The fifth meeting of the Steering Group on Wages, which began its latest session on 21st September, is to discuss the study made recently on labour costs in the jute, cotton textile and cement industries. The following salient features concerning the labour cost in the jute textile industry have emerged from the study:

(1) Between 1946-56, the labour cost has nearly doubled, although the number of workers employed and man-hours worked have both fallen.

(2) The index of wages shows big jumps in 1947 and 1949. Thereafter, the rise is gradual.

(3) From the point of view of workers, the inflated money wages do not mean much, because the money increases in wages may be offset by the rise in the cost of living. In this case, there is a significant rise in real wages during 1946-56. The index shows a steady rise throughout, except in 1950 and 1951, when it stood lower than in the preceding year, and in 1956 when it dropped down by nearly ten points. The decline both in 1951 and in 1956 was due to the rise in the cost of living index in those years.

(4) The decline in employment and man-hours worked seems to be due to an increase in automatisation because the amount of fixed capital employed a worker shows a rise of 133 percent, from Rs. 648 in 1946 to Rs. 1,510 in 1956.

The total value of materials consumed by the jute textile industry amounted to about Rs. 95 crores in 1956. The important materials consumed are (i) jute, (ii) yarn and twist, (iii) cotton selvedge yarn, (iv) batching oil, (v) bobbins, etcetera. Jute is, however, the most important basic material whose value (about Rs. 86 crores) represents 90 percent of the total value of materials and fuels, etcetera, consumed. Therefore, in material utilisation, jute holds a key position and is practically the sole determinant of the working of the industry. Any fluctuations in the price of this single commodity may be expected to exercise an important effect on the industry's total cost of production.

Following the devaluation of the rupee in September 1949, there ensued an undeclared trade war between India and Pakistan, resulting not only in a rise in price, but also in an irregular supply of jute. There were also complaints about the quality. The Indo-Pakistani trade agreement ceased to be operative and the supplies of raw jute from East Pakistan were much below the quantities specified in the trade schedule.

Rise in Fibre Prices

The record rise in the price of jute in 1951 (when the price went up to four times that of 1946 and twice that of 1956) was an aftermath of decontrol. As is known, soon after decontrol, peak prices for raw jute prevailed in the 1951-52 season. But in spite of the fall in the price of jute in 1953, the quantity of jute consumed in that year shows a fall, with some improvement in 1954. Since then, the improvement in the consumption of jute has been steadily maintained, even though the price of jute in these years had an upward trend compared with 1953.

In spite of the rise in the indigenous production of jute, the country's dependence on imports from Pakistan is due to the superior quality of the latter's jute. The need for continued import of quality jute from Pakistan was recognised by the Jute Enquiry Commission (1954).

The prices of jute and jute manufactures show a close inter-action. The peak price of jute in 1951 was also accompanied by the peak price of jute goods in the same year. However, as is generally true of all manufactured goods, the price increases in case of jute manufactures lag behind those for the raw material. It appears that fluctuations in overseas demand of jute goods exercise a big influence on prices, as the output of the jute industry is mainly for export. The Jute Enquiry Commission observed that "fluctuations in the costs of production have relatively small effect because such fluctuations are generally not great and are mainly confined to the extent of variations due to changes in the price of raw jute, which is the main element in cost. Other elements in the costs of production have not shown so much variation during the short period, though over a long period—as between prewar and the present day—due to general increase in wage levels and incidence of labour welfare measures, they have accounted for a degree of rise in keeping with the general increase in the costs of industrial output."

The sound economic position of the jute textile industry which existed in 1946, namely, before the partition of the country, and was characterised by a significantly lower proportion of the value of input to the value of output and consequently, a higher value added, has not been regained in any of the post-partition years. The industry's position was critical in 1949; the index of gross value added declined by 46 percent during that year. The best year for the industry was 1953, when the index recovered up to 87.2 in spite of the substantial drop in the price index of jute manufactures.

Material Cost Index

The material cost index was at the peak in 1949, although the price of jute was the highest in 1951. This was so because the selling price of jute manufactures in that year remained practically station-

ary while the cost of jute and labour went up. The position in 1951 was not so serious mainly because of the spurt in the price of jute manufactures. The steep fall in the material cost in 1953 greatly helped the industry in recovering its position. In subsequent years, the material cost shows a rise; and in 1956, although it shows a decline compared with the previous year, it was still about 24 percent higher than in 1946.

The component of wages and salaries in the output was the highest in 1953, even though wages in that year were not the highest. If this rise had not taken place, it was likely that the industry would have recovered very nearly the pre-partition position in the matter of value added. The component of wages and salaries was, however, the lowest in 1951, even though peak prices of both jute and jute manufactures had prevailed in that year. During 1954-56, this component shows a falling trend, compared with 1953. It was, however, still up by 20 percent in 1956, compared with 1946. Next to the material, it is the most important component. The proportion of fuel cost is very small. Compared with 1946, it shows a further decline in recent years. Work done by others is smaller still. Even with the increase in recent years, the proportion to output remains insignificant.

Since the prices of jute manufactures are influenced by conditions in overseas markets, an increase in the former, if any, may be offset by the rise in material costs (as happened in 1951). It is clear that a reduction in material costs holds the key to the future prosperity of the jute textile industry.

Tourist Development Council Meeting

The Tourist Development Council has been discussing the question of a "luxury car" for tourists. The Department of Tourism has been receiving requests from motor-car operators at various tourist centres for the allotment of luxury cars imported by the Department. It is not possible for the Department to accede to the requests of all these operators because the supply is extremely limited and the Ministry of Commerce and Industry is reluctant to permit further imports of large cars. In view of this, the only permanent solution is to tap indigenous sources for the regular supply of good cars for the use of tourists. Accordingly, the Department has suggested to the Delhi State Transport Authority to license medium-sized cars as luxury taxis for purposes of sight-seeing in Delhi. The suggestion has already been made to the D.S.T.A. to consider issuing licences for the operation of Hindustan Ambassador cars as luxury taxis (bearing DLY licence numbers to distinguish them from the DLZ large-sized luxury cars). The hiring rate for these cars will be 10 annas a mile (in case of large luxury cars it is 12 annas a mile). The Department of Tourism has already written to the Transport Departments of the various State Governments to consider allowing the motor-car operators in their regions to operate new medium-sized cars as luxury taxis for purposes of sight-seeing. The latter have also been requested to permit the existing motor-car operators to replace their existing large luxury taxis by new medium motor-cars like Hindustan Ambassador, which should be allowed to run as luxury cars for not more than two years, after which period they may be converted into ordinary taxis. This follows the Ministry's ban on the import of luxury cars.

Heavy Electrical Equipment Targets

When the heavy electrical equipment plant in Bhopal, set up in collaboration with Associated Electrical Industries Ltd, goes into full production, it is expected to make heavy electrical equipment worth about Rs. 50 crores annually. Present efforts are to reach an annual production of about Rs. 25 crores of heavy electrical equipment by 1965 and about Rs. 50 crores a year during the fourth plan period. In addition to the factory in Bhopal, two more units for the manufacture of heavy electrical equipment have been planned in collaboration with Russia and Czechoslovakia. These units are expected to manufacture hydraulic turbines and generators, steam turbines and generators, electrical motors and high-pressure boilers. The production capacity and production programmes of the two other units are still being worked out in consultation with Russian and Czech experts.

The Development Council of the Heavy Electrical Industries has exanimed the targets for the industries coming within its purview for 1965-66. The targets for the third plan were fixed on the basis that the increase in power generation during the five-year period would be of the order of 6 million kW, the annual targets being as follows:

1961-62	1.0 million kW
1962-63	1.0 million kW
1963-64	1.2 million kW
1964-65	1.3 million kW
1965-66	1.5 million kW
	6 million kW

ANALYTICAL

Consulting and Technical Chemists
Soil, Water (including Bacteriological), Minerals, Oils, Fertilizers, Shellac, Foods and Drugs—Gold and Silver assayers.
Sampling by arrangement.

R. V. BRIGGS & CO. PRIVATE LTD.

16, Old Court House Street,
(West End Watch Co., Top Floor).

Assumptions made in working out the target for step-up, step-down and distribution transformers are as follows:

A power factor of 85;

One and a half times the step-up transformer capacity for arriving at step-down transformer capacity; and twice the step-up transformer capacity for arriving at the demand for distribution transformers.

On the basis of these, the demand for step-up, step-down and distribution transformers and capacities to be established has been visualised as follows:

Year	Step-up and step-down transformers		Distribution transformers	
	Target demand	Target capacity	Target demand	Target capacity
1961-62	2.9	3.3	2.35	2.75
1962-63	2.9	3.3	2.35	2.75
1963-64	3.5	4.0	2.8	3.25
1964-65	3.8	4.5	3.0	3.5
1965-66	4.4	5.0	3.5	4.0

Assumptions concerning electric motors up to 300 h.p are: (i) 40 percent load factor and (ii) 50 percent of the energy generated would be available for industries where electric motors are used.

Year	Target demand (Million h.p.)	Target capacity (Million h.p.)
1961-62	1.6	1.9
1962-63	1.6	1.9
1963-64	2.0	2.35
1964-65	2.2	2.6
1965-66	2.5	3.0

Switchgear and Control-gear:

(Targets for switchgear up to 11 kV only)

Year	11 kV circuit breakers and switch-boards incorporating the same		L. T. circuit breakers and switch-boards incorporating the same		Iron clad switches		Motor starters	
	Target demand	Target capacity	Target demand	Target capacity	Target demand (Million nos.)	Target capacity (Million nos.)	Target demand	Target capacity
	Nos.	Nos.	Nos.	Nos.			Nos.	Nos.
1961-62	1,500	1,800	12,000	21,000	3.6	4.2	225,000	265,000
1962-63	1,500	1,800	12,000	14,500	2.4	2.9	150,000	180,000
1963-64	1,800	2,200	14,400	14,500	2.4	2.9	150,000	180,000
1964-65	1,950	2,500	15,500	17,500	2.8	3.4	180,000	215,000
1965-66	2,250	2,650	18,000	18,000	3.0	3.5	195,000	225,000

Progress of Light Electrical Industries

A review of the progress made by the light electrical industries was made. The installed capacity, additional capacity licensed, and production, etcetera, of the various industries were studied in detail. The Council noted the general progress made by the different light electrical industries, but observed that there was some shortage of fluorescent tubes and recommended that increased production should be arranged early by allowing extra shift working in existing units. The Council also noted that due to difficulties of foreign exchange, the implementation of some of the projects contemplated during the second five year plan was being delayed.

After taking into consideration the recommendations made by the various panels, the programme of power development during the third five year plan which visualises an increase of the order of 6 million kW and the production trends, etcetera, the Council recommended the following production targets. The targets for the second plan period were also reviewed.

Industry	Year 1960-61	Year 1965-66
Electric fans	1,000,000 nos.	2,500,000 nos. (inclusive of export provision)
Radio receivers	350,000 nos.	1,000,000 nos. (plus 20-30 percent extra for the small-scale sector. This includes provision for exports)
Electric Meters		
(a) A.C. single-phase meters	one million numbers	1.5 million nos.
(b) Polyphase meters	115,000 nos.	150,000 nos.
Dry batteries	205 million to 210 million cells	350 million cells
Storage batteries		
1. Motor-vehicle batteries	600,000 nos.	800,000 nos.
2. Train lighting cells	84,000 nos.	nil.
Electric Lamps		
1. *G.L.S. and other similar lamps.*		
a. G.L.S. lamps	35.5 million nos.	58 million nos. (plus 10 percent extra for exports)
b. Other similar lamps	5 million nos.	10 million nos. (plus 10 percent extra for exports)
II. Miniature lamps	22 million nos.	45 million nos. (plus 10 percent extra for exports)
III. Fluorescent tubes	2 million nos.	6 million nos. (plus 10 percent extra for exports)
IV. Vapour discharge lamps including mercury vapour lamps	100,000 nos.	300,000 nos. (plus 10 percent extra for exports)
V Photo flash lamps	(To be assessed later on by the panel)	
Refrigerators		
a. Domestic refrigerators	20,000 nos.	50,000 nos.
b. Commercial refrigerators (including ice cream cabinets, bottle, coolers, display and walk-in type, etc.)		6,000 nos.
Room air-conditioners	25,000 nos.	50,000 nos.
Water coolers	3,000 nos.	20,000 nos.

Production of Industrial Machinery

The table below shows the estimated turnover of the following industrial items during 1960 and that anticipated during 1965-66:

Name of the industry	Estimated turnover during 1960 (Rs. lakhs)	Expected production in 1965 (Rs. lakhs)
Paper-making machinery	80	6,50
Tea machinery industry	1,00	1,50
Cement machinery industry	60	4,75
Sugar mill machinery industry	3,00	10,20
Solvent extraction plant	48	2,50
Mining machinery	15	16,00 (including public sector)
Construction machinery	88	2.50
Weighing machinery	60	1,65
Machine tool industry	6,00 for machine tools 4,00 for small tools	23,00 for machine tools 15,00 for small tools
Electric transformers	7,00	30.00 to 35,00
Electric motors	6,00	30,00
Diesel engine	6,30	11.88
Power-driven pumps	2,40	4.11.60
Jute mill machinery	1,75	2.30
Printing machinery	5	3.50
Chemical machinery	2.10	20,00
Boiler industry	50	10,00
Heavy electrical equipment	(production just started)	25,00
Heavy machinery	do.	1,00

London

CUT IN BANK RATE AND REMOVAL OF HIRE-PURCHASE CURBS SUGGESTED

AUGUST TRADE FIGURES ENCOURAGING

(FROM OUR LONDON CORRESPONDENT)

SOME surprise was occasioned recently when *The Times Review of Industry* published the *London and Cambridge Economic Bulletin's* suggestion that the U.K. Government's immediate policy should be a reduction in Bank rate and the removal of restrictions on hire-purchase. It has added to the confusion by saying: "Britain is not quite competitive enough in the markets of the world—including her own." It anticipates matters getting worse as production costs are raised by current wage increases and reduction in working hours. In the long term, the *Bulletin* holds that the U.K. Budget should provide the remedy for excessive consumption, but as that is still several months off, some immediate action is necessary. The general economic prospect which emerges from the *Bulletin* is a high level of production and consumption in the U.K. going hand in hand with persistent strain in her balance of payments.

It seems unlikely that the U.K. Government will allow itself to be unduly influenced by the advice just when its official measures are beginning to show some results, and more especially as the anxiously awaited August trade figure indicate that the situation has improved, although not yet sufficiently to remove all danger. Britain's overseas trade last month was marked by recovery in exports which helped reduce the trade gap. Recorded exports rose by £5 million over July to £279.8 million and the trade gap—measured by the excess of imports over exports—declined to £89 million, against £96 million in the previous month. Imports were £500,000 higher at £381.9 million while re-exports rose by £2 million to £12.9 million. Allowing for seasonal variations, August exports were £25 million higher than in July at £297 million, while imports declined by £3 million to £385 million. On the same basis, the "real" trade gap reached £74 million in August, against July's exceptional figure of £104 million. Too much must not be read into these figures, and it is well to remember that over the first eight months of this year, the increase in imports of 13 percent over the average in 1959 far exceeded the 6½ percent improvement in Britain's exports. Moreover, the trade gap is still higher than the average for the first six months of the year.

Six-seven Link and the Commonwealth

A preliminary meeting of officials took place in Lancaster House last week, and as a result it is anticipated that the Commonwealth Finance Ministers will be asked to give their views on proposals for linking Britain with the European Common Market at this week's meetings of the Commonwealth Consultative Economic Committee. Each country will be asked to say what its minimum requirements will be if agreement can be reached on linking the Common Market six and the European Free Trade Association seven. In addition, the Committee will consider proposals for co-operative action by the Commonwealth to give economic aid to Commonwealth countries in Africa which have attained or are approaching independence, notably Ghana and Nigeria.

Campaign to Boost Exports

The Ministerial campaign to boost British exports has been renewed with new energy after a pause during the recent holidays. U.K. Cabinet and other Ministers are booked to address no fewer than 14 meetings in many towns in the next few weeks. Simultaneously, the export branches of the U.K. Board of Trade are urgently examining the scores of suggestions for administrative improvements which have been received by the Prime Minister, the Board of Trade and trade organisations after the inauguration of the export drive by Mr. Macmillan. Indeed, a first step to help exporters has already been taken by the U.K. Treasury. It has abolished the need for exporters to fill in form C.D.3 if consignments of goods are under £2,000 in value. The ceiling was previously £300. The form is an exchange control document, and the last major simplification in this field was introduced four years ago.

As a result of the Treasury's decision, it is estimated that the number of forms to be filled in and examined will be reduced by 400,000 a year—a great economy in labour both for exporters and officials. This represents over two-thirds of the present number of exchange forms for exports to destinations outside the sterling area. The modification is expected to be of particular help to many small firms which lack the specialist staff to deal with complicated forms. A feature of the U.K. Government's campaign is to attract smaller firms with an unrealised potentiality for exporting. Some of the suggestions made by exporters and industrialists are worthy of serious consideration, but it will be some time before Mr. Erroll can indicate the other changes he will introduce to simplify the work of exporters.

The Standard of Living

Mr. Butler's oft-quoted prophecy at the Conservative Party conference six years ago that the standard of living in the U.K. could be doubled in 15 years is the subject of a progress report in the Party's weekly newsletter. The question, "How are we doing?" is answered by citing a number of statistics which suggest that Mr. Butler's claim is well on the way to being made good. These include: *Production*—the index of industrial output, which stood at 100 in 1954, was 120-121 for July 1960. *Wage-packets*—in April 1954, the average earnings in industry were £9 17s 8d. In April 1960, they were £14 2s 1d—an increase of 43 percent. During the same period, prices rose by 19 percent. *Shopping*—between 1954 and 1959, sales of household equipment rose by 32 percent, sales of food by 7 percent, and retail sales as a whole by 5 percent. *Motoring*—3,100,000 families owned a motor-car in 1954, compared with 4,966,000 today—an increase of nearly 60 percent. *Television*—between 1954 and 1960, the number of television sets has more than doubled—from 4,156,000 to 10,647,000. *Housing*—about 3.5 million families are living in postwar houses, compared with 1,250,000 million families in 1954. *Personal Savings*—the 1954 total was £582 million. By 1959, it was nearly £1,500 million.

Chancellor Meets T.U.C. Members

The U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, had a 90-minute meeting at the Treasury last week with six members of the General Council of the Trades Union Congress, accompanied by Mr. G. Woodcock, the newly-elected General Secretary of the T.U.C. The talks were at the suggestion of the Chancellor, who was accompanied by Mr. Maudling, President of the U.K. Board of Trade, and Mr. A. Barber, Economic Secretary to the Treasury. The talks were described afterwards as "an informal exchange of ideas on economic questions."

Mr. Lloyd, it is understood, outlined the present economic position and emphasised the need for increasing exports. The trade union chiefs were headed by Mr. A. Birch, chairman of the T.U.C. Economic Committee. Little new appears to have emerged from their replies to the U.K. Chancellor. They believe that more should have been done by the Government to raise the level of exports and that more appeals to industry will do little to solve the problem. However, Mr. Lloyd is believed to have given them the impression of being more co-operative and amenable to ideas than his predecessor, Mr. Heathcoat Amory.

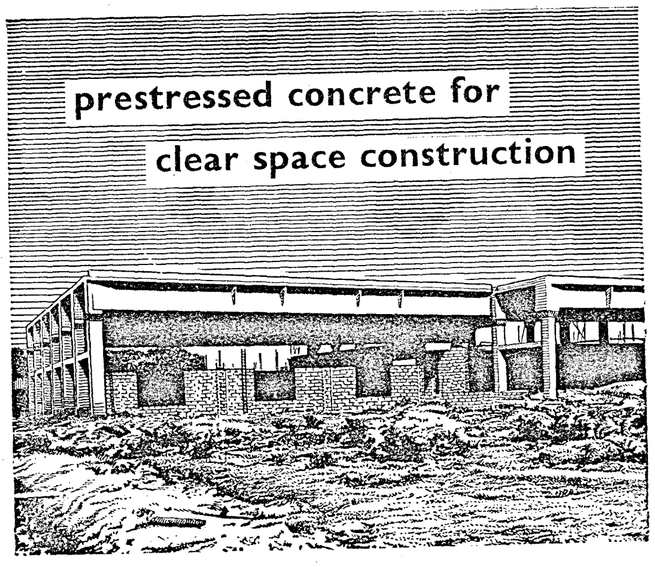
State Steel Sale

The second biggest nationalised steel Company, Staveley Iron and Chemical, has been sold to Stewards and Lloyds, the steel tubes and iron pipes and castings group. The purchase price was £6 million. Staveley Iron and Chemical was nationalised in 1951 and its former parent, Staveley Coal and Iron, was awarded £8.2 million as compensation after arbitration. Its profits last year were £653,000 after having stood at about £2 million a year. The only other company still in the hands of the Government's Iron and Steel Holding and Realisation Agency is Richard, Thomas and Baldwins. Preparations for a public offer of shares are believed to be well advanced.

Fall in Retail Price Index

The official retail price index was 110 on 16th August, compared with 111 on 12th July (17th January 1956 equals 100). The U.K. Ministry of Labour says that the fall was mainly due to reductions in the average prices of potatoes, other fresh vegetables, and apples. Calculated to one decimal point, the August index was 110.4, compared with 111.1 in July. It was one point higher than in August last year.

A feature of the economic scene in the first three months after the April credit restrictions was the buoyancy of retail trade in general, in spite of the fall in sales of consumer durables. From May to July, the U.K. Board of Trade's seasonally adjusted index of retail sales remained at the previous level of about 111-112 (1957 equals 100), because the rising expenditure on clothing, footwear, and food offset the sharp decline in demand for the more expensive household goods. Provisional figures for August suggest that the level of total sales in the shops is not being maintained, for the tentative adjusted figure for August is placed at only 109-110, against 112 for July. The unadjusted figure—natural for a holiday month—shows a much sharper fall to 102 from 112 in July, but it is notable that it is up by only 3 percent on the previous August's level, while the unadjusted figures for June and July showed increases of 4 percent on the year before. The change represented by these figures is limited. Nevertheless, the authorities, who must be watching all the economic indicators for signs of the results of credit policy, may see in them a welcome hint that the restrictions are beginning to act as some brake on the growth of consumer demand generally.



Uninterrupted Working Space at a Milk Factory, Calcutta

A roofing area of 24,000 sq. ft. was completed in about four months and no shuttering for roof slab was used. Seven 100 ft. long and eight 75 to 80 ft. long precast and prestressed concrete 'I' section girders spaced at 20 ft. apart were employed. On the top flanges and spanning between the girders, were placed 2½" thick x 14' wide precast prestressed concrete planks, over which 2" of in-situ concrete was laid, forming a composite flat roof slab of 4½" thickness. The roof was waterproofed with Stp "Tarfelt" treatment.

Jute

VOLUNTARY LOOM SEALING SCHEME TO CONTINUE UNTIL END OF DECEMBER

FURTHER COMPULSORY CUT IN WORKING CAPACITY LIKELY THEREAFTER

AT a special meeting yesterday, the committee of the Indian Jute Mills Association reviewed the raw jute position in the light of the latest stock returns and estimates of the 1960-61 crop. It unanimously agreed that, if the supply of raw material is to be adequate for the industry's needs with a reasonable carryover into the next season, it is essential to extend the voluntary sealing scheme for a further two months—up to 31st December, 1960. As from 1st January, 1961, an increase in the percentage of looms compulsorily sealed appears inevitable, the I.J.M.A. stated. In a Press note issued on 8th September, it had expressed its determination to adjust the production of the mills to the supplies of raw material likely to be available during the current season, and mentioned that the voluntary sealing scheme introduced last June might have to be extended for a month.

Mills Buy Fibre

Although Calcutta mills say that they are not interested in following the present rise in raw jute prices, fairly large business has been done during the past week both in Calcutta and in the agencies. Mills with agencies of their own have not only asked for more fibre but have raised rates considerably to meet the higher prices quoted upcountry. Imports in all the agencies have shown a general improvement, but the demand from sellers, *beparis* and mill agents is almost double the arrivals. Consequently, operators have been bidding against each other in an attempt to cover their requirements. This, in turn, has encouraged growers to be slack in their supervision, and even jute with a very high moisture content has found ready buyers.

That the current price of raw jute is too high is recognised by the trade in general. Both manufacturers and sellers are hoping that rates will fall. Sellers have been particularly badly hit; all their commitments made earlier in the season for mid-September and September shipment—many of them under a guaranteed delivery clause—were negotiated at much lower prices than those ruling today. Consequently, there is no profit on uncovered contracts, and many sellers are facing big losses. Market difference bills are liable to be heavy; but some are prepared to pay them, and to hold jute which should have been allocated under those contracts, in the hope of making a profit. The general impression among sellers is that prices will not decline very much, at least not for some time; in spite of the fact that the full weight of the crop will be felt in the next few weeks, the demand is liable to exceed the supply.

The delay in issuing cuttings licences has done serious harm to the Indian mills. Instead of paying reasonable prices, they are now being held to ransom. Prices jumped by Rs. 30 a bale almost overnight when licences were issued to a selected number of mills. The demand in Pakistan is heavy, and prices have risen to about Rs. 140 a bale, which is over Rs. 160 landed in Calcutta. Nevertheless, business has been done at the enhanced rates. Such is the current demand in Pakistan, and the potential demand in India, that it is unlikely that cuttings rates will show any great decline in the near future.

Improving Jute Yields and Quality

It is gratifying that the I.J.M.A. is embarking on a jute development programme to supplement the work done by various other Government bodies. The aim of increasing the yield an acre is good, but some disagree with the idea of improving the quality of fibre grown in India, except from some particularly notoriously low-grade districts. Mofussil merchants often complain that most mills are in the habit of buying low assortments of Middles and Bottoms; since arrivals in the mofussil markets are mostly of jute yielding much higher assortments, the merchants are left with a surplus of Tops and Middles. This is a difficulty which has beset the upcountry baler for many seasons and it is only rectified from time to time when nature, by drought, excessive rain or floods, ensures a crop of poor quality. Many believe that the average jute crop is of better quality than is required by the industry for the production of standard goods, and that there is normally more good quality fibre available than is required for the small quantity of special goods manufactured. It is necessary, therefore, to concentrate on producing plants which will give a higher yield of fibre in proportion to the green weight of the plant. While buying jute, mills naturally take those qualities which are suitable for the goods they are going to manufacture. It is true that early in the season many try to buy an excessively high percentage of Bottom quality jute, because the early-season Bottom is generally better value than that which can be bought later. But the competition to sell is such that few traders can resist the temptation to accept business even in Bottoms alone.

The Calcutta jute goods market has been a little quieter, and the general attitude seems to be reserved. Mills do not appear to be eager to sell for the forward position, as prices for these deliveries are not attractive, but all seem prepared to sell their balances for the near position. The raw jute position still dominates the mills' selling policy, and is responsible for most of the price movements in the gunny section. The placing of the Government order helped stabilise heavy goods prices. The improvement in U.S. burlap consumption during August created temporary steadiness in hessians, but this has been counteracted by rumours of Government interference in the fatka market. Speculative activity has dominated proceedings, and prices have moved through a fairly wide range.

THE JUTE MARKETS

There was fair activity in the futures market during the past week. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 14th September to 19th September, were as follows:

	Hessians 40in. 10oz. Nov. 1959	Sacking B Twills Nov. 1960	Raw Jute Assam Dec. 1959	
	Rs. a 100 metres	Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 kilos	Rs. a md.
Opening	51.44	47.04	127.10	98.06	36.00
Highest	51.66	47.46	128.10	102.19	38.14
Lowest	50.99	46.60	125.40	96.24	35.92
Closing	51.38	47.14	127.50	100.63	37.56

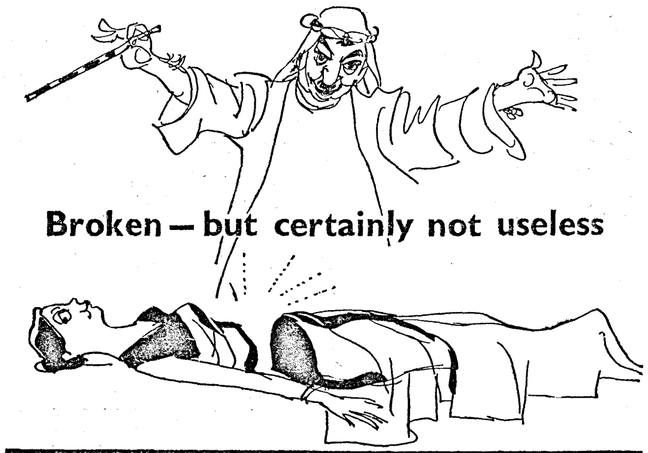
Manufactured Goods: Sacking was quiet at the opening due to the lack of overseas interest, and also to rumours that the Government is thinking of taking steps to curb speculative activity. Hessians, however, showed signs of improvement on account of the better consumption figures from the U.S.A. Soon, however, B Twills, from an opening of Rs. 142.40 on Thursday morning, recorded a steady advance. The premium of ready goods over January-March shipment remained at about Rs. 12, but the forward section was neglected and moved only in sympathy with ready goods. Hessians opened at Rs. 48.85 for 40in. 10oz. September shipment, but prices showed a downward tendency. Thus, while sacking gained Re. 1, hessians declined by about 45nP. Heavy speculative activity late on Friday brought about a rapid decline in rates, particularly in sacking where the bulk of the activity was concentrated. By Saturday morning, B Twills had dropped to Rs. 139.75 and 40in. 10oz. to Rs. 48, so the market was very dull. During this period, genuine mill interest was limited and overseas buyers remained out of the market. Thus, all price movements were the result of either stronger advices from the raw jute section or speculative activity. After the week-end, the undertone of the market improved slightly, but only fractional price gains were recorded. With a holiday atmosphere developing, there was little interest in jute goods.

Opening quotations on Wednesday morning were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	26.25	26.50	35.25	36.15
40in. 8oz.	39.50	29.00	38.75	38.63
40in. 10oz.	48.15	48.50	48.75	48.25
B Twills	139.30	136.00	123.25	132.00
Heavy Cees (Plain)	135.50	136.00	133.00	131.75
A Twills	167.00	163.00	160.00	157.00
Liverpools	158.00	154.50	152.00	120.00
Cornsacks	139.60	139.00	135.50	133.50

Raw Jute: Superficially, mills showed very little interest during the past week, but there was a fair amount of "undercover buying", and activity in mill agencies increased considerably. Reports about the business done were inflated, resulting in a bullish tendency. Arrivals in all upcountry agencies were increasing but such was the demand for jute that, instead of falling, prices began to harden, and general indications were raised. Buyers were willing to pay the higher rates, and competition was so keen that parcels with heavy moisture got through unchecked. Assam rates in Calcutta opened at Rs. 41.50 a maund, but this was well below the parity of mofussil rates. So, over the next few days, the gap was closed by a steady advance in Calcutta indications to Rs. 43. Even at these rates, there were very few sellers, although buyers were plentiful. After the week-end, however, following a very strong opening, a lower tendency developed as buyers withdrew from the market. Imports continued to improve as the demand slackened, and with the Puja holiday atmosphere developing, the undertone of the market eased considerably but without any major reduction in general indications.

Wagon arrivals in Cossipore continued to improve, and over the week 480 wagons were logged. This was slightly higher than in the previous week,



Do you throw away a broken SCREWGRILL FALLER BAR as useless and buy a new one ?
Well now you need'nt ! Because we at LAGAN, have installed a new FALLER BAR repair plant which does a marvellous job repairing——MACKIE FALLERS.

THE LAGAN JUTE MACHINERY CO. PRIVATE LTD
24, Chittaranjan Avenue, Calcutta-12.

LAGAN/NAA/20

but still a long way from the average of previous years.

Business was done in Assam at Rs. 43 and Rs. 43.50 for ready bills of lading, and in Northern at Rs. 41.50 for September-October shipment. Daissee and selected Tossa were done at Rs. 42 to Rs. 43.50 for October and 15th October shipment. Pakistani cuttings, following the issue of licences, passed at Rs. 145 to Rs. 160 a bale.

On Wednesday morning, the market was quiet, and opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	113.75	42.50	Sept.-Oct.
Northern	112.50	42.00	"

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption last month was about on par with August a year ago, and there was a slight improvement in piecegoods sales for industrial uses. The estimated consumption so far this year is running 18 million yards below the same period of last year. Unless more attractive prices prevail and there is a greater degree of stability in the price level, there is little chance that this year's consumption will be as high as last year's. U.S. burlap in stock and afloat at the end of August declined by 7 million yards. At 258 million yards, 133 million yards were spots and 125 million yards were afloats, thereby showing a decline of 14 million yards in the spot and an increase of 7 million yards in the afloat positions. Appearing below are two tables which include the August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

FIBRE PRICES RISE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Dundee is firm, and prices recently rose by at least £2 a ton for most grades while those for others advanced more. Mill Firsts are now more or less nominal in the absence of offers, although a sale to the Continent was reported at £129, afloat. Tentative offers have been made at around £131 for September-October shipment for Mill Firsts while Mill Lightnings are none too freely offered at £122 lowest, with Mill Hearts at from £118. Grade Hearts are quoted by only a few sellers at from £111 to £114 for September-October, c.i.f. U.K.-Continent. Dark jute has also gone up to £127 10s for Grade Tossa-2/3 and £122 for fours, with Continental Tossa-2/3 from £119, and Daissee-2/3 has been more frequently mentioned at £123 for good marks and £114 for Grade, October-November shipment, c.i.f. U.K.-Continent.

Continental spinners were active buyers over the past three weeks or so, and it is said that the volume of business done with them is the main reason why prices are being so well maintained at the higher level. Dundee spinners have also participated in transactions to a certain extent. They have been afraid to stay out of the market while prices have been advancing, although they are now grudgingly paying the higher rates. The general belief among fibre sellers in Dundee is that prices might rise once again in the future. Some big firms are offering very little and they are quoting high prices, thereby indicating that they are unwilling to sell. They are obviously willing to see imports from upcountry centres on a much larger scale.

THE PAKISTANI JUTE MARKETS

SHARP RISE IN CUTTINGS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE dominant feature of the raw jute market over the past week has been a spectacular rise in prices, especially of cuttings which now stand at Rs. 130 a bale, compared with Rs. 107 a week ago. In the course of a single day, the cuttings market rose by Rs. 7 a bale. Yet there have been keen buyers at this price, and sellers have become reserved. Loose jute has followed cuttings, although the rise in its case has not been so rapid. In loose jute, lot prices of over Rs. 40 a maund are already being paid, even though Rs. 40 a maund for white jute has always been regarded as an excessively high price, which is paid only in exceptional circumstances.

Overseas buyers had been holding off and buying only from hand to mouth at lower prices a short while ago. But they have now rushed in to buy in a rising market. In fact, their problem is to find sellers. It is difficult to pinpoint the cause of this rapid rise. The answer probably is that a month ago, arrivals were larger than reported, and accordingly, although all balers were buying to capacity, there was more than enough jute arriving to meet the demand. More recently heavy rains and the harvesting of the midland crop have tended to reduce the flow of arrivals so that at baling stations, there has not been enough jute for the eager buyers. Coming at a time when overseas buyers were beginning to return to the market, this has created near-panic conditions. India, too, chose this time to issue more licences for cuttings, giving a further fillip to the market.

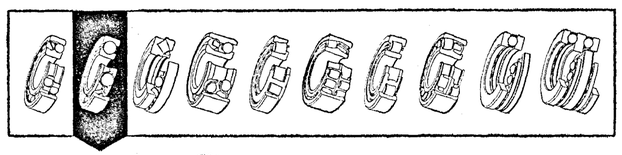
With prices as high as they are, and reportedly even higher in the interior than in the baling centres, the condition is worse than ever before. This correspondent, on his tour of the agencies, cannot remember having seen so much wet jute so blatantly offered for sale. Sellers pay no heed to complaints about moisture, since they know that many buyers will accept it without question. If only something could be done about the moisture in jute, there would be considerable benefit all round, including to growers.

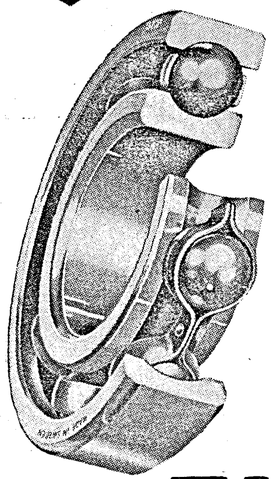
Previously, it had been believed that a financial barrier would be reached which would stop free buying and so reduce prices. This barrier has been evaded by recent purchases from overseas allowing balers to turn over their money and continue to buy. On the other hand, it is very likely that the overseas market, having satisfied its immediate requirements, will again withdraw. But judging from the present bullish sentiment, this may not deter balers from continuing to stock.

Since the last report, E.P.C. prices for Tossa have also risen by £1 or £2, and in the case of outport Tossa-4 by £3. This may have something to do with the fact that for the first time, Pakistan mills are buying Tossa since they are so positive that there will not be enough white jute for their requirements. The mills are undoubtedly going to be the biggest factor in the market this year, and to all accounts, it is their intention to continue buying heavily throughout the season in order to replace their depleted stocks and to keep up with their increased rate of production.

At the present high price of jute and with the small difference between grades, there is a loophole for the unscrupulous shipper to take advantage of, which may well lead to trouble for the buyers. If a baler packs any of the white marks higher than Export Hearts as much as 25 percent low, he would be liable to a claim of something like £1, since the present difference between grades is only £4. Under clause No. 9 of the contract, the arbitrators cannot give an award against him. This rapidly rising market may well produce malpractices of this kind against which the buyer has no protection. Unfortunately, the crop is so short that he cannot restrict himself to leading shippers if he is to get his jute.

SKF *offer the widest selection of bearings*





Illustrated here is the SINGLE ROW DEEP GROOVE BALL BEARING, the most widely used of the ten variants of the four basic types of ball and roller bearing made by **SKF**

The groove depth, ball size and high degree of conformity between balls and tracks enables **SKF** single row deep groove ball bearings to deal with considerable thrust loads in addition to radial loads even at very high speeds.

INDO-U.S. AIR TALKS TO BEGIN SOON

NO AIRCRAFT TO REPLACE DAKOTAS CHOSEN YET

(FROM OUR NEW DELHI CORRESPONDENT)

INDO-U.S. air talks, it is expected, will begin next month in New Delhi. India has already permitted an additional weekly frequency through Delhi to Pan American Airways.

Draft Indo-Swiss Air Agreement

The draft of the Indo-Swiss air agreement is being finalised. India is already operating her services through Switzerland. Swissair has recently introduced jets in its service.

Replacement for Dakotas

The question of Dakota replacement is still being examined by the Indian Government. A friction between the Ministries of Defence and Communications has so far prevented the decision being reached, but it is likely that their differences will be settled in the near future. The Ministry of Defence is interested in the *Avro* and has been opposing any other proposition. The Ministry of *Communications* is equally determined to own an aircraft factory, offered by Lockheeds. In the meantime, the French aircraft *Caravelle* has come as a candidate. It is a jet short-hoop aircraft which can return to Delhi by lunch time after doing Calcutta, Madras and Bombay. It is time jets were introduced in internal services. *Caravelle* could be a good choice.

B.O.A.C. Winter Schedule

B.O.A.C.'s winter schedule, which is now available, provides daily service from Calcutta to London on Mondays, Wednesdays, Fridays and Saturdays by *Comets*, and on Tuesdays, Thursdays and Sundays by *Boeings*. Delhi has one service a week for London, namely, on Sundays. Westward services from Bombay will be on Wednesdays, Thursdays and Sundays. Similarly, Calcutta will have a daily service from London on its east-bound routes.

Thai Airways

Thai International Airways has increased schedules on several sectors of its Far Eastern route network. Major changes in the flight schedules include three new weekly flights between Bangkok and Hongkong, increasing the service on the route to six weekly flights each way daily excepting Tuesdays; three weekly flights between Bangkok, Kuala Lumpur, and Singapore, with all flights landing in Kuala Lumpur. This will permit passengers to tour Malaya on flights between Singapore and Bangkok; an eastbound service on Mondays, Wednesdays and Fridays between Bangkok, Rangoon and Calcutta, and a service on Tuesdays, Thursdays and Saturdays westbound.

K.L.M. to Introduce DC-8

Next autumn, K.L.M. will introduce the *DC-8* on a number of its Far East services, namely, to Tokyo, Sydney and Singapore. As a result, on 18th October, the travel time on the *Amsterdam-Tokyo* route *via* south-east Asia will be reduced by fully 18½ hours (from 46 hours to 27½ hours). For the time being, the two services to Tokyo and Biak *via* the North Pole will still be operated with *DC-7Cs*. Travel time from Amsterdam to Sydney, which is flown once weekly by K.L.M., will be shortened by nearly a full day with effect from 18th November, as the *DC-8* will cover this distance in 34 hours and 40 minutes. The old travel time with *Super-Constellations* was 56 hours and 15 minutes. The *DC-8*, which will replace the Lockheed *L-188* at the end of November, on the Amsterdam-Singapore route is to reduce the travel time by six hours. The *L-188* had recently shortened the journey time of the *Super-Constellations* by no less than seven hours and 15 minutes. One month before the beginning of the winter service (on 1st October, 1960), the tourist class will be replaced by the economy class on all Far East services of K.L.M., including the services *via* the North Pole, the services to Central and South Africa and the five services to Curacao across the southern part of the Atlantic Ocean. This alteration works out at a fare reduction of 6 percent to 10 percent depending on the route to be flown, while maintaining the present service level and including hot meals. The tourist class will only be maintained on the routes to South America and the Near East and within Europe and the Caribbean Area.

T.A.I. Aircraft Changes

T.A.I. placed its first *DC-8* jet in service on 11th September on a 12,000-mile route—from Paris, halfway round the world through the Near and Far East and on to Australia and Noumea. Weekly flights scheduled for 27 hours, less than half the time required by pistons, will serve Athens, Karachi, Bangkok, Saigon, Darwin and Sydney. At Noumea, the airline has *DC-7C* flights continuing to Tahiti, Honolulu and Los Angeles where they connect with Air France 707 jet flights over the polar route to Paris *via* Montreal. T.A.I. will introduce its jets on the Noumea-Los Angeles route next May to provide round the world jet service *in association with* Air France.

U.S.-French Air Agreement

A revision of the U.S.-French bilateral air agreement approved recently formalises an earlier agreement giving Air France a traffic stop at Montreal between Paris and the U.S. west coast. The French carrier began operating in June. No local traffic can be carried between Los Angeles and Montreal. In return, U.S. carriers are granted a stop at London between New York and Paris, without rights to carry local traffic between London and Paris, and permission to serve other points in France on all-cargo flights which stop at London. A revision in the Anglo-U.S. bilateral agreement will be necessary, however, before U.S. airlines, can utilise traffic rights at London on flights to points in France.

B.E.A. London-Paris Route

B.E.A. hopes to have its *Vanguards* in regular service on the London-Paris route in March 1961 and may have two available for the Christmas peak season. Rolls-Royce has completed the modification of some Tyne engines, and two prototypes are now being prepared for test flying. First of 23 *Vanguards* for T.C.A. has begun flight tests.

Lufthansa Extending Jet Service

Lufthansa will introduce the *Boeing 707-430* on its Middle East routes at the end of this year and on the Far East route to Bangkok by the end of January 1961. At that time, the route to Bangkok will be extended to Hongkong and Tokyo. The airline will shortly receive the fourth of the five 707s, and by summer 1961, will have the last jet. Lufthansa's South American services will eventually be taken over by four *Boeing 720Bs* now on order. West Germany and Pakistan have signed an air agreement covering scheduled service between and through the two countries.

Persian Air Service to London

Persian Air Services has become the fifth operator to offer through service between London and Teheran with the inauguration of first passenger flights. Having operated sheduled freight services between Iran and Europe for the past six years with *DC-4s* and a *DC-6*, the Company has now obtained a *DC-7C* from Sabena. Sabena provides the flight crews and the Persian airline bases its operations at Brussels, where Sabena maintenance facilities are available. A non-I.A.T.A. carrier, Persian Air Services charges I.A.T.A. rates on its flights which serve London, Brussels and Geneva twice a week and Paris once a week. In Teheran, the services connect with Iranair flights to other points on the Persian Gulf. The two Iranian airlines operate in close collaboration and there is a possibility that a complete merger will be effected. Jet equipment may be purchased soon to place Persian Air Services on a more competitive basis with other operators on the route to London including B.O.A.C., Qantas, P.I.A. and Pan American. The P.A.S. freight services, continuing with *DC-4s*, operate between Brussels and Teheran and serve Abadan, Damascus, Beirut, Athens and Basle.

METALOCK REPAIRS

With reference to a statement concerning Metalock repairs, which appeared in the article on "Ship Repairing Facilities in Calcutta" (published in *Capital's* Survey of Indian Industries in June 1960), Metalock (India) Private Ltd points out that the repairs are of a permanent nature. It is stated that the repairs to plant and machinery return the unit to its original strength, and a six-month guarantee is given against any failure of the Metalock repairs. The Metalock process is recognised and accepted by various shipping bureaus throughout the world.

INCOME TAX ACT

Supplement to the Law and Practice of Income Tax. By J. B. Kanga and B. A. Palkhivala. (Published by N. M. Tripathi Private Ltd, Bombay 2. Price Rs. 12.50, pages 326.)

The *Law and Practice of Income Tax,* which was published by the authors in 1950, is considered a standard work on the subject. Since the publication of the fourth edition, the Indian Income Tax Act has been substantially changed by the Finance Act, 1958, the Indian Income Tax (Amendment) Act, 1959, and the Finance Act, 1959. In the present volume, the entire Act as it stood on 1st October, 1959, as amended from time to time, has been carefully analysed. A substantial portion of it has been devoted to the discussion of new case laws. The publishers have maintained their usual high standard, so the volume—along with the principal one—will be a good acquisition for a law library. Besides, it will prove useful as a reference book for income tax practitioners.

Elements of Income Tax. By R. N. Lakhotia. (Published by Asia Publishing House, Ahmedabad. Price Rs. 3.80, pages 204.)

Income tax payers in India may not know that the tax has been levied, collected and paid (and partly evaded) for the last 100 years. In spite of the long history, one learns from Mr. Lakhotia's book that the Income Tax Act has not yet adequately defined income. The legislation has been complicated by numerous amendments from time to time. Besides, there are many case laws which the author has analysed and the major issues have been discussed in the form of problems and solutions. Mr. Lakhotia's book will be useful to students, taxpayers and income tax practitioners.

POPULATION PROBLEM

Population and Family Planning in India. By Dr. C. P. Mamoria. (Published by Kitab Mahal, Allahabad. Price Rs. 3.75, pages 167.)

The first census in India was undertaken in 1871. During the period 1850 to 1950, the country's population increased by 197 percent. The population in certain other countries has increased at a higher rate. But the real problem in India is not so much the rate of growth as the net increase to the existing population in each decade. This large net addition nullifies all efforts to improve the sub-human living standards of the masses. So the population problem has engaged the attention of demographers, economists and politicians. Professor Mamoria has written a good book. In a brief compass, he discusses the population problem of the world as well as of India. He stresses the need for a "population policy" for the latter, taking into account the level of education, health, habits and customs of the people. The book also discusses the methods of control and contraception and contains valuable statistics.

INDUSTRIAL ORGANISATION

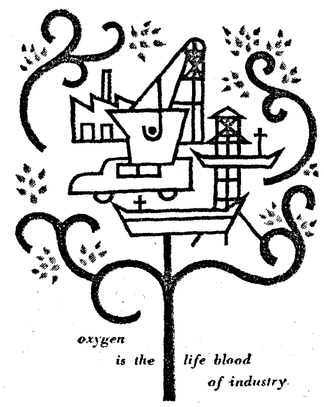
Industrial Organisation and Industrial Finance. By V. R. Sonalkar. (Published by the Author. Price Rs. 12, pages 207.)

Unlike the usual textbooks dealing with industrial organisation and finance, Mr. Sonalkar's book shows his intimate knowledge of the subject since he was a managing director of the Industrial Finance Corporation of India. He explains in brief how industries are started, how they work, what factors promote or affect their growth and the remedies which might be applied in particular cases. The author stresses the part played by the engineer, the administrator, the financier and the worker in a well-organised industry. He frankly admits that many of the points he has touched on in the book will require a more comprehensive treatise. He says cryptically, "manuals cannot make managers". For the success of India's five year plans, the background for industrial organisation and finance ought to be widely known. Mr. Sonalkar's book gives a fairly broad idea of the fundamental aspects of the subject.

INDIAN CURRENCY

The Indian Currency. By I. N. Kapoor. (Published by Kitab Mahal Publishers, Allahabad. Price Rs. 6, pages 200.)

Although many books have been written on Indian currency, few of them can claim to be up-to-date. In a brief compass, Mr. Kapoor has given the historical background, the vicissitudes of the rupee, the effects of world events on the Indian economy and the implications of linking the Indian currency with sterling. Independence, partition, the devaluation of the pound in 1949 and their effects on Indian currency have been lucidly explained. The author says that the planners have erred in not giving more stress to food self-sufficiency both in the first and the second plans. Many will agree that first things have not always come first in India's five year plans. Mr. Kapoor's book is written well and contains useful statistics.



oxygen is the life blood of industry

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.
Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

BOLTS and NUTS
for all tightening purposes

You can rely on the output of our modern factory, made to I.R., I.S.D. & B.S. Specifications. Accuracy is meticulously checked in every stage of the manufacture.

COUNTERSUNK BOLT
for fastening of wood and metal

You can rely on our Countersunk Round and Countersunk Squares, Screws and Nuts, for the fastening of wood and metal.

Manufacturers of all type of Bolts, Nuts, Rivets and Spikes. Made to any required specifications.

STEEL MOULDERS
18A, Rupchand Roy Street, Calcutta-7

time is the yardstick...

with which even the instruments of time are ultimately judged, for time leaves its mark on the best of watches, however precisely or delicately built these may be. And such enemies of watches as dust, damp or drying up of oil are sure to raise their heads with the passage of time. Good watches are difficult to obtain today. If you have one, it should be entrusted to the care of experts alone, when required.

We are fully equipped to handle all brands of watches, timepieces and clocks.

INTERNAL CONSUMPTION OF TEA RISING

EFFECTIVE SALES PROMOTION REQUIRED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE tea market in India remained relatively stable during the past two years. One of the important factors contributing to the stability has been the steady increase in India's internal consumption, which is partly the result of the propaganda campaign financed by the Tea Board with the cess collected from exported tea. Some have suggested the need for curtailing internal propaganda since there has been a rise in domestic consumption. Planters oppose the proposal since almost all the teas sold in India are common teas which cannot be sold easily in foreign markets. If only a portion of India's output of common teas could be dumped on foreign markets, there would have been a sharp fall in world tea prices. "India's great strength in the tea world is the existence of her big internal market, and it will be a great blunder to neglect it", the chairman of the South Indian Association in London, Mr. J. L. H. Williams, said recently.

Official Policy

If India is either to hold or increase her share in foreign markets, it will be necessary for her to maintain an efficient propaganda and sales promotion organisation for external marketing. Mr. W. W Mayne, who has just retired from the chairmanship of the United Planters Association of Southern India, said at the recent annual meeting that the tea industry feels that official policy has been "uncertain and dilatory"—especially in the sphere of propaganda in spite of the repeated resolutions of the Tea Board and producers' associations. "For this task, the Government's methods of financial and operational control are unsuited and some risks must be taken. The funds for propaganda come from the industry's pockets and if its representatives are ready to take the necessary risks, it should not be for the Government to hesitate", he added.

Sustained Publicity

Official circles, however, do not believe that the Government's efforts have been ineffective as producers allege. The Government holds the opinion that Indian tea would have sold on its own if the contacts of the Indian tea trade with overseas buyers were sound. A slight change from this complacent attitude was recently indicated when the Government announced that tea promotion officers were appointed for certain foreign markets and that more would be appointed in future. This has not apparently satisfied producers, who point out that the purchase of Indian tea abroad is still governed by free choice of the consumer and that there is no better means to win him over than sustained publicity. On this score, the difference of opinion between producers and the Government is fairly wide. It is reassuring, however, that the Government has recently announced that more attention will be given to publicity in future. But sales promotion demands high professional skill and the Government's insistence that it should have absolute control over the selection and control of the personnel—who have to handle external propaganda for Indian tea as well as over the method of promotional activities —has failed to instil confidence in the industry.

Tentative Production Target

New Delhi has strongly favoured a concerted effort to increase production with a view to meeting the country's export and internal requirements. But official circles are not happy over the tentative production target for the third plan laid down by the Working Group since it has suggested an output of only 850 million lbs,; this is only 135 million lbs more than the best crop harvested in 1958. The Working Group has suggested only a meagre annual increase in production, although the average rise in domestic consumption is about 15 million lbs a year. The country will, therefore, be left without much surplus if it maintains the present level of exports.

Unimpressive Export Target

Similarly, the export target suggested by the Working Group is unimpressive, according to the Central Government. The target of 550 million lbs for export in 1965 is only 27 million lbs more than the 523 million lbs sent abroad in 1956 and only 42 million lbs more than the exports in 1958. During 1950 to 1958, India's tea exports rose from 403 million lbs to 508 million lbs—an increase of 105 million lbs in eight years. But in the seven year-period from 1958, the increase contemplated is only 42 million lbs. According to official circles, these "modest" figures were the result of the insistence of producer-members of the Working Group who stressed that the industry has not the means to undertake an ambitious expansion programme. Planters say that the tea industry is heavily taxed. The total tea acreage in south India increased by 9 percent in the last decade while production rose by 73 percent. The industry increased its yields by 59 percent and its capital by 102 percent. But during this period, tax increased by 252 percent and left the industry practically the same profit as it earned on a much smaller output at much lower prices in 1949, according to the U.P.A.S.I.'s official journal, *Planters' Chronicle*. If this is true for the tea industry of the whole country, it is clear that the resources cannot be generated by the industry as long as taxation takes away the full benefit of any increase in production.

World Tea Output Declines

World tea production is at present 15 percent less than last year's. The decline in output has been brought about by the severe drought which affected the tea gradens in north-east India and Pakistan during the first half of the current year. The north-east Indian crop up to the end of July amounted to 172 million lbs—31 million lbs less than the output in the corresponding period of last year. Pakistan's production was down by 12 million lbs, but she may make good her loss during the present rainy season. Ceylon and south India are already ahead of last year's output, and they may maintain their gains.

Pepper Market Recovers

The Indian pepper market recently recovered after a phase of easy trend. On the Cochin market, spot delivery has reached Rs. 255 a cwt. from Rs. 235 a cwt. three weeks ago. October delivery, meanwhile, is quoted at Rs. 267.50. Dealers think that the change in the market sentiment is due to good buying support from both internal and export buyers and the low stocks of pepper. Fresh buying orders are emanating from both the communist countries and the United States, according to reports from Bombay. Russia is said to be interested in the immediate purchase of about 1,000 tons while other communist countries are likely to buy another 500 tons. The current Indian pepper season will close next month. Stocks (all inclusive) are estimated at 2,000 tons or 3,000 tons. The standing crop is not as good as the one harvested, according to preliminary reports from growing centres.

No Pepper Forward Market for Bombay

The Kerla Finance Minister, Mr. R. Shankar, told the State Legislature recently that his Government had been informed by the Centre that it had dropped the proposal to open a fresh forward market for pepper in Bombay for the time being, so Cochin's monopoly of the market will not be disturbed. Kerala was agitated over reports that a forward market for pepper would be established in Bombay. It is because of the persistent representations from Kerala that the Centre had agreed to drop the proposal.

COCHIN TEA SALES

At Sale No. 36, 417,000 kilogrammes of tea were on offer. There was a strong demand for low medium and medium descriptions which were 10nP to 20nP dearer. Good mediums advanced by 30nP following improved quality. Best liquoring grades met with rather less demand and were irregular depending on quality.

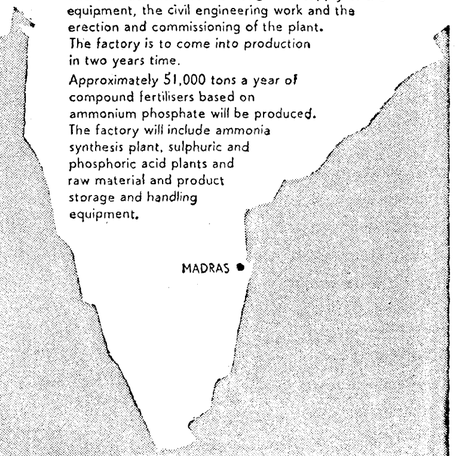
A COMPLETE NEW FERTILISER FACTORY FOR INDIA

Simon-Carves have received a contract from East India Distilleries & Sugar Factories Ltd., to build a complete new compound fertiliser factory in Ennore near Madras.

The contract includes the design and supply of the equipment, the civil engineering work and the erection and commissioning of the plant.

The factory is to come into production in two years time.

Approximately 51,000 tons a year of compound fertilisers based on ammonium phosphate will be produced. The factory will include ammonia synthesis plant, sulphuric and phosphoric acid plants and raw material and product storage and handling equipment.



COMPLETE FERTILISER PLANTS BY

Simon-Carves Ltd

Incorporated in England. The liability of the members is limited.

RAPID PROGRESS OF TEXTILE TECHNOLOGY

NEED FOR QUALITY CONTROL STRESSED

DEVELOPMENTS in textile technology follow each other with such rapidity that it is difficult to keep up with them. They are usually of such importance, however, that a careful perusal of the trade Press proves a worthwhile activity for the textile executive. Speaking at the annual meeting of Shirley Developments Ltd, Sir Raymond Streat said that firms in the textile industry are increasingly ready to adopt new devices and machinery. Many firms, even during the period of general uncertainty, continued to order new equipment from the Company and its licensees, but now it is obvious that maximum efficiency was being sought. All the Shirley machines produced by the licensees contributed in one way or another to the production of better qualities of goods in more economic ways, and more producers are realising that quality control costs little, compared with the savings it permits.

Two of the Shirley appliances manufactured by licensees, Sir Raymond said, are being taken by a large number of firms. The pressure point system has been installed in many mills, and managements think highly of the improvement it has made in working conditions in cardrooms. The automatic size box has been adopted in many mills, while an impregnation control system, based on its principles, is being used outside the textile industry. Shirley Developments Ltd has been entrusted with the sale of numerous useful instruments or devices developed by the research associations of the lace, jute, linen, and hosiery and allied industries.

New Standard for Labelling

A new standard for the "honest labelling" of all textiles has been announced by the British Standards Institution. It claims that this is an important advance in the protection of the shopper and should make it easier to enforce the Merchandise Marks Act and related legislation. The standard is assured in advance of the support of many textile trades organisations, but its use by manufacturers remains voluntary. An official of the B.S.I. said: "It will give manufacturers a clear guide on labelling. If retailers and their assistants become familiar with it, they should be more knowledgeable about the fibre content of the goods they sell and the accuracy of their description."

The standard, published as "description of fabrics," is intended for use particularly by retailers. The important principles established are that a label referring to one fibre only will mean the cloth is made wholly from that fibre, subject to small allowances for inadvertent impurities or decorative effects. A label referring to one fibre only and qualified by the word "all" will mean that the cloth contains no fibre other than the one named, subject to allowances for inadvertent impurities only. In mixture fabrics, the fibres should be listed in order of dominance. Where a fibre with only a small quantity is mentioned on a label, less than 15 percent, or, in the case of wool, 10 percent, the actual percentage of such fibre has to be given. In the 71 definitions given, the standard also lays down the meanings of commonly used terms related to fibres and yarns, fabric construction, and processes.

Versatile Viscose Staple

One of the most recent and most promising of the modified viscose fibres—still known by the code name "M 95"—has not passed the pilot development stage. So far it is being produced in 1½ denier 1¼ inch staple bright, 3 denier 2½ inch staple matt. It is the strongest viscose staple so far produced in Britain, with a wet strength of around 3 grammes a denier and a dry strength of 4 grammes to 4.2 grammes. It has good resistance to abrasion, particularly when wet, and it has a smoother cross-section than standard viscose, which caused softer handling and draping in fabrics. As its price is only 36d a lb, it is much cheaper than long-stapled cottons and just under one-third the price of nylon staple, with which it is comparable in strength. It seems to have a good all-round performance, and the extensive trials already given to it show that it lends itself to various stabilising finishes. It offers good prospects for shirtings and overall fabrics with good wear and abrasion resistant properties when suitably finished.

With "Tricel", it has already been developed in blends of two-thirds "Tricel" with one-third "M.95" for suitings and trouserings with little tendency towards pilling. Pocketings made wholly of the new fibre have been found extremely hard-wearing, and would seem to compete with the types now being made in rayon-cotton reinforced materials with a small percentage of nylon; and it has a price advantage over these. As a spinning assistant in blends with wool, it has a great advantage through being very much cheaper than the fully synthetic fibres, particularly because it has so good a wet strength. Among its industrial uses, it is already considered suitable for conveyor belting, shoe linings, and hosepipe ducks. It has good impact resistance, and being a staple and not a continuous filament yarn, it provides good adhesion to plastic coating compounds without special treatment. In these fabrics also, the good wet strength seems particularly important.

Acrylic Fibres for Blankets

At a time when the washing and maintenance properties of textiles are considered extremely important, there seems increasing scope for the development of acrylic fibres in the blanket trade, and good progress is reported in both "Courtelle" and "Acrilan" A recent development has been the introduction of a lightweight cellular blanket made wholly of "Courtelle" which is believed to retail at under £4 in a single-bed size. Other blankets are being developed along the lines of conventional wool blankets, both wholly in acrylic fibres and in blends with them, and there are also developments in the acrylic fibres in types normally made by cotton and union blanket manufacturers. Several makes are being developed in blends containing 50 percent of "Courtelle" with cotton, and with rayon in the more popular-priced ranges.

The main attraction in the use of acrylic fibres for blankets, in the opinion of some leading manufacturers, are the easy-care properties combined with a high degree of warmth and lightness. Acrylic fibres are the only man-made fibres which are inherently warmer than wool, and they have high abrasion resistance and do not mat or felt. Stains are more easily removed than from conventional blankets because of the low absorbency of the acrylic fibres, which property is also responsible for their quick drying. In common with synthetic fibres generally, they are mothproof, and as the fibres are also thermoplastic, they can be heat-set during the finishing process to prevent shrinking.

New Fabric for Protective Covering

Users of fabrics for clothing, furnishings, packing and wrapping, and other purposes are demanding more insistently that materials should give protection against sun, rain, wind, sea water, high and low temperatures, chemicals, and the special hazards encountered in manufacturing, processing and transportation. Man-made materials of one kind and another are increasingly being employed where protection against the different risks of deterioration or damage is required. By using a man-made fibre and a plastic fabric, Storeys of Lancaster has now produced "Plastolene," a material made by an exclusive process of laminating specially constructed 'Teryline" fabrics between two layers of flexible P.V.C. sheeting. The woven effect gives the fabric an attractive appearance, but the manufacturer's printing facilities and experience enable them to apply colours and printed designs according to the requirements of the finished product.

Both the formulation of the P.V.C. sheeting and the type of the "Terylene" fabric can be varied so as to adapt the physical properties of the material to the requirements of the purpose for which it is to be used. The protective clothing industry is obviously one outlet for the new product and several firms are, in fact, already using it for clothing for outdoor workers in a number of trades. Covers for sports grounds, awnings, garden furniture, swimming-pool liners, and tarpaulins are other outlets for which it seems well adapted. Variations of "Plastolene", which are already being tried, include special grades for low temperatures, flame-resistant material, types which resist particular chemicals, and a range of heavyweight laminates.

Metallic Yarn in Dress Goods

Knitted dressgoods and particularly jersey materials are offering a still wider challenge to conventional woven dress materials, and a new quality of "Lurex" non-tarnishing metallic strip yarn has been introduced specifically for the requirements of knitted jersey and similar materials. This latest version of "Lurex MM' is based on two ends of 30-denier nylon with one end of "Lurex" doubled together, and is a finer and softer quality with a higher yield than earlier versions. Some manufacturers of jersey fabrics are already taking up this yarn, and it has already been sampled in jersey for cocktail dresses made from "Ban-lon" and "Courtolon" nylon, "Crimplene Terylene," "Courtelle," rayon, and wool jersey. Most of the fabrics are piece-dyed, but it is also being effectively used in styles intended for printing. The same type of Lurex is likewise being developed for both circular and fashioned knitted outerwear in all-wool as well as in the acrylic fibres.

A recent development on the weaving side, again designed for the dressgoods trade, is the use of "Lurex MF" for the more popular priced jacquard figured dressgoods. Most of these figured cloths are for piece-dyeing, but the "Lurex" yarn is immune to all the usual cotton finishing processes, including bleaching, mercerising, and the crease-resistance process. It is being used both in cotton and in cotton and rayon mixture cloths, and one manufacturer is developing a range of overprinted broad stripes in a fabric made from a rayon warp and a bleached cotton and "Lurex" weft.

Silicones in Rainwear Trade

The introduction of washable rainwear, largely through the influence of man-made fibres, but in which cotton and wool textiles are both playing a part, has been greatly facilitated by the availability of new types of proofing which withstand the wash tub and could in time lead to the gradual disappearance of the time-honoured formulae based on paraffin wax and aluminium salts. The silicone proofing materials, indeed, have already brought a good many changes to the trade and helped develop the first gay and fashionable rainwear in acetate and nylon.

Now developments arising from the success of popular priced suitings based mainly on rayon are

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August 1960. As compared with July, the August Index for Food shows a rise of 1 point, while those for Clothing, Fuel and Lighting and Miscellaneous remain unchanged at 575, 289 and 300 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 462 points during August 1960.

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

taking place. Perhaps the most successful yarn introduced in the rayon suiting section of the Lancashire cotton trade has been the blend of 85-percent rayon with 15-percent nylon, and this has captured a steadily increasing share of the women's suiting trade and the leisure trouser trade among both Lancashire and Yorkshire weavers. The latest step is the introduction of gabardine weaves in the same blend yarn, and they are being developed on a large scale for the children's raincoat trade with the assistance of silicone emulsions, especially suitable for cellulosic and synthetic fibres. Gabardines in what are now becoming known in Lancashire as the "triple blend"—"Trical," rayon, and nylon—are also meeting with some success, and one of the leading suppliers of silicone finishes maintains that its proofing is helping with both improved abrasion resistance and better crease recovery. "Terylene" and cotton blend fabrics with silicone proofing have, of course, already made a formidable impact on the rainwear industry. Blends of worsted spun "Terylene" and wool are now going into top coats in addition to suits. Indeed shower-proofed spring overcoats are expected to become increasingly popular with the aid of silicone proofing.

Fine Elastic Thread

A new elastic material which contains no rubber, "Vyrene," can be spun into threads of very fine gauge. In spite of its fineness, it has remarkable resistance to the effects of sunlight and perspiration, and resists deterioration through laundering and dry-cleaning. "Vyrene" thread, covered with nylon and other textile fibres, has already been used in the United States in a wide range of fine elastic fabrics for corsets, swimsuits, and underwear. Although light and comfortable to wear, it fits closely and gives some support.

It was discovered by the United States Rubber Company, and is a man-made fibre of the linear polyurethane type. It is a silicone lubricated polyester monofilament made from material originating in the petro-chemical industry. The elastic is manufactured by Lastex Yarn and Lactron Thread, Ltd. an associated Company of the Dunlop group and of the United States Rubber Company.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.2 percent to 125.2 during the week ended 3rd September, 1960, compared with 124.9 for the previous week. The index was lower by 0.3 percent when compared with the corresponding week of the previous month but was higher by 7.7 percent than that of a year ago. The index for Food Articles advanced by 0.5 percent to 124.1 due to a rise in the prices of potatoes (+12%) and gur in Madras (+5%), bajra and maize (+3% each), jowar, mung, milk, fish, meat (+2% each) and wheat, barley, ragi, gram, arhar, urad, ghee, mustard oil and tea (+1% each), although the prices of onions (−9%), and rice in Kozhikode (−5%), black pepper (−4%), bananas and turmeric (−3% each), oranges (−2%), and groundnut oil, coconut oil, eggs, coffee and chillies (−1% each), showed declines. The index for Tobacco fell by 0.6 percent to 101.8 as a result of a decline in the prices of raw tobacco (−1%). The Fuel, Power, Light and Lubricants group index stood unchanged at the earlier week's revised level of 119.6, in spite of a rise in the prices of castor oil (+1%). The prices of raw silk (−3%) and raw cotton, gingelliyseed and lac (−1% each) moved down while those of tanning materials (+3%) and logs and timber (+1%) showed advances, and the index for Industrial Raw Materials stood at 137.0, against 137.2 for the previous week. The index for Intermediate Products receded by 0.4 percent to 128.7 due to a fall in the prices of cotton yarn, coir yarn and tin (−1% each). The prices of zinc (+3%), however, were marked up. The index for Finished Products advanced by 0.2 percent to 121.8 due to a rise in the prices of general chemicals, oilcakes and glass (+1% each).

DEMAND FOLLOWS QUALITY AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 13, held on 19th and 21st September, there was a good general demand for the 55,509 packages on offer at the Export auction with buyers once again following quality closely. C.T.C. teas were the weakest feature of the sale and were from 50nP to Re. 1 below last rates except for secondary fibrous kinds which were at times dearer. Bright liquoring Assam B.O.P.s and O.Fgs. met with fair demand, particularly the former but were irregular; however, the plainer liquoring kinds were up to 50nP below last rates. Medium B.P.s met with strong demand and were considerably dearer, particularly the bright liquoring kinds while the Fannings in this category, although irregular, were generally dearer. Plain Brokens and Fannings also met with strong demand and the lower priced kinds were much dearer, the better types being firm and sometimes dearer. There was a strong demand for the Legg-cut teas, which appreciated considerably in price. The poorer whole leaf grades were well supported and were dearer, but the better descriptions were again easier. Darjeelings met with fair enquiry, but prices once again declined. Tippy teas continued to be irregular and prices were again easier.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.40 to 5.60	1.94 to 1.94
Plain B.P.	4.45 to 4.60	1.86 to 1.89
Plain Fannings	4.50 to 4.75	2.01 to 2.14
Medium B.P.	5.00 to 5.50	1.99 to 2.00
Medium Fannings	5.20 to 5.50	2.12 to 2.22
Best Assam C.T.C. B.P.	7.00 to 8.00	2.30 to 2.70
Best Assam C.T.C. Fgs.	7.50 to 8.50	2.70 to 3.10

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 20,716 chests of Dusts on offer met with a strong general demand. Exportable orthodox kinds with ordinary liquors were slightly easier but the smaller brighter liquoring descriptions met with keen competition and were considerably dearer. Dooars Legg-cut Dusts showed a further increase in price. Medium C.T.C. types were generally dearer, although the brighter lines were somewhat irregular. The best descriptions in this category were irregular with buyers following quality closely.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Medium Dooars Dust	4.65 to 5.00	1.95 to 2.02
Medium Assam Dust	5.00 to 5.60	1.90 to 1.96
Medium Assam C.T.C. Dust	6.20 to 6.35	2.00 to 2.15
Best Assam C.T.C. Dust	6.40 to 6.90	2.50 to 2.70

(Quotations are inclusive of excise duty.)

There was a good demand for the 245 chests of Leaf on offer.

STEADY TREND IN FREIGHT MARKETS

THE freight markets maintained a steady tone during the past week, and with west coast Indian ports now free of monsoon restrictions, fixtures have been made in various directions. Karwar-Constantza paid 44s f.i.o.t. and Karwar-Italy 40s f.i.o.t. Pakistani charterers had to pay up to 50s f.i.o.t. for rice from Alexandria to East Pakistan and Durban-Colombo coal was done at 46s f.i.o.t. with 1,000 tons discharge. Grain was fixed at 70s from U.S. Gulf to west coast India.

From recent Press reports, it appears that the stevedores and unions in Calcutta have objected to grain ships at Haldia anchorage being worked by contract labour. Most stevedores in Calcutta do not wish to work at Haldia and it is only a vociferous minority who, from past records, could in no way achieve the rate of discharge and smoothness of organisation necessary to make lightening of grain ships at Haldia, the success it was last year. It is a remarkable fact that the rate of discharge at Haldia last year was almost twice the discharge of the same ships when they reached Calcutta. It would be most unfortunate if Haldia proved unworkable this year as a severe strain would then be placed on Visakhapatnam and Madras in addition to the railways in coping with increased wagon demands at these ports. On the other hand, if stevedores attempted to work Haldia, the resultant chaos would cost the Government heavy sums in demurrage to ships—payable in foreign exchange. It is particularly unfortunate, in the present crisis, that local elements should again show their lack of concern for the good of the country.

LINSEED FIRM

The market was firm in the past week. Both seeds and oil prices advanced in sympathy with rises in other oils and seeds. Sellers showed little interest. There were good enquiries from millers. The oil market was firm and stocks were limited. Small lots changed hands at higher prices. The oilcake market showed little change because shippers were not interested. Small business passed daily. The latest quotations are as follows: Ready Rs. 25.75 a maund.

COMPANY AND PUBLIC NOTICES

ROHTAS INDUSTRIES LIMITED
Dalmianagar (Bihar)

THE Board of Directors declared an interim dividend of 20% viz., Rs. 2.00 per share (subject to deduction of tax) on Ordinary Shares for the Company's financial year ended 31st March, 1960 payable to those shareholders whose names appear on the Company's Register of Members on 1st September, 1960 or to their mandatees. The dividend although termed 'interim dividend' will be in fact constitute full dividend for the year and no further distribution in respect of the year ended 31st March, 1960 will be recommended for consideration at the Annual General Meeting to be convened in due course.

The exact amount of tax to be deducted by the Compay under Section 18(3D) of the Income Tax Act from the said gross dividend of Rs. 2/- per share would be notified as soon as the Income Tax Officer determines the appropriate portion of the dividend on which tax is not payable by the recipient shareholders under the provisions of Section 15C of the Income Tax Act.

The aforesaid dividend on Ordinary Shares will be paid on 15th day of October, 1960 subject to the Income Tax Officer determining the proportion of tax free dividend in terms of Section 18 (3F) of the Income Tax Act.

The Board of Directors have also extended the date for receipt of subscription money in respect of Right Issue of Ordinary Shares upto Tuesday, the 18th October, 1960.

For SAHU JAIN LIMITED,
A. P. JAIN,
Director,
Managing Agents.

15th September, 1960.

THE DUFFLAGHUR TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of The Dufflaghur Tea Co., Ltd., will be held at the Registered Office, at No. 4, Mangoe Lane, Calcutta, at 11 A.M., on the 13th day of October, 1960, for the following purposes:—

(1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1959, the Balance Sheet as at that date and the Reports of the Directors and Auditors.

(2) To declare a Final Dividend for 1959.

(3) To appoint Auditors and to fix their remuneration.

(4) To appoint a Director in place of Sir U. C. Mahtab who retires by rotation and who being eligible offers himself for reappointment.

The Share Transfer Books and Register of Members of the Company will be closed from the 7th October, 1960 to 13th October, 1960, both days inclusive.

By Order of the Board,
THE DUFFLAGHUR TEA COMPANY, LIMITED,
WILLIAMSON MAGOR & CO., LTD.,
V. S. VIJI,
Secretary,
Managing Agents.

Calcutta, 19th September, 1960.

Note:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

2. The Dividend, if declared, will be paid on or after 20th October, 1960 to those shareholders whose names appear in the Company's books on 13th October, 1960 or to their mandatees. No application for Dividend Warrants will be necessary.

ROHTAS INDUSTRIES LIMITED
NOTICE

LETTERS of offer for right ordinary have already been posted by the Company to the registered holders of ordinary shares in the capital of the Company on the 1st day of September, 1960. If any shareholder requires larger number of Renunciation Forms, he should write to the Company's Office at Dalmianagar (Bihar) for the same.

The Company is advised that exemption from Super Tax will be available as provided in Section 56A of the Indian Income Tax Act on dividends received by Companies in respect of any shares subscribed by them in the present issue of Ordinary Shares in the capital of this Company.

for SAHU JAIN LIMITED,
A. P. JAIN,
Director,
Managing Agents.

19th September, 1960.

DEARER MONEY: GROPING IN THE DARK

THE monetary measures which the Reserve Bank has introduced from the beginning of this month are somewhat exceptional, in the sense that borrowing by commercial banks from "the lender of last resort" has been made costlier although Bank rate remains unchanged at 4 percent. Each scheduled bank has been allocated a quota for borrowing from the Reserve Bank which is equal to the reserves it has to keep with the central banking institution under the law. The reserves are equivalent to 5 percent of the bank's demand liabilities and 2 percent of its time liabilities. A bank can borrow up to 100 percent of the quota at a rate of interest equal to Bank rate. Borrowing over 100 percent of the quota, but not more than 200 percent, is subject to an interest rate of 1 percent above Bank rate. Borrowing more than 200 percent of the quota suffers an interest rate of 2 percent above Bank rate. Instead of letting the effects of its higher lending rates work their way down the money market, the Reserve Bank has taken a further step so as to ensure that interest rates generally are increased. All commercial banks have been asked to raise their interest rates for loans and advances. They have also been told not to lend at less than 5 percent, except in a few cases. It is worth noting that some banks used to charge an interest of less than 5 percent on loans given to the Government and some first-class private concerns before. Many banks have already increased their lending rates by up to 1 percent.

By making money dearer without increasing Bank rate, the latest measures have probably become less objectionable. Bank rate in this country is still of rather academic interest, since changes in it do not affect the money situation much. As long as a large proportion of the credit circulates outside the organised money market, the use of Bank rate can be of little significance. But Bank rate changes do make a great deal of difference to Government borrowing. They reflect official ideas concerning interest rates, and the Government does not usually borrow at an interest rate higher than Bank rate. In the present circumstances, there is hardly any justification for paying more interest on Government loans, so the decision not to increase Bank rate is realistic. A rise in Bank rate would not only have made Government borrowing more expensive, but would have also depressed the market for existing Government securities. Ever since the "Three Wise Men" of the World Bank mission advocated dearer money some months ago, a great deal of uncertainty has prevailed about Bank rate changes. The latest move implies that no change in Bank rate is likely in the near future, so greater stability seems to have been ensured.

To the extent that credit has been made more expensive without suffering the adverse effects of a rise in Bank rate, the measures may be considered pragmatic. But this does not imply that the case for dearer money is unchallengeable. For some months, official opinion has exaggerated the rôle of bank credit as a cause of inflation. It has complacently been argued that commodity prices are high mainly because monetary pressure has increased. So it is thought that costlier credit can reduce the demand for money and prices might thus be held down. But the argument has been proven wrong by experience. The various monetary measures enforced by the Reserve Bank earlier have failed to check inflation since the latter arises from many factors other than purely monetary ones. An excessive supply of money may be partly responsible for high prices, but the money supply has been increased mainly by deficit financing rather than by the creation of bank credit. Unless deficit financing is cut down, the money supply cannot be restricted. Inflation has also been promoted by physical shortages, bigger production costs and high tax burdens. If the supply of commodities is not increased so as to keep pace with the rise in demand, prices cannot be held down. Attention needs to be concentrated on reducing production costs and fiscal levies in order to make commodities cheaper.

These considerations apart, it is doubtful whether dearer money by itself will help reduce the monetary pressure. To begin with, bank credit so far constitutes a relatively small portion of the total credit supply. In regulating bank credit alone, the effects can be no more than marginal. In that case, even though credit has been made more expensive, the monetary demand may not decline much. In a developing economy like India's, dearer money by itself will not reduce the demand for credit. As long as shortages of various commodities continue, especially in view of import restrictions, entrepreneurs will not be discouraged by dearer money. The economy will merely become a high-cost one. Not only will consumers be forced to bear the consequences of increased costs; the competitive strength of Indian products will be reduced. Certain financial circles are disturbed not so much because bank credit has been made more expensive, but because banking resources have been squeezed further. During the current slack season, those resources have been fully employed. In spite of exhortations and persuasion from the Reserve Bank, it has not been possible to reduce credit appreciably. The demand for bank credit has lost many of its seasonal characteristics with the progress of industrialisation. In addition, this year the demand has been sustained at a high level because of special factors. Large funds have been blocked in sugar stocks because only niggardly releases have been permitted from the factories. Some money has been immobilised in stocks of imported cotton because there has been a shortfall in domestic production.

The evidence suggests that bank finance has so far been used mostly for genuine economic activity. The heavy speculation in commodities, shares and bullion during the past year or so has not been financed by bank credit to any great extent. Speculators have depended largely on money outside the banking system. As long as enough funds are available in this way, speculation will be difficult to restrain. If the authorities are serious about curbing it, sterner measures will have to be adopted for mopping up the financial resources outside the organised money sector. Any kind of control operating through the organised money sector will have little effect. It is against this background that an adverse view of the new monetary measures is justified. Instead of holding down prices, they might do considerable damage by hampering economic activity. In view of the strain on the banking system, commercial banks will be forced to borrow from the Reserve Bank at higher interest rates. Their borrowing will increase as the busy season gets into its stride in a few weeks' time. With their present deposits, scheduled banks can borrow from the Reserve Bank only about Rs. 30 crores at Bank rate under the new scheme. Borrowing in excess of this amount will have to be at interest rates higher than Bank rate. The borrowing of scheduled banks from the Reserve Bank is now more than Rs. 60 crores. As the deposits of the State Bank constitute a large proportion of the total deposits of all scheduled banks, the amount which the private banks will be able to borrow at Bank rate will be quite small. It is possible that, in order to avoid paying more interest, banks will be forced to sell Government securities. If they are, official borrowing programmes will suffer.

The higher interest rates apart, a further squeeze on banking resources is likely. The deposit impounding scheme has immobilised a fair portion of bank deposits. It is also possible that the growth of deposits will be hampered now that the interest, especially on short-term deposits, is to be cut under the directive of the Reserve Bank. The cut is being made even though the interest offered by postal savings banks and the various official small savings schemes remains the same. So funds may be diverted from the banks to other competing institutions. In fact, the cut in deposit rates, it is believed, may place many of the smaller banks in an embarrassing position. So far, they have attracted deposits in competition with the bigger banks by offering higher interest rates. By forcing all banks to pay interest on deposits at a uniformly lower rate, the Reserve Bank may not have acted realistically.

The decision to exclude medium-term industrial lending by banks from the present scheme is sound. If the Reserve Bank rediscounts the medium-term industrial advances of commercial banks, the sums involved will not be included in the banks' borrowing quota. Considering that banks can obtain refinancing facilities from the Reserve Bank and the Refinance Corporation for their medium-term industrial lending, it is possible that this sector of business might be boosted. Henceforth, commercial banks are expected to go in more vigorously for industrial financing in order to take advantage of the cheaper credit available from the Reserve Bank and the Refinance Corporation.

The prices of bank shares have become steadier in the Calcutta and Bombay stock markets since the new measures were announced. Investors believe that the profitability of banks will improve. The cut in deposit rates, combined with the rise in lending rates, should increase earnings. But the increase might turn out to be much smaller than the markets think. Commercial banks will have to pay more interest for borrowing from the Reserve Bank. Unless the interest paid by the Reserve Bank on the deposits it has impounded is enough to compensate for the interest paid by commercial banks on these deposits, the profitability of the latter will suffer. If a deposit insurance scheme is introduced in the near future, as is likely, banks will have to pay premiums which will increase their costs. Finally, the tribunal which is investigating the emoluments of bank employees might recommend further increases in wages, salaries or benefits. Short-term official borrowing through Treasury bills is likely to suffer as a result of the squeeze on banking resources. As higher interest rates may not reduce the demand for money, the interbank call rate is unlikely to decline from the present high level; on the contrary, it has already risen. Banks may be increasingly pressed for funds in the coming months. The institutional support for Treasury bills could thus decline rather than improve.

The prospects for banks remain uncertain. Their resources will be strained because dearer credit will not make much difference to the demand for money. An expansion in activity will depend on whether the resources can be reinforced. In trying to increase deposits, banks will have to face keener competition with the reduction in their deposit rates. In any case, new deposits cannot contribute much to the expansion of activity as long as half of them are being immobilised under the deposit impounding scheme. If, as a result of the squeeze on resources, borrowers turn to *bazaar* credit circulating outside the organised money market, economic development will become unhealthier. The effects of the new measures thus need to be watched carefully. If they only increase the cost of credit without reducing the demand for it much, there should be no hesitation in abolishing them. The Reserve Bank has enough powers to keep down credit through selective credit control measures. If the latter are enforced more judiciously and at the right time, there is scarcely any justification for complicating the system of monetary controls with flashy innovations like the latest ones. Some think that credit can be regulated better if more attention is paid to combining selective credit controls with variable reserve ratios. The latter could imply that banks maintain a certain fixed percentage of cash and investments in relation to their deposit liabilities. By varying this ratio judiciously, it may be possible to regulate bank credit much more effectively than by the measures now adopted.

THE STATE OF WORLD CURRENCIES

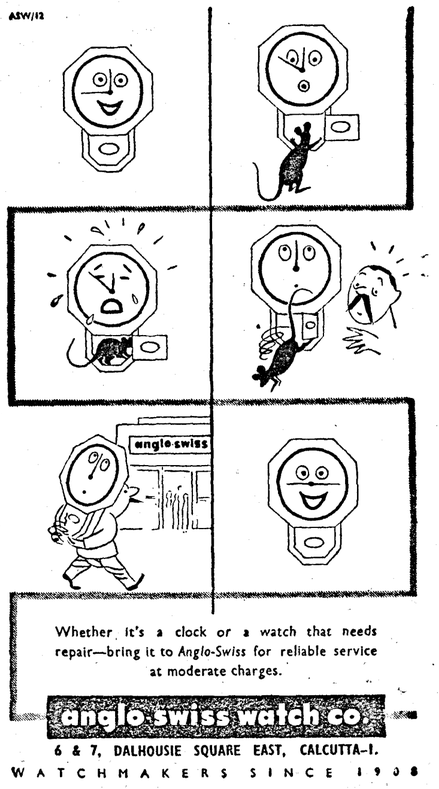
THIS year's meeting of the International Monetary Fund had to discuss the international currencies in restricted circumstances. Elections that may affect future policies are near in the United States and not far distant in West Germany. The changes in the Congo require changes in the Belgian economy. The broad economic trend is confused. In such circumstances, it is hardly possible to agree, or even to discuss, any important modification in the relations between currencies. International finance is always in a state of flux, but the movements of recent months cannot be considered as normal. That some of the excessive quantities of gold which flowed into the United States in previous years should flow out again was desirable, but the weakening of confidence in the dollar has caused some confusion. The flow of gold and currencies to West Germany has the same adverse effect on international liquidity as resulted from the earlier flow to the United States. The centre of attraction for short-term funds is London, and the flow of funds to this centre denotes confidence in sterling. But the motive for the flow is simply high interest rates in London.

Both temporary and permanent factors are involved in these movements, and they may combine or conflict. The quotations for the dollar in the foreign exchange markets reflect underlying changes in the American economy, deterioration of confidence among foreigners (particularly central banks), and a policy of low interest rates that the U.S. authorities have been confident enough to enforce for internal reasons in spite of the unfavourable circumstances. But, to many observers, it appears that the new-style "dollar problem" will persist until the value of the dollar is adjusted to the situation which developed in the 1950s—a situation where the primary and manufactured products of the United States are no longer urgently required abroad, because competing goods are being produced abundantly in other countries. A contrary idea is that the improvement in the U.S. balance of payments this year represents a new phase in the affairs of the dollar and that the pressure against the dollar will be supportable until the massive flow of revenue from recent foreign investment by U.S. corporations removes that pressure permanently. Attention has been focussed hitherto rather on the outflow of capital than on the inflow of earnings from that capital, but the earnings—an increasing factor in the invisible incomes of the United States and the U.K. particularly—requires more consideration now.

Sterling presents no comparable problems at present, being, apparently, valued realistically. The U.K.'s balance of payments is causing some anxiety, but the much-discussed "failure" of British exports is not evidence of over-valuation of the pound. Britain is not the only major trading country whose exports have lost vigour this year, and no one suggests that devaluation of currencies is a proper reaction to a state of comparative lethargy in the world market. Nor is it a proper treatment for a slightly excessive rate of imports —particularly when the excess seems to have been caused by stockbuilding of materials as much as by consumption of imported finished goods, and both demands show signs of easing. The immediate problem for the British authorities is whether they can safely relax restraints at home in a manner that would check the flow of short-term funds which has lent contra-seasonal strength to sterling and to the reserve—by reducing short-term interest rates. The interest on these funds is now a major element in the invisible account—on the debit side. The money itself, being by nature unstable, is not a true support for the currency or the reserve. But the foreign money is useful while the balance of payments is adverse.

Foreign money of more permanent character has been flowing into the U.K. recently, for investment in industrial shares. It has provided an opportunity to eliminate the only variety of "unofficial" sterling remaining after the currency was made formally convertible at the end of 1958. Foreign-owned sterling has not been fully convertible : if a foreign owner of British shares or other assets sells them, he has not been permitted to withdraw the capital by exchanging his sterling officially but has had to sell it in the foreign exchange market as "security sterling". Other non-residents wishing to invest in Britain have usually been able to buy this variety of sterling at a discount. But foreign purchases of British shares have recently exceeded foreign sales of them. So all available "security sterling" has been absorbed, the discount has been eliminated, and foreign capital invested in Britain has been exchanged officially, strengthening the official rate and augmenting the reserve, as the short-term funds have done. West Germany and Switzerland have resisted the inflow of short-term funds; but West Germany's reserve has been substantially increased by a favourable balance of payments, and this movement has continued so long that the accumulation has seriously restricted international liquidity. A comparable development in Italy, on a smaller scale, has attracted attention more recently. The question has arisen whether the European countries that were defeated in the last war have emerged from the period of rehabilitation with their currencies undervalued.

After the last devaluation of the French franc —which has materially assisted the financial recovery of France—it was widely believed that the Belgian franc was over-valued, and that currency became still more suspect when Belgian interests in the Congo were threatened. However, the level of prices in Belgium did not provide conclusive evidence of over-valuation, and it has lately been argued that Belgium can adapt itself to the changed situation in the Congo as the Netherlands did earlier to the changed situation in Indonesia. The Dutch and Swiss currencies remain, of course, very strong; and the Scandinavian currencies have generally held their ground. So the broad picture shows no critical problems but some disequilibrium. Speculation has played an important part —against the Belgian franc, in favour of the German mark, against the U.S. dollar, and in favour of gold. But revaluation of gold seems to be no nearer.



AN OPTIMISTIC TRIMMING OF IMPORTS

CONTRARY to the fears of trade and industry, the import policy announcement for the half-year from October 1960 to March 1961 has turned out to be a largely colourless affair. The cuts in imports were expected to be many and drastic, but it is reported that the total saving likely from those actually announced is estimated at only Rs. 3 crores. This can hardly be considered a large sum, since total imports over the period may amount to well over Rs. 400 crores. The cuts may not do much to stem the decline in the foreign exchange reserves: the latter, it is believed, have fallen by about Rs. 3 crores over the past fortnight alone, after having dropped from Rs. 207.81 crores in January 1960 to Rs. 146.5 crores in the middle of September 1960. The smallness of the import cuts reflects two things. One is that the scope for reductions was extremely limited if economic progress was not to be retarted. The other is that the Government has not yet given up hope of getting all the foreign aid it considers necessary before the end of the second plan period six months hence. Whether the latter optimism is justified, only time will show; from what is known of the recent "Aid India Club" meetings in Paris, Mr. Morarji Desai's tour abroad, and the World Bank and I.M.F. meetings in Washington, not enough foreign assistance has yet been definitely promised for the remaining months of the second plan. That is why the import policy is not being taken very seriously: if the assistance does not come, further cuts in imports may become necessary before March 1961.

The policy thus seems to have been announced with little regard for the present condition of the foreign exchange budget. The Government's aim in doing so presumably is to check anticipatory speculation and profiteering in imported commodities. The choice which New Delhi faced was a difficult one: it was either to cut imports drastically straightaway and liberalise them later as the foreign assistance arrived, or to make only minor reductions for the time being, with more to follow later. The decision in favour of the latter course seems reasonable in the circumstances. Potential speculators have at least been kept in a state of uncertainty about where the axe will fall next if the drop in the foreign exchange reserves continues. It may not be wise, however, for industry to assume immediately that all is well for the next six months.

A notable feature of the new import policy is the attempt to concentrate imports in the hands of actual users at the expense of established importers. In fact, it is openly stated that the result will be a certain amount of unemployment among the latter. Presumably this type of unemployment does not worry the Government too much, since in the context of current attitudes the importer appears to be only a trader and therefore only one step removed from the maligned bania who never produces anything useful. In point of fact, however, established importers have always been an important link in the trade chain: their experience can be invaluable in making the best purchases from the cheapest sources possible. Some importers have earned the trade a bad name by speculating at home and over-invoicing abroad. The Government appears to assume that the inclination of the actual user to speculate will be less, since he needs the goods himself. But it is open to question whether this will actually be the case. The clan of actual users who indent for bigger imports than they themselves need, and then sell the surplus in the black market, is not quite extinct in this country; recent cases where newsprint has somehow been spirited away from newspaper offices into a flourishing black market are not confined to one industry alone.

Another similar assumption, that the only honest *bania* in the import trade is the State Trading Corporation, seems also a trifle exaggerated. The somnolence of the S.T.C. in importing and distributing goods is well known. About the cuts in imports of individual commodities, there will no doubt be much controversy. All except wasteful idlers will be grateful for the belated mercy whereby raw film imports are to be cut in order to persuade the Indian film industry to reduce the length of its interminable masterpieces. Bibbers of alcohol will regret the cut in foreign supplies while not subscribing wholeheartedly to the Government's flattering opinion of the Indian liquor manufacturers. Smugglers will greet the new import policy as completely satisfactory.

Current News and Comment

Indian Cable Does Well

The report of the Indian Cable Co. Ltd for the year ended March 1960 is welcome for being more comprehensive. The accounts have been explained with graphs and summaries. Simplified profit and loss account and balance-sheet figures have also been given. The results reflect the benefits of factory expansion, which has been completed. Turnover has increased by more than 10 percent compared with the previous year, due mainly to full production in the paper insulated power cables factory. The net profit has increased from Rs. 52.26 lakhs to Rs. 79.79 lakhs, after providing Rs. 17.24 lakhs (against Rs. 17.15 lakhs) for depreciation and Rs. 66.50 lakhs (against Rs. 45 lakhs) for taxation. But it should be recalled that substantial bad debts were written off in the previous year.

The profit figure has also benefited this year from the changes in the system of corporate taxation. A gross dividend of Rs. 2.25 a share has been declared on both ordinary and preference shares, against Rs. 1.50, tax-free, in the previous year. The present dividend thus more than compensates shareholders for the tax which has to be deducted at source by virtue of the Finance Act, 1960. In recommending the dividend, the directors express the hope that this rate of payment can be maintained in future years without difficulty. The dividend offers a yield of 7.1 percent at a price of Rs. 31.87 an ordinary share and is covered more than two and a half times. Notable allocations are Rs. 5 lakhs (same) for replacement of fixed assets reserve, Rs. 9.05 lakhs (against Rs. 5 lakhs) for general reserve, Rs. 1 lakh (against Rs. 12.75 lakhs) for development rebate reserve and Rs. 3.15 lakhs (against Rs. 3.05 lakhs) for debenture redemption sinking fund. The carry-forward is Rs. 45,64,364, compared with Rs. 40,00,510 brought in.

The prospects for the current year are assessed optimistically. The results so far have been good, and the order-book is full. The contract department is working satisfactorily. In spite of keener competition from the other cable factories which have been set up recently, the Company expects to sell its products without difficulty in view of the increased demand for electric cables. The balance-sheet is strong. The ordinary share capital of Rs. 2.36 crores is backed by the impressive reserves of Rs. 2.49 crores. Fixed assets are Rs. 1.58 crores and current assets Rs. 4.69 crores. Among prominent features are included the declines in the value of raw material stocks and the amount due from sundry debts. The increases in the value of stocks of finished goods, of work in progress and in the amount of cash and bank balances, are worth noting.

Bird Jutes: One Down, Two Up

The result of the Dalhousie Jute Co. Ltd. the Lawrence Jute Co Ltd and Lansdowne Jute Co. Ltd—all of which are under the managing agency of Bird and Co. Private Ltd—for the year ended March 1960 are mostly satisfactory, because prices of raw jute were favourable in comparison with those of manufactured goods. But the prospects for the current year are being assessed cautiously in view of the fibre shortage. The decision of the I.J.M.A. to extend the scheme for the voluntary sealing of looms up to the end of this year highlights the tightness of raw jute supplies. The Association has stated that it might be necessary to increase the percentage of compulsorily sealed looms from the beginning of 1961 in order to enable the industry to work without interruption and to ensure a reasonable carryover of raw jute to the next season (1961-62).

Providing Rs. 2.74 lakhs (against Rs. 3.58 lakhs) for depreciation, the profit of Lawrence Jute has amounted to Rs. 8.66 lakhs, against Rs. 13.90 lakhs. A taxable ordinary dividend of 15 percent, including an interim of 7 percent, has been declared. This offers a yield of 11.3 percent at the price of Rs. 133 a share, and is covered more than one and a half times. The ordinary dividend was 2 percent, tax-free, in the previous year. Taxation contingencies reserve is allocated Rs. 2 lakhs (against Rs. 1.5 lakhs) and general reserve Rs. 2 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 10,530, compared with Rs. 60,304 brought in. The arrangement with the Auckland Jute Co. Ltd, the Lansdowne Jute Co. Ltd and the Northbrook Jute Co. Ltd for the purchase of loom-hours continued throughout the year under review. Fixed assets have been written down by Rs. 16.65 lakhs to correct the revaluation which was made in 1948.

The directors of Dalhousie Jute have placed orders for further machinery in order to complete the modernisation programme. The arrangement with the Northbrook Jute Co. Ltd for the use of loom-hours has proved beneficial to Dalhousie, because the increase in production has helped reduce unit costs. The profit has increased from Rs. 7.46 lakhs to Rs. 10.47 lakhs after transferring Rs. 4.71 lakhs (against Rs. 5.38 lakhs) for depreciation. A taxable ordinary dividend of 1 percent has been declared. This gives a yield of 0.8 percent at the present price of Rs. 125 a share, and absorbs only Rs. 31,492. The ordinary dividend for the previous year was passed over. The carry-forward is Rs. 18,142, against a debit balance of Rs. 6,42,070 brought in. Debenture redemption reserve is allocated the same amount of Rs. 1 lakh and Rs. 45,000 has been transferred from general reserve. Fixed assets have been written down by Rs. 34.02 lakhs by debiting the reserves for the revaluation of fixed assets accounts in order to correct the revaluation made in 1948.

The profit of Lansdowne Jute has increased from Rs. 1.85 lakhs to Rs. 6.65 lakhs, after providing Rs. 4.29 lakhs (against Rs. 4.65 lakhs) for depreciation. The ordinary dividend has been passed over and a debit balance of Rs. 2,02,024 has been carried forward. Debenture redemption reserve is allocated Rs. 1 lakh, but an amount of Rs. 52,500 has been transferred from general reserve. Fixed assets have been written down by Rs. 24.83 lakhs to correct the revaluation made in 1948.

Imperial Tobacco Earns More

In his address at the annual general meeting of the Imperial Tobacco Co. of India Ltd in Calcutta recently, Mr F. A. Collett, chairman, pointed to the satisfactory results for the year ended March 1960. (A fuller version of the speech is printed on a later page of this week's *Capital*.) The profit has increased from Rs. 1.15 crores to Rs. 1.42 crores, but part of the increase has resulted from the changes in the system of corporate taxation. In order to get over the difficulty of importing spare parts for machinery due to the foreign exchange shortage, the Company has taken steps to encourage the production of indigenous machinery. Mr. Collett mentioned that Molins of India Private Ltd has started production in a new factory in Behala, near Calcutta. A portion of the capital of Molins has been subscribed by Imperial Tobacco. It is expected that the project will yield good results. Mr. Collett referred to the recent deterioration in the supplies of leaf tobacco. He pointed to the need for producing quality flue-cured tobacco in greater measure, because this will help domestic producers to maintain the quality of cigarettes. India exports substantial quantities of flue-cured tobacco, especially to the U.K., but the foreign market cannot be maintained unless quality is improved.

Imperial Tobacco has promoted sales by placing many new brands of cigarettes on the market. It has not been possible to supply filter-tipped cigarettes in line with the increased demand, because of the shortage of filters, which are largely imported. Producers of filters are believed to be negotiating with the Government of India for starting manufacture in this country. As soon as supplies of filters are increased, bigger quantities of filter-tipped cigarettes can be produced. Mr. Collett said that many schemes have been adopted for improving the operational efficiency of workers. The results during the first five months of the current year have been encouraging. Sales have improved, but the profit may not increase proportionately in view of the rising costs and partly because smokers are tending to switch on to lower priced and less profitable brands of cigarettes. The directors have declared a first interim dividend of 2½ percent, taxable, for the year ended March 1961.

Anuh Pharma Share Offer

Anuh Pharma Ltd, a new Company formed recently in Maharashtra State, will offer from Saturday this week 80,000 ordinary shares of Rs. 10 each for public subscription at par. The issued capital is Rs. 10 lakhs, divided into 100,000 ordinary shares of Rs. 10 each. Of this, 20,000 shares will be subscribed by the promoters, directors and their friends. (Fuller details of the issue are published on a later page.) The Company has taken over as a going concern the business carried on by Messrs Anuh Pharma. It proposes to do business in indigenous drugs. It has already produced many kinds of Ayurvedic medicines and the directors think that the products have good commercial prospects. They expect to sell nearly Rs. 10 lakhs worth of goods a year by 1962. When the turnover becomes fairly big, a modern factory will be built. The present factory site has been chosen because adequate supplies of raw materials in the form of vegetables, herbs and fruits are available nearby. The directors think that it may not be long before dividends can be paid.

Hindustan Wires Share Offer

The prospects for the engineering industries are fairly reassuring, so the offer by Hindustan Wires Ltd of 250,000 ordinary shares of Rs. 10 each for public subscription at par is expected to attract attention. (Fuller details concerning the offer are published on a later page.) The list will open on 17th October. The Company's issued capital consists of 500,000 ordinary shares of Rs. 10

each. Of this 50,000 shares have already been subscribed. Another 200,000 shares will be taken up by the directors and their friends. The Company is building a factory in Sodepur, near Calcutta. Production has already begun and orders for more machinery have been placed. The plant and machinery have been supplied largely by Sir James Farmer Norton and Co. Ltd of the U.K. and they have agreed to look after the installation. It is proposed to manufacture high tensile, spring steel, concrete reinforcement, signal, galvanised, hard bright and annealed wires and wire products. The installed capacity of the unit is 5,000 tons a year but there is scope for further expansion. Most of the products the Company will make are now imported. So there should be little difficulty in selling them. The directors think that as soon as normal production is achieved, it will be possible to pay reasonable dividends. The cost of the project is estimated at Rs. 50 lakhs. The Company will be entitled to special benefits under the Indian Income Tax Act concerning development rebate. Profits up to 6 percent of the employed capital will be exempt from income tax during the first five years of working.

New Products from Mukand Iron

At the annual general meeting of the Mukand Iron and Steel Works Ltd last week in Bombay, the chairman, Mr. K. N. Bajaj, reported that the Company has taken up the manufacture of intricate castings for the motor-car industry and sugar plants. The production of additional components like roller bearing axle boxes and centre buffer couplers for the railways has also been started. (A fuller version of the speech appears on a later page of this issue.) All these items were hitherto imported; the Company is the first to start supplying Indian-made centre buffer couplers to the railways. The expansion programme could have been completed earlier but for the land acquisition proceedings, which had to be contested in the courts. The judgment of the Supreme Court has gone in the Company's favour, but a reference before the Maharashtra High Court is still pending. A matter of gratification to the Company is the fact that the Government has accepted the recommendations of the Tariff Commission, with some modifications, on the new retention prices payable to the re-rolling industry.

Discussing economic conditions, the chairman said that although a better industrial balance is being achieved through the fuller use of installed capacities, shortages of food, fuel, power and transport continue to be major handicaps. They have retarded growth to some extent, and hindered at least one of the main steel plants from developing to its full capacity. The third plan steel target of 10.2 million tons, or 7.5 million tons of finished steel, is encouraging, but greater emphasis should now be placed on the development of steel-consuming industries rather than continuing to make heavy investments in new steel-making units. A proper balance in industrial development will be impossible to achieve without directing the growth in this way. Due to the heavy plan expenditure, demand for consumer goods has been rising at a greater rate than current production can cope with. It is, therefore, necessary to restrict deficit financing to the unavoidable minimum in the next plan period. Mr. Bajaj suggested that the prudent thing to do would be to divide the third plan into two parts: the first consisting of the essential projects based mainly on internal resources; and the second comprising the remaining schemes, listed in order of priority, to be taken up as and when external assistance becomes available. Otherwise, the difficulties of the second plan would be repeated, if the expected volume of foreign aid does not come forth. As has happened in the current plan, many essential projects may have to be deferred while the less important projects will have to be continued because work on them will have commenced already.

Macneill and Barry Profit Up

Presenting the report for the year ended March 1960, the directors of Macneill and Barry Ltd point out that the outlook for the current year is fairly satisfactory in spite of the reduction in income following the restrictions imposed by the Companies Act reducing the number of managed companies to only ten. Development projects within Macneill and Barry and its subsidiary, Kilburn and Co. Private Ltd, continue to make progress. It is hoped that the income from these sources will more than counterbalance the losses in other directions. The profit has increased from Rs. 44.46 lakhs to Rs. 45.23 lakhs. The income from investments in the tea, jute and light industries has increased, but that from coal has declined. The earnings from the harbour boating service have fallen, but steps have been taken to rationalise activities; it is hoped that the income from them will improve during the current year. A taxable ordinary dividend of 8 percent has been declared. This offers a yield of 7.7 percent at a price of Rs. 104 a share, and is covered more than three and a half times. The ordinary dividend was 7 percent, tax-free, in the previous year. Taxation is allocated Rs. 19.40 lakhs (against Rs. 22.75 lakhs) and general reserve Rs. 6 lakhs (against Rs 5 lakhs). The carry-forward is Rs. 2,92,857, compared with Rs. 3,04,264 brought in.

Williamson Magor Teas

The reports of the Williamson Magor group of tea companies for the year ended December 1959 have just been published. The Dimakusi Tea Co. Ltd, an Assam producer, has made a profit of Rs. 3.63 lakhs, against Rs. 2.96 lakhs in the previous year. A taxable ordinary dividend of 30 percent, including an interim of 15 percent, has been paid, and it absorbs Rs. 1.42 lakhs. This offers a yield of 10.5 percent at a price of Rs. 28.44 a share The ordinary dividend was 25 percent, tax-free, in the previous year. Building reserve is allocated Rs. 50,000. The carry-forward is Rs. 1,56,884, against Rs. 1,65,963 brought in. The crop declined from 682,908 lbs to 678,452 lbs, but the average sale price increased from Rs. 2.63 to Rs. 2.80 a lb. Estimates for 1960 have been made for a crop of 704,000 lbs at a cost of Rs. 2.06 a lb.

The Gohpur Tea Co. Ltd has virtually maintained its profit at about Rs. 1.98 lakhs. A taxable ordinary dividend of 10 percent has been declared, absorbing Rs. 67,600. This offers a yield of 5.9 percent at a price of Rs. 16.81 a share. The dividend was 5 percent, tax-free, in the previous year. Building reserve receives Rs. 50,000. The carry-forward is Rs. 131,256, against Rs. 143,353 brought in The output declined from 635,432 lbs to 586,588 lbs, but the average sale price increased from Rs. 2.46 to Rs. 2.61 a lb. Estimates for 1960 have been framed for a crop of 620,000 lbs at a cost of Rs. 4.54 a lb.

The profit of the Soom Tea Co. Ltd, a Darjeeling garden, has fallen from Rs. 3.18 lakhs to Rs 2.10 lakhs. A taxable ordinary dividend of 30 percent, including an interim of 15 percent, has been declared, absorbing Rs 90,000. This gives a yield of 10.2 percent at the present price of Rs. 29.50 a share. The dividend was 50 percent, tax-free, in the previous year. The carry-forward is Rs. 1,75,267, compared with Rs. 1,82,909 brought in. Production was 312,255 lbs (against 312,398 lbs), but the average sale price declined from Rs. 3.49 to Rs. 3.17 a lb.

The Lingia Tea Co. Ltd, a Darjeeling producer, has made a profit of Rs. 1.69 lakhs, against Rs. 2.95 lakhs. An interim dividend of 12½ percent, taxable, was paid, absorbing Rs. 87,500. This is to be considered as the final dividend. It offers a yield of 6.2 percent at the price of Rs. 20.31 a share. The dividend was 17½ percent, tax-free, in the previous year. The carry-forward is Rs. 41,950, against Rs. 30,830 brought in. Production declined from 653,005 lbs to 647,910 lbs and the average sale price from Rs. 3.16 to Rs 2.93 a lb. Estimates for 1960 provide for a crop of 672,000 lbs at a cost of Rs. 2.81 a lb.

I. F. C. Profit Up

The gross profit of the Industrial Finance Corporation of India has amounted to Rs. 2.5 crores for the year ended 30th June, 1960. or about 25 percent more than in the previous year. Loans granted to industrial concerns constituted the bulk of its business operations. They reached the peak in 1955-56, when its loans amounted to Rs. 15.18 crores; this represented a marked advance on the previous two years' figures of Rs. 7.34 crores and Rs. 5.27 crores, respectively. The peak year of 1955-56 was followed by three years of steady fall —Rs. 11.91 crores in 1956-57, Rs. 7.79 crores in 1957-58 and Rs. 3.79 crores in 1958-59. It is gratifying, therefore, that the decline has been followed by a steep rise to Rs. 17.92 crores in 1959-60. In his address (details of which are printed on a later page of this week's *Capital*) at the annual general meeting in New Delhi recently, Mr. K. R. K. Menon, chairman, said that the "phenomenal improvement" in the Corporation's loan operations last year—although it partly reflects the rise in industrial production—cannot be attributed to any easing in the foreign exchange situation or any appreciable liberalisation in the licensing of capital goods imports in that year. Out of Rs 17.92 crores, only Rs. 5.66 crores represent loans to concerns which obtained import licences in 1959-60 and Rs. 1.46 crores to those which had obtained import licences in previous years. Mr. Menon said that the balance of Rs. 10.78 crores was, in the main, accounted for partly by loans to concerns which were to use the Corporation's rupee loans for obtaining foreign currency credits from the Central Government or directly from foreign financial institutions and partly by loans to concerns—mostly sugar co-operatives—the bulk of whose capital goods are to be manufactured indigenously.

Dealing with the distribution of loan approvals among the various industries, the chairman said that sugar continued to occupy first place in the past year also, followed by paper and rayon. The bulk of the loans to the sugar industry (Rs. 4.2 crores out of Rs. 5 crores) went to co-operative societies, the total amount of loans to which now stand at Rs. 18.89 crores distributed among 32 societies in various States. The societies have put the loans to proper use, and in meeting commitments relating to the payment of interest and repayment of principal, their record has been satisfactory. This is gratifying, the chairman said, in view of the fact that quite a few of these societies are still in the initial stages of production.

Mr. Menon declared that the Corporation's business operations would have been helped if it had a certain amount of foreign currency funds at its disposal. It is grateful to the Development Loan Fund authorities for the loan of Rs. 4.7 crores in U.S. dollars which was sanctioned to it in April this year. The Corporation has already received requests for the entire amount, and it hopes to process the applications "before the end of a couple of months or so from now." Mr. Menon hoped that the D.L.F. would offer further credits in the future. The Corporation might also succeed in persuading the World Bank to give it a substantial loan in convertible foreign currencies to meet the pressing needs of its constituents.

Progress of Ruby General

Presiding at the annual general meeting of the Ruby General Insurance Co. Ltd recently in Calcutta in the absence of Mr. B. M. Birla, Mr. M. L. Shah referred to the reorganisation of the fire insurance department. (The full speech is published on another page of this week's *Capital*.) It is hoped that this branch of activity will show better results in the future. The claims experience of the motor-vehicle section in the miscellaneous department has been unsatisfactory, but the recent increase in certain motor premium rates should help improve working. In view of the demand for many other types of miscellaneous insurance, the Company is thinking of diversifying its activities. The marine department has shown a big loss because of the increase in the premium reserve from Rs. 10.90 lakhs to Rs. 16.04 lakhs. The unsatisfactory claims experience is largely due to the increase in foreign marine hull business, but the latter has now been substantially cut. The loss experience on import shipments reflects the unsatisfactory conditions in the ports. Mr. Shah thought that the Bill which has been introduced in Parliament to codify the marine insurance law will improve working. The Company's profit has amounted to Rs. 11¼ lakhs for the year ended December 1959. A taxable dividend of 80nP a share has been declared, absorbing Rs. 3.20 lakhs. The premium income is over Rs. 1.34 crores and reserves amount to Rs. 95 lakhs. There has been an appreciation of Rs. 25 lakhs in the investment portfolio. Steps have been taken to reorganise the overseas business and better results are expected.

RARE SCOTCH WHISKY

General Assurance Problems

Speaking at the annual general meeting of the General Assurance Society Ltd last week, Mr. D. L. Jalan mentioned the difficulties of general insurance business arising from keen competition. (The details of the speech are published on a later page of this week's *Capital*.) He did not think that the restrictions placed by the Government or the Code of Conduct have brought any improvement. It is necessary to review the Code of Conduct carefully and remove the difficulties. Mr. Jalan felt that fire insurance business is generally good, but the market for insurance has become difficult because of the regular recurrence of fires in specified areas. If this problem is to be tackled effectively, it is necessary that the survey of fire claims be taken up by the Association itself. It is also necessary to introduce in Calcutta the system of auctioning quickly material salvaged from fire damage, as is being done in Bombay. Mr. Jalan stated that the India Reinsurance Corporation should diversify its activities beyond the conventional types of reinsurance business.

Tata Chemicals Dividend

Tata Chemicals has declared a dividend of 60nP, subject to tax, on the old ordinary shares for the year ended June 1960. The dividend is 20nP, subject to tax, on the new ordinary shares, plus interest of 40nP a share payable out of capital at 4 percent a year, making a total of 60nP. The dividend on the preference shares is 5 percent, free of income tax (Rs. 6.25 gross or Rs. 4.375 net), calculated on the basis of the Preference Shares (Regulation of Dividends) Bill, 1960. The cut in the ordinary dividend—the Company paid 52.5nP net for the previous year—was anticipated by market circles, so the quotation for the shares had been declining for some time. The turnover during the year was Rs. 341.32 lakhs, against Rs. 340.7 lakhs in the previous year, but the profit is down from Rs. 43.88 lakhs to Rs. 27.36 lakhs. From this, the directors have provided Rs. 1.05 lakhs for tax (against Rs. 12.51 lakhs) and Rs. 14.35 lakhs for development rebate (against Rs. 13.3 lakhs), leaving a balance of Rs. 11.96 lakhs. With Rs. 6,792 brought in, the total available is Rs. 12.03 lakhs, to which the directors have added Rs. 2.5 lakhs from general reserve, making a total of Rs. 14.53 lakhs. A sum of Rs. 14.38 lakhs has been appropriated for the proposed dividends, leaving Rs. 14,509 to be carried forward.

Pesticides: A New Venture

A project to manufacture a wide range of insecticides and chemicals is being prepared in Bombay. A new Company called Pesticides Limited will soon be incorporated to undertake the project, with an initial cost of Rs. 50 lakhs. The Company will have an authorised capital of Rs. 1 crore, made up of 1 million equity shares of Rs. 10 each. Half of the capital is being issued in the first instance, and Rs. 25.5 lakhs of the issued capital is being subscribed by the promoters, directors and their friends. The remaining Rs. 24.5 lakhs will be offered to the public. The Company is expected to enter the market some time in December. It proposes to manufacture a number of insecticides, including B. H. C. (benzene hexachloride), the import of which is currently banned. Malathion (an organo-phosphorus insecticide), zinc phosphide, 2-4-Dichloro-phenoxy acetic acid and some mercury compounds.

The industrial licences have been obtained. It is claimed that this unit will be the first plant in the east to make Malathion (which is produced only in the U.K. and U.S.A.). The Kureha Chemical Industry Company and Itoh and Company are the foreign collaborators. They will provide technical assistance, machinery and plant. Of the initial outlay of Rs. 25 lakhs, the foreign exchange expenditure involved will be about Rs. 15 lakhs, including Rs. 1.2 lakhs as the technical assistance fee. No royalty is to be paid to the Japanese associates. The factory will be located in Bombay's industrial suburb of Thana and present expectations are that it will start production by the end of 1961 or early in 1962. According to the promoters, the proposed annual production will be 1,500 tons of B.H.C., 30 tons of Malathion, 130 tons of zinc phosphide, 300 tons of 2-4-dichloro-phenoxy acetic acid, and 25 tons of mercury compounds.

Rights from Shreeniwas Cotton

The directors of the Shreeniwas Cotton Mills have decided to issue rights shares totalling Rs. 10 lakhs in the ratio of one share at par for every eight shares held. The authorised capital of the Company is Rs 5 crores—400,000 equity shares of Rs. 100 each and 100,000 preference shares, also of Rs. 100 each. The issued capital is Rs. 84.8 lakhs, made up of 80,000 ordinary shares and 4,800 preference shares. The Company had applied some time ago to the Government for the issue of additional capital of Rs. 16 lakhs, in the proportion of one share for every five shares held. It appears that it withdrew the application in view of the Government's latest policy of allowing new issues only at a substantial premium. It is reported that the Company's working so far during the current year has been satisfactory.

Joint Indo-U.S. Ventures

If present negotiations prove successful, five Indian promoters will enter into collaboration agreements with U.S. firms for the establishment and operation in India of plants for the manufacture of cheese, ammonia, feron, refrigeration compressors, hard boards and glass products. The proposal for the manufacture of cheese has come from Sardar Pritam Singh Sandu who seeks equity investment, machinery, equipment and technical know-how. He proposes to put up his plant in Faridabad, near Delhi. Land is available nearby and this might be used for the establishment of a dairy farm with the co-operation of the U.S. investor. Sardar Pritam Singh proposes to invest up to Rs. 8.5 lakhs in land, factory construction and working capital. The firm of Bhawani Prasad Girdhari Lal of Kanpur has a scheme for feron refrigeration compressors. To begin with, it proposes to manufacture 100 compressors a year on a one-shift basis. A full production capacity of 500 or more compressors a year is visualised during the second phase. The Elixir Trading Company of Kottayam, Kerala, is looking for U.S. collaboration for the supply of imported machinery for its plant for hard or chip board. The cost of the machinery is estimated at Rs. 12 lahks, or half the value of the enterprise. Among the other two concerns is the Hindustan Wired Glass Manufacturing Company. About Rs. 25 lakhs, which is 40 percent to 50 percent of the estimated capital needed for the project, is sought from the potential U.S. investor, while the balance will be raised by the Indian firm. The U.S. investor is offered equity capital participation. Swastik Rubber Products of Poona seeks U.S. collaboration for the establishment of a plant for the manufacture of rubber and p.v.c. insulated cables. The capacity of the factory will be 5 million core yards a year. The firm is currently manufacturing 500,000 core yards of rubber cables a year.

Prospects for Malayalam Plantations

In his statement to shareholders of Malayalam Plantations Ltd, Mr. H. W. Horner, chairman, says that the Company proposes to pay a final dividend of 10 percent on the increased capital. This is equivalent to 15 percent on old capital and is in conformity with earlier expectations. (A fuller version of the statement is published on a later page in this week's issue of *Capital*.) Future distributions, Mr. Horner said, will depend on market conditions and the level of taxes in India. They will also depend on the speed at which the Government will insist on the implementation of the Plantations Labour Act, including the provision of housing for labour. Since the formation of the coalition Government in Kerala, there has been no reduction of the crippling burden of taxation imposed on the plantation industry. On the contrary, the new Government recently increased the land tax from Rs. 2 to Rs. 10 an acre.

Taxation policy in India, the chairman said, appears to be dictated by the immediate need for revenue, and the Government does not consider the adverse long-term effects on industries. Representations by planters' associations against the additional burden "have been unavailing". Mr. Horner said that the increased land tax does not affect the Company as far as the 1959-60 financial year is concerned. Nevertheless, the taxes which the Company had to bear on income and the direct or indirect levy of export and excise duty and sales tax amount to about £880,000. The increase in replanting subsidy for rubber, the chairman said, will be of advantage to the Company when it undertakes in due course the phased replanting of about 9,000 acres of unselected rubber. The average yield of the latter is under 400 lbs an acre, while the yield from the selected areas in tapping is already about 625 lbs an acre. Some of the selected rubber areas are yielding more than 1,000 lbs an acre. Mr. Horner said that the Company's replanting policy is sound from the long-term point of view, since higher yields are necessary to meet the rising costs resulting from Government enactments to provide amenities for labour.

Madras Aluminium Project

The Madras Government's third plan has stressed the necessity for starting a new aluminium plant in Mettur, so the flotation of a new company in the private sector with a capital of Rs. 13 crores is awaited eagerly by investors in the State. The Madras Government feels that the bauxite and power available in Salem will help establish a large aluminium industry. The new plant in Mettur will obtain 4 million to 5 million tons of bauxite from the Shevaroys. The project has been examined by experts. The Italian associates, it is reported, favour the local manufacture of rolled products as well as ingots. The plant will have an annual production capacity of 10,000 tons and will also manufacture aluminium conductors since copper supplies are inadequate. The State Government has stated that the new plant will have to manufacture aluminium sheets for the nationalised transport industry, although it has made no estimate of the prospective demand for such products. The Central Government has already approved the project, and the State Government has asked the Madras Finance Corporation to provide part of its capital.

