72nd YEAR OF ISSUE — CALCUTTA, 7th JULY, 1960. — Vol. CXXXXV No. 3617

THE THIRD PLAN: RESOURCES AND AIMS

THE draft outline of the third five year plan released by the Planning Commission yesterday varies little from the general conception which may have been formed on the basis of the inspired reports that have been appearing in the Press over the past few months. An important feature of the outline is that it confirms the plan will be a bigger one than looked likely four months ago. At that time, the total investment was visualised as Rs. 9,950 crores—Rs. 5,950 crores in the public sector and Rs. 4,000 crores in the private sector. Now, it is proposed to raise the aggregate investment to Rs. 10,200 crores, the entire increase of Rs. 250 crores being in the public sector. As the discussion proceeds in coming months, complaints will no doubt be heard that the plan is "too big", and that the resources visualised simply cannot be raised. To which, there is equally no doubt, rejoinders will be forthcoming from motley gatherings of Congressmen, communists, socialists and Mahalanobisites that the plan is "too small": it will provide jobs for no more than 13.5 million people at a time when the increase in population might be well over five times that number, and it visualises only a minor improvement in consumption standards. But, as time goes by, it is possible that this controversy may prove sterile in the world of earthy realities, however stimulating it may be in the elevated councils of academic discussion. Whether the resources visualised can or cannot be raised, only time will show; the present indications are promising, although by no means as promising as the planners think they are. And whether the increase in jobs and consumption standards can be any greater than the planners propose is no less doubtful: fuller employment and prosperity do not depend on drafting a plan fifty times bigger than the one now outlined, but on whether the people of this country work hard, accept sacrifices and complement the larger inflow of foreign aid with the adoption of rational economic policies at home.

The essence of the plan lies in its assessment of resources, and on how it is intended to raise and allocate them. It is clear that the aim is to accelerate the momentum of the effort which has gone into the first and second plans. How great the acceleration may be, is brought out by two sets of statistics. The ratio of domestic savings to national income is to be raised from 5 percent in 1951 and 7 percent in 1956 to 8 percent in 1961 and 11 percent in 1966. The ratio of investment to national income will be higher—from 5 percent in 1951 and 7 percent in 1956 to 11 percent in 1961 and 15 percent in 1966 (this includes foreign aid). The theoreticians who say that an economy approaches the stage of self-sustaining growth when it starts to save a steady 10-12 percent of its national income, and invest a steady 12-14 percent, should find reason for modest satisfaction here.

The real issue which arises now is whether the saving is to be mobilised from the right sources and the investment is to be made in the right places. Here, unfortunately, the draft outline of the third plan leaves scope for considerable doubt. To begin with, the experience of both the first and second plans shows that the private sector has much more vigour than the planners think; during the current quinquennium especially, it will be exceeding the target it was set four years ago by a margin that is nothing short of spectacular. Yet, right through the third plan outline, there runs the assumption that the private sector cannot be relied upon to do very much, so the public sector has to be pushed forward to a position of increasing dominance in the economy. There is no clear justification for this on economic grounds, even if there be some on grounds of the political ideology propounded by the Congress Party. It is true that the public sector will soon be reporting some spectacular achievements at the nodal points of industrial growth, such as steel manufacture. But the fact remains that the public sector has not been able to invest as much as it should have done because it has been wasting a good deal of its money on grandiose welfare schemes, as on the railways; and even the money which has been invested has not been efficiently used to give the best returns possible.

All this might have mattered less if the public sector had not been drawing its funds mostly from the same pool of savings as are available to the private sector. During the second plan, especially, official revenue-raising policies have had a major impact on the funds available to private enterprise. The draft outline of the third plan indicates that the process of milching the private cows to nurse the State-owned calves is to continue with renewed vigour. As the accompanying Table 2 shows, most of the increase in revenue for the public sector is to come from three main sources: (1) external aid (which would be welcome); (2) "additional taxation, including measures to increase the surpluses of public enterprises" (which would not); and (3) the "surpluses of other public enterprises on the existing basis" (a doubtful quantity). Mercifully, there is to be a substantial decrease in deficit financing; but the Budget which Mr. Morarji Desai presented this year suggests that this is only a paper promise the Government has kept ready for visiting foreign bankers but which it has no serious intention of fulfilling.

The impact of the whole system of raising resources for the public sector would be less adverse if the concentration were on mopping up funds which are not normally accessible to the private sector. In that way, the total pool of mobilised savings would be increased, instead of the savings being merely transferred from one sector of the economy to the other. The present system of taxation hits directly those parts of the economy where voluntary savings would normally be the greatest, whereas it leaves practically untouched the numerous other parts which are not in the habit of saving—and which, if they do save, merely accentuate inflation by putting their money in foodgrain, commodity and bullion hoards. The draft outline of the third plan contains a minor recognition of this injustice when it implies that any substantial increase in the rate of income and corporation taxes is unlikely. "Further increases in yields will have to be sought mainly through a tightening of tax administration, watch on expense accounts of companies and other measures to check evasion." But it does not rule out altogether the possibility of heavier direct taxation, although it seems to imply that the main reliance will be on indirect levies. It admits that these latter (and the new pricing policies of State enterprises) will tend to raise prices and costs; and then adds that "this is part of the calculated sacrifices that have to be made." The greater reliance on indirect levies is by no means injudicious; but it may be doubted whether the Government's determination on this point will prove as impressive as the current proposal. Much of the additional money will have to be raised by the States, whose record in drawing revenue from the right sources has so far been remarkably poor. It remains to be seen whether they will find the courage to tax the untaxed, especially the farmers, at a time when the strength and unity of the Congress Party seems to be in sharp decline almost everywhere except in the rural areas.

Table 1

THE PLANS COMPARED

(Rs. crores)

	First plan (As now assessed)	Second plan Originally proposed	Second plan As now assessed	Third plan
Public sector outlay*	1,960	4,800	4,600	7,250
Public sector investment*	1,560	3,800	3,650	6,200
Private sector investment	1,800	2,400	3,100	4,000
Total investment	3,360	6,200	6,750	10,200

*The Planning Commission defines "investment" as the expenditure on creating physical assets, such as buildings, plant and equipment, whereas "outlay" includes in addition the expenditure on revenue account on plan schemes.

Table 2

FINANCIAL RESOURCES FOR THE PUBLIC SECTOR

(Rs. crores)

	Second plan	Third plan
Balance from revenues on the basis of existing taxation	(−) 100	350
Contribution of the railways on the existing basis	150*	150
Surpluses of other public enterprises on the existing basis	**	440
Loans from the public	800	850
Small savings	380	550
Provident funds betterment levies, steel equalisation fund and miscellaneous capital receipts	213	510
Additional taxation, including measures to increase the surpluses of public enterprises	1,000	1,650
Budgetary receipts corresponding to external assistance	982	2,200
Deficit financing	1,175	550
Total	4,600	7,250

*Inclusive of increased fares and freights

**Included in the first item above

The dependence on external aid will, of course, constitute the major uncertainty. The planners estimate that they will need Rs. 3,200 crores of it over the five years—Rs. 1,900 crores directly for the plan, Rs. 200 crores for importing components, balancing equipment, etcetera, needed to increase the domestic production of capital goods, Rs. 500 crores for servicing capital already received, and Rs. 600 crores as P.L. 480 commodity assistance from the United States. It may fairly be stated that almost the entire third plan depends on this one component of resources: if the foreign aid does not come, the plan will have to be scrapped, since India's own foreign exchange reserves are already below the minimum considered necessary. Fortunately, the indications are that foreign aid will come on a much more liberal scale, although whether it will be as liberal as the planners visualise is difficult to say. The Planning Commission, on its part, has responded to this situation reasonably by declaring in plain words that "the plan will have to be flexible, and the commitments in regard to foreign exchange expenditure will have to be made only on the basis of external resources that are clearly in sight. The fact that the commencement and execution of projects, both in the public and private sectors, will depend upon the external assistance that is forthcoming highlights the need for keeping ready, well in advance, a sufficient number of projects that can be executed as soon as the necessary foreign exchange has been secured." Cynics may, however recall that the second plan too was not without

pretensions to flexibility; that flexibility was nowhere to be found in practice until the foreign exchange crisis arrived like a thunder-clap, and by then a lot of money had been wasted on projects that were started but could not be finished. It is to be hoped that the latest proposals for flexibility during the third plan will not be similarly jettisoned by sectional prodding from various pressure groups.

The time has probably now come when India's foreign friends, in the West especially, should seriously consider what they can do to help her progress towards a more prosperous and stable democratic society. As the Three Wise Men of the World Bank Mission pointed out a couple of months ago, democracy has its price. They might well have added that the price of liberty is not only eternal vigilance, but also dollars, sterling and deutschemarks that are transformable into steel plants, hydro-electric equipment and food. The political justification apart, there is a moral and economic justification for helping a society of 400 million people who will have converted themselves into 480 million by 1966. The donor-governments of the West no doubt have their own problems. They have to persuade their electorates to sanction taxes which will ultimately go to faraway India, whose only interests until recently were believed to be *maharajahs*, elephants and snake-charmers. They have to persuade their legislatures, and also their bankers, that if allocations of aid are made only on an annual basis, the process is likely to hamper the progress of five year plans which are based on a larger vision and therefore call for longer commitments. They have to persuade themselves that there must be something in it if even their traditionally conservative bankers have come round to the view that much of the aid will have to be given on easier terms than those strictly commercial. And, finally, in countries like West Germany, they have to learn that the debt of gratitude they owe America for the so-called Erhardian miracle has to be paid back by generosity elsewhere—and not by coolly fattening their own foreign exchange reserves.

For India's part, the tasks of the Western aid-givers can be considerably eased if she rationalises further the plan she has just outlined, so as to show that economic progress is the top objective of her policy. It is no doubt a satisfactory thought that the Government should extend community projects and the co-operative movement to the whole country by 1966; that it should be able to provide free and compulsory primary education for all children in the 6-11 years age group; and that there should be a glorious blossoming of village schools, community centres and village libraries throughout the length and breadth of the land. But it would be less satisfying if these undoubted benefits were to be secured at the cost of food and industrial production. Not even charlatans would deny that primary-school-going six-year-olds are better than non-primary-school-going six-year-olds; but if the mental pabulum of school is won at the cost of starvation at home, the nation will be entitled to wonder whether the resources of the economy are being used to the best purpose possible. Over the next few months, as the third plan is finalised, the planners and the Government will have an opportunity to show that they have the political courage and the economic realism to trim the electioneering frills in the proposals they have produced. There is a direct need for more serious concentration on agriculture, transport and industry, and on the use of more efficient methods of production than village and small-scale industries have yet shown themselves capable of adopting. India is too poor a country to be able to afford anything other than producing the most she can in the most efficient and economical way she knows.

THE CENTRE BORROWS

THE Government of India intends to raise Rs.175 crores by offering two new loans—the 3½ percent bonds 1966 at an issue price of Rs. 99.75 percent and the 4 percent 1980 loan at an issue price of Rs. 99.90 percent. The list will be open from 18th July to 20th July, but may be closed earlier as soon as the loans are subscribed fully. The Government reserves the right to retain subscriptions up to 10 percent in excess of the amount notified. The terms and conditions of the loans are in line with market expectations. The 3½ percent 1966 loan gives a redemption yield of 3.54 percent and a running yield of 3.51 percent. The yield of the 4 percent 1980 loan works out to roughly 4 percent. These yields are fair, and compare favourably with those available from existing securities with comparable maturities.

The decision to offer a short-dated loan is welcome because there is a shortage of such securities. Commercial banks have a special interest in them, so the present issue should be satisfactory. Last year also, the Government went in for a two-tiered loan programme, but then there was only a medium-dated and a long-dated stock on offer. Now there are enough medium-term loans in the market, so the replacement of a medium-dated loan by a short-dated offer is justified. The banks will no doubt support the short-dated loan as far as their resources permit, but their investible funds are now limited. The demand for credit in the money market is strong; and a substantial portion of bank deposits have been impounded by the Reserve Bank. So banks may not have much money left to invest in Government securities. It is, nevertheless, expected that the Government will get all it wants without any difficulty, since strong support will come from the Reserve Bank, the Life Insurance Corporation and provident funds. The long-dated loan should prove popular with the latter two institutions. The conversion facilities which are being given are likely to make the subscription easier. The new loans can be subscribed either in cash or by the conversion of the 2½ percent 1960 loan, the 4 percent 1960-70 loan or the Hyderabad loans which have been notified. Most of the 2½ percent 1960 loan and the 4 percent 1960-70 loan is held by the Reserve Bank, so substantial conversions are foreseen. If conversions amount to over Rs. 100 crores, as is expected, the remaining cash subscription should be forthcoming easily.

The size of the new borrowing programme is somewhat surprising. When presenting the Central Budget for 1960-61, Mr. Morarji Desai, Finance Minister, indicated that the borrowing programme would total Rs. 250 crores during the current fiscal year. To this, the prize bonds which have recently been issued were expected to contribute Rs. 25 crores. Sales of the prize bonds have so far been extremely buoyant. Whether or not this is because people are satisfying their gambling instincts the fact is that collections have been impressive—and will probably be much more than the Finance Minister had hoped for. It is thought that if sales of these bonds are pushed vigorously, much bigger amounts can be mopped up. Moral considerations are irrelevant; it is time the people's liquid resources were mobilised in this manner if excessive speculation in the share and commodity markets is to be restrained. It is difficult to say, however, whether the increased collections from the prize bonds have persuaded the Government to trim its borrowing programme.

There can be two good reasons why the borrowing programme should be modest at the present time. Firstly, conditions in the money market are stringent, because the return of funds from borrowers during the past few weeks has been very slow. It seems that the usual distinction between the slack season and the busy season is fading as the industrialisation of the economy progresses. Considering the strong demand for money, the Government's decision to borrow less appears to be justified. Secondly, it is possible that the authorities may be thinking of going in for a second tranche of loans later this year, as they did in 1959. The idea of borrowing in stages is appropriate since it enables the Government to raise money in accordance with its requirements.

Although there is little doubt that the new loan will be subscribed without difficulty, this is a time when the Reserve Bank should seriously consider scotching current rumours of a possible increase in the Indian Bank rate. There is a growing suspicion that once the loans are out of the way, Bank rate might be raised. The suspicion has grown since the U.K. Bank rate was increased from 5 percent to 6 percent a few days ago, and since some Indian banks decided to raise their advance rates. But it should be made clear that the circumstances which have necessitated an increase in the U.K. Bank rate are quite dissimilar from those prevailing in this country. The U.K. has had to increase Bank rate in order to restrain the excessive growth of her domestic demand and to help maintain her exports. But circumstances in India are quite different. Bank rate here is largely of academic interest, since it cannot be made effective in an economy which does not have an integrated money market. This is probably the main reason why most of the official measures to restrict credit have failed. As long as a large amount of credit remains outside the banking system, as it does in India, the regulation of bank credit alone can have little effect. It is, therefore, not appropriate to rely too much on the mechanism of Bank rate for regulating the economy.

A rise in Bank rate might do more harm than good. To begin with, it will make official borrowing more expensive. When the Government can borrow at the present rate of interest, there is no reason why it should pay more. If Bank rate were to be increased, the psychological effects might be extremely adverse, for Government securities would fall in value and the banks would face serious financial embarrassment. It is unnecessary to increase Bank rate in order to make money dearer. The fact that some banks have already decided to increase their advance rates confirms the view that market interest rates have little to do with Bank rate. The decision to increase advance rates has obviously been taken in order to meet the rising costs of administration. But it will not help economic development. If a high-cost economy is built on the basis of dearer money, the sale of Indian commodities, in foreign markets especially, will suffer.

The current fad for checking inflation in India by curbing bank credit springs from the mistaken belief that money is being used for rigging the prices of shares and commodities. In fact, however, most of the speculation in the share and commodity markets has been supported by money obtained from outside the banking sector. Unless the supply of this money can be regulated—which can be done only through stringent administrative controls—it will be difficult to check speculation, as has been proved by the failure of the recent credit curbs. It is admitted that the price inflation is due largely to physical shortages and to increased costs of production because labour emoluments have been rising. If production costs are to be realistic and economic, the working efficiency of industries has to be improved.

PROSPECTS FOR PEACE IN ALGERIA

THE decision of the Algerian rebels' "National Liberation Front" (F.L.N.) not to send a delegation to Paris for the time being to negotiate a settlement of the Algerian dispute will cause widespread disappointment. India's interest in the issue is rather limited, but New Delhi was one of the many world capitals which received the recent possibility of a *rapprochement* in Algeria with considerable relief. The one capital which found no reason for satisfaction was Peking, where the original news was so unwelcome that it was not even published by the régime for a week, that is, until the Chinese communist leaders had had time to swallow their disappointment. That the Algerian war had reached a stage where its continuation was considered a disastrous absurdity by everyone except the Chinese is significant. Indeed, it is one of the reasons why both parties realised that the time had come to make a supreme effort for peace. Increasing Chinese intervention in this conflict was unnerving both parties and all their respective allies, and was threatening to convert the war into something infinitely more dangerous for world peace. The eagerness to intervene is described by Peking as enthusiasm for the anti-imperialist cause. Quite apart from the hypocrisy of this pretension on the part of the régime responsible for current events in Tibet and the Himalayas, it is obvious that the Chinese have a much more adventurous notion of anti-imperialism than the Russians, who have never even contemplated overt intervention in north Africa. While declaring their sympathy with the Algerian cause, the Russians have carefully refrained from translating this sentiment into actions which might awaken American anxieties.

This policy can properly be described as statesmanlike. The unwritten agreement between Washington and Moscow not to meddle too openly in Algeria is, perhaps one of the reasons why the war there has dragged on as long as it has, but it is also the main reason why, having dragged on, it has not more gravely threatened world peace. No one, not even France's N.A.T.O. allies, believed the fiction that Algeria was an internal French affair, but no one believed either that the rights of the Algerian people, nor France's adjustment to the loss of her empire, nor world peace would be secured by open intervention in the armed struggle by the Big Powers. When Peking brushed aside this caution and promised the Algerian rebels every form of aid, it demonstrated once again that it sets less store by world peace than by its own expansionist ambitions, disguised under anti-imperialism.

It is clear why this prospect should increase French readiness to end the war. China could never intervene in distant Algeria as effectively as she did in neighbouring Indo-China, but her material and moral support for the rebellion could convert a military stalemate into a situation precarious for the French. The fear of the Chinese was not felt only on the French and western side. The conservative régimes in Tunisia and Morocco (and perhaps further east in Islam), which are the main allies of the F.L.N., were panic-stricken at the thought of an invasion of Chinese "volunteers" and technicians. The Chinese alliance was already bringing to the forefront of the F.L.N. the most intransigent and least far-sighted elements and thus

CAPITAL, 7th July, 1960.

the north African States found themselves obliged by Arab solidarity to co-operate with men with whom they had less and less sympathy. The conversion of the Algerian nationalist movement into a communist instrument would contain dangers that must frighten even the leaders of the United Arab Republic.

The F.L.N. itself no doubt realised that, however useful the Chinese card might be in propaganda and in bluff, the reality of Chinese aid would alienate sympathies which would not be compensated for by more guns—not just international sympathies in the western and Arab countries, but within Algeria itself. The mainspring of the Algerian nationalist movement, as of most nationalist freedom movements, is the local *bourgeoisie*, which looks upon communism with a distrust equal to, or only slightly less than, its resentment of classic European imperialism. A consistent French policy since the Algerian war began has been to seek to isolate the F.L.N. as men of violence and to call up a nationalist "third force" inside the country, with which Paris promised, more or less sincerely, to deal liberally. This promise was certainly sincere on the part of the French Army which virtually rules Algeria and would not hesitate to sacrifice the white *colons* whom it detests, provided it was dealing with a peaceful nationalist movement and not with its military enemies, the F.L.N. This attitude can only be understood by recalling the "Dien Bien Phu complex" of an Army that has no sympathy with colonialism but is determined to avoid the appearance of another defeat at the hands of armed nationalism. The French quest for a suitable "third force" has so far failed (in part because the F.L.N. assassinated or intimidated likely candidates for the rôle), but it would have every chance of succeeding if the external rebel organisation came to be considered by the moderate Muslim *bourgeoisie* as committed to the Chinese communists.

All the parties interested in the Algerian dispute having realised that continued intransigence creates dangers from which only China can hope to benefit, they wisely chose the course of negotiation. But even if the present stalemate is ended, one cannot conceive a political campaign and a referendum being carried on in a country barely emerging from six years of murderous civil war, with two political parties recommending totally opposed solutions (independence or "association") under the watchful gaze of two temporarily inactive armies. One does not require much imagination to foresee the violent incidents which would arise, nor much pessimism to fear at every moment the recrudescence of armed conflict. Such an artificial transposition of the war from the battlefield to the hustings would be insecure and dangerous. Although the two parties have not yet admitted it, they will have to agree on much more than the mere conditions of a free referendum. They will in fact have to agree on a plan for the political future of Algeria, which they may then put jointly before the inhabitants of the country for their approval. If it were a plan that was jointly sponsored by the French Government and the rebel organisation, it would of course be quite certain of approval. That is to say, the referendum will be a purely symbolic operation, endorsing a solution already reached by negotiation.

If this seems to be incompatible with the famous "principle of self-determination", then it is best to realise plainly that the grandiloquent democratic formula has never been anything other than a pretext for the French and the F.L.N. to begin negotiations without losing face. The F.L.N. claimed for years to be the natural representative of Algerian nationalism whose titles needed no endorsement by popular vote because they were established by the support the people gave it in the war. The French claimed to be the legal constituted authority in Algeria, which could not surrender to a self-appointed band of terrorists, representing at most one community out of the several that compose the population. General de Gaulle's stroke of genius was to suggest the occasion of a free vote, not to settle the conflict, but to bring these two rivals to the conference table without either appearing to recognise the juridical claims of the other. If in future they claim to be discussing the merely formal conditions for discovering the Algerian people's will, in reality they will be discussing the future of the country. If a referendum is ever held in Algeria, it will merely ratify a just and amicable settlement already reached between the French Government and the F.L.N.

Current News and Comment

Indian Copper Attracts

The ordinary shares of the Indian Copper Corporation Ltd have been meeting with good support during the past few weeks for two main reasons. The first is that the Company's project for setting up a plant to produce electrolytic copper is making progress. And the second is that the steadiness in the international price of the metal encourages the hope that working during the current year will be satisfactory; the prices of the Company's products are governed largely by international trends. Indian Copper's results for the year ended December 1959 are good. The trading profit has improved from £997,848 in 1958 to £1,202,259 last year, chiefly because higher prices were realised for the various products. An ordinary dividend of 27 percent, taxable, has been declared and it absorbs £370,251. It offers a yield of 6.9 percent at the present price of Rs. 5.18 a share. An ordinary dividend of 18 percent, tax-free, was paid in the previous year. Allocations are £175,000 (against £150,000) for depreciation, £56,250 (against £50,625) for development rebate reserve, £439,949 (against £467,282) for taxation and £125,000 (same) for general reserve. There is a carry-forward of £107,120, against £71,312 brought in.

The total ore reserves increased by 169,400 tons to 4,203,547 tons, but the ore reserves of the Badia section were 35,793 tons less at 535,896 tons. The output of refined copper declined by 288 tons to 7,553 tons. The production of rolled products increased from 9,211 tons to 9,419 tons. The output of brass sheets and strips was restricted by the shortage of import licences for zinc. About 10,867 tons of products (including 1,690 tons of copper ingots) were despatched for sale, compared with 10,966 tons (including 2,007 tons of copper ingots). Sales of kyanite increased by 1,573 tons to 16,222 tons. As for the litigation concerning the kyanite leases, an appeal has been made by the Company to the Supreme Court against the judgment of the Patna High Court.

Stock market circles are now debating whether Indian Copper will make a fresh share issue. Some say that there might be a rights issue to finance the electrolytic copper project, but since the Company has ample resources, the possibility of such an issue is now being discounted. Operators' hopes about bonus shares are based on the fact that reserves are impressive. They total over £2,265,925, against a share capital of £1,371,300. Fixed assets are £1,353,909. Whether bonus shares will be issued by capitalising reserves, in spite of the stiff bonus issue tax, is anybody's guess.

Burn Earns Less

The ordinary shares of Burn and Co. Ltd have improved to Rs. 534 during the past month or so. Investors' confidence has been reinforced by the latest report for the year ended April 1960, which reviews the Company's expansion programme in considerable detail. The order books of the Howrah works are full, but the production of wagons during the past year has been interrupted by confusion arising from thousands of tons of steel imported by the Railway Board being sent to the wrong destinations. This resulted in wagon-builders receiving a good deal of steel which had to be reloaded and sent to other wagon-builders ultimately. The directors are trying to diversify the activities of the works in view of the possibility of a fall in the wagon demand from the Government of India in the future. During the past year, an agreement was concluded between Burn and the Vaughan Crane Co. Ltd of the United Kingdom for the manufacture of cranes at the Howrah works. Vaughan Crane's contribution will be in the form of drawings and technical "know-how". A new company—the Vaughan Burn Crane Co. Private Ltd—has been formed in India for marketing the products. Burn has taken 3,000 shares of Rs. 10 each, representing a 30 percent holding. Twenty percent of the shares have been taken by Martin Burn Ltd, and 50 percent by the Vaughan Crane Co. Ltd.

The Raniganj refractory group has been booked to capacity. The modernisation of the Lalkoti works and the Gulfarbari works is making progress. For 20 years, Burn has been engaged in a joint venture with Armco (India) Private Ltd (associated through the Armco International Corporation with the American Rolling Mills Co. of the U.S.A.) for the manufacture of the insulating brick materials. Armco has decided to discontinue manufacture in India and has offered its rights in the patents and trade names, together with its half share of the goodwill in the joint venture, to Burn for Rs. 1,20,282. As the manufacture of these insulating materials has always proved profitable, the directors of Burn have decided to accept the opportunity. The profit on the insulating brick materials during the six months after 1st November, 1959 (the date of the take-over) has amounted to Rs. 1,04,409. As for the Salem project, equipment has begun to arrive at the site and work has begun for building the factory which will produce magnesite shapes. The factory will obtain raw materials from the adjacent magnesite mines in Salem.

Burn's profit has declined from Rs. 1.03 crores previously to Rs. 96.74 lakhs during the year ended April 1960, after transferring Rs. 18.74 lakhs (against Rs. 18.31 lakhs) to depreciation. An ordinary dividend of 28½ percent, taxable, has been declared. This offers a yield of 5.3 percent at the present price and is covered more than four times. The same dividend was paid in the previous year, but it was tax-free. Important allocations include Rs. 63.15 lakhs (against Rs. 50 lakhs) for taxation, Rs. 2.46 lakhs (against Rs. 2.07 lakhs) for development rebate reserve, Rs. 2.75 lakhs (against Rs. 3.64 lakhs) for works reconstruction and expansion reserve, Rs. 2.24 lakhs (against Rs. 20 lakhs) for the Salem project reserve and Rs. 2.24 lakhs (against Rs. 1 lakh) for the Niwar project. The carry-forward is Rs. 26,14,452, compared with Rs. 26,07,391 brought in.

It is worth noticing that Rs. 14.13 lakhs has been brought in due to credits concerning previous years following the finalisation of the prices paid by the Government for wagon contracts made in 1954-55, 1957-58 and 1958-59. The balance-sheet is impressive. There are reserves of over Rs. 2.35 crores against an ordinary share capital of only Rs. 84 lakhs. Fixed capital assets amount to over Rs. 2.27 crores and current assets stand at Rs. 4.92 crores. Cash is shown at Rs. 34.82 lakhs. Commenting on the payment of the preference dividends after deducting the prescribed tax—hitherto the preference dividends were paid free of tax under the old system of corporate taxation—the directors express their willingness to compensate the preference shareholders for the loss of income under the new system of corporate taxation. But since more money cannot be paid to preference shareholders except after changing the articles of association, they are thinking of how to overcome

the legal difficulties in increasing the preference dividends.

Metal Box Does Well

The Metal Box Company of India Ltd has produced excellent results for the year ended March 1960. The profit has increased from Rs. 97.58 lakhs to Rs. 1.08 crores, after raising depreciation from Rs. 14.02 lakhs to Rs. 14.78 lakhs. An interim ordinary dividend of 90nP was paid on the old shares. An ordinary final dividend of Rs. 1.60, taxable, has now been declared on the increased capital. The ordinary dividend was Rs. 1.75, tax-free, in the previous year. The present dividend offers a yield of 5.9 percent at Rs. 42.25 a share. During the past year, 460,000 new ordinary shares of Rs. 10 each were issued to the existing shareholders at par in the proportion of two new shares for every five held.

It is noteworthy that 656 rights shares were not taken up by the shareholders concerned, but the directors sold them at the market prices and the profit thus made was given to the shareholders who were entitled to the rights shares. This excellent practice is worth emulating.

Notable allocations from the profit include Rs. 51 lakhs (against Rs. 56 lakhs) for taxation, Rs. 3.25 lakhs (against Rs. 2½ lakhs) for development rebate reserve and Rs. 15 lakhs (same) for general reserve. The carry-forward is Rs. 23,96,994, compared with Rs. 19,33,761 brought in. Sales increased by Rs. 1.35 crores to Rs. 8.45 crores. Exports were substantial and in his review (a fuller version of which is printed on a later page) Mr. K. C. Mahindra, chairman, indicated that they would increase further if adequate supplies of raw materials can be obtained at reasonable prices.

The new No. I Calcutta factory has shown improvements in operational efficiency. The reorganised No. II Calcutta factory has expanded the production of plastics, embracing injection moulding, polyethylene extrusion, printing and bag-making. The machinery building section of the latter factory has been extended. It is producing an increasing range of ancillary equipment. It provides industrial components for many new products which are now being produced in India. The factory in Faridabad has been completed and the transfer of equipment from the old factory in Azadpur will be completed soon. Mr. Mahindra mentioned the adverse effects of the high excise duties which have been levied recently on tinplate and aluminium. Not only is the incentive to reduce the prices of various products affected by these levies, but it is feared that they might discourage the use of sound packaging. If the production of containers and packaging materials is to be helped, domestic supplies of tinplate and aluminium have to be increased. Mr. Mahindra hoped that the production of both will improve in the not distant future.

Metal Box's ordinary share capital of Rs. 1.61 crores is supported by reserves of more than Rs. 1.89 crores. Fixed assets amount to Rs. 2.11 crores and current assets are shown at Rs. 3.40 crores. Cash stands at Rs. 19.77 crores.

More Hope for India United Mills

The working results of the India United Mills have been unsatisfactory for a long time, but the latest report for the year ended December 1959 shows some improvement. If the improvement continues, the day may not be far off when the Company will be able to pay its shareholders the dividends they have been denied for a long time. It is deplorable that the differences between the members of the managing agents continue. The differences were to be subject to the arbitration of Mr. Morarji Desai and Mr. G. D. Birla. But according to the directors, the viewpoints are so irreconciliable that the arbitrators decided last year not to proceed with the matter. This was the second arbitration by the same gentlemen in the affairs of Messrs Agarwal and Company, the agents. Thereafter further attempts were made by various persons, including Bombay's Labour Minister, Mr. Shantilal Shah, but efforts to bring about a settlement failed. The directors say that in view of these differences, no application has been made to the Central Government for the reappointment of the managing agents. Under Section 330 of the Companies Act, 1956, the office of managing agents will terminate on 15th August, 1960. The effects of this development, especially on the Company's finances and management, is difficult to foresee.

The accounts show that the Company has made a profit of Rs. 29.68 lakhs in 1959. Providing Rs. 1.27 lakhs for development rebate and Rs. 50,000 for the managing agents' minimum commission, the net profit is Rs. 27.91 lakhs. To this is added Rs. 10 lakhs, being the *ad hoc* reduction made in the previous year from the stock-in-trade now considered unnecessary. After adjusting the loss of Rs. 57.7 lakhs brought in, there is a net debit of Rs. 19.79 lakhs to be carried forward. No dividend is recommended.

Maiden Dividend from Indian Dyestuff

Few shares have recorded such a meteoric rise in recent memory as have those of the Indian Dyestuff Co. Ltd. On 27th June, they were bid up to a record high of Rs. 1,000, which works out to around Rs. 9,100 after allowance is made for the rights issue in 1959 when the ordinary capital was increased from Rs. 15 lakhs to Rs. 150 lakhs through the issue of nine new shares at par for each one held. In January 1959, their price was only Rs. 160. It is difficult to explain the spectacular rise, even though the Company's performance during the year ended March 1960 has been fairly encouraging. Sales were Rs. 1.52 crores, against Rs. 91.64 lakhs in the previous year. So the gross profit has increased to Rs. 54.23 lakhs from Rs. 25.94 lakhs. The directors have proposed a maiden dividend of Rs. 6 gross (Rs. 4.2 net) on the old shares and Rs. 1.86 gross (Rs. 1.32 net) on the new shares. Appropriations include : managing agents' commission Rs. 5.12 lakhs (against Rs. 1.84 lakhs), depreciation Rs. 2.95 lakhs (against Rs. 2.98 lakhs), development rebate Rs. 1.87 lakhs (against Rs. 15.84 lakhs) and taxation Rs. 20 lakhs (against nil). The preference and ordinary dividends absorb Rs. 8.64 lakhs, and Rs. 15 lakhs is transferred to the general reserve, leaving Rs 62,000 to be carried forward, against Rs. 10,000 brought in.

The expansion programme of the Company is progressing satisfactorily and is likely to be completed by about the middle of 1961. But considering that the gross block has increased during the past year by only Rs. 2.52 lakhs to Rs. 43.10 lakhs and the expansion scheme will not begin to yield full results until late next year, the current year's performance is unlikely to be much better than in 1959-60. Since both the old and the new shares will now rank *pari passu* for dividends, the outlook for dividends can hardly be considered very encouraging either. It cannot be very surprising that the shares dropped sharply from Rs. 1,000 to Rs. 730 within a day of the announcement of the maiden dividend and working results. Even at the lower level, they seem over-valued in terms of the dividend and earning prospects.

Bigger Profit for Tata Oil Mills

The preliminary figures for the Tata Oil Mills Co. Ltd indicate that the Company has done reasonably well during the year ended March 1960. A dividend of Rs. 4.50 less tax (same) has been recommended on the preference shares. The ordinary dividend is Rs. 3.75, less tax, against Rs. 3.25 net in the previous year. The net profit is Rs. 17.81 lakhs, compared with Rs. 10.1 lakhs in the previous year, after providing Rs. 13.47 lakhs (against Rs. 11.3 lakhs) for depreciation, Rs. 25.75 lakhs (against Rs. 21.75 lakhs) for tax, Rs. 2 lakhs (against Rs. 3.25 lakhs) for development rebate reserve, Rs. 1 lakh (against Rs. 2.25 lakhs) for general reserve and Rs. 5 lakhs (against nil) for plant modernisation and development. Sales during the year totalled Rs. 8.31 crores, against Rs. 6.64 crores in the previous year.

Poor Results from Minerva Mills

The Minerva Mills Ltd has again reported a loss of Rs. 14.284 for the year ended December 1959, but this is much less than in 1958. The Company's efforts to modernise and rationalise indicate that working results in the coming years might show some improvement. To the loss for 1959 is added the debit balance brought in from 1958, making a total loss of Rs. 7.99 lakhs, including Rs. 11.279 being the tax reimbursed to the managing agents on agency commission forgone by them for 1951. A sum of Rs. 59,733 has become available, being the refunds of insurance premia receivable for previous years. After deducting this from the total debit, there remains a net debit of Rs. 7.39 lakhs, which the directors propose finally to close by transferring an equivalent sum from general reserve. The report says that the management is now concentrating its efforts on putting the mills on a sound, profit-making basis. It is switching over a substantial part of the production from coarse and medium counts to superfine counts, and working the spinning department on a temporary three-shift basis in order to absorb the surplus staff. It is rationalising the various departments and continuing the programme of

renovation and modernisation of plant and machinery. Some new machinery, like the Barber Colman spooler and warper, was erected at the beginning of the current year and is now in operation. The Company has also received permission to install 144 automatic looms in place of old looms. The replacement will form part of the second phase of the Company's programme of renovation and modernisation, which will be undertaken as soon as the National Industrial Development Corporation provides the money.

South Indian Textile Wages

Textile shares in the Madras Stock Exchange, except those of four mills in Andhra Pradesh, eased after the news of a settlement between south Indian millowners and labour unions for implementing the Textile Wage Board's recommendations. The State Government has helped negotiate a settlement in accordance with the Board's recommendation for an increase of Rs. 8 in the basic wage of a worker from 1st January, 1960. The dearness allowance also has to be adjusted in case the cost of living goes up. Clerks are eligible for an increase of Rs. 10 a month in their salary. The new mills have been called upon to pay the same wages as the old ones. The Buckingham and Carnatic Mills has urged that the extra allowance already paid to workers should be set off against the proposed increase in wages, but the workers' union has objected and threatened a strike. The I.N.T.U.C leaders have appealed to the mill authorities to accept the settlement on the ground that most south Indian mills will soon agree to pay more to workers. The south Indian millowners initially thought the Board's award too onerous, and last month's token strike had little effect. The mills will now have to carry out rationalisation programmes so as to offset higher labour costs by increased productivity.

Stabilising Shellac Prices

Speaking at the annual general meeting of the Indian Lac Exporters Association in Calcutta recently, Mr. C. R. B. Menon, president, said that the principal reason why the consumption of shellac has declined is that it has had to face strong competition from synthetic resins. The latter offer several advantages such as stable prices, consistency of quality and adequacy of supplies. But they would not have displaced shellac in many countries if it had not been subject to violent price fluctuations caused by speculative activity. So the main task of the Association has been to stabilise prices. Mr. Menon said that soon after its formation in 1958, the Association fixed minimum export prices. The chief drawback of shellac from the point of view of the industrialist was, therefore, removed. The main problem facing the Association, Mr. Menon said, has been the disparity between the minimum export prices and the internal prices of lac. The divergence in prices has in some months been of the order of 10 percent to 15 percent, so the Association prepared a scheme for maintaining a buffer stock to stabilise internal prices. It also started a separate fund for this purpose, and credits to it were made through a fluctuating levy imposed on exports. The scheme was submitted to the Central Government in 1958, but it has made no progress so far. Mr. Menon said that the Association has always appreciated the need for research on new uses of lac and intensified publicity. It has accordingly levied a voluntary cess on lac exports and has built up a substantial fund for this purpose. Part of the fund will be used for subsidising publicity and research in the United States, part for granting scholarships in the United Kingdom and part for financing research in India.

Bicycle Output Approaches Target

Bicycle production and demand have risen rapidly in recent years. The output of the organised sector was only 372,00 in 1954, but has increased to 1 million in 1959. If the figures for the small-scale or unorganised sector are included, the total comes to about 1.2 million, against the second plan target of 1.25 million. The target, it is expected, will exceeded in the current year. The industry's efforts to achieve self-sufficiency in components have made good progress. Mr. B. D. Kapur, president, told the annual general meeting of the Cycle Manufacturers Association of India this week in Delhi that the percentage of the components now imported is "barely 2 to 3" The Government has banned the import of bicycles, and in the third plan period, it is proposed to raise output to 2.5 million a year. The total production capacity at present is 1.87 million. In order to expand production, the industry has to increase the manufacture of components. According to Mr. Kapur, the major units, "in spite of their best efforts", are not in a position to produce much in excess of their requirements to meet the needs of all the units adequately. They have been doing their best to raise their own output of components and encouraging the ancillaries to raise theirs; even so, the gap is expected to be wide, since, apart from the normal needs of a higher scale of production, a large quantity will be needed as spares and replacements. Mr. Kapur said that the industry is capable of delivering the goods if regular and sufficient raw material supplies are ensured, and consumable stores, plant and machinery made available in time. Alternatively, the present arrangement for "import pack value will have to be continued." Dealing with export prospects, he said that against a target of 10,000 bicycles set for 1959, about 7,500 were exported to the neighbouring countries in the east as well as the Middle East. Some components and accessories have also been exported. "The quality of the Indian bicycles have not stood in the way of developing exports, as was once feared." The target for 1960 is again 10,000 bicycles. An appreciable number has already been sold; Egypt, in particular, is a promising market.

U. K. Loan to India

Britain has offered India a loan of £10 million. The Minister of State for Commonwealth Relations, Mr. C. J. M. Alport, in a written reply in the House of Commons last Thursday said: "The United Kingdom has offered a loan of £10 million to the Government of India, to be made under Section 3 of the Export Guarantees Act. The intention is that India should be able to draw on this loan to make payment for a broad range of her imports from the United Kingdom. The loan is being offered in response to an approach by the Government of India to the United Kingdom for early assistance in meeting India's foreign exchange requirements for 1960-61, the final year of the second five year plan. In addition, the United Kingdom will later join in consideration of India's need for assistance during the current year with the consortium (the United States, Canada, Japan, and West Germany, in addition to Britain) which met under the aegis of the World Bank to concert assistance to India in 1958 and 1959."

The new U.K. loan of £10 million (Rs. 13.33 crores) made under Section 3 of the Export Guarantees Act is in addition to previous measures since 1958 of general balance-of-payments help. Like these previous loans, it is not tied to new projects. The earlier loans were £28.5 million (Rs. 38 crores) in December 1958 and £19 million (Rs. 25.33 crores) in November 1959, bringing the total of British aid of this kind to £57.5 million (Rs. 76.67 crores) in two years. In addition, the U.K. Government has lent £15 million (Rs. 20 crores) specifically towards the cost of the Durgapur steelworks (1958) and £3 million (Rs. 4 crores) towards the Assam pipeline (1959)—in each case supplementing private finance from Britain for these projects—giving a grand total of £75.5 million (Rs. 100.67 crores). The most valuable aspect of the new loan is that it can be used quickly by India to pay for general imports from the United Kingdom.

The informal consortium referred to first met under the aegis of the International Bank in August 1958. The date of the next meeting is not known, but it seems probable that one will take place some time later this year. Of loans totalling just over £100 million (Rs. 133.33 crores) made to independent Commonwealth countries under the Export Guarantees Act during the last two years, £75.5 million, or three-quarters, has been authorised for India. Approximately 1¼ percent of the national income of the United Kingdom already goes to benefit the less-developed countries by means of public lending and private capital investment.

E.F.T.A.: The Seven Start

The European Free Trade Association (E.F.T.A.) came effectively into being on 1st July, when the first reduction, one of 20 percent, in the Customs tariffs on industrial products traded between members came into force. The E.F.T.A.—sometimes referred to as "the Seven"—consists of seven nations: Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom. The convention establishing the Association was initialled in Stockholm in November 1959 and came into force on 3rd May, 1960, when member Governments deposited their instruments of ratification. Its headquarters are in Geneva. The aims and purposes of the E.F.T.A. are economic expansion, full employment, the rational use of

when tomorrow comes...

For him a spade is not yet a spade.

The telegraph wires hum a strange tune, the—

distant drone of a plane means faraway places, mystery.

And imitating father is a new kind of play.

When tomorrow comes, play will turn to work.

Life will take on a different purpose. A spade

will be a spade, and care will be part of living.

Today's striving and effort is for the world

he will grow into, a world that offers a little more—

a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . . **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts. And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow... Hindustan Lever serves the home

PR.J-X53

resources, financial stability, and a higher standard of living. Starting on 1st July with the first tariff cuts of 20 percent, the Stockholm convention will progressively establish a free market between the members of the Association. This will be achieved by the abolition of tariffs and other obstacles to trade in the industrial products of members over a period of ten years, or earlier if so decided (there are special provisions for trade in agricultural produce and fish). In so far as the member States still have import restrictions, these quotas will also be relaxed. But each country will be free to decide its own external tariffs.

Better Prospects for Builders Hardware

The builders hardware industry has now raised its production to a level where it is able to export a sizable part of its output after meeting a large home demand for hinges, padlocks, padbolts and tower bolts. Mr. A. Pal, president of the Builders Hardware Industries Association of India, speaking at the annual general meeting last week in Calcutta, viewed the prospects for the industry with optimism. He pointed out that with the house-building programmes contemplated in the third plan, and the liberalised financial aid given by the Government under the subsidised industrial housing scheme for workers, the demand for the products of the industry will increase substantially. The development of the construction industry also promises to enlarge the market. These will offer the builders hardware industry with fuller scope for expansion. The manufacturers still have their raw material difficulties, and the quotas they get from State Governments or the Central Development Wing meet only 50 percent of their needs. The Rourkela steelworks is designed to produce flat products and until it goes into production, the need for raw material imports will persist. But since all the three new steel plants have already been commissioned, and it is proposed to set up a fourth one in Bokaro during the third plan period, the raw material shortage will soon disappear. Mr. Pal suggested that in order to take advantage of the bigger steel supplies in prospect, the industry must diversify its production by taking up such new items as hydraulic door closures, superior types of butt hinges, cabinet hardware, mortise locks and other door and window fittings for modern house construction. This will also make operations more economical.

Engineering Exports Rise

The Engineering Export Promotion Council states that exports of engineering goods by sea routes in May 1960 were over Rs. 44.5 lakhs more than in May 1959. Total exports during the first five months of this year have amounted to Rs. 3.03 crores, against Rs. 1.87 crores during the corresponding period of the previous year. Sales to south-east Asia, west Asia, Africa, north, central and south America and Europe have recorded sizable increases. Individual areas which have bought appreciably more are Burma, Ceylon and Malaya in south-east Asia; Iran, Iraq and Persian Gulf areas in west Asia; Egypt in the Middle East; British East Africa; and the U.S.A. The items which have contributed substantially to the increase in exports are sewing machines, electric fans, oil mill machinery, tea making machinery, diesel engines, builders hardware, G.I. products, stainless steelware, tin containers, crown corks and marine transport equipment. In view of the steadily rising exports of Indian engineering goods, the Council thinks that it will be possible to achieve the export target of Rs. 8.5 crores fixed for the current year.

Atomic Power Station Proposed

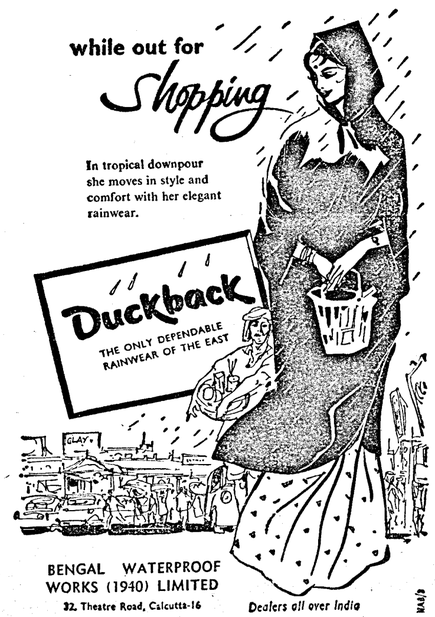
The Madhya Pradesh Government has suggested setting up an atomic power station in Bina during the third five year plan period. This could ease the power shortage in the Chambal region of Madhya Pradesh and Rajasthan, the Kanpur-Matatila service area of Uttar Pradesh and the adjoining Bundelkhand region of Madhya Pradesh. The draft scheme proposes that the atomic station should be a joint project of Madhya Pradesh and Rajasthan and the work on it should be started soon so that power is available by the end of the third plan or the beginning of the fourth plan. A joint project may be preferable to individual ventures of the kind contemplated in Uttar Pradesh before. Except for Kanpur, the entire region to be served by the proposed atomic station is extremely undeveloped, having no industry worth the name, although it is rich in mineral resources. The idea is that the atomic station should be initially planned with two 150 MW reactors, with provision for extending the capacity by another 150 kW. to help meet the expected shortage of 409 MW of power in the region.

Madhya Pradesh and Rajasthan already share the benefits of the Chambal scheme, while Madhya Pradesh and Uttar Pradesh are likely to share the benefits of the Bethwa hydel projects. Madhya Pradesh has large coal deposits in both the eastern and the Pench Valley regions but there are hardly any coalfields in the Madhya Bharat region. The distance from the nearest coalfield to the Chambal area in Madhya Pradesh is about 450 miles and to Rajasthan 600 miles. Similarly, the Kanpur-Matatila service area of Uttar Pradesh is quite far from the coalfields. The only source of power in the Madhya Pradesh region is the proposed Chambal hydel scheme, the total potential of which is assessed at 210 MW. But regions served only by hydel power are vulnerable to drought, which can lead to the closure of industries. The alternative is thermal power but setting up thermal stations becomes uneconomical when coal is not available nearby. In view of this, an atomic power station is considered necessary for the region. Bina has been suggested as the site because of two factors. One is that enough cooling water will be available from the north-flowing Bethwa river. The second is that Bina is well connected by rail; the transport of materials from the power station and of natural uranium for the reactors will present no great problem.

A Plea from Ferrous Scrap Traders

The memorandum submitted recently to the Central Minister of Steel, Mines and Fuel by the Scrap Traders and Exporters Association of Bombay reinforces earlier pleas for a revision of the Government's policy. The main point it makes is that the present policy is not doing enough to promote exports and earn foreign exchange. The need for revision has become urgent, in the Association's view, since the export policy has ended in June. The memorandum urges the appointment of a high-powered committee to evolve a permanent solution for the scrap industry's problems and normalise working. The present difficulties of the industry are due to the estimates of scrap arisings, made by the Scrap Investigation Committee, which were adopted as the basis of the export policy. The S.I.C.'s assessment of arisings is a gross underestimate of the country's real potential, according to the Association. About 760,000 tons of surplus scrap were wasted between 1957 and 1959, on the basis of S.I.C.'s estimates, with a loss of about Rs. 10 crores in foreign exchange earnings. But the Association says that the uncollected and unused scrap surplus is 1.5 million tons, and it could earn Rs. 25 crores of foreign exchange.

The memorandum discusses the various factors which have discouraged the collection and use of melting scrap. The export levy payable to domestic furnaces for the export of inferior bundles is too heavy. Exports of No. 3 bundles have been completely shut out by the levy while those of No. 2 bundles are disappointing. Because of barter arrangements, bundle scrap exports have reached about 41,500 tons, but the Association thinks that since the export levy is excessive and export prices are low, exports have scarcely any chance of improving. There is also hardly any justification why scrap exporters should feed domestic furnaces with the raw material at the present controlled price. The memorandum urges that export outlets be created for No. 1 bundles, supplies of which exceed domestic requirements. The country could earn Rs. 1.5 crores a year from this source. Short-term policies keep the trade in a state of uncertainty and hamper normal trading in the domestic markets. The Association welcomes the extension of barter deals, but for which conditions in the trade would have been much worse. The direct export of inferior scrap has become unremunerative, so the Association suggests the liberalisation of exports as an incentive to scrap collection. It says that the Government should delete the provision concerning allocations to furnace owners against exports of unwanted inferior bundles; remove the ban on the export of No. 1 bundles; liberalise the export percentage of heavy melting scrap from 16 percent to 40 percent; introduce longer export validity periods; and give permission to account all exports of scrap under barter arrangements with liberal return imports to the full f.o.b. value of export earnings.



RAILWAYS IN INDIA

FROM the administration report on Railways in India for 1899-1900, we gather that "the total length of railways open and sanctioned on the 31st March 1900, after allowing for minor corrections of mileage, was 26,790 miles being a net increase of 730¾ miles during the year. The total length of railways open for traffic on the same date was 23,763 miles, being a net increase of 1,272 miles, leaving 3,027 miles still under construction or sanctioned. The mean mileage worked during the calendar year was 22,845¼ miles, being an increase of 1,369¾ miles over the figures of the previous year. The total capital outlay on railways open to traffic amounted on the 31st December 1899 to Rs. 287.60 crores, being an increase of Rs. 19.51 crores as compared with the expenditure incurred to the end of the previous year. The gross earnings in 1899 amounted to Rs. 29,43,18,276, or Rs. 1,96,75,927 more than in the previous year; the working expenses amounted to Rs. 14,01,94,084, and absorbed 47.63 percent of the gross earnings against 47.56 percent in 1899. The net earnings amounted to Rs. 15,41,24,192 being an increase of Rs. 1,01,25,369. The statistical return on the capital expenditure, as entered in rupees in the books in India, was 5.34 percent against 5.37 percent in the previous year."

A Ditcher's Diary

TWO YEARS AND ELEVEN MONTHS AGO, THE COUNTRY was faced with a situation not wholly dissimilar from the one it is in today. The posts and telegraphs employees had threatened to go on strike, whereupon the Government engaged itself in a memorable pirouette to entice them to surrender. At the eleventh hour and fifty-ninth minute, the notice of surrender came, but it was the Government and not the employees which had usurped the honour of staging it. Your guess is as good as mine as to whether the performance is about to be repeated in the course of the next four days; certainly, the firmness the Government has displayed so far would seem reassuring, were it not for the fact that it bears a disquieting resemblance to that displayed until 3rd August, 1957—also four days before the postal strike at the time was scheduled to begin. I do not share the general satisfaction that Mr. Gulzarilal Nanda, the Central Labour Minister, is now hoist with his own petard: having persuaded labour conferences to press for the so-called need-based wage, and for the linking of dearness allowance to the cost of living, he finds himself obliged to lead the battle against the acceptance of these measures by the Government itself. The country has more to lose than the reputation for consistency of an ordinary Minister; and the feature of the past week's parleys which struck me as especially curious was the report that the Government was offering its employees the guarantee that it would not allow the cost of living to rise any further. Mr. Nanda is Minister not only for Labour and Employment but also for Planning, and it would be interesting to know with what warmth the offer of such a guarantee was received, since the draft outline of the third five year plan issued yesterday clearly implies that the rise in prices will continue: "this is part of the calculated (sic) sacrifices which have to be made." There are some attitudes which are described as double-faced, and it is not for me to say whether the Government's reliance on them should be less than complete. It may be open to question, however, whether the ideal solution for disputes with employees is to crown weakness with hypocrisy. Oscar Wilde once said that the art of diplomacy, as of cooking, lies in mixing the right amount of oil with the right amount of vinegar; on the Government's showing, the culinary analogy to the art of good labour relations would seem to lie in garnishing the heart of a chicken with the tongue of a fox.

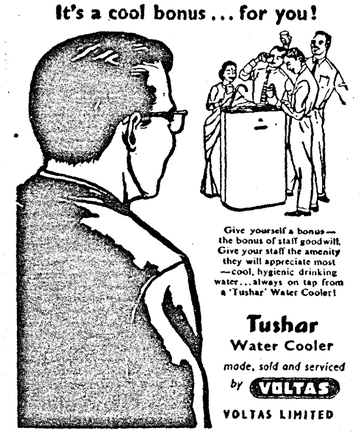
A DECADE HENCE, PROBABLY NO SINGLE YEAR WILL be remembered better in African history than 1960; and probably no single date better than 1st July, when the Congo became independent, the Italian flag waved for the last time in Somalia, and Ghana converted to republican status within the Commonwealth. The winds of change blowing through the African continent have this past fortnight reached a new intensity; the hope may not be wholly forlorn that they may one day lead to the birth of sturdy democracies in a continent where the desire for independence is as strong as the support for liberalism is weak. My faith in Afro-Asian unity, the Bandung spirit and what have you is less than implicit; but the fact of spreading independence in Africa is nevertheless as welcome to me as it may be to others in India, and also in Britain. The real test of African nationalism, however, is yet to come; and by that I do not refer only to the secessionist dangers in the Congo, or the curfew in Leopoldville, or the tribal warfare in Somaliland. India may recall that on the occasion of her own independence nearly thirteen years ago, similar dangers were not wholly absent in this country, nor indeed are they now; but there was a strong tradition of political and administrative leadership, in which the newly-independent African territories are rather noticeably lacking. In this sense, I suspect, the Congo may play a crucial rôle in determining the future pattern of African development, and indeed in many ways it represents in microcosm the problems of the whole continent: it is a large country, rich in natural resources and with a small population, but poor in educational and bureaucratic talent, where politics are concerned more with personalities than with policies. Dr. Verwoerd's claims notwithstanding, Africa south of the Sahara has so far been largely spared the scourge of communist influence; but nothing suggests that this is likely to remain the case. The fear will be that some of the relatively undeveloped societies may find the transition to communism easier than to democracy. In this, there may lie a powerful argument why the snapping of the imperial connection should not be allowed to become an adequate reason for the discontinuance by the West of such economic, administrative and educational help as the newly-independent African territories may need.

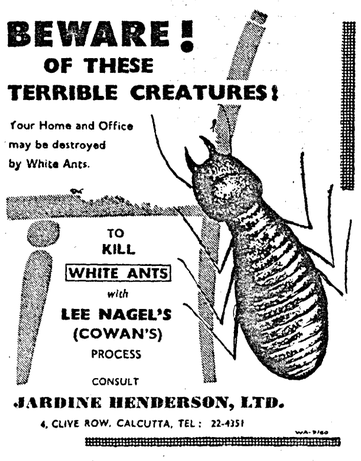
PRICE, QUALITY AND DESIGN—IN THAT ORDER OF importance—are the points on which the products of India's small-scale industries fail rather badly. Of course, the marketing organisations are lacking too, but I believe they would not be too difficult to develop, provided the industries could assure a steady supply of the types of goods consumers really want. The special emporia which have been set up, in New Delhi and Bombay especially, for displaying the products of cottage industries have done excellent work, even if they have to be liberally subsidised. Perhaps, in time, the industries concerned could become self-supporting, and that indeed should be the aim. But I do not think that on the question of designs at least, official assistance is likely to be of much value for the time being. It is not that I consider bureaucracy inherently removed from good aesthetic or commercial judgment; as a class, it probably is, although from a recent issue of the official bulletin, *Design for Industry*, I see that some rather attractive samples of tiffin carriers, electric kettles and coffee sets have been prepared under Government auspices. No, my view rather is that the concentration should first be on quality—on ensuring that the smaller industries use the right raw materials and processes, and then check the reliability of their products by the strictest standards. I was told on a recent visit to New Delhi that good work in this direction is already being done among the weavers of the excellent carpets which come from Kashmir nowadays; and the Srinagar craftsmen have, in fact, just made a clean sweep of the prizes for carpets in the National Design competition. Perhaps the official experts who look after handloom cloth, or pottery, could with advantage be a little more conscientious about the quality as they may be about the designs of the products I have a suspicion that the smaller industries, with their easier access to traditional craftsmanship, can compete strongly with the bigger ones on aesthetic grounds—a point on which most of the latter are singularly unimaginative. But, as an occasional buyer, I am still interested in the plain-looking flower vase I have which has lasted a few years, rather than in the colourful one I had whose bottom dropped out no sooner than the water was poured in.

A LONDON LIBRARY, I NOTICE, HAS HAD TO AUCTION the manuscripts of E. M. Forster's *A Passage to India* and of T. E. Lawrence's *Seven Pillars of Wisdom* to meet the tax obligations imposed by an unimaginative and heavy-handed bureaucracy. I am indeed sorry that a public library should have to lose such valuable possessions; but the point which intrigued me most is that the very handsome price of £6,500 should have been paid by a New York bookseller for Forster's manuscript after strongly competitive bidding from one of his rivals in the transatlantic book trade. I am aware of Forster's great popularity in both Britain and India, where his writings are admired not only for their elegance and wit, but also for their warm humanity; I did not know, however, that in the United States too he could be as sincerely appreciated, since some of the subjects of his best works, such as *A Passage to India*, are a little remote from American experience. When I read this particular book some years ago, I was convinced that even if it was likely to become dated in a superficial sense with the passing of the British *raj*, it would easily qualify as one of the classics of our time. Nothing that has happened since then suggests that the opinion need be revised. The adaptation of the work for the stage, made by Santha Rama Rau and presented in London a few weeks ago, was, I gather, a remarkable success. And indeed I am not surprised; for, after making allowance for Miss Rama Rau's skill and the Briton's capacity to enjoy jokes made at his expense, *A Passage to India* has intrinsic qualities which lend themselves well to effective dramatisation. The portrayal of characters is remarkably neat, and Forster's insight into human nature truly profound; the rôle of the Nawab Bahadur, in particular, is something which it would interest me greatly to see played on the stage. The enterprise of the English theatre seems to be on the decline in Calcutta, but I sincerely hope that some of our local dramatic societies will consider presenting *A Passage to India* as a variation from the normal run of tested drawing-room comedies.

THE NEWS THAT AN ORGANISATION CALLED THE Overseas Development Institute is to be formed in Britain for studying the problems of the "developing" territories of Asia and Africa is to be welcomed, even if it merely seems to add another high-sounding name to the already lengthy list of bodies which are operating in this field. The difference between the Overseas Development Institute and the others is that the latter are very largely academic institutions, whereas there is a strong business and industrial flavour about the new venture, in whose inauguration Sir Leslie Rowan, formerly of the Treasury and now of Vickers, is playing a leading rôle. The more that can be known about the needs and achievements of the "developing" countries (of which India is the outstanding example in the free world), the better it will be.

THE DITCHER





SPECIAL CONCESSION FOR STUDENTS!

- 50% discount on the adult's fare—both one-way and return—for those up to 11 years of age
- 25% discount on one-way as well as return trip fare for those between 12 and 25 years
- Concession available for travel between India and any point in Europe and Asia and vice versa
- Individual attention every mile of the way

A wonderful opportunity for students going abroad for study purpose or coming to India during school vacation!

THE METAL BOX COMPANY OF INDIA LIMITED

CHAIRMAN, MR. K. C. MAHINDRA'S STATEMENT

The Twentyseventh Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday, the 20th July, 1960 at 59C, Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. K. C. Mahindra, which has already been circulated to members.

Sales

Once again it is my pleasant privilege to review a successful year with sales at Rs. 830 lakhs, 19% over last year's. This increase was achieved notwithstanding unexpectedly poor offtake by the new fish canning and milk processing industries; it is substantially due to your Company's success in enlarging exports and sales of non-tinplate products, namely plastics, industrial components and machinery made at the newly constituted Calcutta No. 2 Factory. The improved exports I anticipated last year have been realised: we registered a sevenfold increase. We sought markets far and wide: during the year we exported goods to Ceylon, Burma, Thailand, Iran, Hongkong, East Africa, Pakistan, Malaya, Italy, the Fiji Islands and Aden, with particular emphasis on the first four. Having established ourselves in these export markets, we can with confidence look forward to a further expansion this year, but for achieving this it is vital that the concessions on tinplate prices applicable last year for export purposes—but reduced progressively since December 1959—should be restored to their previous level.

The new excises on tinplate and aluminium were not imposed until March and have had no effect on the year's operations. But in view of the success I reported to you last year in effecting, in the face of rising costs, price reductions following greater operational efficiency, these imposts are most disappointing. Faced with the task of bridging a large gap between expenditure and revenue, and in pursuance of a policy of broadening the base of indirect taxation, the Finance Minister in his latest budget made use of the fact that there is scarcely any income group in urban India which does not purchase packaged goods; these heavy excises, added to the already abnormally high prices charged for tinplate and aluminium, will bear down upon poor and rich alike. However simple they may be as a device for collecting taxes, these excises have a damaging social side effect with repercussions on the nation's health. This step must adversely affect the province of the Health Ministry since the most effective single remedy for the evil of food adulteration and the trade in spurious goods is pilferproof consumer packaging. Through its own Research Division, its Technical Development Section and its Technical Consultants overseas, your Company has played a leading part in developing the mass production and sales at economic rates of tamperproof containers which now constitute the major part of its business. The result: instead of being sold loose in unhygienic bulk containers which are a standing temptation to adulteration, an increasing volume of goods is being packed in factory-sealed consumer units. These branded consumer packages—containing from a few grams to a few kilos—may be Notampa-sealed Rigid Tubes, Pockets made from heat-sealing aluminium foil laminate, Bottles and Cans sealed with R. S. Closures, Open Top Cans, Diaphragm Cans, Scored Cans or Cans fitted with Capsule Overseals. Surely any Government which has declared its intention of beating the problem of food adulteration should encourage the use of these packages.

What we find happening in reality is the imposition of a heavy excise on two of our essential raw materials for producing tamperproof packages. With the latest impositions, for example, tinplate will bear some 33⅓% in the form of excise, sales tax and the levy for the Steel Equalisation Fund. Likewise aluminium will now cost your Company—and ultimately the public—almost twice as much as it does manufacturers in the U.S.A. and U.K. Particularly affected by this increase will be the R. S. Closure which has been accepted in the last six years as the most efficient seal in preventing adulteration and substitution in the ethical drug, fruit drinks, and other beverages trades.

It may be argued that the excise will not affect the current year's sales, and that there is no harm introducing deterrents against the use of materials in which the country is not yet self-sufficient. No doubt in short-term no damage may be done but the long-term implications are clear: self-sufficiency is in sight both in respect of tinplate and aluminium and there is a simple choice on the one hand between condoning adulteration and, on the other, of encouraging the use of packages which protect their contents from adulteration. By making the materials from which they are produced freely available at the lowest possible prices, much food adulteration could be prevented and the maximum use could be made of the country's installed capacity to protect consumer goods. My hope is that there will be some rethinking in high places and that these discouragements to sound packaging will either be removed altogether or substantially reduced.

Raw Materials

At the beginning of the year under review stocks of tinplate were so low that it was not possible to meet adequately the normal demands placed on us by our customers and, to keep packing industries supplied as far as possible, uneconomical sizes of plate had to be used. The position had an adverse effect on the efficiency of our operations.

It was indeed fortunate that indigenous supplies were well maintained. Without these supplies the delayed arrivals of imported materials would have had serious repercussions on our production.

Towards the second half of the year the stock levels had improved but the forward position was still a matter of grave concern. Past experience has shown that the availability of tinplate both at home and abroad can change at very short notice. It is therefore essential that we be permitted a stock level which will cover such vagaries.

Furthermore, because of the length of the order books of foreign producers, it is essential in today's conditions that licences are granted for adequate quantities well in advance.

Having regard to the relatively high capital-output ratio of secondary steel products, it is to be hoped that Government will make available as quickly as possible within the country a capacity of at least 250,000 tons of tinplate per annum. If this is not achieved over the next five years the development of packaging will be held back.

The position in respect of supplies of aluminium has also presented difficulties. It was not so many years ago that your Company was asked to make an all out effort to help develop the use of aluminium to provide an outlet for the increased production of aluminium envisaged at that time. Your Company made the effort and its consumption of aluminium increased from 327 tons in 1956/57 to 827 tons in 1959/60. It is hoped the new units licensed for the manufacture of primary aluminium will soon come into production.

As a result of the efforts of the Company's Research Division, more and more ancillary materials are being developed from indigenous sources and the quality of these products is showing a marked improvement. However, although work is in hand on new formulæ, the supply position needs constant watching as a number of these materials are still dependent on a comparatively small percentage of imported constituents. As you can imagine this will remain a frustrating experience for all concerned until a more liberal attitude is possible towards the licensing of such materials.

As in the past the full resources of your Company will be concentrated on obtaining the desired materials to maintain its output but in the last analysis its success will depend upon the support received from the Government.

Developments

I would again like to comment on the new Calcutta No. 1 Factory and I am pleased to report that the improvement in the operational efficiency mentioned last year resulting from the new premises has continued proving beyond all doubt the advisability of building a new factory which allowed of adequate space for well laid out equipment and a well designed flow from raw materials to finished products.

At the rehabilitated old factory, re-organised as Calcutta No. 2, the expanded production of plastics envisaged there, embracing injection moulding, polyethylene extrusion, printing and bag-making, was implemented. I am pleased to report that the establishment of these processes was significantly devoid of the teething troubles normally expected with new projects which reflects well on those responsible.

The Machinery Building Section of the Calcutta No. 2 Factory has been expanded and now produces for our customers an increased range of closing and ancillary equipment. In addition, it has undertaken the manufacture of individual production machines to help towards the conserving of foreign exchange that would otherwise be required to import the equipment. To the same end it is undertaking the manufacture of spare parts. Development in these directions must be dependent on the availability of adequate machine tools. If these are supplied, there is the skill and knowledge present to make great progress.

Your Company's efforts to provide Industrial Components for many of the new products which are now being manufactured in India continue and the Company's range of these products has widened considerably. It produces many such components which hitherto were imported from overseas.

During the year the Company's Technical Development Section was transferred from its existing premises to the Calcutta No. 2 Factory to provide space for the expansion of the Company's Research Division. This expansion was necessary to progress the development of indigenous raw materials and to increase the facilities to meet the manifold packaging problems encountered by our customers

The factory at Faridabad, New Delhi, has been completed and the transfer of equipment from the old premises at Azadpur will be effected shortly. Delay in moving was caused by the shortage of power at Faridabad and even now it can only be made available during restricted hours. It is hoped that this position will improve during the current year with the increase in power supply planned by Government.

Rights Issue

As forecast in my last review, the rights issue at par in the ratio of two new shares for every five shares held was made in December, 1959. The money so raised has already been fully utilised.

It seems to us that if a rights issue is made at an attractive price, extra care should be taken to ensure that as far as possible no shareholder loses by his failure to take up the shares to which he is entitled. In our case only 656 shares were not taken up by the shareholders entitled to them. The Directors decided to allot these to a Board of Trustees who promptly sold the shares at market prices. The profit on sale was then paid to the shareholders originally entitled to the rights shares. By this means the best interest of all our shareholders was safeguarded.

Industrial Relations

In the present stage of development it would be most unusual if I had nothing to report in that most important field of Employee Relations. There has been a lot of activity. In the main the good relationship normally found in the Company between Management and Employees has continued and almost without exception any dispute that has arisen has been settled on a bi-partite basis. The negotiations on this basis show an awareness on the part both of Management and Employees that there must be "give and take". I hope that the Employees are as proud of their Company as the Company is of the Employees.

The apparently inevitable rise in the cost of living led, during the year, to negotiations in respect of Dearness Allowance, apart from which, in certain cases, there has been a revision of grading schemes. In nearly all cases agreement was reached on a basis of understanding and friendliness to the mutual benefit of all concerned.

Last year it was reported that a revised production bonus had been introduced in Bombay. This has been extended to the other units in the Company with a substantial increase in productivity and a comparable increase in earnings.

The Directors' offer to increase the level of contributions to the Provident Fund from 6¼% to 8⅓% was much appreciated by the Employees of the Company.

The only tri-partite negotiations have been in respect of the hourly rated Employees of the Madras Branch. Their demands are still under negotiation on a tri-partite basis but it is to be hoped that ultimate agreement will be reached without recourse to the time consuming processes of the Industrial Courts.

In the field of training there has been considerable development and as forecast in last year's review, the training staff of the Company has been substantially reinforced. Apart from the training organised within the Company, the Company has participated actively in all available spheres of external training. Only recently the second course in the Primary Centre established under the Workers' Education Scheme sponsored by the Government was inaugurated in Calcutta at the Company's No. 1 Factory there.

The Company again offered facilities for parties of Employees to visit projects being developed under the Five-Year Plans which were attended with continuing enthusiasm.

Staff

In times of rapid economic expansion a multiplicity of problems in running a business is to be expected, problems which seem to be inevitable and of a nature difficult to forecast. The Officers and Staff responded once again admirably to those which had to be faced during the year and I have ever growing confidence in the ability of our Officers and Staff to deal satisfactorily with these problems as and when they arise.

We continue to receive the benefit of overseas training in the U.K. with the Company's Associates there. Within India we are participating more and more in Management and Technical courses being organised throughout the country and through facilities provided by the National Productivity Council.

I would also like to make reference to successful efforts to promote social and sports activities within the Company, the importance of which should not be overlooked as a valuable contribution to the consolidation of a fine team spirit so essential to an effective organisation.

I thank the Officers and Staff for a year of hard work and successful results.

Visits from Associates

It was with great pleasure that towards the end of the year we welcomed to India Sir Harold Roxbee Cox, Deputy Chairman of The Metal Box Company Limited, England, accompanied by Lady Roxbee Cox and also Mr. K. D. Brough, Managing Director of The Metal Box Company Overseas Limited. The purpose of their visit was, as representatives of our Technical Consultants, to see at first hand the industrial expansion so rapidly progressing in India and the developments that had taken place in your Company with a view to assessing in which directions they could make the most effective contributions.

Whereas we have had the opportunity of welcoming Mr. Brough from time to time over a considerable number of years, it was Sir Harold's first visit and as a prominent industrialist and a renowned scientist he evinced keen interest in all aspects of the Company's activities and India's progress. He has subsequently told me how impressed he was and for my part I would like to thank him for the refreshing results of his visit which helped to cement the growing mutual understanding and respect between members of your Company and those of its Associates in the U.K.

THE CALCUTTA MONEY MARKET

ADVANCES INCREASE

Wednesday, 6th July.

ADVANCES in the Calcutta money market showed a modest increase during the past week. Most of the rise was accounted for by the credit needs of the jute and engineering industries. There was a seasonal decline in the accommodation given for sugar, while advances to cotton mills were virtually unchanged. In the interbank market, conditions were still tight and the call rate remained at 3⅜ percent.

The exchange market was quiet, with not many bills passing, most of those seen being on account of gunny shipments. Remittance was small. Sterling strengthened considerably against most currencies.

BULLION WAS STEADY DURING THE PAST WEEK. Silver rose from the previous week's level of Rs. 215 to Rs. 217, quoted today for ready delivery. The rate for forward delivery was Rs. 217.37. The London and New York prices were shown at 79d and 91.375 cents.

Gold was steady in sympathy with silver. The price increased from Rs. 129.50 to Rs. 131. The sovereign at Rs. 86.25 showed a gain of 50nP.

THERE WERE DECLINES OF Rs. 9.58 CRORES TO Rs. 1,865.06 crores in the total note issue and of Rs. 1.47 crores to Rs. 1,834.52 crores in active notes, according to the return of the Reserve Bank of India for the week ended 1st July, 1960. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 10 crores to Rs. 1,476.40 crores. This was presumably done by transferring securities to the Banking Department, in which investments rose by Rs. 26.51 crores to Rs. 257.10 crores. Deposits of the Government of India fell by Rs. 7.74 crores to Rs. 54.67 crores, but other Government accounts rose by Rs. 2.43 crores to Rs. 20.79 crores. Balances of commercial banks at Rs. 115.45 crores showed a rise of Rs. 78 lakhs. Balances held abroad again fell by Rs. 88 lakhs to Rs. 13.59 crores. Other loans and advances increased from Rs. 121.56 crores to Rs. 130.06 crores, of which advances to scheduled banks against usance bills amounted to Rs. 13.10 crores (Rs. 13.54 crores). Ways and means advances were shown at Rs. 31.92 crores against Rs. 43.62 crores. Some other noteworthy changes took place on the liabilities side of the Banking Department as a result of the transfer of the Reserve Bank's profits. The National Agricultural Credit (Long-term Operations) Fund was increased by Rs. 10 crores to Rs. 40 crores and the National Agricultural Credit (Stabilisation) Fund by Rs. 1 crore to Rs. 5 crores. Other deposits were Rs. 42.14 crores higher at Rs. 133.06 crores, but other liabilities were cut by Rs. 51.88 crores to Rs. 9.45 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 24th June, 1960, shows Demand and Time liabilities at Rs. 786.81 crores (Rs. 14.90 crores on account of borrowings from banks) and Rs. 1,216.32 crores (Rs. 24.05 crores), compared with Rs. 796.81 crores (Rs. 15.02 crores) and Rs. 1,199.06 crores (Rs. 23.06 crores), respectively in the previous week. Cash has declined by Rs. 40 lakhs to Rs. 46.57 crores, while balances with the Reserve Bank have increased by Rs. 3.10 crores to Rs. 107.34 crores. There is a drop of Rs. 71 lakhs to Rs. 739.72 crores in investments. Advances and bills discounted at Rs. 1,125.86 crores show a decline of Rs. 5.96 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.7 percent and 56.2 percent, against 7.6 percent and 56.8 percent.

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—iron ore, coal, manganese ore, limestone, dolomite, refractories... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

STOCK MARKET STEADIER

GILT-EDGED RISE

London, 6th July.

MORE settled conditions have ruled on the stock market over the past week after the upset which followed the Government's measures to combat inflation, and as sterling strengthened, the market steadied. Business, however, is restricted with buyers proceeding cautiously. Already there are indications that hire-purchase restrictions are having their effect and this is particularly noticeable in the sales of motor-vehicles. The possibility of the flow of new capital issues is also a restraining influence. A feature of the sections has been the return of investors to the gilt-edged market. The higher yields are proving an attraction and prices subsequently are showing gains over a broad front. In spite of the overall subduedness in industrials, some bright spots have emerged. The most recent feature in this section is Turner and Newall, following the one-for-one free scrip issue and higher dividend forecast. With the unsettling events in Cuba, oils moved uncertain. Shell and Royal Dutch were particularly affected and their prices came back. However, at the end of the period, this section was steadier. Tins continued to move higher. Eastern advices and the rising metal price influenced this section. Rubbers and teas were mainly featureless and prices were inclined to soften. A good recovery was being staged in the gold mining section of the "house" during the early period of the week, following favourable Press comment and a more lenient view by operators of events in South Africa. However, in spite of the satisfactory June mining profit statements, prices later reacted on the absence of support. Copper shares also came back from the good levels ruling earlier in the week.

The Money Market

The credit situation in the market during the past week was dislocated by the intervention of half-year-end factors Money was acutely short on the last day of the half-year with the situation additionally affected by the weekly transfers to the Revenue Department and commercial commitments. However, following the half-year, the market went back to the easy conditions prevailing in the previous week. Money during the very difficult phases ruled at 5½ percent, but during the easy period went as low as 3 percent. A good demand was encountered from the banks for September and "hot" bills. At last Friday's tender, there was a small decline in the Treasury bill rate at £5 13s 6.14d percent following on the market paying 1d more for the bills.

Mixed Movement in Vegetable Oils

Demand for Canadian linseed for the November-December shipment position was more subdued in the vegetable oils market last week, but French buying helped to retain a steady to firm tendency for the market. On the other hand, castorseed prices eased, although demand was relatively steady. Groundnuts were mostly neglected again, and the previous week's good demand for soyabeans was not repeated. The demand for linseed oil was more active and enquiries covered periods from January up to June next year. Prices became a little firmer, but not sufficient enough to indicate a price concession in spring oilcakes, sales of which up to now have been discouraging. Castor oil for shipment continued in steady demand for early shipment at further enhanced rates.

Argentine Plan for Linseed Export Opposed

The Argentine Linseed Crushers Federation has asked the Argentine authorities to scrap plans which would allow the export of 200,000 tons of linseed. This project to open linseed exports is reported to be under consideration by the Ministry of Economy in view of the large 1959-60 crop of 825,000 tons. Crushers argue that any such move would deprive the crushing industry of raw materials.

Copper and Congo Developments

The political situation in the Congo remains an important factor in the copper market, but when all is said and done, prices on the London Metal Exchange have at no time risen really excessively since the Congo situation began increasingly to assert itself as a market influence. European consumers have for the most part pursued a policy of not rushing in to buy even when the news from the Congo has been far from reassuring. Admittedly, the price of cash copper in London advanced sharply recently, but this was because of the Liverpool dock strike and the price fell back when the strike ended. Demand for copper outside the United States has been exceedingly good and the world excess production in relation to offtake (on an yearly basis) is estimated to be under 300,000 tons. Assuming it to be in the region of 289,000 to 290,000 tons, it is approximately equivalent to the yearly output from the Congo. This poses the question of how much prices would rise in the event of any interruption in Congo supplies.

Sterling Area Reserves Rise

The sterling area's gold and currency reserves in June rose by £12 million, the Treasury has announced. This is compared with a rise of £10 million in May. Total holdings on 30th June stood at £1,033 million, against £1,021 million at end-May.

LONDON INSURANCE LETTER

AUTOMATION IN THE OFFICES

THE Prudential is the biggest insurance Company and is naturally a pioneer of office automation. The Commercial Union was the first in Britain to announce such a scheme at the beginning of May, but the Prudential was not far behind with an announcement that appeared before the end of that month. Both schemes involve a data-processing centre. The Commercial Union will use the English Electric K.D.P. 10 system to maintain, on magnetic tape, a file of some 5-million policies, to arrange renewals and new policies, and for other such daily functions. The Prudential's system will be the Ferranti Orion, dealing initially with 1¼ million ordinary life policies, likewise on magnetic tape and processed daily, but later, it may be, all the 30 million industrial life polices of this office will be filed and processed in this centre.

Such developments underline the importance of the mergers of insurance undertakings which have been a feature of the business in Britain in recent years. Lord Kindersley, Governor of Royal Exchange Assurance, emphasised in his annual statement in May the benefits of last year's merger with Atlas Assurance. He said the two organisations would "in time fit well together"; and he mentioned with particular favour Atlas's subsidiaries, the Montreal Life, "with a valuable and growing business in Canada", and the Americana, "a company with excellent prospects in Brazil". Likewise, Sir Robert Bignold, president of the Norwich Union, spoke enthusiastically of that group's acquisition of the Scottish Union, and National. He said the full benefits of the new group would take some time to achieve but economies were already being effected, in particular the merging of interests in the United States in a joint head office, while in Canada Norwich Union's chief officer had become general manager for the group. It is not yet clear how far the combined undertakings intend to integrate their organisations. The goodwill of each favours individuality; whereas efficiency is not individualistic. If competitive efficiency and traditional individuality are incompatible, individuality must, it seems, be sacrificed.

Investment of the Prudential

One has to wait until late in the year for comprehensive figures for insurance companies' finances, but individual companies provide significant information. The breakdown of investments of the biggest company is informative. At the annual general meeting of the Prudential in May, the chairman, Sir Frank Morgan, showed that this Company's new investments in 1959 totalled £104 million representing an increase of £70 million in the group's funds plus the proceeds of sales and repayments. Forty-five million pounds of the total was invested in ordinary stocks and shares, and it represented 43 percent, against 26 percent. This substantial sum represented the view that "equity investments appeared particularly attractive during the greater part of the year". Sir Frank said that the Prudential took full advantage of a situation that was very favourable to investment in 1959; but he pointed out that the substantial increase in the value of the ordinary shares did not immediately benefit policyholders and shareholders. An appreciable part of current market value, he said, reflected the expectation of increases in profits and dividends, and to that extent current values would not be confirmed unless these expected increases materialised. "It is always necessary to consider to what extent current income may be sacrificed for future growth, however bright the prospects."

The Prudential is, of course, a worldwide organisation, and it has large sums to invest abroad. For the first time in three years, Sir Frank discussed the investments of the overseas branches. In the intervening years, he said, movements in the investments of the major territories had corresponded with those in Britain; but, because of "limitations of the local markets" and "lack of an adequate range of shares available to provide a sufficient spread of risk", the proportion of local assets invested in ordinary shares does not, in any overseas territory, approach that of home life funds.

New Giant Liner

The marine insurance market is following closely the moves to replace the Cunard Steamship Company's aging *Queen*. The latest development is the report of the Chandos Committee, which recommends that the Government should lend £18 million to Cunard to help to finance a substitute for the *Queen Mary* which would cost about £30 million. Insuring such a liner would be a major operation: but the task would, of course, be widely spread. The largest marine insurance ever placed on a single hull was negotiated earlier this year for the *Oriang*, under construction in Vickers-Armstrongs' shipyard at Barrow-in-Furness. It was provisionally insured with the marine insurance companies and Lloyds for £15 million; and the final figure, which cannot be fixed until the ship has been delivered later this year, may be even higher.

Stocks and Shares

MARKET QUIETER DUE TO STRIKE THREAT FROM GOVERNMENT EMPLOYEES

NEW LOAN ANNOUNCEMENT CAUSES LITTLE REACTION IN GILT-EDGED

Wednesday Evening.

ALTHOUGH the Calcutta Stock Exchange was in fairly good form during the past week, the strike threat from Central Government employees restrained the bulls, who became more cautious. Turnover was restricted. The disappointing production figures of the Indian Iron and Steel Company for June affected the shares and the price receded from Rs. 24.40 to Rs. 24.

The highlight of the week was the announcement of two new Central Government loans for a total sum of Rs. 175 crores, a short- and a long-dated issue. The former is likely to attract support from the banks and individual investors, while the latter will suit the requirements of the L.I.C. and provident fund institutions. The terms of the new loans were in line with market expectations and hence there was no perceptible effect on the prices of existing issues. Details of the yields obtainable on the new loans and existing Government loans of almost similar maturity are given below. They clearly show that there has been no change in the yield pattern :

New Loans	Issue price	Gross running yield %	Gross redemption yield %	Redemption yield % less income tax (a)	Redemption yield % less income tax super tax (b)
	Rs.	Rs.	Rs.	Rs	Rs.
3½% Loan 1966	99.75	3.51	3.54	2.49	1.96
4 % Loan 1960	99.90	4 00	4.00	2.80	2.20
Existing Loans					
3½% Loan 1963	99.95	3.50	3.51	2.46	1.94
4 % Loan 1979	100.25	3.99	3.98	2.79	2.19

(a) Redemption yield after deducting income tax at 30nP in the rupee.

(b) Redemption yield after deducting income tax at 20nP and super tax at 25nP.

It is understood that the subscription list for the recent preference and equity issue by the Raymon Engineering Works was closed on 4th July and it was over-subscribed. The response came mainly from upcountry centres and Bombay.

In view of the fact that there were only four working days in the Calcutta Stock Exchange during the past week, there would be little point in giving a detailed account of price trends in various sections of the market. One outstanding feature was the steady rise in the price of Philips Carbon Black on frantic short-covering.

Here is a chart showing representative price movements:

	Opening 1st July	Closing 6th July
	Rs.	Rs.
Bengal Coal	334.00	332.00
Burrakur Coal	19.81	19.37

Brooke Bond Tea	17.00	16.75

Eastern Cachar Tea

The Eastern Cachar Tea Co. Ltd has incurred a loss of Rs. 17,231 for the year ended December 1959. The dividend has again been passed over. After making various adjustments, there is a debit balance of Rs. 5,83,651, which is carried forward. The crop increased from 4,913 maunds to 4,958 maunds and the average sale price from Rs 1.82 to Rs. 1.99 a lb Estimates for 1960 provide for a crop of 5,800 maunds at a cost of Rs. 7.72 lakhs. Octavius Steel and Co. Ltd resigned as managing agents of the Company with effect from 31st March, 1960.

Pathemara Tea

The Pathemara Tea Co. Ltd has made a profit of Rs. 94,143 for the year ended December 1959. The dividend has been passed over. After making various adjustments, the debit balance is reduced to Rs. 1,34,828, which is proposed to be carried forward. A crop of 6,617 maunds was manufactured, against 6,159 maunds. The average sale price was Rs. 1.97 against Rs. 1.70 a lb. Estimates for the current season have been made for a crop of 6,750 maunds to cost Rs. 9.14 lakhs. Due to the severe drought experienced earlier this season, it is unlikely that the crop originally expected will be harvested.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for June 1960 are published below, the figures for May 1960 being given in brackets.

(In tons)

Production

Pig iron	80,127 (83,903)	
Steel ingots	69,140 (71,579)	
Saleable steel :		
(a) Semis	23,795 (26,238)	53,737 (56,406)
(b) Finished	29,942 (30,168)	

Despatches

Saleable steel 53,607 (58,663)

Martin Burn Ltd, managing agents, state that the iron, and consequently ingot, production is low due to one blast furnace being off for relining.

Purtabpore Sugar

The Purtabpore Co. Ltd has earned a profit of Rs. 2.81 lakhs for the year ended October 1959. Dividends on cumulative preference shares for 1956-57 and 1957-58, subject to taxation, have been paid. Depreciation absorbs Rs. 1.35 lakhs (against

Rs. 1.44 lakhs). Development rebate reserve gets Rs. 5,400 (against Rs. 1.31 lakhs) and rehabilitation reserve Rs. 3.27 lakhs. An amount of Rs. 3,27,137, being profit on the sale of agricultural land, has been added. After transferring Rs. 1 lakh from stocks and stores reserve, Rs. 25,000 from general reserve and making other adjustments, there is a balance of Rs. 4,006, which is carried forward. The quantity of cane crushed during 1958-59 was 2,603,812 maunds, with a recovery of 9.88 percent. The crush was 2,490,615 maunds, with a recovery of 9.91 percent in the previous year.

Bombay Markets

BUSINESS REMAINS FAIRLY BRISK

SPECIAL MARGINS DEMANDED ON TWO MORE SHARES

Wednesday Evening.

FAIRLY active conditions prevailed in the Bombay stock market during the past week. Support was fully maintained in shares on the cash list but other scrip were bought selectively. In spite of the addition of two more shares to the list of those which were subject to the payment of special margin deposits at the last settlement, bullishness continued due to good corporate news. Operators ignored the threat of a strike by Central Government employees. Activity was restricted by the stringent money conditions. Attention centred on the new loans offered for public subscription by the Central Government.

Tata Steel were transacted at Rs. 158, but Indian Iron declined to Rs. 24.24 because of the lower output figures for June. Engineering shares showed mixed trends. Alcock Ashdown were freely offered at Rs. 307, but Premier Construction were taken at Rs. 356. Tata Locomotive were steady at Rs. 265, as were Larsen and Toubro at Rs. 43.50. Indian Hume Pipe were shaded at Rs. 180 and Mahindra and Mahindra were idle at Rs. 23.40. In motor shares, Premier Automobile were quoted at Rs. 163 and Hindustan Motors were steady at Rs. 20.83 on support from Lyons Range.

Cotton mill shares rose on reports of improved cloth sales. Bombay Dyeing were taken at Rs. 68.30 and Century came to hand at Rs. 518. Kohinoor were bought at Rs. 346 and Simplex were dealt in at Rs. 180. Finlay were quoted at Rs. 323 and Standard were done at Rs. 1,695. Sassoon Spinning changed hands at Rs. 70 and Central India were quoted at Rs. 112. Apollo were offered at Rs. 1.64 and India United Ordinaries came to hand at Rs. 13.52.

Sugar shares were prominent in the miscellaneous group and prices improved on prospects of increased production. Belapur were steady at Rs. 372, as were Phalton at Rs. 193. Among cement shares, Associated Cement fluctuated narrowly around Rs. 143. Digvijay were quoted at Rs. 170. Shipping shares were quiet, and Scindia Steam were available at Rs. 15.64. Great Eastern Shipping declined to Rs. 17.92. Mining shares were steady, and Shivrajpur Syndicate were bought at Rs. 72. Chemical shares were firm, and Tata Chemical were bought at Rs. 18. Indian Dyestuff were quiet on the payment of a dividend which was lower than had been expected. Poly Chem were firm at Rs. 287.50 and Alembic Chemical were bought at Rs. 268. Colour Chem improved to Rs. 475. National Rayon reacted to Rs. 550 on profit-taking, but Bombay Burmah were steady at Rs. 607. Ceat Tyre lost at Rs. 285, as did Voltas at Rs. 269. West Coast Paper retreated to Rs. 205 on pressure.

There was scattered interest in banking shares, and Bank of India were done at Rs. 96.70. Central Bank were dealt in at Rs. 46. Insurance shares were quiet, and New India Assurance declined to Rs. 62.50. Vulcan were available at Rs. 18.75.

Prices of electric supply shares improved on replacement buying. Ahmedabad Electric were quoted higher at Rs. 90 and Bombay Suburban were taken at Rs. 89.50. Tata Power were placed at Rs. 1,060.

Madras Market

INVESTMENT SUPPORT KEEPS SHARES STEADY

SUGAR ISSUES IN DEMAND

Wednesday Evening.

THE Madras stock market was steady during the past week and share prices improved on fresh investment support. The terms of the Central Government loans were interpreted bullishly because it was thought that the cash subscription would be quite small. A substantial amount was likely to be obtained in the shape of conversions. Sugar shares were supported on hopes that companies might increase their profits due to their bigger output. Tea and coffee shares were in demand and investors were not too worried about the increased land tax on plantations. Textile shares were bought selectively.

Government securities were dull in view of the new loans offered by the Central Government. Public utilities were neglected, and South Madras were sold freely at Rs. 10 on the payment of a final dividend of 4½ percent. Cochin were transacted at Rs. 10.40 and Berhampur were taken at Rs. 6.25. West Coast were done at Rs. 12.25.

In the banking group, Andhra were sold at Rs. 99.85, as were Canara Banking Corporation at Rs. 80. Indian were dealt in at Rs. 173 and Indian Overseas were indicated at Rs. 171.

Among sugar shares, Deccan were wanted at Rs. 15.50 and Andhra were bought up to Rs. 26. E.I.D. were steady at Rs. 58 and India came to hand at Rs. 12.30. Mysore were transacted at Rs. 56.80 and K.C.P. were done at Rs. 26. United Breweries were firm at Rs. 104.

Among planting shares, Blue Mountain were transacted at Rs. 4.97 and Cochin Malabar were steady at Rs. 8.80. Consolidated Coffee were bought at Rs. 26.10 and Ouchterloney were done at Rs. 5.05. Periakaramalai were quiet at Rs. 3.70 on the payment of a dividend of 13½ percent. Chembra were firm at Rs. 5.50 on the payment of a dividend of 20 percent, and the Company decided to issue bonus shares by capitalising reserves in the proportion of one share for every two held. Kailas improved to Rs. 5.65 on the payment of a dividend of 22½ percent. Balanoor were placed at Rs. 17.75 and Coffee Lands were done at Rs. 25.75. Coorg were steady at Rs. 5.80 and Devon were dealt in at Rs. 15.70. Kil. Kotagiri were bought at Rs. 5.68 and Lucky Valley were transacted at Rs. 11.85. Midland were quoted at Rs. 12.65 and Nilgiri were done at Rs. 7.50. Parkside came to hand at Rs. 27 and Peermade were bought up to Rs. 23.12. Teekoy were steady at Rs. 7.40, but Thirumbadi were sold at Rs. 1.72.

In the textile group, Lakshmi were steady at Rs. 162.50 and Madura were transacted at Rs. 32.85. Travancore Rayon were placed at Rs. 37.15. Adoni were wanted at Rs. 8.90 and Venkatesa were firm at Rs. 150 on the payment of a dividend of 30 percent. Premier came to hand at Rs. 238 on paying of a dividend of 18 percent. Buckingham improved to Rs. 206 on the payment of an interim dividend of 3½ percent, and Bangalore Woollen were done at Rs 195. Cambodia were steady at Rs. 10 and Kothari were indicated at Rs. 12.20. Mettur were taken at Rs. 428 on the payment of a dividend of 30 percent and Vasanta were done at Rs. 238.50.

Among miscellaneous shares, Aluminium Industries were quoted at Rs. 23.12, and Ashok Leyland at Rs. 9.15. India Cement were done at Rs. 6.90. Enfield were dealt in at Rs. 18.75 and F.A.C.T. changed hands at Rs. 10.50. General Papers were bought up to Rs. 13.35 and Mettur Chemical were taken up to Rs. 9.90. Standard Motor were dealt in at Rs. 16.70 and Textools were firm at Rs. 173. Tube Investment found buyers at Rs. 325 and United Electricals were taken at Rs. 9.50.

THE WEEK'S TRANSACTIONS

PROTECTION FOR THE SHEET GLASS INDUSTRY

NEED TO REDUCE PRODUCTION COSTS STRESSED

OPENING the public enquiry into the question of continuing protection to the sheet glass industry beyond 31st December, 1960, Dr. S. K. Muranjan, member of the Tariff Commission said that the history of tariff protection to the industry dates back to 1960 when, on the recommendation of the Tariff Board, the Government granted it protection up to 31st March, 1952, by converting the revenue duty of 45 percent *ad valorem* on sheet glass of all gauges into an equivalent protective duty. Under the Finance Act, 1951, a surcharge of 5 percent was levied raising the effective rate of duty to 47½ percent *ad valorem*. Subsequently, in consultation with the Tariff Commission, the period of protection was extended from time to time till 31st December, 1954. Since then there were two enquiries, one in 1954 and the other in 1957. In 1954, the Commission recommended that protection to the industry be continued for a further period of three years from 1st January, 1955, but that the rate of protective duty should be increased to 70 percent *ad valorem*. These recommendations were accepted by the Government and the enhanced rate of protective duty came into force on 4th September, 1954. The period of protection was also extended up to 31st December, 1957. The next enquiry in 1957 led to the continuance of protection to the industry up to 31st December, 1960, at the existing rate of duty, namely, 70 percent *ad valorem*.

Domestic Demand

In 1957, the Commission estimated the domestic demand for sheet glass at 55 million square feet for that year. It expressed the view that the tempo of industrial and building activities in future was likely to be maintained at the same pace as in the previous three years. It, therefore, expected that the demand during the next three years would increase at an annual rate of 5 million square feet to 60 million square feet in 1958, 65 million square feet in 1959 and 70 million square feet in 1960. During the Commission's investigations, it received diverse estimates of demand from the Development Wing and sheet glass producers. According to the Development Wing, the domestic demand for 1960 will be about 100 million square feet and that for 1962, 130 million square feet. The estimates furnished by sheet glass producers range from 60 million square feet to 118 million square feet for 1960 and from 75 million square feet to 171 million square feet for 1963. The apparent consumption of sheet glass, made up of sales of domestic sheet glass and imports, during the last three years was 58 million square feet in 1957, 74 million square feet in 1958 and 79 million square feet in 1959.

Manufacturing Units

In 1957, there were four units engaged in the manufacture of sheet glass, namely, (i) Hindusthan Pilkington Glass Works Ltd, Asansol, (ii) Seraikella Glass Works Private Ltd, Kandra, (iii) U.P. Glass Works Ltd, Bahjoi, and (iv) Indo-Asahi Glass Co. Ltd, Bhurkunda. Of these, Indo-Asahi Glass Company was a new unit floated by Asahi Glass Company of Japan after taking over the assets of Sodepur Glass Works Ltd from the Industrial Finance Corporation of India. This unit went into production in October 1957. The Commission has now been informed by the Development Wing that two new units, namely, Madras Glass Works and Indo-Belgian Glass Works Private Ltd, both of Madras, have been granted licences under the Industries (Development and Regulation) Act, 1951, for the manufacture of sheet glass. The capacities licensed to these units are stated to be 18 million square feet and 7.2 million square feet a year, respectively, although they have not yet commenced production.

Thus, there are at present the same four units as were in production in 1957. The annual capacity of these units was estimated at 106.60 million square feet at the last enquiry while the capacity now claimed by them aggregates 138.60 million square feet. The capacities of these units registered with the Development Wing, however, add up to only 106.56 million square feet. Between 1957 and 1959, there has been considerable increase in the indigenous sheet glass output. But, as in the case of capacity, production figures furnished by manufacturers and the Development Wing are at variance. According to the statistics furnished by the former, the total net production of sheet glass amounted to 56.7 million square feet in 1957, 81.7 million square feet in 1958 and 79.5 million square feet in 1959. The corresponding figures furnished by the Development Wing for these years are 54.1 million square feet, 71.9 million square feet and 84.0 million square feet.

Basic Raw Materials

The basic raw materials required for the manufacture of sheet glass are sand, soda ash, limestone and salt cake. Sand of requisite quality is reported to be available in India. Manufacturers have, however, complained that wagons are not available in time for movement of sand to their works. As for soda ash, the industry has represented to the Commission that it has been allotted light soda ash and has been asked by the Government to use it along with heavy soda ash in the manufacture of sheet glass. It has stated that on technical grounds light soda ash is unsuitable for sheet glass manufacture and has, therefore, pleaded that its entire requirements of soda ash be supplied only in the heavy variety. In this connection, it is suggested that since the domestic production of light soda ash is not adequate to meet the requirements of various consuming industries, imports of heavy soda ash should be permitted in place of light soda ash to meet the requirements of the glass industry.

Negligible Exports

Exports of indigenous sheet glass to foreign countries during the last three years have been negligible. Efforts are being made by the Export Directorate of the Central Ministry of Commerce and Industry to increase exports of sheet glass, and certain incentives have been provided by the Government for this purpose.

Future Prospects

Dr. Muranjan said that the sheet glass industry has been enjoying protection for nearly a decade. During this period, it has expanded its capacity and production as well as the range of products manufactured by it and it has plans for further expansion. The quality of domestic sheet glass has been improved. Because of heavy import restrictions, foreign competition has lost its force. But the industry has prayed for the continuance of protection for a further period of five to six years on the grounds that the costs of raw materials in India are higher than those in foreign countries; that the domestic units, being small, cannot secure economies of large-scale production; and that productivity of labour in India is comparatively low. One of the obligations on the part of a protected industry, Dr. Muranjan said, is to make efforts to reduce its cost of production and thereby afford some relief to consumers at whose expense it enjoys protection. It has been brought to the Commission's notice that during the last two or three years, certain manufacturers have, in fact, increased the selling prices of their sheet glass. The Commission would like to know from the manufacturers the factors responsible for increase in their prices, as also the steps taken by them, if any, to bring down their cost of production.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) rose by 0.6 percent to 123.5 during the week ended 18th June, 1960, compared with 122.8 for the earlier week. The index was higher by 0.9 percent and 6.4 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Higher prices of potatoes in Patna (+22%) and in Kanpur (+12%), eggs (+10%), gingelly oil (+8%), rice in Hailkandi (+7%), onions (+6%), oranges (+4%), jowar, gram, tea, black pepper, chillies, turmeric and betelnuts (+3% each), groundnut oil, coconut oil and fish (+2% each) and maize and urad (+1% each) raised the index for Food Articles by 0.7 percent to 121.4. The prices of potatoes in Mandi (−17%) and in Shillong (−12%), wheat in Djanduka (−6%), masur and bananas (−3% each), arhar, cashewnuts, mustard oil and cloves (−1% each), however, showed declines. The index for Tobacco receded by 0.7 percent to 106.9 due to a fall in the prices of raw tobacco (−1%). The index for the Fuel, Power, Light and Lubricants group stood at 118.6, against 118.5 for the previous week; the prices of castor oil (+2%) showed a rise. The prices of cottonseed (+6%), groundnuts (+3%) and copra and tanning materials (+2% each) showed advances, while mustardseed in Kanpur (−5%), lac (−3%) and raw jute (−2%) were marked down, and the index for Industrial Raw Materials rose by 0.4 percent to 139.0, compared with 138.5 (revised) for the previous week. The index for Intermediate Products increased by 0.4 percent to 127.0 due to a rise in the prices of aluminium (+8%) and zinc (+1%), although the price of lead (−3%) showed a decline. The index for Finished Products rose by 0.6 percent to 119.2, compared with 118.5 (revised) for the earlier week. Items, which showed variations during the week, were : jute manufactures (+3%), mill cloth (+1%) and bicycles and general chemicals (−1% each).

DRAFT OF THE THIRD FIVE YEAR PLAN PUBLISHED

STATE TO PLAY LEADING ROLE IN STEEL AND INDUSTRIAL MACHINERY PROGRAMMES

(FROM OUR NEW DELHI CORRESPONDENT)

THE draft of the third five year plan was published for eliciting public opinion this week. The proposals are substantially the same as reported in these columns, particularly in the issue of *Capital* of 23rd June. The following extracts from the draft highlight the main proposals :

"For raising exports substantially, it is not sufficient to have larger production. Exports depend upon how competitive Indian prices are, compared with those of other suppliers. It is vital in this context to pay adequate attention to the question of production costs. The fiscal and monetary policies to be followed have also to be designed to make it possible for Indian exports to sell abroad at competitive prices. Excise duties on internal consumption can help materially in this direction. The difficulties encountered by our exports abroad need to be studied in relation both to long-term and to short-term factors and suitable measures will have to be devised to overcome these handicaps. The scope for expanding State trading in this context should be carefully examined.

Regional Pattern of Trade

"The regional pattern of trade cannot but change as various countries begin to exploit and develop their unutilised resources. There have been considerable changes both in the structure and in the regional pattern of international trade since the end of the second World War, and new trade groupings have arisen or are being worked out. Developing countries cannot but wish that these groupings do not become restrictive. India has, in the coming years, to expand exports not only to Commonwealth countries, but to other countries as well both in the East and in the West. In recent years, India's trade relations with countries that have adopted a system of State trading have been strengthened considerably on a basis of mutual benefit, and it is expected that the arrangements which have been negotiated with them will provide scope for further expansion of trade. The possibilities of closer commercial relations with neighbouring countries in Asia and Africa as also with Latin America have also to be kept in mind while formulating commercial policies. In its immediate aspect, the problem is one of creating a larger export surplus even at the cost of domestic consumption.

Labour Policy

"The Government has assumed responsibility for prescribing minimum wage rates under the Minimum Wages Act. Apart from this, the fixing of wages has been left to the processes of collective bargaining, conciliation, arbitration and adjudication. The second plan recommended the setting up of wage boards as the most suitable method where large areas of industry are concerned. This has so far been applied to the cotton textile, cement and sugar industries and will be extended to other industries according to circumstances. The representatives of workers and employers have reaffirmed their adherence to this approach and have agreed that the unanimous recommendations of a Wage Board should be implemented fully. Some broad principles of wage determination have been laid down in the report of the Fair Wages Committee. On the basis of an agreement between the parties, the Indian Labour Conference had indicated the content of the need-based minimum wage for guidance in the settlement of wage disputes. This has been reviewed in the light of certain questions which had arisen and it has been agreed that the nutritional requirements of a working class family may be re-examined on the basis of the most authoritative scientific data on the subject. It is felt that disparities in the earnings of skilled and unskilled workers have narrowed down to a point where incentives for skills are becoming less meaningful. Among the aspects on which studies are proposed to be organised are (a) wage differentials, (b) the manner in which wages should be linked to productivity, (c) the techniques of measuring productivity, and (d) the norms on the basis of which gains in productivity should be shared. The two agricultural labour enquiries undertaken in 1950-51 and 1956-57 have thrown revealing light on the conditions of work and life of agricultural labourers. In the second enquiry, an attempt has been made to assess in broad terms the impact of development schemes undertaken during the first plan period. In order that the agricultural workers may have their due share in the benefits of economic progress, their needs and problems should receive special consideration in the course of the third plan.

Power Programme

"The third five year plan envisages an outlay of Rs. 975 crores for power, of which Rs. 925 crores will be in the public sector and Rs. 50 crores in the private sector. The approximate break-up of the outlay in the public sector is Rs. 580 crores for hydro and thermal generating schemes, Rs. 51 crores for atomic power and Rs. 24 crores for uranium mining and the fabrication and plutonium extraction plant, and Rs. 270 crores for transmission, distribution and rural electrification. The foreign exchange component of the power programme in the third plan is estimated at Rs. 270 crores.

"The third plan at present provides for the installation of 300,000 kW of nuclear power. Further proposals of the Atomic Energy Commission for the expansion of nuclear energy are under consideration. By the end of the second plan, the total number of towns and villages electrified in the country will be about 19,000, against 7,400 at the end of the first plan. The third plan provides for the electrification of further 15,000 villages and towns with an estimated outlay of Rs. 105 crores.

Industries and Minerals

"The broad distribution of the investment of Rs. 2,500 crores between different major groups of industries and minerals is envisaged as follows :

Industrial group	Investment in 1961-66 (Rs. crores)
Metallurgical and engineering industries	1,200
Chemical and allied industries (heavy chemicals, fertilisers, drugs, plastics, dyestuffs, cement, paper, etcetera)	650
Textile industries	125
Food industries	75
Minerals	405
Miscellaneous (including townships and housing colonies for Government industrial projects)	45
Total ...	2,500

"Programmes in the public sector may be broadly classified as follows : (1) projects under execution and carried over from the second plan ; (2) new projects for which external credits are already assured ; and (3) new projects which can for the present be regarded as included in the plan. Most of these have reached a fairly advanced stage of preparation, but no foreign credits have yet been arranged ; (4) other new projects on which preparatory work is less advanced and for which no foreign credits have yet been arranged. No definite decision has yet been taken about the inclusion in the plan of projects falling in this category. They will be worked out in fuller detail and may, in due course, be considered for inclusion in the plan in substitution of some projects in category (3) or even otherwise, if the necessary external and internal resources can be made available and other circumstances are favourable. (5) Projects of a contingent nature whose implementation will depend on developments which cannot at present be accurately foreseen, *e.g.*, pipelines and refineries for new reserves of mineral oil that may be proved.

"Major developments planned in industries in which the public sector plays a large rôle, namely, iron and steel, coal, industrial machinery, mineral oils and petroleum refining, iron ore and other minerals, fertilisers, basic chemicals and intermediates and essential drugs are briefly reviewed below :

Steel Expansion

"*Iron and Steel*—The development programmes outlined in this field cover the expansion of capacity for mild steel (rolled), for alloy, tool and special steels, including stainless steels, (rolled) and for pig iron for sale. The targets suggested for these basic developmental commodities take into account the requirements of growth dictated by long-term perspectives, the allowance to be made for a reasonable gestation period after the commissioning of the new plants for the achievement of output corresponding to plant capacities and the levels of demand visualised for the last year of the third plan. The requirements of finished steel and of pig iron for sale by 1965-66, are provisionally estimated at about 7.3 million tons and 1.5 million tons, respectively. As for alloy, tool and special steels, the overall demand by 1965-66 has been placed at 200,000 tons for planning the expansion programmes.

"Against the background of the above projection of demand, planning is at present proceeding in relation to a capacity target of 10.2 million tons of mild steel ingots, 1.5 million tons of pig iron for sale and 200,000 tons of alloy, tool and special steels. The target for alloy, tool and special steels is expected to be achieved up to 130,000 tons a year in the public sector and up to 70,000 tons a year in the private sector. Part of the output in the public sector (about 30,000 tons of transformer grade electrical steel sheets by 1965) is expected to be planned and produced under the expansion programme of the Rourkela steel plant while the output of the ordnance factories is expected to amount to about 50,000 tons a year. The balance of 50,000 tons within the public sector is to be planned in a new unit whose location will be decided during the current year after the receipt of the project report. The importance of this project is to be judged not by the tonnage of output, but by the production of the very high-priced products on which large-scale foreign exchange would have to be otherwise expended for meeting the domestic demands. The bulk of these requirements are of the highest priority being connected with machinery and industrial plant manufacture. The expenditure to be incurred on this new unit is tentatively estimated at about Rs. 35 crores and the foreign exchange component at about Rs. 20 crores.

Mild Steel and Saleable Pig Iron

"As for mild steel and pig iron for sale, the contribution of the private sector for the realisation of the targets is envisaged to be only marginal. The developments in the public sector included in the third plan comprise the expansion of the Bhilai, Rourkela and Durgapur steel plants and of the Mysore Iron and Steel Works and the establishment of a new steel plant in Bokaro. The nature of end-products proposed for manufacture under these schemes has kept in view the demand for different categories of mild steel by 1965-66, the facilities for specialised production as well as the surplus capacities, particularly in the finishing mills, available at the different public sector plants. The levels of developments visualised under these public sector programmes are given below :

	Target capacity Steel ingots	Free pig iron
	(million tons)	
Expansion of Bhilai ...	2.5	0.3
Durgapur ...	1.6	0.3
Rourkela ...	1.8	—
Expansion of the Bhadravati steel works ...	0.1	—
Bokaro steel plant ...	1.0	0.35

"In relation to these programmes, the overall investment requirements covering the main plants proper and ancillary facilities aggregate Rs. 571 crores according to the current estimates. The provision in the 'outlines' for these schemes is Rs. 506 crores which is expected to be supplemented by additional funds from the allocation for industrial townships separately made. Even so, there would be a marginal shortfall in relation to investment requirements mainly for ancillary facilities. If required, upward adjustments would have to be made concerning this plan provision in due course, in view of the importance of achieving the target for iron and steel.

Low-shaft Pig Iron Furnace

"A pig iron plant based on low-shaft blast furnace techniques and the use of coke from Neyveli lignite is also included in the outline as a project on which preparatory work should continue with a view to reaching decisions in due course. Inclusive of the capacity of the main producers in the private sector (3 million tons of steel ingots) and small-scale electric furnaces producing billets for re-rolling, the overall capacity expected to be installed under the iron and steel industry would correspond to 10.2 million tons of steel ingots. The finishing of these ingots provides facilities for additional production of billets at the main steel works so as to increase the overall availability of these billets from the level of 700,000 tons in 1960-61 to about 1 million tons by 1965-66.

"In view of the limitations of demand for the end-products planned for manufacture at Bhilai, namely, rails and heavy structurals, and the time-lag to be normally allowed for reaching full output, it is envisaged that the production of finished steel in 1965-66 would be about 6.9 million tons, although the ingot production might be of the order of 9.5 million tons.

Coal Targets

"*Coal*—On the basis of the target for steel, thermal power and the railways, which are major consumers of coal, the demand for this fuel by the end of the third plan is expected to be of the order of 97 million tons. A target of this magnitude will require production to be stepped up by 37 million tons over the target of 60 million tons set for the last year of the second plan. Although this target is not likely to be achieved in full by the end of the plan period, the necessary investment required for attaining production of this order will have been made by then. While in the second plan, a sizable contribution towards the additional production required could be obtained from existing workings, mostly in the private sector, the order of increase indicated in the third plan will call for the opening of a number of new mines in virgin areas, and this will entail a great deal of effort and capital investment.

"The most important objective of the coal programme in the third plan should be to ensure adequate supplies of coking coal required for the steel industry and of high grade non-coking coal required for the railways and certain other industries. The exact requirements of the steel industry, the sources of supply and the step to be taken to ensure their full availability are now being gone into by a special committee. In the meanwhile, the additional requirements of coking

coal for this industry during the third plan are estimated roughly at 11 million tons, while the additional requirements of high grade non-coking coal will be of the order of 10 million tons. Additional production of coking coal and higher grades of non-coking coal will have to come mainly from the Jharia and Raniganj coalfields which are at present wholly in the private sector. During the second plan, the private secctor was allowed to raise an additional production of 10 million tons from existing workings and immediately contiguous areas. The contribution which the private sector can be expected to make during the third plan is under examination. After a scrutiny of the expansion proposals put forward by the individual collieries in the private sector, an assessment will be made of the additional production that can be raised by them and a phased programme for achieving this production will be drawn up. For the present, it has been tentatively assumed that about 16 million tons could be raised by the private sector.

Producing More of Other Grades

"The additional production required for other grades of coal will have to come largely from outlying coalfields like Karanpura in Bihar and the coalfields in Madhya Pradesh, Orissa and Andhra Pradesh. The demand for inferior grades, which are used for brick-burning and domestic purposes, cannot be forecast with as much precision as that for the better grades which are required by the major consumers. Production of the inferior grades can, however, be stepped up comparatively cheaply and quickly as they are largely obtained from open quarries, and in their case it is transport rather than the ability to increase raisings which is likely to be the limiting factor.

"Apart from the distribution of the additional production as between the public and private sectors, which is under examination, its distribution fieldwise and gradewise has also to be gone into in detail. For the present, a provision of Rs. 138 crores has been made for the coal programme in the public sector. In addition, some provision for raising coal is included in the allocation of Rs. 200 crores for the Bokaro steel plant and its ancillary facilities.

"*Integrated Neyveli Lignite Project*—The integrated Neyveli lignite project which is under implementation envisages mining annually 3.5 million tons of lignite for thermal power generation (250 mW), fertiliser production (70,000 tons of nitrogen) and production of carbonised briquettes (380,000 tons). During the third plan, thermal power capacity is proposed to be increased to 400 mW, provision for which is made under the power sector. To meet the requirements of the expanded power plant, mine output is to be increased from 3.5 million tons to 4.8 million tons and the necessary provision has been included in the plan.

Plans for Industrial Machinery

"*Industrial machinery*—Foundry-forge capacity which is crucial for machinery projects is proposed to be established on a considerable scale in the public sector during the third plan. Capacity for 45,000 tons of steel castings, 38,000 tons of grey iron castings and about 70,000 tons of steel forgings will be created at the foundry-forge which is being set up in Ranchi. Further capacity will become available from foundries attached to to the steel plants in Durgapur, Bhilai and Rourkela, to the heavy electrical project, Bhopal, to the mining machinery project, Durgapur and to Hindustan Machine Tools, while a steel foundry is under construction at the Chittaranjan Locomotive Works. The total capacity expected to be created in the public sector under these schemes is as follows:

(Figures in tons)

	Grey iron castings	Steel castings	Steel forgings
Foundry-forge project, Ranchi (third stage)	38,000	45,000	69,700
Durgapur mining machinery plant (30,000 tons capacity for mining machinery)	11,000	6,000	7,000
Hindustan Machine Tools, Bangalore	2,500	...	...
Chittaranjan Locomotive Works (Chittaranjan)	3,000	7,000	...
Steel plants: Durgapur, Bhilai and Rourkela	75,000	15,000	...
Others (excluding foundries attached to the railway workshops)	6,000	...	...
Total	135,500	73,000	76,700

"Castings and forgings will also be required by several other machinery projects included in the third plan, but a clear picture of these requirements and the best arrangements for meeting them, namely, whether through captive foundry-forges or through independent units, or a combination of both is expected to emerge when the project reports are received.

Heavy Machinery Plant

"The heavy machinery plant, which is being set up near Ranchi will, on its expansion to 80,000 tons output a year, be able to supply the bulk of the equipment required for adding to steel-making capacity at the rate of about one million tons annually. The expanded mining machinery project at Durgapur is being designed for an annual output of 45,000 tons of equipment. The three heavy electrical equipment projects are designed to ensure from indigenous sources a wide range of electrical equipment sufficient to enable power generation to be increased at an annual rate of 2 million kW a year from 1971 onwards. They will also produce heavy motors, rectifiers and control equipment. The manufacture of high-pressure boilers for thermal power plants with an annual capacity of 19,000 tons is tied with the electrical equipment projects.

"Among other heavy engineering projects, mention may be made of the diversification at the Chittaranjan Locomotive Works which will enable the manufacture of electric locomotives to be undertaken there; the plate and vessels works intended to provide pressure vessels and allied equipment for fertilisers and chemical plants; the heavy structural shop which is planned in the first phase to produce the components of heavy structurals for use by other structural fabricators and later to be expanded to produce heavy structural fabrications and cranes; the expansion of the Hindustan Shipyard in Visakhapatnam and the construction of the second shipyard in Cochin jointly designed to step up the capacity for shipbuilding to 50,000 to 60,000 d.w.t. by the end of the third plan.

