed Standard-Vacuum in 1933 from their then-existing independent facilities in the East. In this area, Jersey Standard was engaged primarily in the production of crude oil and in the refining of petroleum products. Socony Mobil's interests were basically in the marketing of finished products. The two Companies felt they could do better through the joint ownership of facilities from the well site to the marketplace. As world conditions have changed and as the petroleum industry has developed, the two Companies now feel that a realignment of Standard-Vacuum is best. Under the terms of the reorganisation agreement between Jersey Standard and Socony Mobil, each Company will be in a position to serve separately the consuming public with its petroleum products.

At present, Jersey Standard and Socony Mobil each owns 50 percent of the capital stock of Standard-Vacuum, which does business either directly or indirectly through affiliates in about 50 countries and territories of southern Asia, including India. The interests which Socony Mobil will acquire will be held through the Mobil Petroleum Company Inc., a new wholly-owned affiliate. The remaining portion will be held by Jersey Standard through the ownership of Standard-Vacuum, the name of which will be changed to Esso Standard Eastern. Standard-Vacuum's present interests in India will be retained by Esso. These interests include Standard-Vacuum's marketing businesses, its stock ownership in the Standard-Vacuum Refining Co. of India Ltd, and its petroleum exploration activities in India.

Policy for P.V.C. Projects

It is reliably learnt that the Licensing Committee has now formulated a general policy for approving new schemes for the manufacture of P.V.C. plastics in the country. It has recommended that new projects should be approved in principle only if they satisfy certain conditions. The raw materials used must be wholly indigenous and no imports should be allowed. No foreign exchange from free resources, or under any of the credits which are required for more important projects, should be made available for importing plant and machinery. The foreign exchange requirements for a project, including know-how, will have to be arranged by equity capital participation and/or payment through exports of P.V.C. and other items manufactured in the plant. The Development Wing should approve of the capacity which is licensed for each of the schemes, consistent with availability of raw materials in the allocations proposed. Finally, the manufacturers should make 75 percent of their production available for processing by others, and should retain only 25 percent for processing themselves.

Many applications, it is reported, have been submitted to the Government for setting up plants for manufacturing P.V.C. The applicants include India Cements, the Delhi Cloth and General Mills, Dhrangadhra Chemicals and Standard Mills. India Cements Ltd of Madras has applied for a licence to establish a new industrial undertaking in Tirunelvelli, Madras, for the manufacture of P.V.C. resins and compounds. The capacity will be 5,400 tons a year in terms of resins, working on a three-shift basis, and the plant will be built in collaboration with the B.F. Goodrich Chemical Co. of the U.S.A. The Delhi Cloth and General Mills wants to set up a plant in Kotah, Rajasthan, for manufacturing 30 tons of caustic soda a day with the equivalent chlorine, 40 tons of calcium carbide and 20 tons of P.V.C. and copolymers. Dhrangadhra Chemicals' application is for a plant in Sahupuram, Madras, with a capacity of 18,000 tons of P.V.C. resins a year. The Licensing Committee, it is said, has approved the scheme submitted by Delhi Cloth. The Standard Mills application is still being considered. As for the applications submitted by India Cements and Dhrangadhra Chemicals, the Committee is believed to be of the view that a total quantity of up to 10,000 tons a year can be permitted in the Madras region. It has recommended that the two applicants should try to arrive at a suitable arrangement for jointly establishing this capacity.

Rayon-grade Pulp Projects

A number of companies, it is understood, have asked the Government of India for permission to set up factories for the manufacture of rayon-grade pulp and paper in Mysore State because raw material supplies are abundant there. The West Coast Paper Mills has asked for permission to increase its existing capacity for the manufacture of rayon-grade pulp from 100 tons to 150 tons a day. The other proposals are for setting up plants in the Nanjangud area of Mysore. The National Rayon Corporation wants to establish a new industrial undertaking there for manufacturing 36,000 tons of rayon-grade pulp a year. Jolly Brothers of Bombay has also applied for a licence to set up a plant with a capacity of 22,000 tons of pulp, out of which 3,600 tons of writing paper will be manufactured: the rest will be sold as pulp. Abdullabhai Fiddali and Co of Bombay wants to set up a plant with a capacity of 18,000 tons of pulp a year. Finally, Rohtas Industries has applied for a licence for setting up a factory with a capacity of 50,000 tons, of which 35,000 tons will be converted into printing and writing paper.

The Licensing Committee, it is reliably understood, has recommended that a licence be granted to the National Rayon Corporation, subject to the following conditions: (1) the terms of foreign collaboration should be settled to the satisfaction of the Government; (2) the Development Wing should be satisfied about the manufacturing programme and other technical details; and (3) the foreign exchange requirements should be screened by the Capital Goods and Heavy Electrical Plant Committee. The West Coast Paper Mills' application for increasing the existing capacity is likely to be sanctioned soon, because the proposal has been approved by the Mysore Government, which recently appointed a committee to consider the possibilities of setting up more paper factories based on bamboo resources. The Licensing Committee has recommended that the applications of Rohtas Industries, Abdullabhai Fiddali and Co. and Jolly Brothers should be rejected since there will be no scope for further expansion.

Cloth Output, Exports and Prices

Mill cloth output in October 1960 is provisionally estimated at 424 million yards, which is 11 million yards less than in the previous month and 10 million yards less than in October 1959. Yarn production has also fallen to 146 million lbs, from 150 million lbs in September 1960 and 148 million lbs in October last year. The decline in production seems to be due entirely to the Diwali holidays. The October figure raises the output of cloth during the first 10 months of the year to 4,193 million yards, which is 192 million yards more than in the corresponding period of 1959. Yarn production shows a rise of 6 million lbs at 1,433 million lbs. Although production has increased, cloth exports have suffered badly. Shipments of cotton piecegoods from Bombay last month totalled 48.78 million yards, compared with 83.52 million yards in October 1959. Exports from January to October 1960 total 500 million yards, against 549 million yards in the corresponding period of last year. On the basis of the current performance, shipments from Bombay in 1960 are unlikely to exceed 600 million yards, against 717 million yards in 1959. The fall in exports is attributed to the high price of Indian cloth, which reflects the sharp increase in raw cotton and labour costs. While the decline in exports is discouraging, some comfort might be derived from the fact that foreign exchange earnings are higher. Cloth exports during the 10 months from January to October 1960 have fetched Rs. 38.55 crores, against Rs. 36.78 crores during the corresponding period of 1959.

The increase in production and the decline in exports have meant larger supplies of cloth for domestic consumption. The easier tendency in cloth prices over the past few months is due not to this, but to the Government's firm attitude which has obliged the industry to reduce prices. Ex-mill prices are fixed according to a formula which has been approved by the Government. The trade's margin has also been fixed. Enquiries in the cotton piecegoods market indicate that many varieties of cloth are available at below the stamped prices. As raw cotton prices are likely to ease because of the improved supply, the trade expects that cloth will become cheaper. The monetary stringency and expectations of a decline in prices have discouraged the trade from carrying big stocks. This has led to an appreciable increase in the stocks held by mills over the past few months. At the end of October, they were 384,500 bales, or only 1,500 bales less than in September. The decline is very small considering that big purchases are usually made during Diwali. The current trend of offtake suggests that the stocks with mills are likely to remain high. This might cause considerable hardship to the less efficient units, particularly those whose cloth is not popular in the market.

Indo-Burmese Trade Prospects

A Burmese trade delegation recently discussed Indo-Burmese trade problems with the South Indian Chamber of Commerce in Madras. There was a frank exchange of views concerning the stoppage of imports of Indian handloom goods by Burma. The delegation made it clear that the latter is ready to buy a wide range of Indian goods if the prices are reasonable and deliveries prompt. As for spices, the Burmese market hopes that Indian traders will quote lower prices in future. Restoration of the trade in beans and pulses was one of the subjects discussed. A Burmese delegate pointed out that strict import controls in India have contributed to the reduced offtake of Indian goods in his country. Burma has turned to Japan and communist China since India limited her purchases. Burma is ready to pay in sterling for goods bought in India. Besides, she is determined to adhere to the procedure of calling for tenders in buying yarn and mill cloth from India. A large part of Burma's trade, the delegation said, remains in private hands, and the State boards at present handle only the rice and timber trade. The co-operative agencies and joint venture corporations are ready to place orders in India. The rice export quota will be fixed by the Rangoon Government, which has already found customers for the current year's surplus of 2 million tons in Ceylon, Malaya, Pakistan and China. But as far as the export of *lungis* from India is concerned, Burma is resolved, like Ceylon, to protect her own hand-weaving industry, so traders in Madras are not optimistic about larger shipments in the future.

Indian Exports to U.K. Rise

The latest statistics on Indo-British trade show that India sold more to the U.K. during the first nine months of the current year than in the corresponding period of 1959. Exports rose to £101.2 million from £95.2 million. Tea exports fell to £34.7 million from £36.5 million, and so also did those of oilseed cake and meal (excluding husk meal). But there were rises in almost every other major item, the notable ones being in cotton yarns and woven fabrics, animal and vegetable oils, fats, greases and derivatives, and metalliferous ores and metal scrap. U.K. exports to India, however, fell—from £124 million to £115 million. Machinery, including electrical machinery, apparatus and appliances, recorded sharp declines. Another principal item, road vehicles and aircraft, also fell. Rises of a minor nature occurred in wool and other animal hair and tops and petroleum and petroleum products. There was a substantial increase in iron and steel and non-ferrous metals, but metal manufactures were sharply down. An individual break-down of U.K. machinery exports shows that the items which were particularly

Radiantly fresh every hour of the day!

The secret is the wholesome, invigorating Mysore Sandal wash.

The rich, delicately fragrant lather of Mysore Sandal Soap is unequalled in its quality of thorough cleansing.

And that keeps you alluringly fresh with the lingering Sandal fragrance, all day long.

affected were boiler and boiler-house plant, pumps, industrial and works trucks and tractor and mechanical handling equipment, converting machinery, transformers, switchgear and switchboards, electric cables, wires, strips and insulated strands. The only items which recorded rises were machine tools (excluding portable power tools) and textile machinery.

Nationalising Life Insurance in Ceylon

The Ceylon Government's proposal to nationalise life insurance has aroused widespread interest. Soon after India set the example, voices were heard in both Pakistan and Ceylon demanding similar steps there. No reliable statistics are available about the volume of life insurance in Ceylon and its distribution among different groups of companies. The *Statistical Abstract of Ceylon* gives some figures, but they are admitted to be incomplete and vary widely from year to year. Adjusting the figures, it seems a fair estimate that 150,000 policies are in force in Ceylon and the life premium income may be between Rs. 35 million and Rs. 40 million. More than half the business seems to be in the hands of the British companies The rest is about equally distributed between Ceylonese and other companies.

From the figures, it is not very clear what the Ceylon Government wishes to achieve by nationalising life insurance. It has nationalised the port administration in Colombo, but both insurers and consignees confirm that the working of the port has deteriorated sharply as a result. As in India, there seems to be a doctrinaire bias in favour of nationalisation. There is, however, one important difference. The Ceylon Government has publicly given notice of nationalisation, whereas in India the Government swooped down on the insurers suddenly. Ceylon may be carefully studying the Indian experience In that case, she will have discovered that the teething troubles for nationalised life insurance in India have been long, painful and complex. Even today, many serious deficiencies remain. The difficulties may persuade Ceylon not to follow India in integrating the companies into a single monolithic unit. If more than one unit functions, the competiton could make insurers more energetic in getting business and providing better service to policyholders.

New Gandak Bridge

A new double-line railway bridge across the Gandak, built at a cost of Rs. 1.95 crores, was inaugurated recently by the U.P. Chief Minister, Dr. Sampurnanand. The previous railway bridge has been given over to the Bihar Government for conversion into a road bridge. Originally, there were two bridges over the river, but one was seriously damaged in the 1924 floods. Subsequently, the river formed a new channel, leaving the bridge high and dry. Left with only one bridge in Sonepur, throughout its length from the gorge to its confluence with the Ganga, traffic naturally got congested. The girders of the bridge constructed in 1892 were strong enough for the traffic handled in the past, but they did not permit the use of present-day heavier locomotives except at restricted speeds. This led to a further reduction of capacity, and the Sonepur-Hajipur section became a bottleneck for the traffic. Since any improvement to the existing bridge with its long masonry viaduct was not considered possible, it was decided in 1956 to construct a new double-line bridge at a site 250 feet upstream and also to double the track on the section between Sonepur and Hajipur. The new bridge consists of eight main spans of 250 feet each and its piers are exactly opposite to the existing ones. The piers supporting the main spans are founded on cement concrete wells which have been sunk to a depth of 72 feet to 95 feet below the low water level. About 800,000 cubic feet of concrete and 392 tons of steel were required for the purpose. The steel work of the girders was supplied by a Yugoslav firm. While the foundation and piers were constructed by the Hindustan Construction Company, the assembly and erection of the entire superstructure was done departmentally. The erection of the girders was started in April 1959 and completed in September 1960. The Sonepur approach of the new bridge passes through the area of the Sonepur *mela*—Asia's biggest cattle fair—and additional openings for the *mela* traffic have, therefore, been provided.

Crime Prevention on the Railways

Certain observations made recently in Lucknow by the Governor of U.P., Dr. B. Ramakrishna Rao, while declaring open the Jagjiwan Ram Centre for refresher courses for the Railway Protection Force, will worry the general public, which has every right to demand a higher standard of integrity in the public services Maintaining that it is wrong to expect workers to be more honest than others, the Governor said: "Those in the service of railways, or for the matter of that in any other service, reflect only the virtues or the vices of the people as a whole." If this is really so, the sum of Rs 16½ lakhs spent in constructing the Centre to give training to about 500 R.P.F. men of all ranks can be written off as a waste. A similar centre opened in Bulsar in Maharashtra some time ago can also be scrapped.

It is good, however, that the chairman of the Railway Board, Mr. Karnail Singh, does not take too cynical a view of the situation. One of the principal reasons for setting up such training centres, he said, is that unsocial elements are for ever devising new methods for committing crime. The R.P.F. has, therefore, to be abreast of the latest methods of crime detection. Besides transporting 4 million passengers every day, the railways today have 200,000 goods wagons being loaded or unloaded at 6,000 stations spread all over the country. Mr. Karnail Singh added: "There are some 3,500 goods trains running on the Indian railways every day and some of these require special escort."

The question, however, is why in spite of all the *bandobust*, crime on the railways against both property and person is increasing. Much has been said in the past about the complications introduced by the dual responsibility for crime prevention on the railway. The R.P.F., which is a Central force, is more concerned with the protection of railway property, while the Government Railway Police, which is responsible for other security measures, is under the control of the States. As long as responsibility is not unified, the Centre and the States can always pass the buck. Large-scale pilferage of goods on the railways has led to a considerable diversion of traffic to the roads.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 20

Dr. Rajendra Prasad, President of India.

Total Rs. 300

Previously acknowledged Rs. 2,572.05

Grand Total Rs. 2,872.05.

WORKING OF CALCUTTA PORT

WE publish in the usual column a notification by the Secretary to the Commission inviting persons to give evidence, and we also publish a list of the questions referred to therein. They are fourteen in all. We notice that one of the questions is, how do the various charges levied by the Calcutta Port Trust compare with those levied in other ports. It seems to us that this is altogether a misleading question. We are not concerned with other ports, but we are concerned with Calcutta; and what we have got to get at is, whether the charges could be lowered consistently with efficiency, because the lower the charges, the more attractive the port must become. Para 76 of the final report of the Royal Commission on Indian expenditure runs as follows: "The Public Works Department is responsible for a large amount of stores, especially for railway works. The Examiner in each Provincial Government audits the store accounts, as he audits the cash accounts of the Public Works Department. In every September and March there is a survey of stores, and the Accountant-General of the Public Works Department at headquarters compares the result of the survey with the results of the store accounts. Control over work is exercised by a comparison of cost with estimate and it is stated that the result is generally satisfactory." It would be interesting to know what control the Port Trust have over their stores. We notice that at conference of the representatives of the Bengal Chamber of Commerce on the Port Trust, and the Committee of the Chamber on the 6th of March last, Mr. M. G Turner made the very significant admission that he thought good might be done if Messrs Lovelock and Lewes, or any other chartered accountants had a look into the accounts department. This is a point which the Commission might turn their attention to.

A Ditcher's Diary

TWO HUNDRED CRORES OF RUPEES IS A LOT OF *money in any currency, in any country, at any* time. Dr. Roy's—or was it the Hoffman team's?—ambitious scheme to put life into the fast decaying city of Calcutta at that cost is deserving of the highest consideration at the Centre, in spite of its apparently extravagant dimensions. It may be that Calcutta is like the Duchess's baby in *Alice in Wonderland* who howled so incessantly "that it was quite impossible to say whether the blows hurt it or not"; but there is no doubt at all that this city's many problems have never received their due attention from New Delhi. That the Government of West Bengal and the Corporation of Calcutta show no conspicuous ability to use such resources as they have is no excuse for the Centre not caring. If it is true that Dr. Roy is looking more towards international agencies than to the Union Government for his Rs. 200 crores, I hear that the former will not think of investing so large a sum without some very specific conditions—mostly political. I do not know whether Calcutta and its suburbs can be politically insulated for any length of time, but the advantage to the Congress is obvious. Its hopes of getting more Congressmen elected from this area for Parliament or the State Assembly remain far from bright; but if the municipalities are denied democracy, it should at least neutralise its opponents for the duration. But even this is oversimplifying the factors involved, for there never will be any honest suspension of politics even if the elected bodies are superseded. No political Party, least of all the Congress, can be trusted to let go such immense opportunities of patronage as the municipalities provide—and that for so remote and abstract a goal as the good of the people.

TALKING OF THE PROPOSED METROPOLITAN BOARD, I noticed that what Dr. Roy said about this fair city when recommending the idea to the Assembly, would appear to indicate that he has now come round to the views expressed by a certain American journalist in an article published in *Time* a year or two ago, which then evoked a good deal of outraged protest from our worthy Chief Minister. Perhaps that means something will at last be done to remove such nuisances as pariah dogs, stray bulls and refugee hawkers from the city streets; these simple improvements would not cost a fraction of Dr. Roy's Rs 200 crores. Every year, without fail, one reads in the newspapers that stray cattle are to be run off the streets. But every year, just as unfailingly, not a single solitary thing is done about it. Then the pariah dogs; these I see are to be allowed to multiply, along with the rabies they carry, because it is nobody's business to destroy them. The Corporation is reluctant to do the work because its antiquated Act empowers it only to impound ownerless animals, while the S.P.C.A. is unwilling to carry on alone. Meanwhile, the increase in the number of these disease carriers goes unchecked and I, who have been trying to get my own dog injected against rabies for weeks, cannot secure this elementary precaution because the serum is not available due to import restrictions. As for refugee hawkers, it is a pity that the High Court has recently had to be moved for the performance of a duty which is undoubtedly the responsibility of our guardians of law and order. These pests are especially troublesome these days around the precincts of Calcutta University, near College Street, where the noise has become deafening and the pavements untenable. Meanwhile, our city fathers are, as always, thoroughly occupied minding everybody's business except their own.

SEEING THE SIGHTS OF CALCUTTA FROM AN AIR-conditioned bus is perhaps not the kind of thing which appeals to the more enthusiastic tourist: but it is certainly the way most of them would prefer to do it. The acquisition of two vehicles for this purpose, therefore, has my full approval, provided two conditions are observed: that the buses are used only for tourists and not for government dignitaries on tour, and that they are not permitted to share the fate of so many other vehicles which fall into the hands of this State's servicing and maintenance departments. I have been noticing a greater appreciation of the tourist problem throughout the country lately, although I see the Planning Commission is still eager to restrict them to "addicts corners" for their drinking. Even those notorious humbugs the Bombay sea Customs have mended their ways recently, I am told. But the experience of a visiting friend with the "tourist coupons" the Government so thoughtfully issues, when told to me the other day, makes me wonder whether official effort is getting all the co-operation it deserves. The coupons are intended to provide the tourist with a limited amount of liquor, fims and foreign tobacco at prices which exclude the usual element of profiteering. This friend first tried to use his to buy films in Darjeeling, but was told they only covered colour films whereas he wanted black and white. When he came down to Calcutta, he tried to buy foreign tobacco, only to learn that there was none of that available either, except perhaps on the black market. Then he went after whisky. The first shop he chose from the list given refused to sell him any because, as they put it, what they had on their shelves was not "tourist whisky". They did eventually offer to sell him half bottles, which would, of course, have put up the price. This shop would have given him brandy on his coupons, but not bitter campari. The next one he visited wanted to sell him half bottles too. When he declined, they offered full ones at the normal market prices. But their selection was small and he finally left for the third shop where, in fact, he met with complete sympathy and co-operation. The whole expedition cost him two hours of valuable sightseeing time. I doubt if he will come again.

WHEN A CALCUTTA BUSINESS MAN WAS REFUSED permission the other day to fly to Britain on a return ticket, for no better reason than that he could not speak sufficient English, I began to wonder if the authorities really knew what they were doing. It is difficult to imagine a more ridiculous excuse for preventing a person travelling abroad than the fact that he does not speak the language of the country to which he is going. If this principle were to be carried to its logical conclusion, then quite a few Ministers and any number of M.P.s would be forced to stay at home; and what is infinitely worse, many Indian journalists as well. In fact, considering the declining standard of English, this country would soon be completely isolated. This curious regulation was apparently devised to check the racket in bogus passports which has been flourishing recently in some parts of the Punjab. But such a remedy is surely worse than the disease. Besides, "literate" persons are known often enough to have used forged passports when they have been unable to obtain the genuine article. It seems to me about time the Indian Government considered simplifying its passport regulations, if only to prevent normally law-abiding citizens from becoming law breakers simply in order to secure what are in fact their inalienable rights. The authorities have also relaxed on another requirement I see—that of a tax exemption certificate for Indian nationals who intend to return to India. This rule still applies to foreigners, though, no matter whether they live in this country or not, nor how temporary their stay abroad. This discrimination can no doubt be justified on several grounds. But as one who has suffered all too frequently from this irritating and altogether unnecessary piece of "babuism", I should like to plead for its abolition for everybody. I cannot see why the inducement to escape from tax liabilities is any greater among foreign nationals, who usually have assets such as provident funds in this country anyway, than it is among Indians.

OF COURSE GILBERT HARDING WAS IRASCIBLE, RUDE, *sometimes downright outrageous.* But, to modify what Winston Churchill once unfairly said about Attlee, did not post-war England provide Harding with ample reasons and occasions for losing his temper in public? Whether or not Mr. Harding had a heart of gold can be sorted out between *The Times* obituarist and Mr. Lionel Hale. It is his tongue, far from silvery, and his stare, almost steely, that the British will long remember. Anybody engaging in his sort of activity was bound to overdo it sometimes—don't we columnists? But he lashed out against what the French contemptuously call "The System" and what we occasionally call the "New Tyranny"; and most of his fury was in my view fully deserved. What was service like in British restaurants immediately after the war? And those impudent waitresses who made you feel you had gone to a gruel kitchen for a free meal! I must confess I was glad somebody was rude on my behalf. The shortages of those days were nobody's fault, except in part Labour's for hanging on to controls long after they were necessary. But the most deplorable shortage was in good manners; and Harding did a service in reminding producers and sellers that the British consumer would not take everything offered, not indefinitely. Nor is it true that rudeness was the only equipment in Harding's repertoire. I think he had a sense of humour. And when I read of the illness that dogged his last years, I admire the man more. He certainly knew a number of languages and had experience of many countries besides his own. But how many will remember him in another three or five years? Dr. Johnson's uncivil witticisms are on permanent record. Even James Agate's volumes of *Ego* may be read by those interested in the years to come. But what of Harding? I can well believe that, despite their resounding success in the immediate present, most sensitive performers (even if one cannot call them artistes) on transient media such as the film or radio or television suffer the mortifications of certain mortality, however illusory notions of immortality may be in literature or painting. It's the sense of doing what will die under your feet before your eyes which generates strange discontents; and I am well aware that this applies to journalists too.

THE INDIAN IRON AND STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S STATEMENT

The Annual General Meeting of the Indian Iron and Steel Company Limited will be held at 12, Mission Row, Calcutta, at 3 p.m. on Thursday, the 15th December, 1960. The following statement by the Chairman, Sir Biren Mookerjee, has been issued to the shareholders along with the Directors' Report and audited accounts for the year ended 31st March, 1960 :

The highlight of the year was the improvement recorded in the Company's output of steel, the production of steel ingots at 827,072 tons showing an increase of 218,867 tons over the previous year. This position is of course attributable to the enlargement of the steel making capacity of our plant under the expansion programmes and while we have still a long way to go to achieve our ultimate target of one million ingot tons, it is heartening to see the planning and labour of the last five years now beginning to bear fruit. On the reverse side of the picture there are however no grounds for complacency as regards the production of iron which was, and continues to be, seriously affected by the high ash content of our coke consequent upon the unsuitable quality of the coal that we are being forced to accept. I will refer to this matter in more detail later since the position with which not only ourselves but the iron and steel industry of the country as a whole is faced as a result of the inadequacy of supplies of good quality coking coal is of the utmost gravity.

Accounts

I am compelled to comment again this year on the taxation provisions relating to the allowance of development rebate which require that as a prerequisite to the grant of such allowance an amount representing 75% of the rebate shall be charged against profits and set aside to reserve. With Company taxation now at the revised rate of 45% this means that over and above the saving in taxation arising from the allowance, which quite rightly should be set aside to reserve, a dead charge of 30% of the amount of the rebate is thrown against available profits compared with 23½% in the previous year. In our own case the excess of the compulsory reserve for the year under review over the actual taxation saving amounts to no less than Rs. 1,03,49,296 and I cannot on principle accept without protest a position whereby a charge of this magnitude should be thrown against the profits of a Company. In order that the Profit & Loss Account should show the true results of the working for the year the position has therefore been compensated by the write back to profits from the General Development Reserve of this excess amount of Rs. 1,03,49,296, the effective and logical result being, accordingly, a net accretion to the Development Reserves of the actual saving in taxation and a consequential net charge against profits of the amount of taxation that would have been payable but for the allowance of development rebate.

In the Profit & Loss Account this year will be found a new head of expense namely "Interest on Special advance from the Government of India" which I should perhaps explain. The special advance totalling Rs. 10,18,26,476 consists of two items of Rs. 10 crores and Rs. 18,26,476 covered by separate agreements with Government, the Rs. 10 crores having been granted as direct assistance towards finance of the cost of expansion and the Rs. 18,26,476 to meet the commitment charge on the first World Bank loan between the date from which such charge commenced to run and the later date, owing to circumstances beyond the control of the Company or the World Bank, from which the loan actually became effective for withdrawal purposes. In terms of the relative agreements it was provided that the advance should bear no interest prior to the 30th June, 1958 or such other later date as might be mutually agreed upon and that thereafter, the question of charging interest and the rate of such interest should be decided by Government on the advice of the Tariff Commission. It was further provided that any interest charged should be payable by the Company out of its earnings arising from a special element in the prices of iron and/or steel over and above the normal retention prices. The matter was accordingly in due course referred by Government to the Tariff Commission who recommended that interest should be charged at the rate of 5% per annum as from the 1st July 1958, but that recovery of such interest and the allowance of the special element should be postponed until after the 31st March 1960 when decision had been taken as to the retention prices to apply from that date. Acceptance of these recommendations was notified by Government on the 25th November 1959. The Company has protested against the unnecessary complications introduced by deferment of the interest compensating element and since in terms of the agreements with Government all interest chargeable must be compensated, the interest accrued from the 1st July 1958 to the 31st March 1960, as necessarily provided for in the Accounts under review, has been offset by the inclusion under the head "Sales" of the similar amount to arise from the enhancement of the sales retention prices.

Dividend on Preference Shares

I would take this opportunity to express my sympathy with the Preference shareholders in the position in which they have been placed in regard to their dividends by the amendments made to the Income-tax Act by the Finance Acts of 1959 and 1960, for when we have been able to compensate the Ordinary shareholders in full for the loss of the previous notional credit on their dividends in respect of income-tax payable by the Company, it should follow in equity that the Preference shareholders should also be compensated. Under the provisions of the 1959 Act we were able to increase the Preference dividend for the half-year ended 30th September 1959 to such gross amount as after deduction of 30% thereof represented the amount previously payable without deduction of tax, but with the cancellation of these provisions by the 1960 Act we have had no option in law but to pay the dividends for the half-years ended 31st March 1960 and 30th September 1960 at the rate of 5% stipulated in the Company's Articles of Association.

The Preference shareholders were advised at the time of payment of the 31st March 1960 dividend that your Directors were considering the legal steps to be taken in an endeavour to effect a fair and reasonable adjustment of the position. In the meantime however a Bill entitled The Preference Shares (Regulation of Dividends) Bill has been introduced in the Lok Sabha and is awaiting the consideration of Parliament. If passed into law, the provisions of this Bill in their application to our own Preference dividend would mitigate the present most unsatisfactory position to the extent that the rate of Preference dividend would be compulsorily increased with retrospective effect. Since legislation is now pending your Directors accordingly feel that it would be inadvisable for them in the meantime themselves to take any unilateral action lest this should result only in making confusion worse confounded.

Competitive Power of Indian Steel

I am glad to inform you that over the last price fixation period of five years which ended on the 31st March 1960, we have been able to achieve in total a production of saleable steel exceeding by some 13% the target set us by the Tariff Commission in 1955 and that despite heavy increases in our Works costs the position remains that under a free economy no foreign steel could undersell us in our own country. Under the present policy of Government however the advantage we enjoy over foreign steel is appropriated by Government and a further heavy burden by way of surcharge is additionally loaded by Government on to the selling prices. In this connection not even our retention prices, that is to say the prices which we are allowed to retain as distinct from the much greater prices we are required to charge to the consumers for the further benefit of the revenues of the country, give a true indication of the position since these retention prices themselves include the incidence of the heavy excise duty levied by Government of Rs. 40/- per ton on ingot steel equivalent to about Rs. 50/- per ton of saleable steel. Even if allowance be made for this excise duty, our competitive power is in fact greater than the retention prices would indicate for we suffer from a number of disabilities peculiar to our country.

We are handicapped by the policy of the Government which prevents us not only from reducing the number of superfluous labour but compels us to retain in our employment workmen who are found by experience to be inefficient. We have to employ a large number of men to provide all the necessary health and municipal services which are supplied by the Government or the municipal corporations in other countries. We have also to provide housing accommodation requiring heavy capital expenditure and maintenance costs. We have also to provide at heavy capital and recurring expenditure, buildings for schools, hospitals and social services, to equip them adequately and to secure and pay for the necessary trained staff to run them.

I explained last year the dangers of the present extremely heavy loading of the price of steel to the consumer by way of surcharge and I would again urge the necessity that the statutory selling prices should be reduced. Steel either directly or through the medium of construction or operational costs enters into the final cost to the consumer of practically every commodity and artificial inflation of this cost is certainly no help towards the solving of the urgent problem of effecting a reduction in the cost of living. The surcharge levied by Government was intended primarily to rebate the cost of imported steel so that each category of steel, whether indigenous or imported, should be sold at the same price. With the increase in production of the plants in the Private Sector and with the three Government Steel Plants now coming into operation, imports of steel have already fallen considerably and will continue to fall. Maintenance of the surcharge at its present level can therefore no longer be justified.

It is necessary also that selling prices should be reviewed having regard to the necessity for building up an export market for the surplus production there will in my opinion undoubtedly be when the three Government plants come into full operation. In this connection it is reported that certain exports of semi-finished steel have already been made by the Government plants and it would be of considerable interest to know the real effective prices at which these exports have proved possible.

Increase in Works Cost

Owing to variations in the different categories of end product an assessment of the trend of Works costs in relation to the production of saleable steel gives a somewhat unreal picture. It is preferable therefore to compare Works costs in relation to ingot production. This will include also the variations in the Works cost of pig iron. At the same time since the ingot enters into every finished product, its Works cost will be distributed in proportion to the quantity of ingot used in the production of such saleable product. If this basis is adopted we are able to obtain a more accurate picture.

Under normal conditions, that is to say when there are no external causes beyond the control of a manufacturing unit to affect its operations, it is to be expected that the Works cost per ingot ton should show inverse variation according to the volume of production. In our own case however, while the production of ingots increased between 1955-56 and 1959-60 by about 55%, the Works cost increased over the same period by nearly 40%. Some explanation of this illogical position is therefore required. The main cause is of course the enhancement by Government of the rate of excise duty on steel ingots from Rs. 4/- per ton to Rs. 40/- per ton with effect from the 16th May 1957. Other causes, some or all of which have operated in our Works at different times either separately or simultaneously as you will have gathered from my previous statements are (a) continued upward revision of labour costs as a result of the pernicious system of automatic annual increments as opposed to an assigned pay for each particular job and of enforced increases in the rates of wages, allowances and incentive bonus ; (b) increase in railway freight rates on raw materials and stores ; (c) the sales taxes imposed by the State Governments or excise duties by the Central Government on such indigenous raw materials and stores as are used in the manufacturing processes and the customs duties on imported goods imposed by the Central Government ; (d) the increases from time to time in the statutory prices of controlled commodities such as coal and other raw materials ; (e) variation in the quality of stores and raw materials and in particular the severe deterioration in the quality of coking coal; and (f) complete, partial or go-slow strikes by labour.

Coal—An Intractable Problem

There has been for a long time a deplorable shortage in the quantity of coal required by the iron and steel and many other coal consuming industries. A still greater difficulty in maintaining, far from increasing the production of iron is created by the admitted and evergrowing deterioration in the ash content of available coking coal. Washing the coal before use has therefore become an indispensable necessity. There has however been virtually no decision yet taken by Government for the establishment of washeries at the main coal producing centres to meet the needs of the iron and steel industry in the Private Sector.

Our Works costs and our production alike are seriously affected by the continuous deterioration that has taken place in the quality of coking coal and by its chronic inadequate availability although paradoxically we are virtually sitting on top of coal. Such is the position that, apart from diversion of outside supplies, there has even been an occasion when coal in transit to Burnpur from the Company's own collieries has been diverted elsewhere. These factors will definitely preclude us from achieving the production envisaged under our expansion programmes until improvement in the quality as well as the quantity of coking coal is effected. To illustrate the conditions under which we are now forced to operate our Blast Furnaces I have had a chart appended at the end of this statement showing the variation in the ash content of our coke due to the inferior quality of the coal we are being allotted. This chart shows not only the current increase in the ash content over the previous normal but also the present extremely wide day-to-day variation in ash content. Paucity of stocks has made it impossible for us to blend the coal in an attempt to achieve in some measure a consistent even if far too high ash content in our coke and the problem of endeavouring to produce a standard grade of iron under these most unsatisfactory and constantly varying conditions is one that can be better imagined than described.

Recently as a result of concentration of railway transport on the priority movement of coal against the demands of the steel industry there has been some increase in the volume of coal supplies, although I very much fear that this may be only a temporary phase So far as we ourselves are concerned this increase in transport has however merely served to emphasise the shortage of good quality metallurgical coal that exists in the country, for all that has happened is that collieries have taken advantage of the position to get rid of accumulations of inferior quality coking coal totally unsuitable for the steel industry. In our own case, an ash content of the ridiculously high figure of 22% has been recorded in much of these additional supplies. While therefore on paper our stocks of so-called coking coal have shown some improvement in tonnage, the added supplies have resulted only in a still further increase in the ash and sulphur content of our coke and an accentuation of operational difficulties to a point of the utmost gravity in relation to the maintenance of production.

The last fixation of our steel retention prices expired at the 31st March 1960 and the question of the revised prices to apply from that date is now under consideration by Government. So long as the metallurgical coal position remains unchanged there is, as I have said, no possibility of achieving the production envisaged under our expansion programmes and any fixation of prices by reference to a theoretical plant capacity based on normal working conditions would, accordingly, be entirely erroneous. I have full confidence, however, that the abnormal conditions under which, through force of circumstance, we are now being compelled to operate our plant will be recognised by Government so that the new retention prices may be fixed on the basis of working conditions as they actually obtain and not by reference to a theoretical capacity or standard of working that, until the raw materials problem is resolved, is quite incapable of attainment.

I am afraid that until the further coal washeries scheduled by Government have been installed, which will probably take a minimum of three years, the position as regards metallurgical coal will remain critical for there will in fact be an increasing demand against the already inadequate available supplies as the Government steel plants attain their full production potential. In the case of the jute industry where installed capacity greatly exceeds production, the industry has had to adjust itself to the position by the sealing of looms. It would be a tragedy if the steel industry, to adjust itself to the inadequacy of the supply of suitable coking coal, were to find itself faced with the alternative either of having to seal off Blast Furnaces or to operate its plants uneconomically and hazardously below the efficient level of their productive capacity.

Blueprints and fixation of targets of coal production are no substitute for effective and instant action for alleviation of the position with the minimum of delay. The target fixed for the Second Five Year Plan of sixty million tons per annum will definitely not be achieved and the still higher target for the Third Year Plan of ninety seven million tons annual production has meagre chances of success unless a large number of new collieries are opened up in the Private Sector and the existing ones substantially expanded wherever possible even at a higher cost. This will necessitate the purchase and installation of foreign mining and handling machinery for which the tentative allocation in the Third Five Year Plan of about Rs. 138 crores may prove to be inadequate. It has been reported in the Press that in a statement made in the Lok Sabha it was admitted that there would be a shortfall of some six million tons from the target fixed for the Second Five Year Plan but the matter was dismissed with the remarks that the shortage would be made good in 1961 and that this would therefore involve a delay of only a few months. In face of the position with which the country is confronted it has been somewhat disconcerting to note the apparent complacency with which this critical question of coal supplies has until recently been regarded by Government. I am glad to say, however, that the seriousness of the position appears at last to be realised with the appointment by Government of a high-powered Committee to examine means for the amelioration of the position of the Iron and Steel Industry in regard to the shortage of raw materials in general and coking coal in particular.

The coal producing and coal consuming interests alike will be further prejudiced by the Government's industrial policy resolution of 1956. Future main development of the coal industry is undertaken by the Government under this resolution to the exclusion of the private sector which has been practically solely responsible for starting, expanding and equipping the industry at great financial risk during the last hundred years or so. A further deterrent to the expansion of the existing private industry has been created by the enactment of the Coal Bearing Areas (Acquisition and Development) Act of 1957. What is however of great national importance is that the Government do not seem to have adequately realised that no new collieries can be opened and brought into full operation within less than five years under the most favourable conditions and that during this period all industries, including the iron and steel industry in particular, are likely to face disaster both in the public and private sectors. I would urge, therefore, that to retrieve so far as possible the desperate position with which the country is faced, Government should relax all ideological restrictions and permit and encourage the private sector of the coal industry to participate to the fullest extent in the great effort that is called for to meet the crisis. Apart from its vital necessity, such action would also involve the mundane consideration that to the extent to which this participation is allowed the cost to Government funds of the development of the industry would be reduced.

The Strike of Government Employees

It is impossible to estimate the total loss to the country by reason of a strike, particularly if it takes the form of such a General Strike as the recent one of Government employees, for it hits the national economy at too many points visible and invisible to permit of any measurement of the damage caused. I can therefore give you only the position as it affected our Company.

An integrated iron and steel Works is a complex organisation in which all departments rely on each other, the primary and subsidiary products of one entering into the operations of the others, the whole being designed as a fully balanced plant. The primary basic producing units, that is to say the Coke Oven Batteries and Blast Furnaces, are continuous operational plants and any disruption of their working causes innumerable problems. Blast Furnaces have to be damped down involving risk of their loss through sudden cut or too rapid cooling while on the other hand Coke Ovens must be maintained at high temperature in order to prevent their collapse even if little or no metallurgical coke is produced in the process. The ensuing loss of Blast Furnace and Coke Ovens gas for heating and power purposes affects all other departments.

As a consequence of the strike, all inward supplies of raw materials ceased from the morning of the 12th July 1960. Ground stocks having been reduced to below emergency level owing to the previous inadequacy of transport and supplies, the Coke Ovens throughput was reduced to 1,800 tons of coal a day from the 15th July 1960 against the normal throughput of approximately 6,000 tons. No. 3 Blast Furnace was damped down from the 13th July 1960 and No. 4 Blast Furnace from the 15th July 1960. No. 2 Blast Furnace which had been re-lined but which, owing to the previous shortage of coal supplies, had already been waiting one month to be brought back, had to continue to remain out of production The steel Melting Shop activities were reduced from seven to two furnace operation. Loss of production, an irretrievable loss to the country as well as to ourselves, amounted to some 22,000 tons of iron and 20,000 tons of ingot steel. Despatches of finished steel remained totally suspended from the 9th to the 19th July 1960 owing to non-allotment of wagons. The strike was called off from the 17th July 1960 and from the 18th July 1960 the Blast Furnaces, Coke Ovens and Steel Melting Furnaces were gradually brought back into production and by the 26th July 1960 all plant and equipment was again fully operational. Such in our case was the result of the strike. I am glad to inform you however in testimony to the skill with which the position was handled by the Works senior executive staff that it has been confirmed by our Consulting Engineers that little, if any, damage has been caused to the plant as a result of the enforced shut down.

Strike Legislation

The strike of Government employees has given an illuminating indication of the difference between the policy of Government in respect to the handling of a strike and its treatment of its own employees and its policy in relation to strikes in the private sector. The dismissal of many of its employees, the disciplinary action of various kinds against others and even imprisonment under the Preventive Detention Act were perhaps very necessary, and it is not my purpose to call Government's action in question for all strikes are anti-social in their effect and cannot be taken as a matter of course whatever justification there might be from the employees' point of view. The point I wish to make however is that no employer in the private sector is allowed in self-defence to adopt any of these or similar courses but is obliged to stand the consequences of a strike with all that these entail.

To illustrate the effect a strike even of brief duration can have, I will relate the sad experience we ourselves had in September last year when an illegal one-day strike was brought about by the INTUC Labour Union over the question of profit sharing bonus. Although in our working for 1958-59 we had fallen short of the estimate computed by the Tariff Commission it was decided by the Management as a gesture of goodwill to pay the same profit sharing bonus of 65 days wages as for the previous year. Considerable agitation was worked up by the Union leaders that the amount of bonus should be increased and on the management standing fast on their generous decision workers were prevented by the Union from taking payment of their bonus, although in fact some of the men had already willingly accepted payment, and the illegal one-day lightning strike brought about commencing from midnight. Revenue loss to the Company at retention prices as a result of the direct loss of production for the day amounted to approximately Rs. 15 lakhs, while the cost to the country of making good this loss of production from foreign sources is computed at some Rs. 20 lakhs.

Severe Damage

This however is not the full story for unfortunately severe damage was caused to No. 1 Blast Furnace by the irresponsible action of the strikers in refusing to co-operate with the management to damp down this Furnace in an orderly manner. The Furnace was scheduled to be blown out on the 25th September for a partial re-lining from the mantle upwards which work would have taken approximately 30 days to complete. Before a Furnace is taken out for re-lining it is essential that some blast be kept on so that the charge may remain fluid for draining off. Owing to the action of the strikers the charge went cold and about 100 tons of metal and slag solidified inside the Furnace necessitating long labour for its removal by blasting with high explosive followed by a complete instead of partial re-lining. As a result work on the Furnace lasted 110 days instead of the contemplated 30 days with a consequential loss of production of some 39,000 tons of pig iron and an additional re-lining cost of some Rs. 13 lakhs. To complete the sad story it has to be added that this Furnace was producing against an export order from Japan, the contract for which had to be cancelled in view of inability to supply with resultant direct loss to the country of foreign exchange to the extent of some £700,000 or Rs. 93 lakhs. In total the loss caused accordingly amounted to some Rs. 121 lakhs ; such is the damage that can be done to a Company and to the country by an ill-considered and irresponsibly led strike even of one day's duration.

I have in previous years emphasised the necessity that Government should require and instil the utmost sense of responsibility in Trades Union leadership and it is accordingly the more disturbing to note that occurrences such as the above can continue to take place in an industry so vital to the progress of the country. The position becomes all the more difficult for me when I am asked by shareholders to comment on the fact that the leader of the INTUC Union in question is also a Government nominated Director of Hindusthan Steel Limited. I can of course say nothing on this matter for the propriety of such a duality of roles is naturally a subject solely for Governmental policy decision.

Government have recently decided in the case of all essential Government services inter alia (a) completely to ban strikes (b) to permit no outsider to be the leader of any union, though Unions affiliated to the Government sponsored Indian National Trade Union Congress are led by complete outsiders and (c) to provide machinery for compulsory arbitration. It is difficult for any impartial observer to understand why similar legislative provision should not be made to protect some of the most essential industries such as the iron and steel industry and the engineering industries on which practically the whole structure of our national planning is to be built through the establishment of heavy industries of which these are the linchpins.

Many Disabilities

Far however from the extension of these provisions to the private sector, as I have pointed out on previous occasions, all kinds of disabilities are imposed upon it in regard to disciplinary action, reduction of redundant labour and payment of heavy compensation to labour when a unit in whole or in part is closed down temporarily or permanently. Though in the more efficient industrial units in the private sector, generally speaking, as in our own works, the workers enjoy more favourable conitions of service, wages, housing and other amenities than those employed by the Government in comparable non-technical departments, we as employers are brought under constant Government criticism as if we were indifferent to the welfare of our labour. Consequently, on almost every occasion when any serious conflict takes place between us and our employees, and the dispute is referred to a Tribunal or for conciliation proceedings, often after a delay which may have already caused us heavy loss, the awards of the Tribunals or the directions or orders of the Government have been generally in favour of labour, increasing their wages, their amenities and other perquisites. The natural consequence of this continuous increase in wages is to accentuate the inflationary effect created by the Government on prices of all essential commodities and particularly of food and other consumer goods. If for instance, steps were taken by the Government to reduce the cost of living by the provision of more food and consumer goods, a tremendous improvement at much smaller cost than is involved in the establishment of heavy industries could be made in the standard of living of the country at large, which would help also to reduce the excessive burden of taxation and the heavy costs of industrial production.

I maintain that the first duty of our Government as that of any other country is to adopt prompt and adequate measures to promote the reduction of prices of essential commodities by increasing their production particularly in the private sector. Apart from the incalculable monetary loss, strikes of any kind and high cost of living will slow down the pace of our industrial development and make the cost of implementation of future plans so high as to be beyond our domestic or foreign aid resources. It must be remembered that the common man and woman are the real sinews of national economic and industrial development, and not high taxation, heavy domestic borrowings, foreign aid, deficit finance or unreliable index figures and *ad hoc* statistics. Without securing the complete and whole-hearted co-operation of the common man by supplying at reasonable prices his daily needs, particularly of food, clothing, shelter and health services, the optimistic Five Year Plan for the future may remain substantially on paper.

Labour Legislation

To the already full roll of labour legislation there has recently been added The Employment Exchanges (Compulsory Notification of Vancancies) Act, 1959 and rules have been framed under this Act requiring every establishment whether in the public or private sector to report to the Local Exchange vacancies, with some few exceptions, occurring in such establishments from time to time So far as I am aware, there is no democratic country in the world where the employers have to notify vacancies to the Labour Exchanges, though those in search of employment may have to register their names in the local Exchanges. If the employer is desirous of recruiting any operatives he may apply to the appropriate Labour Exchange and if he is satisfied, select such of them as appear to him to be suitable for the particular jobs. It is true that the Rules as promulgated by the Government definitely state that no compulsion will be used by Exchanges to employ any particular person but rules may always be changed and I must confess to some misgiving that these Exchanges should be under control of the individual State Governments and administered by local officials who cannot fail to be subjected to pressure in varying forms.

I very much fear that the present requirement for the notification of vacancies may be only the first step towards the prohibition of the filling of vacancies except through the medium of the local Labour Exchanges. I sincerely hope that my fears may be groundless for the consequences that might follow are disturbing to consider, including as they would the dangers of nepotism, favouritism and corruption and above all of fostering the evil of provincialism of which there is already alarming manifestation in the country and which, if not checked, threatens in my opinion ultimately to disrupt the Union.

Provincialism—A National Evil

There has been for some time an agitation sponsored by some Trade Unions and several of the State Governments to insist on the restriction of jobs to those popularly described as "sons of the soil". If this principle is carried to its logical conclusion it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other States. The mobility of industrial labour which is of benefit both to the workers and their employers, will be seriously hampered and cause no small embarrassment to the management of industrial establishments all over the country.

It is regrettable that in order to confine the available jobs only to the "sons of the soil", some States are making the local language the official language. Recent unhappy, tragic and most deplorable occurrences in Assam prove the danger of adopting such a course for achieving an object outside the purpose for which the States have been given the right to localize the State language.

So far as our Company is concerned we employ as many "sons of the soil" as we find suitable for the jobs to be filled but for the rest impose no restrictions of any kind This to my mind is the only reasonable course. This is no platform for discussing the merits of the language controversy, either at the Centre or in the States, and all I wish to emphasise as a business man is the adverse effect that any other course will have on the economic development of the country.

Acknowledgments

In conclusion I should like to express on behalf of the Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, and his executive staff throughout the year. An expansion on the scale undertaken by our Company throws a very great burden and responsibility on all staff additional to the normal cares, troubles and anxieties of management on which there has now been superimposed the constant problem of the operational difficulties caused by short supply and severe deterioration in quality of raw materials. Our thanks are also due to our Consulting Engineers, The International Construction Company Limited, who have so ably planned and supervised the execution of the expansion. To all it must be a source of the greatest satisfaction to see as a monument to their efforts the fine expanded plant as it stands today in the final stages of its completion. It gives me pleasure to place on record this expression of our thanks.

EQUITIES FIRM ON FORD BID IMPLICATIONS

GILT-EDGED EASE AS BANK RATE REMAINS UNCHANGED

London, 23rd November.

THE *Ford Motor bid continued to provide the* big talking point in the stock market during the past week, and now that Treasury consent for the transfer has been given, the share price has moved up nearer to the 145s 6d the U.S. parent company is offering. It now remains to be seen whether shareholders will seek a better price which many financial commentators are recommending they should do. The prospect of the proceeds of this vast share deal finding its way into other equity shares has been largely responsible for the firm tone of the equity market. Some profit-taking has already taken place in Fords and the proceeds reinvested elsewhere. However, many would-be buyers are adopting a cautious attitude in view of the sharp widening of the trade gap and the uncertain business outlook. Steel shares encountered bouts of buying in anticipation of the dividend statements which will be appearing in the next few weeks, but in view of the further adverse news from the motor-car industry, it is thought that steel directors will adopt a conservative dividend policy. Motor-car shares presented a brighter appearance with British Motor Corporation particularly favoured on the chairman's optimistic remarks in his annual review. Gilt-edged were firm at one time, but as hopes of an early reduction in the British Bank rate faded, prices eased. Foreign bonds were quiet but among rails, Antofagasta ordinary was in demand. Gold shares have been rather disappointing with the gold price moving narrowly. Business was held up on one day by the removal of the Johannesburg Stock Exchange into new premises. Coppers have fluctuated somewhat, but made a favourable response to the optimistic statement by Sir Ronald Prain, chairman of the Rhodesian Selection Trust group concerning the long-term outlook for the metal. Tin shares responded to satisfactory dividend statements. Tea shares tended to drift lower in the absence of interest, but rubbers have more than maintained their steadier tone, going further ahead in response to favourable Press comment suggesting that the bottom has been reached and that an upturn was a possiblity. Interest in oil shares remained on a very limited scale and the tendency was again towards slightly lower levels.

The Money Market

There was no easing of the credit situation in the money market over the past week. Borrowers had to pay firm rates of 4⅜ percent and 4⅝ percent for their needs and are forced to borrow a fairly large amount at the Bank rate term of 5½ percent. In contrast to the tight money position, there was a continuation of the current demand for bills and a resultant easing of the rate for February and hot bills from 4-23/32 percent to 4-19/32 percent. The latter rate was the reflection of a further fall in the Treasury bill rate at the weekly tender, when the market put in a joint bid of 6d more than the previous week's for the 91-day bill at £98 16s 8d, with the result that the average rate for bills came to around 2s lower at £4 13s 5.93d percent. The average rate for the 63-day bills was around 2s 6d lower at £4 14s 5.10d percent.

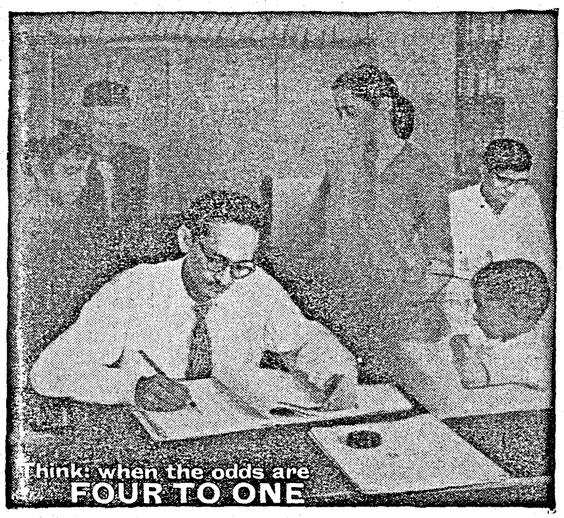
Activity on Wall Street

Intermediate and longer-dated U.S. Government obligations held within a narrow range in limited dealings during the past week. Continued lack of interest was attributed to uncertainties raised by the election results. Investment quality corporates drifted lower in company with convertibles. In the foreign sector, Chile 3 percents finished with little change on balance, while a few German nationals and Greeks were soft. Union of South Africans and Japanese Governments generally were mixed. Denmark 5½ percents were higher.

NAMES AND DATES

With a view to securing maximum efficiency in the administration and working of the Central Excise Department and the rationalisation of its procedures, the Government of India has recently appointed a Central Excise Reorganisation Committee, with Mr. A. K. Chanda as chairman, to examine the organisation and methods of the department and to review the Central Excise Act and rules which regulate its work.

Mr. Ramdas Kilachand has been elected president of the Bombay Oilseeds and Oils Exchange Ltd for the current year.



Mr. Employer: to every member of your staff add four dependants—and there you have a rough idea of the extra people who depend on your payroll. These dependants are important to your organisation because upon their financial security rests your employees' peace of mind; peace of mind which makes for greater productivity, devotion to duty and loyalty. The Life Insurance Corporation offers two Schemes which, as an employer, you should know about:

Group Insurance Scheme offers low-cost Life Insurance protection to your staff under one Master Policy.

Superannuation Scheme is the cheapest method of providing retirement pension, with or without life insurance benefit.

MORE ABOUT THESE SCHEMES:

- *For tax purposes premiums on both Schemes are* treated as normal business expenses
- Under certain Schemes attractive tax-relief is allowed to the employees
- Employees get the benefits of these Schemes at lower cost
- They can often be instituted at no extra cost to the employer
- Administratively, they do not involve your office in anything but minor clerical work
- It is being increasingly realised that these schemes go a long way to increasing staff productivity and length of service.

When next an Insurance man calls on you about these Schemes, give him a few minutes of your time—without any commitment of course.

Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS STILL SCARCE

Wednesday, 23rd November.