Increasing Use of Green Manures

The fertilisers Distribution Committee has recommended a number of measures like the abolition of the sales tax on fertilisers to popularise their use. It appears to have overlooked the fact that fertilisers are not available to cultivators at a fair price. In many States they have to pay a higher rate than the one fixed by the Government. In this connection, the report from U.P. that the area under green manure in the State is expected to go up from 650,000 acres to 1.1 million acres, that is, by 17 times in five years, should come as an eye-opener. Until three years ago, there was an inadequate supply of green manure seeds. The border planting method advocated by Mr. M. S. Sivaraman, adviser to the Planning Commission, it is stated has now removed this bottleneck. According to a Press note issued by the U.P. Government, the cultivators have taken enthusiastically to the use of green manure, the production of which, it is expected, will ultimately go up to 30 million acres.

THE DEVELOPMENT OF JAPAN

ON the subject of the development of Japan, the Yokohama Foreign Chamber of Commerce says that speaking generally, the industries of Japan depend upon manual labour, and the opportunities afforded by the introduction of railways, steamships, etc., appear to have absorbed the surplus workers with the result that labour has demanded and received an increase of wages. At the same time there is a tendency to carelessness and independence of the kind which results in the turning out of poor and unsatisfactory work. As a consequence the labour of Japan, while still cheap, according to western ideas of remuneration, is not cheap when considered in relation to the output, and in many ways the cost for a given result is greater in Japan than in Europe or America. The expensive nature of this reliance upon supposedly cheap labour instead of upon the labour saving inventions of the age is easily illustrated. The cost of travelling from place to place in one of Japan's great cities is greater than either New York or London, the cost of transporting merchandise is greater and is further increased by the delays which often occur, cargo from Yokohama to Tokyo, which is less than 20 miles away, being over a week *en route*. When the proportionate wealth of the people and their ability to pay these high charges is considered the disadvantages under which Japan now labours in her competition with the world can easily be estimated.

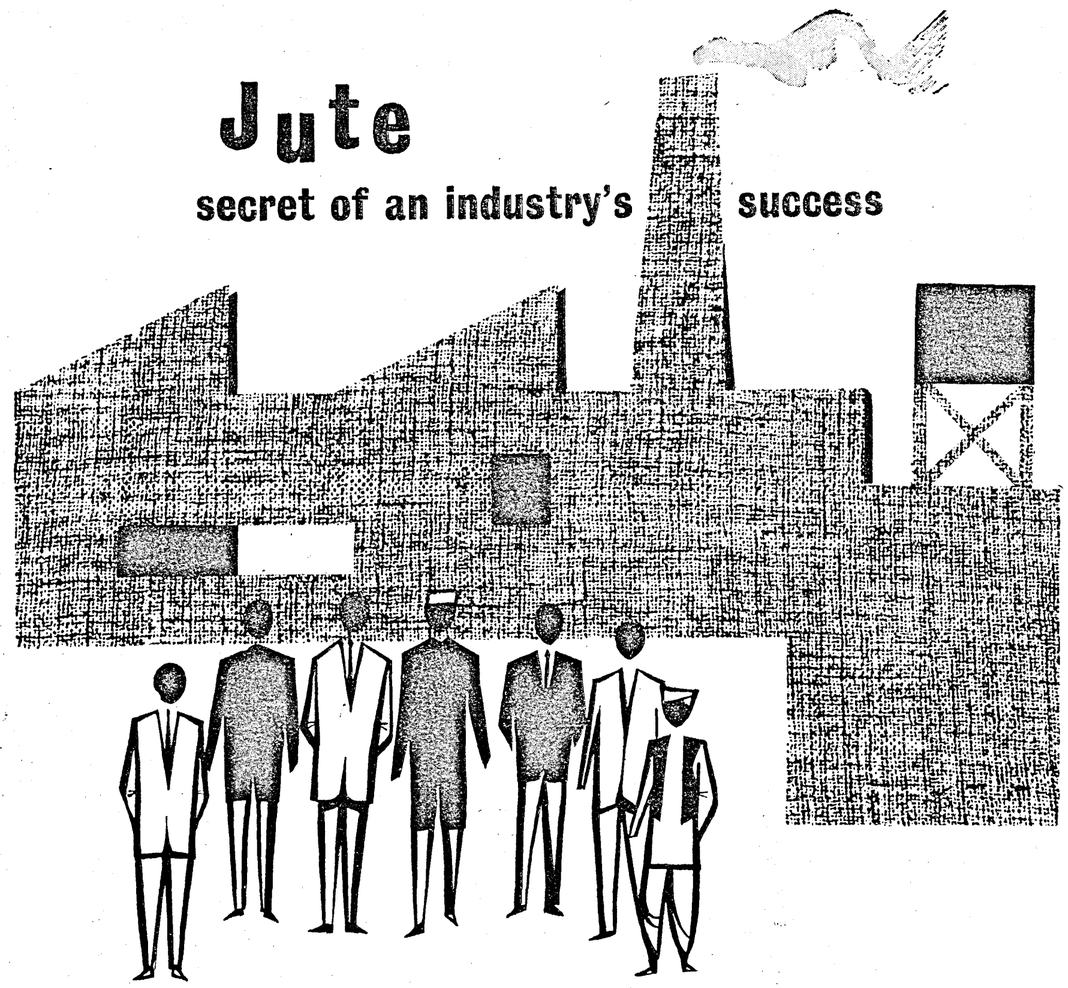
Jute

secret of an industry's success



With a membership of 70 companies, comprising 100 manufacturing units, the IJMA represents almost 95% of the total jute loomage in India.

Providing employment to millions of farmers, traders and mill-workers . . . earning about Rs. 115 crores annually in foreign exchange . . . contributing large sums in taxes to the State and Central Exchequers — the Indian jute industry occupies a prominent place in the nation's economy.

Guarding the interests of this nationally important industry and guiding its destiny, is the Indian Jute Mills Association. Founded in 1884, the IJMA — representing almost 95% of India's total jute loomage — protects, forwards and defends the trade of its members. The Association carries on research . . . to improve the quality of jute products and to develop new uses of this already versatile material. In the field of export promotion the Association has been active for well over a decade, undertaking publicity and promotional work which has helped make jute goods India's largest dollar-earner. Its labour welfare activities have set standards throughout industry.

The Indian Jute Mills Association looks forward to serving the Indian jute industry in ever-increasing measure in the years to come.

A Ditcher's Diary

I AM AFRAID I WAS NOT PERSONALLY PRESENT through what has been described as Calcutta's best-policed Puja. But I am always glad to see a compliment or two paid, occasionally, to the Calcutta Police. There had been suggestions before the Puja came that, because of the unfortunate happenings in Assam, this year's celebrations should be on a modest scale and that the resultant savings should be spent for refugees. To what extent this was done I would not know; nor do I know if there was a decrease in the number of community Pujas. The Puja does something to the Bengali Hindu; once, I have heard, many Moslems participated in the celebrations; and considering the cheerless existence most middle-class Bengalis generally live for the rest of the year, nobody will grudge them their Puja which is more than a religious occasion. Greatly inconvenient though it is for some, there is something to be said for the long vacation the Pujas mean to many Government and mercantile offices. There would be more if, while insisting on one long vacation a year, the people of Bengal could forgo the many holidays which punctuate working life in this State. It has been said times without number that there is more legalised absenteeism in India than anywhere else in the world; but if India is going to be modern and industrialised like the "advanced" countries of the world, I am afraid some change will have to be accepted in the leisurely pace of life in this country. And here Mr. Nehru, who works impossible hours with hardly any holiday, has never been serious about teaching the country to do what he visibly practises. As I have said, I was myself on holiday; but it was not an unmixed pleasure to come back to find a large accumulation of papers and things on one's desk and then to find that many other people had not been back at work at all. The next Durga Puja is a year away; but meanwhile there will be so many excuses on so many days for doing nothing.

I AM VERY GLAD YOUNG DOM MORAES'S *Gone Away* has been widely noticed, both in Britain and here; and I am not entirely sorry that not all the reviews were wholly uncritical. Some very eminent men, such as E. M. Forster and Kingsley Martin, have reviewed the book; that is distinction enough for a young man's first serious effort in prose. It's a pity, but perhaps only to be expected from a poetic temperament, that Dom Moraes did not take his assignment a little more seriously. He would in that event have planned the book and given it some shape. But this criticism has been made before; and he has rightly been praised for the touching chapter on a dying poet of Nepal. (I had read Ved Mehta's account of some of the escapades in the *New Yorker*, but no comparison is warranted.) I do not seem to have seen it mentioned anywhere that *Gone Away* is one of the few books written in recent years in which Bengal and the Bengalis are treated with respect. Mr. Moraes does not know Bengali—as, alas, I don't either; unnecessarily he says more than once that he knows no Indian language; so that what he says of Bengal's culture and literature is what he has been told. But it was good to see that at least one visitor found this city of ours intellectually stimulating. Goodness knows there is much to criticise in Calcutta today; but this city grows on one, as I have learned over the years. Calcutta's attractions are not primarily visual, unless one has a morbid fascination for noisy demonstrations; but there is in the air something I would like to call mental alertness; and even among the wayward young I have sometimes found a degree of impersonal interest in the world and its affairs that I have not encountered in many places. I am very glad that a sensitive poet felt the imperceptible in Calcutta's life which so often escapes the tourist in a hurry.

IF ALL INDIA RADIO AND SOME OTHERS HAD NOT foolishly gone for that excessive build-up in advance, I think Mr. Nehru's speech at the United Nations on Monday would have made a profounder impact on India. At the United Nations itself, the not exactly startling address was received well enough; and in the relayed applause I found appreciation of Mr. Nehru's total sincerity. He spoke completely without vehemence; and I think he is the only one to have done so. As I listened in, I had a suspicion that perhaps some of his colleagues from Africa are finding him too quiet. (It will be a long time before anyone thinks of writing a novel called *The Quiet African*.) What is noticeable is that, except for the United States and the West in general, the United Nations and its Secretary-General have not received unqualified support from anyone. It is not necessary to accept any of Mr. Khrushchev's criticism of the two, for all of it was palpably *mala fide*; but those who are inclined to treat any criticism of the world organisation or its fallible Secretary-General as treason or something should think again. I think Mr. Hammarskjoeld has done a magnificent job in an excruciatingly difficult and dangerous situation; but it is simply not true that the U.N. never made a mistake in the Congo. And some of those mistakes helped parties I would not describe as friendly towards an independent Congo. On the other hand, the Soviet Union never did anything there which was not calculated to make confusion worse confounded. But even the Congo is now almost a secondary consideration, for Mr. Khrushchev has made a frontal attack on the United Nations itself. Again, I cannot pretend to understand the reasons for it. In spite of the seriousness of the crisis, I find it difficult to believe that the United Nations has exhausted its usefulness—even from the point of view of the Kremlin, even after Mr. Khrushchev's painful discovery that the new African and Asian States are not all blind followers of the Soviet line. I have a hunch that Mr. Khrushchev may back down again; and all must hope that he will.

WHETHER OR NOT BRITAIN HAS "NEVER HAD IT SO good", it is doubtful whether Labour has ever had it so bad. The Party, so great so recently, seems split right through; and I do not believe that unilateral disarmament is the only, or even the main, issue. Not even the rivalry between Mr. Hugh Gaitskell and Mr. Frank Cousins will, in my view, fully explain the disintegration. Something has gone wrong in the Party's philosophy, its appeal to the British people. A Party has to think again if it cannot survive prosperity; but I often wonder whether this is only Labour's problem. I am not at all sure that the same phenomenon never causes Mr. Khrushchev a nagging worry or two now and then. Although nothing like an abundance of consumer goods obtains in Russia yet, there are more of them now than ever before. And a generation is rising which will not accept shortages as part of the Soviet way of life. And things are not mere things; they change one's whole attitude to life. It is understood in the bourgeois world that something happens to a man when he buys his first dinner jacket or for the first time moves into an air-conditioned office all his own. In the Soviet Union, an imported dress or a jazz disc may affect young people as radically, as fundamentally. To get back to the Labour Party, its slogans of the 'thirties simply do not make sense in the context of the welfare State which Labour itself did much to create. It is not that Mr. R. H. S. Crossman does not realise the change as much as Mr. Anthony Crosland or anyone else, but the pull of the past is strong; and the fact that the Tories now speak an entirely different idiom makes things harder. It is none of my business to suggest new battle-cries for Labour, but the Party has a place in the political life of Britain; and it will be a pity if it is weakened by a lack of clear thinking. The Liberals have of late given some evidence of fresh thinking, although their divisions are as real. The Conservative Party may be totally wrong in imagining that it needs no fresh thinking at all.

WORKING CONDITIONS IN GOVERNMENT OFFICES are deplorable, and perhaps in few cities more so than in Calcutta. Visitors to Customs House, I am told, are perennially astonished that their files are ever located in the disorganised mass of paper and rickety furniture which passes under the description of that august organisation's head office. My own, fortunately infrequent, experiences in the inner portals of the G.P.O. have been no better: after negotiating labyrinthine corridors littered with benches and stools, one is liable to enter rooms which, for filth and overcrowding, bear an uncomfortably close resemblance to slums in decay. The inter-ministerial committee of senior officials which has been looking into working conditions in Central Government offices in this city has drawn some familiar conclusions from painfully familiar facts. The value of its investigations will not, therefore, be immediately evident. The committee pays a well-deserved tribute to some private concerns for the better conditions in their offices and colonies, although I would say that even there cases of total chaos are by no means unknown. The difficulties are, no doubt, one aspect of the general overcrowding in this city, where accommodation is scarce and rents exorbitant; but the committee will, I feel, have missed the point entirely if it does not emphasise that the deplorable conditions in Central (and State) Government offices are, to a large extent, a corollary to the operation of Parkinson's Law. From what I know, through requisitioning and rent control, official organisations manage to get accommodation more easily and cheaply than private individuals or business men. If, even so, the former manage to look more shabby, the trouble may not lie only in the general shortage of facilities. Multiplication of staff in the lower echelons of Central and State Government offices has hardly been much slower than that of the locust swarms now invading western India. Unless it can be stopped, the committee's recommendations may be no more than temporary palliatives for a growing problem.

MUKAND IRON AND STEEL WORKS LIMITED

CHAIRMAN, MR. KAMALNAYAN BAJAJ'S REVIEW

The following is the address of the chairman, Mr. Kamalnayan Bajaj, to the shareholders of Mukand Iron and Steel Works Limited at the 22nd Annual General Meeting held at Bombay, on 29th September, 1960.

Ladies and Gentlemen :

1. I have great pleasure in welcoming you all, and particularly the new shareholders, to the 22nd Annual General Meeting of the Company. The Directors' Report and the Accounts for the year ended 31st March, 1960 have been with you for some time. With your permission I shall take them as read.

2. Production and productivity are increasing in many industries throughout the country. Better balance has been achieved during the year by more fully utilising the installed capacities. Still, shortages of food, fuel, power and transport continue to be the major national handicaps. These have retarded further growth to some extent, and hindered at least one of our main steel plants from developing to its full capacity. Besides, until ancillary industries are developed adequately, it will be difficult to stabilise and consolidate our growing industrial economy.

3. Demand is increasing at a greater pace than production, specially in consumer goods industries. This has started a spiral of increase in prices and cost of living. The estimated development outlay in the Draft Outline of the Third Plan is far in excess of the domestic resources, which may result in further inflationary tendencies.

Deficit Financing

4. The provision for deficit financing of Rs. 550 crores in the Third Plan as against Rs. 1,200 crores during the Second Plan is, no doubt, more realistic. But, unless we ensure against a shortfall in external assistance by way of loans and aid, circumstances may compel us to resort to larger deficit financing, jeopardising the stability of our economy.

5. It would, therefore, be prudent to divide the programme of the Third Plan into two parts : the first consisting of the essential projects depending mainly on internal resources ; and the second comprising the remaining schemes, listed in order of priority, to be taken up as and when external assistance is available. This will save us from the difficulties such as were experienced during the Second Plan when we were forced to restrict ourselves to the core and ultimately to the hard core of the Plan deferring many of the essential projects while being obliged to complete less important projects that had already been commenced.

6. The total estimated investment during the Third Plan period is Rs. 10,200 crores, of which Rs. 4,000 crores have been allocated to the private sector. There should not be any conflict between the public and private sectors, because they are, in fact, complementary aspects of the national sector. In an underdeveloped, mixed economy like ours, rapid progress in the private sector will largely depend upon the growth of the public sector which should, however, restrict its scope to basic and strategic industries. Within this framework, full scope should be given to the private sector to develop. National interest demands that allocation of industries to the public and private sectors should be made on the basis of optimum investments and returns.

Steel Target

7. The target for steel calculated at 10.2 million tons of ingots equivalent to 7.5 million tons of finished steel is encouraging. The time is opportune for placing greater emphasis on development of steel-consuming industries in preference to heavy investment in new steel-making units. This will help achieve a proper balance between them and consolidate industrial development.

8. While it is desirable to evolve a national wage policy based on a minimum wage and the cost of living index, it must also be linked with productivity. Otherwise, prices and wages will continue to chase each other and national interest will suffer.

9. Nepotism, bribery and corruption are bad enough. What is more alarming is that the natural moral fibre of the people is weakening. It is the responsibility of the national leaders to keep awake *Punya Prakop* (righteous indignation) in people to resist evil.

10. Prosperity which follows industrial growth and economic development is good. But we must guard against the danger of our going the way of Western countries as the craving for material wants is likely to go on ever-increasing and will be difficult to satisfy. This undesirable trend can be checked if our national leaders and the Government set examples of austerity and simplicity and create an atmosphere of moral and spiritual values in public and private life, which the people will not be slow to emulate.

11. The States of Maharashtra and Gujarat came into being with good-will this year. I reiterate the hope I had expressed in 1956, that the rich heritage of our great languages will be utilised towards forging the bonds of unity amongst the people.

12. The Government of Maharashtra is alert to the problem of stimulating planned economic development. Ways and means of accelerating the pace of development were discussed in the Maharashtra Commercial and Industrial Conference held recently in Bombay. It is hoped that a comprehensive development plan for the entire State will emerge.

13. The recent establishment of the International Development Association under the World Bank will provide for a more flexible type of development lending without the burden of a fixed charge on the borrower's foreign exchange income, in addition to the Bank's regular operations. It is likely to prove beneficial to underdeveloped countries like ours by providing greater borrowing facilities for development programmes.

Manufacture of Intricate Castings

14. The Company has taken up the manufacture of intricate castings for the automobile industry and sugar plants and additional components like roller bearing axle boxes and centre buffer couplers for the Railways, all of which were hitherto being imported. I am proud that we have been the first to start supplying Indian-made centre buffer couplers to the Railways.

15. Our expansion programme was delayed as the land acquisition proceedings were contested in the Courts. The judgment of the Supreme Court of India, delivered last month, was in our favour ; but a reference before the Maharashtra High Court is still pending. We hope it will be disposed of before long.

16. I am glad to say the Government have accepted—though with some modifications—the recommendations of the Tariff Commission on the retention prices payable to the re-rolling industry.

17. During the last five years, the average emoluments of the Company's workers have increased by 71 per cent while the corresponding increase in the cost of living index is only 24 per cent.

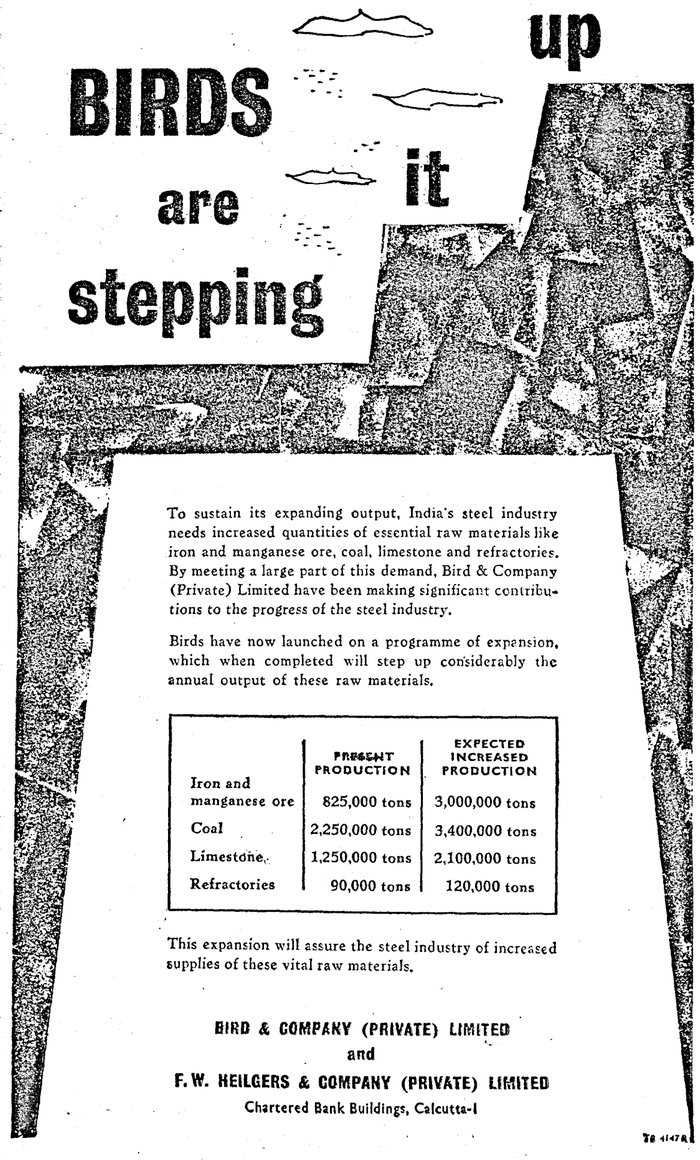
18. The Company's new air-conditioned office building at Kurla was occupied in February this year.

19. The Company has taken out comprehensive insurance cover to safeguard against possible loss of profits due to breakdowns.

20. Shri Rameshwarprasad Nevatia, a Director of the Company, has been selected as the leader of the specialist team on "Plant Layout" sponsored by the National Productivity Council of India for a study tour of Japan, United States and West Germany. Shri Viren J. Shah, our Chief Executive, was one of the 30 select participants from all over the country at the First Advanced Management Programme in India conducted by the Massachusetts Institute of Technology in collaboration with the All-India Management Association

21. The relations between the Management and Employees of the Company continued to be very cordial. I thank the Managing Agents, Executives, Staff and Workers for their efforts in producing satisfactory results of working during the year.

N.B. This does not purport to be a record of the proceedings of the above Twenty-second Annual General Meeting of the Company held on 29th September, 1960.



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	825,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,400,000 tons
Limestone	1,250,000 tons	2,100,000 tons
Refractories	90,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

BIRD & COMPANY (PRIVATE) LIMITED
and
F. W. HEILGERS & COMPANY (PRIVATE) LIMITED
Chartered Bank Buildings, Calcutta-1

14, India Exchange Place, Calcutta-1.

OBJECTS

The Company was incorporated on the 28th March, 1959 with the objects mentioned in the Memorandum of Association of the Company, a copy whereof is annexed hereto and forms part of this Prospectus. The immediate aim of the Company is to manufacture High Tensile Spring Steel, Concrete Re-inforcement, Signal, Galvanized, Hard Bright and Annealed wires (6 SWG to 30 SWG) and wire products.

PROSPECTS

At present High Tensile wires, Concrete Re-inforcement wires, fine G.I. wires, Signal wires, etc. are largely imported. Indigenous production of Hard Bright, Annealed and G.I. wires is also not sufficient to meet the requirements of various industries and therefore these wires are also being imported. The Company's plant shall help in reducing these imports.

The Company has already acquired land for the factory on Barrackpore Trunk Road, Sodepur near Calcutta. Factory buildings have been erected, electric and water installations have been completed. Substantial part of plant and machinery and auxiliary services such as, pickling, baking, annealing facilities have been installed. *The plant has gone into production from August, 1960.* Some more plant and machinery have been ordered and an import application for the same is pending with the Government. The Company has been granted an Industrial Licence for production of 5,000 tons per annum, but as large quantity of wires of all types is still being imported, and with the increased production of steel in the country, there is a good scope to increase the production of wires by the Company.

PROFIT

The Company's present plant has gone into production and is likely to earn reasonably good profits. Barring unforeseen circumstances, the Company shall be in a position to pay reasonable dividends.

PLANT, MACHINERY & TECHNICAL SERVICES

The plant already acquired and erected by the Company is of the best and latest type. It has been manufactured by the renowned and world's leading manufacturers of such plant namely, Sir James Farmer Norton & Co. Ltd. of Manchester, U.K. The existing plant includes Gravity Blocks which have been recently developed, patented and exclusively manufactured by Sir James Farmer Norton & Co. Ltd. Orders for further plant have also been placed with the same manufacturers.

The Company's plant has been planned and installed in consultation with the resident Technical Engineer of Sir James Farmer Norton & Co., Ltd.

The Company's Works Manager is a very competent Engineer and has a very long experience in the line.

LOCATION OF FACTORY

The Company's factory is located on a spacious site at Barrackpore Trunk Road, Sodepur. This location is advantageous from the point of raw material supplies and proximity to market.

WATER SUPPLY

The Company has already installed a deep well Turbine Pump for requirement of water supply together with necessary overhead tanks etc.

POWER

The Company has already obtained from the Calcutta Electricity Supply Corporation 6 KV A/C supply at the factory and also installed a 1000 KVA Transformer together with necessary control gears.

CAPITAL OUTLAY & WORKING CAPITAL

The estimated requirements are as follows :—

*(1)	The cost of land building plant and machinery and water and electric installations ..	Rs. 37,00,000.00
(2)	Preliminary expenses including commission, brokerage and expenses for the issue ..	Rs. 1,10,000.00
(3)	Working Capital ..	Rs. 11,90,000.00
(4)	Any other expenditure ..	Rs. Nil
		Rs. 50,00,000.00

* A sum of Rs. 17,00,000/- has already been spent in purchase of land, construction of buildings, installation of plant, etc. This has been met by the present subscribed Capital of Rs. 5,00,000/- and the balance from temporary loans which are intended to be repaid out of the subscription of the present issue.

The minimum amount which, in the opinion of the Directors, must be raised by this issue of Shares in order to provide the sum required to be provided as per para 5 of the Schedule II of the Companies Act, 1956 upon which the Directors will proceed to allot the shares offered by this Prospectus, has been fixed at 3,25,000 Equity Shares of the nominal value of Rs. 32,50,000/- being only a part amount of this issue, out of which Rs 20 lakhs has been agreed to be subscribed by the Directors and their friends. The balance amount of Rs. 12,50,000/- will be arranged by borrowing from the banks and other sources against fixed and other assets of the Company in the ordinary course of business.

SPECIAL BENEFITS

The Company will be entitled to Special Benefits under the Indian Income-tax Act with respect to Development rebate. It will also enjoy the benefits of Section 15C of the Indian Income-tax Act whereby profits upto 6 percent on the empolyed capital will be exempted from tax for the first five years of operation.

MANAGING DIRECTOR

The Board of Directors shall, subject to the approval of the Central Government, enter into an agreement with Sri M. L. Bhartia for his appointment as Managing Director of the Company. An application in this behalf is being made to the Central Government for sanction for such appointment under the relevant provisions of the Companies Act, 1956.

The draft agreement between the Company and Sri M. L. Bhartia provides *inter alia* that Sri M. L. Bhartia shall be paid an annual remuneration of 5% commission on net profits of the Company computed in the manner laid down in the Companies Act, 1956 and that in the event of the Company having no profits, or its profits being inadequate in any financial year, he is to be paid a minimum remuneration of Rs. 30,000/- per annum, provided nevertheless the said Sri M. L. Bhartia shall be entitled to draw a sum of Rs. 2,500/- per month towards his remuneration as Managing Director.

APPLICATION FOR SHARES AND ALLOTMENT

Application for Equity Shares must be for 50 shares or multiple of 50 shares. All applications must be made on the prescribed forms. Copies of Prospectus on the terms of which alone applications will be considered, and application forms may be obtained from the Registered Office of the Company or from the Company's Bankers and Brokers. All application forms properly completed must be lodged together with the amount payable on application with the Registered Office of the Company or with any one of the following Banks, namely :

1 State Bank of India, Calcutta Bombay, Madras, New Delhi.

2. The Central Bank of India Ltd, Calcutta or with any of their Branch Offices at Ahmedabad, Allahabad, Amritsar, Bombay, Baroda, Bangalore, Calcutta, Cochin, Coimbatore, Delhi, Hyderabad, Jaipur, Kanpur, Lucknow, Madras, Nagpur, Patna, Rajkot, & Surat.

Cheques or drafts should be drawn in favour of HINDUSTAN WIRES LIMITED and should bear the words "Equity Issue A/c". Separate cheque or draft must accompany each application.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus having attached thereto the documents referred to hereafter has been duly delivered for registration to the Registrar of Companies, Bombay, as required by Section 60 (2) of the Companies Act, 1956.

The Subscription list will open at the commencement of banking hours on the eighth day of October 1960 and will close at the close of banking hours on the seventeenth day of October 1960 or later at the discretion of the Directors, but not earlier than 12th October 1960.

Application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation of the equity shares of the Company.

ANUH PHARMA LIMITED

(Incorporated under the Companies Act, 1956 on 19th February, 1960).

SHARE CAPITAL

AUTHORISED:

5,00,000 Equity Shares of Rs. 10/- each ... ... Rs. 50,00,000/-

PRESENT ISSUE:

1,00,000 Equity Shares of Rs. 10/- each ... ... Rs. 10,00,000/-

ISSUE OF SHARES FOR CONSIDERATION OTHER THAN CASH:

Out of the present issue of 1,00,000 Equity Shares of the face value of Rs. 10/- each, 10,000 Equity Shares of the face value of Rs. 10/- each are to be allotted as hereinafter mentioned to Dr. G. Krishna Murty, Shri Madhav Vasudeo Pathak, Shri Vinodrai Mansukhlal Shah, Mrs. Sharadabai Krishna Murty, Shri Chitrasen Krishna Murty (minor) and Shri Krantikumar Gudibanda in terms of the draft Agreement referred to, in Article 5 of the Articles of Association in part payment of the price for the sale of their business of Messrs. Anuh Pharma carried on by them in partnership, for consideration other than cash. The allotment of the aforesaid 10,000 Equity Shares is in payment of the price of the goodwill of the said business of the Vendors. Rs. 1,00,000/-

ISSUE OF SHARES FOR SUBSCRIPTION IN CASH:

The Promoters, Directors and their friends have agreed to subscribe for and take 10,000 Equity Shares of the Company of the face value of Rs. 10/- each by payment in cash for the said shares. Rs. 1,00,000/-

The balance of 80,000 Equity Shares of the face value of Rs. 10/- each is now offered for public subscription in cash at par in terms of the Prospectus. Rs. 8,00,000/-

Rs. 10,00,000/-

The present issue of Equity Shares except the Shares to be allotted to the Vendors as aforesaid for consideration other than cash shall be payable as follows:

On application—Rs. 2.50 per share.

On allotment —Rs. 2.50 per share.

The balance of Rs. 5/- per share will be called in two instalments of Rs. 2.50 each at the discretion of the Directors at intervals of not less than three months between each call and prior notice of at least thirty days shall be given in respect of each call.

Failure to pay allotment money or any cash when due will render shares liable to forfeiture. Applications should be for a minimum of 50 shares or any multiple of 50 shares.

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present offer on which the Directors will proceed to allotment is Rs. 3,00,000/-.

FINANCIAL REQUIREMENTS

The estimated financial requirements for implementing the manufacture and research programme contemplated by the Company will comprise of the following:

(1)	Part of the consideration payable to the Vendors	Rs. 22,101/-
(2)	Preliminary expenses including brokerage and remuneration.	Rs. 66,000/-
(3)	Costs of land and building.	Rs. 3,00,000/-
(4)	Costs of machinery, laboratory apparatus and other equipment.	Rs. 3,09,000/-
(5)	Working Capital.	Rs. 3,00,000/-
		Rs. 9,82,101/-

While part of the above expenditure may be postponed, recourse may also be made to borrowings for part of the requirements as and when necessary.

DIRECTORS:

Shri P. R. Subramanyam (Chairman), Stock Broker, Bombay.

Shri P. V. Pakvasa, Solicitor, Bombay.

Shri N. T. Khandwala, Businessman, Bombay.

Shri Sevantilal K. Shah, Businessman, Bombay.

Dr. G. Krishna Murty (Technical Director), Consulting Physician, Bombay.

Dr. Sureshchandra C. Sheth, Honorary Physician, Dr. Balabhai Nanavati Hospital, Bombay.

Dr. V. P. Bhat, Physician, Bombay

Shri M. V. Pathak, Businessman, Bombay.

Shri V. M. Shah, Businessman, Bombay.

BANKERS:

(1) **Bank of Baroda Limited,** 12, Apollo Street, Bombay-1. And their branches at New Delhi, Kanpur, Calcutta, Madras, Bangalore, Ahmedabad, Cochin, Coimbatore and Hyderabad.

(2) **The Union Bank of India Limited,** Dalal Street, Bombay-1. And their branches at Calcutta, New Delhi, Madras, Bangalore, Coimbatore, Madurai and Cochin.

(3) **Canara Industrial & Banking Syndicate Limited,** Pherozshah Mehta Road, Bombay-1. And their branches at Madras, Mangalore, Coimbatore, Cochin and Bangalore.

(3) Messrs. G. M. Pyne, Allahabad Bank Building, 14 India Exchange Place, Calcutta.

(4) Messrs. M. Nanjappaiah Jahgirdar, Post Box No. 71, 181, Cavalry Road, Bangalore.

REGISTERED OFFICE:

100, New Citizen Bank House, Carnac Road, Bombay-1.

CONSENT

The consent in writing of the Directors, Auditors, Managing Brokers, Official Brokers, Bankers and Legal Advisers to the Company to act in their respective capacities has been obtained and has been filed with the Registrar of Companies, Bombay as required by Section 60 of the Companies Act, 1956 and none of them has withdrawn the consent given.

OBJECTS

The Company was incorporated on 19th February 1960 with the objects mentioned in the Memorandum of Association, a copy thereof is annexed hereto and forms part of the Prospectus. The main object of the Company is to acquire and take over as a going concern the business now carried on in partnership at Bombay under the style and firm name Messrs. ANUH PHARMA.

PROSPECTS

The business being taken over by the Company from the said Partnership Firm ANUH PHARMA has been marketing for a short period of one and a half years pharmaceutical products based on the valuable research made by Dr. G. Krishna Murty since 1936 resulting in a number of drugs of scientific and commercial value. The said firm has been doing business on a small scale without any capital equipment and with limited working capital from September 1958 to February, 1960.

The raw drugs had to be bought in small quantities and at higher prices and so the products had to be priced high. The products manufactured were all for specific diseases, and they had to be detailed only to the medical profession for which the propaganda machine was insufficient because of limited capital. For want of capital, sales and propaganda experts could not be employed. And therefore the working results of the vendor firm during the period September 1958 to February 1960 as disclosed in prospectus have not been profitable.

The future of the Industry cannot be based on the initial working during this short period. The results of the research of Dr. G. Krishna Murty are well-known. The drugs on which he has worked have high scientific and commercial value. When the Company can buy raw material at low cost in bulk and when the products are manufactured at the Company's own factory the selling price can be brought down. When the Company can manufacture the active principles of these drugs, they can be exported to foreign countries. In addition, with an efficient sales and propaganda department the products now marketed and other new products can have a large turnover and yield ample profits to enable payment of fair dividend on the capital employed besides provision for research and expansion work. It is estimated that the turnover during the 13 months ending 31-3-1961 may be about Rs. 5,00,000/- and in the second year it is expected that the turnover will be about Rs. 10,00,000/- with scope for further increase.

AGREEMENT

One of the main objects of the Company as contained in Clause No 1 of the Memorandum is to acquire and take over as a going concern the business carried on in partnership at Bombay under the name and style of "ANUH PHARMA" together with the goodwill thereof and all its assets and liabilities and to enter into an Agreement referred to in Clause 5 of the Articles of Association of the Company and to carry the same into with or without modification.

The consideration for the sale of the said business is to be satisfied by allotment of shares of the Company as hereinafter mentioned and partly in Cash.

The consideration for the Goodwill of the said business is Rs. 1,00,000/-. The said consideration of Rs. 1,00,000/- is payable in two instalments of Rs. 50,000/- each. The first instalment of Rs. 50,000/- is payable on the completion of the sale of the said business and after the registration of the Company, and the same shall be paid and satisfied by allotment to the Vendors or to their nominee or nominees 10,000 Ordinary Shares of the face value of Rs. 10/- each in the capital of the Company on which a sum of Rs 5/- per share shall be credited as Paid-Up thereon. The Vendors shall accept such partly paid-up shares of Rs. 5/- per share to be credited as Paid-Up thereon as aforesaid in payment of the first instalment of Rs. 50,000/- payable as aforesaid in part payment of the first instalment of Rs 50,000/- payable as aforesaid in part payment of consideration for the Sale to the Company for Rs. 1,00,000/- payable to the Vendors for the Goodwill of the Vendors' business.

The second instalment of Rs. 50,000/- shall be paid on or before 30th June 1961 and the same shall be paid and satisfied by a further sum of Rs. 5/- per share being credited as Paid-Up on each of the Shares allotted to the Vendors as aforesaid on or before 30th June 1961. The Vendors shall accept the same in payment of the balance of the consideration money namely Rs. 50,000/- payable to the Vendors for the goodwill of the Vendors' business.

The said 10,000 Ordinary Shares of the Company to be allotted to the Vendors as aforesaid are to be allotted by the Company as stated in the said Agreement between the Company and the Vendors for the sale of the said business.

Part of the consideration for the Sale of the said business of the Vendors shall be the payment to the Vendors the value of Stock-in-Trade and other assets of the Vendors in Cash. The value of the said Stock-in-Trade and other assets of the Vendors is to be such sum as to be certified by Messrs. Hariharan & Co., Auditors of the Company to be the fair value thereof. The Auditors have now certified the value of the Stock-in-Trade and all other Assets of the Vendors as Rs 1,49,557/-. The liability of the Vendors as on the said date is Rs 1,27,456/-. Accordingly the amount payable to the Vendors in cash is Rs 22,101/- as part consideration for sale of their business to the Company. (A copy of the said Certificate is available for inspection at the Registered Office of the Company on any week day from 11.0 a.m. to 4.0 p.m., and on Saturdays between 11.0 a.m. and 2.0 p.m. except on public holidays) as on 1st March 1960 the date on which the Company has agreed to take over the business of the Vendors.

As the residue of the consideration the Company has undertaken to pay and discharge and fulfil all the debts, liabilities, contracts and engagements of the vendors in relation to the said business and to indemnify the Vendors against such liabilities.

Under the said Agreement, from the 1st March 1960, the Vendors have agreed to carry on the said business in the same manner as heretofore carried on so as to maintain the same as going concern and they shall from that date namely 1st March 1960 be deemed to have been and to be carrying on such business on behalf of the Company from 1st March 1960 and shall account and indemnify accordingly.

As part of the Agreement for Sale, the Company has agreed to pay a remuneration of Rs. 18,000/- per year to Dr. G. Krishna Murty for services rendered and to be rendered to the Company.

As part of the Agreement, the Company has agreed for the payment of royalty at the rate of 5 per cent of the net sales value (i.e. gross value less the trade discount) of the products standardized or the formulae given by the said Dr. G. Krishna Murty.

Dr. G. Krishna Murty has volunteered to accept a reduced royalty of 2½% on net sales value instead of 5% on net sales value (as per the agreement) with a view to help the Company.

Dr. G. Krishna Murty has further volunteered to forgo the royalty of 2½% of the net sales value for the period of the first two years with a view to help the Company in the initial stages.

The Company is fortunate in securing the services of Dr. G. Krishna Murty as its Technical Expert. Dr. G. Krishna Murty who is the founder of ANUH PHARMA is a highly qualified physician in the Ayurvedic System and has an excellent background of research experience in indigenous drugs for 30 years. Though an Ayurvedic Physician, he is well versed in modern clinical medicine, pathology and method of investigations in the allopathic system. He is essentially a research worker and a therapeutic clinician and as such has succeeded in finding out a number of indigenous drugs.

Dr. G. Krishna Murty has hitherto assayed clinically six vegetable drugs which are marketed by ANUH PHARMA by their registered trade names—RUDANIL, UGRATIN, NISPAN, SISANAL, PUSHADIN, and ORBITRI. Besides these there are two more products e.g. ARUPIN and SAMANIL which contain more than one ingredient and these are in accordance with the principles mentioned in the Ayurvedic texts.

RAW MATERIALS

The main raw material viz. RUDANTI fruits are available in plenty in Konkan Region in the West Coast of Bombay and Mysore States and Goa. These fruits are seasonal being plucked in April and May. Other raw materials like Embelia ribes, Acorus Calamus, Balsamodendron etc. are also easily available in plenty.

PRELIMINARY EXPENSES AND BROKERAGE AND REMUNERATION

The preliminary expenses including the expenses of this issue and including brokerage and remuneration which may be payable by the Company is estimated at Rs. 69,000/-.

A brokerage at the rate of 15 nP. per share will be paid on allotments in respect of applications bearing the stamp of a Bank or a Member of the recognised Stock Exchange. The Managing brokers will further be entitled to a lump sum remuneration of Rs. 10,000/- for managing the issue.

APPLICATIONS AND ALLOTMENT OF SHARES

Applications for equity shares must be for 50 shares or multiples of 50 shares.

Applications for shares must be made on the forms accompanying this Prospectus further copies of which may be obtained from the Registered Office of the Company or from any of the Bankers of the Company or from the Brokers of the Issue.

Applications must be completed in accordance with the directions contained therein and delivered before the closing of the subscription lists together with the remittance of the amount payable on application to the Company's Bankers or the Company's Managing Brokers and Official Brokers.

All cheques or drafts drawn on Banks situated at places other than those mentioned above should include a sum at the rate of 25 nP. per cent (minimum 65 nP.) of the amount remitted to cover all the commission and Bank charges; otherwise, the application is liable to be rejected.

Allotment will be notified by the despatch of an allotment letter.

Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reasons.

MALAYALAM PLANTATIONS LIMITED

CHAIRMAN, MR. H. W. HORNER'S STATEMENT

The Thirty-ninth Annual General Meeting of Malayalam Plantations Limited will be held on October 27 in London.

The following is the statement by the chairman, Mr. H. W. Horner, circulated with the report and accounts for the year ended March 31, 1960:—

It is pleasing to be able to present the accompanying results of the working for the past year in spite of the unfavourable climatic conditions and of the recession in the tea market.

Within the year ended 31st March last, South India experienced exceptional rainfall, followed by a drought which was seriously prolonged. The shortfall in the crops of tea is attributable almost entirely to unfavourable weather conditions which were perhaps the worst in the last 36 years. It was not found possible to overtake the tea crop shortage which occurred in the first half of the season and the final figure showed a shortage on the actual crop for 1958/59 of rather more than 1¼ million pounds. This shortage was, however, largely compensated for by an appreciably better average selling price per pound. The rubber crop was encouragingly ahead of that of 1958/59, the net average selling price under Government control being approximately the same with a slightly higher cost per pound. The tea market had a period of depression which started at the end of last March and continued for some months. Latterly, there has been an appreciable revival and, if total world production does not show significant increase, a firm market may be expected.

As a result of exceptional conditions prevailing in South India, last year's annual meeting was held in the second week in December. This year more favourable circumstances rendered it possible to complete the accounts earlier and to hold the annual general meeting in October. The directors' report and accounts are presented in a form which it is hoped members will consider an improvement on that of former years.

The accounts for 1959/60 do not, of course, show the company's new capital structure which was not approved by members in general meeting until April, 1960. A note is, however, appended to the accounts linking the proposed final dividend with the present issued capital.

Sales Tax

There is an item in the Profit and Loss Account "Sales Tax in respect of previous years" made necessary by the retrospective raising of assessments to Sales Tax, amounting to £85,001, on certain sales of produce in South India. The tax assessments against which appeals have been lodged arise on turnover previously deemed to be exempt but the failure of similar appeals by this and other companies in South India leaves little ground for optimism. The profit before taxation is consequently lower than that of the previous year but this is largely offset by lower total taxation so that the profit after taxation is not appreciably less than that of 1958/59. The Board have transferred £13,500 to Development Rebate Reserve and £74,907 to Replanting Reserve. They propose a final dividend of 10 per cent, on the increased capital which will absorb £166,490 and leave £98,982 to be carried forward. This final dividend is equivalent to 15 per cent, on the old capital and is in conformity with the expectation expressed in the circular to members dated 18th March last dealing with the scrip issue. Future distributions must inevitably be subject always to market conditions and to the level of Indian tax; also to the speed at which the Government insist on the implementation by employers of the provisions of the Plantations Labour Act, with particular reference to the housing of the labour.

The Kerala elections held early in 1960, following the supersession of the Communist Government by "Governor's rule" in the previous year, resulted in the formation of a coalition Government with Congress as the main party. Since the new Government took office, conditions in the State have been reasonably stable and law and order have been re-established. Labour conditions have on the whole been satisfactory and the population appears to have welcomed the return of firm and orderly government. There has been no alleviation of the crippling burden of taxation imposed on the plantation industry and the new Government recently increased the land tax from Rs. 2 to Rs. 10 per acre. Taxation policy throughout India appears to be dictated by the immediate need for revenue, without due regard being given to the long term effect on the industries on which the taxes are levied. Representations by the planters' associations protesting against this additional burden have been unavailing. The increased land tax does not affect this company in respect of its financial year 1959/60; nevertheless, the taxes which the company had to bear on income and in the direct or indirect levy of export and excise duty and sales tax approximate to £880,000.

The Current Season

It is satisfactory to be able to report that, so far this season, both tea and rubber crops are substantially in excess of those for last season, tea being nearly 2 million pounds and rubber nearly 1 million pounds ahead. Tea prices in the early part of the season suffered a severe setback but are now showing an encouraging improvement. As regards rubber, the Government of India recently decided not to alter the controlled selling prices which, at the moment, with the recession in world prices, compare not unfavourably with the latter. The replanting subsidy is, however, to be increased from Rs. 250 to Rs. 1,000 an acre. The increase will be of advantage to this company when in due course, in pursuance of a programme of phased replanting, the 9,000 or so acres of unselected rubber are taken in hand. The average yield from the unselected rubber is under 400 lb. an acre while the average yield from the selected areas in tapping is already about 625 lb. an acre and this will materially increase as the younger of such areas attain full maturity. Some of the selected rubber areas are giving yields in excess of 1,000 lb. an acre. The company's replanting policy is undoubtedly correct from the long term point of view: higher yields are necessary to meet the higher costs largely resulting from Governmental enactments to provide amenities for labour.

The Board had the opportunity earlier in the year of discussions with the company's senior Visiting Agent, Mr. Price, who is to visit Malaya in the near future. We have no doubt that the information which he will obtain there will be of great value both to him and to the company. To Mr. Price, to his fellow Visiting Agent, Mr. Reid, to all the staff on our estates and to our Eastern Agents, we offer our sincere thanks and appreciation for their continued hard work and for their unremitting devotion to the company's affairs.

During the financial year 1959/60 a member of the Board, Mr. Sands, paid a visit to all the company's estates. He reported that they were in good order and had created a favourable impression of the general progress which is being made.

Note: This does not purport to be a record of the proceedings of the above Thirty-ninth Annual General Meeting.

ANUH PHARMA LIMITED—*Cont'd.*

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

CHAIRMAN, MR. F. A. COLLETT'S REVIEW

The following is the speech made by the Chairman, Mr. F. A. Collett, at the Forty-ninth Annual General Meeting of the Imperial Tobacco Company of India Ltd on 21st September, 1960.

Ladies and Gentlemen,

I have much pleasure in welcoming you to this, the forty-ninth Annual General Meeting of the Company.

The Notice convening this meeting, the Report of the Directors and the Accounts have been circulated, and with your approval we will take them as read. I will now ask the Secretary to read the Report of the Auditors.

Board of Directors

At the end of March this year, Mr. G. H. J. Clarke and Mr. D. B. St. John retired from the Board. Mr. Clarke had served the Company since the end of 1932, and had been a member of the Board for six years. He became Chairman of the Company in December 1955, and has presided over the last four General Meetings of the Company. I was appointed to the Board in December 1959, and following Mr. Clarke's retirement I was elected Chairman of the Company, in which capacity I aspire to serve you as well as my predecessor did.

Mr. St. John first joined the Company in December 1928 and had been a member of the Board for six years, during which time he was mainly responsible for the Company's finances. We wish Mr. Clarke and Mr. St. John much happiness in their well-earned retirement.

In April this year Mr. R. K. Banerjee was appointed Deputy Chairman of the Company, and I am quite sure that in this new capacity he will not only make a further substantial contribution to the progress of the Company, but will also prove invaluable in the assistance he will give me in my new appointment.

Also in April this year Mr. H. C. Reeve, who has served the Company for 27 years, was appointed to the Board.

Mr. J. R. Blaikie has recently resigned from the position of Secretary of the Company, and Mr. B. G. Pearson has been appointed as his successor.

Accounts

You will see from the Accounts in your possession that the net profit for the year has risen from Rs. 115 lakhs to Rs. 142 lakhs, some part of this increase being caused by a reduction in the rate of Income-tax and Super-tax from 51.5% to 45%, coupled with the discontinuance of Wealth-tax on Companies. This decrease in corporate taxation, however, has to be viewed in the context of the new basis of dividend taxation introduced by the Finance Act of 1959, whereby Income-tax is no longer deemed to be paid by the Company on behalf of the shareholders. You are all fully aware of the new provisions, and it is quite unnecessary for me to enlarge upon them.

Apart from this the Balance Sheet and the Profit & Loss Account call for no particular comment, so I will proceed with a review of the Company's activities.

Production of Spare Parts

The very necessary restriction on foreign exchange has made it difficult for the Company to obtain its essential requirements of spare parts for its production machinery. We therefore opened negotiations with the main suppliers of our cigarette making machinery with a view to obtaining increased manufacture of the required spares in India, and I am pleased to be able to tell you that on 1st July this year Molins of India Private Limited commenced manufacture in a new factory in Behala, near Calcutta. Part of the capital of Molins of India Private Limited is being subscribed by your Company, thus ensuring our active participation in the new venture, and we wish it every success.

Leaf Tobacco Supplies

You are probably aware that a very large proportion of the leaf tobacco which we use in cigarette manufacture is produced in Andhra Pradesh, where during the last two years the weather has been very unkind to the producers of flue-cured tobacco. In 1959 very heavy unseasonal rain was experienced at the end of January and the beginning of February—two vital months in tobacco cultivation—while in 1960 exceptionally high day temperatures, coupled with very low relative humidities, had a considerable influence on the quality outturn of the crop.

Events such as these, which lead to an embarrassingly large production of low-grade flue-cured tobacco, are, of course, beyond the control of the cultivator; but another, and perhaps a more serious, problem has arisen during the last few years when tobacco has been produced in undesirable growing areas, which has resulted in decided degradation in the tobacco whilst in storage. Fortunately Government are alive to this problem, which has received the earnest attention of the Indian Central Tobacco Committee, the Extension Staff of the Government of Andhra Pradesh, and the Experimental & Research Department of our main tobacco suppliers, Indian Leaf Tobacco Development Company Limited.

The efficient production of good quality flue-cured tobacco is of paramount importance not only to your Company, but also to India, for exports of unmanufactured leaf tobacco produce foreign exchange annually to the value of between Rs. 12 and Rs. 15 crores. The production of sub-standard flue-cured tobacco, coupled as it is with a tendency to increasing prices, must inevitably be viewed with disfavour by the importing countries, of which the United Kingdom is by far the most important, and they will naturally look elsewhere for their requirements if this undesirable trend is not halted.

It is most important that the cultivators lay far greater emphasis on following the cultural practices recommended by the Indian Central Tobacco Committee, and pay close attention to the proper harvesting, curing and handling of their products, for the alternative can only be continued production of unwanted low-grade flue-cured tobacco, with the inevitable loss of export markets.

New Brands

During the year under review, your Company has marketed several new brands, and with the Annual Report we have enclosed a folder depicting them. They have been designed to appeal to the changing tastes of the consumer and we are optimistic of their success. As Mr. Clarke told you last year, the marketing and advertising of new brands is expensive, particularly in the early stages, but sales in general are encouraging and we hope to reap the benefit of this year's expenditure in future years.

You will have noticed that two of the new brands depicted in the leaflet have filter tips. It is with regret that your Board has had to restrict the distribution of this type of cigarette because the filters are imported and so in short supply. However, the producers of these filters are at present negotiating with the Indian Government for their production in India, and although the establishment of a new industry cannot be hurried, we look forward to the time when local manufacture of filters will enable us to give the consumer unrestricted supplies of this type of cigarette.

Labour Relations

In his speech last year Mr. Clarke referred to the unsatisfactory operation of our factories at Monghyr due to the labour force being greater than was required for the output from that point. Although those conditions continued throughout the year under review, I am pleased to be able to tell you that as a result of improved forward requirements it has been possible to absorb some of the redundant labour by re-introducing a partial double-shift at Monghyr. At the same time we have, with the ready assistance of the Bihar Government and the Trade Union, been able to streamline the labour allocation to some extent and, as a result, we hope to operate more economically in future.

Elsewhere in the organisation also our relations with our employees have improved and it is now becoming more and more apparent to everybody that increased productivity is the only practical answer to increased benefits to the employees and the shareholders alike.

You will remember that in last year's Annual Report we included some photographs of the Company's residential training centre near Calcutta. The requirements of Staff development are by no means simple; however, it is felt that real progress in this field is being achieved and although the value of the staff training centre is difficult to assess accurately, your Board is convinced that it has been a worthwhile venture.

During the year we have extended our training activities and have started technical training for selected groups of employees at some of our production branches. This training is being carried out by our staff who have received the necessary guidance at the training centre, using the techniques of work study and training within industry. It is gratifying to know that as a result of these activities there has been a noticeable improvement in skills and at the same time an encouraging improvement in Management/Labour relations in the areas where the training has been carried out.

Your Company has continued to pursue its policy of providing amenities to its employees and of making working conditions as pleasant as possible. For some years the Company has provided free uniforms and subsidised canteens, given free medical attention in excess of statutory requirements and made annual donations to the sports clubs of the various branches. In addition to this, we have provided Institutes at some of our factories, the latest being the Clarke Institute at Bangalore, which was formally opened by the Governor of Mysore. A photograph of the Institute is reproduced on page 18 of the Annual Report.

A substantial donation was made to the new Saharanpur District Civil Hospital, thus helping towards adequate hospital and other medical facilities to the employees and their families at our Saharanpur branch.

Financial assistance has been given to certain Co-operative Credit Societies at branches where there was evidence of constructive self-help.

The efficacy of all these measures has been amply demonstrated by the increased output which we have been able to achieve. Under the scheme of productivity payments which is in operation in our factories, this increased output has resulted in financial benefit to our employees, all of whom I should like to thank for their continued co-operation.

Prospects

During the first five months of the present financial year sales have shown a welcome increase over the previous year, in the face of intense competition, and in fact have exceeded all previous records. It is too much to expect profits to keep fully in step with sales, partly because of rising costs and partly because of the continuing tendency of the smoker to switch to lower priced and less profitable brands. Nevertheless your Board had complete confidence in declaring a first interim dividend of 2½%, subject to tax, in respect of the year to 31st March, 1961.

"Powells" Stop Man-handling in Industry

THE GENERAL ASSURANCE SOCIETY LIMITED

A HIGH-POWER COMMISSION TO REVIEW GENERAL INSURANCE BUSINESS

CHAIRMAN, MR. B. L. JALAN'S ADDRESS

Delivering the Chairman's Address at the Annual General Meeting of the General Assurance Society Ltd., on Monday, the 26th September, 1960, Mr. B. L. Jalan made the following observations:

The premature collapse of the Summit Conference has, once again, whipped up the cold war. The problem of disarmament is nowhere near solution. Congo continues to be in turmoil in spite of all-out intervention by the United Nations. These developments and events appear to be quite anachronic in the context of the unprecedented progress that is being achieved in the scientific and technological world, in the field of space and nuclear research, in medicine and in speed of transport. In fact, what we need today is a definite advance towards the "one world" idea.

On the contrary, you are also aware of the ideological differences which have been thrown into bolder relief between Communist Russia and China. While China was the first signatory to the doctrine of Panch Sheel, she seems to assert that co-existence is not possible and that war between the capitalist and the communist worlds is inevitable. If China believes in the inevitability of conflict between nations, it is no wonder that she continues to occupy forcibly and illegally territories of other nations.

It is, however, a good augury that there is a happy turn in our relations with Pakistan. Only last week, our Prime Minister visited that country to sign the agreement on Canal Waters, thus ending a long-standing dispute. One would only hope that all remaining differences between the two sister countries would soon be resolved. I would suggest that, at an appropriate stage, the South-East Asian countries should examine the possibilities of forming a Common Union on the lines of the European Common Market for freer trade and, particularly, for joint efforts with respect to investments and economic development.

India has passed an equally uneasy year in her internal affairs. In the name of linguism, heart-rending events have taken place. It appears that we still lack the emotional integration which would make us one nation. I have been suggesting for a long time that if the country is to function as one unit bereft of all kinds of linguistic and cultural rivalries, we must redivide the country into geographically homogenous zones.

Draft Third Plan

The draft Third Five-Year Plan has been formulated. Even a casual look at the broad outline would show that although it is a *very bold and ambitious programme*, it does not take care of some of our basic needs and hopes!

Let us take the employment aspect. The planners estimate that the total employment potential of the Third Plan outside agriculture might be about 10.5 million out of a total increase in the new entrants of about 15 million. The Prime Minister had rightly observed that what we have been doing so far was hardly enough even to maintain existing low standard of living and consumption levels.

The Second Plan provided for a deficit financing of the order of Rs. 1,200 crores. It is now estimated that deficit financing of the order of Rs. 1,175 crores will have taken place by the end of the Plan period. In spite of a much larger outlay of over Rs. 10,000 crores, the planners have reduced the level of deficit financing for the Third Plan to Rs. 550 crores only. It is proper that resort to deficit financing should be controlled as stability of prices is very essential to the successful execution of our Plans but it is hoped that the position would be kept under constant review and that as and when the situation demands, the rate of deficit financing should be appropriately increased.

Foreign Exchange

The most important and crucial factor, however, in our structure of the Third Plan is that of foreign exchange. Altogether, there would be a total gap of Rs. 3,200 crores in our foreign exchange budget during the Third Plan period. Thus, the foreign exchange gap would be as large as one-third of our total Plan outlay.

We have now touched the lowest levels of our foreign exchange reserves. The present balance is the bare minimum as foreign reserve. Almost all the existing credit lines of foreign loans have also been exhausted. A stage has come when Government is finding it difficult to sanction any industrial scheme until the promoters could manage to secure private foreign capital to the extent of their foreign exchange requirements. In most cases this is not practical. It might militate against the policy which had been adopted earlier of ensuring that the Indian promoters held the controlling interest. It is also not realised that whenever foreign capital is sought in such proportions as are represented by the foreign exchange requirements of the project, the bargaining capacity of the Indian promoters is very much weakened and it costs us and the country as a whole much more than otherwise.

Deferred Credit Arrangements

It is understood that, at the present time, Government does not favour even deferred credit arrangements against supply of foreign equipment and that they prefer direct capital participation by foreign collaborators or financiers. The obvious reason is that it is feared that we would not have adequate capacity to pay off the exchange liability in subsequent years by remitting due instalments. I believe that even from a strictly exchange point of view, deferred payment facilities would be more favourable than direct capital participation.

A single example would make the point clear. Let us assume that there are available deferred credit facilities of Rs. 10 crores spread over a period of eight years with interest at 6 per cent, for a certain project. On the basis of interest being calculated on progressively reduced debit balances, we would have to remit Rs. 1.55 crores year by year for eight years to clear up the credit facilities of the aforesaid order. Now, if in a case of direct capital participation, we were to remit dividends which may work out as high as, say, 16 per cent, we would have to remit Rs. 1.60 crores every year for an indefinite period while the basic capital liability would remain intact. This only shows that even exchange-wise, the preference for private foreign capital to the prejudice of deferred credit arrangements will not solve our repayment and repatriation problem in subsequent years. It will only cause a perennial drain on our foreign exchange reserves.

It is, indeed, a very happy development that American capital, the largest and most prospective source of external finance for industries, has shown a growing tendency to participate in Indian industrial ventures. At least three factors are responsible for this welcome new tendency: first, India's subscription to the risk of nationalisation under the U.S. Investment Guarantee Programme; secondly, avoidance of double taxation arrangements with America; and, thirdly, a general shift in the official policy of the country and a growing realisation in our official circles of the importance of the role which private capital, including foreign capital, can play in accelerating the rate of economic growth. The Government have now reversed its policy of reserving industries like fertilisers for the public sector. This is a pointer to our future economic policy. I would here recall my earlier suggestion for the establishment of a World Corporation of Investment Insurance. This, when established, will go a long way in encouraging inflow of foreign capital and solving not only our financial problem but also that of foreign exchange.

It would not be out of place here to mention about the deleterious effect which recent announcements with respect to proposed amendments to the Company and Taxation Laws produced on an otherwise cheerful capital market. The proposal to tax charitable institutions is undoubtedly an ill-conceived one because such institutions have been a source of great assistance and relief to the poorer sections of the community.

There is yet another aspect of our Five-Year Plan, namely, that of utilisation of idle man-power in the country, which requires pointed attention. We can solve the problem of unemployment a great deal by utilising this surplus labour, on self-help basis, on programmes, such as road building, construction of houses, sinking of wells, etc. In West Bengal, 26,000 houses have been constructed by the village people on the basis of Self-help Scheme in flood-affected areas. It is very gratifying to note that the Chief Minister of Orissa, Dr. H. K. Mahtab, has also decided to follow the same scheme in his State.

Turning now to the General Insurance industry, the basic problem, as we all know, is one of severe internecine competition. It would appear that the General Insurance business has ceased to be a profitable and attractive business. Restrictions imposed by Government and the Code of Conduct have only made the confusion worse confounded.

High-powered Commission of Enquiry

It is now time to make a proper appraisal of the results achieved by the new Code of Conduct promulgated by the General Insurance Council. I would very strongly suggest that the Government should constitute a high-powered Commission consisting of all sections including representatives of the industry, to review the position of the industry in great detail and evolve an entirely new basis for its reformation.

Indian fire business is very good but certain spasms of recurrent fires in certain areas completely upset the results. We find that almost at an interval of every fortnight, we hear of a very big fire in some Calcutta godown, while there are hardly any fires in the mofussil godowns.

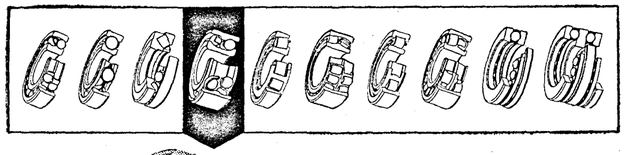
The problem could be solved if the survey of fire claims were taken up by the Association itself which has no vested interests. The Association will have to maintain a full-fledged department specialised in survey work. The cost of the department, however, would be met out of the survey fees which may be charged on a pro-rata basis.

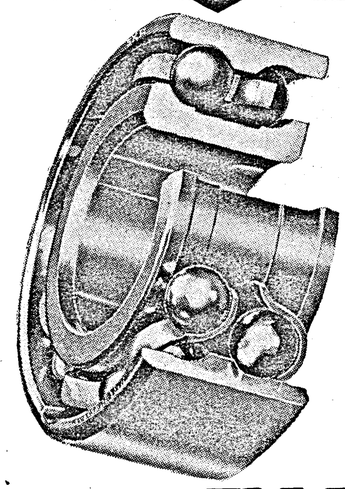
A lot of money could also be saved if salvage were properly disposed of. In Bombay, the industry follows the practice of auctioning off the salvaged materials soon after occurrence of fires, but in Calcutta this more rational and proper practice is not accepted. It is absolutely necessary that in all areas of the country, this system of auctioning off the salvaged materials should be followed.

I would also suggest that the India Reinsurance Corporation should not limit its activities to the conventional type of reinsurance business but must give a lead to the companies in breaking new ground as they have now started doing on a small basis.

Note: This does not purport to be a complete report of the proceedings of the Annual General Meeting.

SKF offer the widest selection of bearings





Illustrated here is the SKF DOUBLE-ROW ANGULAR CONTACT BALL BEARING in which the ball tracks are disposed so that the load paths through the balls intersect the shaft centre line outside the bearing. This type of bearing is useful where the displacement of a shaft subject to axial loads must be kept within very narrow limits.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. R. K. MENON'S ADDRESS

Speech delivered by Mr. K. R. K. Menon, Chairman, Industrial Finance Corporation of India, at the Twelfth Annual General Meeting of the Corporation held on the 24th September, 1960.

Gentlemen,

I have pleasure in placing before you the Annual Accounts of the Corporation and the Report of the Board of Directors for the year ending 30th June, 1960. Printed copies of the Accounts and of the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

2. The year that has passed has been a noteworthy one for the Corporation from many points of view. Our gross profit for the year came to Rs. 2 crores 50 lakhs, which represents an increase of nearly 25% over that of last year. Our reserves now exceed Rs. 1 crore, after finding a sum of the order of Rs. 50 lakhs to meet a bad debt that we wrote off in 1957. We have put away Rs. 10 lakhs this year also towards repayment of the Government subvention received in the past, and I confidently hope that the balance of our debt to the Government on this account, which now stands at Rs. 28 lakhs, will be repaid in the course of the next three years, if not earlier. The total amount of loans approved by your Board of Directors during the year aggregated Rs. 17 crores 92 lakhs, out of which final sanctions were issued for Rs. 9 crores 15 lakhs, the balance Rs. 8 crores 77 lakhs having been held over pending receipt of Government's orders. The total amount approved by us during the year, *viz.* Rs. 17 crores 92 lakhs, besides being a very big advance from our last year's figure of Rs. 3 crores 79 lakhs, is also better than the highest figure ever reached by us previously, viz. Rs. 15 crores 18 lakhs in 1955-56. Progress was made in the field of underwriting also, the total for the period ending 30th June, 1960 being Rs. 1.87 crores. And last, but not least, during this year, our efforts, dating from as long ago as 1951, to obtain credits in foreign currency, were crowned with success with the sanction by the DLF of the United States Government of a loan of 10 million dollars to us towards the end of the year for being sub-loaned to industrial concerns in this country.

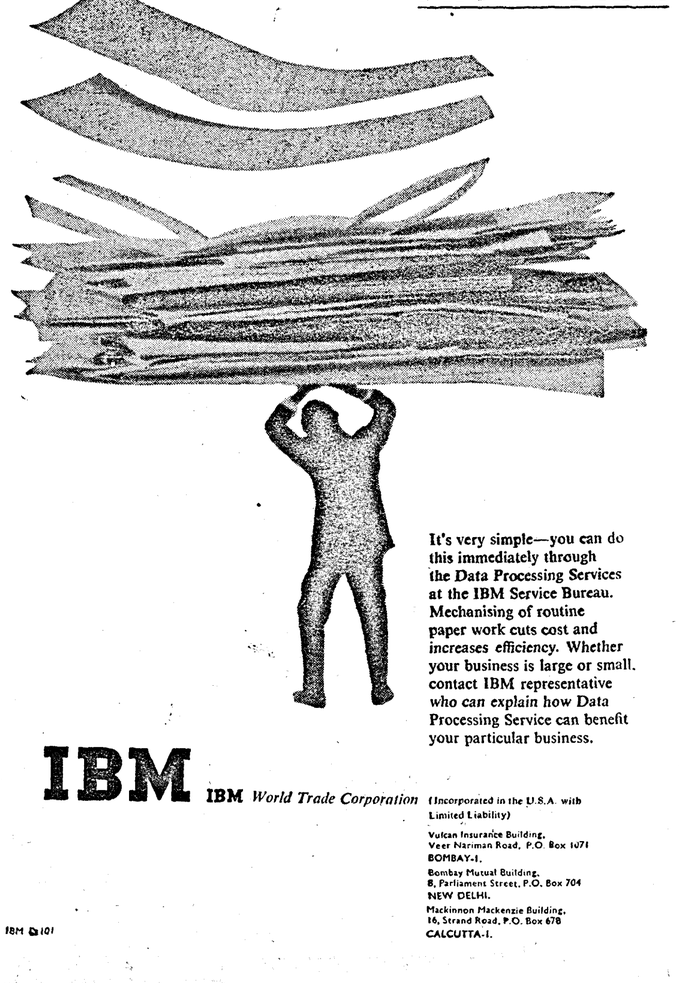
Business Operations

3. Loans continued to constitute the bulk of our business operations. We had reached in 1955-56 what till now has been the peak, viz. Rs. 15 crores 18 lakhs. It will be recollected that this figure represented a marked advance on the previous two years' figures of Rs 7 crores 34 lakhs and 5 crores 27 lakhs respectively. The peak year of 1955-56 was followed by three years of steady fall—11.91 crores in 1956-57, 7.79 crores in 1957-58 and 3.79 crores in 1958-59. It is all the more gratifying therefore that this has been followed in 1959-60 by the remarkably steep rise to Rs. 17 crores 92 lakhs. It is noteworthy that this phenomenal improvement in our loan operations during the last year, though it partly reflects the strident advance in industrial production that has been taking place recently, cannot be attributed to any easing in the foreign exchange situation or the liberalisation to any appreciable extent in the licensing of the import of capital goods in that year. Out of the Rs. 17 crores 92 lakhs mentioned by me, only Rs. 5 crores 68 lakhs represent loans to concerns which obtained import licences during the year 1959-60; Rs. 1 crore 46 lakhs represent loans to concerns which had obtained import licences in previous years. The balance, Rs. 10.78 crores, is, in the main, accounted for partly by loans to concerns who were to utilise our rupee loans for obtaining foreign currency credits from the Central Government or directly from foreign financial institutions, and partly by loans to concerns—mostly sugar co-operatives—the large bulk of whose capital goods requirements were planned to be obtained by indigenous fabrication. This latter factor has indeed been a very welcome development, particularly the institution by Government of the consortia for the manufacture of sugar factory machinery in the country. We in the I.F.C. may, I think, look forward with great hope to further and faster progress in this line in the period covered by the Third Five Year Plan, in the confident expectation that we should thereby be enabled to play our part adequately in our function of industrial financing, in spite of the continued deficiency in foreign currency resources which has been the major obstacle in our way during the past few years.

Foreign Currency Loan

4. I must, however, make it clear that impressive as has been our achievement in this regard in the past year, the picture that I should have been able to present to you today would certainly have been a very much brighter one indeed if only we had had a certain amount of foreign currency funds also at our disposal. In January, 1960, when we were negotiating for a foreign currency loan from the Development Loan Fund of the United States Government, the position was that, for want of import licences alone, loan applications aggregating Rs. 6.15 crores had had to be treated as withdrawn, and out of the remaining applications which we then had on our hands, there were applicants who were counting on foreign exchange credits of the total value of as much as Rs. 20.93 crores to be able to implement the schemes for which our financial assistance had been sought. These figures provide an index of the significance of the foreign currency component in the financing by our Corporation of large-scale industrial enterprises in India at present. Every little assistance in this direction helps, and we have therefore reason to be thankful to the Development Loan Fund authorities for the loan of Rs. 4.7 crores in U.S. dollars which they sanctioned to us in April this year. How much of a real need even this small loan has helped to serve can be gauged from the fact that already we have received requests for this entire amount, and we are hoping to process these before the end of a couple of months or so from now. Considering that there was a good deal of initial apathy to be overcome, arising from the fact that, except for individual loans not exceeding a hundred thousand dollars—which is less than 5 lacs rupees—loans from this DLF credit can be availed of in dollars only, and must be utilised for purchase of capital goods exclusively in the U.S.A., I think we may rightly claim that we have made good and swift use of the facility already given to us. I confidently hope that this will pave the way for further credits from the DLF in the future. I am also hopeful that, with the continued good offices of the Government of India, we should succeed in persuading the World Bank, at whose doors also we have been knocking persistently during the last few years, to give us a substantial loan in convertible foreign currency to meet the pressing needs of our constituents.

5. You will no doubt be interested to know what the main terms and conditions of the DLF loan that we have already obtained are. Briefly, the loan will be available to the I.F.C. for grant of sub-loans to industrial concerns in the private sector in India for approved projects in any industry except textiles including manufacture of wearing apparel and made-up textile goods, ship building, tobacco, beverages, petroleum refineries and hotels. Each specific project for which a sub-loan is given by us out of the DLF credit will need to be approved by the DLF, if the sub-loan exceeds two hundred and fifty thousand dollars, which is roughly the equivalent of 12 lakhs rupees. The payment of the sub-loans will be made to foreign suppliers of capital goods, materials and services, on behalf of the loanee concerns in India, by arrangements made by the DLF through a bank in the U.S.A. The sub-loans will be for periods ranging from 5 to 25 years according to the needs of the industrial concerns. Repayment will be made in Indian currency. Purchases of capital equipments, materials and services out of the sub-loans must, as already stated, be made in the U.S.A. only, except where the loan is for less than $100,000, in which case, purchases can be made in any country included in Code 899 of the International Co-operation Administration Geographical Code Book of the U.S.A. Government; this includes U.K. and most of the Western European countries. The sub-loanee i.e. the Indian concern, will have to give an undertaking that the procurements of the capital equipments, materials and services are made in the U.S.A. or elsewhere, at reasonable prices approximating to the lowest competitive price having regard to quality, time, cost, delivery, etc.; this is certainly a wholesome provision which should curb any tendency towards extravagance. Cost of shipment of capital equipments and materials under sub-loans of amounts above $100,000 will be financed only if these are transported in U.S. vessels. 50% of the gross tonnage of such items will have, in any case, to be transported in privately owned U.S. commercial vessels if such vessels are not declared unavailable. Import duties, tariffs, etc. will not also be financed out of the sub-loans. The rate of interest to be charged by the I.F.C. on the sub-loans has not yet been decided, but it will not, under our arrangements with the DLF, exceed 8% p.a. in any case.



It's very simple—you can do this immediately through the Data Processing Services at the IBM Service Bureau. Mechanising of routine paper work cuts cost and increases efficiency. Whether your business is large or small, contact IBM representative who can explain how Data Processing Service can benefit your particular business.

Rupee Resources

6. I will turn now for a moment to our rupee resources on which we have been wholly dependent up to the end of the past year. As I have stated in the Annual Report before you, we went in for a bonds issue again last year, and it proved to be a tremendous success, the required amount of Rs. 5 crores having been over subscribed within a few hours of the list being opened. In accordance with the usual practice we retained an additional sum of Rs. 48 lakhs 87 thousand out of the total amount subscribed, which resulted in the total allotment aggregating Rs. 5 crores 49 lakhs. The bonds were for 12 years this time, as against 10 in the preceding year, and the rate of interest offered was 4% only as against the previous year's 4½%, the discount offered being also less, at 0.25% as against the previous year's 1%. I am sure you will share with me our gratification at this encouraging sign of public confidence. You will also be interested to know that, out of the sum of Rs. 5 crores 49 lakhs which was allotted in all, as much as Rs. 3 crores 81 lakhs were accounted for by allotments to the private sector alone, and Rs. 1 crore 68 lakhs to the Life Insurance Corporation of India.

7. Coming now to the distribution of our loan approvals as among the various industries, Sugar continued to take the first place in the past year also, followed by Paper and Rayon. It is to be noted that the bulk of the loans to the Sugar industry (Rs. 4.20 crores out of Rs. 5 crores) went to co-operative societies, the total amount of our loans to which now stand at Rs. 18 crores 89 lakhs distributed among 32 societies located in Assam, Andhra Pradesh, Gujarat, Maharashtra, Madras, Mysore, Punjab and Uttar Pradesh. Out of these 32 sugar co-operatives, 28 availed of loans to the extent of Rs. 14.11 crores. Of these, barring five which are still in the construction stage and one which has already repaid the loan availed of by it, the output of the remaining 22 during the year under review came to 2.45 lakh tons of sugar; this is equivalent to nearly 10 per cent of the country's entire production of sugar. The societies have put the loans advanced by us to proper use, and, in the matter of meeting their commitments relating to the payment of interest and repayment of principal, their record has been satisfactory, which is gratifying in view of the fact that quite a few of these societies are still in the initial stages of production and have had their share of the many teething troubles which beset newly set up factories.

Total Disbursements

8. In the matter of the actual drawal from us of amounts against loans approved there was appreciable increase during the past year, the total disbursements having aggregated Rs. 8.41 crores as against Rs. 7.48 crores of the preceding year. We continued to make interim payments against approved loans on the same liberal scale as we did in the past, and this has helped considerably towards eliminating the delays that usually arise in connection with the completion of legal formalities before loan documents are finalised. A sum of the order of Rs. 6 crores was paid out during the year under report by way of interim loans alone.

9. A larger percentage of loanee concerns was inspected in the course of the past year than in the previous one, and I am glad to say that in the case of the large majority of them we were completely satisfied with their progress in implementing their schemes and with their general financial position and the progress of their production. Quite a few of them also declared handsome dividends with our prior concurrence. The defaults committed by loanee concerns in the payment of interest and repayment of principal tended to come down further in the past year, the percentage being 1.2 and 4.3 as against 1.4 and 5.4 respectively of the previous year. I would add that, in spite of our vastly increased activities, our administration expenses were not allowed to shoot up on Parkinsonian lines. As a percentage to our gross income they came down in the past year to 4.66 from 5.11 of the previous year, and 15.65 of four years prior to that.

10. I am glad to say our relations with the various Chambers of Commerce and other similar organisations continued to be as close and friendly as in the previous year, and so were our relations with our loanee concerns too. We went ahead during the year with the programme that we had initiated a few years ago of having suitable non-officials nominated as our representatives on the Boards of Directors of our loanee concerns, and I take this opportunity to thank these gentlemen on my behalf, and on behalf of our Board of Directors, for the very valuable work they have done in this capacity.

11. It is also my very pleasant duty before I conclude, to convey our hearty thanks to the members of our five Advisory Committees—non-officials and officials—for the very able and effective assistance they have rendered to the Corporation. My thanks are due also to my colleagues on our Board of Directors for their very valuable co-operation and wise counsels, and their generous response to the many calls I have had to make on their time. Finally, I have also great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part.

RUBY GENERAL INSURANCE CO., LTD.

CHAIRMAN REVIEWS PROGRESS

The following is the Chairman's Speech delivered at the Twentyfourth Annual General Meeting of the Shareholders of the Company held at 8, India Exchange Place, Calcutta on Friday the 23rd September, 1960.

Gentlemen,

It gives me great pleasure to welcome you to the Twentyfourth Annual General Meeting of the Company.

The Report of the Directors and the Audited Accounts for the year 1959 have been with you for some time and with your permission I take them as read.

The following net premium figures reveal the progress of the Company:

	1949 Rs.	1954 Rs.	1959 Rs.
Fire ...	20,97,000	32,76,000	57,01,000
Misce. Accident ...	32,31,000	37,11,000	57,13,000
Marine ...	8,15,000	12,79,000	20,04,000
	61,43,000	82,66,000	1,34,18,000

The Company has continued its progress which will be evident from the comparative premium figures of the last several years. The net premium for the year ending 31st December, 1959 and the Capital and Funds as at 31st December, 1959 stand at Rs. 1,34,18,000/- and Rs. 1,27,81,000/- as compared to Rs. 82,66,000/- and Rs. 84,53,000/- respectively as at the end of 1954.

Fire Department

More attention is being given to develop the Fire business as the results have been comparatively better. The working for the year shows a record profit of Rs. 11,50,000/-. However, there has been again a reduction in the Fire premium rates from 1st January, 1960 and it would have some effect on the working of the Department but it is hoped that with more attention being given to develop the business of the Department, it would still show a reasonable profit.

Motor and Miscellaneous Department

The claims experience in this Department, particularly in the Automobile Section, which forms a major portion of the premium income, has been generally bad. We have however followed a cautious underwriting policy with the result that though there is a small reduction in the premium income but the working has greatly improved, which will be evident from the small loss incurred this year in the Department. The motor premium rates in certain sections have been increased from August, 1960 and it is hoped that it would result in some improvement in the claims experience of this Section. There is considerable demand of other types of Miscellaneous business and your Company is trying to develop these new types of business so that the portfolio may be more balanced and adverse results in one section do not upset the entire working of the Department.

Marine Department

The working of the Marine Department shows a big loss on account of the jump in the Premium Reserve from Rs. 10,90,000/- to Rs. 16,04,000/- and the adverse claims experience, which is due to the increase in the Foreign Marine Hull business. Your Company has, however, taken steps to reduce the Foreign Hull business and it is hoped that the Department will show improved working in future.

The loss experience on the import shipments also continues to be rather unfavourable owing to unsatisfactory state of affairs in the various ports of the country. Several representations have been made to the Government, and I feel that it is high time the Government had considered necessary amendment in the Port Acts so as to define more definitely the Port Commissioners' liability for loss or damage to the cargo whilst in their custody.

Another important development which is intimately connected with the Marine Insurance Market is the introduction of a Bill in the Rajya Sabha to codify the law relating to the Marine Insurance in this country. It is understood that the matter is presently engaging the attention of the Government of India in the light of the views and suggestions offered by the various Bodies and State Governments. With the passing of this Bill, which has already received the support of the various Commercial, Shipping and Insurance Organizations, a great lacuna would be removed.

You are aware, we are reorganising our Overseas business on the basis of the experience gained in the past and in view of the political changes in some countries in recent years which has resulted in contraction of the Overseas business, but it is hoped that this will show a better overall working result.

As is evident from the Balance Sheet, the Company has a very strong financial position, the Reserves amounting to Rs. 95,00,000/-, and there is an appreciation of Rs. 25,00,000/- in its Investment portfolio. It is gratifying to note that the Company continues to command the full confidence of its patrons and constituents.

It is time the Government of India and the Insurance Industry sit together and seriously consider the problems facing the industry at present and evolve practical working formulæ to put this important industry on a sound footing. The Government should help the industry in maintaining its reputation and developing its business which is to the ultimate good of the country.

I hope you will join me in expressing our sincere thanks to the Executives, Staff, Agents, Field-workers and other representatives both in India and abroad for their close co-operation which enabled the Company to maintain the progress during the year under review. I also convey my thanks to our valued clients whose support has helped the Company to achieve this position.

I now move that the Directors' Report and Audited Accounts and Balance Sheet of the Company for the year ending 31st December, 1959 be approved and adopted.

Thanking you.

Note: In the absence of Shri B. M. Birla, who is out of India, the speech was delivered by Shri M. L. Shah, who presided over the meeting.

This does not purport to be a record of the proceedings of the above Twenty-fourth Annual General Meeting held on 23rd September, 1960.

ERRATIC TREND IN THE STOCK MARKET

RISE IN GOLD SHARES AND GILT-EDGED

London, 5th October.

IT has been an eventful but erratic fortnight in the London Stock Exchange, and on balance, there is not a great deal of change in the general run of prices. Gilt-edged securities and gold shares are higher, although below their best levels while industrials fluctuated within fairly narrow limits and generally are around their previous levels. The performance of the market must be judged to be satisfactory in view of the flow of adverse news and the almost complete absence of encouraging news. The behaviour of Wall Street, the almost daily evidence of the effects of the credit squeeze, the serious balance of payments position, the increasing flood of new issues and the threat of a nationwide rail strike—these were adverse developments, yet actual selling was small. It is a notable fact that whatever the news, little stock comes out and as soon as the market suffers a setback, buyers appear. Business as a whole was at a fairly low level with sellers holding off, but buyers also were not aggressive. One of the main features recently has been the return to favour of the gilt-edged market. U.S. buying of War 3½ percent loans, coupled with a steady investment demand brought an all-round rise in prices, and although a slightly easier trend developed following the announcement of a new £500 million Treasury 5½ percent stock issue, gains in prices extended to about a point. Foreign bonds attracted little attention, but dollar stocks fell back. Most violent movements in prices were recorded in gold shares. U.S. buying on dollar devaluation fears brought sharp gains, but prices reacted following the official statement that the price of gold would not be changed, and the rises were sharply reduced. Base metals were dull. Oils also eased with the feature provided by the sharp reaction in Apex following details of the bid from British Petroleum. Among individual features in industrials were the sharp rise in I.C.I., following the half-yearly figures and the fall in G.E.C. on news of the proposed merger with English Electric. The general trend in a very quiet rubber share market was towards lower levels. Losses, however, were small in most cases. Tea shares also were very quiet. Movements were irregular and rarely exceeded a few pence.

The Money Market

There has been some variation of the credit situation over the past fortnight in the money market, but on balance, money remained tight and dear with the general rate for money 5¼ percent and 5⅜ percent. Last week, the market had three days of relative comfort. This was because the take-up of Treasury bills was largely taken up on the last two days in view of their end-year maturity. This resulted in a very quiet demand for money in the earlier part of the week with ample provisions of funds available to cover needs. However, end-month influences took their toll and conditions again became difficult with the subsequent heavy bill take-up finding money very short. While help had been given to the market when money was short, the authorities also forced the market into the Bank of England on three occasions over the fortnight. The amount at which the market had to pay the penal price was small, but it was an official warning to the market that the authorities were not yet thinking in terms of an easing of the credit squeeze. It was this prodding by the authorities which prompted the market to revise its joint bid at last Friday's tender rather sharply after having paid a little more the previous week in order to secure as many of the year-end bills as possible. As a result of their move, the rate for Treasury bills advanced over 1/16 percent to £5 11s 3.6d percent, compared with £5 9s 10.25d percent in the previous week.

Revised Contracts for Lead and Zinc

With effect from 3rd October, revised contracts for lead and zinc have been enforced on the London Metal Exchange for metal to be delivered on and after 2nd January, 1961. Under the revised contracts, the delivery basis for lead and zinc will be in warehouses, instead of the present ex-ship basis. From 3rd October, the trading positions in lead and zinc has been the first-half October and three months. From mid-October, they will be second-half October and three months and this pattern will be continued until 2nd January. From that date, the quoted positions will be cash and three months and a daily settlement price will be quoted. The quoted positions for lead and zinc will then be the same as for copper and tin.

Narrow Movement in Hongkong Gold

Hongking gold prices moved narrowly during the past week. Carryover charges were 20 cents in sellers' favour. Deliveries totalled 19,800 taels.

Skilled hands working with the touch of steel—steel weaving in and out of fabric, making a pattern or sewing together, steel fashions the clothes we wear. Fine needle to giant machinery in modern cloth mills, much of the textile industry's equipment is shaped from steel—tons of steel are required to produce the fabrics which clothe our millions. Soon we shall know abundance in an even greater measure—the finest textile at a price all can afford. Soon all this will be ours as there is a little more steel for each of us. *Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.*

STEEL IS MORE CLOTHES FOR YOU

THE CALCUTTA MONEY MARKET

INTERBANK CALL RATE RISES

Wednesday, 5th October.

THERE was a small increase in the general level of advances in the Calcutta money market during the past fortnight. Most of it was accounted for by jute and engineering concerns, but there was also a minor rise in cotton and foodgrains credit. The accommodation given to sugar mills was fractionally down. In the interbank market, conditions were extremely tight and the call rate rose to 4 percent, with borrowers over.

The exchange market remained quiet, partly because of the holidays. More tea bills were seen, but there were very few on account of gunny shipments. Remittance was on a fair scale. The trend in sterling was steady.

BULLION WAS QUIETLY STEADY DURING THE PAST fortnight, but turnover was restricted in view of the Puja holidays. Silver was quoted at Rs. 223.44. The price was 79⅛d in London and 91⅜ cents in New York. Gold fetched Rs. 136.25.

DURING THE WEEK ENDED 30TH SEPTEMBER, Government of India Treasury bills for Rs. 51,00,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 4th October. The total amount offered was Rs. 2,55,00,000. Tenders at Rs. 99.365 and above were accepted in full and those at Rs. 99.360 were allotted approximately 69 percent, the average rate of acceptance being Rs. 2.552 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 5th October to 8th October at Rs. 99.376 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 28th September to 1st October amounted to Rs. 8 lakhs.

A RISE OF RS. 6.07 CRORES TO RS. 1,790.04 CRORES in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 30th September, 1960, but the total note issue fell by Rs. 22 lakhs to Rs. 1,805.03 crores. Notes held in the Banking Department were, therefore, Rs. 6.30 crores lower at Rs. 14.99 crores. Deposits of the Central Government declined by Rs. 13.31 crores to Rs. 63.32 crores as did other Government accounts by Rs. 4.97 crores to Rs. 18.46 crores. Balances of commercial banks fell by Rs. 5.78 crores to Rs. 104.94 crores. Balances held abroad again fell by Rs. 4.76 crores to Rs. 16.17 crores, but investments were Rs. 7.17 crores higher at Rs. 222.32 crores. Other loans and advances declined from Rs. 143.14 crores to Rs. 130.63 crores, of which advances to scheduled banks against usance bills amounted to Rs. 9.28 crores (Rs. 12.26 crores). Ways and means advances stood at Rs. 27.36 crores, against Rs. 30.58 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 23rd September, 1960, shows Demand and Time liabilities at Rs. 772.07 crores (Rs. 17.04 crores on account of borrowings from banks) and Rs. 1,186.51 crores (Rs. 25.36 crores), compared with Rs. 777.33 crores (Rs. 19.22 crores) and Rs. 1,184.68 crores (Rs. 25.31 crores), respectively, in the previous week. Cash has declined by Rs. 62 lakhs to Rs. 45.50 crores, while balances with the Reserve Bank have increased by Rs. 9.23 crores to Rs. 103.14 crores. There is a rise of Rs. 61 lakhs to Rs. 729.97 crores in investments. Advances and bills discounted at Rs. 1,122.58 crores show a drop of Rs. 5.05 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.6 percent and 57.3 percent, against 7.1 percent and 57.5 percent.

TREASURY BILL MATURITIES

LONDON INSURANCE LETTER

COVERING U.K. CAPITAL ABROAD

IT seems somewhat uncomplimentary to Britain that tens of millions of dollars' worth of U.S. investment there is insured under the U.S. Government's scheme for covering the risks of investing abroad, whereas, apparently, American firms thought that no such precaution was needed in Cuba. Their losses in Cuba have, it is reported, aroused Americans' interest in this kind of cover, and the principle has been discussed in insurance circles in Britain, where no comparable facilities exist. U.S. firms investing in Britain have not, apparently, concerned themselves with the risk of expropriation of their property, or with the risk of physical damage caused by war (which would, of course, be compensated by the British Government), but they have not shown equal confidence in the convertibility of sterling receipts into dollars (although, of course, the proceeds of foreign investment were freely remitted from Britain while sterling was formally inconvertible). The International Co-operation Administration, the official U.S. body that covers these three risks, in approved conditions, is itself covered by foreign Governments' guarantees against expropriation of the properties in question and against impediments to remittance of profits arising from them. Essentially, therefore, the risk it assumes is that future Governments will repudiate the agreements.

Since the British and other European insurances were written the activities of the I.C.A. have been restricted so that the cover is available only for enterprises in "underdeveloped" countries —although, of course, existing commitments in Europe (and Japan, which is similarly affected) remain in force. It is for the "underdeveloped" countries that some British firms feel a Government-sponsored scheme is desirable. Proposals for such a scheme a few years ago did not take a concrete form, but "the winds of change" in such countries as Cuba and the Congo have become gustier since then, and it is feared that desirable investment will be inhibited if it cannot be protected by insurance specifically devised by the Government to promote it.

Lloyd's out of the Doldrums

The effects of the improvement in the insurance markets of North America, observable previously in the finances of the British insurance companies operating there, are now apparent in the results of Lloyd's underwriters in their 1957 account. Since Lloyd's accounts cover three-year periods, this is the latest account, concluded in 1959. It shows a profit of £9.7 million on a total income of just under £283 million, compared with a profit of £5.7 million on a total income of just under £256 million in the 1956 account. The rate of profit was thus approximately 3½ percent compared with approximately 2¼ percent. It is still well below the rate of nearly 5½ percent earned on the 1955 account, and it may seem a meagre return for the services that Lloyd's performs; but conditions in 1958 and, still more, in 1959 suggest that the accounts that began in those years will show further improvement.

That the improvement in the last account is attributable mainly to North America is only surmise, but the assumption seems reasonable, as most of the improvement occurred in "all other" insurances, which is mainly fire and accident business. In this category total income increased by £16 million to £150 million, and the profit increased by £2¼ million to £4½ million. In the category marine, aviation, and transit, total income increased by nearly £10 million, to £122½ million, and the profit increased by £1¾ million to £3¾ million but within this category aviation business showed a loss of nearly £1 million, an income moderately increased to just over £13½ million being exceeded by claims of £14¼ million. Motor-vehicle business expanded more than aviation business but was still the smaller, its income being a little over £10 million, but it was much the more profitable, showing a balance of nearly £1½ million. The life-assurance sector is comparatively trifling with a total income of barely £70,000 in the 1957 account; but as far as it went this business was profitable, earning a balance of nearly £25,000. The position will doubtless be transformed if the plan to form a life-assurance company within the framework of Lloyd's is put into effect. This business would probably then become the most profitable in Lloyd's.

Power to Compete

Moves to amalgamate the smaller insurance companies were resumed last month with the offer by the London Assurance Company to acquire the shares of the Sea Insurance Company; the transaction having been arranged between the boards of the two Companies in negotiations lasting only a few days—although preliminary discussions began some months earlier. This move is in line with the current trend towards larger groupings, and it has also an individual characteristic. Both Companies have been actively building up their businesses abroad—it was evidently mainly for this purpose that the London issued more capital not many months ago. The improvement in North American business had a particularly marked effect on the London's results for 1959: and the London and the Sea, both with substantial marine accounts, shared the same marine agents in the United States.

Stocks and Shares

FALL IN SHARE PRICES RETARDED

SIGNS OF REVIVAL IN INVESTMENT DEMAND

Wednesday Evening.

THE Calcutta stock market closed for the Puja holidays on 26th September on a note of uncertainty. The timely action taken by the Stock Exchange authorities helped avert a possible crisis following the sharp fall in prices earlier. The ban on fresh sales of clearing shares was lifted. But brokers will, until further notice, have to deposit a sum of Rs. 2 a share if their net sales exceed their purchases in the case of six shares on the forward list—Indian Iron, Hindustan Motors, Orient Paper, Rohtas Industries, Indian Cable and Textile Machinery Corporation.

One satisfactory feature was the revival of investment demand for high-class equities which had again begun to look attractive. But with few sellers to meet the market, brokers found it extremely difficult to obtain their clients' requirements, except by making higher bids. This appeared to indicate that the technical position of the market was sounder than it had been for several months past. It may be, therefore, that investors will find themselves in a happier mood before the advent of Diwali, which was not the case on the eve of Puja holidays. The Stock Exchange was open only for three days during the past fortnight. The following representative list of share prices illustrates the trend:

	Opening 22nd September Rs.	Closing 24th September Rs.
Bengal Coal	320.00	325.00
Burrakur Coal	16.81	17.12
Kesoram Cotton	26.25	26.50
Indian Iron	23.90	24.00
New Central Jute	24.00	24.50
Alkali and Chemical	30.62	31.00
Dunlop Rubber	41.00	41.50
Indian Aluminium	26.50	26.62
National Insulated Cables	26.75	28.00
Rallis India	124.00	128.00
Union Carbide	49.50	52.00
Dyer Meakin Breweries	22.37	22.75
Tezpore Tea	15.00	15.25
Metal Corporation	9.56	9.75

During the holidays, Indian Iron fluctuated unofficially between Rs. 23.84 and Rs. 23.32.

Dauracherra Tea

The revenue profit of Dauracherra Tea Co. Ltd has increased from Rs. 3.78 lakhs to Rs. 4.07 lakhs for the year ended December 1959. A taxable ordinary dividend of 15 percent has been declared, against 10 percent, tax-free, in the previous year. The provision for taxation is Rs. 2.60 lakhs (against Rs. 2.75 lakhs). After making other adjustments, there is a carry-forward of Rs. 45,770, against Rs. 58,190 brought in. A crop of 382,106 lbs was produced, against 424,720 lbs. The average sale price was Rs. 2.70, compared with Rs. 2.32 a lb. Estimates for 1960 provide for a crop of 416,000 lbs at an outlay of Rs. 6.69 lakhs.

Ledo Tea

The Ledo Tea Co. Ltd has incurred a revenue loss of Rs. 2.27 lakhs for the year ended December 1959. The ordinary dividend has again been passed over. Bringing in Rs. 9,827, transferring Rs. 1.50 lakhs from buildings and machinery reserve and making other adjustments, there is a balance of Rs. 22,109, which is carried forward. A crop of 416,006 lbs was made, compared with 476,968 lbs. The average sale price was Rs. 2.13 a lb, against Rs. 1.80 a lb. Estimates for the current year provide for a crop of 456,000 lbs at a cost of Rs. 12.08 lakhs.

Mysore Spinning

The profit of the Mysore Spinning and Manufacturing Co. Ltd has risen from Rs. 2.82 lakhs to Rs. 5.84 lakhs for the year ended February 1960, after providing Rs. 4,557 (against Rs. 4,999) for depreciation. An ordinary dividend of Rs. 7 a share, subject to deduction of tax, has been declared. Allocations include Rs. 85.000 (against Rs. 64,055) for development rebate reserve and Rs. 3.50 lakhs (against nil) for machinery rehabilitation reserve. After various adjustments, there is a carry-forward of Rs. 24,962, against Rs. 33,826 brought in.

Kotamullai Tea

The working of the Kotamullai Tea Co. Ltd has resulted in a profit of Rs. 1.78 lakhs for the year ended December 1959. The dividend has again been passed over. After transferring Rs. 3,500 to development rebate reserve and making other adjustments, there is a debit balance of Rs. 2,30,952, which is carried forward. The crop of Jiajuri amounted to 460,461 lbs, while that of Kotamullai was 608,200 lbs. The average sale price of the former was Rs 2.17 a lb and that of the latter Rs. 1.74 a lb. Estimates for 1960 provide for a total crop of 1,090,000 lbs at a cost of Rs. 20.95 lakhs.

(a) Semis	7,664	(22,438)	50,663	(60,899)
(b) Finished	42,999	(38,461)		
Despatches				
Saleable steel	53.814	(61,640)		

Bombay Market

OPERATORS QUIET AND NERVOUS

EFFECTS OF MONETARY CURBS BEING WATCHED

Wednesday Evening.

QUIET conditions prevailed in the Bombay stock market during the past fortnight. Share prices declined on tired bull liquidation and operators were nervous about the effects of the monetary measures introduced by the Reserve Bank recently. It was thought that bank credit would become more expensive and difficult to obtain. Investors were meanwhile busy examining the prospects for many new share issues which would be offered soon for public subscription. The imposition of a heavy premium on the rights issue by Guest, Keen, Williams generated fears that the Controller of Capital Issues might impose considerable premiums on future rights issue, although some had recently been permitted at par.

Sentiment was subdued in steel shares, and Tata Steel declined to Rs. 153.25. Indian Iron fell to Rs. 22.52 because of the disappointing production figures for September. Alcock Ashdown were freely sold at Rs. 280 and Mukand Iron were lower at Rs. 24 in spite of the directors having taken a fairly optimistic view of working during the current year. Tata Locomotive declined to Rs. 267.50 and Larsen and Toubro fell to Rs. 32.75. Scattered interest was taken in Premier Construction because the Company proposed to convert 35,000 promoters' shares into 11,666 ordinary shares by capitalising Rs. 2.19 lakhs. Then the Company will issue one bonus share for every two ordinary shares held, by capitalising part of the general reserve and capital reserve. In motor shares, Hindustan were offered at Rs. 18.44 and Premier Automobile lost at Rs. 153.75.

In spite of the improved cloth offtake, cotton mill shares lost on balance. Towards the close, there was a partial recovery in selected scrip on short-covering. Bombay Dyeing were indicated at Rs. 64.40 and Century were placed at Rs. 455.50. Kohinoor were taken at Rs. 301 and Simplex came to hand at Rs. 168. Svadeshi were dealt in at Rs. 243 and India United Ordinaries were freely offered at Rs. 12.52. Apollo were indicated at Rs. 1.36 and Morarjee Mills declined to Rs. 346 in spite of paying the same dividend for the year ended June 1960.

Prices of miscellaneous shares moved down in sympathy with the general pattern. In the sugar group, Belapur fell to Rs. 351 and Phalton were quoted at Rs. 176. Among cement shares, Associated Cement were sold at Rs. 140.75 and Digvijay lost

Contains practical illustrations showing in detail the working and effect of all the principles of taxation and the text of the Income Tax Act as amended up to 30th June, 1960.
An ideal Book for Examinees and a useful practical reference guide for officials, practitioners and businessmen.
PRABARTAK PUBLISHERS
61, Bepin Bihari Ganguly Street, Calcutta-12.

at Rs. 164.50. The latter Company has decided to undertake the manufacture of asbestos sheets and pressure pipes itself instead of through its subsidiary. Steamship company shares were neglected, and Scindia were available at Rs. 14.20. Great Eastern Shipping were dealt in at Rs. 15.44. Among mining shares, Shivrajpur Syndicate were called at Rs. 67. Bombay Burmah were dealt in at Rs. 573.50 on dividend prospects, but National Rayon fell to Rs. 456 on pressure. Tata Chemical were quoted at Rs. 16.36 and Indian Dyestuff declined to Rs. 510. Polychem recovered to Rs. 245 on the news that 14.18 percent of the dividend declared for the year ended March 1960 would be exempt from super-tax and income tax under Section 15C(4) of the Income Tax Act. Wimco were steady at Rs. 260 on hopes of a higher dividend. Ceat Tyre fell to Rs. 225 and West Coast Paper to Rs. 179.

Bank shares were steady, and Central Bank came to hand at Rs. 48.75. Indian Bank were quoted at Rs. 100. Turnover was small in insurance shares, and New India Assurance were placed at Rs. 54.50.

Sellers predominated in electricity supply shares, and Ahmedabad Electric declined to Rs. 87.30. Bombay Suburban were done at Rs. 85.30 and Tata Power were transacted at Rs. 1027.50.

Madras Market

DULL TREND IN SHARES

COMMODITY PROSPECTS PULL DOWN PLANTATION ISSUES

Wednesday Evening.

DULL conditions prevailed in the Madras stock market during the past fortnight and business was extremely small. Operators were busy examining the effects of the latest monetary measures of the Reserve Bank. There was little inclination to extend commitments either way because it was feared that the Government might take further measures to restrain speculation. Government securities were neglected and State loans, in particular, suffered considerable losses. Public utilities were sold freely at lower rates. Tea shares attracted little attention in view of the discouraging marketing outlook. Coffee shares turned softer in view of the report that the South African producers have joined the International Coffee Agreement. Rubber shares were depressed due to the decline in international prices. Miscellaneous shares were neglected.

In the banking group, Andhra were transacted at Rs. 100 and Indian Overseas at Rs. 174. Pandyan came to hand at Rs. 35.50.

Among public utilities, Cochin were done at Rs. 10 and Ellore at Rs. 18.37. Vellore were done at Rs. 11.50 and West Coast were taken at Rs. 11.87.

In the sugar group, Deccan were quoted at Rs. 14.90 and Cauvery were taken at Rs. 144.50. E.I.D. were quoted at Rs. 41 and Mysore came to hand at Rs. 60.50. Travancore were done at Rs. 11.80 and United Breweries were steady at Rs. 114.50.

Among planting shares, Blue Mountain were dealt in at Rs. 5 and Cochin Malabar came to hand at Rs. 6.85. Consolidated Coffee were taken at Rs. 25.75 and Ouchterlony were quoted at Rs. 4.80. Periakaramalai were done at Rs. 3.45 and Kalpeta changed hands at Rs. 12.35 on the payment of a dividend of 12½ percent, taxable. Peermade were steady at Rs. 23.32 on the payment of an interim dividend of 7½ percent, taxable. Sangameshwar declined to Rs. 2.40 on declaring a taxable dividend of 6 percent. Business passed in Balanoor at Rs. 16.70 and Chembra were taken at Rs. 4.90. Kil Kotagiri came to hand at Rs. 5.65 and Lucky Valley were done at Rs. 12.25. Midland were transacted at Rs. 11.75 and Parkside were quoted at Rs. 28.40.

Textile shares were dull and sellers predominated. Bangalore Woollen were available at Rs. 194 and Buckingham at Rs. 196. Kothari were quoted at Rs. 12.65 and Lakshmi were done at Rs. 138.50. Madura were dealt in at Rs. 33.60 and Travancore Rayon were quiet at Rs. 33.90. South India Viscose were sold at Rs. 143 and Vasanta were available at Rs. 238.50.

In the miscellaneous group, Aluminium Industries were transacted at Rs. 23 and Ashok Leyland were dealt in at Rs. 7.95. Business was done in India Cement at Rs. 6.68 and Tube Investment were steady at Rs. 331. Western India Plywood declined to Rs. 248 on paying a lower dividend of 10 percent, taxable. Enfield were quoted at Rs. 15.79 and F.A.C.T. were done at Rs. 10.75. Jeewanlal were quoted at Rs. 8.08 and Parry's Confectionery were dealt in at Rs. 4.40. Singareni were placed at Rs. 10.50 and Spencer were done at Rs. 21.60. Standard Motor came to hand at Rs. 17.75 and Textool were steady at Rs. 188.50.

THE TRANSACTIONS

[In the following list of Stocks and Shares in which transactions took place on 22nd, 23rd and 24th September, the figures indicate Opening, Highest, Lowest, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

QUALITY

This is the certification mark of the Indian Standards Institution. It is given to many consumer and industrial articles manufactured or processed according to relevant Indian standards.

The ISI mark has many advantages. To the manufacturer it means increased demand through customer satisfaction, and protection from unfair competition. To the consumer it offers an assurance of quality of goods and services purchased, and better value for the money spent. The granting of the licence to use the ISI mark is a trust placed with the manufacturer. ISI maintains a constant vigil to see that it is not misused in any way, for the interest of the consumer has to be safeguarded.

LEGISLATURE RECONSIDERS KERALA LAND BILL

SUBSTANTIAL CONCESSION FOR PLANTATIONS PROPOSED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Kerala legislature is now reconsidering the controversial Agrarian Relations Bill of the former communist Government, which was recently returned by the President with the recommendation that certain changes be made. The State Government has tabled nearly 40 amendments in the light of those recommendations. The conditional exemption provided to plantations in the original Bill is sought to be made absolute by some of these amendments. The definition of a plantation will be changed so as to include "land contiguous to, or in the vicinity of, or within the boundaries of the area cultivated with plantation crops not exceeding 20 percent of the area so cultivated, and fit for the expansion of such cultivation", and "agricultural land interspersed within the boundaries of the area cultivated with such crops not exceeding such extent as may be determined by the Land Board as necessary for the protection and efficient management of such cultivation." Plantations also will hereafter find a place in the exemption clause. Another major concession to plantation owners is that they can evict their tenants if that is found necessary for the protection, maintenance and expansion of plantations, after paying compensation for it.

Defence of Government

The Revenue Minister, Mr. Chandrasekharan, and some prominent members of the ruling alliance strongly defended the concessions proposed for the plantation industry. They said that the industry is the back bone of Kerala's economy and only by preserving and developing it, could Kerala's problem of unemployment and under-employment be solved. The Revenue Minister said: "Plantations as far as Kerala is concerned are everything. If you destroy the plantations, you are really destroying the roots of Kerala. That is why the President has recommended in his message that plantations in this State may be preserved, and available areas which can be converted reasonably into plantations should also be preserved for the purpose of raising plantations. It is not possible to convert them easily into agricultural lands. The areas which are situated in hill tracts are essentially meant for the purpose of raising plantations and are practically unfit for any other agricultural operations. That is why we submit, sir, that the President's message in that matter is certainly acceptable".

Communist members are highly critical of the concessions granted to the industry. Their contention is that in the original Bill they have provided "all reasonable protection" for the plantations and "nothing more is required" for their preservation and development.

Enhancement of Rubber Cess Proposed

There are proposals to raise the cess on raw rubber to finance the enhanced replanting subsidy of Rs. 1,000 an acre. The recent amendment to the Rubber Act enables the Central Government to levy a maximum cess of Rs. 25 a 100 lbs, or four times the existing rate. The Central Government, according to reports, may confine itself, for the time being, to an additional levy of Rs. 7 a 100 lbs, as recommended by the Tariff Commission. The cess is at present collected from the manufacturers. The cess of Rs. 25 a 100 lbs may not appear high, if compared with that of Malaya where nearly Rs. 38 a 100 lbs are collected. But the value of the enhanced cess will be judged by the extent to which it helps in the increase of production. The record of the Rubber Board—the agency which is responsible for the use of the cess for the rehabilitation of rubber estates—cannot be considered satisfactory. It has failed to make use of most of the huge amount which has been collected as cess and credited to the Consolidated Fund of India for the purpose for which the money is intended.

Further Rise in Pepper

The pepper market has further warmed up. The quotation from Cochin at the time of writing is Rs. 262.50 a cwt. for the exportable garbled variety. This represents a gain of about Rs. 10 in three weeks' time. This change should be significant in view of the fact that other important international markets are seeking lower levels. In New York, Malabar Black is offered around 50 cents a lb, Singapore is also bearish. A section of the trade, however, feels that the easy conditions in these markets are artificial as there are negligible stocks with dealers in New York and elsewhere. The demand is generally subdued on account of the buyers' wait-and-see attitude. Stockists in India are expecting a further rise in prices. Sellers are virtually absent in Cochin and Alleppey. Uncommitted stocks in India are placed around the very low figure of 1,000 tons to 1,500 tons. Arrival of the new crop are not expected before December due to unusually heavy rains Kerala has had during this year. Under normal conditions, fresh arrivals begin by November. There are possibilities of India getting a lower yield in the coming season. Extensive damage to pepper vines has been reported from Malabar and certain areas in Travancore due to some mysterious disease which is still spreading. A 15 percent or 20 percent fall over the current season's crop is expected. The size of the crop is placed at over 25,000 tons. The current season will end with this month.

India has had an unusually large export of pepper during the current season. She exported as much as 16,709 tons during the first nine months or more than double the quantity exported during the corresponding period of the previous season.

Coffee Cultivation Expansion Opposed

The proposals to expand the cultivation of coffee to new areas are not favoured by the leaders of the Indian coffee growing industry. They feel that against the world background of production exceeding consumption by almost 100 percent and prices falling heavily, any substantial expansion of coffee production in India will be extremely unrealistic. Their doubts about the wisdom of these proposals, they say, are a sober recognition of the seriousness of the coffee situation. The country's requirements can be met more wisely by raising the unit production. Efforts may be made to enhance the revenue surplus from existing holdings so that the growers can face lower prices.

World production of coffee for 1960 is estimated at 76 million bags. The carry-forward from the previous season is placed at 56 million bags, compared with the annual world requirement of about 43 million bags. The surplus has been growing steadily at an alarming level. It is, therefore, no wonder that prices have fallen by 30 percent to 40 percent during the past three years. Attempts have been made to regulate exports from the major producing countries, but the weight of stocks makes the prospects of any such scheme precarious. India's coffee crop for the coming season is estimated at over 55,000 tons, compared with her annual requirement of about 30,000 tons.

COCHIN TEA SALES

At Sale No. 37, 423,000 kilogrammes of tea were on offer. The market was strong but irregular. Low mediums and mediums were 10nP to 20nP dearer while fannings and good mediums were steady. Best liquorings rose by a rupee over last prices. Tippy teas had a dull market.

At Sale No. 38, 550,000 kilogrammes of tea were on offer. High-growns met with less demand and were sometimes a rupee lower. Good mediums were firm while low mediums and mediums were irregularly 10nP to 20nP dearer. Orange pekoes were much easier.

BRITISH TEXTILE REVIEW

TIMING OF REORGANISATION SCHEME CRITICISED

THE booming trade in the home market for textiles (exports have not been so buoyant) has provoked criticism of the schemes to consolidate the U.K. cotton industry. In the industry itself, the revival of trade, coinciding with the offers of compensation for scrapping plant was thought to be ill-timed, because it would weaken the incentive to reduce the production capacity. In the trade, on the other hand, the schemes themselves are regarded as ill-timed, because many of the machines, which have been destroyed (some of which were producing their maximum output right up to the "deadline" at the end of March), could have been usefully employed throughout the boom. As the Earl of Dundee, Minister without Portfolio, stated in the House of Lords in July, the industry scrapped more of its machinery than the Government had expected, yet increased its output. But it could certainly have increased its production more if no special incentive to reduce capacity had been offered. And if it had increased its output more, it would probably have exported more; for a relatively poor export performance cannot be attributed entirely to weakness in demand for Lancashire's goods abroad.

Mr. W. T. Winterbottom was obviously aware of these criticisms of the reorganisation schemes when he made his report, as chairman of the co-ordinating committee, to the annual meeting of the Rayon Staple Spinners and Doublers Association last month. He denied that too much machinery had been scrapped and asserted that further scrapping would be desirable during the phase of re-equipment. But even the most convinced advocates of consolidation would surely agree that the elimination of plant would have been more opportune in a period when trade was depressed.

Export Problems

In the first half of this year, cotton yarn exports amounted to 11.6 million lbs, compared with 11.9 million lbs in the first half of last year and 11.0 million lbs in the second half of last year; and exports of cotton cloth amounted to 171.1 million square yards, compared with 169.1 million square yards in the first half of last year and 178.3 million square yards in the second half of last year. Thus in both categories, there was some decline in exports in the first half of this year, compared with the annual rates last year. Of increased production, the proportion exported has declined. It may seem, therefore, that it is not insufficient production but inadequate demand which has retarded exports. But the strength of demand at home is naturally an important factor: it has weakened the incentive to export, which would have been stronger if more machinery had been available to employ. Full order-books imply delays in delivery, which adversely affect demand in competitive markets abroad. Even if such delays could be avoided (some firms are more successful than others in this matter) full order-books will restrict exports by reducing the ability to develop new products and by reducing the incentive to seek new markets. But new products, and new markets for particular products, are necessary to increase, or even to maintain, exports in the long run.

Spinning and weaving machinery is not, of course, involved in exports of goods made of imported grey cloth, finished in Britain, and, as there is still plenty of capacity at the finishing end of the industry, it may be possible to raise exports on the basis of increased cloth imports. But the countries which export grey cloth are steadily increasing their exports of finished cloth and of made-up goods. If this tendency continues (and there is no reason to doubt that it will), there will eventually be no substantial surplus of grey cloth available to the U.K. from abroad, and the U.K.'s exports—cloth and made-up goods which have been spun and woven as well as finished in Britain—will be competing with a greatly increased output of such goods from the countries that are now broadening the range of their exports.

New Techniques

In the prevailing situation, technology is supremely important to Lancashire. The omens concerning this are not unfavourable. Sir Raymond Streat told the annual meeting of Sirley Developments Ltd that the industry shows increasing interest in new devices and machines and that most firms are anxious to attain the maximum efficiency and to gain the full benefits of quality control. He said particularly that the pressure-point system and the automatic size box had been adopted by numerous mills. Collaboration between the Lancashire and Yorkshire industries has interesting possibilities. For instance, yarns spun in Lancashire on the schappe system have found favour this year among Yorkshire weavers for featherweight suitings and dress goods, and after some four years' development of schappe spinning, Lancashire cannot satisfy the demand for these yarns. In Yorkshire, blends of Terylene and wool, in the ratio of 45:55, have been used with conspicuous success to make 5½ oz. or 6 oz. cloths. Schappe-spun nylon shirtings are another important outlet.

New Delhi

BRITAIN ANNOUNCES NEW LOANS FOR INDIA

IMPORTS CUT BECAUSE EXTERNAL RESERVES FALL AND AID PROSPECTS UNCERTAIN

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.K. Treasury announced in London on 23rd September that further loans totalling £35 million are to be given to India. India's Minister for Finance, Mr. Morarji Desai, and the British Chancellor of the Exchequer, Mr. Selwyn Lloyd, discussed the possibility of further loans, during the former's recent visit to London for the Commonwealth Economic Consultative Council meeting.

The Treasury also announced that the U.K. would make a fresh loan of £5 million to finance a broad range of Indian imports from Britain during the present financial year—the final year of India's second five year plan. This brings the amount of U.K. loans to India during the year to £15 million. The announcement stated: "As for India's third five year plan, which is to come into operation next year, Mr. Desai explained India's need for assurances of future financial assistance to enable India to place orders within the next year or so, for which payment would be made in subsequent years. In response, the Chancellor of the Exchequer informed Mr. Desai that the U.K. would be prepared, as an initial act of assistance for the third five year plan, to make further loans amounting to £30 million to finance orders to be placed in the United Kingdom for the capital goods required for the implementation of the plan. In addition, it was agreed that further discussions should take place to explore the possibilities of finance from the U.K. Government and from private U.K. sources to meet the foreign exchange cost, estimated at roughly £20 million, of the proposed extension of the Durgapur steel works in India. The external costs of the first stage of this steel works have already been met to a substantial extent out of earlier Government loans and private credits from the United Kingdom."

U.K. Technical Aid under Colombo Plan

Technical assistance from the U.K. under the Colombo Plan is received in the form of training facilities for Indian nationals in Britain and the services of experts from the U.K. in various technical fields. The yearly break-up of this assistance is given below:

Year	Experts	Trainees
January 1952-30th June, 1953	28	151
July 1953-June 1954	22	60
July 1954-June 1955	14	34
July 1955-June 1956	17	102
July 1956-June 1957	4	105
July 1957-June 1958	21	163
July 1958-June 1959	19	199
	125	814

Import Policy

The import policy for the half-year from October 1960 to March 1961 has been announced. The Press note says: "In formulating the policy, the views expressed at the meeting of the last Import Advisory Council, held on 27th August, have been taken into account. Considering the insistent need to effect the maximum possible economy in the country's imports, the import policy being announced is, of necessity, restrictive on account of foreign exchange considerations, and cuts have had to be made in many items of consumer interest, such as wines, whisky, cotton fabrics, sheet and plate glass, time-pieces, etcetera. Import quotas have also been scaled down over the range of items having a strong indigenous industry angle, such as flexible pipes or tubes, malleable iron pipe fittings, cast iron pipe fittings, iron and steel wire ropes, boot and shoe grindery, copper manufactures, brass manufactures, leather belting, electric insulations, house service meters, industrial and street light fittings, paste board, mill board, water motors, vulcanised fibre sheets; certain chemical items such as hydrosulphite of soda, bleaching powder, calcium carbide, textile preservatives, carboxy methyl, acetic acid, anhydrous ammonia; certain motor-vehicle parts such as gaskets, radiator assembly, shock absorbers, piston assemblies, piston rings, thin-walled bearings; and certain items of drugs and medicines. Although the quota for drugs and medicines has been reduced, a provision has been made according to which quota licences issued for a specified item can also be used for the import of drugs and medicines not otherwise specified so that adequate quantities of drugs and medicines may still be imported within the lower cost ceiling. The quota for raw films has been scaled down from 66-2/3 percent general and 66-2/3 percent soft to 50 percent general and 50 percent soft. This reduction is not likely to affect the film industry adversely in view of the fact that the film industry has shown its willingness to effect a cut in the length of films. Every effort has, however, been made to make adequate provision to sustain industrial activity and to ensure an adequate use of the country's industrial potential. The list of items for which actual-user licensing will be undertaken has been expanded.

"At the same time, in spite of the foreign exchange difficulty, the quotas for the import of spare parts for sugar manufacturing machinery and spare parts for earth-moving machinery have been slightly increased. The face value provisions for the import of certain items, such as bolts and nuts, ball bearings and garage tools, against licences for certain machinery items, have been liberalised. The import of mercury will be canalised to reduce speculative spurts in prices.

"The import policy for about 20 items, such as dates, spices, betelnuts, paper items, cotton yarn, photographic sensitised materials, watches, giant tyres, agricultural tractors, etcetera, will be announced later."

Items Uncovered

Some comments are necessary. Firstly, the import policy announced is incomplete, because of the uncertainties concerning the availability of foreign aid for immediate needs. In other words, unless India is assured of credits covering payments falling due during the period ended 31st March, 1961, she has to conserve every pie of her external reserves. This explains the cuts in imports or the delay in announcing the policy for items such as giant motor, motor-cycle and bicycle tyres and tubes, machine tools, and wheeled and crowler tractors. The complete policy can, therefore, be expected only after the return of the Finance Minister, Mr. Morarji Desai, from the U.S.A.

It should, however, be a matter of some concern that while one part of the Ministry, namely, the Industry Ministry, has been systematically increasing the import bill, the other part, namely, the Ministry of Commerce, is called upon every six months to cut down imports, even of such items as life-saving drugs. Then, again, although steel production has increased, resulting in the reduction of imports, the Ministry of Industry, instead of matching its new industries to the end-products of the new steel plants, has been merrily licensing industries which require categories of steel still not manufactured in India.

The Ministry of Commerce and Industry has not yet been able to state what industries outside the plan have been started during the second five year plan. The case of the watch industry is among those known so far. The Ministry is almost committed to manufacture a "Janata" car in the public sector. There is an import policy for six months based on the availability of foreign exchange, but there is no such policy for industries which can be created at will, even though the existing resources of the country do not permit it.

Export Performance

A revealing picture of exports was provided to the Export Advisory Promotion Council some weeks ago. A statement indicated the items in which there has been progress. These items include cashew kernels, pepper, chillies, ginger, lac, iron ore, onions, and castor oil (crude, refined or purified). It will be useful if the Government appraises the achievements of the various export promotion councils and screens their foreign delegations, which are increasing in number. The amount of foreign exchange spent on these trips abroad should also be made public.