"The manufacture of optical glass is of basic importance to the instruments industry. Its manufacture is envisaged during the third plan on the basis of the know-how and experience built up by the Central Glass and Ceramic Research Institute of the Council of Scientific and Industrial Research.

"The total output of machinery in the public sector is expected in terms of value to amount to about Rs. 200 crores on the achievement of peak operation by the various projects to be constructed in the third plan period.

Private Sector Programmes

"With a view to formulating capacity and production targets for the third plan, the Planning Commission has during the past eight months had discussions with the representatives of various industries, and further discussions are scheduled to be held in the near future. The Commission has also had before it the recommendations so far made by development councils and by other agencies who have been requested to consider targets for specific industries. Discussions have also been held with the premier industrial and commercial organisations of the country like the Federation of Indian Chambers of Commerce and Industry, the Associated Chambers of Commerce and the All-India Manufacturers Organisation and representatives of the institutional financing agencies on wider issues such as the financial resources likely to be available to the private sector for investment during the third plan. The sources of supply of investible funds for financing the gross fixed assets formation in the private sector during the second plan and anticipations for the third plan are broadly given in the following table:

SOURCES OF SUPPLY OF FUNDS FOR INDUSTRIAL PROGRAMMES OF THE PRIVATE SECTOR

(Rs. crores)

	Second plan period	Third plan period
From institutional agencies	85	130
Direct loans—participation by Central and State Governments	20	10
New issues	120	200
Internal resources (net of repayment liabilities)	400	610
Direct foreign credit participation in capital	200	300
Total	825	1,250

"Exclusively of the expenditure likely to be incurred on replacement and modernisation programmes, the net investment under manufacturing industries and coal mining during the third plan period is visualised at Rs. 1,050 crores. The magnitude of the investment required for the backlog of modernisation programmes of the cotton textiles, jute textiles and sugar industry is still under examination.

Target for Motor-vehicles

"A reference must be made to the targets for motor vehicles in view of the large-scale investments involved in building up new capacity and the demand on foreign exchange for sustaining production. The targets tentatively proposed for passenger cars, commercial vehicles, jeeps, motorcycles and scooters are:

	Estimated production (1960-61)	Target for 1965-66
Passenger cars (Nos.)	20,000	30,000
Commercial vehicles (Nos.)	28,000	60,000
Jeeps and station wagons	5,500	10,000
Motor-cycles, scooters and three wheelers	16,000	48,000

"The target for commercial vehicles includes 4,000 units expected to be supplied by the ordnance establishments.

"The expansion of capacity for the production of motor-vehicles visualises co-ordinated developments by the vehicle producers and the ancillary industries broadly on the lines of the recommendations made by the *Ad Hoc* Committee on the Automobile Industry in its report submitted in March 1960. To reach the targets of production of motor-vehicles without excessive and continued strain on foreign exchange resources, it will be necessary to achieve at least 85 percent indigenous content by 1965-66, compared with less than 60 percent at the start of the third plan. Investment designed to increase the indigenous content has to take precedence over investment for establishing new units or expanding existing capacity. Priority has also to be given to the production of commercial vehicles.

Metallurgical Industries

"*Iron and Steel*—Compared with the second five year plan, the share of the main producers of iron and steel in further expansion is likely to be relatively small. The principal contribution to be made by private enterprise will be the expansion of production of scrap-based steel billets in electric furnaces and the production of pig iron in low shaft blast furnaces. The additional output to be obtained in this manner by the end of the third plan is placed at 200,000 tons of steel ingots and an equal quantity of pig iron. In the field of alloy and tool steels, the target for the private sector is visualised at 70,000 tons by 1965-66. The nature of the products to be manufactured has to be co-ordinated with the pattern of production envisaged in the new alloy, tool and special steels plant of the public sector. Early decisions in this matter are required.

"*Aluminium*—In the field of non-ferrous metals, aluminium is expected to continue to retain its dominant position in the third plan. The target of 82,500 tons by 1965-66 is expected to be achieved as a result of the following projects already recommended for implementation:

"(1) expansion of the Indian Aluminium Company's plant in Hirakud by 10,000 tons a year;

"(2) establishment of a smelter in Rihand of 20,000 tons annual capacity;

"(3) establishment of a smelter in Koyna of 20,000 tons annual capacity;

"(4) establishment of a smelter near Salem of 10,000 tons annual capacity; and

"(5) expansion of the plant of the Aluminium Corporation of India by 5,000 tons a year.

"*Zinc*—Production of zinc for the first time in India is expected to be achieved by the middle of the third plan period with the commissioning of the zinc smelter based on zinc concentrates from the Zawar mines in Rajasthan. The annual capacity of the plant will be 15,000 tons. In step with the increase in the mining of the lead-zinc ores for maintaining the zinc smelter in full operation, additional output of lead is envisaged. The zinc smelter is also being equipped to operate a by-product sulphuric acid plant based on the smelter gases which will be used for the manufacture of phosphatic fertilisers.

"*Copper*—The production of electrolytic copper will commence in the early years of the third plan with the commissioning of the unit in Ghatsila by the Indian Copper Corporation.

Fertilisers and Heavy Chemicals

"*Heavy Chemicals and Fertilisers*—Compared with the second five year plan, private enterprise is expected to play a much larger part in the production of nitrogenous fertilisers and will also, as before, be mainly responsible for the further development of phosphatic fertilisers. About 65 percent of the production of sulphuric acid is expected to be consumed by the fertiliser industry. Within the overall target of 1.5 million tons set for sulphuric acid, the share of the private sector is envisaged at between 85 percent and 90 percent.

"The additional production required in order to reach the target for caustic soda is expected to be based on both the electrolytic and the chemical processes, but a much bigger increase in the output by the chemical process is envisaged, compared with the current levels. The expansion of soda ash production is expected also to cover the production of dense soda ash. The output of this grade of soda ash, which is required almost entirely by the glass industry, is placed at about 160,000 tons.

"In fixing the target for industrial explosives, the additional demands for the large-scale mining developments envisaged in the third plan have been kept in view. The additional production is expected to be secured by the expansion of the unit near Gumia which went into production in 1959. Major developments are envisaged in the organic chemical industry based on the supplies of intermediates from the basic chemicals and intermediates plant in the public sector, namely, production of rubber chemicals, manufacture of A.S.C. and sulpha drugs from acetanilide and of phenol-formaldehyde from the supplies of phenol from the Government intermediates plant. Production of citric acid and oxalic acid is also envisaged for the first time. Large-scale expansion of acetic acid, acetone, formaldehyde and the production of organic esters required as solvents, namely, butyl acetate and phthalic esters, will further strengthen the organic chemical industry. The production of plastic monomers like vinyl chloride, styrene and of high polymers like synthetic rubber, currently under development, may also be mentioned in this connection. All these new products are expected to assist in bringing down the requirements of foreign exchange for maintenance in some of the major industries established in the postwar period.

"*Cement*—The capacity target for cement has been fixed at 15 million tons by 1965-66 and represent a 50 percent increase over the level expected to be reached by the end of the second plan. The progress of this industry as well as other established industries like paper and sugar is expected to be linked with supplies of indigenous machinery from about the middle of the third five year plan.

Increasing Newsprint Output

"*Consumer Goods Industries*—Paper, including newsprint, cotton textiles, rayon, sugar and vegetable oils are the major items for which specific targets have been proposed for the third plan. In the case of cotton textiles, the target of 5,800 million yards for the organised mills is linked with the production level of 3,500 million yards envisaged for the decentralised sector (handloom, powerloom and *khadi*). The overall target for cloth production is derived from the domestic requirements (including additions to stocks) of 8,450 million yards and an export target of 850 million yards. Under paper and paperboard, expansion of capacity of about 128 percent (from 360,000 tons to 820,000 tons) and under newsprint, a four-fold expansion have been proposed in step with the anticipated growth of demand under the third plan.

"On the basis of the foreign exchange commitments so far allowed, the rayon and staple fibre industries are expected to achieve an installed capacity of 140 million lbs by 1962-63. Expansion of these industries is envisaged up to 215 million lbs in the third plan. Considerable importance has been attached to the phasing of investments in these industries, preference being given to the expansion of wood pulp manufacture over further expansion of output of synthetic filament.

"In the case of vegetable oils, the programmes are based on stepping up the output of cottonseed oil from 37,000 tons to 100,000 tons. The success of this programme will depend upon a co-ordinated effort to absorb the cottonseed cake as animal feed and cotton linters as industrial raw material. A four-fold expansion of oil production by the solvent extraction of oilcakes to 160,000 tons is also envisaged. The possibility of further expansion of production of vegetable oils is largely dependent on the programme for the production of major oilseeds, but some increase in output may be obtainable by devoting attention to the extraction of oil from rice bran.

Engineering Industries

"Large-scale developments are proposed in this sector in view of the prospects of increased supplies of pig iron and steel, the emphasis on machinery manufacture and the scope in many instances for wide employment opportunities in relation to investments. Targets have been proposed for an extensive range of manufactured items, namely, agricultural machinery and construction equipment like tractors, diesel engines, road rollers, dumpers and shovels; power distribution and measuring equipment like transformers (below 33 kV), electric cables and wires and house service meters; rail and road transport items like locomotives, wagons, passenger coaches, commercial vehicles (buses and lorries); complete plants for the setting up of new units for the sugar, paper, cement and textile industries and certain chemical industries, steam-raising equipment (boilers) and machine tools, consumable stores like welding electrodes and durable consumer goods like passenger cars, sewing machines, bicycles and electric fans. These targets do not, however, cover all lines of expansion. The physical content of the proposed targets is explained in the case of some of the machinery programmes in the table at the foot of this page."

A Decade of Planning in India

A review of the first decade of planning in India shows that the total investment in the economy during the first two plans will come to a little over Rs. 10,000 crores, of which the outlay in the public sector will amount to about Rs. 6,560 crores.

(Rs. crores)

	First Plan 1951-56	Second Plan 1956-61 (anticipated)	Total 1951-61
Public sector outlay	1,960	4,600	6,560
Public sector investment	1,560	3,650	5,210
Private sector investment	1,800	3,100	4,900
Total investment	3,360	6,750	10,110

The increase in the production of major agricultural commodities has been as follows:

Commodity	1950-51	1960-61 (likely achievement)
Foodgrains (cereals and pulses) (million tons)	52.4	75
Oilseeds (million tons)	5.1	7.2
Sugarcane (in terms of gur (million tons)	5.6	7.2
Cotton (million bales)	2.9	5.4
Jute (million bales)	3.3	5.5

The following table gives the likely achievements in 1960-61 in the production of important producer goods:

	Unit	1950-51	1960-61 (likely production)
Finished steel	million tons	1	2.6
Aluminium	thousand tons	3.7	17
Diesel engines	thousands	5.5	33
Electric cables (A.C.S.R.) conductors	tons	1,674	18,000
Locomotives	number	3	295
Nitrogenous fertiliser (N)	thousand tons	9	210
Sulphuric acid	thousand tons	99	400
Cement	million tons	2.7	8.8
Coal	million tons	32	53
Iron ore	million tons	3	12

There has been a substantial increase in the production of consumer goods including durables such as cotton textiles. sugar, bicycles and motorcars. The manufacture of a number of new products was established in the country for the first time including industrial boilers, milling machines and other types of machine tools, industrial explosives, sulpha and antibiotic drugs, D.D.T. and newsprint. The period has also shown considerable development in village and small industries. Between 1950-51 and 1960-61, the production of handloom cloth will have increased from about 742 million yards to about 2,125 million yards. of *khadi* from over 7 million yards to about 80 million yards, and of raw silk from about 2 million lbs to about 3.7 million lbs. The production of a number of small-scale industries like builders hardware. hand tools, sewing machines, electric fans and bicycles has also registered sizeable increases. Small industries service institutes have been set up in all the States.

The installed generating capacity of power will increase from 2.3 million kW in 1950-51 to 5.8 million kW by the end of 1960-61. The number of towns and villages electrified will have increased by more than five times from 3,687 in 1950-51 to 19,000 by 1960-61.

Railways, Coal and Steel

The rehabilitation of the railways, which had suffered on account of the war and partition, was the main objective during the first plan. During the second plan, extensive development schemes have been undertaken for building basic industries like steel, coal and cement. About 1,200 miles of new railway lines are likely to be added, 1,300 miles of railway track doubled and 880 miles electrified by 1960-61. The total freight traffic originating on the railways is expected to increase by about 80 percent from 91 million tons in 1950-51 to 162 million tons at the end of the second plan. The number of locomotives will increase from 8,200 at the beginning of the second plan to 10,600 by the end, of coaches from 19.200 to 28.900, and of wagons from 199,100 to 354,100.

The mileage of surfaced roads will increase from 97,500 at the beginning of the decade, to 144,000 miles in 1960-61. The shipping tonnage will increase from 390,000 g.r.t. to 900,000 g.r.t.

The increase in employment during the second plan has not kept pace with the growth of the labour force. It was hoped that the development programmes visualised would lead to the creation of 8 million additional jobs outside agriculture. The achievement for the plan period is at present estimated at about 6.5 million new jobs.

Contemplated Changes in Company Law

The Central Government is at present examining two important changes in relation to the company law. The first is about fixing a ceiling on the incomes of company directors. With the ceiling on land holdings, there has been a persistent demand for a ceiling on urban incomes. It is perhaps to satisfy the demand that a ceiling on the remuneration of managing agents has already been placed. The next step now being discussed is a ceiling on the remuneration and commission of a whole-time director. Earlier this year, a tentative ceiling of Rs. 1,20,000 a year or Rs. 10,000 a month, all inclusive, was fixed in certain cases. As it was not a Cabinet decision, the proposed ceiling has since been changed, and new ones are being discussed. Under the law, one and the same person can be the whole-time director of at least two undertakings. Will the ceiling, when fixed, be applicable ot his total income or to his remuneration and commission from only one undertaking? All these aspects are being examined and a final decision, it is expected, will be reached shortly.

The second issue relates to public participation in State enterprises. A suggestion was made recently that the public should be invited to subscribe to a fixed proportion of the capital in a State undertaking. The first question now being discussed is whether the public participation will be in equity capital or through preference shares or debentures. The issue for determination is what should be the rate of dividends which will be predetermined in the case of preference shares and debentures. If the rate is higher than that prevailing for Government borrowing it will depress Government securities. The preference shares or debentures will not be attractive if the rate of return is lower One proposal is to offer a part of the equity capital to the public, the rate of dividends being determined by the progress of the undertaking, like any other undertaking in the private sector. The public may be attracted to buy such shares because they will be almost as good as gilt-edged securities. Another question which is being examined is whether such a scheme will attract untapped resources or will it cause a diversion of funds now available for the public and private sector. The recent experience of company flotations has shown that there is a great deal of idle money in the country seeking safe investment, and a share in the equity capital of State undertakings may not cause any diversion of funds from the traditional channels of investment.

Seven More D.L.F. Loans

The U.S. Development Loan Fund has announced the simultaneous signing of seven loan agreements totalling $89.2 million (Rs. 42.4 crores) for enterprises in India. Five loans are for power generating facilities, one is for a development bank and one is for the import of U.S.-made jeep and lorry parts. The road transport loan is for $13.1 million (Rs. 6.2 crores), which will enable private manufacturing firms in India to procure U.S.-made motor-car parts to be assembled into jeeps and lorries in India. Firms will receive licences from the Government enabling them to import components and pay U.S. suppliers with dollars provided by the Development Loan Fund. The Motor-vehicle components to be imported will consist mainly of frames, axles, transmissions, differentials and wheels. These will be combined with other components manufactured in India to produce 5,000 jeeps. 800 jeep station wagons. 800 jeep lorries. 800 Dodge one-ton lorries and 6,000 Dodge 3-ton lorries

The loans involving power generating facilities include one to the Ahmedabad Electricity Company Ltd for $3.9 million, to cover foreign exchange costs of adding 30,000 kW to its system; and another to the Barauni thermal power project for $3.8 million to add 30,000 kW generating capacity to its power plant near the Ganges river, 250 miles north west of Calcutta. (The Barauni project has also received Rs. 1.3 crores of assistance in P.L. 480 rupees).

Kerala Planters Move against Tax Measures

The United Planters Association of Southern India has made a representation to the Central Government against the Kerala Government's proposal to enhance the tax on land from Rs. 2 an acre to Rs. 10 an acre. This is to be applicable to all holdings under tea, coffee, rubber, cardamom, coconuts, arecanuts and pepper, exceeding five acres. While full clarification is awaited, it must be assumed that this applies to all land held, whether cultivated or not. The burden of this tax will vary widely according to the yield of the cultivated land, and the extent of uncultivated reserves held. The case of the Kannan Devan Hills Produce Company Ltd is cited to illustrate the point. The Company has been paying Rs. 2 an acre on some 135,000 acres of land, although the actual cultivated area is only about 25,000 acres of tea and 15,000 acres of fuel plantations. Of the remaining 95,000 acres, perhaps one third is good jungle, while the balance is poor grass-land and rock of virtually no productive value whatever. The Company has been endeavouring for some years to persuade the Government to take back some 40.000 acres of its uncultivated land, but no decision has been reached. The new tax means an increased commitment of Rs. 11 lakhs on the acreage held by the Company, and represents a burden which can only mean a contraction in its operations. The Company's profits before tax in recent years have varied between Rs. 30 lakhs and Rs. 60 lakhs, and it is obvious that in view of the exceptionally high agricultural income-tax paid by a large company under the inequitous slab system introduced by the previous Government and the requirements of finance for labour welfare measures and development, the meagre balances at present available will be still further reduced. Other plantations will be affected in greater or less degree. It is estimated that this enhanced land tax will add between 2nP–and 5nP a lb to the price of rubber according to the yield an acre and the extent of reserve land held. In the case of Kannan Devan, the increased cost of production a lb of tea will be at least 5nP.

Increasing Newsprint Output

	Standard size of plant (tons a day)	Number of plants	Value of plants excluding electricals (Rs. crores)	Indigenous content (percent)

London

POSSIBILITY OF FURTHER CREDIT SQUEEZE MEASURES DISCOUNTED

CHANCELLOR STRESSES NEED TO STABILISE COST OF LIVING

(FROM OUR LONDON CORRESPONDENT)

SUGGESTIONS that further credit squeeze measures are in prospect have been discounted in Whitehall, although Mr. Heathcoat Amory, Chancellor of the Exchequer, recently told an audience in Devon that the public would have to get used to "fairly frequent" changes in Bank rate and credit restrictions "to avoid the slumps and booms of prewar." He intended that expansion should proceed at an even and not excessive rate, keeping the cost of living stable. It is now felt that the recent official measures will achieve these ends for the time being, for it must be remembered that the 6-percent Bank rate is only gradually making itself felt in other sectors. For instance, only now have some finance houses increased interest rates on hire-purchase agreement covering new and second-hand motor-cars, while most of the commercial banks have yet to follow the example of the Midland in raising the interest rate on new personal loans from 5 percent to 6 percent.

It begins to look as if the long rise in industrial production is at last coming to an end. According to the U.K. Board of Trade's adjusted *index, industrial output in May was little different,* perhaps slightly lower, than in April. The April index was 122 and the early estimate for May is 120-121 which, like the April figure, may be revised up to 122 in due course. The average for the March-May period is 121, or 2-percent higher than in the previous three months and 9-percent higher than a year ago. The index is filled out a little by production figures for the electrical and mechanical engineering industries. Their output in April *was less than in March due to the Easter holiday,* but 6-percent more than in April last year. Taking March and April together, output increased by 13 percent, but the rise is no better than that in January and February. The interesting thing is that deliveries of engineering consumer goods (home appliances *etcetera) turned downwards in* the first quarter The hire-purchase controls imposed at the end of April and the caution they have induced among already well-stocked retailers have probably accelerated this falling trend. Demand for capital goods is still good (almost the whole of the increase in engineering output this year applies to capital goods). It is, of course, in the capital goods sector that production capacity is still available.

Balance of Payments Surprise

The U.K. balance of payments figures for the first three months are more favourable than might have been expected from the monthly trade *returns, which suggested a first-quarter trade gap* of over £150 million. The Treasury's figures show a favourable payments balance of £3 million for visible trade. There are differences of coverage, timing and definition between the two sets of figures, but the discrepancy this time is very marked. While the £3-million surplus is gratifying, too much should not be read into it. Also, although it is an improvement on the last and first quarters of 1959 (which both showed deficits of £16 million), it falls short of the £57-million surplus in the first quarter of 1958. Including the invisible trade, there was a total favourable current balance for the quarter of £46 million, compared with a deficit of £18 million for the last three months of 1959 and a surplus of £19 million in the first quarter of 1959. This includes a credit of £114 million for net invisible receipts (non-Governmental), a welcome recovery from the low figure of £60 million in the last quarter of 1959 and £88 million better than a year previously. The balance of monetary movements showed an improvement of £22 million.

Trade Trends Examined

Detailed overseas trade figures for May show that in recent months, the flagging in Britain's exports reflects a fall in deliveries to the sterling area and a below-average increase in sales to North America. Most of the 1-percent fall in the seasonally corrected export figures over the past three months arises in the food and fuel sector, with manufactured exports holding up. This suggests that the new stiffer credit measures are unlikely to have any marked short-term effect on exports. Prospects for damping import demand, whose rate of increase is confirmed to be slowing down, seem brighter. The rising import trend comes mainly from manufactured goods and partly from an above-average level of food, drink and tobacco shipments. Motor-cars, clothing and non-electric machinery featured in the import bill for manufactured goods. These imports, with those of iron and steel and non-ferrous metals, may well suffer from dearer and scarcer credit.

A *marginally less favourable overseas trade* development in May was that the terms of trade moved against Britain, the first upward movement since last October. The index rose from 88 in April to 89 in May (1954=100) reflecting unchanged import prices coupled with lower values for engineering and other manufactured exports. In spite of the rise in May in the import-export price ratio to 89, Britain's terms of trade still compare favourably with the 1958-59 average of 90 and with last year's peak of 91, last reached in October and November. Further commentary on Britain's lagging exports emerges in a Board of Trade 11-country comparison of exports of manufactured goods in the first three months of 1960. The 11 leading industrial nations showed an average 26-percent export increase, with gains of more than 50 percent by France and Italy, 30 percent by West Germany and 23 percent by Japan. Britain's increase appears at only 16.9 percent, although this figure compares favourably both with experience in recent years and with the 13.7-percent growth in exports reported by the United States for the first quarter of 1960.

The Labour Year

Although 1959 started with nearly 621,000 unemployed registered in Britain, the year was notable for its rapidly increasing industrial activity. This culminated in November with a record total working population, estimated at 24.385 million, says the Ministry of Labour's annual report, issued as a White Paper. In spite of the normal seasonal fall in November and December, the total at work was still higher at the end of the year than in any previous year. Overtime rose to a very high level and short-time working fell to one of the lowest levels ever reached. The recovery was not marked by any great surge forward in wage levels. The Ministry records a slower tempo than in previous years: the settlements raised the index of weekly wage rates by just over 1 percent, compared with 3½ percent, 5½ percent and 7¾ percent in the three preceding years. But earnings rose between October 1958 and October 1959, by 5.1 percent, a reflection of the shorter hours worked and the increased overtime payments. The picture in the areas of high unemployment remained bleak, and there was little evidence that the improved benefits and changes in the qualifying *conditions for the Ministry's scheme* to help workers to move away from areas of high unemployment had any serious impact on the problem.

Two points are made by the report. The first is that although British industry "very commonly" dealt with redundancy only when it occurred, it shows a growing tendency to plan ahead. The second is that industry is "increasingly conscious" of the need to inform and consult its workers. The Ministry also notes that in 1959, many firms tried to avoid discharging workers. They tried to retain them by forward planning of labour needs, by training those redundant for other jobs, and by a reliance on the normal process of wastage. The Ministry has also found employers seeking new management and training methods because of technological changes.

Steel Demand Rising

The U.K. Iron and Steel Board expects the demand for steel, including exports, to rise to 26 million tons this year, compared with 21 million tons in 1959. To meet the sharp increase, production will go up from about 20 million tons to 24.3 million tons. The Board predicts that steel stocks will rise by as much as 1.2 million tons this year, compared with a fall of 630,000 tons in 1959. Exports should rise by 700,000 tons to 4.4 million tons, and imports by 900,000 tons to 1.4 million tons. Giving these figures, a spokesman said that they did not include any estimate of the effect of the latest increase in Bank rate. Some of the figures might, therefore, have to be reduced.

With the possible exception of the new higher level of interest rates, the Board expects no check in 1960 to the expansion which began midway through last year. Indeed, the report emphasises the comprehensiveness of the recovery. Production, earnings and exports all rose strongly in 1959. Except for some heavy products, the industry is now working to its capacity; and in response to the recovery, capacity is being raised. By 1962, the industry should be capable of producing 29 million tons of crude steel, and by 1965 "at least" 32 million tons. The report shows that overseas trade in 1959 broke an old record. Steel imports declined to 372,000 tons and exports rose to 2.7 million tons with the result that the excess of exports over imports was the highest since the first World War. The high level of prosperity brought the industry's workers an increase in earnings of £1 8s a week at the end of 1959, compared with a year earlier. At £14 16s, average earnings were higher than ever before.

Lloyds Bank Merger Talks

Discussions are in progress for a merger of the business of Lloyds Bank branches in India, Pakistan and Burma with that of National and Grindlays. This would be effected by the issue of National and Grindlays shares to Lloyds. The principle of a merger has been approved by the directors of both banks, and the aim will be to make it effective as from 1st January next. A further statement will be issued in future. Lloyds Bank, through its shareholding and by representation on the board of National and Grindlays, will maintain its long-standing interest in the territories concerned. The scheme provides for an enlargement of this interest by Lloyds' subscription of further National and Grindlays' capital.

Brevities

British imports of grey cotton cloth have become so large that a number of interested Manchester firms have decided to form an association of importer merchants of grey cloth, to be called Greycloth Merchants Importers Association.

Mr. Neville N. Wadia, chairman of the Bombay Dyeing and Manufacturing Company, has joined the board of National and Grindlays Bank.

Mr. Lennox-Boyd, formerly Colonial Secretary, will be chairman of the Council of the Royal Commonwealth Society from next January, it was announced at the Society's annual meeting by the present chairman, Earl de La Warr

The motor-car industry exported 83,663 vehicles in May—a record and almost equal to the number (83,723) exported during the whole of 1938. More than half the motor-cars shipped abroad (35,796 out of 70,273) went to the North American mar

COMPLICATIONS IN THE CONVERSION TO THE METRIC SYSTEM

QUIETER TREND IN JUTE AND GUNNY MARKETS

IN accordance with the laws passed by the Central Government in 1958, there has been a compulsory introduction of the metric system of weights and measures in the jute trade and industry with effect from 1st July, 1960. Although the trade has known of the date of introduction for almost two years, never has it been so unprepared to meet such a situation. Almost the only body to show any real initiative in the matter has been the East India Jute and Hessian Exchange, but it too has considerable doubts on certain matters. There has been an unaccountable lack of liaison between the principal authorities concerned, and many important aspects, imperative to a smooth transition, which should have been finalised long before the date of introduction are only now coming up for discussion.

Method of Quoting

One of the main differences of opinion appears to centre on the method of quoting prices for raw jute. The pricing unit under the metric system is rupees a 100 kilograms, but the exact rupee conversion on this basis gives an unwieldy decimalisation for calculation purposes. Many advocate a rounding off of these decimals to the nearest 25nP, 50nP or 75nP. But although this may be acceptable to one party to the contract, it may not be acceptable to the other. Until a conference of all the interested parties is held, misunderstandings are bound to occur. The bale equivalents have been accepted as 60, 130, 150 or 180 kilograms, but in the case of the latter, which is the metric equivalent of a pucca bale, it is understood that the changeover will not come into force until 1st August, 1960. On enquiry, it has been ascertained that this is meant to allow balers to get rid of stocks already baled. Surely, these parties could have been advised to liquidate their stocks before 1st July or instructed to repack under the new weights after that date. What will happen if, by 1st August, existing pucca bale stocks are still unsold, as may well be the case? Is the time limit to be extended indefinitely?

Nor is the Government blameless in the matter of the changeover. Mills are concerned over the raw jute tax which is payable by the seller but is deducted from the seller's invoice and paid directly by the mills. The tax is 25nP a maund, but mills have not been advised at what rupee equivalent the Government intends to calculate, seeing that the maund equivalents for bales have been "rounded off". Another problem arises from the instruction that piecework inside the mills must be calculated on the metric system. When the conversion was first discussed some time ago, mills were assured that internal working would not be affected, and accordingly, weighing equipment, in most cases, was converted for only the import and export side. Weighment inside the mills for piecework calculations remained in pounds. This will now involve extra calculations until the small internal visible weighing scales can be converted, and it is understood that they are in short supply.

Units of Packing

In the case of finished goods, the position is more conflicting. Some attempt has been made with raw jute to follow instructions, but in jute goods the "compulsory introduction" of the metric system has not taken place. It is understood that, for the time being, they will be packed as at present and that no variations in sizes and weights have yet been decided on for the purpose of the changeover to the metric system. What amendments are visualised is not yet known, but before final adoption they must be submitted for approval by the Forward Markets Commission. Thus quotations and indications are still being given on the old system. Is the delay in this section due to the widespread belief that the metric system, as far as hessian sizes are concerned, is unworkable?

Market Trends

It is not surprising, in view of the foregoing, that there has been very little activity in the Calcutta markets during the past week. With the exception of one or two small enquiries, overseas buyers have shown no interest. Following quieter advices from the raw jute market, prices have tended to sag. The gunny statistics for June will probably play an even greater part than before in formulating market trends, and the effect on mill stocks of the voluntary sealing of looms will be carefully analysed. U.S. hessian consumption will also be under scrutiny. If this should continue at the recent high level, it may prove a strongly bullish factor and the large bull account in local markets may be maintained. If consumption should fall, however, which is normal for the time of year, those same operators may find themselves in difficulties.

In the raw jute market, interest has been confined to a few buyers. Early delivery new crop fibre still attracts attention, and the prices paid in this category, particularly for guaranteed July shipment, have borne no resemblance to market rates in general. A short time ago, offers of early delivery jute were hard to come by, but recent offers have nearly all been for quick shipment, and offers for forward shipment—even up to 15th September—have been restricted. It is reported from upcountry agencies that the demand there for July shipment jute is very heavy, and agency rates for this delivery are around Rs. 41, which is Rs. 1.50 or Rs. 2 more than Calcutta indications. Old crop jute has been completely neglected, and it appears that the mills' demand for it has been satisfied, now that early deliveries of new crop fibre seem quite favourable. Prices during the past week have eased, but sellers are reluctant to discount. The issue of quotas and licences to mills for importing an additional 100,000 bales of Pakistani cuttings, unlike last time, has met with little response. On the last occasion when licences were issued, there was a scramble to buy cuttings, and prices soared rapidly from about Rs. 95 a bale to Rs. 160. Current quotations for Pakistani N.C.'s are about Rs. 115 a bale for forward shipment, and rates have actually fallen since the licences were issued and mills took no interest.

New Crop Prospects

Reports from all areas indicate that the new crop prospects remain favourable. A few districts have experienced heavy rain and minor flooding, but on the whole conditions indicate "good growing weather". The harvesting of the lowland crop is proceeding in Assam and some Northern districts, and small deliveries are expected by the end of the month. The recent heavy rain in Calcutta has been localised. The Daissee areas have not experienced the same conditions athough light rain has been widespread. River levels continue to rise in all areas.

THE JUTE MARKETS

There was a fair amount of covering business in the futures market during the past week. Prices, as given by the East India Jute and Hessian Exchange for the period 1st July to 4th July, were as follows:

	Hessians 40in. 10oz. Nov. 1960		Sacking B Twills Nov. 1960	Raw Jute Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	48.70	44.54	122.50	86.30	32.96
Highest	49.21	45.00	123.80	89.91	33.56
Lowest	48.42	44.28	121.85	87.77	32.76
Closing	48.44	44 30	121.85	87.77	32.76

Manufactured Goods: Business during the past week was restricted to four working days due to the Bank Holiday and Muharram. The opening phase was quiet although a steadier undertone developed due to reports of business with Egypt. Other overseas buyers, however, showed no interest and opening quotations on Friday morning after the previous day's holiday were virtually unchanged. B Twills stood at Rs. 129.50 for ready shipment and Rs. 124.25 for October-December; 40in. 10oz. hessians were slightly better at Rs. 45.60 and Rs. 45.05 for the near and forward positions, respectively. During the day, prices improved partly in sympathy with jute and partly due to covering business in the near positions. Sacking advanced about Re. 1 and hessians by 25nP. Over the week-end, conditions changed again, and quieter advices caused a reaction, although there was little change in the quoted rates. Prices declined towards Monday afternoon and fell rapidly towards the close. The markets were officially closed on Tuesday.

Opening quotations on Wednesday morning were as follows:

	July	July-Sept.	Oct.-Dec.
40in. 7½oz.	33.25 (36.24)	33.40 (36.41)	33.00 (35.97)
40in. 8oz.	35.85 (38.08)	35.90 (39.13)	35.35 (38.53)
40in. 10oz.	44.90 (48.94)	45.10 (49.15)	44.10 (48.06)
B Twills	129.00	128.65	122.15
Heavy Cees (Plain)	129.50	129.25	122.25
A Twills	155.00	155.00	148.50
Liverpools	145.00	144.75	138.00
Cornsacks	134.00	134.00	125.00

Raw Jute: Interest in the fibre market was confined to new crop purchases for near delivery shipment. Old crop jute was completely neglected. Quotations in this section were given in the metric system from 1st July, and the lack of any directive about fractional differences in the conversions led to some confusion at the outset. Early in the period, two large mill groups purchased new crop jute for guaranteed July shipment, paying what were generally considered to be higher than normal prices. This set the pattern for the week's events, and sellers became keen to sell for early shipment to get the benefit of the higher price. Offers were still being made in rupees a maund, and reports of business were all on that basis. Opening quotations on 1st July were Rs. 37 a maund or Rs. 99.13 a 100 kilograms for Assam Bottoms for August-September shipment. Although business was reported below this rate for shipment up to 15th September, general quotations were virtually unchanged.

There was business in Northern Middles only at Rs. 39.50 a maund (Rs. 105.83 a 100 kilos) and Rs. 40 (Rs. 107.17) for guaranteed August shipment, and in Assam Bottoms at Rs. 39 (Rs. 104.49) for guaranteed July shipment. August-15th September shipment fetched about Rs. 36 (Rs. 96.45) and October-November shipment Rs. 35.40 (Rs. 92.43). Jungli white was reported at Rs. 33.50 (Rs. 89.75) and Rs. 34 (Rs. 91.09) for 15th August-September shipment.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a maund	Shipment
Assam	96.45	36.00	Aug.-Sept.
Northern	93.77	35.00	"
Purnea Desal	91.69	34.00	"
Daissee Selected	96.45	36.00	Sept.-Oct.
Assam Tossa	96.45	36.00	"
Mesta:			
Assam-Northern	81.72	30.50	"
Daissee	80.38	30.00	"
Desal	81.72	30.50	"
Jungli	79.04	29.50	"

Pakistani Cuttings 114.00 a bale.

THE FOREIGN JUTE MARKETS

FALL IN FIBRE PRICES EXPECTED

(FROM OUR DUNDEE CORRESPONDENT)

BUSINESS in all sections of the Dundee jute trade is confined to the purchase of imperative needs only. Buyers expect lower prices and, naturally, they are holding off in the hope of being able to buy at much less than current quotations. Already, there has been a distinct drop in prices of both old and new crop fibre, since it became evident that the crisis over a shortage of supplies was over. Raw jute prices are irregular, and there are still some sellers who are reluctant to make any offers of new crop There are others, however, who are keen on selling as far forward as September-October white jute.

For July-August shipment, new crop (and it is surprising the number of sellers there are who are willing to offer this very early jute) is obtainable at from £117 for Mill Lightnings, £112 for Mill Hearts, and £107 for Grade Hearts; for August-September at £112, £107, and £102, respectively, and for September-October at £1 less in each case, c.i.f. U.K.-Continent. Offers of Mill Firsts are now surprisingly few. Grade Tossa-2/3 is mentioned at £118 and fours at £112, c.i.f. Spinners are not showing any interest in the purchase of fibre at these rates. They are all comfortably placed with supplies in Dundee, now that fears of a late crop have vanished.

The Calcutta goods market has steadied up because of a holiday but prices generally have eased off lately. Hessians have gone down to 69s 9d for 40in. 10oz. and 62s for 7½oz., July, 70s 3d and 51s 9d August-September and 68s and 51s 3d for October-December, with B Twills at 198s, 197s 3d and 188s 9d for the respective positions of shipment, all f.o.b., Calcutta.

Although jute yarn and cloth prices in the U.K. have been reduced by about £5 a ton from 25th

June, there are a few exceptions such as J.C.C. and J.C.T. qualities. Hessian yarns are down to 18.87d a lb for 8 lbs C.H.W. cops and to 20.02d for 8lbs J.C.H. warp, with rove at £125 10s for 48 lbs and £88 for 200 lbs a ton. Cloth prices are now at 15.92d a yard for 40in. 10oz. hessians and 13.46d for 8oz.

THE PAKISTANI JUTE MARKETS

OVERSEAS BUYERS STAY OUT WHILE RATES FALL

(FROM A CORRESPONDENT)

DURING the past week, the raw jute market in East Pakistan was lifeless, with prices following a sharply downward trend. The undertone was very weak, and trading was restricted. Arrivals of loose jute from the interior were estimated at about 2,500 to 3,000 maunds a day. The quality of the fibre, it is reported, is average, and the condition is unsatisfactory. New crop arrivals were limited, being about 1,000 maunds a day. Overseas buyers have stayed out, expecting further falls in prices, and awaiting some more definite forecasts about the crop. The Dundee jute market expects a further drop in fibre when the crop in Pakistan has been harvested, but it is maintained that with a reduced world carry-over from the last season, the supply position will prevent a drastic price fall. The assumptions of fall are mainly based on the belief that the actual crop, when harvested, will be larger than the forecasts made so far. It has been commented that the Pakistan State Bank has been slow to meet buyers' wishes for lower rates, and its minimum export prices, although recently reduced by £4 a ton, are still about £8 a ton higher than the level at which some sellers are offering new crop jute. The Bank's policy is designed to maintain the prices for the remnants of the last season's crop. It has, however, persuaded buyers that if they hold off the market until the new crop arrives, they would be able to buy a good deal cheaper.

C.i.f. quotations of the old crop (a ton) for June-July shipments are as follows: Dundee firsts £170; Mill Firsts £136; Export Firsts £130; and Superior N.C.'s £77. C.i.f. quotations of the new crop (a ton) for July-August shipments are as follows: Dundee Firsts £166; Mill Firsts £132; Export Firsts £126; and Superior N.C.'s £75.

WEST EUROPEAN JUTE MILLS TO PRESS FOR CONTINUED PROTECTION

Action programmes to promote jute textile interests have been adopted by the management committee of the European Jute Association, which held a three-day conference in Gleneables, Scotland, in the last week of June. The conference was attended by representatives of 14 countries in western Europe, whose annual production of jute goods is valued at approximately £90 million. Member countries of the Association are France, West Germany, Holland, Belgium, Italy, Spain, Austria, Switzerland, Portugal, Denmark, Norway and Sweden. The representatives of the industries of the U. K. and Eire attended as observers. Mr. R. C. Carmichael (France) was re-elected president. He has led the organisation since it was formed six years ago.

The conference reaffirmed the Association's basic policy of seeking limits to the imports of jute products from low wage-cost countries in the East and State trading countries in eastern Europe, which are regarded as centres of abnormal competition. It was feared that undue imports from these areas could seriously dislocate west European jute processing centres, which would not be in the long-term interest of the world jute economy.

On European affairs, an important discussion took place on the position of jute industries against the background of the Common Market and the European Free Trade Association. It was agreed in view of the special structure of the European industry, the establishment of the two trading areas raised no significant problems, except in a few special cases which required investigation. The need for good understanding with Asian countries was stressed. The conference saw Europe, India and Pakistan as having a common interest in the promotion of jute goods in the face of competition from other fibres and materials. Of particular importance to Pakistan was the fact that western Europe purchases more than half of her exports of jute fibre. Arrangements were made at the conference for the exchange of knowledge between the European jute industries on market trends and techniques for improving customer services. Special commissions have been set up for this purpose. Steps were also taken to exchange views on technical progress, the raising of productivity and public relations activities within the various countries. The triennial congress of the Association will be held in May 1951, in Lisbon, at the invitation of the Portuguese delegation. Officials of governments and international organisations will be invited as guests.

Speaking at the close of the conference, Mr. Carmichael, said: "As a result of the good progress made at our meeting, and the spirit of co-operation shown by all member-countries, we are preparing the way for decisions at our Lisbon Congress next year which will have an important bearing on the future of the jute industry in western Europe."

Calcutta Markets

LINSEED FIRM

THE market was firm during the past week as seed supplies from upcountry centres were short. The oil market was very steady. The local buyers showed keen interest in ready and forward deliveries, but sellers were hesitant to do any business because of the uncertainty concerning seed supplies. The oilcake market showed little change. Latest quotations are as follows: Ready Rs. 25.25 a maund and September futures Rs. 25.50 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 28th June and 4th July, 1960)

Cowhides: Wet salted (Ord.) 19,800 pcs. on the basis of Rs. 7 to Rs. 13; Wet salted (Slaughtered) 18,100 pcs. on the basis of Rs. 13 to Rs. 17 and Rs. 18 to Rs. 26; Wet salted (Ord.) 9,600 pcs. on the basis of 87nP a lb

Goatskins: Wet salted (Daissee, Kustia) 57,900 pcs. on the basis of Rs. 445 to Rs. 465 and Rs. 500 to Rs 525; Wet salted (he-killed) on the basis of Rs. 5.25 and (she-killed) on the basis of Rs. 5 a piece; Assam-Dinajpur-Poona 31,900 pcs. on the basis of Rs. 380 to Rs. 410 and Rs. 400 to Rs. 425; Purneah-Kissenganj 8,500 pcs. on the basis of Rs. 460 to Rs. 485.

Bazar Stocks

(4th July, 1960)

Cowhides: Wet salted 122,500 pcs.

Goatskins: Wet salted (Daissee, Kustia, Killed) 30,000 pcs.; Assam-Dinajpur 30,260 pcs.; Muzaffer-pore-Patna-Pakur-Purneah-Kissenganj 92,500 pcs.

SHELLAC STEADY

During the week ended 4th July, the market was steady. The range of quotations was as follows:

Standard Pure Button lac	Rs. 85 buyers; 87, 88, 87 sellers.
Lemon No. 1 Shellac	Rs. 85 buyers; 88 done; 88, 90 sellers
Lemon No. 2 Shellac	Rs. 80, 83 buyers; 82, 85 sellers.
F.O. Superfine Shellac	Rs. 76 buyers; 77, 78, 77 sellers.
Standard One Shellac	Rs. 74 buyers; 75, 76, 75 sellers.
T. N. Pure Shellac	Rs. 68 buyers; 70 sellers.
Golden Kusmi Seedlac	Rs. 92 sellers.
No. 1 Kusmi Seedlac	Rs. 76, 80 sellers.
No. 2 Kusmi Seedlac	Rs. 66, 70, 68 sellers.
Golden Bysacky Seedlac	Rs. 73 buyers; 74 done and buyers; 75 sellers.
One B Seedlac	Rs. 70, 70.50 buyers; 71, 71.50 sellers.
Two B Seedlac	Rs. 61, 63, 62 buyers; 62.50, 64, 63 sellers.
Manbhum Fine Seedlac	Rs. 67, 68 buyers; 68, 70, 69 sellers.
Fine Bysacky Seedlac	Rs. 63 buyers; 64, 65 done; 65, 66 sellers.
Genuine Bysacky Seedlac	Rs. 57, 58 buyers; 59, 60 sellers.

Shipments during June were 32,820 packages.

Engineering and Transport

BHOPAL HEAVY ELECTRICAL PLANT COMMISSIONED

TWO MORE FACTORIES DURING THIRD PLAN

THE Bhopal heavy electrical project went into production on the original target date of 1st July. First of its kind in India, the factory is the biggest in Asia. Manufacturing starts with switch gear, control pannels, power transformers and capacitors of smaller sizes and progressively cover bigger ranges, as the operatives gain experience and proficiency. Traction motors for the E.M.U. stock for the railways will be turned out from April 1962. Equipment for electric locomotives and industrial motors will follow suit and hydro and thermal generators will come out a year hence. By 1967 or so, when the factory will be in the full stride, it will turn out annually hydro and thermal generating units totalling one million kW capacity, the maximum single unit being of 150,000 kW, the biggest so far designed for this country.

The factory blocks for the first phase of the project have now been completed. This consists of two factory blocks having seven and eight bays, respectively, each being 800 feet long and 60 feet wide fully equipped with cranes. A walk through these bays would cover over two miles. Foundry and pattern shops have been located away from the factory blocks. A maintenance block for repair work has also been built and a service tunnel over two miles long runs through the factory carrying electric cables, water, gas and compressed air pipes. A well-equipped laboratory for testing and research is being got ready. A modern township with all amenities has sprung up in the area with nearly 3,000 quarters which are ready. One thousand more quarters are being constructed. The training arrangements for technical personnel are comprehensive. The first batch of nearly 2,700 trainees will shortly complete their course at the Bhopal training centre. The centre with its well-equipped workshops and hostel accommodation, which have been completed, can train 3,000 persons. As many as 110 senior engineers have been trained in the U.K. at the workshops of the Associated Electrical Industries, the technical consultants for the Bhopal project. The entire training arrangements will cost about Rs. 4 crores.

Annual Output

Due to foreign exchange difficulties, the Bhopal project had to be divided into three phases; initially, only the first phase was sanctioned at an estimated cost of Rs. 28 crores. The output originally contemplated, however, was found inadequate in relation to the growing needs, so it was decided to raise the annual output to Rs. 25 crores by double shift working and marginal adjustments. The second and third phases were also sanctioned bringing the total capital commitments to Rs. 47.5 crores. Since then, the country's requirements of heavy electrical machinery for the fourth plan have been assessed at Rs. 80 crores annually for a generating capacity of 2 million kWs. So it is now proposed to expand the output to Rs. 50 crores a year, and the workshop design and equipment have been adjusted to suit the manufacture of heavier generators and transformers.

New Units

Two more factories will be installed elsewhere during the third plan period, one in collaboration with Russia and the other with Czechoslovakia. Preliminary action has been initiated and these factories will go into production in three years' time. While the Russian-aided project is to produce 750,000 kW hydro and thermal generating units and high power motors for the steel works, that which is to be set up with Czech collaboration visualises the production of thermal units of 600,000 kW capacity and about 19,000 tons of high pressure boilers. Both projects will undertake other matching equipment and will have sufficient scope for expansion.

The capital cost of the Bhopal factory for an annual output of Rs. 50 crores, including the residential colony, will be about Rs. 80 crores. Some 35,000 men will ultimately be on its pay-roll, and the population of the township is likely to exceed 100,000. There will be a four to five-fold increase in the development of electric energy in the next 15 years. While the development of electric energy will be about 2.3 million kW during the second plan, it will be about 5 million kW during the third, and about 10 million kW during the fourth plan period. The heavy electrical factory in Bhopal will, therefore, play a significant rôle in this development.

SECOND DURGAPUR OPEN-HEARTH FURNACE GOES INTO PRODUCTION

The second 200-ton basic open hearth furnace of the Durgapur steel works went into production on 30th June. Production of steel started at the works on 25th April, when the first open hearth furnace was commissioned. So far, this furnace has produced about 11,000 tons of ingot steel. The first consignment of finished steel in the form of billets left the steel works on 27th June. The Durgapur steel works which will produce one million tons of ingot steel annually will have seven 200-ton and one 100-ton open hearth furnaces. The latter will turn out special steel for the wheel and axle plant.

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1966

ISSUE PRICE Rs. 99.75 PER Rs. 100 (NOMINAL).
REPAYABLE ON 18TH JULY, 1966.

4 PER CENT. LOAN 1980

ISSUE PRICE Rs. 99.90 PER Rs. 100 (NOMINAL).
REPAYABLE ON 18TH JULY, 1980.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 175 crores (approximately). Subscriptions may be in the form of (i) cash/cheque or (ii) securities of the 2¾ per cent. Loan 1960 or 4 per cent. Loan 1960-70 or 2¼ per cent. Hyderabad Loan 1955-60, which will be accepted for conversion at the following rates:—

2¾ per cent. Loan 1960	...	Rs. 100 for Rs. 100 (Nominal)
4 per cent. Loan 1960-70	...	Rs. 100.30 for Rs. 100 (Nominal)
2¼ per cent. Hyderabad Loan 1955-60	...	Rs. 84.75 for Rs. 85.71 or O.S. Rs. 100 (Nominal)

Interest will be paid on the 2¾ per cent. Loan 1960, 4 per cent. Loan 1960-70 and 2¼ per cent. Hyderabad Loan 1955-60 tendered for conversion up to 17th July 1960 inclusive.

The new bonds and loan will bear interest from 18th July 1960. Interest will be payable half-yearly on 18th January and 18th July.

Subscription lists will open on 18th July 1960 and close on 20th July 1960 or earlier without notice.

Applications for the bonds and loan will be received at:—

(a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi.

(b) Branches of the State Bank of Hyderabad conducting Government business and those at Mancherial, Nagarjunasagar, Purli Vaijnath and Sailu;

(c) Branches of the State Bank of Mysore in the State of Mysore except at Bangalore, Mangalore and Gulbarga; and

(d) Branches of the State Bank of India at Mangalore and at other places in India, except at the places mentioned in (a), (b) and (c) above.

For full particulars apply to any of these offices or branches or treasuries.

COMPANY AND PUBLIC NOTICES

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Twenty-eighth Annual General Meeting of the Members of Jessop & Co., Ltd., will be held at the Registered Office of the Company on Friday, the 29th July, 1960 at 3 p.m. for the transaction of the following business :—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors, for the year ended 31st October, 1959.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

As a special business.

5. To appoint Joint Auditors of the Company for the year ending 31-10-60.

Explanatory Statement

A notice has been received under section 190(1) of the Companies Act, 1956 from a Member proposing that Messrs. Lodha & Co., Chartered Accountants, be appointed as Joint Auditors of the Company for the year ending 31-10-1960, with Messrs. Lovelock & Lewes.

Similar notices have also been received from some other members proposing that Messrs. G. Basu & Co., Chartered Accountants, be appointed as Joint Auditors of the Company for the year ending 31-10-1960, with Messrs. Lovelock & Lewes.

The Ordinary Share Transfer Registers of the Company will be closed from 15th July to 29th July, 1960, both days inclusive.

By Order of the Board,
A. K. THAKUR,
Acting Secretary.

63, Netaji Subhas Road,
Calcutta, 2nd July, 1960.

Note :—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Board of Management has sanctioned the payment of an interim dividend on 5% Cumulative Preference Shares for the half-year ended 30th April, 1960 subject to the deduction of Income Tax at prescribed rates in accordance with the provisions of the Finance Act 1960.

Preference Share Transfer Register will be closed from 15th July to 29th July, 1960 both days inclusive.

Dividends will be paid only to the registered Shareholders or their mandatees.

By Order of the Board,
A. K. THAKUR,
Acting Secretary.

63, Netaji Subhas Road,
Calcutta, July 2nd, 1960.

BURN & COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Sixty-sixth Ordinary General Meeting) of the Company will be held on Friday, the 29th July, 1960, at 11 a.m. at the Registered Office, 12, Mission Row, Calcutta, to transact the following business :

1. To receive and adopt the audited accounts for the year ended 30th April, 1960, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the ordinary shares. The dividend, if declared, will be paid on or after the 4th August 1960 to the Shareholders whose names are on the Company's Register on the 29th July, 1960, or to their mandatees.
3. To appoint a Director in place of the retiring Director.
4. To appoint auditors and fix their remuneration.

The Ordinary Share Register of the Company will be closed from the 21st July, 1960 to the 29th July, 1960 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
L. T. CARMICHAEL,
Managing Director.

BHARTIA ELECTRIC STEEL COMPANY LTD.

NOTICE.

NOTICE is hereby given that the Thirty-first Annual General Meeting of the Shareholders of Bhartia Electric Steel Co., Ltd. will be held on Tuesday, the 26th July, 1960 at 4 P.M. at the registered office of the Company at 4, Old Court House Street, Calcutta-1, to transact the following businesses :—

1. To receive, consider and adopt Directors' Report and the Audited Profit & Loss Account of the Company for the year ended 31st December, 1959 and the Balance Sheet as on that date and the Auditors' Report thereon.
2. To declare dividend.
3. To appoint Directors in place of Shri R. L. Bhartia and Shri P. R. Bagri, who being longest in office retire by rotation but being eligible for re-appointment, offer themselves for re-appointment.
4. To appoint Auditors for the year 1960 and to fix their remuneration.
5. To consider re-appointment of Shri R. L. Tantia who, having been appointed in the course of the year, ceases to be a Director as per Sec. 260 of the Companies Act, 1956.
6. To consider and, if thought fit, to pass with or without modification the following resolutions :—

As Special Resolutions :

(1) "Resolved that the words 'ordinary share' wherever appearing in the Memorandum, Articles of Association, Share Certificates issued by the Company or elsewhere be and are hereby substituted by the words 'equity share'."

(2) "Resolved that the name of Shri Rameshwar Lal Tantia which was omitted due to inadvertance, be inserted after the name of Shri Prem Ratna Bagri in Article 90 of the Articles of Association of the Company, as adopted by special resolution on 30th November, 1959, and it be deemed that the name of Shri R. L. Tantia was there on the date of adoption of the said Articles."

EXPLANATORY STATEMENT.

Item No. 6 (1)

The Companies Act, 1956 as stated in Section 85 thereof provides for only two kinds of share capital viz. preference share capital and equity share capital. The ordinary shares of the Company are the equity shares and it is therefore necessary to term the ordinary shares in accordance with the provisions of the Companies Act. It is proposed to replace the word 'ordinary' by the word 'equity' in the Memorandum of Association, Articles of Association of the Company and also in the Share Certificates of the Company or elsewhere wherever it appears.

Item No. 6 (2)

Shri R. L. Tantia has been appointed an additional Director of the Company with effect from 12th November, 1959. But in the Articles of Association of the Company adopted by the shareholders by a special resolution passed on the 30th November, 1959, the name of Shri Rameshwar Lal Tantia was inadvertantly omitted while printing from Article 90. It is necessary that the said printing mistake be corrected.

Directors' Interest :

The Directors of the Company have no interest in the aforesaid resolutions except as will appear from the said resolutions.

Note :—**1. The Register of Members and Share Transfer Books of the Company will be closed from 12th July to 26th July, 1960, both days inclusive.**

2. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the company.

By Order of the Board,
N. K. SARAF,
Secretary.

4, Old Court House Street,
Calcutta-1.
Dated the 21st June, 1960.

JAYBIRPARA (DOOARS) TEA COMPANY LTD.

THE Board of Directors have today decided to recommend to the forthcoming Annual General Meeting of Members a dividend in respect of the year ended 31st December, 1959, of 50nP per share on the Ordinary Shares. Tax will be deducted from these dividends before payment in accordance with the provisions of the Finance Act currently in force and the warrants for the dividends, if declared, will be despatched to shareholders on the date on which the Annual General Meeting is held

By Order of the Board,
JAYBIRPARA (DOOARS) TEA CO., LTD.,
ANDREW YULE & COMPANY LTD.,
A. S. MacLaren,
Secretary,
Managing Agents.

Calcutta, 29th June, 1960.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of "A" Second Preference shares and new Ordinary shares.

NOTICE is hereby given that the extended period for submission of coupons in respect of the "A" Second Preference shares and the new Ordinary shares in terms of the Company's Circular dated the 12th October 1959 expires on the 30th June 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite coupons, the Directors have extended the period for submission of coupons to 29th July 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 1st July 1960 upto but not later than the 29th July 1960 in respect of such coupons Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under :—

(i) For applications with coupons from resident shareholders from 16th December 1959 to the date of payment ; and

(ii) For applications with coupons in the case of non-resident shareholders from 1st June 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of "A" Second Preference shares and new Ordinary shares from the non-resident shareholders which was 30th June 1960 be extended upto 29th July 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from 1st day of April 1960 to the date of payment shall be paid to the Company's bankers.

No application in respect of coupons received from resident shareholders on and after the 16th December 1959 and from non-resident shareholders on and after the 1st June 1960 and no application in respect of right "A" Second Preference shares and new Ordinary shares received from non-resident shareholders on and after the 1st April 1960 will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 29th July 1960.

Dated at Bombay this 29th day of June 1960.

By Order of the Directors,
For and on behalf of
THE TATA IRON AND STEEL COMPANY LIMITED,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents.
By their Constituted Attorney
V. G. MOKASHI.

(b) The Dividends, if declared, will be paid on or after 2nd September, 1960, to those Shareholders so entitled whose names appear in the Company's books on the 27th August, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

HOARE MILLER & COMPANY LIMITED.

NOTICE is hereby given that the Fortieth Annual General Meeting of the Members will be held at the Registered Office of the Company, 5, Fairlie Place, Calcutta, on Friday, the 5th August 1960, at 11 a.m., for the following purposes :

1. To consider and adopt the Profit and Loss Account for the year ended 31st December 1959, together with the Balance Sheet as at that date and the Reports of the Board of Directors and of the Auditors.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 15th July to 5th August 1960, both days inclusive.

By Order of the Board,
For HOARE, MILLER & COMPANY LIMITED,
J. B. BRAID,
Managing Director.

5, Fairlie Place,
Calcutta, 21st June 1960.

NOTE :—A member entitled to attend and vote at this meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of this Company. This instrument appointing a Proxy must be deposited in the office not less than 48 hours before the time for holding the meeting.

For a nominal charge, "Capital's" Statistical Department can provide you with a certificate of share prices.

New frontiers

From the beginning of time human eyes have looked up into space and wondered, and wondering, desired to possess the moon.

Today, man has travelled far on the road of knowledge ; today he is about to inherit the moon.

We may not yet know all the details of that first flight which will send him hurtling through space. But of this we are sure, he will need Oxygen to sustain him. And of this too we are sure, that Oxygen will have helped to cut or weld his space-ship and its equipment.

STRIKES, POLITICS AND THE COST OF LIVING

RATHER less than the originally estimated two million employees of the Government of India went on strike at midnight on Monday this week without anybody being very sure what the strike was about, or whether it was really necessary. The one organisation which viewed the justification for the strike unequivocally was not the employees' Joint Council of Action which launched it, but the New China News Agency—the presumptuous loudspeaker for the butchers of Aksai Chin, Mustang and Tibet. The strike, it is reported, finally materialised because of the indecision of one man—Mr Peter Alvares, secretary to the Joint Council of Action but near-nonentity to others. Although by 4-30 p.m. on Monday afternoon, he was reported to be convinced that the strike should be called off, he failed to contact the other leaders, notably Mr S. M. Joshi and Mr Nath Pai. So he shrank from the idea of having to take sole responsibility for the decision and quietly departed for Bombay (where the other two venerables meanwhile proceeded to jail). As a result, the Government is left with the dilemma that it has promised the employees all it can, and can give no more without driving the economy to ruin. The employees are left with the dilemma that they have got almost all they might really have hoped for, but are now obliged to risk their jobs, pensions and gratuities to save the face of leading politicos who have nothing more to lose while they lie quietly enjoying Government hospitality behind bars. Worst of all, the country is left with the dilemma that it has little choice but to look on helplessly as this face-saving contest shreds the fabric of normal economic life, and as the under-current of *goonda* violence slowly but surely flows westwards from the gory plains of Assam.

The whole question of the salaries, allowances and other benefits which the employees should get has been badly handled, not only by the Government but also by the leaders of the strike. The Government set the pattern three years ago, when many of its employees, led by the posts and telegraphs unions, demanded two safeguards against the inflation then rampant. The first was that a Pay Commission be appointed to review wage and salary scales; and the second was that, before its recommendations appeared, interim relief should be given. Both demands were ignored until a strike was threatened. Thereafter, considerable quibbling over terminology followed, with the Government offering an "enquiry" and the employees demanding a "Commission" Four days before the strike was scheduled to begin, a curious compromise was reached with the Government deciding to appoint a "Commission of Enquiry". The other point of dispute concerning interim relief remained unresolved, until it was finally shelved by the Government announcing that the Commission would be free to make interim recommendations (which it did). On this basis, the strike was avoided only a few hours before it was due to begin. The main lessons which the employees and their leaders drew from this episode apparently were: (1) that demands would never be seriously considered, unless they were reinforced by the determination to launch go-slow movements, strikes or other forms of "direct action"; and (2) that not until the last minute, when the catastrophe of widespread economic dislocation looked almost certain, would the Government give in.

The events of the past few weeks have indicated that these are the two fundamental assumptions born of the 1957 experience which have guided the employees' actions in the latest dispute. They started by presenting six demands: (1) a "need-based" national minimum wage, calculated according to the principles laid down by the Fifteenth Indian Labour Conference at Rs. 125 a month; (2) linking the dearness allowance to the cost of living, as was once prescribed by the first Pay Commission and accepted by the Government; (3) a standing board, consisting of an equal number of representatives from organised labour and the ministries concerned, with a neutral chairman; (4) no curtailment of existing amenities, rights and privileges; (5) compulsory arbitration machinery and the recognition of one union in one industry; and (6) withdrawal of the provisions for summary dismissal and punishment in various ministries. Opinions varied widely as to how many of these demands were acceptable and how many not. What was certain was that not all of them were acceptable—a fact which the employees themselves came to recognise by deciding in course of time to press urgently only the first two. Of these two, even the first seems to have been shelved now in recognition of its sheer impossibility; it is being smuggled away under the comforting, but woolly and meaningless, formula that a national minimum wage of Rs. 125 cannot be given yet although it may remain a distant aim of official policy. The whole strike, therefore, now centres on the question of linking the dearness allowance to the cost of living. Mr Gulzarilal Nanda, Central Labour Minister, on Monday confirmed the Government's offer that, if the cost of living goes up by ten points over a period of 12 months, the situation will be reviewed and a neutralisation of at least 50 percent will be given. The Joint Council of Action, on the other hand, is reported to have urged that the review be made if the cost of living rises by seven points. In other words, the ridiculous situation has emerged where much of the country's economic life is suspended by a strike over three points of the cost of living index. The whole history of labour relations may not yield the example of a dispute rivalling the current one in sheer stupidity.

Yet, it would be superficial to assume that the dispute really centres on the three-point shiftiness in the cost of living index alone. Far bigger issues are at stake, and that is why the relatively firm stand the Government has adopted has won strong countrywide support that transcends criticism against weak but highly-placed quislings in the Government itself. The most important of these issues is that the course of the present strike, and the way it is handled, will have a far-reaching influence on the pattern of labour disputes, not only in the Government but also in private industry. That pattern, in turn, will have a far-reaching influence on the achievement of the country's economic ambitions, such as those outlined only eight days ago for the third five year plan. In the immediate future, the Government's first function, faced with a strike that is illegal and unwarranted, is to maintain services at as normal a level as possible. The strikers' first targets have inevitably been the railways, and the postal and telegraph services. It is here that extreme firmness will be necessary in ensuring that willing workers are not intimidated, picketing is prevented, and the tendency towards violence is checked by emergency punitive measures. Supplies of essential commodities like food, sugar, coal and petroleum are nowhere so large that transport interruptions can be contemplated with equanimity. The general public has desisted from hoarding these commodities on the scale it has been known to do in earlier emergencies; that is a measure of the co-operation it is giving, and the confidence it is placing in the Government. If the co-operation is to continue, and the confidence is to be reinforced, clear evidence must be forthcoming that the effects of the strike have not been allowed to become as adverse as they might have been. For the people, such evidence will only be found in the facts of everyday living, and, in particular, in whether the *goondaism* incipient in some parts of the country can be put down with military sternness. Assuming that this can be done, there is reason to believe that the strike leaders will resile from the perfidy of launching a strike which even they were not sure they ever wanted.

Looking further ahead, the Government will have to consider a little more seriously the question how far it can allow second-rate politicians with personal axes to grind, to head employees' unions, risk their constituents' jobs, and hold the country to ransom by disrupting its economic life. Some politicians of this kind are to be found in the Government itself; they may have to be dissuaded from disseminating fantasies about fixing the national minimum wage at Rs. 125 a month when the country's *per capita* income is well below Rs. 35 a month. The fact has to be brought home to them that wealth reproduces itself more slowly than do speeches, resolutions and conferences that spawn unsatisfiable hopes and frustrated ambitions. It is true that Government employees have suffered from inflation, but so has the rest of the country; there is no reason why the former should be cushioned against it at the expense of the others. Whatever the temporary expedients may be, in the longer run Government employees have to choose, as the rest of the country has to, between bigger earnings with fewer jobs or smaller earnings with more jobs. This is a choice which needs to be presented in concrete terms; it may prove more effective than airy talk about sacrifices for the five year plans and about the spunk of the soldiers in Ladakh, all of which means little to the man who wants the extra five rupees in his pocket to be really worth five rupees. Finally, the Government can never afford to forget the point that the current strike may have been ill-conceived, unjustified, illegal or precipitate, but at its root lies one powerful and genuine economic grievance. It is that prices have been rising, eroding the increase in money wages and accentuating the hardships of the people. Unless the rise can be stopped, the present strike, already not the first, may not be the last on this issue.

—

THE ILLS OF GENERAL INSURANCE

THE Tariff Committee of the General Insurance Council of India appears to have at last taken a firm stand against the further revision of fire premium rates. Mr. B. K. Shah, chairman, told the recent annual general meeting of the Committee in Bombay that the latest revision of fire rates, which came into effect from 1st January, 1960, is likely to affect insurers so adversely that it is unlikely the Tariff Committee will be able to undertake any further revision in the near future. Such a positive attitude should have been adopted long ago. But the Committee, for reasons of its own, could not come to a specific decision. It thus played into the hands of the Controller of Insurance, who wanted to use the Committee for reducing fire rates and thereby check offers of illegal rebates and inducements. It is well known that the Tariff Committee, in making previous revisions, has had no statistical data on which to base the correct rating. Its compilation of claims figures has been inadequate. In any case, claims statistics are only one factor in the computation of premium rates. There are various other factors, such as costs, contingency reserves and profit reserves, which have not entered into the calculations at all.

Mr. Shah pointed to a "couple of disturbing factors" which he advised insurers to keep in view while trying to improve their motor insurance business. The first is the statement attributed to Mr. B. Gopala Reddy, Central Minister for Revenue and Civil Expenditure, that the Government is examining the question of taking over third party risk insurance on motor vehicles. The third party section of the motor portfolio is unlikely to be remunerative alone. But its withdrawal would weaken Indian general insurance by reducing the scope for private companies. So it would be wrong

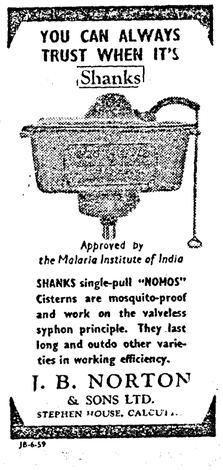
to do something which will only hit the insurance market without benefiting the Government itself. The other point Mr. Shah referred to is the reported decision of several automobile associations to start their own mutual insurance company composed of the members of the associations. He said that he did not wish to be critical, but he hoped it would be realised that automobile associations in India are being substantially subsidised by insurance interests. Any effort to form mutual funds will weaken and confuse the working of the indigenous insurance market, without any hope of profit or more economical motor insurance rates. Insurers should take all constructive steps to prevent such action.

Reviewing the condition of general insurance in India, Mr. Shah expressed concern at the closure of some Indian units. According to him, a number of measures are necessary if insurers are to reorganise and rationalise the structure of the business and place it in strong position. Firstly, the management of offices has to be placed on an economic basis. In Mr. Shah's opinion, the costs, however liberal the provisions for management expenses under Rule 17 for some offices may appear, should be around 45 percent, including commission costs. Further, the industry should be prepared to eradicate rebating by adopting unorthodox measures. No sacrifice would be too big for this purpose. Secondly, the rates for motor-car and marine insurance should be raised so that the loss ratio in these two classes of business comes to about 40 percent. Only by such an adjustment can the industry expect to work on an operating cost of about 85 percent, leaving an operating surplus of 15 percent. Thirdly, in a period of inflation and rising costs, it is imperative for various units to amalgamate or form groups, so that an average unit will have a premium income of at least Rs. 1 crore. "We are living in a Sputnik Age, which demands quick cures." In the judgment of Mr. Shah, amalgamation or group working is the one way in which many units can still save themselves. They have to act quickly, otherwise forced closure will be the inevitable result.

In this context, it is suggested that Indian general insurers might well study insurance trends in Britain if they wish to avoid the partial or complete closures which, it is reported, have affected about 40 companies in this country during the last few years. An outstanding feature of 1959 in the United Kingdom was the exceptional number of mergers among important insurance companies. No less than five such mergers took place, involving 10 big companies. The process started with the marriage between the Commercial Union and the North British and Mercantile companies. After that came the merger of Norwich Union with Scottish Union and National, of Royal Exchange with Atlas, of Eagle Star with Midland Employers Mutual and of Sun with Alliance. One of the principal reasons for the mergers of the "giants" is that large benefits can be obtained from sheer size, in view of the enormous commitments required by modern insurance. Amalgamation brings considerable economies in capital costs, overheads and general running expenses. Big groups are in a better position to take full advantage of costly automation equipment, such as electronic computers. The important point to note is that the mergers in Britain have been entirely voluntary. There is no Controller of Insurance there to take recourse to the law and force amalgamation or alliances. Indeed, no forced merger can successfully weld two companies to trade as a cohesive whole. The key to success lies in the desire to take advantage of size, of the numerous economies in trading costs and of the ability to shoulder bigger commitments.

To British insurers, the advantages of operating in large groups is probably nowhere more apparent than in the U.S. market, in which British insurance companies are deeply interested, since nearly half their total fire and accident business is derived from North America. In recent years, experience in this market has been anything but good. To effect economies and facilitate operations, several cases of consolidation and regrouping had already been noted before the recent mergers were announced. The Royal Exchange, Atlas and Sun, for example, placed their U.S. operations under a common management, and the London and Lancashire group consolidated its American subsidiaries. While the importance of the U.S. market was undoubtedly a major consideration in at least some of the recent mergers, it was by no means the only consideration. The merger of the Commercial Union and the North British and Mercantile has yielded a group with total assets of £300 million. The total assets of the Norwich Union-Scottish Union and National group are about £230 million, of the Eagle Star-Midland Employers' Mutual £165 million, of the Royal Exchange-Atlas £150 million, and of the Sun-Alliance £113 million. With the exception of the Norwich Union-Scottish Union and National merger, every amalgamation was effected through a share, or share-plus-cash, offer. The Norwich Union bid for the Scottish Union and National had to be in the form of a simple cash offer since the Norwich Union is a mutual society and has no shares. This merger, incidentally, had a feature probably unique in the insurance world, in that, for a very short time, two companies were making rival bids for the control of the Scottish Union and National. The other company was the Yorkshire, which quickly withdrew its offer when the Norwich Union offer was made, the directors stating that they deprecated the spread of take-over bid techniques to the insurance world and would not be a party to competition in take-over bidding.

The total assets of the general insurers in India amounted to Rs. 51.79 lakhs on 31st December, 1958, against Rs. 49.08 lakhs on 31st December, 1957. When it is remembered that these assets are spread over about 90 insurers, their financial limitations and inability to compete will be apparent. Even the L.I.C.'s subsidiaries have not been able in the four years since nationalisation to form a "giant" on the British model, although their shareholding is confined to the L.I.C alone. There is, of course, nothing new in insurance mergers but 1959 was perhaps the first occasion in the U.K. when five mergers of such magnitude took place in a single year. Coming so closely together, they tended to overshadow other important amalgamations which had taken place in recent years. Between 1954 and 1957, for example, the Guardian acquired successively the Cambrian, the Licences and General and the Caledonian; and thus grew rapidly into one of the most important insurance groups in the country. Against this, there is no visible trend in India towards such mergers. A parochial outlook and the inability to see beyond one's nose is still the feature of insurance in this country, even though companies are closing down one by one. A large number of British "smalls" work actively side by side with the "giants", which gives U.K. insurance a healthy look and avoids monopoly. India needs a number of "giants" on the British model to compete successfully in the international market, and then a number of "smalls" in the local market as a counter to monopolies and cartels.



COMMUNITY PROJECTS REVIEWED

GENERALLY, two views are taken about the future of the community development programme in India. One is the official line adopted by the Prime Minister downwards, which sees only the bright, although still largely theoretical, side, and which wishes to spread the programme over the whole of India as quickly as possible. (The programme started in 1952, and covered nearly one quarter of the countryside by 1956. three years later, almost half of rural India came under it, and the Government has plans to extend it to the remaining half by 1963). The other line is taken by those who think that the authorities should "hasten slowly." They are not necessarily detractors, but they do not let idealism get the better of their judgment. In the villages, things move slowly, too slowly to permit of rapid changes such as the planners often visualise. So the cautious suggest consolidation before expansion. This was the suggestion of the U.N. team which examined the progress of the programme a couple of years ago.

The seventh evaluation report of the Planning Commission's Programme Evaluation Organisation has now reached conclusions which more or less point to the same course. The P.E.O. report is more comprehensive than any of its predecessors, as the enquiry has been more thorough. Apart from the usual aspects, such as agriculture, animal husbandry, organisation of supply, co-operation, village industries, health, education, social education and democratic decentralisation, there are two sets of case studies of successful *panchayats* and co-operatives and also a fragmentary study of rural unemployment. The evaluation board finds light and shade in the picture which emerges from the enquiry, but the "shades predominate and one gathers the impression of an inadequately co-ordinated endeavour, governmental rather than popular in character, and sustained more by hope than by achievement." This is a depressing conclusion, especially when it is found that the drawbacks of the movement arise more from the incompetence or indifference of the officials, whose number keeps increasing, rather than from the inadequate participation of the village community, for whose benefit the programme has been launched. In fact, the case studies of the *panchayats* show that their contribution to the creation of new assets for the villages, such as roads, schools and wells, is substantial. But where such crucial things as agriculture and education, including social education, are concerned, it is not the *panchayats*, nor the co-operatives, nor any other popular organisation that has or can have much to do; it is the agencies of the Government which must bear the main responsibility, and their performance has by all accounts been unsatisfactory.

For example, in agriculture (on which the community development programme concentrates), the efforts to spread irrigation facilities, control diseases and pests and check soil erosion have been effective only in some cases, and poor in most. Improved cultivation practices are spreading very slowly; supplies of improved seeds and implements are generally short, and those of fertilisers irregular. Demonstration is the main extension technique, but no attempt has been made to ensure that the farmer grasps the lessons. Artificial insemination as a method of improving cattle breeds is proving popular, and one of the oldest prejudices is dying, but here again the effort is not being intensified. The progress of fodder cultivation is very unsatisfactory and the same can be said for animal husbandry as a whole. Village industries can provide relief against rural unemployment and under-employment which, as the evaluation study shows, are extensive. Here again, action has been fundamentally slack. Many of the people who have joined training courses in arts and crafts have done so only for the sake of the stipends they have got; on completion, they have not followed any craft or trade. Thus, substantial sums of money have been wasted, and until it can be ensured that the people who come for training do in fact intend taking to a trade or craft afterwards, the money will continue to be wasted.

One of the darkest spots in the picture is education. Statistically, more primary schools have been opened, the attendance has increased and there are more Harijan children now than before. But in the haste for expansion, not much attention has been paid to the quality of the education given or to the quality of those who give it. In most of the 18 blocks surveyed, the village school teachers had no training in "the philosophy and the working of the community development programme". In most of the blocks, they were indifferent, and in some they had no faith in it at all. The P.E.O. enquiry board considers it a pity, since these teachers can be "a large source of energy and enthusiasm of the community development programme." More striking is the failure in the field of social education. This aspect of the programme is concerned with developing a community sense, a corporate outlook and social consciousness, which work is done through such institutions as community centres, women's organisations and youth clubs. Yet the percentage of the villages which have these institutions is very low, and nearly 60 percent of those organised until December 1959 were either inactive or defunct. A high rate of mortality is common to all the institutions; as such, it is a matter for serious concern since the magnitude of the effort wasted is large. The adult literacy campaign is proving popular, yet there is either too little money or too few efficient workers for it.

The facts will explain why the progress of the community development programme is slow in spite of Mr. Nehru's personal interest, and the efforts of the Central Minister. The State Governments are primarily responsible for carrying out the programme and the Centre appears to have no direct administrative responsibility. Not all the former are keen, and some are distinctly half-hearted. Most of the officials are perhaps as ignorant of, or indifferent to, "the philosophy and the working of the community development programme" as the village people are, and the former's activities obviously do not inspire much confidence. Of the many explanations which have been offered about the "generally unfavourable attitudes and reactions of the people," the one which pinpoints the bureaucratic approach as the most important cause is perhaps nearest the truth. In the course of its evaluation, the P.E.O. board found that the majority of the villagers do not consider community development as their own programme; rather, they look on it as one "for the officials", who appear as the main beneficiaries of all the expenditure. The conclusion is inescapable that a programme to raise the standards of competence and integrity among the officials entrusted with the work will have to be carried out before more community development blocks are started in the remaining half of rural India by 1963. Otherwise, the shadow between the idea and the reality, to which many an expert has drawn attention, will persist. It is, of course, possible to show "substantial progress" on paper and in the Budgets of the Central and State Governments.

Current News and Comment

Jessop Disappoints

The ordinary shares of Jessop and Co. Ltd have been stagnating around Rs. 23.75 during the past few weeks, and investors' doubts will be accentuated by the latest report for the year ended October 1959. There has been little improvement in working results and an ordinary dividend of 8.58 percent, taxable, has been declared. This is covered more than five times and offers a yield of 3.6 percent at the present price. The dividend was 6 percent, tax-free, in the previous year. So shareholders do not seem to have been compensated for their past sacrifices. The disappointment will be the greater because it is difficult to foresee any improvement in dividends in the near future, considering that the ordinary share capital has been doubled during the past accounting year by the issue of rights shares in the proportion of one new share for every share held at a premium of Rs. 2 a share. If there is no increase in the dividend, the return will look poor, especially from a big engineering concern like Jessop.

The Company's profit has amounted to Rs. 52.17 lakhs, against Rs. 52.83 lakhs in the previous year. Sales are fractionally higher at Rs. 6.59 crores. Depreciation is allocated Rs. 13.05 lakhs (against Rs. 10.89 lakhs), taxation Rs. 22.68 lakhs (against Rs. 23.10 lakhs) and development rebate reserve Rs. 3.62 lakhs (against Rs. 3.55 lakhs). The carry-forward is Rs. 25,87,602, compared with Rs. 26.18 lakhs brought in. The new coach works has begun to function and three electrical multiple coach units were delivered to the railways by the end of October 1959. Another 14 units have been completed and delivered since then. On an average, 24 third-class metre-gauge bogie coaches are being produced each month. The structural, mechanical and wagon works have been expanded. Efforts have been made to obtain new machinery in order to modernise the mechanical works. It is thought that as soon as the modernisation is completed, the production capacity will be improved. It is claimed that the manufacturing capacity of the various works has been nearly doubled as a result of the expansion and changes which have already been made. Production is, nevertheless, running below the installed capacity due to the shortage of certain categories of steel and components. In spite of the improvement in supplies of various raw materials, there is still a shortage of "matching steel".

The board of management has instituted five civil suits against Mr. H. D. Mundhra and others in the Calcutta High Court for recovery of the losses suffered by the Company during 1956 and 1957 and for the establishment of the Company's title to the shares of Richardson and Cruddas Ltd and Assam Cements Ltd. The board says that two major schemes for expansion are being investigated, but the details cannot be given at the present stage.

Bengal Paper to Expand

There has been some support for the ordinary shares of the Bengal Paper Mills Co. Ltd at Rs. 102 during the past week due to the prospects for expansion. It is proposed to expand the production capacity to 100 tons of paper a day, and the necessary licence has been granted by the Government of India. Orders for plant and machinery will, it is expected, be finalised soon. Referring to the effects of the reduction in paper prices since the beginning of 1960, the directors say in their report for the year ended December 1959 that they do not think the profit of the Company will be affected much. The decline in earnings might be compensated by increased production and modernisation. Production rose from 14,826 tons in 1958 to 15,927 tons last year. So the profit has improved from Rs. 34.67 lakhs to Rs. 44.21 lakhs. An ordinary dividend of 32 percent, taxable, including an interim of 12 percent, has been declared. This gives a yield of 7.8 percent at the present price and is covered more than thrice. Depreciation is allocated Rs. 4.84 lakhs (against nil), taxation Rs. 18.48 lakhs (against Rs. 17.67 lakhs), capital reserve Rs. 10,000 (same), general reserve Rs. 7 lakhs (against Rs. 4.09 lakhs) and development reserve Rs. 2.10 lakhs (against Rs. 1.14 lakhs). There is a carry-forward of Rs. 1,35,498, against Rs. 92,500 brought in.

Bigger Profit for T.E.L.C.O.

The working results of the Tata Locomotive and Engineering Co. Ltd for the year ended March 1960 justify the market's confidence in the shares. They have risen to Rs. 269. The turnover has increased to Rs. 28.25 crores, from Rs. 26.45 crores in the previous year, and the gross profit to Rs. 221.57 lakhs from Rs. 154.53 lakhs. The directors have provided Rs. 93.3 lakhs for taxation and Rs. 14.04 lakhs for development rebate reserve. The dividend of Rs. 5 a share, subject to deduction of tax at 20 percent, on the preference shares absorbs Rs. 8 lakhs. The ordinary gross dividend is 12.50 percent, taxable, subject to relief under Section 15C of the Indian Income Tax Act; it absorbs Rs. 99.95 lakhs. The directors have also provided Rs. 6 lakhs for deferred taxation reserve, leaving a balance of Rs. 2.24 lakhs to be carried forward, against Rs. 1.95 lakhs brought in.

Banks Fare Better

The season for half-yearly bank reports has begun and three banks—the Bank of India, the Bank of Baroda and the Dena Bank—have issued their results during the past few days. Their performance suggests that the first half of 1960 has been fairly good for the banking industry in spite of the credit squeeze having been intensified from the second week of March. The banks have used their funds well. Although deposits have increased, the advance-deposit ratio has remained comparatively high. The voluntary agreement to cut interest rates on deposits has apparently helped. It is likely that these favourable factors will continue during the current half-year.

After making the usual provisions for contingencies, the Bank of India has made a profit of Rs. 42.64 lakhs, against Rs 28.11 lakhs in the corresponding period of 1959. With Rs. 12.47 lakhs brought in, a sum of Rs. 55.12 lakhs is available. The directors have recommended a dividend at the rate of 15 percent a year, against 12 percent a year for the corresponding period of last year. The net interim dividend work out to Rs. 2.625, against Rs. 2.10 for the corresponding period of 1958 and Rs. 3 for the first half of 1957. The carry-forward is Rs. 32.62 lakhs, subject to taxation.

The Bank of Baroda has maintained its dividend at the rate of 14 percent a year, or Rs. 3.50 on the ordinary shares and Rs. 1.75 on the "B" ordinary shares. The profit for the first half-year has risen from Rs. 14.19 lakhs to Rs. 17.23 lakhs. With Rs. 1.02 lakhs brought in, the total available comes to Rs. 18.25 lakhs. The dividends absorb Rs. 8.75 lakhs, and the carry-forward is Rs. 9.5 lakhs.

The Devkaran Nanjee Banking Corporation has made a profit of Rs. 10.22 lakhs, against Rs. 6.98 lakhs in the first half of last year. With Rs. 5.65 lakhs brought in, the total available is Rs 15.87 lakhs. The directors have recommended a taxable interim dividend of Rs. 1.86 (Rs. 1.30 net), which is the same as in the corresponding period of last year. About Rs. 14.01 lakhs is carried forward, subject to taxation.

Caltex Oil Refining Earns Less

The report of Caltex Oil Refining (India) Ltd for the year ended December 1959 shows that there was a substantial increase in the total crude processed by the Company. The throughput of 6,205,728 barrels of crude yielded 6,033,508 barrels of refined products and stocks in process. The year ended with a profit of Rs. 155.45 lakhs, from which the directors have transferred Rs. 62.18 lakhs to tax equalisation reserve and Rs. 4.48 lakhs to development rebate reserve. The balance of Rs. 88.78 lakhs is to be carried forward, and no dividend has been recommended.

The profit fell by 9.58 percent in 1959 in spite of larger crude throughput and lower operating expenses. This is partly because the Company surrendered to the Government its right to duty protection on motor spirit which amounted to 2 annas a gallon. This will bear heavily on earnings in future years too. The Government also issued an order limiting the incidence of duty protection accorded by the letter of agreement governing the operations of the refinery to the estimated production figures. For the purposes of this ceiling, the excise authorities included quantities that were exported from India under bond, and on which duty protection would not in any case have been received. The directors do not think that the order reflects the meaning of the letter of agreement, nor that the method of implementing it in relation to exports under bond is equitable. Representations have been made expressing these views, but without success so far.

During the past year, the construction of two new tanks was completed. One of these tanks will be used for the storage of low sulphur fuel oil, the special item produced by the refinery for use in India's steel mills. The second tank provides storage space for the increased output of motor-vehicle diesel oil. The directors are still awaiting consent to the issue of preference capital for Rs. 150 lakhs to implement the agreement reached with the Government about the establishment of the refinery.

Simplex Mills Pays More

Preliminary reports about the Simplex Mills Co. Ltd show that its performance during the year ended March 1960 has been satisfactory. The gross profit is Rs. 14.07 lakhs, after providing Rs. 8.65 lakhs more for repairs and replacement, but after taking credit for Rs. 2.32 lakhs, being the provision for taxation no longer required. gross profit in the previous year was Rs. 4.8 lakhs. The directors have allocated Rs. 12.36 lakhs (against Rs. 9.02 lakhs) for depreciation. The net profit is Rs. 1.64 lakhs, against a loss of Rs. 5.22 lakhs in the previous year. A dividend of Rs. 7.50 a share, subject to tax, has been recommended, against Rs. 5, free of tax, in the previous year. Reliable reports indicate that the working of the Company during the current year has been better than it was last year.

B.I.E.C. Costs Rise

There has been considerable increase in the production of switchgear by the British India Electric Construction Co. Ltd during the year ended December 1959. But in spite of the increase in turnover, the profit has declined from Rs. 7.63 lakhs in 1958 to Rs. 6.43 lakhs last year due to rises in labour costs following the implementation of a tribunal award. An ordinary dividend of 25 percent has been declared. At the present price of Rs. 37 a share, the yield works out to 6.8 percent and the dividend is covered more than four times. Allocations include Rs. 1.57 lakhs (against Rs. 1.09 lakhs) for depreciation, Rs. 2.98 lakhs (against Rs. 4.12 lakhs) for taxation, Rs. 32,907 (against Rs. 8,706) for development rebate reserve and Rs. 1.81 lakhs (against Rs. 2.52 lakhs) for general reserve. There is a carry-forward of Rs. 74,493, against Rs. 68,189 brought in. The ordinary share capital of Rs. 5 lakhs is backed by reserves of more than Rs. 8.47 lakhs. Fixed assets total over Rs. 10.16 lakhs and current assets amount to Rs. 47.82 lakhs.

Bengal Potteries Earns More

Bengal Potteries Ltd has done well during the year ended December 1959. Sales increased from Rs. 1.21 crores to Rs. 1.66 crores. The trading profit has risen from Rs. 9.44 lakhs to Rs. 20.66 lakhs. An ordinary dividend of 14.29 percent, taxable, has been declared and it absorbs Rs. 7.89 lakhs. This offers a yield of 6.3 percent at the present price of Rs. 5.66 a share. The dividend was 10 percent, tax-free, in 1958, so the present net dividend is the same as before. Depreciation is increased from Rs. 6.10 lakhs to Rs. 10.67 lakhs. Other allocations include Rs. 3.40 lakhs (against Rs. 7.16 lakhs) for development rebate reserve, Rs. 2 lakhs for general reserve and Rs. 7.16 lakhs for taxation. The carry-forward is Rs. 14,572, compared with Rs. 2,48,328 brought in.

Bengal Potteries proposes to go in for two major expansion schemes. It has decided to produce high-tension and low-tension electrical porcelain insulators as the demand for them is increasing; in this scheme, the collaboration will come from a German firm. The other scheme is to produce fine china on a bigger scale in collaboration with a British firm. It is expected that both the projects will be completed during the next couple of years. The production of crockery has already increased considerably.

Bhartia Electric Suffers

Commenting on the working results of the Bhartia Electric Steel Co. Ltd for the year ended December 1959, the directors point out that the order position of steel castings is unsatisfactory since the Railway Board has decided to change the design of wagons. Bhartia Electric has entered into technical collaboration with the American Steel Foundries International S.A. and the Cardwell Westinghouse Company of the U.S.A., for the production of centre buffer automatic couplers and draft gears for the new types of wagons introduced by the Railway Board. The Company has received an order worth Rs. 70 lakhs for the production of these couplers and draft gears. Orders have also been received for roller bearing axle boxes. The plant and machinery for producing these items has been ordered and is expected to arrive soon.

The Khardah factory, consisting of a rolling mill, has been transferred to the Calcutta Steel Co. Ltd from 1st January, 1960. Bhartia Electric at present owns only the Ballygunge works where the electric furnaces, the steel foundry and the machine shops were situated. The work of modernising the equipment of this factory has begun and the project is likely to be completed in the near future. Providing the same amount of Rs. 6 lakhs for depreciation, Rs. 2.67 lakhs (against Rs 1.83 lakhs) for development rebate reserve and Rs 9 lakhs (against Rs. 14 lakhs) for taxation, the Company's profit has declined from Rs. 10.81 lakhs to Rs. 10.57 lakhs. An ordinary dividend of Rs. 1.50, taxable, has been declared. This offers a yield of 9.6 percent at the present price of Rs. 15.62 a share, and is covered more than two and a half times. The dividend was 12½ percent, tax-free, in the previous year. The carry-forward is Rs. 3,60,479, against Rs. 53,806 brought in.

Camphor and Allied Products

Camphor and Allied Products Ltd will be the name of the new Company which has been formed for manufacturing synthetic camphor. The foreign collaboration will come from a well-known British firm, which will provide the technical know-how. The Company will have an authorised capital of Rs. 1 crore, half of which will be issued at first—Rs. 10 lakhs of preference shares and Rs. 40 lakhs of ordinary shares, the face value of both the preference and ordinary shares being Rs. 100 The Government has been asked to approve the foreign collaboration and sanction the capital issue. The Company may enter the capital market in September or October. Of the Rs. 40 lakhs to be issued, only Rs. 20 lakhs will be offered to the public, the rest being taken up by the promoters and their friends. It is said that the foreign collaborator will participate in capital, but its share is not likely to exceed 25 percent of the total. The plant and machinery are expected to cost about Rs. 40 lakhs, one-third of which will be machinery made within the country. The rest will come from the United Kingdom. The annual capacity of the plant will be 900 tons of camphor and 60 tons of thymol The Company will be managed by a board of directors.

New Solvent Extraction Plant

It is reliably understood that Western India Vegetable Products has decided to put up a solvent extraction plant at an estimated cost of Rs. 10 lakhs. The plant is likely to be established in Amalner, Maharashtra Its capacity will be 15,000 tons, and it is expected to go into production early next year. The value of the extraction cake which will be available for export may total about Rs. 50 lakhs.

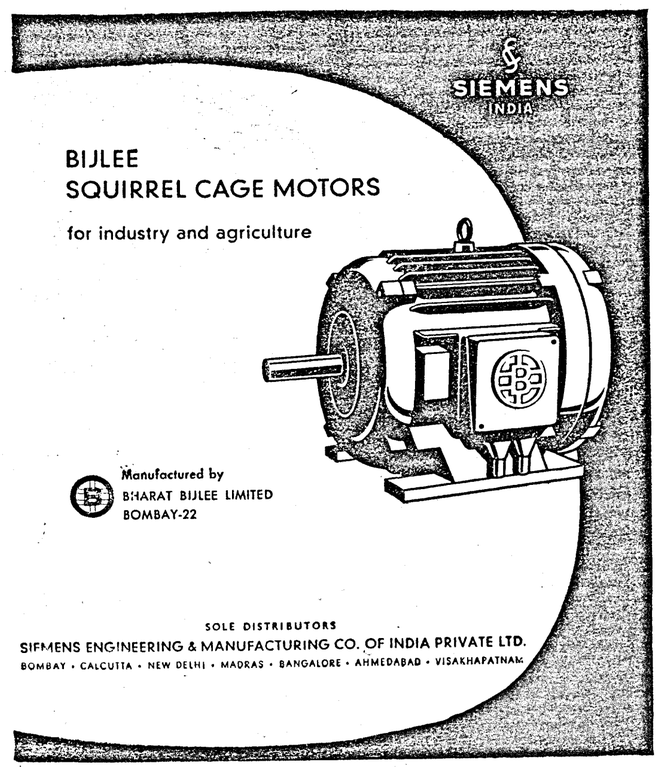
Manufacture of Gas Cylinders

The Government of India has decided to permit the setting up of units for the manufacture of gas cylinders in the country. The decision has been taken in view of the large-scale expansion in the production of various industrial gases likely in the next few years and the corresponding rise in the domestic demand for cylinders for bottling and transporting these gases. While the sizes and specifications of the cylinders vary according to the nature of the gases, it has been estimated that by the end of the third plan, about 100,000 cylinders will be required. By the end of the fourth plan, the domestic requirements will be double this number.

In forwarding their proposals for Government approval, intending entrepreneurs have been asked to indicate particularly what arrangements they have made for importing the required capital equipment. The Government would prefer capital equipment to be imported by using the share of the foreign collaborator in the capital structure of the scheme. Import of capital machinery and equipment required for the project under long-term credit arrangements or long-term deferred payments acceptable to the Government or through rupee payment arrangements will also be considered. The applicants should indicate the terms of royalty and other technical fees which involve payment in foreign exchange. Details about the manufacturing process, arrangements for securing raw materials, etcetera, should also be furnished. The proposals may be forwarded to the Central Ministry of Commerce and Industry as early as possible before the end of 1960.

Paint Bodies Merge

The Paint Federation and the Indian Paint Manufacturers Association have merged to form a single organisation known as the Indian Paint Association. The first meeting of the I.P.A. governing body was held on 1st July, from which date it has started to function. Outlining the background to the growth of producers' associations in the industry, a Press release issued by the newly-formed Association says that the Calcutta Paint Manufacturers Association, which was formed in 1929, consisted of members from local English paint factories. In 1937, its name was changed to the Association of Paints, Colour and Varnish Manufacturers in India with a joint membership of English and Indian producers. During the second World War, many Indian paint factories were established, and in 1941, the Indian Paint Manufacturers Association was started. Its members consisted of only Indian paint manufacturers and it was affiliated to the Indian Chamber of Commerce. Meanwhile, in 1949, the name of the Association of Paints, Colour and Varnish Manufacturers in India, which was affiliated to the Bengal Chamber of Commerce, was changed to the Paint Federation, composed mainly of the English firms in the industry. These two bodies—the Indian Paint Manufacturers Association and the Paint Federation—were encouraged to amalgamate. The newly-formed Indian Paint Association is affiliated to the Indian Chamber of Commerce.



Agreement on U.P. Textile Wages

A conference of millowners and labour representatives convened by the U.P. Chief Minister in Naini Tal has reached agreed decisions on implementing the recommendations of the Cotton Textile Wage Board. Mills in Kanpur and Saharanpur will give a wage increase of Rs. 6 a month in terms of the Wage Board's recommendation. The increase will take effect from 1st January, 1960, the extra sum from January to June being paid in monthly instalments spread over the remaining six months. Mills in Modinagar will give an increase of Rs. 8 a month in terms of the Wage Board's recommendation. The cases of all other mills have been left to the decision of the Chief Minister. An important question about the implementation of the award in Kanpur was whether the "personal wages" drawn by many workers there should be absorbed in the increase. As divergent views were expressed at the tripartite conference, a final decision on this too was left to the Chief Minister.

The U.P. Government Press note announcing the agreement refers to the cordiality which prevailed at the conference. While this is welcome, it is idle to pretend that the persistent claim of the millowners in the past about their inability to pay has vanished overnight. They have agreed to the Chief Minister's proposal in Naini Tal because reports were recently circulated that the Government of India had framed an ordinance for enforcing the Wage Board's recommendations and that its actual issue had been left to the discretion of the Central Labour Minister, Mr. Nanda. It may be recalled that even when the Wage Board was appointed, millowners voiced the demand—which was endorsed by the U.P. Government—that the U.P. units should be excluded from the scope of the all-India wage structure. It was pointed out that, of the total of 30 mills in the State, 16 have had to suspend operations because the efficiency of U.P. mills is lower and their operating costs are higher. The aggregate of working days in Kanpur in a year is 295, compared with the all-India average of 308. It has to depend on distant markets for its cotton supplies. The area under cotton in U.P. itself has shrunk to about 100,000 acres, compared with 600,000 acres in the prewar years. There is also a large redundant labour force whose retrenchment poses insuperable difficulties. The wage increases recommended by the Cotton Textile Wage Board are linked up with rationalisation, a fact which the Chief Minister has acknowledged in theory, but which is subject to numerous limitations in practice.

U. S. Business Conditions

The good and bad elements in the business news have continued roughly in balance in recent weeks, and the overall measures of activity have moved broadly sideways, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. The unfavourable aspect of the industrial situation is that, according to the latest reports, new orders are continuing to run below shipments, as they have done since late 1959. Declining unfilled orders suggest that industrial activity during the summer may be lower rather than higher, and this suggestion is reinforced by the curtailment in motor-vehicle output needed to clear the heavy dealer stocks of 1960 models Thus, few observers expect an early or general forward movement. On the other hand, it seems clear that the decline in backlogs is traceable mainly, if not wholly, to a drop in forward buying for the purpose of checking or reversing inventory build-up. Plainly, substantial progress has been made towards bringing production into balance with consumption. In some lines, such as steel and appliances, production curtailment was the answer—fortunately achieved without marked spiralling effects. In other cases, steady or rising consumption has kept markets in order. Final consumption of goods and services is well sustained. To be sure, aggregate retail sales in May were lower than in April, after seasonal adjustment. However, the April figures set all-time highs by a good margin, and the May dip may have no lasting significance. More to the point may be the unchecked rise in personal income, which has touched new peaks in each month this year, and in May was on the threshold of a $400 billion seasonally adjusted annual rate.

Total civilian employment in May at 67.2 million was higher than in any previous May, up 1.2 million from a year earlier. This record has been reached in spite of the fact that manufacturing employment is actually less than it was three years ago during the high months of the 1954-57 upswing. In fact, the 16.3 million persons working in manufacturing in May were a slightly smaller number than before the steel strike last July. Few people stop to realise how much employment in manufacturing has shrunk as a proportion of the working labour force—to less than one out of four. This is a result of technological progress, freeing manpower for other areas such as services, trade and the Government. The sustained growth of employment and income outside the manufacturing sector has been the chief reason why consumer demand has held up so well while steel and other industries were going through an adjustment. The economy also has the support of better export trade and of moderately rising plant and equipment expenditures. Official surveys show that business men are adhering closely to the capital spending plans reported three months earlier. Preliminary estimates place second quarter outlays at a seasonally adjusted annual rate of $37,000 million, up 5 percent from the first quarter.

These figures are encouraging when weighed against the fear that failure of sales and profits to come up to earlier expectations might cause curtailment in investment programmes. Nevertheless, little additional buoyancy can be expected to appear from this direction. For the second half of this year, only a slight additional increase in plant and equipment expenditures is forecast. In this mixed picture, there is little indication of either new dynamic factors to push business ahead or any real weakness likely to push it down. Partly because of ordinary seasonal influences and partly because of the desire to check inventory accumulation, the summer promises to be a testing period. The strong point is the high level of consumption. Non-manufacturing activities, such as recreation and vacation travel, promise to be an expansive force. Industrial activity picked up a point in May and probably did not change much in June. The Federal Reserve index of industrial production (seasonally adjusted, 1957 equals 100) was put at 110, between the March-April low of 109 and the January peak of 111. The overall stability of the total index since last December has concealed a variety of largely offsetting movements among the individual industries. As orders fell short of expectations, output was adjusted at different times for different products. In a number of lines, including motor-vehicles, apparel and television, output has been on an upgrade from lows earlier this year.

Wealth of India

Valuable material on 24 major, medium, small-scale and cottage industries in India has been compiled in the fifth part of the "industrial products" series of the *Wealth of India*, just published by the Council of Scientific and Industrial Research. The Council has made an attempt to trace the development of industries and to describe their present position, the principal raw materials and their source and availability. Besides, there is a description of the manufacturing processes with statistical data. Among the important industries dealt with are iron and steel, jute, locomotives, lac and shellac and leather. The volume contains 24 articles beginning with the letters I, J, K, and L. It includes articles on insecticides and other pesticides, iron and steel castings, and lead (major industries); ice, ink (printing), ink (writing), iron compounds, jute pressing and baling, lamps and lanterns, lapidary industry, lead compounds, lime, linoleum, lock industry and lubricants (medium and small-scale); ivory and jewellery (cottage). The publication has 289 pages and is priced at Rs. 30. It is illustrated with colour plates, photographs and flow-sheets.

The *Wealth of India* is being published in two series, one devoted to raw materials and the other to India's industrial products. So far, five volumes of raw materials (A-K) and four parts of industrial products (A-H) have been brought out. The compilation was undertaken by the Council as it was felt that the collection and dissemination of information on India's material resources was necessary for the economic development of the country. For each article, a ledger is maintained, containing such information as bibliographies, reprints of photo-copies of articles or their

abstracts or extracts, and other reports, circulars and bulletins.

Scooters and Mopeds

Enfield India Ltd proposes to undertake the manufacture of motor scooters in Madras, apart from producing mopeds. It has received the Government's sanction for manufacturing Villiers engines in 1961 for use in scooters and motor-cycles. The engines might also be used for agricultural and industrial purposes. Meanwhile, Tube Investments of India Ltd has notified its shareholders that it intends to make scooters at its Ambattur factory. Its articles of association are being amended for taking up such new lines of manufacture as seats, saddles, chains, electric and dynamo lamps, aluminium products, hypodermic syringe needles and gauge tubes. Following reports about the diversification of the Company's activities, there has been a steady rise in T.I. shares to Rs. 322.50 in the Madras market. Shareholders think that the Company will show improved results for 1959-60 with the expansion in its bicycle output.

New Labour Bill for U.P.

The U.P. Government has decided to enact new legislation on industrial relations in supersession of the U.P. Industrial Disputes Act of 1947, which has been found inadequate even after the amendments made in 1956 and the Central Industries Disputes Act of 1947. The draft, which was discussed by the State Legislature's Standing Committee for Labour recently, provides for representative unions of workers and representative associations of employers to facilitate bilateral agreements for maintaining peace in industry and protecting the rights of workers. The workers' unions and the employers' associations will have to be recognised by the Labour Commissioner. They can appeal to the Industrial Tribunal against the Labour Commissioner's decision, and the Tribunal's verdict will be final. A union can claim to be representative if at least 25 percent of the workers of an undertaking are its "good members" (that is, members who pay their prescribed dues in time) and if it subscribes to the code of discipline and the principles for avoiding inter-union rivalry adopted by the Indian Labour Conference in Naini Tal. The draft Bill provides that employers shall recognise the representative unions and accord all facilities for their functioning in the factory. The facilities will include collection of dues on pay day from the pay office of the factory and pasting of notices on the factory's notice boards. An agreement between a representative union of workers and a representative association of employers will be binding on all the workers of the undertaking or industry.

The Bill gives protection to a certain number of workers, not exceeding 5 percent of the total, against dismissal, except when dismissal is permitted by the Industrial Tribunal in writing. The present State law protects trade unionists against dismissal only during the pendency of proceedings before a labour court, tribunal or conciliation agency. The new Bill includes workers employed by contractors in its purview. It follows closely the provisions of the Bombay Industrial Relations Act and the claim is that it will succeed in promoting the growth of healthy trade union activity in the State. Of equal interest, however, is a Madras Government proposal to have the Industrial Disputes Act so amended as to confer on individual workers the right to approach industrial courts for the adjudication of genuine grievances. It stands to reason that any worker's refusal to join a union should not disqualify him from getting justice, but the proposal is bound to meet with resistance from vested union interests as it offers a threat to their survival. On the other hand, the present proviso that a worker must approach an industrial court through the agency of a trade union is at least partly responsible for the mushroom growth of unions.

Jet Aircraft Sales

The total number of pure-jet airliners ordered by, or already delivered to, the world's airlines is now 632. This is shown by the table of orders, corrected to 2nd June, issued by the Society of British Aircraft Constructors. The numbers of jet airliners, divided between countries of origin are: Britain—De Havilland *DH-121*, 24; De Havilland *Comet 4*, 50; and Vickers *VC-10*, 35. United States—*Boeing 707*, 154; *Boeing 720*, 56; *Convair 880*, 45; *Convair 600*, 39; and Douglas *DC-8*, 147. France—Sud *Caravelle*, 82.

CORRESPONDENCE

PREFERENCE DIVIDENDS

(To The Editor of "Capital")

Sir,

Your editorial on the subject of preference dividends in the issue of 30th June was none too late. The antics of the Life Insurance Corporation at the annual meeting of the Indian Standard Wagon Co. Ltd were amusing, but they may have serious repercussions by tempting sundry preference shareholders of companies to adopt similar obstructive tactics at their meetings. In the concluding paragraph of your editorial, you appear to suggest that the Government and the L.I.C. should find a way out of the present impasse. This looks like giving too much importance to the L.I.C. as a preference shareholder; it may have conflicting interests also as a holder of ordinary shares. It cannot be claimed that the L.I.C. has an interest in all companies, nor a major share in companies in which it has any holding. The L.I.C. cannot, therefore, help towards a solution.

The law-makers themselves do not appear to know their mind. With so many courts of first instance, there can be much litigation but little unanimity of views among them. Recently, a judge of the Supreme Court, it is reported, observed that on a recent reference from the Central Government, seven judges of the Court gave seven different opinions and it was difficult to discover on which points they agreed and on which they disagreed. There is no gainsaying that last year's amendment of the Income Tax Act hit some companies hard, but the current year's amendment has brought confusion. It now lies with the Government to restore the *status quo ante*, without considering the question of prestige. The present attitude of its servants is to grouse on any pretext; and they cannot do more if the arithmetical work of "grossing" the dividends, which they used to do when making assessments and of which they were relieved, is now put back. A few companies already appear to have amended their articles of association so as to enable them to pay a higher rate of dividend to their preference shareholders. This raises the question whether, by this action, the preference shareholders rendered eligible for such higher dividends do not fall within the ambit of Section 87 of the Companies Act and lose part of their voting rights.

Yours etcetera,
K. V. Iyer

Madras, 8th June

TEA EXPERIMENT IN U.S.A.

There is a larger demand in the United States for green than for black tea, and at present, a large amount of artificially prepared green tea is consumed. It is said to be made of a cheap tea leaf highly coloured with Prussian blue, and faced with powdered soapstone, etc. in order to conceal its natural defects, and it can be neither healthful nor nutritious. But as the demand indicates a decided preference for green qualities on the part of the public taste—that is teas not oxidised—it should apparently stimulate the effort to supply a pure and wholesome article of this type. Unfortunately as yet green teas can only be made by hand, and owing to the greater cheapness of oriental labour and the use of lower and medium grades, successful competition by American manufacturers seems to be almost impossible. Black tea can, however, be made by machinery at almost every step. Owing to the comparatively high cost of labour, the production is necessarily dear, but, experiments are to be made to give a higher yield per acre by free manuring and fertilising, and substituting machine for hand labour. The rain fall is rather scanty, and experiments will also be made to increase the productiveness of the tea gardens by judicious irrigation. The undertaking has been expensive up to the present, but in view of its prime importance, it is hoped that the cost will be amply repaid by results. There are many acres of land in this part of the Southern States capable of irrigation, which can be utilised for this new industry, provided the present efforts prove satisfactory up to this time. the experience gained by the South Carolina gardens indicates that moist well-drained land is best adopted for tea culture; but the question as to how much increase of crop production can be obtained by artificial irrigation and how much water should be applied remains as yet to be seen. The most profitable field for tea experiments in America is considered to lie in the more expensive grades, as these, when imported from foreign countries do not retain their delicacy of flavour. It has been suggested that probably the best chance for success in this direction lies in the development of selection of long pekoe tips for the manufacture of Mandarin tea such as is made in China.

A Ditcher's Diary

Historical analogies are apt, at times, to become a little tiresome; and those I have been drawing recently between the Central Government employees' strike, and the one threatened three years ago by the posts and telegraphs unions, may be proving so already. I will not venture, therefore, to point to possible parallels between current events in Assam and those which occurred in Kerala—also in July, but last year. The examples, in any case, would not be congruent all the way: the disorders in Kerala originated mainly from a contest of political ideology, while those in Assam arise from a dangerous upsurge of provincial jealousies. Kerala's Government, at the end, found itself unceremoniously removed from office by presidential decree; Assam's, so far has escaped a similar fate, to the considerable disappointment of many. And, finally, the Kerala events roused the ire of many distinguished personages in New Delhi, among whom were Mr. Nehru and Pandit Pant; the Assam riots have been received with a silence suggestive of equanimity. It is not true that my faith in speeches from the mighty being an effective antidote to rowdyism is unshakable; but even in a fortnight full of many other preoccupations, it would have been reassuring to know that the Centre was more concerned about the fate of the non-Assamese residents of Assam than was implicit in merely despatching Mr Krishna Menon on a rather quick, holiday-style visit to Gauhati. For the fact is that, although Assam, Manipur and Tripura have been mercifully exempted from the Central Government employees' strike, the events there have far more serious implications for the rest of the country than the strike which is New Delhi's present obsession. The Centre's cool reaction to the Assam troubles can hardly be ascribed to the fact that information is lacking because Mr Chaliha is ill—so ill, indeed, that he is unable to lift the telephone-receiver when anxious calls come from the West Bengal Government. The reaction is merely as deplorable a display of complacency as New Delhi has ever indulged in; and the sooner it realises that the first problem on its hands is not so much the strike itself, as the orgy of violence born in Assam whose spread the strike is facilitating, the less dangerous will be the anxiety and anger now rising in the east.

Calcutta has been degenerating fast from a city of palaces into a city of processions. But call it what you will, the trend provides unmistakable evidence of the growing social and political instability noticeable in postwar years. It had long been my view that living conditions in the city could be a subject for salutary socio-economic investigation, so I was delighted to receive Professor S. N. Sen's interesting book entitled *The City of Calcutta*, which embodies the results of an economic survey of the city conducted between 1954-55 and 1957-58. Sponsored by the Planning Commission and undertaken jointly by the Departments of Economics and Statistics of Calcutta University, the research project adds facts and figures to the dismally familiar story of the appalling living conditions in this city. One particularly interesting point it brings out is the growing preponderance of men over women: in 1957-58, there were 1,876 of the former for every 1,000 of the latter. I see no reason to disagree with the professor that the resultant lack of an ordered family life for a quarter of the population has added to the tensions, although I would not join him in hazarding the guess that Calcutta probably enjoys the unique distinction of being the most male city in the world. The crux of the problem, I think, is that apart from the large sex disparity, the city has a predominantly adult population, many of whom are unable to find worthwhile jobs. Professor Sen says that about a third of the people enjoy (if that is the word) a monthly *per capita* income of Rs. 20 or less, which means that most of them live below the subsistence level. Add to this the ubiquitous slums, the poor sanitary arrangements and the abominable congestion resulting from the ineptitude of the official town-planners. Reading Professor Sen's account, I am left with a sense of horror and despair. If the city's population goes on increasing at the rate of 5 percent a year, how will the new millions be accommodated, let alone provided with essential civic amenities? The one solution I can think of is decentralised town planning backed by better transport facilities, but that is a matter to which our city fathers and the State Government have paid scant attention so far.

For me, the relative immaturity of the modern pantomime had been an old complaint. The art could be amusing, even expressive and memorable in its many representations and caricatures; but most performances I had seen tended to fail rather badly on grounds of both realism and æstheticism. It was a pleasure, therefore, to be persuaded to revise my opinion of the possibilities of the pantomime as an art form since I attended the excellent performance given by M Marcel Marceau at the New Empire on Tuesday. I would not unhesitatingly endorse the verdict of Brooks Atkinson, the *New York Times* critic, that Marceau is "a genius of Chaplin's stature." Chaplin will always have a place in our hearts which no one can share, unaffected by the ignominy and persecution he and his art may have suffered at the hands of McCarthyite sleuths in the 'fifties. But it is apparent that Marceau derives much of his inspiration from the Chaplin of the silent films; and in some of the items presented on Tuesday, the resemblance between the two may have struck many besides myself as remarkably close. Yet it is one of the justifiable prides of gallic art that it is never unoriginal; the mechanical quality which I consider one of the greatest failures of the modern pantomime turns in Marceau's case into a display of exceptional tenderness and beauty that is in conformity with the high standards of the contemporary French theatre. Marceau, at 37, is, I am told, the youngest of the three great French mimes of today, the other two being Etienne Decroux and Jean-Louis Barrault (of *Les Enfants du Paradis* fame); but, in the West, he is probably the best known of them all, having travelled widely in Europe and the Americas, appearing not only on the stage but also on television. With the ovation given him by a warmly appreciative Calcutta audience on Tuesday, there may be little doubt that he will earn in the East too a renown he richly deserves. The Alliance Française de Calcutta, an organisation whose dissemination of French culture has always been as urbane and elegant as it has been unpretentious, deserves our gratitude for introducing a breath of freshness in a city where the variety of entertainment is as limited as its quality is poor.

Sir Winston Churchill apart, there has probably been no more colourful and controversial personality in British politics since the war than Aneurin Bevan. The news of the latter's death last Thursday, after a long illness patiently borne, was received with a sorrow that was remarkable for its uniformity among his political allies and critics alike. Many people will remember Bevan's tour of India in the cold weather of 1952-53. Those who had expected to meet a fire-eating, rabble-rousing socialist agitator were pleasantly surprised at the soft voice, the gentleness and the urbanity of the man. He charmed those whom one would expect to be his political friends, and completely disarmed those others who looked upon his politics with suspicion and hostility. He had, of course, begun to mellow by the time he undertook his only eastern journey; he had already held important ministerial office and was a figure in international socialism as well as his own Party. And apart from his politics, he had become a personality in his own right and had clearly begun to enjoy making his impact on upper-class society. Except perhaps Keir Hardie (who visited this country before the first World War), no other Labour politician enjoyed quite the same reputation among Indians who, since their own struggle for freedom had been won, could be the more cordial in the welcome they gave to Bevan. From Delhi he went on to Karachi, but for some reason or another he did not go down very well in Pakistan. If I remember rightly, he made a speech which offended many people there. The truth is that Bevan's main interests were in democracy and the social services, neither of which were much in evidence in Pakistan at the time. Bevan subsequently maintained his Indian contacts through the Indian High Commission in London, where he was frequently to be seen as a guest at various functions.

The July issue of *Which*, the publication in the United Kingdom devoted to the protection of consumer interests, has conducted a survey of the "inflammable rubbish" suitable for burning in picnic stoves. The survey has yielded some unexpected results which may tend to fray tempers in certain sectors of British journalism. The most suitable things to burn, it seems, are the national daily newspapers: eight of them were tried, and each boiled three pints of water in six minutes or less. *The Times* took 8¼ minutes and made "fairly dense smoke"; the reference, I presume, is not to the equivocations on its editorial page. The *Financial Times* took 9½ minutes, and created "very dense smoke", a condition which, I imagine, may be due to its surfeit of tables, quotations and statistics.

LONDON INSURANCE LETTER

LLOYDS MAY FORM NEW LIFE BUSINESS COMPANY

IT has often been necessary to explain to people not closely concerned with insurance that Lloyd's is not an entity that transacts business in its corporate capacity but an association of underwriters who transact business individually. Lloyd's can seemingly exist for ever, but its individual members are mortal. The business of Lloyd's is, therefore, subject to an important limitation. The variety of short-term risks which can be underwritten at Lloyd's is practically limitless, but long-term life assurance is impracticable. Life business is not excluded, but it is limited to a five-year term. At the end of June this year, the chairman of the Committee of Lloyd's, Mr. A. C. Grover, made a statement to members meeting privately. It seems to imply a fundamental change in the institution. He said the Committee is considering the formation of a company, in which the Corporation would have a controlling interest, and that the company would be empowered to transact life assurance.

The contemplated change is fundamental in that it envisages Lloyd's as a corporate insurer; and the resulting practical changes might be as profound as the change of principle. The life business is comparatively insignificant at present; according to the latest figures (the last three-year analysis relates to 1956), premium and other income from life assurance accounted for little more than £50,000 of a total premium income of almost £256 million. But if it were freed from the limitation imposed by the mortal character of Lloyd's members, this business could grow to huge proportions. The new form in which life business will be transacted will not, of course, imply a fundamental distinction between the Corporation and its members—which is, indeed, inconceivable. Through the new company, the members will become deeply involved in life business. The motive for the proposed change is not difficult to discern, Lloyd's underwriters are at present virtually excluded from the most dynamic section of insurance, and their profits are suffering accordingly. The latest three-year analyses show a decline in the profit balance from nearly £16 million for 1954 to less than £13 million for 1955 and a sharp fall to less than £6 million for 1956.