ONCE again there has been little change in the level of advances outstanding in the Calcutta money market, although what there has been has tended to be in the downward direction. The credit requirements of the jute industry show an increase, but those of the sugar mills and the engineering, and iron and steel industries are down. There has also been a slight decline in demand from the cotton mills. Little change has been reported in call for accommodation against foodgrains and seeds storage. In the interbank market, conditions still remain tight, although a slight easing took place earlier this week on the arrival of money from Madras and Bombay. The call rate remains at 4½ percent.

There has been some improvement in the exchange market, chiefly on account of an increase in tea bills. Remittance has continued to be poor. The pound has been generally firm on the London money market and shows net gains against all important currencies.

BULLION WAS QUIET ON REPORTS OF BIGGER supplies of smuggled gold. The price of silver was quoted at Rs. 225 for ready delivery and the rate for forward delivery was quoted at Rs. 224.75. The London and New York prices were 79½d and 91.375 cents.

Gold was also easier in sympathy with silver. The price declined from the previous week's level of Rs. 136.75 to Rs. 136. The sovereign at Rs. 90.75 showed a decline of 25nP.

DURING THE WEEK ENDED 18TH NOVEMBER, Government of India Treasury bills for Rs. 16,53,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 22nd November. The total amount offered was Rs. 2,48,75,000. Tenders at Rs. 99.360 were accepted in full and those at Rs. 99.355 were allotted approximately 46 percent, the average rate of acceptance being Rs. 2.564 percent a year. Tenders for Rs. 2 crores of 91-day Treasury bills will be received at all centres up to the close of business on 28th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 23rd November to 26th November at Rs. 99.376 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 16th November to 19th November amounted to Rs. 80 lakhs.

THE RETURN OF THE RESERVE BANK OF INDIA FOR the week ended 18th November, 1960, showed a fall of Rs. 6.91 crores to Rs. 1,820.31 crores in active notes, but the total note issue was Rs. 94 lakhs higher at Rs. 1,842.66 crores. Notes held in the Issue Department consequently rose by Rs. 7.85 crores to Rs. 22.35 crores. In the Banking Department, deposits of the Government of India increased by Rs. 8 lakhs to Rs. 53.61 crores, as did other Government accounts by Rs. 8.63 crores to Rs. 23.49 crores. Balances of commercial banks at Rs. 95.17 crores showed a decline of Rs. 10.92 crores. Balances held abroad again declined by Rs. 1.48 crores to Rs. 16.62 crores. Investments were Rs. 11.94 crores higher at Rs. 234.98 crores. Other loans and advances fell from Rs. 125.99 crores to Rs. 118.42 crores, of which advances to scheduled banks against usance bills amounted to Rs. 6.86 crores (Rs. 8.15 crores). Ways and means advances stood at Rs. 30.23 crores, against Rs. 34.81 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 11th November, 1960, shows a drop of Rs. 1 crore to Rs. 578.21 crores in total deposits. Investments in Government securities are down by Rs. 10.01 crores to Rs. 335.67 crores, while other authorised investments are up by Rs. 5 lakhs to Rs. 9.99 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 1.50 crores to Rs. 212.62 crores. Cash and balances are, in consequence, shown at Rs. 28.71 crores or Rs. 3.30 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 11th November, 1960, shows Demand and Time liabilities at Rs. 785.34 crores (Rs. 21.86 crores on account of borrowings from banks) and Rs. 1,144.46 crores (Rs. 16.26 crores), compared with Rs. 790.62 crores (Rs. 19.55 crores) and Rs. 1,143.86 crores (Rs. 20.54 crores), respectively, in the previous week. Cash has increased by Rs. 48 lakhs to Rs. 47.56 crores, while balances with the Reserve Bank have decreased by Rs. 3.03 crores to Rs. 101.63 crores There is a drop of Rs. 10.81 crores to Rs. 688.16 crores in investments. Advances and bills discounted at Rs. 1,103.05 crores show a fall of Rs. 6.56 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.7 percent and 57.2 percent, against 7.8 percent and 57.4 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 25-11-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

Stocks and Shares

REMARKS OF INDIAN IRON CHAIRMAN INDUCE CAUTION

NEW ISSUES DO WELL

Wednesday Evening.

THE Calcutta Stock Exchange closed today on a fairly steady note, but prices finished in most cases below the highest levels touched last week. Towards the week-end, operators became cautious, following the publication on 19th November of the Indian Iron and Steel chairman's statement, along with the balance-sheet for the year ended 31st March, 1960. Sir Biren Mookerjee's criticism of both the quality and inadequate availability of coking coal, which have seriously affected both works costs and production, together with his remarks on the unsatisfactory labour situation in the country generally, had a sobering effect on the market, and the shares were initially marked down from Rs. 24 to Rs. 23.70. Subsequently, they recovered to Rs. 23.86, but again slipped back to Rs. 23.70, which was tonight's settlement rate. The unsatisfactory foreign exchange position, as outlined by the Finance Minister in the Lok Sabha on Monday last, necessitating a further cut in import quotas, also contributed to the softer trend of share prices.

The Isaac Holdens (India) Limited issue of 292,500 equity shares of Rs. 10 each was, as expected, heavily over-subscribed, and the lists were closed on 19th November, 1960. The Hindustan Twyfords issue, it is stated, was over-subscribed. Applications for up to 1,475 shares will be decided by ballot. Applicants successful in the ballot will be allotted shares on the following basis. Applicants for 25 shares will receive ten shares each. Applicants for above 25 shares and up to 1,475 shares will receive 25 shares each.

Allotments to applicants for 1,500 shares and aboce will be on a* *pro rata* basis, without ballot, as follows :

1,500/2,475	25 shares each
2,500/5,100	50 do
5,125/7,475	75 do
7,500/9,975	100 do
10,000/14,975	125 do
15,000/30,000	250 do
Over 30,000	375 do

It is expected that posting of allotment letters and letters of regret will begin by the second week of next month.

Government securities were fairly steady and the 3% Conversion Loan 1946-86 closed better at Rs. 74.35.

Holders of preference shares are cautiously awaiting the Select Committee's report on the Regulation of the Preference Dividends Bill before making fresh commitments in this section.

As far as the remaining sections of the market are concerned, there were a few isolated features, among which were Textile Machinery, India Steamship, Orient Paper, Alkali and Chemical and Indian Copper.

Jute shares were dull and neglected as investors are taking a very cautious view of the immediate prospects of the industry.

Here is a table of a representative list of shares showing price trends during the past week :

	Opening 17-11-60 Rs.	Closing 23-11-60 Rs.
Punjab National Bank	19.12	19.25
United Commercial Bank	85.00	86.00
Burrakur Coal	17.62	17.75
Karanpura Collieries	180.00	175.00
Kesoram Cotton	28.37	28.06
Jessop & Company	20.50	20.12
Textile Machinery	22.80	23.90
Anglo-India Jute	186.00	186.00
Howrah Jute	19.87	20.06
New Central Jute	22.87	22.00
Orient Paper	41.00	42.10
Shree Gopal Paper	27.00	26.69
Belsund Sugar	14.12	14.37
Alkali & Chemical	34.25	37.00
Associated Battery	37.00	36.50
Dunlop Rubber	42.37	42.37
Gwalior Rayon	44.00	43.00
Hindustan Aluminium	8.31	8.50
Indian Aluminium	30.19	30.00
Hindustan Motors	20.25	20.06

Hasimara Tea	22.87	22.62

Swinton Estates

The Swinton Estates Co. Ltd has made a profit of Rs. 85.141 for the year ended March 1960, against Rs. 9,745 in the previous year, after providing Rs. 2,697 (against Rs. 2,696) for depreciation. An ordinary dividend of 12½ percent, subject to tax, has been declared. The provision for taxation is allocated Rs. 42,000 (against Rs. 3,000). General reserve absorbs Rs. 3,000 (against nil). After making other adjustments, there remains a balance of Rs. 4,289 to be carried forward, compared with Rs. 558 brought in.

Parkside Estates

The profit of the Parkside (Neilgherry Hills) Estate Co. Ltd has risen from Rs. 7.12 lakhs to Rs. 9.02 lakhs for the year ended June 1960, after providing Rs. 96,554 (against Rs. 98,192) for depreciation. A taxable ordinary dividend of 27½ percent, including an interim of 7½ percent, has been declared, against 27½ percent, tax-free, in the previous year. Taxation absorbs Rs. 4.30 lakhs (against Rs. 3.20 lakhs). Development rebate reserve is allocated Rs. 6,790 (against Rs. 1,035) and general reserve Rs. 1 lakh (against nil). After making various adjustments, there is a carry-forward of Rs. 47,411, against Rs. 50,402 brought in. A crop of 819,500 lbs was made. The average sale price was Rs. 2.98 a lb, against Rs. 3.12 a lb.

Anderson Wright

The profit of Anderson Wright Ltd has increased from Rs. 1.19 lakhs to Rs. 7.14 lakhs for the year ended December 1959, after providing Rs. 3,135 (against Rs. 3,709) for depreciation. A taxable ordinary dividend of 10 percent has been declared, against nil. Taxation absorbs Rs. 3.01 lakhs (against Rs. 55,414). General reserve is allocated

Rs. 25,000 (against nil) and debenture redemption reserve Rs. 50,000 (against nil). Making other adjustments, there is a carry-forward of Rs. 31,477, against Rs. 6,145 brought in.

Bombay Burmah Trading

The tea crop of the Bombay Burmah Trading Corporation Ltd for the five months up to 31st October, 1960, amounted to 2,646,892 lbs, compared with 2,191,298 lbs during the same period of 1959. The weather was exceptionally favourable, so it is not expected that this increase can be maintained.

Bombay Market

COTTON MILL SHARES HOLD BACK PRICES

OPERATORS CAUTIOUS ON FOREIGN EXCHANGE DOUBTS

Wednesday Evening.

THE Bombay stock market has shown two-sided movements during the past week. Stray support was forthcoming in steel, engineering and miscellaneous shares on favourable corporate developments, but sellers predominated in cotton mill shares on fears that the Government might introduce controls and rationing of cloth distribution.

Trading was done on a cautious scale in view of the amendment to the Companies Act, proposing to impose stiffer restrictions on flotations of new shares. The Prime Minister's observation about the Chinese intrusion into Indian territories called for caution. There was growing concern about the difficult foreign exchange position, and operators were anxious to know whether further import cuts would be imposed in the near future.

Tata Steel were quoted at Rs. 143.75, but Indian Iron were supported up to Rs. 23.80 on firmer advices from Lyons Range due to the publication of excellent results for the year ended March 1960. Among engineering shares, Tata Locomotive enjoyed support on unconfirmed reports that the Government has sanctioned further expansion schemes. Premier Construction were done at Rs. 312 and Mukand Iron changed hands at Rs. 23.24. Alcock Ashdown were dealt in at Rs. 253. Motor shares were steady, and Premier Automobile were wanted up to Rs. 178 on hopes of expansion. Hindustan Motors were firm at Rs. 20.20 on support from Calcutta interests.

Prices of cotton mill shares backed away on selling pressure. Bombay Dyeing were sold at Rs. 63.70, as were Century at Rs. 474. Kohinoor were available at Rs. 276 and Finlay declined to Rs. 337. Standard dipped to Rs. 1,165 and Svadeshi were quoted lower at Rs. 232. After an initial fall, India United Ordinaries recovered fractionally on stray support due to the Government order that the Company must amend the articles of association for introducing proportional representation as far as the election of directors is concerned. Apollo were freely offered at Rs. 1.36.

In the miscellaneous group, sugar shares were prominent, and Belapur improved to Rs. 397 on paying a higher dividend of Rs. 29, taxable, against Rs. 21, taxable. Walchandnagar Industries rose to Rs. 298.50, as did Phalton to Rs. 189.50. Among cement shares, Associated Cement were slightly higher at Rs. 147 on the hope that the claim for increased dividends might be considered by the directors on representation by shareholders. Digvijay were taken at Rs. 157.25. In the mining group, Shivrajpur Syndicate improved to Rs. 74 on prospects of a better dividend. Shipping shares were steady on reports that there might soon be a rise in coastal freights. It was also rumoured that the Government might give interest-free loans to the shipping companies for expansion. Scindia Steam rallied to Rs. 14.60 and Great Eastern Shipping were taken up to Rs. 15.80. Bombay Burmah gained at Rs. 595 on producing a larger tea crop for the five-month period ended October 1960, but the directors are doubtful whether this increase can be maintained in later months. National Rayon were taken at Rs. 552, but Gwalior Rayon declined to Rs. 52.50 on profit-taking. In chemical shares, Tata Chemical were in demand up to Rs. 17.20 on an encouraging speech made by the chairman of the Company at its annual general meeting. Colour-Chem were steady at Rs. 340 on producing good results during the first year of its working, but Indian Dyestuff were sold down to Rs. 507.50. Voltas benefited from talk of a higher distribution. Ceat Tyre reacted to Rs. 233.75, as did Premier Tyre to Rs. 80 on profit-taking. West Coast Paper met with scattered interest at Rs. 194.

Reports that banks may be soon required to increase their share capital promoted interest in the scrip. Bank of India were transacted at Rs. 107 and Central Bank were bought up to Rs. 55.50. Punjab National gained at Rs. 19.28 on the proposal of a three-for-five rights share issue at par. Insurance shares were dull, and New India Assurance were done at Rs. 53.70.

Routine business was transacted in electricity supply company shares. Ahmedabad Electric were dealt in at Rs. 87.50 and Tata Hydro were placed at Rs. 103.50. Bombay Suburban changed hands at Rs. 84.70.

Madras Market

PRICES STEADIER IN ABSENCE OF SELLING PRESSURE

CREDIT RELAXATION WELCOMED

Wednesday Noon.

THE Madras stock market closed this week in a steadier mood due more to the absence of selling pressure than to support. Operators were inclined to interpret bullishly the decision to relax the deposit impounding scheme because it was thought that trade and industry would not be denied adequate credit facilities for legitimate purposes. Government securities became steadier because selling pressure abated to a great extent. There was evidence of small professional support in public utilities. Sugar shares met with interest on prospects of increased production. Better advices from auctions promoted interest in selected tea shares. Rubber shares were also steady in sympathy. Stray support was seen in coffee scrip because dividends of many companies will be announced soon. In spite of the threat of controls and rationing of cloth, selected cotton mill shares were in demand. Good corporate news helped improve prices of some miscellaneous shares.

In the banking group, Indian were done at Rs. 171 and Indian Overseas were transacted at Rs. 173. Among public utilities, business passed in South Madras at Rs. 10.05 and in West Coast at Rs. 13.75.

In the sugar group, E.I.D. were prominent at Rs. 44.50 and Deccan improved to Rs. 15.73. Cauvery were taken up to Rs. 143.50 and Travancore were supported up to Rs. 11.10. United Breweries were steady at Rs. 114.50 and Mysore were placed at Rs. 60.50.

In the planting group, Blue Mountain were transacted at 4.17, as were Cochin Malabar at Rs. 7.28. Interest was taken in Consolidated Coffee at Rs. 23.90 on dividend prospects and Ouchterlony came to hand at Rs. 4.95. Periakaramalai were transacted at Rs. 3.50 and Swinton improved to Rs. 3.20 on paying a dividend of 12½ percent, taxable. Nonsuch made Rs. 27 on the payment of a taxable final dividend of 10 percent, making 20 percent, taxable, for the year. Talayar were quoted at Rs. 1.78 on paying a taxable dividend of 8 percent. Parkside were bought up to Rs. 29.75 on declaring a final dividend of 20 percent, taxable, making 27½ percent, taxable, for the year. The Company has also decided to issue bonus shares in the ratio of one new share for every ten held, by capitalising reserves. Coffee Lands were done at Rs. 23.90 and Chembra were bought up to Rs. 5.15. Emerald Valley were in demand up to Rs. 5.65 and Kil Kotagiri were sold down to Rs. 5.68. Lucky Valley were steady at Rs. 12.75 and Mysore Coffee met with support up to Rs. 5.50. Nilgiri changed hands at Rs. 7.45 and Peermade were steady at Rs. 22.80.

In the textile group, Travancore Rayon were steady at Rs. 35.50 and Madura changed hands at 35.15. Business passed in Lakshmi at Rs. 156 and Kothari were steady at Rs. 12.05. Buckingham were quoted at Rs. 198, as were Bangalore Woollen. Interest was taken in Rajalakshmi at Rs. 75, but South India Viscose declined to Rs. 160. Tirupati were transacted at Rs. 10.50 and Ramakrishna were bought up to Rs. 224.

In the miscellaneous group, Aluminium Industries were steady at Rs 23.25 and business passed in Ashok Leyland at Rs. 8.88. India Cement were in demand up to Rs. 6.40, but Tube Investment were slightly easier at Rs. 305. Mysore Chemical Manufacturing were done up to Rs. 27.50 on paying a dividend of 30 percent on the increased capital. Spencer were steady at Rs. 22.65 and Standard Motor were sold down to Rs. 17. Textool were taken at Rs 190 and F.A.C.T. were steady at Rs. 10.20. Enfield were dealt in at Rs. 15.20 and Mandya National Paper were steady at Rs. 12.

THE WEEK'S TRANSACTIONS

fewer children . . . happier families

In Jamshedpur, groups of workers' wives gather in the evenings at the seven maternity and child welfare clinics run by Tata Steel. Here, trained advisers tell them about the baneful effects of improvident parentage and distribute contraceptives at cost price to ensure planned parenthood. More such units are being set up. Jamshedpur is the first city in India where, since 1959, oral contraceptive pills are being tested out on a fairly extensive scale.

An important feature of these efforts is male sterilization operations being carried out since 1951 under the guidance of Dr. Harbans Lall, who is in the forefront of a devoted group of workers engaged in popularising family planning in Jamshedpur. A Fellow of London's Royal College of Surgeons, Dr. Lall has so far been responsible for carrying out over 475 operations successfully.

In keeping with the national objective of curbing the runaway growth of population, pioneering work is being done in Jamshedpur . . . a city where industry is not merely a source of livelihood but a way of life.

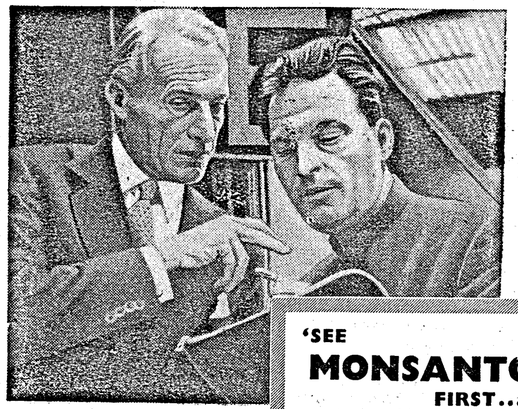
For top grade Industrial Chemicals



'SEE MONSANTO' FIRST...

Monsanto works constantly to develop new, better chemicals – and to improve those chemicals you already use. In every industry, whether it be agriculture – automotive – aviation – ceramics – chemical processing – cosmetics – electrical – foods – insecticides – mining – oil – paint – paper – rubber – soaps and detergents, there is a Monsanto chemical that will help to improve production and quality.

Monsanto Regd.

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

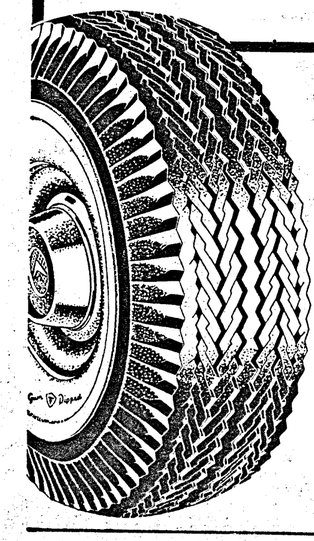
There's no such thing as Carefree Motoring

FEEL SAFER—BE SAFER FOR LONGER

Firestone

New DeLuxe Champion Tyres



Fit Firestone New DeLuxe Champion tyres to *your* car and get EXTRA VALUE for your money. Whether you are driving in towns with dense traffic, or on the open road at high speed or cautiously negotiating dangerous corners in the hills; you FEEL SAFER on Firestone BECAUSE all Firestone tyres are built with the same engineering skill the World Motor Racing Champions depend on for *their lives!*

And your Firestone tyres will *stay* safer LONGER because of their unsurpassed, skid-resistant tread—an EXCLUSIVE product of Firestone Research.

FIT **Firestone** BEST IN RUBBER

FINANCE MINISTER OUTLINES FOREIGN AID PROSPECTS FOR THIRD PLAN

EXTERNAL RESERVES CANNOT BE ALLOWED TO FALL FURTHER

(FROM OUR NEW DELHI CORRESPONDENT)

THE Finance Minister, Mr. Morarji Desai, making a statement in Parliament this week disclosed that the amount of credit which India's foreign friends have so far committed or indicated for financing the third five year plan is Rs. 750 crores. This includes aid from the U.S.A., the U.K., Russia, West Germany, Canada, Japan, and the World Bank. The assurances of aid at present are purely verbal in most cases. The assistance so far promised is intended mainly to provide for the orders for plant and machinery which India has placed in order to keep to the plan schedule. Mr. Desai said that the third plan is an integral whole, and although the actual expenditure must be phased from year to year, the objective is to find finances for the whole of the plan and not only a part of it. Secondly, whenever commitments are made for part of a project, there should be an assurance that further funds to complete it will be available at the appropriate time.

Reviewing the present position, Mr. Desai said that foreign exchange earnings, most of which are derived from exports, are barely adequate to sustain the economy and to meet other essential demands on resources for which normally no foreign exchange assistance is available. As the reserves are already down to the rock bottom level of Rs. 141 crores, there is no scope for further running them down. "We have thus to depend wholly on foreign aid for financing our development plans. Over the entire period, the third plan is going to be a continuing and difficult quest for foreign exchange resources to match the external costs of the projects included in it and to meet other commitments."

After detailing the assistance received during the current year, Mr. Desai said that although the balance of payments gap visualised in February has been reduced, "we are even now faced with a fairly large deficit for financing which no assistance is in sight, and some foreign exchange expenditure will be carried into the third plan. During the winter months, our balances usually rise due to seasonal factors being favourable for our exports, and during the summer and monsoon months, they drop by a fairly substantial figure. Hence it is absolutely essential that we should reach a more satisfactory level of balances by the end of this winter before the balances start coming down due to seasonal factors. This can be achieved only by making an all-out effort for increasing our exports and exercising an even greater economy in imports, even though it may mean a good deal of hardship as we cannot with confidence count on much further external aid to meet our payments gap in the current year. Our present level of foreign exchange reserves is too low to provide any cushion," Mr. Desai said.

Principles for Managing State Concerns

Professor J. K. Galbraith was recently invited by the Government of Ceylon for consultation in connection with that country's plans for economic development. He submitted a report to the Government, a summary of which appeared in *Daily News* as a despatch from its reporter. Although Professor Galbraith's remarks relate to the Ceylonese situation, they have considerable relevance to India's problems too. The newspaper's report is reproduced below:

"A six-point charter of 'fundamental essentials' for the successful working of public corporations and to provide a maximum chance for their efficiency and success has been recommended to the National Planning Council by Professor John K. Galbraith of Harvard University, the well-known American economist and author. His recommendations are based on observations of public corporations in a number of countries—some where they are a success and others where they are failures.

"He recommends that the ideal form of public industrial organisations should be a relatively small number of multi-purpose enterprises. Although this may look awkward and perhaps top-heavy at first glance, it accords with the requirements of modern industrial life, he adds. Professor Galbraith warns the Government that if the public enterprises perform badly, the implementation of the country's national plan would fail or at least 'fall short of expectations.'

"In a preamble to his report, Professor Galbraith warns: 'Socialism in modern times has suffered more in political esteem from the administrative failures of a publicly-owned enterprise than any other cause. Nothing has been more disillusionary or so costly in public support.' The essential steps outlined by him for the successful working of the country's public enterprises are:

"(1) The formulation of a charter incorporating the rules in accordance with which the corporation should conduct its business. This document should state basic policies governing labour, price and procurement policy—exclusion of favouritism and nepotism, financial procedures, etcetera. If the management abides by these rules, its individual actions and decisions should not be subject to question.

"(2) The board of directors should consist of men of general wisdom and competence, and they should be appointed for fairly long periods. No active public official should ever serve on any board. Before passing on matters to the board, the official should refer them to his superiors.

"(3) It must be recognised that the functions of the board of directors, although not unimportant, are not decisive, and it is not an executive body. It must be a forum for discussing and deciding on larger functions of financial and other policies. It is not desirable that the board plays a large rôle in management—its co-operation need not be high.

Decisive Figure

"(4) The decisive figure should be the chief executive officer—chairman, president, managing director. The responsibility for the success of the enterprise should always rest on him. The selection of this executive is the task (a high responsibility) of the Minister. Once appointed, the executive must have the autonomy and independence necessary to get results. His term of office should be no longer than that needed to show results, for his security of tenure always depends on performance. If he succeeds, he should be continued in office; if he fails, he must be superseded. Commenting further on this point, Professor Galbraith observes that within the framework of rules that exclude favouritism and neoptism he should have large authority over the promotion and demotion of his staff and subordinate executives. So long as he gets results, he should not be challenged on individual decisions. If the results are unsatisfactory, the proper procedure is never to revise and correct his decisions but to replace him.

Severe Standards

"(5) The salaries paid to the executives of the public corporations need not be extravagant. They should be higher than in the civil service as this would in part be a reward for the 'greater gamble' involved. Rightly or wrongly, the civil service is tolerant of the man who does not quite come off, but the standards of public corporations must be much more severe. If a man fails, he must go.

"(6) A successful corporation must be assigned new tasks as rapidly as it can absorb them and perhaps more rapidly than it thinks it can. This means that it must be consistently concerned with training new executive talent. Success means new tasks and new opportunities for such talent.

"Commenting on the failures of public corporations in Ceylon, Professor Galbraith observes that they have been due to the failure to accord public corporations their full conditions for success. He goes on to say that because of the strong political attachment to socialism in Ceylon, the rôle of the publicly-owned enterprise will be that much the greater. If publicly-owned enterprises are to be important, it follows that the success of the development programme turns very largely on the success of these enterprises. If they are effective and efficient, planning goals will be achieved on schedule at low cost and funds will become available for further investment and further growth. On the other hand, the failure of public enterprises will breed contempt or despair. Their poor performance will be visible evidence for the people that 'nothing goes well'. Earnings indispensable for further investment and growth will not be forthcoming. He points out that there is enough on record to show that Ceylon faces a serious problem. Most people in Ceylon will generally agree in taking it seriously.

Points of View

"Commenting on the view held by conservatives and socialists on this matter, Professor Galbraith observes that conservatives who advocate private enterprise dismiss socialism with the claim that all public enterprise is inherently inefficient and incompetent. Socialists by contrast regularly assume that the decision for nationalisation is the critical thing, and once this is taken, the further questions of organisation and management will solve themselves. He says that conservatives should be reminded that many publicly-owned enterprises are competently and efficiently run and they should also be reminded that the modern large private corporation is run by salaried managers, who not infrequently have only a managerial stake in profits. Socialists for their part need to be reminded that socialism in modern times has suffered more in political esteem for the administrative failures of publicly-owned enterprises than any other cause. Nothing more has been more disillusionary or so costly in public support. Speaking on the question of managerial talent, Professor Galbraith states that the problem of the shortage of managerial talent is regularly asserted in under-developed countries. This, in turn, is asserted as the reason for the high incidence of the failure of public enterprises. A proper search, however, he says, will turn up competent managers and training will make more available. While management must be a well-paid profession, no country in modest circumstances should think it necessary to pay exceptionally high salaries.

Three Factors

"Analysing the peculiarities of public enterprise, he points out that the existence of successfully operated productive enterprises should depend on three important factors. The productive enterprise demands prompt decisions and quick action, unlike in the Government sphere where decisions have to be adjusted to procedures often referred to as 'red tape'. Decisions in a public enterprise cannot be referred for activity from a Department to Ministry or Ministry to Treasury and sometimes Treasury to Minister. The price of such delay will be idle men and plant, high cost and lost opportunity. Unlike in government departments, decisions in productive enterprises have to be made more rapidly, for always the ordinary individual business decision is not usually of critical importance. It rarely sets a precedent. Wrong decisions in an enterprise can be reversed when it becomes clear that they are wrong. If the price is too high, it can be adjusted. What is important is promptness of decision rather than precision. 'It is not a perfect score but a high average that makes the successful business manager.'

Technical Needs

"The second difference between the public enterprise and a civil department is in the technical requirements of the task. The large productive enterprise involves the co-ordination of a wider range of technical skills than does the Government department. The head of an enterprise who must co-ordinate the work of several kinds of engineers, chemists and other specialists must take them on trust and each must take the other on trust. Only gradually, as a result, as people know the strengths and limitations of others, does an organisation become competent and efficient. Every new organisation will be in some degree inefficient and there is a chance that it may be appallingly so. Almost any experienced organisation will be better than a new one.

"The third difference which distinguishes the public enterprise is that unlike a civil department, it produces something for sale. This means that it is subject to a special test of performance. That test is its ability, with alternative sources of supply and at adequate prices, to yield a profit for further investment."

States and Plan Resources

The well-known approach of the State Governments towards raising their own resources for the development plans, it is expected, will be adopted again when the National Development Council meets here on 10th and 11th December. From the beginning of planning in 1950, the States have persuaded the Centre to approve their big plans on the distinct understanding that they alone would raise the additional resources required to finance the schemes. As the history of the two five year plans shows, the States have not done nearly enough to raise resources by themselves. It is the Centre which has had to meet most of their bill. The same approach is being adopted, particularly by the Government of West Bengal, towards the third plan. This State Government has offered to raise Rs. 340 crores for its plan. A case may be cited to illustrate the point how the West Bengal Government can always have its way. It has a pipeline project to transport gas from Durgapur to Calcutta. It negotiated and entered into a contract with the Yugoslav Government for the supply of pipes notwithstanding the strong and combined protests by the Central Ministers of Steel and Finance that foreign exchange should not be used on a project for which Indian pipes will be available after some time. The West Bengal Government got its way on the plea of urgency, yet not an inch of Yugoslav pipe has reached India, while the Indian pipe factory has already gone into production. Notwithstanding the inspired stories in newspapers that "there is no disposition in the Planning Commission to accept the West Bengal Government's statement that it would find resources of its own for an outlay of about Rs. 340 crores," the State Government will not only have its way, but the Centre will in due course obligingly provide the resources. This is one aspect of the problem. The other aspect is that the plan, in its ultimate analysis, is the election manifesto of the Congress Party. It already has projects divided into categories, some to be undertaken only if Indian and external resources are available. Looking from this angle, it does not matter what the plan outlay of a particular State is.

To put it in the language of the planners, the plan is perfectly flexible. So was the second plan. Apart from specific projects which had to be held over for lack of resources, particularly foreign exchange, the second plan targets for coal and foodgrains have remained unrealised.

The biggest disappointment has been the export target, in spite of the appointment of a deputy minister for exports and a galaxy of export promotion councils. It may be added that India is in the same position as the U.K. was after the last war. Inflation and an unsatisfied home demand provide an ample margin of profit to Indian pro-

ducers to sell their goods on their doorstep. The way to export promotion lies in lowering prices below the world levels. This means more production and internal competition.

The Union Finance Minister, Mr. Morarji Desai, has written to State Chief Ministers indicating the Central assistance to be made available in each case for plan programmes in the first year of the third plan. The allocations have been drawn up according to a formula, under which plan expenditure will be staggered, beginning with roughly 12 percent of the total plan budget in the first year, and ending with about 25 percent in 1965-66. The following are the Central allocations for 1961-62: Andhra Rs. 21 crores; Bihar Rs. 31.5 crores; Jammu and Kashmir Rs. 9 crores; Gujarat Rs. 15.5 crores; Kerala Rs. 16 crores; Maharashtra Rs. 22.5 crores; Madhya Pradesh Rs. 30 crores; Mysore Rs. 19 crores; Orissa Rs. 19 crores; Punjab Rs. 19.5 crores; Rajasthan Rs. 22.5 crores; West Bengal Rs. 23 crores; Uttar Pradesh Rs. 51 crores. The allocations for Assam and Madras will be finalised in the next few days.

New Policy on Income Tax Certificates

The Government of India has made an important change in the existing administrative procedure concerning the issue of exemption and tax clearance certificates under Section 46A of the Income Tax Act, to Indian nationals proceeding abroad. Under Section 46A, persons of Indian domicile who, in the opinion of the income tax authority, are not likely to return to India, have to obtain tax clearance certificates before their departure. Airways and shipping companies are responsible for ensuring that the persons carried by them are in possession of such certificates. In order to help the carriers to identify the Indian nationals liable to produce tax clearance certificates, the practice hitherto has been to require all Indian nationals proceeding abroad temporarily to obtain exemption certificates from the Income Tax Department.

As a result of the experience of the past several years, the Government has now decided to abolish the requirement that exemption certificates should be produced by every Indian national proceeding abroad. It is only in a case when the income tax authority concerned declares that a particular person is not likely to return to India that a clearance certificate will be required from him. In such a case, the person concerned will be intimated of this requirement by the income tax authority and his name will also be communicated to the Collector of Customs at the various sea and air ports and through them to the carriers. Such exceptional cases apart, it will not be necessary for an Indian national proceeding abroad to obtain a certificate under Section 46A of the Income Tax Act. The new procedure will come into effect from 1st December, 1960. It applies only to Indian nationals. As for persons of non-Indian domicile, the existing procedure will continue to apply.

Official Reports on Trade and Industry

The Government of India has set up a committee to simplify, co-ordinate and rationalise the system of reporting in relation to trade and industry. The Cabinet Secretary is the chairman and other members are: Director, Organisation and Methods Division, Government of India; president, Federation of Indian Chambers of Commerce and Industry; president, Associated Chambers of Commerce and Industry; and one more representative of the industry as may be appointed by the Federation of Indian Chambers of Commerce and Industry. The committee will have the power to associate as member any other person considered useful for its work.

The terms of reference of this committee will be to undertake a survey of the requirements placed on the industries by the administration in the matter of supply of data, submission of reports, etcetera, to the Government, and to suggest ways and means of securing the elimination of unnecessary reports or information, reduction of frequency of reports or information, reduction in the number of copies of reports or data, simplification or consolidation of existing reports or data, elimination of unnecessary details, delay or cost of reporting and elimination or modification of specific procedures. The survey will be carried out jointly by trained Government and business personnel under the directions of the Committtee. To begin with, the Committee of Direction will take up for study the coal and textile industries.

Calcutta-Durgapur Expressway

In March 1959, the Government of West Bengal submitted a proposal for the construction of an expressway from Calcutta to Durgapur. The Central Government examined the proposal and advised the State Government that, as a first step, a proper origin and destination survey of traffic in the area should be carried out and the data so collected furnished to the Government of India to enable the latter to assess the essentiality and economic soundness of the project. Further, the State Government was advised that attention may, in the first instance, be concentrated on the development of the Calcutta-Palsit (near Burdwan) section of the expressway where the existing road is comparatively congested. The State Government has since furnished the required traffic data and the matter is now being examined further.

Statement on Coal

Coal was in the news in the Lok Sabha last week. Replying to various questions, the Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, said: "The Government is aware that supplies of coal to brick kilns, generally, in all the States have been inadequate, and it is likely that certain brick kilns may have closed down due to the coal shortage. It has to be remembered, however, that for the purpose of movement, brick-burning coal has almost the lowest priority compared with coal for other categories of consumers. The annual demand from all the States for brick-burning coal which moves by rail is about 150,600 wagons. To increase the supplies to the consumers of brick-burning coal (i) consumers are encouraged to take more supplies during the slack season of the railways, and (ii) a proposal to open coal dumps at suitable places is under examination in consultation with State Governments."

He said that he was aware of the extreme scarcity of coal in some States, particularly Bihar, Uttar Pradesh, Punjab and Himachal Pradesh. This was, however, in slack coal for brick-burning purposes and domestic soft coke. These requirements have a low movement priority compared with coal for public utilities and essential industries. As a result, within the limit of the transport capacity available, supplies have often fallen short of requirements. Besides, the movement to Uttar Pradesh, Punjab and Himachal Pradesh in the direction "above Moghalsarai" is difficult.

Coal for Sindri

As for Sindri, the Minister said that arrangements have been made for the regular supply of coal in the required quantities and qualities to make proper blends for the manufacture of coke. A programme of systematic overhauling of gas generators has been drawn up. One generator has already been overhauled and work on others is to be taken up one by one as components and spares required for replacement are received against orders already placed. An additional gas generator is under erection and it is expected to be commissioned in six months.

Reviewing coal production, the Minister said that the production in 1950 was 32.30 million tons, and in 1951, it was 34.43 million tons. No specific target of coal production was fixed for the first five year plan. The production in 1955 was a little over 38 million tons. The target for the second five year plan period was 60 million tons. The production during 1959 was 47.06 million tons, while production during the first nine months of 1960 was 38 million tons. It was expected that a level of production of between 54 million tons and 55 million tons would be reached in March 1961, the last month of the current plan period. There is an allocation of Rs. 53.34 crores for the coal production programme in the public sector. The amount actually spent up to the end of September 1960, against the allocation, was Rs. 36.16 crores. Most of the balance of Rs. 17.18 crores, it is expected, will be used before the close of the financial year.

Sardar Swaran Singh added that the production of coal in the collieries in the public sector during 1959-60 was 7.11 million tons—4.85 million tons by the National Coal Development Corporation and 2.26 million tons from the Singareni group of collieries. The shortfall of 5 million tons to 6 million tons in the level of production would be mostly in the production from the collieries of the National Coal Development Corporation. However, all arrangements on the ground will have been made by the Corporation by the end of March 1961 for a production commensurate with its target of 13.5 million tons. The target rate of output will be attained within the first year of the third plan.

Sardar Swaran Singh said that the basic policy on coal production, which was adopted during the second plan, and had the approval of Parliament, was to assess the total requirement of coal in the national economy and then to apportion responsibility between the private and public sectors to achieve this production according to their capacity. The policy still remains the same.

"Our main objective being to produce all the coal that is needed, the allocation of the respective shares of the private and public sectors cannot be on the basis of a pre-determined target for each. The proper course is to make an assessment of the capacity of each and then to work out what contribution it should be called upon to make in order to achieve the total production needed. This has been our approach in deciding the part that each of these sectors has to play in the third plan. Our estimate of coal requirements during the third plan works out to 95 million tons, exclusive of an extra 2.5 million tons required for the projected fourth steel plant in Bokaro. This means an additional production of 35 million tons over the target of 60 million tons in the second plan.

Report by Working Group

"A working group comprising the Coal Controller, the Coal Mining Adviser attached to the Ministry of Steel, Mines and Fuel and a representative of the coal industry was set up recently to invite offers from individual units, through the Joint Working Committee of the industry concerning the additional production they are capable of achieving during the third plan. This working group, after securing the necessary information from the industry and scrutinising the individual offers from the point of view of feasibility, made an assessment of the total capacity of the private sector.

"The final estimate of the said group is that the private sector is capable of producing about 4.87 million tons of coking coal and about 11 million tons of non-coking coal, thus making a total of 16 million tons approximately. Of this total, about 12 million tons to 13 million tons are to be produced from the existing workings in the collieries in question and the rest from areas adjacent to them as well as from non-contiguous or proximate areas. This estimate can be considered fairly realistic, based as it is on an examination of what individual units are capable of producing. The figure has turned out to be the same as was tentatively mentioned in the draft outline as the private sector's target.

"Similarly, the capacity of the public sector comprising the National Coal Development Corporation and the Singareni Collieries has been estimated at 19 million tons. This assessment is again based on a careful examination of what the public sector is capable of achieving, taking into account such important factors as the availability of the necessary equipment, manpower and technical know-how.

"The intention, however, is not to treat these allocations as rigid. These have been laid down for the present for the purpose of programmes to be drawn up by the various units, and the evaluation of performance from time to time. It is proposed to keep a close watch on the progress of each unit that is participating in the programme of additional production, and if shortfalls are noticed in one sector, adjustments will be made in the programme of the other sector, the basic objective being to ensure that the total production planned for is actually achieved.

"The above policy is fully in accord with the Industrial Policy Resolution of 1956. That resolution stipulates that all new units in the coal industry will be set up by the State. But this does not preclude the expansion of the existing privately owned units or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require. The role that has been assigned to the private sector I have just mentioned does not involve a general relaxation of the Industrial Policy Resolution itself. A realistic assessment having been made of the optimum production that can come from existing mines and areas immediately contiguous to these mines in the private sector our intention is to give special permission to individual units to work new or non-contiguous areas where the raising of coal from such areas has to be ensured to make up the total production required. This is quite in consonance with what the Industrial Policy Resolution states, namely, that where the national interests so require, private enterprise may be allowed to expand.

Policy on Prices

"Another important aspect of coal policy pertains to coal prices. In this matter, we have adhered to a policy of holding the price line. It will be recalled that some time ago, the Government constituted a Coal Price Revision Committee which went into the entire price structure of coal and besides recommending an economic price for coal, made certain other recommendations, the object of which was to create the right conditions for the expansion of coal production and assurance of supplies to consumers. These recommendations were accepted by the Government and are being implemented. A very important one among these is the introduction of a scheme of subsidy to collieries which are handicapped by adverse factors such as the presence of gas, very deep workings, difficult geological conditions, excessive accumulation of water, etcetera, and which cannot be worked economically at the existing coal prices, although it is in the national interest to keep them in production.

"Another important measure is the raising of the ceiling for stowing subsidy from 75 percent or 85 per cent to 100 percent. The Government is also going ahead with the scheme to put up Central ropeways both in the Jharia and the Raniganj coalfields for extraction of sand from the river beds and distribution to individual collieries. The scheme is expected to be put into effect by the end of the first quarter of 1963. All these schemes will benefit the private and public sectors alike. To sum up, then, there has been no radical change in the Government's policy on coal. It is based on what the national interests require, and is entirely within the scope defined by the Industrial Policy Resolution of 1956."

Shortage of Steel Technicians

Replying to another question, Sardar Swaran Singh, said that "Hindustan Steel's shortage of trained technical Indian personnel is mainly in the category of senior and middle-grade supervisory personnel. They have almost met the entire personnel requirements of trained junior engineers for manning the three steel plants. The reasons for this shortage, as enumerated by Mr. Leo Werts, are that persons with experience are not available in the country and the sources from which the new steel plants can draw their manpower requirements are practically exhausted. The remedies recommended are: a comprehensive training plan and an organisation to develop the newly trained engineers, association of some top personnel and training consultants from another country with Hindustan Steel's training programme, setting up of a technical advisory committee on training and the integration of technical training institutes at the steel plants with a country-wide training programme."

Pig Iron Plants

The general criterion for the location of pig iron plants is that they should be located far from the major steel works and be based on the use of non-coking coal and preferably low-grade iron ore available in areas nearby. Six small pig iron plants, three each in Bombay and Madras, have been licensed under the Industries Act. Besides, one unit near Gwalior in Madhya Pradesh has been permitted under the Iron and Steel (Control) Order. One of the licensed units in Madras and the small furnace near Gwalior are in production; one unit in Orissa is in regular production. The total production in the Orissa and Gwalior units has been about 15,200 tons. At present, the scope for setting up new electric furnaces is very limited, as existing furnaces and those already sanctioned are expected to consume most of the available melting scrap, estimated at about 600,000 tons by 1961. However, the question of permitting new furnaces in the context of the third five year plan is being examined.

Steel Order by Railway Board

The Railway Board has placed orders for the import of 96,000 tons of steel from Japan, Holland, the U.K., West Germany, Spain, the U.S.A., France, Belgium, Norway, Sweden and Italy. The average price is Rs. 675 c. and f. a long ton.

Making Tractor and Earth-moving Machinery

There is a proposal to set up a factory for the manufacture of tractors and earth-moving machinery in the south. It will be located in Ennore, Madras State. The capacity of the undertaking will be as follows:

Item	Output a year Nos.	Tons
Steel structurals	—	1,800
B.L.H. Shovels	30	900
Allis-Chalmers motorised scrapers	80	—
Allis-Chalmers motorised dumpers	100	—
Allis-Chalmers crawler tractors and bulldozers	To be determined later	

It is proposed that the authorised capital of the undertaking would be Rs. 2 crores, with an issued capital of nearly Rs. 1.6 crores.

Rising Aluminium Output

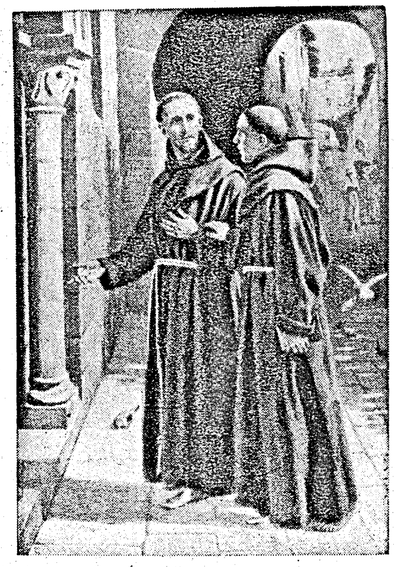
The production of aluminium in 1950-51 was about 3,738 metric tons. The target for the end of the first five year plan was 12,192 metric tons. During 1951-56, Rs. 2.25 crores, it is estimated, was spent on the development of aluminium. The target of production for the end of the second five year plan is 25,400 metric tons. The actual production during 1960 is estimated at 18,288 metric tons, and will increase considerably in 1961-62. The amount spent so far in the second plan on the development of the industry is Rs. 13 crores.

Ventures with Foreign Collaboration

From April to October 1960, the Government of India has approved 228 agreements between Indian and foreign entrepreneurs for the manufacture of a variety of items. The agreements countrywise have been:

United Kingdom	80
West Germany	41
U.S.A.	35
Japan	23
Other countries	49

Not by Words Alone...



The story is told of St. Francis of Assisi, that he once stepped down into the cloisters of his monastery, and laying his hand on the shoulder of a young monk, said, "Brother, let us go down into the town and preach".

The venerable father and the young monk set out together, conversing as they went. They wandered down the principal streets, and wound their way through alleys and lanes, and even to the outskirts of the town and the village beyond, until they found themselves back at the monastery again.

Then enquired the young monk, "Father, when shall we begin to preach?"

And the father looked kindly down upon his son and said, "My child, we have been preaching; we were preaching while we were walking. We have been seen....looked at; our behaviour has been remarked, and so we have delivered a morning sermon. AH! MY SON, IT IS OF NO USE THAT WE WALK ANYWHERE TO PREACH UNLESS WE PREACH AS WE WALK".

YES . . . it is no use that we walk anywhere to preach unless we preach as we walk . . . . . in building the India of our dreams . . . there is little room for preaching by mere words . . what are needed are DEEDS . . . And DEEDS include higher production of some ESSENTIAL commodities like

CEMENT . . . THE GREAT MODERN MATERIAL OF BUILDING CONSTRUCTION . . . .

In 1952, we had placed at the Nation's disposal over 1,32,000 Tons of Cement.
In 1954, we had produced over 2,02,000 Tons of Cement.
In 1958, we produced nearly 3,50,000 Tons of Cement.

This year . . . . in 1960 . . . .

We expect to place at the nation's disposal over 3,60,000 Tons of Cement

BECAUSE INDIA NEEDS MILLIONS of TONS of CEMENT . . .

for Building the richer and prosperous India of our dreams . . .

Refractories for all purposes...

The Kumardhubi range of refractories is now being increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.

Backed by over 50 years of manufacturing experience, Kumardhubi Fireclay and Silica Works contribute a vital operational requirement in a number of industries.

KUMARDHUBI FIRECLAY & SILICA WORKS LIMITED
Managing Agents: Bird & Company (Private) Limited
Chartered Bank Buildings, Calcutta-1

We are rather proud of ourselves

Today, banking is almost a public utility. Its success depends on its ability to give friendly and helpful service.

We modestly believe that our progress shows that our clients, whether they are industrialists, exporters or just men who want to deposit Rs. 5/- in a Savings Bank account, realise that in IOB they have an institution that has made friendly service the basis for all their activities.

U.K. TRADE GAP WIDENS FURTHER

TREASURY CONCERNED ABOUT LOW OVERSEAS EARNINGS

(FROM OUR LONDON CORRESPONDENT)

BRITAIN'S trade gap, measured by the excess of imports over exports, widened considerably in October. With exports, including re-exports of £12.2 million, totalling £269.4 million and imports standing at £379 million, the gap was £109.6 million. This compares with a gap of £90.6 million in September. Even allowing for the fact that exports were affected by the strike of tally clerks at the London docks to a greater extent than imports—the U.K. Board of Trade ascribes the decline in exports mainly to this factor—the gap is disconcertingly wide. Detailed figures are not yet available, but it must be assumed that the sharp fall in motor-car exports to the United States—which affected the late summer figures—continued last month. The export total was the lowest for any month this year and well below the monthly average for the past two years. It compares with a total of £272.7 million in September and £292.7 million in August. The import figure is slightly less than the level of earlier months, but the U.K. Board of Trade points out that imports would have been higher than in recent months if there had been no delay in unloading.

The real story is even worse than these figures show. After adjustment for seasonal factors, exports in October were no less than 13 percent down on September at £252 million, while imports were up to the level of recent months of £385 million, giving a seasonally adjusted gap of no less than £122 million—much the worst figure for a long time. In July, the comparable figure was £104 million; in the first quarter of this year, the average "gap" was only £56 million. Taking the seasonally adjusted figures, exports in the last three months were 1½ percent below the previous three months, while imports were ½ percent up. In the first ten months of this year, exports were 5 percent above the average for 1959, while imports were 14 percent higher.

Further Deterioration

In its monthly *Bulletin for Industry* for November, the U.K. Treasury states that the current trade figures "imply a further deterioration" in the balance of payments position. It is much concerned about the danger of insufficient overseas earnings. It says: "An intensified export drive is called for, especially since less buoyant world demand makes the export task difficult. It would become still more difficult if there were to be a general return in this country to increased costs and prices". It also takes a grave view of the trade trend. On this subject, it says: "The overseas current account is not strong enough to sustain heavy aid and investments and the monetary position has deteriorated. The identified current surplus of £35 million in the first half-year was more than offset by net identified long-term investment abroad of £138 million. The current trade figures imply a further deterioration". Clearly, the growing unbalance in Britain's external accounts has been masked by the massive inflow of foreign money. There is no harm in that if the deficit is temporary. But if exports cannot be increased in the face of stagnating world trade, the question will arise once again whether the United Kingdom can afford the large volume of overseas investment, aid and defence expenditure which is burdening the debit side of the accounts.

U.K. Chancellor Warned about Unemployment

The U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, was warned last week of a rapidly deteriorating employment situation in the motor-car manufacturing, furniture and television industries. It was suggested to him that the Government might consider a "less violent use of the weapon of hire-purchase restrictions". Mr. Lloyd was presiding at a meeting of the National Production Advisory Council on Industry, on which are represented the Government, employers, trade unions, the nationalised industries and the regional boards for industry.

It was the first meeting of the Council since Mr. Lloyd became the U.K. Chancellor. He said he would like to do something about hire-purchase restrictions and that he was keeping the question "in mind all the time". Fears about the present recession in some industries obviously dominated the meeting, but there appear to have been no concrete proposals aimed at remedying the situation. Mr. Lloyd said that there are both good and worrying things in the present position. There is still great pressure on Britain's resources, side by side with a dangerous threat of rising costs. Mr. Lloyd was gravely concerned about the fall in U.K. exports and suggested that the Council might consider the question of selling.

Better News about Coal

Coal consumption continues to run at a markedly higher level than last year, figures issued by the U.K. Ministry of Power show. In the week ended 5th November, 4.044 million tons were sold on the home market, compared with 3.81 million tons a year earlier. So far this year, the total inland demand has reached 163.55 million tons—a rise of 4 percent. During the same period, exports have gone up by as much as 35 percent from 3.475 million tons to 4.701 million tons. Behind the increase at home lies the growth of industrial production, about 8 percent above 1959. Record outputs by massive consumers like the steel industry has been an important factor. The electricity industry has used about 11 percent more coal than it did last year. Higher sales abroad represent both a true growth in demand from a Continental industry and a reward from the austere pricing policy initiated over the past year. Coal is being sold at more than £1 a ton less in export markets than at home.

At the same time, output has been held down at 3,964,600 tons in the week ended 12th November, against 4,144,800 tons in the corresponding week of 1959. Over the year, production has fallen by more than 6 percent, from 179,107,000 tons to 167,517,000 tons. The result is that undistributed stocks of coal—which the National Coal Board at one time thought might be reduced by 1 million tons this year—have already dropped by more than 3 million tons, from 35,726,000 tons to 32,524,000 tons.

Record Output of Iron and Steel

Production of steel in October reached a record level of 497,000 tons a week, compared with the previous highest month's figure of 485,100 tons a week in March 1960, and with 441,400 tons a week in October 1959, the U.K. Iron and Steel Board has announced. Production of pig iron in October also set a new record of 313,900 tons a week, compared with the previous highest figure of 312,300 tons a week in March 1960, and with 269,800 tons a week in October 1959.

Preliminary results of the census of users' stocks of steel taken at the end of September suggest that the stocks of finished steel rose by 200,000 tons, or about 5 percent, in the third quarter of the current year. The increase followed rises of 6 percent and 8 percent in the first and second quarters. Steel sheet again contributed the greater part of the rise in stocks.

SIEMENS INDIA

SIEMENS TRANSFORMERS now made in India

As a result of the technical collaboration with the internationally known HOUSE OF SIEMENS—Siemens Transformers are now being made in India by Bharat Bijlee. They are well-known for their high quality and dependability, and for the outstanding features of their design and construction. These transformers are manufactured under Siemens licence and conform to Siemens Design.

Jute

RAW JUTE PRICES FALL AS MILLS REDUCE PURCHASES

INDUSTRY AGREES TO SMALL INCREASE IN GUNNY PRODUCTION

THERE has been a definite improvement in the prospects for the jute industry during the past week. Although there is still a long way to go before the difficulties are overcome, there is a glimmer of light on the horizon. The raw jute quota system introduced by the I.J.M.A. and the vigilance of the East India Jute and Hessian Exchange have at last borne fruit, since in the course of the week fibre prices have dropped by about Rs. 5 a maund in Calcutta. The effect on the upcountry markets has not been so spontaneous. While some agencies have kept pace with the generally downward tendency, others have resisted the falls. With lower prices, imports in many of the upcountry agencies have decreased, so indications have often been nominal and very little jute has been available at the quoted rates. The position of stockists in Calcutta, however, is different. Many sellers have been hit by the fall in prices. Goods shipped a week or ten days ago and offered as ready bills of lading—or on a price-to-fix basis—are already showing a loss of anything up to Rs. 8 a maund. Consequently, rather than take delivery in Cossipore and face godown charges and the distinct possibility of still lower rates, "distress sellers" have panicked into offering their stocks at discount prices. Contract business is still limited, and many mills have confined their purchases to their own agencies and ex-Cossipore.