The Government is supposed to function on the principle of joint responsibility. It should, therefore, be a common responsibility of every Ministry to save foreign exchange. While the import of drugs and medicines which are still not manufactured in India has been banned, dieselisation of the railways which will increase the import bill is now an integral part of the policy. Luxury cars have been imported to promote tourism and more than one atomic power-station is planned, increasing the import bill for at least 20 years. It is high time that not only the import policy but also industrial expansion was linked to the availability of foreign exchange instead of the so-called "needs of the people."

The following statistics show how the foreign exchange reserves have been rapidly run down:

Sterling balance in January 1960	Rs. 207.81 crores
Sterling balances in July 1960	Rs. 153.23 crores
Sterling balances on 16th September, 1960	Rs. 146.5 crores

The following shows the state of the country's balance of trade since 1958: since then, they have gone down by another Rs. 3 crores.

Balance of trade 1958:	
Imports	Rs. 878 crores
Exports	Rs. 562 crores
Balance (—)	Rs. 316 crores
Balance of trade 1959:	
Imports	Rs. 887 crores
Exports	Rs. 623 crores
Balance (—)	Rs. 264 crores
Balance of trade: January-August 1960:	
Imports	Rs. 613 crores
Exports	Rs. 408 crores
Balance (—)	Rs. 205 crores

India's foreign trade with some selected countries during the five months ended May 1960 was as follows:

Countries	Balance of trade in crores of rupees	
Common Market area	(—)65.24	(—)53.67
Free Trade area	(—)18.65	(—)29.28
E.C.A.F.E. area	(—) 9.49	(—)24.61
U.S.A.	(—)27.89	(—)14.08
Canada	(—)29.95	(—)20.20
Rupee payment area	(—) 2.02	(+)11.60

Import of:

Food	1958	Rs. 149 crores
	1959	Rs. 123 crores
Steel	1958	Rs. 98 crores
	1959	Rs. 84 crores
Oil	1958	Rs. 75 crores
	1959	Rs. 77 crores

Jute Goods Export Trends

Jute goods exports during the first six months of 1960 were a little higher than in the corresponding period of 1959, but lower than in the second half of 1959.

Period	Exports ('000 tons) Hessian	Sacking	Others	Total
January-June 1960	220.05	134.02	37.05	392.02
January-June 1959	213.05	134.05	28.08	376.07
July-December 1959	239.01	213.06	27.08	480.50

Taking into account seasonal variations in the demand for jute goods, it appears that exports are being maintained slightly above the level reached last year. Export earnings have also increased as will be seen from the following:

Year	Exports	Value
(April-March)	('000 tons)	(Rs. crores)
1958-59	791.08	101.91
1959-60	855.06	111.92
1960-61 (three months)	215.04	30.58

The significantly higher rate of foreign exchange earning in the first quarter of the present financial year (compared with 1959-60) is due to the rising level of jute goods prices since December 1959. On the credit side, the following may be noted:

(1) The recovery in the offtake by Argentina from the unusually depressed level of the previous year.

(2) Increased purchases by Belgium and West Germany, in the latter case due to the first stage of relaxation of import quota restrictions.

(3) Continued purchases by China at the rate established in the second half of 1959.

(4) The entry of Japan into the Indian market for the first time, with an offtake of about 5,000 tons in six months.

(5) Improved shipments to Egypt and the Sudan.

(6) Continued high offtake by Russia.

Loss in Markets

As against this, there has been a noticeable decline in shipments to some important markets:

(a) Australia—partly because of gunny stocks carried over in that country from the last season, and partly due to increased purchases from Pakistan. (b) U.K.—the small decline is probably due to reduced rates of purchase on account of high prices. (c) U.S.A.—reports show that although consumption this year is running at almost the same rate as last year, U.S. buyers have reduced their purchases due to high prices by running down stocks. (d) East and West Africa—the drop in exports to Tanganyika, Ghana and Nigeria represents further inroads into these markets by the Pakistani jute industry. (e) Although there is a small increase in the offtake by Cuba, the fact is that shipments to this market have been rapidly dwindling in the past three to four years due to increased bulk-handling facilities for sugar. About half the remaining market has been lost to Pakistan.

The apparent decline in offtake by Denmark and Turkey is, however, misleading. Last year's purchases by Turkey were exceptional and more Indian goods are reaching Denmark.

Established buyers of Indian jute goods, especially in the U.S.A., have reacted adversely to the renewed evidence of price instability, after almost a year of comparative quiet. Moreover, the price-levels now prevailing appear to be too high, considering that the main virtue of jute fabrics is their cheapness, and jute bags have to compete with paper bags and bulk handling in the industrially advanced countries. It may be hoped, however, that if stability can be restored at lower price levels in the next few months, no permanent harm may be done to India's export trade in gunnies.

Of the speciality products of the jute industry, the greatest expansion in production recently has been of wide hessian, which is exported to the U.S.A. for use in making tufted carpets. Exports

rose from about 20,000 tons in 1958-59 to about 30,000 tons in 1959-60. This product is a good earner of foreign exchange, its price being almost double the price of standard hessian. At the end of 1959, 521 broad looms had been installed in the Indian jute industry. This has since risen to 676, and another 190 are to be installed shortly. Exports of cotton bagging, a low-cost wide-mesh fabric used in the U.S.A., went up from about 30,000 tons in the previous year to about 45,000 tons in 1959-60. Other specialities more or less maintained their position, except twine, whose exports declined sharply because of competition from the cheaper material offered by Pakistan.

Revival of Competitive Industries

The last few months have seen a distinct revival among India's competitors in world jute markets. The U.K. industry substantially increased its production in 1959, and does not appear to have suffered any ill effects from the reduction in the protective "mark up". The French industry, whose production was declining in 1959, has since staged a recovery. West Germany has stabilised her production, while liberalising her imports. Belgium continues to hold her share of the U.S. market for carpet backing, and her production in 1959 was well above the 1958 figure. Japan, it is understood, is increasing her loomage, but for domestic consumption.

India's main competitor, Pakistan, exported 164,000 tons of jute goods between July 1959 and April 1960, so that her total exports for the period July 1959-June 1960 are likely to have been about 196,800 tons, as against 137,300 tons in 1958-59 and 103,000 tons in 1957-58. Out of approximately 8,000 looms installed in Pakistan, about 7,800 are now in regular operation, most of them working on two or three shifts. The Pakistan Industrial Development Corporation, it is understood, has been entrusted with the responsibility of executing the plans for putting up 4,000 additional looms in the next two years. Pakistan's exports to the U.K., Australia, Cuba, Burma, East and West Arrica and Argentina have shown a marked improvement in 1959-60 over the previous year, besides better shipments to South Africa, where India does not export.

The present indications are that in 1960-61, the world demand for jute goods will be maintained at or above last year's levels, so that even if India is not able to increase her share of the market, exports should not fall. But to achieve the plan target of 900,000 tons of exports annually, it would appear to be necessary to bring price levels down to nearer those of last year, and it is necessary to maintain a greater degree of price stability than has been possible in the current year.

I.J.M.A. Delegation Report

The fourth Indian Jute Mills Association (I.J.M.A.) delegation to the U.S.A. and Canada, which visited those countries and the U.K. in October-November 1959, submitted its report in February this year. The delegation found that in North America, burlap was able now to compete on more equal terms with paper in the bag market, so it has emphasised the primary importance of maintaining burlap prices in line. The delegation anticipates a further, though slower, growth in the demand for wide hessian, and considers that there should be a growing market for burlap laminated with other materials. It has also suggested that sacking might be used in North America for certain industrial applications.

The Indian Jute Mills Association proposes to send a delegation to the U.S.A. soon, which will also visit Argentina. In the U.S.A., the delegation will explain to buyers the reasons for the rise in prices this year and the measures which are being taken to stabilise prices at lower levels. A delegation of the Calcutta Jute Fabrics Shippers Association to the Middle East and Africa is planned for the winter.

Tungsten Carbide Manufacture

At the beginning of this year, a Swedish Company, the Sandvik Steel Works Company Ltd, obtained from the Indian Government a licence permitting it to build a tungsten carbide factory in Poona, about 200 kilometres east of Bombay. For the planned production of tungsten carbide in India a new Company will be formed, Sandvik Asia Ltd, with a share capital of Rs. 60 lakhs, out of which 40 percent will be Indian capital and 60 percent Swedish. The factory will produce Coromant tungsten carbide as well as finished products with tungsten carbide tips. Production will start in 1961 and will gradually increase during the coming years. The factory is to be started under the supervision of Swedish production engineers. As soon as possible, a staff of Indian technicians will be trained. The main part of machinery and furnace equipment, which cannot be obtained in the open market, will be of Sandvik's own construction. Indian machines, wherever available, will be ordered from local suppliers.

Transfer of Safety Razor Factory

Swing Ltd, A.B., manufacturers of safety razors and razor blades, are to transfer their plant in Sandviken, Sweden, to India, where a factory will be established near Bombay in association with an Indian enterprise, according to the managing director, Mr. George Zeidlitz. The new Company, Indo-Swing Private Ltd, will have a share capital of Rs. 10 lakhs. Some of the Swedish factory's workers will take up posts with the Indian Company. Swing's sales organisation in Sweden will be retained. At the same time, it will act as agents for the Indian goods exported to Sweden.

Licensing Private Fertiliser Units

The Government of India is planning to introduce the ordinary system of licensing for fertiliser units in the private sector. Some applications, it is expected, will be considered at the next meeting of the Licensing Committee. As already reported, the Government is planning to introduce the system of retention prices for fertilisers.

Hindustan Steel Changes

Some changes are taking place in Hindustan Steel. Firstly, its chairman, Mr. Pande, is retiring. He will be succeeded by Mr. Srinagesh, who was until recently managing director of Indian Refineries Ltd. The general managers of Rourkela and Durgapur are also being changed. Mr. Neogy from Railway Standards will succeed Mr. Sen at Durgapur.

Coal Shortage and the Causes

The Prime Minister has been greatly perturbed about the coal shortage and has directed some of his seniormost secretaries to submit a report to him. A full-fledged cold war has been going on between the Ministry of Coal and the Ministry of Railways over the responsibility for the shortage for coal. It is explained that to move coal for maintaining steel production at the existing level, from the coalfield in West Bengal and Bihar, a daily supply of 1,400 railway wagons are required, provided coal is loaded on six days a week. A further supply of 300 wagons a day will be required for coal movements if the three blast furnaces are commissioned now and the fourth one commissioned in April 1961.

The railways claim that they have made available 5,030 wagons daily in the last year of the plan, as against 4,560 wagons required by the coalfields in Bihar and West Bengal. Actually, 4,050 wagons a day were made available. A great deal is being made of the steel shortage, and it has even been suggested that matching steel should be imported from the money recently lent by the World Bank. The fact is that it is not so much the lack of steel as the slowing down of the wagon-making programme by the railways which is responsible for the wagon shortage. Besides steel, there are other industries such as textiles, cement and brick-baking which require coal. The steel plants have had an inadequate supply of coal and their stocks have been dwindling. Under such conditions, the building up of stocks for additional blast furnaces has not been possible. In other words, due to the coal shortage, there will be two months' delay in the commissioning of each blast furnace. It is high time the responsibility for the movement of coal was placed squarely and unequivocally on the railways. It should be made compulsory for the railways to supply 1,600 to 1,700 tons of coal a day to the steel industry alone, either by reducing the supply of coal to others or by diverting wagons from the general traffic.

As far as future plans are concerned, the Government will be compelled to readjust its steel production programme, if coal from the new mines are not available or, alternatively, there is no increased production from the existing mines in Jharia.

Inauguration of I.D.A.

The International Development Association, the new international agency for financing economic growth in less developed countries, has come into being as an affiliate of the World Bank. Fifteen countries, including India, have already become members, bringing the total subscriptions to the equivalent of $683 million. If all members of the Bank join the International Development Association, its initial resources will be the equivalent of $1,000 million, of which the equivalent of $787 million will be available on a fully convertible basis. The International Development Association is to be administered by the World Bank. It will seek to promote economic development by providing finance to less developed countries on terms more flexible and bearing less heavily on their balance of payments than conventional loans, thereby furthering development objectives and supplementing the activities of the Bank. The first meeting of executive directors of the International Development Association representing its member-countries will be held later in the autumn. On the date of this meeting, the International Development Association will formally begin operations. A considerable degree of flexibility is given to the Association by its articles of agreement, both in the purposes for which it may provide finance and in the terms on which it may make loans. The International Development Association will finance a wider range of projects than the World Bank, but since both agencies will have the same management, it is to be expected that the former will maintain the same high standard as the latter in the planning, management and financing of the projects which it assists. A unique feature of the I.D.A. is the division of member-countries into two groups for purposes of subscription of funds. Subscriptions will be payable over a five-year period and the countries in both groups will pay 10 percent of their initial subscriptions in gold or freely convertible currencies. One group consisting of 17 of the more industrialised member-countries of the Bank, will pay their 90 percent in five equal instalments of gold or freely convertible currencies; the other group consisting of 51 less developed countries will pay their 90 percent in their national currencies which the I.D.A. will not be free to convert into other currencies or to use to finance exports from the country concerned without its consent. The I.D.A. is to keep the adequacy of its resources under regular review. It is contemplated that the first review will take place before the end of the first five-year period, and subsequent examinations at intervals of approximately five years thereafter. The general or individual increases in subscriptions may be authorised at any time.

THE WEALTH OF INDIA—INDUSTRIAL PRODUCTS;
Part V (I-L)

290-xiii pp., 11 plates; Demy 4 of to; Price Rs. 30.00

Gives a comprehensive account of the development and present position of the following industries:

Major Industries—Insecticides and Pesticides; Iron and Steel; Iron and Steel Castings; Jute Mill Industry; Lead; Leather; Locomotives.

Medium & Small Scale Industries—Ice; Ink (printing & writing); Iron Compounds; Lac and Shellac; Lamps and Lanterns; Lapidary; Lead Compounds; Lime; Linoleum; Lock; Lubricants.

Cottage Industries—Ivory; Jewellery; Kattha and Cutch; Khadi.

An indispensable reference book for educational institutions, libraries and industries.

COMMONWEALTH CONFERENCE DISCUSSES IDEA OF U.K. JOINING COMMON MARKET

NEW AFRICAN AID PLAN APPROVED

(FROM OUR LONDON CORRESPONDENT)

THERE can be little doubt that from the point of view of future Commonwealth co-operation in the economic sphere, the recent two-day meeting of the Finance Ministers was perhaps as important, if less momentous, as the one held in Ottawa as long ago as 1932, when the famous Ottawa Agreement was signed. There were positive developments from the discussions which, for all the unsensational nature of the final *communiqué*, were unusually frank. A system of thorough consultation on the progress of all negotiations on economic matters has been worked out, as a result of which the other members of the Commonwealth have been given a double assurance from the United Kingdom that their "essential interests" will be safeguarded during any negotiations which might involve Britain entering the European Common Market, and that they will be informed and consulted at all stages along the way. Besides, general approval was given to the new project to be known as S.C.A.A.P.—the Special Commonwealth African Assistance Plan—a new Colombo Plan proposal aimed at helping the economic development of the African territories now at various stages on their way towards independence.

It was emphasised at the end of the talks that there had been "no fireworks," but it is unlikely that the British Ministers making up the U.K. delegation—Mr. Selwyn Lloyd, Chancellor of the Exchequer, who was in the chair, Mr. Heath, Lord Privy Seal, and Mr. Reginald Maudling, President of the Board of Trade—anticipated the amount of opposition which the idea of Britain entering the European Common Market aroused among some of the Commonwealth Ministers. The latter evidently thought that Mr. Macmillan's recent meeting with Dr. Adenaeur had been productive of more progress than was in fact the case. It appears to be the U.K. Government's policy to seek entry into the European community if the terms of admission are reasonable and the other members of the Commonwealth can be assured that they will gain as much as they lose by such a move. The Finance Ministers were asked to "take a first look" at the idea from their countries' points of view and to express their opinions. The British delegation was left in no doubt whatever that any tampering with the Commonwealth preference system would dangerously, and perhaps fatally, injure the Commonwealth itself. In one form or another, this view was apparently expressed by the spokesmen of Canada, Australia, New Zealand, India, Malaya and Ceylon. On the other hand, it was generally recognised that Britain was concerned about the possibility of growing economic division in Europe and the importance of political and economic unity in western Europe. It was accepted, therefore, that in any negotiations the essential interests of the Commonwealth countries should be safeguarded. The final *communiqué* stressed that full account must be taken of the continuing importance of intra-Commonwealth trade. It was agreed that "if and when Britain moves forward towards further negotiations", she would keep the other members of the Commonwealth informed of the progress of the talks. Mr. Maudling, who wound up the discussions, assured the delegates that although the European Common Market negotiations were of an urgent character and Britain would like to be associated with this big community, it was not something that she intended to buy at any price.

Another Loan to India

The U.K. Chancellor has agreed with Mr. Morarji Desai, India's Finance Minister, to make another loan of £5 million, bringing the total up to £15 million in the present financial year, which is the final year of the second five year plan. The loans are being made to finance a broad range of Indian imports from the United Kingdom. In addition, India has received assurances of financial assistance for the third plan. Further loans up to £30 million will be offered to enable India to place orders for British capital goods within the next year or so. This was described by the U.K. Treasury as "an initial act of assistance for the third plan." It does not include a further £20 million needed for the extensions to the Durgapur steel works expected to be ordered from British firms. About £5 million of this may be advanced by U.K. banks and the rest by the Government.

These arrangements have not entirely filled India's immediate needs. At the Paris conference of India's creditors, it was found that there was still a foreign exchange gap of £95 million for the completion of the second plan; but under pressure this was reduced to some £50 million, of which the creditors agreed to advance £24 million (including the £15 million now arranged in London). Mr. Desai said that another £15 million is still required by his Government. But if it is not received, Indian orders abroad will have to be cut down further. Mr. Desai emphasised that the total foreign exchange gap is precisely in line with the estimate submitted by the Indian Government at the first meeting of creditors in Washington. But, he added, the need for finance is flexible as long as the sterling balances are above the danger point: now that they have dropped to just over £100 million, they can no longer be drawn upon.

Capital Expenditure

Evidence shows that, as retail trade and the consumer durable industries face difficult conditions of demand and keen competition, the pick-up in the capital goods industries gathers momentum. Provisional estimates, recently made by the U.K. Board of Trade, show that during the second quarter of the current year, fixed capital expenditure by British manufacturing industry was 18 percent higher than in the same quarter of 1959. Capital expenditure by "other industries and services" rose by 12 percent. The 18-percent rise in manufacturing industry's capital spending in the second quarter compares with an increase of 11 percent over the previous year's level achieved in the first quarter of the year. Expenditure on building work showed a 39-percent rise. Besides, spending on plant and machinery was 10 percent up, while expenditure on motor-vehicles (a relatively small item) rose by 31 percent over the level for the second quarter of last year. The new emphasis on expansion in the capital goods industries is reflected in the latest quarterly analysis of advances issued by the British Bankers Association. Between May and August of the current year, the increase in advances to a new record of £3,516 million is of only £59 million, compared with the previous quarter's rise of £213 million—a striking confirmation of the recent slowing down in the rate of expansion.

Pattern of Bank Lending

Taking the detailed figures, loans in the personal and professional category have risen by only £10.7 million, whereas in the previous quarter they jumped by £43 million. At £691 million, however, they still account for nearly 20 percent of total bank advances. Loans to hire-purchase finance companies at £143.3 million, against £148.4 million, show a decline for the quarter of £5 million—the first fall for a long time past. Loans to the retail trade are also £11.3 million down at £357.8 million. In striking contrast to these declines, which included a drop of £25.5 million to £172.3 million in the food, drink and tobacco group, bank lending to the engineering trades has jumped during the May-August quarter by £46.6 million to £378.8 million. Advances to the iron and steel and allied trades have risen by £6 million to £82.6 million. These figures suggest not only a slowing down in the rate of bank lending but a changing pattern, with the emphasis shifting from personal and consumer trade borrowing to the capital goods industries.

August Overseas Trade

It is unlikely that the full details now released of Britain's overseas trade in August will give the City any reason for changing its view of the preliminary figures, which was one of distinctly modified rapture. Although the visible trade gap was rather smaller, the underlying trends remain disturbing. As the U.K. Board of Trade points out, if the three months, from June to August, are taken together, exports averaged 4 percent less than in March to May, and the fall is now shown to have affected all the main classes of exports, except the food, drink and tobacco group. On a seasonally adjusted basis, the drop in export sales to North America was sufficient to account in itself for most of the decline, but exports to western Europe were also down. Taking the various categories, the main contribution to the decline came from manufacturers and from engineering products, especially motor-cars. Compared with a year earlier, motor-car exports in the June-August period were 6 percent down, and the fall compared with the average rate for the first five months of this year was as much as 31 percent—a steep decline even allowing for seasonal factors. By contrast, exports of commercial vehicles have continued to expand strongly to a wide range of markets.

On the import side, there has been an increase of 1½ percent during the three months from June to August this year, compared with March-May. In the early summer, the main increase in imports was in finished and semi-finished manufactures, but in June to August there has been a further rise in imports of basic materials, as well as semi-manufactures. The detailed figures show that much of the increase in the last three months—allowing for seasonal influences—has been due to a rise in imports from North America. Between the two three-month periods, there has been little change in the value of recorded imports from western Europe, probably reflecting a seasonally adjusted fall after a strong and continuous rise since the beginning of 1959. A fall in recorded imports from the sterling area countries reflects seasonal movements.

Trade Balance in Second Quarter

In her current transactions with the rest of the world, Britain incurred a deficit of £9 million in the second quarter of this year. This compares with a current payment surplus of £44 million in the first quarter of 1960 and with a surplus of £96 million in the second quarter of 1959. The deficit, although disappointing, will cause no great surprise, since it is mainly the result of a deterioration in Britain's trade balance. In the second quarter of the current year, imports exceeded exports by £39 million, whereas in the first quarter exports were £12 million higher than imports. Another adverse factor has been the drop from £104 million in the first quarter to £96 million in the second quarter in Britain's net income from "invisible" transactions, among which a large item is the earnings of the international oil companies.

Terms of Trade Steady

For the third successive month, Britain's terms of trade, measured by the relation between import and export prices, were unchanged in August. The U.K. Board of Trade's index (1954 equals 100) held steady at 88. In September last year, the index stood at 90, when export prices were lower than they are now. In August, there was again only a very slight fall in the index for the food, beverages and tobacco group of imports, which has been fairly stable since March. Prices of imported basic materials were about 2 percent down, but this fall was largely offset by a 1-percent rise in imported fuel prices and a slight increase in values of imported manufactured goods. On the export side, small falls in prices of engineering products and other manufactured goods were roughly offset by a rise of about 1 percent in the textile group. Also for the third successive month, the U.K. Board of Trade's index of prices of basic materials used in British manufacturing industry has shown a decline. For August, the index has been provisionally estimated at 97.5 (1954 equals 100), compared with 98.5 in July. At its present level, the index is 1.0 below August 1959.

Fewer Unemployed

The number of unemployed in Britain dropped by 16,181 between 15th August and 12th September, according to the U.K. Ministry of Labour. The proportion of the total labour force out of work remained at 1.4 percent, the same as in August, and compared with 1.9 percent in September 1959. The total number of unemployed registered was 305,176 on 12th September.

The main change between August and September was the absorption of school-leavers, boys and girls whd had come on to the labour market only during the summer. Unemployment rose by 2,406 among adults, and fell by 18,587 among boys and girls. But even without including the school-leavers in the reckoning, the September figures are much better than one would expect from the usual seasonal influences. Apart from school-leavers, the number wholly unemployed increased by 3,764, compared with a normal seasonal increase between August and September of about 15,000.

Factory Building Plans

In the second quarter of this year, the U.K. Board of Trade approved 1,020 industrial building schemes for a total surface area of 23.8 million square feet. This is less than the area of 34.5 million square feet approved for the 996 schemes in the first quarter, when the approvals included some of the large projects of the motor-car industry. Taking the first two quarters together, the total area for which certificates were issued was 58.3 million square feet, compared with 30.1 million square feet approved in the first half of 1959.

National Income and Expenditure

The annual blue book on national income and expenditure, just published by the H. M. Stationery Office, not only gathers together and amplifies the main statistics in this field, but provides a run of figures for the 11 years up to 1959, so throwing into relief a number of interesting trends. Total personal income before tax in 1959 was, at £19 676 million, 86 percent above the level of 1949 and 4¼ percent higher than in 1958. During the decade, there was a proportionate increase in the number of salary-earners; the blue book shows that in 1959 salaried employees made up 21 percent of the labour force in manufacturing industry, against 17 percent in 1949, while their average earnings over the ten years rose by 71 percent, compared with an increase of 88 percent in average wage earnings.

On the consumption side, there are fresh details to illustrate the striking changes in personal spending after the lifting of the credit restrictions two years ago. Between 1958 and 1959, there were increases of 27 percent in expenditure on motor-cars and bicycles, of 10 percent on furniture, and of 19 percent on durable consumer goods, while other main items accounted for only small increases. The blue book deals very fully with capital formation and many of its tables are devoted to this subject. These record that investment has absorbed a notably constant part of the gross national product in recent years. In 1949, gross fixed investment was 14.5 percent of the gross national product. This proportion rose to 16 percent in 1953 and 17.2 percent in 1956, since when it moved only slightly to the 1959 proportion of 17.6 percent. Military expenditure as a proportion of public expenditure has continued to decline. Allowing for price changes, the figure for 1959 was 26 percent lower than in 1953, its peak level. By contrast, health service expenditure was in 1959 36 percent higher in real terms than ten years before, while education showed an increase of 48 percent.

Brevity

Associated Electrical Industries have been given contracts worth more than £600,000 by the Malay Federation Central Electricity Board. The orders are for switchgear for the Cameron Highlands hydro-electric scheme.

Engineering and Transport

PROTECTION FOR THE POWER CONDUCTOR INDUSTRY

DEMAND FOR PRODUCTS INCREASING FAST

OPENING the public enquiry into the question of continuing protection to the bare copper conductors, A.C.S.R. and A.A.C. industry beyond 31st December, 1960, Mr. K. R. P. Aiyangar, chairman, Tariff Commission, said that in 1957, the demand for bare copper conductors was estimated at 10,000 tons a year, and that for aluminium conductors at 15,000 tons a year. It was observed at that time that the future demand would depend on the extent of additional generation of electricity and the pattern of its distribution. A shift in the demand from copper to aluminium conductors was anticipated because of the better availability of the latter at lower prices. The estimate of demand for copper conductors in 1960-61 was 10,000 tons, the same as in 1957; while the demand for A.C.S.R. and all aluminium conductors, it was anticipated, would increase to 20,000 tons a year. These estimates were exclusive of the demand of railway electrification scheme which was being considered. In connection with the present enquiry, varying estimates of demand have been received from the Development Wing as well as from producers. The Development Wing has estimated the current demand for copper conductors at 15,000 tons and does not expect it to rise by 1962-63; the Non-ferrous Metals Manufacturers Association puts the current demand for copper conductors at a lower figure of 10,000 tons in 1960 and also expects the demand to continue at the same level during the next three years. As for aluminium conductors, the Development Wing, following the advice of the Development Council for Heavy Electrical Industries, has estimated the demand for 1960-61 at 20,000 tons and expects it to rise to 22,000 tons during each of the years 1961-62 and 1962-63 and to 26,500 tons during 1963-64. According to the Non-ferrous Metals Manufacturers Association, the current demand is about 20,000 tons a year which would increase at the rate of 2,000 tons a year during the next three years. The estimates of demand furnished by individual manufacturers show wide variations. The consumption of copper conductors was 11,372 tons in 1957, 9,356 tons in 1958 and 7,578 tons in 1959. The figures in the case of aluminium conductors for the corresponding period were 20,406 tons, 16,396 tons and 17,467 tons.

Manufacturing Units

In 1957, there were nine units manufacturing copper and aluminium conductors. Of these, four were producing only copper conductors, three only aluminium conductors and two both copper and aluminium conductors. Since the last enquiry, the new unit of Hindustan Electric Company in Ulhasnagar and also the new unit of Aluminium Industries in Hirakud have begun the production of aluminium conductors. In 1957, the capacity for the manufacture of copper conductors was assessed at 11,900 tons a year on single shift and that for aluminium conductors at 6,360 tons. The total capacity of the industry for the manufacture of copper conductors registered under the Industries (Development and Regulation) Act, as furnished by the Development Wing, is 23,800 tons a year, and that for aluminium conductors at 19,300 tons, both on double shift. The capacities of individual units are in some cases different from those furnished by the Development Wing. The production for bare copper conductors reveals a declining trend. It was 9,446 tons in 1957, declined to 8,387 tons in 1958, to 7,158 tons in 1959 and 3,364 tons in January-May 1960. The production of aluminium conductors was 15,366 tons in 1957, 14,740 tons in 1958, 16,646 tons in 1959 and 6,805 tons in January-May 1960. The Planning Commission has tentatively fixed the targets of capacity and production of A.C.S.R. by 1965-66 at 55,000 tons and 44,000 tons, respectively. That would indicate that there is considerable scope for the expansion of the industry. It is understood that licences have been issued to more units for the manufacture of aluminium conductors and that some of the units which had received licence at the time of the last enquiry are still to go into production.

Raw Materials

The main raw material for the manufacture of bare copper conductors is electrolytic copper wire bars. There is no domestic production at present and the entire requirements of the industry are met through imports. However, it is understood that the Indian Copper Corporation has been licensed to produce 8,400 tons of electrolytic copper a year and that it is expected to go into production by 1962-63, provided it gets sufficient foreign exchange for the import of plant and machinery. The copper wire bar in which form electrolytic copper is at present imported is free of duty. As for the manufacture of copper rods needed for wire drawing, there are five units in production. Their total capacity is 18,420 tons on single shift and the production was 11,608 tons in 1957, 11,817 tons in 1958 and 14,560 tons in 1959. One more unit, namely, Hindustan Transmission Products Ltd, New Delhi, has also been licensed recently for the manufacture of electrolytic copper rods.

The important raw materials for A.C.S.R. are conductor-grade aluminium ingot-bar or rod and high tensile galvanised steel wire. All aluminium conductors require only conductor-grade aluminium ingot-bar or rod. A good part of the conductor-grade aluminium is still imported. The Indian Aluminium Company Ltd is the only unit which at present produces electrolytic aluminium in the country. Its production was 2,338 tons in 7957, 2,400 tons in 1958 and 2,751 tons in 1959. When sanctioning the additional capacity of 10,000 tons to the Company, the Government has stipulated the quantity of electrolytic aluminium to be produced by the Company. Further, as new units have been licensed and considerable expansion of capacity is envisaged in the third plan, it is reasonable to expect that the entire requirements of the aluminium conductor industry for electrolytic aluminium would be met from domestic sources.

NEW TARIFF ENQUIRY INTO BALL BEARINGS INDUSTRY

CONSUMERS NOT SATISFIED WITH QUALITY

PROTECTION was first granted to the ball bearings industry for a period of two years ended 31st December, 1954, by converting the revenue duty of 9¼ percent *ad valorem* into a protective duty. In consultation with the Tariff Commission, the period of protection was later extended up to 31st December, 1956. This has been subsequently extended up to 31st December, 1960. A fresh enquiry is currently being held in order to determine whether the protection granted to the industry needs to be increased, decreased, modified or abolished altogether. At the last enquiry, after examining the requirements of different consuming industries such as electric fans, electric motors, motor-vehicles, pumps, machine tools, ring-frames, and sharp cutters, the domestic demand for ball bearings up to 2in bore diameter was estimated at 1.6 million in 1956 which was expected to rise to 2.5 million in 1960-61. In connection with the present enquiry, the Development Wing has estimated the current demand at 4 million bearings a year and expects it to increase to 11.68 million by 1965-66. These estimates, it is claimed, have been prepared on the basis of the targets fixed for the third five year plan, and include the demand both for original equipment and replacement covering also the field of industrial machinery. The National Engineering Industries, Jaipur, has estimated the current demand at about 3.45 million and expects it to increase to 5.96 million by 1963. On the basis of the sales of bearings produced in the country and imports, the apparent consumption was 2.35 million in 1957, 2.50 million in 1958 and 2.34 million in 1959.

Producing Firms

In 1956, there was only one unit, namely, National Engineering Industries Ltd, producing ball bearings. The actual production of bearings up to 2in. bore diameter was 1.6 million in 1957, 2.1 million in 1958, 1.7 million in 1959 and 1.3 million during January-June 1960. Besides bearings up to 2in. bore diameter, the Company produces other sizes of ball bearings, roller bearings up to 2in. bore diameter, steel balls, axle boxes for locomotives and spindle inserts. Two more units have been licensed for the manufacture of bearings, one in Poona with a capacity of 1.5 million bearings and the other in Bombay with a capacity of 1.6 million bearings on double shift. These two units have not yet established their factories. However, a small unit with a capacity of 25,000 bearings a year has been set up in Lonavla. It is at present producing only thrust bearings. The Director of Industries, Punjab, reports that there are 14 small-scale units producing bearings in that State.

Complaints about Quality

There has been some improvement in the quality of indigenous bearings, but complaints still persists and some defects such as noise level in the bearings and tolerance of dimensions are noticed. It is also stated that the life of indigenous bearings is shorter than those imported. The National Engineering Company has claimed that it has introduced quality control and has also installed necessary equipment for the testing of its products at every stage of manufacture. The quality of bearings is of vital importance to all the industries which use it. The Tariff Commission, said Mr. K.R.P. Aiyangar, chairman, while opening the fresh enquiry, would like to examine this question in detail and find out what further steps the industry should take to remove the defects in the bearings pointed out by the consumers.

Since October 1958, the value of import licences for restricted categories have been reduced to 2½ percent for ball bearings up to 1in. bore diameter and 5 percent for ball bearings for 1in. to 2in. bore diameter. Licences for unrestricted categories are issued liberally. The total imports of ball bearings were valued at Rs. 100.37 lakhs in 1957, Rs. 61.12 lakhs in 1958 and Rs. 48.29 lakhs in 1959. The main sources of imports are West Germany, the U.K., Italy, Russia, Sweden and Austria.

The Commission, Mr. Aiyangar further said, has received a large number of complaints about the selling system of the National Engineering Company from the dealers as well as from the consumers. One of the common complaints is that distributors and dealers are changed frequently and the consumers are often put to difficulties in getting deliveries in time, receiving after-sales service and getting complaints attended to. The prices are also said to be high relative to the corresponding imported type of bearings even after payment of the heavy duty. "I would like to remind the National Engineering Company that as a protected unit and as a virtual monopoly unit in the indigenous industry, at present being the largest single producer, it has a special obligation to the consumer to satisfy his requirements at reasonable prices and remove causes for complaints about its products," Mr. Aiyangar said.

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field. and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government departments, railway administrations, chambers of commerce and industrial associations.

Jute

FIRM TREND MAINTAINED DURING THE HOLIDAYS

MILL DEMAND CONCENTRATED ON QUICK SHIPMENT JUTE

THE raw jute shortage continues to dominate the Calcutta markets, as supplies do not appear to have eased over the past few weeks. Many thought that with the closure of markets and mills for the Puja holidays, the excitement would fade away and prices would become more realistic. But this has not happened, although the trade agrees that fibre and gunny rates are too high, and something should be done about it. The mills have, on the one hand, been claiming that they are not interested in purchasing jute and have thus been trying to bring down prices. But, on the other hand, they have in fact continued to buy fibre, particularly in the agencies. Many sellers are as anxious as the industry to see a fall in fibre prices, so that they can then fulfil low-priced contracts with a smaller loss; but they too are being encouraged to "make hay while the sun shines" by taking advantage of the increased demand and the premiums the mills are prepared to pay.

The mills as a whole are probably not very short of jute, but the trouble is that the stocks are unevenly distributed. Some mills are in a very vulnerable position, and it seems unlikely that they will be able to extricate themselves from it until more jute becomes available. Uneven distribution, however, is not the only difficulty. Those mills which earlier were gentlemanly enough to abide by the "gentlemen's agreement" not to buy jute are now paying the penalty by being short of jute. This is the main reason for the current demand for quick shipment fibre in the form of ready bills of lading which command fancy prices. Other mills which acquired their stocks by more speculative methods are in a much safer position. Doubts continue about the size of the Indian crop, and many people think that there will be a very tight squeeze in jute towards the end of the season. Only time will show whether this opinion is correct, but if it is, the position may worsen before long. The statistics available so far lead to no definite conclusion. It is too early to make firm predictions; but on the figures available, and assuming that the mills in India will consume approximately the same amount of fibre during the current season as they did during the last season, there should be just enough to go round, with little left to cope with unforeseeable needs or for the carryover. Much will depend on the ultimate size of the crop and its successful harvesting; the actual cutting of the crop has so far not been hampered.

Fibre Arrivals

The increased demand from mills and the desire to cover at a time when imports upcountry are scanty have inflated jute prices. Arrivals in the receiving centres have been held up recently due to bad weather and the lack of transport. Arrivals have also been small in the local Cossipore markets. In addition, arrivals of raw jute at Calcutta and mill stations have been far from satisfactory. During August, they amounted to 231,650 bales, consisting of 23,450 bales from Pakistan and 208,200 bales from India. Although the total was better than in the previous month, it did not compare favourably with the August figure for previous years. Total arrivals during July-August 1960 were a record low of 409,300 bales, made up of 61,100 bales from Pakistan and 348,200 bales from India. Arrivals from Pakistan showed a welcome improvement of 25,900 bales compared with the corresponding period of 1959, mainly due to the increase in the import of Pakistani cuttings; but those of Indian origin were 262,500 bales behind last year, making an overall shortage of 236,650 bales. During August, the estimated raw jute consumption of mills reporting to the I.J.M.A. was 521,000 bales, bringing the total consumption for July-August 1960 to 1,011,500 bales. This was 602,200 bales more than the arrivals during the same two months. In 1959-60, the estimated consumption during the first two months was 1,020,000 bales, or only 371,000 bales more than the arrivals.

Pakistani Cuttings

The position of Pakistani cuttings has again evoked much comment. Many mills have still to receive licences against their allocations, so sellers have been prevented from registering their E.P.C. forms. Meanwhile, prices in Pakistan continue to rise, and just before the holidays, indications were based on Rs. 150 a bale, which means about Rs. 175 landed in Calcutta. Although there were still buyers at just below this price in Calcutta, there were very few sellers. The general opinion in Pakistan is that many will have difficulty in fulfilling outstanding contracts, as there is also a big demand for cuttings in Pakistan for internal consumption.

The bearish reaction which usually follows inflated prices has not become apparent in the Calcutta markets. Selling pressure from mills, profit-taking in the fatka market, and the lack of overseas interest have failed to depress prices. On the contrary, gunny prices have risen to new high levels, influenced mainly by the very steady trend in fibre. During the past fortnight, there have been only six days when the markets were officially open. Even so, gunny values have fluctuated widely, mainly on speculative activity; gains and losses of Rs. 2 or more in one day have been common whenever the markets were open. The general atmosphere throughout this period has been one of tension and uncertainty.

Overseas Buyers Worried

Overseas consumers are viewing the current situation with obvious concern. Enquiries from abroad are very few, and buyers there are working on a hand-to-month basis. Operators, both here and abroad, are greatly worried about the long-term effects of excessively high prices. The heavier margin deposits imposed by the East India Jute and Hessian Exchange have not had much effect and many now advocate stricter controls. It is understood that the question has been discussed in detail, and the margin deposits were reviewed at a recent board meeting of the Exchange. But so far no fresh developments have followed.

THE JUTE MARKETS

Manufactured Goods: The market was very steady at the opening on Thursday, 22nd September. This was mainly because the I.J.M.A. decided to extend its voluntary loom sealing scheme for a further period of two months up to 31st December. Opening B Twill quotations jumped by Rs. 1.95 to Rs. 41.25 for September shipment, while January-March shipment moved up by Rs. 2.25 to Rs. 134.25. Hessians also improved and 40in. 10oz. rose by Re. 1 to Rs. 49.35. No foreign business was reported at this stage, but prices continued to rise until both sacking and hessians reached new high levels—B Twills at Rs. 143 and 40in. 10oz. at just over Rs. 50. Quieter advices from the jute market prevented a further rise, and much of the previous day's gains were lost although the undertone remained steady. With the lack of overseas buying, prices showed a considerable discount over the weekend and the market closed before the Puja holidays on a quiet note. There was little change on Saturday, 1st October, when the market reopened and it took some time before operators were able to make their presence felt. An increase in overseas interest and covering by local shippers soon restored the bullish tendency. B Twills moved quickly back to the Rs. 140 mark. The jute section extended its influence, and mill interest in fibre ensured the maintenance of prices. Calcutta mills were not particularly keen to enter into any transactions due to the continuous fluctuations, but the steady tendency continued and the market closed on a very bullish note.

Quotations on Monday morning were as follows:

	Ready	Oct.	Nov.	Dec.	Jan.-March
40in. 7½oz.	37.00	37.00	37.05	37.05	37.10
40in. 8oz.	40.25	40.00	39.75	39.60	39.60
40in. 10oz.	49.20	49.30	49.60	49.45	49.50
B Twills	140.50	138.00	137.25	137.00	136.75
Heavy Cees (Plain)	139.75	138.75	137.60	136.75	136.50
A Twills	167.50	166.00	164.00	163.50	163.00
Liverpools	157.50	157.00	156.50	155.00	155.50
Cornsacks	145.00	143.25	140.00	139.00	138.75

Raw Jute: Mills showed steady interest throughout the past fortnight and business was done almost daily. The main interest was in quick delivery jute, or ready bills of lading, or rail receipts. Opening quotations were based on Assam jute at Rs. 42.50 a maund, but these proved to be purely nominal as rates rose rapidly with the demand in both Calcutta and the upcountry agencies. Mill agents were very active and there was no parity between agency prices and those quoted in Calcutta. Even during the holidays, mills continued to show interest, this time in mesta, and good business was reported for forward shipment at rising prices between Rs. 41 and Rs. 42 for October-November. In the short interval between the two holidays, a fair amount of business was transacted and Assam Bottoms were quoted at Rs. 44 for October shipment, but ready bills of lading passed at Rs. 44.50 to Rs. 45.50 before the close. The market became very bullish on Monday, 3rd October, due to speculative activity and mill interest. At this stage, most sellers withdrew.

Quotations on Monday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	120.50	45.00	Oct.-Nov.
Northern	119.25	44.50	"
Purnea Desal	116.50	43.50	"
Daissee Selected	121.75	45.50	"
Assam Tossa	121.75	45.50	"
Mesta:			
Assam-Northern	112.50	42.00	"
Daissee	112.50	42.00	"
Jungli	111.25	41.50	"
Pakistani N. C.	175 a bale		

THE PAKISTANI JUTE MARKETS

FURTHER RISE IN CUTTINGS

(FROM OUR EAST PAKISTAN CORRESPONDENT)

CUTTINGS continue to dominate the pucca bale market in Narayanganj. During the past 14 days, prices have risen from Rs. 120 a bale to Rs. 140 a bale, at which level considerable business was done. When one of the larger buyers started profit-taking, there was a pause and eventually a decline to Rs. 125 a bale. The big stockists and the bulls returned to the market at this level, offering to buy at Rs. 2 a bale higher and in a few days, the market was pushed up once again to Rs. 140 a bale. The Puja holidays, which were accompanied by heavy rains, helped to create a quieter feeling, but the position remains the same as far as prices are concerned.

There has also been some activity in baled long jute and prices now stand as high as Rs. 265 sellers for Export Firsts, which is higher than overseas parity. This may be partly because of the general bullish sentiment and partly because quite a few balers are short and have a considerable amount of covering to do. The upward trend of the market does not encourage anyone to wait for lower prices before covering.

It is rather more difficult to quote prices in loose jute. The best way to evaluate this section is to say that although prices have risen by Re. 1

NEWS! India's First Financial Daily Newspaper

THE FINANCIAL EXPRESS

EDITED BY G. M. LAUD

Here Soon! India's First Financial Daily Paper to bring you every morning up-to-minute authentic information on market prices and trends—finance—and economic reports!

Complete Financial News Service for Bankers, Industrialists, Investors and Traders — Edited by G. M. Laud.

The Financial Express — India's first financial daily newspaper, is to be published by Indian Express Newspapers, Bombay, very shortly.

The Financial Express will be edited by G. M. Laud, the well-known financial journalist, author and banker, assisted by a team of experts specialised in finance, commodities, trade, industry, politics and foreign affairs. Augmented by news service from overseas markets, and a complete network of teleprinter communications between the business centres throughout India and overseas.

The Financial Express will tell you all the things you want to know in the world of business — accurately and faster than ever before! — It will only cost 25 nP a copy. So why not tell your newsagent today to reserve your copy.

- **MARKET TRENDS AND QUOTATIONS**
  Fast teleprinter communications system will give you each morning, the latest quotations and comments from all the stock exchanges and commodity markets in India.
- **FOREIGN MARKET REPORTS**
  London Stock Exchange—Wall Street—Continental Bourses—and commodity markets will be covered by correspondents who will give you latest news and potential developments.
- **MARKET INTELLIGENCE SERVICE**
  Expansion of export trading, will be assisted by well-informed exclusive reports on world's leading markets.
- **BANKING AND FINANCE**
  Economists will comment and analyse everyday finance—world banking policies—and international economic activities.
- **INDUSTRY, TRADE AND COMMERCE**
  You will receive appraisals on Government policy—problems of management and labour—new developments in production techniques.
- **NEW ISSUES AND DIVIDENDS**
  Details of company registrations, and impartial analyses on new issues and balance sheets will be given by experts.
- **INVESTORS GUIDE**
  Every week the 'Investors Guide' will give you sound advice on profitable market investments

MACHINERY FOR JUTE, FLAX, HEMP & TOW

or Rs. 2 a maund, the actual cost has risen even more since too much of water is being added to the jute. The problem of moist jute is more serious than ever before. While it is easy to blame the jute inspectors for laxity, this is only partly the answer. The growers, as usual, have taken advances from *jarias*, who this season are smaller in number due to losses last year, and being smaller in number, have been able to squeeze higher interest out of the growers. Added to this is the fact that the grower has, generally speaking, received a poor outturn from his field. To make up for this loss, he is adding water to his jute, which is normally done by the middlemen. The middlemen, assured of their position by a daily rising market, have been adding even more water before presenting the jute in the bazaar. The baler, however, cannot escape a certain proportion of the blame. A concerted effort by all balers to reject wet jute would undoubtedly put a stop to this malpractice. Recently, there have been rumours that the Martial Law Authorities will be taking from the Directorate of Jute the authority to penalise balers in wet jute. There is no doubt, however, that a considerable amount of damage has already been done and overseas buyers will be complaining bitterly of the loss in weight through wet jute. It is likely, however, that some of the jute will have been shipped so wet as to be heart-damaged. Although the buyers will receive compensation for this, it will be cold comfort this season since the jute will be very hard to replace.

During the first half of September, overseas buyers bought nearly 600,000 bales, which is a record for a fortnight. In spite of this rush of sales, overseas buyers, after a very short pause, are still in the market, and in spite of daily rising prices, latest reports indicated that there is a shortage of sellers rather than buyers. Export Firsts, which at one time were being sold this season at a discount of £110, are now hard to find at £132. Other qualities of white and tossa have similarly risen. Judging by the shortage of the crop and the sentiment in the market, there is every reason why this rise should continue.

Although overseas buyers have continued to buy long jute, they have not been able to follow the rise in cuttings. After the first spurt of buying, they have left this section of the market to the Indian and Pakistani mills. In fact, the E.P.C. price for the export of cuttings has recently been reduced by £1. India, which is buying considerable quantities, has been buying mainly for ready shipment. Reports indicate that exports during September to India have been the largest so far. This may well create a shortage of barges during October, creating delays in shipments for overseas countries. It was expected that the Puja holidays would cause less demand and greater arrivals. Unfortunately, everything this season seems to have a bullish trend, and although demand fell off due to the holidays, the imports did not increase because of exceptionally heavy rains. The prospects for October are heavy shipments, heavy local buying and very few overseas sellers.

THE FOREIGN JUTE MARKETS

CLOTH AND YARN PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices strongly advanced during the past two weeks and there were two rises in values of jute yarns and cloth in Dundee. The first took effect from 17th September and the second exactly a week later. Most yarns were raised by £5 a ton, but the better-class qualities were allowed to remain unaltered. This was corrected on 24th September, when J.C.C., J.C.L., J.C.T. and fine yarns, such as the former Rio, were raised by £10 a ton.

Ordinary C.H.W. cops were up from 17.73d a lb to 18.30d a lb for 8 lbs, then further raised to 18.87d a lb later, while 8 lbs J.C.H. warp rose from 18.87d to 19.45d and then to 20.02d a lb. Three ply 8 lbs twist was raised from 20.79d a lb to 21.37d on 17th September and then to 21.94d on 24th September. Rove jumped from £114 10s to £122 15s for 48 lbs and from £82 10s to £85 5s a ton. Yarn buyers have not followed the advance, as they were already fairly well bought.

Spinners are also well placed with orders for delivery over the next two or three months, and manufacturers are generally booked in many widths up to the end of the year. The only thing they complain about is the rise in prices against their customers, for whom they have every sympathy. The market believes that the present firm trend in prices can only be temporary and that when fibre imports from the upcountry markets are more regular, there might be a fall in prices. Hessian cloth values are up to 16.01d a yard for 40in. 10oz. and 13.51d for 8oz. Heavy goods are all up by about £10 a ton over the past two weeks.

Raw jute prices were firm last week but in many cases were nominal because of the Pujas. Mill Firsts were quoted from £139, Mill Lightnings £131, Mill Hearts £127 and Grade Hearts £124, with Grade Tossa-2/3 from £139 and fours £129, also Continental Tossa-2/3 from £127, October-November, c.i.f. U.K.-Continent.

The Calcutta goods market was irregular as usual, but with an undercurrent of strength: 40in. 10oz. was quoted at 74s 6d and 7½oz. 56s 3d October and November, 3d less December, and 74s 3d and 55s January-March B Twills 209s 9d, 204s 9d, 203s 3d and 203, respectively, f.o.b. Calcutta.

Calcutta Markets

HIDES AND SKINS QUIET

THE market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 27th September and 3rd October, 1960)

Cowhides: Wet salted (Slaughtered) 8,200 pcs. on the basis of Rs. 8 to Rs. 16 and Rs. 19 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 64,900 pcs. on the basis of Rs. 330 to Rs. 350, Rs. 360 to Rs. 390 and Rs. 425 to Rs. 450; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Assam 11,300 pcs. on the basis of Rs. 280 to Rs. 315; Patna (Ord.) 500 pcs. on the basis of Rs. 270; Patna-Muzaffer-pore-Purneah 4,000 pcs. on the basis of Rs. 450 to Rs. 490.

Bazaar Stocks

(3rd October, 1960)

Cowhides: Wet salted 134,800 pcs.

Goatskins: Wet salted (Daissee, Kustia, Patna) 17,000 pcs.; Assam-Dinajpur 170,000 pcs.; Muzaffer-pore-Patna-Pakur-Purneah-Kissenganj 248,500 pcs.

LINSEED DULL

The linseed market was dull in the past week due to the Pujah holidays. Prices fluctuated narrowly. Sellers showed little interest. Business in the oil market was slow with buyers and sellers pausing. The oilcake market showed little change, and a small volume of local business was done. Foreign markets were also dull. The latest quotations are as follows: Ready Rs. 25.62 a maund.

COMPANY AND PUBLIC NOTICES

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Extension of date for submission of coupons and applications in respect of new Ordinary shares.

NOTICE is hereby given that the extended period for submission of coupons in respect of the new Ordinary shares in terms of the Company's Circular dated the 12th October, 1959 expires on the 29th September, 1960. As some shareholders have not yet exercised their right to obtain shares by submitting the requisite new Ordinary share coupons, the Directors have extended the period for submission of such coupons to 31st December, 1960, and the Company's bankers have accordingly been authorised to receive applications on and after the 1st October, 1960 upto but not later than the 31st December, 1960 in respect of such coupons provided that along with each such application with the required coupons and the moneys to be received with such application interest at the rate of 9% per annum (which the Directors have decided to charge) shall be paid to the Company's bankers as under :—

(i) For applications with new Ordinary share coupons from resident shareholders from 16th December, 1959 to the date of payment; and

(ii) For applications with new Ordinary share coupons in the case of non-resident shareholders from 1st June, 1960 to the date of payment.

The Directors have also resolved that the last date for receiving applications in respect of new Ordinary shares from the non-resident shareholders which was 29th September, 1960 be extended upto 31st December, 1960 provided that along with each such application and the moneys to be received with such application interest at the rate of 9% per annum thereon (which the Directors have decided to charge) from 1st April, 1960 to the date of payment shall be paid to the Company's bankers.

No applications received from resident shareholders on and after the 16th December, 1959 and from non-resident shareholders on and after the 1st June, 1960 in respect of new Ordinary share coupons and no application received from non-resident shareholders on and after the 1st April, 1960 in respect of rights to new Ordinary shares will be entertained by the Directors unless interest is paid as aforesaid. No such application will be entertained after the 31st December, 1960.

The above extension of date does not apply to applications in respect of "A" Second Preference shares or "A" Second Preference share coupons, the last date for submission of which was 29th July, 1960.

Dated at Bombay this 28th day of September, 1960.

By Order of the Directors,
For and on behalf of

BANKS

H. indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A WEAKER DOLLAR: PROBLEMS AND PARADOXES

IT is now sure that the recession prophesied for the United States for the year 1961 has arrived, rather earlier than expected. There are so far no sound grounds for supposing that it will be a serious one or even that it will go far beyond a severe shake-out in Wall Street and a temporary lapse of business confidence through the winter. Guesswork on that point is unnecessary here. What is more interesting to the world at large is the effect of such measures as Washington might take to stop the recession on the other problem that has been preoccupying the United States for two years past, the fall in U.S. gold reserves. There are two possibilities. Washington might consider that the recession was the more urgent problem and that it had to be combatted even at the cost of further gold losses. Or it might think that the drain on the reserves was becoming worrying, by undermining confidence in the dollar, and that it had to be stopped even at the cost of accentuated stagnation in the U.S. economy. So far, the American authorities have chosen the former course; they have made credit cheaper than elsewhere in the world, in order to stimulate business, although the gap between interest rates on the two sides of the Atlantic has been hastening the outflow of capital.

Maybe there is an element of electioneering in this decision. On the eve of choosing a President and a Congress, all voters are aware of the slowdown in business and the fall in the stock markets but few individuals are losing sleep about the level of the reserves. Yet the choice can be justified on more respectable grounds. A recession would be a graver threat to the nation's (and the West's) prestige and security than a few thousand millions more off the reserves. The reserves in fact are still quite high, and the most one can say about them is that recent losses cannot be allowed to continue indefinitely, although nothing must be done to protect them that would reduce the heavy U.S. contribution to Afro-Asian development and western military security. Thus the American dilemma is neither acute nor dramatic, but it is a dilemma. After years of expansion and defence preparation at home and two decades of giving, lending and investing abroad, the point has been reached where what is good for the U.S. economy is not good for the status of the dollar as the world's principal money. Of course, this is precisely the dilemma Britain has had to face, in much more tragic form, since the war, when the conflict has arisen between the needs of the British national economy and the obligations laid on sterling as the world's second money.

Now, these are not simply national problems that concern only those two nations. They are issues that lay bare the paradox of the gold-exchange standard on which all the world's trade is today based. Before the first World War, governments backed their internal currency and their foreign trade deficits with gold. That was the gold standard. They have long since ceased to back their internal circulation with gold or anything else, and all currencies today (including the dollar, whose face value is six or seven times the gold in Fort Knox) are fiduciary. Since the 1920's, the governments have backed their external trade deficits partly with gold and partly with reputable foreign currencies. That is the gold-exchange standard. The proportion of those foreign currencies—in practice, dollars and sterling—in the central gold and foreign exchange reserves of nations other than the United States and Britain has increased from 9 percent in 1913 and 25 percent in 1928 to over 50 percent today. Therefore, under the gold-exchange standard, the value of those nations' reserves, and hence the size of the deficits they can afford to incur in foreign trade, depend on two things, the supply of gold and the supply of dollars and sterling.

The supply of gold is limited by the world's mining industry. It is constantly expanding but much more slowly than world trade and hence more slowly than trade deficits and the reserves required to meet them. So most of the extra reserves must come in the form of the two major currencies that can be exchanged for gold—dollars and sterling. Then, what fixes the supply of these? Obviously, there is only one source, the balance of payments deficits of the United States and Britain. If the United States, to take the stronger currency, does not run a big enough payments deficit, there is a scarcity of the material used to build central reserves when there is not enough gold: that situation is the famous dollar shortage. If, on the contrary, the United States runs a big deficit—whether by importing more than she exports, or by lending, giving and investing abroad—there are plenty of dollars to go round, and cautious governments can build reserves proportionate to the volume of their foreign trade.

Yet in this latter case of a plenitude of dollars, if governments are really cautious they must reflect that they are consenting to build reserves in dollars only because dollars are as good as gold, as the name "gold-exchange standard" asserts. But is a country's currency really as good as gold if it is running immense and persistent payments deficits? If all the holders of dollars decided to find out, by trying to convert a large part of their dollar balances into gold, there would be such pressure on the dollar that Washington would be forced to devalue or make the currency inconvertible. At first, this might seem unlikely. But it is precisely what has happened several times in our generation with the world's other master-currency, sterling, and mistrust of the dollar has been so marked in the past two years that those eventualities have been publicly discussed. The alternative would be to make dollars scarce again by slashing foreign aid programmes, resorting to protection or allowing the U.S. economy to stagnate, all of which are undersirable for the world economy. Such extreme measures are as yet improbable, but what is quite thinkable—what in fact already exists to a certain extent—is that the United States will be faced with the awkward choice, whether to follow a credit policy suited to combatting a depression or whether to stem the outflow of capital towards Europe.

This is the paradox of the gold-exchange standard. Nations can only accumulate dollars in their reserves if there is a U.S. payments deficit, yet that very deficit—if it is big enough and persistent enough to ensure reserves adequate for expanding world trade—automatically saps confidence in the dollar. That is the position today: west European reserves have never been bigger, and confidence in the dollar has not been lower for a generation. The world cannot do without dollars, and yet it cannot use them beyond a certain limit without compromising their value—and that limit is lower than what is required by the rate of expansion of world trade now made possible by the recovery of western Europe and the quickening development of Asia and Africa. This state of affairs can be made to seem tolerable only if one under-estimates the likely expansion of world trade in the years ahead. That is what the I.M.F. experts did at their New Delhi meeting, when they forecast that the average rate of growth of production and international trade in the next ten years would be 3 percent, whereas in reality it has been 6 percent since the war. To accept the gold-exchange standard as a safe basis for future world trade is to gamble on depression, war and the failure of Afro-Asian development as a means of limiting the volume of international commerce.

These are the reasons why the replacement of the gold-exchange standard has become a live issue among monetary theorists this year, stimulated by the present coincidence of recession and capital losses in the United States. The best known suggestion is the one canvassed by the Yale economist, Robert Triffin, which would mean replacing the present sums of dollars and sterling held in reserves by central banks with credits created by the I.M.F. and convertible into gold at a rate guaranteed by that Fund. The technicalities of this operation are not of general interest; it is enough to see that it revives the plan put forward at Bretton Woods by Lord Keynes, to which was preferred the American "White Plan".

Keynes, and now Triffin, wanted the world to have a real central bank, guaranteeing the value and controlling the volume of the token-money used in international trade, precisely as each nation's central bank does for the currency used in domestic operations. Just as, in India and elsewhere, the system of leaving the nation's currency backing scattered among various private banks led to crises and failures until that backing was centralised in the Reserve Bank, so the centralisation of international exchange reserves is recommended for the trading world as a whole. Perhaps the main interest for India of such a proposal is that it would, by placing immense liquid resources at the disposal of the I.M.F., make it a real bank capable of lending on a scale commensurate with this country's needs. Indeed, this is the traditional objection to a Keynesian reform of the gold-exchange standard: it would enable the I.M.F. to lend too lavishly and thus generate a world inflation. Yet it seems reasonable that suitable restrictions could be imposed on the I.M.F.'s lending so that it could avoid that error while still ensuring an adequate expansion of international liquidities in line with the growth of world trade. This is something which, we have seen, cannot be ensured at present without creating difficulties for the world's two bankers, the United States and Britain.

The introduction of so considerable a reform would demand time. If all goes well, the world can afford to wait—that is, if the United States manages to curb the recession and stem the fall in reserves, without damaging its partners and dependents; but it cannot wait indefinitely. The insufficiencies of the gold-exchange standard will become more and more evident as world trade expands, and as the relative shares of the United States and Britain in it shrink in comparison with those of Continental Europe and developing Asia. On the other hand, the world will be less inclined to wait if something not at all improbable happens —if the U.S. recession deepens while the flight of capital from New York continues, necessitating drastic and contradictory measures that will bring out clearly the paradox of the present system.

Meantime, there is something useful that can be done to patch up the gold-exchange standard in an era of convertible currencies, and it was touched on by Mr. Morarji Desai in his address at the recent World Bank meetings. This is international co-ordination of restrictive monetary policies, which are now decided upon by national governments without consulting their neighbours and partners. Mr. Desai was thinking mainly of the mutually throat-cutting restrictions of developing countries, but the question is even more urgent inside the Atlantic world. If countries like West Germany and Britain pursue dear-money policies for domestic reasons, while the United States has to cheapen credit for domestic reasons, there are set up vast tides of "hot" money and other international funds whose movements (nowadays facilitated by non-resident convertibility) undermine the deficient banking system on which world trade rests. If partial convertibility is to work, and even more so if full convertibility were seriously contemplated, some co-ordination of money rates in the principal trading countries is an immediate necessity. The co-ordination will not be easy to achieve. Yet the west European countries will have to face the fact that the outflow of gold from the United States may bring the American authorities to the point where the latter feel that some drastic action is needed. For political as well as economic reasons, this would not be welcome. That is why the sooner proposals for co-ordinating money rates are investigated, the better it will be.

CATERING FOR THE CONSUMER

ONE of the major weaknesses of the second five year plan has been the excessive concentration on developing heavy industries. The investment made in such industries invariably takes a long time to mature. Meanwhile, it generates purchasing power, which tends to push up prices, especially if the supply of consumer goods does not increase as fast. During the second plan, not only have heavy industries been promoted at the expense of those manufacturing consumer goods, but altogether too high a proportion of the investment has been backed by deficit financing. As a result, prices have risen steadily. Mr. J. R. D. Tata recalled in his address from the chair at the annual general meeting of the Tata Iron and Steel Co. Ltd in Bombay last Thursday that "in the last five years alone, the purchasing power of the rupee has fallen by about 35 percent." (A fuller version of the speech is printed on a later page.) The pattern of development proposed during the third plan period is similar, so it would not be surprising if inflationary pressures increase further in the years to come. Because of labour troubles, especially the recent Central Government employees' strike, and the rise in administrative and industrial costs, New Delhi is beginning to realise that inflation can be harmful, even dangerous. The deficit financing proposed during the third plan period, therefore, is to be reduced to the more reasonable level of Rs. 550 crores, and vigorous efforts are to be made to increase food production. But many fear that even if the results in these two aspects conform with the present targets, inflation will not be checked. While first priority needs to be given to achieving self-sufficiency in food, the production of other essential consumer goods will also have to be increased rapidly. It is doubtful whether the latter requirement has been considered seriously.

Mr. Tata pointed out that once the purchasing power has been generated in the economy, there are three main ways of trying to keep down prices. One is to impose drastic controls over the whole field of consumption. But this "would be both objectionable and impracticable in a country like ours"—and the assertion is borne out by the failure of attempts to control the prices and distribution of commodities like cereals, sugar and cloth in recent years. The second way is to mop up the excessive purchasing power by imposing additional taxation. This too cannot be done easily, since direct taxation is far too high, and has already affected costs and prices. The planners have indicated that most of the additional tax revenue of Rs. 1,650 crores or so they want to raise over the next five years will be found through indirect levies. But it is hard to think of a fiscal policy that is judicious and rational, and yet raises so much extra revenue without at the same time pushing up prices. The fact is that when shortages are acute, as they are in India at present, most of the increase in taxes and costs tends to be passed on to consumers in the form of higher prices. The main way of checking inflation thus lies in the third possibility Mr. Tata visualised. This is to take energetic measures for increasing the supply of consumer goods. The success of schemes to raise food production remains to be seen; the achievements hitherto have been none too encouraging. But a major defect of the Government's policy is that in many other spheres it is deliberately restrictive. The production of cloth by the textile mills has been held down for ideological reasons during the second plan; and will be again during the third. Although the shortage of sugar remains acute, the third plan target for the commodity is modest. The Central Food and Agriculture Minister is meanwhile going round talking as if India is now in a position to launch forth as a major exporter of sugar.

The choice between heavy capital goods industries and light consumer goods industries is always a difficult one. In theoretical terms, it may not be easy to say whether a country is at the stage where it would be best advised to concentrate on the one rather than the other. Heavy industries have their advantages. They can help reduce imports as the steel plants hope to do; they can promote the growth of secondary and tertiary enterprises, which too can provide a large number of jobs; they represent more spectacular achievements, if that is required for political reasons; and, by stimulating further growth, they can induce the mobilisation of new capital. But consumer goods industries offer no fewer advantages. Their rôle in saving and earning foreign exchange, which is a major criterion for industrial priorities these days, can be great. Mr. Tata pointed out, for instance, how the failure of agriculture has cost the country heavily, as over Rs. 1,000 crores of foreign exchange have been spent on food imports since 1948, apart from the Rs. 500 crores of food obtained under P.L. 480 from the United States. The neglect of consumer goods industries has similarly meant a large loss of foreign exchange, even though probably no accurate estimate can be made of the loss resulting from the textile industry not being allowed to expand, or the sugar industry not being persuaded to become more efficient.

While Mr. Tata was right in pointing to the harm done by not developing consumer goods production fast enough, however, it might have been fairer if he had also mentioned how much foreign exchange has been spent on steel imports. It is reported that, in 1957 and 1958 alone, India spent over Rs. 250 crores on imported steel, a sum which might have covered the foreign exchange cost of a steel plant bigger than Mr. Tata's present expanded one. Since it is precisely circumstances such as these that appear to govern the Government's thinking, the steel industrialist's comments on them would have been interesting. One hopes that anything he might have had to say there would not have undermined the validity of his basic theme—that consumer goods industries have been unduly neglected. The latter argument is reasonable, whether or not one supports the Government's "fatal fascination" for steel and other heavy industries. Tentatively, it seems, the fact is that India is trying to set up a large number of heavy industries for which she has no obvious natural advantages, money or technical talent. They are being built at the cost of consumer goods industries, which can be developed much more easily and cheaply and which will benefit the economy no less. If, however, Mr. Tata had the expansion of the steel industry in mind and considered it too rapid, the validity of his judgment is by no means clear yet.

BIGGER SCOPE FOR THE I.F.C.

THE report of the Industrial Finance Corporation of India for the year ended June 1960 is reassuring in the sense that this institution is now in a position to expand its activities if it chooses to do so. The Corporation is one of the few institutions which provide long-term finance to industry. The demand for such finance is great, but the existing institutions are not adequate by any means. Apart from them, business entrepreneurs have to depend on the open capital market. In spite of the recent buoyancy of the latter, it is doubtful whether industry will be able to obtain much money through capital issues in the coming months, because investors might take a pessimistic view of the prospects for taxation. As for short-term financial needs, industries are being served reasonably well by banks. The scope for longer-term industrial financing by banks appears to be limited because the rediscounting facilities offered by the Refinance Corporation are for a much shorter duration than is usually required for buying fixed assets. In any case, the scope for expanding bank credit has been restricted severely by the squeeze on banking resources. Bank credit has also become much more expensive.

Under the circumstances, it looks as if the Industrial Finance Corporation will be called upon to meet more of the industrial demand for financial facilities. In fact, during the past year, the total amount of loans it approved was Rs. 17.92 crores, which is a record. Loans worth only Rs. 3.79 crores were approved in the previous year. The Corporation should have the ability to obtain more resources and expand its activities. For instance, it got more than Rs. 5.49 crores some months ago by issuing bonds on convenient terms. The total amount of bonds outstanding is Rs. 22.24 crores. Since the Corporation is backed by the credit of the Government, it could attract funds by paying interest at around Bank rate. In addition, it can obtain money from the Government, if required. It has already borrowed Rs. 13.25 crores from there.

An important feature which has increased the usefulness of the Corporation is that it has obtained a loan of $10 million from the Development Loan Fund of the U.S. Government and will be able to lend foreign exchange to industrial concerns. Most industrial projects in India require a substantial amount of foreign exchange before they start. Their implementation will be greatly facilitated if they can borrow both rupees and foreign exchange from the Corporation. As for the cost of the loans it gives, the Corporation has a substantial advantage in competing with other institutions. The interest rate of 7 percent it charges seems fair and attractive by market standards. Borrowers are even entitled to get a refund of ½ percent interest if interest and capital repayments are given regularly.

The Corporation can be of great help in underwriting issues of stocks, shares, bonds or debentures of industrial concerns. So far, it appears to have tackled this business very cautiously. During 1959-60, it underwrote an issue of 7 percent tax-free redeemable cumulative preference shares for Rs. 50 lakhs only. It has also approved two more proposals for underwriting issues of redeemable cumulative preference shares—one of Rs. 20 lakhs, carrying a tax-free dividend of 7 percent and the other of Rs. 25 lakhs, carrying a tax-free dividend of 6½ percent. In view of the expertise at its disposal, the Corporation might find it worth while extending activity in this line of business. If new capital issues are backed by an institution like the Industrial Finance Corporation, investors might find it easier to judge broadly which issues to support and which to reject. One important point in increasing the activities is that its loans can be channelled into projects which conform with the wishes of the Government. In fact, loans have so far been given largely to projects which enjoy official blessing. Many modernisation, rationalisation and expansion plans have also been financed with the Corporation's money.

The latest report indicates that the financial position of the Corporation has been strengthened. After providing Rs. 49.76 lakhs for taxation, the net profit has increased to Rs. 59.51 lakhs from Rs. 35.37 lakhs. An amount of Rs. 11.25 lakhs has been used for paying the guaranteed dividend of 2¼ percent on the share capital of Rs. 5 crores. About Rs. 38.26 lakhs is transferred to general reserve, raising it to Rs. 69.40 lakhs. The Central Government is being paid Rs. 10 lakhs on account of the subvention previously drawn from it for paying the guaranteed dividend. The outstanding subvention of Rs. 28 lakhs previously drawn will, it is expected, be repaid soon. Borrowers have generally been regular about capital repayments and interest. The amount of interest charged on all the loans advanced since the Corporation's inception is Rs. 9.21 crores, of which Rs. 9.10 crores has been received. So the default is only Rs. 10.77 lakhs, constituting 1.2 percent of the total amount due. The corresponding percentage at the end of the previous year was 1.4. The amount of principal due to the Corporation since its inception is Rs. 7.12 crores, of which Rs. 6.61 crores has been received. Extension of time has been granted to six concerns for repaying instalments aggregating Rs. 20.80 lakhs. Excluding this amount, the default is Rs. 30.69 lakhs, or 4.3 percent of the amount due. The corresponding percentage at the end of the previous year was 5.4.

Current News and Comment

The Outlook for Tata Steel

Last Friday, the ordinary shares of the Tata Iron and Steel Company could be bought around Rs. 151.75, which was Re. 1 less than the lowest rate recorded in 1959. They had been sold down to Rs. 144 in March this year. Investors in Tata Steel have thus suffered a loss even in a year of stock exchange boom. Little wonder, therefore, that shareholders spoke rather bitterly about the Company's dividend policy at their annual meeting on 6th October. They said it was only fair that they should get a dividend higher than Rs. 6.80 net as production has increased with the completion of the expansion programme. The chairman, Mr. J. R. D. Tata, admitted that investors in the steel industry have had a raw deal but said that the management is not to blame. (A fuller version of Mr. Tata's opening address is published on a later page.) The industry is controlled; it can decide neither its production nor its prices, and it has to depend on the Government for allocations of coal and transport. Mr. Tata defended the Company's dividend policy and asserted that the management has done all it could. In fact, Rs. 4.5 crores have had to be transferred from reserves for paying the dividends in the past two years. Mr. Tata deplored the inordinate delay in announcing the Government's decision on the Company's claim for an increase in retention prices. Asked about the increase claimed, the chairman said that it would not be in the Company's interest to disclose the figure. Lest undue hopes are raised among shareholders, he reminded them that nearly Rs. 4.5 crores have been drawn from the general reserve to pay dividends and that these reserves will have to be replenished first with the amount received from higher retention prices.

Referring to the Company's scheme for an alloy steel plant, Mr. Tata said the Government has made it clear that the proposal can be considered only after it has decided about the alloy steel plants in the public sector. The chairman, however, assured shareholders that they would be given preference for participating in the new Company's capital. He rejected a suggestion for merging the Indian Tube Company with Tata Steel as the present partnership with Stewarts and Lloyds is very valuable and should be continued. He indicated that part of the Indian Tube capital might be put on the market, but the amount would be small. There is no intention of selling any more shares of the Tata Locomotive and Engineering Company. An application has been made to the Ahmedabad Stock Exchange to place Tata Steel shares on the forward list. A similar application is also to be made to the Calcutta Stock Exchange.

Talking about production, the chairman said that it would take time to increase production to the rated capacity because of the various difficulties concerning raw materials and transport. The coal supplied has a high ash content and this defect can be remedied only when the coal washery starts functioning. The Company requires 460 wagons of coal daily but is getting only about 330 wagons. The management is also considering measures to use more oxygen in the manufacturing process to augment production. This may require some modifications in the steel melting shop.

Informed sources say that the alloy steel project submitted by Tatas visualises setting up a plant with an annual capacity of 100,000 tons of ingots, to be increased later to around 200,00 tons. Foreign collaboration, which is essential for the project, is likely to come from Japan. The Government is planning to produce 200,000 tons of alloy, tool and special steels a year during the third plan. Of this, the public sector is expected to produce 130,000 tons, the balance being left to the private sector. About 30,000 tons of transformer grade electrical steel sheets are likely to be made under the expansion programme of the Rourkela steel plant. The ordnance factories are expected to contribute another 50,000 tons. The remaining 50,000 tons, it is proposed, will be produced by a new unit to be set up during the plan period. The new unit is estimated to cost about Rs. 35 crores, with a foreign exchange component of Rs. 20 crores. An Indian firm of engineering consultants, which recently submitted its project report to the Government on the location of the plant, has, it is understood, recommended Durgapur as the most suitable site. The Government is expected to decide the location of the plant before the end of the year.

Bombay Burmah Pays More

The shares of the Bombay Burmah Trading Corporation have been comparatively steady on influential buying, although the rest of the market has eased. This is because it was believed that the Company was doing well, with the increase in tea output and prices. An increase in the dividend was forecast, and the market's expectations have come true. The directors have decided to recommend a final dividend of Rs. 26.50, subject to deduction of tax, on the old ordinary shares (Rs. 125 paid) for the year ended May 1960. With the interim dividend of Rs. 11 already paid, the total for the year comes to Rs. 37.50 gross, which works out to Rs. 26.25 net—Rs. 2.50 more than in the previous year. The final dividend on the original shares of Rs. 2,500 each is Rs. 530, subject to tax, making a total of Rs. 750. The final dividend on the Rs. 50 paid shares is Rs. 10.60, making a total of Rs. 15, subject to tax. The net distribution for the year works out to 21 percent, against 19 percent in the previous year. Around the current price of Rs. 570, the shares yield about 4.4 percent.

Dalmia Cement Earns More

Presiding at the annual general meeting of Dalmia Cement (Bharat) Ltd in Dalmiapuram, Madras, last Monday, Mr. V. H. Dalmia indicated that the prospects for the coming years are good. (A fuller version of the speech is printed on a later page). The demand for the commodity is expected to increase steadily. The installed capacity of the industry has been doubled to 9.5 million tons during the past five years or so. In view of the increase in demand, the production capacity is likely to be raised to 1.5 million tons by 1966. An important point is that within the next two or three years, cement-making machinery may be manufactured in India. So the rehabilitation, modernisation and expansion of the industry should be facilitated.

Dalmia Cement has produced satisfactory results for the year ended December 1959. The trading profit has increased from Rs. 35.48 lakhs to Rs. 55.35 lakhs. Of this, depreciation absorbs Rs. 10.34 lakhs (against Rs. 6.23 lakhs) and development rebate reserve Rs. 22.22 lakhs (against Rs. 3.85 lakhs). An ordinary dividend of 12 percent, taxable, has been declared. This offers a yield of 10.2 percent at the price of Rs. 11.81 a share and is covered more than twice. Taxation provision is allocated Rs. 10.85 lakhs (against Rs. 17.5 lakhs). Rahabilitation and expansion reserve receives Rs. 5.24 lakhs (against Rs. 5.21 lakhs). The carry-forward is Rs. 25,287, against Rs. 22,262 brought in.

Production and despatches of cement and ceramic products have increased. The installation of the third kiln was completed at the end of 1959 and the new plant is working satisfactorily. The iron ore department has produced fair results and the production of ore is being increased steadily. Mr Dalmia took an optimistic view of the project for producing dead and burnt magnesite. In view of the bigger demand for this product, an application has been made to the Government of India for increasing the capacity of the Dalmia Magnesite Corporation, in which Dalmia Cement has a major interest.

Barnagore Jute Does Well

The Barnagore Jute Factory Co. Ltd has produced good results for the year ended March 1960. After providing £50,773 (against £55,154) for depreciation, the profit has increased from £231,385 to £258,191. An ordinary dividend of 30 percent, taxable, has been paid, absorbing £50,531. This offers a yield of 15.9 percent at the price of Rs. 125 a share. The ordinary dividend was 10 percent in the previous year. Important allocations include £150,000 for general reserve

and £25,000 for contingencies reserve. The carry-forward is £92,399, compared with £67,968 brought in. Commenting on the prospects, the directors take a cautious view. In fact, the profits during the first quarter of the current year have fallen substantially. They also mention the possibility of higher costs if the Wage Board for the Jute Industry recommends an increase in wages. Meanwhile, the modernisation scheme is making progress. As for the sale of the South mill, the obsolete machinery has been sold, but the purchase price is short of the written-down value of the machinery by £55,000. The disposal of the South mill buildings and land is being considered by the directors.

Tulsipur Sugar to Expand

The Tulsipur Sugar Co. Ltd has been formed recently. It has taken over half the assets and liabilities of the Balrampur Sugar Co. Ltd under an order of the Calcutta High Court. Its ordinary shares have been allotted to the shareholders of Balrampur. Tulsipur Sugar has published its first report for the period from 21st April, 1959, to 30th June, 1960. The trading profit is Rs. 3.87 lakhs. Of this, depreciation absorbs Rs. 1.12 lakhs, development rebate reserve Rs. 1.34 lakhs and taxation Rs. 60,000. An interim dividend of 62nP, taxable, has been declared; it is to be considered also as the final dividend for the period. The dividend absorbs Rs. 86,804 and offers a yield of 9.2 percent at the price of Rs. 6.75 a share. The Balrampur factory crushed 3,343,913 maunds of cane (against 2,157,885 maunds), but the recovery declined from 9.56 percent to 9.53 percent due to unfavourable weather conditions. The production capacity has been expanded from 746 tons to 890 tons a day at a cost of Rs. 7 lakhs. It is proposed to raise the production capacity further to 1,200 tons a day with an expenditure of Rs. 15 lakhs. If weather conditions remain favourable, the working during the next season might improve.

Northern India Paper Mills

The Northern India Paper Mills Ltd will manufacture writing and printing paper. The project has been sponsored by the Jaswant Sugar Mills Co. Ltd of Meerut. Situated about two miles from Meerut, the plant will have a capacity of 18,000 tons of paper a year. The Company has already received a licence for the import of plant and machinery, and orders have been placed with a French firm. The plant is expected to go into production before the end of 1962. The Company will manufacture paper mainly from bagasse, which will be available from the Jaswant Sugar Mills and from other sugar factories in the area. The other raw material is bamboo, which can be obtained within a radius of about 100 miles. The authorised capital of the Company will be Rs. 4 crores. The issued capital will be Rs. 2 crores, of which Jaswant Sugar Mills will take up Rs. 70 lakhs in equity shares of Rs. 100 each. Another Rs. 50 lakhs will be taken up by the directors and their friends. The balance will be offered to the public. The Industrial Finance Corporation has agreed to advance a loan of Rs. 1 crore to the Company and it has stood guarantee for Rs. 3.25 crores to the suppliers of plant and machinery. The Industrial Credit and Investment Corporation of India, it is said, has agreed to underwrite equity shares worth Rs. 20 lakhs and preference shares worth Rs. 30 lakhs.

Wandleside-National Conductors

Wandleside-National Conductors Ltd is a new Company which has been formed to undertake the manufacture of insulated conductors used in the electrical industry and other applications using various types of insulation, including paper, synthetic enamel, rayon and silk. The production of electrolytic conductors is still far short of the country's requirements and the deficit has to be covered through imports. The Wandleside Cable Works Ltd of the U.K. will supply technical know-how to the new Company. The foreign collaborators have also agreed to supply the plant and machinery on deferred payment terms spread over three years. The Company has an authorised capital of Rs. 25 lakhs, of which only Rs. 10 lakhs are being issued in the first instance. The directors and their friends and associates have taken up 5,000 equity shares of Rs. 100 each. The balance of Rs. 5 lakhs is being offered to the public. The factory is likely to be located near Poona.

Baroda Electric Meters

A new Company, known as Baroda Electric Meters Ltd, is being formed to undertake the manufacture of single and polyphase house service meters. The factory will be located in Baroda. The output is estimated at 60,000 single-phase meters and 24,000 polyphase meters a year. Nearly half the output of polyphase meters is intended for export. A West German firm will provide the technical know-how, train Indian technicians and carry out the work of plant and machinery installation. The Company will have an authorised capital of Rs. 1 crore, made up of Rs. 75 lakhs in equity shares of Rs. 100 each and Rs. 25 lakhs in unclassified shares. The issued capital will be Rs. 40 lakhs, of which the directors propose to offer Rs. 25 lakhs to the public at present. The Industrial Credit and Investment Corporation of India is likely to take up shares worth Rs. 5 lakhs. Negotiations are also going on to secure a loan of Rs. 5 lakhs from the I.C.I.C.I. for the purchase of machinery from east European countries against rupee payment. The Company is likely to enter the market next month.

Public Deposits with Companies

The monetary measures introduced by the Reserve Bank from the beginning of this month have focussed attention on whether industries will be forced to borrow money from sources other than banks in view of the possible squeeze on the latter's resources. Some years ago, many industries, especially the cotton mills of Bombay and Ahmedabad, obtained substantial amounts of money in the form of deposits from the public. The importance of this source of finance has declined in recent years as larger facilities have become available from banks.

In its August issue, the *Reserve Bank of India Bulletin* gives an estimate of the public deposits in joint-stock companies. The figures are not strictly accurate, since the published balance-sheets of the companies usually do not show the figures for public deposits separately. In estimating the deposits, the balance-sheets of 1,001 companies have been considered. The companies constitute 76 percent of the public limited joint-stock company sector, excluding banks, insurance companies and other financial companies. The figures also include deposits other than those from the public. So the actual deposits from the public are probably much smaller than the total figures show.

The total deposits, fixed and other, stood at Rs. 23.7 crores in 1958, against Rs. 20.8 crores in 1957. They formed a little more than 1 percent of the total liabilities of the companies. The increase during the one year under review amounted to Rs. 2.9 crores, but the net increase in public deposits can be taken to be much smaller than this. It is noteworthy that the rises in deposits were substantial in the transport equipment, cotton textiles, trading, sugar and machinery groups. In as many six industries, the deposits actually declined. In a few important industries, they were virtually negligible. Some believe that public deposits as a source of industrial finance may grow now that bank credit has been made more expensive and difficult to get.

The Drop in New Shares

Newly-issued shares have lost much of their glitter and their premiums have suffered a steep decline. Synthetics and Chemicals, which fetched a premium of about Rs. 230 in July, were available at a premium of only Rs. 88 some days ago. The premium on East Anglia Plastic has come down from Rs. 21 to Rs. 7, on Jayant Paper from Rs. 75 to Rs. 20, on Hindustan Twyford from Rs. 12 to Rs. 4 and on William Powell from Rs. 12 to Rs. 2. Chase Bright Steel have declined from Rs. 22 to Rs. 15 and Phillips Carbon Black from Rs. 25.50 to Rs. 15.50. The sharp decline in premiums has exposed the highly speculative nature of the boom enjoyed by the new issues. But it has affected the flow of risk capital relatively little, since some of the most recent new issues have continued to meet with a good response. Seshasayee Paper, Zenith Steel Pipes, Shah Construction and Citric India have all been over-subscribed. Many new companies are expected to enter the market in coming weeks. They can expect investors to be a little more cautious and selective.

The L.I.C. Valuation Bonus

According to a Press report, the Life Insurance Corporation's final scheme of differential bonus on the basis of the first valuation has not been announced yet because certain points have been raised by the Government of India. The Government. adds the report, wants further refinement in classifying the units of the Corporation for the purpose of bonus. The groupings made by the Corporation, which include putting itself in the first category, do not appear to be a satisfactory basis for the differential bonus. The second valuation, as at 31st December, 1959, is now due and it is reported that the Corporation has taken up the work. Many hope that it will not make the same errors as it made in the case of the first valuation. The intricate work of valuation should be done under the guidance of an independent actuary outside the control of the Corporation. The semi-judicial status of the independent actuary is of paramount importance. The Corporation has on its rolls a number of professionals, but the responsibility for the valuation should be entrusted to a person independent of, and outside the influence of, the Corporation. That will give the second valuation a status which cannot be claimed if the valuation is carried out by its own employees.

The Corporation, it is reported, has undertaken a study with a view to evolving a suitable formula under which a stable bonus to policyholders can be maintained in an inflationary era. Inflation reduces the real value of the policies. The fear that the return to policyholders dwindles with the rise in prices is widespread. In an inflationary period, the Corporation has to incur heavier expenses of management and its attempts to expand life assurance in the rural areas are also likely to increase the expenses. It will thus have to increase its income if a stable return to the policyholders is to be maintained. The Corporation has to study its investment portfolio and find out whether it is possible to raise its income by increasing investments judiciously. It is likely to lose with the recent decision of the banks to reduce interest rates on money at seven days' notice from 3 percent to 2 percent. To some extent, however, inflation might help the Corporation. If its administration is improved, the premium income from new business can be increased faster than it is today. New business, coupled with judicious investment, can ensure a good, steady return for the L.I.C. The latter can then ensure an adequate return to policyholders to compensate them in some measure for the dwindling real value of the sum assured.

Hedge Trading in Cotton

The uncertainty has at last ended about futures trading in new crop cotton. The futures market, which has been virtually closed since about the end of May, will start working soon. The Forward Markets Commission has approved the amended by-laws for trading and has permitted the East India Cotton Association, Bombay, to start trading in the April 1961 contract from 18th October. The associations in Ahmedabad, Akola and Ujjain have also been asked suitably to amend their by-laws. Unlike three hedge contracts in the past, there will now be only two delivery contracts—April and August. The trade seems to be optimistic about the smooth functioning of the futures market. As weather conditions remain very satisfactory, the crop estimates have been revised to around 5.1 million bales, against the 1959-60 crop of only 3.75 million bales. The locusts which had invaded many cotton producing areas have, it is said, done negligible damage to the crop. The Government is keen on building buffer stocks by securing large quantities of cotton from the U.S.A. under P.L. 480. Besides, it seems determined to keep cloth prices under check. All these factors may help keep cotton prices below the ceiling.

Cotton Control Policy

The compulsory survey of cotton and the restrictions on mill buying which seriously curtailed normal trading activity could scarcely have been avoided in view of the failure of the 1959-60 crop. The carryover of Indian cotton at the end of August stood at a record low of about 950,000 bales. This was not enough to last for even three months, and it will be only after about the middle of November that movement of the new crop will gather pace. That is why the authorities have had to tighten the control measures to deal with the possible breakdown in domestic supplies. Presiding over the annual meeting of the Cotton Buyers Association in Bombay recently, Mr. Madanmohan R. Ruia appealed to the trade to put up with the inevitable hardships for a little while more because the latest weather reports indicate the possibility of a good crop. While defending the Government's policy which led to a virtual suspension of trading, he expressed the hope that the authorities would relax if not remove, the present restrictions in case the new crop turns out to be normal, as is generally anticipated.

The future of the country's cotton trade, however, depends essentially on a substantial increase in domestic production. The scope for extending the area under cotton is limited, so an increase in production can be brought about only through a marked improvement in the yield an acre, which, at present, is about the lowest in the world. Mr. Ruia welcomed the Government's move for setting up an expert body to examine price fixing, agricultural production and allied questions. This will help farmers and the trade to place their viewpoints more forcefully, thus enabling the Government to rectify the deficiencies in the existing structure of cotton prices.

The president of the Cotton Buyers Association emphasised the need for increasing the output of long-staple cotton, which constituted barely 10 percent of the total output in 1958-59. With the improvement in living standards, consumers will want more and more of fine cloth, but the country cannot afford to depend mainly on imported cotton. Mr. Ruia regretted that in spite of larger imports, the trade has been denied the opportunity of using its experience and expert knowledge in procuring cheaper cotton and at the same time arranging for speedier shipments. Since the country will have to continue importing large quantities of cotton for some years, the trade should be given its due share. Mr. Ruia seemed to be optimistic about an early export quota for Bengal Deshi because the crop this season is expected to be normal and the need for earning foreign exchange is urgent.

The prospects for importing large quantities of U.S. cotton under P.L. 480 for building up buffer stocks are believed to be encouraging. It is reported that the U.S. representatives told the recent meeting of the "Aid India Club" in Paris that the maximum possible help will be given so as to enable India to maintain imports essential for the industry. Mr. L. K. Jha, Secretary for Economic Affairs, has been in the U.S.A. discussing the question of cotton imports with the authorities. It is said that Washington might agree to supply about 1.2 million bales over a period of three or four years. This will not only ensure the flow of supplies to the Indian textile industry even during years of bad harvests, but will also have a salutary effect on cotton prices, which have an important bearing on cloth prices. Latest reports indicate the possibility of securing another 200,000 bales soon. Only a few months ago, the U.S.A. agreed to supply 400,000 bales under P.L. 480 and these have already been allocated to the mills. The extra 200,000 bales will raise the total import quota for the season to 800,000 bales, because a quota for 200,000 bales from countries other than the U.S.A. has also been announced, although it has not yet been allocated. The quantity licensed for import during the 1959-60 season amounted to 1,176,169 bales of which U.S. cotton totalled 462,765 bales. Actual arrivals are placed at 905,214 bales—350,450 bales from the U.S.A. and 554,764 bales from other countries.

Vegetable Oil Exports

Exports of oils, oilcakes and oilseeds, which earned Rs. 50.70 crores in 1955, brought a mere Rs. 15.75 crores in 1958. The figure was Rs. 36.52 crores in 1959, but the current year is unlikely to show equally good results. Only castor oil has done well this year, shipments up to 22nd September having exceeded 46,000 tons. Exports of other oils, seeds and oilcakes do not compare favourably with those during the corresponding period of last year. Few expect exports of groundnut oilcakes to total much more than half of the record figure of about 400,000 tons in 1959. Shipments of groundnut oil and linseed oil are disappointing. In the second plan, it was visualised that 214,000 tons of vegetable oils would be available for sale abroad in 1960-61. But exports in 1959-60—the fourth year of the plan—totalled only 109,000 tons. They have remained unsatisfactory in spite of New Delhi's helpful policy. Not only have fiscal impediments been removed, but the Government has also allowed incentives for exporting groundnut oil, salad oil and *vanaspati*. Unfortunately, internal prices have been pushed up whenever any incentive has been announced, thereby defeating the very purpose of the incentive.

Mr. Ratilal Gandhi, president, suggested at the recent annual meeting of the Indian Oil and Produce Exporters Association in Bombay the setting up of a high-powered committee, consisting of two or three officials and an equal number of non-officials, to take stock of the situation and suggest ways of boosting exports. He said that the committee should set before itself the goal of earning about Rs. 50 crores a year—Rs. 5 crores from seeds, Rs. 20 crores from oils and Rs. 25 crores from oilcakes. He also repeated the trade's demand for concessions in railway freight for the movement of goods for export, regular shipping facilities at reasonable and competitive rates on a long range and stable basis, and the abolition of the deferred rebate system by the Conference Lines. Any move which helps exports would be welcome, but it is doubtful whether the high-powered committee suggested by Mr. Gandhi can do much good. The question of export promotion has already been examined by several committees. Their recommendations have made little difference to the overall results.

The problems facing the export trade are well-known. Internal influences tend to keep domestic prices above world parity. Although the production of oilseeds has been rising, the increase has not kept pace with domestic requirements. Exportable surpluses have thus continued to shrink. The third plan target of 9.2 million to 9.5 million tons of oilseeds is rather low. That increased production is the only effective answer to high prices will be readily conceded. But this cannot be achieved in a very short time, while the need for maximising foreign exchange earnings from the available supplies is urgent. Freight concessions, increased storage facilities and the bulk handling of exports can improve the competitive position of Indian goods. But that is not enough. India has to compete with countries which continue to offer their goods at below the domestic prices. Some countries have a multiple exchange rate system for stimulating exports. There is also the problem of trade blocs. Some think that the competition from these sources can be met only if exports are canalised through a central body. Efforts to evolve such an organisation in the past have met with little success. According to informed sources, New Delhi is of the view that if exporters cannot get together on their own and form a central organisation for pushing exports, the State Trading Corporation might be asked to take a larger interest in the export of oils and oilcakes. It has already been playing an important rôle in negotiating business with the communist bloc. Many think that the highly speculative character of the trade is a serious impediment. The benefit of export incentives has gone mainly to speculators.

Export Risks: Packing Credit Policy

It is reliably understood that the Export Risks Insurance Corporation has decided to extend its field of activities by issuing a new type of policy known as "packing credit policy" to cover the pre-shipment risk on credits given against firm contracts of sale. The risks which the Corporation will cover under the new policy are: (1) non-delivery of shipping documents to the financing bank; and (2) non-payment of the debt if shipments are not made. In the event of a loss due to either of these causes, it will indemnify the financing bank under the policy to the tune of 50 percent of the insured debt. The premium rates are unlikely to exceed 0.1 percent.

Hitherto, the E.R.I.C. has been covering the risks in exports on credit terms. The risks covered under the policies are mostly post-shipment risks. Under contract policies, however, the additional risk of a change in the Government's policy for the export, before shipment is effected, also comes within the cover. Banks give credit facilities to exporters to enable them to manufacture and/or purchase goods. The advances are given when there is a firm sale contract or agreement. In some cases, the buyers open letters of credit in favour of the exporter and in some cases advances are given even if there is no letter of credit. Because of the nature of the advances, this facility is available only to a few top-ranking exporters at present. Representatives of banks on the Export Promotion Advisory Council recommended to the Government some time ago that the E.R.I.C. should cover the risks involved in banks giving advances to exporters for the manufacture and/or purchase of goods to be exported. The recommendation was for covering only up to 50 percent of the loss. It was pointed out that if the Corporation covers the risks on such advances, shippers of moderate means will be able to obtain pre-shipment finance which will help promote exports. It is hoped that the new policy will enable banks to make packing credit finance available to exporters for expanding their trade.

Oilcake Freight Cut

The Karmahom Conference Lines have reduced the freight to U.K. and Continental ports for oilcakes by 15 shillings a ton from October. The surcharge of 5 shillings a ton on shipments from Saurashtra ports has also been abolished. The reduction brings down the freight from 100 shillings to 85 shillings. On this, shippers get a rebate of 10 percent, provided they do not use non-Conference vessels. In spite of the latest cut and the deferred rebate, Conference freight is costlier than charter freight by 5 to 10 shillings a ton. The export trade has long been pleading for the abolition of the deferred rebate system which prevents it from taking advantage of charter freight even when the Conference Lines are unable to provide the necessary freight. The announcement of the reduction in freight has been quickly followed by a decline in the overseas quotations for Indian oilcakes. The U.K. reduced the quotation for groundnut extractions, 50 percent, from around £28 10s to £27 15s. October-March shipment. Subsequently however, the price steadied to £26 2s 6d. The fall in foreign quotations was not unexpected, considering the keen competition among exporters here. Manufacturers of extractions are the main exporters, and there has been a marked increase in production with the increase in the number of solvent extraction plants over the past few years. Crushing capacity has expanded so much that not all the plants are able to work to capacity. Growing competition among the manufacturers in India, it is said, is the main reason for the steady decline in the overseas quotations for Indian extractions. Over the past two months alone, groundnut extractions have declined from £30 10s to around £27 15s. The trade hopes to sell fair quantities of extractions in the coming months, but few expect any material improvement in prices.

The recent announcement of export quotas for 50,000 tons of linseed cake and 15,000 tons of coconut cake to be shipped up to the end of March has not caused any excitement in the market. This is because business in these cakes had never been limited by the availability of quotas. Substantial portions remain unused from the previous quotas. Although the export performance this year does not compare badly with last year's. Exports from India in 1959 totalled 71,556 tons of linseed cake and 13,782 tons of coconut cake. Of these 38,806 tons of linseed cake and 11,174 tons of coconut cake were shipped from Bombay. Shipments from Bombay this year up to 22nd September are estimated at 36,843 tons of linseed cake and about 7,000 tons of coconut cake. The decline in oilcake prices abroad over the past few months has reduced the margin on exports. Even so, business is not unremunerative. October to March is generally a favourable period for Indian oilcake demand. The trade hopes to sell substantial quantities in the near future, but not many expect the entire export quotas to be used by the end of March. The outlook for coconut cake is thought to be less promising than for linseed cake. This is partly because of the pronounced weakness in copra and copra cake prices abroad and partly because of the rather tight supply position in India. Imported copra is the main source of supply of coconut cake for export.

U.S. Business Conditions

The opening weeks of the autumn season have not produced any striking changes in the business climate, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Activity picked up in the retail trade and also in a number of manufacturing lines, although sales and new order inflows were quite commonly disappointing. On the whole, the economic data available for September indicate an extension of the high-level plateau, which began forming as early as last December in industrial production and more recently for other measures. The climb has levelled out in business investment, personal income and gross national product. Reflecting particularly the opening up of new jobs in service industries, employment (including the armed forces) this past summer averaged 71 million persons, higher than ever before. If prosperity were only a matter of the size of the gross national product, or of the overall level of income, employment and industrial output, it would be hard to find fault with current business condtions. The strong showing of most comprehensive economic measures so far this year leaves little doubt that 1960 as a whole will set new records exceeding any previous year. Gross national product in the third quarter probably held at about the record second quarter rate, equivalent to $505 billion a year, as rising final demand for goods and services offset declining inventory demand. In August, personal income edged up to a new high annual rate of $407.6 billion. The industrial production index (1957 equals 100) held at the lower end of the 109-111 range it has maintained since last December. With western Europe still booming and restrained in competing for exports by powerful domestic demands, U.S. export business in 1960 has been a point of exceptional strength. Nevertheless, a conspicuous degree of caution prevails, particularly in the business community. This reflects disappointment that sales volumes this year have not reached even higher levels, shrinkage in order backlogs from the peak reached during the steel strike, competitive pressures on prices, and a developing squeeze on profit margins. Appreciation of these facts helps explain the September sell-off in common stocks which brought prices to new lows since late 1958.

Conservatism in business policy has been most apparent in inventory buying, but more recently it has shown up in some trimming back of capital investment plans. Evidence of this was contained in the quarterly survey by the Securities and Exchange Commission and the U.S. Department of Commerce issued in September. Non-farm business outlays for new plant and equipment in 1960, which at one time were expected to set a new record, now appear more likely to fall short of the 1957 peak of $37 billion by about $600 million, or 2 percent. However, total outlays are still scheduled to rise 12 percent from 1959; the highest

increases are among durable goods manufactures, who are boosting their plant and equipment purchases by 26 percent. All major industrial groups now expect capital outlays in the second half to equal or exceed those in the first half of 1960, but most groups have cut back their second-half capital expenditure programmes from the levels anticipated last spring.

New Porcelain Insulator Factory

The Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, recently inaugurated a new plant for manufacturing porcelain insulators set up by Seshasayee Industries in Vadalur in south Arcot. The demand for H.T. insulators is rising, and their local manufacture will help save foreign exchange. The new plant has a production capacity of 1,200 tons a year, with provision for raising it to 4,000 tons by 1962. A clay-working plant in Neyveli will ensure ample raw material supplies. In its draft third plan, the Madras Government has estimated the demand for insulators at 24,000 tons, against an output of 5,532 tons. Imports in 1958 amounted to Rs. 1.86 crores. So the new factory will have bright prospects for expansion. The Company, it is reported, will have to import only special glazes. Its oil-fired kilns for baking chinaclay have been completed. Although the factory has been formally opened, it will have to wait to get its power supply from Neyveli. Meanwhile, a township has been set up in Vadalur.

New Tyre Projects

National Rubber Manufacturers Ltd of Calcutta has sponsored in collaboration with Messrs Technoexport of Czechoslovakia a project for the manufacture of motor-vehicle tyres and tubes in West Bengal. It is claimed that the industrial and import licences have been secured, a suitable factory site has been selected and a new Company called General Tyres Ltd has been incorporated to implement the project. Arrangements with Messrs Technoexport are at an advanced stage for the supply and erection of a complete motor-vehicle tyre and tube plant, and for technical assistance. General Tyres Ltd is expected to enter the market with a public issue of its shares in the near future.

The Madras Rubber Factory of Madras has also been given an industrial licence to manufacture motor-vehicle tyres and tubes in collaboration with the Mansfield Tyre and Rubber Co. of the United States, which will subscribe nearly 25 percent of the capital. The Factory, it is claimed, has obtained a long-term loan from an American bank. The capacity of the unit, when it goes into full production early in 1962, will be over 300,000 tyres and tubes a year.

Foggy Outlook for Shipping

The Central Minister for Shipping, Mr. Raj Bahadur, said recently that the expansion of the shipping industry has been hampered by the shortage of foreign exchange. Only 10 percent of the foreign trade is at present carried in Indian bottoms. The Minister exhorted shippers to use Indian shipping with a view to saving foreign exchange. Denying the charge of flag discrimination, he declared that Indian ports are open to the vessels of all nations. The modest shipping target for the third plan, Mr. Raj Bahadur said, is due to the surplus of tonnage, the slackness in shipbuilding and the offer of second-hand ships to India. But he did not refer to the conditions imposed by the Government of India concerning the purchase of second-hand ships, especially in the matter of such concessions as deferred payment terms. He also did not discuss the difficulties of Indian shipping companies due to the prevailing freight recession and the fall in the demand for space. The dull trend in shipping shares shows that the growth prospects of the industry are dim.

Metric Measures in Madras

The enforcement of metric measures in Madras from 1st October has caused some confusion among traders. Quotations for export commodities like groundnut oil and kernels appear in kilograms and quintals, but the unit of measurement is still the French candy, so the producing centres rely on the old system. The retail trade, unlike the wholesale, has not switched over to the metric weights and measures. Meanwhile, the replacement of the pint and local fluid measures by the litre has led to some complaints about milk supply in the State. Consumers in Madras complain that the price has been suddenly increased because the litre is the unit of measurement, while the supply comes in old bottles holding less. The State Government's milk scheme is, therefore, viewed as a device to extract more from consumers. It will be recalled that the scheme was based on experiments in Calcutta and Bombay and was meant to remove cattle out of the residential areas, apart from effecting the centralisation of milk supply and pasteurisation and other improvements. But the villagers from whom milk will continue to be purchased for distribution in the city object to litres since they are unfamiliar with the new system of measurement. Although the bullion market has adopted the new system, jewellers still quote prices in terms of tolas. The fruit and vegtable vendors, too, have not gone in for metric weights. Only the conventional pound or seer is known to them since they are not aware of conversion tables.

Leather Exports to East Germany

An East German trade mission recently met south Indian leather exporters. It referred to the differences in the leather offtake of West Germany and East Germany from India. The Continental auctions may eventually help enlarge demand, it said, although East Germany is mainly interested in dry-salted goatskins. The mission pointed out that the prewar importance of Hamburg as an outlet for hides and skins has been undermined by the partition of Germany, but it thought that East Germany should stop buying raw hides and skins and switch over to semi-tanned skins. She at present obtains hides and skins from China, Italy and other countries, so prices will have to be competitive if India is to increase her exports. Leather exporters in south India referred to the rise in prices of raw materials required for tanning, but some solution will have to be found for this problem if India is to increase her leather exports in the future.

THE CALCUTTA MUNICIPALITY

WE understand that Mr. Greer has declined to accept the permanent appointment of Chairman of the Calcutta Municipality and has only consented to act as a stop-gap; this, of course, means that matters will be hung up for the next six months, and that absolutely no improvement will be recorded. Anything more unsatisfactory, it is difficult to imagine, and if the Government cannot induce a suitable man to accept the appointment from the ranks of the Civil Service, they should go further afield in their quest. In the resolution on the administration of the affairs of the Municipality, the Government somewhat animadvert on the conduct of the Vice-Chairman in the matter of collections, and state that under the new law he has been relieved of much of his out-door duties by the appointment of a Deputy Chairman, and the Lieutenant Governor will expect him, in future, to exercise a real instead of a nominal control over the collections. But we understand that the Deputy Chairman has been or will be withdrawn from the service of the Municipality to undertake the Census operations; so that, here again we find that as soon as an officer has made himself acquainted with the duties of his appointment, he is shifted elsewhere. We hear that the Government of India are likely to make a grant of Rs. 50 lakhs for the improvement of Calcutta. This is indeed a step in the right direction; the health of Calcutta is not a municipal or even a provincial question; it is of paramount importance to the trade of the country; and the actions of the Government of India in making the improvement of the city an imperial question is eminently a move in the right direction. We would suggest that a qualified short-hand reporter be brought out from home, who would record the proceedings at meetings and act as Assistant Secretary. The state of the Municipality calls for considerable improvement in every department, and the Government of Bengal will not be able to evade their liability, if they turn the superior offices into a game of post.

FROM

CAPITAL

11th October, 1900

CORRECTION

There was a printing mistake in the second sentence of the leading article entitled "Dearer Money: Groping in the Dark", which appeared in last week's issue of *Capital*. The sentence should have read: "Each scheduled bank has been allocated a quota for borrowing from the Reserve Bank which is equal to half the reserves it has to keep with the central banking institution under the law." The word "half" was unfortunately omitted.

A Ditcher's Diary

THE CHARMS AND AMENITIES OF FRAZERGUNGE ARE a subject on which I would not care to pose as an authority. I have never visited the place myself and I would have the utmost difficulty pinpointing it on the map. But if it is true that the West Bengal Government now prefers it to Digha as a tourist centre for Calcutta, then the sooner whatever plans it has are carried out the better. I say this because once again during the Pujas I was struck by how difficult a city Calcutta is to escape from for a few days. If one is rich enough to do it in comfort, the over-night train journey to Puri is tolerable. But unless one has had the foresight to stake a claim on the strictly limited accommodation well in advance, there is little prospect of finding anywhere to sleep other than the beach. Much the same may be said of Gopalpur; in neither case can the resort claim to be a satisfactory tourist centre for Calcutta as, say, Brighton is for London or even Juhu for Bombay. And while the Government's plans for the improvement of this city go no further than the extension of its already interminable acres of soulless concrete and blistering plastered brick, there must be few places in the world which offer greater relief in the form of simply getting outside them for a day or two. But where to go? Rail travel is either expensive or unbearable; air fares are out of the reach of the middle classes; long-distance road transport scarcely exists, and where it does the roads are often impassable to either buses or motor-cars at the end of the monsoon. Then there is the problem of accommodation. Last year I toured Bihar for a few days during the Puja holidays and still remember how difficult it was to find anywhere to stay. That was when the road to Calcutta was intermittently blocked by floods; had it been open all the time and so many reservations not been cancelled. I doubt if I would have found a single decent roof to sleep under.

THERE IS MORE THAN ONE WAY OF LOOKING AT Mr. Nehru's mission in New York. I can understand India's disappointment that so much well-meant effort came to nothing: the regret is shared by many besides. But the view that India or her Prime Minister has been "snubbed" seems to me unwarranted by what really happened. It is no secret that Washington was not enthusiastic about another summit, almost dictated by a Mr. Khrushchev who has never stopped abusing President Eisenhower since the *U-2* affair. Nobody questions the sincerity of the five leaders who introduced the resolution, although it is not unlikely that Presidents Nkrumah and Nasser perhaps saw in it an opportunity of projecting the "African Personality" on world affairs. But what, honestly, could a summit meeting achieve? Mr. Khrushchev put it rudely, but it happens to be true that the American Presidency is at the moment paralysed —granting that the second Eisenhower administration has ever been otherwise. At this point in the election campaign President Eisenhower could not possibly commit his successor to any long-term policy; and Messrs Nixon and Kennedy have as yet no mandate. Perhaps there would have been a lessening of tension if Mr. Khrushchev and Mr. Eisenhower had shaken hands and been photographed doing so; but that too I doubt. The manner in which the five-nation proposal was frustrated can be questioned though; for it smacked of manoeuvring. For some of the new African leaders this was probably the first lesson in the facts of international life—no harm done. But the western cause as a whole may have been harmed, for Africa, always suspicious of the West's intentions because of its colonial past, may now be even more suspicious. If Africa is today habitable, it is because of what western Europe has done there, and this is not offset by any charges of exploitation and injustice, correct though they may be.

ABOUT THE TIME THE GREAT—AND STILL REGRETTED —department stores disappeared from Indian cities, the Cassandras were prophesying a slower but similar fate for their counterparts in Britain. The departure from this country of the class of people for whom the Army & Navy and Whiteaways had mostly catered, was paralleled in the U.K. by the sharp, relative fall in the purchasing power of the middle and upper income groups, the traditional patrons of Harrods—among others. The old department stores seemed unable to adjust to the new class structure of the British economy, and anybody who glimpsed Sir Richard Burbidge, managing director of Harrods, making his bowler-hatted morning tour of that staid emporium, like his father and grandfather before him, must have wondered if they ever could. Indeed, throughout most of the 1950's they steadily lost ground to the chain speciality shops, the co-operatives and the independent speciality stores who knew how to attract the custom of the more affluent lower-income brackets. They knew, too, that the British public was less interested in clothing and soft goods (the classic stock of department stores) than in durable consumer goods, and that it was flocking to shops where it saw washing machines, television sets and vacuum cleaners gaudily displayed under big "Easy Terms" notices. While Debenhams and Selfridges languished, the Great Universal Stores (the "Gussies" of the London Stock Exchange) multiplied the price of their ordinary A shares by 26, and it even became respectable for county people to be seen in Marks & Spencers. The worm turned about 1957 and since then we have seen the titanic take-over struggles in department store management, such as when Fraser, Debenhams and United Drapery fought for the control of Harrods. But it is only in the first six months of this year that the prices paid during those contests have been justified. For the first time, the department stores have increased their sales as fast as the speciality chains. They have at last adjusted themselves to the new structure of retail trade, and the only thing that can stop them now is the traffic jams in Oxford Street—and Selfridges projected 1,000-car park for customers will help there. This recovery is interesting, and encourages one to hope that department stores have not vanished from India for ever.

LORD MONCKTON AND HIS COLLEAGUES DID NOT set out to please Sir Roy Welensky who, in any event, declared in advance that the Commission had no right to review the Federation. The question now is whether the report, obviously the product of great labour, will succeed in pleasing the African leaders, notably Dr. Hastings Banda and Mr. Kenneth Kaunda. These latter's task may have been made easier by Sir Roy Welensky's summary dismissal of the most important part of the report—the right to secede. If Dr. Banda can hold his tongue, which is rather a difficult feat for so voluble a politician, he can by his silence appear to accept the recommendations while Sir Roy will look like the difficult man. The Federation has meant a great deal of economic benefit, more for Nyasaland than even for Southern Rhodesia; but it is unlikely in the extreme that the economic argument will weigh much with the African leaders. Nor need it be pretended that it is the chief consideration with Sir Roy either. Lord Monckton and his Commission's majority endorse the view, widely held, that the Federation has failed to win the trust of the Africans; and I am by no means certain that another five-year trial with a looser and weaker federal structure will improve matters. Bitterness may indeed deepen, for Dr. Banda and others have reduced the very word "Federation" to an object of ridicule and contempt. To call it by another name will change little of that attitude. The Colonial Office, accused by Sir Roy of foolish idealism, has apparently decided to act boldly, as the announcement on Northern Rhodesia suggests; and it is a pity that the chief obstacle to progress is not, immediately, African extremism, but the settlers' refusal to accept what seems inevitable. It is no less a pity that dissolution of the Federation will not improve the lot of the African in any material sense; it is to be doubted whether even individual freedom will be greater. But then, reason plays only a very small part in nationalism; and in Africa today one is foolish to expect it to play any part at all.

IVOR JEHU, WHOSE SUDDEN DEATH ON FRIDAY MUST have been felt more widely in Bombay and New Delhi than in Calcutta, acted for a time as *Capital's* Special Correspondent in the capital and in Simla. It would call for some research to establish exactly when this was and for how long; but I remember a former editor of this newspaper speaking appreciatively of his despatches. And that was at a time when there was much to report on from both places. I came to this country too late to see Simla in its glory; but I can well imagine the atmosphere. Many crucial negotiations took place there; and many must remember the 1945 conference at which Lord Wavell's valiant efforts failed to get the Congress and the Muslim League to agree to anything. Talks were, of course, held in all seriousness; but I like to think that the pace was slower and the tone gentler. I remember seeing, for instance, pictures of Mr. Nehru on horseback. Old Simla hands tell me that Special Correspondents of the more important newspapers then belonged to the *élite*, and mixed freely as equals. Indian and British correspondents, I am told, were more than professionally friendly; and social life played as important a part as the business of filing a story at the end of the day. Bureaucrats were ever conscious of their unrepresentative character, their lack of contact with the people at large; and in consequence they treated newspapermen with respect. (I have heard more than one former Simla journalist lament that all this is now changed.) There was, admittedly, an element of artificiality in life in the hills in those days. But, think it over: many of the best things of life are artificial. Ivor Jehu knew this life and, I am told, liked it as much as his later experience in cosmopolitan Bombay.

THE TATA IRON AND STEEL COMPANY LIMITED

CHAIRMAN, MR. J. R. D. TATA'S ADDRESS

The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the fiftythird Annual General Meeting of the shareholders of the Tata Iron & Steel Company, Limited, on Thursday, October 6, 1960.

Ladies and Gentlemen,

I must first apologise to you for the delay of a little over a month this year in holding our meeting.

Although we have repeatedly urged Government to come to an early decision on our long outstanding claims and pointed out the difficulties and inconvenience caused by the prolonged delay which has taken place, I am sorry to say the matter remains undecided to this day. I am therefore unable to enlighten you any further today on this matter which is of such great importance to us. Lest, however, undue hopes are raised in the breasts of the more optimistic amongst our shareholders, I must remind you that during the last two years, including the one under review, we have, in order to pay dividends, drawn nearly Rs. 450 lakhs from our general reserves, the replenishment of which will have first claim on any amount we may obtain in compensatory price increases.

As my statement, published along with the annual report, included all I had to say directly concerning the accounts and affairs of our Company, I shall today only review briefly some matters of interest to us and to industry generally.

The past year has shown progress in many directions and in particular a welcome spurt in industrial production. It is therefore all the more disappointing that agricultural output has failed to make effective progress and that the country seems to be as far away as ever from self-sufficiency in food without which all efforts at achieving rapid economic growth must fail.

Economic Obstacles

In the immediate context, however, the two most serious economic obstacles facing the country are the inflation which steadily erodes the fruits of the development plans before they can reach the people, and the foreign exchange situation which has reached another crisis even more serious than the one we faced in 1957.

The problem of inflation is perhaps the most threatening and intractable of all. In the last five years alone, the purchasing power of the rupee has fallen by about 35% and, with mounting development expenditure, inflationary pressures will increase further in the years to come. I realise the grievous dilemma and difficulty with which our Government and planners are faced in having to reconcile the need for rapid development involving large and continuous public expenditure with the need to hold the price front. May I suggest, however, that they are themselves aggravating the situation and magnifying the problem by insisting on concentrating development expenditure to the extent that is now being done on basic and capital goods industries, the products of which are incapable of absorbing the additional purchasing power pumped into the economy.

Large scale investments with long periods of fruition involve pumping into the economy corresponding increases of purchasing power which are automatically translated into demands for consumer goods. Apart from the imposition of drastic controls over the whole field of consumption, which would be both objectionable and impracticable in a country like ours, the only two possible ways of relieving this type of inflationary pressure are to meet, as far as possible, the demand for consumer goods, or to mop up excess purchasing power by additional taxation which is out of the question in India as the level of taxation is already excessive and the Third Five-Year Plan has in any case already provided upto the hilt for taxation as the principal source of internal finance. Therefore an increase in the supply of consumer goods is the only practical alternative at our disposal. In view of the foreign exchange situation which precludes imports other than of food financed by foreign aid, it is clear that we must turn to our own industries for additional consumer goods. Unfortunately, far from encouraging the development of consumer goods industries, Government impose severe restrictions on further investments in them and on increased output from some sections of the industries which could otherwise help to counter inflation. One example of this is the limitation of 800 million yards, or a mere 16%, imposed on the increased production of mill-made cloth by the end of the Plan period. While recognising the complexity of the problem, I submit that, unless positive steps are taken to counter the inflationary effect of large investments in heavy industry by the balancing growth of consumer goods, the spiral of inflation cannot but continue to grow.

Foreign Exchange Shortage

The gravity of the foreign exchange situation can be judged from the fact that, except for a dangerously small working balance, we have exhausted all our past accumulation of foreign resources and have an annual deficit in our current balance of trade, while we require a further Rs. 2,100 crores of foreign exchange to finance developmental imports under the Third Plan, and during the same period we will have to repay foreign loans to the extent of Rs. 600 crores, including interest. It is therefore only too clear that unless foreign aid, loans or investments are forthcoming in full measure, the Plan will inevitably have to be pruned, and even our present rate of industrial production may be in jeopardy.

These grim figures highlight the consequences of our failure to achieve self-sufficiency in food. Since 1st January 1948 we have spent on imports of food over Rs. 1,000 crores from our own foreign exchange resources in addition to nearly Rs. 500 crores obtained through foreign aid mainly from the United States under the PL 480 Programme. If we had been spared these imports, there would today be no foreign exchange crisis and the task of building up the country's economy would be infinitely easier. We can only hope that the dismal lesson has been fully learnt and that in future nothing will be allowed greater priority than attaining self-sufficiency in food.

Third Five Year Plan

An outline of the Third Five-Year Plan, was recently published and debated in Parliament. As citizens we are vitally interested in the nature, scope and objective of these Plans with which Government seek to mould our future economic destinies. As I have said on many occasions before, we in private enterprise are neither against planning nor against doing so on a big scale provided it is in due relation to available resources. We realise that the all pervading problem of the country's poverty cannot be solved without bold action and without sacrifice in which all must share. We firmly support the objectives of raising the national income as rapidly as we can and of distributing it as widely and justly as possible. Some of us may regret that so large a part of Government's economic policies is based on the belief that these objectives can only be attained by socialistic means, as thereby much of the country's effort is wasted in a mass of costly, time-consuming and largely ineffective controls, and the initiative and creative urge of the people is stifled. So much has been said in the past on the subject, some of it by myself, that I will not weary you with a further pursuit of this unhappy controversy. I shall only repeat that, to the extent that we are desired or permitted to do so, we shall, as in the past, continue to offer our full cooperation wherever we can be of service to the nation.

Reverting to the Third Five-Year Plan, I have already mentioned the decisive extent to which our ability to raise the necessary foreign exchange will determine whether it can be adhered to or will have to be pruned. In either case, I would plead for the maximum degree of realism, untinged by ideological considerations, in regard to industrial objectives and targets. In the Plan as it stands, the most striking feature is that 60% of the investment in industry is proposed to be in basic and heavy industries, including steel. While there can be no question that a modern and fully industrialised nation must be largely self-sufficient in these basic industries, the question at issue is whether, with the strictly limited resources at our disposal, and, subjected as we are to heavy and growing inflationary pressures, we can afford at this time to give such overwhelming priority to steel and heavy industry, unless of course they can be financed in part by foreign capital which would release the pressure on our own foreign exchange resources.

Foreign Participation in Industry

In this context, we welcome the shift in our country's policies towards foreign participation in industry. We have gone a long way from the days when such participation in industry was looked upon with suspicion and discouraged and this is obviously to the good. With the persistent shortage of foreign exchange which is bound to plague us for many years to come, it is obvious that India has much to gain from an influx of foreign capital which, it may be usefully remembered, was what made possible the initial economic growth of the United States of America in the last century.

However much Government might prefer to see basic industries developed in the State Sector, I sincerely hope, in view of the tremendous capital expenditure involved in such industries, that they will not, on ideological grounds, oppose participation by foreign private enterprise in these fields if such participation can be secured, which of course is by no means certain. While no risks could arise in a controlled economy such as ours, the benefits to the country would be enormous. Not only would the objective of developing basic industries be met to that extent, but the large funds released in consequence could be diverted to equally vital projects, such as additional fertiliser production and the development of power, fuel and transport resources.

As it is, industry throughout the country, in both the Public and Private Sectors, is suffering acutely from inadequacies in the supply and quality of raw materials. All the steel plants in India today are operating on a hand-to-mouth basis in respect of coal and rail transport. In fact, during the past few months, the commissioning of three new blast furnaces with their allied coke oven installations have had to be postponed because of lack of coal. I hope that Government, now fully alerted to the dangers of this situation, will ensure that, in future, supplies of raw materials and transport do not lag behind the growth of industrial capacity.