The Broad Picture

At the British Insurance Association's recent annual meeting in London, Mr. H. A. Walters, chairman, mentioned life assurance particularly as the most buoyant element in the business. In competition with National Savings, building societies, unit trusts, and other savings media, life assurance maintained its position as the principal medium of personal savings last year, when it was the recipient of net new savings of £423 million—a big increase on the figure of £366 million for the preceding year. However, Mr. Walters's account of British insurance last year was a story of total expansion. An aggregate increase in net premiums from £1,425 million in 1958 to £1,520 million in 1959 was built up of increases in all the main categories—fire, accident, marine, as well as life. Ordinary and industrial life premiums together expanded from £602 million to £ 650 million. Next in order of size is the accident department, with an increase from £479 million to £510 million, then the fire department, with premiums increased from £270 million to £284 million; finally marine, with a more modest expansion from £74 million to £76 million.

Mr. Walters said: "There has been an increased demand for insurance protection from people enjoying a higher standard of living and with more money to save, from industrialists with more valuable stocks and new factories to safeguard, and from traders with more goods to move around the world." And policyholders, as such, could benefit from the nation's prosperity in so far as funds had been invested in ordinary shares and larger dividends accrued from them.

Differential Rates

Mr. Walters was able to report a material improvement in motor insurance, on a world scale. At home, the market produced a small profit last year; and the much-discussed increase in premium rates does not, therefore, seem imminent. (However, if the upward trend of wages involves car-repairers, the cost of claims will promptly increase, and premium rates will necessarily rise.) The British companies still operated their total motor business at a loss last year, but it was reduced from £10 million in 1958 to £1½ million. The improvement is attributed to more selective underwriting and to the adjustment of rates in the least satisfactory territories. Many insurers believe that much sharper differentiation is desirable, not only between different territories but also between different categories of drivers in the same territory. One idea that was introduced only recently to Britain is reduced rates for drivers who never drink alcohol. The idea came from Sweden, where it had been successfully applied by Ansvar. A British insurance agency represented Ansvar over a period of 18 months, offering cover at rates about 5 percent below the normal insurance tariff and more generous no-claims bonuses than are customary. The response was so strong, and the claims experience was so good, that Ansvar has formed a British subsidiary, using its own name, Ansvar Insurance Company, to conduct the business locally.

Stocks and Shares

SHARE PRICES RALLY IN SPITE OF UNSATISFACTORY STRIKE SITUATION

TURNOVER REMAINS RESTRICTED

Wednesday Evening.

PRICES on the Calcutta Stock Exchange seesawed during the past week. When hopes of avoiding the strike by Central Government employees failed to materialise, Indian Iron broke sharply and were at one time traded down to Rs. 23.10 during the course of yesterday's trading. Later in the day, when conditions in the city and outlying districts appeared to be peaceful, short-covering brought the shares up to Rs. 23.85. The recovery was not maintained, however, when operators received their newspapers this morning to find that the strike situation was in point of fact gradually deteriorating. It was felt that disruption of transport and communications on account of the strike would leave scars on the economy which would take some time to heal. Another disquieting factor was that if the political unrest in Assam continues it may have serious repercussions in West Bengal. In spite of the prospect of a general strike in the city tomorrow, share prices rallied after market hours today.

Due to the strike which began at midnight on 11th July, deliveries in the Calcutta Stock Exchange were suspended yesterday until further notice. The new working hours will also not come into operation until the strike is settled.

At today's settlement, prices of shares on the clearing list were in the majority of cases higher than a fortnight ago, as will be seen from the following table:

	Last settlement rate 29th June	Today's settlement rate 13th July
Indian Iron	24.28	23.16
Indian Cable	33.50	34.25
Indian Aluminium	28.50	29.00
Indian Copper	5.14	5.17
Burrakur Coal	19.69	19.62
National Jute	23.75	24.00
Howrah Jute	22.50	22.75
Shree Gopal Paper	29.50	28.37
Hindustan Motors	20.69	21.00
Orient Paper	45.00	45.15
Textile Machinery	27.10	27.25
Rohtas Industries	39.12	38.37
Dunlop Rubber	45.00	45.25

In Government securities, short-dated issues were in demand, but medium- and long-dated loans had more sellers than buyers.

Business in preference and bank shares was of a retail nature and prices showed little change.

In coals, Bengal were softer at Rs. 325, as were Amalgamated at Rs. 24.50. In contrast, Katras Jherriah were wanted at the higher rate of Rs. 40.75.

In cotton textiles, Dunbar improved from Rs. 217 to Rs. 227, and Jayshree from Rs. 15.04 to Rs. 16.19. Kesoram met with profit-taking and reacted from Rs. 32 to Rs. 31.25.

Electric supply shares were dull and featureless.

In the engineering group, Bhartia Steel were better at Rs. 16, and British India Electric rose from Rs. 37.50 to Rs. 38.25. Guest, Keen, Williams were shaded at Rs. 47, but J. K. Steel were steady at Rs. 16.12 and Textile Machinery at Rs. 27.25.

Jute shares were devoid of interest and in most cases prices, where changed, were lower.

In papers, Bengal were steady at Rs. 102, as were Sirpur at Rs. 19.37 and Orient at Rs. 45.15.

In sugar, Dyer Meakin Breweries were taken at Rs. 20.12 and Carew were better at Rs. 10.

Among miscellaneous industrials, Alkali and Chemical were fairly steady at Rs. 32, while Bharat Commerce receded to Rs. 16.12. Dunlop Rubber were a firm feature with buyers at Rs. 45.25. Hindustan Lever advanced from Rs. 42.50 to Rs. 44, and Hindustan Motors were steady at Rs. 21. Indian Cables, on rumours of a higher dividend, improved from Rs. 33.62 to Rs. 34.25, and Indian Oxygen were wanted at Rs. 40.50. India Steamship were quiet at Rs. 10.87 and Associated Battery, after being done up to Rs. 38, closed easier at Rs. 37. Philips Carbon Black were unchanged around Rs. 18.50, while National Rubber improved further to Rs. 18. Philips India were strong at Rs. 31, and Rallis India were in demand at Rs. 135. The outstanding feature was Union Carbide which moved up from Rs. 44 to Rs. 47.25.

In the mining group, Metal Corporation were depressed at Rs. 10, while Indian Copper were fairly steady around Rs 5.16.

Tea shares were more or less neglected and business was nominal.

Basmatia Tea

The profit of the Basmatia Tea Co Ltd has amounted to Rs. 3.86 lakhs for the year ended December 1959, against Rs. 2.50 lakhs in the previous year. An ordinary dividend of Rs. 3 a share, taxable, has been declared, against Rs. 2.50 a share, tax-free. Taxation is allocated Rs. 1.48 lakhs (against Rs. 1.06 lakhs). General reserve absorbs Rs. 70,000 (against Rs. 50,000). Development rebate reserve gets Rs. 12,087 (against Rs. 5,788). After making other adjustments, an amount of Rs. 43,644 has been carried forward, against Rs. 40,495 brought in. A crop of 7,611 maunds was secured, against Rs. 7,439 maunds. The average sale price was Rs. 2.99, against Rs. 2.62 a lb. Estimates for the current year have been framed for a crop of 8,000 maunds at a cost of Rs. 11.70 lakhs. Andrew Yule and Co. Ltd will cease to act as managing agents of the Company on 15th August, 1960. Their appointment as secretaries and treasurers for a period of five years from that date has been approved by the Central Government.

Rajgarh Tea

After providing Rs. 35,833 (against Rs. 26,877) for depreciation, the profit of the Rajgarh Tea Co. Ltd has increased from Rs. 73,872 to Rs. 1.11 lakhs for the year ended December 1959. An ordinary dividend of 35 percent, subject to tax, is declared, against 25 percent, tax-free. Provision for taxation is shown at Rs. 45,000 (against Rs. 34,000). There is a carry-forward of Rs. 45,190, against Rs. 38,792 brought in. The crop declined from 5,755 maunds to 5,364 maunds, but the average sale price improved from Rs. 2.19 to Rs. 2.47 a lb. Estimates for 1960 have been made for a crop of 6,000 maunds at a cost of Rs. 9.31 lakhs. Andrew Yule and Co. Ltd will cease to act as managing agents of the Company on 15th August, 1960. Their appointment as secretaries

and treasurers for five years from that date has been approved by the Central Government.

Bengal Assam Steamship

The profit of the Bengal Assam Steamship Co. Ltd has declined from Rs. 4.74 lakhs to Rs. 64,419 for the year ended October 1959. An ordinary dividend of Rs. 3 a share (gross), has been declared, against Rs. 6 a share, tax-free. After making necessary adjustments, there is a carry-forward of Rs. 26,410, against Rs. 88,927 brought in. The results are disappointing due to a considerable decrease in freight earnings. The substantial rise in earnings from jute carried from Assam was more than offset by a reduction in the earnings from jute imports from Pakistan. Andrew Yule and Co. Ltd will cease to act as managing agents on 16th August, 1960. The Company has applied to the Central Government for approval of the appointment of Andrew Yule and Co. Ltd as secretaries and treasurers with effect from that date.

Burma Lime

After providing Rs. 58,000 (against Rs. 50,000) for taxation, the Burma Lime and Chemical Co. Ltd has earned a profit of Rs. 48,893 for the year ended September 1959, against Rs. 22,357 in the previous year. The directors have paid a dividend of 10 percent, subject to deduction of tax. Allocations include Rs. 25,000 (against Rs. 10,000) for reserve fund, Rs. 10,000 (against nil) for dividend equalisation fund and Rs. 4,855 (against nil) for development rebate. After making other adjustments, there remains a balance of Rs. 3,275, which is carried forward, against Rs. 27,775 brought in.

Tata Iron Production

Tata Industries Private Ltd, managing agent of the Tata Iron and Steel Co. Ltd, reports that the total approximate production of iron and steel at the steelworks in Jamshedpur during June 1960 was: pig iron 122,200 tons; steel ingots 123,600 tons; semi-finished steel for sale 31,000 tons; and finished steel 63,200 tons. Production during the month continued to be affected by the inadequate supplies and poor quality of iron ore and coal.

Bombay Market

CLOSING UNDERTONE STEADY

EARLY RISE IN STEEL RETENTION PRICES RUMOURED

Wednesday Evening.

THE Bombay stock market closed with a steady undertone during the past week. Earlier, share prices fell on precautionary profit-taking in view of the strike by Central Government employees. It was also feared that there might be further credit restraints in order to curb speculation as the slack season advances. Towards the close, sentiment improved on bear-covering induced by optimism about the strike situation. Some operators doubted whether the strike would succeed. Steel shares were prominent on rumours of an imminent increase in the retention price of the commodity. The absence of offerings from Lyons Range due to the interruption in communications also promoted steadiness.

Tata Steel improved to Rs. 162 and Indian Iron were quoted at Rs. 24.08. Engineering shares fluctuated narrowly, and Alcock Ashdown were available at Rs. 301. Premier Construction were placed at Rs. 366. Larsen and Toubro were bought at Rs. 45.50. Tata Locomotive were quiet at Rs. 275 in spite of the publication of a satisfactory report. In motor shares, Premier Automobile improved to Rs. 174.50 on a report that the scrip would be added soon to the forward list of the Ahmedabad Stock Exchange. Hindustan Motors were placed at Rs. 21.32. New Standard Engineering were available at Rs. 166.

Routine business was transacted in textile shares because there was a great deal of uncertainty concerning the outlook for the supply of raw cotton. Bombay Dyeing made Rs. 68.90 and Century were dealt in at Rs. 529.50. Kohinoor were bought at Rs. 359.50 and Svadeshi were taken at Rs 252. *Simplex changed hands at Rs. 180 and* Khatau were bought at Rs. 485. Standard came to hand at Rs. 1,270 and Apollo were freely offered at Rs. 1.80. India United Ordinaries were transacted at Rs. 13.68.

Prices of miscellaneous shares moved in pattern with the general trend. Among sugar shares, Belapur were shaded at Rs. 369, as were Phalton at Rs. 192. Walchandnagar Industries were indicated at Rs. 313.75. In the cement group, Associated Cement declined to Rs. 143.75 and Digvijay were offered at Rs. 168. Mining shares were quietly steady, and Shivrajpur Syndicate were taken at Rs. 69. Steamship company shares were quiet, and Scindia Steam declined to Rs. 15.60. Great Eastern Shipping were quoted lower at Rs. 18.08. Bombay Burmah improved to Rs. 650 on replacement buying, but National Rayon reacted to Rs. 557 on profit-taking. Voltas were available at Rs. 271, but Tata Oil were firm at Rs. 84.20. Chemical shares were steady, and Tata Chemical were quoted at Rs. 18.72. Indian Dyestuff were wanted at Rs. 815 and Colour Chem were done at Rs. 485. Ceat Tyre were transacted at Rs. 275 and Gwalior Rayon declined to Rs. 41.

Bank shares improved on hopes of better results for the half-year ended June 1960. Bank of India rose to Rs. 105.30, as did Central Bank to Rs. 51.30. Insurance shares were quiet, and New India Assurance declined to Rs. 62. Vulcan were available at Rs. 18.70.

There was scattered interest in electricity supply company shares and Ahmedabad Electric were quoted at Rs 88. Tata Hydro came to hand at Rs. 108.95 and Bombay Suburban were placed at Rs. 88.50.

Madras Market

SHARES SUBDUED AFTER EARLIER STEADINESS

BUSINESS RESTRICTED BY STRIKE DISLOCATION

Wednesday Evening.

THE Madras stock market closed in a subdued mood during the past week after being steady earlier. The decision of the Stock Exchange authorities that no deliveries of documents would be made after 7th July, 1960, until further notice, due to the strike of Central Government employees, made operators nervous. It was also reported that banks were not willing to discount bills as freely as before. There was a general inclination to await further developments concerning the strike situation. Selected sugar shares attracted notice on good corporate news, but rubber shares met with selling pressure on talk that the Tariff Commission had not recommended any increase in the price of the commodity. Tea and coffee shares showed little variation because of uncertainties about the marketing outlook. Textile shares were hesitant in view of the difficulty concerning the implementation of the recommendations of the Wage Board.

In the banking group, Indian Overseas were quoted at Rs. 175, but Indian met with support around Rs. 175. Andhra were sold at Rs. 99.85, as were Canara at Rs. 80.

Public utility shares were sold freely at lower rates. Berhampur changed hands at Rs. 6.25 and South Madras were taken at Rs. 10. Vellore changed hands at Rs. 11.50 and West Coast were *dealt in at* Rs. 12.

Among sugar shares, E.I.D. were prominent on the payment of an interim dividend of 7.17 percent. Deccan improved on a report that its plant at Samalkot had been sold on favourable terms. It was also thought that the factory in Pugalur was working very well. Mysore were sold at Rs. 56.80, as were Travancore at Rs. 11.80. United Breweries were firm at Rs. 104, but Andhra were available at Rs. 26.50.

In the planting group, Cochin Malabar declined to Rs. 8.25 on the payment of a final dividend of 10 percent, which was below market expectations. Blue Mountain were transacted at Rs. 4.95 and Consolidated Coffee made Rs. 26. Ouchterlony were quoted at Rs. 5.06 and Periakaramalai were available at Rs. 3.67. Balanoor changed hands at Rs. 15.70 and Be Be Rubber were done at Rs. 3.10. Chembra were taken at Rs. 5.55 and Coffee Lands were dealt in at Rs. 25.79. Devashola were done at Rs. 31.50 and Highland came to hand at Rs. 19.25. Kil Kotagiri were steady at Rs. 15.45, as were Lucky Valley at Rs. 11.75. Mercara were taken at Rs. 9 and Midland were transacted at Rs. 12.60. Nilgiri were done at Rs. 7.50 and Parkside were taken at Rs. 27.50. Peermade were dealt in at Rs. 23.25 and Teekoy were quoted at Rs. 7.40. Travancore Rubber changed hands at Rs. 12.75 and Waterfall were bought at Rs. 4.17.

In the textile group, business passed in Lakshmi at Rs. 163 and Madura were quoted at Rs. 32.90. Buckingham declined to Rs. 205 because of the breakdown of the negotiations between the management and workers concerning the implementation of the Wage Board award. Anglo-French were steady at Rs. 110, but Cambodia were sold at Rs. 10. Bangalore Woollen were quoted at Rs. 197 and Kothari were bought at Rs. 12.20 Mettur were dealt in at Rs. 428 and Premier were bought at Rs. 238. Travancore Rayon improved to Rs. 37.25 and Vijayakumar were taken at Rs. 130.

Business in miscellaneous shares declined and prices were lower where changed. Aluminium Industries were available at Rs. 22.80, as were Ashok Leyland at Rs. 8.95. India Cement were shaded at Rs. 6.87 and Forest Industries were quoted at Rs. 3.30. Binny were steady at Rs. 190 and Enfield changed hands at Rs. 19.75. A roomful of hope

THEY ARE WAITING to see a friend ... each heart a mixture of a little anxiety and a lot of hope. Their confidence in the skill and knowledge of the doctor is well-founded — for he is a man dedicated to the service of humanity.

Well-founded, too, is the confidence doctors have in HOECHST—a name that is backed by over 75 years of experience in medicine. Proud of its past, HOECHST is also forging ahead to the future...carrying out valuable research in the field of medical science.

›HOECHST‹ *A 75-year tradition in medicine*

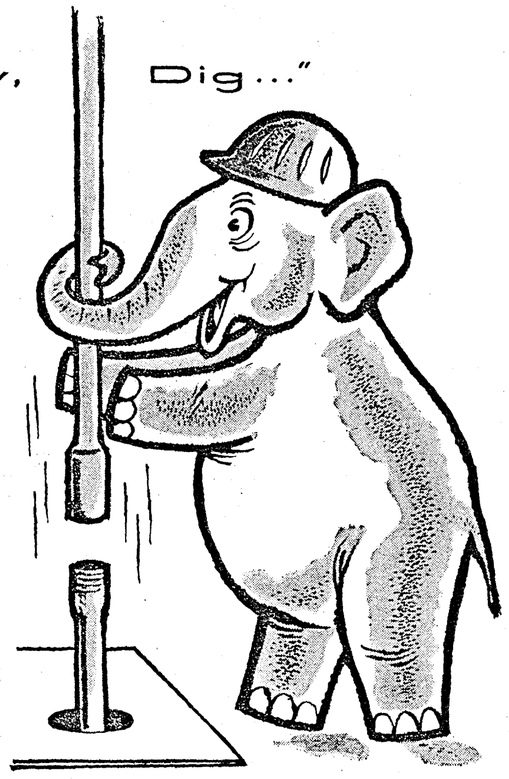
Memoirs of an Elephant—2

"Dig Boy, Dig..."



As I told you before—in the 1880s
I made a great discovery by
stepping into a pool of oil. Soon,
these human beings started
drilling holes into the earth to try
and find more of this precious fluid.
Very hardworking men they were.
All the time, day and night, they used
to be at this drilling job. When
the first well was being drilled I used
to see one Willie Leova Lake
stand at the well site and shout
"Dig Boy, Dig"—I think he was
trying to encourage the workmen.
"Dig Boy, Dig" became such
a familiar phrase in the locality,
that I believe the place eventually
came to be known as "Digboi".
Work on this first oil well was started,
I remember, in 1889. When
they completed it they had taken
14 months—and they had drilled
to a depth of 662 feet. Today,
things have changed completely. The AOC
can drill a 10,000-foot well in less than 10 days. When I asked
one of the AOC men how they are able to do this he tells me it is "experience",
"know-how", "technical development" and a few other things.
One thing more. I think the AOC took the clue from the words
"Dig Boy, Dig" because they have been digging ever since.
Today, about 1000 wells have been drilled by
them in this area—all, they say, to unearth that
precious fluid oil for the Nation's use.

PROGRESS OF THE SECOND PLAN REVIEWED

SUBSTANTIAL BENEFITS FOR CENTRAL EMPLOYEES UNDER RECOMMENDATIONS OF PAY COMMISSION

(FROM OUR NEW DELHI CORRESPONDENT)

THE main difference between propaganda and publicity is that the latter is supposed to be factual. But this dividing line is not usually clear in the official publicity for the plans. In spite of the grand achievements which have been claimed for the second five year plan, there are uncomfortable admissions which should cause some anxiety. The *Progress Report*, for example, claims that the intake capacity of the engineering colleges has increased from 5,937 students a year in 1955-56 to 13,500 students a year in 1960-61. It is also claimed that the outturn from the engineering colleges and technical institutions during the five years will be 21,475. The *Report*, however, does not disclose the number of technical personnel required and how and in what manner it is proposed to meet the growing demand for them. The "achievements" concerning the railways and coal production have been highlighted. It is, however, not stated that steel production is being adversely affected by the shortage of higher grades of coal. Similarly it has not been mentioned that pig iron is not being moved out of the steel plants for want of rail transport.

A review of financial resources undertaken in May 1958 showed that the available resources were likely to be short in relation to the original plan outlay of Rs. 4,800 crores. The estimates then made indicated the level of total resources at around Rs. 4,260 crores over the five-year period. It was also realised that the increase in cost estimates already implied a reduction in physical targets. At that stage, the National Development Council agreed to retain the ceiling for the outlay at Rs. 4,800 crores, but at the same time directed that projects and programmes should be divided into two parts: the first, involving an outlay of Rs. 4,500 crores, was to include projects and programmes directly related to the increase of agricultural production, "core projects" and projects which had reached an advanced stage. Commitments could be made, it said, for these for the rest of the plan period, on the assumption that the resources needed would be found. The second part of the plan, with an outlay of Rs. 300 crores, included the remaining projects, but expenditure on them was to be undertaken only to the extent additional resources became available.

Budgetary Resources

In 1956-57, the yield from budgetary resources was larger than anticipated due to the substantially larger balance from current revenues. The contributions of the railways and the volume of loans from the public and small savings were only slightly lower than the Budget estimates. The magnitude of actual external assistance and budgetary deficits were, on the other hand, significantly lower.

The position of resources in 1957-58 was, however different. Domestic budgetary resources fell short of expectations. Although there was a significant increase in the balance from current revenues, the contribution from the railways and the volume of loans from the public and small savings were much less than expected. External assistance was again substantially lower than the Budget estimates and the volume of budgetary deficit larger. In spite of the considerable tax effort made during the two years, resources available for the plan from domestic budgetary sources did not come up to requirements. It is noteworthy that 1957-58, the year in which the biggest tax effort was made, was also the year of the heaviest budgetary deficit.

In 1958-59, the balance from current revenues declined considerably. Loans from the public and collections through small savings were, however, considerably stepped up, which resulted in almost doubling domestic resources over the previous year. This, coupled with a substantial inflow of external assistance, resulted in a lower budgetary deficit than in the preceding years, in spite of the fact that the development expenditure in 1958-59 was 16 percent higher.

Reorientation of the Tax Structure

Since the beginning of the second plan, the objective of taxation policy has been to reorientate the tax structure to the needs of development planning. In 1956-57, a number of tax changes were introduced at the Centre along the lines suggested by the Taxation Enquiry Commission. These were estimated to yield Rs. 35 crores a year. Further measures of taxation were announced in September and November 1956 (namely, an additional excise duty on cotton cloth, capital gains tax, etcetera), which were expected to yield Rs. 18.5 crores in 1956-57 and Rs. 43 crores in a full year. The total yield from the tax measures of 1956-57 was estimated at Rs. 55 crores for the year and Rs. 81 crores for the full year thereafter. The Central Budget for 1957-58 aimed at a further widening and deepening of the tax base. The yield from additional taxation imposed was estimated at Rs. 93 crores for the year and at about Rs. 107 crores in a full year. With the subsequent concessions granted, and considering that the yield of the wealth tax and of the railway passenger fares tax turned out to be smaller than was forecast initially, the additional tax receipts for the year were about Rs. 73 crores and might be placed at Rs. 85 crores for a full year. Revenue receipts of the Centre for the year 1958-59 were smaller than visualised at the time of framing the Central Budget due mainly to a large drop in Customs revenue.

Additional Taxation in States

In the States, the additional taxation measures in 1956-57 yielded Rs. 11.6 crores. In 1957-58, the additional taxation was of the order of Rs. 30.6 crores—Rs. 14 crores from measures adopted in 1956-57 and the balance of Rs. 16.6 crores as a result of measures adopted in 1957-58. In 1958-59, yields from additional measures of taxation amounted to Rs. 50.6 crores, of which only Rs. 9.8 crores accrued from fresh measures, the rest of the Rs. 40.8 crores being the receipts from measures introduced in the previous two years. In the States, the general sales tax and tax on motor-vehicles and on passengers and goods contributed the bulk of the receipts from additional measures of taxation over the three years 1956-59, their contribution, respectively, being 58 percent and 16 percent of the total. Receipts from agricultural income tax, tax on motor spirit and diesel oil, land revenue and irrigation rates and electricity duties ranged between 3 percent and 5 percent of the total yield during 1956-59. Contribution from the betterment levy was negligible, being only Rs. 30 lakhs out of a total of Rs. 92.8 crores collected by the States from the various sources during the three years 1956-59. A number of States failed to adopt additional measures of taxation. At the end of the three years, 1956-59, Bihar, Madhya Pradesh, Orissa, Punjab and Uttar Pradesh were generally lagging behind and were not expected to achieve the five-year targets set earlier. Uttar Pradesh, although lagging behind the targets, contributed in absolute terms the highest revenue from additional measures of taxation. The yield in most States that did levy additional imposts was generally small. The performance of the Centre compared more favourably with the plan targets than the contribution of the States. It is also noteworthy that over the three years 1956-59, Central assistance to the States was of the order of Rs 568 crores. This was over 54 percent of the total plan outlay of the States during the same period.

Public Loans and Small Savings

The yield from public loans at the Centre and the States amounted to about Rs. 78 crores and Rs. 68 crores, respectively, in 1956-57, Rs. 68 crores and Rs. 10 crores in 1957-58, and Rs. 182 crores and Rs. 56 crores in 1958-59, making a cumulative total of Rs. 462 crores. Borrowings on this scale strained the market considerably and the securities of a number of State Governments were quoted at a sizable discount. The Reserve Bank had to give a good deal of support to the capital market and some of the State Governments had to repurchase their own securities.

Net receipts from small savings amounted to Rs. 59 crores in 1956-57, Rs. 70 crores in 1957-58 and Rs. 83 crores in 1958-59. The collections in 1956-57 were actually about Rs. 7 crores less than in the previous year, and thus a downward trend was evident. This was perhaps largely due to the general stringency in the money market. A number of steps were taken in 1957-58 to intensify the small savings drive further. The rate of interest on small savings was also increased. It was, however, only in the latter part of 1957-58, that the small savings collections showed an improvement over the level for the corresponding period of the previous year. This improvement was steadily maintained in the subsequent year also. The contribution from unfunded debt and miscellaneous receipts on capital account represents the net effect of receipts and disbursements under a number of items The actuals for 1956-57 showed a net outflow of Rs. 22 crores, which was enhanced to a net outflow of Rs. 87 crores in 1957-58. In the case of the Centre, the net outflow is explained mainly by the expenditure incurred on State trading, compensation payments to displaced persons and other non-plan items. In the case of the States, the net outflow in 1956-57 was partly due to expenditure of a development nature taken up outside the plan. The tendency of outflow was, however, arrested for the Centre in 1958-59, when a net inflow of Rs. 18 crores was registered.

The contribution of the railways towards the financing of their development programme in the first three years of the second plan, estimated at about Rs. 126.4 crores, compared favourably with the plan target of Rs. 150 crores. This improvement is accounted for mainly by the surcharge of 6¼ percent which was levied on all freight traffic, with the exception of foodgrains and certain other items.

External Aid

The following abstract summarises the position concerning the authorisation and use of external assistance, during the three years 1956-59:

(Rs. crores)

	Unutilised balance from the first plan	Fresh authorisation from 1st April, 1956 to 31st March, 1959	Total available for the first three years of the second plan	Extent of utilisation from 1st April, 1956 to 31st March, 1959	Balance as at the end of the year 1958-59
Grants	72.37	125.53	197.90	97.42	100.48
Loans	123.96	836.72	960.68	363.23	595.45
Total	196.33	962.25	1,158.58	462.65	695.93

During this period, two further agreements were executed by the Government of India with the U.S. Government under Public Law 480 for the supply of U.S. surplus agricultural commodities against payment in rupees. The total value of commodities already received and paid for up to the end of June 1959, is approximately Rs. 265 crores, of which an amount of Rs. 185.40 crores as loans and Rs. 43.57 crores as grants are to be made available to the Indian Government for mutually agreed projects in the five year plans. Projects benefiting by this assistance under various agreements executed up to August 1959 included 13 irrigation and power projects, three industrial finance corporations and also the malaria eradication programme.

Under the Development Loan Fund established by the U.S. Government in 1957, India obtained substantial amounts of loans—all repayable in rupees—and two allocations of such loans in the year 1958-59 alone represented about 25 percent of the total funds appropriated for the D.L.F. during the fiscal years 1958 and 1959. A credit of $150 million from the Export-Import Bank of Washington was also negotiated with the U.S. Government early in 1958 and the loan argeement with the Bank was signed on 12th June, 1958. This credit is available for procurement in the United States of capital equipment, machinery and related services needed for such programmes as irrigation and reclamation, power development, transport and communications in the public sector and mining and certain selected industries like aluminium, textiles, chemical engineering, motor-vehicles, coalmining and machine tools in the private sector. Assistance received from Russia is mainly in the form of long-term credits for the Bhilai steel plant and other development projects under the five year plans. The total amount of credits for which agreements have been signed up to September 1959 is 2,709 million roubles (approximately Rs. 322.53 crores).

Russian Credit

The Russian Government has also provided gifts of machinery and equipment, free services of experts and training of Indians for the mechanised farm in Suratgarh and the Indian Institute of Technology in Bombay. The aid provided in the form of machinery and equipment is valued at Rs. 1.22 crores. Under an agreement concluded on 9th November, 1957, the Russian Government has agreed to give a credit of 500 million roubles (about Rs. 59.53 crores) for the establishment of (i) a heavy machine-building plant, (ii) an optical and ophthalmic glass factory, (iii) a thermal power station in Neyveli, (iv) a coalmining machinery plant and (v) other coalmining development enterprises.

Under the technical co-operation scheme of the Colombo Plan, the U.K. has so far agreed to provide £350,000 (approximately Rs. 47 lakhs) for the supply of equipment and books for research and training in various fields. A contract for the establishment of an integrated steel plant in Durgapur with a capacity of 1 million tons of ingot steel was entered into with a consortium of British steel manufacturers and allied interests in October 1956. The U.K. Government has granted a loan of £15 million (Rs. 20 crores) towards the cost of the steel plant. In addition, the Indian Steel Works Construction Company, London, which has been entrusted with the erection and construction of the plant, has offered to arrange with a syndicate of British bankers credit for £11.5 million (Rs 15.33 crores).

A number of agreements were entered into with the West German Government in 1958, providing for assistance to various development projects in India. Loans have been given primarily for financing the Rourkela steel project. Some credit is also available for facilitating other imports for development purposes. The West German Government has agreed to provide grants of machinery and equipment valued at Rs. 2.09 crores for the prototype production-*cum*-training centre in Okhla and for the Indian Institute of Technology in Madras.

The balance from the World Bank loans at the end of the first plan period was about Rs. 3 crores and Rs. 21 crores for the private and public sectors, respectively. Fresh authorisations to the extent of Rs. 65.38 crores for the private sector and Rs. 118.38 crores for the public sector were made during the period April 1956 to March 1959. During this period, loans of about Rs. 93 crores were used in the public sector and about Rs. 70 crores in the private sector.

The first loan agreement between Japan and India was signed during 1957-58. The yen credit authorised up to the end of 1958-59 amounts to Rs. 27.61 crores, of which only Rs. 25 lakhs had

been drawn during the period. About Rs. 2.72 crores of Ford Foundation grants were used during the three years, leaving an unused balance of Rs. 4.69 crores.

Gross Fixed Capital Formation

It has been estimated that the gross fixed capital investment in the organised manufacturing industries in the private sector during the two years 1956-57 and 1957-58, amounted to Rs. 370 crores. The corresponding investment during 1958-59 is estimated at Rs. 193 crores. Major investments during the year took place in the iron and steel industry, followed by cotton textiles, sugar, engineering, chemicals, cement and paper. There was also substantial new investment in the petroleum refining industry. Total direct Central and State Government loans and participation in the share capital of private industrial undertakings, amounted to Rs. 1.3 crores in 1958-59, compared with Rs. 3.2 crores in 1957-58, and Rs. 7.7 crores in 1956-57. The aggregate assistance in the three years thus amounted to Rs. 12.2 crores, against Rs 20 crores visualised for the entire second plan period. The loans sanctioned by the institutional agencies such as the Industrial Finance Corporation, the State Finance Corporations, the Industrial Credit and Investment Corporation and the Refinance Corporation in 1958-59 were also somewhat lower than in the previous year.

Coal Target and Shortfalls

The trend of coal production since 1955 is given below, against a target of 60 million tons, set for the second plan period:

Year			Million tons
1955	...	...	38.22
1956	...	...	39.43
1957	...	...	43.50
1958	...	...	45.34

During the first three years of the plan period, additional production amounted to a little over 7 million tons. Production would probably have been higher in 1956 and 1957 but for a prolonged strike in the Raniganj coalfields in 1956 and heavy rains which dislocated the industry during the latter part of the same year. Shortage of wagons and foreign exchange difficulties also contributed in some measure to the reduction in output. While the additional production visualised in the public sector, from existing State collieries has been achieved in full, the production expected from new collieries will begin to fructify in a large measure only during the later stages of the plan period. During the five years, attention was focussed mainly on the acquisition of virgin areas and unworked areas of coal leases, and prospecting these areas with a view to preparing plans for their development Apart from expanding production in the existing collieries, new developments were initiated in the Bhurkunda and Kurasia collieries and new collieries were established in Korba, Kathara and Saunda, which started producing in a small way. Production from Singareni Collieries also registered a substantial increase. Steps were also taken to establish training schools for technical personnel required for the public sector programme. In view of the increasing importance of the public sector in coal, a new organisation—the National Coal Development Corporation—was set up in September 1956. This was charged with the responsibility of administering existing State collieries and opening and administering new collieries to be established in the public sector. Of the four washeries planned, the washery in Kargali, which is to supply washed coal to the Rourkela and Bhilai steel plants, went into production in November 1958. It will be some time before this washery can be expected to start producing to its full capacity.

Tractor Manufacture

The Indian Government's policy on tractor manufacture has recently undergone some change. Whereas previously only tractors in the 12 to 18 draw bar H.P. range were considered necessary to meet immediate needs, it is now felt that substantial capacity in the 20 to 30 and 35 to 45 ranges will be required. Fords recently made an offer to the Indian Government to erect a factory, the whole cost of which was to be borne by them and to meet the cost of all imported components required to be imported until the production became 100 percent indigenous. The conditions which made this offer unacceptable to the Indian Government were: (i) 100 percent capital control by Fords, and (ii) that Fords wanted a monopoly of tractor production in this country. The scheme would have involved an investment of at least Rs. 10 crores. The Indian Government has now invited the existing licence holders to submit proposals for the 20 to 30 and 35 to 45 draw bar H.P. ranges—and has invited proposals from newcomers for those ranges; the latter are not allowed to apply for the 12 to 18 range. The position may be tabulated as follows:

Tractor range draw bar H.P.	David Brown Mahindra and Mahindra	Massey Ferguson, India (Tractors) Pvt. Ltd. (Massey's and Simpsons)	Eichers, West Germany
12—18	already licensed (2D)		already licensed
20—30 }	applied	licence under consideration	
35—45 }			

It is likely that both Eichers of West Germany and Zetors of Czechoslovakia will be applying for a licence to manufacture in the upper ranges.

Strike by Central Government Employees

The strike by Central Government employees began on the midnight of 11th-12th July, as scheduled. All efforts at a last-minute settlement through intermediaries failed. The labour leaders' two basic demands, which the Government did not concede, were that the minimum wages should be based on needs, as defined by the Indian Labour Conference of 1957, and that dearness allowance should be linked to the cost of living index. The Government claims that it never accepted that recommendation of the Labour Conference. The draft of the third five year plan, published on 6th July, however, says that the "Government has assumed responsibility for prescribing minimum wages under the Minimum Wages Act."

Only a fortnight ago, the Union Labour Minister, Mr. Gulzarilal Nanda, threatened the Madras textile millowners that he would enforce the decisions of the Textile Wage Board by an Ordinance if the report was not implemented by them voluntarily. It has since been implemented. The Textile Wage Board award has linked dearness allowance to the cost of living. It thus appears that the Central Labour Ministry is attempting to evolve two standards, one for the public sector and the other for the private sector. The official argument is that since the private sector is allowed to rationalise, it should pay a dearness allowance which is linked to the cost of living. What prevents the Government from carrying out a measure of rationalisation in its own services? The Central Labour Ministry's policy is now proving a boomerang against the Government itself.

Appointment of the Second Pay Commission

The Second Pay Commission was set up in September 1957, following the threat of a strike by the posts and telegraphs employees for enhanced emoluments. There were eminent economists among the members of the Commission, which was presided over by a judge of the Supreme Court. The Central Government employees demanded interim relief pending the submission of the final report, and the Commission submitted an interim report in December 1957 recommending a grant of Rs. 5 a month for low-paid employees. This recommendation was immediately accepted by the Government and the interim grant was extended to all the low-paid employees. The final report was received in August 1959. The report, together with the Government's decisions on some of the major recommendations contained in it, was published on 30th November, 1959. Since then, decisions on a few more recommendations have been announced. In these, the Government has accepted the minimum remuneration and the rates of dearness allowance recommended by the Commission. But the assignment of appropriate scales of pay to the various categories of posts in the new scales, has not been completed. This is because there are hundreds of categories whose scales of pay have to be rationalised and fitted into the typical scales recommended by the Commission. The job obviously is a stupendous one. This process, however, has now reached completion, and the Government's decision is likely to be announced soon.

In February 1960, agitation for a better deal for the Central Government employees was started by the Confederation of the Central Government Employees' Unions. Later on, the All India Railwaymen's Federation took an active interest in the agitation and staged a demonstration outside Parliament House on 20th February. In the first week of April 1960, representatives of the Confederation of Central Government Employees' Unions, the All-India Railwaymen's Federation, the All India Defence Employees' Federation and the National Federation of Posts and Telegraph employees met at a convention in Bombay and formed a Joint Council of Action.

Demand by Employees

The convention put forward the following demands and authorised the Joint Council of Action to take steps, including direct action, if necessary, for the realisation of these demands.

(i) Payment of dearness allowance on the basis of the first Pay Commission's recommendations.

(ii) The grant of a national wage for Central Government employees in the light of the principles enunciated by the fifteenth Labour Conference, and the determination of differentials between Classes IV, III, II and I, as well as between unskilled categories on a national and equitable basis.

(iii) The appointment of a standing board consisting of equal representation of organised labour and the concerned Ministries, with a neutral chairman, to settle disputes relating to scales of pay, and other service conditions commensurate with the diversity of occupation, responsibilities, risks and hazards, connected with the duties of various categories in different departments and Ministries.

(iv) No curtailment of any existing amenities, rights and privileges.

(v) Reference to arbitration of disputes referred by either parties and the recognition of one union in one industry by the determination of the representative character of a union through a referendum held bi-annually.

(vi) Withdrawal of Rule 148 and Proviso to Rule 1708 of the State Railway Establishment Code, Vol. I and Rules 4(A) and 4(b) of Civil Service (Conduct) Rules and judicial enquiry into all cases of arbitrary removal from service under the above Rules.

It is noteworthy that all the above demands were exactly those formulated by the All India Railwaymen's Federation at its General Council meeting held in February 1960.

The two main demands which the Joint Council of Action wants to be accepted by the Government forthwith relate to (1) the need-based minimum pay, and (ii) dearness allowance linked to the cost of living index. These two demands were pressed by the unions of Government employees before the second Pay Commission, which considered them in considerable detail and came to the following conclusion: "A need-based minimum wage of the order of Rs. 125 p.m. proposed by the employees is not feasible, economically and financially."

Recommendations of the Commission

The Commission recommended that the minimum remuneration payable to Central Government employees should be increased from Rs. 75 to Rs. 80 a month. The Government has accepted this rise recommended in the minimum wage. As far as dearness allowance is concerned, the Commission was emphatic that "there should not be automatic adjustment of dearness allowance with the price index". The Government has accepted the rates recommended by the Commission for employees drawing pay below Rs. 300. It is evident that both the demands of the Joint Council have been considered by a neutral and independent body like the Pay Commission, which has come to the conclusion that both the demands cannot be accepted. In the face of such a categorical rejection by a high-powered Commission, it was unrealistic on the part of the Joint Council to press the demands. The Government would set a bad precedent if the Pay Commission's recommendations were ignored or the whole issue was reopened. Secondly, people like Supreme Court judges would not ever undertake such duties in future. Thirdly, it would be bad both for the Government and for the employees not to accept the Commission's recommendations, which were given after full consideration and deliberation. Fourthly, the Government cannot either bypass or ignore what a Commission has recommended as that would put an end to all such approaches in future. Fifthly, even as it is, the recommendations of the Pay Commission would ultimately cost the Central Government about Rs. 40 crores a year. An addition of one rupee to the earnings of an employee would increase the expenditure of the Central Government by about Rs. 2 crores.

The Joint Council of Action is composed of the All India Railwaymen's Federation with Messrs Guruswamy and Peter Alvares taking the lead; the Confederation of Central Government Employees' Unions is represented by Mr. Nath Pai; the All India Defence Employees Federation led by Messrs S. M. Bannerji and S. M. Joshi, and the National Federation of Posts and Telegraph Employees is led by Mr. Anjaneyulu and others. All these federations are dominated by persons with leanings towards the P.S.P. or the Communist Party. It is understood that the communist leaders feel that the agitation by Central Government employees will provide the Party with a good opportunity to improve its position among them. The All India Trade Union Congress and the P.S.P. have been openly supporting the agitation. The strike notices were served by the unions affiliated to the federations which constitute the Joint Council. The employees in such public utility services as the railways, posts and telegraphs, defence installations and other Central Government offices, are directly involved.

The daily earnings of the railways are estimated to be about Rs. 1.15 crores. On the posts and telegraphs side, the daily earnings are about Rs. 21 lakhs. The daily loss of both these sectors, if affected, would be of the order of Rs. 1.5 crores a day. In addition to this national loss, the employees also stand to lose in terms of their wages. The daily wage bill on the railways is estimated at about Rs. 46 lakhs and in the posts and telegraphs the corresponding amount is about Rs. 12 lakhs. In other words, the workmen on the railways and the posts and telegraphs stand to lose in terms of wage Rs. 58 lakhs a day.

There is every likelihood of the law and order situaution being affected. It may involve seeking the assistance of troops also.

Decisions of Government

The Government of India issued on 30th November, 1959, a resolution embodying its decisions on some of the major recommendations of the Pay Commission. Accepting the recommendation of the Commission that the minimum remuneration of a Central Government employee should be raised from Rs. 75 to Rs. 80 a month, it decided to split the remuneration of Rs. 80 into a basic pay of Rs. 70 and a separate dearness allowance Rs. 10. This rate of Rs. 10 would apply to sa' below Rs. 150 and thereafter, there would be a dearness allowance of Rs. 20 a month for salaries up to Rs. 300 a month, with marginal adjustme for salaries up to a total of Rs. 320. About 76 Central Government employees, constituting about 40 percent of the total strength, stand to benefit from the decision to accept these recommendations. This class of employees includes

cleaners, packers, letter-box peons, telegraph messengers, sweepers, peons, chowkidars, malis, etcetera. The real benefit which they will get will be substantially greater than what the increase in the minimum remuneration from Rs. 75 to Rs. 80 may suggest. The 50nP increment a year, which obtained in the lowest grade, has been increased to a minimum rate of Re. 1 a year. The scale has also been lengthened so that an employee can now expect to reach a higher maximum. In place of the existing scale of Rs. 30-½-35 (basic pay), an employee will now be switched on to the scale of Rs. 70-1-85 (basic pay). Central Government employees will thus have a higher start, a double rate of increment and a longer scale.

Moreover, their salaries in the new scale will be fixed on a point-to-point basis subject to certain conditions. As an illustration, the example of an employee, who is in the old scale (Rs. 30-½-35) and has put in 10 years of service, may be taken. In the old scale, he would have reached the maximum of Rs. 35 after completing 10 year of service. But when he is placed in the new scale accepted by the Government, he will get a basic pay of Rs. 80, namely, the basic minimum of Rs. 70 plus ten increments at the rate of Re. 1 a year. He does not stop there; he can go up to the maximum of the scale, namely, Rs. 85 because of the longer scale accepted by the Government. This increase in basic pay will benefit him in other ways also. For instance, his pension and retirement gratuity will be calculated on the higher basic pay that he will draw.

The New Minimum

This new minimum for Government employees compares favourably with the rates of remuneration in similar employment outside the Government. In fact, the Government minimum of Rs. 70 is attractive when compared with the minimum wages fixed under the Minimum Wages Act which, with a few exceptions of little significance, vary between Rs. 30 and Rs. 52.50. In the case of organised industry, it has been computed that the average minimum wage of an unskilled worker is likely to be not more than Rs. 70. There are, of course, industries where a higher rate of remuneration obtains. For instance, in the textile mills in Bombay, the total monthly remuneration of an unskilled worker is about Rs. 110. But it should be remembered that Central Government employees in "A" class cities are entitled to a city compensatory allowance of Rs. 7.50 to compensate for the higher cost of living and a house rent allowance of Rs. 10.

The Government has also accepted, with some improvements, the Commission's recommendations concerning house rent and compensatory allowances and leave travel concessions.

There are two kinds of concessions provided by the Government to its employees: (1) provision of rent-free quarters or grant of a house rent allowance in lieu of it; and (ii) grant of a house rent allowance in certain classes of cities to compensate the employee for the high rents in those cities.

The latter is in fact a supplement to the dearness allowance. The Government has accepted the recommendation of the Pay Commission that in "A" class cities (Bombay and Calcutta), employees drawing less than Rs. 75 as pay should get a house rent allowance of Rs. 10 a month and those drawing between Rs. 75 and Rs. 100 an allowance of Rs. 15.

Some Modifications

The Government, however, has modified the Pay Commission's recommendation concerning employees in the pay ranges Rs. 100-Rs. 200 and Rs. 200 a month and above, to the advantage of these employees. While under the Pay Commission's recommendations, employees drawing between Rs. 100 and Rs. 200 would have got only a flat rate of Rs. 20 as house rent allowance, they will now receive 15 percent of their pay as house rent allowance, subject to a minimum of Rs. 20. In other words, an employee drawing Rs. 200 a month will gete an allowance of Rs. 30, compared with the flat rate of Rs. 20 recommended by the Commission. The Government has also fixed the rate of house rent allowance for employees in the pay range Rs. 200 to Rs. 499 at 15 percent of pay, compared with 10 percent suggested by the Commission.

Where quarters are provided by the Government, it has been decided that the maximum rent recoverable should be reduced from 10 percent of pay, as at present, to 7½ percent for employees drawing less than Rs. 150. This is intended to neutralise the effect of absorption of dearness allowance in the pay. The Pay Commission has estimated that about 637,000 employees (excluding those in the Northern Railway for whom no information is available), namely, 36 percent of the total staff of the Central Government get the benefit of this allowance.

The Government has accepted the recommendation of the Pay Commission that in "A" class cities, employees drawing less than Rs. 150 a month should get compensatory allowance at the rate of 10 percent of pay subject to a minimum of Rs. 7.50 and a maximum of Rs. 12.50. The minimum compensatory allowance so far paid was Rs. 5 for the lowest grade employees. As for the Commission's recommendation for employees drawing between Rs. 150 and Rs. 300 a month, the Government has modified it in favour of the employees. While accepting the Commission's suggestion that these employees should get compensatory allowance at the rate of 8 percent of their pay, the Government has done away with the ceiling of Rs. 17.50 prescribed by the Commission. Thus an employee whose pay entitles him to get a higher compensatory allowance than Rs. 17.50 will receive the higher amount, provided it does not exceed 8 percent of his pay. For instance, an employee drawing Rs. 300 will get a compensatory allowance of Rs. 24, compared with Rs. 17.50 which is the maximum recommended by the Commission.

Compensatory Allowances

Likewise, the Government has increased the rate of compensatory allowance payable to employees drawing over Rs. 300 to 8 percent of pay, instead of 6 percent recommended by the Commission, subject to a maximum of Rs. 75.

The object of the leave travel concession is to assist employees to go to their home towns to discharge their social and domestic obligations. Although the concession is available only for journeys beyond certain prescribed miles, the extent of concession allowed in the case of longer journeys is as much as 90 percent of the train fare, not only for the Government servant but also for members of his family. The Government has accepted the recommendation of the Commission that this concession should not be restricted only to journeys by rail, as there are employees who come from places far away from the railheads, namely, those who come from Himachal Pradesh, Garhwal or Kumaon. The Government has accordingly decided that employees whose home towns are not connected by railways should be allowed the travel concession for journeys performed between their homes and the nearest railway station.

As pointed out earlier, Central Government employees will derive considerable benefits in the shape of gratuity and retirement pension provision, consequent on the reapportionment of the total remuneration betweeen pay and dearness allowance. The Government has liberalised the rules relating to retirement benefits so as to permit the period of temporary service of an employee, which is followed by permanent service, to be counted in full instead of half as at present. Rules relating to death-cum-retirement gratuity have also been liberalised. If a Government servant dies after the completion of 20 years of service, his family is allowed a pension equal to half the superannuation pension admissible to the officer at the time of death but subject to a maximum of Rs. 150 a month and a minimum of Rs. 30 a month. Family pension is also allowed for a specified period to the family of a pensioner, who dies within five years of his retirement. In special cases, family pensions are also granted to families of deceased Government servants who have rendered qualifying service between ten and 20 years. The Government has also increased the amount of minimum gratuity admissible to the family of a permanent employee who dies before completing five years of service, but after completing one year of service, to six months' salary.

The Financial Effect

The financial effect of the Pay Commission's recommendations is roughly estimated as follows:

(A) Interim relief given on the Pay Commission's recommendations in 1957	Rs. 12 crores.
(B) Immediate effect of the recommendations concerning pay, allowances and pension already accepted, (excluding defence personnel).	About Rs. 20 crores (previously this figure was assessed at about Rs. 18 crores)
(C) Improvements in family pension scheme, contributory health service scheme and educational and canteen facilities, if accepted by the Government. (The decision has not been taken yet).	about Rs. 4.70 crores
(D) Immediate effect of the extension of the benefit to defence service personnel	about Rs. 7 crores
(E) Ultimate effect of pay, allowances and pensionary increases	Rs. 31 crores as against Rs. 20 crores with immediate effect as in (B) above
(F) Total immediate effect (including C and D) also including interim relief	Total about Rs. 44 crores

The total ultimate effect, including interim relief, will be as follows:

	Rs. crores
Pay and allowances	25
Retirement benefits	6
Interim relief	12
Improved family pension scheme	1
Extension of contributory health service scheme	3
Educational and canteen facilities	0.70
Extension of benefit to defence personnel	7
Total	55

Dearness Allowance

The Pay Commission has advised against linking the dearness allowance with the cost of living index, by pointing out that in a developing economy, compensation to fixed income earners for the decline in the real value of their incomes consequent on a rise in the price level should not be given irrespective of the situation in which prices rise or of broader national requirements. It is not the rise in prices, but the cause of it, which should be a material factor in deciding whether there should be compensation, and if so, to what extent. Such freedom of decision, the Commission emphasised, will not be possible if a precise link is established between prices and dearness allowance. "The economic consequences of compensation", it observed, "if given, may also vary according to the state of the economy at a particular point of time. If the inflationary pressure is already severe, further addition to income may aggravate the situation. Moreover, the claim of employees for compensation is only one of the claims on the financial resources of the Government and we do not wish to make a recommendation which would, by implication, accord priority to that claim over all other competing claims, including those of the investment essential for the country's advancement and of expansion of social benefits which the employees of Government would share with the rest of the community." The Commission, however, has suggested that if during a period of 12 months, the index remains on an average 10 points above 115, the Government should review the position and consider whether an increase in the allowances should be allowed and, if so, at what rate.

The Need-based Minimum

As for the other main demand for a need-based minimum wage, it should be remembered that while the Indian Labour Conference agreed that the minimum food requirements should be calculated as recommended by Dr. Aykroyd for an average Indian adult of moderate activity, it did not say which one of the three approved diets of Dr. Aykroyd, namely, (1) the optimum diet, (2) the adequate or balanced diet and (3) the improved diet, should be adopted for the purpose of calculating the minimum wage. The Commission obtained expert medical and scientific opinion on the subject and came to the conclusion that as against a net intake of 3,000 calories recommended by Dr. Aykroyd, the calorific value of a balanced diet can well be about 2,600. It obtained from experts a diet schedule capable of providing the requisite calories and other essential nutrients, worked out within the limits of the country's present output of foodstuffs. The cost of such a diet plus the value of the requirements of cloth, housing, etcetera, as recommended by the Indian Labour Conference, were worked out by the Pay Commission and this formed the basis of the minimum wage it recommended. In laying down norms for calculating a need-based minimum wage, the fifteenth Indian Labour Conference also clearly stated that "wherever the minimum wages fixed are below the norms recommended, it would be incumbent on the parties concerned to justify the circumstances which prevented adherence to the aforesaid norms."

Strike Banned

The Government promulgated an ordinance on the eve of the strike, which made voluntary stoppage of work in various essential services illegal.

Liaison Officers

Instructions have been issued to dismiss from service all employees, who participate in the strike; all temporary staff can be dismissed summarily and permanent members of the staff are to be issued with "show cause" notice. This is in addition to the penalty imposed on strikers by the Ordinance. It is anticipated that the heads of departments will use this opportunity to get rid of the superfluous, inefficient and indisciplined members of the staff and rationalise the staff position. The Government has posted the following five senior secretaries to function as liaison officers between the Centre and the States, and also as its own advisers to take all such actions concerning the Central services as the national emergency demands: Mr. S. Ranganathan, for Madras, Andhra and Mysore; Mr. S. S. Khera, for West Bengal and Assam; Mr. Shanker Prashad for Uttar Pradesh and Bihar; Mr. Sachdev for Punjab and Rajasthan; and Mr. P. N. Thapar for Marhastra and Gujarat.

MR. AMORY MAY RESIGN SHORTLY

MAJOR CABINET RESHUFFLE EXPECTED

(FROM OUR LONDON CORRESPONDENT)

THE Finance Bill will have had its third reading in the House of Commons at the end of this week. It must then clear the Lords, and receive the royal assent. By then Mr. Amory, the U.K. Chancellor of the Exchequer, will be free to resign, as he has long wanted to do. While the Finance Bill is with the Lords, the Commons have had a debate on the economic situation recently. Changes at the U.K. Treasury may not formally be made before Parliament adjourns for the summer recess, and Mr. Macmillan may still try to keep Mr. Amory in the Government in a less exacting capacity—perhaps as a non-departmental Minister in the House of Lords. But if, as has been suggested, Mr. Amory is eager to get back to Tiverton and the family business, he might prefer a clean break with office. It is believed at Westminster that the Prime Minister will carry out a fairly extensive reconstruction of the Government when Mr. Amory leaves the Treasury by about the end of this month. The original assumption was that Mr. Macmillan would merely replace Mr. Amory and restrict consequential changes to the minimum. Apparently, he has now decided to make a reshuffle of various other posts, rather than wait until the autumn for a second instalment of promotions and transfers.

Sterling Area Reserves Rise

The June increase of £12 million in the sterling area's reserves of gold and convertible currencies was the fifth successive rise, and it brought the total holdings to £1,033 million, a gain of £56 million from the level at the end of 1959. The reserves were still at the end of June £100 million below the figure in the same month of last year, but against this fall must be set the big repayments of debt, particularly to the U.S. Export-Import Bank, which took place in the last quarter of 1959. The net rise in June takes account of three special payments—£5 million to the International Monetary Fund, £2 million to bilateral creditors outstanding under the European Payments Union, and £2 million for half-yearly interest on the European co-operation and mutual security loans from the United States.

It is known that there has been some improvement in the reserves since the increase of Bank rate to 6 percent on 23rd June. This implies that up to that date, the performance may not have been satisfactory and the inference is that the U.K. Chancellor may have had the external position very much in mind when the exact timing of the Bank rate change was settled. If there has been a reversal in the trend of net payments during recent days, that fact will go far to answer criticism that the latest Bank rate move is premature. During the past month, there was a substantial move into the deutschemark but not a corresponding drain from the sterling area reserves. In the week after 23rd June, the United States lost $133 million of central reserves. Some of this may have come to London because of the higher interest rate, but a part of this loss may correspond to West German gains.

Fall in Hire-purchase Business

The U.K. Government has certainly succeeded in checking the expansion of hire-purchase business. Sales of goods on hire-purchase in May, the first month after controls were brought back, were 3 percent lower than in the same month of last year. In the first four months of this year, they were 18 percent higher. As previous experience has shown, and the May figures confirm, hire-purchase restrictions are the sharpest weapon in the Government's armoury. The total debt outstanding under hire-purchase agreements rose by £15 million in May to £964 million. In April, the rise in the debt was £29 million. Although the increase in May was barely more than half that of April, it probably does not fully reflect the drop in new hire-purchase business in May.

Out of the total debt, £341 million is owed directly to shops selling household goods, and the remaining £623 million to hire-purchase finance houses. The figure for shops is the same as at the end of April, but there was a rise of £15 million in the debt held by finance houses (the whole of the increase in the May total). So far shops have been harder hit by the controls than the finance houses. The former's hire-purchase sales fell by 23 percent in May below the May 1959 figure. They also appear to have had a leaner time during the first four months of this year when hire-purchase sales were rising fairly rapidly (the figures for the period suggest a rise of only 2 percent), but many shops channel their credit business to finance houses and the aggregate figures are not an accurate guide to the pace of their hire-purchase business

Hire-purchase sales of motor-cars, for which June figures were published at the same time, are also dropping. According to *Hire-purchase Information*, the number of hire-purchase contracts for motor-vehicles was 142,022 last month, compared with 155,046 in May and 167,919 in June last year. Stories are numerous of the difficulties of the second-hand motor-car dealers since hire-purchase controls returned and the figures seem to confirm them. Contracts for used motor-cars in June were only 4,167 fewer than in May but 15,426 fewer than in June last year. Sales of new motor-cars on hire-purchase dropped to 13,958 from 16,857 in May. In June last year, they totalled 14,193.

Exchequer Returns

For the quarter just ended, the nation's ordinary revenue amounted to £1,118.7 million, which is about £8 million more than in the corresponding quarter of 1959. Almost inevitably, expenditure rose much more steeply, the total ordinary outlay being £1,321.8 million, or £121.8 million more than last year. Income tax brought in £21 million less at £321.2 million, but this is not significant at this time of year. Receipts from profits tax were a little lower at £48.6 million, against £53.4 million. The big revenue gains were in Customs, motor-vehicle and excise duties, and radio and television licences. Advances to the nationalised industries declined from £80.75 million last year to £69.35 million. But £23 million was expended by the civil contingencies fund, which disbursed nothing in the corresponding quarter of 1959.

The feature of the returns is that they show a deficit "above the line" of £203.058 million, compared with that in the same period last year of £89.266 million. The gap has widened because Government expenditure has risen quite sharply, while tax revenue has increased hardly at all. No particular significance can be read into the large deficit; the first quarter's figures are no guide to the eventual outcome. The deficit "below the line," where the main capital expenditure items lie (nationalised industries' spending, etcetera) has diminished from £148.966 million to £105.804 million. The overall deficit at the end of the quarter is thus £308.862 million, against £238.232 million.

Record Orders for Tools

Britain's machine tool industry did a record volume of business in March. Orders booked for new metal-working machine tools reached £16.499 million compared with £5.334 million in March last year. Deliveries were also substantially higher at £8.9 million, against £7.227 million. Most of the new orders came from the home front, to the value of £13.132 million compared with £3.614 million in March last year. Orders for export were nearly doubled at £3.367 million. The pace slowed a little in April but the new orders figure of £12,436 million still represents a great improvement on the April 1959 level of £5.99 million. Deliveries during the month were slightly down on those of April last year at £6.42 million, compared with £6.427 million, but this difference could well be accounted for by the change incidence of the Easter holiday. These figures present a very much more cheerful picture of the machine tool industry than seemed possible a year ago. The value of orders on hand at the end of April was nearly 60 percent above that of July 1959.

Tractor Exports Rise

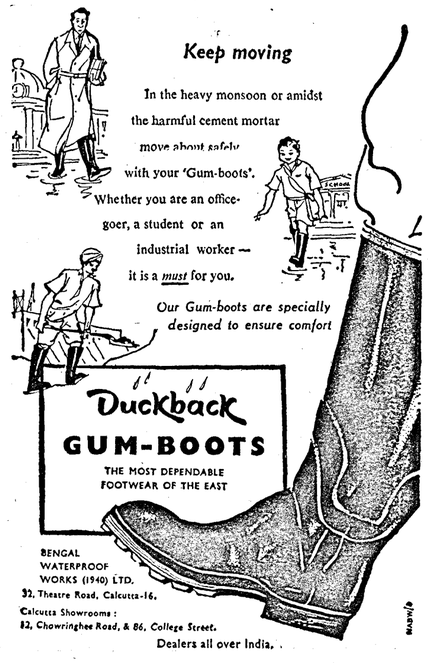
Britain's agricultural engineering exports to the end of May this year were £13 million, 28 percent more than for the same period of last year, according to the Agricultural Engineers Association. This is nearly a tenth of the total increase in value (£141 million) of the exports of all Britain's manufacturing industries combined. Farm machinery exports rose by 14 percent, and the value of tractor exports by 50 percent. So far this year, 65,191 tractors have been exported, compared with 49,053 tractors in the first five months of 1959. There was an increase of 170 percent in exports to America, and 68 percent to West Germany, Britain's most important tractor export rival.

Cotton Finishing Reorganisation

About £2½ million of Government money is available for payment in compensation to firms and workers in the cotton textile finishing industry. But firms must be prepared to scrap something like 20 percent of the industry's present capacity. The figures were given in Manchester by the U.K. Cotton Board. Details were announced also of the complex reorganisation scheme for the finishing section, the final phase in the £30-million plan for reducing the size of the U.K. cotton industry in keeping with the present-day requirements. But while most of the 400 bleaching, dyeing and printing firms are happy about the terms, some mill men were lightly describing it as the "take-your-chance" scheme because of basic differences from those already put into effect in the spinning and weaving sections. For, if the finishing sections fail to reach the scrapping targets which have been set, the schemes will still go on. But the firms will have to finance them entirely instead of paying part of the cost by means of levies. The Government will pay nothing.

Fewer Unemployed

Unemployment continued to fall in almost all industries in the four weeks ended 13th June. The U.K. Ministry of Labour's analysis, issued recently, shows that only in shipbuilding and repairing and furniture making were more workers unemployed. More than one-third of the total decline of 36,000 in the number out of work in the month was due to greater seasonal activity in the construction, catering and distributive trades. At the same time, the number of vacancies which could not be filled increased by 15,100. More than two-thirds of these vacancies were in catering and distribution. The total number unemployed at mid-June was 305,127, the lowest since October 1957. About 172,000, or 58 percent of the total, had been out of work for more than eight weeks.



Jute

GUNNY PRICES EASE BUT JUTE REMAINS STEADY

OPERATORS FEAR SERIOUS DISRUPTION OF TRANSPORT

ALTHOUGH the gunny market has shown definite signs of easing during the past week, fibre has been steady. The volume of business transacted by mills, however, has not been large; it has, in fact, been much smaller than in previous weeks. Nevertheless, business has been done daily, but since much of it has been seller-covering against previous higher-priced contracts, it has given the impression of a larger turnover than is actually the case. The main deterrent has been the unsettled situation throughout India in general, and Calcutta in particular. The troubles in Assam, and the possibility of a breakdown in rail communications for the movement of jute, especially from the northern Bengal agencies, as a result of the strike by the Central Government employees, have made sellers reserved. Buyers' ideas have also changed. Fearing that deliveries of early guaranteed shipment jute might be delayed, their interest has switched from new crop back to old crop fibre. Sellers, who only a week ago were offering jute in this category at a discount, are now holding back, in spite of stocks being available. Selling pressure for forward delivery jute has been heavy, but mills have shown little interest as they are under the impression that prices will be lower later on.

Favourable Crop Reports

The attitude is supported by the continuance of favourable crop reports. A recent survey of the main centres in Assam and northern Bengal indicates that the prospects are excellent. It is the general opinion, however, that very little will be available from any agencies in July, although by August the situation will have eased. For this reason, prices for early delivery have shot up recently and are well above the parity of Calcutta rates. Many sellers are prepared to pay the enhanced prices, as much of the jute they are attempting to cover is against higher-priced contracts. Small samples of new crop jute have been reaching Calcutta recently, but although the colour is very good, and there is practically no root, the fibre in most cases is very immature. Opinions about the size of the crop vary, but most think that the final outturn will be much the same as last year.

The possibility poses a problem for the mills. If the 1959-60 crop was not enough to allow the mills to work at full capacity—as has been proved by the voluntary sealing of looms to conserve stocks—the prospects for the end of 1960-61 can be none too bright. Mills have been helped to a certain extent in the season just completed by a fairly adequate carryover from 1958-59, but the carryover into the current season is reported to be the smallest for many years.

Third Plan Target

In view of this, it is encouraging to note that it is proposed to increase India's jute production by 200,000 bales a year during the third five year plan. As against a figure of 5.5 million bales during the second plan, a target of 6.5 million bales has been suggested for the third plan. This was stated at the meeting of the Central Supervisory Body for Jute in Calcutta last week. Ways of achieving this target were discussed. It was admitted that much depends on the vagaries of nature, but it was emphasised that one of the measures necessary is to assure irrigation facilities to cultivators—by the installation of river pumping sets, the construction of dams and barrages and the sinking of tube-wells. Only in this way can the effects of a long drought, such as was experienced recently, be reduced. The question of fertilisers was also discussed, and it was pointed out that 16,000 tons of fertilisers have been allocated to the jute-producing States during the season and that loans have also been sanctioned for the purchase and distribution of fertilisers in certain States. Admirable as this may sound, the whole effect may be lost if the farmer is not educated in the correct use of fertilisers, so supervisors should be made available. This is an aspect of the situation which is never given enough attention. Although inspectors and advisers are provided in many cases, much more must be done in order to derive full benefit from the facilities.

Gunny Prospects

The jute goods market has been depressed during the past week and rates have fallen to the lowest level for nearly three months. There has been little demand from U.S. buyers, to whom operators here tend to look for relief in the hessian section, and the U.S. burlap consumption and stock statistics for June are eagerly awaited. The ban on the purchase of Cuban sugar by the United States has affected Cuba's purchase programme. It was confidently expected that she would be entering the market in the very near future to prepare for the bagging of her bumper sugar crop. Although the current situation may only delay matters, the effect on the market has been magnified. It was also thought that Australia would buy large quantities, as she still had to purchase about half her requirements—the other half being already booked from Pakistan. But so far she has shown little inclination to enter the market. Apart from some small Government tenders, therefore, enquiries have been poor. The strong selling pressure from mills and traders has brought a general reduction of rates and a quieter undertone. Speculators have been active but bull liquidation is restricted by the lack of buyers.

I.J.M.A. Stocks of Manufactures

Contrary to expectations, I.J.M.A. mills' stocks of jute goods showed only a very small reduction at the end of June 1960. Total stocks were 81,400 tons (300 tons less than in the previous month) and were made up of 35,200 tons of hessians (43.2 percent), 35,900 tons of sacking (44.1 percent) and 10,300 tons of other goods (12.7 percent). Hessians stocks increased by 700 tons and sacking by 2,300 tons, but these gains were offset by the heavy drop of 3,300 tons in the stocks of other goods, the percentage of which is now the lowest since January 1959. In June 1959, mill stocks were 95,400 tons, made up of 23,700 tons of hessians (24.7 percent), 57,400 tons of sacking (60.3 percent) and 14,300 tons of other goods (15 percent).

THE JUTE MARKETS

There was heavy selling pressure in the futures market, but with no buyers, business was restricted, so prices fell. Rates, as reported by the East India Jute and Hessian Exchange Ltd, for the period 6th to 12th July were as follows:

	Hessians 40in. 10oz. Nov. 1960		Sacking B Twills Nov. 1960	Raw Jute Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	48.70	44.54	122.50	88.30	32.96
Highest	49.02	44.84	123.60	89.32	33.34
Lowest	46.63	42.78	115.25	82.90	30.93
Closing	46.63	42.78	115.25	83.59	31.19

Manufactured Goods: Opening transactions in the goods market were featured by a heavy fall in gunny rates. This was the result of selling pressure and the absence of any overseas enquiries. B Twills lost Rs. 3.75 to open at Rs. 125.25 in the near position and Rs. 118.50 for forward shipment. Hessians slumped by Rs. 1.25 for 40in. 10oz. to open at Rs. 43.65 for July shipment and Rs. 42.85 for October-December. The publication of the I.J.M.A. stock figures led to a slight recovery during the day, so by Friday morning sacking and hessians had both advanced by Re. 1. Selling pressure from mills soon nullified these gains, and over the week-end further losses were reported as overseas buyers showed no interest. On Monday morning, B Twills had dropped to Rs. 124.75 and 40in. 10oz. hessian to Rs. 43.90. During the day, there was renewed selling pressure from the mills and in the futures market. Uncertainty about conditions during the Central Government employees' strike also led to lower rates, but towards the close conditions appeared to improve.

On Wednesday morning, quotations were based on the following:

	July	August	September	Oct.-Dec.
40in. 7½oz.	32.30 (35.43)	32.55 (35.48)	32.55 (35.48)	32.25 (35.15)
40in. 8oz.	35.00 (38.15)	35.00 (38.15)	35.00 (38.15)	34.65 (37.77)
40in. 10oz.	43.65 (47.57)	43.80 (47.74)	43.65 (47.57)	43.05 (49.92)
B Twills	122.55	121.50	120.50	116.75
Heavy Cees (Plain)	123.25	122.00	120.25	117.00
A Twills	149.00	146.00	146.50	131.75
Liverpools	141.00	137.50	136.00	131.75
Cornsacks	125.50	126.50	125.50	119.50

Raw Jute: While gunny prices declined rapidly, fibre remained comparatively stable. This was the result of continued interest from the mills for both old and new crop jute, the complex situation arising from the Assam disturbances, and the possibility of transport difficulties during the Central Government employees' strike. As a result, buyers changed their ideas and some switched their interest to ready delivery old crop jute, but sellers were reserved, anticipating higher prices if communications did break down. Crop reports continued to be favourable but their effect was lost against the background of the other uncertainties. Very few sellers would give guaranteed shipment offers, and in general, their ideas were higher than the quoted rates. Demand for quick delivery jute in the agencies caused prices there to rule above the parity of those quoted in Calcutta. Wagon arrivals in Cossipore last week amounted to 162, which was very small compared with the corresponding figure for previous years.

Business reported during the past week consisted of old crop Assam and Northern jute at Rs. 36 to Rs. 37 a maund for ready delivery. New crop transactions were reported at Rs. 33.75 to Rs. 35 for Assam and Northern for August-September guaranteed shipment, and Rs. 32 for October-November. Pakistani cuttings were done at Rs. 101 a bale for October-December.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md. (Approx.)	Shipment
Assam	92.50	34.50	Aug.-Sept.
Northern	89.75	33.50	"
Purnea Desal	87.00	32.50	"
Daissee Selected	89.75	33.50	Sept.-Oct
Assam Tossa	92.50	34.50	"
Assam (Old Crop)	97.75	36.50	Ready
Mesta:			"
Assam-Northern	76.25	28.50	Sept.-Oct
Daissee	76.25	28.50	"
Desal	76.25	28.50	"
Jungli	73.75	27.50	"
Pakistani Cuttings	102 a bale.		"

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of jute goods for June as follows:

Description		Quantity
1. Gunny Bags		
(a) Hessian	6,661 tons	(6,767 metric tons)
	1,89.7 lakh yds.	(1,73.50 thousand metres)
	96.0 lakh nos.	
(b) Sacking	41,281 tons	(41,953 metric tons)
	9,50.5 lakh yds.	(8,69.15 thousand metres)
	4,18.2 lakh nos.	
2. Gunny Cloth		
(a) Hessian	30,730 tons	(31,223 metric tons)
	11,89.2 lakh yds.	(10,87.56 thousand metres)
(b) Sacking	860 tons	(874 metric tons)
	20.5 lakh yds.	(18.71 thousand metres)
3. Other Manufactures	9,597 tons	(9,751 metric tons)
4. Total Production (All kinds)	89,129 tons	(90,559 metric tons)

Summary

(90,000 yds. and 600 metres)	June '60	May '60	June '59	(000 tons and metric tons) June '60	May '60	June '59
Hessian	13.79 (12,60,86)	13.97 (12,77,56)	14.41 (13,17,28)	37.4 (38.0)	37.7 (38.3)	37.5 (38.1)
Sacking	9.71 (8,87,86)	10.32 (9,43,62)	8.51 (7,78,18)	42.1 (42.8)	44.5 (45.2)	35.5 (36.1)
Others				9.6 (9.8)	9.5 (9.6)	9.5 (9.6)
Grand Total				89.1 (90.6)	91.7 (93.1)	82.5 (84.0)
Hours worked				200.0	208.0	200.0

N.B.—These statistics are based on replies received a represent all members of the Association and Gaga bhai with estimates for two non-member mill The figures in brackets are metric measures, ar those of length, being based on the actual (detailed figures, are more precise.

THE PAKISTANI JUTE MARKETS

SHARP CUT IN E.P.C. RATES

(FROM OUR EAST PAKISTAN CORRESPONDENT)

AFTER the widely varying reports on the cro in recent months, the beginning of the ne season on 1st July was marked by no particularl

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of June as follows:

Description	30th June, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st May, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st June, 1959 Lakh Yds. (000 Metres)	000 Tons (000 Metri Tons)
Hessian cloth and bag	13,10 (11,98,08)	35.2 (35.8)	12,63 (11,54,54)	34.5 (35.1)	+47 (+43.54)	+0.7 (+0.7)	8,78 (8,02,68)	23.7 (24.1
	8.41	35.9	7,94	33.6	+47	+2.3	13,83	57.4
Sacking cloth and bag	(7,69,04)	(36.5)	(7,25,81)	(34.2)	(+43,23)	(+2.3)	(12,64,54)	(58.3
		10.3		13.6		−3.3		14.3
Others		(10.5)		(13.8)		(−3.3)		(14.
Grand Total		81.4		81.7		−0.3		9
(000 Tons/Metric Tons)		(82.8)		(83.1)		(−0.3)		(9

N.B.—These figures are based on replies received and represent all members of the Association and Gaga with estimates for three non-member mills. The figures in brackets are metric measures, based on actual (detailed) figures, and are more precise.

noteworthy event except for a rather serious drop in the E.P.C. prices as issued by the Pakistan Jute Association. The P.J.A., instead of showing two lists of prices for ready June-July and for July-August, as before, is now issuing only one column of rates, namely, for July-August-September. Published at the end are the main prices as shown on 30th June and 1st July. It will be seen that the effective fall in Export Firsts, for example, is £10 a ton; that is to say, from £130 a ton for June-July to £120 a ton for July-August-September. This is a well-advised move since E.P.C. prices were well above the current market rates. The question that now arises is whether this drop in E.P.C. prices will encourage buying, or whether it will, as in the past, induce buyers to believe that there will be further falls, in which case, they may well sit out.

It may, therefore, be expected that the old situation of sellers offering with reserve and buyers holding off in an attempt to force the market down will continue for some time. However, it looks as if this time the sellers will win the battle. Although Dundee is fairly well bought, most of the other countries are not so well placed. Some even require jute immediately, and several others must have August-September shipment jute. There are reports that afloat jute is still available, which will help overseas consumers to some extent, but in view of the lateness of the crop and the present overseas requirements, it is unlikely that the dull trading conditions will continue much longer. Active trading condition normally means an increase in prices. The Pakistan Jute Association has also reduced the market prices for local business considerably. The reduction is Rs. 10 a maund on long jute and Rs. 5 a maund on cuttings and once again, only one list is being issued, namely, for ready shipment with no difference for forward deliveries. The reductions have had little or no effect on the local market, which is not exactly weak, since not much is coming forward from sellers. Only one of the mills has so far bought from some bear speculators, and covered satisfactory quantities at a discount for October-November of about 8 annas a maund. Overseas interests have ignored the reduction.

Although the flow of jute has begun, it is, as may be expected after the drought, coming in very slowly. The jute is being bought, of course, but there is no great eagerness to buy. One of the reasons is that not many balers have done their "lucky day" purchases, and the majority are waiting for theirs.

Estimates of the crop this year have been rather conservative. Figures are not being quoted in terms of numbers of bales, but only in terms relative to the old crop. The general idea varies from 200,000 bales to 500,000 bales more than the last crop. It is also agreed that as against a carry-over of 1.3 million bales last season, the new season has opened with a carryover of not more than 200,000 bales. While the available jute for the current season will only be required for 11 months since the crop is late, the fact remains that no amount of juggling with statistics can show a bumper crop. On the other hand, if the crop is as small as some people indicate, it is possible that the Pakistani authorities may consider restricting exports to India by licences, just as India restricts the import of raw jute from Pakistan. The following are the lists (old and new) of raw jute rates, as issued by the Pakistan Jute Association:

	30th June, 1960		1st July, 1960
	c.i.f. U.K.-Continent (£ a ton) Shipment June-July	c.i.f. U.K.-Continent (£ a ton) Shipment Aug.-Sept.	c.i.f. U.K.-Continent (£ a ton) Shipment within three months
Mill Firsts	£136	£132	£126
Export Firsts	£130	£126	£120
Export Lightnings	£124	£120	£114
Export Hearts	£116	£112	£106
S.N.C.	£ 67	£ 65	£ 63
N.C.	£ 59	£ 57	£ 53
Cut Ropes	£ 67	£ 65	£ 63
Habi Jabi	£ 72	£ 70	£ 67
S.M. Rejections	£ 82	£ 80	£ 71

JUST OUT JUST OUT
LAW RELATING TO DISMISSAL, DISCHARGE & PUNISHMENT
In the Private Sector.
By D. N. Vohra, M. A., LL. B., Labour Law Adviser.

To maintain discipline in staff or establishment, it is now very essential that an employer must have a correct knowledge of how to proceed and when to proceed to take disciplinary action against an employee. This book explains the latest position of the law relating to dismissal, discharge and all other types of punishments in the light of latest Supreme Court and High Courts decisions and labour legislations today. Entire procedure has been explained step by step, even draft notices and orders have been given in the appendix which if properly followed are sure to help an employer in avoiding interference by Labour authorities. (Over 300 pages. Printed on offset paper. A 'must' for all employers and Labour Officers and advisers.)

Price Rs. 15/- No postage; (otherwise Rs. 1.50) extra if order placed before 31st July, 1960.

Order today.

NEW RECORD IN WORLD RAW WOOL OUTPUT

PRODUCTION IN AUSTRALIA AND NEW ZEALAND RISES

WORLD production of raw wool during 1959-60 is now estimated at some 5,600 million lbs, greasy basis; this represents an increase of 5 percent when compared with the previous season's total of 5,350 million lbs, and constitutes a new record. On a clean basis, the current season's production is estimated at some 3,180 million lbs, also a 5-percent increase on 1958-59. The output of merino wool is estimated to have risen by nearly 6 percent and that of cross-bred and carpet types by 4 percent and 5 percent, respectively. Wool production in the non-communist world (that is, excluding Russia, eastern Europe and China) is estimated at just over 4,500 million lbs, greasy basis, or 4 percent more than the previous season's total of 4,337 million lbs. Australia has again accounted for the major part of the increase; the latest official estimate of that country's clip, made in December, put the total at 1,690 million lbs, or 6-percent higher than in the previous season, but it now seems certain that this figure will be exceeded. In New Zealand, production is expected to increase by 5 percent to 565 million lbs, but in South Africa the latest estimate of the South African Wool Board is that the output will be only about 2-percent higher than the previous season's figure of 314 million lbs. In both Australia and New Zealand, climatic conditions have been generally favourable during the past season, but parts of South Africa have suffered severely from drought. The latest estimate of the Argentine Wool Federation puts production in that country at some 434 million lbs, or 3 percent above that of the last season; in spite of a 20-percent reduction in the provinces of Corrientes and Entire Rios, and a fall of about 15 percent in Santa Cruz (Patagonia), the output in other parts of Argentina has shown a marked rise.

U.S. Output Rises

The U.S. output this season has shown a rise of 8 percent, compared with a year earlier, to a total of 316 million lbs, greasy basis; it is the first time that the 300 million lbs mark has been exceeded since 1956-57. In western Europe, too, production has risen somewhat this season, due largely to favourable climatic conditions over practically the whole Continent. Among the carpet wool producing countries of the Middle East, little change has been reported, apart from a sharp rise of about 10 million lbs in the Turkish output, bringing production in that country above the 100 million lbs level. India's estimated production at 76 million lbs is the same as in the previous year, although the provisional estimate for 1959-60 shows an increase of 2 million lbs. Production in Russia, China and eastern Europe in the 1959-60 season is expected to show a further increase estimated at about 8 percent. Wool production in 1959-60 reached a new peak of some 765 million lbs. Production in eastern Europe showed only a small rise of some 2 percent to just under 150 million lbs. In China, there was, it is estimated, a further rise due to increasing sheep numbers, although no production figures for that country have yet been issued.

CARPET EXPORTS INCREASE

India exported carpets worth Rs. 5 crores during 1959, showing an increase of Rs. 46 lakhs over the previous year. Carpets earn the maximum foreign exchange for the country among the Indian handicrafts. A 2-percent decline in sales to the European countries at Rs. 2.93 crores was more than offset by an increase of 34 percent to the American countries. The American purchases totalled Rs. 1.78 crores. Rise in exports to the African countries was also recorded. There was a fall of 50 percent in exports to the Oceanic countries while Asian countries also bought less. Among the European countries, the United Kingdom bought the maximum. Exports to that country and Switzerland fell by 4 percent and 2 percent, respectively. Exports to Russia were eight times higher than in the previous year.

Among the American countries the U.S.A. was the chief buyer and shipments to that country at Rs. 1.02 crores were 64.5 percent higher than in 1958. Exports to Canada rose by 36 percent. An aggregate fall of 26 percent to the Asian countries was recorded. Exports to Singapore, Kuwait, Japan and Malaya fell by about 22 percent, 76 percent, 29 percent and 12 percent, respectively. Hongkong, Burma, Ceylon and Pakistan showed a rise of 24 percent, 80 percent, 25 percent and 73 percent, respectively. Exports to other Asian countries declined by about 38 percent.

Exports of Indian woollen carpets to the African countries were 2 percent higher than the previous year. All the important countries except south Rhodesia, Uganda and Ghana showed a rise. Exports to Ethiopia, north Rhodesia and Nigeria rose by 74 percent, 70 percent and 24 percent, respectively. Exports to other African countries, however, fell by about 33 percent.

A 50-percent fall in woollen carpet exports to the Oceanic countries was recorded during 1959. Exports to Australia and New Zealand fell by as much as 45 and 73 percent, respectively.

Plantation Topics

PLANTERS OPPOSE KERALA MOVE TO RAISE LAND TAX

RISE IN PRODUCTION COSTS CERTAIN

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PLANTERS in Kerala are worried about the State Finance Minister's recent proposal to enhance the land tax on plantation holdings from Rs. 2 an acre to Rs. 10 an acre. They have challenged the Finance Minister's statement that nobody will dispute the ability of planters to contribute a greater share to the common pool of the Government's resources, since the yield from plantations is several times that from ordinary land. The new levy is the latest of a series of punitive imposts on Kerala plantations The State has already imposed the highest tax a rupee on agricultural earnings. It was three years ago that the communist Government added to the industry's burdens by a steep increase in the rate of taxation. The burden of the tax is highlighted by the fact that the present impost of Rs. 10 an acre is double the incidence of the export cess on tea.

Planters have estimated that the levy will raise the cost of production by about Rs. 5 a 100 lbs. The forward-looking companies with land reserves for development will be hit most. The State Finance Minister has not apparently appreciated the serious effect of the five-fold increase in the plantation land tax. The levy is not the only tax on the industry but the latest of a series, so the cumulative effect of the huge burden of taxation will seriously affect the industry's prospects for expansion. For companies having large development programmes, the levy will mean a payment on land which does not give any return In some cases, the additional burden will completely wipe out the small surplus which planters managed to get after the last increase in agricultural income tax, super tax and surcharge on super tax. The Kerala Finance Minister, it is said, will pave the way for the closure of many planting companies in the State.

Discriminatory Levy

The new tax is discriminatory. It totally overlooks the traditional principle that land taxation should be at a uniform rate for the same class of land, so wet and dry lands have to pay a particular rate irrespective of the crops raised on them. The new plantation tax will, however, fall heavily on land cultivated for raising certain specified crops, such as tea, coffee, rubber, pepper and coconut. But whether one grows coffee or tea, the land remains the same: the tax should, therefore, be the same too. It is vaguely stated in justification of this discrimination that what may be collectively called plantation crops yield abnormally high profits and can, therefore, bear the high rates of taxation. But planters have pointed out that what the State Government contemplates at present is not taxation on land but on the profits of agriculture. The plantation tax is thus actually an agricultural income tax, although agricultural income in Kerala is already subject to income tax. Even as an agricultural income tax, the new levy is "quite arbitrary", planters say. It takes no note at all of the incomes which are derived from land, since the levy is proposed at a flat rate of Rs. 10 an acre irrespective of the income derived from the land.

Practical Aspect

There is also the practical aspect of the administration of the proposed levy which the State Government has to consider. Land revenue has always been closely related to the nature and quality of land. Revenue records contain details of the category and class to which each survey number and plot of land is assigned. When a flat basic tax of Rs. 2 an acre was introduced in Kerala some years ago, the distinction between classes and categories of land lost much of its significance. But now when a high rate of tax is to be levied on land on which particular crops are grown, the fact that revenue records are not being prepared on the basis of crops should attract the notice of the authorities Revenue officials have at present no data concerning the crops that are grown on individual survey numbers or plots of land. In cases where plantation crops are cultivated in scattered areas in the same holding, the extent of land under plantation crops cannot be determined except by conducting a land survey. Village officials and tax collectors, who are responsible for the collection of land tax, having no means of correctly assessing the extent of land on which the higher plantation tax will be due, will, therefore, have to rely on purely arbitrary estimates. This will create an opportunity for tax officials to harass the agricultural population.

Expansion Prospects

The plantation industry has still great scope for expansion in Kerala. The State Finance Minister himself admitted this while presenting his Budget. The proposal for the new levy is, therefore, considered by planters as a blow that was least expected. The United Planters Association of Southern India has said in a Press note that the effects of the levy might be so serious that many planting companies might have to consider a drastic cut in their development programmes.

The State Finance Minister, Mr. Shankar, announced a nominal concession in the new levy while recently winding up the general discussion on his Budget in the State Assembly. This was intended to help the small plantation holders, he said. The small planters will have to pay only the existing basic tax for the first two acres, and for the rest, the enhanced rate will be applicable. The concession he announced will reduce the revenue from the tax by Rs. 10 lakhs to Rs. 70 lakhs.

Dispute in Cashew Factories

The stalemate in Kerala's cashew processing industry is likely to end soon. After holding negotiations with representatives of the management and workers, the State Government has expressed the hope that a settlement could be reached soon. The leaders of the Congress, Communist and Revolutionary Socialist Parties, who have a stake in cashew trade unions, have announced their "complete faith in the *bona fides* of the Government." They have ordered a ten-day suspension of the "indefinite strike" of the 60,000 cashew workers of the Quilon area which was started on 1st July in support of their demand for getting revised minimum wages. The State Government has assured the trade union leaders that it will try its best to persuade the factory owners to arrive at a settlement. The employers who moved the High Court and obtained a six-week stay against the Government notification, have also withdrawn their closure notices which were to have become effective from 1st July.

The trade union leaders at a joint Press conference held in Trivandrum on 1st July said that they had received an assurance from the State Government that it would see that the minimum wage notification was implemented. The assurance has satisfied them completely, so they have agreed to suspend the strike. Their impression is that the factory owners will be eventually compelled to arrive at a settlement in view of the inherent weakness of their case and the strong position taken up by the State Government.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for June 1960:

Upper Assam: Outturn normal to poor; except in Sonari, crop prospecs generally favourable; rainfall generally below normal

Central Assam: Outturn not good; rainfall normal except in Nazira where it was much below normal; immediate prospects fair.

Lower Assam: Weather seasonable; outturn not good; immediate prospects fair to poor; red spider prevalent in Bishnauth.

North Cachar: Outturn good but very poor in Lakhipur; weather favourable but not so in Lakhipur; the outturn todate is considerably below last year; immediate prospects fair; thrips severe in some parts of Lakhipur.

South Cachar: Outturn about normal but poor in Hailakandi and Longai; weather favourable; outturn todate is considerably under last year.

Eastern Dooars: Weather seasonable; outturn good; crop prospects generally are favourable; red spider blight severe in Kalchini.

Central Dooars: Good rain has fallen generally and prospects are now brighter; outturn todate is slightly under last year.

Western Dooars: Outturn about normal; weather seasonable; red blight severe in some parts of Dam Dim.

Darjeeling: Outturn good; immediate prospects good; weather seasonable.

Terai: Crop above normal; climatic conditions favourable; virulent attacks of red spider; prospects likely to be poor.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 3, held on 11th and 13th July, offerings at the Export auction consisted of 29,219 chests. There was a strong and general demand, emphasis being paid on improved quality which showed a further seasonal improvement, and there were some quite nice Darjeelings and Assams on offer. Brokens of orthodox manufacture met with keen competition and were generally 10nP to 20nP above last rates while Fannings in this category were fully firm and sometimes dearer except for the more expensive kinds which were occasionally easier. Orthodox Assam B.O.P.s with improved quality also showed an increase in price. Legg-cut teas were in better demand and those with improved quality were dearer to buy, although the first flush offerings were about steady. Bright liquoring C.T.C.s met with strong competition and sold at dearer rates, brokens often receiving more attention than Fannings. First flush C.T.C.s, however, were irregular. Darjeelings with flavour sold well, but the more ordinary kinds were again 20nP to 50nP easier. Whole leaf grades, particularly the cheaper kinds, were 10nP to 20nP dearer to buy, while the remainder were about steady at last rates. Tippy teas were fairly well supported at irregular rates.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.20 to 5.40	1-9-6
Plain B. P.	4.50 to 4.70	1.66 to 1.72
Plain Fannings	4.35 to 4.45	1.60 to 1.66
Medium B. P.	Not quotable	1.95 to 2.00
Medium Fannings	Not quotable	2.10 to 2.20
Best Assam C.T.C. B. P.	7.50 to 8.50	3.40 to 3.60
Best Assam C.T.C. Fngs.	8.00 to 9.00	4.00 to 4.40

(Quotations are exclusive of excise duty.)

At the Internal Sale, the 10,823 packages of Dust on offer met with a strong demand, and prices were generally dearer. Orthodox grainy kinds were taken up at irregularly dearer rates, while the smaller stronger liquoring types were a strong feature. Legg-cut Dooars were keenly competed for and showed an advance of about 25nP. Bright liquoring C.T.C.s and smaller kinds met with a good demand and sold at dearer rates, while the plainer kinds in this category sold at about last rates. Darjeelings again sold well.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.30 to 4.45	1.70 to 1.74
Medium Assam Dust	4.50 to 4.80(Nom.)	1.70 to 1.78
Medium Assam C.T.C. Dust	5.60 to 6.00	2.00 to 2.20
Best Assam C.T.C. Dust	6.20 to 6.50	2.80 to 3.20

(Quotations are inclusive of excise duty.)

For the 284 packages of Leaf on offer, demands was active and prices were generally slightly dearer.

SHARP FALL IN FREIGHT RATES

A VERY sharp break in rates took place last week in the freight markets, and the lowest ever rate of 48s 9d for grain from Pacific Coast to India was conceded. This compares with 60s paid at the end of May. Rice has been fixed from Bangkok to Chittagong at 32s f.i.o.s. and from Saigon to Ceylon at the same rate. The *Jagmata* was reported fixed at 19s 6d a d.w. ton delivery Rangoon-redelivery Japan with the option of a round voyage at 16s 6d. Marmagoa-Osaka was arranged at 41s 6d f.i.o.s. and it was rumoured the very low rate of 37s 6d f.i.o. was secured for Marmagoa Continent. Unless international tension provokes stockpiling, it looks as if tramp shipping rates will decline again to the uneconomical rates of a year ago.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 5th July and 11th July, 1960)

Cowhides: Wet salted (Slaughtered) 10,200 pcs. on the basis of Rs. 9 to Rs. 15 and Rs. 18 to Rs. 25.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 40,000 pcs.; Assam-Dinajpur 38,000 pcs.; Muzafferpore-Patna - Pakur-Purneah - Kissenganj 145,500 pcs.

COMPANY AND PUBLIC NOTICES

KANKNARRAH COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August 1960, at 11-15 o'clock in the forenoon to consider and if thought fit to pass with or without modification, the following Resolutions, namely :—

1. **(As an Ordinary Resolution).** "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960, on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."

2. **(As a Special Resolution).** "That the Articles of Association of the Company be altered in the manner following :—

   (1) Articles 2A and 3 shall be deleted and the following two new Articles 2A and 3 substituted therefor :—

   "2A—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."

   "3—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960, are embodied in an Agreement dated the 29th March 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents".

   (2) Article 5A shall be deleted.

3. **(As a Special Resolution).** "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licencee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to determine on the fourteenth day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

4. **(As a Special Resolution).** "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3., England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5% per annum or such higher rate as may be agreed upon subject to a maximum rate of 2% above the State Bank of India Advance Rate; that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.

   The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year.

5. **(As a Special Resolution).** "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1% of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956"

6. **(As a Special Resolution).** "That the following contract between the Company and an Associate of its Managing Agents as defined in Section 2(3) of the Companies Act, 1956, a draft whereof has for the purpose of identification, been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch :—

   With The Kassipur Company Limited (an Associate of the Managing Agents) for sales of such manufactured jute goods in which the Company regularly trades or does business as may be required by the Associate as raw materials for the purpose of its business;

it being a term of the above contract that the prices at which transactions take place shall be based on rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and that payment shall be made to the Company by the Associate within one month of the date of supply or sale of goods.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August 1960, at 11-45 o'clock in the forenoon to consider and if thought fit to pass with or without modification, the following Resolutions, namely :—

1. **(As an Ordinary Resolution).** "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960, on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved. and which for purposes of identification has been signed by the Chairman thereof."

2. **(As a Special Resolution).** "That the Articles of Association of the Company be altered in the manner following :—

   (1) Articles 126 and 126A shall be deleted and the following two new Articles 126 and 126A substituted therefor :—

   "126—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."

   "126A—The terms upon which Jardine Henderson, Limited hold the office of *Managing Agents up to* the 15th August 1960, are embodied in an Agreement dated the 29th March 1957, made between the Company and the Managing Agents and the terms upon which the *Managing Agents shall continue* to hold such office after the said 15th August 1960, shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents".

   (2) Article 127A shall be deleted.

3. **(As a Special Resolution).** "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine *Henderson, Limited* be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required *by the Company, at any* other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licencee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to *determine on the fourteenth* day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to *have any* exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

4. **(As a Special Resolution).** "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3., England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an *allowance calculated* at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year ; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the *rate of 5% per annum or* such higher rate as may be agreed upon subject to a maximum rate of 2% above the State Bank of India Advance Rate ; that such appointment may be terminated by either party giving the other not less than six months' previous notice in writing of intention so to do.

   The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, *Limited in maintaining their London office are* in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the *proportion which may reasonably be* attributed to the services rendered and work done on behalf of the Company will depend on the *volume* of the purchases effected and services rendered in relation to the total turnover in each year.

5. **(As a Special Resolution).** "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective *as from the 1st April 1961*, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1% of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."

6. **(As a Special Resolution).** "That the following contract between the Company and an Associate of its Managing Agents as defined in Section 2(3) of the Companies Act, 1956, a draft whereof has for the purpose of identification, been subscribed by the Chairman of this Meeting be and the same is *hereby approved and the* Directors are hereby authorised to execute the said Agreement on behalf of the Company with *all convenient despatch* :—

   With The Kassipur Company Limited (an Associate of the Managing Agents) for sales of such manufactured jute goods in which the Company regularly trades or does business as may be required by the Associate as raw materials for the purpose of its business ;

   it being a term of the above contract that the prices at which transactions take place shall be based on rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and that payment shall be made to the Company by the Associate within one month of the date of supply or sale of goods.

KAMARHATTY COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Members of the Company will be held at the Registered Office, No. 4, Clive Row, Calcutta, on Friday the 12th August 1960, at 11-00 o'clock in the forenoon to consider and if thought fit to pass with or without modification, the following Resolutions, namely :—

1. **(As an Ordinary Resolution).** "That Jardine Henderson, Limited be and are hereby re-appointed the Managing Agents of the Company with effect from the 15th August 1960, on terms and conditions to be embodied in a separate Agreement to be entered into between the Company and the Managing Agents, a draft whereof has been submitted to this Meeting and approved, and which for purposes of identification has been signed by the Chairman thereof."

2. **(As a Special Resolution).** "That the Articles of Association of the Company be altered in the manner following :—

   (1) Articles 2A and 3 shall be deleted and the following two new Articles 2A and 3 substituted therefor :—

   "2A—Jardine Henderson, Limited are and shall continue to be the Managing Agents of the Company up to the 14th day of August 1965."

   "3—The terms upon which Jardine Henderson, Limited hold the office of Managing Agents up to the 15th August 1960, are embodied in an Agreement dated the 29th March 1957, made between the Company and the Managing Agents and the terms upon which the Managing Agents shall continue to hold such office after the said 15th August 1960. shall be embodied in a separate Agreement to be entered into between the Company and the Managing Agents".

   (2) Article 5A shall be deleted.

3. **(As a Special Resolution).** "That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 1, Jardine Henderson, Limited be and are hereby authorised to provide the Company with suitable furnished office accommodation at the Registered or Principal Office for the time being of Jardine Henderson, Limited in Calcutta and also, if so required by the Company, at any other place or places in which Jardine Henderson, Limited may be able to provide such accommodation, and the Company shall pay to Jardine Henderson, Limited a monthly sum of Rupees seventy per one hundred square feet or part of one hundred square feet of such accommodation PROVIDED that the Company shall be deemed to be the licencee of Jardine Henderson, Limited in respect of any accommodation so occupied and such licence shall be deemed to *determine on the fourteenth* day of August, one thousand nine hundred and sixty-five being the date on which the term of office of Jardine Henderson, Limited upon re-appointment expires or until the date such term of office expires whether by virtue of the Companies Act, 1956, or otherwise whichever is the earlier PROVIDED always that the Company shall neither have nor be deemed to have any exclusive right or occupation, enjoyment or use of any such accommodation and that Jardine Henderson, Limited shall always be entitled to determine the licence on giving to the Company thirty-one days' notice in writing, AND it is expressly declared that such licence is personal to the Company."

4. **(As a Special Resolution).** "That consent be and is hereby accorded to McLeod Russel & Company, Limited an Associate of the Managing Agents as defined by Section 2(3) of the Companies Act, 1956, and who maintain an office at 149, Leadenhall Street, London, E.C. 3., England, for the purposes of their business of management and administration of several companies of which they are appointed secretaries and agents, acting and continuing with effect from the 1st March 1961, until the 28th February 1964, to act as agent for the purchase in the United Kingdom and on the continent of Europe of goods from time to time required by the Company and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the Company at a remuneration by way of an allowance calculated at the rate of ten shillings per registered loom per annum on the Company's loomage registered with the Indian Jute Mills Association payable by quarterly instalments in arrear on the last working day of March, June, September and December of each year ; that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such agent as aforesaid other than interest on the balance from time to time outstanding on current account at the rate of 5% per annum or such higher rate as *may be agreed upon subject to a maximum* rate of 2% above the State Bank of India Advance Rate ; that such appointment may be *terminated by either party giving the other* not less than six months' previous notice in writing of intention so to do.

   The expenses estimated at £38,000 per annum incurred by McLeod Russel & Company, Limited in maintaining their London office are in the nature of salary and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto and the part which represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company will depend on the volume of the purchases effected and services rendered in relation to the total turnover in each year.

5. **(As a Special Resolution).** "That this Meeting hereby authorises in conformity with the provisions of sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, such authority to be effective as from the 1st April 1961, for a period of five years, payment to the Directors to be divided equally between them in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) of an amount equal to 1% of the net profits of the Company for such financial year or part thereof computed in the manner referred to in Section 198(1) of the Companies Act, 1956."

6. **(As a Special Resolution).** "That the following contract between the Company and an Associate of its Managing Agents as refined in Section 2(3) of the Companies Act, 1956, a draft whereof has for the purpose of identification, been subscribed by the Chairman of this Meeting be and the same is hereby approved and the Directors are hereby authorised to execute the said Agreement on behalf of the Company with all convenient despatch :—

   With The Kassipur Company Limited (an Associate of the Managing Agents) for sales of such manufactured jute goods in which the Company regularly trades or does business as may be required by the Associate as raw materials for the purpose of its business ;

   it being a term of the above contract that the prices at which transactions take place shall be based on rates which are not less favourable to the Company than the market rates or which are otherwise reasonable, and that payment shall be made to the Company by the Associate within one month of the date of supply or sale of goods.

LINSEED FIRM

The market was firm during the past week. Sellers were reserved. The local stock position was poor, and arrivals were small. Crushers were operating on a small scale. The oil market was firm. Local buyers showed interest for ready and forward deliveries. but sellers were not inclined to do any business due to seed shortages. The oilcake market showed little change. There was a small daily turnover at prevailing rates, but shippers remained out of the market with overseas buyers pausing. Latest quotations are as follows : Ready, Rs. 25.25 a maund and September futures Rs. 25.50 a maund.

Shipments during July until the 7th were 3,297 packages.

PRODUCTION OF MOTOR-VEHICLES INCREASES

Production figures of motor-vehicles for the first half of 1960 indicate that the output this year will be about 40 percent higher than last year. During January-June 1960, the output totalled 32,247, compared with 19,025 during the corresponding period last year. A break-up of the January-June production figures shows that the rise has been particularly striking for cars, commercial vehicles and scooters. The output of cars at 9,218 was almost double that during the first half of last year. In the case of commercial vehicles, production of January-June 1960 amounted to 12,213, about 50 percent higher than during the corresponding period last year. Scooter production amounted to 5,838, compared with only 2,008 in January-June last year. The production of jeeps and motor-cycles also was much higher than during last year. Half-yearly production of these totalled 3,045 and 1,933 respectively, compared with 2,628 and 1,363.

THE MECHANISM OF THE NEW ISSUE BOOM

WHEN the new company law was enacted four years ago, the criticisms against it were mainly two. One was that the rules and regulations it prescribed were far too stringent and often unnecessary. And the second was that, in spite of their stringency, they would not prevent malpractices in companies run by entrepreneurs who had no intention of abiding by the spirit of the law and who would concentrate only on exploiting law and who would concentrate only on exploiting its various loopholes. In that event, it was argued, the Companies Act, 1956, would hit only companies which were in any case honestly and efficiently run; they would spend their time filling forms and observing procedures which would do no tangible good to anybody, while the shadier sector of corporate enterprise quietly went on mulcting somnolent shareholders and gullible consumers. The force of this criticism was soon seen in spectacular fashion, when even a powerful and supposedly well-informed investor like the Life Insurance Corporation found itself the victim of a historic bluff which culminated in the Mundhra affair. The echoes of that affair have not died down yet, and meanwhile there have been a few other similar episodes on a smaller scale—from all of which the Government seems to have drawn the conclusion that the law needs to be tightened further.

But how this is to be done, and with what specific purposes in mind, are points which New Delhi does not appear to have considered very deeply. Hence the erratic nature of the proposals which are put forward from time to time for stiffening the regulations for inter-corporate investments, for controlling the remuneration of managing agents, and—the latest one—for imposing a ceiling on the earnings of directors. Some of these proposals have already been enacted by legislation, and some are being considered. But nearly all of them miss the basic point that the deficiencies which exist today are not so much in the law, but in the agencies which are supposed to keep a watch on the way it is being observed. Between them, the Companies Act, the Industries (Development and Regulation) Act, the Capital Issues Control Act, and the Securities Contracts Regulation Act arm the Government with powers as extensive as the present situation may require. Unless, however, the departments charged with supervising the observance of these measures go about their business with a greater sense of responsibility, backed by a certain discrimination and expertise, the aims the Government has in mind will never be served. Good companies will go on wasting their time abiding by the details of the law, as some are doing nowadays by issuing circulars inviting information on the parentage of their shareholders. The less estimable concerns will meanwhile see the laws for what they are—high-sounding in aim but asinine in practice—and go their merry way, without the Government departments being any the wiser or shareholders being any the better protected. The view has, therefore, been gaining ground that the Government should concentrate a little less on relatively unimportant details such as the remuneration given to managing agents or directors, where the law tends to hit most only the honest, efficient and well-managed concerns; it should instead concentrate a little more on the other lesser known ways in which companies and shareholders are deprived of their money for the personal gain of influential parties.

In response to this view, it is reported, the Government is thinking of making a start by looking into the mechanism of the new issue market. This particular section of the private capital structure has attracted a lot of attention recently. It has displayed a boom reminiscent of the 1946 euphoria, when the black money of the war days was easy to come by and innumerable concerns mushroomed on the initiative of speculator-financiers, until the inevitable crash supervened during the communal troubles accompanying partition. The strength of the new issue market would normally be cause for satisfaction; it would indicate how investors view the prospects for the economy and would show the confidence of private enterprise in its own future. But, the argument runs, when it reaches the stage where individual shares begin to discount the dividend and growth prospects for companies sometimes ten or even 15 years ahead, it indicates that there may be something wrong: speculative manipulation may be afoot. A number of share flotations made recently have given the impression of unwarranted influences or prognostications being at work. There was, for instance, the Rs. 5 (paid-up) share of one company which three months ago, before even the subscription lists opened, was offered at Rs. 11 in the *fatka* markets, and has risen to nearly Rs. 25 now in the official market. There has, since then, been the Rs 25 (paid-up) share of another company, the unofficial price of which shot up to Rs. 220 before anybody had a single scrip in his pocket, and which is still quoting at the quite extraordinary price of Rs. 150. Lesser examples of the same trend are provided by a few other companies which have floated shares in recent months.

Many reasons have been offered to explain the unwarranted rise in such shares. Some say that the trend is not new: a number of foreign-owned companies which "Indianised" their capital structure by offering shares to the public in recent years met with a similar response. Others say that the new companies of today are entering highly promising industries, so they must make attractive profits. Yet others claim that the companies are launching projects with foreign collaboration, so they will have the benefit of proven technical and managerial competence. Finally, there are those who argue that since the Government has vetted the projects, they must be sound, otherwise they would never have been sanctioned.

These optimistic excuses lose sight of a number of important points. Firstly, the success of share offers by foreign-owned companies "Indianising" their capital structure was due to the Government deliberately depressing the issue price of the shares; also, these companies had the merit that their profitability and dividend-paying capacity was proven by a long string of balance-sheets, whereas the new companies have yet to produce a single balance-sheet (in some cases, even a reasoned profit estimate is missing). Secondly, although the industries in many cases may be promising and the foreign collaboration an advantage, neither of these factors justifies the price of the new companies' shares being far higher than the price of the shares of established companies in equivalent industries. Thirdly, Government sanction for the projects can have no special meaning; almost any worthwhile project launched these days has to be sanctioned by the Government, which specifically says that it does not in any way imply the project is for that reason necessarily sound. Finally, there is the fact, which genuine investors at least cannot afford to ignore, that it takes years for the money to be raised, the machinery ordered and the plant got working, after which it takes some more years for the production of a new company to reach the profit-yielding stage. Any assumptions about when dividends will be paid, and how big they will be, therefore tend to be presumptuous and arbitrary if they are made four or five years before profitability is clearly in sight.

All this does not necessarily mean that the rate for new shares should idle around the issue price. What it does mean is that if a share, even before subscription, starts quoting unofficially at two, three and occasionally nine times its paid-up value, the possibility of manipulation cannot be ruled out. The possibility becomes the more real if the shares of new companies, which have no great production or progress to show, fluctuate sharply: the rate for one new company's shares, for instance, has jumped from Rs. 11 to almost Rs. 25 in a mere month, reportedly on frantic short-covering, while another company's shares have dropped on the kerb from Rs. 220 to Rs 150 over the same period. The range of these fluctuations demonstrates that the Government and the Reserve Bank, which start getting excited if a market leader like Indian Iron moves up or down by 10 percent, have been barking up the wrong tree: the speculation is concentrated on shares belonging to the cash, not the forward, list—and on new issues in particular. In fact, it is whispered in market circles that the money for speculation even in the older shares—which have risen despite stringent credit curbs and margin restrictions—may be coming from the money meant for the new issues.

There is no positive evidence concerning the worth of these rumours, nor will it be easy to come by. But it is reported that the Government and the Reserve Bank have been disturbed by certain circumstances surrounding the public offers of new issues, and are thinking of devising ways of watching them more closely. One feature which has worried the authorities particularly is that many share issues have been over-subscribed heavily. This would normally be reason for satisfaction, except that it gives influential parties temporary command over large sums of money which they do not really need. The suspicion, it is stated, is that these sums of money are then, for the time being, diverted to speculation in the share and commodity markets, in which the parties sometimes have an old-established interest. The use of that money enables them to make nonsense of the Reserve Bank's credit curbs and the stock exchanges' margin restrictions. Alternatively, it is claimed, the extent of over-subscription is sometimes exaggerated; in that way, an issue which may have been over-subscribed, say, five or six times is finally described as having been over-subscribed many times more. This description causes the price of the share to rise, and brings windfall gains to successful applicants (especially if they are speculators with a short-term interest) at the cost of gullible long-term investors.

In the circumstances, various measures are reportedly being considered for counteracting such tendencies. One is that the practice of the more reputable companies should be made general: the subscription lists for a particular issue should be closed as soon as possible after it has been over-subscribed. Another is that the banks handling the issue money should be asked to submit promptly to the Reserve Bank certified returns indicating exactly how much money has been received; that would not only prevent exaggeration about the extent of over-subscription, but would also ensure that the subscription money has actually been deposited with the right banks. A third argument in favour of closing subscription lists sooner is that, with less money to handle, companies will be able to complete allotments and refunds quicker. At present, many take two months or more to do this, which not only reflects poorly on their efficiency but also deprives applicants of large sums for an unnecessarily long period. The latter's plight is worsened by the fact that they are not paid any interest on the money refunded. Nor indeed do the companies always indicate what they themselves do with the interest they might have earned in this manner. It is, therefore, felt that in order to discourage companies from garnering in money they do not really need, they should not only be advised to close their subscription lists sooner but should also be put under a legal obligation to pay interest on the refunds.

The whole problem is complicated, and can be considered in detail only after closer investigation into some specific cases where new issues have been heavily over-subscribed in the recent past. The private capital market generally has a deep interest in the outcome of any such enquiry, since the dangerous view is gaining ground that, with

the new issue market booming with surplus funds, it should be invited to contribute to the financing of State enterprises. The fact is that the sources of funds for private companies are limited; any diversion of the funds to State enterprises by the indirect method of inviting capital subscriptions will seriously harm private companies in the longer run. The latter have an interest, therefore, in not allowing speculative manipulation to exaggerate the strength of the private new issue market. The stock exchange authorities, too, have a rôle to play in these matters. If they follow the deplorable example of one leading stock exchange by listing shares when allotments and refunds have been only partially completed, they will invite the charge of conniving in the speculation.

The basic trouble of the new issue market is that, as share offers are heavily over-subscribed, more and more people come to think that there are quick capital gains to be made out of subscribing to them. This attitude has a "snowballing" effect, and creates an ideal environment for the entry of the speculators. The heavy transactions which follow the despatch of allotment letters indicate the type of applicants who have been attracted, although one would normally expect that only genuine long-term investors would care for companies which are unlikely to be able to pay any dividends until at least four or five years have passed. It would be unfortunate if the capital market, or the authorities which are supposed to regulate it, forgot that precisely such conditions preceded the crash of 1946, which was only one of many historic replicas of the South Sea Bubble of two and a half centuries ago.

AIMS OF OPEN MARKET OPERATIONS

FEW functions of the Reserve Bank tend to attract less attention than its open market operations. Even in financial circles which are closely concerned, the interest is only sporadic. This is partly because open market operations are a complicated affair, and the scope for them is extremely restricted, although they do constitute an important means of monetary regulation. Such operations cover the buying and selling of Government securities, equity shares, gold and foreign exchange by central banks. In most countries, however, as in India, the operations are conducted in Government securities alone. When a central bank sells Government securities in the market, the supply of cash is reduced. This has the effect of restricting the supply of credit, with a corresponding stiffening in interest rates. Conversely, if a central bank buys Government securities, the supply of cash is increased and interest rates tend to move downwards. So open market operations are intended to regulate the flow of credit and thus influence the economy.

The aims of open market operations can be fulfilled provided certain basic conditions exist. The first is that there must be active money and capital markets in which the central bank functions. Another is that the central bank should have an adequate investment portfolio in order to be able to buy and sell securities freely. The Reserve Bank has the legal powers necessary for open market operations. It can buy and sell Government securities. It can also buy and sell short-term commercial bills. But it has no authority to buy and sell industrial shares. There is no proper bill market in India, so the Reserve Bank has had virtually no occasion to buy and sell commercial bills or Treasury bills. Its open market operations, therefore, are confined largely to Government securities, including the loans of the various State Governments. As the Indian money and capital markets are not yet integrated in the strict sense of the term, and the market for Government securities is restricted, the Reserve Bank's success in open market operations has been limited. The relative smallness of the gilt-edged market is indicated by the fact that the buyers are mainly the commercial banks, the Life Insurance Corporation, provident and pension funds, charitable trusts and joint-stock companies. Individual investors are very few in number. On the supply side, the public debt in India has begun to grow only during the past few years. Even so, Government borrowing has probably not been extended as much as it could have been. It is unfortunate that in official circles the scope for borrowing does not appear to have received the importance it deserves.

The open market operations have largely been devoted to assisting the Government in its borrowing operations and maintaining orderly conditions in the gilt-edged market. The Reserve Bank has played a useful part in grooming the market at the time of new flotations of Government loans by acquiring securities nearing maturity in order to facilitate redemption. The Government of India, for instance, decided to borrow Rs. 175 crores this week—lists closed yesterday—by offering 3½ percent bonds 1966 and 4 percent loan 1980. The 2¾ percent loan 1960, the 4 percent 1960-70 and the Hyderabad Loans which were notified, were being offered in exchange for the new loans. By having acquired a substantial portion of these loans from the market, the Reserve Bank has helped subscriptions to the new loans. Open market operations have so far succeeded in maintaining steadiness in Government securities by adjusting supplies in accordance with demand. The index for Government and semi-Government securities stood at 100.7 during 1958-59 and at 101.3 during 1959-60 (1952-53 equals 100). So it is evident that fluctuations in the prices of securities have been narrowed to a great extent.

The Reserve Bank deserves praise for having helped the flotation of new Government loans by its open market operations during the past few years. The Bank facilitates the repayment of maturing loans by acquiring sufficient quantities of them through buying spread over a fairly long period before the repayment date. The object of these purchases is to facilitate the redemption of the loans and to ensure the success of new flotations. At the same time, care is taken not to pump too much money in the market—most of the purchases are covered by selling other suitable securities. It is notable that at such times purchases or sales of securities in the form of "grooming" are also undertaken in order to bring yields of comparable securities in line with those offered by the new loans. The trend of borrowing by the Central Government during recent years shows that the Bank has also helped lengthen the period of maturity of new loans to a great extent. Borrowing for a longer period is considered appropriate at the present time as an aid to planned development.

It is stated in the latest issue of the *Reserve Bank of India Bulletin* that the Reserve Bank does not seek either to make profits or to rig prices, but wishes to maintain a free, continuous and healthy market. Being a major reservoir of Government securities, it tries to ensure an adequate supply of securities in response to demand. Whether this claim can be substantiated is open to question. There has been an appreciable shortage of short-dated securities during the past few months and commercial banks have been forced to invest their money in longer-dated stocks. It is possible that the Reserve Bank does not have enough short-dated stocks in its investment portfolio to offer the market. Its investments amounted only to Rs. 130.06 crores during the week ended 1st July, 1960, but the investments of scheduled banks were Rs. 739.72 crores. If the Reserve Bank wants to feed the market with the securities the latter needs, it will have to replenish its stocks of short-dated securities.

The *Bulletin* mentions the operational techniques of the Reserve Bank. Since November 1951, the Bank's dealings in securities have been mostly in the nature of "switches"—buying one security against the sale of another—as distinct from outright purchases or sales. The switch transactions are generally done through approved brokers, of which there are at present 12 in Bombay, eight in Calcutta and 10 in Madras. The Reserve Bank does not usually like to buy securities from commercial banks so that the latter may obtain cash. If commercial banks are to obtain credit from the Reserve Bank, they are generally forced to borrow against Government securities. This sometimes results in forced selling of securities, because commercial banks do not always find it appropriate to go to the Reserve Bank for loans. In such circumstances, the prices of securities decline, causing worry to the banking community. The Reserve Bank might well reconsider whether it should still remain a mere spectator, on the ground that its function is not to influence prices against market trends. Unless it is prepared to undertake open market operations, it is difficult to understand how fluctuations in securities can be reduced.