Mill Quotas

Some mills have not taken up all their allotted quotas. In view of the increase in raw jute arrivals in Cossipore and mill stations, many feel that the shortage of fibre has been exaggerated. Certainly the quota system has prevented any one mill from cornering supplies and has ensured equitable distribution. It has also been largely responsible for the reduction in prices. If prices can be kept down, it may bring out hidden stocks of jute. But the testing time will be after March next year, when the industry will have to depend mainly on stock jute. Although the general opinion is that there will be enough to go round, there may be a squeeze before the next season's crop becomes available. It will probably take the industry two years to recover fully from the current crisis. If in the meantime the I.J.M.A. or the Government can implement the proposed "buffer scheme", the mills may have fewer worries about the supply of their raw material.

The recent orders of the East India Jute and Hessian Exchange have severely restricted the activities of some of the big local operators. One prominent millowner has tried to take out an injunction from the High Court to prevent the Exchange from imposing margins. This caused a flurry of excitement in the goods market, and for a short time, prices fluctuated violently. There was an anti-climax, however, when the injunction was postponed to a later date. After this, prices showed a definitely downward tendency.

Unsealing of Looms

The question of sealing looms continues to evoke much criticism from labour unions. The All-India Jute Textile Workers Federation, at its first annual general meeting last Sunday, announced in no uncertain terms its dissatisfaction over the I.J.M.A.'s action, and even accused the Central and West Bengal Governments of "conniving at it". It called for a cancellation of the agreement between the I.J.M.A. and the Government of India empowering the former to enforce the sealing of looms, accompanied by a reduction in working hours. Meanwhile, the I.J.M.A. has stated that although some time will be required to comply with the formalities involved in the new method of working, 2 percent of the looms already sealed are being reopened from Wednesday, 23rd November. Eventually the sealed looms will be reduced 12 percent, with working hours cut from 48 to 45 a week, which in effect is equivalent to a sealing of about 17 percent on the basis of the working hours hitherto in force.

This decision has had no effect on the market, as production will increase by only about 2,000 tons a month. Overseas buyers continue to sit out of the market. In the U.S.A., burlap consumption during October dropped by 9 million yards to 67 million yards. This is the lowest consumption figure for October for six years. It is obvious that, in spite of the small consumption, consumers drew heavily on stocks, as burlap stocks in the U.S.A. at the end of October showed a drop of 29 million yards to 232 million yards, which is the smallest stock figure since November 1958. Total U.S. burlap consumption for the period from January to October 1960 now stands at 713 million yards, for a monthly average of 71.3 million yards. During the same period in 1959, total consumption was 737 million yards, giving a monthly average of 73.7 million yards.

Raw Jute Arrivals

The publication of the raw jute arrival figures for October 1960 did much to ease the jute market. Total arrivals in Calcutta and mill stations amounted to 602,750 bales—58,650 bales from Pakistan and 544,100 bales from India. This was 213,950 bales more than in the previous month, arrivals from Pakistan being up by 16,900 bales and those from India by 197,050 bales. Compared with October 1959, total arrivals from Pakistan were up by 43,850 bales, and those from India by 26,700 bales, making an overall increase of 70,550 bales. Total arrivals for the period from July to October 1960 were 1,412,400 bales made up of 173,050 bales from Pakistan and 1,239,350 bales from India. During the same period, the estimated raw jute consumption of mills reporting to the I.J.M.A. amounted to 2,032,500 bales, or 620,100 bales more than the total arrivals. From July to October 1959, total arrivals were 1,533,600 bales —61,700 bales from Pakistan and 1,471,900 bales from India. They were 444,200 bales less than the estimated raw jute consumption during the same period.

THE JUTE MARKETS

Manufactured Goods: In the absence of foreign enquiries, the jute goods market ruled very quiet at the opening last Thursday. Business was virtually at a standstill and B Twills lost Re. 1 to open at Rs. 169 for November shipment, this being a premium of Rs. 9 over the January-March position. There was little or no change in hessians. The near and forward positions of 40in. 10oz. were quoted at Rs. 54.75 and Rs. 54.25, respectively. On Friday, prices showed a slight improvement, particularly in heavy goods, and conditions were quiet at the opening. As the day progressed, erratic fluctuations took place as reports were circulated that an injunction against the Forward Markets Commission had not been supported. By Saturday morning, all gains had been nullified. Prices continued to fall over the week-end, and on Monday morning November B Twills were called over at Rs. 168, with forward shipment now at a Rs. 10 discount. In hessians, 11-porter dropped back to Rs. 54, but there were no buyers at these rates, nor was any business reported. After the opening, there was a slight revival but no genuine operations were conducted. The report that the I.J.M.A. had sanctioned a 2 percent unsealing of looms, pending the readjustment of working hours, went practically unnoticed. Overseas buyers showed no interest, and conditions were dull.

On Wednesday morning, opening quotations were as follows:

	November	December	Jan.-March
40in 7½oz.	42.25	41.50	40.50
40in 8oz.	45.00	44.50	43.50
40in. 10oz.	54.50	54.00	52.50
B Twills	168.50	162.00	159.50
Heavy Cees (Plain)	169.50	164.00	159.50
A Twills	202.00	198.50	193.00
Liverpools	192.50	188.00	185.00
Cornsacks	168.50	167.00	164.50

Raw Jute: Very little business was reported during the past week. Mills either bought in the agencies or from Cossipore, or failed to take up their quotas. From the opening, prices began to fall rapidly. From Rs. 50.50, Assam jute lost about Re. 1 a day until the week-end, and then over the holiday, fell a further Rs. 2 to open on Monday at Rs. 47. The upcountry markets were quiet. With prices only receding slowly, they could not match the spectacular fall of the Calcutta market. Many sellers withdrew and imports in the upcountry agencies began to decrease. This was not reflected in Cossipore, however, where wagon arrivals were supplemented by the arrival of unsold bill of lading consignments, and many of these were put on offer at discount rates. A total of 800 wagons were reported in Cossipore, this being the same as in the previous week. The improved raw jute arrival figures for October helped to create an easier tendency, and eventually Assam rates fell to Rs. 46.50, but in many cases business was possible below this level.

During the past week, business was reported in Assam ready bills of lading and 15 days' delivery at Rs. 46.50 to Rs. 47.50, and in Daissee-Tossa at

Pakistani N. C.	220 a bale.		

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in October was quite satisfactory in view of high prices. The full effect of the latter was not reflected in either bag cut-up or piecegoods sales last month, the sales having been made on a lower level of prices. At 67 million yards, about 50 million yards represent bag cut-up and 17 million yards went into industrial uses. For ten months this year, the total estimated consumption has been about 3 percent below last year. U.S. burlap, in stock and afloat, at the end of October declined sharply, 16 million yards in spots and 13 million yards in afloats—a total reduction of 29 million yards. The lower level of stocks reflects a decline in buying over recent months due to the prevailing high burlap prices. Calcutta clearances (shipments), which are running about 20 percent below last year, have been forecasting this development. Appearing below are two tables which include the October figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

	U.S. burlap consumption (as reported to T.B.M.A.) (Million yards) 1960	1959		U.S. burlap consumption (estimated industry total) (Million yards) 1960	1959

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL

(FROM OUR DUNDEE CORRESPONDENT)

IT looks as if raw jute prices in Dundee might take a long time to come back to reasonable levels. Although a slight weakness was noticeable during the past week, many sellers are still reluctant to reduce their terms. The E.P.C. prices were recently down by £3 a ton for white jute and £4 a ton for dark jute, but the holders of secured parcels in Dundee did not reduce their quotations by as much. Mill Firsts were an exception, since they came down from £200 to £195, but Mill Lightnings were down by £2 to £188, Mill Hearts to £184 and Grade Hearts to £181 for November-December shipment, c.i.f. U.K.-Continent. Grade Tossa-2/3 declined to £194 and fours to £186, with Continental Tossa-2/3 at £183, same shipment.

Dundee spinners have bought only small quantities of various grades to meet their requirements. They are reported to be well bought, some—according to market circles—as far forward as August next year, at prices about half those ruling at present. Spinners usually make the best use of their business acumen in buying at the right time, but they cannot regulate the prices for jute yarns, as these are fixed officially. Consumers of yarns and cloth, on the other hand, sometimes look for concessions, but the gentlemen's agreement prohibits sellers from breaking the official prices fixed for manufactures.

Calcutta goods displayed considerable weakness. Since last week, hessian prices declined by 6s for 10oz. and 3s 6d for 7½oz. and B Twills were down 21s 3d to 27s. Recent quotations are 83s for 40in. 10oz. and 63s 6d for 7½oz., November, 82s 9d and 62s 9d December and 82s 6d and 62s 3d January-March, with B Twills 259s 9d, 249s 3d and 243s 6d for the respective months of shipment, all f.o.b., Calcutta.

Little business was done in Dundee in jute yarns and cloth or bags during the past week. There is little doubt that short time will be much more widely spread by the New Year. Manufacturers are looking for business in wide widths and, generally speaking, the outlook is poor indeed. Many industries in the U.K. are experiencing dull trade at present, on which the Dundee jute industry depends much to keep it busy.

THE PAKISTANI JUTE MARKETS

FURTHER FALL EXPECTED IN FIBRE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

OVERSEAS interest in the fibre market has been poor during the past week. There have been few buyers, as it is generally felt that prices will collapse. This view has been strengthened by the reduction of £3 a ton in E.P.C. prices for white and £4 a ton for tossa and £4 a ton for all cuttings. Previously, tossas had been cut by £1. In the pucca bale market, this bearish view is to some extent reflected in Narayanganj rather than in Daulatpur, since most balers are short of money, although their financial position has started improving again.

While encouraging overseas buyers to sit out and wait for even lower prices, the drop in E.P.C. prices would normally scare the baler who is long or even square at rather high prices. Unfortunately, the supply of loose jute is so bad that any baler who sells, putting himself in a short position, cannot be sure that he will be able to cover profitably. For this reason, it is unlikely that there will be a rush of offers at lower prices.

One has to go into the interior really to appreciate the strength of the market there. Imports into Narayanganj, as already stated, are negligible, and the sellers have no intention of bringing in more jute unless the buyers are prepared to pay the same prices; in some centres, the sellers are even trying to increase the rates. On instructions from their head offices, some balers have tried to dispose of the jute in their import sheds at reduced prices because of the weak overseas market, but such attempts are meeting with no success.

The poor arrivals in Narayanganj are attributed to paddy harvesting which keeps growers too busy to bring jute into the baling centres. The bigger reason is that because of their strong financial position, they are able to stay out of the market. The stock position of overseas buyers must be weak and they may again be in the market after two or three weeks. The long position at high prices of some of the smaller sellers, coupled with shortage of finance, is responsible for the present eagerness to dispose of stocks, which has caused the market's weakness. But the bigger balers can hold out longer than overseas buyers, and the growers probably longer than anybody. It would appear, therefore, that a further drop in prices can be expected, especially as the mills are now getting mesta and are likely to require less jute for ready delivery. But as soon as the long position of jute balers, particularly of the smaller ones, is liquidated, it is to be expected that prices will once again rise as the crop is short and the present low prices may induce the European mills to accept more orders from their customers. The indications are that this drop in the market may well be the last before the final rise.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.2 percent to 126.7 during the week ended 5th November, 1960, compared with 126.4 for the earlier week. The index was higher by 0.8 percent and 6.9 percent, respectively, compared with the corresponding week of the previous month and that of a year ago. Lower prices of potatoes in Shillong (−13%), oranges in Calcutta (−9%), jowar in Nagpur (−6%), cashewnuts and milk (−4% each), onions and coconut oil (−3% each), rice, masur, fish, meat and chillies (−2% each) and wheat, barley, urad, ghee, groundnut oil, coffee and betelnuts (−1% each) brought down the index for Food Articles by 0.5 percent to 121.0, compared with 121.6 for the earlier week, although the prices of salt (+15%), oranges in Madras (+12%), jowar in Hyderabad (+10%), potatoes in Patna (+7%), bananas, gingelly oil and turmeric (+5% each), bajra (+4%), mustard oil (+3%), maize and eggs (+2% each), and ragi, arhar, mung, gur, black pepper and cloves (+1% each) showed advances. The index for Tobacco declined by 0.6 percent to 116.8 against 117.5 for the earlier week. The Fuel, Power, Light and Lubricants group index remained stationary at the earlier week's level of 119.9. The index for Industrial Raw Materials rose by 2.0 percent to 149.9, compared with 146.9 (revised) for the earlier week. The index for Intermediate Products worked out to 131.5, against 130.8 (revised) for the earlier week. The index for Finished Products advanced by 0.3 percent to 124.6, compared with 124.2 for the earlier week. Items which showed variations during the week were: jute manufactures (+2%) and oilcakes (−1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October 1960. Compared with September, the October Index for Food shows a drop of 8 points, while those for Clothing, Miscellaneous and Fuel and Lighting remain unchanged at 579, 301 and 289 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 4 points during October 1960.

AIR-INDIA TO INTRODUCE JETS ON SERVICE TO TOKYO

NEW PATTERN OF FARES PROPOSED FOR INTERNATIONAL ROUTES

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International is introducing *Boeing* jet aircraft on the India-Tokyo route from April next year, after it gets its fourth *Boeing*. The inaugural flight to Tokyo will take place in January 1961. As already reported, K.L.M. introduced its jet service in the East by staging an inaugural flight with a *DC-8* last week.

Air France to Use More Boeings

Under its winter schedule, Air France will be introducing *Boeings* on the Paris-Tokyo route *via* India. Two flights, east and west, will call at New Delhi and one at Calcutta. These will serve Bangkok-Hongkong-Saigon-Manila on their way to Tokyo. With effect from 1st April, 1961, Air France will introduce an additional *Boeing 707* on inter-continental service through Delhi, thus making the frequency at Delhi to three services a week East and West. The four pool partners, namely, Air France-Alitalia-Lufthansa-T.A.I., have inaugurated their "air credit plan" in India. Under the plan, the passenger is required to make a down payment of only 20 percent of the passage fare—the rest being payable in monthly instalments over a maximum period of 15 months, if so desired. The benefit of repayment in easy instalments, over a period of three, six, nine, 12 and 15 months, should appeal to a new "class" of travellers, who cannot always afford the large initial instalment to buy an international air ticket.

S.A.S. Polar Route

Marking the sixth anniversary of its polar route, Scandinavian Airlines System announced on 15th November that it has carried nearly 125,000 passengers between Europe and the U.S. west coast. The Scandinavian Airlines System inaugurated its "Route of the Northern Lights" with Douglas *DC-6B* airliners, followed three years later by *DC-7Cs*. On 3rd June this year, S.A.S. introduced *DC-8C* jetliners on the polar route, slashing flying time between Europe and south California to approximately 12 hours. S.A.S. now operates five weekly flights in each direction between Copenhagen and Los Angeles, all by *DC-8C*. During the recent peak season, the frequency was eight flights a week.

B.O.A.C. Comets to Singapore

B.O.A.C. has increased *Comet* flights to Singapore from two to three a week since 1st November and has announced plans to begin flights with the jets to Karachi and the Persian Gulf. The Corporation will begin its first transatlantic all-cargo service at the end of November, using two *DC-7Cs* now being modified by Douglas.

Lufthansa Plans More Routes

Lufthansa is planning major new routes which will eventually provide a round-the-world service. This winter the Far East service is to be extended from Bangkok into Hongkong and Tokyo (subject to the approval of the Thai Government). At a later date as yet not determined, transpacific services will link Tokyo with San Francisco, establishing a round-the-world service, by connection at San Francisco with Lufthansa's transatlantic service which was extended across the U.S.A. this spring. Other routes include one to Central America and one to South Africa, to be opened at a future date, not yet decided.

Aviation Standards in Russia

The Soviet *Il-18* turboprop has been grounded because of fuel injection problems, although the Russians still refuse to admit it, F.A.A. Administrator, Mr. E. R. Quesada, reported recently. Mr. Quesada commented also on the "antiquated" Russian air navigation and air traffic facilities on his return with other U.S. aviation experts from a tour of Russian airports. The criticism of the Russian Press of Aeroflot for its indifference to passengers, flight delays and poor airport services has lent support to his views. Russian aviation facilities would not meet safety standards for New York-Moscow service even if a bilateral agreement with the U.S.A. could be negotiated, he said.

International Air Fares

Scheduled airlines have completed negotiations for agreements on international fares and rates for most world routes for a period of two years, the International Air Transport Association has announced. Principal new features of the fares pattern proposed for Government approval by the I.A.T.A. Traffic Conferences include substantial reductions in lower-class fares across the north and central Pacific and between north and south America. New excursion and family fare discounts, and special low rates for parties travelling together will also be introduced on several routes to promote greater tourist traffic, particularly in the off-season.

On the cargo front, worldwide rates were revalidated at existing levels pending a special I.A.T.A. Conference beginning 23rd January which will discuss new approaches to cargo rating in order to encourage greater bulk traffic over north Atlantic, European and related routes. In the past, international fares and rates agreements have been valid for 12 months, but if Governments agree, the Cannes resolutions are for the most part scheduled to become effective on 1st December or 1st April, 1961, until 31st March, 1963. Carriers will be able to request the consideration of specific changes at the end of 12 months if there is material change in circumstances. Liberalised rules for roundtrip air-sea journeys were adopted which will make these combined trips more attractive.

A brief area-by-area summary of the Cannes fares and rates agreements follows: New economy class services will be offered over the northern and central Pacific at fares 14 percent below existing fares beginning 1st December. Thus, the lowest year-round fare between the U.S. west coast and Tokyo will drop to $435 on jets and $405 in propeller aircraft. First-class fares will go up slightly to $700 one way on the jets with propeller aircraft taking either a $50 lower fare differential or offering more liberal seating accommodation at the jet prices. Special group rates for parties of 35 or more passengers travelling together will cut the northern and central Pacific fares a further 30 percent. They will be valid between 1st September and 28th February eastbound and 1st November and 28th February westbound. Cargo rates will not change. Fares within Asia and Australia were fully agreed, with no alteration made.

Safe Custody and Management of Shares and Securities

To those who buy and sell securities and shares, their safe-keeping and management is often a source of worry.

For a very small cost the State Bank of India undertakes to relieve you of this burden and to provide you with (a) safe custody for your Government securities and share and debenture scrips, (b) a prompt and efficient service for the collection of interest and dividends, and (c) other services connected with the buying, selling and transfer of the scrips.

This Safe Custody service of the State Bank is one of the many banking services the Bank renders to its clients. It may be worth your while to know how the Bank can be useful to you by calling on any of the local head offices or branches of the Bank.

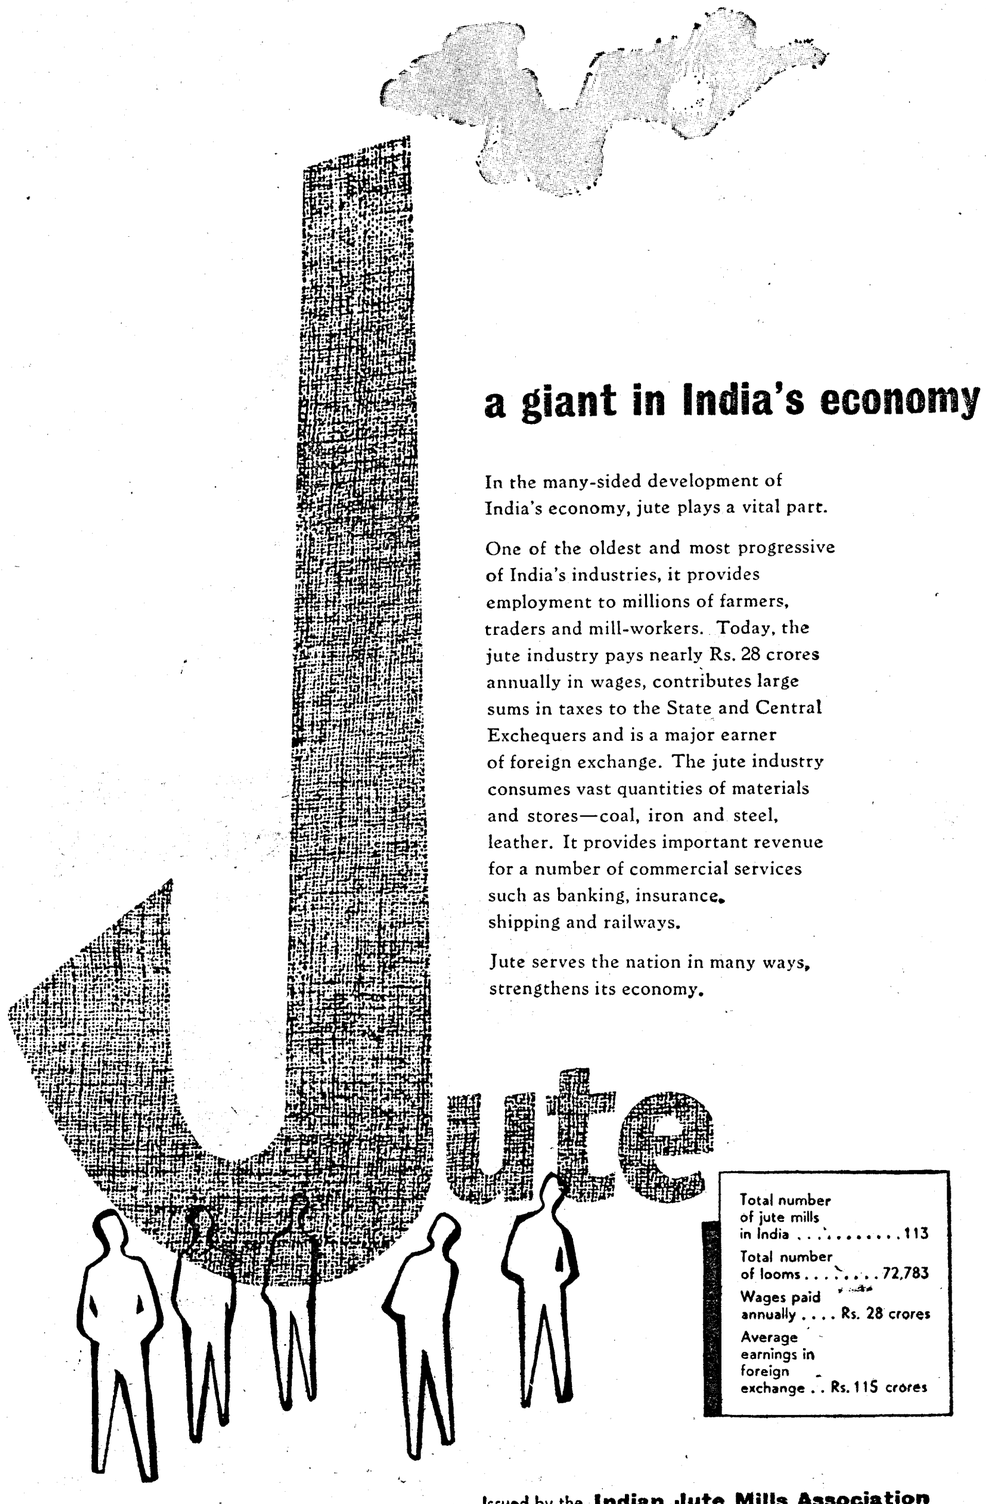
INDIA'S LEADING BANK

SISTA'S-58-28



a giant in India's economy

In the many-sided development of India's economy, jute plays a vital part.

One of the oldest and most progressive of India's industries, it provides employment to millions of farmers, traders and mill-workers. Today, the jute industry pays nearly Rs. 28 crores annually in wages, contributes large sums in taxes to the State and Central Exchequers and is a major earner of foreign exchange. The jute industry consumes vast quantities of materials and stores—coal, iron and steel, leather. It provides important revenue for a number of commercial services such as banking, insurance, shipping and railways.

Jute serves the nation in many ways, strengthens its economy.

COFFEE EXPORT PRICES FALL SHARPLY

GROWERS WORRIED ABOUT WORLD SURPLUS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE difference between the internal and export prices of Indian coffee is getting wider to the growing anxiety of producers. The average prices realised by principal varieties in the internal and export sales last month are as follows (export prices are given in parentheses): Plantation A Rs. 229.79 a 50 kilos (Rs. 178.37), Arabica Cherry Flats Rs. 176.31 (Rs. 151.15) and Robusta Cherry Flats Rs. 153.51 (Rs. 87.97). The producer's return will obviously shrink on account of the steep fall in export prices. Besides, the mounting stocks with the Coffee Board are likely to have a dampening effect on the internal market. India's coffee crop for the season which has just begun will be higher than the last season's 49,160 tons. The latest estimate on the Coffee Board has placed the crop at 52,290 tons. According to the present estimate, India will contribute 20,000 tons to the world market during the coming marketing season. The world market is burdened with a heavy surplus. Meanwhile, the International Coffee Agreement has become more broad-based as east African producers have joined it. Among the other producing countries, only India, Indonesia, Ethiopia and the Congo now keep away from it. The joint propaganda of the producing countries as well as larger offtake by countries like the United Kingdom are showing encouraging results. In spite of this, the future of the coffee growing industry appears to be bleak because of the fast growing surplus. It was pointed out at the recent coffee conference held in Gold Coast that by 1962, Brazil alone will have with her enough coffee to meet two years' world requirements.

Natural Rubber Prices Fall

Natural rubber prices are showing a tendency to fall in the world market. No. 1 R.S.S. was available last week in the Singapore market at Rs. 155 a 100 lbs. Growers do not regret this fall, since in their opinion it will prove useful to the rubber growing industry in the long run. Higher prices and wide fluctuations, they say, will shift consumer preference in favour of synthetic rubber. In the United States, natural rubber consumption has gone down to 30 percent of the total offtake of rubber (both natural and synthetic) by the manufacturing industry following a rise in its price. If higher prices continued, consumption would have registered further falls. India, meanwhile, will have to import more rubber this year. She may have to do so for some time more in view of the manufacturing industry's rapid expansion. To meet the growing demand for rubber to some extent, there is now a proposal to start another rubber reclaim plant in Bombay with a production capacity of 5,000 tons a year. There are already two large reclaim units in India. With the commissioning of the third unit in Bombay, it is expected that India will be able to produce 20,000 tons of reclaimed rubber a year. The present annual consumption of reclaimed rubber in India is estimated at about 4,500 tons.

Rubber Plantation Scheme

The Kerala Government has just finalised the rules for allotting lands under its 200,000-acre rubber plantation scheme. They will be published in the next issue of the State Government's *Gazette*. The Government will soon consider the applications from individuals, co-operatives and companies for lands. Allotments are expected to be completed within the next two months. The latest official estimate is that the Kerala Government will not be able to make available more than 15,000 acres for rubber cultivation during the coming planting season. It will have to clear the forest lands demarcated for rubber cultivation before allotting them to private parties. Some delay, it is reported, is bound to occur because some formalities are involved.

The State Government proposes to set apart 5,000 acres out of the 15,000 acres for distribution among landless and educated unemployed. Each man will get seven acres—five acres for rubber cultivation and the remaining two acres for settlement. Those who get land under the scheme will have to form rubber planting co-operatives for which the Government will offer some assistance. Another 4,000 acres will be set apart for distribution among individuals who can afford to pay for the land and meet the cost of cultivation. The land will be parcelled out into ten-acre plots and sold in auctions. Another 2,000 acres will be given to planting companies. They will have to pay for the land and the distribution will be made through auctions. The State Government will plant directly 4,000 acres during the coming planting season. It hopes that another 14,000 acres with private agencies will also be brought under rubber cultivation during the next season. It is reported that the Government of India has agreed to give Rs. 1.19 crores—Rs. 50 lakhs to finance direct cultivation by the State Government, Rs. 27 lakhs to assist co-operatives and Rs. 42 lakhs for giving loans to individual planters next year. The total allocation in Kerala's third plan for the rubber cultivation scheme is Rs. 6.9 crores.

CALCUTTA TEA AUCTIONS IN OCTOBER

GOOD GENERAL DEMAND

DURING the first week of October, no sale was held on account of the Puja holidays, but thereafter, four sales took place, and offerings amounted to 279,076 packages. There was a good and general demand throughout the month, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. The better liquoring Assam B.O.P.s and O.F.s with declining quality came in for only fair support, and prices were easier in each of the four sales. Medium B.P.s and Fannings were well supported, but were irregular and generally easier. Teas for price were well supported and may be quoted as firm. Best and Medium C.T.C. Assams came in for fair support, but were easier, although the poorer and more fibrous descriptions were well supported and were about firm at last rates. Non-wither Legg-Cut teas were well supported and may be quoted as being firm at last rates. The lower priced whole leaf grades came in for good competition and were about firm, but the better and more stylish descriptions declined further. Darjeelings were fairly well supported, particularly the better and more stylish varieties, although the lower grades were easier to buy. Enquiry for tippy teas was fair, but the market was a little irregular.

Quality from Darjeeling district showed a further decline during the earlier sales of the month, but some improvement was noticeable in the later sales, and a number of fair flavouring teas were on offer. The leaf appearance of the orthodox Assam grades was fairly satisfactory, although tip content showed a decline. The liquors, however, with the exception of a few teas were of a rains description. The quality of C.T.C. teas was about average for the time of year, and only a very few useful liquoring teas were on offer. Both leaf appearance and cup quality of Dooars and Terai teas were satisfactory for the time of year and were average for the district. The leaf appearance of the higher grades from Cachar and Tripura was satisfactory and some tip was in evidence, but rather more stalk and fibre were present in the lower grades. Cup quality, however, was barely average.

(Inclusive of zonal excise duty)

Leaf offerings amounted to 1,665 packages in the three sales held during the month. Demand in all auctions was strong and general, with prices above the rates ruling in the previous month. Green teas came to a strong market and sold well. A total of 64,387 packages of Dusts was offered during the month. There was a good general demand in all three sales, prices generally showing a slight decline as the month progressed. Orthodox exportable descriptions were well supported, although selling at slightly lower rates, while the smaller and thicker liquoring kinds were, in all sales, a strong feature and must be quoted fully firm to dearer. Legg-cut Dooars Dusts found ready buyers, but sold at easier prices except in the first sale when they were firm. Medium C.T.C. descriptions opened strongly, but in the later sales, registered a decline of 10nP to 15nP with declining quality. Best C.T.C. Dusts were irregular and tended easier.

(Inclusive of zonal excise duty)

The estimated north Indian crop to the end of September 1960 was 162.81 million kilograms (358.93 million lbs), compared with 181.97 million kilograms (40.17 million lbs) to the same date of last year. The average figure at this date for the three years 1957-59 was 175.92 million kilograms (387.83 million lbs).

The Export quota market has been quiet and business has been transacted at ¼nP, but buyers have been scarce and sellers have been readily available at ¼nP.

Export sales (up to Sale No. 16) for the 1960-61 season totalled 777,015 chests at an average price of Rs. 5.85 a kilo, compared with 902,709 chests (average price Rs. 5.31 a kilo) of the 1959-60 season. Internal sales of 4,880 chests of leaf and 263,687 chests of Dust (average prices Rs. 4.38 and Rs. 5.31 a kilo) go against 9,087 chests and 300,722 chests (Rs. 3.86 and Rs. 4.29 a kilo) of the same period last year.

Arrivals (in chests) in Calcutta warehouses during the period 24th September, 1960 to 23rd October, 1960, with the figures of the comparable month last year in parentheses, were: by steamer 360,859 (438,640), by rail 80,406 (162,300) and by air 6,854 (7,624), making a total of 448,119 (608,614) chests. Arrivals for the season from 1st April, 1960 to 23rd October, 1960, have been: by steamer 1,381,148 (1,869,517), by rail 432,508 (628,036) and by air 38,942 (46,252), making a total of 1,852,569 (2,543,805) chests.

THERE IS A DUNLOP Adhesive FOR EVERY PURPOSE

Dunlop offers a balanced range of quality adhesives based on natural and synthetic rubbers. Whatever may be the material which has to be bonded—Dunlop has an adhesive for it. Their unique qualities are based on Dunlop's world wide experience and prolonged research. You can do your bonding job better and cheaper if you stick to Dunlop Adhesives.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES FALL

AT Sale No. 20, held on 21st and 23rd November, the 64,552 packages offered at the Export auction, met with a good general demand. Teas for price and plain brokens met with a good enquiry and were firm to dearer, although Fannings in this category were a little easier. Medium B.O.P.'s met with a fair enquiry at irregular rates; a few selected lines appreciated in price, but the poorest were at times easier. O.Fgs. were also generally lower. Medium B.P.'s and Fannings were well supported and were about firm. Whole leaf grades met with fair support, but were somewhat irregular and sometimes easier. Legg-cut teas were up to 20nP easier with the exception of the cheaper kinds which were about steady. Best and medium C.T.C.'s although being irregular, were well supported with buyers following quality. The poorer types, however, eased by 20nP to 30nP. Darjeelings met with good support, particularly the higher grades which were often dearer. Tippy teas were a little irregular.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.30 to 5.60	2.10 to 2.16
Plain B.P.	4.55 to 4.65	1.92 to 1.96
Plain Fannings	4.85 to 5.00	2.08 to 2.14
Medium B.P.	4.65 to 4.85	1.94 to 2.08
Medium Fannings	5.00 to 5.30	2.12 to 2.24
Best Assam C.T.C. B.P.	5.90 to 6.30	2.70 to 2.90
Best Assam C.T.C. Fgs.	6.30 to 6.80	2.70 to 2.95

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a less general demand at easier rates for the 21,942 packages of Dusts on offer. Orthodox teas were sold well below last rates with the exception of the plainer descriptions which were irregular, although showing a weaker tendency. Legg-cut Dooars were irregularly easier. C.T.C. teas were a weak feature and generally declined by 20nP.

Quotations

	1960 Rs. a Kilo	1959 Rs. a lb.
Medium Dooars Dust	4.70 to 5.00	2.08 to 2.28
Medium Assam Dust	4.80 to 5.20	2.04 to 2.18
Medium Assam C.T.C. Dust	5.70 to 5.85	2.10 to 2.30
Best Assam C.T.C. Dust	6.10 to 6.30 (Nominal)	2.60 to 2.80

(Quotations are inclusive of excise duty.)

There was a good demand for the 390 chests of Leaf on offer. The 36 chests of green teas were also well supported at dearer rates.

FIRMER UNDERTONE IN FREIGHT MARKETS

FOOD SHIPS TO UNLOAD AT HALDIA

THE freight markets had a somewhat firmer undertone in the latest exchanges, with a more widespread enquiry apparent. U.S. Gulf to India paid up to 73s 9d for West Coast discharge with the usual 2s 6d extra East Coast plus 2s 6d extra two ports East Coast. Bangkok-Ceylon rice was arranged at 31s 6d f.i.o.s. and manganese ore Visakhapatnam-Ghent was done at 50s f.i.o. Five vessels were taken for phosphates from Casablanca to China at 56s 6d basis South China discharge with 1s extra for Shanghai. In the time charter section, the *Crowborough Becon* obtained the good rate of 23s 6d on 9,720 d.w. for the voyage to the U.K.-Continent with delivery Calcutta end November.

The announcement that the Haldia anchorage is to be operated for discharging grain ships from 15th December with Dock Labour Board personnel, has caused some surprise in shipping circles. The experiment will be watched with much interest and some perturbation as the withdrawal of a large number of winchmen from Calcutta port will have repercussions on the working of ships in Calcutta, particularly the end-month loaders. While it is correct that gunny shipments have declined sharply this is only a temporary phase pending a solution to the current problems in the jute industry and demands for winchmen will again exceed supply when this is achieved. The need for a third lightening port for grain ships is, of course, urgent and the recent spell of bad weather in Madras has increased delays there from four to seven days while the number of vessels due in Visakhapatnam in end-November or early December will strain that port's resources fully.

Ore Loading Record

A particularly meritorious performance in loading ore was achieved on the *Tensho Maru* at 5 King George Dock. The vessel commenced loading at 16.00 hours on 15th November and completed 6,963 tons, at 04.00 hours on 17th November. This proves that given the cargo and co-operation from labour, the port can do very much better than the poor average figures at present being done on most ships. Perhaps it may also encourage labour to accept a piece-rate scheme for bulk cargoes which would pave the way to a general piece-rate scheme with its unquestionable advantages to all.

General cargo movement is still very slow and with the jute industry in its present confused state, parcels of gunnies are scarce. Most liners are sailing with ample space to spare, although there have been reports of a revival in Australian and Indonesian purchases. Tramp owners are showing a little more optimism on the strength of recent figures of laid-up tonnage which reflect a considerable reduction over the last month. At the beginning of November, the U.K. Chamber of Shipping reckons 495 vessels of 3,847,306 gross tons were laid up, a decline of 92 ships of about 800,000 gross tons on October figures. Of this total, only 247 ships of 1,390,309 gross tons were dry cargo carriers and many were old ships unlikely to trade again. Any return to oil carrying by the numerous tankers now engaged in the grain trade would have a very swift impact on rates for dry cargo carriers and most owners look forward to very sharp increases in freights.

HIDES AND SKINS QUIET

The market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 15th November and 21st November,1960)

Cowhides: Wet salted (Slaughtered) 12,100 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19.50 to Rs 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 65,200 pcs on the basis of Rs. 325 to Rs. 350, Rs. 360 to Rs. 382 and Rs. 420 to Rs. 435; Wet salted (he-killed) on the basis of Rs. 4.50 and (she-killed) on the basis of Rs. 4.25 a piece; Assam-Dinajpur 31,600 pcs on the basis of Rs. 270 to Rs. 310 and Rs. 325 to Rs. 360; Purneah-Kissenganj 29,600 pcs. on the basis of Rs. 350 to Rs. 365; Patna (Ord.) 33,000 pcs. on the basis of Rs. 275 to Rs. 300.

Bazaar Stocks

(21st November, 1960)

COMPANY AND PUBLIC NOTICES

THE EAST INDIAN COAL COMPANY, LIMITED

(Incorporated in England with Limited Liability).

NOTICE is hereby given that the One Hundred and Eighth Annual General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Friday, the 30th December, 1960, at 11 a.m. for the following purposes:—

1. To receive and consider the audited Accounts for the year ended 30th April, 1960, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the one retiring.
4. To fix the Auditors' Remuneration.
5. **(As Special business).** To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a SPECIAL RESOLUTION, viz.:—

"That the Articles of Association of the Company be altered in the manner following:—

(a) Article 51 . That the words "twice the nominal amount of the share capital of the Company for the time being issued" be deleted wherever they occur and the following words substituted therefor, viz. "twice the aggregate amount of the nominal capital of the Company for the time being issued and the reserves including undistributed profits".

(b) Article 108A. That the following new article be inserted immediately after Article 108 and numbered 108A:

"A resolution in writing signed by all the Directors for the time being entitled to receive notice of a meeting of the Directors shall be as valid and effectual as if it had been passed at a meeting of the Directors duly convened and held".

Notice is also given that the Share Transfer Books of the Company will be closed from the 14th December to the 30th December, 1960, both days inclusive.

A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a Member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Forty-Third Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 3 p.m. on Thursday, the 15th December, 1960, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1960, and the Directors' and Auditors' Reports thereon.
2. To confirm as the final dividend for the year ended 31st March, 1960, the interim dividend on the Ordinary Shares declared by the Board on the 9th August, 1960.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that two special Notices as defined in Section 190 of the Companies Act, 1956, have been received by the Company under Section 281 of that Act to move the following Resolutions at the meeting:—

"That Sir P. P. Ginwala be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

"That Dr. N. N. Law be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

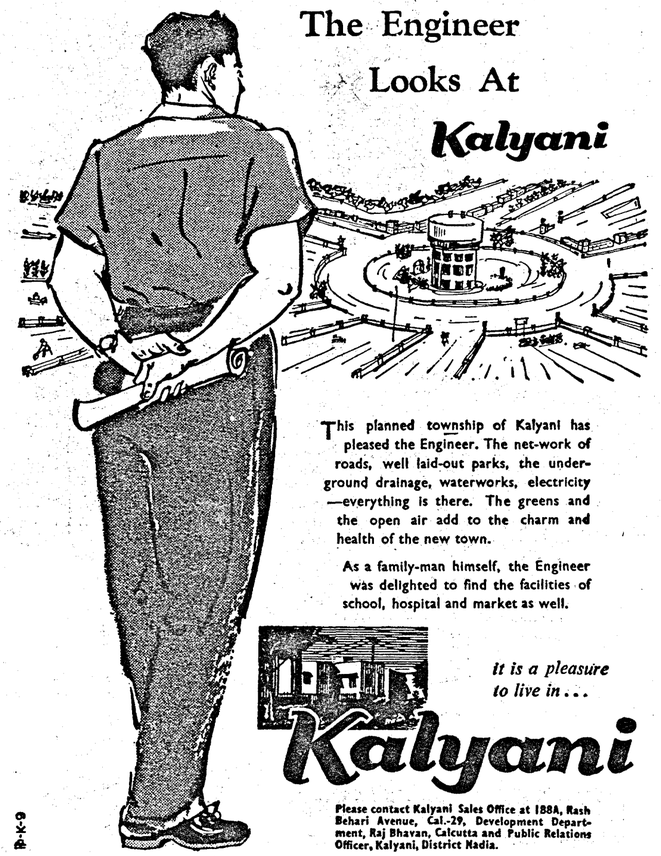
A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta,
19th November, 1960.

Note:—An Explanatory Statement is annexed to the convening notice issued to Members of the Company.

The Engineer Looks At **Kalyani**



This planned township of Kalyani has pleased the Engineer. The net-work of roads, well laid-out parks, the underground drainage, waterworks, electricity —everything is there. The greens and the open air add to the charm and health of the new town.

As a family-man himself, the Engineer was delighted to find the facilities of school, hospital and market as well.

It is a pleasure to live in...

Kalyani

Please contact Kalyani Sales Office at 188A, Rash Behari Avenue, Cal.-29, Development Department, Raj Bhavan, Calcutta and Public Relations Officer, Kalyani, District Nadia.

ENTIRELY NEW! Spartan Plastic PAINT

greatest darned paint you ever used!

THE BANK OF INDIA LIMITED

THE ALUMINIUM CORPORATION OF INDIA LTD.

NOTICE is hereby given that the Twenty-second Annual General Meeting of the members of the ALUMINIUM CORPORATION OF INDIA LTD., will be held at the Registered Office of the Company at 7, Council House Street, Calcutta, on Tuesday the 27th December, 1960, at 4-30 P.M. for the following purposes:

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st March, 1960.
2. To declare dividends.
3. To appoint Directors in place of those retiring by rotation and in this connection to consider and, if thought fit, to pass the following resolution in respect of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relevant Explanatory Statement is annexed hereto.

RESOLVED:

That pursuant to the provisions of Section 281 of the Companies Act, 1956, Shri D. N. Sen, a Director of the Company, who has attained the age of 71 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is specially declared that the age limit prescribed under Section 280, of the said Act shall not apply to him.

4. To appoint Auditors and to fix their remuneration.

The Registers of Members and Transfer Books of the Company will be closed from the 9th to the 27th December, 1960, both days inclusive.

By Order of the Board,
J. K INDUSTRIES PRIVATE LTD.,
Managing Agents.
H. S. SINGHANIA,
Director.

Calcutta, the 21st November, 1960.

Note: (i) Dividends as recommended by the Directors, if approved at the Annual General Meeting, including the additional dividend payable to the Preference shareholders on enactment of Preference Shares (Regulation of Dividends) Bill will be paid to those shareholders whose names are on the Company's Registers as on the 27th December, 1960, or to their Mandatees. The payments will be made on or after the 21st January, 1961 and of additional dividend after enactment of the Preference Shares (Regulation of Dividends) Bill.

(ii) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An Explanatory Statement is annexed to the convening Notice issued to the members of the Company.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

POORER PROSPECTS FOR FOREIGN AID

THE shortage of foreign exchange promises to be by far the most critical problem of the third five year plan. This is hardly surprising, it has been of the second. But whereas the second plan was well under way before the foreign exchange crisis developed, and India was therefore in a strong position to warn her friends that without their emergency help it would collapse altogether, bringing her economy with it, the position now is that unless firm commitments can be secured for much more than the mere Rs. 750 crores mentioned by Mr. Morarji Desai in the Lok Sabha last week, there is scarcely any justification for launching the plan in its present form and risking a recurrence of the dangers and embarrassments of 1957. This is the dismal warning underlining the report Mr. Desai has made on his recent visit to Britain and the United States; its most optimistic interpretation is that India will simply have to throw herself once again on the mercy of countries which, with the best will in the world, may be unable to meet a call on their resources totalling Rs. 2,600 crores over the five-year period. It is quite clear from the size of the commitments already secured that the plan is running a grave risk, which is only obscured at the moment by the optimistic assumption that "something will turn up". Well, it might; and certainly timidity has never achieved anything. But before the irrevocable decision is taken to proceed with a plan of the projected size and form, it might be useful to review the prospects for foreign aid in the context of circumstances as they are and not as the Government would like them to be. And whatever Mr. Desai said last week about prospects, he certainly did not do this.

It is a pity that the picture has been confused during the past few months by the hopes arising out of the U.S. election. It is not only wishful thinking in this country which has clouded the issue, the enthusiastic declarations of the winning candidate and the appearance of newspaper reports about making India "a showpiece of democracy in Asia", must also share the blame. No doubt Mr. Kennedy will do his best for India, and would do a great deal more if he were able. But bearing in mind the present position of the dollar, the various other calls on U.S. resources, and the key position which this single source occupies in world development prospects, all such attempts to mislead a country to whom this is almost a matter of life and death, are regrettable to say the least. The facts of the matter are that the U.S.A. is in no position appreciably to increase her aid to under-developed countries; that her allies cannot hope to make up where she proves inadequate; that in any case the ideas of Britain, France and West Germany, especially the latter, about the best ways of granting aid, differ considerably from those of America; and that the list of priorities for what aid is available may soon have to be amended drastically in favour of south America and Africa, and against India.

There is no reason for being too pessimistic about the fate of the dollar, at least not for some time yet. No new American President would dare tamper with the parity of the currency until he has been in office for some years, especially when his margin of popular votes is as narrow as Mr. Kennedy's. There are so many measures at the U.S.A.'s disposal for correcting the situation, and vague rumours about the preparation of a "Marshall Plan" for America and the virtual banning of all private capital exports from that country, can be dismissed as pure speculative nonsense. The chief strain on the dollar at the moment is believed to be the movement of short-term capital, or "hot money" as it is sometimes called, and effective steps are being taken to rectify this. At the same time, it must be faced that the dollar is over-valued, given the many calls at present made on the U.S. economy, that the gold reserve at Fort Knox has sunk below the "critical" $18,000-million level, that the Eisenhower Administration is already cutting commitments, that the Dillon-Anderson Mission to West Germany has failed in its aim of persuading that country to take some of the military burden off U.S. shoulders in Europe, and that Britain's balance of payments is deteriorating under an already too-heavy outflow of development capital. The facts, therefore, point to a more cautious assessment of aid prospects than has been the rule in India recently.

This verdict is reinforced by political as well as economic factors. It is quite clear, for instance, that first call on U.S. assistance will in future be made by Latin America. Thanks to the combined efforts of Mr. Khrushchev and President Castro, and to the mismanagement of the Eisenhower-Dulles era, there is now a first-class problem of development to arrest the spread of communism, right in the U.S.A.'s back yard. After what Mr. Kennedy has said about the Cuban problem, it would be strange indeed if he did not regard his first duty to be that of securing his own country's approaches. No doubt the preservation of India for democracy is objectively no less an important matter, but it is unlikely to loom as large in the new President's thinking as that of keeping communism out of the American continent. And after Latin America must come Africa. Once again, thanks to Mr. Khrushchev and what he revealed in the Congo of communist plans for African influence and domination, U.S. money will have to be poured on an increasing scale into the newly-independent countries there if western interests are to be protected. India may regret this, but with a communist problem on her own borders she has at least the consolation of knowing that the money is being used to weaken the expansion plans of those to whom she has herself already fallen victim. The attractions of Africa are also likely to be strong for America's allies, especially France and Britain, who both have connections in that continent which they consider it in their interests to maintain. The pull may not be so strong for West Germany, but even that country has traditional links with her old colonies in Africa which could take priority over any extra help she might be in a position to extend to India. The conclusion is, therefore, that in the absence of some such unlikely development as world disarmament, which would release funds on both sides of the Iron Curtain that would otherwise have been put to military use, India's prospects of raising development aid on the scale presaged in the third five year plan, are about as poor as they have ever been since planning started.

There seem to be two main ways of adjusting to this unfavourable state of affairs without reducing the tempo of economic advance. The first is by revising the third plan so as to give a larger share to the private sector. For various reasons, the western aid to India is likely increasingly to be available for private sector projects exclusively. This is largely because, with the virtual disappearance of "untied" assistance, the major part of U.S. aid will in future be channelled through institutions whose charters do not permit co-operation with public sector enterprises, and because, now that the importance of the U.S.A.'s allies, especially West Germany, has increased in these aid matters, more attention is going to be paid to the question of how funds are used. If, therefore, a proportion of the limited aid available to India is not to be wasted, the plan will have to be adjusted so as to make the maximum use of it; the experience of the second plan, where some of the assistance granted was not able to be used, or had to remain unused for a long period, can be avoided. There need be no emotional difficulties about this; as long as the pace of development is maintained through the maximum possible utilisation of what foreign aid is available, the choice of whether it goes into the private or the public sector is surely of nothing but ideological interest.

The second adjustment which may be necessary is in general policy towards private foreign capital. There is no point in going into the relative merits of this form of assistance here, whether its destination is the public or the private sector. This has been done many times before and the arguments are familiar to everybody concerned. The latest contribution to the various publications on the subject has just been issued by the Federation of Indian Chambers of Commerce and Industry, entitled *India—Guide for Foreign Investors*. This is a private contribution towards enlightening the foreign investor as to the general prospects in this country. But it is no substitute for official action, and this can only be the outcome of a change of policy on the part of the Government itself. If New Delhi is still in doubt about the extent to which India is now dependent on foreign aid and resources of all kinds, it is only necessary to refer to the words of the Finance Minister in his speech last week. It is only logical, therefore, that full advantage should be taken of all opportunities for attracting foreign exchange. This is an age of increasingly freer private capital movement, and only the other week, in the shape of the Ford Motor's purchase, Britain was faced with the same problem of weighing considerations of national interest and balance of payments effects against the facts of economic expansion and foreign competition. Perhaps the decision made will help the Indian Government in its urgent need to adjust itself to the task of attracting private foreign capital in future as distinct from merely tolerating it.

THE SHORTFALL IN COAL

FEW industries have been hit harder by the ideological dispute over the public and private sectors than the one engaged in mining coal. Its production in 1955 totalled 38 million tons, out of which 35 million came from private collieries and 3 million from State-owned collieries. Under the second five year plan, it was proposed that the total output be raised to 60 million tons, out of which 45 million would come from the private sector and 15 million from the public. In fact, it looks almost certain that during 1960, the overall production will be no more than 52 million tons, to which the private producers' contribution will be around 43 million tons. Thus, the private sector will fall short of its target by about 2 million tons, and the public sector by about 6 million tons. The result is that the whole country has run short of coal, especially the better qualities. The working of the steel plants and the railways has been seriously affected, and so also has that of many other important industries. Public utilities and manufacturing concerns have been brought to the position where they have had to cut production drastically at times in response to the fuel shortage. Meanwhile, two wings of the Government—the Steel, Mines and Fuel Ministry on the one hand, and the Railways Ministry on the other—have been able to think of nothing better to do than launch a public controversy in which each has blamed the other for the shortage. The first has been saying that although less coal has been produced, the railways have not been able to move even that. The railways, in turn, have been inventing excuses for their own lapses, taking special trouble to emphasise those aspects (such as the steel shortage and the inferior quality of the coal they are given) where the sister Ministry can be blamed.

There is some evidence that this pointless controversy has lately been calming down. Ministerial intervention has been successful in papering over the conflicts between the bureaucratic hacks of the two Ministries. But, beneath the facade of calm, the fact is that hardly any of the fundamental

problems the coal industry faces has yet been seriously attacked It is unlikely that it will be, unless both Ministries begin by recognising how serious their lapses in fulfilling the coal programme of the second plan have been. These lapses are implicit in two simple sets of statistics. Coal production should by now have been nearing 60 million tons annually, but is still running nearly 15 percent below that figure. Coal despatches, in turn, should now have been nearing 51 million tons, but they too are running about 15 percent below that figure. It is no consolation to hear the Steel, Mines and Fuel Ministry saying that production has lagged behind because the development work of the National Coal Development Corporation inevitably takes time to mature; the fact ought to have been recognised in 1955, not 1960. It is also no consolation having the railways saying that inferior coal has affected their operational efficiency, and that they were not given enough foreign exchange in time for importing steel for their wagon-building programmes; the shortfall in despatches would never have been so great if these admitted difficulties had not been supplemented by a large amount of bureaucratic bungling.

The results are what matter, and the Planning Commission and the Government of India should tell this to both Ministries plainly. Fortunately, the signs are not wholly lacking that the Steel, Mines and Fuel Ministry might at last have begun to recognise the point. At the meeting of the Coal Council of India in New Delhi last week, it seems to have been agreed that the demand for coal by the end of the third five year plan will be around 97 million tons a year. (The draft outline of the plan suggested this figure, but at one time a target of 95 million tons was being strongly recommended.) Increasing or decreasing a target by 2 million tons may not by itself signify much; it is a popular pastime in the smoking parlours of the planners. But, in this case, the increase might indicate that the coal shortage is making a deeper impression than it was until recently. Unfortunately, however, it is not yet clear what specific measures are to be taken in order to ensure that the new target will be achieved. The Government has been deliberately understating the magnitude of the increase by taking the second plan target of 60 million tons as the base, and then saying that out of the extra 37 million tons, 20 million tons will come from the public sector and 17 million tons from the private sector. It might have been more honest to say that the second plan target can now be forgotten; the actual increase will have to be from 51 million or 52 million tons at present to 97 million tons in 1966. This means that the public sector will have to raise its production from nearly 9 million tons to 35 million tons; and the private collieries from 43 million tons to 62 million tons. Time alone will show whether the State collieries will be able to achieve the task they have been set; if they go on working as they have been doing so far, it would be almost a miracle for them to *quadruple* output within five or six years. The private collieries will find their own task difficult enough, unless more favourable conditions are created for them to mobilise resources.

In the recent past, only one moderate change seems to have been made in order to make the conditions more favourable. It is that the Government is apparently relaxing its policy for private collieries extending their operations into new areas. The Industrial Policy Resolution has had extremely damaging effects in specifying that coal development will be reserved for the public sector. It forgot to note that coal is a wasting asset; a coal company has to fold up if it finishes working one set of mines and then is allowed to work no new ones. No entrepreneur will waste his money on equipment or exploration when conditions are created where he cannot visualise his activities continuing beyond a few years. It appears that the Government is beginning to appreciate the point. Various collieries, it is reported, will be asked to submit their schemes for extending operations into new areas, and each of these schemes will be considered on its merits. Much will depend on how the term "on merits" is interpreted in actual practice. But it is necessary that since the shortage of high-grade coal is acute, the expansion of the high-grade producers at least should be freely allowed.