Difficult Circumstances

However far and fast we may wish to travel in the next five years on the road to full industrialisation, I earnestly plead that in the final size and shape of the Third Five-Year Plan and those that follow, we do not at any time divert to expansion the resources required to maintain the full output of existing productive capacity. In the difficult circumstances which confront India today nothing could be more wasteful than to have to restrict output and employment because of a lack of power or raw materials or transport.

The fact that we may be critical of Government at times about some of their ideas or policies does not mean that we do not recognise the tremendous efforts they have made and are making to give us a sound administration and to promote the welfare of the 400 million people in their care. It is inevitable that there should be disagreements as to the best means of achieving rapid economic growth. Indeed, it is a healthy sign of vigour in our democracy that there should be such differences of opinion and that they should be fearlessly stated. So long as we share the common will to serve, there should be no possibility of misunderstanding motives and honestly held convictions.

In the formidable undertaking of freeing in a brief space of time the people of this ancient country from their bonds of poverty, I hope that we shall have a useful part to play, and on your behalf I pledge the full support of the Tata Iron and Steel Company in this great task.

Note: This is not a report of the proceedings at the above Annual General Meeting.

ANNOUNCEMENT

ANUH PHARMA LIMITED, BOMBAY.

The subscription list in respect of 80,000 Equity shares of Rs. 10/- each offered in terms of the Prospectus dated 20th September, 1960, was to open on the 8th October, 1960 and in view of slight amendments filed with the Registrar of Companies as noted below on page 10 of the Prospectus, the date of opening of the subscription list is postponed to the 15th instant. Therefore the subscription list will open at 10 A.M. on Saturday, 15th October, 1960 and will close at 5 P.M. on Monday, 24th October, 1960 or later at the discretion of the Directors. The following is the addenda to the Prospectus on page 10 under the heading 'Nature and Extent of the interest of Directors'. Read fresh paras numbered 7 and 8 as follows:—

(7) Shri N. T. Khandwala has advanced a sum of Rs. 25,000/ to Messrs. Anuh Pharma, the Vendors.

Interest at the rate of 9% per annum is payable on the said loan by the Vendors and the loan was given to the Vendors on the hypothecation of part of the stock in trade on 20th July, 1960.

Business and stock of the firm Anuh Pharma taken over by the Company is subject to this liability.

Shri N. T. Khandwala was co-opted as a Director on 6th September, 1960.

(8) Mr. P. R. Subramanyam has guaranteed the loan of Rs. 25,000/- given by the Canara Industrial Syndicate, Ltd. to the Vendors on the hypothecation of the part of stock in trade. Business and Stock of the Firm Anuh Pharma taken over by the Company is also subject to this liability.

S/d. **P. R. SUBRAMANYAM** *(Chairman)*

Anuh Pharma, Ltd.

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN, MR. V. H. DALMIA'S REVIEW

The following is the speech of Mr. V. H. Dalmia, Chairman, Board of Directors of Dalmia Cement (Bharat) Limited, delivered at the eighth annual general meeting of the Company held in Dalmiapuram (Dist. Tiruchirapalli—Madras State) on Monday, 10th October, 1960.

Gentlemen :

It gives me great pleasure in welcoming you to the Eighth Annual General Meeting of your Company. The Accounts for the year 1959 were sent to you some time back along with the Notice of this meeting. The Directors' Report which accompanied the Accounts deals with some of the important aspects of your Company's operations. There has been a slight decline in the net profit as compared to the previous year. This is mainly due to the transfer of Rs. 22.21 lakhs to the Development Rebate Reserve as against Rs. 3.85 lakhs only in 1958 and also a higher provision for Depreciation. The gross profit before providing for Depreciation and Development Rebate Reserve amounts to Rs. 55.35 lakhs as compared to Rs. 35.18 lakhs for the year 1958. I am glad to inform you that your Company is making steady progress and there is every hope of continued improvement in the working results of your Company in the years to come.

This is the last year of the Second Five Year Plan. As in the First Plan, great progress has been made by the Cement Industry in the Second Plan period also. The installed capacity of the Cement Industry has already touched 8.35 million tons and is expected to go up to 9.5 million tons by the end of 1960-61. The production capacity has thus doubled over the Second Plan period rising from 4.9 million tons to 9.5 million tons.

Though problems arise now and again in regard to the disposal of stocks, particularly due to transport difficulties, the Industry has on the whole a bright future. Increasing quantities of cement will be required with the growing tempo of development. In the draft outline of the Third Five Year Plan, it has been estimated that by 1965-66 about 13.5 million tons of cement will be needed and to achieve this production, it is planned to raise the installed capacity to 15 million tons. In my view, the target set for the Cement Industry is both realistic and practical and there should be no difficulty in expanding cement production as envisaged in the Plan.

Manufacture of Cement Machinery

It will interest you to know that by the middle of the Third Plan most of the cement making machineries will be manufactured in the Country. By the end of the Plan period, six to seven cement plants will be manufactured yearly. The standard size of these cement plants would be 500 tons per day. The total value of the plants excluding electricals would be Rs. 4 crores to 5 crores per year and the indigenous content of the manufacture is estimated at 90%. The manufacture of cement making machineries will constitute a land-mark in the development of the Cement Industry in our Country and give a fillip to the programme of rehabilitation, modernisation and expansion of the Industry. It will be obvious, however, that even though a start will be made towards manufacturing cement making machineries in the Country, the manufacturing capacity will not be able to meet a major part of the requirement of the cement industry for achieving the target of 15 million tons. It would, therefore, be necessary to allow import of plant and equipment after making an appraisal of the extent to which indigenous manufactured machineries would be available. It would be unrealistic to place a total embargo on import of cement machineries and I am afraid, if this is done, there would be serious setback in the plans to expand the cement industry to the extent envisaged in the Third Plan.

Dead burnt magnesite, which is being manufactured at Salem by Messrs. Dalmia Magnesite Corporation, a firm in which your Company is a major partner, will be in ever increasing demand. It is required in large quantities by the Steel Industry and by the Refractory Industry for the manufacture of basic refractories. The current installed capacity for manufacture of dead burnt magnesite is 64,320 tons per annum. If the projects which have been sponsored for expansion of this Industry are taken into consideration, it is estimated that in the next three to five years, the installed capacity will go up to about 100,000 tons. Even then, the total demand for dead burnt magnesite would not be met and there is scope for further expansion of the dead burnt magnesite industry. The Steel Industry itself will require about 90,000 tons of dead burnt magnesite by the end of the Third Plan period for which alone it would be necessary to raise the annual installed capacity to 115,000 tons. In addition to this, the requirement of dead burnt magnesite by the Refractory Industry would also be on the increase with the anticipated switch over by the steel industry to all basic roof for the open hearth furnaces. In view of the considerable scope for expansion of this Industry, it is proposed to double the production capacity at Salem Works and an application is being submitted to the Government of India for grant of necessary licence and import facilities.

Iron Ore Business

I am glad to inform you that the iron ore business of your Company is developing satisfactorily. Iron ore has now become an important foreign exchange earner. The export of iron ore has been rising steadily and in 1958-59 India exported 23.90 lakh tons. The State Trading Corporation, to whom the entire export of iron ore has been entrusted is pursuing a wise policy in promoting the exports through long term agreements with important customers of Indian iron ore. New markets have been established particularly in Eastern Europe though Japan continues to be India's main buyer. In view of the growing importance of iron ore in the country's export programme it has been decided by Government to make substantial investments in mining, railway transport and port facilities with a view to augment the export of iron ore during the Third Plan period, in which considerable assistance is being received from Japan. Your Company is making its due contribution in this export drive so as to maximise the foreign exchange earnings which are so badly needed to push forward the development plans of our country.

In my speech last year, I had dwelt on some aspects of tax assessments which create avoidable hardships for the tax payer. I had suggested that the power of the Income Tax Department to question any business expenditure should be confined to cases where they find the expenditure to be in the nature of tax evasion and it should not be their function to decide whether the expenditure was commercially expedient or to question the quantum of the expense. In a recent case which went up to the Supreme Court in an appeal against the judgment of an Industrial Tribunal, the Learned Judges of the Supreme Court held that in the absence of cogent and compelling evidence leading to the definite conclusion and finding that a purported expenditure was sham or had been made with the express object of minimising the profits with a view to deprive the workmen of their bonus, it is no part of the duty of *an industrial tribunal to substitute its own judgment as to what was or was not commercially justified in the place of the judgment exercised by the company and its directors in whom in law the management of the company is confided.* The principle enunciated by the Supreme Court is applicable equally to tax assessment cases and I would urge that the law should be suitably amended so that the power of the Income Tax Department to question business expenditure is restricted to cases where on cogent evidence the conclusion is reached that the expenditure was sham or malafide with the ulterior object of tax evasion.

Disposal of Tax Cases

I would also like to draw the attention of Government to the long delays that occur in completing the assessments. To some extent, this indifference to early disposal of tax cases can be traced to the advance deposits of taxes required under law. Taxing authorities, therefore, find themselves in no hurry to finalise the assessments. This is particularly true of cases where final assessments are likely to result in a refund. When the cases are ultimately taken up after several years, it is because they would otherwise get time-barred. The assessees are then rushed and numerous informations and statements are required to be furnished within a matter of days. At that late stage it becomes difficult for the assessee to gather all the details, particularly, because the persons who handled the subjects or transactions may not be available or, if available, may, at that length of time, recollect little about the precise facts or circumstances of the case. The proceedings end up in a large number of arbitrary disallowances of bonafide items of business expenditure and the assessee gets penalised for no fault on his part. I would strongly urge that assessments should be disposed of expeditiously. This is in the interest both of revenue and the tax-payer. In this connection, I may also draw attention to the inordinate delays that take place in effecting refunds of tax. Where on completion of final assessments, refunds become due on account of excess deposits made by way of advance payments of tax, payments should be effected promptly and refund cases should not be neglected as is usual at present. The Direct Taxes Administration Enquiry Committee has also recommended that greater importance than at present should be given to disposal of refund applications. I am glad that this recommendation has been accepted by Government and hope that necessary instructions will be issued for according highest priority for disposal of the refund cases.

Report of the Wage Board

I would now refer to the Report submitted by the Central Wage Board for the Cement Industry of which I was a Member representing Employers. The Board was appointed by the Government of India in April 1958 to work out a wage structure based on the principles of fair wages for the employees of the Cement Industry. The Board has recommended a uniform set of wage grades for the Industry on an All-India basis. A uniform Dearness Allowance has also been recommended for all the factories with the exception of factories in Gujarat and Saurashtra regions where somewhat higher Dearness Allowance has been permitted. The Dearness Allowance would be adjusted from time to time, having been linked to the All-India Consumer Price General Index-base 1949. In our dissenting note, we the Employers' Representatives, stressed the importance of linking the fair wages to fair loads of work and recommended that in accordance with this fundamental principle of wage fixation prescribed by the Fair Wages Committee, workload studies should be carried out in the Cement Industry. The recommendations of the Wage Board have been accepted by the Government of India. Government have also considered the views expressed by the Employers' Representatives in their dissenting note and have decided that a study of workloads would be desirable and should be carried out as early as possible. The Wage Board and subsequently the Government have accepted the position that the Industry does not have the capacity to pay the wages recommended by the Wage Board on the existing retention prices and it has been agreed by the Government to allow suitable increase in the ex-Works price to take care of the incidence of the higher wages recommended by the Wage Board. Some of the questions arising from the Wage Board Report were considered at the Third Session of the Industrial Committee on Cement which was held at New Delhi on the 2nd August, 1960. It was decided by the Committee that the recommendations of the Wage Board should remain in force for a period of five years with effect from 1st January, 1960 and the Chief Adviser of Factories has been asked to arrange intensive workload studies in selected units to begin with.

You would be glad to learn that the outstanding dispute in regard to Bonus for the year 1958 to which a reference was made in my Speech last year has been settled along with the question of Bonus for the year 1959 as a result of mutual discussions with the Workers' Unions. Under a settlement, which was brought about through the efforts of Mr. R. Venkatraman, the Minister of Industries and Labour, Government of Madras, workers have undertaken to maintain industrial peace and discipline and to forbear from having resort to any strikes or go-slow for a period of five years. The Agreement lays down the procedure which is to be followed by the parties for the settlement of their differences or demands raised by any of the Unions. I am sure that both the Management and Labour will stand to benefit by this agreement because the smooth working of the factory is in the interests of both.

Before I conclude, I would like to express our appreciation of the services rendered by the officers, staff and workers of the Company during the year.

I would now request you to proceed with the consideration of the subjects on the agenda of the meeting.

N. B. The above extract of the speech does not purport to be the report of the proceedings of the Eighth Annual General Meeting of the Company held on the 10th October, 1960.

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories

For over 35 years "BEHAR" REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

BIG RISE IN STOCK MARKET

GILT-EDGED BETTER ON HOPES OF BANK RATE CUT

London, 12th October.

THE past week in the stock market was the best for a considerable time. The recent lengthy period of indecision gave way to a distinctly buoyant trend and a broad advance was recorded. Virtually all sections participated, even oil shares which were out of favour for such a long time. The sustained rise in the market was recorded in spite of almost a continuous flow of adverse news including the threat of a rail strike, later withdrawn, increasing activity in the new issue market and a rising volume of evidence of the effects of the high Bank rate and the credit squeeze on industry. Prior to the week-end, the market took all this news in its stride and continued its advance, but some hesitancy developed after the week-end as the volume of evidence on the credit squeeze effects steadily expanded. Nevertheless, there was little or no deterioration in the general tone which remained firm. The main reason for the advance was the chronic shortage of stock. Whatever the news, hardly any selling developed and with buyers still coming forward prices advanced accordingly. Among the few favourable influences were the end-September gold reserve figures which made a good impression, the better trend on Wall Street and for the gilt-edged, the reduction in the French Bank rate. This stimulated hopes of a cut in the British Bank rate, particularly as it is reported that a reduction may take place in the West German rate very shortly. The gilt-edged market benefited from investment buying, some of which, it was reported, were on foreign account and prices recorded useful gains. Foreign bonds were generally subdued, but free issues attracted speculative buying and dollar stocks responded to the sustained rally on Wall Street. Banking, hire-purchase finance and insurance shares met with a selective demand. Industrials recorded a broad advance, although prices eased after the week-end. Good company news contributed to the advance. South African gold shares went ahead on Johannesburgh buying after the referendum result but gains were subsequently reduced. West Africans lost ground on reports that Ghana is to nationalise foreign firms but rallied when these reports were denied. Coppers were dull, but tin shares improved. Oil shares recorded some good gains following a revival of buying interest. Rubber and tea shares were very quiet and price movements were small and irregular.

The Money Market

Stringent conditions were again apparent in the money market over the past week with the rate for day-to-day loans ranging between 5¼ percent and 5½ percent. A new development arose concerning the weekly transfer of tax money to the Revenue Department. As from last week, these transfers which normally take place on Thursdays, are now undertaken on Tuesdays. Thus the disturbance to credit which is usually associated with tax payments will be felt on this day and last Tuesday as no exception, money being in very short supply and the authorities had to give a large amount of assistance. It is now assumed that unless there is a sudden easing of the credit situation, the first two days of the week will always be difficult for the market in future. The demand for bills over the week was fairly good with second-half Decembers and "hot" maturities changing hands at 5½ percent. There was virtually no change in the Treasury bill rate at the weekly tender which came at £5 11s 3.52d percent.

Activity on Wall Street

Intermediate and long-dated U.S. Government obligations drifted into lower ground during the past week. The reasons cited for the lack of buying interest included uncertainties over the international situation and the domestic business outlook along with an inclination to await the outcome of the Presidential election. Top quality corporates were marked down early, but eventually developed a firmer trend. Convertibles fluctuated irregularly. Belgian Congo 5¼ percents were a good feature in the foreign section. German nationals were higher by as much as 2½ points with Italians showing fractional gains. French Credit Foncier moved up by a major fraction at the outset, but was unable to maintain all of the advance. Polish issues eased fractionally. A number of Brazilians were firm adding a point or more, while the Chile 3 percents backed and filled narrowly.

NAMES AND DATES

Following its policy of maintaining close contact with jute goods importers and consumers in its principal overseas markets, the Indian Jute Mills Association is sending a delegation to the United States, Canada, Argentina and the United Kingdom later this month. The delegation will consist of Mr. D. C B. Pilkington, the present I.J.M.A. chairman, as leader, Mr. D. P. Goenka, former chairman of the Association, and Mr. T. R. Crook as member-secretary.

Money

THE CALCUTTA MONEY MARKET

ADVANCES FALL SHARPLY

Wednesday, 12th October.

THERE has been a considerable fall in the advances outstanding in the Calcutta money market during the past week, with all main sources of demand showing reductions. The largest drop is on account of the sugar mills, but the requirements of the engineering and iron and steel industries are also down heavily. The reduction in demand from the jute mills and against grains and seeds storage is also appreciable. Conditions have remained extremely tight in the interbank market where the call rate is 4½ percent, but business has been reported up to 4¾ percent. The reason for this unusual stringency is thought to be the Government's credit restrictions.

The recent improvement in the flow of export bills has been maintained during the past week. The flow of both gunny and tea bills has increased. Remittance has been poor. In the London market, the pound is slightly weaker and closed with fractional losses against most important currencies. The undertone of sterling, however, remains strong.

BULLION WAS STEADY DURING THE PAST WEEK DUE to the Diwali demand. The price advanced from the previous week's level of Rs. 222 to Rs. 223, quoted today for ready delivery. The rate for forward delivery was Rs. 221.25. The London and New York prices were 79½d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 134 to Rs. 134.25. The sovereign gained 50nP at Rs. 89.50.

DURING THE WEEK ENDED 7TH OCTOBER, GOVERNment of India Treasury bills for Rs. 9,03,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 11th October. The total amount offered was Rs. 2,35,00,000. Tenders at Rs. 99.360 were allotted 85 percent, the average rate of acceptance being Rs. 2.560 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 17th October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 12th October to 15th October at Rs. 99.376 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 5th October to 8th October.

RISES OF RS. 20.87 CRORES TO RS. 1,810.91 CRORES in active notes and of Rs. 18 crores to Rs. 1,823.13 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 7th October, 1960. The currency expansion was covered by increasing rupee securities in the paper currency reserve by Rs. 20 crores to Rs. 1,451.74 crores and by reducing the rupee holding from Rs. 132.52 crores to Rs. 130.62 crores. In the Banking Department, deposits of the Government of India fell by Rs. 7.98 crores to Rs. 55.34 crores, and other Government accounts decreased by Rs. 7.21 crores to Rs. 11.25 crores due to the usual disbursements at the beginning of the month. Balances of commercial banks at Rs. 105.61 crores were Rs. 67 lakhs higher. Balances held abroad rose by Rs. 1.62 crores to Rs. 17.79 crores. Investments fell by Rs. 35.38 crores to Rs. 186.94 crores, partly due to a transfer of securities to the Issue Department. Other loans and advances declined from Rs. 130.63 crores to Rs. 127.75 crores, of which advances to scheduled banks against usance bills amounted to Rs. 8.31 crores (Rs. 9.23 crores). Ways and means advances stood at Rs. 39.19 crores (against Rs. 27.36 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 30th September, 1960, shows a drop of Rs. 4.51 crores to Rs. 591.65 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 2 crores and Rs. 5 lakhs to Rs. 359.63 crores and Rs. 9.88 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 3.03 crores to Rs. 219.05 crores. Cash and balances are, in consequence, shown at Rs. 29.48 crores, or Rs. 5.43 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 30th September 1960, shows Demand and Time liabilities at Rs 775.00 crores (Rs 19.51 crores on account of borrowings from banks) and Rs. 1,183.62 crores (Rs. 25.81 crores), compared with Rs. 772.07 crores (Rs. 17.64 crores) and Rs. 1,186.51 crores (Rs 25.36 crores), respectively, in the previous week. Cash has increased by Rs 27 lakhs to Rs 45.77 crores, while balances with the Reserve Bank have declined by Rs. 6.94 crores to Rs. 96.20 crores There is a drop of Rs. 3.76 crores to Rs. 726.21 crores in investments.

Advances and bills discounted at Rs. 1,127.59 crores show a rise of Rs 5.01 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.2 percent and 57.6 percent, against 7.6 percent and 57.3 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 14-10-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
14-10-60	15-1-60	2,00,00	Rs. 2.560%
7-10-60	8-1-61	2,00,00	Rs. 2.552%
1-10-60	2-1-61	2,00,00	Rs. 2.540%
23-9-60	24-12-60	2,00,00	Rs. 2.540%
16-9-60	17-12-60	2,00,00	Rs 2.540%
9-9-60	10-12-60	2,00,00	Rs 2.540%
26-8-60	27-11-60	2,00,00	Rs 2.540%
19-8-60	20-11-60	2,00,00	Rs 2.540%
12-8-60	13-11-60	2,00,00	Rs 2.745%
5-8-60	6-11-60	2,00,00	Rs 2.737%

Stocks and Shares

STOCK MARKET OPENS QUIET AFTER PUJAS

HEAVY SELLING IN GILT-EDGED

Wednesday Evening.

THE Calcutta Stock Exchange reopened after the Puja holidays on a subdued note. Business was reduced to a trickle, and in the absence of investment support prices continued their downward trend. Jute mill shares were virtually unsaleable owing to the high working costs caused by the shortage of fibre, and it is rumoured that before long there may be a further sealing of looms. The somewhat pessimistic speech made by the chairman of the Tata Iron and Steel Co. Ltd last week added to the gloom which prevailed, particularly as no early announcement of an increase in steel retention prices is expected.

Whatever little interest is being shown in the stock market at present is in the new issues which are now in full swing.

As a result of the Reserve Bank credit curbs imposed from 1st October the inter-bank call rate rose to 4½%, against 3¾% last month with no lenders and all borrowers. Bank selling of Government securities has continued unabated with no declared buyers.

The Citric India Ltd issue is reported to be doing well, and it is expected that the subscription lists will be closed tomorrow.

The recently issued State loans were, in the majority of cases, offered at a discount, and in the case of the U.P. issue, there were sellers at Rs. 2 below the issue price with few takers.

Very little business was reported in bank and railway shares and quotations were unchanged at around last week's levels.

Business in preference shares was also of a nominal nature. Holders are anxiously awaiting the final emergence of the Preference Shares (Regulation of Dividends) Bill from the forthcoming winter session of the Lok Sabha, when it will finally be established whether or not their dividend pay packets will be smaller in future. This matter was discussed in *Capital's* leading article in the issue dated 15th September, 1960.

Except for a small recovery in Burrakur Coal from Rs. 16.81 to Rs. 17.06, coal shares were dull and neglected and very few transactions were recorded.

In the absence of support, cotton textile shares were easier. Bowreah were marked down from Rs. 152 to Rs. 150, Dunbar from Rs. 19.75 to Rs. 19.50 and Kesoram to Rs. 26.

In electrics, Calcutta recovered from Rs. 14.50 to Rs. 15.12.

In the engineering issues, there was a small enquiry for Braithwaites at Rs. 31.19 but Burn and Company were marked down from Rs. 440 to Rs. 435. Calcutta Steel were offered freely at the lower rate of Rs. 15.12 x.r. Indian Iron & Steel fluctuated between Rs. 22.66 c.d. and Rs. 22.77 x.d., to close tonight at Rs. 22.70. Jessops were offered at the lower rate of Rs. 20.25 and Textile Machinery receded from Rs. 22.60 to Rs. 22 on tired bull liquidation.

For the reasons given earlier, little interest was shown in jute shares and prices were marked down on a broad front as will be seen from the following table:

	Opening 6.10.60 Rs.	Closing 12.10.60 Rs.
Agarpara	12.06	11.94
Bally	204	200
Birla	27.37	26.87
Howrah	21.25	20.50
New Central	24.50	23.37

In paper, Bengal moved down from Rs. 94 to Rs. 92 and Orient Paper, on rumours of a possible rights issue at a fairly high premium, were marked down from Rs. 40 to Rs. 39.50. Titaghur were easier at Rs. 37.75.

In sugar, Dyer Meakin Breweries were better at Rs. 23 owing to the further cut in imports of foreign liquors with effect from 1st October.

Among miscellaneous industrials, Alkali & Chemical reacted from Rs. 30.75 to Rs. 29.81 while Associated Batteries recovered from Rs. 35.87 to Rs. 36.25. Dunlop Rubber were easier at Rs. 40 while East Anglia Plastics moved up from Rs. 11.75 to Rs. 13. Hindustan Aluminium (Rs. 7.50 paid-up) were quiet at Rs. 8.50. Indian Cables, after being sold down to Rs. 31.50, recovered to Rs. 32.19 on publication of an excellent report. National Insulated Cables were slightly better at Rs. 29.50 while Phillips Carbon Black were softer at Rs. 16.87. Rallis India were subdued at Rs. 114 and Union Carbide were lower at Rs. 50.50.

Prices of tea shares showed little variation, except Tezpore which met with moderate enquiry and recovered from Rs. 15.25 to Rs. 15.75.

In the mining group, Metal Corporation were subdued at Rs. 9.44 as were M.P. Industries at Rs. 14.75 and Indian Copper at Rs. 4.33.

Dufflaghur Tea

The Dufflaghur Tea Co. Ltd has made a profit of Rs. 2.86 lakhs for the year ended December 1959, against Rs. 3.27 lakhs, after providing Rs. 2.20 lakhs (against Rs. 2.94 lakhs) for taxation. An ordinary taxable dividend of 35 percent, including an interim of 15 percent, has been declared. The previous year's dividend was 45 percent, tax-free. Allocations include Rs. 6,000 for development rebate reserve, Rs. 1.50 lakhs for building reserve and Rs. 50,000 for repairs and renewal reserve. There is a carry-forward of Rs. 3,83,571, compared with Rs. 4,42,523 brought in. The crop was 928,388 lbs, against 1,058,370 lbs. The average sale price was Rs. 2.71, against

WORLD-WIDE ACCEPTANCE

Why is it that S.T.C. is such a universally trusted name in the World of telecommunications? Partially because the S.T.C. organisation has repeatedly proved its ability to produce integrated communication systems on a truly massive scale. Partially because S.T.C. products—from the smallest component to the most complex network—have won an enviable reputation for dependability. But primarily perhaps because nothing pleases S.T.C. more than to face the challenge of a new problem—and to succeed in solving it. All these resources . . . all this experience are yours to enlist, no matter what your telecommunications problem may be.

Rs. 2.52 a lb. The estimate for 1960 has been made for a crop of 928,000 lbs at a cost of Rs. 2.12 a lb.

Teliapara Tea

The Teliapara Tea Co. Ltd has earned a revenue profit of Rs. 7.57 lakhs for the year ended December 1959, against Rs. 4.83 lakhs. A taxable dividend of 17½ percent has been declared, against 12½ percent, tax-free, in the previous year. Allocations include Rs. 4.60 lakhs (against Rs. 4.07 lakhs) for taxation, Rs. 1.50 lakhs (against Rs. 25,000) for revenue reserve, Rs. 36,000 (against Rs. 10,000) for development rebate reserve. Making other adjustments, there is a carry-forward of Rs. 31,974, compared with Rs. 21,959 brought in. The crop of Teliapara amounted to 512,738 lbs (against 523,400 lbs) and that of Satchurie was 379,380 lbs (against 418,810 lbs). The average sale price of the former was Rs. 2.57 (against Rs. 2.19) and that of the latter was Rs. 2.55 (against Rs. 2.13) a lb. Estimates for 1960 provide for a total crop of 1,090,000 lbs at an outlay of Rs. 16.63 lakhs.

Nagri Farm Tea

The profit of the Nagri Farm Tea Co. Ltd has fallen from Rs. 1.56 lakhs to Rs. 1.03 lakhs for the year ended December 1959. The dividend has been reduced from 30 percent, tax-free, to 20 percent, subject to tax. Transferring Rs. 25,000 to building reserve and Rs. 25,000 to repairs and renewal reserve, and setting aside Rs. 85,000 (against Rs. 1.30 lakhs) for taxation, there remains a balance of Rs. 1,29,955, which is carried forward, against Rs. 1,23,767 brought in. The crop has increased from 391,092 lbs to 405,068 lbs, but the average sale price has declined from Rs. 3.44 to Rs. 3.14 a lb. Estimates for 1960 provide for a crop of 424,000 lbs at a cost of Rs. 2.72 a lb.

East India Tea

An ordinary dividend of 10 percent, taxable, against 5 percent, tax-free, has been declared by the East India Tea Co. Ltd for the year ended December 1959. The profit has increased from Rs. 1.01 lakhs to Rs. 1.58 lakhs, after providing Rs. 1.50 lakhs (against Rs. 38,000) for taxation. Making various adjustments, there is a carry-forward of Rs. 1,31,213, against Rs. 1,15,741 brought in. The crop rose from 1,153,223 lbs to 1,191,489 lbs, and the average sale price from Rs. 2.47 to Rs. 2.56 a lb. Estimates for 1960 provide for a crop of 1,208,000 lbs at a cost of Rs. 2.24 a lb.

Tata Steel Output

Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Co. Ltd, report that the total approximate production of iron and steel at the steel works in Jamshedpur during September 1960 was: pig iron 133,300 tons; steel ingots 138,100 tons; semi-finished steel for sale 86,300 tons; and finished steel 71,700 tons.

Bombay Market

SHARE PRICES EASE IN QUIET TRADING

OPERATORS WORRIED ABOUT DEARER BANK CREDIT

Wednesday Evening.

THE Bombay stock market was quiet during the past week. Share prices declined on a broad front on nervous bull liquidation. Operators were worried about bank credit becoming more expensive, and it was feared that there might be a rise in Bank rate. Even the shares of companies likely to make rights issues were not in demand because it was thought that the Controller of Capital Issues might insist on substantial premiums. Towards the close, a few scrip recovered slightly on short-covering, but the undertone remained hesitant. The address given by Mr. J. R. D. Tata, chairman of the Tata Iron and Steel Company, at the annual meeting held in Bombay a few days ago, had little effect. But higher production figures of the Company for September induced some bear-covering in the scrip, which closed at Rs. 145.25. Indian Iron were quoted at Rs. 22.76 as the production of the Company during September showed a decline. Among engineering shares, Alcock Ashdown were steady at the lower price of Rs. 260 on prospects of a new share issue. Premier Construction declined to Rs. 315, but scattered interest was taken in Tata Locomotive at Rs. 277. Larsen and Toubro recovered to Rs. 33.50, but Mukand Iron were sold freely at Rs. 24.

There were widespread losses in cotton mill shares, although closing prices were occasionally somewhat higher. Bombay Dyeing were quoted at Rs. 63.30 and Century were available at Rs. 455. Standard were done at Rs. 1,300 and Kohinoor were taken at Rs. 301.50. Simplex were quoted at Rs. 168 and Finlay were dealt in at Rs. 340. Svadeshi were transacted at Rs. 252 and India United Ordinaries were offered at Rs. 11.92. Apollo came to hand at Rs. 1.34.

Miscellaneous shares moved in line with the general trend. Among cement shares, Associated Cement declined to Rs. 144.50, and Digvijay to Rs. 164.50. In the sugar group, Belapur were quoted lower at Rs. 358 and Phalton lost at Rs. 178. Walchandnagar Industries were placed at Rs. 298. Steamship company shares were quietly steady, and Scindia Steam were bought at Rs. 14.24. Great Eastern Shipping changed hands at Rs. 16. There was little interest in mining shares, and Shivrajpur Syndicate were indicated at Rs. 67. Bombay Burmah reacted to Rs. 571 on pressure in spite of paying the higher dividend of 30 percent taxable. Chemical shares were quiet, and Tata Chemical were offered at Rs. 16.20. Indian Dyestuff declined to Rs. 580. Voltas were shaded at Rs. 263 on profit-taking. Ceat Tyre were available at Rs. 245 and Polychem were transacted at Rs. 262.50. Gwalior Rayon declined to Rs. 39 and National Rayon were quoted lower at Rs. 463.

Bank shares were neglected, and Central Bank declined to Rs. 39. Bank of Baroda were sold at Rs. 81. In the insurance group, New India Assurance were quoted at Rs. 54.20 and British India General declined to Rs. 12.25.

Sellers predominated in electricity supply shares, and Ahmedabad Electric were available at Rs. 88.50. Bombay Suburban were sold at Rs. 84.50 and Tata Hydro were dealt in at Rs. 102.50.

Madras Market

COMMODITY TRENDS AFFECT SHARE SENTIMENT

FURTHER IMPORT CUTS FEARED

Wednesday Evening

SENTIMENT deteriorated further in the Madras stock market during the past week. It was feared that the working of industry might suffer if more import cuts were to be enforced due to the foreign exchange shortage. A cautious view was taken about the prospects for exporting textile goods, especially since Ceylon had placed fresh restrictions on imports of cloth. Sugar shares were traded cautiously because of the uncertainty about the cane price during the coming season. The question of linking the cane price with the value of sugar has been referred to the Tariff Commission. Tea shares were quiet in view of the possibility of greater competition from foreign producers. The export outlook for coffee became uncertain due to Africa having joined the International Coffee Agreement. In spite of an increase in production in September, rubber shares were soft because of a decline in the international price of the commodity. Buyers were conspicuous by their absence as far as miscellaneous scrip were concerned.

Government securities were quiet, with sellers predominating. Some State loans were quoted at a discount. Public utilities were neglected. Cochin were transacted at Rs. 9.92 and Negapatam came to hand at Rs. 8.90. South Madras were dealt in at Rs 10.10 and Vellore were done at Rs. 11.50. Bank shares were neglected around the previous levels.

Sellers predominated in sugar shares and prices declined all round. Deccan were available at Rs. 14.73 and E.I.D. at Rs. 41. Mysore fell to Rs. 60.50 and United Breweries were idle at Rs. 114.50. India were transacted at Rs. 12.75, and Andhra at Rs. 29.

In the planting group, Blue Mountain were offered at Rs. 4.80 and Cochin Malabar at Rs. 6.81. Scattered business passed in Consolidated Coffee at Rs. 25.50 and Ouchterlony were placed at Rs. 4.85. Periakaramalai came to hand at Rs. 3.46 and Midland were bought at Rs. 11.75 on paying a taxable dividend of 12½ percent. Balanoor were quoted at Rs. 16.70 and Chembra were sold at Rs. 4.85. Cowcoody were placed at Rs. 5.15 and Kalpetta were done at Rs. 11.95 on paying a taxable dividend of 12½ percent. Business passed in Kil Kotagiri at Rs. 5.64 and Nilgiri were dealt in at Rs. 7.75. Peermade were quietly steady at Rs. 23.32 and Swinton were available at Rs. 2.90. Twyford were indicated at Rs. 11.50 and Woodland were offered at Rs. 7.65.

Among textile shares, Buckingham were sold at Rs. 196.50 and Bangalore Woollen were also dealt in at the same price. Kothari were quiet at Rs. 12.20 and Lakshmi were offered at Rs. 138.50. Madura changed hands at Rs. 33.60 and Travancore Rayon recovered to Rs. 32.70 at the close. Sellers predominated in South India Viscose at Rs. 147 and Mettur were shaded at Rs. 392. Rajalakshmi were placed at Rs. 72 and Rangavilas were bought at Rs. 42.

There was little interest in miscellaneous shares and prices were lower. Aluminium Industries were available at Rs. 22.35 and Ashok Leyland at Rs. 7.90. India Cement came to hand at Rs. 6.68 and Mandya National Paper were quoted at Rs. 12. F.A.C.T. declined to Rs. 10.50 and Enfield were offered at Rs. 15.79. Textool were dealt in at Rs. 188 and Tube Investment were offered at Rs. 331. Singareni were placed at Rs. 10.50 and Spencer were quoted at Rs. 21.60. Standard Motor were transacted at Rs. 17.75 and Parry's Confectionery were offered at Rs. 4.35.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. Refractories for all purpose
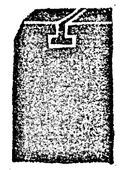
The Kumardhubi range of refractories is now being increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.



Backed by over 50 years of manufacturing experience, Kumardhubi Fireclay and Silica Works contribute a vital operational requirement in a number of industries.

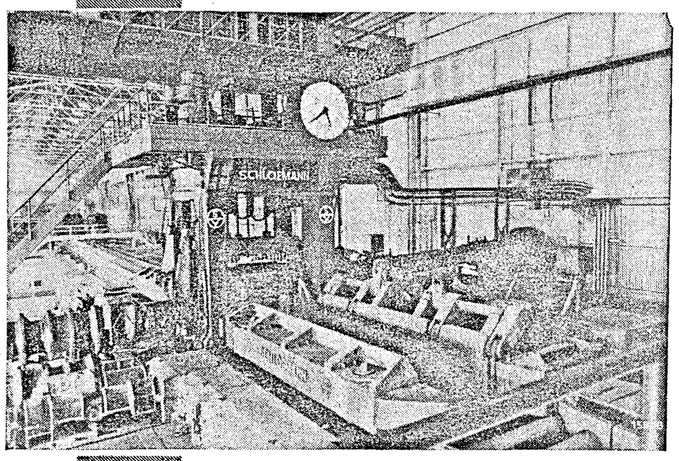
SCHLOEMANN



46" blooming and slabbing mill, for piece weights up to 15 tons, built for the Tata Iron and Steel Co. Ltd., Jamshedpur, India.
13 Blooming and Slabbing Mills
During the past seven years SCHLOEMANN have built thirteen blooming and slabbing mills complete with auxiliary equipment. Additionally, extensive equipment has been supplied to modernize existing mills. In all cases particular attention has been paid to robust design, good accessibility and easy interchangeability of the rolls and all wearing parts, an advantage that is much appreciated where semi-skilled labour has to be depended upon.

TUGS built by Mazagon Dock ...help save foreign exchange!
Tugs, built by Mazagon Dock during the last few years are today being used by Bombay Port Trust, Saurashtra Government and several other parties. Their performance compares favourably with the best in the world. Mazagon Dock have already built and have under construction several vessels of different types including tugs, dredgers, barges, survey launches, fire floats. etc.
Mazagon Dock help India save foreign exchange by building these vessels in India and also by providing reliable repair facilities for vessels which would otherwise be repaired in foreign countries. Mazagon Dock also earn foreign exchange by repairing vessels, owned by foreign shipping firms.

Such is the target set by the Third Five Year Plan and Simon-Carves look forward to playing their part in achieving this.

Closely associated with numerous industrial enterprises in India for over a quarter of a century, Simon-Carves design, engineer and erect complete plants for: Synthesis gas, derived from coke oven gas or from gaseous, liquid or solid hydrocarbons. Ammonia synthesis by the Ammonia Casale process. Production of nitrogenous, phosphatic and complete fertilisers.

Simon-Carves have started work on building a granulated compound fertiliser plant based on synthetic ammonia for The East India Distilleries & Sugar Factories Ltd., at Ennore near Madras.

New Delhi

WEST GERMAN EXPERT PLEADS FOR LIBERAL AID TO INDIA

MEASURES TO INCREASE IMPORTS FROM COMMUNIST COUNTRIES

(FROM OUR NEW DELHI CORRESPONDENT)

A WEST GERMAN expert, Dr. Paul Krebs, who came to India with Dr. Abs, one of the three international bankers whom the World Bank sent to this country earlier this year, recently expressed his views on the economic prospects for India and Pakistan before a West German audience. He said that he was under the impression that West German merchants as well as consumer goods manufacturers were more sceptical than the investment goods industry about the industrial development of certain overseas areas, which admittedly were hasty and ill-conceived and about western aid which was being extended in order to promote such industrialisation. Here, Dr. Krebs said, a real conflict existed between the foreign trader's "open-world" attitude and his "vested interest" in preserving and extending the markets for his traditional export articles. Dr. Krebs referred to the speech of a leader of the West German jute industry who had expressed very pronounced doubts about western aid programmes. He said that the investment goods industry was clamouring loudest of all for aid to the developing countries. But the jute goods industry spokesman was doubtful whether it was at all right to export investment goods designed for the building of export industries in developing countries, because the West German consumer goods industry would be endangered by the cheap export articles manufactured in these new factories. It would be better for the developing countries (mainly India and Pakistan were referred to) if the western nations would first make combined efforts to enable them to produce enough food to nourish their peoples. In making this remark, the speaker, Dr. Krebs said, touched on one of the most important problems which must be investigated when trying to find an answer to the question: development aid, but how?

"In Pakistan," Dr. Krebs continued, "the new Government under President Ayub Khan succeeded in a relatively short time in improving the country's economic conditions, relieving the pressure of inflation, and preventing the currency reserves from dwindling further by introducing strict foreign exchange controls. The import ban has been relaxed again in the meantime concurrent with an export-promotion system which was devised with the assistance of Mr. Vocke, former president of the Deutsche Bundesbank, who for a time acted as an adviser to the Pakistani Government. Nevertheless, after thoroughly investigating the situation, we found that for years to come Pakistan will not be in a position to satisfy her normal import demands, nor procure the foreign exchange needed for development projects from out of her own resources. This is important to consider when trying to judge the future prospects of our import and export business with Pakistan. The Government of Pakistan is fully aware of these circumstances. Pakistan was indeed forced to admit a certain minimum of imports of 'non-essentials' in order to satisfy the most urgent demands of the population and stave off the danger of inflation. But, on the whole, only such imports are accepted as help save or earn foreign exchange, namely, industrial raw materials, semi-finished goods, spare parts and investment goods. A prominent place in the economic plans was thus given to the establishment of domestic producer and consumer goods industries which use as many indigenous raw materials as possible and are designed to satisfy the growing home demand in the agricultural and industrial sector and to sell their surplus output abroad.

Second Pakistani Plan

"In the second five year plan which is to begin in July 1960, top priority is given to promoting agricultural production, that is, making the country self-sufficient in food. All other measures are subordinated to this target. We have noted with satisfaction that the Government is determined to pursue this policy in the face of all difficulties which may arise. A decisive step forward will have been taken if, in spite of the 2 percent annual rate of population growth and the difficulties exprienced in the fields of administration, education, credit and communications, the Government succeeds by its own effort and by suitably applying foreign aid, in attaining the desired independence of foreign food imports by the end of the second five year plan.

"But even in that event the path will not be cleared for a more liberal import policy, because most of the imported food, which together with domestic production satisfied the minimum needs of the population, was delivered to Pakistan by the U.S.A. without creating foreign exchange obligations. Assuming self-sufficiency in food were actually to be attained, a wide foreign exchange chasm will still persist which cannot be closed by increased export earnings for a long time yet. Pakistan is in a very much worse situation than India, because the country has very limited raw material resources. The great dilemma of the country, a vicious circle which must be broken mainly by foreign aid, is that the demand for housing, clothing and simple consumer goods will keep rising due to both higher incomes derived from increased domestic production and population growth. This applies to many other developing countries. Considering that today the average income in India and Pakistan is no more than $(U.S.) 65 to $(U.S.) 75 a year, it is easy to understand that the mass of their peoples, whose income is beneath the subsistence level, cannot be expected to save by refraining from consumption. On the other hand, if the supply of commodities is much too small, their incomes must depreciate, although nominal earnings become higher.

"In Pakistan, only a very small proportion of the rising demand for goods of our civilised world can be satisfied by greater export achievements. For a long time yet, the lack of commercial experience and organisation will stand in the way of a substantial expansion of exports. This applies particularly to exports of finished goods which are being or will be manufactured by newly established industries. Another important obstacle to the increase in exports is that in proportion to the rise in domestic demand, fewer raw materials and finished goods will be available for sale to foreign countries, a state of affairs which exists already now both in India and Pakistan.

Need for Industrialisation

"This situation must teach us to realise two things. One is that countries like Pakistan, but also India, which I shall refer to later, besides increasing their agricultural production, are simply forced to industrialise and to this end even develop the basic materials sector as an indispensable foundation for manufacturing industries by which foreign exchange can be saved or earned, and by which they can satisfy the most urgent needs of the population, the living standards of which they are literally bound to improve gradually. Otherwise, they will not be able to keep their current foreign exchange budget in balance, besides repaying their foreign debts which have mounted up in the meantime and will continue to become greater. They would be forced for a long while to live on the charity of others with all the political consequences which can only be fatal for themselves as well as for us.

"For this reason, it would be a mistake to stand firm against this development for the sake, for instance, of our own short-term export interests and other reasons and to decline to grant public assistance to these countries; or, on the part of private business to refuse to help them to get on their feet by providing them with production goods, 'know-how', qualified instructors and advisers, and capital. On the contrary, it is in our very own interest to study any and all requests and openings concerning sound projects and, especially, to try to find out where we might suitably invest in new industries to the developing countries' benefit and the profit of all parties concerned.

"Commercially, from a long-term point of view, this development must not be looked on as a drawback for the industrial countries, sorry as the prospect may be of gradually losing the present markets in certain developing countries, a process which cannot be held back. For the less developed countries certainly will be able sooner or later to stand on their own feet, if they seriously try to do so and provided they are given financial, technical and commercial assistance at the right time. Once their individual and national purchasing power has become substantially greater, these countries will be in a position to purchase larger quantities of the goods which they are unable to produce at home. In addition, they will require more foreign spare parts and equipment items for further industrialisation. Experience has proved that sound and properly developed countries do a much greater and steadier amount of trade with each other than highly developed countries can expect to do with less developed and weak partners. Brazil and Japan are excellent examples in this matter, too. And today this applies more than ever to dealings with the so-called raw material producing countries. If we assist them in developing their economic resources and their markets and help them sell more of their products in their domestic markets and abroad, this will in the long run be to our own advantage.

"All this means that we must begin to remodel our thinking entirely when looking on our commercial relationships with developing countries like India and Pakistan. Of course, revised attitudes will create new poblems concerning industrial projects to be carried out there, but these problems can be solved. I hope to have shown you that a genuine participation in such projects on our part is logical and even necessary in the long run. In my opinion, we must not be deceived by the circumstance that sales conditions for us still are relatively favourable in these countries. In view of the developments which I have described to you and which may be expected to proceed at a faster rate than industrialisation did in Brazil, for instance, we must begin here and now to take proper precautions in order to secure a fair share of these markets in competition with other exporting nations.

Targets of Development

"Both countries are forced today more than ever to concentrate the development of their economies on certain essential targets. For, on the one hand, they have only a limited potential of foreign exchange resources, public and private savings, raw materials, and qualified personnel, which they have to use carefully. On the other hand, while endeavouring to provide the broad masses with higher incomes, they must create those very conditions which effectively ensure a gradual improvement of the general standard of living.

"The Governments of India and Pakistan told us that they do not intend to establish State-controlled economies. The idea of the development plans merely is to use suitable foreign exchange, investment, and other controls for the exclusive promotion of such projects, both public and private, as will help assure their implementation. From year to year, the plans are to be adjusted to the available means, especially to the amount of foreign aid which is promised from time to time. Both in India and Pakistan, projects of secondary importance are to be suspended if the amount of aid were to be reduced. Here conclusions have been drawn out of former mistakes. Wherever possible, orders for development projects are not to be definitely placed before the necessary funds, particularly foreign exchange and foreign credits, are actually forthcoming. The Rourkela case was a warning to India. Still it must be realised that it is not easy to be flexible when major long-term development projects are to be prepared and carried out. In this matter, both the countries depend on foreign assistance being promised in advance for a number of years.

Indian Third Plan

"The third Indian five year plan, which starts from 1st April, 1961, sets the following targets: (1) to achieve self-sufficiency in foodgrains and increase other agricultural production in a degree sufficient to satisfy the demands of industry and export trade; (2) to restrict the promotion of industry to such projects as will help save or earn foreign exchange, that is, to develop the manufacture of goods mainly relying on indigenous raw materials; (3) to expand the basic industries (steel, fuel and power) and the capacities in engineering to an extent which will enable India within about ten years to meet most of her demands for further industrialisation from the country's own resources; (4) to create as many more opportunities for gainful employment as possible; (5) to adjust the unequal distribution of incomes and achieve a more even distribution of economic power.

"Looking at the size of funds which are to be invested in both plans, I cannot help calling them pretty enormous in both cases. In the internal sphere—tax revenue and savings accumulations—as well as the amount of foreign aid required, it will be difficult to reach the targets, particularly as both Governments declared that in the interest of monetary stability, they will try not to resort to excessive deficit spending, even in emergencies.

"Both countries are aware that excessive creation of money supply and an inordinate influx of capital from abroad will cause inflation. It remains to be seen whether they will be able to avoid this grave danger, or whether in a really serious situation they would be afraid to clamp on the brakes for fear of the political consequences.

"The Indian five year plan is much more ambitious than the second Pakistani programme, even considering that India has more than four times as many inhabitants as Pakistan. The investments are to be increased from $13,800 million to $21,000 million, compared with the preceding five year plan. This is due in the first place to the fact that industrial development in India is much more advanced and on a much broader basis, so that larger capital expenditure will have to be provided for, if economic growth is to proceed. The raw material resources of India are much larger than those of Pakistan and the Government naturally wishes to use them for the development of a basic industry in order to save as much foreign exchange as possible. This, for the next few years to come, calls for an extraordinary amount of foreign assistance.

"In view of this different situation and development of the Indian economy, and considering that so far India has not suffered from erosion of the soil, comparatively small funds have been apportioned to agriculture. Nevertheless, in the Indian plan, too, agriculture is given the first priority.

"The total of $21,000 million is to be distributed as follows: 19.9 percent for agriculture, village communities, irrigation and drainage systems; 23 percent for industry and raw materials; 4.4 percent for crafts and small industries; 16.5 percent for transport and communications; 16.5 percent for social welfare; 3.5 percent for power-stations; and 11.5 percent for equipment and stocks.

Allocation of Expenditure

"Altogether 60 percent of the total is to be spent in the public sector and 40 percent in the

private sector. The amount of foreign aid which is needed is given as about $5,500 million or 25 percent of the total—$1,500 million for the balance of payments aid and the funding of foreign debts. This means an increase of 45 percent in foreign aid over the assistance promised under the second five year plan. To the above total of foreign aid must be added $1,100 million in U.S. food deliveries, which India expects to require before self-sufficiency in agricultural products is reached in 1966. Foreign exchange is not required for these food deliveries.

"In both countries, the question is important as to whether they will be able to satisfy the demand for foreign exchange by increasing their exports. On the one hand, this depends on the development of the 'terms of trade', particularly in the raw materials sector. On the other hand, both Governments must not drive their export promotion too far, because they have to provide for an adequate supply of commodities to satisfy the rising home demand and at the same time prevent real incomes from depreciating. For these reasons, export estimates in both five year plans are rather conservative, perhaps too conservative. In making the estimates, the authorities were aware that foreign markets for their raw materials and finished goods will be relatively restricted for some time yet. The indifferent quality of many articles and the limited 'efficiency of the export' organisation is another impediment. However, much can be done to improve the situation in this matter with suitable foreign advice and assistance. The West, including ourselves, in their own interest should permit India and Pakistan to use what chances they have in the western markets by pursuing a more liberal import policy. Instead, by allotting them bagatelle quotas in some fields, we now sometimes give them the impression as if we were not particularly interested in assisting them in their efforts to become economically independent.

Opportunities for Self-help

"On the other hand, India and Pakistan might and should do much more themselves to become less dependent on foreign aid by expanding their mutual commodity exchange. There are many opportunities in this field which are not yet being explored on account of certain political difficulties. In spite of the enormous sums which are to be invested, the five year plans of India and Pakistan cannot be called excessively ambitious, considering that, as we were told, their purpose is to raise the *per capita* income by a mere 2 percent or slightly more each year, and considering also that the population in these areas increases by an annual 2 percent. Of course, one must examine very carefully whether actually the plans are not too big for achieving this objective. Further, it is necessary to investigate whether rapid industrialisation will not produce new import requirements which more than compensate the foreign exchange savings. If these dangers are to be averted, it seems to me essential for India and Pakistan to prepare an effective export drive on the basis of long-term prospects and expectations.

"Meanwhile, it may well happen during the development phase visualised that the quantity of home-produced consumer goods and other commodities periodically falls so far short of the rising demand that either the prices run away or further economic development is halted. In such emergencies, foreign countries must think of giving temporary assistance in the form of raw materials, semi-finished or finished goods, perhaps on a basis similar to the American food supplies under P.L. 480.

Foreign Exchange Requirements

Some $7,200 million in foreign exchange and development aid—excluding food supplies—alone to India and Pakistan is a big order. Such aid equals $1,450 million or about 6,000 million deutschemarks each year until 1965-66. A closer examination of the two development plans which the World Bank has carried out recently may prove that both countries actually could do what they intend to on less money. But, even if this were so, great efforts must still be made to give effective and timely aid to these two countries. In doing so, we must not forget that besides India and Pakistan, quite a number of other developing countries depend on outside assistance. But aid to India and Pakistan is a necessity of the first order if a chain of political and economic reactions in other areas is to be prevented, quite apart from the humanitarian aspects of western assistance.

"Our policy should be to make a fair contribution and see that our aid is convincing by nature, purpose and execution. As long as this is the case, we need not even fear massive eastern assistance. Besides, such assistance eased our own burden while draining the communist world's economic potential, which is strained as it is. And why should we not give Russia the chance to make mistakes like we often do ourselves? In order to give the developing countries the full benefit of our assistance and at the same time restrict the measure of air to a bearable minimum, it is high time to co-ordinate aid, at least the general outlines. The co-ordination must take place not only among the assisting nations, but also in appropriate consultation with the receiving countries. Fortunately, this necessity was pointed out and stressed during the last Bundestag session. Co-ordination and consultation should take place not only in the field of direct Government aid, but also be applied to assisting industry in delivering investment goods and in carrying out private capital investments in the developing countries.

"Considering the enormous sums which they hope to receive from the capital investing countries, the developing countries, for their part, should realise that it is necessary for the former to make a common examination of the development projects by their size and overall economic worth, the nature and duration of credit required, the application of goods and services delivered, and the effects of foreign aid on monetary stability in the receiving country. The European nations also had to submit to such controls as the recipients of Marshall Aid, and this has worked to their advantage. New institutions should and need not be set up in order to examine projects and supervise the application of funds, etcetera. This would neither benefit givers nor receivers of the assistance. I am sure that all parties concerned would agree on having the necessary investigation and co-ordination carried out under the auspices of the World Bank and the International Monetary Fund.

Value of Untied Loans

"Multilateral usability of public foreign assistance (untied loans) is another way of giving development aid economically, that is, at a minimum of cost and with a maximum of economic effect. Unfortunately, the U.S.A., for balance of payments and other reasons, has found it necessary considerably to restrict the practice of this principle. Our own and other assisting governments should try and re-establish it. Of course, we can only expect the U.S.A. to do so if Europe takes some of the burden off that country by making greater contributions towards helping the developing countries.

"Private development aid in the form of 'know-how', advice on the spot, and partnerships in industrial and commercial undertakings in the developing countries is another field where a lot of money, at least public money, might be saved. I have already tried to explain why German business in its own long-run interests should do more in the way of offering capital participation, qualified personnel, and 'know-how' even to the countries which are not so near and familiar to us. Once this necessity is generally realised, business will be prepared to assume the admittedly considerable risks without relying too much on State protection and will also find a solution for personnel and other difficulties. This does not mean that both the giving and receiving countries must not create a favourable investment climate which will make it possible for private business to become more active in the developing areas. The effective protection of foreign investment against political risks by bilateral or better multilateral inter-State agreements, suitable tax relief, and other measures to alleviate capital investment in the developing countries, are problems yet to be solved.

Private Foreign Investment

"This whole problem of promoting private foreign investment in the developing countries is among those which ought to be tackled and co-ordinated on an international basis among the capital-giving nations and between them and the various capital-receiving countries. In some of the assisting countries, including West Germany, the problem of how these funds shall be raised is unresolved or only partially solved up to the present. For instance, it is useless for West Germany to offer developing countries Hermes-Plafonds and leave the provision of long-term finance to the capital market which is simply unable to raise the necessary capital. In the meantime, the Hermes-Plafonds have run up to a total of far more than 1,000 million deutschemarks. The developing countries quite rightly are disappointed when they discover that Hermes guarantees do not provide cash. On the other hand, it is frustrating and discouraging for West German concerns which compete for sound development projects to find out that sufficient finance cannot be procured in West Germany and that it is almost useless to try and secure contracts because our interest level is so very much higher than the interest level in competing countries.

"Nor do certain government quarters seem to realise that, considering the structure of deposits, commercial banks can undertake to provide long-term capital only to a relatively modest extent. Yet, long-term funds are essential because development aid is chiefly concerned with infrastructural projects which cannot be financed with normal bank credit, and because many developing countries are unable to raise enough money and earn enough foreign exchange to repay credits within a few years. The drastic scaling-up of our minimum reserve requirements and our high interest rates which the developing countries are scarcely able to afford, have produced new difficulties in the field of normal bank credits Our capital market is out of reach even for domestic projects, last but not least as a result of recent measures in the credit sector.

"The present interest level in West Germany actually prevents capital exports to the developing countries and encourages capital imports. Consequently, the Reconstruction Loan Corporation, the most important West German institution for financing and refinancing development aid, is quite unable at present to procure long-term funds in the market. So far, the so-called 'Development Fund' has merely been discussed without tangible results. In any case, only part of this restricted Fund can be used for development aid purposes if the most urgent domestic requirements are not to be neglected.

West German Development Fund

"Therefore, even if Bonn were at least to put the Development Fund on its feet, we shall still have to produce an adequate amount of German aid contribution from other sources. Many wise suggestions have been made in this matter such as: (1) using part of the minimum reserves of the banks, (2) demanding special contributions from banks and industry, and (3) using part of the German foreign exchange reserves, and others.

"I remind you of the statements which Messrs Ollenhauer and Carlo Schmid made after their return from Asia in 1956, when they pleaded for a European Marshall Plan to help Asia, to be financed from a direct levy on incomes in the industrial States.

"I should like to touch on a much discussed subject, namely, development aid by stabilising raw material prices. Fascinating as this idea may be, it would neither do the developing countries much good, nor be reconcilable with the principles of free competition. Price controls would only cause greater distortions in the competitive situation of each individual raw material producing country and give rise to new tensions. They would also conduce to wrong investment in the raw material production sector, where the resulting excess capacities would produce new sales difficulties. By adopting a plan of this kind, we would repeat the identical mistakes from which, in the agricultural sector, for example, we ourselves, the U.S.A., Britain and other countries have been suffering for a long time. Finally, price stabilisation will cost the raw material purchasing countries a good deal more money in the long run than genuine and direct development aid which could be given in a manner permitting the receiving countries to stand on their own feet after a certain time and after that to require no more than normal credits and loans."

Foreign Debt Repayments

The total amount which will fall due for repayment by India to West Germany at the end of the second plan will be 150 million deutschemarks (nearly Rs. 17 crores). India will repay 50 million deutschemarks (nearly Rs 5½ crores) on the stipulated dates, but defer repayment of the balance of 100 million deutschemarks (about Rs. 11 crores). She will repay 50 million deutschemarks (about Rs 5½ crores) after four years of the second plan period, with a further option to extend the period by another four years, that is, a total deferment of eight years. The remaining balance of 50 million deutschemarks will be similarly deferred initially for four years, with an option of extension for a further period of eight years. This will give India a full margin of 12 years. A similar concession in repayments arising from the Rourkela steel project, which falls due on 31st December, 1961, is being considered. Here, India will repay on the due date only 10 percent of the amount due; the balance will be split up into two equal instalments to be paid in eight and 12 years, respectively. Likewise, the West German credit of $100 million (nearly Rs. 50 crores) for India's second five year plan—the last instalment of $30 million of this credit will be paid this month—can be repaid in 12 years. The repayment of this credit will in no event fall due before the expiry of five years, the object of this arrangement being that the implementation of India's third five year plan should not be adversely affected. Another indirect help which India will continue to receive from West Germany lies in the export credit guarantees which are expected to cover 250 million deutschemarks (about Rs. 28 crores) worth of supplies from West German firms during the course of the third plan.

Canadian Wheat Help

Canada has offered to supply India wheat worth $7 million (about Rs. 3.4 crores) under the Colombo Plan. This is part of a total Canadian assistance of $25 million allocated to India under the Plan for 1960-61. The Government of India has accepted the Canadian offer. The counterpart funds from the sale proceeds of the wheat will be used for development projects in this country. Canada has been giving aid to India under the Colombo Plan to purchase wheat during the last several years. In 1959-60, Canadian wheat worth $7 million was received under this programme; in 1958-59, the quantity received was worth $18 million.

Diversion of Foreign Trade

An unsatisfied home market which makes it possible for a manufacturer to sell his products on his doorstep with a fair margin of profit, the lack of adaptability of the free world to adjust its trade to the changed condition in the East, the creation of trade blocs in Europe and the trade offensive of communist countries are the factors which are leading India to look more and more to the Russian bloc for trade, in addition to aid. The case of petroleum products is well known. India wants more and more of petroleum products, such as kerosene, diesel oil and lubricants. The western oil companies can and are willing to meet India's demand in full, provided the foreign exchange is released. But foreign exchange is scarce. So Russia came in with an offer to supply these products on a rupee payment basis. The next hurdle is machinery, equipment and spare parts. The possibilities of importing these are being explored by sending a mission to the Russian bloc countries. According to reports, a Russian trade delegation is expected here, some time this month, to discuss the export of Russian machinery to this country.

On India's side, a trade delegation, headed by the chairman of the State Trading Corporation, Mr. C. M. Poonacha, is shortly leaving for the communist countries, the other members of the mission being Mr. K R. F. Khilnani, Joint-Secretary, Central Ministry of Commerce and Industry, and Mr Y. T. Shah, Deputy Secretary, Central Ministry of Finance.

It is explained that all agreements with the communist bloc rest on two fundamentals, namely, (1) that all payments of a commercial and non-commercial character would be made in non-convertible Indian rupees, and (2) that trade will be on a balanced basis, for which purpose an annual trade plan with each country would be made. Trade plans for 1959 and 1960 with all these countries were duly made. New trade and payments agreements valid for three years were signed with Poland, East Germany, Yugoslavia, Bulgaria and Hungary. The agreements with Rumania, Czechoslovakia and Russia are valid until May 1963, December 1960 and December 1963, respectively. The new agreement with Hungary has a trade plan valid until December 1961.

The Poonacha mission will negotiate and finalise the 1961 trade plans with Rumania, Yugoslavia, Poland, East Germany, Czechoslovakia and Bulgaria. The trade agreement with Czechoslovakia is due to expire on 31st December, 1960. The delegation will conclude a fresh trade and payments agreement with that country. Lastly, it will discuss some procedural methods for the smooth implementation of the existing trade plan with Hungary. The balance of payments surplus has improved by about Rs. 9 crores with the rupee payment trading area during the first five months of the current year, compared with the corresponding period of 1959, as the following figures (in lakhs of rupees) show:

	January-May 1960	January-May 1959
Imports	14,57	14,74
Exports	26.17	16,76
Balance	+ 11,60	+ 202

It should be noticed that while the imports remained practically unaltered, exports increased by Rs. 9.41 crores.

Trade with Iraq

Messrs K. R. F. Khilnani, Y. T. Shah and K. L. Dalal (the last-named is Joint Chief Controller of Imports and Exports) recently visited Iraq and Afghanistan to finalise the trade arrangements for 1960-61. The Indo-Iraqi trade agreement, it will be recalled, provides that the total value of dates to be imported will be finalised by the two Governments in September of each year, and that at least 2½ percent of the value of import licences issued by Iraq for tea would be for Indian tea. The delegation also discussed the possibility of Iraq importing non-traditional goods such as engineering and other manufactures from India.

The Government of India has accepted in principle the recommendation of the Standing Committee of the Export Promotion Advisory Council that export houses should be set up for purposes of tapping the export potential of various commodities. It is felt that the establishment of three or four well-organised export houses of repute in India will serve as an effective instrument to boost the export of Indian goods, particularly in the case of difficult and non-traditional items of export. The export houses will be given the same concessions and facilities as are at present allowed to other exporters.

Capital Issue Consents

During the quarter ended 30th June, 1960, the Controller of Capital Issues has given consents to 59 applicants involving an amount of Rs. 48.57 crores. A break-up between industrial and non-industrial groups indicates that out of the total amount consented to, 86 percent was for industrial and 14 percent for non-industrial groups. Out of the total consents, 15 involving an amount of Rs. 38.87 crores, were for Rs. 1 crore and above. An analysis of the type of securities to the issue of which consent was given, indicates that 57 percent were ordinary shares, 2.8 percent preference shares, 5.8 percent debentures and 34.4 percent loans, etcetera. From a further classification of the consents given for Government and non-Government companies, it will be seen that the former represents five companies involving an amount of Rs. 14.22 crores and the latter 54 companies involving an amount of Rs. 34.35 crores. A split-up between public and private companies indicates that consents to 35 public and 24 private companies involving an amount of Rs. 23.67 crores and Rs. 24.90 crores, respectively, were given. Some 14 "giant companies", with an authorised capital of Rs. 28 crores—accounting for 56 percent of the total authorised capital of all the new registrations during the quarter ended 30th June—were registered in India.

A list of these giant flotations is given below:

Name of Company	Public or Private
(1) Agro-Chemicals and Fertilisers	Public
(2) India Firebricks and Insulation	Public
(3) Amrit Products	Public
(4) Jayant Paper Mills	Public
(5) Utkal Machinery Private	Private
(6) Neyveli Ceramics and Refractories	Public
(7) Jairamdas Udyog Private	Private
(8) Seshasayee Paper and Boards	Public
(9) India Forge and Drop Stampings	Public
(10) Suraj Textile Mills	Public
(11) Gayday Iron and Steel Company	Public
(12) General Tyres	Public
(13) Ratnakar Shipping Company	Public
(14) Wheels India Private	Private

Trade with Africa

Several measures, including the opening of trade missions and bilateral trade agreements, are proposed with African countries. Mr Bilgrami is already in Morocco in this connection.

Credit for Durgapur Plant

Having been assured of the credit for the expansion of the Durgapur steel plant, the Central Minister for Steel, Sardar Swaran Singh, and the Secretary of the Ministry of Steel, Mr S. Bhoothalingam, are expected to go to London to finalise the credit arrangements.

Replacement Costs in Industry

At the instance of the Central Labour Ministry, the National Council of Applied Economic Research, has made a study of replacement costs in industry. The Council in its report says: "The National Council recommends that depreciation allowances to cover the replacement cost of the fixed assets of a firm should be made legally obligatory. It also urges that in estimating the replacement cost, the firms should be asked to take account of increases, if any, in the price of the relevant assets. For this purpose, the Central Government should undertake the task of compiling index numbers of prices of important types of machinery used in our industries.

"Where, however, price adjustments are found operationally difficult, as in the case of buildings, the legal obligation may be limited to depreciation at original cost, although even here in case indirect evidence of a price rise is available, tax exemption should be granted on such additions to depreciation allowances as would be justified by the price rise. The National Council favours the straight-line method of determining depreciation. This is in consonance with the usual practice elsewhere. If, however, an industry wishes, on accounting considerations, to follow the written-down-value method, it must, while making the deduction, adopt a percentage which is higher than would be the case if the straight-line method had been followed. Further, at some stage it must switch on to some other method with a view to writing off the cost within the period set by the economic life of the relevant asset.

State in which registered	Authorised Capital Rs.
Maharashtra	1 crore
Maharashtra	1 crore
Gujarat	1 crore
Gujarat	1 crore
Maharashtra	2.5 crores
Madras	1 crore
Maharashtra	1 crore
Madras	10 crores
Madras	1 crore
Punjab	1 crore
West Bengal	1 crore
West Bengal	2 crores
West Bengal	3.5 crores
Madras	1 crore

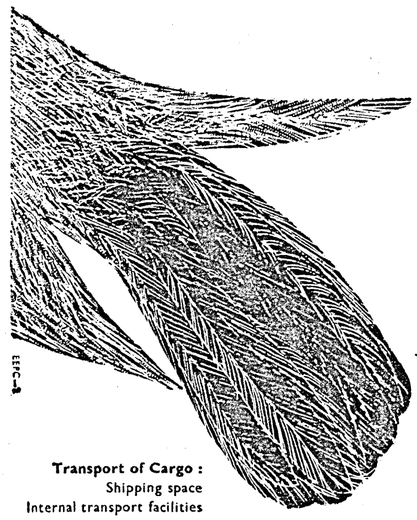
Separate Replacement Account

"The Council further recommends that there should be an obligation on the part of a firm to keep a separate replacement account, apart from its general reserve, and any sum taken out of it for use as working capital should be shown as a loan transaction against which normal interest should be charged. While the current use of the replacement fund must be left to the discretion of management, we would urge that the balance-sheet of a firm should indicate clearly what part of it is used within the business as working capital and what part is invested in securities—care being taken to see that resources drawn out of gross profit to cover replacement needs are in no way dissipated.

"The Council is aware that labour in many industries has a feeling that it is not getting a bare minimum wage, not to speak of a living wage to take account of its growing aspirations. We believe, however, that the best way of ensuring a good minimum wage and in due course a full living wage is not by making inroads on depreciation, but by establishing a system of an incentive bonus scheme which would equate higher wages with higher productivity. We, therefore, recommend that the depreciation allowance that we are asking to be put on a compulsory basis should be regarded strictly as cost and that net profit must

Dovetailing our efforts

In your export efforts, you may be in need of many difficult-to-get items and services. We can help you to get :



Foreign Exchange : For Business tours, Publicity, Opening new offices etc.

Indigenous raw materials : Steel, Pig Iron, Tin Plate etc.

Imported Materials : Raw or semi finished goods, Spareparts and Components, Accessories & Balancing Parts etc.

Market & Marketing Information : Market potential, Import regulations, Other useful information.

Transport of Cargo : Shipping space Internal transport facilities for Raw Materials and finished goods.

Please Contact :

ENGINEERING EXPORT PROMOTION COUNCIL

India Exchange (7th Floor), Calcutta-1

be calculated only after deducting the whole of depreciation from gross profit. The principle, let it be emphasised, must apply to both the managing agency remuneration and any extra demand that labour may make."

Economics of Jute Industry

The Council has also made a special study of the jute industry. It says: "The jute industry is one of the oldest industries in India employing the largest number of industrial labour next to cotton textiles. It produces very simple products like sacking cloth and yarn, almost 90 percent of which are exported. For a number of years, this foreign market has been shrinking. But the size of the mills (formally geared to an expanding world market) continues to be the same as before. Consequently, the industry has developed considerable excess capacity leading to higher capital costs a unit of output. This position is aggravated by the postwar rise in the cost of replacement, the effect of which has been a considerable increase in the value of the fixed assets of the industry. Further, the increase in raw material prices, particularly after partition, together with the increase in wage rates has in no small measure contributed to the high operational costs in the industry. This rise in unit costs has endangered the competitive position of the industry in the world market.

Maintenance and Repairs

"There is, however, an active sector in this shrinking industry. The spinning departments of the mills show greater activity than the weaving departments, and, therefore, the replacement need would be more in the former than in the latter departments where a general policy of sealing a certain percentage of looms is being followed to avoid a glut in the market. As explained, the expenditure incurred on repairs and maintenance is an important influencing factor in the replacement of fixed equipment. But firms generally find it difficult to maintain separate accounts of repairs and maintenance for individual items of equipment; at best, they keep accounts for groups of assets and they are given in the annual balance-sheets of the firms. The balance-sheet figures on repairs and maintenance have another limitation also. They often include only the materials consumed for repairs and maintenance, but not the wages of labour (engaged in repairs and maintenance) which are combined with the total wages and salaries of the firm. Subject to these limitations, an attempt is made here to compare the expenditure on repairs and maintenance expressed as a percentage of the net written-down-value of the fixed assets from industry to industry and also from one group of assets to another.

"A study of the consolidated balance-sheet data for 57 jute mills for the year 1956-57 shows that the expenditure on repairs and maintenance forms 7.2 percent of the net value of all fixed assets (excluding land). Similar percentages worked out from the consolidated balance-sheet data for the other three industries under study for the same year are: 5.9 percent for the sugar industry, 5.5 percent for the chemical fertiliser industry and 3.4 percent for the cement industry. This inter-industry comparison shows that repairs and maintenance expenditure forms a greater proportion of the net value of fixed assets in the jute industry than in the sugar, fertiliser or cement industry.

"On disaggregating the fixed assets of the jute industry into buildings, plant and machinery, and other fixed assets (such as transport vehicles), we find, from the same balance-sheet data, that repairs and maintenance expenditure on buildings forms 3.0 percent of their net value, on plant and machinery 6.9 percent of the net value and on other assets 17.5 percent of the net value. The percentage of expenditure on repairs and maintenance of plant and machinery (6.9 percent) is above that of buildings, but much below that of other fixed assets in the industry. Similar percentages worked out for plant and machinery in other industries under study are: 6.5 percent in the sugar industry, 6.7 percent in the cement industry and 7.1 percent in the fertiliser industry. Therefore, the percentage of repairs and maintenance for plant and machinery in the jute industry is lower than in the fertiliser industry, but it is higher than in the sugar and cement industries. If plant and machinery in the jute industry is divided into spinning and weaving equipment, the percentage of repairs and maintenance for the spinning equipment would be higher than 6.9 percent found for all plant and machinery, since the spinning equipment is being put out to a greater degree of use than the weaving equipment.

"In order to study the nature of the replacement problem in the active and idle sectors of this shrinking industry and examine the adequacy of the depreciation allowance to supply internal finance for replacement purposes, we sent a questionnaire to the individual jute mills and obtained data on (1) the number and age and also the normal working life of the existing looms and spindles, the rate at which they have been replaced yearly on the average during the previous ten years and the causes behind replacement or non-replacement, (2) the rates and formulae used for computing depreciation allowances on different types of fixed assets, and (3) the firms' estimate of current requirements of machinery and finance for replacement or modernisation, and the sources of finance contemplated. The results of the survey are given under the following sections: replacement practices, depreciation practices, and current needs.

Replacing Equipment

Replacement practices—In replacing equipment, its present age in relation to its normal working life is an important consideration. The estimates of normal working life of looms and spindles, as given by the individual firms in the industry, vary very much. The looms were given periods averaging 30 to 40 years; but in many mills the life of their looms was regarded as indefinitely long. The life of spindles was generally estimated to be between five and 20 years; one mill, however, estimated the life of its spindles as 50 years. The present age in relation to the normal working life is higher for the looms than for the spindles. The relative 'youth' of the existing spindles is due to the fact that the speed and precision requirements are much greater for the spindles than for the looms. Consequently, the old spindles with ten to 15 years' life, which are more robust and durable, are less efficient than the modern spindles used in sliver spinning; and whenever an opportunity arose, the mills have replaced the old spindles by the new and modern ones to reduce the unit costs of yarn.

"The position is, however, different for the looms. Many mills still possess very old looms whose age is not much different from their expected life. Some of these firms indicated that they have been working with their existing looms for the last 50 years without any replacement. Many mills do not intend to replace their old looms by new ones in the foreseeable future because the old looms are robust and are still in good working condition. This shows that the old looms, though obsolete by current standards, still have cost advantages over the new ones. Replacement, if adequate and regular, would not make the fixed equipment of a firm too old; and the older the equipment of a firm, the greater would be the annual repairs and maintenance charges. Our survey data as well as the balance-sheet data are inadequate to establish clear relations between the past rates of replacement and the present age of equipment or between the present age of equipment and the annual charges for repairs and maintenance. But we can give some individual cases of interest: firms which indicated that they had no regular replacement in the past ten years are found to have relatively old equipment (spindles and looms). And firms whose equipment (spindles and looms) is relatively old have incurred a relatively high expenditure on the repairs and maintenance of plant and machinery in the year 1956-57.

"The rate of replacement, as indicated by the individual jute mills, varies with the number of looms they possess. We may particularly classify the jute mills according to three sizes. Mills with more than 800 looms, mills with 400 to 800 looms and mills with less than 400 looms. The rate of replacement of spindles is 5 percent to 10 percent for mills with more than 800 looms; 10 percent to 25 percent for mills with 400 to 800 looms; 10 percent to 20 percent for mills with less than 400 looms. The medium-sized mills which are large in number have generally been replacing spindles at a relatively high rate, while the large-sized mills have been replacing at a relatively low rate. The position is, however, different concerning looms. The rate of replacement of looms is 5 percent to 10 percent for mills with more than 800 looms; almost no replacement by mills with 400 to 800 looms; and about 5 percent for mills with less than 400 looms. The medium-sized mills are thus conspicuous by their relatively high rate of replacement of spindles and almost no replacement of looms during the last ten years.

Varying Methods

"The reasons for replacement generally given by the firms are: the physical wear and tear of equipment replaced, and the need for modernisation, particularly of their spinning sections. Where replacements could not be made by the firms, the reasons given were the good operational conditions of existing equipment, or their lack of finance. Neither import difficulties nor labour-attitude seem to have come in the way of replacement by the firms.

"*Depreciation practices*—The depreciation allowances made by a firm on its fixed assets are an important source of internal finance for replacement.

"Depreciation practices, particularly concerning plant and machinery, seem to differ with different firms according to size. Firms with less than 400 looms charge 9 percent to 13 percent depreciation employing the written-down-value method; firms with 400 to 800 looms charge 3 percent to 9 percent employing either the straight-line or the written-down-value method; and firms with more than 800 looms charge 9 percent employing the written-down-value method.

"Since the most frequent size of the Indian jute firms is 400 to 800 looms, and the depreciation rate charged by these firms ranges between 3 percent and 9 percent, compared with 9 percent allowed by the income tax authorities in India on plant and machinery, it is not surprising that the Matthai Taxation Enquiry Commission found the depreciation provision made by the jute industry (Rs. 4.19 crores) to be less than the depreciation allowed by the income tax authorities (Rs. 6.18 crores). The depreciation rate of 9 percent allowed by the fiscal authorities in India on the written-down-value method compares not quite well with the rate ranging from 7½ percent to 10 percent allowed in the U.K. on the straight-line method for the plant and machinery of jute firms. Yet the jute mills in India seem to charge rates lower than what the fiscal authorities allow them.

Current Needs

"*Estimates of current needs*—While the firms do not contemplate replacement (not to speak of modernisation) of their looms, they indicated a strong desire for modernisation (and not mere replacement) of their spinning departments. But the desire for modernisation of the spinning departments is relatively less for firms with more than 1,000 looms than for firms with less than 1,000 looms.

"The total finance required for replacement and modernisation, as indicated by 14 out of 18 representative firms examined in the industry, is about Rs. 4 crores, of which 25 percent is expected to be met out of internal sources, and 75 percent out of external sources such as loans from *ad hoc* governmental agencies, banks and even leaseholders in cases where the firms are leased.

"Our analysis of the sources of finance for replacement and modernisation, as indicated by the individual firms, shows that the ability to self-finance seems to be relatively high for firms with 400 to 800 looms, although, as already stated, the depreciation rates charged by these firms are relatively low. This ability may be due to the adequacy of internal reserves other than the depreciation reserve. The ability to self-fianance for very large firms with more than 1,000 looms is relatively low; it is almost nil for the very small firms with less than 200 looms. The ability to self-finance varies also with the age of plant and machinery: firms with looms and spindles less than ten years old. Thus while the past replacement practices of a firm have an influence on the present age of its equipment, the latter has an influence on the productive efficiency and thereby on the internal financial strength of the firm.

"The above study leads us to the following conclusions:

"(a) Replacement practices are least adequate in the very large and very small firms. The most economic size of a producing unit would appear to be from 400 to 800 looms. Firms in that range show stronger financial ability to set aside funds for adequate replacement.

"(b) Depreciation practices are also least adequate in this industry. The rates actually charged by the firms seem to be less than what the fiscal authorities allow them.

"(c) The greatest need for replacement is in the spinning section of the industry.

"(d) The spinning section needs also modernisation to meet international competition."

COMMONWEALTH PREFERENCES WILL NOT BE ABANDONED IF U.K. JOINS THE SIX

F.B.I. PRESIDENT DISCUSSES EFFECTS OF REGIONAL ECONOMIC GROUPING

(FROM OUR LONDON CORRESPONDENT)

THE President of the U.K. Board of Trade, Mr. Reginald Maudling, recently reaffirmed the undertaking he gave to the Commonwealth Finance Ministers that the British Government would not abandon Commonwealth trade preferences in favour of the U.K.'s entry into the European Common Market. He called it "a matter of urgency to find a solution to the threatened division of western Europe," while at the same time protecting "the traditional interests" of the Commonwealth countries. "We are inspecting the practical problems involved and seeing whether a new and satisfactory basis can be found on which to negotiate a lasting solution." Part of Mr. Maudling's speech, which he delivered when deputising for the Prime Minister at a banquet for manufacturers who were attending a conference organised by the Council of European Industrial Federations, was in effect a postscript to the Commonwealth Finance Ministers' meeting. That the Finance Ministers came to London to defend prepared positions, Mr. Maudling did not deny; he merely professed amazement that anyone should think the British Government had ever fallen out of sympathy with the Commonwealth preference system and had toyed with the idea of jettisoning it in favour of the Rome treaty. The Finance Ministers' conference, therefore, had not raised new obstacles to an understanding in Europe; the obstacles are old ones and the British Government is aware of them. Mr. Maudling said that Britain still does over 40 percent of its trade with the Commonwealth and "vitally important as is the developing economy of Europe, we should be foolish to neglect this fact." He detected "a growing political will" to find an economic system that would avoid division in Europe and maintain the economic and political cohesion of the British Commonwealth.

An Industrialist Warns

Addressing the conference itself earlier, Sir William McFadzean, president of the Federation of British Industries, said that trade with the Commonwealth is of such importance to Britain that it would be suicidal to do anything that would substantially curtail these markets. Any regional economic grouping should always aim to create wider and freer trade, rather than to restrict or confine it to sealed compartments. It will be little short of tragic if fresh barricades are to be raised after so much patient work had been done over the past 15 years in attempting to encourage an easier flow. Economic regionalism is a comparatively new development and it must be recognised that the scale and scope of modern industry require markets spilling over national boundaries. At a time when there is little prospect of tariffs being materially lowered on a global scale, the broadening of markets on a regional basis has obvious, although limited, advantages.

The emerging and developing countries have been caught up in the revolution of rising expectations and are impatient for progress, Sir William said. "If they cannot look to us for help, then we cannot blame them if they look elsewhere. Mere charity is not enough. We must be accepted as partners in furthering all their plans." Turning to East-West trade relations, he said that mounting competition is likely throughout the whole uncommitted and emergent world.

Reserves still Rising

Last month's £13-million net increase in Britain's gold and currencies reserves, after the special £20-million payment to the International Monetary Fund, was regarded as satisfactory in the City. At 30th September, the reserves totalled £1,110 million. September's effective increase of £33 million in the reserves compares with rises of £52 million and £57 million in the two previous months, and with one of £21 million in June before the 6-percent Bank rate had taken full effect. By any standards, the £142-million increase in Britain's reserve during the September quarter represents an impressive improvement.

The figures suggest, however, that the rate of inflow of new money may be slowing down. It is now more than three months since Bank rate was raised to 6 percent and recent irregularities in sterling may indicate some two-way movements in foreign balances. The benefit to the reserves from short-term capital movements and from the favourable operation of "leads and lags" in commercial payments may be reversed if comparative world interest rates move against Britain. But the authorities have now reduced the I.M.F. debt to only £30 million and the two recent advance payments will act as a cushion to Britain's reserves in the months ahead.

Hire-purchase Debt Down

The volume of hire-purchase debt in Britain fell by £1 million to £970 million in August as a result of the credit squeeze. This is the first reduction in the total since March 1958, when the decline was also £1 million to £451 million. Of the latest total, £328 million is owed directly to household goods shops, against £332 million in July and £279 million in August last year. The amount owing directly to finance houses went up by £3 million to £642 million, probably due to the freer supplies of motor-cars.

Credit controls also affected deliveries of refrigerators by manufacturers. These fell by 17½ percent in August to 53,930 from 65,489 in August last year. Exports, however, increased by 40 percent to 7,649. In spite of the drop in August, total deliveries in the first eight months of the current year were 30 percent greater than in the corresponding period of 1959.

Good Machine Tool Orders

Orders obtained by the U.K. machine tool industry in July totalled £14.5 million. This is nearly three times the figure of £5.2 million for July last year and compares with £10.3 million in June 1960. Thus the recovery in the industry, which began in the early part of this year but slowed down in May and June, made further marked progress. But the increase in new export orders was at a slower rate than in those from the home front. The industry's total order-book at the end of July stood at £93.2 million, against £81.7 million at the end of June and only £49.2 million at the end of July 1959. Orders for export account for £21.1 million of this total. Deliveries in July were £6.77 million—an increase of 35 percent over July 1959.

Banks and the Squeeze

The effects of the credit squeeze are clearly reflected in the latest monthly figures of advances issued by the 11 London clearing banks. These show that between 17th August and 21st September, loans outstanding from these banks rose by only £1.6 million to £3,313 million. This small increase follows a fall of about £45 million in bank loans between 20th July and 17th August, but that movement reversed a previous trend, in which loans by the banks had been rising rapidly. In the June-July period, there was a jump of £99 million. A spokesman for the clearing banks said that the latest figures pointed to a new pattern, in which the emphasis was moving from personal and consumer trade borrowing to advances to the capital goods industries.

Output Rise Slackens

The rate of increase in Britain's industrial production is slowing down. The Central Statistical Office has announced that the production index for August, adjusted to take into account holidays and other seasonal factors, is expected to be 121 or 122. (1954 equals 100). The adjusted index for June was also 121. In August last year it was 113. The U.K. Treasury said: "The provisional figure for July and the early estimate for August confirm the earlier impression that the rise in production has been flattening out. In the first eight months of this year, there was a 9 percent gain over the corresponding period of 1959."

Revenue Deficit Up

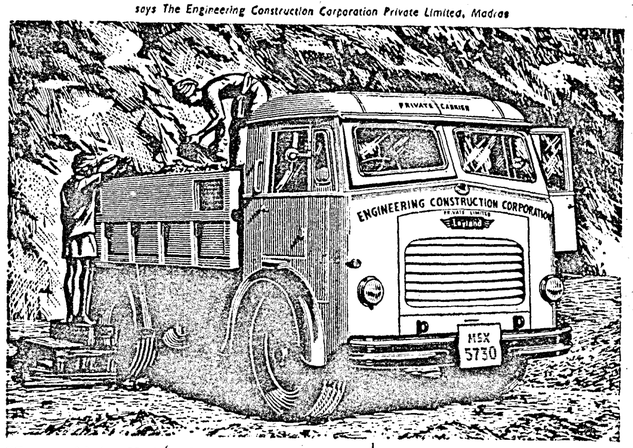
Treasury returns for the first half of Britain's financial year show a deficit on ordinary revenue of £386.7 million—an increase of £156.6 million over the deficit at this time last year. Revenue was £101.6 million higher, but expenditure rose by £258.2 million. Income tax brought in £678.1 million, against £665.9 million a year ago, but surtax yielded slightly less at £36.2 million, against £38.5 million. The higher interest rates now ruling are reflected in an increase of £38 million in the cost of servicing the national debt.

Employed still Increase

The U.K. Minister of Labour has announced that during August the working population rose by 120,000 to 24,597,000 consisting of 16,303,000 men (a rise of 69,000) and 8,294,000 women (a rise of 51,000). Those in civil employment totalled 23,779,000—an increase of 117,000. There were increases in nearly all sectors of industry, but the largest were in construction (21,000) and engineering and electrical goods manufacture (19,000). By the end of August, the number of working overtime in manufacturing industries was 1,713,000—60,000 less than at the end of May. At the same time, the number of operatives working short time reached 31,000—the same as three months ago and 10,000 more than at the end of July.

"Ashok Leyland COMETS carry in 5 trips what others would need 7 to clear"

says The Engineering Construction Corporation Private Limited, Madras



"FOR THE Madras Harbour Job we shall need upto 500 tons of blue metal a day. All this has to be moved from our Quarries at Pallavaram to the Madras Harbour 15 miles away. Since a lorry can make only a limited number of trips a day, the larger the load it can carry, the more economical it will be for us. That is why we are happy to have Ashok Leyland Comets in our fleet. They carry in 5 trips what others would need 7 to clear. We save on fuel, maintenance and overheads too. Breakdowns? No...None so far!"

Testimonials like this show why LEYLANDS are the most wanted vehicles in over 50 countries in the world. Every vehicle is built to exacting standards of precision and craftsmanship

The Forward-Controlled Leyland Comet Chassis is designed specially to combine large body space with easy handling. The quick starting, long life Leyland Diesel engine, with its high torque output combines pulling power with remarkably low fuel consumption. *The Ashok Leyland Comet is the only 7½ ton payload chassis made in India.*

FORWARD TRADING SUSPENDED IN COCHIN PEPPER MARKET

EMERGENCY DECLARED: PRICES FALL SHARPLY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE pepper forward market in Cochin suspended operations from 4th October. The Indian Pepper and Spice Trade Association, under whose auspices the market was working, declared an emergency because of the steady and steep fall in futures prices. The Association has fixed floor prices for October and later deliveries. They are Rs. 236 for 50 kilograms for October delivery and Rs. 206.25 for 50 kilograms for December delivery. Those who defend the decision for the suspension of transactions attribute the disquieting weakness in the market to the "machinations" of those who have been disappointed over the Central Government's decision to drop the proposal to open a second pepper forward market in Bombay. It is alleged that some Bombay firms started selling heavily and that too at "unreasonably low prices" to precipitate a crisis at the Cochin market and to force their claim on the authorities for additional hedging facilities.

According to market circles in Cochin, the present statistical position does not justify any precipitous fall in the Indian pepper prices. India has had an unusually heavy shipment during this season. Total exports, it is reported, amounted to 16,709 tons during the first nine months of the current season, against an output of 25,000 tons. Shipments were more than double the amount exported during the corresponding period of the previous season. The uncommitted stocks now in India are estimated at the low figure of about 1,000 tons. New crop arrivals will be late. Besides, at least a 15-percent shortage is expected in the size of the new crop. So the present statistical position is unusually tight, traders say.

Squaring up Past Sales

Pepper traders in Bombay are highly critical of the declaration of emergency and the fixing of floor prices. They say that it was an effort to square up past sales at floor prices fixed by the Association. These prices are said to be quite unfavourable to the seller. Furthermore, traders in Bombay say that some of their counterparts in Cochin have been carrying forward their purchases for several months, and October is the last delivery month. They add that pepper prices in Cochin have declined only by about Rs. 30 a cwt during the past one month. The fall is not unusual in a highly speculative commodity like pepper, the price of which largely depends on foreign demand. Probably, the Association had to declare an emergency, it is stated, because sales of the futures at the Cochin market could not be fully absorbed by operators. The Association is empowered by its by-laws to declare an emergency and close the market for five days. But for a longer closure and for any decision to square up deals at floor prices, it has to seek the sanction of the Forward Markets Commission.

Foreign Demand Declines

The current Indian prices are higher than those in Singapore. The latter, it is stated, is offering New York black pepper at 45(U.S.) cents a lb c.i.f. or 7 cents less than the Indian price. American buyers have not, therefore, been showing any active interest in Indian pepper for some time now. Besides, the high expectations of traders about Russian and east European purchases have failed to materialise, so the easier trend in prices might be partly due to the fall in foreign demand. A section of the trade is, however, hopeful that Indian prices will not suffer any major setback because the U.S. demand might revive in future if supplies from Singapore fail. Besides, prices are unlikely to decline further since a tight supply position now prevails in India.

Irish Tea Delegation in South India

The Irish tea delegation was in south India last week. It visited some prominent tea estates in Madras and Kerala and also the Cochin tea market. The leader of the delegation, Mr. Percy McGrath, told reporters that they were visiting some important tea estates in India and the Indian tea markets with a view to finding out the extent of good quality teas that might be available for export. He said that 80 percent of Ireland's annual imports of 23 million lbs of tea came from India. The main aim of the delegation's tour is to arrange for greater imports of quality teas from India. At present, 50 percent of Ireland's tea imports from India are of quality grades, and the delegation wants to raise this percentage to 70. It visited Calcutta and had talks with the Tea Board and other tea interests in north-east India.

Closure of Cashew Factories

Some of Kerala's 175 cashew factories are either being closed down or are due to close within a month or because of the inadequate supply of raw nuts. Prices of both raw nuts and processed kernels, manufacturers say, have moved up in recent weeks. U.S. buyers who were hesitating to offer anything more than 51 cents for processed kernels, recently raised their offers to 60 cents or more. But Indian shippers are demanding more and are reluctant to enter into long-term commitments due to the uncomfortable stock position. The cashew factory owners of Quilon area—the main centre of the Kerala cashew processing industry—have recently formed a syndicate of their own. It recently sent a delegation to Bombay and New Delhi to explore the possibilities of ensuring uninterrupted supplies of imported raw nuts from Africa at reasonable prices. The delegation's visit to Bombay was intended for negotiations with raw nut importers there and its visit to Delhi for seeking the assistance of the Central Government with a view to saving Kerala's cashew factories from a grave predicament.

Amendments to Agrarian Bill

The Kerala Legislature recently voted some amendments to the Agrarian Relations Bill. The plantation industry will be benefited by some of these amendments. According to one of them, the meaning of *kudikidappukaran* (hut-dweller) has been restricted to enable the owners of plantations as well as owners of lands "which are appurtenant to a mill, factory or workshop" to evict certain *kudikidappukarans* if it is found necessary for the development and maintenance of a plantation, mill, factory or workshop. The communist members opposed the amendment on the ground that "lakhs and lakhs of our workers" would be thrown out of their homesteads if it was passed. Government spokesmen, on the other hand, pointed out that only those *kudikidappukarans* who were not protected by any of the existing laws alone would be affected, and that their number would be insignificant. They said that unless sufficient protection was given to planters and industrialists, the industrial progress of the State would be adversely affected.

The definition of a plantation was modified with another official amendment. The revised definition brings under the term "plantation" (in addition to lands used principally for growing tea, coffee, rubber or cardamom or such other special crops as may be specified by the Government by notification in the *Gazette*) "land contiguous to or in the vicinity of or within the boundaries of the area cultivated with such crops and not exceeding 20 percent of the area so cultivated and reserved by the person cultivating it for the expansion of such cultivation." Agricultural lands which are interspersed within plantations are to be treated as "plantations" according to the new definition. But such lands are not to exceed an area to be determined by the Land Board set up under the Act and should be necessary for the "protection and efficient management of such cultivation." If any question arises whether any land is adjacent to, or within the boundaries of, the area cultivated with plantation crops, it will also be determined by the Land Board. The enlarged definition is significant because all plantations are to be exempt from the ceiling. By another amendment, it was decided that while the provisions relating to tenancies should not apply to plantations exceeding 30 acres in area, some of them will apply to tenancies in relation to agricultural lands interspersed within plantations.

Law and Order in Kerala Plantations

Kerala's Home Minister, Mr. P. T. Chacko, told the State Legislature recently that his Government would not tolerate any hooliganism or nefarious activities indulged in by workers and trade union leaders in the name of labour disputes. Police will not interfere as long as the labour disputes are kept within the limits which law has prescribed for them. If they transgress into other fields and the law and order situation is disturbed, the police will step in and take measures to maintain law and order, Mr. Chacko added. He made the policy statement when he was replying to a "calling attention" motion of a communist member who alleged that the police had interfered unnecessarily in a dispute between the workers of a tea estate in Peermade and its management. The Minister said that the communist-led workers of that estate took law into their own hands in the name of a trade dispute, so the police had to take action against some of the workers. He denied the communist allegation that the police had used force.

Rubber Planting Scheme

The Kerala Government does not think that it will be possible to make available for rubber cultivation more than 13,000 acres of forest land during the ensuing planting season, against the original proposal for 20,000 acres. But it expects that it will be possible to reach the target of 200,000 acres envisaged under its rubber planting scheme. The scheme, it is said, will be implemented during the third plan period. The Government will directly plant 20 percent of the total area which will be set apart for rubber planting under the scheme. The rest will be distributed among landless peasants, middle income-group people and planting companies. The rules of land allotments, etcetera, are being finalised.

COCHIN TEA SALES

At Dust Sale J, 330,000 kilograms of tea were on offer. There was a good general demand at easier rates. Prices declined by 20nP or 30nP for all descriptions.

At Sale No 39, 480,000 kilograms of tea were on offer. There was a good but irregular demand. Low medium and medium brokens were 10nP to 20nP easier but similar fannings, particularly black leaf grades, were irregularly 10nP dearer. Good mediums were steady while best liquorings were lower except where quality was maintained.

initiative from the shop floor

The manufacture of crowbars in Tata Steel's Agrico factory in Jamshedpur involved a number of time-consuming and uneconomic manual operations. Ratan Singh, a foreman, decided to do something to improve matters. Carefully studying the problem, he designed a die which cut down work, improved the product and substantially increased turnover at reduced cost. For his brilliant work, Ratan Singh received an award of Rs. 3,000.

In the ten years up to 1960, Tata Steel employees have put forward a total of 10,165 major and minor suggestions—an average of three a day. In the latest year, 445 suggestions were received, 54 of which have merited rewards.

Thus, initiative from the shop floor is helping to improve productivity at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JUTE AND GUNNY PRICES RISE SHARPLY

BULLS EXPLOIT ADVERSE REPORT ABOUT PAKISTANI CROP

IT is depressing to report that during a year when many other industries have shown varying degrees of progress, the jute industry appears to have moved from one crisis to the next. At present, it is facing one of the most serious crises in its long history, the outcome of which cannot be foreseen. Similar difficulties have occurred in the past and have been surmounted as changing conditions have relieved the position. The indications are that, with careful handling, the same may be the case again. It is, of course, always easy to criticise after the event. But it is, nevertheless, necessary to look back and assess the factors which have led to this unfortunate state of affairs. Over the past few months, the price of raw jute has shown a steady rise, mainly due to the shortfall in the 1959-60 crop and the lateness of the current one, which was brought about by the prolonged drought at the time of sowing. The situation was aggravated by reports that the current crop will not be as large as was at first estimated. A voluntary sealing of looms by the I.J.M.A. member-mills was allowed in an attempt to conserve jute and thus try to bring down the price of the raw material. This met with only limited success, but the industry was forced to persevere with the policy as jute stocks dwindled and prices continued to rise.

Mill Buying

Buyers then resorted to purchasing jute for fairly quick shipment under a guaranteed delivery clause. Most sellers made a reasonably satisfactory attempt to fulfil their obligations. However, the system broke down when mills, particularly a large group with a great number of guaranteed contracts on its books, began buying ready bills of lading and rail receipts at inflated prices. It is incredible, but in many cases these were bought from the same sellers and from the same agencies for which the mills had outstanding guaranteed delivery contracts. Meanwhile, fibre prices continued to rise, and jute under the guaranteed contracts was not delivered. When the contract delivery period expired, the market difference on the undelivered portions was so great that if it had been claimed, the sellers—or brokers, if the sellers repudiated the bills—would have been put out of business. The mills then had no option but to extend the delivery time of the guaranteed delivery contracts, this anomaly being brought about by the action of the mills themselves, albeit of a small proportion.

Newspaper Reports

Many in the jute trade, particularly among the sellers, believe everything they read in the newspapers, and it is this gullibility which has sparked off the latest flare-up in the market. Last Thursday, a Calcutta daily published a strange report to the effect that the Pakistani jute crop would be only 4.2 million to 4.5 million bales, as against the original estimate of 6.2 million bales. This is a drop of 25 percent or 30 percent, and to those who cared to analyse the situation the figures were either misprints (which was denied) or were circulated by vested interests. Gullible sellers, however, reacted bullishly. So raw jute prices jumped up by Rs. 4 a maund overnight, and a further Re. 1 on the following day, making Assam jute Rs 50 a maund basis Bottoms. How the Pakistani crop can be estimated at such a low figure is beyond the understanding of trade circles in Calcutta, particularly as in this season there are no restrictions in the border belt or limitations on the crop. A reduction to, say, even 5.5 million bales would have been accepted in the trade. Such a large drop must have some explanation, but there does not appear to be any.

Because of the rapid increase in the price of raw jute, the I.J.M.A. held a series of meetings last Friday. Subsequently, it was stated that mills would not buy any jute for seven days, after which time the situation would be reviewed. Almost immediately, rates dropped by Rs. 2.50 a maund, but after that they were slow to respond. It was rumoured that the I.J.M.A.'s decision was not unanimous, and this became apparent as several mills, notably Indian-owned, bought freely in the upcountry markets. Credited mill agents also entered the market, although not in the mills' names but in their own or others'. It is obvious that this jute will be offered to their groups when the ban is lifted. Many sellers also became buyers at the lower prices, either to cover existing contracts, or to offer at higher prices later on. Most sellers appear to think that a further rise is inevitable, and many are already seeking the settlement of existing contracts even before due date.

Futures Market Regulations

Meanwhile, the gunny market was equally concerned about the high prices ruling for jute goods. Consequently, the East India Jute and Hessian Exchange Ltd, with the concurrence of the Forward Markets Commission, decided to introduce fresh measures to restrain speculative activity. All fresh transactions in hessian cloth and sacking bags contracts for November 1960 delivery were prohibited until 15th November, 1960. The only exception was that offsetting transactions would be allowed for outstanding business concluded prior to the ban. Certain other restrictions were also imposed in both jute and gunnies. Maximum prices were fixed for trading and special margin deposits imposed on all outstanding purchases. All fresh transactions in raw jute contracts for December 1960 delivery were prohibited until 1st December, 1960, except offsetting transactions.

The restrictions seem to have been as effective as the "gentlemen's agreement" in jute, as prices have continued to rise, ostensibly in response to the jute market. Unofficial activity has proceeded feverishly in spite of the closure of the futures market. Many buyers are in evidence for all deliveries, as it is rumoured that the mills are thinking of compulsorily sealing another 5 percent of their loomage, and operators fear a shortage of goods. If the industry does decide to seal more looms, it will bring the percentage of compulsorily sealed looms to 14 percent.

I.J.M.A. Stocks of Jute Goods

The fall in jute goods stocks during September was expected in Calcutta, although many thought it would be larger. In spite of this, the market reacted bullishly to the news, particularly in sacking. Total stocks now amount to 77,600 tons, which is 5,800 tons less than at the end of August. The total is made up of 29,400 tons of hessians, (37.8 percent), 39,400 tons of sacking (50.8 percent) and 8,800 tons of other goods (11.4 percent). Hessian stocks were down by 1,500 tons, sacking by 3,700 tons, and other goods by 600 tons. In terms of percentages, the changes are very small, hessian and other goods showing a minor increase at the expense of sacking.

I.J.M.A. Delegation

The Indian Jute Mills Association has sent a three-man delegation to the United States, Canada, Argentina and the United Kingdom. The delegation, which is due in New York on 14th October, includes Mr. D. C. B. Pilkington, chairman of the I.J.M.A., who is the leader, Mr. D. P. Goenka and Mr. T. R. Crook. Before leaving, Mr. Pilkington pointed out that this would be the first official delegation from the Association in Calcutta to visit the Argentine, which is India's largest market for hessians after the U.S.A. The visit to the U.S.A. so soon after last year's tour has been made necessary by the sharp rise in raw jute and gunny prices to levels which are causing concern to overseas buyers, and thus damaging the goodwill of the industry abroad. The delegation will explain personally to customers the reasons for the present market conditions, and the steps which are being taken to remedy the situation.

THE JUTE MARKETS

Manufactured Goods: In spite of the official closure of the futures market, speculative activity continued to have a considerable influence on gunny prices. With the raw jute shortage becoming acute, and the possibility of more looms being sealed, buyers for all types of fabrics for all deliveries were very much in evidence. Mills were generally reserved, and most of the goods on offer came from local bazaar holders seeking a profit. The nominal quotations after the holidays indicated a boom in sympathy with raw jute, which advanced on adverse crop reports from Pakistan. B Twills jumped by Rs. 7 to Rs. 147.50 in the ready position and Rs. 147 for January-March shipment. Thus, the gap between near and forward sacking, which was running at a premium of Rs. 5 or Rs. 6 in favour of the ready position, was virtually closed. Hessians jumped by Rs. 2.50 for 40in. 10oz. to be quoted at Rs. 52 for ready shipment and Rs. 52.50 forward shipment. Over the next two days, due to heavy demand and speculative buying, sacking advanced by another Rs. 7.50, while hessians moved up, slowly by Rs. 1.25. In sacking, the pressure was on forward shipment, and before the week-end January-March shipment B Twills went into a Rs. 2 premium over ready goods—a state of affairs which has not existed for a long time. After the week-end, small overseas enquiries, coupled with local speculative pressure, forced both sacking and hessians to new high levels, and boom conditions prevailed. Prices in both sections rose sharply on reports of foreign interest, and heavy goods quotations on Wednesday morning were Rs. 13.50 higher than those on Monday morning. During the same period, hessians jumped by Rs. 3.75. The market was extremely sensitive and reacted to the slightest indication.

On Wednesday morning, nominal quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	48.25	48.25	48.50	48.50
40in. 8oz.	46.25	46.25	46.50	46.50
40in. 10oz.	57.75	58.00	58.25	58.50
B Twills	168.50	168.00	168.00	168.50
Heavy Cees (Plain)	166.00	167.50	168.00	168.50
A Twills	196.00	196.00	196.00	196.00
Liverpools	186.00	186.00	186.00	186.00
Cornsacks	165.00	178.00	176.00	175.50

Raw Jute: There was practically nothing to report from the Calcutta fibre market, where business was virtually at a standstill due to the gentlemen's agreement among mills not to buy any jute for seven days. Upcountry, however, there was a fair amount of business as many sellers began to buy at the lower prices ruling after the mills' announcement. Imports were reported to be increasing at all receiving centres. This improvement was reflected in the arrivals in the local Cossipore market, where a total of 796 wagons were received. This, of course, included a considerable backlog from the holiday period, but still the daily average jumped up to about 100 wagons, which was nearly double that of recent arrivals.

Raw jute quotations opened at Rs. 50 for Assam Bottoms last Thursday and by Friday morning they had advanced to Rs. 51. The rapid rise was the result of misleading indications in a local newspaper about the size of the Pakistani crop. After a series of meetings on Friday, the I.J.M.A. mills decided to refrain from buying any jute for seven days in an attempt to get the price down. This was successful to a certain extent, and an initial drop of Rs. 3.50 a maund was considered a satisfactory beginning. Unfortunately, demand increased at the lower prices, and with the goods market booming, raw jute prices soon rocketed to new high levels, and the mills' good intentions were undermined.

No business was reported on contract during the past week, and opening quotations on Wednesday morning showed a rise of Rs. 5 a maund over the previous day. The low quotations on Monday and Tuesday were suspected to be false as the October due date for cancellation of contracts fell in this period, and indications were purposely kept low.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	139.25	52.00	Oct.-Nov.
Northern	138.00	51.00	"
Purnea Desal	135.25	50.50	"
Daissee Selected	140.75	52.50	"
Assam Tossa	142.00	53.00	"
Mesta:			
Assam-Northern	134.00	50.00	"
Daissee	134.00	50.00	"
Jungli	131.25	49.00	"

THE FOREIGN JUTE MARKETS

TRADE WORRIED OVER RISE IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

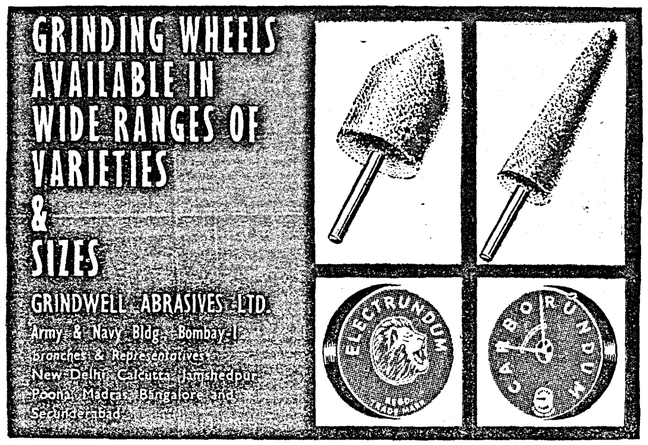
THE fantastic rise in fibre prices in Pakistan has created a state of chaos in the jute industry in Dundee. The trade thought that any doubts there were over fibre supplies during this season,

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September as follows:

Description	30th September 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	31st August, 1960 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	Increase over (+) or decrease from (−) last month Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)	30th September, 1959 Lakh Yds. (000 Metres)	000 Tons (000 Metric Tons)
Hessian cloth and bag	10.80	29.4	11.50	30.9	− 70	− 1.5	9.21	25.5
	(9,87,74)	(29.9)	(10,51.13)	(31.4)	(− 63.39)	(− 1.5)	(8,41,73)	(25.9)
Sacking cloth and bag	9.50	39.4	10.32	43.1	− 82	− 3.7	10.26	42.7
	(8,68,34)	(40.0)	(9,43.85)	(43.8)	(− 75.51)	(− 3.8)	(9,38,23)	(43.3)
Others		8.8		9.4		− 0.6		10.5
		(9.0)		(9.5)		(− 0.5)		(10.7)
Grand Total		77.6		83.4		− 5.8		78.7
(000 Tons Metric Tons)		(78.9)		(84.7)		(− 5.8)		(79.9)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.



and the anxieties would be removed with the return to more reasonable levels of prices. Buyers do not know what to do, while Dundee spinners and manufacturers are not getting much opportunity for business. Those who are well bought in their jute—and there are quite a few in Dundee—will be glad to enter business in yarns at the current prices, but few buyers will now care to pay the greatly enhanced rates. With the recent rise in raw jute quotations for shipment, there might be another jump of about £15 a ton in yarn prices and the industry may be advised to that effect shortly. It is possible that the authorities might withdraw all prices, which has had to be done previously.

Business was done in Dundee last week at up to £152 for Mill Lightnings and later the price rose to £158, with Mill Hearts at £153 and Grade Hearts at £147, October-November shipment, all c.i.f. U.K. Mill Firsts were entirely nominal in the absence of offers, as also were Tossa and Daissee.

The Calcutta goods market was practically unaffected by the sharp rise in Pakistani jute, prices being up by only 3d to 6d until hessians rose by 2s 6d for 40in. 10oz., and 1s 3d for 7½oz., with B Twills up by 11s to 115s a 100 bags. This was attributed to the announcement that the Indian jute mills were to discuss the compulsory sealing of looms by up to 5 percent.

Hessian prices are up to 79s 6d for 10oz. and 59s 6d for 7½oz., October to March, with B Twills at 226s 3d same shipment, all f.o.b., Calcutta. Hessian yarns are now quoted at 20.02d a lb for 8 lbs C.H.W. cops and 21.16d for 8 lbs J.C.H. warp, while most other yarns are up by about £10 a ton since 5th October. Cloth and bag prices have been correspondingly raised: 40in. 10oz. hessians to 16.77d and 8oz. to 14.12d a yard. Sackings have been raised too, also tarpaulings.

THE PAKISTANI JUTE MARKETS

SPECTACULAR RISE IN FIBRE PRICES

(FROM OUR EAST PAKISTAN CORRESPONDENT)

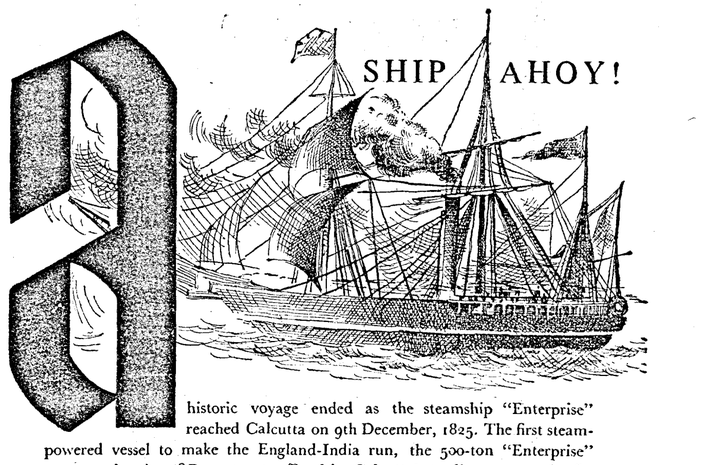
THE past week has seen a spectacular rise in fibre prices. It is most likely that the rates which prevail at the time of writing, will have gone up by several rupees a bale by the time this report appears in print. However, purely for parity purposes, a few prices are quoted below. Cuttings for a long time this season were quoted at Rs. 80 a bale. Even this was a reasonably high price and barely economical for the mills in the normal market. At the moment, business in cuttings is being done at Rs. 180 a bale. Export Firsts have for a long time been around Rs. 220 a bale. Today it is difficult to find any sellers of these at Rs. 340 a bale. This steady price rise apart, there is a tremendous difference between the ready and forward delivery contracts, and the latter are gradually proving useless for all practical purposes. Mills and jute balers who foresaw this rise and have bought forward, have reaped paper profits, but they are beginning to doubt whether these profits will come to anything since supplies are so uncertain. This is particularly so in the case of jute mills who bought forward, not to make trading profits, but to cover against future price rises. It is reported that they are refusing to settle differences, but are prepared to give extension to sellers, partly to avoid panic and partly to ensure that they get some jute. If differences are settled, this will only raise prices more since the suppliers, having got rid of low-priced contracts, could buy further only at the present high prices

The upcountry growers are now getting very good returns. The Government has been making generous advances and loans to them, and reports indicate that they have now turned stockists. They, it is reported, are selling paddy instead of stocking it, since they know that the paddy crop this year is good. The big growers, particularly, are using their spare money to buy jute from smaller cultivators or even in the bazaar, and are stocking the fibre in expectation of higher prices. Since the Puja holidays, the traders have been acting with the knowledge that there is a raw jute shortage in both India and Pakistan and that the supply will not come anything near demand.

The overseas buyers now show a more realistic appreciation of the market situation, too. Adding to the panic is the fact that the Siamese jute crop this year is not larger than last year's. It is also highly probable that the trouble in the Congo will prevent the export of that country's jute at least for some time. It is obvious that even if prices do not rise any more, a large percentage of the overseas buyers are going to suffer seriously.

The Indian mills, for a variety of reasons, will almost certainly get all the jute they have already bought, and since they have bought well early and since the gunny market has risen considerably, they may not suffer seriously. The communist countries, whose jute mills are owned by the State, do not have to worry much about prices. Italy, which has several small mills, is likely to be severely hit by the fantastic prices as well as by the defaults. This also applies to West Germany and Belgium. But in the U.S.A., there is a very real danger of the mills switching over to synthetic fibres.

The only bright spot in this very depressing week is that military intervention to curtail the sale of wet jute has succeeded. As a result, the condition of jute in many upcountry agencies has considerably improved.



historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

FURTHER PROTECTION GRANTED TO PISTON INDUSTRY

CHROMIUM-PLATED RINGS ALSO COVERED

THE Tariff Commission has submitted its report on the continuance of protection to the piston assembly (pistons, piston rings and gudgeon pins) industry on the basis of an enquiry it undertook. The recommendations are as follows:

(1) Chromium-plated rings should be brought within the scheme of protection and protection to piston assembly industry should be continued at the existing rates of duty for a further period of three years ended 31st December, 1963.

(2) The Development Wing should ascertain from piston manufacturers the specifications and quality of pig iron required by them and should arrange with the Iron and Steel Controller to plan the requirements of the industry and place allocations with those producers who can make pig iron according to the specifications of the piston manufacturers.

(3) It is reiterated that the domestic manufacturers of internal combustion engines of all types should finalise their arrangements for obtaining their requirements of piston assembly and components from indigenous sources. Further, the import policy should be so framed as not to retard the implementation of the above recommendation.

(4) The units which have entered into foreign collaboration should take steps to get the restrictive provisions concerning exports suitably modified in their own interests as well as for the development of the export trade.

(5) The indigenous aluminium industry, if it cannot augment its supply of aluminium alloy ingots, should not at least reduce the supplies to piston manufacturers below the existing levels.

The Government has accepted the first recommendation. The duties recommended by the Commission for chromium plated trunk piston rings of diameter six inches and below are being brought into force with immediate effect under notifications published separately in the *Gazette*. The necessary legislation will also be introduced in due course.

The Government is considering the second recommendation for suitable action to the extent possible. The attention of the domestic manufacturers of internal combustion engines of all types has been drawn to the former part of the third recommendation concerning arrangements for obtaining their requirements of piston assembly and components from indigenous sources. The Government has taken note of the latter part of the recommendation concerning import policy. The attention of those units of the piston assembly industry who have entered into foreign collaboration has been drawn to the fourth recommendation. The attention of the aluminium industry has been drawn to the fifth recommendation.

PROGRAMME OF DEVELOPMENT FOR U.K. VERTICAL TAKE-OFF AIRCRAFT

As part of the development programme of the *SC-1* vertical take-off research aircraft which made such a hit at the recent S.B.A.C. display, Short Brothers and Harland have been conducting a series of rolling or short take-offs. This has meant reversing the usual procedure of first using the four vertical-lift engines to get the aircraft off the ground prior to opening up the horizontal-thrust engine. A "rolling" take-off means that the aircraft taxies along the runway a short distance before opening up the lift-engines so that the *SC-1* climbs away with all five engines running.

With the *SC-1* and the Hawker *1127*, which is due to start flying trials soon, Britain is in the forefront of development in this field. This fact was acknowledged during Farnborough week by Herr Strauss, the West German Defence Minister, who said that he believed Britain was the most advanced country in the development of vertical take-off aircraft. He declared that the *SC-1* was a "milestone in the history of aviation and also of mastering nature," and was a great triumph for the British aircraft industry.

The *SC-1's* design was created in 1954-55 and first flew as a conventional aircraft early in April 1957. The first tethered vertical take-off was made towards the end of May 1958, and the first free vertical take-off in October of that year. In April 1960, the *SC-1* made its first transition from jet-borne hovering to wing-borne forward flight and back again to vertical landing.

Mr. David Keith-Lucas, Short's Technical Director, says: "From the beginning we have kept our eyes on the V.T.O.L. supersonic airliner as our ultimate goal—this is one reason why we believe that there is a more immediate need for military strike and reconnaissance aircraft to operate from forward areas without having to rely on runways, which are often not available and are always vulnerable."

ORIENT EXPRESS
Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates. Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

U.N. BODY REPORTS ON LEAD AND ZINC SURPLUS

COPPER PRICES FALL: TIN FIRM

THE *communiqué* of the U.N. Lead and Zinc Study Group, after its meeting in September, confused the London Metal Exchange. Since its meeting in January, it had changed its predictions for 1960 from a deficit of 78,000 tons to a surplus of 74,000 tons of zinc and from a surplus of 99,000 tons to a surplus of only 21,000 tons of lead. Yet it did not recommend measures to restrict the flow of zinc or—with a possible deficit in sight after cutbacks in Canadian and Australian production—to relax restrictions on the flow of lead. The explanation of the policy is that zinc stocks in consumers' hands are moderate but lead stocks in producers' hands are very large. Indeed, the statistical position of zinc is still much stronger than that of lead, and the earlier change in the price relation in favour of zinc is seen to have been justified. The prospective surplus of zinc is, anyway, largely in the United States, where consumption estimates have been drastically scaled down, and the figures do not imply a particularly weak statistical position in the non-American world.

Copper Surplus

The copper surplus obtruded again when the price of the metal surprised the market by breaking below the "barrier" of £240 a ton, at which level, it was thought, producers would intervene as buyers to stabilise the price; and in fact they did so intervene, but at a somewhat lower level. It is not, however, clear whether this manoeuvre was short-term and tactical or part of a long-term strategic plan. The decline in the price of copper from above £260 a ton in the first half of July is attributable to heavy stocks accumulated by consumers as a precaution against interruption of supplies: if only because of the physical difficulty of accommodating more metal, stockpiling could not continue indefinitely and demand subsided. The threat of interruption of supplies recurs frequently, and it is, therefore, unlikely that stocks will be allowed to run down; but the basic statistical position of the metal is such that no appreciable recovery in the price in the next few months can be foreseen.

Tight Supply of Tin

The tin market, on the other hand, maintains a firm tone, because in spite of the removal of export quotas for the fourth quarter of the current year, the statistical position of the metal is still tight. Substantial stocks were accumulated in Malaya while exports were controlled, but they will be released only gradually, and other producing countries will be unable to increase their supplies much.

Shortage of Antimony

Shortage of antimony is anticipated, and after two years of stability, the U.K. price of regulus has been raised by £10 a ton. The Chinese and the Russians, while maintaining a price differential, are following the U.K.'s lead in the market.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.4 percent to 125.7 during the week ended 24th September, 1960, compared with 125.2 for the earlier week. The index was higher by 0.6 percent and 6.4 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for September 1960 stood at 125.3, compared with 125.0 for August 1960 and 117.2 for September 1959. Higher prices of jowar in Coimbatore (+22%) and in Nagpur (+7%), potatoes in Mandi (+10%), wheat in Bhopal (+8%) onion (+7%), milk (+6%), rice in Tihu and bananas in Calcutta (+5%), bajra and cumin (+3% each), groundnut oil (+2%) and barley and chillies (+1% each) raised the index for Food Articles by 0.2 percent to 123.9, although the prices of oranges (−25%), and rice in Sambalpur (−11%) and in Cuttack and Imphal (−5% each), black pepper (−8%), jowar in Hyderabad (—7%) and in Nandyal (−6%), maize and potatoes in Delhi and bananas in Bombay (−7% each), wheat in Kanpur and turmeric in Cochin (−5% each), cashewnuts and eggs (−3% each), gram, arhar, meat and coffee (−2% each) and urad, gur, tea and salt (−1% each) showed declines. The index for Tobacco rose by 1.0 percent to 103.7 due to an increase in the prices of raw tobacco (−1%). The index for the Fuel, Power, Light and Lubricants group stood unchanged at the earlier week's level of 119.6, in spite of a rise in the prices of castor oil (+1%). The index for Industrial Raw Materials advanced by 1.4 percent to 141.1, compared with 139.1 (revised) for the previous week due to arise in the prices of raw skins (+10%), tanning materials (+4%), raw jute, cottonseed (+3% each), lac, groundnuts (+2% each), castorseed and copra (+1% each). The prices of raw wool and rapeseed (−1% each), however, moved down. The index for Intermediate Products moved up by 0.3 percent to 130.5 as a result of higher prices of rayon yarn (+7%) and linseed oil, coir yarn and lead (+1% each). The index for Finished Products worked out to 121.5, against 121.4 for the earlier week. Items which showed variations during the week were jute manufactures and general chemicals (+1% each) and bricks and tiles (−1%).