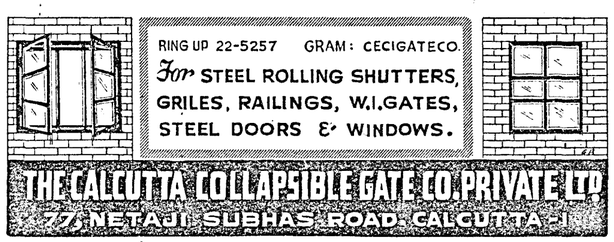
Open market operations are of little use in regulating credit. Except for helping commercial banks to tide over seasonal monetary stringency on some occasions, they have rarely been used for restraining credit. The Bank usually restricts credit through other monetary measures, among which various selective credit controls are prominent. There is, nevertheless, evidence that the open market policy of the Bank has been used during the past few years to reinforce the general policy of credit restraints in a broad way. Since 1951-52, total purchases of securities from the open market by the Bank have amounted to Rs. 309 crores, while its sales have been Rs. 560 crores. The difference of about Rs. 250 crores should have helped restrain credit. It is, nevertheless, clear that net sales during the past eight or ten years have been very small. It is hard to agree with the official view that in a developing economy with a series of plans, there is little scope for open market operations of an anti-cyclical character. In fact, the economy shows signs of inflationary strain. The Reserve Bank does not appear to have used its open market operations to any worthwhile extent for checking inflation. It is possible that the Bank is circumscribed by official regulations in choosing a suitable monetary policy.

ECONOMIC PROSPECTS IN THE WEST

THE recent low level of operations in the U.S. steel industry and the sharp decline in sales of durable consumer goods in the United Kingdom have revived doubts about the duration of the economic boom in the western world as a whole. Some observers believe that, in the United States and Britain, the trend has already turned downwards, and that the counter-inflationary measures applied by the U.K. Government in June will soon seem ill-advised. Such conclusions are necessarily tentative until more statistics relating to the second quarter of the year are available. It is a serious criticism of any policy of "managing" an economy (unless one accepts the principle of total planning) that most of the information on which the authorities must base their decisions—to subdue, to stimulate, or to remain inactive—relate to a situation as it was some weeks or some months previously. A further complication for the "managers' is the impossibility of distinguishing the causes of any change in the economic position. It may be that in the U.K. the latest phase of expansion reached its highest point last April: but if the trend turned downward in May, one cannot be sure that the change was caused by the further restraints on credit imposed at the end of April and not by forces that existed previously and were already beginning to exert themselves when the authorities acted.

The American position is so confused by changes in inventories, particularly in the steel-using industries, that one must be cautious about interpreting a change in the level of production as a change in the economic trend until both have been confirmed over a period of months. It is now apparent that the steel-using industries had, in general, built up very large stocks before the long strike in the steel industry, so that subsequent restocking was less than was generally expected. If the proportion of production that was going to stock was more than was supposed, the "true" level of economic activity must have been lower than was supposed. The level of activity in Britain was certainly rising rapidly in the early months of this year, but figures published early in July raised doubts. Credit was an important factor in the expansion, and already in June it had been revealed that the growth of bank credit had virtually ceased by the middle of that month. In July appeared the figures for total hire-purchase debt in May, showing a continued increase but at a slower rate than previously: but at the same time appeared the figures for hire-purchase sales of vehicles in June, showing a sharp decline.

The control of hire-purchase agreements imposed at the end of April is obviously effective. But it is not yet possible to see how it has affected total trade. Sales of durable goods, particularly domestic appliances and cars, have certainly been



reduced; and reductions in employment (whether in the number of workers or in the time a worker) at the works of Hoover and Vauxhall Motors and some other companies have dramatically emphasised the change. But it is equally certain that some demand has been transferred from durable goods to soft goods; and in consequence the textile industry, which in comparatively recent memory has been neglected in favour of others that satisfy more modern needs, is one of the most active.

Some observers believe that, in an election year, U.S. policy will soon be more positively expansive, but British policy since June has been established as firmly restrictive. Effects attributed to the restrictions imposed at the end of April were visible about two months later, and observers of the British trend are now waiting for the effects that they can attribute to the restrictions imposed late in June. But even if these effects are disturbing, the restrictions will not be hastily relaxed, for September, or thereabouts, is the time of year when sterling suffers its worst strains in any period of difficulty. The British authorities have taken no chances this year. Their first consideration is the stability of sterling, even if, to maintain it, the economy slides into a mild recession. The flow of gold to West Germany is a complicating factor; it influences British policy, even though no reasonable action by the British authorities can prevent it. But in other respects the position of sterling is quite healthy—and even the West German problem will be moderated soon if prices there continue to rise while British prices remain constant.

Withdrawal by the most important sterling countries of some of their balances in London implies some pressure on sterling and the reserve, for part of these withdrawn balances is being spent outside the sterling area. But Britain can minimise this factor if she can offer to the sterling countries exports that are in every way competitive with foreign countries'. The essential fact is that sterling now commands confidence, whereas it was more or less suspect almost throughout the postwar era until the drastic measures of September 1957 were seen to be effective—and permanently so, because the Government had changed its policy and put sterling first on the list of priorities. This change of policy is one reason for supposing that no violent measures will be needed, as in 1957. The U.K. Government has applied stimulants only when needed, not as in 1955, when the pre-election Budget accelerated economic activity in most inappropriate circumstances; and it has applied restraints when needed—or earlier. So no more drastic action will be needed. But Britain is now, perhaps, experiencing the obverse of that policy, a decline in economic activity that must not be arrested because sterling might suffer in the process. It will be distressing if Britain's task, coinciding with the United States' problems, operates against the expansion of world trade.

Current News and Comment

Shaw Wallace Attracts

Shaw Wallace and Co. Ltd has done well during the year ended December 1959. The profit has increased from Rs. 44.45 lakhs to Rs. 56.66 lakhs. An ordinary dividend of 15 percent, taxable, has been declared. This offers a yield of 6 percent at the present price of Rs. 25 a share. The ordinary dividend was 10 percent, tax-free, in the previous year. There is still considerable strength in the shares as the Company's working during the first half of 1960 has been satisfactory.

The modernisation and expansion plans are making steady progress. In the review which has been circulated along with the report and accounts, Mr. S. M. Smith, chairman, outlines plans for diversifying activities. (A fuller version of the statement is published on a later page.) Strenuous efforts are being made to increase the use of fertilisers, especially for food production. The Company's output of superphosphates and sulphuric acid has increased considerably due to the expansion of the old factory and the setting up of the new acid plant. The production of acid has increased from 7,396 tons in 1958 to 9,429 tons in 1959 and that of superphosphates from 23,839 tons to 26,849 tons. With both units working to capacity, the production of superphosphates is expected to rise to more than 70,000 tons during 1960. Efforts are being made to increase the sales of insecticides and fungicides. The production of glue has increased from 12,495 cwts to 20,124 cwts in spite of difficulties concerning raw material supplies. The adhesives section is making steady progress. Plans have been made to extend activities into the field of synthetic adhesives, which might prove useful for the plywood trade. Referring to the working of the Tinplate Company of India Private Ltd, Mr. Smith says that the price which has been fixed for the Company's products is unremunerative. Plans to expand and modernise the Golmuri works are being investigated. In view of the likely increase in demand, it is necessary to encourage production by fixing a more reasonable price for the products.

Mr. Smith takes a moderately optimistic view of the prospects for the collieries. The latest increase in the price of coal, combined with the fact that many mining difficulties have been overcome, may help to improve the working of collieries under the management of Shaw Wallace. Mr. Smith, nevertheless, stresses the need for a more liberal pricing policy if new areas are to be developed and more mechanisation is to be introduced for increasing production. "With very little encouragement, the private sector can raise its output considerably, and it is difficult to conceive why this necessary encouragement is not yet forthcoming".

The shipping interests have been extended because Shaw Wallace has acquired a 50 percent interest in Cruickshank and Co. Private Ltd, a small private Company formed as successor to Clegg Cruickshank and Co. Private Ltd. The Company in question acts as agents for the Lief Hoegh Steamship Co., Oslo, and Messageries Maritime. Shaw Wallace has also acquired the Bengal Distilleries Co. Private Ltd during the past year. The production of the distillery has increased to a great extent. The New Samanbagh Tea Company has acquired, by an exchange of shares, the entire share capital of the Rajnagar Tea Company. The New Samanbagh Tea Company is now a subsidiary of Shaw Wallace. The latter has also acquired Walker and Greig (Coonoor) Private Ltd. This is a small engineering Company in the Nilgiris. Mr. Smith hopes that the investment will prove remunerative. The factory of the yeast company is expected to start production soon. A new factory for the manufacture of agricultural sprayers has been erected in Madras and is likely to begin full production soon.

T.E.L.C.O. Expanding

The working of the Tata Locomotive and Engineering Co. Ltd during 1959-60 has shown encouraging progress. The production of all divisions has exceeded the targets, and sales have increased considerably. The net profit has improved and an ordinary dividend of 12.5 percent, taxable, has been declared. This leaves a net dividend of 8.75 percent in the hands of shareholders. In his statement circulated along with the report and accounts, Mr. J. R. D. Tata, chairman, reviews the Company's efforts to expand and diversify its activities. (A fuller version of the statement is published on another page of this week's *Capital.)* Arrangements have been completed for the production of paper and pulp making machinery and power shovels; production is expected to begin soon. As a result of this expansion, the capacity available in the general engineering and foundries division is likely to be used more fully at a fair margin of profit. The financial requirements of the project will come from internal resources.

The motor-vehicle division has made satisfactory progress. It is expected that the expansion of the manufacturing capacity to 12,000 vehicles a year will be completed within 1960. The indigenous content of the Tata-Mercedes-Benz vehicle has now reached 78 percent, and is likely to increase further with the development of ancillary products. Steps have also been taken to encourage outside producers to manufacture more ancillary products. Mr. Tata thinks that the production of the division needs to be increased more in view of the great scope for road transport. The Company, therefore, proposes to raise the capacity for the production of Tata-Mercedes-Benz vehicles to 24,000 a year, with an indigenous content of more than 90 percent. Mr. Tata indicates that the financial proposals concerning the project will be conveyed to shareholders in due course.

His observations on the project to manufacture a cheap motor-car deserve special attention. T.E.L.C.O. has submitted a scheme for producing D.K.W. "junior" cars. If it is decided to manufacture cheap passenger cars in India, it is necessary to concentrate attention on producing a reasonably good car. Merely producing a small car at a low cost and selling it cheaply might not help users in the long run; the costs of repairs and spare parts too have to be considered carefully. The life of a car in India is important considering that road facilities here are far inferior to those in Europe. In India, families are also usually bigger. So "if a small car is to be made at all, the Government will approve of a reasonably roomy car, modern in design and rugged in construction, with a long and economical life built into it." The sooner the Government takes a decision concerning the production of a small car, the better it will be; a large number of people are already suffering because of the exorbitant prices which have to be paid for the cars now available in India.

The foundry and forge division of T.E.L.C.O. has made satisfactory progress. A substantial portion of the motor-vehicle division's requirements of forgings will be met soon by this unit. As for the locomotive division, it is indicated that the railways will buy steam locomotives for many years ahead. Mr. Tata hopes that the Railway Board will fix the prices of these locomotives at a reasonable level, instead of leaving them to be decided by cumbersome bargaining every year.

Seebpore Coal Steady

The ordinary shares of the Seebpore Coal Co. Ltd have been steady around Rs. 31.62 during the past week due to the publication of a good report for the year ended December 1959. Raisings improved from 77,909 tons to 90,609 tons, and despatches from 80,894 tons to 90,906 tons. As a result, the profit has increased from Rs. 3.41 lakhs to Rs. 4.59 lakhs, after raising depreciation from Rs. 45,500 to Rs. 49,000. An ordinary dividend of Rs. 3, taxable, including an interim of Re. 1 a share, has been declared. This offers a yield of 9.5 percent at the present price and is covered more than four times. The ordinary dividend was Rs. 1.75, tax-free, in the previous year. An amount of Rs. 75,000 (against Rs. 30,000) is transferred to general reserve, raising reserves to Rs. 10.99 lakhs, against an ordinary share capital of Rs. 2.80 lakhs. Other allocations include Rs. 2.18 lakhs (against Rs. 2.10 lakhs) for taxation and Rs. 15,087 (against Rs. 12,318) for development rebate reserve. The carry-forward is Rs. 45,862, compared with Rs. 43,951 brought in. Current assets stand at the impressive figure of Rs. 20.16 lakhs.

The articles of association of the Company provide for a fixed cumulative preference dividend of 5 percent, free of Indian income tax. In viet

of the new provision for deducting tax at source from all dividends, the directors have declared a final preference dividend of 3 9/14 percent, making 7 1/7 percent for the year, subject to tax deduction. Andrew Yule and Co. Ltd will cease to be managing agents of the Company on 15th August, 1960. Their appointment as Secretaries and Treasurers for five years from that date has been permitted by the Government of India.

Wm. Powell Offer

Wm. Powell and Sons Ltd is offering 49,000 ordinary shares of Rs. 10 each for public subscription at par. The list opened on 19th July. Of the total issue of 100,000 ordinary shares, the directors and their friends have agreed to subscribe to 51,000 shares. (Further details of the offer are published on another page of this week's *Capital*). The Company will take over the business of Wm. Powell and Sons, with all its assets and liabilities. The latter has a factory in Lilooah, near Calcutta. It is proposed to build a new factory in Behala, near Calcutta, for producing conveyors, automation equipment and precision instruments. Considering that many industries might mechanise more rapidly in coming years, there should be a fair demand for the Company's products. Negotiations for foreign collaboration are believed to be progressing. The management hopes to pay reasonable dividends soon. Wm. Powell and Sons has developed many designs and models of general and special conveyor equipment and components. So the new Company should be able to start as a going concern. The financial outlay is estimated at Rs. 16 lakhs and the annual turnover is expected to be around Rs. 87 lakhs.

Ruby Rubber Preference Issue

The Ruby Rubber Works Ltd has a paid-up capital of Rs. 11.43 lakhs. It declared an ordinary dividend of 6 percent, taxable, and a preference dividend of 6½ percent, tax-free, for the year ended June 1959. It is now offering 250,000 10 percent, taxable, cumulative preference shares of Rs. 10 each at par for subscription. The issue has been offered to the existing shareholders in the first instance, but applications have been invited from the public for any shares which may not be taken up by the former. The Company has a factory in south India for the manufacture of bicycle tyres, tubes and allied products. The money from the new share issue will be used for building a new factory in Bangalore, which will make various rubber products. The existing shares of the Company are dealt in on the Madras Stock Exchange, and an application will be made soon for listing the new shares too on that exchange. (Fuller details of the issue are published on another page of this week's *Capital*).

Manufacture of Coaxial Cables

The first coaxial trunk cable was produced at the Hindustan Cables factory in Rupnarainpur, West Bengal, on 20th July. A major step has thus been taken towards the goal of self-sufficiency in the manufacture of telecommunication equipment. The Hindustan Cables factory's output has gradually risen from the initial target of 469 miles of cables to 691 linear miles of cables of various types during 1959-60. In terms of money, it is worth Rs. 115 lakhs. At present, 70 percent of the Posts and Telegraphs Department's requirements are met by this factory while small quantities are also sold to the railways and other organisations.

The ready availability of coaxial trunk cables will mean a bigger network of trunk telephone channels, a reduction in traffic disturbances (as these cables are underground), and more telegraph and teleprinter circuits. The project for the manufacture of coaxial cables has been launched because the demand for long-distance telephone channels is increasing, and the existing overhead circuits are inadequate, especially on the important trunk routes. To reduce the chances of dislocation of traffic resulting from copper wire thefts, the Posts and Telegraphs Department has decided in the first stage to link the major cities with underground coaxial trunk cables and associated equipment. The factory's target for 1960-61 is 200 miles of coaxial cables. They will be laid between Kanpur and Banaras so as to constitute a link with the other imported cables which have already been laid. Thereafter, the output will be gradually raised to 600 miles of cables a year. These will be laid between Agra and Bombay *via* Ahmedabad, Bombay and Madras, Madras and Coimbatore, and Delhi and Amritsar. The sale value of the cables, when the factory goes into full production, will be nearly Rs. 140 lakhs a year.

A coaxial cable consists of a copper conductor placed centrally in a copper tube which is made from a copper tape. The copper conductor is held in position by polythene discs placed at regular intervals. With a view to reinforcing it mechanically and providing electromagnetic screening, the copper tube is bound by two mild steel tapes and finally insulated with two lappings of paper. Two such tubes (or more, if required) are formed into a cable and the interstices are filled with a suitable number of quads on either side. The manufacture of coaxial cables will help the copper and steel industries, as the principal raw materials are copper wire, copper tapes, special polythene discs and granules, lead and steel tape. Although initially the cables are being manufactured from raw materials which are mainly imported, later on indigenous materials will be used as long as they conform to the approved standards. There is also a proposal for setting up a copper wire drawing unit at the Hindustan Cables factory during the third five year plan.

Walford Transport Earns More

The turnover of Walford Transport Ltd has risen from Rs. 1.52 crores to Rs. 2.04 crores during the year ended December 1959. In view of the expansion in road transport, the demand for motor-vehicles and their components is expected to increase. But the rise may not be large since motor-vehicles and spare parts have become very expensive. Vehicle-owners will tend to use the existing vehicles longer by carrying out repairs, rather than buy new vehicles. Meanwhile, as the margins permitted to dealers have been cut, the directors of Walford Transport have taken steps to compensate for the loss of income by diversifying the Company's activities. The profit has improved from Rs. 4.11 lakhs to Rs. 8.90 lakhs. The ordinary dividend has been increased from 14 percent. tax-free, to 20 percent, taxable. This is covered more than five times and offers a yield of 5.2 percent at the present price of Rs. 3.81 a share. Taxation provision is allocated Rs. 5.20 lakhs (against Rs. 2.51 lakhs). An amount of Rs. 1.5 lakhs is transferred to general reserve in order to strengthen resources for handling the increased business. The carry-forward is Rs. 167,197, against Rs. 140,959 brought in.

Shortage of Rubber

Speaking at the annual general meeting of the Indian Rubber Industries Association in Bombay recently, Mr. L. M. Jamnadas, president, said that while the rubber manufacturing industry has made all-round progress, the rubber plantation industry has not developed to the extent desired. The latter has been unable to benefit fully from the extra price paid by manufacturers for its expansion. It is, therefore, necessary for the Tariff Commission to see that any extra sum the manufacturing industry is asked to pay for raw rubber is used for the purpose for which it is intended. Mr. Jamnadas said that the price control on rubber has become ineffective since the commodity is selling at much higher rates than the controlled ones. Because of the raw material shortage, many manufacturers are unable to work their factories to their full capacity. The most important cause of the shortage, the president said, is insufficient production. Furthermore, since world prices are higher than the Indian controlled prices, some manufacturers are not using their import licences. There is a scramble for such small quantities as are available, so prices have risen. Another factor which has contributed to the rise in prices is the Tariff Commission's delay in submitting its report to the Government. Planters believe that the fo... ...'ll recommend higher raw rubber prices, so they have shown a tendency to withhold supplies. But the announcement of a fair price, Mr. Jamnadas said, will not solve the problem of shortage and high prices unless there is effective distribution control. Manufacturers should import adequate quantities of rubber even at high prices in order to build adequate stocks.

Competition in Insurance

A sub-committee of the U.S. Senate has been conducting an interesting enquiry to find out how far insurance companies in the United States are trying to restrict competition and create semi-monopolies. The first witness before the enquiry was Mr. Robert A. Bicks, of the Anti-trust Division of the U.S. Department of Justice. He thought that it might be worth investigating the extent of the freedom to cut rates and of the coverage presently offered in fire and casualty insurance. There are no life insurance rating bureaux, he said, but in fire and casualty insurance, a regular pattern of control of rates has been established in nearly all the U.S. States. The rates, he said, become effective after a specified time unless they are disapproved by the Insurance Commission. An all-industry model law, enacted in most States, specifies: "Every member of, or subscriber to, a rating organisation shall adhere to the findings made on its behalf by such organisation, except that any insurer may make a written application to the Commissioner for permission to file a deviation." But, in practice, deviations present problems; they must be agreed annually and in each case have to be the subject of a separate application, involving long delays. It has been argued, said Mr. Bicks, that over the years, regulations have reduced the competitive factor and firmness is necessary to change this trend. Any company should be able to file the rate which its experience and financial position justify. This would save the insurance business and also provide competitive rates and good service for the policy-holder. On the subject of insurance mergers, and whether the merger movement might be forestalled by the application of the Federal anti-trust laws, Mr. Bicks stated that six publicly-reported mergers have been noted recently. They were all in the fire and casualty fields and happened to be of substantial significance; some mergers might have had anti-competitive implications.

While insurers all over the world will watch the U.S. enquiry with interest, the most important question is whether rates are realistic and responsive to competition, or are arbitrarily maintained through the medium of rating boards. The insurance markets of the U.K. and India have traditionally grown on the basis of tariff and rating schedules. Tariff rates express the pool loss experience, the average losses of insurers and their administrative expenses. Non-tariff companies, a large number of which trade actively in the U.K., have their own basis of rating, which is not far removed from the tariff rates. Yet it is a credit to the U.K. insurance system that both types of offices function side by side, cutting across monopolistic tendencies. India, which has based her general insurance practice on that followed in the U.K., has to retain tariffs even though they may have anti-competitive implications. Indian general insurance is too immature to be able to do without tariffs.

Progress of Chinese Textile Mills

In recent years, international markets have felt the impact of China's growing trade in cotton textiles. But it is impossible, in the absence of details about output and exports, to appreciate what influence the country may have in the future. Of considerable interest, therefore, is an article on the Chinese cotton textile industry appearing in a recent issue of the *Review of the International Federation of Cotton and Allied Textile Industries*. The article is based on original documents, some of them not available hitherto. Although they cannot be checked, the author believes his information to be reliable and reasonably accurate. When things go wrong, he explains, statistics are simply not published. In 1936, the last year of peace in China, cotton yarn output was 2,146,000 bales and cloth output was 3,458,000 metres. But by the end of the Japanese war, the war in the Pacific, and the civil war that followed, these totals had fallen to 1,803,000 bales and 2,151,000 metres. At that time, that is, when the new *régime* was officially established on 1st October, 1949, there were 247 cotton mills in the country with 4.9 million spindles and 127,000 looms.

In the three years 1950 to 1952, nearly 200 million yuan (£1 is equivalent to approximately 7 yuan) was invested in the cotton industry, with the result that its total capacity was raised to 5.6 million spindles and 142,000 powerlooms, of which 74,000 were in modern mills. By the end of the period, production had risen to 3.62 million bales of yarn and 3.83 million metres of cloth. The next major stage in the reconstruction and development of the industry came with the first five year plan, which began in 1953. By the end of the plan in 1957, about 1,600 million yuan was invested in the textile industry as a whole, about 90 percent of this in the cotton industry. The number of spindles rose to 7.6 million and the number of looms in modern mills to 129,000 (the total number of looms is not available, but in 1956 it was 175,000). Apart from the installation of new machinery, productivity was also increased, and it is believed that over 80 percent of the rise in output was achieved through better use of existing equipment. During the period of the plan, the ownership of the textile industry was completely changed and all private mills were converted into joint State-private enterprises. One of the advantages of the communist economy can be seen in the figures for capital accumulation. The average cost of building a mill of 100,000 spindles and 3,500 looms during the period was 35 million yuan and the time taken to build it about 13 months. But the average profit handed over to the State by each mill was 34.9 million yuan a year, so it appears as if the cost of capital investment was recovered in a little over a year.

The inauguration of the second five year plan heralded a major change in the structure of the industry when it was decided to break away from the Russian model of big capital-intensive projects by making use of the vast manpower of China to establish small and medium-sized plants. No complete figures have yet been published on the plan's progress but from ministerial statements it can be assumed that the increase in productive capacity has continued and that by the end of last year, the number of spindles installed was between 9.5 million and 9.75 million. The latest estimate of the number of looms is for the end of 1958, when it is thought that there were about 150,000 in modern spinning and weaving mills. Output figures have been published, and they show that the output of yarn in 1959 was 8.25 million bales and that of cloth 7.5 million metres. The 1960 plan provides for increases to 9 million bales and 7.6 million metres, respectively.

Wage Dispute in Buckingham Mills

The Buckingham and Carnatic Mills has recently stated that in addition to basic wages and dearness allowance, it has been paying certain cash allowances to workers, so it is reluctant to increase wages in accordance with the Cotton Textile Wage Board's recommendations. It has pointed out that it offers liberal cash allowances to its workers, unlike many mills in India. The Company entered into a bonus agreement long before additional burdens were imposed by the Wage Board. The management feels that the cash

allowances must be set off against the increase in wages to be granted under the Wage Board award, and that the bonus agreement needs to be revised. The workers, however, have urged the mill authorities to increase wages as other mills have done. The management issued a notice on 8th July stating that the Labour Minister had asked the parties to refer the points at issue to arbitration by a nominee of the State Government, but the workers rejected the suggestion. The management is prepared to accept the award, provided the question of setting off cash allowances against the increase in wages and the revision of the bonus agreement is referred to an arbitrator nominated by the Madras Government.

New Industries in Madras

At the recent annual general meeting of the Hindusthan Chamber of Commerce, the president referred to the increasing number of new enterprises which have been started during the last four years in Madras. Not one licence has been surrendered so far, and there has been an increase in employment opportunities. Besides, the climate for investment in the State has improved. The State Government has invited outside capitalists to start new undertakings and has promised official assistance. It feels that there should be more engineering and paper concerns as well as iron and steel mills to remove local shortages. A Japanese mission, it is reported, has arrived in India to start a plant for manufacturing road-rollers in a new factory near Madras city. In this connection, the name of Sakai and Company and of Sumitomo is mentioned as the collaborator for the manufacturing programme, which is to be undertaken by Garlick and Company. The new plant may start working within six months.

New Seed Drill

A demonstration was recently given in Lucknow of a new "master seed drill" before high officials of the U.P Department of Agriculture and experts from the Indian Council for Agricultural Research. The invention of a local school-teacher-turned-farmer, Master Ram Narain Singh, the drill represents a vast improvement on every other method now used in India for sowing seeds. It can sow all seeds for *rabi* and *kharif* crops at the desired depths and distances. It is also suitable for mixed cropping, where separate furrows are used for different types of seeds at varying depths and varying distances; the whole thing can be done in one operation. Perhaps the greatest advantage of the drill is its low operational cost. The cost of sowing wheat with other drills is about Rs. 15.44 and by the Dibbler method about Rs. 22.75, whereas it costs only Rs. 5.19 with the "master seed drill." In a communication to the Regional Directors of Agriculture, the State's Additional Director of Agriculture has stressed the fine points of the "master seed drill." "The draught of the seed drill," he says, "is not heavy and it can easily be worked with a pair of bullocks. The seed drill also has a mechanism for sowing different crops mixed in lines. It can be adjusted to sow practically all crops from pea to mung, urad, paddy and jute. The distances can be adjusted from seed to seed as well as from row to row." The State's Department of Agriculture has decided to buy a large number of these drills, costing Rs. 250 each, for extensive trials during the *kharif* season.

LABOUR MIGRATION FROM INDIA

THERE was a large increase in the number of coolies who emigrated to British colonies during last year, the total number being 9,369 against 6,024 in the previous year, and the increased demand in some of the colonies is believed to be due to the improvements in the sugarcane industry. The majority of the emigrants were recruited from the North-West Provinces, and nearly half the number of despatched went to Demerara, Trinidad and Natal coming next. During the year 2,421 emigrants returned from the colonies, and those who came from Trinidad were worth Rs. 215 per head, Fiji coming next with Rs. 201 per head. Too much reliance cannot, however, be placed on the coolies' statements as to the amount of their savings, as a number of them declared themselves to be in a penniless condition. From enquiries made it appears that the West Indies and Guiana with Fiji are the most promising fields for emigrants, and that they thrive less in Mauritius and Natal than in any other of their resorts. Steps are to be taken to ascertain the amount of money sent by the emigrants to the several colonies to India by money-order, as any information regarding the prospects of emigrants in different colonies is very valuable.

FROM
CAPITAL
19th July, 1900

A Ditcher's Diary

NOT EVEN IN MY INFREQUENT MOMENTS OF radicalism have I been an unhesitating supporter of strikes and *hartals*; I believe that one of the major virtues of a democratic society is that it provides less extreme, yet equally effective, safety-valves of peaceful dissent. Strikes can, of course, be peaceful; but until last Saturday it might not have been visualised that they could be so in Calcutta too. My surprise, not unmingled with considerable relief, was perhaps pardonable, therefore, when I discovered that this city, for the first time in probably fifteen years, had staged a general *hartal* which passed almost without incident. The purpose of the strike was noble indeed: to express West Bengal's horror and anxiety at the senseless and violent campaign to drive Bengalis out of Assam. The purpose of the leftist Parties which called the strike may, however, have been less noble, considering reports that their Gauhati and Shillong branches were among the main instigators of the Assam troubles. By singling out this unsavoury piece of hypocrisy, I do not imply that the one innocent entity in the affair was the Congress; on the contrary, the greatest failure in Assam has been the Chaliha Ministry's in not being able to—perhaps not even wanting to—suppress an orgy of *goondaism* that has driven nearly 40,000 Bengalis out of their homes. I would not venture to predict whether the Assam Government's apathy will lead to its displacement by Presidential rule; such predictions would be safe only where Governments are run by Parties other than the Congress. But it would be reassuring to know from Mr. Nehru, now that he has completed a three-day conducted tour of Assam, that the authorities there have given him a more satisfactory excuse for their somnolence through six weeks of rioting than they have yet given anybody else. It would be unwise to assume that the dignity and restraint which marked West Bengal's protest last Saturday are immutable; or that the somewhat ostentatious display of military and police precautions organised in Calcutta that day will prove perenially effective. When they meet later this month, Dr. Roy can be relied upon to give Mr. Nehru a more reliable assessment of the repercussions of linguistic riots than Mr. Chaliha's colleagues might have done; it would be unfortunate if the increasingly insular outlook of the Congress were to foster the assumption that the prestige of Assam's Congress Ministry is worth more than the sense of security of the 40,000 inhabitants it failed to protect.

A FIVE-DAY STRIKE FOR NOTHING SOUGHT AND nothing gained: so may the past week be remembered by the Central Government employees returning to work after suffering one of the most shameful bluffs in the sordid history of labour politics in this country. Well before the strike began, it was clear to the employees no less than to their Joint Council of Action that there were virtually no demands left to fight for: of the six originally presented, four had been dropped and the remaining two muffled up in formulae of meaningless verbiage. Why then, one wonders, was the strike ever launched, unless it was to save the face of second-rank politicos drawn from a rag-bag alliance of leftist Parties who had worked themselves up into an unnecessary pother over the whole issue? I do not suppose that, even with their considerable capacity for self-delusion, the members of the Joint Council of Action imagine themselves as having emerged from the whole episode looking like the heroes they never were. The ignominy of the "unconditional surrender" they have had to concede is as complete as it is welcome; and one hopes it may have some salutary lessons for the conduct of future labour disputes, not only in the Government but in industry too. The lessons for the Government are particularly important; and the first of these is that firmness pays, especially in dealing with a strike which is nothing more than an invitation to hooligans who think that intimidating conscientious workers, removing fish-plates from railway tracks and cutting telecommunication wires are supreme acts of Party patriotism. I am not among those who believe that the Government now also has an unexpectedly favourable opportunity to solve its over-staffing problems by dismissing the former absentees on a large scale; but to pardon a single person guilty of violence, sabotage or criminal default would be one of the surer ways of promoting demoralisation in an administration where morale has never been noticeably high. The country has already suffered heavily from the strike; there is no reason why those who launched it, both within the Government and without, now should not suffer too.

AS MOST PEOPLE EXPECTED, SENATOR JOHN KENNEDY has won the Democratic nomination for the U.S. Presidential election, and he seems to be a promising entry. Although young and inexperienced, even compared with Mr. Nixon who will in all probability be the Republican nominee, the Senator is a liberal with a shrewd appreciation of the international and domestic problems facing his country. His campaign speeches have made a good impression abroad and, it appears, at home too. I liked particularly that quip of his that what the United States needs most at present is statesmanship and not salesmanship. It cannot be said that the Republican Administration of Mr. Eisenhower has maintained an impeccable record, especially in foreign affairs; and Mr. Nixon may have much to answer for on its behalf. He does, though, have the advantage that his health is better, and his eagerness for golf not so obviously intrusive on affairs of State, than in the case of the present President. While Mr. Eisenhower's prestige in the United States is still no doubt high, I am not sure that he will go down in history as a great, or even moderately successful, President. The record of his Administration might have been better if he had chosen his advisers a little more carefully, not only in the State Department but also in the Pentagon. Their handling of the *U-2* incident was rather short of masterly, and now, with the shooting down of the *RB-47*, the Kremlin is making some headway in persuading the world that the saboteurs of the Summit were more numerous in Washington than in Moscow. The impression seems to be growing that Mr. Eisenhower does not know of a good many things done in his name until well after the storm has burst. The Democratic leaders, especially Senator Kennedy and Mr. Stevenson, have inevitably played up this fact in a well-calculated move to damage the prestige of the Republican Administration. I would not venture to guess how much better they might have done themselves, but the chances are that in the next four years they might provide the United States with more statesmanlike policies than the somewhat erratic Mr. Nixon.

THE JULY LETTER OF THE FIRST NATIONAL CITY Bank of New York contains a table which purports to give comparative rates of depreciation in the purchasing power of various currencies. Thus, in a list of 35 countries, Portugal stands fairly high with an annual rate of depreciation of only 1.5 percent between 1954 and 1959. Pakistan has done nearly as well with 1.6 percent, but India makes a poor showing with 3.7 percent. The U.K., too, is far down the list with a depreciation of 3.2 percent between 1954 and 1959, the rate of depreciation having been even higher in earlier years. At the very bottom of the table is Bolivia, whose currency depreciated by 40.4 percent in the 1954-59 quinquennium. These calculations are no doubt very interesting, but they seem to me to be somewhat misleading in certain ways. Pakistan, for instance, stands higher in the table than the United States, but one is justified in asking whether you would rather be stranded in, say, Zürich (which is an international money centre) with a pocket full of U.S. dollars or U.K. sterling, or your note-case stuffed with Pakistani rupees. I have little doubt what the answer of most people would be. And I suspect that a good many people will question whether the real purchasing power of our own Indian rupee fell by as little as 3.7 percent annually over the five-year period. That may be the figure suggested by the indices, but it hardly squares with the cook's book in my own household, which, in my experience, is a very reliable guide to the value of money.

PERHAPS FEW DEVELOPMENTS IN THE PUBLISHING world have done more to encourage the spread of literacy in modern times than the introduction of the "paper-backs". There was a period, not so long ago, when well-known publishers shied away from the idea of producing them; indeed, I am told that when Sir Allen Lane pioneered the famous Penguin series in 1935, the reaction of the book trade was a mixture of cynicism and hostility. Yet the "paper-backs" have proved an astonishing success, and a correspondent tells me that at a recent exhibition in London, samples from as many as 14 countries were on display—some of them issued by leading publishers in the "hard-cover" field. Sir Allen was perhaps fortunate, in that not long after the Penguins were launched, the war broke out, creating an exceptionally favourable environment for smaller books cheaply produced. But recent years have shown that the Penguins and Pelicans were by no means mere war babies; shortages of raw materials for the publishing trade have eased greatly, yet the popularity of the "paper-backs" remains undiminished, and Britain alone is selling no less than 70 million of them every year, a large proportion abroad. The heyday of India's own "paper-backs" is perhaps yet to come; I hope the mass market of readers they can build will be allowed to grow to maturity in the absence of modern distractive horrors such as television which have wooed away many potential literates in the West.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking, of which a copy is open to public inspection at the Registered Office of the Company at 4, Lyons Range (Top Floor), Calcutta. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus, having attached thereto the documents mentioned therein and the consents from Solicitors, Bankers, Brokers and Auditors, has been delivered for registration to the Registrar of Companies, West Bengal, as required by Section 60 of the Companies Act, 1956.

An application has been made to the Calcutta Stock Exchange Association for the listing of the name of this Company.

The subscription list will be open at the commencement of the banking hours on the 19th July 1960 and will close at the discretion of the Directors at any time after the close of Banking hours on the 25th day of July 1960 or sooner or later as the Directors may decide.

Applications must be made at and received by the banking offices of the Bankers set out in the instructions on the back of application forms, during banking hours.

Wm. POWELL & SONS LIMITED

(Incorporated under the Companies Act, 1956.)

Authorised Capital:

5,00,000 Equity Shares of Rs. 10/- each—Rs. 50,00,000

Present Issue:

1,00,000 Equity Shares of Rs. 10/- each—Rs. 10,00,000

OBJECTS

The Company has been formed for taking over, as going concern, the Conveyor and other allied business run under the name and style of Wm. Powell & Sons with its Office at 4, Lyons Range, Calcutta and Factory at 6, Station Road, Lillooah, Howrah with all assets liabilities, goodwill, agencies, contracts, orders, tenders, designs, etc. and for establishing a new factory at Behala, 24 Parganas to manufacture Conveyors, Automation Equipment and Precision Instruments. When commissioned, this plant will be first of its kind in India to manufacture Engineer's high precision Tools, Gauges and Gadgets and the largest plant in India to manufacture Conveyors.

Of the 1,00,000 Equity Shares now offered for subscription the Directors and their friends have agreed to take 51,000 Equity Shares of ten rupees each including the purchase price payable to the Vendor in the form of 30,000 fully paid Equity Shares under the sale agreement and in terms of article 4 of the Articles of Association of the Company.

The Balance 49,000 Equity Shares of Rs. 10/- each is now offered for public subscription in terms of the Prospectus.

Except the purchase price payable to the Vendors as per agreement no shares are to be allotted for a consideration other than cash.

The 49,000 Equity Shares will be payable as follows :—

On application	Rs	5 per share.
On allotment	Rs.	5 per share.

Failure to pay the allotment money will render the shares liable to forfeiture.

Applications must be made for a Minimum of Fifty shares or a multiple thereof.

BOARD OF DIRECTORS

1. **Sri Sohan Lal Sethia,**
   Industrialist
   38, Baranasi Ghose Street, Calcutta.
2. **Sri Murari Lal Jhunjhunwala,**
   Industrialist,
   12, Murli Dhar Sen Lane, Calcutta-7.
3. **Sri Kishan Lal Jhunjhunwala,**
   Industrialist,
   87, Howrah Road, Salkia, Howrah.
4. **Mr. John Kilgour,**
   Technical Adviser,
   4, Lyons Range, Calcutta-1.
5. **Sri Krishna Kishore Kapani,**
   Businessman,
   8, Circus Range, Calcutta-19.
6. **Sri Nurani Sesha Parameswaran Iyer,**
   Industrialist,
   36-A, Jatin Das Road, Calcutta-29.

MANAGING DIRECTOR

Sri Nurani Sesha Parameswaran Iyer,
36-A, Jatin Das Road,
Calcutta-29.

BANKERS

1. **The Union Bank of India Ltd.,**
   5, Clive Row Calcutta-1.
2. **The Indian Overseas Bank Ltd.,**
   P-35, Royal Exchange Extension, Calcutta-1.

BROKERS

1. M/s. Khandelwal & Bros.,
   25, Swallow Lane, Calcutta-1.
2. M/s. P. R. Subramanyam,
   70-A, Stock Exchange Building,
   Apollo Street, Bombay-1,
3. M/s. M. Nanjappaiah Jaghirdar,
   181, Cavalry Road, Bangalore City-1.
4. M/s. Harbans Singh Mehta & Co.,
   33, Regal Building,
   1, Parliament Street, New Delhi.
5. M/s. Lokkur & Co.,
   Kempagowada Road, Bangalore City-9.

AUDITORS

M/s. S. N. De & Co.,
Chartered Accountants,
2, Church Lane, Calcutta-1.

SOLICITORS

M/s. S. N. Mukherjie & Co.,
10, Old Post Office Street, Calcutta.

REGISTERED OFFICE

4, Lyons Range—Top Floor, (7th Floor)
(Post Box No. 859),
Calcutta-1.

PROSPECTS

The Company has obtained a Development Licence from the Government of India for the manufacture of :—

Items	Capacity on 3 Shift Basis
Conveyors & Conveyor Equipment	: Capacity to be determined by the Development Wing.
Engineer's Inspection Tools	: 20,000 pieces a month.
Micrometers	: 200 pieces a month.

CONVEYORS

With the growing consciousness for faster, safer and better industrial mining and plantation operation and the cry of the day for reducing manufacturing cost, Indian industries in general and the large projects in particular are realising the urgent need to stop MAN handling in industry and are resorting to mechanised handling of raw materials, components, finished products, output, raisings and so on.

New Projects like steel plants, fertilizer projects, oil refineries, coal mines, lignite mines, heavy engineering plants, etc., have necessarily to depend upon conveyors for efficient material handling while industries like jute, tea, textiles, engineering, bottling, etc., are rapidly changing over to mechanised handling, with advantage. It is understood that Neyveli Lignite Project alone (the proposed fertilizer plant included) shall have, in another five years conveyors of a total length of 13 miles the cost of which will run into a few crores of rupees. The Vendors, have during the last few months submitted tenders worth Rs. 136/- lakhs many of which are under consideration.

PRECISION INSTRUMENTS : FIRST OF ITS KIND

Engineer's high precision instruments, particularly the costly items like Micrometers, Verniers, Calipers, Height Gauges, Straight Edges, V Blocks, etc., will be manufactured by this Company in India for the first time on an organised scale. Negotiations are going on for foreign collaboration arrangements in this respect.

The conservative estimate of the anticipated annual sale when fully commissioned is as follows :—

Conveyors	.. ..	Rs. 60 lakhs a year
Instruments	.. ..	Rs. 24 lakhs a year
Other items including agency sales	.. ..	Rs. 3 lakhs a year
		Rs. 87 lakhs a year

When the plant capacity may have to be increased to meet increasing demands, the Company proposes to readily increase its resources by further issues of shares or debentures.

PROFITS

The Directors are reasonably of the opinion that in view of the present market indications the Company should normally be in a position to pay fairly reasonable dividends from the close of the first financial year itself.

TECHNICAL ASPECT

The Vendors Wm. Powell & Sons have developed and have also acquired a number of designs and models of general and special conveyor equipments and components which conform to BSS (to the extent applicable) or to the specifications of Conveyor Equipment Manufacturer's Association, Washington. They have further developed tools and designs for precision instruments as well.

Mr. N. S. P. Iyer is a highly qualified and experienced Production Engineer, Cost Accountant and a Labour Adviser and he is specialist in efficiency study. Mr. J. Kilgour, Technical Director is a U.K. qualified Engineer, a highly competent designer of conveyors and tools.

LOCATION AND LAND

The Company has purchased a plot of land admeasuring 12½ Bighas on the Diamond Harbour Road (National High Way) in Behala. The plot has all conveniences. The Company is in negotiation for purchasing the adjoining plots as well.

CAPITAL OUTLAY & WORKING CAPITAL

The estimated requirements are as follows:

(i) Cost of erecting new factory & office buildings, acquiring additional machinery and erecting including shifting ..	Rs.	5.5 lakhs
(ii) Preliminary and issue expenses (including brokerage) ..	Rs.	0.5 lakhs
(iii) Purchase price payable to Vendors as per agreement in the form of fully paid shares	Rs.	3.0 lakhs
(iv) Working capital	Rs	7.0 lakhs
	Rs.	16.0 lakhs

(A portion of the above expenditure can be deferred).

This amount will be met as follows :—

Subscription by Directors and their friends including Vendors subscription ..	Rs.	5.1 lakhs
Shares now offered to public	Rs.	4.9 lakhs
Bazar credits, advances and Trade deposits ..	Rs.	2.0 lakhs
Bank accommodation against stocks, bills, etc., (in due course)	Rs.	4.0 lakhs
	Rs.	16.0 lakhs

PRELIMINARY EXPENSES AND ISSUE EXPENSES

The preliminary expenses which are payable by the Company are estimated to be Rs. 50,000/- including brokerage of Rs. 10,000/-, commission and other issue expenses.

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares upon which the Directors will proceed to allot shares offered by the Prospectus is the subscription of the 50,000 Equity Shares of the nominal value of Rs. 5,00,000 payable in cash.

MANAGEMENT

The Directors have appointed Sri Nurani Sesha Parameswaran Iyer as the Managing Director of the Company for a term not exceeding five years at a time and have fixed his remuneration by way of a salary and allowances under the draft agreement and as provided in article 51 of the Articles of Association.

DIRECTORS' INTEREST

Sri Nurani Sesha Parameswaran Iyer is interested as Director and shareholder of the Company and Sri Iyer is the Vendor whose sole proprietory business the Company has acquired in terms of article 4 of the Articles of Association. Sri Iyer is further interested as a Managing Director of the Company, a place of profit, as per agreement between himself and the Company a copy of which is available for inspection at the Registered Office of the Company.

Sri Krishna Kishore Kapani and Mr. John Kilgour, Directors have consented to serve the Company as full time Sales Director and Technical Director respectively in terms of their respective draft agreements with the Company copies of which are available for inspection at the Registered Office of the Company.

All Directors are interested in the usual remuneration to be paid by way of fees for meetings attended and their travelling expenses if any.

INSPECTION OF CONTRACTS AND OTHER DOCUMENTS

The following documents may be inspected at the Registered Office of the Company during usual business hours on any working day until the subscription list is closed.

(a) A print of the Memorandum & Articles of Association of the Company.

(b) A letter addressed to the Vendors by the Controller of Capital Issue, Government of India, regarding the present issue.

(c) Licence granted to the Company under the Industries (Development & Regulation) Act, 1952 and Rules made thereunder.

(d) Report of the Auditors and the Audited Statement of Accounts.

(e) The draft agreement between Sri Nurani Sesha Parameswaran Iyer, Sole Proprietor of the Vendor firm and the Company regarding purchase of the Vendors business as per article 4.

(f) The three draft agreements between Sri Iyer, Sri K. K. Kapani and Mr. J. Kilgour respectively and the Company relating to the terms and conditions under which these Directors will serve the Company as full time Directors in their respective capacities.

Applications for shares must be made on the Application Forms and delivered before the close of the Subscription list to any of the offices of the Banks set out on the back of application forms accompanied by the full amount payable on application. Application money must be paid in cash or by cheque or bank draft. Money Orders will not be accepted. Cheques or drafts must include sufficient amount to cover all commissions and Bank charges. Where no allotment is made, the deposit will be returned by cheque on the Company's Bankers at Calcutta and where a partial allotment is made the unutilised balance after adjusting for the allotment will be returned by cheque on the Company's Bankers at Calcutta. Bank commission, if any, will be payable by the applicant. No interest whatsoever will be paid by the Company on call money or other sums. The shares when issued will be governed by the Regulations viz: Memorandum and Articles of Association of the Company.

Further copies of the Prospectus and application forms will be available from the Brokers named herein, at the Company's Registered Office and at the office of the Banks listed.

The Directors do not bind themselves to allot the full number of shares applied for and reserve the right to reject any application wholly or in part without assigning any reason therefor. Applications which are not complete or which are not accompanied by proper payment as above may not be considered.

The Share Certificates will be issued within nine months from the date of allotment.

TATA LOCOMOTIVE AND ENGINEERING COMPANY LIMITED

CHAIRMAN, MR. J. R. D. TATA'S STATEMENT

Statement of Mr. J. R. D. Tata, Chairman of Tata Locomotive & Engineering Co. Ltd., for the year 1959-60.

The Year's Results

Production of all the Divisions has exceeded targets and the sales of the Company's products have been higher than at any time in the past. New construction and expansion have proceeded according to schedule. The programme of indigenous production of Tata-Mercedes-Benz vehicles has been completed in time and efficiency continues to increase all round. The results of the year have enabled your Directors to declare a gross dividend of 12.5% on ordinary shares. The net dividend in the hands of the shareholders after deduction of tax will be 8.75%.

Profit and Appropriations

The turnover for the year under review exceeded the previous year's figure by about Rs. 1.8 crores; and the net profits by Rs. 47 lakhs after providing Rs. 48 lakhs more for depreciation. The amount carried to the Development Rebate Reserve has been reduced from Rs. 74.62 lakhs to Rs. 14.04 lakhs because the value of new fixed assets installed was much lower than in the previous year. The large increase in taxation, from Rs. 13.25 lakhs to Rs. 93.30 lakhs, was due partly to higher profits and partly to the reduction in development rebate.

Expansion and Diversification of Activities

The Company's plans for development foreshadowed in my speech last year are now taking concrete shape. Arrangements for the manufacture of paper & pulp making machinery and power shovels have been completed and production will commence shortly. The manufacture of these products, which will help your Company to utilise fully the available capacity in the General Engineering and Foundries Divisions, is expected to yield a fair margin of profit.

The additional capital requirements for both the projects to manufacture paper & pulp making machinery and the P & H power shovels will be met from the internal resources of the Company.

The Automobile Division

This year has been a period of outstanding activity and success in this Division. The expansion of our manufacturing capacity to 12,000 units a year has made satisfactory progress and is expected to be completed on schedule by the end of this year. It is gratifying for me to record that, as anticipated in my speech last year, we have fully discharged our commitment to establish in four years the manufacture of Tata-Mercedes-Benz vehicles, according to the phased programme approved by Government in 1954-55. The average indigenous content of our vehicles has reached 78% and we are now proceeding to increase this percentage still further by developing the manufacture of certain ancillary products and encouraging and assisting others to establish the manufacture of ancillary products or to increase their capacity. Members will be gratified to note the findings of the Ad Hoc Committee (Automobiles) on the progress and achievements of the Company, extracts from which are reproduced in the Annual Report. Not only have we kept strictly to the original schedule for developing indigenous manufacture, but side by side we have rapidly and systematically expanded the output and maintained the excellent quality and performance of the vehicles for which the Mercedes-Benz name is rightly famous all over the world.

Despite the four-fold rise in the output of Tata-Mercedes-Benz vehicles, the demand has far outstripped supplies. With the industrial and agricultural development of the country, the requirements of vehicles for road transport will rise further year by year. Your Directors feel, therefore, that it is in the interests of the Company as well as of the country at large to expand the output of vehicles further as rapidly as possible. With this in view, a major scheme for increasing the output of Tata-Mercedes-Benz vehicles is in hand and proposals will shortly be placed before Government. Under this scheme the capacity of the Automobile Division will rise to 24,000 vehicles per year with an indigenous content of over 90%. The capital expenditure involved will be substantial and your Directors will, in due course, put up proposals for meeting it.

In my speech last year, I had referred to the scheme submitted by the Company to Government for the manufacture of the DKW "Junior" car. Although no decision has been announced as yet by Government, two important statements on the subject have been made public in recent months. The first is the report of the Ad Hoc Committee on the Automobile Industry published in January this year. While making no specific recommendations as to the selection of the make of car to be manufactured or the agency to be entrusted with the task, the Committee have recommended that the manufacture of a low cost car should be undertaken in the country and have indicated that the choice would lie between five proposals, including Telco's, amongst the twentyfive proposals received.

One important feature of the Committee's Report is that they have expressed themselves clearly against the project being undertaken in the Public Sector. At the end of March 1960, the Minister for Industry, in the course of a debate in the Lok Sabha, was reported by the Press as having announced that "a car of the people to be manufactured by the people, for the people" would soon be produced. His somewhat cryptic statement was universally interpreted in the Press as meaning that the car would be made in the Public Sector, which seemed to be confirmed by his further statement that Government would try to take the help of the Private Sector for the production of component parts from their existing installed capacity.

I am not sure I understand clearly what all this means. Possibly, Government have not made up their own mind on the subject. But if it is true that Government contemplate establishing the manufacture of a small car by the State and, if as rumoured, the two reasons advanced for such a proposal are that the cars proposed by established manufacturers are too expensive and that Government find it difficult to choose between the many projects offered, I can only express concern and regret in regard both to the proposal and to the reasons advanced for it.

With the existing automobile industry able and willing to undertake the manufacture of a small car, there can be no possible reason for Government to allocate such a project to the Public Sector except on grounds of socialist ideology or dogma, which Government spokesmen, including the Prime Minister, have repeatedly and unequivocally disavowed as playing any part in their policies.

On the question of the price of the car, I trust Government will take note of the Ad Hoc Committee's view that such a car has to be cheap not only in initial cost but also in running and maintenance cost. When a user buys a car, he really buys a certain number of miles of road transportation. It is no doubt possible to make a very light and low powered car for, say Rs. 1,000 or Rs. 1,500 less than the initial cost of the DKW we have proposed or similar cars, but if, such a car is capable of only half the trouble-free mileage that a more sturdy car would give, or, to put it differently, if the cost of repairs and spare parts is twice as high for the same mileage in the case of the lighter car, then the unfortunate user will in fact have, over the life of his car, paid not a lower price but a much higher price. Families are, on the average, much larger in India than in Europe, and road surfaces are much inferior and therefore more destructive. I sincerely hope that if a small car is to be made at all, Government will approve of a reasonably roomy car, modern in design and rugged in construction, with a long and economical life built into it.

In any case, I trust that in arriving at a decision concerning any scheme for the manufacture of a cheap car, whether in the State or Private Sector, the Government of India will keep in mind, among other things, its implications in terms of foreign exchange expenditure for capital as well as current account. The Ad Hoc Committee (Automobiles) has rightly stated that the development of a new car presupposes that extra foreign exchange will be available and that the programme of development and expansion of the existing units will not be affected. They go further and recommend that only after certain other priority claims of the automobile industry and road transport have been fully met should any allocation of foreign exchange be made for the new programme. I trust these recommendations will find acceptance by Government.

Members will note with satisfaction that the development of our Foundry and Forge sub-Divisions is progressively reducing our dependence on imported semi-finished materials. By the end of this year all our requirements of high duty castings and a substantial part of our requirements of forgings for the manufacture of Tata-Mercedes-Benz vehicles will be produced in our own Works. For the basic raw materials, namely, rolled steels of special quality, we are unfortunately still dependent to a large extent on imports. After the Rourkela steel plant goes into full production, about 65 to 70% of our requirements of steel should be available indigenously. But even thereafter materials worth about Rs. 700 per vehicle will still have to be imported. In this respect, what is true of the automobile industry is, in the main, true also of other engineering industries.

It is unfortunate that up to now Government and the Planning Commission have laid so much more stress in regard to steel on the quantitative rather than the qualitative aspects of the country's requirements. The rapid industrial development and the economic strength of a country depend not so much on total self-sufficiency in ordinary, carbon steels but in the capacity and range of steel processing industries which themselves depend on quality steels and on machine tools and allied equipment. The automobile industry of India and other precision engineering industries will reach maturity and will cease to be a drain on foreign exchange resources only when all the raw materials and most of the machine tools used by the industry are made in the country. I earnestly hope that our planners and Government will keep this important aspect of the question in view when planning the future of the steel and engineering industries.

Locomotives

Coming to the General Engineering Division in which locomotives are made, as mentioned in the Report, the Railway Board have now indicated to the Company that the Indian Railways will require steam locomotives for many years to come. While the price which has been awarded by the Adjudicator for supplies of locomotives during the period of two years upto the end of the year under review falls short of our expectations, mainly because it excludes altogether the annual bonus to the staff, which is an appreciable element in our cost of production, it is gratifying to record that the Railway Board and the Company have been able to agree on the prices of the locomotives to be supplied during the remaining period of the Agreement. The price of the 325 locomotives to be delivered over a period of five years after the completion of the Agreement is still under negotiation but we have made it clear to the Railway Board that the price must be a fixed one subject only to agreed escalators as, in their interest as well as ours, there must be an end to the annual bargaining and bickering as well as the unmerited criticism which has characterised supplies of locomotives in the past few years.

The prices which the Company will receive will in any case be lower than the prices at which similar steam locomotives can be obtained from abroad. As we have repeatedly explained in the past, the benefit of the depreciation allowed to us through prices in the past years, now flows back to the Railway Board in the shape of lower prices, as a result of lower written down value of plant and equipment.

The Future

Whilst there is much that is encouraging in the assessment of the future, we must not forget the increased responsibilities that will have to be shouldered by us.

If continuous progress is to be achieved, we have constantly to add to our resources in engineers, administrators and craftsmen as well as in up-to-date equipment. This is a somewhat obvious truth which, however, is not always fully appreciated in our country where industrial enterprises, particularly in the State Sector, are too often visualised mainly in terms of money and machines. I am glad to say that in your Company, very special attention has been paid to this vital problem and our skilled personnel, both in shops and offices has been carefully employed, trained and developed along with our plant and machinery.

Housing

The shortage of housing for the Company's workers which presents a growing problem in connection with the expansion of the Company and the increasingly heavy deficit between the costs of maintaining the Colony and the rents recovered, have been a cause of growing concern. Despite large amounts expended by the Company on the Telco Township, we are unable to provide individual quarters to more than a fraction of our work-force. Without providing the requisite housing, it will be extremely difficult for the Company to employ the additional technical staff and skilled workmen needed to implement its expansion schemes. This question is receiving the urgent attention of your Directors. In the meanwhile, it is gratifying to note that the Government of Bihar, besides advancing housing loans to the industries in Jamshedpur, including your Company, are constructing a housing estate for industrial workers not far from the Company's Works in Jamshedpur. It is hoped that some of the Company's workmen will be able to secure accommodation in the Bihar Government's industrial estate at Jamshedpur.

As regards the problem of the heavy burden of maintaining the Telco Township, members will be pleased to learn that in the Conciliation Settlement of 20th October, 1959, the Telco Workers' Union has agreed that "the question of increasing the rates of rental chargeable for the Company's houses under construction in the sixth and following phases of construction be separately discussed and a suitable formula should be worked out for fair rents being fixed".

Labour

There have been no strikes or other disturbances to production during the year except for a minor one-day stoppage in the Welding Shop.

The improvement in the industrial climate at Jamshedpur and particularly in the Telco Works is a gratifying development and we are anxious that it be maintained. On our part, we are convinced that the problems which inevitably arise in the labour field from time to time can be solved with mutual goodwill and confidence. I am particularly glad that, in the recent Conciliation Settlement with the recognised Telco Workers' Union, the Union have accepted the principle that any demands made on the Company should be examined on merits and without any undue emphasis on the practice of concerns in other industries in Jamshedpur which operate under materially different circumstances. It was also agreed that all difficulties between the Management and the Union would be resolved by peaceful and voluntary negotiations and that there would be no resort to direct action such as strikes, lock-outs, go-slow and other coercive measures. In consideration of the acceptance of these principles, the Company agreed to an increase in the dearness allowance and sanctioned a scheme for the grant of sick leave in anticipation of the extension of the Employees State Insurance Scheme to Jamshedpur.

In the engineering industry in which we operate, capital investment per employee is the highest in India. The very modern and expensive plant and equipment installed at the Telco Works offers to the employees an opportunity almost unparallelled in this country to attain high levels of productivity. The Company's ability to provide higher wages and better amenities and facilities depends on the effective utilisation of this equipment and I hope that, in the fulfilment of this objective, we shall receive the wholehearted co-operation of the workers and their chosen representatives. It is only thus that increases in the emoluments of our workers, which are already among the highest in the country, can be maintained.

Our thanks are due once more to our General Manager and all employees, whatever their degree of direct responsibility, for the results achieved. The initiative and the work that members of our staff have put in have been principally responsible for the Company's progress which is reflected in the Report and Accounts before you.

SHAW WALLACE & COMPANY LIMITED

CHAIRMAN, MR. S. M. SMITH'S REVIEW

The Fourteenth Annual General Meeting of the Members of the Shaw Wallace & Company Limited was held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on 15th July, 1960.

In course of his speech the Chairman, Mr. S. M. Smith, said :—

Before embarking on this review I refreshed my memory as to what I had said this time last year. I refrained then from making any specific forecast for the year under review. It may therefore come as a surprise to the large number of our shareholders, a pleasant one I hope, that the year 1959 has been a record one. It ended with a Profit before Taxation of Rs. 56.66 lakhs as compared with Rs. 44.45 lakhs during 1958, an improvement of Rs. 12.21 lakhs or 27.5 per cent. I am sure you will agree that this is a most satisfactory achievement, and will wish to join me in thanking my colleagues on the Board and all members of our various staffs and labour forces without whose efforts and hard work your Company could not have obtained such successful results.

Whilst the Company is expanding satisfactorily, prudence demands that amounts should be set aside to finance this expansion and in these circumstances I feel sure that members will approve of the action of your Directors in transferring Rs. 10 lakhs to General Reserve, and making the other necessary provisions for Depreciation and Development Rebate Reserve.

It is a measure of the success of your Company's activities during the year that after this transfer to General Reserve and the transfer of Rs. 5,32,000 to the Statutory Development Rebate Reserve your Directors are able to recommend for your approval an increased Dividend of 15% on the Ordinary Shares. The old basis of 10% is equal to just over 14% on the new.

Unfortunately the increased dividend cannot be tax free as have been all Ordinary Dividends hitherto. You are familiar with the changes in the Tax structure of the country introduced by the Finance Acts of 1959 and 1960, and the Company is now obliged by law to deduct Dividend Tax at source at the time of payment of dividends. The effective rate of Dividend Tax for residents is 30% for the forthcoming dividend.

FERTILISERS :

General.—Strenuous efforts were made to increase our turnover by popularising the use of fertilisers for food production in the areas in which your Company operates. In this we were reasonably successful. We intend to intensify our efforts during the coming year. If the country is to become self-sufficient in foodstuffs greater efforts will have to be made to increase the application of fertilisers. Much time, thought and effort is being devoted to this aspect of our business.

Superphosphates and Sulphuric Acid.—The extensions to the factory referred to last year were completed in October and the new Acid Plant went into production on 19th October, 1959. The opening ceremony was performed by Shri M. Bhaktavatsalam, the Minister of Agriculture, Government of Madras. We are grateful to him for consenting to perform this function in the midst of his many pressing duties and preoccupations.

Production of Acid and Superphosphates during the year increased to a satisfactory extent considering that only a few weeks' production was obtained from the new plant Comparative figures for the past three years are as follows :—

	Acid tons	Superphosphates 16% basis tons
1959 ...	9,429	26,849
1958 ...	7,396	23,839
1957 ...	5,770	15,454

During 1960 with both units working to capacity it is anticipated that production of Superphosphates should amount to over 70,000 tons.

Insecticides and Fungicides.—The efforts of our sales staff to increase the sales of the products manufactured by both Sandoz Products Private Limited and Tata Fison Private Limited resulted in turnover being increased by no less than fifty per cent. Further efforts are to be made to improve on this achievement.

It is recognised that a prime need in the Third Five Year Plan is to increase production of food and cash crops, particularly the former. There is an enormous task before the country in the fields of Fertilisers, Insecticides and Fungicides.

The targets of consumption for the main Fertilisers are as follows :—

	Tons of Product	
	SECOND FIVE YEAR PLAN	THIRD FIVE YEAR PLAN
Nitrogen (Basis Sulphate of Ammonia)	25,00,000	67,50,000
Phosphates (Basis 16% Superphosphates) ...	9,37,000	31,25,000
Potash (Basis 50% Muriate of Potash)	1,20,000	4,00,000

Even assuming that the targets for the Second Five Year Plan will be achieved, the contemplated increases during the next Plan are enormous. There is little or no Potash production, as yet, in India but every effort is to be made by Government to produce Nitrogen and Phosphate to achieve the targets mentioned. This will be a vast undertaking.

Apart from the problems of manufacture, there is the related problem of distribution and your Company with its widely developed facilities in this field hopes to share in the joint effort over the coming years.

Generally speaking, the farmer is proving receptive to the use of Fertiliser of all kinds, the main stumbling blocks meantime being how his purchases can be financed until his crops come in and getting the materials to the right place at the right time.

Glue.—Considerable difficulty was experienced last year in obtaining sufficient quantities of materials suitable for the production of quality Glue. This necessitated constant research and experiments in methods of production, but despite the numerous difficulties, your Company's production increased during the year as the following comparative figures will show :—

1959	1958	1957	1956	1955
Cwts.	Cwts.	Cwts.	Cwts.	Cwts.
20,124	12,495	14,225	11,688	10.615

The Adhesives Industry is a specialised one and, generally speaking, has limited markets. Your Company is doing its best, and with some success we hope, to meet the increasing demand arising from the ever-rising tempo of industrialisation. It has plans afoot shortly to expand its activities into the synthetic branch of Adhesives and to erect a plant to manufacture Urea Formaldehyde, which is particularly useful in the Plywood trade. Other developments are under consideration.

Tea.—In general the Tea Companies under our management had a successful year, and income from this source showed an appreciable improvement. The higher average prices for both export and internal teas obtained in the Calcutta Sales, and also in Chittagong, were responsible for the better results. The area under cultivation at the estates in our Agency and Managing Agency increased by 232 acres during the year to 24,071 acres and the total crop harvested amounted to 309,091 maunds of tea as compared with 311,955 maunds in 1958.

The general improvement in Indo-Pakistan relations notwithstanding, no permanent solution has been found to the remittance difficulties and our Indian Rupee Companies with Estates in Pakistan continue to be heavily indebted to us.

During the year under review the New Samanbagh Tea Company acquired, by exchange of shares, the entire Share Capital of our subsidiary, the Rajnagar Tea Company. The New Samanbagh Tea Company is now a subsidiary of ours and accordingly its Accounts are being published with our own for the first time, and have also been included in the consolidated Balance Sheet and Profit and Loss Account of the Group.

The Tinplate Company of India Private Limited.—The difficulties of the Tinplate Company of India Private Limited were not resolved during the year although there was an increase in production from 57,877 tons in 1958 to 67,900 tons in 1959. The Company has long been price-controlled through the medium of the Tariff Commission although other producers in the Jamshedpur area, except the Tata Iron & Steel Co. and ourselves, are not so treated, nor indeed are the consumers of the Tinplate produced by our Company. It is a well-known fact that large profits have been made by such other steel processing industries and equally by the consumers of Tinplate.

The Tinplate Company of India Private Limited does not seek a preferential position nor does it claim the right to make exorbitant profits. It is, however, a sad commentary that the Tariff Commission's Report on the Pricing Enquiry which was held as late as May, 1958 covering the years 1957 to 1960 inclusive was not issued until August, 1959. The prices then proposed were so unsatisfactory that the Company had to appeal to the Government against them. No revised prices had been announced at least up to the middle of May, 1960 although the Company has reason to apprehend that whatever is finalised will leave small enough margin indeed with which to pay dividends to Shareholders not to mention Reserves and rehabilitation of Plant.

The Tinplate Company of India Private Limited were pioneers in the production in India of Tinplate from Tinbar and have been sole producers for many years. Government are now expected to undertake the manufacture of Tinplate at Rourkela within, say, the next two or three years. Exact details of likely production are not known at the time of writing but it seems possible that in future the Government Plant will make half the country's requirements and possibly the other half may be made at Golmuri.

There is considerable divergence of opinion regarding the likely total demand for Tinplate in the country over the next 5 to 7 years but it is obvious that this must rise considerably, particularly if the present trends are continued and accelerated with increased industrialisation and the rising standard of living.

As the main steel target has been fixed, Government may be expected to make some announcement about the target for the Tinplate production in the Third Plan in the near future and whatever that target may be it is certain that the development of industries using Tinplate will require very considerable stimulus if all the projected output is to be consumed. Particular attention will need to be paid to the development on sound lines of the canning industry which has hitherto lagged seriously behind in the development of India's economy. Efforts to increase the size of factories, to ensure cheap and efficient production, to improve the quality of canning and other important far-reaching measures to ensure that supplies of sound and suitable products for canning are organised on a commercial scale will be essential if the objectives set for the usage of tinplate are to be achieved inside the Plan.

The problem is a many-sided one and in our view a series of Conferences between Producers of Tinplate, the canning interests and Government Departments should be held starting at an early date, to resolve difficulties and plan for the future.

Plans for the expansion and modernisation of the Company's Golmuri Works are under scrutiny but it is too early to forecast the final outcome. The Company has faith in the future and believes that its present grave difficulties will be only temporary. Faith is certainly necessary as things stand!

It is worth noting that, because of the pricing delays referred to above, we have so far received no remuneration for our services as Managing Agents for the two years 1958 and 1959. The work-load has been considerable in the meantime.

I think that Officials of the Steel Ministry, by whom Tinplate affairs are handled, have been doing

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS.

A copy of the Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956 has been delivered for registration to the Registrar of Companies, Kerala, Ernakulam. The subscription list will open at 10 a.m. on the 25th of July 1960, and will remain open at least for 15 days and thereafter will be closed at the discretion of the Directors.

The Shares of the Company previously issued are dealt in and officially quoted on the Madras Stock Exchange. Application will be made forthwith to the Madras Stock Exchange to include the shares of the present issue also for being dealt in and officially quoted on the Madras Stock Exchange.

RUBY RUBBER WORKS LIMITED

CHANGANACHERRY

(Incorporated on 7th September, 1955 under the Companies Act, 1913).

CAPITAL PREVIOUSLY PAID-UP: Rs 11,42,855

PRESENT ISSUE :

Rs. 2,50,000 divided into 25,000 10% (subject to deduction of income-tax) Cumulative Preference Shares of Rs. 10.00 each. The amount payable in respect of each share is Rs. 5.00 on application and Rs 5.00 on allotment.

The present issue of 10% Preference Shares were first offered to the existing Equity shareholders in proportion to their current holdings i.e. 10 Preference Shares for every 36 Equity Shares and applications in terms of the Prospectus are now invited from the Public for shares not taken up by the existing shareholders.

BOARD OF DIRECTORS :

UNDERWRITERS :

M/s P. R. Subramanyam, 70-A, Stock Exchange Building Apollo Street, Fort, Bombay-1.

REGISTERED OFFICE :

Rubynagar Post, Cnanganacherry, Kerala State.

OBJECTS, HISTORY & BUSINESS :

The Company was incorporated on 7th September, 1955 to acquire and take over the lands, building, machinery, equipment, etc. of the Concern known as "RUBY RUBBER WORKS" situated at Changanacherry with its goodwill and the various sales depots situated throughout India. The Company obtained its Certificate of Commencement of Business on 9th January, 1956 and acquired the abovementioned "RUBY RUBBER WORKS" and has been carrying on the business of manufacturers of rubber goods and selling the same directly and through various depots. The Factory is at present producing cycle tyres and tubes, tyre retreading materials, hose pipes of all varieties (plain, delivery, armoured suction pressure, pneumatic, tool hoses, etc.), industrial sheetings, car materials, automobile parts, cycle rubber parts, all varieties of moulded goods required for various industries, rice polishers, ebonite goods, all varieties of extruded goods, etc. Ruby's extruded quality tread rubber (tyre retreading compound) enjoys a wide popularity throughout India among retreaders. The Company has been registered as a supplier to the Director General, Supplies and Disposal, Delhi, and is supplying various rubber products to various Government Departments, Central as well as States, various Railways, semi-Government Firms and automobile and cycle manufacturers throughout India.

EXPANSION :

With a view to more efficiently serve the large volume of customers in the States of Mysore and Andhra and in view of the steady rise in the demand for the rubber goods being manufactured by the Company, the Board of Directors of the Company have decided to establish and operate a branch factory at Bangalore. Sanction has been received from the Government of India as per Licence No. L/30-4/N-23/60 of 24th February, 1960, authorising the Company to produce at the Bangalore Factory 9,00,000 lbs. of tyre retreading materials like tread rubber, camel back cushion compound, etc. The requisite land for the Bangalore Factory measuring 8 acres has been purchased for Rs. 20,000 and is situated on the Bangalore-Bannerghatta Road about 1½ miles outside the city boundary. Construction of office premises costing about Rs. 25,000 is nearing completion and the factory buildings and godowns to be constructed are estimated to cost about Rs. 75,000. For the requisite machinery, viz., two mixing mills, two extruders, one small size three Bowl Calendar Machine and one Solution Mill, orders have already been placed with Fabricators in India and together with other machinery under fabrication in the Company's Workshop at Changanacherry, the total cost of machinery for the Bangalore Factory is estimated to cost round about Rs. 75,000.

OBJECTS OF THE ISSUE :

To meet the cost of the machinery, building and land referred to above estimated to cost in the aggregate to Rs. 2,00,000 and to provide for a portion of the working capital required to the extent of Rs. 50,000 the present issue is made. For further working capital estimated at Rs. 1,00,000 the same could be covered by borrowing facilities from Commercial Banks.

PAST WORKING :

Year Ended 30th June	Capital Paid up	Turnover	Net Profit before Depreciation & Taxation	Depreciation
1956 (6 months' working)	Rs.	Rs.	Rs.	Rs.

30-6-60	Not yet declared	Declared 9.3% taxable (6½% tax free) for half-year ended 31st December '59 and 10% taxable (7% tax free) for half-year ended 30th June, 1960 to holders of record 30-6-60.

(Continued from the previous page)

their best to alleviate the position. If we have a basic complaint, it is that the Tinplate Company is not treated exactly as other users of steel products nor as the users of its product.

Coal.—Certain of our collieries in the Pench Valley experienced various mining difficulties during the year and this coupled with unremunerative prices in force resulted in the two Companies which operate in this area viz., the Amalgamated Coalfields Ltd. and the Pench Valley Coal Co. Ltd., working at uneconomic levels. I am pleased to be able to say that the mining difficulties appear to have been overcome and with the new prices, which however only cover increased costs, announced by Government in November 1959 we can look forward to 1960 being a more satisfactory year.

Rewa Coalfields Ltd. also suffered from an uneconomic selling price but the introduction of grading and the consequent increase in prices should produce more satisfactory results during the current year.

Comparative figures of raisings and despatches are as follows :—

	Raisings tons	Despatches tons
1959 ...	19,12,949	18,49,610
1958 ...	18,96,923	18,53,957
1957 ...	17,82,953	16,89,573

It is now generally realised that Government's industrialisation plans will be held up seriously because of the lack of Coal, unless rectifying steps are taken. Considerably increased quantities can be produced by the private sector, including the Coalfields in which we are particularly interested, but amongst other things this requires a more liberal pricing policy by Government to permit reserves and resources of the various Companies to be built up. Much finance is needed to develop new areas and to introduce mechanisation where this is desirable. Regulations regarding development of adjacent areas, and those not being properly developed by lease holders, must also be eased. With very little encouragement the private sector can raise its output considerably and it is difficult to conceive why this necessary encouragement is not yet forthcoming.

Flour.—The two Mills in our Agency had a successful year. Production and sales of wheat products exceeded all previous records for both Companies. Comparative figures are :—

	Production maunds	Sales maunds
1959 ...	13,88,397	13,89,295
1958 ...	12,99,101	12,99,043
1957 ...	12,37,138	12,34,597

Shipping.—1959 saw a slight recovery in shipping and our income from this source increased by no less than thirty per cent. Since the close of the year we have acquired a fifty per cent interest in Cruickshank & Co. Private Limited, a small private company formed as a successor to Clegg Cruickshank & Co. Private Limited. The Company in question acts as Agents for the Lief Hoegh Steamship Co., Oslo, and Messageries Maritime. We have long desired an interest in Calcutta shipping, and our participation in Cruickshank & Co. Private Limited satisfies this desire. A small but satisfactory income is expected from this connection.

Imports and Agencies.—India's foreign exchange difficulties continued to restrict our Import Trade.

Our business in Steatite improved slightly. There is considerable scope for further improvement if the Mills which supply us can step up production and deliveries.

Wines and Spirits.—During the year we acquired the Bengal Distilleries Company Private Limited for which we previously acted as Distributors. This Company is now a fully owned subsidiary. Production at the Distillery increased substantially last year and the sales promotion work that was undertaken enabled us to dispose of the increased production without difficulty.

The acquisition of this subsidiary is proving a valuable adjunct to your Company's productive activities.

Gunnies.—Our policy of restricted trading was implemented by link transactions, and a small though satisfactory profit was earned.

Investments.—Details of the Company's investments are as usual given in the Schedule G attached to the Accounts. Apart from the purchase of the entire Share Capital of Bengal Distilleries Company Private Limited and the exchange of New Samanbagh Tea Company Ltd. shares for Rajnagar Tea Company Ltd shares, to both of which I have already referred, the principal changes in our portfolio of investments are the purchase of the fifty per cent interest in Glue Products Private Limited and of 8 330 shares in Walker & Greig (Coonoor) Private Limited The former completes the transaction mentioned in my review last year Walker & Greig (Coonoor) Private Ltd is a small engineering concern in the Nilgiris with a Capital of 13,000 shares of Rs. 10 each. It combines well with our other South India interests and we have acquired the entire Capital of this Company by purchasing 8,330 shares during 1959 and the balance early in 1960. There is a limited scope for expansion in this new subsidiary and a satisfactory though moderate return on our investment is expected.

A sum of Rs. 3 lakhs has been utilised from our profit for the year to reduce the Book Value of investments. It is the view of your Board that this is a policy of prudence which should be followed whenever profits permit.

Ceylon.—Your Ceylon Subsidiary has worked under the most trying conditions and numerous difficulties have had to be overcome. The success achieved is all the more creditable and our thanks are due to every member of the Ceylon organisation.

Pakistan.—Your Pakistan Subsidiary's business in Karachi continued to be difficult, and the loss sustained there offset the profits made in Chittagong.

New Ventures.—You will expect me to say something about the Yeast Company mentioned in my review last year. This project is now well under way and it is hoped to have the Factory ready to go into production in November this year.

A new factory for the manufacture of Agricultural Sprayers has been erected in Madras. Production on a small scale commenced in October, 1959, and should get into full swing by June of the current year.

Government.—All Companies operating in India today have the closest of contacts with Government, both Central and State, at many levels.

This Company's views and opinions have always received detailed attention and consideration in all quarters. Government officials have invariably received us courteously. The latter are hard-pressed but are doing a fine job and are getting through a tremendous amount of work.

The Future.—The Second Five Year Plan has been pushed through. Production targets have been achieved in many cases whereas in others they have fallen short. Nevertheless, generally speaking, it must be assumed that inside the targets laid down the Plan itself has done what it set out to do.

Now that the country is entering the next phase, in the shape of the Third Five Year Plan, the pace must necessarily increase very considerably. The rate of progress of all kinds must in due course snowball and the coming decade will see India at the real point of take-off, to the goal of vastly better living conditions and fuller and better lives for all.

This Company has not always agreed in every detail with the planners; nevertheless, it recognises and supports the main objectives and has every confidence in the future of India and anticipates an increasing raising of the tempo of production and ultimately of the Standard of Living. We are ready to play our part.

Conclusion.—I feel that under today's conditions a Company, such as yours and with such varied interests, can contribute something to forward progress by placing its experiences, difficulties and conclusions squarely before its Shareholders at such a time as this. In regard to prospects I can say that for the first half of the current year results have been satisfactory.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

City Cable

UNSETTLED CONDITIONS IN STOCK MARKET

INDUSTRIALS FALL

London, 20th July.

A NUMBER of factors combined to produce quiet and unsettled conditions in the stock market during the past week, and prices in most sections lost ground. First and foremost were the developments in the international situation, notably the events in Cuba and the Congo and the shooting down by Russia of another United States aircraft. Later came the disappointing United Kingdom June overseas trade figures, and the subsequent appeal by the Prime Minister to increase exports. In addition, there was considerable nervousness over the business outlook and the effects of the credit squeeze, although most company chairmen still appear to take an optimistic view. In spite of the many adverse developments and the lack of encouraging news, selling throughout the week remained small, but buyers held off and prices deteriorated accordingly. Other restraining influences included the approach of the peak holiday season and the indecisive performance of Wall Street. Industrial equities, although not without occasional bright spots, generally receded on small selling and lack of support to record widespread losses on the week. Gilt-edged securities drifted lower being somewhat disturbed by the unexpected appearance of a new £300-million sterling Treasury bond issue, but a harder tendency developed later, following the fall in the United Kingdom Treasury bill rate. Events in Africa continued to cast a shadow over mining markets, but gold shares held up well. Coppers by contrast lost ground. Tin shares drifted lower at one time, but later rallied on a resumption of eastern buying. The international situation remained the dominating influence in them. Rubber shares staged a good recovery after their recent setback, and some appreciable gains were recorded. Tea shares were quiet and generally irregular. Lower dividends brought a number of falls.

The Money Market

Credit conditions in the money market during the early part of the past week were easy with money in ample supply to cover the market's requirements. The rate for overnight loans ranged from a high of 5¼ percent in the morning down to a low of 3½ percent. The market was taken by surprise by the announcement of a new £300 million 5½ percent Treasury stock with a life of around 2½ years. In view of its attractiveness, there was a good public application for the stock which resulted in a dislocation of the credit conditions on Friday and a return to tight credit conditions afterwards with the authorities having to provide a large amount of assistance. Consequently, cheap money disappeared with the effective rate at 5¼ percent. There was a good demand for bill throughout the week, although the market was not able to satisfy demand. Late September and "hots" were sold at 5⅛ percent and 5⅛ percent until the tender on Friday when a sharp drop in the Treasury bill rate resulted in subsequent business in the same maturities on the basis of 5⅛ percent. The sharp fall in the Treasury bill rate which came out at £5 10s 2.49d percent was due to discount houses paying 10d more for them.

Restricted Trading in Vegetable Oils

With many buyers and sellers attending the seed crushers' conference, trading was slow in most sections of the vegetable oils market last week. However, prices were generally steady and under origin advices some advances were recorded. Canadian linseed advanced around 10s a ton in keeping with a firmer trend at origin. Both Argentine and American linseed also tended higher. In spite of slow trading, linseed oil also stiffened in price with the more distant deliveries mainly affected. Philippine exporters were still reluctant to offer copra to Europe. Preoccupation with elections virtually closed down the Colombo market and exporters were not making definite offers of coconut oil. Indian castor oil eased in conjunction with lower advices from Bombay in the morning, but later in the day, a partial recovery left general rates only 10s a ton down on balance.

THE CALCUTTA MONEY MARKET

DECREASE IN ADVANCES

Wednesday, 20th June.

THE general level of advances showed a fair decrease in the Calcutta money market during the past week. The decline was biggest in the case of jute credit, but food, sugar, textile and engineering advances also fell. In the interbank market, conditions were very tight, with the call rate unchanged at 3½ percent.

The exchange market was quiet in the early part of the week due to the *hartals*. Later, however, with the end of the Central Government employees' strike, there was more business, especially in gunny bills. Remittance was on a small scale. Sterling was appreciably stronger in relation to most of the leading currencies.

BULLION WAS STEADY DURING THE PAST WEEK after the end of the Central Government employees' strike. Silver rose from the previous week's level of Rs. 217.50 to Rs. 219.75, quoted today for ready delivery. The rate for forward delivery was the same. The London and New York prices stood at 79⅛d and 91.375 cents.

Gold was steady in sympathy with silver. The price advanced from Rs. 130.75 to Rs. 131.75. The sovereign rose from Rs. 86 to Rs. 86.25.

DURING THE WEEK ENDED 15TH JULY, GOVERNMENT of India Treasury bills for Rs. 288,80,75,000 were sold in favour of the Reserve Bank.

A DECLINE OF Rs. 8.44 CRORES TO Rs. 1,841.67 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 15th July, 1960. The total note issue was Rs. 79 lakhs higher at Rs. 1,864.73 crores. Notes held in the Banking Department consequently rose by Rs. 9.24 crores to Rs. 23.07 crores. Deposits of the Government of India increased by Rs. 4.97 crores to Rs. 74.24 crores, but other Government accounts fell by Rs. 3.15 crores to Rs. 11.81 crores. Balances of commercial banks increased by Rs. 12.36 crores to Rs. 129.93 crores. Balances held abroad fell by Rs. 4.32 crores to Rs. 22.35 crores. Investments were Rs. 12.44 crores lower at Rs. 256.61 crores. Other loans and advances declined from Rs. 133.93 crores to Rs. 132.83 crores, of which advances to scheduled banks against usance bills amounted to Rs. 12.42 crores. Ways and means advances rose from Rs. 34.93 crores to Rs. 37.15 crores.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of March 1960 :

	Rs.
(1) At the Reserve Bank of India in India ...	72,28,25,000
(2) At treasuries in India ...	(a)—3,46,15,000
(3) In England (sterling converted at 18d the rupee) ...	1,14,50,000
Total ...	69,96,60,000

(a) The minus balance represents the net result of the amount of cash in treasuries and amount of remittances in transit at the close of the year.

THE PUNJAB NATIONAL BANK HAS MADE A PROFIT of Rs. 45.37 lakhs for the half-year ended June 1960, compared with Rs. 42.76 lakhs in the corresponding period of 1959. An interim dividend of Re. 1, taxable, has been declared, which absorbs Rs. 12½ lakhs, leaving a carry-forward of Rs. 36.06 lakhs. Deposits stood at Rs. 145 crores, against Rs. 141 crores at the end of December 1959.

McTEAR ROTORVANE

CONTINUOUS TEA ROLLER

- Uniform processing,
- Controlled fermentation,
- Stronger liquors,
- Replaces 3-4 batch rollers

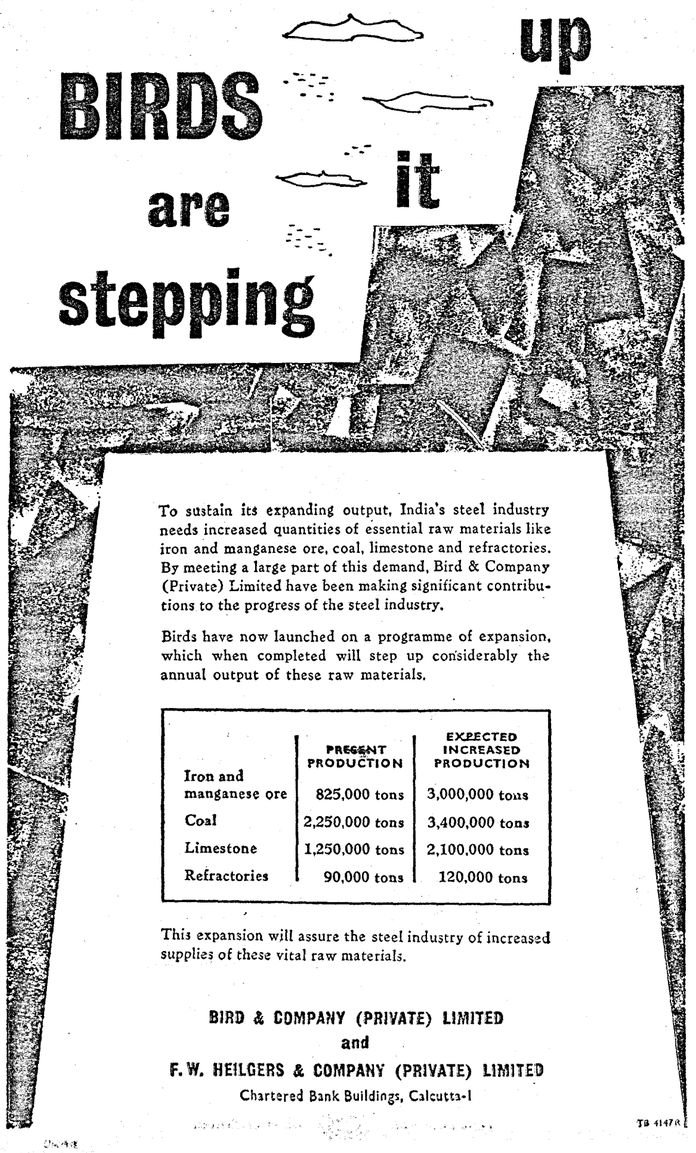
Machine invented and patented by the Tocklai Experimental Station of The Indian Tea Association, Calcutta.

PORT ENGINEERING WORKS LTD.

M/A.: ANDREW YULE & CO. LTD.,

8, CLIVE ROW, CALCUTTA-1.

BIRDS are stepping up it



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

AIR TALKS TO BE HELD WITH U.S.A. AND WEST GERMANY

B.O.A.C. EXTENDING ECONOMY CLASS TRAVEL FACILITIES TO U.K.-AFRICA SERVICE

(FROM OUR NEW DELHI CORRESPONDENT)

INDO-WEST GERMAN air talks, it is expected, will commence here shortly. There is no air agreement between the two countries at present, so the West German airline, Lufthansa, operates its services on an *ad hoc* basis. The S.A.S. service through Calcutta is also on an *ad hoc* basis. India has an air agreement with Sweden, but not with the other two Scandinavian countries, namely, Norway and Denmark. The airline is owned by the Governments of all the three countries. K.L.M. and S.A.S are the two airlines with which India has no *quid pro quo*. Air-India International operates neither through Holland nor through any of the three Scandinavian countries. The arrangement with S.A.S., therefore, will remain on an *ad hoc* basis as long as India does not operate her India-London service *via* Moscow.

Indo-U.S. air talks, it is also expected, will commence here shortly. A delegation from the U.S.A. is expected here for the purpose.

India has indicated to Hungary that she is interested in opening a service *via* Budapest.

B.O.A.C. to Acquire More Super-V.C.s

According to reports reaching new Delhi B.O.A.C. has signed an agreement with Vickers for the supply of ten super *V.C. 10s* at an estimated cost of £25 million without spares.

Popularity of Economy Class Travel

The economy class air travel, which has met with considerable success on B.O.A.C.'s north Atlantic services, is to be introduced between Britain and points in Central and West Africa on 1st October by both B.O.A.C. and British United Airways, working in partnership. Central African Airways and East African Airways will also participate. Announcing this, the airlines also said they proposed to introduce even cheaper third-class services—called "skycoach" services—from the same date to the same destinations. The points to be served include Entebbe, Nairobi, Dares-Salam, N'dola, Lusaka and Salisbury. The British airlines will fly a total of 13 flights a week to Nairobi alone. Present tourist standards will apply on the economy flights.

The skycoach flights will be at a much-reduced frequency, once every fortnight, using *Britannias* and *Viscounts*. The skycoach flights will be available only for residents of the U.K., the West African territories and the Federation of the Rhodesias and Nyasaland. These passengers will be asked to sign a certificate to that effect. These cheap flights will have a limited passenger service. Light packaged meals will be available, but there will be no bar service. Free baggage allowance will be 33 lbs. Applications are shortly to be made to the appropriate authorities in Britain and Africa for the necessary licences for these skycoach services.

Inauguration of Air Union Postponed

The official start of Air Union, the pool of four Common Market airlines, is likely to be further delayed beyond 1st November, the date officially visualised. The Governments of the four countries concerned—France, Italy, West Germany and Belgium—have not yet concluded the agreement considered necessary for setting up the pool. This makes it most unlikely that parliamentary ratification to the eventual agreement can be obtained in time for the 1st November date. This has not, however, stopped Air France, Alitalia, Sabena and Lufthansa co-ordinating some of their services in the current summer schedules and the process will be taken further in the winter timetables for 1960-61. Co-operation also exists in some sectors of the airlines' ground services. Once properly established, Air Union will be a major force in the world of international civil aviation. This is shown clearly in a comparison of the present aircraft fleets of the four lines concerned with those of Pan American Airways. The four at present have 200 aircraft with an annual capacity of 1,300 ton-kilometres, compared with Pan American's 180 aircraft with 1,400 ton-kilometres. Pan American's greater capacity in spite of the smaller number of its aircraft is explained by the fact that the U.S. airline has 37 long-range jets against only 34 owned by the four Air Union partners, although both groups have more jets on order.

More Night Jet Services to London Airport

Mr. Duncan Sandys, U.K. Minister of Aviation, has authorised two foreign airlines, Scandinavian Airlines System and Swissair, to operate *Caravelle* jet airliner services into and out of London Airport during the night. Hitherto, British European Airways has been the only airline allowed to run night jet services (with *Comets*) in this banned period, extending from 11 p.m. to 7 a.m. Swissair is planning seven landings and seven take-offs a week in the night period with jets, while S.A.S. is planning three take-offs and landings. According to the Ministry, both airlines have shown in tests that they can keep *Caravelle* noise down to the level of B.E.A.'s *Comets*.

Russo-U.S. Air Negotiations

In spite of the collapse of the summit talks in Paris, the Russians are still interested in air agreement with the U.S.A. Aeroflot chief, Mr. Y. P. Loginov, said recently that technical discussions had already been held and that talks in New York, to begin on 18th July, were expected to result in an exchange of commercial air rights between New York and Moscow. The U.S. State Department is proposing a meeting on 18th July in Washington to begin air talks with Russia. *Aviation Daily* reports that Aeroflot has offered Pan American traffic rights beyond Moscow, a key bargaining point, since no free world airline has been able to get authority to fly beyond the Russian capital. The U.S. State Department is now holding bilateral talks with the Philippines, Mexico and Britain.

Air Ceylon Acquires Electra

Air Ceylon is acquiring an *Electra* from K.L.M. under a five-year lease-purchase agreement and plans to introduce it in service in October on its Colombo-Bombay-Karachi-Bahrain Island-Cairo-London-Amsterdam service, now operated once weekly with *1049G Super-Constellations*.

Pan American Transpacific Service

C.A.B. attorneys have recommended the extension of Pan American's transpacific authority to New York, to give the airline its first and long sought route across the U.S.A. Pan American would be barred, however, from carrying passengers between domestic terminals.

Pan American will provide commercial, technical and operational assistance and supply personnel to Austrian Airlines under an agreement concluded between the two carriers. The draft accord requires approval of the Austrian Council of Ministers, which is expected to be forthcoming soon. A.U.A. has had financial troubles and recently received additional Government-backed credit. The agreement is reported to include a stock arrangement between the two airlines.

T.W.A. Polar Jet Service

T.W.A. began its weekly jet service over its polar route from San Francisco and Los Angeles to Paris and Rome from 21st May. The *707* flights will be operated twice a week. When necessary, fuel stops will be made at Montreal. From New York, the airline began its weekly nonstop jet service to Rome continuing to Athens, on 27th May.

B.O.A.C. Back to Amman

B.O.A.C. will resume its service to Amman on 3rd June, after three and a half years of suspension. A *Britannia* flight serving the London-Rome-Beirut-Bahrein route will include a stop at the Jordanian capital. Jordan recently approved both B.O.A.C. and K.L.M. for a once-weekly service to Amman and K.L.M. has announced an *Electra* service from Amsterdam *via* Vienna, Istanbul, Ankara, and Beirut.

B.O.A.C.'s first *Boeing 707-420* made a proving flight to New York on 16th May in preparation for the opening of the scheduled north Atlantic services with the jet on 6th June.

ESTIMATE OF OIL RESERVES IN NEW ASSAM AREAS

An independent firm of internationally-known geological consultants, DeGolyer and MacNaughton, has confirmed that recoverable crude oil reserves amounting to 29 million tons have so far been proved to exist in the upper Assam areas to be developed by Oil India Private Ltd. The estimate is based on the latest appraisal of potential production data obtained from the Nahorkatiya and Moran oilfields. The additional reserves indicated, but not confirmed by testing hitherto, have been appraised at approximately 13 million tons. In addition, it is hoped that the further drilling planned will establish the presence of a further 20 million tons of recoverable reserves, and that together these reserves will enable the combined oilfields to produce at a maximum rate of three million tons a year for an estimated minimum period of 15 years. The maintenance of this rate of production will, however, depend on the continued success of drilling still to be carried out. It has been arranged that DeGolyer and MacNaughton will reappraise the reserves at six-monthly intervals.

Stocks and Shares

SHARE PRICES BOOM AFTER GOVERNMENT EMPLOYEES END STRIKE

STEEL RETENTION PRICE RUMOURS REVIVE

Wednesday Evening.

CONDITIONS reminiscent of the 1946 boom were witnessed in the Calcutta Stock Exchange last Monday, following the collapse of the five-day-old strike by Central Government employees and the return to normal life in the city after the peaceful *hartal* on Saturday. With these favourable developments, operators heaved a sigh of relief, the bears rushed in to cover and the bulls took full advantage of the situation. Indian Iron, for example, recovered smartly from Rs. 23.56, which was the closing price at last Wednesday's settlement, to Rs. 25.60. The rise was due partly to rumours that the retention price of steel will be increased soon. The remaining shares on the forward list moved up in sympathy, and several blue chips recorded spectacular gains, as will be seen from the following table:

	Opening 15th July During strike	Closing 18th July After strike	Closing 20th July Rs.	
	Rs.	Rs.		
Guest, Keen, Williams	47.50	51.50	51.00	
Indian Copper	5.26	5.40	5.39	
Alkali and Chemical	33.00	38.12	36.62	
Britannia Biscuits	35.00	39.50	38.50	
Dunlop Rubber	46.00	48.00	49.00	
Hindustan Motors	21.37	22.44	23.37	
Indian Oxygen	40.50	45.00	43.00	
Associated Battery	37.25	39.00	40.75	
Phillips Carbon Black	20.37	24.75	22.00	
Metal Box	42.87	47.00	47.00	
Philips India	32.00	35.00	34.00	
Rallis India	137.00	144.00	148.00	
Union Carbide	50.75	57.50	54.00	Nom.
Orient Paper	46.00	47.15	47.05	
New Central Jute	28.50	30.00	30.25	
Indian Cable	34.81	36.00	36.62	
Rohtas Industries	38.60	39.69	39.75	
Kesoram Cotton	32.56	34.25	38.00	

The steep and sudden rise in prices compelled the Stock Exchange authorities to hold an interim settlement on Monday for two of the 13 shares on the forward list—Indian Iron and Hindustan Motors. This decision initially had a sobering effect, but prices soon rallied again and Indian Irons went ahead from Rs. 25.10 (the interim settlement rate) to Rs. 25.44; tonight's closing quotation was Rs. 25.28. Yesterday, some shares shed part of their previous gains, but tonight's closing quotations were still considerably higher than those prevailing a week ago.

The present bout of unbridled speculation is causing considerable anxiety among the more sober members of the stock-broking fraternity, who, unfortunately, are in a minority. The possibility of further credit curbs being introduced by the Reserve Bank to end wild-cat speculation cannot be ruled out. Yields on blue chips have now narrowed to the point where, in some cases, it has become possible to obtain higher returns even on Government securities.

Contrary to the general trend, coals, sugars and teas were neglected. But there were signs of activity in the jute section, after many weeks of dull conditions.

Subscription lists for the two new Government loans, which opened on Monday, were closed at 1 p.m. today. The borrowing programme of the various State Governments, it is expected, will be announced shortly. Meanwhile, the Government securities market is holding up well with the enquiry centred mainly on short- and medium-dated issues.

Hoolungooree Tea

After providing Rs. 75,611 (against Rs. 63,876) for depreciation, the profit of the Hoolungooree Tea Co. Ltd has amounted to Rs. 2.93 lakhs for the year ended December 1959, against Rs. 3.47 lakhs in the previous year. An ordinary dividend of Rs. 20, subject to tax, has been declared, against Rs. 17.50, free of tax. Taxation is reduced from Rs. 1.56 lakhs to Rs. 98,000. General reserve receives Rs. 25,000 (against Rs. 50,000). Development rebate reserve is allocated Rs. 21,203 (against Rs. 729). After making various adjustments, there is a balance of Rs. 75,669, which is carried forward, against Rs. 90,604 brought in. A crop of 14,619 maunds was secured, against 15,259 maunds. The average sale price was Rs. 2.45, against Rs. 2.32 a lb. Estimates for the current year have been framed for a crop of 15,500 maunds at a cost of Rs. 24,04,783.

Bengal Nagpur Coal

The profit of the Bengal Nagpur Coal Co. Ltd has risen from Rs. 33,306 to Rs. 81,421 for the year ended December 1959. The dividend has again been passed over. After making various adjustments, the debit balance is reduced to Rs. 24,902, which is carried forward. Raisings from the 15 seam quarry during the year amounted to 16,422 tons, compared with 5,592 tons. Despatches totalled 16,742 tons, against 5,329 tons. The directors state that an incline has now been driven to the 5, 6 and 7 seams in the rise area of the Bhuggutdih property. It is expected that raisings will commence within three months. Progress has been made in the arrangements to stow 10 seam. Andrew Yule and Co. Ltd will cease to act as managing agents on 15th August, 1960. Their appointment as secretaries and treasurers of the Company for five years from that date has been approved by the Central Government.

Calcutta Steel

After providing Rs. 3.07 lakhs for taxation and Rs. 95,632 for depreciation, the Calcutta Steel Company has made a profit of Rs. 3.53 lakhs from 6th August, 1959, to 31st March, 1960. An ordinary dividend of 50nP a share, taxable, has been declared. Making the necessary adjustments, there remains a balance of Rs. 1,03,035, which is carried

forward. The directors say that raw material supplies have improved.

Bombay Market

SHARES RISE DUE TO END OF STRIKE

STEELS REACT AFTER EARLY FIRMNESS

Wednesday Evening.

NEAR-BOOM conditions prevailed in the Bombay stock market during the past week. Hectic buying support developed as soon as the strike by Central Government employees was called off during the week-end. The buying was mainly speculative in nature, because the prices of many shares were far higher than could be justified by yields or growth possibilities.

Steel shares were boosted on various rumours. It was said that the Tata Iron and Steel Company would soon receive a licence to produce stainless steel and a subsidiary company might be established for the purpose. There were rumours of an early rise in the retention price of steel and of an increase in the dividend. Towards the close, prices reacted on profit-taking as operators realised that the working of the steel companies might be affected by the shortage of suitable coal. Indian Iron were steady at Rs. 25.20 on support from Calcutta interests and the price of Tata Ordinaries closed at Rs. 160.75.

Engineering shares improved on balance because of good corporate reports. Alcock Ashdown were taken at Rs. 315 and Premier Construction increased to Rs. 380 on the revival of talk concerning the capital reorganisation scheme. Larsen and Toubro were quoted at Rs. 52 and Mukand Iron realised Rs. 27.50. Tata Locomotive met with support up to Rs. 299 on an encouraging statement made by the chairman. In motor shares, Premier Automobile gained at Rs. 181 on reports of increased sales and Hindustan Motors were supported at Rs. 23.04 by Calcutta interests.

Cotton mill shares were shaded at the close due to unconfirmed reports that the Government might regulate cloth prices. Bombay Dyeing were dealt in at Rs. 68.80 and Century were transacted at Rs. 528. Kohinoor were done at Rs. 354, but Standard recovered to Rs. 1,865 on speculative support. Khatau were taken at Rs. 485 and Simplex came to hand at Rs. 181. Svadeshi were indicated at Rs. 263 and Finlay were steady at Rs. 338. Apollo were offered at Rs. 1.90 and India United Ordinaries were taken at Rs. 14.44.

Miscellaneous shares moved up in line with the general trend. In the sugar group, Belapur rallied to Rs. 390 and Phalton were quoted at Rs. 192. Walchandnagar Industries were placed at Rs. 308.75. Cement shares were steady, and Associated Cement increased to Rs. 146. Digvijay were dealt in at Rs. 170. Steamship company shares improved fractionally, and Scindia Steam were done at Rs. 15.40. Great Eastern Shipping were quiet at Rs. 17.84. Mining shares were steady, and Shivrajpur Syndicate were wanted at Rs. 71.50. National Rayon firmed up to Rs. 565.50 and Bombay Burmah were bought at Rs. 653. Voltas were steady at Rs. 287 and Tata Mills came to hand at Rs. 47.50. Chemical shares were firm, and Tata Chemical were placed at Rs. 19.32. Amar Dye jumped to Rs. 495 on prospects of expansion. Indian Dyestuff recovered to Rs. 860. Gwalior Rayon were higher at Rs. 48 and West Coast Paper increased to Rs. 223.

The publication of good results by the Tata group of companies induced support in the electricity supply section. Andhra Valley were quoted higher at Rs. 1,010 and Tata Power were wanted at Rs. 1,057.50. Ahmedabad Electric were done at Rs. 85 and Bombay Suburban were dealt in at Rs. 91.

Bank shares were steady on reports that profits were higher during the first half of the current year. Central Bank improved to Rs. 54, and Bank of India to Rs. 106. Insurance shares were quietly steady, and New India Assurance were done at Rs. 64. Indian Mercantile were transacted at Rs. 45.50.

Madras Market

STEADIER TREND ALTHOUGH BUSINESS STILL LIMITED

SUGARS ATTRACT ON HOPES OF BIGGER OUTPUT

Wednesday Evening.

AFTER remaining quiet earlier, the Madras stock market turned steady towards the close of the past week. Business in clearing shares was transacted on a small scale, but prices improved all-round. Buying of cash scrip increased because investors were inclined to take a more optimistic view of the prospects for the corporate sector. It was thought that many industries would expand during the third five year plan. Sugar shares attracted notice in view of the prospects for increased production. Textile shares were selectively bought because of the settlement of the dispute concerning the implementation of the Central Wage Board award. Planting shares met with selective support and many miscellaneous shares were bought on good corporate news.

There was little business in Government securities because attention was diverted to the new Central Government loans. Public utilities were neglected. Cochin were available at Rs. 10.30, and South Madras at Rs. 10. Vellore were dealt in at Rs. 11.50 and West Coast were taken at Rs. 12.

In the sugar group, India improved to Rs. 12.60 on talk of a rights share issue. It was stated that the Company might set up a new fertiliser factory soon. Deccan were done at Rs. 16.85 and Andhra were taken at Rs. 27. Cauvery were steady at Rs. 144 and E.I.D. were transacted at Rs. 61. Mysore improved to Rs. 57.50 on rumours of a rights share issue. United Breweries were firm at Rs. 104 and Travancore were wanted at Rs. 11.80.

In the planting group, Cochin Malabar were sold at Rs. 8.35 on the payment of a final dividend of 10 percent, which fell below market expectations. Blue Mountain were taken at Rs. 5.25, as were Consolidated Coffee at Rs. 26.50. Ouchterlony changed hands at Rs. 15.06 and Periakaramalai were dealt in at Rs. 3.72. Amalgamated were steady at Rs. 13.85 and Balanoor were placed at Rs. 16.70. Chembra came to hand at Rs. 5.60 and Coffee Lands were done at Rs. 25.80. Highland were steady at Rs. 15.25 and Kil Kotagiri were wanted at Rs. 5.50. Malankara were taken at Rs. 20.25 and Mercara met with support at Rs. 9. Midland were dealt in at Rs. 12.60 and Nilgiri came to hand at Rs. 7.50. Parkside were bought at Rs. 27.50 and Peermade were supported at Rs. 23.50. Rajendra changed hands at Rs. 16 and Teekoy were dealt in at Rs. 7.40. United Nilgiri were placed at Rs. 22.10 and Waterfall came to hand at Rs. 4.70.

Among textile shares, Lakshmi were steady at Rs. 163 and Madura were bought at Rs. 33.25. Travancore Rayon were done at Rs. 38.10 and South India Viscose improved to Rs. 158. Rajapalayam were steady at Rs. 135 on paying a taxable dividend of 9 percent. Anglo-French were dealt in at Rs. 120 and Buckingham were taken at Rs. 206. Bangalore Woollen were done at Rs. 197 and Cambodia came to hand at Rs. 10. Kothari were taken at Rs. 12.20 and Loyal were done at Rs. 34.50. Mettur met with support at Rs. 328 and Vasanta were steady at Rs. 238.50.

In the miscellaneous group, Aluminium Industries were transacted at Rs. 24.50 and Ashok Leyland were dealt in at Rs. 9.20. India Cement changed hands at Rs. 7 and F.A.C.T. were placed at Rs. 11.30 on a proposal to expand its output capacity. Andhra Cement were indicated at Rs. 10.85 and Binny met with support at Rs. 196. Enfield were steady at Rs. 20.25 and General Paper were transacted at Rs. 14. Jeewanlal were steady at Rs. 8.50 on the payment of a maiden dividend of 2½ percent. Mettur Chemical were bought at Rs. 428 and Parry's Confectionery were quoted at Rs. 5.50. Ruby Rubber met with demand at Rs. 8.83 and Spencer were done at Rs. 21.25. Standard Motor were placed at Rs. 16.70 and Textool were dealt in at Rs. 185. Tube Investment were firm at Rs. 325 and W. I. Plywood were bought at Rs. 300.

THE WEEK'S TRANSACTIONS

COMPLETE SHIP REPAIRS

FOR OVER HALF A CENTURY

The site of Garden Reach Workshops covers an area of 64 acres with half a mile of river frontage, slipway and dry-dock facilities suitable for inland water craft up to 2,000 tons and building berths for shallow-draft vessels up to 1,200 tons launching weight.

*

SHIPBUILDING

Garden Reach Workshops have provided complete ship repair facilities at Calcutta for over fifty years. The Workshops are fully equipped to handle major and minor repairs to vessels in the River Hooghly, in the stream and in wet-docks, dry-docks and lay-up berths allotted by the Calcutta Port authorities. Stocks of components and spare parts for M.A.N. Marine Diesel Engines are maintained in Bond and complete servicing facilities are readily available.

FACILITIES

Garden Reach Workshops handle **a daily average of 25 to 35 ocean-going vessels** and during the two years ended 30th September 1959, the Workshops have conserved, foreign exchange to the extent of **Rs. 48 lakhs** being the value of repairs carried out to Indian-owned deep-sea vessels; foreign exchange earned during the period by way of repairs to foreign-owned vessels amounted to **Rs. 1.44 crores.** Garden Reach Workshops are capable of handling twice this volume.

FOREIGN EXCHANGE: SAVING AND EARNING

Shallow-Draft vessels consisting mainly of Harbour Tugs, Launches, Water-Boats, Barges, Dredgers and Pontoons are wholly constructed at Garden Reach Workshops and during the past four years the value of those vessels amounted to almost **Rs. 2 crores,**—a valuable contribution to the saving of foreign exchange. Plant and experience combined with expert craftsmanship and supervision enable competitive rates to be quoted for all General Engineering Work.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base : year ended March 1953=100) worked out to 122.9 during the week ended 25th June, 1960, against 122.8 (revised) for the earlier week. The index stood almost at the same level as that prevailing in the corresponding week of the previous month, but was higher by 6.3 percent than that of a year ago. The monthly average for June 1960 worked out to 122.9, compared with 122.7 for May 1960 and 115.6 for June 1959. The index for Food Articles rose by 0.3 percent to 120.4, compared with 120.0 (revised) for the previous week due to a rise in the prices of rice in Tihu (+8%) and in Kotma (+7%), betelnuts (+5%), bajra and gingelly oil (+3% each), wheat, gram, barley, arhar, meat, gur, black pepper and chillies (+2% each) and jowar, coconut oil and eggs (+1% each), although the prices of oranges (−10%) and rice in Kanpur (−9%) and in Chiplun (−7%), onions (−7%), salt (−5%), potatoes and fish (−3% each), milk (−2%) and maize, mung, cashewnuts, coffee and cloves (−1% each) showed declines. The index for Tobacco advanced by 2.1 percent to 109.1 as a result of a rise in the prices of raw tobacco. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 118.6, in spite of a rise in the prices of castor oil (+1%). The prices of gingellyseed (+3%), raw silk, castorseed, rapeseed and copra (+2% each) and groundnuts and linseed (+1% each) showed advances, while those of raw skins (−7%), raw jute and tanning materials (−3% each) and lac (−1%) moved down, and the index for Industrial Raw Materials stood at 138.9, against 139.1 (revised) for the earlier week. The index for Intermediate Products advanced by 1.6 percent to 129.0 due to a rise in the prices of linseed oil (+4%) and cotton yarn, rayon yarn and aluminium (+2% each). The prices of lead (−2%), however, moved down. Lower prices of jute manufactures (−5%), general chemicals and bicycles (−1% each) brought down the index for Finished Products by 0.6 percent to 118.5, although the prices of handloom cloth and oilcakes (+1% each) rose.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

WORLD RAW COTTON PRICES RECOVER

The cotton season, which will end on 31st July, seems likely to provide new high records for production, international trade, and consumption. There has been a marked recovery in cotton prices compared with last year, and it is expected that total stocks will be reduced by about a million bales to the lowest figure for six or seven years. These prospects are discussed in a review of the situation in 1959-60 in the latest issue of *Cotton*, published by the International Cotton Advisory Committee. While pointing out that the present position has several satisfactory aspects, the review calls attention to some serious problems. There is, for one thing, a chronic tendency towards surplus production of the fibre, but there is also a maldistribution of productive resources. This, among other things, is one of the greatest obstacles to the conclusion of an international agreement which attempted to restrict raw cotton production throughout the world, causing local scarcities in the midst of plenty. India is at present perhaps the most prominent example of a cotton-growing country which is having to make large purchases abroad in order to supply its own mills, thus competing for limited foreign exchange resources with other imports necessary for maintaining the projected rate of economic growth. The country now has an urgent need to produce a larger cotton crop. Brazil and Pakistan are trying to stimulate production because domestic consumption has been at the sacrifice of exports still considered vital to their economies. On the other hand, some countries are still restricting production in the interests of maintaining equilibrium both at home and abroad.

Similarly, while consumption is increasing in the world as a whole, it continues to decrease in many countries where textile industries were established long ago. In the last decade, consumption was more than doubled, but the increase exceeded the consumption in the traditional textile manufacturing countries. The expansion has been the greatest in cotton-growing countries —although it has been very considerable in Hongkong and Formosa—which have tried to achieve self-sufficiency in cotton textiles. This has now largely been achieved, in relation to effective demand if not to potential demand, and the emphasis is now on the production of a surplus for exports. Pakistan—now, according to the review, the world's largest exporter of cotton yarn—and Egypt have made especially great progress in this direction, while Hongkong now ranks among the top ten of the world's cotton cloth exporters.

New Delhi

AGREEMENT WITH RUSSIA SIGNED FOR IMPORTING PETROLEUM PRODUCTS

GOVERNMENT OIL COMPANY TO BE THE SOLE DISTRIBUTING AGENCY

(FROM OUR NEW DELHI CORRESPONDENT)

AN Indo-Russian agreement for the import of petroleum products was signed here last week. Russia will supply mainly kerosene and diesel oil, the tentative ceiling for which during the next three and a half years is 1.5 million tons. The initial period of the contract is four years. The quantities to be imported will increase year by year, depending largely on the storage capacity in India and the transport facilities from Russia. The imports will be channelled through the wholly Government-owned Indian Oil Company, which was set up earlier in the year to undertake the distribution and marketing of petroleum products. If any private company wishes to distribute the Russian products, it will have to approach the official agency. Mr. K. K. Roy, who earlier in the year entered into an agreement to import petroleum products from Russia, is not likely to be given a separate licence. The payments for all the oil imports, like other imports from Russia, will be made in Indian rupees. The Minister for Oil, Pandit K. D. Malaviya, has told the Press that the Russian supplies will be at prices below the world level. He would not, however, disclose the exact cut in prices. It may be noted that the agreement does not provide for the import of Russian crude oil. Pandit Malaviya has not ruled out a rate war with the existing companies engaged in the marketing of oil products. "I will supply oil products as cheaply as possible to my people", he said. Initially, Russia will export oil to India in its own tankers. The first consignment, it is expected, will arrive in India next month. Meanwhile, the Indian Government is building its own storage capacity. The existing storage capacity is of the order of 10,000 tons. India's supplies of kerosene and diesel oil have been short. The oil companies are able to import these and other oil products which are in short supply in India but only against payment in foreign exchange, of which India is also short. Through its rupee payment plan, Russia has thrown a challenge to the western oil companies. The Middle East is the latter's source of oil supplies. India has no rupee payment agreements with the Middle Eastern countries, and Iran declined to include oil in the schedule of the Indo-Iranian trade agreement.

Inability to Process Russian Crude

Earlier in the month, the Government asked the three refinery companies whether they would be interested in refining the Russian crude, which was about 20 percent cheaper than the crude from the Persian Gulf area. The oil refinery companies initially wanted to analyse the Russian crude, but finally declined to refine it on the plea that they themselves had entered into long-term agreements with their present suppliers. They have, however, agreed to reduce the price of their imported crude by 7½ percent a ton, without affecting the prices of the refinery products. This has brought to the forefront the issue of revision of the refinery agreements. The Government holds that the agreements are outdated and require wholesale revision. In particular, a revision of the following four clauses, it says, is necessary:

"(1) The oil companies will take such steps as may be necessary to ensure that the Indian company will train an adequate number of Indian personnel in refining operations for employment in the refinery and, subject to the right of the management to select personnel and to judge what is necessary for the efficient and economic working of the refinery, will employ Indians in all capacities to the extent that qualified Indian personnel are available from time to time.

"(2) To the extent that the Indian company and/or the oil companies do not require them for their own purposes, and to the extent that it may be reasonably practicable to do so without prejudice to the interests of the Indian company, the oil companies will ensure that the Indian companies will make available at reasonable prices to those engaged in the manufacture of chemicals such by-products as they may require, provided

"(a) that these by-products can be made available without added capital investment, and

"(b) that should materials be manufactured therefrom which the Indian company and/or the oil companies wish to purchase, these companies shall have a prior right to purchase at a reasonable cost.

"(3) The Government will permit the oil companies to establish the prices of the refinery products from time to time at any level not higher than that at which they sell, or could make available for sale equivalent imported products, provided that, subject to the foregoing principle, the oil companies shall consult the Government before they alter the price of any of the products.

"(4) The existing duty protection on oil products manufactured in India will be maintained for a period of ten years from the commencement of full-scale refinery operations or until 31st December, 1965, whichever is earlier. The Government will grant for a period of ten years from the date when full-scale refinery operations commence or until 31st December, 1965, whichever is earlier, a duty protection by maintaining an import duty on motor spirit of two annas an imperial gallon higher than the excise on locally manufactured motor spirit."

No Unilateral Changes in Refinery Agreement

The Government has declared that it has no intention to amend or modify the agreements unilaterally. It will do so only with the consent of the oil refineries concerned. It has also asked the parties which have shown interest whether they are prepared to submit a detailed project report, inclusive of the necessary techno-economic survey, on the proposed lubricating plant. On receipt of these reports, the Government will determine the precise details of the project and also select the party to be entrusted with implementation. The parties have been asked to indicate the total cost involved together with the foreign exchange component.