Permission for expansion is not the same thing as expansion itself, and this is where the private collieries may find that their really difficult problems begin to arise. The worst of them centres on the fact that they do not have enough money to invest. For years, the selling price of coal was statutorily pegged, while production costs kept on rising steadily. Then, when the selling price was raised, the increase was far too small to leave a fair margin of profit. As a result, coal companies have not been able either to build reserves or to attract outside capital. The stiff enforcement of the Mines Regulations since the colliery disasters of a couple of years ago has increased operating costs further. It is doubtful, therefore, whether any but the very best collieries can approach the capital market for large sums of money. The Steel, Mines and Fuel Ministry nowadays starts to feel bilious when the question of increasing the selling price of coal is broached, and develops a sudden affection for the idea of "holding the price line." But it is time for it to consider where the money will come from if the coal companies are not allowed to save it for themselves. It cannot expect the coal industry to subsidise other industries, as it has been doing for well over a decade. If the price of coal is kept uneconomically low, other forms of assistance are necessary.

The proposal is now being considered whereby coal companies may be able to raise money from officially-sponsored industrial financing institutions. Hitherto they have not qualified for aid from many such institutions because the circumstances in which collieries work do not meet the conditions on which the aid is given. Yet something will have to be done so as to ensure that private collieries can not only raise the rupees they will have to invest in expansion, but also get the foreign exchange they will need for importing equipment and machinery. Finally, the railways will have to be given a stern reminder that when coal is dug out of the ground, the purpose is not merely to use it for decorating the top of the colliery. The purpose is to move it to fuel consumers all over the country, as and when they need it. It is estimated that nearly a million tons of coal has been lost this year because of the railways' inability to provide transport facilities. They are carrying about 43.5 million tons of coal annually now, but will have to be carrying about twice that quantity by the end of the third plan. Any inventive genius they might have would be better concentrated on this task than on hatching excuses based on the deficiencies of other Ministries.

FAILURE OF U.K. CONTROLS

WHEN Viscount Amory discussed economic controls in his maiden speech in the British House of Lords a few weeks ago, he spoke with the authority of a former Chancellor of the Exchequer who had used these devices. He had not, however, used them with conspicuous success—whether because he was ill-advised, or because his own judgment was at fault, or because the technique of economic control itself had not been developed for the situations with which Mr. Heathcoat Amory (as he was then) had to grapple. Lord Amory admitted that the methods had been defective when he said that in the next decade, probably, new instruments of economic control, more delicate and more effective than the old ones, would be devised, or we should learn to use the existing instruments more gently and yet obtain the desired results with them. He acknowledged the prevalent criticisms of hire-purchase controls when he said that, though quick-acting and effective, they made their impact in a relatively narrow sector and should, therefore, be used infrequently.

Shortly before Lord Amory's speech, the Federation of British Industries, through the medium of its president, Sir William McFadzean, had made its first formal statement on hire-purchase controls, revealing that it was firmly opposed to them. Shortly after his speech the Trades Union Congress, representing the other side of the employer-employee relationship, announced that it had protested to the Chancellor of the Exchequer against the continued restriction of hire-purchase. The motor-car, domestic-appliance and furniture industries have at various times urged on the Chancellor the need for relaxation. While opposition to hire-purchase controls was thus gathering strength, Sir Oliver Franks, chairman of Lloyds Bank, addressing the Liverpool and District Bankers Institute, attacked another familiar method of economic regulation, control of bank-credit. He did not emphasise the very real grievance of the banks against this method of control, applied, as it is in Britain, selectively: its impact falls on the banks that do business with the general public, not on the merchant banks, whose functions are more specialised, nor on the U.K. branches of overseas banks. These institutions—and even hire-purchase finance companies, their normal function restricted by hire-purchase control—have granted credit to customers of the banks whom the banks were not allowed to satisfy, and business has thus been transferred from the banks to other institutions without benefit to the national economy. Sir Oliver did not complain as a banker, but he pointed out that the intentions of the authorities, when they restricted bank-credit, could be frustrated by these alternative facilities, by more liberal use of trade credit, and by encashing savings.

The *Westminster Bank Review* has recently published three articles by Mr. J. C. R. Dow, deputy director of the National Institute of Economic and Social Research, discussing methods of economic regulation, and its purpose. The trend of these articles is strongly critical of orthodox monetary regulation and decidedly inclined towards fiscal control through the medium of the annual Budget. Mr. Dow believes that consumption—which, in Britain, accounts for a half of all final expenditure and influences the rest—should be regulated to grow at an even rate, and that, while monetary policy can control some kinds of consumption, only fiscal measures can control consumption as a whole. While Mr. Cameron Cobbold, the retiring Governor of the Bank of England, misses no opportunity to speak in defence of Bank rate, the British Government shows some inclination towards more direct methods. Its plans for public investment in the next fiscal year (beginning next April) were published five months earlier than usual, with the evident intention of revealing that public spending would be somewhat increased, to support an economy whose private sector was weakening at some points. But, obviously, long-term investment is not a practical means of adjusting short-term variations in the economy.

In the present difficult phase ideas flow freely, but no convincing solution of the nation's main problem has yet been proposed. Familiar methods of control are criticised; then the criticisms are criticised. We have a fairly clear view of the inadequacies of the various methods but no indication of the right method. It is easy to condemn hire-purchase controls when the industries whose sales are largely financed by credit are underemployed, but it is difficult to deny that expenditure on these industries' products was formerly excessive. It is easy to show that control of bank credit has been inept, but it is difficult to deny that the growth of bank-credit was endangering the currency. It is easy to argue that central control of the quantity of money and the cost of credit is imprecise, but it is difficult to deny that taxes, mostly fixed once a year, are comparatively inflexible. The fact remains that the policy adopted by the British Government early this year has not worked as intended. The strength of sterling in the foreign-exchange markets may seem to be evidence to the contrary, but it is a strength in quotations, not in the currency itself: the flow of short-term money, attracted by Britain's high interest-rates, has concealed the basic weakening in the balance of payments—a result of the decline in exports. Unquestionably, the restraints have been effective at home: they have restricted demand and relaxed the pressure on industry—albeit unevenly. But at the next stage the Government's plan has failed: restraint at home has not promoted exports.

This is the central problem for 1961. Restrictions have impeded growth, but they have not improved the balance of payments. But can they be safely removed? The threat of instability was apparent in 1959, and the failure of the policy adopted in response to that threat does not imply that the threat was imaginary. "Re-expansion" from a position of weakness is a dangerous policy. What is needed, first, is a clear understanding why British industry, as a whole, is unable to exert itself effectively abroad. It may be that the financing of export trade is inadequate—this matter is receiving attention. But it may be that the basic trouble is not in financial policy but in industry itself: that too much of Britain's output is produced by small, unenterprising, firms.

RIGHTS SHARES AT A PREMIUM

THE decision of the Bengal Coal Co. Ltd to issue ordinary rights shares at a premium of 100 percent has given rise to a great deal of conjecture in stock market circles about the prospects for new share issues by established companies. Considering that no share issue of more than Rs. 10 lakhs can be made except with the approval of the Government, it is clear that a company issuing rights shares is entirely at the mercy of official directives. Unfortunately, on this subject the Controller of Capital Issues does not appear to follow any logical policy in ensuring uniformity of practices. Recent examples of some rights share issues show that in fixing the terms and conditions the Government has acted quite arbitrarily. Some good companies with impressive dividend records and fair prospects have been permitted to issue rights shares at par, while others have been forced to charge substantial premiums.

The right of the Government to regulate share issues at the present time is not disputed; during a period of planned development it is necessary to channel savings into approved activities. But there can be no justification for the regulations being enforced in a haphazard manner as is done at present. Under normal conditions, shareholders are free to decide whether new shares in their companies are to be issued at par, at premiums or at discounts. The decision is obviously made in line with the circumstances suited to each company. The basic idea underlying the fixing of premiums on new share issues is that a company wants to obtain larger resources without increasing its share capital proportionately. Company managements usually pursue cautious policies on the increasing of share capital. But the intention of charging premiums is that shareholders are compensated adequately at a later date by capitalising the premium reserve through the issue of free bonus shares. In any case, these premiums are usually fixed in line with various circumstances, of which the convenience of the shareholders concerned is given priority.

It is, therefore, appropriate that in fixing the terms and conditions under which rights share issues are made, the Government should proceed on the basic principles of equity and justice. The need for formulating a codified policy in this matter is the greater because the capitalisation of share premium reserves has been hampered by a heavy bonus share tax. As long as the latter is not abolished, it is questionable whether it is fair to enforce heavy premiums on rights share issues at all. Unless more liberalisation is introduced in the matter of issuing rights shares at reasonable premiums, investment in ordinary shares will be discouraged. It should be borne in mind that people generally take the risks of business by investing in ordinary shares with a view to obtaining rewards from the growth of the companies concerned. But this growth prospect has been undermined by the arbitrary method of fixing high premiums on rights shares and enforcing a heavy bonus share tax.

As far as the Bengal Coal Company is concerned, the proposed rights share issue is likely to be easily subscribed in view of the fact that the scrip are considered to be blue chips. It has been decided to issue rights ordinary shares in the proportion of one new share for every five held at a premium of Rs. 100 a share, the par value of the shares being Rs. 100 each. The present paid-up ordinary share capital is Rs. 1 crore and is supported by impressive reserves of more than Rs. 1.90 crores. The Company has an excellent record of working results and the dividend performance has been very satisfactory. During the year ended October 1959—this is the latest year for which the accounts have been published—a taxable ordinary dividend of 25 percent was paid, offering a yield of 7.2 percent at a price of Rs. 347 a share. Considering that the dividend was covered three times over, it is reasonable to expect that the Company will find little difficulty in servicing the extended share capital satisfactorily. Meanwhile, the Company has paid an interim ordinary dividend of Rs. 10 a share, taxable, for the year ended October 1960. During the year ended October 1959, the same interim dividend was also paid. The proceeds of the new share issue are likely to be used for expansion and development.

Current News and Comment

A.C.C. Raises Dividend

The directors of the Associated Cement Companies have recommended a dividend of Rs. 12 a share, subject to tax, for the year ended July 1960. This compares with the previous year's gross dividend of Rs. 11. The latest net dividend works out to Rs. 8.40, against Rs. 7.70 for 1958-59, Rs. 8.50 for 1957-58 and Rs. 9 for 1956-57. During the past 23 years, A.C.C. has only twice declared dividends of 10 percent, free of tax. The market is pleased with the increase in the dividend for 1959-60, although it is almost in line with general expectations. As a result, A.C.C. shares have improved from Rs. 147 to Rs. 150 since the official announcement. The shareholders of the Company recently submitted a memorandum to the chairman, through the Bombay Shareholders Association, requesting an increase in the dividend. The proposed increase, however, falls short of the shareholders' plea for 10 percent, tax-free.

The Company, it is reported, has done fairly well during the past year because cement output and despatches have increased. The gross profit is expected to show a substantial rise, but informed sources believe that the profit after providing for depreciation, development rebate and taxation will not be sufficient to pay the proposed dividend. The Company, it is said, has been obliged to draw on the general reserve, as was the case in the previous year. As cement is now in a sellers' market, the outlook for the shares is viewed with optimism.

Hindustan Construction Earns More

The working of the Hindustan Construction Co. Ltd for the year ended August 1960 shows a profit of Rs. 31.87 lakhs, against Rs. 24.37 lakhs in the previous year. The profit has been calculated after providing Rs. 35.61 lakhs for depreciation (against Rs. 1.72 lakhs), Rs. 3.02 lakhs for development rebate (against Rs. 14.54 lakhs) and Rs. 31 lakhs for taxation (against Rs. 25 lakhs). With Rs. 1.22 lakhs brought in and Rs. 4.35 lakhs being the previous year's provision no longer required, the total available is Rs. 37.45 lakhs. From this, the directors have provided Rs. 20 lakhs for special depreciation reserve, Rs. 2 lakhs for dividend equalisation reserve and Rs. 3 lakhs for contingency reserve, leaving a sum of Rs. 9.99 lakhs. The dividends absorb Rs. 7.76 lakhs, and Rs. 1.23 lakhs is carried forward. The directors state that the Company secured contracts worth Rs. 11.84 crores during the year. Work bills fetched Rs. 9.55 crores (against Rs. 9.56 crores). Work-in-progress at the close was valued at Rs. 5.94 crores (against Rs. 8.40 crores). The work in Bhilai, Rihand and Koyna is progressing satisfactorily.

Scindia Steam Dividend Disappoints

On Wednesday last week, the shares of the Scindia Steam Navigation Company fell sharply within a few minutes from Rs. 14.76 to Rs. 13.60. The fall followed the announcement that the directors have recommended a dividend of 60nP gross a share for the year ended June 1960, against Rs. 1.30 gross in the previous year. Shipping companies have been having a difficult time, as freight earnings have been declining while operational costs have been increasing. The working of Scindia Steam has been particularly discouraging. That the dividend for 1959-60 would be cut was widely expected. But few imagined that it would be cut by more than 50 percent. The Company paid a net dividend of 91nP for 1958-59, but the actual disbursement was 96nP because of the relief under Section 15C. The net dividend for 1959-60 works out to only 42nP.

The actual figures concerning the working results in 1959-60 are not available. But it is doubtful whether the performance will be less discouraging than the dividend. Reliable sources say that the Company might carry over a loss after providing for depreciation and development rebate. The dividend, it is said, has been paid out of reserves. The directors' report is eagerly awaited by the market. It is reliably understood that Mr. Tulsidas Kilachand and Mr. Lalchand Hirachand have resigned from the board of Scindia Steam. The resignations are yet to be formally accepted.

Hindustan Motors Diversifying

In their report for the year ended March 1960, the directors of Hindustan Motors Ltd give some idea of the progress made in producing indigenous components for the Ambassador motor-car and the Bedford lorry. It is stated that almost 70 percent of the components for the Ambassador motor-car are now made in the Company's factory. The remaining 30 percent need to be made mainly by ancillary industries. As for Bedford lorries, the manufacture of the chassis frames has already been completed. The Company has asked the Government for permission to produce the Bedford diesel engine. When the permission is obtained, steps will be taken to import the equipment required. The production of motor-cars and lorries has increased during the past year, but the factory is still working below the installed capacity due to the shortage of imported components. The directors say that the Government should expedite imports of components if production is not to suffer. The demand for motor-cars and commercial vehicles is likely to increase, so Hindustan Motors has already submitted its expansion proposals to the Government. The directors think that the profit of the Company has been held down by the low price charged for Hindustan products. But buyers of motor-cars and lorries will not subscribe to this view.

Steps have been taken to diversify the activities of Hindustan Motors. It has entered into agreements with various foreign collaborators for the manufacture of mounted diesel powered excavators and components, bulldozers and scrapers, cranes and Athey dumpers. Production of these items will begin when import licences for raw materials and capital goods are obtained.

The Company's profit has increased from Rs. 34.88 lakhs in 1958-59 to Rs. 1.37 crores in 1959-60, after transferring Rs. 51.80 lakhs (against Rs. 69.63 lakhs) to depreciation and Rs. 30 lakhs (against Rs. 8.10 lakhs) to development rebate reserve. Taxation absorbs Rs. 68 lakhs. A taxable ordinary dividend of 9 percent has been declared. This offers a ield of 4.5 percent at a price of Rs. 20.19 a share, and is covered more than two and a half times. The ordinary dividend was 5 percent, tax-free, in the previous year. As for preference dividends, they have now been paid at the stipulated rate of 6 percent, taxable, but the directors have asked the Calcutta High Court for permission to increase the dividend by 2.57 percent. As soon as the sanction is obtained, the further amount of 2.57 percent will be paid and provision for this has been made in the accounts. The carry-forward is Rs. 3,63,217, compared with Rs. 5,18,731 brought in. It is worth noting that there are arrears of initial depreciation and development rebate to the extent of Rs. 84 lakhs.

Maiden from Anil Hardboards

The shares of Anil Hardboards have risen during the past week from Rs. 340 to Rs. 370. The improvement reflects the market's satisfaction over the Company's working results for the year ended March 1960, which has enabled it to declare a maiden dividend of 6 percent on the equity capital. Both the ordinary and the preference dividends are on a tax-free basis, as the payment is to be made out of the Section 15C profit reserve. The Company has made a gross profit of Rs. 22.18 lakhs in 1959-60, against Rs. 12.88 lakhs in the previous year. After providing Rs. 9.93 lakhs for depreciation and Rs. 91,017 for development rebate, the net profit is Rs. 10.12 lakhs. With Rs. 4,351 brought in, the total available is Rs. 10.16 lakhs. After allocating Rs. 2.49 lakhs for unadjusted depreciation and Rs. 3.76 lakhs for development rebate for the previous year, there remains a balance of Rs. 3.89 lakhs. The directors have transferred Rs. 3.75 lakhs to the Section 15C profit reserve and provided Rs. 14,000 for tax. The carry-forward is Rs. 966. The proposed dividends will absorb Rs. 3.38 lakhs.

It has been decided to increase the capital of the Company by issuing 10,000 equity shares of

Rs. 100 each. The new shares are to be offered to the existing shareholders at par in the ratio of one new share for every three held. The directors state that the factory worked to full capacity during the year. The Company has been listed with Directorate-General of Supplies and Disposals, New Delhi, and has secured a substantial contract for the supply of hardboards to the railways. Work on the insulation board project is proceeding satisfactorily, and foreign exchange for importing machinery has been obtained from the World Bank through the I.C.I.C.I. The machinery is expected to reach India by March 1961 and the factory is likely to start production by the end of next year.

Jardine Henderson Earns Less

The directors of Jardine Henderson Ltd have made some interesting observations on the prospects for the Company in their report for the year ended March 1960. They say that the improved earnings from the jute mills during the past year should not be taken as a pointer to subsequent trends. The industry has found it difficult to get enough raw jute, so the profitability of the mills is being undermined by the high price of fibre. As for the tea companies, it is pointed out that drought during the early part of the current season has hampered production, so earnings from this industry are also likely to decline. Although earnings from the coal companies fell during 1959-60 following the implementation of the expansion schemes, it is hoped that there will be a substantial improvement in the current year. The coke company has incurred substantial losses, so the benefits of renovation and rationalisation there will not be reflected in increased earnings for Jardine Henderson for some time.

The working of the subsidiaries is improving. Diamond Products Ltd and the Kassipur Co. Ltd have been expanded. Progress has been made with the new works of Meameco Private Ltd in Dhanbad. Negotiations have been going on with foreign collaborators for producing mining machinery, and the Government has been asked to sanction the project. The directors mention that early in 1960, Braithwaite and Co. India Ltd, in which Jardine Henderson has a considerable interest, took over the control of the Angus Engineering Works near Calcutta. It is proposed to expand and diversify the activities of this concern.

Providing Rs. 1.42 lakhs (against Rs. 1.36 lakhs) for depreciation, the profit of Jardine Henderson has declined from Rs. 27.51 lakhs to Rs. 27.03 lakhs. A taxable ordinary dividend of 7 percent has been declared. This offers a yield of 10.1 percent at a price of Rs. 69.50 a share, and is covered more than one and a half times. The ordinary dividend was 5 percent, tax-free, in the previous year. Taxation is allocated Rs. 9.50 lakhs (against Rs. 11.30 lakhs) and general reserve Rs. 1 lakh (against Rs. 2.50 lakhs). The carry-forward is Rs. 5,21,494, compared with Rs. 540,165 brought in.

Usha Martin Black: Steel Ropes

Usha Martin Black (Wire Ropes) Ltd, a new Company, is expected to offer ordinary shares of Rs. 10 each and 9½ percent taxable cumulative redeemable preference shares of Rs. 100 each for public subscription at par in the near future. It proposes to build a factory near Ranchi, in Bihar, for producing steel ropes and wire ropes, in collaboration with Martin Black and Co. (Wire Ropes) Ltd of the U. K. The installed capacity of the factory is expected to be 7,200 tons a year. There is a good demand for the products which Usha Martin Black proposes to manufacture, but most of the requirements are now met by imports. The principal raw materials which the factory will use are high carbon steel rods. These will be largely imported because the domestic production of the rods will take some time to increase. The Government, it is believed, has assured the factory of a timely supply of rods. Production is expected to begin before the end of 1962. The directors hope to be able to pay reasonable dividends from then.

Poor Results from Burma Corporation

The Burma Corporation (1951) Ltd, which is jointly owned by Burma Mines Ltd and the Government of Burma, has earned a profit of £164,002 for the year ended June 1960, compared with £204,979 in the previous year, after transferring £150,000 to taxation and £82,725 to depreciation. Working difficulties, combined with the decline in the prices of lead and zinc, have contributed to the fall in profits. It is stated that it will be necessary to write off the expenditure incurred on geological exploration previously carried-forward from the profit which has been made. The production of refined lead was 16,929 tons, of refined silver 1,530,693 fine ounces, of copper 344 tons, of nickel 275 tons and of zinc 18,287 tons.

Royal McBee Typewriter Proposal

Royal McBee International Inc. of the U.S.A. has, it is understood, submitted a proposal to the Government of India for setting up a factory to manufacture typewriters in this country. The sponsors have a programme for the progressive manufacture of 24,000 typewriters a year, the indigenous content of the products being increased gradually. Production in the first stage, it is proposed, will be 6,000 units, with an indigenous content of 40 percent to 50 percent; in the second stage, 18,000 units with an indigenous content of 70 percent to 80 percent; and in the third stage 24,000 units, with 100 percent indigenous content. The project is estimated to cost Rs. 75 lakhs, out of which the U.S. Company will provide Rs. 45 lakhs and the rest will be raised in India. If the scheme is approved by the Government, a new company might be set up under the name of Royal McBee (India) Private Ltd. The total licensed capacity in India at present is 33,000 typewriters and production is to be raised to 100,000 units a year by the end of the third plan according to an assessment made by the Planning Commission. Apart from Royal McBee International, it is reported, three more concerns have submitted to the Government schemes for the manufacture of typewriters.

Indo-Nippon Chemical Venture

The Indo-Nippon Chemical Co. Ltd is a new enterprise formed in Bombay to undertake the manufacture of plasticisers such as D.A.P., D.B.S., D.H.P. and D.O.P., which are raw materials for the leather cloth, plastic, paint, lacquer and electric cable industries. The factory will be located in a suburb of Bombay, and is expected to go into production early next year. The plant will have an initial capacity of about 900 tons of plasticisers a year but the Company has asked the Government to allow it to double the capacity because of the large and unsatisfied demand in the country. Promoted by the Gandhi Parekh Investment Corporation Private Ltd of Bombay, the Company has an authorised capital of Rs. 50 lakhs. It is likely to enter the capital market only after it has secured the Government's permission for expansion. The Japan Cotton and General Trading Co. Ltd of Osaka is the foreign collaborator.

Directive to India United Mills

The Government of India's Department of Company Law Administration has directed the India United Mills in Bombay to adopt the principle of proportional representation for its board of directors. This is the first time the Government has used its powers under Section 265 and 408 of the Companies Act. Section 265 provides for the appointment of directors on the principle of proportional representation by a single transferable vote. Section 408 defines the powers of the Government for preventing oppression and mismanagement in the affairs of a company. The Government's directive was inspired, it is said, by a petition from shareholders representing minority interests.

Two rival groups in the India United Management have long been struggling to acquire complete control over the Company. Efforts to settle the dispute have failed. The managing agency of Agarwal and Co. expired on 15th August, 1960, as no application for its renewal was made in time. One group succeeded in securing an overwhelming majority of votes The minority group then applied to the Government under Section 408 of the Companies Act, asking for proportional representation on the board of directors. The Government enquired into the matter, and felt satisfied that it was necessary to take action to prevent the affairs of the Company being conducted in a manner which was oppressive to some members and prejudical to the interests of the Company. It has, therefore, directed the Company to amend its articles in the manner provided in Section 265, and then make a fresh appointment of directors in pursuance of the articles so amended within 90 days of the date of the order, which was issued on 15th November. Meanwhile, until the elections are held, the Government has appointed two independent persons, Mr. N. K. Petigara and Mr. S. G. Nivetia, as additional directors on the board. Whether the Government's intervention will help improve the affairs of the India United Mills, it is difficult to say. But it may serve as a warning to other companies which are in a similar position.

Chemical Equipment Project

A new company, whose name has still to be finally decided, is being formed in Bombay to establish a factory for the manufacture of plant and equipment suitable for use by petroleum refineries and industries such as fertilisers, pharmaceuticals and heavy chemicals. The industrial licence has been secured in the name of Mr. Navin M. Mapara. The company will have an authorised capital of Rs. 2 crores, consisting of 20,000 7 percent tax-free cumulative redeemable preference shares of Rs. 100 each and 180,000 equity shares of Rs. 100 each. The issued capital will consist of Rs. 10 lakhs in preference shares and Rs. 90 lakhs in equity shares. The factory, which hopes to have an installed capacity for producing goods worth Rs. 4 crores, will be located near Bombay. The major raw materials it will use are mild steel, bright and carbon alloy steels, titanium, monel and non-ferrous alloys. While mild steel and non-ferrous alloys will be available in steadily larger quantities from indigenous resources, most of the other items will have to be imported. But there will be a substantial saving in foreign exchange by way of conversion costs. The project is estimated to cost Rs. 2 crores, which it is proposed to raise by issuing capital worth Rs. 1 crore and by negotiating long-term credits for the purchase of plant, machinery and equipment on deferred terms (excluding the initial payment). The company hopes to sign technical collaboration agreements with established U.S., British or other manufacturers of international repute

With the rapid development of the chemical, dye and pharmaceutical industries, the manufacture of the plant and machinery they need has become increasingly important. The Central Ministry of Commerce and Industry has recommended a target of Rs. 50 crores a year for the manufacture of chemical machinery in the third plan. The indigenous production in 1957-59 was valued at only about Rs. 70 lakhs a year. There is thus great scope for expansion. Mr. Morarji J. Vaidya will be chairman of the company.

Factory for Motor-vehicle Wheels

A new unit for the manufacture of motor-car and truck wheels will soon be set up in Bombay by B. K. Sahney and Sons. The industrial licence has been secured in the name of Sardar Sant Singh of the New India Trading Company. The project is estimated to cost about Rs. 50 lakhs, of which Rs. 20 lakhs will be in foreign exchange. Joseph Sankey and Sons Ltd. the British wheel manufacturers, will provide the technical know-how. The factory, which will be located in Kurla, near Bombay, is expected to turn out 100,000 wheels on a single-shift basis during the first year of production. The demand for motor-car and jeep wheels is at present placed at 125,000 and for the wheels of commercial vehicles it is 175,000. With the third plan targets for motor-cars, jeeps and lorries fixed at 30,000, 10,000 and 60,000, respectively, the requirements of wheels would be around 600,000. There is thus considerable scope for new units for manufacturing auto wheels.

Sheet Piles against Manganese Ore

The State Trading Corporation, it is understood, is considering proposals for importing about 5,000 tons to 5,500 tons of sheet piles for a certain barrage project against the export of manganese ore. The sheet piles will have to conform to prescribed specifications They will be released to allottees by the Iron and Steel Controller (Barrage Projects) at prices which will be fixed later. The contracts for exporting manganese ore will be negotiated by the S.T.C. with overseas suppliers of sheet piles as principal to principal. The manganese ore buyers will be required to open confirmed, divisible, assignable and irrevocable letters of credit valid for a period of 60 days beyond the anticipated date of delivery. Preference will be given to those who are prepared to lift the maximum quantity of 40-42 percent grade of manganese ore and are willing to supply sheet piles on the most competitive terms. The S.T.C., it is reported, will be under no obligation to consider the lowest or any other tender.

Manganese Ore Policy Criticised

The new export policy for manganese ore announced on 23rd November has evoked a good deal of criticism from the trade. Export quotas will be allotted for a period of three years beginning from January 1961. Newcomers and non-quota-holders will get an opportunity to participate in the export business, although only as agents of the State Trading Corporation. Increased facilities are being made available so as to make rail movement free as far as practicable. These are welcome changes but they are unlikely to help exports much. The benefits of a long-term policy will necessarily be limited unless there is some sort of guarantee that no export levy will be imposed on the ore during this period. In order

to co-ordinate the movement capacity with export potential and also to ensure supplies of ore according to the qualities and schedule of deliveries desired by overseas buyers, all export transactions under the new policy will have to be registered with the State Trading Corporation. But the compulsory registration of contracts is strongly resented by the trade; it runs counter to normal business practices, especially since the Corporation is also exporting manganese ore. The trade has criticised the provision whereby all barter deals will have to be routed through the Corporation. It is not convinced by the Government's argument that arrangements with the S.T.C. for joint marketing will enable established shippers and mine-owners to develop their relationship with traditional buyers of Indian ore. On the contrary, fears have been expressed that established shippers will not be eager to continue exports if they have to place all their cards before the S.T.C. The trade should be given more freedom if it is to expand its activities.

Price Support for Agriculture

Replying to questions in the Lok Sabha recently, the Central Minister for Food and Agriculture, Mr. S. K. Patil, declared that the Government might intervene in the interests of farmers if the present downward trend in agricultural prices continues. In a welfare State, the Government has a duty to protect everybody's interests, including the producers', but Mr. Patil could not say at what stage the Government might intervene. When the Central Government acted in 1955, wheat was selling at about Rs. 10 a maund and gram at about Rs. 8 a maund in the U.P. and Punjab markets. At present, wheat is being quoted at about Rs. 16 to Rs. 18.25 a maund in Hapur, and the price of gram ranges from Rs. 16 to Rs. 17 a maund. It appears from this that there is no cause for alarm yet. The Central Deputy Minister for Food, Mr. Krishnappa, has declared that in spite of floods, drought and the locust invasion, the overall crop situation is quite good. But, even so, that does not indicate that the downward trend in agricultural prices will persist to the extent of harming cultivators.

Until the overall production exceeds the demand for food in the country, there cannot be a steep fall in prices. Under the circumstances, therefore, the concern being expressed at Government level for agriculturists must be deemed premature. Its only topicality is that general elections are coming nearer and the ruling Party has a vital interest in keeping the rural population happy and contented. It is easy enough to say that prices should be fixed in such a manner that they are fair to both the producer and the consumer. Fairness to the producer involves fixing a price which will make agriculture not only self-supporting but profitable. On the other hand, fairness to the consumer involves fixing a rate which will ensure food supplies for the common man at a reasonable price. Perhaps at no stage does either the producer or the consumer feel fully satisfied. But the general opinion in recent years has been that agriculturists have improved their position fairly well. In future, it is through increased production that they must strive to augment their income—not through high prices created by scarcity conditions or through official programmes of artificial price support.

Introduction of Powerlooms Opposed

Although the introduction of powerlooms in the handloom industry is necessary for increasing production, it is disappointing that even now spokesmen for the latter cannot get fully reconciled to the change. Mr. Somappa, president of the All-India Handloom Fabrics Marketing Co-operative Society, has said recently that the handloom industry is working at only 50 percent of its actual capacity, so the Government should allow it to use its full capacity before encouraging powerlooms. The latest to announce a programme for the introduction of powerlooms is the Government of U.P. Under the scheme, 750 powerlooms will be set up and four yarn preparatory factories will be established to feed the looms with sized beams. Primary co-operative societies of handloom weavers with a satisfactory record of work will be given 15 powerlooms each, and the State Government will advance loans as working capital and for purchasing electric motors and other equipment. Powerlooms have also been actively sponsored by the Madras Government, and its Chief Minister, Mr. Kamraj Nadar, has appealed to handloom weavers to take to powerlooms so that they can produce more, earn more and operate without Government subsidy.

Whatever might be the pace of the official programme for persuading handloom weavers in the co-operative sector to switch to powerlooms, there has been some evidence that unauthorised powerlooms have been set up in different parts of India on a large scale. Working without a licence, they have reaped rich profits by evading duties, taxes and labour laws. But the Central Government has agreed to treat these cases leniently, because the prosecution of the owners will lead to both unemployment and shortage of cloth. The Planning Commission's estimate of production in the handloom sector in 1960-61, namely, 2,100 million yards from handlooms and 405 million yards from powerlooms, has been disputed in some quarters. It is believed that the respective figures will be 1,063 million and 1,055 million yards. If these latter figures are correct, it could only mean one thing—that the benefit of the measures adopted by the Government at the expense of the mill sector to help handlooms has gone to powerlooms.

Road Transport in Madras

A recent seminar in Madras considered the State Government's policy on road transport. It is reported that the Government has objected to a uniform single-point tax on motor-vehicles. It claims that roads have been improved by stiff taxes on transport but it was pointed out at the seminar that heavy vehicles and increased traffic have heavily damaged the roads in the State. Road transport, it was argued, provides more employment, involves a smaller outlay on track maintenance and ensures revenue for the State from motor-vehicles. But a spokesman of the State Government pointed out that it probably spends much more than it collects from the road transport industry. He added that it does not get a share of the excise duty levied on petrol and diesel oil or the import duty on raw materials for the motor-vehicle inudstry. There is no denying that the road transport industry helps to develop small local engineering enterprises.

Third Plan for Madras

The third plan for Madras has recently been revised at the instance of the Planning Commission. The total outlay under it will be about Rs. 291 crores, of which Rs. 190 crores will be found by the Centre. The State expects to invest largely in power development, to supplement the supplies from the Neyveli project. A sum of Rs. 45 crores will be advanced to co-operatives in the form of loans. Besides, part of the outlay of Rs. 8 crores on handlooms will be recoverable from co-operatives. The plan visualises the development of Tuticorin port and foresees a great future for it as an industrial centre for manufacturing chemicals with salt. The Parambikulam scheme is included; it promises an extension of irrigation in the area adjacent to Kerala. The financial assistance promised for the State Finance Corporation may not finance many new industrial ventures, for the Corporation needs larger resources. A sum of Rs. 75 lakhs has, however, been provided for the Salem steel project which, it is said, is still being scrutinised by the Government. The establishment of a State-owned rolling mill at a cost of Rs. 1 crore to produce 20,000 tons of steel products a year, it is stated, will not affect the existing Indian Steel Rolling Mills in Nagapatam. The latter may raise additional capital to finance its expansion. An important place is assigned to the manufacture of fertilisers. It is stated that the Neyveli urea project will be under the Centre but its output will supplement that available from the private sector.

Commonwealth Aid for Poor Countries

Efforts to stimulate capital investment throughout the Commonwealth have been urged by the Federation of Commonwealth and British Empire Chambers of Commerce. It believes that governments should improve the investment climate by providing better transfer facilities and reducing tax levels. The recommendations, made at the Federation's twentieth congress in Canberra earlier this year, are outlined in a report issued recently. The 160 delegates have passed more than 60 recommendations on social and economic development in the Commonwealth. Special emphasis is laid on the problems of poor countries which have to sell their goods to develop their economies. "Other Commonwealth countries should examine ways and means of buying from them in even greater quantity and variety than at present." The congress felt that all Commonwealth countries should re-examine their "industrial protective machinery" at stated intervals to see whether unnecessary artificial barriers to an expanding economy were being created. "Governments should be urged to undertake periodic reviews of levels of tariff protection and their consequences." Another recommendation was that underdeveloped countries should be helped to expand their exports as a means of payment for imports. "Energetic efforts should also be made through improved Commonwealth trade to counteract the growing threat of State trading or bilateral arrangements between certain communist countries and members of the Commonwealth." As a possible solution to the problem of raising standards of nutrition in under-developed countries, the congress favoured the idea of a food bank under the United Nations. This will allow all needy countries to obtain supplies under special financial arrangements.

Outlook for British Exports

According to the *Export Guide* prepared quarterly by the General Electric Company, the only foreign markets in which Britain's export prospects are deteriorating are the United States, Venezuela, Belgium, Ceylon and Kenya. It analyses 34 foreign markets and finds that in 25 of them the outlook is considered good, in six it is improving, and in the remaining five deteriorating. A "bad" category is included, but no market has come under this heading since the beginning of 1960. The report has considered the European position in more detail. Although the meeting between Mr. Macmillan and Dr. Adenauer in August was welcomed as a turning point in Britain's relations with the European Common Market, there have been few concrete results. In fact, the speeding up of moves towards a common external tariff for the "Six" makes serious discrimination more likely. On the other hand, attitudes are changing both in Britain and the Continent.

Traditional British objections to joining the European Common Market—Commonwealth preference agriculture and, more recently, membership of the European Free Trade Association—are losing much of their force. Business men and union leaders are increasingly concerned about the drift of investments from Britain to the European Common Market. On the Continent, it seems to be agreed that there should be no further extension of the political powers of the Common Market's institutions. This in itself is a big step towards the British position, but the report warns that the present favourable conditions may well disappear. Unless the U.K. Government is prepared to accept the principles of the Rome Treaty within the next few months, there may be serious economic consequences. The situation is also changing rapidly in Africa. Until recently, British exporters faced little competition in U.K. territories there, but as self-government spreads, these safe markets are not only expanding but being thrown open to foreign competition. If Britain is to retain a reasonable share of the trade, she must be prepared to adapt her policy to the speed and diversity of these changes. At present, the most developed markets are in Ghana, Nigeria and the Central African Federation. The *per capita* national income is still low but is rising, and imports a head are rising even faster.

Ban on Cow Slaughter

The Cow Slaughter Acts passed by some State Governments have been frequently criticised, presumably because the sentiments of the draftsmen have been getting the better of the discretion which the Supreme Court has for the second time enjoined on them. The Governments of Bihar, Madhya Pradesh and Uttar Pradesh have been directed by the Supreme Court not to enforce the provisions of their respective Cow Slaughter Acts as far as they relate to the slaughter of bulls, bullocks and buffaloes. It will be recalled that in April 1958, the Supreme Court ruled that the three Acts were void since they imposed a total ban on the slaughter of breeding bulls and buffaloes without prescribing any test or requirement as to their age or usefulness. Following this, the State Legislatures amended the Acts prescribing age-limits. Bihar prescribed 25, while Uttar Pradesh and Madhya Pradesh prescribed 20. Rejecting these as unreasonable, the the Court declared: "We are clearly of the view that the almost unanimous opinion of the experts is that after the age of 15, bulls, bullocks and buffaloes are no longer useful for breeding, draught and other purposes, and whatever little use they may have then is offset by the economic disadvantages of feeding and maintaining unserviceable cattle." Accordingly, it held that the complaint of the petitioners, who were engaged in slaughtering animals, that the object of the Act was to put a stop "for all practical purposes" to their profession, was justified. In 1958, while delivering judgment, the Chief Justice, Mr. S. R. Das, said that economically too it is questionable wisdom to keep useless cattle alive. Whatever fodder is available, he said, should be preserved for cattle capable of yielding milk or doing work. Preservation of useless animals is not in the best interests of the nation since the useless cattle deprive the useful ones of a good part of the fodder, cause deterioration in the breed and eventually affect the production of breeding bulls and working bullocks, besides involving an enormous expense for their upkeep.

According to the livestock census of 1951, there were 155.09 million cattle and 43.35 million

buffaloes. In spite of this large population, the value of livestock products in that year amounted only to Rs. 664 crores, or about 16 percent of the national income from agriculture. Article 48 of the Constitution prescribes that the States should endeavour to organise agriculture and animal husbandry on modern and scientific lines. Besides, they should take steps for preserving and improving the breeds, and prohibiting the slaughter of cows, calves and other milch and draught cattle. An expert committee on the prevention of slaughter of cattle was appointed by the Government of India in 1954, and it came to the conclusion that a complete ban on the slaughter of cattle would result in an enormous growth of the cattle population estimated at the rate of 6 percent a year. In 1953, the Gosamvardhan Enquiry Committee appointed by the U.P. Government reported that fodder resources available in the State were sufficient only for about 58 percent of the cattle population. So there cannot be two opinions that in defining the scope of bans, a realistic view has to be taken by the Governments concerned. The establishment of an unlimited number of *gosadans* is impracticable. However commendable it may be on humanitarian grounds, it cannot be a principle in State policy.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity showed a drop of 25.2 points during April 1960. There were decreases in sugar, jute, yarn, cloth, cement, pig iron, finished steel, motor-cars, bicycles, electricity and railway ton-miles. Tea, coal, paper and tyres showed rises.

THE HINDU MARRIAGE SYSTEM

MR. MALABARI is a Parsee, who for very many years past has fervently believed—or professed to believe—himself endowed with a special faculty for grappling with the mysterious intricacies of the Hindu marriage system. It is, perhaps, needless to observe that the vast body of orthodox Hindus, without exception, consider the would-be reformer a meddlesome, impertinent busy-body, possessing a vast fund of self-conceit and exuding many obnoxious irrelevancies. Whether this opinion be a reasonable one we shall not attempt to determine. On the other hand, a certain set of well-meaning people, both at Home and here, have done not a little to strengthen Mr. Malabari's good conceit of himself. On the whole, it is the people at Home who have invested Mr. Malabari with extraneous importance. He has pleaded the cause of the child-wife and the child-widow in the ears of English people who, naturally enough, being profoundly ignorant of the physiological, religious and traditional point of view, from which the Hindu regards the whole matter, have regarded Mr. Malabari somewhat apparently in the light of a Parsee apostle, or missionary or evangelist, with a latter-day Gospel on his tongue for latter-day sufferers and sinners in the East. The English people who have listened to him are, of course, in a hopelessly false position, not because the evils against which Mr. Malabari inveighs are not a fertile source of misery—as are many of our own customs for that matter—but because Mr. Malabari is emphatically not the kind of man who is likely to be listened to for one single instant by the Brahmanic priesthood. His position is something like that of a Hindu reformer in the West, who should endeavour to impress upon the British matron, the advantages of the *zenana* for the aristocracy and upper classes, or who should endeavour to imbue the British workman with a profound horror of the wickedness attendant on eating a beef steak and drinking a pot of four ale.

A Ditcher's Diary

WHEN SUCH UNRELENTING ANGLOPHOBES AS Dr. Lohia oppose the coming Royal visit on the grounds that it will promote the use of English and strengthen India's attachment to the U.K., then they are expressing an opinion to which they are undoubtedly entitled. My own, is that English needs little encouragement in India today—unless it is the proper use of it—but that if the Queen's presence here improves Indo-British relations, then that is a good thing if only because friendship between nations is always better than its opposite. But Dr. Lohia may disagree, and I am not the one to force my views about the advantages of cordial relations between nations on anybody. Where I feel I must take issue with him, however, is on the question of the "considerable expenditure" incurred for the Royal visit, which he deplores and I must welcome. I am not referring to the buntings and decorations which will no doubt be brought out for the occasion; the Queen would be the first to agree that these should be kept within reason. It is the money going on improving the roads, clearing up eyesores, and generally making Calcutta at least look as if somebody cares for it, that I consider is being well spent. And no previous distinguished visitor has touched off a bigger wave of civic consciousness in this city, not even Messrs Bulganin and Khrushchev. Even if Dr. Lohia begrudges all this, I doubt if many long-suffering ditchers would agree with him. For years the road to Dum Dum has been accepted by air travellers as the ugliest approach to any major airport in the world. When I went along it the other evening it was as congested and chaotic as ever, but for once there were signs of work in progress and improvement on the way. Such souvenirs of the Royal visit may be expensive, but they will be much appreciated long after the Queen passed on her way. I hope there will be many of them, expense notwithstanding; so much needs to be done here and it can be a long time between Royal visits.

AS A MATTER OF ROUTINE, OR SO IT SEEMS TO ME, Mr. C. S. Jha lodged a protest with the United Nations against the beating up of Indian army officers in the Congo last week. I do not see the point at all; and neither may Mr. Hammarskjoeld, who has only to forward the protest to Mr. Dayal or Brigadier Rikhye at Leopoldville to reveal the meaninglessness of the Indian action. If the United Nations in the Congo fails to protect Indian personnel, the failure must surely be Mr. Dayal's and Brigadier Rikhye's—both Indians; it is no use saying they are U.N. personnel now. Mr. Krishna Menon is quite right in thinking that if the U.N. fails in the Congo the future of the world organisation itself will be in jeopardy. All I have to add is that the failure of the U.N. is no longer in doubt; and India's continued participation in O.N.U.C. can do little to help the U.N. while it may do a great deal of damage to India's reputation in Africa. Dr. Nkrumah's hostility to any U.N. action which does not fit in with his own ideas, which many consider expansionist, has been steadily on the increase; and I wish I could say he is not representative of a large volume of African sentiment. If, thus, the U.N. makes itself unpopular in Africa, which is more than probable, some of that will inevitably attach to this country. Not as though there is any law of nature that India must in all circumstances support everything African; but if that is Delhi's wish, as has often seemed to me, sticking to the U.N. operation in the Congo is difficult to understand. After its adventitious success over Suez, the United Nations began to have illusions that it is some sort of a world government. Of course it is nothing of the kind; and the biggest mistake, for which India and some others bear part responsibility, was to make the U.N. do more than it comfortably can. The Congo is beyond the line of that capacity; and all we have before us now is a full picture of the weaknesses inherent in the United Nations. The U.N. serves many useful purposes. It serves none when nations want it to serve their own particular ends; and on this count the guilty parties include Russia, America and Ghana.

IT WAS A PLEASURE TO MEET IN CALCUTTA THIS week some of Germany's most attractive actors and actresses; and the one film I saw, *The Royal Game*, was certainly a fine specimen of German efforts in the cinema. In Federal Germany the current industrial boom, which makes Berlin (west) a perfect setting for lavish films, could hardly have left the film industry unaffected. Indeed, life in Germany now has many resemblances to life as depicted in some of Hollywood's loudest products. Having recently made the Americans look almost like poor relations, the Germans are apparently determined to challenge Hollywood too. My first reaction is one of unmixed delight, for Calcutta, or for that matter India, sees too few non-American films. Goodness knows the Continent produces as much cheese-cake as America or Britain. But France, Germany and Italy have also produced some of the finest films ever made; and we would all appreciate seeing more of them. But here misgivings creep in. An excessively export-minded film industry, which may well be Hollywood's besetting sin, thinks too much of foreign audiences; and to that extent its products are less genuinely native in character. A friend who knows tells me that even Madras and Bombay might have produced less rubbish if they had not become so obsessed with the thought of capturing an all-India audience. If West Bengal Bengal has in recent years put itself firmly on the world's film map, it is because Bengali films are primarily for provincial audiences. There is thus less money and more talent; the reverse is true of Bombay, where they never tire of churning out imbecile imitations of Hollywood's worst "spectaculars". In past years the best German films have been brutally realistic. I shall be sorry to see that realism replaced by fantasy; but, of course, there is no reason why a big market *must* mean bad films.

PORTUGAL, ACCORDING TO MR. NEHRU, IS NOW THE world's premier colonial power. With due respect to the Prime Minister, I should like to point out that he is wrong; that somewhat dubious distinction belongs to Russia, and I am surprised that such a well-informed man as Mr. Nehru should make that kind of mistake. Apart from its possessions in Europe—which it rules in the good old-fashioned imperialist way through puppet governments—Russia has a vast colonial empire in Asia which, although an integral part of the U.S.S.R., she has about as much right to pass off as her home territory as Portugal has to claim Goa as part of hers. I have just been reading an article in the 19th November issue of the *Economist* on Uzbekistan, a so-called "autonomous" republic, but in fact a colonial possession which was added to the Russian empire at about the same time as Algeria was to the French. There is no denying that it is a well-run colony; as the article points out, Russian achievements there are impressive in industry, agriculture, education and the social services. But it is a colony nevertheless; the best jobs are filled by Russians, the indigenous population is losing its distinctive character, and the Muslim religion is fast being extinguished altogether. There is a commendable absence of social, race or colour distinctions, of course; but this, I believe, is often said in defence of Portuguese colonies. The point is that efficient though it may be, beneficial to the local inhabitants though it obviously is, and sanctified by silence though it has become, this is still colonialism, is still suppression of local customs and aspirations, and is still a classic example of imposed isolation from the outside world maintained by force of arms. Much the same, in fact, as under the Portuguese system. The difference is that whereas, with the exception of Portugal, the western colonial powers have not been successful in cutting their possessions off entirely from external influence, or have not even tried, Russia has been brilliantly successful and continues to be so. But in substance, the only difference between the case of Russia and Uzbekistan and that between France and what she is trying to make of Algeria—and what India opposes in the name of anti-colonialism—is just a few short miles of salt water.

GOLD, I SEE, IS BEGINNING TO REGAIN SOME OF THE prestige as a hedge against inflation which it has lost in recent years to, among other things, French post-impressionist paintings, Louis XIV-style furniture and Ispahani carpets. According to Dr. Franz Pick—the man who is currently credited with deciding for the U.S. Treasury that the "critical" level for the U.S. gold reserve should be $18,000 million—total unofficial private gold hoards throughout the world had risen to an all-time record of $13,600 million by the end of October 1960, an increase of approximately 3 percent above the 1959 estimate. I suppose this is inevitable at a time when even the more optimistic observers are predicting that the dollar must be devalued within the next year or two, and a fair number of other currencies along with it. Perhaps the most discouraging feature of this renewed wave of hoarding, however, is that world liquidity is being reduced thereby; gold which disappears into private hands is not available for financing world trade. In fact, again according to Dr. Pick, the world's private gold hoards are equivalent to the combined stocks of yellow metal held by the central banks of Belgium, Canada, France, West Germany, Holland, Italy, Switzerland and the U.K., and exceed that with the International Monetary Fund by about five times. In other words, the free world is being deprived of its sources of liquidity at precisely the time when it needs them most to promote increased world trade. One probable outcome of this is, of course, an increase in the price of gold, which means, in fact, a devaluation of the dollar. Or, a further alternative—and this is one on which I would very much like to read Dr. Pick's opinions—the emergence of another currency, backed more adequately with gold, to rival the dollar and sterling as a convertible international trading medium. In other words, the reformed rouble. Well, why not?

THE AHMEDABAD ELECTRICITY COMPANY LIMITED

CHAIRMAN, MR. A. N. HAKSAR'S REVIEW

The following is the speech delivered by Mr. A. N. Haksar, Chairman of The Ahmedabad Electricity Co. Ltd., at the Annual General Meeting of the Shareholders held on 29th November, 1960:

Gentlemen,

The Forty-eighth Annual General Meeting of the Company is the first to be held after the inauguration of the State of Gujarat. The new State embraces an area which is both prosperous and progressive and it is certain that the achievements of the past will be more than embellished under the new constitution. It is perhaps not realised today, that, in years gone by, your Managing Agents made a substantial contribution to the growth of the region which today is the State of Gujarat. Apart from various industrial enterprises including your own Company, they promoted a number of Railway Companies which more than anything else, perhaps, led to the opening up and rapid development of the northern part of the old Bombay State. We, today, are as alive as our predecessors to the needs of the new State, and on your behalf, as well as my own, I extend Greetings and all best wishes to Gujarat in the years to come. As in the past your Company will be called upon to play an important part in the development of Gujarat and I am certain that we shall not be found wanting.

As an example of what I have just referred to, I would like to tell you that on the eve of the birth of the new State your Company was called upon to make available special power facilities to numerous premises, both public and private, in the city of Ahmedabad and its environs. All these calls were fully met and I am pleased to say that the promptness with which the Company responded to the demands has been fully appreciated and recorded by the Gujarat Government.

Expansion in Generating Capacity

The area served by your Company has witnessed significant industrial development in recent years, in the wake of a rapid expansion in generating capacity at the Sabarmati Power Station. With the formation of Gujarat State the pace of development is expected to be stepped up at an even quicker pace. This will be seen from the fact that the Gujarat Electricity Boards is now engaged in organising large scale thermal development at Dhuwaran, near Cambay, comprising three 50 MW sets with an option for one more similar set. The Board of your Company following the decision to purchase 30 MW of plant, has now decided to repeat the order even before the first set is installed. Materials for this first set are now beginning to arrive from the suppliers and the commissioning date is expected to be at the latest, March 1962. The idea of repeating the earlier order is to try and ensure that additional power capacity is brought into commission by March 1963. Sanction for this new expansion has been received from the Gujarat Electricity Board, and it is hoped that Government will release Sterling for the new project. It is appreciated by all concerned that a repeat order will bring the quickest relief to the power starved city of Ahmedabad and Gujarat State as a whole. Efforts are therefore under way to obtain the necessary clearance from the Exchange and Import Authorities so that firm orders can be placed with the overseas suppliers.

With the completion of these extensions, the Sabarmati Power Station will have reached its optimum size at the present site. As far as is known at present the first 50 MW set at the Dhuwaran Thermal Station is expected to be commissioned by the end of 1963 or the beginning of 1964. The subsequent sets are expected to be brought into commercial use every 3/6 months thereafter. Further power for Gujarat is expected to be available from the proposed 300 MW Nuclear Power Station to be installed at Tarapore in Maharashtra. Power from this source may not, however, be available during the Third Five Year Plan period. Hydro power resources in Gujarat have large scale potentialities but by its very nature development of hydro power is time-consuming and consequently new power capacity from these sources will not be available until after the Third Five Year Plan period.

Plant Capacity

In the immediate years ahead, therefore, power availability both in the North Gujarat and South Gujarat regions will be limited by the plant capacity at Sabarmati Power Station (217.5 MW), Dhuwaran Thermal Station (200 MW) and the Utran Thermal Station of the Gujarat Electricity Board (67.5 MW). These together will make a potential installed capacity of 480 MW. Making due allowance for standby, it has been anticipated that by the end of the Third Five Year Plan period, the demand in the combined regions including Saurashtra will out-pace the available capacity by at least 30 MW. In the light of experience gained in so many power systems the world over one has been led to expect a much faster rise in demand than planners generally have reckoned with. I predict that this trend will, if anything, be even more marked in Gujarat, in view of the new sense of drive and direction in industrial development following the creation of the new State. There may therefore be scope for your Company to expand even further its generating capacity. I am sure I echo your views when I say that the Company for its part is more than ready to take upon itself further obligations in this direction. This, however, would entail the location of additional generating plant at a completely new site, and preliminary thoughts are already being given to this problem.

Whatever may be the Company's position in Gujarat's scheme of power development, whether it continues to export power for distribution by the Gujarat Electricity Board or whether it will have to import power from the Board for distribution in its own licensed area, there can be no doubt that a large measure of finance will be needed to augment distribution facilities in its area of supply. Certainly the City of Ahmedabad is a centre of great load density, but the history of power expansion shows that there is no such thing as saturation point and money will be needed in the years to come to satisfy the inevitable growth in demand.

Investment in Electricity Supply Industry

Speaking of development, it is only appropriate for me to elaborate at this stage on the factors which influence adversely, investment in the Electricity Supply Industry at the present time. Since the application of the financial provisions contained in the Electricity (Supply) Act, 1948, Electricity shares have continued to shed their values. The Amendment Act of 1956 brought no improvement. The situation became worse when the Finance Act of 1959 prevented "grossing up" of dividends as hitherto and in addition, shareholders had to suffer a deduction of tax at the rate of 30% from the dividends paid to them. The Industry's memorandum submitted to the Ministry of Irrigation & Power following the enactment of the Finance Act, 1959 suggesting that the tax deducted from dividends be permitted as a charge on the consumer of electricity did not find favour with the authorities, and the best which has been achieved so far has been a recommendation by the Government of India to the State Governments requesting the latter to permit undertakings as special appropriation, the tax relief of 6¼% representing the difference between the old rate of taxation of 51.5% and the present rate of 45%, being permitted to be ploughed back into the business without deduction from the capital base.