WHY WE ADVERTISE—9

bringing you the good things of life

Mr. D. D. Lakhanpal, Managing Director, Murphy Radio of India Ltd.

With the progressive consolidation of basic economic conditions in India, levels in both production and income are steadily rising.

Sparked by the many facets of the Plans, there is a steady demand for both capital and consumer goods, so it may be thought that increasing production is enough in itself, that goods will sell themselves.

This is a fallacy: for growing sales are a *cause*, and not a result, of growing production. A rise in production, and its consequent benefits to the consumer, can only come with a *corresponding rise in demand and sales*—and this must be created.

Demand and sales are closely related not only to a consumer's buying power, but also to those standards of living which he wishes to enjoy. In the Radio Industry, for example, Advertising has been used to stimulate that desire for better things, establish a *demand* for better things. And, in turn, that demand has been met by improving quality; and, as mass sales have built up mass production, lowered prices have resulted.

Thus many of the better things of life which were once 'luxuries' are moving within the reach of more people who, by buying, are stimulating production and completing the cycle of prosperity.

Advertising, as an accelerator of selective mass-buying, helps to broaden the country's industrial base, and helps afford people a wider range of better products at lower cost.

Good Advertising Serves *You*

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 14, held on 10th and 12th October, offerings at the Export auction amounted to 65,771 packages which met with a good general demand. The best C.T.C.'s declined further and were up to 50nP easier, while the medium and poorer types in this category were well supported and were at times dearer. The better Assam B.O.P.s with declining quality were easier while there was only limited enquiry for similar O.Fgs. and were generally easier. The lower priced B.O.P.s and O.F.g.s., however, received better enquiry, particularly the latter. Medium B.P.s were irregular and generally easier while similar Fannings met with more enquiry. Plain brokens and Fannings came in for a strong market and poorer brokens were often dearer, while Fannings, especially the black, cleaner types, were appreciably dearer. Legg-cut teas met with satisfactory support, but were a little irregular. The better whole leaf grades were again easier, but the poorer types were well supported and were firm to dearer. There was fair enquiry for Darjeelings, and although the better descriptions were discounted, the lower priced types came in for more support. Tippy teas were again irregular and easier.

Quotations

	1960 Rs. a kilo
Clean Black Pekoe	5.40 to 5.65
Plain B.P.	4.50 to 4.55
Plain Fannings	4.65 to 4.90
Medium B.P.	5.00 to 5.40
Medium Fannings	5.10 to 5.40
Best Assam C.T.C. B.P.	6.60 to 7.20
Best Assam C.T.C. Fgs.	7.20 to 7.80

(Quotations are inclusive of excise duty.)

At the Internal Sale, Dust offerings which comprised 20,663 chests met with a strong general demand. Medium C.T.C. Dusts were well supported at about last rates; the smaller and brighter liquoring kinds often tended to be dearer. The best C.T.C. descriptions found ready buyers, although at irregular rates which generally tended to be slightly easier. The orthodox exportable types were readily taken up at somewhat easier rates while the smaller good liquoring kinds sold readily at often dearer rates. Brown Dooars were again keenly sought after at generally dearer rates.

Quotations

		1960 Rs. a kilo
Medium Dooars Dust	...	4.65 to 5.00
Medium Assam Dust	...	5.00 to 5.60
Medium Assam C.T.C. Dust	...	6.20 to 6.35
Best Assam C.T.C. Dust	...	6.40 to 6.90

(Quotations are inclusive of excise duty.)

The 391 packages of Leaf on offer met with a good demand.

ACTIVE TIME CHARTERING IN FREIGHT MARKETS

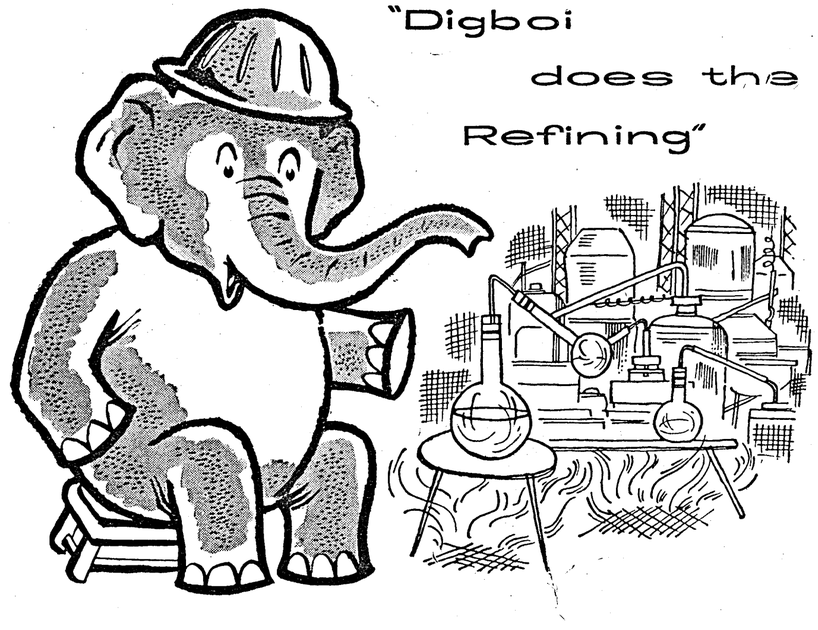
A CONSIDERABLE number of vessels have been fixed on time charter over the past month, many for fairly long periods, but there is no real rise in the market to justify this activity. Grain charters from British Columbia to India were concluded at 55s and from U.S. Gulf to East Coast India at 72s 6d and 70s. Iron ore was done from Calcutta to Poland at 54s f.i.o.t. Various fixtures have been reported from West Coast India to Black Sea at 43s f.i.o.t., to Yugoslavia at 47s 6d and to Rotterdam at 42s 6d. The recent strike of baggers and stitchers on grain vessels is yet another example of the unwillingness of stevedores in this port to co-operate with the authorities.

LINSEED DULL

The market was dull in the past week. Prices showed little movement either way. The general undertone was firm, but trading was very limited. Stocks of seed were small and sellers were reserved. Crushers showed interest for ready and forward deliveries. The oil market was steady, but business was negligible.

Memoirs of an Elephant—5

"Digboi does the Refining"



You know, I really can't understand these people at the AOC. After all the trouble they take to find the oil, they tell me that when they do, it is "crude" and that it has to be "refined".

It is now about 60 years since they started this "refining" business in Assam. They say that their plant in Digboi was the first in India operating on modern lines. During these years, many additions have been made to the plant. Among others they added a Dubbs Cracking Plant, an Edeleanu Plant, Atmospheric and Vacuum Tube Stills, and Oil Heaters. A new petroleum plant and a new Lubricating Oil Distillation unit were added in 1954.

One thing, they seem to keep right up-to-date in Digboi utilising all the latest technical — "know-how" and equipment.

From what I have heard, this "crude" oil can produce many different things like—Motor Spirit, Kerosine, Diesel Oil and at least another hundred products.

The Digboi refinery is the only one in India producing petroleum products from indigenous "crude"oil.

—And to think that all this is due to me!

SPECULATIVE BOOM IN THE JUTE MARKETS

CHAOS reigns supreme in the Indian jute and gunny markets. For three weeks, the prices of raw jute, hessians and sacking have been shooting upwards with a rapidity not seen for almost ten years. Various efforts have been made to stop the uptrend, but the results have been uncertain so far. A month ago, the industry announced that, in order to conserve raw jute supplies, the scheme for the voluntary sealing of looms would be continued until the end of the year, instead of only until the end of this month: from the beginning of 1961, it added, a further increase in the percentage of looms compulsorily closed appeared inevitable. Then, a fortnight ago, the proposal was debated whether the mills should raise the proportion of their compulsorily sealed looms from 9 percent to 14 percent. This proposal has apparently now been abandoned. Instead, the Indian Jute Mills Association has recommended that its member-mills close another 5 percent of their looms voluntarily from the beginning of this week; and a further 5 percent from the beginning of next.

Simultaneously, the East India Jute and Hessian Exchange, which operates what is flatteringly described as a well-regulated futures market for jute and jute goods in Calcutta, has also been running round in circles trying to stop the speculative boom. A fortnight ago, it started by suspending futures trading for two days. When trading was resumed on Monday last week, it decided that only offsetting transactions would be allowed in the November jute goods hedge contracts and the December raw jute hedge contracts. These transactions, it added, would have to be within certain fixed ceilings—Rs. 140 a 100 bags of B Twills, Rs. 51 a 100 yards of 40in. 10oz. hessians, and Rs. 43.50 a maund of Assam Bottoms jute. Jute and gunny prices, however, have continued to move in a direction opposite to that intended. The mills' attempts to cut gunny production were meant as a warning to the raw jute speculators that they could not hold the industry to ransom; the latter seem instead to have interpreted them as evidence that the mills admit the existence of a raw jute shortage. Similarly, the measures taken by the East India Jute and Hessian Exchange have had one main effect. This is that speculators have been driven out of the futures market into the real goods market, which latter has therefore skyrocketed. In consequence, B Twills have been up to Rs. 186, 40in. 10oz. hessians up to Rs. 61.75 and raw jute up to Rs. 56 in the most spectacular rise seen since the Korean war boom. Speculation flourishes, while genuine trading is almost at a standstill, although a softer tendency has been apparent during the past couple of days.

The background to the present situation is provided by the raw jute shortage. Until about six months ago, both the industry and the Indian Government were reasonably convinced that there would be enough fibre to meet the mills' needs until the new 1960-61 crops arrived in the markets. But, soon afterwards, opinion began to change. The long drought in April and May this year delayed the sowing of the crops, and hampered the growth of plants already sown. It implied that the new harvests would be late in reaching the markets, and would also be smaller than usual. The carryover from the old 1959-60 crop was in any case expected to be poor, so the bulls saw in the new situation an opportunity of exploiting the mills—and fibre prices began to rise. Most people thought that the rise would prove only temporary, since a reaction would set in as soon as the new crops reached the markets. The excellent growing conditions during the greater part of July and August supported the impression, especially since it was advertised that the delay caused by the earlier drought had largely been made up. But three adverse factors still remained. The first was that transport facilities were disrupted by the Central Government employees' strike and the linguistic riots in Assam. The second was that the linguistic riots also caused the care and preparation of the jute crops to be neglected. And the third factor was that, during this period, the mills' demand for jute was built up to the point where, when the jute ultimately did begin to arrive, the demand was far in excess of arrivals.

It is this speculative situation which has been developing in intensity during the past few weeks. Since jute arrivals have fallen short of demand, prices have been rising. And because prices have been rising, the growers and the trade have been holding back the jute they possess. It is claimed that the mills' demand for the raw material cannot have fallen much, since only an extra 3 percent or 4 percent of their looms, on average, have been closed under the voluntary loom sealing scheme introduced in June. Furthermore, some mills have been very short of jute because they bought too little; others have run short with sellers defaulting even on guaranteed delivery contracts. The process whereby jute prices rise because arrivals are poor, and arrivals remain poor because jute prices are rising, could have been ended if prompt and liberal imports of cuttings had been allowed from Pakistan. But when the imports were allowed last month, they once again proved too little and too late, partly because bureaucratic muddling caused an unconscionable delay in the issue of licences. The position now is that if India imports cuttings from Pakistan, it will cost her well over Rs. 2 crores to get the same amount which she could have got seven weeks ago for Rs. 1 crore. Such is the glorious success of the Government's efforts to save foreign exchange.

The sharp rise in prices notwithstanding, the evidence suggests that jute is by no means as short as the bulls are trying to make out. There are, of course, some who say that the Indian crop will not be more than 5.4 million bales and the Pakistani crop no more than 4.5 million bales. On the other hand, there are others who claim that both India and Pakistan will produce almost bumper crops of over 6.5 million bales each. The truth is notoriously elusive in estimates about the jute crops, but a widely held opinion is that it probably lies somewhere midway between the bull and bear extremes. In other words, the Indian crop may total about 5.8 million bales and the Pakistani one about 5.5 million bales. On these assumptions, the present levels of jute and gunny prices would be completely unjustified. The median view of the crops is supported by the fact that nothing so drastic has happened so far this season to bring about a sharp decrease in output. It is true that some harm was done by the long drought during the sowing period, by the Assam disturbances and by the serious floods in Orissa. But these could hardly have been so serious as to bring down the total Indian output by almost 30 percent, as the bulls claim.

The main aim, it seems, must now be to get the new crop jute moving from the upcountry areas to the mills, and to bring down both fibre and gunny prices. The two are inter-related. If a downtrend in prices can be firmly established, it will automatically persuade growers and traders to disgorge their jute hoards. If the hoards can be disgorged, there is a fair chance that fibre prices will fall, bringing gunny prices down with them. Various measures have been suggested as to how these two aims might be realised. Among the more extreme ones are price controls and a system of requisitioning jute stocks for subsequent allocation to the mills. Others relate to restrictions on trading in the real goods market, where the speculation is now mostly concentrated; and to enforcing cuts in the industry's production so that the immediate demand for raw jute may decrease sharply. Inevitably, there is deep controversy about which of these measures would be justified, and which not. So far, the main attempt has been to reduce the mills' demand for jute—by sealing looms and by evolving a quota system for fibre purchases. The effectiveness of the attempt remains to be seen, but it is generally agreed that positive measures to induce a decline in jute prices are urgently needed. In the process, the fingers of many will no doubt be burnt, but in any case they cannot expect to escape lightly when the current speculative boom comes to an end. The trade and the industry can hardly afford to ignore the fact that gambling orgies of the kind Calcutta is now experiencing will seriously damage their interests in the short as well as the long run.

TOWARDS DISASTER IN OIL

THE obvious determination of the Union Oil Minister, Mr. K. D Malaviya, to avoid an increase in oil imports during the third five year plan, is both correct and commendable. Saving foreign exchange is an exercise in national survival at the moment, and to the extent the developments in official oil policy reported from New Delhi last week-end are inspired by the need to keep purchases of foreign crude to a minimum, there can be no valid criticism to level against them. That is, of course, provided they are practicable and sound, and provided the foreign exchange saved in one field is not more than cancelled out by that spent in another. Unfortunately, Mr. Malaviya's latest policy instalment does not entirely satisfy these conditions. And as an answer to the predictions of the industry in general and the proposals of Burmah-Shell in particular, it seems inadequate and unconvincing. It is, in fact, little more than a statement of ambitions, such as have emanated from New Delhi Ministries in large numbers over the past few years and invariably proved incorrect, and seems intended chiefly to contradict previous Government statements of policy on the limits of public and private enterprise rather than to indicate just how this country is to meet the demand for petroleum products expected by the end of the third plan.

The most encouraging feature of the new policy development is the partial acceptance of the industry's view on future demand. Instead of the vague "not less than 10 million tons" indicated in the draft outline of the third plan, the Ministry now appears to have reverted to the region of its original estimate, and the one the industry has favoured all long, of about 13 million tons a year. The difference between the two views, the Government's and the industry's, has now been narrowed to one million tons, a figure which looks small enough on paper, but can cost the country considerable foreign exchange if it turns out to be on the wrong side. Taking for a moment the Government's estimate of between 12½ and 13 million tons of petroleum products as the correct one, what are the chances now of that level of production being reached? It is expected the three large private-sector refineries will be able to expand their output to six million tons by 1966 without any additions to present capacity. This can be accepted without further query. So can the estimate of half a million tons for the Assam Oil refinery at Digboi, making 6½ million tons in all and leaving a gap of roughly the same amount to bring production up to the official figure. The two new, Government-owned refineries at Nunmati and Barauni will, it is hoped, be producing 2.75 million tons by 1962 and it is now proposed to increase this figure to 4 million tons by 1966 through an immediate expansion in production capacity. Another public-sector refinery at Cambay is then expected to bring the output up to the 13-million ton total.

The plan for bridging the 6½-million ton gap, which the Ministry proposes to make its entire responsibility, would certainly seem to depend on a large number of "ifs". At the moment, there is little sign of the Nunmati and Barauni refineries

on the ground. Yet the talk is already of expanding them. The public sector has no experience of running industrial units of this kind, and yet the Ministry is expecting they will be working smoothly at full capacity by 1966. Assuming that the complicated problems of building and operating the pipeline system—entirely new to India—can be solved to complete satisfaction by that date, it seems highly unlikely that sufficient experience will have been gained, and enough technicians trained, to maintain an output of four million tons. (This is not to raise the question of costs at all—presumably that has already been dismissed as irrelevant.) Yet the Government's hopes seem based entirely on this supposition, along with the even more tenuous one that the Nahorkatiya reserves are much larger than estimated earlier. This point alone would seem sufficient to encourage extreme caution. But the Ministry goes one better and makes an equally unsupported assumption concerning the oil reserves found at Cambay and Ankleshwar. At this rate, not only is there the possibility inherent in the official policy that the three new public-sector refineries will not be able to reach the output expected of them by the end of the third plan, there is also the risk indigenous oil supplies will not be available for them to refine.

All this adds up to a fair number of ifs, and common prudence would suggest that, where available, safeguards should be taken full advantage of. The Burmah-Shell proposal to increase capacity to four million tons annually is certainly one of these. But the Government now seems to have ruled this out completely, despite the fact that no cost in foreign exchange would be incurred. Instead, it prefers to use Russian aid to further its own public-sector ambitions, so making nonsense of the frequent claims that the only criterion in the choice between public and private enterprise is the economic one. Now, not only does the Ministry appear to be quite willing to use Russian aid—which presumably could be devoted to other useful purposes—to provide what private resources could equally well find, at least in part, but a wholly unjustifiable risk is being taken that the untried and inexperienced public sector will be able to achieve all that is expected of it. The stage indeed seems set for the kind of ideological fiasco which has beset the coal industry since the beginning of the second plan.

The above arguments are based on the assumption that the Government is correct in estimating the end-third plan requirements at 13 million tons instead of the industry's 14 million tons. If, in fact, the industry is proved right and the Government wrong, then there will be seen to have been even less justification for reserving expansion for the public sector, and the parallel with the coal industry will be even more complete. The possibility that annual requirements might reach 14 million tons, together with the fact that something is quite capable of going wrong with the public-sector refinery plans, would seem quite enough to justify approval of a private-sector project which is sure of being achieved, will cost the country no foreign exchange, and will permit the Company to accept a revision of the refinery agreement against which the Minister is never tired of fulminating. The fact they have not been considered so is obviously a tribute to Government short-sightedness and Ministerial ambitions. It is also remarkably difficult to square with official protestations that ideology plays no part in economic decisions and that the country is short of foreign exchange. If the policy is based upon well-thought-out views about the future availability of Middle Eastern oil, or the prospective abundance of foreign aid, then the Government would do well to take the public into its confidence. As it is, there is apt to be difficulty in escaping the opinion that the country's oil policy is being tragically mismanaged and that precious foreign exchange is being forfeited to satisfy Ministerial empire building.

IMPLICATIONS OF THE U.S. RECESSION

THE cut in the French Bank rate in October was the first important downward move in money rates in Europe, although in North America the decline began early in the year. The downward trend which has asserted itself in both the main industrial regions of the non-communist world reflects a change in the trend of business—at least, a potential change that will develop into a recession unless the governments act in advance of that development. Reducing Bank rates is such counteraction, and it is being supplemented here and there by more positively expansive acts. The belated downturn in money rates in Europe has somewhat relieved the anxieties of the U.S. authorities. They brought rates down in the United States because economic activity had stopped rising. But the policy of cheap money, adopted for domestic reasons, had undesired external consequences, since short-term funds, and therefore gold, moved in massive quantities from the United States. A reduction in money rates abroad implies that the attraction of funds to other countries will be weaker.

However, the redistribution of reserves, which have for many years been too heavily concentrated in the United States, was not unwelcome abroad. When the American economy was in recession—as it has been, apparently, since early in the year—other countries would not so easily earn dollars, and the problem of the gold and dollar shortage might reappear. The contraction of exports to the United States is not a possibility but a fact. In Britain, a few weeks ago, the Board of Trade analysed British exports to the United States and Canada in the three months from June to August. By comparison with the same months of 1959, exports to the United States were reduced by 29 percent and to Canada by 4 percent. The damaging potentialities of this contraction are emphasised by the sharply rising trend of U.S. exports this year, while west European exports of manufactured goods have been, on the whole, steady.

It is already apparent that the present American recession differs in its effects from that of 1957-58. Then the United States maintained and even increased its demand for foreign goods. But the main factor in that helpful situation was the demand for foreign motor-cars, and that demand has waned in 1960. Indeed, American "compact" cars are threatening European cars outside as well as inside the American market. There is some doubt, too, about the U.S. Administration's policy towards the deficit in the external account. In the recession of 1957-58, the Administration's policy was liberal. It did not protect the gold reserve either by monetary means or by restricting imports. There is no assurance of a similarly liberal policy in the current recession, when American politics are more confused.

It is argued that, even if the policy is adverse, Europe will not suffer much from this American recession because Europe does not now "catch influenza when America sneezes". Certainly, Europe's development has changed the economic balance of the world and put the former in a much stronger position to withstand external influences. But this argument is irrelevant to the less-developed countries, unless Europe's growth enables them at least to maintain their external earnings in spite of a contraction in earnings from their American trade—and that contraction has already begun. The most disturbing feature of the present situation is the hesitation of business simultaneously in America and Europe. There are important differences in degree, as the state of the economies has deteriorated more in North America than in western Europe. Indeed, some west European countries show no obvious signs of recession. But the differences seem to be in the timing rather than in the pattern of developments. Europe, no longer at the mercy of the U.S. recessions, is quite capable of generating her own.

In this situation, the outlook for the primary-producing countries is somewhat discouraging. They cannot hope to maintain their rate of activity if trade in the two major industrial regions recedes. So one must contemplate the possibility of a recession in America, Europe and the primary-producing countries simultaneously. In those circumstances, the total of world trade could diminish considerably. The circumstances might be particularly adverse to Britain and the British Commonwealth. They would imply a decline in British exports to America, Europe and the primary-producing countries inside and outside the Commonwealth, and a decline in the exports of the other Commonwealth countries over a correspondingly wide range. Sterling would not easily maintain its strength in this situation, and the simultaneous weakening of the two principal reserve currencies would have disturbing implications for monetary stability over a wider area.

However, this gloomy reasoning does not correspond with the mood of business, as reflected, for instance, on the stock exchanges, and in the trade in capital goods in most countries. Hesitation is, certainly, apparent. In the stock markets particularly, there have been periods of doubt and adjustment. But correction of over-optimism is not the same as pessimism. In fact, few people believe that the recession, in any major area, will be severe. The duration of U.S. recessions in the last decade has averaged about 15 months, and if the current American recession began last February it has not, according to precedent, very much longer to run. Europe's recession is beginning later, and precedent suggests that Europe's recovery will not necessarily coincide with America's. But an American recovery would certainly moderate a European recession. There is no assurance that the earlier pattern will be repeated, but against the fact that the artificial stimulus of the aftermath of the war is exhausted must be set the fact that the techniques of economic regulation, although not yet perfected, are much more effective than they were between the wars.

COMPANY FINANCES IN RETROSPECT

THE statistics concerning the finances of 1,001 Indian joint-stock companies for 1958, published in the September issue of the *Reserve Bank of India Bulletin*, have little topical value. But they are still useful in the sense that the trends they point to have not changed fundamentally. Investors will, of course, have to bear in mind that the consolidated figures of all companies need not necessarily be in line with the results of their own particular concerns. Sometimes a company will have done well even though the industry to which it belongs has not.

The figures show that the growth of sales slowed down from 12.1 percent in 1956 to 5.1 percent in 1958. Sales increased by Rs. 86 crores to Rs. 1,789 crores in 1958, compared with an increase of Rs. 137 crores in 1957. Of this rise, cotton textiles, iron and steel, sugar, cement and other textiles accounted for as much as Rs. 65 crores. On the expenditure side, raw materials consumed and other manufacturing expenses declined by Rs. 19.8 crores in 1958, against a rise of Rs. 72.2 crores in 1957. In many instances, the consumption of raw materials fell because of import restrictions. Salaries and wages rose by Rs. 12.1 crores to Rs. 287.8 crores, compared with an increase of Rs. 17.8 crores in 1957. There was a steady decline in the number of companies having managing agents Of the 1,001 companies, 637 had managing agents at the end of 1958, against 681 in 1957. Companies with secretaries and treasurers numbered 24 in 1958, against 23 in 1057. Expressed as a percentage of profits, the remuneration of managing agents declined from 11.6 percent in 1957 to 10.2 percent in 1958.

The profits before tax of these companies rose by Rs. 12.6 crores to Rs. 119.9 crores in 1958; they had declined by Rs. 23.6 crores to Rs. 107.3 crores in 1957. The jute textile, cotton textile, transport equipment, paper and paper products and tea plantation industries showed bigger profits. But the shipping, iron and steel, sugar, mineral and mineral oil industries made less profit. In considering items like tax provision, profits after tax, and dividends, it must be remembered that a comparison is difficult in view of the changes in the system of corporate taxation under the Finance Act, 1959 Taxation provision as a percentage of profits before tax worked out to 46 percent in 1958, showing a decline of 2 percent from 1957. Profit after tax increased from Rs. 55.8 crores in 1957 to Rs. 64.3 crores in 1958. The ratio of gross profits to gross sales rose from 8.2 percent in 1957 to 8.7 percent in 1958. In 1958, the profitability rate of 579 companies ranged from 4 percent to 15 percent. It was nearly 20 percent in the case of 148 companies; 163 companies showed low profits ranging from zero percent to 4 percent and 111 companies incurred losses. So the profitability of equity capital, as measured by the ratio of profits after tax to net worth, increased to 7.1 percent in 1958 from 6.4 percent in 1957.

In 1958, the average rate of dividends on ordinary shares was 9 percent, against 8.8 percent in 1957. The cotton textile, iron and steel, cement and shipping industries cut their dividends during 1958. The highest dividend of 14.8 percent was paid by plantations other than tea. The sugar industry paid 13.6 percent, mineral oils 12.9 percent, paper and paper products 12.6 percent, matches 10.9 percent and tea 10.4 percent. The dividends paid by other major industries ranged from 5 percent to 9 percent. The ratio of dividends to net worth increased from 4.9 percent in 1957 to 5.1 percent in 1958. But shareholders need not take an optimistic view of the dividend prospects from these figures; the comparison between 1957 and 1958 must be qualified by the fact that in the latter year many dividends were subject to th prior tax deduction under the Finance Act and shareholders were also deprived of the grossing privilege.

The gross assets formation in the corporate sector was Rs. 160 crores in 1958, compared with Rs. 237 crores in 1957. Gross fixed assets were Rs. 144 crores in 1958, against Rs. 174 crores in 1957. The fall was partly due to the completion of many projects during 1956 and 1957 and partly because of cuts in imports of equipment. There was a sharp setback in inventories. The rise in the latter was only Rs 3 crores in 1958, compared with an increase of Rs. 52 crores in 1957. During 1958, gross capital formation, consisting of fixed assets and inventories, amounted to Rs. 147 crores, against Rs. 227 crores in 1957. Of the gross fixed assets formation of Rs. 144 crores in 1958, plant and machinery accounted for Rs. 109 crores. The iron and steel industry claimed as much as Rs. 40 crores. The annual rate of expansion in the gross assets of the 1,001 companies was 16.3 percent in 1957, but it declined to 11.6 percent in 1958. The annual rate of expansion in net fixed assets fell from 20.5 percent in 1957 to 12.5 percent in 1958. The gross assets of these companies amounted to Rs. 2,491 crores in 1958 and their net assets were Rs. 1,954 crores. Of the total net assets, net fixed assets were Rs. 851.8 crores. So net worth in terms of paid-up capital and free reserves as a percentage of total liabilities fell from 46.9 percent in 1957 to 46.5 percent in 1958. The declining trend in the liquidity of companies since 1955 continued. The percentage of current assets to total net assets fell to 54 percent in 1958 from 56.5 percent in 1957. The ratio of current assets to current liabilities also continued to fall.

The pattern of financing the assets formation in 1958 showed important changes. There was a substantial decline in the importance of external sources of finance other than free reserves and surpluses, depreciation and taxation reserves. Of the total assets formation of Rs. 160 crores in 1958, external sources contributed Rs. 82.6 crores or 51.5 percent, compared with 72.3 percent in 1957. Bank borrowing declined from Rs. 48.6 crores in 1957 to Rs. 8.2 crores in 1958, presumably due to the pressure on banking funds. Fresh capital raised from the open market fell from Rs. 27.9 crores in 1957 to Rs. 20.2 crores in 1958. Internal sources contributed Rs. 77.7 crores in 1958, compared with Rs. 65.8 crores in 1957. During the three years from 1956 to 1958, external sources contributed Rs. 657 crores. Borrowing from banks constituted 20 percent of the total finance. New issues of shares and debentures contributed Rs. 27.1 crores in 1958, against Rs. 29.1 crores in 1957.

As a percentage of total new issues, ordinary shares declined in importance and constituted 63.5 percent in 1958, compared with 84.8 percent in 1957, but debentures increased from 3.3 percent in 1957 to 21.8 percent in 1958. The percentage of preference shares in total new issues rose from 11.9 percent in 1957 to 14.7 percent in 1958. Judging from current trends, it does not look as if companies will be able to obtain much finance in the near future through either preference shares or debentures. The monetary measures of the Reserve Bank have made credit more expensive and have helped increase interest rates. So companies will not find it worth while obtaining money in the form of debentures by paying exorbitant interest. The outlook for preference shares is far from encouraging since the Preference Shares (Regulation of Dividends) Bill has not improved their position much.

Current News and Comment

Tata Iron Output Rising

The Tata Iron and Steel Co. Ltd has produced good results for the year ended March 1960. The price of its ordinary shares has been steady around Rs. 145 on the hope that working will improve further during the current year. In his statement to shareholders circulated along with the report—a useful feature which has just been introduced—Mr. J. R. D. Tata says that production was nearly 80 percent of the total capacity during 1959-60. But output is likely to increase in the near future because active measures have been taken to improve the quality and supply of coal and iron ore. Mr. Tata foreshadows an expenditure of about Rs. 1 crore for improving iron ore supplies. In completing the two-million-ton capacity programme, he points out, Tata Iron has spent Rs. 1,100 to build a ton of ingot capacity; it would cost at least Rs. 1,800 to build similar capacity in an entirely new steel plant.

Production during the year ended March 1960 has increased substantially. The output of pig iron has risen from 1.14 million tons to 1.59 million tons, of steel from 1.17 million tons to 1.56 million tons and of saleable steel from 899,000 tons to 1.23 million tons. The profit has increased from Rs. 8.47 lakhs to Rs. 1.63 crores, after providing Rs. 8.47 crores (against Rs. 5.53 crores) for depreciation and Rs. 4.14 crores (against Rs. 3 crores) for plant rehabilitation and development rebate reserve. General reserve is allocated Rs. 1.54 crores, leaving a carry-forward of Rs. 846,767, against Rs. 846,767 brought in. The directors have transferred Rs. 3.76 crores from general reserve consisting of taxed profits of previous years for paying dividends. A tax-free ordinary dividend of Rs. 6.80 a share on the old ordinary shares, and a tax-free dividend of Rs. 1.70 a share on the new ordinary shares, has been declared, absorbing Rs. 3.13 crores. The dividend offers a return of Rs. 10.50 on the old ordinary shares, so the assurance given to shareholders appears to have been fullfilled. An important point to notice is that the Company has not earned enough profit for paying dividends. This is largely because the current retention prices of steel and pig iron do not cover the increased cost of production. It is hoped, therefore, that the prices will soon be increased in order to place the working of the steel companies on a more satisfactory basis.

Tata Iron's ordinary share capital has been increased during the past year by issuing 613,933 shares of Rs. 75 each at par to the existing shareholders in the ratio of one share for every five held. The Company has bought 54 percent of the issued capital of Belpahar Refractories Ltd, which is a subsidiary. The latter has been formed for producing refractories with foreign collaboration. The Indian Tube Co. Ltd issued 26,000 new ordinary shares of Rs. 1,000 each, of which 12,737 shares have been allotted to Tata Steel. The latter has sold 5,140 shares of the Tata Locomotive and Engineering Co. Ltd during the year.

Escorts Share Offer

The offer of 171,000 ordinary shares of Rs. 10 each at a premium of Rs. 5 a share, and 24,000 9 percent (free of company tax) redeemable cumulative preference shares of Rs. 100 each at par, by Escorts Ltd is expected to meet with a good response. The lists will open on 24th October. (Fuller details concerning the offer are published on a later page of this week's *Capital*.) The issued capital of the Company consists of 289,000 ordinary shares of Rs. 10 each and 15,000 10 percent (less tax) redeemable cumulative preference shares of Rs. 100 each. The preference share issue has been underwritten to the extent of Rs. 17½ lakhs. Preference shares worth Rs. 6½ lakhs have already been allotted for firm subscription. Escorts Ltd expects to make a profit of Rs. 70 lakhs during the next three or four years from the orders which have been already booked and confirmed. During the year ended December 1959, the Company paid an ordinary dividend of 26 percent, free of company tax, and the reserve fund stands at Rs. 8 lakhs.

The manufacturing activities of the Company have been diversified. Arrangements have been made for Goetze (India) Private Ltd to manufacture piston rings and cylinder liners. The production of pistons at the Patiala factory has commenced in May 1960 and supplies have been made to motor-vehicle producers. It is proposed to set up a factory for manufacturing X-ray equipment with foreign collaboration. Production is expected to begin in 1961. Sharpedge Private Ltd, a subsidiary, is working a blade factory at the Okhla industrial estate. It is proposed to build a factory for producing shock absorbers for the railways and another factory for manufacturing the heating elements required for household electrical appliances.

Kesoram Cotton Expands, Diversifies

Considering the difficulties the cotton textile industry has been facing, the performance of the Kesoram Cotton Mills Ltd during the year ended March 1960 is satisfactory. The cotton mill section is being modernised and rationalised. The scheme is likely to involve substantial capital expenditure during the next few years. The rayon plant is working satisfactorily. Orders have been placed for equipment in order to expand the production capacity of this unit further. The new machinery is expected to begin production in 1961. The construction work for the cellophane paper plant is progressing and the unit may start manufacture in a few months' time. Kesoram has, it is believed, obtained a licence to produce 60,000 tons of steel tubes a year. Negotiations are proceeding with the Industrial Finance Corporation for a foreign exchange loan for the project. As soon as the finance has been arranged, steps will be taken to implement the scheme. In view of the diversification and expansion of activities, the Controller of Capital Issues has permitted the Company to increase the ordinary share capital of Rs. 1.60 crores by issuing new ordinary shares of Rs. 10 each at par for Rs. 40 lakhs. The step is being examined by the directors. Considering these developments, they take an optimistic view of the prospects.

During 1959-60, the Company's trading profit has improved from Rs. 10.59 lakhs to Rs. 45.69 lakhs. A taxable ordinary dividend of 5 percent has been declared. This is covered more than five times and offers a yield of 1.9 percent at the price of Rs. 27 a share. The ordinary dividend was 2½ percent, tax-free, in the previous year. Development rebate reserve is allocated Rs. 47.20 lakhs (against Rs. 2.08 lakhs) and depreciation absorbs Rs. 2.17 lakhs (against Rs. 3.99 lakhs). The carry-forward is Rs. 67,607, compared with Rs. 76,764 brought in but Rs. 14.73 lakhs have been transferred from general reserve. The balance-sheet shows reserves at Rs. 2.41 crores and current assets at Rs. 2.32 crores. Fixed assets are Rs. 6.27 crores.

Fort Gloster Maintains Profit

In their report for the year ended March 1960, the directors of Fort Gloster Industries Ltd point out that the installation of the cable factory has been completed. Production has begun with the technical collaboration of British Insulated Callender's Cables Ltd. In the jute mills, the second phase of modernisation appears to have been delayed by the restrictions on machinery imports. But the directors expect to import some equipment in 1961. The Company's profit has amounted to Rs. 24.67 lakhs in 1959-60, against Rs. 24.55 lakhs in the previous year, after transferring Rs. 10.29 lakhs (against Rs. 8.73 lakhs) to depreciation. A taxable ordinary dividend of 25 percent has been declared. This offers a yield of 7.5 percent at the price of Rs. 335 a share and is covered more than twice. Development rebate reserve is allocated Rs. 13 lakhs (against Rs. 1.14 lakhs). Taxation takes Rs. 4.25 lakhs (against Rs. 11.75 lakhs) and debenture sinking fund Rs. 1.75 lakhs (same). About Rs. 5.5 lakhs has been transferred from general reserve account. The carry-forward is Rs. 72,060, against Rs. 1,94,546 brought in.

Britannia Engineering Pays More

The ordinary shares of the Britannia Engineering Co. Ltd have been steady around Rs. 13.62 because the growth prospects have been highlighted by the decision to increase the authorised share capital from Rs. 1 crore to Rs. 2 crores by issuing 500,000 new ordinary shares of Rs. 10 each and a further 500,000 unclassified shares of Rs. 10 each. At present, the ordinary share capital is Rs. 40 lakhs, divided into 400,000 ordinary shares of Rs. 10 each. The preference share capital is Rs. 6.95 lakhs. The directors say that the share capital

is being increased in order to obtain more money for the expansion and diversification of activities.

During the year ended December 1959, the wagon-building factory in Mokameh began production. Its output has increased with the bigger supplies of raw materials. The progress of the plant for producing printing machinery is satisfactory and it is expected that the first batch of machines will be ready for sale soon. The production of road rollers has been satisfactory, and the directors expect further improvement with the installation of new equipment. The demand for tea dryers has increased. Plans for diversifying activities further, in collaboration with foreign firms, are being examined by the directors.

Providing Rs. 5.49 lakhs (against Rs. 5.23 lakhs) for depreciation and Rs. 5.32 lakhs (against Rs. 3.95 lakhs) for taxation, Britannia Engineering's profit has increased from Rs. 3.06 lakhs in 1958 to Rs. 6.53 lakhs in 1959. A taxable ordinary dividend of 10 percent has been declared. This offers a yield of 7.3 percent at the present price and is covered more than twice. The ordinary dividend was 6 percent, tax-free, in the previous year. Development rebate reserve is allocated Rs. 1 lakh (against Rs. 1.06 lakhs). The carry-forward is Rs. 1,82,481, compared with Rs. 78,052 brought in.

Jay Engineering Does Well

In his speech at the annual general meeting of the Jay Engineering Works Ltd last Thursday, Sir Shri Ram, chairman, took a fairly optimistic view of the prospects. (A fuller version of the speech is printed on a later page.) The fan factory is being extended and components are being increasingly produced by Jay Engineering itself. The production of sewing machines has increased and the Company has applied for a licence to set up a new unit with a capacity of 25,000 sewing machines a month. These machines will be mostly of the zig-zag type. Sir Shri Ram mentioned that sales have been promoted by introducing the hire-purchase system. Working during the year ended March 1960 has been satisfactory. Sales have increased from Rs. 5.33 crores to Rs. 7.21 crores, and the profit from Rs. 44.22 lakhs to Rs. 51.94 lakhs. The Company has raised its exports to Rs. 80 lakhs, from Rs. 45 lakhs in 1958-59. Efforts are being made to reach a figure of Rs. 1.25 crores during the current year. Sir Shri Ram was confident that exports of engineering goods like those produced by Jay Engineering can be promoted substantially if incentives are given, especially in the form of arrangements for extending cheap and adequate financial facilities.

Bihar Cable and Wire Industries

Bihar Cable and Wire Industries Ltd, a new Company, hopes to issue ordinary shares soon for public subscription at par. It has taken over the Khemka Cable Works and the Bihar Wire Industries in Patna. Both these are likely to begin production soon as small-scale industrial units. The former will produce coils and cables, whereas the latter will make galvanised iron wires, nails and pins. The demand for these products, it is claimed, is good.

Contin Finance and Mining

In his statement to shareholders at the annual general meeting of the Contin Finance and Mining Co. Ltd in London last week, Mr. W. J. C. Richards, chairman, said that conditions during the year ended 30th June, 1960, being favourable for Stock Exchange dealings, the opportunity was taken to sell Government securities (which represented 20 percent of the Company's portfolio), and to reinvest the proceeds in first-class commercial and industrial companies. (Extracts from the chairman's statement appear on another page). The Company's holding in mining companies has increased slightly, but no opportunity has occurred of participating directly in promising mining ventures. The dividends received by the group increased by approximately 50 percent during the year, and the tendency of the investments at present held is still upwards. Negotiations with the Burmese Government for a joint venture with the Consolidated Tin Mines of Burma having failed, the mining company's properties were sold. "Your directors feel that the Company is now firmly established and being rid of the association with the mining company in Burma, it has bright prospects under enterprising direction," the chairman observed.

Premier Fertilisers Offer Soon

Premier Fertilisers Ltd is a new Company which will manufacture superphosphate and other chemicals. The factory in Cuddalore will have a capacity of 40,000 tons of superphosphate and 16,500 tons of sulphuric acid a year. The West German firms of Messrs Chemblebau, Dr. A. Zieren G.m.b.H. and Koln am Rhein will supply the machinery, set up the factory and train personnel. The capital requirements of the project total Rs. 63.50 lakhs, of which Rs. 26.50 lakhs is for machinery and equipment, Rs. 9.50 lakhs for land and buildings, Rs. 2.5 lakhs for preliminary expenses, including underwriting commission and brokerage, and Rs. 25 lakhs for working capital. These will be met by the equity issue of Rs. 50 lakhs and a foreign exchange loan of Rs. 11 lakhs from the Industrial Credit and Investment Corporation of India. The balance of Rs. 2.5 lakhs will be raised by borrowing from banks. The company has an authorised capital of Rs. 1 crore, made up of Rs. 75 lakhs in ordinary shares of Rs. 10 each and Rs. 25 lakhs in 9 percent taxable preference shares also of Rs. 10 each. The coming issue will consist of Rs. 50 lakhs of ordinary shares, of which Rs. 27.5 lakhs will be offered to the public early in November.

Indian Bright Steel Issue

The Indian Bright Steel Company has been formed to undertake the manufacture of bright steel, shaftings and some other varieties of steel. The factory will be located near Bombay. It will have an annual capacity of 5,400 tons of bright steel bars of varying sizes and of different varieties of steel. The U.S. firms of Mckay Mathine and Blaw-Knox will supply the plant, which will be fully automatic. It is expected to go into production by the end of next year. The Company will have an issued capital of Rs. 50 lakhs, divided into 500,000 ordinary shares of Rs. 10 each. Of this, the directors and their friends will take up shares worth Rs. 15 lakhs. The rest will be available for public subscription. The Company is expected to be in the market before the middle of November.

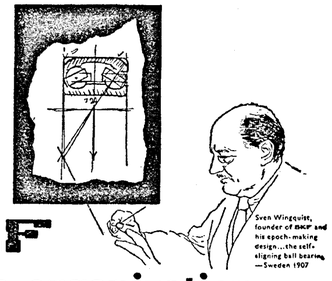
Poor Results From Testeels

The directors of Testeels Ltd say that trading conditions during the year ended March 1960 remained difficult and competitive. The profit of the Company is down from Rs. 4.29 lakhs to Rs. 1.72 lakhs, after providing Rs. 1.52 lakhs for depreciation (against Rs. 1.20 lakhs). The directors have recommended an ordinary dividend of Rs. 5 a share. It is stated that the entire amount of the taxable profits will be covered by Section 15(C) of the Income Tax Act and as such is exempt from tax. Accordingly, the dividends will be exempt from tax in the hands of shareholders. This, however, is subject to final determination by the income tax authorities as provided under Section 18(3F) of the Income Tax Act. After providing for the proposed dividends and making various adjustments, Rs. 15,288 is carried forward, against Rs. 15,748 brought in. The directors state that the Company has successfully implemented the programme to manufacture chain pulley blocks. An agreement has been reached with Mitsubishi Heavy Industries for the manufacture of tillers, and production will start early in 1961. The approval of the Government is awaited. The new plant in Dehgam will, it is expected, be commissioned by the end of the year.

Operations of Burmah-Shell

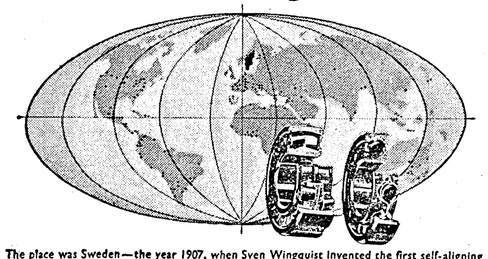
The working of the oil industry has been attracting greater interest in recent months. This is partly because the consumption of petroleum products in India has risen sharply—from 2.2 million tons in 1948 to 6.6 million tons in 1959. The demand is expected to increase faster in coming years, and might more than double itself by 1966. So a large amount of capital expenditure will be required if it is to be met. An investment of nearly Rs. 600 is generally required to locate and market every additional ton of oil. On this basis, the investment may have to be about Rs. 500 crores. In a survey of its activities in 1959, the Burmah-Shell Oil Storage and Distributing Co. of India Ltd has given some interesting details, concerning the demand for various oil products. The total Indian demand increased by 12 percent in 1959, compared with an average annual growth of 7 percent or 8 percent during the previous few years. The demand for kerosene rose the most, due largely to the shortage experienced in 1958. There was a marginal rise in the demand for motor spirit as more motor-cars and jeeps were put on the road. The rate of increase in high-speed diesel oil consumption was slower, presumably because retail prices increased with heavier taxation. Burmah-Shell, it is stated, handled 2,628,123 metric tons in 1959, and extended its storage and distribution facilities. Trading receipts amounted to Rs. 152.16 crores during the year. After meeting all expenses, a surplus of Rs. 2.67 crores, or 1.75 percent of the total proceeds, was earned, which has been used for reinvestment and for paying dividends. Substantial reductions have been made by Burmah-Shell in the selling prices of several products in recent years. But the Government of India has offset the reductions by raising duties, so consumer prices have not fallen.

from this little sketch



Sven Wingquist, founder of SKF and his epoch-making design... the self-aligning ball bearing. —Sweden 1907

grew the SKF world-wide organization



The place was Sweden—the year 1907, when Sven Wingquist invented the first self-aligning ball bearing, which revolutionized the bearing industry.
Manufacturers liked the new type of bearing and demand for it became world-wide.
With the passing of time SKF has grown with the industry it serves.
Today you will find SKF at work on all types of machinery in every industry, filling the intricate precision requirements of the jet aircraft, to the tough needs of huge construction units. Wherever a bearing is required, SKF will meet the requirement—with the finest bearing in the world.

Cotton Board Postpones Decisions

Contrary to expectations, very little came of the Cotton Advisory Board's meeting—the first of the new season—in Bombay last Thursday. The Board reviewed the current crop prospects. It considered the allocation of indigenous cotton to mills, the reservation of a certain percentage for compulsory purchase of Cambodia cottons, allocation of foreign cotton stapling 1⅛ inches and above from global area, the working of the survey committee, price differentials for certain varieties of cotton, export quotas and the policy of random requisitioning of cotton. The discussions, it is reported, were lively but no specific recommendations followed. Although a crop of 5 million bales is widely forecast, the Board thought it wise to wait for a clearer picture before making any firm recommendations. The recent heavy rains in the Moglai region and cloudy weather in Berar and Khandesh have, it seems, induced caution. This is not surprising, because an unfavourable turn in the weather in October has often upset calculations in the past.

The Textile Commissioner, it is reported, told the meeting that there would be no wholesale requisitioning of the new crop, but random requisitioning would continue so as to ensure strict observance of the control regulations by both the trade and the mills. He also announced an extension, up to the end of October, of the period for the purchase of the old crop by mills against the balance of the Indian cotton quotas of the previous season. As for issuing new crop quotas to mills, the Board was unable to take any firm decision. However, there appeared to be a general feeling that, to begin with, the Government might issue very small quotas with a view to avoiding a rise in prices. These quotas would be raised gradually with the increase in the pace of new crop arrivals. The decision on an export quota for Bengal Deshi, has been deferred for some weeks but it is felt that the trade's plea for a quota of 100,000 bales will be accepted. It appears the Government might soon license the import of 200,000 bales of cotton from the sterling area. The quota was announced late in August, and the possibility of the trade getting a share in it is not ruled out.

Groundnut Oil Exports

The Central Ministry of Commerce and Industry has announced a new scheme for facilitating exports of groundnut oil and salad oil. The old incentives in the form of export quotas of groundnut expellers—3½ tons for each ton of groundnut oil and 4 tons for each ton of salad oil—are to continue. In addition, exporters will be allowed to import copra and palm oil. The quantities of copra and palm oil have not been specified. Exporters will now have to submit tenders indicating the quantity of oil to be exported on a firm basis during the period ended January 1961, the minimum quantity of copra and palm oil wanted, the countries to which exports will be made and the ports of shipment. These tenders are to reach the Director of Export Promotion by the end of October. Each tender has to be accompanied by a bank guarantee of 5 percent of the value of the tender as security for completing the shipment of the export quota. Export permits will be granted immediately to those whose tenders are accepted. The export quota for groundnut expeller cake and the import quota for copra and palm oil will be granted on the production of documents proving the export of oil.

Exports of salad oil have seldom been large, but groundnut oil has earned substantial amounts of foreign exchange in the past. The performance so far this year has been disappointing. Groundnut oil exports until the end of September are estimated at barely 7,000 tons, against 41,000 tons in 1959. The disparity between Indian and world prices has remained too large to make business remunerative in spite of the incentive scheme. Against the prevailing U.K. quotation of about £110 for December shipment, the Indian parity for groundnut oil works out to around £135. The export quota of 3½ tons of expellers yields a profit of £14 (about £4 a ton), leaving a gap of nearly £11 a ton on groundnut oil. This is now to be reduced through imports of copra and palm oil. The profit margin on imports of copra and palm oil is currently estimated around £30 and £40 a ton, respectively. The new scheme will undoubtedly stimulate exports. But due to the uncertainty about import quotas, the trade is unable to say how much oil will be exported by the end of January. Much depends on the Government's attitude. In view of the slightly better crop this season, it should be possible to export at least 50,000 tons of groundnut oil. Of course, in spite of the larger crop, groundnut prices are already quoted at a level which is almost a record high for this time of year. The tender system will tend to keep down the cost of the incentive scheme, but it is likely to create many difficulties for the export trade because of the uncertainties about the prices of oil and expellers here as well as abroad between the time of submitting tenders and their actual acceptance. Shippers say that the Government should have specified the import quotas of copra and palm oil along with the export quotas for expellers. But that might have pushed up the domestic prices of oil and oilcake, thereby adversely affecting the export prospects. Overseas reactions to New Delhi's revised incentive scheme are awaited with interest.

Raising Resources for Third Plan

At the recent half-yearly meeting of the Hindusthan Chamber of Commerce in Madras, Mr. H. C. Kothari referred to the increase in the production of machinery under the second plan, the rise in power output and the gradual improvement in transport facilities. The third plan outline, he said, is not over-ambitious, although there might be scope for anxiety about how the resources will be raised. Dealing with taxation, Mr. Kothari cautioned the planners against an increase in excise duties since they might lead to higher prices. The Central Railway Minister, who inaugurated the meeting, said that freight concessions would be given in particular cases to help increase exports. A review of railway freights will be carried out to help exports of non-traditional items from India. The Minister declined to accept the proposal that new railway lines should be constructed in the south. The Chamber should think in terms of national development, and not of regions. The Minister, however, promised that the electrification project up to Villupuram from Tambaram would not be delayed. As for overcrowding in trains, Mr Jagjivan Ram said that the problem is not acute on the Southern Railway.

Bonus Pact for Coimbatore Mills

The bonus pact between the two major labour unions in Coimbatore and the South Indian Millowners Association has been welcomed by both employers and workers. The millowners have welcomed it because the workers did not press for arbitration or adjudication. According to the agreement, the mills which do not make any profits also have to pay some bonus to their workers, even though the increase in wages under the Wage Board award this year will raise costs. The Madras Government, it is reported, favours the proposal that bonus paid in cash should be limited to three months' wages only. If more is offered, it should be in the form of National Savings Certificates. The State Industries Minister has suggested that some form of compulsory saving will benefit industrial workers The amount paid as bonus, the Minister added, could be used for industrial housing since the Central Government offers a subsidy for this purpose. The State Government is now keen on providing tenements for industrial workers, and hopes that employers will be ready to invest in cheap housing in new areas which are not too far away from the city. Meanwhile, organisers of small savings schemes welcome the proposal for a ceiling on the cash bonus since this will enable them to sell more savings certificates. The suggestion made in Madras should be taken up by employers or the authorities in other States since it will help reduce consumption among workers. They will also be financially more solvent and will not fall victim to usurious moneylenders.

Growth of Madras Stock Market

At the recent annual general meeting of the Madras Stock Exchange, the outgoing president, Mr. K. S. Vaidyanathan, referred to the success of forward trading and the growth of the investment habit in south India. He said that the misgivings about how the third plan would be financed has affected market sentiment in recent weeks. Besides, the Reserve Bank's dear money policy has shaken the confidence of many bull operators. Prices of many consumer goods, meanwhile, have risen due to the higher cost of raw materials. Mr. Vaidyanathan referred to the obscure outlook for the coffee plantation industry since a new disease is reported to have affected many estates. Commenting on the tax deduction from dividends paid to preference shareholders, the president said that the position obtaining before March 1959 would not be fully restored by the new Bill as far as preference shareholders' tax liability is concerned. Referring to the success of the Madras Stock Exchange, Mr. Vaidyanathan said that its income has risen steadily. It has secured suitable premises in the business area and intends to have a new *pucca* building of its own, instead of functioning in a rented hall as at present. There has been no increase in its membership, and it has depended mainly on inter-market business during the last few years. The Madras forward list has attracted considerable interest from outside.

Rehabilitating Displaced Traders

During his recent visit to Badrinath, President Rajendra Prasad assured the people of Uttarkhand Division that the Central and State Governments would do everything possible to remove their difficulties. The people of this region, consisting mostly of Marchcha, Tolcha and Bhotiyas, were engaged in trade with Tibet until the Chinese occupation. The Chinese confiscated their stocks, imposed restrictions on the currency they used and also limited their movements. A large number of yaks, sheep and goats belonging to the Bhotiyas are detained in western Tibet, and they are being compulsorily sold to the Chinese at reduced rates. It was recently reported that the Bhotiyas on the northern flank of the new border district of Chamoli have returned to India. According to them, the Chinese authorities have imposed a tax of 3 percent both on the import and export of goods by Indian traders. The Chinese, it is stated, are not accepting Indian currency, but demanding Chinese currency, or failing that, cloth, wool, *gur* and other commodities.

It was originally thought that the trade of the Bhotiyas could be diverted to the hill areas of U.P., but then it was found that everything the Bhotiyas had to sell was already available in the areas—and at much cheaper rates. The present scheme is to settle the traders in occupations like agriculture and horticulture. The division of Uttarkhand was specially created by the U.P. Government to facilitate the development of the area by cutting out red tape and placing it directly under the Chief Secretary. The State Government has told the Centre that such expenses as are incurred for the development of communications in the area, as also for the rehabilitation of the Bhotiya traders, should be excluded from the allocations under the third plan.

Checking the Rise in Prices

Addressing the half-yearly general meeting of the Merchants Chamber of U.P. in Kanpur last week, Mr. P. D. Singhania, president, said that the solution for holding the price line lay not in controls, selective or otherwise, nor in the extension of State trading, but in increasing the production of goods used for mass consumption. Citing the Government's coal policy as one instance of economic needs being subordinated to ideological considerations, Mr. Singhania said that to maximise coal output, not only should the performance of the public sector be improved, but the present restrictions on the expansion of the private sector should be removed. The new blast furnaces at Bhilai and Rourkela have been lying idle for want of coking coal. But the Railway Ministry has disowned all responsibility by saying that the movement of wagons for coal transport is controlled by the Coal Controller who works under the Ministry of Steel, Mines and Fuel, and that irrespective of any overall shortage, sufficient wagons have been made available for the priority movement of coal to the steel plants. In relation to mineral oils also, Mr. Singhania said, there is a similar shortage for industries. He said that additional refineries might be set up in the public sector, but if this is not possible additional capacity must be allowed in the private sector on reasonable terms.

Turning to unemployment, Mr. Singhania expressed surprise at a recent statement of the Central Planning Minister, Mr. G. L. Nanda, and said: "When the backlog has progressively increased in the first three plans, it is difficult to comprehend how this process will be reversed in the subsequent plans. I am afraid our unemployment problem is not capable of solution unless effective and, if necessary, drastic steps are taken to curb the alarming growth of population." Mr. Singhania also referred to the allocations for U.P. under the third plan and opposed the suggestion that past performance, fulfilment of expenditure targets and additional taxation during the second plan should be the criteria for allocations. He urged that the

"Of petroleum products moving to selling outlets, Motor Spirit, High Speed Diesel Oil and various Aviation Fuels have, for quality and safety reasons, to move in specially-designed road transport vehicles. For the movement of these products, a distributing company, handling a million tons of products has to operate a transport fleet of 256 bulk lorries, each having a capacity of 1,200 I.G. (approximately 5,455 litres) and each costing about Rs. 33,000. The total investment on the fleet alone would be about Rs. 84 lakhs."

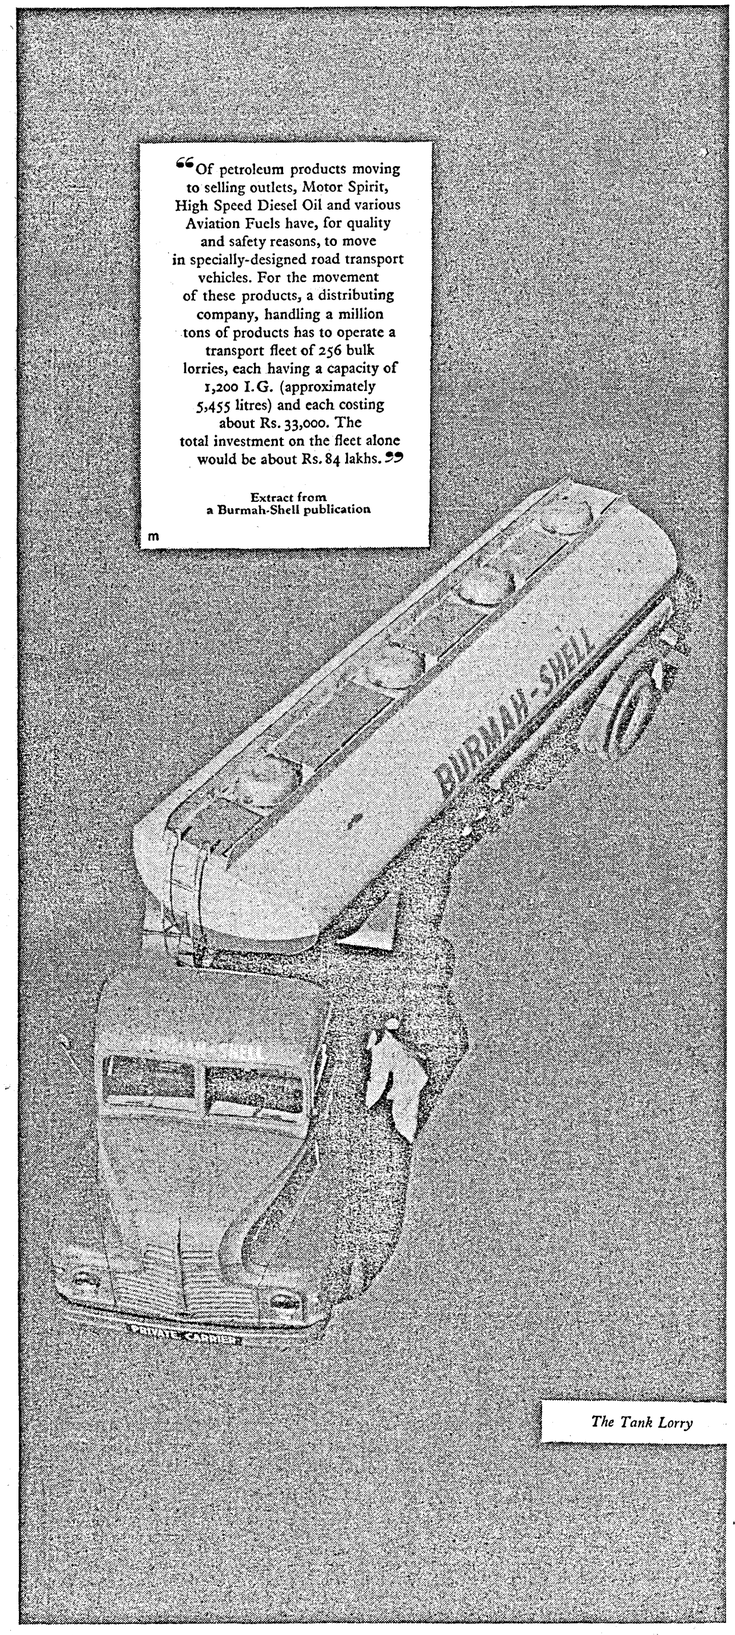
m



The Tank Lorry

route mileage of the railways and metal roads in U.P. be increased and electric power generation stepped up.

Coffee Production Rises

Speaking at the annual general meeting of the Mysore State Planters Association in Mysore on Monday, Mr. U. K. Lakshman Gowda, chairman, said that the coffee industry in south India is worried about its prospects. Since 1949, prices have remained attractive, so growers have increased production. The average yield of well-managed estates has risen from 364 lbs in 1949 to 988 lbs in 1959, and the total output has increased by 61 percent during the period But the prospects for the industry have changed due to a growing world surplus and a lower price for the commodity. It was from the earnings abroad, the chairman said, that part of the money was diverted for subsidising internal consumers. But the price of coffee is falling steadily due to the accumulation of stocks abroad. The International Coffee Agreement, concluded in Washington in May this year, has provided for the restriction of exports. Mr. Lakshman Gowda said that one of the weaknesses of the world agreement is that no restriction has been placed on acreage or production. Although the agreement since 1958 provided for the restriction of exports, most of the increase in output has occurred during the past three years. India produces only 49,000 tons out of the world crop of 4.47 million tons, so she cannot influence the international market.

WEALTH OF TIPPERAH

THE wave of emigration that has set in from the denser populated parts of the Sylhet district to the valleys and lower slopes of the North Cachar hills since recent railway extensions, indicates that similar satisfactory results would attend the projection of private lines of tramways to the backwoods on the southern side of the lower Surma valley, and we have, in the remains of temples, causeways, masonry, tanks and other evidences of a former civilisation, ample testimony to prove that all along under the mountain terais of the ancient kingdom of Tipperah, a thriving population existed both prior to, and at the time of, Tavernier's journey 260 years ago. Facilities once given to reach these lands that have lapsed into jungle would undoubtedly lead to the rehabilitation of former prosperity, and now that the Lushai hill tribes are thoroughly in hand, there is every reason to believe that these present deadly jungles, bare mountain slopes and ravines, would once again teem with industrious inhabitants. One of the most enlightened of Bengal's landed gentry—the Tipperah Rajah—has vast tracts at his disposal hereabout extending from the western limit of the range to our lately acquired mountains, and although no actual survey, other than triangulation has been made in this direction, and most of the timber in accessible places has been cut away or ruthlessly destroyed by jhumers in the interior, through which it is now quite safe to travel, there are, presumably from the revenue once yielded, thousands of acres of land that will vie in fertility with those thrown open in the opposite ranges. Though the hills facing the Chittagong district do not present an overinviting aspect from an agricultural point of view, those on the other side, abutting on the Surma valleys, are admirably adapted for raising fruit and such plants as pines, areca and other economic shrubs, while oil blossoms go to indicate that petroleum exists in the shale reefs farther back, and though the only coal as yet brought to light is some rather immature lignite to the north-west of the Huldi valley, were the seams followed up and properly probed, fuel of good quality might be forthcoming within 30 miles of the coast on the estuary of the Fanni.

CORRECTIONS

The Kanpur Electric Supply Administration produced 277.5 million units of electricity during the year ended March 1960. The demand rose during the year; it has increased further since then, and the total is estimated at 70,000 kilowatts. The plant replacement project includes two 150,000 lbs an hour boilers. The cost of production of electricity has increased to 5.64nP a unit in 1959-60. It is regretted that some of these figures were misprinted in the item entitled "Kanpur Electric Supply", appearing in the Current News and Comment section of *Capital* on 22nd September, 1960.

Commenting on the monetary measures of the Reserve Bank in the leading article entitled "Dearer Money: Groping in the Dark" in the issue of *Capital* dated 6th October, 1960, it was stated that commercial banks would be able to rediscount their medium-term industrial advances with the Reserve Bank. Fuller details about the monetary measures are available now, and it is clear that the Reserve Bank does not rediscount these industrial advances. Commercial banks can obtain refinancing facilities for their medium-term industrial advances from the Refinance Corporation.

A Ditcher's Diary

DEWALI IS AN ENTIRELY—EXCEPT FOR WHAT I HAVE to say later—pleasing festival. In one form or another it is celebrated throughout India; and that can be a great unifying factor. The illumination of houses can sometimes be truly beautiful. The eye has a feast at this time, in spite of the greenflies. Alas, the ear has a more difficult time; and I have given up trying to find out which really is Dewali day, for the fireworks are certainly spread over two days—if not more. As one who does not celebrate Dewali, I have no right at all to criticise the people who do. But I have found that there are critics even among them. Apparently not every Hindu approves of the total noise that is created; and for the police Dewali means extra hours and especial vigilance. A partial list of accidents caused by children handling dangerously explosive crackers will have appeared in print by the time this is read. Some excesses are unavoidable in festivals which are celebrated by men and women, young and old; and I am certainly not a killjoy. But as with Guy Fawkes Day in Britain, the fun is sometimes carried too far; and tragedies occur. The police can do something; they have arrested not a few people in Calcutta in the last few days, although mostly in connection with gambling and illicit sale or storage of unauthorised explosives. But it is the guardians who have to teach their wards, for they are the most vulnerable. I know of people who did not go out at all last night, for fear of unguided missiles from unpredictable directions. An overjoyous Dewali for a few should not mean a dismal Dewali for others. This is the point to remember: that there *are* others, who may have different ideas of celebrating a popular festival. It is not, I suggest, enough for Calcutta boys to say that they have not yet matched our legislators or councillors or Mr. K. in rowdyism.

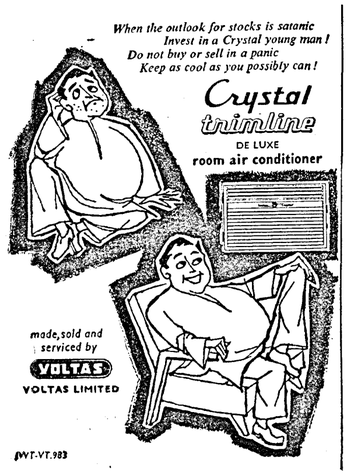
THE ELEVENTH LETTER OF THE ENGLISH ALPHABET has long been a respected name in the British shoe trade; but the use Mr. K. made of his pair of shoes in the United Nations might have been expected to leave some of my Bengali friends feeling afresh that what Bengal thinks today even the socialist fifth of the world can only think tomorrow. Councillors of the Corporation of Calcutta and members of the West Bengal Legislative Assembly can once again hold their heads high; and point to Mr. Khrushchev's assertion of the place of shoes in serious debate. The difference is worth noting, for in West Bengal nobody was proud of what the demonstrators had done. But days have gone by, and I have seen no regret emanating from Moscow. I never concealed my total conviction that the assembly of a large number of heads of government at the United Nations would achieve nothing positive; but some good may yet have come of the "greatest show on earth". For once 99 members of the world body, many of them novices, had a glimpse of the supreme arbiter of one of the world's two most powerful nations; and I should be surprised if many did not go back with a vivid awareness of the danger inherent in the fact that so much power rests in the hands of a patent megalomaniac. The Americans did many silly and childish things, I know, but Mr. Khrushchev's performance was a series of astonishingly irresponsible acts. His has become the kind of buffoonery that does not amuse me any more; and I must count it a pity that not every leader present in New York saw the sinister implications of his antics. It is true that Mr. Khrushchev did not break the U.N.O nor did he have it removed from New York to Geneva or anywhere else. But he has succeeded in converting many Asians and Africans into thinking, with some justification, that the United Nations is not the place where their problems can be discussed constructively and dispassionately, and that when he, Mr. K., cannot get his own way by arguing, they can expect attempts to get it by other means.

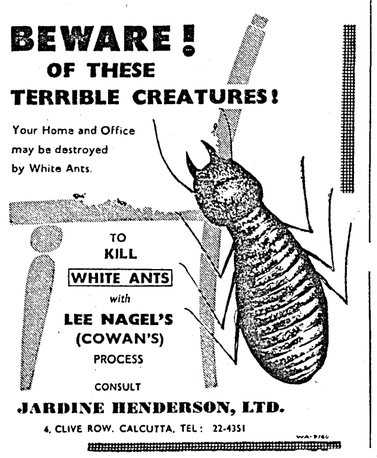
IT IS POSSIBLE I HAVE BEEN FORTUNATE IN THE "belly" dancing I have seen from time to time, and usually enjoyed. The provocative aspects of the art are obvious enough, although no worse than many other forms of dancing. The performers I have watched may not have been dressed for out-door strolling, but they were wearing considerably more than a dancer I remember seeing in a recent film of that acme of respectable art, the Bolshoi. However one looks at it, dancing involves the human body and there will always be people who become guilty and self-conscious about the feelings a dancer's contortions arouse in them. I would not be surprised to find President Nasser is one such person, crusading politicians often are. He may not have banished his belly dancers completely yet, but he has, I see, decreed that they perform in future clothed in a manner which cannot fail to guarantee their eventual extinction. I suppose there is nothing unusual in a ruling despot hitting out at something which distracts attention from his own public antics; it has certainly happened before. But wiser counsel—if such a thing exists in Egypt today—should surely have advised greater tolerance here, if only because President Nasser himself is anything but a substitute for a skilled entertainer these days. His personal magnetism is certainly not what it was when he used to delight the Cairo mob every other day by promising the overthrow of imperialism and the annihilation of Israel; the imperialists may have gone, but it must be obvious to the most benighted *fellah* that their brand of domination has merely been exchanged for the Russian variety, and Israel obstinately continues to prosper despite everything Nasser has threatened to do about it. Even his U.N. performance the other day was anything but a model of Egypt's professed neutralism. Personally, I hope such misplaced puritanism does not kill the art of belly dancing. Repression is always followed by its reaction and the Egyptians will eventually need brighter consolations than unfinished projects and broken promises.

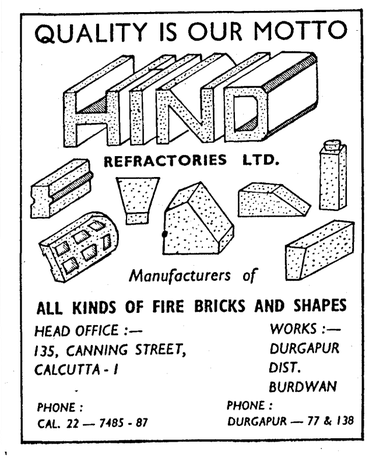
IF YOU HAVE EVER WONDERED WHAT PROPORTION of humanity would be dishonest if given a really easy opportunity, you will find some clues in the results of the recent "credit card" craze in the U.S.A. Introduced by the famous Diners Club, these cards were meant to enable business men of approved financial status to sign their bills in restaurants and pay a central billing agency at the end of the month. Because such facilities became a symbol of social status, there were soon hundreds of thousands of applicants; and because the Diners Club was taking a tidy 10 percent commission on the bills it "picked up", competition moved in, massively and recklessly. With consumers clamouring for the honour to live on the cuff in public, and with finance houses competing for business, the standards of credit-checking promptly slumped and the game became, as the Irish would say, an open slather. When the police took in a 19-year-old, $73-a-week clerk called Joe Miraglia in a New York slum recently for $10,000 worth of unpaid (and unpayable) bills concerning champagne, air fares and mink stoles, he revealed that he got a credit card by signing a form he found lying on a restaurant table. Nobody asked about his bank balance, his income or even his age. "Suddenly", stated Joe, "I was somebody. I had five glorious weeks" Another moral imbecile had an even more "glorious" time by using three credit cards, but the record, naturally, belongs to a pretty girl from California who did the finance houses down for $86,249. Credit losses began to soar and some of the trusting newcomers trusted themselves right out of business. Even the cautious and experienced Diners Club found that bad debts were exceeding 0.75 percent of total billings and approaching the 1 percent figure they had agreed to regard as dangerous. After this interesting but unnecessary investigation into the limits of human honesty, the rules have been tightened up. Checking of creditworthiness is stricter, many cards now carry code marks warning merchants of an individual's credit limitations, and some firms have electronic equipment that gives warning when any card is showing unusual activity—such as Joe Miraglia's must have displayed during those five hectic weeks. Everybody, in short, is sadder but wiser.

ONE NEVER SAW A GREAT DEAL OF MALCOLM Macdonald in Calcutta, and I have heard members of the British community here state that as a fault to be laid at his door. But the work of a British High Commissioner in India, nowadays, is located in New Delhi, and often enough the presence in the country of a large expatriate community of his own nationals, not all of whom may share his progressive views, can be a distinct embarrassment. It was in New Delhi that Malcolm Macdonald's work had its greatest impact. Certainly he had a feel for things there which few British High Commissioners have had before him, while his friendly sincerity was a guarantee of personal popularity. He accepted change, strove for a sympathetic understanding of it, then put it to the best possible use in the performance of his duties. Unless a British diplomat is able to do this, he has no value in Asia today; and Malcolm Macdonald's work must necessarily serve as a model for his successors. His was largely a post-independence acquaintance with India, and this may occasionally have led him into error, such as when he wrongly prophesied immediately after Suez that Indian feeling towards the British would never be the same again. But most of the time, and on most occasions, he was instinctively right, and judged the modern Asian mind with an accuracy which all too few Britons these days have the sympathy or patience to cultivate. He has served his country as well in India as he did in Malaya and it would be a pity if Asia has seen the last of him; there is still much work of the kind in which he excels to be done for Britain out here.

THE DITCHER







This is only an announcement for information and not a prospectus. Applications are invited on the basis of the prospectus, copies of which are available from the Company's Registered Office, the Bankers and the Brokers mentioned hereunder.

The consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of the prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956 has been delivered to the Registrar of Companies, Delhi, for Registration. Applications have been made to the Delhi and Calcutta Stock Exchange Associations for permission to deal in and for quotation of the shares of the Company.

The subscription list will open at the commencement of banking hours on the 24th day of October, 1960, and will close at the discretion of the Directors at any time after the 29th day of October 1960.

UNDERWRITING

The following underwriters have underwritten the Preference issue:—

(i)	Life Insurance Corporation of India	Rs. 6.50 lacs
(ii)	National and Grindlays Bank Ltd., New Delhi	Rs. 6.00 lacs
(iii)	New India Assurance Company Limited	Rs. 5.00 lacs
		Rs. 17.50 lacs

The underwriters will receive a commission of 2½% against the amounts underwritten by them.

The Directors have satisfied themselves regarding the resources of the Underwriters and hereby certify that the Underwriters are fully capable of underwriting the issue.

FIRM SUBSCRIPTIONS

The Company has agreed to allot the following Preference Shares against requests for firm subscriptions:—

(i)	National Employees' Mutual General Insurance Association Limited	Rs. 2.00 lacs
(ii)	Westinghouse Electric International S.A.	Rs. 0.50 lacs
(iii)	Maschinenfabrik Augsburg-Nuernberg A.G. (W. Germany)	Rs. 2.39 lacs
(iv)	*Messrs. Rheinmetall GmbH., (W. Germany)	Rs. 1.61 lacs
	Total:	Rs. 6.50 lacs

*Subject to permission for investment by the Government of India.

BROKERAGE

Brokerage will be paid by the Company to members of the recognised Stock Exchanges at 18 nP. per Equity share and 1% of the nominal value on Preference Shares.

PAYMENT

Applications must be made for a minimum of fifty Equity shares or a multiple thereof or five Preference Shares or a multiple thereof. Every application for Equity or Preference shares must be accompanied by 50% payment and the balance of 50% will be payable on allotment. Application moneys in respect of which no allotments are made shall be returned within two months from the date of closing of the subscription list.

DIRECTORS:

1. **Mr. H. P. Nanda,** Managing Director, Industrialist, 12, Jor Bagh Nursery, New Delhi-3.
2. **Mr. A. H Lawrence,** Businessman, Motibagh Palace, Patiala.
3. **Mr. Vincent Mckim White,** Regional Director and Vice-President of Westinghouse Trading Co (Asia) Limited 23, Carmichael Road, Bombay-26.
4. **Mr. Shantanu Lakshman Kirloskar,** Industrialist, General Manager & Director, Kirloskar Oil Engines Ltd., Poona. 'LAKAKI', Shivaji Nagar, Poona-5.
5. **Sodhi Kartar Singh,** Businessman & Landlord, Townsend, Jakhoo, Simla.
6. **Mr. R. L. Khanna,** Businessman, 203, Golf Links Area, New Delhi.
7. **Mr. Harbans Singh Mehta,** Stock & Share Broker, 29-A, Friends Colony, New Delhi.

MANAGING AGENTS:

Messrs. Harparshad & Company Private Limited, New Delhi.

REGISTERED OFFICE:

H-2, Connaught Circus, New Delhi.

AUDITORS:

Messrs. S N. Dhawan & Company, Chartered Accountants, C-37. Connaught Place, New Delhi.

BANKERS:

The National and Grindlays Bank Limited, New Delhi.

BROKERS:

New Delhi

1. Messrs. Harbans Singh Mehta & Co., 33, Regal Buildings, Connaught Place, New Delhi.
2. Messrs. R. K Relan & Company, United India Life Building, F, Connaught Place, New Delhi.

Calcutta

Messrs. Place, Siddons & Gough (Private) Limited, 6, Lyons Range, Calcutta.

Bombay

1. Messrs. Lewis & Jones, Bank of Baroda Building, Apollo Street, Bombay-1.
2. Messrs. Baltlivala & Karani, Union Bank Building, Dalal Street, Fort, Bombay-1.
3. Messrs. R R. Nabar & Co., 31, Dalal Street, Fort, Bombay-1.

Madras

Messrs. Paterson & Company, 22, Errabalu Chetty Street, Madras-1.

RESERVES & DIVIDENDS

The Company has transferred to its General Reserve Account various amounts during the past years, which stands at Rs. 8 lacs as on 31-12-1959. From the accounting results of the Company for the last 7 years, it would appear that it has paid dividend at good rates on its Ordinary shares, which is as under:—

1.	1953	17.092% Free of tax.
2.	1954	11% do.
3.	1955	8% do.
4.	1956	13% do.
5.	1957	14% do.
6.	1958	18% do.
7.	1959	26% Free of Company's tax.

DIVIDEND ON PRESENT ISSUE

The shares allotted in terms of this issue shall rank for any dividend declared after the date of allotment in proportion to the period during which such shares have been held.

PROSPECTS

In the trading business according to the accounting practice of the Company, the commission received from the foreign Principals is booked on actual receipt basis, and profits on self-buyer business on the basis of final completion of the contracts. Against the orders already booked, secured and confirmed and contracts under execution, commissions and profits exceeding **Rs. Seventy Lacs (Rs. 55 lacs as commission and Rs 15 lacs as margin on contracts under completion) have accrued to the Company as on 1st July, 1960.** These profits and commissions are due to be received in next 3-4 years and would form part of the profits of the Company during the years 1960 to 1964. The Company has for past several years established Branch Offices in important towns like Calcutta, Bombay, Madras, Delhi Patna and Kanpur, etc. and has a well-spread Sales and Service Dealer organisation in most of the important towns in India.

MANUFACTURING SCHEMES

Piston Rings:

In 1956 the Company brought about an agreement to manufacture Piston Rings and Cylinder Liners by Goetze (India) Private Ltd., under the Technical & Financial Collaboration and Licence of Messrs. Goetzewerke Friedrich Goetze A.G. Burscheid (West Germany) who are the largest producers of Piston Rings in Europe, Goetze (India) Private Limited a subsidiary of the Company are suppliers of original equipment to automotive and engine builders in India.

Pistons:

The Company has established under Licence No. L/7(5)N-13/58 dated 24-5-1958 granted by the Government of India under the Industries (Development & Regulation) Act, 1951, a factory for manufacturing Pistons in Patiala in collaboration with **Messrs. Mahle Komm.-Ges.-Stuttgart-Bad Cannstatt, West Germany.** The factory commenced production in May, 1960 and has already supplied several lacs worth of Pistons to Automobile Manufacturers as original equipment and replacement. The manufacturing is phased to reach complete manufacture in 1961. The annual installed production capacity of the Piston factory from 1961 is expected to exceed Rs. 60 lacs.

X-Ray Equipment:

The Company has been granted an Industrial Licence No. L/5(7)N-3/59 dated 23rd November, 1959 by the Government of India under the Industries (Development & Regulation) Act, 1951, for manufacturing X-Ray equipment in India. The scheme involving collaboration with **Messrs. Weslinghouse Electric International Co. (U.S.A.)** has been approved. The manufacture is scheduled to commence by June, 1961. Under the agreement the Company will be producing all types of diagnostic fluoroscopic and therapeutic X-Ray equipment for medical purposes and also diagnostic and fluoroscopic X-Ray equipment for Industrial use. The annual turnover of finished X-Ray equipment is expected to exceed Rs. 50 lacs.

Razor Blades:

Sharpedge Private Ltd., a subsidiary Company, has established a blade factory in Okhla Industrial Estate. It has installed one of the latest German Plants with a capacity of over two crores blades per annum. Increase in production by additional machinery is planned.

Railway Shock Absorbers:

The Company has received Industrial Licence No. L-7(4)/2/MEI/60 dated 20th July, 1960 from the Government of India, under the Industries (Development & Regulation) Act, 1951, for manufacturing Shock Absorbers for the Indian Railways under the technical and financial collaboration of Messrs. Rheinmetall GmbH., W. Germany. The Company is expected to go into manufacture during the year 1961 and the annual turnover is expected to be Rs. 20 lacs.

Heating Elements for Electrical Appliances:

The Company has entered into Technical Collaboration Agreement with Messrs. Eltra K.G. West Germany, for the manufacture of Heating Elements (both round and flat type) required for almost all types of household electrical appliances. The technical collaboration agreement has been approved by the Government of India and the Industrial Licence No. L/5(9)-2/EEJ/1960 dated 26th July, 1960 has been received.

THE JAY ENGINEERING WORKS LIMITED

CHAIRMAN, SIR SHRI RAM'S REVIEW

The following is the speech delivered by Sir Shri Ram, Kt., Chairman, The Jay Engineering Works Limited at the 23rd Annual General Meeting of the Company held on 15th October, 1960.

Ladies and Gentlemen,

The Balance Sheet and Profit & Loss Accounts and the Directors' Report have been in your hands for some time and these with your permission I will take as read.

The comparative figures of sales, etc. between the year ending 31st March, 1959 and the year ending 31st March, 1960 are:—

	For the year ending 31-3-1959	31-3-1960
Sales	5,33,24,107	7,20,63,503
Profit before providing for income-tax ...	44,22 192	51,94,362
No. of Sewing Machines made	1,97,126	2,42,035
No. of Fans made ...	2,70,807	3,45,772
No. of Schools ...	527	716
No of Students ...	40,000	50,000
No. of Selling points ...	1,500	1,800

You will be glad to know that for the first time the Fan Factory was able to produce more than 50,000 Fans in the month of April, 1960.

Additional Excise Duty

As you know at the time of the last Budget, when additional excise duty was levied on fans, we soon after reduced the prices to the extent of the additional excise duty (in spite of the fact that the excise duties on aluminium sheets and ingots, pig iron etc. meant monthly increase in cost of over fifty thousand rupees) so that our customers did not have to pay net higher prices for our fans, in the hope that increased production will cover this loss.

So far we had been making electrical stampings to meet part of our requirements. We have now been granted a licence to increase our capacity for making laminations so that we may be able not only to meet our entire requirements, but also be able to supply to other manufacturers. Steps have been taken to add necessary amount of machinery etc. for this purpose.

We started the hire-purchase scheme not only in the case of sewing machines, but in the case of fans also, particularly for the cold weather. Although our scheme will mean higher cost and less profits, but it will help those buyers who could not pay the full price at one time, to pay by easy instalments, total cost being the same.

Air-Circulators, Exhaust Fans, and Fractional H. P. Motors are now in regular production.

Zig-zag Sewing Machine

I am sorry to say that Zig-zag Sewing Machine is still not in production, but this time I am glad that while we could have started production somewhere about July or August, but our Design Section got some new ideas, which will make the machine more efficient than before, and we are now hoping that we will start production by January or February next year.

We have now made a good study and have good experience of the foreign markets, and the export of our sewing machines can be considerably increased.

Since the present factory cannot meet the demand we have applied for a licence for a complete new unit of the capacity of 25,000 sewing machines a month, mainly of the zig-zag type, and I and my colleagues are confident of being able to export almost the whole production of the new factory. We hope the licence will be soon granted.

During the year we have fully mechanised our Foundry and it is, if not the only one, one of the very few mechanised foundries in the country.

As is well known our country is in a difficult position so far as foreign exchange is concerned. In keeping with our policy of continuously increasing our exports, I am glad, that while in the year ending 31st March, 1959 our exports were worth about Rs. 45 lakhs, in the year ending 31st March, 1960 our exports were over Rs 80 lakhs. Every effort is being made to see that by 31st March, 1961 we may be able to increase our exports to somewhere near Rs. 1,25,00,000.

Need to Raise Exports

While on the question of exports, I will appeal to all brother industrialists, particularly of the non-traditional type, to make every effort to export more and more year after year, and to those not exporting, to start exporting. It is true that the margin of profit by sale in India is much higher than what it would be if the goods are exported, but we have also to remember that these margins of profit by sale in India, are due to Government's policy of severe restrictions on imports. It is, therefore, the duty of all of us to help our country by increasing exports in the hour of its need.

I will also, in all humility, make a few suggestions, to the Government. It is very necessary that quick decisions should be arrived at as regards the various incentives to be given for exports, or difficulties to be removed, and I would suggest that a high-power committee consisting of, say, the Secretary of the Finance Ministry, of the Industries Ministry, the Steel Ministry, and the Railway Ministry, with two representatives of the Export Promotion Councils be formed with very wide power, to take quick decisions, and implement them without too much of redtapism. Of course, where they may consider it necessary, they can consult higher authorities.

Long-term Credit

Among other incentives an important one is about the long-term credit on engineering goods for export, and the other a lower rate of interest on long-term credit. Everybody is interested in export and while the Reserve Bank gives loans at concessional rates for agricultural purposes, co-operative purposes, handloom purposes, etc., in this case also it can help, particularly in the case of non-traditional items. I also think, and very strongly, that concessions in the matter of income-tax, etc. should also be given in the case of exports.

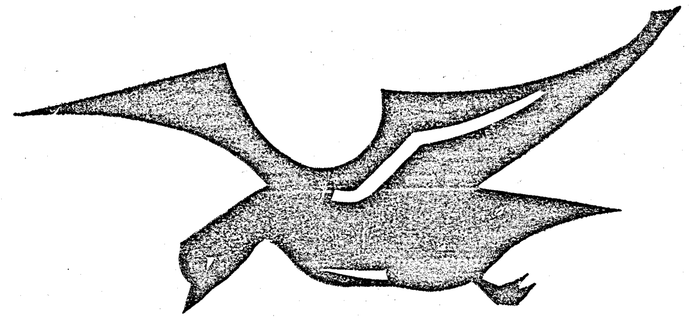
While no doubt it is true that in a very small way there is some increase in the exports of engineering goods, but it is not enough, and I am sure that if the Government and the manufacturers make up their minds, then by the end of the Third Five Year Plan, the exports of engineering goods alone should go up to worth about 50 crores of rupees a year.

Role of Industry

I would, therefore, suggest that individual industries should make their own associations to share such losses of profits as may be suffered by those whose goods are of approved quality and who export in increasing quantities. These may be shared by all manufacturers pro rata on the basis of their production. If, however, manufacturers cannot form their own associations, then even at the risk of incurring the displeasure of the business community, I would suggest that on such industries a small cess may be levied, and the exports of those goods may be handed over to the State Trading Corporation who I hope will utilize the normal trade channels for the purpose, but we must make up our own mind that every year the export of engineering and non-traditional goods should go on increasing so that in the last year of the Third Five Year Plan we export not less than Rs. 50 crores worth of engineering goods alone, and if possible even more.

I have pleasure in saying that the relation with our staff and workers continue to be cordial, and it is the result of these relations that we have been able to steadily increase production, and we are therefore grateful to all our colleagues whether in the Factory side or on the Sale for their devotion and hard work.

N.B.—This does not purport to be a record of the proceedings of the above Annual General Meeting.



a BIRD'S-eye view of service to the economy

The Birds/Heilgers group of companies meet a substantial part of the country's demand for industrial raw materials like iron ore, coal, limestone, manganese ore, refractories ... provide tubewells for tea estates and factories ... manufacture plants for water treatment ... supply paper for a variety of uses ... make jute goods and steel castings and structurals ...

Birds have today launched on a programme of expansion to increase their output and service facilities... And their laboratories are constantly at work exploring new uses for their products so that they may serve India's industries better.

A symbol of industrial leadership, Birds will continue to play a vital role in helping India attain industrial self-sufficiency.

TB 1961

THE DELHI CLOTH AND GENERAL MILLS COMPANY LIMITED, DELHI

CHAIRMAN, MR. BHARAT RAM'S ADDRESS

Speech delivered by Lala Bharat Ram, Chairman, Delhi Cloth and General Mills Co. Ltd., Delhi, at the Annual General Meeting of shareholders held on 17th October, 1960 in the office of the Company at Bara Hindu Rao, Delhi.

Ladies and Gentlemen,

With your permission, I will take the Accounts and Directors' Report as read.

It is a matter of satisfaction that the profits of the Company are better than in the last year.

The Cotton Mill Industry, as a whole, has also fared better than jn the last year in the matter of profits. This, however, should not mislead us to think that the industry is set straight on the road to higher and higher prosperity and that the various difficult problems it had to face in the past no longer exist. On the contrary, it appears to me that as one set of difficulties are surmounted, another set is ready to appear in its place. During the last year I had made a reference to the difficult situation in the matter of supplies of cotton. This continued to grow worse due to the lower Indian crop and the Government not taking timely steps to import larger quantities of cotton. There was, thus, both a physical insufficiency of raw material as well as a considerable increase in its price. As is to be expected in a period of planned development, the demand for cloth kept on rising. Consequently, the prices of cloth went up all over the country. These circumstances leading to this difficult situation have, I am afraid, not been sufficiently appreciated by those who have been criticising the cotton mill industry.

Apart from the increases in the price of cotton and its physical insufficiency, the costs of the industry have been further increased by the recommendations of the Textile Wage Board which granted an ad hoc increase to all workers from 1st January, 1960, and has also stipulated a further increase with effect from 1962. At the same time, the industry has not been permitted to increase its capacity and is therefore unable to recoup these increasing costs by larger volumes of production. The cotton mill industry is one of the oldest in the country and a large part of its machinery is not only old in years but also obsolete in its working. Adequate replacement and renovation programmes call for large scale financial outlay, which are beyond the limited internal resources of the industry. A considerable part of such machinery has also to be imported for which foreign exchange is not freely available. Financial institutions like the N.I.D.C., I.F.C., etc. are no doubt assisting with loans, but these are far from adequate and are subject to many limitations. The industry therefore faces a situation in which it has to meet increasing costs without having the facilities for matching these with increased productivity through renovation of machinery and improvement in techniques

Demands of Consumers

If the industry is to be placed on a sound footing and the demands of consumers met at reasonable prices, it is essential that these basic problems must be identified and solved in a rational way. The first step to be taken, to my mind, is to increase at once the availability of cotton not only for the current season but over a period of years. For this purpose, I would suggest that the Government should immediately import cotton, not only to meet the needs of this season and to make good shortfalls of the last season, but also to build up a sizeable surplus buffer stock. The mere existence of such a buffer would have a healthy influence on the prices of cotton which in turn would enable the prices of cloth to be kept at a reasonable level.

The production programme for cloth should be made out so as to ensure a reasonable balance between the supply and demand for cloth. The demand for cloth at the end of the Third Plan period has been estimated by the Planning Commission at 9,300 million yds. per annum. The Indian Cotton Mills' Federation has placed this demand somewhat higher but even the Planning Commission's target of 9,300 million yds. will call for additional cloth output of over 2,000 million yds. It would appear to be the intention of the planners that out of this increase, some 500 million yds. should be allocated to the mill industry and the rest to the handloom and power-loom sectors. It is well known that the handloom sector can only thrive on the basis of subsidy and that its development must eventually be at some cost to the general public. Apart from this, it is pertinent to consider how far the handloom industry could be in a position to achieve the increase proposed for it, because, if it fails to do so, and the mill industry's production is limited to the planned targets, there is bound to be again a scarcity of cloth, with resultant, higher prices.

Third Plan Target for Handlooms

The performance of the handloom industry during the Second Plan period does not carry the promise that it will be able to achieve the higher targets proposed for it in the Draft Third Plan. There is considerable doubt whether the published statistics give an accurate picture of the actual production of the handloom industry. The published statistics of production by handlooms are not based on actual reports of production but derived from the quantities of yarn released for the handloom industry and the cloth that should have been produced from these. The production, according to these published statistics is of the order of 1,000 million yds. per year whereas it is surmised that the actual production could not be more than 1,100 million yds. The gap between these two figures is so wide that one can easily imagine the situation that could arise if the increases proposed for the handloom industry were allocated to it without scientific investigation.

It is my earnest submission that we look on this as a problem, not of farming out production opportunities to this Sector or that but of providing adequate supplies of cloth to the people of the country at prices which are both reasonable and stable so that standards of living may rise. If this purpose is kept in mind all these issues fall into perspective, and it will be easy to see the need for production to be allocated on a realistic basis and for providing the industry with the means to achieve its targets, namely, sufficient supplies of raw materials at reasonable prices, adequate financial assistance for modernisation and renovation, and some restraint in fiscal and other increases in costs.

There is another important aspect which makes it desirable that we strengthen the cotton mill industry in the country. As is well known, the textile industry is one of the major earners of foreign exchange by export of cloth. But increasingly in the past years competition in the export markets is becoming harder to face while at the same time the costs of the industry at home are going up, with the result that there is a serious threat of being priced out of the export markets. The recent conspicuous rise in the prices of cloth within the country led to diversion of cloth from exports to domestic markets. From the point of view of exports also, therefore, it is essential that domestic prices should be kept at a reasonable level so that the exports do not suffer.

Incidentally you will be glad to know that the exports of your company have further increased during the year, and we are the second largest exporters of cotton textiles from India.

Agricultural Production and Prices

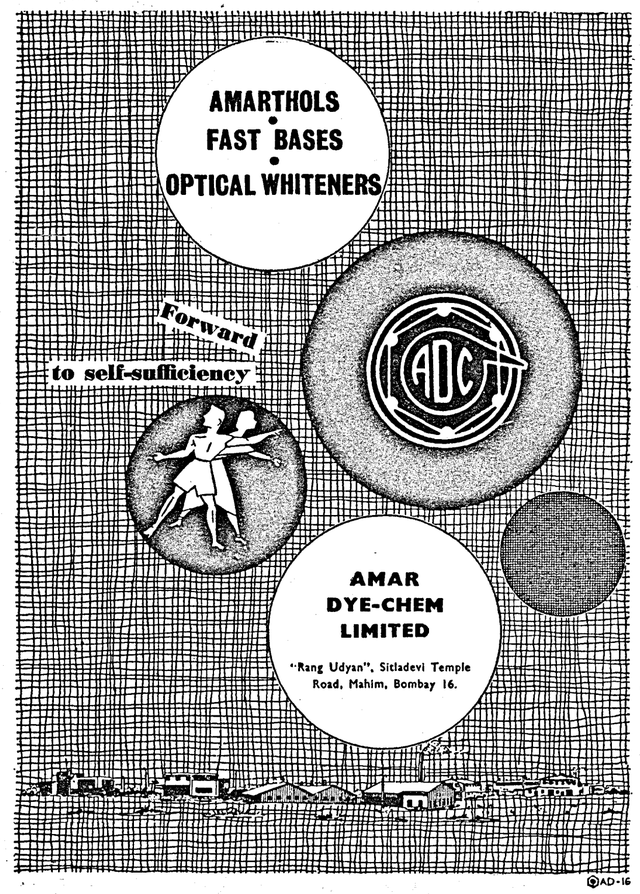
From these matters which are specific to the textile industry, let me dwell for a while on a subject basic to the progress of all our industries, namely, the problem of agricultural production and prices. Experience with the First and Second Five Year Plans has taught us two important lessons. One is the imperative need, if standards of living are to rise, for keeping price-levels stable over a period of years. The other is the realisation that agricultural prices are and will continue in the foreseeable future to be a major influence on price levels. In the field of agriculture, as in that of industry, the most effective means of keeping prices low and stable is to increase productivity. In fact, there is no alternative to this, for it is only on the basis of reasonable prices of agricultural products that sustained industrial progress can be built and standards of living improved.

I know I am, perhaps, treading on delicate ground, but it does seem to me that it is time for the Government and the people to give thought to the serious indiscipline that has crept into almost every walk of life. If this is not given immediate consideration and steps are not taken to remedy the position, it is bound to lead to a permanent weakness in the structure of our society. Confining myself, however, to indiscipline among employees as a class, I would humbly urge upon the Government to consider the effect of labour legislation on this problem of discipline in industry. Our labour legislation is founded on the belief that employees are always exploited and they should be meticulously protected from such exploitation. The actual effect of such legislation, however, has often been to protect inefficiency and indiscipline on the part of the employee by making it extremely difficult for the employer to take corrective action quickly and effectively enough. I am willing to grant that in some cases individual injustices do occur but an elaborate legal structure built to protect everyone from every such injustice has resulted in large scale indiscipline going unpunished. I would, therefore, suggest that we should weigh the two evils—one of indiscipline affecting the entire fabric of society and the other of stray cases of individual injustices occurring here or there.

As is well known, the Company is required, under the new Income Tax Law, to deduct Income Tax at 30% from all dividends. This would cause hardship to holders of Preference Shares with fixed rates of dividends as they would now be paid only those rates minus 30% As this is not equitable to them, you will be pleased to know that your Directors have proposed to change the rates of dividend payable on these shares so as to ensure that after deduction of 30%, these shareholders will get the same net amount as before.

Before I close, let me convey my thanks to all my colleagues who form part of this organisation—the D.C.M.—and whose efforts have been responsible for the satisfactory working of the Company.

NOTE :—This does not purport to be a record of the proceedings of the Annual General Meeting.



Money

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS STILL TIGHT

Tuesday, 18th October.

THE heavy fall in advances of the previous week appears to have been halted, and some of the main sources of demand have shown slight improvement in offtake during the past week. The requirements of the sugar and jute industries have remained unchanged, but moderate increases have been recorded by the cotton mills and the engineering and iron and steel industries. The total of all advances is fractionally higher. The extreme tightness in the interbank market has persisted in the past week and the official call rate has edged up to 4½ percent. This figure is, however, nominal, as little business of any kind is passing. The reason for this stringency continues to be the Government's credit policy.

Conditions in the bill market have remained more or less unchanged during the past week, with a fair flow of gunny and tea bills. Remittance has been poor. On the London market, the pound has remained steady against all important Continental currencies and improved fractionally against the U.S. dollar.

BULLION WAS STEADY DURING THE PAST WEEK DUE to the Diwali demand. Silver rose from the previous week's level of Rs. 223 to Rs. 223.50, quoted today for ready delivery. The London and New York prices were 79¼d and 91.375 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 134.25 to Rs. 135.25. The sovereign moved up from Rs. 89.50 to Rs. 91.

DURING THE WEEK ENDED 14TH OCTOBER, GOVERNment of India Treasury bills for Rs. 255,99,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 18th October. The total amount offered was Rs. 2,40,00,000. Tenders at Rs 99.360 were allotted approximately 87 percent, the average rate of acceptance being Rs. 2.560 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 24th October.

DECLINES OF Rs. 2.27 CRORES TO Rs. 1,808.64 CRORES in active notes, and of Rs 10 lakhs to Rs. 1,823.03 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 14th October, 1960. Notes held in the Banking Department consequently rose by Rs. 2.17 crores to Rs. 14.39 crores. Deposits of the Central Government declined by Rs. 2.66 crores to Rs. 52.68 crores, while other Government accounts were Rs. 32.55 crores higher at Rs. 43.80 crores. Balances of commercial banks rose by Rs 4.55 crores to Rs. 110.16 crores. Balances held abroad increased further by Rs. 5 lakhs to Rs. 17.84 crores. Investments at Rs. 246.78 crores showed an increase of Rs. 59.84 crores. Other loans and advances rose from Rs. 127.75 crores to Rs. 128.58 crores, of which advances to scheduled banks against usance bills amounted to Rs. 8.77 crores (Rs 8.31 crores). Ways and means advances stood at Rs. 26.24 crores, against Rs. 39.19 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 7th October, 1960, shows a drop of Rs. 6.36 lakhs in total deposits to Rs. 589.29 crores. Investments in Government securities are up by Rs. 1.23 crores to Rs. 360.66 crores, while other authorised investments remain unchanged at Rs. 9.88 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have decreased by Rs. 5.16 crores to Rs. 213.89 crores. Cash and balances are, in consequence, shown at Rs. 23.11 crores or Rs. 6.37 crores less.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 21-10-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
			...
21-10-60	22-1-61	2,00,00	Rs. 2.560%

CONTIN FINANCE AND MINING COMPANY LIMITED

The fourth annual general meeting of Contin Finance and Mining Co. Ltd., was held on October 13, in London.

Mr. W. J. C. Richards, Chairman, presided. The following is his Statement circulated with the Report and Accounts for the year ended 30th June, 1960 :—

Conditions during the year were favourable to Stock Exchange dealings and the opportunity was taken to sell Government securities which represented 20 per cent. of our portfolio and to reinvest the proceeds in first-class commercial and industrial companies. Our holding in mining companies has increased slightly but no opportunity has occurred of direct participation in promising and developing mining ventures.

The dividends received by the group increased by approximately 50 per cent. and the present tendency on the investments at present held is still upwards. The discussions with the Government of the Union of Burma with a view to a joint venture with the Consolidated Tin Mines of Burma Limited proved abortive and the mining company's properties have now been sold and realised £35 332, which amount accrues to this Company subject to claims by other creditors and the costs of liquidation. Although £25,000 has been written off the outstanding balance of £61,678 reducing the amount to £36,678, some further provision is likely to be required but the amount cannot yet be determined. The Directors have decided to recommend the payment of a dividend at 12½ per cent. now rather than to defer it until the affairs of the Mining Company have been finally cleared up. As the accounts show, the dividend was fully earned on the year's workings (before tax adjustments) with a margin of approximately 50 per cent. Your Directors feel that the Company is now firmly established and, being rid of the association with the Mining Company in Burma, it has bright prospects under enterprising direction.

The report and accounts were adopted, and the meeting terminated with a vote of thanks to the Chairman and Directors.

INDUSTRIALS DEPRESSED IN STOCK MARKET

GILT-EDGED RISE DUE TO INVESTMENT DEMAND

London, 19th October.

ALL the main sections of the Stock Exchange receded during the past week, with the notable exception of gilt-edged securities, which enjoyed a steady investment demand, some of which was on overseas account, and was partly stimulated by hopes of a reduction in Bank rate. There was a growing volume of evidence of the restrictive effects of the credit squeeze, particularly the news of short-time working in the motor-car industry. This was followed by the news of the spread of short-time working to the steel industry, and combined to depress the market. Other important influences were the September trade figures, which provided no evidence of any improvement in the export situation, and the Chancellor of the Exchequer's speech at the Conservative Party's conference indicating fairly clearly that there is no hope of an early relaxation in the credit squeeze. Such hopes had contributed to buoyancy in the market during the previous week. The main effect of all this was to discourage recent buyers and there was a marked falling off in demand, which was largely responsible for the fall in the market, there being no marked pressure to sell. Industrials were the chief sufferers and widespread, often appreciable, losses were recorded. Steel shares were particularly depressed. South African gold shares eased in the absence of support and base metal shares deteriorated. There was little further change in West African issues. Oil shares relapsed after the previous week's revival of interest. Rubber shares tended lower and showed widespread declines. Tea shares were quiet and narrowly irregular.

The Money Market

The only feature in the money market last week was that at the weekly Treasury bill tender the market elected to pay 6d more for the bills, which resulted in a sharp fall in the Treasury bill rate of approximately 1s 9d to £5 9s 6.35d percent. This was not because of any ideas of an easing in the credit situation, but because the market was needing bills badly as the result of the poor quotas over the past two or three weeks and the running down of their portfolios by sales of bills to the banks. Any hopes of a relaxation of the credit squeeze have been dampened by the Chancellor's remarks at the Conservative Party's conference which contained no hint of an immediate relaxation. Money was in keen demand over the week with the rate for day-to-day loans ruling firm at 5⅞ percent and 5¾ percent for funds created by the authorities in its smoothing out operations when money was most short. There was a good demand for bills over the week with January and "hots" changing hands at 5½ percent and 5⅝ percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: Gradual advance in London gilts may gain momentum and soon test the recent highs. Last week's sharp rally in industrials was aided by hopes of lower interest rates and renewed investment interest. After minor rally, gold shares paused to reassess political factors. Base metals are still uncertain with conflicting influences. Oils' rebound on Wall Street advice was largely technical and has lost momentum. Wall Street's technical rally continues in quiet trading as market contends with economic and political forces. The possibilities of a cut in London Bank rate to bring it closer to other countries and of relaxation of the credit squeeze have been more aired recently. There is little to justify such moves immediately and the firmness of the market may owe more to unit trusts and other institutional demands in a market still short of stock.

Activity on Wall Street

U.S. Government obligations in the longer maturity ranges extended their recent declines at the outset with many at their lowest levels since early July, due to the continued lack of interest. The market, however, eventually developed a steadier trend on improved demand. Top quality corporates were generally a shade lower in quiet dealings. Convertibles displayed a mixed appearance. In a rather slow market for foreign dollar bonds, Belgium Congo 5¼ percents fell back about half a dozen points. Their recovery was high while Cuba 4½ percents added over a point. Australians were mostly lower with several issues dropping a point or more, with Union of South Africas mostly higher. Japanese Government bonds were mixed, with Chile 3 percents steady at the $44 level.

U.S. Gold Stock Declines

U.S. gold stocks fell a further $10,316,517 on 13th October. The Treasury Department reported that stocks on that day totalled 531,542,354 ounces, valued at $18,603,982,398. On 12th October, stocks were 531,837,112 ounces, worth $18,614,298,915.

Mixed Trend in Vegetable Oils

A broader buying interest emerged for the harder type vegetable oils and seeds, and in several sections, prices showed a firmer trend in the vegetable oils market last week. On the other hand, soft varieties made little progress with buyers, and under the pressure of cheaper offers from some sources, values edged lower.

Hongkong Gold Quiet

The Hongkong gold market was very quiet with traders showing no interest. The week's deliveries were mainly confined to domestic uses, with prices showing a small net gain over the period. Carry-over charges were nil, deliveries totalled 16,500 ounces and arrivals from Macao were 32,000 ounces. The forward contract was placed at $(U.S.)38.20 c.i.f., Macao.

NAMES AND DATES

The general manager of the Assam Oil Company, Mr. W. P. C. Maclachlan, will shortly be leaving India. His place as representative and general manager of the Burmah Oil Company's interests in India will be taken by Mr. H. J. Condon, who has also been appointed to succeed Mr. Maclachlan on the board of Oil India (Private) Ltd. At the same time, Mr. G. N. S. Robertson is taking over the administration of the Assam Oil Company with his headquarters in Digboi in Assam.

MODERATE PRICE RECOVERY IN DIWALI-EVE TRADING

GILTS STILL UNDER PRESSURE

Tuesday Evening.

ON the eve of Diwali the Calcutta Stock Exchange is in a better mood, and several issues have recorded moderate gains. The unanimous opinion of the majority of market men is that the recent bear phase has ended and that the new business year, which will begin from tomorrow, should get off to a good start. Yields on several high calibre equities are now reasonably satisfactory and investment interest is, therefore, expected to broaden. The recent shake-out in share prices has improved the technical position of the market and it is rumoured that the L.I.C. may soon be showing more interest. The selling pressure in gilts continues, however, and most of the scheduled banks are still keen to raise funds by selling in the gilt-edged market. This is due to the tight money conditions following the Reserve Bank credit curbs introduced on 1st October. Three percent Conversion Loan was quiet at Rs. 73.80 and all short-dated issues, including State loans, were freely offered without attracting buyers.

Very little business was reported in banks and preference shares and quotations were more or less unchanged from last week's levels.

In the coal section, Bengal were steady at Rs. 323 and Burrakur recovered from Rs. 17 to Rs. 17.37.

In cotton textiles, Kesoram, on the publication of a satisfactory report (although the ordinary dividend was disappointing), moved up from Rs. 26.94 to Rs. 27.25. Dunbar met with small enquiry and improved from Rs. 20.25 to Rs. 20.62.

Electric supply shares were dull and featureless.

In the engineering group, Calcutta Steel met with renewed enquiry and rose from Rs. 14.87 to Rs. 16. Guest, Keens were taken at the higher rate of Rs. 49 and Indian Iron & Steel improved steadily to close tonight at Rs. 23.15. Jessop & Co. were subdued at Rs. 20.25 while Textile Machinery were taken at the higher rate of Rs. 22.55.

Paper shares were better, particularly Orient which rose from Rs. 39.20 to Rs. 41.15, Sirpur from Rs. 17.25 to Rs. 17.87 and Shree Gopal from Rs. 24.37 to Rs. 25.25; in contrast, Titaghur were easier at Rs. 37.

Very little business was done in sugar shares and prices fluctuated narrowly around last week's levels. There was a small enquiry for Belsund at Rs. 13.75 and Carew at Rs. 10.87.

Jute shares were neglected and prices showed little variation. With the immediate outlook so uncertain, due to fears of a fibre shortage, investors kept away from this section of the market. Today, however, there was some enquiry for a few selected shares.

Among miscellaneous industrials, Alkali & Chemical rose smartly from Rs. 30.25 to Rs. 31.62 and Aluminium Corporation were better at Rs. 18.37. Associated Batteries had buyers at the higher rate of Rs. 37 but sellers were scarce. Britannia Biscuits were wanted at the higher rate of Rs. 37.25 and Dunlop Rubber were enquired for at Rs. 41.75 against last week's quotation of Rs. 40.25. Hindustan Motors were better at Rs. 19.31 while Metal Box were unchanged at Rs. 44. Indian Cables rose to Rs. 33.19 and Indian Oxygen to Rs. 38.25. Philips India were better at Rs. 28.50 as were Rallis India at Rs. 123. Union Carbide improved slightly to Rs. 51. Rohtas Industries moved up to Rs. 23.44 and Indian Aluminium to Rs. 27.75.

The higher prices being realised at the auctions, owing to the shortfall of the crop, led to a moderate enquiry for tea shares. Betjan were better at Rs. 21.50, as were Brooke Bonds at Rs. 17.12, Hantapara at Rs. 124 and Hasimara at Rs. 21.

In the mining group, Karanpura Development, after being done up to Rs. 15.25, closed easier at Rs. 15. Metal Corporation were better at Rs. 9.62 as were Indian Copper at Rs. 4.50.

Wm. Powell

With reference to its recent share offer, Wm. Powell and Sons Ltd announces that, in consultation with the Calcutta Stock Exchange committee, it has been decided to allot the shares as follows. Applicants for 50 shares will get five shares each, with alternate allotment eliminating 50 percent of the applicants. This alternate allotment will be made under the supervision of a member of the committee. Applicants for 100 shares to 950 shares will get 5 percent. Applicants for over 1,000 shares will get 4 percent. The allotment and regret letters are now being issued.

Octavius Steel

After providing Rs. 61,491 (against Rs. 57,326) for depreciation, Octavius Steel and Co. Ltd has earned a profit of Rs. 14.97 lakhs for the year ended December 1959, against Rs. 17.46 lakhs in the previous year. A taxable ordinary dividend of 12½ percent, including an interim of 5 percent, has been declared. The previous year's dividend was 8¼ percent, tax-free. Taxation is allocated Rs. 7.13 lakhs (against Rs. 8.78 lakhs). Investment reserve absorbs Rs. 1.05 lakhs (against Rs. 12,419). Bringing in Rs. 2,95,557 and making other adjustments, an amount of Rs. 3,33,734 is carried forward.

Seajuli Tea

The profit of the Seajuli Tea Co. Ltd has dropped from Rs. 1.92 lakhs to Rs. 1.37 lakhs for the year ended December 1959. A dividend of 17½ percent, subject to deduction of tax, has been declared, against 22½ percent, tax-free, in the previous year. Allocations include Rs. 47,000 (against Rs. 83,000) for taxation and Rs. 50,000 (against

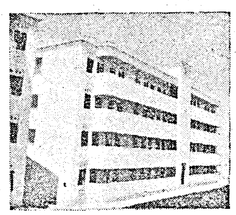
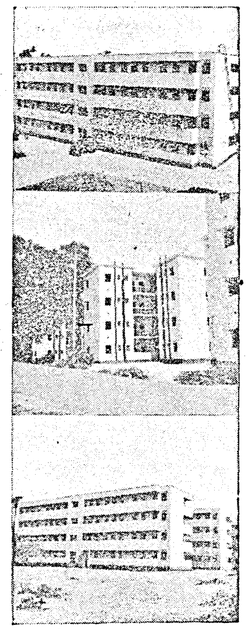
HOUSES

FOR THE
INDUSTRIAL WORKERS

Yet another amenity for the industrial workers is the progressive implementation of the Subsidised Industrial Housing Scheme. Away from the rattle and din of the factory, but close enough to be within easy reach, the industrial worker can now have a house for himself to enjoy his well deserved rest and the quiet comfort of family life.

5452 tenements have already been completed, 824 are under construction. Projects for 1316 more are to be shortly taken up. Any industrial worker may occupy a house on rental basis. One-roomed or small two-roomed tenements are available for workers with monthly income not exceeding Rs. 250/-, while two-roomed ones for those with monthly income not exceeding Rs. 350/-. No minimum limit of income in either case.





For full details contact: Estate Officer, Housing Directorate, New Secretariat Buildings (1st Floor), Calcutta-1

BETTER HOUSES FOR Better Bengal

Issued by the Government of West Bengal.

Rs. 25,000) for building reserve. Making other adjustments, there remains a balance of Rs. 91,288, which is carried forward, against Rs. 1,10,551 brought in. The crop rose from 439,136 lbs to 470,732 lbs, but the average sale price fell from Rs. 2.74 to Rs. 2.65 a lb. Estimates for 1960 provide for a crop of 440,000 lbs at a cost of Rs. 2.34 a lb.

Malankara Rubber

The profit of the Malankara Rubber and Produce Co. Ltd has declined from Rs. 4.88 lakhs to Rs. 4.46 lakhs for the year ended March 1960. A taxable dividend of 15 percent has been declared. Taxation is allocated Rs. 2.37 lakhs (against Rs. 2.39 lakhs). Depreciation absorbs Rs. 37,582 (against Rs. 31,719). After making other adjustments, there remains a carry-forward of Rs. 9,942, against Rs. 11,167 brought in. The rubber crop was 670,174 lbs, and the average price realised was 148.50 cents a lb.

Bareilly Electricity

After providing Rs. 1.81 lakhs (against Rs. 1.76 lakhs) for depreciation, the profit of the Bareilly Electricity Supply Co. Ltd has increased from Rs. 1.40 lakhs to Rs. 3.26 lakhs for the year ended March 1960. A dividend of 11 percent, subject to deduction of tax, has been declared, against 10 percent, tax-free, in the previous year. Taxation absorbs Rs. 79,000 (against Rs. 22,000) and general reserve is allocated Rs. 17,000 (against Rs. 25,000). After making other adjustments, there remains a balance of Rs. 23,612, which is carried forward, against Rs. 20,465 brought in.

Saugor Electricity

The Saugor Electricity Supply Co. Ltd has earned a profit of Rs. 76,344 for the year ended March 1960, against Rs. 1.17 lakhs in the previous year. A taxable dividend of 6 percent has been declared, against 5 percent, tax-free. Allocations include Rs. 8,968 (against Rs. 8,300) for statutory contingencies reserve, Rs. 18,533 (against Rs. 73,620) for development reserve, Rs. 12,000 (against nil) for taxation and Rs. 15,000 (against Rs. 40,000) for general reserve. After making other adjustments, there is a carry-forward of Rs. 3,177, against Rs. 3,189 brought in.

CREDIT STRINGENCY FEARED DURING BUSY SEASON

Monday Evening.

THE Bombay stock market was steadier during the past week. Sentiment had improved after nearly three weeks mainly because of the healthier technical position. Some shares were removed from the list to which special deposit "making-up" prices payable by bulls were applicable, and special deposit rates were fixed against bears in other shares. Trading, nevertheless, was limited because operators were worried about the prospect of credit stringency as soon as the demand of the busy season got into its stride in a few week's time.

Tata Steel were supported at Rs. 145.25 and Indian Iron were bought at Rs. 22.92 on hopes of an early increase in the retention prices of steel and pig iron. Among engineering shares, Alcock Ashdown met with interest at Rs. 256 ex-rights; the Company issued rights shares at par in the ratio of two new shares for every share held. Tata Locomotive were bought at Rs. 284 and Larsen and Toubro came to hand at Rs. 34.25. Premier Construction were easier at Rs. 306.50 on selling pressure. Among motor shares, Premier Automobile were quiet at Rs. 163.75, but Hindustan Motor met with support at Rs. 18.72, especially from Calcutta interests.

In the cotton mill group, closing prices were above the lowest levels touched earlier in the week. Bombay Dyeing were placed at Rs. 62.80 and Century were taken at Rs. 465. Khatau were supported at Rs. 510 and Standard recovered to Rs. 1,317 on fresh rumours of a capital issue. Morarjee were taken at Rs. 350 on the publication of the good results for the year ended June 1960. The Company's expansion and modernisation scheme was making good progress. Kohinoor were indicated at Rs. 299 and Simplex were dealt in at Rs. 168. Apollo were offered at Rs. 1.36 and India United Ordinaries were transacted at Rs. 12.20.

Miscellaneous shares showed mixed trends. Sugar shares were steady, and Belapur recovered to Rs. 367. Phalton were dealt in at Rs. 178, but Walchandnagar Industries were subdued at Rs. 297.50. Steamship company shares were quiet, and Scindia Steam were sold at Rs. 13.72 on fears that the dividend might be passed over. Great Eastern Shipping were available at Rs. 15.84. Mining shares attracted little interest, and routine business passed in Shivrajpur Syndicate at Rs. 67.50. In the cement group, Associated Cement were quiet at Rs. 144.50, but Digvijay were steadier at Rs. 165. Bombay Burmah recovered to Rs. 571.50 on replacement buying and National Rayon gained at Rs. 470. Gwalior Rayon declined further to Rs. 39. Among chemical shares, Tata Chemical were offered freely at Rs. 16.12, but Alembic Chemical improved to Rs. 245 on the decision to issue rights shares at par in the proportion of one share for every ten held. Hopes of a rights share issue induced support for Wimco at Rs. 278. West Coast Paper rallied to Rs. 191.50 on a report that the Company might increase the daily output capacity from 70 tons to 150 tons. Ceat Tyre were quiet at Rs. 240, but Hindustan Lever met with support at Rs. 45.

Bank shares were steady, and business passed in Central India at Rs. 51.50. Bank of India were bought up to Rs. 101. Insurance shares were quiet, and British India General fell to Rs. 11.75. New India Assurance were done at Rs. 54.20.

There was scattered interest in electricity supply shares, and Ahmedabad Electric gained at Rs. 88.80. Tata Power were quoted at Rs. 1,030 and Bombay Suburban changed hands at Rs. 84.50.

Madras Market

SENTIMENT STEADIER ON FOREIGN AID HOPES

TEA AND RUBBER ISSUES RISE

Tuesday Evening.

SENTIMENT improved in the Madras stock market during the past week and support was forthcoming at the lower levels. Operators were encouraged by the hope that the flow of foreign financial assistance might not be delayed too long. Turnover increased in tea shares on reports of good production in most of the south Indian gardens. Rubber shares were also supported, but coffee scrip were neglected due to the heavy accumulation of stocks of the commodity. Cotton mill shares were traded cautiously because sales of cloth and yarn fell. Miscellaneous shares showed mixed trends and support came for only a few scrip due to good corporate news.

Government securities were quiet and many State Government loans were available at substantial discounts. Public utilities were quiet, and Berhampur were sold at Rs. 6. Business passed in South Madras at Rs. 10 and in Vellore at Rs. 11.70. Bank shares were steady, and Indian Overseas were bought at Rs. 171. Travancore Forward were transacted at Rs. 5.50 and Andhra came to hand at Rs. 100.