Raw Cotton Supply Short

The raw cotton position is causing anxiety to the Government. It is not intended to create a panic but, as matters stand at present, there may be a serious shortage this autumn, which may lead to a rise in the prices of cotton textiles. The all-India fourth estimate of cotton for 1959-60 puts the acreage at 18.96 million, against the corresponding adjusted estimate of 19.41 million acres for 1958-59, thus showing a decline of 450,000 acres or 2.3 percent over the previous year. The decrease has been reported mainly by Bombay and Punjab and is attributed generally to unfavourable weather conditions at the sowing time. The decline has, however, been offset to some extent by the increase in the area reported mainly by Madhya Pradesh and Mysore. Among different varieties of cotton, the decline in area has occurred mainly in the case of H. 420, Oomras, Bengals, Broach-Vijay, Malvi, Hyderabad, Gaorani and Southerns. Americans have registered a substantial increase in area. As for staple lengths, the area under short staple cotton has declined considerably from 3.2 million acres last year to 2.7 million acres. The area under medium and long-staple cotton remains practically at last year's level.

This estimate generally covers the period up to the end of January 1960. The crop was affected by heavy rains and floods in Saurashtra, Gujarat and Vidarbha regions in September-October 1959, and in all the important cotton-growing districts of Madhya Pradesh in July-September and by lack of rains in parts of Chingleput, Tanjore, Madurai and Ramanathapuram districts of Madras. Attacks of powdery mildew were also reported from Rajgarh, Shajapur, Dewas, East Nimar and Chhindwara districts of Madhya Pradesh. Elsewhere, the condition of the crop was, on the whole, satisfactory. This estimate does not cover the entire area sown to the crop during 1959-60. Past experience shows that the area at the fourth estimate stage forms roughly 95 percent of the area finally reported. The fifth trade estimate of the 1959-60 cotton crop puts the production at 4,270,000 bales, against the corresponding and final estimates of 5,221,000 bales and 5,143,000 bales, respectively, for 1958-59.

Wheat Handling in Canada

The Central Food Ministry will shortly be sending out a three-man team to Canada to study the handling of wheat in that country, it is learned.

U.N. Technical Team on Fertilisers

A U.N. technical team is shortly coming to India to study and advise on the production of fertilisers in this country. It may be headed by an Indian. It has already been decided to set up a fertiliser plant in Visakhapatnam to use the raw material from the Caltex refinery. A similar scheme to set up a fertiliser plant in eastern Uttar Pradesh to use the raw materials from the Barauni oil refinery is now being considered.

Film Agreement with U.S.A.

An arrangement for the import of films from the U.S.A. was signed here last week. The arrangement, which will be in force until March 1962, provides for the use of the earnings of U.S. films in India for the purchase or rent of Indian films, production and co-production of films in India and also for investment in Indian Government securities. The U.S. Motion Picture Export Association has undertaken to ask its member companies to assist in promoting exports of Indian films to the U.S.A. and other markets.

Statutory Prices of Woollen Worsted Yarn

The Government of India has statutorily fixed maximum prices for the different categories of woollen worsted yarn under the provisions of the Industries (Development and Regulation) Act, 1951. The prices have been fixed for worsted hosiery yarn of counts ranging from 1/12s to 2/48s spun from various grades of wool tops, from 49/50s to 70s. These prices have come into effect from 2nd July, 1960.

During the recent past, manufacturers of woollen hosiery have been experiencing considerable difficulties in securing an adequate supply of hosiery yarn at reasonable prices. This question has been under the Government's consideration for some time now and the present step of fixing statutory prices has been taken to help manufacturers. Towards the end of last month, the Government announced its decision to grant *ad hoc* additional licences for the import of raw wool and wool tops to manufacturers of woollen hosiery yarn. Licences will be subject to the following conditions:

(i) Raw wool and wool tops and shoddy wool and rags imported against the licence will be exclusively used for the manufacture of hosiery yarn or shoddy yarn.

(ii) Sale of hosiery yarn or shoddy yarn manufactured out of the raw wool and wool tops imported against the licences can be effected only on the directions of the Textile Commissioner, Bombay, and at prices not exceeding those to be specified by him.

(iii) In case of short delivery of hosiery yarn or shoddy yarn manufactured from the raw wool and wool tops imported against the licence, double the quantity of raw wool and wool tops or shoddy wool will be deducted from the allocation which might be made to the licensee in the next half-year. This will be without prejudice to any other action which may be taken for contravening the condition imposed on the licensee under the I.T.C. regulations.

Electrical Concern Taken Over

The Government of India has assumed control of the India Electric Works Ltd. Calcutta, under Section 18A of the Industries (Development and Regulation) Act, and has appointed Mr. S. C. Banerji, Development Officer, Central Ministry of Commerce and Industry, to take over the management of the undertaking. This action has been taken on the recommendation of the four-man committee of enquiry which the Government set up last month to investigate the affairs of the Company. Of late, there has been a steady fall in production and the workers went on strike from 10th June. The committee of enquiry recommended that, in the interest of the Company and its employees and to maintain production, the Government should immediately assume control of the undertaking.

Contracts for English Electric

An order worth about £500,000 for rectifiers and transformers for the Hindustan Aluminium Corporation has been awarded to the English Electric Company. The equipment, to be shipped to a new plant in Uttar Pradesh near the Rihand power-station next spring, will supply direct current for aluminium smelting. Rihand will be the main source of the large amount of electric power needed for aluminium smelting. The output of the new plant, it is expected, will be used mainly for consumer goods. The rectifiers and transformers will be made at the Stafford works of English Electric. The Company is at present fulfilling a contract worth about £1.5 million for similar equipment to supply direct-current power for fertiliser and heavy-water production at Nangal. English Electric is also supplying the generating plant and water turbines for the Rihand power-station. The new contract includes control gear, switchgear, and auxiliaries.

Revised Agricultural Targets

The revised targets of additional agricultural production in the second plan are given in the table below. The foodgrains target was based on a series of discussions with individual States that followed the Mussoorie conference. The targets for oilseeds, sugarcane, jute and some other crops were agreed to with the States at the Mussoorie conference. The target for cotton was proposed by the Indian Central Cotton Committee in consultation with the State representatives in the light of the requirements of the textile industry. On the basis of the revised targets, agricultural production was expected to increase by about 28 percent during the second plan period, the increase in the production of foodgrains being of the order of 24 percent.

REVISED TARGETS OF AGRICULTURAL PRODUCTION

Commodity	Unit	Estimated production in 1955-56 (as given in the plan)	Tentative targets of production as in the draft plan	Revised targets of production
Foodgrains	Million tons	65.8	75.0	80.5
Oilseeds	Million tons	5.5	7.0	7.6
Sugarcane (gur)	Million tons	5.8	7.1	7.8
Cotton	Million bales	4.2	5.5	6.5
Jute	Million bales	4.0	5.0	5.5
Other crops	Million tons	...	...	...

In re-examining the agricultural production targets for the second plan, State Governments,

in common with the Central Ministry of Agriculture and the Planning Commission, accepted the view that the maximum effort possible should be made by all concerned within the financial resources allotted for agriculture under the plan. Funds proposed for agriculture in the block budgets of national extension and community project areas were not to be diverted to other heads of development. It was, however, recognised that at later stages in the plan, it might be necessary in some instances to make small additions to the allotments available for agriculture through internal adjustments and in other ways.

It was further agreed to speed up such programmes through the establishment of seed farms, arrangements for the fuller use of local manurial resources and, in some States, the programmes of minor irrigation. The importance of integrating the programme of improved seeds multiplication, use of local manurial resources, use of fertilisers, irrigation, soil conservation, etcetera, was also stressed particularly in areas with secure irrigation facilities and adequate rainfall so that a more rapid increase in agricultural production may be achieved. Local resources and enthusiasm for increasing agricultural production and raising living standards were to be mobilised through the agency of the National Extension Service. The importance of enlisting local participation and community effort on the largest scale possible in such programmes as minor irrigation and contour-bunding was stressed. It was urged that in each village there should be a village *panchayat* and a multipurpose co-operative society which should see that every family has an integrated plan for the use of improved seeds, fertilisers and organic and green manures and was provided with short-term credit in money or kind for carrying through its plans.

Record Output

Agricultural production was at a record level during the year 1958-59, particularly for foodgrains, sugarcane and jute. The production of foodgrains was 73.5 million tons, which was 17 percent more than the production during 1957-58 and about 8 percent higher than the previous highest production recorded during 1956-57. Against a plan target of 15.5 million tons of additional foodgrains production, a net addition of 7.7 million tons of foodgrains had been achieved. Production of commercial crops had also increased; output in the case of oilseeds, *gur* and jute was at a record level. The volumes of production of the various food and commercial crops for 1958-59 and the preceding three years, are given in the following table:

AGRICULTURAL PRODUCTION

Crop	Unit	Plan target	1955-56	1956-57	1957-58	68-8861
Foodgrains	Million tons	80.5	65.79	68.75	62.51	73.50
Oilseeds	Million tons	7.6	5.64	6.17	6.05	6.92
Sugarcane (gur)	Million tons	7.8	6.0	6.8	6.9	7.2
Jute	Million bales	5.5	4.20	4.29	4.05	5.18
Cotton	Million bales	6.5	4.00	4.73	4.74	4.71

The progress of the minor irrigation programmes under the agriculture and C.D. and N.E.S. programmes for the period 1956-59 is given in the table below:

MINOR IRRIGATION PROGRAMME

	Plan targets 1956-61	1956-57 Target	1956-57 Achievement	1957-58 Target	1957-58 Achievement	1958-59 Target	1958-59 Achievement
Area irrigated (lakh acres)							
(i) Under the agriculture plan	45	24.5	12.2	22	16	22	
(ii) Under C.D. and N.E.S. plan	45	N.A.	2.9	6	4.5	N.A.	

Rise in Prices

The revised targets of agricultural production, based on the formula of the former Deputy Chairman of the Planning Commission to raise output by 20 percent, have not proved realistic. The price level, instead of going down, has gone up. This is what the Planning Commission says: "The price situation continued to cause anxiety in 1958-59. The upward trend in prices, resumed in February 1958, gathered further momentum during the first half of 1958-59. The general index number of wholesale prices (1952-53=100) which had declined to 104.7 in February 1958, after having reached 112 in August 1957, resumed its upward trend, reaching a peak of 116.9 in mid-September 1958. Thereafter, it tended to decline, falling to 111.7 by the end of March 1959. The average weekly index of wholesale prices for 1958-59 was about 4 percent higher than in the previous year. The rise in the price level occurred in all commodity groups, but was most marked in the case of food articles, the index of which rose by about 8 percent. The index for rice at 105 was the same as in the previous year, but that for wheat had risen from 88 in 1957-58 to 105 in 1958-59. There was also a rise in the indices for sugar and *gur* (15 percent) and other food articles including spices (15 percent). The rise in the first half of the year was due to the poor harvest in 1957-58. The decline in the second half of 1958-59 was made possible by the prospects of good crops in 1958-59. This pattern corresponded to the seasonal behaviour of prices, but the amplitude of the rise was greater and that of the decline less in 1958-59 than in 1957-58."

London

POLICY FOR STABILISING PRICES SUCCESSFUL, SAYS MR. AMORY

NO DRASTIC CUT IN PUBLIC EXPENDITURE NEEDED

(FROM OUR LONDON CORRESPONDENT)

RIGHTLY or wrongly, the economic debate in the House of Commons last week was taken to mark the conclusion of Mr. Heathcoat Amory's tenure of office as the Chancellor of the Exchequer. Mr. Harold Wilson, the principal Opposition speaker, took advantage of the opportunity to pay Mr. Amory a valedictory tribute. Members on the Government benches refrained from following suit, but they showed what they thought of the Chancellor and his work by defeating the Labour censure motion by a thumping majority. Once again, the debate added little to one's knowledge of the economic situation and outlook. The Opposition spokesmen trotted out the well-worn charges without even troubling to dress them up anew. For his part, Mr. Amory contented himself with underlining the main fact that his policy had achieved stability of prices. The City was glad to learn that no drastic cut in public expenditure will be needed in order to peg the total for next year at the same level as for this year, for it has argued all along that the Government's recent measures of restraint were not really necessary. Mr. Amory does not agree with that opinion, but he added: "Our aim is not to halt expansion but to moderate its rate to a safe pace." If the Government's restraint proved to be excessive, however, nothing could be easier than to relax it.

Mr. Wilson had earlier done his best to prepare the House for the worst. He predicted big cuts in the road programme, on education and on the social services. The aim, he contended, would be to impress Conservative supporters with some vicious and mean cuts in essential services. The Chancellor refused to be drawn into giving figures for the different items in the public investment programme other than his overall assurance as to the total, but he promised that when the programme was completed and agreed, it was intended to lay it before Parliament.

Consumer Expenditure

Further light on the recent official measures is thrown by new figures on the trend of consumer expenditure in the first quarter of this year published in the latest issue of the *Digest of Statistics*. These bring out clearly the extent to which the boom has been dominated by the rapidly rising sales of new motor-cars. Indeed, more money was spent on new and second-hand cars and motor-cycles than ever before. Consumers' expenditure on these items amounted to £168 million, compared with £108 million in the corresponding period of last year, and £97 million in the first quarter of 1958.

Steel still Doing Well

Records continue to be broken by the U.K. steel industry. Following a modest decline in the output in May due to special technical reasons, the vigorous upward trend was resumed in June. According to the U.K. Iron and Steel Board, production on a seasonally adjusted basis reached a new peak of 465,000 tons a week, which compares with the previous best of 460,000 tons set up in April. Steel production in the first half of the year rose to 12.4 million tons, which is in line with the total estimate for the year of 24.3 million tons. So far, at least, the credit restrictions have not made any noticeable impact on home consumption of steel, or on the tendency for users to rebuild their stocks. The substantial order-books for most steel products suggest that there is unlikely to be any early effect on the steel output.

An encouraging feature has been the high level of shipments abroad. Steel exports in the first five months were at an annual rate of 4.4 million tons, which is the target for this year. If this figure is reached, it will represent the highest ever achieved and would represent a considerable gain over 1957, the best postwar year, when exports reached 3.9 million tons.

Special Deposit Payments

The London clearing banks have made a start with their payments of special deposits to the Bank of England to meet the second call announced with the Bank rate rise on 23rd June. This is shown in the latest weekly Bank return, which shows that special deposits have increased during the week by £13.3 million. They now stand at £87.5 million, which means that about another £60 million remains to be paid by 17th August. Of this, about £23 million must be transferred by 20th July. Another feature of the Bank return was a jump of £20.2 million in the active note circulation, raising the total to £2 245.6 million. To replenish the note reserve in the banking department, the fiduciary issue has been increased by £50 million to £2,300 million. So far, five of the London clearing banks have issued their half-yearly balance-sheets made up to 30th June. Barclays shows an increase of about £28 million in advances, compared with its last mid-monthly statement dated 15th June. For the same fortnight, the National Provincial shows an increase of £10.7 million in advances and Martins a rise of £8.5 million. At first sight, this might seem a curious reversal of the flattening out trend discernible in the mid-June statements, but that would be a superficial interpretation. It has to be remembered that the Banks' position at the end of the half-year is always distorted by special influences. In particular, items in transit are always substantially inflated at the half-year end. For these reasons, no great importance is being attached to 30th June figures.

Bank of England Report

A longer and a much more informative annual report from the Bank of England goes far towards meeting the Radcliffe Committee's recommendations. This document should explain much more than in the past what lies behind central banking policy. The report assembles a great deal of statistical information, especially in the field of Exchequer financing, not hitherto available. It reviews, in some detail, the main decisions affecting the level of interest rates. It sets out the reasoning which led "the authorities" to decide in January that any further large rise in general demand would lead to over-strain. What the Bank observed during the winter months was no different from what the Press reported at the time, that is, a steady rise in bank and hire-purchase credit, in consumer expenditure, and in house building, to which after October a sharp upturn in industrial investment plans was added. In January, it became clear that Government expenditure was about to rise heavily, that imports were growing much faster than exports and that new wage increases would not be met, as in 1959, by equivalent rises in productivity. But it was the general "extravagantly optimistic attitude towards the future" which seems to have induced both the Governor of the Bank and the Chancellor to give repeated public warnings from November onwards. These events are known, but it is of real value to know, even in retrospect, how they appeared to the Bank.

The report also contains a detailed discussion of monetary policy during the year ended March 1960. Those who study the money market will be fascinated to read how the Bank "decided that the circumstances warranted some rise in short-term interest rates" and promptly put the discount market under pressure. Again, it is set out why the downward tendency of Government security prices after the end of November 1959, "was not resisted," and there is at least the inkling of an independent view in a final sentence which refers to the problem of striking the right balance between fiscal and monetary measures.

F.B.I. on Company Law

The Jenkins Committee on Company Law has received some interesting recommendations from the Federation of British Industries, whose views by no means conform to those expressed by other professional bodies who have already given evidence. On take-overs, in particular, the F.B.I. comes out against attempts to legislate the bids. Neither does the F.B.I. wish to recommend any change in the law relating to non-voting shares, or shares with restricted voting rights. While appreciating the problems which such securities may cause, it says a rule that all shares should have equal voting rights would "be far too heavy a restriction on legitimate optrations, and any less rigorous rule would be only too easy to evade." The F.B.I. considers that the matter is best left to the stock exchanges to exercise their discretion in each case and refuse quotations where it is thought that a holder of non-voting shares is inadequately protected. It "would be glad to see such action taken in future cases."

On disclosure of ownership and control of companies, no recommendation has been made, largely on the grounds that no water-tight scheme appears practicable. Apart from disclosure tending to restrict dealings and making bearer shares "nonsensical," it is suggested that it "would embarrass those who have legitimate reasons for concealment." On the other hand, some important suggestions have been made for the limitation of the powers of directors. Any contract to sell a substantial part of a company's undertaking should be made conditional on subsequent approval by shareholders. If proceeds of a sale are in cash, or easily convertible into cash, shareholders' consent should be required if these are used in some new activity, even if this is already allowed by the company's memorandum of association.

An interesting case is made for the setting up of two classes of enquiry by the U.K. Board of Trade. At present, the F.B.I. claims that the appointment of an inspector is a serious stigma on a company and suggests that one class of enquiry should be where there is a suspicion of criminal activity and another where only "incorrect conduct" is alleged. Inspectors should be given a secretariat. Any change in the accounting exemptions given to banks, assurance and shipping companies are opposed. No changes are recommended on law on donations by companies for charitable and political purposes.

Jute

TRANSPORT OF JUTE FROM UPCOUNTRY AREAS AFFECTED BY RECENT STRIKE

NEW CROP REPORTS REMAIN FAVOURABLE

CONDITIONS in the Calcutta jute and jute goods markets have been becoming more normal towards the close of the past week. Before that, trading was disrupted by the general strike last Thursday in sympathy with the Central Government employees, and the *hartal* on Saturday called as a protest over the Assam situation. On these two days, the markets were officially closed, while on Friday, the tension was such that the general attendance in offices was affected and business was poor. The Central Government employees' strike was called off late on Saturday night after only five days, but the effects it has had on rail transport will take a much longer time to overcome. During the strike, the movement of jute has been practically at a standstill and arrivals in the Cossipore market have been almost nil. This has had a steadying influence on fibre prices, which are supported by reports that the amount of new crop fibre available in July might not be as large as had been expected. In fact, some operators go so far as to say that there will be practically no imports before the middle of August. Much of this talk can be dismissed as bullish propaganda, but the fact remains that sellers with commitments for July—some for guaranteed shipment—are going to find it difficult to fulfil them.

Agency Prices Rise

This has caused prices in the agencies to soar, as the demand for quick shipment jute is far greater than the supply, and premiums of Rs. 2 or Rs. 3 have been demanded and paid. Another factor affecting the situation is the shortage of labour. Sellers with agencies in Assam are finding it difficult to recruit supervisory, godown and office staff who are normally Bengalis, and sent from Calcutta, as they are reluctant to risk a transfer to Assam until the political situation has quietened down. Delays are thus bound to occur, and upcountry operators are taking full advantage of the fact.

The one redeeming feature has been the continuance of favourable reports about the new crop. Conditions in all areas have been almost perfect, and harvesting is proceeding according to plan. Rivers and tanks are full, so there should be no difficulty about retting and preparation. In the Daissee areas, the plants are very healthy, but the proportion of mesta under seed appears on first estimates to be slightly less than it was last year.

The publication of the raw jute arrival figures has also caused a hardening of prices. This is because total arrivals from both India and Pakistan during the season just completed (July 1959 to June 1960) have failed to come up to the estimated raw jute consumption of mills for the same period. Arrivals from Indian stations have recorded a new low at 209,850 bales, being not only the lowest for June for five years, but also the lowest for any month since August 1955. June's arrivals have been 96,400 bales less than in the previous month, and 93,500 bales less than in June last year. Arrivals from Pakistan have shown a welcome rise, being helped by the large shipments of cuttings which were due against licences that expired at the end of June. Arrivals last month from across the border have been the second highest of the season, and at 92,550 bales are 49,150 bales more than in the previous month and 80,200 bales more than during June 1959. Total arrivals have amounted to 302,400 bales, which is the lowest figure for ten months. Compared with May, they are down by 37,250 bales; they are also down by 3,300 bales on June 1959.

More Fibre from Pakistan

The arrivals for the full season, from July 1959 to June 1960, can now be analysed. They make a grand total of 5,788,650 bales—5,191,650 bales from Indian stations (89.6 percent) and 597,000 bales from Pakistan (10.4 percent). The total is the lowest since the 1954-55 season. Compared with 1958-59, arrivals are down by 716,850 bales, mainly due to a drop of 984,850 bales from India, which was partially offset by a rise of 268,000 bales in arrivals from Pakistan. The ratio of arrivals last year was 94.9 percent from India and 5.1 percent from Pakistan. Thus, during the season just ended, the percentage of arrivals from Pakistan has more than doubled.

There was very little business in the gunny market in the early part of the past week due to the restricted number of working days, and also the delay in overseas mail and cables as a result of the strike. The markets tended to be steady, however, mainly in sympathy with raw jute. The general attitude of overseas buyers gave little support, and it was obvious that consumers were not inclined to pay the current high prices.

As expected, U.S. burlap consumption has shown a fall in June, but the decrease of about 3.5 million yards is not too great. The actual consumption last month was 71 million yards, which brings the total consumption for the first half of 1960 up to 444 million yards, giving a monthly average of 74 million yards. The total consumption is only 10 million yards lower than last year's record figure for the same period. U.S. burlap consumption so far is the highest for the last ten years, apart from 1959. U.S. burlap stocks have shown a small rise of about 3 million yards and now stand at 266 million yards, which is equal to 3¼ months' consumption at the current average rate. Most people consider the stocks more than adequate, and the question of the U.S.A. entering the market in the near future seems remote.

Rumours of Chinese Buying

Since the week-end, conditions have been quiet, but towards the close, the market has become excited on rumours of good business with China. Overnight on Tuesday, heavy goods prices have jumped by Rs. 2 or Rs. 3, and the speculative market after a period of quietness has once again sprung to life. The low raw jute import figures for June have helped create a bullish tendency, as rumours of a fibre shortage are again circulating. The rumours have been prompted by newspaper reports that the acreage under jute is only about 90 percent of last year's. But the report also points out that the yield an acre is expected to be much higher than in 1959-60, which market operators here have ignored. Sellers have adopted very firm ideas, so offers have been reduced and prices increased accordingly.

I.J.M.A. Production Figures

The production figures of the I.J.M.A. mills for June show a fall of 2,600 tons to 89,100 tons. The decline can be accounted for by the decrease in working hours (which were 200, against 208 in the previous month) and also the effect of mills sealing looms. Hessian accounted for 41.9 percent, sacking for 47.3 percent and other goods for 10.8 percent of the total. Production for the season amounts to 1,074,200 tons, made up of 449,400 tons of hessians (41.8 percent), 530,700 tons of sacking (49.5 percent) and 94,100 tons of other goods (8.7 percent). Production an hour over the season works out to 436.8 tons. Total working hours were 2,459. In 1958-59, the total production was 1,040,500 tons in 2,428 working hours, the production an hour being 428.5 tons.

THE JUTE MARKETS

There was a fair amount of activity in the futures market, and prices, as given by the East India Jute and Hessian Exchange for the period from 13th to 19th July, were as follows:

	Hessians 40in. 10oz. Nov. 1960	Sacking B Twills Nov. 1960	Raw Jute Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	46.80	42.80	115.70	83.85	31.30
Highest	48.20	44.08	119.40	86.11	32.14
Lowest	46.76	42.76	115.00	83.64	31.22
Closing	48.06	43.96	118.95	85.57	31.94

Manufactured Goods: All markets were officially closed last Thursday due to the general strike. On Friday, they opened on a steady note, mainly due to anxiety about raw jute supplies. Overseas buyers showed no interest, but the general tendency was upwards. B Twills rose by Rs. 1.95 in the July position to Rs. 124.50, with forward shipment at Rs. 119. Hessians also moved up and 40in. 10oz. opened at Rs. 44.60 for early shipment. On Saturday, a *hartal* was declared, so the markets were again closed. A reaction set in on Monday, by when the strike had been called off. Both sacking and hessians lost ground, but conditions began to change rapidly on Tuesday in sympathy with the jute market, where doubts arose about the early delivery of the new crop. Support came later from rumours of substantial business with China, but this was unconfirmed. The market reaction was prompt, however, so sacking was forced up by Rs. 1.90 and hessians by 50nP. The rise was accelerated towards the close, when substantial gains were recorded.

On Wednesday morning, quotations were as follows:

	July	August	September	Oct.-Dec.
40in. 7½oz.	34.00 (37.06)	34.15 (37.22)	34.15 (37.22)	33.60 (36.62)
40in. 8oz.	36.50 (39.78)	36.65 (39.94)	36.65 (39.94)	36.00 (39.24)
40in. 10oz.	45.60 (49.70)	45.70 (49.81)	45.60 (49.70)	44.85 (48.88)
B Twills	129.50	128.50	127.50	123.50
Heavy Cees (Plain)	126.50	128.00	127.50	123.50
A Twills	153.00	152.50	152.50	147.00
Liverpools	147.00	145.00	144.00	139.50
Cornsacks	131.50	132.00	132.00	126.25

Raw Jute: There was little to report from the jute market at the opening, as sellers were reserved. Uncertainties about the fibre supply position and the effect of the strike prescribed cautious trading. The first day the market was open was Friday, when quotations were unchanged at Rs. 34.50 for Assam for August-September shipment, but there were very few offers at this level. Only limited business was reported, and buyers appeared to be more interested in ready delivery old crop jute which began to show a substantial premium. On Saturday, the market was closed, and on Monday morning, conditions were easier but quotations remained unchanged. As the week progressed, however, prices hardened as the supply position became doubtful. Sellers withdrew from the market, or offered at higher rates, and old crop jute for ready delivery took on a substantial premium over new crop. Towards the close, prices in the futures market rose rapidly on speculative buying in both jute and gunnies. Stronger advices from the goods section helped stabilise jute sellers' ideas.

During the past week, business was done in ready delivery Assam and Northern at Rs. 37 to Rs. 39. New crop Assam and Northern fetched Rs. 34.50 to Rs. 36, according to delivery. Cuttings were also done between Rs. 100 and Rs. 103 for September-October-November shipment.

At the close, the market was very steady and quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	95.00	35.00	Sept.-Oct.
Northern	92.50	34.50	,,
Purnea Desal	89.75	33.50	,,
Daissee Selected	96.50	36.00	Oct.-Nov.
Assam Tossa	96.50	36.00	,,
Assam Old Crop	104.50	39.00	Ready
Mesta:			
Assam-Northern	80.50	30.00	Sept.-Oct.
Daissee	80.50	30.00	,,
Desal	80.50	30.00	,,
Jungli	77.75	29.00	,,

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in June was 10 million yards lower than that of June last year and 3 million yards below May this year. Consumption in June 1959, however, was abnormally high. Last month's bag cut-up improved slightly over May but was about 15 percent lower than the 1955-59 average. Piecegoods business last month declined by about 3 million yards from May but was about equal to piecegoods deliveries a year ago. U.S. burlap in stock and afloat at the end of June increased by 3 million yards. At 266 million yards, 143 million yards were spots and 123 million yards were afloats. Appearing below are two tables which include the June figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

DULL TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

LITTLE interest is being shown in any section of the Dundee jute market, and business remains slow. The state of chaos which recently prevailed in India due to the Central Government employees' strike has been responsible for the lack of information and dealers have had no news about the goods market. There were, however, offers of 40in. 10oz hessians at 67s 3d and of 7½oz. at 50s 3d for July shipment, 67s 6d and 50s 3d August, 67s and 50s 3d September and 66s and 50s

October-December, with B Twills at 189s, 187s 9d, 187s and 180s 3d for the respective months of shipment, all f.o.b., Calcutta.

It is reported that there has been more business in raw jute in the Pakistani market. Many sellers are, therefore, inclined to be reserved in making offers. One or two firms are quoting more than the E.P.C. prices for their jute because they believe that something may happen to affect adversely the current jute crop in Pakistan. There are other sellers, however, who are willing to sell at lower prices than the E.P.C. rates.

There are offers at £120 for Mill Firsts, £114 for Mill Lightnings, £108 for Mill Hearts and £102 for Grade Hearts for July-August shipment, £120, £109, £104 and £101 August-September and £117, £107, £102 and £99 for September-October, c.i.f. U.K.-Continent. Old crop is of little interest now, and any buyer wishing to purchase a small quantity can satisfy his requirements at more reasonable terms.

Tossa-2/3 is offered at £115 and fours at £110 for September-October, with Continental Tossa-2/3 at £116, same shipment, c.i.f. No prices are mentioned for Daissee now, yet at one time Dundee spinners used little else. Buyers of jute yarns are interested in light coloured yarns nowadays since they have got used to them.

Business in jute yarns and cloth in Dundee has remained quiet. More enquiries were reported since the recent reduction of £10 a ton in most qualities of yarns. Buyers expect still lower prices which might be realised in the near future. Hessian yarns, meanwhile, are quoted at 17.15d a lb for 8 lbs C.H.W. cops and at 18.30d for 8 lbs J.C.H. warp, with 40in. 10oz. hessians at 14.87d and 8oz. at 12.60d a yard.

THE PAKISTANI JUTE MARKETS

BUYERS HOLD OFF EXPECTING FURTHER PRICE FALL

(FROM OUR EAST PAKISTAN CORRESPONDENT)

DURING the past week, both overseas and local prices continued to fall, and the P.J.A. market quotation for overseas sales was marked down by a further £3. Its local quotations were similarly reduced. Reports from foreign markets indicated that even at £117, Export Firsts were considered too high. Buyers, it is said, are not interested in any price higher than £110 for Export Firsts. As in Calcutta, raw jute sellers have been reportedly eager to sell their fibre at a discount. In Narayanganj, some heavy discounts have been offered.

In spite of all this and earlier reports that buyers both in India and overseas are awaiting lower prices in order to cover their requirements, very little actual business has been reported. This suggests that as far as foreign buyers are concerned, the market indications are based partly on wishful thinking and partly on occasional distress sales of afloat parcels. Furthermore, it has to be remembered that however short of jute the buyers may be, they invariably hold out for as long as possible when they see that the P.J.A. market quotations are being reduced. They have found from experience that the longer they hold out, the more eagerly the Pakistan Jute Association reduces its daily quotations.

This correspondent feels that the present fall in prices is purely nominal. There is in fact no real market at present, as the crop is late. The view is inspired by the fact that old crop or even new crop ready fibre is salable locally at a premium of as much as £8 a ton above the overseas quotations. More and more reports are coming in that the crop is better than was expected originally, and this means that by the end of this month, arrivals in main baling centres should be at the normal level. Opinion is sharply divided between bears and bulls over the prospects for the new crop.

THE PROSPECTS FOR INDIAN TEA

KEEN COMPETITION EXPECTED FROM CHINA

By P. C. Datta

THE production target of 700 million lbs of tea laid down for the second five year plan was reached in 1958. This was considered by some as a hopeful sign for the industry. The production was about 600 million lbs just after partition, but has risen since 1954. The number of tea estates has also increased, from 6,214 in 1950 to about 8,071 at the end of 1959. The area under cultivation, which was 782,998 acres in 1951, has increased to 809,555 acres, and the average size of a tea estate is estimated at 100.30 acres, with an average production of 852.39 lbs an acre. Some people think that statistics such as these indicate a promising future for an industry which earns more foreign exchange than any other. But in spite of the hopeful trends, India may face a crisis if she fails to maintain her command in foreign markets and counteract the stiff competition from rivals like East Africa and China.

Foreign Competition

In 1959, India exported over 472 million lbs of tea. Against this, Ceylon exported 383 million lbs, Indonesia 71 million lbs, Kenya 23 million lbs, Pakistan 11 million lbs, Nyasaland 22 million lbs, Uganda 7 million lbs and Tanganyika 6 million lbs. India, although, falling short of her 1956 and 1958 export figures, still had the major share of the world market. But, except in 1956, Ceylon gradually raised her exports, while India's exports fluctuated from year to year. This was disappointing, considering the estimate that world absorption (excluding China) had shown a gradual rise from 1,163 million lbs in 1951 to 1,500 million lbs in 1959.

The U.K. is the biggest buyer of tea. She imported 464 million lbs in 1951, and the figure has risen after many fluctuations to 518 million lbs in 1959. Ceylon seems to have done better in the U.K. market than India. Nyasaland and Kenya have also gradually improved their position there, as the following statistics indicate:

TEA IMPORTS INTO THE U.K.
(In million lbs)

		1949	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959
India	...	318	239	276	304	315	321	383	399	384	325	284
Ceylon	...	118	93	110	117	116	134	121	125	139	161	137
Nyasaland	...	11	7	12	13	13	14	17	18	19	17	20
Indonesia	...	9	3	16	16	10	12	7	8	9	15	9
Kenya	...	1	2	3	3	3	5	8	10	12	11	10
Total (including other countries)	...	474	368	464	496	492	542	499	513	594	588	518

Interesting Feature

An interesting feature is that while India is raising her output and exports along with an increase in the number of estates and acreage, Ceylon is increasing her production and exports while keeping her acreage almost steady. The cost of production of Ceylon tea, therefore, is likely to be an advantage for her. Furthermore, Ceylon uses an insignificant portion for local consumption. Against this, India consumes over 200 million lbs of tea herself. The Indian industry's future thus depends on both internal consumption and exports. The most important consumer of Ceylon tea is the U.K (which imported 137.5 million lbs in 1959). After the U.K. come Australia (58 million lbs) and the U.S.A. (43.5 million lbs). Iraq was an important market for Ceylon, but the position has changed now since, as a result of the bilateral trade agreement reached last year, Iraq is buying more from India. Two other countries which patronise Ceylon tea are South Africa (with imports of 21.18 million lbs) and New Zealand (23 million lbs).

India is still the biggest supplier to the U.K., having sent 284 million lbs during 1959. But in the U.S.A., Australia and New Zealand, her position is worse than Ceylon's. Indonesia offers little competition, but the problem of the Indian industry is to increase the production of quality tea.

Certain Advantages

Ceylon has certain advantages in tea production. The quality of her soil is good and more uniform. She has two monsoons, giving an evenly distributed rainfall of at least 60 inches a year. The nitrogen, potash and phosphorus content of the soil is quite satisfactory. Ceylon's plantations have the advantage of altitude without being too high, so that both aroma and cup quality are favourable. In India, both climate and altitude vary more, so the quality of the tea differs widely from region to region. The tea from Darjeeling has a superb flavour and Assam teas generally have strong liquoring quality, while south Indian teas combine both. The range in the quality of Indian tea is a major factor to consider in planning tea promotion abroad.

Fall in Production of Quality Teas

As a result of the drought from March to May this year, a fall in the production of north Indian tea was feared. The output until June this year has been 101.1 million lbs, against 113.9 million lbs in the corresponding period of 1959. But the most disappointing feature is the fall in the production of quality teas at a time when the second flush is harvested. If producers try to make up the shortfall in later months, it is thought, a surplus of common teas might develop. In that case, the "price concertina" between the quality grades and the common grades will widen, with a fall in the price of the latter. So one suggestion is that the industry should concentrate on fine plucking to keep up prices, since India has a good export market for quality teas.

During the current season, Ceylon has been able to increase her output over that of recent years by taking advantage of the favourable weather. She has not concentrated on the fine grades, since most teas presented at recent Colombo auctions consisted of the medium grades which were often lower in price. Reports from Indonesia and East Africa suggest that they also have good prospects for the plain grades, so a substantial quantity is likely to be offered in the world markets in the coming season. Although China has exported tea to only a limited group of countries so far, she is gradually coming up in the world market with black tea. Her tea output was estimated at 340 million lbs in 1958. Chinese planners have fixed a production target of 860 million lbs for 1960 and 1,000 million lbs for 25 years later. In view of the recent annexation of territories which are believed to possess good tea soil, it may not be difficult for China to increase her production. Her 600 million people consume as much tea per capita as India's do. China will now have a considerable quantity available for export to foreign markets even if the promises held out are only partially fulfilled.

Russian Consumption Rising

Russia, which produces about 70 million lbs of tea a year, imports another 50 million or 70 million lbs from India and China annually. The amount consumed in Russia is likely to increase gradually. Her purchase was limited to high grade teas from India last year and the quantity imported from India increased over the previous years. She bought 25.3 million lbs of Indian tea in 1958 and 27.3 million lbs in 1959, the whole of which consisted of quality grades. The demand from the Middle East for Indian tea increased last year due to various trade agreements. But if India's output falls this year and Chinese competition increases, this country's position in the world tea market will suffer.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 4, held on 18th and 20th July, offerings at the Export auction amounted to 35,797 chests of which 70 packages were of old season's manufacture. The quality continued to be maintained and once again, quite a few bright invoices were on offer. There was only a fair demand. The enquiry was selective and withdrawals were numerous, their proportion being the largest so far during the current season. Plain brokens Fannings were well supported at firm to dearer rates, especially the poorest kinds. The cheapest legg-cuts also sold readily but the better-priced descriptions were generally up to 10nP easier. Orthodox Assams were irregular and mostly sold at easier prices. Whole leaf grades, especially the more expensive types, were also easier by up to 20nP. Tippy teas received only a limited support. The very best bright liquoring C.T.C.'s were a strong feature and were fully firm to dearer. The remainder, however, were discounted by up to 30nP and the proportion of withdrawals was considerable. Flavoury Darjeelings realised attractive prices but the plainer types were once again easier.

Quotations

	1960 Rs. a kilo
Clean Black Pekoe ...	5.00 to 5.20
Plain B. P. ...	4.60 to 4.70
Plain Fannings ...	4.40 to 4.60
Medium B. P. ...	5.00 to 5.20 (Nom.)
Medium Fannings ...	Not quotable
Best Assam C.T.C. B. P. ...	8.00 to 9.00
Best Assam C.T.C. Fgs. ...	8.50 to 9.50

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings, which consisted of 11,531 packages, met with a good general demand. The small good liquoring orthodox descriptions met with an active enquiry and generally realised dearer rates, while the export-able types also sold readily. Non-wither Dooars, however, were irregular and, except for the powdery kinds which were keenly sought after, were often taken up at easier rates. Medium C.T.C. teas were well supported generally at 10nP below last rates while the better descriptions met with selective enquiry and were irregular.

Quotations

	1960 Rs. a kilo
Medium Dooars Dust	4.40 to 4.60
Medium Assam Dust	4.50 to 4.90
Medium Assam C.T.C. Dust	5.60 to 6.00
Best Assam C.T.C. Dust	6.10 to 6.50

(Quotations are inclusive of excise duty.)

There was a strong demand at dearer rates for the 223 chests of leaf on offer.

LINSEED FIRM

The linseed market was firm during the past week. The supply of seeds was small with sellers showing little interest, but enquiries from crushers were fairly keen. The oil market was also firm. Small business was done by local buyers. The oilcake price was steady because of some local demand, but no export business was done as the U.K. price had fallen. Latest quotations are as follows: Ready Rs. 26 a maund and September futures Rs. 26 a maund.

HIDES AND SKINS DULL

The market ruled dull. Stocks were less than in the previous week.

Bazaar Sales

(Between 12th July and 18th July, 1960)

Cowhides: Wet salted (Slaughtered) 6,400 pcs. on the basis of Rs. 9 to Rs. 15 and Rs. 18 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee and Kustia) 89,500 pcs on the basis of Rs. 350 to Rs. 375, Rs. 435 to Rs. 455 and Rs. 500 to Rs. 525; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinajpur 19,800 pcs. on the basis of Rs. 350 to Rs. 450 and Rs. 475.

Bazaar Stocks

(18th July 1960)

Cowhides: Wet salted 137,000 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 35,000 pcs.; Assam-Dinajpur 18,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 142,500 pcs.

Books

CURRENCY AND FINANCE

A Short History of Money. By George Winder. (Published by Newman Neama Ltd in association with the Institute of Economic Affairs, London. Price Rs. 15s.)

The disastrous inflation in Britain and elsewhere in the past 20 years has reduced the purchasing power of the currency to about a quarter of its original value. This has led many people, irrespective of their politics or incomes, to argue that the rot has to be stopped. Mr. Winder's contribution to the subject is a layman's attempt to investigate the problems of finance and currency, and to find solutions. The author, formerly a solicitor of the New Zealand Supreme Court and now a farmer in Sussex, has traced the development of money from cowrie shells and gold coins to paper currency. He has dealt with such subjects as bills of exchange, monetary systems, full employment and the gold standard. But the main interest lies in the author's critical analysis of the causes of inflation in Britain in the postwar years. He apparently believes that the prime cause of inflation there is excessive Government borrowing from banks, so the way to stop it is to reduce official borrowing from the banking system, which indeed the Government has been trying to do since 1955. The book is neither a technical work nor a textbook, but a layman's guide to currency and inflation. It is written in plain language, with complete logic and a scrupulous respect for facts.

HISTORY OF KARACHI

Karachi through a Hundred Years. By Herbert Feldman. (Published by Oxford University Press, Karachi. Price Rs. 15, pages 258.)

Mr. Feldman's book is the centenary commemoration volume of the Karachi Chamber of Commerce and Industry for the period 1860 to 1960. Such chronicles usually have a romantic flavour, going back as they do to the dim past. But this publication has added importance because it not only traces the history of an important chamber of commerce, but has also much to say on the economic growth of the sub-continent and of a city whose destiny it was to become the first capital of one of the dominions of the Commonwealth. The book contains a mine of information, much of which will be of considerable value to those who are interested in the commercial history of the times and the activities of chambers of commerce in India and Pakistan. The chapter dealing with the activities of the Karachi Chamber after the formation of Pakistan is recent history and gives a vivid picture of the readjustments that had to be made due to the exodus of the local commercial people who were mainly, although not entirely, drawn from the Hindus.

The following quotation on the reactions of the Upper India Chamber of Commerce to the first Income Tax Act of 1886 will be of interest to the hard-pressed assessee of today: "The Secretary of the Upper India Chamber of Commerce solemnly averred that in as much as the European and Eurasian population was already paying in 1887-88 no less than Rs. 25-2-6 a head a year by way of duty on imported liquors, they should not be asked to pay further taxes."

INDUSTRIES ANNUAL

Industrial India Annual, 1960. Edited by S. T. Chary. (Published by A. MacRae and Co. (Private) Ltd, United India Building, Sir Phirozeshah Mehta Road, Fort, Bombay. Price Re. 3.50, pages 326.)

The Industrial India Annual presents a mixed bag of articles ranging from such subjects as the growth of the public sector to oil exploration. It gives a résumé of the progress of many Indian industries with up-to-date facts and figures. As the official organ of the All-India Manufacturers Organisation, the annual will be welcomed as a useful review of economic trends.

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Block Account Rs.	Reserve & other Funds Rs.	Acreage under Tea	Outturn and Average Price per lb realised for crop 1957 Lbs.	1957 Rs.	1958 Lbs.	1958 Rs.	Estimate 1959 Lbs.	NAMES	Accounts closed	Mg. Agts. Secretaries etc.	Net Profits including taxation Rs.	Dividends per cent 1956	1957	1958	Paid-up per Share Rs.	Latest Market Quotations as available until 20-7-60 Rs.	13-7-60 Rs.	A year ago Rs.

THIRD PLAN: TAXATION AND STATE ENTERPRISES

THE discussions on economic policy during the autumn session of Parliament which begins next Monday will inevitably centre on the draft outline of the third five year plan published earlier this month. It looks certain that no part of the outline will deserve more thorough attention than the scheme for raising the money to finance a plan whose ambitious nature is denied not even by the Planning Commission itself. The relative modesty and the innumerable qualifications featuring the essay indicate that it is meant, for the time being, to provide mainly a basis for discussion. Various adjustments and revisions are likely to be made before the new plan is finalised, especially after detailed talks have been held during the next few months about the resources of the States, which are to raise at least a third of the new taxes and incur just over half of the public sector outlay.

As it stands, the outstanding feature of the plan is its extraordinary reliance on foreign aid. Of the total outlay of Rs. 11,250 crores, no less than Rs. 3,200 crores is required in the form of external assistance; unless this comes, the plan will not be worth the paper it is written on. Fortunately, the prospects are promising that foreign aid will be on a much larger scale than during the second plan, when it is expected to total Rs. 982 crores. But no one can say whether, over the next few years, it will be as large as the planners expect. About Rs. 600 crores will come as a result of the P.L. 480 food agreement signed with the United States three months ago. In addition, Rs. 180 crores has been promised by Russia for specific projects during the next quinquennium; and a few smaller sums have apparently been assured by some of the communist countries of eastern Europe. The remaining gap, however, is still large enough to make much of the plan rather chancy.

There is reasonable hope that if the cold war does not intensify, and if the democratic countries of western Europe can be persuaded to supplement American generosity more liberally, most of the remaining sums required will be forthcoming. Inevitably, political as well as economic developments in future years will govern the nature and scale of the assistance from abroad. The two main dangers at the moment are, firstly, that the competing demands of resurgent Africa may impinge on the funds that would otherwise come to India; and, secondly, that the tendency to "tie" credits to purchases from the country giving the aid might reduce their value considerably in real terms. In that case, the planners' present assumptions concerning foreign exchange requirements may not only prove an under-estimate but may even so not be available in full. Some safeguard against these dangers is implicit in the decision to keep the third plan flexible, but there are limits even to flexibility if the balanced nature of development is not to be disturbed. Almost none of the aid offered so far for the third plan is "untied". Unless a large proportion of the sums given in the future are linked neither to purchases from a particular country, nor to specific projects in India, the balance and flexibility will not be easy to maintain: pockets of over-production will develop alongside pockets of scarcity, on the same pattern as they did through the errors of the planners in 1957 and 1958.

At the moment, detailed criticism of the plan is handicapped by the uncertainty about foreign aid. Some say that, if the Rs. 3,200 crores of external assistance does come, the remaining Rs. 8,050 crores of internal resources will simply have to be found, and it does not matter how. Others argue that external assistance is not likely to be available on the scale expected; in that case, the target for internal resources need not cause excessive worry, because those resources will not then need to be raised. But, whatever the assumptions might be in relation to the adequacy or otherwise of foreign aid, the scheme for raising internal resources which the planners have suggested is highly unrealistic in many details. The assurance cannot be accepted that the Government's approach to the question of raising resources will be "pragmatic", and will be adjusted in the light of the developing situation. It cannot be accepted because the proposals just presented are far from "pragmatic".

The draft outline indicates that the heaviest reliance in raising internal resources for the public sector will be on two items: (1) additional taxation; and (2) measures to increase the surpluses of Government enterprises. About both, serious doubts may be expressed. The planners assume that, on the existing basis, Government revenues will leave a balance of Rs. 350 crores available for the third plan, and the surpluses of Government enterprises other than the railways will amount to Rs. 440 crores—giving a total of Rs. 790 crores. That Rs. 790 crores will need to be supplemented by Rs. 1,650 crores of "additional taxation, including measures to increase the surpluses of public enterprises." Not only is it extremely doubtful whether a sum of this order can be raised; it is equally certain that if an attempt is made to raise it, serious damage will be done to the economy.

The planners unfortunately do not specify exactly how much of the extra Rs. 1,650 crores they propose to raise through the surpluses of public enterprises, and how much through additional taxation. Even the sum of Rs. 440 crores expected from Government enterprises on the existing basis is admitted to involve "certain broad assumptions" and is therefore confessed as "very rough". No estimate is given about what the surpluses have been like so far, although Government enterprises are the one subject on which one would expect the Planning Commission to have detailed information, considering the reliance placed on them. The scraps of information available hitherto about such enterprises are extremely foggy, and far from reassuring. The Explanatory Memorandum accompanying the last Central Budget gives an estimate of the sums the Central Government has invested in its industrial enterprises and the profits it has received from them. The statistics show that, during 1958-59, seven undertakings yielded profits totalling Rs. 1.68 crores on an aggregate investment of Rs. 35.09 crores; there were 34 other industrial undertakings, for which no profits were shown, because some apparently made no profits at all and some obviously had not got going. The proportion of profits to capital investment in the seven undertakings for which profits were shown was thus about 4.8 percent.

According to Press reports, another analysis has recently been made by the Central Statistical Organisation; this shows that gross profits total only about Rs. 5 crores or Rs. 6 crores in Central Government industrial undertakings which are in full operation now and in which the total capital invested is about Rs. 171 crores; the return in their case too appears to work out to only around 3-3½ percent. It is true that many large projects, such as the three steel plants and the oil refineries, will be completed during the third plan period. But on the evidence so far available, it is doubtful whether they will be able to contribute resources on the scale the planners expect. If they are to follow proper accounting procedures, they will have heavy depreciation to provide for in their initial years and modest reserves to build; these allocations will reduce appreciably the profits available for investment elsewhere. Semi-monopolies like the railways and the posts and telegraphs could possibly squeeze their customers for more; but it is questionable whether enterprises like the fertiliser and steel plants can inflate their prices indefinitely, even assuming the existence of highly protected markets. If they do, the rise in costs throughout the economy will be substantial; it will not only raise the domestic price level but also harm exports seriously.

If the scope for mobilising the surpluses of Government enterprises has been exaggerated, it is likely that the planners will want to raise the largest part of the extra Rs. 1,650 crores they want through additional taxation. For the time being, they have assumed that at least a third of this sum will have to be raised by the States. But the present condition of State finances does not justify the optimism that they will be able to do so without serious difficulties. The major accretions to the State revenues in recent years have come from sales taxes and levies on road transport. Increasing either of these will have a direct and immediate impact on the price level. Other sources of revenue, like the taxes on agriculture, have not been increased enough—for political reasons. The planners will need more than exhortations if they are to persuade the States to tax farmers more heavily, and thereby invite the political unpopularity which the State Governments have not dared to incur ever since the first plan was launched. A move in this direction has long been necessary; whether, when and to what extent it will be made remains to be seen.

Assuming that the State Governments raise their share of the new taxes, the larger proportion will still remain to be raised by the Centre. The Planning Commission says that both direct and indirect taxes will have to be increased. Although it mercifully recognises that there is little scope for heavier rates of income tax and corporation tax, it might have been more realistic for it to admit that these have already passed the point of diminishing returns. Most of the extra revenue will apparently be sought from indirect levies. This would be reasonable, except that it is impossible to conceive of any system of indirect levies which can bring the planners most of the Rs. 1,650 crores they will want over the next five years. They admit that indirect taxes (together with the increases in the prices of goods produced by Government enterprises) will tend to raise prices and costs; but add that "this is a part of the calculated sacrifices that have to be made." The simple answer to such assumptions is that the "calculated sacrifices" are far too great; they will spark off another round of major cost increases in an economy where costs are already too high and which is being enervated by acute inflation.

The Planning Commission supports here a popular fallacy about the supposed virtues of indirect taxation as compared with deficit financing: the former, it says, "works off" the inflation potential by raising prices, whereas the latter builds up the inflation potential further. But the effects of the two can by no means be explained in such simple terms, for indirect levies can give rise to inflation of the "cost-push" variety, which is no whit superior to the "demand-pull" inflation resulting from deficit financing. From the point of view of the export trade, the former may actually be more dangerous. Indirect levies can be used for mopping up surplus purchasing power, but for that they have to be used with extreme judiciousness. The fiasco which resulted from the excise duties imposed on cloth four years ago—with the aid of precisely similar arguments—indicates that the judiciousness is not yet to be found in the Central and State Finance Ministries. The Planning Commission does, of course, make a series of reassuring statements on the subject, culled from popular economics textbooks, such as: "The relative limits of each form of taxation have to be determined pragmatically. The effects of taxation, whether direct or indirect, are often complex, and great care has to be taken while framing tax measures to ensure that the economic fabric is not stretched too far at the wrong points." But the translation of these soporofics into practical terms will leave scope for considerable anxiety, especially in relation to the

overall targets for additional taxation which have been proposed.

There is little doubt that, if the taxation targets are forced through as now visualised, the resources left to the private sector will be far less than the planners expect. Additional taxation (including the surpluses of Government enterprises) of Rs. 1,650 crores over five years works out to an average of Rs 350 crores a year. It may seriously be asked whether revenues of this order can be raised, without milching the private sector dry. The Planning Commission appears to be preoccupied with the fact that, although taxation during the second plan has been far heavier than was originally visualised, private enterprise continues to show exceptional vigour. It seems also to be unduly impressed by the current strength of the new private capital issue market, forgetting that this is now the victim of speculative manipulation on a scale not seen since 1946. Already, the officials' estimates of investment in the private sector are open to some doubt. They claim, for instance, that private investment in agriculture, including irrigation, will total Rs. 675 crores during the second plan, as against the original estimate of Rs. 275 crores; but many will want to know why, if the upsurge in agricultural investment has been so great, agricultural production is lagging so far behind. The estimates concerning the investment in private large and medium industries, including minerals, are no doubt more reliable; but it may still reasonably be asked whether this category of investment can increase by 50 percent, from Rs. 700 crores in the second plan to Rs. 1,050 crores in the third, if the proposed scheme of additional taxation is to be carried through in full. Neither of these estimates include the requirements for modernisation and replacement, which are rising faster as the process of industrialisation continues, and where a huge backlog remains which cannot be indefinitely postponed.

In sum, over the coming months, the Planning Commission may be called upon for a more detailed explanation as to how the various sources of revenue it has counted will be tapped. It is hardly enough to promise "pragmatism", "flexibility" and adjustability "in the light of the economic situation as it develops". To assume from now that State enterprises will yield surpluses they have hitherto shown no signs of yielding, and that the economy's capacity for bearing stiff new taxes is as unlimited as the Government's judgment in imposing them is impeccable, will call for more positive evidence than has yet been offered. High taxation targets may appear to have propagandist virtue if they are intended to impress foreign governments about the sacrifices India herself is prepared to undertake in case the external assistance is forthcoming. Low targets for deficit financing, too, may appear to have a similar virtue if they are addressed to hard-headed bankers abroad who have been alarmed by the dangerous impact of inflationary financing during the second plan. But what will matter finally is whether India will decide on a rational plan: it can be bold and imaginative, but it will have to make a stern concession to economic realities in assessing the resources likely to be available within the country itself.

WEST GERMAN AID AND TRADE

THE announcement a few days ago that the West German Federal Bank (the "Bundesbank") has advanced a credit of $240 million (Rs. 115 crores) to the World Bank is a heartening sign that West Germany remains aware of the need to help developing countries. It has often seemed that Bonn's eagerness to continue amassing huge foreign exchange reserves has exceeded its eagerness to promote the outflow of capital and aid, especially to the under-developed areas of the world. It is true that, over the past six months, it has taken a number of steps to increase the outflow of capital, and particularly of capital goods. But their value has seemed limited in view of what West Germany could afford, and justifiable criticisms on this score were voiced at the recent meeting of the Development Assistance Group. Since the beginning of this year, a new West German law has systematised all the previous dispositions aimed at encouraging the outflow of capital; another has raised the ceiling imposed on the major private export credit guarantee house; and the Finance Act of 1960 has done the same for the State's own guarantee fund in aid of exporters. This effort is to continue. The resources at the disposal of State organisations concerned with assisting developing countries are to be increased annually. Meantime, Bonn is pursuing negotiations with the developing countries with a view to minimising the political risks of capital exports, and hopes eventually to make the resultant agreements multilateral instead of bilateral, so that the same sums will cover a wider range of transactions.

Although the West Germans are insufficiently anxious to assist developing economies, the nature of their foreign trade obliges them to seek every means of facilitating capital goods imports by those economies. The Erhardian miracle is to a large extent based on exports, and half of West Germany's exports are producer goods—goods which are normally paid for over a long period—unlike consumer goods, where the need for long-term credit is less. So the question of financing foreign trade, and of guaranteeing the credits involved, is more acute for West Germany than for any other country. Moreover, a good part of West German producer goods go to developing countries, which need especially liberal credit terms and yet whose political insecurity (as seen by cautious West Germans) sometimes makes such credit hazardous. The matter would be less serious were it not that West German trade as a whole results in a large and consistent surplus, which means that West Germany's customers are not earning the marks that could finance the necessary credits for capital goods. And this surplus is earned, as to one-third, in trade with the developing countries, whereas private West German investments go mainly to Europe and North America, so that they do not compensate for the payments unbalance with the developing nations.

Obviously, this situation calls for special support for capital goods exports to Asia and Africa, simply in order to keep the system working, in spite of West German reluctance to take risks outside the industrial West. It is this that explains the recent liberalisation of export credits. The financing of exports and the insurance of credits have, for the most part, been undertaken by the exporters themselves and by the banks. There exist a Government agency and a consortium of banks specialising in this business, but their commitments are small and well below their capacity, no doubt because of their charges. The field is dominated by the Hermes insurance organisation, which specialises in covering commercial and political risks on exports. It is estimated that 90 percent of the transactions covered by Hermes relate to developing countries, and so it is of importance to these latter that the ceiling on its operations has just been raised by law from 9,500 million deutschemarks to 12,000 million deutschemarks—for this increases by 25 percent the insurance facilities available to West German firms exporting to such countries as India. The ceiling figure refers, naturally, to a revolving fund, so over a period it can cover operations totalling a much greater value and this makes the 25 percent increase more significant.

However, the Hermes company, having joined the Berne Union, is bound to cover risks with a life of less than five years, and for many major capital imports India demands a longer credit. To meet such needs, the West German Government last year created its own guarantee fund which can cover risks of up to ten years and even 15 years in larger projects. This fund was first limited to 2,000 million deutschemarks, but this year the ceiling has been raised to 5,000 million deutschemarks which, once again, increases the facilities available to firms trading with the developing countries. The fund covers long-term credits, loans which amount to a participation in a foreign enterprise, and outright German capital investment in foreign firms. It covers the political risk on 80 percent of the capital involved in such transactions, leaving the firm to make separate arrangements for the purely commercial risk (which is of course much easier to insure with private institutions). The charges are very low. Since it is the West German Government itself which is here bearing the political risk, it is seeking to conclude agreements with the governments of developing countries, by which these latter will bind themselves to pay full compensation for expropriation and to permit the free repatriation of interest and capital. These bilateral pacts are regarded by Bonn as an interim guarantee, for it is well known that the West German Government is in favour of a universal (or at least multilateral) charter for the protection of foreign private investment.

The Bonn Government is not restricted to the operations of this guarantee fund. On the one hand, it can offer very special insurance cover for transactions "which have sufficient political interest to justify such intervention", which means that it can guarantee projects entailing exceptional political or economic risks but which are held to be useful on grounds of foreign policy. On the other hand, it can offer direct long-term credits, which are not specifically "tied" to the purchase of West German capital equipment, "on condition" (says the law) "that these loans are of such a nature as to improve relations with the countries concerned". The importance of these two dispositions is that the lending of West German capital is no longer limited by purely commercial considerations but can have a political content. When one recalls the dogmatic free enterprise ideology of Dr. Erhard's economic system, one sees that this marks some advance in German thinking. It is an advance, moreover, of which India has been among the first to benefit: the largest credits so far promised on these terms are 225 million deutschemarks to India and 220 million deutschemarks to Greece.

The resources available for such loans will, it is hoped, increase steadily over the years to come. The fund concerned started out with 260 million deutschemarks of counterpart credits resulting from the Marshall Plan, and this is to be raised to 600 million deutschemarks by annual instalments of 60 million deutschemarks. Further, the West German Government will make over to this fund certain extraordinary revenues, such as the proceeds of the sale of shares in Volkswagen and other State enterprises which are to be denationalised. In sum, a new source of foreign capital has been opened from which India may expect to draw further benefit.

Bonn has also just offered to liberalise the restrictions on imports from India. But the liberalisation is to be so slow and so limited that one would imagine West Germany were in the midst of a disastrous foreign exchange shortage. The Bonn authorities sometimes plead that they cannot increase the outflow of capital because they do not want to interfere too much with their "free enterprise" economy. The "free enterprise" arguments somehow seem to be conveniently forgotten when it comes to West Germany taking a bold step towards liberalising imports from the developing countries. Dr. Erhard's liberal arguments addressed abroad might seem more convincing if they were reinforced by the practical application of liberal doctrines at home, in the sphere of import policy.

DEFECTS IN MONETARY TECHNIQUE

THE last important statement made by Mr. Heathcoat Amory as Britain's Chancellor of the Exchequer coincided with the Bank of England's first new-style annual report, as recommended by the Radcliffe Committee last year. Together they provide some useful pointers to policy and technique. Naturally, the Bank—which, although not a Government department, is ultimately subservient to the Government—did not publicly criticise official policy. Naturally, the Chancellor of the Exchequer—the man primarily responsible for the conduct of economic affairs—rejected the criticisms that had been freely offered from other sources. But both the Bank and the Chancellor tacitly admitted that those criticisms were not all wide of the mark. The comment in the Bank's report that attracted most notice requires some interpretation. The report noted the strains that were developing early in 1960 and remarked: "This state of affairs, coupled with the persistent tendency of public expenditure to increase, again brings into prominence the recurrent problem of the right balance between fiscal and monetary measures in bringing about the necessary degree of restraint." This somewhat diffuse statement may be interpreted as meaning that in the opinion of the Bank, the Government should have exercised more control over its spending, and that the increase in spending, not being counteracted by additional taxation, imposed too heavy a strain on the Bank's monetary measures.

The report does not discuss developments that occurred after the end of March, and in fact towards the middle of the year the strains on the economy were apparently relaxed. Thus Mr. Amory, speaking in July, had to defend himself against the criticism that he had restrained activity unnecessarily. He recognised the risk that "intervention might adversely affect production for some time"; but when there was also the risk that "demand would overspill and cause dangerous effects to the stability of prices and to industrial costs and so to the balance of payments," the only safe course was "to take remedial action". Mr. Amory developed the maxim that "it is infinitely more important to have stable employment and stable prices than to have a stable Bank rate". He had warned on a previous occasion that the London Bank rate would probably be changed more often in the future than it had been in the past, and he said on this later occasion that the Government should be prepared to intervene actively and comparatively often, using fiscal and monetary measures, whenever the situation required restraint or stimulation; otherwise the swing of the pendulum would be much wider.

However, Mr. Amory's defensive manner, and particularly his assurance that the Government was ready to relax the restraints if they were seen to be excessive, showed that criticisms of the restrictive policy had made some impression. Bankers believe, indeed, that the Treasury has had second thoughts on the wisdom of the more recent restraints, particularly of the rise in Bank rate to 6 percent in June. If policy is as flexible as Mr. Amory asserts, and if the authorities can be trusted to interpret the signs fairly accurately, ere is no need to worry so much about policy, d we can turn our attention to technique. itain's technique is still experimental—but too utiously experimental, the critics say. How- er, there are some indications of the direction which the experiments are leading.

Bank rate is no longer respected as in former nes. The Radcliffe Committee, in its report last ar, expressed doubts that were already in many inds when it questioned the efficacy of this vice as an economic regulator. British expor- rs, specially, have been irritated by the increase the cost of credit since Bank rate was raised 6 percent, and the Treasury is well aware that high Bank rate involves relatively large payents to foreign owners of short-term money nployed in Britain—when the balance of payents requires attention—and to owners of such nds at home—when the rate of the Government's bursements to the business community and to dividuals is already causing concern. In spite Mr. Amory's remarks on a flexible Bank rate, is doubted that the authorities will use this ethod of restraint so readily in the future. ariation of the banks' liquidity seems now to be referred. The authorities' reluctance to use variable liquidity ratios is not clearly understood; and some critics assert that a specified, variable, ratio of advances to deposits would be the most effective means of regulating bank credit. However, the system of "special deposits", which was first applied in April and was applied again in June, is a method of controlling liquidity, and therefore a method of controlling credit. Liquidity control particularly was advocated by the Radcliffe Committee, and, although naturally disliked by bankers, it is generally considered in London as a much more effective and rational method of control than Bank rate.

The technique of funding short-term debt into longer-term debt is more complex, and the operation of that technique is more confused. Intermittently, over many years, the authorities have attempted to regulate—rather, to restrict—the liquidity of the economy by this means. The Bank of England's latest report shows how this policy has failed to achieve its purpose. So far from issuing Government stock to cover the Exchequer's deficit in the year ended 1st March, the authorities had to issue Treasury bills and to promote National Savings through the Post Office in order to finance large net purchases of Government stock, as well as the Exchequer's deficit. Treasury bills and National Savings are short-term commitments; so the system became not less liquid but more so. This failure is significant; for it resulted from the funding policy itself, whereby sales of stock kept prices of Government stock low, and efforts to attract buyers by more generous terms, weakening prices further, put this form of investment permanently in disrepute. The authorities are still funding actively. But they have adapted themselves to investors' desire for stock of such short "life" that the value of the capital invested cannot depreciate.

Current News and Comment

ndian Copper Attract

The support for the ordinary shares of the ndian Copper Corporation Ltd around Rs. 5.38 uring the past few weeks is due to two factors. he first is the publication of a good report for e year ended December 1959. The ordinary ividend has been increased to 27 percent, taxable. his gives a net amount higher than the dividend f 18 percent, tax-free, paid in the previous year. he trading profit has amounted to £1,202,259. he second factor is that the prospects for the orporation are being assessed optimistically, since he price of the metal in world markets is steady. n his address from the chair at the annual general eeting in Calcutta yesterday, Mr. P. E. G. W. arish pointed out that the value of the copper roduced by the Company is governed largely by he world price, because most of the domestic requirements are met through imports. (A fuller ersion of the speech is printed on another page f this week's *Capital*.) Of the domestic demand of 0,000 tons a year, Indian Copper produces only ,000 tons. Whether the international price will remain as steady as at present, it is difficult to predict. or the time being, output has suffered due to disurbances in some producing countries. If normal conditions return soon, stocks may increase nd prices will fall, unless the bigger producers gree to restrict output voluntarily. Present inlications are that they are anxious to maintain remunerative price even by restricting output, f necessary.

Indian Copper produced less in 1959 than in 958 due to a temporary breakdown in the melter. But the shortfall, it is expected, will be made up during the current year. Ore reserves have increased from 4,034,147 short tons to 4,203,547 short tons. Mr. Parish pointed to the possibilities of expansion. The increase in production has been planned so as to continue in line with the further development of the mines. The expansion will involve considerable capital expenditure during the years ahead. A crushing plant, a smelter and a concentrating plant will shortly be required to deal with the increased ore production. The estimated cost is nearly £1 million. Prospecting on the leasehold properties has not yielded very favourable results so far. But it is premature to make a forecast about the ultimate results at the present stage. Meanwhile, reserves have been enlarged by concentrating on development at depth. This is obviously more expensive.

The demand for kyanite has improved in spite of the competition from synthetics and other sources. Mr Parish thought that some American markets will be recaptured soon. As for the electrolytic project, arrangements have been completed for installing a refinery and a foundry for producing electrolytic copper and wire bar. It is proposed to use Indian Copper's production and imported copper, if necessary. At the same time, the production of rolled copper and brass sheets will be continued as in the past. The project is expected to begin production by the end of 1962.

Howrah Jute Profit Down

Jute shares have been stagnating in the Calcutta stock market for some weeks as the outlook for the industry is uncertain. The price of fibre is high since supplies are short. This has forced many mills to cut production by sealing looms. The prices of jute goods are still uneconomical in relation to those of raw jute; even so, foreign customers are not buying on a large scale. These conditions are reflected by the shares of the Howrah Mills Co. Ltd and the Company's results for the year ended March 1960 are disappointing. In accordance with the decision of the Indian Jute Mills Association permitting mills to seal looms voluntarily from 6th June, 1960, Howrah Mills has decided to close down another 5½ percent of the total loomage. So the sealed looms now amount to 14 percent of the total. The Company's working during the past accounting year has been interrupted by labour troubles, but there has been an improvement in the position since then. The directors, nevertheless, think that the prospects for the current year are not favourable in view of the disparity between the prices of fibre and those of goods. The profit has declined from Rs. 17.43 lakhs to Rs. 14.36 lakhs. An ordinary dividend of Rs. 1.25, taxable, has been declared. This offers a yield of 5.3 percent at the present price of Rs. 23.50 a share, and is covered more than one and a half times. The ordinary dividend was Re. 1, tax-free, in the previous year. Allocations include Rs. 2.5 lakhs (against Rs. 8 lakhs) for general reserve, Rs. 1 lakh for debenture stock sinking fund, Rs. 62,527 for taxation and Rs. 37,340 for development rebate reserve. The carry-forward is Rs. 72,382, compared with Rs. 58,053 brought in.

Clive Row Investment Does Well

In their report for the nine months ended December 1959, the directors of the Clive Row Investment Holding Co. Ltd. point out that the investment portfolio is distributed to the extent of 25 percent in jute, 15 percent in coal, 13 percent in tea and 38 percent in miscellaneous industries. As the Basmatia Tea Co. Ltd, the Hoolungoorie Tea Co. Ltd, the Murphulani Assam Tea Co. Ltd and the Rajgarh Tea Co. Ltd have become subsidiaries of Clive Row, the dividends from these Companies will be subject to the lower tax applicable to dividends received from subsidiary companies. But the prospects for the tea industry have been affected by the drought earlier this year. The coal industry might do better due to the price increases permitted in 1959, but the outlook for the jute industry is uncertain because of the fibre shortage. The paper mill in the miscellaneous group might be affected adversely by the cut in the price of the commodity introduced at the beginning of 1960. Clive Row's profit has improved from Rs. 13.06 lakhs during the year ended March 1959 to Rs. 14.58 lakhs in the nine months ended December 1959. A dividend of 75nP, taxable (including an interim of 25nP), has been declared. It absorbs Rs. 10.41 lakhs, and offers a yield of 10.5 percent at the price of Rs. 9.69 a share. The dividend was 37nP, tax-free, in the previous year. Taxation provision is Rs. 5.35 lakhs (against Rs. 6.30 lakhs). The carry-forward is Rs. 216,378, compared with Rs. 334,488 brought in. The Company became a subsidiary of the Calcutta Discount Company (Private) Ltd on 19th December, 1959.

Tata Electrics Earn More

The three electricity companies in the Tata group—Tata Hydro, Andhra Valley and Tata Power—have presented satisfactory results for the year ended March 1960. The revenue from power supply has increased, Tata Hydro having got Rs. 158.72 lakhs (against Rs. 153.53 lakhs in the previous year), Andhra Valley Rs. 197.87 lakhs (against Rs. 190.26 lakhs) and Tata Power Rs. 353.2 lakhs (against Rs. 321.44 lakhs). Net profits have also risen. Tata Hydro has earned Rs. 60.57 lakhs (against Rs. 58.25 lakhs), Andhra Valley Rs. 46.11 lakhs (against Rs. 43.84 lakhs) and Tata Power Rs. 108.1 lakhs (against Rs. 82.66 lakhs). With a final dividend of Rs. 4.50 and a bonus of Re. 1 a share, the total distribution on the Tata Hydro share works out to Rs. 8.50, giving a net amount of Rs. 5.95, against Rs. 8 in the previous year. Similarly, the total in the case of Andhra Valley and Tata Hydro is Rs. 85, which includes a bonus of Rs. 10, giving a net amount of Rs. 59.50, against Rs. 80. It is to be noted that, due to the depreciation and other allowances permissible under the Indian Income Tax Act, in the case of the Andhra Valley and Tata Power companies there were no assessable profits, so the dividends paid in the

previous year were not "grossable". The amount paid last year (Rs. 80), which was taxable and therefore not net, should be compared with the gross amount of Rs. 85 payable this year and not with Rs. 59.50.

From the profit of Rs. 60.56 lakhs, Tata Hydro has provided Rs. 20.78 lakhs for tax, and to the balance is added Rs. 29,433, making a total of Rs. 40.08 lakhs. Interim dividends took Rs. 10.32 lakhs, while among the allocations are Rs. 1.75 lakhs (against Rs. 3.41 lakhs) for contingencies reserve, Rs. 1.9 lakhs (against Rs. 8.59 lakhs) for development reserve and Rs. 7.8 lakhs (against Rs. 8 lakhs) for general reserve. The final dividend absorbs Rs. 16.32 lakhs, leaving Rs. 25,281 to be carried forward. The net profit of Andhra Valley is Rs. 46.11 lakhs. From this is provided Rs. 36,000 (against Rs. 2.28 lakhs) for taxation and to the balance is added Rs. 32,647, making Rs. 46.07 lakhs. Interim dividends absorbed Rs. 10.81 lakhs. Allocations include Rs. 2.41 lakhs (against Rs. 4.71 lakhs) for contingencies reserve, Rs. 9.27 lakhs (against Rs. 7.18 lakhs) for development reserve and Rs. 2.4 lakhs (against nil) for general reserve. Final dividends take up Rs. 18.38 lakhs, leaving Rs. 22,547 to be carried forward. From the profit of Rs. 108.1 lakhs, Tata Power has provided Rs. 20.54 lakhs (against Rs. 4.35 lakhs) for tax. Interim dividends absorbed Rs. 18.72 lakhs. Allocations include Rs. 13.36 lakhs (against Rs. 7.24 lakhs) for development reserve, Rs. 8 lakhs (same) for special repairs and Rs. 9.3 lakhs (against Rs. 3.82 lakhs) for general reserve. The proposed dividends take Rs. 31.6 lakhs, leaving Rs. 33,359 to go forward, against Rs. 41,605 brought in.

Planning for power supply beyond 1965 is the main theme of the statement issued by Mr. J. D. Choksi along with the reports of the Tata Hydro, Tata Power and Andhra Valley Companies. He deals at length with the supply position of the various Trombay units as well as of the Koyna project, and says that studies made by the engineers indicate that the system's peak demand will grow to about the firm capacity of this interconnected grid by the end of 1965. Planning for additional power beyond 1965 has now begun and the two alternatives considered are: (a) nuclear power plants, and (b) hydro-*cum*-thermal development. Mr. Choksi refers to the Central Government's intention to set up a nuclear power plant of 300 mW capacity in the north of Bombay and the proposal to link it with Surat and Ahmedabad in the north and the Tata and Koyna systems in the south. He says that an inter-connected grid such as this, extending over many hundreds of miles and with power-stations having varying capacities of generating units from 10 mW to 150 mW, will create many difficult technical problems. Tata engineers are studying the possible repercussions on the Companies' system. Mr. Choksi believes that the commercial operation of a project of this type, dimension and complexity will take more than five years to materialise. It might, therefore, be more prudent to plan some further power development within Tata's own area, independent of the Central Government's project. If necessary, these plans could at a later stage be co-ordinated with the Government project. Tatas are also in close touch with the Maharashtra Government and its Electricity Board, whom they will consult while planning the further expansion of their system after 1965. The development of hydel power on the Tata system, Mr. Choksi says, will of necessity be restricted. Perhaps a small hydro plant could be installed on the rail race waters outside Bhira on the Kundalika river. This will give additional peaking assistance, but will not meet the demand for additional power beyond 1965 to any substantial extent. Similarly, on the completion of the new tunnel in Bhira, an additional machine could be installed at the Bhira power-tation, but even that will add very little to the capacity. Tatas are, therefore, left with the possibility of considering further thermal expansion in Trombay.

Mr. Choksi also deals with the question of returns on investment. He says that the drop in the value of electricity shares reflects the stringent limitation of profits and other restrictions imposed on public utilities by the Electricity (Supply) Act and the recent introduction of the prior tax on dividends. The Federation of Electricity Undertakings has continued to press the claims of the industry for a higher permissible return on capital base, either by permitting the tax on dividends to be considered as legitimate expenditure for calculating the reasonable return and clear profits, or by increasing the standard rate of return. The Government, he says, has assured the industry of sympathetic consideration but no decision has been announced yet.

F.A.C.T. Sells Less, Pays More

Fertilisers and Chemicals, Travancore, has done fairly well during 1959 in spite of a decline in sales. The distribution of fertilisers undertaken on behalf of the Kerala Government has been satisfactory; the Government might entrust the Company with the distribution of manures throughout the State. In spite of the setback in the production of some items, the Company has made a gross profit of Rs. 66.83 lakhs, against Rs. 64.32 lakhs in the previous year. The directors have recommended a gross dividend of 6 percent, making a net payment of 42nP a share, against 40nP in the previous year. The Company has no tax liability for 1959 as it still has to cover depreciation to the extent of Rs. 95 lakhs. Sales are down by Rs. 8 lakhs to around Rs. 239 lakhs. Allocations include Rs. 22.11 lakhs (against Rs. 21.97 lakhs) for depreciation, Rs. 1.28 lakhs (same) for wealth tax and Rs. 3.36 lakhs (against Rs. 11.26 lakhs) for development rebate. The carry-forward is Rs. 19.58 lakhs, against Rs. 4.38 lakhs. Against the gross block of Rs. 5.13 crores, Rs. 2.8 crores has been provided for depreciation. The Company has incurred a total expenditure of Rs. 1.12 crores on development projects during 1959, making a total of Rs. 3.11 crores. The sulphur dioxide plant, forming the first stage of expansion, was commissioned during the year. The electrolytic hydrogen plant is about to be commissioned and the production of ammonium phosphate is expected to begin at the end of the current year. In the second stage of expansion, the ammonia capacity will be increased by 40 tons a day. The directors have in view a third stage of expansion, which will take the output of ammonia to 240 tons a day.

Dharamsi Morarji Chemical Delays

Although there has been some delay in implementing the Madhya Pradesh project of the Dharamsi Morarji Chemical Company, production is likely to start by about April next year. The progress has been checked by the delay in receiving import licences for some essential components of the plant and machinery. The delay in issuing import licences was apparently due to the shortage of foreign exchange, but the Industrial Credit and Investment Corporation has agreed to give the Company a foreign exchange loan of about Rs. 10 lakhs on certain conditions. As the chances of obtaining the licences have improved, steps are being taken to speed up the implementation of the project. Orders for the local items of plant and machinery have already been placed. Efforts are also being made to obtain the industrial licence for the 300 tons a day sulphuric acid plant as soon as possible. The working of the Company during the past year has been satisfactory, except that the reduction in the price of superphosphate has offset the benefits of larger production.

Indian Sugar to Expand

The British heavy engineering firm of John Thompson Ltd has entered into an agreement with the Indian Sugar and General Engineering Corporation for the manufacture of some of its major products in India. The agreement provides for erection at the Indian Corporation's Punjab works of a new plate shop capable of carrying out welding to class 1 specifications. John Thompson will supply equipment worth £75,000 and the Indian Company will provide machinery worth more than £200.000. The new plate shop will be equipped with overhead travelling cranes of 25-ton capacity. The equipment is to include a heavy pyramid plate-bending machine; a 400-ton, four-column hydraulic press; plate-heating furnaces; and boring machines. The Indian Company is providing furnaces, and as much local material as possible is being used. The agreement also provides for British technicians to come to India to assist in the earlier stages of operation of the new factory, and for the training of Indian technicians at John Thompson's Wolverhampton premises.

Bigger Dividend from U.P. Sugar

The United Provinces Sugar Co. Ltd crushed a record 4,021,387 maunds of cane during the year ended September 1959, and the recovery amounted to 10.26 percent. The value of sugar sold increased from Rs. 93.07 lakhs to Rs. 1.48 crores, so the trading profit has amounted to Rs. 12.39 lakhs. An ordinary dividend of 15 percent, taxable, has been declared. This offers a yield of 8.9 percent at the present price of Rs. 16.81 a share, and is covered more than five times. The dividend was 10 percent, tax-free, in the previous year. Allocations include Rs. 4.60 lakhs (against Rs. 3.53 lakhs) for taxation, Rs. 1.93 lakhs for capital reserve, Rs. 2 lakhs (against Rs. 50,000) for development reserve and Rs. 80,000 for development rebate reserve. There is a carry-forward of Rs. 1,08,870, against Rs. 50,287 brought in. The crush is believed to be 4,874,282 maunds during 1959-60 season, and the recovery has amounted to 9.45 percent. So the directors hope for good results during the current year. The estate profit and loss accounts showed a loss of Rs. 19,202 for the year ended September 1959, and a few acres of uneconomic land were sold.

Bombay Suburban Electric Expands

The Bombay Suburban Electric Supply Company has sold 121.27 million kilowatt-hours of energy during the year ended March 1960. This is a rise of 21.43 percent over the figure for the previous year. The directors say that 18 new substations have been added, making a total of 226, and the transformer capacity of 16 existing substations has been increased. The high-tension system has been substantially strengthened and extended. The low-tension network, including mains, services and street lighting, has been expanded. Extensive developments are taking place in the Company's area of supply due to industrial and residential expansion. The Central Government has approved the appointment of Killick Industries as managing agents of the Company for a further period of five years from 1st April, 1960.

The accounts show that during the year ended last March, the Company has made a gross profit of Rs. 21.53 lakhs, after charging Rs. 11.58 lakhs for depreciation and Rs. 7.38 lakhs for taxes on income and profits. To the profit of Rs. 21.53 lakhs is added Rs. 6.83 lakhs written back from additional income tax provision, making a total of Rs. 28.4 lakhs. A sum of Rs. 1.01 lakhs is provided for contingencies reserve, Rs. 4.44 lakhs for consumers' benefit and Rs. 6.32 lakhs for development reserve. The directors have proposed a final dividend of Rs. 5 (making 8 percent for the year). It absorbs Rs. 8.75 lakhs, leaving Rs. 1,957 to be carried forward.

Permanent Magnet Project

A new company, Permanent Magnet Ltd, is being formed to manufacture permanent magnets for the first time in this country. The project licence has already been obtained. The factory will be located in a suburb of Bombay, although the Company has been registered in Gujarat. Mr. Madanmohan R. Ruia will be the chairman and Mr. Kanitlal Morarji will be the managing director. The Company will have an authorised capital of Rs. 1 crore, of which Rs. 25 lakhs will be issued in the first instance. Only Rs. 10 lakhs worth of equity shares are likely to be offered to the public, the balance being taken up by the promoters and their friends. If all goes well, the Company will be in the market for capital before the end of October.

Permanent magnets have varied uses, and current annual imports are valued at around Rs. 36 lakhs. The proposed plant will meet the country's entire needs by manufacturing 3.6 million permanent magnets a year weighing 180 tons. The cost of the capital equipment required is Rs. 15.7 lakhs, of which equipment worth Rs. 6.75 lakhs will be obtained from the sterling area and machinery worth Rs. 7.55 will be secured from non-convertible rupee payment account countries. The process for the manufacture of permanent magnets is a closely guarded secret, known to only a few manufacturers, who usually work in close co-operation. The Company has secured the collaboration of the well-known Italian firm of Centro Magneti Permanent. The firm is likely to participate in the equity capital and its investment will be used for the purchase of plant and machinery from the sterling area. The Indian Company will have to depend mainly on imports for its raw materials, which include pure iron, cobalt, nickel, aluminium, copper, titanium and silicon. For the proposed capacity of the plant, raw material imports are estimated to cost Rs. 13 lakhs (plus import duty) a year. The average cost of one magnet of average size will be Re. 1, against the landed cost of Rs. 1.75.

Insurance in the Assam Riots

The widespread civil distrurbances in Assam have inevitably had their effect on the insurance world. In general insurance, riot and civil commotion can be insured against; so since the disturbances started, there has been a widespread demand for such cover from all parts of Assam. This type of cover is, however, granted as ancillary to the main insurance; but even those who for many years did not take fire insurance for their properties, have come forward with a demand for riot and civil commotion cover. From the underwriters' point of view, the disturbed and uncertain situation in Assam calls for caution and circumspection. They are quite prepared to continue riot cover for those who, in anticipation of such contingencies, have continued to pay premiums in normal times for riot and civil commotion insurance at the rates already agreed upon; but the same facility obviously cannot be granted to newcomers. So the Insurance Association of India, represented in eastern India by the Calcutta regional council, has decided to declare what it calls an "apprehensive period" for Assam. From 7th July (by all standards, rather late), it has decided that for all new business in Assam not already insured against riot risks, temporary cover can be granted for one month only but the premium chargeable thereon should be the full annual rate. Thereafter, it can be renewed for another month on paying the premium applicable to a 12-month policy. After the expiry of these two months, a renewal for three months is permissible at twice the annual rate, to be followed, if desired, by a policy for 12 months at three times the normal annual rate. The steep rating is designed to act as a disincentive to those wanting riot cover at a time of danger; it is also a sort of penalty on those who wish to collect quick claims by taking such cover only in times of crisis. It has been suggested in knowledgeable circles that even if insurers could grant riot cover at the declared rates, the premiums collected would hardly compensate them for the losses suffered following the widespread looting, destruction and burning of property. Nevertheless, some sort of cover has to be offered.

The riot and civil commotion cover granted by insurers was originally intended to insure against loss or damage arising from labour disturbances primarily during strikes and lock-outs in a mill or factory. The communal disturbances prior to independence and the partition of the country led to a review of the basis of riot insurance, so over the years, the wording has been periodically revised. The cover now existing will indemnify insurers "in any disturbance of the public peace, whether in connection with a strike or lock-out or not". But it does not include certain other things like "mutiny, civil commotion assuming the proportion of or amounting to a popular rising, military rising, insurrection, rebellion, revolution, military or usurped power or any act of any person acting on behalf of or in connection with any organisation with activities directed towards the overthrow by force of the Government *de jure* or *de facto* or to the influencing of it by terrorism or violence." This important exclusion, read with other exclusions such as war, the act of a foreign enemy, etcetera, leave little doubt that they are directed towards avoiding the risks from all uprisings, whether military or otherwise, which are calculated to undermine or overthrow the established government.

The Assam disturbances are not directed towards overthrowing the existing order. They are primarily meant to further a sectional interest, although they amount to the "influencing of it by terrorism or violence". It has been suggested that the insurers, after the payment of riot claims, should enforce their claim for compensation against the Assam Government. Their loss has resulted not from an isolated labour disturbance, or strike, or lock-out. It has resulted from violence against linguistic minorities. The civil authority has to atone for its failure to discharge its responsibilities for the maintenance of law and order, and thus should indemnify the claimants as an insurer would do in similar circumstances.

Cloth Prices Rise

Cloth prices have been a subject of heated discussion ever since reports came from New Delhi that the Government is worried about their being so high and is thinking of measures to check the rise. The prices are reported to be 20 percent or 30 percent higher than "normal", although what the "normal" price might be, is a moot point. Criticism has been growing that the industry has taken full advantage of the sellers' market in cloth, since demand has risen sharply while output has not. Mill cloth production during the half-year ended June 1960 was 2,466 million yards, or only 21 million yards more than in the corresponding period of 1959. Unsold stocks with mills, at 132,000 bales, represent just about two weeks' production and are rather small. The chairman of the Indian Cotton Mills Federation, Mr. K. M. D. Thackersey, told a Press conference in Bombay that the rise in cloth prices reflected essentially the high price of raw cotton, the bigger wage bill following the Cotton Textile Wage Board's award and the rise in the cost of chemicals, fuel, etcetera. It is true that cotton prices now are at their highest level in many years. It is also true that the wage bill and other costs have risen. But the industry still cannot easily escape part of the blame for the present high prices. Between May and December 1959, the Economic Adviser's price index for mill-made cloth rose from 113.8 to 123.2, and by the end of May 1960, it increased further to 128.8—a rise of around 13 percent over the year. The price index for handloom cloth, however, rose by only 1 percent from 106.6 to 107.8 between May and December 1959; by the end of May this year, it reached 113.7, showing a rise of 7 percent over the year. Has not the rise in cotton prices affected the handloom sector? Also, mill cloth prices had recorded a substantial increase even before the implementation of the Wage Board's award.

The rise in prices, it is reported, has been sharpest in the coarse variety, which is not surprising in view of the marked decline in its output. Between January and April 1960, coarse cloth production totalled only 201.5 million yards, against 293.4 million yards in the corresponding period of 1959. The total output of mill cloth during the same period increased by about 5 million yards. The industry's plea that inadequate supplies of indigenous cotton have led to a sharp decline in the output of coarse cloth is not borne out by the facts, for in spite of the serious shortfall in the 1959-60 Indian crop, mill consumption of Indian cotton during January-April this year at 1,473,000 bales is down by only 79,000 bales—which means a decline of only 5 percent, against the fall of 31 percent in the output of coarse cloth. Even during the nine months from September 1959 to May 1960, the consumption of domestic cotton has been only 100,000 bales less at 3.39 million bales.

Whether the industry or the trade is to blame for the rise in cloth prices is a matter for detailed enquiry. But few can deny that prices can be held in check only through larger production. The industry says that it can increase production even with the present installed capacity provided it is assured of adequate raw cotton supplies. Mr. Thackersey pointed out that if the next season's cotton crop is normal, the anxiety about cloth supplies will soon be removed. Meanwhile, it is necessary to prevent a scare being raised about a shortage of cloth. He doubted whether price-stamping would be effective in checking the rise in prices. The industry, he said, has no objection to this measure but it cannot be a substitute for higher production. Mills are anxious that stamping should not lead to cloth going into the black market or the Government losing revenue.

RAILWAY ROLLING STOCK

A STATEMENT attached to the recently issued Railway Administration report compares the rolling stock of the principal English and Indian Railways. From this it appears that the goods vehicles on the East Indian Railways are 5.55 per mile open against 82.27 per mils open in the English Midland Railway, the least among the principal Indian railways being the Indian Midland with 2.12 goods vehicles per mile open against 12.54 on the London and South-Western Railway. It must be remembered, however, in this comparison that notwithstanding the fewer goods wagons on railways in India, the Companies in this country cannot work their stock to nearly the same advantage as is done in England. This is partly due to the long leads from the interior to the ports, mostly along single lines of railway, and to the fact that British ports are provided with better appliances for dealing with export traffic (particularly the coal traffic), and also to the deficiency of storage room which tends to delay the unloading of the wagons. All these causes tend to lower the amount of work which can be got out of a wagon in a given time. During the last four years, 895 coaching and 6,426 goods vehicles have been added to the principal standard gauge lines, and 3,023 goods vehicles to the stock of the principal metre gauge lines. Although the carrying capacity of the lines has been thus increased, the increase in the ton mileage has not been to the same extent. Further large increases to the stock of both goods and coaching vehicles have been sanctioned for most of the principal railways, standard and metre gauge, in India; but owing to the present excess of the demand over the supply from England and elsewhere, it will take some time before the lines can be stocked to meet the great expansion of traffic now developing.

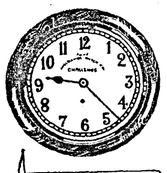
CHALLENGE

LEVER MOVEMENT CLOCK



Ideal clock for offices, homes, workshops, schools etc. Used in most of the Railways, Central and State Government offices.

Lever movement will work in any position. Cases made of highly polished solid teak-wood and may be spray painted to choice. Weekly winding. Chromium bezel, round shape with bold Arabic figures and hands. Dial 12", overall diameter 16" and depth 4".

MODEL No. CL-27/1
PRICE Rs. 125.00

SENTINEL

MARINE LEVER ROUND SHAPE

anglo-swiss marine lever clock is an accurate and dependable time-keeper, especially constructed to withstand extremes of climate and vibration. Suitable for ships, engine rooms, buses and other transports. Used in homes and offices too. White dial with Roman figures. Bevelled glass. Body fully chromium plated and equipped with an 8-day lever movement. Dial 8", overall diameter 10½" and depth 4".

MODEL No. CL-24
PRICE Rs. 180.00

GUARANTEED FOR ONE YEAR — MADE IN INDIA

THE PROSPECTS FOR TRADE WITH WESTERN EUROPE

By K. B. Lall*

IN the autumn of 1959, a group of Indian business men and officials visited Italy, Switzerland, France, Belgium and West Germany to study the possibilities of strengthening India's economic co-operation with western Europe. The delegation met leading personalities in Government, industry and business, and came to the conclusion that while there was plenty of goodwill, the basic elements of the economic situation were not sufficiently appreciated. It will be useful if India's commercial relationship with western Europe is compared with her recent experience in trade with the United Kingdom on the one hand, and the east European countries on the other. The table below shows that India is able to earn by her exports to the United Kingdom the greater part of the resources which are necessary to finance large imports from that country. History has, of course, something to do with the situation; but the greater part of the credit must be given to the liberal commercial policies which the United Kingdom has pursued to mutual advantage. Indian products are admitted into the U.K. without any quota restrictions, and import duties do not hamper the growth of co-operation between British industries and Indian raw material suppliers.

(In million rupees)

	Imports from the U.K.	Exports to the U.K.	Balance of trade
1957	2,385	1,612	—773
1958	1,685	1,663	— 22
1959	1,727	1,722	— 5

India's direct trade with east European countries is of recent origin and comparatively small in volume. The table below, however, shows that while Indian exports are tending to rise, imports from the east European countries are somewhat stationary. They practise State trading and try to achieve a balance in their trade with individual countries. The demand for Indian products in these countries is increasing, and it is expected that because of the prevailing foreign exchange difficulties, their exports to India will rise.

INDIA'S TRADE WITH EAST EUROPEAN COUNTRIES

(In million rupees)

	Imports	Exports	Balance of Trade
1957	382	310	— 72
1958	360	313	— 47
1959	339	457	+ 118

The following table on India's trade with the O.E.E.C. countries, excluding the United Kingdom, will serve to show the one-sided nature of India's commercial links with that region.

(In million rupees)

	Imports	Exports	Balance of Trade
1957	2,631	585	—2,046
1958	1,916	486	—1,430
1959	2,154	586	—1,568

While imports from the west European region are higher than those from the United Kingdom, Indian exports are stagnating around a low level which is only slightly higher than that attained by India in her commercial relations with the east European countries and which is almost a third of India's exports to the United Kingdom.

Multilateral Trading

India is a founder-member of G.A.T.T. and the International Monetary Fund. She believes that her interests, as also those of world trade, are best served by free convertibility of currencies and multilateral trading. So far, India has not been unduly worried by the serious unbalance in her trade with west European countries. It has not been too difficult to finance the unbalance through multilateral credits and loans received from the United States and international agencies, tied credits from West Germany, long-term credits from France and Italy, and by drawing down on India's sterling balances which, at the commencement of the second five year plan, stood at the high figure of Rs. 746 crores.

India's requirements of the kind of goods which western Europe can supply are increasing at a fast pace. The import duties imposed on such goods by India are low and her import policies in relation to them are within the limitations created by the availability of free foreign exchange, liberal and non-discriminatory. The west European countries have played a notable part in accelerating India's industrialisation during the second five year plan period. The third plan provides more exciting opportunities for closer collaboration and for larger exports of west European industrial products to India. The latter is both keen and anxious to avail herself of such facilities, since west European technology and industrial skills can help quicken the pace of economic growth and raise living standards.

Current Prospects

Current prospects, however, do not indicate many possibilities of exports from west European countries to India, as they have to be financed by resources from outside the region, or by drawing on India's depleted sterling balances. A large part of imports from these countries will necessarily have to be paid out of India's cash export earnings or out of such supplementary resources as are made available on a tied or multilateral basis from within the region. It is in this context that the increase in exports of Indian products to western Europe becomes a matter of vital concern to the exporting industries in India as well as in western Europe, and also to a very wide circle of men and institutions genuinely interested in the expansion of international trade and industrial activity.

The intimate connection between imports, credits and exports in the context of India's third plan is now widely recognised. As far as domestic resources in raw materials, technical skill and manpower are concerned, the country has a great export potential. But it is still faced with the problem of increasing exports to the west European region. Many observers feel that it might be possible to increase India's exports to that region. During the past decade, the Western economy has developed at a fast pace; industrial production has increased significantly and is poised to register further increases; standards of personal consumption are rising; aggregate imports into the area have increased and in spite of an attempt to meet the greater part of the requirements from within the region, import figures may justifiably be assessed at rising levels.

Tariff Averages

The trend in the direction of regionalism, however, continues to cause widespread apprehension in knowledgeable quarters. The external tariff of the European Common Market is being computed on the basis of arithmetical averages. Import duties on Indian products in low tariff countries, where sales were concentrated in the past, will, therefore, be raised, which may retard, rather than promote, Indian exports. The corresponding reductions on duties in high tariff countries are not likely to provide adequate compensation. The formal consultations under G.A.T.T. are not likely to prove particularly fruitful: there is a tendency to ask for proof of actual damage while there is not enough desire to view the problem in a wide perspective.

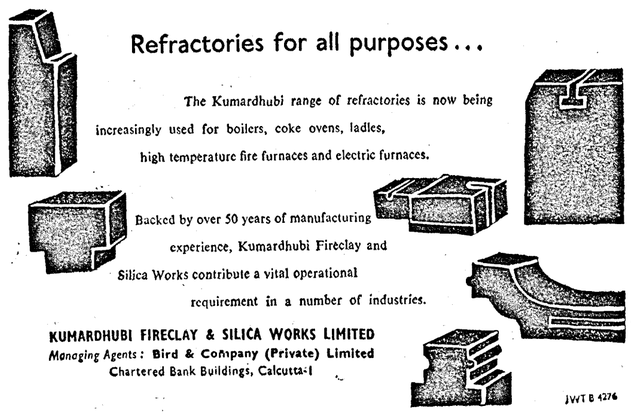
Obviously, the greater part of economic endeavours in the recent past have been concentrated on the development of trade and industries within the region. Considerable attention has also been paid to inter-regional relations between the Six and the Seven. But the momentous problems posed by economic and commercial co-operation between the Six and the Seven on the one hand, and comparatively distant regions like the Indian sub-continent on the other, have yet to receive adequate attention.

Many countries in this region have traditionally believed in the efficacy of protectionism, so the faith in the beneficent impact of free international competition has still to take root. Diverse devices such as high tariffs, heavy revenue duties, quantitative restrictions, restrictive trading practices and other similar measures conspire to thwart specialisation in industry and expansion of international trade. Developing countries, such as India, are endowed with abundant supplies of raw materials; their capacity to process these raw materials and produce intermediate or finished products is fast increasing. A growing variety of products now processed and finished in India can be marketed competitively in industrialised countries; but restrictive and discriminatory practices stand between these products and the European consumer.

Liberal Commercial Policies

Nevertheless, the Indian delegation, which visited western Europe in the autumn of 1959, has returned with the impression that "there is a growing realisation in influential circles that economic progress is bound up with liberal commercial policies" and co-operation between India and western Europe "can grow in volume and intensity on a basis of reciprocity." In this connection, it is heartening to note that while surveying the problems of international trade, Mr. Eric Wyndham White, the executive secretary of the General Agreement on Tariffs and Trade, observed that "none of us can accept" the "imposition of restrictions by powerful countries in full flood of prosperity and economic growth" on the products of countries fighting for their survival "as a tolerable situation in our affairs today". This observation is endorsed by the recent World Bank Mission to India which said: "The more highly industrial countries can further assist the cause of development by removing the kind of barriers which restrict the export opportunities of developing countries. The process of development, and the growth of new areas of industry which it brings with it, must", it adds, "inevitably exert a profound influence on the whole pattern of international trade". The basic elements of the situation constitute a challenge to the ingenuity, enterprise and wisdom of leaders in all walks of life. The nature of the response to this challenge will determine the dimensions and pattern of economic co-operation between India and western Europe.

* The author is the Additional Secretary to the Central Ministry of Commerce and Industry.



A Ditcher's Diary

THERE IS NO REASON, SAID ASSAM'S FINANCE Minister on Tuesday, why Mr. Chaliha should resign. No reason indeed, some may say, except that it is one of the primary functions of a Government to maintain law and order, and if it fails to do so, it must be prepared to pay the prescribed penalty. If I remember rightly, the Congress Party was among the first to rush in with a recommendation to resign when Mr. Namboodiripad's Ministry failed to keep the peace in Kerala only a year ago; I am not so optimistic, however, that at the Congress Working Committee meeting this week the same recommendation will be offered, or the same alternative of Presidential rule will be ratified. But many will wait with eagerness to see what other steps the Working Committee might find itself able to suggest, so that the thousands of non-Assamese driven out of Assam can return to their homes in peace and security. It may not, I am afraid, be enough merely to issue exhortations and assurances that large bands of Congressmen will be posted at every street-crossing in Assam to spread the message of amity and non-violence; in private, if not in public, Mr. Nehru is reported to have already recognised the Assam Congressmen for what they are worth, and his opinion of them may still be more flattering than the rest of the country's. Nor, I fear, may it be enough to underline the fact that Mr. Chaliha's fever has been up to 103 degrees F, at which level even Chief Ministers do not quite manage to remain Chief Ministers. If the Bengalis uprooted from Assam are to return there, more positive indications may have to be given that the determination to prevent violence is stern, to the point of ruthlessness; and it is this which lies at the root of the demand that the Assam Ministry deserves a change, regardless of the fact, as Assam's Finance Minister has tried to explain, that Mr. Chaliha commands a majority among the legislators of the State. After all, many may recall, when the Namboodiripad Ministry was removed, it was not because of the vote of the legislature but because it had proved itself unequal to cope with the rising wave of chaos. The chaos did not drive thousands of people, Keralans or non-Keralans, out of Mr. Namboodiripad's home State; it has, however, driven thousands of non-Assamese out of Assam. That, to my mind, is a not wholly irrelevant index to the relative intensity of the disorders in the two States, and to the measures the Congress Working Committee should be prepared to take.

PRESIDENT AYUB KHAN'S ADVICE TO JOURNALISTS in Dacca the other day that "Pressmanship today amounts to statesmanship" may have struck many among his audience as rather strange. The military mind is not the ideal begetter of quips, and I had not hitherto been aware that the Pakistani President had by now quite established his claim as an impeccable judge of the responsibilities of the Press; the International Press Institute is not the only body which is appalled by the muzzling of the *Pakistan Times*, nor Indian editors the only ones who have noted with dismay the new and distasteful servility of *Dawn* Whether Pakistan should or should not opt for the system of parliamentary democracy is, I suppose, in some ways her affair. But President Ayub Khan's suggestion that newspapers and politicians who seek a return to the parliamentary system there are, at heart, traitors to the country, is a point which I would not readily accept. The dark hand of communist influence is nowadays presumed to exist in strange places; and the Pakistani President's implication that the lackeys of Indian communism, in Press and politics, are inspiring the agitation for parliamentary democracy in his country seems to me to have a remarkably McCarthyite flavour. I do see a basis for his deep suspicion otherwise that, in the loftier councils of Peking and Moscow, the possibility of creating a communist satellite by hiving off West Bengal and Assam and joining them with East Pakistan, has not been conclusively dismissed. It is true, and disturbing, that the Indian communists have made a remarkable recovery not only in West Bengal but also in Assam, the gallant exploits of their Chinese comrades on the northern borders notwithstanding. But I would still be inclined to wait for more reliable evidence before I am fully convinced that the Indian communists' activities in this country, together with the pleas for the parliamentary system in Pakistan, are part of a grand strategy whereby the red empire is to be extended to the shores of the Bay of Bengal. For the present, the greater threat to the security of this subcontinent, I feel, comes from Indo-Pakistani differences, to which the contribution of the men of Rawalpindi has not been entirely negligible, and to which they might usefully pay more reasoned attention.

DICTATORSHIPS HAVE THE ADVANTAGE OVER DEMOcracies that they do not allow all men to speak at once; over the American democracy, they have the further advantage that they do not allow various organs of the Government to contradict one another simultaneously, at least not in public pronouncements on issues of international importance. I must confess that, in spite of the Security Council's gracious efforts last week, I am no less uncertain than I was as to whether the *RB-47* was shot down over Russian territorial waters; my relief is, nevertheless, considerable that the U.S. State Department has not been impelled to call its sister National Aeronautics and Space Administration a liar, nor President Eisenhower, in turn, been impelled to call the State Department a liar. The *U-2* incident, which momentarily found the U.S. Government in the uninspiring condition of a decapitated chicken, has, however, done American diplomacy lasting damage—in that, whatever may have happened to the *RB-47*, the reaction in large parts of the world to the case which Mr. Lodge put forward in the Security Council last week will be one of at least partial disbelief. It is hard to conceive that the Americans despatched a plane from faraway Britain merely because their curiosity about the Arctic weather is insatiable; if only scientific information were sought, it is not impossible that less inhospitable areas could be found to offer equally fascinating data. On the other hand, it would mark no major deviation from Russian morality if an unarmed plane were to be shot down over international waters, and its remains carried into Soviet territory before the formal protest was made. In the circumstances, it is hard to see what could come of the "impartial" international investigation which Mr. Lodge suggested; evidence will be difficult neither to cook nor to suppress. My tentative conclusion from the recent spy-flight episodes would be that the dividends they pay are beginning to get smaller and smaller; the risks they involve are, at the same time, becoming larger and larger, not only for the sponsors but also for the neutrals who may be the potential victims of forthcoming Big Bangs.

THERE WAS A TIME, NO MORE THAN A FEW MONTHS ago, when many feared that the creeping decay of parliamentary democracy in south Asia might provide some uninspiring clues to the future course of political life in Ceylon too; it has, after all, done so in Pakistan, Indonesia and Burma. The impressive victory of the Sri Lanka Freedom Party in the recent general elections will, I hope, serve as a reassuring reminder that not all nations see their salvation in the Ayub Khans, the Soekarnos and the Ne Wins of our time. Mrs. Sirimavo Bandaranaike has more reasons to celebrate her victory than that she is Ceylon's first, and the world's only, woman Prime Minister; the 81 seats which her S.L.F.P. has won, in a House of 157, offer the hope that her Government might be more stable than the children of unworthy compromises led by Mr. Dahanayake and Mr. Dudley Senanayake in the recent past. While criticising the latter two personalities, however, I would not fail to give them credit for the fact that even in their most anxious moments, they did not lose faith in the possibility of general elections leading to a more stable Government in Ceylon. Nor am I inclined hastily to assume that Mrs. Bandaranaike's victory now will restore a semblance of political unity: after all, no less than 22 Parties contested the latest elections, and even if some have in the process drifted nearer extinction, enough remain to play on the emotions of the island's somewhat shifty electorate. The new Prime Minister, furthermore, has many unamiable supporters from among the Marxists including some communists and trotskyites. She has denied having any immediate intention of nationalising foreign-owned plantations in Ceylon, but the leftist flavour of her political alliances is nevertheless evident in the decision to nationalise life insurance in the country. I feel, however, that the test of Mrs. Bandaranaike's hitherto indeterminate qualities of statesmanship may be found in the way she handles the complex problems concerning the citizenship of the settlers of Indian origin in Ceylon.

THE TWO HAD BEEN DEBATING WHAT WOULD HAPPEN if they put a penny on the rails in front of the expected express. One guessed the penny would be flattened out, but the other thought it would be cut in two. The penny was duly placed on the line, and the express roared over it. But when it had gone, the penny, too, had disappeared. "We might have known it," said one of them, bitterly. "That was the Flying Scotsman!"

THE DITCHER

US* knows about steels

Our grammar is fine. So are our steels. US is United Steel, the group of companies which produce the widest range of steels and steel products in Britain.

Not just steel—but steels. Each with its specialised qualities and specified uses . . . steel for motor cars, watches or umbrellas. Mining machinery, saucepans or railway lines. Over one-eighth of Britain's steel is produced by the 37,000 people employed in United Steel.

Companies in the United Steel group retain their individuality to a remarkable extent. They are specialists—geared to understand the manifold problems of modern industry. You will see their work in straight-forward railway axles, or the complex structure of the Jodrell Bank radio telescope.

The many special steels that nuclear reactors demand, steel for the Ganga Bridge or the Boeing 707—US makes them all. And to specialisation, United Steel adds the benefits of large-scale co-operation in research and marketing. That's why it pays to know US.

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN, MR. P. E. G. W. PARISH'S REVIEW

Address delivered by Mr. Patrick E. G. W. Parish, O.B.E., Chairman of Indian Copper Corporation, Ltd., at the Annual General Meeting of the Company for the year ended 31st December, 1959, held on the 27th July, 1960.

Gentlemen,

Your Directors' Report and the Accounts for the year ended 31st December, 1959 have been in your hands for some time. I once again welcome this opportunity to give you a short outline and some further information on the results of the working of your Company during the year, together with some comments concerning copper prices which are of interest and affect your Company's working results.

General Review

It is a fact that, if all Copper Mines throughout the world worked to capacity production would exceed current consumption. In that event prices would be bound to fall. During the year 1959, however, strikes took place in various mines, especially in America, with the result that production was curtailed, world stocks were reduced and a consequent rise in price took place.

For the first ten months of the year the average London Metal Exchange price for this metal fluctuated within small limits around £230 per ton, and thereafter steadily increased to a maximum figure of £255 per ton in December. There were further increases in price for the first few months of this year, followed by a small decline, but at present the price appears to be steady around £255 per ton.

As regards the future, it would seem that, if settled conditions return, stocks will increase and prices are likely to fall unless some of the world's larger producers voluntarily agree to restrict output.

Working Review

Your Company's production of Fire-Refined Copper during 1959, but for an unfortunate breakdown in the Smelter during December necessitating the annual shutdown for repairs a month early, should have been another record. However, it is expected that the shortfall of 1959 will be made good during this year, provided there are no other unforeseen setbacks.

Copper consumption in India at present is about 50,000 tons per annum against which your Company, the only indigenous mine, produces about 8,000 tons. Naturally the price at which our Copper is sold is linked to the price of imported metal.

The more copper we can produce the less foreign exchange will be required for imported metal. The steady increase in production during recent years is planned to continue in line with the further development of the Mine. This will obviously require considerable further capital expenditure which will have to be met in the years ahead. In particular, a new Crushing Plant, Smelter and a small Concentration Plant will shortly be required to deal with the increased ore output and these items alone will cost something in the neighbourhood of £1 million.

Prospecting throughout our leasehold continues, but results so far cannot be regarded as particularly favourable and do not at present indicate that any major deposits which might be equal in size to your Mosaboni and Badia Mines are available. These prospecting operations have been intensified over recent years; it is premature to forecast what final results will eventually be obtained.

Ore reserves have again increased from 4,034,147 short tons to 4,203,547 short tons despite the decrease of 35,793 short tons in Badia Section. This has been achieved by concentrating on development at depth in the Mosaboni Mine and on development of the new small mine—Surda.

The satisfactory final results for 1959 are directly attributable to the increased selling prices. As I predicted last year, the working costs have increased due to the necessity of mining at greater depths. There has also been a further increase in these costs as a result of lower production and heavy maintenance charges.

Once again, I am pleased to inform you that during 1959 relations with the employees remained satisfactory. The three-year Agreement with the Mines and Works Unions is at present under review and negotiations are taking place between the Management and the Unions to try to arrive at a new settlement.

Kyanite

The demand for our raw material in world markets continues to be satisfactory despite the increased consumption of synthetics and competition from other sources. New world markets are being sought and there are hopeful signs that provided prices can be kept at competitive levels, it may be possible to recapture certain established markets, particularly in America. Our exports to the U.S.A. last year amounted to approximately 20% of all our exports.

At the moment I have nothing further to report concerning the suits in regard to your Company's Kyanite Leases, as they are subjudice in the Supreme Court.

Electrolytic Project

All matters appertaining to the Electrolytic Project for the installation of a Refinery and Foundry for the manufacture of Electrolytic Copper and Wire Bar have been finalised, and I am pleased to report that a start has already been made to implement the scheme. The proposal is to utilise some or all of the Company's production of copper supplemented, if required, by the importation of Blister Copper for the Refinery. At the same time the production of Rolled Copper and Brass Sheets will be continued as in the past. The target date to commence production of Electrolytic Copper is the end of 1962.

Accounts

The profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,202,259. Your Directors have decided to place £175,000 to Depreciation and £125,000 to General Reserve. Income Tax and Super Tax on profits for the year amount to £439,949.

Your Directors recommend a Dividend of 27% subject to deduction of tax which gives a slightly higher nett yield than the Dividend of 18% free of tax paid in the previous year. You are no doubt aware that, under the Income Tax laws, dividends now have to be declared subject to deduction of tax. With these proposals £107,121 will be carried forward.

Staff

I think you will agree that we have had another satisfactory year and I am sure that I speak for you all in extending our thanks to the General Manager, Mr. N. A. B. Hill, to the Staff both at the Mine and at the Works, and to the workers, all of whom have contributed to the results during 1959.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

LIFE INSURANCE CORPORATION OF INDIA

CHAIRMAN, MR. P. A. GOPALKRISHNAN'S STATEMENT

The following is the statement by Mr. P. A. Gopalkrishnan, I.C.S., Chairman, at the Fifty-second Meeting of the Life Insurance Corporation of India, held in Bombay on 25th July, 1960, to discuss Annual Report and Audited Accounts for the year 1959.

I have great pleasure in welcoming you to this special meeting of the Board which has been convened mainly to consider the draft Annual Report and Audited Accounts for 1959. These have already been circulated to all the Members. I wish to take this opportunity to review the steady and satisfactory progress made by the Corporation after it was established on 1st September 1956.

New Business

You will remember that the Corporation secured a new business of Rs. 345 crores in 1958 which was 22% more than that of 1957. In 1959, our new business amounted to Rs. 429 crores recording an increase of 25% over that of the previous year. The number of new policies issued has also steadily increased to 1.15 million in 1959, which is about 41% more than the number issued in 1957.

A small amount of foreign business is also done by the Corporation and is included in the figures quoted above. During the period between the 19th January and 1st September 1956, there was considerable uncertainty as to whether the Corporation will do new business in foreign countries. Because of this uncertainty, many of our good agents in those countries left us to join our competitors. Even when we finally decided to do foreign business, we excluded doing of new business in Ceylon, Burma and Pakistan. Owing to these reasons, our foreign business amounted only to Rs. 5.40 crores in 1957. In 1958, it was Rs. 5.62 crores. I visited East Africa in the latter half of 1958 and Malaya and Singapore in early 1959. As a consequence of my visit, we took various measures for increasing our business in those countries. The results of these measures are reflected in our increased new business in 1959 which amounted to Rs. 9.47 crores. The improvement of business thus brought about in 1959 continues in this year also.

Although the Janata Scheme is not working successfully in all the places where it was started, the number of Janata policies issued has been gradually increasing. 21 208 policies were issued in 1957, 24,325 in 1958 and 28,705 in 1959, the sums assured being Rs. 1.17 crores, Rs. 1.61 crores and Rs. 2.01 crores respectively. We have recently introduced another scheme which has more or less the same objective as the Janata, namely, extending insurance to sections of the population which would otherwise remain uncovered. Under this scheme, policies are issued without medical examination in rural areas which are inaccessible and where there is paucity of doctors. These policies are issued only up to a total sum assured to Rs. 2,000/-. We have to watch the working of this scheme for two or three years before we decide to extend it all over the country.

Lapse Ratio

Questions have been asked in certain quarters about the stability of the increasing business secured by the Corporation. We have made a detailed analysis of our lapse experience during the years 1957 and 1958. The figures for 1959 are being collected for analysis. You will find from the analysis already made that the Corporation's experience in the matter of lapsation of business is distinctly better than the experience of the companies before nationalisation. The net lapses which amounted to 7.3% of the mean business in force in 1954 and 7.6% in 1955 came down to 6.4% in 1957 and 5.1% in 1958. The percentage of lapses is thus steadily coming down.

It is also a matter for satisfaction that our business in force has increased enormously after nationalisation. It took all the companies in India several decades to build up a business in force of Rs. 1,220 crores at the end of 1955. The Corporation's business in force at the end of 1959 was Rs. 1,964 crores, recording a net increase of Rs. 744 crores, that is, more than 60%. The number of policies in force on 31st December 1959 was nearly 7 million, representing an increase of 45% over that at the end of 1955.

Economy of Management

The next question to be considered is the economy of management. Here also, we have set up a record which should be deemed satisfactory. I would like to recall in this connection that we took over all the staff of the old companies with their emoluments protected. Then we considerably increased our administrative expenditure by standardizing their scales of pay which meant in several hundreds of cases a considerable increase in the emoluments which they were drawing before nationalisation. On the other side, we reduced our premium income by reducing our premium rates by Re. 1/- per Rs. 1,000/- sum assured below the Oriental rates and by removing various extras, such as extras on the insurance of female lives. The net result would have been an increase in our renewal expense ratio but for various measures of rationalisation adopted by us. Our progressive increase of new business has also contributed considerably to the fall in our renewal expense ratio. This ratio came down to 15.89% in the accounting year 1956-57 from the combined renewal expense ratio of 17.3% of all the companies in India in 1955. It came down further to 15.46% in 1958. I introduced a system of budget control with effect from 1959, which was approved by the Board. The result has been extremely satisfactory since the renewal expense ratio in 1959 has come down to 12.92%, which compares favourably with that of some of the best companies in the past.

I shall now refer to some other figures which indicate the progress of the Corporation. Our Life Fund, which stood at Rs. 380 crores on the day of nationalisation, has increased to Rs. 493 crores at the end of 1959. Our total assets have similarly increased from Rs. 414 crores to Rs. 552 crores. Our annual income consisting of premiums and income from investments has been steadily going up until it crossed the hundred crore mark in 1959 amounting in that year to Rs. 105 crores. With increasing business and investments, this income should go up further in future years.

Disbursements to Policyholders

Our disbursements to policyholders and their beneficiaries by way of settlement of claims have also been increasing year after year. In 1959, we paid out Rs. 28 crores, of which about 25% were claims arising from death, the balance representing maturity benefits. Since the nationalisation of life insurance, the Corporation has paid about Rs. 82 crores in all on account of claims.