As your Company has a 'nil' assessment for the financial year 1959-60—for which period the tax relief visualised would apply—there cannot be any tax "saving", but nevertheless an opportunity has been taken pursuant to the recommendation by the Central Government, to represent to the Gujarat Government that in our cases the sanction should be extended to cover notional tax relief. Government's reaction is still awaited.

Need for Adequate Incentive

More recently the Federation of Electricity Undertakings of India has on behalf of the Electric Supply Industry, formulated proposals for consideration of the Central Government which, among other matters, are to include (1) shifting of the tax burden on to the consumer, which if conceded would automatically permit the tax at the prescribed rate deducted from dividends payable to the shareholders being reckoned as a charge for determining the clear profit under the Electricity (Supply) Act, and (2) an increase in the Standard Rate by 1% on the old capital block and 2% in respect of new finance. Profitable opportunities are available for equity capital in other sectors of industry, and it is to be hoped that the authorities will recognise that capital always flows towards the enterprise which can offer the best return. While the problem of offering adequate incentive for new capital is paramount in relation to development, the need to restore values in existing equities is equally important. Otherwise disinvestment in the Industry already evident in loss in share values, will be further accentuated. I believe that it was the intention of those who framed the Electricity (Supply) Act that investors in the Industry should receive a net return on their investments. I further believe that the return stipulated at the time was worked out taking into account the fact that it has always been the general practice to gross up dividends in the hands of shareholders. I would therefore urge those who are at present engaged in reviewing the financial provisions of the Act to consider this point and frame a reasonable return on investments accordingly. I would also like to point out that in so many other ways does the Electric Supply Industry receive priority in planning and in foreign exchange allocation for example, although unfortunately much of this priority is directed towards the Public Sector. I hope that the Authorities will not overlook the major contribution which the Private Sector has to make in the field of power development. However more should be known about the liberalisation of the *Electricity (Supply) Act within the next few months.*

While at this stage we must suspend judgment on any future financial provisions of the Electricity (Supply) Act, we must face up to the need to raise finance to cover expansion plans. As far as the first 30 MW Extension is concerned, the foreign exchange component has been covered by a loan of $3.9 million (equivalent to Rs. 1.85 crores) which the Company was very fortunate to receive from the Development Loan Fund of the United States. This loan carries interest at 3½% repayable in 15 years in semi-annual instalments, the first instalment being repayable three years after the first disbursement. This loan will make it easier to finance the second 30 MW project and how best the needed resources can be raised will receive your Board's consideration in due course.

Demand for Power

The demand for power on the Company's System has continued to grow, and recently the maximum demand has reached the danger level of 150 MW. With an installed capacity of 157.5 MW this means that we only have one old 7.5 MW generating set available as standby in case of breakdowns and the greatest ingenuity is needed in order to carry through the programme of routine maintenance. For the present a measure of control involving the staggering of recesses on a 5 group basis has been introduced for the Textile Mills in Ahmedabad. This load control is expected to bring about a relief of 3 MW. There can be no doubt however that until the first 30 MW Set is brought into commission in March 1962, further control measures will be necessary. Furthermore the demand for power is growing at such a pace that it would be rash to assume that controls will not be necessary after the installation of the first 30 MW set. Much of the capacity of this set has already been mortgaged and by March 1962, overhauls of our hard worked existing plant may be necessary.

I have no doubt that suitable measures will be implemented as circumstances demand so that the available power supply can be equitably distributed to the best advantage of all concerned. In the meantime the heavy load carried by the plant installed in the Company's Power Station speak well of both the type of plant in operation and the skill and hard work of the operating staff in keeping it in good order. The operating difficulties have been further accentuated by the inadequate movement of coal supplies to the Company's Power Station in the recent months. This has been due partly to the diversion of coal to the new steel plants and partly to the recent Railway Strike. However, I should be failing in my duty if I did not point out the serious consequences that would arise if for any reason there was a further stoppage of vital coal supplies to our Power Station. The problem is of general application at the present time, and we are in close touch with the authorities to try and ensure that adequate stocks are built up.

Your Company's agreement with Killick Industries Limited, the Managing Agents, was renewed by the Central Government with effect from 1st April 1960 for a period of 5 years. May I take this opportunity to stress that your Managing Agents will strive to conduct your affairs even more vigorously than has been the case in the past. We are fully aware of our responsibilities at this critical juncture in your Company's affairs and once again I would ask those people who in recent years have tended to be critical of us to give us a chance to show that we are fully capable of improving upon even the high standards of the past.

The Accounts for the year under review reflect a satisfactory position. The proposed final dividend of Rs. 4/50 per share, making 7% for the year, represents some improvement, albeit small, and a sum of Rs. 1 lac has been set aside to the Equalisation of Dividends Reserve.

Tax Relief

A reference has been made earlier to the Company's application to the Gujarat Government claiming as a special appropriation under the Electricity (Supply) Act the tax relief of 6¼% on the notional assessable income. A sum of Rs. 4,71,778/- has been set aside on this behalf in the Accounts under review, subject to the sanction of the State Government. In view of the fact that it would be a condition of the approval that the money will be ploughed back into the business, it is hoped that the approval will be forthcoming.

You will also have seen that the note which was appended to the Balance Sheet up to 1958-59 concerning the contingent liability for Additional Income-tax on Dividend, is omitted in the Balance Sheet under review. This is due to the fact that following the judgment of the Supreme Court on test cases filed by the Income-tax Department, all the appeals filed by this Company overing the six years 1948-49 to 1953-54 have been heard and disposed of in favour of the Company. The sum of Rs. 4,03,922/- which was actually paid in respect of 1948-49, subject to appeal, has also been refunded.

It now remains for me to record our thanks to the Resident General Manager, Mr. K. N. Paulin, and all ranks of the staff for yet another year of successful operations. While on the subject of staff and before closing my speech I would also like to make reference to the fact that our relations with the Union have never been more cordial than at present This has not been only because of the efforts made by the management but is also due in no small measure to the friendly co-operation which we have received from the officials of the Union I hope that this satisfactory state of affairs may long continue so that the Company and the Union may share their joint responsibilities to our employees, consumers and shareholders.

Note: This does not purport to be the proceedings of the Annual General Meeting which can be seen by any shareholder on request.

Money

THE CALCUTTA MONEY MARKET

INTERBANK CALL RATE FALLS

Wednesday, 30th November.

THERE has been a substantial rise in the level of advances in the Calcutta money market during the past week. The biggest increase is on account of the larger requirements of the jute industry, but the sugar factories too show a rise. The demand of the cotton textile mills has decreased, as has that on account of foodgrains and seeds storage. Conditions in the interbank market are somewhat easier on the week, with the official call rate reduced to 3½ percent and business reported at 3½ percent; even at these levels there are lenders over.

The recent improvement in the exchange market has been well maintained during the past week, with a further rise in the supply of tea bills. Gunny documents, however, remain scarce. Demand for remittance has been moderate. The pound has weakened on the London money market and shows net losses against all important currencies.

BULLION WAS STEADY DURING THE PAST WEEK. There was evidence of fair upcountry support. Silver advanced from the previous week's level of Rs. 224.50 to Rs. 225, quoted today for ready delivery. The rate for forward delivery was Rs. 224.75. The London and New York prices were 79½d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 136 to Rs. 137. The sovereign was Re. 1 higher at Rs. 91.75.

DURING THE WEEK ENDED 25TH NOVEMBER, Government of India Treasury bills for Rs. 46,91,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 29th November. The total amount offered was Rs. 2.4 crores. Tenders at Rs. 99.365 were accepted in full, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 5th December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 30th November to 3rd December at Rs. 99.381 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 23rd November to 26th November, amounted to Rs. 3 lakhs only.

DECLINES OF Rs. 9.34 CRORES TO Rs. 1,820.31 CRORES in active notes, and of Rs. 9.04 crores to Rs. 1,842.66 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 25th November, 1960. Notes held in the Banking Department consequently rose by Rs. 30 lakhs to Rs. 22.65 crores. Deposits of the Central Government increased by Rs. 13.66 crores to Rs. 67.35 crores, but other Government accounts fell by Rs. 13.17 crores to Rs. 10.32 crores. Balances of commercial banks at Rs. 98.43 crores showed a rise of Rs. 3.31 crores. Balances held abroad improved by Rs. 34 lakhs to Rs. 16.96 crores. Investments were Rs. 9.18 crores higher at Rs. 244.16 crores. Other loans and advances declined from Rs. 118.42 crores to Rs 114.50 crores, of which advances to scheduled banks against usance bills amounted to Rs. 4.27 crores (Rs. 6.36 crores). Ways and means advances stood at Rs 31.39 crores, against Rs 30.23 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 18th November, 1960, shows a drop of Rs. 8.72 crores to Rs. 569.48 crores in total deposits. Investments in Government securities are down by Rs. 7.21 crores to Rs. 328.46 crores, while other authorised investments are up by Rs. 15 lakhs to Rs. 10.14 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 2.97 lakhs to Rs. 209.65 crores. Cash and balances are, in consequence, shown at Rs. 26.92 crores or Rs. 1.79 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 18th November, 1960, shows Demand and Time liabilities at Rs. 789.24 crores (Rs. 21.15 crores on account of borrowings from banks) and Rs. 1,134.64 crores (Rs. 17.21 crores), compared with Rs. 785.34 crores (Rs. 21.86 crores) and Rs. 1,144.46 crores (Rs. 16.26 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.23 crores and Rs. 8.30 crores to Rs. 46.33 crores and Rs. 93.33 crores respectively. There is a drop of Rs. 7.33 crores to Rs. 680.83 crores in investments. Advances and bills discounted at Rs 1,106.66 crores show a fall of Rs. 2.39 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.3 percent and 57.5 percent, against 7.7 percent and 57.2 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of August 1960:

		Rs.
(1) At the Reserve Bank of India	...	59,63,73,000
(2) At treasuries in India	...	34,53,000
(3) In England (sterling converted at 18d the rupee)	...	20,00,000
Total	...	60,18,26,000

man's faith

Faith that makes man aspire, strive ...
awakening him to tasks in the early-glow of dawn.
That melts rock, shapes granite; transforms
still waters to surging power.

A faith in the living future:
in a world that offers a little more—
a little less of the care, a little more of the joy.
Faith that gives meaning to life.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for ... **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products ...

Today and Tomorrow... Hindustan Lever serves the home

Stocks and Shares

LIMITED PROFIT-TAKING FOLLOWS COMPANY BILL AMENDMENTS

SELECTIVE PRICES WELL MAINTAINED

Wednesday Evening.

THE adoption of three important clauses of the Companies (Amendment) Bill in the Lok Sabha last Monday, has caused a certain amount of profit-taking in the Calcutta share market. At the end of today's trading, most scrip were quiet, but the main speculative counters, and many other prominent shares, were well mantained. The first of these clauses empowers the Central Government to end the "undesirable cornering of shares" or the acquisition of control of a company, which might be prejudicial to the public interest or the interest of the company, by "freezing" the transfer of shares for a three-year period. The second gives the Government a larger measure of control over the appointment of sole selling agents, while the third (Clause 136) makes a major change in the existing law and provides that no company may normally make an investment in other companies in excess of 30 percent of the subscribed capital of the investing company.

The Prime Minister's comment in the Rajya Sabha that there had been no noticeable change in Sino-Indian relations since the two countries began talks on the border issue, and his terse remark that there was "no alternative to talks except war", also contributed to the feeling of nervousness which prevailed earlier in the week.

With more lenders than borrowers in the money market, Government securities ruled steady with a general enquiry for all dated issues. Three percent Conversion Loan 1946-86 were well maintained at around Rs. 74.50.

In the banking section, United Commercial shed Re. 1 to close at Rs. 85.

In coal, the only steady feature was Bengal, which are now full of rights, and there were buyers at the higher rate of Rs. 344.

In cotton textiles, Kesoram were softer at Rs. 27.75 as were Dunbar at Rs. 21.75.

Electric supply shares were dull and neglected, except Patna which were better today at Rs. 10.37.

In the engineering group, Indian Iron & Steel, after being done up to Rs. 24.14, moved steadily downwards to Rs. 23.60, but closed slightly better tonight at Rs. 23.84. Braithwaites were unchanged at Rs. 32.25, while Guest, Keen, Williams eased to Rs. 38.50, as the recent excitement over the rights issue has died down. Jessops were subdued at Rs. 19.87, while Textile Machinery, after being sold down to Rs. 23.10, recovered at the close to Rs. 23.35.

Jute shares failed to evoke any interest, and in the absence of enquiry, quotations, where changed, were lower. New Central were particularly quiet at Rs. 21.44.

In paper, Orient were quietly steady at Rs. 80 and Shree Gopal at Rs. 26.50. Sirpur were softer at Rs. 18.25 while Titaghur were fairly steady at around Rs. 38.

In sugar, Belsund were steady at Rs. 14.50, but Cawnpore receded to Rs. 13.

Among miscellaneous industrials, Alkali & Chemical, after being done up to Rs. 37.50, slipped back at the close to Rs. 35.62 on profit-taking. Angelo Brothers were offered at Rs. 19.75 and Britannia Biscuits dropped from Rs. 38.37 to Rs. 37. Dunlop Rubber were fairly steady at around Rs. 42.81 as were Hindustan Lever at Rs. 45.25. Gwalior Rayon were marked down to Rs. 42 and Hindustan Aluminium to Rs. 8.44. Hindustan Motors were softer at Rs. 19.75 as were Indian Aluminium at Rs. 30.25. India Steamship, after being done up to Rs. 10.12, closed lower at Rs. 9.56. Metal Box were firm at Rs. 44.87 as were National Insulated Cables at Rs. 29.75 x.d. and Indian Cables at Rs. 32.81. National Pipes & Tubes were a good feature and rose on investment buying to Rs. 20.75. National Rolling were also firm at Rs. 19.25 as were Philips India at Rs. 27.12. Rohtas Industries were quiet at Rs. 21.75 following the sale of a large block of shares during the week-end. Union Carbide closed Re. 1 lower at Rs. 48.

Very little business was put through in tea shares and prices moved narrowly.

In the mining section, Indian Copper met with good enquiry during the earlier part of the period under review and at one time were taken up to Rs. 4.66, but subsequently, in sympathy with the rest of the market, were marked down at the close of business to Rs. 4.60. Karanpura Development met with good enquiry and improved further to Rs. 18.

Sijua (Jherriah) Electric

The profit of the Sijua (Jherriah) Electric Supply Co. Ltd has increased from Rs. 3.23 lakhs to Rs. 3.67 lakhs for the year ended March 1960. A taxable ordinary dividend of Re. 1 a share has been declared, against 75nP, tax-free, in the previous year. Notable allocations include Rs. 1.77 lakhs (against Rs. 1.55 lakhs) for taxation, Rs. 39,139 (against Rs. 36,866) for contingencies reserve, Rs. 52,481 (against nil) for development reserve, Rs. 60,000 (same) for debenture redemption reserve and Rs. 25,339 (against nil) for special appropriation reserve. After transferring Rs. 5,000 from general reserve and making other adjustments, there is a carry-forward of Rs. 2,037, against Rs. 6,962 brought in. During the year, 124.1 million units were sold, compared with 106.7 million units.

Cowcoody Estates

The Cowcoody Estates Ltd has made a profit of Rs. 1.56 lakhs for the year ended June 1960, against Rs. 1.11 lakhs in the previous year. A taxable ordinary dividend of 25 percent, including an interim of 10 percent, has been declared. Depreciation absorbs Rs. 16,561 (against Rs. 14,760). Taxation is allocated Rs. 41,900 (against Rs. 27,200) and general reserve Rs. 25,000 (same). There is a carry-forward of Rs. 27,670, compared with Rs. 28,560 brought in. The crop was 99.155 tons, against 101.457 tons.

Investment Trust

An ordinary dividend of 5 percent has been declared by the Investment Trust of India Ltd for the year ended September 1960. The net revenue has amounted to Rs. 46,253. Bringing in Rs. 7,644 and making other adjustments, there is a balance of Rs. 3,897, which it is proposed to carry forward.

Bengal Bonded Warehouse

The Bengal Bonded Warehouse Association has produced satisfactory results for the half-year ended October 1960. There is an increase of Rs. 28,000

to Rs. 2.78 lakhs in gross earnings. A dividend of 6 percent has been declared to absorb Rs. 81,000, while Rs. 2,000 is allocated to building and repairs fund. Making other adjustments, there is a carry-forward of Rs. 3,200, against Rs. 2,434 brought in.

Bombay Market

PRICES DECLINE ON REDUCED INTEREST

TATA OUTPUT RUMOURS DEPRESS SENTIMENT

Wednesday Evening.

THE Bombay stock market has been quiet during the past week, and share prices declined on a broad front in the absence of interest. Operators were inclined to lighten their commitments in view of the many uncertainties. The possibility of little improvement in Indo-Chinese relations in the near future called for caution. The amendment of the Indian Companies Act, proposing to place further restrictions on promotional expenses and transfer of shares, disturbed sentiment. Talk of a decline in the production of Tata Iron and Steel Company in November promoted selling pressure.

Tata Steel lost at Rs. 141.25, but Indian Iron were quietly steady at Rs. 23.52 on scattered support from Lyons Range. Tata Locomotive declined to Rs. 296 at the close after an earlier steadiness prompted by the fact that the Company has obtained big orders from the Government for the supply of metre-gauge locomotives. Larsen and Toubro were sold down to Rs. 37.25, but Premier Construction were bought up to Rs. 296 by knowledgeable quarters. Mukand Iron were transacted at Rs. 22.24. Alcock Ashdown were offered at Rs. 250. Profit-taking reduced the prices of motor shares. Premier Automobile changed hands at Rs. 172 and Hindustan Motor were quiet at Rs. 19.56.

Sellers predominated in cotton mill shares on fears that further cuts in cloth prices might be enforced by the Government. Bombay Dyeing backed away to Rs. 62.30, as did Century to Rs. 457. Khatau met with scattered support on the view that the new project may help earnings. Kohinoor were available at Rs. 266 and Simplex were sold down to Rs. 161. India United Ordinaries met with selling pressure in view of uncertainties regarding the management of the Company. Apollo were freely offered at Rs. 1.34.

In the miscellaneous group, sugar shares were quietly steady, and Belapur lost at Rs. 391 on profit-taking. Phalton came to hand at Rs. 188 and Walchandnagar Industries were dealt in at Rs. 297. Among steamship company shares, Scindia declined to Rs. 13.68 on paying a lower taxable dividend of 60nP a share, against Rs. 1.30 a share, taxable, in the previous year. Great Eastern Shipping were quoted at Rs. 15.52. Mining shares were steady, and Shivrajpur Syndicate were bought up to Rs. 71. Among cement shares, Associated Cement were supported up to Rs. 148 on paying a satisfactory dividend of Rs. 12 a share, subject to tax. Digvijay Cement were quoted at Rs. 156. Chemical shares were quiet, and Tata Chemical were sold down to Rs. 16.60. Colourchem were slightly steadier at Rs. 335, but Indian Dyestuff declined to Rs. 495. National Rayon fell to Rs. 492 and Bombay Burmah were lower at Rs. 577. Voltas met with investment support up to Rs. 264, but Gwalior Rayon lost at Rs. 43. Anil Hardboards were steady at Rs. 357.50 on the decision to issue rights ordinary shares in the proportion of one new share for every three held. The Company has also declared a maiden dividend of 6 percent, tax-free, for the year ended March 1960. Ceat Tyre were dealt in at Rs. 220 and Premier Tyre improved to Rs. 87.

There was scattered support for bank shares, and Central Bank were transacted at Rs. 56. Bank of Baroda were taken at Rs. 82.50. In the insurance group, New India Assurance were dealt in at Rs. 54.50 and Indian Mercantile changed hands at Rs. 42.50.

Among public utilities, Ahmedebad Electric were bought up to Rs. 87 and Tata Power were done at Rs. 1,032.50. Bombay Suburban were quoted at Rs. 85.

Madras Market

TURNOVER DECLINES ON LOWER ADVICES

INVESTORS PONDER COMPANIES ACT AMENDMENT.

Wednesday Noon.

THERE was a substantial decline in turnover in the Madras stock market during the past week and only routine business was transacted. Lower advices from the Calcutta and Bombay stock markets induced caution. Investors were worried about the proposed amendment of the Companies Act. In Government securities, prices of short-dated loans improved slightly. Selected cotton mill shares were bought on good corporate news. Planting shares lacked interest and coffee shares were freely offered on the declaration of some disappointing dividends. Tea and rubber scrip met with only scattered support. Interest in miscellaneous shares was at a low ebb.

In the banking group, Indian Overseas were steady at Rs. 175 and Punjab National were transacted at Rs. 19.37. Among public utilities, small interest was taken in South Madras at Rs. 10.20 and in West Coast at Rs. 14.

Among sugar shares, E.I.D. met with support at Rs. 44.25 and Deccan up to Rs. 16. Business passed in United Breweries up to Rs. 114.50 and Travancore were dealt in at Rs. 10.85. Andhra were bought up to Rs. 28 and Mysore were wanted at Rs. 60.50.

Among planting shares, Blue Mountain were transacted at Rs. 4.15 and Consolidated Coffee declined to Rs. 22.50 on paying a taxable dividend of 20 percent. Cochin Malabar were dealt in at Rs. 7.15 and Ouchterlony changed hands at Rs. 4.95. Periakaramalai were taken up to Rs. 3.57 and Peermade were steady at Rs. 22.75. Mysore Plantation were sold down to Rs. 2 on passing over the dividend for the year ended March 1960. Rajagiri were quiet at Rs. 20.12 on paying a taxable final dividend of 10 percent, making 20 percent for the year. Coffee Lands were freely offered at Rs. 20 on declaring a taxable dividend of 6 percent. Be Be were done at Rs. 3.06 and Cowcoody were quietly steady at Rs. 5.16. Business passed in Kil Kotagiri at Rs. 5.55 and Midland were transacted at Rs. 12.15. Nonsuch were quiet at Rs. 26.55, as were Parkside at Rs. 30.

In the textile group, South India Viscose were bought up to Rs. 161 on the news that the scrip have been listed on the Bombay stock market. Lakshmi were steady at Rs. 157, as were Madura at Rs. 35.25. Travancore Rayon were dealt in at Rs. 35.50. Adoni met with support up to Rs. 9.60 and Buckingham gained at Rs. 200. Bangalore Woollen were neglected around Rs. 197. Rajalakshmi were done up to Rs. 74.50 and Ramakrishna were transacted at Rs. 224. Vijaylakshmi were quoted at Rs. 85.

In the miscellaneous group, Aluminium Industries were taken at Rs. 23 and Ashok Leyland changed hands at Rs. 8.78. India Cement were steady at Rs. 6.12 and Enfield were quoted at Rs. 15.50. F.A.C.T. were done at Rs. 10.07 and Kirloskar Electric were quoted at Rs. 13.10. Parry's Confectionery were wanted up to Rs. 4.60 and Singareni were sold down to Rs. 9.97. Spencer were steady at Rs. 22.65 and Standard Motor were bought up to Rs. 17. Tube Investment were in demand up to Rs. 305 on expansion prospects and Textool were offered at Rs. 190.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. RARE SCOTCH WHISKY

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

SUBSTANTIAL FALL IN SHARE PRICES

INDUSTRIALS BADLY HIT

London, 30th November.

THE past week has been the worst of the year in the London Stock Exchange. With the exception of gold shares and gilt-edged securities which offered some resistance to the trend, prices tumbled throughout the market to record substantial and widespread falls on the week. Losses of around 5s were quite common in the industrial market and in quite a number of cases, larger falls were sustained while banking, hire-purchase finance and insurance shares recorded substantial declines. This sharp setback reflected the cumulative effect of an almost continuous stream of adverse news in recent weeks. To start with, the market had not reacted on this news, having been sustained by special factors, notably the reinvestment and prospective reinvestment of the Ford Motors bid money, but the weight of bad news eventually had its effect. The fall was touched off in the first place by the troubles of the hire-purchase finance houses, which have sustained heavy losses due to bad debts and the fall in prices in the second-hand car market. This news was closely followed by further evidence of the deterioration in the consumer durable trades, signs of a slackening in retail trade and the failure of the U.S. mission to Bonn. This last factor raised fears about the effects of any action the Americans may take to protect the dollar in view of the apparent failure to get co-operation from Bonn. With the economic and business outlook so uncertain, buyers held off the market and fairly heavy selling developed. Dealers were unwilling to take stock on to their books and prices were slashed accordingly. The weakness persisted for three days before the fall was halted. Needless to say, however, the market remained highly sensitive after the fall. Oil shares were no exception to the general trend and small losses were recorded on the week. Tea shares remained out of favour, while rubbers turned dull.

The Money Market

Conditions in the money market during the past week were somewhat mixed. After a difficult period when some discount houses were forced to borrow from the Bank of England at the penal rate, the position improved and short-term loans were arranged at rates down to as low as 3 percent. On one day, the supply of credit was such that the authorities operated in the reverse direction in order to mop up the surplus funds. Credit conditions subsequently became difficult again and the discount houses had to pay up to 4⅜ percent for night money. It was again necessary for three or four discount houses to borrow from the Bank of England. In the weekly Treasury bill tender, rates for both the 91-day and 63-day bills were again lower.

Vegetable Oils Better

Animated trading in groundnut oil and soya-bean oil highlighted the market for vegetable oils and oilseeds in the past week, partly stimulated by the sales of prompt deliveries to France. Groundnut oil shed its recent somnolence and a lively forward shipment business was concluded to Rotterdam. Out of the 2,000 tons required, it was reported that France has so far purchased 1,200 tons at 114s c.i.f. Dieppe and 300 tons at 114½s c.i.f. Marseilles, all for delivery in December. Business to Rotterdam included November-December shipments of Argentine groundnut oil at 110½s c.i.f. with subsequent bidding up to 110½s, while several parcels of Nigerian oil sold to Rotterdam included January-February despatches at 107½s and February-March at 107s, all c.i.f.

Improvement in U.S. Economy Forecast

U.S. investment bankers, assembling in Hollywood for their 49th annual convention, have generally predicted that next year would bring improvement in the U.S. economy and modest gains in the stock market. Many of the men who underwrite and distribute new issues of corporate bonds and shares foresaw the need for increased financing by large corporations next year for plant modernisation and the rebuilding of depleted inventories.

Further U.S. Gold Losses

The United States lost $1.5 million worth of gold on a single day in the past week, the Treasury announced today.

NAMES AND DATES

The second quarterly general meeting of the Indian Chamber of Commerce, Calcutta, will be held at 4 p.m. today at India Exchange, Calcutta. The president, Mr. R. H. Mody, will preside.

New Delhi

MR. MALAVIYA OUTLINES AIMS OF OFFICIAL OIL POLICY

GOVERNMENT TO PRESS HARD FOR BETTER TERMS FROM PRIVATE COMPANIES

(FROM OUR NEW DELHI CORRESPONDENT)

OIL figured in the proceedings of the Lok Sabha last week. The Central Minister for Oil, Pandit K. D. Malaviya, in clear and unambiguous language assured the existing private oil companies that the Government has no intention of making things difficult for them. This is in line with his earlier statement that the Government has no intention of revising the agreements with the oil companies unilaterally, but only with the latter's consent. He, however, made it clear that the Government has every intention of pressing as hard as possible to get "the best terms and most favourable conditions" from the oil companies in all spheres—exploration, production, refining and distribution. He declared that the Indian Oil Company, the Government's oil distributing concern, had come to stay. It will do its work, in collaboration with the private distribution companies if possible, and if not, independently.

Replying to a question in the Lok Sabha, the Minister said: "The first phase of the working plan of the Indian Oil Company Ltd, which covers the period ended 31st March, 1962, has been received on 14th November, 1960, and is under scrutiny for the approval of the Government. The scheme, in the main, provides for (1) the construction of adequate bulk storage installations at the main ports and storage depôts and retail dispensation points, at various places in the economic supply areas; (ii) details of the organisational set-up for handling the distribution and marketing of deficit petroleum products being imported from Russia and the products of Nunmati refinery likely to come on stream early in 1962; (iii) a programme of imports from Russia; (iv) a programme of distribution and sales; and (v) details of capital outlay." The Minister, it will be seen, has confirmed this correspondent's earlier story that the Indian Oil Company had no organisation for distribution when the Russian oil reached India.

Replying to three other questions, Pandit Malaviya said: "As for the transport of petroleum products, the programme of laying pipelines is being considered and may take some time before decisions are taken after techno-economic studies. The crude oil found in the oilfields in Assam will be transported by a 720-mile long pipeline to Nunmati in Assam and further to Barauni in Bihar. The latest estimated cost of this project is Rs. 41.48 crores, while the former estimates were of the order of Rs. 56 crores, Rs. 54 crores and Rs. 44.6 crores, respectively. The decision to transport crude oil from Assam by pipeline was reached after considering the comparative economics of other available means of transport in that area. The crude oil pipeline will be 720 miles long. The first leg of the pipeline from Nahorkatiya to Nunmati will be 260 miles and of 16 inches diameter. The second leg of the pipeline from Nunmati to Barauni will be 460 miles and of 14 inches diameter. To facilitate the transport of crude by this pipeline, there will be eight pumping stations *en route*. The work on this project has already begun."

Replying to another question, the Minister said: "The Indian Oil Company Ltd received its first tanker of high-speed diesel oil from Russia towards the end of August 1960. This oil was discharged in two tanks in Bombay, which the Company had acquired from the Army. The second tanker carrying kerosene from Russia reached Bombay on 7th November. To create storage for the incoming kerosene in Bombay, the Company decided to transfer approximately 3,663 tons of high-speed diesel oil from one of its tanks in Bombay to Naval tanks in Cochin which it has since acquired for its use. This high-speed diesel oil was shipped in a second tanker from Bombay to Cochin, which is the main port for the supply of petroleum products to Kerala State and the adjoining areas."

The Government has decided to establish a refinery with a capacity of about 1 million to 1.5 million tons a year, if possible, in Gujarat. Two new types of Rumanian 4-LD rigs for Cambay have been purchased and the purchase of one more rig of the same type offered is being negotiated.

U.K. Participation in Industrial Exhibition

The U.K. has decided to participate in a big way in the international industrial exhibition, to be held here in the winter of 1961-62. Mr. Michael Balfour, head of the Exhibition Division of the U.K. Board of Trade, is already in India. While in New Delhi, He visited the exhibition grounds to select a site for the British pavilion. He will be having discussions with British industrial undertakings operating in India about their participation in the exhibition.

Training Indian Technicians

Mr. A. H. P. Humphrey, director of Technical Assistance in the U.K., is spending about ten days in this country, particularly in Ranchi and Durgapur, to evolve a long-term programme for training Indian technicians and for the employment of British technicians in India until Indians are trained to take over the operation of the plants. A similar training programme is being arranged with the West German Government, which will pay half the cost of training.

Power, Mining and Transport

Indications are that greater emphasis will be placed in the third plan on power, mining and transport projects. It is no longer a secret that due to inadequate planning of mining and transport, production in the three State steel plants has been delayed. Lack of power is holding up industrialisation, particularly in the south.

Alloy and Special Steels Plant

As already indicated, Durgapur, has been finally selected for the location of the Government alloy and special steels plant. It is a Rs. 15-crore project, for which the "know-how" is expected from the Canadian firm of Atlas. There is some uncertainty about the finance for the project, especially about foreign exchange. The British are unlikely to advance another bulk credit for a tied project, they having already offered £20 million for Durgapur, and £15 million for such projects as the expansion of the heavy electrical plant in Bhopal and a fertiliser plant in Assam. Another £15 million has been offered for the purchase of machinery and equipment. The Canadian firm, it is expected, will offer the know-how, but is not likely to offer credit for the project. Nor will the Canadian Government. It may be that the Indian Government will arrange a number of credits, buying some equipment from Britain, some from West Germany and some from the U.S.A.

New Drugs and Pharmaceuticals Projects

A number of corporations are being set up to undertake the various drugs and pharmaceuticals projects in India. Four projects, which are being financed by Russian credit, will form one corporation. They are the antibiotics project in Rishikesh, U.P., the surgical instruments and medical appliances project in Madras, the synthetic drugs plant in Hyderabad and phyto-chemical (alkaloids) project in Munnar, Kerala. Their compined production will be worth Rs. 30 crores to Rs. 40 crores a year.

The West German combine, Bayer, will participate in the equity capital of another corporation to the extent of 10 percent. It will set up a plant to manufacture organic intermediates required by the Russian-aided corporation and the dyestuff industry.

The third corporation will be the company in Pimpri, which is being expanded with the assistance of the World Health Organisation and U.N.I.C.E.F. and the U.S. firm of Sharpe, Merck and Dohme. This corporation will also manufacture Vitamin C and tetra-cyclins.

In order to secure effective co-operation and co-ordination among the three corporations, it is proposed to constitute a technical committee consisting of their top representatives. This body, it is expected, will lay down the broad policy for the whole industry covered by the three corporations. The representatives of Bayers are already here, selecting site for the plant, preparing lists of the equipment to be ordered from (a) West Germany, (b) other foreign countries and (c) Indian sources. They are discussing the organisational set-up for the project and training facilities in India and West Germany.

Smelter for Sulphur

A big smelter to produce 400 tons of sulphur a day from the sulphur pyrite ore discovered in the Amjore area of Bihar State, it is proposed, will be set up by the Government, Mr. Manubhai Shah, Central Minister for Industry, told the Lok Sabha last week. It is also proposed to set up a plant for the production of 1,000 tons of sulphuric acid a day to meet the growing demand from industries. Mr. Shah, who was replying to Mr. D. C. Sharma and several others, said that the capacity of the sulphur factory and the acid plant has been revised following the discovery of additional deposits of pyrite ores in Amjore area. The earlier estimate was of the order of 8 million tons.

Mr. Shah said that originally it was expected that the smelter would be set up within two years, but now it would take one more year. Asked by Mr. P. Deo how long it would take to bring about national self-sufficiency in sulphur, Mr. Shah said that at present India was importing about 300,000 tons annually. The demand would rise to 600,000 tons by the end of the third plan, and half of it would be met from internal production. He expected the country to meet its sulphur needs entirely through internal production by the end of the fourth plan. Mr. D. N. Tiwary wanted to know the cost of the smelter plant. The Minister replied that the earlier estimate was about Rs. 8 crores, but now it would go up because of the revised plans. Asked by Dr. Ram Subhag Singh whether the Government would set up a fertiliser factory near the sulphur plant to use the ores, Mr. Shah said that the Government would supply the ores to the fertiliser factory to be set up by the State Government in Bihar and also to the Sindri and other fertiliser plants.

Foreign Debt of India

The total outstanding debt of the Government of India as on 1st October, 1960, owed to foreign countries, including the loans from the World Bank, was approximately Rs. 670.80 crores. This is exclusive of the amount of Rs. 93.18 crores representing foreign debt on account of public sector non-Government organisations and private sector agencies, as well as Rs. 60.71 crores due to the International Monetary Fund for the repurchase of rupees. It is also exclusive of the deferred payment liabilities in the public and private sectors. The repayment liability for the Rs. 670.8 crores for the years 1961-62 to 1970-71 will, it is estimated, be of the following order:

Year	Amount (Rs. crores)
1961-62	27.14
1962-63	36.89
1963-64	50.06
1964-65	30.90
1965-66	34.11
1966-67	39.00
1967-68	39.10
1968-69	36.57
1969-70	36.57
1970-71	31.89
Total	366.39

UNDER SECRETARY TO GOVT. 5 DEC 1960 PUBLIC DEPARTMENTS

Allocation of Yen Credit

The entire Japanese credit of 18,000 million yen (Rs. 23.81 crores) has been firmly allocated to various development projects in the public and private sectors. The total value of the loan agreements already signed and loan applications now pending with the Export-Import Bank of Japan is Rs. 16.5 crores. The balance of Rs. 7.31 crores is also fully covered by approvals already given for the purchase of equipment required for power projects, ports, broadcasting and industrial projects. The following are the details of allocations made for Rs. 16.5 crores:

(Rs. lakhs)

	Value of loan agreements signed	Value of pending loan applications	Total
Public sector			
(1) Equipment for power projects ...	369.45	40.23	409.68
(2) Equipment for the National Coal Development Corporation	6.57	17.08	23.65
(3) Tractors for the Rajasthan canal project	11.28	—	11.28
(4) Tractors for the Dandakaranya project ...	120.29	2.96	123.25
(5) Equipment for small-scale industries ...	—	8.95	8.95
(6) Equipment for the Posts and Telegraphs Department	9.79	1.52	11.31
(7) Tanker for the Western Shipping Corporation	108.00	—	108.00
(8) Equipment for roads projects	99.09	65.16	164.25
Private sector			
(1) Cargo vessels for the Scindia Steam Navigation Company Ltd	275.71	—	275.71
(2) Equipment for the rayon industry ...	43.76	322.58	366.34
(3) Equipment for the manufacture of paper, steel wire, etcetera.	54.62	92.52	147.14
Total:	10,98.85	5,51.00	16,49.56

The target of coal production in the third plan, broken down field-wise and grade-wise, was reviewed by the Coal Council of India meeting here last week. The Council also took up the allocation of the target between the public and private sectors at the meeting. On the basis of the targets now finalised for steel, thermal power and railways, which are the major consumers of coal, the demand for coal by the end of the third plan, it is expected, will be of the order of 97 million tons. The target will require production to be stepped up by 37 million tons over the target of 60 million tons set for the second plan. Reports on the progress of work done by the various committees of the Coal Council and the Fuel Efficiency Committee were also taken up at the Council meeting.

New Locomotive Contract for T.E.L.C.O.

Negotiations have been finalised, and a supply contract will shortly be concluded with T.E.L.C.O. for the supply of 325 metre-gauge locomotives to the Indian railways during the period from 1st June, 1961 to 31st March, 1966, covering more or less the third plan period. The present 16-year contract with T.E.L.C.O. will terminate on 31st May, 1961. The agreed prices are Rs. 3,80,750 a Y.G. locomotive and Rs. 3,78,750 a Y.P. locomotive. These prices are below the price of Rs. 3,80,917 a Y.G. locomotive settled by the last arbitration award for the period 1958-60, covering the supply of 200 locomotives or an average annual supply of 100 locomotives. The average annual supply by T.E.L.C.O. in 1961-66 will be only about 65 locomotives.

U.S. D.L.F. Chief Arrives

Mr. Vance Brand, managing director of the U.S. Development Loan Fund, arrived last week. During his eight-day stay in this country, Mr. Brand will meet the Finance Minister, Mr. Morarji Desai, and have discussions with senior officials of the Central Government. He will also visit the steel plant in Bhilai. Two officials of the U.S. Development Loan Fund and two consultants will be with Mr. Brand during his visit. They are Mr. George A. Wyeth, Jr., Assistant Deputy Managing Director for Private Enterprise, Mr. John G. Christy, Assistant Loans Officer, Mr. J. D. Haight, Industrial Consultant, and Mr. I. E. Milton Barber, Steel Consultant.

Steel Venture with Finance from Dalai Lama

A licence under the Industries Act has been issued to Mr. Gyalo Thondup of New Delhi to set up an undertaking under the name of the Gayday Iron and Steel Company Ltd for the manufacture of 30,000 tons of cast iron spun pipes and fittings a year. The undertaking, it is proposed, will be located in Kodarma, Bihar State. It was stated by the applicant that some part of the finance required for this project might be provided by the Dalai Lama. The Government has also been informed that this project will indirectly provide some employment or other assistance to Tibetan refugees.

Indo-Burmese Trade Prospects

The Indian and Burmese trade delegations have agreed that the trade between the two countries should be raised to as high a level as practicable, and that the question of entering into another long-term trade agreement and also another long-term rice agreement should be considered. The Burmese delegation offered to sell, and the Indian delegation agreed to purchase, 200,000 tons of rice out of the 1961 crop for the present. The Burmese delegation agreed to offer an additional quantity later, if possible.

Policy for Manganese Ore Exports

The Government of India has announced the policy for the export of manganese ore for a three-year period beginning from 1st January, 1961. During this period, manganese ore exports will be regulated in the following manner: Export quotas will be allotted as in 1959-60 for the period beginning 1st January, 1961. The releases of quotas for October, November and December 1960 will be made on a *pro rata* basis. In order to co-ordinate movement capacity with export potential and ensure supplies of ore according to the quantities and schedule of deliveries desired by overseas buyers, all export transactions of manganese ore will have to be registered with the State Trading Corporation. A copy of the relevant sale contract should be filed for this purpose with the Corporation. All shipments will be made by the shippers or mine-owners including the State Trading Corporation in their respective names. To enable established exporters and mineowners to maintain and develop their relationship with the traditional buyers of Indian manganese ore, they will have opportunity under the joint marketing arrangements of the corporation to negotiate, sign and execute contracts and ship the ore, as its agents, for the quantities out of the Corporation's quota placed at their disposal. New comers, i.e., the parties which had no quotas to their credit in 1959-60, have been advised to offer their tonnages to the State Trading Corporation and may export as its agents.

In order to make rail movement free to the maximum extent practicable, it has been decided that no movement quota slips will be necessary for any grade of ore on the Western Railway sectors to the Bombay port, i.e., from loading stations of Dohad, Shivrajpur, Nathpuri and Pani in Panchmahal districts of Bombay and Rajasthan stations. Movement quota slips will be freely issued for moving by railways low-grade ores analysing 40 percent and below from Garividi, Sri Kakulam, Bobbli, Salur, Raygada and Nallimaria stations for export through Visakhapatnam, on the production of foreign sales contracts to the railway authorities. To facilitate and continue rail movements on and from 1st January, 1961, all Joint Chief Controllers of Imports and Exports will be asked to issue movement slips to all parties who had quotas in 1959-60 to the extent of half of their tonnages covered by such quotas. A meeting will be arranged in the Ministry of Commerce and Industry in the second week of December to examine how best the total rail movement capacity for all ores on different sectors like Barajamda to Calcutta could be best utilised for the movement of various ores from the point of view of foreign exchange earnings and other factors. All barter transactions will be handled only by the State Trading Corporation; the export tonnages under such transactions will be procured under the joint marketing arrangements according to the quantities, ports of shipment, schedule of delivery, etcetera. In order to enable parties who held quotas in 1959-60 and were unable to fulfil their firm commitments due to rail transport difficulties, the validity of quotas against unfulfilled commitments have been extended up to 31st December, 1960, for tonnages lying at the port or in transit on 30th September, 1960.

Italian Fertilisers for Indian Goods

The State Trading Corporation has been negotiating with an Italian firm for the import of fertilisers and other commoditions in exchange for Indian goods. The arrangements have not yet been finalised. Meanwhile, some quantities of fertilisers have been imported on an *ad hoc* basis and exports of Indian goods in exchange are in the process of being made.

Import Quotas on Left-over Items

The import policy for 12 out of the 20 items which had been held over at the time of the announcement of the half-yearly import policy on 1st October, 1960, was announced last week. The items for which the import policy has now been announced include machine tools, surgical instruments, apparatus and appliances, agricultural tractors, watches, photographic negatives and printing paper, packing and wrapping paper, giant motor, motor-cycle and bicycle tyres and tubes, and unset diamonds. For machine tools, the import quota for established importers has been reduced from 30 percent general and 30 percent soft to 20 percent general and 20 percent soft. In the case of surgical instruments, apparatus and appliances, while there is no change in the import quota, the concession extended during the last half-year period in the shape of supplementary licences has been withdrawn. For tractors, there will be no import quota for the current half-year (October 1960-March 1961).

The import quota for complete watches has been halved to 5 percent general and 5 percent soft. For photographic negatives and printing paper excluding X-ray films, the reduction will be from 33⅓ percent general and 33⅓ percent soft to 25 percent general and 25 percent soft. For printing paper, the quota has been reduced from 12½ percent to 7½ percent and for packing and wrapping paper from 7½ percent to 5 percent. In the case of filter paper, there is no change, compared with April-September 1960. For paper not otherwise specified, the quota has been maintained as during the last half-year, but the additional licences which were being issued during the last half-year will now not be granted. For giant motor, motor-cycle, bicycle tyres and tubes and flaps and solid tyres, the quota will continue to be as during the last half-year, *viz.*, 75 percent. The licences will, however, not be valid for the import of bicycle tyres and tubes. For diamonds unset and imported uncut, excluding bort and industrial diamonds, the quota has been reduced from 10 percent to nil. The import policy for card clothing and card accessories will continue to be the same as before, namely, 66⅔ percent general and 66⅔ percent soft.

Project Report for Heavy Machine Tools

Negotiations with the Czechs are in progress to settle the terms under which the heavy machine tools building plant project report is to be entrusted to them. The 22 machines proposed for production in the heavy machine tool plant and their distribution among seven categories are stated below:

Category	Models
(2) Central lathes	6
(2) Planers	3
(3) Horizontal borers	4
(4) Vertical boring and turning mills	3
(5) Plano-milling machines	2
(6) Grinding machines	2
(7) Radial drilling machines	2
Total	22

The saving in foreign exchange likely to be effected as a result of the establishment of the plant would be about Rs. 5 crores to Rs. 6 crores annually.

Raw Wool Imports and Exports

During the first six months of this year, raw wool imports were 79 percent higher than in the corresponding period of last year. Wool tops imports (processed wool) declined by 19 percent. It is believed that this greater import of raw wool results from the more intensive use of wool combing machinery in the country. Prior to import restrictions, manufacturers found it more economical to buy tops. Now raw wool, costing comparatively less foreign exchange, is taken whenever possible. During this period, raw wool imports from Australia more than doubled. Receipts of tops from both Australia and the U.K., the chief sources of Indian imports, fell by 14 percent each. This trend will be intensified when newly licensed combing plants come into full commission.

Home-grown wool exports from India during the second quarter of 1960 at 9 million lbs actual weight, were 2 percent lower than in the previous quarter and 6 percent down on the same quarter of 1959. The reduction compared with January-March was mainly in shipments to the U.K. and the U.S.A., since those to Russia virtually doubled. During the first six months of 1960, exports totalled 18.2 million lbs, which was 4 percent below the 19 million lbs exported in the comparable period of the previous year. Shipments to the U.K. and the Common Market fell by 11 percent and 18 percent, respectively, to 6.4 million lbs and 2.2 million lbs. By contrast, exports to Russia rose from 300,000 lbs to 4.7 million lbs, but those to the U.S.A. were halved to under 4 million lbs.

U.S. Foodgrain Cargo for Indian Ships

No specific proposal is being considered for subsidising Indian shipping companies for carrying foodgrains under the recent P.L. 480 agreement with the U.S.A. Indian ships are even now offered for as much foodgrains cargo as they can lift at the prevailing world freight rates.

New Food Zone in Western India

In a statement made in the Lok Sabha last week, Mr. S. K. Patil, Central Minister of Food, said: "The Madhya Pradesh Government is issuing an order under which the wholesale dealers of Madhya Pradesh, Maharashtra and Gujarat States who want to undertake the export of wheat and rice from Madhya Pradesh will be granted licences freely for this purpose. Such licensed dealers will have the authority to export wheat and rice from Madhya Pradesh to Maharashtra or Gujarat without any export permit. Since Madhya Pradesh, Maharashtra and Gujarat taken together are surplus in rice, it has been decided that a levy of 25 percent should be imposed by the Central Government on the licensed mills and dealers in the main rice-producing districts. As far as wheat is concerned, the Government of India has adequate stocks and there is, therefore, at present no need for any procurement of wheat by or for it. The Madhya Pradesh Government also holds at present a large stock of wheat and, therefore, does not propose to impose any levy. It may, however, impose a levy on wheat later if it finds it necessary."

At the time of the formation of the eastern rice zone, it was agreed that the Central Government would give a subsidy to the Government of Orissa for building a reserve stock of rice for local distribution in the State in case the prices of rice rose too high. The subsidy was to be equal to the difference between the actual purchase prices of the Orissa Government and the procurement prices which existed prior to the formation of the zone, subject to a maximum of Re. 1 a maund. This subsidy was payable for the quantity of rice purchased at higher prices and actually distributed to consumers through fair price shops during 1960. No claim for any such subsidy has so far been received from the Orissa Government.

Wheat and Rice Imports

The following table shows the quantity of wheat and rice imported from the U.S.A., Burma and the United Arab Republic under various agreements during the period 1st August, 1960 to 31st October, 1960:

	(In thousand tons)	
Exporting country	Wheat	Rice
U.S.A.		
Under September 1953 P.L. 480 Agreement	56.8	—
Under November 1959 P.L. 480 Agreement	746.6	15.8
Under March 1960 P.L. 480 Agreement	—	43.2
Under May 1960 P.L. 480 Agreement	104.4	—
Burma		
1960 contract	—	8.9
United Arab Republic		
March 1960 contract	—	50.5
Total	907.8	118.4
Total of rice and wheet	1,026.2	

Double Taxation Avoidance

Mr. Brooks of the British Board of Revenue is expected here shortly. He is at present in Pakistan, negotiating an agreement for avoidance of double taxation between the two countries. As British Board of Trade, is already in India. While far as India is concerned, a similar agreement is still being considered; taxation of shipping has been the main bottleneck. Mr. Brooks, while in New Delhi, may make another attempt.

Chief of the Investment Centre

Mr. R. S. Bhatt, member, Tariff Commission, is becoming chairman of the All India Investment Centre, which is being set up with the assistance from the U.S. Technical Co-operation Mission.

Another Mission from World Bank

A two-man World Bank mission consisting of Mr. Stewart Mason and Mr. Rucinsky will reach Bombay on 15th December and Delhi on 19th December. It will have further discussions on the third plan and what loans could be arranged from the World Bank.

Italian State Oil Company Chief Arrives

The head of the Italian State-owned oil company, Mr. Enrico Mattei, arrives here on 12th December to discuss, and if possible finalise the agreement for oil exploration. His proposal is for an Indo-Italian joint venture with equal share in the capital, and sharing on a 50-50 basis after paying taxes.

Periodical I.M.F. Check on Indian Currency

Another periodical I.M.F. mission is expected here on 5th December, to appraise the development and stability of the Indian rupee. It will be headed by Mr. H Murphy.

T.U.C. URGES CHANCELLOR TO RELAX CREDIT SQUEEZE

LIMITATIONS OF CUT IN BANK LENDING ANALYSED

(FROM OUR LONDON CORRESPONDENT)

FULL details of Britain's overseas trade in October did nothing to mitigate the discouraging impressions drawn from the preliminary announcement. An analysis by U.K. Board of Trade experts confirms that while last month's low export figure was influenced by the strike of tally clerks at the London docks, imports would also have been larger but for the strike. Once again r. tor-car exports gave a poor performance. In October, they were less than half those of October 1959. Until the balance of payments position improves, it is hard to see how anything more than a slight easing of the credit squeeze could be undertaken without risk. Nevertheless, this course has been urged on the Chancellor of the Exchequer by the T.U.C. after its General Council had considered the present situation. The latest unemployment figures show an increase—mainly in the Midlands—which is obviously the outcome of the difficulties facing the motor-car industry.

Nevertheless, the outlook is not altogether gloomy. For the fifth successive month Britain's terms of trade—measured by the relation between import and export prices—remained unchanged in October. Although the import price index (1954 equals 100) was one point higher at 99, this was not sufficient to affect the terms of trade index, which stayed at 88. On the import side, higher prices for food, beverages and tobacco reflected a normal seasonal trend. Import prices of manufactured goods were slightly lower. A fall of 1 point in the export price index for metal manufactures was more than balanced by increases for both textiles and other manufactures groups, but the total index was unchanged at 112. Export prices in the engineering products group remained at the same level reached in September, when there was a fairly sharp improvement.

A View on the Credit Squeeze

The chairman of Lloyds Bank, Sir Oliver Franks, can always be depended upon for a keen and masterly analysis of the monetary scene. He addressed the Liverpool and District Bankers Institute last week, and in the course of his remarks had something to say on the question of bank advances as an object of policy. He made the point that the restriction of bank lending could not be disinflationary by itself. Sir Oliver said that a cut in bank advances to be effective, must form part of a reduction in the overall liquidity of the economy. If that were lacking, he argued—if, for example, bank deposits were unchanged or rising—a fall in advances would have little significance. As for the current situation, Sir Oliver agrees that the boom has gone "off the boil," even though advances are still not far from their peak level. He has linked this change with the fact that bank deposits have been stable or even declining for the first time for several years and that long-term rates of interest stay high. This means that there has been some reduction in the overall liquidity of the economy. This is certainly an argument with some force if it means that the authorities should not expect too much from pressure on the banks and that the range of instruments at their disposal ought to be widened. Unfortunately, however, it does not do away with the fact that the authorities have only a few imperfect regulators at their disposal and must use them as much for their impact on business sentiment as for their direct monetary effects.

Rise in Cost of Living

The biggest rise in the cost of living for two years was recorded in October. The U.K. Ministry of Labour has announced that the official index of retail prices stood at 111 on 18th October (January 1956 equals 100), compared with 110 in September. Calculated to one decimal point, the index for October was 111.4. In September, it was slightly under 110.5, and in October 1959, 109.2. According to the Ministry, the rise was due mainly to increases in the prices of coal, milk and eggs.

Prices of basic materials for industry, on the other hand, were lower in October than at any time for two years. The latest issue of the *Board of Trade Journal* shows that the provisional index of these prices declined in October from 97.1 to 96.8 and is still below the level of 100 in 1954. The decrease was mainly due to the continuing downward trend in prices of copper, rubber, wool, oil nuts and kernels, as well as to a fall in prices of materials used in the food manufacturing industry. These declines outweighed a sharp advance in the price of raw jute and higher prices for iron ore and raw cotton. The index of fuel prices increased by a further 1 percent to 131.3 (1954 equals 100), chiefly as a result of a rise in the price of coke.

More Imports and Exports by Air

During the first half of 1960, total U.K. imports by air rose by £11.7 million (15 percent), exports by £7.7 million (10 percent), and re-exports by £3.8 million (33 percent), compared with the second half of 1959, according to the *Board of Trade Journal*. Against the corresponding half of last year, the increases were £25.5 million (41 percent), £16.8 million (25 percent), and £2.5 million (19 percent), respectively. Compared with the previous half-year, there were increases in absolute terms in the majority of commodities, while against the first half of 1959 all commodities other than clothing, footwear, travel goods, and handbags, showed increases in absolute terms. The most important exports were again in the non-electric machinery group which, compared with the first half of 1959, rose by £9.6 million (48 percent). Although there were increases in total imports, this was not a general reflection of all the commodity groups. There was an increase of 97 percent (£2.9 million) in hides, skins, and fur skins, undressed, but this and other increases were offset by decreases in other groups.