Sugar shares were selectively bought. Business was done in Deccan at Rs. 15.25 and in E.I.D. at Rs. 43.50. Mysore changed hands at Rs. 60.50 and Travancore were traded at Rs. 11.90. United Breweries were steady at Rs. 114.50.

In the planting group, Blue Mountain changed hands at Rs. 5 and Cochin Malabar at Rs. 7.05. Consolidated Coffee were dealt in at Rs. 24 and Ouchterlony were done at Rs. 4.95. Periakaramalai came to hand at Rs. 3.55, but Midland declined to Rs. 11.75 on paying a taxable dividend of 12½ percent. Kil Kotagiri were steady at Rs. 5.70 and Lucky Valley were available at Rs. 12.25. Nilgiri were quoted at Rs. 7.19 and Parkside were offered at Rs. 29. Peermade were taken at Rs. 23.35 and Teekoy were quoted at Rs. 6.05. Chembra were offered at Rs. 4.95 and Coffee Lands were sold at Rs. 24.50.

Among textile shares, Lakshmi were done at Rs. 140 and Madura at Rs. 33.75. Travancore Rayon recovered to Rs. 32.95 and South Indian Viscose were dealt in at Rs. 150. Buckingham were transacted at Rs. 196.50 and Bangalore Woollen were also available at the same price. Kothari were shaded at Rs. 12 and Mettur were offered at Rs. 380. Pankaja were dealt in at Rs. 69 and Vijayaswari were available at Rs. 113.

In the miscellaneous group, Tube Investment were bought at Rs. 320 on paying a taxable dividend of 10 percent. Business passed in Aluminium Industries at Rs. 23.35 and Ashok Leyland were placed at Rs. 8.40. India Cement were quoted at Rs. 7.05 and Enfield were done at Rs. 15.20 F.A.C.T. were sold at Rs. 10 and Kirloskar Electric were steady at Rs. 13.10. Parry's Confectionery were wanted at Rs. 4.35 and Singareni were offered at Rs. 10.50. Spencer were done at Rs. 21.65 and Standard Motor were dealt in at Rs. 17.12. Textool changed hands at Rs. 189 and United Electrical were quoted at Rs. 9.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

WHY REMAIN IN THE DARK ABOUT QUALITY?

There is no reason why you should. For, quality is obtainable wherever standards are maintained, be they in social, economic, or other spheres of human activity.

Standardization helps in promoting economy and efficiency in production and use of goods and services, by providing a common ground of understanding among producers, dealers, consumers and users. The Indian Standards Institution is responsible for developing standards on a national and international basis.

Through research, tests, and quality control schemes, goods produced to specified standards can have the assurance of quality. Many consumer and industrial articles, produced to relevant Indian standards, have been granted the ISI certification mark.

The ISI mark is the guarantee of their quality.

New Delhi

GOVERNMENT APPOINTS COMMITTEE TO ENQUIRE INTO CONCENTRATION OF WEALTH

U.S. AID FOR DEVELOPMENT OF FERTILISER INDUSTRY

(FROM OUR NEW DELHI CORRESPONDENT)

THE personnel and terms of reference of the committee to enquire into the wealth of persons or firms were announced last week. As expected, Professor P. C. Mahalanobis will head the committee, the other members being Dr. V. K. R. V. Rao, director, Institute of Economic Growth; Dr. P. S. Lokanathan, director-general, National Council of Applied Economic Research; Dr. B. N. Ganguli, director, Delhi School of Economics; Mr. Vishnu Sahay, Secretary, Planning Commission; Mr. D. L. Mazumdar, Secretary, Department of Company Law Administration; Dr. B. K. Madan, executive director, Reserve Bank; Mr. B. N. Datar, adviser, Central Labour and Employment Ministry; and Mr. P. C. Mathew, director, Central Statistical Organisation (member-secretary). The committee will ascertain the extent to which the operation of the economic system has resulted in the concentration of wealth and means of production; study the recent trends in the distribution of income and wealth; and review the changes in the standards of living during the first and second plans. It is officially stated that the committee's enquiry will be at the expert level. Its primary object is "to ascertain such statistical and economic data as may be gathered at present, to identify the gaps in the existing information and to suggest steps for removing these deficiencies."

Since 1947, the Reserve Bank of India has been preparing reports on the assets of foreign concerns in India. The work of the present enquiry might have been simpler if the same body were directed to report on the assets of Indian firms as on 15th August, 1947, and 13 years thereafter. Side by side, some more enquiries are called for. For instance, there should be an enquiry concerning productivity, particularly of white-collar workers as on 15th August, 1947, and now. It is also necessary to find out how many labour laws have been enacted during the two plan periods and for whose benefit; how many of them are being implemented and with what results. Other points to investigate are: how many technicians were required for the public sector during the two plan periods, how many were trained and how many are being employed in the jobs for which they were trained? Seven Indians were trained in soil conservation methods in the U.S.A.; are they employed on soil conservation work? What is the amount of technical aid received from friendly foreign countries, including a dental van from West Germany, and what use is being made of this aid? Then, again, how many projects outside the plans were started during the two plan periods and what is their import bill? The western nations were told that the big size of the second plan was necessary to meet the challenge of communism. A committee should enquire whether the second plan has been able to counteract communism.

Congress Economic Policy

As far as the Mahalanobis enquiry is concerned, its verdict should be interlinked with the economic policy of the Congress Party. It does not need an enquiry to discover that the policy of protection has largely contributed to the concentration of wealth in a few hands. There are admirable institutions such as the Indian Standards Institution housed in an imposing building in New Delhi and the Central Productivity Council, which only provides junkets abroad for an increasing number of people and holds seminars. The Indian Standards Institution lays down standards. The consumer has yet to discover how they are enforced. As for the activities of the Productivity Council, if production could be stepped up by seminars, India would have been at the peak of her efficiency. But both standards and productivity are largely regulated by competition, which is lacking.

U.S. Loan for State Fertiliser Plant

The U.S. Government has announced that it will finance the entire cost—$58 million (Rs. 27.6 crores)—of a large Government fertiliser plant to be built in Trombay, near Bombay city. The Trombay factory, one of the biggest in Asia, will be run by Hindustan Chemicals and Fertilizers Ltd, a Central Government corporation. Of the total cost, $30 million (Rs. 14.3 crores), to cover the foreign exchange requirements, will come from the U.S. Development Loan Fund. Loans granted by the D.L.F. are repayable in rupees. Repayment in India's currency, in this case, does not involve the export of goods or services from India or expenditure from India's foreign exchange reserves. The local currency costs of the factory will be met by a loan of approximately Rs. 13.3 crores (equivalent to $28 million) from the sale proceeds of agricultural commodities supplied to India by the United States under Public Law 480. The loan is also repayable in rupees.

The Trombay factory will consist of four major units. These will produce ammonia and nitric acid as intermediary products, and 105,000 tons of urea fertiliser and 300,000 tons of nitro-phosphate fertiliser annually as final products. The principal raw materials will be refinery gas and naphtha from the nearby petroleum refineries and imported phosphate rock. It is expected that the factory will go into full production during 1962 or early 1963.

In the Press release issued in Washington on the Trombay fertiliser project, the Development Loan Fund noted that the Indian Government has also announced its intention of enlisting the co-operation of privately-owned and operated fertiliser plants in the achievement of increased production targets, and has stated that U.S. Government assistance would be welcome in financing private investment in fertiliser plants in India. In reply, the D.L.F. authorities indicated that although no commitments could be made in advance of the receipt of specific proposals, they would give sympathetic attention to loan applications in the fertiliser field. It may be added that the Licensing Committee has approved of the principle to locate one private sector unit in each State and has set up a small sub-committee to examine the applications and make recommendations to the Government.

Indo-Polish Trade

Letters were recently exchanged in Warsaw, renewing the Indo-Polish trade arrangement for 1961. The Indian exports to Poland will include textile machinery and accessories, coir goods, tanned and semi-tanned goatskins and leather, iron ore and manganese ore, tea, spices, shellac, mica, castor oil, groundnut oil, deoiled cakes, black pepper, handicrafts, sports goods, coffee, cinematographic films, books and periodicals, castings and forgings and semi-products for pharmaceutical production. The imports from Poland will be capital goods, various machinery items, chemicals and drugs, textile machinery and accessories including automatic looms, garage tools and service equipment, machinery and equipment for foundries, rolls for rolling mills, zinc, medical equipment and instruments and other types of machinery for small and large-scale industries.

Rice-growing Demonstration

India's "action programme" in connection with the F.A.O.'s "Freedom from Hunger Campaign" is likely to include the setting up of a number of centres where rice-growing demonstrations will be undertaken by teams of Japanese farmers. The scheme also visualises the training of young Indian farmers, willing to put in physical effort and labour, at these centres. They are expected to work alongside the Japanese farmers for one or two seasons before going back to their villages.

Promoting Tea Exports to Ireland

Steps for promoting the export of Indian tea to Ireland were discussed here last week by a seven-member delegation from Ireland, led by Mr. Percy McGrath, chairman of the Irish Tea Council. The delegation, which is visiting India at the invitation of the Tea Board, arrived in New Delhi after visiting the tea estates in Assam and south India. Ireland is one of the important consumers of Indian tea and imported 15 million lbs last year.

Site for Alloy Steel Plant

The Government of India, it is believed, is likely to select Durgapur for the location of the proposed alloy steel plant. The plant's initial capacity will be 50,000 tons annually, capable of being expanded later to 200,000 tons a year. It is a Rs. 50-crore project, of which Rs. 20 crores is the foreign exchange component. The project report was recently submitted by Dastoor and Company.

Tenders for Atomic Power Station

The Department of Atomic Energy issued a notification inviting global tenders for India's first atomic power station to be built near Tarapur, about 62 miles north of Bombay. The "enquiry specification", outlining in detail the requirements of the station, was issued on 17th October by the Project Administrator, Tarapur Atomic Power Project. The tenderers have been given about seven and a half months' time to formulate and submit their tenders.

The power station will produce about 300,000 kW of electric power and will consist of two nuclear reactors of equal capacity. The specification has laid emphasis on the need for keeping the foreign exchange component to the minimum. The tenderers are to employ, to the greatest extent possible, Indian materials, locally fabricated equipment and Indian personnel. The Tarapur atomic power station, it is expected, will be completed in 1965, when it will contribute substantially to meeting the power needs of Maharashtra and Gujarat. India has already signed an agreement with Russia for setting up another atomic power station.

Russian Trade Delegation

A Russian trade delegation has arrived to negotiate trade plans for a three-year period. These plans, under the existing trade agreement, are so far on a yearly basis. The longer period of three years will enable both countries to plan their trade better. As already reported, India would like to import machinery and equipment from rupee-payment countries in general, and Russia in particular.

An Indian team, headed by Dr. D. S. Kothari of the Ministry of Defence, has left for Russia to finalise the deal for the purchase of helicopters and certain categories of engineering equipment. According to reports, Russia is prepared to set up a helicopter factory in India under "certain conditions".

Burmese Rice

India has invited a Burmese trade delegation to negotiate a rice deal. If prices are favourable, India would like to import 300,000 tons of rice from Burma in 1960-61.

Sugar Export Quota

The Central Ministry of Food has announced the export quota for sugar, ignoring its past experience of the sugar industry, which now wants a subsidy, either by an increase in the internal price of sugar or by direct payment. It has asked for a sum ranging between Rs. 1.25 crores and Rs. 1.3 crores. It claims that since the internal price of sugar is fixed, it is unable to bear a loss on exports. It is explained that the Government, in fixing the 1957-58 season's prices at Rs. 36 a maund, has allowed a margin of 50nP a maund to enable the industry to export sugar. Some 36,000 tons of sugar were exported in that year. In the 1958-59 season, only 11,000 tons, including 4,000 tons of carryover, were exported. In 1958-59, the question of prices was referred to the Tariff Commission, which did not recommend any revision. The Commission stated that 50nP a maund should be regarded as an adequate margin to meet the loss on exports. In the 1959-60 season, cane prices were raised by As. 3 a maund. This increase was passed on to consumers by raising the price of sugar to Rs. 37.85 a maund. The industry claims that its cost of production has gone up by 39nP a maund in the following way:

		Naye Paise
Increase in wages	...	10
Increase in the packing charges	...	12
Increase in the price of stores	...	7
Increase in insurance charges	...	1
Increase in railway freight	...	3.2
Return on capital employed	...	24
Total	...	57.2
Less 18nP in lieu of the Tariff Commission's formula relating to the duration of season	...	—18.0
		39.2

It should also be borne in mind that when sugar prices were fixed, production was 2 million tons. It is now 2.4 million tons. *Prima facie*, the increased production should reduce the overhead charges. Then again, there were no exports from the 1959-60 output on which an 11nP a maund subsidy was paid to the industry. A rough calculation places this margin of profit at Rs. 72 lakhs. The Government has also allowed an excise duty rebate on excess production, which works out to Rs. 6½ crores. In case India is allowed an import quota by the U.S.A., she will be able to sell her sugar at 82 percent higher prices in that country.

Diesel Locomotive Shop

The Government has decided to set up a diesel locomotive shop in the public sector. There are 181 diesel locomotives in service at present and 78 are on order. The target for the third plan is 450 locomotives. Due to heavy movements of goods, particularly of coal, diesel locomotives have been introduced on the Asansol-Rourkela, Barkakhana-Daulatgunj, and Gaya-Mughalsarai sections. Coal movements on these sections are so heavy that there is no longer any possibility of coping with this traffic with steam locomotives. It is, however, explained that dieselisation has been introduced in advance of electricity which will replace it, as soon as it is available. Some parts of India will still have diesel traction including the Kandla-Palampur section in Saurashtra or that from Barauni to Amingaon in Bihar for which 60 locomotives are about to be ordered. Lumding to Badurpur in the hilly areas in Assam will also be served by diesel locomotives, particularly due to the nature of the country. For the quicker movement of coal, it is also proposed to serve the Mughalsarai to Saharanpur *via* Lucknow section with diesel locomotives. In fact, for this section, tenders for 40 locomotives have already been issued.

Railways and Coal Shortage

The Ministerial cold war over the coal shortage continues, although the new blast furnaces at the Rourkela and Bhilai are still lying idle. The railways' case is that the steel plants in the public sector were planned on certain assumptions concerning the supply of coal and other raw materials. It is claimed that many of these assumptions have not materialised. Three coal washeries, for example, were to be set up side by side with the steel plants. Only one coal washery has so far been installed. Apart from the availability of the right type of coal, the coal washeries were to provide

JWT BY-848

bunkers, thereby mechanising coal loading. The tippling apparatus at the steel plants mechanises unloading.

It is further claimed that 125 wagons of 22-ton capacity are required for the carriage of one million tons of coal, provided wagons are loaded every day. The coal industry, even in the public sector, has not been able to load coal on Sundays and other holidays. The requirements of wagons, it is asserted, are based on six days a week loading. The loadings dropped during the Durga Puja holidays. The assumption under the second plan was that the loadings would be for seven days a week. It is learned that arrangements have now been made to resort to seven days a week loading with effect from 1st November.

The iron ore mine for Rourkela could not be mechanised and, instead of moving ore from a distance of 36 miles, it is being drawn from the same area as that catering for the Tata, Indian Iron and Durgapur steel works. Similar is the story of limestone, which is being moved from Sutna or from north-east Bengal. It is alleged that neither Rourkela nor Durgapur have installed trippers for wagon unloading. This means delay in loading, delay in unloading and not using the specially built coal wagons to be run as coal specials.

Poor Coal for Railways

The railways are also complaining about the quality of coal allotted for their own use. This coal is supplied from public sector collieries, where there are no screening and loading arrangements. The railways, it is alleged, get inferior quality coal, which seriously affects their efficiency. In the public sector, the overburden from coal mines has been removed by costly imported equipment, leaving open-cast mines. In the absence of loading arrangements, wagons are detained.

It is further claimed that from 21st September to 30th September, the railways offered 5,215 wagons daily to the Coal Controller, who used only 4,318. The average of wagons used, it is pointed out, should have been 4,915 a day. It is claimed that the Coal Controller has been informed that his first priority for the allocation of wagons should be for steel plants, and yet the actual loading for steel plants was less than 1,400 wagons a day. It is alleged that collieries are cancelling their allocations of wagons, which might mean that there is no coking coal available. It is further explained that the railways have asked for the opening of dumps, so that requirements of coal during the busy season might easily be met. As for railway sidings, it is stated that the National Coal Development Corporation is largely responsible for the delay. The Corporation has not provided a single bunker nor has it made any permanent arrangements for the loading of coal.

This is an alarming picture. It is no secret that coal production has not been rising according to plan and that washeries could not be got ready by the time the blast furnaces in the steel plants were to be fired. An equally important question is whether the railways are ready with their special tippling wagons. In Bhilai, tippling was ready long before wagons were ready and being used. Mechanisation is avoided in this country. The Planning Commission's emphasis is on employment. There is on record a common agreement to which the railways are a party that there will be no tippling in Rourkela and that manual labour will be used for unloading coal.

The case of Durgapur is on a different footing. Firstly, this steel works is to have a coal washery. Even for tippling, there are open and closed wagons. It was agreed that the closed and open wagons will be in certain proportions. It is learned that arrangements for the tippling of small wagons in Durgapur are complete but the railways are not sending out wagons in the agreed proportion. Another type of wagon called "Bobs" is used for carriage of iron ore. It is hoped that the iron ore mines originally planned for Rourkela will soon be ready.

Indian Delegation to G.A.T.T.

Due to last-minute changes and the decision against holding meetings at the ministerial level, the personnel of the Indian delegation to G.A.T.T. is changed. It will now be led by Mr. S. Ranganathan, Secretary, Ministry of Commerce and Industry. Mr. T. Swaminathan, Commissioner-General in Europe will be the alternate leader. In addition to two officers of the Ministry, the delegation will include Mr. G. L. Bansal, secretary-general, Federation of Indian Chambers of Commerce and Industry. The delegation will leave India on 28th October.

U.S. Credit for Third Plan

The U.S. Government, it is expected, will soon announce its credit contribution to India's second and the third plans. According to reports, it will be $250 million during the U.S. fiscal year 1st July to 30th June, 1961. Of this, $50 million will be from the Export-Import Bank and the rest from the D.L.F. Of the $200 million, $50 million, it is expected, will be untied to be used for the import of capital equipment from the U.S.A. It is expected that at least $25 million will be made available to bridge the second five year plan's foreign exchange gap. The U.K. is being pressed by India to give a further £10 million credit in addition to the £15 million already given. Indications are that the U.K. will offer at least £5 million shortly, making a total of £20 million towards the second plan. Japan, it is reported, is planning to give a $20-million credit to India for the third plan.

London

U.K. CHANCELLOR URGED TO RELAX CREDIT SQUEEZE

STEEL PRODUCTION RISES: DEMAND FALLS

(FROM OUR LONDON CORRESPONDENT)

THE U.K Chancellor of the Exchequer, Mr. Selwyn Lloyd, is due to explain the Government's intentions concerning the economic outlook to the Conservative Party annual conference on the one hand, and on the other is faced with widespread demands both from employers and union leaders to relax the credit squeeze in an effort to offset the setback which has affected output in certain sections of industry in the last few weeks. The situation is further complicated by the month-old unofficial strike of tally clerks in London which has had the effect of bringing the working of the port—which handles something like 40 percent of the country's trade—to a virtual standstill. The motor-car industry has mainly been affected by the setback, where some 50,000 workers are now on short-time, but it must in due course spread to the various ancillary industries in engineering if overproduction is to be avoided. The reasons advanced for the recession include a general pause in world trade, a partial return to the seasonal trade habits, the hire-purchase restrictions, and the rapid growth of production capacity, and to this must be added the increasing competition being met in the American market from their "compact" motor-cars. Not all these factors come within the control of the Government, nor is the recession by any means universally felt throughout industry.

The U.K. Iron and Steel Board has reported that the demand for steel from producers of motor-cars and other durable consumer goods has eased but this change is being met by reduction in sheet imports and it is partly offset by the rising steel demand from the investing industries. "The substantial tonnage of orders on hand makes it likely," the Board comments, "that steel production will continue for the present at a high level." In September, moreover, the annual rate of steel production has just been over 25 million tons—the first time that figure has been passed. This is nearly 3 million tons more than the rate that was being achieved in September of last year. Even the motor-car industry does not regard the present recession as more than a temporary setback. It is significant that capital expansion plans are not being altered. There has been little indication so far as to the U.K. Government's thinking on the subject, but the Prime Minister, replying to a request from leading television and radio manufacturers for an easing of the credit squeeze indicated that he had "called the attention of the Chancellor of the Exchequer, the President of the Board of Trade, and the Minister of Aviation to the facts that the manufacturers have put before him."

U.K Investment Abroad

U.K. Board of Trade statisticians—with the co-operation of 4,000 companies—have made a notable addition to one's knowledge of international investment and to the underlying factors in the balance of payments. The first figures are published in the latest *Board of Trade Journal* from an enquiry, to be made regularly in future, into Britain's private direct investment overseas and a corresponding private direct investment made there by foreigners. "Private" and "direct" cover investment by manufacturers, traders and others in businesses outside their own country, both by transferring money and leaving profits in the country in which they have arisen to finance further development. In other words, the U.K. Board of Trade's enquiry excludes Government and portfolio investment. The first published figures also exclude investment by oil and insurance companies which is being dealt with separately.

As the table below shows, the U.K. balance of payments on current account last year benefited to the extent of £89 million (the difference between profits of £228 million on overseas investments and £139 million which accrued on foreign investments in the U.K.). This compared with £102 million in 1958. Net investment abroad (U.K. foreign investment less foreign investment in the U.K.) is shown by the second part of the table to be about the same (£58 million) in both 1959 and 1958. But the final figures are likely to show that more was invested in Britain in 1959 by overseas interests than the former invested abroad. The survey also brought out the high proportion of U.K. investment which is made in the sterling area. The latter's figure for 1958 was £79.7 million out of a total of £145 million, whereas U.K. investment in North America, which came next, amounted to £38.3 million. North America leads as a source of overseas investment in industry in the U.K. The total North American investment in 1958 was £71.6 million, of which the United States accounted for 85 percent. Investment from all external sources was £87.3 million. The earnings of U.K. offshoots of American business made up 90 percent of all foreign earnings in Britain (£94.6 million). U.K. companies in the United States earned £17 million in 1958.

Changes in Imports

The U.K. Treasury's latest *Bulletin for Industry* contains a study of the relation between economic growth and imports, which brings out the familiar fact that in any period of industrial expansion imports tend to rise very fast, and then usually to fall off as fast again when activity levels off. This mainly reflects changes in industrial stocks. But in the last five or six years, there have been three other important changes in British imports. One is that rising prosperity has led to higher imports of food and other consumer goods. The U.K. Treasury's study points to the rapid rise in imports of new motor-cars and motor-cycles, radio sets, sewing machines, washing machines, and refrigerators and cameras. Secondly, the import content of domestic capital expenditure on plant and machinery has risen sharply; between 1954 and 1959, gross fixed investment in plant and machinery in the U.K. rose by just over 40 percent, while imports of industrial machinery went up three times as fast. These two developments can, however, hardly be described as a "trend" because they happened in a period when import restrictions were being dismantled. On the other hand, the third—the rapid rise in imports of oil—is surely due in part to a basic technical shift from coal to oil which will not respond much either way to changes in the rate of economic growth. In fact, the reasons why Britain's balance of payments goes wrong so regularly when economic activity begins to hum are still far too little known.

Engineering Output Expands

Production in the U.K. engineering and electrical goods industries continued to expand in the first seven months of 1960, although the rate of growth slackened after the end of April. This is the inference from the latest statistics published by the U.K. Board of Trade, which show that the volume of production in these industries in July was 7 percent more than a year earlier, compared with increases of 8 percent in May and June and 13 percent in the first four months of 1960, over the corresponding months of 1959. The main reason for the slackened rate of growth after the end of April was most probably the falling demand for electrical consumer goods.

The inflow of new orders to the engineering and electrical, traction and heavy vehicle industries was less in the second quarter of 1960 than in the first when the rate was particularly high, but orders continued to exceed deliveries. The slackening in the second quarter, when the index was 119, against 137, for the first quarter (1958 equals 100), was most marked for export orders, which were falling during the three months. The latest available order figures for July show some improvement, however, and the recovery extends to overseas as well as home trade.

Turnover Index Down

The Midland Bank's index of business turnover (1950 equals 100) was 183 for the third quarter of the current year. This compared with 185 for both the first and second quarters of this year and with 167 a year ago. The index is derived from figures of the total drawings on or debits to current accounts with the Midland Bank, excluding those kept at a handful of branches in the City of London, where turnover is dominated by money market and other financial transactions.

World Industrial Output

World industrial production, in slight recession in 1958 and in vigorous recovery in 1959, continued to expand in the first quarter of 1960 but probably stopped rising in the second quarter. Figures quoted in the U.K. Treasury's latest *Bulletin for Industry* show an estimated index of output for industrial countries at 136-137 for the second quarter of the current year, compared with 136 in the first quarter. (Basis is 1953 equals 100.)

Quotas for Russian Trade

Quotas of consumer goods to be traded between Britain and Russia in the year ending 30th June, 1961, were announced by the U.K. Board of Trade recently. They will total £2.85 million, f.o.b., worth of goods in each direction. The Russian quotas have been raised by 10 percent to give c.i.f. equivalents. The quotas were arranged in accordance with the 1959 Anglo-Soviet trade agreement. Both sides have agreed to further talks during the year to arrange additional quotas to bring the totals up to £4 million, f.o.b., in each direction—the target set in June this year. The biggest quota of Russian goods for Britain is £550,000 for tinned salmon. In addition, licences for the latter amounting to the same figure will be issued under arrangements made outside the consumer goods agreement. Among British goods for export to Russia are white fish, £550,000, leather footwear, £470,000; woollen piecegoods, £425,000; cotton piecegoods, £270,000 and motor-vehicles, including passenger cars and spare parts, £150,000.

Lancashire Textile Traders Worried

The announcement by the Government of India that it had withdrawn its imports quotas for cotton textiles has caused some concern in the trade in Lancashire. Not so much because of the actual value of trade involved, as at about 3 million square yards valued at £450,000 it is only of minor importance, but because of what its cessation represents, especially from the long-term point of view. The quota system for textile imports has been in force since the proclamation of the Republic. It was then based on a system of past performance by importers, irrespective of the types of cloth concerned. Imports, moreover, were subject to a very high tariff rate even taking into account preferential rates.

The system was basically insecure from both points of view, and in 1955 a mission led by Mr. A. D. Campbell went to persuade the Government of India to revise the system and secure some reduction in tariffs. After lengthy negotiations, the mission achieved a 50-percent reduction in tariffs and, more important still, persuaded the Government of India to revise the quota system. The new approach took into account the different types of cloth in demand in the country and the part that could be played in supplying them by the home industry and by imports from Britain. A list of 15 cloths not produced in India was prepared for which import quotas would be allocated and this list, with some additions and reductions, has remained in force up to the present.

The Campbell mission aimed at an overall total of exports of about 15 million to 20 million square yards. This total, however, was never reached and the course of events has been a steady reduction in the quota, the most recent, of 25 percent, being imposed in April last year. The highest figure reached was in 1957 when a total of 7 million yards was sent to India, but this fell to less than 3 million yards in 1958 and 1959. Although the trade was only of minor importance, there is some concern in Lancashire as it is considered that the quota represented a foothold in the market and ensured that contact was being maintained.

— an industry on the march

Long regarded as the cheapest heavy-duty packaging material, jute is today claiming attention as a fabric with greater possibilities and wider applications.

Laminated with paper or plastic, jute fabrics provide moisture-proof containers for fine or high-grade products. Treated with chemicals, they offer protection against rot, mildew, corrosion and attack by rodents and insects. Scientific experiments have resulted in the production of a hessian membrane for water-proof roofing... hessian in combination with asphalt is finding increasing favour as a material for canal-lining and a moisture barrier.

These and other discoveries which have dramatically widened the scope of jute usage, stem from the fundamental and applied research carried out at the Indian Jute Mills Association's Research Institute in Calcutta. Side by side, the Institute of Jute Technology—financed by the IJMA—provides facilities for training young men for important supervisory positions in jute mills.

Founded in 1884, the Indian Jute Mills Association seeks to serve India's vital jute industry in ever-increasing measure.

GUNNY PRICES EASE AFTER SHARP INITIAL RISE

MILLS SEAL MORE LOOMS: QUOTA SYSTEM BEING CONSIDERED FOR FIBRE PURCHASES

ONE of the complaints often made by users of jute goods is that they have to suffer wide and unpredictable variations in prices. Consumers have pointed out that it is impossible to plan ahead because of the vagaries of the Calcutta market, and there is no doubt that the use of substitutes has been encouraged by the uncertainty of jute goods prices. Some years ago, the West Bengal Government brought from the U.K. an expert in cotton futures trading to conduct an investigation into jute futures. After a prolonged enquiry, an elaborate scheme was drawn up but then duly pigeonholed. Later, a modified scheme was put into operation. But it was abandoned after a trial period and the whole project was then dropped. A regulated futures market again came into being under the auspices of the East India Jute and Hessian Exchange Ltd, incorporating many of the salient features of previous recommendations. This has now been temporarily closed, which confirms the private view of the experts that this form of trading will never work well as long as it is used as a means of making money instead of as a legitimate hedge, and to control undue price fluctuations.

Consumers Bewildered

Recent trading, in spite of the fact that the futures market is again closed, has been subject to daily fluctuations, often without any close relation to the supply of, and the actual demand for, goods. At one moment, speculators are in a bearish mood and prices are knocked down—until another group decides that it is an opportune moment to raise futures rates for a particular delivery. There is nothing the legitimate trader can do about it. Meanwhile, there has quite possibly been no change in the supply position. All this must be very bewildering to consumers. They may be people who use jute goods as a packaging material and they cannot quote with certainty for the commodities they are to supply, because they do not know within reasonable limits what their packing is going to cost. Likewise, those who use jute manufactures as components of their own finished products must have their calculations upset by the speculative fluctuations in Calcutta.

Rapid Rise

The complaint is being repeated now because of the rapid rise in prices recently. Since the beginning of this month, the price of B Twills for ready delivery has risen by 35 percent, and the price of 40in. 10oz. hessian cloth by 15 percent. During the same period, raw jute rates have advanced by 25 percent, and it is from here that the current uncertainty takes a lead. It has been obvious for some time that the jute crop will not be sufficient to supply the demand. So raw jute prices have soared, and the situation in Calcutta has become critical, to say nothing of the effect on overseas interests.

During the past week, the situation has been under constant review by the I.J.M.A., sellers' organisations, brokers' organisations and the East India Jute and Hessian Exchange. Settlement of market differences was proposed in the futures market at rates well below those ruling at the time, and sellers put up a proposal to the mills that a similar arrangement should be concluded for their outstanding contracts in raw jute. It is understood that this did not meet with the buyers' approval, although they were prepared to consider a wide variety of options and extensions. The gentlemen's agreement not to buy jute was exended up to Monday, 14th October, and has subsequently been renewed for the rest of this week. Although in general mills have kept to the agreement, there has been a certain amount of minor trading both upcountry and in Calcutta. The effect has, however, been noticeable as prices have fallen by about Re. 1 a maund each day, although gunny prices have continued to fluctuate erratically.

Voluntary Sealing of Looms

The I.J.M.A. has also decided to allow its members voluntarily to seal up to a further 5 percent of their looms from 17th October, and, if necessary, an additional 5 percent one week later. It is understood that most mills have taken advantage of the move, and production has been cut. Protests have come from the West Bengal Government; it is believed that it has urged representatives of the I.J.M.A. and the central trade union organisations to meet the Labour Commissioner to discuss the situation. At a recent meeting, the I.J.M.A. also considered the introduction of a quota system for the mills to make jute purchases, and a sub-committee has been formed to evolve a plan. It is understood that a modified quota system may be ready for adoption early next week.

Meanwhile, the raw jute situation has eased considerably. Upcountry agencies report that prices are now nearer parity with Calcutta rates, which themselves have dropped by Rs. 3 a maund, this being the extent of the single rise last Thursday. Imports in most receiving centres, while not showing much improvement, have been maintained at a reasonable level. Cossipore arrivals have numbered about 100 wagons a day, which is not only well up to average, but above the figure for the corresponding week of last year. A fair amount of business has been conducted by sellers, both in the local markets and upcountry, and there appears to be no shortage of ready jute. Both farmers and stockists appear to be holding fair quantities, and incongruously the supply at present seems greater than the demand.

Pakistani Crop Forecast

The news from Pakistan has also tended to alleviate much of the tension and speculation about the availability of jute across the border. To scotch recent newspaper reports, the official final forecast of the jute crop in East Pakistan could not have been better timed. The Provincial Directorate of Agriculture says that the total production of jute during the 1960-61 season will be 5,625,000 bales, which is 261,882 bales higher than last season's output. The increase is attributed to a bigger acreage as a result of the abolition of the jute licensing system, and the withdrawal of the ban on the cultivation of jute in the border areas. The total acreage of jute during the season stood at 1,517,800. Official estimates are always notoriously inaccurate, and the trade in general considers the Pakistani one an exaggeration. But it feels that the figure is nearer the mark than that recently reported in the daily Press.

The Calcutta goods market has seen wide variations this week. Mills, not being able to buy raw jute, showed very little interest in gunnies. Consequently, a demand developed for various fabrics against small shipper enquiries. Cornsacks, in particular, came in for interest, and their rise to Rs. 200 a 100 bags was a result of mills' reluctance to sell, combined with heavy covering in this fabric. Sacking in general was in good demand, but hessians were quiet and price movements were governed by the fluctuations of the heavy goods section. Reports that mills were considering a further cut in production sparked off fresh speculative buying, but eventually a stage was reached when everyone was a buyer, with no sellers available. This brought a quick reaction, and towards the close, easier conditions prevailed.

I.J.M.A. Production Figures

During September, member-mills reporting to the I.J.M.A. produced 89,400 tons of jute goods in 192 working hours. The total consisted of 32,500 tons of hessians (36.3 percent), 47,900 tons of sacking (53.5 percent) and 9,000 tons of other goods (10.2 percent). The output was 4,800 tons less than in the previous month due to a drop of 2,600 tons in hessians, 400 tons in sacking and 1,800 tons in other goods. The fall can be accounted for mainly by the reduction of 16 working hours compared with the previous month because of the Puja holidays. The drop would probably have been much bigger if the average production an hour had not increased by 13 tons to 465.6 tons. The latter rise was mainly due to the continued swing in production towards sacking constructions, which showed an increase of about 2 percent at the expense of both hessians and other goods.

Total production for the period July-September 1960 now stands at 270,400 tons, made up of 101,900 tons of hessians, 138,600 tons of sacking and 29,900 tons of other goods, giving an average hourly production of 450.6 tons. In September 1959, the production was 92,600 tons—37,500 tons of hessians (41.8 percent), 48,800 tons of sacking (50.5 percent) and 6,300 tons of other goods (7.7 percent). The hours worked were 209 and the average hourly production was 443 tons. Total production for the period July-September 1959 was 269,100 tons, made up of 115,600 tons of hessians, 130,600 tons of sacking and 22,900 tons of other goods.

Raw Jute Consumption

The estimated raw jute consumption of mills reporting to the I.J.M.A. was 500,000 bales, making a total of 1,544,000 bales for the period July-September 1960. In September 1959, the estimated raw jute consumption was 534,000 bales, and the total for July-September 1959 was 1,554,000 bales.

THE JUTE MARKETS

Manufactured Goods: The Calcutta jute goods market was very steady at the opening last Thursday. Several overseas orders were being covered, and prices, particularly of cornsacks, rose rapidly. While ready B Twills advanced by Rs. 2 to Rs. 170.50, ready cornsacks jumped by Rs. 10 to Rs. 195, eventually rising to Rs. 200 before the demand was satisfied. Hessians were completely neglected and 40in. 10oz. dropped by 75nP in the near position to Rs. 57. On Friday, there was again a bullish atmosphere due to covering business and speculation. B Twills moved up to Rs. 178 and 40in. 10oz. to Rs. 58. On Saturday, rates rose by a further Rs. 5.50 and Rs. 1.25, respectively, on reports that the mills were thinking of sealing more looms. A reaction set in over the week-end and a general movement in a downward direction became apparent. Selling pressure from holders, and resistance to higher prices by shippers, had their effect, so over the next two days, a quieter tendency developed. Cornsack rates, which at one stage stood at a premium of Rs. 20 over B Twills, dropped back to a premium of about Rs. 13, and hessian indications were reduced by about Rs. 2.50. Wednesday being a holiday, the markets were officially closed.

On Tuesday morning, nominal quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	42.00	42.00	42.15	42.35
40in. 8oz.	45.85	45.25	45.25	45.25
40in. 10oz.	55.75	56.00	56.25	56.50
B Twills	175.00	173.00	171.00	169.00
Heavy Cees (Plain)	174.00	173.00	171.00	169.00
A Twills	208.00	207.00	206.00	203.00
Liverpools	193.00	193.00	191.00	189.00
Cornsacks	188.00	184.00	179.00	174.00

Raw Jute: Once again, hardly any business was reported from the jute market. The response to the gentlemen's agreement, with minor exceptions, was good. Apart from an initial rise during the opening session, prices showed a gradual decline, Assam Bottoms falling from Rs. 55 to Rs. 52 a maund. Mills, after another series of I.J.M.A. meetings, rejected the sellers' requests for settlements against outstanding contracts, and extended the duration of the ban on buying jute to the end of the current week. At the same time, the feasibility of a quota system was explored and a sub-committee formed to frame a plan of action. It is expected that by early next week, some form of "rationing" will be in force, in which case the ban on purchases will be lifted. Meanwhile, member-mills of the I.J.M.A. voluntarily sealed a further 5 percent of their looms in a further attempt to conserve jute supplies.

Sellers were now keen to sell jute, and offers on a price-to-fix basis were plentiful. Stocks upcountry improved slightly, and prices came down to levels more in line with Calcutta indications. Official assurances that the Pakistani crop would not be as short as was recently indicated, did much to restore confidence, but prices in Pakistan remained high. Arrivals in the Cossipore market last week were good and a total of 717 wagons were reported. In addition, several flat loads were taken into stock since the sellers had been unable to sell the jute in transit as ready bills of lading. The Cossipore stock position was much better than it was a few weeks ago, and inter-baler business increased.

As Wednesday was a holiday, the prices below were those ruling at the opening of business on Tuesday morning:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	139.25	52.00	Oct.-Nov.
Northern	136.75	51.00	„
Purnea Desal	135.25	50.50	„
Daissee Selected	140.75	52.50	„
Assam Tossa	142.00	53.00	„
Mesta:			
Assam-Northern	134.00	50.00	„
Daissee	134.00	50.00	„
Jungli	131.25	49.00	„
Pakistani *N. C.*	255 a bale		„

THE PAKISTANI JUTE MARKETS

FURTHER SHARP RISE IN FIBRE PRICES

(FROM OUR EAST PAKISTAN CORRESPONDENT)

RAW jute prices have risen almost hourly this past week, and quotations are unreal as the sellers, who are few, get any price they ask for. Only in August, cuttings stood at Rs. 80 a bale. It was then expected that as soon as the light-rooted jute, which one gets at the beginning of the season, was exhausted, prices would come down, particularly as it was taken for granted that the small carryover consisted mainly of cuttings. But now a trader would consider himself lucky if he could buy a lot of 1,000 bales of cuttings at Rs. 230 a bale. It is even reported that private business without a broker is being transacted at Rs. 250 a bale. Export Hearts, Export Lightnings and Export Firsts in mid-August were considered expensive at Rs. 203, Rs. 213 and Rs. 218 a bale. Furthermore, it was felt that with the midland crop damaged by receding waters, there would be a glut of Export Hearts and the gap between Export Firsts and Export Lightnings, as also that between Export Lightnings and Export Hearts, would increase. While today there may be less of Export Firsts than usual, the general shortage of all grades has kept the margin of Rs 10 between the marks unchanged, namely, Rs. 390 for Export Firsts, Rs. 380 for Export Lightnings and Rs. 370 for Export Hearts is already a "low" price according to the current quotations in the market.

It was generally believed that the tossa crop was proportionately larger than the white crop, and, therefore, the prices of dark jute would rise less. But Outport Tossa 2/3 has risen from Rs. 213 a bale to Rs. 375 a bale and Dacca Tossa-5, which stood at Rs. 228 a bale recently, is now quoted only nominally at Rs. 395 a bale. A similar rise has occurred overseas. When in August Export Firsts were accepted at a discount price of £110 a ton, it was considered a good sale. Business has

now been done at £180 a ton, although offers have been made at £200 a ton.

It is extremely difficult to quote loose jute prices, which depend purely and simply on the mood of the sellers. Lot prices of Rs. 80 for garsat jute are being freely asked in the Narayanganj market. On the other hand, in some other up-country agencies, prices are as much as Rs. 15 a maund cheaper. The reason is obviously that the telegraphic communication upcountry cannot keep pace with the rise in the Narayanganj market. Loose jute sellers have once again started the practice of adding moisture to fibre.

There have been a series of meetings between the trade associations and various Government representatives. While nothing definite is known about the outcome, it is interesting to study the rumours which prevail. The first suggestion was for destinational quotas, but it is obvious that the official introduction of this system will take too long to have any effect. Another suggestion was to restrict exports of low-grade fibre which is normally used by the local and Indian mills. It is unlikely that the Government will agree to such a measure. Another more reasonable suggestion was that whenever a baler registers a sale for export, he should simultaneously offer to the mills, at the latter's price, 20 percent of what he has sold overseas. Although more feasible, this would call for a rather complicated check system.

In spite of the fantastic prices which shippers demand, overseas buyers remain in the market. Egypt is reported to have bought very recently over 2,000 tons at about £190 a ton for Export Firsts. Russia and China have so far not come into the market but if they had, there is no knowing to what heights prices would have shot up. One bright spot is that some of the bigger balers have decided that the rise has gone too far and they are trying to lower the market by refusing to buy, or at least by buying less. This would appear to be the only effective way to check the present profiteering. If buyers both in Pakistan and overseas co-operate in sitting out, they may well succeed, at least temporarily, in bringing some sense into this market. Unfortunately, the biggest culprits are the Pakistani jute mills, who, having had a good position on paper, and having been badly let down by their suppliers, are desperately looking for jute, and are buying anything they can lay their hands on. The mesta crop which will be coming in shortly may alleviate the position of the mills slightly, but the relief will be small.

THE FOREIGN JUTE MARKETS

FIBRE PRICES RISE SHARPLY

(FROM OUR DUNDEE CORRESPONDENT)

JUTE traders in Dundee have been surprised by the fluctuations of raw jute prices during the past fortnight. They refuse to believe that the new high levels can be maintained for any length of time. They seem to believe that if prices remain as high as they are now, the jute industry in Dundee will be ruined and many mills might have to close down. Not many people are interested in the daily prices of fibre, as they have been jumping to such great heights as £210 for Mill Firsts, £200 for Mill Lightnings, £195 for Mill Hearts and £190 for Grade Hearts, £200 for Grade Tossa-2/3 and £187 for fours, with Continental Tossa-2/3 from £184, October-November, c.i.f. U.K.-Continent.

The availability of secured parcels, which are being offered all over the market at anything from £10 a ton to £15 a ton less than the pucca shipment offers, is responsible for considerable irregularity in prices, and it will be a difficult task over the season to determine actual shipment prices from those of secured lots. Mill Lightnings, for instance, were offered recently at £188 and Mill Hearts at £183, but these were later withdrawn and £191 and £183 were the lowest prices, respectively, for October-November shipment.

Dundee spinners have bought little jute since the rise in prices began, and they have not been keen to pay the prices which, to say the least, are so fantastic that it might be impossible to maintain them. Periodically, the Dundee jute industry has to suffer the effects of speculative manipulation by fibre traders, and consumers of yarns and cloth get disgusted with the rising prices. Much business will be lost to substitutes this year.

On 12th October yarns were raised by £15 a ton (rove by £7 10s.) Now the rates are 24.03d a lb for 8 lbs C.H.W cops and 25.18d for 8 lbs J.C.H. warp, with 3 ply 8 lbs twist at 27.10d and 24 lbs sacking weft at 20.04d a lb. Hessian cloth values rose to 19.43d a yard for 40in. 10oz. and 16.25d for 8oz.

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total production of jute goods for September as follows :

Description		Quantity
1. *Gunny Bags*		
(a) Hessian	2,674 tons	(2,717 metric tons)
	88.1 lakh yds.	(80.56 thousand metres)
	57.7 lakh nos.	
(b) Sacking	47,379 tons	(48,129 metric tons)
	11,14.1 lakh yds.	(10,18.74 thousand metres)
	5.03.0 lakh nos.	
2. *Gunny Cloth*		
(a) Hessian	29,848 tons	(30,327 metric tons)
	11,36.0 lakh yds.	(10,38.77 thousand metres)
(b) Sacking	510 tons	(518 metric tons)
	11.0 lakh yds.	(10.05 thousand metres)
3. Other Manufactures	8,948 tons	(9,092 metric tons)
4. Total Production (All kinds)	89,359 tons	(90,793 metric tons)

Summary

	(00,000 yds and 000 metres) Sept. '60	Aug. '60	Sept. '59	(000 tons and metric tons) Sept.'60	Aug.'60	Sept.'59
Hessian	12.24	13.14	14.03	32.5	35.1	37.5
	(11,19.33)	(12,01.77)	(12,82.49)	(33.0)	(35.7)	(38.1)
Sacking	11.25	11.34	11.39	47.9	48.3	48.3
	(10,28.79)	(10,36 65)	(10,41.01)	(48.7)	(49.0)	(49.6)
Others				9.0	10.8	6.3
				(9.1)	(10.9)	(6.4)
Grand Total				89.4	94.2	92.6
				(90.8)	(95.6)	(94.1)
Hours worked				192.6	208.0	209.9

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are metric measures, and those of length, being based on the actual (detailed) figures, are more precise.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in September, following the usual seasonal pattern, was 9 million yards above August but was 4 million yards below September last year. Compared with August, bag cut-up improved by 14.4 percent and piecegoods deliveries by 10.8 percent. Last month's estimated consumption, which was 4 million yards below that for a year ago, reflected the effects of a higher price level on sales. With the further sharp advance in prices since the Puja holidays, burlap sales for bag and industrial uses have almost come to a standstill. U.S. burlap in stock and afloat at the end of September increased by 3 million yards. At 261 million yards, 131 million yards were spots and 130 million yards were afloats. Appearing below are two tables which include the September figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)

	1960	1959

THE WEALTH OF INDIA
Industrial Products
Part V (I-L)
Pp. xiii + 290; 11 Plates; Demy 4 to; Price Rs. 20 00

Gives a comprehensive account of the development and present position of the following industries:

Major Industries—Insecticides and Pesticides; Iron and Steel; Iron and Steel Castings; Jute Mill Industry; Lead; Leather; Locomotives

Medium & Small Scale Industries—Ice; Ink (printing & writing); Iron Compounds; Lac and Shellac; Lamps and Lanterns; Lapidary; Lead Compounds; Lime; Linoleum; Lock; Lubricants.

Cottage Industries—Ivory; Jewellery; Kattha and Cutch; Khadi

An indispensable reference book for educational institutions, libraries and industries

CALCUTTA TEA AUCTIONS IN SEPTEMBER

PRICES OF PLAIN AND MEDIUM GRADES RISE

THREE sales were held in September, and offerings totalled 186,769 packages. No sale was held in the last week of the month on account of the Puja holidays, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. There was a fair general demand throughout the month, and plain brokens tended dearer while fanning grades in this category were firm to dearer. Bright liquoring orthodox B.O.P.s and O.F.s sold well, but the more ordinary mediums, particularly B.O.P.s, showed an easier tendency. Medium B.P.s and P.F.s were barely steady in the first two sales, but in Sale No. 13 these were strongly supported and recovered most of the loss of the previous two weeks. Prices of C. T. C. Assams showed a steady decline, although a few of the best grades sold well in Sale No. 11, and quotations during the month declined by Rs. 1.50 or Rs. 2 a kilo. Non-wither legg-cut teas, however, sold at firm to dearer rates in each sale and were particularly well supported in the last sale of the month. The lower priced whole leaf grades came in for good competition, and prices were fully firm to dearer, but the better and more stylish varieties tended easier. Darjeelings met with a fair enquiry but, although an occasional invoice sold well, prices showed a steady declining trend, particularly in the case of the higher priced lots. There was a fair demand for tippy teas, but these were irregular and tended easier throughout the month.

Although the quality of Darjeeling teas continued to show a fairly general seasonal decline, there were a number of invoices with very fair flavour on offer, and leaf appearance was again very satisfactory. The general standard of Assam teas was about average, and some quite useful liquoring grades were on offer. Those of C. T. C. manufacture were often thicker and more coloury in cup, although there was some deterioration in quality. Leaf appearance was satisfactory but stalk and fibre were sometimes more noticeable. There was little change to note in the offerings from Dooars and Terai, compared with the previous month, both leaf appearance and cup quality being up to the expected standard. A number of invoices from Cachar and Tripura were very satisfactory, being clean and sweet in cup, with good black leaf and a little tip in the top grades. The general standard, however, was barely average, and there were a number of dullish and stalky invoices on offer with plain liquors.

(Inclusive of zonal excise duty.)

The Internal Market

Leaf offerings amounted to 1,000 packages, for which a strong demand prevailed at generally enhanced rates. Dust offerings amounted to about 63,000 packages. There was a strong general demand in all auctions. Orthodox descriptions came to an easier market in the first sale when prices were 20nP to 30nP lower, but in the following auctions exportable types sold at fully firm and sometimes dearer levels, while the brighter liquoring and smaller sized grades were a strong feature and considerably dearer. Legg-cut teas were again keenly competed for at appreciably enhanced rates. Medium C.T.C. dusts were well supported in the first sale and were dearer by up to 30nP but a slight easing was seen in the second sale for these descriptions. In the final sale, however, prices were fully firm to dearer, and quotations were well above those ruling in the previous month. Best liquoring C.T.C. teas sold well in all the sales and, although prices were often irregular, a dearer tendency was maintained.

Quotations

	1960-61 A kilo Rs. nP.	1959-60 A kilo Rs. nP.
Sale No. 11 Clean Plain Dust ...	4.68	3.98

Sale No. 13 „ „ „ ...	4.83	4.22

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 13 totalled 569,936 chests at an average price of Rs. 5.96, compared with 680,407 chests at an average price of Rs. 5.45 for the same period of the previous season. Internal sales at 2,925 chests of leaf and 197,898 chests of dust (average prices Rs. 4.32 and Rs. 5.22) go against 6,536 chests and 233,588 chests, respectively (average prices Rs. 3.48 and Rs. 4.39) of the corresponding period of the previous season.

The estimated north-Indian crop to the end of August 1960 was 121.55 million kilograms, compared with 138.01 million kilograms to the same date of last year. The average figure at this date for the three years 1957-59 was 133.45 million kilograms.

The export quota market was steady and quiet during the month, and little business was transacted. Sellers were quoting ¼nP while there were buyers at ¼nP, at which rate business was transacted.

Arrivals (in chests) in Calcutta warehouses during the period 24th August, 1960 to 23rd September, 1960, with the corresponding figures of the previous year in parentheses were: by steamer 416,033 (519,620), by rail 116,977 (159,055) and by air 10,189 (12,191), making a total of 543,204 (690,866) chests. From the beginning of the season 1st April, 1960 to 23rd September, 1960, arrivals have been: by seamer 1,020,290 (1,430,877), by rail 352,102 (465,686) and by air 32,088 (38,628), making a total of 1,404,480 (1,935,191) chests.

AGRARIAN BILL RECONSIDERED BY KERALA LEGISLATURE

PLANTATIONS EXEMPTED FROM THE CEILING

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Kerala Assembly has recently finished the reconsideration of the controversial Agrarian Relations Bill. The latter, it will be recalled, was originally prepared by the previous communist régime, but the President of India sent it back with a recommendation that certain changes be made in some of its important provisions in order that it may qualify for his assent. The amendments moved by the Congress-P.S.P. coalition, which is now running the State's administration, were recently passed by the Legislature, although the communist Opposition tried to defeat them at every stage. At the third reading of the Bill, the Opposition, however, expressed its willingness to co-operate in implementing the legislation. It puts a ceiling on land holdings at 15 acres, offers ownership rights to tenants, guarantees a fixed tenure and protects hut-dwellers from indiscriminate eviction.

Plantation holdings, lands used for industrial purposes and those held by religious, educational and charitable institutions have, however, been exempted from the ceiling. In the original Bill, exemption given to plantation holdings was conditional and partial. Another important change is the validation of all *bona fide* transfers made up to 27th July, 1960. The original Bill provided for the distribution of surplus lands to individuals. This provision has been altered to effect redistribution through co-operatives of landless agricultural labour. The Bill, as amended, will be sent again to the President for his assent. The Kerala Government hopes that the President will approve the new Bill readily. It has promised the House that it will try for the speedy implementation of the Bill.

Stalemate in the Pepper Market

The stalemate in the Cochin pepper market still continues. Although the futures market there reopened on 13th October—after remaining closed for five days—transactions did not take place on account of the absence of buyers at the floor prices fixed by the Pepper and Spice Trade Association under whose auspices the market operates. Meanwhile, ready rates have started moving down. The lack of overseas demand seems to have unnerved the stockists. A section of export dealers say that floor prices fixed for October and December deliveries by the Pepper and Spice Trade Association are unrealistic. For example, the floor price of Rs. 237.25 a cwt. for October delivery is as much as Rs. 27.25 higher than the corresponding New York quotation. It is, however, expected that the Indian pepper market will soon adjust itself to the changed conditions.

Shortage of Fertilisers

South Indian planters complain that they are not getting adequate supply of chemical fertilisers needed for maintaining the plantation industry's productive efficiency. The results of experiments on manuring have proved that the tea bush yields greater output with adequate manuring, says the *Planters' Chronicle*, the official journal of the United Planters Association of Southern India. Once manuring is stopped, the bush begins to react even in the first year and at the end of the five-year non-manuring period, the "production clock" is put back to the figure of 20 years previously. It has been found that in order to get the full benefit, nitrogen potash also should be applied to tea. Experiments have proved that the application of nitrogen in the absence of potash results in a decline in the ability of the tea bush to recover from pruning. During 1959-60, the south Indian tea industry received supplies amounting to 17,700 tons of sulphate of ammonia, 8,130 tons of ammonium sulphate nitrate, 3,450 tons of urea and 2,395 tons of calcium ammonium nitrate, against its indents of 24,580 tons, 11,995 tons, 3,450 tons and 2,650 tons, respectively. The position during the current year is reported to be unsatisfactory, since the industry has received only about 50 percent of its requirements of sulphate of ammonia and only negligible quantities of the other three fertilisers.

The supply of fertilisers for the coffee industry is no better. The chairman of the Coffee Board said recently that the shortage this year is causing considerable anxiety as only 50 percent of the indents for the first two quarters has so far been allotted. He added that even out of this quantity, a substantial portion is yet to be delivered from the fertiliser pool, although the allottee firms have paid for them in full. The coffee industry has efficiently used the fertilisers allotted to it during the past five years. This is evident from the fact that the yield has gone up from 34,500 tons to 49,000 tons during the period. With a record crop of over 53,000 tons standing on the trees, it will indeed seriously affect them if they were to be starved of fertilisers at this stage, planters say.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for September 1960:

Upper Assam: Outturn about normal; in Sonari outturn to date is considerably below last year; weather generally seasonable but more rain required in Dibrugarh and Panitola; floods reported from Nahorkatiya; immediate prospects fair.

Central Assam: Outturn poor to normal; rainfall insufficient; immediate prospects fair.

Lower Assam: Outturn normal to poor; outturn to date is considerably below last year in Nowgong; weather seasonable; immediate prospects fair.

North Cachar: Outturn poor to normal; good rain has fallen generally and prospects are now brighter; outturn to date is considerably below last year; immediate prospects fair; helopeltis and red spider blight prevalent in some districts.

South Cachar: Outturn normal to poor; immediate prospects fair; outturn to date is considerably below last year; red spider blight, helopeltis and black rot prevalent in almost all the districts.

Eastern Dooars: Outturn about normal; outturn to date is considerably below last year in Kalchini where black rot is prevalent.

Central Dooars: Outturn normal to poor; outturn to date is below last year; weather seasonable; immediate prospects fair.

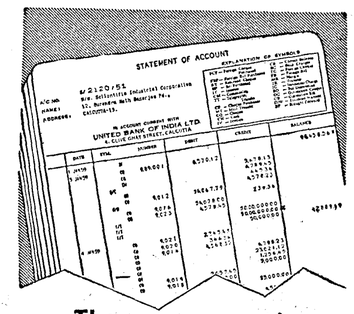
Western Dooars: Outturn about normal; in Chalsa outturn is slightly below last year; cold and wet weather is interfering with outturn; immediate prospects in Nagrakata fair; floods reported from Dam Dim

Darjeeling: Outturn about normal; immediate prospects fair: weather unseasonable; helopeltis prevalent in some districts; blister blight severe.

Terai: Crop slightly below normal; weather unfavourable in the first half of the month; the latter half seasonable; red spider continues to be persistent; some helopeltis; prospects uncertain.

COCHIN TEA SALES

At Dust Sale K, 250,000 kilograms of tea were on offer. There was a good demand, particularly for colouury mediums which were firm. Milled dusts were 10nP to 20nP easier while others declined by 5nP or 10nP.



They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

HITCH ARISES IN INDO-U.S. AVIATION TALKS

EXPORT-IMPORT BANK LOAN FOR AIR-INDIA INTERNATIONAL

(FROM OUR NEW DELHI CORRESPONDENT)

THE Governments of India and the United States have begun their consultations in New Delhi, for a general review of civil aviation matters since the two countries signed their air agreement on 3rd February, 1956. The talks, according to reports, have run into heavy weather. The U.S.A. wants another frequency, in addition to the one recently given by India to Pan American Airways to operate jet services through New Delhi. The issue hinges on *quid pro quo*. Meanwhile, the U.S.A. itself is receding from the Bermuda principles and is veering to the Indian viewpoint. It has been negotiating with K.L.M. and S.A.S. to reduce their frequencies on the *quid pro quo* principle.

K.L.M. DC-8 on Demonstration Flight

K.L.M. last week gave a demonstration flight in its *DC-8*, which flew at nearly ten miles a minute. The introduction of this jet by K.L.M. will mean a saving of seven to ten hours of travel time on the stretch Calcutta-Europe and about seven hours on the Calcutta-Tokyo stretch. From Delhi to Tokyo, the time saved will be approximately eight hours, while on the Delhi-Europe stretch, it will mean about three to four hours of saving of time over the fast *Electra* service. The *DC-8* will be put into operation on all the services of K.L.M. from India—eastbound as well as westbound.

Winter Schedule of Airlines

Air India, B.O.A.C., and Q.E.A., have announced the winter schedules for their jointly operated routes, which will come into effect on 1st November. The growing importance of tourism to the Indian capital is recognised by the increased frequency. The B.O.A.C. *Britannia* terminator disappears, replaced by two additional transit *Comets*, which flies westbound six times a week to London, and eastbound once to Sydney, twice to Singapore, and thrice to Tokyo. Air-India *Super-G* service joins Delhi to Tokyo and to London *via* Bombay once weekly. These total seven. Two of Air-India's thrice-weekly Tokyo *Constellations* connect Calcutta on the return westbound journey, with Bombay-originating *Boeings;* another *Boeing* makes Calcutta its turn-around point from London. B.O.A.C. also introduces a turn-around *Britannia* from London in addition to seven *Comets*, four of which terminate in Australia, two in Tokyo and one in Hongkong. Qantas *707s* transit three times a week in each direction on the Sydney-London route. The total is 14 services a week to London. Bombay-based *Boeings* leave for London overnight five times, and *Comets*—one a terminator—four times weekly. The three eastbound *Comets* are destined one each to Tokyo, Hongkong and Sydney *via* Colombo and Singapore, while *Super-Gs* serve Sydney once and Djakarta twice weekly *via* Madras, and Tokyo thrice weekly *via* Calcutta. The number of pure freighter services has been increased. Westbound Bombay has one, Calcutta three and Delhi five services a week to London. Eastbound Delhi and Calcutta share equally four weekly services to Sydney, of which two are routed *via* Singapore and two *via* Hongkong.

K.L.M. to Cut Frequency on Southern Route

K.L.M. will reduce flight frequencies on its southern route through the Middle East to Tokyo to two a week after jets are introduced within the next few weeks. The airline now operates two *DC-7C* services over the polar route and three *Super-Constellation* flights over the southern route each week. K.L.M. agreed to the reduction at the request of the Japanese Government under a revision of the current civil aviation agreement between the two countries.

Air-India Service to Kuwait

Air-India International has begun a weekly *Super-Constellation* service between Bombay and Kuwait *via* Karachi and Bahrein since 4th October.

Pakistan Airways Covers Geneva

Pakistan International Airways has included Geneva on one of the *707* flights between Karachi and London which began on 1st October.

Order for U.K. Aircraft

A review of British aircraft designs, sales and prospects shows that new orders announced during the Farnborough air show included five *Comet IVCs* and 16 more Armstrong Whitworth *Argosy-660* air freighters, for a total of 56 for the Royal Air Force, and six Handley Page *Heralds* for Jersey Airways. Previous orders for aircraft on display at Farnborough include three *Avro 748s* for Skyways, five for B.K.S. Air Transport, three series two *Avro-748s* (powered with R.Da.7 Darts instead of R.Da.6s in the series one) for Aden Airways. A.V. Roe conducted a sales campaign with the *748* in the U.S.A. earlier this year and claims interest by local carriers, notably Frontier and Central. The series one *748* is billed as a *DC-3* replacement and will sell for $650,000. The series two sells for $740,000 with delivery set for mid-1961. A 40-44 passenger transport, the *748* cruises at 230 knots and carries a maximum payload of 9,666 lbs over a 580 nautical mile range. The U.K. Aviation Ministry has bought three *Heralds* for B.E.A. and a provisional agreement for seven has been signed with V.A.S.P. of Brazil. The *Herald* was first flown in 1958 and is now in production.

U.S. Export-Import Bank Loans to Airlines

The U.S. Export-Import Bank approved loans recently to three international airlines to help finance the purchase of *Boeing 707* jets. A $4.1 million credit will go to Air-India International for its fourth *707*, $8.9 million will assist El Al in the purchase of two *707s* to be delivered next May and June, and Ethiopian Airlines will receive $9.2 million to help buy two *720Bs*. The latter will take delivery of its jets in late 1961 for service over trans-Africa routes and new schedules to Europe planned for 1962-63.

Air France-U.A.T. Combined Service

Air France and U.A.T. met recently in Paris to consider further co-operation on their African services. The two airlines have already agreed on the formation of a new company, Air Afrique, to operate regional services within the French Community States. At present, Air France has a monopoly on services to east Africa and U.A.T to the Rhodesias, Nyasaland and South Africa.

HANSA-LINE INTRODUCES NEW FAST HEAVY LIFT VESSEL ON RUN TO CALCUTTA

M.V. Wartenfels (9,724 gross registered tons), which arrived recently in Calcutta on her maiden voyage, is another type of a fast heavy lift vessel which Hansa-Line is introducing on the Calcutta-Continent run. The liner is equipped with a heavy lift crane with a record capacity of 260 tons. *M.V. Wartenfels* is the first of the new series of seven vessels which are intended to be put into the Calcutta-service soon. It is built as a full scantling vessel and has a direct M.A.N. diesel engine drive. The cubic capacity of the five hatches and two tweendecks amounts to grain 705,000 cubic feet and bale 643,000 cubic feet, including two cargo cool rooms of 7,400 cubic feet and vegetable oil tanks of 17,600 cubic feet capacity. Besides the comprehensive gear, the vessel is provided with two deck-travelling cranes with a capacity of five tons each. The most important feature is the speed of the vessel—over 20 knots—which almost is the speed of a passenger liner.

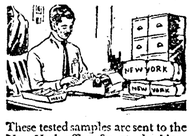
This expert has won the trust of millions in the label *'Sanforized'*

Meet our American-trained expert who makes sure that any fabric marked 'Sanforized' won't shrink. Every day, all through the year, he tests fabrics bearing this international label; so that your clothes won't shrink out of fit—even after many, many washings!

Travelling from mill to mill, he advises and helps them with their technical problems; and makes on-the-spot tests that ensure value in the cloth you buy labelled 'Sanforized'.

Whenever he visits the mills, he takes at random several samples from their godowns as well as off the processing machine. These samples are first measured, and then given a standard wash test.

And then, the samples are re-measured. This is the first stage of ensuring quality. All fabric must meet the Company's strict anti-shrinkage specifications *before* it can use the label 'Sanforized',



These tested samples are sent to the New York office for re-checking, and with them goes the expert's detailed report. These documents record the progress and prosperity of each individual mill.

The New York office checks thousands of samples from all over the world. This is your assurance that fabric labelled 'Sanforized' is of a uniformly high standard, and is welcomed *everywhere* in the world!

Look for

·SANFORIZED· REGD TO MK

on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Commodity Markets

WORLD COTTON TEXTILE BOOM CONTINUES

PIECEGOODS EXPORTS RISE

THERE are few signs of any weakening in the worldwide cotton textile boom in the latest production figures appearing in the U.K. Cotton Board's *Quarterly Statistical Review* for September. The cotton yarn output in those non-communist countries for which regular information is available showed an increase of about 4½ percent in the second quarter, compared with the same period of last year. The corresponding increase in the first quarter was about 8½ percent. The decline in the rate of increase can be attributed partly to the fact that recovery from the recession was already well under way in the second quarter of 1959 and partly to the fact that Easter fell in April this year but in March last year. Of the major cotton manufacturing countries, only the U.K. and Canada recorded lower production in the second quarter than a year earlier. The biggest increase over the same period was achieved by Japan.

Contrary to the popular impression, there has been no downward trend in world trade in cotton piecegoods since the war. Total world trade in cotton cloth in 1959 was probably higher than in any postwar year except 1951 and 1957, and the total for 1960 will almost certainly be greater than for 1959. Exports from non-communist countries in the second quarter were less than in the first quarter—a normal seasonal movement—but were about 9 percent greater than in the corresponding period of last year. This compares with a 22-percent increase in the first quarter when, however, the comparison was with a period of very poor export trade. Possibly, the most striking feature of the trade in the first half of 1960 was the increase of about 35 percent in exports from continental western Europe compared with a year ago—an increase in which all the main exporters appear to have shared. India, Pakistan, Hongkong and, to a lesser extent, Japan also exported more cotton cloth in the first half of this year than in the same period of 1959. In contrast, there was relatively little change in shipments from the U.K. and the U.S.A.

The postwar history of world trade in man-made fibre cloth has been quite different from that of cotton cloth. A steady and rapid increase after 1952 more than doubled the volume of export trade by 1957. Thereafter, there was a decrease in 1958 and in 1959, and trade in each of the first two quarters of this year was about 3 percent less than in the corresponding period of last year. The main reason for the continued decline has been a further fall in Japanese exports. U.K. exports were also smaller in the first half of this year than in the same period of last year. Shipments from the U.S.A. were at much the same level while exports from western Europe, particularly from Italy, expanded.

U.K. Output Falls

In recent months, there has been a slight falling off in the daily rate of output, adjusted for official holidays, of the U.K. cotton textile industry. In part this is because, at holiday times, the output always falls by a greater amount than can be explained by the bare number of holidays. However, the level of production is now less than in the corresponding period of last year. The rate of yarn output fell below the level of a year ago in April, and in June, July and August it was about 5 percent less than in same months of 1959. The daily rate of cloth output did not fall below last year's level until June, but in that month and July it was about 3 percent less than in June and July 1959. The main feature of interest on the weaving side up to the start of the holidays was the further rapid substitution of continuous filament synthetic yarns for rayon yarns. The reason for the fall in production, compared with a year ago, is the loss of labour. The labour force at the end of July was 16,600 smaller than a year earlier—a decrease of 7 percent. Since the end of March, however, changes in employment have been comparatively small.

Although the volume of orders received by mills has been much smaller than a year ago, order-books still remain very well filled and were even increasing, at least up to the end of July. Deliveries have also been well maintained on the whole. Certain sectors of the doubling section seem to be less favourably situated than the rest of the industry. One factor which is helping to maintain the level of demand is the excellent progress of home consumption. In the first seven months of this year, retail sales of clothing—allowing for price changes—were about 7 percent greater than in the same period of 1959, which was itself a good year for clothing sales. On the debit side, imports continue at a very high level. Imports of cotton piecegoods in the second quarter were slightly less than the record level in the first quarter since the quota arrangements reduced imports from India and Pakistan. Imports from Hongkong and Spain expanded, however, and imports from Portugal and Egypt were becoming significant. Imports of man-made fibre piecegoods have also expanded sharply this year, mainly because of increased arrivals from the U.S.A. The increase in imports of cotton yarn is mainly attributable to Spain. More than half by weight of the yarn entering the country is in a doubled form, and in the first seven months of the year these imports were running at an annual rate in terms of weight equivalent to almost 12 percent of the current rate of the U.K. doubled cotton yarn output.

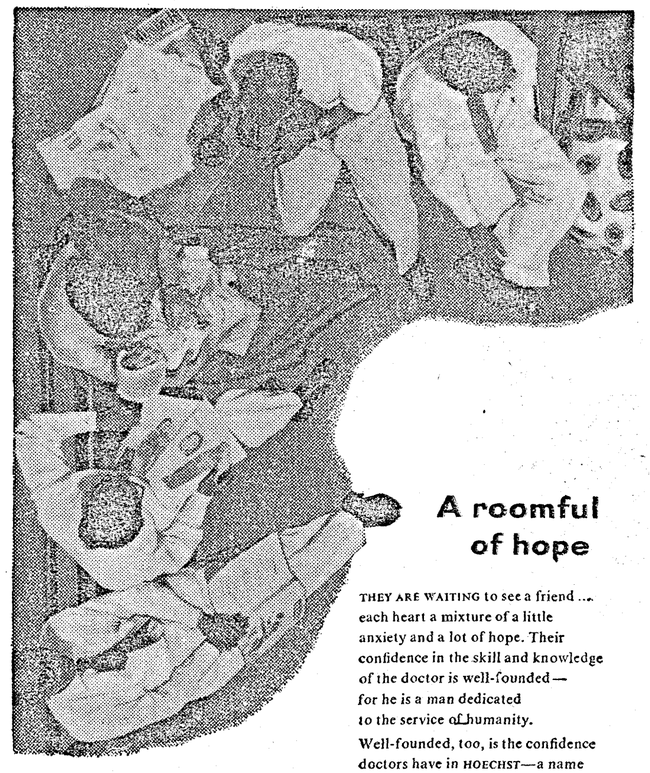
Exports of cotton piecegoods totalled 85 million square yards in the second quarter, compared with 87 million square yards in the first quarter of this year and the second quarter of last year. The decrease, compared with a year ago, in exports of cloth woven in the U.K. was considerably more severe than these figures indicate, since re-exports of processed foreign grey cloth expanded over the same period. Exports to New Zealand, Canada, the Congo and, in particular, British West Africa were greater than a year earlier, but there were moderate decreases in shipments to almost all the other main markets. Exports of man-made fibre piecegoods were also less in the second quarter than in the corresponding period of last year. The main features were an expansion in shipments to South Africa and a decrease to Rhodesia and Nyasaland. The decline, compared with a year ago, in exports of both cotton and man-made fibre piecegoods was much more severe in July and August than in the second quarter.

American Outlook Uncertain

Activity in the U.S. cotton industry continued at a high level in the second quarter of the current year. Mill consumption of raw cotton was nearly 2 percent greater than in the second quarter of last year and consumption of synthetic staple was up by 23 percent. On the other hand, consumption of rayon staple showed a further drop of 14 percent over the same period. The latest figures of the weaving output relate to the first quarter when production of cotton cloth and synthetic fibre cloth showed increases of 4 percent and 19 percent, respectively, compared with a year earlier, while the rayon cloth output was down by about 7 percent. But there have been signs of weakening in the textile trade. The rate of consumption of raw cotton in both July and August was less than in the same months of last year. Order-books have been shortening and inventories increasing since the beginning of the year, although both are still reasonably satisfactory by historical standards. The margin between the price of grey cloth and that of raw cotton narrowed steadily between February and May, although there was a very slight widening in June. Finally, there was a sharp fall in profits earned by textile manufacturers in the first quarter of the year. Fortunately, retail sales of textile products remain buoyant.

The future prospects of the U.S. cotton industry were further clouded by the refusal of the Tariff Commission to recommend an additional duty on imports of cotton products to compensate for the higher price paid by the domestic mills for raw cotton. Imports of cotton piecegoods totalled 122 million square yards in the first quarter, compared with 106 million square yards in the preceding quarter and only 37 million square yards in the first quarter of 1959. The second quarter figure is likely to be much the same as the first quarter total, in which case it will exceed the volume of exports in the same period—the first time this has happened for many years. The principal suppliers in the first quarter by size were Japan, Hongkong, India, Spain, France, Portugal, Egypt, Pakistan and Formosa. Imports of cotton yarn, although small, have also been increasing, Portugal being the main supplier. Imports of man-made fibre piecegoods, principally from Japan, fell sharply in the first quarter but are reported to have increased again.

Exports of cotton piecegoods totalled roughly 105 million square yards in the second quarter, compared with 128 million square yards in the first quarter and 118 million square yards in the second quarter of 1959. The most striking feature of the comparison with a year ago is the virtual



A roomful of hope

THEY ARE WAITING to see a friend ... each heart a mixture of a little anxiety and a lot of hope. Their confidence in the skill and knowledge of the doctor is well-founded—for he is a man dedicated to the service of humanity.

Well-founded, too, is the confidence doctors have in HOECHST—a name that is backed by over 75 years of experience in medicine. Proud of its past, HOECHST is also forging ahead to the future...carrying out valuable research in the field of medical science.

disappearance of the import trade with Cuba. Exports to Canada were also sharply down, but there were increases in shipments to Australia, the U.K., the British West Indies and a number of Latin American countries. Exports of rayon piecegoods continued their steady decline, totalling about 19 million square yards in the second quarter compared with 20 million square yards in the preceding quarter and 22 million square yards a year earlier. As was the case with exports of cotton cloth, the disappearance of the Cuban market was the main cause of the recent decline. The U.S.A. remains the world's leading exporter of synthetic fibre fabrics; shipments of these remained fairly constant in the second quarter at about 21 million square yards.

Japanese Mills Busy

The Japanese cotton and allied textile industries were exceedingly busy in the second quarter of this year, when 1.2 million more cotton spindles and 26,000 more cotton and spun-rayon looms were running than in the same period of last year. The cotton yarn output totalled 306 million lbs, 18 percent up on a year earlier and the highest figure for any quarter since the war. The spun synthetic yarn output continues to increase very rapidly and in the second quarter was double what it was in the same period of last year. Production of spun rayon yarn in the second quarter was 15 percent greater than a year earlier but is still well below the 1957 level of output. On the weaving side, the increase compared with the second quarter of 1959 in the production of cotton cloth, spun rayon cloth, filament rayon cloth and synthetic fibre cloth was 17 percent, 12 percent, 7 percent and 79 percent, respectively. Domestic consumption of textiles in Japan has been well maintained and export offtake has been quite satisfactory, but the very high level of output has caused stocks to mount since the beginning of the year, so wholesale prices have declined. Future prospects are not regarded with any great optimism.

Japanese exports of cotton yarn increased further to reach the high level of 19 million lbs in the second quarter of the current year. The increase is mainly attributable to shipments to Indonesia. Exports of cotton piecegoods totalled 299 million square yards in the second quarter, being much the same as in the preceding quarter and in the second quarter of last year. Comparing shipments in the first half of this year with those of last year, there have been notable increases to Hongkong, Indonesia, British West and East Africa, Australia, Ceylon and Singapore. On the other hand, less cotton cloth has been shipped to the Philippines, the U.S.A., Iran, Iraq, Indo-China, Burma, the Netherlands and South Africa. Exports of rayon piecegoods recovered to a level of 235 million square yards in the second quarter, compared with 211 million square yards in the first quarter but with 250 million square yards in the second quarter of 1959. Shipments to Singapore, Iraq, Iran and a number of other important markets in the first six months of 1960 were less than a year ago, but there were increases in exports to Indonesia, British East Africa, Germany, the Philippines and the U.S.A. Exports of synthetic fibre piecegoods increased to almost 15 million square yards in the second quarter—double what they were only a year previously.

India Faces Many Problems

Mill production of cotton yarn and cloth in India was reasonably well maintained in the second quarter of this year and was, respectively, 1 percent and 1½ percent greater than in the second quarter of last year. The handloom and independent powerloom sectors were suffering from a shortage of yarn. The Government's main concern is over raw cotton supplies and raw cotton and cotton textile prices. Stocks of raw cotton were reduced to a low level by the end of last season and hopes are now centred on the new crop, while arrangements have been made for the import of substantial quantities of American cotton. Contrary to trade expectations, the Government has not increased the ceiling and floor prices for Indian cotton, and there have even been cases of merchants' stocks being requisitioned for allocation to mills at the official prices. In keeping with the Government's policy of holding down prices, the Indian Cotton Mills Federation has called on mills not to charge more than a fixed percentage increase over the August 1959 prices, the permitted increase ranging from 9 percent for superfine cloth to 25 percent for coarse cloth. These maxima are to apply to all cloth delivered henceforth, even if the contract price is higher. To ensure that the price reductions are passed on to the consumer, both the ex-mill and retail prices are to be stamped on pieces of cloth, the latter being 15 percent higher than the former.

Indian exports of cotton piecegoods declined from 394 million yards in the fourth quarter of 1959 to 195 million yards in the first quarter of 1960. There was a further decrease to about 170 million yards in the second quarter, which compares with a total of 158 million yards in the corresponding period of last year. The main reason for the big drop in the first quarter was the very severe decline in shipments to the Sudan. The Government has extended until March 1961, the incentive scheme by which import licences for dyestuffs, chemicals and gums are granted against cotton textile exports.

West European Exports Rise

Order-books in the cotton industries of continental western Europe are reported still to be very healthy on the whole, and in several countries the output has been restrained only by the shortage of labour. The cotton yarn output in these countries in the second quarter was roughly 9 percent greater than a year earlier: this compares with an increase of about 18 percent in the first quarter. One of the largest proportionate increases was achieved by Italy.

There has been a remarkable expansion in exports of cotton piecegoods from continental west European countries in the last two years. The postwar history of this trade shows an increase up to 1951, a subsequent decline until 1956, relative stability in the following two years, an expansion of about 19 percent in 1959 and one of about 35 percent in the first half of this year, compared with the same period of last year. All the important exporting countries apparently shared in the increase, France doing particularly well. Much of the increased trade is, of course, intra-European, stimulated by the European Common Market; in particular, Germany has provided a rapidly expanding market. Outside the Continent, the U.K. and the U.S.A. have been the main markets.

Postwar exports of man-made fibre fabrics from continental western Europe have been marked by fluctuations about a rising trend. Exports in 1959 were about 14 percent greater than in 1958, and in the first six months of this year they were about 4 percent larger than in the same period of last year. The main increase so far this year has come from Italy, while the Netherlands, Sweden, Switzerland and Spain, have recorded smaller exports.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.5 percent to 125.1 during the week ended 1st October, 1960, compared with 125.7 for the previous week. The index stood almost at the same level as that prevailing in the corresponding week of the earlier month but was higher by 5.4 percent when compared with that of a year ago. The index for Food Articles fell by 0.9 percent to 122.8 due to a decline in the prices of oranges in Madras (−18%), rice in Nagpur (−6%) and in Sambalpur and Matihat (−5% *each*), gur in Ahmednagar (−5%), jowar and milk (−4% each), cashewnuts, meat and turmeric (−3% each), bananas and chillies (−2% each) and wheat, barley, maize and coffee (−1% each), although the prices of gur in Madras (+9%), oranges in Calcutta (+8%), onions (+7%), rice in Nizamabad and eggs in Delhi (+5% each) and urad, potatoes, groundnut oil, coconut oil, fish and black pepper (+1% each) showed advances. The index for Tobacco remained stationary at the earlier week's level of 103.7. The Fuel, Power, Light and Lubricants *group index* also stood unchanged at the previous week's revised level of 119.5. Lower prices of raw jute (−3%) and tanning materials (−1%) brought down the index for Industrial Raw Materials by 0.4 percent to 140.6. The prices of gingellyseed and lac (+2% each) and groundnuts and rapeseed (+1% each), however, moved up. The index for Intermediate Products receded by 0.2 percent to 129.7, compared with 130.0 (revised) for the earlier week as a result of a fall in the prices of zinc (−2%) and cotton yarn (−1%). The index for Finished Products stood unchanged at the previous week's level of 121.5, in spite of an increase in the prices of bicycles (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

BETTER PRICES FOR PLAIN GRADES

AT Sale No. 15, held on 17th October, the 68,966 chests on offer at the Export auction, met with a good general demand. Plain brokens were fully firm and sometimes dearer, while Fannings in this category were a strong feature of the sale and their prices showed considerable advances, particularly the leafy clean black types. Assam B.O.P.'s were generally easier, particularly the more ordinary liquoring kinds, while similar B.P.'s sold up to 20nP below last rates. Fannings grades met with fair support, particularly the cheaper kinds, but O.Fgs. with tip were generally lower. The poorer whole leaf grades were firm and were well supported, but the more stylish descriptions were again easier. Tippy teas were irregular and generally easier. Darjeelings met with a fair enquiry and the cheaper kinds sold fairly well. With the exception of a few selected lines, the prices for C.T.C. teas eased with the best declining by up to 60nP. The poorer C.T.C. descriptions generally sold at 10nP and up to 20nP below last rates.

Quotations

	1960 Rs. a kilo
Clean Black Pekoe	5.45 to 5.70
Plain B.P.	4.50 to 4.65
Plain Fannings	4.70 to 5.00
Medium B.P.	4.80 to 5.20
Medium Fannings	5.10 to 5.40
Best Assam C.T.C. B.P.	6.20 to 6.80
Best Assam C.T.C. Fgs.	6.60 to 7.20

(Quotations are inclusive of excise duty.)

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

(Bazaar Sales)

(Between 4th October and 10th October, 1960)

Cowhides: Wet salted (slaughtered) 12,700 pcs. on the basis of Rs. 8.50 to Rs. 15.50 and Rs. 18.50 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 82,700 pcs. on the basis of Rs. 315 to Rs. 335, Rs. 350 to Rs. 370 and Rs. 440 to Rs. 460; Wet salted (he-killed) on the basis of Rs. 4.50 and (she-killed) on the basis of Rs. 4.25 a piece; Assam-Dinajpur-Siliguri-Murshidabad 15,700 pcs. on the basis of Rs. 260 to Rs. 300, Rs. 340 to Rs. 350 and Rs. 375; Purneah-Kissenganj 24,000 pcs. on the basis of Rs. 345 to Rs. 360; Muzafferpore-Patna 11,000 pcs. on the basis of Rs. 340.

Bazaar Stocks

(10th October, 1960)

Cowhides: Wet salted 115,100 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 22,000 pcs; Assam-Dinajpur 168,500 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 197,500 pcs.

LINSEED STEADY

The linseed market was steady during the past week, but turnover was rather limited. Millers were not very active because of unfavourable crushing margins. The oil market was steady. There was a notable improvement in the local demand and enquiries from Australia increased. The oilcake market was firm due to good local demand. The latest quotations are as follows: Ready Rs. 25.62 a maund.

SHELLAC QUIET

During the week ended 17th October, the tone of the market was quiet. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 86, 83, 85 buyers; 82 done and buyers; 88, 85, 86, 84 sellers.
Lemon No. 1 Shellac	Rs. 86 to 83 buyers; 89 to 85 sellers.
Lemon No. 2 Shellac	Rs. 81 to 78 buyers; 83 to 80 sellers.
F.O. Superfine Shellac	Rs. 76, 73, 74 buyers; 78, 76 sellers.
Standard One Shellac	Rs. 73, 70, 71 buyers; 75, 73 sellers.
T. N. Pure Shellac	Rs. 65, 62, 63 buyers; 67, 65, 66 sellers.
Golden Kusmi Seedlac	Rs. 95 sellers.
No. 1 Kusmi Seedlac	Rs. 78 sellers.
No. 2 Kusmi Seedlac	Rs. 65, 64, 65 sellers.
Golden Bysacky Seedlac	Rs. 72, 70 buyers; 75, 73 sellers.
One B Seedlac	Rs. 67 buyers; 68, 67, 68 sellers.
Two B Seedlac	Rs. 59, 58 sellers.
Manbhum Fine Seedlac	Rs. 64, 63, 65 buyers; 66, 65, 67 sellers
Fine Bysacky Seedlac	Rs. 60 buyers; 58 done and buyers; 63, 60, 62 sellers.
Genuine Bysacky Seedlac	Rs. 56, 55 buyers; 58, 56, 58 sellers.

Shipments during October until the 12th were 2,334 packages.

COMPANY AND PUBLIC NOTICES

RESERVE BANK OF INDIA

Applications are invited for the following posts in the Bank:

(A) POSTS AND SCALES OF PAY

(i) Banking Officers: Rs. 375-55-815 E.B. 55-925-60-1045.

(ii) Probationary Assistants: Rs. 250-25-450 E.B. 25-650.

(iii) Banking Assistants: Rs. 175-12.50-300 E.B. 20-440.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) QUALIFICATIONS:

(i) Banking Officers: Applicants should have:—

(a) a first or high second class Master's degree of any recognised Indian or foreign University with Economics, Banking, Commerce or Accountancy as a special subject of study and should also have proficiency in drafting. They should possess at least 10 years' practical experience of work in a commercial bank and should have held responsible positions such as an Agent or an Inspector of branches for some time; or

(b) they should be Chartered Accountants with a *minimum standing* of 5 years.

Preference will be given to those who have passed the examinations of the English or Indian Institute of Bankers.

(ii) Probationary Assistants: Applicants should have a brilliant academic record and a first or high second class Master's degree of a recognised Indian or foreign University with *Economics*, Banking, Commerce or Accountancy as a special subject and should also have some proficiency in drafting. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers' examinations and/or possess practical banking experience in a supervisory capacity in a commercial bank. Candidates who have applied recently for these posts in the Department of Banking Operations or the Agricultural Credit Department in response to previous advertisements dated the 6th February and 13th August, 1960 need not apply again.

(iii) Banking Assistants: Applicants should have a high second class Master's degree or a first class Bachelor's degree of a recognised Indian or foreign University in Economics, Commerce, Banking or Accountancy and also have some proficiency in drafting. Educational qualifications may be slightly relaxed in the case of candidates who have passed the Institute of Bankers' examinations and/or possess some practical commercial banking experience.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) AGE LIMITS AS ON 1ST NOVEMBER 1960:

(i) Banking Officers: Candidates should not ordinarily be over 35 years of age but the age limit may be relaxed in the case of candidates with exceptionally good experience of value to the Bank.

(ii) Probationary Assistants: Between 21 and 25 years.

(iii) Banking Assistants: Between 18 and 24 years.

In the case of (ii) and (iii) the maximum age limit is relaxable but not beyond 30 years in the case of:

(i) candidates possessing special qualifications and experience of value to the Bank;

(ii) candidates with approved war service;

(iii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iv) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(v) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit *separate* applications accompanied by separate application fees and *should clearly indicate the post for which they have applied.*

3. Applicants for the posts of Banking Officers and Probationary Assistants must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by Postal Order. Applicants for the posts of Banking Assistants must remit a fee of Rs. 2.00. *The application fee is in no case refundable.* Bonafide refugee candidates *not in employment* applying through Employment Exchanges are *exempted from payment* of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by *copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post Graduate degree examinations and two testimonials* should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 5th November, 1960.

5. *Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.*

6. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

7. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

8. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing will be regarded as a disqualification.

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company for the half-year ended 30th September, 1960, at the rate of Rs. 2.20 nP per share.

Payment will be made on or after 1st November, 1960, to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

This dividend is being paid at the rate of 5½ per cent per annum, less Income Tax at the current rate for companies and will be subject to deduction of tax under Section 18(3) (D) of the Indian Income Tax Act, 1922.

The Preference Share Transfer Books of the Company will be closed on the 31st October and 1st November, 1960.

By Order of the Board,
J. H. G. WHITFIELD,
Secretary.

2, Fairlie Place,
Calcutta-1, 17th October, 1960.

ANGLO-INDIA JUTE MILLS CO. LTD.

THE Directors at their meeting held on 17th October, 1960, decided to recommend to the Shareholders that the following dividends be declared at the Annual General Meeting to be held on 16th November, 1960, for the year ended 31st March, 1960:

On Preference Shares @ 7% per annum (Rs. 7/- per share) subject to deduction of Income Tax.

On Ordinary Shares @ 20% per annum (Rs. 20 per share) subject to deduction of Income Tax.

The Share Transfer Books of the Company will be closed from 31st October to 16th November, 1960, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO. LTD.,
Managing Agents.

Calcutta, 18th October, 1960.

UNDER SECRETARY TO GOVERNMENT 24 OCT 1960 PUBLIC DEPARTMENT

BANKS

H indicates that Share capital is half paid. O C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P. against name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary Rs.	Net Block Account Rs.	Reserves & other Funds Rs.	Acreage under Tea	Outturn and Average Price per lb. realised for crop 1958 Lbs.	1958 Rs.	1959 Lbs.	1959 Rs.	Estimate 1960 Lbs.	NAMES	Accounts closed	Mg. Agts., Secretaries, etc.	Net Profits including taxation Rs.	Dividends per cent 1957	1958	1959	Paid-up per Share Rs.	Latest Market Quotations as available until 18-10-60 Rs.	12-10-60 Rs.	A year ago Rs.

GOLD PRICES SOAR ON THE LONDON MARKET

THE frantic excitement which began last week in the London gold market does not yet appear, by any means, to have died down. This is despite the intervention of the Bank of England and the statement from the U.S. authorities that the present policies on the purchase and sale of gold, together with the existing parity of $35 an ounce, are to be maintained. Furthermore, informed opinion has it that unless the U.S. Federal Reserve Board is prepared to abandon its determination to sell gold only to central banks for strictly "legitimate monetary purposes," a permanently higher free market price than the $35.25 an ounce—at which it is profitable to buy gold in New York and sell it in London—can be expected for the future. This is a startling prospect. It means, in effect, that dollar quotations are now condemned to a permanent discount on world markets; that, in blocking the gold outflow which alone can correct this position, the Federal Reserve Board will be forced, to a limited extent, to maintain the dollar inconvertible on short-term capital account; that currencies tied to the dollar will find themselves out of line with those that are not; and so on. When the impact on U.S. domestic politics, foreign aid policies, and world trade in general, are taken into consideration, it can be seen that what has been happening in London has far greater significance than what would normally be expected from the temporary depredations of a few irresponsible speculators.

The high prices which gold has touched—$41 compared with little more than $35 for the past 20 years or more—do seem to have been chiefly the result of wild speculation. But the pressure which first pushed the quotation above the $35.25 mark, and so encouraged the speculators to take over the market, seems to have come from buyers in Zürich, many of whom, it is suspected, are acting as agents for principals inside the United States. Whether this sudden eagerness of Americans to sell dollars to buy gold is due to anxieties over the coming Presidential election results, or whether it is the outcome of normal speculative views of a market suffering from a shortage of gold and reluctant to replenish itself at the expense of the fast-diminishing U.S. gold reserves, is immaterial. The fact remains that because the dollar has now come under serious long-term pressure, and because central banks in other countries are unwilling to buy gold from the U.S.A. at $35 an ounce and sell it in European centres at a higher price, the whole delicate system of international gold arbitrage has been brought to a standstill and the impression created that the dollar is due for some drastic policy and parity changes. The fact the movements have not gone further than they have is at least partly due to the willingness of the Bank of England to sell gold from the sterling area's reserves, and possibly also to the recent dollar buying which West Germany has been doing. The same effect could have been obtained, at far less expense to the U.S.A.'s friends, if the F.R.B. had abandoned its policy of, not interfering in foreign markets to stop speculation, and had supported the dollar in the way the British Equalisation Reserve authorities have frequently been called on to support the pound. As things are, the speculators are bound to take the view that the U.S. Treasury is more obsessed with the weakness of its own position than it probably is. And the result is likely to be more speculation and a bigger loss of gold all round.

It is a great pity to give the speculators this impression. There are certain difficulties in the U.S. position, especially at the present time, but the view that there is no long-term remedy for the dollar's troubles other than devaluation, is entirely wrong. The U.S. gold losses of the past two years—which amount to about $9,000 million or about one-third of the entire reserves—are certainly large. But thanks to the measures taken recently to relieve the U.S.A. of some of its burden of overseas aid, there has been an improvement during the past few months. At the current rate, it would be something like six years or so before the gold level represented by the legal backing of the currency is reached. Even then, a simple change in the law, such as India has been forced to make recently, would be quite sufficient to reduce the backing and provide the U.S. authorities with a fresh supply of the yellow metal. But long before that became necessary there are many steps which could be taken to relieve the situation. Private U.S. commercial investment in the Common Market countries and in Britain, for example, could be slowed up without interfering with the politically necessary aid to under-developed nations. A greater burden of foreign aid could be undertaken by West Germany, whose capacity for piling up reserves is one of the chief reasons for the present difficulties, or that country might be persuaded to shoulder a larger proportion of the costs of American troops stationed there. The U.S.A. could improve its export potential—only a fractional increase would be necessary to do the trick—and that should be easy enough to achieve when the internal market is relapsing into depression. Or the F.R.B. could avail itself of a portion of the unused drawing rights which the United States has accumulated through the fat years with the International Monetary Fund. International interest rates could be re-aligned. And so on. There is, in fact, scarcely any limit to the measures which can be taken to rectify a situation which has only arisen because the U.S.A. is, voluntarily, the world's largest international lender. The speculators would do well to ponder on the $1,000 million or so which is roughly America's annual surplus on current account. In that gigantic figure lies a great deal of potential strength for the dollar.

It seems likely that most of the present speculative pressure is in fact based on an assessment of more immediate difficulties, especially those which will be faced by the new President when he assumes office. The most pressing of these is the need to do something about boosting the U.S. economy. Reflationary measures will inevitably put pressure on the currency, although it is to be hoped there will be no avoiding them on this account—a serious U.S. depression would be much more damaging for the free world than a devaluation of the dollar. If, as both candidates have promised, the country is to play a more active part in world affairs and redress the balance of political, military and scientific power which is at present heavily weighted in favour of the communist bloc, then the consequent increased government spending will also prove weakening. These are serious dilemmas, and there is nothing the U.S.A. can do to avoid them—such as improving productivity—which would be possible in the time available. It is true enough that the total calls on the U.S. economy are at present greater than can be sustained, given the existing parity of the dollar. But that is no reason for under-estimating the room for manoeuvre which the country still enjoys, or the strength of the feelings of national pride and prestige which the authorities, perhaps wrongly, still attach to the dollar's present parity.

The logic of the situation apart, a permanently higher free market price for gold is bound to have far-reaching international implications. The impact has already been felt on the price of gold shares; South Africa has placed restrictions on the movements of gold to the trades which use it, while in Hongkong the free market has folded up altogether for the time being. The prices of other metals—copper, zinc and tin—have begun to move up, and a world inflationary trend may have set in. This could affect India; and so might the efforts the U.S.A. can be expected to make to protect the dollar. Aid in the form of untied dollars can now be dismissed as altogether unlikely; the much more important question of whether or not the required volume of aid will be maintained has now to be faced squarely. More aid in future will have to come from creditor nations such as West Germany, and under-developed countries like India would do well to ponder the question whether such assistance will be as large, or as unconditional, as that they have been enjoying from the United States.

Finally, the consequences of an eventual devaluation of the U.S. dollar will now have to be given more serious attention. It is true that with a surplus on current account of about $1,000 million a year and a reducible aid and investment deficit of roughly $4,000 million a year, there is technically no need for the U.S.A. to devalue within the foreseeable future. But the political need to maintain this outflow of resources may be found eventually to outweigh the prejudices against realigning the dollar. One of the great disadvantages of such a move would be, of course, that it could touch off a round of competitive devaluations, at the end of which the U.S.A. might find herself back where she was, except for a higher price for gold and possibly an increased parity for the deutschemark. Exactly the same effect could be obtained by West Germany doing now what she should have done earlier, revaluing the deutschemark, and for the U.S.A. to increase the price paid for gold. Unfortunately, there is no sign yet that either simple acts of common sense will come to the rescue of the besieged dollar.

THE OUTLOOK FOR SHARES

THERE has been a modest recovery in the stock markets during the past week. The sharp fall in share prices which began early in September has been halted, and replacement buying has developed on a small scale. But the undertone is still uncertain, as investors are moving cautiously, having burnt their fingers when the recent boom suddenly came to an end. It is clear that the technical position of the markets has become healthier, especially since no serious payment difficulties have developed. Nevertheless, more positive evidence is awaited as to whether the bottom has already been passed, or whether the present recovery is only a minor interruption of a prolonged bear phase. It is recognised that the progress of the economy so far has been reasonably satisfactory, although by no means as satisfactory as seemed likely six months ago. Agricultural production has turned out to be smaller than the optimistic hopes of early 1960 indicated; there has been a modest decrease in the output of foodgrains, and a bigger one in the production of cash crops such as jute, tea and cotton. But the expansion of industrial activity continues, and this remains a major support for market sentiment. There are, of course, many dangers still on the horizon. The state of the foreign exchange reserves is perilous, so that imports have had to be cut and may have to be again soon. The improvement in exports has been minor, and it is recognised that if the inflow of foreign aid does not increase in the near future, the external payments position will deteriorate sharply. Inflationary pressures continue in the economy, although it is reported that deficit financing has not been as large as was proposed under the Central Government Budget presented in February 1960. Finally, the outlook for many of the major industries is discouraging.

Looking ahead, it seems that the trend of the stock markets may depend on three main factors—the level of industrial activity, the scale of foreign aid, and the prospects for taxation. The first two are closely related. The import cuts announced so far in response to the foreign exchange crisis have not been very severe. They are concentrated largely on consumer goods,

although certain industrial requirements have also been affected. But the import policy now in operation is not final. When it was announced four weeks ago, it was clearly stated that the policy for a substantial number of industrial items would be announced later, after the Central Finance Minister, Mr. Morarji Desai, came back from his tour abroad with a clearer picture of the prospects for external assistance. Since Mr. Desai returned, however, he has said little that could be reassuring. He has merely claimed that the general "climate" for foreign aid is good, apparently on a long-term view; there is little indication whether India's immediate and somewhat desperate needs will be met in time. The question, therefore, is being asked whether imports can be maintained at even the present restricted level for the next five or six months. If they cannot, further restrictions are likely to affect industrial items mainly, since there is no scope left for reducing consumer goods imports now. In that case, the growth of industrial activity will suffer.

The import restrictions might have mattered less if the major industries were not faced with exceptional difficulties. During the past few months, the jute and the cotton textile mills have suffered badly from the scarcity and dearness of their raw material supplies. The jute mills have been steadily reducing their output, and are still not sure whether there will be enough raw jute to enable them to restore the production cuts in later months The cotton textile industry has achieved only a minor increase in output, but the benefits have been more than offset by the rise in its raw material and labour costs. There is some hope, however, that if the new cotton crop is normal, and if it is supplemented by liberal imports, the working of the industry might improve. In the case of tea, the experience of the north Indian gardens has been extremely disappointing; bad weather has reduced their production sharply this year, and the fall has not been fully compensated for by the recent rise in the prices of the plainer teas. The progress of the coal industry remains sluggish, especially since its transport difficulties appear to have been unusually severe. At the conference held in Calcutta on Monday, it is reported, the private collieries were urged to increase their production faster, but it is not clear whether any of the incentives necessary for the purpose were offered. Because of the transport bottlenecks in both coal and iron ore, the working of the steel plants has suffered; and, in turn, the engineering industries have been starved of their main raw material.

While the prospects for the major industries are thus none too reassuring generally, it is expected that forecasts concerning taxation will have an important influence on the trend of the stock markets in coming months. When the draft outline of the third five year plan was issued in July, investors paid little attention to the proposal for raising Rs. 1,650 crores of revenue through additional taxation during the next quinquennium. They consoled themselves with the belief that most of the revenue would be found through indirect rather than direct levies. By September, however, they began to realise that additional taxes of this order would have serious effects on industry, regardless of whether they were direct or indirect. The realisation did much to induce the fall in share prices. Now, with the Central Government's Budget four months away, talk has already started about what it will be like. There is a deep-rooted fear that the tax effort might begin strongly from the very first year of the new plan period, with a wide range of drastic indirect levies. Recent discussions on the third plan in New Delhi indicate that there is no inclination to bring down the target for additional taxation to a more realistic level. On the contrary, with the States pressing for bigger allocations, and with numerous Central Ministries angling to get their pet schemes into the plan, the chances are that the target will at least be maintained. The stock markets will tend to approach this prospect cautiously.

In sum, it appears that no major revival in investment activity is to be expected in the coming months. Selective improvements might take place among first-class equities which offer attractive yields or promising growth prospects at the present levels. There are also industries facing exceptional difficulties now whose shares may expect to benefit as the raw material shortages ease. In any case, investors are likely to be highly discriminating, having learnt how easy it is to lose money by joining in a speculative boom of the sort seen earlier this year. The discrimination would be justified most of all in subscribing to new issues, since some of the sharpest of the recent falls have occurred among these. Numerous entrepreneurs have been lucky enough to raise money easily for doubtful ventures over the past few months. The going may not be so easy now.

CHINESE FOREIGN TRADE

CHINESE foreign trade statistics are treated more or less as State secrets. Peking rarely gives figures for exports and imports, limiting itself to a statement (usually belated) of percentage increases, and if foreign trade is not doing well, as during the crisis of 1956-57, the year of comparison is chosen at some suitably remote date in the past. Nevertheless, with the aid of the somewhat more informative statistics published by Russia and the European communist countries (who are China's main trading partners), of U.N. statistics and American guesses, one can form an independent idea of Chinese external trade. All one learns from those sources goes to confirm the official Chinese claim that foreign trade was multiplied by three between 1950 and 1958. This means that China's foreign trade is about the same as Italy's, in spite of the immense difference in populations, or alternatively about the equivalent of the foreign commerce of Brazil, Argentina and Chile put together. On the other hand, it also means that it is bigger than India's.

In 1930, before China lost Manchuria, her foreign trade was only 36 percent of India's, as India then was, *i.e.*, including Burma and Pakistan. By 1958, it was 9 percent bigger than the foreign trade of India, Pakistan and Burma combined. While China was tripling her foreign exchanges between 1950 and 1958, India and her neighbours managed only to add 20 percent to theirs in spite of all their efforts in that direction and in spite of a quantity of aid from the West that far exceeded what China got from Russia. Meantime China was diversifying the catalogue of her export products, which (in view of the instability of many world markets) is as important to a developing country as absolute increases in sales abroad. The traditional Chinese exports—eggs, oilseeds, silk, catgut, tong oil and pig products—continued to be prominent, but to them were added rising quantities of antimony, tin, tungsten, manganese and other minerals, as well as more and more finished manufactures. The result was that the percentage of agricultural produce in Chinese exports fell from 82 to 72 between 1952 and 1957 even though China became for the first time an exporter of cotton, rice and other foodgrains of which she used to be a net importer.

Since she is proposing to add more coal and iron ore to the export list, the prospect for her exports is excellent. An economy that is still selling abroad only 4 percent to 5 percent of the national product and is making rapid advances in production can easily afford to boost her foreign trade, especially when the Government has unlimited power to control production, distribution and prices for the benefit of exports. Official policy is to concentrate on exports of manufactures, both producer and consumer goods, adapted to the needs of under-developed countries: Asia, Africa and Latin America are the chosen targets of the Chinese trade drive. This vigorous offensive is accompanied by an effort to make China as self-sufficient as possible. This circumstance, read with the fact that China normally gains an export surplus in southern Asia which she spends in Russia and Europe, means that Peking is serving notice on her Asian neighbours that she plans to invade their markets and buy next to nothing in return. The ambition needs to be borne in mind in considering India's chances of finding export markets for her manufactures in the same regions.

TIGHT CREDIT FOR THE BUSY SEASON

THERE is a great deal of concern in financial circles at the moment about the growing tightness of money. The call rate has increased to 4½ percent in Calcutta, but even at this level funds are difficult to obtain because lenders are few and far between. Considering that the monetary demand during the coming busy season (1960-61) may soon be getting into its stride, it is being asked in the market where resources are to be obtained for financing the increased requirements. Judging from current trends, it appears that the demand for credit this season will be substantial. Industrial production is running at a fairly high rate and both food and cash crops are expected to be bigger than in the previous year. This apart, high prices for some industrial raw materials, such as jute and cotton, may siphon off bigger funds.

As for banks, their advances appear to be fully extended at present. The latest return of scheduled banks for the week ended 14th October, 1960, shows that their advances, including bills discounted and bought, constitute 57 percent of total deposits. During the 1960 slack season, which has now almost come to a close, banks were not able to reduce their advances by as much as in the 1959 slack season. During the latter, advances of scheduled banks were reduced by nearly Rs. 80 crores. Banking resources were also replenished by an increase of Rs. 97 crores in deposits. Banks were therefore able to increase their investment portfolios by about Rs. 145 crores. During the 1960 slack season, these trends have been reversed. Bank credit has been reduced by only Rs. 9 crores. Deposits have declined by Rs. 30 crores, but this may not be representative of the banking sector as a whole because in the figure for total deposits of scheduled banks, those of the State Bank have a big weightage. These deposits of the State Bank are believed to have been affected by a steady transfer of P.L. 480 counterpart funds to the Reserve Bank during recent months. In any case, banks cannot have benefited much from the recent increases in deposits because 50 percent of this increase has been impounded by the Reserve Bank. As a result of this squeeze on resources, banks have been forced to reduce their investment portfolios by nearly Rs. 38 crores in order to obtain cash. It should be pointed out that banks cannot be blamed for not having reduced their advances this year because they have had to finance largely genuine economic activities. The demand for credit has not declined, due to the fact that the seasonal pattern of advances has changed fundamentally with the increased industrialisation of the economy.

It is evident that banks have simply not got enough resources to finance expected demand during the coming busy season, and they may not find it possible to increase their resources by themselves. Deposits are unlikely to improve as soon as the activities of the busy season begin. It is possible that banks may obtain more cash by selling their investments, but this is not likely to be beneficial under present circumstances. Government securities have become quiet because investors are now worried about a rise in Bank rate. Although the latter has been kept unchanged at 4 percent, it remains to be seen how far the authorities can succeed in holding it down to an unrealistically low level in the face of an increase in interest rates all round. The Reserve Bank itself has increased the lending rate chargeable when banks borrow from it more than their allotted quotas. So for all practical purposes, the effects of a rise in Bank rate are being felt throughout the economy. Under these circumstances, it is not expected that support will be forthcoming for Government securities. In fact, the Reserve Bank is now about the only buyer of Government securities in the market. As it buys mainly Central Government scrip, the prices of State Loans have fallen substantially in the absence of any worthwhile support. Except for the Life Insurance Corporation, there is now virtually no buyer of State Loans. Against this background, the prospects for banks selling Government securities cannot be viewed with complacency. If banks are forced to do this, they may incur substantial capital losses. It is, therefore, hoped that steps will be taken to ensure the supply of adequate credit so that the demands of the coming busy season can be met satisfactorily.

If banks are to meet these demands without difficulty, they have no alternative other than to borrow from the Reserve Bank, and considering that their borrowing quotas as fixed by the Reserve Bank have already been filled, they will simply have to pay more interest. This is likely to make banks shy in borrowing liberally from the Reserve Bank unless they are able to ensure that their borrowing costs will be fully recouped by the lending rates charged on advances made. It is possible, therefore, that there will be yet another round of interest rate increases.

Apart from the controversy about whether high interest rates are beneficial for a developing economy like India's, there is a danger that the shortage of bank credit might divert a substantial portion of the monetary demand to the unorganised money sector. If credit expansion outside the banking sector is encouraged, many vices, such as profiteering and hoarding, will be accentuated. It would now seem to be about time the Reserve Bank thought seriously about how to replenish the banks' resources so they may not be hampered in financing coming requirements.

Current News and Comment

General Tyres Share Offer

The shares of companies producing motor-vehicle tyres and tubes have met with steady support in the stock markets. This is because the demand for the products has risen faster than their production. The growth prospects for the shares are also considered good in view of the rapid development of road transport. Against this background, the ordinary and preference shares offered by General Tyres Ltd for public subscription at par are expected to meet with a good response. The Company's issued share capital consists of 450 ordinary shares of Rs. 10 each. The present issue consists of 799,550 ordinary shares of Rs. 10 each and 20,000 9 percent (free of company tax) cumulative redeemable preference shares of Rs. 100 each. Out of this total, the directors and their friends have agreed to subscribe to 149,550 ordinary shares. The managing agents—National Rubber Manufacturers Ltd—have undertaken to get 250,000 ordinary shares subscribed by the shareholders of National Rubber in the proportion of one General Tyres share for every two ordinary shares in National Rubber. The remaining 400,000 ordinary shares and 20,000 preference shares are being offered to the public. The subscription lists will open on 3rd November. (Fuller details are printed on a later page.) The entire public issue has been underwritten.

General Tyres will set up a factory for producing motor-vehicle tyres and tubes, components and accessories. Technical collaboration will come from Messrs Technoexport of Czechoslovakia. The products will be sold under the "Barum" brand. The technical collaborators will supply the plant, install it and put it in production. The factory site will be in Kankinarrah, near Calcutta. The Company has been licensed to produce 180,000 tyres and the same quantity of tubes a year. Since the demand is good, the directors do not foresee any difficulty in selling the products. The foreign collaborators have agreed to buy 5,000 tyres and tubes annually for a period of four years after production starts; these will be exported to Czechoslovakia. There is no restriction if General Tyres wishes to export its products. The foreign collaborators have agreed to supply the equipment as soon as possible.

The cost of the project is estimated at Rs. 2.20 crores. Apart from the proceeds of the share capital, the Industrial Finance Corporation has agreed to advance a loan of Rs. 60 lakhs and deferred payments have been arranged for Rs. 40 lakhs. Further finance will come from banks. Being a new Company, General Tyres will enjoy the benefit of the usual tax exemption and the development rebate. The directors hope to earn good profits when production begins and to pay reasonable dividends before long.

India Steamship Reports a Loss

The ordinary shares of the India Steamship Co. Ltd have been sluggish around Rs. 10.37 during the past week because the report for the year ended March 1960 is disappointing. The Company has incurred a loss of Rs. 42.85 lakhs, after increasing depreciation from Rs. 75.56 lakhs to Rs. 91.29 lakhs. The working, it appears, has suffered because, with the depression in the freight markets, the fleet could not be employed fully. The cost of running the fleet has also increased substantially. In fact, the rise of Rs 35 lakhs to Rs. 8.39 crores in freight earnings has been more than offset by higher costs. Meanwhile, the fleet has been expanded by the addition of three new ships. A debit balance of Rs. 40,76,067 has been carried forward, against a credit balance of Rs. 2,09,413 brought in. The development rebate permitted for income tax purposes during the past year could not be provided for in view of the adverse results.

Dividends have been paid by transferring Rs. 26.54 lakhs from the dividend equalisation account, which has now been reduced to Rs. 5.46 lakhs. The taxable ordinary dividend of 10 percent absorbs Rs. 24.75 lakhs, and offers a yield of 9.6 percent at the present price. The dividend was 10 percent, tax-free, in the previous year. The directors take a cautious view of the prospects for the current year, but they hope that conditions will soon improve

Poor Results from Champaran Sugar

Reporting the results of the Champaran Sugar Co. Ltd for the year ended June 1960, the directors mention the possibility of an increase in the cane crop during the coming crushing season. During the past year, the Company's sales increased from Rs. 2.03 crores to Rs. 2.20 crores. The Barrah factory crushed 2.64 million maunds of cane, against 2.42 million maunds, but the recovery declined from 9.81 percent to 9.49 percent. The Chanpatia factory had a crush of 3.23 million maunds, against 3.37 million maunds with a recovery of 9.28 percent, against 9.86 percent. Mainly because of the lower recovery, Champaran Sugar's profit has declined from Rs. 12.40 lakhs to Rs. 10.17 lakhs, after providing the same amount of Rs. 1.75 lakhs for depreciation. A taxable ordinary dividend of 15 percent has been declared. This offers a yield of 7.3 percent at the price of Rs. 20.44 a share and is covered nearly twice. The dividend was 15 percent, tax-free, in the previous year. Taxation provision is allocated Rs. 4 lakhs (against Rs. 5 lakhs) and rehabilitation reserve Rs. 3 lakhs (against Rs. 4 lakhs). The carry-forward is Rs. 27,968, compared with Rs. 16,996 brought in.

Delhi Cloth Earns More

The ordinary shares of the Delhi Cloth and General Mills Co. Ltd have attracted support partly because the results for the year ended June 1960 are satisfactory and partly because of the growth prospects. The profit has increased from Rs. 62.75 lakhs to Rs. 82.80 lakhs, after transferring Rs. 1 crore (against Rs. 95 lakhs) for taxation, Rs. 70.17 lakhs (against Rs. 65.53 lakhs) for depreciation and Rs. 16.5 lakhs (against Rs. 11 lakhs) for development rebate reserve. The ordinary dividend has been increased from 10 percent to 12 percent, subject to tax. The yield works out to 8.5 percent at the price of Rs. 35.37 and the dividend is covered more than four times. Debenture redemption reserve is allocated Rs. 10 lakhs (same), development reserve Rs. 18 lakhs (against Rs. 16 lakhs) and fall in prices reserve Rs. 10 lakhs (nil). The carry-forward is Rs. 2,72,401, compared with Rs. 2,84,684 brought in. The working of the cotton mill units has improved considerably, but the silk factory has suffered from raw material shortages. The modernisation and renovation programme of the cotton mills has been undertaken. The chemicals division has shown an improvement, but it may take some time before the fertiliser plant can be worked at full capacity. The vanaspati factory has worked well, but profit margins have been narrowed by the sharp rise in oil prices. The directors think that the trend may not change in the near future. The working of the sugar units has been satisfactory and the distilleries have had a good year.

There is, nevertheless, reason for taking a cautious view about the prospects for the cotton mill industry considering the difficulties outlined by the chairman, Mr. Bharat Ram, in his address at the annual general meeting in Delhi a few days ago. (A fuller version of his speech was published in *Capital* last week.) There is an acute shortage of raw cotton, so its price has increased greatly. Mr. Bharat Ram pointed to the need for importing more cotton so as to build buffer stocks. Production costs have increased due to the implementation of the recommendations of the Cotton Textile Wage Board concerning the emoluments of workers. This difficulty apart, there is an urgent need for renovating equipment. As replacement costs are high and will involve a large amount of capital expenditure, the industry will face financial difficulties. It is, therefore, necessary to allow it to produce more so that enough money can be ploughed back into the business.

Mr. Bharat Ram did not think that the Planning Commission's proposals for allocating the increased target of production during the third five year plan between the mill sector and the handlooms are realistic. Of the proposed increase of 2,000 million yards a year in production, the mills have been allocated only 500 million yards. Experience suggests that the handloom industry will not be able to produce as much as it has been allocated. If cloth shortages are to be avoided, it is necessary to allow the mills to produce much more. The advantage of bigger production from the mills is that production costs may decline. If cloth is cheaper, exports are likely to be promoted.

Delhi Cloth's ordinary share capital of Rs. 3.39 crores is backed by reserves of more than Rs. 4.68 crores. Fixed assets are Rs. 6.08 crores and current assets Rs. 11.55 crores. Sales have improved from Rs. 30.08 crores to Rs. 31.79 crores.

Champdany Jute Maintains Profit

In their report for the year ended March 1960, the directors of the Champdany Jute Co. Ltd say that the outlook at present is uncertain in view of the shortage of fibre and the increased competition from the Pakistani mills. Orders have been placed for machinery for producing wide carpet-backing. The machinery will be installed at the Wellington mill and is expected to begin production early in 1961. Providing Rs. 7.05 lakhs (against Rs. 6.06 lakhs) for depreciation, the profit is Rs. 9.88 lakhs, compared with Rs. 9.69 lakhs. Sales declined from Rs. 3.05 crores to Rs. 2.66 crores and stocks of jute goods were reduced from Rs. 47.97 lakhs to Rs. 6.22 lakhs. A taxable ordinary dividend of 6 percent has been declared. This is covered more than two and a half times and offers a yield of 5.6 percent at a price of Rs. 107.50 a share. The dividend was 7 percent, tax-free, in the previous year. Development rebate reserve is allocated Rs. 3.74 lakhs (against Rs. 86,347) and contingency reserve Rs. 1.5 lakhs. The carry-forward is Rs. 1,68,730, against Rs. 92,149 brought in.

Swadeshi Cotton: Modest Recovery

The trading profit of the Swadeshi Cotton Mills Ltd, Kanpur, has increased from Rs. 6.47 lakhs to Rs. 27.41 lakhs for the year ended December 1959, but no provision has been made for depreciation. The ordinary dividend has been passed over, but the dividends on the preference shares and the preferred ordinary shares have been paid, leaving

a carry-forward of Rs. 9,04,312, against Rs. 2,961 brought in. The dividends have been paid after transferring Rs. 12 lakhs from general reserve. About Rs. 19 lakhs have been provided for development rebate reserve. The various units have worked satisfactorily. The Kanpur unit has made a profit of Rs. 26.43 lakhs (against Rs. 18.15 lakhs). The directors are taking steps to install processing machinery there. The mills in Pondicherry have suffered a loss of Rs. 9.42 lakhs, against a loss of Rs. 12.04 lakhs in the previous year. The mill in Naini has shown a profit of Rs. 10.17 lakhs, against Rs. 3.16 lakhs. The cotton mill in Udaipur is likely to begin production in 1961. The vanaspati plant has also made a profit, having incurred a loss in the previous year. Considering the improvement, the directors take a fairly optimistic view of the prospects.

Tata Chemicals Suffers

The operating profit of Tata Chemicals Ltd during the year ended June 1960 showed a fall of about Rs. 15 lakhs from the previous year, although sales were maintained at around Rs. 341 lakhs. The ordinary dividend has been reduced from 75nP to 60nP, both gross. To declare even the lower dividend, the directors have had to draw Rs. 2.5 lakhs from general reserve. The report explains at length the various reasons for the decline in profit and the consequent cut in the dividend. The year's profit was affected by: (1) the inevitable interference with the production of existing units by plant under construction, reduced operations and lower efficiency arising from the trials and commissioning of new units under the expansion programme; (2) the reduction of Rs. 10 a ton in the price of soda ash for the full year, against only four months in the previous year, and a reduction of Rs. 30 a ton in the price of caustic soda from October 1959 following the recommendations of the Tariff Commission; (3) the higher cost of salt due to lower production; (4) higher interest charges; and (5) the increased dearness allowances given to workers and staff from December. Out of every rupee earned, the Company spent 45nP (against 42nP in the previous year) for materials consumed, .19nP (against 18nP) on employees, 2nP (same) on repairs and renewals, 9nP (against 8nP) on administration and 8nP (same) on freight and handling. Depreciation got 6nP (same), while 3nP (against 7nP) went to the Government and 4nP (same) were taken to reserves. The dividend accounted for 4nP (against 5nP).

The operations of the caustic soda plant showed an all-round improvement. Production increased by about 9 percent and the efficiency was also greater. The output of sodium bicarbonate rose appreciably with the commissioning of new equipment. But the production of soda ash, although slightly better than in the previous year, did not come up to expectations because of the unavoidable delay in completing the new units. Approximately 40 percent of the new equipment was installed and commissioned during the year. The major units installed were the new brine refinery, the new ammonia still and the steam tube drier. By far the greatest harm was done by the rains, which were heavy enough to cause a substantial fall in the production of both solar and vacuum salt. The output of solar salt fell by nearly 30,000 tons to 71,000 tons; in 1957-58, it was as high as 154,000 tons. The fall in production depleted the salt reserve in Mithapur, making it necessary for the Company to purchase salt from outside sources at substantially higher prices. The completion of the new salt works in Samalsar was also hampered by heavy rains and it is now expected that the works will be completed by the end of 1960. Rains affected the working of the marine products section, where production fell by about 29 percent. Among agro-chemicals, the production of B.H.C. increased by more than 20 percent with the completion of the first phase of the expansion programme. Further expansion of the plant is continuing; when completed, the manufacture of a new pesticide, "lindane", will be taken up. Orders for the lindane plant were placed in Germany and it is likely to be completed by June 1961. A new product, copper sulphate, was placed on the market during the latter part of the past year.

Agro-chemicals and Fertilisers

Agro-chemicals and Fertilisers Ltd is a new Company which has been formed in Indore to undertake the manufacture of superphosphate. It has secured an industrial licence from the Government. The fertiliser factory, it is stated, will be the first in western Madhya Pradesh, where the Chambal project is expected to irrigate 750,000 acres of land from next year. The Company will have an authorised capital of Rs. 1 crore, consisting of 90,000 equity shares of Rs. 100 each and 10,000 6½ percent tax-free cumulative redeemable preference shares, also of Rs. 100 each. The issued capital will consist of 30,000 equity shares and 10,000 preference shares, out of which the directors and promoters will take equity shares worth Rs. 15 lakhs. Equity shares of the value of Rs. 15 lakhs will soon be offered to the public. The Company has asked the Life Insurance Corporation to take part of the preference share capital. The factory is expected to go into production by the beginning of 1962. The Company has applied to the Industrial Credit and Investment Corporation of India for a foreign exchange loan to purchase plant and machinery.