While we have, thus, every reason to be satisfied with our performance so far, we have to examine how far we are realizing one of the fundamental objectives of nationalisation of life insurance, namely, the mobilization of resources for the successive Five Year Plans of the country. Here, I should admit that we have only touched the fringe of the problem. It is true that we have increased the business in force from about 11% of the national income in 1955 to 15% in 1959. There are countries in the world, particularly the United States and Canada, where the life insurance business in force exceeds the national income. Canada is the leader in this respect with life insurance in force amounting to 157% of the national income in 1958. Our population is poor by comparison and the saving potentiality is much less in this country than in the highly industrialized countries like the United States and Canada. Nevertheless, it should be our endeavour to expand our business to the maximum possible extent every year to that more and more resources can be contributed by us for the economic development of our country.

New Business Target

As you are aware, the Corporation has started with a modest Five Year Plan of its own from 1959 and has fixed Rs. 1,000/- crores as the target of new business in 1963. Although there are reasons to believe that the potential business in the country is very much more, this target has been fixed on realistic grounds after taking into account the Corporation's capacity to expand its organization consistent with the maintenance of efficiency. We had inherited from the old companies all sorts of staff who had varying degrees of experience, whose methods of working were not uniform and who needed training before they could be fitted into the Corporation's way of working. We have since then recruited additional staff every year who also stand in need of training. In order to meet this need and to strengthen and equip our organization to handle the increasing volume of business, we have recently started one training college for junior officers and training courses for our clerical staff at almost all the headquarters of our divisions. The eleven training schools that we started over a year ago for our development personnel have already made much progress in training our Field Officers and agents. I hope that these training institutions will enable the Corporation to function efficiently when business flows in accordance with our Plan.

Before nationalization, the private companies were operating from their headquarters in big cities and the number of centres in the country, where they had their offices, was only 97. The Corporation has, on the other hand, a widely decentralized organisation and the number of branch and sub-offices has been increased from 216 on 1st September 1956 to 345 at the end of 1959. A further increase in the number of offices has been sanctioned in 1960. Every care is taken to see that none of the new offices opened by us turns out to be an uneconomic proposition. The method that we have adopted is to start with a development centre where a Field Officer or Assistant Branch Manager is posted to organise business without the aid of an office. When the annual business procured increases beyond a certain limit, the development centre is upgraded into a sub-office which is in effect a miniature branch office. When the sub-office begins to procure more than about Rs. 70 lakhs of business, it is upgraded into a full-fledged branch office. This gradualness of our expansion ensures that we don't take any avoidable risk while expanding our organization in the country. In the next three or four years, our growing net-work of offices should be in a position to serve every nook and corner of India

Mechanical Aids

No large insurance company in the world can operate efficiently without the aid of machines. Millions of premium notices and receipts have to be sent out every year and millions of calculations are necessary in connection with the collection and analysis of statistics, maintenance of accounts and periodical valuations. The output of our employees can be increased considerably by switching over to modern electronic and other equipments, thus reducing our expenses of management and making more and more surpluses available to our millions of policyholders. We have been studying this question for some time and have come to the conclusion that at the rate at which we are expanding, we have no alternative but to resort to the latest machine techniques if our service to policyholders is not to suffer and if we are to reduce our expenses at a rapid rate. I shall be bringing up proposals in this connection as soon as I find it possible to do so.

Meanwhile, everything possible is being done to improve our system of working as well as the output of our employees. The average output of a Field Officer was Rs. 4.9 lakhs of new business in 1957. It increased to Rs. 6.5 lakhs in 1958 and to Rs. 7.5 lakhs in 1959. The average output of our agents has similarly increased from Rs. 31,067 of new business in 1957 to Rs. 37,494 in 1958 and to Rs. 44,435 in 1959. These improvements have come about as a result of persistent efforts on our part to improve the quality of our field force instead of depending merely on numbers. When our administrative training has continued for a sufficient time I have every hope that the output of our clerical employees will also register a similar improvement.

You are aware that we had a programme for decentralizing the policies of the old companies and getting them serviced by the appropriate divisional offices of the Corporation. The first phase of this programme has now been completed and the policies of 139 companies have been decentralised up to the end of June 1960. The next phase of the programme will be taken up shortly.

Stock Exchange Investments

You will remember that the total book value of our Stock Exchange Investments was Rs. 338.59 crores on 31st December 1957. The market value of these investments had depreciated by Rs. 8.02 crores of which the depreciation of the investments taken over from the erstwhile insurers was Rs. 7.28 crores. We made a contribution of Rs. 8.02 crores to the reserve for investments which, together with the previous reserves, now stand at Rs. 13.32 crores. As at 31st December 1959, the book value of our Stock Exchange Investments pertaining to life business was Rs. 409.82 crores while the market value was more by Rs. 4.68 crores. Nevertheless, we propose to leave the reserves intact which will be a cushion against any future developments of an adverse character.

As you are aware, we have set up an Investment Research Section in our Investment Department and this Section has been systematically analysing the balance sheets of all the companies whose shares are quoted on the Stock Exchanges of the country. The Investment Committee is thus provided with all the necessary data before its advice is taken on investments to be made. In the case of new industrial ventures which approach us for investments, searching enquiries are made and all relevant data are carefully examined before the Investment Committee is asked for its advice. We thus make sure that all the investments that we make are in sound concerns and bring us returns which we consider attractive. We have also been reviewing the investments that we inherited from private companies and selling all those which are found to be unprofitable. Thus, we are constantly endeavouring to improve the quality of our investments.

Before I close this statement, I would like to convey my thanks to all the Members of the Corporation for the assistance and co-operation that I have uniformly received from them. My thanks are also due to the Members of the Investment Committee whose advice has been most useful for the Corporation in the matter of investments. I should also like to put on record my appreciation of the invaluable services rendered by our field force and our office personnel including officers who have contributed in no small measure to the progress of the Corporation.

Note:—This does not purport to be a record of the proceedings of the above Meeting.

City Cable

STOCK MARKET REMAINS UNSETTLED

INDUSTRIALS EASIER AT CLOSE

London, 27th July.

THE stock market was quiet during the past week and generally failed to establish any definite trend. The best performance was given by industrials where small selective buying brought a steady advance in prices prior to the week-end. The buying was not sustained subsequently however, and prices turned easier. Elsewhere the underlying tendency was towards lower levels, a recovery movement in gold shares proving short-lived. There were some sharp fluctuations in Ceylon tea and rubber shares. Prices fell sharply following the Ceylon elections, but recovered most of their losses in response to the new Ceylon Finance Minister's statement that British-owned estates would not be nationalised. There were several adverse factors, but very little of an encouraging nature. The international situation and the continuing disturbances in Africa were perhaps the main factors, but the disappointing June overseas trade figures and nervousness concerning the business outlook, in spite of some optimistic statements by company chairmen, also were restraining influences. In addition, the persistent weakness of Wall Street was exerting an increasingly adverse effect on sentiment, while the approach of the peak holiday season tended to restrict business. There has been very little interest in the gilt-edged market, and on balance, there is not a great deal of change in prices. The appearance of a £13-million cash and conversion offer by Australia brought lower prices for some Dominion, colonial and corporation stocks. In the foreign market, Chinese, Greek and German bonds eased under light selling while dollar stocks eased in sympathy with Wall Street. Mining shares were overshadowed by the African troubles. Gold and copper shares eased, but lead and zinc shares held fairly steady, and there was a selective demand for tin shares from time to time. Oil shares tended lower.

The Money Market

It was a week of mixed conditions in the short loan money market. During the initial stages, credit was in short supply in the absence of bill maturities and the authorities found it necessary to provide the market with help. However, the position was never serious enough to force market houses into the bank, and the assistance given was through the normal channels. The fact that the week included the third Wednesday in the month when the banks make up their balance-sheets tended to aggravate the situation, but it caused no great difficulty. Money rates varied fairly considerably and at the more difficult period, 5¼ percent was paid for night loans but when funds became available later, money was taken at down to 4 percent. There was a fair demand for bills for most of the week with late September, early October maturities and "hots" changing hands at 5 1/32 percent. The weekly Treasury bill tender proved uneventful and the average rate came out a few pence lower at £5 9s 9.27d percent.

Italian Gold Imports

The Italian Government is studying measures to liberalise gold imports, according to an announcement by the Italian Foreign Trade Ministry. Gold imports currently are the monopoly of the Italian Foreign Exchange Office. A Foreign Trade Ministry spokesman told Reuter that previous proposals for the abolition of the monopoly were being re-examined. The Bank of Italy, the Italian Foreign Exchange Office and the Treasury were considering the matter, he said.

Vegetable Oils Steady

Preoccupation with the International Association of Seed Crushers Congress which opened in London this week served to curtail general activity in vegetable oils and seeds. Nevertheless, the basic undertone of most sections remained steady with origin firmness occasionally establishing some items on a firmer basis. Canadian linseed maintained its recent advance, and in consequence, remained out of reach of most United Kingdom buyers. However, speculative sellers of castorseed were more prominent and prices of east African settled back about £2 a ton over the week. On the surface, groundnuts remained neglected, but with France expected back in the market next month for further quantities of Nigerian, sellers were disinclined to reduce prices. Underlying strength in linseed lent suppport to linseed oil, while news that stocks of oil in Rotterdam had fallen back to little more than 8,000 tons stimulated selling reserve. Castor oil showed some basic firmness, although United Kingdom buyers were only occasionally prepared to pay higher rates.

TRADE ELC MARK

ELC PRODUCTS

Ensure trouble-free service

ELC SOIL PIPES & FITTINGS, STOVE TUBES, MANHOLE COVERS & FRAMES and SURFACE BOXES, manufactured by IISCO, are made to standard specifications under a system of rigid quality control. Proved in service for years, ELC products stand up to the most arduous conditions.

ELC FLUSHING CISTERNS are also manufactured by IISCO and are available in a wide range to meet individual requirements.

Money

THE CALCUTTA MONEY MARKET

ADVANCES FALL AGAIN

Wednesday, 27th July.

THE general level of credit decreased again in the Calcutta money market during the past week. Most of the fall was in jute and sugar advances, although the requirements of the cotton textile mills also declined a little. The accommodation given for the storage of foodgrains and seeds was slightly higher, but engineering credit was virtually unchanged. In the interbank market, conditions remained very tight, with the call rate still at 3½ percent.

Business in the exchange market was very dull, the few bills noticed being on account of tea shipments. Remittance was on a poor scale. Sterling was generally steady.

BULLION WAS STEADY DURING THE PAST WEEK ON renewed support. Silver rose from the previous week's level of Rs. 219.75 to Rs. 220.25, quoted today for both ready and forward. The London and New York silver prices were quoted at 79½d and 91.3/5 cents.

Gold was steady in sympathy with silver. The price increased from Rs. 131.75 to Rs. 133.

DURING THE WEEK ENDED 22ND JULY, GOVERNMENT of India Treasury bills for Rs. 124,18,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 26th July. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.310 and above were accepted in full, the average rate of acceptance being Rs. 2.745 percent a year. Tenders for Rs 2 crores of 91-day Government of India Treasury bills will be received at Bangalore, Calcutta, Kanpur, Madras and New Delhi up to the close of business on 1st August, and in Bombay and Nagpur up to 11 a.m. on 2nd August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 27th to 30th July at Rs. 99.326 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 18th to 23rd July.

Declines of Rs. 26.29 crores to Rs. 1,815.38 crores in active notes and of Rs. 23.01 crores to Rs. 1,841.72 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 22nd July, 1960. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 24.83 crores to Rs. 1,451.57 crores. In the Banking Department, deposits of the Central Government fell by Rs. 22.79 crores to Rs. 52.45 crores, but other Government accounts rose by Rs. 19.27 crores to Rs. 31.08 crores presumably due to a transfer of funds from the Government of India. Balances of commercial banks at Rs. 113.86 crores showed a fall of Rs. 16.07 crores. Balances held abroad declined by Rs. 5.05 crores to Rs. 17.29 crores, as did investments by Rs. 9.73 crores to Rs. 259.32 crores. Other loans and advances declined from Rs. 132.83 crores to Rs. 116.20 crores, of which advances to scheduled banks against usance bills amounted to Rs. 13.05 crores (Rs. 12.42 crores). Ways and means advances stood at Rs. 37.15 crores, against Rs. 29.55 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 15th July, 1960, shows a drop of Rs. 15.11 crores to Rs. 617.06 crores in total deposits. Investments in Government securities are down by Rs. 11.98 crores to Rs. 371.62 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 3.69 crores to Rs. 216.02 crores. Cash and balances are, in consequence, shown at Rs. 49.15 crores or Rs. 14.80 crores higher.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 29-7-60.

"Oil is now the world's most valuable seaborne cargo. On any average day some 15 million tons of petroleum and its products, valued at well over Rs. 133 crores, are at sea – a far cry from the early days of the modern oil industry. In the eighteen-sixties, oil was shipped in wooden barrels – a highly inflammable cargo for the wooden sailing ships of the period. The oil industry, however, soon began to develop specialized facilities for swift, safe and economic transport of oil in bulk. Most outstanding achievement in this field was perhaps the production of the oil tanker – a type of ship which now accounts for approximately one-quarter of the world's entire merchant fleet."

BULLS BECOME CAUTIOUS DUE TO FEARS OF FURTHER CREDIT CURBS

INDIAN IRON STRIKE THREAT DISTURBS MARKET

Wednesday Evening.

THE past week witnessed violent price fluctuations in both forward and cash scrip. Wild rumours over the week-end that the Finance Minister's visit to Bombay was intended specifically for the purpose of imposing fresh credit curbs to arrest the upward trend in share prices, caused a wave of panic selling. Indian Irons dropped from a high of Rs. 25.85 to a low of Rs. 24.30 at one stage. Subsequently, the fears were allayed when no such measures were announced and prices recovered quickly on replacement buying. Closing quotations today, however, were well below the highest touched during the recent boom, and there were definite signs that the bulls had become more cautious. The prospect of a strike at the Indian Iron works also had a sobering effect. The Government's determination to hold the price line appeared to indicate that a runaway boom was not likely to recur in the immediate future. Another restraining factor was the thought that a number of new issues in the private sector would be launched from September onwards (after the borrowing programme of the State Governments was completed). So there would be an increase in the floating supply of equity stocks. Hitherto the scarcity of good scrip had pushed up prices to levels which were not justified even on the most optimistic assessment of the growth prospects for the companies concerned.

It is believed that a move is afoot to restrict dealings in partly-paid new issue shares on a filled-up deed basis. This means that the buyers of such shares will be compelled to register. The measure, it is hoped, will help prevent excessive speculation of the sort seen lately.

There was no change in the trend of Government securities. Short and medium-dated issues remained the focal point of interest.

In the banking section, United Commercial improved by Re. 1 to Rs. 75.50.

Coal shares were rather neglected and prices, where changed, were lower. Amalgamated were marked down to Rs. 24.75 and Burrakur to Rs. 20. In contrast, Raneegunge were slightly better at Rs. 15.75.

Cotton textile shares were marked down on a broad front and sellers predominated. Bowreah receded from Rs. 197 to Rs. 185, Dunbar from Rs. 246 to Rs. 235, Jay Shree from Rs. 18.62 to Rs. 18.12 and Kesoram from Rs. 37.50 to Rs. 36.25.

Electric supply shares were once again out of favour and very little business was reported.

In the engineering group, Indian Iron fluctuated between Rs. 25.85 to Rs. 24.30 to close at Rs. 24.82, which was the settlement rate. Bhartia Electric Steel eased from Rs. 17.56 to Rs. 17.25, but Braithwaites had ready buyers at Rs. 34.50. Guest, Keen, Williams were unchanged around Rs. 51, while Jessops were marked down by Re. 1 to Rs. 25. Textile Machinery were at one time taken up to Rs. 29.50, but in sympathy with the rest of the market, they closed easier tonight at Rs. 29.10.

Jute shares met with profit-taking, and prices generally moved to lower levels, as will be seen from the following table :

	Opening 21st July	Closing 27th July
	Rs.	Rs.
Anglo-India	220.00	216.00
Birla	33.87	32.12
Union	200.00	194.00

In contrast, there was a keen enquiry for New Central around Rs. 31.12 and Budge Budge advanced from Rs. 132 to Rs. 140.

Paper shares eased due to lack of support. Bengal were marked down to Rs. 103, Orient to Rs. 46 and Sirpur to Rs. 21.19.

In sugars, there was a good enquiry for Dyer Meakin and the quotation moved up from Rs. 21.37 to Rs. 22.75. Cawnpore met with a small enquiry at Rs. 15.12.

Among miscellaneous industrials, Alkali and Chemical were well maintained around Rs. 36 and Aluminium Corporation at Rs. 20.12. Bengal Potteries were steady at Rs. 7, ex-dividend, but Bharat Commerce were marked down from Rs. 18.69 to Rs. 17.75. Clive Row met with profit-taking and closed lower at Rs. 9.12, against a quotation of Rs. 9.75 a week ago. Dunlop Rubber reacted from Rs. 49 to Rs. 47.75 and Imperial Tobacco were marked down to Rs. 12.75. Hindustan Motors weakened to Rs. 23, while Hindustan Lever were steady at Rs. 46.50. Indian Aluminium were better today at Rs. 31.75 and Indian Oxygen moved down to Rs. 41.62. Associated Batteries declined to Rs. 39 and Phillips Carbon Black dropped from Rs. 16.50 premium (Rs. 5 paid-up) to Rs. 13.50 premium. National Insulated Cables were enquired for at the higher rate of Rs. 28.37, but Metal Box were offered at the lower rate of Rs. 45, as were Philips India at Rs. 32. Rallis India, after being done up to Rs. 152, closed lower at Rs. 148. Union Carbide declined further to Rs. 50.75, with few declared buyers.

In teas, Basmatia were slightly better at Rs. 30, as were Brooke Bond at Rs. 17.75. Dufflaghur were taken at the higher rate of Rs. 41.50, ex-dividend, and there was a small enquiry for Hasimara at Rs. 24.12.

In the mining group, Indian Copper hardened to Rs. 5.40 on hopes of a rights issue. Metal Corporation met with sudden enquiry and recovered from Rs. 10.87 to Rs. 12.37 *cum* rights.

Standard Coal

The Standard Coal Co. Ltd has increased its profit from Rs. 2.05 lakhs to Rs. 2.15 lakhs for the year ended December 1959. An ordinary dividend of 15 percent, taxable, has been declared, against 12½ percent, tax-free, in the previous year. Taxation provision is allocated Rs. 1.01 lakhs (against Rs. 1.51 lakhs). After making various adjustments, there is a carry-forward of Rs. 24,861, against Rs. 14,796 brought in. The directors say that the Company's portfolio is representative of the investments which are quoted on the Calcutta Stock Exchange, with the exception of some shares costing Rs. 1.50 lakhs for which no quotation is available. The value of the investments for which

quotations are available, together with unquoted investments as valued by the directors, amounts to Rs. 30.84 lakhs.

Carron Tea

The Carron Tea Company has made a revenue profit of Rs. 2.44 lakhs for the year ended December 1959. A dividend of 15 per-cent, subject to deduction of tax, has been declared, against nil in the previous year. Revenue reserve absorbs Rs. 1 lakh and building and machinery reserve Rs. 6,000. A balance of Rs. 21,500 is carried forward, against Rs. 6,411 brought in. The crop has increased from 465,018 lbs to 720,002 lbs, and the average sale price from Rs. 1.72 to Rs. 2.09 a lb. Estimates for 1960 provide for a crop of 600,000 lbs at a cost of Rs. 11.52 lakhs.

National Jute

After providing Rs. 3.41 lakhs (against Rs. 3.40 lakhs) for depreciation, the profit of the National Co. Ltd has increased from Rs. 3.17 lakhs to Rs. 15.23 lakhs for the year ended October 1959. An ordinary dividend of Re. 1, subject to tax, has been declared, against 75nP, tax-free, previously. Taxation provision is increased from Rs. 41,500 to Rs. 6.44 lakhs and development rebate reserve from Rs. 1.10 lakhs to Rs. 1.59 lakhs. After various adjustments, there remains a balance of Rs. 20,257, which is carried forward, against Rs. 6,286 brought in. Sales of gunnies rose from Rs. 1.41 crores to Rs. 1.59 crores. Stocks were Rs. 11.60 lakhs, against Rs. 7.73 lakhs. The directors state that the resignation of Andrew Yule and Co. Ltd as the managing agents of the Company was duly accepted.

Lakshmi Mills

Increasing depreciation from Rs. 12.97 lakhs to Rs. 16.64 lakhs, the profit of the Lakshmi Mills Co. Ltd has risen from Rs. 36.25 lakhs to Rs. 49.92 lakhs for the year ended March 1960. An ordinary dividend of 20 percent, less income tax, has been declared. Allocations include Rs. 20 lakhs (against Rs. 12 lakhs) for taxation, Rs. 3.75 lakhs (against Rs. 9 lakhs) for development rebate reserve and Rs. 1 lakh (against nil) for contingent reserve. After making other adjustments, there remains a balance of Rs. 17,876, which is carried forward, against Rs. 1,54,659, brought in. The directors state that during the past year, 59,680 spindles were working in the Coimbatore mill and 51,120 spindles in the Kovilpatti Mill. One hundred automatic looms have been installed in the Coimbatore mill, so the total loomage has now risen to 300.

Bombay Market

OPERATORS DEBATE STEEL DIVIDEND PROSPECTS

LESS BUSINESS IN SPECULATIVES

Wednesday Evening.

TRENDS were mixed in the Bombay stock market during the past week. There was an appreciable decline in activity in shares on the forward list due to rumours that further steps may be taken to restrain speculation. The choice of two more shares for fixing "make-up" prices discouraged operators from extending their commitments. Business in shares on the cash list also declined and many prices were shaded because of profit-taking. Sentiment in steel shares was uncertain due to varying rumours concerning the coming dividend of the Tata Iron and Steel Company for the year ended March 1960. The general opinion was that the directors might not be able to pay a satisfactory dividend unless the changes in steel retention prices were announced before the accounts of the Company were finalised. Investors in cotton mill shares were worried about the possibility of official controls on cloth prices.

The price of Tata Steel closed around Rs. 161 and Indian Iron were quoted lower at Rs. 24.84 on selling pressure from Lyons Range. Engineering shares showed mixed trends. Tata Locomotive were bought at Rs. 333 on hopes of a rights share issue to finance expansion. Sellers predominated in electricity supply shares at lower rates. Ahmedabad Electric declined to Rs. 84.50 and Bombay Suburban were transacted at Rs. 89.50. Tata Power were placed at Rs. 1,075.

Madras Market

SHARE PRICES STEADY AS TURNOVER INCREASES

PLANTATION ISSUES MEET WITH FAIR DEMAND

Wednesday Evening.

THE Madras stock market was steady during the past week and turnover improved in both clearing and cash scrip. Planting shares attracted notice due to the encouraging results of the auction sales held in Cochin. Rumours of an increase in the price of the commodity helped rubber shares. Reports that the world production of coffee might be lower during the current year induced support for coffee shares. Textile shares were bought on reports of higher cloth prices. Sugar shares met with selective buying due to increased production during the current season. Miscellaneous shares were supported on good corporate news.

The publication of better results for the half-year ended June 1960 induced buying in selected bank shares. Indian were transacted at Rs. 177 and Indian Overseas were wanted at Rs. 177. Canara Banking Corporation realised Rs. 71 and Pandyan Rs. 38.75.

Public utility shares lacked interest, and South Madras were available at Rs. 10. West Coast were sold at Rs. 11.90 and Cochin were taken at Rs. 10.30. Berhampur were offered freely at Rs. 6 and Vellore changed hands at Rs. 11.50.

In the sugar group, Deccan were active at Rs. 16.45 and E.I.D. were bought at Rs. 61.75. Andhra came to hand at Rs. 27 and India were dealt in at Rs. 12.60. Mysore were steady at Rs. 60.50 and Travancore were taken at Rs. 11.90. United Breweries were firm at Rs. 104.

In the planting group, Blue Mountain met with support at Rs. 5.25 on prospects of bonus and rights issues. Cochin Malabar were transacted at Rs. 8.45 and Consolidated Coffee were dealt in at Rs. 26.75. Ouchterlony made Rs. 5.12 and Periakaramalai changed hands at Rs. 3.85. Devashola were quoted at Rs. 31.50 on the payment of a final dividend of 15 percent. Balanoor came to hand at Rs. 16.70 and Be Be were quoted at Rs. 3.15. Chembra were done at Rs. 5.58 and Coffee Land were steady at Rs. 26.25. Devon were transacted at Rs. 14.65 and Emerald Valley were taken at Rs. 6. Highland were dealt in at Rs. 15.50 and Kalasa were taken at Rs. 4.55. Kil Kotagiri were steady at Rs. 5.60, as were Lucky Valley at Rs. 12. Midland made Rs. 12.60 and Mysore Coffee were bought at Rs. 5.40. Nilgiri met with demand at Rs. 7.50 and Nonsuch were wanted at Rs. 28. Peermade were steady at Rs. 23.62, but Rajagiri were sold at Rs. 22.50. Teekoy were quoted at Rs. 7.40 and Travancore Rubber were bought at Rs. 12.40. United Nilgiri were dealt in at Rs. 22.20 and Waterfall were quoted at Rs. 4.50.

Among textile shares, Lakshmi were steady at Rs. 170.50 nad Madura were dealt in at Rs. 33.60. Mettur were bought at Rs. 420 and Travancore Rayon were steady at Rs. 38.75. Buckingham improved to Rs. 206 in spite of labour troubles and Bangalore Woollen were placed at Rs. 199. Rangavilas changed hands at Rs. 44.50 on the payment of a dividend of 5 percent, taxable. Kothari were steady at Rs. 12.62 and Radhakrishna were done at Rs. 224. South India Viscose were wanted at Rs. 155 and Trichinopoly were done at Rs. 11.75. Anglo-French were steady at Rs. 127 and Cambodia were taken at Rs. 10.

In the miscellaneous group, Aluminium Industries were quoted at Rs. 25.65 and Ashok Leyland were bought at Rs. 9.65. India Cement were done at Rs. 7.15. Enfield were indicated at Rs. 21.50 and F.A.C.T. were firm at Rs. 12.90. K.I.C. came to hand at Rs. 12.80 and Mettur Chemical were steady at Rs. 14.60. Mysore Paper were done at Rs. 26 and Parry's Confectionery were quoted at Rs. 5.55. Spencer were taken at Rs. 21.25 and Standard Motor met with support at Rs. 16.70. Textool were bought at Rs. 188 and Tube Investment changed hands at Rs. 325. W. I. Plywood were steardy at Rs. 300.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base : year ended March 1953=100) rose by 0.6 percent to 124.2 during the week ended 9th July, 1960, compared with 123.4 for the earlier week. The index was higher by 1.1 percent and 6.4 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced further by 1.7 percent to 123.8, compared with 121.7 (revised) for the previous week, due to a rise in the prices of rice in Kanpur (+15%), eggs (+13%), fish (+11%), jowar in Hubli (+10%) and in Coimbatore (+9%), onions and milk (+10% each), maize, bananas, cloves, cardamoms and salt (+4% each), masur and potatoes (+3% each), arhar, urad, oranges, groundnut oil and turmeric (+2% each) and wheat, barley, mung, ghee, gingelly oil, mustard oil, coconut oil and black pepper (+1% each), although the prices of jowar in Rohtak (−15%) and in Jhansi (−5%), betelnuts (−5%) and meat (−1%) showed declines. The index for Tobacco remained unchanged at the earlier week's level of 109.1. The index for the Fuel, Power, Light and Lubricants group stood at 118.8, against 118.7 for the earlier week. Lower prices of tanning materials (−12%), raw jute (−8%), raw cotton and castorseed (−1% each) brought down the index for Industrial Raw Materials by 1.2 percent to 136.6, compared with 138.3 for the previous week. The prices of raw silk and gingellyseed (+3% each) and rapeseed, cottonseed and lac (+2% each), however, moved up. The index for Intermediate Products advanced by 0.6 percent to 130.3, against 129.5 (revised) for the earlier week. Items, which showed variations during the week, were : zinc (+2%), cotton yarn (+1%), brass and copper (−1% each). The prices of jute manufactures (−3%) showed declines, while those of oilcakes (+1%) moved up, and the index for Finished Products receded by 0.3 percent to 118.1 during the week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

*=Estimated R=Revised

NEW RECORD FOR ACREAGE AND OUTPUT OF SUGARCANE

The all-India final estimate of sugarcane, 1959-60, puts the current year's area and production at an all-time record of 5,178,000 acres and 75,038,000 tons in terms of sugar cane (or 7,579,000 tons in terms of *gur*), respectively, according to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture. Compared with the partially revised estimate of 4,803,000 acres and 70,456,000 tons in terms of sugar cane (or 7,113,000 tons *in terms of gur)* for 1958-59, the estimate for 1959-60 shows an increase of 375,050 acres or 7.8 percent in area and 4,582,000 tons or 6.5 percent in production. The increase in acreage during the current year has been reported mainly by Uttar Pradesh, Punjab, Bihar, Maharashtra and Rajasthan. It has been attributed generally to favourable weather conditions during the sowing time. The increase in production during the current year has been shared mainly by Punjab, Uttar Pradesh, Maharashtra and Bihar. The rise is attributed partly to the increase in area and partly to favourable seasonal conditions during the growing period of the crop. Andhra Pradesh has, however, reported a slight decrease in output.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1960. As compared with May, the June Index for Food indicates a rise of 1 point, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 289, 571 and 300 points, respectively:

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 456 points during June 1960.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

STEEL EXPANSION UNDER THE THIRD PLAN

NO FOREIGN AID OFFER SO FAR FOR BAKARO PROJECT

(FROM OUR NEW DELHI CORRESPONDENT)

SOME broad indications about the expansion of the steel industry during the third plan period are now available. As already reported, the Government of India is not in favour of a package deal for the expansion of the Durgapur steel works. Nor is it very eager to entrust the expansion of this plant to the present consortium, although, unlike in Rourkela, it has here the advantages of dealing with one organisation instead of 47 different companies. The Government is, however, anxious to secure British credit for a minimum period of 12 years to expand the Durgapur works. The amount it wants is of the order of £25 million. The exact sum will, however, be known after the Government has decided whether it will have a strip mill or a skelp mill, or whether it wants just one or two extra blast furnaces. It has already decided not to include a fertiliser plant in the proposed expansion of the works. The Government is now more anxious to make a beginning with the expansion of Rourkela than with Durgapur because of the former's pattern of end-products. As far as the fourth plant in Bokaro is concerned, there has so far been no approach from U.S. steel interests. Some think that western steel companies are unlikely to be drawn in, even if the Russians show interest. They will consider the project purely on its economic merits if an approach is made.

In sum, the Indian Government seeks British collaboration on its own terms. U.S. and West German collaboration may be available, but not until the forthcoming elections in the two countries are out of the way. The West Germans, thanks to the Finance Minister, Mr. Morarji Desai's efforts, are keen to assist Indian development. But German laws which hamper long-term loans need to be relaxed or amended, before the Germans are in a position to collaborate in India's industrialisation more substantially. There is another proposal to create a fund by the levy of a special tax.

Indo-Austrian Credit Talks

Meanwhile, the Indo-Austrian talks for a long-term credit of 350 million Austrian schillings (Rs. 6 crores) to India opened in Vienna last week. A short-term loan of 150 million Austrian schillings to cover Austrian exports to India is also being considered. The details of a Swiss credit offer of £10 million have been settled and an agreement, it is expected, will be signed in Berne shortly. The agreement for the £10 million credit to India by the U.K. announced recently, will be signed this week in New Delhi by the Finance Minister, Mr. Morarji Desai, and the British High Commissioner, Mr. Malcolm Macdonald.

U.S. Assistance

The full details of U.S. aid to India during the year ended 30th June, 1960, are as follows (in millions of U.S. dollars):

Agricultural commodities supplied under Public Law 480 (This estimate is only approximate. Every month India is receiving slightly over 300,000 tons of foodgrains or between 3.5 million and 4 million tons a year)	300
Aid under the Technical Co-operation Programme (including aid for the malaria eradication programme) ...	23
Development Loan Fund (loans announced or signed during the course of the fiscal year 1960)	119
Export-Import Bank	13
Agricultural commodities distributed through voluntary agencies (Public Law 480, Title III)	10 (approximately)
Total ...	465
Assistance from private U.S. organisations during the fiscal year 1960:	
Ford Foundation (approximate) ...	15
Rockefeller Foundation	2

U.K. Coal Expert Reports

The British coal expert, Mr. H. E. Longden, has submitted his report to the Government of India, it is learned. The latter, it will be recalled, had circulated *aide memoires* to various Governments in the following terms: "During the third five year plan, the production of coal by the National Coal Development Corporation is likely to increase considerably. Although no definite targets have yet been adopted, it is likely that the Corporation will have to undertake production of coal of the order of 45 million tons a year, thereby marking an increase over the second plan target by more than 30 million tons. While some of the increase will come from the mines already in production or likely to be in production within the second plan period, the bulk of it will have to be from entirely new mines. This means that a number of new mines, both underground and open-cast, will have to be planned within the next few years. The development of existing mines and opening of new mines will require detailed planning concerning the mines themselves as well as for ancillary establishments, such as workshops. In undertaking this work, it will be of considerable assistance if expert advice is available to the Corporation. Expert advice may be made available either in the shape of individual experts, whose services may be placed at the disposal of the Corporation, or with the help of a firm of consultants, who may be called upon to tender advice in such matters as the Corporation may desire. In whichever of these two forms advice is made available to the Corporation, it will be necessary to focus attention on the following items : (a) on the technique of underground mining ; (b) on the technique of open-cast mining ; (c) in the layout and management of workshops ; and (d) in the matter of coal washeries and other coal preparation installations.

"Whatever form of advice is ultimately adopted, it would be necessary for the advisers to work as an integral part of the organisation of the National Coal Development Corporation. The advisers should be associated with the planning of mines as well as of other ancillary establishments right from the preliminary stage when the decision is taken to open a mine or to put up an installation. They should be fully associated with all later stages until the mine or the installation in question is finally planned and a decision taken to implement this plan. It would also be necessary for the advisers, without infringing in any way on the administrative authority of the engineers in charge of the various projects, to watch the progress of implementation and, if necessary, make suggestions from time to time for such changes in the plan as they may regard desirable. Suggestions concerning services either of individual experts or of firms of consultants for advising on the above items and functioning in the manner indicated above may be invited from various countries where the technique of mining, either underground or open-cast, has made considerable advances. Any further suggestions about the manner in which the advisers, either individuals or firms of consultants, should function would also be welcome."

Study by Other Coal Experts

In response to these *aide memoires*, the British Government deputed Mr. Longden to visit this country. He has now made his report to the Government of India. Similarly, the German Government deputed a coal expert, who has been here for some months. A high-powered three-man U.S. team, sponsored by the Indo-American Technical Co-operation Administration, is coming to India shortly under the same scheme. A couple of U.S. coal experts have been in India on their own initiative to study the prospects of coal development in this country.

Fertilisers in the Private Sector

The Government will shortly announce its policy for the fertiliser industry in the private sector. A retention price for fertilisers is visualised.

Cotton Shortage and High Cloth Prices

The Cotton Textile Consultative Board is meeting here on 29th July to discuss the problem of cotton textile prices. The prices of medium and coarse cotton cloth and yarn have risen by 40 percent over the past year. The position of cotton stocks, as already reported, is unsatisfactory. On the one side, the carry-over of cotton this year is the lowest on record. On the other side, the Congress ideology is responsible for a cess on mill-made cloth in order to subsidise *khadi*. In the nature of things, when there is a shortage of cotton piecegoods leading to a steep rise in their prices, the Government should have taken off the *khadi* cess and stopped the *khadi* subsidy. There must be something wrong somewhere if *khadi* is not able to stand on its own feet even during a cloth famine.

It also looks strange that the Central Ministry of Labour should have been oblivious of the cotton shortage and should have enforced the Wage Board award when prices are rising. Cloth prices are an integral part of the cost of living index. The shortage of raw cotton should have been known, at least to the Central Ministry of Commerce and Industry. It is not known whether Mr. Satish Chandra, who recently went to the U.S.A. in response to a cable to discuss the prospects of American private enterprise collaborating in the Indian fertiliser industry, also discussed the question of cotton shortage with the U.S. Government, and if so, with what results. That India was negotiating to import 400,000 bales of cotton under P.L. 480 was known here even before Mr. Chandra went on his tour. There is a proposal to stamp prices on cotton cloth. Such measures did not bring down prices in the past and are unlikely to do so in the future. The procedure in the past helped some unscrupulous business men to evade income tax. The solution lies in increasing raw cotton supplies. Another deal under P.L. 480 for 1 million bales will help stabilise textile prices.

Meetings of Import and Export Advisory Councils

The next meeting of the Import Advisory Council will be held on 27th August. The Export Promotion Advisory Council will meet on the following day.

Tenders Invited for Diesel Locomotives

The Railway Board has invited global tenders for 40 broad-gauge high-powered diesel locomotives of 26,000 horse-power. Tenders have also been invited for 75,000 tons of steel materials, such as plates and sheets. The railways are planning to buy abroad 55,000 wheel sets and 70,000 roller bearing axle boxes for the wagon-building programme.

Committee on Oil Prices

The Government of India has decided to set up a three-man committee to determine the prices of petroleum products. It consists of Mr. K. R. Damle, former chairman of the Tariff Commission and at present Secretary to the Central Ministry of Agriculture, Mr. N. Krishnan, the Chief Cost Accounts Officer of the Central Ministry of Finance, who examined the price structure of the oil companies in 1958, and one non-official, Mr. R. G. Saraiya. As already reported, the oil companies have made an *ad hoc* reduction in the prices of petroleum products for the period ended 31st March, 1961. The enquiry is meant to evolve a new formula. The demand of the American oil companies for an enquiry by the Tariff Commission has been rejected by the Government.

New Bills for Parliament

A Bill to facilitate quick slum clearance operations is among the 27 new Bills to be introduced by the Government in the forthcoming session of the Lok Sabha commencing on 1st August. One other measure is the Constitution (Amendment) Bill, which seeks to give effect to the eastern and western border settlements with Pakistan. The duties and powers of the Comptroller and Auditor-General of India will also be defined through legislation. Another Bill will regulate payment of dividends to preference shareholders. Section 99A of the Criminal Procedure Code, 1896—empowering the Government to declare certain publications forfeited and to issue search warrants for them—will be amended to widen its scope. Six Bills are for putting into effect the metric system of weights and measures in different fields. These are : the Indian Post Office (Amendment) Bill ; the Standards of Weights and Measures (Amendment) Bill ; the Indian Tariff (Amendment) Bill ; the Tea (Amendment) Bill ; the Central Excise Laws (Metric System Adoption) Bill, and the Motor Vehicles (Amendment) Bill. To provide for the better administration and management of the Indian Museum in Calcutta, the Indian Museum (Amendment) Bill is being brought forward. Similarly, the Salar Jung Museum and Library Bill is meant to provide for the management of Salar Jung Museum, Hyderabad. The Central Maternity Benefit Bill is to be introduced to regulate the payment of maternity benefits to women workers employed in factories, mines, plantations, etcetera, on a uniform basis. The Employees Provident Funds (Amendment) Bill will reduce the limit of employees' strength for coverage of an establishment under the parent Act from 50 or more to 20 or more persons.

Other bills to be introduced are : the Indian Telegraph (Amendment) Bill ; the Indian Wireless Telegraphy (Amendment) Bill ; the Indian Trade Unions (Amendment) Bill ; the Indian Aircraft (Amendment) Bill ; the Khadi and Village Industries Commission (Amendment) Bill ; the Rubber (Amendment) Bill ; the Industries (Development and Regulation) Amendment Bill ; the Bilaspur Commercial Corporation (Amendment) Bill ; the Delhi (Urban Areas) Tenants Relief Bill ; the Tripura Excise Law (Repeal) Bill ; the Railway Passenger Fares (Amendment) Bill and the International Development Association Bill.

The business before the Lok Sabha also includes discussions on the 1958-59 reports of the University Grants Commission and the Commissioner for Scheduled Castes and Scheduled Tribes, supplementary demands for grants, railways and general, for 1960-61, and the ninth report of the Union Public Service Commission.

Automatic Direction Finder for Avro

The *Avro-748* turbo-prop aircraft being built in India will be fitted with the Marconi subminiature automatic direction finder, Type AD 722, says an announcement by the firm. This direction finder is one of the Marconi devices being manufactured by Bharat Electronics Ltd in Bangalore, under the terms of a general manufacturing agreement recently concluded between the Government of India and Marconi's Wireless Telegraph Co. Ltd, of Chelmsford, U.K. The AD 722 was originally developed for the Royal Air Force to meet the need for a radio compass of very small weight and size, suitable for unpressurised operation at high altitudes. Intended primarily for pilot operation in high-speed aircraft, it has an all-up weight of less than 10 kilogrammes (about 22 lbs), while maintaining a high degree of operational efficiency.

London

U.K. TRADE GAP WIDENS SUBSTANTIALLY

SHARP DECLINE IN EXPORTS

(FROM OUR LONDON CORRESPONDENT)

THE overseas trade figures for June came as something of a shock and underline the need for last month's rise in Bank rate and the U.K. Government's other measures aimed at curtailing home demand with a view to checking the rise in imports and stimulating exports. The trade gap, measured by the excess of imports over exports, widened appreciably last month. With exports and re-exports totalling £285.3 million and imports costing £384.4 million, the gap was £99.1 million or £38.7 million above the May figure and the widest for three and a half years. The main explanation lies in the performance of exports, which declined by £42.5 million from the May level. Even making full allowance for seasonal influences, the June export total is disappointing. Comparing the second quarter of this year with the first quarter and eliminating normal seasonal variations, British exports show a 3-percent drop. On the same basis, imports—which are still running at a high level—show a rise for the quarter of 2 percent over the January-March total. If this was allowed to continue unchecked, it would impose a considerable strain on the U.K. balance of payments.

The Government's restrictive measures also fit into the picture presented by the revised estimates of fixed capital expenditure for the first quarter of this year. These show that capital spending by manufacturing industry rose by as much as 11 percent, compared with a year earlier. At the same time, outlays by "other industries and services" increased by 22 percent. This is the first time since the third quarter of 1957, when expenditure rose by 10 percent, that there has been a substantial rise over a year earlier.

Need for an Export Drive

The surprising thing is that there is still evidence that good export opportunities exist. The latest issue of the *Export Guide*, produced by the General Electric Company, reports that conditions are "good" in the great majority of Britain's overseas markets. In view of the situation, and pending the other measures beginning to have some real impact on the economic climate, the U.K. Government has decided to launch a more intensive export drive. This was stressed by the Prime Minister in an address to a large gathering in London of representatives of the Association of British Chambers of Commerce, the Federation of British Industries and the National Union of Manufacturers. Britain, he said, has to broaden the scope of the goods she exports and expand the capacity to sell abroad her services of banking, insurance, merchanting and broking. Last year. exports touched £10 million a day, which was double the prewar rate. An impressive figure, but still not quite good enough. "There is a real need to do even better." He made a special appeal to the smaller concerns and went on to explain the Government's services for exporters. "In the name of the nation, I ask you to help me to find a great band of merchant adventurers among your own ranks, and I ask you to search them out from the many thousands who are not here today."

It is understood that the meeting was the initial move which other Ministers will carry on. The campaign will be an attempt to ensure that the comprehensive services long available to traders from the U.K. Board of Trade are better known and more widely used, more especially by firms which have not yet ventured into the export business. Although the U.K. Prime Minister gave no target, it seems that the Government would be immensely relieved if another one or two percent of the gross national product was switched to overseas markets. Mr. Heathcoat Amory, Chancellor of the Exchequer, carried on the good work in addressing the members and guests of the Slough Chamber of Commerce a couple of days later. "I do not want you to think that anything has suddenly gone wrong with exports or that we are in a panic about it," he said, but went on to urge that the difficulties of selling in the export market should be tackled in a gigantic way.

Retail Trade Pointer

One of the problems Britain is up against is undoubtedly the enormous home demand. Retail trade remained at a high level in June, and although sales of durable goods were below the corresponding 1959 level, those of food, clothing, footwear, etcetera, were well maintained. Provisional figures for the U.K. Board of Trade's seasonally corrected sales index remained at the previous month's level of 111 (1957=100). Prices rose by about 1 percent last month, so most of the increase in retail sales arose from a larger volume. The only clear pointer that last April's official measures are beginning to bite on consumer demand emerges from the two-monthly comparison of the growth of sales. In May and June together, retail trade increased by about 3 percent, against increases of 4 percent in both the previous two-month periods of March-April and January-February. Moreover, the picture may prove to be less buoyant when the detailed June figures are available. It also seems clear in the motor-car industry at least that the retail market has become more difficult since the end of June—and this, in spite of the price cuts to clear stocks.

While on the subject of indices, here is a round-up of some others available recently. First and foremost is an increase of one point in the index figure which measures changes in the average level of retail prices—the cost of living. On 14th June, says the U.K. Ministry of Labour, the index stood at 111, against 110 for the previous month (January 1956=100). The index had stood at 110 or below since April 1958, and was a strong talking point in favour of the Government's policy. Calculated to one decimal, the June figure was 110.9, compared with 110.3 in May. Potatoes and other vegetables and higher rail fares were the villains of the piece. Wholesale prices of basic materials used in British manufacturing industry, on the other hand, held steady last month. At 99.4 (1954=100), the June index was unchanged. It has shown practically no fluctuation since March. Higher prices for imported softwood and raw cotton were offset by falls in lead, zinc, rubber and copra prices. Finally, the Midland Bank's index of business turnover (1950=100) was unchanged for the second quarter of this year at 186, the level reached in the first quarter. The index shows a sharp increase, however, compared with the second quarter of 1959, when it stood at 173.

Freight Rates Decline

Little encouragement is to be derived from the latest freight rates indices issued by the U.K. Chamber of Shipping. The index number for voyage rates (basis 1952=100) was 72.0 for June, against 72.4 for May and 69.2 for June 1959. The index for tramp time charter rates fell from 69.0 to 63.4, but is still above the level of a year ago. Recent developments in Cuba have so far had no great effect on rates. Although the volume of laid-up dry cargo tonnage fell last month, the laid-up tanker fleet showed a further increase and the total of both groups, at 5,471,000 gross tons, showed little change. The large volume of unemployed tanker tonnage remains a threat to any revival in the dry cargo market during this autumn.

Shipowners have continued their policy of selling older vessels for scrap, but there are limits to the rate at which these sales can be effected. Harley Mullion, the London shipbrokers, have reported that there is a heavy surplus of tonnage awaiting demolition in Hongkong, and it is not expected that there will be any great enquiry from that area for some time.

Anglo-Japanese Trade

More Japanese goods will be allowed to enter Britain—including textiles, cameras and transistor radio sets—under a one-year trade arrangement signed last week in London by the Japanese Ambassador, Mr. Katsumi Ohno, and the President of the U.K. Board of Trade, Mr. Maudling. As a counterpart to British quota concessions for Japanese goods, substantial import concessions have also been made by Japan. It is estimated that Japanese imports into the United Kingdom (which in 1959 amounted to £43 million) will increase by rather less than £3 million, while British exporters will have the opportunity of increasing their sales to Japan by up to £3½ million. The arrangement is for the period 1st April, 1960 to 31st March, 1961. The previous arrangement expired at the end of March, and it has taken five months to reach the new agreement.

The small increases in mutual trade, while useful, are by no means startling, but it is evident that the discriminatory policy against Japanese goods will continue as before and is not likely to be changed until a full commercial treaty has been negotiated between the two countries. Negotiations towards this end have been going on for some time, but have had to be suspended because so far it has proved impossible to devise adequate safeguards for British trade. Further liberalisation measures of benefit to U. K. and colonial exports are likely to be introduced in Japan during the period of the new arrangement. Meanwhile, larger quotas have been granted for motor-cars, machine tools, duplicating machines, knitwear and woven apparel, plate and sheet glass, and many other items. As for British imports from Japan, increased quotas have been granted for a fair number of products, including various types of textiles, pottery, cameras, toys and sports goods, plastic materials, transistor radios, sewing machines, mopeds and scooters.

Brevities

The War Risks Committee of the Institute of London Underwriters has recently announced sharp increases in shipping risk rates for the Belgian Congo.

The Noble Lowndes Pension Service, leading private pension scheme consultants, have announced that new sums assured under pension schemes totalled £51.05 million for the first half of the year, compared with nearly £35 million a year before. One reason for the big increase is that many employers are now deciding to introduce pension plans in advance of the new graduated State scheme which will come into operation next April.

Jute

NEW JUTE CROPS MAKING EXCELLENT PROGRESS

MILL DEMAND FOR EARLY DELIVERY FIBRE CONTINUES

IT is many years since the new crop reports from all areas have been as favourable as they are today. For the last few weeks, conditions have been perfect, and much of the delay caused by the long drought at the beginning of the sowing period has been made up. In Assam, where it was reported earlier that rivers were in spate, drier conditions during the past week have allowed the water to recede, and no damage to the crop has been reported. The plants are very healthy and the rate of growth better than in previous years. Harvesting of the lowland crop has been reported in a small way, but only very limited quantities are available for shipment. In the northern districts, more rain has been experienced, but the floods are now subsiding, with no damage to the crops. Here, again, the plants are very healthy. The Daissee areas have been favoured with almost perfect growing conditions—plenty of rain, usually at night, followed by long spells of sunshine during the day. It is expected that there will not be very much delay in this crop.

In the circumstances, it is surprising that raw jute rates have not declined. Sellers continue to be reserved, particularly for near delivery shipment. This is mainly because many of them have still to open their agencies. Conditions in Assam are now reported to be peaceful. Although railway facilities still appear to be restricted, judging by the amount of wagons arriving in Cossipore, the steamer companies have advised their customers that bookings and space are freely available, with one or two minor restrictions. There is still a small backlog in Gauhati, but it is expected to be cleared up in a few days. The only other station where conditions are uncertain is Alipur Dooars.

Demand for Quick Delivery

The main reason for the firmness in raw jute is the steady demand for quick delivery by certain mills. General indications for, say, September shipment Assam jute are Rs. 93.75 a 100 kilograms (Rs. 35 a maund), but business has been done for ready and August shipment at between Rs. 39 and Rs. 40 a maund. Certainly, the quantities available for this delivery period are extremely small, but the business done has tended to establish a price level, and has been one of the main reasons why the rates for later deliveries have not fallen. Sellers are reserved, except for shipment towards the end of the year, but no buyers are interested in such long delivery. Some speculative business has been reported towards the close by a large operator who, it is said, has bought January-February Assam fibre at Rs. 34.50—the mills' names to be declared in the first week of December. But most people believe this is purely an attempt to keep up prices.

During the past week, small interest has developed for Pakistani cuttings. Over the past few weeks, mills have been granted licences for about 200,000 bales of Pakistani cuttings, to be used during the July-December period. Unlike last time, there was no immediate rush to take up the allotted quantities and prices remained fairly stable. A recent reduction of rates in Pakistan, however, has created some interest, and business is reported for last quarter shipment. Some Indian mills have shown interest in near delivery cuttings, but very little is available and the premiums demanded are prohibitive. Some in Pakistan think that it will be difficult for her to fulfil the obligation of 200,000 bales within this year and still meet her own demands; the period may have to be extended to the first quarter of next year, when cuttings will become more plentiful. Meanwhile, prices in Narayanganj are reported to be about Rs. 75 a bale which, with charges added, makes the landed price in Calcutta just over Rs. 100 a bale.

Cossipore Stocks

A further bullish factor in the fibre market is the report that stocks in Cossipore are less than 130,000 maunds—the lowest for many years. Nor is the situation improving as arrivals by rail have been ridiculously small during the past week, with daily arrivals often being recorded in single figures. Furthermore, the distribution of the stock available is very uneven, and covers a wide range of districts and qualities, much of it being low-grade fibre for which there is never any great demand. Mill agents are always in attendance and are prepared to pay high prices for their requirements. Upcountry prices are also very high and many mills with their own agencies are finding that prices in the agencies are often Re. 1 or Rs. 2 higher than in Calcutta.

More Overseas Interest

There has been slightly more overseas interest in the Calcutta jute goods market lately. This, combined with local and Government activity, has tended to keep rates high. The current high prices of ready sacking are due partly to speculative activity. All heavy goods fabrics are showing a fair premium in the ready position, which indicates a genuine shortage, and can be accounted for by mill sales for the July-September period made earlier when that quarter showed premiums over other deliveries. Business has been reported with Australia for a fair quantity of cornsacks for August-September shipment, and also with Turkey for smaller quantities of sacking and hessian. Local covering against a reported Government tender forced prices up sharply at one time, as it was thought that quick delivery was required. But when the tender announced only a small quantity for August shipment and the balance in September, operators began to unload with a consequential fall in prices. Interest from the U.S.A. continues to be limited, and price variations in hessians are minor. September shipment goods continue to show a small premium over the ready position, but after that period, the rates fall away sharply. It has been a feature of the hessian market for some time that deliveries for a period of, say, two or three months ahead show a premium. This is probably due to anticipation of American interest; for some considerable time, U.S. burlap stocks have been running at the three-month level, and to preserve this position, any interest must inevitably include a fair portion of goods for shipment within this two or three-month period.

THE JUTE MARKETS

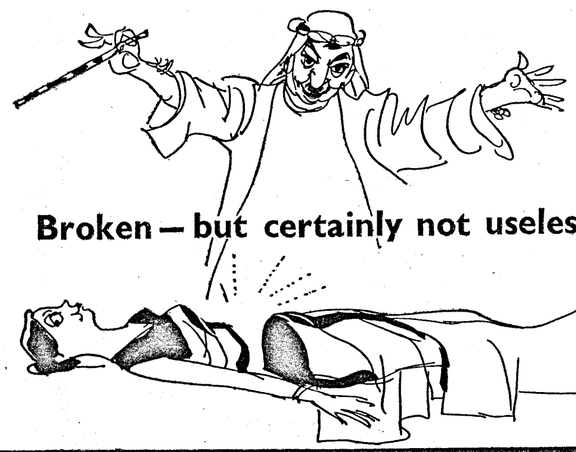
Speculative activity caused minor fluctuations in the futures market last week. Prices, as given by the East India Jute and Hessian Exchange Ltd for the period 21st July to 26th July, were as follows:

	Hessians 40in. 10oz. Nov. 1960		Sacking B Twills Nov. 1960	Raw Jute Assam Dec. 1960	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	48.61	44.46	122.10	88.79	33.14
Highest	48.92	44.74	128.35	89.86	33.54
Lowest	47.54	43.48	119.18	86.86	32.42
Closing	47.89	43.94	123.00	88.46	33.00

Manufactured Goods: The market continued firm at the opening last Thursday, mainly due to reports of small business with Turkey for both sacking and hessians, and also because of covering by local shippers. B Twills opened at Rs. 130.50 in the near positions, and Rs. 124 for October-December. Hessians improved in sympathy, 40in. 10oz. recording Rs. 45.75 for July and Rs. 45 for October-December. As the day progressed, however, conditions eased, mainly due to quieter advices from the raw jute section where the improved conditions in Assam and the favourable reports from the growing areas tended to create an easier undertone. As prices declined, speculative activity increased, and as a result of heavy buying indications at the lowest levels, conditions took a turn for the better. The main interest was in sacking, and by Monday morning indications in that section were increased by about Rs. 2, while hessians showed nominal gains. At this stage, overseas buyers were inactive and price movements were governed completely by speculative activity. Prices, particularly of heavy goods, continued to forge ahead, aided by local shipper covering for near shipment, and also in sympathy with a slightly firmer raw jute market. B Twills now stood at Rs. 131.25, with hessians unchanged at Rs. 44.70. Fresh business from overseas and also Government buying against the recent tender helped stabilise conditions. Once again, the main interest was in heavy goods and sacking rates again advanced by 75nP while hessians remained unchanged. At the close, the market was very steady, with prices tending to rise.

Opening quotations on Wednesday morning were as follows:

	July		August		September		Oct.-Dec.	
40in. 7½oz	33.70	(36.73)	33.85	(36.88)	32.80	(36.84)	33.25	(36.24)
40in. 8oz.	36.35	(39.62)	36.35	(39.62)	36.35	(39.62)	35.70	(38.91)
40in. 10oz.	45.00	(49.03)	45.20	(49.26)	45.10	(49.15)	44.40	(48.39)
B Twills	134.75		133.25		132.00		125.75	
Heavy Cees (Plain)	133.00		132.50		132.00		125.75	
A Twills	156.00		150.00		136.00		151.00	
Liverpools	152.00		151.00		150.00		142.00	
Cornsacks	136.00		136.75		136.25		128.75	



THE LAGAN JUTE MACHINERY CO. PRIVATE LTD
24, Chittaranjan Avenue, Calcutta-12.
LAGAN/NAA/20

Raw Jute: There was very little interest in the fibre market at the opening last Thursday. Prices tended to ease as the new crop prospects improved. Assam quotations were based on Rs. 35.50 for September, but the only buying interest was for quick shipment and premium rates were indicated in this category. Political conditions in Assam, it appeared, had greatly improved, but many agencies were still not working at full capacity due to a shortage of labour. Steamer schedules were reported to be back to normal, but railway communications were still difficult, and movement of jute by this method was negligible. Towards the week-end, several mills showed keener interest in quick shipment jute and premiums of Rs. 4 or Rs. 5 were paid for ready bills of lading and July shipment jute. This had a steadying influence on the market in general. Although price indications remained the same for later shipment periods, sellers became very reserved. The shortage of ready jute in the Cossipore market and also the rising price of fibre in the agencies gave sellers bullish ideas, which were reflected in the daily offers and quotations. Wagon arrivals during the past week were the lowest for several years, only 72 wagons being reported, as against 100 in the previous week and 260 during the corresponding week of last year.

Business was reported at Rs. 39 to Rs. 40 for Assam and Northern jute for ready bills of lading and July and early August shipment. For 15th September and September shipment, buyers paid Rs. 34 to Rs. 34.50. Jungli white fetched Rs. 33 for September shipment. Assam Tossa was done at Rs. 36 for September-October. Interest was also shown in mesta, and prices paid ranged from Rs. 30 to Rs. 31 for Desal and Daissee mesta, and Rs. 29 for jungli mesta, all for October-November shipment. Small business was reported in Pakistani cuttings at Rs. 99 to Rs. 101 for October-November-December shipment.

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	95.00	35.50	Sept.-Oct.
Northern	92.50	34.50	,,

Pakistani Cuttings	102.00 a bale		

THE PAKISTANI JUTE MARKETS

REPORTS OF LARGE INDIAN CROP DISCOUNTED

(FROM OUR EAST PAKISTAN CORRESPONDENT)

CONTINUOUS heavy rains and a rise in the level of the Brahmaputra have caused fears of early floods. Normally, a rise in the river levels as far north as the Brahmaputra does not bring floods here because the water tends to disperse by the time it gets down to the jute growing areas in Pakistan. At present, however, together with the rise in the river levels in the north, there is a serious rise in the delta area.

Loose jute prices are unchanged, but high. This is probably due to the fact that there are still several parties who sold at high prices in May and June and are now covering their July commitments. They are the only serious buyers for the limited quantity of jute arriving, so the loose jute market is artificially high. In pucca bales, there has been some interbaler business recently at prices lower than local parities but higher than overseas parities. The interesting thing about local interbaler business is that the difference between Export Firsts and Export Lightnings is only Re. 1 or Rs. 2 a bale, which is about 155 a ton. As a result, some balers covering high-priced sales are buying Export Firsts and shipping them under Export Lightning tickets in order to make sure that they will not get any claims.

Overseas markets are somewhat steadier because of greater buying interest. In spite of buyers' reports that they find free sellers, the actual position seems to be that with the rise in overseas prices, local sellers have withdrawn. As different balers have different calculations, it is rather difficult to convert loose jute prices or even pucca bale prices f.o.b. Narayanganj correctly into sterling prices c.i.f. Continent. However, taking fairly average calculations, it is interesting to see that for August shipment, the overseas market is quoted at about £112 a ton for Export Lightnings. The local pucca bale market is at the equivalent of about £118 a ton for Export Lightnings. If one can find any dry, loose new crop jute, the c.i.f. parity is approximately £120 a ton for Export Lightnings. At these prices, it must be difficult to trade profitably. Although most people expect a fall in prices when arrivals increase, as they will in August, the undertone in Pakistan is bullish. While it is not fair to judge future imports from the trickle that is arriving at present, it is disturbing to note the consistency with which all jute arrivals maintain an exceedingly high percentage of moisture and any attempt to reject wet jute results in the seller simply removing his jute to another godown. In the districts, it is exceedingly difficult to dry such jute without deterioration in quality. In the jat areas, frequent rain makes it very difficult to dry the jute at all.

The E.P.C. registrations for the last fortnight of the 1959-60 season are interesting. Purchases amounted to 32,750 bales. Czechoslovakia was the biggest buyer at 11,000 bales, with Spain coming second at 5,600 bales. Other purchases made by a few countries ranged from 2,700 bales down to 200 bales. Total exports for the 1959-60 season amounted to 4,475,338 bales, against 4,753,203 bales in the previous season. The difference of 277,265 bales is more than accounted for by the increase in purchases by India, which bought nearly 500,000 bales more in 1959-60. Most other countries bought about the same as in 1958-59, except the U.K., which purchased 200,000 bales less, and Belgium which reduced her offtake by a similar quantity.

THE FOREIGN JUTE MARKETS

FIRM TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE jute markets are again causing anxiety among buyers and sellers of fibre in Dundee. Only the other day, prospects for the current season's crop were reported to be satisfactory, but prices are now tending dearer because of a probable squeeze for supplies during the next few months. Meanwhile, it is reported that the Pakistani mills are buying new crop jute for early delivery. Shippers are not offering as freely as they were doing recently and, indeed, for September-October shipment of new crop fibre, they are now reserved, and only a few offers have been made so far.

For earlier periods, namely, July-August and August-September, various quotations are made, and they vary considerably according to the view of sellers. Some firms appear to be reluctant to offer new crop this season. Besides, they have quoted high prices, even up to £3 a ton above the fixed E.P.C. levels.

Quotations are £122 for Mill Firsts, £115 for Mill Lightnings, £111 for Mill Hearts and £104 for Grade Hearts, July-August, £119, £112, £107 and £102, respectively, for August-September, and £119, £109, £107 and £100 for September-October, with Grade Tossa-2/3 old crop at £123 and fours at £119 and Continental Tossa-2/3 at £111, August shipment, all c.i.f., U.K.-Continent. Dundee spinners have been showing little interest, especially since the market became firmer. They seem to have little confidence on the future trend of prices.

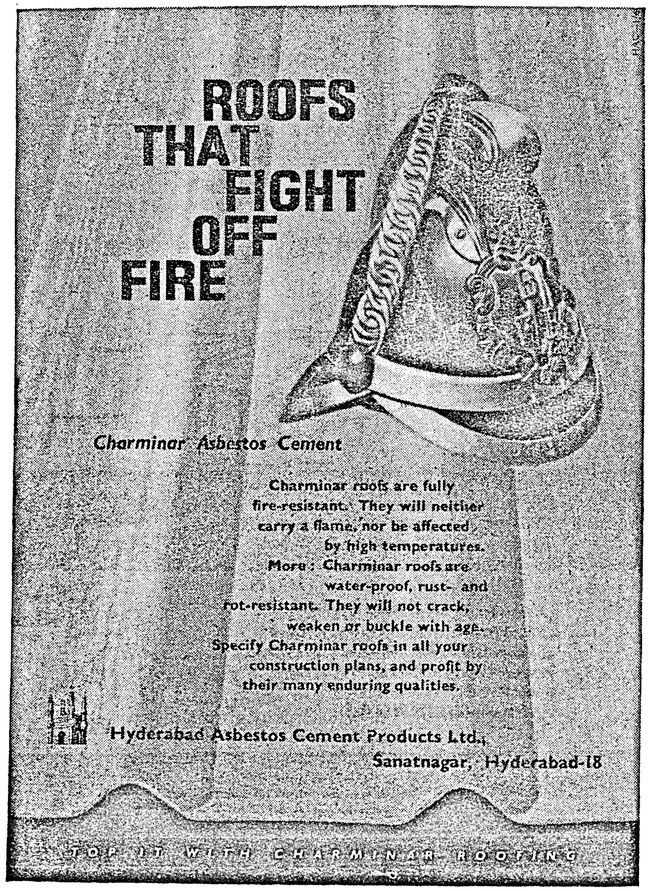
The Calcutta goods market is irregular, and prices fluctuate from day to day. Australian buyers are said to be in the Dundee market. Earlier, Egypt and Hamburg bought 9,000 bales of B Twills. The U.S. consumption at 70.5 million yards is not satisfactory for June, for her offtake amounted to 81.4 million yards last year. Quotations are 68s 6d for 40in. 10oz. and 52s for 7¼oz., July-September, and 67s 3d and 51s October-December, with B Twills at 198s. July-August, 196s 6d September and 188s October-December, all f.o.b., Calcutta.

Business in jute yarns and cloth is quiet. A holiday feeling prevailed last week, and the markets closed for two weeks from 22nd July up to the morning of 8th August.

TENTATIVE ESTIMATE OF JUTE AND MESTA

The total jute and mesta crop will be a little over 6.2 million bales during 1960-61, according to a tentative estimate made by the Central Supervisory Body for Jute which met in Calcutta recently. Of the total crop, jute will be about 4,710,000 bales and mesta about 1,505,000 bales. Substantial increases in the acreage under jute have been reported in Orissa and U.P. and under mesta in Bihar. But a small reduction in the area under jute and mesta has been reported from West Bengal due to delayed sowing, following drought conditions. From all areas, it is reported that weather conditions after the first showers have been so uniformly favourable that the growth of plants has been excellent. There is, therefore, every reason to expect a substantially larger crop in 1960-61 than in the previous year if natural conditions continue to be favourable. The tentative estimate of Statewise jute and mesta output is as follows:

State	Jute	(In 00,000 bales) Mesta
Assam	11.15	0.15
Andhra	—	3.00
Bihar	9.40	3.75
Bombay	—	1.60
Orissa	2.50	0.55
Tripura	0.30	0.60
U.P.	1.50	—
West Bengal	22.25	4.50
Other States	—	0.90
	47.10	15.05



Plantation Topics

CALCUTTA TEA AUCTIONS IN JUNE

PRICES OF QUALITY GRADES IMPROVE

IN June, two sales were held which were numbered 1 and 2, and these took place on 13th June, and 27th June, respectively. A total of about 58,300 chests were on offer, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. In the first sale of the month, the market opened on a hesitant note but as the sale progressed, demand improved. Whole leaf grades and brokens were the strongest feature and were readily absorbed, but fannings grades, particularly O.F.s, met with only limited enquiry. The latter were especially difficult to sell. There was a limited enquiry for C.T.C. teas while non-wither legg-cut teas were neglected. Darjeelings came in for limited support and sold at easier rates. In the second sale, there was a good general demand. Cachar and Dooars brokens and fannings met with better support and were firm and sometimes dearer. The brighter orthodox B.O.P.s sold well but the more ordinary descriptions were irregular. There was, however, a better enquiry for O.Fs. Improved C.T.C. teas came in for strong competition at considerably enhanced rates, and they were the strongest feature of the sale. There was slightly greater support for legg-cut teas, although they were again easier. Darjeelings came in for selective enquiry and those with flavour sold at high prices but the more ordinary types were again easier. Whole leaf grades and tippy teas sold well.

Leaf appearance of Darjeeling teas maintained a satisfactory standard and the liquors in general were fully average for the time of year, while some very useful and really fine invoices were catalogued. The dry leaf from Assam has been satisfactory, but in the first sale the liquors, although about average, were of an ordinary first-flush description. But in the second sale, some quite attractive teas, made by the C.T.C. and orthodox processes, were on offer. Leaf appearance of Dooars and Terai teas was about average but in cup the teas from these districts were generally plain and barely average. Very few teas from Cachar and Tripura were seen as a result of the prevailing drought conditions. The liquors were, however, fully average, although some stalk was evident in dry leaf.

Quotations

	1960-61 A kilo Rs. nP	1959-60 A kilo Rs. nP
Sale No. 1 Plain B.P.	4.34 (nominal)	Not quotable
Sale No. 2 ,, ,,	4.40 (,,)	3.63

(Inclusive of zonal excise duty)

The Internal Market

Leaf offerings in June amounted to 866 packages, of which 205 were new season's teas. Demand was good and general, but the prices realised were generally a little below valuations. In the final sale of the 1959-60 season, 15,293 packages of dusts were on offer. There was an active demand at slightly lower rates. Exportable kinds were well supported, although they tended easier as more fibrous kinds were taken out of the sale. Bright C.T.C. descriptions sold well but the end-of-season kinds were a weak feature. In the last week of the month, the first sale of new season's dusts was held and offerings totalled 14,513 packages, of which 750 were last season's manufacture. Demand was good but selective. Orthodox grainy descriptions met with restricted enquiry at well below brokers' valuations; the smaller stronger liquoring types, however, were better supported, although prices were lower. Legg-cut Dooars teas were taken up at easier rates at the beginning of the sale but towards the close they proved difficult to sell. C.T.C. teas were keenly competed for and prices appreciated considerably. Darjeeling dusts also came to a strong market and sold well.

Quotations

	1959-60 A kilo Rs. nP	1958-59 A kilo Rs. nP
Sale No. 47 Clean Plain Dust		3.66
	1960-61	1959-60
Sale No. 2 ,, ,, ,,	4.20	Not quotable

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 2 totalled 71,920 chests at an average price of Rs. 5.71, compared with 75,757 chests at an average price of Rs. 5.91 for the same period in the previous season. Internal sales at 194 chests of leaf and 11,410 chests of dust (average prices Rs. 4.35 and Rs. 4.61) go against 358 chests and 14,003 chests, respectively (average prices Rs. 3.86 and Rs. 4.14) of the corresponding period of the previous season.

The estimated north Indian crop to the end of May 1960 was 16.89 million kilograms, compared with 24.55 million kilograms to the same date of last year. The average figure at this date for the three years 1957-59 was 23.48 million kilograms.

The market in export quotas opened at 2½nP at which price business was transacted. In the middle of June, however, a slightly easier trend was seen, and the price declined to 2nP.

Arrivals (in chests) in Calcutta warehouses during the period 24th May, 1960 to 23rd June, 1960, with the corresponding period of the previous year in parentheses were: by steamer 82,659 (139,194), by rail 23,417 (54,561) and by air 3,336 (4,276), making a total of 109,412 (198,031) chests. From the beginning of the season 1st April, 1960 to 23rd June, 1960, arrivals have been: by steamer 88,018 (169,041), by rail 42,887 (77,470) and by air 6,219 (11,011) chests, making a total of 137,124 (257,522) chests.

RECORD COFFEE POOL RECEIPTS

INTERNAL RELEASES FALL

COFFEE pool receipts of the 1959-60 crop have touched an all-time record. Up to the end of June, total receipts amounted to 48,503 (45,398) tons comprising 25,087 (17,776) tons of Plantation, 6,566 (7,345) tons of Arabica Cherry and 16,850 (20,277) tons of Robusta; the figures within brackets indicate pool receipts on the same date of last year. During the first half of the current year, the total offtake of coffee amounted to 14,013 tons comprising 5,878 tons of plantation, 2,065 tons of Arabica Cherry and 6,069 tons of Robusta, compared with 14,621 tons absorbed by the home market during the same period of last year. The quantity released in the internal market during June 1960 amounted to 2,324 tons.

A quantity of 8,596 tons, consisting of 7,499 tons of Plantation, 756 tons of Arabica Cherry and 341 tons of Robusta, has been sold for export out of the 1959-60 crop. Tenders for the sale of 1,491 tons (915 tons of Plantation, 72 tons of Arabica Cherry and 504 tons of Robusta) are due on 4th August, 1960. Apart from 869 tons retained for "monsooning" and sale in October-November, the balance available for export sale out of the 1959-60 crop is 9,644 tons.

COCHIN TEA SALES

At Sale No 29, 1,600,000 lbs of tea were on offer. There was a good demand, particularly from internal buyers. Low mediums and medium brokens advanced by 10nP or 15nP and similar fannings by 5nP. Good medium and best liquoring grades were up to 20nP dearer following quality. Whole leaf types were strong and dearer.

FAIR DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 5, held on 25th and 27th July, the 34,045 chests on offer at the Export auction met with only a fair demand. Enquiry was selective and withdrawals once again were fairly heavy. Plain brokens continued to be fully firm and sometimes dearer, but Fannings, though opened fairly firm, were 10nP to 15nP lower at the close. Nonwither Dooars were irregular, the lower-priced descriptions being up to 10nP easier while the better kinds tended to be neglected. Except for a few invoices with bright liquors which were firm, most orthodox Assams sold 20nP to 30nP below last rates. Most C.T.C.'s, except for the very best kinds with quality which were keenly sought after at fully firm to dearer rates, were a weak feature with heavy withdrawals and were up to 30nP easier. Whole leaf grades received good support from Turkey; the low-priced descriptions being dearer while the better kinds were about firm. Tippy teas received fair support at irregular rates. Flavoury Darjeelings once again sold readily, but the plainer descriptions were generally easier.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoes	5.30 to 5.50	1.82
Plain B.P.	4.60 to 4.70	1.70 to 1.76
Plain Fannings	4.40 to 4.60	1.80 to 1.90
Medium B.P.	5.00 to 5.20 (nominal)	2.00 to 2.10
Medium Fannings	4.80 to 5.00 (do)	2.10 to 2.20
Best Assam C.T.C. B.P.	8.00 to 8.50	3.40 to 3.60
Best Assam C.T.C. Fgs.	8.50 to 9.00	4.00 to 4.50

(Quotations are inclusive of excise duty)

At the Internal Sale, the 12,015 chests of Dust on offer met with a good general demand. Brown Dooars were the strongest feature of the market and appreciated considerably in value. The smaller good liquoring orthodox teas were also keenly competed for at generally dearer rates, while the exportable types sold readily at up to 10nP below last rates. The enquiry for medium Assam C.T.C.'s was selective, and they were easier by up to 15nP. The best kinds opened firm, but registered a decline towards the close.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.40 to 4.70	1.50 to 1.86
Medium Assam Dust	4.50 to 5.00	1.80 to 1.84
Medium Assam C.T.C. Dust	5.60 to 5.90	2.60 to 2.20
Best Assam C.T.C. Dust	6.10 to 6.50	2.70 to 3.00

(Quotations are inclusive of excise duty.)

For the 205 chests of Leaf on offer, there was a good general demand.

LINSEED FIRM

The linseed market was firm during the past week. The local stock position was poor, arrivals were smaller and the crushers had to work on a hand-to-mouth basis. There were enquiries for oil from local buyers for ready and forward deliveries, but business was done on a small scale because supplies were limited. The oilcake market was firm due to good local demand. Latest quotations are as follows: Ready, Rs. 26 a maund and September futures Rs. 26 a maund.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 19th July and 25th July, 1960)

Cowhides: Wet salted (Slaughtered) 14,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28; Wet salted (Ord.) 15,000 pcs. on the basis of 81nP a lb.

Goatskins: Wet salted (Daissee, Kustia) 26,000 pcs. on the basis of Rs. 425 to Rs. 450 and Rs. 490 to Rs. 500; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam 1,300 pcs. on the basis of Rs. 400; Purneah 5,500 pcs. on the basis of Rs. 425; Patna (Ord.) 4,500 pcs. on the basis of Rs. 325; Patna-Muzafferpore 2,700 pcs. on the basis of Rs. 365.

Bazaar Stocks

(25th July, 1960)

Cowhides: Wet salted 187,200 pcs.

Goatskins: Wet salted (Daissee, Kustia, Killed) 30,000 pcs.; Assam-Dinajpur 51,500 pcs.; Muzafferpore-Patna - Pakur-Purneah - Kissenganj 174,000 pcs.

SHELLAC QUIET

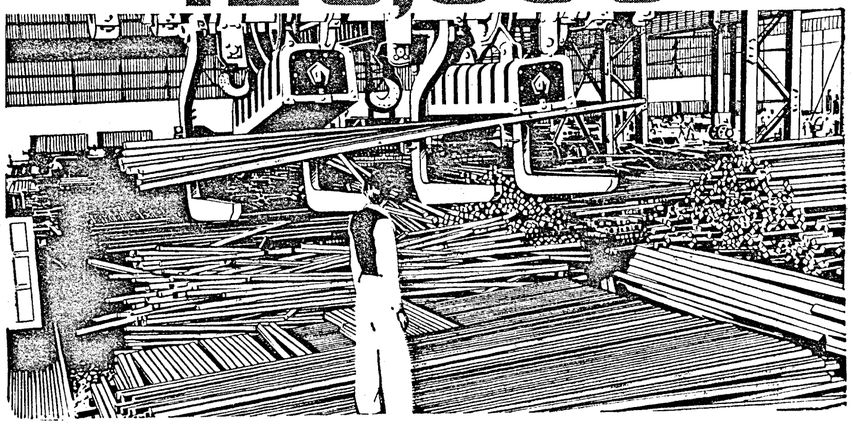
During the week ended 26th July, the tone of the market was steady at the beginning, but inactive at the close.

Standard Pure Buttonlac	Rs. 86 buyers; 88 sellers.
Lemon No. 1 Shellac	Rs. 92 to 90 buyers; 93, 94, 92 sellers.
Lemon No. 2 Shellac	Rs. 86 buyers; 88 done, 85 buyers; 88, 90, 87 sellers.
F.O. Superfine Shellac	Rs. 80, 78 buyers; 82, 81 sellers
Standard One Shellac	Rs 76 done; 76 buyers; 78 sellers.
T.N. Pure Shellac	Rs. 70 buyers; 72, 73 sellers.
Golden Kusmi Seedlac	Rs. 95 sellers.
No. 1 Kusmi Seedlac	Rs. 85 sellers.
No. 2 Kusmi Seedlac	Rs. 70 sellers.
Golden Bysacky Seedlac	Rs. 75, 76 buyers; 73 done; 77, 76 sellers.
One B Seedlac	Rs. 70, 69 buyers; 71, 70 sellers.
Two B Seedlac	Rs. 62 buyers; 63 sellers.
Manbhum Fine Seedlac	Rs. 69, 68 buyers; 70, 69 sellers.
Fine Bysacky Seedlac	Rs. 64 buyers; 65 sellers.
Genuine Seedlac	Rs. 60, 59 buyers; 61, 60 sellers.

Shipments during July until the 21st were 13,664 packages.

BHILAI FEEDS

OVER 120,000 TONS



OF BILLETS TO INDIA'S RE-ROLLING MILLS

Billets worth about Rs. 6 crores have been supplied to Re-rolling Mills all over the country by the Bhilai Steel Works since December 24 last when its Billet Mill went into operation.

The Re-rolling Mills will convert these billets into a variety of finished marketable products like bars, rods, wires and other light sections. With these supplies, the long-felt need for larger quantities of billets by the country's Re-rolling industry has been met. A small quantity of Bhilai billets has even been exported abroad.

Bhilai, one of the three steel plants, owned by Hindustan Steel Limited, has thus already helped in the productivity and stabilisation of the economy of an important industry of the country.

The Billet Mill at Bhilai has an annual capacity of 427,000 tons, out of which 150,000 tons will be for sale and the rest will be used in the Merchant Mill for conversion into rounds, angles, beams, channels, light rails etc., of which there is a great demand in the country.

COMPANY AND PUBLIC NOTICES

BALLY JUTE COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 8, India Exchange Place, Calcutta, on Wednesday, the 31st August, 1960, at 2-30 P.M. for the following purposes:—

(1) As Special business to consider and if thought fit to pass with or without modification the following resolution as Special Resolution.

"WHEREAS by an Agreement dated the 15th day of July, 1960 made between the Company of the first part, Shri B. L. Pasari on behalf of himself and all others the holders of Ordinary Shares in the capital of the Company of the second part and Shri Keshoram Gupta on behalf of himself and all others the holders of Preference Shares in the capital of the Company of the third part, it was agreed to modify the rights attaching to the Preference Shares,

AND WHEREAS the said Agreement has been confirmed by the consent in writing of the members holding the prescribed number of shares of each class in the capital of the Company in conformity with the provisions of Article 64 of the Articles of Association of the Company and Section 106 of the Companies Act, 1956,

RESOLVED that the Memorandum and Articles of Association of the Company be altered in manner following that is to say, the words and figure '7 per cent per annum' occurring in Clause 5 of the Memorandum and the words and figure '7 per cent per annum free of Indian Income-tax' occurring in Article 4 of the Articles of Association of the Company shall in each case be altered to the words and figure '10 per cent per annum'."

(2) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1960.

(3) To declare Dividends on Preference and Ordinary Shares.

(4) To elect Directors in place of the retiring Directors.

(5) To appoint Auditors and to fix their remuneration.

(6) As special business to consider and if thought fit to pass with or without modification the following resolutions:—

(i) As Ordinary Resolution:—

"RESOLVED that the resignation from Office as Managing Agents of the Company of Messrs. Birla Brothers Private Ltd. be and is hereby accepted with effect from the close of the 31st March, 1960."

(ii) As Special Resolution:—

"RESOLVED that as and from the 1st April, 1960 all references to Messrs. Birla Brothers Private Ltd. as Managing Agents of the Company or to their associates as such whether contained in the Articles of Association of the Company or in any resolutions or in any agreement or otherwise and whether applicable to them directly or by inference or by implication shall be deemed in so far as permitted by law as reference—

(a) in the case of Messrs. Birla Brothers Private Ltd. to them as Secretaries and Treasurers; and

(b) in the case of their associates as reference to the associates of Secretaries and Treasurers;

and that such reference shall be construed as such and shall stand amended accordingly."

(iii) As Special Resolution:—

"RESOLVED that the commission payable to Directors under Article No. 114 of the Articles of Association of the Company shall continue to be so payable for a further period of five years with effect from 1st April, 1961."

(iv) As Special Resolution:—

"RESOLVED that the Article No. 142 of the Articles of Association of the Company shall be deleted and the following new Article substituted therefor—

"142 (1) The Board may elect a Chairman of its meetings and determine the period for which he is to hold office.

(2) If no such Chairman is elected or if at any meeting the Chairman is not present within five minutes after the time appointed for holding the meeting, the Directors present may choose one of their number to be the Chairman of the meeting."

The Register of members and Share Transfer Books of the Company will remain closed from the 8th August, 1960 to the 31st August, 1960, both days inclusive.

By Order of the Board,

Per Pro BIRLA BROTHERS PRIVATE LIMITED,

G. MAKHARIA,

Secretaries and Treasurers.

Calcutta,

Dated, the 15th July, 1960.

N. B. (i) The Directors have recommended the payment of the following dividends, subject to deduction of tax under Section 18(3D) of the Income-tax Act—

On Preference Shares @ 10% per annum.

On Ordinary Shares @ Rs. 25/- per share

If dividends on shares as recommended by the Directors are approved at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 31st August, 1960 or to their order or to their Bankers. No application need be sent for dividends as relative Dividend Warrants will be posted to such shareholders by the 24th September, 1960.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An explanatory statement in respect of the above items of Special Business is annexed to the convening Notice of the meeting issued to members of the Company.

3. To elect Directors in place of Shri P. D. Himatsingka and Shri G. D. Kothari, who retire by rotation.

Shri P. D. Himatsingka has attained the age of 70 years and as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as Ordinary Resolution under Section 281 of the Act, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"RESOLVED that Shri P. D. Himatsingka who has attained the age of 70 years be and is hereby re-elected a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

Shri G. D. Kothari is an Associate of the Managing Agents and as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as Special Resolution under Section 261 of the Act, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"RESOLVED that Shri G. D. Kothari, an Associate of the Managing Agents under the Companies Act, 1956, be and is hereby re-elected a Director of the Company."

4. To appoint Auditors and to fix their remuneration.
5. As special business, to consider and if thought fit, pass with or without modification, the following resolutions as Special Resolutions:—

(i) "RESOLVED that the Company do hereby consent to the holding of office of profit as an employee under the Company by Shri Prakash Chandra Mohta who is a relative of a Director of the Company at a salary of Rs. 700/- per month with the usual benefit of increments, provident fund, bonus, perquisites and amenities, etc."

(ii) "RESOLVED that the commission payable to Directors under Article 114 of the Articles of Association of the Company shall continue to be so payable for a further period of five years with effect from the 1st April, 1961."

(iii) "RESOLVED that the Company do hereby approve of the contract or arrangement with the Kothari Charity Trust for letting on rent to the Company since 1-3-1960 of a portion of premises at No. 46 Ballygunge Circular Road, Calcutta, at a rental of Rs. 840/- per month inclusive of furniture and fittings or at such amount as the Board may approve at any time."

The Register of Members and Share Transfer Books of the Company will remain closed from the 8th August, 1960 to 31st August, 1960, both days inclusive.

By Order of the Board,
Per Pro. BIRLA BROTHERS PRIVATE LIMITED,
G. MAKHARIA,
Managing Agents.

Calcutta,
Dated, the 15th July, 1960.

N.B. (i) The Directors have recommended the payment of the following dividends subject to deduction of tax under Section 18(3D) of the I. T. Act—

On Preference Shares @ 7½% per annum.

On Second Preference Shares @ 7.86% per annum.

On Ordinary Shares @ Rs. 1.50 per Share.

If dividends on shares as recommended by the Directors are approved at the Meeting, the DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 31st August, 1960 or to their order or to their Bankers. No application need be sent for dividends, as relative dividend warrants will be posted to such shareholders by the 24th September, 1960.

(ii) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An Explanatory Statement in respect of items of above Special business is annexed to the convening notice of the meeting issued to the members of the Company.

THE O.E.C.D.: WESTERN AID AND TRADE

THE negotiations between the United States, Canada and the 18 nations of western Europe about the new body which is to succeed the defunct Organisation for European Economic Co-operation have been followed with considerable interest in this country. India's name has frequently been mentioned at the conference table, and possible Indian opposition is repeatedly invoked against certain of the plans put forward. This is not because of suddenly increased solicitude on the part of the Atlantic nations about the impact of their association on this country's trade. It is rather that those 20 nations, which make up half of G.A.T.T.'s membership, have the feeling that they are negotiating under the watchful gaze of the other half of G.A.T.T.; if they conclude an agreement which serves only their own interests, an opposition campaign will find its natural spokesmen in India and Brazil. More simply, the Atlantic nations are anxious to avoid the impression of forming a "rich nations' club" which would be immediately denounced by the poor nations.

This apprehension might seem curious at first, for neither India nor any other developing nation ever found much fault with the O.E.E.C., so why should they have suspicions about its successor O.E.C.D. (the Organisation for Economic Co-operation and Development)? In fact, there are many reasons why India must take a different view of the new organisation. The old O.E.E.C. was indeed a European club successfully designed to increase trade among its members more than trade with outsiders. But in those days, the United States and Canada were among the outsiders, and it was they who bore the main burden of discrimination. In the O.E.C.D., on the contrary, the United States and Canada are full members, so if the new body were to continue the practices of the old, that would amount to discrimination by the whole Atlantic community of advanced nations against the trading interests of the Soviet *bloc*, of the Asian nations led by India and of the Latin American nations led by Brazil. The old O.E.E.C. was a "reconstruction club" which lived at the United States' expense. The new O.E.C.D., thanks to the brilliant recovery of western Europe and to the inclusion of North America, could well become a "rich nations' club" detrimental to the interests of the rest of the world.

To meet that danger, or at least to forestall criticism along those lines, the Americans and certain of their European allies drafted a charter for the new association which, it was hoped, would disarm all suspicion. The charter made no mention of the internal trade of the Atlantic region, whereas promotion of internal trade had been the main function of the old O.E.E.C. It was implied that the objectives would be such as could only be applauded by countries like India, namely: (1) the co-ordination of the aid given to developing countries by the richer nations; (2) the expansion of world trade multilaterally and without discrimination, possibly including an effort to stabilise commodity prices; and (3) the harmonisation of economic expansion in the western world so as to keep Atlantic living standards increasing faster than Russian. Thus the new association took the name of Organisation for Economic *Co-operation* and *Development*, emphasising that the major problem of this decade for the West is to co-operate in order to stay ahead of the Russians, to boost world trade and to assist the development of the backward countries.

When this charter, directly inspired by the Americans, was brought before the 20 Atlantic nations this summer, it encountered considerable opposition from a group led by the Swiss and Scandinavians. Their attitude is that questions of co-operation and development aid are all very well, but meantime there still exists a purely European trade problem, which must be solved before Europe can give its mind to helping the backward countries. That problem consists, according to them, in the Common Market. The emergence of that six-nation Customs union has divided Europe into two antagonistic commercial *blocs* and created a specifically regional problem, which cannot be left to G.A.T.T., nor resolved by a simple expansion in world trade as a whole. Therefore, the O.E.C.D. must continue the work of the O.E.E.C.—devote itself first to Europe's internal problems and set more store by increasing Swiss trade with France or Scandinavian trade with West Germany than by promoting trade and aid between the rich nations and the poor. The noble declamations about world trade and help for outsiders may be left in the O.E.C.D. charter, but there must be a clause indicating that the main job of the association is to boost trade within the Atlantic region.

This opposition is so determined that the Americans seem obliged to compromise. Negotiations went on during May and July, but will not be completed until towards the end of the year, when the O.E.C.D. will be officially born from the ashes of the O.E.E.C. At the present moment, it appears likely that the new association will be a hybrid, or at least will be born under two stars: its birth certificate will be vague enough to satisfy everyone, but the Americans and some Europeans will look upon it as a totally new enterprise destined to serve co-operation and development, whereas the rest of the Europeans will consider it as the successor of the O.E.E.C. concerned with internal European trade disputes.

That the Europeans should have regional trade problems which are of greater concern to them than to outsiders will seem perfectly natural. After all, India has her own reservations and misgivings about the Common Market, so it is not surprising that nations like Britain and Switzerland which live right next door to the Six should feel even more strongly about it. Rather than see a trade war begin in western Europe between two hostile *blocs*, India would prefer to see the parties most concerned meet in some common organisation where they could iron out their disputes about discrimination. American membership might not seem necessary for that, but at least the presence of the North American nations will ensure that compromises between the two west European trade *blocs* are not too outrageously detrimental to overseas countries. The U.S. Congress, which will have to approve American membership of the new organisation, would never consent to participation in a body which was selfishly concerned with increasing Atlantic trade to the neglect (or even the apparent neglect) of commerce with Latin America and Asia. Thus, the open degeneration of the new 20-nation group into a "rich nations' club" is improbable.

The danger is more subtle. The 20-nation group could well spend much of its time dealing with internal trade matters, while using the protestations about aid and co-operation as a mere alibi. This has happened before with various ventures in international co-operation. In that case, even if Indian interests were not gravely affected, the miscarriage of laudable American intentions would be a source of great disappointment. For India's position is clear: internal European trade squabbles have their local importance, but from India's point of view they are entirely secondary. What matters to this country is the sort of work the Americans wanted to get European support for by joining the transformed O.E.E.C.: the expansion and stabilisation of world trade, and the increase of aid to developing countries. If the American attempt to persuade western Europe, now that it is back on its feet, to take a global rather than a regional view of trade fails, countries like India will be the losers. A new organisation, which is more powerful than any that has preceded it because it groups all the industrialised West, and which is specifically devoted to the questions of aid and development, would be very welcome. India would be entitled to reserve judgment on it until she saw whether it got beyond mere statements of intention, but its existence and an unambiguous charter would be a promise and a moral commitment to which this country could always appeal. However, if this venture is confused at the very outset by attempts to keep the O.E.C.D. in the rut of the O.E.E.C., Indian scepticism is bound to grow.

Such attempts would be the sign of a state of mind which nations in this region, so often called backward, will have no hesitation in calling a backward one. The reconstruction of western Europe was the problem of the 1950's. It has now been completed, thanks to the O.E.E.C. and to American support of that discriminatory club. Its work done, the O.E.E.C. should disappear and give way to a new body concerned solely with the real problem of the 1960's: the development of all the non-communist world. If certain European countries cannot see that, and if they are more engrossed with profits and losses in their regional trade, they must be seriously underestimating the threat of communist economic progress and the needs of the developing countries which are still attached (even "neutrally") to the West. Those who have a just appreciation of that threat and of those needs will find it discouraging that Europeans, at the beginning of the crucial 1960's, should seek to sabotage U.S. efforts to meet them, by confusing the important task with minor regional problems. Without placing excessive hopes on the O.E.C.D., India will take the conditions of its establishment later this year as a test. The more it looks like the late O.E.E.C., the less confident will this country be that western Europe has left behind it the problems of the 1950's. The more it looks like a brand new effort to deal with trade and aid on a worldwide basis, the more inclined will India be to believe that the industrialised West is at least morally prepared to face up to the problems of the 1960's.

FINANCE FOR SMALL INDUSTRIES

THE development of small-scale industries in India has been seriously hampered by the shortage of financial facilities. Although various measures have been taken by the Government during the past few years, the problems remain. The State financial corporations, for instance, were set up originally to finance mainly small industries. But their record shows that they have done very little in this sphere; on the contrary, many of them are now trying to finance bigger industries, although there are numerous other credit institutions already operating for that purpose. This is why some of State financial corporations are now asking for permission to increase their lending limits for individual advances. Still, the recent decision of the Government of India to introduce a guarantee scheme for loans given to small industries, is a welcome move to increase the supply of credit for such enterprises. The scheme provides that losses will be shared between the lending institutions and the Government of India, if the maximum amount recoverable under the guarantee does not exceed Rs. 1 lakh for any single advance. The Reserve Bank has been appointed as the administrative authority for implementing the scheme.

The basic aim is to encourage commercial banks to lend more money to small industries. It is thought that banks are well suited for this type of activity since they are better acquainted

with local conditions. The State Bank and its subsidiaries have recently increased their financing of small industries, but it is doubted whether commercial banks in general will take much interest in the guarantee scheme under the present cricumstances. This is because, to begin with, they already have enough remunerative opportunities to use their funds. They may not, therefore, be keen to finance small industries, where the risks are greater. Furthermore, the banks' resources have been reduced by the deposit impounding scheme. So there is less incentive left for undertaking the more hazardous business of financing small industries.

The main factor which prevents small industries from obtaining money from credit institutions is that they are not creditworthy by ordinary banking standards. They usually do not possess enough securities to back their loan applications. Even if they manage to obtain money for completing their fixed capital projects, the shortage of working capital remains. The industries have little access to modern marketing facilities, so they cannot attract finance from outside sources. It is clear, therefore, that if the supply of credit to small industries is to be increased faster, the lenders will have to take the risk of giving loans mostly on the basis of personal security. This does not imply that personal loans are less creditworthy than loans backed by more tangible securities. But whether commercial banks will be attracted to such financing remains doubtful. Giving credit to small industries involves many complications, so the administrative costs of this kind of business are usually very high; but commercial banks are naturally reluctant to charge high rates of interest which may be far out of line with their present rates. The guarantee scheme can offer no great incentive to the State Bank and its subsidiaries because they are already financing small industries as much as circumstances permit.

At the same time, the merits of the guarantee scheme cannot be ignored. It can prove useful if State financial corporations and co-operative banks are encouraged to increase the supply of credit to the small industry sector. The details of the scheme appear to have been worked out carefully. Applications for a guarantee may be made before or after sanctioning an advance. The applications should, in the first instance, be made for a year or for more than a year, if a loan is given for a fixed period of more than one year. In any case, the duration of the guarantee cannot exceed seven years from the date on which an advance has first been made. The charge for providing the guarantee is moderate—¼ percent a year on the maximum amount of the advance sanctioned. An important feature is that any claim made under the guarantee will be paid within 30 days after the supporting evidence has been received. Suitable provisions have been made for recovering loans after the invocation of the guarantee. The responsibility for collecting the loan after the invocation of the guarantee rests on the lending institution, which has to take steps for recovery, as may be necessary or as may be required by the Reserve Bank which has been made the guarantee organisation. The scheme thus seems to rely on the judgment and good faith of lending institutions for the sanctioning and realisation of advances.

TWELVE STATES TO BORROW

THE terms and conditions of the new loans which 12 State Governments are offering for public subscription seem fair by present market standards. The lists for the loans will open on 29th August, and fuller details concerning the issues are published on a later page. The loans carry an interest of 4 percent a year and are repayable in 1969. Two States have offered their loans at par and the other ten States have offered theirs at discounts of 25nP or 50nP. For the loans offered at par, the redemption yield works out to 4 percent. It is 4.03 percent for the loans offered at a discount of 25nP, and 4.06 percent for the loans offered at a discount of 50nP. The yields thus compare favourably with those available on the existing loans at current prices. The redemption yield of the Bombay 4 percent Loan 1970, for instance, works out to 3.91 percent at the present price of Rs. 100.70. By reducing the maturity period of the new loans to nine years, an appropriate change has been made; hitherto State loans had a longer maturity. The change should encourage subscription in view of the present demand for shorter-dated securities. Investors are shy about buying longer-dated loans because of the prevailing uncertainties concerning interest rates.

Another important feature which will facilitate subscription is that conversion facilities have been offered. Four States are offering such facilities to those subscribing to their loans. The Bombay State 3 percent Development Loan 1960 will be accepted at par for conversion into the new loan of the Maharashtra Government. The Madhya Pradesh 3 percent Loan 1960, the Madras Government 3 percent Development Bonds 1960, the Madras Government 3 percent Loan 1960 and the U.P. 3 percent Loan 1960 will also be accepted for conversion at par into the new loans of the respective State Governments. If the old loans are converted in full, the amount available will be more than Rs. 13 crores. In that case, the new loans will mop up only Rs. 62 crores of cash; the amount may be slightly larger since the States have been authorised to keep subscriptions up to 10 percent in excess of the notified amounts.

Financial circles think that the subscriptions will come mainly from the Life Insurance Corporation and the provident funds. It is difficult to say at the present stage to what extent commercial banks can support the loans. The support they give will depend to a great extent on the conditions prevailing in the money market at the time of subscription. So far, the trade demand for money has been running at a high level and banks do not seem to have much money to spare for gilt-edged investment. It is questionable whether money conditions will become very much easier over the next few weeks. But banks will have an incentive to subscribe as much as possible to the new State loans since the terms are attractive. On the other hand, banks will find it difficult to choose between the new State loans and the 3½ percent loan 1966 issued recently by the Government of India, since the latter might soon be offered for sale on tap by the Reserve Bank. The Central loan is probably more suitable from the banks' point of view because its maturity period is much shorter.

State Government loans attracted subscriptions totalling more than Rs. 100 crores last year. But conditions in the money market then were much easier than they are now. The strain on banking resources is already noticeable, and might increase as soon as the new State loans are fully subscribed. The authorities should, therefore, start thinking when and how the strain should be relieved. An appropriate way of doing this would be to relax or abolish the scheme for impounding new bank deposits.

ACCELERATING GROWTH WITHOUT INFLATION

SINCE Mr. Graham Hutton is well-known as a forceful economist, it was to be expected that his *Inflation and Society* (published by Allen and Unwin in July) would be a forceful book. The title may suggest that the work is less opportune now than it would have been some years ago, when inflation was more menacing. Even Dr. Per Jacobsson, head of the International Monetary Fund, has asserted—last year and again this year—that the principal economic nations have got this disease under control. But that the disease is still in the system is clearly recognised by the monetary authorities of the advanced countries, and when it begins to reassert itself—as in Britain this year—the authorities show their fear of it by prompt remedial measures. In another sense, too, a discourse such as Mr. Hutton's is particularly opportune now. Those remedial measures are controversial, because they are restrictive. Lenin noted how debauching the currency could weaken the capitalist system, but in the era of Khrushchev the system is challenged by economic advance, and some people see relative inertia as a worse danger than inflation.

Mr. Hutton is not afraid of restraint, because he sees it as a means to efficiency, or because he proposes a policy for improving efficiency by other means as part of the campaign against inflation. But the expansionists will argue that restraint of credit, which Mr. Hutton accepts as necessary, impedes the modernisation of industrial equipment, and the full utilisation of that equipment, which also he regards as a necessary means to combat inflation. Some economic thinkers, one suspects, have become slaves to their own metaphors. The economic, as well as the social, importance of the motor-car is undeniable, and the foot on the brake or the accelerator, and the hand on the steering wheel, are useful analogies. But pressing a pedal and turning a wheel do not change the structure of a vehicle. Mr. Hutton's idea of deflation is more dynamic, and he would probably agree that an athletic analogy would be more appropriate. An athlete who regulates his diet and trains hard may lose weight, but he will improve his athletic efficiency.

In many people's minds, and often in fact, inflation and growth are associated with each other, but they may be mutually antagonistic. Efficiency and growth are associated likewise, but a policy that promotes the one may impede the other. Inflation and efficiency are seldom harmonious. Too much demand causes congestion in the system, and congestion prevents labour and materials from flowing freely to the points where they are needed. Too much demand makes the human factor in production—whether management or labour—complacent. The resulting condition is not conducive to either efficiency or growth. Yet other difficulties may arise when demand is restrained. Both these problems have been apparent in Britain in the last few months. Early this year, production was retarded by congestion; later it was retarded by restraint—and by threats of more restraint. But Mr. Hutton's argument is neither strengthened nor weakened by these developments, for the Government's policy of control is not the same as his policy of deflation.

Mr. Hutton's plan is comprehensive, not confined to monetary action. All restrictive practices should be abolished, to release resources and allow free competition. Competition should be intensified by admitting more foreign goods into the domestic market—by reducing or removing tariffs; and subsidies should be withdrawn. In the whole economy, skill should be improved and the most efficient equipment should be installed; and—another reason for abolishing restrictive practices, as applied, for instance, to shift-working—machines should be allowed to produce all they are capable of producing. Those recommendations refer mostly to the private sector of the economy, whereas many critics of the Government's policy have blamed the public sector for most of the nation's troubles. Naturally, Mr. Hutton does not spare the public sector. Public expenditure should be reduced so that it accords with a reasonable level of taxation, and with the quantity of savings that both the public and the private sector can borrow, for the medium or long term, at rates of interest established in a free capital market.

It is interesting to recall that before the Radcliffe Committee, Mr. Hutton gave evidence on the effects of interest rates jointly with Professor F. W. Paish, another eminent economist, who has subsequently written (in a symposium, "Not Unanimous", published by the Institute of Economic Affairs) that to restrain inflation in the next 15 years by means of interest rates alone it would have been necessary to establish a long-term rate possibly above 20 percent. Yet Professor Paish and Mr. Hutton are convinced that the rise in the market rate from the artificially low level of 1949—albeit to nowhere near the fantastic level of the professor's hypothesis—was the essential factor in the control of inflation, and that it would have been uncontrollable otherwise without unreasonably high taxation or direct regulations which would probably have been inoperable. The much more drastic policy that Mr. Hutton proposes in his book would completely eliminate inflation from the economic system. Is it practicable? With regret or relief, the reader will probably answer No. But it may be hoped that the policy-makers are studying the recommendations and will adapt their policies accordingly, even if they cannot altogether adopt Mr. Hutton's. He has not solved the problem of social change, and opposition to it that would inevitably result from deflation. In Britain, the only method of deflating that would be immediately acceptable and would immediately promote growth is a drastic cut in the military budget, and this year's political events make it more difficult. Some people said that Stalin might win "the cold war" by debauching the western currencies; perhaps Khrushchev has not "revised Lenin" as much as some people suppose.

Current News and Comment

The Jessop Profit Enigma

Considerable uncertainty prevails in stock market circles about whether the computation of the profit figure, as given in the report of Jessop and Co. Ltd for the year ended October 1959, is correct. The speech made by Sir B. P. Singh Roy, Chairman, at the annual general meeting of the company in Calcutta last Friday, does little to clarify the point. (A fuller version of the speech is published on a later page of this week's *Capital*.) Further is it explained adequately why the Company's results have deteriorated. The accounts indicate that the net profit amounted to Rs. 25.88 lakhs during the year ended last October, against Rs. 26.18 lakhs in the previous year. The figures are reached after providing Rs. 22.68 lakhs (against Rs. 23.10 lakhs) for taxation and Rs. 3.62 lakhs (against Rs. 3.55 lakhs) for development rebate reserve.

But it seems that the profit for the year ended October 1959, apart from being smaller, has been calculated after taking credit for certain items in a manner which cannot be justified by the normal procedures of company financing. Firstly, the value of the closing stocks has been inflated by Rs. 7.93 lakhs by providing depreciation at a lower rate. This kind of exaggeration is unsound, regardless of whether the stocks are perishable or durable; the stocks should be valued on a very conservative basis, and if there is any appreciation in their value, the increase should be brought in only after they are sold. Secondly, credit has been taken for Rs. 7.30 lakhs on sales account, because the board of management estimates that this sum might be recoverable from the Government under the "escalator" clauses in various contracts. This credit is of uncertain value, considering that it is in addition to the accepted "escalator" bills which have already been included in the sales figures. The two items mentioned above are removed from the profit figure, as they should be, the profit would be much less. It would not only change the entire financial picture of the Company; it would also be nearly absorbed by the dividends which have been declared. So the ploughing back of Rs. 17 lakhs into general reserve, as the balance-sheet shows, is largely fictional for all practical purposes.

The deterioration in the Company's results is [illegible] since production and sales have increased and rehabilitation plans have made considerable progress. The board of management therefore, have given a fuller explanation for unsatisfactory performance. The increase in emoluments as a result of tribunal awards have reduced the profit to some extent, but [illegible] be other items on which expenditure is extravagant. The expansion schemes by the Company in 1955 and 1956 have now completed and the productive capacity of [illegible] has been increased substantially. The works are fully occupied and are producing at rated capacity. The production of road [illegible] has reached the target of 200 a year. The manufacture of wagons is proceeding at a satisfactory pace. Thus, as far as output and sales are concerned, there is reason for optimism. Production has been extended and will continue to improve steadily. The order-book is very healthy. There are signs that the Company's products are being with good demand.

It is interesting to note that the board of management is considering further schemes for expansion and diversification, although details cannot be given at the present stage. Sir Bijoy Prosad mentioned the possibility of an increase in financial requirements. If these are to be met by a further expansion of share capital, the details will be communicated to shareholders in due course. The company has recently doubled the ordinary share capital by issuing rights shares of Rs. 10 each at a premium of Rs. 2 a share. It is hoped the board of management will bear in mind the fact that shareholders have already made big sacrifices so that the Company may recover from the damage it suffered during the Mundhra episode. They may not feel very enthusiastic if they are asked to make further sacrifices now, even after many expansion schemes have been completed. If expenditure is kept down, shareholders could hope for better dividends considering the substantial increase in production and turnover which has taken place during the past couple of years.

Bigger Profit for Philips India

The ordinary shares of Philips India Ltd have come down to Rs. 32, after having risen to Rs. 36 some days ago. The increase was due purely to speculation, so the decline now is a necessary correction. The Company's results for the year ended December 1959 are noticeably better than those for the previous year. Sales have increased from Rs. 4.5 crores to Rs. 4.9 crores, as production has expanded and the demand for the Company's products has been well maintained. The activities have been concentrated mainly on radio, acoustics, etcetera. Although import restrictions have affected the sales of many industrial and professional articles, efforts have been made to assemble medical apparatus and other products locally from indigenous components. The production of lamps has been hampered by restrictions on output. It is thought that supplies of lamps may not be adequate to meet the increased demand in the near future.

Philips India's profit has improved from Rs. 53.56 lakhs in 1958 to Rs. 58.82 lakhs in 1959, after increasing depreciation from Rs. 8 lakhs to Rs. 11.2 lakhs. This is because sales of the more remunerative products have increased. An ordinary dividend of 12 percent, taxable, has been declared. This offers a yield of 3.8 percent at the present price and is covered more than twice. The ordinary dividend was 8.5 percent, tax-free, in the previous year. The net payment to shareholders now will be only a negligible fraction smaller than the previous one. It is, therefore, difficult to see the purpose of the directors' remark: "It would be appreciated that so far as your Company is concerned, the new scheme of taxation will adversely affect the liquid position required for the current and future expansion of your Company's operations if the net cash dividend is to be maintained at the same level as that obtaining under the old scheme of grossing-up."

Important allocations include Rs. 28 lakhs (against Rs. 27.8 lakhs) for taxation, Rs. 3.25 lakhs (against Rs. 4.3 lakhs) for development rebate reserve and Rs. 1 lakh (against Rs. 3 lakhs) for general reserve. The carry-forward is Rs. 47,000, against Rs. 36,000 brought in. The Calcutta factory has maintained production at a satisfactory level. The factory in Loni has started making radio sets and components. Press tools and moulds are being manufactured. Facilities have been provided for electroplating metalware components. Steps have been taken to produce push-button wave-band switches and push-button tone registers. It is proposed to extend the local manufacture of X-ray equipment, cinema projectors and electronic measuring instruments. Self-sufficiency will, it is expected, be achieved soon in the production of radio sets. It is interesting to note that not only has production been extended in the Company's two factories, but efforts are being made to produce more in collaboration with ancillary and small-scale industries. It is hoped that the output of radio components will not only meet the Company's own requirements, but will also be offered to outside parties. The manufacturing programme includes photoflash bulbs and glow switches for fluorescent lamp starters.

Progress of the L.I.C.

The Life Insurance Corporation has made encouraging progress during the past year. Its chairman, Mr. P. A. Gopalkrishnan, reviewed the achievements in his statement at the L.I.C. meeting in Bombay recently. (The statement was published in full in last week's issue of *Capital*.) New business has risen from Rs. 345 crores in 1958 to Rs. 429 crores in 1959—an increase of 25 percent. In foreign business, the L.I.C. seems to have overcome some of its initial difficulties; such business has risen from Rs. 5.40 crores in 1957 to Rs. 5.62 crores in 1958 and Rs. 9.47 crores in 1959. According to the chairman, the L.I.C. has increased the business in force from about 11 percent of national income in 1955 to 15 percent in 1959. The achievement is satisfactory, although there are some countries in the world, particularly the United States and Canada, where the life insurance business in force exceeds national income.

For the first time, the L.I.C. chairman furnished an analysis of lapse ratios. The Corporation's experience, he said, is distinctly better than that of the companies before nationalisation. Thus, net lapses amounted to 7.3 percent of the mean business in force in 1954 and 7.6 percent in 1955 but came down to 6.4 percent in 1957 and 5.1 percent in 1958. The figures for 1959 are still being compiled. Management expenses have apparently been reduced. The chairman claimed that the renewal expense ratio came down from 17.3 percent for all companies in India in 1955 to 15.89 percent in 1956-57, 15.46 percent in 1958 and 12.92 percent in 1959. The last of these figures is indeed commendable and compares favourably with that of some of the best companies in the past.

The life fund, which stood at Rs. 380 crores at the time of nationalisation, has increased to Rs. 493 crores at the end of 1959. The L.I.C.'s total assets have risen from Rs. 414 crores to Rs. 552 crores. The annual income, consisting of premiums and income from investment, has been rising steadily and crossed the Rs. 100-crore mark in 1959, being Rs. 105 crores in that year. The chairman expects that since business and investments are increasing, this income should go up further in the future. The Corporation has started with a five year plan of its own from 1959 and has fixed Rs. 1,000 crores as the target for new business in 1963. According to Mr. Gopalkrishnan, there are reasons to believe that the potential business in the country is very much more. But this target has been fixed on

realistic grounds after taking into account the Corporation's capacity to expand its organisation consistent with the maintenance of efficiency.

New India Assurance Earns More

The New India Assurance Company has made satisfactory progress during 1959. There has been a substantial increase in the premium income. The claims ratio is much lower in the fire department, but higher in the miscellaneous and marine departments; the overall claims ratio has decreased. The net premium income is up by Rs. 1.33 crores to Rs. 8.86 crores compared with the previous year. The increase has been mainly in the fire and miscellaneous departments, which have secured Rs. 40 lakhs and Rs. 93 lakhs more at Rs. 346.7 lakhs and Rs. 342.8 lakhs, respectively. The net premium income of the marine department is almost unchanged at Rs. 196.8 lakhs. The incurred claims ratio of the fire department has improved from 45.7 percent in 1958 to 34.6 percent during the past year. The fire department has made a profit of Rs. 66.2 lakhs, against Rs. 50.4 lakhs. The profit of the miscellaneous department shows little change at Rs. 8 lakhs. The marine department has made a loss of Rs. 1.2 lakhs. The Company's gross profit is Rs. 92.8 lakhs, subject to tax. In 1958, the profit was Rs. 65.7 lakhs. After providing Rs. 37.8 lakhs for tax, Rs. 2 lakhs for reserve for bad and doubtful debts, Rs. 7 lakhs for exchange reserve and Rs. 3 lakhs for the investment reserve, there is a balance of Rs. 44.3 lakhs. The dividend of Rs. 4.50 a share, subject to tax, absorbs Rs. 42.7 lakhs, leaving a balance of Rs. 1.6 lakhs to be carried forward. The year's operations have resulted in the Company's total funds moving up to Rs. 10.14 crores, from Rs. 9.11 crores at the end of 1958. The Company's paid-up capital is Rs. 142.42 lakhs. Capital reserve is Rs. 53.78 lakhs, general reserve Rs. 100 lakhs, dividend equalisation reserve Rs. 30 lakhs, and investment reserve Rs. 25 lakhs.

Rewa Coalfields Profit Down

The working of the Rewa Coalfields Ltd for the year ended December 1959 has been affected by the increase in costs due to higher labour emoluments. But the prospects for the current year are better, because the grading of Rewa's coal has now been done, and the new selling prices have become applicable. A new pit has been developed in Umaria and the entire output of the colliery may be obtained from this pit in due course. The Amlai colliery is in full production, but raisings there are restricted by wagon shortages. Capital expenditure has amounted to Rs. 4.16 lakhs (against Rs. 6.43 lakhs) during 1959. Output has increased from 409,275 tons to 446,980 tons and despatches from 410,693 tons to 445,246 tons. Providing Rs. 1.74 lakhs (against Rs. 2.05 lakhs) for depreciation, the profit has fallen from Rs. 3.16 lakhs to Rs. 1.40 lakhs. An ordinary dividend of 10 percent, taxable, has been declared and it absorbs Rs. 1.35 lakhs. It offers a yield of 4 percent at the present price of Rs. 24.87 a share. The ordinary dividend was 10 percent, tax-free, in the previous year. Taxation provision is allocated Rs. 1.31 lakhs (against Rs. 2.69 lakhs), general reserve Rs. 50,000 (against Rs. 2.35 lakhs) and development rebate reserve Rs. 53,750 (against Rs. 98,348 lakhs). There is a carry-forward of Rs. 29,537, against Rs. 32,142 brought in.

Tulsipur Sugar Rights Issue

The Tulsipur Sugar Co. Ltd proposes to make a rights issue of ordinary shares in the ratio of one for one in the near future. The proceeds of the issue will be used for expansion. The Company took over the Tulsipur sugar factory from the Balrampur Sugar Co. Ltd under a scheme of arrangement sanctioned by the Calcutta High Court in 1959. Under the scheme, it allotted 140,000 ordinary shares of Rs. 5 each to the ordinary shareholders of Balrampur. Since the commencement of its business, Tulsipur has increased the output capacity from 746 tons to 890 tons a day. It now proposes to raise the capacity to 1,200 tons a day by spending Rs. 15 lakhs. Orders for the plant and machinery have been placed and the project is likely to be completed within two years. Tulsipur has crushed 3.3 million maunds of cane during the period ended June 1960 and an interim dividend of 62nP, taxable, has been declared for this period. The present price of the ordinary shares is indicated around Rs. 7.75.

Shree Digvijay Cement Price Worries

Mr. Gobindlall Bangur, chairman, told shareholders of the Shree Digvijay Cement Company in Sikka, Jamnagar, last week that the retention prices fixed by the Government for cement are too low. The Company's output has not come up to the rated capacity assumed by the Tariff Commission. The results during the two years of operation subsequent to the Commission's recommendations thus reflect the unrealistic assumptions about the capacity of the plant. The attitude to the rehabilitation allowance also needs to be liberalised. The chairman felt that such questions as costs, output, depreciation, rehabilitation allowance and returns on capital should be re-examined from the point of view of the long-term needs of the industry. This is necessary if the cement industry is to achieve the target of 13 million tons for it under the third plan. The expansion of the Digvijay factory, it is claimed, has been making satisfactory progress. It has been planned in two stages: (1) the clinker grinding plant in Bombay; and (2) the clinker manufacturing plant in Sikka. A substantial part of the plant and equipment required for the clinker grinding section has already been shipped and is expected to reach Bombay soon. The location of the clinker grinding plant will enable the Company to serve large consumers better through bulk supply. The Company has plans for diversification, and a plant for asbestos cement products will be built. Orders have been placed for a pipe-making machine and a sheet-making machine. The Company's subsidiary, the West Coast Paper Mills, has being doing well and is planning to expand.

Bridge and Roof Pays More

The Bridge and Roof Co. (India) Ltd has had another reasonably good year, as is evident from its results for the year ended December 1959. The profit has improved from Rs. 4.59 lakhs to Rs. 6.89 lakhs, after providing Rs. 8.75 lakhs (against Rs. 8.68 lakhs) for taxation. A dividend of 30 percent, taxable, has been declared. This offers a yield of 12 percent at the present price of Rs. 25 a share, and is covered more than four times. The dividend was 20 percent, tax-free, in the previous year. Depreciation is allocated Rs. 8.72 lakhs (against Rs. 8.43 lakhs), development rebate reserve Rs. 55,210 (against Rs. 2.44 lakhs) and general reserve Rs. 2.5 lakhs (against Rs. 2 lakhs). The carry-forward is Rs. 1,72,548, compared with Rs. 1,48,354 brought in. Although sales have declined from Rs. 2.28 crores to Rs. 1.95 crores, the work-in-progress has risen from Rs. 39.87 lakhs to Rs. 56.62 lakhs, indicating that production is running at a satisfactory level. The plans for the reorganisation of the works are being implemented. It is expected that they will be completed in 1961. It is noteworthy that the ordinary share capital of Rs. 12 lakhs is supported by reserves of more than Rs. 33.85 lakhs. Fixed assets are Rs. 34.92 lakhs and current assets exceed Rs. 1.23 crores.