Motor-car Production and Exports

U.K. Board of Trade returns published recently show a drop in production of motor-cars in October, compared with the same month of last year. The figures were 90,312, against 110,354—a fall of 20,042. They reflect the industry's cuts in employment to meet the position, which arose in June, of demand falling short of rising output. October was the first month this year to show a fall in production.

In October, motor-car exports reached 24,937 units, but in October last year they were 49,892, and in September this year they were 29,795, compared with 38 513 for that month in 1959. So far, October included, the year can scarcely be regarded as a bad one. Production for the ten months since 1st January was 1,109,624, compared with 927,778 for the same period of last year. Exports for the ten months this year were 504,644, compared with 461,450 in that period last year.

Cotton and Man-made Fibres

Full official co-operation between the cotton and man-made fibres industries is planned as a result of an agreement between the U.K. Cotton Board and the British Man-Made Fibres Federation. They are to establish a joint tariff section. Mr. J. H. P. Hadden, formerly head of the Federation's tariff department since 1954 and now director of the overseas trade department of the U.K. Cotton Board, will direct it. The cotton and man-made fibres organisations are to pool their existing tariff material. The move follows the decision to amalgamate the cotton and rayon research associations, and plans to link the employers' associations in both spinning and weaving of cotton and man-made fibres.

Insurance Premium Changes

Insurance premiums on motor-cycles and certain classes of commercial vehicles will be increased by up to 50 percent and 27½ percent, respectively, from 1st January. This was announced by the Accident Offices Association on behalf of its members, who transact a substantial proportion of the motor-car insurance business in the United Kingdom. It states that the increases are due to rising claims. The rates for all motor-vehicles are constantly being reviewed, it says, but no alteration is being made in the standard rates for private cars at the present time.

The increases for goods-carrying vehicles will range according to carrying capacity, class of licence, district, and policy cover, from approximately 10 percent to 27½ percent of the existing premiums, but for the majority of vehicles the increase will not exceed 20 percent. From the time the revised premium becomes payable, the limit of indemnity for damage to third party property will be increased for the better protection of policyholders from £10,000 in any one accident to £50,000. For comprehensive cover for motor-cycles of 101c.c. and over, the premium increase ranges from about 25 percent to 50 percent; for third party fire and theft cover for machines over 350 c.c., the increase is about 25 percent. No alteration is being made in the standard rates for other motor-cycle covers.

Brevities

Under the Trustee Investments Bill now before Parliament, trustees will be permitted to put up to one-half of trust funds into company shares. At present, they are confined to the securities on the Trustee List. The wider powers are to extend to bodies other than trustees whose investment powers are limited statutorily to the Trustee List. The Bill will also enable local authorities to use their investment powers collectively.

The U.K. Board of Trade has announced that from 1st May, 1951, higher fees will be charged for applications and registrations of trade marks and for renewals on or after that date. Present fees for applications, registrations and renewals are £2, £3 and £5, respectively; they will be increased to £4, £4 and £6, respectively.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base : 1953) has now been brought up to April 1960. Compared with the preceding month, there were decreases in sugar 165.99 points, jute 0.28 points, yarn 2.40 points, cloth 0.56 points, cement 19.30 points, pig iron 17.16 points, finished steel 7.97 points, motor-car 71.73 points, bicycles 27.26 points, electricity 0.64 points and railway ton-miles 100.94 points, while increases occurred in tea 56.81 points, coal 0.64 points, paper 3.06 points and tyres 7.55 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity decreased by 25.2 points during April 1960.

Jute

SHARP RISE IN JUTE AND GUNNY PRICES

FUTURES MARKET AUTHORITIES CLOSE HEDGE CONTRACTS AT FIXED RATES

FEARS have long been expressed that the high prices of jute and gunnies will encourage the switch to substitutes and competitive fibres. It is disappointing, therefore, to record that once again recent developments have tended only to cloud the outlook for the industry, just when thoughts were turning to the possibility of an improvement. Many wonder whether the latest rise in jute and gunny prices is justified by circumstances. Recent events have followed a familiar pattern, with the industry alternating between periods of depression and prosperity. The current difficulties have lasted too long, as at the present prices of manufactured goods and raw jute, there are few classes of fabrics which show a manufacturing profit. Nor is it feasible for the price of finished goods to increase. Both raw jute and gunny rates will have to show a considerable reduction before the trade can recover lost markets.

In a situation fraught with difficulties, any enquiry for goods takes on a significance far greater than the situation warrants. Thus, the recent Government tender for 10,000 bales of B Twills sparked off a fresh wave of buying which, once started, was very difficult to stop. The low level of jute goods stocks in Calcutta tends to be a bullish factor in world markets, as they are not offset by bigger stocks abroad. Even in the United States, in spite of the recent fall in consumption, burlap stocks bear a lower ratio to the monthly consumption than they have done for some time. At current prices, consumers justifiably work on a hand-to-mouth basis. Until prices fall to a level at which they can build up stocks, it is inevitable that even small business will have a big effect.

Quota System

During the past week, the rise in raw jute was greater than in manufactured goods. Many thought that with the introduction of the quota system for jute purchases, fibre would become cheaper. Indeed, on the introduction of the system, prices fell by about Rs. 5 a maund. But, during the past week, the losses have been offset by a rise of about Rs. 122 a ton in raw jute, against a rise of Rs. 100 a ton in heavy goods and Rs. 97 a ton for hessians in the ready position. The demand for forward shipment goods being greater, their prices have kept pace with the rise in raw jute. Sacking for January-March shipment has advanced by Rs. 120 a ton, while hessians for the same delivery have shot up by Rs. 150 a ton. Operators in Calcutta have been in constant search of goods, many of them trying to cover for November due date, but mills have shown no inclination to sell.

The upcountry raw jute markets continue to rule very steady. Imports in many of the main agencies dwindled to practically nothing when prices began to fall. The latest rise is due not to any shortage, but to the fact that jute has gone "under the counter." The farmers, being in a better financial position than for many years, can afford to hold on for better prices. Even the lack of interest from mills has not stemmed the rise. Only towards the close, in sympathy with a quieter goods market, and on learning that no quota for jute has been issued for the current week, have rates shown signs of falling.

Emergency Clearing Prices

At a meeting last Tuesday, the board of the East India Jute and Hessian Exchange Ltd decided to close outstanding contracts in jute and jute goods at 8-30 a.m. on 30th November at specified prices. The emergency clearing price for B Twills for November 1960 was Rs. 151.50 a 100 bags, and for hessian cloth it was Rs. 53 a 100 yards. The price fixed for raw jute for December 1960 was Rs. 44.50. The previous maximum prices for these three commodities were Rs. 140, Rs. 51 and Rs. 43.50, respectively. Any outstanding hedge contracts are now deemed as having been closed at the emergency rates. The arrangements for tendering alternative varieties against hessian cloth and sacking bag hedge contracts for November 1960 delivery, and the premium and discounts fixed for them, have now been rescinded. As for raw jute contracts, the maximum price on trading which was to be in force up to 14th December has been withdrawn with effect from 30th November.

THE JUTE MARKETS

Manufactured Goods: The market was very firm at the opening last Thursday following the news of a tender from the Central Government for 10,000 bales of B Twills for December delivery. Because of the nearness of the delivery period, the market reaction was swift. Rates, particularly for heavy goods, advanced rapidly. B Twills in both the near and forward positions shot up by Rs. 4 to Rs. 172.50 and Rs. 163.50, respectively. There were no overseas enquiries, and hessians moved up mainly in sympathy with sacking. Ready 40in. 10oz. rose to Rs. 55.50 and January-March shipment to Rs. 54. Prices continued to rise as the Government order was covered. Over the next two days, heavy goods went up by Rs. 3.50 and hessians by Re. 1. In spite of the heavy demand, mills showed little inclination to sell, and operators, in their search for goods over the week-end, forced prices up further. On Monday, B Twills recorded new high levels, and ready delivery was quoted at Rs. 180, which was a Rs. 10 premium over forward shipment. This trend continued on Tuesday, but the interest switched to January-March shipment, where prices showed a rise of Rs. 5.50, against Rs. 2.50 in ready goods. Mills were not interested in forward sales due to the unremunerative discount attached to them. Although operators narrowed the gap between near and forward positions, even this did not attract mills, particularly as no raw jute quota had been issued for the current week.

	Nov.	Dec.	Jan.-March
40in. 7½oz.	44.25	43.75	43.50
40in. 8oz.	47.25	46.75	46.50
40in 10oz.	58.00	56.00	58.00
B Twills	181.00	176.50	173.00
Heavy Cees (plain)	182.00	176.50	173.00
A Twills	213.00	213.00	216.00
Liverpools	203.00	203.00	201.00
Cornsacks	181.00	181.00	178.00

Raw Jute: The easier tendency which was apparent earlier continued at the opening of the past week. Raw jute quotations for Assam fell to Rs. 46.50. Upcounry markets, however, did not fall as rapidly as Calcutta rates; apart from this, with each reduction in price, less and less jute was offered. As imports were negligible and Calcutta operators were unable to cover their commitments, prices once again began to rise. Helped by a firm goods market, the rise was accelerated, until on Monday morning Assam Bottoms were quoted at Rs. 51.50, or Rs. 5 above the week's opening indications. After this, prices remained static, and only towards the close did the prices show a tendency to fall in sympathy with the goods market. Sellers began to offer more freely, but in the absence of any quotas, mills showed little interest. In common with upcountry agencies, imports in the Cossipore market were also reduced, and over the week wagon arrivals dropped to 620, which was 180 less than in the previous week. Buying activity in the Cossipore market by mill agents and seller interests was heavy, and stocks were reduced to the very low figure of 500,000 maunds. At this time last year, stocks were about 800,000 maunds.

Business was reported in Assam at Rs. 50.50 to Rs. 51 and in Northern at Rs. 50 to Rs. 50.50, for one month's shipment and ready bills of lading. Mesta came in for small interest and buyers paid Rs. 48 to Rs. 48.50 for Daissee and desal, while jungli mesta passed at Rs. 47.50 to Rs. 48.

At the close, the market was quiet, and on Wednesday morning quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	135.25	50.50	December
Northern	132.50	49.50	,,
Purnea desal	121.25	49.00	,,
Daissee Selected	139.25	52.00	,,
Assam Tossa	138.00	51.50	,,
Mesta :			
Assam Northern	128.50	48.00	,,
Daissee-Desal	128.50	48.00	,,
Jungli	126.00	47.00	,,
Pakistani N. C.	220.00 a bale		

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL SLOWLY

(FROM OUR DUNDEE CORRESPONDENT)

THE future course of raw jute prices in Dundee is still uncertain, although manufacturers are pleased to see that an easier tendency in values is being maintained. There is not that occasional steadying effect which is usually seen in a declining market, but the fall is very slow, so it is having little or no effect on the market. Buyers, meanwhile, are looking for a decline in prices on about the same scale as the advance which took place previously. Sellers have, however, other views, and they apparently intend to keep prices at as high a level as they possibly can, although the belief is gaining ground in the market that the rise has been unreasonably high.

The saving in raw jute by curtailment of production in India and Pakistan should make a vast difference to the total consumption and, as some say, there may be a good surplus at the end of the season. Producers in other countries are beginning to feel the dearth of orders for jute yarns and cloth, and spinners and manufacturers in Dundee are sure that they will be compelled to resort to short-time working if conditions do not improve in the near future.

Not much of a reduction took place in raw jute values last week. Mill Firsts are now quoted at from £195, Mill Lightnings £187, Mill Hearts £183 and Grade Hearts £177, with Grade Tossa-2/3 from £188 and fours £183, also Continental Tossa-2/3 from £180, November-December shipment, c.i.f. U.K.-Continent. Tossa is down about £5 a ton and Grade Hearts £4 a ton, but the price of white jute generally has gone down by only about 20s.

The Calcutta goods market is erratic again, but the tendency is generally firmer. This may be due to the decision to reduce working hours in Indian jute mills Hessians have been down to 82s 9d for 40in. 10oz. and 63s 6d for 7½oz., and the latest rates are 85s 6d and 66s, respectively, for November shipment, with December at 85s and 65s and January-March at 84s 3d and 63s 6d, and B Twills at 270s 6d, 259s 9d and 252s 3d for the respective positions of shipment, all f.o.b., Calcutta. Prices of jute yarns and cloth in Dundee remained unchanged last week.

THE PAKISTANI JUTE MARKETS

FIBRE DULL IN SPITE OF CHINESE BUYING

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE arrival of the Chinese jute buying delegation in Dacca last week had no effect whatsoever on the market. It has now left, after, it is reported, having bought 15,000 bales of fibre from one baler and 1,500 bales of gunnies from the Pakistani mills. The fact that there has been no reaction indicates how very dull the local market is, which again reflects a complete lack of overseas interest. In spite of the market being weak, upcountry sellers are still reserved and are bringing in jute only in small quantities. Even more important is the fact that in Narayanganj wet jute is once again appearing and the sellers appear to have no difficulty in disposing of this wet jute. These contradictory trends, namely, the strength at the origin and the weakness at the marketing centre, can only mean that the condition at the latter place is being controlled entirely by the paucity of finance. In fact, financial difficulties have been forcing those balers who are long to sell, but when they dispose of their stocks they will find it extremely difficult to replace them. So they are not inclined to continue to sell at reduced prices. Consequently, even though the market is weak, a serious drop in prices does not seem likely. The weakness overseas is further accentuated by the afloat position which is being disposed of at discount prices and, in fact, fresh sales are also reported at discounts.

The mills who are well stocked with cuttings and who are able to buy their day-to-day requirements in the loose jute agencies in addition to fair quantities of mesta, are sitting out of the pucca bale market. This has produced, among other things, a glut of cuttings and it is quite likely that their price will drop considerably. In fact, the E.P.C.s for cuttings have been reduced by £4 and may well be reduced further in the near future. Although estimates for the crop vary from as low as 4.2 million bales to as high as 5.6 million bales, the general consensus of opinion is that there is not enough jute to go round. A small number of buyers, however, have now found a new argument to support their 5.6 million bales crop theory. Reports have it that instead of Pakistan jute at the border being smuggled into India, the opposite is happening, and Indian jute is being smuggled into Pakistan because the prices of Pakistan jute have been considerably higher in the border area than in India. The figure of smuggled jute is quoted as high as 500,000 bales, but it is unlikely that this is correct.

During the first 15 days of November, sales registered with the State Bank of Pakistan amounted to 116,636 bales, and once again, Dundee was the biggest buyer at 30,360 bales. It is apparent that the Dundee buyers, who acknowledged to be jute experts at least in the buying world, are convinced that the crop will be short. The next largest buyer was Egypt with 19,880 bales. The U.S.A. with 11,350 bales came next. During the second half of the month, reports indicate that Dundee has continued to buy as well as Australia and France. India for the moment seems to be sitting out, but it is hard to believe that the Indian mills will not buy any more of Pakistani cuttings.

Engineering and Transport

NEW BRITISH LIGHT AIRCRAFT GROUP FORMED

GOOD PROSPECTS FOR EXPORTS

THE recent formation of British Executive and General Aviation Ltd, to be known as "Beagle", constitutes a shot in the arm to the manufacture of light aircraft in the U.K. and will mean, in effect, that there will be a fourth airframe manufacturing group in the British aircraft industry. Three member-Companies of the Society are concerned—Pressed Steel, who own Kidlington airport, Oxford, and who have been engaged in the manufacture of aircraft components, are acquiring the whole share capital of Auster Aircraft, a leading maker of British light aeroplanes, while a technical and manufacturing liaison has been arranged with F. G. Miles, Ltd. Powerplants for Beagle aircraft will be manufactured initially by Rolls-Royce.

Development of the Auster range of aircraft will continue, backed by the considerable financial resources of Pressed Steel and the production facilities of all three Companies. A new range of aeroengines to be manufactured by Rolls-Royce will be used to power the aircraft produced by Beagle, while a small gas-turbine engine, under development by Rover—seen at this year's S.B.A.C. flying display and exhibition—may well be fitted to later versions of the aircraft produced by the new group.

Various Uses

The formation of Beagle will speed the development of general aviation—which includes executive and business flying, crop-spraying, aerial photography, pleasure and sporting flying—in Britain. Today, there are about 900 aircraft in these categories registered in the U.K., cost being a major factor against the more widespread use of light aircraft in post-war years. With a utilisation every working day of, say, two hours, a small four to five seater, twin-engined executive or light aeroplane costs about £10,000-£11,000 a year to fly and maintain. In addition to depreciation, the annual cost of fuel, hangerage, the certificate of airworthiness, engine and airscrew overhauls, landing fees and insurance all add up to make private ownership of an aircraft a fairly costly business.

Nevertheless, there are more than 80 aircraft owned by air-minded business concerns. There are more than 6,000 holders of private licences in Britain and about 100 airfields available for use by private owners. Moreover, there is a rapidly increasing demand for light aircraft in many parts of the world and there should be a good export market for British products, especially in the Commonwealth, provided the costs are competitive with the new American and European models.

WHEEL FORGING PRESS FOR THE DURGAPUR STEEL WORKS

The 6,000-ton hydraulic wheel forging press for the Durgapur steel works has been designed to forge cheese-shaped steel ingots into solid railway wheel blanks, ready for rolling and finishing, in five operations taking less than 90 seconds. The wheel and axle plant in Durgapur, of which this press will be the primary productive unit, is scheduled to come into service in July 1961. The plant is planned for initial production of 45,000 railway carriage and wagon wheel sets a year (two wheels and one axle a set) with provision for subsequent expansion to 75,000 wheel-sets annually in the future. This output is required to meet the Indian Railway Board's carriage and wagon building programme, which is a vital part of India's expanding economy. The 6,000-ton hydraulic wheel forging press has been built by Davy and United Engineering Co. Ltd—a member-Company of I.S.C.O.N.—the British consortium constructing the steel works in Durgapur.

FIRST GENERATOR AT BHAKRA ON LOAD

The first of five A.E.I. hydro-electric generators which will supply a total of 450 mW of power to the Punjab and the neighbouring States, Rajasthan and Delhi, has been put on load at Bhakra, on the river Sutlej, some 200 miles north of Delhi. A second machine will begin its trials shortly and is expected to be commissioned in the new year. Bhakra dam, the world's highest straight-gravity dam (740 feet high and 1,700 feet long) is part of the £130-million Bhakra-Nangal project, an ambitious scheme which will eventually have an installed capacity of more than 1,000 mW, as well as irrigating millions of acres of land. Besides the dam in Bhakra, which will store water for two power stations, another dam, in Nangal, supplies water for power stations in Ganguwal and Kotla. Both dams are part of the irrigation system. One of the Bhakra power stations is nearly finished, and delivery of the five generators has been completed. Work has started on the other power station, which is being built on the opposite bank of the river. The A.E.I. generators ordered by the Punjab Government from A.E.I. (India) Private Ltd are rated at 100 mVA, 0.9 power factor, 166.7 r.p.m., and supply power at 11 kV, 3-phase, 50 cycles. Closed-circuit ventiliation is provided. Protective relays, automatic voltage regulators, and neutral earthing and surge protection equipment were also supplied.

Commodity Markets

BRITISH TEXTILE REVIEW

LOOKING FOR NEW MARKETS

WHEN negotiations to form a European Free Trade Area were in progress, the U.K. textile industry was forced to consider in a new light the opportunities for its exports in the various areas of trade. However it might incline towards the markets of the British Commonwealth, for reasons of tradition and sentiment, it could not ignore the protective tendency of the Commonwealth countries—and it must be said that restrictions were usually regarded as protective even when they were allegedly imposed to strengthen the balance of payments. When the European market seemed to be opening its doors wide, the U.K. industry's attention was necessarily turned in that direction. Some sections of it were troubled by the prospective abolition—gradually —of the U.K. tariffs on imports from Europe, but wool textile firms were satisfied that in a European Free Trade Area, more trade would be gained on the Continent than lost at home, and other textile firms, although less enthusiastic, were moderately hopeful.

After the collapse of that scheme and the substitution of the European Free Trade Association comprising only "the Seven", the industry continued to plan, long-term, on the assumption that "the Seven" and "the Six" would somehow be united. However, in recent months, particularly since the Commonwealth Finance Ministers, meeting in London in September, showed unexpected hostility to association of the Commonwealth with "the Six", the idea of unification of the two European blocs has receded a long way, and the textile industry is somewhat gloomily assessing the potentialities of "the Seven". These potentialities are not insignificant. For instance, the considerable trade with "the Seven" in French wool yarn and in Italian, West German, Belgian and Dutch wool cloth, noted in a recent study by the Commonwealth Economic Committee, will presumably be partly diverted, to the advantage of British suppliers. But it is impossible to avoid the fact that the biggest market, that of "the Six", is gradually breaking down its internal tariff system and enclosing itself in an external tariff wall.

The U.K. textile industry hopes to increase its trade with the Commonwealth countries, in spite of the latter's protective arrangements; but it is looking also in other directions. The wool textile industry is making a particularly impressive contribution to the British Trade Fair to be held in Moscow next May-June. The Russian authorities specifically requested that wool goods should be shown there, and in fact, the wool-textile stand will show as many as 10,000 different samples of fabric, representing the export ranges of more than 100 firms. The National Wool Textile Export Corporation said last month that it regarded the Russian market as having "an immense potential".

Strengthening Research

Lancashire's efforts in the European market have not been altogether rewarding, and the cotton textile industry is anxiously reviewing—among other problems—the rising tendency of costs. The value of research, and the need for a strong body representing the industry in its dealings with the Government and with other organisations outside the industry, are recognised now as never before. Important moves are now in progress to consolidate the trade and research organisations of the cotton and allied industries. First, it was decided to merge the British Cotton Industry Research Association with the British Rayon Research Association and the Cotton Spinners and Manufacturers Association with the Rayon Weaving Association. Then a committee under the chairmanship of Lord Rochdale, chairman of the Cotton Board, with representatives of four organisations in the spinning and doubling sections, formulated proposals for merging those four organisations. There is no doubt that these moves will promote efficiency in their particular field.

Dr. D. W. Hill, director of research of the British Cotton Industry Research Association, provided last month, at a preview of exhibits for "members' days" some valuable information on the Association's activities. The industry's reorganisation and re-equipment schemes have produced innumerable enquiries about new machinery and other problems, particularly on the weaving side. About four-fifths of the staff's work has been concerned with advice in this matter; but the one-fifth devoted to research has obviously produced valuable results. Dr. Hill said the Association must try to think ten years ahead and estimate the industry's needs then, and in the immediate present, it must help firms adapt themselves to changes. It is good news that the merger with the British Rayon Research Association has cleared the way for a new building with much better facilities than are at present available for research in chemistry and finishing.

A Huge New Textile Group

On the industrial plane, a giant merger is being planned between J. and P. Coats and Patons and Baldwins, and the proposed terms will probably be announced early next year. With revealed assets of some £130 million, it will be much the largest U.K.-based textile group excepting Courtaulds—if Courtaulds can still be regarded simply as a textile group. The true value of the new group's assets must be very much more than the revealed value, for Coats's numerous overseas subsidiaries are certainly undervalued in the group's balance-sheet, and in terms of assets (and earnings) Coats is roughly three times the size of P. and B. Both companies, although huge, are somewhat specialised, Coats as a maker of cotton and synthetic fibre sewing thread, P. and B. as a maker of worsted, woollen and synthetic fibre yarns and, particularly, knitting wools. A group combining both interests will be more stable than either individually. Both companies manufacture on a worldwide scale, but the overseas interests of P. and B. are naturally not comparable with those of Coats, which include 45 factories abroad—besides six in the U.K. In particular export markets, the companies have been co-operating for some time, and in merged form their position as exporters will be much stronger. But the greater part of the group's overseas business will still be done from local manufacturing units. It may be that the chief significance of the merger will be not in economies of operation or combination of marketing facilities but in co-ordination of research. Both groups have worked on the problems involved in extending the use of man-made fibres, and if they work together on further research in this direction, important developments may emerge.

PROTECTION CONTINUED FOR SHEET GLASS INDUSTRY

TARIFF BODY CONSIDERS QUALITY SATISFACTORY

THE Tariff Commission, in its enquiry report on continuing protection to the sheet glass industry, has recommended that protection should be continued at the existing level of duty of 70 percent *ad valorem* for a further period of two years, i.e., up to 31st December, 1962. Secondly, the Government should make available heavy soda ash to meet the full requirements of the industry; and thirdly, the Government should, after making technical assessment of the requirements of each sheet glass unit, grant necessary facilities for the import of equipment for gas producers as early as possible so that readjustment of plant capacity to use lower grades of coal could be effected smoothly by the industry.

The Railway administration, the Commission suggests, should examine the request of the industry for upgrading the transport classifications of raw materials and take such appropriate steps as may be deemed feasible. The Government has accepted the first recommendation for which the necessary legislation will be undertaken in due course. Steps will be taken to implement second and third recommendations as far as possible. Note has been taken of the recommendation concerning the railways and such action as may be feasible will be examined.

Capacity and Production

The present rated capacity of the indigenous sheet glass industry is 113.80 million square feet. It is expected to increase to 163.00 million square feet in 1961 and further to 170.20 million square feet in 1962. The domestic production of sheet glass in terms of 2 mm. thickness was 56.67 million square feet in 1957, 81.73 million square feet in 1958, 79.54 million square feet in 1959 and 46.68 million square feet during January-June 1960.

The current domestic demand for sheet glass is estimated at 100 million square feet. During the next three years, it is likely to increase at an annual rate of 15 million square feet over the level of 1960.

The quality of indigenous sheet glass, says the Commission, has considerably improved and is, by and large, satisfactory. There will be further improvement in quality when *Hindusthan-Pilkington* Glass Works Ltd and Indo-Belgian Glass Works begin production by the new process, namely, "Pittsburgh system" which will enable them to produce glass sheets of superior quality.

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 126.6 during the week ended 12th November, 1960, against 126.7 for the previous week. The index was lower by 0.6 percent when compared with the corresponding week of the previous month, but was higher by 6.5 percent than that of a year ago. The prices of oranges (−37%) and rice in Imphal (−17%), Nagpur (−15%), Ranchi (−11%) and Nandgarh (−6%), potatoes in Farrukhabad (−16%), jowar in Ujjain (−9%), fish (−6%), bananas (−5%), gingelly oil and cardamoms (−4% each), gur (−3%), eggs and tea (−2% each), barley, ragi, ghee and black pepper (−1% each) witnessed a fall, while those of salt (+13%), betelnuts (+11%), rice in Balurghat (+8%) and in Raipur and Kumbakonam (+5% each), jowar in Jhalawar (+8%) and in Nagpur (+7%), milk (+7%), maize in Khagaria and potatoes in Kanpur (+5% each), turmeric (+1%), masur, onions and cosonut oil (+2% each) and wheat, cashewnuts and chillies (+1% each) were marked up, and the index for Food Articles declined by 0.2 percent to 120.8, compared with 121.0 for the earlier week. The index for Tobacco remained stationary at the previous week's level of 116.8. The Fuel, Power, Light and Lubricants group index also remained unchanged at the earlier week's level of 119.9. Lower prices of cottonseed (−5%), raw jute and tanning materials (−2% each) and linseed and rapeseed (−1% each) brought down the index for Industrial Raw Materials by 0.5 percent to 149.2, compared with 149.9 for the earlier week, although the prices of raw skins (+2%) and raw silk, castorseed, gingellyseed and copra (+1% each) showed advances. An increase in the price of coir yarn (+2%) was neutralised by a fall in the price of rayon yarn (−2%), and the index for Intermediate Products stood stationary at the earlier week's revised level of 131.4. The index for Finished Products rose by 0.3 percent to 125.1, against 124.7 (revised) for the earlier week. Items which showed variations during the week were: jute manufactures (+2%), alum (ferric) (+5%), bricks and tiles (+1%) and sodium hydrosulphite (−4%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 12-11-60	5-11-60	14-11-59
I. Food Articles:	120.8	121.0	122.5

*=Estimated R=Revised

MICA EXPORTS RISE

Mica exports from India increased to 347,218 cwt during the first six months of this year from 239,443 cwt in the same period of last year. This was stated by Mr. S. K. Sen, chairman of the Mica Export Promotion Council and Joint Chief Controller of Imports and Exports, at the fourth extraordinary general meeting of the Council in Calcutta recently. The chairman, however, pointed out that although the quantity of exports increased, their value declined to Rs. 5.27 crores during January-June this year from Rs. 5.39 crores in the same period of 1959. The decline in earnings was attributed to the fact that the U.S.A., which was the largest purchaser of Indian mica till last year, bought much less on account of the cessation of contracts. The Government of India had decided to set up a Mica Research Centre at the Central Glass and Ceramic Research Institute, Jadavpur, Calcutta, at a cost of over Rs. 8 lakhs. The meeting decided to set up a sub-committee for fixing minimum export prices of mica.—N.A.F.E.N.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST RATES FALL

At Sale No. 21, held on 28th and 30th November, the 71,291 chests offered at the Export auction met with a good general demand. There was a good enquiry for teas for price and plain brokens and these were firm to dearer while similar Fannings often showed considerable advances. Bright liquoring medium B.O.P.'s were fairly well supported, but the poorer kinds and O.Fgs. were irregular. Medium B.P.'s were a strong feature and were 10nP to 15nP dearer; Fannings in this category also enjoyed a good sale, but those with indifferent liquors were up to 20nP easier. Whole leaf grades were well supported while tippy teas sold well. The brighter Darjeelings, particularly the higher grades, were firm, but the remainder were irregular and sometimes easier. Legg-cut teas generally declined by 10nP to 20nP. Best and medium C.T.C.'s met with fair enquiry with buyers following quality, but sold generally up to 20nP and sometimes more below last rates. The poorer kinds were irregular and as much as 20nP to 30nP lower. There was more demand for brokens than Fannings.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.20 to 5.50	2.12 to 2.18
Plain B.P.	4.55 to 4.70	2.02 to 2.10
Plain Fannings	4.85 to 5.00	2.14 to 2.20
Medium B.P.	4.80 to 5.00	2.00 to 2.12
Medium Fannings	5.00 to 5.30	2.20 to 2.30
Best Assam C.T.C. B.P.	5.80 to 6.20	2.75 to 2.90
Best Assam C.T.C. Fgs.	6.10 to 6.60	2.75 to 2.95

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings, which amounted to 23,902 packages, met with a good general demand at generally easier rates. There was a fair enquiry for medium C.T.C. Dusts, although they were lower by up to 20nP while the best kinds were well supported at about firm rates. Legg-cut Dusts were irregular and mostly tended easier. Orthodox descriptions sold readily, although generally below last rates.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.65 to 5.00	2.08 to 2.22
Medium Assam Dust	4.80 to 5.10	2.04 to 2.15
Medium Assam C.T.C. Dust	5.60 to 5.75	2.10 to 2.30
Best Assam C.T.C. Dust	6.10 to 6.40 (nominal)	2.00 to 2.90

(Quotations are inclusive of excise duty.)

There was a good demand for the 627 packages of Leaf on offer.

LINSEED FIRM

The linseed market was firm during the past week. Sellers were reserved. The local stock position was poor with arrivals scarce. The oil market was firm in sympathy with seeds and other oils. There was a good demand from local buyers for ready and forward deliveries. The oilcake prices were steady due to local demand. Small business was reported for the U.K. at reduced prices for early shipment. The latest quotation is as follows: Ready Rs 27.50 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 22nd November and 28th November, 1960)

Cowhides: Wet salted (Slaughtered) 22,400 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 28.

PRODUCTION OF PLYWOOD AND TEA CHESTS

The production of plywood and tea chests in India in 1958 was valued at Rs. 4.48 crores, according to official sources. Of this, plywood accounted for Rs. 1.9 crores, tea chests for Rs. 1.99 crores and other products for Rs. 58 lakhs. The productive capital employed in that year was Rs. 3.51 crores—Rs. 2.1 crores of fixed capital and Rs. 1.41 crores of working capital. The data relate to 50 out of 68 registered factories.—N.A.F.E.N.

COMPANY AND PUBLIC NOTICES

THE TITAGHUR PAPER MILLS CO. LTD.

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 P.M. on Tuesday, the 27th day of December, 1960, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Sir Asoka K. Roy, who retires by rotation, and, being 74 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

   And in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended.

   To be Proposed as an Ordinary Resolution

   "That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation."
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 6th to 27th December, 1960, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 10th November, 1960.

NOTES:

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after the 30th of January, 1961, to those shareholders so entitled whose names appear in the Company's books on the 27th December, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE NAIHATI JUTE MILLS CO. LTD.

NOTICE is hereby given that the Annual General Meeting of the abovenamed Company will be held at the Registered Office, No. 33 Netaji Subhas Road, Calcutta-1, on Monday the 26th December, 1960, at 3 P.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1960, and to receive the Directors' and Auditors' Report thereon.
2. To appoint Auditors and fix their remuneration.
3. To appoint a Director in place of a retiring Director.

The Share Transfer Registers of the Company will be closed from 13th December, 1960 to 26th December, 1960, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
K. C. BHAGAT,
Chairman.

33, Netaji Subhas Road,
Calcutta-1.
The 1st December, 1960.

ROHTAS INDUSTRIES LIMITED

NOTICE

THE Twenty-seventh Annual General Meeting of the Shareholders of Rohtas Industries Ltd. will be held at the Registered Office of the Company at Dalmianagar on Wednesday, the 28th December, 1960 at 11 A.M. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the financial year ended 31st March, 1960.
2. To declare dividends on Preference Shares and to confirm as final dividend the interim dividend on Ordinary Shares declared by the Board on 15th September, 1960.
3. To elect a Director in place of Shri B. N. Chaturvedi, who retires by rotation but, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

As a special business:

5. To pass the following resolution which is proposed as an Ordinary Resolution, with or without modification:—

   "RESOLVED that the appointment of Messrs. Ashoka Marketing Ltd., Calcutta as sole selling agents of the Company for the sale of Paper & Boards of all varieties, except Vulcanised Fibre Board, for the whole of India, on the terms and conditions enumerated in the Agreement, submitted to this meeting and approved by the Board of Directors of the Company, be and is hereby approved and confirmed."

By Order of the Board,
For SAHU JAIN LTD.,
A. K. JAIN,
Managing Director.
Managing Agents.

Calcutta,
28th November, 1960.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

Explanatory Note:

Messrs. Ashoka Marketing Ltd. have been the Sole Selling Agents of the Company for sale of Paper & Boards of all varieties, except Vulcanised Fibre Boards, in India, except the States of Bombay and Saurashtra. The last agreement between the Company and Messrs. Ashoka Marketing Ltd. was for period up to 31st October, 1960. It has been considered expedient that the Company continues to avail of the sales organisation of Messrs. Ashoka Marketing Ltd. The Board of Directors have reappointed Messrs. Ashoka Marketing Ltd., as the Company's Sole Selling Agents for the whole of India for a period of five years from 1st November, 1960 for sale and distribution of Paper & Board of all varieties, except Vulcanised Fibre Boards, manufactured by the Company on terms and conditions contained in the relevant agreement. A copy of this agreement is available for inspection of the members on all working days during business hours at the Registered Office of the Company and the same will be placed before the shareholders at the above meeting. The appointment of Sole Selling Agents requires approval of the Industrial Finance Corporation of India in terms of the Mortgage Debenture Trust Deed executed by the Company in favour of the said Corporation. Industrial Finance Corporation of India have been pleased to accord their requisite approval to the said appointment. Approval of the shareholders is sought under Section 294 of the Companies Act, 1956.

The Managing Agents and the Directors of the Company have no interest in the said appointment or agreement.

THE INDO-BURMA PETROLEUM COMPANY LTD.

NOTICE is hereby given that the Preference Register of Members of the Company will be closed from the 12th December, 1960 to 2nd January, 1961, both days inclusive for the purpose of payment of the dividend for the half-year ending 31st December, 1960 on the 2nd January, 1961 at the rate of Rs. 3.50 per share less tax to be deducted in accordance with the provisions of the current Finance Act.

By Order of the Board,
STEEL BROTHERS & COMPANY LIMITED,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta,
25th November, 1960.

THE INDIAN STEEL & WIRE PRODUCTS LTD.

NOTICE

NOTICE is hereby given that the Twenty-fifth Annual General Meeting of the Shareholders of THE INDIAN STEEL & WIRE PRODUCTS LIMITED will be held at its Registered Office, No. 7, Wellesley Place, Calcutta-1, on Friday, the 30th December, 1960, at 12 Noon, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1960.
2. To declare dividend on Ordinary shares of the Company.
3. To appoint a director in the place of Sardar Ajaib Singh, who retires by rotation and is eligible for re-appointment. In this connection to consider, and if thought fit, to pass the following resolution in respect of which a Special Notice, as required under Section 261 of the Companies Act, 1956, of intention to move it as a special resolution for the reason that the said Sardar Ajaib Singh is a member and director of Indra Singh & Sons Private Limited and therefore "an officer and associate of the managing Agents" has been received by the Company and is hereby given to the members:

   "RESOLVED that pursuant to section 261 of the Companies Act, 1956, Sardar Ajaib Singh, a member, director, officer and associate of Indra Singh & Sons Private Limited, the Managing Agents of the Company, be and is hereby re-elected a director of the Company."
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 15th December, 1960 to 30th December, 1960, both days inclusive.

By Order of the Board of Directors,
INDRA SINGH & SONS PRIVATE LIMITED,
INDRA SINGH,
Director,
Managing Agents.

7, Wellesley Place,
Calcutta-1.
25th November, 1960.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself and that a proxy need not be a member.

If dividend on shares, as recommended by the directors, are passed at the meeting, the payments will be made on or after 14th January, 1961, to those shareholders, whose names are on the Company's Registers on the 30th December, 1960.

The Explanatory Notes of the above resolution under item No. 3 of the notice have been sent to the shareholders along with the notice of the meeting. It can be inspected at the registered office of the Company, No. 7, Wellesley Place, Calcutta, during usual office hours on any working day.

(F) Option to redeem all or any of the Debentures at a premium of Re. 1/- per cent by giving one month's notice on the 31st December, 1954 or any subsequent interest date.
(G) May be redeemed on 30th June 1957 at a premium of 1% or on 30th June 1962, at a premium of 1%.
(H) May be redeemed at a premium of Rs 20/- per debenture (i.e. 2%) if redeemed earlier than 31st Dec., 1955 on 3 months' notice.
(I) The Company has option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th Sept., 1955. At any time on or after 1st Oct., 1957 the holders may convert each note of Rs 500/- into 25 ordinary shares to take effect on 1st Oct. in each year on giving 15 days notice prior to such day
(J) May be redeemed at 101% at any time after 31st March, 1963 and at 100½% on any time after 31st March, 1955.
(K) Rs. 1,60,000 Debentures will be redeemed at par annually by drawing from 1-9-65. Any Debenture outstanding on 1-9-65 will be redeemed on that date with option to redeem all Debentures at 101% on 1-9-64.
(L) Any time on 6 months' notice.
(M) At par in September 1960.
(N) May be redeemed at the end of 1965 or thereafter at 101%
(O) Option to repay at par on or after 31st May 1961.
(P) Redeemable at par on 31st Dec., 1972 with option to redeem at par at any time on 6 months' notice after 30th June 1938. At any time after 31st Dec., 1948 each note of Rs. 500/- may be converted into two ordinary shares of Rs. 100/- each ranking for dividend from 1st January following.
(Q) With option to redeem annually Rs. 2,00,000/- at par after 31-3-58 by drawing or by purchase in the open market.
(R) May be redeemed annually at par by drawing after 10th year also the whole issue at 101% on or after 31-3-63.
(S) (Option to repay at par one month's notice). At any time after 1st October, 1956.
(T) (Option to repay at par on 6 months' notice) after 31-3-63.
(U) (Option to repay on 3 months' notice). At any time after 31st December, 1960.
(V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.
(W) After giving six months' notice.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

A GERMAN FOUNDATION FOR DEVELOPING COUNTRIES

THE "German Foundation for Developing Countries" is an official organism designed to co-ordinate and promote the various efforts that the Federal Republic is making to assist economic progress overseas. A recent study by its president, Bundestag deputy Herr Rudolf Vogel, may fairly be taken as stating the West German approach to foreign economic aid at a moment when the Federal Republic is being urged by its allies to show more enterprise and generosity in the matter. It is quite typical that Herr Vogel's policy statement should consist of one-third assurances of goodwill, one-third warnings about West Germany's limited resources, and one-third expressions of scepticism about the whole idea of foreign aid for development. This scepticism is most apparent in his references to India, where Herr Vogel thought it necessary to say firmly, "It is unthinkable that we should give any encouragement whatsoever to an increase in the Indian birth rate" and then to add, as the dominant impressions of his 1959 visit to this country : "The 200 million and odd sacred cows do not contribute to the food supply and in fact they furnish barely 48 percent of the milk consumed in the country. There are also 30 million monkeys and numberless millions of rats that do much damage but against which one is helpless because they must not be killed." From a talk with Mr. Nehru, he retained the contrast between the figure of 8 million new jobs to be created in five years and the figure of 25 million children to be born in the same time, implying that the task of adequate development was therefore virtually insoluble. On aid to Africa, he remarks, "I think our assistance must not serve to finance the balkanisation of Africa or to assure certain tribal chiefs the salaries of western ministers".

These observations are not false, nor even really objectionable. Yet one cannot imagine the president of an equivalent institute in Britain, America or France reminding potential borrowers so bluntly of what they already know as well as he, that foreign aid will never solve all their troubles. Herr Vogel here faithfully reflects the thought of Dr. Ludwig Erhard, who has as good as said that the financial needs of developing countries are so hopelessly immense that a few billion marks more or less will hardly matter, so why all the fuss about inadequate West German aid ? The obvious answer is that the magnitude of the task is no excuse for not making a beginning (on the contrary), and extra West German aid is not expected to usher in the millenium but to help carry through specific important projects. Herr Vogel agrees that something must be done, but he cannot hide his scepticism for long because he at once suggests that one percent of all West German aid to developing countries should be devoted to propaganda aimed at convincing "the Asian and African masses" of the generosity of West Germany and of the niggardliness of Soviet Russia. In other words, if the operation is, in his view, unlikely to yield great economic benefit, it may as well show a political profit.

Approaching the question of aid for development with this visible lack of enthusiasm, Herr Vogel stresses his country's limited ability to be of much help. This is the "West Germany is not a rich nation" argument that was produced in November in Bonn for the emissaries that President Eisenhower had sent to demand more marks for N.A.T.O. and for backward economies. It will be produced again when Britain asks Bonn to shoulder more of the cost of maintaining British forces on the Rhine, and indeed on any other occasion when there is a question of West Germany putting back into circulation part of the reserves she has amassed. In truth, one must sympathise with the Germans here : they have so successfully advertised their "miraculous" recovery that foreigners over-estimate their financial capacities. The recovery was genuine enough, and it has brought large sums of exchange into German coffers. But the country is not "rich" in this sense that it does not yet have a vigorous capital market. It is not commonly realised that the combined assets of its three biggest private banks (the Deutsche Bank, Dresdner Bank and Commerzbank) do not even equal the assets of the smallest of the British "Big Five".

In other words, in that land of high revenues and bulging liquidities there is a problem of mobilising savings for long-term use, especially for use abroad. Yet like all problems, that one exists to be solved ; merely to recall it does not prove that West Germany can do nothing more to finance development in poor countries. If foreigners consistently over-estimate German capabilities, Germans just as consistently under-estimate them. Thus Herr Vogel imagines that the difficulty the Federal Government has in placing loans at 6.34 percent finally proves the point that West Germany is not a source of development capital—and passes on to the next point. Yet everyone knows that the tottering governments of the last French Republic could not even borrow at higher interest rates without guaranteeing the principal in terms of gold —but they nevertheless managed to pour development capital into Africa. There are more ways than one of mobilising savings for investment abroad, and given the will, a way can be found.

Having proven to his own satisfaction West Germany's financial poverty, Herr Vogel says, "We can nevertheless offer specialists, schools and technical training"—but hastens to add that such offers must unfortunately be limited. Has not West Germany full employment and a labour shortage—so how can she send experts abroad ? The country is short of 40,000 engineers, there is a grave deficit of technical teachers and no branch of industry reports a surplus of experts. Thus German participation in the supply of know-how must remain as cautious as ever. Yet, he adds, there are several thousand unemployed German agronomists and forestry officers, expelled from the backward eastern zones "at present under Russian and Polish administration", so maybe something could be spared in that direction. It is plain that Herr Vogel, like most West Germans, conceives development aid as a luxury that a western nation can afford to indulge in only when its every last domestic need has been met; *e.g.*, one sends experts abroad only when they are walking the streets at home. If Britain, in the difficult years after the war, France, during the inflationary instability that lasted until de Gaulle, and the U.S.A., in her present awkward payments position, had all taken this same point of view, then of course the developing nations would not have received a penny of help to this day. Do West Germans imagine that their allies—and now their Soviet enemies—have given assistance to India, to Africa and to Latin America only because they had nothing better to do with their spare men and money ?

A final obstacle that the president of the German Foundation for Developing Countries thinks important enough to mention is the language question. In matters connected with development and technology, the peoples of the backward economies speak English, French and Spanish, so German experts are at a grave disadvantage. Of course, this is a difficulty, but at a moment when Cuba is overrun with Russians and Guinea with Chinese it scarcely seems insuperable ! The study of the German language (which already in India has increased in recent years) will grow parallel with the interest Germany takes in assisting developing countries. The fact should be too evident to require mention, and we only bring it up to show how Herr Vogel scrapes the bottom of the barrel in looking for excuses for West Germany's disappointing performance in development aid.

At all events, it is a politician with these ideas that has been chosen to preside over the principal West German organisation concerned with foreign aid. The Foundation, which is headquartered in Berlin although it is a Federal body, is composed half of officials, half of deputies and has representatives from industry and the universities. Its finance comes from Bonn, and its main job is to *co-ordinate the scattered efforts of ministries, industries* and institutes concerned with assisting development abroad. Not surprisingly after what has been said, its conception of its responsibilities is very modest but might still interest Indians hopeful of co-operation from West Germany. The Foundation has already begun giving courses of one week to German technicians charged with showing around the 7,000 people from developing countries that go to study German industry, and it is organising one-week courses for experts sent abroad to Asia and Africa. It is seeking to promote knowledge of technical German among the 21,000 foreign students enrolled in German universities and technical schools, and hopes to stimulate the Goethe Gesellschaft to become the equivalent abroad of the British Council and Alliance Francaise. The Foundation promises to provide bursaries for students to go to Germany, but meantime is more interested in inviting groups of 25 or 30 "leaders" from developing countries to spend periods of two months in Berlin. There they will be offered courses in public health, river navigation, co-operatives, police services and adult education. Herr Vogel has stressed that these courses are not

open to students or young people, but are reserved for directors and leaders, who will be grouped geographically (*e.g.*, people from Pakistan, Iran and Afghanistan will be taken together).

This unambitious programme, and the sceptical, patronising spirit that inspires it, will not arouse the enthusiasm of West Germany's allies, who have been hoping for help in carrying the aid burden, nor of people in the developing countries, who have been hoping for assistance from a prosperous nation that has always enjoyed in Asia a reputation for technical skill. Yet, no doubt, the best way to encourage West Germany to go further is to make good use of the limited facilities she is offering, and one would hope to see students, industrialists and "leaders" in this country taking full advantage of the new German Foundation. Its very existence demonstrates that West Germany is at last taking more seriously its responsibilities toward developing nations, who are among its best customers for machinery and manufactures. Its limitations, on the other hand, show that West Germany is not yet prepared to take her place alongside the other industrial nations in the struggle against under-development.

President Eisenhower's emissaries came away empty-handed from Bonn in the last week of November after letting it be known that the West German aid plans presented to them seemed inadequate and half-baked. It is decidedly possible that if the Federal Republic is considering making a more generous gesture it would prefer to do so, not to please a lame-duck President, but to impress the new Democrat Administration when it takes over next year. So West Germany may not have said its last word on development aid, and the German Foundation for Developing Countries may be given more ambitious objectives next year.

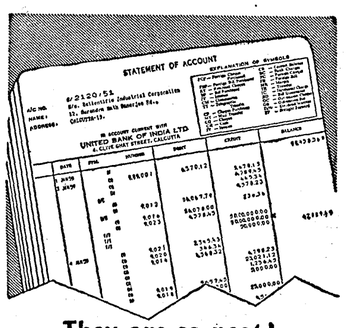
EXPANSION IN PAPER

THE paper industry has made rapid progress in recent years. Its production totalled 210,000 tons of paper and board in 1957, and rose to 292,000 tons in 1959. This year, the output is expected to be about 325,000 tons, although the installed capacity will have reached 400,000 tons a year. Under the third five year plan, it is proposed to raise production to 700,000 tons annually, and to expand the installed capacity to 820,000 tons. But in his presidential address at the annual general meeting of the Indian Paper Mills Association in Bombay on Monday, Mr. H. P. Singhi suggested that the capacity target should be fixed at the higher level of 900,000 tons, since output normally runs at about 75 percent or 80 percent of installed capacity. The significance of the capacity targets recommended by the planners and by Mr. Singhi may not, however, be easy to appreciate at first sight. It is reported that, if all schemes reach completion, the licensed capacity at the end of the third plan will be 960,242 tons. To the present licensed capacity of 400,000 tons will be added 136,880 tons by the substantial expansion of existing units, 225,800 tons by the establishment of new major units, and 197,562 tons by the setting up of new small units. Whether all the schemes which have been licensed will actually be implemented, is, of course, uncertain; and Mr. Singhi doubted whether they would be. What is fairly certain is that five or six years hence, the paper industry will need to be almost double its present size if it is to meet the rapidly growing demands upon it.

The impressive expansion of the past few years has been facilitated by one major factor. This is that the industry has enjoyed a sellers' market, especially since the foreign exchange shortage has caused paper imports to be severely restricted. The companies have not only earned fair profits, but have also used them judiciously. Large sums have been ploughed back into the business for modernisation and expansion programmes. At the same time, dividends have been reasonable by market standards, so it has been possible to supplement internal resources with outside capital. Since the beginning of this year, however, conditions have become more difficult. The Government has forced the industry to cut the prices of its products to such an extent that the profit margin left is inadequate. Reiterating the defects of the new pricing scheme, Mr. Singhi pointed out that present prices are based on the production costs existing before November 1958. Since then, costs have risen appreciably because more has had to be spent on raw materials, chemicals and railway freight. The Tariff Commission gave a contingency allowance of 5 percent, but by the time paper prices were cut on 1st January this year, the cost increases had already exceeded the allowance. Further increases have taken place since then on account of railway freight, raw materials, waste paper and chemicals. All these have reduced the return which the industry is supposed to get. Mr. Singhi pointed out that the return of 12 percent on capital employed which the Tariff Commission has recommended is already inadequate. The figure of 25 percent which the industry asked for would have been fairer, especially in view of the need to build reserves for rehabilitation and expansion.

The indications are that the Government has been rather hasty in deciding to cut paper prices. If the cuts had benefited the consumer, they might have had some justification. But in fact, their main effect has been to siphon money out of the pockets of the industry into those of the trade. Some varieties of paper which are in very short supply are no cheaper in the market than they used to be, even though the mills are selling them at lower prices. It is true that certain other varieties have become cheaper, but they would have done so in any case as supplies rose in closer approximation to demand. Some mills, it is reported, have been able to soften the impact of the price cuts by readjusting their production schedules, and concentrating on raising the output of the more profitable varieties. Others have taken steps to improve manufacturing efficiency. But by far the more reasonable way of coping with the paper shortage would have been to let the industry earn the money it needs for increasing production, rather than to introduce an artificial price-fixing scheme which is undermining the prospects for future expansion. According to one estimate, the paper shortage is easing, and could ease to the point where by 1966 the commodity might even be in a buyers' market. This happier prospect could have been brought nearer if the industry had been allowed to earn and invest more money for increasing its production.

Another important point which Mr. Singhi raised related to raw material supplies for the industry. It has been an old complaint of the paper mills that State Governments are unwilling to grant them leases over forest areas on a long-term basis. The present practice of giving only short-term leases creates a great deal of uncertainty for the industry, and is extremely damaging for the country. The shorter the term of the lease, the greater is the temptation to exploit forest resources quickly. If the leases were for long periods, the mills would have a clear incentive to undertake replantation vigorously and thus ensure that the resources would be adequate for the future too. The Planning Commission, together with other official bodies, has recognised the soundness of the industry's case for long-term leases. But they have unfortunately not been able to persuade State Governments on this point. An urgent decision will be necessary if the paper industry is to have adequate forest resources for its use in the future. It could, as Mr. Singhi recommended, supplement raw material supplies by using sugarcane bagasse, and it is encouraging to see that more paper mills are taking to the use of the latter. But technical and other difficulties may prevent a rapid switchover to bagasse, so it is essential that the supply of bamboo and *sabai* grass to the industry should be adequate and cheap.



They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

THE U.S.-BRITAIN MERGER PROPOSAL

IN the midst of the controversy on American offers for British companies' shares, Britain's Prime Minister, Mr. Harold Macmillan, talked "off the record" to American correspondents in London, and what he said, or was believed to have said, caused consternation among all sections of political opinion in Britain. It is difficult to discover, either from official or from unofficial statements on the matter, exactly what the Prime Minister told those correspondents, but there seems to be at least a substantial element of truth in the report by Lord Lambton (a Conservative who is often critical of the Conservative Government's policy), in an article in the London *Evening Standard*, that he "suddenly produced the peculiar theme of an Atlantic Union. Indeed, he is reported to have said that nothing should stand between the eventual merging of this country and the United States." Others who claim inside knowledge of that mysterious meeting say that Macmillan's idea of a union of the United Kingdom and the United States was a long-range concept, not related to the politics and economics of the next few years. But it is not the timing but the trend that is important. If the Prime Minister of Britain feels that his country must incline towards total absorption in the United States—it is absurd to suggest that union has any other meaning when the two countries are so disparate in size and strength—it is obvious that he has no faith in his country's independence, nor in its ability to merge harmoniously in Europe, nor in the permanence of the British Commonwealth as an association of independent States with Britain as its nucleus. That is, however, the extreme view.

It is foolish to exaggerate the significance of this episode, but more foolish to pretend that it is insignificant. In the present mood of Britain—including politicians of all parties—a forthright statement of intention to merge Britain with America would be an act of political suicide by Macmillan. But the course of a country's policy is not always announced in advance. While the supporters and the opponents of Macmillan argue about the acquisition of the British-owned Trinidad Oil Company by the American Texas Oil Company in 1956 and the offer for the minority interest in the British Ford Motor Company by the American Ford Motor Company in 1960 (it was Macmillan who—Chancellor of the Exchequer in 1956, Prime Minister in 1960—approved both), and argue about the defence policy that has made Britain dependent, from 1965, on an American missile that does not yet exist, and has granted a British base for American submarines carrying an American missile that does exist—while these disputes are in progress the causes of them become established facts and Britain inclines more strongly than ever towards America. It is impossible to disentangle the political from the economic factors in this development, but the underlying cause of it is economic—the relative weakening of Britain's economic position. A comparatively small nation, however important as a trader, cannot be completely independent. It must align itself with some other nation or group of nations or establish harmonious relations with most or all of them. Britain has wavered in recent years between America and Europe, while maintaining somewhat tenuous economic relations with the widely-dispersed countries of the Commonwealth. She has aligned herself economically with six other European countries in the European Free Trade Association, but this group, though certainly useful to Britain, does not offer a very wide market for British goods.