Cooper Engineering Does Well

The working results of Cooper Engineering Ltd for the year ended June 1960 are quite encouraging. Sales increased from Rs. 1.50 crores to Rs. 1.92 crores. After providing Rs. 4.82 lakhs (against Rs. 3.41 lakhs) for depreciation, Rs. 2.98 lakhs (against Rs. 2.82 lakhs) for development rebate, and Rs. 11.5 lakhs (against Rs. 4 lakhs) for taxation, the profit is up from Rs. 4.61 lakhs to Rs. 7.78 lakhs. The directors have recommended a dividend of 10 percent and a bonus of 3 percent a share. A sum of Rs. 1 lakh has been allocated to the contingency reserve, including gratuity (against nil), and the general reserve absorbs Rs. 1 lakh (against Rs. 1.25 lakhs). The dividend takes Rs. 5.75 lakhs (against Rs. 3.27 lakhs), leaving Rs. 75,000 to go forward, against Rs. 72,000 brought in.

The Company has taken up the manufacture of C.V.R.-5 high-speed vertical diesel engines, incorporating the Licardo Comet combustion chamber. Sales of oil engines, machine tools and looms have increased appreciably. The oil engines have met with a good response in export markets. The new machine tool factory in Chinchwad is expected to go into production in the near future. The directors propose to increase the authorised capital of the Company from Rs. 1 crore to Rs. 2 crores by creating 50,000 equity shares of Rs. 100 each and 50,000 unclassified shares of Rs. 100 each. It is also proposed that the existing unissued 50,000 5½ percent cumulative preference shares of Rs. 100 each be termed and known as 50,000 unclassified shares of Rs. 100 each.

Carburettor Project

Carburettor Private Ltd of Madras, it is reported, has obtained a licence from the Central Government to manufacture "Solex" carburettors in India in collaboration with the French firm of Solex Ltd. Import licences have been issued for the machine tools and components, and the first pack of c.k.d. units has already arrived. The machine tools, it is expected, will be received soon.

Central Revenues Buoyant

The revenue collected by the Central Government from important dutiable items in August 1960 totalled Rs. 59.47 crores, which was Rs. 8.66 crores more than in August 1959. The latest figure raises the total for the first five months of the fiscal year 1960-61 to Rs. 290.90 crores, compared with Rs. 250.65 crores in the corresponding period of last year. Customs duties brought Rs. 64.20 crores and Central excise duties, excluding the coal cess and the salt cess, yielded Rs. 162.21 crores. The corresponding figures for April-August 1959 were Rs. 60.17 crores and Rs. 138.91 crores. The 1960-61 Budget provided for an increase of Rs. 2.50 crores in Customs revenue and Rs. 29.12 crores in excise income. But during the first five months alone, Customs revenue has risen by Rs. 4.03 crores and excise duties have brought Rs. 23.30 crores more than in the corresponding period of last year. The improvement in Customs revenue is accounted for mainly by larger imports. Exports have risen too but export duties do not yield much revenue now. The increased revenue from excise duties reflects the impressive rise in industrial production. If imports remain large and the tempo of industrial production gains momentum, the buoyancy of Central revenues can be expected to contitue. The 1960-61 Budget estimates might be exceeded by a substantial margin.

Cloth Output and Stocks

Mill cloth output in September 1960 is provisionally estimated at 434 million yards, which is the highest for any month so far this year. The production was 432 million yards in August 1960 and 412 million yards in September 1959. The September 1960 figure raises the total for the first nine months of the year to 3,738 million yards, which is 81 million yards more than in the corresponding period of last year. The output of yarn was 150 million lbs—also a record high this year—and it brings the total for the January-September period to 1,287 million lbs, compared with 1,279 million lbs in January-September 1959. Although small, the increase in cloth and yarn output is welcome. It speaks well of the Government's efforts to ensure adequate raw material supplies through larger imports following the partial failure of the domestic crop in 1959-60. As the new crop is estimated at around 5 million bales, against 3.75 million bales during the last season, and imports are continuing on a liberal scale, the industry can hope for larger supplies of cotton at lower prices.

Stocks of cloth held by mills have risen for the fifth consecutive month. At the end of September, they totalled 386,000 bales (of 1,500 yards each), against 361,000 bales on 31st August. Unsold stocks rose from 172,000 bales to 183,000 bales and those in the category of "sold but delivery not taken" increased from 189,000 bales to 198,000 bales. At the end of April, stocks totalled 274,000 bales, of which 128,000 bales were unsold and 146,000 bales were "sold but not lifted". Stocks have risen by a little over 100,000 bales since the end of June. With the Government insisting on a reduction in cloth prices, the trade has been restricting its purchases to the bare minimum. The uncertainty about cloth prices came to an end in August, with the industry agreeing to a voluntary cut in prices. But cloth offtake has remained rather low for several months. "Moorat" business in the cotton piecegoods market last week was a dull affair, being virtually confined to some of the popular varieties. Few observers expect a marked revival in demand in the near future. The general belief is that cloth prices will ease as raw cotton becomes more abundant and cheaper. There is little incentive for the trade to hold stocks, since cloth prices are being virtually regulated and the trade's margin is more or less fixed. Besides, the holding of stocks has become difficult and expensive on account of credit restrictions.

Oil Export Incentive Scheme

The incentive scheme for exporting groundnut oil and salad oil, announced recently by the Central Government, has evoked considerable comment from the trade, mainly because of the uncertainty about the quantum of copra and palm oil which the Government might allow for import against oil exports. Mr. Tulsidas M. Vishram, chairman of the Indian Oil and Produce Exporters Association, says that the scheme does not take into account the highly fluctuating character of the international market for groundnut oil, groundnut expeller cake, copra and palm oil with which an exporter will now have to deal. It will be risky to assess the value of incentives on the basis of the current prices, here and abroad, of groundnut oil, expeller cake, palm oil and copra. Mr. Vishram fears that the trade might thus pass into the hands of speculators. It is important that the shipper who submits his tender for the export of oil to the Director of Export Promotion should know the result of his tender within a day, otherwise the delay will upset his price calculations. Another suggestion is that incentive licences for copra and palm oil should be issued simultaneously with the sanctioning of tenders for oil exports, and not after producing the documents proving the export of these oils, so that the shipper can know how much he stands to gain from the import of copra and palm oil. In spite of the various uncertainties, fairly large business has been reported in groundnut oil with the U.K. and Burma since the announcement of the incentive scheme on 15th October. How much groundnut oil and salad oil might be exported by the end of January will depend on the Government's decision about import quotas for copra and palm oil.

Sugar Production and Prices

Addressing the recent annual convention of the Sugar Technologists Association in Kanpur, Mr. Manubhai Shah, Central Minister for Industries, said that the sugar production target for the third plan, which was originally fixed at 3 million tons a year, is being raised to 3.5 million tons, considering the need for increased exports. For higher production, it will be necessary to pay greater attention to the agricultural side, namely, to increasing the yield of sugarcane an acre and the sucrose content of the cane. Referring to the manufacture of sugar machinery, Mr. Shah said that while production in 1956 was worth only Rs. 32 lakhs, it will be worth over Rs. 350 lakhs this year. By 1963, it will be possible to manufacture within the country 12 complete sugar plants each year of the capacity of 1,000 tons or 1,250 tons, and the equivalent of about nine complete plants by way of expansion and replacement needs of the industry. Although Mr. Shah said that the aim of official policy is to ensure fair prices for consumers, it is obvious that because of the need to increase exports, the possibility of domestic price reductions is remote. The Indian Sugar Mills Association thinks that an increase in the internal price of sugar is necessary to subsidise the loss on exports. The present export quota has been fixed at 50,000 tons. It has been estimated that even after deducting excise duty and cane cess, the loss on exports of this amount will be a little over Rs. 1.5 crores.

Meanwhile, experiments in Kanpur by the National Sugar Institute have shown that it is possible to extract a larger quantity of sugar from sugarcane juice by a new process. Known as the "ion-exchange process," it consists in the purification first of the sugarcane juice and then treating it again with the help of ion-exchange resin to remove the non-sugar mineral impurities. It is claimed that the sugar thus obtained is appreciably more than by the usual purification processes, and that waste molasses from the demineralised juice has better edible characteristics.

Price-linking Formula for Sugar

The Government of India has referred to the Tariff Commission the question of revising the price-linking formula for sharing the sugar prices between factories and growers. It has also been asked to examine whether the industry's claim for a rehabilitation allowance is justified and, if so, the rate at which it should be provided for. It will be recalled that the basic principle underlying the formula, which was enunciated in 1958, has been criticised, especially by factory owners. Under the formula, the cultivator who supplies sugarcane to a factory shares with the mill the net sugar price realised, excluding taxes. But this principle is followed in no other industry, in the first place. Secondly, it is a one-sided transaction, since the grower is entitled to share in the profits of a factory, but there is no corresponding obligation on him to share its losses. It is now realised that since the Tariff Commission's report of 1959, which made modifications in the method of costing, the price-linking formula has been a source of serious difficulties. Although it took into account the question of rehabilitation allowance, the Commission made no provision for it. One of the industry's major demands has been for the exclusion from the formula of those regions where there is ex-factory control on sugar. Producers argue that sugar prices are based on the minimum price of sugarcane, and factories are, therefore, not expected to make any extra profits. Furthermore, the price-linking formula has not given any incentive to the grower to improve the yield or the quality of sugarcane. If, irrespective of his effort, he can share in the profits of factories, he will not care about his performance. But in all deals between the grower and the factories, it is the consumer's interest which tends to be ignored. It is to be hoped that the Tariff Commission, while re-examining the price-linking formula, will keep this aspect in mind.

Commonwealth Trade with Europe

The Commonwealth and Europe, a study sponsored by Britain in Europe Ltd and written by the Economist Intelligence Unit, reviews the growth of trade between the overseas Commonwealth and Europe, and the growth of Commonwealth economies in the context of European economic integration. It provides an extensive analysis of the factors influencing the pattern of Commonwealth trade, including tariff preferences, quotas and purchasing agreements, foreign investment and ownership and such imponderables as custom and sentiment. One of the book's conclusions is that the creation of the European Common Market (E.E.C.) is likely in general either to increase exports from individual Commonwealth countries, or to leave them largely unaffected, apart from certain foodstuffs which are likely to suffer. If the E.E.C. and the E.F.T.A. were to merge, it would be possible to arrange terms that neither violated the principles of the Common Market nor did serious harm to any substantial flows of Commonwealth trade. At the same time, the Commonwealth's exports in general would benefit from faster economic growth in the U.K. and easier access to Continental markets. The system of

Fly your Goods to the U.S.A.

2 WEEKLY JET FLIGHTS
DIRECT TO NEW YORK

Whatever your taste in music—there's no argument that the ringing of cash registers makes sweet harmony...and cash registers ring in the U.S.A. for goods that arrive there *fresh...fast...frequently!*

We'll jet speed your products to New York—2 direct flights every week, via Europe and the U.K. *You'll* cut down on transit and storage risks and costs; cut out idle capital; enjoy faster turnover; tune in to the sweet music of jingling profits!

Every Thursday ex Calcutta, every Friday and Saturday ex Bombay direct to New York via the Middle East, Europe and the U.K.

Commonwealth preferences, it is stated, is less important to the exporting countries concerned than the guarantee of an adequate market in the U.K.

The E.E.C.'s imports from the Commonwealth, which in most years recently have been in the region of £750 million to £850 million, are tending to increase more rapidly than Commonwealth sales elsewhere. It is fortunate, therefore, that a high proportion of this trade, mainly raw materials, will continue to enter the Common Market duty-free, and should indeed benefit by the stimulus to growth imparted by European economic integration. Commonwealth exporters of temperate foodstuffs may in some instances find their slender hold on the market weakening and exporters of manufactures may also be hurt, should the E.E.C. pursue a restrictive quota policy against low labour-cost goods from Asia. But the only sector of trade which stands to suffer appreciably is that in tropical foodstuffs, cocoa from West Africa and coffee principally from East Africa. Apart from this, the creation of the E.E.C. should in general either improve the chances of increasing exports from individual Commonwealth countries or leave them largely unaffected. The creation of the E.F.T.A. will have negligible effects on Commonwealth trade other than exports from Canada, which is likely to find itself facing more severe competition from Scandinavia in the British market.

On the basis of forecasts of Europe's gross national product in 1970, the demand for various commodities and the likely increase in Commonwealth sales is estimated. The general view that the growth of demand for temperate foodstuffs will be sluggish is confirmed but some important exceptions to this pattern have been found. Notable among these exceptions is beef, which offers a major opportunity of increased trade to Australia and New Zealand. The demand for tropical foodstuffs is, on the whole, growing more rapidly, but in several cases the market is overshadowed by the threat of a world surplus, while tea, the most important item of all from the Commonwealth point of view, faces only a slowly growing market. Raw materials, on the other hand, particularly metals and wood products, are much better placed in relation to the future European market. In one instance, rubber, a not very promising situation is being transformed by the expansion of Commonwealth production and the difficulties of its chief competitor, Indonesia.

Bank Mergers in South India

Measures to amend the Banking Companies Act have led to speculation about the amalgamation of banks in south India. Since the crash of the Palai Central Bank, proposals have been made for merging non-scheduled banks with scheduled ones. Some south Indian bankers have suggested that the bigger scheduled banks should try to take over the smaller ones which have shown little or no progress during the past decade. The small regional banks, they suggest, should also be encouraged to implement schemes to strengthen their finances. Banks in Kerala are not eager for indiscriminate amalgamation and they point to the peculiar conditions prevailing in the State. But many bankers in Madras favour mergers because amalgamation will enable them to increase their deposits and offer more efficient service to their constituents. The Trichur Chamber of Commerce has urged the authorities to scrutinise the affairs of every bank in Kerala in order to find out whether it is a viable institution. But hasty or casual mergers there may not be practicable because particular communities owe allegiance to particular banks.

Work Starts on Yamuna Hydel Scheme

Work has started on the Rs. 42.44-crore Yamuna hydro-electric scheme in Dehra Dun district. The preliminaries, including the calling of tenders, are now over. The project involves the construction of six power-stations having a total installed capacity 420 megawatts and will be completed in two stages. It forms part of an integrated scheme which also includes the Harduagang, (stages I and II) and Ramganga projects. The scheme is designed to electrify 1,500 towns in western U.P.—300 in each year of the third plan. At stage I, the Yamuna hydel project will have an installed capacity of 56 megawatts and it is scheduled to be ready by the middle of 1965. Civil works costing Rs. 6 crores to Rs. 7 crores will start this month when the river is expected to return to its normal level. The second stage, providing for an installed capacity of 264 megawatts, will be carried over into the fourth plan. The foreign exchange component of both the stages is Rs 7.57 crores. The Yamuna hydel scheme was originally part of the State's second plan, and was to cost about Rs. 30 crores. The capacity which was to be installed visualised an output of 210 megawatts of electricity. It was given up at the instance of the Government of India, because Punjab wanted to build a dam near Koch, further up the Yamuna. It was only a few months ago that the U.P. Government was told that the Koch dam project had not been found feasible.

Piracy in Bicycle Trade Marks

The infringement of trade marks for bicycle parts is becoming very frequent in Uttar Pradesh, according to a report issued recently by the U.P. Director of Industries. So a separate cell has been set up to combat it. In the beginning, the scheme was launched in six districts, and it has since been extended to 18. Inspectors attached to the cell survey the markets, detect cases of infringements and launch prosecutions against offenders. Manufacturers of the original articles, the report says, need only supply information on their products and any case of infringement they come across. So far, the cell has initiated 234 prosecutions, and it is reported that nearly all of them have ended in convictions, the offenders being fined or jailed. Sometimes, the imitations were plain copying, detail for detail. In other cases, very minor differences were incorporated. Re-filling of empty containers and passing them off as genuine is another widespread evil. As far as bicycle parts are concerned, the dispersal of the industry throughout the country in both the large-sale and the small-scale sectors has facilitated the infringement of patents and trade marks. Against 21 large-scale units manufacturing bicycles, there are about 120 units in the small-scale sector. There is a concentration of these small-scale units in Punjab, Delhi and U.P. The number of units exclusively engaged in the manufacture of components is estimated at over 20.

Labour Policy in Madras

The Labour Minister of Madras said recently at a Press conference that trade unions in the State are no longer eager to go to court for the settlement of disputes, since they now have greater faith in collective bargaining. He suggested that members pay more to strengthen the finances of trade unions. This will enable the latter to offer more help to workers during disputes. The main aim of the labour policy of the Madras Government, the Minister said, is to increase productivity and to reduce friction between employers and workers. Although the Government has not banned strikes, it has indicated that negotiations are always preferable. The Minister said that the progress of industrialisation in the State will depend on amicable relations between employers and workers. Many new enterprises have been established in Madras because of industrial peace during the last two years.

Expanding Coal Production

During the discussions that took place last Monday with representatives of the coal industry, the Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh, broadly accepted the recommendations of the Working Group constituted earlier in the year to examine the expansion plans of private sector collieries. A major recommendation was to the effect that an additional production of about 16 million tons could be achieved by the private sector during the third plan. In addition, the Minister said that more individual projects would be considered by the Government on merit. Appreciating the contention that arrangements should be put in hand forthwith, he requested the industry to proceed with the implementation of expansion projects and indicated that any procedural difficulties encountered should be referred immediately to the Coal Controller. His assurances concerning the removal of procedural delays were welcomed. The basic problems facing producers which had repeatedly been placed before the Government were broadly discussed at the meeting. The industry stressed that effective implementation of its expansion plans would depend on the ability of the railways to maintain an adequate and sustained supply of wagons for coal movement. It was also stressed that adequate wagon allotments to collieries or depôts where stocks of coal exist are essential if effective use of offerings made by the railways is to be ensured.

The Minister appreciated the industry's concern over the delay in the disbursement of assistance to collieries working under adverse mining conditions, such as gasiness, depth, heavy dewatering expenses, etcetera. A cess has been imposed on despatches of coal with effect from 1st February, 1960, but the scheme for granting assistance has not yet been finalised. At the Minister's request that the grant of assistance should be based on the available proceeds from the fund created by the cess, the industry put forward an agreed formula for subsidising such collieries irrespective of the fact that the effective assistance to such mines on this basis would be quite inadequate. It is understood that these proposals are being examined by the Government, and an early decision is expected. Producers welcomed the Minister's suggestion for periodic reviews of the progress in implementing the expansion plans and projects with a view to obviating procedural delays and to ensure a realistic approach to the problems which will arise.

The Hanover Industries Fair

An Industries Fair will be held in Hanover, West Germany, between 30th April and 9th May next year. Since the Fair was first held in 1947, its importance for international trade has steadily increased. To accommodate the growing number of German and foreign exhibitors, it has been necessary to extend the exhibition area every year. The exhibitors are producer firms only, and the following industrial groups will be represented: mechanical engineering, electrical engineering, chemistry and plastics, precision mechanics and optics, iron and steel, tools, rubber, office supplies, porcelain and ceramics, glass, jewellery and silverware, watches and clocks, cutlery and metal goods.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity showed a rise of 3.0 points during January 1960. There were increases in sugar and railway ton-miles. Tea, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, tyres, motor-cars, bicycles and electricity showed declines.

WORLD TEA EXPORTS

ALMOST the entire production of the world's tea is raised within the region popularly known as the "Far East". Experiments in tea-planting have been carried out in Brazil, Southern Russia, the United States, Borneo, and several parts of Africa, but at present the results are either unsatisfactory or so small as not to appreciably affect the world's tea trade. It is impossible to obtain the figures showing the total tea production of the world, but the following table gives a summary of the exports of tea to all parts from the chief sources of production in 1899.

			lbs.
From India	(season)	...	175,000,000
„ Ceylon	„	...	138,000,000
„ China	„	...	149,000,000
„ Japan	(year)	...	45,830,000
„ Java	„	...	12,850,000
			520,680,000

The figures for China include about 34,000,000 pounds sent overland by caravan to Russia, but excludes 64,000,000 pounds of brick tea sent abroad, most of which also went to Russia. There are no reliable statistics of the domestic consumption of tea in China and Japan, but as it is in general use it must be enormous. The other principal tea-drinking countries of the world are the United Kingdom, the British Colonies, Russia and the United States. The tea consumed in the United Kingdom during 1899 amounted to about 244,000,000 pounds, of which as much as 221,000,000 pounds was British grown. In 1899, the crop from Ceylon was the heaviest on record. About 17,000,000 pounds of this tea were consumed in Russia last year, and as the consumption is increasing yearly, there is no fear that the Caucasian tea now grown on the south-east coast of the Black Sea will oust it from the Russian market. India now ships nearly nine-tenths of her tea exports to the United Kingdom, but, of course, some of this tea is re-exported to other countries. Japanese teas mostly go to the United States and Canada, only about a twenty-fifth part being exported to Europe and the rest of the world. Indian and Ceylon growers are strenuously seeking to increase their hold on the American trade, and are gradually supplanting the Japanese teas which are poor in quality.

A Ditcher's Diary

IN THESE COMPLICATED DAYS OF STATISTICAL summaries, cost of living indices, economic indicators and what have you—all appearing long after the events to which they refer—to judge the prosperity of a particular year by simpler means is to put oneself in the position of the peasant who forecasts the weather by the colour of the evening sky. Yet in this office we have something which tells us with remarkable accuracy how prosperous the year has been, even before it officially ends. At least, it discloses how prosperous people feel it has been for them, which, of course, may not quite be the same thing. I am referring to *Capital's* Christmas Toy Fund, a fact you may already have guessed, because it is an established practice of mine this time every year. On the basis of the collection for 1959, I can say with some confidence that the year was by no means as prosperous as 1958, which in turn seems to have been much better than 1957. These are the figures: 1957, Rs. 3,215.63; 1958, Rs. 4,511.50; 1959, Rs. 3,809.57. Now, if my memory serves me correctly, 1957 was a year of massive import cuts and foreign exchange crisis, 1958 was one of inflation and booming markets, and 1959 brought higher dividend taxes and moderate credit stringency. At that rate, then, the collection for 1960 threatens to be the worst for some time, because although this has been a year of inflation, it has also seen severe credit curbs, lower preference dividends, increased import cuts, a crisis in the jute industry and a shortfall in the tea crop. That is why I am appealing specially this year for contributors to increase their donations despite their economic problems. The point is, of course, that the calls on the Fund are not connected in anything like the same way with the cycle of prosperity and depression; they just go on increasing every year to the maximum we can collect. On previous occasions we have been able to spread a poor collection a little more thinly so as not to leave any child disappointed. But the expedient has now reached its limit; the toys we buy are already costing no more than Re. 1 each. So I am asking all my readers to be particularly generous this year and to help put us back on the upward trend that I fondly hoped had set in with the 1958 collection. There is no need to remind you that we make no distinction of colour, race or creed. The address is *Capital* Christmas Toy Fund, 5 Mission Row, Calcutta.

THE RUTHEVERETT HAS SAILED AT LAST, I SEE, AND no doubt the Calcutta Customs can compliment themselves on a pretty thorough job of work. But I wonder how many smuggling attempts succeed for every one which turns out to be a Rutheverett—a remarkably large number would be my guess. And now that the popularity of gold seems to be increasing outside India, it is possible the demand for it here—where it has always been a favourite hedge—will rise more than proportionately, and with it the incentive to further smuggling. The lesson is, of course, that no nation enjoying extensive trading contacts with the outside world can possibly insulate its currency from the impact of its own Government's economic follies. Much of the activity on the internal gold markets may be speculative, but the prevailing price level is a fairly accurate guide to the confidence the Indian public has in the rupee. The outside world rates it no higher either, as anybody who has been abroad recently can confirm. The point may not yet have been reached when, as Professor Shenoy I believe already claims, the foreign aid India receives is completely neutralised by payments made for illicit gold imports, but it is probably not as far off as the Government would have us believe. The example of the Rutheverett is a clear lesson to those who care to learn, that an efficient Customs service is no substitute for sound internal economic policies.

WHEN THE JURY IN THE CASE OF *Lady Chatterley's Lover* reassembles today, Thursday, its members will have gone through a strange sort of experience at their age, that of compulsory reading. (It seemed to me slightly odd that none of the jury should have said that he, or she, had read a pirated edition of the novel long ago; or, perhaps that would have been prejudicial?) *The Times* of 21st October carried an extensive report of the first day's proceedings; and it made excellent reading. Mr. Griffith-Jones's prosecution was competent; but Mr. Gardiner's defence was brilliant. Nobody would suggest, said Mr. Gardiner, that the Director of Public Prosecutions had become depraved and corrupted by reading the book, nor counsel, nor witnesses, nor the judge nor the jury. "It is always someone else, it is never ourselves" that is corrupted. We will soon know whether Lawrence's 30-year-old novel is obscene or not; and I dare not anticipate the verdict. But the Obscene Publications Act of last year is a distinct improvement on past laws: and it is ironical that the first book tried under the new law should have been *The Ladies' Directory*, which contained names and telephone numbers of prostitutes, and the second, *Lady Chatterley's Lover*. Surely, the two publications do not even belong to the same category? But then, in the eye of the law, I suppose they might have something in common. This is the second virtue of the Jenkins Act. For the first time the jury, should it find *Lady Chatterley* obscene, will be called upon to say whether it is literature. I would not suggest for a second that Sir Allen Lane instituted the case for any reason other than to establish what the law is; but the wide interest the trial has already created certainly gives the book more publicity than its quiet publication would have secured. Should it get the expected clearance, its 200,000 copies will be sold out in no time: and I do not apprehend either greater immorality, or increased use of "good old four-letter Anglo-Saxon words" in the Army, the Navy and the Air Force. The latter simply cannot increase any more.

IF A NEWSPAPER ESTABLISHMENT WERE NO MORE than just another industry or business venture, there would be little grief over the death of the *News Chronicle* and *Star*. Reactions since Monday week are ample testimony that we journalists are not the only ones to be sentimental over the living personality of a newspaper. Lord Layton and Sir Geoffrey Crowther have explained the economic inescapability of the decision of the trustees to sell out to, of all conceivable parties, Carmelite House; and the staffs of the two papers have, in part, answered the argument. It is not for me to join the debate, although it is obvious that not everything about the deal is clear. A newspaper once associated with Charles Dickens, A. G. Gardiner and other giants, deserved a better fate than to be parcelled out like that; and this to be done when the Liberals are showing some signs of revival is the more cruel. In 114 years the *Chronicle* had established a tradition of its own, of which Fleet Street was justly proud; and others have already pointed out how this newspaper wrote of India at a time when the majority of the British people were not interested at all in this distant country. It has also been noted how the *Chronicle* was among the first to expose the ugly face of fascism. But it is not by particular stands or scoops alone that a newspaper endears itself to its readers. What does that is the general tone; and here the *Chronicle* was a happy blend of seriousness and brightness. It has been suggested that the paper fell between these two stools, that it tried to speak the "popular" idiom but chose serious subjects. This may well be part of the explanation; but unless "popular" journalism in Britain finds some way to make this combination an economic proposition, it will ill serve the British public.

WHEN THE WORLD-RENOWNED PIANIST, GRANT Johannesen, gave two recitals before Calcutta audiences last week, attendance on both occasions by no means did justice either to the reputation of the performer or to the brilliance of his playing. No doubt numbers are no indication of enjoyment given, but the whole thing must have been a disappointment for the sponsors and dispiriting for Mr. Johannesen himself. If he left Calcutta with the impression that the level of musical awareness in this city is not high, or that enthusiasm for good music is insufficient to persuade people to leave their homes to listen to it, then we only have ourselves to blame. I see the annual series of concerts organised by the Calcutta School of Music will once again be upon us, and it would be a pity indeed if these too were not to receive the support they deserve. I am told that last season's concerts were the best attended for some years, and while I should like to believe that my own scolding had something to do with it, it would be even more gratifying to feel that music lovers—and there are more than one might suppose from concert attendances—had at last grasped the fact that the School's own creditable efforts are useless without their personal support. It is not always appreciated what a desert Calcutta has become so far as western culture is concerned; what showing there is nowadays depends to a large extent on the work done by the School. If it were ever forced to abandon its yearly concert series through lack of public support, the result would be a cultural disaster indeed. The prospectus I have here tells me that this year's collection of soloists is a good one, if slightly weighted in favour of pianists, and should be a fine attraction. It includes names as well known as Alberto Lysy, the violinist, who will perform at the first concert on 23rd November; Julius Katchen, pianist, who will also give a recital on 22nd December, the day after his concert; and Daphne Spottiswoode, Karl Delseit and Abbey Simon, also distinguished pianists. Of course, Calcutta's own Miss Liesl Stary has not been omitted, and she, I see, is to appear at the fourth concert on 8th February. In addition, Paul Badura-Skoda will give a recital on Sunday, 5th February. This season, as during the past three, the Calcutta Symphony Orchestra will be conducted by Mr. Bernard Jacob.

THE DITCHER

US* knows about steels

Our grammar is fine. So are our steels. US is United Steel, the group of companies which produce the widest range of steels and steel products in Britain.

Not just steel—but steels. Each with its specialised qualities and specified uses . . . steel for motor cars, watches or umbrellas. Mining machinery, saucepans or railway lines. Over one-eighth of Britain's steel is produced by the 37,000 people employed in United Steel.

Companies in the United Steel group retain their individuality to a remarkable extent. They are specialists—geared to understand the manifold problems of modern industry. You will see their work in straight-forward railway axles, or the complex structure of the Jodrell Bank radio telescope.

The many special steels that nuclear reactors demand, steel for the Ganga Bridge or the Boeing 707—US makes them all. And to specialisation, United Steel adds the benefits of large-scale co-operation in research and marketing. That's why it pays to know US.

This is US

PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any statements made or opinion expressed in regard to it.

Certificate for Commencement of Business No. 24704 dated 4th August, 1960 has been issued by the Registrar of Companies, West Bengal.

A copy of this Prospectus having attached thereto the documents mentioned hereinafter has been delivered to the Registrar of Companies, West Bengal for registration, as required by Section 60 of the Companies Act, 1956.

Permission has been obtained from the Calcutta Stock Exchange to deal in and for an official quotation of the Shares of the Company.

The Subscription List will open at the commencement of banking hours on Thursday, 3rd November, 1960 and will remain open up to the close of banking hours on Tuesday, 8th November, 1960 in respect of the Equity Shares and up to the close of banking hours on Thursday, 10th November, 1960 in respect of the Preference Shares. The Directors at their discretion may close the subscription list for Equity Shares earlier but not before the close of banking hours on Monday 7th November, 1960.

GENERAL TYRES LIMITED

(Incorporated on 14th June, 1960 under the Companies Act, 1956).

AUTHORISED SHARE CAPITAL		**Rs. 2,00,00,000**
divided into:		
(1) 15,00,000 Equity Shares of Rs. 10/- each		**Rs. 1,50,00,000**
(2) 50,000 Preference Shares of Rs. 100/- each		**Rs. 50,00,000**
		Rs. 2,00,00,000
ISSUED SHARE CAPITAL		
450 Equity Shares of Rs. 10/- each fully paid		**Rs. 4,500**
PRESENT ISSUE		
(1) 799,550 Equity Shares of Rs. 10/- each at par		**Rs. 79,95,500**
(2) 20,000 9% (Free of Company's Tax but subject to tax deducted at source at the prescribed rate from time to time) Cumulative Redeemable Preference Shares of Rs. 100/- each at par		**Rs. 20,00,000**
		Rs. 99,95,500
OUT OF THE PRESENT ISSUE		
(1) the Directors and their friends have agreed to subscribe for and will be allotted 149,550 Equity Shares of Rs. 10/- each		**Rs. 14,95,500**
(2) National Rubber Manufacturers Ltd. have undertaken to get 250,000 Equity Shares of Rs. 10/- each subscribed for by their Shareholders and to take up such number of shares, if any, as may not be subscribed for by their shareholders		**Rs. 25,00,000**
NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION		
(1) 400,000 Equity Shares of Rs. 10/- each		**Rs. 40,00,000**
(2) 20,000 9% (Free of Company's Tax but subject to tax deducted at source at the prescribed rate from time to time) Cumulative Redeemable Preference Shares of Rs. 100/- each		**Rs. 20,00,000**
		Rs. 99,95,500

UNDERWRITING

The entire present issue to the public is being underwritten as follows:—

Underwriters	Amount in Rupees	
	Equity Shares	Preference Shares
1. Industrial Finance Corporation of India. New Delhi	**Nil**	**20,00,000**
2. The Bank of Baroda Ltd., Calcutta	**40,00,000**	**Nil**
	40,00,000	**20,00,000**

In the opinion of the Directors the resources of the underwriters are sufficient to discharge their underwriting obligations.

APPLICATIONS AND SUBSCRIPTIONS

Applications for shares by members of the public must be for a minimum of 50 Shares or multiples of 50 Shares in respect of Equity Shares.

TERMS OF PAYMENT OF ABOVE SHARES

EQUITY SHARES:

On application— Rs. 5.00 per Share

Balance— Rs. 5.00 per Share payable on calls to be made but no call will exceed Rs. 2.50 per share and there shall be an interval of at least one month between calls.

Rs. 10.00 per Share

PREFERENCE SHARES:

On application— Rs 50.00 per Share

Balance— Rs. 50.00 per Share payable on calls to be made but no call will exceed Rs. 25.00 per share and there shall be an interval of at least one month between calls.

Rs. 100.00 per Share

Failure to pay the balance money on any call when made will render the Share liable to forfeiture.

DIVIDEND AND CAPITAL

The Company in general meeting may declare a dividend to be paid to the members according to their rights and interest in the profits of the Company and may, subject to the provisions of Section 207 of the Companies Act, 1956, fix the time for payment.

No dividend shall be payable except out of the profits and no dividend shall carry interest as against the Company.

RIGHTS OF PREFERENCE SHARES

Dividend: The Preference Shares shall confer upon the holders thereof the right to a fixed cumulative preferential dividend of 9% per annum free of Company's tax but subject to tax deducted at source at the prescribed rate from time to time, on the capital for the time being paid up thereon. The Preference Shares shall rank for dividend from the day of allotment on the amount for the time being paid up thereon.

Capital: The Preference Shares shall also confer on the holder thereof the right on winding up to payment of capital and arrears of dividend whether earned, declared or not upto the commencement of winding up in priority to the equity shares but shall not confer any further right to participate in any profits or assets.

Subject to the provisions of the Companies Act, 1956, the Company shall have the option to redeem the whole or any part of the said Redeemable Preference Shares at par at any time or times after the expiry of 5 years but not later than 10 years from the date of issue at the option of the Company on giving not less than six months previous notice in writing specifying the date of redemption and, in the case of partial redemption, the number of shares to be redeemed.

RIGHTS OF EQUITY SHARES

Dividend: Subject to the provisions of the Companies Act, 1956, and to the Articles of Association of the Company the net profits of the Company from time to time determined to be divided in respect of any year or other period shall be applied first in paying the preferential dividend on the capital paid up on the Preference Shares and the surplus shall be divisible amongst the holders of the Equity Shares in proportion to the amount paid up on the Equity Shares held by them respectively.

Capital: On a winding up the holders of Equity Shares shall be entitled to payment of capital after paying off the capital on Preference Shares and other dues thereon or in respect of other liabilities of the Company.

OCT 1960

GENERAL TYRES LIMITED—*Cont'd*

CONSENTS

Consent in writing of the abovenamed Bankers, Solicitors, Auditors, Brokers to act in their respective capacities have been filed with the Registrar of Companies, West Bengal. The Auditors of the Company have given and have not upto the date of delivery to the Registrar of Companies, West Bengal, of this Prospectus for registration, withdrawn their written consent to the issue of the Prospectus with the inclusion therein of their Report set out below in the form and context in which it appears.

OBJECTS OF THE COMPANY

The Company was incorporated on 14th June, 1960 with the objects mentioned in the Memorandum of Association of the Company and particularly to undertake immediately the manufacture of and carry on business an automobile tyres and tubes and components and accessories relating to tyres and tubes.

MANUFACTURING LICENCE

The Government of India has issued under the Industries (Development & Regulation) Act, 1951 a Licence No. L/30-1/N-12/60 dated 19th March, 1960 for the manufacture of automobile tyres and tubes.

IMPORT LICENCE

The Government of India has issued Import Licence No. 999469/HQ dated the 30th March, 1960 for a total amount of Rs. 80,00,000 for the purchase of a complete automobile tyre and tube plant from Czechoslovakia.

FACTORY SITE, POWER & WATER SUPPLY

The Company has entered into an Agreement to purchase from Calcutta Tanneries (1944) Ltd. of 96, Garden Reach Road, Calcutta-23 a suitable factory site at Kattadanga Road, Kankinarrah, District 24 Parganas, West Bengal which is about 20 miles from Calcutta, situated near a railway siding, the total area of land being approximately 94 Bighas. The land is permanent leasehold and on the land there are three main brick built buildings and other structures covering an area of approximately 70,000 sq. ft. which can be converted and utilised for the purposes of the Company, which is advantageous to the early implementation of the project. The Company has agreed to pay Rs. 7,00,000 in cash as the purchase price for this factory site.

The factory site has its own power-house for the supply of part of the electricity required. *Arrangements will be made with the Calcutta Electric Supply Corporation Ltd. for the supply of the additional power required.*

The factory site has a 300'×6" bore Tube Well fitted with an electric pump and connected to its own reservoir which is capable of meeting the entire requirements of water supply for the factory.

RAW MATERIALS

The basic raw material, namely raw rubber and certain fabrics and mineral fillers are largely available from indigenous sources. Other materials such as synthetic rubber, ravon tyre-cord, carbon black and special chemicals like rubber accelerators and anti-oxidants are now being imported but manufacturing units are being set up to manufacture such items in India to meet the demand of the Industry.

PLANT AND MACHINERY

The complete Automobile Tyre and Tube Plant is being purchased from Technoexport Foreign Trade Corporation, Praha, Czechoslovakia. Further reference to this Plant is made under the heading "Technical Collaboration". Technoexport has indicated that it is in a position to ship about half of the plant and machinery required within this year which would assist the early implementation of the project.

PROMOTION BY NATIONAL RUBBER MANUFACTURERS LIMITED

This Company is sponsored and promoted by National Rubber Manufacturers Limited of Calcutta. National Rubber Manufacturers Limited has since its incorporation in 1946 rapidly expanded its activities and at present is one of the largest manufacturers of mechanical rubber goods and cycle tyres and tubes in India. As a result of this expansion which is nearly complete its monthly turnover has increased from Rs. 11,00,000 in 1956 to approximately Rs. 21,00,000 during the first six months of 1960.

In pursuance of this policy of expansion National Rubber Manufacturers Ltd has sponsored this project for the manufacture of automobile tyres and tubes in India and has promoted this Company for this purpose. It has undertaken all the preliminary work involved and has obtained the manufacturing and import licences necessary for the project and has negotiated with Technoexport Foreign Trading Corporation of Czechoslovakia for the supply of the complete Plant for the manufacture of tyres, etc. and for all technical assistance in the production. It has also negotiated the purchase of the factory site in West Bengal for the Company.

National Rubber Manufacturers Limited has acquired an extensive knowledge and experience of the Indian market and has an established sales organisation throughout India. In order to obtain the benefit of this experience the Company has appointed National Rubber Manufacturers Ltd. as its Managing Agents and arrangements are also being made for National Rubber Manufacturers Ltd. to share its sales organisation for the sale of the automobile tyres and tubes and other ancillary products manufactured by the Company once the Plant goes into production so that a ready and quick market will be available for such products.

TECHNICAL COLLABORATION

The Promoter, National Rubber Manufacturers Ltd., had negotiated and entered into an Agreement with Technoexport Foreign Trade Corporation, Praha, Czechoslovakia in November 1959 for the supply and erection of the complete Automobile Tyre and Tube plant and for technical assistance and collaboration in the operation of the Plant and the production of automobile tyres and tubes. This Agreement has with the consent of all parties concerned been assigned to this Company on the 1st October, 1960. The Government of India has given its approval to the technical collaboration with Technoexport.

Technoexport is the Foreign Trade Corporation of Czechoslovakia engaged in the export of complete industrial plant and machinery and equipment produced by the Czechoslovak Engineering Industry.

Technoexport specialises (inter alia) in the export of plant and machinery for processing of rubber, particularly for the production of tyres and tubes of motor cars, motor cycles, bicycles, rubber and tennis balls, rubber toys, rubber thread, etc. The rubber manufacturing Plants have been set up in 25 countries including Indonesia, Iran, Burma, Lebanon, U.A.R., Iraq, Austria, German Democratic Republic, Yugoslavia and other European countries. Recently Technoexport has supplied a complete rubber plant to Indonesia which has already been erected and put into operation with the assistance of Czechoslovak experts. The products of this factory are equal in quality to all well-known products of this kind. The Czechoslovak Rubber Tyre factories produce high quality tyres under the well known "BARUM" brand which are exported to 68 countries including West Germany, Sweden, near, Middle & Far East, etc.

The following is briefly the scope of the agreement entered into with Technoexport.

(1) SUPPLY OF PLANT & MACHINERY

Technoexport will supply the plant, machinery and equipment required for the manufacture of automobile tyres and tubes for the sum of Rs. 71,00,000/- It will also prepare the Final Project Report based upon the Preliminary Project Report already prepared by Technoexport comprising all technical aspects relevant to the setting up of the Plant at the Factory site. The Plant will be capable of manufacturing high quality tyres and tubes. Payments will be made on deferred terms for which the usual interest of 6% per annum will be charged. The Corporation has indicated that it is in a position to ship about half of the Plant and Machinery by December 1960.

(2) SUPERVISION OF ERECTION

Technoexport will arrange for selected technical personnel to be sent to India from Czechoslovakia who will erect the Plant and put it into production. The Company will bear the salaries, travelling expenses, etc. of such technical personnel who are sent to the Plant.

(3) TECHNICAL ASSISTANCE

Technoexport will send out specialised technicians who will work at the Plant for periods varying from 6 months to 24 months whose responsibility it will be to ensure that stipulated production is achieved at the Plant and Indian personnel are trained to take over the running of the Plant. Selected Indian personnel will also be sent for training to factories in Czechoslovakia at the cost of the Company. The Company will bear the expenses, salaries, etc. of the technical personnel sent to the Plant.

(4) TECHNICAL AID AND LICENCE TO USE "BARUM" TRADE MARK

Technoexport together with Rudy Rijen National Corporation, who are manufacturers of automobile tyres in Czechoslovakia, will supply to the Company all technical know-how and assistance including the use of secret processes and patents relating to the manufacture of automobile tyres and tubes according to the latest standards in Czechoslovakia. The Corporation will arrange for the use of the "BARUM" Trade Mark in India by the Company for a period of 10 years on payment of fees and subject to certain conditions.

All payments in terms of the above items are to be made in Indian rupees by virtue of the Trade Agreement entered into between the Government of India and the Government of Czechoslovakia. Therefore, there is no foreign exchange requirement in connection with this Project.

EXPORTS

No restriction has been imposed by Technoexport on the export by the Company of its tyres and tubes to any country in the world and Technoexport have also agreed to purchase at current prices 5,000 tyres and tubes per annum for a period of four years from the commencement of production for export to Czechoslovakia and other countries.

MARKET POSSIBILITIES AND BUSINESS PROSPECTS

The road mileage per 1,000 square miles of area in India is only 250 against 1,003 in U.S.A., 3,035 in France and 3,242 in U.K. Thus, there is ample scope for development of roads in this country. The Five Year Plans envisage considerable increase in road transport facilities in India. During the period of the First Plan the road mileage increased from 2,44,000 to 3,16,668 and the expected level of achievement at the end of the Second Plan is 3,79,000 miles. The increase in agricultural and industrial production expected to take place in the Third Five Year Plan period would naturally call for additional road transport facilities. The Draft Outline of the Third Plan provides for construction of substantial additional mileage of roads and also lays down the following targets for the manufacture of different categories of Automobiles:—

	Estimated production in 1960-61 (In Nos.)	Target for 1965-66 (In Nos.)
Passenger Cars ..	20,000	30,000
Commercial Vehicles ..	28,300	60,000
Jeeps & Station Wagons ..	5,500	10,000
Motor Cycles, Scooters & Three Wheelers ..	16,000	48,000
	69,500	1,48,000

The anticipated progress in the road sphere as above is sure to raise considerably the demand for automobile tyres and tubes. The position with regard to the existing and future manufacturing capacity licenced or to be licenced by the Government of India having regard to the expected demand by the end of the Third Five Year Plan period as estimated by the Planning Commission is indicated by the following table:—

Description	Estimated capacity by 1965/66	Capacity in 1960/61
Automobile Tyres	3.7 millions	1.76 millions
Automobile Tubes	3.7 millions	1.81 millions

PRODUCTION PLANS

The Licence issued by the Government of India authorises the Company to establish a new industrial undertaking in West Bengal for the manufacture of Automobile Tyres and Tubes in collaboration with Technoexport, Praha, Czechoslovakia with annual capacity as follows:—

	Tyres	Tubes
For Buses and Trucks	1,20,000	1,20,000
For Passenger Cars	60,000	60,000
Total	1,80,000	1,80,000

The Directors anticipate that there will not be any difficulty in selling the entire production of the Company as above in view of the large increase of demand as estimated by the Planning Commission.

ESTIMATED PROFITABILITY

The Directors have estimated the cost of production of tyres and tubes on a conservative basis. After careful scrutiny of cost of raw materials, establishment and other direct expenses and on the basis of a conservative estimate of sales the Directors think that the Company may reasonably expect to earn sufficient profit to pay a reasonable dividend on the invested Capital.

TAX BENEFITS

According to present law the Directors consider that (a) the Company will be entitled to special benefits in respect of Development Rebate under the Indian Income-tax Act and may also enjoy a Tax-holiday for five years in respect of profits up to six per cent on the employed capital under Section 15C of the Indian Income-tax Act.

(b) Shareholders of the Company would also be exempt from Wealth-tax on their holdings for a period of five years under Clause XX of Sub-section (1) of Section 5 of the Wealth Tax Act and may also be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 15C of the Indian Income-tax Act.

FINANCIAL ARRANGEMENTS WITH INDUSTRIAL FINANCE CORPORATION OF INDIA

(a) Loan

Industrial Finance Corporation of India have agreed to grant a loan of Rs. 60,00,000/- to the Company to be utilised towards the acquisition of land, buildings plant and machinery for the project. The loan is to be secured by a mortgage of the existing and future fixed assets of the Company at an interest of 7% per annum with a rebate of ½% if instalments of principal and interest are paid on due dates. So long as this mortgage would subsist the Industrial Finance Corporation of India may at any time appoint not more than two persons to be Directors of the Company and such nominee Directors shall not be subject to retirement by rotation nor required to hold qualification shares. The Company may also borrow from its Bankers from time to time against hypothecation of stocks, raw materials and finished goods to raise working capital. During the currency of the loan the dividend on Equity shares shall not without the prior approval of the Corporation exceed 8% and certain other restrictions are imposed on the Directors and Managing Agents of the Company. The other terms and conditions of the loan are set out in the Corporation's letter dated 15th October, 1960 and eventually a formal agreement embodying (inter alia) these terms will be entered into between the Company and the Corporation.

(b) Guarantee for Deferred Payments

Industrial Finance Corporation of India have also agreed to guarantee the deferred payments in respect of the contract with Technoexport for the purchase of the Automobile Tyre and Tube Plant to the extent of Rs. 40,00,000/- and will be paid a commission of 1% per annum with a rebate of 1% on the terms and conditions of the Guarantee being duly fulfilled.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is Rs. 60,00,000/- being the whole of the share capital now offered for subscription by the public.

The Capital outlay required for this project will be as follows:—

Land and Building	Rs.	26,00,000
Machinery, Installations and Equipments	Rs.	1,07,00,000
Cost of Project Report payable to Technoexport	Rs.	4,00,000
Preliminary expenses Underwriting, Commission and Brokerage	Rs.	3,00,000
Working Capital	Rs.	80,00,000
	Rs.	2,20,00,000

Sources of Finance

The above amount will be provided for as under:—

(a) Out of the present Issue	Rs	1,00,00,000
(b) Loan from Industrial Finance Corporation of India	Rs.	60,00,000
(c) Deferred payment	Rs.	40,00,000
(d) Loans from Banks (to meet part of the working capital as and when required in the usual course of business)	Rs.	20,00,000
	Rs	2,20,00,000

EXPENSES OF THE ISSUE

The expenses of the Issue other than brokerage and Underwriting commission are estimated at Rs. 70,000 and will be payable by the Company.

BROKERAGE

Brokerage will be paid to Brokers and Banks @ 10 nP per Equity Shares of Rs. 10/- and Re. 1/- per Preference Share of Rs. 100/- each on allotments made in respect of applications bearing their stamps. Place, Siddons & Gough (Private) Ltd., Calcutta, are the Managing Brokers to the Issue and will be in addition entitled to a commission of 5 nP per Equity Share subscribed by the public.

The total amount of brokerage payable by the Company is estimated at Rs. 80,000/-.

UNDERWRITING COMMISSION

Industrial Finance Corporation of India, New Delhi, will be paid an underwriting commission of 2½% and brokerage of Re. 1/- per share on the number of Preference Shares that may not be taken up by the public.

The Bank of Baroda Ltd. will be paid an underwriting commission of 2½%.

GENERAL TYRES LIMITED—*Cont'd*

The total amount of underwriting commission payable by the Company is estimated at Rs. 1,50,000/-.

PAYMENT TO PROMOTERS, ETC.

No amount or benefit has been paid or given or is intended to be given to any Promoters, Brokers, Directors or otherwise of the Company apart from the normal remuneration.

AUDITORS REPORT

In accordance with the provisions of Clause 24 of Part II of Schedule 2 of the Companies Act 1956 we report that the account of General Tyres Limited which was incorporated on 14th June, 1960 has not been made up at any time since the incorporation of the Company.

Chartered Accountants.

6, Hastings Street,
Calcutta, the 1st October, 1960.

DIRECTORS

The Articles of Association of the Company provide that :—

(a) Until otherwise determined by a General Meeting, the number of Directors shall not be more than 15 or less than 3.

(b) The qualification of a Director other than Special, Ex-officio or Debenture Directors shall be the holding of Equity Shares of the nominal value of at least Rupees One thousand in the Company.

(c) Until otherwise determined by the Company in a General Meeting the remuneration of a Director for his services shall be such a sum as may be fixed by the Board of Directors not exceeding Rs. 250/- for each meeting of the Board or Committee thereof attended by him. Subject to the limitation provided by the Companies Act, 1956 the Directors shall be paid 1% of net profit of the Company or other remuneration as the Company in a General Meeting may from time to time determine and such additional remuneration shall be divided among the Directors in such proportion and manner as the Directors may from time to time determine provided that the Ex-officio Directors shall not be entitled to such remuneration.

The remuneration of Directors shall in so far as it consists of a monthly payment be deemed to accrue from day to day. In addition to remuneration payable as aforesaid Directors may be paid all travelling, hotel and other expenses properly incurred by them (a) in attending and returning from meetings of the Board of Directors or a committee thereof, or (b) in connection with the business of the Company.

(d) So long as the loan from Industrial Finance Corporation of India shall remain due it will be at liberty to appoint Directors not exceeding two to the Board of Directors of the Company. The Directors so appointed shall not be subject to retirement by rotation nor shall they be required to possess any share qualification prescribed by the Articles of Association of the Company nor shall they be counted for determining the total number of Directors.

(e) National Rubber Manufacturers Ltd. whilst they shall be the Managing Agents of the Company shall have the right to appoint Ex-officio Directors not exceeding two and such Directors shall not be subject to retirement by rotation nor shall they be required to possess share qualification prescribed by the Articles of Association of the Company nor shall they be counted for determining the total number of Directors.

INTEREST OF DIRECTORS AND PROMOTERS

1. Mr. J. L. Esplen, Managing Director of Place, Siddons & Gough (Private) Ltd., who are the Managing Brokers and one of the Brokers to the Issue is interested in the brokerage payable to them.

2. Mr. R. G. Edwards, Managing Director of Place, Siddons & Gough (Private) Ltd., who are the Managing Brokers and one of the Brokers to the Issue is interested in the brokerage payable to them.

3. Mr. H. J. Silverston is a Partner of Messrs. Orr, Dignam & Co., who are the Solicitors to the Issue and to that extent is interested in the fee payable to this Firm.

4. Mr. K. N. Mookerjee is the Managing Director and Dr. D. Banerjee, a Director of National Rubber Manufacturers Ltd. who are the Managing Agents of the Company and as such they are interested in the remuneration payable to the Managing Agents.

5. All the Directors are interested to the extent of the shares subscribed for by or to be allotted to them and also in the remuneration of 1% of the net profit to be distributed amongst them. Save as above no Director has any financial or any other interest in the promotion of the Company and in any other property acquired or proposed to be acquired by the Company.

6. National Rubber Manufacturers Ltd. which has promoted this Company, has been appointed its Managing Agents and has also agreed to have subscribed either by itself and/or by its shareholders 2,50,000 Equity Shares of Rs. 10/- each. Mr. D. N Kapur, a Director of National Rubber Manufacturers Ltd. is also a Managing Director of Place, Siddons & Gough (Private) Ltd. and Mr. K Kheshvala, a Director of National Rubber Manufacturers Ltd. is also a Partner of Messrs. Lewis & Jones, one of the Brokers to this Issue.

BORROWINGS

Subject to the restriction imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge the undertaking, property and uncalled capital or any part thereof and to issue Debentures and other Securities.

VOTING RIGHTS

Subject to any special rights or restrictions as to voting affecting any particular class of shares on a show of hands every member entitled to vote and present in person shall have one vote and upon a poll every member entitled to vote and present in person or by proxy shall have one vote for every share held by him provided that no company shall vote by proxy so long as a resolution of its Directors under the provisions of Section 187 of the Act is in force. The holders of preference shares shall be entitled to receive notice of and to be present at any General Meeting but shall not be entitled to speak at such meeting or to vote by virtue or in respect of their holding of preference shares unless a resolution is proposed directly affecting the rights or privileges attached to such preference shares. Subject as aforesaid, every member of the Company holding any preference share capital shall in respect of such capital be entitled to vote on every resolution placed before the Company at any meeting if the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than 2 years preceding the date of commencement of the meeting. The voting rights of such holders of preference shares on a poll shall subject to the provisions of Section 89 and Sub-section (2) of Section 92 of the Act be in the same proportion as the capital paid up in respect of the preference shares bears to the total paid up equity capital of the Company.

VARIATION OF RIGHTS

The special rights attached to any class of shares (unless otherwise provided by the terms of issue of the shares of that class) may, subject to the provisions of Sections 106 and 107 of the Companies Act, 1956 and whether or not the Company is being wound up, be varied with the consent in writing of the holders of three-fourths of the subscribed shares of the class or with the sanction of a special resolution passed at a special General Meeting of the holders of the shares of that class.

RESTRICTION ON TRANSFER OF SHARES

There are no restrictions on the transfer of fully paid shares, but the Directors may, subject to the right of appeal conferred by Section 111 of the Companies Act 1956, decline to register any transfer of partly paid shares.

INDEMNITY

Every Officer or Agent for the time being of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings, whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Act in which relief is granted to him by the Court.

OPTION TO SUBSCRIBE

Save as mentioned herein no contract or arrangement has been or is proposed to be entered into whereby any option or preferential right of any kind will be given to any person to subscribe to any shares out of the present issue to the public.

ISSUES OTHERWISE THAN IN CASH: OPTION

No shares have been issued or agreed to be issued otherwise than in cash. No shares have been issued at a premium nor are any shares presently to be issued at a premium. No share or loan capital is under option or agreed to be put under option.

MANAGING AGENTS

National Rubber Manufacturers Limited, 19 Chowringhee, Calcutta has been appointed as the Managing Agents of the Company for a period of 10 years from 1st October, 1960 with the approval of the Government of India (*vide* their letter No. 9(770)-C.IV/60 dated 14th October, 1960). The remuneration to be paid to them in respect of their services as Managing Agents for each financial year or part thereof of the Company is based on the net profits of the Company determined in accordance with the provisions of the Companies Act, 1956, as follows:

(i) 10 per cent on the first 10 lacs net profits or fraction thereof;
(ii) 9 per cent on the next 10 lacs net profits or fraction thereof;
(iii) 8 per cent on the next 10 lacs net profits or fraction thereof;
(iv) 7 per cent on the next 10 lacs net profits or fraction thereof;
(v) 6 per cent on the next 10 lacs net profits or fraction thereof;
(vi) 5½ per cent on the next 25 lacs net profits or fraction thereof;
(vii) 5 per cent on the next 25 lacs net profits or fraction thereof;
(viii) 4 per cent on any sum over one crore of rupees net profits.

In the event of loss or inadequacy of profits in any financial year, the Managing Agents shall be entitled subject to the prior approval of the Government of India to receive by way of minimum remuneration the sum of Rs. 50,000/- for such financial year.

The Managing Agents are entitled to be reimbursed by the Company the expenses incurred by them on behalf of the Company as may be determined by the Board of Directors of the Company subject to the provisions of the Companies Act, 1956. The Managing Agents are to provide the Company with office accommodation at Calcutta and at such other places in which they may be able to provide such accommodation and the Company will pay to the Managing Agents such rent and outgoings as the Board may from time to time determine. In the event of the Managing Agents being entitled to compensation for loss of office the limit of such compensation will be governed by Section 366 of the Companies Act, 1956. The Managing Agents will have the right to nominate not more than two Directors on the Board of the Company

The Authorised Share Capital of the Managing Agents Company is Rs 1 Crore and the Subscribed and Paid-up Share Capital is Rs. 60,00,000/- made up of 5 lakhs Ordinary Shares of Rs. 10/- each and 10,000 Preference Shares of Rs. 100/- each fully paid up.

MATERIAL CONTRACTS

The following contracts not being contracts in the ordinary course of business which are or may be material have been or are proposed to be entered into by the Company :—

1. An Agreement with Technoexport Foreign Trade Corporation, Praha, Czechoslovakia for the supply of the Automobile tyre and tube Plant, supervision of erection of machinery & equipment, technical assistance and licensing of the "Barum" trade mark as recorded in the Note of Discussions dated 5th November, 1959 and by supplemental agreement dated 1st October, 1960 between Technoexport, National Rubber Manufacturers Ltd. and this Company and by the letter of Technoexport dated 18th October, 1960.

2. An Agreement entered into with Calcuta Tanneries (1944) Ltd., regarding the purchase of 94 bighas of land at Kankinarrah, 24 Parganas, West Bengal the terms of which are recorded in four letters exchanged between the parties between the 20th July, 1960 and the 9th August, 1960.

3. Agreement to sanction a loan of Rs. 60 lacs from The Industrial Finance Corporation of India, New Delhi on the terms set out in the letter dated 15th October, 1960 with enclosed Memorandum of final terms.

4. An Agreement for the guaranteeing of deferred payments to Technoexport by Industrial Finance Corporation of India, New Delhi, up to Rs. 40 lacs on the terms set out in the letter dated 15th October, 1960.

5. An undertaking given by Technoexport to purchase for export at current prices 5000 tyres & tubes per annum for four years as recorded in their letter dated 3rd October, 1960.

6. An Agreement between this Company and Industrial Finance Corporation of India, New Delhi for the underwriting of the Preference Shares to the extent of Rs. 20,00,000 on the terms set out in the letter dated 15th October 1960 with its enclosures.

7. An Agreement with The Bank of Baroda Ltd for underwriting of Equity Shares now being offered to the public on the terms set out in their letter dated 18th October, 1960 with its enclosures.

8. An Agreement entered into on the 20th October, 1960 with National Rubber Manufacturers Ltd. appointing them Managing Agents of the Company.

9. By letter dated 17th October, 1960 Mr. K. N. Mookerjee and Dr. D. Banerjee, Directors of the Company, have given an undertaking to the Company to subscribe in cash either by themselves and/or by their friends for 149,550 Equity shares in the Company.

10. By letter dated 15th October, 1960 National Rubber Manufacturers Ltd. has given an undertaking to the Company to get 250,000 Equity shares subscribed by its shareholders and to take up such number of shares, if any, as may not be subscribed for by its shareholders.

INSPECTION

A printed copy of Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issues, the Licence issued by the Central Government for setting up the Factory, Import Licence in respect of Plant and Machinery, copies of the material contracts listed in this Prospectus, the Report of the Auditors of the Company, the Consent of the Central Government to the appointment of the Managing Agents and the Consent of the Ministry of Commerce & Industry (Central Government) to the arrangements with the Technical collaborators can be inspected at any time on working days during the usual office hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the Subscription Lists are closed whichever is earlier.

APPLICATION FOR SHARES AND ALLOTMENT

Applications for Equity Shares must be for a minimum of 50 shares or multiples of 50 shares. Applications for Equity and Preference Shares must be made on the form accompanying the Prospectus which can be had from the Company's Bankers or Brokers to the Issue.

All application forms duly completed must be lodged together with the amount of Rs. 5 per share in respect of Equity Shares and Rs. 50 per share in respect of Preference Shares with either of the following Banks, namely :—

(1) The Bank of Baroda Ltd., Calcutta or with any of their Branch offices in the Indian Union.

(2) Lloyds Bank Limited, Calcutta, or with any of their Branch offices at Calcutta, Bombay, New Delhi, Madras and Amritsar.

(3) The Union Bank of India Ltd., Calcutta, or with any of their Branch offices at Calcutta, Bombay, Delhi, Madras, Kanpur, Ahmedabad, Bangalore, Coimbatore, Cochin, Surat, Baroda and Hyderabad.

The remittance should be made by cheque or draft which, if it is desired to avoid payment of Bank charges, must be drawn payable either at the particular office or branch of one of the above Banks to which the application form or cheque or draft is being sent, or upon a branch of any other bank situated in the centre to which the application is being forwarded.

All cheques or drafts drawn on Banks situated at places other than those mentioned above should include a sum at the rate of 25nP per cent of the amount remitted subject to a minimum of 0.75nP to cover all the commission and Bank charges; otherwise the application is liable to be rejected or the amount adjusted against the application moneys.

Cheques or drafts should be drawn in favour of one of the Bankers to the Issue "A/c General Tyres Limited--Equity Issue" in the case of applications for Equity Shares and "A/c General Tyres Ltd.—Preference Issue" in the case of applications for Preference Shares. For the applicant's protection, cheques or drafts should be crossed "A/c Payee only". A separate cheque or draft must accompany each application.

Allotment will be notified by despatch of an allotment letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part, in either case without assigning any reason. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant in which event Bank commission, if any, will be payable by the applicant.

SHARE CERTIFICATES

Share Certificates will be issued in exchange for Letters of Allotment within six months from the date of allotment.

Dated the 21st October, 1960.

Money

THE CALCUTTA MONEY MARKET

ADVANCES DECLINE

Wednesday, 26th October.

THE past week has brought another small decline in funds outstanding in the Calcutta money market. At the present time, there is no sign of the usual seasonal upturn in demand. Most of the main industries showed declines in their offtake, including both jute and sugar. The only serious exception was the engineering and iron and steel industries; their requirements have risen. Call for accommodation against grains and seeds storage is about the same. There has been no change in the extreme tightness in the interbank market. The official call rate is still 4½ percent, but business has been done up to 5 percent in Bombay, and the pressure in Calcutta seems to be towards higher rates. The reason continues to be the Government's credit squeeze.

There has been an improvement in the supply of export documents in the exchange market during the past week, with more of both tea and gunny bills in evidence. Demand for remittance has remained moderate. On the London market, the pound has firmed up following developments in the gold market and, at the close, showed net gains against most important currencies except the Canadian dollar and the Belgian franc.

BULLION WAS QUIET EARLIER IN THE PAST WEEK, but prices improved at the close due to the rise in the international price of gold. Silver closed at Rs. 223.50, quoted today for both ready and forward. The London and New York prices were 79-1/8d and 91.37 cents, respectively.

Gold rose from Rs. 135.75 to Rs. 137.50, and the sovereign from Rs. 90.75 to Rs. 91.

DURING THE WEEK ENDED 21ST OCTOBER, GOVERNment of India Treasury bills for Rs. 1,19,53,25,600 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 25th October. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.355 and above were accepted in full, the average rate of acceptance being Rs. 2.565 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 31st October.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 26th October to 29th October at Rs. 99.376 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 19th October to 22nd October.

THE RISE OF RS. 3.44 CRORES TO RS. 1,812.08 crores in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 21st October, 1960. The total note issue was Rs. 56 lakhs higher at Rs. 1,823.03 crores. Notes held in the Banking Department consequently fell by Rs. 3.94 crores to Rs. 10.45 crores. Deposits of the Central Government rose by Rs. 54 lakhs to Rs. 53.22 crores, but other Government accounts fell by Rs. 10.90 crores to Rs. 32.90 crores. Balances of commercial banks at Rs. 103.41 crores showed a decline of Rs. 6.75 crores. Balances held abroad improved fractionally by Rs. 9 lakhs to Rs. 17.93 crores. Investments at Rs. 248.42 crores were Rs. 1.64 crores higher. Other loans and advances rose from Rs. 128.58 crores to Rs. 130.91 crores, of which advances to scheduled banks against usance bills amounted to Rs. 9.43 crores (Rs. 8.77 crores). Ways and means advances stood at Rs. 25.89 crores (against Rs. 26.24 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 14th October, 1960, shows a rise of Rs. 1.04 crores to Rs. 590.33 crores in total deposits. Investments in Government securities are down by Rs. 10.23 crores to Rs 350.63 crores, while other authorised investments remain unchanged at Rs. 9.88 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have risen by Rs. 2.34 crores to Rs. 216.23 crores. Cash and balances are, in consequence, shown at Rs. 27.50 crores or Rs. 4.39 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 14th October, 1960, shows Demand and Time liabilities at Rs. 792.37 crores (Rs. 16.37 crores on account of borrowings from banks) and Rs. 1,164.34 crores (Rs. 21.88 crores), compared with Rs. 790.42 crores (Rs. 18.64 crores) and Rs. 1,166.29 crores (Rs. 23.70 crores), respectively, in the previous week. Cash has declined by Rs. 98 lakhs to Rs. 47.50 crores, while balances with the Reserve Bank have advanced by Rs 6.09 crores to Rs 107.76 crores. There is a drop of Rs. 12 21 crores to Rs. 707.72 crores in investments. Advances and bills discounted at Rs. 1,116.12 crores show a fall of Rs. 5.89 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.9 percent and 57.0 percent, against 7.7 percent and 57.3 percent.

THE NEPAL BANK LTD HAS MADE A PROFIT OF Rs. 8.66 lakhs for the year ended 12th April, 1960, after providing Rs. 11,966 for depreciation. A dividend of 10 percent has been declared. Cash and balances with other banks are Rs. 1.09 crores and investments are Rs. 75,000. General reserve is shown at Rs. 20.25 lakhs. The figures are given in the Indian currency.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 28-10-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
28-10-60	29-1-61	2,00,00	Rs. 2.565%

GOLD SHARES RISE IN HECTIC TRADING

GILT-EDGED IMPROVE ON HOPES OF BANK RATE CUT

London, 26th October.

THE outstanding event in the stock markets during the past week was the strength and activity of gold shares since last Thursday, following a phenomenal rise in the London gold price. On Friday, however, a reactionary tendency developed in the shares and the gold price after the United States emphatically reiterated previous statements that the gold price would be held at the $35 level. But speculators appeared to have other ideas. On Monday, at the London "fixing" and in dealings immediately following, the gold price advanced, so the shares, in both Johannesburg and London, again forged ahead in fairly active trading. The South African political risks were pushed into the background. In fact, some commentators thought that a higher gold price could reduce that country's troubles. Some of the biggest gains were recorded in the shares of low-grade producers, and finance house issues were particularly favoured. Another market which claimed a good deal of attention was gilt-edged. It was thought that a cut in the British Bank rate was close at hand, although no general relaxation of the credit squeeze was expected. Lower money rates would, of course, enhance the position of fixed-interest securities, so there was a good demand for gilt-edged in anticipation of such a move. Foreign buyers were also fairly active in the gilt-edged market. The persistent fall in Wall Street brought down dollar stocks. Although company news was on the whole satisfactory, the general business outlook remained obscure. The latest news from the motor-car industry, particularly the fall in exports during September, was a depressing influence. The much more important item of company news was the planned merger between the giant textile groups, J. and P. Coats and Paton and Baldwins. The shares of the latter went smartly ahead. Stores were favoured on reports of good retail sales. Activity in gold shares overshadowed other mining issues, and there was very little interest in coppers, but tin shares moved higher. Oil shares fluctuated somewhat, with a tendency to ease. Rubber shares drifted lower in line with the commodity price, while tea shares moved irregularly.

The Money Market

Stringent conditions were again apparent in the money market during the past week. Loanable funds were in short supply, with the rate for day-to-day loans firm at 5½ percent. One significant factor, however, was that the authorities did not force the market into the Bank of England. This softening of the official attitude prompted the market, for the second week running, to tender a higher bid, so there was a further and sharper fall in the Treasury bill rate at last Friday's tender. The rate fell to £5 6s 6.38d percent—the lowest level since the British Bank rate was put up to 6 percent last June.

Activity on Wall Street

During the past week, little interest was shown in long-dated U.S. Government obligations, but short-term Treasury bills were active and strong, reflecting the heavy demand from commercial banks and corporations. Investment quality corporates also displayed strength, while convertibles were mostly lower. In the foreign section, Belgium Congo 5½ percents were higher, while Japanese Government issues were mostly lower. Greek 6 percent moved higher from the year's low, while French Credit Foncier 5½ percents, Italians and Norwegians generally ruled unchanged.

The London Gold Market

Before the "fixing", the price of gold in London was called at $37.50 to $38.50 on Monday. Most of the business was done within this range. The top price paid was believed to be $38.50. On Tuesday, the price of gold was "fixed" at 270 shillings a fine ounce, based on a dollar price of $38. Turnover at the "fixing" was described as moderate. As demand exceeded the supply, the price shortly afterwards edged up to between $37.75 and $38.50.

Hongkong Suspends Trading

All trading on the Hongkong gold market was suspended from 21st to 24th October. Before that, buyers and sellers were unable to reconcile prices. An emergency meeting of the Gold and Silver Exchange Committee was held last Friday, at which it was officially decreed that all outstanding positions be settled at $ (H) 270 a tael by 24th October, and that no further business be done until that date. Local bullion experts estimated that there were 52,000 taels of gold outstanding.

NAMES AND DATES

The annual general meeting of the Associated Chambers of Commerce of India will take place at 11-30 A.M. on Monday, 19th December, 1960 in the Royal Exchange, Calcutta. The Central Finance Minister, Mr. Morarji R. Desai, has accepted the invitation of the Chambers to be the chief guest and to address the meeting.

Stocks and Shares

MARKET RULES DULL AFTER DIWALI CLOSING

INVESTMENT BUSINESS AT VIRTUAL STANDSTILL

Wednesday Evening

WHEN the Calcutta Stock Exchange reopened last Saturday after the three-day Diwali closure, there was a feeble recovery movement on the view that after the steady decline in recent weeks following the Reserve Bank credit curbs, prices had touched bottom. The hopes of market operators, however, proved to be short-lived when a prominent bull speculator decided yesterday to unload his fairly substantial holdings of Indian Irons. The shares were then marked back sharply from an opening quotation of Rs. 23.08 to Rs. 22.46. When this news spread in the market, a renewed feeling of nervousness prevailed and most of the shares on the forward list declined in sympathy.

The severe punishment which the bulls have taken in successive clearings has scared away would-be buyers, and investors too have considered it advisable to stay out of the market failing any solid reason for taking an optimistic view of prospects. Consequently, genuine investment business has not only suffered but has virtually come to a standstill.

The new issue market continues to be active, but perhaps not as much as before. At the moment, the Escorts Ltd issue is in progress, to be followed in early November by an issue of 400,000 equity shares and 20,000, 9% (free of company's tax) redeemable cumulative preference shares by General Tyres Ltd. The recent Hindustan Wires issue has, it is reported, been over-subscribed.

With bank credit becoming tighter day by day, Government securities continue to meet with selling pressure and it looks as if an era of dearer money lies ahead. This in turn might result in a general adjustment of the yield pattern on all types of securities by a further lowering of the price level.

Three percent Conversion Loan was marked down from Rs. 73.65 to Rs. 73.55 and all other dated issues moved to lower levels in the absence of enquiry.

Very little business was reported in preference shares and quotations were unchanged at around last week's levels.

In the banking section, the solitary feature was United Commercial which advanced from Rs. 78 to Rs. 79.

The announcement at last Monday's conference in Calcutta by the Central Minister for Steel, Mines and Fuel, when he met representatives of the coal industry, that there would be no overall ceiling for raisings for private sector collieries, was well received, and Bengal Coal advanced from Rs. 325 to Rs. 332. The improvement in prices, however, was confined only to selected issues due to the generally weak trend in most sections of the market.

In cotton textiles, Dunbar were better at Rs. 21.75 while Kesoram were marked down to Rs. 27.50.

Electric supply shares were dull and featureless.

In the engineering group, Indian Iron and Steel fluctuated between Rs. 23.20 and Rs. 22.46 to close at Rs. 22.63 xd, which was the settlement rate. Other engineering issues were more or less unchanged at around last week's levels, with the exception of Indian Standard Wagon which rose by Re. 1 to Rs. 87 and Guest, Keen, Williams which moved up to Rs. 50. Textile Machinery recovered today from Rs. 21.50 to Rs. 22.60.

The reduction in jute goods production as a result of the sealing last week of 5% of the industry's looms and the I.J.M.A.'s request to member mills to seal a further 5% of the looms from this week, is expected to have an adverse effect on the profitability of jute mills. In consequence, jute shares were dull and neglected and selling orders were difficult to execute.

Paper shares were steady, with Orient being marked at Rs. 41 and Shree Gopal at Rs. 24.87. Sirpur, in contrast, eased to Rs. 17.87.

In sugar, Ramnugger met with some enquiry and recovered from Rs. 24.87 to Rs. 26.50. Other issues were more or less unchanged.

Among miscellaneous industrials, Alkali & Chemical were steady at Rs. 32.25 as were Associated Battery at Rs. 37.87. British India Corporation met with small enquiry at the higher rate of Rs. 7.25, and Dunlop Rubber were better today at Rs. 41.25. Hindustan Motors were slightly easier at Rs. 19 as were Indian Aluminium at Rs. 27.37. India Steamship, on the publication of a disappointing report, were subdued at Rs. 10.44. National Insulated Cables, on the other hand, following the publication of excellent results, improved to Rs. 39. Rohtas Industries were unchanged at Rs. 23.25, and Union Carbide were shaded at Rs. 50.75.

Tea shares were slightly better, particularly Bishnauth at Rs. 21.50, Gungaram at Rs. 120 and Huldibari at Rs. 21.50.

In the mining group, Indian Copper, after being done up to Rs. 4.50, closed easier at Rs. 4.44. Metal Corporation were slightly better at Rs. 10.12 and there was some enquiry for Karanpura Development at the higher rate of Rs. 16.25.

New Manbhoom Coal

The New Manbhoom Coal Co. Ltd has earned a profit of Rs. 1.95 lakhs for the year ended March 1960, against Rs. 69,672 in the previous year. An ordinary dividend of 7½ percent, subject to deduction of tax, has been declared, compared with 5 percent, tax-free. Allocations include Rs. 1.50 lakhs (against Rs. 50,000) for general reserve, Rs. 6,792 (against Rs. 10,838) for development rebate reserve and Rs. 12,000 (against nil) for doubtful debts. Making other adjustments, there remains an amount of Rs. 56,603 to be carried forward, against Rs. 97,273 brought in. Raisings increased from 129,736 tons to 139,431 tons, but despatches fell from 122,017 tons to 116,109 tons. The directors say that the second stowing and crushing plant has been delivered and steps are being taken to install it. After the installation, there should be an increase in the output of Selected Grade coal. It is hoped that this will improve the working of the colliery.

Calcutta Electric

The profit of the Calcutta Electric Supply Corporation Ltd has amounted to £1,827,091 for the year ended March 1960, against £1,618,584. An ordinary dividend of 7½ percent (actual) has been declared, against 7 percent in the previous year. Taxation provision is allocated £659,601, against £513,931. Contingency reserve absorbs £85,866, against £83,417. After making various adjust-

Bombay Market

CREDIT FEARS INTERRUPT SHARE RALLY

CONGRESS PROPOSALS FOR NEW TAXES AWAITED

Wednesday Evening.

THE Bombay stock market closed in a quiet mood after a steady spell earlier in the past week. The steadiness featuring the Moorat session a few days ago was not maintained because operators became worried about the growing tightness of money. It was feared that credit would become scarcer and more expensive in the coming months. Long liquidation was induced by fears about the A.I.C.C. meeting in Raipur during the coming week-end. Investors were inclined to wait for indications about how the additional tax resources of Rs. 1,650 crores would be raised during the third plan period.

Tata Steel were subdued at Rs. 143.50 and Indian Iron declined to Rs. 22.40 on rumours of heavy selling by a prominent operator in Lyons Range. Among engineering shares, Alcock Ashdown were quietly steady at Rs. 254, but Tata Locomotive fell to Rs. 274 on profit-taking. Premier Contruction were sold at Rs. 299 and Larsen and Toubro lost at Rs. 34. Motor shares were shaded, and Premier Automobile were available at Rs. 163. Hindustan Motor declined to Rs. 18.60.

Cotton mill shares declined due to the uncertain prospects for cloth exports. Bombay Dyeing were dealt in at Rs. 63.20 and Century fell to Rs. 456. Standard lost at Rs. 1,105 since talk of a rights issue was discounted. Kohinoor were sold at Rs. 288 and Simplex were indicated at Rs. 166. Finlay were available at Rs. 348 and Khatau declined to Rs. 475. Apollo were offered at Rs. 1.32 and India United Ordinaries were lowered to Rs. 12.16.

Miscellaneous shares showed mixed trends. Sugar shares attracted scattered interest, and Belapur improved to Rs. 363 on replacement buying. Phalton were quoted at Rs. 178.50 and Walchandnagar Industries came to hand at Rs. 298.75. Steamship company shares were quiet, and Scindia Steam were sold at Rs. 13.48. Great Eastern Shipping were transacted at Rs. 16.16. Cement shares were quietly steady, and business passed in Associated Cement at Rs. 143.50. Digvijay were taken at Rs. 164. Mining shares were quiet, and Shivrajpur Syndicate were sluggish at Rs. 67. Bombay Burmah reacted to Rs. 566 and National Rayon declined to Rs. 461.50. Chemical shares were quiet, with sellers predominating. Tata Chemical changed hands at Rs. 15.96 and Alembic Chemical were quoted at Rs. 255. Indian Dyestuff declined to Rs. 557.50. Ceat Tyre lost at Rs. 210 and Voltas were available at Rs. 260. West Coast Paper were quietly steady at Rs. 195 on prospects of expansion.

Bank shares were steady, and Central Bank were bought at Rs. 51.70. Bank of India were transacted at Rs. 100.50. Insurance shares were quiet, and New India Assurance lost at Rs. 54.20. Vulcan were done at Rs. 18.25.

There was scattered interest in electricity supply shares. Ahmedabad Electric improved fractionally to Rs. 88.50, as did Tata Power to Rs. 1022.50. Bombay Suburban were placed at Rs. 84.50.

Madras Market

DECLINING TREND FOLLOWS EARLY STEADINESS

FOREIGN EXCHANGE SHORTAGE WORRIES OPERATORS

Wednesday Evening.

THE Madras stock market showed mixed trends during the past week. After being steady earlier in the period, prices of clearing shares turned softer towards the close on profit-taking induced by weaker advices from Calcutta and Bombay. There was selective investment support in planting, textile and industrial shares on good corporate news. Operators were, nevertheless, cautious and disinclined to extend commitments in view of the uncertainties concerning the foreign exchange shortage.

Government securities were subdued and most of the State loans were sold at substantial discounts. Public utilities were bought discriminatingly. Vellore were transacted at Rs. 11.70 on paying a taxable dividend of 15 percent. West Coast Electric came to hand at Rs. 11.87 on declaring a taxable dividend of 15 percent. Business passed in Berhampur at Rs. 6 and in South Madas at Rs. 10.

In the banking group, interest was taken in Indian at Rs. 173 and in Indian Overseas at Rs. 171. Canara Bank came to hand at Rs. 82 and Andhra were dealt in at Rs. 100.

Among sugar shares, Deccan were transacted at Rs. 15.65, as were E.I.D. at Rs. 43.75. Cauvery changed hands at Rs. 42 and Mysore were dealt in up to Rs. 60.50. Travancore were steady at Rs. 12.10 and United Breweries at Rs. 114.50 showed little change.

In the planting group, Blue Mountain changed hands at Rs. 4.94 and Cochin Malabar were transacted up to Rs. 7.05. Consolidated Coffee declined to Rs. 23.40 on receipt of unsatisfactory crop reports. Business was done in Ouchterlony at Rs. 5.02 and in Periakaramalai at Rs. 3.54. Vayitri were steady at Rs 1.45 on the payment of a taxable dividend of 6 percent. Chembra were dealt in at Rs. 5.10 and Balanoor were transacted up to Rs. 16.70. Coffee Land were sold at Rs. 23.25 and Devon were offered at Rs. 14.37. Kil Kotagiri were steady at Rs. 5.70, as were Highland at Rs. 14.30. Lucky Valley came to hand at Rs. 12.25, but Mysore Coffee were offered at Rs. 5.50. Nilgiri were transacted at Rs. 7.19 and Peermade were bought up to Rs. 23.35. Travancore Rubber were sold at Rs. 11.50 and Waterfall changed hands at Rs. 4.35.

Textile shares were quietly steady, and Asher were bought up to Rs. 212.80 on declaring a taxable dividend of 12½ percent. Buckingham and Bangalore Woollen were transacted at the same price of Rs. 197. Lakshmi were steady at Rs. 145, as were Madura at Rs. 33.85. Travancore Rayon were taken up to Rs. 33.25 and Mettur were dealt in at Rs. 360. Kothari were done at Rs. 12 and South India Viscose were taken at Rs. 155.

In the miscellaneous group, Ashok Leyland were steady at Rs. 8.37 on the decision to issue new ordinary shares worth Rs. 1.72 crores. Aluminium Industries were transacted at Rs. 22.75 and India Cement were dealt in at Rs. 7.25. Enfield were placed at Rs. 15.20 and F.A.C.T. were sold at Rs. 10. Kirloskar Electric were steady at Rs. 13.15 and Mettur Chemical were done up to Rs. 12.65. Parry's Confectionery were placed at Rs. 4.42 and Singareni were quoted at Rs. 10.50. Spencer were bought up to Rs. 21.87 and Standard Motor changed hands at Rs. 17.12. Textool came to hand at Rs. 189 and buyers were found for Tube Investment at Rs. 317.

A METAL BOX TUBE!

Your favourite toothpaste comes to you in a Collapsible Tube, a speciality of The Metal Box Company of India Ltd. Wherever necessary, this tube is given an inner coating of a specially devised, chemically inert lacquer that keeps the toothpaste from reacting with the metal of the tube itself. The tube collapses with reducing contents, thereby protecting the toothpaste from oxidation and dehydration. The Metal Box Collapsible Tube is therefore a functional as well as a convenient package. It is scientifically designed to ensure that the toothpaste remains fresh for months.

Backed by their knowledge and experience drawn from India and abroad, Metal Box are manufacturing a wide range of scientifically designed packages for the consumer goods you use.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

LONDON INSURANCE LETTER

LLOYD'S MAY UNDERTAKE LIFE BUSINESS

LLOYD'S is planning to undertake life assurance on a big scale; but Lloyd's is a world-renowned institution. For any insurance business more modestly endowed, entering the intensely competitive life market needs courage. Even its rivals, therefore, are watching with a hint of sympathetic admiration the development of the National Employers Mutual General Insurance Association in the life-assurance sector, which it has entered after nearly half a century of operation in general insurance. The N.E.M.G.I.A. has not started this side of its business from zero: it has acquired the National and Colonial Assurance Corporation, which has been transacting life business for a quarter of a century. But this is not one of the major offices: indeed, its name was not so well known that it had to be retained, and it has, in fact, been changed to the National Employers Life Assurance Company. Its capital has been increased to £1 million; its management has been strengthened; and it has adopted an independent policy.

The characteristic of this policy is modernism. Investment of insurance funds has for years past inclined towards ordinary shares: a large proportion of the National Employers' funds will be invested in such shares. With-profit life policies are increasingly favoured: the National Employers offers no other kind of life or endowment policy, although the normal practice is to offer without-profit policies as an alternative. Proposal forms have been criticised as too complex, requiring a mass of detailed information on the history of the applicant; the National Employers' form requires answers to only four simple questions—date and place of birth, height and weight, name and address of medical attendant, and what illnesses the applicant has had in the last five years, or over a longer period if they involved absence from work for more than a month.

Superficial Similarities

In spite of this modernisation, it may be asked whether a virtually new life-assurance institution can justify itself when so many are already in the market. The answer must be that, whereas the services which banks can offer are (in spite of variations in recent years) still broadly similar, there are surprisingly wide differences between life-assurance policies which are superficially similar. But to convince the uninformed intending policyholder that a policy offered is different from those of more familiar offices may not be easy. To argue in principle in favour of exclusive with-profits policies should not be difficult, but in practice an office which starts with modest resources cannot promise bonuses as large as those paid by offices with many years' accumulation of profit-earning funds at their disposal. Moreover, the expenses of management which, among other factors, have induced some offices to amalgamate, must weigh heavily on any new and developing venture in the market.

The idea that industrial (home-service) life-assurance business must gradually give way to ordinary life-assurance business, because the personally-collected premiums involve uneconomic expense, gains no support from the figures published by the Industrial Life Offices Association recently. Mr. G. Kitchen, the Association's chairman, said that net new savings through the industrial offices exceeded £155 million last year—nearly 20 percent more than in 1958. Premiums collected from more than 10 million households increased by £8 million to £185 million, and premiums on ordinary life policies increased by £7½ million to £124 million. The figure for net new savings refers to industrial and ordinary policies combined, funds having increased approximately equally in each branch. It might be thought that in these times of high incomes, when many working-class families bring home in their pay-packets considerably more than the average salary-earning household receipts, the practice of collecting small premiums at frequent intervals would be unnecessary. But Mr. Kitchen said in this year's progress report: "The growth of industrial branch business reflects the continued widespread appeal of a life-assurance system in which regular contact with the home-service agent affords real encouragement to provide for the long-term future. For many it is the only practical way to save systematically."

Property Companies

More than usually at this time, relations between insurance companies and property companies are mutually beneficial. On the Stock Exchange, the trend of ordinary shares is uncertain, and property may offer better opportunities for investment. In the City, finance is not easily obtainable, and a ready supply from insurance companies is welcome among property-developers. It was announced last month that the Prudential Assurance Company had agreed to lend £13 million to City and Central Investments on long-term mortgages of its properties, and that the Prudential was acquiring—presumably at a cost of £11½ million or £13 million—10 percent of the property Company's issued capital. City and Central Investments is directed by the well known financier Mr. Charles Clore. It caused a sensation recently by purchasing a 99-year lease of 40 Wall Street, New York—one of the world's highest buildings. The Prudential's money is being used not for that purpose but for expansion in the U.K.

New Delhi

INDIA GETS ANOTHER LOAN FROM THE U.S.A.

TRADE WITH RUSSIA EXPECTED TO INCREASE

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.S. Government has announced the approval of a loan of $25 million (Rs. 11.9 crores) to the Government of India for importing capital equipment. The loan will come from the U.S. Development Loan Fund. It will be used for obtaining equipment to increase the productive capacity of small and medium-sized private industrial enterprises in the fields of metallurgy, electrical installations, machine tools, earth-moving equipment and chemicals. The loan is repayable in rupees. The approval of a loan of this type marks a departure from the practice of the D.L.F. in recent months, during which it has given only project-type loans.

In recent years, India's foreign exchange resources have been increasingly devoted to large-scale projects. Consequently, there is a need for foreign exchange to cover capital imports in the immediate months ahead for the establishment, expansion and modernisation of smaller private enterprises. The funds provided by the D.L.F. are expected to attract additional investment of Indian rupees by Indian investors and to contribute substantially to strengthening the private industrial segment of the Indian economy.

Another loan of $25 million has been given by the U.S.A. to India for financing imports of steel and steel products needed by private and public enterprises. Steel sheets are expected to account for more than half the procurements. The remainder will consist of tinplate, strips, tool and alloy steels, billets, wires and rods.

Indo-Russian Trade

An official statement issued here says that broad Indo-Russian understanding has been reached on the need for increasing the volume of trade and diversifying its content. It is expected that, during the next three years, the present level of exports and imports will be nearly doubled. Steadily larger quantities of tea, coffee, spices, tobacco, shellac, mica, vegetable oils, and hides and skins of the tanned and semi-tanned varieties will, it is hoped, be taken by Russia. India expects to import non-ferrous metals, newsprint, tinplate, steel materials, oil products, and machinery and equipment for metallurgical, power and construction projects.

Newsprint Project

A plant is planned in Maharashtra for producing 60,000 tons of newsprint annually from sugarcane fibre, using methods developed through eight years of American research. The mill in Karad, 220 miles from Bombay, will be constructed by Sahu Jain Ltd. As a result of a joint agreement between the Indian Company, the Crown Zellerbach Corporation and the Hawaiian Development Company, the mill will receive technical assistance and patent permits for the production of newsprint from bagasse. The plant, for which the Government of India has already granted an industrial licence, will represent an investment of approximately $20 million.

Indo-Swiss Credit Pact Ratified

Instruments of ratification relating to the Indo-Swiss agreement on transfer credits were exchanged here last week. The agreement, which was signed on 30th July, 1960, provides for the purchase of Swiss capital goods by India. The credit is for a period of ten years, covering transactions of the value of 100 million Swiss francs (Rs. 10.9 crores). Of this amount, 60 million Swiss francs will be provided immediately and the balance later. The credit will be provided by a consortium of Swiss banks on mutual credit terms. It will be guaranteed by the Swiss Government within the framework of its federal law on export risk guarantees.

Tariff Enquiry on Cement

The Government of India has asked the Tariff Commission to undertake a fresh examination of the cost of cement production in the different manufacturing units for the purpose of determining the fair ex-works prices payable to producers from 1st July, 1961. The three-year period for which the Government had fixed fair ex-works prices, on the basis of the Tariff Commission's recommendations in 1958, will expire on 30th June, 1961. The Commission, which will submit its report to the Government as early as possible, will examine all aspects of the industry's working, such as production, prices, distribution and development.

West German Policy for Foreign Aid

The advisory council of the West German Ministry for Economic Affairs has arrived at some significant conclusions concerning economic aid for the developing countries. It points out that "the Federal Republic has decided to give economic support to the so-called developing countries. In giving assistance, one should not only consider the economic effects but its impact on the whole culture of the people. Vigorous technological progress, or one-sided promotion in parts of the economy carried on without due attention to progress in all other fields of life, would prove to be useless economically and would create perilous social and cultural tensions. The success of economic aid will depend largely on whether or not these peoples, who often are still living in a non-rational world, will be able to find their way to commercial and technical rationality. To adopt rational ways of action should, however, not be considered as a higher ethical value but simply as a requirement of economic success.

Communist Aid

"Efforts made by western countries to assist developing regions in the attainment of a free economic order frequently meet with Soviet offers of economic aid enticing them into the communist orbit. Such competition should not be counteracted by trying to outbid the Soviet offer at any cost. Each case should, however, be studied to find out if, and to what extent, the advantages held out by the Soviet side are not apparent rather than real, and balanced, perhaps even outweighed, by hidden disadvantages. Development aid of any kind can be successful only if the developing countries possess both the institutions and the personnel necessary to apply such aid economically. Technical assistance which today—quite rightly—means much more than what the term would seem to indicate, is the most important part of any aid to developing countries. In addition to instruction in production techniques, as well as commercial and organisational skills required for economic activities it includes advice requested by the developing countries themselves concerning the way in which the general framework of their social and institutional conditions should be organised.

"Besides covering the economic sector, technical assistance is required for the establishment of an efficient public administration and for suitable measures and facilities of public and private social services. Industrialisation in these countries entails profound changes in social and cultural conditions. This necessitates the adjustment and extension of numerous cultural institutions, mainly in the field of education. Here, appropriate advice may be extremely valuable. The same is true of the novel and entirely unsolved problems put up to these countries by the sudden increase in population. In relation to economic matters, technical assistance should by no means be confined to production and distribution, but should include advice and help to private households concerning reasonable ways of spending their incomes and handling consumer goods carefully. Technical assistance should not be considered merely as concerning isolated projects or from a purely technical and administrative point of view. It should be based on a distinct concept for each individual country, taking into consideration its possibilities and resources. This individual approach is also important when choosing the technology most appropriate to a developing country according to its relative shortage of labour and capital. Technical assistance must not succumb to the temptation of forcing socio-economic philosophies on the developing peoples.

Dumping of Goods

"In this connection, special reference should be made to the problem of imports from the so-called 'low-cost producing countries.' It must be admitted that there may be genuine dumping in certain markets of the world which justifies corresponding protective action. However, protection against the so-called 'wage-cost dumping' of developing countries (which is wrongly described by that term) would mean preventing these countries from assuming their legitimate rôle in the international division of labour. Instead of being assisted, they would be deprived of the possibility of developing themselves on their own initiative; and the object of such action would be to promote artificially countries and regions which are already developed. Less developed countries would then not be able to make efficient use of available labour and capital resources.

"As for the trade policy towards developing countries, long-term commodity stabilisation schemes for the production and sale of certain foodstuffs and raw materials should be considered. In view of the unfavourable implications of such commodity agreements experienced between the two wars and partly also after the second World War, and as a matter of economic policy principles, they are frequently rejected. Caused by the peculiar pattern of supply and demand, the unusually wide fluctuations in the prices and sales of certain export products have a strong influence on the entire economic life of some developing countries. It must, therefore, be expected that the countries concerned will—in their plight—adopt stabilising measures. In view of the considerable difficulties of a national stabilisation policy, and in view of its dangers for reasonable economic development in the world, the international stabilisation of certain commodities will represent the lesser evil, provided such action is confined to a mere flattening of price fluctuations. It is recommended, for an international stabilisation policy avoiding the faults of commodity agreements, to time the granting and repayment of loans so as to offset the effects of fluctuating exchange receipts from the raw material exports of the developing countries. Such guidance should be preferred to commodity agreements, especially when fluctuations in the prices and sales of raw materials are the result of changes in the demand of buying countries.

Private Investment

"In view of the political and social conditions which are rather unfavourable in developing countries for the investment of private capital, it appears to be inevitable that the public authorities in the capital-exporting countries take additional measures in order to promote the flow of private capital to developing countries. At present, this takes the form of public guarantees or other warrants for the safeguarding of special risks customarily involved in capital exports to underdeveloped areas, and which would probably not be removed entirely even if the above-mentioned measures were to be taken by the developing countries. Measures of this kind already taken by the States are aimed above all at the financing of exports of durable capital goods and at the support of direct private investments.

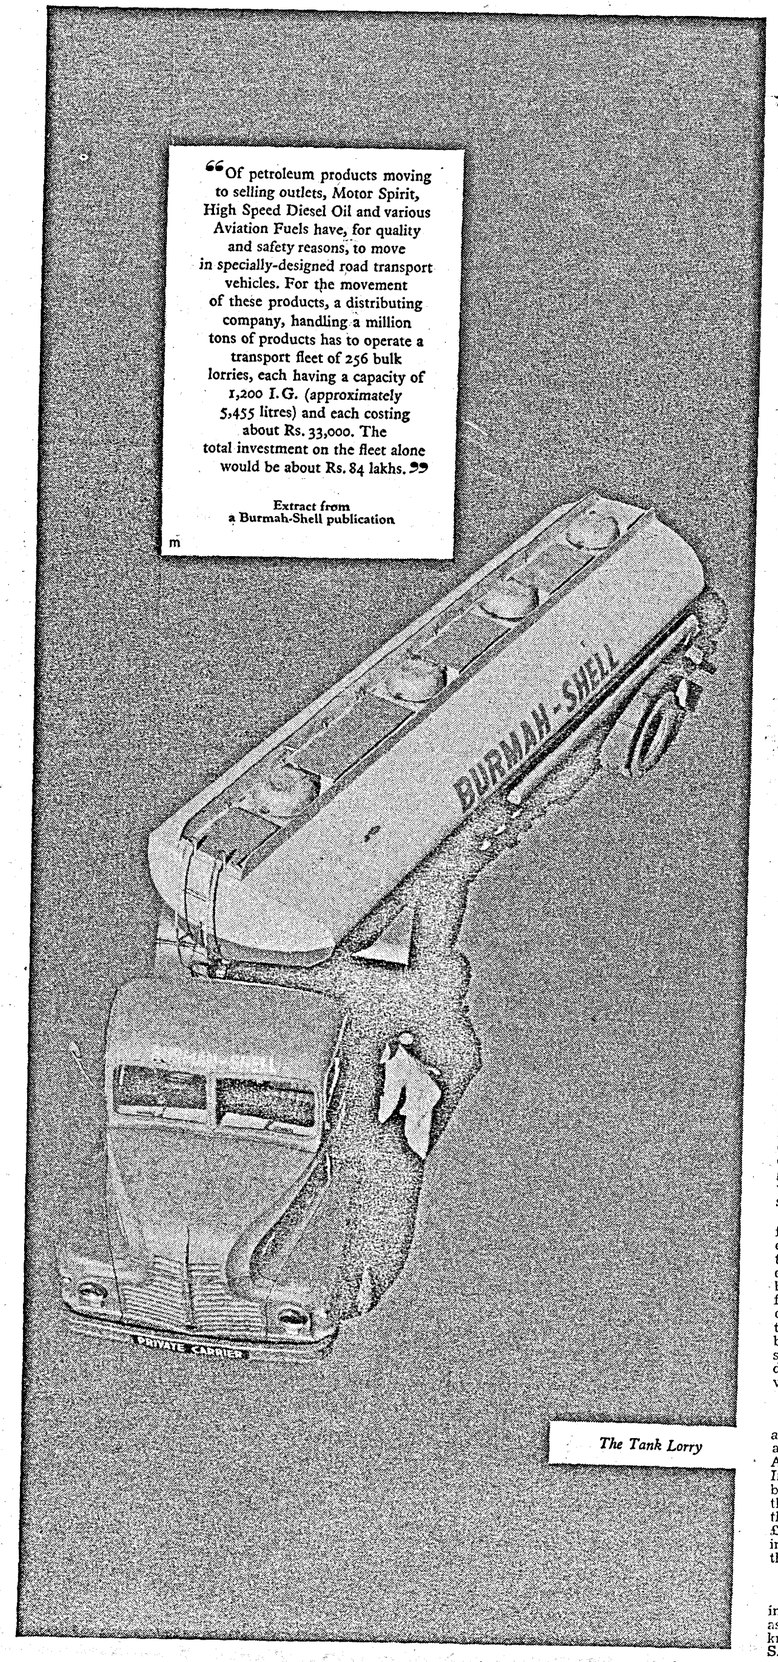
"Public promotion of exports of capital goods through guarantees and other warrants, as well as by way of financing facilities, has constantly grown in the last decade. Much as this provision of private capital for the benefit of developing countries may be welcome, it nevertheless entails grave disadvantages. In the first place, State authorities in the various exporting countries pursue different practices for the partial assumption of political and currency risks which distort the international competition among exporting firms. Secondly, the measures adopted at present frequently favour larger enterprises and consequently foster tendencies of industrial concentration. In the third place, the present procedure has the drawback that competition between the authorities of the various countries leads to a constant expansion of the facilities provided, which is undesirable from the point of view of the exporting countries. Fourthly, and above all, it must be indicated that the financing of long-term investment projects by short and medium-term credits given to the supplier contains severe perils for the developing countries themselves. The main danger is that too many investment schemes are begun with a view to the seemingly easy possibilities for initial financing and later on become economic bottlenecks (balance of payments difficulties, etcetera) which render it impossible to finish and use the investments as originally planned. Investments in developing countries are depedent on credits, often fortuitous, which in turn give rise to malinvestments. Hence, it appears to be imperative not to permit the further expansion of such State promotion of capital goods exports and to make available to the underdeveloped countries other financing possibilities, bearing in mind the long-term nature of the necessary investments.

Interest Rates

"Within the framework of conditions laid down by supranational co-ordination, the national arrangements for export promotion should aim at realising a practice in which small and medium-sized export firms are given, *de facto*, the same chances as large firms. The interest rates should not be manipulated in favour of export credits, as this is likely to impair the functioning of the national money and capital markets. West Germany's membership of the European Common Market, however, constitutes a certain limitation to this freedom of action, as it obliges her to take part in development programmes established for overseas and associated territories. Also, being a member in many international organisations entails the duty to co-operate in their respective tasks of development promotion.

"When considering West German commercial measures in favour of developing countries, it must be taken into account that the European Economic Community treaty provides for a common foreign trade policy for the Six. Thus, many possible measures can only be taken within the framework of the Community. Therefore, West German representatives in the institutions of the Common Market have to see to it that the foreign trade policy of the Common Market, as an entity, makes as much allowance as possible for the needs of the developing countries. In this connection, it is of great significance that West Germany is ready to modify and mitigate its own agricultural protectionism, and that it does not reinforce the agricultural protectionism of the Common Market as a whole.

"The Council is of the opinion that West Germany should discontinue her policy of isolated and more or less accidental measures of development promotion. Instead, a long-term general programme should be evolved. It goes without saying that such a programme must be incorporated into a sound estimate of the future economic and financial development of the Federal Republic. That would enable the West German Government to reach a responsible decision about how far to increase the aid actually granted up to now. At present, the sum total of development aid, and the amount of contractual or politically promised obligations, does not seem to be accurately survey-



The Tank Lorry

able at a glance. Hence, it is an urgent task to create such an overall view as quickly as possible. This is the only way to establish the necessary basic programme covering several years for development aid, while taking into account the timing and the consequent burden accruing from promised or not fully executed obligations."

Taxing Small Business Assessees

A simplified procedure has been drawn up by the Income Tax Department for dealing with the assessments of persons who derive small incomes from business sources. The procedure is intended to apply to persons who derived the whole or part of their income from business, other than speculation, in the past three years and were assessed thereon for amounts not exceeding Rs. 7,500. The essence of the simplified procedure consists in doing away in the case of small assessees with the examination of accounts at the income tax office. The income tax officers will address letters to such assessees explaining the simplified procedure and inviting them to file balance-sheets, profit-and-loss accounts and trading accounts along with the returns of income. If the income shown by the assessee is found acceptable after a broad check of the statements enclosed and the details of the past assessments, the return will be accepted and a demand notice issued straightaway on the basis of the income declared. Even if the income declared is not found to be acceptable without modification, the assessee will not be called upon to attend the income tax office with his books of accounts. A fair estimate will then be made of the income, having in view all the relevant circumstances, including the results of past assessments. This estimate will be comunicated to the assessee. If it is accepted by him, a demand notice will be issued on the basis of the estimated income.

If the income and the tax it is proposed to levy, as communicated by the income tax officer, are not acceptable to the assessee, it will of course be open to him to prove the income shown by him in the return, with the aid of his books of accounts, etcetera. The idea underlying the simplified scheme is thus to cut short the time spent in the assessment of cases involving small incomes which produce very little revenue. The scheme will not apply to cases where losses are declared or where the income includes profits from speculation. The new scheme is to be initiated next month. Assessees with small incomes, who have already filed their returns and whose assessments are still pending, will also be covered by it.

Small Car Committee

The Government has announced the personnel of the committee constituted for advising it on the manufacture of a low-cost car in the public sector. Mr. G. Pande, former chairman of the Railway Board, will head the committee. He was, until recently, chairman of Hindustan Steel Ltd. The members of the committee are Mr. K. B. Lall, Additional Secretary, Ministry of Commerce and Industry; Mr. V. K. R. Menon, Director, International Labour Bureau, Mr. K. L. Ghei, Joint Secretary, Ministry of Finance; Rear Admiral D. Shankar, Controller-General, Defence Production Organisation, Ministry of Defence; and Dr. B. D. Kalelkar, Senior Industrial Adviser, Ministry of Commerce and Industry.

In its resolution on the report of the Ad Hoc Committee on the Automobile Industry last month, the Government announced its decision to appoint a committee to advise it on the manufacture of a low-cost car in India. The committee, which will submit its report within four months, will examine such models as it may *prima facie* consider feasible for production in India in the public sector. It will recommend to the Government the model or models which, in its opinion, could be manufactured within an ex-factory price of around Rs. 5,000 on the basis of an annual production of 50,000 cars. The committee will also give an estimate of the ex-factory price of such cars on the basis of an annual output of 20,000 cars. The car so produced should, even at the beginning, have a sufficiently high indigenous content and should be made more or less wholly indigenous within three years from the start of production.

The committee will examine in detail various factors, such as the quantum of investment involved, both in rupees and foreign exchange, production costs and other factors. It will be free to explore, by discussion with relevant parties, the best possible terms and conditions that may be forthcoming for collaboration, foreign exchange credit and other technical, financial and organisational aspects of the project. The committee has been asked to indicate the most suitable site or sites to enable the Government to reach an early decision. A full-time secretary of the committee will be appointed shortly.

Choosing Projects for Foreign Aid

The Central Finance Ministry has been holding a series of meetings to determine the projects which are to be financed with foreign aid, it is learned. Almost all the aid-providing countries have asked India to indicate the project or projects which will be financed with their aid. Indications are that the U.K.'s contribution in the form of credits for the third plan will be about £123 million, of which £50 million has already been announced. This includes the credit of £20 million for expanding the Durgapur steel works.

Technical Assistance from Sweden

A three-man team of Swedish engineers is coming to study the possibilities of rendering technical assistance to India. The team is from the well-known firm of Swedish consulting experts, called S.G.C.

London

NO EARLY RELAXATION OF CREDIT SQUEEZE, SAYS U.K. CHANCELLOR

SEPTEMBER RETURNS SHOW TRADE GAP UNCHANGED

(FROM OUR LONDON CORRESPONDENT)

THERE will be no early relaxation of the credit squeeze. Mr. Selwyn Lloyd made this clear in his first major public speech as the U.K. Chancellor of the Exchequer. He told the Conservative Party conference in Scarborough that the restrictions would be eased as soon as he thought it safe to do so in the interests of the economy as a whole —a clear hint to the motor-car and television industries that they can expect nothing in advance of any other industries. Mr. Lloyd promised a White Paper at the beginning of the next Parliamentary session, dealing with capital investment in the nationalised industries and fixing priorities as agreed by the U.K. Government last summer. This may show that the nationalised industries are being allowed to go ahead only with projects which promise an early commercial return. The U.K. Chancellor was careful to make no promises about future tax cuts. But he did drop one strong hint. In summing up the debate demanding the abolition of Schedule A, he said he had great sympathy, but the feeling he had from the conference was that top priority should go to tax reductions which encouraged initiative and effort. This was taken to mean that if anything goes in the next U.K. Budget, Mr. Lloyd will first try to raise the level at which surtax becomes payable and then take something off the standard rate.

Trade Returns

Both exports and imports were lower in September than in August but by much the same amount, so that the trade gap at £90.6 million was little changed from the August figure of £89.2 million. Provisional figures, issued by the U.K. Board of Trade, show the recorded value of September exports at £259.9 million, re-exports at £12.8 million and imports at £363.3 million. The comparable figures for August were £279.8 million, £12.9 million, and £381.4 million, respectively. When the figures are adjusted to the "truer" form, which discounts seasonal variations, there is still little change in the balance of exports and imports over the two months, and their actual levels are also fairly constant. On this basis, September imports were, at £386 million, £77 million above exports and re-exports of £309 million, compared with August imports of £395 million, which were £7 million higher than exports and re-exports of £311 million. Although the latest figures show no significant change in the trend of either exports or imports between August and September, it is believed that but for the London tally clerks' strike, which began on 20th September, the September picture might have been worse. The strike is likely at first to have affected imports more than exports. The latter are likely to show repercussions in October.

Poor Payments Balance

Figures of Britain's balance of payments, issued by the U.K. Treasury, confirm that the first half of 1960 was the poorest for five years. This leaves the clear prospect of an overall deficit on current account for the year as a whole. The overall picture presented by the first-half figures is of a current surplus too small to finance the present level of overseas investment, with the difference being made good partly by the inflow of overseas capital and miscellaneous items, and partly by larger short-term liabilities to foreigners. Britain's current surplus reached only £35 million, against overseas investments of £139 million, while £65 million of miscellaneous credits still left a net adverse movement of £38 million.

The main reason for Britain's inadequate current surplus—as month-to-month trade figures have shown—is the disappointing growth in exports. Comparing the first halves of 1959 and 1960, the rise in exports is only £187 million, or 11 percent. But two other factors have also contributed to Britain's poor current account result. One is growing imports of consumer—as opposed to industrial—goods, mainly from the United States. Imports from North America show a 22-percent increase in the first half of the year, against the average increase of 12 percent. A second contributory factor was the deterioration in invisible earnings, which reached not much more than half the total of the corresponding six months of 1959. Government spending abroad increased by £28 million, and the larger number of people travelling overseas added another £8 million. At the same time, net receipts from interest and dividends declined by £19 million, mainly because of larger outgoings resulting from higher Bank rate here.

Prospects for Industry

British industry as a whole is still very fully occupied according to the latest enquiry by the Federation of British Industries. The results of the ninth quarterly enquiry into industrial trends suggest that the pace of production is now beginning to slacken. There is no sign of any real slump in the offing. Questions were put to 728 chairmen and managing directors, and their replies indicate that the rising trend of activity has continued, but at a slackened pace. There are signs that activity is now "approaching a plateau," the F.B.I. comments. But there is a good deal less optimism about the general business outlook. One-third of those replying are less optimistic than they were four months ago; only one-eighth are more so. In the previous enquiry last June, a quarter were more optimistic and only an eleventh less so.

New orders are still higher than they were four months ago, but 20 percent of the firms now report orders "down," against only 12 percent in June, while 34 percent report a higher inflow, against 47 percent in June. Employment is still expected to rise, and nearly a third of the firms said that output was limited by the shortage of skilled labour. But 22 percent (against only 15 percent in June) said this time that they are short of orders or sales to sustain production. Conditions differ in particular industries. It is obvious from the latest developments that the motor-car industry is not doing well at present. The F.B.I. survey, which has so far proved to be reasonably close to the facts, shows that the general condition of the U.K. economy is still one of high employment and prosperity, although the pace is slacking.

Retail Sales Maintained

Provisional estimates show that total retail sales were again well maintained in September, the U.K. Board of Trade has announced. Indications are that while sales by clothing and footwear shops were very buoyant and were even further above the level of a year ago than they had been in August, sales by durable goods probably remained as much below the level of a year earlier as they had been in recent months. The index of the value of total retail sales in September, seasonally adjusted, is estimated at 111, compared with 110 in August and 112 in July. For the third quarter, the index is estimated at 111, or about the same as in the previous quarter.

Compared with a year earlier, the total value of September sales was about 4 percent higher, against increases of 4 percent and 3 percent, respectively, in July and August, and in the third quarter as a whole the increase (at 4 percent) was the same as in the first and second quarters. Retail prices in September are estimated to have been about 1 percent higher than a year ago, so the increase in the volume (at 2 percent or 3 percent) was about the same as the average of recent months.

Campaign to Boost Exports

A campaign of "hard, imaginative selling" abroad is needed to boost Britain's export trade. Without this, according to the Federation of British Industries, many firms in the U.K. will continue to lose opportunities to foreign competitors with energetic sales techniques. The Federation has already emphasised the "disturbing" absence of any significant increase in export orders during the last four months. Many firms are showing concern about the new difficulties of selling overseas due to cut-throat competition. They especially point to the intensive competition from west European countries, where the rate of productivity increases at a better rate than in Britain. Some countries, which have made a remarkable recovery after the postwar economic depression, are going all out for exports. The so-called "low-cost" countries, notably Japan, are adding to the difficulties confronting British manufacturers, and there is a steady growth in competition from countries in the Russian bloc.

Even Commonwealth countries are becoming Britain's rivals in the export race. The latter has to take a certain proportion of the goods produced in the Commonwealth. But new industries in those countries are turning out goods for export which Britain is also trying to sell abroad. Some experts in the U.K. believe that domestic manufacturers are not studying their markets properly. Nearly every time an opportunity is lost or a market dries up, another arises elsewhere. Yet Britain appears to be slow in recognising it. The experts believe that manufacturers should be more alive to the problem. It is also thought that Britain should concentrate on the European Free Trade Area, where some countries, like Norway and Sweden, are being "fed" by West Germany.

Some experts believe that in the United States —Britain's biggest overseas market—there is room for bigger and better selling. Some manufacturers complain that the U.K. Government is not paying enough attention to the claims of export industry. They say that the present level of taxation does not induce them to sell as they would like. Others point out that the system of documentation which exporting involves creates unnecessary difficulties, so they believe that it should be suitably "streamlined." It has been suggested that the U.K. Government should allocate more funds to trade promotions abroad. Other countries spend freely on advertising their goods at the international trade fairs. It has also been said that not enough is being done by Britain to compete for the best agents abroad. To do so effectively, manufacturers must give them goods which are easy to sell. Their products must compete with their competitors', not only in basic quality, but style, presentation and eye-appeal.

No Bad Markets

The G.E.C. *Export Guide* in its October issue analyses the prospects for British exports of 36 product-groups to 34 major markets. For the fourth successive quarter, that is, for the whole of 1960, there are no "bad" spots among Britain's major overseas markets. The outlook for the last quarter of 1960 is "good" in 23 countries, "improving" in five, "deteriorating" in three, and "unchanged" in three. The outlook for British exports since July 1960, has improved in Iraq and Pakistan while it has become less favourable in Ceylon, the U.S.A. and Venezuela.

Record Price for Gold

The last few days witnessed an enormous scramble to buy gold in the London bullion market, carrying the price of the metal to 260s an ounce—the highest price ever recorded. Last Thursday, the price jumped by 17s 4d in the day, an unprecedented increase, for usually the price moves only by pennies or even half-pennies. Dealers described the leap as "phenomenal," "fantastic" and "terrific." The previous record price was 252s 1d an ounce, in July 1936. The Bank of England's sales of gold for South African, Australian and other holders were nowhere near enough to meet the great buying wave. Sterling area residents may not buy or hold gold in any form, but Continental residents may, and it is from those quarters that most of the demand has been coming. The buyers are mainly big Swiss investors who will rather have gold than meet the present imposition put upon foreign funds held in Switzerland. The available supply falls a long way short of what is wanted, and neither private holders of gold nor the central banks, which may have got gold from the U.S.A., have so far shown any sign of making releases at present. The circumstances are certainly unprecedented, and the rise is the outcome.

Retail Prices

The U.K. Ministry of Labour has announced that the official index of retail prices (the cost of living index) on 13th September was 110, the same figure as on 16th August. The figure was 109 in September last year.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (Base: 1953) has now been brought up to January 1960. Compared with the preceding month, there were increases in sugar 62.73 points and railway ton-miles 8.38 points, while decreases occurred in tea 28.21 points, jute 7.59 points, yarn 8.30 points, cloth 4.10 points, cement 3.87 points, coal 5.99 points, pig iron 25.54 points, finished steel 6.22 points, paper 18.84 points, tyres 14.20 points, motor-cars 51.97 points, bicycles 105.45 points and electricity 0.69 points.

Correlating all the factors, the *Capital* Index of Indian Industrial Activity increased by 3.0 points during January 1960.

QUOTA SYSTEM INTRODUCED FOR RAW JUTE PURCHASES BY MILLS

U.S. BURLAP CONSUMPTION AND STOCKS RISE

AFTER last Friday's meeting of the I.J.M.A. committee, it was announced that a quota system for the purchase of raw jute had been introduced for member-mills. Since that time, mills have been at liberty to make purchases. The quota is based on each mill's actual physical stocks. Those with stocks for three weeks or less are permitted to buy up to 1½ weeks' consumption during the weekly quota period. Others having bigger stocks have to buy proportionately less. There is no restriction on prices, assortment or sources of supply. But detailed returns have to be submitted about deliveries, purchases, etcetera, and the position will be under constant review.

Although there has been no immediate rush by mills to take up their quotas, selective buying has been reported at market rates. Mills with agencies already have most of their quotas covered in the agencies, and it is significant that they have shown little interest in jute on offer under contract. But sellers' ideas have changed with the introduction of quotas. Whereas, a little earlier, many of them were keen to sell, they now prefer to hold on and see the market reaction. As a result, prices have hardened. There has also been a noticeable change in the method of offering jute; many offers on a "price-to-fix" basis have found favour with both buyers and sellers. The advantages to both sides of this mode of business are obvious, and while the market is steady, deliveries will be good. But it is likely to be a different story once the market starts to fall.

More Normal Conditions

Conditions in the mofussil jute markets are gradually returning to normal. Until last week, they were abnormal, and were such as had not been experienced for many years. Normally this should be the most active period of the year for the movement of jute. But imports everywhere have been very meagre, so prices have touched a very high level. The rise in values began some weeks ago in the absence of any appreciable increase in imports at a time when an improvement was confidently expected. This uptrend was accelerated as the shortage continued. While prices rose, the possibility of sellers delivering jute already contracted for at much lower rates receded. With the virtual closure of the futures market, their chances of breaking even on the deal vanished. This has been the direct cause of sellers repudiating low-priced contracts, and the subsequent need for mills to restrict output by sealing looms.

Mill Purchases

The position at the moment is that Calcutta mills are estimated to have bought less than four months' jute out of this season's crop—which is much lower than normal—although many estimate that the cultivator has marketed nearly 40 percent of his crop. Total arrivals of loose jute in Calcutta for the first three months of the season are estimated at about 800,000 bales, against 1 million bales in the corresponding period of last year. This is very nearly half of the estimated consumption of mills over the same period, so any carry-over the mills had from the last season is already discounted. It is not surprising, then, that mills' stocks are now counted in terms of weeks rather than months.

Last Monday, member-mills of the I.J.M.A. voluntarily sealed a further 5 percent of their loomage. This was in addition to the 5 percent sealed on 17th October. The industry now has about 19 percent of its looms sealed. The idea is to conserve raw jute and bring gunny production in line with the availability of fibre. So far, there is no indication that more looms will be sealed, but the voluntary loom sealing scheme has been extended to the end of the year. Some changes in production may be effected as a result of individual stock positions.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during September 1960 amounted to 384,300 bales, made up of 37,250 bales from Pakistan and 347,050 bales from India. This was 141,100 bales more than the revised estimate for the previous month, arrivals from Pakistan being up by 2,250 bales and those from India showing an increase of 138,850 bales. Compared with September 1959, arrivals show an improvement of about 29,650 bales —3,300 bales from Pakistan and 26,350 bales from India. Total arrivals for the period July-September 1960 are now 805,150 bales, made up of 109,900 bales from Pakistan and 695,250 bales from India. This is 196,250 bales less than during the corresponding period of 1959, arrivals from India being down by 259,250 bales, which is partially offset by an increase of 63,000 bales in the arrivals from Pakistan.

The estimated consumption of raw jute during September by mills reporting to the I.J.M.A. was 500,200 bales, bringing the total estimated consumption for the period July-September 1960 to 1,544,200 bales—or 739,050 bales more than the total raw jute arrivals over the same period. In September 1959, the estimated raw jute consumption was 534,000 bales, and the total consumption for July-September 1959 was 1,554,000 bales. This was about 554,000 bales more than the raw jute arrivals during the same period.

Although the United States has shown very little interest in the Calcutta markets, U.S. burlap consumption and stocks have increased. During September 1960, the consumption was 76 million yards, which was 4 million yards less than in September last year but 9 million yards more than in August 1960. Total U.S. consumption so far this year is 646 million yards, giving a monthly average of 71.8 million yards. During the same period of 1959, consumption was 668 million yards, or a monthly average of 74.2 million yards. In spite of the increase in consumption, stocks of burlap have risen. At the end of September, they stood at 261 million yards, which was 3 million yards more than in the previous month. Spot stocks were 131 million yards and afloat stocks 130 million yards. In September 1959, burlap stocks were 254 million yards.

THE JUTE MARKETS

Manufactured Goods: Once again, jute goods prices showed wide variations but genuine business was small. At the opening, quiet conditions prevailed in spite of a small increase in prices. B Twills opened at Rs. 176.50 for ready shipment, which was Rs. 6.50 more than the January-March quotations. But 40in. 10oz. hessians were quoted at Rs. 56.50 for ready and Rs. 56.60 for forward shipment. Thereafter, both heavy goods and hessians fluctuated widely as holders came out to sell. Sacking dropped by Rs. 2.50 and hessians by Rs. 1.75, but the loss in heavy goods was soon made up, following small business with Australia, mainly in woolpacks. Hessians were neglected and unchanged. A slump developed in heavy goods over the week-end, and prices fluctuated rapidly. This phase continued on a smaller scale until Tuesday, when B Twills fell to Rs. 172.50 and hessians to Rs. 54.50, both for ready delivery. The forward rates, however, showed more stability due to small enquiries for January-March shipment. Towards the close, a quieter tendency developed, with buyers showing little interest.