Kumardhubi Fireclay Does Well

The Kumardhubi Fireclay and Silica Works Ltd has made satisfactory progress during the year ended December 1959. Sales of refractories have been maintained at a reasonable level. Silica bricks have been in good demand. Production has continued at a fair level and the capacity for making silica and sillimanite bricks has been extended. The demand for these products is expected to increase considerably in the coming years. The Company has made a trading profit of Rs. 27.31 lakhs in 1959, against Rs. 25.81 lakhs in the previous year. The ordinary dividend of Rs. 1.80, taxable, absorbs Rs. 5.40 lakhs. The dividend was Rs. 1.25, tax-free, in the previous year. Important allocations include Rs. 5.45 lakhs (against Rs. 57.53 lakhs) for depreciation, Rs. 8.45 lakhs (against Rs. 9.40 lakhs) for taxation, Rs. 1 lakh (same) for debenture redemption reserve and Rs. 2.5 lakhs (same) for plant renovation reserve. The carry-forward is Rs. 39,793, against Rs. 30,092 brought in. A noteworthy fearure of the balance-sheet is that fixed assets have been written down by Rs. 54.23 lakhs. The reserve for the revaluation of fixed assets has been debited by the same proportion as these assets were written up in 1952. This has been done to bring the fixed assets back to their actual written down value based on their original cost.

New Ventures: Acid, Dyes, Board

Three new companies will, it is expected, be launched in the near future. The first of these, with Mr. Madanmohan Ruia as chairman, is Citric India Ltd, which will manufacture citric acid for the first time in this country. The Company will have an authorised capital of Rs. 100 lakhs, of which Rs. 50 lakhs will be issued in the form of equity shares of Rs. 100 each. Of this, the directors and their friends will take up Rs. 25.5 lakhs and the remainder will be offered to the public. The factory is likely to be set up in Nasik and its capacity will be 1,500 tons a year. The Company has reached an agreement with a West German firm for technical collaboration. Production is expected to start in 1962. The Company's prospects seem to be fair in view of the importance of citric acid in the manufacture of such goods as drugs, medicines, bottled soft drinks and confectionery.

United Dyestuffs Industries is another Company which is likely to be formed soon for manufacturing vat dyes and other allied products. The industrial licence, it is said, has been obtained, and the factory will be set up near Ahmedabad. The authorised capital of the Company will be Rs. 2 crores, and the issued capital will be Rs. 50 lakhs, comprising 50,000 equity shares of Rs. 100 each. The promoters, directors and their friends may take up capital worth Rs. 25 lakhs, leaving the balance for public subscription. The Company is likely to enter the market by the end of October. Production is expected to start by the end of 1961 and negotiations are in progress for securing technical collaboration with overseas manufacturers.

Jolly Brothers, it is said, has obtained an industrial licence for a particle board factory with a capacity of 6,000 tons a shift a year. It is reported that the factory will be the first of its kind in India. The authorised capital of the new Company will be Rs. 1 crore, while the issued capital is likely to be around Rs. 50 lakhs. The project involves a capital outlay of Rs. 60 lakhs; and it is believed that the promoters have received offers of technical collaboration from Swiss and German manufacturers. However, the foreign firm chosen may be asked to participate in the capital to the extent of Rs. 25 lakhs, which is the approximate foreign exchange component of the machinery costs. The factory will be situated near Bombay.

New Glass Projects

The Shree Vallabh Glass Works, a private Company manufacturing safety glass for motor-vehicles, trucks and railway coaches, will soon be converted into a public company which will make new types of glass. The new Company will have an authorised capital of Rs. 1 crore, of which Rs. 60 lakhs are to be issued at present. The plant will be located in Anand, Gujarat State. It is proposed to produce annually 27.2 million square feet of sheet glass of all thicknesses and 7.2 million square feet of wired, figured and rolled glass. Besides, the Company will produce 2,000 pieces a day of glass building blocks and roofing tiles. The decision on foreign collaboration has yet to be taken. If everything goes according to schedule, the Company should be raising capital before the end of October.

The Hindustan Wired Glass Manufacturing Company is another concern which is being formed to produce wired and figured glass. The project licence has already been secured and the plant, which will be located near Baroda, will have an annual capacity of 10,000 tons. The negotiations for foreign collaboration have not yet been completed. The Company will have an authorised capital of Rs. 1 crore and the issued capital will be Rs. 40 lakhs. The plant and machinery are estimated to cost between Rs. 40 lakhs and Rs. 50 lakhs. Production is expected to start early in 1962.

Weakness of General Insurance

The healthy working of general insurance companies in India has been hampered by three main factors in recent years. The first is that fire premium rates have been reduced periodically. The second is that the ceiling on management expenses is fixed on an unrealistic basis. And the third is that some of the regulations under the Code of Conduct for general insurers are either ineffective or unnecessary. The familiar repetition of these complaints constituted the greater part of the speech made by Mr. B. G. Rakshit, president, at the annual general meeting of the Indian Insurance Companies Association held in Calcutta a few days ago. Mr. Rakshit appreciated the motives underlying the "remedial measures", but thought that the remedies have often proved worse than the disease in practice. About 40 percent of the total gross premiums written direct by Indian general insurance is in fire insurance. Yet in this sector there have been periodical reductions in rates, the latest one having taken effect from 1st January, 1960. The reductions have caused much avoidable hardship, and the chairman of the Tariff Committee has said that his Committee now intends to resist further cuts. Mr. Rakshit commended the stand and declared that the evils of rebating will not be checked by reducing fire rates. The remedy, in his view, lies not in multiplying the regulations, but in "readjusting what has already been codified." How the regulations

should be "readjusted" was not, however, explained by Mr. Rakshit.

The ceiling fixed for management expenses under Section 40(C) is another "remedy" which has produced a "built-in need to scramble for direct Indian business". Mr. Rakshit suggested that the ceiling should be related, as far as possible, to the actual expenses incurred by an insurance office in such sectors as direct business, facultative reinsurance business and treaty business. The current practice of having a lower permissible limit for marine business has been criticised. The administration of marine business entails more work and bigger expenditure, so the same limits should apply to the marine department as to the fire and miscellaneous departments. Pointing to the recent closure of two well-known Indian companies, Mr. Rakshit warned insurers against "care-free underwriting". If the cost of securing business is not kept within reasonable limits, financial stability will suffer. Insurers should, therefore, refrain from accepting risks which involve financial commitments far in excess of their resources. The current regulations for measuring expenses are fostering "indiscriminate canvassing for business, with results very often disastrous." If these are the weaknesses vitiating general insurance and leading to the closure of companies, Mr. Rakshit's view that insurers "are doing their best and are as anxious as anyone to reorganise and rationalise the industry" can hardly be sustained. The deterioration in the business is only partly attributable to the laws framed on the basis of good intentions; no less harmful are the loopholes which insurers continuously use for evading them. Since there are too many regulations, Mr. Rakshit was justified in pleading for only a few "broad regulations" to ensure the "financial stability of insurance companies." But this rather general statement should have been elaborated; he should have specified what type of "broad regulations" he has in mind.

Mr. Rakshit welcomed the introduction of the Marine Insurance Bill in Parliament. The measure is necessary since hull insurance in India is gradually expanding and the Government is insisting that, because of the foreign exchange shortage, Indian insurers should cover such risks. Furthermore, the practices in India should have statutory force, otherwise they may be challenged in courts of law. As Mr. Rakshit said, it is only proper that the Bill should be based on the U.K. Marine Insurance Act; insurance markets the world over have been greatly influenced by the British law and have been following the principles laid down there.

Cotton Prices and Controls

The Government has decided not to change the floor and ceiling prices of cotton for the 1960-61 season. This was made clear by the Central Commerce Minister at the meeting of the Cotton Textile Consultative Board last Friday. The decision has disappointed the trade in Bombay, which argued that higher prices would encourage farmers to produce a larger crop. Besides, the trade felt that the fantastic premiums commanded by cotton right from the start of the current season have made nonsense of the price controls. The Government's decision, however, shows that it is anxious to keep down cloth prices, so a rise in the ceiling prices of cotton is not considered advisable. Official circles are of the view that it is the weather, rather than higher prices, which will influence cotton production. The Commerce Minister's call at to requisition stocks if prices do not come down to a reasonable level sounds amusing in view of the utter failure of cotton controls this season. With the crop totalling barely 3·75 million bales in 1959-60, the need for stricter enforcement of the price controls could never have been more pressing.

The trade fears that the market might not be able to function smoothly if the ceiling prices are left unchanged. But these fears seem exaggerated to many. It is true that the carry-over of Indian cotton at the end of the current season is unlikely to exceed 950,000 bales, against 1.85 million bales at the end of 1958-59. The figure is rather small, in that the supply will be just enough to meet mill demand until the middle of November, whereas the new crop movement really gathers momentum only in December if the weather is normal. But the trade seems to overlook the fact that the Government is trying to secure bigger imports. Normally, the annual import quota has been around 600,000 bales. But with the new agreement for importing 400,000 bales of U.S. cotton under P.L. 480 and another 200,000 bales from other sources, the total allocation this season will be around 1.78 million bales. The Government has also made efforts to secure adequate supplies of short-staple cotton. If, therefore, the 1960-61 crop is normal, there is reason to expect that cotton prices will recede to levels well below the ceilings. But it will not be until about the end of October that a clear picture of the crop position will be available. Weather reports have so far been favourable.

Meanwhile, cotton prices suffered a sizeable decline last week. The Jarilla August contract came down from Rs. 826 to Rs. 810 a candy. The fall in the spot market was much steeper, ranging up to Rs. 70 a candy over a fortnight. This was because traders were anxious to dispose of their goods before the end of the month; from 1st August, all cotton has to be sold through the agency of the Textile Commissioner. Traders have to submit details of unsold stocks as on 31st July. The mills, too, have to furnish information about their purchases against quotas until the end of July.

The Cotton Shortage

The shortage of cotton has become acute during the past eight months. The 1959-60 crop is now estimated at about 3.75 million bales, against the forecast of 4.7 million bales made at the beginning of the season. Speaking at the annual general meeting of the East India Cotton Association in Bombay last week, Mr. Madanmohan R. Ruia, president, said that bad weather has generally been responsible for the decline. The weather remains the one dominant factor which can jeopardise all plans for increased production. The current season's shortage has led to a steady rise in prices, which reached the statutory ceilings for many varieties early in the year. The carryover of Indian cotton into 1960-61 will be the lowest on record since the subcontinent was partitioned. Because of the shortage, the Government has allowed big imports—the largest since 1951-52. The Association asked the Government to do away with floor and ceiling prices since they cannot be enforced in years of shortage. The natural forces of demand and supply, Mr. Ruia said, should regulate the market. The Government should check fluctuations in prices mainly by regulating imports and exports.

Tea Output and Export Targets

The tentative production target for tea under the third five year plan is 850 million lbs. Compared with the 1958 production of 715 million lbs, the increase sought is 135 million lbs over a period of seven years, or an annual rise of nearly 20 million lbs. Mr. Satish Chandra, Central Deputy Minister for Commerce and Industry, addressing the annual general meeting of the Tea Association of India in Calcutta recently, said that the industry "should go full steam ahead with its attempts to increase production". This will be a "more potent and dynamic" solution than restricting internal consumption to create a bigger surplus for export. It is possible, he declared, to "build up an expanding internal market" while India's importance as the world's biggest exporter of quality teas is maintained. The Deputy Minister asked the industry seriously to reconsider the targets set, because India's share in the world output has fallen from 46.8 percent to 42.8 percent over the last decade. He said that the export target of 550 million lbs for 1965 is not "heartening", since it represents an increase of only 27 million lbs over the 1956 figure, and only 42 million lbs over that of 1958. He agreed that the industry should have the means to work for a higher target and that there should be a larger supply of fertilisers, machinery and finance. But when "there is a bold and forward looking approach", the Government will do all it can to help. The scheme for financial assistance to marginal gardens has been put into operation. The hire-purchase arrangements for the supply of machinery will help many estates to renovate their equipment. Several schemes for providing replantation finance are before the Government, including one suggesied by the Tea Board. "We accept in principle the need for replantation finance and I hope a decision about this matter will soon be taken." Discussing export trends, the Deputy Minister said that merely sending promotional staff or carrying on propaganda for tea abroad would not help much; the supply line has to be adequately fed and prices should be competitive.

In his address at the meeting, Mr. B. P. Bajoria, president, said that India's tea production has increased by about 17 percent since 1950. But the output in Ceylon has increased by 35 percent, in East Africa (including Mozambique) by 102 percent, and in Indonesia by 23 percent. In the export field, too, India has raised her foreign sales to 472.5 million lbs from 403.2 million lbs—a rise of about 17 percent. But against this, Ceylon has raised her exports by 29 percent and East Africa (including Mozambique) by 121 percent. In the U.K. which is the biggest market for India, this country has been able to sell more, but the proportion of her sales to total U.K. imports has declined from 65 percent to 55 percent. Dealing with specific problems, Mr. Bajoria said that fertiliser supplies for the gardens have been very insufficient, totalling 51,000 tons last year against an actual requirement of 70,000 tons, when the output of tea was 723 million lbs. The industry is now expected to produce 127 million lbs more tea, but the supplies of fertilisers are to remain at 51,000 tons. Mr. Bajoria declared that the propaganda for Indian tea in European countries, such as France, Italy, Belgium and West Germany, is rather ineffective. The range and magnitude of the efforts made by Ceylon, which is India's principal competitor, are much bigger. So a liberal increase in the expenditure for propaganda, and an intensification of the campaign, is necessary. The main factor which has affected Indian tea adversely is the high rate of export duty; it creates a serious disadvantage in meeting world competition. Mr. Bajoria suggested that the system of export quotas should be abolished since it has outlived its utility, especially with the expiry of the International Tea Agreement in 1955. The long-term solution to the industry's problems lies in a well-phased replanting scheme, but the industry is short of finance, Mr. Bajoria said.

Plan Allocations and Population

The demand of the U.P. Chief Minister, Dr. Sampurnanand, for plan allocations based on population will produce sharp reactions. Quite apart from the provincial rivalries it will generate on the political plane, economically too the demand is open to a number of objections. The convention of M.P.s called recently by the U.P. Chief Minister was even more poorly attended than last time, and not all the newspapers in the State have supported his stand. It has been pointed out, for instance, that in a scheme for Central assistance, population can be the basis for allocation for agriculture, irrigation, social services and community development. But heavy industry cannot be located in a State on the basis of its population, as the Central Government has its own priorities. In the second plan, some States got more than what they would have been entitled to on the population basis only because of higher allocations for heavy industry. But then the heavy industries are of national importance and their benefit accrues to the whole nation. If U.P. is to get a proportionate share on the population basis, without allotments for heavy industry, it will presumably get far more than it can usefully spend on agriculture, community development or social services. In order to achieve the target of food self-sufficiency, investment in agriculture will have to be spread over the States on the basis of area and not of population. Again, if Dr. Sampurnanand's contention is accepted, it will mean that a State in which a heavy industry is located will not be entitled to any other developmental expenditure.

The U. P. Government's case is that the population of the State is nearly one-sixth that of the whole country, so while the *per capita* outlay during the second plan was Rs. 57 for the whole country, it was only Rs. 37 in U.P. From 63 million at the time of the last census, U.P.'s population is estimated to have increased to 73 million at present. The net result, according to Dr. Sampuranand, is that the *per capita* income in the State, which was 4.9 percent higher than the all-India figure at the beginning of the first five year plan, is today lower by 12 percent. In common with many other States, U.P. too has been lagging behind in the targets set for additional taxation during the second plan, but the Planning Commission has observed in its latest progress report that "although U.P. has been lagging behind targets, it contributed, in absolute terms, the highest revenue from additional measures of taxation." The fact that in spite of raising the highest revenue from additional taxation measures U.P. could not make matching contributions to Central aid schemes is the true measure of its poverty. The State's third plan provides for an outlay of Rs. 900 crores. That it will be reduced is, of course, taken for granted. Dr. Sampurnanand's demand is that it should not be cut to less than Rs. 600 crores.

U. P. Textile Wage Order

The U. P. Government has ordered the cotton textile mills in Kanpur and Saharanpur to give wage increases of Rs. 6 a month, and those of Modinagar Rs. 8 a month, to their workmen with retrospective effect from 1st January, 1960. The order, which has been published in a *Gazette Extraordinary*, embodies the unanimous decisions of the tripartite conference held recently in Naini Tal. It excludes the clerical staff of the mills. Three-fourths of the dear food allowance in Kanpur (which comes to Rs. 44.71) will, according to the order, be merged with the basic wages. The remaining 25 percent will continue as a flexible dearness allowance, fluctuating according to changes in the cost of living index. The personal

wages payable to workmen will not at present be adjusted with the increased basic wages, and the Government's decision on this matter will be announced separately later. The order will remain in force for one year in the first instance. It is estimated that over 45,000 workmen will get a total benefit of about Rs. 3 lakhs a month in the areas covered by the order. As for piece-rate workers, the order says that their earnings will first be calculated on the existing basis and thereafter an addition of Rs. 6 in the case of Kanpur and Saharanpur mills and Rs. 8 in the Modinagar mills will be made in the earnings so calculated. In the case of piece-rate workmen who have worked for a fortnight or less, the additional increase will be calculated proportionately as being Rs. 3 or Rs. 4 for a fortnight of 13 working days. The Government's decision concerning the ten mills situated in other areas of the State is expected in three months' time. A special "cell" headed by the Deputy Secretary for Labour has already been set up to expedite the work.

Sales Tax or Excise Duty

The Central Minister for Revenue and Civil Expenditure, Mr. B. Gopala Reddi, said at the annual general meeting of the Andhra Chamber of Commerce in Madras recently that some State Governments are unwilling to replace sales tax by Central excise duty. But pressed for more revenue, State Governments, by and large, may have to extend the list of taxable items or enhance the rates. The chairman of the Chamber dwelt on the adverse effects of sales tax on commodities. He pointed out that the multipoint sales tax raises the price of exportable goods. There is a need for uniformity in State Governments' sales tax laws with a view to avoiding waste and delay. Mr. Gopala Reddi's hint that the Government might appoint an advisory council for income tax administration is perhaps a sop to critics of the proposed amendment to the Income Tax Act which threatens to publish the names of tax-evaders in future. The Minister said that the level of investment must go up in the future since the *per capita* income in India is lower than in such under-developed countries as Ceylon and Ghana. In defending the third plan outline, he made it clear that savings would have to be increased through some restraint of consumption. The scope for deficit financing is limited now, so additional taxation is inevitable. The Government is considering the claims of backward States, and the balanced growth of the country is the aim of development planning. In stressing the need to hold the price line, Mr. Reddi said that it is the responsibility not only of the Government but also of agriculturists and industrialists who have a duty to raise output.

Export Risks Insurance

The Export Risks Insurance Corporation issued 135 policies during the period 1st January, 1960, to 30th June, 1960, against 110 policies issued during the corresponding period of last year. The Corporation, which started underwriting risks involved in exports on credit terms in October 1957, had a total of 269 policies, with a maximum liability of Rs. 6.74 crores, in force on 30th June, 1960, against 198 policies with a maximum liability of Rs. 6.64 crores on 30th June, 1959. During the first half of this year, the Corporation covered shipment contracts for Rs. 3.50 crores, against Rs. 2.32 crores in the first half of last year—the increase being 50 percent. The premium income amounted to Rs. 1,05,885, against Rs. 75,238—the increase in this case being 40 percent. During this period, the Corporation registered 835 assignments in favour of the financing banks, against 703 assignments during the corresponding period of last year.

Raising Oilseeds Output

Speaking at the annual general meeting of the East India Oil Millers Association in Calcutta last Friday, Rai Bahadur G. V. Swaika, president, said that it is necessary to raise the output of oilseeds in order to meet the rapidly expanding domestic demand and to create a substantial surplus for export. India is the largest producer of major oilseeds in the Commonwealth, but her production of 7.2 million tons in 1960-61 will fall short of the second plan target (which was 7.5 million tons). India's population will increase to 430 million in 1960-61, so oilseeds output will have to be raised substantially to meet the growth in consumption. Rai Bahadur Swaika said that about 10.6 million tons of the major oilseeds are required for domestic consumption, but the third plan target is only 9.5 million tons. The Government should, therefore, raise the target. It is necessary to provide more cottonseed to the crushing industry, mainly by discouraging its use as a conventional cattle food. Besides, the president thought, manufacturers of soaps and paints should not use edible oils, which are at present in short supply. By using more of non-edible oils, they can leave the edible oils for human consumption. As for increasing exports, Rai Bahadur Swaika said that the Government should set up an Export Promotion Council for Oils, Oilseeds and Oilcakes with a view to exploring new markets abroad. It should also give up the practice of making frequent changes in the export policy by manipulating the export duties. The railways should offer concessional freight rates to oil and oilcake exporters.

International Debt Study

A new study arising from the work of the World Bank, and written by two members of the Bank's economic staff, has been published today by the Johns Hopkins Press. The book is entitled *Debt Servicing Problems of Low-Income Countries, 1956-58*, and its authors are Dragoslav Avramovic and Ravi Gulhati. It is a companion piece to *Debt Servicing Capacity and Postwar Growth in International Indebtedness* written by Mr. Avramovic and published in 1958. The industrial recession of 1957-58 put considerable strain on economic and financial relations between the creditor and debtor nations of the world. The authors present a comprehensive analysis of this period, from the point of view specifically of those nations in Asia, Africa and Latin America whose continued growth depends to a considerable extent on their ability to borrow capital from abroad and to service such debt according to a fixed schedule of interest and principal repayments.

The book points out that while the period under review was one in which there was a definite slowing down in the rate of world economic growth and trade, nonetheless the flow of capital rose significantly. For those nations whose credit depends on the export of primary products, these circumstances led to two fundamental consequences: most had to adapt their domestic economies to unfavourable factors operating in world commodity markets; and some encountered new problems in meeting their fixed debt service payments out of a reduced flow of export receipts. The authors explore these consequences in a number of countries and discuss the problem of maintaining a healthy flow of international development capital in the face of cyclical disturbances. The book has 74 pages and statistical appendices; its price is $2.50.

A SHARE TRANSFER CASE

NEARLY six columns of a local contemporary are taken up with a judgment of the North-West High Court, in what is known as the Muir Mills share transfer case. The judgment is inordinately and unnecessarily long. If the Articles of Association of a company contain no provision giving discretionary powers to Directors to refuse the transfer of shares, they are bound to register any transfer presented to them. But some companies contain provisions that the Directors may exercise a discretionary power of rejecting transfers if they do not approve of the transferee, and some articles enact that the Directors need not assign any reason for their refusal. But in the language of Mr. Justice Chitty: "The discretionary power is of a judiciary nature and must be exercised in good faith, that is, legitimately for the purpose for which it is conferred. It must not be exercised corruptly, or fraudulently or wantonly. It may not be exercised for a collateral purpose. In exercising it, the Directors must act in good faith, in the interest of the company and with due respect to the shareholder's right to transfer his shares, and they must fairly consider the question of the transferee's fitness at a Board meeting. When the Court once arrives at the conclusion that the Directors have in good faith rejected a transfer on the ground that the transferee is not a fit person to become a member of the company, it will not review the Directors' decision. The Directors are not bound out of Court to assign their reasons for disapproving. If they decline to do so, or if their decision is challenged in Court, and they refrain from giving evidence, upon which a cross-examination may take place as to their reasons, or if in giving such evidence they refrain from stating their reasons, the Court will not, merely on that account, draw an unfavourable inference against them." But if the Directors do disclose their reasons, they must be valid ones. The mere fact that the new member is not a *persona grata* to the Board or management is not a sufficient reason.

A Ditcher's Diary

LONG HAVE THE TRIBAL SOCIETIES OF INDIA'S north-eastern frontier been alarmed by the advance of the "civilisation" of the plains. And now, after two months of parochialist rioting in Assam, who would say that their fears were altogether unjustified? The main virtue of the agreement negotiated last week between the Naga delegation led by Dr. Ao and the Government of India, it seems to me, is that for the first time after many years of bitter conflict, there is reasonable hope that peace may return to the Naga areas; and if it does, it will be not because the operations of the Indian Army there have been ruthlessly effective, but because the Nagas may feel that their problems are now to be placed in hands kindlier than those of the arrogant plainsmen to their immediate west. I cannot claim to know the quality and strength of Dr. Ao's following in the new State of Nagaland; but it has appeared to me that the star of the moderates belonging to the Naga People's Convention has been in the ascendant since Mr. A. Z. Phizo moved out to enjoy the London summer. It is now more than probable that, although peace may not return immediately, the leadership of the Naga movement will pass out of the hands of the militants who had brought much unnecessary hardship to the people they presumed to represent. India, in turn, had lost much too, in numbers and nerves, fighting a guerrilla organisation which, through intimidation, had blurred the distinction between friend and foe in Naga territory. Dr. Ao's first task may now be to convince his own people that the Government of India's new policy is genuine, sincere and far-reaching—to the point where the militancy may have completely outlived whatever purpose it may have had. The demand for an independent Naga nation had always looked somewhat ridiculous; the demand for a State of Nagaland within the Indian Union much less so, especially since the alarming upsurge of provincialism in Assam. If Nagaland has to depend heavily on assistance from New Delhi, I see no reason for the Centre to regret the fact; the administration of the area could not have been noticeably cheaper in recent years. Money spent helping a people, rather than fighting them, would seem by any criteria money well spent.

HAVING COMMENTED HERE ONCE, AT LENGTH AND critically, on the absence of a telephone directory for the city of Moscow, I suppose it is my duty now to report that this deficiency has been made good—more or less. With a year's delay on the promised date, a 900-page list of private telephone subscribers appeared in Moscow recently. It soon disappeared. The authorities admit that they published only 15,000 copies (for a city of five million souls) and, at 13 roubles a time, these had vanished from the kiosks within 24 hours. So the visitor arriving in a Moscow hotel is no more likely to find a directory in his room than ever he was. Someone who has seen the precious document assures me that he would not be much further advanced if he did. Assuming that he could decipher the Cyrillic script, he would discover that Russian suspicion of foreigners goes to the point of quite omitting them from the directory: so there is no mention of one's embassy or consulate or of friends and colleagues resident in the capital. Since these are the people one is most likely to want to get in touch with on arriving in a strange place, the telephone book leaves you still looking at the wall of your hotel-room. If one has Russian friends, there is hope. But not if they are persons of importance, for no one of real eminence in Russia consents to have his address made public. There are 19 Kaganovitches, eight Khrushchevs, two Lenins and even one Stalin, but the initials indicate that none is the real McCoy. Finding humbler Russians can be difficult because homonyms are as common in Russia as in Punjab or Bengal; there are columns and columns of Romanovs and Guerassimovs, while the Ivanovs run into pages. Initials can no more be relied upon to distinguish one from another than they do with the innumerable Singhs and Ghoshes. Your Russian friend would be lucky to have a phone all to himself; if he has not, and you know his exact address, you will have to hunt him down in the 200-page list of "collective-use telephones" at the start of the directory. Anyhow, the chances are that, like most Muscovites, he has no telephone at all—silent, private or collective. In that event, your only resource is to go to the H.Q. of the Moscow militia, armed with the modest sum of 20 kopecks, where you can learn his address—provided you already know his profession, age and place of birth.

THE DEATH SENTENCE ON THE FARTHING PRONOUNCED by the British Government last week is a disheartening commentary on the wisdom of the doughty financiers of the Age of Inflation. Time was when the coin had genuine value; it was during the reign of Edward I, nearly seven hundred years ago, that it became part of England's regular currency system—when it was made of silver, not bronze. The antiquity of coins with a similar name elsewhere perhaps goes back much further; there is a reference to the farthing in the Gospel according to St. Matthew. It is, however, a reflection on the financial practices of medieval times that in England, by the seventeenth century, the silver farthings of Edward I gave way to those of copper; within two and a half centuries thereafter, the latter were in turn superseded by bronze pieces of the sort current today. The value of the farthing, however, suffered its most serious depreciation after the first World War; lollipops and lemon-drops apart, there was little else it could buy. Over the last fifteen years, it has served as little more than an accomplice in psychological eye-wash whereby gullible bargain-hunters have been persuaded that things priced at, say, 5s 11¾d are distinctly cheaper than those more honestly declared to cost 6 shillings. The passing of the farthing may mark the welcome end of such illusions, although among older folk it will revive nostalgic memories of the days when the care-free watering of the currency was not held to be the acme of governments' financial respectability. I do not suppose that all the 200 million farthings now estimated to be circulating in Britain will return to the Treasury when they cease to be legal tender from next year; the piggy-banks of my younger comrades are not often broken in deference to the decisions of Whitehall. And so it should be; a few decades hence, the farthings of today may be as valued a prize for numismatists as are Britain's pre-Victorian gold coins which were withdrawn from circulation seventy years ago.

MOST PEOPLE I KNOW HAVE BEEN WASTING their money. I am not aware that any of them have bought Ispahan rugs from Persia, antique Bessarabian carpets, French Savonnerie and Aubusson rugs—or even old Indian weaves. Yet, Dr. Franz Pick, that indefatigable student of the increasing worthlessness of money, says in the latest issue of *Pick's World Currency Report* that these are the things whose prices have increased by between 200 percent and 350 percent during the past six months. The sincerity of my admiration for the currency expert is in no way diminished by the quiet admonition he implicitly addresses to nagging wives: the (international) price of gold has fluctuated very narrowly, and there's no money in it. Diamonds, the tycoons' girl friends' best friends, have not been much use either: the price of the inferior ones has risen by a mere 4 percent, and of the superior ones by only 7 percent. Far better would it have been to buy French Louis XV and Louis XVI furniture (up nearly 40 percent since January, after more than doubling its price in 1959); or even manuscripts, maps and illustrated books of the thirteenth and fourteenth centuries (up 40 percent). Those with pretensions to art would not have done too badly, had they been discriminating enough to anticipate the reviving demand for old masters like Rubens and Gainsborough (up 25 percent or 35 percent). Nor, indeed, if they had gone in for post-impressionists such as Cézanne, Gauguin and Modigliani (up 25 percent or 30 percent). Gourmets who care as much for what they eat with as for what they eat, may have found some consolation for subsequent dyspepsia if they had acquired French or English table services of the eighteenth century period (up 30 percent to 75 percent). And the consolation would have been the greater if the dyspepsia had originated in dining rooms bordered with good modern sculpture (up 25 percent). The evidence suggests that there's money in being a vulture for culture—a fact which should not be entirely lost on the gentlemen from India's wild west whose pursuit of pelf has hitherto been confined largely to the cornering of jute, food or gold.

Capital LEARNT WITH DEEP SORROW LAST WEEK OF the death of Mr. Narayan Chunder Chatterjee at the ripe old age of 92. Mr. Chatterjee served this newspaper for forty-eight years, from 1898 to 1946, and is remembered by his colleagues for a devotion to duty that was exceptional even in former times. He retired as head clerk after having worked under four editors of the newspaper. He visited the office frequently even subsequent to retirement, calling on old friends and colleagues, until an unfortunate accident a few months ago impaired his remarkable vitality. Mr. Chatterjee had served *Capital* longer than any other individual, and was the oldest surviving member of its former staff.

JESSOP AND COMPANY, LIMITED

CHAIRMAN, SIR B. P. SINGH ROY'S REVIEW

The following is the speech delivered by Sir Bijoy Prosad Singh Roy, K.C.I.E., Chairman, Board of Management, Jessop & Co. Ltd., at the Twenty-eighth Annual General Meeting of the Members held in Calcutta on 29th July, 1960 :

Gentlemen,

Once more I have pleasure in welcoming you here today at this the Twenty-eighth Annual General Meeting of your Company.

This Meeting has unfortunately been delayed as just before the Accounts, which are now before you, had reached the final stage of printing, non-compliance through oversight of certain provisions of the Companies Act was discovered. The matter was purely technical, but before publishing and presenting the Accounts to you the Board of Management thought it proper to bring it to Government's notice with a view to resolving any legal implications. The position has been fully explained in the Board of Management's Report to you.

The year ending 31st October, 1959, was one of consolidation and of continued improvement to the manufacturing potential of your company, and the results are even better than appear at first sight as I think you will agree if you will bear with me.

The shortage of steel referred to at both the last two annual general meetings continued with increasing severity during the year under review. It was thus exceedingly difficult to maintain production and the greatest credit is due to all those who not only maintained output but actually increased it in the face of this and other difficulties. The steel position is now improving but this welcome change is having, initially, its disadvantages. For any contract steel is needed in a variety of sizes and shapes and it is not possible to start work on that contract until supplies of all those varieties are available in balanced quantities. We have for long been used to having the bulk of certain items of steel in hand and having to wait until the missing items, or 'matching steel' as we call it, come to hand. With the improvement in steel supplies we are now receiving more steel and the missing items are fewer, but they are still there and as important as ever. Thus we find that funds locked up in materials have risen sharply while production - itself is still hampered by these shortages. We hope that now that indigenous steel is generally more freely available Government will be able to concentrate on imports of those types and sizes which are in short supply and that the situation will improve. In fact there are welcome signs to that effect.

Expansion Schemes

Last year I was able to tell you that the major expansion schemes started in 1955 and 1956 had reached the productive stage and I can now tell you that all these have attained their full target rate of output. The quantum of imports required for these products also has been considerably reduced and the work done at Dum Dum has greatly increased, though this fact, involving as it does, the substitution of an item previously imported by one made by ourselves naturally does not show in the sales figures by which output is normally judged.

We have now completed the first stage of our contract for Electric Multiple Unit Coaches and the last of sixteen three-coach units was handed over to the Eastern Railway early this month. For this stage we imported the motor coaches, one to each three-coach unit, in the knocked down condition and we assembled and finished it at Dum Dum. We made the two trailer coaches required for the train set. All the bogies, both for motor and trailer coaches, were imported.

Work on the second stage of this contract is now in hand and the first of eighteen three-coach units will leave our Works for Bombay next month. For this second stage we are making all the motor coaches as well as all the trailers, the bogies still being imported. The quantum of work done at Dum Dum will be some fifty per cent more than in the first stage although its effect will not be reflected in the sales figures.

I am glad to tell you that we have recently secured a further contract for this E.M.U. Stock, again for Bombay, and this will keep the section of the Coach Works concerned busy until late in 1962. For this contract we will build all the bogies at Dum Dum. This will require an extension to the Coach Works which is already in hand.

The Furnishing and Finishing of Metre Gauge Passenger Coaches has now reached its target rate of 24 coaches a month, a coach every working day. We completed the first 150 of these coaches in June last and are now working on the next 300. We also have on our books a further order for 450 coaches and this will keep us busy until towards the end of 1962.

Production of Road Rollers

The production of Road Rollers has also reached its target rate of 200 a year and we have fully implemented the terms of our manufacturing licence. The proportion of manufacture at Dum Dum has risen from about 35% in 1957 to about 63% today, an increase of 80% in the work done per roller quite apart from the increased number of machines turned out. The balance 37% consists of the engine, previously imported but now made in Madras, and the transmission which is outside our present manufacturing licence.

The manufacture of the new heavy eight-wheeled BOX Wagon referred to in my last address was unfortunately delayed as the drawings and specifications were not finalised by the Railway Board until February of this year. As a result, it was not possible to despatch any wagons of this type until May of this year and production is still in the stage of being built up. This delay has been most unfortunate for it has meant a long gap between the last of the old four-wheeled wagon and the first of the new. We estimate that production worth about Rs. 300 lakhs will have been lost during this long change-over period, and this fact must be borne in mind in considering the working results.

Since the close of the year under review we have also established the manufacture of Metre Gauge Bogie Motor and Parcel Vans, and the first deliveries were made in May this year. This is an entirely new design of vehicle having the dual purpose indicated by its name and designed to run with passenger trains.

Larger Output

Since I last addressed you we have continued to add to and improve our facilities at Dum Dum and the results are already beginning to show. In the current financial year after a slow start due to shortage of steel and the hold-up on the new wagon, production has increased rapidly and is still increasing. We expect the current year will show considerably greater output than that you are now considering, and that next year will show a further substantial improvement. We have a very healthy Order Book and the demand for our products continues to be good.

The greatly increased output now being achieved and the fact that it is still increasing means that your company is maintaining its position in the Engineering Industry and that it is playing its part in the industrialization of the country and in the saving of imports. It also emphasises the necessity, mentioned in the Board of Management's Report, of strengthening the financial resources of the company to meet the greater demand for working capital on account of increased output and for undertaking new and diversified lines of production besides expansion of the existing ones.

In my last address I referred to the Award of the Fifth Engineering Tribunal. On due clarification of the doubtful points, the award was fully implemented resulting in an average monthly increase of Rs. 13/- in the basic wages and dearness allowance of the workmen in general. This increase has, amongst other things, had its effect on the profits of the company.

Rights Issue

Thanks to your co-operation, the recent 'rights' issue of equity capital was fully subscribed and it has enabled your Board to reduce the ceiling limit of cash credit facility with the State Bank of India from Rs. 275 lakhs to Rs. 175 lakhs and to release the Guarantee of the Central Government with which that accommodation had been secured. To meet the increasing needs of funds to finance the rehabilitation and expansion schemes, however, your Board has recently finalised arrangements with the State Bank for a 6¼% Debenture Loan of Rs. 75 lakhs which takes the form of a second cash credit account and may be drawn upon as and when necessary. The Board intends to reserve this account, as far as practicable, for capital purposes as distinct from day to day use.

As you will see from the foregoing and also from the published accounts the company's financial position is now greatly improved and for this due credit must be given to the sacrifices made by the shareholders. At the same time output has risen and is likely to rise considerably in the future which will necessitate larger working funds. In an industry such as ours, also, it is necessary to plan well ahead and I would remind you of the earlier part of my address today in which I mentioned that major schemes started in 1955 and 1956 had come into full fruition only in 1960. As indicated in the Report of the Board of Management there are other schemes now under consideration and these too will require funds both for capital expenses and for working capital. It is doubtful whether the debenture issue already referred to will suffice to cover these extra demands. The whole matter is having the careful attention of your Board and we shall approach you at the appropriate time for your co-operation and support should we find it necessary to raise further share capital.

Dividend on Preference Shares

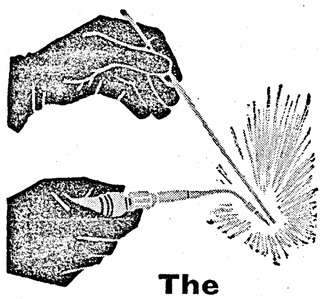
I think, Gentlemen, that at this juncture you will expect me to say something about that thorny question, the rate of dividend on our Preference shares. As you know our Preference shares are what is known as 5% tax free, by which is meant that the dividend is free of any deduction on account of tax paid by the company on its earnings. Last year by virtue of Section 18(3E) of the Income Tax Act we were able to gross up the dividend on the Preference shares so that after deduction of tax at 30% it still left 5% in the hands of the shareholders. Unfortunately with the deletion of that section by the Finance Act, 1960, this is no longer possible and the only way now to achieve the desired result would be to raise the rate of dividend which would require a change in our Articles of Association. This in turn would require the consent in writing of not less than 75% of both classes of shareholders, Ordinary and Preference, which is virtually impossible to obtain. We sympathise with the Preference shareholders, but we are not to blame and we can do nothing unless the law is changed.

Gentlemen, in recounting this story of solid achievement I am sure you will wish me to give full credit to those whose hard work has made this progress possible and I am sure that you will join with me in thanking the workmen and all the staff of the company. In this connection you will be interested to know that the Board has, in principle, decided to introduce an incentive system at the Works as soon as possible. A firm of experts is already making a preliminary study but it must be realised that in an organisation such as ours which handles a very wide range of products and which is continually venturing on new lines the introduction of such a scheme requires very careful consideration, though all agree that it will be greatly to the ultimate benefit of the workmen and the company alike.

Finally, I cannot close without mentioning the retirement last March of Mr. C. V. Graham, a Member of the Board. Mr. Graham had been in the company's employ for over 32 years and we will greatly miss his wide experience and his capacity for hard work. I am sure that you will all join with me in wishing him many happy years of leisure in England.

In Mr. Graham's place Government has been pleased to appoint Mr. M. Lall, who has had twenty-four years' service with the company. I know you will all join with me in welcoming him to the Board.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.



The breath of industry

Oxygen—feeding the flame that knifes through steel, welding enormous broken castings and bubbling through molten metal to make pure steel—the flow of Oxygen in modern industry never ceases. From tiny workshops to the great steel plants and shipyards, wherever there is metal to be worked, Oxygen is on the job.

THE CALCUTTA MONEY MARKET

ADVANCES DECREASE : CALL RATE UNCHANGED

Wednesday, 3rd August.

THERE was a modest decline in the general level of advances in the Calcutta money market during the past week. Most of the decrease was accounted for by sugar, jute and foodgrain credit. The accommodation given to cotton mills also fell, but engineering advances were higher. Conditions in the interbank market were very slightly easier than before, but the call rate was unchanged at 3½ percent.

The exchange market was more active. A somewhat larger number of export bills were seen, on account of not only tea but also gunny shipments. Remittance was on a moderate scale. Sterling fluctuated narrowly but the undertone was fully steady.

BULLION WAS STEADY DURING THE PAST WEEK DUE to increased support in the face of limited supplies. Silver advanced from the previous week's level of Rs. 220.25 to Rs. 221, quoted today for both ready and forward delivery. The London and New York prices were shown at 79¼d and 91.3/8 cents.

Gold was steady in line with silver. The price rose from Rs. 133 to Rs. 134.50. Sovereign at Rs. 86.25 showed a gain of 25nP.

DURING THE WEEK ENDED 29TH JULY, GOVERNMENT of India Treasury bills for Rs. 62,75,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 2nd August. The total amount offered was Rs. 2,26,00,000. Tenders at Rs. 99.325 and above were accepted in full and those at Rs. 99.310 were allotted approximately 83 percent, the average rate of acceptance being Rs. 2.737 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 8th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 3rd August to 6th August at Rs. 99.326 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 27th July to 30th July.

DECLINES OF RS. 21.38 CRORES TO RS. 1,794 CRORES in active notes, and of Rs. 13.32 crores to Rs. 1,828.40 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 29th July, 1960. The currency contraction was adjusted by reducing foreign securities in the paper currency reserve by Rs. 15 crores to Rs. 128.01 crores and by increasing the rupee coin holding of the Issue Department from Rs. 129.38 crores to Rs. 131.06 crores. This was presumably done by transferring securities to the Banking Department, in which foreign balances held abroad rose by Rs. 7.93 crores to Rs. 25.22 crores. Deposits of the Central Government rose by Rs. 14.60 crores to Rs. 67.05 crores, but other Government accounts declined by Rs. 8.46 crores to Rs. 22.62 crores. Balances of commercial banks at Rs. 124.74 crores showed a rise of Rs. 10.88 crores. Investments fell by Rs. 47 lakhs to Rs. 258.85 crores. Other loans and advances declined from Rs. 116.20 crores to Rs. 112.29 crores, of which advances to scheduled banks against usance bills amounted to Rs. 9.12 crores (Rs. 13.05 crores). Ways and means advances were shown at Rs. 30.52 crores, against Rs. 29.55 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 22nd July, 1960, shows a rise of Rs. 10.77 crores to Rs. 627.83 crores in total deposits. Investments in Government securities are down by Rs. 6.87 crores to Rs. 364.75 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 5.75 crores to Rs. 210.21 crores. Cash and balances are, in consequence, shown at Rs. 35.99 crores or Rs. 13.16 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 22nd July, 1960, shows Demand and Time liabilities at Rs. 804.42 crores (Rs. 21.85 crores on account of borrowings from banks) and Rs. 1,211.39 crores (Rs. 27.12 crores), compared with Rs. 787.37 crores (Rs. 21.64 crores) and Rs. 1,211.84 crores (Rs. 24.77 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have diminished by Rs. 3.01 crores and Rs. 14.85 crores to Rs. 47.60 crores and Rs. 106.77 crores, respectively. There is a drop of Rs. 3.36 crores to Rs. 728.88 crores in investments. Advances and bills discounted at Rs. 1,119.38 crores show a fall of Rs. 8.96 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.6 percent and 55.5 percent, against 8.6 percent and 56.4 percent.

THE DIRECTORS OF THE HONGKONG AND SHANGHAI Banking Corporation have decided to pay an interim dividend of £1 5s a share for the year ended 31st December, 1960. This payment is on the increased capital of 631,798 shares. The 1959 interim dividend of £1 2s 6d was paid on 498,491 shares.

THE NET PROFIT OF THE INDIAN OVERSEAS BANK Ltd, including Rs. 1,26,011 brought in, amounts to Rs. 19,30,393 for the half-year ended June 1960.

THE NET PROFIT OF THE INDIAN BANK LTD AMOUNTS to Rs. 22,38,746 for the half-year ended June 1960. This, together with Rs. 80,143 brought in, makes Rs. 23,18,889 available for disposal.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of April 1960 :

		Rs.
(1)	At the Reserve Bank of India in India ...	51,94,55,000
(2)	At treasuries in India ...	32,84,000
(3)	In England (Sterling converted at 18d the rupee) ...	1,31,04,000
	Total ...	53,58,43,000

4 PER CENT. STATE GOVERNMENTS LOANS 1969

Name of State		Amount	Issue price per cent
(1)	Andhra Pradesh	Rs. 900 lakhs	Rs. 99.75
(2)	Bihar	Rs. 300 lakhs	Rs. 99.50
(3)	Gujarat	Rs. 500 lakhs	Rs. 100.00
(4)	Kerala	Rs. 400 lakhs	Rs. 99.50
(5)	Madhya Pradesh	Rs. 500 lakhs	Rs. 99.50
(6)	Madras	Rs. 1,200 lakhs	Rs. 99.75
(7)	Maharashtra	Rs. 1,000 lakhs	Rs. 100.00
(8)	Mysore	Rs. 400 lakhs	Rs. 99.75
(9)	Orissa	Rs. 400 lakhs	Rs. 99.50
(10)	Rajasthan	Rs. 500 lakhs	Rs. 99.75
(11)	Uttar Pradesh	Rs. 700 lakhs	Rs. 99.75
(12)	West Bengal	Rs. 700 lakhs	Rs. 99.75

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 29th August 1969.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 29TH AUGUST 1960 AND CLOSE ON 3RD SEPTEMBER 1960 (6TH SEPTEMBER 1960 IN CASE OF KERALA LOAN) OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 29th August 1960.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% Bombay State Development Loan 1960 will be accepted AT PAR for conversion into the new loan of the Government of Maharashtra. Securities of 3% Madhya Pradesh Loan 1960, Madras Government 3% Development Bonds 1960, Madras Government 3% loan 1960 and 3% U.P. Loan 1960 will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest at the rate of 3% per annum on the securities of Madras Government 3% loan 1960 and 3% U.P. loan 1960 tendered for conversion will be paid upto and inclusive of 28th August 1960. In case of securities tendered in respect of Madras Government 3% Development Bonds 1960, 3% Madhya Pradesh Loan 1960 and 3% Bombay State Development loan 1960 which are due to mature on 31st July 1960, interest will be paid at the rate of 3% per annum upto and inclusive of 30th July 1960 and at the rate of 4% per annum from 31st July 1960 to 28th August 1960 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS WILL also be received at PLACES WITHIN THE RESPECTIVE STATES as follows :—

(i) At the office of the Reserve Bank of India at Nagpur in the case of Maharashtra loan.

(ii) At the branches of the State Bank of India and at treasuries and sub-treasuries in the case of Andhra Pradesh, Bihar, Kerala, Madhya Pradesh, Maharashtra, Madras, Orissa, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India ... e of West Bengal Loan.

(iv) At the branches and treasury pay offices of the S... Bank of Hyderabad in the case of Andhra Pradesh and Maharashtra State loans.

(v) At the branches of the State Bank of Mysore (except at Bangalore, Mangalore and Gulbarga), the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in Mysore State in the case of Mysore State loan.

(vi) In the case of Gujarat loan the State Bank of Saurashtra at Bhavnagar and its branches in the State of Gujarat will collect applications and forward them to the nearest receiving office.

Copies of Notifications and application Forms may be obtained at any Receiving Office.

Applicants tendering their application at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, New Delhi and Madras will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans, which may not be fully subscribed by that time. To avail of this facility, the persons tendering their applications should complete the SPECIAL OPTION FORM copies of which are available on application from any of the abovementioned offices of the Reserve Bank of India.

LONDON FINANCIAL LETTER

EFFECTS OF CREDIT CURBS ON STERLING

By Air Mail.

IT has been interesting in the first weeks of July to compare the economic mood of Britain with that of six months previously. In the first weeks of January, optimism had given way to doubt. The advance was too fast; it would have to be restrained; no one knew when, or how, the Government would act. Bank rate was raised: the doubt remained. The Budget was presented: the doubt was accentuated. Credit control was imposed: but was it enough? Then, near the end of the half-year, Bank rate was raised again and more "special deposits" were called: the task of restraining the advance seemed to have been completed. So in the first weeks of July, the mood has been comparatively serene—not seriously disturbed even by talk of a recession which might result from the last series of restraints. A factor in this improvement of mood is the evidence of confidence in the pound—it has been generally, although not consistently, firm since the "further measures" of June. No sterling crisis is expected this autumn; and it is thought that if there are temporary difficulties, they will be overcome by resorting to the International Monetary Fund rather than by further restrictive measures, since to provide such temporary assistance is, after all, one of the main functions of the Fund. However, even temporary difficulties may be avoided; for the U.K. Treasury's figures of the balance of payments have been better than could have been deduced from the relevant figures of the Board of Trade.

Overseas Trade

The picture of overseas trade in the first half-year, as presented by the U.K. Board of Trade is not, indeed, altogether reassuring. Seasonally-adjusted figures show that the value of both imports and exports was 16 percent higher in the first quarter of this year than in the same period of last year, but that in the second quarter, on the same comparative basis, the value of imports was 18 percent higher while that of exports was only 6 percent higher. The performance was particularly unsatisfactory in June, when exports reached their lowest level in nine months and the gap between exports and imports, almost £100 million, was the widest since January 1957, when the Suez trouble was still affecting trade. A major statement by Mr. Harold Macmillan, the U.K. Prime Minister, on 18th July marked the beginning of a new drive to increase exports. If British industry does not energetically respond to the new appeals, it can only blame itself, collectively, for any further restrictions which may be imposed. The performance of some big firms in overseas markets is exemplary, but many thousands of smaller firms seem indifferent to export trade when they can easily sell their output at home. If these smaller firms persist in this attitude, the U.K. Government may feel compelled to make trading more difficult at home.

An alternative procedure, which is favoured by an anonymous "eminent economist" contributing to a London stockbroking firm's review, is to restrict imports by higher tariffs. The reasoning that supports this proposal is that the relaxation of import restrictions last year is the main cause of the increase in imports this year. It is true that the relaxation, affecting particularly U.S. goods, has revealed a bigger demand for foreign manufactures than was generally expected; but it can be argued that the demand would have been no more than moderate if demand in the U.K. market, as a whole, had been less buoyant. In any case, the stimulant of foreign competition seems to be needed by many British firms. Stockbuilding of materials may have been an equally important element in the increase in imports; and the general measures of control are now resrticting it.

Variety in the Stock Market

The London Stock Exchange responded unfavourably to the figures of overseas trade, but general industrial ordinary shares have reflected the new mood of tranquility, with prices rising gently, since the "further measures" of June. The gilt-edged market, on the other hand, was not prepared for the very short-dated stock, with a gross redemption yield of nearly 6 percent, which was offered in the middle of July. Prices of existing stocks at the "short" end of the market were sharply adjusted downwards. This issue reflects a keen demand for short-dated stocks, as a consequence of which the authorities had nearly exhausted the supply of such stocks that they like to sell, not only to provide finance but also to regulate the market. They must prepare for the next maturity, of nearly £800 million of Funding stocks due for repayment in the middle of April next: some of the proceeds of the new Treasury stocks, nearly £300 million, will be used to buy the Funding stocks in advance of their maturity.

That the Treasury is not committing itself to a high "coupon"—5½ percent, with an issue price of 99—for much more than two years ahead may imply that it does not expect the present structure of interest rates to be maintained for long. As for the terms, it may be wondered that the Treasury seems to derive little benefit from the strong demand for "shorts"; but such stocks are intended to appeal to the discount market, which has to pay high rates for borrowed money at the present level of Bank rate and has been carrying bonds recently at a loss Because investors' preference for short-dated stocks (the new stocks appeal, for instance, to industrial companies with surplus liquid assets available) is a special characteristic of the present financial position—the "long" end of the gilt-edged market is more than usually divorced from the "short" end, and holders of medium- and long-dated stocks can make no deductions from the terms of the new issue. Longer-term interest rates may remain high for years after short-term rates have been reduced. Another specially interesting development this month is the application for a London quotation for the shares of August Thyssen-Huette, about £1¼ million of the £38 million capital being available in London. Thyssen, the biggest steel producer in the Continent, is the first German Company ever to have its ordinary shares quoted in London, and these are the first Continental shares to be quoted in London since the war. Others, undoubtedly, will follow.

83 Branches in 28 countries for complete world-wide banking services.

Stocks and Shares

SHARE VALUES EASE AS BUSINESS SHRINKS

INDIAN IRON PRODUCTION FIGURES DISAPPOINT OPERATORS

Wednesday Evening.

THE Calcutta Stock Exchange had another dull week. The sharp reduction in business suggested that the recent boom was petering out. Investors showed little inclination to buy even the bluest of blue chips at the prevailing prices. In the absence of support, the downward trend continued. Indian Iron shares declined from Rs. 24.82 to Rs. 24.48 following the publication yesterday of the disappointing production figures for July. The meeting of the Investment Committee of the Life Insurance Corporation is due to be held in Calcutta tomorrow. It will be interesting to see whether any substantial purchases are made at the prevailing level of prices.

Excluding Assam and Punjab, 12 State Governments have announced their borrowing programme for a total sum of Rs. 75 crores, which is the highest on record. All the loans will carry interest at the rate of 4 percent a year and will be repaid at par on 29th August, 1969. The lists will open for subscription on 29th August, 1960. Details are given below:

Name of State	Amount Rs. lakhs	Issue Price Percent Rs.
Andhra Pradesh	900	99.75
Bihar	300	99.50
Gujarat	500	100.00
Kerala	400	99.50
Madhya Pradesh	500	99.50
Madras	1,200	99.75
Maharashtra	1,000	100.00
Mysore	400	99.75
Orissa	400	99.50
Rajasthan	500	99.75
Uttar Pradesh	700	99.75
West Bengal	700	99.75

Compared with the terms offered last year, subscribers will be at a slight advantage this year in view of the fact that the same rate of interest is being offered for loans maturing three years earlier—in nine years instead of 12 years. In view, however, of the shortage of bank funds this year, the response is not expected to be as encouraging as last year, when over-subscriptions totalled up to the satisfactory figure of more than Rs. 32 crores. Government securities were quiet due to the stringency in the money market, although prices were more or less unchanged.

There was somewhat more enquiry for preference shares as investors were attracted by the generous yields offered by several good scrip. But sellers were scarce.

In the banking section, United Commercial were slightly better at Rs. 75.

In coals, Bengal were taken at the higher rate of Rs. 335, while Equitable were neglected at Rs. 28 because of the reduction in the latest dividend. Pench Valley eased from Rs. 23.50 to Rs. 22.62. In contrast, East Indian were slightly better at Rs. 31.87.

In cotton textiles, Kesoram were marked down from Rs. 35 to Rs. 33, and Dunbar were offered at the slightly lower rate of Rs. 227.

Little or no business was reported in electric supply shares.

In the engineering group, Braithwaite met with profit-taking and were marked down from Rs. 34 to Rs. 32.75. British India Electric improved to Rs. 37.50, while Guest, Keen, Williams reacted to Rs. 50. Jessop were marked at Rs. 24.81, ex dividend, and Textile Machinery receded to Rs. 28.50.

Jute shares were dull and featureless and business was of a retail nature. Here is a chart showing representative price movements:

	Opening 28th July Rs.	Closing 3rd August Rs.
Anglo-India		
Bally	31.62	31.25
Kanknarrah	88.00	83.00
Lawrence	145.00	143.00
Union	194.00	196.00

In papers, Bengal were steady at Rs. 102, ex dividend, as were India Paper Pulp at Rs. 21.87. Orient fluctuated narrowly around Rs. 46, and Sirpur recovered to Rs. 20.75. Titaghur were taken at Rs. 41.50.

In sugars, there was a small enquiry for Belsund at Rs. 13.75 and Dyer Meakin Breweries advanced further to Rs. 23.12.

Among miscellaneous industrials, Alkali and Chemical reacted to Rs. 33.50 and Angelo Brothers were offered at Rs. 21. Aluminium Corporation were in demand and recovered from Rs. 19.75 to Rs. 20.25. Britannia Biscuits were steady at Rs. 35.50, while Dunlop Rubber eased to Rs. 47.37 on profit-taking. Hindustan Motors were quiet at Rs. 22.87, as were Indian Aluminium at Rs. 31.37. Indian Oxygen were shaded at Rs. 41 and Associated Battery at Rs. 37.75. Phillips Carbon Black recovered from Rs. 13 premium to Rs. 14.25 premium. Philips India were quoted at Rs. 30. Rallis India, after being sold down to Rs. 138, recovered at the close to Rs. 140. Union Carbide were better at Rs. 51.

Tea shares were dull and neglected and prices generally were lower.

In the mining group, Indian Copper changed hands freely at Rs. 5.10, ex dividend, and Metal Corporation were marked at Rs. 10.75, ex rights. Orissa Minerals were firm at Rs. 44.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for July 1960 are published below, the figures for June 1960 being given in brackets.

	(In tons)	
Production		
Pig iron	72,502 (80,127)	
Steel ingots	62,962 (69,140)	
Saleable steel:		
(a) Semis	4,292 (23,795)	40,897 (53,737)
(b) Finished	36,605 (29,942)	
Despatches		
Saleable steel	40,287 (53,607)	

Martin Burn Ltd, managing agents, state that the production is low on account of one blast furnance being off for relining. Also, the output of the main units of the plant was reduced by the shortage of raw materials resulting from the Central Government employees' strike.

Choonabhutti Tea

The profit of the Choonabhutti Tea Co. Ltd has increased from Rs. 4.63 lakhs to Rs. 5.62 lakhs for the year ended December 1959. An ordinary dividend of Rs. 30 a share, taxable, has been declared, against Rs. 22.50, tax-free, in the previous

for the future

Under the furrowed brow, his aging eyes see
his child grow to manhood. He gives his all: care
and protection, knowledge culled from experience.
And prepares him to meet the future.

Soon the youth will learn from life.
Soon will come the struggle to achieve.
Soon he will be part of the striving . . .

The striving and effort for a better world.
A world that offers a little more—
a little less of the care, a little more of the joy.

Today, as in the past, our products help to make homes cleaner, healthier, happier. But today we are also working for . . . **Tomorrow,** when the evergrowing urge for better living will demand still greater efforts And we shall be ready with wider service, new ideas, new products . . .

Today and Tomorrow...Hindustan Lever serves the home...

FR. 4-X53

year. Provision for taxation is increased from Rs. 2.15 lakhs to Rs. 2.36 lakhs. General reserve absorbs Rs. 50,000 (against Rs. 60,000) and development reserve Rs. 2,864 (against Rs. 4,420). After making various adjustments, there is a carry-forward of Rs. 98,628, against Rs. 1,13,818 brought in. A crop of 13,761 maunds was secured, against 14,667 maunds. The average sale price was Rs. 2.19, against Rs. 2.07 a lb. Estimates for the current year have been framed for a crop of 14,500 maunds at a cost of Rs. 18.26 lakhs. Andrew Yule and Co. Ltd will cease to act as managing agents of the Company from 15th August, 1960. Their appointment as secretaries and treasurers of the Company for a period of five years from that date has been approved by the Central Government.

Hattikhira Tea

The profit of the Hattikhira Tea Co. Ltd has fallen from Rs. 3.12 lakhs to Rs. 1.75 lakhs for the year ended December 1959 after providing Rs. 86,000 (against Rs. 1.30 lakhs) for taxation. A dividend of 5 percent, taxable, has been declared, against 5 percent, tax-free, in the previous year. After making various adjustments, there is a carry-forward of Rs. 60,217, against Rs. 74,618 brought in. A crop of 17,826 maunds was manufactured, against 22,163 maunds. The average sale price was Rs. 1.86, against Rs. 1.70 a lb. Estimates for 1960 provide for a crop of 20,000 maunds at a cost of Rs. 22.52 lakhs.

Bombay Market

SHARE PRICES FALL IN RESTRICTED ACTIVITY

SHARP DECLINE IN CASH SCRIP

Wednesday Evening.

THE Bombay stock market was quiet during the past week, and prices declined on a broad front. The fall was particularly pronounced in the case of shares on the cash list, because operators were worried about the possibility of official measures to restrain speculation. It was thought that the prices of many shares, especially of new ones, had been inflated artificially without any economic justification. In the case of clearing shares, bulls were anxious to lighten their commitments following rumours that the Stock Exchange authorities might adopt sterner measures to curb speculation. It was thought that the president of the Stock Exchange might be authorised to impose *ex parte* margins. The present facility for operating within free limits in some clearing shares might also be withdrawn at the discretion of the Stock Exchange. Bigger deliveries at the past settlement and the approach of the next settlement induced caution.

Steel shares were subdued because of the delay concerning the decision about changes in the retention price of steel. Tata Steel were quoted at Rs. 160.75 and Indian Iron declined to Rs. 24.52 on the publication of the lower production figures for July. Engineering shares fell on a broad front and sellers predominated. Alcock Ashdown were offered at Rs. 300 and Tata Locomotive declined to Rs. 325 on pressure. Larsen and Toubro were quoted lower at Rs. 51.50 in spite of prospects of a further share capital issue. Premier Construction were dealt in at Rs. 368 and Mukand Iron were transacted at Rs. 25.25. In motor shares, Premier Automobile were available at Rs. 187.50 and Hindustan Motors were done at Rs. 22.84.

Cotton mill shares fell on fears that cloth prices might be regulated. Bombay Dyeing were offered at Rs. 70.70 and Century at Rs. 507. Kohinoor were placed at Rs. 359 and Simplex came to hand at Rs. 175. Gokak were transacted at Rs. 154 and Svadeshi were dealt in at Rs. 255. India United Ordinaries were offered at Rs. 13.64 and Apollo were quoted lower at Rs. 1.68. Finlay were done at Rs. 352 and Standard fell to Rs. 1,930 on pressure.

Miscellaneous shares moved down in sympathy with the general trend. Among sugar shares, Belapur lost at Rs. 377, as did Walchandnagar Industries at Rs. 305. Phalton were indicated at Rs. 185. Steamship company shares were shaded, and Scindia Steam were sold at Rs. 15.76. Great Eastern Shipping found little support at Rs. 17.48. Cement shares were quiet, and Associated Cement were available at Rs. 146.50. Digvijay were quietly steady at Rs. 174 on the publication of a good report. Mining shares fluctuated narrowly, and Shivrajpur Syndicate were dealt in at Rs. 75.50. Chemical shares were quiet, and Tata Chemical declined to Rs. 20.64. Indian Dyestuff fell sharply to Rs. 825 and Poly-Chem were offered freely at Rs. 295. Colour Chem were neglected at Rs. 450. National Rayon lost at Rs. 526 and Bombay Burmah were quoted at Rs. 612. Voltas were offered at Rs. 298 and Wimco were quoted at Rs. 241.25. Ceat Tyre declined sharply to Rs. 285 and West Coast Paper were dealt in at Rs. 228.

Bank shares were steady but turnover was restricted. Bank of India were placed at Rs. 104 and Central Bank were taken at Rs. 51. In the insurance group, New India Assurance were quoted at Rs. 64 and Indian Mercantile came to hand at Rs. 45.50.

Electricity supply shares were quietly steady, and Tata Hydro were bought at Rs. 106. Ahmedabad Electric changed hands at Rs. 89.50 and Bombay Suburban were placed at Rs. 89.50.

Madras Market

SENTIMENT SUBDUED AT CLOSE

SELECTIVE DEMAND FOR TEA AND RUBBER ISSUES

Wednesday Evening.

THE Madras stock market closed in a subdued mood after remaining steady earlier in the past week. Towards the close, operators became anxious in view of lower advices from Calcutta and Bombay. The possibility of official moves to restrain speculation was discussed. Business in Government securities was small because attention was diverted to the coming State loans. Public utilities were neglected. In the planting group, tea and rubber shares were selectively bought on hopes of steadier prices for the commodities. In the miscellaneous group, chemical and cement shares attracted notice, but the earlier steadiness in sugar shares was not maintained at the close.

The Madras Government has decided to raise a loan of Rs. 12 crores bearing an annual interest of 4 percent. The list will open on 29th August and the loan is being offered at an issue price of 99.75 percent, the maturity being in 1969. The Madras Government 3 percent Development Bonds 1980 and the Madras Government 3 percent Loan 1960 will be accepted at par for conversion into the new loan.

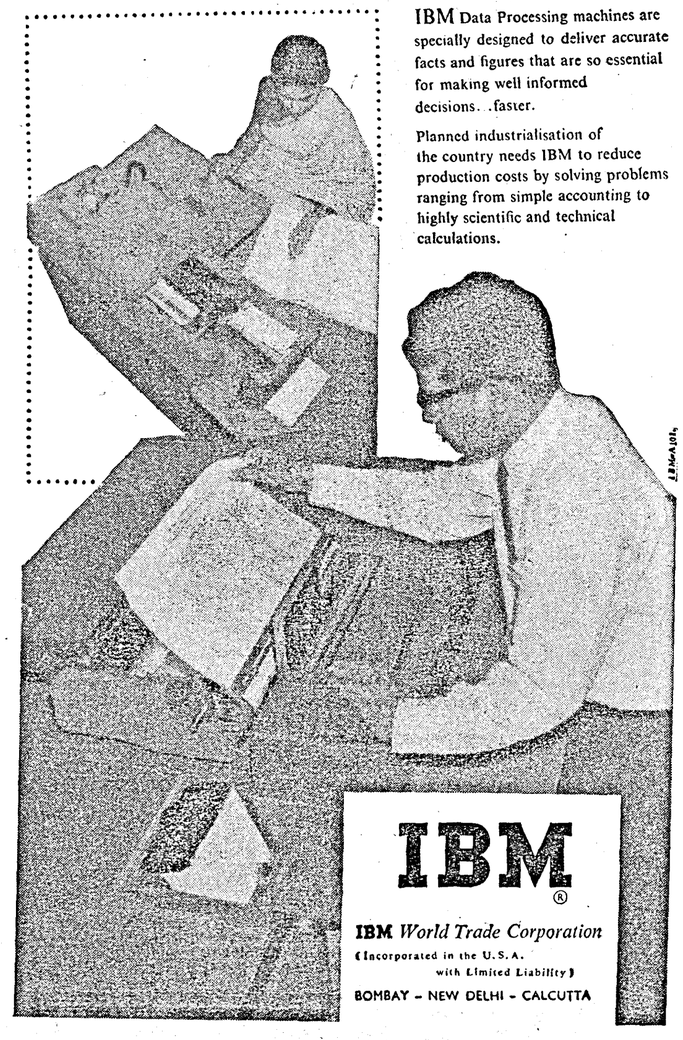
Among public utilities, Cochin were sold at Rs. 10.30 and South Madras were offered at Rs. 10. Vellore were done at Rs. 11.50 and Berhampur came to hand at Rs. 6.

There was scattered interest in bank shares. Indian Overseas were transacted at Rs. 175 and Indian came to hand at Rs. 179. Andhra were quoted at Rs. 99.85.

In the sugar group, Deccan were available at Rs. 16.30 and E.I.D. changed hands at Rs. 61.75. India were done at Rs. 12.45 and business passed in Kirlampudi at Rs. 86. Mysore were steady at Rs. 60.50, as were United Breweries at Rs. 108.

In the planting group, selected tea shares attracted attention as good prices were realised for the commodity at the Cochin auctions. Rubber shares were supported on talk of an increase in the price of the commodity. Coffee shares were quietly steady because the international trend was better. Blue Mountain were transacted at Rs. 5.32 and Ouchterlony were done at Rs. 5.15. Cochin Malabar came to hand at Rs. 8.34 and Consolidated Coffee were transacted at Rs. 27.25. Highland realised Rs. 15.50 on the payment of a dividend of 15 percent. Kadur were taken at Rs. 2.84 on the declaration of a dividend of 7½ percent. Balanoor were offered at Rs. 16.70 and Be Be changed hands

Adding to India's Economy



IBM Data Processing machines are specially designed to deliver accurate facts and figures that are so essential for making well informed decisions. .faster.

Planned industrialisation of the country needs IBM to reduce production costs by solving problems ranging from simple accounting to highly scientific and technical calculations.

BOMBAY - NEW DELHI - CALCUTTA

at Rs. 3.15. Emerald Valley were dealt in at Rs. 5.95 and Gokul were taken at Rs. 1.93. Kil Kotagiri were steady at Rs. 5.55 and Lucky Valley made Rs. 12. Midland were sold at Rs. 12.45 and Nilgiri were done at Rs. 7.50. Nonsuch were quoted at Rs. 28.15 and Periakaramalai changed hands at Rs. 3.81. Peermade were quietly steady at Rs. 23.50, as were Parkside at Rs. 28.10. Rajagiri were dealt in at Rs. 22.50 and Rajendra changed hands at Rs. 16. Travancore Rayon were bought up to Rs. 38 and United Nilgiri were placed at Rs. 22.25. Waterfall met with support at Rs. 4.67 but Woodland were offered freely at Rs. 7.65.

Textile shares showed mixed trends. Lakshmi were steady at Rs. 172 and Madura were bought up to Rs. 33.90. Business passed in Travancore Rayon at Rs. 38 and Kothari were bought up to Rs. 12.75. Bangalore Woollen were quoted at Rs. 198 and Buckingham were transacted at Rs. 206. Cambodia were done at Rs. 10 and Coimbatore Cotton made Rs. 173. Mettur were steady at Rs. 399 and Premier were dealt in at Rs. 238. South India Viscose declined to Rs. 143.75 and Vasanta were offered at Rs. 238.50. Anglo-French were placed at Rs. 125 and Hemalatha were transacted at Rs. 7.25.

In the miscellaneous group, India Cement were steady at Rs. 7.15 on the payment of a dividend of 11 percent. Aluminium Industries were quoted at Rs. 25.50 and Ashok Leyland were placed at Rs. 9.55. Andhra Cement were steady at Rs. 11 and F.A.C.T. realised Rs. 12.75. Enfield were taken at Rs. 21.50 and General Paper came to hand at Rs. 13.62. Mettur Chemical were quoted at Rs. 14.25 and Mysore Paper were supported up to Rs. 26.75. Parry's Confectionery were available at Rs. 5.60 but Spencer met with support at Rs. 22.60. Singareni were quoted at Rs. 10 and Standard Motor changed hands at Rs. 16.70. Textool were steady at Rs. 189.50 and Travancore Cement were bought at Rs. 8.25. Tube Investment were indicated at Rs. 337 and United India Fire were dealt in at Rs. 7.92.

IRREGULAR TREND IN STOCK MARKET

GILT-EDGED AND INDUSTRIALS LOWER

London, 3rd August.

THE stock market presented a generally unsettled appearance in the pre-holiday week, but the tone improved immediately before the holiday and this better tendency was maintained afterwards. On balance, therefore, the market's performance was fairly satisfactory, particularly in view of the various adverse influences which have been restraining the market recently. The earlier dull trend was due primarily to the low level of support which was insufficient to absorb the small selling in progress. A feature of the week was the smallness of business, but this was not surprising in front of the peak holiday week-end of the year. The international situation and events in Africa continued to restrain markets, but the economic situation reasserted itself as the main adverse influence. Nervousness concerning the export situation emphasised by the fall in motor-car exports, the sharp rise in bank advances disclosed by the mid-July statements raised fears of a further intensification of the credit squeeze, although these fears diminished later. In addition, the renewed weakness of Wall Street became an increasingly important factor and it was noted that the sharp upward movement at that centre, which followed the reduction in United States margin requirements, proved short-lived. The gilt-edged market was very quiet, and routine selling brought lower prices in the absence of support. Industrials lost ground on small selling and lack of support, but the appearance of a few buyers towards the end of the week was responsible for some recovery in leading issues. Gold shares staged a modest rally, but turned easier later, and were only slightly higher on balance. *Coppers* were above the worst but down on the week. Tin shares lost ground and lead-zinc shares were on the dull side. Oil shares tended lower. Rubber shares improved after early dullness. Tea shares moved within narrow limits.

The Money Market

Fairly comfortable conditions prevailed in the money market during the past week. Credit was not always readily available, but with a little assistance from the authorities on one or two occasions, the market was able to overcome the difficult periods without borrowing on Bank rate terms. The release of Health Service's money at one time and later local authority money, put the credit situation on an easy basis on the days concerned, and the rate for overnight loans cheapened to as low as 3½ percent after the usual opening level of 5½ percent. On the days when money appeared a little uncertain, a rate of 5½ percent and even 5⅝ percent was conceded for loans, but mostly 4½ percent was the more effective rate throughout the week. There was only a moderate demand for bills from the banks with late September, early October and "hots" changing hands at 5⅛ percent. After the weekly tender, business in bills took place at 5⅛ percent, thus reflecting the higher average rate which came out at £5 10s 10.96d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "Gilts are very steady and appear to be forming a base along the 79.29-79.50 *Financial Times* index area. Industrials had minor fluctuations only. In gold mines, support was still evident for leading financials and younger mines. In base metals, political factors predominate. In oils, there was a minor rally from the recent lows. Since the main elements in general market picture seem to be further weakness on Wall Street and continued uncertainty on the international front—and still no definite evidence about the success or otherwise of the credit squeeze concerning the export position—it seems to us that equities are behaving remarkably well in maintaining their position. If Throgmorton Street really were ripe for a bear market it is hard to imagine a combination of circumstances better calculated to start it off than the events of the past few weeks. As it is, investors appear resigned to live with uncertainties around the present levels—which is just as well, as we see no quick resolution of these uncertainties in the immediate future, and by inference, therefore, no decisive trend in either direction."

Activity on Wall Street

U.S. Government obligations advanced with many reaching new highs for the year. Investment companies were among the active buyers particularly of the high interest coupon notes of recent issue, presumably representing the switching of funds from the stock market to the Treasury list. High quality corporates were also strong with most issues at new high. Convertibles were mostly lower in line with the recent fall in security values. In foreigners, Belgian Congo 5½ percents rose sharply, but the gain was not fully held. Rhodesia 5½ percents were weak. Australians were mostly higher, while Union of South Africas were lower. Japanese Government 5½ percents rose, while among Europeans, Amsterdam 5½ percents advanced to sell at a new high for this year. French Credit Foncier moved erratically, while German nationals tended to ease. Chile 3 percents were fractionally lower.

U.K. MACHINE TOOL SUPPLIERS WORRIED ABOUT SHRINKAGE OF INDIAN MARKET

(FROM OUR NEW DELHI CORRESPONDENT)

THE *post-mortem* of the recent strike by Central Government employees is going on. The happiest of the lot are the communists. They have been able to expose the incompetence of the *Praja Socialists*, and are now doing their best to woo workers by pleading for them.

The aim of the strike leaders was obviously to subvert civil authority by the "dislocation of communications and disruption of Government work." But the strikers did not succeed in doing that. With the exception of West Bengal, Bombay, Ahmedabad and Nagpur, the employees, generally speaking, remained loyal.

After Mr. Asoka Mehta returned from abroad, he and Mr. Guruswamy clearly saw that, unless the strike was called off quickly, it would collapse as the strikers were fast resuming work. So the strike was called off "unconditionally" through a resolution, which congratulated the "martyrs who lost their lives in the cause of the present struggle." It also warmly congratulated "lakhs of Central Government employees who have responded to the call." The unions which had given the notice of strike had claimed a membership of 550,000. The "friendly" newspapers had placed the numbers who went on strike at 250,000. In other words, 300,000 members of the trade unions, which had given the strike notice, did not respond to the call.

Thereafter, the resolution condemned the Government—for preventing the strike leaders from paralysing the economic life of the country. It also congratulated the general public for "the great support it gave to the strikers." Which public outside Calcutta and Sealdah the strike leaders had in mind, was not disclosed. In any case, this is the type of resolution on the basis of which the Government is being asked to "reciprocate the grand gesture." The joke of the past month was the statement of Mr. A. P. Sharma, general secretary of the National Federation of the Indian Railwaymen, that "unconditional withdrawal of the strike was definitely a victory of Gandhian trade unionism."

Recognition Withdrawn

After having learnt the bitter lesson, the Government of India has issued instructions withdrawing recognition from unions or associations which were parties to the strike. It also proposes to enact legislation to ban strikes in essential services and to set up suitable machinery for dealing with disputes relating to service conditions between the Government and its employees. The following is a list of the unions which gave strike notices and their membership:

Railways: All India Railwaymen's Federation (nine unions) 316,693. Southern Railway Labour Union (affiliated neither to A.I.R.F. nor N.F.I.R.) 16,634.

Defence Installations: All India Defence Employees Federation (out of 150 unions, 103 gave strike notice) 73,396.

Posts and Telegraphs: National Federation of Posts and Telegraphs Workers' Unions (nine unions) 74,800.

Central Government Employees: Confederation of Central Government Employees—11 unions and membership 76,215, made up as follows: All India Central P.W.D. Workers Union, 7,615; All India Income Tax (Non-Gazetted) Staff Federation 12,000; All-India (Non-Gazetted) Audit and Accounts Association 36,000; All-India (Non-Gazetted) Customs Staff Federation 3,200; Central Government Clerks Union 7,000; All-India Civil Aviation Department Employees Union 4,500; Indian Meteorological Workshop Workers Union 150; Indian Meteorological Department (Non-Gazetted Staff) Union 150; All India P. and T. Industrial Workers Union 5,500; Defence Accounts Association (membership not available) and Survey of India (Class III) Employees Union 400. The total membership of all these unions is 557,738.

It is presumed that the Government will shortly evolve consultative machinery to replace these unions. In doing so, "outsiders", irrespective of their party affiliations, should be eliminated. The Government has also issued instructions about taking disciplinary action against strikers. Its general line is that there should be no harshness in dealing with those who were merely misguided. Side by side, the instigators or actual participants in the strike should not go unpunished. For this purpose, departmental heads have been given the discretion to use their judgment in applying the Government's instructions. The Government has directed that the services of all those who have been convicted in a court of law should be terminated.

Punishment for Offences

All except those who were found indulging, say, in sabotage, violence, intimidation, or gross misbehaviour, are being allowed to return to duty. The guilty will be suspended and subjected to disciplinary proceedings. As for punishment, the Government has explained that the appropriate departmental authorities should exercise judgment and take into account extenuating circumstances. It is not the Government's wish that there should be wholesale dismissals. Strikers who are not subjected to disciplinary proceedings will have a suitable entry made in their character roll. Likewise, in organisations where some went on strike and some did not, a suitable entry will be made in the character roll of those who remained at their posts. These entries will be taken into account when questions like promotion and crossing of efficiency bars come up. There will be no pay for a striker for the period of unauthorised absence.

Benefits for Railway Workers

Notices of termination of service were issued to temporary non-industrial employees who went on strike. In these cases also those whose conduct was particularly objectionable will be suspended and disciplinary proceedings will be taken against them. Others will be allowed to return to duty and final decision will be taken in individual cases before the period of notice expires as to whether the notice should be revoked or not. The Government's acceptance of the Pay Commission's recommendations will result in an immediate increase in emoluments and a substantial increase in retirement benefits for all railwaymen who number about 1.15 millions. There are nearly 700,000 Class IV railway men and 450,000 Class III railway men (Class I and II officers on the Indian Railways number less than 4,500).

The main features of the revised pay structure are: (i) higher minimum and maximum salaries for employees in each grade; (ii) generally higher rates of increment; and (iii) merger of bulk of dearness allowance with pay.

Nearly 500,000 railway men in the lowest pay scale of Rs. 30-35, who now start on a basic pay of Rs. 30, will in future start on a basic pay of Rs. 70, and in addition, receive a separate dearness allowance of Rs. 10. Taking total emoluments, these employees at present join on Rs. 75 and retire on Rs. 80, if they are not promoted in the meanwhile. In future, they will start on Rs. 80 (where they end at present) and rise up to Rs. 95, if they are not promoted in the meanwhile. During this period, their rate of annual increment will be Re. 1, which is double the present rate. This grade of employees includes 133,000 gangmen, 18,000 gatemen, 4,000 chowkidars, 167,000 khalasies, 18,000 engine cleaners, 15,000 porters, 9,000 hamals and 36,000 sweepers. All other employees will benefit in a similar manner, though in varying degrees.

All the class IV and class III scales will have higher starting and higher maximum salaries. For instance, about 64,000 employees in the existing scale of Rs. 35-50, who include 37,000 pointsmen and 9,000 keymen, will start at Rs. 85 instead of Rs. 80 and end at Rs. 105 instead of Rs. 95. Again, employees in the existing scale of Rs. 100-185, who include 8,000 station masters, 2,300 guards, 3,000 train examiners, 8,000 commercial clerks, 2,000 ticket checking staff, 500 train clerks, etcetera, will all start at Rs. 170 instead of Rs. 155, and end at Rs. 260 instead of Rs. 250.

Rates of Increments Raised

The higher rate of increment is a common feature of all the revised class IV grades. Thus about 19,000 second firemen in the existing scale of Rs. 40-50 will receive an average annual increment of Rs. 1.5 instead of Rs. 1. About 2,000 drivers "B" will rceive an average annual increment of Rs. 12 instead of Rs. 10. The highest grade class III staff like loco foremen, station masters and 3,000 inspectors in the existing scale of Rs. 360-500 will receive an average annual increment of Rs. 25 instead of Rs. 20. While the emoluments of all the employees will go up as a result of the above-mentioned decisions, which have general application, some of the employees will benefit even more as their posts have been upgraded on considerations of their qualifications, duties, responsibilities, etcetera. Among the categories which will be so upgraded are certain unskilled class IV staff in workshops, ferro-printers, X-ray attendants, laboratory attendants, etcetera.

Among class III staff, those being upgraded include 5,500 sub-heads and head clerks in executive offices, 1,000 section controllers, 700 assistant yard masters, certain train examiners numbering 3,000, 12,000 drivers grade C, 1,000 shunters grade A, 7,000 shunters grade B, marine drivers and sarang, 1,000 matrons, sisters, staff nurses (and health visitors), 1,000 compounders-dispensers, sanitary-malaria inspectors, chemists, laboratory assistants, assistant store keepers, junior accountants, sub-heads in the accounts department, stock verifiers, assistant pay masters and certain teaching staff.

The pay in the revised scales will be fixed on the "point to point" basis. In other words, it will be assumed that an employee has rendered all his service in the new scale, instead of in the old scale, and he will be given the benefit of the higher increments from the starting point. This will result in a substantial gain to the employees concerned.

The immediate increase in total emoluments which will include both pay and dearness allowance in the various grades will vary from Rs. 5.5 a month to Rs. 25 a month. An increase of Rs. 5.5 will accrue to staff in the lowest class IV grade numbering about 500,000. As already stated, this grade includes, among others, 133,000 gangmen, 18,000 gatemen, 4,000 *chowkidars*, 18,000 *engine* cleaners, 167,000 khalasis, 15,000 porters, 36,000 sweepers, 9,000 hamals and large numbers of peons, water men, lamp men, etcetera. In the case of the highest grade class III employees in the existing scale of Rs. 360-500 (loco foremen, station masters, inspectors, etcetera), the immediate increase in emoluments will be Rs. 25. The increase which will accrue to some of the other important categories is shown below.

	Rs. a month
37,000 pointsmen, 9,000 keymen, large numbers of semi-skilled artisans in the scale of Rs. 35-50	5.72
18,000 second firemen in the scale of Rs. 40-50	5.41
8,000 first firemen in the scale of Rs. 50-80	10.18
61,000 semi-skilled artisans in the scale of Rs. 36-60	5.24
7,000 shunters grade B in the scale of Rs. 75-105	13.27
25,000 commercial clerks, 4,000 signallers, 18,000 tracers, etcetera, in the scale of Rs. 60-150	8.18
15,000 assistant station masters, 9,000 guards and a large number of assistant yard masters in the scale of Rs. 80-170	8.18
8,000 station masters, 2,000 guards, 7,000 commercial clerks, 2,000 ticket checking staff, 1,000 signallers in the existing scale of Rs. 100-185	9.38
12,000 station masters, 1,000 guards, 1,000 train examiners, 1,000 commercial clerks and large numbers of yard masters, signallers, train clerks, ticket checking staff and inspectors in the scale of Rs. 150-225	8.64

The categories of posts which have been upgraded will receive a much higher immediate increase. Thus 12,000 drivers of grade C who have been upgraded from Rs. 80-185 to Rs. 100-185 in existing terms, will get an immediate increase of Rs. 21.35 a month. The ultimate increase in the emoluments of each employee will be more than the immediate increase shown above. The ultimate increase in the case of the lowest grade class IV employees numbering 500,000 will, on an average, be about Rs. 11, against the immediate increase of Rs. 5.5.

Merger of Dearness Allowance with Pay

As the existing dearness allowance has been merged with pay, dearness allowance will continue as a separate element only for employees whose pay is below Rs. 300 in revised terms. This will be paid at the following rates:

Pay below Rs. 150 (in revised terms)	Rs. 10 a month
Pay of Rs. 150 or above but below Rs. 300 (in revised terms)	Rs. 20 a month

For example, skilled workers who are now in the grade of Rs. 60-130 in loco sheds, workshops and elsewhere, at present receive Rs. 55 to Rs. 60 of their emoluments in the form of dearness allowance; in future, only Rs. 10 to Rs. 20 of their emoluments will be paid in the form of dearness allowance, the whole of the balance being paid to them in the form of basic pay. Again, the higher grade employees such as drivers A, station masters, yard masters, assistant loco foremen, etcetera, who are at present in the scale of Rs. 260-350, receive Rs. 70 of their emoluments in the form of dearness allowance; but they will draw in future the whole of their emoluments in the form of pay.

What is the significance of the merger of dearness allowance with pay? One of the major benefits will be to increase the retirement benefits substantially. The revision of pay and allowances will increase the retirement benefits of pensionable and non-pensionable staff of the lowest class IV grade, numbering 500,000, by about 50 percent and by varying percentages in the case of others, the increase in the case of the highest class III employee being over 10 percent.

Provident Fund

The increase in emoluments on the one hand, and the merger of the bulk of dearness allowance with pay on the other, will naturally increase deductions on account of provident fund and house rent. The increased deduction on account of provident fund will really represent additional savings for the employee himself and will, in the case of the non-pensionable employee, attract a larger matching Government contribution which will go

to increase his retirement benefits. As for house rent, the rules have been amended to ensure that the rent of those whose pay is below Rs. 100 at present does not go up due to the merger of dearness allowance. About 750,000 may benefit from the change of rules.

The increase in provident fund deductions and, in the case of some, in house rent, will generally be much less than even the immediate increase in emoluments with the result that the "take home pay" will increase in almost every case. The rates of city compensatory allowance and house rent allowance are also being revised and the revised rates will be higher for the staff in the lower pay ranges. For instance, a class IV employee drawing a basic pay of Rs. 30 at present will get a city compensatory allowance of Rs. 5, instead of Rs. 3 at present, in a B class city, and an employee drawing Rs. 60 at present will get a house rent allowance of Rs. 15 instead of Rs. 10 at present in a B class city. (B class cities are those with a population of over 500,000). These increases will involve an expenditure of about Rs. 1 crore.

No change is being made in holidays, hours of work or casual leave of the running staff. On the contrary, some Pay Commission recommendations may benefit them. Much has been made of three Saturdays being declared full working days, but this decision does not affect 90 percent of the railwaymen. The changes made in the hours of work, holidays, and casual leave, affect only office and similar staff, who form less than 10 percent of the total staff on the railways. The hours of work at present prescribed for workshop staff and line staff will continue as at present; it is also being examined whether the basis on which certain categories, such as gatemen, have been classified (as "intensive", "continuous", "essentially intermittent") has changed on account of increased traffic, etcetera; necessitating reclassification. The line staff who, because of the nature of their duties, cannot be allowed public holidays, will continue to be eligible for 15 days' casual leave as at present.

Complaints of U.K. Machine Tool Suppliers

The British machine tool industry has complained that the rupee payment arrangements of the Indian Government are leading to an increasing diversion of orders from the U.K. to eastern Europe. It has also made the point that advertisements regularly appear in Indian newspapers offering east European machine tools from stocks, whereas the low level of import quotas for the established importers who handle British tools does not allow them to hold stocks for sale. An examination of the Calcutta newspapers shows that in one paper alone, there were 18 advertisements in April and 19 in May for east European machine tools, which, it was said, were available from stocks. It is understood that the greater part of these machine tools are imported by the State Trading Corporation. According to official returns, the following licences for machine tools were recently issued to the Corporation:

		(Rs. crores)
30th May, 1960	...	1.247
11th June, 1960	...	0.360
18th June, 1960	...	1.318
Total	...	2.925

In May-June 1959, bulk licences worth Rs. 1.33 crores were issued to the State trading body, and in August 1959, further licences for Rs. 70 lakhs were issued making a total of Rs. 2.03 crores for that year. It is understood that actual users who apply for licences to import machine tools are frequently advised by the licensing authorities to obtain their requirements from stocks of east European equipment. It is alleged that in some cases, particular tools which are barred by the current import policy, are nevertheless imported from these sources. The examples quoted are radial drills, wood-working band saws, universal cylindrical grinders, precision column drills, gear shapers and vacuum moulding machines. If this information is correct, it appears that certain machine tools are imported from east European sources which are not allowed to be imported from the U.K. or other western countries. The overall figures for machine tool imports show a marked fall from the U.K. in 1959, compared with 1957, while the total of imports has increased. The figures are as follows:

MACHINE TOOLS ONLY

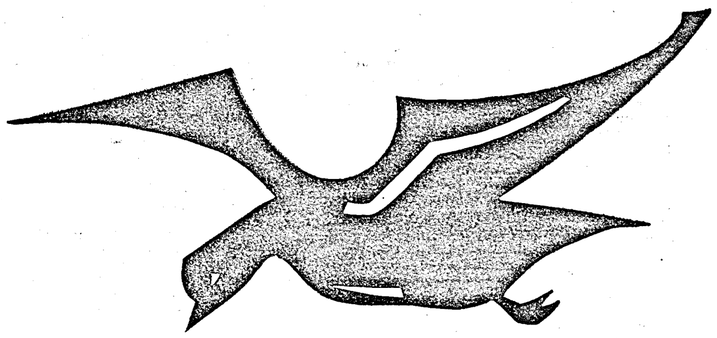
	1957		1959	
	Rs. lakhs	Percent	Rs. lakhs	Percent
United Kingdom	428.6	41.2	280.8	25.5
Eastern Europe	71.1	7.0	166.6	15.1
West Germany	348.5	34.3	388.7	35.2
U.S.A.	65.6	6.4	160.2	14.5
Switzerland	21.6	2.1	28.5	2.6
France	23.3	2.2	44.3	4.0
Total	10,19.1		11,05.0	

The figures show a definite trend that imports from the U.K. have been falling both absolutely and as a share of the total trade in machine tools. At the same time, imports from east European countries have increased steadily, and their share of the trade is twice what it was two years ago. In some categories, there appears to have been a definite diversion from the U.K. to east European supplies. Looked at from the viewpoint of a U.K. manufacturer who specialises in one or more of these particular categories, this represents a serious loss of trade. The size of the bulk licences given to the State Trading Corporation for imports from eastern Europe appears to be increasing substantially. It was about Rs. 2 crores in 1959 and is already Rs. 3 crores in 1960. A figure of Rs. 5 crores has been spoken of, and unless there is an overall increase in imports, this may make further inroads into the U.K. trade.

West Germany Liberalising Imports

The West German Government has agreed to take a series of steps to liberalise imports from India. This follows consultations between the representatives of the Governments of West Germany and India in pursuance of the trade arrangement between the two countries concluded on 30th October last year and the G.A.T.T. decision asking West Germany to relax existing restrictions as soon as possible. It is understood that West Germany plans to free most of the import restrictions on the textile group during the next five years. Among the other items on the restricted list, imports of goods like sewing machines, ceramics and toys, in which Indian exporters are interested, are now regulated under global quotas, which are to be increased annually. Licences for imports from India will be available to West German traders in terms of these quotas.

For certain textile items, it has not been possible so far for the West German Government to indicate an official date for complete liberalisation, but it is the intention to establish quotas for these. Indian exporters could use this facility to effect sales to German buyers. As for hand-woven cotton fabrics, the West German Government has indicated its readiness to consider the grant of additional licences, if applications are certified by an Indian Government authority that the goods are "hand-woven". The All India Handloom Board in the Central Ministry of Commerce and Industry may be approached for the required certificate. A consultative protocol on these lines has already been signed between the representatives of the two Governments. The protocol provides that, as soon as the value for which licences are issued is fully taken up, West Germany will automatically increase the quota by 50 percent. As for "household articles", this automatic rise will be of the order of 100 percent. The items covered by the protocol are fabrics made of cotton, wool, art silk, artificial and synthetic textiles, filaments and garments, coir carpets and fabrics, sewing machines, toys, etcetera. In order to take full advantage of the quotas released for imports from India, Indian exporters may seek further details from the Director of the Indian Trade Centre, Frankfurt, or the First Secretary (Commerce), Indian Embassy in Bonn, or the Indo-German Chamber of Commerce in Bombay and Calcutta. Since most of the quotas have to be used by the end of the year and the "betterment" clause in the protocol can be attracted only when these quantities are fully used, Indian exporters should make an all-out effort to enter the West German market as soon as possible.



a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories ... manufacture plants for water treatment ... supply paper for a variety of uses ... make jute goods and steel castings and structurals ...

Birds have today launched on a programme of expansion to increase their output and service facilities ... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

CITY REACTS ADVERSELY TO TRANSFER OF MR. LLOYD TO TREASURY

BIG RISE IN BANK ADVANCES

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Prime Minister has kept down to ten the number of changes he has made in his Government as a result of the resignations of Mr. Heathcoat Amory, Chancellor of the Exchequer, and Mr. Derek Walker-Smith, Minister of Health. It is felt that a more comprehensive reshuffling will be made within six months or a year. In spite of opposition, he has appointed Lord Home, the former Commonwealth Secretary, to replace Mr. Selwyn Lloyd at the Foreign Office, with Mr. Heath from the Ministry of Labour as a sort of first lieutenant with Cabinet rank and special responsibility for European affairs in the Foreign Office and the House of Commons spokesman for that department. His justification for this move is that in the first place, he has chosen the best man available for the particular job and, secondly, the Foreign Secretary in the past answered only about one-quarter of the questions relating to his department and was available for only one-third of the time the House of Commons devoted to foreign affairs. Mr. Heath should be able to do better than that and yet Lord Home will still be available for the travelling which the U.K. Foreign Secretary is obliged to do. The return of Mr. Peter Thorneycroft as the Minister of Aviation and of Mr. Enoch Powell as the Minister of Health is widely welcomed since they will strengthen Mr. Macmillan's team. Mr. Duncan Sandys has replaced Lord Home as the Commonwealth Secretary, where his talents will stand him in good stead.

The City has not reacted too well to Mr. Selwyn Lloyd's transfer to the U.K. Treasury, where Mr. Amory inspired confidence by his readiness to do unpopular things if he thought they were necessary. Mr. Selwyn Lloyd will be "on trial" for the present, for his record as Foreign Secretary—as far as City opinion is concerned—is not very impressive, and he is not considered to have the necessary strength and authority to make a good Chancellor. Time, however, may prove differently.

Bank Loans Rise

The change comes at a time which can hardly be regarded as propitious, for the present economic situation suggests that the U.K. Government has not adopted the correct policy to meet current difficulties. Advances by the 11 London clearing banks in the five weeks ended 20th July are shown to have advanced by £99 million. This is the largest monthly rise since March 1959, and it follows an addition of only £3 million to the loans' total between May and June. The City took fright, for this had occurred in spite of a 6-percent Bank rate, special deposits and official warnings. On the other hand, it overlooked that the rise was largely caused by seasonal factors—particularly holiday spending and the debiting of half-yearly interest to overdraft accounts at the end of June. Nevertheless, there are several indications that expansion of the economy is continuing in spite of the Government's efforts to damp it down slightly. The banks are selling investments to the extent of £35 million in the latest period under report, and that can only mean that advances are being made on a scale well beyond the limit which general conditions seem to dictate. The official exhortation to export is being continued actively, but the feeling is growing that exhortation alone will not be enough; either the credit squeeze will have to be tightened further or incentives will have to be offered to exporters.

U.K. Exports Fall

Details now released of Britain's overseas trade in June confirm the impression of disappointing trends created by the preliminary figures. On the export side, it is now obvious that the check to the increase in the last few months has been over a broad front. Compared with the normal seasonal expansion between the first and second quarters of more than 10 percent, sales to North America show a slight fall. As expected, the steepest decline has been in exports of motor-cars to the dollar market. Taking exports as a whole, the June figure for passenger cars was only 46,241, against 70,273 in May.

Most engineering products show falling export figures on a comparison of the second quarter with the first quarter of this year. The same is true of textiles and clothing, food and fuels. On the other hand, exports of chemicals have held up well and among engineering products there have been increased export sales of textile machinery, electric generators, commercial vehicles and aero-engines. On the import side, the full figures show that a slight slowing-down in the rate of increase in recent months has been due mainly to a fall in the cost of food imports after the sharp rise in the final quarter of last year. There has also been some levelling off in the increase in imports of basic materials. Imports of manufactured industrial materials and of finished manufactures have continued, however, to expand sharply in the second quarter of this year, although not at quite the same rate as previously.

Better Terms of Trade

Britain's terms of trade, as measured by the relation between import and export prices, moved favourably last month. After remaining steady since March, the import price index (1954 equals 100) moved down in June from 99 to 98. As the export price index was unchanged at 111, the terms of trade improved by 1 to 88. This is the same low level as was reached in April this year and in April 1959. The main reason for the small fall in the total import price index was a reduction in prices of imported fuels and manufactured goods. On the export side, a rise from 120 to 121 in the index for engineering products was offset by small declines in selling prices of textiles and metals.

Fewer Unemployed

The number of people unemployed in Britain fell below 300,000 in July for the first time since October 1957, when Mr. Thorneycroft started his policy of credit restriction. The figure on 11th July was 291,919, representing 1.3 percent of the estimated number of employees. Unemployment fell by 13,208 between 13th June and 11th July, and reduced the percentage from 1.4. In July 1959, it was 1.8 percent. The most encouraging fact is that, allowing for seasonal factors, the biggest improvements are in Scotland, the north-western, and the northern regions. Scotland has an unemployment percentage of 3.2, the north-west of 1.7, and the northern region of 2.3.

Since October 1957, when unemployment was 275,000, the graph has gone through a lofty arc. It rose steadily through 1958, and reached a peak in January of last year—621,000. Since then the total has been falling steadily. There was an increase of 18,668 unfilled vacancies between June and July, compared with a normal seasonal increase of about 17,000. The total 379,548, was 104 higher than a year ago, and 165,000 more than in July 1958. To complete the picture, one must point out that the shortage of labour is the strongest known motive power towards industrial modernisation and higher productivity. If unemployment goes on falling and vacancies go on rising for another three months not even an 8-percent Bank rate will stop another upward revision of industrial capital investment plans.

Rise in Earnings

The average weekly earnings of men in British industry in the last pay week of April was £14 2s 1d, compared with £13 11s 1d in October last year. This increase of 4.1 percent is recorded in provisional figures just issued by the U.K. Ministry of Labour. They cover 7 million manual wage earners. The figure shows an increase of 7.2 percent compared with April 1959, and of 19.7 percent over four years. Taking the manufacturing industries only, the average earnings for men were £14 16s 4d—an increase of 4.3 percent. Average weekly hours had decreased from 48.5 to 48 in the six months since the last survey. The average hourly earnings were 5s 10.5d, compared with 5s 7.1d in October. Women's weekly earnings had risen by 2.9 percent to £7.5 and their hours were down from 41.4 to 40, leaving hourly earnings up from 3s 4.8d to 3s 6.6d. There is an interesting contrast between the rise in earnings and that in rates of pay between October and April. The weekly rates for men were up by 1½ percent and the hourly rates, which allows for the widespread introduction of the shorter working week during the winter, by 3½ percent.

Record E.C.G.D. Business

Business declared under the "commercial" insurances of the Export Credits Guarantee Department in the second quarter was 4 percent up on the same quarter of last year—a record for this quarter, although below the all-time record of the previous quarter. The value of short-term policies was higher than ever before and included three valued each at £1 million or more. Medium-term policies issued during the quarter amounted to £39 million, compared with £20 million for the previous quarter. They included contracts for tyre machinery, chemical plant, paper-making machinery, and power-station equipment.

Rules on Take-overs

New rules for take-over bids produced by the U.K. Board of Trade will come into force on 9th August. These rules, of which the draft appeared in May, apply specifically to the 20 or so licensed dealers. But the Board has expressed the hope that they will also be observed by other financial agents engaged in bids. Main features of the draft rules were that bidders should reveal their identity and the size of their holdings in the take-over company. Most of the changes in the U.K. Board of Trade's final draft are technical, but they have resisted suggestions that the bidder need not reveal his name. One change of general importance, which appears in the final draft, is that when directors support a bid, they should give information on any material change in prospects as well as on the company's financial position. A suggestion which the Board has not adopted is that the bidder should be required to give some statement of his intentions. Their view is that any statement of this sort could be misinterpreted and could not be enforced. Best practice in the City, however, is that the bidder should make some statement on future policy, for employees as well as shareholders.

Check on Public Spending

M.P.s are to have more opportunities next session to call the Government to account for its expenditure of taxpayers' money. Mr. Butler, leader of the House, has announced procedural changes which represent at least partial success for the long campaign launched by back-benchers to achieve closer and earlier scrutiny of Government spending. His proposals, generally welcomed on both sides of the House, will be discussed in detail when Parliament resumes on 25th October after the summer recess.

Summarised, they are: the enlargement of the Select Committee on Estimates from 36 to 43 back-benchers; the appointment of a new sub-committee to report on the spring supplementary estimates early in the year; a special report on the main differences between each year's estimates and the last; three extra days, one apiece out of Government, Opposition and private members' time, on which the House will debate reports from the Estimates Committee and the Public Accounts Committee; a White Paper each autumn on the investment programmes in the public sector, including nationalised industries, to be debated before Christmas; and two of the Opposition's allotted "supply" days to be taken before Christmas. In addition, Mr. Butler promised to report, from time to time, conclusions reached by the Government on the advice of a committee under Lord Plowden's chairmanship which is reviewing the methods of controlling public expenditure.

Brevities

The International Tin Council has stated that the amount of tin held in the buffer stock on 31st March was 10,030 tons, which compares with 10,050 tons on 30th September last.

The Commonwealth Development Finance Company has signed an agreement with East India Distilleries and Sugar Factories, Madras, for a loan of £600,000 as part of the financing of a compound ammonium phosphate fertiliser plant to be erected in Ennore. It will have an annual capacity of about 51,000 tons.

British aircraft exports during June totalled £11,472,065, and brought the half-year's total to £76,494,146. The Society of British Aircraft Constructors, giving the figures, said that during the six months aero-engine sales abroad totalled £38,098,952, an annual rate of £76 million, compared with last year's record aero-engine export figure of £64.5 million.

CONTINUING PROTECTION FOR ALUMINIUM INDUSTRY

BIG INCREASE IN DEMAND

OPENING the public enquiry into the question of continuing protection for the aluminium industry recently, Mr. K. R. P. Aiyangar, chairman, Tariff Commission, said that in 1946, the Tariff Board undertook the first enquiry into the aluminium industry and in its report submitted to the Government in the same year recommended protection through a protective duty as well as a subsidy. As the Board's report raised various important issues and in the Government's view a further examination of the question was necessary, it appointed an official committee. In the light of the findings of the committee and of variations in the cost of production and c.i.f. prices since 1946, the Government made certain modifications to the scheme recommended by the Board and granted protection to the industry with effect from 15th May, 1949. The rates of protective duty imposed were 30 percent *ad valorem* plus specific duties at Rs. 328 a ton of ingots and Rs. 121 a ton of sheets, strips and circles in 1949-50, and these rates of specific duty were to be progressively reduced to Rs. 146 and nil in 1951-52. Besides, differential rates of subsidy on a sliding scale were fixed for the two manufacturers of virgin metal for a three-year period from 1949-50.

After a review of the scheme of protection in 1950, the Tariff Board recommended that the subsidy and the specific duty be discontinued. Protection was extended to the industry up to 14th May, 1952, by retaining the *ad valorem* duty of 30 percent. Subsequently, in consultation with the Commission, the period of protection was continued from year to year until 31st December, 1955. The third enquiry was undertaken by the Commission in 1955 and on its recommendation, the then existing protective duty of 30 percent *ad valorem* plus a surcharge of 5 percent was continued up to 31st December, 1958. Under the Finance (No. 2) Act, 1957, the protective duty was rounded off to 35 percent *ad valorem*. The last enquiry in 1958 led to protection at the same rate of duty being continued up to 31st December, 1960. By the Finance Act, 1960, excise duties at Rs. 300 a metric ton of aluminium in any crude form including ingots, bars, blocks, slabs, billets, shocs and pellets and Rs. 500 a metric ton of aluminium manufactures, namely, plates, sheets, circles, strips and foil including foil in any form or size ordinarily used as parts and fittings of tea chest were imposed from 1st March, 1960. Countervailing duties at the rates of excise duty leviable on the domestic products were fixed for imports. By a notification issued on 20th April, 1960, the Government exempted aluminium in any crude form if manufactured from old aluminium scrap or scrap obtained from virgin metal on which the appropriate excise duty has been paid from the whole of the excise duty while in the case of aluminium manufactures produced from such scrap, the excise duty has been reduced to Rs. 200 a metric ton. With effect from 3rd December, 1955, a revenue duty of 25 percent *ad valorem* was imposed on aluminium scrap which was subsequently abolished on 10th July, 1956. At the instance of the Government, the Commission examined the question of duty on aluminium scrap and in accordance with its recommendation, a revenue duty of 15 percent *ad valorem* was reimposed on aluminium scrap with effect from 28th November, 1957, and this duty has since been continued.

Divergent Estimates of Demand

In 1958, it was estimated that the annual domestic demand for aluminium for that year was 35,000 tons which, it was expected, might increase to 44,000 tons by 1961. In connection with the present enquiry, divergent estimates of demand from the Development Wing, manufacturers and other interests have been received. Their estimates of current demand range from 34,000 tons to 58,000 tons and those for 1963 from 54,500 tons to 98,000 tons. The Development Wing has informed the Commission that the demand for aluminium has been steadily rising due to increasing uses of aluminium for various purposes. According to the Development Council for Non-ferrous Metals, the annual consumption of aluminium was 35,000 tons in 1958. It expects the demand to increase to 50,000 tons a year by 1961 and to 100,000 tons by 1966. An indication of the country's consumption is usually provided by sales of indigenous products, scrap arisings and imports, although with restricted imports there may be a volume of unsatisfied demand. The total of these three items for the last three years was 34,024 tons for 1957, 32,273 tons for 1958 and 40,301 tons for 1959.

The industry has recorded considerable expansion of capacity and production since the last enquiry. Although Indian Aluminium Company Ltd and Aluminium Corporation of India Ltd still continue to be the only two producers of aluminium ingot, the commissioning of the former's new smelter in Hirakud in January 1959 has increased the ingot capacity by 10,000 tons a year. According to the figures furnished by the manufacturers, the present capacity of the industry for the manufacture of primary metal is 17,800 tons, compared with 7,700 tons in 1958. The Development Wing has informed that the Aluminium Company has been licensed to expand the capacity of its Hirakud smelter from 10,000 to 20,000 tons a year and the Aluminium Corporation from 2,500 to 7,500 tons. These expansion schemes are expected to be completed by 1962-63. Licences have been issued by Government to three new units, namely, Hindusthan Aluminium Corporation Ltd, Tendulkar Industries (Pvt.) Ltd and Madras Aluminium Ltd for an aggregate capacity of 50,000 tons. When these capacities are installed, the capacity of the industry will increase to 83,100 tons. The output of aluminium ingots which amounted to 8,134 tons in 1958 rose to 17,114 tons in 1959 and 7,387 tons during January-May 1960.

Fabricating Industries

In the sector of semi-manufactures, there were eight rolling mills inclusive of the two primary producers in 1958. The capacity of these units was then assessed at 17,800 tons a year of which the capacity for industrial sheets was placed at 8,000 to 9,000 tons. There are 11 units in the organised sector, but the necessary data for only nine of them have been obtained. The present capacity of these nine units totals 21,000 tons. Besides these, there is a number of small units scattered about in the country engaged in rolling non-ferrous metal products including aluminium depending upon the availability of raw material. Full information concerning the latter is not available. It is understood that 45 small-scale units have an aggregate capacity of 4,635 tons a year. According to the data furnished by the Development Wing, the production of aluminium sheets and circles by the organised sector amounted to 13,582 tons in 1958 and 15,931 tons in 1959. The production in the small-scale sector was small.

As in 1958, Venesta Foils Ltd is the only unit at present manufacturing aluminium foils. Its capacity for the manufacture of foils and container sheets has been reported to be 3,504 tons, compared with 1,600 tons estimated at the last enquiry. The firm has plans to increase its capacity to 4,104 tons during 1961 and further by 2,000 tons during the third five year plan. It is also understood that Aluminium Corporation of India has been granted a licence to manufacture up to 480 tons of aluminium foils. The production of foils amounted to 1,864 tons in 1958, 2,429 tons in 1959 and 1,342 tons during January-May 1960.

Quality of Products

During the last enquiry, the consensus of opinion was that the quality of the products manufactured by the primary producers and the rollers in the organised sector was satisfactory. As for the products of the small fabricators in the unorganised sector, adverse comments were then expressed and their inferior quality was attributed to poor quality of scrap used by the units. During the present investigation, the evidence received is more or less to the same effect. Satisfaction has been expressed by consumers about indigenous ingots. A few complaints have been made about the quality of flat sections and they relate to existence of streaks, water stains, pitting, uneven thickness, incorrect temper, etcetera. By and large, the products of the small-scale sector have been found unsatisfactory by consumers.

Aluminium Imports

The total imports of aluminium in all forms were 21,391 tons, valued at Rs. 8,00,77,733, in 1957, 19,163 tons, valued at Rs. 5,99,76,866, in 1958 and 19,011 tons, valued at Rs. 5,93,72,201, in 1959. The principal sources of supplies were Canada, Norway, the U.S.A., Russia, the U.K., Yugoslavia and Sweden.

The Indian Standards Institution has revised or published eight specifications relating to aluminium and its products and that six standards for testing of aluminium and its alloys are either under revision or preparation. It has also added that only three re-rollers have joined the Certification Marks and that the two main producers are out of it. Under the I.S.I. scheme of testing and inspection for certification of aluminium utensils, it is obligatory on the part of utensil manufacturers who hold licences under the Certification Marks Scheme to use in the manufacture of utensils aluminium sheets, strips and circles conforming to I.S.I. specifications. The utensil fabricators have represented that sufficient quantity of certified sheets, strips and circles are not available to them.

Poor Exports

Exports of aluminium sheets circles and utensils are allowed freely, but the exports have been small. According to the *Monthly Statistics of the Foreign Trade of India*, exports of aluminium products during the last three years amounted to 501 cwts., valued at Rs. 1,95,212, during 1957, 277 cwts., valued at Rs. 1,21,629, during 1958, and 215 cwts., valued at Rs. 1,12,408, during 1959. The decline in exports is noticeable probably due to failure to bring down prices to comparable levels in the overseas markets, in spite of the natural geographical advantages and fiscal concessions and export facilities provided.

The Commission's Cost Accounts Officer has examined the costs of production of aluminium and its products manufactured by the two primary producers. For determing the quantum of protection required by the industry, f.o.b. quotations as well as c.i.f. prices of foreign aluminium ingots, sheets, circles and other products have been obtained.

The aluminium industry has been enjoying protection for more than a decade. During this period it has considerably expanded its capacity and production. By and large, the quality of the domestic products manufactured by the organised sector has been found to be satisfactory by consumers. The industry is at present on the threshold of great expansion. During the 1958 enquiry, it was found that on the basis of the cost of manufacture of the primary producers, there was no *prima facie* case for the continuing of protection to sheets and circles. However, out of consideration for the re-rollers who had to roll imported ingots and who had to suffer frequent interruptions in production due to shortages of aluminium, extension of protection to these commodities up to 31st December, 1960, was recommended. In connection with the present enquiry both the primary producers have prayed for further protection beyond 31st December, 1960, on the grounds that the industry is capital-intensive, the domestic bauxite is of inferior quality, rates of power supply are comparatively high, the capacity of their plants are small, costs of imported raw materials are rather high, and so on. One of the primary producers has pointed out that 1965 would be the proper time for examining the question of continuing of protection to the industry as by that time expansion and new schemes already licensed will have materialised.

PROTECTION FOR MOTOR-VEHICLE HAND TYRE INFLATOR INDUSTRY TO GO

The Government of India has accepted the Tariff Commission's recommendation that protection to the motor-vehicle hand tyre inflator industry need not be continued beyond 31st December, 1960. The Government's resolution on the Commission's reports, published last week, has drawn the attention of the Indian Standards Institution to another recommendation of the Commission that the former should take up the formulation of a standard for seamless brass tubes required for the industry.

There are at present six units—four in the large-scale sector and two in the small-scale sector, manufacturing motor-vehicle hand tyre inflators. The annual rated capacity of these units has been estimated at 85,200 for hand tyre inflators and 96,000 for pump connections. The actual production in 1959 amounted to 47,784 hand tyre inflators and 48,906 pump connections. The Commission has estimated the current annual domestic demand at 55,000 inflators and 150,000 pump connections. It has observed that the demand for inflators will be stable on this level, except for a slight upward trend.

PROTECTION FOR WOOD SCREW INDUSTRY TO END

The Government of India has accepted the Tariff Commission's recommendation that protection to the wood screw industry need not be continued beyond 31st December, 1960. In the resolution on the Commission's report, the Government has also taken note of the recommendation that steps should be taken to ensure that no export of wood screws takes place unless accompanied by a proper test certificate on quality and proper packing. The Government has also drawn the attention of the wire manufacturers to the Commission's recommendation that in the context of the increased supply of billets to them; they should endeavour to meet more fully and expeditiously the demand of the wood screw manufacturers for steel wire. The need to take urgent steps to improve the quality of wire rods and wires and conform to Indian standard specifications has also been stressed.

Protection to the wood screw industry, first granted in 1947, was extended from time to time. The combined output of wood screws in both the large-scale and small-scale sectors rose from 8.5 million gross in 1957 to 9.9 million gross last year. There are at present 23 units in the large-scale sector with a total rated capacity (on a single shift basis) of about 7.8 million gross. In addition, there are about 28 units in the small-scale sector, and their capacity is estimated at about 1 million gross of wood screws a year. The Commission estimated the domestic demand at about 11 million gross for 1960. The demand is expected to increase by at least 1 million gross a year, reaching 14 million gross in 1963.

Jute

SPECULATIVE ACTIVITY CAUSES SHARP FLUCTUATIONS IN SACKING PRICES

PROSPECTS FOR NEW JUTE CROPS REMAIN FAVOURABLE

THE Calcutta jute goods market has been active throughout the past week, and a further rise in prices has been recorded. Heavy speculative activity has caused violent fluctuations, and sacking prices have moved through a range of over Rs. 4. There has been some demand from overseas, and towards the close a large order for hessians is reported, but, as usual, *bazaar* parties have been the chief buyers from mills. Shippers, however, have also been taking interest and *bazaar* dealers, in turn, have been able to dispose of considerable quantities in overseas markets. The jute industry in Calcutta is so dependent on the U.S. market for hessians, that when no orders come from there, burlap is invariably in the doldrums. Conversely, when interest is noted, the reaction assumes far greater importance than the quantities involved warrant. It is encouraging, therefore, to see reliable signs of increasing trade from other sources. Many think that the interest shown recently by Russia in hessians will greatly benefit the industry.

Settling Day

The slump in sacking prices at the end of July had no significance as far as real goods were concerned. It was the direct result of speculative activity ahead of settling day. Once the settlement had passed, prices recovered very rapidly and the market became bullish. For some time now, interest has been confined to the near delivery positions, and forward shipment has been comparatively neglected. The reason appears to be that overseas consumers, due to the uncertainty about Calcutta prices, are no longer interested in laying in large stocks, but prefer to work on a hand-to-mouth basis. They hope that prices will be favourable for them at the time of purchase, and always have substitutes at the back of their mind should the rates prove too high. This policy may have suited the mills, since they have refrained from making forward sales due to the possibility of a shortage of jute in the transition period between the seasons. Their gentlemen's agreement has aimed at discouraging the purchase of jute unless it was for immediate needs. Thus, the covering of forward sales of goods by buying jute has been limited, and manufacturers have been reluctant to enter into any commitments without being covered in jute. This position has been reflected in the change in quotations from the beginning of the year. In January, there was only a discount of about Rs. 2 a 100 bags in B Twills for business more than three months ahead. By April, this had increased to about Rs. 5. Now, the rates for October-December shipment are nearly Rs. 12 below the near delivery position. This is not a healthy position for the market, and shows little confidence in the future.