The British Government has not abandoned hope of a compromise between the E.F.T.A. and the Common Market, but the line of approach to such a compromise is not clearly defined. The main difficulty is that any proposed compromise seems to resemble one or other of the schemes that one or other part of western Europe has already rejected. It is suggested that Britain could join the Common Market with reservations that would allow her to maintain her present relations with the Commonwealth and to protect her agriculture; but in long discussions previously it was impossible to work out a formula that would achieve that result and would be acceptable to all concerned. An idea that has gained some adherents recently is a Customs union between "the Six" and "the Seven", whereby internal tariffs within and between both groups would mostly be abolished and a common tariff would be applied to imports from the rest of the world; but this proposal offers no solution of problems already laboriously discussed—Britain's preferential tariffs on imports from the Commonwealth and Switzerland's and Sweden's low tariffs that would have to be raised to accord with a common tariff. In the meetings a few months ago between Britain and the other countries of the Commonwealth, and Britain and the other countries of "the Seven", the other countries' opposition to association with "the Six" was much stronger than the British Government expected. This opposition has provoked some influential Britons to suggest that Britain's policy be suited to her own interests rather than to the interests of any group with which she is associated. Notably, Sir William McFadzean, president of the Federation of British Industries and chairman of the new Export Council for Europe, has said that the Commonwealth's preferential tariffs, whose value has diminished in recent years, are obstructing the unification of Europe and should be reviewed.

However, recommendations that Britain should consider her own interests first do not answer the question what Britain's interests are. Her association with the E.F.T.A. is a necessary substitute for the broader association with Europe that is not yet practicable. If she loosened her ties with the other countries of the Commonwealth she would probably suffer more than they. She needs freer access to the American market, but dependence on that market would be dangerous. What Britain needs is not an exclusive association with one country or bloc but freedom to trade anywhere. However, she could not take full advantage of such freedom if her products were not fully competitive. If Britain made more resolute efforts to strengthen her own economy she would do more to assure her position in the world than she can ever hope to do by discussion with other countries.

Current News and Comment

Progress of Titaghur Paper

In his statement to shareholders issued along with the report and accounts of the Titaghur Paper Mills Co. Ltd for the year ended March 1960, Sir Walter Michelmore has made some significant observations. To begin with, he takes a cautious view of the near-term outlook. The cut in paper prices enforced at the beginning of 1960 has had adverse effects on working, because the new prices are not remunerative enough. The prices were fixed on the basis of costs which have become out-of-date as there has been a substantial rise in the latter. The supply and demand of the commodity is now better balanced, and most consumers are obtaining their requirements at the official prices. Sir Walter does not rule out the possibility of excessive supplies in a few years' time. In any case, it looks as if there will be more competition in the trade.

As production costs have increased and competition is stiffer, the directors of Titaghur Paper have been planning the next stage of the renovation programme. It is proposed to concentrate attention on the No. 2 mill since the No. 1 mill is already a well-balanced unit. The soda recovery and boiler plants will be improved and an electrolytic bleach plant will be installed. These renovations may cost Rs. 30 lakhs, but production costs will be reduced substantially. The mill in Orissa started production some months ago and measures have been taken to expand output. The mills in West Bengal have been running satisfactorily during the current year.

Sir Walter refers to the expansion prospects for the industry. The licensed capacity may be 960,242 tons in 1966, to which the expansion of the existing units may contribute 136,880 tons. The present licensed capacity is estimated at 400,000 tons. A noteworthy development is the manufacture of paper and pulp-making plants and chemical equipment. A Company called Bertrams-Scott Private Ltd has been formed, in which three well-known U.K. concerns (James Bertram and Son Ltd, Bertrams Ltd and Earnest Scott and Co. Ltd) will collaborate with the Bird-Heilgers and Yule groups. Titaghur Paper has agreed to give land and buildings in Titaghur in exchange for shares in the new Company. The project has made considerable progress and the concern can now deal with enquiries for 50-ton paper-making units and all types of paper-making plant.

Titaghur Paper's profit has amounted to Rs. 55.42 lakhs, against Rs. 46.01 lakhs in the previous year, after providing Rs. 32.46 lakhs (against Rs. 29.06 lakhs) for depreciation and Rs. 27.09 lakhs (against Rs. 62.56 lakhs) for taxation. A taxable ordinary dividend of 25 percent, including a final of 13 percent, has been declared. It offers a yield of 6.6 percent at a price of Rs. 38 a share, and is covered more than thrice. The ordinary dividend was 25 percent, tax-free, in the previous year. The dividends on the preference and preferred ordinary shares have been paid at the rates mentioned in the articles of association, but the directors say that they will pay additional dividends, if required, when the Bill concerning the regulation of preference dividends is passed. The carry-forward is Rs. 2,48,642, against Rs. 1,01,113 brought in. Fixed assets have been written down by Rs. 76.30 lakhs by debiting the revaluation of fixed assets reserve in order to correct the revaluation which was made in 1948.

Kothari Sugars and Chemicals Offer

Subscription lists for the 400,000 ordinary shares of Rs. 10 each offered for public subscription at par by Kothari Sugars and Chemicals Ltd will open on 15th December. (Fuller details concerning the offer are published on a later page.) Of the total issue of 800,000 ordinary shares, 250,000 shares have already been subscribed. The directors and their friends have agreed to take up 120,000 shares. The Madras Industrial Investment Corporation Ltd has underwritten 150,000 shares, out of which it will subscribe to 130,000 shares. The Life Insurance Corporation of India has underwritten 550,000 shares, out of which it will take up 150,000 shares. So the entire issue has been underwritten.

The Company proposes to build a sugar factory in the Tiruchirapalli district of Madras State. The initial crushing capacity of the factory will be 1,000 tons of cane a day, but may be increased to 1,500 tons a day later. The estimated cost is Rs. 1.60 crores. The Industrial Credit and Investment Corporation of India and the Bank of India have agreed to give loans of Rs. 35 lakhs each. Arrangements have been made with Binny's Engineering Works (Private) Ltd for the supply of the equipment. Production is expected to begin early in 1962. Kothari Sugars and Chemicals Ltd will enjoy special benefits under the Indian Income Tax Act concerning development rebate and depreciation. As a new concern, it will enjoy income tax exemption on profits up to 6 percent of the capital employed during the first five years of operation.

Belapur Sugar Makes Record Profit

The gross dividend of Rs. 29 a share proposed by the directors of the Belapur Company is the highest ever; the Company's profit for the year ended September 1960 also sets a new record. The gross profit of Rs. 85.60 lakhs is Rs. 37.44 lakhs more than in the previous year. The profit has increased even though sales are down from Rs. 2.02 crores to Rs. 1.93 crores. Stocks, however, have risen by about Rs. 33 lakhs to Rs. 49.86 lakhs, because the movement of sugar to consuming centres was slower and the monthly release orders issued by the Government did not keep pace with the increase in production. The impressive increase in profits is due to a larger crush, a larger tonnage of sugar produced and an increase in the recovery percentage. Although the area harvested was only 121 acres more than in 1958-59, the additional quantity of cane produced was over 26,200 tons. In addition, 7,630 tons were purchased from outside cultivators. The rebate in excise duty allowed as an incentive to increase production helped augment the profit. Besides, unlike in the previous year, the Company did not suffer any loss from compulsory exports of sugar, since no exports were made.

Towards the end of August 1960, the directors decided to invest some of the Company's liquid funds by acquiring a financial interest in the Gangapur Sugar Mills, a modern sugar factory with a capacity to crush 1,000 tons of cane a day. When all the formalities have been completed, Gangapur Sugar will become a subsidiary of the Belapur Company. Gangapur Sugar has incurred losses for two years, but the directors say that strenuous efforts are being made to put the mills on a profitable basis. The cash resources of the Belapur Company are down from Rs. 84.70 lakhs to Rs. 18.45 lakhs, while investments have risen from Rs. 24.46 lakhs to Rs. 53.95 lakhs. These reflect mainly the investment in the Gangapur Sugar Mills and the loans which the Belapur Company has given to it.

After providing Rs. 3 lakhs for depreciation (against Rs. 3.30 lakhs in the previous year) and Rs. 19.75 lakhs for taxation (against Rs. 12.50 lakhs), Belapur's net profit is Rs. 54.59 lakhs, against Rs. 27.48 lakhs in 1958-59. With Rs. 75,919 brought in, the total available is Rs. 55.35 lakhs. The ordinary dividend of Rs. 29 a share, subject to tax, absorbs Rs. 40.89 lakhs. A sum of Rs. 13.63 lakhs has been allocated to the reserve fund, leaving Rs. 82,958 to be carried forward. The Company paid Rs. 57.08 lakhs (against Rs. 62.01 lakhs) as excise duty and cane cess. The shares of the Company are quoted around Rs. 395, offering a yield of about 5.4 percent.

Colour-Chem Optimistic

Mr. Ramniwas R. Ruia was optimistic in his speech at the annual meeting of Colour-Chem shareholders in Bombay last Friday. Production was interrupted during 1959-60 by the shortage of raw materials. Sales were not as high as they should have been. But production has been proceeding smoothly since January as licences for importing raw materials are now being regularly received. Sales during the current year have already exceeded the previous year's total by a substantial margin. This is due in no small measure to the efficient organisation of the Company's three distributors. The Company's products have been received well in the market, and it is claimed that they are in no way inferior in quality to the imported items. Referring to the prospects, Mr. Ruia stated that the Government has reduced the quotas of established importers of pigment emulsions and has prohibited completely the import of certain pigment powders. He hoped that these imports would be reduced further in the next licensing period. The capacity of the Company's plant is large enough to meet the country's entire requirements of pigment emulsions. The details of the phythalocyanne blue project are being worked out in collaboration with the German associates. Meanwhile, negotiations for acquiring additional land adjacent to the Company's existing property have been finalised. Referring to the working results for 1959-60, Mr. Ruia said that although sales did not exceed Rs. 37 lakhs, the Company has been able to set aside more than Rs. 10.50 lakhs for depreciation and development rebate, and a little less than Rs. 1 lakh has been carried over to reduce the previous year's loss.

Smaller Profit for Rohtas

The trading profit of Rohtas Industries Ltd has declined from Rs. 2.95 crores to Rs. 2.64 crores during the year ended March 1960, in spite of a general increase in production. The decline in profit is due mainly to two factors. The first is the cut in paper prices enforced at the beginning of 1960. The second is that the price which the Company is allowed to charge for its cement is too low in view of the rise in production costs. An interim taxable ordinary dividend of 20 percent was paid some time ago. This is to be treated as the final dividend for the year. At a price of Rs. 20.75 a share, the yield works out to 9.6 percent. The preference and ordinary dividends absorb Rs. 56.83 lakhs. The ordinary dividend was 15 percent, tax-free, in the previous year. Depreciation is allocated Rs. 76.03 lakhs (against Rs. 86.06 lakhs), taxation Rs. 52 lakhs (against Rs. 55 lakhs) and development rebate reserve Rs. 3.10 lakhs (against Rs. 16.30 lakhs). General reserve receives Rs. 26 lakhs (against Rs. 47.27 lakhs). The carry-forward is Rs. 1,93,085, compared with Rs. 3,773 brought in.

The output of paper and board increased from 47,130 tons to 53,170 tons, that of cement from 276,157 tons to 300,646 tons, and that of sugar from 388,254 maunds to 418,305 maunds. Production during the current year has been running satisfactorily. Paper output has been 25,126 tons during the six months ended September 1960, cement output 144,756 tons and sugar output 40,337 tons. As for expansion plans, it is proposed to set up a newsprint plant and preliminary work has started. Technical collaboration is being arranged with foreign firms for producing mechanical and chemical bagasse. The directors think that cheap bagasse pulp can be produced for newsprint and paper manufacture in collaboration with a Japanese firm. The Company has started a project for producing paper and pulp plants with a capacity of up to 10 tons a day. The products are expected to meet with good demand because the Government is keen to promote the establishment of smaller paper-making units.

Gillanders Arbuthnot Diversifying

The results of Gillanders Arbuthnot and Co. Ltd. for the year ended March 1960 are good, and the directors consider the prospects for the Company to be fairly satisfactory. Steps have been taken to improve the earnings from the agencies by selling more Indian goods. The Indian Copper Corporation Ltd, which is a managed company, is expanding. It is proposed to set up a plant for

manufacturing electrolytic copper and wire bars. Production from this project will begin in 1962. The demand for the goods manufactured by the Indian Wood Products Co. Ltd, another managed company of Gillanders Arbuthnot, has increased, but profitability has been affected by the rising cost of raw materials.

In view of the increased demand, it is thought that the ropeways section will do much better in the future. As for the diversification of manufacturing activities, Adequate Weighers (India) Ltd has been formed for producing a special type of automatic weighing machine. The factory will be located in Konnagar, near Calcutta, and production is likely to begin in 1961. Another company is in the process of being formed and it will start production with foreign collaboration in 1961. Gillanders Arbuthnot has acquired a substantial interest in Recondo (Private) Ltd. This is a Bombay Company specialising in reconditioning and relaying roads. A controlling interest has also been acquired in E. W. Stevens and Co. Private Ltd, which has valuable agencies in the marine and radar fields.

Gillanders Arbuthnot's profit has risen from Rs. 23.07 lakhs to Rs. 26.10 lakhs. The ordinary dividend has been maintained at 10 percent, tax-free. It is covered more than two-and-a-half times and offers a yield of 7.5 percent at the price of Rs. 13.31 a share. Taxation is allocated Rs. 10.94 lakhs (against Rs. 11.27 lakhs), general reserve Rs. 3 lakhs (against Rs. 2 lakhs) and contingencies reserve Rs. 1 lakh (same). The carry-forward is Rs. 1,71,222, compared with Rs. 1,57,026 brought in.

India Jute Does Well

Presenting the results of the India Jute Co. Ltd for the year ended March 1960, the directors take a cautious view of the prospects for the current year in view of the high price of fibre. The cotton mill section has started production on a moderate scale, and it is proposed to modernise this unit. An application has been made to the National Industrial Development Corporation for a loan of Rs. 75 lakhs for the project. The directors mention that the No. 3 mill's land, building and electrical installations have been sold to the Madura Mills Co. Ltd for Rs. 12 lakhs. A taxable ordinary final dividend of 8 percent has been declared by India Jute, making 14 percent for the year. The dividend is covered more than twice and works out to a yield of 11.3 percent at the present price of Rs. 15.44 a share. The dividend was 9.92 percent, tax-free, in the previous year. The profit has increased from Rs. 8.70 lakhs to Rs. 18.08 lakhs, after providing Rs. 11.48 lakhs (against Rs. 10.40 lakhs) for taxation and Rs. 6.99 lakhs (against Rs. 5.42 lakhs) for depreciation. Development rebate reserve is allocated Rs. 1.44 lakhs (against Rs. 1.82 lakhs) The carry-forward is Rs. 4,94,235 against Rs. 62,038 brought in.

Pulp Mill from Megna Jute

The ordinary shares of the Megna Mills Co. Ltd—a Calcutta jute concern—have been steady around Rs. 10.87. This is because of the proposal to set up a paper pulp mill in Assam with an installed capacity of 100 tons of rayon and paper pulp a day. The preparatory work is proceeding and the Company has asked the Calcutta High Court for permission to make the necessary changes in its memorandum of association. Megna Mills has also made progress in producing tufted carpet backing on broad looms. Already, 47 such looms have been installed and it is expected that more will be installed soon. The Company has increased its profit from Rs. 9.81 lakhs to Rs. 14.20 lakhs for the year ended March 1960, after providing Rs. 9.90 lakhs (against Rs. 7.36 lakhs) for depreciation and Rs. 3.79 lakhs (against Rs. 11.59 lakhs) for taxation. A final taxable ordinary dividend of 6 percent has been declared, making 12 percent for the year. This offers a yield of 11 percent at the present price and is covered nearly twice. The ordinary dividend was 10 percent, tax-free, in the previous year. Development rebate reserve is allocated Rs. 6.51 lakhs (against Rs. 2.84 lakhs) leaving a carry-forward of Rs. 56,999, compared with Rs. 2,82,057 brought in.

Indian Smelting: Cable Project

The Indian Smelting and Refining Company of Bombay, a Birla venture, has received an industrial licence for the manufacture of paper-insulated underground power cables. The licensed capacity is 624 miles of cables a year. The project is estimated to cost about Rs. 2 crores, of which the foreign exchange component will be around Rs. 80 lakhs. Half the foreign exchange requirements are likely to be met by a loan from the Industrial Credit and Investment Corporation of India. The rest might become available from the Commonwealth Development Fund through the I.C.I.C.I. It is reported that British Insulated Callender's Cables Ltd will provide the technical know-how, but will not participate in the capital of the Company. The plant and machinery will come from the U.K. It is not yet known whether the new project will be operated by the Indian Smelting and Refining Company or a new company will be formed.

Rajranka Pulp and Paper

Rajranka Pulp and Paper Mills Ltd, it is understood, will soon enter the market to raise Rs. 12.25 lakhs from the public through the issue of equity shares of Rs. 100 each. The Company has an authorised capital of Rs. 50 lakhs, consisting of Rs. 40 lakhs in equity shares and Rs. 10 lakhs in redeemable preference shares, all of Rs. 100 each. Of this, only Rs. 25 lakhs worth of equity capital is being issued at present. The directors and their friends are taking up 12,750 shares, leaving the balance of 12,250 shares to be offered to the public. The factory will be located in Tumsar Road near Nagpur, and will have a licensed capacity of 3,000 tons of writing and printing paper a year. The Japanese firm of Marubeni Lidi will supply the machinery and the technical know-how.

Ideal Jawa for Motor-cycles

Ideal Motors of Bombay has promoted a new Company called Ideal Jawa India Private Ltd for the manufacture of "Jawa" motor-cycles. The factory will be located in Mysore. Starting with a production of nearly 10,000 units a year, the Company expects to reach the target of 15,000 units within 2½ years. The production range will include 50 c.c., 175 c.c. and 250 c.c. motor-cycles, with more than half the output in the first category. To begin with, the indigenous content of the motor-cycles will be 15 percent, but it is expected to rise to 80 percent in about 2½ years. The project is estimated to cost about Rs. 75 lakhs, of which nearly Rs. 50 lakhs will be spent on machinery. No foreign exchange is involved, since the machinery will be imported from Czechoslovakia against rupee payments. The Czech organisation, Motokov of Praha, will provide the technical know-how, for which the payment will be in rupees. Production is likely to commence early next year. Machinery has already begun to arrive. The promoters hope to sell the motor-cycles at a price of Rs. 1,300.

Acme Pig Iron Project

A new Company known as Acme Pig Iron and Centrifugal Pipe Works Ltd has been formed to undertake the manufacture of refined grades of pig iron, steel castings and billets. The plant will be set up in Khapoli, nearly 60 miles from Bombay. While the licensed capacity is 15,000 tons a year, it is proposed to install a plant with double the capacity to facilitate future expansion. The Company intends to manufacture 6,000 tons of steel castings and billets at a later stage. The plant is expected to go into production by the end of next year. The sponsors of the project have secured the technical collaboration of Compagnie Générale des Conduites d'Eau of Belgium. The Indian Company will have an authorised capital of Rs 50 lakhs, consisting of 30,000 equity shares of Rs. 100 each and 20,000 unclassified shares of Rs. 100 each. The issued capital will be only Rs 15 lakhs, of which the directors and their friends will take up shares worth Rs. 7.5 lakhs. The remaining 7,500 shares are likely to be offered for public subscription early next year.

The Prospects for Bombay Burmah

The Bombay Burmah Trading Corporation Ltd has done well during the year ended May 1960. The gross profit has increased by Rs. 37.90 lakhs to Rs. 131.92 lakhs. From what the chairman, Mr. Pratapsingh Mathuradas, said at the annual meeting of the Company in Bombay last Friday, the shareholders would be justified in taking an optimistic view of the future. The crops in the Company's estates have been better; timber operations in North Borneo have proved very fruitful; the rubber estate in Java is in good condition; and the boat-building activities in Burma are expected to improve during the current year. The Company has for some time been allocating the resources rendered idle by the closure of its teak workings in Burma and Thailand. The point has now been reached where it can start to reap the benefits of past developments.

Tea and timber, the leading sources of revenue, are doing well. The tea crop, according to the chairman, is running at a level appreciably higher than last year. With reasonable weather conditions, the Company may expect a harvest no lower than in 1958-60, when it was nearly 577,000 lbs larger than in 1958-59. Prices in London had eased slightly, but now there are signs of recovery and quality teas will continue to have a good market. Local prices are a little better and domestic consumption is increasing. The progress of the Company's tea estates in Tanganyika is encouraging and plans are in hand for a second factory. Referring to timber, Mr. Pratapsingh Mathuradas said that it is in North Borneo that the developments have been most fruitful. The Wallace Bay branch has increased its output to 125,131 tons of round logs and production costs have been reduced. Since profitable timber working in North Borneo depends on maintaining a very high volume of extraction and sales, the Company is engaged in forest surveys in that area. The prospects of selling Borneo timber depend on Japanese demand but efforts are being made to develop other markets. Although timber prices have declined recently, the average for the current year will not be far different from the 1959-60 level. The gradual development of the plantation interests in North Borneo—cocoa, oil palms and perhaps other crops later—will help widen the basis of Company's operations and will serve as a safeguard against any marked fluctuations in the timber income.

In Burma, new boat-building orders have been received. Encouraging progress has also been made with the concrete pipe and asbestos cement factories in Rangoon, both of which are now firmly established with a high level of production and increasing offtake. The redeployment of branch resources in Burma has been a long and somewhat difficult task, but many earlier difficulties have now been overcome and the future can be viewed with confidence. Replying to shareholders' questions, Mr. Pratapsingh Mathuradas stated that the Company is thinking of extending its activities in India. It has one or two schemes in hand, but he cannot say what shape they will finally take. About the shareholders' suggestion for a bonus issue on the occasion of the centenary celebrations, he said that the management would look into the matter but he could made no commitments.

Ahmedabad Electricity Expanding

The working results of the Ahmedabad Electricity Co. Ltd for the year ended March 1960 are satisfactory. A taxable ordinary dividend of 7 percent, including a final of 4½ percent, has been declared. But the return is considered low in relation to the capital investment due to the stringent provisions of the Electricity (Supply) Act. Addressing the annual general meeting of shareholders in Bombay last week (a fuller version of the speech was printed in last week's *Capital*), Mr. A. N. Haksar pointed out that because investment in electricity undertakings is unattractive, it has become difficult to obtain fresh funds from the market. Unless the Government allows the industry to offer bigger returns, investors will be inclined to shift their resources to other enterprises. Mr. Haksar referred to the various representations which have been made to the Government for improving the investment attractions of electricity companies. Better returns are needed in order that the companies may expand and meet the increased demand. Mr. Haksar also mentioned the possibility of the provisions of the Electricity (Supply) Act being liberalised in the near future.

The demand for electric power has been increasing steadily since the inauguration of Gujarat State, which has taken steps to develop various industries rapidly. The Ahmedabad Electricity Co. and the Gujarat Electricity Board have taken measures for providing more power. The latter is organising large-scale thermal development. Ahmedabad Electricity had already placed an order for 30 M.W. of plant and it has now decided to repeat the order before this set is installed. The first set is expected to start working early in 1962. Permission has been obtained from the Gujarat Electricity Board for further expansion.

With the completion of the expansion schemes, the Sabarmati power station of the Company will reach its optimum size. But Mr. Haksar saw scope for further expansion in view of the rising demand So the directors are thinking of installing more generating plants at new sites in the future. The expansion schemes will naturally require a substantial investment of funds. More money is also needed to improve distribution facilities in the areas which are already served with power by Ahmedabad Electricity.

Difficulties of Woollen Industry

In his speech from the chair at the annual meeting of the Federation of Woollen Manufacturers in Bombay last week, Mr. Calloway said that many of the difficulties facing the woollen industry arose from the Government's policies. If

the Government continues to issue control orders and notifications without consulting manufacturers, chaos will follow. The industry cannot run the installed machinery to its full capacity due to raw material shortages. Last year, it worked on the basis of 1½ shifts, on average. The foreign exchange shortage has necessitated a cut in raw material imports, but many of the difficulties could have been avoided by the timely release of import quotas. In spite of assurances from the Government, import licences have been issued so late that the mills will not receive shipments before the end of December or even later. Shifts have already been closed in some units and in one case the entire worsted mill has been shut down. Heavy retrenchment compensation has to be paid in the event of closure notices. To avoid expensive breaks in manufacturing programmes is essential for efficient working.

The acute shortage of essential spare parts, dyes and chemicals is another serious difficulty which the industry has to face. The mills will have to be modernised if they are to compete successfully in foreign markets for earning the badly needed foreign exchange. Mr. Calloway urged the Government to revise its rules so that manufacturers may import their actual requirements of synthetic raw materials according to their overseas orders for mixture cloths. He strongly criticised the official control order on the production of worsted yarns. Mills have been ordered to manufacture worsted yarn for weaving, hosiery and knitting on the basis of 47½ percent, 32½ percent and 20 percent, respectively. But to fix different percentages for the production of worsted yarns for specific purposes is not feasible technically. Apart from an adequate supply of imported raw materials, the industry needs licences for rehabilitating machinery by using the various credit schemes negotiated with the U.K., Japanese, Swiss and French Governments.

The Rupee Depreciates

The value of the Indian rupee in unofficial dealings has depreciated considerably in recent weeks. It now costs nearly Rs. 19 to buy £1 sterling in the black market, against the official parity of Rs. 13.33. The U.S. dollar costs about Rs. 6.75, while the official rate is only Rs. 4.76. About a month ago, the pound sterling could be had at Rs. 17.50 and the dollar at Rs. 6.25. One might not perhaps take much notice of these movements in the rate of exchange if business were limited. But the unofficial foreign exchange market is reported to be quite active. The recent fall in the value of the rupee seems to reflect an increase in smuggling activities following the end of the monsoon. The smuggling is not confined to gold. Many items, the import of which is banned or severely restricted, such as watches, fountain pens, portable radio sets and toilet goods, are freely available in the market. Imports have to be paid for in foreign currency. But the demand for unauthorised foreign exchange does not arise from smuggling alone. Indian tourists abroad usually spend more money than they are entitled to.

Some will wonder how the foreign exchange is found for meeting all these requirements. Formerly there used to be a good deal of leakage through the outright smuggling of currency, because the Indian rupee was legal tender in many Middle Eastern countries and could be converted freely into sterling. The issue of a special series of rupee notes for circulation in these countries has virtually sealed the loophole. Drastic restrictions on the amount of Indian rupees an individual can carry with him outside the country or bring into the country have also helped. But even so there are various ways in which people are able to accumulate a considerable amount of foreign exchange abroad which cannot be detected by the authorities. The under-invoicing of exports is a common method, while export promotion schemes and barter deals also enable exporters to accumulate hidden funds abroad. It is suggested that in some cases capital goods licences are given for a greater value than is really needed. The large demand for foreign exchange keeps the unauthorised market active.

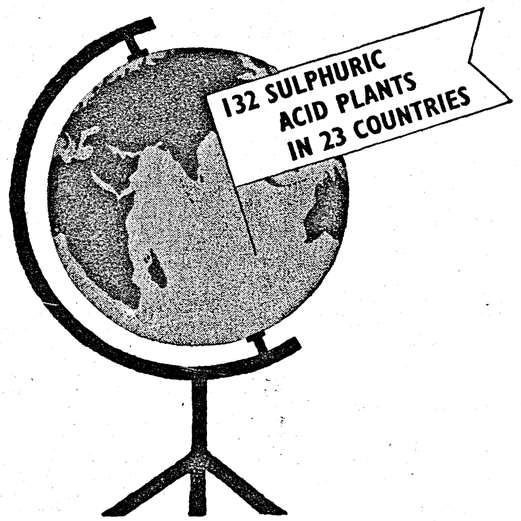
Synthetic Rubber Plant

The foundation-stone of the Rs. 5-crore synthetic rubber plant—the first of its kind in India—was laid in Bareilly, U.P., on 28th November by Mr. Ramdas Kilachand. The plant, it is expected, will be commissioned by 1962. The project is based on the use of alcohol, of which 14 million gallons will be required in the initial stages for producing 20,000 tons of synthetic rubber. The demand for alcohol is estimated to rise to 20 million gallons when the production of the factory is expanded to 30,000 tons. The use-ratio of synthetic rubber has been growing in India. In 1957, for instance, she imported 9,677 tons of synthetic rubber, which was about 28 percent of her total rubber consumption. When the Bareilly rubber plant goes into production, it will reduce the dependence on imports and will be of considerable help to the rubber manufacturing industry. Writing in the *Indian Rubber Bulletin* in October 1953, the Central Minister for Industry, Mr. Manubhai Shah, said that the Government wishes to make the industry increasingly independent of imports. He added: "With this object in view, the scope for setting up a snythetic rubber (G.R.S.) plant using indigenously available alcohol, benzene, ethylene, etcetera, is being explored. It is hoped to initiate the establishment of the synthetic rubber plant in the second five year plan period." This promise has now been fulfilled, but other important raw materials like carbon black, sulphur, antioxidents, etcetera, still have to be mostly imported. The setting up of a big smelter to exploit the iron pyrite resources in Amjor, Bihar, might reduce India's dependence on foreign sulphur to some extent About 300,000 tons of sulphur are at present imported annually.

Kanpur Power Supply

The Kanpur Electric Supply Administration—a U.P. Government undertaking—has handled badly the situation arising from the changing course of the river Ganga. The result has been an almost complete breakdown of electric supply for industrial uses for about a week, throwing a few hundred thousand workers temporarily out of employment. While floods can be sudden, the recession of a river is generally a slow process. So the authorities should have taken measures sufficiently in advance to ensure water supplies to the power-house. The disaster might have been greater and of longer duration but for the fact that the Kanpur water works reduced its intake from the Ganga and the Ganga Canal from 24 million gallons to 5 million gallons a day, and thereby enabled the power-house to function nominally. The latter needs 70,000 gallons a minute to cool the turbo-alternators.

The K.E.S.A. authorities, in a statement, have pointed out that the power-house was built near the river 40 years ago when the changing course of the Ganga—away from the Kanpur side—could not be foreseen. When a power-house is situated away from a river and ample supplies of water are not available, the alternative of providing cooling towers has to be adopted. But these, according to the authorities, involve heavy capital expenditure and give rise to operational difficulties, such as lower efficiency and higher generating costs. As a rule, therefore, power-houses are located near river banks. But since Indian rivers are sometimes erratic, it should not be beyond the resources of



Since 1935 Simon-Carves have received orders for and put into service, one hundred and thirty two Simon-Carves-Monsanto sulphuric acid plants of which 21 have been installed in India. With an aggregate rated capacity of nearly 3¼ million long tons of 100% sulphuric acid per annum, these plants have been built in twenty three countries throughout the world. Their individual rated capacities range from 10 to over 400 tons of 100% acid per day. Designed to use any sulphur bearing material including raw sulphur, pyrites, sludge acid, refinery waste gases, anhydrite etc, their output is used in oil refining, steelmaking, uranium processing, the production of fertilisers, explosives, rayon, dyestuffs, pigments and many other industries.

the Government to evolve a remedy. In the summer months, the level of the river will fall and the three-mile long channel, which has now been excavated, will then prove useless. The U.P. Irrigation Department has announced plans to build a bund across one of the streams of the Ganga and to cut a direct channel from above the bund to the pumping plant of the power-house. But these schemes could have been thought of many years ago as, according to the K.E.S.A. authorities themselves, the drying up of water supplies to the power-house has been a hardy annual every autumn after the floods.

Industrial Statistics

In keeping with modern practice, the use of statistics in India for industrial and commercial purposes has been increasing. Testifying to this fact, Sir Biren Mookerjee, chairman of the Indian Iron and Steel Company, said at the annual general meeting of the Bureau of Industrial Statistics in Calcutta last week, that much useful work is being done in this field. The Bureau is a non-official organisation, which has during the past 11 years been engaged in research activities such as surveys of industries and markets, consumer research, technological relationship and productivity studies. According to Mr. T. Ghose, director, the Bureau in 1959-60 took up preliminary work in connection with studies for the regional development of industries in West Bengal, and for possible reorganisation and dispersal of industries under the Greater Calcutta master plan. Since systematic and reliable data which could form a sound basis for planning the reorganisation and development of small industries in West Bengal are not available, it prepared a comprehensive scheme, which was submitted to the Reserve Bank. The scheme is now being considered by the Government of India. After indicating the broad outlines of the scheme the Bureau has prepared, Mr. Ghose said that preliminary arrangements have been completed to "make a pilot study of eight different zones of West Bengal as the basis for drawing up the final survey pattern." Discussing the other project to study the possible reorganisation of small industries under the Greater Calcutta plan, which is designed for the rapid development of the entire industrial belt stretching from Kalyani to Diamond Harbour, Mr. Ghose said that in the Calcutta municipal area alone there are numerous small industries, which are scattered in the most haphazard manner and which need prompt attention for their development. These industries include electrical and mechanical engineering, repairing and job workshops particularly motor-car, bicycle and transport equipment repairing, leather and leather goods and hosiery manufacture. The Bureau is studying the economic aspect of these small industries to help their reorganisation "in the form of scientific dispersal in suitable industrial estates around the vast belt of the proposed Greater Calcutta, leaving room for future growth as also encouraging new ventures to join." Further surveys which the Bureau proposes to undertake include one of ancillary industries in Durgapur and adjacent areas, a re-survey of small engineering industries in Howrah and another of goods which find a market in West Bengal but are not locally produced.

Waste through Indecision

Speaking at the quarterly general meeting of the Indian Chamber of Commerce in Calcutta last Thursday, Mr. Russi Mody, president, said that governmental indecision has caused much frustration during the past ten years. Many administrators are fully capable of taking decisions and following them up with resolute action, but they refrain from doing so because of the changed relationship between ministers and civil servants. The confidence, integrity and incorruptibility of civil servants, Mr Mody said, has been sapped by a Government which is constantly on the look-out for votes and popular acclaim. It is up to a minister to create good relations with his secretariat so that a divergence of views can be allowed without impairing discipline. Errors of judgment and mistakes are bound to occur; occasionally they are costly, but then there have also been innumerable cases where firm decisions could have saved the country several crores of rupees. Official indecision has been noticed in the manufacture of aircraft and motor-cars; in the setting up of refineries and fertiliser factories; in establishing coal washeries for the benefit of the steel industry; and in scores of other projects.

Developing Industries in Madras

The annual general meeting of the Southern India Chamber of Commerce in Madras last week was a prelude to the golden jubilee which will be celebrated with an exhibition starting at the end of this month. Commenting on the speech of the president, Mr. M. A. M. Muthiah Chettiar, the Chief Minister of Madras, Mr. Kamaraj Nadar, declared that the State Government cannot relax the rules relating to the collection of sales tax. But it is keen on developing the State by removing such handicaps as the shortage of power. The Madras Government's willingness to let private enterprise flourish has been welcomed by entrepreneurs. The president of the Chamber referred to the political stability attained in the State under the leadership of Mr. Kamaraj Nadar. He welcomed the Government's proposal to investigate the causes of the rise in prices. Referring to the banking situation in the State, he said that the nervousness among depositors has produced an atmosphere of uncertainty, although it is a passing phase. India needs a more positive and dynamic approach to the problem of increasing credit facilities for expanding industries.

Grand Total Rs. 3,390.55.

HINTS ON ADVERTISING

IN the minds of business men who really know, by practical experience, the value of advertisements as a means for increasing their commercial operations, there can be little doubt that, great as has been the advance made during the nineteenth century in advertising as a specialized branch of trade, the coming century will see a tremendous development therein. The matter is one of the greatest importance to manufacturers, producers, wholesale merchants and retail traders alike, and may be profitably considered from many points of view. At one end of the line, so to speak, stands the seller, at the other the purchaser, and between these two are ranged a host of factors the sole function of which is to establish connecting links between the two extremes. After the seller, whether he be producer, manufacturer or trader comes the advertising agent or specialist, and the conditions of modern competitive commercialism are such that, to obtain a satisfactory return on advertisement expenditure, the specialist must be regarded as the most important link in the chain. He should really be a kind of confidential adviser to the seller, and whether he chooses the agency of the newspapers, the aid of catalogues, the publicity of the poster, or any other method—and there are scores—for attracting the attention of the buyer, the cardinal principle on which all his operations should be based is the successful transfer of goods from the seller to the producer. To do this satisfactorily demands a degree and variety of knowledge little suspected by the uninitiated. It calls for a knowledge of geographical, social and economic conditions, which specially apply to the particular community to be approached, it requires an intimate acquaintance with the influence and potentialities of the medium to be used, and in its higher operations it should be able to command and direct the best resources, not only of pictorial illustration but shou'd even press the events and occurrences of daily life into its service.

DEEDS
....Not merely words
PERFORMANCE
.....Not only promises

The beginning and the end of a Five Year Plan are vital dates in the nation's history. Each Five Year Plan is both an assessment of the past and a call for the future. It seeks to translate into practical action the aspirations and ideals of the millions in the country and gives to each of us the opportunity of service in the common cause of eliminating poverty and raising standards of living...

Today, on the eve of the Third Five Year Plan, we of Dalmia Cement (Bharat) Ltd. believe that almost 23 years of useful service to the Nation is something to talk about. Here are a few facts about our "achievements" and our contribution towards raising the standard of living of our people during the past few years.

For building the India of our dreams, the richer and prosperous India, there is little room for preaching by mere words and what are needed are DEEDS... DEEDS, in the terms of rebuilding of our nation, including higher production of some of the essential commodities like

CEMENT

the great modern material of building construction

In 1947, we had placed at the Nation's disposal over 67,000 Tons of Cement
In 1950, we had produced over 1,64,000 Tons of Cement
In 1954, we produced over 2,70,000 Tons of Cement
In 1957, our production reached nearly 2,80,000 Tons of Cement
And This Year.... in 1960
We expect to place at the nation's disposal over 4,25,000 Tons of Cement

BECAUSE WE NEED MILLIONS of TONS of CEMENT
for building the richer and prosperous India of our dreams....

DALMIA CEMENT (BHARAT) LTD.

A National Enterprise in Nation's Service

A Ditcher's Diary

IT IS ROUND ABOUT THIS TIME EVERY YEAR THAT I take a look at the progress of our Christmas Toy Fund and either nod my head with quiet satisfaction or throw up my hands in despair. It is a few years now since I had occasion to do the first of these; usually it is the second, and this year I regret to say there is more cause than ever. If I may trouble you a moment with figures: Up to 6th December, 1958, the total for the Fund was Rs. 3,896.05; by the same date in 1959 it was Rs. 3,731.50. But on 6th December, 1960, it was only Rs. 3,390.55. This, on anybody's reckoning, represents a steady deterioration over the past three years. For 1958 and 1959, actual collections up to 6th December were fairly close—Rs. 3,334.50 compared with Rs. 3,283.57—because the above totals contained an element of carry-forward from previous years. But the figure for collections in 1960 is only Rs. 3,005.50. The gap is too wide; on collections it is Rs. 329 between 1960 and 1958 and Rs. 278.07 between 1960 and 1959. The Fund is getting smaller every year. The trouble is, of course, that the calls upon it are not; in fact, they tend to increase. We have already spread the money as thinly as we can so as to include as many poor children as possible. Now, whether or not this year we are going to have to deprive some child of what he had last year and perhaps the year before, depends on you. And I need hardly add that it is much worse to do without something if you have once had it than it is if you have never had it at all. So please help us to bring this year's Fund at least up to last year's, and higher if possible. Send your contributions now to *Capital's* Christmas Toy Fund, 5 Mission Row, Calcutta.

•

I NEED HARDLY SAY THAT I WAS NOT PRESENT AT THE recent, protracted conference in the Kremlin of communist leaders from 81 countries. I have only read the equally authoritative reports that (a) the Russians won hands down and (b) the Chinese had it all their own way. The State Department has not been able to repeat its magnificent performance over the 20th Congress of four years ago, although it was on that occasion perhaps helped by Mr. Khrushchev himself. Is nobody going to spill the beans this time, or were there no beans to spill? The latter I find hard to believe, for so many otherwise busy men would not have spent so much time discussing such trivia as whether or not war is inevitable between the socialist world and the "capitalist" world. This dialectical scholasticism, I suggest, was only cover for more serious and practical matters relating to party organisation and, perhaps, involving many personalities in many lands. A Soviet "expert" told me this week that he expected a purge on the Stalinist scale in another two years or so. In every totalitarian régime this is always a possibility, sometimes a certainty; but I found his evidence unconvincing and his timing unwarranted by anything specific that is known in the free world. That the Chinese have a primitive economy, and so want a primitive form of socialism, is obvious. That the Russians are by comparison richer, and so can do without the rigours China considers imperative, is also plausible. But I should not be surprised if there are critics of relaxation even in the Soviet party, for private cars and more consumer goods have affected the younger generation of Russians psychologically; and this is totally at variance with party discipline. At the summit, I suspect, there were many to speak for the "tough line". But the fact of Soviet power remains; and this will be the final arbiter of ideological squabbles.

THE DEVIL MUST HAVE HAD A BAD TIME IN ROME the other day. This is an age of changes all right, but I never thought I should live to see the day when Pontiff and Prelate would meet together in a "spirit of cordiality". I have heard it remarked that Henry VIII must have turned in his grave. But I doubt it. Henry prided himself on dying a good catholic, and his quarrel with Rome was more over temporal matters than spiritual. Personally, I think he would have welcomed this meeting as a contribution to the christian unity which his conscience never forgave him for disrupting. And so must all christians, good, bad or indifferent. This does not mean that England is contemplating a return to the catholic fold; the national character would scarcely permit that. It simply means that the leaders of the two christian sects have decided that a higher degree of friendship and understanding is more appropriate to this day and age; and only the most irredeemable of bigots would disagree with them. One might ask why there has not been such a meeting before. The answer undoubtedly lies in the character of the two men concerned. Nobody who has met the Archbishop can have the slightest doubt as to which side the initiative came from. But without a receptive spirit in Rome, even his friendliness could scarcely have broken down the barriers of the centuries. So it is in the personality of Pope John where we must look for the answer. It was said when he was chosen that his advanced age would prevent his being anything more than a caretaker of his great office. But already he has made many departures from tradition which his predecessor, from what we remember of him, would never have contemplated for a moment. He has, in fact, set a number of excellent precedents for his successors to follow, and one of them is this meeting.

THE VERY CONCEPT OF DETENTION WITHOUT TRIAL is, of course, illiberal; and so, repugnant to every genuine democrat. Hardly a day passes without Ghana imposing fresh restrictions on elementary freedoms; and all of it is done in the name of some glorious African tradition or other. All that is calculated bunkum: but I am prepared to concede that in some of the extremely unstable societies of Africa it may be necessary to limit liberties. But if, after thirteen years of independence, and after so many tributes have been paid to the political stability of the country, India still needs the Preventive Detention Act for another three years, well, then India forfeits the aforementioned compliments. In the Lok Sabha there were complaints of abuse. These were, expectedly, denied by the Government. But I am not persuaded that any Government—*any* Government—can have such unlimited powers and never abuse them. The temptation to lock one's opponents up is hard to resist. A contemptible piece of legislation though the P.D. Act is, the Government's argument receives a semblance of justification from the fact that there are in the country a number of very anti-social and potentially dangerous elements. I am sorry to have to say that communalists are not an extinct race yet in India; and I have sometimes been shocked by their existence in the most unexpected quarters. I have little experience of Bombay, which shares with West Bengal the unenviable distinction of locking up the largest number of people, but in Calcutta ever present is a suggestion of violence in the air; and it is a pity that the Government has not found a more satisfactory substitute for the Goonda Act than the P.D. Act, preferable though even this is to the Acts that some States would certainly have promulgated in the absence of the Central Act. It is depressing to think that conditions in India will continue to be such for three years as to justify the P.D. Act. Why not an annual review?

IN TONES BREATHLESS WITH URGENCY AND QUIVERing with trepidation a British friend writes:

"While there is still time, warn your British readers that their country is once again in mortal danger, facing a threat which rivals such historical perils as Caesar's legions, the Conqueror's archers, the Spaniard's Armada, Napoleon's *Grande Armée*, the Luftwaffe's bombers and Australia's cricketers. I am referring, of course, to that Shavian nightmare, the proposal to merge Britain and the United States. This is only the latest craftily-contrived revival of a deep ambition to rejoin the British Empire which the colonists have secretly nurtured ever since, by winning the War of Independence, they so carelessly brought upon themselves the greatest catastrophe in American constitutional history. It was only to be expected that we would hear more of this pitiful scheme now that their headstrong and overgenerous behaviour has landed their precious dollar in such difficulties. But all fresh attempts to reunite these prodigal colonies with their mother country must be resisted at all costs. It called for a considerable effort of foresight and inefficiency on Britain's part, which history has since amply justified, to lose those 13 boisterous offspring and force them to make their own way in the world. And it has taken years of patient bamboozling and cajoling to persuade them to take over the thankless and embarrassing position of the world's leading power, as well as a great deal of precious investment to make them so rich that Britain is no longer the envy of all other nations. We have indeed worked hard for the privilege of sitting back and watching the United States take from our shoulders the blame for all the world's ills. Of course, it was scarcely to be expected Americans would not eventually see through the grand design and seek to deprive Britain of some of the hard-won freedom earned through centuries of ingenuity. But Britain's natural sympathy for the unfortunate must not be allowed to defeat her determination to leave the colonies to lie on the bed they were persuaded with such difficulty to make. I call on all British everywhere to harden their hearts against this pathetic American attempt to share the burden of excessive riches and the blame of world responsibility with a parent country who herself carried them for so long and planned so untiringly to shift them elsewhere. Why, these Americans are just as unrealistic in expecting us British to relieve them of their neuroses as we would be in hoping that some day they will learn to speak our language."

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus has been duly filed with the Registrar of Companies, Madras State, for registration. Consent of the Central Government has been obtained to this issue. A licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking. The Madras Stock Exchange Limited has agreed to grant an official quotation for the Shares of the Company and permission to deal in them on the Company complying with the usual and necessary formalities after the closure of the subscription list.

The subscription list will open at the commencement of the Banking hours on Thursday the 15th December, 1960 and will close at the close of the Banking hours on Thursday the 22nd December, 1960.

KOTHARI SUGARS AND CHEMICALS LIMITED

(Incorporated under the Companies Act, 1956)

AUTHORISED CAPITAL:
50,00,000 EQUITY SHARES OF Rs. 10 EACH ... ... Rs. 5,00,00,000

ISSUED CAPITAL:
8,00,000 EQUITY SHARES OF Rs. 10 EACH ... ... Rs. 80,00,000

SUBSCRIBED CAPITAL:
2,50,000 EQUITY SHARES OF Rs. 10 EACH ... ... Rs. 25,00,000

PAID-UP CAPITAL:
AT THE RATE OF Rs. 5 PER SHARE ON
2,50,000 EQUITY SHARES OF Rs. 10 EACH ... ... Rs. 12,50,000

Out of the above issue, the signatories to the Memorandum, the Directors of the Company and their friends have subscribed among themselves for 1,20,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 12,00,000. The Madras Industrial Investment Corporation Limited have underwritten 1,50,000 shares out of which they have subscribed for 1,30,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 13,00,000 and have also agreed to make an open application for a further 20,000 Equity Shares of Rs. 10 each which will rank for allotment on a par with other applications received from the public, making in all Rs. 15,00,000. Out of the balance of Rs. 55,00,000 the Life Insurance Corporation of India have underwritten and have agreed to subscribe and will be allotted 1,50,000 Equity Shares of Rs. 10 each to the aggregate value of Rs. 15,00,000.

The Balance offered for public subscription by the prospectus:
4,00,000 Equity Shares of Rs. 10 each. Rs. 40,00,000

On Application ... ... Rs. 5 per share
On Allotment ... ... Rs. nil.

The balance of Rs. 5 per share is payable as and when called.

The entire issue (other than the shares allotted to the Directors and their friends) of 6,80,000 shares of the face value of Rs. 68,00,000 has been underwritten.

No shares are issued for consideration other than cash.

"Oriental Buildings", Armenian Street, Madras-1.

OBJECTS OF THE COMPANY

The Company has been incorporated on 7th November, 1960 for the several purposes set out in the Memorandum of Association, in particular to carry on the business of sugar manufacturers in all its branches.

PROSPECTS

The Company has been promoted by M/s. Kothari & Sons, Madras. The Promoters obtained a licence for this Company from the Government of India for the establishment of a Sugar Factory by this Company in Lalgudi Taluq of the Tiruchirapalli District, Madras State for the manufacture of sugar with a crushing capacity of 1,250 tons of sugar-cane per day.

It is proposed to establish a factory for the manufacture of sugar in the Lalgudi Taluq in Tiruchirapalli District, Madras State with an initial crushing capacity of 1,000 tons per day which could be increased later on to 1,500 tons crushing capacity per day

TAX BENEFITS

The Company will enjoy the special benefits under the Indian Income-tax Act, 1922 as regards development rebate and depreciation; in addition, as a new Industrial undertaking, it will enjoy exemption from Income-tax for profits upto 6% on the Capital employed for the first five years of the Company's operation.

Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under Clause XX of Sub-section (1) of Section 5 of the Wealth-tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

PLANT AND MACHINERY

It is proposed to enter into an agreement with M/s. Binny's Engineering Works (Private) Ltd., for the supply of the plant and machinery. They have agreed to import the necessary foreign components and to manufacture and supply the plant before the end of 1961. It is, therefore, expected that the factory will commence production early in 1962.

CAPITAL OUTLAY

In respect of this issue, the minimum subscription on which the Directors will proceed to allot is Rs. 15 lakhs being 1,50,000 Equity Shares of Rs. 10 each.

The capital required to reach the stage of production is estimated as follows:

		Rs.
(a) Land & Buildings	...	31,00,000
(b) Plant & Machinery (Including spares)	...	1,05,00,000
(c) Preliminary Expenses	...	4,00,000
(d) Pre-operative Expenses	...	4,00,000
(e) Working Capital	...	16,00,000
		1,60,00,000

The Industrial Credit & Investment Corporation of India Ltd., and The Bank of India Ltd., have agreed to give a loan of Rs. 35 lakhs each i.e., Rs. 70 lakhs secured by a mortgage over the land, factory, plant and machinery and other fixed assets. The loan by The Bank of India Ltd., will carry interest at the rate of 2% over the Bank Rate subject to a minimum of 6½% while the loan from the Industrial Credit and Investment Corporation of India Ltd., will carry interest at 6½%. The balance required will be borrowed from Banks and other sources.

MANAGING AGENTS

Subject to the approval of the Government of India, the Company will be under the management of M/s. Kothari & Sons (Industries) Private Limited. Articles 137 and 138 of the Company's Articles of Association provide for the appointment of M/s. Kothari & Sons (Industries) Private Limited as Managing Agents of the Company on the prescribed scale of commission subject to a minimum of Rs. 50,000 per annum.

UNDERWRITING

The Underwriters, will, each be paid an underwriting commission of 2½% on the face value of all the shares underwritten by them respectively besides brokerage of 1% on shares allotted on application bearing their Rubber Stamp.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker. Brokerage on the same basis is payable to the Underwriters in addition to the underwriting Commission on all allotments in respect of applications made or procured by them and bearing their Rubber stamp.

Copies of the Prospectus and application forms may be obtained from the Company, the Underwriters, Bankers and Brokers set out above.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 7th December.

THERE has been scarcely any change during the past week in the total of advances outstanding in the Calcutta money market. Some sources of demand have shown an increase; the jute and the sugar industries are the main ones. But others, such as cotton mills and engineering, are about the same, while call for accommodation against grains and seeds storage shows a slight decline. The inter-bank market is tighter following the withdrawal of the funds which came in last week from outside. The call rate has increased to 4 percent, and at this level there are borrowers over.

There has been considerable activity in the exchange market, with a substantial increase in both tea and gunny bills. Remittance demand, however, remained moderate. On the London money market, the pound has ruled quietly steady and for most of the week showed little change on previous levels. Changes at the close were confined within narrow limits.

BULLION WAS QUIET DURING THE PAST WEEK DUE to the lack of demand. Silver was quoted at Rs. 225 for ready delivery, and the rate for forward delivery was Rs. 225.25. The London and New York prices were 79½d and 91.375 cents, respectively.

Gold was easier in sympathy with silver. The price declined from Rs. 137 to Rs. 136.50. The sovereign was quoted at Rs. 91.75.

DURING THE WEEK ENDED 2ND DECEMBER, GOVERNMENT of India Treasury bills for Rs. 32,93,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 6th December. The total amount offered was Rs. 2,40,00,000. Tenders at Rs. 99.365 were allotted approximately 83 percent, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 12th December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 7th to 10th December at Rs. 99.381 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 30th November to 3rd December amounted to Rs. 70,00,000.

RISES OF Rs. 18.49 CRORES TO Rs. 1,852.11 CRORES in the total note issue, and of Rs. 17.14 crores to Rs. 1,828.11 crores in active notes, were the notable features of the return of the Reserve Bank of India for the week ended 2nd December, 1960. The currency expansion was covered by increasing the rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 1,482.06 crores. This was done partly by transferring securities from the Banking Department, in which investments declined by Rs. 40.17 crores to Rs. 203.99 crores. Deposits of the Central Government fell by Rs. 6.64 crores to Rs. 60.71 crores, but other Government accounts rose by Rs. 1.39 crores to Rs. 11.71 crores. Balances of commercial banks at Rs. 89.78 crores showed a decline of Rs. 8.70 crores. Balances held abroad improved by Rs. 11.79 crores to Rs. 28.75 crores. Other loans and advances increased from Rs 114.50 crores to Rs. 121.15 crores, of which advances to scheduled banks against usance bills amounted to Rs. 4.06 crores (Rs. 4.27 crores). Ways and means advances stood at Rs. 35.58 crores, against Rs. 31.39 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 25th November, 1960, shows a rise of Rs. 2.27 crores to Rs. 571.76 crores in total deposits. Investments in Government securities are up by Rs. 5.06 crores to Rs. 333.52 crores, while other investments remain unchanged at Rs. 10.14 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 1.66 crores to Rs. 207.99 crores. Cash and balances are, in consequence, shown at Rs. 31.55 crores or Rs. 4.63 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 25th November, 1960, shows Demand and Time liabilities at Rs. 798.00 crores (Rs. 26.61 crores on account of borrowings from banks) and Rs. 1,142.12 crores (Rs. 18.13 crores), compared with Rs. 789.24 crores (Rs. 21.15 crores) and Rs. 1,134.64 crores (Rs. 17.21 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 71 lakhs and Rs. 2.70 crores to Rs. 45.62 crores and Rs. 90.63 crores, respectively. There is a rise of Rs. 4.03 crores to Rs. 684.86 crores in investments. Advances and bills discounted at Rs. 1,104.65 crores show a drop of Rs. 2.01 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.0 percent and 56.9 percent, against 7.3 percent and 57.5 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 9-12-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
9-12-60	10-3-61	2,00,00	Rs. 2.540%
2-12-60	3-3-61	2,00,00	Rs. 2.540%

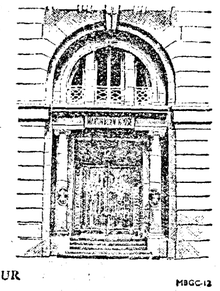
historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.