On Wednesday morning, opening quotations were as follows:

	Oct.	Nov.	Dec.	Jan.-Mar.
40in. 7½oz.	40.15	40.25	40.25	40.50
40in 8oz.	45.75	43.75	43.75	43.50
40in. 10oz.	53.25	53.50	53.75	54.00
B Twills	170.50	167.50	165.00	163.00
Heavy Cees (Plain)	169.00	168.00	165.00	163.00
A Twills	203.50	203.00	199.00	196.00
Liverpools	190.00	189.00	187.00	185.00
Cornsacks	183.00	180.00	172.50	163.00

Raw Jute: There was very little interest in the fibre market at the opening, as mills continued to make no purchases. The tendency was quieter, and by Friday, Assam jute had fallen to Rs. 51. After the I.J.M.A. meeting on that day, it was announced that mills were now at liberty to buy jute on a quota basis. Small business was reported on Friday night, and again on Saturday, when prices were marked up by Re. 1. In general, however, mills did not appear to be anxious to cover their requirements, and sellers became scarce as they withdrew to await events. Over the week-end, prices again advanced by Re. 1 because of poorer imports at the agencies, but as the week progressed imports improved, and fibre rates recorded a gradual decline. Small business was reported daily with the mills, and inter-seller business was also reported, but in general trading was dull. Wagon arrivals in Cossipore again showed an improvement, and in the eight days ended 25th October, a total of 930 wagons were logged.

Business was confined mainly to quick shipment jute. Ready bills of lading and seven to 15 days' shipment for Northern and Assam jute was reported between Rs. 51 and Rs. 53. Tossa and Daissee fetched Rs. 52.50 to Rs. 53 and Jungli

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL

(FROM OUR DUNDEE CORRESPONDENT)

DEALERS in Dundee heaved a sigh of relief during the past week because of the "break" in fibre prices. They were worried about the steady rise of as much as £30 a ton in a few days. So they predicted that this could not go on for long, and that the rise was due to speculative manipulation. The Pakistani Government has done well in issuing an estimate of the jute crop for this season which is reported to be 5.6 million bales. But a lot of harm was done to the industry by an earlier report that the crop would yield only 4.2 million bales, which was a ridiculous figure. It is unfortunate that manufacturers and dealers in Dundee are so gullible, since they swallow wild rumours periodically, providing an opportunity to speculators to make the most of it.

Mill Firsts were offered last week at £201 a ton but they came down to £194 towards the close, with Mill Lightnings declining from £194 to £184. Mill Hearts from £192 to £180 and Grade Hearts from £185 to £185, Grade Tossa-2/3 from £199 to £190 and fours from £193 to £185, the lower rates in each case being those prevalent later in the week for November-December shipment, all c.i.f. U.K.-Continent. Since the fall started, spinners were away from the market, although they showed some interest when values were £10 cheaper. The highest transaction recorded in Dundee was in Mill Lightnings at £192, afloat.

The Calcutta goods market also tended easier but prices became irregular later, possibly due to the uncertainty about the total percentage of sealed looms. Meanwhile, raw jute consumption of the Indian jute mills should be curtailed by the sealing of looms, although the home crop may not be very much insufficient to satisfy their requirements this season. Pakistan is likely to have enough jute to satisfy the export markets with about 4 million bales and the local mills as well with about 1.7 million bales.

Prices for Calcutta goods are 84s 9d for 40in. 10oz. and 63s for 7¼oz., October, 85s and 63s 3d November, 85s 6d and 63s 6d December and 86s 3d and 64s January-March, with B Twills 269s 9d, 266s, 263s 9d and 260s 9d for the respective shipment months, f.o.b. Calcutta.

Prices for Dundee yarns were further raised from 15th October by another £15 a ton for hessian qualities, following a rise of £15 a ton on 12th October. Hessian yarns are now at 25.75d a lb for 8 lbs C.H.W. cops and 26.89d a lb for 8 lbs J.C.H. warp, on spools. Rove rose from £147 5s to £155 5s for 48 lbs and from £115 10s to £123 15s a ton. Prices of hessians were raised from 19.43 to 20.57d a yard for 40in. 10oz. and 16.25d to 17.16d for 8oz., which buyers paid only for urgent needs. It looks as if the industry will face a very quiet spell for some time ahead, as buyers will not purchase in a falling market.

PAPERS invited on

"RECENT RISE IN PRICES—CAUSES & CURE"

from persons with minimum qualifications of an University Degree.

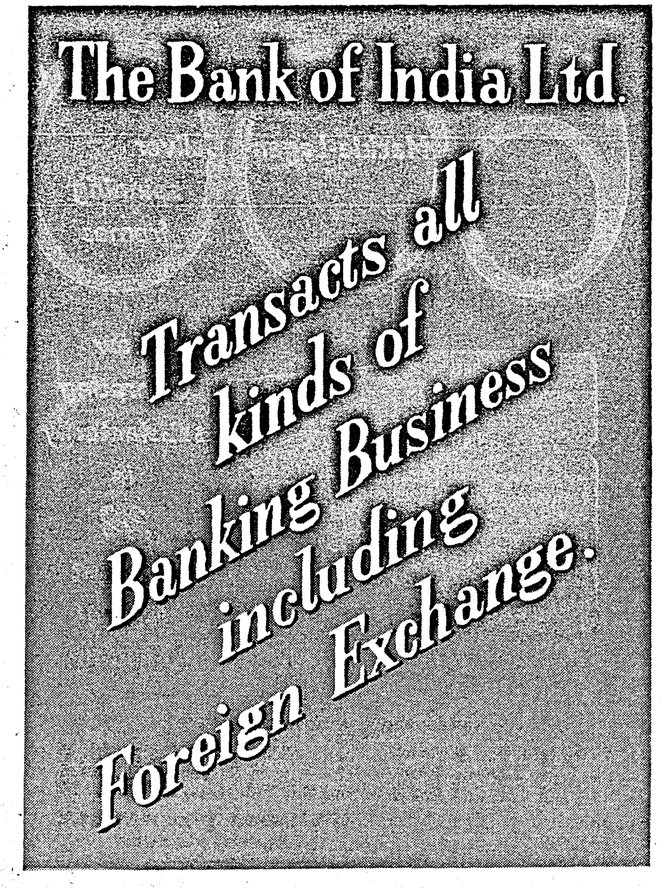
Prize for the best Paper Rs. 1,000/- and for the 2nd best Paper Rs. 500/-

Last date for submission—15th November, 1960.

Papers will be judged by Eminent and Foremost Economists.

For particulars please contact:

Hony. Secretary,
Economic Committee of the Osmania Graduates' Association,
Exhibition Grounds, Mukarram Jahi Road, Hyderabad (A.P.).



THE PAKISTANI JUTE MARKETS

SUBSTANTIAL FALL IN FIBRE PRICES

(FROM OUR EAST PAKISTAN CORRESPONDENT)

THE measures taken by the martial law authorities to check the watering of jute, and the drop in fibre prices, have frightened sellers in the East Pakistan jute market during the past week. In their eagerness to liquidate stocks before rates fall further, they are only too keen to dry the jute before selling it. Unfortunately, it is difficult for them to do this, since they have been buying the jute reasonably dry and have profitably sold it at a cheaper rate only by wetting it first. This is one reason why many people believe that, as soon as the present rush of arrivals is taken up, arrivals will decrease sharply. In a falling market, *beparis* and middlemen may become afraid of buying more fibre from the growers, since by the time they bring it to the baling centres, they will be showing a loss on their purchases. While local sellers are eager to dispose of their jute, the mills and the more solid balers are sitting back watching each other and waiting for the correct moment to buy. When they do buy, *beparis* will once again be encouraged to bring in more jute from the interior. With luck, they may learn their lesson, and may at this time insist on buying and selling only dry material.

Overseas buyers, as might well be expected, have been delighted about the fall in fibre prices. They are sitting out, with the usual claim that they are waiting for lower rates. Some of the wiser ones are continuing to buy the market down. The others may be wondering why most sellers have withdrawn since E.P.C. prices were reduced by £5 on 20th October. While local prices may continue to fall for a few days, it is unlikely that any sellers other than the smaller ones will be prepared to dispose of their stocks in this market, when it is apparent that the crop is short. As soon as reports reach the overseas market that the mills have started to purchase, there will probably be another buying rush from overseas. In fact, reports indicate that already the mills are buying quietly, attempting to do so without affecting the market. If, over the next few days, prices rise again, the present lull may have given the mills a chance they have been waiting for to stock up ready jute. In that case, the rise may well be followed eventually by another lull, if the overseas buyers have the courage to sit out and if some of the London traders continue to sell.

In the long run, however, there is no doubt that the crop will not be sufficient to meet the demand from India and from overseas balers. A squeeze is expected towards the end of the season, even if some countries reduce their consumption, and even if, as the Pakistan Government intends, sowings next year are earlier. The two big buyers, Russia and China, have not yet made their appearance in the market. There is no reason to believe that they will spend the whole season without taking anything. The slightest suggestion that Russia or China intends to buy could push up the market again in a matter of hours.

It is interesting to try to analyse the reason for the recent fall in fibre prices. Almost certainly, it is that buyers and sellers alike were beginning to get worried about the ridiculous levels to which prices had gone up. Local balers holding a very precarious and expensive long position were afraid to increase it at such high levels. Local sellers, hearing of the martial law authorities' steps to penalise those offering wet jute, were determined to get rid of their stocks before they got into trouble. Overseas buyers, stunned by daily rise in prices, stopped buying, seeing no parity between their purchases and sales. At the first sign of a pause, the local mills withdrew, resulting in a quite serious drop in prices. Export Firsts have fallen from Rs. 400 a bale to Rs. 340. Cuttings were done at Rs. 265 a bale, but now it is difficult to find a buyer at Rs. 220. Loose jute prices have come down by as much as Rs. 5 maund in two or three days and still the jute is pouring into Narayanganj, Daulatpur and the upcountry baling centres. Overseas business, it is reported, has been done at as high as £198. Some of the smaller countries which buy in Dacca have paid as much as £202 for Export Firsts.

COFFEE GROWERS WORRIED ABOUT WORLD SURPLUS

RESTRICTION OF ACREAGE AND OUTPUT URGED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE coffee growing industry in India is worried about its future. The chairman of the Mysore State Planters Association, Mr. U. K. Lakshman Gowda, said recently at the annual general meeting that the anxiety arises from the success of the industry's productive efforts. Growers have introduced vast improvements in the methods of production since 1947 on account of the attractive price they were getting for their produce. No other crop in India has achieved as much progress either in yield an acre or in total volume of production as coffee, Mr. Gowda said. The industry's average yield for well-managed estates has increased from 164 lbs in 1949 to 988 lbs in 1959, and total production has increased by 61 percent. But along with the spectacular increase in output, there has been a great increase in the burdens on the industry. Mr. Gowda said that taxes have been increased 37 times since 1949.

Lower Prices

The Coffee Board which is in sole charge of the distribution of the commodity has been selling it in the internal market for over 12 years at considerably lower prices than what it would have fetched in the export markets. For example, when Plantation A was sold in the world market at over Rs. 500 a cwt. in 1953, it was made available to the internal consumer at Rs. 195 a cwt. It was from export earnings that internal consumers were subsidised in those years. The Coffee Board, however, is now faced with a different problem altogether. The world coffee surplus is becoming heavy, so the price is falling steadily. The decline cannot be checked unless some effective measures are taken by producing countries. The International Coffee Agreement, which was concluded in Washington in May has provided for the restriction of exports alone; it does not provide for the restriction of production or acreage. Although since 1958, the world agreement had provided for the restriction of exports, most of the increase in output occurred during the last three years. Five years ago, the total world output was 40 million bags while the current season's production is estimated at 76 million bags. World exports, on the other hand, amounted to 36 million bags some five years ago, but they are estimated at 42 million bags this year. There has been an increase of only 6 million bags in the world requirements of coffee, Mr. Gowda said, but the output has been increased by 36 million bags. So the vast accumulation of stocks has affected the market and during the last five years the price of coffee has declined by about 40 percent in the world market.

Rise in Production Costs

India produces only about 49,000 tons out of some 4,475,000 tons of the world crop. Because of the small volume of output, India cannot influence the world market. Yet her need to export is great since she produces an increasing surplus for export and because she must increase her export earnings. When production was barely sufficient for internal consumption in the past, exports tended to create a scarcity within the country, so prices rose. Another unpleasant development is the steep rise in production costs in spite of the substantial increase in output. Illustrating this point, Mr. Gowda said that for a group of ten coffee companies whose production costs were examined, the increase was from Rs. 195.75 an acre to Rs. 775.10 an acre. In 1952, the grower could get a return of Rs. 2.25 a point, but because of the higher price for exports the actual return was Rs. 2.75 a point. Eight years later, because of the increase in production costs, the retention price has been lowered to Rs. 2.20 a point, and it is unlikely that producers will get more than this. Next year the position will be even worse, since there will be a higher surplus for export with the highest crop on record. Mr. Gowda said that without increasing production an acre and the size of the total crop, the industry cannot meet the rise in costs. But the increase in production will affect the industry adversely. Furthermore, if the world price is lower than the retention price, the industry in India will have to incur a greater loss. Consumers who have long been accustomed to the idea that their coffee should be subsidised will now resent a subsidy on the reverse, namely, one on exports. So growers face a very difficult situation.

Proposal for Commonwealth Pool

The authorities are now considering a proposal for the disposal of Indian coffee by creating a Commonwealth pool to which the surplus could be consigned and which could be marketed from London. Similarly, it is necessary to consider whether a joint propaganda organisation could be set up for coffee produced in the Commonwealth. At present, east African producers have a joint representation in London, and they are considering a proposal for setting up an African Coffee Promotion Board. If this idea—before it takes final shape—could be changed in favour of a Commonwealth Coffee Propaganda Board, it will help Indian coffee as well as save a great deal of costs. India has not been doing any organised or sustained overseas publicity for a long time, so India's traditional markets have disappeared. Mr. Gowda thinks that the authorities have not given adequate attention to the internal market. It is necessary to remember that without a broader internal base, export efforts will suffer. The bigger the internal market, the more stable will be the country's export efforts, and the less consequential will be the effect of a fall in prices in export markets.

Rubber Production and Consumption

The International Rubber Study Group, which recently met in Kuala Lumpur, has estimated the world consumption of rubber (both natural and synthetic) at 3,860,000 tons. Of this, natural rubber would be of the order of 2,110,000 tons and synthetic rubber 1,750,000 tons. Production of natural rubber, the study group thinks, will exceed consumption by only 25,000 tons and synthetic rubber by 60,000 tons or a total of 85,000 tons. This margin of overproduction relative to total consumption is considered to be so small as to indicate the very narrow balance between supply and demand. Both producers' and consumers' representatives are reported to have agreed on the dangers of high prices. Not only will high prices check the growth of rubber consumption, but they may also provide a powerful stimulus to the increased use of, and demand for, synthetic rubber.

New Tyre Factories

Two more new tyre factories in India will reach the production stage within the next two years. The demand for rubber is rising, so it is necessary to increase production substantially. Rubber manufacturers estimate that by 1965 India will need about 100,000 tons of raw rubber.

COCHIN TEA SALES

At Dust Sale L, 300,000 kilograms of tea were on offer. There was a good general demand at slightly easier rates for everything except residual grades which were dearer.

NEW U.K. AIRCRAFT FOR FREIGHT TRAFFIC

EFFORTS TO CUT COSTS

THE air cargo business is still in its infancy—it accounts for 18 percent of the scheduled tonne-kilometres performed by the world's airlines—and it seems likely that the increase in air freighting during the 1960s will match passenger growth. Indeed, it is possible—even probable—that by 1970, air freight tonnage will exceed the weight of passengers flown. As with passenger traffic, the rate of growth will be governed largely by costs. Short Brothers, for example, in a recent survey forecast that a 50-percent drop in freight rates will increase traffic fourfold. The characteristics of cargo aircraft that will shortly be available are, therefore, of some interest to operators.

Two freighters, one weighing more than 160 tons and the other less than 4 tons, have been announced recently. Designed to meet and develop the expected longhaul cargo traffic expansion in the 1960s, the Vickers *Super VC-10 Freighter*—and the freighter version of the standard *VC-10*—are aircraft designed to keep operating costs to the bare minimum. Moreover, a terminal handling and loading system has been designed for use with the *Super VC-10 Freighter*. One version of this system employs a train of ready-loaded containers which are rolled along tracks straight into the fuselage—which has a swing nose—by means of a mobile, adjustable-height dock.

Maximum Payload

The *Super VC-10 Freighter* itself will be powered by developed Rolls-Royce Conway by-pass turbojets of about 24,000 lbs (almost 11,000 kilogrammes) thrust each, will have a maximum payload of 106,000 lbs (48,000 kilogrammes) and a freight hold with a capacity of 11,770 cubic feet (some 330 cubic metres). The maximum range with a fuel reserve sufficient for two hours' flying will be 3,950 nautical miles (7,319 kilometres) with a payload of 59,677 lbs (about 27,000 kilogrammes). With similar fuel reserves, the aircraft's maximum payload can be transported 2,260 nautical miles (4,187 kilometres). The standard *VC-10 Freighter*, which has a shorter fuselage, will have a maximum payload of 80,000 lbs to 90,000 lbs (36,000-41,000 kilogrammes).

Tiny Aircraft

By comparison, the Short *SC-7*—roughly the equivalent of a 30 cwts. (1,500 kilogrammes) van—is a tiny aircraft but one that will play an important part in air freighting in the 1960s. Displayed in model form at the Farnborough exhibition just over a month ago, the *Skyvan* is a twin-engined light transport capable of operating safely at full load from a half-mile-long field and will be remarkably versatile. It can be used as a 15-seat passenger transport, an air ambulance carrying 12 stretcher cases and one attendant, or a military transport carrying 12 fully-armed paratroops (the men can jump straight out of the back of the aeroplane). The *Skyvan* can also be used as a freighter—indeed this is likely to be its main rôle; it can carry one and a half tons of almost any kind of cargo (including a car), the cargo being loaded straight into its square-section fuselage through a large rear-loading door. The floor can bear a load of up to 300 lbs a square feet (or 1,464 kilogrammes a square metre). With one and a half tons of payload, the aircraft can fly 200 miles (320 kilometres) at 160 miles an hour. With a one-ton payload, the range increases to 900 miles (1,448 kilometres) at 140 miles an hour.

MULTI-CHANNEL CARRIER EQUIPMENT FOR INDIAN PIPELINE PROJECT

The Transmission Department of A.E.I. Telecommunications Division has announced that a £130,000 order for carrier transmission equipment has been received from Murphy Radio of Welwyn Garden City. The equipment will form part of an extensive radio network for the 720-mile Oil India pipeline project in northern India. Work on the laying of the pipeline, considered to be one of the largest of its kind in the world, is scheduled to start in November. The main purpose of the radio link will be to provide the control headquarters of Oil India Private Ltd in Nunmati with telemetering facilities, ensuring a constant check on oil flow output along the pipeline from the issuing station to the terminal refinery. The radio link will have an ultimate capacity of 34 channels for telemetering and teleprinter facilities, and speech transmission. Teleprinter services will be allocated on a separate channel connecting pump and maintenance stations on an individual link basis.

The transmission path will follow the oil pipeline route from the issuing station in Nahorkatiya, in the State of Assam, westwards along the Brahmaputra valley for 260 miles to the pipeline control headquarters and the Government oil refinery in Nunmati. It will then cross to the northern side of the river and continue westwards or a further 460 miles skirting the Pakistan frontier and ending at the terminal oil refinery of Barauni, in the State of Bihar. Transistorised channelling equipment of the most up-to-date type will be installed at the terminal and intermediate stations, and at most of the repeater stations along the route. Over the longer communication arm, to the west, 15 radio repeaters and back-to-back terminals will be positioned with local access to the channelling equipment, while nine radio repeaters will be spaced at intervals over the shorter distance, to the east. Access points established at the repeater pumping stations and maintenance stations will allow mobile v.h.f. links to be fed into the main network. In the event of a possible emergency breakdown, the carrier channelling equipment will automatically transfer to stand-by radio repeater units.

LLOYD'S REGISTER FORMS GREEK COMMITTEE

Lloyd's Register of Shipping has formed a Greek National Committee. The General Committee of the Society, at a meeting held in London on 13th October, approved the membership and rules of this, the eleventh national committee of Lloyd's Register of Shipping. The chairman of the Greek Committee in Professor Stratis G. Andreadis, president of the Union of Greek Shipowners, and the Deputy Chairman is Mr. P. Yannoulatos, vice-president of the Union of Greek Shipowners. The formation of the Committee marks the recognition by Lloyd's Register of Shipping of Greece's maritime importance and the desirability of creating a means whereby Greek views can be expressed in the General Committee in London. As chairman of the Greek Committee, Professor Andreadis becomes *ex officio* a member of the General Committee, and a Greek representative will be invited to sit on the Society's Technical Committee, the body which advises on changes in the rules.

Lloyd's Register of Shipping has for many years had national committees in leading shipping and shipbuilding countries, whose existence ensures that its practice will reflect international experience.

QANTAS AWARDS CONVERSION CONTRACT TO AMERICAN AIRLINES

Qantas Airways, Australia's international airline, has awarded American Airlines a contract for the conversion of 29 of its present jet engines to turbo-fans. Three U.S. firms which tendered for the work were Pratt and Whitney, American Airlines, and Pacific Airmotive. The contract is worth a little under $400,000 to American Airlines, which operates a fleet of Boeing *120* and *720* aircraft.

The big American Company will have converted more than 120 of its own engines to turbo-fans before starting work on the first Qantas engines in August 1961, at its Tulsa, Oklahoma, plant.

SECOND COKE OVEN BATTERY LIT UP AT DURGAPUR STEEL WORKS

Mr. Malcolm Macdonald, the retiring High Commissioner for the U.K. in India, lighted up the second coke ovens battery of the Durgapur steel works recently. The first battery of the coke ovens was lighted up on 24th August, 1959, and the first coke was pushed on 22nd November, 1959. The battery has been working satisfactorily and of late, its daily production has been 1,484 metric tons of coke, which is more than the targeted capacity. Coke ovens form an integral part of a modern steel works. The Durgapur steel works with its three batteries of ovens will carbonise daily 5,200 tons of dry coal into 3,900 tons of coke. Each battery consists of 78 ovens. The ovens are devised to use blast furnace gas as well as coke oven gas as fuel.

NEW METHOD IMPROVES DIESEL OIL PRODUCTION

A method which will result in higher diesel oil production has been developed by an employee of the Stanvac Bombay Refinery, Mr. W. A. Wagle. For his original suggestion, Mr. Wagle has been awarded the largest sum paid to any employee so far under the "employee suggestion plan." Mr. Wagle's suggestion has helped improve the refinery operation by upgrading a portion of the fuel oil into diesel oil during shut-downs of the catalytic unit. During these shut-downs, the operation of the refinery is affected and the quantities of base stocks going into diesel oils decreased. The practical method developed by Mr. Wagle cuts down this loss to a minimum. The suggestion scheme was introduced in the Refinery on 1st August, 1957. Since its introduction, 6,000 suggestions have been received from employees. More than 70 percent of the employees have participated in the scheme and 371 awards of the total value of Rs. 13,415 have been distributed during the last three years.

Announcing
LUFTHANSA'S
fabulous
*Senator
service

ON THE EUROPE—FAR EAST ROUTE

From the 1st November, the superb Senator Service is being introduced on LUFTHANSA'S Far East flights. The little extra touches make this service the last word in sheer luxury!

On any of our twice-weekly flights to Europe, you will bask in LUFTHANSA'S lavish attention—you will breathe an air of good living, which only the Senator Service can provide.

Commodity Markets

BRITISH TEXTILE REVIEW

EXPORTS OF COTTON GOODS FALL

A NOTE of doubt has crept into Britain's textile trade. Yorkshire is watching somewhat anxiously a rate of wool consumption which has recently been appreciably lower than a year earlier. Lancashire is worried about the implications of expanding imports and contracting exports. Only the man-made fibre section continues to develop in a full mood of confidence—notably at the Courtaulds plant in Grimsby, where a third unit to produce Courtelle is to be built. The demand for textiles in the home market is still active, and not many Lancashire firms have much surplus for export at present. That is probably one reason why the U.K.'s exports of cotton goods have recently fallen to the lowest levels in years, and there is not enough incentive to make vigorous efforts abroad. There is evidence now, however, of a more positive interest in export promotion. Sooner or later, it is argued, the diversification of cheap imports from the Commonwealth and the increase in more sophisticated imports from Europe and America must produce in this market a surplus of goods which can be disposed of only by increasing exports.

In their respective fields, the U.K. Cotton Board and the Wool Textile Export Corporation—to name only two of many bodies concerned—have done excellent work in promoting British exports. They have studied not only the markets but also—and equally important—the methods of selling in those markets, and they have devised many original schemes. Restrictions on trade are partly to blame if results have not always realised the highest hopes, and this problem involves high policy which the bodies concerned have often tried to influence by pressure on the Government. These various activities are now being intensified, and if individual firms put their full weight behind them, Britain will no doubt see better export figures in the future. It is, however, questionable whether this improvement can be achieved quickly enough to avert a difficult situation in the U.K. Old orders keep most of the textile industry busy at present, but new orders are not forthcoming on a scale sufficient to maintain this rate of activity. Figures published by the U.K. Board of Trade late in September showed that two months previously the textile and clothing industries had received new orders valued at 15 percent less than in the same month of last year. If some such disparity continues for a few months, the textile boom will be finished.

Long-term Trend

It is curious that, whereas the wool industry is acknowledged to be basically healthy and the cotton industry has operated for decades on a declining long-term trend, it is the former which is showing more signs of weakness in the current boom. Most cotton firms' order-books ensure a high rate of activity until early next year at least, but some sections of the wool industry—notably the combing section—are already suffering from a reduction in activity. Yet it is still true that basic anxieties are deeper in Lancashire than in Yorkshire. Partly, the wool industry's trouble is simply uncertainty concerning the value of wool—an uncertainty which was only partly allayed by the recovery in Australia in September. The burden of surplus tops has not been lightened as many people in the trade expected, and the prices which spinners are willing to pay are considerably less than the cost of making new tops at current prices of wool. But success in blending fibres, while it implies a reduction in consumption of wool relatively to the industry's output, will help maintain that output; for on the men's side, the trade has become more fashion-conscious, and the new blends are an important element in fashion. The new season's ordering by clothiers, which will begin a few weeks hence, will probably reflect both this fashion-consciousness and the generally high level of prosperity among consumers.

The wool industry's exports, like the cotton industry's, have declined in recent months, but there are some brighter aspects in the position. The reported substitution of a single-rate tariff of 38 percent on imports of wool goods into the United States, instead of the two-phase 25 percent or 45 percent arrangement, is at least less unfavourable to the British trade than the system with a quickly-filled quota; and it should benefit particularly the worsted side of the industry, and so help relieve the pressure of surplus tops.

Voluntary Agreement

The U.K. cotton industry is still troubled much more by future imports than by future exports. The voluntary agreement limiting exports from Hongkong—on which depend the comparable agreements with India and Pakistan—terminates at the end of next year, and it has to be assumed that the agreement will be renewed, if at all, on terms much more favourable to suppliers. The strength of the U.K. trade is an adverse factor in this matter, not only because it has made it more difficult to convince suppliers of the need to limit their sales but also because it has called forth additional imports from the Continent of Europe, which are not limited by any agreement. Faced with the awesome possibility of an unrestricted flow of cotton textiles from the Asian countries of the Commonwealth, which would eventually involve a further drastic contraction of Lancashire's capacity, the U.K. cotton industry is considering with increasing favour the possibility of Britain's participation in the European Common Market, with limitations on non-European goods applicable to the whole area. For a different reason, the wool industry also favours participation; it will allow free access to the important German market (especially important on the worsted side), which otherwise will be left free to the Italians.

Demand for Acrylic Fibres

The above-mentioned development by Courtaulds was announced when the group's first acrylic-fibre plant had not yet reached full output and the second had not yet started producing. But Courtaulds has every reason for confidence in the demand for acrylic fibres, which are already competitive in price. This third unit brings the planned production of Courtelle in the U.K. to 32 million lbs a year; to which must be added, in the acrylic range, 10 million lbs of Chemstrand's Acrilan.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.3 percent to 125.7 during the week ended 8th October, 1960, compared with 125.4 (revised) for the previous week. The index was higher by 0.4 percent and 4.7 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Lower prices of milk in Bombay (−33⅓) and in Nagpur (−6⅔), rice in Ranchi (−14⅔), in Chiplun (−7⅔) and in Imphal (−5⅔), oranges in Madras (−6⅔), black pepper (−5⅔), bananas (−4⅔), fish (−3⅓), maize, gur, cardamoms and betelnuts (−2⅔ each), masur and urad (−1⅔ each) brought down the index for Food Articles by 0.7 percent to 122.1, against 122.9 (revised) for the earlier week, although the prices of oranges in Calcutta (+54⅔), milk in Ludhiana (+12⅔), potatoes, onions (+7⅔ each) and rice in Tihu, cashewnuts in Mangalore and groundnut oil (+5⅔ each), eggs (+3⅓), bajra, coconut oil and chillies (+2⅔ each), jowar, ragi, gram, ghee and meat (+1⅔ each) showed a rise. The index for Tobacco remained stationary at the earlier week's level of 103.7. The index for the Fuel, Power, Light and Lubricants group worked out to 119.6, against 119.5 for the earlier week. Castor oil (+1⅔) showed a rise. The prices of raw jute (+13⅓), mustardseed in Kanpur (+5⅔) and raw wool (+1⅔) moved up, while those of linseed (−1⅔) declined, and the index for Industrial Raw Materials advanced by 2.5 percent to 145.7, compared with 142.2 (revised) for the previous week. The index for Intermediate Products receded by 0.4 percent to 129.2 due to a decline in the prices of brass (−3⅓), copper (−2⅔) and zinc (−1⅔), although those of coir yarn (+1⅔) were marked up. The index for Finished Products advanced by 0.7 percent to 122.5, compared with 121.6 (revised) for the earlier week as a result of higher prices of jute manufactures.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1960. As compared with August, the September Indices for Food and Clothing show rises of 4 points each, and that for Miscellaneous indicates an increase of 1 point. Fuel and Lighting remained unchanged at 289 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 3 points during September 1960.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100

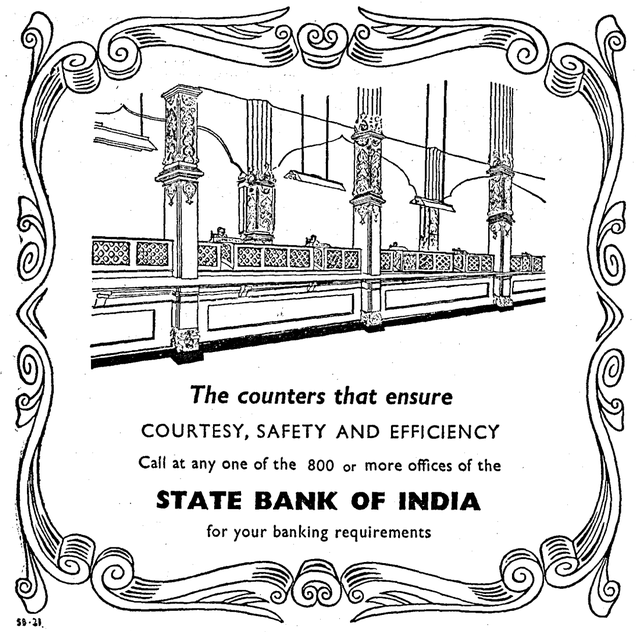
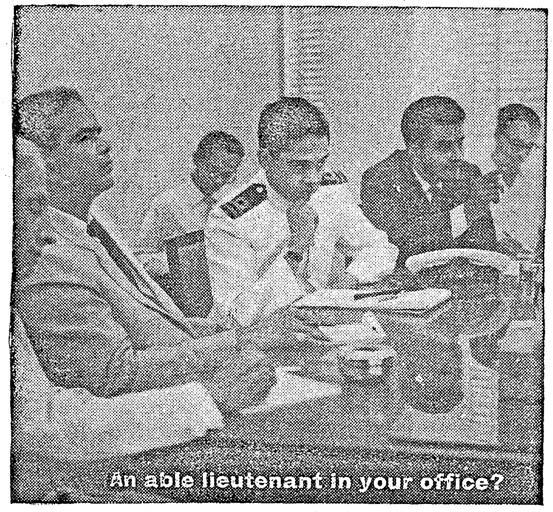
MARTIN BURN LIMITED
MARTIN BURN HOUSE, 12 Mission Row, Calcutta 1





Your executives are your trusted lieutenants. They implement your decisions with imagination and loyalty, making a valuable contribution to output and profits. You know the worth of these men and you certainly like to pay them accordingly.

But, beyond a certain level, the more you pay them the less do they proportionately realise after taxes. And with the high standard of living they have to maintain, they cannot save for retirement.

The LIC can show you a new way of remunerating them. It is through the Group & Superannuation Schemes. These Schemes possess three unique advantages:

i Your executives can receive a part of their emoluments tax-free to build up retirement benefits and maximum family security

ii This may not involve any extra cost to the employer

iii The employer gets tax-relief on what he pays towards the Scheme

For further information, please contact the nearest LIC Divisional office and have a word with the Manager. He will be delighted to give you full particulars.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 16, held on 24th and 26th October, offerings at the Export auction amounted to 73,280 packages for which there was a strong general demand. Except for a few lines of the better C.T.C. teas and orthodox Assam B.O.P.'s and Orange Fannings which were irregular and easier, the remaining offerings came in for a satisfactory market and were generally firm. More interest was shown for Fannings than Brokens.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb
Clean Black Pekoe	5.40 to 5.70	2.00 to 2.04
Plain B.P.	4.50 to 4.65	1.88 to 1.90
Plain Fannings	4.70 to 5.10	2.04 to 2.12
Medium B.P.	4.70 to 5.10	1.92 to 2.08
Medium Fannings	5.10 to 5.50	2.60 to 2.80
Best Assam C.T.C. B.P.	6.20 to 6.70	2.80 to 3.00
Best Assam C.T.C. Fgs.	6.50 to 7.00	

(Quotations are inclusive of excise duty.)

At the Internal Sale, a good general demand prevailed for the 22,537 packages of Dusts on offer at irregular and often lower prices. Medium C.T.C. Dusts were well supported at up to 15nP below last rates while the best C.T.C. descriptions were irregular and generally easier by 20nP. Brown Dooars were readily taken up, although mostly at lower rates. The smaller orthodox descriptions again met with a good enquiry and sold at fully firm and often dearer rates while the exportable kinds declined by up to 10nP.

Quotations

	1960 Rs. a kilo	1959 Rs. a lb.
Medium Dooars Dust	4.65 to 5.00	1.96 to 2.00
Medium Assam Dust	4.90 to 5.60	1.90 to 1.94
Medium Assam C.T.C. Dust	6.10 to 6.25	2.00 to 2.15
Best Assam C.T.C. Dust	6.30 to 6.60	2.50 to 2.70

(Quotations are inclusive of excise duty.)

The 784 chests of Leaf on offer met with a good demand. The small quantity of green tea sold well.

FREIGHT MARKETS QUIET

BUSINESS in the freight markets is still slow to develop due to the reserve of both charterers and owners. The Baltic Exchange Chartering Committee withdrew enquiries for tonnage to ship foodgrains from the Northern Range or Gulf to India, and it seemed that shipments would be arranged from the Pacific. Chinese Government charterers have been suddenly out of the market. This may be due to China having apparently had serious crop difficulties due to bad weather during the past summer. But there has been an enquiry for sugar for China from Cuba and about six vessels have been fixed for October-November position at 94s f.i.o. Pakistan charterers paid 35s 6d f.i.o. trimmed for 9,500 tons of coal, Chinwantao-Chalna or Chittagong. Ore charterers paid 52s f.i.o.t. from Calcutta-Visakhapatnam to one port Poland, and paid 42s from Marmugao to Japan. Although the time charter section has been reasonably active, the rates indicated by the charterers were not very attractive.

LINSEED DULL

The linseed market was dull in the past week. Crushers showed interest for ready and forward deliveries, but small business was done as arrivals of seeds from upcountry were restricted. Trading in the oil market was slow. Local buyers showed interest for forward deliveries, but millers were not keen to do business since stocks were limited. The oilcake market was firm. There was a good local demand. The latest quotation is as follows: Ready Rs. 25.62 a maund.

HIDES AND SKINS FIRM

The market was firm. Stocks of skins were higher but those of hides were less than in the previous week.

Bazaar Sales

(Between 18th October and 24th October, 1960)

Cowhides: Wet salted (Ord.) 7,600 pcs. on the basis of Rs. 11.75 to Rs. 13 and Rs. 14 to Rs. 17; Wet salted (Slaughtered) 9,800 pcs. on the basis of Rs. 8.50 to Rs. 15.50 and Rs. 18.50 to Rs. 27.

Goatskins: Wet salted (Patna, Daissee, Kustia) 79,900 pcs. on the basis of Rs. 325 to Rs. 350, Rs. 360 to Rs. 380 and Rs. 460 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 4.50 to Rs. 4.75 and (she-killed) on the basis of Rs. 4.25 to Rs. 4.50 a piece; Assam-Dinajpur 7,400 pcs. on the basis of Rs. 300 to Rs. 360; Bihariganj 2,800 pcs. on the basis of Rs. 335; Durbhanga 800 pcs. on the basis of Rs 300 to Rs. 380.

Bazaar Stocks

(24th October, 1960)

Cowhides: Wet salted 100,400 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia, Killed) 33,500 pcs.; Assam-Dinajpur 195,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 203,000 pcs.

COMPANY AND PUBLIC NOTICES

RESERVE BANK OF INDIA

Applications are invited for the posts of Deputy Chief Officers in the Department of Banking Operations of the Bank.

(A) SCALE OF PAY: Rs. 1275—75—1575.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scale.

In addition to pay, the selected candidates will be eligible to draw local pay (at centres where it is admissible) and house allowance at the rates prescribed by the Bank from time to time.

(B) AGE LIMIT: Candidates should not be over 45 years of age as on 1st November, 1960.

(C) QUALIFICATIONS: Applicants should have a minimum of 15 years' commercial banking experience out of which not less than five years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POST AND ONLY THOSE CANDIDATES WHO STRICTLY SATISFY THE ABOVE REQUIREMENTS ARE ADVISED TO APPLY.

2. Applicants for the above post must remit with their applications a fee of Rs. 7.50 by cheque or bank draft on a *Scheduled Bank* payable at Bombay or by Postal Order. The application fee is in no case refundable.

3. Applications in the prescribed form obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow, Trivandrum and Patna accompanied by copies (*originals should not be sent*) of *at least* two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 12th November, 1960.

4. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected, at the time of their appointment in the Bank's service.

5. Selected candidates must be prepared to serve in any office of the Bank in India and to undertake tours when required.

6. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

7. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgment Due". Apart from those who may be specially called, interviews will not be granted to candidates, nor will the Bank enter into correspondence with them.

8. Canvassing will be regarded as a disqualification.

HELPING SMALL FIRMS: AN AMERICAN IDEA

THERE are not many fields where one can see the gigantic American economy wrestling with precisely the same problem as the underdeveloped Indian economy. Yet one such exists in the matter of finding finance for small business. The vast capital resources of the U.S. system place most economic problems there in another world altogether from that facing Indian enterprise. But if one defines "small business" as those firms that do not have access to the nation's normal capital funds—because they want to borrow longer than banks can lend, are too small to interest insurance companies and other institutional investors, too risky and too specialised to get help from the Government, and too poor and too inexperienced to raise share capital in the stock markets—then one can see that this class of enterprise exists in the United States as well as here, and faces substantially the same problems. There are, naturally, differences of scale: in the United States, a "small" business is taken to be one with total assets of less than $5 million and net profits of less than $150,000, whereas an Indian firm approaching those dimensions would be considered as at least "medium". Yet, since the American definition also includes the conditions that the business be privately owned, not dominate its field and suffer from the inability to raise capital through the usual channels, it is not absurd to speak of Indian and American small businesses as belonging in the same category.

It is conceivable that techniques which work in one country to find capital for small businesses might be worthy of imitation in the other. Just when India was experimenting with government finance corporations devoted to that end, the Americans were doing the same. The American venture produced even more disappointing results than the Indian: the Reconstruction Finance Corporation, which was the U.S. Government's lender to small business, was involved in one scandal after another and had to be wound up in 1953. The Americans then tried another governmental system of assisting small business, which was meant to be temporary and to close down in 1955. This was the Small Business Administration and its approach was not so very different from that inspiring governmental aid to small business in this country. It was intended to advise small concerns, help them get government contracts, and offer loans to those which could not interest the banks, from a revolving fund of $50 million. It came in for all the criticism—on grounds of meanness, excessive caution, "banker's mentality" and neglect of the struggling small concern—which has been heard in India. Yet, when its lease expired in 1955, it was found too valuable to be allowed to die. So the S.B.A. was put on a permanent footing, and its loan funds were increased first to $500 million and then to $750 million.

It was still considered inadequate by small American business men, and by Congress, just as the corresponding Indian finance corporations will always be, no matter how much more loan capital is placed at their disposal. Lending public funds, it must necessarily adopt an approach which the small entrepreneur will find unimaginative; it will, for example, demand security against funds advanced, when that is precisely what the small business cannot offer. It was then that Congress decided "to fill the gap in the country's financial structure" (the same expression is frequently heard here) by setting up machinery which is just now coming into operation and which could be imitated in this country. This took the form of the Small Business Investment Act of 1958, under which are licensed mixed private-public ventures called "small business investment companies" or S.B.I.C.s. These act as investment bankers helping young enterprises over their first financial and managerial hurdles. The fact that these ventures combine public and private money, and thus are an excellent example of the "mixed economy", may constitute a departure from the supposed American attachment to unassisted free enterprise; but it is also a circumstance which should interest Indian legislators, even those always allergic to anything that comes from the United States. The idea is in its infancy, so India has the chance to see it starting out: the first S.B.I.C.s were licensed in March last year, but most of the 100 which already exist are much younger than that. New ones, moreover, are being launched every week.

A S.B.I.C. is a company formed according to special rules defined in the Act and whose purpose is to provide both counsel and cash to small firms. It may offer them outright loans or it may purchase convertible debentures, common or preferred stock, or any other form of participation in the firm's capital. So far, the most popular sort of assistance has been the purchase of convertible debentures, which let the S.B.I.C. assume the rôle of creditor while deriving current income from interest payments. Because the debentures are convertible into common stock later (for instance, if the small business "goes public", that is, becomes a public company), the S.B.I.C. is assured of direct participation in the growth of its wards. The price at which debentures are converted will be decided by negotiation between the firm and its creditor S.B.I.C., but will obviously be pegged close to book values; if the firm then "goes public", its shares would be worth a good deal more than the original book values, so the S.B.I.C. stands to make useful capital gains. To date, the system is too young for this to have happened, but since the S.B.I.C.s now in operation have assets totalling $115 million, mostly in convertible debentures, American investors think this is a shrewd calculation.

To encourage the formation of S.B.I.C.s, the U.S. Congress made the rules very attractive. A "minimum" S.B.I.C. requires to have a paid-up capital of $300,000, and half of that is put up by the Government through the Small Business Administration. Once that capital sum is in hand, the Federal Government stands ready to supply another $150,000, and private sources may be tapped for additional funds equal to four times the original capital (in this "minimum" case, $1.2 million). Therefore, the promoters of the S.B.I.C. have to find only $150,000 to start with, and they can build up a portfolio of $1.5 million worth of loans and securities. Naturally, in Indian imitations of this system, the sums would be more modest but the principle could be the same.

Government help does not stop there. After making it easy to form a S.B.I.C., the U.S. Congress wrote several interesting tax provisions which are tantamount to indirect State subsidies. Firstly, all dividend income received by a S.B.I.C. is free of tax. Secondly, if any of its investments fail, the S.B.I.C. is entitled to write off the entire capital loss against ordinary income. Thirdly, the same privilege is granted to private individuals who buy shares in a S.B.I.C.: if they lose money when they sell those shares, they may deduct the loss from their taxable revenue. Clearly, this attracts investment from cautious lenders, who do not get this privilege when they buy shares in other companies; thus risk capital is directed to small business via the S.B.I.C. The latter provision makes S.B.I.C. shares especially interesting for wealthy investors; an American broker has calculated that for a person in the top income bracket, it is wise to amass S.B.I.C shares because if he gains one dollar for every seven he loses, he still breaks even, thanks to his tax savings. The law includes safeguards, such as the stipulation that no S.B.I.C. can place more than 20 percent of its funds in one firm.

Most of them, in fact, try to build up a balanced portfolio like that of a diversified investment fund, scattering their risks over 10 or 12 industries. It is notable that most of them, too, restrict the geographical scope of their operations, supporting various firms in their home area. A handful of S.B.I.C.s, by contrast, specialise in two or even one industry; while risks are higher because of lack of diversification, there are offsetting benefits since the S.B.I.C becomes an expert judge of prospects in one field. Such an investment company soon acquires expertise in the branch which concerns it, and can readily separate the wheat from the chaff; its board may include engineers experienced in that branch. The largest of the American S.B.I.C.s, the Electronics Capital Corporation, has a stake in nine electronics firms and its board is an impressive array of talent in its department; plainly, its advisory function is as important to small businesses as its provision of capital.

While bringing help on a growing scale to American small businesses, the S.B.I.C.s are proving attractive to investors. Some are private and some public companies. Several banks have found them a new outlet for their funds, and have taken the initiative to form S.B.I.C.s of their own by putting up the initial capital, or have bought shares in existing investment companies. Citizens and Southern S.B.I.C. was formed by the Atlanta Bank of that name, and the Franklin Corporation was launched by the Franklin National Bank. In Tennessee, there is a S.B.I.C. whose original capital was put up by 42 banks in that State; this is a way of forming investment companies for small business that could possibly be duplicated in India. A dozen S.B.I.C.s already have shares in the hands of the public, and a dozen more are planning to "go public" this year. Shareholders are evidently won by the tax concessions, the profits a S.B.I.C. can make on its debentures and the prospect of higher profits if and when it exchanges its debentures for a proprietary interest in its successful protégés. On the other side of the book, the "small business investment company" seems to be the most sensible way yet devised to save struggling small concerns from usurious lenders, from unimaginative governmental agencies, and from premature public sales of shares. It is probably one of the more useful ways in which a governmental agency concerned with small business can put its funds to work. By combining private initiative with the funds and the moral support of the State, it constitutes an example of co-operation between the private and public sectors which should arouse the interest of Indian legislators.

TEA SHARE PROSPECTS

A STEADIER trend has been noticeable in the north Indian tea markets during the past couple of months. Until about July, the outlook was extremely uncertain. Most people thought that, because of the long pre-monsoon drought in north India, the quality of the crop would suffer, so there would be a shortage of good teas. At the same time, with production rising rapidly in Ceylon, south India and east Africa, it was assumed that the supply of the commoner teas would be more than adequate. As a result, the "price concertina" would widen, with a strong market for the quality grades and a weak trend in the commoner ones. In fact, however, the recent movements have been precisely the contrary. The prices of good teas have been falling, partly because of the seasonal decline in quality and partly because buyers have covered much of their requirements. The market for the plainer teas meanwhile is exceptionally steady as buyers are coming round to the view that overall supplies this year will not be as large as they had originally thought.

A crucial rôle in bringing about this change of sentiment has been played by the progress and condition of the north Indian crop. When drought first hit the north Indian (and Pakistani) estates between March and May this year, nobody except

the producers seemed to be very worried. Buyers gradually reconciled themselves to the prospect that they would have to pay heavily for their superior teas, but thought that they would be able to offset the loss by paying less for the inferior grades; the price of the blends would not, therefore, need to be changed too sharply. As for the fall in production, it was considered to be only temporary; the onset of a good monsoon revived hopes that the drop in the first and second flush harvests would be made up in the later months of the year. By July, however, it started to become clearer that the drought had not only harmed the quality of the crop but had also done lasting damage to the plants. Apart from the crop during that month being extremely poor (71.51 million lbs, against 89.31 million lbs in July 1959), the movement of teas to Calcutta was badly affected by the Assam disturbances and the Central Government employees' strike. But buyers were still inclined to wait, on the assumption that the unfavourable weather in July may have delayed the recovery of the north Indian crop; in any case, they argued, enough was available from Ceylon and east Africa. Only when the setback suffered by the north Indian crop in August became known did the sentiment of the markets begin to change. The crop during that month was far poorer than in August 1959 (95.4 million lbs, against 101 million lbs), thus indicating that the damage done to the tea bushes in north India was semi-permanent in nature.

The position now is that there is little hope of world production this year being appreciably larger than in 1959. So far, the output of the major exporting territories is running about 6 million lbs behind last year's figures. Ceylon, east Africa, south India and Indonesia have all produced more tea, but the increase has been more than offset by the fall in north Indian and Pakistani output. That is why the market for the plainer grades has become steadier. Many overseas buyers who thought that they could afford to defer their purchases from north India have been compelled to change their minds. The statistical evidence indicates that they may not be able to draw from other sources all the requirements which they would normally have taken from north India. Their deferment of purchases in Calcutta has meant that only about 94 million lbs of north Indian tea have been shipped abroad so far this season (since 1st July), against over 145 million lbs shipped in the corresponding period of the last season. Despatches to the U.K., in particular, are sharply down—to 66 million lbs, from 94 million lbs. Now it is found that demand in India's internal market is well maintained, so domestic traders have been bidding strongly for the cheaper teas at the Calcutta auctions. As foreign demand develops in addition to the domestic enquiries, the prices of the plainer grades should be well maintained.

Investors in north Indian tea shares, however, need not be misled by the recent auction trends in both Calcutta and London. At the latter centre, in particular, the price pattern has been distorted by the tally clerks' strike in the port. It hampered the unloading of teas and created a temporary shortage, as a result of which there has been a certain amount of panic buying. As more normal conditions return, however, investors will have to bear in mind the fact that although north Indian tea has fetched better prices this year, the estates have generally produced much less of it. At the Export auctions in Calcutta, for instance, the only district which has sold more tea this year is Darjeeling, but the average price obtained for it is only slightly higher than last year's. All the other main districts—Assam, Cachar, Dooars, Terai and Tripura—have sold appreciably smaller quantities at moderately higher prices. The experience of individual gardens may vary widely, but the conclusion is inescapable that the industry as a whole will not do much better this year than it did in 1959, which latter was hardly a prosperous year. Statistically, Darjeeling may appear to be a happy exception, but then it has fared badly in previous seasons because the production costs of tea estates there are relatively high; the latest recovery may be of no more than marginal significance in relation to previous losses.

Further developments in the fiscal field will also have to be watched carefully. The Assam Government has been drowned in the mire of its political bickerings, so it presumably has not had much time to examine the implications of the Supreme Court decision declaring the Assam carriage tax void. Authoritative news is awaited whether, and to what extent, the revenue collected under the tax during the past six or seven years will have to be refunded. It is feared that, in any case, the Supreme Court judgment will not bring about a lightening of the tax burden on tea; instead, the proposals which have long been considered for absorbing the Assam carriage tax (and the West Bengal octroi) into an additional Central excise duty may now be implemented more speedily. In that case, there will be little for investors to feel cheerful about. A reduction in the total tax burden is necessary if the tea industry is to go ahead with the plans for replanting and modernisation necessary for meeting competition from low-cost producers abroad.

MARRIAGES OF CONVENIENCE

BRITAIN'S production and exports may be criticised for lack of vitality, but the same criticism can certainly not be applied to her industrial structure. It is changing now more rapidly than ever before. The special characteristic of present developments is the merging of big enterprises. At the end of September the English Electric Company and the General Electric Company revealed an agreement in principle to merge their organisations in a holding company. Within a month from that time the following developments were announced—in this order of chronology. The *News Chronicle* and the *Star* were merged with the *Daily Mail* and the *Evening News*, respectively: never before had two major newspapers ceased publication in one day. Messrs J. & P. Coats and Patons & Baldwins announced an agreement to discuss detailed plans for merging their interests through a holding company. City and Central Investments and City Centre Properties announced that they had agreed in principle to amalgamate their companies.

The merging of the newspapers is obviously not of the same character as the other developments. It represents the absorption of a big but weak company (Daily News Ltd) by a bigger and stronger company (Associated Newspapers Ltd). But it is in line with developments in and around London's Fleet Street, where some of the biggest newspaper- and magazine-publishing groups—notably Odhams and Newnes, and Daily Mirror Newspapers and Amalgamated Press—have merged in recent years. The public's and the advertisers' money must be confined within a narrower field when costs are rising, and costs must be reduced by "the economies of scale". There is no defensive purpose in the merging of the property companies. Mr. Charles Clore, chairman of City and Central/Investments, and Mr. Jack Cotton, chairman of City Centre Properties, are Britain's two most successful property financiers, and they are amalgamating their interests to provide still more financial strength for development on the grand scale—in London, New York, or any other city whose valuable centre offers opportunities for "redevelopment". At present, the combined assets of the two companies are worth about £70 million; and there is plenty of money from insurance companies available to finance new projects.

The combined assets of the English Electric and the General Electric companies amount to nearly £180 million, and the new group (assuming that it comes into being) will be the biggest ever to result from a merger in Britain; it will be one of the biggest British companies of any kind, and the biggest British electrical company—though by only a comparatively narrow margin, for Associated Electrical Industries is much the biggest at present. The combined assets of Coats and Patons & Baldwins exceed £130 million, and this new group (again with the same assumption that the announcement expected early next year is positive) will be by far the biggest in the British textile industry. Coats is renowned for sewing threads—cotton and synthetic fibre; Patons & Baldwins for yarns—worsted, woollen, and synthetic fibre. Their interests, therefore, are not the same but complementary. The group will be broader-based than either of the separate companies, and its selling organisation will be more effective and more economically used.

These electrical and textile mergers are in the classical tradition, represented principally by the merging of the Nuffield and Austin motor companies, forming British Motor Corporation, and the absorption of British Celanese by Courtaulds. They are amalgamations of big companies in the same industry. The cycle industry's biggest units, Tube Investments and Raleigh Industries, have recently been merged. So have numerous big brewing companies; and two of the biggest dairy-produce companies; and big units in the milling industry; and so on. Whatever the motive—to reduce surplus capacity, to spread the costs of research, to compete more effectively in an increasingly competitive world—these developments are changing the structure of British industry. Their effects on British finance may be less obvious but are not less profound. Directly, the financial institutions concerned are mainly insurance companies, which are much more numerous than banks and are suffering, in some cases, from an uneconomic scale of operations; but the giants of insurance have not yet come together.

The most important financial implications of the consolidation of British companies are concerned not with the financial institutions but with the nation's external accounts. In general—there are, of course, many exceptions to the rule—small companies are relatively inefficient exporters. In some industries they are relatively inefficient producers, whether because they cannot do enough research or because they cannot take advantage of economies of scale. However efficient their production, they cannot sell efficiently on a small scale. Big companies can put great strength into an export drive. At the same time they have the resources needed to establish production units abroad. Many British companies are establishing themselves on the other side of the European Common Market's tariff wall: if all British companies were small, the implications of this tariff wall would be more serious. The emergence of very big units in British industry should, therefore, help Britain to recover some of her lost export trade, and it should be reflected in the nation's "invisible" account, to the extent that profits from overseas units are remitted. But in the earlier stage, of course, direct investment abroad weakens the overall balance of payments, as it involves export of capital. Mainly, the consolidation of British industry by merging companies will strengthen the economy and prepare it for a more difficult period of international competition. But it may be regretted that the emphasis is on merging big companies rather than small ones. The companies that attract attention now are already strong enough to exert themselves effectively, while there are thousands of small companies that seem destined to remain small, and comparatively inefficient.

THE BLEAK OUTLOOK FOR GOVERNMENT SECURITIES

GOVERNMENT securities have become quiet during the past month or so and prices, especially of medium and long-dated issues, have fallen considerably. The index for Central Government loans has declined from 101.6 a year ago to 100.7 (1952-53 is equal to 100) and that for State Government scrip from 102.8 to 102.1. At the moment, there is a predominance of sellers with few declared buyers in evidence, and only scattered interest in short-dateds. Prices of State Government issues have fallen more heavily and many are difficult to sell even at substantial discounts.

The pressure has stemmed mainly from banks anxious to sell securities to obtain more cash and thus reduce their borrowing from the Reserve Bank. Incidentally, it may be mentioned that if a commercial bank borrows more than the quota alloted to it, a penal rate of interest has to be paid. It is, therefore, understandable that banks should not at the moment be keen to borrow from the lender of the last resort. In view of the growing monetary demand due to the onset of the busy season, it now seems likely that banks will prefer to sell Government securities rather than buy them, at least during the coming months. Furthermore, there is unlikey to be much support for securities in the near future because, in this country banks are probably the biggest buyers of these stocks. The Life Insurance Corporation has, of course, been buying discriminatingly and provident funds are generally forced to buy small quantities from time to time.

It seems likely, therefore, that the pressure on Government securities will increase steadily. In any case, private investment in these securities is never considerable, and support may decline further in the near future because the outlook has become so uncertain. At a time like the present, when support dries up, prices of Government securities are usually maintained by Reserve Bank buying. For the time being, however, the latter seems to be taking an interest only in very short-dated loans and its switch method of buying securities is of little significance. This is because not only are the loans offered by the Reserve Bank in exchange for the short-dateds it wants not in demand, but the terms of these transactions are unattractive. Under the circumstances, it is difficult to take any other than a gloomy view of the trend. As long as credit remains scarce and expensive, it is difficult to understand how prices of securities can be held at current levels. Market rates of interest have made yields on gilt-edged stocks extremely unattractive. Even the call rate has reached a level which is higher than the yields available on securities at current prices.

Bearing in mind that recent official moves support the view that dearer and scarcer credit is necessary for holding down inflation, it is reasonable to believe there will not be any worthwhile relaxation of credit curbs in the immediate future. Investors will, therefore, be justified in taking a cautious view of Government securities, at least for the time being. Except for short-dated stocks, buying any other dated loans may involve running the risk of a capital loss. Banks cannot afford to take a complacent view of the present circumstances. Because they are forced to hold a fairly large investment portfolio, any further deterioration in the prices of securities will involve them in substantial losses. It would seem to be necessary, therefore, that the Reserve Bank adopt a more vigorous open market policy in order to ensure stability in securities. But Reserve Bank buying may not provide a lasting solution. The disadvantages of official demand on a large scale cannot be ignored. If interest rates start moving up further, as they are likely to do with the progress of busy season demand, it is possible that bigger parcels of Government securities will be sold. Firstly, such sales may be necessary for obtaining more cash. Secondly, the gap between the yields on gilt-edged stocks and interest rates will tend to widen.

Against this background, there seems scarcely any chance of more official borrowing this year. At the same time, the importance of official borrowing for obtaining resources cannot be disregarded. In fact, an impressive target of Rs. 850 crores has been set during the third plan period. If Government borrowing is to be maintained at this high level, it is time attention were given to ensuring greater stability in securities. An important factor is that the mere fact that Bank rate has been kept nominally unchanged at a low level may be of little value as far as future official borrowing is concerned. Unless interest rates are reduced, the Government might be forced to borrow by paying interest at more than the present Bank rate of 4 percent. As expensive official borrowing is not likely to contribute to the long-term interests of the economy, it is expected that moves will be made at the appropriate time to soft-pedal the structure of interest rates by introducing credit relaxation measures.

Current News and Comment

Mafatlals to Build Chemical Plant

The Standard Mills Company's shares, which had risen from Rs. 398 to Rs. 898 in 1959, touched a record high of Rs. 2,100 in July this year. Last week, they were sold down to Rs. 1,020, but they have rallied to Rs. 1,200 since then. Speculation about the petro-chemicals project sponsored by Standard Mills, which had caused violent fluctuations in the price of the Company's shares, has at last been set at rest. The chairman, Mr. Arvind N. Mafatlal, told the extraordinary general meeting of the Company in Bombay on 26th October that Standard Mills has received the Central Government's sanction for the project to manufacture a wide range of organic and inorganic chemicals. But the Government has said that the project should be undertaken by a separate company with public participation, and that there should be no managing agents for the new company. The extraordinary general meeting was called in order to seek the shareholders' approval for the Company's proposal to purchase the Surat Cotton and Spinning Mills in Dewas. The proposal was approved unanimously.

The scheme for the chemicals factory visualises the manufacture of about 24 products. Among the important items are 16,500 tons a year of caustic soda and/or caustic potash, 13,200 tons of chlorine, 5,000 tons of polyvinyl chloride, 4,000 tons of aluminium chloride, 1,000 tons of ethylene oxide, 750 tons of carbon tetrachloride, 300 tons of hydrofluoric acid and 300 tons of freon gas. Some of the chemicals to be manufactured under the scheme will require raw materials based on petroleum feed stocks. The project is estimated to cost about Rs. 7.5 crores. The factory will be set up in Maharashtra. A suitable site will be selected in either Thana or Colaba. Negotiations for foreign collaboration are in progress. Replying to the demand that shareholders of Standard Mills should get an opportunity of participating in the capital of the new company by means of firm offers, Mr. Mafatlal said that he fully appreciated the sentiments and that the board would try its best to fulfil their expectations.

Referring to the purchase of the Surat Cotton Spinning and Weaving Mills, the chairman said that the unit offers a good avenue for Standard Mills to employ the surplus funds and extra capacity. About 88 of the former's 288 looms are automatic. Besides, Madhya Pradesh being a deficit area in cloth, the chances of expansion are brighter there. It is hoped that the return from this investment will be much better than the 3 percent or so which the Company is now earning on its liquid cash. As for the working of Standard Mills during the current year, Mr. Mafatlal said that there is room neither for undue optimism nor for pessimism.

Dhrangadhra Chemical to Expand

The Dhrangadhra Chemical Works Ltd is embarking on a big expansion programme. The capacity of its caustic soda plant is to be increased from 30,000 tons 50,000 tons a year. This is estimated to cost about Rs. 1.5 crores. The Company has received the industrial and import licences from the Government. Orders for machinery have also been finalised with foreign manufacturers. The scheme is to be financed partly by increasing the share capital. The Company has sought the Government's permission to issue rights shares in the ratio of two new shares at par for every three held. This will bring Rs. 43 lakhs.

The management is also considering many new schemes. The Company has applied for an industrial licence for manufacturing P.V.C. by using chlorine. Reliable reports indicate that licence will be granted for setting up a plant with a capacity of 20 tons a day. The capital outlay for this project is estimated at Rs. 4.5 crores. Negotiations for collaboration with a French firm, it is said, have been completed. The Company has plans to manufacture trichlor ethylene and highest hypochlorite. The plant for trichlor ethylene will have a capacity of 15 tons a day and the capacity of the other plant will be 30 tons. These two projects are estimated to cost nearly Rs. 3 crores. It is not yet known whether all these projects will be undertaken by the Dhrangdhra Chemical Works itself or new companies will be formed for this purpose. But even if new companies are formed, Dhrangdhra Chemical will have a substantial interest in them. Its shareholders may be offered shares in the former on a firm basis.

The working results of the Dhrangdhra Chemical Works for the year ended March 1960 show an improvement over those for the previous year. The gross profit has risen from Rs. 7.6 lakhs to Rs. 40.67 lakhs, since sales increased from Rs. 1.54 crores to Rs. 1.69 crores. The turnover would have been even larger but for the heavy accumulation of caustic soda stocks during the year. The accumulation, it is said, is a sequel to the import of a substantial quantity of caustic soda by the State Trading Corporation. The stocks have, however, begun to decline during the past few months. In spite of the handsome increase in gross profit, the directors have been obliged to pass over the ordinary dividend. The dividend on the preference shares has been recommended on the lines proposed in the Preference Shares (Regulation of Dividends) Bill. The Company had paid an ordinary dividend of 4 percent, free of tax, in the previous year. The ordinary dividend has been passed over presumably in order to use the surplus for clearing some deferred payment liabilities and partly for increasing working capital because of the heavy accumulation of caustic soda stocks. The amount available for appropriations is Rs. 43.74 lakhs. Allocations include Rs. 23.06 lakhs for depreciation (against Rs. 9.36 lakhs), Rs. 10.11 lakhs for general reserve (against nil), Rs. 3.5 lakhs for contingencies (against nil) and Rs. 1.14 lakhs for managing agents' remuneration (against Rs. 8,356). The preference dividend absorbs Rs. 3.53 lakhs, leaving Rs. 2.40 lakhs to be carried forward. The fixed assets of the Company have risen from Rs. 4.03 crores to Rs. 4.25 crores and current assets from Rs. 1.04 crores to Rs. 1.81 crores.

Amalgamated Electricity Sells More

The Amalgamated Electricity Company realised Rs. 90.88 lakhs from the sale of energy during the year ended March 1960. This was Rs. 9.34 lakhs more than in the previous year. The gross profit, however, rose by only Rs. 1 lakh to Rs. 21.87 lakhs, because of the increase of Rs. 9.38 lakhs to Rs. 66.66 lakhs under the item of purchase, generation and distribution and sale of energy. Units of energy generated and purchased during the year increased from 49.3 million to 57.6 million. The directors say that the Company is trying to generate more at the various stations and is extending the transmission lines to meet the growing demand for electricity. Out of the two used sets purchased for Malegaon the year before last, one has been put into commission and the other is being erected. The two used sets of 570 b.h.p. ordered for Malegaon have been transferred and put into commission, one in Jalgaon and the other in Belgaum. Two sets of 1,550 b.h.p. each have been ordered from France to increase the plant capacity in Malegaon and Ajmer. The Company intends to increase further the plant capacity in Belgaum. An order for the solvent extraction plant has been placed with Extraction Cotima Desmet, Belgium. The industrial licence for setting up the plant has been received and the import licence for the foreign element is awaited.

After allocating Rs. 7.98 lakhs to depreciation, Rs. 67,475 to contingency reserve, Rs. 42,470 to tariffs and dividends control reserve, Rs. 33,873 to development reserve; Rs. 35,998 to wealth tax, Rs. 1,24,073 to income tax, Rs. 5,855 to tax relief reserve and making a few other adjustments, there remains a balance of Rs. 9.31 lakhs. With Rs. 15.95 lakhs brought in, the disposable surplus is Rs. 25.29 lakhs. Dividends absorb Rs. 9.6 lakhs, leaving Rs. 15.69 lakhs to be carried forward.

Trading Corporation for Paper

The Paper Traders Association of Bombay, it is understood, is considering a proposal to form an all-India trading corporation to act as the distributive agency for all varieties of imported paper except newsprint. Newsprint has been excluded because trade-sponsored organisations dealing in this item already exist in Bombay, Madras and Delhi. The Government, it is said, is favourably inclined towards the formation of such a corporation, and it is believed that the new body will come into being early next year. Only established importers will be allowed to become members, and they will participate in the profits in proportion to their share in its capital. It is understood that the corporation will be allowed to distribute about 75 percent of the country's imported paper, 40 percent of which will be passed on to the retail trade and the balance will be distributed by the corporation in any manner it likes.

World Bank Loan to I.C.I.C.I.

The World Bank has approved a loan equivalent to $20 million to the Industrial Credit and Investment Corporation of India. The loan is for a term of 10 years, which may be extended to 14 years by agreement between the Bank and the I.C.I.C.I. in the case of individual projects for which a longer

period is appropriate. Interest will be applied to each portion of the loan at the Bank's current rate when such portion is committed for one of the I.C.I.C.I.'s projects. Amortisation of the loan will begin on 1st November, 1963. The new loan is timely. The $20 million in foreign exchange given to the I.C.I.C.I. through the first two loans has been virtually exhausted. With the increasing tempo of industrial development and the marked improvement in the condition of the capital market, coupled with the difficult foreign exchange situation, demands for foreign exchange loans from the I.C.I.C.I. have been growing fast. The funds provided by the $10 million World Bank loan made in July 1959 have been committed more rapidly than was expected. The proceeds of the new $20 million loan should help the Corporation to meet the foreign exchange requirements of its borrowers for the next two years. Including the new loan and the $20 million lent earlier by the Bank, the Corporation's total resources amount to Rs. 42.1 crores. These resources include Rs. 5 crores of paid-up share capital, Rs. 17.5 crores of advances and credits from the Government of India and Rs. 50 lakhs of retained earnings. The first two World Bank loans have been allocated to 32 projects in a wide variety of undertakings. These projects on average may be expected to generate annual net foreign exchange savings at least as large as the amount of foreign exchange invested in them.

Lloyds: National and Grindlays

It has been announced that the terms for amalgamating the business carried on by Lloyds Bank Ltd through its branches in India, Pakistan and Burma, with the business carried by National and Grindlays Bank Ltd, have been settled. The amalgamation will take place on 1st January, 1961. There will be an issue of shares of National and Grindlays to Lloyds in consideration for the acquisition of the eastern branches, and simultaneously an enlargement of the interest of Lloyds in National and Grindlays by a subscription by it for further shares. It has since been agreed that Lloyds will make a transfer to National and Grindlays of reserves appropriate to the business of the eastern branches, thus increasing the value of the assets to be acquired and consequently increasing the number of shares of National and Grindlays to be issued therefor. Lloyds will make the reserve contribution mentioned above on 1st January, 1961, and the business and assets of the eastern branches will be transferred to National and Grindlays As consideration for the transfer, National and Grindlays will issue to Lloyds 1,520,700 shares of 15s each credited as fully paid up, and will assume responsibility for the liabilities of the eastern branches. The new shares will not participate in any dividend for the year ended December 1960.

In view of the relative values of the business of National and Grindlays and of the business to be acquired and taking all factors including profitability and volume of business into account, the directors are satisfied that the terms as agreed are fair and reasonable. The shares to be issued equal in amount the present unissued capital of National and Grindlays and when issued they will constitute just under 25 percent of its total issued capital. The directors are satisfied that the profits from the amalgamated business will be adequate to service the enlarged capital and to make appropriate contributions to reserves. The deposits of the eastern branches will represent nearly 25 percent of the deposits of the amalgamated business. It is desired that Lloyds interest in the territories where its eastern branches operate should be continued so as to preserve for the benefit of the amalgamated business the available connections and long established and strong ties created by Lloyds in these territories. This continued interest will be ensured by the shareholding Lloyds will have in National and Grindlays, and by the representation which it is proposed that Lloyds should have on the Board of Directors of National and Grindlays. The amalgamation and the close association with Lloyds will widen and strengthen the position of National and Grindlays and will give opportunities for further expansion.

Hooghly Jute Pays More

Reporting the results of the Hooghly Mills Co. Ltd for the year ended March 1960, the directors state that the modernisation of the preparing and spinning departments of the jute mill has been nearly completed. Of the loan of Rs. 24 lakhs sanctioned by the National Industrial Development Corporation, Rs. 10.28 lakhs has been drawn so far for buying equipment. Providing Rs. 1.81 lakhs (agaist Rs. 1.76 lakhs) for depreciation, the profit has amounted to Rs. 9.69 lakhs, compared with Rs. 9.43 lakhs in the previous year. A taxable ordinary dividend of 10 percent has been declared. It gives a yield of 5.8 percent at the present price of Rs. 17.25 a share, and is covered more than five times. The ordinary dividend was 6 percent, tax-free, in the previous year. Taxation is allocated Rs. 3.10 lakhs (against Rs. 4.85 lakhs), development rebate reserve Rs. 2.5 lakhs and general reserve Rs. 90,000. There is a carry-forward of Rs. 38,329, against Rs. 49,754 brought in. Gunny sales increased to Rs. 2.01 crores from Rs. 1.61 crores. Stocks rose from Rs. 6.31 lakhs to Rs. 8.03 lakhs.

Amalgamated Coal, Pench Valley

The reports of the Amalgamated Coalfields Ltd and the Pench Valley Coal Co. Ltd—both of which are under the managing agency of Shaw Wallace and Co. Ltd—for the year ended March 1960 are significant. They show how coal companies are using most of their profits for financing development and expansion. The capital expenditure of Amalgamated Coalfields during 1959-60 amounted to Rs. 14.71 lakhs. New property has been bought in order to offset the loss in output from the collieries which are likely to be exhausted soon. Production from the new property will begin at an early date Pench Valley Coal has incurred a capital expenditure of Rs. 8.86 lakhs. A new area is being developed for compensating the loss in production from the Barkui colliery.

The profit of Amalgamated Coalfields has declined from Rs. 16.11 lakhs to Rs. 4.66 lakhs, after providing Rs. 3.61 lakhs (against Rs. 3.23 lakhs) for depreciation. A taxable ordinary dividend of 10 percent has been declared. This offers a yield of 4.9 percent at the price of Rs. 20.25 a share and is covered more than one and a half times. The dividend was 15 percent, tax-free, in the previous year. Development rebate reserve is allocated Rs. 2.24 lakhs (against Rs. 1.08 lakhs) and general reserve Rs. 85,000 (against Rs. 3.5 lakhs). The carry-forward is Rs. 11,999, against Rs. 39,129 brought in. The working results have apparently been affected by the fall in production and despatches. Raisings declined from 946,564 tons to 900,348 tons and despatches from 938,545 tons to 905,752 tons. The falls were mainly due to the shortage of wagons and the delays in obtaining permits for depillaring. The directors say that these difficulties have now been overcome, so raisings and despatches are expected to improve during the current year. Amalgamated Coalfields offers fair growth prospects in view of the expansion which has been undertaken. The ordinary share capital of Rs. 25.5 lakhs is supported by reserves of more than Rs. 31.56 lakhs. Fixed assets are Rs. 43.43 lakhs and current assets are more than Rs. 58.77 lakhs.

Increasing depreciation from Rs. 2.29 lakhs to Rs. 3.25 lakhs, the profit of Pench Valley Coal has fallen from Rs. 6.96 lakhs to Rs. 4.16 lakhs and a taxable ordinary dividend of 10 percent has been declared. At the present price of Rs. 20.62 a share, the yield works out to 4.8 percent and the dividend is covered more than twice. The ordinary dividend was 10 percent, tax-free, in the previous year. Taxation is allocated Rs. 2.11 lakhs (against Rs. 4.34 lakhs), development rebate reserve Rs. 1.09 lakhs (against Rs. 1.35 lakhs) and general reserve Rs. 75,000 (against Rs. 2 lakhs). There is a carry-forward of Rs. 14,547, compared with Rs. 32,685 brought in. The raisings of Pench Valley Coal declined to 496,108 tons from 500,161 tons and despatches to 497,427 tons from 503,180 tons mainly because of the inadequate supply of wagons. But they have shown considerable improvement until the end of August this year, and the directors hope that the trend will be maintained.

Anglo-India Jute Diversifies

The report of the Anglo-India Jute Mills Co. Ltd for the year ended March 1960 shows that the Company's activities are being diversified. Isaac Holdens (India) Ltd has taken over a portion of the Jagat Dal mill for building a wool combing plant. Anglo-India Jute has been allocated 123,345 shares of Rs. 10 each in the new Company in return for handing over the Jagat Dal mill property. As more capital is required for achieving the full production capacity of Isaac Holdens (India) Ltd, Anglo-India Jute has agreed to subscribe to a further 86,516 ordinary shares of Rs. 10 each in the new Company by paying cash. The directors think this investment will prove remunerative.

As for Anglo-India Jute, the modernisation of the preparatory and spinning sections of the middle mill has been completed. The modernisation of the winding and beaming machinery of the lower mill has begun. Orders for similar modern machinery for the middle mill will be placed as soon as the import licence has been obtained. The sale of most of the upper mill property has been completed. The Company's trading profit has increased from Rs. 38.19 lakhs to Rs. 47.04 lakhs. A taxable ordinary dividend of 20 percent has been paid. This offers a yield of 10 percent at the price of Rs. 201 a share and absorbs Rs. 9.84 lakhs. Depreciation is allocated Rs. 10 lakhs (against Rs. 12 lakhs), taxation Rs. 20.90 lakhs (against Rs. 16.88 lakhs), contingency reserve Rs. 1.20 lakhs, development rebate reserve Rs. 6.60 lakhs (against Rs. 40,000) and investment reserve Rs. 5 lakhs (against Rs. 3 lakhs). The carry-forward is Rs. 226,168 against Rs. 215,974 brought in. A profit of Rs. 21.15 lakhs has also been made by selling fixed assets. Landale and Clark Ltd, a subsidiary, has had a profitable year of trading. Sales of Anglo-India Jute increased to Rs. 6.45 crores from Rs. 6.29 crores. Gunny stocks rose to Rs. 35.11 lakhs from Rs. 30.71 lakhs.

Brooke Bond Estates Earns Less

The profit of Brooke Bond Estates India Ltd has declined from Rs. 15.84 lakhs to Rs. 15.02 lakhs for the year ended June 1950. The crop has fallen from 3.20 million lbs to 3.10 million lbs due to the drought. But the directors state that there has been no lasting damage to the property, and all areas are recovering satisfactorily. Nevertheless, the effects of the drought will also be reflected in the 1960-61 crop. The average sale price declined from Rs 2.29 to Rs. 2.27 a lb because the prices of the better grades declined. The loss has been partly offset by an increase in the prices of poor grades. The taxable ordinary dividend of 15 percent absorbs Rs. 5.25 lakhs. It offers a yield of 8.7 percent at a price of Rs. 17.25 a share. The dividend was 12½ percent, tax-free, in the past year. Taxation is allocated Rs. 7.15 lakhs (against Rs. 9.03 lakhs) and general reserve Rs. 2 lakhs. The carry-forward is Rs. 2,53,984, compared with Rs. 4,40,470 brought in.

Forward Trading in Bullion

Forward trading in bullion in Bombay, which had hitherto been conducted under the supervision of the State Government, will now come under the direct control of the Forward Markets Commission. The Central Government has decided to apply the Forward Contracts (Regulation) Act, 1952, to gold and silver in the area of Greater Bombay, and it has granted recognition to the Bombay Bullion Association Ltd to conduct forward trading in gold and silver for a period of three years. The position of future trading in the rest of the country remains unchanged. In its report on the recognition of associations for forward trading in gold and silver submitted to the Government in May 1957, the Forward Markets Commission had recommended that: (1) Sections 15 and 18 (3) of the Forward Contracts (Regulation) Act, 1952, may be applied immediately to gold and silver throughout the country, except in the cities of Jaipur, Delhi and Calcutta, where these Sections might be made applicable a few months later to enable the existing associations to reconstitute themselves; (2) futures markets for gold and silver may be established in Bombay and Delhi, and for only silver in Jaipur and Calcutta; and (3) formal recognition may be granted under Section 6 of the Forward Contracts (Regulation) Act, 1952, to the Bombay Bullion Association for gold and silver. After examining the recommendations, the Central Government decided in February 1958 that the *status quo* should continue for the time being. This gave the impression that it did not share the Commission's views on the usefulness of futures trading in bullion. The Government's latest decision should dispel the impression.

Serious doubts have often been expressed about the need for futures dealings in bullion, considering that there is no major internal source of supply and private imports are banned. The Forward Markets Commission, which examined the question of regulating forward trading in bullion in 1956, expressed the view that it is not the internal production of a commodity but the volume of marketable stocks that is really important for the successful functioning of a futures market. In view of the non-perishable nature of gold and silver, they could be offered for purchase and sale from the same stocks over and over again. The argument was that the trade must have proper hedging facilities if it is to satisfy the needs of the millions who somehow have a marked preference for investment in bullion. The Commission also pointed out that it is administratively impossible to enforce a ban on futures trading and that the closure of the forward markets would lead to unemployment and to considerable loss in revenue from stamp duty. It, however, conceded that the case for bullion was not as strong as that for agricultural commodities. It also stated in its report that with the spread of literacy and the rise in the standard of education, the psychological, religious and social factors behind the preference for investment in bullion would automatically decline in importance, and the need for futures trading would disappear.

Opinion differs sharply on the usefulness of a futures market in bullion. But if forward trading is to continue, the need for bringing it under the control of the Forward Markets Commission will be readily conceded. The Commission will have to deal with a very difficult market. Its own report mentions at length the six crises in the Bombay Bullion Association between 1949 and 1955. In view of the small volume of floating stocks, the bullion market is working all the time under abnormal circumstances. The all-India stocks are estimated at around 80,000 tolas of gold and 3,500 silver bars of 2,800 tolas each. Even at the present high prices, they are worth only about Rs. 3.25 crores. It is worth noting that the 20,000 bars of silver imported between May 1956 and April 1957 were absorbed at rising prices, indicating the huge absorptive capacity of the Indian market. In 1952-53, gold and silver were available at around Rs. 75 a tola and Rs. 142 a 100 tolas, respectively. In May this year, gold was bid up to Rs. 138.69 and silver to Rs. 231.25. Prices are only slightly lower now. There is no relationship between the cost of production and the prices of gold and silver in India. In the absence of any norm for determining prices, it will be difficult for the Forward Markets Commission to tell the market when values have risen far too high. Now that the Bombay Bullion Association has been brought under the control of the Commission, the Association will have to amend the by-laws so as to conform to the pattern set by the Commission. Perhaps the emergency by-laws will be tightened appreciably to enforce discipline on the market. The prospects for the smooth functioning of the futures market will worsen with the steady deterioration in the supply position.

Radio Lamp Profit Up

The report of the Radio Lamp Works Ltd (now known as Bajaj Electricals Ltd) for the year ended March 1960 is encouraging. Sales have increased by about 22 percent, from Rs. 1.75 crores to Rs. 2.12 crores, and the gross profit at Rs. 8.88 lakhs is up by nearly 76 percent. The directors have expressed the hope that sales of lamps and fluorescent tubes will show a marked improvement in future years. Sales of transformers did not increase noticeably, but are gradually rising now. The demand for scientific and electrical instruments is increasing rapidly. The Company has obtained two manufacturing licences for expanding the production of instruments. The agency agreement for the sale of fans is due to expire on 31st December, 1960. The question of increasing the commission has still not been settled. Depreciation is allocated Rs. 1.18 lakhs (against Rs. 1.02 lakhs), taxes Rs. 3.15 lakhs (against Rs. 1.85 lakhs), general reserve Rs. 75,000 (against nil) and development rebate reserve Rs. 25,000 (against Rs. 40,000). Dividends absorb Rs. 3,18,910 (against Rs. 1,61,910), and Rs 6,664 has been carried forward, against Rs. 14,470 brought in. The Company has increased the preference dividend so that shareholders may receive the same net 5 percent. The gross dividend of Rs. 8.10 an old ordinary share compares favourably with Rs. 5, tax-free, in the previous year.

Plastics Exports Rising

Exports of plastics and linoleums from India have been rising steadily under the influence of export incentives and the efforts of the Export Promotion Council. From a mere Rs. 7.5 lakhs in 1955-56, exports in 1959-60 increased to Rs. 74 lakhs. The figure for the first half of this year comes to Rs. 35.39 lakhs. This is Rs. 8.18 lakhs more than in January-June 1959. India's plastics goods are now going even to advanced countries like the U.S.A., Canada, Switzerland and the U.K. Linoleum exports have also made progress and New Zealand, Yugoslavia and Burma have been mentioned as the main buyers. The Plastics and Linoleums Export Promotion Council has suggested evolving a scheme for importing equipment to modernise certain lines of the industry which have a good export potential. Reliable reports say that the Government is willing to consider liberal imports of machinery, moulds and dies if the industry is prepared to guarantee that the foreign exchange now spent on these imports will be recouped through additional exports within a reasonable period of time. The Council has been asked to submit definite proposals.

Dieselisation of Railways

The Government of India's decision to set up a diesel locomotive shop in the public sector has coincided with the announcement of Mr. Shah Nawaz Khan, Central Deputy Minister for Railways, that the railway line from Moghalsarai to Saharanpur, both in Uttar Pradesh, will be undertaken after electrification of the lines around Calcutta is completed. It will be recalled that the expert committee on coal consumption had recommended that by 1975 not more than 50 percent of railway transport should be propelled by steam-power, and that a target of 30-percent electrification and 20-percent dieselisation should be aimed at. Diesel locomotives have already been introduced in the Asansol-Rourkela, Barkakhana-Daulatganj and Gaya-Moghalsarai sections, but these are expected to be withdrawn as soon as the sections concerned are electrified. The progress of electrification, it would appear, has been slowed down by the power shortage. The prospect for dieselisation does not seem to be bright either because of the shortage of diesel oil, not to mention the difficulties in importing diesel engines until India becomes self-sufficient in their indigenous manufacture.

Both electrification and dieselisation have been conceived of as the answer to the shortage of high-grade coal. It is recognised that electrification—apart from easing the pressure on India's coal reserves—will release considerable transport capacity as coal itself will not need to be transported. Many other operational costs could also be cut down, leading to appreciable economies. But the main problem is the availability of power in the required quantities. Most of the big hydro-electric projects completed or nearing completion are not expected to have much surplus left. This is true of the Rihand dam in U.P. and the Bhakra project in Punjab, where the high voltage transmission lines for carrying power to Delhi and Rajasthan have become superfluous with the decision to set up the fertiliser and heavy water plants in Bhakra itself. As for dieselisation, it has been an outstanding success in the U.S.A. primarily because of the availability of huge quantities of cheap diesel oil there. America owns nearly 80 percent of the world's diesel locomotives, but in India, where diesel oil has to be imported, dieselisation may conceivably lead to a rise in costs, besides presenting other difficulties. Even if the implementation of all the refinery programmes does not lead to any hitch, there will be a huge deficit at the end of the third plan period. It is to counteract this that the draft outline has proposed the use of mixed fuels to reduce the demand for high-speed diesel oil.

Earthmoving Equipment Spare Imports

At the annual general meeting of the Tractor Earthmoving and Construction Equipment Distributors Association, held last week, Mr. A. R. P. Ramsay, chairman, discussing some of the current problems of the trade said that the kind of machinery in which it dealt was not getting the priority it deserved in the matter of foreign exchange allocation. Consequently, it was difficult to import essential spares to keep the equipment in operating condition. The value of the equipment population in India today was estimated at Rs. 170 crores; against this, licences for spare parts were being issued annually to the extent of a little over Rs. 2 crores. As 8 percent of the value of the machine population is the minimum requirement for spare parts, a little more than half of the equipment is working, or working efficiently, at this time, Mr. Ramsay said. The import policy as it applies to spare parts for this kind of equipment "still shows obvious influence from, and confusion with, the automotive industry," because some of the parts used have the same nomenclature as those of motor-vehicles. Moreover, the ancillary industries which have been set up to produce motor-vehicle spares do not like to meet the needs of the construction and earthmoving equipment industry, because the latter's demand is too small to make their production economically worth while.

Customs interpretation of imported spares for purposes of duty also created difficulties. Much of the earthmoving and construction equipment which came into India was mounted on pneumatic tyres, and the revenue authorities construed this to mean that "this kind of machinery is adaptable for use on roads." So they wanted to levy an excise duty of 12½ percent applicable to all mechanically propelled vehicles adapted for use on roads. The equipment is expressly designed for off-the-road service, and an imposition of such a heavy duty could only discourage its use, Mr. Ramsay said. The distributors in India wanted to resell old and obsolete equipment to their principals overseas for the purpose of importing new current parts, but the Government has refused to give the permission. "The alternative is if the Government does not approve this scheme, these obsolete parts will deteriorate to the point where they will be sold as scrap."

Mixed Trends in Rayon Exports

The rayon export statistics since the beginning of this year make interesting reading. The year started with a fairly good offtake in January, but suffered a sizable setback in the following month. Exports recovered in March, however, and in April touched the highest so far during the year when offtake reached 4,673,623 yards valued at Rs. 51,10,763. In May, again, there was another setback, when India sold just about Rs. 30-lakh worth of rayon goods to overseas markets. During the following two months exports recovered considerably, to nearly Rs. 40 lakhs. There was, however, no cause for optimism since in August they fell again, and managed to touch the Rs. 27-lakh mark. The experience has been that during the last quarter of every year exports generally pick up in view of the Diwali and Christmas festivals, and it can be safely expected that the erratic movement in the export curve will stop and a significant rise will set in. The upward trend has already started in the beginning of September when exports totalled 3,528,440 yards valued at Rs. 32,36,630, compared with 2,658,326 yards costing Rs. 26,73,127 during the previous month.

Apart from the increase in performance, it can be seen from the figures for September that the Indian manufacturers have realised the need for selling their rayon goods abroad at competitive prices. This is, indeed, a good trend. However, there are still reports from foreign markets that the packing of goods has not improved. There have been complaints from the overseas importers that Indian manufacturers and exporters do not conform to the samples they send in advance, and orders for which material have been placed. If this practice is not stopped, it is felt that offtake of Indian rayon goods will steadily decline. Indian manufacturers and exporters would do well to realise the fact that they can get business only when they satisfy their customers. The overall total of exports from January to September amounted to Rs. 3,09,03,041. Ceylon was the biggest buyer and accounted for Rs. 7,26,693-worth of the fabric, followed by Singapore buying material costing Rs. 6,93,823. Other markets which imported sizable quantities of Indian material (with values of offtake in brackets) were: Malaya (Rs. 3,65,730); Iran (Rs. 2,94,964); Afghanistan (Rs. 2,39,315); Sudan (Rs. 1,11,943); Aden (Rs. 1,06,909) Mauritius (Rs. 98,846); Kuwait (Rs. 71,505); Tanganyika (Rs. 70,766); Saudi Arabia (Rs. 51,210); Bahrein (Rs. 47,298); Burma (Rs. 46,980) and Iraq (Rs. 42,672).

Increasing Raw Jute Output

Speaking at the annual general meeting of the Gunny Trades Association, held last week in Calcutta, Dr. B. P. Kedia, president, said that the cause of the present abnormally high jute goods prices lay chiefly in the fact that a serious fibre shortage is expected in both India and Pakistan during the current season. It was, therefore, essential that energetic steps be taken to increase fibre supplies to the industry from domestic as well as outside sources. This country was able to achieve near self-sufficiency in the 1958-59 season by producing 6.65 million bales of raw jute due to the efforts made by the Indian Central Jute Committee, and the Central and State Governments. But this should not generate a sense of complacency. Some 19 percent of the total production capacity of the industry is lying idle, when the demand for jute products, both at home and abroad, has been increasing. Idle capacity also adds to costs and has caused much unemployment. In Dr. Kedia's opinion, the target of production (including mesta) for the third plan should be 8 million bales.

The increase in output should be achieved by aiming not so much at an expansion of acreage as at an improvement of acre yield. The yield in this country, compared with those in Pakistan and China, is low; the highest to have been achieved in the post-partition period was 2.85 bales. The corresponding figures in Pakistan and China are four bales and five bales, respectively. The results achieved so far from the experiments at research centres in India had shown that with the help of improved methods of cultivation and

HINDUSTHAN MERCANTILE BANK LTD.

Paid up	..	Rs. 50 lakhs

Interest allowed on Savings Bank Account at 3 per cent per annum.

All types of Banking business transacted. Branches and Agencies throughout India. Loans granted on approved securities. Terms on application.

V. V. Chellam,
Chief Accountant.

by supplying better seeds and fertilisers to growers, it would, he said, be possible to get, on an average, nearer four bales of jute from one acre. The qualitative aspect is equally important. The general texture, appearance and finish of manufactures depend chiefly on the quality of the raw materials used. India is still deficit in high-grade and better coloured jute, but this can be made up by improved retting techniques. Steps also need to be taken against excessive price fluctuations in fibre prices in the interest of the industry as well as of the grower himself. A plan should be devised by which a uniform supply of fibre can be ensured: when there is a bumper crop, the surplus, if any, should be put into a buffer stock, and in the contrary event, stocks could be brought out. It was encouraging to learn, Dr. Kedia said, that with a view to giving support to fibre prices, the Indian Jute Mills Association "has already prepared a scheme for maintaining a buffer stock in the event of abundant supply." Efforts should also be made to guarantee minimum prices for raw jute at such levels as might give a fair return to cultivators so that they might grow more jute, he added.

Referring to export prospects, Dr. Kedia said that although 1959 was a particularly good year from this point of view, during the current year, Indian jute goods exports, particularly those of sacking, had not been able to keep pace with the rise in overseas demand. This is largely because of competition from Pakistan. The offtake by South American countries also shows a declining trend, and the restrictions imposed on Indian jute fabrics by the U.K. Jute Control and the Common Market countries are other adverse factors. India must take up this question at the next meeting of G.A.T.T. In the meanwhile, a reasonable measure of price stability for jute goods has to be ensured if the markets are to be maintained.

Heavy Industries for U.P.

The Chief Minister of U.P., Dr. Sampurnanand, has made a dramatic offer to invest in the proposed small-car factory provided the Central Government decides to locate it in the State. He could not have been in any doubt about the Centre's reply because the draft of the State's third plan candidly says: "Central projects and investments by private individuals are based on economic calculations with a view to minimising costs. Costs are bound to be lower in areas where transport and communications are developed and power is available. Hence, other things being equal, location of both Central projects and private investments is to a large extent determined by investments made in social overheads." The logic of this line of thinking may be that as time passes, initial backwardness is perpetuated and intensified because the external economies in developed States increases the gap in comparitive costs of projects in relatively backward areas.

The report of the U.P. Heavy Industries Planning Committee, a summary of which has recently been released, represents an attempt to break through this vicious circle by recommending investments in various social and industrial overheads over a period of 15 years. It has recommended the setting up of a Heavy Industries Corporation to implement the various industrial projects in the public sector. A Mineral Development Corporation has also been proposed. The Committee says that techno-economic survey of suitable areas for industrial development should be undertaken on a continuing basis. Effective steps should be taken for speedy allocation of power. A nuclear power-station should be established in the State during the fourth plan period to meet the growing requirements of U.P. as well as Delhi. The U.P. Financial Corporation should be reinforced with additional resources to advance loans of up to Rs. 10 crores to industry. The State Government should float loans to the extent of Rs. 15 crores and advance the amount to the private sector, and the Government should also provide bank guarantees for Rs. 20 crores. The railways should increase their capacity to transport an extra load of 15 million to 17 million tons as a result of increased activity during the third plan period.

Four rail links, namely, Pipri to Naunagarh, Jeonathur to Bechepur, Dhakpathar to Dehra Dun and the metre-gauge line in Naini should be built. An Industrial Research Commission should be constituted, and the existing resources of the Harcourt Butler Technological Institute should be under for industrial research. A full-fledged design-cum-research centre should be set up for engineering industries where prototypes of tools and instruments could be designed and produced on a pilot plant scale. For technical know-how, post-graduate courses of industrial importance should be sanctioned in the principal universities. The large and medium-scale industries recommended by the Committee are pulp and paper, ceramics, plastics, heavy chemicals, fertilisers, fine chemicals, pharmaceuticals, oils, foods, mechanical engineering, leather, cement, sugar, textiles, etcetera.

Developing Industries in Kerala

The Kerala Government issued a statement of policy in June 1960 concerning the development of industries in the State. It showed a keen awareness on the part expected of the Government, of the industrial backwardness of the State, and of the need for a peaceful industrial climate as the pre-condition for accelerated industrial activity. Speaking at the annual general meeting of the Cochin Chamber of Commerce held in Cochin on Friday, Mr. T. A. K. Nair, president, said that the absence of a proper climate in the past—mainly resulting from labour indiscipline—had been one of the major factors deterring private entrepreneurs from choosing Kerala for setting up large-scale industries, although natural advantages in the State are attractive. "Unless and until the supreme importance of discipline and of increased productivity is realised by labour and respected in practice, the future of this underdeveloped and overpopulated State will remain bleak indeed," the president said. Meanwhile, the Government has not shown much evidence that it is anxious to create the proper climate for increasing the flow of private foreign capital. The impediment to the flow of foreign capital, Mr. Nair said, stems from certain disabilities which foreign corporate bodies have to face. The manner in which the provisions of Section 42 of the Income Tax Act are being interpreted is proving detrimental to foreign concerns which would otherwise be keen on investing capital in India. As far as these companies are concerned, the Government should make it clear that it is not attempting to assess profits which do not arise in India. The president referred to Proviso XIV(a) to Section 4 which takes away "the inducement to foreign technicians to stay any longer than the period to which the reliefs given under the proviso are applicable."

The Chamber, Mr. Nair said, has had occasion to discuss with the Central Minister for Revenue and Civil Expenditure the question of replacing sales tax by excise duty. It was informed that all the States had agreed to the proposal in principle, but that the Government had not been able to arrive at a final decision because of the divergence of opinions among the States on the question whether the proceeds of the excise duty should be distributed on a population or consumption basis. The third Finance Commission, the Chamber was told, will consider the matter and arrive at an agreed formula for distribution. Referring to the tax burden in Kerala, Mr. Nair said that in spite of protests by trade associations in the State, the Government has doubled the surcharge on sales tax. He added that the levy of 5-percent surcharge on sales tax—coupled with the introduction of single-point taxation on certain commodities at 5 percent or 6 percent, as the case may be—would be a serious blow to several members of the Chamber, especially in view of the provision contained in the Kerala Surcharge on Taxes Act, 1957, that no dealer will be entitled to collect the surcharge. Besides, the introduction of an additional levy at the rate of Rs. 8 a yielding acre—in addition to the basic tax of Rs. 2 an acre—is a serious blow to plantations in the State, which will have its adverse effects on several members of the Chamber, the president said.

Small Industries in Madras

The recent conducted visit of a team of small industrialists from Mysore to Madras city has indicated that the industrial estate in Madras has helped improve prospects for small-scale enterprises there. The exhibition of U.S. tools last year created much interest among small entrepreneurs in improved equipment. The Institute has surveyed many districts and ascertained possibilities for starting small-scale industries. Meanwhile, technical assistance has been offered by official experts. The fruit processing industry, which manufactures squashes and soft drinks, has been developed through Government assistance. The sale of bicycle pedals made of compressed rubber by a small unit located in Guindy to a major bicycle factory shows how small industries can serve as feeders to big factories or act as sub-contractors producing goods to the specifications of big manufacturers. The diversity of industrial units in Guindy ranging from factories making electrical accessories to toys indicates that small industries can be rapidly developed with official assistance.

European Integration and Cotton Industry

Policies which might form a basis for integration of the cotton industry throughout Europe are being considered by the Committee for European Affairs of the International Federation of Cotton and Allied Textile Industries. At its recent annual meeting in Amsterdam, Herr Rudolf Seidl, chairman, referred to the damaging effect on exports of the European textile industry as a result of the present division of western Europe into two separate integrated areas. In his view, the most important task in any effort to avoid damage is to secure co-ordination of the relevant commercial policies of European countries in their relations with the rest of the world, and in particular with the newly developing countries which badly need export outlets for their cotton goods. An essential first step is to revise the rules on area origin for tariff purposes as stipulated by the E.F.T.A. convention. These are totally inadequate and have left the spinning section in jeopardy. Reasonable limits must be imposed on imports from countries with entirely different economic and social structures, State-controlled economies, or multiple exchange rates. One of the main obstacles to European integration is the problem of Customs tariffs against third countries. For textiles, it will be advisable to harmonise the Customs tariffs of E.F.T.A. countries with the common "outside" tariff of the E.E.C. This might also solve the technical problem of the rules of origin, which will then become obsolete. Discussions will no doubt continue on all aspects of the problem and it may be that a basis will be found for co-operation in some directions. At the moment, however, it appears that the U.K. Government's adherence to the Montreal Declaration must preclude the possibility of any common limitation of imports from Asian countries severe enough to satisfy every European country's desire for pretection.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations to the 1960 Fund.

Rs. 250 each
Gestetner Duplicators Private Ltd., J.B.

Rs 50 each
K. B. Mathur, K. U. Matthew, D. L. Winckler, K. C. Gale.

Rs. 45

Rs. 5 each
K.K.S., J.C.P., V. G. Pai.

Rs. 3 each
R. W. Steed, K. Latifi, A. K. Luthra, H. K. Singh.

The Fund now totals Rs. 1,263.05 including a carry-forward of Rs. 385.05.

BUILDING RAGULATIONS

OUR readers will remember that at a meeting held at the Bengal Chamber of Commerce on 24th September, the Lieutenant-Governor stated that he had arranged that the building provisions of the new Municipal Act should remain in abeyance in the case of the rebuilding of houses and huts which have been damaged by the late floods. As we said at the time, we have every sympathy with the kindly feeling, which induced the Lieutenant-Governor to take this step; but all the same we are persuaded that it was an ill-advised one. If advantage be not taken of calamities of this kind to improve the city of Calcutta, when, may we ask, will anything be done in this direction? Thus, for instance, if a fire were to burn down the whole of Burra-bazaar, does anyone suggest that it should be built up again exactly as it is at present. The proposition has only to be stated. Now, section 363 of the new Municipal Act enacts: "After the commencement of this Act, no piece of land shall be used as a site for the erection of a building, and no building shall be erected or re-erected, otherwise than in accordance with the provisions of this chapter and Schedule XVII, and any orders, rules or bye-laws made under this Act, relating to the use of building sites or the erection or re-erection of buildings, as the case may be." We should ask, how the Lieutenant-Governor proposes to legally carry out his resoultion, and if he cannot do it legally, are we to understand, that the Government of Bengal are above the laws which they so deliberately enact?

A Ditcher's Diary

RECENTLY I READ SOMEWHERE THAT OUT OF 140 countries in the world only 44 have full freedom of the Press; and these latter include the U.K., the U.S.A., Japan, Hongkong and the Philippines. India was not included in the incomplete list I saw, although the Press here is in some ways remarkably free. If some individual newspapers here are not, the fault is often the papers' rather than the Government's. But I am far from sure that this reputation for one of the most fundamental freedoms of civilised societies will long be India's, now that Punjab and Assam have been allowed to pass laws of which some avowedly authoritarian countries would perhaps be ashamed. Nobody will believe that these constrictions imposed on the Press are not in some way connected with the grave allegations recently made against the administration in these two States; and it is always a government with something to hide that wants to suppress newspapers. (The mildly amusing epigram of a Calcutta business man that he did not want to own or publish a newspaper because he had nothing to conceal, not even his income, was in part facetious.) That newspapers sometimes play up popular passions—no more rational today than in ancient Greece, but far more fatal in consequence—I will not deny. Those who rejoice over the increasing influence of what are called language newspapers hardly realise what it means in terms of provincialism, for a provincial language paper cares only for its own clientele and is under no compulsion, except moral, which is so easy to forget, to bear in mind the all-India position. The Government of India appears to take the view that as long as "the dirty work", as the *Statesman* put it, is done by State Governments, its own reputation for liberalism is safe. But it is not, as I hope the International Press Institute will take an early opportunity of reminding Mr. Nehru. It is the President's duty to uphold the Constitution; and the Assam and Punjab Acts are demonstrably against the spirit of that document. Or, am I old-fashioned in thinking that the Constitution is above the short-term interests of the Congress Party in Assam and Punjab?

AS AN ADMIRER OF THE PRIVATE-ENTERPRISE initiative behind those carefully tended gardens on the traffic roundabouts at the northern end of the Red Road, it has always puzzled me why, on most evenings when I pass that way, they should be covered with people squatting and talking in groups. They have no right there in the first place of course; the surrounding railings are obviously put there to keep them out and avoid the damage they do; this is something the police might look into, heaven knows they are no help to the traffic at that point. But this fact apart, why, I often ask myself, must these intruders choose railed-off, well-cared-for garden plots to hold their conversations when they have the whole, wide, unobstructed Maidan for the purpose? It is not lighter there, except for what must be the irritating to and fro of car headlights. It is no safer; a lorry could run amok among them at any time. It is not drier; so far as I can see those plots must be watered every day to keep them so fresh. There is not even the advantage of silence; the din of the surrounding motor-vehicles must make conversation extremely difficult. I even doubt if it can be pleasanter, because the exhaust fumes at that time of day are choking. Why then go there? The more I puzzle over the problem the more I am inclined to see the answer in an explanation I once heard from a former editor of *Capital* when asked why, of all the continental countries, Indians seem to prefer Switzerland for their holidays. His reply was: "Because it is so completely different from everything they are used to". And so it is. Switzerland is small, cool, well-ordered and immaculately clean: India is huge, hot, chaotic and in places regrettably filthy. To the Indian visitor, Switzerland must be an island of peaceful tranquility in an ocean of troubles and frenzy. The same is true, it seems to me with these roundabouts at the end of the Red Road; for a few minutes at the end of the day they answer the unconscious need in the Bengali soul to escape the squalid and disorganised jungle it normally lives in. It would be ungenerous to grudge such cheap consolation. But for the sake of the gardens, though, it is a pity the same satisfactions cannot be obtained elsewhere.

MANY OF MY READERS MUST HAVE SEEN A PAIR OF American dancers who toured India a few years ago, where they were billed in nightclubs and hotels as "Julia and Nicolas Darvas, The Greatest Dance Act in Decades". More interesting than their terpsichorean abilities is the fact that while Darvas was moving around India he was in the process of becoming a multi-millionaire on Wall Street. He has now acquired another small fortune by showing how he did it, in a book that has found 125,000 readers and become number two in the non-fiction best-seller list. This second success is not surprising because the book is called *How I Made $2,000,000 in the Stock Market*, and its price, $4.95, is tax-deductible for American investors. Eight years ago Darvas, who is Hungarian by origin, could barely speak English and did not know that Wall Street existed. He made his pile very quickly and claims to have discovered, in doing so, a new investment system which he calls, for he has now learned to speak fluent American, the "techno-fundamentalist theory". As with most amateurs who combine intelligence, luck and daring, what he has "discovered" are things that have been known to market analysts under different names for years. Darvas has something that no one will acquire just by reading his book, namely, the courage of the born gambler; but unlike other gamblers he had the curiosity to work out, after the event, why some of his strokes came off and others did not. By the time he had acquired half a million, these post mortem researches had given him his "system" which he claims to have used in amassing the other $1½ million. Personally, I would rather have the half-million than the system, as a basis on which to build a fortune. Yet there is one sound point, at least, in Darvas's book (I am afraid my stockbroker friends are not going to like what follows), and it has to do with the fact that he started to make his fortune while in India—*i.e.*, about as far away as you can get from Wall Street. Darvas began his speculative career by relying on brokers and subscribing to every advisory service he could get. Result: he lost most of his savings. He then had to come on tour over here, and was forced to rely on a good weekly financial paper, his own wits and the cable service. He made a lot of money. Arriving back in New York feeling like a Napoleon of high finance, he began haunting brokers' offices, seeking out "inside dope", picking up tips and gossip, and buying and selling shares with both hands. Result: near bankruptcy. So he decided to recreate his Indian situation by locking himself in a New York hotel room, forbidding brokers to ring him up, and relying again on his financial weekly. Then came the $2 million. So there, if you want to make a killing in the stock market, what you need is a subscription to *Capital*, a supply of graph paper, two sharp pencils (one red to plot price movements, one blue to plot volume changes) and a quiet room in Frazergunge.

I AM WELL ABLE TO HOLD MY BREATH UNTIL THE result of the U.S. Presidential election is officially announced next week; and I see little point in speculating on the subject. Like most outsiders, I have watched the campaign with interest mixed with mirth, disgust, anxiety and a dozen other emotions. I do not know what the Americans may think of it, but as the campaign progressed I began to be sceptical about an earlier notion that it does not matter who is elected—they are both the same. I do not now think they are, although everything I have read doubtless contained rather more than a pinch of propaganda. I am inclined to believe Mr. Walter Lippmann that Mr. Kennedy showed a remarkable grasp of detail in his television appearances while Mr. Nixon relied on popular emotions. But I am not foolish enough to ignore that emotions are a material political factor, especially in an election with a majority of feminine voters, "good looks" may be as decisive as good policies. Nor do I think it likely that the average American voter will worry overmuch about the international implications of his or her vote. Even American commentators are not their usual cocksure selves when it comes to the influence Mr. Kennedy's religion may exert on the electorate. If it is true, and it may be wide of the mark, that at the moment Mr. Kennedy is a little ahead of Mr. Nixon, I would not put it past the Republicans to produce something in the nature of a Zinoviev letter at the last minute, although, as this diary goes to press, it looks as if the Democrats may have beaten them to it. If I have already betrayed a slight bias for the Democratic candidate, I do not think I am totally unrepresentative in this respect—so far as the world outside is concerned. Although the Eisenhower administration, for all its paralysis, was not in practice out-and-out Republican, the Party is the source of much suspicion; and Mr. Nixon's personal political record is not exactly flawless. Democratic politics are not always clean either; but the Party has somehow retained a modicum of interest in ideas as distinct from things. Although some "eggheads" can be disastrous in politics, I think it is better that Mr. Kennedy—unlike Cæsar—has men around him who think. If, in spite of this, Mr. Nixon wins, I am sure I will have many occasions to tell him how to be a better President than at this point he looks like being. Nor do I believe that Mr. Kennedy as President will never provide me with a subject for a critical paragraph in this diary.

IRREGULAR TREND IN LONDON STOCK MARKET

GILT-EDGED WEAKER IN SPITE OF BANK RATE CUT

London, 2nd November.

THE big event in London during the past week was the cut in the British Bank rate from 6 percent to 5½ percent. However, the move had been anticipated to such an extent that it had very little effect on the stock market; in fact, gilt-edged securities have been inclined lower ever since the announcement. The Chancellor of the Exchequer's emphatic warning that this does not indicate any change in the Government policy concerning the credit squeeze was a considerable restraining influence and dampened speculators' enthusiasm. However, it is now thought in some quarters that a further cut in Bank rate cannot be far ahead and this view is encouraged by the fact that there appears to be no withdrawal of the hot money which has been coming to London. Indeed, sterling has held very steady and the monthly gold figures which are to be published shortly are awaited with considerable interest. The foreign bonds market has provided little of interest, but in rails, Antofagasta stocks went ahead in response to the surprise dividend payments, particularly the resumption of dividends on the ordinary. Dollar stocks have followed Wall Street where pre-election unsettled conditions have been experienced. There has been no lack of good company news and there will be some important announcements soon from certain of the larger companies including Courtaulds, Tube Investments and Guest Keen. This has prompted a selective demand and some useful gains have been established. There has been a keen demand for property shares and both City Centre and City and Central Investments (who are to merge) with large United States projects on hand have been prominent. Stores also attracted a good deal of attention. With the London gold market now back to normal conditions and the price well below the dizzy height reached in the recent upheaval, gold shares have gradually drifted back, although not without bursts of strength, one of which reflected week-end comment, and favoured low-grade issues. Copper shares moved erratically, but tin shares pursued a downward course in the absence of buyers. Interest in oil shares was at a low ebb and there were some narrow irregular price movements with a slight tendency to lower levels. Tea shares were a dull market, but rubbers offered resistance to the recent downward trend, although the commodity again moved lower.

The Money Market

In view of the softening attitude towards the money market over the past three weeks, the cut in Bank rate from 6 percent to 5½ ppercent was fully expected and came as no surprise. It did, however, come as a relief and ended the uncertainties which had been prevailing. The action of the market at the Treasury bill tender following the Bank rate change was one of caution. Not wishing to cause too great a fall in the bill rate to the displeasure of the authorities, they put in a joint bid which was 1s 1d above that of the previous week's at £98 14s 6d, representing to them a rate of £5 2s 3d percent. With outside bids higher, the Treasury bill rate resultantly came out at £5 2s 3d percent, or approximately ½ percent below the previous week's rate, and compared with the ½-percent reduction in Bank rate. As for the credit situation over the week, money remained very tight with the rate for day-to-day loans firm. The rate prior to the Bank rate change was 5½ percent, but after the change, the new high level became 4¾ percent. The recent keen demand for bills persisted with January and hot bills changing hands at variety of rates ranging from a high of 5½ percent down to 4⅝ percent.

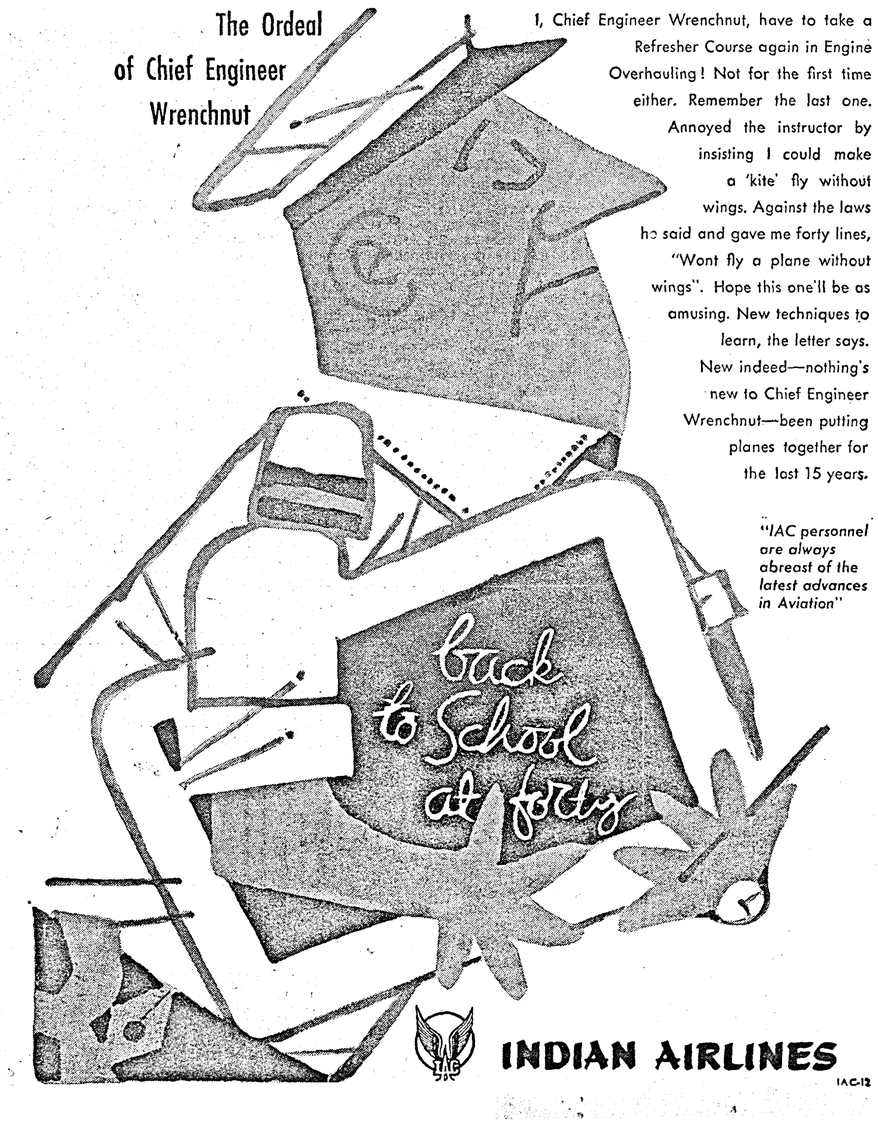
Mild U.S. Recession Forecast

A sizable majority of U.S. leading economists foresee a mild recession between now and the end of 1961. This is stated in a survey made by F. W. Dodge Corporation, a construction and marketing statistical agency. At least two-thirds of 327 economists canvassed expect a decline in business activity in the next six to nine months with a majority of these seeing a rebound late in 1961. The other economists polled said the economy would hold its own during the next year. The survey said the general feeling seemed to be that some corrections had already taken place in the economy during the past several months and this would serve to lighten the severity of the expected decline. The survey listed the following factors for the majority forecast: lack of "enthusiastic" consumer demand, the squeeze on corporate profits, over-capacity in many industries, expected reductions in capital outlays, continued high unemployment and inventory reductions.

NAMES AND DATES

Mr. H. Bizot, General Manager, Comptoir National D'Escompte de Paris (French Bank), will shortly arrive in Calcutta to preside over the celebrations of the Bank's centenary in India.

Mr. L. A. Green, of the London firm of S. Berendsen Ltd, is now in Bombay in the course of a visit to India for the purpose of expanding business and promoting sales.



Money

THE CALCUTTA MONEY MARKET

SMALL RISE IN ADVANCES

Wednesday, 2nd November.

THERE has been a moderate increase in advances in the Calcutta money market during the past week. Demand from the jute industry has risen and the requirements of the grains and seeds storage are also up. The main reason for the increase, however, is the large rise in demand for funds from the engineering and iron and steel industries. The requirements of the sugar mills are slightly lower, and this fact suggests that the larger volume of business done this week does not necessarily mean that the busy season has set in. The interbank market has been extremely tight, with the call rate at 4½ percent and very little money on offer. There is, however, some sign of the conditions easing in Bombay.

The exchange market has been particularly dull during the past week, with few tea bills and scarcely any gunny bills at all. Remittance has been in poor demand. The value of the pound on the London market has remained steady during the past week, with very little change against most of the more important currencies.

BULLION TURNED SOFTER IN THE PAST WEEK Operators took interest in the official move to regulate trading in Bombay under the Forward Contracts Regulation Act. Silver fell from the previous week's level of Rs. 223.50 to Rs. 223, quoted today for ready delivery, and the rate for forward was quoted at Rs. 222.75. The London and New York prices were 79½d and 91.37 cents.

Gold was subdued in sympathy with silver. The price fell from Rs. 137.50 to Rs. 137.25. The sovereign at Rs. 90.75 showed a loss of 25nP.

DURING THE WEEK ENDED 28TH OCTOBER, GOVERNMENT of India Treasury bills for Rs. 57,94,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 1st November. The total amount offered was Rs. 2,35,00,000. Tenders at Rs. 99.360 were accepted in full and those at Rs. 99.355 allotted approximately 67 percent, the average rate of acceptance being Rs. 2.565 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 7th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold up to 5th November at Rs. 99.376 percent, subject to the conditions that sales can be stopped at any time without notice if the Government thinks it necessary. There were no sales of these bills during the period 26th October to 29th October.

THERE WAS A DECLINE OF RS. 17.84 CRORES TO Rs. 1,794.18 crores in active notes, according to the return of the Reserve Bank of India for the week ended 28th October, 1960. The total note issue was fractionally higher by Rs. 89 lakhs to Rs. 1,823.36 crores. Notes held in the Banking Department consequently rose by Rs. 18.73 crores to Rs. 29.18 crores. Deposits of the Central Government rose by Rs. 12.14 crores to Rs. 65.35 crores, but other Government accounts fell by Rs. 8.65 crores to Rs. 24.25 crores. Balances of commercial banks at Rs. 100.56 crores showed a decline of Rs. 2.85 crores. Balances held abroad again improved by Rs. 1.81 crores to Rs. 19.74 crores. Investments declined by Rs. 4.96 crores to Rs. 243.46 crores. Other loans and advances fell from Rs. 130.91 crores to Rs. 115.87 crores, of which advances to scheduled banks against usance bills amounted to Rs. 6.54 crores (Rs. 9.43 crores). Ways and means advances were Rs. 28.40 crores, against Rs. 25.89 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 21st October, 1960, shows a drop of Rs. 11.45 crores to Rs. 578.88 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 10.25 crores and Rs. 20 lakhs to Rs. 340.38 crores and Rs. 9.63 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 2.02 crores to Rs. 214.21 crores. Cash and balances are, in consequence, shown at Rs. 27.50 crores, or Rs. 4.13 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 21st October, 1960, shows Demand and Time liabilities at Rs. 785.11 crores (Rs. 15.48 crores on account of borrowings from banks) and Rs. 1,148.24 crores (Rs. 21.05 crores), compared with Rs 792.37 crores (Rs. 16.37 crores) and Rs. 1,164.34 crores (Rs. 21.88 crores), respectively. Cash has increased by Rs. 84 lakhs to Rs. 48.34 crores, while balances with the Reserve Bank have decreased by Rs. 8.70 crores to Rs. 99.06 crores. There is a drop of Rs. 10.72 crores to Rs. 697 crores in investments. Advances and bills discounted at Rs. 1,116.29 crores show a rise of Rs. 17 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.6 percent and 57.7 percent, against 7.9 percent and 57.0 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 4-11-60.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
4-11-60	5-2-61	2,00,00	Rs. 2.565%
28-10-60	29-1-61	2,00 00	Rs 2.565%

Stocks and Shares

L. I. C. BUYING AIDS PRICE RECOVERY MOVEMENT

GILT-EDGED REMAIN WEAK

Wednesday Evening.

THE Life Insurance Corporation appears at last to have come to the rescue of the stock market when, at its meeting held in Bombay on 28th October, offers of equities valued at about Rs. 1 crore were, it is believed, accepted. As soon as this was known, *the bears began covering* and a recovery movement started which spread along the entire list. Jute shares were the only exception to the general trend, because of difficult trading conditions as a result of the fibre shortage. New Delhi appears to be worried over the situation which now exists in the industry and the results of the two-day talks between representatives of the I.J.M.A. and the authorities, which began in the capital today, are keenly awaited. Strong rumours in the City that the Reserve Bank may consider some relaxation of the recent credit curbs also aided sentiment, but in the absence of any concrete news the gilt-edged market continued to slide away under selling pressure.

The Escorts issue closed at 1 p.m. on Saturday last, and preliminary reports indicate that it was over-subscribed approximately ten times.

The General Tyres issue is also going well and is expected to be over-subscribed. Next week, Isaac Holdens (India) Ltd., will be coming to the market with a public issue of 290,000 equity shares *at par. A salient feature of this offer is that* production will start before the end of this year and, therefore, unlike most other capital issues this year, investors may expect a return on the capital invested in a reasonably short time.

The Government securities market, except for 3% Conversion, Loan, 1986, which improved on *bear covering* to Rs. 74.10, and 3% Loan 1970-75 which was slightly better at Rs. 89.18, continued to move downwards, particularly medium and long-dated issues.

In coal, Burrakur improved from Rs. 17.62 to Rs. 18 and Bengal from Rs. 332 cum-dividend to Rs. 328 ex-dividend. Most other issues were unchanged at around last week's levels.

In cotton textiles, Bowreah rose by Rs. 4 to Rs. 154 and Kesoram had takers at the higher rate of Rs. 27.75 ex-dividend. Dunbar were wanted at Rs. 22.37, against last week's quotation of Rs. 21.75.

Electric supply shares were dull and featureless.

In the *engineering group*, Indian Iron & Steel shares improved steadily to Rs. 23.38 from an opening price of Rs. 22.64 to close tonight at Rs. 23.17. Similarly, Textile Machinery moved up from Rs. 22.20 to Rs. 22.65. Jessops were quiet at Rs. 20.50, while both Braithwaite and Britannia Engineering were wanted at the higher rate of Rs. 31.37 and Rs 14.25, respectively. Guest, Keen, Williams were firm at Rs. 39.75 ex-dividend, ex-rights.