Almost every week, one finds Calcutta sellers submitting reports to their agents which are intended to create the impression that prices of raw jute will be at least maintained, if not advanced. The testing time for mills is now here, and this is demonstrated by the increase in buying interest over the past week. At one time, manufacturers thought that six months' stocks in their godowns, or at least on their books, was essential at the commencement of a new season. Certainly, they have been in the habit of carrying much more than their present stocks, although a considerable percentage has always been held against sales of goods. Recent statistics about jute stocks have been an unsettling factor for the market. Sellers have considered them bullish, but buyers feel that the weight of the new crop will soon be coming and it will prevent any further advance in values.

Fibre Arrivals

Recent arrivals of fibre in the upcountry agencies have been heavy for the time of year, particularly when one considers how late the crop was shown. Much of the initial delay, however, has been made up with the very favourable weather conditions prevailing during the past month. The crops have grown faster and matured much earlier than anyone had dared to hope. The following figures, however, indicate why sellers are so reserved.

Mill stocks of raw jute as at 30th June, 1959	1,678,000 bales
Mill stocks of raw jute as at 30th June, 1960	1,249,000 bales
Difference	429,000 bales
Stocks held in Cossipore as at 30th June, 1959	120,000 bales
Stocks held in Cossipore as at 30th June, 1960	80,000 bales
Difference	40,000 bales

If the crop estimates for the current season were higher than those for 1959-60, the difference of bout 470,000 bales in mills' and Cossipore stocks would not have been so significant. But, according to the official estimates, the 1960-61 crop will not be much larger than that of 1959-60. Government estimates, however, have always proved to be notoriously inaccurate, and in many quarters it is believed that the final outturn will be much higher, thanks to the good weather.

Crop Prospects

Crop reports from all districts continue to be very favourable, and a fair amount of jute has already come forward. Some agencies report heavy imports, but in all cases the moisture content is very high. Prospects in the superior Daisee areas, such as Sheoraphuli and Midnapore, are excellent. As the weather is good, arrivals are expected much earlier than in previous years. The percentage of Daissee availability as against mesta is expected to be larger this season. During the last season, the outturn was about 50 : 50, but current estimates put the ratio at about 65 : 35 in favour of Daissee.

THE JUTE MARKETS

Heavy speculative activity was a feature of the futures market during the past week. There were wide price fluctuations because of settling day. Prices, as given by the East India Jute and Hessian Exchange Ltd for the period 27th July to 2nd August, were as follows:

	Hessians 40in. 10oz. Nov. 1960 Rs. a 100 metres	Sacking B Twills Nov. 1960 Rs. a 100 yds.	Raw Jute Assam Dec. 1960 Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	48.31	44.18	123.60	88.79	33.14
Highest	49.54	45.30	125.55	90.07	33.62
Lowest	47.63	43.56	122.00	87.61	32.70
Closing	49.11	44.92	124.75	89.43	33.38

Manufactured Goods: The market was very steady at the opening last Thursday. Prices rose on speculative activity, and also because some business was done with overseas buyers in sacking. Heavy goods indications advanced by Rs. 2.75 from the previous day, and ready B Twills stood at Rs. 137.25, with October-December shipment at Rs. 127.25. In the absence of business, hessians moved up slowly in sympathy, so 40in. 10oz. opened at Rs. 45.20 in the near position and Rs. 44.60 for forward shipment. With the approach of settling day, heavy goods rates slumped by Rs. 3.50, and hessians by about 70nP. After the week-end, however, the recovery was rapid. By Monday morning, B Twills had regained Rs. 3 and hessians 35nP. Reports of good hessian business and other overseas orders created a very steady undertone, so prices continued to advance. Profit-taking at the higher levels caused a slight setback late on Tuesday, but before the close, prices had recovered.

	Ready	Aug.	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	34.50	34.65	34.05	34.20	33.60
40in. 8oz.	37.15	37.15	37.15	36.65	36.00
40in. 10oz.	46.30	46.50	46.45	45.55	44.80
B Twills	138.50	138.00	136.40	128.75	125.25
Heavy Cees (Plain)	135.00	136.00	136.00	128.75	125.25
A Twills	161.50	162.00	162.00	155.00	151.00
Liverpools	157.00	156.00	155.00	145.00	141.00
Cornsacks	141.00	141.75	141.75	131.75	127.25

Raw Jute: During the past week, mills showed a fair amount of interest in raw jute. The accent was on near delivery and offers for ready bills of lading, so August shipment carried premiums of Rs. 2 or Rs. 3. There was no interest in forward shipment, except for some small lots of mesta. Prices did not fluctuate a great deal, but sellers were very reserved and only small offers were made. The violent fluctuations in the heavy goods market caused some uncertainty, but reports of heavy arrivals in many agencies kept prices down. Assam Bottoms for September-October shipment fluctuated between Rs. 35 and Rs. 36. Several mills wanted quick shipment jute, and were willing to pay premiums. A fair quantity was available but sellers were not willing to reduce rates. Even the mills which showed interest in September-October fibre found that sellers were reserved. One of the reasons was the continued shortage of jute in Cossipore markets, where it was reported that current stocks of all varieties were under 80,000 maunds. Arrivals during the past week showed an increase. Although 175 wagons were logged, which was 100 more than in the previous week, the figure was well below the average for previous years.

Business was done at Rs. 38 to Rs. 40 for Assam and Northern bills of lading. August Assam passed at Rs. 38.50 and September at Rs. 37. September-October shipment fetched Rs. 37 for Assam, Rs. 36 for Northern and Rs. 35 for Desal. Small lots of mesta were reported at Rs. 31.75 to Rs. 32 for Daissee mesta for October-November and Rs. 32.50 for Desal mesta for the same shipment—all prices basis Bottoms. Cuttings were done at Rs. 100 to Rs. 101 a bale for N.C. and T.C.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	98.50	36.75	Sept.-Oct.
Northern	95.75	35.75	,,
Purnea Desal	94.50	35.25	,,
Daissee Selected	99.75	37.25	Oct.-Nov.
Assam Tossa	99.75	37.25	,,
Mesta:			
Assam-Northern	89.00	33.25	,,
Daissee	87.75	32.75	,,
Desal	89.00	33.25	,,
Jungli	85.00	31.15	,,
Pakistani N. C.	101.00 per bale		Sept.-Oct.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES EASE

(FROM OUR EAST PAKISTAN CORRESPONDENT)

WHILE the raw jute market in East Pakistan is in a confused state, the local loose jute as well as pucca bale prices are slightly easier. The P.J.A. quotations for the overseas market have been marked up by £2 for Export Lightnings and Export Hearts and by £1 for all other marks. Neither of these reflect the true state of the market. Overseas quotations for the ready position are approximately the same as those of the P.J.A., but quotations for the forward shipment period are so much lower than the prices quoted by the P.J.A. for E.P.C. purposes that one is inclined to assume that no business is being done from Pakistan for forward delivery unless, of course, there are balers who are selling below P.J.A. prices, which is contrary to the regulations. Very few offers appear to emanate from the larger shippers. If business is being done at discount prices, these will only be registered if the E.P.C. levels come down in time, which, judging from the present indications, seems unlikely. This and other factors which may well be expected to develop in a season when the crop is small and speculation rife, may well lead to a position where buyers will suffer due to non-fulfilment of low-priced contracts. This will give a bad name to Pakistani shippers at a time when they are already being blamed for keeping prices at an uneconomically high level, thus encouraging substitutes.

There has been an increase in the quantity of arrivals into the Narayanganj baling centre and even upcountry. More encouraging are the reports that the moisture content is less and the condition of the crop somewhat better, although there is still plenty of room for improvement. Present arrivals are approximately 50 percent of what they should be at this time of year, even allowing for the late crop. Probably due to this fact, local prices remain well above overseas parities making any business purely speculative. No great overseas buying was reported during the week. There are rumours that some of the communist countries may be in the market, but they are likely to restrict their purchases to one or two of the larger balers as usual. The river levels continue to rise, although at a slower rate. It is still apprehended that there may be floods again.

WORLD TEXTILE MILL ACTIVITY CONTINUES AT HIGH LEVEL

FOREIGN TRADE IN CLOTH WELL MAINTAINED

IN the early half of 1960, according to the *Quarterly Statistical Review* of the U.K. Cotton Board, mill activity in most countries continued at a high level, prices and margins were generally favourable, and foreign trade was well maintained. In a number of countries, the volume of new orders coming into the mills has declined, but this is not causing any immediate concern in view of the length of order-books. The cotton yarn output in those non-communist countries for which regular information is available was about 8 percent greater in the first quarter than in the corresponding period of last year. This is about the same percentage increase compared with a year earlier as in the preceding quarter, although the fact that Easter fell in April this year, against March last year, must have had something to do with the extent of the increase. Of the main cotton manufacturing countries, only Canada and India recorded lower production in the first quarter than in the same period of the previous year.

Exports of cotton cloth from non-communist countries in the first quarter of this year were well below the high level recorded in the previous quarter, mainly because of sharply reduced shipments from India and Japan. Nevertheless, the volume of trade remained high and total exports were about 24 percent greater than in the first quarter of 1959, although that period was admittedly a very poor one for world trade in cotton textiles. All the major exporters without exception increased cloth shipments, compared with a year earlier. The most significant increases were probably those by India, Pakistan, France, West Germany, the Netherlands, Portugal and Spain. Cotton yarn exports also expanded strongly, particularly from Japan and Pakistan. Exports of man-made fibre cloth have shown no similar expansion; in fact, the decline which has been evident ever since 1957 continued in the first quarter of the year, when shipments were about 3 percent less than in the first quarter of 1959. The cause of the decline was a further reduction in Japanese exports of rayon piecegoods. Exports from the U.K. were slightly less than a year previously, as were shipments from Switzerland, Sweden and the Netherlands. Reports from most other European countries, especially Italy and from the U.S.A., were above the levels attained a year previously.

Reorganisation in the U.K.

Since the last issue of the *Reivew*, the scrapping of machinery under the spinning, doubling and weaving reorganisation schemes has been completed, apart from a very small proportion of machinery for which extensions of the scrapping period were granted. The latest figures of machinery are 13.15 million mule-equivalent spinning spindles and 166,000 looms (excluding looms in northern Ireland), compared with about 25.4 million spindles and 259,000 looms in April 1959. Over 95 percent of the spindles and about 93 percent of the looms are now actually running, and the average hours worked a week have increased from about 44 to 53 in the case of spindles and from 52 to nearly 60 in the case of looms. This is a reflection of the expansion of shift-working, and the increase would undoubtedly have been greater but for the fact that a considerable number of the workers displaced by the scrapping programme have not stayed in the industry. The total number on the books of spinning, waste spinning, doubling and weaving mills at the end of April 1960 was 184,900, compared with 202,400 a year earlier. The effect on production has been comparatively small. In the first three months of the year, the daily rate of output both in spinning and weaving was ahead of last year's level; only in April did the level of production fall below the figures for the corresponding month of 1959, and then only by small amounts.

The daily rate of cloth output in April was about 6 percent below the October level, which was the 1959 peak, while yarn production in May was 4 percent below the October peak level. In both spinning and weaving, the trend appears to be upward. The main features on the spinning side since the beginning of the year have been a tendency for the output of pure cotton yarn to increase, while the output of blended yarn has fallen. The virtual maintenance of the level of output with a much reduced labour force is partly explained by the elimination of short-time working, but there has also been an improvement in output a head. For example, output a head in spinning has increased by about 9 percent since June 1959, and not all this rise can be explained away by the fall in the average count spun. Moreover, this increase has occurred in spite of the fact that shift-working normally entails a reduction in the number of hours a week worked by the operatives.

The volume of orders received by mills has been on a smaller scale this year than in the second half of last year, but there has been comparatively little decline in the length of order-books on the whole and deliveries have been well maintained. Retail sales of clothing have continued at the excellent level established in the last quarter of 1959; in the first four months of this year, they were, allowing for price changes, some 7 percent or 8 percent greater than in the same period of last year. But in spite of the strong demand from the home market, there should be no general shortage of supplies with production and imports running at their current levels, although there may conceivably be difficulties in particular lines. The volume of imports gives some grounds for concern. Imports of cotton piecegoods reached a new record of 176 million square yards in the first quarter of this year. In part this was because import restrictions in India and Pakistan had not begun to take effect, but arrivals from a large number of other countries had also increased. Imports from Spain, believed to be subsidised or dumped, totalled 12 million square yards, and that country is also mainly responsible for the expansion of cotton yarn imports. The U.S.A. now figures in the list of countries exporting cotton piecegoods to the U.K., and is also shipping considerable quantities of nylon cloth.

Exports of wholly cotton piecegoods from the U.K. totalled 86 million square yards in the first quarter of 1960, compared with 94 million square yards in the preceding quarter but with 82 million square yards in the corresponding period of the previous year. Virtually the whole of the increase compared with a year earlier, however, is accounted for by imported grey cloth which had been merely finished in Britain. The main increases, compared with a year ago, were in shipments to British West Africa (principally Nigeria), the Belgian Congo, South Africa, Rhodesia and Nyasaland, Burma, the Sudan and the Irish Republic, while decreases were recorded in exports to Australia; British East Africa, French Africa and India. Exports of man-made fibre and mixture piecegoods in the first quarter were less than a year ago, an increase in shipments to South Africa being insufficient to make up for losses in trade with Rhodesia and Nyasaland, Australia and New Zealand.

U.S. Boom Weakening

The U.S. Cotton industry continued to be busy in the first quarter of the year. Mill consumption of raw cotton was about 5 percent greater than a year ago and consumption of synthetic staple was up by about 23 percent; consumption of rayon staple showed a drop of about 9 percent, however. The latest cloth production figures relate to the final quarter of 1959 when, allowing for the different number of weeks in the two periods, the cotton cloth output was roughly 12 percent greater than a year earlier, synthetic fibre cloth production was about 30 percent greater, but the rayon cloth output about 3 percent less.

Nevertheless, there are signs that the boom may be weakening slightly. The index of cotton consumption fell by about 5 percent between January and March, and there seems to have been a slight contraction in the average hours worked a loom a week between the same two months. Order-books have been shortening quite noticeably, and there has been some tendency for mill stocks to increase. The average margin between raw cotton prices and loomstate cotton cloth prices, after widening steadily month after month, narrowed slightly in March and April. Furthermore, imports continued to rise. Cotton cloth imports totalled 106 million square yards in the fourth quarter of 1959, and are believed to have amounted to over 80 million square yards in the first two months of 1960. The great bulk of this cloth comes from Asia, particularly Japan, India and Hongkong, and from Spain, with other European countries supplying specialities. It is reported that one textile union has voted to take action against these cheap imports.

Exports of cotton cloth at about 128 million square yards were much the same as in the preceding quarter and some 10 million square yards greater than in the first quarter of 1959. Compared with a year earlier, there were moderate increases to the U.K., South Africa, Canada and Australia, which were more than sufficient to compensate for a notable reduction in exports to Cuba. While full details are not yet available for first quarter exports of man-made fibre fabrics, it appears that they were about 3 million square yards more than in the first quarter of 1959, but some 4 million square yards less than in the preceding quarter. Compared with a year earlier, shipments to the U.K., Australia, Belgium and Sweden have expanded, while those to Canada, Cuba, Switzerland and Thailand have decreased.

Problems Facing Indian Mills

Fears are now being expressed in Indian trading circles that if demand for cotton by spinners continues at present rates, stocks of all good qualities of domestic cotton will be exhausted shortly; meanwhile, import licences are being granted to ensure larger supplies. It is thought that the Government may have to announce a rise in the celling prices of indigenous raw cotton for 1960-61 season to stimulate production. Besides the prospect of increased raw material costs, manufacturers are having to meet an immediate increase in wage costs following the Textile Wage Board's award. The modernisation of mills has been aided by the National Industrial Development Corporation, which has sanctioned loans of Rs. 12 crores to mills for re-equipment and modernisation.

Cotton yarn production in the first quarter was well below the previous quarter's level and was also 1 percent or 2 percent less than in the corresponding quarter of 1959. Mill production of cotton cloth was about the same in the comparable period of 1959. Stocks are now much smaller than they were a year ago. Exports of cotton piecegoods in the first quarter of 1960 are expected to be roughly 30 percent less than the very high total of 304 million square yards recorded in the preceding quarter, but about 30 percent more than in the first quarter of 1959. Very large shipments of cloth to the Sudan were mainly responsible for the big increase of Indian exports in the second half of last year. The U.K. and Burma also took much greater quantities of Indian cloth, while the U.S.A. appeared as a major market for the first time.

Impressive Recovery in Japan

With the progressive relaxation of production curtailments and the return of sealed spindleage to production, the output of the Japanese cotton and man-made fibre industry has made an impressive recovery from the recession. In most sectors, the volume of output has surpassed or is approaching the pre-recession 1957 levels; only in spun rayon yarn and fabrics is production still well below what it was in 1957, no doubt because of the severe decline in exports of spun rayon piecegoods. In the spinning section, the increase in output in the first quarter of this year in comparison with the same period of last year was 22 percent for cotton yarn, 19 percent for spun rayon yarn and 103 percent for spun synthetic yarn. In weaving, the corresponding increases were 15 percent for cotton cloth, 10 percent for spun rayon cloth, 13 percent for filament rayon cloth and 79 percent for synthetic fibre cloth. More recently a certain amount of nervousness about the future seems to have developed. Stocks have begun to rise again and there have been renewed warnings about the danger of overproduction. The political situation may also have had an unsettling effect.

Cotton yarn exports in the first quarter amounted to 15 million lbs, against 6 million lbs a year previously, the increase being due to greatly increased shipments to Indonesia. Cotton cloth shipments totalled 302 million square yards, compared with 363 million square yards in the previous quarter and 291 million square yards in the first quarter of last year. With the notable exception of Indonesia, almost all countries took less Japanese cotton cloth than in the final quarter of 1959. Compared with the first quarter of 1959, increases in exports to British East Africa, Hongkong, Australia, Indonesia and Venezuela more than counter-balanced decreases to the Netherlands, Indo-China, Iraq, Iran, the Philippines and the U.S.A. Exports of rayon piecegoods continued to decline and totalled only 211 million square yards in the first quarter of this year, compared with quarterly averages of 254 million square yards in 1959, 316 million square yards in 1958 and 341 million square yards in 1957. Compared with the first quarter of 1959, reductions in shipments were widespread, being particularly severe in the case of British West Africa, Singapore, Iraq and Iran, but exports to Indonesia showed a substantial increase. Japanese exports of synthetic fibre piecegoods now amount to 12 million or 13 million square yards a quarter.

Activity in Western Europe

The continental west European cotton industries are operating at a high rate of activity, although in some countries it is reported that price levels leave something to be desired. In most countries, orders appear to have come in at a considerably slower rate in the first few months of this year, but order-books are long enough to ensure a high level of output for some months to come. Cotton yarn production in continental western Europe as a whole in the first quarter of 1960 was about 17 percent greater than in the corresponding period of 1959, before the recovery from the recession got under way. The increases in output in France, West Germany and Italy, compared with a year earlier, were particularly striking. In the Netherlands and Switzerland, it is reported that labour shortages are holding back production. In Sweden, it is reported that supply now exceeds consumption and that stocks are beginning to increase.

Exports of cotton piecegoods from western Europe in the first quarter of this year were at the high level achieved in the preceding quarter, and were over 40 percent greater than in the first quarter of last year. Every country reported increased exports compared with a year ago, but the increases were especially great in the case of France, Portugal, West Germany, the Netherlands and Spain. For both Spain and Portugal, the U.K. and the U.S.A. have become very important markets. France has also shipped large quantities of cotton cloth to the U.S.A., and both France and the Netherlands have expanded their sales to West Germany. Exports of man-made fibre piecegoods in the first quarter were about 12 percent greater than a year previously but experiences were not uniform. Italian, German and, probably, French exports showed increases, but Sweden, Switzerland and the Netherlands shipped less than a year ago. The increase in Italian exports has been directed mainly to the U.K., West Germany and South Africa.

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories

For over 35 years "BEHAR" REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.6 percent to 125.1 during the week ended 16th July, 1960, compared with 124.4 (revised) for the earlier week. The index was higher by 1.9 percent and 6.3 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced further by 1.1 percent to 125.1, compared with 123.7 (revised) for the earlier week due to a rise in the prices of milk in Calcutta (+33%), potatoes (+7%), jowar in Mohal (+6%), maize in Mandi and bananas (+5% each), gram, onions, and oranges (+4% each), wheat, mustard oil, eggs and meat (+3% each), arhar, masur and groundnut oil (+2% each) and rice, barley, ragi, ghee, coconut oil and gur (+1% each). The prices of milk in Bombay (−36%), jowar in Rohtak (−27%) and in Hubli (−6%), maize in Khagaria (−11%), mung in Hissar (−5%) and cardamoms (−4%), however, declined. The index for Tobacco declined by 1.5 percent to 107.5 as a result of a fall in the price of raw tobacco (−2%). The index for the Fuel, Power, Light and Lubricants group stood at 118.9, against 118.8 for the earlier week. The prices of castor oil (+3%) rose during the week. Lower prices of raw jute and cottonseed (−3% each), lac (−2%), raw wool, castorseed and copra (−1% each) brought down the index of Industrial Raw Materials by 0.2 percent to 136, compared with 136.7 (revised) for the previous week. The prices of groundnut, gingellyseed, rapeseed (+2% each) and linseed (+1%), however, moved up. The index for Intermediate Products advanced by 0.2 percent to 130.5 due to a rise in the price of linseed oil (+2%) and tin and lead (+1% each), although the prices of zinc (−2%), coir yarn, brass and copper (−1% each) showed declines. The index for Finished Products rose by 0.3 percent to 119.3, against 118.9 (revised) for the earlier week. Items which showed variations during the week were: cotton cloth (mills), oilcakes, bicycles, bricks and tiles (+1% each), jute manufactures and general chemicals (−1% each).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 16-7-59	9-7-60	18-7-59

*=Estimated R=Revised

LINSEED DULL

The linseed market was dull during the past week. Activity was limited. Crushers showed some interest in ready and forward deliveries, but sellers were reserved. Trading in the oil market was slow and buyers showed interest at lower prices, but sellers were not inclined to sell at a discount as stocks were limited. Business in oilcake was negligible with overseas buyers pausing. The present prices are: Ready Rs. 26 a maund and September futures Rs. 26 a maund.

DISPUTE IN KERALA CASHEW INDUSTRY SETTLED

WORKERS TO GET REVISED MINIMUM WAGES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE dispute between the Kerala cashew factory owners and their employees on minimum wages was recently settled at a tripartite conference in Trivandrum. Following the agreement, workers called off the strike and resumed work from 22nd July. The employers have agreed to withdraw the writ petition they filed in the High Court against the recent minimum wages notification of the Sate Government. Other terms of the agreement are that the factory owners will implement the minimum wages notification, except the recommendation on dearness allowance, with retrospective effect from 15th June, 1960. The dearness allowance fixed under the notification will not be operative till 15th October, 1960. The employers have agreed to provide material for work from 8 a.m. to 5 p.m. during working days, failing which they will pay the guaranteed minimum wages prescribed in the State Government's notification.

Special Machinery

The Government has undertaken to constitute special machinery for the settlement of disputes concerning the guaranteed minimum wages. The parties have agreed not to resort to strikes or lock-outs if there is any difference of opinion on this matter. It will be recalled in this context that the Kerala Government issued a notification recently revising the minimum wages in the cashew processing industry. The employers complained that the revised wages were beyond the capacity of the industry to pay, so they challenged the State Government's notification in the court of law. The High Court granted an interim stay of the notification for six weeks from 29th June, 1960. Subsequently, about 50,000 workers in the Quilon area, where the industry is concentrated, started an agitation sponsored jointly by trade unions owing allegiance to the Congress, Communist and Revolutionary Socialist Parties. They demanded revised minimum wages and declared a strike. This was the first major labour dispute since the new Kerala Government came to power. Labour leaders say that the latter has acquitted itself creditably.

Fall in Exports

During the financial year 1959-60, India's cashew kernel exports amounted to 38,178 tons, compared with 40,373 tons in the previous year. Export earnings amounted to Rs. 16 crores, against Rs. 15.9 crores in 1958-59. The main reason for the fall in exports was lower production of cashew kernels in India on account of the decline in imports of raw nuts from Africa. Raw nut imports in 1959-60 were only 95,950 tons, against 125,400 tons in the previous year.

The United States, as usual, was India's largest buyer of cashew kernel. It bought 68.7 percent of total exports. Russia bought 11.6 percent, the U.K. 5 percent and Canada 3.2 percent of total Indian exports. During the year, Japan emerged as a new market for Indian cashew kernel. Exports of cashew shell liquid increased from 3,823 tons valued at about Rs. 31.4 lakhs in 1958-59 to about 4,924 tons worth about Rs. 38.8 lakhs in 1959-60. The U.K. was the largest buyer having imported 2,453 tons, followed by the United States (1,480 tons) and Japan (795 tons). Australia, West Germany, France and Singapore were the other important buyers.

Pepper Exports Rise

Pepper exports showed a marked recovery in 1959-60. Total exports from India shot up to about 20,300 tons valued at Rs. 8.2 crores. The comparative figures for the previous year were 11,741 tons and Rs. 2.5 crores, respectively. All the major buyers except West Germany imported more pepper from India. The United States ranked first having imported 9,115 tons, against 3,572 tons in the previous year. Since 1951-52, export earnings from pepper have been declining: from about Rs. 23 crores that year which was the highest figure ever reached, export earnings fell to Rs. 2.5 crores in 1958-59. It was in 1959-60 that this trend seems to have been reversed.

World Coffee Crop Estimate

The latest world coffee crop for the 1959-60 season is estimated at over 76 million bags. World coffee exports during 1960 are expected to equal or exceed 42.5 million bags, a record in recent years. Brazil's surplus stock from its 1959-60 crop is estimated at about 50 million bags.

The Robusta type of coffee has suffered a major setback in value in the world market, and its price has gone down substantially. India has allotted 4,000 tons of Robusta for export this year, but she now faces the risk of distress selling. About 8,596 tons of coffee were exported from India out of the current season's crop up to the end of June. The quantity consisted of 7,499 tons of Plantation, 756 tons of Arabica Cherry and 341 tons of Robusta.

Threat to Indian Teas from East Africa

East Africa is fast becoming a rival to traditional tea-growing countries like India. But the threat posed by her is not fully appreciated by tea planters in this country. The chairman of the Nilgiri Planters Association, Mr. Bhagwandas Narayandas, who recently made an on the spot study of the east African tea industry, said at the annual general meeting that some 700,000 acres of Kenya highlands had been thrown open for tea cultivation. That country can produce about as much tea as Indian estates do an acre and probably of better average quality. The full impact of this competition may not be felt today or even five years hence, but its influence on the market is unmistakable. Tea cultivation in east Africa is being extended rapidly, so the threat of competition is immediate. The chairman said that east African growers are closer to western markets. Besides, they are not burdened with export or excise duty like their counterparts in India. The planters there are introducing mechanisation on the estates with far fewer inhibitions than in India. These points should be considered by the Government with a view to helping the Indian tea industry.

COCHIN TEA SALES

At Sale No. 30, 475,000 kilograms of tea were on offer. There was a strong demand for everything. Low medium and medium fannings advanced by 10nP or 20nP a kilo. Similar brokens were fully firm while good medium and best liquoring grades were considerably dearer following quality. Orange pekoes were much dearer.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business—concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 6, held on 1st and 3rd August, the 43,827 chests on offer at the Export auction met with a good general demand which, however, eased as the sale progressed. Orthodox Assams with bright liquors were fully firm to dearer, but the remainder in this category were easier by 20nP to 30nP. Ordinary liquoring Dooars B.O.P.'s and O.Fgs. were a weak feature and were difficult of sale. Plain brokens were easier by 10nP, while Fannings sold 15nP to 20nP below last rates. The cheaper brown Dooars were fully firm to dearer, but the better descriptions in this category were up to 15nP easier. Clean black Pekoes were firm to dearer, but stylish whole leaf grades met with less competition and were generally easier. Tippy teas sold below last rates. The very best bright liquoring C.T.C.'s met with strong competition and were fully firm to dearer, but the more ordinary kinds were irregular and generally easier, and there were quite a number of withdrawals.

Quotations

	1960 Rs. a kilo
Clean Black Pekoe	5.70 to 5.90
Plain B.P.	4.50 to 4.70
Plain Fannings	4.40 to 4.60
Medium B.P.	5.10 to 5.30
Medium Fannings	5.00 to 5.20
Best Assam C.T.C. B.P.	9.00 to 9.50
Best Assam C.T.C. Fgs.	10.00 to 10.50

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings, which amounted to 18,519 packages, met with a good general demand. Brown Dooars were once again a strong feature and generally appreciated in value. Bright liquoring orthodox teas were also well supported at dearer rates while the exportable types were readily taken up at up to 8nP below last rates. Medium C.T.C. descriptions met with a fair enquiry but were easier by up to 15nP. The poorer kinds, however, were actively suported and were sometimes dearer. The best C.T.C. teas were irregular.

Quotations

	Rs. a kilo
Medium Dooars Dust ...	4.40 to 4.64
Medium Assam Dust ...	4.50 to 5.10
Medium Assam C.T.C. Dust ...	5.60 to 5.90
Best Assam C.T.C. Dust ...	6.00 to 6.50

(Quotations are inclusive of excise duty.)

Leaf offerings amounted to 284 chests. There was a good demand, but prices were irregular. Green teas were a weak feature.

EASIER TREND IN FREIGHT RATES CONTINUES

THE mid-year recession in freight rates continued during the past fortnight and charterers have had little difficulty in filling their requirements at low levels. Owners, however, continue to be optimistic, reasoning that the present drop in rates is not as bad as they had anticipated. The shipment of grain from the U.S.A. to India is still a major topic with Indian shipowners, who may be allowed to time charter for this movement. However, if Indian owners are to be paid the open market rate, there will be little incentive for them to take the risk of time chartering. The last rate paid North Pacific-East Coast India was 48s 9d and charterers now indicate 47s 6d. This compares with $(U.S.)23.50 for American flag vessels for the same business. The recent declaration by U.A.R. dockers that they will support their Indian brethren in boycotting vessels and shipping companies trading with Mormugao could have very interesting repercussions on the freight market. Some 15 to 20 ships monthly leave Mormugao for the U.K.-Continent, and if forced to go round the Cape, would require higher rates. There would also be a shortage of tonnage. The U.A.R. dockers will meet to the middle of August to ratify the decision.

HIDES AND SKINS DULL

The market ruled dull. Stocks of skins were higher but those of hides were less than in the previous week.

Bazaar Sales

(Between 26th July and 1st August, 1960)

Cowhides: Wet salted (Slaughtered) 33,400 pcs. on the basis of Rs. 9 to Rs. 15 and Rs. 18 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 46,850 pcs. on the basis of Rs. 375 to Rs. 400, Rs. 420 to Rs. 444 and Rs. 480 to Rs. 500; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece.

Bazaar Stocks

(1st August, 1960)

Cowhides: Wet salted 165,100 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 47,000 pcs.; Assam-Dinajpur 60,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 205,500 pcs.

COMPANY AND PUBLIC NOTICES

THE PATNA ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 26th day of August 1960 at 3-45 p.m. to consider and, if thought fit, to pass, with or without modification, the following subjoined resolutions, namely :—

1. (As an Ordinary Resolution):

"That as on and from the 1st day of June, 1959, Octavius Steel & Co., Limited, the Managing Agents of the Company, shall be and are hereby re-appointed as such Managing Agents upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for purposes of identification signed by the Chairman thereof the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 326(1)(b) of the Companies Act, 1956, and that the Directors be and they are hereby accordingly authorised to enter into an agreement in writing between the Company of the one part and Octavius Steel & Co., Limited of the other part in terms of the said draft agreement with all convenient despatch".

2. (As a Special Resolution):

"That the Articles of Association of the Company be altered in the following manner :—

(a) By deleting Article 103 and submitting in place thereof the following Articles :—

103. Subject to the approval of the Central Government, as and when such approval becomes necessary, Octavius Steel & Co., Limited, shall be the Managing Agents of the Company upon such terms and conditions as may from time to time be agreed upon between the Company and the Managing Agents and embodied in an agreement in writing between the parties and subject as provided in the Companies Act, 1956, and in such agreement the Managing Agents shall have and be in charge of, the management of the whole affairs of the Company.

103A. Unless and until otherwise agreed between the Company and the Managing Agents, the Managing Agents shall be entitled to receive by way of remuneration for being in charge of the management and managing the whole undertaking of the Company :—

(i) Ordinary remuneration as and to the maximum extent specified in sub-paragraph (1) of paragraph XIII of the Sixth Schedule to the Electricity (Supply) Act, 1948, subject to the maximum amount of the minimum remuneration specified in sub-paragraph (2) of paragraph XIII and

(ii) an office allowance as and to the maximum extent specified in sub-paragraph (3) of the said paragraph XIII.

(b) by deleting the words "the last preceding clause" appearing in the second line of Article 104 and substituting in place thereof the words "Article 103 hereof".

(c) by deleting Article 107."

3. (As an Ordinary Resolution):

"That the borrowing powers of the Directors conferred by Article 46 of the Company's Articles of Association be increased to a sum not exceeding Rs. 1,00,00,000 (Rupees One Crore) at any one time for the purpose of carrying on the business of the Company notwithstanding that the amount to be borrowed pursuant to the authority hereby conferred shall, together with moneys already borrowed (apart from temporary loans obtained or to be obtained from the Company's Bankers), exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose."

By Order of the Board,
I. P. GOENKA,
Director.

14, Old Court House Street,
Calcutta,
Dated, 30th July, 1960.

NOTE:—

(i) The Share Register of the Company will be closed from 19th August, 1960 to 26th August, 1960 both days inclusive.

(ii) A member entitled to attend and vote is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself. Such proxy need not be a member of the Company.

(iii) An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

W. H. TARGETT & CO. LIMITED

NOTICE is hereby given that an Annual General Meeting of W. H. TARGETT & CO. LIMITED will be held at the Bengal Chamber of Commerce and Industry, Calcutta, on Friday, the 26th August, 1960, at 10-30 A.M., to transact the following business :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1959, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 13th August, 1960 to 26th August, 1960, both days inclusive.

By Order of the Board,
W. H. TARGETT & CO. LIMITED,
W. G. EASSON,
Secretary.

Calcutta, 4th July, 1960.

Note:

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 31st August, 1960, to those Shareholders so entitled whose names appear in the Company's books on the 26th August, 1960, or to their mandatees. No application for Dividend Warrants will be necessary.

DHELAKHAT TEA COMPANY, LIMITED

NOTICE is hereby given that the Forty-second Annual General Meeting of the Shareholders of Dhelakhat Tea Company, Limited, will be held at the Registered Office of the Company, No. 31, Chowringhee Road, Calcutta, on Tuesday, the 30th day of August, 1960, at 9-15 a.m. for the following purposes :—

1. To receive the Directors' Report for Season 1959.

H. P. DHANUKA,
Director.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of new Ordinary shares.

NOTICE is hereby given that the extended period for submission of coupons in respect of the new Ordinary shares in terms of the Company's Circular dated the 12th October, 1959 expires on the 29th July, 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite new Ordinary share coupons, the Directors have extended the period for submission of such coupons to 29th September, 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 30th July, 1960 upto but not later than the 29th September, 1960 in respect of such coupons Provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under :—

(i) For applications with new Ordinary share coupons from resident shareholders from 16th December, 1959 to the date of payment; and

(ii) For applications with new Ordinary share coupons in the case of non-resident shareholders from 1st June, 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of new Ordinary shares from the non-resident shareholders which was 29th July, 1960 be extended upto 29th September, 1960 Provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from 1st day of April, 1960 to the date of payment shall be paid to the Company's bankers.

No application received from resident shareholders on and after the 16th December, 1959 and from non-desident shareholders on and after the 1st June, 1960 in respect of new Ordinary share coupons and no application received from non-resident shareholders on and after the 1st April, 1960 in respect of rights to new Ordinary shares will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 29th September, 1960.

The above extension of date does not apply to applications in respect of "A" Second Preference shares or "A" Second Preference share coupons, the last date for submission of which is 29th July, 1960.

Dated at Bombay this 28th day of July, 1960.

By Order of the Directors,
For and on behalf of
THE TATA IRON AND STEEL COMPANY LIMITED,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
J. J. BHABHA,
Agent.

GOVERNMENT BORROWING FOR THE THIRD PLAN

LATER this month, 12 State Governments will be entering the capital market for raising loans totalling Rs. 75 crores or Rs. 80 crores. The fate of their borrowing programme, together with the programme worth Rs. 180 crores completed by the Central Government last month, will provide a clue to the potentialities of the gilt-edged market in coming years. It will be an important clue to the prospects for the economy also, considering that the draft outline of the third five year plan proposes that the Central and State Governments should raise loans totalling Rs. 850 crores over the next five years. Many feel that the borrowing target suggested by the planners is far too low. It is only Rs. 50 crores higher than the amount borrowed during the second plan (Rs. 800 crores). And the Rs. 850 crores constitutes only a small proportion of the total of Rs. 5,050 crores which the planners want to raise in the form of rupee resources for the third plan.

Because the borrowing target is low, the targets for taxation and for the surpluses of public enterprises during the third plan have been inflated to the point where they seem highly unrealistic. Some adjustments are necessary, and the experience of the Central and State Governments' borrowing programmes in recent years suggests that they can easily be made. There is little hope that the surpluses expected from public enterprises will be found on the scale assumed by the planners; furthermore, the additional taxation they suggest will assuredly inflate costs and prices to such an extent that the chances of steady growth will be seriously jeopardised. It is essential, therefore, that Government loans should contribute bigger sums than the planners now visualise. No great attention need be paid to the interpretations put forward by various financial commentators recently that last month's Central Government loan was rescued from failure only by the Reserve Bank's subscriptions. The fact is that the subscription lists for the loan opened when conditions in the money market were tight due to the delayed onset of the traditional slack season. No great harm can result if the Reserve Bank has taken up a large part of the loan in such conditions with the intention of unloading it gradually on the market as the demand for trade and industrial credit eases. The loan will presumably be offered for sale "on tap" in the coming months; sold that way, it will bring in sums as large as the Government might have hoped for. Sales "on tap" offer the clear advantage that the impact of Government loans on the capital market is not concentrated in a brief period; the loans can be absorbed slowly and conveniently, without the market having suddenly to starve trade and industry of funds in order to pick up the gilt-edged securities it wants.

It is noteworthy that, during the past three years or so, the loans floated by the Central and State Governments have been successful. At the end of March 1959, India's outstanding marketable rupee debts amounted to Rs. 2,238 crores. The public debt was thus nearly one-third of the gross national product during 1958-59 (the data for the latter are approximate); and around 45 percent of the net national income. It is interesting to note that at the end of 1958, the proportion of the national debt to the gross national product was 60 percent in the United States, 170 percent in the U.K. and 75 percent in Canada. An important factor governing the effects of the public debt on the economy is the proportion which interest charges on the debt bear to public revenues. In 1958-59, the interest charges on the public debt in India constituted 7 percent of the total public revenues, compared with 11 percent in the United States and 16 percent in the U.K. If there is to be a steady increase in the gross national product and national income in the coming years, official borrowing can be increased substantially without affecting the economy adversely.

The advantages of raising resources by borrowing rather than by other means are clear. The sums the planners hope to raise from the surpluses of public enterprises and taxation are not only too high; any attempt to raise them will be strongly inflationary. If Government borrowing helps mop up savings, the inflationary potential in the economy can be reduced. The official borrowing programmes of the past few years have resulted in a position where the maturity structure of the public debt is satisfactory. Too many short-term securities would necessitate refinancing on a large scale, but the proportion of the former is not excessive. At the end of 1958, 36 percent of the debt was to fall due within five years, 33 percent within five to 10 years, 13 percent within 10 to 15 years and 18 percent after 15 years. It is evident that the authorities have succeeded in popularising the issue of long-dated loans. Since the money from Government loans is mainly used for development programmes, the longer the maturity of the loans, the better it is.

The pattern of ownership of the public debt in India is reasonably reassuring. A large part of the loans are held by the commercial banks. At the end of December 1958, they held 28.6 percent of the total. Insurance organisations, including the Life Insurance Corporation, held 13.5 percent; provident funds 6 percent; Governments 10.1 percent; and the Reserve Bank 13.7 percent. (The Central and State Governments usually take up part of their own loans, when floated, for their cash balance investment account, but these holdings are sold to the market later). As far as the Reserve Bank's holdings are concerned, they are very flexible. The Bank is responsible for keeping the gilt-edged market healthy, and it has to conduct open-market operations from time to time. It often rightly takes up a substantial portion of new loans at the time of subscription and sells these to the market later. This method of selling securities "on tap" eases the strain on the money market during periods of stringency.

Commercial banks have always been major holders of Government securities. When they buy gilt-edged stock by reducing their loans and advances, the effects tend to be anti-inflationary. Government securities have not yet become very popular among private individuals, so for some years ahead it will be necessary to mop up their personal savings through the medium of the banks. The latter can be expected to subscribe more to Government loans since their deposits are increasing. In fact, the time has now come when the Reserve Bank should seriously consider abolishing the scheme for impounding deposits introduced earlier this year. Instead of forcing banks to keep a portion of their deposits as idle hoards in the Reserve Bank, they should be encouraged to invest the money in Government securities. If it is considered appropriate, they may be asked statutorily to invest more of their deposits in these securities. This will help restrain credit expansion to the extent desired. Meanwhile, the support from the Life Insurance Corporation, provident funds and the funds created by the Employees State Insurance Act in the future is expected to be on a much bigger scale. The five-year plan of the Life Insurance Corporation promises a large increase in its business, so its investments in Government securities should rise steadily. More industries and employees are being brought under the Employees Provident Fund Act, 1952, and the Employees State Insurance Act, 1948, so substantial sums are likely to be invested in Government securities from these sources.

The draft outline of the third five year plan provides for a total net Governmental borrowing of Rs. 850 crores. About Rs. 872 crores of Central and State Government loans will mature for repayment over the five-year period, so the gross market borrowing should amount to Rs. 1,722 crores, against Rs. 1,130 crores fixed for the second plan period. The target of Rs. 850 crores (net) for Central and State Government loans over the five years from 1961 to 1966 gives an annual average of Rs. 170 crores. During the current year (1960-61), the Central Government loan has been subscribed to the extent of Rs. 180.30 crores, of which cash subscriptions were Rs. 106.05 crores and conversions were Rs. 74.25 crores. The 12 State Governments which propose to raise loans totalling Rs. 75 crores on 29th August will be able to retain subscriptions up to 10 percent in excess of the notified amounts. Conversions might not amount to more than Rs. 12 crores or Rs. 13 crores. The new cash raised this year will thus be at least Rs. 165 crores or so. In view of the prospect that there will be a steady increase in national income, the third plan target of Rs. 170 crores annually for market borrowing thus looks very modest. It is, therefore, necessary that the target be increased. If more resources are raised in this way, the amounts expected from the surpluses of public enterprises and taxation can be substantially reduced. The argument that Government borrowing would divert resources from the private sector is irrelevant considering the strong support given to private capital issues in recent months.

There is, nevertheless, no reason to take a complacent view of the prospects for official borrowing. The Central and State Governments have to borrow in competition with others. If the former try to extend the maturity of Government loans, the competition they have to face will be stiffer. Inflation will make investors shy of lending for a long term. So it will be necessary to improve the terms and conditions of the loans in order to attract support. Some of the more advanced countries have recently increased interest rates and introduced new schemes to attract investors. Australia, for instance, issued special bonds in 1958, bearing interest at 4 percent until the beginning of 1961, at 4½ percent for the succeeding two years and at 5 percent for the remaining three years until maturity. The redemption value has also sometimes been fixed according to an "escalator" scale. The idea of paying increased interest on the same loan as it approaches maturity, by means of escalator clauses, deserves serious consideration. This will not only enhance the attractions of the loan; the frequent difficulty of paying interest on new loans in line with Bank rate might also be surmounted to a large extent. Uncertainties concerning Bank rate are already affecting Government securities in India greatly. In view of the need for obtaining bigger sums from market borrowing, there is no reason why orthodox practices should be strictly followed for Government loans.

The disappointing results of the small savings schemes in recent years are partly due to the fact that the interest rates they offer are too low. The terms and conditions of the schemes are less attractive than those offered by competing borrowers. As a result, net collections through small savings are expected to be not more than Rs. 380 crores during the second plan period. The Planning Commission has tentatively fixed a target of Rs. 550 crores for small savings during the third plan. It is hoped that this target will not include collections from the Prize Bonds which have been introduced from the current financial year. As the Prize Bonds have proved extremely popular, they should be encouraged. If the target for small savings is to be reached, the returns will have to be attractive in comparison with those offered by similar competing investments. Small savings schemes will meet with a much better response if they are prepared according to varying needs of investors. Their organisation has to be improved if savers, especially in the rural areas, are to be persuaded to divert their funds from the traditional hoards of gold and silver to more modern investment media. Finally, an essential prerequisite for encouraging savings is to keep prices stable. If inflation continues to erode incomes, people will be left with less money to save and invest.

INDIA AND THE DEUTSCHEMARK

THE campaign for the upward revaluation of the deutschemark, which reached a crescendo in 1957, has been touched off again by the continued accumulation of West German trade surpluses and by the deflationary policy of the Bundesbank. It has gained enough credence to cause a new flow of foreign capital into the West German banks. Although the Bundesbank has ruled that these foreign deposits can no longer bear interest, and thus do not benefit from the deflationary rise in the price of money, speculators think that the chances of a revaluation of the mark are good enough to make it worthwhile leaving capital with the Frankfurt banks. Bonn has issued a firm denial of revaluation plans, but speculators are evidently counting on the September meeting in Washington of the International Monetary Fund and the World Bank to assist the revaluation campaign. It is argued that even if West Germany's neighbours cannot convince Bonn of the need to revalue the mark from 4.2 deutschemarks to the dollar to 4 deutschemarks to the dollar, they might persuade her to let it fluctuate between wider limits so that it would tend freely towards a more realistic exchange rate. Alternatively, revaluation of the mark could constitute the price which Bonn would consent to pay, and London consent to accept, for a return to total convertibility of European currencies. Plans for a return to free convertibility (that is, not only for non-residents as at present, but for all holders of those moneys) are certainly being studied. They do not yet seem feasible, at least for sterling, but a sufficiently generous revaluation of the deutschemark could make them so.

The effects of a revaluation of the mark would be highly damaging to India. They would in fact reproduce all the consequences of a devaluation of the rupee, often suggested and always rejected, in an important department of India's foreign trade. India's imports from West Germany are much greater than from any other European country (including Russia) except Britain. Those imports are constituted as to two-thirds by capital goods, machinery and transport equipment, and thus cannot be reduced on grounds of price without affecting this country's development and industrialisation. Most of the remaining third is chemicals and manufactures, which are almost as important. Moreover, India's trade with West Germany is heavily deficit, which means that this country would lose a great deal on the import side and gain very little on the export side. In 1958, for example, India bought Rs. 94 crores of goods from West Germany, but sold her in return only Rs. 14.7 crores. Add, say, 5 percent to each of those figures and India's deficit increases considerably in absolute terms.

India will be able to argue at the meeting of the Bretton Woods institutions that similar effects would be felt by all the developing countries which rely on West German industry for the supply of capital goods. The result would be a net deterioration in the already adverse terms of trade for those countries in their relations with the industrial West. However, she has a much more weighty argument to urge against revaluation of the deutschemark. Since the origin of the trouble is large West German payments surpluses, and since the object of a hypothetical revaluation would be a redistribution of reserves, the readier solution would be to commit a greater part of the West German reserves to direct aid to the developing countries. Combined with an accelerated repayment of West German foreign debts, this would produce a significant (although admittedly not a final) relief of present unbalance. West Germany is making greater efforts to send capital to the developing countries and it would be better for this to continue and increase. The day West Germany is as heavily committed in that field as Britain, France and the United States are now, the unbalance in the western nations' reserves will be less acute. If the cases of Britain and France were not convincing, the recent weakening of the dollar by generous foreign aid (despite, it must be remembered, a consistent U.S. trade surplus) will demonstrate the strength of this argument. Direct aid by the West German Government is already causing budgetary difficulties for the Federal Republic; it is the fear of these among the orthodox financiers of Bonn that is limiting further aid by this channel. Obviously budget deficits caused by more extensive foreign aid will have effects on the West German economy that will relieve the discomfort of her neighbours, who are now calling for revaluation.

The argument that a dearer mark is the only solution, because it will encourage imports into West Germany and discourage competition for her exports, has a strong appeal to other western nations, who can hope to sell significantly more manufactures to the Germans while meeting less competition from German capital goods exporters overseas. Naturally, it has less appeal for countries such as India, who cannot hope to sell much more in West Germany (because agricultural protectionism and high German excise duties limit Indian exports as much as questions of price), and who have to go on buying German capital goods for their development.

U.K. POLICY FOR EXTERNAL INVESTMENT

IN the U.K. House of Lords a few weeks ago, Lord Bruce of Melbourne, an "elder statesman" of the British Commonwealth, said that "Britain must remain and maintain that position she has held throughout her history as the great market for her overseas sister-countries' exports, and must remain the great provider of capital". In its annual report, published about the same time, the Bank of England remarked that provision of development capital "requires the use of resources which might otherwise be used at home" and could, therefore, "have implications both for the balance of payments and reserve position and for the stability of the domestic economy". These are two representative opinions on the provision of development capital by Britain: the one insistent that Britain continue her traditional function, the other apprehensive lest she over-strain herself in attempting to do so. The Bank warned that the increase in grants and loans to the less developed countries (the total of £135 million provided by the British Government in 1959-60 was much larger than in any previous year) might impose too heavy a burden.

A few weeks later the National Institute of Economic and Social Research, in its latest bi-monthly review of the economic situation in Britain, took up the same theme. "The policy of encouraging foreign investment, without much attention to its location or purpose, does not seem to have brought the promised harvest in invisible income. This policy, the Institute suggested, should be "reappraised". The mention of this "promised harvest" is interesting. At the annual Anglo-Argentine luncheon in London in July, Argentina's President Frondizi complained that his country had not enough access to capital goods. "Thermal and nuclear power-stations, transport, and iron and steel," he said, "are basic activities in which Britain can offer significant aid to my country, and receive adequate benefits in return." The results of Britain's investment in Argentina have in the past been somewhat discouraging, but extended credits—whether official or through the banking system—might be more rewarding. Bankers engaged in Latin American business are jealous of the British Commonwealth, which, they feel, claims too much of the limited resources available. But the more general feeling, in both political and financial circles in London, is that the Commonwealth must take precedence while resources are scarce.

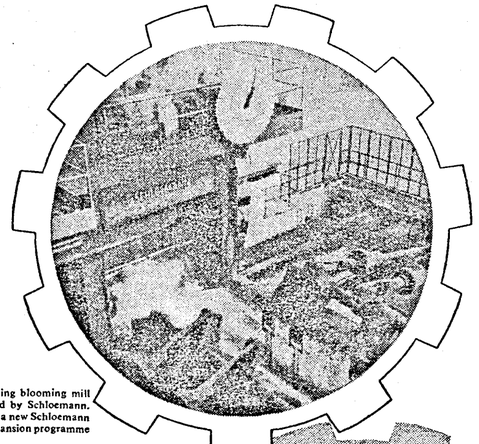
The United States has gathered only a small part of the harvest that should accrue from its massive foreign investments in recent years. But many observers—inside and outside the U.S. Government—believe that the big increase in invisible income which will eventually be forthcoming will gradually strengthen the dollar. For her own benefit, as well as for the benefit of the developing countries, the United Kingdom should try to build her investments abroad, with an eye on the future income from them. The distressing fact remains that the interest of the providers of capital and the interests of the would-be recipients of capital are often in conflict. It can hardly be disputed that communications and power in a potentially rich but undeveloped region are socially more important than yet more canned foods or domestic appliances in Europe. But consumer goods in a developed region promise larger—or, at least, quicker—profits. And anyway the corporations which provide capital for such goods abroad are mostly engaged in producing the same goods at home; they are not concerned with primary development anywhere.

Another aspect of foreign investment by big corporations attracts more attention as the proportion of such investment in the economies of some developing countries grows. Countries such as Australia and Canada may be gratified by the attentions of the capital-exporters, but as remittances of profits from those countries increase—to the extent that they are equivalent to a substantial proportion of new capital invested from abroad—the benefits of these attentions are more closely scrutinised. It may comfort the United States, the United Kingdom, West Germany and the other exporters of capital to know that their invisible incomes will increase as their investments abroad become more productive. But the "harvest" of these investments will perhaps give less satisfaction to the countries where the profits are earned. The official objections to foreign companies are mitigated where those companies invite local investors' participation in their projects (British industry claims that its policy is more progressive than American industry's in this sphere). But in the less developed countries, local savings may not always be sufficient to take advantage of the opportunities.

Thus has external investment been criticised form the viewpoints of both the capital-exporting countries (particularly Britain) and the capital-importing countries (particularly Canada, but many others too). Careful scrutiny of the methods used is certainly desirable, and both the exporters and the importers of capital have to consider with open minds whether they are gaining appropriate benefits from the transactions. But it would be regrettable if the principle of capital migration falls into disrepute, for the world as a whole should benefit from the development of any of its parts. The concern of the capital-exporting countries should rather be with the means to release more resources for development. For Britain, the National Institute of Economic and Social Research advocates a "reappraisal" of spending on defence; and for the whole world Lord Boyd Orr, renowned authority on population and nutrition, proposes a world-scale reduction of 10 percent in military spending to form "a massive fund" to fight hunger and disease. The direction of investment requires attention. Continental Europe attracts both Britain and the United States at present, but when profits "ploughed back" in less developed countries fructify, there may be bigger "harvests" there.

Serving heavy industry...

SCHLOEMANN



As early as 1937, the existing blooming mill at TISCO was modernised by Schloemann. TISCO have now installed a new Schloemann blooming mill for their expansion programme

ROLLING MILLS HAMMERS PRESSES

Among the industrial undertakings in India which are using or have ordered Schloemann plant and equipment are:
Tata Iron & Steel Co. Limited
Hindustan Steel Limited
Mysore Iron & Steel Works
Tata Locomotive & Engineering Co. Limited
Indian Steel & Wire Products Limited
Krishna Steel Industries

In her steady progress towards economic and industrial advancement, India demands the finest plants and equipment for her heavy industries—and Schloemann have been supplying the country with the latest designs in rolling mills, hammers and presses for over a quarter of a century.

SCHLOEMANN plants for India's Heavy Industry

Current News and Comment

Indian Iron Dividend Up

The price of Indian Iron shares has improved to Rs. 25.50 during the past couple of days because the ordinary dividend of Rs. 1.50; taxable, for the year ended March 1960 is satisfactory. The directors have termed this dividend as an interim one, because the accounts of the Company for this period have not yet been finalised. This dividend, nevertheless, constitutes the full dividend for the accounting year ended March 1960, and there will be no further payment. The completion of the accounts is likely to take some time in view of the fact that the retention prices of steel and pig iron for this period have not yet been decided by the Government. The directors have decided, therefore, to pay the dividend without keeping shareholders waiting. The share registers and transfer books of the Company will be closed from 26th August to 17th September. The dividend will be paid on or after 21st September. The date for holding the annual general meeting will be announced in due course as soon as the accounts are finalised after the announcement of the new retention prices.

The present dividend works out to Rs. 1.05 net, after deducting the prescribed tax of 30 percent under the Finance Act, 1960. The ordinary dividend was Re. 1, tax-free, last year, but at that time shareholders enjoyed the "grossing" privilege, which has now been removed under the new system of corporate taxation. On the old basis where shareholders enjoyed the "grossing" privilege, the present gross dividend of 15 percent would represent in effect a tax-free dividend of 10.275 percent. By increasing the latest dividend, the directors have thus tried to compensate shareholders for the loss of the tax credit they enjoyed previously. It is also possible that a substantial portion of the tax reliefs the Company has gained under the new system of corporate taxation has been passed on to shareholders in the form of an increased dividend. The details of the financial implications will be known only after the accounts are published.

Rights Issue from Rohtas

There has been fair support for the ordinary shares of Rohtas Industries Ltd around Rs. 40.87 for some days because the Company has decided to issue ordinary rights shares at par in the proportion of one for one. The proceeds of the issue will be used for financing expansion, especially of the paper mills. The expansion schemes have been nearly completed and the production of paper has increased considerably. It is authoritatively learnt that this division has been working satisfactorily. The reduction in paper prices since the beginning of 1960 might not affect it, as suitable adjustments have been made in the production programmes.

The steadiness of the scrip is also helped by the fact that the share registers of the Company will be closed from 25th August for the issue of the new shares and the payment of the dividends for the year ended March 1960. So shareholders will get the dividend money in time to subscribe to the new shares. An announcement about the forthcoming dividend is awaited, but the market hopes that the net payment will be at least as big as last year's 15 percent, tax-free. During the year ended March 1959, the trading profit amounted to Rs. 2.95 crores and the ordinary dividend absorbed Rs. 37.62 lakhs. It is believed that the Company's results for the year ended March 1960 will be better than those of the previous year, so there should be little difficulty in paying a satisfactory dividend.

The value of Rohtas shares works out to Rs. 25, ex rights, at the present price. Apart from the profitable working of the paper division, the results of the cement department are also expected to improve because the Government is believed to be thinking of increasing the retention price of cement. Whether the increase will be made by reducing the excise duty or by raising the selling price for consumers, it is difficult to say. The working of Rohtas should continue at a satisfactory level and there should be little difficulty in paying a fair dividend on the new shares which are being issued. The ordinary share capital at present is about Rs. 2.51 crores, divided into 2,508,000 shares of Rs. 10 each, and reserves total more than Rs. 2.20 crores.

National Tobacco Pays More

The National Tobacco Company of India Ltd has declared an ordinary dividend of 16 percent, taxable, for the year ended December 1959. This is covered more than four times and offers a yield of 6.8 percent at the present price of Rs. 23.62 a share. The ordinary dividend was 11 percent, tax-free, in the previous year. Providing Rs. 6.10 lakhs (against Rs. 6.49 lakhs) for depreciation, Rs. 1.56 lakhs (against Rs. 53,810) for development rebate reserve and Rs. 26.27 lakhs (against Rs. 27.83 lakhs) for taxation, the profit increased to Rs. 29.39 lakhs, compared with Rs. 22.67 lakhs in the previous year. Important allocations include Rs. 15 lakhs (against Rs. 9 lakhs) for capital reserve and Rs. 5 lakhs (against Rs. 2.14 lakhs) for general reserve. The directors say that it is necessary to plough back substantial resources into the business in order to finance expansion. The carry-forward is Rs. 7,07,850, against Rs. 9,59,940 brought in.

The indications are that cigarette consumption in India has increased, so National Tobacco has benefited. Its sales have risen from Rs. 8.35 crores to Rs. 9.35 crores. The Company has taken steps to promote sales by diversifying its products. The introduction of filter-tipped cigarettes, for instance, has become very remunerative. Smokers are being offered a variety of new products and packages by National Tobacco. Much of the equipment has been modernised and this has improved operational efficiency. As for the export of unmanufactured tobacco, there has been a decline during the past year, because the United Kingdom—which is the main buyer of Indian tobacco—has purchased less. Steps have been taken to improve the quality of Indian tobacco and reduce the price. The directors take an optimistic view of the working during the current year and the results so far are stated to be encouraging.

Polychem Fares Well

The report of Polychem Ltd for the year ended March 1960 suggests that the production and expansion programmes are making satisfactory progress. The plant for manufacturing an improved quality of high-impact polystyrene called Styron 475 has been installed; it started production during the year. The output of other formulations has been expanded to meet the growing demand from various industries. The Company's polystyrene plant has enough capacity to meet the increasing demand for the product, but due to the import restrictions on raw materials, it is being operated at around 60 percent of its rated capacity. The Company asked the Government for additional licences for importing raw materials. If the licences had been given, more polystyrene could have been produced. The Company has received an industrial licence for making the basic raw material, styrene monomer. An agreement concerning this project is being finalised with Dow Chemie A. G. of Switzerland. The plant is expected to go into production in 1962.

The accounts show a sizeable increase in sales and in the net profit. Sales have risen from Rs. 105.72 lakhs to Rs. 153.12 lakhs. After providing Rs. 4.57 lakhs (against Rs. 3.93 lakhs) for depreciation, Rs. 17.5 lakhs (against Rs. 5.75 lakhs) for taxation and Rs. 1.53 lakhs for development rebate reserve, there is a net profit of Rs. 19.59 lakhs, against Rs. 6.88 lakhs in the previous year. With Rs. 18,183 brought in, the total available is Rs. 19.78 lakhs. The directors have provided Rs. 7.5 lakhs for the dividend fund account under Section 15C of the Income Tax Act. From this, a payment of 7½ percent, taxable, is to be made on the preference shares and Rs. 5.50 on the ordinary shares. General reserve gets Rs. 12 lakhs, leaving Rs. 27,844 to be carried forward.

Kumardhubi Engineering Cautious

The ordinary shares of the Kumardhubi Engineering Works Ltd have been steady around Rs. 6.87 since the publication of a satisfactory report for the year ended November 1959. The Company's working during the earlier part of 1959 was hampered by a fall in demand, combined with

a shortage of steel. The demand improved towards the end of 1959 but the directors take a cautious view of the current outlook, since a substantial improvement cannot be expected until 1961 as far as the steel foundry is concerned. It is hoped that steel supplies will be more freely available from the end of 1960, and the working of Kumardhubi Engineering will then improve. During the past accounting year, the value of fixed assets has been reduced by Rs. 12.93 lakhs. This has obviously been done in order to bring the value of these assets back to their actual written-down value based on the original costs. So the increase in value effected on revaluation in 1948 has now been corrected.

An ordinary dividend of 30nP, taxable, has been paid on the share capital, which has been increased by issuing 307,200 ordinary rights shares of Rs. 3 each during the past year. The dividend absorbs Rs. 2.76 lakhs and offers a yield of 4.4 percent at the present price. The ordinary dividend was 30nP, tax-free, in the previous year. The profit is Rs. 2.93 lakhs, against Rs. 3.21 lakhs. A sum of Rs. 4.43 lakhs (against Rs. 3.05 lakhs) is provided for depreciation, Rs. 3.22 lakhs (against Rs. 4.35 lakhs) for taxation, Rs. 6,391 for general reserve, Rs. 2.12 lakhs (against Rs. 1.87 lakhs) for statutory development rebate reserve and Rs. 1 lakh for debenture redemption reserve. The carry-forward is Rs. 31,233, compared with Rs. 1,00,074 brought in.

Bharat Nidhi Conversion

The directors of Bharat Nidhi Ltd have decided to convert the 2,683,362 partly-paid ordinary shares of Rs. 10 each into fully-paid ones after completing the necessary formalities. The present paid-up capital of the Company is Rs. 2.01 crores, divided into 53,572 preference shares, 807,182 fully-paid ordinary shares of Rs. 10 each and 2,683,362 partly-paid ordinary shares of Rs. 10 each. It is reliably learnt that the Company's working during the year ended December 1959 has been better than in the previous year. It is proposed to pay the ordinary dividend in specie; a fully-paid share of Rs. 10 of the Punjab National Bank Ltd will be given for every 20 fully-paid or for every 80 partly-paid ordinary shares of Bharat Nidhi. There has been an appreciable rise in the book value of investments.

Progress of New Great Insurance

The New Great Insurance Company of India Ltd has done well during 1959. A dividend of Rs. 2.50, taxable, has been paid. General reserve is allocated Rs. 1 lakh and investment reserve Rs. 17,602. The fire department has earned premiums of Rs. 38.09 lakhs, the miscellaneous department Rs. 27.16 lakhs and the marine department Rs. 34.43 lakhs. The chairman's statement (a fuller version of which is printed on a later page of this week's *Capital*) was read at the annual general meeting held some days ago by Mr. J. P. Patel. Mr. Tulsidas Kilachand, chairman, mentioned the failure of the Code of Conduct. Instead of promoting healthy practices, it has hampered the working of insurance companies because the controls have generally been evaded. So he thought that companies should be permitted greater freedom in relation to costs, commissions and other items. The reduction of premium rates for fire insurance since the beginning of 1960 has not helped. It is wrong to cut premiums except on the basis of favourable experience, Mr. Kilachand stated. He did not think that the Government acted fairly in taking away a large part of its insurance business from the private companies.

Dyes Importers: A New Company

The Bombay Kariana, Colour and Chemical Merchants Association has drawn up a scheme to organise its members who are established importers of coal tar dyes and derivatives and dye intermediates into a public limited company, called the Dyes Importers of India Ltd. The main object of the Company is to strengthen the existing trade channels for the distribution of imported and indigenous coal tar dyes, coal tar derivatives, dye intermediates and allied chemicals. The Company also proposes to seek distribution rights for these items from companies in both the public and private sectors, as well from the State Trading Corporation and similar organisations. Among the other objects are the manufacture of these commodities and the promotion of their exports. The Company will have an authorised capital of Rs. 10 lakhs, divided into 10,000 shares of Rs. 100 each. Those who happen to be members of the Association on or before 30th September will be allotted shares provided they hold valid and effective quota certificates for coal tar dyes and derivatives falling under serial No. 1-B of the I.T.C. schedule Part III. Established importers at any port are eligible to become members and hold shares in the proposed Company. Shares will be allotted in proportion to the quota certificates held by the members. It is proposed to keep back 10 percent of the issued shares for allotment to subsequent claimants.

The Prospects for Raw Cotton

The standing committee of the Cotton Advisory Board met in Bombay on 5th August to discuss the present supply of cotton, mill requirements and the marketing policy for the next season. The current year's allocation of indigenous cotton to the mill industry is placed at 4.1 million bales, including the carry-over of 600,000 bales. Since mills are expected to increase output by working extra shifts and more spindles, their requirements of cotton next year are estimated at 5.4 million bales, of which 600,000 bales will be of staple length 1⅛in. and above. The carry-over at the end of this season (on 31st August, 1960) is placed at 1.05 million bales of Indian cotton and 350,000 bales of foreign cotton, against 1,847,000 bales and 160,000 bales, respectively, at the end of August 1959. The new crop outlook is uncertain in spite of the favourable weather conditions so far. The committee's deliberations were thus dominated by thoughts of the acute shortage during 1959-60 and the record low carry-over at the end of the season.

The committee, it is understood, did not approve of the suggestion for introducing the nominee system for the purchase and sale of cotton. The control over distribution, however, is to continue. It favoured the release of quotas by instalments in the light of the supplies available from time to time. The committee, it is believed, also suggested that imports should continue to be large—around 900,000 bales—during the next season even if the crop is good. This is intended to ensure the smooth flow of supplies and to prevent a sharp rise in prices. The need for expediting imports was also emphasised at the meeting, because there continues to be a wide gap between the quotas announced, the quantities licensed and the actual arrivals. The import quotas announced so far total about 1.88 million bales, whereas the quantity licensed up to 21st July is mentioned as around 1.1 million bales and actual arrivals are hardly 740,000 bales. To make price control a success, the committee suggested that mills should be prohibited from buying unginned cotton and discouraged from making large forward purchases. The compulsory survey of cotton before delivery to mills is reported to be another suggestion. Requisitioning is favoured if the supply position becomes tight. The chairman of the committee, Mr. R. A. Podar, emphasised that the trade should purchase unginned cotton only at a price which will enable it to sell ginned and pressed cotton at the statutory ceiling rates.

Meanwhile, trading in cotton futures in Bombay has been almost at a standstill for a long time. Jarilla August is quoted unofficially at around Rs. 831, against the ceiling rate of Rs. 820 a candy. As the supply of Indian cotton is very tight and the size of the new crop still uncertain, the prospects for hedge trading have been causing considerable anxiety to the trade. But Mr. Madanmohan R. Ruia, president of the East India Cotton Association, said last Friday that the Government is not against permitting hedge trading in the 1960-61 crop contracts. Now that the uncertainty about the floor and ceiling prices for the next season has been removed, the E.I.C.A. has appointed a sub-committee to formulate a hedge contract which might function smoothly within the framework of the Government's price policy. There is an attempt to make the new contract as broad-based as possible by increasing the tolerance for the purpose of tenders. If the tolerance for grade and staple is increased on both sides, it will widen the scope for tenders considerably. It is generally thought that the new contract will be known as I.C.C. 13/16in., and cotton stapling 11/16in. to 1-1/16in. will be allowed to be tendered against the contract. The existing contract is Moglai fine 25/32in. Trading in the new crop contract is expected to start by about the end of August.

Cotton under Barter

The State Trading Corporation has entered into a barter deal with four U.S. firms—the Ferro Metal and Chemical Corporation, the Overseas Metal and Ore Corporation, the Associated Metals and Minerals Corporation and Colodetz and Company. The S.T.C. will sell manganese worth $7 million and take in return cotton stapling 1in. and below of the same value. The quantity of cotton which India will secure under the deal is estimated at around 50,000 bales. The bartering contractors have appointed Cook and Company of Memphis as their commodity agents to handle the shipment of cotton on their behalf. The cotton under this arrangement will be available from the stocks held by the U.S. Commodity Credit Corporation. The C.C.C. will sell at its minimum sale price or the market price, whichever is higher, but the bids are likely to be accepted with a tolerance of 25 points for which the discretion may be given to Cook and Company. The agreement does not provide for any arbitration. The cotton is likely to be distributed mainly among India's cloth exporting mills, so that they may increase the production of coarse and medium varieties which constitute the bulk of the country's textile exports.

The barter deal has been criticised by the trade as a further encroachment by the S.T.C. on their field of activity. Private importers are not allowed to participate in the business directly, even though imports are now about three times the normal annual quota. They merely act as agents for the importing mills on a meagre commission. The terms and conditions of the deal are also thought to be somewhat unsatisfactory, in that there is no guarantee about the quality of the cotton offered since there is no provision for arbitration. It is pointed out that the tolerance allowed in the price to Cook and Company can easily work against the mills' interests. Once a mill has accepted the quota under the barter deal, it will have to use the cotton, failing which the quota will be adjusted against its future allocation of indigenous cotton. But in spite of these handicaps, mills will welcome the U.S. cotton deal because of the acute scarcity of short-staple cotton here.

General Insurance and Government

Addressing the annual general meeting of the Indian Insurance Companies Association in Bombay on Tuesday last week, Mr. J. S. Dalal said that he had, "during the tenure of his presidency, a difficult task to hold this office with any degree of confidence in view of his official position as an executive of an insurance company in the public sector." The president stated that the expansion of general insurance during the past few years has been much slower than the growth of industrial production. The slight improvement in 1958 was heartening, but it is doubtful whether it has been maintained in 1959, the final figures for which year are not yet available. One significant point which Mr. Dalal made is that the first ten Indian insurers accounted for as much as 60 percent of the gross premium income of all Indian insurers during the period from 1953 to 1958. In 1953, the gross premium of the first ten was Rs. 9.03 crores, or 53 percent of the total of Rs. 16.52 crores. In 1958, the gross premium of the first ten insurers was Rs. 16.90 crores, or over 63 percent of the total of Rs. 26.63 crores for all Indian insurers. The figures, according to Mr. Dalal, show that the bigger Indian insurers increased their gross premium income by over 87 percent during the period from 1953 to 1958, while the gross premium income of all insurers together rose by only 60 percent.

This, according to Mr. Dalal, is not a healthy sign, since it shows that growth has been substantial only in the larger units. The big units are becoming bigger, while the development of the small and medium ones is stunted. The closure of a number of Indian insurance companies, including two recently which were of several years' standing, is surprising. It is particularly surprising that they should have shut down at a time when the economy is expanding and business opportunities are increasing. If several companies have found it unprofitable to carry on, "it could only be because of some basic disorder in the trade." One "basic disorder" which Mr. Dalal did not mention is the policy followed in distributing Government business. The heavy weightage of 75 percent in favour of Government-owned insurance companies is the sort of discrimination which makes the growth of the small and medium units "stunted". Another "basic disorder", to which Mr. Dalal did refer, is unhealthy competition—securing business by offering rebates and higher rates of commission than those prescribed by law. Mr. Dalal was surprised that unhealthy competition should have increased even though the number of units operating has fallen considerably, while opportunities for writing larger premium incomes have grown with the expansion of trade and industry. But the trend would have looked less surprising in view of the irrational policy for distributing Government business.

Mr. Dalal thought that the deterioration has now reached the stage where the trade should be prepared to accept any constructive suggestions or regulations the Government may choose to put forward. In fact, surprisingly, he invited the Government to make some "constructive" suggestions, saying that if it does not take a sympathetic and active interest now, it might be faced later with a situation far worse than that prevailing at present. Mr. Dalal said that the Government has rightly turned down the proposal for the nationalisation of general insurance. But he was not sure whether the proposal would meet with the same resistance from the Treasury benches if the condition of the insurance trade deteriorates further in future years. A number of employees' associations are pressing for the nationalisation of general insurance, especially since the recent closure of some companies. Mr. Dalal did not see reason for undue anxiety merely because such demands are being made; but as a matter of "realism", he invited "constructive" suggestions from the Government. Private insurers will have to consider whether they can endorse the view put forward by Mr. Dalal as chairman of an association composed mainly of private insurers. It seems odd that Mr. Dalal should have advocated a course which has been resisted for many years by insurers all over the country.

Failings of the Export Trade

As India industrialises, the range and variety of the products she can sell abroad will increase. Her imports will rise too, and in the circumstances it is disappointing that her exports should be lagging so far behind. This is partly because the price of Indian products is high and partly because many Indian exporters have an unsavoury reputation abroad. Quality and packaging are often poor and delivery schedules are not adhered to. Salesmanship is neither aggressive nor imaginative. The Indian exporter does not care to study the preferences or tastes of consumers, does not know what his competitors have to offer, and relies too much on the Government to do the sales promotion. Trade delegations which have been overseas have emphasised these failings, yet there is no sign that matters have improved. It is good, therefore, that some chambers of commerce are making a bigger effort to keep themselves and their constituents informed about export markets. The Indian Chamber of Commerce in Calcutta, for instance, is trying, however amateurishly, to collect market intelligence about countries with which India has trade connections. It has so far directed its attention to Asia and Africa. The first of its surveys, published some months ago, was on the countries of south-east Asia and Oceania. The second has now appeared, and it covers western Asia and Africa.

The latter publication, like the first, makes a detailed analysis of export and import trends in the countries concerned, from India's point of view. It shows that India has not been able to take advantage of the expanding sales opportunities in those countries, which are also trying to develop and diversify their economies. This country is losing ground to Britain, the United States, Russia and Japan. The trend is to some extent natural, because western Asia and Africa need the sort of goods which the more industrialised economies are in a better position to supply; the latter can also offer credit and other facilities. The main suppliers to Egypt, for example, during the past year were West Germany, the United States, Russia, Britain, Italy, Spain, East Germany and Czechoslovakia. There was a decline in India's sales in 1958 compared with 1957, and those in 1959 increased only slightly. The survey points out that India's performance could have been better had the market for her engineering goods been explored more thoroughly. Pakistan, which is another market for Indian goods, has been cutting her imports from this country as she is developing her own industries, and the goods she now requires are those which she can obtain on better terms from the more advanced countries of the West and Japan.

These examples are typical. Nevertheless, there are industries in which India enjoys important natural advantages, such as jute, tea and cotton textiles. Some of her growing engineering industries, like fans and sewing machines, have a considerable export potential. But she will not be able to develop it as long as the Government follows fiscal and social policies which damage export prospects, and as long as the Indian exporter does not become more active. For example, in the present survey, the Chamber quotes the Indian Trade Commissioner in Aden as saying that Japanese fans are becoming more popular there at the expense of Indian fans, since "there have been complaints about the delivery dates of Indian fans and the Aden importers are rather disgruntled about it." It would have been useful if the Chamber had extended its investigations further and ascertained to what extent the failings of the Indian trader are responsible for the poor progress of exports.

U.S. Business Conditions

The economic situation generally does not show much change during mid-summer, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. This year is no exception. After allowance for vacations and other seasonal cutbacks, July brought no unusual changes in domestic business activity, in spite of the rising international tension and falling stock prices. The general trend of industrial activity is still indecisive, although both output and demand remain at high levels. As far as can be ascertained from the available data, U.S. industry's basic problem remains the same in midsummer as at the start of 1960: because current production rates are not fully supported by new orders, backlogs of unfilled orders are declining; because production is not being fully absorbed by the current rate of shipments, inventories continue to rise, although more slowly than in earlier months. Corporate profits have failed to keep pace with enlarged sales, reflecting a squeeze on profit margins in sharply competitive markets. Estimates of gross national product for the second quarter testify to the strength of overall demand, but, after adjustment for price changes, they also reveal that the total physical volume of goods and services barely increased over the first quarter. This is consistent with the sideways movement in industrial production and other physical measures.

In dollar totals, gross national product reached a new high in the June quarter at the seasonally adjusted annual rate of $505 billion. This was an increase of $3.7 billion over the first quarter, in spite of the sharp decline in the rate at which goods were being added to inventory. Business men cut their rate of inventory accumulation by nearly half, from $11.4 billion a year in the first quarter to $6 billion in the second. Such a reduction from the obviously excessive rate of accumulation in the first quarter is healthy for the economy. But with inventories piling up at a $6 billion annual rate, manufacturers and distributors have continued their efforts to curtail accumulation. In consequence, it is likely that slackened inventory building will offset increases in other types of demand in the current period, just as they did in the second quarter. Final demand—sales other than for inventories—rose more than $9 billion in the quarter, as consumers, business men and the Government stepped up their purchases. About $5 billion of this increase was in consumer expenditures, which have been supported by record levels of employment and income. In fact, the rise of $7.3 billion in disposable personal income might have been expected to boost sales even more than it did. The remainder of the increase in gross national product was spread among business investment in machinery and equipment, State and local Government spending, and further improvement in exports. Residential construction, however, has not so far visibly responded to easier mortgage money and liberalising steps by Government agencies.

The steel industry has borne the brunt of shifting inventory policy in recent months. Overall industrial activity, as measured by the Federal Reserve index (seasonally adjusted, 1957 equals 100), edged down in June to 109.3, compared with 109.9 in May. This setback, however, was entirely accounted for by the 11-percent drop in the iron and steel index; other industries as a whole held up. In fact, if the fluctuations in the iron and steel industry are removed from the production index, other output in May and June was at a new record, slightly higher than either the January peak or the pre-strike level a year ago. Other durable goods industries, while maintaining output on a reasonably even keel, have, like the steel industry, seen their order backlogs contract. Production is not being fully absorbed, as shown by rising inventories at factories and in dealers' hands. This will eventually lead to a whittling down of production rates unless new orders start flowing in greater volume.

1960 Pick's Currency Yearbook, the sixth in the series by the internationally-known monetary analyst. Disagreeing with the generally popular conclusion that "inflation is now over", the author goes on to say: "The (worldwide) erosion of monetary value, due to many political and social problems, most probably had not yet reached its end. As it represents the easiest way to reduce government debts, as well as an excellent technique of getting around the always touchy problem of higher taxes, debasement of purchasing power is here to stay...These expropriations, favouring all those who owe money, especially governments, destroy the asset value of all nominal obligations and make holdings of bonds, bank deposits, life insurance policies, as well as all pension claims of individuals, merely bitter parodies. The cynical statement according to which thrift in debasement periods is the road to poverty, therefore, represents a gospel that governments do not like to hear."

Dr. Pick goes on to say: "Gross national product in the United States, estimated at more than half a trillion paper dollars at mid-1960, was only about $235 billion in 'constant' 1940 units. The $10,000 life insurance policy was worth only $4,700 and the 2½ percent $1,000 government bond of 1967-72, listed at $870, was really worth about $409 in 'constant' dollars...The balance-sheets of most corporations would show more realistic figures if aligned to a constant dollar level." It is stated that the 89 currencies listed in the *Yearbook*, about 50 are due for far-reaching adjustments or devaluations. And as political developments in Africa will create at least a dozen new currencies, "the devaluation schedules seem to be full".

The new *Yearbook*, revised and enlarged to over 600 pages, presents a thorough analysis of 89 leading world currencies, including a general economic survey, monthly free or black market rates since 1951, official monetary statistics, transferability regulations and summary ten-year currency records. For the first time, an international compilation of gross national product *per capita* is included, joining the already unique *per capita* tabulations of government debt, currency in circulation and a currency mortality table. Another part of the book is devoted to statistics and comments on the leading gold markets, transactions and complete data on world public and private gold holdings and production, including the communist bloc. A comprehensive international trade directory, with names and addresses of foreign departments of leading banks, currency dealers, gold traders, security arbitrageurs, etcetera, completes the scope of the new *Yearbook*. The publication is compiled and edited by Dr. Franz Pick, and issued by the Pick Publishing Corporation, 75 West Street, New York 6, N.Y. The price is $37.50.

Leasing of Machinery

Some novel means of bringing machinery within the reach of all—one of the big problems in developing backward areas—are being devised these days, and they are of interest also to small-scale industrialists everywhere. For instance, one of Britain's largest hire-purchase finance houses, Mercantile Credit, has formed a new subsidiary, Mercantile Leasing, to engage in the leasing of machinery and equipment. Rentals will be arranged according to the period of the lease, the usual period being about five years. The United States Leasing Corporation, of San Francisco, the largest U.S. Company engaged in this type of business, will take a 20-percent holding, subject to the permission of the Bank of England's Exchange Control Department. The initial capital will be £100,000, and any further equity capital will be subscribed by the partners on a *pro rata* basis. It is claimed that machinery leasing frees working capital for more profitable uses, and avoids heavy maintenance costs on old equipment. The leasing company buys the equipment from the manufacturer, and the lessee assumes responsibility for maintenance and carries the usual insurance risks. The system has made rapid strides in the United States over the last six or seven years. As practised by the United States Leasing Corporation, it applies particularly to machine tools, various types of research equipment and office machinery. In 1959, the Company bought about $16 million of equipment for leasing to customers, and this year the total is expected to exceed $25 million. It already has an offshoot in Toronto, but the deal with Mercantile Credit is its first venture outside North America.

Another development in this field is the creation of a clearing house for used equipment. This is a non-profit organisation for selling used, but fully operative, industrial equipment. It has been founded on the initiative of Mr. Hans Langenskiold, a Swedish industrialist. The organisation, known as the Industrial Co-ordination Bureau, has the support of the U.N. secretariat. It also acts as a centre for supplying technical know-how from highly industrialised countries to developing countries. The Bureau was legally constituted in Switzerland in February and will have its administrative headquarters in Geneva. Its first operating centre has been established in Stockholm. It will cover the member-countries of the Seven group. There will be another operating centre in Brussels for the European Common Market and a third centre in New York. Regional inspectors will be stationed in New Delhi, Bangkok, Beirut, Brazzaville and Lima. They will supervise the activities of the Bureau's agents in the developing countries in their respective geographical regions. Mr. Langenskiold has spent the past ten years in Feru and has gained experience in starting several small industries. In an interview with *Swedish Digest*, he is reported to have said that the Bureau will primarily deal with projects costing less than $50,000, a sphere generally considered to be too small to be covered by existing international organisations for technical assistance.

Housing Board for Madras

Madras will soon have a Housing Board to look after schemes of slum clearance as well as the construction of new houses for low-paid officials in the newly started colonies for middle-class people. The Improvement Trust there has initiated some ambitious schemes, although they cannot be compared with those in Calcutta or Bombay. The expansion of the city has increased the demand for housing, so the Government is anxious to build more satellite towns in accordance with its scheme for decentralised town planning. The Housing Board, it is reported, will depend on Central grants. Besides, it may try to get loans from the Life Insurance Corporation. But if the Board is patronised too much by Government agencies, the co-operative housing societies in the State are likely to get less official assistance in the future. Planners have said that the stability of land values during the third plan period is vital for progress in housing. Some have even suggested the levy of a tax on vacant sites to increase the tempo of building construction. But large-scale investment in housing will continue to depend on the cost of living as well as the availability of building materials.

BRITISH SHIPBUILDING

LLOYD'S Register of Shipbuilding returns of Mercantile vessels under construction in the United Kingdom, at the close of the quarter ended 30th June, 1900, indicate a state of great activity in all shipbuilding and marine engineering centres. The condition of the shipbuilding industry is still very satisfactory, though the present return shows a reduction of 135,000 tons, as compared with the unprecedentedly high total, which was reached in December 1898, when the figures gave no less than 1,385,715 tons gross under construction in the United Kingdom. The figures for the period under review are 499 vessels of 1,265,313 tons gross. The 499 vessels comprise 436 steel, 35 iron and 2 wooden and composite steamers, representing gross tonnages of 1,243,307, 6,661 and 870, respectively; and 8 steel and 18 wooden and composite sailing ships of 12,730 and 2,105 tons gross, respectively. The sail tonnage presently under construction, though merely 14,475 and therefore insignificant, is somewhat noteworthy, as being much in excess of the paltry sail tonnage building at the corresponding period of 1899, which was only 3,482 tons gross. Of the Mercantile vessels under construction in the Unied Kingdom at the end of June, 420 of 1,001,415 tins are under the supervision of the surveyors of Lloyd's Register with a view to classification by this society. In addition, 55 vessels of 216,032 tons are building abroad with a view to classification. The total building at the present time under the supervision of Lloyd's Register is thus 475 vessels of 1,217,447 tons.

A Ditcher's Diary

THE DEBATE IN PARLIAMENT THIS WEEK ON THE Central Government employees' strike proved, as might have been expected, to be a largely fruitless affair. Brave, indeed, were the words spoken by the Prime Minister and the Home Minister; less brave, one hears, is the action now being taken against those many hundreds of workers, for whom the strike was no more than a convenient excuse for sabotage, violence and intimidation. The Government spokesmen reassured Parliament that they do not intend to deal harshly with the strikers; on the other hand, they also reaffirmed that acts of illegality or extreme indiscipline would not be condoned. How exactly the distinction would be made in implementing these two facets of the post-strike policy, the debate unfortunately did not make much clearer. Nor, perhaps, could it have; the precise form of disciplinary action necessary has inevitably to be left to the discretion of departmental heads, and this now seems to be the subject of the leftists' main attack, which is being conducted with the aid of canards about senior officers going on the rampage to settle personal vendettas. But, the canards apart, in many areas of the country, the fear is now precisely the contrary: the officers' powers to deal sternly with cases of extreme indiscipline are being widely negated by political interference. Charge-sheets have been issued, only to be withdrawn at the behest of political busybodies, bringing ignominy to the officers rather than to those they were supposed to prosecute. I suppose Congressmen too have to look to the future of their labour vote, so none of them cared to point to such miscarriage of policy during the debate; but it is nevertheless unfortunate that the lack of support from political superiors, which has been a major cause of demoralisation in the services in recent years, continues to be viewed with singular complacency even by responsible members of Parliament. The most important lesson of the strike was that firmness pays: the strong speeches of Mr. Nehru and Pandit Pant notwithstanding, this week's debate in Parliament has done little to alter my impression that the lesson is already on the way to oblivion.

THE DILEMMA OF THE INDIAN UNIVERSITIES IS AN old one: too many students and too few facilities. Dr. K. L. Shrimali's announcement last Friday indicates that the Central Government might now find the courage to solve it in the only way it can be solved: by restricting the number of students the universities should admit. Over the last ten or fifteen years, the deterioration in educational standards throughout the country has been alarming—not only in the universities, but also in primary and secondary schools. Multitudes of ill-equipped students have rushed into overcrowded institutions seeking instruction from teachers who are over-worked, under-paid and, therefore, frustrated. The fact the country has to face is that the resources it can spare for education are limited: if they are to be properly used, they have to be concentrated on the relatively small number of matriculates, graduates and the like required, rather than spread thinly over the hordes of young men and women for whom the universities are no more than labelling plants freely dispensing certificates that are basically worth very little. I am not insensitive to the anxiety of students who may not be able to find a place in the universities in future years; but it would not be inappropriate if they stopped to consider whether the money spent in becoming B.A.s or M.A.s could have been better spent elsewhere—in acquiring technical training, for instance. The resources for setting up more technical institutions will have to be found if admissions to the universities are to be restricted: I believe they could be found if the Government were less eager about propagandist stunts such as the schemes for extending primary education in the third plan. What India needs today is not *coolies* who can read their worthy ministers' speeches but skilled technicians who can run her industries.

REACTIONS TO STORIES OF CHINESE ATROCITIES IN Tibet are apt to vary widely according to the political predilections of those who hear them. The main merit of the report published this week, which was submitted to the International Commission of Jurists by one of its special committees, is that it is based on evidence sifted by expert legal opinion. Protests will no doubt be heard that the report is a political, not a legal, document; much of it is based on circumstantial evidence, and on the stories of refugees whose adherence to the truth is not always notably single-minded. Yet the ruthlessness of Chinese dictatorship in Tibet is a fact which few any longer find it necessary to deny. I must confess that the dethronement of the Tibetan theocracy has not moved me deeply; it was based on a system of exploitation not very dissimilar to the one which led to the oppression of the scheduled castes in India, however much the theocrats may otherwise have done for the preservation of Tibetan independence and culture. But the cruelty accompanying the revolutionary reforms the Chinese have tried to introduce in Tibetan society is nothing short of shocking; the I. C. J. committee's report records innumerable stories of pillage, rape and murder reminiscent of the Russian occupation of eastern Europe after the last war. Yet, although the record of Chinese atrocities yields a document at once interesting and horrifying, I sometimes wonder whether the help given to persecuted Tibetans should not now take more useful forms than the writing of essays. The United Nations did some admirable work for the rehabilitation of the refugees in Europe and Palestine; would not India be entitled to expect that, if the sympathy for Tibetan refugees is as great as this report implies, a more generous measure of international co-operation should be forthcoming for their rehabilitation too?

THE CAMPAIGN AGAINST HINDI WHICH HAS BEEN going on in the south seems to be gathering strength; and the fanatics of the D. M. K. have even threatened to re-enact the "tragedy of Assam" if Hindi is imposed on them. The threat may or may not be taken seriously, but it is symptomatic of the general distrust in the south as well as in many other parts of the country about what the Government's language policy means in practical terms. Both the President and the Prime Minister have reassured the non-Hindi-speaking people that a language will not be forced on them if they do not wish to learn it; and that English will continue at the Union level as an associate language beyond 1965, perhaps as long as is necessary. The assurance, I see, has now been repeated by the Home Minister, since a member of Parliament has complained that Hindi is fast replacing English in Central Government offices through directives which are quite contrary to the new policy. The statements of the high and mighty would seem rather reassuring, except that I have often wondered how the lingual dichotomy will work in actual practice. After 1965, some officials, possibly the majority, will write their notes in Hindi, while others, possibly the minority, will find it easier to express themselves in English. Each category will presumably need to recruit large numbers of interpreters in order to find out what exactly it was that the other wanted to say. The final result may be that the officials who do not speak Hindi will be compelled to learn it; in that case, the policy would merely mean that the time for the imposition of Hindi was being postponed, without any long-term solution having been evolved for meeting the objections of those who do not, and do not wish to, speak Hindi. It is my suspicion that this fear may be at the root of the agitation against the new language policy, however statesmanlike the latter may have appeared superficially. Perhaps the time is not inopportune for the Government to consider whether English cannot be given permanent status as an associate language, not only at the Centre but also in the States.

AS A CONTRIBUTOR TO THE SUM TOTAL OF POPULAR boredom, the rôle of the Films Division of the Government of India has not been entirely negligible. In days when audiences were more discriminating, the projection of its newsreels and documentaries on the screen was invariably received as a signal for a mass exodus from cinema-halls. Nowadays, however, it is a sign of the eternal resiliency of the human spirit that the display of trash on the screen is suffered almost without protest, including the trash emanating from the parlours of the Information and Broadcasting Ministry. The foreign exchange shortage having reduced the variety and supply of films, popular tolerance of repetition has grown—not only in seeing the gallant heroes of the Wild West rescuing ladies in distress after massacring scores of warriors single-handed, but also in watching Dr. Keskar delivering interminable speeches on Indian culture, or Mr. Nehru planting bananas to the accompaniment of much rejoicing among his lackeys. Among more discriminating cinema-goers, however, a glimmer of hope had remained over the years in that the Films Division of the Government of India had mercifully not been made permanent; the hope has now died with the conferment of permanent status on an organisation which, with never-ending devotion, thinks it has to do for Dr. Keskar what Boswell did for Dr. Johnson, with rather noticeably less interesting results. Perhaps it is too much to hope that the Films Division will find it possible to discard its tiresome addiction to endless moralising; but it may not be unreasonable to expect that its staff, now that they are to enjoy greater security, will be more independent and judicious in their efforts to instruct and entertain. The conferment of permanent status, I am told, means that they will now be entitled to certain new privileges, including death gratuity benefits; if the quality of their work fails to improve, it is only fair to hope that the near-fatal boredom of their audiences will be compensated with similar benefits too.

THE NEW GREAT INSURANCE COMPANY OF INDIA LIMITED

SPEECH OF MR. TULSIDAS KILACHAND

Mr. Jehangir P. Patel presided over the 17th Annual General Meeting of the shareholders of the Company on the 30th July 1960, in the unavoidable absence of the Chairman, Mr. Tulsidas Kilachand, and delivered the speech prepared by the Chairman for the occasion. In his speech, Mr. Tulsidas referred to some of the problems facing the Insurance Industry.

Mr. Tulsidas Kilachand expressed his disappointment at the decision of the Executive Committee of the General Insurance Council to continue the *status quo* as regards the Code of Conduct which, he felt, would not help in improving the market conditions. *Controls merely led to ingenuous methods to* circumvent them and this was exactly what had happened in General Insurance Business, with the result that after ten years of the Code, we were witnessing the sorry spectacle of Company after Company closing down. The only course open to assist the Industry was to remove all provisions of the Insurance Act restricting commission, cost, etc. As in the United Kingdom, Companies should be free to operate solely on the motto of "Freedom and Publicity".

Fire Premium Rates

Mr. Tulsidas went on to point out that, as was feared last year, the worst had happened and Government had finally decided to reduce the Fire Insurance rates from 1st January this year. He felt that it would have been more prudent had the rates been reduced wherever experience had shown favourable claim results. As it was, the indiscriminate reduction might well turn out to be a disastrous step from the point of view of the Industry as a whole, particularly in the context of the large number of recent fires. He asked the Insurers to adopt a firm attitude against any move for further reduction and also not to hesitate to make upward revision should the results warrant.

Government Controlled Insurance Business

The Chairman made a passing reference to the steps taken by Government to gradually deprive the non-governmental companies of their shares in the Government-controlled insurance business, which he felt was most unfair.

Company's Building

Mr. Tulsidas also took the opportunity of disclosing to the shareholders the happy news that the Company had taken up on hand the construction of the building on Backbay Reclamation which was expected to be completed in 1962.

Company's Accounts

Dealing last with the departmental accounts, Mr. Tulsidas stated that the gross direct premium for the year 1959 was Rs. 38,08,922 in Fire, Rs. 27,16,256 in Miscellaneous Insurance, and Rs. 34,42,771 in Marine, whilst the net premiums were Rs. 35,87,510, Rs. 25,90,585 and Rs. 18,16,985, respectively. After providing for losses and expenses and reserves at 50% in respect of Fire and Miscellaneous Insurance, and 100% for Marine, the net amount to the credit of the Profit and Loss Account in all was Rs. 4,31,804. The Directors had transferred Rs. 40,000 to Staff Gratuity Account, Rs. 1,00,000 to General Reserve and Rs. 17,602 to Investment Reserve, and they proposed to pay Eleventh Dividend on Ordinary Shares at Rs. 2.50 per share less deduction of income-tax, amounting to Rs. 2,50,000.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting of the Company.

Money

THE CALCUTTA MONEY MARKET

ADVANCES DOWN : MORE EXPORT BILLS

Wednesday, 10th August.

THE total of advances decreased in the Calcutta money market during the past week. Most of the decline was accounted for by the jute and sugar industries. The accommodation given to the engineering concerns was higher, but credit for cotton and foodgrains fell. In the interbank market, conditions were somewhat easier but the call rate stayed at 3¾ percent.

The exchange market was noticeably more active. There was a larger supply of gunny as well as tea bills, although the latter were still less than is normal at this time of year. Remittance was on a bigger scale. Sterling was fully steady in relation to most of the important currencies.

BULLION WAS QUIET DURING THE PAST WEEK ON long liquidation. The price of silver declined from the previous week's level of Rs. 121 to Rs. 120.50, quoted today for both ready and forward. The London and New York prices stood at 79⅛d and 91.3/5 cents.

Gold was quiet in sympathy with silver and the price fell from Rs. 134.50 to Rs. 134. The sovereign was steady at Rs. 87, against Rs. 86.25.

DURING THE WEEK ENDED 5TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 101,93,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 9th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99 310 and above were accepted in full, the average rate of acceptance being Rs. 2.745 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to 11 a.m. on 16th August.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 10th August to 13th August at Rs. 99.326 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 3rd August to 6th August amounted to Rs. 16,00,000.

A RISE OF RS. 18.32 CRORES TO RS. 1,812.32 CRORES in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 5th August, 1960, but the total note issue was Rs. 1.63 crores lower at Rs. 1,826.77 crores. Notes held in the Banking Department consequently fell by Rs. 19.96 crores to Rs. 14.45 crores. In the Banking Department, deposits of the Central Government declined by Rs. 9.67 crores to Rs. 57.38 crores, and other Government accounts by Rs. 4.77 crores to Rs. 17.85 crores. Balances of commercial banks at Rs. 118.45 crores showed a fall of Rs. 6.29 crores. Balances held abroad declined by Rs. 5.37 crores to Rs. 19.85 crores. Investments were Rs. 25 lakhs lower at Rs. 258.60 crores. Other loans and advances rose from Rs. 112.29 crores to Rs. 122.05 crores, of which advances to scheduled banks against usance bills totalled Rs. 10.85 crores (Rs. 9.12 crores). Ways and means advances were shown at Rs. 37.07 crores, against Rs. 30.52 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 29th July, 1960, shows a fall of Rs. 16.92 crores to Rs. 610.91 crores in total deposits. Investments in Government securities are down by Rs. 84 lakhs to Rs. 363.94 crores, while other authorised investments remain unchanged at Rs. 9.87 crores. Advances, including loans, cash credits, overdrafts, and bills discounts and purchased, have declined by Rs. 1.85 crores to Rs. 208.42 crores. Cash and balances are, in consequence, shown at Rs. 36.92 crores or Rs. 93 lakhs higher.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 12-8-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
12-8-60	13-11-60	2,00,00	Rs. 2.745%

BIRDS cover a wide field

The Birds/Heilgers group do not produce steel. But they provide the vital raw materials that go into the making of steel—*iron ore, coal, manganese ore,* limestone, dolomite, refractories.... They do not grow jute but their mills turn out jute goods for a variety of uses. Their interests cover a wide field from paper to engineering... coal to electricity.

Their production units are today engaged in a programme of expansion to step up output to meet the increasing demands of India's industries. And their laboratories are constantly at work to improve their products... to explore new applications.

Through their service to the country for nearly 100 years, Birds have become a significant part of India's industrial scene.

INDUSTRIALS RISE IN STOCK MARKET

GILT-EDGED DULL

London, 10th August.

A STEADY advance in industrial equities provided the main feature of the stock market during the past week. Buying of industrials was by no means heavy, but a persistent demand found the market poorly supplied with stock and prices responded accordingly. Bid news and good company news was responsible for some particularly good features. There was not a great deal to encourage buyers apart from good company news, although the record June employment figures and the end-July gold reserve figures helped sentiment. On the other hand, the indecisive performance of Wall Street and the disturbing statement from Hoover with its effects on the hire-purchase restrictions, made for some uncertainty. Further evidence of the effects of these restrictions was provided later by the figures indicating a slackening of retail trade in May and June and a reduction in hire-purchase business in June. Elsewhere, conditions remained very quiet and the main feature was the dullness of mining shares under the influence of events in Africa. The gilt-edged market had a very quiet week, and prices moved within narrow limits to record only minor changes on the week. Oil shares moved erratically and there was not a great deal of change on balance. Tin shares lost ground on London selling in the absence of the recent support from the East. Rubber shares were quiet and small irregular movements were recorded. Tea shares were narrowly irregular.

The Money Market

With money flowing into the Revenue Department on account of quarterly purchase tax payments, stringent credit conditions prevailed in the money market during the past week. However, while the rate for day-to-day loans ruled firm at 5¼ percent and 5¾ percent for most days, the supply of credit was just about equal to demand. Only on Thursday, with the weekly tax payments making the situation worse, did the authorities provide assistance, the amount being large and made mainly by the banks. The money so created was passed on mainly in the form of loans at 5⅜ percent and under pressure also at 5½ percent. The week's business in bills was moderate with October and "hots" discounted at 5⅛ percent and 5¼ percent. There was a further increase in the Treasury bill rate at last Friday's tender of around 8d to £5 11s 7.17d percent, the market paying 1d less for the bills at £98 12s 1d at which price they secured 40 percent of the £250 million bills offered.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "Gilts continue steady. Fluctuations in industrials continue as the index first shed eight points and then recovered 2½ points in very quiet trading because of holiday influences. Gold mines: the recent improvement maintained. Base metals: coppers turn firmer; features in tins and lead-zincs: the former revived on eastern demand. Oils: further marginal drift followed by modest rally, partly on Wall Street. Wall Street: the cut in margins prompted a rally in industrials. This carried the market out of the immediate critical area, but the rally was not sustained, markets turning narrowly irregular; the volume fell and home bonds registered a new peak for this year, both indicating that uncertainty persists.

Activity on Wall Street

There was a technical correction in the U.S. Government bond list last week following the recent advance. The market later rallied on reports that the Federal Reserve system planned to take further credit easing steps. High-grade corporates moved up with the Treasury list. Convertibles also were mostly higher on the week. Cuba 4½ percents hit a new low. Among Japanese Governments, 6½ percents of 1964 advanced over one point, while Chile 3 percents added a full point.

Paris Gold Soars

Paris gold prices reached their best levels for months last week, reflecting the uncertain international situation especially in the Congo. The Napoleon, the most popular coin, ended the week at its highest level since January this year, while the one-kilo ingot was at its best since April last. Trading, however, was comparatively small, the firmness of prices being partly due to lack of sellers. Some foreign buying was reported in the market, especially for Belgian account.

U.S. Treasury Gold Holdings Drop

Gold holdings of the U.S. Treasury dropped more than $20 million on 3rd August, it was announced by the authorities. The Treasury said that the stocks on 29th July totalled 546,973,645 ounces worth some $19,144,077,599, down $20 million from the previous day.

Appreciation in Stock Values

In spite of the stock market decline this year, many issues have gained "substantially, according to a well-known Wall Street statistician, Mr. Harold Clayton of Hemphill Noyes and Company. He said that of the 50 largest companies whose shares were traded on the New York Stock Exchange, the shares of 14 have advanced during the first seven months of this year.

Stocks and Shares

INDIAN IRON IMPROVE ON HIGHER DIVIDEND

JUTES BETTER: RIGHTS ISSUE BY ROHTAS

Wednesday Evening.

THE announcement made yesterday by the directors of the Indian Iron and Steel Co. Ltd proposing a gross dividend of Rs. 1.50 on the ordinary shares (Rs. 1.05 net) for the year ended 31st March, 1960, against Re. 1 net for the previous year, was hailed by the stock market. The shares rose spontaneously from Rs. 25.20 to Rs. 25.80. The price rise, however, was not held for long, as the bulls who had made purchases on the eve of the dividend announcement rushed in to take their profits ahead of the heavy budla charges anticipated at today's settlement. In the process, the shares dropped to Rs. 25.25. New buyers were immediately attracted at the lower level and tonight's settlement rate was better at Rs. 25.60. Contrary to expectations, other shares on the forward list did not follow, as had been customary in the past, in the wake of the once undisputed leader of the Calcutta Stock Exchange. This made many wonder whether speculators had at long last begun to realise that the present level of most share prices was not justified on even the most optimistic estimate of future earnings.

Earlier in the week, the announcement by Rohtas Industries of a one-for-one rights issue at par lifted the shares from Rs. 40 to Rs. 41.75. But subsequent profit-taking brought the price down at the close today to Rs. 40.87. There was some disappointment over the dividend proposed by the Textile Machinery Corporation—Rs. 2 gross (Rs. 1.40 net), against Rs. 1.50 net for the previous year. So the shares slided down from Rs. 28.90 to Rs. 28.50.

Fairly reliable reports emanating from Bombay indicated that Synthetics and Chemicals Ltd had at last reached the final stages of allotment and that applicants could expect to receive their allotment letters and/or letters of regret within the next fortnight or so. Official dealings opened in East Anglia Plastics (India) Ltd last Saturday at Rs. 15.50 (Rs. 5 paid-up); tonight's closing quotation was Rs. 16.

Cotton textile shares were subdued on the Central Commerce and Industry Minister's statement in the Lok Sabha on Monday that he was not satisfied with the 10 percent voluntary cut in cloth prices announced by the Indian Cotton Mills Federation. He expressed the hope that, at tomorrow's meeting of the Federation, millowners would reconsider the whole matter and bring down cloth prices by 15 percent instead.

It is believed that the earlier proposal of the Stock Exchange authorities to keep the market open for an additional one hour on week-days has been shelved for the time being.

In view of the opening of the subscription lists for 12 State Government loans on 29th August, Government securities, including State loans, were somewhat subdued. Prices, where changed, were fractionally lower.

In the banking section, United Commercial improved smartly from Rs. 74.50 to Rs. 77.50.

In coals, Bengal met with keen investment enquiry and spurted from Rs. 335 to Rs. 347. East Indian moved up from Rs. 31.62 to Rs. 32.37 and Pench Valley from Rs. 22 to Rs. 22.62. Katras Jherriah advanced from Rs. 42 to Rs. 43 and Seebpore from Rs. 32.50 to Rs. 35.

Cotton textile shares were depressed, the worst sufferers being Kesoram, which were marked down from Rs. 33.50 to Rs. 31.75 with sellers over.

Electric supply shares were dull and neglected.

In the engineering group, Braithwaites recovered to Rs. 33.12 and Burn advanced from Rs. 488 to Rs. 490. Guest, Keen, Williams were in keen demand owing to the impending rights issue and rose from Rs. 50 to Rs. 51.50. J.K. Steel were better at Rs. 18, while Jessops met with some selling pressure and eased to Rs. 24.70.

Jute shares met with renewed enquiry and a number of price gains were recorded, particularly in the Birla group of shares, because of the publication of a satisfactory batch of balance-sheets. The following chart illustrates the more important price movements:

	Opening 4th August Rs.	Closing 10th August Rs.
Agarpara	12.31	13.12
Alliance	106.00	113.00
Auckland	164.00	180.00
Bally	253.00	259.00
Champdany	118.00	126.00
Birla	32.25	34.37
Howrah	22.87	23.50
Kamarhatty	160.00	175.00
Kinnison	177.00	190.00
Northbrook	20.00	21.00
Rameshwara	8.25	10.00

In papers, Bengal were higher at Rs. 102, while Orient were subdued at Rs. 46.60. Titaghur were steady at Rs. 42.25, as were Sirpur at Rs. 21 and Shreegopal at Rs. 28.62.

In sugars, Dyer Meakin Breweries were taken at the higher rate of Rs. 23.37, as were Ramnugger Cane at Rs. 26.37.

Among miscellaneous industrials, Alkali and Chemical recovered smartly from Rs. 33.50 to Rs. 36, and Balmer Lawrie were taken at the higher rate of Rs. 227. Britannia Biscuits were wanted at Rs. 36, while Dunlop Rubber were unchanged at Rs. 47. Hindustan Motors were easier at Rs. 22.87 while Indian Cables improved to Rs. 37.62. Indian Aluminium were steady at Rs. 32. Associated Battery were wanted at Rs. 38 and Phillips Carbon Black were reported at Rs. 19.50. National Rolling Mills changed hands at Rs. 15.50 and National Pipes and Tubes at Rs. 17.50. Rallis India were unchanged at Rs. 141, while Rohtas, after being done up to Rs. 41.75, closed easier at Rs. 40.87, due to the high budla charges. Union Carbide spurted today from Rs. 51.25 to Rs. 58 to close at Rs. 56.25.

In the mining group, Indian Copper receded to Rs. 5.05. Metal Corporation changed hands at Rs. 10.69 while Orissa Minerals were softer at Rs. 43.

Tea shares were dull and neglected.

New Dooars Tea

The New Dooars Tea Co. Ltd has increased its profit from Rs. 6.95 lakhs to Rs. 8.52 lakhs for the year ended December 1959. An ordinary dividend of Rs. 32.50, taxable, has been declared, against Rs. 25, tax-free, in the previous year. Depreciation is allocated Rs. 1.04 lakhs (against Rs. 91,439). The provision for taxation is increased from Rs. 3.25 lakhs to Rs. 3.60 lakhs. Development rebate reserve absorbs Rs. 3,365 (against Rs. 5,267). General reserve gets Rs. 50,000 (against nil). After making various adjustments, there is a carry-forward of Rs. 52,126, against Rs. 86,415 brought in. A crop of 20,049 maunds was secured, compared with 22,413 maunds. The average sale price was Rs. 2.32, against Rs. 1.98 a lb. Estimates

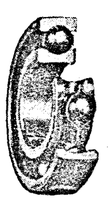
IN STEP WITH MAN'S **PROGRESS**

SKF



the finest bearings in the world

Over half a century of bearing manufacturing has given **SKF** the needed skill, experience and facilities to meet the requirements of this modern age.

SKF
The SKF Ball Bearing Co. Private Ltd.
P.O. Box 71, Sir Pherozeshah Mehta Road, Bombay.
P.O. Box 588, Netaji Subhas Road, Calcutta.

for the current year have been framed for a crop of 21,000 maunds at a cost of Rs. 26.45 lakhs. The Central Government has approved the reappointment of Andrew Yule and Co. Ltd as managing agents of the Company for a period of five years from 15th August, 1960.

National Screw and Wire

Providing Rs. 49,531 (against Rs 52,344) for depreciation, the profit of the National Screw and Wire Products Ltd has declined from Rs. 6.49 lakhs to Rs. 5.62 lakhs for the year ended December 1959. A dividend of 15 percent has been declared. The provision for tax is decreased from Rs. 4.44 lakhs to Rs. 2.54 lakhs. After various adjustments, an amount of Rs. 91,161 has been carried forward. The directors state that the machinery for the manufacture of A.C.S.R. conductors is being installed. Production is expected to commence soon.

Bokakhat Tea

After providing Rs. 34.833 (against Rs. 36,090) for depreciation, the profit of the Bokakhat Tea Co. Ltd has fallen from Rs. 1.13 lakhs to Rs. 86,164 for the year ended December 1959. A dividend of 8 percent, subject to tax, has been declared, against 5 percent, free of tax, in the previous year. After making all adjustments, an amount of Rs. 38,457 is carried forward, against Rs. 52,381 brought in. A crop of 4,870 maunds was manufactured, against 4,493 maunds. The average price declined from Rs. 3.02 to Rs. 2.91 a lb. Estimates for 1960 provide for a crop of 5,300 maunds at a cost of Rs. 9.65 lakhs.

Tata Steel Production

Tata Industries Private Ltd, managing agents of the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during July 1960 was: pig iron 107,400 tons; steel ingots 121,700 tons; semi-finished steel for sale 26,800 tons; and finished steel 70,700 tons.

Bombay Market

CLOTH PRICE CUTS WORRY OPERATORS

GOOD DIVIDEND EXPECTED FROM TATA STEEL

Tuesday Evening.

THE Bombay stock market closed in a subdued mood during the past week. The bulls were discouraged by two main factors. The first was that the Stock Exchange had not yet decided what further measures it would take to restrain speculation; it was thought that the president might be authorised to impose *ex parte* margins. The second factor was that the corporate news was considered unfavourable. The decision of the cotton mill industry to cut cloth prices by 10 percent had not met with official approval, so it was feared that sterner measures might be taken to reduce prices in the future. The announcement of a disappointing dividend of 5 percent, taxable, by the Kohinoor Mills Co. Ltd induced pressure in cotton mill shares.

Steel shares were steadier because it was rumoured that the forthcoming dividend of the Tata Iron and Steel Company would yield shareholders the same net payment as last year's. The news that the merchant mill of the Company had started production was interpreted bullishly. It was thought that the Company might also undertake the production of stainless and alloy steels in the near future. Tata Steel closed at Rs. 160, but Indian Iron improved to Rs. 25.65 on the announcement of a gross ordinary dividend of 15 percent, against 10 percent, tax-free, last year. Among engineering shares, Alcock Ashdown were sold at Rs. 296 and Tata Locomotive declined to Rs. 302 on pressure. Mukand Iron were quoted at Rs. 25.75 and Premier Construction came to hand at Rs. 344.50. Motor shares were shaded, and Premier Automobile were available at Rs. 177. Hindustan Motors declined to Rs. 22.80.

Prices of cotton mill shares declined on a broad front. Bombay Dyeing were quoted lower at Rs. 68.30, as were Century at Rs. 515. Kohinoor were offered at Rs. 341.50 and Svadeshi were dealt in at Rs. 244.50. Simplex were taken at Rs. 171 and Finlay were transacted at Rs. 347. Standard were steady at Rs. 1960 on prospects of a new share issue. India United Ordinaries were sold at Rs. 13.12 and Apollo were freely offered at Rs. 1.60.

Prices of miscellaneous shares moved down in sympathy with the general trend. Among sugar shares, Belapur were taken at Rs. 371 and Phalton were transacted at Rs. 179.75. In the cement group, Associated Cement were quoted at Rs. 144.25 and Digvijay were bought at Rs. 164 on the publication of a good report. Mining shares were quietly steady, and Shivrajpur Syndicate were dealt in at Rs. 74.50. Steamship company shares were quiet, and Scindia Steam were available at Rs. 15.36. Great Eastern Shipping fell to Rs. 17.44. Bombay Burmah reacted to Rs. 590.50, and National Rayon to Rs. 503. Voltas were bought at Rs. 283.50 and Tata Oil were transacted at Rs. 72. Chemical shares were quietly steady, and Tata Chemical were available at Rs. 19.96. Indian Dyestuff declined to Rs. 822.50 and Polychem were available at Rs. 301.25. Ceat Tyre were lower at Rs. 271.25 and Anil Hardboards came to hand at Rs. 395.

Bank shares were steady, and Bank of India were wanted at Rs. 100.50. Central Bank were bought at Rs. 51.50 and Bank of Baroda were done at Rs. 81. There was little interest in insurance shares, and New India Assurance were quoted at Rs. 63.20. Vulcan were taken at Rs. 19.50.

Prices of electricity supply shares improved on increased support. Ahmedabad Electric were bought up to Rs. 90 and Tata Hydro were quoted higher at Rs. 106. Bombay Suburban were dealt in at Rs. 90.

Madras Market

PALAI BANK CLOSURE DISTURBS MARKET

SELECTIVE DEMAND FOR TEA AND COFFEE SHARES

Wednesday Evening.

THERE was a substantial decline in activity in the Madras stock market during the past week. The prices of clearing as well as of cash scrip declined. The report that the Palai Central Bank had gone into liquidation had an adverse effect. Business in Government securities was on a small scale because investors were waiting to subscribe to the new State Government loans which will be offered at the end of this month. Public utilities met with scattered interest. The earlier support for sugar shares was not maintained at the close. In the planting group, selected tea and coffee shares were bought due to the better marketing prospects. Rubber shares were neglected because of uncertainty concerning the recommendations of the Tariff Commission about the price of the commodity.

In the banking group, business passed in Indian Overseas at Rs. 176 and in Indo-Commercial at Rs. 38. Canara were placed at Rs. 80.

Among public utilities, Negapatam were steady at Rs. 9.96 on the payment of a dividend of 10 percent. Kumbakonam met with support at Rs. 10.15 on the announcement of a dividend of 10 percent. Vellore were sold at Rs. 11.50, as were West Coast at Rs. 11.75.

Among sugar shares, Deccan were dealt in at Rs. 16.06 and E.I.D. came to hand at Rs. 41.50 on prospects of a rights issue. Travancore were steady at Rs. 11.90 and United Breweries were firm at Rs. 112. Mysore were indicated at Rs. 60.50 and Kirlampudi were wanted at Rs. 89.

In the planting group, Blue Mountain were steady at Rs. 5.28 and Periakaramalai were taken at Rs. 3.80. Cochin Malabar were offered at Rs. 8.02 and Consolidated Coffee were sold at Rs. 26.55. Ouchterlony changed hands at Rs. 5. Lingapur were bought at Rs. 7 on the payment of a dividend of 15 percent and Vaikundam were done at Rs. 31 on the declaration of a dividend of 15 percent. Balanoor were placed at Rs. 16.70 and Chembra were taken at Rs. 5.20. Coffee Lands were offered at Rs. 26 and Devon were sold at Rs. 14.65. Gokul were transacted at Rs. 1.93 and Kalpetta came to hand at Rs. 12.45. Kil Kotagiri were done at Rs. 5.62 and Lucky Valley came to hand at Rs. 12.10. Midland were done at Rs. 12.25 and Nilgiri were wanted at Rs. 7.70. Nonsuch were placed at Rs. 28.25 and Parkside were steady at Rs. 28.50. Peermade met with support at Rs. 23.40 and Rajagiri were transacted at Rs. 22.75. Teekoy were sold at Rs. 7.25, as were Travancore Rubber at Rs. 12.30.

Textile shares were quiet on uncertainties concerning cloth prices. Adoni were sold at Rs. 9.75 and Anglo-French were offered at Rs. 126.50. Buckingham were quoted at Rs. 206 and Bangalore Woollen were transacted at Rs. 198.50. Kothari were steady at Rs. 12.70, as were Lakshmi at Rs.

Our Railways have another responsibility . . . of protecting costly equipment against scorching heat, lashing rain and gruelling service.