The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

Stocks and Shares

SHARES RECOVER AS FEARS OF BANK RATE INCREASE RECEDE

OPERATORS WELCOME MOVE TO RAISE PREFERENCE DIVIDENDS

Wednesday Evening.

TRADING in the Calcutta stock market has been slow and dull for the greater part of the past week. But conditions have livened up a good deal since yesterday, when the Central Finance Minister, Mr. Morarji Desai, indicated that Bank rate is not likely to be increased in the near future, nor credit restrictions made more stringent. Reports of his speech to Parliament's consultative committee on finance have proved particularly reassuring at a time when the stock market's major worries centred on the credit difficulties which might precede the year-end closing of the banks' accounts. It was thought that the annual process of "window-dressing" banks' balance-sheets might prove especially harsh this year, with the busy season monetary demand gaining momentum at a time when advances are already very high.

The inclination not to increase Bank rate is generally approved. Any such increase would have depressed Government securities and embarrassed the banks. But the question is nevertheless being asked whether Bank rate can be allowed to fall far out of line with market interest rates. If the latter go on rising, whether under the impulse of Reserve Bank directives or for other reasons, can the interest rate for Government borrowing be artificially pegged at a low level? The question may appear to be largely of academic interest for the time being, because no new Government loan flotations are in sight. But it may acquire greater practical relevance when the next official borrowing programme is launched some months from now.

The second most encouraging development for the stock market is that a bigger increase is proposed in preference dividends, in order to compensate preference shareholders for the loss of the "grossing" privilege. The Preference Shares (Regulation of Dividends) Bill, as originally introduced, suggested that the tax-free dividends should be raised by 25 percent and the taxable dividends by 7 percent. The select committee which has been considering the Bill has now recommended that the tax-free dividends should be increased by 30 percent and the taxable ones by 11 percent. Preference shareholders are naturally pleased that they will get more money. But the pleasure is diluted by the thought that in many cases gross payments (the net dividend plus the refundable prior deduction of tax) will still not be as large as they were before the new system of corporate taxation was introduced. (This is particularly true of companies which used to pay the full company income tax of 31.5 percent under the former system.)

The stock market's attention on more general matters affecting the economy has been limited. Operators have not had much to say about current proposals to increase the size of the third five year plan, such as by increasing the outlay on agriculture and oil. The general view seems to be that it does not matter much if investment targets are raised or lowered by a few hundred crores of rupees. The ultimate size of the plan will depend on : (1) how much foreign aid can be got ; and (2) whether the corresponding rupee resources can be raised. On the first point, hopes have been dimmed a little by the announcement that the International Co-operation Administration of the United States will not allow its dollars to be spent in 19 countries whose currencies are relatively strong. The tendency increasingly to "tie" aid to purchases from the country giving the aid implies that the borrowers' projects will become more expensive and and will also probably be scrutinised more closely by the lenders. As for rupee resources, there is an undercurrent of anxiety that so many State Governments should be going round freely promising the Planning Commission that they will raise more money in order to get a few of their pet schemes included in the third plan. Operators recall that previous promises of this sort have been fulfilled to only a limited extent—and then mainly by imposing taxes and duties which have hit trade and industry.

Steel shares have steadied up during the past two days, after having been rather sluggish earlier. Tata Steel's production figures for November were interpreted bearishly in Bombay, but Calcutta is moderately satisfied with Indian Iron's performance. Compared with October, the latter Company produced more pig iron, steel ingots and saleable steel last month, although despatches decreased a little. Indian Iron shares fell to Rs. 23.52 but have improved to Rs. 23.58 at today's clearing. Among other engineerings Indian Oxygen are firm around Rs. 40.12 as they are hoping for a rights issue to complement the expansion plans. Texmaco, at Rs. 23.50, have recovered what they lost in sympathy with the general trend. In Guest, Keen, Williams, trading is confined largely to the rights renunciation letters, which are quoted around Rs. 9.25.

Among coals, the only notable feature are Bengal, which are firm around Rs. 344 because of the rights issue. Burrakur have been moving sluggishly before closing at Rs. 17.56.

Interest in jute shares has been extremely limited, since the jute and gunny markets remain in a state of utter confusion. The high prices of gunnies should normally be bullish, but the dearness of raw jute indicates that the mills cannot be making even modest profits. India and Megna have attracted attention because they propose to diversify their activities. Howrah are a little better at Rs. 20.

Among miscellaneous industrials, the outstanding feature have been Dyer Meakin Breweries ; they have shot up suddenly to Rs. 27.31 on producing what is believed to be an excellent report. Other sugar shares are worried by the news that the Wage Board for the Sugar Industry has submitted its report to the Government, and the latter's decisions will be announced in a few weeks' time. The report is believed to be unanimous, but that offers little consolation since the recommendations of the Wage Board for the Cotton Textile Industry were also unanimous Among mining issues, Karanpura Development have risen smartly on professional support. But papers are dejected, since two important Companies—Rohtas Industries and Titaghur Paper—have just announced that the cut in paper prices enforced at the beginning of this year has contributed to the fall in their profits.

There has not been much business in tea shares. This is partly because it is now certain that the north Indian crop this year will be much smaller than in 1959. But the more important reason is that the undertone of the market for the commoner

Ltd, reports that the total approximate production of iron and steel at the steel works in Jamshedpur during November 1960 was : pig iron 139,500 tons ; steel ingots 141,800 tons ; semi-finished steel for sale 38,400 tons ; and finished steel 68,600 tons.

Bombay Market

STEADIER CONDITIONS FOLLOW EARLY DULLNESS

PRICES MOVE NARROWLY

Wednesday Noon.

THE Bombay stock market closed the week in a steadier mood after an earlier dull spell. The Union Finance Minister's assurance that the Government has no intention of making money dearer has had a cheering effect, but operators were in no mood to increase their commitments. Fluctuations were narrow and activity was restricted either way. The imposition of deposit margins on bulls in the Tata Locomotive scrip at the last settlement was considered unhelpful. The production figures of the Tata Iron and Steel Company during November fell below market expectations. Sentiment was also subdued by reports of declines in cloth sales here and abroad.

Tata Steel were quoted lower at Rs. 141.50 and Indian Iron declined to Rs. 23.60 on pressure from Calcutta interests. Among engineering shares, Tata Locomotive were quietly steady at Rs. 301, but Alcock Ashdown declined to Rs. 238. Premier Construction were offered at Rs. 239 and Mukand Iron were sold down to Rs. 22. Larsen and Toubro lost at Rs. 36.25. Motor shares showed losses, and Premier Automobile declined to Rs. 172.50. Hindustan Motor were shaded at Rs. 19.80.

In cotton mill shares, Standard lost at Rs. 1,045 on tired bull liquidation and Century were dealt in at Rs. 459. Bombay Dyeing were transacted at Rs. 62.50, as were Svadeshi at Rs. 222. Khatau met with scattered interest around Rs. 455, but Simplex were freely offered at Rs. 161. Kohinoor were quiet at Rs. 265.50 and India United Ordinaries were sold down to Rs. 13.48. Apollo were offered at Rs. 1.30 without attracting interest.

Prices of miscellaneous shares moved down in sympathy with the general trend. Among sugar shares, Belapur lost at Rs. 487.50 in spite of the publication of satisfactory results. Phalton were dealt in at Rs. 185.50 and Walchandnagar Industries came to hand at Rs. 287.50. In cement shares, Associated Cement were quietly steady at Rs. 150.50, but Digvijay were available at Rs. 152.50. Mining shares were steady, and Shivrajpur Syndicate were bought up to Rs. 70. Steamship company shares were quiet, and Scindia declined to Rs. 13.96. Great Eastern Shipping were done at the lower price of Rs. 15.40. National Rayon reacted to Rs. 495 on pressure and Gwalior Rayon lost at Rs. 41.25. Bombay Burmah fell back to Rs. 594 on profit-taking. Chemical shares were easier, and Tata Chemical fell to Rs. 16.96. Colour-Chem were lower at Rs. 310 and Indian Dyestuff declined to Rs. 455. In spite of issuing rights ordinary shares at par in the proportion of one new share for every three held, Anil Hardboards lost to Rs. 346.25. Voltas met with scattered interest around Rs. 269 and Ceat Tyre were sold down to Rs. 220.

Bank shares were quiet, and Bank of India declined to Rs. 108.75. Central Bank were available at Rs. 55.50. There was little interest in insurance shares, and New India Assurance were quoted at Rs. 54.50.

Sellers predominated in electricity company shares, and Bombay Suburban were quoted lower at Rs. 84.50. Tata Hydro were taken at Rs. 103 and Ahmedabad Electric were done at Rs. 87.20. An encouraging speech delivered by the chairman of the latter Company concerning expansion prospects has had virtually no effect.

Madras Market

PRICES REACT AFTER STEADY OPENING

SLIGHT RALLY TOWARDS THE CLOSE

Wednesday Noon.

THE Madras stock market showed mixed trends during the past week. Opening steadier, share prices reacted during mid-week due more to the absence of interest than to selling pressure. Lower advices from the Calcutta and Bombay stock markets induced caution. Operators were busy examining closely the implications of the Companies Amendment Bill, especially so far as it related to share transfers, inter-company investment and appointment of sole selling agents. Towards the close, there was a small rally prompted by the statement made by the Union Finance Minister to the effect that there was no intention of increasing Bank rate at the present time.

Business in Government securities was restricted, but prices, especially of selected State loans, improved due to the absence of selling pressure. Sugar shares were easier on predominance of sellers. In the planting group, selected tea shares were in demand, but coffee and rubber shares were freely offered at cut prices. Textile shares weakened, as did miscellaneous shares generally.

In the banking group, scattered interest was taken in Indian Overseas at Rs 178 and in Punjab National at Rs. 19.28. Travancore Forward were transacted up to Rs. 5.50. Among public utilities, interest was concentrated on Vellore at Rs. 12.75, on South Madras at Rs. 10.12 and on Salem-Erode at Rs. 12.50.

Among sugar shares, Deccan declined to Rs. 15.75, as did E.I.D. to Rs. 42.75. United Breweries were steady at Rs. 114.50, but sellers predominated in Mysore at Rs. 60.50.

Among planting shares, Blue Mountain were easier at Rs. 4.08 in spite of the publication of a good report; Cochin Malabar fell back to Rs 7.05. Consolidated Coffee were sold down to Rs. 22.30 and Ouchterlony were offered freely at Rs. 4.80. Business passed in Periakaramalai at Rs 3.46 and Travancore Rubber were dealt in at Rs. 11.30. Rajendra were transacted at Rs. 14 on paying a taxable ordinary dividend of 25 percent. Kottanad were dealt in at Rs. 12.25 on paying a taxable ordinary dividend of 10 percent. Scattered interest was taken in Parkside at Rs. 30.50 on the announcement of a final dividend of 20 percent, making 27½ percent, taxable, for the year. Kil Kotagiri were quietly steady at Rs. 5.60, but Midland were available at Rs. 12.35. Nilgiri were quoted at Rs. 7.85 and Peermade were taken up to Rs. 22.75. Talayar were steady at Rs. 1.78, but United Nilgiri were sold down to Rs. 23.31.

Prices of textile shares showed losses on a broad front. Travancore Rayon declined to Rs. 34.25 and South India Viscose were quoted lower at Rs. 158. Business passed in Lakshmi at Rs. 152 and Madura were sold down to Rs. 35. Anglo-French weakened to Rs. 114 and Bangalore Woollen were available at Rs. 197. Buckingham were quietly steady at Rs. 198 and Kothari were quoted at Rs. 12. Mettur were done at Rs. 370 and Radhakrishna were dealt in up to Rs. 29.

Among miscellaneous shares, Aluminium Industries lost at Rs. 23.15 and Ashok Leyland declined to Rs. 8.10. Sellers were over in India Cement at Rs. 5.90 and Binny were transacted at Rs. 196. F.A.C.T. were offered down to Rs. 9.93, but Enfield were quietly steady at Rs. 15.75. Mandya National Paper were wanted up to Rs. 12 and Mysore Paper were in demand at Rs. 28.30. Seshasayee Paper were newly listed and quoted at Rs. 5. Spencer were transacted at Rs. 22.65 and Tube Investment attracted scattered support up to Rs. 305 on expansion prospects.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named to shown in parantheses and will not be given where such a quotation is not available.]

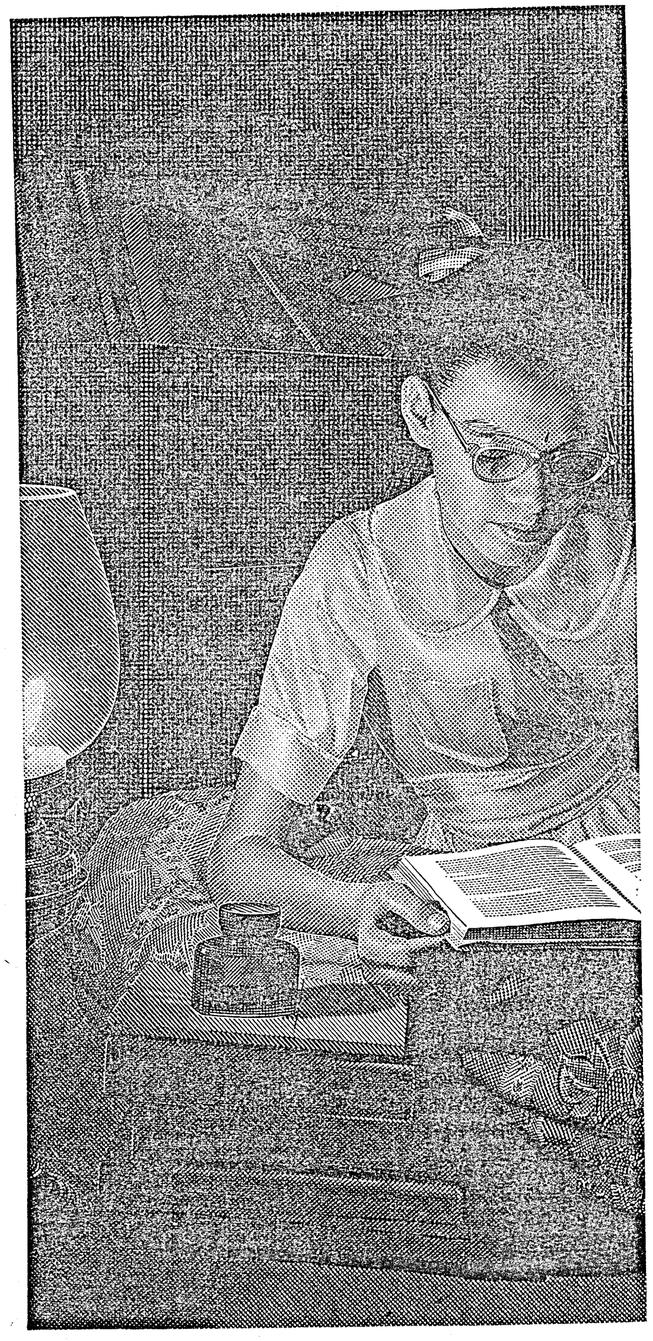
The comforts of life are spreading



Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that demand for Kerosine will be around 2.9 million tons, or well over 800 million gallons a year. There can be no question that the first priority should be exploration and the production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

City Cable

STOCK MARKET REMAINS UNSETTLED

INDUSTRIALS SLIGHTLY BETTER

London, 7th December.

UNSETTLED conditions persisted on the stock market during the past week, but there was no repetition of the previous week's heavy falls. In fact, some recovery was staged in equity shares and prices were above their lowest levels. Nevertheless, confidence was still lacking and nervousness and uncertainty remained the keynote of operations. Business contracted sharply as the previous week's selling diminished and buyers continued to hold off. The market continued to reflect the uncertainties in the business and economic outlook. The accumulating evidence of the effects of the credit squeeze and the apparently poor prospect of any significant relaxation as long as the overseas trading situation shows no improvement was the chief reason for the continuing uncertainty. The persistent dullness of Wall Street and fears of the effects of any American moves to reduce the drain on the U.S. gold reserve were also underlying factors. Most industrials are a little better on the week, but still well below their recent levels. The Ford bid developments brought the most striking movements of the week, but after falling sharply on the U.S. Treasury's approach to the American Ford, the price of the shares recovered equally sharply on the statement by the Chairman of British Ford that the bid would go through. Gilt-edged securities tended to ease in very quiet conditions and then turned distinctly dull following adverse comment on their immediate prospects. This chiefly affected the undated stocks. There was a modest improvement in banking, hire-purchase finance and insurance shares after the previous week's shake-out. Business in gold shares was at a very low level and the tendency was mainly easier. Coppers reacted from early firmness and other base metal shares lost ground. Interest in oil shares remained on a very restricted scale. Tea shares were neglected and showed very little change on the week, but rubber shares eased due to a lack of business in spite of favourable comments.

The Money Market

Conditions in the money market during the past week were somewhat patchy. There were extremes of acute shortages to plentiful supplies of credit, although on most days it was a case of the authorities' coming to the market's aid with official assistance. After two days of shortage, the position became more comfortable, helped by the disbursement of considerable funds due to the interest payment on War Loan 3½ percent and to the cessation of the end-of-the month operations. The supply of credit at that time was such that short-term loans were arranged down to 3 percent and even then, small balances were left unlent. There was then a return to more difficult conditions and market houses experienced some difficulty in satisfying requirements. The usual rate for overnight loans was 4⅞ percent to 4¾ percent with 4½ percent paid at the more difficult periods. Business in bills fluctuated with the supply of credit and at times there was a good turnover with February maturities and hots changing hands at 4⅞ percent and 4½ percent.

Mixed Trend in Vegetable Oils

Enquiries for Canadian linseed showed some improvement on better shipping conditions at Vancouver, but prices were out of parity in relation to linseed oil and cakes in the London vegetable oils market during the past week. The demand for groundnuts was very quiet. After a firm commencement, the market for castorseed weakened appreciably. Linseed oil kept fairly steady with a good underlying demand for positions well ahead. Castor oil finished quieter. Groundnut oil also came in for more attention towards the close, and while Argentine oil was dearer, there were indications that B.W.A. oil was becoming more competitive.

Activity on Wall Street

U.S. Government and high-grade corporate bonds fluctuated irregularly in the week ended 1st December. Early falls—corporates went down up to a point—were followed later by a firmer trend which developed on improved demand with sentiment aided by reports that the Federal Reserve Board is planning to ease credits further in January. Most convertible issues were marked down reflecting the sell-off in the stock market. Among foreign bonds, French Credit Foncier 5½ percents attracted renewed demand following the recent sell-off, and recovered over a couple of points. German Nationals were mixed with rises and falls of more than one point. Italians were little changed, while Greek 6 percents added one point on small volume. Among the Japanese Government bonds, the 5½ percent of 1975 fell nearly two points, while others showed only minor changes. Chile 3 percents held steady.

NAMES AND DATES

Dr. G. W. Usherwood, technical sales representative of Robinson Brothers Ltd, West Bromwich, England, is visiting India this month in the course of an Asian tour.

New Delhi

RUSSIAN TEAM TO DISCUSS USE OF CREDIT FOR THIRD PLAN PROJECTS

MEASURES PROPOSED FOR INCREASING RAW MATERIAL SUPPLIES TO STEEL PLANTS

(FROM OUR NEW DELHI CORRESPONDENT)

A RUSSIAN delegation to finalise the projects which are to be financed from the credit of 500 million roubles for the third plan is expected in New Delhi by the middle of this month. The Indian Government has already selected most of the projects to be financed with this credit. They include power plants, drilling and exploration equipment for mineral oils, coal washeries, a refinery for Gujarat, a heavy compressor and pump project, a basic refractories project, and a ball and roller bearing project. As already reported, it has been decided to set up a refinery in Gujarat, primarily to refine the crude found in that area, Cambay and Ankleshwar, providing adequate capacity for expansion to refine imported Russian crude. Money from the Russian credit is also being provided for the exploration of oil and the laying of pipelines.

The Secretary to the Central Ministry of Industries, Mr. K. B. Lall, has returned to New Delhi after a tour of eastern India. From what he saw, he seems to be of the opinion that the "take-off" stage is about to begin in India. The industrial climate is rapidly changing. Largely due to the ban on imports, entrepreneurs are either finding substitutes for the imported articles or are entrusting others with their manufacture. In other words, ancillary industries are developing round big industries. This, in turn, is creating quality-consciousness, particularly in inter-industry sectors. Competition is also making manufacturers quality-conscious, particularly in the case of bicycles and lorries.

New Aluminium Projects

A proposal for another aluminium plant, it is expected, will shortly be approved by the Central Government. This is a 20,000-ton project, which is being set up in the Koyna area by Tendulkar Industries of Bombay. The U.S. firm of Alcova is the collaborator. As already reported, the 10,000 -ton project sponsored by Mr. R. Venkataswamy Naidu in Mettur district in south India will have the collaboration of Montecatini. The Italian firm will subscribe to the equity capital of the Indian undertaking.

Visiting Economic Journalists

Nine economic editors and commentators from the U.S.A., five from the U.K. and four from West Germany have arrived here, on the invitation of the Indian Government, for a three-week visit. They will tour different parts of the country "to see a cross-section of India's achievements and efforts in the economic field." They have already called on the Minister for Community Development, Mr. S. K. Dey. It is not known whether it is going to be a conducted tour or whether they will be permitted to see India for themselves, the Government providing the necessary facilities. As far as community development is concerned, the visitors might see the village in Alwar State which the Community Development Minister had himself selected for showing to Colonel Nasser when he visited India. The visitors should also travel first-class and eat railway food, in order to see the great achievements in cleanliness, punctuality and comfort. While in the capital, they might take a look at some of the beauty spots, such as Jamuna Bazar, in order to do a piece on India's "leap forward" in slum clearance.

Manufacture of Optical and Ophthalmic Glass

The Government has decided to set up an optical and ophthalmic glass plant in Durgapur, West Bengal, in technical collaboration with Russia by using a portion of the 500-million rouble credit made available under the principal agreement signed on 9th November, 1957. A contract was entered into with Messrs Technoexport, Moscow, on 14th December, 1957, for the preparation of a detailed project report for this plant. In June 1959, a team of Indian engineers was sent to Moscow for taking part in the preparation of the report. The detailed project report which visualises a production of 200 tons of ophthalmic glass and 10 tons of optical glass a year was received on 2nd July, 1959. As the Central Glass and Ceramic Research Institute has successfully evolved a process to manufacture optical glass on a commercial scale, the production of optical glass is now being undertaken in Calcutta by this process. The Durgapur project will manufacture 300 tons of ophthalmic glass a year. The revised project report for a capacity of 300 tons of ophthalmic glass at the Durgapur plant is likely to be received shortly.

Making New Basic Refractories

Burn and Company Ltd, Salem (Madras), Belpahar Refractories Ltd, Belpahar (Orissa), and Orissa Cement Ltd, Rajgangpur (Orissa), all of which are licensed under the Industries (Development and Regulation) Act, 1951, for the manufacture of all types of basic refractories propose to include the production of chemically bonded basic refractories in their manufacturing programmes, to meet the demand from the steel industry as it arises. The process for the manufacture of the latter class of refractories is covered by the world patent of a U.S. firm, and the three Indian manufacturers have sought the Government's approval for foreign collaboration to obtain the technical know-how. The collaboration terms have been approved by the Government.

Financial Help for Tea Gardens

Under the scheme submitted by the Tea Board, a target of replanting and/or replacement of a total area of 50,000 acres has been proposed for the third plan period at a total cost of about Rs. 15 crores. The scheme visualises the granting of loans at the rate of Rs. 3,000 an acre to plains gardens and Rs. 4,000 an acre to hill gardens. The loans would carry interest at 4½ percent a year, and would be repayable in 20 annual instalments. This scheme, along with other proposals, is being considered by the Government.

More Canadian Wheat Aid for India

Under the Colombo Plan, Canada has allotted for the year 1960-61 $7 million for the purchase of Canadian wheat, which the Indian Government has accepted. The amount of $7 million, it is expected, will fetch about 100,000 tons of wheat. This quantity is likely to be shipped between November 1960 and March 1961.

Enquiry on Fall in Sindri Output

Dr Husain Zaheer, a director of Sindri Chemical and Fertiliser Ltd, at the instance of the board of directors, has made a detailed study of the reasons for the decline in production at the fertiliser factory. The causes determined by Dr. Zaheer for low production, and reported to the board, are: (i) clinkering troubles in the gas generators due to the use of coke of poor and inconsistent quality; and (ii) wear and tear in gas generators.

Pipe Order for West German Firm

Hindustan Steel Ltd has placed an order on Messrs Mannesmann for 10,520 tons of pipes. The West German firm has purchased 12,000 tons of steel slabs from the former. Steel ingots are not being sold to Messrs Mannesmann. The entire quantity of slabs contracted for has already been exported. The supply of pipes has also been completed.

Insufficient Coal Supplies to Steel Plants

During June, July and August 1960, receipts of coal at the steel works were short of the programme to the following extent:

Tata Iron and Steel	
June 1960	45,700 tons
July 1960	37,400 tons
August 1960	25,500 tons
Indian Iron and Steel	
June 1960	49,400 tons
July 1960	66,800 tons
August 1960	47,800 tons
Mysore Iron and Steel	
June 1960	2,000 tons
July 1960	2,100 tons
August 1960	3,200 tons
Rourkela steel project	
June 1960	400 tons
July 1960	48,300 tons
August 1960	18,500 tons
Bhilai steel project	
June 1960	15,800 tons
July 1960	14,700 tons
August 1960	16,500 tons
Durgapur steel project	
June 1960	37,600 tons
July 1960	42,400 tons
August 1960	46,800 tons

At the meeting of the high-level committee on the production, supply and movement of iron ore and other raw materials for the steel industry, it was suggested that the movement should take place under high priority. This suggestion has been accepted by the Ministry of Railways. The other recommendations of the high-level committee are:

(1) The Coal Controller, instead of allotting wagons for coal from day to day, will make the allotment for a period of ten days at a time. This is with a view to providing some flexibility to the railways in the execution of the movement programme. Any special allotment required to be made by the Coal Controller even within the ten-day period to meet unforeseen emergency situations will be complied with by the railways.

(2) Loadings of coal should be on all seven days of the week.

(3) The progress of coal washeries for the steel plants should be expedited.

(4) With a view to improving the quality of coal supplied to the railways, it is necessary to beneficiate lower grade coals by setting up non-coking coal washeries. The further measures to be taken on this behalf will be examined on high priority.

(5) In the meantime, the Central Ministry of Steel, Mines and Fuel will take action to ensure that coal of proper quality and size is supplied for the railways' loco requirements.

(6) The need for opening coal dumps at different places in the country and loading bunkers at the major collieries is recognised. The Central Ministry of Steel, Mines and Fuel will pursue the matter with State Governments and the coal industry.

(7) Movement of iron ore for the Rourkela steel plant should be arranged as early as possible from Barsua iron ore mines, as visualised in the original plan for iron ore movement to this steel works.

(8) The Central Ministry of Steel, Mines and Fuel will take action to have adequate arrangements made in the various steel works to ensure expeditious unloading and return of inward loaded stock.

(9) The railways will provide adequate transport to meet the full requirements of the steel plants, including requirements for the stockpiling of coal for the new blast furnaces to be commissioned shortly.

(10) During the busy season starting from November 1960, the railways will endeavour to maintain the overall availability of wagons for coal loading in the West Bengal-Bihar coalfields at 5,000 wagons a day, provided the decisions mentioned above are fully implemented.

With a view to encouraging collieries to improve the quality of coal supplied to the steel plants, it has been decided that they may be paid an extra sum over and above the existing controlled price of coal for each grade, depending on the extent to which the ash content is less than the maximum prescribed for a particular grade. The steps to be taken in cases where the ash content of the coal supplied is consistently above the maximum prescribed for the grade are being considered.

Export Performance

The Central Deputy Minister of Commerce an Industry, Mr. Satish Chandra, told the Lok Sabha that "the overall export performance during 1959-60 was quite satisfactory, compared with previous years. No estimates were made in advance for the year 1958-59. Some rough estimates for the year 1959-60 were worked out." Exports of jute manufactures went down in 1959-60 on account of the decline in the production of raw jute and increased competition from other countries. The import of jute cuttings from Pakistan had improved the position, the Deputy Minister said. Exports of bicycles and batteries could not reach the level of estimates on account of stiff competition from the countries already established in this line. An export promotion scheme has been introduced to assist manufacturers and exporters in obtaining licences for imported raw materials, and the supply of indigenous materials at concessional prices. Special railway freight rates for export purposes have been fixed.

In the case of rayon fabrics, the export promotion scheme was withdrawn in March 1959 due to certain abuses leading to a drop in the export level during 1959-60. A modified scheme has subsequently been introduced. On account of the shortage of sugar during 1959-60, no quota was released for export. The situation has now improved. The high price of Indian linseed oil, compared with the Argentinean oil, in the world market was one of the reasons for a lower level of exports. There was a slight downward trend in the exports of coir products, although this was not serious, Mr. Chandra said.

Cotton textile exports from India to the Sudan during the first nine months of 1960 registered a fall, compared with those during the corresponding period of 1959, the figures being 32.82 million yards, and 59.60 million yards, respectively. The main reason was that import restrictions were imposed by the Sudanese Government in the beginning of 1960 because of excessive stocks due to large-scale imports in 1959. Another factor was the prevailing competition from other exporting countries.

Arrangements by U.K. Cotton Industry

The U.K. Cotton Board, representing the cotton textile industry of the U.K., has entered into certain arrangements with the representatives of the cotton textile industries of India, Pakistan and Hongkong. According to these agreements, exports of cotton manufactures to the U.K. from India, Pakistan and Hongkong will be within certain agreed ceilings for a period of three years from January 1960. The ceiling for the export of cotton manufactures from India to the U.K. during each of the three years is fixed at 175 million square yards. The term "cotton manufactures" is inclusive of all varieties retained for consumption in the U.K. whether in the piece, or made-up garments, but excluding cotton carpets, cotton rugs, cotton durries, cotton shawls and all handloom manufactures. The ceiling will not apply to imports which are subsequently re-exported. About 135 million square

yards of cotton manufactures worth about Rs. 11.8 crores were exported to the U.K. during January-August 1960.

Reduced Cloth Prices

On Government's suggestion, the cotton textile industry has readjusted cloth prices on the basis of a formula announced by the Indian Cotton Mills Federation on 3rd September, 1960. Under this formula, mills are precluded from charging more than 25 percent for coarse, 22 percent for lower medium, 18 percent for higher medium, 11½ percent for fine and 9 percent for superfine varieties over the August 1959 contract prices. Wherever the existing contract prices are lower, the cloth will continue to be sold at the lower prices. This represents a definite reduction from the prices announced by the Federation on 11th August, 1960, which were based on the higher level of prices prevailing in October 1959.

The Federation has also asked the mills to stamp ex-mill and retail prices on all cloth, and this is being brought into effect. There is no doubt that the rising trend in prices has been arrested. With the coming in of the new cotton crop, the Government has taken steps to ensure that cotton is made available to the mills at reasonable prices. This, it is expected, will bring about a further improvement in the situation. In the context of the price revisions announced by the Indian Cotton Mills Federation, taking August 1959 as the basis, it was found necessary to ensure, in the interests of consumers, that textile mills continue to produce the usual varieties for which prices can be compared from time to time with those of the varieties prevailing in the basic period. The Textile Commissioner, therefore, has issued a notification restricting the mills from changing varieties and producing new varieties without obtaining his prior approval.

Effort to Clear Khadi Stocks

There has been no fall in the sale of *khadi*. It has not, however, kept pace with the increasing production and this has sometimes resulted in the accumulation of *khadi* stocks. The total value of accumulated stocks is estimated to be about Rs. 5 crores. The Khadi and Village Industries Commission sanctioned an additional rebate of 6nP in the rupee on the sale of cotton *khadi* during the period from 11th September to 14th November, 1960, with a view to clearing accumulated stocks. This has enabled the Commission to clear most of the accumulation. Besides, the *khadi* institutions and the Commission have undertaken an intensive drive for the sale of *khadi*, and also to improve and standardise the quality of *khadi* production.

Modernising Bombay Docks

A new scheme for modernising the Bombay docks has been drawn up by the Bombay Port Trust. It is being examined in detail in consultation with the consulting engineers in London. The scheme is estimated to cost Rs. 8.35 crores, including an expenditure of Rs. 1.50 crores in foreign currency. It visualises the connection of the Victoria Dock with the Alexandra Dock by the provision of a communication passage between them. Such a passage will also provide six new deep-water berths along its sides and will enable the Victoria Dock berths to be served by the entrance lock from the Alexandra Dock instead of by the present tidal gates of the Victoria Dock entrance. This will result in maintaining a higher impounded water level in the Victoria Dock, thereby making it possible to berth ships of greater draft in that dock. It is proposed to reclaim land on the harbour wall side so as to increase the cargo-handling potential of the berths on the eastern side of the Victoria Dock basin by enlarging the area available for laying roads and railway lines, constructing transit sheds and providing for sufficient open space for the docks' cargo storage.

Cuts in Freight Surcharge

The Conference Lines operating in the U.K.-Continent-Colombo and Japan-Colombo trades have recently announced certain reductions in the freight surcharge on shipments to Colombo, as a result of the improvement in port conditions there. Indian shipping companies which are operating as members of such Conferences, it is expected, will abide by the decision.

Technical Board for Water Transport

It is proposed to set up a Central Technical Assistance Board to advise the Government on the developemnt of ports and inland water transport.

Committee on Quality Control for Export Goods

The Government of India has appointed a committee to examine the question of quality control for goods exported from India. It will recommend measures for ensuring good quality, and thus building up enduring trade relations with overseas buyers. Dr. Lal C. Verman, director of the Indian Standards Institution, will be chairman of the committee. The Agricultural Marketing Adviser to the Government of India, the Drugs Controller in the Central Ministry of Health, the Chief Inspecting Officer (Textiles) and representatives of the Development Wing in the Central Commerce and Industry Ministry, Directorate-General of Supplies and Disposals and Office of the Development Commissioner for Small-scale Industries will be the members. The Joint Director for Export Promotion will be the member-secretary. The Committee, it is expected, will submit its report to the Government by the end of March 1961.

Increasing Production of Tyres

The Central Minister for Industry, Mr. Manubhai Shah, announced in the Lok Sabha that arrangements had been made to import about 120,000 tyres through the State Trading Corporation. Orders for 50,000 tyres had already been placed. The Minister, who was replying to a short-notice question on blackmarketing in giant tyres, added that a number of steps had been taken to increase their production. Domestic output had increased from 640,000 tyres in 1956 to 1,138,000 tyres in 1959, and about 1.35 million to 1.4 million in 1960. Thus tyre production in the country had more than doubled in the last few years, the Minister said. Also the licensed capacity had been expanded from 104,000 a year to 2.94 million a year. Production would increase by 150,000, 250,000 and 300,000 tyres in 1961, 1962 and 1963, respectively. An additional capacity of 1.44 million tyres was being considered. The Minister further said that efforts were being made, with the co-operation of indigenous tyre manufacturers, to check the malpractices in the tyre trade.

Third Finance Commission

The Third Finance Commission will be set up by about the middle of this month. The names of the members and the terms of reference to the Commission, as approved by the President, are as follows: Mr. Ashok Kumar Chanda, lately Comptroller and Auditor-General of India (chairman); Mr. P. Govinda Menon, former Chief Minister of Kerala State; Mr. Dwijendra Nath Roy, retired High Court Judge, Allahabad; Professor M. V. Mathur, head of the Department of Economics and Public Administration, University of Rajasthan, Jaipur; and Mr. G. R. Kamat (member-secretary).

As for the terms of reference, in addition to the matters on which under the provisions of the Constitution the Commission is required to make recommendations, it will also make recommendations concerning (a) the States which are in need of assistance by way of grants-in-aid of their revenues under Article 275, and the sums to be paid to those States other than the sums specified in the provisos to clause (1) of the Article, having regard, among other considerations, to (i) the requirements of the third five year plan, and (ii) the efforts made by those States to raise additional revenues from the sources available to them;

(b) the principles which should govern the distribution under Article 269 of the net proceeds in any financial year of estate duty concerning property other than agricultural land, levied by the Government of India in the States within which such duty is leviable;

(c) the principles which should govern the distribution of the net proceeds of the additional excise duties levied on mill-made textiles, sugar and tobacco in replacement of the sales taxes levied by the State Governments formerly, among the States and the amount which should be assured to the States as the income derived by them from the levy of sales taxes on these commodities in 1956-57;

(d) the principles which should govern the distribution, under Article 269 of the Constitution, of the net proceeds in any financial year of the tax on railway fares. The Commission will, in each case, make its recommendations for the four years 1962-63 to 1965-66.

Bombay Office of U.K. Consultant Firm

The firm of Sir Bruce White, Wolfe Barry and Partners has set up a subsidiary office in Bombay to provide consulting engineering services, such as designing and supervising, in the same field as it does at present from the U.K. These fields include: (1) marine works, docks and harbours, canals, dredging, etcetera, (2) water supply and sewerage, (3) town planning, (4) power-stations (thermal, hydro, diesel, atomic), (5) dams and hydraulic works including irrigation and reclamation schemes, (6) roads, (7) railways, (8) bridges, (9) buildings, offices, industrial establishments, factories, oil installations, etcetera, (10) special structures such as cranes and other heavy machinery and foundations, (11) naval architecture, dredgers, tugs, lighters, etcetera.

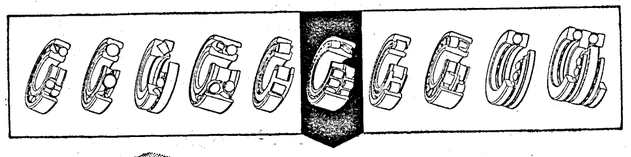
More Money for Power and Road Projects

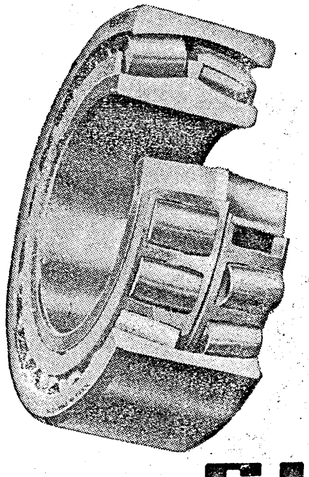
The Planning Commission is allocating more funds for power projects as the 1966 demand estimates have been revised from 11.8 million kilowatts to 13.4 million kilowatts. Additional funds are also being allocated for the road programme, in addition to the Rs. 120 crores already allocated for border roads due to the Chinese aggression. An increase in the third plan outlay of Rs. 500 crores is visualised. The final picture, however, will be available after the meeting of the National Development Council in the middle of January.

REPORT ON DURGAPUR-CALCUTTA GAS GRID DENIED

The West Bengal Government has denied the report from our New Delhi correspondent, published in *Capital* on 24th November, saying that not an inch of Yugoslav pipe for the Durgapur-Calcutta gas grid has reached India so far. An official Press note states that, according to the estimates made by the Durgapur project authorities, a total of 9,400 tons of pipes were required for the gas grid from Durgapur to Calcutta. The whole of this quantity has already arrived in India and has been stored at convenient centres along the route the grid is to take. Preliminary work for laying the grid is also now in progress.

SKF *offer the widest selection of bearings*





Illustrated here is the latest improved design of **SKF** SPHERICAL ROLLER BEARING designated the C type, regarded as the pre-eminent type of bearing for carrying heavy loads, having approximately 40% greater load carrying capacity than bearings of the original design.

It is completely self-aligning—a feature which is only present to a limited extent, if at all, in other types of roller bearing.

London

CHANCELLOR URGES RESTRAINT TO AVOID ANOTHER INFLATIONARY SPIRAL

BIG BALANCE OF PAYMENTS DEFICIT FORECAST BY U.K. ECONOMIC BODY

(FROM OUR LONDON CORRESPONDENT)

THE ups and downs on the London Stock Exchange during the past week have given some force to the current opinion of U.K. Ministers that although the short-term economic situation is inclined to be "difficult," the real danger is that Britain may "talk itself into a depression." It is for this reason that they hope that all the talk of falling orders and short-time working in the consumer durable industries will not discount what they regard as the underlying strength of the economy. They point to the continued high level of industrial production and employment. Speaking to chartered accountants in Liverpool the other day, Mr. Selwyn Lloyd, Chancellor of the Exchequer, warned that a great deal of restraint and leadership would be required if another inflationary spiral was to be avoided. He had no illusions about the difficulties of his task—"but on balance, I remain an optimist." Nevertheless, the U.K. Cabinet is known to be keeping a close eye on economic developments. Apparently, it does not consider that the moment has arrived for any significant relaxation of the credit squeeze, but the stimulus is being held in reserve. It could take either of two courses, a relaxation of hire-purchase controls or a further reduction in Bank rate, or, if necessary, a combination of both.

Evidence that expansion has halted comes from several sources. The index of industrial production, issued by the Central Statistical Office, adjusted for holidays and other seasonal factors, is expected to stand at 120 or 121 for October (1954 equals 100). Apart from a fall of 1 point in June, the figure has been 121 since April. The October estimate is almost exactly level with the monthly average of the previous seven months. The U.K. Treasury—in issuing the index figures—comments that they "do not suggest any change in the overall trend of production". The U.K. Board of Trade finds much the same thing in the engineering industry. While new orders have been coming in at a high rate—higher than deliveries—up to the end of September, the volume of engineering production in that month was only 2 percent up on September 1959. This, the Board of Trade states, "indicates a further slackening in the rate of growth of engineering production to probably quite a small figure." The position is, of course, heavily weighed down by the depression in the industries producing durable consumer goods.

A Rather Dismal Warning

A big balance of payments deficit at the end of this year is forecast by the National Institute of Economic and Social Research, whose periodical surveys of the economic situation have acquired considerable influence in the City. There is also a danger that a small decline in reserves may bring a change in international attitudes to the strength of sterling. The Institute's *Economic Review* gives in general a gloomy picture of the present situation. Economic expansion in Britain has stopped for the present. National output was probably no higher in the third quarter of the year than in the first. Exports fell during the year and are likely to go down further. A larger share of total expenditure went on imports, and a smaller share on home output. In contrast, fixed investment has continued to rise, and seems likely to go on rising into next year. Productivity has been falling while wages have been rising. Costs have been going up at the rate of 4 percent or 5 percent. Thus prices have begun to "edge upwards," and will probably continue to do so.

An article in the *Review* concludes that manufacturers were too optimistic about the demand for domestic appliances such as refrigerators, washing machines, vacuum cleaners and television sets. It suggests that a 2½-percent annual increase of demand is now likely, compared with 15 percent in the 'fifties. Removal of the present hire-purchase restrictions advocated by a number of manufacturers would have a mild effect only, says the article. But a 10-percent price cut could lead to a 10 percent to 20 percent "once for all" rise in demand. Another article concludes that net invisible earnings in 1960 will almost certainly be the lowest since the early postwar years.

Industrialists Look Ahead

Without demanding Government preparation of a full-fledged five year plan, on the patterns now so popular in many other countries, the Federation of British Industries would like "to see if it was possible to agree on an assessment of expectations and intentions which should be before the country for the next five years." This was the central recommendation on economic growth in Britain which emerged from a three-day F.B.I. conference on "The Next Five Years" which ended in Brighton recently. It was attended by over 150 leading industrialists, bankers, exporters and economists. It divided itself into five discussion groups, and at the end the group chairmen summarised what had occurred. On Britain's economic growth, one group argued that it should be accorded first priority, for if this were achieved, the other outstanding objectives of economic and social policy—an adequate balance of payments, full employment and stable prices—would be achieved in its wake. "Invest in productivity" should be the slogan and scarce resources of labour need to be more wisely used—more mobility, better training and retraining, more flexible apprenticeship rules. Above all, the rate of capital investment in manufacturing industry requires to be raised, with the emphasis put firmly on labour-saving plant and machinery. The nationalised industries should be run commercially. On taxation, there were many sensible suggestions. Summing up, at the end, Sir Norman Kipping thought he detected "an underlying atmosphere of confidence."

Banks Face Liquidity Problem

In the face of the credit squeeze, the demand for bank loans is still running at a high level. In the latest statements of the 11 London clearing banks, advances are shown to have risen between 19th October and 16th November by £17.5 million to a new record of £3,363 million. This increase follows a rise of £32 million in the preceding month. The October-November expansion, if a little surprising, is not of such proportions as to suggest that there has been any fresh upsurge in bank lending. Borrowings of the nationalised industries rose by £11.3 million to £83.9 million, so that lending to the private sector increased by only £6.2 million. It is also a safe assumption that the pattern of borrowing has been altering with the emphasis shifting from the personal and hire-purchase categories towards the capital goods industries.

With lending still running at peak levels, however, the banks are confronted by a continuing liquidity problem and although selling of gilt-edged is now down to comparatively small figures, it has not completely dried up. In the latest statements, the banks' holdings show a fall of £15 million to £1,289 million following a decline of £8 million in the September-October period. The liquidity position, however, is one which cannot be viewed with equanimity. With the tax-gathering season looming not far ahead, the average liquidity ratio for the 11 banks is only 31.34 percent, with the Midland's ratio down to 29.9 percent. Unless this position alters materially between now and January, when the seasonal pressures begin, the banks will be faced with an awkward choice.

Shipbuilding Orders Fall

Construction of no more than about 200 ships will have to be shared by Britain's 80 shipbuilding yards if the industry's order-books do not improve. This was the gloomy forecast given by shipbuilding firms the other day. Many of the vessels on order are comparatively small. Their total tonnage is about 1.8 million. The difficulties of the industry were emphasised by employers when they rejected a claim by the unions for higher pay. It is estimated that, on the basis of present orders, the tonnage of ships under construction at the end of 1961 will have shrunk to 357,000. This is less than a third of the tonnage at the end of 1959. Even by the end of this year, the tonnage will be little more than a million. Although individual shipbuilding firms declined to discuss their prospects, it is known that those in the east of Scotland are likely to be hardest hit. On the basis of present orders, there will be no tonnage on the berths of these shipyards in another 12 months. The Clyde will have less than one-sixth of the present tonnage and the Wear less than one-eighth.

More Unemployment

That the pressure of demand on the U.K. economy is subsiding is supported by the latest unemployment figures. Some 352,043 people were registered as unemployed in Britain on 14th November, of whom 328,042 were wholly unemployed and 24,001 temporarily stopped from work, according to provisional figures issued by the British Ministry of Labour. Unemployment, expressed as a proportion of the estimated number of employees, was 1.6 percent in November. It was 1.5 percent in the previous month and 2 percent in November 1959. Between 10th October and 14th November, 1960, unemployment rose by 23,540. There were increases of 14,831 in the number wholly unemployed, and of 8,709 among the temporarily stopped.

BIGGER CARDAMOM CROP EXPECTED

PRICES FALL AT COCHIN AUCTIONS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

A 50-percent increase is expected in south India's new cardamom crop, the marketing of which has just started. Last season's crop is placed at over 2,000 tons. Prices of new crop cardamom have declined. In the first auction sale in Cochin on 21st November, best descriptions on offer met with poor support and were withdrawn without bids. Medium sorts were up to Re. 1 to Rs. 1.15 a lb easier while the inferior grades met with good support, although prices declined by 40nP or 60nP a lb. Rates were considerably below valuations, and the average sale price was only Rs. 7.70 a lb, compared with Rs. 9.78 a lb of the corresponding sale of the last season. Similar tendencies prevail in the other auction centres also (South India has now nine auction centres for selling its cardamom crop).

Last year was exceptionally good for Indian cardamom. Production exceeded 2,000 tons and exports amounted to about 1,600 tons. Cardamom exports realised Rs. 3.5 crores worth of foreign exchange last year—the highest on record. The market for the commodity remained unusually strong ever since the end of the second World War, and during the last five years it has been ruling at prices varying between Rs. 8 and 13 a lb. The traditional markets for cardamom are the Middle East and Sweden. The latter's annual import of cardamom from India exceeds 200 tons. The housewife in that country uses the choicest spices for making bread. There is no real demand there for large-sized and selected green cardamoms, and the country's demand is mainly restricted to good and reasonable F.A.Q. varieties. The seeds are used by housewives only in making bread at home. Importers in Sweden are, however, unhappy about the lack of quality control in India, so they have approached the Species Export Promotion Council with the following requests: (1) a fixed and suitable type under the description "F.A.Q. green cardamoms" should be established; (2) there should be some control on shipments especially in the ports of shipment and a certificate of inspection issued and (3) authorisation should be given to some prominent and well-known shippers who are willing to follow the regulations. These demands have been included in a report from a prominent importing firm in Sweden published in the latest issue of the *Cashew and Pepper Bulletin* of the Cashew Export Promotion Council.

Fall in Pepper Crop Likely

The Indian pepper market is now in a state of uncertainty. Trade circles feel that two or three months more are necessary to get a clearer picture of the size of the new Indian pepper crop as well as the overseas demand for the commodity. So they are reluctant to enter into any firm commitments, meanwhile. The new season has just started, although present arrivals in the market are below normal. This is due to delayed ripening of the berries on account of the unusually heavy rains in the pepper-growing areas this year. It is believed that the rains have affected to some extent the size of the crop. Trade circles are inclined to accept the estimate that the new crop will be 15 percent to 20 percent lower than the last season's output of about 24,000 tons. But one cannot have a firm idea about the crop until there is a normal flow of the commodity into the market. However, it is believed that rains had improved the quality of the new crop.

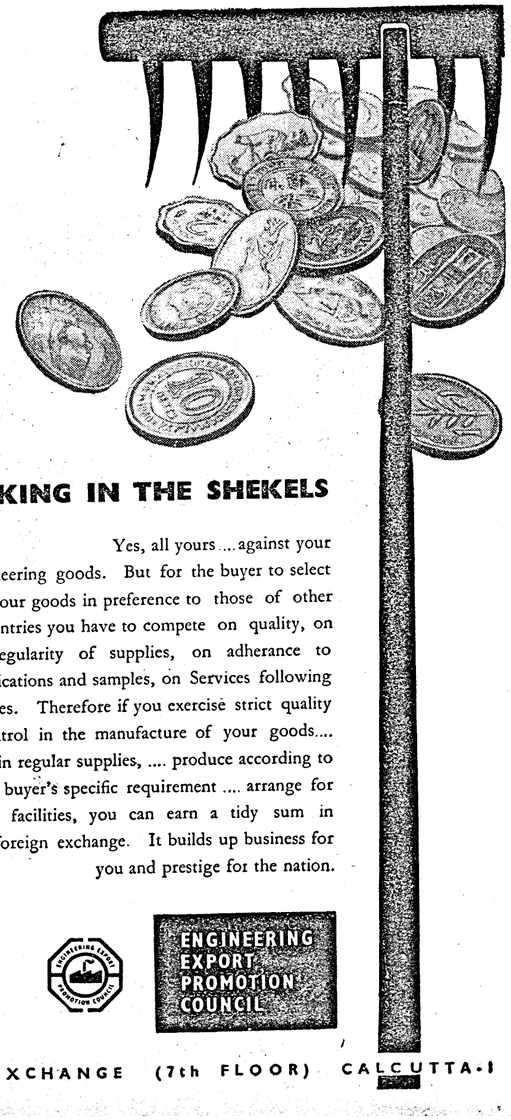
As for foreign demand, both America and Russia seem to be reluctant to place bulk orders. The former used to buy heavily during the early part of the season when supplies are in abundance. Besides, forward contracts for shipments from November to March were used to be made on a large scale. This time forward contracts were effected for a smaller quantity. It is reported that only 500 tons have been bought so far for November and December shipments. The reasons given for this are: (1) Indian export dealers are reluctant to enter into substantial forward commitments before they get a clear picture about the size of the new Indian crop and for other reasons; (2) America is reducing her price ideas steadily, so the margin between Indian quotations and American offers is getting wider; and (3) the absence of any reliable report about the possible supplies from Indonesia. Russia and her east European allies used to place bulk orders previously when steamer facilities were limited. But with the larger flow of trade between India and these countries, shipment facilities have improved considerably. Besides, the pattern of demand from the communist countries has changed. Instead of giving bulk orders occasionally, they are now purchasing small lots regularly. Consequently, orders from communist countries have ceased to give any boost to prices in India.

Record Exports

Meanwhile, trade circles think that there is hardly anything left from the last season's pepper crop. Exports during the last season touched an all-time peak of about 19,000 tons, according to the latest available figures. Another 1,000 tons might have gone abroad this month. The movement of the crop from Kerala for internal consumption during the last season is placed at 5,000 tons or 6,000 tons, which means that there is practically nothing left from the old crop. Consequently, the trade has now to depend almost entirely on the new crop. But in the absence of enthusiasm on the part of exporters to sell forward and substantial orders from abroad, very little trade is being effected in Cochin and other terminal markets on the west coast. The latest quotation from Cochin for spot delivery new crop pepper is Rs. 345 a quintal or Rs. 1,050 a candy of 6 cwts., compared with Rs. 800 at this time last year.

Curbing Speculation

It is stated that the restrictions imposed on forward deals by the Indian Pepper and Spice Trade Association—under whose auspices the Cochin forward market for pepper is operating—have curtailed substantially the scope for speculation. Following the recent crisis in the market, the Association has stipulated a condition that the fluctuations in the course of a day should not exceed Rs. 4 a cwt. According to a spokesman of the Association, this has brought about some stability to the Cochin market. Besides, unhealthy speculation can now be controlled. The measure is said to be advantageous to the producer and the reasonable section of the trade which does not want to exploit forward trading facilities to make easy money. The aggrieved section, on the other hand, says that the decision is arbitrary and reduces the risk-taking capacity of the trade. It obstructs the free flow of trade also. In spite of this controversy, one thing is obvious; the forward business of the market has been reduced and the fluctuations in prices have become very narrow. The Association spokesman indicated the possibilities of relaxing the restrictions in due course when the market shows signs of stability.



RAKING IN THE SHEKELS

Yes, all yours ... against your engineering goods. But for the buyer to select your goods in preference to those of other countries you have to compete on quality, on regularity of supplies, on adherance to specifications and samples, on Services following Sales. Therefore if you exercise strict quality control in the manufacture of your goods.... maintain regular supplies, ... produce according to the buyer's specific requirement .... arrange for service facilities, you can earn a tidy sum in foreign exchange. It builds up business for you and prestige for the nation.
